9. The amount provided for expenditure on Original Works under this head, is Rs. 5,78,860. This is reduced to Rs. 5 lakhs, the difference, as per margin, being added to the grant for Military Works, which appears to His Excellency the Governor General in Council to have been relatively cut down too much, see preceding para.

	Rs.
Items Nos. 41 to 53, Revenue Buildings	10,000
Item No. 55, Printing Office at Allahabad	40,000
Item No. 59, Church in new Cantonments, Allahabad...	20,000
Items Nos. 63 to 65, Schools	3,860
Items Nos. 80 to 89, Police Buildings...	5,000
	78,860

10. *Item No.* 67. *Contribution towards the Thornhill Memorial, Museum and Library. Grant for* 1870-71, *Rs.* 10,000.—This work is apparently not urgent. The approval of this item must therefore depend upon whether the work is in progress, and the money really wanted for this purpose. If not, the amount, it is thought, might be more usefully applied.

Communications.

11. *Item No.* 131.—*New road from Papamhow to the Cantonments at Allahabad. Grant for* 1870-71, *Rs.* 7,500.—This item is struck out, leaving the amount available for any other more important work to which the Local Government may think proper to apply it.

Miscellaneous Public Improvement.

12. *Item No.* 137. *Bridges of boats for Hurdwar Fair. Grant for* 1870-71, *Rs.* 9,000.—Disallowed, as not being a proper Public Works charge, *vide* correspondence noted in the margin. The amount will be added to the grant for Communications.

Public Works Department letter No. 106 A, dated 8th June 1869.
Public Works Department letter No. 699 B—C, dated 24th November 1869.

REPAIRS.

13. The provision made for Repairs, Agricultural, amounts to Rs. 4,07,000, which is increased to Rs. 4,50,000 by the addition of Rs. 43,000 to meet charges on account of Conservancy and Working of Canal Plantations, which, under Financial Department Resolution No. 828, dated 31st January

1870, have to be provided for in the Budget-Estimate of the Public Works Department, with effect from 1st April 1870, *vide* para. 2.

ESTABLISHMENT.

14. The total Establishment charges, as estimated for 1870-71, amount to Rs. 20,08,640, against Rs. 19,39,500 for 1869-70 as follows:—

	1870-71. Amount.	1870-71. Total.	1869-70.
	Rs.	Rs.	Rs.
BUILDINGS AND ROADS—			
Direction	1,66,400		1,77,000
Construction, excluding Rs. 5,760 chargeable to Local Funds	4,80,240		5,73,360
Account, proportional charge	65,000		65,000
		7,11,640	8,15,360
IRRIGATION—			
Ordinary ... Direction and Construction ...	2,88,000		3,40,780
Account, proportional charge ...	10,000		8,060
		2,98,000	3,48,840
Extraordinary Direction and Construction ...	5,75,000		4,65,000
Account, proportional charge ...	25,000		20,000
		6,00,000	4,85,000
COLLECTION AND POLICE...	...	2,37,000	1,39,000
ROORKEE COLLEGE	...	1,53,000	1,43,800
GRANT-IN-AID FOR DISTRICT ROADS IN KUMAON ...	...	9,000	7,500
GRAND TOTAL ...	...	20,08,640	19,39,500

15. The charges for Direction and Construction under Buildings and Roads show a decrease of Rs. 1,03,720 as compared with the grant of the current year. But they are still much too high, being 24 per cent. of the amount allowed for expenditure on works and repairs as per margin, and 19·4 per cent. of the total amount provided for Buildings and Roads, including Establishment.

	Rs.
Military	14,24,000
Civil Buildings	7,31,860
Communications	7,92,500
Miscellaneous Public Improvement ...	12,000
Total Works and Repairs ...	29,60,360
Add Establishment	7,11,640
Total Buildings and Roads ...	36,72,000

16. It would appear very desirable that the first opportunity should be taken of a vacancy occurring among the Superintending Engineers to absorb one of the three Circles of the North-Western Provinces, as there can hardly be work sufficient for three such Officers under present circumstances. As one of them is only officiating in this grade, it is a matter for the consideration of His Honour the Lieutenant Governor whether the reduction should not be carried out at once.

17. The amount provided for Establishment under Irrigation, Ordinary, excluding the cost of the special establishment employed in connection with the canal revenue arrangements, is Rs. 2,98,000, as shewn in the foregoing statement, being 50 per cent. on the amount* provided for expenditure on ordinary agricultural works and repairs. This high rate appears to be due partly to the reduction of the ordinary grant, and partly to the comparatively small amount proposed to be charged to the Extraordinary grant on account of Establishment. Taking the two heads Ordinary and Extraordinary together, the total charge for Irrigational Establishments is about 25 per cent. of the total grant for this service, which is very high.

	Rs.
Original Works	1,59,000
Repairs	4,07,000
	*5,66,000

18. The charges for Collection and Police are estimated at Rs. 2,37,000, the excess of Rs. 98,000 over the grant of the current year being due chiefly to the provision made for Lumberdars' and Putwarrees' fees, and for extra measuring establishment, as per margin, *vide* orders of the Government of India, letter No. 27 A—I, dated 16th October 1867. The total grant under this head is increased to Rs. 2,50,000, by the addition of Rs. 13,000 on account of establishments employed on Canal Plantations, *vide* Financial Department Resolution No. 828, dated 31st January 1870.

	Rs.
Lumberdars' and Putwarries' fees ...	80,000
Extra measuring establishment	10,780
	90,780

19. The provision for Establishments under Accounts, excluding Rs. 20,000, which will be dealt with separately, amounts to Rs. 1,00,000,† being Rs. 7,000 in excess of the grant for the current year. This excess, the necessity for which is not apparent, has been transferred to Military Works, *vide* para. 7 of these orders. The reduction in amount of work owing to small expenditure in the Buildings and Roads Branch should at least be a set-off for increased Irrigation works. The grant for Accounts will thus stand at Rs. 93,000, the same as that for the current year, of which Rs. 25,000 are provided for under the head "Extraordinary."

	Rs.
† Buildings and Roads	65,000
Irrigation Ordinary	10,000
Extraordinary	25,000
	1,00,000

TOOLS AND PLANT.

20. The amount, Rs. 25,000, included under this head for stores from England on account of the Press buildings at Allahabad, is disallowed with reference to the reduction under Civil Buildings, *vide* para. 8 of these orders. The Ordinary grant for Tools and Plant will thus stand at Rs. 65,000, the difference, Rs. 25,000, being added to the grant for Military Works, see para. 7.

EXTRAORDINARY.

21. The total grant under this head is reduced from 35 lakhs to 30 lakhs.

22. *Item No.* 106. *Supplementary Canal head, Anoopshuhur. Grant for* 1870-71, *Rs.* 1,00,000. *And Item No.* 115. *Betwa Canal, Rs.* 1,00,000.—These amounts appear to the Governor General in Council to be unnecessarily large for merely survey operations, to which the expenditure must be confined until the projects are sanctioned by the Secretary of State.

SUMMARY.

23. The following is an abstract of the Imperial Public Works Budget-Estimate of the North-Western Provinces for 1870-71, as modified by the foregoing orders and with the following slight alterations which have been made to bring the appropriations for the different services to even figures :—

		Rs.		Rs.
Original works, Military, altered from		10,26,500	to	10,27,000
„ Communications, altered from ...		2,16,500	to	2,17,000
„ Civil Buildings, Major, altered from		4,44,140	to	4,44,000
„ „ Minor „ ...		55,860	to	56,000
Repairs, Military	„ ...	3,18,500	to	3,18,000
Establishment	„ ...	14,14,500	to	14,14,000

Budget Heads.	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
Ordinary.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military	9,17,000	1,10,000	10,27,000	3,18,000	...	...	13,45,000
Agricultural	29,000	1,30,000	1,59,000	4,50,000	...	...	6,09,000
Other Services :—							
Civil Buildings	4,44,000	56,000	5,00,000	1,53,000	...	...	6,53,000
Communications	2,12,000	5,000	2,17,000	7,75,000	...	...	9,92,000
Miscellaneous Public Improvement	...	...	...	3,000	...	...	3,000
Establishment	...	...	...	...	14,14,000	...	14,14,000
Tools and Plant	...	...	...	...	...	65,000	65,000
Total Other Services ...	6,56,000	61,000	7,17,000	9,31,000	14,14,000	65,000	31,27,000
Total Ordinary ..	16,02,000	3,01,000	19,03,000	16,99,000	14,14,000	65,000	50,81,000
Extraordinary.							
Agricultural	21,56,000	...	21,56,000	...	6,00,000	2,44,000	30,00,000
Total Ordinary and Extraordinary	37,58,000	3,01,000	40,59,000	16,99,000	20,14,000	3,09,000	80,81,000

24. In addition to the above, a sum of Rs. 50,760 is to be expended by Officers of the Public Works Department from Local Funds as follows :—

	Rs.
Original Works, Communications	45,000
Establishment	5,760
	50,760

25. It may here be noted that there is a difference of Rs. 60* between the amount deducted on account of Local Funds as shown by the Controller's Note page 2, and the abstract at foot of Part IV of the Budget-Estimate, the cause of which is not understood. The latter, however, appears to be the correct amount, and it has been accepted accordingly.

	Rs.
*Amount shown in Controller's Note ..	5,820
„ in abstract at foot of Part IV	5,760
Difference	60

RAILWAYS.

26. The amount passed under this head for 1870-71, as per separate orders, is Rs. 32,97,000 as follows :—

	Rs.
Extraordinary. Expenditure on State Railways ...	31,43,000
Ordinary. State expenditure on Guaranteed Railways	1,54,000
	32,97,000

PUBLIC WORKS REVENUE.

27. The estimated receipts on account of Public Works Revenue Miscellaneous during 1870-71, amount to Rs. 2,80,000. This includes a sum of about Rs. 80,000 for Stores from London for the Roorkee Workshops which, under orders about to issue, will be adjusted by means of a remittance account, and not by credit to Public Works Revenue as was intended. Deducting this item, the estimate is reduced to Rs. 2,00,000 as follows :—

	Rs.
Tolls, dues, fees, fines, and refunds	90,000
Rents of buildings	22,500
Sales of produce	72,000
„ of buildings, and of tools and plant	15,500
	2,00,000

28. The receipts on account of Irrigation Revenue are estimated to amount to Rs. 27,12,000. To this may be added Rs. 53,000 on account of receipts from Canal Plantations which have to be accounted for as Public Works Revenue with effect from 1st April 1870, *vide* Financial Department Order of 31st January quoted above.

Fort William,
March 3, 1870.

R. STRACHEY, *Colonel, R. E.,*
Offg. Secy. to the Govt. of India.

PUNJAB BUDGET ORDERS, 1870-71.

The Ordinary Budget grant assigned to the Punjab for expenditure on Public Works from Imperial funds during 1870-71 amounted to Rs. 54 lakhs, which has been distributed as follows, as compared with the grant for 1869-70 :—

	1870-71.	1869-70.	INCREASE.	DECREASE.
	Rs.	Rs.	Rs.	Rs.
Military Works and Other Services.				
Military Works and Repairs ...	20,25,000	36,00,000	.....	15,75,000
Other Services	12,35,600	21,92,200	.....	9,56,600
Tools and Plant	80,820	82,000	.....	1,180
	33,41,420	58,74,200	.....	25,32,780
Establishment	8,51,580	10,27,900	.....	1,76,320
	41,93,000	69,02,100	.....	27,09,100
Agricultural, Ordinary.				
Works and Repairs	7,50,000	6,00,000	1,50,000	.....
Establishment ...	2,61,000	2,21,700	39,300	.....
Establishment. Collection and Police	1,96,000	1,76,200	19,800	.....
	12,07,000	9,97,900	2,09,100	.....
GRAND TOTAL ...	54,00,000	79,00,000	.....	25,00,000

2. This abstract shows that while the grant for 1870-71 for works and repairs under Military and Other Services has been reduced by Rs. 25¼ lakhs, or by upwards of 43 per cent., the grant for Establishment has been reduced by only 17 per cent., and now stands at about 20 per cent. on the total grant of the year. Considering that the outlay on Military Works is, as a rule, concentrated at a few stations, the charges for establishment would appear to be susceptible of further reduction. Something has already been done in this direction, bu their cost appears still incommensurate with the reduced grant, and to call for immediate and particular attention. In this view, it is suggested for the consideration of the Government of the Punjab, whether the appointment of one of the three Superintending Engineers for the General Department might not perhaps be dispensed with, and that the number of executive divisions might be diminished. A further reduction of Upper Subordinates might also be practicable, and in the charges for temporary establishment, both work and clerical. Railways and Irrigation will probably absorb all reductions that can be made.

3. Under the head Extraordinary, the Budget-Estimate provides for an expenditure of Rs. 38,42,000 on Irrigation works, whereas the grant assigned for the purpose is only Rs. 34 lakhs. The difference Rs. 4,42,000 represents the proposed increase to Establishments for loan Irrigation Works, which has not yet been sanctioned. The Budget-Estimate of expenditure from Loan funds on Irrigation works will therefore be reduced to Rs. 33⅓ lakhs, being the grant originally assigned less the sum available from the Ordinary grant on account of the provision of half a lakh made from it for refund of the expenditure incurred during 1867-68 and 1868-69 from Loan funds on the Madhopoor Workshops.

4. The ordinary grant is increased to Rs. 54,28,000 to provide for charges for Conservancy and Working of Canal Plantations transferred from the Forest to the Public Works Budget-Estimate, *vide* Financial Department Resolution No. 828, dated 31st January 1870.

ORIGINAL WORKS.

MILITARY.

5. The provision made for the following works is disallowed, as it appears not desirable with the present reduced grants to begin more works while so many are already in progress :—

		Rs.
Item No.	20.—Distribution channels from Cantonment watercourse, Meean Meer	25,000
„ „	39.—Church at Subathoo	12,000
„ „	47.—Stables for Royal Artillery, Sealkote ...	13,000
„ „	69.—Lines for a Battery of European Mountain Artillery, Abbottabad, the construction of which has been ordered to be deferred	36,000
„ „	73.—Hospital for Native Cavalry at Nowshera, to be held in abeyance pending issue of orders modifying standard plan of hospitals for Native troops...	23,000
„ „	74.—Orderly and Court-martial room at Nowshera...	11,000
„ „	76.—Bakery at Delhi	12,000
„ „	87.—Slaughter-house at Rawulpindee	15,000
	Total ...	1,47,000

6. This amount may be applied to augment the grants for barracks that have been duly sanctioned, or perhaps for new barracks that may be urgently demanded at Lawrencepoor in consequence of damage done to temporary barracks at Campbellpoor by earthquake.

7. ***Items Nos. 88 and 89.—Roads in the Hazara District, Rs. 25,000.***—This grant should properly be accounted for under the head "Communications," and it will be transferred accordingly, thus reducing the allotment for Original Works, Military, to Rs. 17,10,000.

8. The provision made for the following works is allowed to stand, on the condition that no expenditure is incurred until the estimates have been sanctioned by competent authority :—

		Rs.
Item No.	6.—Tank at Subzil-ka-kote Out-post	6,500
„ „	28.—Alteration and re-construction of Native Infantry Lines, Delhi	15,000
„ „	32.—Reconstruction of roofs of slated barracks, Umballa	20,000
„ „	33.—Quarters for Superintendent's rest-house, ditto	5,000
„ „	46.— „ for 20 families, European Infantry Lines, Meean Meer...	24,000
„ „	66.—Lines for a Regiment of Native Infantry, Kohat	20,000
„ „	67.— „ for a Mountain Train Battery, Kohat ...	12,000
„ „	68.— „ for a Regiment of Native Cavalry, Kohat	12,000

9. *Items as per margin.* ***Buildings at Tallagung.***—The Foreign Department will be asked if it is desirable to undertake the outlay involved in establishing a new Civil Station at this place under present circumstances. Meanwhile expenditure should not be incurred, but the grant may stand.

		Rs.
24.	Three wells at Tallagung	3,000
25.	Pumps for ditto	4,000
56.	Bells-of-Arms for Native Infantry at Tallagung	3,200
57.	Quarter-guard at Tallagung	3,800
96.	Collection of materials for Civil buildings at Tallagung	30,000

Civil Buildings.

10. The appropriations made for the following works are disallowed for want of sanctioned estimates or as being for new works the construction of which may be postponed for the present :—

	Rs.
Item No. 93.—Tehseel and Thannah at Depalpoor	17,000
„ „ 98.— Ditto at Lukkee	10,000
„ „ 108.—School-room for girls, Sanawar	16,000
Items Nos. 111 *and* 112.—Workshops and Solitary Cells for prisoners in Jail, Delhi	14,200
Item No. 115.—Police Station, Kalka	4,000
„ „ 116.—Barracks for Reserve Police, Loodiana ...	3,000
„ „ 120.—Solitary cells for prisoners in Central Jail, Lahore	14,100
„ „ 125.— Ditto Ditto Rawulpindee	10,000
	88,300
Add No. 118.—Solitary cells for prisoners, Sealkote	8,500
	96,800

11. Proposals for the specific appropriation of this amount to sanctioned works in progress should be made; meanwhile the amount may stand recorded under the head "Civil Buildings."

12. *Items Nos.* 103 *and* 104. *Buildings at Umritsur, Rs.* 14,500.—This grant is debitable to Local funds, but it is understood that there are no Local funds available to meet the charge. If this is the case, no expenditure should be incurred on the works.

13. *Item No.* 117. *Jail at Umritsur, Rs.* 36,000.—An expenditure of Rs. 42,000 is said to have been incurred on this work without estimate, which is very unsatisfactory.

Agricultural, Extraordinary.

14. The provision made under this head amounts to Rs. 20,44,000, and is passed as follows :—

	Rs.
To be debited to Loan	19,94,000
To be debited to Ordinary grant against provision made for refund of expenditure incurred from Loan funds on Madhopoor Workshops	50,000*
	20,44,000

* The exact amount is Rs. 53,415, but Rs. 50,000 have been entered here to make the grant an even one.

In making up the accounts of expenditure for 1870-71 the Controller should debit Rupees half a lakh of the outlay on Extraordinary works to the Ordinary grant; this will be equivalent to writing back to debit of Ordinary the sums charged in 1867-68 and 1868-69 to head "Extraordinary."

15. Of the provision of Rs. 20,44,000 made under this head, estimates have only been sanctioned for Rs. 3,41,000. It is understood that no expenditure will be incurred from loan funds on the works for which no estimates exist, or on works which have not been specifically sanctioned by the Government of India as Extraordinary.

Agricultural, Ordinary.

16. *Item No.* 186. *Chowkees on Canals, Rs.* 20,000.—It should be stated whether the estimate of Rs. 32,368 for this work has been sanctioned or not. If sanctioned, a reference to the particulars of the authority under which it was done should have been entered in the column set apart for that purpose.

17. *Item No.* 193. *Minor Works, Rs.* 53,500.—This amounts to one-fourth of the grant for works, and appears excessive. The amount is reduced to Rs. 29,500, the balance Rs. 24,000 being applied to augment the grant for other agricultural works in progress on proper authority.

18. The grant for Agricultural Works under head "Ordinary" will stand as follows :—

	Rs.
I.—Provision for specific works	1,56,000
II.— „ to make good outlay erroneously charged as extraordinary in former years... ...	50,000
	2,06,000

Communications.

19. *Item No.* 151. *Tunnel under the River Indus at Attock, Rs.* 10,000.—Separate orders will be issued regarding the source from whence funds are to be provided for this work. Meanwhile, the appropriation of Rs. 10,000 made for the purpose from the Ordinary grant is allowed to stand, to meet necessary expenses connected with the carriage and erection of the pumping engines now on their way from England.

REPAIRS.

20. The grant of Rs. 5,20,000 proposed for repairs under head "Agricultural" is increased to Rs. 5,44,000, to provide for the conservancy and working of the Canal Plantations in the Punjab, which under Financial Department Resolution No. 828, dated 31st January 1870, have now to be provided for in the Budget-Estimate of the Public Works Department.

21. Under Civil Buildings, the grant is passed for Rs. 46,000, and under Miscellaneous Public Improvement for Rs. 11,000. Under Communications it is noticed that the allotment for repairs amounts to Rs. 5,33,100, which is passed for Rs. 5,33,000 against Rs. 7,63,500 provided in 1869-70, the balance being made up from Local funds. As regards the Lahore and Peshawur Road, it is hoped that a considerable reduction of outlay on repairs may be found practicable, now that one-half the road is to be made over to the Railway.

ESTABLISHMENT.

22. The Estimate under this head amounts to Rs. 23,86,580, distributed as follows as compared with 1869-70 :—

	Other Services.		Agricultural.		Total.	
	1870-71.	1869-70.	1870-71.	1869-70.	1870-71.	1869-70.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Direction	1,72,032	1,69,000	1,59,000	1,23,000	3,31,032	2,92,000
Construction	6,09,024	7,96,000	11,80,000	7,18,300	17,89,024	15,14,300
Account	1,03,374	1,14,500	...	...	1,03,374	1,14,500
Collection and Police	...	...	1,96,000	1,76,200	1,96,000	1,76,200
	8,84,430	10,79,500	15,35,000	10,17,500	24,19,430	20,97,000
Less debitable to Local funds	32,850	51,600	...	...	32,850	51,600
Net charges against Imperial funds ...	8,51,580	10,27,900	15,35,000	10,17,500	23,86,580	20,45,400
Distribution of charges.						
Ordinary	8,51,580	10,27,900	4,57,000	3,97,900	13,08,580	14,25,800
Extraordinary	...	...	10,78,000	6,19,600	10,78,000	6,19,600
	8,51,580	10,27,900	15,35,000	10,17,500	23,86,580	20,45,400

23. The estimate does not show clearly the manner in which the charge of Rs. 10,78,000 to the head Extraordinary has been arrived at. It includes a sum of Rs. 4,42,000 for Establishment, which has not been sanctioned as yet, and which is therefore disallowed, thus reducing the debit to Loan funds to Rs. 6,36,000.

24. The Ordinary grant for Establishment is increased to Rs. 13,13,000 to make the sum an even one and to meet charges for establishment for Canal Plantations which has now to be transferred to the Public Works Budget-Estimate. The Punjab Government will have to make such provision from this grant as may be sufficient to provide for the pay of the Mining Engineer on duty there.

TOOLS AND PLANT.

25. The estimate under head "Ordinary" is passed for an even sum of Rs. 81,000.

26. Under Extraordinary, the estimate amounts to Rs. 7,20,000, of which Rs. 3,49,600 is for stores from England. But no indent for such stores has been received as yet.

SUMMARY.

27. The following is an abstract of the Punjab Budget-Estimate for 1870-71 as modified by the foregoing orders :—

	Original Works.			Repairs.	Establishment.	Tools and Plant.	State outlay on Railways.	Total.
	Major.	Minor.	Total.

PUBLIC WORKS REVENUE.

28. The estimate amounts to Rs. 18,14,000, *viz.* :—

	Rs.
Revenue Miscellaneous	1,28,000
„ Irrigation	16,86,000
	18,14,000

To this may be added Rs. 21,000 for receipts on account of Canal Plantations ordered to be brought to account as Public Works Revenue from 1st April 1870. This raises the total of the estimate to Rs. 18,35,000.

FORT WILLIAM ; *March* 3, 1870.

R. STRACHEY, *Colonel, R. E.*,
Offg. Secy. to the Govt. of India.

CENTRAL PROVINCES BUDGET ORDERS, 1870-71.

The final Public Works grant assigned to the Central Provinces for 1870-71 is 30¾ lakhs, which the Local Administration has distributed as follows :—

Heads of Service.	1870-71. Ordinary.	1870-71. Extraordinary.	1870-71. Total.	1869-70, Reduced Grants.
	Rs.	Rs.	Rs.	Rs.
Military	7,07,100	...	7,07,100	8,85,000
Agricultural	50,000	5,10,000	5,60,000	3,76,070
Other Services—				
Civil Buildings	1,46,922	...	1,46,922	2,27,250
Communications	10,10,500	...	10,10,500	14,58,950
Miscellaneous Public Improvement ...	10,000	...	10,000	11,000
Establishment	4,85,000	60,000	5,45,000	8,77,730
Tools and Plant	65,478	30,000	95,478	89,000
Total Other Services	17,17,900	90,000	18,07,900	26,63,930
Grand Total	24,75,000	6,00,000	30,75,000	39,25,000

2. This distribution will be slightly altered in accordance with the following remarks.

BUILDINGS AND ROADS.

3. *Items Nos.* 11 *and* 12 *as per margin.* *Grant Rs.* 30,000.—Disallowed, as it does not appear desirable to commence new works at the present time, while old ones are still incomplete for want of funds. The amount is added to item No. 13 (twelve barracks for Infantry at Jubbulpoor) the grant for which is thus increased to Rs. 2,30,000.

	Rs.
11. Extension of Cantonment, Jubbulpoor	15,000
12. Church at Jubbulpoor	15,000

4. *Item No.* 28. *Improvements to Deputy Commissioner's Court-house, Raepoor, Rs.* 8,100.—Disallowed for some reason, and added to item No. 24 (Central Jail at Jubbulpoor) the grant for which is thus increased to Rs. 38,100.

5. *Item No.* 33.—*Additions to Nagpoor Museum, Rs.* 10,000.—This work is not of an urgent nature, and the estimate has not yet been sanctioned. The item is accordingly struck out, leaving the amount available for properly sanctioned works.

6. *Item No.* 48.—*Kanhan Bridge, Rs.* 1,70,000.—This allotment is allowed to stand subject to the orders which may be passed on the revised Estimate which is now under consideration.

IRRIGATION.

7. The grant for the Kanhan Project (Item No. 36) may stand, subject to expenditure being finally allowed.

ESTABLISHMENT.

8. The necessity for the increased provision for Clerks under "Direction" and "Construction" is not apparent. The amounts provided are certainly within the

sanctioned scale, but that scale was sanctioned before the late reductions in expenditure, the effect of which, and of reducing the number of Executive Divisions, should certainly be to diminish correspondence and clerical labour.

9. The total rate for Establishment of 17·7 per cent. on the total grant is certainly not high, and the Government of India recognize the prompt efforts made by the Administration to adjust their working power to the altered state of things ; but then it is very unlikely that the extraordinary estimate for works will be worked up to, and if it is not, provision will have to be made from the Ordinary grant for such portion of the amount, Rs. 60,000, now proposed to be debited to the Extraordinary grant as cannot fairly be charged to that grant, and the percentage will be increased proportionately.

10. The following reductions will accordingly be made from this part of the estimate :—

		Rs.
Office of Chief Engineer and Secretary		5,000
Jubbulpoor Circle		1,000
Construction	English Clerks	4,000
	Vernacular „	1,000
	Total ...	11,000

This amount will be added to the Ordinary grant for Communications. A detail should be furnished in the usual form of the items comprising the provision of Rs. 2,04,200 made under the head Establishment for the Upper Godavery Works.

11. The total appropriations under each head of service should have been reduced to round numbers. This will now be done as follows :—

	Increase.	Decrease.
	Rs.	Rs.
Original Works—		
Military	...	750
Civil Buildings	78	...
Communications	13,050	...
Repairs—		
Military	...	350
Communications	...	550
Establishment	...	11,000
Tools and Plant	...	478
Total	13,128	13,128

12. The small item, Rs. 550, provided in the Budget-Estimate for the purchase of land on account of Guaranteed Railways has been struck out ; any trifling expenditure which may have to be incurred on this account during 1870-71 can be met from the Ordinary Public Works grant, or may be regarded as a permissible excess over that grant if necessary. This disposes of the separate estimate for this item received with Officiating Secretary's letter No. 394—5640, dated 10th November last.

SUMMARY.

13. The following is an abstract of the Central Provinces Public Works Budget-Estimate for 1870-71, as modified by the foregoing orders :—

Budget Heads.	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
Ordinary.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military	6,08,000	38,000	6,46,000	60,000	...	...	7,06,000
Agricultural	...	50,000	50,000	..	..	...	50,000
Other Services—							
Civil Buildings	95,000	18,000	1,13,000	34,000	..	...	1,47,000
Communications	7,79,000	27,000	8,06,000	2,17,000	...	...	10,23,000
Miscellaneous Public Improvement	...	...	...	10,000	...	...	10,000
Establishment	...	...	...	...	4,74,000	...	4,74,000
Tools and Plant	...	...	...	...	...	65,000	65,000
Total "Other Services"	8,74,000	45,000	9,19,000	2,61,000	4,74,000	65,000	17,19,000
Total Ordinary ...	14,82,000	1,33,000	16,15,000	3,21,000	4,74,000	65,000	24,75,000
Extraordinary.							
Agricultural	5,10,000	...	5,10,000	...	60,000	30,000	6,00,000
Total Ordinary and Extraordinary	19,92,000	1,33,000	21,25,000	3,21,000	5,34,000	95,000	30,75,000

14. In addition to the above, it is estimated that Rs. 16,000 will be spent by Public Works Officers from Local funds during the year 1870-71, as follows :—

	Rs.
Repairs, Miscellaneous Public Improvement ...	12,000
Establishment	4,000
Total ...	16,000

PUBLIC WORKS REVENUE.

15. The estimate of Public Works revenue for 1870-71 amounts to Rs. 14,540, against a Regular-Estimate of Rs. 52,500 for 1869-70. This remarkable difference appears in the estimate without a word of explanation. Seeing that the actual average receipts of the last 5 years have amounted to nearly Rs. 60,000 per annum, as per margin, the estimate for 1870-71 may, it is thought, be increased to Rs. 50,000, the amount for the current year, as follows :—

	Rs.
1864-65	73,470
1865-66	38,378
1866-67	52,225
1867-68	51,710
1868-69	83,100
	2,98,883
Average	59,776
or say per annum ...	60,000

	Rs.
Tolls, fines and refunds	34,700
Rents of buildings	12,300
Sales of produce	2,000
Sales of buildings, and tools and plant	1,000
Total ...	50,000

But a report should be furnished on the subject by the Local Administration.

FORT WILLIAM, *February* 22, 1870.

R. STRACHEY, *Colonel, R. E.,*
Offg. Secy. to the Govt. of India.

BRITISH BURMAH BUDGET ORDERS, 1870-71.

In this Budget-Estimate the mistake has been made of including the grant from Local Funds to meet outlay on Establishment in the body of Part I of the estimate, nor has a comparison been made between the grants of the ensuing and current official year as prescribed by the rules.

2. The Budget-Estimate has been framed for a total grant of Rs. 18¼ lakhs, as sanctioned in Public Works Department Circular No. 104 of 1869, distributed as below with the following slight alterations which have been made to bring the appropriations for the different services to even figures :—

	Rs.	Rs.
Original Works, Communications, altered from	4,61,100	to 4,61,000
Establishment „ „ „	3,96,900	to 3,97,000

Heads of Service.	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military	2,40,000	24,000	2,64,000	86,000	...	...	3,50,000
Agricultural	1,36,000	22,000	1,58,000	28,000	...	...	1,86,000
Other Services—							
Civil Buildings	1,89,000	19,000	2,08,000	39,000	...	...	2,47,000
Communications	4,48,000	13,000	4,61,000	1,37,000	...	...	5,98,000
Miscellaneous Public Improvement	24,000	4,000	28,000	5,000	...	...	33,000
Establishment	...	...	...	...	3,97,000	...	3,97,000
Tools and Plant	...	...	...	...	...	15,000	15,000
	6,61,000	36,000	6,97,000	1,81,000	3,97,000	15,000	12,90,000
Total ...	10,37,000	82,000	11,20,000	2,96,000	3,97,000	15,000	18,25,000
Add grant-in-aid from Local Funds—							
Establishment							58,200
Grand Total							18,83,200

3. This distribution of the grant is approved, subject to the following remarks, and on the understanding that no expenditure will be incurred on works for which estimates have not been sanctioned by competent authority.

4. Of the several works entered in the Budget-Estimate, the estimates for which are noted as having been submitted, the following have since been sanctioned by the Government of India :—

Item No.	Works.	Amount of estimate.	Computed outlay to end of 1869-70.	Grant, 1870-71.	Reference to sanction.
		Rs.	Rs.	Rs.	
1	Fortification of Arsenal position, Rangoon	2,67,012	1,94,000	63,000	Register No. 128 M of 1868-69, and No. 96 B M of 1869-70.
8	Ordnance Magazine at Rangoon	41,469	5,000	25,000	Register No. 100 B M. of 1869-70.
13	Protestant Church, Tounghoo	10,262	...	10,000	
29	Jail at Tounghoo	1,58,399	1,49,000	9,000	Register No. 71 C of 1869-70.
37 & 41	Bridges on Rangoon and Prome Road ...	4,40,076	18,000	1,10,000	„ „ 82 C of „
40	4th Section of ditto	1,81,296	1,24,645	36,100	„ „ 76 C of „
46	Tantabeen Road	97,561	77,191	20,000	„ „ 77 C of „

5. The estimates for the following works are still under the consideration of the Government of India:—

		Rs.
Item No.	5.—Hospital for European Infantry, Tounghoo	1,98,396
„ „	33.—Zaloon Embankment	91,179
„ „	38.—Bridge over the Wetpouk Choung ... ... held over pending receipt of information called for in Public Works Department letter No. 724 B—C, dated 4th December 1869.	30,465
„ „	47.—Sanitary Camp-road, Tounghoo ... ... held over pending receipt of information called for in Public Works Department letter No. 62 B—C, dated 28th January 1870.	62,286

6. Orders on Item 52, Accommodation at Elephant Point for Light House Inspector, have been given in Public Works Department letter No. 66 B—C, dated 31st January 1870. It is probable that the estimate, after the revision which has been ordered, will be within the power of sanction of the Chief Commissioner. As the project has been generally approved subject only to slight modifications, the entry may stand.

7. The appropriations made for Lock Hospitals at Rangoon, Akyab, Moulmein and Bassein (Items Nos. 17 to 20, Rs. 31,000) are allowed to stand, subject to sanction of estimates by competent authority. The grants for the following works are also allowed to stand, on the understanding that the revised estimates for them, which are said to be under preparation, are submitted as soon as possible :—

		Rs.
Item No.	4.—Hospital for Royal Artillery, Thayetmyo	44,499
„ „	7.—Quarter-guard and Cells for European Infantry, Tounghoo	48,143

8. The Governor General in Council observes that several of the entries in Part II are for new works not yet begun. Having in view the great importance of completing all works in progress before any thing fresh is undertaken, a consideration which is of more than usual weight at the present time, it is directed that none of the following items shall be commenced until the Government of India has been satisfied of their being really urgently required :—

		Rs.
Item No.	10.—Tanks for Commissariat and Artillery, Rangoon...	11,000
„ „	13.—Church at Tounghoo	10,000
„ Nos.	17 to 20.—Lock-hospitals	31,000
„ No.	21.—Church at Bassein	3,000
„ „	25.—Court-houses, Shoaygyeen	5,000
„ „	50.—Reclamation of swamp in rear of the town of Myanoung	8,000
„ „	51.—Protective embankment at Shoaygyeen ...	6,000
		74,000

Any sums rendered available by these works being deferred may be re-appropriated to the more pressing works actually begun, and now under construction.

9. It is noticed that the sum provided for Repairs, Military, amounts to Rs. 86,000, against Rs. 80,000 for the current year. In the provision for repairs, a sum of Rs. 22,500 is included for maintenance of Cantonment roads, with reference to which the attention of the Chief Commissioner should be drawn to Public Works Department Resolution No. 812 A, dated 17th September 1869, calling for proposals for fixing an annual grant for this purpose in accordance with the principles laid down in Chapter IX, Section iii, para. 9 of Code. It is requested that these proposals may be supplied as early as possible, with explanation as to the precise roads for the repairs of which the following Budget provision has been made under the head " Communications" :—

	Rs.
Rangoon	9,500
Tenasserim	2,500
Prome	6,000
Tounghoo ... ... „	4,500
	22,500

	Rs.
Akyab Imperial roads	2,000
Maulmein Suburban roads	7,000
Mergui and Tavoy Imperial roads	4,000
Rangoon Town and Suburbs Imperial roads	5,000

Items Nos. 48 and 49 of Part II also seem questionable, being for roads in Rangoon Town.

10. The provision for Establishment, excluding that for Port Blair, has been reduced from Rs. 4,21,000 in 1869-70, to Rs. 3,96,900 in 1870-71. The Governor General in Council, while cordially recognizing the efforts that have been made in British Burmah to reduce promptly the cost of Establishment, notices that the charge on this account against Imperial funds still amounts to about 22 per cent. of the allotment. The Government of India will await the report on the subject promised by the Chief Engineer, but meanwhile every practicable reduction should be made. The cost of the Office of Account would appear susceptible of reduction. Seven Accountants have been provided for, but as there are only nine Divisions in the Province, the established proportion is only six, and the Office should be reduced accordingly. Eight Clerks seem somewhat excessive. Moreover, a provision of Rs. 1,500 has been made for temporary establishment, which, since four Burmese Accountants are under training in the Office, appears unnecessary, and is therefore disallowed.

11. In paras. 27 and 28 of the letter transmitting the Budget-Estimate, a proposal is made to debit Local Funds on account of Establishment charges with the actual percentage of the cost of establishment with reference to the actual outlay incurred. This proposal appears proper, but before sanction is accorded to it, information is desired of the probable amount that will be debited to Local Funds by the arrangement.

12. With reference to the 10th para. of the transmitting letter of the Budget-Estimate, explanation should be furnished of the meaning attached to the remark, that the construction of hospital accommodation for a whole Regiment of European Infantry at Thayetmyo has been forced on the Local Administration. The report promised regarding hospital accommodation at Tounghoo will be awaited.

PUBLIC WORKS REVENUE.

13. The estimate for 1870-71 amounts to Rs. 38,500.

FORT WILLIAM; *February* 15, 1870.

R. STRACHEY, *Colonel, R. E.*, *Offg. Secy. to the Govt. of India.*

OUDH BUDGET ORDERS, 1870-71.

This Estimate is not altogether in proper form. The grants-in-aid from Local Funds have been shown in the body of Part I of the Budget-Estimate; they should have been shown only in the memorandum at foot of the estimate. Also the numbers of the different items have not been repeated at the right hand side of Part II of the estimate, as required by Standing Order No. 7 of 1867.

2. The estimate provides for an expenditure of Rs. 30 lakhs from Imperial Funds, being the grant originally assigned for the purpose, but as the grant has since been reduced* to Rs. 28¾ lakhs, it is necessary to modify the Budget-Estimate accordingly. In this view, the following reductions are made as suggested by the Chief Commissioner :—

* Public Works Department Circular No. 104 of 1869.

ORIGINAL WORKS.

MILITARY.

	Rs.	Rs.
Item No. 5.—Barracks for married men, European Infantry, Fyzabad. Grant reduced from Rs. 50,000 to Rs. 30,000	20,000	
„ „ 6.—Barracks for married men, Royal Artillery, Fyzabad. Grant reduced from Rs. 49,000 to Rs. 24,000	25,000	
„ „ 10.—Grant for Minor Works reduced from Rs. 43,000 to Rs. 38,000	5,000	
		50,000

CIVIL BUILDINGS.

Item No. 13.—School-house at Suffeepoor, disallowed ...	3,000	
„ „ 19.— „ at Misrick, „ ...	5,000	
„ *Nos.* 24—26.—Police Buildings, Roy Bareilly, disallowed	10,000	
„ *No.* 33.—Jail at Pertabgurh. Grant reduced from Rs. 20,000 to Rs. 14,000	6,000	
„ „ 34.—Jail at Sultanpoor. The Chief Commissioner has recommended that Rs. 6,000 out of Rs. 20,000 should be reduced, but as there is no estimate for the work, the entire provision is disallowed ...	20,000	
		44,000

COMMUNICATIONS.

Item No. 46.—Road from Byramghât to Baraich. Grant reduced from Rs. 1,00,000 to Rs. 69,000		31,000
Total reductions		1,25,000

3. In addition to these reductions, it is also necessary to provide from the Ordinary grant for that portion of the estimated charges for Direction and Account debited in the Oudh Budget-Estimate to the grant for Extraordinary Works. The sum roughly estimated for Establishment for Oudh in Public Works Department Circular No. 96 of 1869 was Rs. 2,55,000. The total in the estimate submitted is Rs. 3,04,644, of which Rs. 6,000 is debitable to Local Funds, and Rs. 43,644 to the Loan grant for Irrigation Works in part payment of the charges under "Direction" and "Account" Ordinary. This latter debit appears open to objection. There must be a Chief Engineer and Controller for the Province in any case, and it will not be well to borrow money to pay for their salaries. The charge must therefore be arranged for otherwise. This will be done by an absolute reduction of Rs. 17,644 as per margin in the total estimate for

	Rs.
Temporary Office establishment for Chief Engineer reduced from Rs. 1,800 to Rs. 800	1,000
Contingencies for Chief Engineer reduced from Rs. 6,000 to Rs. 4,000	2,000
Sub-divisional allowances for 15 Sub-divisions, whereas there are only 12 Upper Subordinates. Provision for three Sub-divisions disallowed	1,080
Temporary establishment and allowances for promotion under head Construction ...	8,600
Office contingencies under ditto. reduced from Rs. 6,000 to Rs 4,000	2,000
Temporary establishment and allowance for promotion under head Accounts	2,704
Contingencies under ditto reduced from Rs. 4,500 to Rs. 4,240	260
	17,644

establishment, the balance, Rs. 26,000 being met by disallowing the provision under Original Works, Civil Buildings, for constructing Havaluts at Lucknow and Sultanpoor (Items Nos. 36 and 38) for which no estimates have been sanctioned as yet.

4. Under the above orders, the grant for Establishment, Extraordinary, will be reduced by Rs. 43,644. A further reduction of Rs. 33,868 will also be made on account of the items as per margin, which should properly be debited to works. The aggregate of the sums thus reduced will be added to the grant for Original Works, Agricultural, which will thus be increased from Rs. 9,76,488 to Rs. 10,54,000. In this is included, however, an item (No. 45) of Rs. 97,649 for Minor Works which is not admissible. The grant for the Sardah Canal must be regarded as a whole, and Minor Works cannot be sanctioned separately by the Chief Commissioner.

Petty Establishment.

	Rs. per mensem.
Artificers, Blacksmiths, &c. ...	750
Duffadars, Peons, Classees, &c....	2,074
	2,824 × 12 = 33,868

5. These several reductions will leave the Oudh Public Works Budget-Estimate for 1870-71 as follows :—

Heads.	Original Works.			Repairs.	Establishment.	Tools and Plant.	State Outlay on Guaranteed Railways.	Total.
	Major.	Minor.	Total.					
Ordinary.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military ...	2,95,000	38,000	3,33,000	1,17,000	...	...	...	4,50,000
Other Services—

Add outlay from Local Funds and Contributions—

Original Works—	Rs.	
Civil Buildings	50,000	
Communications	58,250	
	1,08,250	
Establishment	6,000	
		1,14,250
		30,80,150

6. From the remark made against Item No. 33 of the Budget-Estimate, it would appear that expenditure has been incurred in the collection of materials in the District Jail at Pertabgurh. The work is said to have been sanctioned by the Home Department, but that is no authority for incurring expenditure.

7. The grants for the following works are allowed to stand only on the condition that estimates are sanctioned for them by competent authority before outlay is incurred :—

	Rs.
Item No. 1.—Renewing roofs of Military Buildings, Lucknow ...	25,000
„ „ 2.—Houses for servants, Royal Artillery, „ ...	5,500
„ „ 3.—Cook-houses, Lucknow	14,500
„ „ 12.—Additions to distilleries, Oudh	10,000
Items 32 & 33.—District Jails at Roy-Bareilly and Pertabgurh ...	54,000
Item No. 35.—Airing-yards to solitary cells, Fyzabad	5,000
„ „ 52.—Arching Charbagh Bridge, Lucknow	4,500

8. The provision for Repairs, Communications, from Imperial Funds is in excess of the grant for the current year by Rs. 20,000. From what was recently said on this subject, the Governor General in Council was not prepared for this increase. It may however stand, pending issue of further orders.

9. In the estimate for Establishments, in which the distinction between Ordinary and Extraordinary has not been so clearly preserved as it might have been, provision has been made for consolidated rates of pay which is allowed to stand, but information should be furnished as to the sanction under which the petty establishment is entertained, and the necessity for keeping it at its present strength.

PUBLIC WORKS REVENUE.

10. The estimate submitted amounts to Rs. 5,950. No explanation has been given for the large falling-off from the receipts of previous years, and in the absence of such, the estimate is increased to Rs. 13,000, but a report on the subject is requested.

	Rs.
1864-65	13,660
1865-66	11,448
1866-67 (11 months) ...	7,272
1867-68	18,414
1868-69	14,892

Fort William ;

R. STRACHEY, *Colonel, R. E.,*
Offg. Secy. to the Govt. of India.

HYDERABAD BUDGET ORDERS, 1870-71.

IMPERIAL BUDGET-ESTIMATE.

The amount assigned to Hyderabad for expenditure on Imperial Public Works, Ordinary, during 1870-71 is 3½ lakhs, which the Local Administration propose to appropriate as follows :—

Budget Heads.	1870-71.	1869-70.
	Rs.	Rs.
Military	2,64,000	5,50,000
Agricultural	.....	.....
Other Services—		
Civil Buildings	17,000	37,000
Communications	.....	20,900
Miscellaneous Public Improvement	...	.. ...
Establishment	61,700	78,100
Tools and Plant	7,300	14,000
Total Other Services...	86,000	1,50,000
Total Grant ...	3,50,000	7,00,000

Buildings and Roads.

2. *Item No.* 6.—*Water-supply, 1st Regiment, Trimulgherry. Grant Rs.* 12,000.—The estimate for this work has been sanctioned by the Government of India only to the extent of completing the well. Any excess of the allotment beyond what is necessary for this purpose should be transferred to Item No. 9, Cavalry Barracks, which are much wanted, and should be pushed on to completion as rapidly as possible. The grant for these barracks will be supplemented by Rs. 7,000, *vide* para. 14.

	Rs.
Reduction of Establishment	6,700
„ Tools and Plan t.. ...	300
Total ...	7,000

3. *Item No.* 15.—*Telegraph Office at Chudderghât. Grant Rs.* 7,000.—The estimate for this work has not been sanctioned, but under the explanation contained in para. 2 of the letter accompanying the Budget-Estimate, the amount may stand.

Establishment.

4. *Military pay of Superintending Engineer at Rs.* 434 *per mensem* = *Rs.* 5,208.—From this must be deducted Rs. 1,680, being the net Military pay of the Superintending Engineer at Rs. 140 per mensem, drawn in the Military Department. The estimate has been corrected accordingly.

5. *Travelling and personal allowances, Rs.* 2,500.—It is not understood what personal allowances are alluded to, but as the Superintending Engineer's staff salary has been under-estimated by Rs. 100 per month, or Rs. 1,200 for the year, the deficiency may be supplied from this item, which is passed on this understanding.

6. *Office expenses and contingencies, Rs.* 4,020.—This amount is allowed to stand, subject to explanation as to the necessity for the provision of so large a sum under this head, the amount being considerably in excess of what is found to be sufficient for other similar Offices.

7. *Probable increase due to consolidation of salaries, Rs.* 1,800.—This item is inadmissible, being unauthorized, and is accordingly struck out. The amount with other reductions under this head will be added to Part II, Item 9, as shown further on, *vide* para. 14.

8. *Reduction on account of Assigned Districts, Rs.* 18,546.—This item is taken at ⅓rds of the total estimated charges under "Direction," instead of ⅔rds, which is the proper proportion, the grants for the Imperial and Assigned Districts, excluding Railways, being 3½ and 7 lakhs, respectively.

9. With these corrections the proportion of the Establishment charges debitable to the Imperial revenues under "Direction" will stand in even numbers at Rs. 9,000, as follows :—

	Rs.	Rs.
Total, as per original estimate		30,916
Deduct net Military pay of Superintending Engineer...	1,680	...
„ increase for consolidation of salaries	1,800	
		3,480
		27,436
Deduct ⅔rds chargeable to the Assigned Districts ...		18,291
One-third chargeable to Imperial revenue		9,145
Which is passed in even numbers for		9,000

Construction.

10. *Contingencies, Rs.* 1,400.—This seems high for one Division, and should, if possible, be reduced.

11. *Probable increase due to consolidation of salaries, Rs.* 1,800.—This is struck out for the reason already stated in the case of the similar item under "Direction." The total amount under *Construction* will thus be reduced to Rs. 42,000.

Accounts.

12. The total charges under this head amount to Rs. 21,200, thus divided :—

	Rs.
Imperial	5,300
Assigned Districts	5,300
Railways	10,600
	21,200

But the proper proportion according to the total grants under each of these heads should be as follows :—

	Rs.
Imperial	4,000
Assigned Districts	8,000
Railways	9,200
	21,200

13. *Contingencies, Rs.* 2,028.—The necessity for this apparently high charge should be explained.

14. The total amount chargeable to the ordinary Imperial grant on account of Establishments, as above modified, will be Rs. 55,000 in even numbers as follows :—

	Rs.
Direction	9,000
Construction	42,000
Accounts	4,000
Total ...	55,000

The difference Rs. 6,700 between this amount and that (Rs. 61,700) provided for in the original estimate, as also Rs. 300 from the grant for Tools and Plant will be added to Item No. 9, Part II, Cavalry Barracks, making the grant for this work Rs. 53,000, and the total grant for Original Works, Military, Rs. 2,22,000.

SUMMARY.

15. The following is an abstract of the Imperial Public Works Budget-Estimate of the Hyderabad Administration as now passed :—

Budget Heads.	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military	2,00,000	22,000	2,22,000	49,000	...	...	2,71,000
Other Services :—							
Civil Buildings	9,000	3,000	12,000	5,000	...	...	17,000
Establishment	...	...	...	...	55,000	...	55,000
Tools and Plant	...	...	...	...	...	7,000	7,000
Total Other Services ...	9,000	3,000	12,000	5,000	55,000	7,000	79,000
Grand Total ...	2,09,000	25,000	2,34,000	54,000	55,000	7,000	3,50,000

PUBLIC WORKS REVENUE.

	Rs.
Tolls, dues, &c.	400
Rents of buildings	25,000
Sales of produce	200
Sales of buildings	100
Total ...	25,700

16. The anticipated receipts of 1870-71 amount to Rs. 25,700 in even numbers as per margin, against Rs. 20,700 for the current year. This estimate is accepted.

BUDGET-ESTIMATE OF THE ASSIGNED DISTRICTS (BERARS).

17. The amount allowed for expenditure on Ordinary Public Works in the Assigned Districts for 1870-71 is 7 lakhs, which is distributed in the Budget-Estimate as follows :—

Budget Heads.	1870-71.	1869-70.
	Rs.	Rs.
Military	56,700	35,000
Agricultural	9,210	10,000
Other Services—		
Civil Buildings	2,05,890	3,05,000
Communications	3,00,800	2,83,000
Miscellaneous Public Improvement	.....	4,000
Establishment	1,19,400	1,03,000
Tools and Plant	8,000	10,000
Total Other Services	6,34,090	7,05,000
Grand Total ...	7,00,000	7,50,000

BUILDINGS AND ROADS.

18. *Item No.* 8.—*Water-supply for the Cantonment at Aurungabad, Rs.* 6,000.—The estimate for this project has not yet been put in hand, but as it appears from para. 19 of the letter forwarding the Budget-Estimate that the work is very urgently required, the amount may stand on condition that the estimate will be prepared without any unnecessary delay.

19. *Item No.* 48.—*Yeotmahal and Damungaon Road, Rs.* 10,000.—The estimate for this work is not yet ready, and as there is apparently plenty of work already on hand from the grant available, the item is struck out. These orders leave the amount available for any sanctioned work under "Communications" to which the Resident may think proper to apply it.

20. The other works included in this part of the Budget, for which estimates have not yet been duly sanctioned, are allowed to stand under the explanation given in para. 2 of the covering letter, but it is particularly requested that no unavoidable delay may be permitted to occur in the preparation and submission of the estimates for these works.

ESTABLISHMENT.

DIRECTION.

21. There is an error of Rs. 1,000 in this part of the Budget. The amount entered in the abstract at page 16 under "Direction" is Rs. 22,300 instead of Rs. 21,300 as per page 14. The difference, Rs. 1,000, which has been caused apparently by the amount chargeable to Local funds having been included twice, will be corrected in the re-arrangement of the establishment charges as per these orders.

22. The amount chargeable to the Assigned Districts on account of "Direction" will thus stand at Rs. 20,000, as per margin, the total estimated charges for Establishment to be defrayed from the revenues of these Districts being Rs. 1,21,000 as shown below :—

	Rs.
Two-thirds of total charge for "Direction," as per para. 8, say	18,300
Other items, excluding Rs. 1,000 chargeable to Local funds	1,700
Total ...	20,000

	Rs.
Direction	20,000
Construction	93,000
Accounts, *vide para.* 12	8,000
Total ...	1,21,000

23. The difference between this amount and that entered in the original Estimate, is provided for as follows :—

	Increase to reduce amounts to even numbers.	Decrease to reduce amounts to even numbers.
	Rs.	Rs.
Military	300	...
Agricultural	...	210
Civil Buildings	110	...
Communications	...	800
Establishment	1,600	...
Tools and Plant	...	1,000
Total	2,010	2,010

SUMMARY.

24. The distribution of the Ordinary Public Works grant for the Assigned Districts, as modified by the foregoing orders, will be as follows:—

BUDGET HEADS.	ORIGINAL WORKS.			REPAIRS.	ESTABLISHMENT.	TOOLS AND PLANT.	TOTAL.
	Major.	Minor.	Total.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
MILITARY	36,000	6,000	42,000	15,000	...	...	57,000
AGRICULTURAL	...	9,000	9,000	...	...	...	9,000
OTHER SERVICES:—							
Civil Buildings ...	1,76,000	20,000	1,96,000	10,000	...	...	2,06,000
Communications ...	2,34,000	24,000	2,58,000	42,000	...	...	3,00,000
Establishment ...	...	...	...	...	1,21,000	...	1,21,000
Tools and Plant ...	...	...	...	...	...	7,000	7,000
Total Other Services ...	4,10,000	44,000	4,54,000	52,000	1,21,000	7,000	6,34,000
GRAND TOTAL ...	4,46,000	59,000	5,05,000	67,000	1,21,000	7,000	7,00,000

OUTLAY FROM LOCAL FUNDS.

25. In addition to the above, the following expenditure will be incurred from Local Funds by Public Works Officers :—

	Rs.
Original Works.	
Civil Buildings	5,000
Communications	5,000
Miscellaneous Public Improvements	14,100
Establishment	1,000
Total ...	25,100

HYDERABAD RAILWAY.

26. The amount passed under this head, as per separate orders, is Rs. 5 lakhs, as follows :—

	Rs.
Establishment	96,000
Construction of Line...	4,04,000
	5,00,000

KHAMGAON AND OOMRAWUTTEE LINES.

27. The amount passed under this head for expenditure during 1870-71, *vide* separate Orders, is Rs. 2¾ lakhs, as follows :—

	Rs.
Capital.—Oomrawuttee Branch Railway	2,50,000
Revenue.—Khamgaon Branch Railway	25,000
	2,75,000

PUBLIC WORKS REVENUE.

28. The probable receipts under this head for 1870-71 will be Rs. 2,000 as per margin, against Rs. 1,600 for the current year. This is exclusive of Rs. 40,000 from Traffic Earnings of the Khamgaon Branch Railway.

	Rs.
Tolls, dues, &c.	450
Rents of buildings	850
Sales of produce...	100
Sales of buildings and tools and plant ...	600
Total ...	2,000

FORT WILLIAM,
February 24, 1870.

R. STRACHEY, *Colonel, R. E.,*
Offg. Secy. to the Govt. of India.

RAJPOOTANA BUDGET ORDERS, 1870-71.

The Rajpootana Budget-Estimate for 1870-71 provides for an expenditure of Rs. 9,20,000 from Imperial funds, being the grant originally assigned for the purpose. But as the allotment has since been reduced* to Rs. 8,50,000, the Budget-Estimate has to be altered accordingly. In this view the following items are disallowed :—

* Public Works Department Circular No. 104 of 1869.

ORIGINAL WORKS.

MILITARY.

Item 5. *Hospital at Tarraghur.*—By orders issued in Public Works Department letter No. 642 M, dated 8th July 1869, this work will not be required ... ... Rs. 10,000

CIVIL BUILDINGS.

Item 10. *College at Ajmere.*—The accounts show an expenditure of Rs. 24,051 to have been incurred on this work to end of 1868-69, against an estimate of Rs. 35,934 sanctioned by the Government, North-Western Provinces. In the Rajpootana Progress Report for 1868-69, it is reported that the foundation, plinth, and about one-fourth of the superstructure of the work, has been completed. No grant appears to have been sanctioned for the work for the current year, and until information is furnished of the total probable cost of the building, for which a revised estimate is said to be awaited, the provision for next year is disallowed 10,000

AGRICULTURAL.

Item 14. *Balad Reservoir and Canal.*—No estimate. If the project is matured during the year, and approved of by the Government of India, a re-appropriation of Budget-credits may be proposed for it 50,000

Total reductions ... 70,000

2. These reductions leave the Rajpootana grant for 1870-71 as follows :—

Heads of Service.	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military	3,30,000	30,000	3,60,000	30,000	...	...	3,90,000
Agricultural, Ordinary	...	...	...	1,00,000	...	...	1,00,000
Other Services—							
Civil Buildings ...	20,000	5,000	25,000	5,000	...	...	30,000
Communications ...	1,65,000	15,000	1,80,000	20,000	...	...	2,00,000
Establishment ...	...	...	...	...	1,25,000	...	1,25,000
Tools and Plant ..	...	...	...	...	...	5,000	5,000
	1,85,000	20,000	2,05,000	25,000	1,25,000	5,000	3,60,000
Grand Total ...	5,15,000	50,000	5,65,000	1,55,000	1,25,000	5,000	8,50,000

	Rs.	
Add grant from Foreign Funds—		
Original Works, Communications	2,00,900	
Establishment	32,900	
		2,32,900
Add grant from Local Funds—		
Original Works, Communications	5,000	
Repairs, for which details have to be given	5,000	
Establishment	1,000	
		11,000
Grand Total ...		10,93,900

3. Of the works entered in the Budget-Estimate, the following call for remark :—

I. *Item* 3.—*Stables for Royal Artillery, Nusseerabad. No estimate. Grant for* 1870-71, *Rs.* 3,000, *and computed outlay to end of* 1869-70, *Rs.* 5,000.—This work appears to have been commenced without sanctioned estimate in violation of rule.

II. *Item* 12.—*Completion of Police Lines in Ajmere District. Amount of estimate, Rs.* 13,894. *Grant for* 1870-71, *Rs.* 10,000.—Allowed only on the understanding that the scheme has been approved of by the Government of India in the Home Department, *vide* Public Works Department Resolution No. 711A, dated 25th August 1869.

III. *Item* 15.—*Deolee link of road from Nusseerabad to Deolee.*—The amount of estimate for this road is entered at Rs. 1,88,169, but the sum sanctioned is only Rs. 1,69,408. The provision of Rs. 25,000 for next year is allowed, on the understanding that no more than the authorised cost shall fall on Imperial revenue, *vide* Public Works Department letter No. 729 B.—C., dated 8th December 1869, and letter from Agent, No. 3538 S, dated 27th December 1869.

Amount sanctioned in Public Works Department letter No. 598 B—C, dated 24th November 1869	Rs. 1,14,885
Ditto No. 729 B—C, dated 8th December 1869	54,523
	1,69,408

IV. *Items* 21 *and* 22.—*Srinuggur and Munglewas links of Ahmedabad and Agra Road.*—The amount of estimate is entered at Rs. 97,947 and Rs. 73,666, but the sum sanctioned is only Rs. 83,710* and Rs. 60,375,† respectively. The total expenditure on the work should be limited accordingly.

* Public Works Department letter No. 745 B—C, dated 16th December 1869.

† Public Works Department letter No. 55C, dated 27th January 1869 ... ... Rs. 42,080
Ditto ditto No. 340 C, dated 9th June 1869 18,295
60,375

V. *Items* 20 *and* 23.—*Marwar Sections of the Ahmedabad and Agra Road.*—No estimates have been submitted for these sections of road; although it is computed that on the first of them an expenditure of Rs. 95,000 will have been incurred up to end of 1869-70. The work appears to have been commenced as a famine relief work. Information should be furnished as to when the estimates will be rendered, meanwhile, expenditure on the second section is prohibited, while further outlay on the first section should be stopped, unless the work is required for employment of the distressed, in which case the matter should be reported for the orders of the Government of India.

VI. *Item* 24.—*Pokur Road, Rs.* 5,000.—The precise Local funds from which this grant is to be made should be stated. The funds required for the current year, were proposed to be taken‡ from the Imperial Budget grant, and if Local funds are available to meet the charge, the outlay on it during 1869-70 should apparently be met from them.

‡ *Vide* letter from Agent, No. 3297 S, dated 3rd December 1869.

VII. *Item* 25.—*Minor Works, Communications, Rs.* 15,000.—This provision appears to be excessive, and a portion of it should be applied to augment the grant for Major Works.

4. The estimate of Establishment amounts to Rs. 1,58,900, which it is proposed to charge as follows :—

	Rs.
Imperial funds	1,25,000
Local „	1,000
Foreign States	32,900
	1,58,900

The proposal to charge Foreign States with a proportion of the cost of establishment engaged on works, three-fourths of the cost of which is met by those States, appears to be proper¶, but information should be furnished of the precise Local Fund to which it is proposed to debit the sum of Rs. 1,000, and the reason for so doing. This sum, as also the sum of Rs. 32,900 debitable to Foreign States, should have been entered in the memorandum at foot of Part I of the Budget-Estimate under head Establishment.

¶ *Vide* Foreign Department Resolution No. 681, dated 16th May 1868.

PUBLIC WORKS REVENUE.

5. The estimate for 1870-71 amounts to Rs. 10,000.

Fort William;
Dated January 31, 1870.

R. STRACHEY, *Colonel, R. E.,*
Offg. Secy. to the Govt. of India.

CENTRAL INDIA BUDGET ORDERS, 1870-71.

The Central India Public Works Budget-Estimate for 1870-71 has been prepared for the grant of Rs. 20 lakhs assigned in Public Works Department Circular No. 104 of 1869, which has been distributed as follows :—

	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military	7,36,000	64,000	8,00,000	1,40,000	...	...	9,40,000
Other Services—							
Civil Buildings	29,000	4,000	33,000	17,000	...	...	50,000
Communications	2,86,000	19,500	3,05,500	2,80,500	...	...	5,86,000
Establishment	...	...	...	...	3,99,000	...	3,99,000
Tools and Plant	...	...	...	...	...	25,000	25,000

Total, Imperial ...	10,51,000	87,500	11,38,500	4,37,500	3,99,000	25,000	20,00,000
Add outlay from Local Funds and Contributions—							
Original Works—						Rs.	
Civil Buildings						20,000	
Communications						1,65,000	
						1,85,000	
Repairs—							
Communications						31,500	
							2,16,500
Grand Total							22,16,500

2. This distribution of the allotment is approved, but the provision of Rs. 30,000 from contributions from Scindiah and Oojein for the road from Dewas to Oojein (Item No. 55) is disallowed for want of a sanctioned estimate for the work. The Government of India cannot admit the propriety of passing expenditure for which no estimate has been sanctioned from the funds of Foreign States any more than British Funds. The amount should, if possible, be applied to the construction of some other road carried out from the funds of these States, or a further representation may be made when the estimate is completed.

3. Items Nos. 75 and 76 being for works not yet begun are also struck out, as with so long a list of works in progress it is not expedient to add to the number. The appropriations may be transferred to some other Item.

4. It is remarked that the grant has been distributed over a great number of works. Concentration of expenditure over fewer works would have been, it is thought, a preferable disposition of the sum available, and the point may advantageously be borne in mind.

5. No expenditure should be incurred on the Native Cavalry Hospital at Augur (Item No. 12, Rs. 15,000), pending receipt of orders from the Government of India on the general question, it being very likely that the standard plan of hospital for Native troops will be modified.

6. The provision made for repairs to staging bungalows appears to be high; also that of Rs. 8,000 for construction of dák bungalow at Indore (Item No. 83). The latter item cannot be now allowed, the work not having been put in hand, and the sum provided for it may be transferred to some other work.

	Rs.
Southern Division, Agra and Bombay Road ...	2,000
Northern „ „ „ „ ...	4,000
Indore Agency ...	1,500
Bhopal „ ...	500
Nowgong Division ...	500
Western Malwa Agency ...	500
Bundlekhund ...	500
Total ...	9,500

7. The reduction so promptly made in the charges for Establishment from Rs. 5,05,000 in 1869-70, to Rs. 3,99,000, is very satisfactory, but this sum still forms more than 18 per cent. on the total grant.

PUBLIC WORKS REVENUE.

8. The estimate submitted amounts to Rs. 30,000, while the receipts of 1867-68 were Rs. 56,012, and of 1868-69 Rs. 42,528. So considerable a falling off should be explained, meanwhile the estimate for next year will be taken at Rs. 40,000.

Fort William; *February* 15, 1870.

R. STRACHEY, *Colonel, R. E.,*
Offg. Secretary to the Govt. of India.

COORG BUDGET ORDERS, 1870-71.

The Coorg revised Public Works Budget-Estimate for 1870-71 has been prepared for a grant of Rupees one lakh, which has been distributed as follows :—

Heads of Service.	1870-71.					Reduced Grant, 1869-70.
	Original Works.			Repairs.	Total.	
	Major.	Minor.	Total.			
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Civil Buildings	10,000	3,000	13,000	2,000	15,000	33,500
Agricultural	...	...	...	5,000	5,000	...
Communications	8,800	1,000	9,800	44,200	54,000	55,200
Miscellaneous Public Improvement	...	1,300	1,300	...	1,300	...
	18,800	5,300	24,100	51,200	75,300	88,700
Establishment					23,700	35,300
Tools and Plant					1,000	1,000
Grand Total					1,00,000	1,25,000

2. A considerable reduction has been made in Establishment, but the charge still forms 23·7 per cent. of the total allotment, and might apparently be further reduced to Rs. 21,000 by dispensing with the services of the Storekeeper, Cashier, Draughtsman and two Clerks. The particular attention of the Chief Commissioner is drawn to this matter, and it is requested that the necessary tabular statement of the reduced establishment as finally determined on may be submitted for sanction.

3. The provision for Tools and Plant includes Rs. 100 for Office furniture. The expenditure on this account from 1865-66 to 1868-69 has amounted to over Rs. 2,000, and it appears time that the outlay should cease. The Chief Commissioner may usefully look into this point.

PUBLIC WORKS REVENUE.

4. The estimate is for Rs. 1,300.

Fort William,
February 15, 1870.

R. STRACHEY, *Colonel, R. E.,*
Offg. Secretary to the Govt. of India.

MYSORE BUDGET ORDERS, 1870-71.

