APPENDIX I.

Statistical statements—	
Statement A-I.—Canal projects with particulars regarding discharges, rainfall, area commanded, cost of construction, expenditure, interest charges and length of canals, etc. ..	27-30
Statement A-II.—Reservoir projects with similar particulars as above	31-33
Statement B-I.—Capital Account of Irrigation, Navigation, Embankment and Drainage works for which Capital and Revenue accounts are kept ..	34-38
Statement C-I.—Financial results showing receipts and expenditure against Revenue, etc., of Irrigation, Navigation, Embankment and Drainage works for which Capital and Revenue accounts are kept ..	39-46
Statement C-II.—Financial results (based on actual receipts) showing capital outlay, gross receipts, working expenses, interest charges, etc., of Irrigation, Navigation, Embankment and Drainage works for which Capital and Revenue accounts are kept	47-52
Statement C-III.—Demands and realizations of Irrigation, Navigation, Embankment and Drainage works for which Capital and Revenue accounts are kept	53-55

Statistical statements—cont.	
Statement C-IV.—Financial results (based on assessments for the year) of Irrigation, Navigation, Embankment and Drainage works for which Capital and Revenue accounts are kept.	56-59
Statement D-I.—Statement of traffic on the principal navigable canals	60
Statement D-II.—Description and quantities of goods, etc., carried on the principal navigable canals	61-64
Statement E-I.—Areas irrigated, etc., under irrigation works classed as productive and unproductive for which Capital and Revenue accounts are kept	65-66
Statement E-II.—Incidence of working expenses and assessed water revenue on irrigation systems under irrigation works classed as productive and unproductive for which Capital and Revenue accounts are kept	67-68
Statement E-III.—Areas irrigated and the value of crops raised	69-75
Statement E-IV.—Comparative statement of irrigation and rainfall	76-81
Statement F-I.—Incidence of water-rates under irrigation works classed as productive and unproductive for which Capital and Revenue accounts are kept	82-83

APPENDIX II.

Statement showing the results of irrigation.

	PAGES		PAGES
Statement No. I.—Financial results of irrigation works classed as productive and unproductive for which Capital and Revenue accounts are kept	84-89	Statement No. II.—Extent irrigated and the revenue derived under minor works for which Capital and Revenue accounts are not kept	90

APPENDIX III.

Statement showing the number of wells used for irrigation in fasli 1343 (1933-34), Parts I and II.	91

PUBLIC WORKS DEPARTMENT, MADRAS PRESIDENCY

ADMINISTRATION REPORT

FOR THE YEAR 1934-35

PART II-IRRIGATION

Chapter I.

GENERAL.

1. The remarks in this chapter are, as usual, intended to bring the general information up to the end of the calendar year 1935.

2. *Cauvery-Mettur Project.*—The Public Works Department Workshops at Mettur were closed and handed over to the Electrical Department in April 1935 for their use.

To avoid unnecessary delay and to facilitate prompt disposal of the surplus plant by sale, a subdivision, with necessary establishment was sanctioned for a period of six months from 1st April 1935, in the first instance, and this has since been extended to end of April 1936. This subdivision, besides attending to the sales of plant, is also entrusted with other works, such as maintenance of camps and buildings, maintenance of water works and drainage systems, conservancy and other Public Health operations and also the construction of the Thoppur-Mecheri road which last has since been completed and was handed over to the Salem District Board for maintenance on 9th September 1935.

The Mettur Dam.—Despite a very weak south-west monsoon in two successive years, the dam has enabled irrigation to be carried on in the delta with few interruptions. During the year under review, the reservoir never received sufficient water to fill it, but the demands for irrigation were fairly satisfactorily met.

Observations of leakage through the dam show that the leakage, which was never appreciable, is steadily getting still further reduced. The electrically operated sluices have worked satisfactorily.

Early in 1935, the work of raising of the channel banks below the bridge, for a discharge of 30,000 cusecs, was taken up and practically completed. When the channel was closed, some scours were noticed below the bridge floor. These have been filled up and a masonry apron built for a width of about 18 feet below the piers.

Water was let down the channel on the 12th June 1935. Due to a very low lake level on account of the failure of the north-east monsoon of last year and a belated south-west monsoon this year,

the low level channel had to be kept open for passing all the demand of the delta up to the 14th July and even after that date, a good portion of the demand had to be passed through these sluices up to about the 20th August. Owing to the very high velocity of the water emerging from the sluices and the peculiar shape of the channel, the revetment on the right side of the channel collapsed in five places on four occasions necessitating the closing down of the channel for a period of 36 to 48 hours each time for carrying out emergent repairs. This caused some occasional dislocation of the water-supply to the delta till about the 29th July 1935, after which the full supply was sent down regularly.

The lake started with a level of 50.00 on the 12th June and fell to 28.50 by the end of the month and to 21.90 on the 5th July after which the level rose to 68.00 by the end of July, the floods being far below the normal. However, the lake unexpectedly rose to 101.65 in September, falling to 91.00 by the middle of October when the first burst of the north-east monsoon early in November brought the lake to 104.65, the highest level for the year.

Surplus course.—As a result of the last year's surplussing, very small though it was, it was found that some deep scours had formed opposite the ninth, tenth, eleventh and twelfth vents of the surplus sluices and tended to cut back towards the apron, eroding away the soft rock intervening. These scours were causing some anxiety, as the curtain wall at the foot of the rear apron was not founded on hard rock for a length of about 95 feet in this reach. To prevent further cutting back, three masonry walls were built across the scours so as to form water cushions. Water was not, however, let down through these vents this year.

There were mild earthquake shocks locally in October and November 1935, similar to those experienced in 1933 and 1934, during the same part of the year. But the intensity of the shocks that occurred this year was milder than during the previous years.

Godavari Delta System.—The following river sets which required immediate protection after the floods of 1934, were suitably attended to and rendered safe before the floods of 1935 :—

- (1) Nagullanka set.
- (2) Sundarapalli set.
- (3) Kotipalli set.
- (4) Ramachandrapur set.
- (5) Sakshinetipalli set.
- (6) Malleswaram set.

Further slips were noticed after the floods of 1935 in the case of items 2 to 6 and necessary action is being taken to protect the same. There was also much erosion at the Udumudi set and necessary arrangements are being made to protect it.

The manufacture of 3 feet shutters proposed to be installed over the anicut, in place of the existing 2 feet shutters, is in good progress in the local workshops at Dowlaiswaram. Orders for four shutter-lifting machines for lifting the 3 feet shutters have been placed on Messrs. Ransome & Rapiers, Limited, England.

Token grants for two projects, viz., Losarigutlapadu and Vemuladevi, were voted towards the end of 1935 and detailed plans and estimates are nearing completion. These two schemes, when they are completed, are expected to bring an area of nearly 8,000 acres under cultivation and irrigation.

A special division was formed from 18th December 1935 for the localization of second-crop zones in the Godavari Central and Eastern deltas.

Kistna Delta System.—The two works for which the Kistna Special Division was formed in 1933, viz., improvements to the Peddalanka channel and the extension of the Kistna East Bank canal are in good progress. Work on the aqueduct across the Puligedda arm was closed for the season at the end of June after constructing the substructure up to the top level of the piers and casting the trough (inclusive of roadway) for two spans. The work has been resumed now.

Pennar River Canal System.—The investigation for the fitting up of falling shutters over the Sangam and Nellore anicuts and the extension of irrigation under the Sarvepalli reservoir was completed and detailed plans and estimates were submitted to Government during the year.

Tungabhadra Project.—In order to obtain a more reliable estimate of the quantity of water available for the Tungabhadra project, current meter-gaugings of the river were taken during the year, jointly with the Governments of Hyderabad and Mysore. The observations are intended to calibrate the existing gauges at the Valvapur and Sunkesula anicuts, so that the discharges at the two anicuts for many years past can be more correctly computed from the available records of gauge readings.

A special subdivision, sanctioned for the work, was formed in February 1935. The gauging stations were fitted up and equipped by July 1935, and current meter observations are being conducted from July, jointly with the staff deputed by the Hyderabad and Mysore Governments.

Experiments to decide on the duty of water for the project are held up pending consideration by the Chief Engineer for Irrigation and the Director of Agriculture of the detailed proposals made by the Deputy Director of Agriculture and the Agricultural Chemist.

During the year the Government of India were addressed to appoint an Inter-State Commission to arbitrate on the question of the sharing of the available supplies in the Tungabhadra river, between Madras, Bombay, Hyderabad and Mysore. The subject is still pending with the Government of India.

Thippayapalem Project.—Except for a few minor items, which were later on found necessary, the work of the construction of the masonry sluices, weirs and pipe tunnels and the earthen dam itself were all completed by the first week of June 1935. Unfortunately, owing to very heavy rains in the catchment basin and consequent sudden rise of water in the reservoir by about 10½ feet in

3 hours, the newly formed bund gave way in two places on 25th August 1935. A revised estimate for the restoration of the dam is under preparation.