The Mysore Public Works Budget-Estimate for 1870-71 has been prepared for the grant of Rs. 15 lakhs from Ordinary revenue sanctioned in Financial Department Resolution No. 531, dated 22nd January 1870. In addition to this amount, an appropriation of Rs. 3 lakhs has been made from the deposit surplus for expenditure on Agricultural Works, the total assignment for which head of service amounts to Rs. 5,15,800, distributed as follows :—

	Rs.
Original Works	2,65,800
Repairs	2,50,000
Total ...	5,15,800

2. It would thus appear that, of the appropriation from the deposit surplus, Rs. 34,200 is applied to the execution of repairs. But this fund can only be considered to be available for the construction of works of a kind which in British territory would be carried out by loan. Moreover, many of the works entered in the Budget-Estimate under the head Original Works, Agricultural, are such as should properly be carried out from Ordinary revenue. The appropriation from that fund is therefore limited to Rs. 1,25,000 as follows :—

	Rs.
Item No. 16.—Sriramadevara Anicut	10,000
„ 17.— „ Channels	20,000
„ 18.—Madapoor Anicut Channels ...	10,000
„ 20.—Marikanive Reservoir with Channels	70,000
„ 21.—Buildings for „	5,000
„ 22.—Kumlar Katte	10,000
Total ...	1,25,000

No expenditure should be incurred on the last five items until the estimates for them have been sanctioned by competent authority. If it can be shown that other Agricultural Works entered in the Budget may be constructed from the deposit surplus fund, the Governor General in Council will be quite prepared to make the necessary appropriation for the purpose, as well as for the charges on account of Establishment and Tools and Plant arising directly out of these works. Meanwhile, the outlay under these two heads must be provided for from the grant from Ordinary revenue.

3. To make up the difference of Rs. 1¾ lakhs between the appropriation in the Budget-Estimate from the deposit surplus fund and the amount actually allowed above, the following reductions are made :—

	Rs.
ORIGINAL WORKS.	
CIVIL BUILDINGS.	
Item 8.—Improvements to Cutchery at Shimoga ...	5,000
AGRICULTURAL.	
Grant for Minor Works reduced from Rs. 20,000 to Rs. 14,200	5,800
COMMUNICATIONS.	
Items 59 and 60.—Opening out new Hyderghur ghât and approach to ditto	25,000
Item 61.—Kalurghât to Kulur Katte	8,000
Item 63.—Aldur Basavankote Road	5,000
Items 64 and 65.—Travellers' bungalows and Mussafir Khanas in the Nagar and Ashtagram Divisions	20,000
Appropriation for Minor Works, reduced from Rs. 26,000 to Rs. 15,000	11,000
MISCELLANEOUS PUBLIC IMPROVEMENT.	
Items 66 and 67.—Drainage of town of Hassan and Shimoga, which should properly be met from Municipal and Local Funds	10,000
Total Original Works ...	89,800
REPAIRS.	
Repairs—Agricultural, reduced from Rs. 2,50,000 to Rs. 2,35,000 ; the average expenditure of the five years ending with 1868-69 has been only Rs. 1¾ lakhs per annum	15,000
Repairs—Communications, reduced from Rs. 3,40,000 to Rs. 3,20,000, the average expenditure of the five years ending with 1868-69 having been Rs. 3 lakhs per annum	20,000
Total Repairs ...	35,000
ESTABLISHMENT.	
Reduced from Rs. 5,20,200 to Rs. 4,70,000 ...	50,200
Total	1,75,000

4. The estimate for Establishments is extraordinarily high, being nearly one-third of the total expenditure, a rate unknown in any other part of India. It has to be observed that the scales of Establishment sanctioned are, with certain

exceptions, those sanctioned in each case at the express recommendation of the Chief Commissioner, and therefore the protest made in the forwarding letter as to their large total cost is not understood, especially as provision has been made for ten more temporary Sub-Overseers in addition to the sanctioned scale, and three Clerks for the Chief Engineer's Office, which is already organized on an expensive scale. These items, with the items noted in the margin, are disallowed in part of the reduction of Rs. 50,200 made in the estimate.

	Rs.
Three Clerks in Chief Engineer's Office	840
Sub-divisional allowances for 24 Upper Subordinates, corresponding with the number of Upper Subordinates sanctioned. Explanation should be furnished of the necessity for this ; meanwhile, provision for 8 Sub-divisions is disallowed	2,880
Temporary Lower Subordinates	3,000
Difference between pay of 3rd and 4th grade Accountant provided for Executive Engineers' Offices, which has not been sanctioned	1,340
Excess in item salary of Controller	2,800
2nd grade Accountant in Controller's Office ...	3,120
Excess charge of Rs. 100 per mensem for Clerks of Controller's Office	1,200
	15,180

5. The present organization of the Establishments in Mysore calls evidently for reform, especially the arrangement which seems to have been adopted for detaching European Subordinates all over the Province. In para. 16 of Public Works Department letter No. 143 E—I, dated 1st August 1868, the Chief Commissioner was invited to offer suggestions for the education of Natives of Mysore to fit them for Engineering duties, and the Government of India would be glad to receive these as early as possible.

6. Further, the expansion of Divisions without any increase of funds appears injudicious. Three new Irrigation Divisions have been created, but the eight old ones have been continued. It might surely be practicable for the Irrigation Officers to carry out the petty road works in their neighbourhood ; double establishments all over the Province need hardly be necessary. It will be desirable that this matter should receive the prompt attention of the Local Administration. Meanwhile no vacancies occurring in any branch of the Department there will be filled up for the present by the Government of India unless on the special application of the Chief Commissioner, and pending definite reductions, the Establishment charges for the year are reduced by ½ a lakh. This still leaves the charge at the exceptionally high figure of 26 per cent. on the grant, and the Governor General in Council hopes that further considerable reductions may be found possible by the Local Administration.

7. The appropriation of Rs. 17,000 (Item 46) for constructing a bridge at Sakkalespura is allowed to stand, on the condition that the revised estimate for the work is submitted to the Government of India before the commencement of 1870-71.

8. The following is an abstract of the Mysore Public Works Budget-Estimate for 1870-71 as modified by the foregoing orders :—

Heads of Service.	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
ORDINARY.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Civil Buildings	49,336	12,664	62,000	5,000	...	...	67,000
Agricultural	1,20,800	14,200	1,35,000	2,35,000	...	...	3,70,000
Communications	2,22,000	15,000	2,37,000	3,20,000	...	...	5,57,000
Miscellaneous Public Improvement	...	3,000	3,000	3,000		...	6,000
Establishment	...	...	...	...	4,70,000	...	4,70,000
Tools and Plant	...	...	...	..	...	30,000	30,000
TOTAL ...	3,92,136	44,864	4,37,000	5,63,000	4,70,000	30,000	15,00,000
SURPLUS DEPOSIT FUND.							
Agricultural	1,25,000	...	1,25,000	...	...	...	1,25,000
GRAND TOTAL ...	5,17,136	44,864	5,62,000	5,63,000	4,70,000	30,000	16,25,000

9. In addition to the above, a sum of Rs. 43,000 is entered for expenditure on Military Works and Repairs as detailed on the margin. It is explained that all works, whether Original or Repairs, for hutting the Mysore Force, or constructing stables, were formerly provided for out of yearly savings, but that it has been considered more regular to provide for the amount in the Public Works Budget-Estimate, and to credit the savings to Government. But the provision has been made in excess of the grant, and the question as to whether it can be passed will be referred to the Foreign and Financial Departments for disposal.

	Rs.
Stables and huts for Regiment of Mysore Horse, Shimoga	20,000
Huts for Regiment of Native Infantry, Shimoga	12,500
Repairs to huts for Regiment of Native Infantry, Shimoga	10,500
	43,000

PUBLIC WORKS REVENUE.

10. The estimate amounts to Rs. 13,900.

FORT WILLIAM,
February 25, 1870.

R. STRACHEY, *Colonel, R. E.,*
Offg. Secy. to the Govt. of India.

PORT BLAIR BUDGET ORDERS, 1870-71.

This Budget-Estimate has been prepared for a total expenditure of Rs. 1,20,552, instead of the grant named, Rs. 1,25,000, and contains some other mistakes. The grant from Local Funds has been included in the body of Part I of the estimate instead of being entered only in the memorandum at foot. The grants for heads of service as well as for the total are not for even numbers, while the numbers of the items in Part II are not continuous.

2. The appropriations are modified as follows :—

ORIGINAL WORKS.

MILITARY.

	Rs.
Budget provision	42,735
Deduct Item No. 7, Skittle-alley for European Infantry, Ross Island, which is not a necessity	2,600
	40,135
Add unappropriated grant available to meet expenditure on other works should they be required during the year ...	6,365
Total Military ...	46,500

CIVIL BUILDINGS.

Budget provision	44,727
Deduct Items Nos. 22 and 23 for improvements to Commissariat Office and tramway for Commissariat, Ross Island, for which no estimates have been sanctioned, and which are therefore disallowed. If estimates are approved hereafter, a re-appropriation of Budget credits can be proposed for the same	6,000
	38,727
Add unappropriated grant available to meet expenditure on other works that may be sanctioned during the year ...	1,273
Total Civil Buildings ...	40,000

ESTABLISHMENT.

Budget provision	21,590
Add charge for Settlement Overseers who, it is proposed, should take charge of Public Works within their range under the Executive Engineer, and whose pay should therefore be debited to the Public Works grant, a corresponding reduction having been made in the Budget-Estimate of the Civil Department	3,600
Add for difference of pay between Accountant, 2nd grade, appointed to Port Blair, and Accountant, 4th grade, for which provision has been made in the Budget-Estimate	1,560
Add to make the grant an even one	250
Total Establishment ...	27,000

3. Under these orders, the Public Works Budget grant for 1870-71 for Port Blair will be distributed as follows:—

	Original Works.			Repairs.	Establishment.	Tools and Plant.	Total.
	Major.	Minor.	Total.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military	43,000	3,500	46,500	3,500	...	...	50,000
Other Services—							
Civil Buildings	36,000	4,000	40,000	6,000	...	...	46,000
Establishment	...	...	...	...	27,000	...	27,000
Tools and Plant	...	...	...	...	...	2,000	2,000
	36,000	4,000	40,000	6,000	27,000	2,000	75,000
	79,000	7,500	86,500	9,500	27,000	2,000	1,25,000
Add grant from Local Funds—							
Original Works—							
Communications						1,200	
Miscellaneous Public Improvement						9,900	
						11,100	
Repairs—							
Miscellaneous Public Improvement						1,000	
							12,100
							1,37,100

4. It should be explained what Local Funds are referred to.

5. Of the works entered in the Budget-Estimate, the estimate for quarters for Settlement Officers (Item No. 11) does not appear to have been sanctioned as yet. This, as also the revised estimate for stone barracks on Viper Island (Item No. 69), should be submitted for the orders of the Government of India as soon as possible.

Fort William;
February 16, 1870.

R. STRACHEY, *Colonel, R. E.*,
Offg. Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY BUDGET ORDERS, 1870-71.

MADRAS RAILWAY BUDGET ORDERS.

Nos. 32—34 A—R, dated 31st January, 1870.

RESOLUTION,—By the Government of India, P. W. Dept.

Read—

Letter No. 3498, dated 2nd November 1869, from Secretary to Government of Madras, Public Works Department.

The estimate of State expenditure for 1870-71, amounting to Rs. 2,03,675, is increased to Rs. 2,04,700 on account of the additional establishment sanctioned in Financial Department Resolution No. 2282, dated 3rd November 1869; this estimate includes a sum of Rs. 1,08,500 for land for the Neilgherry Branch of the South-West Line, Madras Railway. As regards the outlay on this Branch, both from State funds and also from guaranteed Capital, the necessity for obtaining the sanction of the Government of India to complete estimates before work is commenced should not be overlooked, *vide* Public Works Department letter No. 1277 R, dated 2nd September 1869.

ESTIMATE OF ADVANCES ON CAPITAL ACCOUNT.

REGULAR-ESTIMATE, 1869-70.

2. The probable net advances on Construction account during 1869-70 are entered as amounting to Rs. 24,43,000, but it is considered that this may be reduced to Rs. 23 lakhs, as per margin, the net advances for the first six months of the year having been only Rs. 12 lakhs.

Railways.	Regular-Estimate as submitted.	Net advances for 1st-half of 1869-70.	Regular-Estimate as altered.
	Rs.	Rs.	Rs.
Madras { South-West Line ...	8,80,000	1,23,627	9,30,000
{ North-West Line ...	12,25,000	8,12,861	12,00,000
Great Southern of India ...	2,88,000	2,14,140	2,50,000
Total ...	24,43,000	12,09,298	23,00,000

BUDGET-ESTIMATE, 1870-71.

3. For the Madras Railway, South-West Line, the estimate of net advances amounts to Rs. 15,07,000. This is reduced to Rs. 9 lakhs as follows:—

	Rs.
1.—Works on Neilgherry Branch reduced from Rs. 9,09,915 to	7,00,000
2.—Provision for other works passed in full	5,00,000
3.—Provision of Rs. 6,68,000 for stores considered excessive and reduced to there being a large quantity of stores in hand which should be consumed as far as possible before additional stores are purchased.	5,00,000
4.—Provision of Rs. 3,55,000 for Establishment is considered large. The average capital expenditure on Establishment for the last six months known is under Rs. 9,000 per month. For 1870-71 a sum of should suffice.	1,50,000
Total ...	18,50,000
Less refunds	9,50,000
Net amount passed	9,00,000

4. It is noticed that the Budget-Estimate shows outlay to have been incurred on certain works which have not as yet been sanctioned. Explanation is requested on this point, and the Accountant General, Public Works Department, should be called upon to report whether the irregular outlay incurred was duly brought to notice.

5. The estimate for the North-West Line, Madras Railway, is passed for an even sum of Rs. 20 lakhs as per margin.

	Rs.
Gross advances	23,50,000
Less refunds	3,50,000
	20,00,000

6. The provision of Rs. 92,308 and Rs. 59,098 made in the estimate for minor works on portions of the South-Western and North-Western lines respectively open more than two years appears excessive, and it is hoped that the Government of Madras may be able to effect a reduction on this head.

7. The estimate for the Great Southern of India Railway is passed for:—

	Rs.
Gross advances	2,35,000
Less refunds	1,85,000
Net advances	50,000

ESTIMATE OF TRAFFIC EARNINGS.

REGULAR-ESTIMATE, 1869-70.

8. This estimate appears to be reliable on the whole, excepting that the working expenses of the South-West Line, and the receipts from the North-West Line, appear to have been somewhat over-estimated, while it is thought that perhaps sufficient provision may not have been made for the working expenses of the latter Line. For these reasons, the estimate will be altered as follows:—

Railways.	Gross Earnings.		Working Expenses.		Net Revenue.	
	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Madras S.-W. Line ...	46,00,000	46,00,000	21,62,000	21,00,000	24,38,000	25,00,000
Madras N.-W. Line ...	18,00,000	16,50,000	6,00,000	6,50,000	12,00,000	10,00,000
G. S. of India ...	8,00,000	8,00,000	4,00,000	4,00,000	4,00,000	4,00,000
Indian Tramway ...	55,000	55,000	45,000	45,000	10,000	10,000
	72,55,000	71,05,000	32,07,000	31,95,000	40,48,000	39,10,000

BUDGET-ESTIMATE, 1870-71.

9. This estimate may be altered as shown in the following table:—

Railways.	Gross Earnings.		Working Expenses.		Net Revenue.	
	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Madras S.-W. Line ...	47,00,000	47,00,000	21,15,000	21,00,000	25,85,000	26,00,000
Madras N.-W. „ ...	20,00,000	21,00,000	7,60,000	8,00,000	12,40,000	13,00,000
G. S. of India ...	9,00,000	8,50,000	4,50,000	4,25,000	4,50,000	4,25,000
Indian Tramway ...	55,000	55,000	43,000	43,000	12,000	12,000
Total ...	76,55,000	77,05,000	33,68,000	33,68,000	42,87,000	43,37,000

10. The increase made in the estimate for the North-West Line is to provide for a possible augmentation of receipts should the line be opened throughout by the end of the current year. The estimate for the Great Southern of India Railway is decreased, owing to its being considered unlikely that the revenue will improve to the extent provided for.

SUMMARY.

11. The following is an abstract of the Madras Railway Budget-Estimate for 1870-71 as modified by these orders, and as compared with the Regular and Budget-Estimates of the current year:—

		Budget-Estimate, 1870-71.	Regular-Estimate, 1869-70.	Budget-Estimate, 1869-70.
State Expenditure.		Rs.	Rs.	Rs.
Establishment		66,400	65,200	65,200
Purchase of land		1,38,300	20,000	39,000
		2,04,700	85,200	1,04,200
Advances on Construction Account.				
Madras Railway, S.-W. Line.	Gross advances	18,50,000	13,50,000	...
	Refunds	9,50,000	9,00,000	...
	Net advances	9,00,000	4,50,000	5,00,000

	Net revenue	4,25,000	4,00,000	4,00,000
Indian Tramway Company.	Gross earnings	55,000	55,000	48,000
	Working expenses	43,000	45,000	43,000
	Net revenue	12,000	10,000	5,000
Total ...	Gross earnings	77,05,000	71,05,000	76,48,000
	Working expenses	33,68,000	31,95,000	35,43,000
	Net revenue	43,37,000	39,10,000	41,05,000

ORDER.—Ordered, that this Resolution be communicated to the Government of Madras for information and guidance, and to the Financial Department for information.

Ordered also, that a copy be forwarded to the Accountant General, Public Works Department, for the purpose indicated in para. 4.

BOMBAY RAILWAY BUDGET ORDERS.

Nos. 85—6 A—R, dated 15th February, 1870.

RESOLUTION,—By the Government of India, P. W. Dept.

Read—

Letter from Secretary to Government of Bombay, Public Works Department, No. 2113, dated 9th November 1869.

STATE EXPENDITURE.

The Budget-Estimate of Rs. 1,95,370 for State outlay on Establishments for Guaranteed Railways during 1870-71 is reduced by Rs. 3,370 as per margin, and passed for an even sum of Rs. 1,92,000. In this amount is included an increased provision of Rs. 1,200 for Office contingencies for the Deputy Consulting Engineers, and Examiner of Railway Accounts, regarding which detailed explanation should have been furnished.

	Rs.
Excess provision of Rs. 5 per month made for Military pay and allowances of Consulting Engineer	60
Moiety of increase of Rs. 6,000 made in provision for travelling allowances, disallowed, as in 1870-71 the whole of the Great Indian Peninsula Railway will be open except about 60 miles for the first 6 or 8 months (to make even figures say) ...	3,310
	3,370

2. The estimate for land, amounting to Rs. 13,65,239, is reduced as follows :—

	Lakhs.
1st.—Reclamation on outer line of breakwater, Bombay, Baroda and Central India Railway. Disallowed, as it has yet to be determined on the receipt of estimates whether the approach by the outer line shall be adopted. It is gathered from the Budget-Estimate that the cost of the work will amount to at least Rs. 10 lakhs in addition to the sum of 25½ lakhs sanctioned, and in great part spent, for the inner line. Rs. 50,000 have been entered as the probable expenditure on the work up to end of 1869-70, but it is hoped this is a mistake, the work not having been sanctioned, and the special attention of the Bombay Government having been directed to the necessity for obtaining regular sanction before operations were begun	6
2nd.—Provision of Rs. 2,50,000 as a reserve appears excessive, and is reduced by	1½
The Government of India trust that all applications by the Railway Companies for additional land will be rigidly scrutinized before being complied with, and the outlay only incurred on regularly sanctioned estimates.	
These reductions aggregate	7½

and leave the amount of the estimate for land at Rs. 6,15,000 in even numbers, as follows :—

	Rs.
I.—Reclamation of Back Bay in-shore line	3,15,000

The estimates sanctioned for this purpose by the Government of India amount to Rs. 22,81,689,* but in the Budget this amount is increased to Rs. 25,40,000, the difference, Rs. 2,58,311, representing the amount of supplementary estimates sanctioned by the Government of Bombay, as also the value of rails and sleepers taken over from the Back Bay Company for sidings to the Cotton Green. As the amount involved in these cases is over Rs. 2 lakhs, the sanction of the Government of India is necessary to the increased cost, and this should be applied for in the usual manner.

	Rs.
* Reclamation, *vide* Public Works Department letter No. 848 R, dated 27th September 1867; and Resolution of Government of Bombay, No. 224, dated 5th February 1868...	19,29,194
Filling in unreclaimed ground north of Sonapoor Drain, *vide* Public Works Department letter No. 908R, dated 13th August 1868	3,52,495
	22,81,689

II.—Purchase of properties to give access to site for terminus at Colaba	2,00,000

Allowed to stand with the remark that no land should be taken up until a plan has been placed before the Government of India, showing the quantity required for the approach according as the inner or outer line is adopted (if there would be any difference); and until the probable cost in each case has been reported, confidentially if necessary.

III.—Reserve	1,00,000
Total	6,15,000

ADVANCES ON ACCOUNT OF GUARANTEED CAPITAL.

3. The Regular-Estimate for 1869-70, and the Budget-Estimate for 1870-71 are shown in the Table at the end of this Resolution.

4. The Consulting Engineer seems to be fully alive to the necessity of exercising control over Capital expenditure, and to be determined to enforce it to the full extent of his power, and the Governor General in Council agrees with the Government of Bombay in accepting unreservedly the several recommendations made by him. His Excellency in Council observes with much satisfaction the desire evinced by that Government and their Consulting Engineer to close old sanctions, to postpone as long as possible works of re-construction and the supply of any but really urgent wants, as well as to reduce establishments. It is suggested that no expenditure not urgently required should be incurred for Khundwa until it is settled what point is likely to be the junction of a line to Indore, should it be carried out. The estimates seem large.

5. The provision of Rs. 10,000 (Item 65) made for renewal of engines on the Bombay, Baroda and Central India Railway, may be admitted as a debit to Capital, on the understanding that they have been exclusively used on Construction, and that Revenue has not benefitted by them.

6. Since this estimate was sent forward, the construction of the Veramgaum and Wudwan Branches by the Bombay, Baroda and Central India Railway Company has been sanctioned by the Secretary of State. A provision of 10 lakhs has accordingly been made for the probable outlay on this project during 1870-71. Estimates should be sent forward for orders, as early as possible, showing the probable outlay on surveys and other preliminary operations, and it should be borne in mind that no expenditure on works of any kind can be permitted until estimates have been regularly sanctioned by competent authority.

Estimate of Traffic Earnings.

7. It is thought the Regular-Estimate for 1869-70 may be modified as follows, with reference to the actual receipts up to the last known date :—

Railways.	Gross Earnings.		Working Expenses.		Net Revenue.	
	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Great Indian Peninsula Railway	1,58,00,000	1,55,00,000	1,02,50,000	1,01,00,000	55,50,000	54,00,000
Bombay, Baroda and Central India Railway	48,00,000	46,00,000	36,00,000	35,00,000	12,00,000	11,00,000
Sindh Railway	9,50,000	7,50,000	10,00,000	8,50,000	— 50,000	—1,00,000
Indus Steam Flotilla	10,20,000	10,20,000	8,70,000	8,70,000	1,50,000	1,50,000
	2,25,70,000	2,18,70,000	1,57,20,000	1,53,20,000	68,50,000	65,50,000
Add value of stores transferred to debit of Capital from that of Revenue, Sindh Railway, as also sale proceeds of Chinnee Creek Bridge materials					13,50,000	13,50,000
Total ...					82,00,000	79,00,000

8. With respect to the traffic earnings for 1870-71, the estimate for the Sindh Railway appears to be fixed somewhat too high, and is modified as follows :—

	Rs.	Rs.
Gross earnings, altered from	... 11,00,000	to 8,00,000
Working expenses, altered from ...	... 9,00,000	to 7,00,000
Net Revenue	... 2,00,000	1,00,000

The figures for the remaining Railways are shown in the Table at the end of this Resolution.

9. The Budget-Estimate submitted shows the details of the working expenses under the several heads of service; the grants assigned to each head are intended to be the limits within which the several Departments concerned must confine their expenditure, or show good cause for additional allotments being made. This is the first time that this check over a kind of expenditure which has a most important influence on the financial condition of the country has been attempted in India, and the special acknowledgments of the Governor General in Council should be conveyed, through the Government of Bombay, to the Consulting Engineer for the very elaborate Budget-Estimate that has been submitted, and for his careful review of the requirements of the different Railways in the Bombay Presidency.

SUMMARY.

10. The following is an abstract of the Bombay Railway Budget-Estimate for 1870-71, as compared with the Budget and Regular-Estimate of 1869-70 :—

		Budget Estimate, 1870-71.	Regular Estimate, 1869-70.	Budget Estimate, 1869-70.
	State Expenditure on Guaranteed Railways.	Rs.	Rs.	Rs.
Ordinary	Establishment	1,92,000	1,69,200	1,69,000

A.—*Vide* letter from Secretary to Government of Bombay, No. 414 A, dated 11th December 1869.

Order.—Ordered, that this Resolution be communicated to the Government of Bombay for information and guidance, and to the Financial Department for information.

BENGAL RAILWAY BUDGET ORDERS.

Nos. 74—6 A—R, dated 11th February, 1870.

RESOLUTION,—By the Government of India, P. W. Dept.

Read—

Letter from Joint Secretary to Government, Bengal, Public Works Department, Railway Branch, No. 2528 G, dated 30th November 1869.

STATE OUTLAY ON GUARANTEED RAILWAYS.

The estimate of Rs. 92,880 for State outlay on Establishments for Guaranteed Railways is reduced by Rs. 2,916, as per margin, on account of the transfer of one of the Senior Deputy Consulting Engineers and his Establishment to the Government, North Western Provinces. This reduces the amount of the estimate to Rs. 89,964, which is passed for an even sum of Rs. 90,000, with the remark that the comparison made in the estimate with the grant of 1869-70 should have exhibited the amount sanctioned by the Government of India, and not the grant applied for by the Government of Bengal.

	Rs.
1 Clerk, mean salary	80
2 Peons	13
	93
	12
	1,116
Travelling allowances	1,200
Contingencies	600
	2,916

2. The estimate of Rs. 1,76,415 for purchase of land is passed for Rs. 50,000, *viz.*, Rs. 26,415 the estimated cost of lands ordered to be taken up, and the balance to meet demands of a minor nature as they arise. Rs. 1,50,000 has been proposed by the local authorities for land which it is thought may possibly be required during the year, but it is not desirable to appropriate funds for purposes of which the exact nature cannot be indicated. Every proposal for taking up fresh land should be most closely scrutinized, and it is time that the demands for lands on account of existing Railways in Bengal should cease.

OUTLAY ON STATE RAILWAYS.

3. The Regular-Estimate of expenditure on the Calcutta and South-Eastern Railway for 1869-70 amounts to Rs. 1,28,000, *viz.* :—

	Rs.
Extraordinary—	
Construction charges	13,000
Ordinary—	
Working expenses	1,15,000
	1,28,000

The provision for Working expenses appears however large, and may it is thought be reduced to Rs. 1,00,000. The probable earnings during 1869-70 are set down at Rs. 1,00,000, but Rs. 75,000 is considered a safer estimate.

4. For 1870-71, the estimated expenditure is Rs. 1,44,000, *viz.* :—

	Rs.
Extraordinary—	
Construction charges	34,000
Ordinary—	
Working expenses	1,10,000
	1,44,000

The time, however, appears to have arrived for stopping the debit of further expenditure to the Capital Account of this Line, and in this view the provision of Rs. 34,000 for Construction charges is disallowed. A sum of Rs. 50,000 is, however, allowed under Ordinary to meet outlay on Minor Works that may arise during the year, such as gate-keepers' lodges, (which should be limited to simple huts with tiled roof), putting the Calcutta yard in proper order, re-ballasting the line, &c. &c.

5. The provision for Working expenses is reduced from Rs. 1,10,000 to Rs. 75,000, and the estimate of traffic earnings is also reduced to a like amount. Under these orders, the revenue estimate of the Calcutta and South-Eastern Railway for 1870-71 will stand as follows :—

	Rs.
Improvements, additions, repairs and renewals	50,000
Working expenses	75,000
	1,25,000
Receipts	75,000
Deficit	50,000

Orders will be issued separately regarding the preparation of an estimate working up to the amount now passed.

ADVANCES ON GUARANTEED CAPITAL ACCOUNT.

6. The Regular-Estimate for 1869-70, submitted by the Local Government, may be accepted as detailed in the Table at the end of this Resolution for an even sum of Rs. 95½ lakhs, being Rs. 12½ lakhs in excess of the Budget allotment. The Government of Bengal should, however, bear in mind that the sanction of the Government of India should invariably be applied for in every case in which it is found necessary to make advances in excess of the Budget assignment.

7. The Budget-Estimate of advances during 1870-71 for the East Indian Railway, Main and Jubbulpoor Lines, amounting to Rs. 1,28,31,061, is reduced as follows :—

	Amount disallowed. Rs.
I.—Protection of Bridges.—It is probable that some outlay will be necessary on this account. But there must be a limit to the charge thrown on Capital, and the provision under this head is consequently disallowed. A special reference should be made to the Government of India in every case of importance, and the outlay on all small works of this kind that may be found necessary must be charged to Revenue ...	50,000
Carried over ...	50,000

		Rs.
	Brought forward ...	50,000
II.—Putting in permanent drains in cuttings, Beerbhoom and Rajmehal Districts. Estimate, Rs. 25,000. Expenditure this year Rs. 10,000. Proposed for 1870-71		10,000
All further expenditure on this head from Capital should be discouraged, and the provision is therefore disallowed. If found necessary, the outlay should be provided for from Revenue.		
III.—Construction of rooms for Native employés and Baboos, Bengal Division	Rs. 10,900	
Pucca huts for maintenance gangs, and rooms for Native employés, North Western Division	2,03,390	
against estimates aggregating Rs. 4,15,770, of which Rs. 1,19,790 is expected to be spent up to the end of this year. The Government of India cannot assent to any further outlay, except in completing buildings commenced, until the propriety of the expenditure has been carefully investigated and reported on by the Consulting Engineer. The Governor General in Council cannot admit the propriety of erecting permanent structures at such a heavy cost for Natives, especially in the North-Western Provinces, where mud walls and roofs are used by the whole community furnishing this class of servants. The same remark probably applies to the out-offices of dwellings for the European servants, and certainly to quarters for Natives on the Jubbulpoor Line, for which there is a demand of Rs. 36,200 against estimates aggregating Rs. 64,600, Rs. 23,200 having already been spent. The total provision for quarters for the Main and Jubbulpoor Lines is Rs. 2,50,490. This will be reduced by		2,00,000
IV.—Reserve to meet unforeseen requirements Rs. 5,96,238.* Rupees two lakhs is deemed sufficient for this purpose, and a sum of		3,96,238
is therefore disallowed.		
V.—New Passenger Station, Jubbulpoor.—Disallowed, as the expenditure already sanctioned and which should be incurred during the current official year provides all that seems required for the purpose		1,00,000
Carried over ...		**7,56,238**

*	Rs.
Bengal	96,767
North-Western Provinces	4,08,011
Jubbulpoor	91,460
Total ...	5,96,238

		Rs.
	Brought forward ...	7,56,238
VI.—Doubling Line between Buxar and Mogul Serai, Rs. 8,09,852.—Four lakhs should suffice for expenditure during 1870-71, and the balance ... ... is therefore disallowed.		4,09,852
VII.—Chord-Line, Assensole Changing Station, Rs. 7,68,000.—It is highly improbable that this amount will be required during 1870-71, and it is therefore reduced by		3,68,000
It is understood that the construction of this work does not come under the contract with Messrs. Brassey and Co.		
VIII.—Establishments, Rs. 16,35,000.—Of which, Rs. 1,75,000 is for the Jubbulpoor Line. This latter sum is large for the purpose, and is reduced to Rs. one lakh. That for the Main Line is reduced to Rs. 12 lakhs. Statements should be furnished without delay showing the details of the large establishments proposed to be paid from Capital		3,35,000
8. These reductions aggregate		18,69,090

and reduce the amount of the estimate of advances for 1870-71 as follows :—

	Main Line.	Jubbulpoor Extension.	Total.
Advances.	Rs.	Rs.	Rs.
Estimate submitted	1,21,07,801	7,23,760	1,28,31,061
Less reductions	16,22,480	A 2,46,660	18,69,090
Sum passed in even numbers ...	1,05,00,000	5,00,000	1,10,00,000
Refunds.			
As estimated	28,00,000	4,00,000	32,00,000
Add as per para. 20 of Consulting Engineer's Note for Sale proceeds of stores	1,00,000	...	1,00,000
Total refunds ...	29,00,000	4,00,000	33,00,000
Net advances ...	76,00,000	1,00,000	77,00,000

A.—*Viz.*, Part of item No.		Rs.
III ...		30,200
IV ...		41,460
V ...		1,00,000
VIII ...		75,000
Total ...		2,46,660

9. In the estimate as above passed, a sum of Rs. 90,000 is included in part of estimates amounting to Rs. 2,17,500 for ballasting ; this provision the Consulting Engineer states is not for renewal of ballast, but is merely to make up the ballast to the required section, which in some parts was not wholly done on first making the Line. Before allowing any portion of this expenditure to be debited to Capital Account, the Government of India desire to be furnished with a statement showing what has been the charge to Revenue for ballast on these parts of the line since the outlay on the present estimates commenced. Meanwhile, the item may stand *provisionally*.

10. The sums proposed to be taken for the Locomotive and Carriage and Wagon Departments are comparatively small, but the estimates are unsupported by details of any kind. Certain sanctions, some of very old date, are quoted, but there is no information as to the number of locomotives and vehicles erected and remaining to be erected on those sanctions, or of the number to be erected within the year on the proposed grants. Pending submission of full details on these points, the sums are only admitted provisionally.

11. The provision made in the estimate for Minor Works is passed on the understanding that all expenditure on works of this nature is contingent on the orders that may issue as to limits of cost of works that may be charged against Capital.

12. For the Eastern Bengal Railway the estimate of advances, amounting to ... ... Rs. 8,86,208 is reduced as follows :—

	Rs.	Rs.
Branch Line to Chitpoor, not sanctioned ...	20,000	
Works at Samnuggur	15,000	
Chief Accountant's Office	10,000	
		45,000
Leaving available in even numbers ...		8,41,000
Less refunds		3,50,000
Net advances ...		4,91,000

This includes Rs. 80,000 for Establishments, for which details should be furnished.

ESTIMATE OF TRAFFIC EARNINGS.

13. The Regular-Estimate of traffic earnings for the East Indian Railway shows the receipts of 1869-70 at Rs. 250 lakhs, and the working expenses at Rs. 107½ lakhs, but the former may be altered to Rs. 266 lakhs, corresponding in amount to the actual receipts of 1869, and the provision for working expenses increased to Rs. 111 lakhs. This leaves the net revenue at Rs. 155 lakhs, of which Rs. 8,13,000 should be reserved for payment of surplus profits of the half-year ending 30th June 1869, thus diminishing the sum to be credited to Government to Rs. 1,46,87,000. *(a)*

	Lakhs. Rs.
Actual charges, first-half	56½
Charges for second-half, 45 per cent. of earnings	54½
Total	111

(a)—Exclusive of Rs. 1,11,756, being loss in the working of the Jubbulpoor extension for the half-year ending 30th June 1869, to be recovered in England.

14. In the Regular-Estimate for the Jubbulpoor Line a provision of Rs. 10½ lakhs is made for working expenses. But this seems insufficient, and the amount is increased to Rs. 12¼ lakhs. The estimate of earnings is also altered from Rs. 10½ to 10¼ lakhs. This alteration gives an estimated loss of Rs. 2 lakhs in the working of this Line during 1869-70.

15. The receipts of the Eastern Bengal Railway during 1869-70 are estimated to amount to Rs. 23 lakhs, but the actual receipts during 1869 have only been Rs. 18,80,000, and the Regular-Estimate will be altered accordingly. The working expenses will be taken at Rs. 11,10,000 lakhs, instead of Rs. 11 lakhs, and consequently the net profits may be set down at Rs. 7,70,000 lakhs.

16. The estimate of traffic earnings during 1870-71 provides for a considerable increase, owing to the opening of the Goalundo Extension, and the through Line to Bombay. That estimate is modified as follows, with reference to the actual realizations of 1869 :—

	Gross Earnings.		Working Expenses.		Net Revenue.	
	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.	Estimate as submitted.	Estimate as altered.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
East Indian Railway, Main Line	2,65,00,000	2,70,00,000	1,19,25,000	1,12,00,000	1,45,75,000	1,58,00,000
Ditto, Jubbulpoor Line	12,50,000	15,00,000	11,25,000	10,00,000	1,25,000	5,00,000
Eastern Bengal Railway ...	30,00,000	25,00,000	13,00,000	13,00,000	17,00,000	12,00,000
Total ...	3,07,50,000	3,10,00,000	1,43,50,000	1,35,00,000	1,64,00,000	1,75,00,000
Less estimated moiety of surplus profits, East Indian Railway...						9,00,000
Net Revenue to be credited to Government						1,66,00,000

SUMMARY.

17. The following is an abstract of the Bengal Railway Budget-Estimate as now passed for 1870-71, compared with the Regular and Budget-Estimate of 1869-70 :—

	Budget-Estimate, 1870-71.	Regular-Estimate 1869-70.	Budget-Estimate, 1869-70.

N. W. P. RAILWAY BUDGET ORDERS.

Nos. 50—4 A—R, dated 3rd February, 1870.

RESOLUTION,—By the Government of India, P. W. Dept.

Read—

Letter from Secretary to Government, North Western Provinces, No. 316 R, dated 25th November 1869.

RESOLUTION.—The Budget-Estimate of the North Western Provinces for 1870-71, for purchase of land for Guaranteed Railways, amounting to 2,50,000 is reduced as follows :—

	Rs.	Rs.
1st.—Provision for land likely to be required for East Indian Railway ... ... Disallowed, as the Government of Bengal are not aware at present of any probable requirements. If any emergent demand arise, an additional grant may be applied for.	1,00,000	
2nd.—Provision for unforeseen requirements of the Delhi Railway, Rs. 20,000. Rupees 10,000 would appear to be sufficient for the purpose. Amount disallowed	10,000	
These reductions aggregate		1,10,000
Leaving the estimate at		1,40,000

This amount includes a provision of Rs. 1,30,000 for land for the Oudh and Rohilkhund Railway, and the whole sum is allowed on the understanding that the outlay will only be incurred on estimates sanctioned by competent authority.

2. In addition to the above, a sum of Rs. 14,000 as per margin is added to the estimate to provide for the salary, establishment, &c., of the Senior Deputy Consulting Engineer for Railways in Bengal, who has recently been placed under the direct orders of the Government, North Western Provinces, *vide* Public Works Department Resolution Nos. 1303—4 R, dated 4th September 1869.

	Rs.	Rs.
Staff pay of Deputy Consulting Engineer	700	
Military allowances as Captain of Engineers	294	
One Clerk	80	
Peons	13	
	1,087 × 12 =	13,044
Travelling Allowances and Contingencies ...	...	956
		14,000

3. Under these orders the grant for 1870-71 will be—

	Rs.
Establishment	14,000
Purchase of land	1,40,000
Total ...	1,54,000

ORDER.—Ordered, that this Resolution be communicated to the Governments and Administration noted in the margin, for information and guidance, and that a copy be forwarded to the Financial Department for information.

Governments of Bengal, North Western Provinces and Punjab, and Chief Commissioner, Oudh.

PUNJAB RAILWAY BUDGET ORDERS.

Nos. 64—5 A—R, dated 7th February, 1870.

RESOLUTION,—By the Government of India, P. W. Dept.

Read—

Letter from Joint Secretary to Government, Punjab, Public Works Department, Railway Branch, No. 1932, dated 10th November 1869.

STATE EXPENDITURE.

The Budget-Estimate of State expenditure on Establishments for Guaranteed Railways, amounting to Rs. 63,036, provides for the Consulting Engineer and his Deputy receiving a consolidated monthly pay of Rs. 2,000 and Rs. 950, respectively. This, however, has not been sanctioned as yet, and the excess provision of Rs. 4,740 is therefore disallowed. The provision of Rs. 2,196 for Military pay of the Consulting Engineer is also disallowed, as the Officer holding the appointment at present is only officiating, and in consequence it is improbable that he will be seconded. A provision of Rs. 300 is added for pay of an Examiner of Accounts, instead of the Accountant lately sanctioned, and with this addition, the estimate for Establishments will then stand in even numbers at Rs. 56,500.

	Rs.	Rs.
Amount provided in Estimate		35,400
Amount that should have been provided—		
Consulting Engineer.	Rs.	
Staff pay	1,000	
Military Allowances as 1st Class Lieutenant-Colonel	759	
Deputy Consulting Engineer.		
Staff pay	600	
Military Allowances as Lieutenant of Engineers	196	
	2,555 × 12 = 30,660	
Excess ...	4,740	

2. The estimate shows that the expenditure on Establishments during 1869-70 is likely to be in excess of the Budget grant by Rs. 7,390, of which, Rs. 1,300 is on account of contingencies. The probable expenditure during the current year should be again calculated with reference to the recent promotion of the Officiating Consulting Engineer to the rank of Lieutenant-Colonel, and application made to the Government of India for an additional grant to cover the probable excess, which should reach the Government of India by end of this month at latest.

ADVANCES ON GUARANTEED CAPITAL ACCOUNT.

3. The Regular-Estimate of advances during 1869-70, submitted by the Local Government, may be accepted as exhibited in the Table at the end of this Resolution.

4. The estimate of advances for the Punjab Railway during 1870-71, amounting to Rs. 10,69,000, is reduced as follows:—

	Rs.	Rs.
I.—Passenger Station, Mooltan, and Office accommodation at Lahore, disallowed	1,10,000	
II.—Workshops at Lahore reduced from Rs. 4,50,000 to Rs. 3,00,000	1,50,000	
III.—Provision for rolling-stock reduced from Rs. 1,14,000 to Rs. 50,000, with the remark that before the construction of more rolling-stock is allowed, the insufficiency of the existing stock should first be established	64,000	
IV.—Provision of Rs. 2,40,000 for stores and freight, and of Rs. 96,000 for Establishment debitable to Capital, seems excessive. The former is reduced to Rs. 1,50,000, and the latter to Rs. 60,000 ...	1,26,000	
Total		4,50,000
Leaving the net amount of the estimate at		**6,19,000**
That for refunds being		**4,00,000**
The net amount of advances will be passed for		**2,19,000**

5. The estimate for the Delhi Railway is passed for—

	Rs.
Gross advances	40,00,000
Refunds	4,00,000
Net advances	36,00,000

REVENUE ACCOUNT.

6. The Regular-Estimate of traffic earnings for 1869-70 for the Punjab Railway shows a loss of Rs. 50,000, but as the actual earnings of the year 1869 have amounted to Rs. 10,53,000, that amount will be entered in the Regular-Estimate. The working expenses may be assumed at Rs. 9,73,000, and the net profits at Rs. 80,000.

7. The Budget-Estimate for 1870-71 shows that the whole of the estimated earnings, amounting to Rs. 12 lakhs, are likely to be absorbed by the working expenses. This would be an extraordinarily unsatisfactory result, and the Government of India must express surprise that such an estimate should have been sent up by the Local Government without a word of comment, or any proposal for arriving at a better result. The case calls for immediate and vigorous action, in view to reduction of expense and development of traffic. Stations which do not pay should be closed, and trains which do not pay should be stopped, while the whole of the charges for establishment, from the Agent down to the lowest paid servant on the Line, should also be reviewed with special reference to the recent Circular, No. 40 R of 1869. This Review should be submitted to the Government of India by the 31st March; meanwhile, a provision of only 9 lakhs will be passed for working expenses, leaving 3 lakhs as net revenue. Even this may prove to be a sanguine estimate of the sum available in reduction of the charge for guaranteed interest, which is about £ 115,000.

8. For the Delhi Railway, the Regular-Estimate for 1869-70 shows a net revenue of Rs. 5½ lakhs. This, however, may be safely increased to Rs. 6 lakhs, *viz.* :—

	Rs.
Gross earnings	13,00,000
Working expenses	7,00,000
Net Revenue ...	6,00,000

9. For 1870-71 the figures are—

	Rs.
Gross earnings	22,00,000
Working expenses	15,00,000
Net Revenue ...	7,00,000

10. The gross earnings appear to be considerably over-estimated, while more is provided for working expenses than can be passed. Allowing that 13 lakhs will be realized in 1869-70, that the earnings of the 50 miles between the Beas and Phillour will be received in 1870-71, and that an increase to the through traffic may be expected, there being a break only at the valley of the Sutlej, the estimate for 1870-71 may be taken at—

	Rs.
Earnings	19,00,000
Working expenses	10,00,000
Net Revenue ...	9,00,000

SUMMARY.

11. The following is an abstract of the Punjab Guaranteed Railway Budget-Estimate for 1870-71 as compared with the Budget and Regular-Estimates for 1869-70 :—

ORDER.—Ordered, that this Resolution be communicated to the Government of Punjab for information and guidance, and to the Financial Department for information.

OUDH RAILWAY BUDGET ORDERS.

Nos. 83—4 A—R, dated 7th February, 1870.

RESOLUTION,—By the Government of India, P. W. Dept.

Read—

Letter from Secretary to Chief Commissioner, Oudh, No. 1563 R, dated 12th November 1869.

STATE EXPENDITURE.

The Budget-Estimate of Rs. 40,155 for State expenditure on establishment for Railways during 1870-71, after a reduction of the excess provision of Rs. 2,040* for the pay of the Deputy Consulting Engineer, is increased to Rs. 40,900† on account of the probable cost of the Office establishment and allowances of that Officer; a tabular statement should, however, be submitted for sanction in the usual manner. The estimate of Rs. 50,000 for purchase of land is passed in full.

		Rs.	
* Amount provided			9,192
Amount likely to be drawn :—	Rs.		
Staff Salary	400		
Military Allowances	196		
		596	7,152

Add.—Estimate	40,155—2,040 =		38,115
			40,875

OUDH AND ROHILKUND RAILWAY.

Estimate of advances on Capital Account.

2. The Regular-Estimate of advances for 1869-70, amounting to Rs. 33 lakhs, may be accepted. The Budget-Estimate of Rs. 77,90,000 for 1870-71 is passed for‡ Rs. 65 lakhs, as the Government of India think more than that sum will not be spent, and that large reductions may be safely made in several of the items detailed in the estimate of the year.

	Rs.
‡ Gross advances	67,10,000
Less refunds	2,10,000
	65,00,000

Revenue Account.

3. The Regular-Estimate for 1869-70 appears to be approximately correct, so far as the gross receipts are concerned, but sufficient provision does not appear to have been made for working expenses; the estimate is passed by the Government of India as follows :—

	Rs.
Gross earnings	2,13,000
Working expenses	1,90,000
Net revenue ...	23,000

4. For 1870-71 the figures are :—

	Rs.
Gross earnings	4,14,000
Working expenses	2,48,000
Net revenue ...	1,66,000

This estimate, which appears to be a somewhat over-sanguine one, is based on the expectation that the line from Lucknow to Byramghât, and a portion of the line from Nawabgunge towards Fyzabad, will be open for traffic during the year. Even if this were likely, it is very much doubted whether the additional line will bring in the same proportional returns as the present length for some time to come. But it is not anticipated that the whole 60 miles will be opened for traffic by the end of the rains of 1870. The Byramghât Branch, 40 miles in length, may however be opened at this time, and the gross earnings may be taken at Rs. 2,85,000, of which 75 per cent., or Rs. 2,10,000, will probably be absorbed in working expenses, leaving the net revenue at Rs. 75,000.

SUMMARY.

5. The following is an abstract of the Oudh Railway Budget-Estimate for 1870-71, as compared with the Regular and Budget-Estimate of 1869-70 :—

		Budget-Estimate, 1870-71.	Regular-Estimate, 1869-70.	Budget-Estimate 1869-70.
State Expenditure.		Rs.	Rs.	Rs.
Establishment		40,900	28,600	28,600
Purchase of land		50,000	1,94,400	2,00,000
		90,900	2,23,000	2,28,600
Advances on Capital Account.				
Oudh and Rohilkund Railway.	Gross advances ...	67,10,000	35,00,000	...
	Refunds ...	2,10,000	2,00,000	...
	Net advances ...	65,00,000	33,00,000	50,00,000
Revenue Account.				
Oudh and Rohilkund Railway.	Gross revenue ...	2,85,000	2,13,000	3,25,000
	Working expenses ...	2,10,000	1,90,000	2,25,000
	Net revenue ...	75,000	23,000	1,00,000

ORDER.—Ordered, that this Resolution be communicated to the Chief Commissioner, Oudh, for information and guidance, and to the Financial Department for information.

BUDGET ORDERS OF MADRAS IRRIGATION & CANAL CO.

Nos. 63—4 A—I, dated 1st March, 1870.

RESOLUTION,—By the Government of India, P. W. Dept.

Read:—

Letter from Secretary to Government of Madras, No. 3757, dated 25th November 1869.

STATE EXPENDITURE.

The estimated expenditure under this head during 1870-71, which is to be provided for from the Ordinary Public Works grant, amounts to Rs. 53,800, of which Rs. 27,200 is for a Consulting Engineer and Office Establishment. But now that a separate Chief Engineer is maintained for Irrigation Works, the Government of Madras may be asked whether the appointment of Consulting Engineer is necessary, and whether the duties of the appointment, which are believed not to be onerous, might not be provided for by some more economical arrangement.

2. Rupees 1,728 has been entered for establishment employed to make over land in the Cuddapah District estimated to cost Rs. 10,000. The provision corresponds with what was allowed in previous years, but the time appears to have arrived for dispensing with the services of the establishment. The Government of Madras should be asked to take this matter into consideration and do what is needful.

ADVANCES ON CONSTRUCTION ACCOUNT.

Rs.

3. The Budget-Estimate under this head for 1869-70 amounts to 22,00,000

The Regular-Estimate for 1869-70 to 17,29,000

And the Budget-Estimate for 1870-71 to 22,80,000

This latter sum is reduced to Rs. 13¾ lakhs, being the estimated unexpended balance of the sum authorized to be spent. If it is shown that the balance is larger, the Government of India will be prepared to sanction the necessary additional funds, but it is to be distinctly understood that the expenditure must be strictly limited by the total which is available under the agreement, and the Government of Madras are requested to arrange for restricting the outlay accordingly.

Credits.	Rs.	Rs.
Paid up capital of the Company against an authorized sum of one crore	99,96,660	
Loan sanctioned by Secretary of State ...	60,00,000	
		1,59,96,660
Debits.		
Withdrawals in England up to end of December 1869—		
Against Capital Account	7,66,810	
Against Loan Account...	45,80,000	
And in India	91,88,218	
		1,45,35,028
Balance undrawn on 1st January 1870 ...	...	14,61,632
Estimated advances for the last three months of 1869-70, *viz.* :—		
Regular-Estimate	17,29,000	
Less withdrawn during the first nine months of 1869-70 in England ...	16,50,000	
		79,000
Balance available for expenditure during 1870-71	...	13,82,632

REVENUE ACCOUNT.

4. The figures are as follows compared with the Budget and Regular-Estimate of 1869-70 :—

	Budget-Estimate, 1869-70.	Regular-Estimate, 1869-70.	Budget-Estimate, 1870-71.
	Rs.	Rs.	Rs.
Gross earnings	99,000	16,290	99,000
Working expenses...	23,000	4,970	23,334
NET REVENUE ...	76,000	11,320	75,666

5. The cause of the falling off in the receipts of 1869-70 is explained to be due to the main and distributary channels having been in a much less forward condition than was expected. But the available funds for this undertaking are fast coming to an end, while, so far as is known, the works are still in a very incomplete state. It appears only too evident that the financial condition of this Company will soon again call for the serious consideration of Government.

SUMMARY.

6. The following is an abstract of the Budget-Estimate of the current year :—

HEADS OF SERVICE.	Budget-Estimate, 1870-71.	Regular-Estimate, 1869-70.	Budget-Estimate, 1869-70.
State Expenditure.	Rs.	Rs.	Rs.
Establishment	33,800	30,896	29,000
Purchase of land	20,000	9,124	36,000
Total	53,800	40,020	65,000
Expenditure from Construction funds	13,75,000	17,29,000	22,00,000
Revenue Account.			
Gross earnings	99,000	16,300	99,000
Working expenses...	23,000	5,000	23,000
NET REVENUE	76,000	11,300	76,000

ORDER.—Ordered that this Resolution be communicated to the Government of Madras for information and guidance, and to the Financial Department for information.

BOMBAY STATE RAILWAY BUDGET ORDERS.

Nos. 114—15 A—R, dated 4th, March 1870.

RESOLUTION,—By the Govt. of India, P. W. Dept.

Read :—

Letter No. 191, dated 8th February 1870, from Secretary to the Government of Bombay, Public Works Deparment, forwarding the above.

RESOLUTION.—The estimate submitted, amounting to Rs. 1,35,480, is for establishment for the survey of a line of Railway from Carwar to Hooblee, which has been authorized by the Government of India. The estimate is passed for an even sum of Rs. 1,50,000 as follows :—

	Rs.
Establishment	88,000
Travelling allowances	12,000
Contingencies	36,000
Reserve to meet unforeseen demands during the year	14,000
Total ...	1,50,000

ORDER.—Ordered, that this Resolution be communicated to the Government of Bombay for information and guidance, and to the Financial Department for information.

BENGAL STATE RAILWAY BUDGET ORDERS.

Nos. 110—11 A—R, dated 4th March, 1870.

RESOLUTION—By the Govt. of India, P. W. Dept.

EXTRAORDINARY.

The amount passed under this head is as follows :—

Calcutta and South-Eastern Railway.

	Rs.
Anticipated payment in England to debenture holders of this Railway	1,05,000
Survey of proposed Railway, north of Ganges.	
Establishment for survey expenses	50,000
Total ...	1,55,000

ORDINARY.

2. The following is the Budget-Estimate under this head for the Calcutta and South-Eastern Railway as passed in Public Works Department Resolution Nos. 74—6 A—R, dated 11th February 1870 :—

	Rs.
Charges—	
Construction	50,000
Working expenses	75,000
	1,25,000
Revenue—	
Traffic earnings	75,000
Net deficiency ...	50,000

ORDER.—Ordered, that this Resolution be communicated to the Government of Bengal for information and guidance, and to the Financial Department for information.

N. W. P. STATE RAILWAY BUDGET ORDERS.

Nos. 112—13 A—R, dated 4th March, 1870.

RESOLUTION—By the Govt. of India, P. W. Dept.

Read :—

Letter No. 94 S—R, dated 15th December 1869, from Secretary to Government, North Western Provinces, Public Works Department, submitting the estimate for 1870-71.

RAJPOOTANA RAILWAY.

Delhi District.

For the line from Delhi to Gurhee Hurseroo, the amount included in the Budget-Estimate is Rs. 2,56,500 ; but the sum entered in the letter from the Government, North Western Provinces, is Rs. 3,54,000, which is passed as follows :—

	Rs.
Purchase of land	2,00,000
Construction of line	1,19,000
Ballast	30,000
Stations and Buildings	5,000
Total ...	3,54,000

2. For the line from Gurhee to Rewaree, the sum entered is Rs. 1,84,000. This amount is increased to Rs. 2,34,000 for larger outlay on earth-work and ballast, distributed as follows :—

	Rs.
Purchase of land	22,000
Construction of line	1,50,000
Ballast	55,000
Stations and Buildings	7,000
Total ...	2,34,000

3. The estimated expenditure for the Furrucknuggur Branch is passed for Rs. 60,000.

Agra District.

4. For the line from Agra to Sambhur, the grant is passed for Rs. 2½ lakhs, *viz.* :—

	Rs.
Preliminary expenses	10,000
Purchase of land	40,000
Construction of line	1,50,000
Ballast	50,000
Total ...	2,50,000

5. One lakh is entered for advances to the Forest Department for timber. That Department expects to deliver in 1870-71 about 80,000 sleepers at an estimated rate of Rs. 5 each. This seems excessive, and a reduced rate should be assumed. Allowing for this, and for short deliveries, the estimate may include a payment of Rs. 3½ lakhs, or for Rs. 2½ lakhs in excess of the amount entered.

6. It is somewhat difficult to estimate for the payments in London for stores. Some outlay may be incurred on plant, to meet which 2 lakhs may be provided, as well as on rails, for which Rs. 5 lakhs may be reserved, assuming that rails for 60 miles for the Delhi-Rewaree Section are ordered and paid for. The Rs. 7 lakhs thus provided should be sufficient to meet any small payments for girder bridges that may be required.

SUMMARY.

7. The following is an abstract of the Budget-Estimate for 1870-71 as now passed :—

	Delhi District.			Agra District.	Total.
	Delhi to Gurhee.	Gurhee to Rewaree.	Furruck-nuggur Branch.	Agra to Sambhur.	
	Rs.	Rs.	Rs.	Rs.	Rs.
Preliminary expenses	...	...	...	10,000	10,000
Purchase of land	2,00,000	22,000	6,000	40,000	2,68,000
Construction of line	1,19,000	1,50,000	36,000	1,50,000	4,55,000
Ballast	30,000	55,000	15,000	50,000	1,50,000
Stations and Buildings ...	5,000	7,000	3,000	...	15,000
	3,54,000	2,34,000	60,000	2,50,000	8,98,000
ESTABLISHMENT					2,23,000
PLANT					1,00,000
SLEEPERS					3,50,000
STORES FROM ENGLAND					7,00,000
ADD OUTLAY INCURRED ON SURVEY OPERATIONS BY OFFICERS OF THE B. B. R. COMPANY, TO BE ADJUSTED IN 1870-71, AND ABOUT WHICH SEPARATE ORDERS WILL BE ISSUED					4,07,000
TOTAL ...					26,78,000
ADD PROBABLE OUTLAY ON ROLLING-STOCK— IN INDIA				2,50,000	
IN ENGLAND				2,15,000	
					4,65,000
TOTAL ...					31,43,000

ORDER.—Ordered, that this Resolution be communicated to the Government, North Western Provinces, for information and guidance, and to the Financial Department for information.

PUNJAB STATE RAILWAY BUDGET ORDERS.

No. 116—17, dated 4th March, 1870.

RESOLUTION—By the Govt. of India, P. W. Dept.

Read—

Letter from Joint Secretary to Government, Punjab, Public Works Department, Railway Branch, No. 407 S, dated 24th January 1870, submitting Budget-Estimate for 1870-71.

PUNJAB NORTHERN RAILWAY.

The proposed appropriation for "Construction of Line" and "Stations and Buildings," amounting to Rs. 26 lakhs, appears somewhat excessive, and is reduced to Rs. 18 lakhs as follows :—

	Rs.
Amount of estimates sanctioned by Government of India	7,75,000
Add for three bridges	4,00,000
Total ...	11,75,000
Less probable outlay in 1869-70	5,75,000
Ballance to be spent in 1870-71	6,00,000
Add for large bridges	8,00,000
Add for line beyond Jhelum	4,00,000
	18,00,000

2. On the other hand, the estimate for "Ballast and Permanent-way," Rs. 14,50,000, may be increased to Rs. 23 lakhs as follows :—

		Rs.
*Sleepers ... 5,00,000	Aggregate of amount sanctioned ...	17,00,000
Ballast ... 3,00,000	Less probable outlay in 1869-70 ...	*8,00,000
8,00,000	Balance to be spent in 1870-71 ...	9,00,000
	Add freight up-country for rails, &c., for 100 miles	6,00,000
	Add for line beyond Jhelum—	
	Ballast	1,00,000
	Sleepers	6,00,000
	Add for freight of stores from England payable in India	1,00,000
		23,00,000

3. Rupees 3½ lakhs for Electric Telegraph and Rolling-stock, are disallowed. The telegraph will be constructed by the Government Telegraph Department, the rolling-stock by a separate agency, regarding which special provision will be made (see para. 13). The grant for Plant is reduced from 3 to 2 lakhs.

4. The amount entered for Stores, Rs. 1,38,716, is passed for Rs. 1,00,000. To this amount must be added the probable expenditure in England on account of stores, for which a sum must be arbitrarily taken. Most of the permanent-way material already ordered is likely to be paid for within 1869-70. Some of the girders for large bridges ought to be shipped next cold season, while some small girders have been recently indented for, and it is probable that there will be some more permanent-way to be ordered. Though much of this material will not be required until 1871-72, payments on account of it, as also for station machinery, are likely to be made in England during 1870-71. The aggregate of such payments may be estimated to amount to Rs. 10 lakhs.

	Rs.	Rs.
5. Under Establishment, the estimate amounts to ...		5,61,284
and is reduced as follows :—	Rs.	
Appropriation of ... ... for portion of pay of Consulting Engineer, and his Establishment, which must be provided for from the Ordinary grant.	8,832	
Excess amount in estimate for salaries of Engineer Establishment, which have been entered at the proposed rates of pay, instead of the rates sanctioned	24,000	
Further reduction to make the grant an even one	3,452	36,284
Net amount of estimate		5,25,000

6. It is to be understood that, although the estimate for establishment is passed for Rs. 5¼ lakhs, this does not permit of expenditure being incurred unless otherwise properly sanctioned.

INDUS VALLEY LINE.

7. For preliminary expenses the amount provided is Rs. ¼ lakh. This is increased to Rs. 5 lakhs to provide for the adjustment of the expenditure incurred up to end of 1867-68 on the Indus Valley Survey by Officers of the Sindh Railway Company. Separate orders will be issued as to the manner in which this expenditure should be adjusted.

8. The proposed grant for purchase of land amounts to Rs. 4¾ lakhs. On this line land will be, as a rule, very cheap, and it may be doubted whether the whole can be paid for within the year even if taken up. The amount is therefore reduced to Rs. 1 lakh.

9. Under "Ballast and Permanent-way" the amount is reduced to Rs. 2 lakhs, and is allowed chiefly to meet demands that may be made by the Sindh Forest Department for sleepers.

10. It is improbable that sanction can be given in time for much work on this line during the year, as the Secretary of State has to be referred to before the project is commenced. Three lakhs is therefore considered sufficient for "Construction of Line" and "Stations and Buildings," instead of four lakhs as estimated for.

11. The provision made for Electric Telegraph is disallowed, while that for Plant is reduced to Rs. one lakh, and that for Stores to Rs. ¼ lakh. This is exclusive of stores from London, for which no provision need be made in 1870-71.

12. The estimate for Establishment is passed for an even sum of Rs. 2,00,000.

SUMMARY.

13. The following is an abstract of the estimate as modified by the foregoing orders :—

	Punjab Northern Railway.	Indus Valley Line.	Total.
	Rs.	Rs.	Rs.
Preliminary expenses	...	5,00,000	5,00,000
Purchase of land	25,000	1,00,000	1,25,000
Construction of Line	18,00,000	3,00,000	21,00,000
Stations and Buildings			
Ballast and Permanent-way	23,00,000	2,00,000	25,00,000
Plant	2,00,000	1,00,000	3,00,000
Stores	1,00,000	25,000	1,25,000
Stores from England	10,00,000	...	10,00,000
Total ...	54,25,000	12,25,000	66,50,000
Establishment	5,25,000	2,00,000	7,25,000
Total ...	59,50,000	14,25,000	73,75,000
Add probable outlay on Rolling Stock—			
In India		7,50,000	
In England		7,25,000	
			14,75,000
Total			88,50,000

14. It has to be noticed that, except under Establishment, no details have been given shewing how the several estimates have been made up.

Order.—Ordered, that this Resolution be communicated to the Government of Punjab, for information and guidance, and to the Financial Department for information.

HYDERABAD STATE RAILWAY BUDGET ORDERS.

Nos. 118—20 A—R., dated 4th March, 1870.

RESOLUTION—By the Govt. of India, P. W. Dept.

Read—

Letter No. 160, dated 31st December 1869, from Secretary to Resident, Hyderabad, submitting Estimates for 1870-71.

Hyderabad Railway.

Resolution.—Under arrangements in course of progress, it is probable that the cost of this Railway will be defrayed by the Government of the Nizam. The estimate submitted is passed for Rs. 5 lakhs as per margin. Separate orders will be issued as to the precise manner in which the expenditure incurred should be adjusted.

	Rs.
Establishment	96,000
Works	4,04,000
	5,00,000

Oomrawuttee Branch Railway.

2. The estimate of expenditure, amounting to Rs. 2,80,000, is passed for Rs. 2,50,000 as follows, subject to sanction being accorded to the prosecution of the works. The expenditure is debitable to the Berar Revenues :—

	Rs.
Establishment	34,200
Less excess sum entered herein for share of Office of Account	1,300
	32,900
Passed for	33,000
Works	2,17,000
	2,50,000

Khamgaon Branch Railway.

3. The estimate of expenditure is as follows :—

	Rs.
Maintenance	20,000
Working expenses	20,000
	40,000

4. The first amount appears excessive, and is reduced to Rs. 10,000, which will give Rs. 1,200 per mile for the first year. The amount should however be treated as a charge under working expenses, as although the item in other Railways is commonly treated as a capital charge for the first year, it need not be so treated with this branch.

5. For working expenses also the estimate appears excessive. The line is to be worked by the Great Indian Peninsula Railway at a train mileage rate, and this charge should not amount to more than Rs. 15,000 yearly, with an average of a train each w[illegible]ily. Allowing for more trains in the busy season, less will

probably be needed at the slack season. Hence the working expenses may be taken at Rs. 25,000, including Rs. 10,000 for maintenance, thus leaving the net revenue at Rs. 15,000, the gross revenue being Rs. 40,000.

SUMMARY.

6. The following is an abstract of the grant for 1870-71 as modified by the foregoing orders :—

	Foreign State.	Berars.	Total.
	Rs.	Rs.	Rs.
Capital outlay.			
Establishment	96,000	33,000	1,29,000
Construction of line	4,04,000	2,17,000	6,21,000
Total ...	5,00,000	2,50,000	7,50,000
Revenue Account.			
Khamgaon Branch			
Maintenance	...	10,000	10,000
Working expenses	...	15,000	15,000
Total ...	...	25,000	25,000
Gross Revenue	...	40,000	40,000
Net Revenue	...	15,000	15,000

ORDER.—Ordered, that this Resolution be communicated to the Resident, Hyderabad, for information and guidance, and to the Financial and Foreign Departments for information.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

STANDARD RAILWAY TIME.

Nos. 604—13 R., dated 5th April 1870.

RESOLUTION—By the Govt. of India, P. W. DEPT.

READ—

A telegram from the Government of Bombay, dated 28th March 1870.

RESOLUTION.—A junction having been effected of the two trunk Railways between Bombay and Calcutta, the Bombay Government have proposed that, as Madras is the only Government Observatory in India, its time shall be adopted on these lines.

2. Jubbulpoor time is now in use on the system of the East Indian Railway, as well as on Railways connected with it. It is said to be 32 minutes later than Calcutta time, but is more correctly 34 minutes 6 seconds; Madras time is 32 minutes 49 seconds later than Calcutta. Practically, Madras and Jubbulpoor times are identical and the proposed change, if approved, would scarcely affect the Railway system of Northern India.

3. The Telegraph Department uses Madras time, and should therefore be in a position to give the true Madras time at any Station where there is a Government Telegraph Office. Its adoption would have the advantage of being fairly convenient to Calcutta, Bombay and Lahore, and therefore to the included area, whilst to Madras itself as one of the great cities of India, it would necessarily be acceptable. It would further be convenient when through Railway communication is established between Madras and Bombay, which may be looked for in the course of a few months.

4. The Governor General in Council is accordingly pleased to approve of the adoption of Madras time on the Great India Peninsula Railway, and to desire that the time in use on the East Indian Railway and on the Railways connected with it may be modified at an early date to the same standard. For this purpose, Madras time may, as in the Telegraph Department, be considered 33 minutes later than Calcutta time, and the change will be only one minute on the Railways of Northern India.

ORDER.—Ordered, that this Resolution be communicated to the Governments named in the margin for information and communication to the Railway Authorities concerned.

Bombay. | Punjab. | Bengal. | Oudh.

Also to the Governments and Administrations marginally noted for information.

Madras. | Central Provinces, | Hyderabad. | N. W. P. | Mysore. | Central India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

PROTECTION FROM HEAT OF PASSENGERS AND SERVANTS OF RAILWAY COMPANIES IN TRAINS DURING THE HOT SEASON.

Nos. 614—23 R., dated 5th April 1870.

RESOLUTION—By the Govt. of India, P. W. DEPT.

RESOLUTION.—The Governor General in Council desires that the attention of the officials of the several Railway Companies may be immediately invited to the urgent necessity for endeavouring by every measure in their power to render travelling during the hot season less trying and dangerous, especially to those who are not natives of India, including their own servants, the guards, drivers and firemen, who are necessarily exposed to the worst heat.

2. It is believed that on the East Indian Railway the addition of a double roof to the third class carriages has been found to reduce the temperature somewhat when the vehicles are not in motion, and that this improvement has either been, or is being, applied to the whole stock. The first and second class vehicles have all along had this advantage, and it is evident that something more is wanted to reduce the risks encountered by Europeans in travelling even in those carriages. One obvious improvement would be the fitting of *tatties* to the windows with appliances for watering them, and the Governor General in Council trusts that it is only necessary for him thus to draw attention to the matter to ensure immediate steps being taken to provide first and second class carriages with this means of keeping down the extreme temperature that must otherwise prevail in Railway carriages in most parts of India during the hot months. There is no time to lose if this advantage is to be secured during the season just commencing.

3. The Governor General in Council has no reason to suppose that the Companies would desire to make any extra charge for this convenience, and it does not appear that the supply of the *tatties* and the arrangements for keeping them moist need be productive of much expense. But His Excellency in Council considers that no objection should be made to the demand by the Railway Companies of a reasonable extra payment from those who desire to avail themselves of the means of comfort thus placed within their power, rather than there should be any hesitation or delay on the part of the Companies in acting on this suggestion.

4. But while His Excellency in Council thus advocates the interests of the public, he is not less mindful of the severe trial which the running and working of every train must prove to the working staff during the hot weather months, and especially to the drivers and firemen. How far the cabs of the locomotives may be improved to ward off the effects of the sun from those who, in addition, have to bear the great heat inseparable from their position on the engine, without interfering with their efficiency, is deserving of the most careful investigation of the departmental officials. The prudence of subjecting the drivers and firemen to the effect of a *tatty* may perhaps be questioned, but it would seem desirable at least to try its effect experimentally, as well as to endeavour to devise some other means by which

the temperature may be kept down. For the guards, a tatty fitted to the brake-vans would be a simple expedient.

ORDER.—Ordered, that this Resolution be communicated to the Governments and Administrations marginally noted, for immediate attention and needful action.

Bengal.
Punjab.
Oudh.

Also, to the Governments of Madras and Bombay for information and such further action as the circumstances of the climate of those Presidencies may call for.

Also, to the Government, North Western Provinces, the Chief Commissioners of the Central Provinces and Mysore, the Resident at Hyderabad, and the Governor General's Agent, Central India, for information.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SEARCH FOR COAL IN THE CHANDA DISTRICT OF THE CENTRAL PROVINCES.

From T. OLDHAM, Esq., LL.D., Superintendent, Geological Survey of India, to the Secretary to the Government of India, Home Department,—No. 661, dated Calcutta, the 28th March 1870.

I HAVE the honor to submit, for the information of His Excellency the Governor General in Council, the additional information obtained during the past week or ten days relative to the search for coal in the Chanda District.

2. Carrying out the systematic exploration to the North, a bore-hole was put down near the village of Majri. As already stated (my letter No. 649, dated 19th instant), I had no confident expectation of finding coal there, but there was a chance which it was desirable to test. This chance has not proved favorable. The boring has struck the rocks below the coal at about 100 feet from the surface, and has consequently been stopped. Another bore-hole has been commenced further to the South-West, where it is possible the remarkable overlapping of the successive series of rocks may be avoided. The result shall be communicated as soon as known.

3. A boring has also been put down near the village of Koonara, which has been carried through a good thickness of carbonaceous shale (26 feet) but no coal, and it is probable from the last report that this too has reached the rocks below the coal. To test this fully, a few days more will be required.

4. The boring to the North of Jonara is progressing, but is tedious owing to the necessity for piping the hole from the presence of soft clays which press into the boring and clog the hole.

5. The most important facts ascertained, however, have been arrived at by Mr. Hughes in the course of the detailed geological examination. It appears that a very large portion of the surface of the country to the North is covered with trap-rocks of varying thickness. This trap area, which has its highest elevation in the hill near Dongurgaon, stretches over the whole country lying West of that village to the River Wurdah. The village of Nundoree Kulan is just on the Southern edge of this trappean area. Wurrora town is well on it, also the village of Kulungoham (Kurngaon), Talanah (Tarana), Ashtee, Mardha, and Wanoja, also North of Wurrora, the village of Mohballa, Chinoora, Niensurra, and Ainsa (Yainsa).

6. Saimbal (Saimbar), also four miles to the South of Wurrora, is probably on it, but no sections are there visible, that is, the trap-rocks cover an area of more than 30 square miles.

7. The important bearing which the existence of this great spread of trap has on the capabilities of the Chanda District as a coal-yielding area, will be evident. It cannot of course be asserted that the coal-bearing rocks do not extend under this newer series; but the question as to where they may so exist, or whether at all, is one of such utter uncertainty, and the probable depth below the surface at which, if they do exist at all, they would be found, is also so beyond calculation, that I think the entire of this area covered by trap-rocks may safely be rejected or left out of any estimate, if attempting to sum up the amount of coal now available in the District. Indeed, there is no reason why this area should not be set aside with quite as little hesitation as the more extended area covered by trap-rocks to the North. It may be added that in addition to the impossibility of saying how deep or how shallow the coal-bearing rocks may be under these trap flows (assuming for the moment that they exist), there is the now established fact that the successive groups of beds all largely overlap each other. The Talchirs, below all the coal, are widely overlapped by the Barákar beds, in which the coal occurs, and these again by the lower group of the so-called Kampti beds, which are again overlapped to a grant extent by the upper group or Panchets. And the only reliable indications of coal in the District are those beds of the Kampti, or the peculiar nodular sandstones and beds of the Barákar group. *Neither of these are seen in the area indicated as occupied by the trappean rocks,* so that I believe it would be impossible to give any reliable opinion as to the depth at which coal might be found, or whether it would be found at all. So very uncertain, therefore, would be the result, that I am satisfied this area ought to be left entirely out of calculation at the present. When the District has been more fully opened out or worked, it may be tested; at present it would be simply waste of time and money where coal is known to be more accessible at many other points.

8. I have therefore to state that I believe a sufficiently full and satisfactory answer can now be given to the important question of the most Northerly point at which coal may be justly looked for. Mr. Hughes has carefully gone over the ground in continuation of the examinations which we were carrying out together at the commencement of the month; and the result is that coal *may* exist on the left bank of the Wurdah River for a distance of about four miles to the North of the village of Koonara, and within an area extending for a breadth of about two miles, parallel to the Wurdah. There is at the same time good reason to suppose that much of the coal has been here, as elsewhere, washed away; for instance, Rargao (Bailgaon) village stands on land which was undoubtedly a former bed of the river, and Patalla is probably in the same category; all which facts combine to diminish the probable area under which coal will ever be found on the Chanda side of the Wurdah, and of course to diminish also the probable amount of coal there available. The small area alluded to above as the only part likely to yield coal is now being rapidly proved, and I shall have the honor of submitting the results as soon as known.

GOVERNMENT OF INDIA.

FINANCIAL DEPARTMENT.

EXPENDITURE ON ACCOUNT OF EDUCATION IN BENGAL.

Resolution by the Government of India, Financial Department, No. 2296, dated Fort William, the 31st March 1870.

Read again Resolution No. 3233, dated 8th September 1869.

Read docket from the Home Department, No. 61, dated 2nd February, with enclosure, forwarding a reply by the Government of Bengal to the above Resolution.

RESOLUTION.—In the report now received from the Home Department, the Government of Bengal complains of the terms of the Resolution of the 8th of September, and controverts some of the assertions that it contains.

2. The object of that Resolution was generally to invite attention to the large expenditure in Bengal for giving an advanced education to classes of the population who, it was believed, might be expected to provide for their own education, and had ample inducements to do so, without much, if any, pecuniary assistance from the State. Considering the very limited funds available for the development of education, and the urgent importance of expending whatever money can be allotted by the State for this object in the most economical manner, the Government of India invited the Government of Bengal to enquire whether the time had not come, and whether means could not be found, for setting free some of the funds now devoted to high English education.

3. The Government of Bengal appears to have regarded this invitation as indicating disapproval of the principle upon which the Educational Department is administered in the Lower Provinces.

4. It is urged, in the first place, that to take cognisance only of the imperial income and expenditure on account of education in Bengal, without at the same time referring to the

sums raised and spent by the Local Government which do not appear in the imperial accounts, is calculated to lead to inferences unfair to the people of Bengal, and injurious to the cause of education there.

5. The Government of India regrets that the Government of Bengal should have deduced from the Resolution of September inferences in no way intended by the Governor General in Council. That Resolution had reference only to the effect of the expenditure for education in Bengal upon the imperial finances, and it would not have been consistent with its object to add to the figures which showed this effect any local revenues or expenditure. Doubtless, no complete opinion can be formed of the progress of education in Bengal without taking as much note of local as of imperial income and expenditure upon it; and any account of the operations of the Educational Department which excluded local income and expenditure would be wholly unsatisfactory. But it does not follow that it was improper in the Resolution of September to deal with the imperial receipts and expenditure only; for the Government of India was considering nothing else. It is very desirable that all possible misunderstanding on this point should now be removed.

6. Further, the Government of Bengal urges that it is a mistake to suppose that "the bulk of the State expenditure for education in Bengal is for *high English education*," and asserts that not more than about £54,000 is so spent. The Resolution of September stated only the general impression of the Government of India based upon the imperial accounts, in which the classification of educational expenditure is not very detailed. Dividing the imperial educational expenditure, so far as the imperial accounts furnish the means of doing so, between English and Vernacular education, and distributing the expenditure not susceptible of classification rateably between these two heads, the Government of India find that more than three-fourths* of the gross imperial expenditure on education in Bengal in 1868-69 was on account of English education. Calculated in the same way, the earlier figures exhibit a still larger proportion of the expenditure as devoted to English only. The Governor General in Council acknowledges that the opinion expressed by him agrees very much with this figured result.

* The exact figures are £150,768 out of £200,089, or 75·35 per cent.

7. He is, however, glad to find from the educational section of the Administration Report of the Lower Provinces for 1868-69 (*vide* abstract in the appendix) that a much larger proportion of the unclassified expenditure than was supposed is on account of Vernacular education. Dividing the figures on pages 216 and 217 of that report between English and Vernacular, and distributing the charge for direction, inspection, and miscellaneous rateably between the two, the Governor General in Council finds that £92,492 were spent upon English, and £59,234 on Vernacular education, being in the proportion of about 60·96 and 39·04 per cent., respectively.

8. The difference between these figures and those given by the Government of Bengal arises probably from that Government attempting to distinguish between *high* and *other* English education. It is scarcely possible to make this distinction upon any satisfactory basis; and for the purposes with which the Government of India recorded the Resolution of September 1869, all English education must be classed as high.

APPENDIX.

Bengal Administration Report for the year 1868-69.

9. The principle which the Government of India had in mind in the Resolution of September applies alike to all English education, viz., this, that the motives which induce the people to seek it are *primâ facie* sufficient for its rapid development without any contribution from the imperial finances. It is notorious that the same assertion can by no means be made in regard to Vernacular education. It may, it is believed, truly be said, in respect even to the most intellectually-advanced Provinces of India, such as Bengal, that the desire for Vernacular education, or, as might distinctively be said, for education in order to develop the intellectual powers, apart from the immediate purpose of securing material advantages, is so low as perhaps hardly to exist. It is undeniable that in this form education needs, and ought to receive much artificial stimulus and encouragement.

10. The Government of India is glad to perceive that though dissatisfied with the terms of its Resolution, the Hon'ble the Lieutenant-Governor and the Director of Public Instruction admit the practicability of gradually, and with discretion, increasing the contributions of those who receive from the State, or by its aid, an English education.

11. The Governor General in Council is of opinion that this should be kept constantly and prominently in view, and that it should be, in accordance with the views expressed by successive Secretaries of State, the constant aim of the Supreme and the Local Governments, co-operating cordially together, to reduce to the utmost the charge upon the State for English education with a view to render it as self-supporting as possible.

ORDERED, that a copy of this Resolution be forwarded to the Home Department for communication to the Government of Bengal.

GOVERNMENT OF INDIA.

4·8	2·1
6·3	1·2
..	..

Remarks.

The mean volume of the Ganges Canal passing the Roorkee gauge during the month, was 4,770 cubic feet.

The volumes discharged by the canal were as follows:—

Tail, Etawah Branch	..	38 cubic feet.
Escapes ,, ,,	..	20 ,, ,,
Tail, Cawnpore ,,	..	209 ,, ,,
Escapes ,, ,,	..	*Nil.*
Total	..	267 ,, ,,

The Cawnpore and Etawah Branches have alternate weeks of high and low supply. The gauge readings show the mean of the month.

At the commencement of the month a demand for water was experienced, which steadily increased to the close of the month. In the latter part of the month the demand was very great indeed, and at the close of the month large areas still remained that had not received their first or *kor* watering.

The average supply of the Eastern Jumna reached in this month a very low ebb, and was quite unequal to the demand. Some loss is anticipated in the Meerut District. Bunds are now necessary in the canal, and zillahs are alternately *tateeled*. Some little relief was obtained from a fall of rain on 12th and 13th, chiefly in the Northern part of the canal.

Kulsea rain-gauge	..	= 1·20″
Bhainswal	..	= 0·20″

It will be observed that the rain-fall in Saharunpore and Mozuffernuggur is below the average; in other Districts it is considerably above the average. In the Doon there was a fair demand for water when cloudy weather did not raise an expectation of rain.

* Average for five years only: rain-fall previous to 1864 not given.

ALLAHABAD;
The 23rd March 1870.

No. 18 of 1870.

SUPPLEMENT TO

The Gazette of India.

SIMLA, SATURDAY, MAY 14, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

PROGRESS OF WORKS IN CONNECTION WITH THE ESTABLISHMENT OF THROUGH RAILWAY COMMUNICATION BETWEEN MADRAS AND BOMBAY.

Read the following letter from MAJOR J. H. M. SHAW STEWART, R.E., Consulting Engineer for Railways, Madras, to the Secretary to the Government, Madras, Public Works Department,—No. 79, dated Madras, the 25th February 1870.

I HAVE the honor to submit the following report upon the progress of the works on the North-West Line of the Madras Railway, which I have lately inspected in company with the Agent and Manager and the Acting Chief Engineer.

2. The Government are aware that the line is at present available for traffic as far as Ghooty, to which point it was opened on the 1st August 1869 : the distance from Madras being 258 miles.

3. Beyond Ghooty, the whole of the work on the main line up to the junction with the Great Indian Peninsula Railway at Raichore has been given on contract to Mr. E. W. Barnett, with the exception of the various stations which are being constructed under the charge of the Company's Engineers. The works on the Bellary branch have been given on contract between Balakistnamah Naidoo and Mr. E. M. Ross. The two stations on the branch at Veerapoor and Bellary have also been given to Mr. Ross. The particulars of the various contracts are given in a summary appended to this report.

4. *District XI., Main Line.*—The work on this District has not made good progress of late. According to the terms of the agreement with the contractor, the line should have been completed as far as the Bellary branch junction by the 31st December 1868 ; and there can be no doubt that this would have been accomplished long ago had proper energy been shown by Mr. Barnett. When proceeding up the line, we found that one single thirty feet arch bridge, one double twenty feet arch bridge, and two single twenty feet arch bridges were still unfinished on this side of the junction. In addition to this, a good deal of

heavy rock-cutting had to be excavated. The early opening to the junction was of such importance, and the prospect of further delay seemed so certain, that it was deemed necessary to serve the contractor with the notice required under clauses 12 and 24 of his agreement. I am glad to be able to report that this notice had the desired effect. On our return down the line, we found that the two single twenty feet arch bridges were alone remaining unfinished; and I have now no doubt that an engine will be at the Goondacul junction before the end of March.

The Goondacul Station is making good progress under the energetic superintendence of Mr. Smith, the Resident Engineer in charge. Up to the 31st January, three-fifths of the masonry had been completed. The work is of good quality, and has been executed most economically.

5. *District XIV.*—This District carries the main line Northwards from the Goondacul junction. The work is well advanced: rails are laid over the greater part of the District, and only one-twelfth of the masonry was unfinished on the 31st January. An engine will certainly be able to pass over this District in April.

The Nuncherla Station is in this District, and has only lately been commenced by departmental agency. About one-fourth of the masonry was finished on the 31st January. The rates are considerably below those of Mr. Barnett's contract.

6. *District XV.*—Here the work has not been pushed forward so energetically, and 1,500 cubic yards, being one-fourth of the whole masonry, remained unfinished at the end of last month. It was thought advisable to serve the contractor with a notice for this District also, under clauses 12 and 24 of his agreement. I have no doubt that, with this incentive, the work will be carried on rapidly, and that an engine will be able to traverse the District by the end of April.

The Auspree Station is situated at the Northern extremity of this District. The work has only lately been commenced by the Company's Engineer, and one-fifth of the masonry had been completed up to the end of last month. As at Goondacul and Nuncherla, the rates at which the work is being executed are considerably below those of Mr. Barnett's contract. It was intended that Auspree should be a watering station, and the estimated outlay has been sanctioned; but the situation of the station gives little reason to hope that a proper supply of water will be obtained, and I fear it will be necessary to establish watering arrangements at some point between Auspree and Adoni.

7. *District XVI.*—This District is the most backward of all on this side of the Toongabuddra River. Upwards of 2,800 yards of masonry, nearly one-third of the whole amount, remained unfinished on the 31st January. Here also, as in Districts XI. and XV., it was thought advisable to bring the provisions of clauses 12 and 24 of the agreement into force, and to serve the contractor with the required notice. I understand that the result has been so far favorable that it has not yet been necessary to act upon the notice by supplementing the contractor's labor at his expense. The progress of the work must, however, be watched most carefully from day to day, and immediate action taken upon any backward tendency being shown.

The early completion of the work in this District is a point of very great importance, as upon it depends the possibility of carrying forward the girders for the bridge over the Toongabuddra before the freshes in that river may be expected. With a view to make this result more certain, I have already recommended* the substitution of girders for arches in two of the unfinished bridges on this District. Mr. H. C. West, one of the most energetic Engineers in the Company's service, has been sent to supervise the progress of the work, and I have every hope that an engine will be able to pass over the District in the early part of May.

* In No. 65, dated 16th February 1870.

8. *District XVII.*—The work in this District may be said to be completed. Some 400 yards of masonry remain to be done, but this consists entirely of coping, etc. With the exception of gaps, which cannot be closed over till girders are brought up by rail, an engine could now traverse this District from end to end.

The Adoni Station, which lies within this District, is making rapid progress under Mr. Scott's superintendence. At the end of last month considerably more than half the masonry had been completed.

9. *District XVIII.*—The work in this District has also made excellent progress. Although 1,000 yards of masonry are nominally unfinished, all the bridges are ready for the passage of an engine with the exception of those for which girders must be brought up by rail.

The Kosgee Station in this District is well advanced. It is being carried out under the superintendence of Mr. Jones, the Resident Engineer; and, like all the other stations on the main line, at rates considerably below those of Mr. Barnett's contract. Nearly three-fourths of the masonry were completed at the end of January.

10. *District XIX.*—On this District also the works are well advanced. With the exception of the Toongabuddra Bridge, six-sevenths of the masonry were finished on the 31st January; only 670 yards being then required to complete the District. The only work of any importance unfinished at the time of our visit was a double thirty feet arch bridge, which is probably completed by this time.

The large bridge over the Toongabuddra River, which consists of fifty-eight girder openings measuring each seventy feet from centre to centre, has made good progress since the subsidence of the water in the river. During January upwards of 1,100 yards of masonry were completed, and at the beginning of this month there remained nearly 5,400 yards to be done, being less than one-third of the whole amount. Of the fifty-seven piers, sixteen on the North bank of the river, and ten on the South bank, are finished; the remaining thirty-one piers being more or less advanced towards completion. The work is excellent, and confers great credit on all concerned. Unless prevented by an outbreak of cholera among the work-people, or by unseasonable freshes in the river, I see no reason why the masonry of this bridge should not be completed before the coming monsoon. The Government may rest assured that every effort will be made, both by the Engineer in charge and by the Contractor's Agent, to secure this result. The completion of the bridge will, however, depend upon the date when an engine is able to come up to Adoni, that is to say, upon the completion of the masonry in Districts XV. and XVI. If the girders for the Toongabuddra Bridge can be delivered on the South bank of that river early in May, the temporary tramway across the river bed can be used to transport half of them to the North side, where they can be put together and rivetted during the rains so as to be ready for rolling by the end of the year.

I wish to take this opportunity to bring prominently to the notice of Government the excellent service which has been rendered in connection with the Toongabuddra Bridge by Mr. Robinson, the Resident Engineer in charge of District XIX., a position which he has held for more than four years past. Mr. Robinson has had the supervision of the bridge over the Toongabuddra from first to last; and I attribute entirely to his professional skill, backed by his indomitable energy and perseverance, the admirable masonry which has been used upon this very important bridge. At the commencement of the work, as I have already had occasion to report, considerable difficulty was experienced by Mr. Robinson before he succeeded in obtaining from the contractor masonry of a quality suited to the importance of the bridge; but these difficulties were overcome, and since the commencement of the year 1868 the work has been carried on satisfactorily, and in accordance with the terms of the revised specification which was then drawn up. When the work is completed there will be nearly 18,000 yards of masonry in the bridge, and I believe that every foot will challenge comparison with the best work of the kind in India.

11. *District XX.*—This District has not as yet made much progress; up to the first of this month only one-third of the masonry having been finished. This state of backwardness is not, however, altogether attributable to the contractor, inasmuch as the commencement of the masonry was delayed, owing to the fact that no Engineer was available for supervision; and it was on this plea that sanction* was accorded to the alteration of the date fixed for the completion of the work from 31st December 1869 to 31st December 1870. There is at present little or no masonry being done; the only work now in active progress being the collection of material. It is expected that a large body of masons will be set free from the Toongabuddra Bridge in June, and the work in District XX. will then be pushed on with vigour. The scarcity of water along the greater part of this District renders this course advisable on all grounds.

* *Vide* G. O. dated 2nd April 1869, No. 1075.

The Mutamurri Station lies within this District; but, beyond collecting materials, nothing has yet been done.

12. *Raichore Terminus.*—It will be within the recollection of the Government that the site fixed* on for the station at Raichore was about one and a quarter mile to the North of the point where the Madras and the Great Indian Peninsula Railways join. The letter from the Consulting Engineer to the Bombay Government,† dated the 13th October 1869, will show that a plan was prepared by the Great Indian Peninsula authorities, and that the work was to be put in hand at once by that agency. The plan was objected to by the Madras Railway authorities chiefly on account of the rates which were much above those prevailing on our lines. With a view to reduce the cost of the station, an offer was made that the work should

* *Vide* G. O. 22nd April 1868, No. 1227.

† *Vide* G. O. 9th November 1869, No. 2921.

be undertaken by the Madras Railway agency; and, as will be seen from Colonel Trevor's report* dated the 12th January 1870, this has been agreed to, subject to the approval of this Government. Colonel Trevor explains that, owing to the terms of the agreement with Mr. Bray, it is necessary to select a site on the Madras Railway line. A site, in every respect excellent, has accordingly been chosen by the Acting Chief Engineer of the Madras Railway. It is about a mile South of the point of junction; and, though slightly further from the town of Raichore, is better supplied with water and has gradients more suitable for station purposes. I concur with the Railway authorities in recommending that the station be built on this site; and, if this meets with the approval of the Government, I trust that the construction of the station will now be pushed on rapidly.

* *Vide* G. O. 23rd February 1870, No. 604.

13. *District XI., Bellary Branch.*—The portion of this District which forms part of the Bellary Branch is under four miles in length. The masonry is complete and the line will be ready for the passage of an engine as soon as the Goondacul junction is reached.

14. *District XII.*—The masonry on this District is also finished; and, as soon as girders can be brought up from the Goondacul junction, it will be ready for the passage of an engine from end to end.

The Veerapoor Station is situated within this District, and I regret to say that we found the work progressing at a very unsatisfactory rate. It has been let on contract to Mr. Ross, and the time specified in the agreement expired on the 31st December 1869. Up to the end of January only two-fifths of the masonry had been done. It was thought advisable to give Mr. Ross notice under clauses 12 and 24 of his agreement, and I trust that this measure will have the desired effect.

15. *District XIII.*—This District completes the Bellary Branch; and, with the exceptions of the bridge over the Huggry River and the Terminal Station at Bellary, the work is almost finished.

The Huggry Bridge is to consist of thirty-four openings, each 70 feet from centre to centre, spanned by wrought-iron girders, resting on screw piles. The only masonry is in the abutments, which are now in progress, and in which some 1,200 yards remained unfinished on the 1st instant. The abutment on the East side has a good foundation in clay; but on the West side it was found necessary to sink wells, and, owing to an error in the plan, these were carried five feet too high. The removal of this has caused some delay; but there is plenty of material on the ground, and the work ought to be soon brought to a close. The delay in opening up to the Goondacul junction has thrown the work at this bridge back, inasmuch as the girders and piles must be brought up by engine.

The work at the Bellary Station has not been carried on of late as rapidly as should have been the case. On the 31st January more than half the masonry was unfinished, and, as the time named in the agreement expires on the 31st August, the contractor has as much as he can do to complete his task.

The inquiry into the question of water-supply along the Bellary Branch has not been altogether satisfactory. The town of Bellary has of late years been notorious for scarcity of good water; and, after careful investigation, the attempt to establish watering arrangements for engines has been abandoned. At Veerapoor also the attempt is considered hopeless. It has been therefore proposed to establish a permanent watering place at the Huggry River, eight miles from Bellary, and another at a spot 4½ miles East of Veerapoor Station. Engines will be able to take at the Huggry a supply of water for the double journey to Bellary and back; while an old well on the fort glacis, close to the station enclosure, will give water which, though brackish, will answer for cleaning out engines, &c.

16. It is with great pleasure that I am able to report in most favourable terms upon the quality of the work on the unopened line. I have already drawn special attention to the character of the masonry in the bridge over the Toongabuddra; but throughout the line the work is of a very high average standard, and the instances in which I observed any shortcomings were few and far between. The Government and the Madras Railway Company may both be congratulated on the results which have been secured.

17. In the order of Government dated the 23rd instant, No. 604, I was directed to report upon the present prospects of opening the North-West Line of the Madras Railway to Raichore. In reply, I beg to state that, unless the progress of the work is delayed by some unforeseen occurrence, I have every reason to anticipate the opening of the line to Kosgee during September next, and to Raichore by April or May 1871.

The Bellary Branch ought also to be opened throughout early in 1871.

Summary of the various contracts given out on the North-West Line.

MADRAS; *February* 1870.

J. H. M. SHAW STEWART, *Major, R.E.*, *Consulting Engineer for Railways.*

Order thereon by the Government of Madras,—No. 876, dated the 29th March 1870.

THE Government are gratified to learn from this report that the works on the extension of the North-West Line of the Madras Railway towards Raichore and on the Bellary Branch are progressing satisfactorily.

2. Under the circumstances brought to notice in paragraph 12, His Excellency the Governor in Council approves of the construction of the Station at Raichore being undertaken by the Madras Railway Company on the site selected by the Acting Chief Engineer, and His Excellency trusts that no time will be lost in submitting the requisite plans and estimates.

3. Adverting to the observations of the Government of India in their letter communicated in G. O. No. 723, dated 8th March 1870, the Consulting Engineer will impress upon the attention of the Railway authorities the necessity of their taking special care to prevent any expenditure being incurred, except upon sanctioned estimates, and as it is of importance that the works on the unopened portion of the North-West Line should not be delayed, the submission of those estimates should be expedited.

Endorsed by the Secretary to the Government of Madras, Public Works Department,—No. 877, dated the 29th March 1870.

COPY of the above forwarded to the Government of India, with reference to their letter dated 5th February 1870, No. 227R.

Read the following letter from MAJOR J. H. M. SHAW STEWART, R.E., Consulting Engineer for Railways, Madras, to the Secretary to the Government, Public Works Department,—No. 92, dated Madras, the 7th March 1870.

IN paragraph 12 of my letter No. 79, dated the 25th ultimo, I explained the circumstances under which it has now been proposed to build the junction station at Raichore by the Agency of the Madras Railway Company, and within the limits of their line; and I solicited the approval of the Government to that arrangement.

2. I have this day received from the Agent of the Madras Railway an application for the land required for station purposes. Mr. Elwin also states that the plans and estimates for the station works are in course of preparation, and as it is very important that materials for building should be accumulated on the spot as early as possible, he requests authority to proceed with the collection of materials in anticipation of sanction.

3. The Government are aware that from one cause and another the commencement of the junction station at Raichore has been postponed from time to time. It is of very great importance that no further delay should be allowed to intervene, and I have accordingly communicated to the Agent authority to commence the collection of materials in anticipation of the sanction of Government to the plans and estimates which are under preparation.

4. I trust that my proceedings will meet with approval.

Order thereon by the Government of Madras, Public Works Department,—No. 922, dated 1st April 1870.

THE proceedings of the Consulting Engineer for Railways, as reported in this letter, are approved.

Endorsed by the Secretary to the Government of Madras, Public Works Department,—No. 923, dated 1st April 1870.

COPY of the above forwarded to the Government of India in continuation of docket No. 877, dated 29th March 1870.

Endorsed by LIEUT.-COL. J. S. TREVOR, R.E., Consulting Engineer for Railways, Bombay,—No. 1262, dated Bombay Castle, the 1st April 1870.

SUBMITTED for orders.

2. The progress at the Caugnee Bridge continues most unsatisfactory, and unless the Agent can ensure better progress either by forcing the contractors to put on more men, or by doing part of the work with his own men, the bridge will not be finished before the monsoon sets in, and the opening of the line will be delayed for another six months. The failure to take any steps to proceed with the foundations of the Yedagherry Bridge is most discreditable to the contractors.

From CAPTAIN WHITE, R.E., Deputy Consulting Engineer for Railways, to the Consulting Engineer for Railways,—dated Sholapore, the 28th March 1870.

I HAVE the honor to inform you that in company with the Chief Engineer, Mr. Manning, I inspected the Caugnee Viaduct on contract No. 19, and on returning lorried over contract No. 18 to inspect the progress of the unfinished works on that contract.

Caugnee Viaduct.—The foundations of the last pier are now in, and the piles are being driven to commence work on the abutment. The masonry of the abutment cannot, as you are aware, be put in hand until the coffer dam is complete; and the short supply of timber has, I understand, been the cause of the slow progress of this part of the work. I should think the abutment foundations would not be got in before the first week in May.

Of the five piers required for the 6-60 spans, No. 1 is completed, No. 2 is within 15 feet of the top, No. 3 within 25 feet, No. 4 within 45 feet, and No. 5 is just founded; the masonry of these spans may, perhaps, be completed by the end of June. Regarding the bed blocks of the girders of the 74 feet spans, at the time of our inspection there were 50 on the ground; others, I understood, are coming in, altogether 136 blocks are required. Before hoisting these blocks it is necessary to chisel out the required slope for the last tie-rod of the girder. There were only nine men at this work when we were on the ground, and each chisel draft takes three days to finish. It is therefore probable that unless the contractor hoists the bed blocks wherever Mr. Lindsley, who is in charge of the girder work, may require them, there will be both delay in erecting the girders and unnecessary expense caused by having to lift and traverse the girders laterally instead of putting them together at once upon the bed block.

My impression is that the contractors have no intention of hurrying themselves or assisting in any way towards the early completion of the girder work of the Caugnee Viaduct, the Company might gain a little time if they took the work into their own hands; but as the contract time will be up in three months, I doubt very much whether this gain would be worth the difficulties that would hereafter arise from the Company keeping their contract. Moreover the contractors themselves might certainly endeavour to prevent any one else entering on the contract until their time was up. I advise that the bed block work be left in the contractors' hands. Mr. Manning has ordered Mr. Lindsley to assist the contractors with lifting tackle, and they may, perhaps, push on the work in a more satisfactory manner. Mr. Lindsley will, I know, make the best arrangements for lifting and putting together the girders (which work is now in progress), so that, if impeded by the contractors, he will be able to work on during the monsoon. If the contract there is taken out of the contractors' hands on the 30th June, the Company would, I should think, stand in a much better position in a Court of law, than if they had forcibly entered on the work which is now progressing so slowly.

The diversion across the Caugnee will be accepted in a few days.

Shahbad Viaduct.—The masonry pier of this work is ready to receive the bed block for the girder standard; the piles of the two other piers are being screwed and would, I should think, be completed by the time the masonry of No. 1 abutment, which is now a few feet above ground level, is finished. There has been some delay caused by the walling of the old coffer dam being in the way of the screwing of No. 2 iron pier, but there is every probability that the whole work will be completed by the first week in May.

I am informed by Mr. Manning that the permanent way is laid up to the 29th mile. Between the 29th and 52nd mile there are only the Yedagherry Bridge and the 9-20 feet bridge at 39 miles 40 chains incomplete, the latter work will be finished shortly; but the arrangements of the contractors for getting in the foundations of the Yedagherry Bridge are still most unsatisfactory.

From the 54th mile to the Kistna there are only four small bridges, and the bridge of 14-15 feet spans at the 64th mile. Mr. Manning is informed that the latter work will be complete by the middle of May.

I will report to you shortly on contract No. 18.

From the Government of Bombay, to Her Majesty's Principal Secretary of State for India, London,—No. 15, dated Bombay Castle, the 20th April 1870.

IN continuation of our despatch No. 3, dated 17th January, we regret to have to state that the progress of the works between Goolburga and Raichore, on the South-East extension of the Great Indian Peninsula Railway, let to Mr. Bray, is still most unsatisfactory.

2. The opening of this section of the Railway, as far South as the Krishna River, depends on the bridges over the Caugnee and Yedagherry Rivers. On the former a little work has been done, and the bridge may be finished by the end of June next; but far greater exertions must be made than the contractors' agent has up to the present shown a disposition to make. To the Yedagherry Bridge nothing has been done. The bridge is not a large one, twelve girder openings of 30 feet each, but the foundations are difficult to get in, and of these seven have not been commenced. The work has, in fact, been at a stand for nearly two years for want of adequate pump-power to keep the water down. We attach a copy of a Resolution we have lately passed in regard to these works. But we entertain little hope of better progress being made until the contract with Mr. Bray is closed, or he is induced to send out a new agent, with instructions to spare no effort to complete the works as far South as the Krishna River by the end of the monsoon.

Resolution by the Government of Bombay,—No. 523, dated Bombay Castle, the 8th April 1870.

Read letter from the Consulting Engineer for Railways, No. 1262, dated 1st April 1870, submitting, with observations, for orders inspection report by Captain White, R.E., Deputy Consulting Engineer for Railways, of the Caugnee Viaduct on contract No. 19, and of the unfinished works on contract No. 18, Great Indian Peninsula Railway.

RESOLUTION.—Government regret to observe from this report that the works at the Caugnee River are progressing most unsatisfactorily, and that at the Yedagherry Bridge nothing has been done towards getting in the foundations. These two works are the key to opening the Railway to the Kistna River. If they are not completed before the setting in of the monsoon, plate-laying will have to be stopped for some months, and the completion of the Railway will be indefinitely retarded. Government cannot permit the establishment of through communication with Madras to be delayed by Mr. Bray's Agent, and they look to the Agent and Deputy Chief Engineer of the Company to see that the two works above referred to are finished by the 30th of June 1870. These two officers can make what arrangements they deem best, and Government will be prepared, if necessary, to authorize the two works being taken out of Mr. Bray's hands at once. These proceedings should be reported to the Secretary of State.

From LIEUTENANT-COLONEL J. S. TREVOR, R.E., Acting Secretary to the Government of Bombay, Railway Department, to the Secretary to the Government of India, Public Works Department,—No. 566, dated 19th April 1870.

IN reply to your letter No. 584R of the 1st instant, I am directed to forward copy of a despatch from this Government, to the Secretary of State, and a Resolution No. 523, dated the 8th idem, passed on a report from Captain White, Deputy Consulting Engineer.

2. The progress made with the works continues to be most unsatisfactory. But the Engineers of the Company still express themselves hopefully of the prospect of completing the Caugnee Bridge before the monsoon sets in. A diversion has lately been put in across this river, and as rails are laid on for 14 miles beyond, permanent way materials, of which there is a large stock at Goolburga, will be carried forward for laying down during the monsoon. If a good quantity can be delivered before the monsoon sets in, and if the Yedagherry Bridge foundations can be got in, communication to the Krishna may be established by the close of the monsoon. Beyond that river the Great Indian Peninsula Railway Company have only fourteen miles of line.

From MAJOR E. C. S. WILLIAMS, R.E., Deputy Secretary to the Government of India, Public Works Department, Railway, to the Secretary to the Government of Madras, Public Works Department, Railway,—No. 752 R, dated Simla, the 4th May 1870.

I AM directed to acknowledge the receipt of your letters Nos. 877 and 923, dated 29th March and 12th April 1870, on the progress of the works on the extension of the North-West line of the Madras Railway.

2. As recently intimated in my letter No. 583R of the 1st April 1870, the Governor General in Council continues to attach the utmost importance to the connection by rail of the Presidencies of Madras and Bombay at the earliest possible moment, even though the junction be at first effected imperfectly with breaks at the Krishna and Toongabuddra Rivers. In this view I am directed to request that measures may be adopted to expedite the masonry works on District XX., and that the question of getting across the Toongabuddra by the close of the calendar year, either by means of the bridge or in some other way, may be taken into consideration. At present all idea of opening the line to Raichore before April or May 1871 seems to be given up, but the Governor General in Council would be much disappointed if the opening were postponed so long.

No. 753 R.

COPY to the Government of Bombay for information, with reference to the letter from that Government, No. 566, dated 19th April 1870.

No. 19 of 1870.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

AUSTRALIAN PRODUCE.

From E. C. BAYLEY, Esq., Secretary to the Government of India, Home Department, to His Excellency SIR JAMES FERGUSSON, Governor of South Australia, Adelaide,—No. 2379, dated Simla, the 17th May 1870.

I HAVE the honor to acknowledge the receipt of communications from your Excellency, dated the 10th and 26th of December last, regarding the despatch, free of cost, by the brig *Jane Bell*, of samples of such staple articles of Australian produce as can be regularly supplied in quantity, and which, it is believed, can be furnished to any amount at rates contrasting favorably with those now paid by the Government of India.

2. Again thanking your Excellency for the courtesy shown in this matter, I beg to forward, for your Excellency's information, a copy of the proceedings of a Special Committee appointed by the Government of India to examine and report upon the samples in question.

3. From this report your Excellency will perceive that the flour, certain of the wines, the jams, biscuits, butter, mats, and *tinned* meats appear to be the best suited for importation into India.

Report of Committee on samples of Australian produce per "Jane Bell," dated Fort William, the 18th February 1870.

Number of Packages.	Articles.	Name of Firm by whom shipped.	Condition of Packages.	Wholesale Price of Articles in Calcutta.	Remarks by Committee.
1—20	2 half bags flour	Henry Giles	Some bags and contents slightly injured by damp.	4 annas 3 pie	The flour appears of excellent quality and superior to that manufactured in Calcutta and Bengal generally.
21	1 case of ale and porter ...	Simms and Chapman ...	Good	Rs. 5 to 6 per dozen	Of full body and somewhat over-ripe, of doubtful quality, unsuited for Indian market; each sample varying.
22	1 „ biscuits	Giles and Smith ...	„	5 annas 6 pie per lb. ...	Of excellent manufacture and taste, equal to machine-made biscuits from England.
23—24	2 „ jams and biscuits ...	A. Murray and Sons ...	„	Biscuits, 10 to 12 annas per lb. Jams, Rs. 3 per 3-lb. pot ...	Very excellent biscuits, and equal in quality to those from England. Jams very superior.
25—26	2 „ wine and jam ...	T. Reynolds	„	Wine, Rs. 10 to 12 per dozen. Jams as above.	Wine of fair body and flavor, dry, and resembling a light Burgundy. Jams of good quality.
27	1 „ jam	G. McEwin	„	As above	Very fair flavor and manufacture.
28	1 „ jams, pickles, sauces ...	Mr. N. A. Chaucer ...	„	Jams as above. Pickles, 12 annas per bottle. Sauces, 8 to 12 annas.	11 samples, all of excellent manufacture and good flavor, equal to English.
29	1 „ wine	Dr. A. C. Kelly ...	Packing good; six bottles broken and ullaged.	No price can be given... ...	Light and unsuited for the Indian market; inclined to effervesce.
30—31	2 „ preserved mutton ...	Adelaide Meat Preserving Company.	Good	10 and 12 annas per lb. ...	Fresh, of good quality; the mutton well adapted for troops or ship use.
32—33	2 „ wine	E. J. Peake	„	... ...	Sent to His Excellency the Viceroy.
34	1 „ oranges	T. Hardy	„	4 annas per dozen	Oranges in sand, in good order.
35	1 „ of wine	„	„	Rs. 12 „	Wine Morooroo Reisling. A very good sound wine resembling Sauterne. Highly approved of.
36	1 „	„	„	„ 12 „	Brand—"Fine old white 1862." Sound, good body, flavor good, resembling Sauterne, but sweeter.
37	1 „	„	„	„ 12 to 14 per dozen ...	"Fine old red 1862." A sound wine of fair body and aroma, not unlike Pontac.
38	1 „	„	„	„ 15 per dozen	Morooroo Carbonet. Rich, very full flavor; good aroma and excellent quality, strongly recommended.
39	1 „	„	„	„ 15 „	Morooroo Verdeilho. A light pale dry wine not unlike Chablis. Recommended.
40	1 box of raisins	„	„	10 annas per lb.	Box of raisins in good preservation.
41	Case of wine containing two samples of different sorts.	E. J. Hector	„	Rs. 8 per dozen	"Montura 1868." Sound, rough and fair body, but not sufficient care taken in its manufacture. Montura 1867. Same class of wine, but somewhat clearer.
43	1 keg of wine	D. Randall	„	Rs. 10 or 12 per dozen... ...	Glenparya Vineyard. A very sound good claret.
44	1 case of wine	„	„	„ 12 or 14 „	„ „ A good sound wine carefully prepared, resembling Burgundy. Recommended.
45	Box of soap	W. H. Burford... ...	„	....	Of good quality; an excellent soap.
46	„	Tidmarsh & Co. ...	„	....	Ditto ditto.
47	Box of confectionery ...	A. Irwin	„	10 to 12 annas per large bottle ...	Excellent and prepared with great care.
48	„	„	„	„ „ ...	Ditto ditto.
49	Cordials	G. E. Martin	„	No value can be attached to these ...	Appear of good flavor, but not equal to those procurable in Calcutta.
50	Case of wine	G. White	„	Rs. 8 to 10 per dozen	A light wine, good quality, resembling hock.
51	„	„	„		
52	„	J. Gilbert	„	No value	"Segros Purvey Vale." A red wine of light body, not much approved of.
53	„	„	„	Rs. 8 to 10 per dozen	"Reisling Purvey Vale." A light wine, sound, and fair average quality.
54	„	„	„	No value	"Gouie Purvey Vale." Inferior quality, not approved of.
55	„	„	„	From Rs. 6 to 8 per dozen ...	Carbonet 1865, "Purvey Vale." A rough claret.
56—61	6 cases of cordials ...	J. E. Seppett	„	No value	Quality not adapted for Indian market, nor equal to liqueurs imported from England.
62	1 cask of wine	R. W. Ross	„	„	Frontignac. The quality of this wine is not understood, nor is it suited for the Indian market.
63	„	„	„	Rs. 12 to 14 per dozen	A red wine, a light claret of fair body and quality.
64	„	„	„	„ „	A very dry wine, and partakes of the character of the Amontillado Sherry.
65	1 tin of biscuits	J. Lavin	„	5 to 6 annas per lb.	A very excellent biscuit adapted for issue to troops and navy purposes.
66	1 case of mats	H. Alford	„	From Rs. 5 to 10 each... ...	10 samples of dressed wool of excellent preparation and well worthy of the attention of the mercantile community.
67 & 68	1 case of wine	Clark and Crompton ...	„	Rs. 6 to 8 per dozen	Red wine of fair body, resembling light claret.
69 to 88	20 bags of flour	W. Colman	„	4 to 5 annas per lb.	Of good quality.
89 to 92	4 „	W. Duffield & Co. ...	„	„	„
95	1 cask of beer	Haupen and Catchlove ...	„	Rs. 65 to 75 per hhd.	Of fair quality, but not equal to the ordinary run of English ale imports for the Indian market.
96 to 98	3 bags of flour	James Dawson ...	„	4 to 5 annas per lb.	Sound, fresh, and of good quality.
99 to 103	5 „	Verco and Lees ...	„	„	„ „
104 to 108	5 „	J. Dunn and Co. ...	„	„	„ „
109 to 118	10 „	Giles and Smith ...	„	„	„ „
119 to 128	10 „	Hart and Co.	„	„	„ „
129—132	4 cases of green fruit ...	R. D. Ross	Badly packed ...	4 annas per dozen	Oranges and lemons in pretty fair order, the rest all decomposed; the former of fair quality, but not better than the Sylhet oranges or country limes.
133—137	5 bags of flour	J. Darling	Good order	4 to 5 annas per lb.	Sound, fresh, and of good quality.
138—139	2 casks of beer	Haupen and Catchlove ...	Good	Rs. 65 to 75 per hhd. ...	1 porter and 1 ale sound and of fair quality; but to ensure a sale they should be much cheaper than English beer, which sells for Rs. 5-8 per dozen qrts.

Number of Packages.	Articles.	Wholesale Price of Articles in Calcutta.	Name of Firm by whom shipped.	Condition of Packages.	Remarks by Committee.
140	1 case of butter ...	... 8 to 10 annas per lb. ...	M. C. Davies ...	... Good ...	Very fresh and capital flavor, far better than usually supplied on board ship.
	Wheat.				
141—144		... No value ...		...	
145	1 case of wine ...	...	R. and J. Scott...	... " ...	Frontignac. Sour and unsuited for the Indian market.
146	1 " ...	... "	" ...	... " ...	Portugal, a rough nondescript sort of claret, not recommended.
147	1 " ...	... "	" ...	... " ...	An inferior description of claret ditto.
148—149	2 cases of oranges and lemons ...	... "	G. D. Young ...	... " ...	Contents for the greater part decomposed.
150	1 case of preserved meat	... "	H. B. Hughes ...	... " ...	Contents decomposed.
151	1 package meat ...	... "	L. Conrad ...	... " ...	Contents rotten owing to bad package. Preserved meat should be packed in tin.
152	1 " ...	... "	T. H. Parker ...	... "	Ditto ditto.
153—157	5 bags bark ...	... Price of babool bark is 4s. per md. of 82 lbs. Calcutta	W. Peacock ...	... In canvas ...	ditto.

The above rates have been ascertained to prevail with reference to the wholesale prices of stores, &c., in Calcutta, including transit charges, freight, &c., from England, which do not exceed those charges from Australia. The cost of freight from Adelaide is calculated as being about Rs. 30 to 35 per ton.

FORT WILLIAM, *The 8th March* 1870.

Proceedings of a Committee assembled at Fort William on 3rd March 1870, *by order of the Major-General Commanding the Presidency Division, to report on samples of South Australian produce received per ship "Jane Bell."*

Lieut.-Col. A. D. DICKENS, C.B., *Deputy Commy. Genl.* ... ... *President.*
" G. B. JENNINGS, *Commanding 2-19th Regiment* ... } *Members.*
" A. POND, *Bengal Staff Corps* ... }
Staff Surgeon E. L. HIFFERNAN, *2-19th Regiment,* attending the Committee.

In pursuance with orders received in Assistant Adjutant General's memorandum No. 46 of the 5th instant, the Committee assembled on the 18th idem, and on subsequent dates at the Commissariat Godowns, Baloo Ghaut, and proceeded to examine the sample cases laid out for their inspection. They beg to attach a detailed report of the result of their examination, and they also desire to make the following remarks in connection with the various classes of articles which have been most carefully tested and inspected by them.

Wheat.

The samples of wheat inspected were of a fine white uniform grain, equal in quality to the best Patna Doodia wheat, and far superior to the wheat usually sold in the bazaar used for making flour by the Commissariat Department.

After grinding a maund of 82 lbs. the following results were obtained, which, in comparison with a maund of ordinary bazaar wheat, contrasts as follows :—

	Australian Wheat.		Indian Wheat.	
	Srs.	Ch.	Srs.	Ch.
Bread stuff	29	14	31	7½
Meat or atta	1	1½	1	9¾
Bran	8	4	6	1¾
Loss	1	12½	0	13
Total ...	40	0	40	0

The value of the wheat is reported by the Executive Commissariat Officer to be Rs. 4-14-6 per maund.

Flour.

The flour appears of excellent quality and color. It has stood the test of coming out to India packed in canvas bags, and appears sweet and fresh, a portion of it was made into bread, and the loaves were very generally approved of by the Committee, who considered them superior to the bread supplied to the troops, contrasted with Indian flour as manufactured by the Commissariat Department. The result is as follows :—

	Australian Flour.	Indian Flour.
	No.	No.
No. of loaves produced by 1 maund of 82 lbs. ...	103	103

This flour would sell readily at Rs. 5-8 to 5-12 per maund in the market.

It is nearly equal in quality to the best American and Cape flour. Both the latter are always packed in barrels, and for India this appears the best method of preserving flour.

Ale and Porter.

Several bottles of ale and porter were tasted by the Committee. They all varied in quality, some of them being sour and hard to the taste. The ale in some instances appeared to be over-ripe and unfit for use, the quality on the whole was doubtful, and the opinion of the Committee is that the bottled ale and porter are not equal to that usually imported for the Indian market and would not sell. The two casks of beer shipped by "Haupen and Catchlove" appeared to be of better quality than that in bottle, resembling in taste and character the Hill beer. To ensure a sale, it would have to be sold at a much lower rate than English beer. The latter can be obtained from Rs. 65 to 80 per hogshead.

Biscuits.

All the samples of biscuits presented to the Committee appeared of excellent quality and carefully manufactured, very sweet in taste and moderately priced. They were considered equal in quality to the machine-made biscuits received from England.

Jams.

The samples of jams tasted by the Committee were much approved of, being carefully prepared and containing a good flavour of the fruit. As a rule they are superior to those usually sent for the Indian market, and very much cheaper. The samples supplied by Mr. N. A. Chaucer were, if anything, the best, but all seemed to be worth the attention of the Calcutta provisioners.

Wines.

The Committee tasted a sample of every description of wine sent out by the firms mentioned in list received with letter No. 236 of 14th January, from the Under Secretary to the Government of India in the Home Department, and have expressed a separate opinion in the detailed statement attached, to which reference is solicited. The wines all partake much of the same character; the red wines resembling Burgundy, light clarets, and Cape Pontac, whilst the white wines are all more or less connected with Hocks and Santernes. Most of them appeared to be very sound with a good flavour of the grape. Amongst the best were those shipped by "T. Hardy." His "Morooroo Carbonet" and Morooroo Verdeilho" were both excellent wines, the first resembling a full-bodied claret or Burgundy, and the other a white wine not unlike "Chablis." The prices fixed on the wines seem moderate, and it is not improbable that considerable quantities might be sold. It is, however, not an easy matter to decide upon the prices which such wines would realize in the Calcutta market, as there are none resembling them unless they be Greek and Hungarian wine.

The very light wines it would be useless to import, but a few such as those above mentioned and the following might find a ready sale when once known and appreciated by the Indian public. Actual consumption would be the best test, provided prices were low and within the means of the public. The Committee desire to recommend the wine in cask by "R. W. Ross" as being of good quality and body. The same can be said of a keg of wine shipped by D. Rundall, which was considered to be a very excellent claret. His other wines were also much approved of. For hospital purposes, the Committee do not recommend these wines.

Pickles and sauces.

The pickles and sauces submitted appeared of fair quality but not equal to English importations, and it is doubtful if it would be advisable to send these articles to India, unless there was a marked improvement in them.

Preserved meats.

The Committee examined very carefully the samples submitted by the Adelaide Meat Preserving Company. The contents of the tins were fresh and in good preservation, the mutton was of good quality and quite equal to the English preserved meat. The packages of preserved meats shipped by H. B. Hughes, L. Conrad, and T. H. Parker, owing to their being put up in canvas, arrived in a putrid state. All preserved meats should be hermetically sealed. The Committee recommend greater attention and care in this respect.

Green fruits.

Several cases of oranges and lemons were opened, and a large proportion found to be in a decomposed condition, perhaps one-third in each case were in fair order; but the Committee are of opinion that it would be useless to attempt the importation of fresh fruits, as those grown in India are quite equal to the Australian produce.

Confectionery.

Two boxes of confectionery shipped by A. Irwin were duly examined by the Committee, who considered them to be of excellent quality and manufacture.

Cordials.

These were not approved of, although those from the house of G. E. Martin were better than others. The cordials as a rule were badly manufactured, and were not equal to the same description procurable in Calcutta. In justice to the shippers, the Committee would observe that some of the cordials had never been heard of by them, and possibly required to be better understood to be appreciated.

Soap.

Two cases of soap,—one shipped by W. H. Burford and the other by Tedmarsh and Company,—were inspected. The soap was ordinary, domestic, yellow bar soap, and well adapted for household purposes. It looked quite equal to that usually sold in Calcutta.

Butter.

A case of butter from M. C. Davies arrived in excellent order, very fresh and sweet, admirably adapted for ship use, being fresher and purer than any imported from other countries, and procurable in Calcutta.

Mats or dressed skins.

A case of these shipped by H. Alford contained some beautiful specimens of dressed sheep skins. Some of the fleeces for fineness of texture and length of wool were quite remarkable. Great care had evidently been bestowed in their preparation, and the Committee have no hesitation in saying that they think them equal, if not superior in quality, to anything of the sort they have seen in this country.

Bark.

The sample of bark examined seems to be of good quality, with a fair average amount of tanning quality. The price of bark used for tanning leather in Calcutta is about 4*s.* per maund of 82lbs.

Packing.

Generally the packing of the several samples of Australian produce has been carefully attended to, but the Committee recommend that flour should be sent out in barrels, as less liable to injury from damp or other causes than when packed in canvas bags. Many of the articles inspected by the Committee were injured from the fact of their being badly and unsecurely packed.

The samples generally as regards quality and price contrast favorably with the usual run of importations from the English and other markets.

The following annexures are attached to this Report:—

1.—Division No. 56, dated February, directing the assembly of Committee of Affairs on Australian Produce.

2.—Letter No. 645 of 5th February 1870, from the Adjutant General of the Army, to the Major-General Commanding the Presidency Division.

3.—Letter of February 1870 from the Adjutant General of the Army, to the Commissary General.

4.—Printed letter No. 1342 of the 28th January 1870, from the Assistant Secretary to Government of India in the Military Department, to the Adjutant General, with printed correspondence detailed in letter from the Chief Secretary to Government, Simla Australia to the Hon'ble Secretary, Government of India.

5.—Letter dated 10th November, from the same to the same.

6.—Letter dated 10th November from Sir James Fergusson, Governor of South Australia, to His Excellency the Viceroy and Governor General of India.

7.—Detailed list of samples.

SUPPLEMENT TO
The Gazette of India.

SIMLA, SATURDAY, MAY 28, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

THE LADAK TRADE DURING 1869.

From DR. H. CAYLEY, on special duty at Ladak, to the Secretary to the Government, Punjab.

I HAVE the honor to submit the following report on the subject of the Ladak trade during the past season.

2. I have great satisfaction in being able to repeat what I stated last year as to the readiness displayed by the Cashmere officials in Ladak to work with me and assist me in the furtherance of my plans, and the Wazir, Syud Ali Akbar, keeps up his character for justice and fair dealing towards the traders. I found the Maharaja of Cashmere also most ready to listen to all complaints, and to redress all grievances of the traders which I have had occasion to bring before him; and I can confidently say that, as a rule, the merchants passing through Ladak have met with justice and fair treatment; and in one or two instances, when merchants have brought specific complaints against the former Thanadar of Ladak of robbery and oppression, the Maharaja has ordered restitution to be made. I am in hopes also that the great influence in Ladak of the Wazir Labs Ju, against whose agents such repeated complaints have been made, has been broken through. The Wazir has always kept agents in Ladak, who, on the strength of their master's name and power, have been greatly instrumental in robbing and oppressing other merchants, and the Lé officials have seldom ventured to interfere. This year an agent of Labs Ju, named Saij Ram, attempted various acts of oppression by threatening to carry

merchants to Cashmere as prisoners, and in other ways; and finally he actually seized and made prisoners three or four Yarkandi merchants, and they were only released on my remonstrance. The Wazir of Ladak being afraid to interfere, I reported the matter at once direct to the Maharaja; and he ordered Saij Ram to be immediately made prisoner and removed from Lé, and has given instructions that no agent or servant of Labs Ju is ever again to go to Ladak. This proves the evident desire of His Highness to remedy the abuses in Ladak when brought to his notice.

3. At the latter part of the season, Kazi Kutub Deen was again sent up by the Maharaja as Vakeel; and I can again speak in the highest terms of the straightforwardness and openness he has displayed in all his dealings, and of the assistance he has rendered in carrying out measures for the benefit of trade. The Kazi is, as I have before mentioned, a British subject, and was rewarded by the British Government for his services during the Indian mutiny.

4. A very considerable reduction was this year made in the duties on goods passing through Cashmere and Ladak. The former *ad valorem* duty of five per cent. was reduced to four per cent. on all goods passing in transit through the Maharaja's territories, the same rate being charged on all the different routes.

The total amount of customs duties collected during the year in Lé was Rs. 16,600, or somewhat less than in 1868, when it was Rs. 21,400. This is chiefly due to the exports from Ladak to Cashmere (Tables E. and F.), on which the duties are nearly 12 per cent. *ad valorem*, having been much less than in the previous year.

By the arrangements now agreed upon by the Maharaja of Cashmere, transit duties are to be entirely abolished on all goods passing through Cashmere territories between the Punjab and the countries beyond Cashmere. The merchants who have heard of this are highly gratified by the concession, and a very great impulse to commerce may be looked forward as a result of the measure. This reduction of duty was very necessary for the development of the trade with Central Asia; for (as I pointed out in my reports of the two previous years when recommending the abolition of transit duties) even a four or five per cent. duty pressed most heavily on a trade carried on between regions so far distant from each other, and over such a difficult and dangerous line of country as is presented by the broad and rugged expanse of the Himalayan Mountains.

5. There are still many obstacles and difficulties to be overcome before this trade can be largely increased, or can reach the limit of which it is capable.

One of these is the bad state of the roads, all of which might, at very moderate labor and expense, be made perfectly adapted to the requirements of the trade: only horse-paths are needed, which might, in a few years if necessary, be made suitable for camels. Even in our own Districts of Kullu and Lahoul the roads greatly need improvement, and are still described as being in some places highly difficult and dangerous for laden animals, and the necessary repairs are executed very slowly. Much has, however, been done in the last two years. The Rotang Pass, though only 13,000 feet high, still offers great difficulties to the passage of beasts of burden.

In Ladak generally the gradients are less steep and the roads easier, though they are totally neglected. Comparatively little snow falls, and it melts very gradually, so that the roads are not destroyed wholesale by the avalanches and rush of water in the spring as occurs South of the high mountain ranges. There are nevertheless parts of the road between Lahoul and Lé where improvements are urgently called for. During the latter part of the season the Cashmere authorities were very active in improving the route from Lé *viâ* the Changchenmo Valley and Pass, and were erecting serais for shelter, and promised to establish grain depôts at certain points.

6. Paucity of carriage is another great difficulty experienced by the traders in traversing the thinly-inhabited mountain tracts. This is chiefly felt

in Kullu and Lahoul. Between Ladak and Yarkand the "kiraya kash" of Yarkand, who possess an unlimited number of excellent baggage horses, are able to meet all requirements in this respect; but between Lé and the Punjab the want of carriage is very serious, and the traders feel no certainty of being able to carry their goods through Lahoul without great delays, which are of course matters of much inconvenience and loss. Owing to the arrangements made last year by Mr. Forsyth, the want of carriage was this season much less felt, but still there was not enough carriage for the merchandise that did pass through, and any increase in future years would require a proportionate increase in means of transport on the road.

A new regulation has been recently made that the loads to be carried by hired ponies or yaks through Lahoul are to be limited to two maunds (160 lbs.) for each animal, instead of three maunds as formerly. This rule, however necessary it may be, will press heavily on the Yarkandi merchants, who already have to pay much more highly for carriage in Lahoul than on any other part of the road between Yarkand and the Punjab. The nominal rate is eight annas per stage of 10 to 15 miles for each horse-load, which is reasonable enough, but the traders are made to pay Rs. 13 from Kullu to Rupshu, in Ladak, which is at the rate of one Rupee per stage, and the reduction in weight will add 50 per cent. to this cost of carriage, unless rates are reduced in proportion. The great difficulty, however, to the Yarkandis will be that all the packages of goods that come over from Central Asia are so made up that each horse-load weighs three maunds, or from 240 to 250 lbs., that is, every package of charas, silk, pushm, &c., weighs 120 lbs.—this being the universally acknowledged weight of a half horse-load through all Thibet and Central Asia; and for the merchants to have to open and re-pack their goods on reaching Lahoul would entail most grievous loss and expense. The point is, I think, deserving of consideration, and requires that some fair arrangement should be made to prevent the merchants from being losers on account of the new rule, as years must elapse before the Yarkandi merchants would be likely to alter the weight of their loads of merchandise from its present recognised standard.

The profits gained in the Districts through which the trade passes, by the supply of carriage, are enormous. The people of Lahoul alone must have received nearly Rs. 9,000 on this account alone during the season.

It is probable that every year, now that the merchants are beginning to pass through direct from Yarkand to the Punjab, they will more and more employ their own baggage animals instead of trusting to finding carriage on the road. In a short time, too, the Yarkand "kiraya kash" will probably arrange to carry merchandise right through to Kangra and back. I have little doubt that, in the course of a year or two, camels will come over from Yarkand to Ladak; but until the road through Lahoul and over the Rotang is rendered easier, they will hardly be able to get to the Punjab.

7. Insufficiency of supplies, as grain or fodder, may seriously impede the opening out of the direct road from Lahoul by the Changchenmo Pass and Valley as but little cultivation and few villages occur along the line of route, and this want may force the traders round by Lé. Supplies are, however, plentiful enough in other parts of Ladak, and it is only required that, for a time at least, the Lé authorities should arrange for the maintenance of depôts at one or more suitable places along the Changchenmo route in Ladak, where such supplies could always be procured at a fair rate, as is now done on the Karakoram route, and I have no doubt the Cashmere Government would readily agree to this.

8. There is a general desire on the part of most of the merchants to go by the Changchenmo route to Yarkand in preference to the Karakoram, which is so extremely difficult and dangerous, if they feel confident that no objection will be made by the Cashmere authorities. As I have before brought to notice, the Ladak authorities did at first tacitly oppose the opening of the Changchenmo route; but at the latter part of the season this opposition was entirely abandoned, and they exerted themselves to the utmost to assist and encourage the traders who would consent to go by it.

The advantages of the route by Changchenmo over that by the Karakoram have so often been pointed out that I need not again refer to them. There is a general report of a far easier route through Rudok further to the Eastward. It however runs through Lhassa territory, and is completely closed by the exclusive policy of that country; and as Lhassa seems to have practically thrown off the Chinese yoke, little advantage can be expected from the interference of the Government of China.

9. In the accompanying Tables will be found a detailed list of the imports and exports of Ladak during the year,—the different routes being shown separately.

A comparison of the trade returns of each of the three last years shows a steady progressive increase, which is entirely due to the improved state of the roads, and the measures taken for the proper protection of the traders in Ladak and Cashmere:—

The total value of the imports into, and exports from, Ladak during the year was	...	...	...	Rs.	12,91,587
In 1868 the amount was	...	...	...	„	10,38,401
And in 1867	...	...	...	„	5,54,945

These figures include the trade with Cashmere and Chanthang, as well as that between the Punjab and Central Asia, and comprise the entire imports and exports registered at Lé, so that the actual value of the goods entering Ladak must be estimated at about one-half the above totals.

Besides the merchandise shown in the returns nearly 900 horses and mules, and large amounts of gold and silver, were brought over from Yarkand.

This year's increase of only two and a half lakhs of Rupees appears much less in proportion than that of the previous year, when the trade nearly doubled; but, omitting entirely the trade with Cashmere and Chanthang, and estimating only the *through* traffic between Hindustan and Central Asia, the increase is hardly less than it was in 1868; thus—

		1868.		1869.
Imports into Ladak from Yarkand	...	... Rs.	1,58,057 Rs.	2,78,799
Ditto ditto ditto Punjab	...	... „	2,06,110 „	1,95,957
Exports from Ladak to Yarkand	...	... „	1,23,999 „	1,93,323
Ditto ditto ditto Punjab	...	... „	1,10,117 „	3,16,887
	Total Rs.		5,97,483 Rs.	9,84,996

showing an excess of nearly four lakhs of Rupees in the *through* traffic of the present year over that of 1868.

10. The increase in the trade consists entirely of goods brought over by Yarkandi merchants from Yarkand, who have flocked over in unusual numbers. The merchandise in their hands was worth nearly three lakhs, besides about 900 horses and mules for sale, and a very large amount of gold and silver in the form of gold dust, gold coins (tillas), and silver ingots (kurus or yambus). In addition to the regular traders, nearly 800 pilgrims,—men, women, and children and many of them people of wealth and position,—have passed through Ladak to go to Mecca. They have nearly all brought considerable sums for their road expenses, and to trade with on their return through India. I hear that in Amritsar and other places large amounts of gold and silver jewellery and precious stones have been displayed by them. Among these pilgrims I may mention—

Mirza Alam, a nephew of the Kushbegi;

Ayi Khan, widow of one of the sons of old Habeeb-ollah Khan of Khotan, and who has large estates and great wealth;

Ibrahim, the chief Moulvi of Kashgar, with a large following of Moulvis and pupils;

Mahomed Amin, and two or three more of the chief merchants of Kashgar.

I believe that fear of the advance of Russia, and probable troubles in Yarkand, has helped to drive over so many wealthy people, as they wish to be out of the way till affairs look more settled.

11. The traders from the Punjab have come in rather fewer numbers than last year, and it seems to suit them better to purchase the productions of Yarkand in Kangra or Amritsar than to make the long and arduous journey to Ladak or Yarkand. The merchants of the latter country are much more bold and enterprising, and are not easily deterred by dangers or difficulties. Some of the Punjab merchants have, however, displayed a very adventurous spirit; and among them I can especially mention Tara Sing, Sikh merchant of Rawulpindee, who last year most courageously went over to Yarkand with a large stock of goods and returned this year in safety, and highly pleased with the profitable results of his expedition. In Yarkand he was treated with distinction; for, although both ruler and people are strictly Mahomedan, they are far too mercantile in spirit to show intolerance to people of other creeds; and Hindus, who have lately gone to the country, have met with no interference on account of their religion; and, as is well known, two English travellers, who went over last year, were treated with kindness and distinction. There is evidently a strong desire on the part of the Kushbegi, as well as of the Yarkandis generally, to be on friendly terms with India, and to promote commerce and free intercourse between the two countries. The present ruler is fully alive to the advantages of trade, and endeavours to conciliate the foreign merchants entering his territories. The only people who try to close the Yarkand market to the entrance of Indian traders are the Cashmeerees, who unremittingly endeavour, by false accusations and lying reports, to throw suspicion and discredit on the motives of the merchants from Hindustan, and in several cases they have brought them into serious trouble and danger. It is to be hoped, however, that the influence of the Cashmeerees, resident in Yarkand, will by degrees be entirely destroyed.