Lower Bhavani Project.—The Special Division formed for the localization of the ayacut was abolished on 30th November 1935. Experiments on duty of water for dry crops with flow irrigation under the project conditions in the area were conducted at Chennasamudram from June 1935, during the first-crop season and similar experiments are being carried on at Kugalur from 1st October 1935 during the second-crop season.

There were heavy floods in the Amaravathi and Aliyar rivers due to exceptionally heavy rains in the middle of November 1935 and extensive damages were caused to irrigation works. The cost of restoring the damaged works is roughly estimated at Rs. 3 lakhs. Special supervisors have already been posted for the preparation of necessary estimates for repairs and restoration.

Cauvery Delta System.—Water for the delta was issued from the Stanley reservoir on June 12th. Due to slips in the sides of the channel from the low level sluices of the reservoir, supply had to be curtailed on a few occasions in July and there was in consequence some shortage in the supply to the delta in that month. From the 1st of August a steady supply was maintained. There was some delay in transplantation owing to the shortage of supply in July.

In November (14th to 16th), there was a moderate cyclone which affected the coastal villages. It did not cause much damage to irrigation works, but crops were damaged in the area affected. There were again very heavy rains all over the delta from December 17th to December 27th. This caused damage to crops in the low-lying areas by submerging the standing and almost ripe crops. Except for these two spells of heavy rain, November and first half of December were unusually dry and consequently the irrigation depended entirely on the supply issued from the reservoir. But for such supply from the stored water in the reservoir, there would have been great scarcity of water and consequent widespread failure of crops since the natural flow in the river during this period was very poor.

Kattalai Scheme.—The work on the bed regulator and in the North Bank Canal Scheme was completed and that in the high level channel was in good progress. The Special Division was closed on 1st July 1935 and the remaining works were entrusted to a special subdivision sanctioned to the end of March 1936.

Cauvery gaugings.—In continuation of the work done during the last four years, further observations for the volumetric determination of the sluice co-efficients of the Krishnarajasagara were conducted during the summer of 1935. The work will have to be continued for two more years.

In accordance with rule (3) of the Rules of Regulation of the Krishnarajasagara, joint cross-sections of the three rivers at the gauging sites were taken in the first fortnights of June and October

of the year and gaugings were jointly conducted at Chunchinkatte Standard Station on the river Cauvery to verify the latest discharge curve in use, viz., that of 1932.

Gaugings were continued during the year on the Irwin Canal and the Left Bank Low Level channel.

General.—With a view to relieve unemployment among the rural population, to improve the economic condition of the country and to provide extra work over as large an area as possible the Government decided to spend a sum of Rs. 50 lakhs spread over in three years by taking up a widespread scheme of improvements to minor irrigation works in all the districts excepting Malabar, South Kanara and the Nilgiris with the help of a special establishment sanctioned for the purpose. About nineteen subdivisions and one division were formed during the year to attend to these works. Good progress has generally been made in most of the districts.

Chapter II. ✓

1. M.R.Ry. Diwan Bahadur R. Narasimha Ayyangar Avargal continued as Chief Engineer for Irrigation, and M.R.Ry. V. Ayyadurai Ayyar Avargal continued as Deputy Chief Engineer, throughout the year.

2. Irrigation works in this Presidency are classified as shown below :—

(a) Works for which capital and revenue accounts are kept—

A. Irrigation works—

- (i) Productive.
- (ii) Unproductive.

B. Navigation, Embankment and Drainage works—

- (i) Productive.
- (ii) Unproductive.

(b) Works for which capital and revenue accounts are not kept—

- (i) Irrigation works.
- (ii) Navigation, Embankment and Drainage works.

The classification of a work as productive or unproductive is based on the financial results of three consecutive years. There are no works in this Presidency under B. Navigation, Embankment and Drainage works—Productive.

3. The total outlay incurred on irrigation works and the total revenue realized during the year under report was Rs. 1,41,78,641 and Rs. 3,20,84,152 against Rs. 1,46,03,066 and Rs. 3,12,61,182, respectively, in 1933-34. The area charged as irrigated was 7,302,390 acres against 7,489,535 acres in the previous year. The net revenue after deducting working expenses was Rs. 1,57,92,342 against Rs. 1,57,88,382 of the previous year. The figures of outlay

include indirect charges also. If the direct charges alone be taken, the expenditure during the year amounted to Rs. 131.97 lakhs against the budget allotment of Rs. 130.77 lakhs. The total cropped area in the Presidency during 1934-35 under all the chief food grains and industrial crops, both irrigated and dry, was 37,538,510 acres or 1,391,905 acres less than in the previous year. The area irrigated by Government irrigation works alone, viz., 7,302,390 acres was 19.45 per cent of total cropped area. This was 187,115 acres less than in the previous year. This decrease was due to the unfavourable character of the season, as a result of the failure of monsoon in certain districts.

4. *Financial results*—(i) *Productive works*.—The capital outlay during the year was Rs. 31,86,771 and to the end of the year Rs. 15,01,89,138. The area charged as irrigated was 3,893,039 acres and the estimated value of crops raised thereon was Rs. 19,29,65,273. The net revenue derived was Rs. 1,14,09,227 representing a return of 7.60 per cent on the capital outlay. The accumulated profits to the end of the year amounted to Rs. 29.72 crores.

(ii) *Unproductive works*.—The capital outlay during the year was Rs. 1,40,021 and to the end of the year, Rs. 4,38,56,719. The area charged as irrigated was 399,044 acres and the estimated value of crops raised thereon was Rs. 1,47,40,649. The net revenue derived was Rs. 4,81,602 representing a return of 1.10 per cent on the capital outlay.

(iii) *Minor works for which capital and revenue accounts are not kept*—(a) *Irrigation works*.—There are about 36,300 works of this class. The outlay incurred thereon and the revenue derived therefrom amounted to Rs. 39,34,421 and Rs. 86,28,529, respectively. The area charged as irrigated was 3,010,307 acres.

(b) *Navigation, etc., works*.—The outlay incurred and the revenue derived were Rs. 8,67,705 and Rs. 60,916, respectively.

5. *A. Irrigation works—Productive*.—(1) There are 26 works of this class, as in the previous year. The canals of the Godavari and the Kistna delta systems are used both for irrigation and for navigation. The remaining works are for irrigation only.

(2) The total length of the main and branch canals of the productive systems at the end of the year was 3,663 $\frac{1}{2}$ miles. Of this length, 875 $\frac{1}{2}$ miles were for irrigation and navigation combined and the remainder, for irrigation only. The length of distributaries was 9,969 $\frac{1}{2}$ miles.

(3) The capital outlay (direct and indirect) during the year was Rs. 31,86,771, against Rs. 44,41,518 in the previous year. The bulk of the expenditure was on the Cauvery-Mettur Project. The remaining expenditure was incurred chiefly on the Kattalai scheme and the Kistna delta system. Details of the works carried out are given in Chapter III.

(4) The total area charged as irrigated was 3,380,817 acres of first crop and 512,222 acres of second crop, against 3,321,519

acres and 489,318 acres, respectively, in 1933-34. The increase under both the crops occurred mainly under the Godavari delta system and the Cauvery-Mettur Project.

(5) The gross working expenses of the year amounted to Rs. 55,61,402 against Rs. 49,89,243 in the previous year. The increase occurred mainly under the Cauvery delta, the Cauvery-Mettur Project, the Penner river canals and the Srivaikuntam anicut systems. In the Cauvery delta system, the increase was due to the remodelling of channels, while under the Cauvery-Mettur Project a major portion of the canals was thrown open for irrigation during the year, which involved extra expenditure on maintenance. In the other two systems, the increase was due to the restoration of flood-damaged works.

(6) The gross revenue for the year amounted to Rs. 2,18,82,756 against Rs. 1,99,67,138 in 1933-34. The increase occurred mainly under the Cauvery-Mettur Project and the Godavari delta system and was due to the additional area brought under cultivation.

(7) The net revenue derived and the net profit after deducting interest charges amounted to Rs. 1,14,09,227 and Rs. 51,91,784 against Rs. 1,01,68,641 and Rs. 40,39,232, respectively, in the previous year. The net profit of the year works out to 3.46 per cent on the total capital outlay of Rs. 15,01,89,138 against 6.04 per cent 25 years ago, i.e., in 1909-10. The continued fall in the percentage of profit was due to the heavy outlay on the Cauvery-Mettur Project which has just commenced to function. If this outlay is excluded, the percentage rises to 6.16.