12. The merchandise passing through Ladak differed but little from that described in previous years. I may, however, notice from Yarkand,—

1*st*.—Raw silk, of which in 1867 only one maund (80 lbs.) was imported from Yarkand, rose in 1868 to 47 maunds, and in 1869 to 127 maunds.

The trade in silk is likely to increase enormously, as the supply seems unlimited, and it is getting known that it will obtain a market. Hitherto the Amritsar merchants have despised the Khotan silk because of its apparently coarse, hard fibre, which they do not know how to soften and prepare; and they prefer the fine delicate Bokhara silk; but, for the European markets, the Khotan silk is of more value, as it can be made up into richer and more substantial fabrics. I have in former years described how universally silk-worms are reared and silk produced in Khotan.

2*nd*.—Silk fabrics, some of them of beautiful texture and rich colors, have this year come over in considerable quantity.

3*rd*.—Pushm was imported in much less quantity than last year, chiefly owing to the Cashmeeree market being overstocked. More than the usual amount was exported to the Punjab; but the merchants as yet feel no certainty of being able to sell it at a fair price, as it is current among them that the Amritsar shawl merchants will not take fine pushm, but prefer the coarse wools, which are cheaper.

4*th*.—Bhung or charas was less in quantity than last year, and of course the demand for this drug is strictly limited. The quality of the bhung was, however, far finer than anything ever before seen in Ladak, and fetched double the usual price, the reason being that the finest charas, which is grown at Yanghissar, and goes usually by Kokand and Bokhara, was this year brought up by merchants coming to Ladak on account of the high duties and unsettled state of road through Kokand and Russian Turkistan.

5*th*.—Tea comes in large quantities every year from Lhassa: it is all brick tea, and is chiefly consumed in Thibet and Cashmere. This year a few bricks of tea, as samples, went over to Yarkand. The value of the tea from Lhassa was Rs. 86,000, and the selling price in Lé Rs. 2-4 per pound.

6*th*.—Felt, rugs, and carpets of Khotan and Yarkand make were brought over in considerable quantity to the value of Rs. 9,000, and I believe sold well at Palumpore fair.

7*th*.—Gold dust and silver ingots (kurus or yambus) were largely imported —the former to the value of Rs. 47,000, and the latter Rs. 57,500, besides gold coins (tillas). The above forms but a small portion of the gold and silver actually in possession of the merchants and pilgrims, and no accurate estimate can be formed of the amount they really bring over. The universal accounts may, I believe, be relied on that the gold fields of Khotan are practically inexhaustible, and the gold is obtained without any great labor or difficulty.

8*th*.—Great numbers of other articles were brought from Yarkand in smaller quantities.

9*th*.—A few Russian articles, as broad cloth, gold thread, and embroidery, beet, sugar, &c., came in very small quantities.

13. From Chanthang most of the goods, except musk bags, are for consumption in Cashmere and Ladak.

This year 450 tolas of gold dust (Rs. 5,850) were for the first time brought from the Lhassa gold fields.

14. The total value of the imports from Yarkand and Chanthang during the year were,—

		Rs.
Yarkand		2,78,799
Chanthang		1,33,788
	Total ...	4,12,587
In 1868 these values were		1,58,057 from Yarkand
		1,39,900 „ Chanthang
	Total ...	2,97,957

15. The imports from the Punjab were much what have been described in previous years,—cotton goods, tea, spices, red leather, sugar, drugs, indigo, &c., forming the staple articles.

The total value was Rs. 1,95,957, or about Rs. 10,000 less than in 1868. Of this 1,085 maunds, worth Rs. 1,22,673, came by the Kullu route; 71 maunds, worth Rs. 8,533, by Rampore; and 649 maunds, worth Rs. 64,751, by Cashmere; the latter almost entirely in the hands of traders of Cashmere.

1*st*.—*Tea*.—Only 69 maunds of this were imported to the disappointment of the Yarkandis, who were all crying out for tea, which is now the great want of the country. The prices obtained by Tara Sing in Yarkand for Kangra green tea varied from Rs. 4 to Rs. 7 per pound. In Yarkand and the whole of Central Asia the desire for tea is universal, and this want can now only be supplied from India.

Nearly all the Yarkandi merchants have this year gone to the Punjab to buy tea, and seem to have made large purchases by barter at Palumpore fair. The tea trade promises well for the future.

2*nd*.—*Indigo* was again in great demand, and the new Aniline dyes, of which a few samples went over to Yarkand last year, were much sought after.

3*rd*.—*Otter skins* are much prized, and fetch in Lé Rs. 4 and in Yarkand Rs. 6 each, and even more; during the season over Rs. 35,000 worth (Ladak value) passed through Lé.

4*th*.—*Cloths and Callicos* of all kinds, plain and fancy muslins, merinos, chintz, &c., of English manufacture, besides valuable velvets, brocades, &c., were as usual largely exported to Yarkand.

16. The exports to the Punjab by the different routes were as follows:—

	Rs.
By Kullu 1,568 maunds, value	1,90,472
„ Rampore 89 „ „	6,035
„ Cashmere 327 „ „	1,20,353
Total 1,985 maunds, value ...	3,16,860

The articles generally corresponded with the imports from Yarkand.

17. The exports to Yarkand and Lhassa again, in great measure, are similar to the imports from the Punjab. The value of the exports to Yarkand was Rs. 1,96,323, and to Chanthang or Lhassa Rs. 57,889.

18. The local trade between Ladak and other Cashmere territories was somewhat less than 1868. The imports into Ladak amounted to Rs. 40,000, the exports Rs. 71,919.

19. As before noticed, the increase in the trade has been entirely owing to the arrival of a large number of Yarkandi merchants who chiefly went on, through Ladak, to the Punjab, and must of course return next season with a corresponding amount of English manufactures and Indian products.

It is probable that in future years the precious metals and raw silk will be imported in greatly increased quantities, whilst the bhung, felts, &c., will remain nearly the same. The import of pushm will depend chiefly on the readiness displayed by the Amritsar and Punjab shawl merchants to take the fine *Turfani* wool.

20. From the Punjab a great increase may be expected in the exports of tea, piece-goods, brocades, indigo, and other dyes, skins and leather, and above all in arms: English guns, rifles, and pistols, are in great request, and breech-loaders are especially desired for men of rank. This year 25 guns and rifles, and 11 pistols of English make, were taken to Yarkand.

21. The entire number of people, horses, and loads of merchandise which arrived in Lé during the season in connexion with this trade, were,—

Traders 1,223, pilgrims 793, loads of merchandise 2,108, horses for sale 829, mules 94, asses 234, sheep 412. The people of the country necessarily derive great profits by supplying the wants of so large an influx of foreigners, and the country itself is of course equally benefited.

22. The annual fair at Lé was held in September and largely attended, and the display of merchandise of all kinds was very considerable. Valuable prizes and rewards were given by the Maharaja and liberally distributed among the merchants, and the fair was a decided success.

23. I beg to bring to the notice of Government the valuable services rendered by Tara Sing, of Rawul Pindee. Tara Sing has been for about 15 years engaged in trade with Ladak; and during the first two years of my residence in Lé he gave me great help by openly bringing forward the complaints of the traders, and explaining the difficulties under which they labored at a time when the merchants generally were afraid to speak out. Last year, at my suggestion, he, in spite of much opposition, went over to Yarkand, feeling of course very anxious as to how he would be treated on account of his religion. He was, however, very well received, and made a most profitable speculation. He has made friends with many of the officials and merchants of Yarkand, and has induced many of the latter to go to Palumpore fair. Tara Sing also made himself useful at the fair as the Commissioner of Jullundhur testifies, and he has in many ways been greatly instrumental in developing the Yarkand trade, and I

consider that he is deserving of great consideration, and his services will, I trust, meet with some mark of approval from the Government. Tara Sing is very desirous of the privilege of being allowed a chair on public occasions, which small mark of honor will, I hope, be granted to him.

24. Another merchant, named Bhoniad Ali, who was formerly a Moonshee employed under me at Lé, has this year gone to Yarkand, and has also made himself useful by sending news, and in other ways; and from his intelligence and industry he will, I feel sure, be able, on his return, to afford most valuable information to the Government; and such conduct will, I hope, be deemed worthy of encouragement and reward.

25. I beg also to recommend to your notice the conduct of Kazi Kutab Deen, Vakeel of the Maharaja, whom I have before mentioned. The Kazi has always acted in a spirit of openness and fairness, and has honestly endeavoured to correct the abuses complained of in Ladak, and has been most zealous in promoting trade; and as he is a British subject whose services have already been rewarded, I think that he is deserving of some further mark of approval at the hands of Government.

26. The course of events in Yarkand, and the changes that have taken place during the last 12 months, may be thus briefly summed up.

The Kushbegi, or, as he now styles himself, the "Ataligh Ghazi," is still in undisputed possession of the throne of Yarkand and all the Provinces conquered by him, and no outbreak of any kind has occurred in his dominions to disturb his rule. He still seems to be popular with a large class of his subjects, and especially with the mercantile community, which he encourages and protects. His army keep faithful, but the later accounts describe the troops as unsettled on account of the near approach of the Russians, and the fear of an invasion by that, in their eyes, irresistible power. This feeling has spread through the whole country, and is maintained by the present relations of Russia to the previously independent countries of Bokhara, Kokand, and Andijan, which have, as the people express it, now become Russian; for, although still under their own rulers, and not occupied by Russian troops, these States seem to have entirely submitted to Russian influence and counsels.

In the autumn of 1868 two Russian officers came to Kashgar, but were stopped before entering the town, and were escorted back again as quickly as possible over the frontier. A Russian merchant also arrived, but he too was sent back, and not allowed to trade. The envoy, whom the Kushbegi sent to Russia, returned about the same time without any answer to his requests, and no negociations were entered on between the two countries.

On the Narain River, about five marches from Kashgar in the direction of Almati, the Russians have built a fort and a bridge over the river. The Kushbegi has also strengthened and strongly garrisoned his advance post at Artush, and built two or three new forts on the frontier to protect the road to Kashgar, the two forces being separated by a distance of about two days' march. The Kushbegi has all along been anxious to avoid all intercourse and to keep clear of any dispute with the Russians, and gave the strictest orders to his troops to abstain from any act of hostility, unless actually attacked. The people of the country called Nogai, a semi-Tartar race of Mahomedans, who have settled under Russian rule, continued to pass as traders, &c., between the two countries. In July some slight collision seems to have occurred between the opposing forces, confined, however, apparently to small foraging parties. Directly this came to the ears of the Kushbegi, he re-called the commandant from the frontier, and, it is said, had him beheaded for breaking his orders, and at once collected reinforcements from Yarkand, Khotan, and all parts of his dominions, and hurried every available man to the frontier, and sent his son and chief officers in command. In the course of a few weeks he despatched over 12,000 men. The Russians also largely reinforced their garrison on the Narain, and advanced across the river to within four marches of Kashgar. No further hostilities are reported, and the Kushbegi seems again endeavouring to open negociations, and is said to have sent his son as an envoy. The Russians are always said to demand the right of a settlement in Kashgar, and a road through Yarkand, which the Kushbegi knows to mean loss of independence to himself. The Russian force is said to number 3,000, of which about 600 are regular Russian troops.

27. From the side of Kokand it is reported that Buzrug Khan, Tora, who was formerly ruler in Yarkand, but was deposed by his own minister, the present Kushbegi, and who, two years ago, came down through Ladak to the Punjab, has returned to Kokand, and is planning an attempt to recover the throne of Yarkand, and that he is assisted, and in fact supplied with troops for this purpose, by Khudayar Khan of Kokand, who is a bitter enemy to the Kushbegi. At present no attack has been made.

In July or August a large caravan of merchants reached Kashgar from Kokand after an interval of more than a year, during which the road was closed: several Bokhara merchants came by it. All describe the great risk and almost impossibility of trading through Bokhara and Russian Turkistan, owing to the unsettled state of the country and the excessive duties which, on all English goods, are quite prohibitive.

28. In the early part of last season the Kushbegi decided to send an envoy to India, and told Mr. Shaw in Yarkand that the envoy should either accompany him or follow immediately. An envoy was appointed and all preparations made for his journey, but he was never sent, and the anxiety of the Kushbegi on account of the near approach of the Russians, and other circumstances, stopped the plan for the time. Now, however, news has just come that two envoys have just reached Ladak, and may be expected here shortly,—one is sent to the Maharaja of Cashmere, and the other to the Government of India.

The Kushbegi strongly desires to be on friendly terms with us, and this year all the Hindustani merchants who have visited Yarkand have been well treated, and even a surveying Moonshee, who was discovered there in disguise, when he explained that he was employed under the British Government, was set free and allowed to leave unmolested.

29. In the East there have been some disturbances among the people of Ili and Rumchi (Orumchi). Both these Districts are independent of Yarkand, and were formerly under the Chinese; but in the Tangani rebellion the Chinese were entirely driven out, and their garrisons generally massacred. In Ili the *Toranchis* are now in power, and the *Tunganis* rule in Rumchi, and they have apparently been fighting among themselves; both these people are Mahomedan and descendants of the followers of Timur, who intermixed with the Chinese population,—the Toranchis settling in Ili, while the Tunganis spread over the whole of Eastern Turkistan. It is reported that four envoys arrived from China, and were presented to the "Daoud Khalifa," the Tungani Ruler of Rumchi, who has sent back to Pekin to ask if the men were really sent as envoys, or if they were only come as spies. Since then a Chinese force is said to have reached Rumchi for the purpose of re-taking Yarkand, and that the Tunganis have joined them; this is, however, very improbable. It is true that a *kafila* of China tea has arrived at Yarkand, but in all probability it has only come from Kara Shahar, where it has been in store for several years since the Chinese were driven out. There are said to be enormous stores of tea in the ruined city of Kara Shahar. This city is two marches beyond Koila, the most Easterly town of the Kushbegi's dominions, and Rumchi is eight marches further to the East on the main road to China.

30. The latest news received from Yarkand is dated October 26th, just after the envoy had left for Ladak.

No. 32.

INDIA OFFICE;
London, the 7th April 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

MY LORD,—I forward herewith, for the information of your Excellency in Council, a copy of a despatch* from the Governor in Chief of the Windward Islands, with accompanying correspondence,† transmitting a very favorable report for the first half of 1869, on the immigrants in the Colony of Saint Vincent. I also enclose a copy of a letter‡ addressed by the Chairman of the Emigration Board to the Colonial Office, reporting upon the above papers, and of a despatch from the Secretary of State for the Colonies to Governor Rawson.

* No. 700, dated 3rd December 1869.

† Dated 19th January 1870.

‡ No. 87, dated 26th January 1870.

I have the honor to be,

MY LORD,

Your Lordship's most obedient, humble Servant,

ARGYLL.

From R. W. BAWSON, ESQ., Governor of the Windward Islands, to the Right Hon'ble EARL GRANVILLE, K.G., &c., &c., &c.,—No. 700, dated Barbadoes, the 3rd December 1869.

I HAVE the honor to forward copy of a despatch from the Lieutenant-Governor of St. Vincent,* enclosing the report of the Immigration Agent of that Colony for the half-year ended 30th June last.

* Lieutenant-Governor Berkeley, No. 658, 24th September 1869.

2. I also forward copy of a despatch* which I wrote to Mr. Berkeley on the subject of this report with the original of his reply, and of the Agent's explanations.

* Governor Rawson, No. 873, 28th September 1869.

3. Your Lordship will perceive that the high-flown language of the Agent provoked, in my mind, a doubt as to the correctness of his statements. Mr. Berkeley's report,* however, and the explanations given of the special causes of the Agent's unusually frequent visits, have removed the grounds of my suspicion.

* Lieutenant-Governor Berkeley, No. 689, 23rd November 1869.

But the intimation of it may be serviceable in suggesting a greater caution to the Agent and an increased vigilance to the Lieutenant-Governor in superintending the operations and in accepting the reports of his somewhat euphuistic subordinate.

From the HON'BLE G. BERKELEY, Lieutenant-Governor of Saint Vincent, to the Governor of the Windward Islands,—No. 658, dated Saint Vincent, the 24th September 1869.

I HAVE the honor to transmit to your Excellency the Immigration Agent's Report for the half year ended 30th June last, with several schedules attached.

2. These documents will, I trust, exhibit a continuance of that satisfactory position which has characterized the system of Indian immigration since its commencement in this Colony.

3. With regard to the Agent's comments upon the inadequacy of the salary attached to his office, under existing circumstances, I would beg to remark that in compliance with the permission granted in the Duke of Newcastle's despatch No. 9 of the 18th September 1859, the Immigration Agent holds his office as such in combination with another civil appointment, viz., that of Clerk of the Legislative Assembly, the salary of which is £168 per annum, so that the present Officer is in receipt from the Treasury of an income of £268, besides an allowance of £50 for horse keep.

I am not, however, at all prepared to deny that his duties as Immigration Agent have greatly increased since his appointment in 1864.

From R. W. RAWSON, ESQ., Governor of the Windward Islands, to the Lieutenant-Governor of Saint Vincent,—No. 873, dated Barbadoes, the 28th September 1869.

I HAVE received your Excellency's despatch No. 658 of 24th instant, enclosing the report of the Immigration Agent for the half year ended 30th June last.

2. I have read this report with interest. It gives a very favorable account of the condition of the Indian Immigrants, but one so highly-colored and extravagant in several respects that I can neither accept it nor forward it to the Secretary of State until it is confirmed by yourself, after enquiry into some of the principal statements. It was an act of over-indulgence on your part in receiving and forwarding it without similar comments.

3. I adopt this course in the interest both of the Agent and the Planters. If the present report were to be subjected to the experienced criticism of the Commissioners of Emigration, it would provoke suspicion if not a formal enquiry which, though the result might be favorable to Mr. Brown, would be disadvantageous both to him and the Island.

4. I refer your Excellency especially to the remarks on Schedule B., where the employers, medical attendants, and nurses are described in an unqualified and, to an experienced judge, an incredible strain of eulogy. Also to those on visits to estates in which the Agent reports that his visits have been "well nigh monthly." That Mr. Brown should have visited one or more estates in each month is easy to be understood; that he visited any large proportion of them "well nigh monthly" would be so creditable to his zeal that it deserves special enquiry and approbation if it does not prove a figure of speech. In which case it is desirable for Mr. Brown's credit that it should be altered before the report is forwarded.

5. The tests which occur to me as applicable to the above enquiries, your own experience will suggest others are an enquiry by some independent agency, *e. g.*, the Police Magistrates as to the records of the medical attendance on a few estates, and a return to be furnished by Mr. Brown himself of the dates of each visit for official purposes to the several estates during the half-year in question.

6. With regard to the amount of his salary, you will point out to Mr. Brown that the number of estates to be visited in Grenada is double that of those under his charge, and the number of coolies considerably more than double. The Agent in Grenada holds no other office. In St. Vincent the duties have been intentionally assigned to the holder of another office for the purpose of economy. The only question in my mind is, whether they might not be transferred to an Officer holding some less incongruous office than that of Clerk to the Legislative Assembly with advantage to the Public Service.

From the HON'BLE G. BERKELEY, Lieutenant-Governor of St. Vincent, to the Governor of the Windward Islands,—No. 689, dated St. Vincent, the 23rd November 1869.

I HAVE the honor to acknowlege the receipt of your Excellency's despatch No. 873 of the 28th September, taking exception to certain portions of the Immigration Agent's Report for the half year ended the 30th June.

2. Having communicated the subject of your Excellency's despatch to Mr. Brown, I have the honor to transmit a letter* which I have received in reply; and as I have every reason to believe from indirect sources of information that Mr. Brown's statements are upon the whole correct, I have abstained without further reference to your Excellency from pursuing the investigation through any other channel.

* 10th October 1869.

3. With respect, however, to the frequency of Mr. Brown's visits to the estates during the half-year, I may remark that this circumstance is unconnected with causes calling for the special supervision of the Immigration Agent; neither is Mr. Brown, on this account, entitled to commendation for any over-zeal in the performance of this particular portion of his duties; but it so happened that, during the half-year in question, the Immigration Agent's presence was required upon the estates for certain exceptional reasons, and Mr. Brown took advantage of those occasions to enquire into the general condition of the immigrants, taking credit to himself in each instance for a separate visit as if made in the ordinary course of inspection.

4. I consider it right to inform your Excellency with respect to the medical attendance that, since forwarding Mr. Brown's Report, it came to my knowledge that, for a certain period subsequent to the 30th June, a break occurred in the regular periodic visits to certain of the estates, owing to the absence from the Island of two medical practitioners and the severe indisposition of a third, who had undertaken to perform their duties during their absence. I am happy to add, however, that no inconvenience ensued, as the immigrants on the estates in question were free from sickness during the interval. The measures which I adopted to guard against future neglect of the regulations on this subject will be more particularly referred to when I forward the Agent's Report for the current half-year.

From J. H. BROWN, ESQ., Immigration Agent of Saint Vincent, to the Hon'ble the Colonial Secretary,—dated Saint Vincent, the 10th October 1869.

I HAVE the honor to acknowledge your letter on the subject of my report on immigration for the half year ended the 30th day of June last.

I learn with concern that His Excellency the Governor in Chief, while he has read the report with interest, can neither accept it nor forward it to the Secretary of State unless some of the principal statements which he considers too highly-colored are confirmed. I receive His Excellency's doubts with submission; but as I cannot retract or alter what I wrote with deliberation and with faith in its correctness, I hope by the presentation of corroborative testimony for His Excellency's consideration to remove the impressions he has formed.

His Excellency particularly refers to Schedule B., which speaks of the employer's medical attendants and nurses, and mentions that my visits to estates had been "well nigh monthly."

I beg to annex, in original, certificates as to the statements in Schedule B. from the Attornies and Managers of 13 estates (others received prior to mail day will be forwarded), all of whom, I am able to say, would invite any investigation as to their correctness which His Excellency might be pleased to order.

His Excellency observes that to have visited any large proportion of the estates "well nigh monthly" would be so creditable to my zeal as to deserve special enquiry and approbation if it should prove that my statement is not a figure of speech. I should be liable to the imputation of extraordinary callousness of feeling did I not express how acutely I feel the humiliating idea conveyed in this observation. But with this brief remark I confine myself to the point at issue.

His Excellency is of opinion that visits so numerous would provoke suspicion, and, if enquired into, would be disadvantageous to the Island and myself.

That the visits were made not figuratively but by actual presence His Excellency has now proof and not from my own pen, and under the circumstances which induced them an investigation, I will respectfully show, would more strongly confirm than my words can, that they were favorable to all interests concerned.

I am only required by law to pay one official visit semi-annually; but for the half year ended 30th June, I had a three-fold object in visiting the estates with frequency.

On the 16th of January, the first period of indentures of the Indian immigrants per *Countess of Ripon* expired, and it was incumbent upon me to repair to the various properties to place the people under re-indenture for their further term of two years. Secondly, it was necessary to go from estate to estate to discover the temper and feelings of the people who were to become entitled to a back-passage to India in June as to re-indenturing, and it was upon this enquiry, I founded a report to the Government which led to the introduction of the Act sanctioning the payment of a gratuity in lieu of a back-passage; and, thirdly, it was required of me, as I felt to call upon the estates to learn if the requisite arrangements were made for the reception of the immigrants expected per *Imperatrice Eugenie*. At these times, general details came under my observation. I hope His Excellency will be of opinion that from visits paid with these intentions no prejudicial conclusions could be drawn.

My report for the half-year ended 31st December 1868 was received by Earl Granville with "perfect satisfaction," and that for the previous half-year was subjected to the criticism of the Commissioners of Emigration, and their comments on each paragraph accompanied the Duke of Buckingham's despatch, which stated that all required for the coolie in St. Vincent was done.

The number of estates on which immigrants are *now* located are 25 in number. Richmond and Richmond Vale are situated in the extremity of the Leeward District, Tourama, and four neighbouring estates in the Charil country.

The localities are 50 miles apart. The *Grenada Chronicle*, some time ago, contained the report of the Agent as laid before the legislature for the half-year ended 31st December last, showing the number of immigrants, I think, at 1,600 odd.

We have under indenture as shown by Schedule to 30th June	722
Arrived per *Imperatrice Eugenie*	300
Accepted gratuity and re-indentured	104
(To come forward)	25
Indentured Portuguese and Africans	22

To this have to be added the people 280 per *Travancore* under surveillance on their last period of industrial residence (the greater number will be re-indentured when the numbers of estates will no doubt be increased).

I am aware that the office of Immigration Agent was assigned to the clerkship of the Executive Committee for economy; but as the scheme is assuming a larger character, the remarks on the subject I ventured upon, I did not think unjustified.

I hope His Excellency the Governor in Chief will receive the explanations of my report and the testimony as to its correctness as satisfactory.

From J H. BROWN, ESQ., Immigration Agent of St. Vincent, to the Hon'ble the Colonial Secretary,—dated St. Vincent, the 16th September 1869.

I HAVE the honor to submit my report on the state of immigration in this Colony as regards Indians, Africans, and Portuguese for the half-year ended the 30th day of June last. As I feel some explanation is due to the Government to account for the delay in the presentation of this document, I may be allowed to say that it must be quite within the knowledge of His Excellency the Lieutenant-Governor and yourself how wholly my time has been engrossed first in receiving and allotting the immigrants per ship *Imperatrice Eugenie*, and in indenturing them to the plantation dispersed over the face of the Colony, and, secondly, in carrying out the provisions of the Act so important to the Immigration Fund as well as to the agricultural interests, empowering a bounty to be offered to the Madras immigrants in lieu of a back-passage to India to which they had a right to prefer a claim on the last day of the half-year. The details of these arrangements will appear in my next report; but this is not an inopportune moment briefly to say that my most sanguine expectations have been amply realised, and that it will be shown hereafter, that not only has a considerable amount of trained labor been retained to the Colony, but in round numbers, not short of ten thousand dollars, have been economized.

* A. B. C. D. and E.

2. Enclosed are five Schedules* developing the prominent features of the subject-matter of this report.

SCHEDULE A.

Births.—The number has been 14, and the plantations are given on which they occurred.

SCHEDULE B.

Deaths.—The number shown nine. The plantations where the deceased were located are named, and the cause of death as certified in the medical registers by the Doctors attending, stated. Under the head of "remarks" I have alluded to points to which I pay the most scrupulous attention, the punctual visits of the Doctor, the presence in the Manager's house, of all the medicines required by regulation under the Immigration Law, and the attendance of nurses on the sick. I am glad to affirm that on no occasion, during the six months, have I had reason to find any fault whatever as to want of attention to these most essential particulars. The employers, I write it to their credit, are excessively attentive to their ailing immigrants, and the medical attendants, though only agreeing to one visit per week, do not scruple, when circumstances require, to repeat them as frequently as necessary. The nurses are elderly and experienced in their duties, and from their habits seldom absent from the plantation.

SCHEDULE C.

A general statement as to numbers of *indentured* Indian immigrants incorporates the foregoing schedules, and exhibits numbers and particulars of labor and earnings.

Indentured.

Numbers.—The numerical strength on 20th June was 722
" " " 31st December 1868 717,
which gives an increase of 5.

Removals.—None took place during the half year.

Vide Schedule C.

Labor.—The number of days on which labor was performed amounted to 63,519
Sickness and holidays to 20,403
Idleness to 11,464
The total earnings to $10,017-54

The average earnings are extended. On most estates the average is an improvement upon that of the last half-year, as it was on the foregoing. The employer requires labor, and it commands its price, as he is willing to pay, as he frequently does, in excess of the contract rates for work performed. This discrepancy therefore between the apparent earnings on the plantations can only be accounted for by the difference between idleness and industry, and also by some plantations having more 2nd and 3rd class laborers than others.

SCHEDULE D.

Crimes and Offences.—My semi-annual reports have heretofore shown an immunity from aggravated offences. The present calendar records three cases of sheep-stealing, still I consider, as a whole, it justifies the conclusion that the immigrants are trained under judicious control, and are well and peaceably disposed.

SCHEDULE E.

Particulars as to African and Portuguese Immigrants.—This Schedule does not vary from that submitted for 31st December 1868, with the exception of noting the desertion of five Africans who have not as yet been discovered.

3. *Visits to Estates.*—My half yearly visit as required by law was made in July to all the plantations having immigrant labor, but I can state that during the half year my visits have been well nigh monthly. I found on inspection the muster-roll books, medical registers, and official pay lists regularly kept, and all the provisions of the law maintained.

4. *Coolies* who have received free certificates after five years' labor and are discharging their three years' industrial residence.

The Madras coolies *ex Travancore*, 192 of whom received certificates, were on the last day of the half-year entitled to claim back-passage to India. The 280 Calcutta coolies *ex Castle Howard*, have to remain under surveillance until the 16th of April 1870. I anticipate the Government will in neither case be put to the heavy expense of sending these people back, but that they will, from their own free choice, accept a small gratuity and remain, securing to the Colony, thereby trained and acclimatized laborers.

5. *Health.*—The health of the Coolies on the whole is excellent, the death-rate is small being 1·25 for the half-year, including a case of drowning. The climate of the Colony seems well adapted to the coolie who speedily after arrival becomes strong and robust; and it is pleasing in passing through the plantations to witness this almost universal improvement, and to remark how cheerful and contented the immigrant appears,—a sure test of the general attention paid to his wants and comforts, and that he is well and regularly paid.

6. *Relations between Master and Servant.*—It has been and still continues my pleasing duty to report that the most desirable understanding exists in all cases between the employers and their Indian servants. The laborer has full confidence in his master, and the master appreciates services without which, notwithstanding the greatly improved system of cultivation, his crops would sadly fall off. We have this good feeling and self-interest at work on both sides, serving to encourage the impression that these relations will be permanent.

7. *Provision for the Immigration Service.*—I observe that Earl Granville in a despatch, dated Downing Street, 14th May 1869, and addressed to Governor Rawson, C.B., intimates "that he will not authorize the removal of immigration into Grenada until after an efficient agency is provided for", and that "he is decidedly of opinion the Immigration Agent's emoluments, £250, is insufficient." These remarks are elicited by a remonstrance from the Immigration Agent in his Report *under the above head.* As for myself, I have no complaint to prefer. I am grateful for the many favors which in the discharge of my duties are extended to me: To His Excellency the Lieutenant-Governor for the access he accords me, and his courteous acquiescence in all matters worthy of his consideration for the benefit of the scheme of immigration, and to yourself for advice and assistance whenever it has been sought; still I think it my duty to the office I hold, specially to bring under Earl Granville's notice, that while the duties here must be as onerous and responsible as in Grenada, the number of immigrants to-day being nearly equal, the emolument is only £100 per annum! with an allowance of £50 for horse-keep, which horse must be purchased from the annual income. The last agent enjoyed the same salary (without horse-keep), when only a few Portuguese were under his charge. His Excellency has twice granted me a small sum to cover extra expenses, but no allowance whatever save that stated, has been guaranteed by law, although immigration has assumed such a different phase and become the back-bone of the agricultural interests of the Island. It does not become me to make any comment upon this. I leave the matter to His Lordship's attention.

From T. W. C. Murdoch, Esq., to Sir Frederic Rogers, Bart., &c., &c., &c.,—dated Emigration Board, the 19th January 1870.

I have to acknowledge your letter of 11th instant, with a despatch from the Governor of the Windward Islands, enclosing the reports of the Lieutenant-Governor and Immigration Agent of St. Vincent, on the immigrants in that Island for the six months ending 30th of June last.

2. The number of Indian immigrants on estates at that date under indenture was 722, the births in the half year had been 14, the deaths 9, being at the rate of 1·23 per cent. The immigrants are said to have been in excellent health, cheerful, and contented; well treated in every respect by their employers, and on the best terms with them. The report, like all recent reports from St. Vincent, is very satisfactory, so satisfactory, indeed, that Governor Rawson suspected exaggeration, and sent it back to be verified. The Immigration Agent, however, maintained its correctness, and I am aware of no reason to doubt it.

3. The Immigration Agent, at the conclusion of his report, calls attention to the small amount of his remuneration, £100 a year with £50 a year for travelling expenses. The Lieutenant-Governor, however, points out that he receives a further salary of £168 a year as clerk of the Legislative Assembly, and neither he nor the Governor recommend an increase. Under these circumstances, and looking to the small number of estates (only 18) on which the immigrants are employed, Earl Granville will probably not think that a sufficient case has been made out for his interference in the matter. In other respects the report calls for no action.

From Earl Granville, Secretary of State, to the Governor of the Windward Islands,—No. 87, dated Saint Vincent, Downing Street, the 26th January 1870.

I have the honor to acknowledge the receipt of your despatch No. 700 of the 3rd December, with one from the Lieutenant-Governor of St. Vincent, enclosing the very satisfactory report of the Immigration Agent of that Colony, for the half year ending 30th June last.

I referred your despatch to the Immigration Commissioners, and I transmit, for your information, a copy of their report. I agree with Sir T. Murdoch in the opinion that there are no sufficient grounds for increasing the salary of the Immigration Agent at St. Vincent.

Emigration Communication, 19th January.

REMARKS.

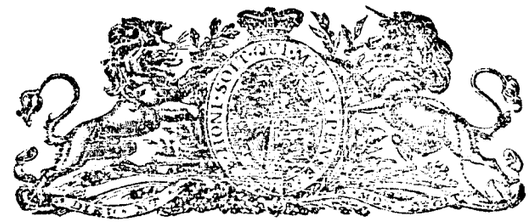
The mean volume of the Ganges Canal passing the Roorkee gauge during the month, was 4,430 cubic feet. The volumes discharged by the canal were as follows :—

Tail, Etawah Branch	..	42 cubic feet.
Escapes ,,	..	79 ,, ,,
Tail, Cawnpore ,,	..	220 ,, ,,
Escapes ,, ,,	..	No returns.
Total	..	341 cubic feet.

The Cawnpore and Etawah Branches have alternate weeks of high and low supply. The gauge readings show the mean of the month.

For the first half of the month the demand for water was great and general. Heavy showers about the middle of the month put an end to the demand all over the Doab, except in the Saharunpore and Mozuffernuggur Districts. The rainfall in these Districts, it will be observed, is below the average. Some damage was done to standing crops by hail.

In the south active "palev" of sugar-cane was commenced on the Eastern Jumna Canal. On the 5th of the month the reading of the Kulsea gauge was 2' 10", the lowest ever recorded in period of demand. The crops were reported to be suffering greatly, and the season for "palev" of sugar-cane was passing.



Fortunately rain fell on the 6th, as well in the Canal Districts as in the Hills, and afforded relief. By the middle of the month constant showers of rain and a rise in the river had put in rubbee crops out of danger, and enabled the "palev" of sugar to be actively prosecuted. In the Doon there was very little demand, owing to heavy rain.

W. G. ROSS, *Lieut., R.E.,*
Asst. to Chief Engineer, Irrigation Works, N. W. P.

ALLAHABAD;
The 20th April 1870.

* Average for five years only : rain-fall previous to 1864 not given.

PUBLIC WORKS DEPARTMENT.

RAILWAY EXTENSION IN INDIA.

THE following extract from a despatch from the Secretary of State, to the Government of India, No. 21, dated 13th April 1870, is published for information in continuation of the papers which appeared in the Supplement *Extraordinary* to the *Gazette of India* of 27th August 1869, and in the Supplement of 27th November 1869, pages 1343 to 97 :—

Para. 1. I have had before me in Council your Excellency's despatch No. 2 of 6th January last, acknowledging receipt of two despatches from me, which communicated the views of Her Majesty's Government with respect to Railway extension in India, and reporting the arrangements made for giving effect to the instructions conveyed to you for the prosecution of the Rajpootana, Indus Valley, and Hyderabad Railways as State Works.

2. Of these arrangements I generally approve.

3. I notice with satisfaction the care that has been taken to place on a footing of equality the Civil and Military Engineers appointed to State Railways, and I approve of your having, in anticipation of my formal authorization, permitted such Engineers as have been selected for Railway duties, to draw whatever additional allowances they would be entitled to under the revised salary regulations recently submitted for my sanction. I am glad to observe, too, the stress laid by you on the necessity for the strictest economy of first outlay in all the adjuncts of a State Railway, the road and the machinery for working it alone being first class at the beginning, and all expensive accessories being postponed until called for and warranted by increased traffic. This is a principle which cannot be too strongly impressed upon all concerned.

No. 22 of 1870.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

FISHERIES OF THE ANDAMAN ISLANDS.

From SURGEON F. DAY, F.L.S. and F.Z.S., d.d. P. W. D., Government of India, to the Officiating Secretary to the Government of India, P. W. Department.

I HAVE the honor to report having visited the penal settlement of Port Blair for the purpose of enquiring into its fisheries, the necessity of working them, and the possibility of doing so in a more efficacious manner than at present. The Superintendent was good enough to place every facility for observation at my disposal, and permitted Mr. Homfray to accompany me through the wilder parts amongst the aborigines, whilst I have obtained much useful information on the sanitary condition of the convicts from the exhaustive reports of Dr. Rean, the senior Medical Officer. I have been unable to submit my views to the Superintendent for his remarks, as he left the Settlement on three months' privilege leave, about five days after my arrival.

2. On December 25th, 1869, I left Calcutta for Port Blair, arriving there on the 29th. After passing a few days at that Station, examining the bays, creeks, and modes of fishing, I proceeded to Chatham on the 7th of January, and to Viper on the 8th. On the 9th we began working with the aborigines, in addition to examining the convict labor, and on the 10th we went with the former to Phœnix Bay and South Point. On the 11th we worked up a large fresh-water creek, but it rained hard all day; in the evening we reached Port Mouat. Most of the succeeding day a severe storm kept us in the house. On the 13th we started at 11 A.M., with 43 aborigines from Mount Augusta by Circular Bay, round to Progress Creek, reaching it by 7 P.M., and on the succeeding day we worked from Port Mouat to the South, still accompanied by the Andamanese, round to Progress Creek, being out from 11 A.M. to 6 P.M., On the 15th I returned to Ross Island. On the 17th I again repaired to Viper, and in the evening to Port Mouat; it was now low spring tides, and for the next three days the Andamanese kept us fully employed at MacPherson's Straits in fishing, and showing us the best places for capturing the finny tribes. On the 20th, hearing the steamer had arrived, I returned to Ross Island, and on the 24th re-embarked for Calcutta, where I landed on the 28th.

Route pursued.

Original occupation of the Andaman Islands, their being abandoned and again re-occupied.

3. It is scarcely necessary my entering upon any account of the appearance of this Settlement, which has been fully reported upon by others. In 1789, Lieutenant Blair first established a convict settlement here, which, on account of its unhealthiness, was abandoned in 1793; again, in 1857, it was re-occupied by Dr. Walker as a penal settlement for mutineers and convicts. Port Blair is in 11° 42' N. Lat., and 93° E. Long.: it has a harbour of moderate size in the deeper parts, but extending a long distance in its shallower portions; across its mouth, and running nearly North and South, is the Island of Ross, protecting it from the full force of the Easterly gales, and leaving a passage for vessels on either side between it and the mainland on the North-East and South-East. The waters are beautifully clear, except in the stormy months of the year, whilst the bottom is sandy, except where corals exist.

Observations upon the manners and customs of the Andamanese.

4. The inhabitants of the Andamans consist of two great elements,—the aborigines and the immigrants. The Andamanese deserve more than a casual notice. Owing to the assistance of Mr. Homfray,* who has so energetically and successfully worked to promote a good feeling between us and these savages, and has mastered their language, I was able to see them in their haunts, and to enquire into the meaning of what I saw. They worked with us in the jungle amongst the streams, they speared fish in the harbours, shot them with bows and arrows in the sea, exerted themselves to catch the smaller kinds with their hands or nets, and thus enriched my collection by thirty-six species, which I did not otherwise obtain. They are computed to be about one thousand in number, whilst the individual forming the tribes around the Settlement number about four hundred. As a race, those who are living in the vicinity of our Settlements are decreasing in number, few appear to live over forty years of age, scarcely any family number above two living children, and only one has three. From April 1868 to April 1869, 38 deaths were reported, and only 14 births; whilst during the four years only six infants have lived whose parents resided at the homes; of monthly visitors only 12; of the half yearly ones some 20; this is somewhat remarkable with reference to the question of the effects of a fish diet on the production of offspring, and the probable result of civilization on this savage race. Their language is meagre, remarkably deficient, and the different tribes have distinct dialects, and even the inhabitants of the Little Andamans cannot understand those of the South Andamans. Numerals are entirely absent, they do not comprehend their use; whilst the day is divided into three portions,—sunrise mid-day, sunset. In like manner they divide the year into three seasons,—*first*, dry, *ea ra bodilin*, or Northern sun, extending from February to May; *secondly*, the rainy, *goo mo lin*, from June to September; and *thirdly*, *pa pa lin*, or moderate season, from October to January. They are of diminutive stature scarcely averaging five feet in height, whilst various and contradictory statements have been given as to their probable origin: at one time feared as cannibals, and even now dreaded by mariners in event of a shipwreck. These Islands get a wide berth from vessels not directly interested in proceding there, as the shipwrecked sailors have hitherto usually met with their deaths from the arrows and spears of the Andamanese, or else the last few survivors have been kept as slaves, and thus probably assisted in continuing this mixed race. Some may be of African origin, their woolly hair and other signs apparently afford such a solution, but some again have entirely smooth hair, and but few have very thick blubber lips, or the Hottentot's projecting jowl. So long as they are pleased, their features are not exactly unpleasant. They do not like persons to wear hair on their head or faces, and they shave off all, except one narrow band from the crown to the nape of the neck, which is, however, cut short. They rarely have eyebrows, beard, or whiskers, and merely a few eyelashes. Formerly, the shaving, which is done generally by old women, was a tiresome process, performed every six months by means of a piece of sharpened flint, but now they use pieces of glass from broken bottles, and undergo the luxury every fortnight. The reason for indulging in this seems to be the impossibility of keeping vermin out of their hair, whilst by thus shaving the appendage no room remains for these parasites to lurk in. They consider themselves very handsome, and one of their greatest pieces of abuse is to say, your nose is ugly, your mouth is deformed, or such like observations. To them a looking-glass presents great attractions, and, although their mode of attire is primitive, they become exceedingly irritated should any remarks be passed upon the method in which they paint or adorn themselves. On a causal observation being made, one turned round and angrily demanded "what are you laughing at, you stupid fellow?" Although they joke with one another, and the bachelors chaff the spinsters so that they generally remain somewhat apart, with strangers they do not like any familiarities in conversation. They resemble monkies, or children amused with toys, delighted on flying a kite for the first time, pleased at receiving pieces of cloth, which they tie round their heads, or dress themselves with as they perceive others to be clothed, but as soon as it becomes dirty, tearing it off for their usual adornment. They are doubtless very lazy, and on receiving tobacco or cheroots seat themselves comfortably in a chair, and direct the servants to bring them a light, which

* Most of the following remarks on the Andamanese are from Mr. Homfray's reports, or informations supplied by him.

they consider it too much trouble to fetch for themselves. I have seen them cut off large branches of trees to obtain the fruit which they might easily have knocked down by means of a bamboo. In the infancy of the Settlement, they used to root up the young cocoanut trees, as they considered the tender portion near the root to be good eating. The women and children are slaves to their parents; whilst, should it suit their views, no untruths are too great to obtain any object they desire. They refuse nothing to one another on its being asked for, and expect everything they demand being given to them in like manner. Their organ of secretiveness appears to be well-developed, but they are comparatively honest with respect to the goods of those they are not well acquainted with, and with whom they never take liberties. They are great backbiters among themselves. In the wilds their tempers are very impatient, and they will let fly an arrow or use a knife at the slightest provocation; but they listen to the aged, and during a quarrel the words of those that are grey-headed at once allays the storm. Should one have fired an arrow at another, he then sits down, all is over: in fact, one moment they may be crying for some loss, the next drying their eyes, when any little incident sets them off laughing. They have a great respect for fire-arms, which they look on with considerabe awe. They are very sharp, and appear to have good memories: thus they soon discovered that they were called by the new comers by names anything but complimentary, and as every race has such epithets at their disposal, which they freely employ, the Andamanese (who are not averse to a joke) recognise each race by the several terms of abuse which they have used in addressing them. They have no pets about their homes, except dogs, which they appear to treat well, because they are useful. At first the canine species appear to have great dread of the aborigines, but this they soon get over. The painting or adorning of themselves is done by the females. Iron is collected from a mineral spring, this burnt red* and mixed with fat is employed as an external application. When I was at Port Mouat, the Rutland Island Chief was in mourning for his only child, and was daubed all over with olive-coloured earth,—a proces which was daily repeated,—whilst a rather thick coating of mud covered his head. This mourning lasts at least one month. During periods of deep sorrow they are very silent, and entirely refrain from the use of red paint and all decorations, from taking much food, even from eating their favourite pork, whilst honey must not pass their lips, but instead, they have daily to throw honey-comb, if obtainable, into the fire. When the period of mourning has expired, they wash off the olive-coloured earth, and revert to their red paint, with which they are fantastically adorned, serving both as a decoration and a charm. Olive mud is likewise used as a decoration when painted over the body in an ornamental manner. These colours form the chief, usually the only, portion of the clothing of the males unless they have a string or two round their waist or neck, or round the leg below the knee like a garter, otherwise they are as primitive as man is represented to have been in his primeval condition. As for the women, they adorn their waist strings by twisting pieces of cloth round them, and painting them red, whilst depending in front are a few leaves fresh gathered from the jungles, and behind are some tails of fibre. A string of their ancestors' bones worn around the neck completes their attire, unless they have a basket slung over their backs in which some relative's skull is carefully carried about, or a broad band over their shoulders by which they suspend their babies. Before marriage, in both males and females, the whole of the body is tattooed; this is done once a fortnight now (formerly twice a year); a small portion only of the body being operated upon at a time, as a considerable amount of blood is lost in the process. A piece of a broken bottle, inserted into the end of a stick, is the instrument employed, formerly pieces of sharpened flint were used. At the age of eight, when they first learn to swim, this commences, and is generally continued up to the adult period of life. Destitute of clothing, these aborigines commisserate foreigners going through their jungles; when it rains they say, "you will be wet, your clothes will spoil, whilst our skin soon dries." When the briers tear their garments, these Andamanese laugh and call attention to how much better off they are with nothing to tear. Crying signifies with them reconciliation with enemies, or joy at meeting an old friend or acquaintance from whom they have been parted. Should two tribes meet, the new comers have to commence, and the women have the priority in weeping; subsequently the men take it up, whilst it becomes the duty of the hosts to reciprocate in the same manner; first the females weeping and afterwards the males, occasionally the performance cannot be completed in one night, especially should the parties have been long separated, it may even be continued through several successive days. After the crying has been completed, dancing begins; that of the women a few years since differed from that of the men, they having to clap their hands and sing to the music of the stamping of the men's feet: their songs appear to be a recital of the events which have passed since their separation. The conclusion of the performance was for both parties to join in a grand dance. Now, however, the men and women occasionally dance together, the females, who intend dancing,

* Dr. Waldie, having been good enough to analyse their red preparation, reports it be as follows:—

Peroxide of iron	42·7
Quartz in small fragments, and very little of any other rock or earthy matter ...	56·4
Water expelled by ignition	·9
	100·0

put on a few extra leaves, and they relieve the men in striking the sounding board with their feet. If a person intends dancing all night, he has an extra coating of paint, which is said to be put on in order to act as a preventive against exposure. It is evident they are very fond of dancing. Having occasion one day (as we were starting upon a fishing excursion) to go inside one of the convict barracks, the Andamanese set to work to dance on the boarded floor, and it was with the greatest difficulty that we could induce them to desist. When one tribe goes into the territory of another, except upon a special invitation, they have to pay homage by dancing all night before the chief of the resident tribe, subsequent to which hospitality is extended to them. When children are born, the infant is first bathed in cold water, and then warmed over a fire, this being done to harden it and inure it to stand changes of temperature. It is very evident that they do not understand how to rear children, they give them whatever they desire, and over-kindness early consigns the little one to the grave. Children are named some months before they are born after same family or favourite name. Consequently, there is no difference between those of the males and of the females. Owing to their list of names hardly exceeding twenty, they prefix to each some word expressive of something in their appearance to distinguish one from another, or else accordingly to the locality from whence they come. They marry as soon as they are able to support their wives, whilst they are monogamous. It is usual for the young man to eat a peculiar kind of ray fish termed *goom-dah*,* which gives him the title to the appellation of *goo-mo*, signifying "a bachelor desirous of becoming a benedict," whilst girls when they arrive at the earliest marriageable age, distinguish themselves by the flowers of certain trees. Young men likewise take a species of oath before marrying, after which they sit still for some days, hardly taking any food. Those who have been pig-hunters refrain for one year (commencing in April) from eating pork, using turtle or fish instead, although they do not give up hunting pigs which are required for the food of the tribe; the turtle-hunters in like manner use pork during this probationary year, during the whole of which time they must not taste honey. This is apparently done for the purpose of ascertaining whether the individual is able or not to support a family. The marriage ceremony is simple: a man about 16 or 18 is engaged to a girl of 13 or 15 belonging to a different family, and with the consent of the girl's guardian, who is generally the chief of the tribe. At their first meeting they are seated apart from others, passing their time in staring at one another; as the shades of the evening darken, the guardian or chief advances, and taking the hands of the pair, joins them together, they then retire into the jungle to spend their honey-moon. On their return to the tribe, crying and dancing are kept up with great spirit. After marriage they are not so useful as before for the general welfare of the tribe, as the married woman has now to erect her husband's hut, and look after his welfare, and consequently they are not ordered about by the chief. As soon as people are marrried, they object to going into the water, of which they previously had no dread; for, although they never wash, their being constantly swimming about keeps them clean. Sea breezes are considered a cause of sickness, as the chief of the evil spirits is believed to ride upon it. The wife has to perform all the home duties, providing shelter, matting for lying upon, cooking the food, procuring water and shell fish, carrying loads when changing from place to place, shaving her husband, and taking care of him whilst sick. The husband has to protect his wife, make canoes of fishing, the implements for hunting pigs or turtle, and occasionally spearing fish, whilst he also obtains food, if not provided by the bachelors or spinsters. The chief of the Rutland Islanders appears very like a Madrassee, or as if he were of Madras origin, and is very superior to those of his tribe. He obtained his present position by marrying the widowed queen. Widows and widowers have no objection to re-marry. I saw one woman who had done so within the month subsequent to her husband's death, but this was considered rather premature. At the "home" the following is the manner in which they pass the day:—At a very early hour they have something to eat, for about 4 A. M. their uncovered bodies become cold, which necessitates their making up their fires, and once up, feeding begins: when residing in the same house, there is no rest after this early hour. About 7 A. M. some of the men go out foraging according to the season, it may be pig-hunting, fishing, or taking tortoises or turtles. The young men and boys assist in making, paddling, and steering canoes. The women in a body go for shells, shell-fish, fruits, and bulbs, in which they are assisted by the girls; whilst the elderly people keep at home, making baskets, nets, bows and arrows, attending the sick, &c. Between 2 and 3 P. M. the foragers return with their spoil, these are, as far as possible, equally divided amongst all. The aborigines are a sickly race, suffering much from fever and lung complications, as well as from malaria in newly-cleared jungly-lands. They have no medicines, their great faith is now in quinine, which they ask for when headache or fever is present. Whatever new drug is offered them, they invariably expect the donor to take some of it first, and subsequently they do not object to it. They plaster themselves over with olive mud for headaches, whilst the same substance rubbed over the body is deemed to be a non-conductor of heat. They cannot stand either strong winds or exposure to the rays of the sun, whilst living as they do almost without shelter, the effects of the climate upon them may be readily imagined. In the month of August the high winds

* The Andamanese words have been divided into syllables, in order to facilitate pronunciation.

and rain are very inimical to their health. Upon the death of an adult, the tribe at once desert their encampment, retiring to a distance of eight or ten miles; this is done in fear of the ghost of the departed, which is considered to haunt the spot: they remain away one month. A corpse is viewed with great dread, and almost equal fear is shown on going near a burial place. Jacko, chief of the North tribe, died on 1st July 1865, and his loss was for several days openly bewalied by his people. He left two married sisters behind, whose husbands had to bury the corpse. Death occurred at 6 A. M., and within two hours his remains were rolled up in leaves by the old people, and corded with fibre preparatory to their being consigned to the grave. The latter was merely two feet deep, and only a few feet above high-water mark. Here the corpse was placed in a half sitting posture, with the face turned towards the East. Previous to filling in the grave, each took his last farewell of one they had loved so well whilst alive, and one by one in turn gently blew upon his face and forehead. When all was over there did not remain more than six inches of earth above the body, placed there to prevent the ribs from being broken; some stones were now heaped over the grave, subsequently some burning faggots, and mourning garlands were placed on the shore in conspicuous places to mark a chief interment. Before retiring, a cup of water was placed at the head of the grave, in case the spirit of the deceased during the night should feel thirsty. Four months subsequently the nearest-of-kin went to the grave and brought away the lower jaw, which about that time became fleshless; a month afterwards the shoulder-bone and a rib or clavicle were extracted; and after six months the skull, now freed from impurities. This was slung round the neck of the principal mourner, and subsequently everybody had it in turn to carry about. When a stranger dies amongst a foreign tribe, he is entirely neglected, and his funeral rites mostly uncared for; the chief generally directs some of the young men to carry away the corpse, and throw it into the jungle or sea. Should a chief or great man die, the ceremony is not generally the same as that described for Jacko. They erect a stage, some twenty feet from the ground, and on this the corpse is placed. Thus the spirit of the departed, it is hoped, will keep above, and not injure any one who may incautiously pass near the corpse, whilst a fire is lighted under the stage for the purpose of disturbing other evil spirits. The extraction of the skull and bones, it is considered, requires great skill and courage, whilst by keeping them carefully and waring them during pain or sickness, it is supposed will induce the ghost of the departed to be friendly to the wearer. In selecting sites for burials they invariably avoid hills and elevated pieces of ground. Should those of other tribes go to condole and sympathise with a widower, the custom is to fall into his lap, embracing and crying for about ten minutes, after which the afflictions are recited. It has been stated and generally admitted that these people have no knowledge of any religion, and are pure Atheists; but they appear to be more Deists with very obscure views. It is curious to see the state into which the Hindoo and Mahomedan convicts are drifting, destitute of religious rites, temples, or priests. Probably were they left alone on the Andamans without any fresh importations, their views after a few generations would be much similar to those of the Andamanese who fear evil spirits, have a great dread of witchcraft, and imagine that the spirits of the departed soar away into space to some place of quietness and haven of rest which they cannot comprehend. Being entirely without caste prejudices themselves, they dislike those who indulge in them, and, amongst the dark-skinned races, prefer the Burmans, who will eat, drink, and smoke with them. Formerly they looked upon all strangers as foes, and their name of an evil spirit was identical with that of a stranger from unknown lands. They strongly object to moving about after dark in dread of meeting ghosts, and at this time no women will go alone, whilst they invariably carry with them a lighted stick to keep off evil spirits, as well as mosquitoes and sand flies. Occasionally the men turn out, imagine they see a ghost, yell as loudly as possible, and let fly their arrows at where they suppose the spirit is, or they ask that a musket or two may be discharged for the same purpose, after which they are satisfied. At night time, they all huddle together as close as possible, the married people by themselves, and the bachelors and spinsters also in separate places. They rub on turtle oil, and wear wreaths of turtles and fish bones, hoping by this means to enchant the spirit of the victim, and keep away sickness should they be exposed to wet. Wreath of turtles' and fish bones are also at times suspended at the prows of their canoes to propitiate good luck to their fishing. They cannot be persuaded that the Europeans do not worship fire, asserting if it were not our God, why is it always with us? Whilst they have to keep a lighted brand, and did their fire go out, they know no manner of reproducing it. They are surprised at our igniting matches, producing fire by means of a magnifying glass, by rubbing two pieces of bamboo together, by flint and steel, by caps on guns, &c., &c. As respects food, they have never tilled the soil, but have lived entirely upon the products of the jungles or of the waters, and storing up but little for a future day's supply. But one of the first questions asked about these people is, are they cannibals? They scout the idea and ask why, when food abounds, should they devour human beings, a repast on whom they assert would most assuredly cause their deaths. They eat nothing raw, not even fruit. In cooking flesh, they either throw it on the embers, turning it over when the under side appears to be

sufficiently done, or else cooking the meat of the tortoise and pork in unbaked earthen chatties. Their appetites are large, they appeared able to consume about 6lbs. of fish at a sitting, and were soon ready to commence again. A large *pinna* forms their plate, a *nautilus* shell their drinking cup. They have no regular periods for their meals—when they are hungry they eat, no matter at what time. As they capture their principal supply of fish and turtle during the low tides, and do not dry or salt any, it follows that they have abundance at that period of the month, whilst they may be comparatively destitute during the intervals. Their chief food at the first or North sun period is honey, fruits, and turtles; in the rainy season they do not wander much about, owing to the difficulty of obtaining shelter; then the jack seeds last them for three months, and in the early part of their middle season, pigs, which however soon become scarce, then comes fishing and turtle catching. Pigs begin in September to rove through the jungle, finding their way to the coasts and creeks: during this period many are killed. In the year 1865 they first began to use dogs for pig-hunting, which they learnt from some Burmese runaway convicts; previously they had to lie in wait hours, and sometimes days, ever in the hopes of seeing one or two; now the dogs find them almost at once, consequently they are in great request for them. The Andamanese, however, have curious ideas respecting pork as food, and when they are able to please themselves, use it as follows:—The children and the weakly persons eat sucklings, the bachelors and spinsters use those of medium size, whilst adults prefer the stronger boar. Beef they consider too coarse for food, neither do they eat birds, as a rule. About the month of January the *Dugong* shows itself in Port Mouat Bay, coming to feed upon a species of sea weed, which is also relished by the turtles. In the month of January honey is generally common, and they bring the combs down from the tree with great dexterity, neither smoking the bees nor being stung themselves. A wild shrub, "Jenedah," exists in the jungles, and its juice appears to intoxicate the bees. The aborigines take a piece in their hand, and biting through the bark, they get the pungent white juice into their mouths, this they spit out at the bees which either fly away or become intoxicated. Wax obtained from the honey-comb is much used for their bow strings, also for covering the fibre where the nails or heads are attached to arrows, or stopping leaks in their canoes. The Andamanese have no tie to keep them to one place, they wander about for food, or as their fancy dictates: they have no constraint, but that of their chief or their individual caprice; in short they love freedom, and they hate control. They have scarcely a want, but as luxuries they esteem tobacco, especially cavendish and grog. Iron they also require for spears and arrows, and for making adzes to construct canoes; formerly they used to steal the convicts' dahs, pieces of iron and nails, but latterly they have refrained from helping themselves. They do not care for sugar, but are immoderately fond of honey; they eat the *cuttle fish*, are much addicted to *chitons*, but will not eat raw oysters. Formerly they appear to have consumed almost anything,—on wet days worms, caterpillars, roots, nuts, mangrove seeds, sharks, shell-fish, &c., &c., things which they now refuse. Amongst fish they prefer the mullet; and one day having placed a quantity of different species before them, they helped themselves in the following order, observing that the first took the best, the last the worst:—Chorinemus, platycephalus, horse, mackerel or caranx, chrysophrys calamara, and lastly tetrodon, or frog fish, which is usually reputed to be poisonous. They will eat cats, but now dogs are spared, because they are found to be useful. Though nominally fed at "the homes," it is a mistake to suppose that they subsist on the food provided by Government, for they only allow Rs. 200 a month to cover all expenses. In the year 1868-69 the following were the earnings of the aborigines:—500 pigs, 150 turtles and tortoises, 20 wild cats, 50 iguanas, and 6 dugongs; whilst the total number of rations given was 48,248, giving a daily average of 132 persons, including women and children, allowing each individual only 9 pics daily, and showing an increase in those fed of 14,575 rations over the previous year, but with a decrease of expenditure of Rs. 209-3-4, thus showing them to be more self-supporting. Since the establishment of these homes and at a trifling cost a great change has commenced: convicts are now unmolested, implements of agriculture are not stolen, the fishing stakes are left undisturbed, the gardens are no longer pillaged, runaway convicts have been re-captured, and shipwrecked sailors assisted. One of the most necessary piece of property to these people is a canoe, a moderately-sized one, being capable of accommodating about 20 persons, and is used for the purpose of obtaining food for about 30. It is scooped out of a tree by men, working with a sort of adze, and who take their turn, during which period they are supplied with food by others. When finished, the canoe is a very fragile construction, and rarely lasts above a year, for they are constantly making its sides thinner by ornamenting and scooping out its interior. It is ballasted by stones, and has a prow projecting about two feet, on which the fisherman stands. They are more especially useful for turtle fishing, and the spearing of skates and rays. The bamboo pole by which the native poles about his boat, has a sharp moveable spear which unships at one end, and to this is attached a long line. When the bamboo is thrown, and the spear becomes imbedded in the prey, it slips away from the bamboo, but being attached to the line the animal is securely held by the fisherman. Their eyes, whilst slowly and silently moving about, are as sharp as hawks,

the spear is generally thrown with a deadly aim, and should the fish be large, some of the natives dive down under water, attacking the victim with knives and spears, whilst others endeavour to pass a line over the game. For their small nets they use a fibre as thread, which they neatly work up, employing their fingers as a mesh, gradually enlarging it as required. When turtles are scarce, a large net is used, just before the tide begins to ebb; this is attached to stakes which encircle the whole of a reef where they resort for food. As the tide recedes, they are of course penned in, but they fight most desperately to break through the net. The Andamanese now use spears, and but few as a rule escape. Their bows and arrows are used principally for shooting fish in shallow water: the upper two-thirds of the arrow is a hollow reed, the lower a piece of heavier wood, armed with a piece of iron or a nail. *Major Haughton* in 1862 observed in the journal of the *Asiatic Society of Bengal* upon flint arrow-heads having been employed by them for shooting fish, and some such heads are still found in their heaps; but the aborigines declare they never recollect when such articles are so employed, but they do remember their being in use for shaving and tattooing. They throw stones with considerable accuracy, and in this way procured me several sorts of small fishes of the goby and blenny families, which I should not have otherwise obtained.

Convicts, with observations on their food, &c.

5. Amongst the immigrant population of the Andamans the convicts form the preponderating element: during 1868 the average number of prisoners was "6,523 males and 514 females. They are from all parts of India, and a small number of Burmans, with a very few East Indians, Europeans, and Chinese."—(*Dr. Rean*, senior Medical Officer.) The same officer observes that at the close of the year the figures were as follows:—Of labouring convicts 6,123 males, and 270 females; of self-supporters, 357 males and 87 females; of ticket-of-leave holders, 216 males and 175 females. The prisoners, with the exception of the self-supporters and those possessing tickets-of-leave, were formed into divisions, receiving pay as follows:—Division gangs-men Rs. 8, sub-division gangs-men Rs. 6, Tolidars Rs. 5 monthly. First class convicts obtain three annas, second class two and half annas, and third classs two annas daily. The proportion originally existing between the classes having been as follows:—Division gangs-men 1–419; Sub-Division gangs-men 1–419, Mohurrir 1–479, Tolidar 1–26, First class ½, second class ⅓, third class ½. Self-supporters, now abolished, used to be promoted to that grade, without any definite period having been served, whilst they only differed from those having tickets-of-leave in not being permitted to go where they pleased upon the Settlement without a pass, and also in having to pay a tax of one Rupee every month. Tickets-of-leave could be obtained by prisoners of seven years' sentence after six years' servitude; by those of 14 years' sentence after 10 years' servitude, and life-prisoners after 16 years' servitude. Convicts who have arrived since October 1868 receive rations, but no pay. "There are," says *Dr. Rean*, "three systems of dieting in vogue on the Settlement. The *first* comprises those prisoners who receive a subsistence allowance according to the scale already detailed, and who purchase their own food; *secondly*, those who are messed in gangs; and *thirdly*, those who receive rations in lieu of any money allowance, and cook their own food. Those who purchase their own food do it from the Commissariat, through a bunniah at an established rate, calculated to enable each man on the lowest pay to receive a fair diet with a small surplus." In the chain-gangs the following is the dieting:—"For Indian prisoners, rice or wheat 24 ozs., dhall 4 ozs., vegetables 5 ozs., ghee 1 oz., mussallah ½ oz., tamarind ½ oz., salt 1 oz., daily. Meat 4½ ozs. twice a week, fish 5 ozs. four times a week." * * "A larger quantity of fish is introduced than usual, with a view to consume, as much as possible, such kinds of animal food as are most economical and produced on the Settlement." The messed convicts are fed on the same scale: 116,299 lbs. of mutton, beef, and pork were issued to convicts in 1868. Respecting the cost to Government, especially of mutton, *Dr. Rean* observes:—"To diminish this is most desirable, and I think quite possible, by the development of the resources of the Settlement in the rearing of cattle, and the increase of fisheries." I could refer to many remarks from this Officer respecting the great value the fisheries ought to be, provided they could be fully worked; thus, so long ago as July 31st, 1869, he observed:—"The next important article of food which should be obtained is fish; it is surprising, with a harbour teeming with the finest fish in every cove and inlet, that sheep have to be imported from Calcutta at an enormous cost to the State to supply the convicts with animal food. Food of a nitrogenous nature is necessary to maintain the labouring man, but if fish or milk could be had in quantity, mutton could be largely dispensed with; 12 ozs. of mutton is now issued to Hindoos weekly, and I am of opinion it might be re-placed by fish to a very large extent without prejudice to the health of the prisoners." *Major Davies* observed in 1867,—"Fish, although abounding in the Bay, is so scarce that it cannot be looked upon as an article of food, * * it would appear to be our best resource as a substitute for mutton." *Colonel Man*, the present Superintendent, remarks,—"*Dr. Rean* justly reprobates the quality of our mutton, and as it is brought here and maintained at a vast expense, my object has been to endeavour to provide substitutes which would enable us to diminish its importation." Without making further extracts, I may observe that it is very clear that nitrogenous food is a necessity, that

the Superintendent and senior Medical Officer desire some substitute for mutton, both on account of its inferior quality and great expense, whilst, if procurable, fish would afford the required substitute.

Present cost of the supply of sheep for convicts at the Andaman Islands.

6. The necessity of some form of nitrogenous food being admitted, a few words are necessary to the quality and quantity of the mutton which is expended on the convicts. As to the quality of the meat, every one who has seen or tasted it must admit it to be of the most inferior description: the climate is evidently unsuited for sheep, they neither thrive, and will not, or cannot breed. The following figures give an approximative idea of the cost of mutton issued to the convicts in one year:—

Mutton.	Sheep alive.	Sheep heads.	Cost.	Recovered.	Loss.
lbs.	No.		Rs.	Rs.	Rs.
52,522	532	1,660	26,235	6,261	19,974,

But as the above estimate does not include the freight, which is Rs. 5 a head by the steamer from Calcutta, and as 7,129 sheep are shown to have been expended,* I suppose at least Rs. 35,645 may be added on that account, thus raising the loss to Rs. 55,619, and consequently, in calculating the value of fish, when given for the purpose of superseding the use of mutton, one must not look on it of the value of simply two annas a pound, the sum charged to the convicts, but that 2lbs. of fish will be equal to at least 1lb. of mutton, which is now a most expensive article; whilst it appears probable that the healthy fine fish of the waters of the Settlement must be superior as an article of diet to the lean mutton. From a return received from the Commissariat Officer, I extract the following:—Sheep remaining, January 1st, 1869, 1,746; received during the year, 7,152; issued and died, 7,129.

Proposition of the Officer in charge of the Fisheries to lease them all out to a Malay: reason against such a step being adopted.

7. The Officer in charge of the Fisheries observes:—"I am averse to Government fisheries, and am sure peculations must go on when I see 30 men, self-supporters, catching three times as much as 60 Government men, and I don't see the way to prevent it. I am in treaty with the Malay from Penang, whom I am in hopes of persuading to farm the fisheries," a course I must strongly oppose; for, however advisable it may appear on paper, I feel sure it will be a great error in practice. Should the fisheries be let for money, a slight return may certainly be obtained, but the contractor must employ convict labour, and unless he agrees to sell his captures to Government at a fixed rate, and furnish a certain amount at stated times, the market will be completely in his hands, for he could fix his own prices, and a most tremendous pecuniary loss must accrue, or Government be driven from the fish market for their supply. If the prisoners are in future to be rationed by Government, as proposed, a certain amount of animal food must be procured; and provided these splendid fisheries are let to a Penang man one of the cheapest and best sources of such supply may be cut off. That Government may and probably does suffer from peculations, as suggested, is by no means improbable, but I do not consider to be the reasons self-supporter obtain three times as much fish as those working in gangs (see paras. 11 and 14). Likewise, I would suggest a trial of certain plans (see para. 15), for the purpose of more effectually obtaining fish for Government purposes. Should Government be independent of the fish supply, by increasing the cows, or breeding goats and pigs, and the convicts not desire to purchase fish, then the fisheries might be leased out; but were this the case, who would take them, for from whence could the lessee derive his profits?

Present mode in which the fisheries are worked.

8. Having in the preceding paragraphs shown that fish are a necessity to Government, and capable of supplanting the now expensive mutton, I arrive at the question of how the fisheries are at present worked? "I believe," observes the Superintendent, "that a large proportion of the fish caught by the Government gangs is now handed over to the self-supporters, and sold by them," a conclusion not exactly commendatory of the manner in which the convict labour is supervised. In October 1869 the same Officer reported,—"Captain Laughton, the Executive Commissariat Officer, has taken charge of the Government fisheries, and is working energetically to bring matters to an effective state." The following shows the number of inhabitants and fishermen in each different Station on the Andaman Islands. The fishermen are divided into those who are self-supporters, and are paid for what they capture, and those who are Government fishermen, and have no encouragement whatever to induce them to work.

Fishes of the Andaman Islands.

remarkable by the absence of the silurioids and carps. I have not detailed amongst the following a large number of the smaller and more insignificant species as regards food.

48. „ spilurus, *Blkr.*
49. „ indicus, *Shaw.*
50. Upeneoides tragula, *Richard.*
51. „ bivittatus, *Cuv. and Val.* Chah-ti-ing-ud-dah, *And.*
52. Mulloides flavolineatus, *Lacép.*

The following table shows the quantity of fish taken during the same period by the two different classes of convicts:—

Month.	No. of Fishermen.		Average No. of pounds of fish taken monthly per man.		Quantity of pounds of fish received from	
	Self-supporters.	Government gangs.	Self-supporters.	Government gangs.	Self-supporters.	Government gangs.
January ...	27	78	200	37	7,125	2,782¼
February ...	37	76	204	62	7,565¾	4,705½
March ...	32	60	327	80	10,470½	4,818⅝
April ...	32	60	292	91	9,362	5,509½
May ...	32	60	294	67	9,408½	4,056
June ...	31	68	321	65	9,940¼	4,446⅛
July ...	31	68	283	85	8,788½	5,358⅞
August ...	31	73	361	97	11,185	7,123¾
September ...	31	73	336	115	8,387½	10,411
October ...	31	73	378	90½	11,709½	6,606
November ...	31	73	227	74	7,034	5,383

The above table shows that during the first eleven months of 1869, each self-supporter captured upon an average 293 pounds of fish monthly, whilst each man working in the Government gang only took 69 pounds during the same period (see paragraph 11.)

Fishermen consist of self-supporters and gangs-men. The latter appear to be chosen by chance, and not selected for their knowledge of fishing, whilst they have no inducement to fish.

9. The men who fish are divided into the self-supporters and those who work in gangs and are under Tolidars. But it does not appear that the Tolidars are selected for their posts, owing to a knowledge of fishing, in fact, some are up-country men who have never seen a sea or back-water fishery previous to their arrival at the Andamans. Any convict may be sent to the fish gang, and those who work in them are liable at any moment to be draughted away to jungle cutting, raising bunds, &c., and fresh hands are given. It must be admitted that no method is adopted at the present time to obtain good fishermen to work the Government fisheries. To develope this source of economy, it would probably be more efficacious were those convicts set aside for fishing who were best acquainted with the work. When getting the drag net ready for use in a fresh water creek, the convicts were at first doubtful which edge was to be above, that with floats or that with weights. I need scarcely add they caught nothing, whilst they fairly excused themselves, observing they had never been fishing previously in their lives. But were good fishermen available amongst the convicts, they have no inducement to obtain fish to procure which for the morning supply they should be at work late at night or at daybreak in the morning. The Senior Medical Officer on April 30th, 1869, observed,—"As the wet season is now setting in, I have the honor to recommend that the men employed in the fisheries be served a dram of rum daily. The person in charge of the gangs should also apply to the hospital for a ration of quinine to be given as well;" an extra suit of clothes was also recommended to be issued to fishermen, so that they might have a dry suit to put on after coming from their work. Under the above circumstances, it is scarcely surprising that they shirk their work whenever it is possible to do so. How the drag net is always requiring to be mended. How the stakes are not drawn, because one man is suffering from fever, or there are not enough canoes. How the line fishermen absolve themselves for bringing in so few fish, with the assertion that their hooks and lines were carried off by a shark, and such like excuses.

Fishes of the Andaman Islands.

10. The fishes of the Andamans are exceedingly varied in their characters, and chiefly remarkable by the absence of the siluroids and carps. I have not detailed amongst the following a large number of the smaller and more insignifiant species as regards food.

SUB-CLASS—TELEOSTEI.

ORDER—ACANTHOPTERYGII.

Family—Berycidæ.

1. Holocentrum, *New species.*

Family—Percidæ.

2. Lates calcarifer, *Bloch.* Jo-dah, *Andamanese.*
3. Serranus hexagonatus, *Forst.*
4. „ ——— *New species.*
5. „ dispar, *Günther.*
6. „ summana, *Forsk.*
7. „ bontoo, *Cuv. and Val.* Rou-je-dah, *And.*
8. „ ——— *New species.*
9. „ argus, *Schn.*
10. „ cyanostigma, *Blkr.*
11. „ suillus, *H. Buch.* Rab-na-dah, or O-ro-tam-dah, *And.*
12. Genyoroge marginata, *Cuv. and Val.*
13. „ ——— *New species.*
14. „ cæruleopunctata, *Cuv. and Val.*
15. „ ——— *New species.*
16. Mesoprion russellii, *Blkr.*
17. „ therapon, *Day.* Jeu-win-dah, *And.*
18. „ rangus, *Cuv. and Val.* To-go-re-dah, *And.*
19. „ chirtah, *Cuv. and Val.* An-na-kah-ro-dah, *And.*
20. „ sillaoo, *Cuv. and Val.*
21. „ johnii, *Bloch.*
22. Ambassis urotænia, *Blkr.*
23. „ dussumieri, *Cuv. and Val.*
24. Apogon multitæniatus, *Blkr.*
25. „ hyolosoma, *Blkr.*
26. „ thermalis? *Cuv. and Val.*
27. „ orbicularis, *Kuhl. & V. Hass.*
28. „ fasciatus, *White.*
29. Dules tœniurus, *Cuv. and Val.*

Family—Pristipomatidæ.

30. Therapon servus, *Bloch.*
31. „ theraps, *Cuv. and Val.*
32. Pristipoma hasta, *Bl.* Oo-rug-nud-dah, or koor-koo-to-dah, *And.*
33. „ maculatum, *Bl.* Oor-ung-dah, *And.*
34. „ argyreum, *Cuv. and Val.*
35. Diagramma nigrum, *Cuv. and Val.*
36. „ ——— *New species.*
37. Lobotes surinamensis, *Bl.*
38. Scolopsis ciliatus, *Lacép.*
39. „ bilineatus, *Bl.*
40. „ cancellatus, *Cuv. and Val.*
41. Dentex multidens, *Cuv. and Val.*
42. „ (synagris)—*New species.*
43. Pristipomoides,—*New species.*

Family—Sciænidæ.

44. Corvina belengeri, *Cuv. and Val.*
45. Otolithus aneus, *Bl.* Chal-burn-dah, *And.*

Family—Polynemidæ.

46. Polynemus tetradactylus, *Shaw.*

Family Mullidæ.

47. Upeneus barberinus, *Lacép.*
48. „ spilurus, *Blkr.*
49. „ indicus, *Shaw.*
50. Upeneoides tragula, *Richard.*
51. „ bivittatus, *Cuv. and Val.* Chah-ti-ing-ud-dah, *And.*
52. Mulloides flavolineatus, *Lacép.*

FAMILY SPARIDÆ.

53. Lethrinus rostratus, *Cuv. and Val.* Po-tang-dah, *And.*
54. „ xanthotænia, *Blkr.*
55. Chrysophrys calamara, *Cuv. and Val.* Moo-roo-kee-dah, *And.*
56. Pimelepterus cinirascens, *Forsk.*

FAMILY—ATHERINIDÆ.

57. Atherina froskâlii, *Cuv. and Val.* Ko-re-dah, *And.*

FAMILY—MUGILIDÆ.

58. Mugil macrochilus, *Blkr.*
59. „ waigiensis, *Cuv. and Val.* Do-dah, *And.*
60. „ bontoo, *Cuv. and Val.* Pa-la-ke-o-dah, *And.*

FAMILY—TRACHINIDÆ.

61. Percis hexophthalma, *Ehrn.*
62. Sillago sihama, *Forsk.* Thol-o-dah, *And.*
63. Pegasus draconis, *Bl.*

FAMILY—CIRRHITIDÆ.

64. Cirrhites forsteri, *Bl. Schn.*

FAMILY—CARANGIDÆ.

65. Caranx hippos, *Linn.*
66. „ jarra, *Cuv. and Val.*
67. „ hasseltü, *Blkr.*
68. „ calla, *Cuv. and Val.*
69. „ djeddaba, *Forsk.*
70. „ mate, *Cuv. and Val.*
71. „ —— *New species.*
72. „ —— *New species.*
73. „ ciliaris, *Bl.*
74. „ speciosus, *Forsk.*
75. „ oblongus, *Cuv. and Val.* Ro-thul-dah, *And.*
76. Chorinemus tala, *Cuv. and Val.*
77. „ lysan, *Forsk.*
78. „ tooloo, *Cuv. and Val.*
79. Trachynotus ovatus, *Linn.*
80. Psettus argenteus, *Linn.* Oo-chra-dah, *And.*
81. Equula fasciata, *Bl.*
82. „ dussumieri, *Cuv. and Val.*
83. „ edentula, *Cuv. and Val.*
84. „ splendens, *Cuv. and Val.*

Exclusive of the foregoing 202 species of fish, I obtained about 50 more (besides two species of Sharks, which I have not yet had time to determine), but this is not of much economic moment, as they are mostly small or else rare; the list comprises those most used as food or most abundant at the Andamans.

11. The modes of fishing employed in the Government fisheries or by the self-supporters are as follows:—Stake fishing, drag nets, cast nets, hooks and lines, on each of which I have a few remarks to offer.

Modes of fishing, stakes, drag nets, cast nets, hooks and lines.

Stake fishing appears to give the steadiest supply, and is exclusively carried on by gangs of convicts, as it requires about ten men to work one set properly. Self-supporters cannot club together to buy the bamboo fences, nor could they work it, unless by hired servants, consequently this description of fishing is entirely in the hands of Government. Fishing stakes are constructed by fixing bamboos at regular distances in the muddy bed of some appropriate locality. A large piece of water is enclosed, and at its centre, opening inwards, are three chambers communicating with one another. These stakes are completed by attaching split bamboo screens (taties) to the fixed bamboos, and constructing a door to the innermost chamber, which can be closed at pleasure, thus entrapping the fish: it is cleared out at low water. The upper edge of the fishing stakes have to be about one foot above high-water mark. Owing to the large number of barnacles and destructive molluscs, they rarely last above a few months, whilst, unless kept clean, fish will not enter. They should be shifted every ten days or a fortnight, as the fish become so cunning that few are taken after it has been standing a few days. Owing to the large amount of coral, it is not always possible to discover a place where bamboos can be driven in, even in localities which otherwise would appear to be exceedingly well adapted for this description of fishing. Stakes succeed best in the rainy weather, when the water is not very clear, as from June to September.

Drag nets are used by gangs, and answer best during the rainy season. Coral reefs considerably interfere with their employment.

Cast nets, owing to their being used by a single individual wading into the shallow water, or from a canoe which is paddled by another man, appear most adapted for the self-supporters, and it is the form they mostly employ. It is by cast nets that sardines, *Clupea neohowii* C. V., are taken in quantities as baits for the line fishermen, or else as an article of food. The sardine season is best from November to March, after which period, having deposited their ova, many retire. There is no difficulty during this period in capturing, in appropriate places, quantities of these fish with this form of net; but, as food, it is inferior to the descriptions of fishes that are taken by hooks and lines, or the larger ones that are captured in the stakes. Any amount of sardines may be taken, more especially at Port Mouat and along the shore, but the difficulty is in disposing of them when caught as they rapidly become putrid, and no convict will purchase them when he can obtain the larger and better kinds at the same price. This is the chief reason the self-supporters take such a much larger quantity of fish than those working in the Government gangs, but there can be no comparison as to quality. Formerly, the sardines and small fishes were sold at half the rate of the stake fish, but now all are the same.

Hooks and lines.—This description of fishing commenced about two years since, and by this means most of the finest fish are taken. It is carried on all the year round, except in very rough weather; but is most prolific during the dry season. The most appropriate places are the bays and out at sea; if the water is clear and the bottom rocky, from 10 to 12 fathoms is about the best depth for taking large fish, as the water shallows the smaller species are captured. Men are employed in gangs at Haddo for this description of fishing, they take their baits (sardines) with a cast net, leave in the evening and remain out all night in the boat, returning in the morning, a second gang succeeds them: consequently they work on alternate days. Some self-supporters also fish in this manner, sea perches (Serrani, Mesoprions, Genyoroge's) and horse mackerel are taken in this manner, but not unfrequently as the captures are being hauled on board, a Shark seizes the fish and breaks the line, likewise many of the stronger fish, when hooked, get under the coral, and the line becomes divided. These, however, are contingencies that must be expected, consequently spare tackle in much larger quantities than now supplied should be furnished. The hooks, when I was at the Andamans, were being purchased in the bazaar at one anna each, but they were of a very inferior description, so much so, that the self-supporters were getting some made from the rings forming the handles of old cast iron cooking utensils. Lines also for fishing were being purchased in the bazaar, but the self-supporters procure cotton thread, from which they make their own.

Observation on the fish supply and fisheries in general.

12. The morning after my arrival at Ross I saw the fish brought in by the gang of eight men who had been out the previous night fishing with hooks and lines. There were upwards of 100lbs. weight, whilst the quality of the species for food could not be surpassed. There were principally sea perches and Dentex's, besides there was a moderately-sized Shark, which, however, only the Madrassees eat. However, there was an average of upwards of 13lbs. per man taken on the previous night, but complaints were made of the deficiency of boats for fishing purposes, which was apparently well grounded. During the few succeeding days I saw the various modes of fishing around the settlement, and the drag net used in Phœnix Bay, when a large draught of a new species of mackerel was taken. Some of the large nets in the settlement were laid up as requiring repairs. The convicts with cast nets did not appear to be very expert in their use. The stakes required shifting, and a deficiency of canoes was very generally complained of. I went several times to North Bay, and satisfied myself as to the impossibility of using drag and cast nets over a great portion of its extent due to the growing coral. Nothing could exceed the beauty of the view in the deep clear water; innumerable fishes of almost every conceivable colour, most diversified forms and different sizes were to be perceived quietly swimming about, as even the sandy bottom was easily seen. In some places the living coral looked like beautiful blue tipped moss, in others like giant mushrooms, or in the form of sticks, leaves, or flowers. As the fishing lines were let down, numbers of fish crowded round, but many only looked at the baits, but would not bite. Although, owing to the assistance I received from nearly every body, the number of species of fishes I collected is perhaps the largest on record in so short a time from one place, I am satisfied that I saw very many more that I failed in taking. On only four fish did I perceive parasites, which extraordinary small proportion would seem to be a decided proof of their excellent condition. The Siluroids and Isinglass Polynemi, as I have observed, were nearly absent, consequently Isinglass could not be manufactured on the Andamans. I could not hear of any sea-snakes, usually so abundant in the Indian Seas, and although the Andamanese asserted they knew of one sort at "Jolly Boys" Islands, they said no one had ever been bitten by it; on its being brought to me I found it to be a sea eel, *Gymnothorax reticulatus*. Pearl oysters, *melagris margaritifera*, were lying about the beach in considerable quantities, more especially at Phœnix Bay; but they were on most places along the shore, and might prove well worth investigating. It was very evident

from the appearance of the shells, that the mollusc had not been dead a full season, consequently one may fairly conclude that pearl oyster beds are in existence on the shores of the Andamans. A species of chank shell, *Turbinella rama*, Lam., so valued by the Natives of Hindoostan, is in fair abundance. During my visit to the Andamans, I procured a rather extensive collection of the land and fresh water shells, but perhaps the one which will be most valued by naturalists, is a fine specimen of the *Nautilus stenomphalus* with the mollusc complete, it having crawled inside one of the stakes.

Excursion with the aborigines to see the best fishing grounds, killing fish by means of bows and arrows, &c.

13. From Port Mouat, as I have observed, I went with Mr. Homfray and the Andamanese to the neighbouring fishing grounds. As their manner of obtaining the finny tribes does not appear to have been recorded, I will give a short description of what I personally witnessed. We left the Andamanese encampment at 3 P. M. at low spring tides, taking with us 17 of the aborigines in our boat, their ages varying from about 19 to 10 years. The females and younger children with three hand or landing nets, remained in the stern of the boats; the bachelors with three bows and arrows and one spear in the forward part, and as usual the latter were constantly chaffing the former. One youngster took the rudder, and we prepared to start for "Jolly Boys" Island, some two miles distance; scarcely was the anchor raised, when a lad in a canoe came with some fish, and likewise handed in a large piece of dead coral, amongst the branches of which numerous beautiful fish (glyphidodons, apogons, &c.,) were to be seen alive, as well as some lovely little crabs. When I suggested they might have got in three by accident or put there for show, over the side of the boat dashed a young savage, who dived down and came again to the surface with another piece as large as his head, and in it were 40 small but living fishes. As we were again starting, we heard a shout of *ooch-rah*, *ooch-rah* (fish, fish), when another canoe arrived, with some splendid specimens obtained by means of bows and arrows. At last we started, the Andamanese carrying as usual fire with them, and asking for tobacco and pipes, their most constant word being *jay*, *jay* (give, give.) As a fore-taste of what was to come, provided they did well, we presented the Chief with a looking-glass, some tobacco and a box of fusees, and we also gave our fellow passengers another box of fusees, which was entirely emptied before we came to the end of our short pull, as they were unable to resist amusing themselves by "making fire." We passed shoals of fish, many being of the most brilliant hues; as we neared the shore, the Andamanese pointed out a turtle or tortoise, but did not succeed in obtaining a shot at it. On landing they at once found its track, and asserted it had been on shore to deposit its eggs, but I refused to stop to hunt for the nest as the tide was on the turn. Away went the females along the shore, the bachelors with their bows and arrows and spear as far out upon the reef as they could proceed, whilst the younger children stayed with us to collect shells and small fish. As soon as we commenced wading into the sea, hundreds of fish darted about, either from under one piece of coral to another, or from sea weed to sea weed. Now our juvenile companions commenced to give chase: first the little Blennies claimed our attention, and though some escaped into holes in the coral, we took as many as I required. Occasionally, whilst feeling under coral or sea weed for a fish, a crab would lay hold of the hand of the investigator. At one yell rather louder than any which had preceded it, and the assertion that a "a sea devil" had injured a boy, I proceeded to the spot, and saw a beautiful scarlet and banded fish *(Pterois volitans)* swimming off, the lad whom it had wounded refused to touch it. Its fins were expanded, and it was sailing very quietly away as much as to say "touch me, if you dare!" However, I threw a pocket handkerchief over it, and in this manner procured it. But many fish I had never previously taken darted past us, and the little Andamanese began to warm to their work; sooner larger game rewarded their labors *(serrani*, several species of *Teuthis*, some mullets, parrot fish, *Hemigymus melanopterus* and *Callyodon viridescens.)* Whilst thus employed, we heard a loud shout seawards, and on looking perceived a large fish struggling with our archers. It proved to be a ray, nearly 6 feet long. After an hour's collecting, observing the numerous sea slugs, *Trepang* or *Beche de mer*, *(Holothuridæ)* which are used as food by the Chinese, and obtaining about sixty pounds weight of shells, we went to see how many fish had been procured by means of bows and arrows, and found that in 1½ hours 31 large mullets, averaging about 3lbs. each, had rewarded their labors, and that without the loss of a single arrow. The succeeding day the same individuals killed 56 large mullets by bows and arrows within two hours' time. As soon as a fish is viewed, all are on the alert; they appear to be at once endowed with a new life, as active as cats, and very acute in their eyesight; they fire the arrows at objects in the water, which no European unused to the work could perceive. They appear to aim under the fish, and mostly hit it through the bowels: when struck, away darts the unfortunate victim carrying off the floating arrow (see paragraph 4), but it soon either becomes entangled in sea weed, or the tired and wounded fish gives in, the arrow floats, the captive's life is nearly over. Had we possessed the means of carrying more fish, a much larger number could have been killed, but the Andamanese suggested they had enough to eat, and declining carrying what was of no use to them. As we were about leaving, one of the aborigines brought an *Amphiprion percula*, and on being told

that it was approved of, observed that she could get numbers more. She took us to a sea-nettle, *Actinia*, which she pulled off the coral rock by inserting her hand behind the attachment of this polype, and on shaking it into the net two more of these litte fishes came out. Subsequently this was repeated to twelve others, and all had two fish inside them, except one, which had three. They asserted these fish usually resided within this curious living domicile. On returning towards our boat, upwards of one hundred esculent swallows were seen soaring about, and perceiving a cave on our right, it suggested their nests might be there. We sent in the Andamanese, who soon returned with two old ones, and they informed us that the season was passed. We caught some specimens of the birds by knocking them down with our hands as they dashed out of the cave. Further on we came across a *Chiton*, on a rock, which they pointed out as excellent eating, but on being asked whether they eat the sea-slugs, they appeared disgusted at the idea. We reached the boat as darkness set in, when the fish were divided, and it was late before we reached their encampment, when the Chief came into our boat to see what he was to get. Having given all the presents, amongst which the spears for Dugong hunting seemed to be very acceptable, we left for Port Mouat, where we arrived shortly after midnight.

Summary of the present condition of the fisheries, and propositions.

14. In making a short summary of the present condition of the fisheries of the Andaman Islands, I must first call attention to the very peculiar circumstances under which those fisheries have been created and worked. They have been no resident fishermen to demonstrate the best modes of procedure, and the very fact of being placed in the fishing gang has scarcely been an inducement to labor, but to rather the reverse. It could not, under these circumstances, be supposed that more appropriate plans would have been suggested by convicts, who on doing so would most probably have been directed to join the fishing gang, by no means a desirable appointment. There are neither sufficient fishermen, canoes nor tackle, and, although the self-supporters take a larger amount of fish than the Government gangs, it is due to their capturing sardines, which, though more abundant, are very inferior in quality to the fish taken in the stakes and by hooks and lines by the Government gangs. I may here remark that when at Port Mouat I enquired why the self-supporters were so idle as regards the fisheries, and was informed that they could not dispose of their captures. As an experiment, four were sent out with two cast nets, and in four hours they obtained 260 pounds weight of sardines, and had to return, as their canoe could hold no more. They assert that they could go on for months taking at this rate had they a market. They dry some on the rocks and export them to Ross, where Madras convicts purchase them. The Government fishermen do not appear to be taken by selection, neither are they considered permanently attached to their work, even should everything be proceeding satisfactorily, but are drafted away for jungle clearing, bund raising and other employments, and new hands sent in their place. This is asserted to be one great cause of injury to the sea gang, for new hands cannot work, they become sea-sick. Convicts, if they do work at the fisheries, are not rewarded for doing well, nor punished if doing nothing. If they return without fish, asserting the nets have been carried away by Sharks having entangled themselves in them, or their lines have been broken by large fish, or divided by the coral, no one can prove that such is not the case; responsibility does not appear to exist anywhere, in fact, supervision is almost absent, whilst fisheries most especially require it. As regards executive control, there is one Tolidar over about 20 men; this individual, however, is not selected for his actual knowledge of fisheries: unless he is well supervised, he must be open to bribery by those under him, in order to screen the lazy, even if for no other cause. This is one strong reason why I object to the new plan, which prevents direct supervision. The Commissariat Officer might, without doing injury, keep the accounts and furnish the fishing tackle, but I would suggest the local officials should supervise the fisheries in their respective ranges, and an Overseer the more direct control. This Overseer should be practically acquainted with fishing, and probably a convict might be selected for the post; under him should be a Jemadar, to extend the supervision more completely over the Tolidars and fishermen. The Overseer and Jemadar should daily examine one or more fishery, and neither have to attend offices nor keep any accounts. As regards the number of fishermen, they are insufficient, and have only one scale of pay, and no inducement to labour.

Failure of convict gangs. Propose an intermediate grade between convicts and self-supporters, with stringent rules, to keep them at their work. Details.

15. That convicts employed as gang fishermen have failed in giving satisfaction is abundantly proved by the official reports, and the state of the fish supply; on the other hand, the self-supporters at Port Mount complain that they cannot sell the fish they capture, so turn their attention to keeping cows and goats. The ticket-of-leave men, who are generally allowed wives, do not care for fishing, which is work only suitable for poor men, they will occupy themselves with it when there are plenty of fish, and the weather is fine, otherwise they cannot be depended upon for a regular supply. For fishermen two things are essential: knowledge of the work and attention to it at such hours that the market may be supplied in the morning; an undertaking which I consider might be met in the following manner:—The fishermen at the different stations should live

apart from all other convicts in distinct villages, and the Tolidars with them, they should not be permitted, under any circumstances whatever, to marry, keep cows or goats, or any description of poultry, as such evidently interferes with their legitimate occupation. If they have cattle they will go for branches of trees wherewith to feed them, or return at the proper hour to milk them, &c., and thus their duties are neglected. I would suggest that convict gangs, as at present constituted, be abolished, and a sort of intermediate grade between them and the self-supporters should be created, (for the peculiar circumstances of the case require peculiar dealing with), giving the work to them that should be done by the former, but purchasing the fish from them, as is now done, from the latter. On the arrival of a batch of convicts any fisherman or suitable person desiring it, should be drafted for trial into this gang, and, if he succeeds, kept there; if not, sent back. They must, in short, distinctly understand that if they fail they will be remanded, which rule should be rigidly enforced, but so long as they work well and are not sick, they ought not to be drafted away for other occupations. After about three or four years at this work, these people will, doubtless, begin to earn money, and wish to go to some more quiet and less troublesome work, and the inducement of being permitted to leave the gang should be held out, when they might become self-supporters, as at present, but take up any occupation they desire. Different sets should be told off, for hook and line fishing, cast nets, drag nets, float nets if they can use them, stakes, and the other descriptions of fishing, and promotions might take place from the more difficult and less paying forms, to the easier and more remunerative, provided the parties have proved themselves deserving of promotion. As a rule, fishermen should be out during the night at line fishing, large net fishing, and clearing the stakes, to be in time for delivering the fish by 9 A. M. The Tolidars should be responsible that this is carried out, the men should be fined if they refuse to work, and returned to the gangs if they persist. I would propose 149 men be employed in the fisheries, and to show that this is not excessive I extract the following from *Major Davis's* report:—"The Superintendent asks for 150 convicts to catch fish for some 6,000 convicts, whereas now there are upwards of 7,000, and as soon as the rationing system comes into operation, a much larger proportionate supply of nitrogenous food will be required." I would suggest these 149 men being thus divided: one Overseer on Rs. 50 a month, and one Jemadar, whilst there should be a Tolidar over every 20 men. I would suggest the establishment of fishing villages, locating the men much as follows: Ross Island, 20; to be solely employed in line fishing at sea. Corbyn's Cove and South Point, 20; Aberdeen and Phœnix Bay, 20; Hope Town, 20; Haddo and Navy Bay, 20; Viper, 20; Port Mouat or McPherson's Straits, 20. Every 20 men should have two large canoes and three small ones suitable for cast net fishing, going to the stakes or the various occupations necessary in this employment. The question may well be considered here, of how are these fishermen to be paid, as I consider paying for the captures most essential to success. They should not receive any salary as is the rule now with the self-supporters, but be paid for their fish (with exceptions to be enumerated) at the rupee for 25lbs., the odd pound (it now being lbs. 24) being allowed the Bunniah for dryage and wastage. This amount, however, should not be paid for sharks, skates, and rays, which very few will eat, neither for sardines taken along the sea shore from October to March, and where they so abound, that several hundred pounds daily can be taken by a single cast net, at such times and in such places a rupee per lbs. 50 might be given.* Also for sharks, provided a shark's liver-oil factory were to be created (see paragraph 17), some different arrangement for payment will have to be instituted, but that could not be decided upon previous to a trial being made. Government may occasionally be losers by the fish becoming putrid, for I would suggest all taken being purchased by them; on the other hand, they will be considerble gainers in the following ways; in no longer paying 140 convicts, who, at two annas a day, receive about Rs. 3,193 a year: in the fishermen in future paying for the cost of all boats, fishing stakes, tackle, &c., besides the increased captures should remove the necessity for sheep for convicts, and thus relieve the settlement of a yearly outlay of at least Rs. 55,619 (see paragraph 6). Should the foregoing plan be deemed impracticable, I would suggest four maistrees on first class pay to every gang of 20 men, chosen by merit, and not by time, and extra clothing should be given, and grog and quinine might be allowed when the work is being satisfactorily carried on. In whatever manner the fisheries are worked, the fishermen or their Tolidars should have nothing whatever to do with the disposal of the captures, but hand them over to the Bunniah, who should give a receipt for the weight received.

Plan of providing boat and tackle, and how the expense should be met.

16. Provided my proposition of substituting self-supporting fishing gangs in lieu of the present plan be approved of, I would point out how I would suggest the expense for the various nets and implements might be met, and the fishing gangs assisted without any pecuniary loss to Government. I would propose that at first should any of the present

* The old rate was 12 lbs. a rupee for the best varieties of fish, and 24 lbs. a rupee for sardines.

fishermen wish to belong to the gang under the new rules, and are qualified for the same, they may be permitted to join. That the tackle, canoes, and boats, now in use, be given over free of cost, but to remain Government property in the hands of the gangs. That all future requisites as canoes, tatties, nets, dhahs, knives, hooks, lines, &c., &c., be kept ready, and supplied to the gangs at rates which cover the Government outlay, but are not so excessive as are now demanded in the bazaar for articles of a very inferior quality. Canoes might be given at eight annas a foot, whereas now the self-supporters have to give two rupees for the same amount of work from Chinamen. Logs might be floatod to Viper, and worked into canoes by the Burman convicts who well understand how to do it. Tatties for stakes, averaging 8 feet high by 15 feet long, might be easily constructed at eight annas each by the invalids at Viper. Bamboos, which have to be fixed five cubits deep in the mud, must be obtained during the rains. "The cost of nets," observes the Commissariat Officer, "is for a hand (cast) net of thread, weighing 2lbs. with 14lbs. of lead, Rs. 6-12. A drag net of 300lbs. of twine, 2,100lbs. of lead, about Rs. 212. Other sizes according to weight." I would here suggest that much less expensive substances might be worked up into equally serviceable articles by the invalids and chain gangs at Viper. Much cheaper fibre than cotton thread and equally good could be obtained in the Andamans, the pineapple was introduced from Burmah at a considerable expense partly for this purpose, and it would be well, (having only reference to the question of nets), were it imperative on convicts who eat the fruit, that the shoots should be kept and planted in some of the newly cleared land, where they thrive exceedingly well, whilst the fibre is excellent, although requiring some amount of labour to prepare. Wild plantains, so common in the Andamans, might also be sown broadcast in new clearings when the land is not requisite for other cultivation; not only would it be useful for its fibre, but partially prevent the weed, known as Egyptian grass, from taking possession of the ground, or the Bandi-koi might be more extensively propagated, as it is an excellent substitute for hemp, besides its fruit being employed as a vegetable food.

Proposition respecting the manufacture of fish-oils at Port Mouat.

17. Besides the direct question of working the fisheries, there are a few other subjects I would suggest as worthy of attention, and first the practicability of manufacturing *fish-oils* at the Andamans. They are of two varieties; the *simple animal-oil*, so necessary for all descriptions of machinery, and *secondly*, sharks' liver-oil required for *medicinal* use. As regards *simple fish-oil*, the sardines at the Andamans are identical with those of Malabar, from which a valuable oil is obtained. They exist in enormous shoals, being most common from October to March. They are said to breed about the latter end of February, then to diminish in numbers. It is during the breeding season that the manufacture of fish-oil might be carried on, previously they are thin, but do for dried fish. The fish could apparently be taken in almost inexhaustible quantities, and without doubt some of the convicts must be well aware of how the oil is obtained by decomposition or by heat, and almost the only requisite in the latter, is a large iron pot for heating the water in, being careful that this is very gently done, and never exceeds 130°, the oil is skimmed off as it floats to the surface. *Medicinal Sharks' liver-oil* I have observed upon in my report on the fresh-water fisheries of British Burmah, page 8, para. 18. Sharks abound off Port Mouat, and fuel is in abundance; a shark net might be made by the invalids at Viper. The mesh should be large, the substance employed strong, and the net should be floated in with the tide. Should it succeed, and it appears as if it ought to, the factory at Calicut, which has failed to furnish the requisite supply, might perhaps be abolished, and the drug made more economically at the Andamans.

Salting fish during dry season, drying when they are not breeding.

18. *Salting fish* might be carried on during the dry season at Port Mouat, McPherson's Straits, or Corbyn's Cove, but it probably would not answer during the rains, owing to the prevalence of numerous flies, the eggs of which rapidly generate maggots. Sardines and allied fishes, prior to the breeding season, might be dried on the rocks for "soukka" or *dried fish* relished by the Madrassees. The present plan is to leave them on the rocks on the sea-shore, or one of the islands for three days. Birds take away a few, but this is inconsiderable, whilst the Andamanese only eat fresh fish, so they do not interfere. I examined four bags of this dried fish at Port Mouat, being three days' work of three self-supporters. They had 192 seers, which at four seers the rupee (provided all were sold) gave them the sum of Rs. 48, or Rs. 16 each man, for three days' labour. The fish were of three descriptions, (assorted) Engraulis telara; E. boelana; and Clupea Neohowü. All had been captured by cast nets, and no expense incurred in the drying.

Pearl oyster banks might be discovered.

19. The pearl oysters likewise seem deserving of attention. I observed the shells in considerable numbers in sheltered spots, and perhaps the Superintendent could suggest what appropriate rewards might be offered to convicts for discovering where the beds are.

APPENDIX.

Return from the Deputy Assistant Commissary General.

Cost of Meat issued to convicts in 1869:—

	lbs.	Estimated Cost. Rs.	Recovered. Rs.
Beef	22,450	6,059	2,109
Mutton	52,522	21,166	5,246
Pork	3,523	889	436
Sheep alive	532	4,403	369
Sheep's heads	1,660	666	666
Total ...		33,183	8,826
Difference ...			24,357

Convicts pay for meat at reduced rates. Rationed convicts do not pay for it at all.

NOTE.—The above estimated cost does not include freight. Freight is now charged Rs. 5 per head by the B. I. S. N. Company.

Sheep remaining 1st January, 1869	1,746
Received during the year	7,152
	8,898
Issued and died ...	7,129
Remaining 1st January, 1870 ...	1,769

Appendix to DR. DAY'S *Report on the Fisheries of Port Blair.*

As to sharks' liver oil, of which a deficiency was complaind of, that no longer continues. The sardines have returned as have likewise the sharks, and the factory is in full working order.

The oil sardines have returned to Malabar, and I have personally made minute enquiries into the mode in which the oil is manufactured, which is effected in one of the two following manners.

Should sardines be fat, their livers are removed and placed in an earthen pot; these glands are covered over with about 2 inches of water. This is gently heated for about 15 or 20 minutes until it is 130° when froth appears on the surface, and the earthen pot is removed from the fire. The oil is now skimmed off with wooden ladles. It is worth 2½ Rupees a maund.

The second plan is more wasteful. A canoe is filled three quarters full of fat sardines and placed in the sun. About mid-day boiling water is poured over the fish, and the oil floating off, is skimmed into pots. This is repeated for three days.

Sardines in Malabar breed in June and July, after this they get fat, and from August to November or December are employed for making oil.

AGRICULTURAL IMPLEMENTS AND MACHINERY FOR EXHIBITION AT SAHARUNPORE.

Revenue.
No. 30.

INDIA OFFICE;
London, the 28th April 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

MY LORD,—After considering the despatch from your predecessor in Council No. 70, Public, and dated the 11th of October 1866, my predecessor, Secretary Viscount Cranborne in Council, entrusted to General F. C. Cotton, who had on several occasions of a like nature given his valuable aid to this Department, the task of ascertaining what agricultural implements and machinery would be most useful for the object which your predecessor in Council had in view, of exhibiting

these specimens of implements for the instruction of Native cultivators, under the superintendence of Dr. Jameson, in connection with the Botanical Gardens at Saharunpore. Various circumstances have delayed the selection of these implements at an earlier date; but I now transmit to you printed copies of a letter and two enclosures from General Cotton containing his recommendations on the subject.

2. You will perceive by the reply* which I have directed should be sent to that officer, that I have requested him to order all the articles recommended by him, the cost of which, including the packing, will be under £250, to be sent to the Director General of Stores at this Office for transmission to Saharunpore, or direct from each of the manufacturers as may seem best to him.

* Dated 12th April 1870.

3. With respect to the proposal for sending out models of machinery and implements for exhibition, General Cotton found that the cost would be so great that he did not recommend its being incurred.

I have the honor to be,

MY LORD,

Your Lordship's most obedient, humble Servant,

ARGYLL.

From MAJOR GENERAL FREDERICK COTTON, C.S.I., to FORBES WATSON, Esq., India Office,—Dated Torquay, the 19th March 1870.

I ENCLOSE a list* of the implements, &c., I should recommend being sent to Saharunpore.

* Appendix A.

In a former letter I gave some explanation† of the machines and tools I thought it advisable to send to Dr. Jameson at Saharunpore. I must ask you to forward a copy of that letter to the Doctor, as it will save the recapitulation of my object in suggesting each implement, and I will only now add a few words that seem necessary in further explanation.

† Appendix B.

I have entered in the list two horse-powers, one to be stationary, the other arranged to pack on wheels for locomotion. The chief object of the latter is to work the threshing machine and winnowing machine in the field, as in India it will very generally be better to thresh the corn at once rather than stack it.

The stationary horse-power will be suitable for all purposes, but will be specially adapted for the chaff-cutter, corn-crusher, and grist-mill, all of which are entered in my list.

The locomotive (or portable) horse-power would be well employed by cutting up straw at any place where the native carts halt for the night, where a great saving of fodder would be effected by it.

Amongst the extra parts to be sent out with Messrs. Howard's plough is a subsoil body, which I consider it very important to introduce into India. I have described its use in my former letter. It follows the common plough, and disturbs the bottom of the furrow without bringing the subsoil to the surface, which is almost always advisable, as the lower soil, not having had the benefit of the air, is rarely so productive as the surface soil till it has been loosened and exposed to the action of the air for a time, and this mode of working by a double operator is especially suited to India, where the team employed is not so powerful as the heavy horse team of England, and where the attempt to break up the whole depth at once would be attended with great waste of power, if it could be done at all.

Messrs. Howard's subsoil body is made to fit on to his common plough instead of the mould-board, and it is on that account mainly that I send out his ploughs.

I have found a light plough of Messrs. Richmond and Chandler's, made for the cultivation of cotton in India, which I also recommend being sent.

Another plough, I recommend, is found in use in Devonshire, and is an admirable implement that will, no doubt, become every year more generally used in England. It is very light, and can be worked both ways, which does not leave the land in butts, but quite even, so that the mowing machines may be used over it. The headlands are less trampled, and there is less waste of time in turning. These ploughs have a spade, as it is called, to be used when it is advisable to skim the surface before ploughing. In this case one end is fitted with the spade, which cuts and turns over the surface, and the plough returning on the same track with the ordinary coulter, covers what the spade had before turned over. In Devonshire breaking up clover is done in this way.

I have also added one of the original grasshopper ploughs of which the above is the modern improved implement. This old plough is still in use, and could be so easily made, and at so little expense, that it might be more readily adopted than the iron plough of the same form.

The cultivator, I recommend, will be a most valuable introduction into India. Its use in this country is becoming every day more extended, and in some light soils it is so effective that it is not thought necessary to use the plough above once in three or four years.

I have entered a very cheap threshing machine as the most likely to be brought into use in India. It will require some modifications to suit it to the peculiar grains of that country, but it will suit some, and I hope ingenuity will be found to adapt it to all.

I have recommended three different winnowing machines, and should be glad if all were sent out. As I have said in my former letter, it is one of the machines most immediately required. It has been for many years adopted in China, and was at once appreciated in Madras.

I have great hopes that if these implements are sent to Dr. Jameson they will be fairly tested and such modifications made of them as will secure there introduction into the North of India.

To ensure the same implements being sent that have been selected by me, I forward by this day's post the estimates of the several manufactures of the cost of each article. And it will be observed that allowance is made for the necessary packing for safe transmission to and through India.

A.

List of Tools, &c., suggested for the Saharunpore Museum and Farms.

Tools, &c.	Cost. £ s. d.	Manufacturers.
1 horse gear, &c. ... ... 2 small cotton ploughs, &c. ... ... 1 No. 3 chaff-cutter, &c. ... ... 2 light horse-hoes, &c. ... ... 1 No. 5 corn-mill, &c. ... ... 1 cultivator, &c. ... ... 1 set of harrows, &c. ... ... 1 No. 2 corn-crusher, &c. ... ... 1 No. 2 sack-holder, &c. ... ... 6 corn sacks	72 10 6	Richmond and Chandler, Salford, Manchester.
One dozen Aberdeen scythes, &c.	4 11 0	Ditto.
1 combined reaping and mowing machine, &c. ... ... 1 eclipse reaper, &c.	46 10 0	Samuelson, Banbury.
1 No. 2 horse-rake, &c. ... ... 1 No. 4 horse-rake, &c.	21 5 0	Keyworth, 35, Tarleton Street, Williamson Square, Liverpool.
1 winnowing machine, No. 3007, in the Royal Agricultural Society's Manchester Catalogue of 1869 ... ... 1 winnowing machine, No. 3010 in the same Catalogue ...	19 14 6	Sawney, Beverley.
1 No. 2 winnowing machine	9 10 0	John Richardson, 8, Brunton Place, Carlisle.
Portable horse gear and threshing machine	38 7 0	E. Chambers, St. Philip's Iron Works, Bristol.
1 Devonshire spade and general purpose plough ... ... 1 grasshopper plough	8 14 0	W. Chamberlain, Dodbrook, Kingsbridge.
1 six-row corn-drill, &c.	9 15 0	Bristol Waggon Works Company, Temple Gate, Bristol.
1 Howard's patent D plough ... ... 1 ditto, DD plough, with subsoil body, &c.	11 13 10	Howard, Britannia Works, Bedford.

Memorandum by GENERAL FREDERICK COTTON, C.S.I., *relating to the Agricultural Implements, &c., suggested for despatch to Saharunpore.*

Barn Works.—These consist of a horse or bullock gear as the motive power, with a set of machines to be worked by it, for thrashing, winnowing, chaff cutting, corn crushing, &c., &c. The costs, of course, depending on the variety of machines required.

I should send more than one set of these, as they are made very cheaply now, and their introduction would produce most important results. They might be established for the use of a whole village, and thereby lead the Natives to get their work done out of their own homes, when, as will generally be the case, it can be better done by those who make it their special business. I need hardly say that this is one of the changes most wanted in India.

Chaff-cutter.—This machine has been found of great value in the Madras Presidency, and ought to be generally introduced in a country where so much use is made of straw as food for cattle. Very cheap machines should be sent out, and such as might easily be copied in India. To make them cheaply, they must be made in great numbers; and it would be a great advantage to India if the manufacture of such important implements was introduced.

It has been found in England that those implement works have been most profitable which were confined to the making of one class of implements; and such would be especially the case in India, where the Natives, not having much inventive genius, are admirable in copying, and attain to great skill when repeating the same operation.

Corn-crusher.—There can be no doubt that much of the hard pulse and grains of India are only partially digested by the animals fed upon them; and it would be very admirable to reduce them to meal before they are used. My experience in all feeding was, that the more thoroughly every grain was reduced to meal before it was used, the more advantage was derived from it. But as the corn-crusher or "kibbler" is much cheaper than the mill, and requires less power to use it, it would be well to send out one or more of these machines. There is, however, a cheap American "grist mill" which might also be sent.

The Corn-drill.—The cheapest form of this machine is rather expensive, and its value depends upon its use being well understood. The advantages of the corn-drill are, that the seed is so laid in the ground that it is sure to be well covered by the soil. It is also so placed, when the lines are far enough apart, that the horse-hoe can be used to remove the weeds when the crop is growing, and the quantity of seed used can be generally secured. But when, as is generally the case in England, a great quantity of seed is used, it is the worst plan of sowing that could be adopted. The seed is deposited in a continuous mass, and the growth of the plant is crippled, exactly as it is in hedges, where from close planting in a line all our timber trees, beech, oak, maple, &c., are made to grow as shrubs for ever, simply by their roots being crowded, and all of one kind. Hence it is that our farmers find when they use much manure, the advantage is lost by the straw becoming too thin to support the ear, and the crop is laid.

In sown broadcast the seed is better placed, and the plants are more clear of each other. But where Mr. Hallett's system of thin sowing is adopted, and the cups of the drill are made to raise one seed at a time only, and they are at sufficient intervals to give each plant a fair space, the drill is turned to the best possible account, and I should recommend a good common drill being sent out, fitted as Mr. Hallett's are, for sowing as little as one peck to the acre. This would not interfere with the trial of larger quantities of seed, but ought, if possible, to be used as a means of introducing thin sowing, both for the sake of economy of seed and to secure a vigorous growth of plant.

Cultivators or Grubbers.—These implements, if not too heavy, would be of great use in India; they do exactly the work of the common Native plough, but can be made to move soil to any depth. Like the Indian plough, they only break up the soil without turning it over as the English plough does, but they require far less power than the plough of England, and would be more readily adopted by the Natives. With the Native plough there is a great loss of labor, as the single point drawn through the soil does not employ all the strength of a good pair of bullocks, and the consequence is that they go a great and unnecessary distance in ploughing each acre. With the cultivator any number of points can be used, according to the strength of the cattle, the hardness of the soil, or the depth to be cultivated, and thus the field is not traversed more than is necessary. The points also are of a much better form than those of the old Indian plough, and I should recommend several of these useful implements being sent out.

Harrows.—It would be well to send out two or three varieties of this implement, which could be copied and modified to suit the work required in India.

Horse-hoe.—This would be of great use, especially in the cultivation of cotton, and the various kinds of pulse, dholl, or other shrubby plants which are sown in lines distinct from each other.

Horse-rake.—A most useful implement in England, and should be sent out as an accompaniment to the mowing and reaping machines.

Mowing and Reaping Machines.—One of each of these had better be sent out. But it is probable that some modification would be necessary to their use in India, with the strong straw of the millet, &c. This, however, could only be done under trial in this country. Where they are to be used, it would be necessary to pay attention to the surface of the soil before the crop was above ground, otherwise the knives would be injured by the stones and clods.

Ploughs.—The English plough in general is too heavy for India, but light ploughs, fitted with a pole and yoke for oxen, have been made, and some specimens of them might be sent out to Saharunpore. I met with them when selecting implements for Madras, but do not remember what maker manufactured them; I could, however, easily ascertain.

The Subsoil Plough.—The ordinary subsoil plough would be an admirable implement to send to India, if its use was well understood. It is a plough without a mould-board, made to follow the ordinary English plough, and rip up the bottom of the furrow, but *not bringing it to the surface,* where it would in many cases be an injury to the crop. After a time, when the subsoil has been by this means exposed to the air, it is fit for the growth of plants, and may be turned over by the mould-board plough, to the great advantage to the crop.

Sacks and Trucks.—The English sack is a very good form of bag, and when used with the common two-wheeled truck, both are quite worth introducing to India.

Scythe.—The scythe ought to be sent out; and the Aberdeen scythe with a double handle is certainly the best to introduce into India.

Spades and Digging Forks.—These cannot be used by men with naked feet, but if a rude sandal were introduced with them, they would be perhaps adopted in India for garden culture.

The Shovel.—Several forms of shovel might be sent out.

Thrashing Machines.—It would not be well to send out the more perfect kinds of the machine now used in England, which not only thrashes the grain, but prepares it for market, as they are very expensive, and would not be generally adopted in India. But there are common thrashing machines which can be worked with such light "horse gear" as I propose to send out, which would be amongst the most useful machines that could be introduced in India, where the loss both of labor and grain by the present mode of trampling out the corn is enormous.

Winnowing Machines.—This implement is of the first importance, and its benefit was at once admitted in Madras. Several might be sent out with the certainty of their being brought into use. They should be fitted both for hand and for horse or bullock power.

Pumps.—It would be well to send out a common cheap pump, taking care that the valves are not of leather, but of metal, leather being objected to by the Natives.

Wire Fence.—Some patterns of wire fence should, I think, be sent to India.

From H. MERIVALE, Esq., C.B., Her Majesty's Under Secretary of State for India, to MAJOR-GENERAL F. COTTON, C.S.I.,—dated London, the 12th April 1870.

I AM directed by His Grace the Secretary of State for India in Council to acknowledge the receipt of your letter of the 19th ultimo giving your opinion as to the Agricultural implements and machinery which it would be advantageous to send for exhibition by Dr. Jameson at Saharunpore, in order to instruct the Native cultivators in the advantages to be derived from the use of them.

I am to express the thanks of His Grace in Council for the trouble which you have given yourself at the request of his predecessor's Secretary Viscount Cranborne, to ascertain the qualities of their implements as well as for the useful documents in which you have explained them.

I am also to acquaint you that His Grace will abide by all your recommendations, and will feel further indebted to you if you will order the several articles, the cost of which, including the packing, amounts from the list which you have sent to about £242. The several invoices* are, therefore, returned to you, and the bills will be paid by the Accountant General of this Office, when they are received here with your countersignature.

* Twelve in number.

The Duke of Argyll will leave it to your judgment whether the several articles had better be sent direct from the manufacturers to Saharunpore, or to the care of the Director General of Stores at this Office, in order that he may provide freight for them to India.

Before I conclude, I am to request that you will supply me with a statement of any expense to which you may have been put by the execution of this commission by the Secretary of State, in order that the Accountant General may be directed to pay the amount to you.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

EAST INDIAN RAILWAY—DELAY IN OPENING THE CHORD LINE.

From Major F. S. Taylor, R.E., Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 2663G., dated 17th December 1869.

Referring to Joint Secretary's letter No. 2136G. of 27th September, on the subject of the chord line works of the East Indian Railway, I am instructed by the Lieutenant-Governor to forward, for the information of His Excellency the Governor General in Council, a copy of a letter from the Board of Agency, East Indian Railway, No. 664G., dated 15th December, expressing their deliberate opinion that there is no possibility of this line being opened before the next rainy season, and that there is little probability of the line being made available for mails and passengers prior to the entire completion of the contract.

The Inspection Report of Lieutenant Wallace, dated 24th November, which is also forwarded for the information of the Government of India, exhibits the present state of the works, and exposes the insufficiency of the reasons assigned by the contractors for the unsatisfactory progress as a whole. His Honor refrains from any further expression of opinion until the expiry of the contract time brings the question directly before Government.

From E. Palmer, Esq., Chairman, Board of Agency, East Indian Railway, to the Consulting Engineer to the Government of Bengal, Railway Department,—No. 664G., dated 15th December 1869.

In reference to your letter No. 2605G., dated 10th instant, enquiring whether the Agency has considered the advisability of a partial opening of the chord line for mails and passengers at the earliest safe date, irrespective of the entire completion of the contract, I have the honor to state that, in the present state of the line, the Agency cannot give an absolute reply to your enquiry, but that, as far as they see at present, there is no probability of the line being opened before the next rainy season. Copy of Chief Engineer's letter No. 2252 of 15th instant, on this subject, is sent herewith.

From G. Sibley, Esq., Chief Engineer, East Indian Railway, to the Chairman, Board of Agency, East Indian Railway Company,—No. 2252, dated 15th December 1869.

Your docket No. 4688, dated 11th instant.

With reference to the enquiry as to the advisability of a partial opening of the chord line for mails and passengers at the earliest safe date, irrespective of the entire completion of the contract, I would remark that the date of entire completion is still so uncertain that it would not be safe to say that there might not be a period when it would be safe and advisable to open the line for mails and passengers, but not advisable to open it for general traffic.

As far, however, as we can at present see, such a condition of affairs is not at all likely to arise.

From the Government of India, Public Works Department, to the Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch,—No. 47R., dated 8th January 1870.

I am directed to acknowledge the receipt of your No. 2663G., dated 17th December 1869, reporting that the chord line, East Indian Railway, will not be open for traffic on the date fixed in the contract.

2. I am desired to express the dissatisfaction and regret of the Government of India at this untoward result of the contractor's operations. It is essential in the public interests that the line shall be made available for traffic as soon as possible, and it is desirable that, if it can be managed, this should not be later than the opening of through communication between Calcutta and Bombay.

3. I am to request that a very early report may be submitted stating the steps that are proposed to be taken to expedite the completion of the works, and enforce the provisions of the contract, and also the time at which it will be possible to open the line for mails, if not for public traffic.

Extract from a letter from the Government of India, Public Works Department, to the Government of Bengal, Public Works Department, Railway Branch,—No. 225R. of 4th February 1870.

Para. 2. I am directed to state that the Governor General in Council continues of opinion that the line should be made available for traffic as soon as possible, and if it can be managed, in such a manner as to admit of any material gain in time in the transport of the mails, simultaneously with the establishment of through communication between Calcutta and Bombay. The Governor General in Council, therefore, will be glad if His Honor the Lieutenant-Governor will be so good as to cause an enquiry to be made on this point from the Agency of the East Indian Railway Company, requesting specific information as to the time that could be saved in the fast train service by an opening before the next rainy season, and the probable cost of such an opening, if feasible. In the event of their considering any such opening undesirable or impossible, the precise reasons should be explained and reported to the Government of India.

From Major F. S. Taylor, R.E., Joint Secretary to the Government of Bengal, in the Public Works Department, Railway Branch, to the Chairman, Board of Agency, East Indian Railway,—No. 480G., dated 28th February 1870.

I am directed to acknowledge the receipt of your letter No. 110G., dated 21st current, with enclosures, from the Chief Engineer, East Indian Railway, intimating that there is no probability of the chord line being opened for traffic before the next rainy season, and that, considering the advanced state of the line, he does not think it would be advisable to take the work out of the contractor's hands, unless by the end of March there were grounds to suppose that the completion of the water-supply tanks before the next rainy season would be a matter of uncertainty.

2. The Lieutenant-Governor now looks to the Board of Agency to act unflinchingly as soon as the necessity for taking the works out of the contractor's hands becomes apparent.

From the Government of India, Public Works Department, to the Joint Secretary to the Government of Bengal, in the Public Works Department, Railway Branch,—No. 501R., dated 24th March 1870.

I am directed to acknowledge the receipt of your No. 481G., dated the 28th February 1870, submitting a letter from the Board of Agency, East Indian Railway, intimating that there is no probability of the chord line being opened for traffic before the next rainy season, and of the reply thereto informing the Agency that the Lieutenant-Governor will now look to them to act unflinchingly as soon as the necessity for taking the works out of the contractor's hands becomes apparent.

2. In reply, I am directed to point out that in Public Works Department No. 47R., dated 8th January 1870, a report was desired to be submitted on the steps proposed to be taken to enforce the provisions of the contract, and on the time at which it would be possible to open the line for mails, if not for public traffic. In Public Works Department No. 225R., dated 4th February 1870, this was repeated, and specific information was requested as to the time that could be saved in the fast train service by an opening before next rainy season, and the probable cost of such an opening, if possible. Further, in the event of the Agency considering such an opening undesirable or impossible, the precise reasons for this were desired to be reported.

3. No reply has been given to these questions, and I am therefore now directed again to request that the necessary information may be obtained from the Board of Agency, and that they may be specifically answered in detail.

From MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 963G., dated Fort William, the 2nd May 1870.

WITH reference to my letter No. 752G., dated 31st March, and in reply to your letter No. 501R., dated 24th March, calling for further information in connection with the opening of the chord line, I am now instructed to forward, for the information of His Excellency the Governor General in Council, copies of the documents as per margin on the subject of a partial opening.

No. 818, dated 9th April 1870, to Board of Agency, East Indian Railway.
Report by Lieutenant W. A. J. Wallace, R.E., Deputy Consulting Engineer to the Government of Bengal, of his inspection of the chord line.
No. 254G, dated 22nd April 1870, from Board of Agency, East Indian Railway, and enclosure.
No. 898, dated 22nd April 1870, to James Perry, Esq.

2. Though the Lieutenant-Governor is given to understand that Railways in India have, as a rule, been opened with perfect safety while in an incomplete state, he is of opinion that it would not be proper to press the Agency further in the present instance.

From MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Chairman, Board of Agency, East Indian Railway,—No. 818, dated 9th April 1870.

YOUR letter No. 110G., dated 21st February, on the subject of the failure of the contractors to complete the chord line by 1st January, having been submitted to the Governor General in Council, I am instructed to inform you that His Excellency is still of opinion that the provisions of the contract should be enforced, and the chord line in its incomplete state made available for the public at the earliest possible date. It appears to me, however, on careful consideration that with the cöoperation of the contractors all cause for dissatisfaction may be removed, and the works left to be thoroughly completed, and formally handed over to the Company at the proper time.

2. The only positive advantage to be obtained by a partial opening would be the acceleration of the down fast mail, and if the contractors will undertake to clear the line and lock all the points every evening after the day's work is finished, and hand a formal certificate, signed by a responsible official, to the Station Master at Luckeeserai to the effect that the line is clear and in safe condition to Setarampore, I see no reason why this one train should not be worked through the chord line to Calcutta only stopping under the guard's orders at two watering places.

3. Under this arrangement, a through train for Calcutta might be made up at Dinapore to be cut off at Luckeeserai, and the regular train would run no further than Jumalpore.

4. The Deputy Consulting Engineer has been directed to make an early inspection of the chord line, in order to ascertain the actual state of the way and works and the views of the contractors on the subject of a partial opening, and I shall be glad to learn that the Board of Agency are prepared to consider this proposal favorably.

From E. PALMER, ESQ., Chairman, Board of Agency, East Indian Railway Company, to the Consulting Engineer to the Government of Bengal, Railway Department,—No. 254G., dated 22nd April 1870.

IN reference to your letter No. 818, dated 9th instant, on the subject of the partial opening of the chord line, I have the honor to send you copy of Chief Engineer's No. 872, dated 16th idem, from which you will see that, in the opinion of the Chief Engineer, in which the Agency concur, it would be criminal to attempt to run mails and passengers over the chord line while the works are in their present condition.

From G. SIBLEY, ESQ., Chief Engineer, East Indian Railway, to the Chairman, Board of Agency,—No. 872, dated 19th April 1870.

WITH reference to the Consulting Engineer to Government Bengal's No. 818 of 9th instant, on the subject of at once running the mail train through the chord line, I have to refer to my report dated January last, and to state that the conditions therein reported with reference to date for safe opening still remain, except that there has been less progress since that date than had been hoped.

I would further record my opinion that to attempt now to run the mail train nightly through the chord line at a speed of 30 miles an hour, in darkness throughout its whole journey, would be criminal.

Inspection Report of the Chord Line, East Indian Railway, by LIEUTENANT W. A. J. WALLACE, R. E., *Deputy Consulting Engineer to the Government of Bengal, Railway Department,—dated the 21st April* 1870.

ON the 15th instant I travelled over the chord line, in company with the Chief Engineer and the contractor, to see what progress had been made since my last inspection, and also to ascertain whether it would be possible and advisable to arrange for running the down mail train by that route, so that it might arrive in Calcutta at 6 A. M., instead of 9 A. M., as at present.

Considerable progress has been made since last November, but the stations and the water-supply works are still in a very backward state, as may be seen from the subjoined tabular statement showing their present condition.

The brick-work in bridges and culverts has all been completed, and the girders on the main line are all in position, except at a few bridges in the Nargunjoo District, where the girders for the second line are now in course of erection.

The embankments are practically all finished, there being only some dressing and trimming of slopes still required. The cuttings have been all completed to the full depth and width at the bottoms, but there remains a good deal of work to be done in side slopes, &c.

A single line tolerably well ballasted throughout has been laid from Seetarampore to Luckeeserai, and about two-thirds of the second line has been laid with the full allowance of sleepers, and partially ballasted.

The fencing has been completed along about one-third of the line, and is generally in progress along the remainder.

From the following tabular statement* it will be seen that the stations are all far from complete, and that the water-supply works are not nearly ready; nor can the tanks be made to the full size by the 15th June, unless the work is carried on much more vigorously than it is at present. The Chief Engineer is fully alive to this, and he has directed the District Engineers to be prepared to take the work out of the contractor's hands on the 1st proximo, if he fails to comply with the instructions given him on the 15th instant as to the force of labor to be concentrated at each of the tanks and the rate at which the excavation is to progress.

* Not published.

With regard to the proposal to run the down fast mail train, or a portion of it carrying the mails and through passengers, over the chord line, the contractor expresses himself quite willing to clear the line every evening in time for the down mail, to supply water for the engine where required, and to accept the responsibility of maintaining the road in safe working order. He also is of opinion that the proposal is a feasible one, and I have no doubt that, with proper precautions, the train might safely be run so long as the weather continues fine; but when it is taken into consideration that the rainy season is now approaching, that there are many deep cuttings of which the sides are not yet fully sloped, and that the highest parts of some of the heaviest embankments have been thrown up since last rains, it must, I think, be admitted that the running of a night train at a high speed would be attended with considerable risk.

From LIEUT. W. A. J. WALLACE, R.E., Deputy Consulting Engineer to the Government of Bengal, Railway Department, to J. PERRY, ESQ.,—No. 898, dated 22nd April 1870.

WITH reference to the Consulting Engineer's suggestion that the down mail train might be run over the chord line, I am directed to request that you will be good enough to place upon record your opinion as to the possibility of the proposal, and state whether you are willing to accept the responsibility of clearing the line and maintaining it in a safe condition for the passage of the mail train every night.

From J. PERRY, ESQ., C.E., of the Firm of MESSRS. BRASSEY, WYTHES AND PERRY, to the Deputy Consulting Engineer to Government of Bengal, Railway Department,—No. 683, dated 22nd April 1870.

I HAVE the honor to acknowledge the receipt of your No. 898 of to-day's date, with reference to the Consulting Engineer's suggestion that the down mail train might be run over the chord line, and asking me to state whether I am willing to accept the responsibility of clearing the line and maintaining it.

In reply, I beg leave to state that I am quite willing to accept the responsibility of clearing the line every evening in time for the passage of the mail train, and also of maintaining the line in good and safe running order.

With regard to the feasibility of the proposal or suggestion of the Consulting Engineer, I have no hesitation in stating that I see nothing to prevent the down mail train passing over the chord line, and that as far as the way and works are concerned I have never seen a line opened in a more perfect state than the single road now is over the chord line, and I have seen a good many both in England and India during the last 20 years.

Memo. from MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Chairman, Board of Agency, East Indian Railway,—No. 906, dated 25th April 1870.

THE undersigned has the honor to forward, for any remarks the Board of Agency may desire to make, a copy of an Inspection Report of the Chord Line, dated 21st April, by Lieutenant W. Wallace, R.E.

2. With reference to Agency letter No. 284G., dated 22nd April, on the subject of a partial opening of the chord line, the Consulting Engineer begs to point out (as it does not appear to have occurred to them to check the Chief Engineer's figures) that, if he is not mistaken, after allowing half an hour for watering and slowing over the worst parts, running speed of 25 miles an hour over the chord line, accelerated between Setarampore and Howrah to the regular mail train speed, would land the down mails in Calcutta at 6-15 A. M.

3. The Consulting Engineer would also be glad to learn whether the Agency have any recent information regarding the *present state of the works* which has not been communicated to this Office.

From E. PALMER, ESQ., Chairman, Board of Agency, East Indian Railway, to the Consulting Engineer to the Government of Bengal, Public Works Department, Railway Branch,—No. 267G., dated the 28th April 1870.

IN reference to the Inspection Report of the Chord Line by Lieutenant Wallace, dated 21st instant, received under cover of your Memorandum No. 906 of 25th idem, the Agency would beg to point out one important error in it. It is stated that a single line tolerably well ballasted throughout has been laid; now all the more recently-finished high banks are, and properly, unballasted. As to the necessity for running 30 miles per hour, in order to save the three hours proposed, the Agency will endeavour to make it clear.

The present running speed of mail trains between stations is 30 mile per hour, stoppages reduce this to 25 miles per hour on the average of a 300 miles run; the saving of distance by chord line is 64 miles. This, at the average of 25 miles, gives a saving of two hours, thirty-six minutes.

The additional savings caused by fewer stoppages on the chord line would be more than balanced by delays in watering. Thus, to save three hours as proposed it would be necessary to run in excess of 30 miles per hour, even without making any allowance for slowing over the worst parts.

The Agency are not in possession of any further recorded information regarding the present state of the works which has not been communicated to your Office.

From the Government of India, Public Works Department, to the Government of Bengal, Public Works Department, Railway Branch,—No. 984R., dated 4th June 1870.

I AM directed to acknowledge the receipt of your No. 963G., dated 2nd May 1870, on the opening of the chord line, East Indian Railway.

2. The contractor has offered to be responsible for clearing the line every night and keeping it in a safe condition for the passage of the down mail train; but Mr. Sibley, the Chief Engineer, has recorded the opinion that to run the mail train nightly at a speed of 30 miles an hour would be criminal, the Board of Agency have adopted that opinion, and the Lieutenant-Governor considers that it would not be proper, under the circumstances, to press the train service upon the Company.