(8) The estimated value of irrigated crops raised during the year amounted to Rs. 19,29,65,273 against Rs. 13,17,80,509 in the previous year.

(9) The average revenue per acre amounted to Rs. 5.62 on the gross area and Rs. 7.11 on new irrigation. The working expenses per acre were Rs. 1.43 on the gross area and Rs. 2.22 on new irrigation.

(10) The remissions granted during the year amounted to Rs. 2,39,615, against Rs. 5,76,427 in the previous year. The areas affected were mainly in the Godavari, the Kistna and the Penner river canals systems.

6. *Irrigation works—Unproductive works*.—(1) There were 28 works of this class as in the previous year including the Thippayapalem project and the Basavannah channel (extension) under construction. The Kurnool-Cuddapah canal is used both for irrigation and navigation, the latter being confined to the first 75 miles. The other works are used for irrigation only.

(2) The capital outlay (direct and indirect) during the year was Rs. 1,40,021 against Rs. 86,787 in 1933-34. This was incurred mainly on the Thippayapalem project.

(3) The total length of the main and branch canals at the end of the year was 912 $\frac{1}{2}$ miles of which 75 miles were for irrigation and navigation combined and the remainder for irrigation only. The length of distributaries was 842 $\frac{1}{2}$ miles.

(4) The area irrigated during the year was 399,044 acres against 385,273 acres in the previous year.

(5) The gross working expenses amounted to Rs. 6,26,578, against Rs. 6,22,224 in 1933-34.

(6) The gross revenue amounted to Rs. 13,98,069, against Rs. 13,28,703 in the previous year.

(7) The net revenue due to improvements amounted to Rs. 4,84,602 against Rs. 4,18,913 in the previous year. This represents a return of 1.10 per cent on the capital outlay of Rs. 4,38,56,749 to the end of the year. The net revenue fell short of the interest charges by Rs. 9,76,654, of which Rs. 5,79,485 pertained to the Kurnool-Cuddapah canal. This deficit represents 2.23 per cent on the capital outlay. Against this, however, must be set the value of the crops produced under these works, viz., Rs. 1,47,40,649.

(8) The estimated value of crops amounted to Rs. 1,47,40,649, against Rs. 1,18,95,007 in the previous year.

(9) The average revenue per acre amounted to Rs. 3.50 on the gross area and Rs. 4.80 on the new irrigation. The working expenses per acre were Rs. 1.57 on the gross area and Rs. 2.64 on new irrigation.

(10) The remissions granted during the year amounted to Rs. 70,480, against Rs. 1,01,891 in the previous year. The area affected was mainly in the Palar anicut system.

7. *B. Navigation, embankment and drainage works—Unproductive.*—There are three works of this class, viz., the Ganjam-Gopalpur canal, the Buckingham canal and the Vedaranniyam canal, the total length being 297½ miles. The gross receipts and charges amounted to Rs. 1,13,882 and Rs. 2,66,079, respectively, against Rs. 1,10,483 and Rs. 2,46,860, respectively, in the previous year. There was thus a loss of Rs. 1,52,197 on the working of these canals, against Rs. 1,36,377 in 1933-34. The value of goods carried during the year was Rs. 93,01,038.

8. *Navigation canals.*—Navigation was carried on as usual on the Dummagudem, Godavari, Kistna, Kurnool-Cuddapah, Buckingham, West Coast and Vedaranniyam canals. As in the previous year, navigation in the Kurnool-Cuddapah canal was limited to the first 75 miles. The total direct receipts amounted to Rs. 4.59 lakhs being an increase of Rs. 0.37 lakh over the figure for the previous year. The increase occurred chiefly in the Godavari canals under annual and six weeks' licence fees and raft fees, due to the issue of licences to some newly constructed private steam launches, etc., during the year.

9. *Works for which capital and revenue accounts are not kept—Irrigation works.*—The outlay incurred on, the area irrigated under,

and the revenue derived from, the works of this class are compared below with the figures of 1933-34 and the average for the previous triennium :—

	Outlay incurred.	Area irrigated.	Gross revenue.
	RS.	ACS.	RS.
During 1934-35	39,34,421	3,010,307	86,28,529
During 1933-34	37,40,578	3,293,425	97,87,946
Average of the triennium ending 1933-34	39,42,200	3,263,518	98,70,119

10. *Tank Restoration Scheme works.*—(1) The total area coming within the scope of Tank Restoration Scheme investigation is 102,500 square miles. The area of minor basins on which work had been commenced or completed at the beginning of the year was 94,660 square miles, of which 88,798 square miles had already been investigated. During the year under review, an area of 80 square miles was investigated bringing the total to 88,878 square miles. The remaining 5,782 square miles have been under investigation. In the area investigated, works were completed on an extent of 84,873 square miles and in the remaining area of 4,005 square miles works have been in progress or are yet to be begun.

Thus about 86.71 per cent of the total area of 102,500 square miles affected by the scheme had been investigated up to the 31st March 1935, leaving on that date a balance of 13,622 square miles. The estimates sanctioned for Tank Restoration Scheme works during the year amounted to Rs. 62,336, against Rs. 81,832 in the previous year. The Tank Restoration divisions and subdivisions abolished as a measure of retrenchment in 1931 have not been restored.

(2) The total amount of estimates sanctioned from the commencement of the Tank Restoration Scheme operations up to the end of the year was Rs. 2,01,83,000 nearly, against which the total expenditure incurred was Rs. 1,69,95,450, exclusive of charges for establishment and tools and plant. The expenditure during the year amounted to Rs. 1,03,718.

11. *Works for which capital and revenue accounts are not kept—Navigation, embankment and drainage works.*—The outlay incurred on, and the revenue derived from, the works of this class are compared below with the figures of the previous year and the average for the previous triennium :—

	Outlay incurred.	Revenue derived.
	RS.	RS.
During 1934-35	8,67,705	60,916
During 1933-34	8,93,810	66,912
Average of the triennium ending 1933-34	10,06,584	73,145

12. *Investigation of projects.*—The Coringa Island Project was ordered to be dropped for the present. With a view to relieve an area of about 20,000 acres from submersion caused by the floods

in the Coringa arm of the Godavari river and by the backing of such floods along the Teki drain during heavy floods in the Godavari river, two alternative schemes, viz., (1) to build a tidal lock at the head of the Coringa river near the French Settlement of Yanam, and (2) to provide banks on either side of the Teki drain and some other drains and to construct suitable inlets were under consideration in consultation with the French authorities. The gaugings on the Gundlakamma were completed during the year, and a report on the results of the gaugings was received late in the year. In connexion with the proposal to construct an anicut across the Pillaperu, to augment the supply in the Mopad main channel, the gauging of the Pillaperu was ordered by the Government during the year. The detailed investigation of, and the preparation of detailed plans and estimates for, the fitting up of falling shutters over the Sangam and Nellore anicuts and for improvements to, and extension of, irrigation under the Survepalli reservoir were ordered by the Government during the year. The investigation in connexion with the Sangam anicut was completed and the detailed plans and estimates were received late in the year. The investigation connected with the Nellore anicut and extension of irrigation under the Survepalli reservoir was in progress during the year.

In connexion with the Tungabhadra project, a special Executive Engineer was deputed, along with the Special Revenue Officer, to study the irrigation practices in the Bombay-Deccan. The reports of the Special Executive Engineer and that of the Special Revenue Officer were submitted to the Government during the year. A conference of the representatives of the Madras, Mysore, Hyderabad and Bombay Governments was held at Bangalore in the month of July with a view to arrive at an agreement for the sharing of the surplus waters of the Tungabhadra and its tributaries but no final agreement could be arrived at, and the conference adjourned for the purpose of mutual interchange of detailed information regarding the projects investigated in Mysore and Madras. The adjourned conference was again held at Bangalore in October but it was found that no agreement could be reached among the representatives as to the share of the ascertained available supply to be allotted to each Government. As a consequence, this Government decided to address the Government of India, to appoint an Inter-State Commission to give a decision on the sharing of the Tungabhadra waters equitable to all the parties. In the meanwhile, it was decided to take joint gaugings with the Mysore and Hyderabad Governments to determine more accurately the quantity of water available and a special subdivision was formed for this purpose towards the close of the year. On the recommendation of the Irrigation Development Board, the Government also accepted the proposal to institute a soil survey of the project area, and necessary establishment was sanctioned for the purpose. A conference of the representatives of the Madras and Hyderabad Governments was held at Hyderabad in August 1934 to discuss various questions outstanding between the two Governments and certain tentative conclusions were arrived at.

The plans and estimates for the Belahal-Bheemanakeri project received from the Superintending Engineer were under examination. Plans and estimates for the Duvvaleru project, and the proposals for excavating a channel from the right bank of the Penner were under revision with the local officers. A special establishment was sanctioned for a period of five years for taking gaugings of the Penner in connexion with the Penner-Kumudavathi project.