3. The advantage of opening the line partially would, it is stated, be the acceleration of the down mail. This would only at present affect the convenience of Calcutta, and as the Lieutenant-Governor has doubtless arrived at the conclusion not to press the Company to open the line, after weighing the advantages against the risks, the Governor General in Council will therefore leave the matter in His Honor's hands.

4. It is understood from the previous correspondence on this case that the line may be expected to be opened some time between the beginning of July and the close of the rains, I am desired to request that the Government of India may be kept informed of any circumstances which may lead the Lieutenant-Governor to form a more precise opinion as to the probable date of opening.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

EXPEDITION VIA BHAMO TO SOUTH-WESTERN CHINA, AND APPOINTMENT OF AN ENGLISH RESIDENT AT BHAMO.

HIS EXCELLENCY the Right Hon'ble RICHARD SOUTHWELL BOURKE, Earl of Mayo, Viscount Mayo of Monycrower, Baron Naas of Naas, Knight of the Illustrious Order of St. Patrick, Grand Master of the Most Exalted Order of the Star of India, Member of Her Majesty the Queen of England's Privy Council, Viceroy and Governor General of India, now addresses His Great, Glorious, and Most Excellent Majesty who reigns over the Kingdoms of Thuna, Paranta, Tampadipa, and all the Great Umbrella-wearing Chiefs of the Eastern Country, the King of the Rising Sun, Lord of the Celestial Elephant, Master of many White Elephants, the Great Chief of Righteousness, as a token of his desire to renew a system of friendly intercourse by which it has been the practice of successive Viceroys to maintain, on *special occasions*, a direct means of intercommunication between the Government of Burmah and the Viceroy of all India.

Since, by the favor of his Sovereign, the Earl of Mayo has assumed the Government of India, he has watched with peculiar interest the great advances which have been made in the wealth and prosperity both of *British Burmah* and of the dominions of His Majesty, and he has been led to conclude that this progress is due, in great measure, to an improved state of intercourse, as the result of treaty alliances which have been recently entered into between the British and Burmese Governments.

One of these results has been that His Majesty the King of Burmah, in answer to a special requisition made by the Viceroy through his Agent, the Chief Commissioner of British Burmah, gave his free sanction to the despatch of a British expedition *viâ Bhamo* to South-Western China, and proclaimed in a royal edict, published at Mandalay on the first day of the increasing moon of Ta-shoung-mon 1229 B. E., that that expedition should be furthered and assisted by every available means at the disposal of the Government of Burmah.

The expedition accordingly took its departure from Mandalay in January 1868, and was furthered on its journey, as far as the Burmese frontier town of Bhamo, by the support and assistance of His Majesty the King, who placed one of his own steamers at its disposal, and otherwise manifested signs of a willingness to cöoperate in the accomplishment of those wise and beneficent objects for which the expedition was originally projected.

The Viceroy has now learned with regret that, though the expedition has been enabled to accomplish the several objects for which it was specially undertaken, the officers who composed it met with serious opposition at the hands of certain Burmese officials at *Bhamo* and *Ponsee*, both of which places lie within the territory of His Majesty the King of Burmah.

At the same time the Viceroy is assured that, apart from this opposition (the evil influences of which were sensibly manifested, even after the expedition had proceeded beyond the Burmese frontier), the several races and people through whose States or Dependencies the expedition passed, were openly in favor of a revival of the old overland trade between *Bhamo* and *Momein*, and evinced evident proofs of a disposition to cöoperate in a work which they acknowledged to be full of interest and advantage to themselves, and which, in the Viceroy's opinion, cannot fail to conduce to the permanent prosperity of all those countries to which the benefits of renewed trade between Burmah and China must eventually extend themselves.

Notwithstanding, however, the Viceroy is willing to believe that the officers referred to acted in disobedience to the orders of His Majesty, and in disregard or in ignorance of His Royal Proclamation, and that His Majesty is as desirous as ever to afford that support to the revival of overland trade *viâ Bhamo* with the South-Western Provinces of China which was so willingly proffered at the time the late expedition was first projected, and took its departure from the Burmese Capital.

The Viceroy feels satisfied that, as soon as His Majesty's officials come to be convinced that it is His Majesty's sincere desire and determination to re-open the old overland caravan route between *Bhamo* and *Momein*, the slightest effort on the part of His Majesty will be amply sufficient to remove any existing obstacles, so that a work which will add stability to His Majesty's Government and cement the bonds of friendship between the King and Her Majesty the Sovereign of England and India, and will confer vast benefits on His Majesty's subjects, may be speedily accomplished.

The people over whom the Queen of England rules take the deepest interest in the extension of commerce with the Districts bordering on the dominion of the King, and the British Government will never fail to urge forward their intentions and to cöoperate with His Majesty in so noble an enterprise. The Viceroy has already so far relied on His Majesty's profession and promises of good-will as to appoint a British Officer to reside at *Bhamo*, whose duty it will be to watch over the interests of traders, and to prevent, as far as possible, the occurrence of petty differences which may possibly arise in the commercial intercourse of races who may desire to participate in the benefits of unrestricted trade.

The Viceroy and Governor General concludes this letter by assuring His Majesty of his sincere regard and friendship, and trusts that the purport of the present communication may be received and acknowledged in a spirit and with a promise of friendly agreement and cöoperation. This, the Viceroy fully believes, will greatly strengthen the stability and power of His Majesty's Government, will increase in the minds of the people of England a desire for His Majesty's welfare, and will tend to secure the continuance in time to come of peace and prosperity to the several countries over which Her Majesty the Queen of England and His Majesty respectively hold rule.

Dated 18*th October* 1869.

His Great Glorious and most Excellent Majesty who reigns over the Kingdoms of Thunaparanta Tampadeepa, and all the Great Umbrella-wearing Chiefs of the Eastern Country, the King of the Rising Sun, Lord of the Celestial Elephant, and Master of many White Elephants, the Great Chief of Righteousness, addresses *His Excellency the Right Hon'ble* the VICEROY AND GOVERNOR GENERAL of India and all the Great Western Countries.

In pursuance of the very great friendship that has existed between the countries of Burmah and China, from the time of His Majesty's great grand-father, in regular succession to His Majesty's reign, and which is similar to the great friendship that exists between England and Burmah, ambassadors came regularly every ten years with royal letters and presents, and the "gold and silver road" of commerce having been opened, numerous merchants took advantage of it for trading purposes, and thereby gave a vast impetus to the trade of the country, and a corresponding increase to the royal customs revenue.

A grievous war having raged, however, between the Chinese and the Panthays, the road became impracticable (literally unpleasant), the usual decennial ambassador with royal letters and presents was unable to come, both trade and the royal customs revenue have declined for the past ten years, and owing to there being little commerce or intercourse of any kind between Burmah and the dominions of the Emperor of China, the wild Kakhyen tribes on the borders rose and became unsettled, and the few traders who took advantage of the road were subject to annoyance.

The material progress of many countries and their free intercourse have been interrupted for many years, owing to the continuance of hostilities between the Chinese and the Panthays. When peace has been established bewteen these two powers, the road will be taken advantage of as before, and the ancient trade revive.

Anticipating this result, His Majesty, in accordance with established custom, was in the act of promoting the object in view to the best of his ability, when His Majesty's Royal Friend, the *English* Viceroy, in the year 1229 B. E. (corresponding to 1867 A. D.), deputed English Officers to explore the country between Bhamo and China.

His Majesty was pleased at this, and gave his hearty support to the expedition.

With reference to that part of the Viceroy's letter in which he wishes His Majesty to facilitate the opening of the routes to China, His Majesty observes that so soon as the road between Bhamo and China is open, and taken advantage of by numerous traders, the Kakhyens and other wild tribes on the borders will not dare to rise, the trade of Burmah will be enhanced to a degree hitherto unknown, and with a view to enable England to reap similar advantages to Burmah, His Majesty will cordially further, to the utmost of his power, any English expedition that may hereafter be deputed to explore the Chinese route.

It has given His Majesty sincere pleasure to receive the assurance of the Viceroy that, adopting the policy of his predecessors, he is anxious to maintain a sincere and lasting friendship. His Majesty is fully convinced that the increased wealth and prosperity which the subjects of both countries now enjoy, may fairly be attributed to the improved state of intercourse, and the amicable relations that exist, owing to the treaty alliances, between the two Governments.

The misunderstanding between the Officers of the English expedition and the Governor and other officials at Bhamo, His Majesty is inclined to believe may solely be ascribed to mutual ignorance of each other's customs and rules of etiquette, and trusts the Viceroy will endorse this view.

His Majesty, far from making any invidious distinction between Burmese and English, daily looks forward, with lively interest, to the English enjoying increased prosperity without let or hindrance, and, in accordance with the friendship that exists between the two powers, His Majesty will use his utmost endeavours to promote their interests in every possible way.

Dated Royal Palace, Mandalay, the 1st day of the increasing moon Taboung 1231 B. E. (corresponding with 2nd March 1870 A. D.).

(True translation.)

A. FYTCHE, *Major-General, C.S.I.,*
Chief Commr. of British Burmah and Agent to the Viceroy and Governor General of India.

REPORT ON THE WORKING OF THE DISPENSARIES AND ESTABLISHMENTS FOR VACCINATION IN RAJPOOTANA, FOR THE YEAR 1869.

From LIEUTENANT-COLONEL R. H. KEATINGE, C.S.I. and V.C., Governor General's Agent, Rajpootana, to the Secy. to the Government of India, Foreign Department,—No. 412G, dated Mount Aboo, the 7th April 1870.

I HAVE the honor to forward, in original, a highly interesting report by the Superintendent General of Dispensaries and Vaccination in Rajpootana, on the working of the institutions under his charge.

2. Excepting Appendices Nos. 1, 2, and 3, I have not sent forward the very voluminous papers of which a list is marginally given at the commencement of Dr. Moore's report. These returns could not profitably be printed for circulation with the report; and if any special reference is wanted on professional subjects they could probably be more easily consulted here than in Calcutta.

3. I request that 35 copies of the report may be sent to me for communication to the Durbars and the Agencies in Rajpootana.

From SURGEON W. J. MOORE, L.R.C.P., Superintendent General of the Dispensaries and Vaccination in Rajpootana, to the Governor General's Agent in Rajpootana,—No. 93, dated Aboo, the —— March 1870.

I HAVE the honor to submit the Annual Report on the working of Dispensary and Vaccination Establishments in Rajpootana for the year 1869, together with papers as per margin, showing 166,560 patients treated during the 12 months, at a total cost of Rs. 44,041-3-8, or four annas three pies per head (excluding Pertabghur and Dholepore); and 49,611 vaccinations, costing Rs. 3,550-5-0, of which 33,853 were successful, the charge on the latter being one anna two pies per case.

Bhurtpore, A1 to A15.
Jeypore, B1 to B13.
Oodeypore, C1 to C8.
Pertabghur, D1 to D3.
Jhalra Patun, E1 to E6.
Keraolee, F1 to F8.
Kotah, G1 to G6.
Marwar, H1 to H13.
Ulwur, I1 to I18.
Tonk, K1 to K6.
Doelee, L1 to L5.
Kotree, M1 to M18.
Serohie, N1 to N6.
Aboo and Anadra, O1 to O2.
Indurghur, P1 to P5.
Dholepore, Q.
Appendices, Nos. 1, 2, 3.

2. I regret this report is not quite complete. But I have not received the required returns from either Pertabghur (*vide* paragraph 43) or Dholepore (*vide* paragraph 55), and consider it useless waiting longer. For, if the very simple returns required from these Dispensaries cannot be prepared in three months, I cease to expect them in double that period. All papers from Dispensaries, under my immediate charge, were in hand by the end of January, and there appears no valid reason why others should not be so submitted.

3. The number of Dispensaries and hospitals in operation was 44. One Dispensary at Neemrana, more particularly referred to in paragraph 48, was abolished and one Dholepore added to the list. The midwifery hospital referred to in paragraph 40 has also been abolished, leaving the number of institutions working at the end of the year 43. But since the first of January, I have received a report of the re-opening of the Jessole Dispensary, regarding which,

it is stated, "the inhabitants of Jessole were much pleased at the prospect of having medical aid within their reach, as were those of the important town of Balotra, which is not a mile distant." This Dispensary formerly at Balmere was discontinued for reasons given in my report for 1868, paragraph 50. Also, during the year under review, Colonel Nixon on my suggestion induced the Maha Rana of Oodeypore to sanction Rs. 50 per mensem, for the conduct of a small Dispensary at Kherwarrah, but its commencement has not yet been reported. A proposal for a Dispensary at Erinpoorah to be maintained jointly by the Marwar and Serohie States, did not meet with support; Colonel Brooke, the Political Agent, informing me the Maharajah would not contribute towards a Dispensary situated in Serohie, and Captain Bayley, the Political Superintendent of Serohie, stating the Rao was too poor to support a Dispensary in addition to that existing at the capital. Yet both Kherwarrah and Erinpoorah, the latter place especially, are localities where Dispensaries are much required, and where, from the presence of an European medical officer, such institutions may be expected to prove of more than ordinary value. Dr. Eddowes, when at Erinpoorah was, I know, in the habit of attending to large numbers of sick poor, often at pecuniary cost to himself; and he states: "In consequence of the comparative scarcity of European medical officers in Rajpootana, many poor people apply for medical aid at the Erinpoorah Hospital. During the past year, 142 of this class have been treated, some of them suffering from severe injuries. Eight operations have been performed among this class, including two who underwent the lateral operation of lithotomy." During the scarcity of last year, when large numbers of poor were collected at Erinpoorah and Kherwarrah, both Dr. Eddowes and Dr. Mullens appear to have brought the matter to the notice of the Deputy Inspector-General of Hospitals of the Agra Circle, and I was requested, if possible, to make some provision for medical aid. But the means at my disposal did not permit me to do so, further than forwarding a sum of money advanced by the Agent, Governor General, from the Famine Fund, and making the suggestions to the Political Authorities as above-mentioned for the establishment of Raj Dispensaries, the desirability of which is still evident.'

Sketch of the medical history of the Native Army of Bengal for 1868, by Surgeon-Major Ross, Secretary to the Principal Inspector General, page 33.

No. 1137, dated the 18th September 1869, from the Deputy Inspector General, Hospitals, Agra Circle.

4. The number of patients treated during 1869 in the Rajpootana Dispensaries, viz., 166,560 is, compared with former years, as shown below, a considerable increase :—

Years.	No. of Dispensaries in operation.	No. of patients treated.
1855	9	33,500
1860	14	99,768
1863	20	113,346
1865	24	142,780
1866	37	150,034
1867	38	149,548
1868	42	160,310
1869	44	166,560

5. The increase occurs at the following Dispensaries :—

Names of Dispensaries.	No. treated, 1868.	No. treated, 1869.
Jeypore	11,552	13,111
Odeypore	5,454	6,903
Jhalra Patun	4,140	4,767
Marwar	8,659	10,841
Tonk	9,587	13,528
Aboo and Anadra	1,681	2,623
Indurghur	715	1,403
Deolee	1,046	1,395

6. The following Table shows the number of Dispensaries or Hospitals in each State; the number of in and out-door patients; the daily average number of sick; and the daily average number of new applicants :—

Names of States.	Number of Institutions.	No. of Patients treated		Daily average No. of Sick.	Daily average No. of new Applicants.	Remarks.
		In.	Out.			
Bhurtpore	14	2,248	77,890	368·	218·

8. Compared with former years, the above Table presents a considerable difference. There is a larger proportion of *remittent* fever than usual, also of *abscess and ulcer*, of *dysentery and diarrhœa*, and of *cholera*, all maladies to which scarcity of food induces a predisposition. Compared with last year (1868), a much greater prevalence of intermittent fever is noticeable. In the last report, it was particularly mentioned, that in those localities where little or no rain fell, malarious fever was reduced to a minimum, and a map was attached illustrating this. In 1869, the rain-fall being more copious, malarious fevers are seen to prevail throughout. The presence of cholera is also striking, as compared with the Table afforded last year, when the cholera column was returned blank. Lastly, from some unexplained reason, there appears a greater general difference in the various *percentages* than heretofore.

9. Before leaving the subject of the influence of want or famine on disease, I must remark on the entire absence of famine or relapsing fever, the "hunger pest" of Europe. On this head, I have made particular enquiries throughout the famine; and accumulated experience is against the existence of this peculiar type of fever.

Influence of famine on disease.

Thus Dr. Compignie, Beaur, wrote: "I have seen no famine fever." Dr. Harvey, Bhurtpore: "No case of relapsing fever has come under my notice." Doctor Martin, Deesa: "The type of fever has always been typhoid, never relapsing." Doctor Galloway, Odeypore: "No cases of relapsing fever have come under my observation." Doctor Eddowes, Erinpoorah: "I have not seen any famine (relapsing) fever here at all." Doctor Newman, Joudhpore: "I have heard of no disease approaching in its type to famine or relapsing fever." Doctor Miller, Nusseerabad: "I have not met with any case of famine or relapsing fever." The replies of the Native Doctors are also to the same effect. Colonel Brook also mentions, that in Marwar, where fever has been more than ordinarily prevalent, it was not confined to the ill-fed, and that it was more severe along the line of the "Loonee" River, thus evidencing its malarious character. In this locality, one-fourth of the population are reported to have died. The above information regarding famine or relapsing fever appears to me of great importance. It corroborates the assertion of the greatest living authority on fevers (Murchison) that famine or relapsing fever does not occur in India. It also agrees with experience of former famines in this country, after which this most deadly form of fever has never been known to prevail. It also tends considerably towards negativing the opinions held by so many, that the contagious fever afflicting the prisons of the North-West and Punjab, from 1860 to 1867, was simply a famine fever, due to defective diet. Lastly, it leaves a somewhat consolatory reflection that in a country like India, where so many fatal epidemics are experienced, there is at last one of the most fatal not yet visiting the land. Regarding the subject from a more purely sanitary point of view, the absence of relapsing or famine fever is evidence that some other agent than want of food is necessary to the development of the disease. Most certainly the amount of distress during the present scarcity has, in many places, been sufficient to establish famine fever, if the malady is caused by this condition alone. But no *famine pest* has so occurred. Hence the conclusion that some other agent is necessary to its production. And holding in recollection the circumstances of life of dwellers in India and Europe, it would appear that *over-crowding* is essential to the excitation of relapsing fever. In the latter country the climate induces the poor to congregate in ill-ventilated dwellings. In India the inhabitants, live more in the open air; especially the majority of those suffering from scarcity, who, adopting a nomadic life, wander off to other localities, where they live pretty much *sub-jove*.

Ratio of surgical disease.

10. The proportion of surgical disease to the total treated in the different States is here shown :—

Bhurtpore.	Jeypore.	Odeypore.	Pertabghur.	Jhalra Patun.	Keraolee.	Kotah.	Marwar.	Ulwur.	Tonk.

Dholepore	.....	.....	.....	... ..

Female attendance.

The average percentage of females attending the whole of the Rajpootana Dispensaries is 20·07, the proportion in the Central Provinces for 1868 being 23·40. As is well known, *caste* perjudices in a great measure prevent female attendance ; and it would be well if the women could always be received in a separate room. This is, however, impossible in the majority of the Dispensaries. Dr. Cuningham mentioned that a woman, an old patient, was the means of bringing many other women to the Dispensary, and I have addressed the various medical officers with the view of eliciting their opinion as to the advisability of a *dhai* or female nurse being attached to each institution.

Death ratio.

14. As remarked in the last Annual Report, the mortality recorded in the Dispensary books does not show the true death ratio; many cases lost sight of are necessarily recorded as "ceased to attend," &c., who may have died at their own houses. But the mortality noted for 1869, is much higher than for 1868, being respectively 1·83 against 21 *per cent.* The greater recorded mortality in 1869, I refer to the prevalence of cholera.

Cost per patient.

15. The cost per patient in the different institutions is shown below. The cost per head throughout Rajpootana has been a fraction above four annas three pies. In the North-Western Provinces for 1868, it was five annas nine pies. The cost varies considerably in the different States, and this depends on whether European medicines have been procured or not during the year, on local rates, and on the varying salaries of the Native Doctors. At Ketree, for instance, the charge is high; but this depends in a great measure on the high salary of a Native Doctor in charge of one of the branch Dispensaries, which was fixed by the Chief's orders. The medical officers superintending Dispensaries examine and check the monthly bills, and the Native Doctors in charge cannot procure any monies without such sanction :—

Bhurtpore.	Jeypore.	Odeypore.	Pertabghur.	Jhalra Patun.	Keraolee.	Kotah.	Marwar.
Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.

Dholepore.						

17. The total number vaccinated is less than for the year 1868. This depends on so many persons having left various parts of the country, on the debilitated condition of many of the remainder, and on the fact of so many in 1868 having suffered from small-pox; leaving the number available for the operation of vaccination less than during other periods. The success in some Districts is more than ordinarily small, but the figures may be accepted as correct, and doubtful cases have been excluded. The percentage of success for the whole of Rajpootana is 78·91; that for the North-Western Provinces for 1867-68 being 83·. I attribute a lower percentage of success to the comparative absence of European superintendence, also during the last year to the debilitated condition of many subjects operated upon. With the exception of an addition to the number of vaccinators in Marwar, no change has occurred in the staff now employed, a number totally inadequate to the wants of the country.

Inoculation.

18. During the past year, the political officers were addressed with the view of ascertaining if prohibiting inoculation in any of the Native States were practicable. It was mentioned that such measure had been adopted in Kumaon and various parts of Bengal; also that forbidding inoculation is altogether a different matter to insisting on vaccination. In the former case, the immediate transfer of a loathsome and fatal disease from one individual to others, all of whom may become fresh centres of infection, is prevented; in the latter, a disease, although mild and harmless, is certainly reproduced. But from the replies received it would appear that inoculation is not so much practised in the Rajpootana States as I hitherto supposed to be the case, or as in many other parts of India.

Thus Captain Walters writes : "I have every reason to believe, as far as Bhurtpore is concerned, the practice of inoculation does not exist at all, and I think it will be found the same is the case in the other States under my control. During the ensuing cold season, Dr. Harvey will have every opportunity of inquiring into the matter." And Dr. Harvey reports, so far as he can ascertain, there are no regular inoculators in the District, nor does the practice seem to be generally known to the people. Captain J. Blair, then officiating at Jeypore, also mentions inoculation is not practised in that State, and this is confirmed by Buxshee Fyze Allee Khan, the Jeypore minister, a Native gentleman who has full belief in vaccination;

and also by Dr. Burr, the Agency Surgeon, who, having made full enquiries, asserts inoculation is not at all practised. In Tonk, both the Political Superintendent and the Native Doctor, Bheekoo Singh, a very intelligent man, report a similar freedom.

I have, however, reason to believe that in the Haraotee States, in Odeypore, and in Marwar, inoculation is more in favor. With regard to the first-mentioned Districts, Captain Muir informed me of his intention to bring the matter to the notice of the Durbars, and I received a similar reply from Colonel Nixon of Odeypore. Colonel Brooke of Marwar did not consider it advisable to take any present action.

Administrative changes and duties.

19. Consequent on the formation of the Agency for the Eastern States of Rajpootana, the immediate superintendence of the Dispensaries in Ulwar and Keraolee, formerly under my Executive charge, was made over to the medical officer of that agency; who, from his proximity to the localities named, is able to afford a greater amount of supervision than could be possibly given by the General Superintendent. A Code of rules for the management of Dispensary and vaccination establishments in Rajpootana has also been published under the authority of the Agent, Governor General, copies of which have been supplied to all medical officers and Native Doctors. The pamphlet, copy of which is attached, marked Appendix No. 2, also contains the forms in use. During the recent tour of inspection, the Native Doctors, as per margin, Government servants, were examined for promotion according to the rules laid down in Government General Order No. 945 of 1868.

Serohie.	Erinpoorah Division, Public Works Department.
Indurghur.	
Tonk.	
Kotah.	Chittore Division, Public Works Department.
Jhalra Patun.	
Pertabghur.	

20. During the year under review, Native Doctors were attached to the camp of the Executive Engineer, Erinpoorah Division, *Public Works Department*, and to the *Chittore Division*, Public Works Department. These Native Doctors have forwarded their reports and bills to me, and were inspected and examined during the usual tour, as the additional work connected with these Public Works Dispensaries can be more easily carried on through this office than from elsewhere. But I am not satisfied with the qualifications of these men, and a special reference has been made on the subject to the Medical Department.

21. An abstract on the foregoing marked Appendix No. 1, is attached, giving the different items and the total of expenditure at each institution, and in each State, the number of patients treated, &c.

Cholera in Rajpootana in 1869.

22. The history of the cholera epidemic in Rajpootana during the past year presents various points of great interest and importance. The general and almost simultaneous appearance of the malady over such an extensive area, is altogether opposed to the theory of communication by human intercourse being the only means by which cholera is disseminated. In May and June, the disease showed itself in many widely distant localities. In the former month, Rutlam and Joura, in Central India, were attacked, as also Jessole and Balmere, in Mullaunee.

Vide Gazette of India, 1869, Report on Cholera by Colonel Daly.

In the North of Rajpootana, Rajghur, in Ulwur, was affected on the 28th May, while on the 2nd June, the disease commenced so far South as Morewarra in Palunpore. The places mentioned, as may be seen by the map attached, being on the extreme frontiers of the extensive Province of Rajpootana. And as if to render the theory of dissemination by human intercourse still less worthy of credence, we have cholera reported at Teheran, in Persia, on the 1st July! It might certainly be possible, although not probable, for cholera to be conveyed by human intercourse in a few days from one side of Rajpootana to the other. But we can scarcely imagine it to have been carried in a similar manner and time to the centre of Persia! We must therefore fall back either on the principle that cholera, under favourable circumstances of climate, meteorology, and defective sanitation, may originate *de novo*, or otherwise adopt Dr. Bryden's views that each epidemic of cholera originating in Bengal arrives at a certain locality Westward at a certain date, travelling "air-conveyed," through a series of years even round the world. If Dr. Bryden's theory is correct, the cholera of Rajpootana of 1869 must have been a "revitalization" of a former epidemic. And here I am bound to mention a fact apparently corroborative of the statistical officer's argument. At page 151 of his report, chapter 7, headed "Characteristics of the year 1868," the following paragraph appears: "The occurrence of cholera in Ajmere (in 1868) might be considered by some only as caused by a Northern extension of the cholera of Malwa, of November and December, but I attribute to it a significance beyond this. I think it not impossible that an offshoot of Southern or South-Eastern cholera was directed into this route in December 1868, which is now becoming manifest." A reference to the map shows cholera in the Burr Pass in November 1868. And this must be regarded either as a remarkable coincidence, or otherwise as supporting Dr. Bryden's views. Personally, I confess to a decided impression adverse to the Constantinople Cholera Congress *dictum* supported by Dr. Bryden, that Bengal is the home of cholera, the only place in which it originates, the breeding ground of the malady for the whole

world! On the contrary, I think there is abundant evidence that, meteorological and other conditions being favourable, cholera may originate *de novo* in most parts of the world, although circumstances may favor its more frequent origin in Bengal. No one will question the *de novo* origin of other diseases,—from canine madness to syphilis; from malarious fever to small-pox; from ephemeral to typhus fever. And attributing the power of spreading in all climates, but of originating only in one, to cholera alone, seems inconsistent with our knowledge of etiology and analogy of disease. It appears to me the simultaneous rise of the malady throughout Rajpootana in 1869 is at least as corroborative of a *de novo* origin as of the "revitalization" of a former dormant epidemic. If the statistical officer's views are by further research and experience proved correct, we shall certainly have the advantage of knowing to almost a day when to expect cholera at any particular locality. But, on the other hand, such knowledge will probably involve some danger of the neglect of sanitary precautions. Dr. Bryden, while asserting that the progress of cholera is fixed by certain laws over which we have no control (page 233), admits that it may become *localized* in unsanitary localities (page 228). If it be once understood that cholera is unavoidable, that it must attack a certain locality at a certain date, a disposition to neglect sanitation during the intervals will certainly follow. Whereas by believing cholera may originate *de novo*, not only in Bengal but in other countries, some degree of continued attention to sanitation will as certainly be secured. And the following history of cholera in Rajpootana will, I think, demonstrate the desirability and utility of sanitary precautions; and hence the contagious nature of the malady.

Cholera communicable.

23. While thus from the progress of cholera in Rajpootana during 1869, drawing a conclusion opposed to the theory of the malady being disseminated only through human intercourse, and while holding that the facts evidence a *de novo* origin, I submit there is reason from the same history to believe that cholera is conveyed along the great lines of road. The second map attached, represents the date of the disease arriving at the places named along the chief road in Western India, from Ajmere to Mount Aboo, a distance of 210 miles. Of course it may be advanced (as Bryden explains the presumed conveyance of cholera by the Hurdwar pilgrims) that the outbreak in any locality appears at the date normal for that locality, and that no circumstances which are merely contingent can determine the occurrence of the outbreak of an epidemic. But when cholera is found travelling down a great line of road, and over a mountain range as the cholera of 1869 in Rajpootana is here shown to have done, and with recollections of similar experience, I cannot refuse to believe in the contagious and portable properties of the maism. I well remember during the English cholera of 1849, a man returning, from the neighbourhood of Dudlay where cholera existed, to his home five miles distant in a Northerly direction. The next day he died. His mother living several miles Eastward came to nurse him, and returning home suffered a similar fate. From these two dwellings the malady spread. And I might quote other examples of the kind, but shall confine myself to what occurred last year in Rajpootana. It will be seen by the map that cholera appeared at the village of Anadra on June 6th; at Omedgunge on June 11th; in the station of Aboo on June 17th, and in the village of Shaulgaum on July 11th. And in order to appreciate the importance of these dates, as unmistakably demonstrating the importation of the malady by human intercourse, the following brief description of the locality must be kept fully in mind. Mount Aboo is an isolated hill composed chiefly of granite, a detachment from the great Aravelli Range. The village of Anadra is situated a mile and-a-half from the foot of the hill, and the village of Omedgunge, half a mile from the foot. The ascent from the latter locality is very abrupt, and formed chiefly by a zig-zag road, built against the face of the mountain. This is altogether impassable for carts, and unless in good repair is scarcely surmountable by horses. The height of Aboo may be generally stated as averaging 3,000 feet above the level of the plains below. There are no other ordinary means of communication with the summit excepting the abrupt ascent above mentioned. On reaching the top, a mile of undulating ravinous ground takes the visitor to the station, and another mile and-a-half to the village of Shaulgaum. From Shaulgaum, another mile and-a-half East, reaches the opposite or Eastern descent. The breadth of the hill summit may, therefore, be four miles, while the length is some eighteen or twenty. The sketch attached shows this, perhaps, more distinctly than any verbal description.

Cholera at Aboo.

24. The first case of cholera occurred at Anadra on the 6th June. The total number of cases here was 99, the deaths, 23. The first case at Omedgunge occurred on the 11th June; and the first case on Aboo, June 17th, and at the village of Shaulgaum on the 14th July. I investigated these epidemic on the spot, and found the first case at Shaulgaum was in the person of a Bheel woman belonging to the village, and who had been down the hill to Anadra, the previous day, conveying a load of grass for sale. Within six days of her return, as nearly as I could ascertain, upwards of 40 cases of cholera occurred: 23 men, women, and children, dying. There was, however, difficulty in ascertaining the exact number attacked. The village is divided into two parts, one inhabited by Rajpoots, the other by Bheels. The former appeared to care very little how the others fared, and on the outbreak of the sickness, a large number left the village, probably going off to the lowlands, or inhabiting caves in various parts of the hills. Of the Rajpoots, five persons only were attacked, and I attribute this comparative

immunity, to their being better off, and not suffering as the Bheels were from scarcity. On the first occasion I visited this village, I saw seven cases of cholera, and several convalescents. The people were thoroughly frightened at the malady. They positively refused to enter some of the huts in which persons were laying sick, and, to set an example, I went into one. But I may as well have remained outside. The darkness of the interior, increased by smoke, rendered it impossible to see either of the occupants,—a women and girl laying sick,—and the bye-standers were not at all shamed to exertion. On a second visit to the village scarcely a Bheel remained in the neighbourhood; as is the custom with these people on epidemic disease occurring, they vacated the locality.

25. Again the first case of cholera at the station of Aboo occurred on June 17th, and was in the person of a coolie woman who came up the hill from Anadra two days previously in search of work. The second case was the wife of a sepoy of the Erinpoorah Irregular Force, on Detachment duty at Aboo, and who ascended the hill the day before. The next three cases were the wife and children of a Bheel, and both man and woman had been to Anadra within three days of the attack in this family. Of the total number 19 attack at Aboo, eight appear thus to have contracted the disease, five others belonigng to the houses or families of the former eight; while in the remaining six instances, no evidence was forthcoming of their having been exposed to contagion. One of the last mentioned was a cook in the employment of Colonel Arthur; another a puggee attached to a bungalow; a third, the wife of Colonel Keatinge's Durzie, resident in the bazaar, three other Bheels, either belonging to Aboo, or some time resident in the locality. I attribute the fact of the disease not spreading more at Aboo, to the isolation of the cases carried out. Until the last three or four attacks, when the heavy rain prevented the procedure, each case was immediately taken to a hut, erected at some distance, over which chowkeedars were placed to prevent any but the necessary attendants passing to and fro.

26. I have been thus particular and perhaps lengthy in noting the facts of the cholera at Aboo, because, with the exception of a few mild cases in 1866, this is the first time epidemic cholera has ever occurred in the locality, and of course exaggerated reports were prevalent regarding the epidemic. Also because the importation of the disease from Anadra to Omedgunge, and from those places up the hill, is so clearly traced. The ascent to Aboo faces the West, and the village of Shaulgaum is to the East. If, therefore, cholera were always "air conveyed" from Dr. Bryden's epidemic localities, the latter village should have been first attacked, and the cholera should have proceeded down the hill to Omedgunge and Anadra; whereas the exact reverse was the case. It is also worthy of remark that, owing to the grass famine during 1869, the hill people were in the habit of conveying loads of grass for sale to the plains; whereas in former years there was no traffic of this kind; the coolies coming up the hill and mostly returning the same day. And this may to some extent account for the former absence of cholera on the hill. I believe had it been practicable to stop all communication with below, no cholera would have occurred on Aboo. But this was not possible; and all that could be done was stationing persons on the road to prevent any sick being brought up.

27. I now quote from the reports of various medical officers superintending Rajpootana Dispensaries their remarks regarding the communicability of the malady. Dr. Galloway, then in charge of the Meywar Agency, states that in almost every Meywar village the "outbreak of cholera followed the arrival of Marwarrees, who were passing through Meywar territory" in, as Dr. Galloway mentions, "all directions," but, as I have reason to believe, chiefly on their road homewards, towards Marwar, in a Westerly direction. Again, Dr. Burr of Jeypore mentions cholera first appeared at Malpoorah, a large town about 50 miles South-west of Jeypore, on the 16th May, and is stated to have originated among travellers from Meywar. Dr. Newman of the Marwar Agency writes: "The cholera appears to have been imported into Marwar, and that in different directions. Thus it can be traced from Ajmere *viâ* Burr to Pallee and on to Joudhpore, again from Ajmere to Nagore. It was brought by returning emigrants from Meywar and Malwa *viâ* Dessooree." The Native Doctor of the Joudhpore Dispensary also reported the first case of cholera in that city occurred in the person of a traveller from Pallee. But, on the other hand, Dr. Harvey of Bhurtpore states the source of introduction into that locality was not apparent. Sub-Assistant Surgeon Mr. Nundo Lall Dhole in charge of the Ketree Dispensaries, also mentions there was no reason to believe the malady was conveyed into the city from any infected place.

Opinions regarding spread of cholera.

28. The Sub-Assistant Surgeon just named refers, however, to a "localization" of cholera at Ketree, which deserves mention here. The first family attacked was that of a dealer in hides. From the absence of forage, and from the effects of an epizootic called by the Natives "rogue ma hogue," the destruction of horned cattle had been immense, so that hides were unusually abundant, and had been stored in large quantities in a portion of the house, four of the occupants of which out of five died.

Localization of cholera.

29. Although great exertions appear to have been made in the various States in the way of providing work and food for the people suffering under the famine of 1868-69, there can be no doubt that the condition of the masses was such as to render them prone not only to malarious fevers, but to cholera also. In my own experience, the people themselves, in many instances, attributed their choleraic symptoms to want; and that hunger had much influence in the production of some of the attacks, is evident from the fact of amendment dating from the first mouthful of meat-broth and arrack which, in certain cases, formed the entire medical treatment. Indeed, the majority of the reports mention famine as one of the predisposing causes of the cholera epidemic. Dr. Burr particularizes unwholesome food, exposure, fatigue and want: Dr. Galloway, distress among the people owing to the high prices of food. Dr. Newman of Marwar writes: "Thousands have been starved to death, and the mortality from disease is evidently accounted for by the debilitated condition of the people, who have barely carried their lives through the famine, and easily succumb." Yet, with all this suffering from want of food, as before mentioned, no true case of famine or relapsing fever was noticed. Judging from the prevalence of cholera and pseudo-cholera in Rajpootana during the season under review, it would indeed appear that among the Natives of India want is capable of producing a class of symptoms very similar to true cholera; or, in other words, the vital depression attendant on insufficient and improper food excites a similar train of symptoms to those following the vital depression consequent on the cholera poison.

Condition of the people.

30. I use the term *pseudo-cholera* above, as while all accounts agree in representing the disease to have been of a mild type, the mortality to treated at various Dispensaries is so low as to forbid the acceptation of the whole number admitted under the head being true Asiatic cholera. And although I recollect that many may have died who are registered "ceased to attend," or otherwise in the Dispensary books, still the statistics, as far as they go, testify to the mildness of the disease, and tend perhaps to evidence of its having been in some degree the offspring of want.

Pseudo-cholera.

31. The recorded mortality to treated from cholera at the various institutions varies from 75 per cent. in the Jeypore Jail (the *maximum*) to four per cent. in the Jeypore City Dispensary (the *minimum*); the average being 30 per cent. to total treated. The largest number of cholera patients treated in any institution was at Pallee, from which 1,914 cases were returned.

Mortality to treated.

32. The number treated in the Dispensaries does not, however, unfortunately convey even an approximate idea of the number suffering and dying from cholera in Rajpootna during last year. Neither have I any means of obtaining correct information on this head. But in Marwar, for instance, it is stated one person died in every 15 of the population, making the total number 75,000. In Bhurtpore city there were 540 attacks and 266 deaths. In Jeypore city there were 930 attacks and 101 deaths. In the Districts 1,191 attacks. In Tonk, up till the first quarter, there were 452 deaths. In Odeypore, again, the Kotwall reported that little short of 1,000 deaths took place in the city alone.

Number treated is no index to number attacked or dying.

33. Neither does the number of cholera patients treated in the Dispensaries afford any index to the total deriving benefit from these institutions. From all the Dispensaries under my immediate control, pills according to Inspector General Dr. Murray's form, and other remedies were sent out in large quantities, and the same course appears to have been adopted by the other agency surgeons. In some cases these remedies were entrusted to vaccinators or other Dispensary servants; otherwise given to thannahdars and different Civil officials. And here I take this opportunity of again bearing testimony to the great efficacy of the cholera pills of opium, assafœtida, and pepper as first recommended by Dr. Murray.

Number treated no index to those deriving benefit from the Dispensaries.

34. With regard to the medical treatment adopted in the various Dispensaries I have little to remark. As before mentioned, some cases under my own care received nothing but stimulants and nourishment. The other medical officers and the Native Doctors appear to have used those remedies which in their experience had seemed most successful, and the list is in consequence somewhat variable. Both Dr. Harvey of Bhurtpore and myself tried the subcutaneous injection of liquor ammonia as recently proposed, but the results were not encouraging.

Medical treatment.

35. In concluding this account of cholera of Rajpootana in 1869, I desire to be understood as submitting that it tends to prove: *first*, that human intercourse alone, or human intercourse with infected places, does not suffice to explain the irregular extension and dissemination of the disease; and *secondly*, that the disease may be extended by human intercourse.

Conclusions regarding cholera.

36. I now remark briefly on what appears to call for observation in connection with the various institutions.

Bhurtpore Dispensaries and vaccination.

37. The number of Dispensaries in the Bhurtpore State, viz., 14, is the same as last year. The total number treated is less than for 1868. The expenditure, Rs. 12,208-13-4, is an increase of upwards of Rs. 2,500, accounted for by the high price of food, the greater number of patients dieted, and Rs. 631 spent on instruments and medicines. Vaccination shows an increase of 3,895, over 1868, due to the presence of small-pox in 1867-68, causing a greater number to submit to the prophylaxis. The percentage of success, viz., 86·44, is good, and each successful case is estimated as costing one anna two pies. The Bhurtpore medical institutions and the vaccination appear to have been conducted with Dr. Harvey's usual care and attention, and several very important surgical operations, as removal of the upper jaw, lithotrity, &c., were performed. I make particular mention of Dr. Harvey's exertions towards improving the qualifications of the Native Doctors serving under him, "in and near Bhurtpore, by anatomical and surgical demonstrations, by making them perform most of the minor important operations, and letting them practice capital operations on the dead body" (*vide* paragraph 5 of Dr. Harvey's Report, Bhurtpore Bundle No. 1).

Bhurtpore Jail.

38. With regard to the Bhurtpore Jail, Dr. Harvey (paragraph 11) mentions an increased death ratio from 32·35 for 1868, to 64·48 per 1,000 for 1869. This is attributed to the enfeebled condition of many prisoners on admission, owing to scarcity and to overcrowding. Allowing 36 feet superficial space per man, 243 prisoners can be accommodated in the Bhurtpore Jail, and for 1868 the daily average was 216. For 1869 it was 310, rising at times to upwards of 400.

Jeypore Dispensaries and vaccination.

39. The Jeypore institutions all exhibit an increase of attendance over 1868. But the number of vaccinations is considerably less. This is accounted for by the dismissal of three vaccinators for carelessness and inefficiency. The percentage of success, namely, 78·08 is fair. The total expenditure in the Jeypore State on medical institutions and vaccination is less than for the previous year. During the year, Dr. Burr performed several important surgical operations; amongst others, removal of the lower jaw for a "cystic" tumour.

Jeypore Jail.

40. The Jeypore Jail also appears to have been very sickly from June to November; the number treated being almost doubled during 1869. A large portion of the sickness and mortality was due to cholera, but the Jail was also overcrowded, the inmates having had only 21·6 superficial feet each. Dr. Burr mentions that he has made over the medical charge of the Jail to Dr. Valentine.

Jeypore midwifery hospital.

41. In last report, I had to lament the abolition of the Jeypore medical school, instituted and conducted for some years by Dr. Burr. And I now have to notice the abolition of the midwifery hospital also established and carried on by Dr. Burr. This measure, it is stated, was adopted by the Jeypore Council as a necessity of economy. But I cannot but again lament the action taken. The Jeypore midwifery institution stood almost alone throughout India. It is stated to have been well appreciated, and to have acted as a check against infanticide. Moreover, there is no doubt that, in difficult cases of midwifery, the institution was the means of saving life. Also the instruction given to a class of midwives by Dr. Burr must have proved instrumental in introducing a more scientific practice of this art,—midwifery being a department of medicine in which Native practitioners are altogether ignorant. During the last year of its existence, 53 women were delivered in the Jeypore institution, and its records show a number of midwifery operations, without which the greater proportion of both women and children must have died. At the present time there are various proposals for midwifery institutions in British Provinces, notably in the Punjab and Calcutta. The Lieutenant-Governor of the first-named Province believes few things are more urgently required in India than this. It therefore seems a period peculiarly ill adopted for the abolition of the midwifery hospital in Jeypore, a city formerly conspicuous by the existence of such an institution; and I even now venture to express a hope that the hospital in some shape or other may still be re-established in Jeypore.

Punjab Dispensary Report 1868, paragraph 12.

42. Although reductions of expenditure in the medical department in the Jeypore State have thus been, as I think, ill-advisedly effected, there is still a great desire on the part of the authorities to benefit the sick and suffering poor. A small-pox hospital was established during the epidemic of that disease, a Dhurmsala hospital during the famine, and a cholera hospital when this malady prevailed. Also Native Doctors and vaccinators were sent into the Districts when their services were required. Dr. Burr also informs me that it is proposed to establish six new District Dispensaries,—institutions much wanted in Jeypore. During the cholera epidemic Dr. Burr gave to the Durbar some carefully-devised rules and suggestions for the prevention of this disease, which appear to have been adopted as far as practicable.

Odeypore Dispensaries and vaccination.

43. The Odeypore Dispensaries show an increase of attendance, particularly of in-door patients. There is also a small increase of the total number vaccinated. Expenditure has also increased, due chiefly to a larger amount spent in dieting. During the year these Dispensaries were conducted by Dr. Galloway, until the return from frulough of Dr. Cuningham in November last. They were inspected on the 24th of January, and found in good order and well supplied. During the absence of Dr. Cuningham, there has been a diminution of the number of surgical operations performed at Odeypore; but I anticipate, from Dr. Cuningham's well known skill in this direction, to record a considerable increase next year. The report on cholera, supplied by Dr. Galloway, has been mentioned in paragraph 26. District Dispensaries are much required in Meywar.

Pertabghur Dispensary.

44. This Dispensary was inspected on the 8th and 9th January. The building is not suited for the purpose, but I was shown by the Chief's orders the plan of another building, of which the foundations were being commenced outside the town walls. I was also requested to make any necessary alterations in the plan. The Dispensary was not well supplied with necessaries, but Dr. Cuningham informed me he had brought out from England some thousand rupees worth of various articles, for which the Chief had supplied the money. The Native Doctor, *Dole Chund*, a Government servant, does not forward his returns regularly, and made the excuse of there being no Post Office at Pertabghur. He is evidently a man not devoid of a certain ability, and gave me the impression of attempting to tacitly ignore our authority while resting on his connection with the Political Department, to secure a good position in the Pertabghur Durbar. These views were expressed to Colonel Nixon, also the desirability of the returns being regularly forwarded, and of Dr. Cuningham being entrusted with more than nominal authority over the Pertabghur Native Doctor. But up to the present period Dr. Cuningham has not been able to procure the returns, although when at Pertabghur I myself gave the Native Doctor the forms and fully explained what was required.

Jhalra Patun Dispensary.

45. Jhalra Patun Dispensary was inspected on the 23rd and 24th December. The number of patients treated is slightly less than for the former year. But the vaccination is better, both numerically and successfully. The total expenditure in this state on both heads was Rupees 2,120-1-3. The Dispensary is well supplied, and the Native Doctor, Mahomed Naeem Khan, still maintains the confidence of the Rajah and people. I was informed the Chief intended establishing a Branch Dispensary at the "Chounee" where he generally resides, and which, some four miles from the city, is now becoming a large place.

Keraolee Dispensary.

46. The returns from this institution show a considerable diminution in the number of out-patients, but almost three times the number of in patients as compared with last year. But in addition to the total treated at the Dispensary, namely, 7,666 as many as 1,218 were also treated by the Dispensary establishment in the temporary "Ghurreeb Khana Hospital." I was not able to see this Dispensary during the season 1869-70, but it was inspected in the early part of 1869. When Captain Walter visited Keraolee, after the death of the Maharajah, he wrote me a very favorable account of the Dispensary and of the conduct of the Native Doctor. Also Dr. Harvey, to whom, as mentioned in paragraph 19, the executive charge of the Keraolee institution has been entrusted, states in his report: "The Dispensary is clean, well kept, largely attended, and has an adequate supply of medicines and instruments in good order." Also that "the Native Doctor is a superior man, and pays every attention to his duties." The consumption of European medicines is, however, noted as large; and the Native Doctor states, what I know from experience to be often correct, that the people being able to obtain country medicines from the hukeems would not attend in such numbers unless other remedies were supplied. The expenditure on this head will, however, be kept down to the lowest figure compatible with the efficiency of the institution. Vaccination, as mentioned in former reports, languishes at Keraolee. The sickness in the Jail hospital was much greater during 1869 than in 1868.

Kotah.

47. This Dispensary was inspected on the 13th, 15th, 16th and 17th December. The number of patients is very slightly less than last year. There is an average of twelve in-patients. The Dispensary is in good order, and the Native Doctor is capable and pains-taking. The vaccine returns are also less than last year, but there is only one vaccinator employed, and there is great opposition to vaccination in Kotah.

Marwar.

48. The Marwar institutions show a large increase of attendance, particularly at Pallee, and this from the sickly condition of the country during the past year, as noticed in paragraph 28. In the early part of the year Dr. Newman took charge of the Marwar Dispensaries, and has recently re-established the Jessole Branch. Sanction has been accorded for the employment of a larger number of vaccinators in this extensive State.

49. The attendance at the Ulwar Dispensaries, namely, 12,327, is slightly less than for 1868, due altogether to the abolition of the Neemrana institution, the reports for which extend only over four months. On the Neemrana Thakoor obtaining full possession of his estate, one of his first acts was abolishing the Dispensary in operation there, and turning the Native Doctor out of the town. I wrote to Captain Walters on the subject, but excepting an intimation of intended enquiry, I have not received any reply. The Ulwar Dispensaries are reported clean and well kept, well found in medicines and instruments, and the Native Doctors diligent and well-conducted. Vaccination is very backward, although the Maharajah does his best to encourage it. The Jail Dispensary is also in good order.

Ulwar.

50. The returns from this Dispensary show a very large increase of patients, both in-door and out. The expenditure is also increased, due altogether to a great number of diets. In fact, in this Dispensary during the famine, many were received and fed, who should really have been the occupants of a poor-house. But Captain J. Blair had confidence in the Native Doctor, and preferred this mode of relieving the destitute to the establishment of a separate temporary poor-house; and, of course, I did not object to such utilization of the means at hand. The Native Doctor, Beekoo Singh, is a trustworthy man, and well qualified for Dispensary work. He was examined according to Government General Order No. 945, 1868, on the 7th December. Vaccination in Tonk has been fairly successful, but the numbers are less than for previous years. One of the Tonk vaccinators has, under arrangement with Major Beynon, been deputed to vaccinate one month in the Lawa estate.

Tonk.

51. The returns from this Dispensary have been made out from the monthly papers half-yearly, instead of annual returns having been forwarded by mistake. There is a large increase of attendance. During the year the Dispensary has passed from the charge of Dr. Deabeck first into Dr. Crawford's care, and afterwards to Dr. Eddowes, who assumed charge in November last. The new building is now completed. Hitherto this Dispensary has been conducted gratuitously, but some allowance should be granted for the charge. As the institution is supported by the States of Odeypore, Jeypore, and Heraotee Durbars, the additional call would be but slight.

Deolee.

52. The three Dispensaries in this State, under charge of Mr. Sub-Assistant Surgeon Nundo Lall Dhole, appear to have been conducted very satisfactorily. The attendance at Ketree and the Chidawa Branch is somewhat less than. for 1868. The vaccination is also considerably less. This decrease is thus accounted for by Mr. Nundo Lall Dhole: "What with struggle for food and migration, the poorer classes did not think much of coming to the Dispensary." And it is worthy of remark that Mr. Nundo Lall Dhole gives the years from 1802-3 to 1868-69 in which this part of the country has been afflicted with famine,—no less than seven in number. *(Vide* Ketree. Bundle No. 1*)*.

Ketree.

53. The *Aboo and Anadra* Dispensary has progressed satisfactorily, showing a large increase of attendance at both places. During the cholera and fever period, it was particularly useful. The total number attended was 110 in and 2,513 out-patients, of whom more than half were applicants at the Aboo Branch. Ten important operations were performed. Subscriptions for the year amounted to Rs. 756-8-0. A printed report, prepared for the information of subscribers, is attached, marked Appendix No. 3.

Aboo and Anadra.

54. This Dispensary has also progressed satisfactorily. There is a slight diminution in the number of out-patients, but a larger proportion of in-patients. This Dispensary was inspected on the 8th of November and the 16th of February. The Native Doctor passed the examination under the new rules, and on my recommendation His Highness the Rao increased his pay in accordance with the said regulations. The vaccination in Serohie for the year is in excess of 1868, and the percentage of success good. This arises in some measure from the Serohie Vaccinator working a considerable portion of his time in the hilly Districts. Last season he was employed about Aboo during the hot weather, and is now again called for that purpose.

Serohie.

55. This Dispensary was inspected on the 7th and 8th of December. The number of of patients attending is almost double that for the previous year. The institution is, however, on a small scale, and receives no in-patients. The Native Doctor is also dissatisfied with his position, and desirous of relief. There is no vaccination carried on at Indurghur. Indurghur is peculiarly situated among low hills; and disease of various descriptions was very prevalent there during the last year. Of all the localities I visited during the tour 1868-69, Indurghur appeared to be the most sickly; and the condition of the people generally more "below *par*" than at any other place. The Chief mentioned a wish to attempt the growth of cinchona plants on the neighbouring hills, but the heighth is not sufficient for a yield of quinine. An infusion of the leaves, however, containing other alkaloids, is found efficacious, and the introduction of the

Indurghur.

shrub could not fail to be advantageous to the people. There is a considerable preservation of wood about Indurghur, so that it appears likely cinchona plants would also be protected. I have written to the Neilgherries soliciting the favour of a few seeds.

56. As remarked in paragraph 2, the annual returns have not been forwarded. The number of patients attended is taken from monthly returns, but no account of expenditure, &c., has been rendered. The Dispensary is a new building, but situated too far from the town. The Native Doctor is stated to be imperfectly qualified, and the Raj officials do not work in harmony with him; but His Highness the Maharana has intimated a wish to remove the Dispensary and to open new ones at other places.

Dholepore.

57. In conclusion, I beg to suggest the publication, as last year, of this report, or portion thereof, as I feel assured the more publicity given to the progress of hospitals, Dispensaries and vaccination in the Native States, the more likely is that progress to be promoted. The condition of other States in this respect is a frequent question preferred by the Native gentlemen with whom I come into contact.

Suggesting publicity of the progress of Medical institutions in the Rajpootana States.

APPENDIX No. 1.

ABSTRACT of the working of the Rajpootana Dispensaries and Vaccination Establishment for 1869.

Number	Name of Dispensaries.	No. of patients treated. In each Dispensary. In.	No. of patients treated. In each Dispensary. Out.	Total treated in each State.	Surgical operations. Important.	Surgical operations. Minor.	Cost of each institution. Rs. As. P.	Number vaccinated. Successful.	Number vaccinated. Doubtful or unsuccessful.	Number vaccinated. Total.	Number of vaccinators employed.	Expenditure on vaccinators. Rs. As. P.	Total expenditure in each State. Rs. As. P.	Names of States.	Remarks.
1	Bhurtpore Dispensary	—	13,692		93	427	1,333 2 9								
2	" Hospital	2,027					4,081 6 9								
3	" Jail Hospital	221					805 0 0								
4	" Palace Dispensary	—	—		—	—	183 10 0

W. G. MOORE, *Surgeon,*
Supdt. Genl., Dispensaries and Vaccination, Rajpootana.

APPENDIX No. II.

RULES FOR THE MANAGEMENT OF DISPENSARIES AND VACCINATION ESTABLISHMENTS IN RAJPOOTANA.

Issued under the authority of the Agent to the Governor General for Rajpootana.

I.—The Superintendent General of Dispensaries and Vaccination in Rajpootana shall perform his duties in subordination to the Agent to the Governor General for the States of Rajpootana.

II.—The Agent to the Governor General is of opinion that it will ordinarily be convenient that all questions concerning Dispensaries and Vaccination, such as establishment of new institutions, modification of existing establishments, procuring or discharging Native Doctors belonging to the Government service, revision of salaries, and other matters which involve reference to Government, or to the Agent, Governor General, should be forwarded through the Superintendent General for submission to, and disposal by, the Agent, Governor General.

III.—The general inspection and supervision of the Dispensaries and Vaccination is vested in the Superintendent General, and all Dispensary Officers are required to attend to instructions issued by him in all administrative matters.

IV.—The Superintendent General shall inspect the Despensaries and Vaccination as often as possible, or any Dispensary, as often as the Agent to the Governor General may direct. He shall inspect and countersign the several journals, registers, and Books of the Dispensaries, and, in Dispensaries under his immediate control, direct the professional practice of the Native Doctors. He shall also receive the various reports hereafter specified, and submit an annual report for the information of the Agent, Governor General, and of Government; also, when occasion requires he shall submit a special report on any particular Dispensary, or on subjects connected with such institutions, or with Vaccination.

V.—The Superintendent General will give notice of the date on which his inspection visits are to be made, both to Political Agents and to Medical Officers in charge; the latter should always accompany the Superintendent General.

VI.—The Agency Surgeon, or local Medical Officer, is styled Superintendent of Dispensaries and Vaccination for the particular District, and shall forward to the Superintendent General the papers noted in last sentence, para. 9, para. 24, para. 26, monthly A. B. annual A. B. C. D. E. F.—para. 29 a weekly summary; also, an intimation of receiving or relinquishing charge of any Dispensary; also, a brief annual report of the general working of the Dispensaries and Vaccination under his charge, specially mentioning the behaviour and qualifications of the Native Doctors; also, a duplicate of the Quarterly Nominal Disposition Roll of Native Doctors required by the medical authorities, for those Native Doctors lent by Government for employment in the Native States.

VII.—The Agency Surgeon shall communicate with the Superintendent General regarding the discharge of any Native Doctor, stating the reasons for the procedure. Should it be proposed to entertain any Native Doctor, his character and qualifications shall be first submitted to the Superintendent General. Should difference of opinion arise regarding the propriety of discharging or engaging a Native Doctor, the matter shall be referred to the Political Officer accredited to the State. This rule refers to Native Doctors not in the Government service, the procuring or discharge of Native Doctors belonging to the Government service, being provided for in Rule II.

VIII.—Native Doctors in charge of Dispensaries are under the direct orders of the Medical Officers superintending the Dispensaries.

IX.—No Native Doctor or Vaccinator shall correspond direct with the Superintendent General, unless attached to those Dispensaries under the direct control of the latter officer, or unless the necessity of prompt information renders it desirable for the Superintendent General to apply to the Native Doctor direct; or *thirdly*, unless after respectful application to the Superintendent that officer refuses to forward the desired communication.

X.—Native Doctors shall exercise a general supervision over the subordinate servants or establishment of the Dispensaries: where Vaccinators are attached to Dispensaries they will be included in such supervision.

XI.—Native Doctors shall be responsible for the cleanliness of the Dispensary premises, for efficient attention to the sick, and for the custody of and writing up to date of the books.

XII.—Native Doctors are reponsible also for the safe keeping of instruments and medicines, and are required to keep the former, and the more expensive medicines, as quinine, under lock and key. Poisons used in medicine, as strychnine, morphia, aconite, must also be kept locked up, the bottles containing them being distinguished by a yellow label.

XIII.—The Dispensary shall be open from sunrise to 9 P. M. The Native Doctor shall always attend three hours in the morning and three in the afternoon, for the purpose of seeing patients; but he shall not refuse attention to urgent calls at any other time, whether by night or by day.

XIV.—The Native Doctor shall uniformly behave kindly to applicants.

XV.—The obviate caste prejudicies, applicants shall be as much as possible supplied with *dry* or *wet* medicines as wished.

XVI.—Each applicant shall be supplied with a paper, or ticket, on which the name of the Dispensary and Medical Officer shall be printed or written, and on which the patient's malady, date of attendance, and prescriptions may be written, unless the latter are kept in a separate book.

XVII.—Each in-patient shall have a ticket hung over the bead head, showing name, diseases, and prescriptions, unless the latter are kept in a separate book.

XVIII.—Native Doctors shall pay particular attention to the correct registration of patients.

XIX.—Instead of returning all under the head, "cured," those "relieved" are to be so returned, and those "incurable" so returned.

XX.—Should a patient neglect attendance for six days, he or she shall be treated as a fresh case.

XXI.—It is not the duty of the Native Doctor to attend calls in the city, except the Chief requires his attendance at the palace.

XXII.—The Native Doctor may, however, attend Native gentlemen or their families in the city, on his own account, charging them for such services: provided the Dispensary work is not neglected, and that the Native Doctor is not absent at the times mentioned in Rule XIII. for seeing patients.

XXIII.—Without permission from the Superintendent, the Native Doctor shall not take leave, nor shall he delegate his authority to any dresser or subordinate servant for even one day without the sanction of the Superintendent, except when legally summoned by the civil authority.

XXIV.—All leaves of absence of more than fifteen days' duration shall require the sanction of the Superintendent General.

XXV.—Each Native Doctor in charge of a Dispensary shall keep a *Daily Register* of sick, showing attendance of both old and new patients, also the following records:—

A. Monthly and Annual Record of In-patients.
B. ,, ,, ,, of Out-patients.
C. ,, ,, ,, of Surgical Operations.
D. ,, ,, ,, of Vaccination performed at the Dispensary, or by any Vaccinator attached to the Dispensary.
E. Monthly and Annual Record of Pay Abstracts.
F. ,, ,, ,, of Contingent Bills: the latter to show the expenditure on Bazaar medicines, necessaries,—such as firewood, lamp oil, bandage cloth, soap, stationery, and diets,—separately.
G. Receipt and expenditure of English medicines.
H. At Dispensaries where a register of rain is kept, the Native Doctor shall be responsible for such register.

XXVI.—The following Returns shall be sent as soon as possible, after the first of the month by the Native Doctor to the Superintendent:—

Monthly.

A. Return of In-patients,
B. ,, of Out-patients.
C. ,, of Surgical Operation.
D. ,, of Vaccination.
E. Pay Abstract.
F. Contingent Bill.
G. List of persons dieted, from all Dispensaries where the diet roll is not under the immediate inspection of the Superintendent.

Annual due 1st January.

A. Return of In-patients.
B. ,, of Out-patients.
C. ,, of Surgical Operations.
D. ,, of Vaccination.

E. Return of expenditure showing the Superintendent's allowance, Native Doctor's pay, Hospital servants' pay, contingencies, cost of Bazaar medicines, cost of diets, number of diets, separately *per mensem*.

F. Return of European medicines.

XXVII.—It will be optional for local Superintendents to have the Annual Returns prepared in their Office from the Monthly Returns; also to require returns from Vaccinators attached to Dispensaries direct, and not through the Native Doctor; it will also be optional for Superintendents, where the practice exists, to indent for Bazaar medicines at longer periods than one month; lastly, the adoption of the exact form of *Daily Register* attached is optional, provided the form used clearly shows the attendance of both old and new patients.

XXVIII.—In addition a separate report must be sent to the Superintendent when any Native Doctor purposes performing any capital surgical operation, if the case admits of delay; if not, a report must be sent immediately after the operation.

XXIX.—When cholera prevails a daily report of the progress of the disease must be sent to the Superintendent; also similar reports on the occurrence of any other virulent or extraordinary disease.

XXX.—Each Native Doctor shall forward every quarter detailed statement of two medical and two surgical cases under his treatment, noting the daily condition of the patient and the prescriptions given.

XXXI.—The Native Doctors shall also supply any other report required by the Superintendents, either for their own information, or that of the Superintendent General; also, any report required by the latter officer under Rule IX.

XXXII.—All reports and returns shall, if practicable, be forwarded in English; if the Native Doctor is unable to write English, he must take care to write the Vernacular legibly.

Approved,

R. H. KEATINGE, *Lieut.-Col.*,
Governor General's Agent, Rajpootana.

APPENDIX No. III.

ABOO AND ANADRA DISPENSARY.

Second Annual Report, 1869.

DURING the past year the utility or rather necessity of the Aboo and Anadra Dispensary has been abundantly demonstrated. The number of sick treated, 2,623, exceeds the total for 1868 (viz., 1,706) by the large figure of 917. Of the number of applicants, 1,514 were treated at Aboo, and 1,109 at the Anadra Branch: 110 were treated as in-door patients, many being supplied with food; others with both food and clothing. During the cholera period of last year, the Dispensary proved particularly useful, as also during the continuance of the

malarious fever so prevalent in the autumn. At Anadra 113 cholera cases were supplied with medicines, and at Aboo 21. At the latter place 307 persons affected with one or other variety of fever, received quinine or other suitable remedy; at the former place 449 people similarly attacked obtained the necessary medicines. Also, during the sickly cholera season, one of the hospital servants was stationed at the Omedgunge village for the purpose of ministering to the sick at that place.

The principal diseases prevailing during the year have been malarious fevers, disease of the bowels, as cholera and diarrhœa, and ophthalmic affections, of which latter an epidemic occurred at Aboo during the hot season

The routine work of the Dispensary has been conducted as detailed in last report. The Anadra Branch is located in the old travellers' bungalow, and a building has been commenced at Aboo for the reception of more important cases, as those requiring surgical interference, &c.

The following is a List of Out-door Patients treated in 1869.

				Subscription for 1868 not paid and written off ...	25	0	0
				Servants' pay omitted in last report	15	0	0
				Purchase of materials, and buildings	710	2	1
				In hand	336	2	1
Total ...	1,518	9	4	Total ...	1,518	9	4

Besides the above sum of Rs. 336-1-4 shown "in hand," Rs. 3,000, as mentioned in last report, remains as a deposit in the Oriental Bank. Some of this, however, is now being spent on building.

Excluding building expenses, the actual cost of the Dispensary for 1869 was Rs. 422-5-2 *plus* the Native Doctor's pay defrayed by Government at Rs. 20 per mensem. While some patients fed and treated in hospital cost comparatively large sums, in one case as much as Rs. 25: the average cost, as nearly as possible, is four annas and half a pie per head.

In conclusion, grateful thanks are due to those whose subscriptions have enabled me to continue the institution.

W. J. MOORE, L.R.C.P.,

Surgeon, Rajpootana Political Agency,

and Superintendent General, Dispensaries, Rajpootana.

HOME DEPARTMENT.

NOTES ON THE LEAD VEIN NEAR CHICHOLI, RAIPORE DISTRICT.

THE following is the result of a brief surface examination of the locality near Chicholi at which lead was discovered three or four years since, by Mr. Smart, of the Revenue Survey. The spot is rather more than 70 miles West of Raipore on the road to Bhandara and Nagpore.

The ore (Galena) occurs in a well marked vein, chiefly composed of quartz, which traverses the metamorphic rocks. The latter are not well seen in the neighbourhood of the vein, but in the surrounding country consist chiefly of granite or granitoid gneiss, and hornblende schist passing into diorite. Besides quartz, the vein contains pink felspar in considerable quantities, green and purple fluorspar, and a green mineral, probably epidote. Galena is sparingly disseminated throughout the mass for some distance on each side of the road, and I found slight but unmistakeable indications of the presence of copper, small quantities of the green carbonate occurring in several places.

In some parts of the outcrop there is a large quantity of peroxide of iron, sometimes as a coating on the surface, sometimes irregularly mixed with quartz ("gossan"), and evidently resulting from the decomposition of some other mineral. This is a common occurrence at the outcrop of mineral veins, and is, I believe, usually considered a favorable indication by miners, in copper veins at least. But the value of such indications depends greatly upon local conditions. Large masses of peroxide of iron and quartz or "gossan," as it is termed in Cornwall, are seen just North of a little peak about quarter of a mile North of the road.

The direction of the vein is N. 10° E., S. 10° W. It forms a series of ridges, some of which are at least 100 feet high above the surface of the ground. I traced the vein for about half a mile North of the high road, and for at least a mile to the South. Beyond the distance mentioned to the North, I could find no signs at the surface of its occurrence, but I did not search for. To the South it doubtless extends beyond the spot to which I traced it, and a hill is seen in the direction in which the vein runs which may be formed of the quartz.

The width of the vein, as usual, varies greatly. Near the high road, both North and South, it cannot be much less than 30 feet. About a quarter of a mile to the South this thickness gradually decreases to about six feet. At this spot the vein stone rises like a wall above the surface of the little ridge formed of its quartzose *debris*, and the direction of its dip, obscure elsewhere, is distinctly seen. It here underlays to the Eastward at an angle of about 10° from the vertical, in other words it dips at 80°. Beyond this to the South, the thickness probably diminishes still further, as for about quarter of a mile the vein can no longer be traced at the surface; beyond that distance it again forms a ridge of some height.

It is simply impossible from the surface examination of a metallic vein, especially in a District where no mines exist, to ascertain what its value may be below the surface. All metallic mines are more or less speculations. Taking into consideration the large amount of vein stone exposed, the proportion of Galena seen is small, and, unless the quantity of lead ore be greater below the surface, it will not alone pay for the working. It should be observed that the fresh, unaltered appearance of the Galena found renders it improbable that its paucity is due to the greater portion having decomposed. But larger masses may occur below, and there is also a probability of copper ore being found. The occurrence of the ores in a well marked vein is certainly a most important circumstance, and I may add that it is the first instance of a distinct metallic lode that I have seen in India.

Altogether I think it may safely be stated that there is nothing in the appearances presented by the Chicholi lode inconsistent with the occurrence of a good vein of lead and copper ore below the surface. There are two disadvantages in the locality,—the absence of workmen acquainted with mining, and want of water, not merely as a motive power for pumps, &c., but for stamps and washing floors. But these are only questions of expense, and, should rich ores occur, will readily be overcome.

At Wurraband, 16 miles East of the Chicholi lode, two rather irregular quartz veins occur, forming hills of considerable size. I saw no traces of ore or of fluorspar in these, but my search was necessarily hurried. The direction of these veins approximates is that of the Chicholi lode.

The 17th March 1870.

W. T. BLANFORD,
Deputy Supdt., Geological Survey of India.

EXPLORATIONS FOR COAL IN THE WURDHA RIVER COAL-FIELDS.

From THOMAS OLDHAM, ESQ., LL.D., Superintendent, Geological Survey of India, to the Secretary to the Government of India, Home Department,—No. 713, dated Calcutta, the 2nd May 1870.

In continuation of previous reports, the last of which was dated 28th March, No. 661, I have now to submit a brief statement of further progress made in the explorations for coal in the Wurdha River coal-fields.

2. I mentioned in my last report that a second boring had been commenced in the lands of Majie village, at a point where it was hoped to avoid the great overlapping of the upper rocks, and to find the coal beneath. This has been quite successful. Coal was struck at 75 feet, and the boring having been continued, a thickness of coal and coaly shale of more than 50 feet was passed through.

3. The Jonara boring (in Berar), also referred to, has been carried down, and the thick coal, which occurs on the other side of the Wurdha, proved to be continuous into Berar. Some 45 feet were cut through.

4. New borings have been made at Goarie or Gowarie, also in Berar, six or seven miles further to the North. This boring was not completed at date of last returns, also at Borgaon, between Goarie and Jonara. This hole is also in progress. A third boring has been commenced near Rajur (Berar), which is a village about one mile East of Nét (Naith) well into the field, and about six miles in a right line from the Wurdha River, and at date of last report eight feet of coal had been cut into.

5. Owing to a rather serious attack of illness, Mr. Heppel, Brace head-man, has been, I regret to say, in Hospital almost all this month, and from his weakened state, it will scarcely be safe for him to take the field again during the hot wind season.

6. This illness has thrown on Mr. Smyth the conduct of the operations at all four borings, and I have much pleasure in stating that the work has progressed under his charge rapidly, safely, and without any interruption. Native holidays (Mohurrum) stopped the progress for a few days, but with this exception, Mr. Smyth has carried on the four holes or borings at the same time with perfect success.

7. The progress made with the steam-boring machine has been very little. This machine was started in anticipation of the arrival of the tubing or piping which had been sent from England for use with it. But on cutting down about 150 feet, the sand of the softer beds was found to come in so rapidly into the bore hole, as entirely to clog the hole. So much as 120 feet of the hole was found to be filled up in one night, and it often required nearly the whole working day to pump out this sand, &c., before any progress could be made. While working steadily in this very unsatisfactory way, Mr. Mather also burnt his foot at the engine, and has been obliged to lie up, being forbidden by the Doctor to move at all. After great delay, the piping has now, I believe, been despatched to Chanda, although up to the 25th, it had not reached; and the work will, I hope, progress rapidly.

8. There are still remaining to be put down in the North of the field, about four borings, which ought to be ample to prove the whole of that area satisfactorily. If not interrupted by sickness or other unforeseen causes, these ought all to be finished by the 15th of May or end of May.

9. Taking advantage of the shelter of a bungalow, the necessary trials close to Chanda town can then be carried on, and possibly the steam-boring machine, when it has completed its present boring, can be moved to Wurrora, to test the ground about that place.

10. As the control of these practical operations has now, I am glad to say, been transferred to the Local Government, I desire to bring to notice the very zealous, intelligent, and satisfactory way in which Messrs. Smyth and Heppel have superintended these borings. The selections of the points at which bore holes were put down has been in every case (since I proceeded to the field at the beginning of November) made by myself, or since I left, by Mr. Hughes; but the actual work has been carried on by these officers most efficiently and rapidly. There has not been with either a single loss of tools, or a single interruption of work, and since Mr. Heppel's sickness, Mr. Smyth has taken upon himself the superintendence of four borings, and conducted them all with skill and success. Mr. Smyth has himself, I regret to say, been laid up for a few days by an accident when riding, but has continued his work.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

GENERAL PRINCIPLES TO BE OBSERVED IN THE ALIGNMENT OF RAILWAYS.

Resolution by the Government of India, Public Works Department,—Circular No. 6 (Railway), dated Simla, the 6th June 1870.

RESOLUTION.—In recent proposals for the alignment of certain railways, a tendency to attach undue importance to shortness of through distance between the termini has been exhibited, which renders it expedient that the Government of India should explain the principles that they desire to see adopted in the detailed laying out of lines of railway.

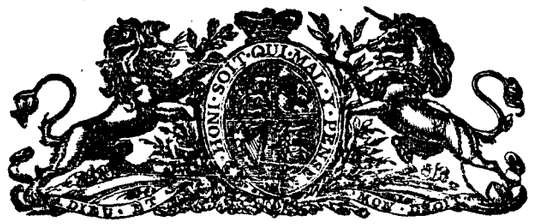
2. Doubtless, the conditions which demand a line of the shortest length may present themselves in all countries; but, in India, with its immense area, and its paucity of communications, those conditions are seldom met with. In a line of communication of any considerable length, a railway presents in India such a vastly better means of transit compared with anything pre-existing, that, regarded from the point of view of the interests of the people and of commerce, the cases must be exceptional in which it would be proper to leave a place of importance, either altogether off a proposed line of railway, or to be served by a branch, when by a deviation involving an inconsiderable addition to the total length of the through line, that place may be served directly.

3. In a country possessing no considerable population or trade, the construction of a railway will bring these in its wake, and its precise alignment is a matter of comparatively little importance. On the other hand, in a country of which the trade has taken a definite shape, and the population is concentrated in towns, it is essential, if the existing trade is to be developed and the convenience of the people is to be served, or, in other words, if the railway is to fulfil all the objects with which it has been projected, that it

shall be taken in the direction best calculated to suit the centres of population and of commerce.

4. There may sometimes be political or strategical reasons for adopting or avoiding a particular route; seldom, if ever, in the present circumstances of India, of avoiding a large city. An inland province may have to be connected with a distant seaport through an inhospitable region, or under circumstances which, if its trade is to be fostered, demand the least possible tax on transport. A frontier province may require the most rapid means of communication with its supports. These, and doubtless other cases, may be cited, in which the disadvantage of the slightest addition to the length of a line of a railway, in order to bring local traffic on to it, may be advanced with some show of reason, if not permitted to carry conviction.

5. But, as a general rule, nothing can justify that rigid adherence to the straight line connecting the obligatory points of a railway which, in ignoring the just claims of the districts passed through and of the towns in its vicinity, sacrifices the local traffic and public convenience as well as revenue to a not unfrequently inconsiderable saving in the first cost of the line, and a practically inappreciable saving of distance and of time in a long through journey. The paying traffic of our railways consists of goods and Native passengers, and, within reasonable limits, that location should, as a rule, be selected which will attract the greatest quantity of goods and the greatest number of passengers to the line. For these desiderata centres of population and of trade must be sought, and the lines should be taken as near to them as local circumstances will permit. If there is one thing more than another in connection with the railways of western countries, of which the paramount importance has been recognised during recent years, it is their extension into the very centres of business.



6. It is not necessary to cite examples in which, for reasons doubtless considered sound and sufficient at the time, the principles here indicated have not been adopted. The facts are patent. Places of importance are daily passed by trains at a distance of a few miles, the results being deficient conveniences to the people and incommensurate returns to the promoters of the undertakings. The Government of India desire that these disadvantages shall not be perpetuated so as to become the distinguishing feature of Indian railways. All officers, therefore, whether civil, political, or departmental, whose duties may in any way associate them with the present or future schemes of railway extension, will understand that the Government have adopted the principles here inculcated after full consideration, and that the precise location of future lines would be made in conformity therewith.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

COAL AT KORBA IN THE BELASPORE DISTRICT OF THE CENTRAL PROVINCES.

From T. OLDHAM, ESQ., LL.D., Superintendent, Geological Survey of India, to the Secretary to the Government of India, Home Department,—No. 727, dated Calcutta, the 17th May 1870.

I HAVE now the honor to forward to you, in original, a report on the character and quantity of the coal exposed in the Belaspore District, near the village of Korba, drawn up by Mr. W. T. Blanford after his recent examination of the locality. The report was promised to be submitted before the end of May (my letter to your Office, No. 607, dated 28th December 1869), I have also appended the results of Assay of the various specimens of the coal sent in by Mr. Blanford.

2. It will be seen that, after careful examination, Mr. Blanford has arrived at the conclusion that there are very favorable prospects of the coal field turning out productive of a large amount of workable coal of fair quality.

The coal field in which Korba is situated, farther extends to the East as far as Rabkuk, the *Oodeypore* of the maps. There is abundance of coal in the Eastern portion, but the quality has not yet been examined. There is, however, not much reason to suppose that it will differ materially from that of the same coals to the West.

3. There is, therefore, as anticipated by myself long since, every probability of an extensive and useful supply of coal being available in these Districts, spread over a very considerable area (Oodeypore is some 50 miles from Korba, in a right line).

4. The occurrence of large plateaus of high ground, nearly flat on top, locally known as Pats (Main Pat, Juneera Pat, &c.,) in this vicinity, ought not to be forgotten, for these offer free selection of localities in every way adapted as retreats for Europeans during the hot weather, which, if a Railway be constructed here from Calcutta, would become readily accessible. The upper portion of all these plateaus is composed of trappean rocks overlaid by thick laterite, and for the most part they have an abundance of excellent water. The value of such a plateau, offering wide open space, dry, or well-drained soil, water abundant and good, and with an elevation of 4,000 feet above the sea, as sanatorial locations for either Troops or Civilians cannot be too strongly insisted on.

5. In view of a Railway being constructed, it may be well also to draw attention to the present abundant supply of timber for sleepers and other purposes, most of which will, in a few years more, if care be not taken, have passed into the hands of speculators and contractors. It would, undoubtedly, be desirable to take some early steps towards the preservation of these forests.

Report on the Coal at Korba, in the Belaspore District.

1. *Locality and mode of outcrop.*—The village of Korba is situated in the Eastern part of the Belaspore District belonging to the Chatisgarh (Chutteesgurh) Division of the Central Provinces, and is the residence of a zemindar who owns a large portion of the surrounding country. It lies on the left or Eastern bank of the Hasdo River, a large tributary of the Mahanaddi. This stream has, in most places, a broad sandy bed, varying, however, from about 200 yards to above half a mile in breadth. The country around Korba, for many miles in all directions, is flat, or very gently undulating, and usually covered with clay.

Coal is exposed in two places close to the right (Western) bank of the river, just below Korba. The exposures are in the bed of the river, no section being seen in the bank itself, and, as will presently be shown, it is probable that both belong to the same seam of coal. A very slight rise in the river is sufficient to conceal both outcrops.

The lower outcrop, which is about half a mile below the village, is the best suited for examination, as both the top and bottom of the seam are exposed. A considerable proportion of the section is above water during the dry season, although there is always a great thickness concealed. The seam is remarkably thick, but, owing to its mode of occurrence, it is impossible to measure it exactly. It may, however, be computed sufficiently closely for all practical purposes. The dip varies in inclination from 13° to about 18° and in direction from N. 30° E. at the Northern extremity of the section to N. 16° E. at the Southern end. The horizontal breadth of the outcrop at right angles to the strike is 350 feet, and, taking the average dip at 15° the corresponding thickness is 90 feet. This, I believe, is rather below the truth than in excess of it.

Both above and below the coal, massive felspathic sandstones occur. Below the seam but a small thickness of these rocks is exposed, but above it, at least, 400 or 500 feet are seen in the river.

2. *Section of coal, seam and quality of coal.*—Of course the great thickness already mentioned does not consist throughout of workable coal. Bands of shale and of inferior coal are interspersed, as is more or less the case with most Indian coal seams. From the imperfect manner in which the seam is exposed, especially towards the base and from the surface, as usually happens, in similar positions, being extensively decomposed, it is impossible to obtain a correct idea of the quality of the coal without cutting into it. I consequently had a series of small pits dug, 6 to 7 feet deep, and from these and the portions of the seam fairly seen in the river bed, I obtained a good section of the whole thickness with the exception of about 10 feet. To examine these few feet would have caused some delay with the means at my disposal; and I had already fully ascertained the existence of a large proportion of good coal.

The section of the seam thus ascertained is the following. Of all the bands of coal to which letters are attached, specimens have been transmitted to Calcutta for analysis :—

Sandstone—	Feet.	Inches.
Shale about	1	0
Coal of fair quality	1	0
Inferior coal	1	0
Shale and inferior coal	3	3
Good coal, an inch or two of inferior coal here and there	3	9*a*
Good coal	6	0*b*
Shale and coal mixed	1	6
Good coal	3	0*c*
Shale with bands of coal	3	6
Good coal	4	0*d*
Coal and shale mixed	2	0
Shale with bands of coal	2	0
Coal of fair quality	1	6
Inferior coal	0	6
Good coal	5	6*e*
Shale	0	6
Coal	0	3
Shale	2	0
Coal	1	0
Shale and inferior coal	2	0
Good coal	4	0*f*
Shale with bands of coal	3	0
Shale and coal, the latter good in part	3	0
Coal, rather inferior in parts but generally good ...	3	6
Shale	1	0
Good coal	1	0
Not examined about	3	0
Shale	1	0
Good coal	4	6*g*
Not examined about	3	0
Good coal	4	0*h*
Shale	0	4
Good coal containing one or two thin bands of shale ...	5	8*i*
Not examined about	3	0
Shale	0	4
Good coal	2	8*j*
Sandy shale / Sandstone	89	3

The above section shews a *minimum* thickness of 50 feet of good coal. The proportion is probably nearer two-thirds of the seam. The best bands appear to be those marked *b*, *g*, and *h*. Portions of these and especially the lower 2 feet of *h** appeared to me equal in quality to any coal found in the Raneegunge field. There is some iron pyrites here and there, but not throughout. The coal ignites readily and burns well with rather more flame than is usual in Indian coal obtained from the surface. The ash left is large in quantity, and partly red, partly white.

* By a rough experiment, I obtained very fair coke from this part of the seam.

Probable extent of seam.—Metamorphic rocks are seen in the Hasdo about three miles South of Korba, and also at about the same distance to the North: these mark the limits of the beds accompanying the coal in those directions. East and West, the coal-bearing beds extend to a great distance and to the North-East they are apparently continuous with those forming the hills East of Chúri and Sutringa, and these are probably part of one large field which has been found by Mr. Medlicott to extend beyond Sirgúja. But, unfortunately, the surface of the country near Korba is so much covered with alluvial deposits that very few rocks are visible, and those seen are almost invariably coarse sandstones, the dip of which can rarely be determined accurately. West of the Hasdo the concealment is even greater than to the East, while in the latter direction, the whole country is an immense forest, rendering the relative position of the few outcrops met with very obscure.

But little information can be derived from the rocks seen in the Hasdo. The second outcrop of coal occurs about 300 yards higher up the river than that already described, and close to the same (right) bank. It is distinctly seen to be faulted against the sandstones which overlie the coal exposed at the Southern outcrop. About 50 feet of coal are exposed, neither

the top or the base of the seam being visible. The dip is very irregular and twisted, owing to the fault close by; it averages about 12° to N. 10° W.

It appears more probable that this is the same seam as that seen a little farther down the river, and that it is brought up again by the fault than that two seams of such unusual thickness should occur in the same beds. This, however, can only be positively decided by boring. The coal at the more Northern outcrop appears rather inferior to that seen to the South, but in the latter locality, the central portion of the seam contains more shale and inferior coal than the top and bottom, and it is the central portion of the seam which alone is exposed to the North. If the two outcrops belong to the same seam, the fault has a downthrow on its Eastern side of no great amount, probably not much above 100 feet.

So far as any reliance can be placed upon the dips on the sandstones, the general direction appears to be North by East to North North-East, for about a mile up the river, above the coal. Beyond this no rocks are seen. Just above the village of Korba, on the left bank, there is a reversed dip to the South-West, but it is probably local.

Below the Southern outcrop, rock is only seen in the river at distant intervals. The few sections observed appear to indicate that the direction of the dip changes to the Eastward. In this case the outcrop of the seam may pass for a long distance down the river, being concealed by the sand in the bed, which is here of great width. All the dips seen appear to be lower than those at the outcrop of the coal; and it is highly probable that the amount of inclination may be higher at this spot than it is elsewhere, and the direction of the dip different in consequence of the fault close by. The circumstance already mentioned of the variation in both amount and direction of dip at different parts of the outcrop in the coal seam itself, is in favor of this view.

So far as an opinion can be formed on these very imperfect data, it appears that the rocks associated with the coal cover a large tract of country, and it is improbable that so thick a seam should thin out within a short distance. It is, however, quite in accordance with our knowledge of similar seams in other parts of India that the exact thickness, the quality of the coal, and the proportion of good coal to inferior coal and shale should be highly variable.

If the coal seam be continuous, it should be found West of the Hasdo throughout a tract from one to two miles broad, extending probably in a West North-Western direction from the river, the Southern boundary of this tract passing through the more Northern of the two outcrops seen in the river. East of the stream the seam should underlie the village of Korba, and the river bank for at least a mile below and probably one to two miles above the village, and it may extend for an indefinite distance to the Eastward, but it is possibly at a considerable depth below the surface throughout a large proportion of the area.

It is evident that, before attempting to open a coal mine, boring must be resorted to in order to ascertain the extent of the seam, and its depth beneath the surface. The best places for boring will depend upon whether it is desirable that the coal should be extracted on the East or on the West side of the Hasdo.*

* In case of a railway bridge being necessary across the Hasdo, Korba appears to be a more favorable spot than any other in the neighbourhood, as the breadth of the river is moderate, and a considerable portion of the channel rocky. For several miles above and below, the breadth is very much greater and the bed a wide expanse of sand.

If to the West, as the strike of the rocks is somewhat uncertain, the first boring should be made about a quarter of a mile West North-West of the spot where the more Northern outcrop appears in the river. Although the strike at the outcrop is West by South, there can be but little doubt that the normal strike is North of West, and that the alteration is due to the fault. Should the coal not be found in the first boring, within a depth of 200 feet, two others,—one 300 yards further North, the other at the same distance to the South,—should be made. When the true direction of the outcrop is ascertained, it will be well to continue the borings along it at distances not exceeding half a mile apart, as any slight change of direction coupled with the high dip (if the latter be constant) will take the coal below the depth to which borings can most conveniently be made. There is also a possibility of other faults occurring besides that seen in the river.

On the East of the Hasdo the question is simpler. The fault so frequently referred to must either pass through the village of Korba or just South-East of it. West of the fault, a boring behind the zemindar's residence would probably pass through the seam. East of the fault the best place for boring is at a spot where sandstone occurs in the left bank of the river below Korba, due East of the more Southern outcrop on the right bank. Owing to the rather high dip, these borings should be made to a depth of about 400 feet, if coal be not found sooner. But, as I have already suggested, it is far from improbable that the high dip is local, and that on the left bank of the Hasdo the inclination is less, in which case the coal may be found at a moderate depth. Other borings, if the above are successful, may be made at intervals along the East bank of the stream below Korba. To the North of Korba the coal for some distance is probably at a considerable depth, but, if continuous, it must again rise

towards the surface between one and two miles North of Korba. It is, however, impossible to indicate with accuracy a good spot for boring in this direction. The best plan for examining the ground would be to put down a series of borings along a line running North North-East from Korba at half mile intervals.

Facilities for mining.—The dip of the seam where seen in the river, although considerable, is by no means so high as to be any impediment to mining beyond its effect in rapidly increasing the depth of the seam below the surface. The sandstone above the coal is firm and massive, and will probably furnish a good roof. The coal appears compact, the joints or "barks" are rather irregular, but still sufficiently marked in general to facilitate mining. Some of the very best and brightest coal is, as usual, rather brittle,* but the greater portion of the seam bears carriage well.

*This bright coal, as I have mentioned, makes a very fair coke, and in that state is far less brittle, besides being much lighter and consequently costing less for carriage. The cost of coking in ovens heated by waste coal would be very trifling.

In consequence of the absence of bands of shale in the overlying sandstone, the quantity of water may be rather larger than usual, but in the small pits dug in the bed of the river, the coal did not appear, in general, to be porous.

In mining a seam of such thickness as this, especially where the proportion of good coal is large, if the roof prove as sound as will probably be the case, it will be an important economic question whether some more advantageous method of mining cannot be adopted than that of removing a small section of the seam, not exceeding 12 feet in height, by "long-wall," or still worse by "post and stall," more especially as it is highly improbable that the best bands of coal will be found for any distance on the same horizon,—a most serious drawback to mining on either of the two English systems mentioned. It would, however, be premature to enter into this subject at present, but the methods adopted for extracting the thick deposits of lignite or brown coal found in parts of Germany are deserving of attention.

Conclusion.—I have endeavoured to show my reasons for the opinion I have formed as to the Korba coal. My conclusions are briefly that both the quality and mode of occurrence are favorable. In thickness, in quality, and in the proportion of good coal to inferior coal and shale, the seam surpasses that near Chanda. The question of the extent over which the coal extends must be ascertained by boring.

CAMP KORBA;
The 18th April 1870.

W. T. BLANFORD,
Deputy Supdt., Geological Survey of India.

The following Table gives the result of Assay of the Coals referred to in Mr. Blanford's Report just given:—

The 9th May 1870.

A. TWEEN.

LEVY OF AN EDUCATIONAL CESS IN BENGAL.

From E. C. BAYLEY, ESQ., C.S.I., Secretary to the Government of India, to the Secretary to the Government of Bengal, General Department,—No. 324, dated Simla, the 24th June 1870.

REFERRING to my letter No. 536, dated 30th September 1869, paragraph 3, I am now directed to forward to you the accompanying despatch from Her Majesty's Secretary of State, No. 5, dated the 12th of May last.

2. Your letter No. 1768A, dated the 30th April 1869, acknowledged in my letter above-quoted, raised such important questions in regard to the levy of an Educational Cess in Bengal, that the Governor General in Council, while maintaining the views previously expressed by the Government of India on the subject, considered it due to the strong views entertained by the Lieutenant-Governor that the entire correspondence should be submitted for the opinion of Her Majesty's Government.

3. The despatch now enclosed contains a decision embracing fully all the points of principle raised by the Lieutenant-Governor and this decision the Governor General in Council fully accepts. His Excellency feels it to be unnecessary to add anything to the arguments used in the despatch, and rests assured that the Lieutenant-Governor will acquiesce in the conclusions which the Secretary of State has founded upon them.

4. The Governor General in Council will advert only to the 20th and concluding paragraphs of the despatch. I am to state His Excellency in Council's entire concurrence in the views expressed in those portions of the despatch. No intention has ever been entertained by the Government of India of applying to one purpose rates nominally levied for another. The words of the Government of India to which the Secretary of State adverts in his 23rd paragraph had reference to an expression of hope that the Lieutenant-Governor would, in discussing the best mode of levying the road cess, be able to overcome the difficulties of detail which admittedly beset the levy of local cesses in Lower Bengal.

5. The Governor General in Council is not unmindful of the existence of these difficulties, but fully shares in the confidence expressed by the Secretary of State as to the Lieutenant-Governor's ability to surmount them; and I am to add that he equally shares the views of the Secretary of State as to the policy and expediency of administering the proceeds of the rates, so far as may be possible, through the people themselves.

6. The Governor General in Council is of opinion that in this question is involved a matter of higher import than mere financial convenience. Local taxation should, as far as possible, be accompanied by local administration and local responsibility. His Excellency is most sincerely desirous that every opportunity should be given to the people to participate in the management of their local affairs. He believes that the comparatively limited experience which has been gained on the subject is not discouraging. In any plan which may be considered this primary object should never be lost sight of, and he will, with this view, gladly assent to any measures which the Lieutenant-Governor may propose for ensuring the cöoperation of the intelligent classes of the community, both in the levy of the rates and in the disposal of their proceeds.

7. I am to add that it is the wish of His Excellency in Council to leave to the Local Government the utmost possible discretion in regard to the general superintendence and control of these and of all other funds raised by local taxation for local purposes.

8. In conclusion, I am to express a hope that the interval which has elapsed since my letter of the 30th September last, will have sufficed for the preparation of the outlines of a scheme of local taxation, such as is indicated in the enclosed despatch, and that His Honor will be very shortly in a position to submit it to the Government of India in a shape that will prevent any further delay in putting it into active operation.

Educational.
No. 5.

INDIA OFFICE;
London, the 12th May 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

PARA. 1. I have had under my consideration in Council your Excellency's despatch No. 17 of the 31st December 1869, with a copy of further correspondence with the Government of Bengal "on the subject of providing from local sources the means of extending elementary education among the masses of Bengal, and of constructing and maintaining roads and other works of public utility." In the concluding paragraph of your despatch under consideration, you declare that the "imperial resources of the empire are unable to provide the large sums necessary for such purposes as these," and you add, "if we are to make roads, to educate the people of Bengal and keep them clean and healthy, it can only be done by imposing on local resources such a burden as they can conveniently bear. We are therefore decidedly of opinion that it is the duty of the Government of India to insist on their gradual imposition, and, if we have refrained from taking immediate steps for this latter object, it mainly is because we wish to be informed, in the first instance, whether our conclusions are accepted by Her Majesty's Government, it being of much importance that we should be fully assured of their support in any measures that we may take to give effect to our intentions."

2. I do not understand the question, now referred for my decision, to be the question whether a local cess, if levied at all, can justly be levied from the zemindars alone, or whether all other classes which have acquired beneficial interests in the soil must equally contribute to the rate. The Lieutenant-Governor of Bengal understood the letter of Sir J. Lawrence, of 28th October 1867, No. 5876, as a proposal to levy rates from the zemindars alone. This impression does not seem to have been removed by the farther letter from Sir J. Lawrence's Government, dated 25th April 1868, No. 237. This last letter modifies, on several points, the opinions which had been indicated in the previous letter of 1867. These modifications the Lieutenant-Governor, in his letter of 30th April 1869, No. 1768A, refers to as important, but he does not accept them as sufficient. In particular, he points out (paragraph 10) that, whilst the method of rating the cess originally suggested (namely, in proportion to the land revenue) is abandoned, "it does not appear that the Governor General in Council has altered his opinion as to the persons who should be called upon to pay it." Accordingly, the Lieutenant-Governor proceeds to state some most important facts, which had not, probably, received adequate attention when the levying of rates was first suggested,—that since the Permanent Settlement was made the condition of landed tenures has entirely changed, and a great variety of derivative interests have arisen between the original zemindars and the actual cultivators of the soil. So complete is this change, that the Lieutenant-Governor represents (paragraph 27) the Permanent Settlement as having been "only a gift to certain individuals, and neither can these persons for the most part now be identified, nor can the share of the increased rental appropriated by them and their successors or assigns be ascertained." In the despatch under reply, the bearing of these facts on the incidence of rates is fully acknowledged, and, in view of them, it would clearly be unjust, irrespective even of the promises given under the Permanent Settlement, to levy cesses or rates solely upon the zemindars. Looking, however, to this correspondence as a whole, I gather, even from the letter of the 28th October 1867, more clearly from the letter of 25th April 1868, and most clearly of all from your Excellency's despatch now under reply, that neither the method of levying the rate, nor the distribution of its incidence among different classes, were questions to which chief importance was attached by the Government of India. The one point on which Sir J. Lawrence insisted, and on which your Excellency

now insists, is that the expense of roads, education, &c., in Lower Bengal, cannot be borne by the imperial exchequer out of its existing revenue, and that it must be met by special rates levied locally for the purpose. The method of levying the rate and the distribution of it, were matters to be carefully considered in communication with the Lieutenant-Governor of Bengal. His Honor, in his letter of 30th April 1869, finally accepts a rate for roads to be levied upon land, but only in consideration of the urgency of your Government and the obvious utility of the purpose in view. His Honor also seems prepared to admit that it might be legitimate, though not expedient, to levy a rate for education, provided it were converted into a general tax affecting all incomes from whatever source. But in principle, I understand His Honor to contend, and a great part of his letter to be directed to establish, that, whether for roads or for education, it is not just to levy in Bengal any merely provincial tax whatever, and especially any rate or cess, the main burden of which must be laid on land held under the terms of the Permanent Settlement of 1793.

3. The question thus raised for the decision of Her Majesty's Government has immediate reference to Lower Bengal; but the arguments used on both sides in the correspondence involve, both directly and by implication, the whole subject of the conditions and the circumstances under which the Government of India can be justified in imposing on the people special rates or taxes in order to effect improvements which the existing revenue is insufficient to provide for.

4. The importance of this subject in a financial point of view can hardly be exaggerated. It may be stated broadly that the general or imperial revenues of India are barely sufficient to meet the demands which are at present made upon them by the Civil, Political and Military Administration of the Empire, together with the interest on debt and the interest on great public works which have not yet become remunerative. But whilst these exhaust the means at the disposal of the Government, they do not exhaust the obligations which are thrown upon it by the condition of the people. The Government does, and it ought to do in India, much, which in Europe is undertaken by private enterprise, or by municipal and other local bodies. In India it may be said with substantial truth that private enterprise does not exist, and that the machinery for local taxation and expenditure is yet but imperfectly developed. In the Department of Public Works, both "Ordinary" and "Extraordinary," there is a large expenditure by the Government which, in Europe, would be met either by individuals or by Companies, or would be defrayed by assessment. But there is still much absolutely requiring to be done, if the condition of the people is to be improved, which the Government cannot overtake out of imperial funds. It cannot, out of the means now remaining at its disposal, make and maintain the roads and bye-roads required for developing the resources of a country so vast as India. If, therefore, this work is to be done at all, it must be done by the help of rates established for the purpose. In like manner, it has been assumed in all the discussions which have arisen during recent years upon this subject that the expenditure which may be required for the Vernacular Education of the people and for sanitary improvements cannot be afforded by the imperial revenue, and must be met in the main out of the same additional resources. There appears, indeed, to be no alternative unless it be the alternative of allowing the country to remain without drainage, and without roads and without education.

5. Accordingly, this conviction has been now for many years forced upon the Administrations of some of the most important Provinces in India, upon the Supreme Government and upon several successive Secretaries of State. Local rates for meeting the necessities of local improvement have been levied, over and above the land revenue, in the Punjab, in the North-Western Provinces, in Central India, in Oudh, in Sind, and throughout the Presidency of Bombay. I shall presently advert to the distinction which has been drawn between the circumstances and conditions under which these rates have been imposed, and the circumstances which affect the question of imposing them in Bengal. I am now only recording the fact that such rates have been raised in the Provinces above-

named. In the 53rd paragragh of the Educational Despatch of the 7th April 1859, Lord Stanley called special attention to the question of the expediency of imposing a special rate to repay the expense of schools for the rural population. Sir Charles Wood, in his despatch of the 25th May 1861 to the Government of Bombay, whilst recounting all the difficulties and objections which had been felt upon the subject of cesses in addition to the land revenue, spoke of the obligation to keep up roads of internal communication as a liability everywhere attaching, both by reason and by custom, to the owners and occupiers of land. In respect to education, he referred to the probable necessity of dealing with the question by a specific legislative enactment. Accordingly, such an enactment, under conditions to which I shall afterwards refer, has actually been adopted in Bombay. Lastly, my predecessor, Sir Stafford Northcote, in Council, in his despatch of the 28th of October 1868, No. 22, approved of these proceedings of your Government, in which the proposal was made to levy a rate for this purpose in Bengal.

6. I come, then, to the specific objection to this proposal that the Government of India is precluded from imposing special rates in Lower Bengal, because of the binding promises made to the landowners of that Province under the terms of the Permanent Settlement. In considering this question, I put aside for the moment every argument which turns upon the purposes to which the proposed rates or taxes are to be applied. On this point, there seems to be some doubtful reasoning used on both sides in the correspondence before me. Your Government repeatedly asserts the right of imposing local cesses for local purposes, implying that the purpose to which such a tax is devoted, affects the question of the right of the Government to impose it. Assuming the right to impose any given tax, the purpose to which it is applied may make all the difference in these two most important things,—*first*, the reasonableness, or even the justice, of imposing the tax; and *secondly*, the possibility of making that reasonableness and justice plain to the people who are to pay it. But if the right to impose the tax be absolutely denied, on the ground of a binding promise that no such tax should be imposed, then the purposes to which we may intend to devote the money can have no bearing on the question of our right to raise it.

7. But the question whether the Government of India has, or has not, the right to impose taxes upon land in Bengal, even for the general purposes of the Empire, has been ruled and decided in the case of the income tax. And yet that ruling was not, and could not, be arrived at by any mere construing of the words in which the promises of the Permanent Settlement were made. Those words did not contemplate such a case; and, to reach the general principles on which that case was ruled, it was necessary to go outside altogether of the four corners of the document in which the Permanent Settlement is recorded.

8. Your Excellency has, indeed, referred to Article VII. of that Regulation as indicating the reservation of a power large enough to include that which is now disputed. I am bound to say, however, that this argument does not appear to me to be satisfactory. It is true, indeed, that under that Article the Government of India retained a right of enacting such Regulations as it might think necessary for the "protection and welfare" of the various agricultural classes. It is true also that we may argue, in all good conscience, that the support of roads and of Vernacular Education are necessary for the "welfare" of those classes. But the whole context of the passage indicates, in my opinion, that the power intended to be reserved under that Article was the power of regulating and limiting the power of the zemindars over their tenantry. It is, indeed, obvious that in the exercise of such a right the revenues of those zemindars might have been affected to a far greater extent than they can be affected by rates for the making and maintenance of roads or of schools. But if the question be whether the right to levy such rates, in addition to the "jumma," was contemplated or thought of at the time, I am compelled to believe that no such idea was in the mind of the Government of Lord Cornwallis in 1793.

9. But if the words of the Permanent Settlement do not rule the case in favour of the power now claimed by your Government, neither do they rule it in a sense adverse to that claim. The great object and purpose of that settlement,

as clearly defined and described in Article VI., should govern our interpretation of its terms. That object was—as this Article explains at length—to put an end for ever to the practice of all former Governments of altering and raising the land tax "from time to time," so that the landholder was never sure, for any definite period, what proportion of the total produce of the soil might be exacted by the State. This uncertainty was to be set at rest for ever. The "public demand" was to be fixed and permanent. Such was the promise: and its scope and object were clearly explained in the concluding exhortation addressed to the landowners, that "they would exert themselves in the cultivation of their lands, under the certainty that they would enjoy exclusively the fruits of their own good management, and that no demand would ever be made upon them or their heirs and successors, by the present or any future Government, *for an augmentation of the public assessment in consequence of the improvement of their respective estates.*"

10. These last words illustrate the whole force of the argument, which has been admitted to be just in the case of the income tax. It must be remembered that none of the pleas which, in the correspondence before me, are urged in favor of the right of the Government to levy rates for roads or for education, could have been put forward in favor of the right to impose an income tax on the landholders of Bengal. The income tax was not "local" in any sense. It was not applied to special purposes intended for the immediate benefit of the agricultural classes. It was, in the fullest sense of the words, a "public demand," levied over and above the public demand which, under the Permanent Settlement, had been fixed "for ever." It went directly into the Imperial Exchequer, and was applied precisely as the land revenue and all the imperial taxes were applied. But there is one thing which that tax was not: it was not an increase of the public demand levied upon the zemindars "in consequence of the improvement of their estates." It was levied upon a wholly different principle, and in respect of a wholly different kind of liability. One index and proof of this difference lay in the fact that, although this "public demand" was made upon those to whom the promises of the Permanent Settlement had been given, it was made upon them only in company with other classes of the community, and with no exclusive reference to the source from which their income was derived.

11. But when the principle of this distinction is clearly apprehended, it becomes obvious that an income tax is not the only form of "public demand" to which that principle applies. The same essential distinction may be established between the original assessment which was fixed "for ever," and every kind of tax, or cess, or rate, which is levied irrespective of the increased value or produce of land, and with no view to a re-adjustment of the proportions in which the produce of the soil is divided between the State and the owners of land holding under it. The best method of marking this distinction, and of making it clear, is to provide that such cesses should be laid upon the owners of land only in common with other owners of property which is of a kind to be accessible to the rate.

12. It has been contended that the rates levied in other Provinces of India are essentially distinct in principle from the rates which it is proposed to levy in Bengal. The argument appears to be, that in other Provinces of India the local rates are simply so much addition to the ordinary land revenue—an addition which is there legitimate, because the Government had not in those Provinces debarred itself by positive engagements from increasing the land assessment. This appears to be only another form of stating the argument already dealt with, which is founded on the terms of the Permanent Settlement. But the distinction thus drawn between the character of such rates when levied in Bengal and the character of similar rates when levied elsewhere, is a distinction which I concur with your Excellency in considering to be unsound. Whatever character may be assigned to these rates as a matter of mere verbal definition, they were unquestionably intended by the Government, in all the Provinces in which they have been raised, to be in addition to the land revenue, and not a part of it. This separation was expressly defined and marked in the proceedings of the Government of Bombay before any special legislation had been passed upon the matter. In the Resolution of that Government, dated

March 9th, 1860, the Superintendents of Survey were directed, "after fixing the assessment of a District," to add the rate "over and above the amount which on other considerations they may deem appropriate." Although incorporated with the land revenue in respect to the mode of levy, as being the most convenient, it is again in the same sentence explained to be "calculated over and above the ordinary assessment;" and Sir Charles Wood, in his despatch of May 25th, 1861, in which he dealt with the proposal, speaks of it as a proposal "for the imposition of a school rate and road cess in addition to the revised rates of land assessment which have been, and still are, in course of introduction."

13. Her Majesty's Government are therefore of opinion that it cannot be said with justice that to impose rates in Bengal would be to impose a special tax on that Province which is not imposed on other parts of India.

14. It is true that, in making some of the more recent land settlements in various Provinces of India, the Government has given notice that in fixing the assessment of land revenue for 20 or 30 years, it retained the power of imposing some additional rates for local expenditure. In the Bombay Act of 1865,* a notice to this effect has been made permanent by law. But this notice, so far from indicating that such rates are to be considered as part of the land revenue, is, on the contrary, a distinct indication that they are to be considered separate. The notice was issued because the Government was warned by the misunderstanding which had arisen in Bengal, and because it knew that precisely the same misunderstanding might arise under any settlement—the misunderstanding, namely, that during the term for which such settlement might be made the Government absolutely surrendered all power of additional taxation upon the land. But, although, under these circumstances, it was expedient to prevent such misunderstanding in future by a warning explanation to all with whom new settlements might be made, Her Majesty's Government do not admit that, where no such notice has been given, no rates can be levied in addition to the assessment. This, indeed, would involve a result in direct antagonism with the principle laid down in this despatch, and sanctioned in the case of the income tax. That principle is, that any extra taxation or rating levied from the agricultural classes over and above the land revenue, must be imposed as equally as possible upon all holders of property accessible to the impost. But if those holders of landed property are to be free from the tax to whom notice was not given at the time of settlement, the rates cannot be imposed equally, but, on the contrary, there must be an extensive system of exemptions. And those exemptions must especially include the holders of inams, of alienated villages, and all permanent tenures either rent-free or at small fixed quit-rents. The guarantee under which these persons hold their lands, free from any increase of the land assessment, is a guarantee quite as binding as the promise given to any holder in Bengal. But the practical injustice of exempting inamdars, or the owners of alienated villages, is as apparent as the departure it involves from the principle of making rates equal and general in their incidence. It must always be remembered, in matters of taxation, that when a given work is to be done, and a given amount of expenditure is required to do it, the exemption of any class is simply an aggravation of the burden on all other classes who are not exempt. And in this case those would be the exempted classes who have been otherwise most favored by the State, and those would be the classes bearing an aggravated burden who already contribute most to the public expenditure. Moreover, the holders of property thus exempted would derive equal, or indeed greater, benefit from the rates than the holders of property, who alone would be called upon to pay them. On these grounds, Her Majesty's Government feel that, in rejecting any claim to exemption from rates on the part of those who did not expect to pay them at the time of the land settlements, or on the part of those who hold under permanent tenures whether of one kind or another, they are not adopting any more verbal plea in order to justify a foregone conclusion which otherwise might be difficult of defence. They are satisfied, on the contrary, that they are rejecting a claim founded solely on a mistaken interpretation of the mere wording of a particular document, and which, if admitted, would lead to results at once anomalous and unjust.

* Act I. of 1865, section 29, clause 1.

15. It is the more important that a final decision on this matter should be arrived at, because it must be admitted that the misunderstanding on which such claims to exemption are founded is a misunderstanding which has been long prevalent, and has imparted a character of doubt and hesitation to the language and to the acts of the Government, both in India and at Home. There has been, on the one hand, a feeling and a conviction of the essential distinction between the ordinary land revenue and the rates which it was desired to levy, whilst, on the other hand, there has been a difficulty in defining that distinction, and a fear lest it should be found to be incapable of explanation to the people. Hence there has been a variety of suggestions for evading the difficulty, by raising the required amount of money through a house tax, or a license tax, or some other tax which could not be confounded with the land revenue, and respecting which, therefore, there could be no doubt of the right of the Government to impose it. But all these suggestions have, for various sufficient reasons, been rejected. The despatch of Sir J. Lawrence, of 22nd February 1867 (No. 9, Revenue Department), exhibits the embarrassment felt by the Government of India in this condition of affairs, and its anxiety lest rates on landed property should appear to the people to be a breach of faith. It is injurious alike to the Government and to the people that this condition of things should continue. The Government has nothing to conceal, and the people have nothing to fear or lose in the re-affirmation of the same principle as regards rating which has already been affirmed as regards the income tax.

16. An important step in the practical decision of this question has been taken in the passing of the Bombay Act No. III. of 1869. The special object of that Act is to raise "funds for expenditure on objects of local public utility and improvement," and for this purpose it imposes rates upon all holders of land, without making any distinction between those who received and those who did not receive a notice at the time of settlement. No exemption of any class of landholder is admitted. On the contrary, the holders of rent-free, of alienated villages, and of other permanent tenures are expressly subjected to the rates.

17. In view, therefore, of these various facts and considerations, Her Majesty's Government have now to intimate to your Excellency the conclusion to which they have come, after a careful consideration of a controversy which has now been going on for a long course of years. This conclusion is that rating for local expenditure is to be regarded, as it has hitherto been regarded in all the Provinces of the Empire, as taxation separate and distinct from the ordinary land revenue; that the levying of such rates upon the holders of land, irrespective of the amount of their land assessment, involves no breach of faith on the part of the Government, whether as regards holders of permanent or of temporary tenures; and that, where such rates are levied at all, they ought, as far as may be possible, to be levied equally, without distinction and without exemption, upon all the holders of property accessible to the rate.

18. So far I have been dealing only with the right of the Government to levy rates, and with the argument that this right had been parted with for ever under the terms of the permanent settlement in Bengal. I now proceed to consider the further question, which ought to be kept entirely separate, namely, the expediency and policy of exercising the legitimate power of the Government in imposing such rates in Bengal. Many arguments, which are entirely irrelevant in the discussion of right, become arguments of first importance on the question of policy. (1) The proportion which the existing land tax bears to the whole resources of the people on whom we propose to place new taxes; (2) the mode of levying them so as to reach fairly the different interests in the property to be assessed; (3) the machinery through which the levy is to be made; (4) the persons to whom the expenditure is to be entrusted; and (5) the special purposes to which rates are to be applied—all these are most important elements in the question of policy, perhaps even of justice. They cannot therefore be too carefully considered.

19. Adverting then to these matters in the order in which I have now enumerated them:—(1) it cannot be maintained that the people of Bengal are less able to afford such rates than the people of other Provinces of India. In so far as the permanent settlement makes any difference in this case, it is a difference

in their favor with respect to the other demands made upon them by the State. A large portion of the produce of the soil which, even at the most moderate assessment made elsewhere in India, would have been appropriated by the State, has been left in the hands of the various classes connected with agriculture, and has contributed to increase the general wealth and resources of the Province. The case, on this point, for the Government cannot be better stated than in paragraph 36 of the Lieutenant-Governor's letter to your Government, dated April 30, 1869:—"Owing to the operation of the permanent settlement, Bengal contains, scattered throughout the different classes of its population, many persons who have acquired more or less of an independence from the profits of the land surrendered by the Government in that measure." It is true that in the greater fruitfulness of indirect taxation and of some direct taxes in Bengal, as compared with other Provinces, the Government recovers some portion of the revenue which it has sacrificed in the form of land assessment. But this very fact testifies to the greater wealth of the people, and is a conclusive proof that they can bear, at least as well as the people of other Provinces, such special taxes as may be required for drainage, roads, and schools.

20. On the next point, (2) the mode of levying rates so as to reach fairly the different interests in the property to be assessed, I understand you to be fully impressed with the justice of providing that they should be levied as equally as possible, not only on all kinds of rateable property, but as equally as possible also upon the various classes who have various interests in that property. I observe that you contemplate the extension of the cess to towns and villages (paragraph 24). There is indeed no reason why the burden either of roads or of education should be thrown exclusively upon the agricultural classes, where other classes are equally interested in the expenditure and have property of a kind which can be made accessible to rates. How all this can best be done is a question which must be locally decided. The knowledge and ability possessed by the Lieutenant-Governor of Bengal, which are eminently displayed in this correspondence, give me confidence that, when the decision of Her Majesty's Government is announced, the measures consequent upon that decision will be directed with a careful regard to all the peculiar circumstances of the Province which is under his administration.

21. As regards (3) the machinery through which the levy of rates is to be made, and (4) the persons to whom the expenditure of them is to be entrusted,—it would indeed be most desirable if the local character of these rates could be emphatically marked by committing both the assessing of them and the application of them to local bodies. If the people were farther advanced in the knowledge and appreciation of those advantages which we desire to confer upon them, there would be no need of interposing the authority of the Imperial Government in regard to such matters as the making and maintenance of roads, of schools, and of sanitary improvements. In this case we might entrust the initiative in all such things to the people themselves. But, speaking generally, it may be said that the people have, as yet, neither the knowledge, nor the desire, nor the organization which could alone render it possible to rely exclusively upon their voluntary action. Nevertheless, when the authority of the Supreme Government has been exerted to prescribe as an obligation the performance of certain duties, it may be possible, and if possible it will certainly be desirable, to carry the people along with us through their natural native leaders, both in the assessment and in the expenditure of local rates. The importance of doing so has been acknowledged in the measures adopted for regulating the management of similar rates in other Provinces of India, and it would be, in the belief and hope of Her Majesty's Government, an undeserved reproach to the many wealthy and intelligent Native gentlemen of Bengal, to suppose that a similar course may not be successfully pursued as regards the people of that Province.

22. Closely connected with the local character which may belong to rates arising out of the mode of assessment and of administration, comes (5) the local character which depends on the purposes to which they are to be exclusively applied. I have already pointed out that the purposes to which a tax may be applied cannot be considered as affecting the abstract right of the Government to

exact it. But assuming this right, everything as regards the policy, and even the justice, of the rates now in question turns upon the manner in which they are to be expended. It is, of course, essential that the Government of India should be itself satisfied that it is breaking no faith in any measure it may take; but next to the necessity of this assurance is the necessity, or at least the great importance, of making the same conclusion plain to the apprehensions of the people. For this purpose it is, above all things, requisite that the benefits to be derived from the rates should be brought home to their doors,—that these benefits should be palpable, direct, immediate.

23. The making and improving of wells, tanks, and other works of irrigation affecting comparatively small areas of land, are the operations which probably best comply with these conditions. But roads are a first requisite in the improvement of every country, and, although as yet they may not be equally valued by the people, it is the duty of the Government to think for them in this matter, and the benefits they must derive will yearly become more apparent to themselves. It is due, probably, to these considerations that the Lieutenant-Governor of Bengal has waived his objection to local rating in Bengal for making and maintaining roads (admitting indeed that for this purpose a cess upon landed property is necessary), although, as regards the argument founded on the Permanent Settlement, no clear distinction has been drawn between the right of the Government to levy rates for roads, and its right to levy rates for education. Her Majesty's Government can have no doubt that, as elsewhere, so in Bengal, the expenditure required for the education of the people ought to be mainly defrayed out of local resources. This, however, is precisely the application of rates which the present condition of the people may render them least able to appreciate. I approve, therefore, of your Excellency proceeding with great caution in this matter. The circumstances which have just compelled you, for the general purposes of the empire, to increase the tax upon incomes, would appear to render such caution more necessary at the present moment. I do not construe the concluding words of the 6th paragraph of your despatch as suggesting that rates nominally levied for one purpose should afterwards be applied to another, because I am sure that your Excellency must be as fully alive as Her Majesty's Government to the necessity of maintaining perfect openness in our dealings with the people of India, especially as regards imposts which are comparatively new, and which seem to be so much contested. I do not doubt, therefore, that, in the paragraph referred to, you intended only to suggest that, until the system, machinery, and incidence of local rating in Bengal has been satisfactorily established, so much only should, in the first instance, be raised as is required for roads. Her Majesty's Government approves of this precaution, and they are of opinion that any addition to the cess should be duly and separately notified to the people, with a full explanation of the special purposes to which it is to be applied.

24. I have now communicated to your Excellency the views of Her Majesty's Government on the matter which you have referred for their decision. Of the great importance of the subject in a financial point of view I have already spoken. If it were indeed true that in the land revenue raised from the agricultural classes the Government of India took so much from the resources of the people as to leave them unable to bear any additional burdens, then, indeed, it would be as impolitic to impose "local rates" as to impose any new imperial tax. In this point of view, it matters nothing whether the land revenue be in the nature of a "rent" or in the nature of a "tax." So far as regards the ability of a people to bear fresh burdens, it is the same thing whether they be over-rented or over-taxed. But Her Majesty's Government are satisfied that this is not the condition of things with which we have to deal. It is notorious that the direction in which the Government of India has been proceeding in its land assessments has been the direction of making those assessments more moderate, and of eliminating altogether the element of uncertainty,—of arbitrary variation,—which, more than anything else, impeded the progress of agricultural improvement. The whole discussion, which is now before me, has arisen out of the fact that in Bengal the Government went so far in giving effect to this policy as to declare the land assessment to be "fixed for ever." The same principle is involved, and the same policy is expressed

in the long and definite periods of time for which, in other parts of India, the assessments are now equally fixed, and during which they cannot be re-adjusted in favor of the State. This policy is a wise one, even though the treasury should appear in the first instance to be a loser by it. The true wealth of a wise and just Government lies in the growing wealth of its people; and the fiscal system which most encourages the accumulation and enjoyment of capital in private hands must in the long run be the most profitable to the State. But there is one condition attaching to this argument, without which it ceases to be applicable to a people situated as the people of India now are. The growing wealth of the country must be made accessible to such demands as arise from time to time out of the duty and the necessity of our applying to its condition the knowledge which belongs to a more advanced civilization than its own. We are spending the imperial revenues of India conscientiously for the good of its people. If there are some great improvements in their condition which we cannot afford to undertake, we must not be precluded from throwing the cost of such improvements upon those growing resources of which we heartily desire to see that people in the enjoyment, but which are due in a great measure to the government we provide.

25. There is yet one other aspect in which the question of local rating for special purposes must be regarded,—an aspect in which it assumes an interest and importance distinct altogether from its bearing on finance. Local rating, although it may be imposed in the first instance by imperial authority, must become a powerful means of further educating the people in an intelligent management of their own affairs. I approve entirely of the anxiety shown by the Government of Bombay in its first action in this matter, and expressed also by the Supreme Government under Sir J. Lawrence, that, as far as possible, the assent and concurrence of the rate-payers should be secured, both in the levy and in the management of the rates. I commend this wise policy to your careful consideration, in communication with the Lieutenant-Governor of Bengal and the subordinate branches of his administration.

I have the honor to be,

MY LORD,

Your Lordship's most obedient, humble Servant,

ARGYLL.

REMARKS.

The mean volume of the Ganges Canal passing the Roorkee gauge during the month, was 4,535 cubic feet.

The volumes discharged by the canal were as follows :—

Tail, Etawah Branch ..	38 cubic feet.
Escapes ,, ,, ..	155 ,, ,,
Tail, Cawnpore ,, ..	236 ,, ,,
Escapes ,, ,, ..	No returns.
Total ..	429 cubic feet.

The Cawnpore and Etawah Branches have alternate weeks of high and low supply. The gauge readings show the mean of the month.

It has been impossible to estimate the supply of Meerut and Boolundshuhur Divisions, as owing to a necessary change of management, the Dasnah gauge has become the ruling gauge for Boolundshuhur, and at present there are no authentic discharges for various readings of this gauge.

The chief irrigation of the month was sugar-cane, and indigo "palev," and towards the end of the month early rice.

On the Eastern Jumna Canal the supply was quite equal to the demand; sugar-cane, indigo, and early rice being the crops irrigated. Rain fell in the Saharunpore and Moozuffernuggur Districts on the 29th and 30th of the month.

* No returns. † Average for past six years.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 21st June 1870,

PRESENT;

His Excellency the VICEROY and GOVERNOR GENERAL of India, K.P., G.C.S.I., *Presiding*.
His Excellency the COMMANDER-IN-CHIEF, G.C.B., G.C.S.I.
The Hon'ble JOHN STRACHEY.
The Hon'ble SIR RICHARD TEMPLE, K.C.S.I.
The Hon'ble J. FITZJAMES STEPHEN, Q.C.
The Hon'ble B. H. ELLIS,
Major-General the Hon'ble H. W. NORMAN, C.B,
The Hon'ble F. R. COCKERELL,

MADRAS DISTRICT MUNSIFS' BILL,

The Hon'ble MR. COCKERELL moved for leave to introduce a Bill to consolidate and amend the laws relating to District Munsifs in the Madras

Presidency. He said that the primary object of the proposal to legislate in this matter was the extension of the pecuniary jurisdiction of the District Munsifs from one thousand rupees, to which amount it was limited under the existing law, to two thousand five hundred rupees. The pecuniary limit of the jurisdiction exercised by the corresponding class of Civil Courts was, in the Bengal Presidency, one thousand, and in Bombay, five thousand rupees.

The proposed increase was not proportionately greater than that recently accorded to the Bengal Munsifs by Act XVI of 1868.

It was advocated by the High Court and approved generally by the Judges of the principal Civil Courts in the Madras Presidency.

Moreover, looking to the fact that the pecuniary jurisdiction of the District Munsifs of Madras had undergone no change since 1833, and that, during the period that had since elapsed, there, as elsewhere, the character of this class of Courts had vastly improved, the propriety of the extension now contemplated could not be doubted.

It was also proposed to consolidate the law relating to District Munsifs, now spread over several local enactments, and this part of the scheme had necessitated the reference to this Council of what was in itself, as the title of the Bill imported, a purely local measure; for the process of consolidation involved the re-casting of some of the provisions of existing enactments affecting the jurisdiction of the High Court, and thus placed the proposed legislation beyond the competency of the local legislature.

The Bill which had been prepared by the Madras Government, dealt solely with the law relating to District Munsifs. As it was necessary to refer the proposed legislation to this Council, he (MR. COCKERELL) thought that the scope of the Bill might have been advantageously enlarged by extending the work of consolidation to the entire law relating to the constitution and jurisdiction of all the Civil Courts of the Madras Presidency, subordinate to the High Court.

A consolidated enactment of this kind, in reference to the Civil Courts of the Bombay Presidency, was passed by this Council last year. The expediency of applying a similar measure to the Madras Presidency, now that the opportunity for it had arisen, appeared to be so obvious as to need no argument. If the Bill was eventually referred to a Committee, he (MR. COCKERELL) would certainly advocate its extension in the direction which he had just suggested.

The Motion was put and agreed to.

CUSTOMS DUTIES EXEMPTION BILL.

The Hon'ble SIR R. TEMPLE moved for leave to introduce a Bill to enable the Government of India to exempt goods from customs duties. He said that large quantities of piece goods and other merchandize were imported into British India and soon after exported to foreign territory.

In order to encourage the use of our ports as *entrepôts*, and for other reasons, it was convenient that the Government of India should have the power to exempt wholly or in part from export duty goods which had paid import duty.

But to authorize such exemptions in the face of the Indian Customs Duties' Act, and of the declaration in section one hundred and thirty-seven of the Consolidated Customs' Act (VI of 1863), he (SIR R. TEMPLE) was advised that legislation was necessary.

The Motion was put and agreed to.

BANK OF BENGAL DIRECTORS' BILL.

The Hon'ble SIR R. TEMPLE also moved for leave to introduce a Bill to enable the Directors of the Bank of Bengal to act by a quorum. He said that the Act for regulating the Bank of Bengal, No. IV of 1862, declared that the business of the Bank should be managed by nine Directors, but did not expressly authorize such business to be managed by a less number. A doubt had accordingly been raised as to whether the nine Directors could legally act by a quorum. The object of this Bill was to remove that doubt, and to validate acts which might be deemed invalid by reason of their having been done by less than the whole number of Directors.

The Motion was put and agreed to.

COURT FEES ACT AMENDMENT BILL.

The Hon'ble MR. COCKERELL moved for leave to introduce a Bill to amend two clerical errors in the Court Fees Act.

He said that the first and most important of these errors occurred in section fifteen, the words "plaint or memorandum of appeal" having been inserted in the seventh line in place of "application."

That the latter word was intended to be used was clear from the context, for the word "other" in the following line of the same section was only intelligible on the hypothesis that the clause had primary reference to some special "application." So obvious was this, that the clause might perhaps have been safely left as it stood to the construction which the Courts would put upon it, but for the circumstance that a literal acceptation of the words erroneously inserted would entail a not inconsiderable loss of revenue.

The provision of this fifteenth section found no place in previous enactments relating to Court Fees.

To discourage what was alleged to be a growing practice amongst the legal practitioners in the Civil Courts, viz., the presentation of applications for a review of judgment on frivolous or insufficient grounds, a special *ad valorem* fee was imposed on all applications for a review of judgment in lieu of the fixed fee chargeable on general applications to the Civil Courts, and which formerly obtained in the case of applications for review.

The provision of section fifteen was devised to prevent the enhanced fee working harshly in the case of well-grounded applications for review. It was intended thereby to recoup to the successful applicant the amount paid by him in respect of his application for review of judgment in excess of the fee chargeable on an ordinary application. The effect of the section as it stood, however, was to give back to such applicant, not the excess fee paid on the application, but nearly the fee paid on the institution of the plaint or appeal in relation to which his application for a review of judgment was successful, or about double the amount to which he was entitled.

The other error was to be found in Schedule I, No. 2, where the words "or memorandum of appeal" had been accidentally inserted. There was no appeal in suits for possession under the Limitation Act (XIV of 1859), such appeal being barred by Act XXIII of 1861, section 26. The words referred to, therefore, were mere surplusage, but they suggested an apparent inconsistency with other enactments, and it was therefore desirable that this opportunity should be taken to excise them.

The Hon'ble MR. STEPHEN regretted that it should be necessary to put so trifling an Act on the Statute-Book. He thought the Executive Government should be empowered to correct such clerical errors by Notification in the *Gazette of India*.

The Motion was put and agreed to.

OUDH TALUQDARS' RELIEF BILL.

The Hon'ble MR. STRACHEY introduced a Bill to relieve from incumbrances the estates of taluqdárs in Oudh, and moved that it be referred to a Select Committee with instructions to report in a month. He said that

this Bill was introduced in fulfilment of the intention of the late Viceroy, and had been framed on the recommendation of the Chief Commissioner of Oudh, and at the request of the taluqdárs themselves. Many of those taluqdárs were deeply in debt, and their estates were subjected to incumbrances so heavy, that they could not perform their proper functions as landholders. The Government considered that, for political reasons, it was expedient to take measures to protect those estates and to prevent their falling into the hands of money-lenders. The Bill resembled an Act which was passed in 1862 by the Bombay legislature, and which had been worked with much success. The Bill proposed to empower the Chief Commissioner, on the application of any distressed taluqdár, and with the previous consent of the Government of India, to vest the management of the taluqdár's estate in a Government officer. Suits against the taluqdár would thereupon be barred, his person would be freed from arrest, and his immoveable property from attachment, and, during the continuance of the management, his right to encumber or alienate would cease. The manager would receive the rents and profits and pay thereout the Government revenue such annual sum as might be necessary to maintain the taluqdár and his family, and the costs of necessary repairs and improvements. The residue would be applied in defraying the costs of management and in settling the taluqdár's debts and liabilities. Provision was then made for ascertaining those debts and liabilities, and, on their discharge, the taluqdár would be restored to the possession of his estate. The rest of the Bill contained the clauses necessary to give effect to the foregoing provisions.

The Bill referred only to the taluqdárs of Oudh, but MR. STRACHEY thought that it deserved consideration whether it might not be expedient to insert a clause authorizing the Government, under special circumstances, to make the Act applicable to the encumbered estates of great landholders in other parts of the country.

His Excellency THE PRESIDENT asked whether it was sufficiently clear that, on the appointment of the manager, the management of the whole of the taluqdár's land would vest in him?

The Hon'ble MR. STEPHEN said that the second clause of section three provided that the Chief Commissioner might by order vest in the manager "the management of the immoveable property of or to which the taluqdár is then possessed or entitled in his own right," and he (MR. STEPHEN) thought that this clearly meant the whole of the taluqdár's immoveable property; but if there was any doubt the matter might be cleared up by the insertion of a word or two in Committee.

The Motion was put and agreed to.

The following Select Committee was named:—

On the Bill to relieve from incumbrances the estates of taluqdárs in Oudh:—The Hon'ble Messrs. Stephen, Ellis, and Cockerell, and the Mover.

The Council then adjourned to the 28th June 1870.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

INTRODUCTION OF THE IPECACUANHA PLANT IN INDIA.

From J. MURRAY, ESQ., M.D., Inspector General of Hospitals, Upper Provinces, to the Private Secretary to the Viceroy and Governor General of India, Simla,—No. 277, dated Simla, the 5th October 1868.

THE success which has attended the introduction of the cultivation of cinchona in India leads to the desire for the introduction of other valuable medicines, the product of similar climates to that in which cinchona is found.

2. Ipecacuanha is the most valuable medicine in the cure of dysentery. It was originally introduced in Europe in 1684 as a specific against dysentery, and has been used in India since 1830. It is the medicine in which I have placed most confidence since 1833 in dysentery, and in many children's diseases, where calomel was formerly used, and in the earliest stages of acute inflammation of the liver.

It is equally valuable in the treatment of the diseases of Europeans and Natives, and there is no indigenous substitute of equal power grown in India.

3. Ipecacuanha is expensive, but it is liberally supplied to the hospitals of the European and Native troops, to the jails, and also in a more limited manner to the charitable dispensaries.

4. The exhibition of the remedy of late years in very large doses has been found of the greatest advantage in dysentery and hepatitis, and its more general use is to be anticipated, but a deficiency of the supply may be anticipated, or at least an increase in the price, as it is stated by Pereira* "that as no care is taken in the cultivation of the plant in Brazil, it has become scarce around the principal towns."

* Pereira's Materia Medica, vol. 2, page 56.

5. The plant grows wild in low shady places in a hilly tropical climate in Brazil. It belongs to the same family as cinchona and coffee. These plants are found to flourish in India, and there can be no doubt but that a suitable habitat exists in many parts of India for the allied plant—ipecacuanha.

6. I would beg to submit to the consideration of Government, whether it would not be desirable to introduce the cultivation of ipecacuanha in an analogous manner to that of cinchona. It would lessen the expense of the supply now required by Government, and it would render a most valuable remedy available to the Natives all over India in the same manner as quinine, it is hoped, soon will be, whose expenditure has hitherto been limited by the expense.

Memorandum Surgeon-Major by T. FARQUHAR, M.D., on Ipecacuanha,—dated Simla, the 6th October 1868.

IT is hardly necessary to say that one of the severest and most fatal diseases met with in India, as in most tropical climates, is undoubtedly dysentery, the successful treatment of which was, until lately, one of the most difficult tasks set before medical men in the East.

The powdered root of ipecacuanha, a small shrub grown in Brazil, and imported *viâ* Europe into India by Government, has long been used by English Medical Officers in the treatment of dysentery in Civil and Military hospitals here.

Its full value, however, has only of late years been understood; for, though originally (200 years ago) given in large doses of 30 or 60 grains, it was used in very much smaller doses, till, in 1858, Assistant Surgeon Docker, a Medical Officer of the British Army serving in Madras, re-introduced the use of 30 grain or half drachm doses.

This has caused quite a revolution in the treatment of dysentery, which, when of the ordinary form, and seen early in the attack, can be cured with as much certainty as ague can by quinine.

The terribleness of the disease for which ipecacuanha is so useful in India may be imagined from the fact that, during the last 10 years, 31,804 English soldiers have been attacked with this disease in Bengal, of whom 2,655 died; while in England, during the six years ending in 1864, only 739 cases occurred in an army double the size, and only 19 deaths.

But the statistic that speaks in favor of ipecacuanha is the decreased death-rate since its use in its most efficient form, viz., in large doses in India.

From Tables prepared by Dr. H. Macpherson, Deputy Inspector of Hospitals, on the vital statistics of the European army for eight years ending 1853-54, there were 21,221 cases of this disease (dysentery) in the then comparatively smaller army in Bengal, with 2,198 deaths.

This gives a proportion of about 103 deaths per 1,000 treated, that is to say, of more than one out of every 10 men attacked died. Again, in the first half of the past 10 years, the men died at the reduced rate of 93 per 1,000, or less than one in 10. This last was while a knowledge of the use of ipecacuanha was gaining ground among the Medical Officers of the English army. When, however, the remedy came into much more extended use during the last five years of the decade, the death-rate was reduced to 57 per 1,000, that is, one man in about 20 only died when attacked with dysentery,—a most gratifying improvement on the former death-rate of more than one in 10.

In acute dysentery 91·8 per 1,000.
In chronic dysentery 172 per 1,000;
or about one in six.

DEATHS FROM DYSENTERY.

Year.	*No. of deaths.*
1858	1,188
1859	562
1860	229
1861	165
1862	114
1863	121
1864	66
1865	83
1866	59
1867	68

No doubt, part of this improvement is to be attributed to the invaliding of sick soldiers to England for change of air, as the highest death-rate in former years was from the *chronic* form of the disease. The rapidity of cure effected by the "ipecacuanha" prevents, however, the acute disease from running into the chronic form, which is now comparatively rare.