The work of localization of the ayacut under the proposed lower Bhavani Project was taken up in the middle of March 1934. The block levelling was completed by the end of November. Allocation of the commandable ayacut under the various distributaries, etc., was completed as also the preparation of rough ayacut registers. Joint enquiry by a Special Revenue Officer, with the Special Executive Engineer and an Assistant Director of Agriculture for the localization of the irrigable ayacut was taken up late in the year and was in progress. Detailed investigation of some typical distributaries was completed and the designs for masonry works were under preparation. Calyx drill operations both at the dam site and the surplus course were in progress. Duty experiments as also transmission loss observations were carried out under certain selected channels.

Detailed estimates for the restoration of the old course of the Uyyacondan channel in the Trichinopoly district were submitted to the Government during the year.

13. *Character of the season.*—The south-west monsoon set in about the first week of June. It was generally normal in June, but strengthened in July and gave good rains in all the districts, except Salem, Coimbatore, Trichinopoly, Tanjore and Madura. It was below normal in August, except in Ganjam, Vizagapatam, East Godavari, West Godavari and Chingleput and was generally weak in September. On the whole, the monsoon was fairly satisfactory only in Ganjam, Vizagapatam, East Godavari and Chingleput, and was below normal in all other districts.

The north-east monsoon set in, in the first half of October and gave good rains in all the districts except Ganjam, East Godavari, the Deccan districts, Nellore, Tanjore, Ramnad and Tinnevely. In October, it was above normal outside the Circars (Vizagapatam Agency and Guntur excepted) and the Deccan. It was below normal in November except in Vizagapatam, Kurnool, Bellary and Trichinopoly, while it was seriously defective in December throughout the Presidency especially in the Carnatic, the Central districts and the South. On the whole, the monsoon was above the average only in Vizagapatam (Agency), North Arcot, Salem, Coimbatore and Trichinopoly and below the normal in the other districts. The condition of standing crops was generally fair except in parts of Bellary, Anantapur, North Arcot, Coimbatore, Ramnad and Tinnevely. The average rainfall of the Presidency, exclusive of

the West Coast districts and the Nilgiris, for the official year 1934-35 was 28.54 inches, as against 37.08 inches in the previous year and 38.66 inches for the five years ending 1933-34.

14. *Floods.*—The highest flood in the Godavari occurred on the 16th August 1934 with a depth of 13.9 feet over the crest of the Dowlaishwaram anicut against the recorded maximum of 17 feet in 1891, above the then crest level (the present crest level being 0.75 feet higher). In the Kistna river, the maximum flood occurred on the 20th August 1934 with a depth of 12.15 feet on the crest of the Bezwada anicut against the recorded maximum of 23.50 feet in October 1903. In the Tungabhadra, the highest reading was 4.7 feet on the crest of the Sunkesala anicut on the 19th August 1934, the highest depth hitherto recorded being 10.40 feet on 31st October 1916. The maximum depth of flow over the Adinimayapalli anicut across the Penner was 4 feet on the 8th June 1934, the highest recorded depth being 13.86 feet on the 26th October 1874. The Cauvery rose to 6.80 feet on the 26th October 1934 gauge on the 7th July 1934 against the recorded maximum of 14.65 feet on the 20th July 1924. This is not, however, a fair basis for comparison as the Mettur reservoir with its large flood moderating capacity has come into operation from this year. The floods in the Tambraparni at the Srivaikuntam anicut rose to 9.8 feet on the 15th December 1934 against 21 feet on 10th December 1931.

15. *Breaches and accidents.*—Owing to heavy floods in the river Vamsadhara in September 1934, there were several breaches in the right bank of the Nagarikatakam channel and in the surplus course taking off from the scouring sluices in it. Several minor breaches also occurred in the Jalamur and Polaki channels and their branches. The breaches were closed in time and no scarcity of water was felt. The floods in the Godavari caused considerable erosions of the margins in various reaches, and a number of sets were affected. As in the previous year, there was heavy shoaling by sand and silt in the main canal below Dowlaishwaram head-sluice and at the heads of the Cocanada and Samalkota canals and to ensure adequate supply for second crop, the silt had to be cleared partly by closing the canals for a short period.

16. *Irrigation Advisory Boards.*—There were advisory boards only in eleven districts, viz., East Godavari, West Godavari, Kistna, Guntur, Nellore, Bellary, Coimbatore, Tanjore, Trichinopoly, Madura and Tinnevely. The advisory boards in the districts of Bellary, Tanjore and Trichinopoly did no work during the year. The question of reconstituting the boards in the Bellary district, so as to bring them into a workable order, was under the consideration of the Collector. Prompt action was generally taken and orders were passed by the local officers on the representations made by the advisory boards.

17. *Irrigation Panchayats.*—Fifty-nine irrigation panchayats for the management of various channels were working in the beginning of the year in the following districts, viz., Vizagapatam, East and

West Godavari, Nellore, Cuddapah, Anantapur, Bellary, Kurnool, South Arcot, Trichinopoly, Ramnad, Tinnevely and Coimbatore. Of these, eleven panchayats in Kurnool were dissolved as they had not been functioning and as their reconstitution was found either impossible or undesirable for want of co-operation among the ryots concerned. The working of the remaining panchayats was on the whole satisfactory. Two panchayats in Tinnevely were newly formed in November 1934. The formation of panchayats in some other districts was under consideration.

Chapter III.

A. IMPORTANT WORKS CARRIED OUT DURING THE YEAR.

1. Works for which capital and revenue accounts are kept.

CAUVERY-METTUR PROJECT.

1. *Staff—Headworks.*—The offices of the Superintendent of Works and of the Executive Engineer, Construction division, were abolished from 1st October 1934, together with the Dam Line East and West Subdivisions, Camps and Buildings Subdivision and Workshops Subdivision. The Mettur Headworks Division, with which the work of the other offices was amalgamated, continued to be in charge of Mr. H. G. Jackson up to the end of March 1935, when it was also abolished and its work amalgamated with that of the Salem division.

Canal system.—The No. II Division and the Special Division, Tanjore, continued to be in charge of Messrs. T. S. Venkatarama Ayyar and N. Keshava Rao, respectively. The two divisions were under the control of the Superintendent of Works up to 1st October 1934 and after the abolition of that post were attached to the Tanjore Circle.

2. *Progress of works—Headworks.*—(1) *Communications.*—The portion of the Mettur-Bhavani road from 2/5 mile to 8/6 mile from Mettur was transferred to the District Boards of Salem and Coimbatore for maintenance. The Cauvery bridge and the ghat road were thrown open for public traffic during the year.

(2) *Camps and buildings.*—The Salem camp was evacuated by the end of November 1934 and the Government staff originally stationed there was shifted to Mettur camp with a view to economize in water-supply, consumption of electrical energy and expenditure on Public Health services. The Camp Committee ceased to function from 1st October 1934 and the administration of the Camp was carried on from that date by the Executive Engineer, Mettur Headworks Division.

(3) *Water-supply.*—The total quantity of raw water pumped and purified during the year was 197.2 million gallons. The cost

per 1,000 gallons worked out to Re. 0-2-3. Samples of water were analysed at the Guindy Institute and the purified water was reported to be of excellent quality. Ample and regular supply was maintained throughout the year.

(4) *Drainage*.—The underground drainage system in Mettur Camp continued to work satisfactorily. The sewage farm at Mettur continued to be run departmentally and the net income during the year from the same was Rs. 1,609, without taking the cost of pumping sewage into account.

(5) *Workshops*.—During the year all the heavy plant on the work was returned to Stores, due to completion of the work. These items were all brought into the workshops and reconditioned for sale or for transfer to other Government Departments. The shops did the dismantling of the heavy machinery in the towers and crushers and of various other structures such as sheds, elevated tanks, etc., for sale. The locos, rolling stock, motor lorries, pumps, cranes, mixers, hoists, etc., were also largely reconditioned.

(6) *Electricity*.—Permanent supply of electrical power to the several motors and lights on the dam was arranged and three transformer substations, installed for the purpose. Low-level and high-level sluice gearings were wired permanently with push-button arrangements. The whole drainage gallery was given a permanent supply of electricity (for lighting) from the dam substations. The supply of power by the Mysore Government was stopped from 18th June 1934 and power was supplied by the Madras Hydro-Electric Department from that date. An efficient supply was maintained throughout.

(7) *Main dam*.—The construction of the Main Dam and the connected works was completed during the year. The overflow section which was at *plus* 725 level during the floods of 1933 was built up to level *plus* 801.00 by the end of June 1934.

(8) *Shutter house*.—The shutter house on the right flank was completed during the year and the emergency shutter of the high level sluices was lodged in it.

(9) *F. Saddle*.—The work of cutting down the F. Saddle on the western side of the dam to *plus* 791.00 to provide an additional surplus escape of 810 feet length was completed during the year. The total cost of the cutting was Rs. 1,16,000. Works to provide protection to the apron and stabilizing works to check scour in the surplus course in rear of the surplus sluice bridge were taken up during the year.

(10) *Season*.—There were 69 rainy days during the year. The evaporation tests were discontinued from 1st June 1934. The number of days on which the temperature was 100° F. and above was 81. The maximum temperature reached was 106° in April and May and the minimum temperature was 62° in December.

(11) *Miscellaneous*—(i) *Park*.—A well-designed park was laid out and opened on 21st August 1934 by Lady Beatrix Stanley after whom it is named. This consists of an upper park in which chiefly flower plants and trees are grown, bounded by the high

and low level channels on three sides and by the dam on the fourth side, and a lower park in which trees of a more commercial value are planted. The laying out of the park cost nearly Rs. 29,000 and was completed during the year.

(ii) *Motor Launch*.—The reservoir has got a foreshore of nearly 145 miles. In order to inspect the foreshore to settle questions of submersion and similar matters, to deal with floating obstacles likely to get caught in the sluices and to maintain communication between the dam and the camp in case of high floods, it was considered necessary to have a motor launch in the lake. Accordingly, a motor launch 50' × 10' was purchased at a cost of Rs. 22,500 during the year. The launch is seaworthy to stand up against any sudden storms which may burst upon the lake.

(iii) *Memorial pavilion*.—The completion of the dam is commemorated by a memorial pavilion which was completed during the year. The pavilion is built on the highest rock (near the left flank of the dam) which was formerly known as "Mullings Seat." Including a concrete approach road, it cost Rs. 33,300. This building with its semi-circular dome and projecting Chajjas commands an excellent view of the dam and its surroundings. The inauguration ceremony of the Mettur Irrigation System was held in this building on 21st August 1934.

(12) *Disposal of surplus materials*.—Price lists of the various classes of surplus materials were printed and distributed to intending purchasers. The sales of surplus materials under the various sub-heads are enumerated below :—

	RS.
Special tools and plant	1,31,191
Stock articles	9,734
Surplus materials including ordinary tools and plant	73,634
Total	2,14,559

Price lists of ordinary tools and plant, machinery and electrical stock materials were also under print.

CANAL SYSTEM.

(i) *Investigation and alignment*.—The investigation of field bothies in both the Vadavar and the Grand Anicut Canal systems, including Blocks I and II, the Pannavayal channel extension area and the area on the right side of the Grand Anicut Canal was completed during the year. Site surveys were also taken for works in Block No. I.

(ii) *Grand Anicut Canal System*—(a) *Mail canals and branches*.—The Regulator at 33/4090 was completed and the one at 195/8038 was in progress. All the works under Falls and Weirs in

Block III were completed and handed over to the Grand Anicut Canal Division. The syphon at 31/50 was nearly completed and five other syphons, three undertunnels and two syphon aqueducts were in different stages of progress. The bridge at 32/6068 was started and completed except for the canal apron which was in progress. The Subdivisional Officer's quarters, two supervisors' and two clerks' quarters, Subdivision office and peons' quarters at Ayangudy and the temporary inspection bungalow at Pannan-gulam were all completed during the year. The temporary inspection bungalow at Karavayal and the lascars' quarters at head of Ammanichatram channel were also in progress. Earthwork from R.D. 31/10 to 33/41 and 34/08 to 34/60 was completed, with the exception of a few gaps. Earthwork in other reaches was in progress.

(b) *Distributaries*.—The B. class bridge at R.D. 2/7980 of the Grand Anicut Extension channel was completed. Some minor syphon aqueducts and headsluices to Anavayal and Ammanichatram channels were in progress. Out of 143 works costing below Rs. 2,500, about 60 works were in progress during the year. Pipe sluices are yet to be taken up. Excavation of minor channels in Blocks I and II was in full progress during the year.

General.—The dam at the headworks was completed during the year and it was declared open by His Excellency Lieut.-Col. The Right Hon'ble Sir George Frederick Stanley, P.C., G.C.S.I., G.C.I.E., C.M.G., Governor of Madras, on the 21st August 1934. The surplus sluices came into operation for the first time during this year. The discharge through these sluices was very low due to the failure of the monsoon. The reservoir, in spite of its low storage due to a weak monsoon, has already justified its construction by supplying the prescribed quantity of water for the Tanjore delta in a year which would but for the dam have been a very bad year.

Regulation of water.—The maximum quantity of water let down in the supply channel was about 24,500 cusecs, against a total requirement of 30,000 cusecs of the delta, the balance being discharged by the Hydro-Electric pipes. As the channel could actually carry with the designed depth only a supply of 25,000 cusecs, against a total requirement of nearly 33,000 cusecs, it was proposed to raise the revetment of the channel by about 3 to 4 feet to run the channel at a greater depth. This work was taken up during the current year and is nearing completion.

Progress of works both at the headworks and on the canals was steady and satisfactory. The construction estimate was closed on the 30th September 1934. During the year under review, the works between 19/25 and 30/60 of the Grand Anicut Canal system, with the exception of a few incomplete works, were handed over to the Grand Anicut Canal Division for being opened for irrigation.

Outlay.—The outlay on works during the year amounted to Rs. 14.59 lakhs and to the end of the year Rs. 659.69 lakhs, against the estimate of Rs. 7.37 crores.

Kattalai Scheme.—Constructing a bed regulator across the Cauvery at Kattalai.—The outlay during the year was Rs. 22,022 and to the end of the year Rs. 6,69,457. The work was completed. The Bed Regulator Subdivision was abolished on 31st July 1934.

Kattalai High Level Channel.—The outlay during the year was Rs. 3,07,144, and to the end of the year Rs. 10,39,990. The excavation of the channel from mile 20/1 to 23/5 and 25/2 to 30/6, the construction of four "C" class bridges, two-foot bridges, three masonry undertunnels, two pipe undertunnels, three siphon culverts, one regulator, and the excavation of distributaries Nos. 4 to 12, were some of the more important items of work that were carried out during the year. Excepting the large distributaries, Nos. 19, 26, 28 and 32, the others were expected to be completed before the end of June 1935. The channel was opened for irrigation down to 20/6 during the year. Nearly 1,000 acres were brought under cultivation during the year and some additional lands were levelled to be fit for irrigation.

Kattalai North Bank Canal.—(Estimate Rs. 3,62,000.) The outlay during the year was Rs. 30,015 and to the end of the year Rs. 3,31,756. The third branch channel (viz., the connecting channel to Amur and Konaseelam channels), the work of revetting the sides of the main canal in its third reach, raising the left bank of the Karapatnar river and the construction of additional bridges in the main canal were completed during the year. The canal was completed in all respects and the supply therein was sufficient.

Basavannah Channel Extension.—The damages to the Mukurthi Odai aqueduct caused by the floods of the previous year were under repairs. The plans and estimate for the distributaries were revised during the year. The total expenditure to the end of the year amounted to Rs. 5,44,994, against the sanctioned estimate of Rs. 5.93 lakhs.

Thippayapalem Project.—Constructing a storage reservoir on the Rallavagu near Thippayapalem.—(Estimate Rs. 4,07,425). *Main bund*.—Foundations for the bund on the downstream of the core wall were completed and the formation of the bund itself taken up and raised to level + 587.00, the top of bund being + 592.00, revetment work was built up to + 563.00, against the sanctioned top level of + 588.00.

Sluices and weirs.—The masonry works, and rock cutting in the weirs were completed in all respects, except for a portion of the masonry in the left flank weir wall and some rock cutting in the right flank. Laying and anchoring of hume pipes was completed in the left flank. In the right flank, 20 pipes still remain to be laid.

Main canals.—The alignment and the detailed estimates for the various component works on the high and low level channels, except the inlets and outlets and the excavation of the low level channel were approved.

The total expenditure to the end of the year amounted to Rs. 2.79 lakhs, against the estimate of 4.07 lakhs.

Rushikulya System—*Excavating the Girisola Channel.*—(Estimate Rs. 2,70,000.) The outlay during the year was Rs. 6,432 and to the end of the year Rs. 2,36,358. The project has been completed except for the construction of a few cross drainage works for which estimates had been sanctioned.

Nagavalli River System—*Excavating the Palavalasa Distributary.*—(Estimate Rs. 17,000.) The outlay during the year was Rs. 763 and to the end of the year Rs. 1,268.

Godavari Delta System—(1) Improvements to the upper portion of the *Yenamadurru Drain.*—(Estimate Rs. 10,14,684.) The outlay during the year was Rs. 17,556 and to the end of the year Rs. 9,72,035.

(2) *Providing means of irrigation to the waste lands proposed for second crop cultivation in the Godavari Western Delta.*—(Estimate Rs. 19,100.) The outlay during the year was Rs. 1,239 and to the end of the year Rs. 11,235.

(3) *Providing irrigation facilities to the Government waste lands in Vempa Muthyalapalli and Losarigutlapadu Ranges.*—(Estimate Rs. 88,885.) The outlay during the year was Rs. 14,575 and to the end of the year Rs. 51,068.

(4) *Constructing a head sluice to the Venkayya and Weyyernu Canal.*—(Estimate Rs. 80,900.) The outlay during the year was Rs. 31,030 and to the end of the year Rs. 75,406.

(5) The following were some of the more important channels and drains the remodelling of, or improvements to, which were in progress during the year in the Godavari Delta and the total expenditure incurred thereon was Rs. 5,728 :—

- (1) Remodelling the Rameswaram channel.
- (2) Remodelling the Adivicodu channel.
- (3) Excavating the Kakinada drain.

Polavaram Island Project.—Extending the north and south embankments of the Polavaram island and constructing outfall sluices. (Estimate Rs. 63,550.) The outlay during the year was Rs. 6,630 and to the end of the year Rs. 6,735.

Kistna Delta System—(1) *Extension of the Kistna East Bank Canal.*—(Estimate Rs. 28,49,320.) The outlay during the year was Rs. 6,98,864 and to the end of the year Rs. 8,07,180. The excavation was in progress in the first two reaches (i.e.) from head to 17/6, nearly a fourth having been done in the first reach, and nearly three-fourths in the second. Masonry works (locks, lock weirs and bridges) in the two reaches were nearing completion. The widening of the main and the Masulipatam canals has been taken up and will be completed in 1935-36. The excavation of the Divi canal and the diversion of the flood bank were completed, as also the left flank regulator above the aqueduct. In the aqueduct

work (substructure), the raising of 21 piers and one abutment left at level + 2.50 in the last season was in progress, and the whole work inclusive of the trough for the entire length is expected to be completed by about the end of May 1936. The investigation of the 15,000 acres block and the alignment of field channels and the preparation of plans and estimates for the same were nearly completed.

(2) *Improvements to the Pedalanka Channel.*—(Estimate Rs. 4,25,690.) The outlay during the year was Rs. 74,486 and to the end of the year, Rs. 1,01,328. The excavation of the canal in the first three reaches (0 to 15/6) was almost completed and this portion is expected to function fully in the irrigation season of 1935. Work in the other reaches was also in progress. Masonry works were also in good progress, one lock and one bridge having been completed during the year. The construction of two other locks and lock weirs was also in progress during the year.

(3) *Excavation of the Vempad Channel.*—(Estimate Rupees 1,05,066.) The outlay during the year was Rs. 4,973 and to the end of the year Rs. 1,01,788. The work was almost completed.

(4) *Excavating the Pedakondur Channel, Kistna Western Delta.*—(Estimate Rs. 47,286.) The work was started during the year and an outlay of Rs. 11,834 was incurred.

(5) *Excavating the Tumulur, Davulur and Kollipara New Channels.*—(Estimate Rs. 54,071.) The work was started during the year and an expenditure of Rs. 10,455 was incurred.

Penner River Canals System—*Extension of Irrigation under the Kanigiri Reservoir.*—(Estimate Rs. 41,300.) The outlay during the year was Rs. 11,646 and to the end of the year Rs. 27,634.

Cauvery Delta System—(1) *Converting the Cauvery-Arasalar dam into a Regulator.*—(Estimate Rs. 36,000.) The expenditure during the year was Rs. 13,157 and to the end of the year Rs. 31,500.

(2) *Improvements to the Odambogiyar.*—(Estimate Rupees 40,500.) The outlay during the year was Rs. 16,637 and to the end of the year Rs. 26,535.

(3) *Improvements to Thillaivilagam and Pallimodu Channels under Viranvayal Regulator.*—(Estimate Rs. 32,400.) The outlay during the year was Rs. 7,817 and to the end of the year Rs. 8,810.

(4) *Conversion of three dams across the Pamaniyar into Regulators.*—(Estimate Rs. 58,700.) The outlay during the year was Rs. 24,402, and to the end of the year Rs. 48,420.

Vriddhachalam Anicut System—*Excavating a new supply channel to Kattalai and Upper Adanur tank from Sathapadi dam.*—(Estimate Rs. 14,800.) The outlay during the year was Rs. 1,977 and to the end of the year Rs. 13,004.

II. Works for which Capital and Revenue Accounts are not kept.

Ganjam division—Excavating a leading channel on the right side of Koratholi Tampara.—(Estimate Rs. 27,000.) The outlay during the year was Rs. 5,306 and to the end of the year Rs. 26,650.

Kistna Central division—Formation of a new tank in Paidurpad village.—(Estimate Rs. 25,360.) An expenditure of Rs. 16,093 was incurred during the year.

Nellore division—Improvements to the Chamadala tank and supply channel.—(Estimate Rs. 37,870.) The outlay during the year was 18,319 and to the end of the year Rs. 23,580.

Kurnool division—Restoration of the Kothapalli Spring channel.—(Estimate Rs. 22,800.) The outlay during the year was Rs. 6,544 and to the end of the year Rs. 11,243, inclusive of the amount spent out of contribution.

Salem division—Restoration of the Gudumalai tank and supply channel.—(Estimate Rs. 37,700.) The outlay during the year was Rs. 6,970 and to the end of the year Rs. 24,626.

Trichinopoly division—Improvements to Musiri Nattu Vaikal.—(Estimate Rs. 46,460.) The outlay during the year was Rs. 1,290 and to the end of the year Rs. 55,255.

Reshuicing the Pagalur channel.—(Estimate Rs. 27,000.) The outlay during the year was Rs. 397 and to the end of the year Rs. 25,076.

Excavation of the Puduvolithalai high level channel for the irrigation of sanded areas of the Murungapettai block.—(Estimate Rs. 73,000.) The outlay during the year was Rs. 31,362, and to the end of the year Rs. 39,791.

Restoring the Neiveli anicut and channel and restoring the Neiveli, Sitambar and Komangalam tanks.—(Estimate Rs. 38,000.) The outlay during the year was Rs. 15,118 and to the end of the year Rs. 24,282.

B. SEASON RAINFALL AND SUPPLY.

Rushikulya System.—The rainfall during the year was poor, though timely, but channels could be run full practically throughout the season owing to a steady supply in the river. The season was generally good with normal yield of crops.

The average rainfall in the catchment area was 43.10 inches, as against 71.70 in 1933-34. Rain gauges were read at six stations south-west monsoon and 3.57 inches during the north-east monsoon. The rainfall on the whole was much less than normal. The water level in the Russellkonda reservoir was 44.90 feet on the 15th July 1934 when it was first opened for irrigation and 39.85 feet on the

17th November 1934 when it was closed; and the reading in the Surada reservoir was 27.90 feet on the 27th July 1934 when it was opened and 27.10 feet on the 25th November 1934 when it was closed.

Nagavalli River System.—The transplantation in the Nagavalli project area also was completed early and the supply of water was sufficient for the whole area. The yield of the crops is reported to have been above the normal. Water for the second crop was supplied for the whole project from 10th January to 28th February 1935 according to the needs of the cultivation season. The water was used by the ryots for the cultivation of chiefly ragi, gingelly and chitteda paddy, on a total extent of 5,816 acres.

Godavari Delta System.—The rainfall was below the average in the whole of the delta, but the canal supplies were on the whole good except during part of July in the first crop transplantation period in the Eastern Delta and also towards the end of the second-crop season in general. The first-crop season was fair in the Central Delta and moderate in the other two deltas. The area under the second crop was above the average, additional area having been allowed chiefly in the Western Delta in the case of lands where the yield of the first crop was poor.

Kistna Delta.—When the canals were reopened, there was a decent supply from the river owing to the ponding up during the summer, but it dropped very rapidly. The rains also held up and the floods in the river came late. Difficulty was felt in rearing the seedlings and in transplanting the lands for which seedlings were grown under tanks. The river rose on the 3rd July and the floods lasted till transplantation was almost over. There were heavy rains in July and this enabled the completion of transplantation to be effected by the usual date.

There was a tendency on the part of the ryots to resort to sugarcane cultivation and special arrangements were made to supply water to the crops during the year.

Divi Pumping System.—Pumping was started on the 6th July and stopped on 26th November 1934. The rainfall and supply in the river were satisfactory during the transplantation period but they were not sufficient during the post-transplantation period of September and October. The river was very low between the 15th and 25th November 1934, and the demand for water could not be met satisfactorily. Transplantation commenced on the 10th July and was completed on the 20th August 1934. Though there were good rains in the last week of July, the ryots could not derive full benefit therefrom owing to want of sufficient labour. On the whole, the season and the supply in the river were more favourable than in the previous year and the yield also is reported to have been good.

Penner River Canals System.—The rainfall was on the whole very poor. There were also no floods in the river. There was great

scarcity of water supply for irrigation all over the delta, and consequently a large extent had to be grown with late crops which also suffered from dearth of water. There was not a sufficient supply for raising a second crop in the delta.

Cauvery Delta.—The seasonal condition was generally fair throughout.

Periyar System.—The rainfall during the year in the catchment and in the irrigated area was considerably less than in any of the previous years. During the period from 1st June to 15th December, the rainfall at Thekkadi was only 38 inches, against an average of 63 inches for the previous ten years. The total discharge through the head sluice at Thekkadi during the irrigation season was 21,497 million cubic feet, against an average of 26,674 million cubic feet for the previous twelve years. Shortage of supply began to be felt towards the end of August. In the meantime, the first crop in the double-crop area having been raised under very favourable conditions had matured and the harvest in September yielded a good crop. Owing to shortage of rain in the latter half of August and the abnormally hot and dry weather then prevailing, the transmission losses were very high and it was not possible to increase the discharge. A crisis was reached towards the end of September. A system of internal turns in the channels had to be resorted to then, with a ruling duty of 140 to start with, which was raised to 160 later on. This turn system was stopped from 6th October, conditions having improved somewhat. Unfortunately however, owing to the failure of the north-east monsoon in November, a turn system had to be introduced a second time from 3rd December, with a ruling duty of 120 to start with, which was raised to as much as 300 at the last stages, and water was allowed in all channels except the IX, X and XII branch channels by day and closed by night subject to further modifications to suit the local conditions. The yield of crop as a whole in the delta portion was 75 per cent of the normal.

The highest flood during the year in the Vaigai was recorded at Peranai on 28th October 1934, the front and rear gauge readings being 10.9 feet and 5.6 feet respectively when eight gates were opened 1 foot each. The Periyar head sluice was opened on 1st June 1934, with the lake level at 148.98 feet, and was closed on 15th March 1935, with lake level at 114.40. The highest level to which water rose in the Periyar lake during the year was 152.55 on the 5th July 1934.

Srivaikuntam Anicut System.—Both the monsoons were a failure during the year, the rainfall being far below the average of the previous years. In the first crop season the anicut surplussed only for three days during the year, in the south-west monsoon period, as against 59 days in 1933, nine days in 1932 and fifteen days in 1931. Even on these three days, the overflow was hardly 0.2 foot over the anicut crest. During the north-east monsoon, the conditions were comparatively worse. The anicut surplussed for eleven

days during this period, as against 59 days in 1933, 33 days in 1932 and 54 days in 1931. The season was on the whole bad which resulted in considerable withering of standing crops.

C. CLOSURE OF CANALS.

The following table shows the dates of closure and re-opening of canals in the Godavari and Kistna deltas :—

Godavari Delta.

Canals.	Date of closure.	Date of reopening.
Eastern delta canals ..	1st May 1934 ..	8th June 1934.
Central delta canals ..	15th April 1934 ..	23rd May 1934.
Western delta canals ..	28th April 1934 ..	5th June 1934.
Dummagudem canals ..	31st March 1934 ..	10th June 1934.

Kistna Delta.

Canals.	Date of reopening.	Date of closure.
Kistna Eastern delta—		
Main canal	15th May 1934 ..	15th March 1935.
Bandar canal	Do. ..	1st March 1935.
Ryves canal	Do. ..	Do.
Ellore canal	1st June 1934 ..	15th March 1935.
Kistna Western delta—		
All canals	1st June 1934 ..	16th March 1935.

D. INDUSTRIAL CROPS.

The extent of sugarcane cultivation under the various systems during the year was 20,562 acres, which was chiefly in the Godavari and the Kistna Delta and in the Hospet taluk of the Bellary district, against 19,372 acres in the previous year. The extent of indigo cultivation under the Penner River Canals system was 28 acres, against 315 acres in the previous year. The decrease is due to the want of timely rains.

E. WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE NOT KEPT.

1. *Irrigation works.*—The number of works in this class during the year was as shown below :—

	Channels.	Tanks.	Other works.	Total.
In charge of Public Works Department.	567	2,889	..	3,456
In charge of Revenue Department ..	5,472	25,634	1,714	32,820
Total ..	6,039	28,523	1,714	36,276

2. The area irrigated by, the outlay incurred on, and the revenue derived from works of this class are dealt with in paragraph 9 of Chapter II.

3. The subjoined statement shows the details of outlay during the year.

Statement showing the outlay incurred in 1934-35 on "works for which neither Capital nor Revenue accounts are kept—Irrigation works" by minor heads.

Minor heads.	Ordinary minor works.		Old maintenance charges.	Tank Restoration Scheme works.	Total.
	Public Works Department works.	Revenue Department works in charge of Public Works Officers.

(b) Works	29,225
Maintenance and repairs	11,86,796
Establishment	2,46,582
Tools and plant	..
Total	14,62,603

4. The particulars of revenue derived from the works during the year are compared below with those of the previous year :—

	1933-34	1934-35
	RS.	RS.
Irrigation revenue	97,14,853	85,60,502
Receipts collected by the Public Works Department	73,093	68,027
Total	97,87,946	86,28,529

5. The net revenue of the year, after deducting working expenses, amounted to Rs. 48,51,236, against Rs. 61,45,197 in the previous year.

6. The progress made in the investigation and execution of Tank Restoration Scheme works is dealt with in paragraph 10 of Chapter II. The following table shows by districts the work done during and up to the end of the year 1934-35 :—

Districtwar Particulars.		Approximate area investigated.		Number of estimates sanctioned.		Amount of estimates sanctioned.	
Circle.	Districts.	year	year	year	year	year	year
		During the 1934-35.	To the end of the year 1934-35.	During the 1934-35.	To the end of the year 1934-35.	During the 1934-35.	To the end of the year 1934-35.

Cauvery delta	..	1st June to 31st October	..	..	..	..	1st November to end of February.	..	..
Sriyakuntam anicut	..	Do.	..	..	..	..	1st November to 31st March.	..	..
Periyar system	..	1st October to 15th March	..	..	..	..	1st June to 30th September.	..	..
The above information regarding the periods is only roughly approximate for there is not any well marked division between the first and second crops which in many places actually overlap some of the so-called second crop being planted while some of the so-called first crop is still on the ground and taking water. In the case of the Godavari and Kistna deltas, the period of irrigation of first crop has been taken to be 187 days and 204 days, respectively, though it varies in each delta as shown below during the year :—									
Godavari delta, Eastern section	..	..	..	..	25th June to 30th November.	..	..	..	..
Do, Central section	..	..	..	..	Do.	..	..	..	..
Do, Western section	..	..	..	..	Do.	..	..	..	..
Kistna delta, Eastern section	..	..	..	..	15th June to 20th November.	..	..	..	..
Do, Western section	..	..	..	..	25th June to 20th December.	..	..	..	..
Area entered in column (7) both seasons are for lands bearing such crops as betel, sugarcane, which require irrigation for the greater part of the year. This is included in the areas of first and second crop.									

E-II.—Statement showing the incidence of working expenses and assessed water revenue on irrigation works classed as Productive and Unproductive for which Capital and Revenue Accounts are kept in the Madras Presidency during 1934-35.

Name of canal.	Average discharge of the year at canal head in cubic feet per second.	Water assessed, 1934-35.			Gross and assessed revenue from all sources.	Working expenses direct and indirect.	Area charged as irrigated during the years 1934-35, first and second crops.	Working expenses.		Total water rate, direct and indirect.
		Total, direct.	Indirect.	Total of direct and indirect.				Per cent on gross revenue.	Per acre irrigated.

APPENDIX I

APPENDIX I

13. Second wet crop in the case of zamindari and inam lands where the cultivator has compounded for two crops for a term of not less than five years.

24. For sugarcane, betel and other garden produce remaining on the ground for the time of two crops.

15. For sugarcane, betel and other garden produce in zamindari and inam lands remaining on the ground for the time of two crops.

16. For sugarcane, betel and other garden produce in zamindari and inam lands remaining on the ground for the time of two crops.

17 to 20. Nil.

21. For a first dry crop systematically irrigated.

22. For a second dry crop systematically irrigated.

23. For a first or second dry crop occasionally irrigated.

24. Special crops like onions, sweet potatoes, chillies, tobacco (the same as for a dry crop systematically irrigated).

25. Mango topes, coconut topes and other tope plantations—

(a) If they take water for a term of two wet crops.

(b) In other cases

NOTE.—When the water used for irrigation cannot be obtained without raising it by baling or by some mechanical contrivance, a deduction of one-fourth of the water-rate will be made.

Double the rates are levied when Peryar water is supplied to Government and minor inam dry lands in the Cumbum valley. Pedyakulam taluk, to which extension of irrigation has been sanctioned.

† No charge for water for twenty years under G.O. No. 128 L, dated 17th March 1916.

‡ Standard scale of water-cess has been ordered to be adopted until further orders—vide G.O. Ms. No. 1277, Revenue, dated 29th June 1934.

Prepared by the Board of Revenue—vide B. P. Routine No. 6123, dated 28th November 1935.

REVIEW OF THE ADMINISTRATIVE ACCOUNTS OF
IRRIGATION, NAVIGATION, EMBANKMENT AND
DRAINAGE WORKS OF THE MADRAS PRESIDENCY,
FOR THE YEAR 1934-35.

Irrigation, Navigation, Embankment and Drainage Works for which Capital and Revenue Accounts are kept are classified into—

(1) A. Irrigation Works; and

(2) B. Navigation, Embankment and Drainage Works;

each of these being subdivided into productive and unproductive works.

Every irrigation, navigation, embankment or drainage work for which a capital account is kept is classed as productive if the net revenue anticipated at the end of ten years from the date of the closing of the construction estimate appears likely to pay the annual interest charges on the capital invested (including direct and indirect charges and all arrears of simple interest), calculated at 4 per cent for works sanctioned before the 1st April 1919, at 5 per cent for those sanctioned between 1st April 1919 and 1st August 1921, and at 6 per cent for those sanctioned after the last mentioned date. If a work is not expected to yield such a return, it is classified as unproductive.

The basis of classification described above was introduced after the Reforms of 1919, and is subject to possible modification in connection with the impending constitutional changes. It might be held, in future, that projects, in respect of which the average annual net revenue over a certain period is not less than the average interest charges payable, during the same, period should be considered as productive.

2. The following table summarizes the results of irrigation, etc., works during the year 1934-35, in comparison with those of the previous year 1933-34 :—

				Total invested (direct and indirect and all arrears of simple interest) to end of		Gross receipts (direct and indirect) during 1933-34.

A. IRRIGATION WORKS.

I. Productive.

3. The number of productive works remained the same as last year, i.e., 26 of which items 1 to 25 of Account No. I (General Abstract) have been in operation. In the case of items 24 and 25, i.e., the Polavaram Island Project and the Cauvery-Mettur Project, the construction estimates were closed on 30th September 1934, but the completion reports have not yet been forwarded to Government. The Kattalai Scheme (item 26) is still in progress.

4. During the year under review, there was an increase in revenue to the extent of 18.27 lakhs as compared with the revenue of last year. The increase was mainly in the Cauvery Delta System (3.52 lakhs), Godavari Delta System (5.00 lakhs), Kistna Delta System (1.95 lakhs) and Cauvery-Mettur Project (7.25 lakhs). There was a slight fall in revenue in the case of Chembrambakkam tank (.14 lakh), Pennar River canals (.82 lakh) and Periyar (.10 lakh), due to the inadequate supply received and the consequent fall in the area of cultivation and the grant of remissions. A slight increase in revenue during the year was also noticed in the following systems, viz., Shatitope (.28 lakh), Cheyyar (.12 lakh), Poiney (.35 lakh), Lower Coleroon (.25 lakh), Kattalai (.37 lakh) and Polavaram Island Project (.24 lakh).

Owing to the increased supply received in the Kistna river, the 'Ayacut' under it had been increasing between 1925 and 1928 and in order to systematize the development of irrigation, the formulation of new schemes of irrigation and the localization and determination of the irrigable extent was necessary. Some of such schemes are in progress. Out of the total extent of lands selected for inclusion in the ayacut, 4,666.47 acres in the Kaikalur taluk of the Kistna district and 724.18 acres in the Ellore taluk of West Godavari district were exempted by Government from the levy of Rs. 25 per acre of inclusion fees † for the reason that the lands are liable to submersion under the Collair. The revenue foregone amounts to Rs. 1,34,750.

5. During the year, there was an increase of nearly 5.87 lakhs in the working expenses as compared with last year. The increase was noticeable in the case of Cauvery Delta (1.77 lakhs), Godavari

* 'Ayacut' means assigned irrigable area under an irrigation source.

† 'Inclusion fees' are fees levied to meet the cost of localization operations, of special staff, of compensation payable, etc.

Delta (1.13 lakhs) and Cauvery-Mettur Project (2.01 lakhs), while in the case of Srivaikuntam (.48 lakh), Pennar River canals (.81 lakh), Periyar (.18 lakh) and Kattalai (.23 lakh), it was slight. The enhancement in the maintenance charges is due to the causes mentioned below against the systems concerned:—

- (1) *Cauvery Delta*.—Completion of work "Improvements to the Peruvilai channel," execution of other remodelling, etc., works found necessary to improve the efficiency of the system, and the carrying out of a number of protective works necessitated by the consecutive floods of the preceding three years and repairs to the rear apron of the Cauvery Regulator.
- (2) *Godavari Delta*.—Execution of the works, (a) Remodelling the Tapeswaram South side channel, (b) special repairs to Biccavole drain and (c) urgent silt clearance work done at the heads of Godavari Eastern Delta canals in the short closure of December 1934. Finishing of incomplete works of previous year and the carrying out of several important set works necessitated by the damages during the heavy floods of 1934.
- (3) *Cauvery-Mettur Project*.—Maintenance of the canal system handed over to the newly formed Grand Anicut Canal Division on completion of the project from 1st October 1934.
- (4) *Srivaikuntam Anicut*.—Execution of heavy repair works to make good the flood damages of 1931 and 1933, and also to raising and strengthening the right and left flood banks of the Tambraparni River below the Srivaikuntam Anicut.
- (5) *Pennar River Canals*.—Execution of the work "Reconstructing the Maldevi Low Level Escape of the Kanigiri Reservoir" and the carrying out of other emergent works rendered necessary on account of the damage caused by the cyclone of November 1933.
- (6) *Periyar System*.—Carrying out of improvements to the Suriliyar channels and special repairs to certain tanks and channels.
- (7) *Kattalai Scheme*.—Due to (a) the advance manufacture of screw-gearing shutter for the Lalapet Regulator, (b) the construction of a drop at Pillapalayam and (c) maintenance of north bank canal from 1st August 1934.

There was, however, a slight decrease in the working expenses under (1) Cheyyar (.42 lakh) due to the completion in 1933-34 of repairs to damages caused by the floods of 1930, (2) Kistna (.15 lakh) due to the expenditure on the purchase of two grab dredgers with accessories having been debited to the system in the previous years' accounts and (3) Ganjam minor rivers (.19 lakh) due to the prevalence of the cholera during the working season in Chicacole sub-division and the cutting out of expenditure on non-urgent works.

6. The systems bearing Nos. 1 to 22 in Account No. I (General Abstract) have been in operation for over thirteen years since the dates of closure of the construction estimates. Of these, items 1, 3 to 7, 9 to 13, 17, 18, 21 and 22 satisfy the test of productivity referred to in paragraph 1 ante; items 8, 14 to 16 and 19 have failed to do so during only a portion of the triennium ending with 1934-35 and their retention under the productive category is justified with reference to rule 3-III of Statement A of Appendix 4 to the Madras Public Works Account Code. It was suggested to Government in November 1934, that the items 2 and 20 might be transferred to the unproductive class but they issued orders in No. 1893 I., dated 27th August 1935, that the works might be retained in the productive class for the present and that the financial results of the systems for the next few years might be watched.

II. Unproductive.

7. There are 28 systems of this class as in the previous year. A slight increase in revenue to the extent of .70 lakh as compared with the revenue of the previous year was noticed, during the year, but the working expenses remained almost the same as during the year 1933-34. The increase in the revenue, in the case of the following systems, was perceptible, viz., Kurnool-Cuddapah Canal (.10 lakh), Madras Water Works (.11 lakh), Palar (.22 lakh), Rushikulya (.06 lakh), Sagileru (.07 lakh), Nagavalli (.08 lakh) and Mopad (.13 lakh).

8. There are no systems in this class to be transferred to the productive class.

B. NAVIGATION, ETC., WORKS.

9. There are three works of this class in the Presidency and all of them have been classed as "Unproductive." There was an increase of .19 lakh in the working expenses in respect of the Vedaranniyam and Buckingham canals and the increase of .09 lakh in the case of the former system is due to the special repairs to the right bank of the canal and the formation of the left bank from 13/2 to Lawfords Straight Cut.

10. The increase in revenue as compared with that of last year is not appreciable.

T. K. RAJAGOPALAN,
Accountant General.