With Natives the success of these large doses, in ordinary uncomplicated dysentery, is equally certain and complete, and they too suffer severely from the disease from one end of the Empire to the other.

Those of them cared for by Government, as the Native army and prisoners, are freely supplied with ipecacuanha, but, except at the Government Dispensaries, the mass of the population has no opportunity of benefiting by its use.

It would therefore be a most valuable boon to the country if a number of plants were imported and its cultivation spread, as has been done with cinchona. It is quite a jungle plant in Brazil, and may be expected to be the same in India, so that little expense need probably be incurred in its propagation; and when it finds its way into the hands of the Native physicians and druggists, its market value will secure its being sufficiently cared for.

Demi-official from Surgeon-Major P. W. Ross, Surgeon to the Commander-in-Chief, to Surgeon-Major T. FARQUHAR, M. D.,—dated Simla, the 5th October 1868.

CONSIDERING that quinine and ipecacuanha are both indigenous to South America, and that the cinchona tree has been introduced into India with much success, it seems extraordinary that it should not have occurred to any one before to have introduced the ipecacuanha plant also.

The great saving of life under dysentery attacks in recent years must show the presence of some active remedy in the treatment of the disease. Such a remedy is the administration of ipecacuanha in large doses. From my knowledge I should say that even now the remedy is not used in India as efficiently and completely as it might be, especially by officers new to the treatment of the complaint in this country; but its use by those who have studied its action has manifestly affected the average of the annual death-rate.

Professor Maclean, in a recent article on dysentery, says, that "mortality among Europeans from dysentery in Bengal, during the 42 years from 1812 to 1853-54, amounted to 88·2 per 1,000. During 1860, when large doses of ipecacuanha were given to the almost exclusion of other methods of cure, the mortality was 28·87 per mille." Again—

"In the Madras Presidency, under the old treatment, the mortality from the disease during 17 years was 71 per 1,000 treated; but when ipecacuanha was largely used, it fell to 13·5 per mille."

Dr. Ewart, in the 16th No. of the Indian Annals of Medicine, calculates that the decrease of mortality attributable to the substitution of large doses of ipecacuanha, in the treatment of tropical dysentery, amounts to no less than 46·60 per 1,000 to treated.

The 3rd Annual Sanitary Report for Bengal (1866), reviewing the recent history of dysentery, states, "the death-rate to cases treated has been reduced to less one-half of what it was. In 1859 it was 8·60 per cent.; in 1866 it had fallen to 4·19" (41·90 per mille).

I first learnt to use the remedy in large doses, and properly guarded so as to ensure its retention on the stomach, from a report of the Surgeon of the 7th Fusiliers at the Mauritius, written about 1855, and since 1858, I may say I have had large experience of its efficacy in the treatment of British officers, soldiers, women and children.

I consider ipecacuanha, in the treatment of dysentery as it occurs in the North-Western Provinces and in the Punjab, to be quite as much a specific as quinine is for the treatment of all malarious attacks; and from its being the agent for combating and subduing more rapid and mortal complaints than are caused by malaria, it may be said to be of more importance than quinine in the diminution of mortality. When it does fail to act thus specifically, it is either from there being organic complications, which must of themselves in the end prove mortal, or that the remedy has been administered without proper knowledge or precautions.

The use of ipecacuanha can fortunately never be so extended as that of quinine, for there are fewer occasions in which its application is called for; but I think it is nevertheless quite as important that its cultivation should be introduced into India.

Telegram from Home Secretary, Simla, to Secretary to Government, Madras,—dated the 13th October 1868.

HAS cultivation of ipecacuanha ever been tried at Ootacamund, if so, with what success?

No. 4122.—Copy by Post.

Telegram from Commissioner, Ootacamund, to Home Secretary, Simla,—dated the 17th October 1868.

THE Superintendent of Government Botanical Gardens here says the ipecacuanha has been tried, and the plants are growing well, but their introduction has been too recent to test the value of the medicine. I see that the bastard ipecacuanha *(asclepias curassavica)* grows in private gardens.

No. 4245, dated Simla, the 23rd October 1868.

Endorsed by the Home Department.

COPY, together with the papers noted in the margin, forwarded to the Government of Bengal with a request that Dr. Anderson, the Superintendent of the Botanical Gardens, may be asked his opinion as to the propriety of taking measures for encouraging the cultivation of ipecacuanha, and the nature of the measures which should be adopted.

Copy of a letter from Inspector General of Hospitals, Upper Provinces, to the Private Secretary to the Viceroy, No. 277, dated 5th October 1868.
Copy of a memorandum by Dr. Farquhar, dated 6th October 1868.
Copy of demi-official letter from Dr. Ross, to Dr. Farquhar, dated 5th October 1868.
Copy of telegram to Government, Madras, dated 13th October 1868.

From P. DICKENS, ESQ., Officiating Under Secretary to the Government of Bengal, to T. ANDERSON, ESQ., M.D., Superintendent of the Botanical Gardens, and in charge of Cinchona Cultivation in Bengal,—No. 5944, dated the 19th December 1868.

I AM directed to acknowledge the receipt of your letter No. 135, dated 8th instant, and in reply to state that the Lieutenant-Governor considers that the successful introduction of the ipecacuanha plant would be a valuable benefit. I am therefore to request that you will take every means in your power to develope it as suggested in paragraph 6 of your letter.

No. 5944.

COPY of the above letter, and of the one to which it is a reply, forwarded to the Government of India in the Home Department for information, with reference to endorsement No. 4245, dated 23rd October last, from that Department.

From T. ANDERSON, ESQ., M.D., Superintendent, Botanical Gardens, to the Under Secretary to the Government of Bengal,—No. 135, dated the 8th December 1868.

IN reply to your endorsement No. 5221, dated the 31st October 1868, I have the honor to state that it appears to me advisable that the cultivation of the ipecacuanha plant should be encouraged in India. The memoranda by Drs. Murray,

Farquhar, and Ross, which form the correspondence sent to me for perusal, prove how valuable ipecacuanha is in the treatment of the most prevalent and fatal of the diseases of tropical climates. Last year (1867) I received information from London that the drug is rising in value in the London market, where its wholesale price is nine shillings per pound. The drug (the root) is collected from plants growing wild in the Brazilian forests, and is nowhere cultivated as an article of trade. Thus the already high price is likely to increase. The plant is also becoming scarce from indiscriminate destruction, and by the greatly-increased consumption of the medicine which has occurred within the last four years. My attention had been directed to the introduction of the ipecacuanha plant into the Botanical Gardens of Calcutta for some years, but I was unable to procure any plants until April 1866, when one plant was sent to me by the overland route by Dr. Hooker, Director of the Royal Gardens, Kew. I am indebted to the care bestowed on the plant by Dr. George King, Assistant Surgeon of the Bengal Medical Service, during the voyage to India, for its having arrived in Calcutta in good health.

2. The ipecacuanha plant is so well known that it is not necessary to give a full account of it. For the purpose of this report, it will probably be sufficient to say that the plant belongs to the same sub-group of the natural order of plants called *rubiaceæ*, in which the coffee tree is placed by botanists. In habit the plant is, however, very different from the coffee. It grows in a diffuse semi-decumbent manner. It is found in moist shady valleys of the mountains of Brazil, and extends from 8° to 20° South latitude. The only part of the plant used in medicine is the annulated root. The appearance of the plants in the Botanical Gardens agree with this description, and the plant evidently loves shade and moisture with considerable heat, and, like most mountain plants, dislikes stagnant moisture in the soil in which it grows.

3. The plant of ipecacuanha originally introduced into the Botanical Gardens in 1866 is dead, but I now possess nine plants in this garden, which have been artificially propagated from the original one, besides five growing at the cinchona plantations at Darjeeling, to which place I sent one plant last year. I have thus **14 plants of ipecacuanha.**

4. I am confident that the cultivation of this valuable plant could be carried on as successfully as that of cinchona, provided suitable places are selected for the experiment. Until now, the plants in the Botanical Gardens and in the cinchona nursery at Darjeeling have been grown under the shelter of glass-frames, which are used here for the protection of the most delicate exotics, and at Darjeeling for the propagation of the cinchonas. I am unable therefore to say from experiment what climate will be suitable for the cultivation of the ipecacuanha plant; but it is probable that the successful cultivation of the plant in the open air in India will be attained in the valleys of the mountain ranges possessing a climate in which coffee, tea, and the most tropical species of cinchona flourish. The measures to be adopted to introduce the cultivation of the ipecacuanha plant are now that we possess the plant comparatively simple. The cultivation must pass through the same stages as that of cinchona. The aim of those to whom the cultivation is entrusted should be to increase the present stock as quickly as possible, and to enable them to do so all the appliances of horticulture should be used. After two hundred plants have been secured, experiments on a small scale can be made on the power of the plants to resist the adverse climatological conditions of the situation selected on purely theoretical grounds for the cultivation.

5. The ipecacuanha plant belongs to an order of plants in which a dimorphic condition of the flowers prevail, and as all the plants I possess are the produce of one plant, their flowers illustrate the floral characters of only one of those two forms. Unfortunately, this is the form with long stamens and a short style in which the power of producing seed even with a cross from the other form is least developed, and which, by itself, is very unfertile. The plant originally introduced flowered here, but bore no seeds. Plants possessing the other condition of the

essential organs of the flower will be obtained from the plants of ipecacuanha now in India by sowing every seed there may be procured from them. Some of these seeds will produce plants having the other character of the flower, and from the spontaneous crossing of these two forms of flowers, the highest state of fertility of the species will be the result. Until then the propagation must be carried on by cuttings, layers, and buds, according to the methods by which the enormous increase of cinchonas has already been obtained.

6. The cultivation of the ipecacuanha can be carried on at the cinchona nursery in Sikhim. (I do not say Darjeeling, for the plantations are 15 miles from Darjeeling, and at 2,000 feet above the sea in a narrow tropical valley.) At least for the next two years, the experiment will cost nothing, as the same agency by which I carry on the cultivation of cinchona will suffice for the propagation of the ipecacuanha plants. All that is required is the permission of Government to my using my best endeavours, with the means at my disposal, to inaugurate the cultivation of ipecacuanha in Bengal.

7. If this is accorded to me, I shall divide the plants I now possess between the Botanical Gardens in Calcutta and the cinchona plantations in Sikhim, with the view of the propagation of the plants being carried on vigorously in both places. The progress of the experiment would be referred to in my annual reports of the Botanical Gardens and the cinchona cultivation in Bengal.

8. The original enclosures returned.

From R. A. DALYELL, Esq., Acting Secretary to the Government of Madras, to A. P. HOWELL, Esq., Officiating Secretary to the Government of India,—No. 3193, dated the 22nd December 1868.

Progs. of Govt., 20th Oct. 1868, Nos. 309-310.
" " 22nd Dec. " " 367-368.

WITH reference to your telegram dated 13th October 1868, and that sent in reply by the Commissioner for the Neilgherries on the 17th idem, I am directed to forward, for the information of the Government of India, the accompanying papers respecting the cultivation of ipecacuanha on the hills.

Extract from the Proceedings of the Madras Government, Revenue Department, dated the 20th October 1868.

READ the following letter from the Commissioner for the Neilgherries, to the Secretary to Government, Fort St. George, Revenue Department,—No. 9, dated Ootacamund, the 17th October 1868.

YOUR telegram to inform the Home Secretary, Simla, whether the cultivation of ipecacuanha had been tried on the hills, and with what success, was received on the evening of the 15th.

2. I called upon Colonel Hadfield, Captain Beddome, Messrs. Ouchterloney, Broughton, and McIvor for information, and this day despatched the following telegram to Simla:—"The Superintendent of Government Botanical Gardens here says the ipecacuanha has been tried, and the plants are growing well, but their introduction has been too recent to test the value of the medicine. I see that the bastard ipecacuanha (*asclepias curassavica*) grows in private gardens."

3. Colonel Hadfield sent me a plant which he thought was the ipecacuanha plant, but which Captain Beddome pronounced to be the bastard or wild ipecacuanha (*asclepias curassavica*), and which he says is used as ipecacuanha, and grows in gardens up here, but grows better in the plains. He added that two other wild plants, namely, *Iylophora Vomitoria*, *Henridesmus Indicus*, answer the purposes of ipecacuanha, and grow well on the plains, but not here.

4. To Captain Beddome's knowledge the true ipecacuanha plant has never been introduced up here. He could not give me its botanical name, but said that it was a South American plant, and may possibly be one of the medicinal plants which Mr. McIvor or Mr. Broughton lately brought out.

5. Mr. Broughton is away somewhere. The Superintendent of Government Gardens (Mr. McIvor) gave me the information mentioned in my telegram to the Home Secretary.

Order thereon No. 2667.

THE Superintendent of the Cinchona Plantations will be requested to supply further particulars in regard to the plants stated to be growing in the Botanical Gardens. He should state whence they were obtained, how long they have been planted, &c.

(True extract.)

R. A. DALYELL,

Acting Secy. to the Govt., Madras.

To the Superintendent, Government Cinchona Plantations.
" Commissioner of the Neilgherries.

Extract from the Proceedings of the Government of Madras, Revenue Department, dated the 22nd December 1868.

READ again Proceedings of Government, 20th October 1868, No. 2667.

Read also the following letter from the Superintendent of the Government Cinchona Plantations, to the Acting Secretary to Government, Fort St. George, Revenue Department,—No. 200, dated Ootacamund, the 30th November 1868.

WITH reference to the order of Government, No. 2667, under date 20th October 1868, I have the honor to state that on the occasion of my visit to England, I procured from Dr. Hooker, of the Royal Gardens, Kew, two plants of the *cephaelis* ipecacuanha, and planted them in the gardens on my return in December last. Previously I obtained one plant, brought out by Mr. Broughton from Kew.

2. I think there can be no doubt that the plants we have got yields the true ipecacuanha of commerce.

3. These three plants have now been increased to nine, and in a few months I hope they will have attained such growth as to yield sufficient roots to test the quality of their produce.

Order thereon No. 3192.

ORDERED, that the foregoing papers be forwarded to the Government of India with reference to the telegram from the Home Secretary, dated 13th October 1868.

2. The Right Hon'ble the Governor in Council will be glad to receive a further report from Mr. McIvor in due course.

(True extract.)

R. A. DALYELL,

Acting Secy. to the Govt., Madras.

To the Commissioner for the Neilgherries.
" Superintendent of Government Cinchona Plantations.
" Board of Revenue, with G. O., 20th October 1868, No. 2667.

NO ORDERS.

From W. S. ATKINSON, ESQ., M. A., Acting Superintendent, Botanical Gardens, to the Assistant Secretary to the Government of Bengal,—No. 9, dated Botanical Gardens, the 24th April 1869.

WITH reference to your endorsement No. 1470, dated the 3rd instant, I have the honor to inform you that Dr. Anderson, who is now on his way to England, has in view the introduction of more plants of ipecacuanha for cultivation in India, and will, I know, endeavour to secure all available plants from the Botanical Gardens in Europe.

I may also state that Dr. Hooker, at the Royal Gardens, Kew, has been already communicated with on this matter, and will no doubt send any spare plants he has there under careful supervision. Seeds unfortunately cannot be had in Europe, all the plants in cultivation having as yet proved sterile, and they could only be secured by persons who have access to the native habitats of the plant.

It might be desirable that copies of this correspondence should be forwarded to Dr. Anderson, with an intimation that the Lieutenant-Governor of Bengal approves of the endeavours he is making for the promotion of the cultivation of ipecacuanha in India.

No. 1801, dated Fort William, the 7th May 1869.
Endorsed by the Government of Bengal.

COPY forwarded to the Secretary to the Government of India, Home Department, for information, in reply to his endorsement No. 1559, dated the 24th March 1869, and in continuation of my letter No. 1537, dated the 24th ultimo. A copy of the correspondence on the subject has been forwarded to Dr. Anderson in England, as suggested by Mr. Atkinson.

Nos. 2520—28, dated Simla, the 2nd June 1869.
Endorsed by the Home Department.

COPY forwarded to the Governments of Madras, Bombay, the North-Western Provinces, and the Punjab, to the Chief Commissioners of Oudh, the Central Provinces, British Burmah, and Coorg, and to the Resident at Hyderabad, for information, in continuation of No. 341—349, dated the 19th January last.

From the Government of India, Home Department, to His Grace the Right Hon'ble the DUKE of ARGYLL, K.T., Her Majesty's Secretary of State for India,—No. 12, dated Fort William, the 25th January 1870.

WE transmit for your information a copy of the papers noted in the annexed list, on the subject of the experimental cultivation of the ipecacuanha plant in India.

2. The only places in India where the plant has actually been grown are Ootacamund, the Calcutta Botanical Garden, and the Cinchona Plantation near Darjeeling; but there are other localities where, as your Grace will perceive from the enclosed correspondence, the experiment may, in all probability, be successfully tried. The stock of plants in India, however, is very limited, and we are desirous of procuring a sufficient supply both of plants and seeds for trial simultaneously at different places. Dr. Anderson, Superintendent of the Botanical Garden, Calcutta, now on leave in England, is known to have taken considerable interest in the cultivation, and to have had in view the collection of plants from the Botanical Gardens in Europe for transmission to India. We shall feel obliged by your Grace asking Dr. Anderson to submit a definite plan for procuring plants and seeds in sufficient quantities for experimental cultivation in different localities in India. We would also be glad to have his opinion as to the proper localities where the cultivation may be tried. And, lastly, we would suggest that if the Botanical Gardens of Europe cannot supply a sufficient number of plants, or if the difficulty about sterility, mentioned in the enclosure of the communication from the Government of Bengal, No. 1801, dated 7th May 1869, cannot otherwise be got over,

Her Majesty's Representative at the Court of Brazil, or the Consul at Rio Janeiro, might be invited to assist in the attainment of our object.

3. We would add that if Dr. Anderson is likely to be detained in England, he could probably make some arrangement under which some officer returning to India could take care of the plants during the voyage.

From Her Majesty's Secretary of State for India, to His Excellency the Right Hon'ble the Governor General of India in Council,—No. 27, dated India Office, London, the 20th April 1870.

I HAVE considered in Council the despatch from your Excellency in Council, numbered 12, Public, and dated the 25th of January, urging upon me the importance of introducing the ipecacuanha plant into India, and suggesting that Dr. Anderson, the Superintendent of the Botanical Gardens at Calcutta, now in this country, should be asked to submit proposals as to the best means for obtaining the object in view.

2. On the application of the Government of Bombay last year, I had already recognized the importance of introducing this valuable medicine; and the two plants received at Bombay having died, I had already taken steps for procuring others for transmission in July next.

3. I transmit to you the correspondence which has been held with Dr. Anderson on this subject, and I trust that, even should the other attempts fail, Dr. Anderson will still have a sufficient number of strong plants to send or to take back with him to India to secure the introduction and establishment of the plant.

4. It seemed to me that an application through the diplomatic agents of Her Majesty was not likely to be so successful as an application through commercial or scientific gentlemen. You will see from the accompanying memorandum by Mr. C. R. Markham, of which I transmit 15 copies, that he has written to Messrs. Miers and Co., of Rio, to Mr. Bramah, and to Dr. Otho Wucherer, to obtain roots of the plant.

5. The accompanying correspondence with Dr. Cleghorn and Dr. Balfour will show you that I have also enlisted the kind assistance of the Royal Botanical Gardens at Edinburgh besides the aid promised at Kew. I forward also herewith 70 copies of the memorandum on the propagation of the ipecacuanha plant prepared by Mr. McNab, of the Royal Botanical Gardens at Edinburgh. Dr. Christison and Dr. Balfour have likewise applied to Dr. Gunning, a medical practitioner at Rio, to assist them in obtaining plants and seeds.

6. I add to these documents the letters which have passed between Dr. Hooker and this Office on the supply of plants for Bombay.

7. You will learn from my despatch* to that Government of this day's date, that the plants destined for them will be retained at Kew, and two healthy plants will be sent to them from the Botanical Gardens at Calcutta.

* (Revenue) Forests, No. 4.

From H. MERIVALE, ESQ., C. B., Under Secretary of State for India, to the Superintendent of the Botanical Gardens, Calcutta,—dated India Office, London, the 3rd March 1870.

I AM directed by his Grace the Secretary of State for India in Council to transmit to you a copy of despatch which has been received from His Excellency the Governor General of India in Council, dated 25th of January, No. 12, Public, with

its enclosures, on the question of the introduction of the genuine ipecacuanha plant into India.

You will perceive that His Excellency has requested the Duke of Argyll to call upon you for a definite plan for procuring plants and seeds in sufficient quantities for experimental cultivation in different localities of India. His Grace will be glad therefore to receive from you any suggestions as to the best method of executing the wishes of the Government of India.

I am at the same time to acquaint you that, in consequence of a similar application from the Government of Bombay, this Department has been in communication with Dr. Hooker of Kew, and Dr. Balfour of Edinburgh, as to the best means of obtaining ipecacuanha plants for transmission to India.

In a letter received from Dr. Balfour, it has been suggested by Mr. McNab, who has successfully propagated some plants in the Royal Gardens at Edinburgh, that the readiest and surest method of obtaining plants would be by the transmission of rhizomes packed in sphagnum moss.

There would be no objection to try this plan, as well as the transmission of plant in Wardian cases, and also of seeds securely packed. Some might also be sown in the cases before they are closed up, provided that an agency, which could be relied on to obtain the genuine plant, might be secured in the Brazils. With regard to this point, I am desired to inform you that Mr. John Bramley Moore, whose firm is connected with the trade of that country, has expressed to a Member of the Council his willingness to assist the Secretary of State in procuring plants and roots, and does not apprehend that there will be any difficulty in so doing. You are at liberty, therefore, to place yourself in communication with Mr. John Bramley Moore, 10, King Street, St. James's.

Memorandum by DR. T. ANDERSON, *Superintendent of the Botanical Gardens, Calcutta, on Ipecacuanha,—dated Herbarium, Royal Gardens, Kew, the 28th March* 1870.

IN reply to your letter dated the 3rd of March 1870, enclosing a copy of a despatch from His Excellency the Governor General of India on the introduction of the true ipecacuanha plant *(cephaelis ipecacuanha)* into India, I have the honor to submit the following report. The steps I have taken to secure a supply of plants from Europe which I may take to India on my return, or may be able to send out in charge of persons who may offer to attend to the plants during the voyage, will show what appears to me to be the best method of obtaining a good stock of plants of ipecacuanha, and will, at the same time, inform the Government of India of the progress that has been made to forward their views.

In the end of last June I received a letter from the Government of Bengal, with copies of the correspondence that had taken place on this subject after my departure from India, and with a request that I would endeavour to further the wishes of Government as expressed in that correspondence.

Acting on that letter, I determined to obtain as many plants of *cephaelis ipecacuanha* as possible from botanical and private gardens in Britain and Europe. I communicated first with Dr. Balfour, Professor of Botany in the University of Edinburgh, and both he and Mr. McNab, the Curator of the Botanical Gardens there, promised to propagate as many cuttings of ipecacuanha for transmission to India as could safely be taken from the two old plants in the Edinburgh Garden. It was when examining these old plants, in order that the best method of propagating might be determined on, that it occurred to Mr. McNab that the numerous root-like tubers might be taken advantage of as a means of rapidly increasing the plants. I saw the first crop of these rhizomes taken off without causing the slightest injury to the plant, and before I left Edinburgh I had the satisfaction of seeing that many of these rhizomes had struck root, and sent up a strong shoot. I heard lately that a considerable number of young plants had been obtained in the Edinburgh Botanical Gardens by means of this root division, and that many more would be procured as the roots are reproduced, all of which are intended for India. I may mention that the two old plants of *cephaelis ipecacuanha* have been many years in Edinburgh, and they are by far the largest and finest I have seen. In addition to these young plants promised by Dr. Balfour from the Edinburgh Botanical Gardens, I procured from Messrs. Lawson and Sons, of Edinburgh, four large plants of *cephaelis ipecacuanha*, and which I have left in their charge for propagation. Messrs. Lawson and Sons possess extensive propagating pits for tropical plants, which are managed by a very successful and intelligent gardener, who takes a great interest in the increase of the ipecacuanha.

There are seven young plants of *cephaelis ipecacuanha* in the Royal Gardens, Kew, and the greater proportion of these and all the cuttings that can be obtained from them will be available for transmission to India, along with the stock I may obtain from other sources. I have also procured another large plant of ipecacuanha in London, from which cuttings will be made, both of the roots and stems, during the remainder of my leave in England. I have heard of a few more large plants in nurseries and private gardens, some of which I shall be able to purchase or obtain in exchange for seeds or plants from the Calcutta Botanic Gardens. Cuttings will be got from those in private gardens, and will be rooted and grown in Kew.

I estimate that I shall be able to take out to India, in January 1871, not less than 50 plants of the true ipecacuanha, all of which will have been obtained in Europe principally in exchange for rare plants and seeds from the Botanical Gardens, Calcutta. In the correspondence sent to me along with the copy of the despatch of the Government of India, I observe that it is assumed that only one form of the flower (they are dimorphic as regards the relative length of stamens and pistils) exists in Europe, and therefore all the plants procured from Europe will prove to be sterile. I hope this is an error, and I believe it is, because it is supposed in India that only one plant was introduced from Brazil, from which all those in Europe have been artificially propagated, whereas the ipecacuanha plants were brought into Europe on two distinct occasions, first, I think, in 1832 or 1833, and again some years afterwards, and there is every reason to believe that each importation consisted of several plants.

The plants flower regularly in stoves in England, but no one has recorded the condition of their flowers. I shall endeavour to obtain information regarding the nature of flowers as the plants I have procured come into blossom, so as to distinguish and mark plants having different forms of flowers. I had also acted on the suggestion first made by Mr. McNab, that living roots packed in sphagnum might survive the voyage from Brazil. I discussed this proposal with Mr. McNab in Edinburgh in October, when we examined the fresh roots cut from his large plants. I had, at the end of June, mentioned the introduction of the ipecacuanha into India to Dr. Christison, Professor of Materia Medica in the University of Edinburgh, and he then wrote to a friend* in Rio de Janeiro, who had long resided there as a medical practitioner, and requested him to obtain information of the habitat of the plant, and, if possible, procure living plants and seeds for me. Drs. Balfour and Christison have since then addressed this gentleman a second time, and have described to him the method of packing the roots recommended by Mr. McNab. In December, I requested Messrs. Veitch and Sons, of the Exotic Nursery, Chelsea, to procure living plants in Wardian cases, roots in moss, and seeds of the true ipecacuanha from Rio de Janeiro. Messrs. Veitch and Sons

---

* Dr. Gunning.

at once wrote to their agent in Brazil, and he has replied that he will have no difficulty in sending plants and seeds to England. In consequence, last week, I entered into an agreement with Messrs. Veitch and Sons to supply me with a good stock of the *cephaelis ipecacuanha* from Brazil. The importation is to consist of live roots packed in moss, and some planted in soil in Wardian cases, and live plants and seeds are also to be sent if they can be obtained. The cost of this importation is not to exceed £25 sterling, including charges for collecting in Brazil and transit to England.

In accordance with the permission given me to communicate with Mr. John Bramley Moore, who has expressed his willingness to assist in procuring roots and plants of ipecacuanha from Brazil, I have called upon that gentleman, but have not had yet an interview with him.

There can be no doubt, I think, that the attempts to introduce the true ipecacuanha from Brazil into India, will succeed only by establishing a nursery in England where roots and plants should remain until they become large and healthy enough to be sent to India. I do not think so small rhizomes as those of the ipecacuanha could survive the long and trying voyage from Brazil to India, even by the shortest overland route, however well they may be packed. Plants received at Calcutta from England, and packed in sphagnum, generally reach in bad order, from fermentation having taken place from the great heat the plants have been exposed to probably in the Red Sea.

It is most likely that a considerable percentage of ipecacuanha roots in sphagnum, and plants in Wardian cases, will arrive alive in England from Brazil, but not possessing sufficient vitality to enable them to withstand the risks they would be exposed to during the very trying voyage to Calcutta. Seeds, too, may retain their vitality until they reach England, but not much longer; for, like the seeds of most species of the *coffeæ*, to which tribe *cephaelis* belongs, they soon lose their germinating power. I therefore recommend that Dr. Hooker should be requested to allow all transmissions of ipecacuanha plants, roots, and seeds to be received at the Royal Gardens, Kew, and to be kept there until they have properly recovered from the effects of the voyage, or until the seeds have germinated. As I am occupied at Kew assisting in the publication of the "Flora of British India," I shall be able to observe the state of the plants, and to arrange with Dr. Hooker for despatch of the plants to India as opportunities may occur. If any of the roots packed in moss are found to be in very good order, a few of the best may be selected, repacked, and forwarded to India by the overland route. If a large quantity of seed is obtained, part of it also might be sent to India, the remainder being sown at Kew.

I may mention that this plan is approved by Dr. Hooker, who also agrees with me in thinking that roots or plants of ipecacuanha sent direct to India from Brazil could not survive so long a voyage.

With reference to the plants of ipecacuanha now in England which I have secured for transmission to India, I think they should not be exposed to the risks of so long a voyage, unless some one conversant with the management of plants can be found to take care of them. Should no one be found willing to do so, no time will be lost by keeping them in England till my return to India in January next, as their multiplication by cuttings and root divisions can be carried on most successfully in this country, and it has been arranged that this should be done. If, however, any officer returning to India who understands the treatment of plants can be found to undertake the care of a small Wardian case of ipecacuanha plants, one or two despatches might be made to Calcutta or Madras before next January. I strongly recommend that the experiment of cultivating the ipecacuanha plant should be entrusted, in the first case, to the Superintendent of the Calcutta Botanical Gardens, and to Mr. M'Ivor at Ootacamund, instead of sending them to other places where there are no horticultural appliances, and where the plants cannot recover from the damage they inevitably receive on the voyage in spite of all the care that may be taken of them.

The plants have thriven at Calcutta and at the lowest levels of the Cinchona Plantations in Sikkim, and also at Ootacamund. There were 20 plants at Calcutta and Darjeeling last November—all the produce of one plant I received in 1866—and 13 at Ootacamund on the 9th of November last, the produce of three plants obtained by Mr. M'Ivor from Kew in 1866-67. These four original plants are the only ones from which cuttings have been made in India, all others having perished on the voyage or soon after reaching the country.

Localities in India adapted to the growth of the ipecacuanha plant will be found in Districts possessing no well-marked or very long, dry, cold season, as the plant cannot withstand cold or drought. Sikkim is the most Western Province of the Himalaya in which the plant will grow. The plains of North-West India are also too hot and dry, and I do not think the plant will withstand the cold or the dry season of Lower Bengal without shelter. Assam, Cachar, Chittagong, the moist parts of Burmah, and the Tenasserim Provinces are Districts in the East in which the cultivation would succeed. The Western Ghâts, from latitude 20° N. Southwards, and the tropical vallies of the Nilgherries, Anamallay, and Pulney Hills, and the Wynaad, in the Bombay and Madras Presidencies, will also be found suitable.

I have just read the memorandum on the ipecacuanha by Mr. Markham, which contains almost all that is known on the subject, and I can add very little to the information therein given.

The account of the plant by Sir William Hooker in the "Botanical Magazine," and quoted by Mr. Markham, is drawn from St. Hilaire's *Plantes usuelles des Brassilies*, published in 1824, and there is no description of it in that author's *Histoire des Plants les plus Remarquables de Bresil et du Paraguay*. In that work he also describes another spurious sort of ipecacuanha, besides those referred to by Mr. Markham. It is yielded by the *Ionidium poaya*, of the natural order *Violaceæ*, an order distinguished by the emetic properties of its plants.

P. S.—I have just been informed by Dr. Hooker that he thinks he sent two more plants to Madras, in addition to the one taken out by Mr. Broughton, the Quinologist at Ootacamund, and the two given to Mr. M'Ivor, thus making five sent from Kew to Madras.

I think I have observed a notice of these plants in the proceedings of the Agri-Horticultural Society of Madras, and that the plants were kept in Madras. It might be as well to inquire about those plants, as no notice of them occurs in the correspondence that has taken place on this subject.

I think it would be very useful to have a translation made of extracts from St. Hilaire's *Plantes usuelles*, and also from Weddell's Memoir in the *Annales des Sciences Naturelles*, and if the Secretary of State approves of this suggestion, I can have the translation made and transmitted to the India Office to be printed.

From H. MERIVALE, ESQ., Under Secretary of State for India, to DR. T. ANDERSON, Superintendent of the Botanical Gardens, Calcutta,—dated India Office, London, the 13th April 1870.

I AM directed by his Grace the Secretary of State for India in Council to acknowledge the receipt of your letter of the 28th ultimo, stating, in reply to the letter from this Office of the 3rd ultimo, the measures which you have already taken, and those which you recommend should be taken for procuring a supply of plants in order to introduce the ipecacuanha into India.

2. In reply, I am desired to thank you for your interesting letter on this subject, which his Grace will have printed and sent to the Government of India with the other papers on this subject.

3. The Duke of Argyll approves of the measures which you have taken and of those which you suggest in your letter. It seems clear from your opinion and

that of Dr. Hooker, that it is desirable, as Dr. Hooker is able and kindly willing to arrange for receiving and propagating the plants at Kew, that they should be sent thither and be under your superintendence to be drafted off where any are fit to be transplanted, and, if a favorable opportunity should occur, sent to Calcutta or the Nilgherries where some few plants have been successfully propagated. His Grace consents also that the two plants now reserved at Kew for Bombay should be made over to you, on the understanding that you will supply two good plants from Calcutta and transmit them to that Presidency in July next, and His Excellency the Governor in Council at Bombay will be informed to this effect.

4. You are also at liberty to correspond officially with Dr. Balfour of the Royal Botanical Gardens at Edinburgh on this matter, and he will be requested to communicate with you in regard to the plants which he has reserved for transmission to India.

5. Your arrangement with Messrs. Keitch is sanctioned, and the Secretary of State will be obliged to you if you will, as you propose, procure translations of the extracts from the works suggested by you and forward them to this Office to be printed.

Memorandum on Ipecacuanha, by C. R. MARKHAM, ESQ.,—*dated* 10*th March* 1870.

Ipecacuanha. Discovery of its use.

THE native tribes of Brazil have always known the efficacy of the little root of the best sort of ipecacuanha in various diseases. Their ancestors, in very remote times, learned its use from the *irara*, a kind of martin, which, when it had made a beast of itself on brackish water, always ran to chew the roots, to excite vomiting. The common native name is *Poaya de mato* and *Cipo*. In the Province of Minas Geraes it is called *ipecacuanha*. The meaning of this name is uncertain, but it is composed of Guarani words. According to one derivation, it is formed of *ipe* (bark) *caa* (plant), *cua* (scented), *nha* (striped), *i. e.*, "the bark of a scented and striped plant."* Burton gives *ipé caá goéne*, "the little plant by the road side."† The "Medical Botany" has *ipi* (Peruvian for a root), and *Cacuanha*, a District; but *ipi* is not the Peruvian for a root, and there is no such District as *Cacuanha*.

Meaning of the word

First mention.

The first mention of ipecacuanha, as of most things, is to be found in "Purchas his Pilgrimes." Purchas begged, borrowed, or stole every journal of travels he could get hold of. A certain Captain Frank Cook, of Dartmouth, appears to have taken a journal from a "Portugal" in 1601, much against the owner's will, and to have lent it to Purchas. It was signed "Manoel Tristan, Enfermero do Colegio de Baya," and contained the first known account of the root. In this journal it is called *Igpecaya*, or *Pigaya*, and is thus described:—"It is said to be profitable for the bloody flux. The stalk is a quarter long, and the roots of another or more. It hath only four or five leaves, and smelleth much wheresoever it is, and the smell is strong and terrible." In 1689 the plant was described by Piso, in his "Natural History of Brazil," p. 101.

Use in dysentery.

Helvetius received a great reward from Louis XIV. for his successful treatment of dysentery with ipecacuanha, and he wrote a treatise on its use.

First described.

Professor Brotero, of Coimbra, first described the plant (which he called *Callicocca Ipecacuanha*) from specimens brought from Brazil by Bernardo Gomez. His description is published in Vol. VI., p. 137 of the "Transactions of the Linnæan Society for 1801," and the paper is illustrated by a drawing of two stems, with the leaves, from one root.

---

* Probably the correct derivation.—*Ipe* is bark, and *caa*, a tree or plant. † Wrong.

Emetic discovered. Present name given.

The great French chemist, Pelletier, discovered the active principle in the root in 1817, which he called emetine; and in 1818 M. Richard again described the plant, calling it *cephaëlis ipecacuanha*, a name which has been generally adopted.

Various descriptions.

The ipecacuanha plant is described in Stephenson and Churchill's "Medical Botany" (1834), with a coloured plate, copied from the one in the Linnæan Transactions, but only giving one stem. It is also figured in Curtis's "Botanical Magazine," 1844, Vol. LXX, p., 4063; and there is a full account of it, with good drawings of the roots, in Pereira's "Materia Medica," 4th edition, 1854, Vol. II., Part II. A plant presented by M. Makoy, of Liege, flowered at Kew in June 1843.

Habitat.

The *cephaëlis ipecacuanha* is met with in Brazil from about latitude 8° to 22o S., in the forests of the Serra do Espinhaco* or mountains extending from the capitania of Bahia, through the Province of Minas Geraes, to the Northern part of Sao Paolo. The forests in Minas Geraes are divided into four classes,—the *Matos Virgens*, or virgin tropical forests; the *Catingas*, or woods composed of smaller deciduous trees; the *Carrascos*, at still greater heights, consisting of shrubs; and the *Capoeiras*, or scrub growth on land once cultivated. The *Matos Virgens* clothe the eastern slopes of the Serra do Espinhaco and the Organ Mountains to the westward of Serra do Espinhaco, in Minas Geraes, the country is flatter, consisting of pasture land and much *Catinga* forest; and still further West is the *Sertao*, or desert country in the basin of the San Francisco and its affluents. The ipecacuanha is found, I believe, both in the *Matos Virgens* and the *Catinga*, in moist, shady situations.

Growth.

Cephaëlis ipecacuanha is a little shrub, consisting of a perennial root, three to six inches long, and a short stem with a few leaves at the end.

Root.

The root is bent and contorted, having a knotty appearance like a number of rings of unequal size strung on a thread, of a pale brown colour when fresh.

Stem.

The stem is creeping at the base, then erect, and rising five to nine inches. After the first year or two, the stem throws out crooked knotty runners, which take root irregularly at the knots, and produce new stems.

Leaves.

There are four to eight leaves at the end of the stem. They are almost sessile, oblongovate, opposite and entire, three or four inches long by one or two broad, rough and deep-green above, pale and finely pubescent beneath. The petioles, at the base of the pairs of leaves, are short and hairy, and there are a pair of interpetiolar stipules deeply cleft into segments.

Flower.

The flowets are aggregated into a solitary head, a little drooping, set on a round downy stalk, terminating the stem. The green bracts are pubescent entire, and sessile. The florets sessile and 15 to 24 in number. Calyx, five-toothed, and very short. Corolla sympetalous, white, and five-lobed. Anthers enclosed; stigma, bifid, and usually exserted; stamens, five.

Berry.

The berry is obovate oblong, and crowned with the remains of the calyx. Soft and fleshy, being reddish purple at first, and becoming black and wrinkled. It has two smooth oval seeds.

---

* Backbone Mountains.

Trade.

The ipecacuanha roots are gathered at all seasons, but more frequently from January to March, by the Negroes in the neighbouring estates, and also by the Coroado Indians in Minas Geraes. They cut the roots from the stems, dry them in the sun, and pack them in bundles. The berries are ripe in May. The bundles of roots are disposed of to traders, who bring them down to the coast, and they are shipped from Rio and Bahia in bales, bags, barrels, and *serons*.* It is called *annulated ipecacuanha* in commerce.

Cultivation.

Koster, who wrote in 1817, tells us that the ipecacuanha plant is easily cultivated. He had himself made the experiment, but he adds that it requires shade, or at least that it must not be completely exposed to the sun.

Yield of emetine.

Pelletier found that the *cephaëlis ipecacuanha* contained 16 per cent. of emetine in its roots, but Professor Attfield recently obtained only 10·5 per cent. of pure emetine.

Silence of travellers.

It is remarkable how very little is said of ipecacuanha by travellers who have written on Brazil. Nieuhoff, St. Hilaire (in his eight volumes of travels), Castelnau, Henderson, Gardner, Scully, Kidder, Fletcher, and Burton scarcely mention it. Spix and Martius give a few particulars, as also does Koster; and I understand that there is an account of it in St. Hilaire's "Histoire des plantes les plus remarquables de Brésil et du Paraguay." But this work (distinct from his travels) is neither in the Linnæan, Geographical, nor Athenæum libraries.

Second kind.

The second best kind of so-called ipecacuanha is obtained from the root of *Psychotria emetica*, a cinchonaceous shrub growing in Peru, and also in New Granada along the banks of the Magdalena. It is known in commerce as striated ipecacuanha, the root being longitudinally striated, with deep circular intersections at intervals. It is of a blackish brown colour. Pelletier found nine per cent. of emetine in this root; but the results of a recent analysis by Professor Attfield have not been so satisfactory. Last autumn, Messrs. Meier imported about 700 lbs. of the striated ipecacuanha from Bogota by way of Carthagena, and sent a specimen to Professor Attfield for assay. He only found 2·75 per cent. of pure emetine, and expressed a strong opinion that the importation of this root should be discouraged, as being of no direct value. I hear, however, that the cultivation of the *Psychotria emetica* has been successfully introduced into Algeria by M. Hardy.

Third kind.

The third kind met with in commerce is the undulated ipecacuanha, the root of the *Richardsonia scabra* of DeCandolle. It is a perennial shrub, found in Peru and Brazil, with a root having a jointed appearance, with semi-circular grooves, and of a greyish white colour. Pelletier obtained six per cent. of emetine from this root; but an analysis at the present day would probably give a much smaller percentage.

Measures for obtaining roots, &c.

It is quite clear that the *Psychotria* and *Richardsonia* should be entirely ignored, and that attention should be exclusively directed to the best sort—the *cephaëlis* of Minas Geraes. It appears, however, that there are already about 20 plants of this kind in India, from which a good gardener, after a time, could propagate very rapidly. It is therefore unnecessary to go to any great expense in obtaining more from Brazil. Yet if, as is asserted, the roots packed in damp moss will bear a voyage and afterwards strike, supplies might be obtained at trifling expense. It would be merely necessary to instruct traders to see that a portion of the harvest of roots was not dried in the sun, but packed in damp moss and so brought down to the port of shipment. I should myself be inclined to doubt the roots surviving a voyage, unless they were in charge of a competent person. The seeds are very

* Hides.

perishable, but if they were gathered when quite ripe, and properly packed and attended to, a percentage would probably germinate. If a gardener was sent out to bring down plants in damp moss, and establish them at Rio or Bahia in Wardian cases to be sent to India, the most ordinary skill and care would ensure success. But this course would entail an expense which, as there are already plants of the right kind in India, would be quite unnecessary.

Information required.

The acquisition of more accurate and detailed information respecting the soil, climate, and exposure best suited to the plant would of course be useful.

Steps that have been taken.

I have written to Messrs. Miers of Rio requesting them to take steps with reference to obtaining roots packed in damp moss for transmission to England, and also to Mr. Bramah, who will get them through a firm at Rio. I have also addressed Dr. Otho Wucherer, a scientific German, living at Bahia, asking him what steps he would take for procuring roots in a proper state, and ripe seeds; and also requesting him to furnish me, if possible, with more detailed information respecting the habit of the plant than is to be found in any accessible work. Captain Reeks, a Commander, and Mr. Wade, a Surgeon, in the Royal Mail Steam Company's Service on the Brazilian line, will be requested to take special care of any roots or seeds that may be entrusted to them.

Additional Memorandum by C. R. MARKHAM, ESQ.,—*dated* 11*th March* 1870.

SINCE I wrote the above, I have heard from Mr. Daniel Hanbury, a high authority on all questions relating to medicinal plants. He does not think it worth while to send to Brazil for roots of the *cephaëlis ipecacuanha*, if there are plants already in India. He says,—"The places in which the ipecacuanha plant is found are remote from the coast, and long and tedious delays would probably intervene between the collecting and the shipment of any roots that might be obtained. For these reasons I doubt extremely whether roots packed in wet moss would retain their vitality until they reached England. Moreover, I should think that the heat of a tropical climate would inevitably cause specimens so packed to become rotten. If there are growing plants in India, could not a Mr. M'Ivor be found to exercise his skill in multiplying them?"

I find that the region where the ipecacuanha has been found wild is not confined to the forests of Minas Geraes, but extends westward across Brazil to the confines of Bolivia, and the plant grows in special quantities in the upper valley of the Paraguay, in the Province of Matto Grosso. Indeed, Mr. Bramah tells me that, at the present day, nearly all the exported ipecacuanha comes from Matto Grosso. This locality was visited by Dr. Weddell, who published a "Note sur le Cephaëlis Ipecacuanha, son mode de Vegetation dans le Province de Matto Grosso," in the "Annales des Sciences Naturelles, 3rd Series, 1849, Vol. XI., pages 193 to 202."

Dr. Weddell says that the plant was first discovered in Matto Grosso in 1824, near the town of Villa Maria, on the Paraguay. It was generally found growing in large clusters. The collectors, called *Poayero*, take all the stems forming a cluster into one hand, press a hard-pointed stick, called *saracoa*, obliquely into the ground under the roots, and dexterously pull them all up with scarcely any fracture. In the wet season, the earth being loose and wet, it is easier to pull the roots up without fracture, but in the dry season it is more convenient for drying them in the sun. The plant sends down runners from the stem, and multiplies rapidly, and even a fragment accidentally left on the ground will take root. The cephaëlis was growing, with many palm trees, on comparatively high land, above the reach of inundations from the river.

The land journey from Matto Grosso to the coast is over execrable roads, and more than twice as long as that to the Minas Geraes.

Besides the places I mentioned in the former memorandum, the plant will be found figured in "Historia Naturalis Brasiliæ," Gulielmus Piso. Amsterdam, 1648, lib. iv., cap. 65, p. 101, where there is a very rude wood cut. Also, in M. Richard's "Historie Naturelle et Médicale des differentes Espèces d'Ipecacuanhe," 1820, p. 21, tab. i., and in Martius's "Specimen Materiæ Medicæ, Brasiliensis," 1824, tab. i., and p. 4, two flowers, with leaves and root. There are figures also in "Woodville's Medical Botany," Edition 3, Vol. V.

"Heyne, Arzeneigewächse," viii., fol. 20; and Berg and Schmidt's "Offizinelle Gewächse," tab. xv., the two latter and that in the work of Martius being particularly good figures.

Notes on the propagation of the Ipecacuan Plant.

In August 1869 I had a conversation with Dr. Anderson, Director of the Botanic Garden, Calcutta, relative to the growth, habit, and propagation of the ipecacuan plant. He was anxious to procure as many specimens as possible from the British and foreign nurseries and gardens to send to India for the purpose of establishing them in that country. The ipecacuan plant has always been exceedingly scarce in British collections, and, owing to its peculiar habit of growth, is likely to remain so. The conversation referred to induced me to turn my attention to the mode of propagating this plant, which for years had remained much in the same condition, making little or no progress.

Martius, in his "Plantes Usuelles de Brazil," gives the following information regarding the wild state:—"It is found inhabiting the moist and shady forests of various parts of Brazil, especially in the Provinces of Pernambuco, Minas Geraes, and Bahia, its growth extending as far South as lat. 22°; on the islands of Parahyba and the banks of two rivers, called Pomba and Xipota, it is particularly abundant."

It was first introduced into the British gardens in 1830, but through what source does not seem to be recorded. It is a plant of remarkably slow growth; the largest specimen now in the Botanic Garden at Edinburgh is scarcely one foot in height, although more than thirty years of age, and has three leading shoots, each four inches in length. The method hitherto adopted of propagating the *cephaëlis* (as far as I am aware) is by cuttings, but of these not more than one or two can be got at a time, and at long intervals. Cuttings root freely when inserted in white sand. If placed in bottom heat and kept somewhat moist, five or six weeks will be amply sufficient to produce roots. After the cuttings are sufficiently strong, they should be potted in a mixture of fine loam and sand. On account of this comparatively slow method of propagating, the *cephaëlis* will probably remain scarce.

The roots, or rather rhizomes, of the *cephaëlis* are peculiarly annulated. A few of them were taken from one of the plants in the Botanic Garden during the month of August 1869, and after being cut into transverse sections of different lengths, were inserted in a horizontal position over the surface of a pot prepared with drainage and white sand. This pot was placed under a hand-glass in a warm propagating bed and kept moist. A few weeks afterwards the root-cuttings began to swell and showed signs of budding, chiefly on the edge of the upper cut surface. In most cases only one bud was developed, but in some instances two or more were produced. When several growing points are observed, the root can be cut through so as to form independent plants. In every case the leaf buds are first developed and nourished by the sap in the fleshy portion of the root. As the buds begin to elongate, some fine filmy roots are protruded from the under surface. Young plants so produced are now growing freely in the garden, the largest being 3½ inches high, with five small leaves, and young fibrous roots about 1½ inches long. In order to meet the demand which in all likelihood

will be made on nurserymen for plants of the *cephaëlis*, it is well to know how it can be propagated independently of cuttings, and at the same time without injury to the parent plant.

Understanding that the Government intend to introduce the cultivation of this plant into India, I would suggest that no time should be lost in securing a quantity of the ipecacuan plants for the purpose of making a fair start. I have explained from experiments how this plant can be increased by means of root division; but as this will be a slow process, on account of the few established plants in the country to work upon, it is desirable that immediate steps should be taken to procure a quantity of plants or roots (rhizomes) from the native habitats in Brazil, and thus enable cultivators to get a stock to propagate from. For this purpose I beg to offer a few observations on the introduction and extension of the ipecacuan plant. Various ways may be suggested for this end. The first and perhaps the most expensive method would be to have the plants brought Home in Wardian cases, and on their arrival in this country, or in India, they could be subjected to root propagation. If the tops come Home alive, they also could be placed in positions to secure a new growth of leaves and roots. But a cheaper, and perhaps the safest, method of procuring plants would be to collect a quantity of the fresh roots or rhizomes from their native soil, and after sealing the cut extremities, to place them longitudinally in a close-fitted packing-box made of wood (not less than one inch thick), having a layer of fresh sphagnum moss placed between each layer of roots. If the moss is firmly packed, it ought to keep the roots in a plump and perfect state for many months, or until such time as they reach their destination. If white sphagnum moss cannot readily be obtained, moss of any kind moistened, and the excess of moisture thoroughly squeezed out, will perhaps answer the purpose as well. If moss cannot be procured, heavy soil, taken six or eight inches under the surface, with the natural moisture in it, may be used, although not so suitable as sphagnum.

Rose bushes have been sent from this country to Australia, packed entirely in layers of sphagnum moss, and have reached their destination in safety. Some years ago I packed a quantity of roots of herbaceous plants in sphagnum in the backwoods of Canada during the month of August, and unpacked them in Edinburgh in January all perfectly fresh; and I have also brought Home many species of American tree seeds in spagnum moss in a state fit for growing, while samples of the same seeds, brought Home in canvas and paper bags, were incapable of germination. From my knowledge of the preservative powers of fresh sphagnum moss, and the nature of the woody roots of the ipecacuan plant, I have no hesitation in saying that roots or rooted stems (the plants being previously divested of their foliage) might be sent Home alive in the manner described. It is a curious fact that some variety of sphagnum moss is found in almost every quarter of the globe. A few weeks ago some plants of *Anæctochilus*, packed in sphagnum at Singapore, reached this country in good condition, thus showing the wonderful preservative powers of the moss.

When the young ipecacuan plants intended for India are of sufficient size, they ought to be hardened in a moderately cool plant-house for some weeks to enable them better to stand the transit. After being sufficiently matured, they may be planted in a Wardian case, where they should remain a few weeks to settle before being sent out. However this method of packing for transmission abroad is not always desirable, except in the case of very strong specimens. With the exception of a few old ones, the age of the majority to be sent out will not average over eight or ten months. Such young plants could hardly survive in a case constructed on the Wardian principle, and the young roots could not hold the soil together; besides, Wardian cases are liable to be upset and the roots injured and lost.

Judging from the size and nature of the plants likely to be available, it will be preferable to send them all in pots. The case for such plants to be divided into wooden compartments like a bottle basket, each compartment being made to contain only one pot. The pots to be enveloped in sphagnum moss, having some light clean pieces carefully placed on the surface of each, and afterwards tied round and kept down with very fine galvanised iron wire, as bast matting or

hemp cord, generally employed for such purposes, is apt to mould with the damp and injure the young plants. The bottom of the case should be perforated with six or eight holes, half an inch in diameter, to carry off any superfluous moisture. The plants, before being tied up, ought to be watered and well drained before the sphagnum covering is put round them, and so arranged in the case that the tallest shall be in the centre row. The bottom of the case should be covered with sphagnum, so that each pot will rest securely on it, and, if necessary, some fine wire can be taken over the surface of the rack to keep the pots from moving. By the method of packing here suggested, the cases will be lighter than the ordinary earth ones and more easily moved. A little fresh water now and then poured over the moss will be sufficient to keep the earth in the pots in proper condition. Such sphagnum prepared cases could be glazed, wired, and covered with tarpaulin in the way adopted for Wardian cases. Instead of glass, I would recommend strong white cotton cloth tightly stretched and tacked over properly-constructed frames, hinged at the bottom, and made to lock or open at pleasure. A sprinkling of fresh water over the cotton covering several times during the transit, ought to keep the plants in good condition till they reach their destination, without pouring it over the moss as is necessary in glazed cases.

The cotton-covered cases could be made of different sizes to hold twelve, fifteen, or eighteen pots. The pots placed in each case should be of a uniform size, say 3 or 4 inches outside diameter. We shall suppose a plant case constructed to hold fifteen plants, and each pot 4 inches in diameter. This ought to be 26 inches long and 16 inches wide (inside measure), made of wood one inch thick, the sides to be eight inches deep, and the height need not be more than 18 or 20 inches. The ends to be wholly of wood, so constructed as to receive the framed cotton covering, and to be provided with iron handles. The rack to contain the pots should be made of wood three-quarter of an inch thick, and 3 inches deep, so secured as to be 4 inches above the bottom of the case, thus allowing the moss to be uniform over all the under surface; by being so, it will be less liable to become dry, than if each compartment were filled separate. If properly done at first with clean moist sphagnum, it will be found that the occasional moistening of the cotton cloth, either by rain or artificial watering, will be found sufficient to keep the plants in good condition till they reach their destination.

It will be necessary, when the cases arrive at their journey's end, to admit light and air very cautiously. In the event of a glass covering, air ought to be introduced gradually, but with a cotton covering, less care is required, as, no matter how strong, it always admits a certain amount of ventilation.

If the plants arrive in good condition, they should be planted at first in an open, free, and fibrous soil, with a slight mixture of sand, and properly shaded and protected. In such a mixture, the fleshy roots will develope themselves better than in soil of a heavy compact or clay nature, which, however, may suit them after they are sufficiently matured.

If the tops of any of the plants should decay during the transit, the pots and soil should be preserved, as it is likely that fresh tops will be produced, from the fleshy portion of root under the surface.

Circular from E. C. BAYLEY, ESQ., Secretary to the Government of India, to Local Governments and Administrations,—Nos. 2913—22, dated Simla, the 11th June 1870.

IN continuation of the letter from this Department, dated the 19th January 1869, I am directed to forward for information the accompanying copy of a despatch from Her Majesty's Secretary of State, No. 27 (Revenue), dated the 20th April last, and of its enclosures, showing the steps that have been taken by His Grace to promote the introduction of the ipecacuanha plant into India, together with copies of the pamphlet referred to in the despatch entitled Notes by Mr. McNab on the propagation of the plant.

2. I am to request that a few copies of Mr. McNab's pamphlet, with a copy of the Secretary of State's despatch and its other enclosures, may be communicated to the local Agri-Horticultural Society.

NEILGHERRY CINCHONA PLANTATIONS.

From the Government of Fort St. George, to Her Majesty's Secretary of State for India,—No. 5, dated the 7th March 1870.

Proceedings of Government, 21st February 1870, Nos. 208-210.

IN continuation of our despatch dated 9th March 1869, No. 9, we have the honor to forward, for your Grace's information, the accompanying Tabular Report on the progress and condition of the Cinchona Plantations on the Neilgherries for the half year ending 31st July 1869.

Extract from the Proceedings of the Government of Fort St. George, Revenue Department,—No. 208-210, *dated the* 21*st February* 1870.

READ the following letters:—

From the Commissioner of the Neilgherries, to the Acting Secretary to the Government of Madras, Revenue Department,—No. 48, dated Ootacamund, the 15th September 1869.

I HAVE the honor to forward Mr. McIvor's report on the number, distribution, and condition of cinchona plants on the Neilgherry Hills for the half year ending 31st July 1869.

2. The report does not seem to call for any remarks from me.

From the Commissioner of the Neilgherries, to the Acting Secretary to the Government of Madras, Revenue Department,—No. 8, dated Ootacamund, the 1st February 1870.

I BEG to forward duplicate copy of the report called for in your Under Secretary's official Memorandum No. 10 of the 18th ultimo.

2. The original, Mr. McIvor states, he sent to my Office on the 1st October last, but it does not appear to have reached, hence the delay which I much regret.

Report on the Number, Distribution, and Condition of Cinchona Plants on the Neilgherries for the half year ending 31*st July* 1869.

Table showing the Propagation, Distribution, &c., of Plants and Seeds during the half year ending 31st July 1869.

Date.	Total number of Plants propagated.	Total number permanently planted out.	Total number of Plants distributed to private individuals.	Total quantity of seeds distributed.
				Ounces.
February 1869	12,600	.....	.....	2½
March „	5,440	.....	.....	3
April „	2,480	.....	.....	6
May „	1,200	.....	2,700	1
June „	701	121,020	4,800	7
July „	86	128,767	.....	14
	22,507	249,787	7,500	33½
Previously	2,571,770	894,057	170,850	206½
Grand Total ...	2,594,277	1,143,844	178,350	240

Remarks.—The number of plants permanently planted out in the plantations is 249,787, making the total 1,143,844.

All the species of cinchona still maintain their usual luxuriance; the older plants of Cinchona Succirubra, Micrantha, and Officinalis have this year again produced a large quantity of good seeds.

The increase by propagation is 22,507, the monthly average being 3,751, making the total 2,594,277.

The number of plants distributed to the public is 7,500, giving the total distribution of 178,350: thirty-three and-a-half ounces of seeds have also been gratuitously distributed, making the total 240 ounces.

W. G. McIVOR,
Supdt., Govt. Cinchona Plantations.

Ootacamund:
23rd August 1869.

[210.] Order thereon, No. 255, dated 21st February 1870.

Copies of the report received with the Commissioner's letter of 1st instant, will be forwarded to the Secretary of State, to the Supreme Government, to the other Governments in India, and to the Superintendent of Cinchona Plantations in Java.

2. A copy will also be laid on the Editor's table.

(True Extract.)

R. A. DALYELL,
Acting Secretary to Government.

From the Government of Fort St. George, to Her Majesty's Secretary of State for India,—No. 7, dated 21st March 1870.

In continuation of our despatch dated 7th instant, No. 5, we have the honor to forward, for your Grace's information, the accompanying Tabular Report on the progress and condition of the cinchona plantations on the Neilgherries for the half year ending 31st January 1870.

Proceedings of Government, Nos. 149-150, dated 18th March 1870.

Extract from the Proceedings of the Government of Fort St. George, Revenue Department,—Nos. 149-150, dated 18th March 1870.

Read the following letter:—

From the Commissioner of the Neilgherries, to the Secretary to the Government of Madras, Revenue Department,—No. 18, dated Ootacamund, the 5th March 1870.

I have the honor to forward the Report of the Superintendent, Cinchona Plantations, for the half year ending 31st January 1870.

2. The Government will observe that 862 plants of the new lanceolate variety of *C. Officinalis* and 37 of the pitayo variety have been propagated since the 31st July 1869. Since the receipt of Government Order, dated 9th November 1869, the Superintendent has devoted attention to the above-mentioned varieties, and is propagating them as fast as he can.

Report on the Number, Distribution, and Condition of Cinchona Plants on the Neilgherries for the half year ending 31st January 1870.

REMARKS.—The number of plants permanently planted out in the plantations is 4,580, making the total 1,148,424.

This increase by propagation is 899, the monthly average being 150, making the total 2,595,176.

The number of plants distributed to the public is 255, giving the total distribution of 178,605: fifty-five ounces of seeds have also been gratuitously distributed, making the total 295 ounces.

OOTACAMUND;
The 28th February 1870.

W. G. McIVOR,
Supdt., Govt. Cinchona Plantations.

[No. 150.] Order thereon, No. 371, dated 18th March 1870.

COPIES of the Report received with this letter will be forwarded to the Secretary of State, to the Supreme Government, to the other Governments in India, and to the Superintendent of the Cinchona Plantations in Java.

2. A copy will also be laid on the Editor's table.

(True extract.)

R. A. DALYELL,
Acting Secretary to Government.

From the Government of Fort St. George, to Her Majesty's Secretary of State for India,—No. 8, dated the 21st March 1870.

WE have the honor to forward, for your Grace's information, the accompanying satisfactory Report from the Government Quinologist respecting his examinations of the cinchona barks, etc., together with our Proceedings thereon dated 22nd February 1870, No. 268.

Pregs.* of Govt., 22nd Feb. 1870, Nos. 235, 236.

* Published in the Supplement to the *Gazette of India* of the 19th March 1870, pages 448 to 461.

2. Our Proceedings of the 22nd September 1868, and 19th June 1869, referred to in Mr. Broughton's report (paragraphs 3, 5 and 10) were forwarded to the Home Government with our despatches dated, respectively, 6th October 1868, No. 49, and 27th July 1869, No. 44.

From Her Majesty's Secretary of State for India, to the Government of Fort St. George,—No. 13, dated London, the 19th May 1870.

I HAVE received and considerred in Council your Excellency's despatches in the Revenue Department, dated March 7th and 21st (Nos. 5, 7 and 8) of 1870, transmitting two reports of the progress and condition of the cinchona plantations on the Neilgherry Hills, and Mr. Broughton's report on his examination of cinchona barks.

2. Mr. Broughton, by a series of careful and judicious analyses which are most creditable to him as a scientific chemist, appears to have arrived at practical results respecting the more important questions relating to Cinchona cultivation, namely, the best conditions of growth, the time for harvesting, and the mode of drying the bark.

3. Upwards of a million plants are now permanently planted out in the Government plantations, some of which are 25 feet high and 32 inches in girth. The time, therefore, seems to have arrived for your Government to adopt some systematic course with reference to utilizing the very large quantity of febrifuge alkaloids which is now stored in the bark of these trees. I am of opinion that this subject should receive consideration from your Government at an early date, and that, in consultation with Mr. Broughton and Mr. McIvor, a regular system of procuring and utilizing an annual harvest of bark should be commenced and developed as further experience is acquired in future years.

4. The plantations will require thinning from time to time, and strict injunctions should be given that no bark, not even that of the smallest twigs, should be wasted. The bark which is useless for the extraction of quinine is valuable as a febrifuge for the use of coolies in the form of a decoction or infusion. But a certain number of larger trees must now be annually in a sufficiently advanced stage of growth to yield bark suitable for the extraction of alkaloids. It will be a point for your decision whether this bark should be used in the manufactory at Ootacamund for the supply of hospitals in India, or be sent to the London market, or whether a portion should be sent Home, and a portion worked up on the spot.

5. In considering the course to be adopted with reference to the Government plantations, the question will arise whether they should remain permanently in the hands of the Government for the supply of quinine in the hospitals, and the distribution of seeds and plants throughout India, or whether they should eventually be disposed of as in the case of the Government tea plantations. If the latter course appears preferable, it will be necessary to decide at what stage of its development the connection of Government with the enterprise should cease.

6. In considering this important subject, many other points will arise which I am not in a position to specify; but I trust that the whole question, in all its bearings, will receive full consideration from your Government, and that your conclusions may be communicated to me in time to allow of a regular system being adopted for the ensuing year.

From E. C. BAYLEY, ESQ., C. S. I., Secretary to the Government of India, Home Department, to the Chief Secretary to the Government of Fort St. George,—No. 3093, dated 28th June 1870.

REFERRING to the 5th paragraph of the despatch from Her Majesty's Secretary of State for India, to the Government of Fort St. George, No. 13, dated the 19th May 1870, regarding the course to be adopted with reference to the cinchona plantations on the Neilgherry Hills, whether they should remain permanently in the hands of Government, or whether they should eventually be disposed of, as in the case of the Government tea plantations, I am directed by His Excellency the Governor General in Council to request that no proposals for the sale of the said plantations may be made without first communicating with the Government of India.

EPIDEMIC FEVER WHICH RAGED IN THE ISLAND OF MAURITIUS IN THE YEAR 1867, AND THE IMPROVEMENTS EFFECTED IN THE SANITARY CONDITION OF THE LOWER CLASSES OF THE COMMUNITY AND TIME-EXPIRED EMIGRANTS.

From E. C. BAYLEY, ESQ., Secretary to the Government of India, Home Department, to the Hon'ble the Colonial Secretary to the Government of Mauritius,—No. 3303, dated Simla, the 16th July 1869.

THE Government of India recently addressed Her Majesty's Secretary of State for India with a view to procure a modification of the orders of the Home Government, under which space at the rate of 24 superficial feet only is allowed to coolies in depôt at Bombay and Madras. This amount of space was considered insufficient; and, in advocating its extension, the Government of India, referring to an opinion expressed by the Health Officer of Port Louis that the Mauritius fever had been imported from India, observed that the risk of taking the fever on board was very greatly increased by anything approaching to over-crowding in depôt, and that, if the coolies were allowed only 24 feet each, they were dangerously over-crowded.

2. On the question thus raised, Her Majesty's Secretary of State* has now communicated to the Government of India the opinions of the Colonial Office, the Emigration Board, and the War Office Sanitary Commission, from which it would appear that those authorities are unanimous that 24 superficial feet, properly ventilated, constitute an adequate space for

* Despatch from the Duke of Argyll, to the Government of India, No. 23 (Sanitary), dated 13th May 1869.

coolies in a depôt. Under these circumstances, His Grace the Duke of Argyll has declined to modify the orders above-mentioned, but has invited the attention of this Government to certain remarks made by the War Office Sanitary Commission* in relation to the very defective arrangements which appear to exist in the Mauritius for the accommodation of emigrants.

* Memorandum dated 8th March 1869.

3. The remarks of the Sanitary Commission, to which the attention of the Government of India is thus called, are as follows:—

"The Mauritius epidemic is proved in the papers recently before the Commission to have been neither more nor less than a very severe local malarial fever with fatal complications. It was remittent and intermittent in character; it arose from local conditions which are perfectly well known; it was not imported, and had nothing to do with cooly emigrants, except that they were attacked like the rest of the population in consequence of the same local and epidemic causes.

"The same papers show that there is another fever, called the Bombay fever, on account of its prevalence among imported coolies, which has nothing in common with the Mauritius epidemic. This fever is a typhoid fever, almost entirely confined to coolies, and clearly connected with the bad accommodation and other sanitary defects to which the people are exposed in the Mauritius itself. There is hence no argument from these Mauritius fevers which can be used for augmenting the superficial area to be allotted to coolies in the depôts in India.

* * * * * * * *

"Lastly, the evidence contained in the Mauritius papers recently before the Commission shows that whatever dangers the cooly may be exposed to in depôt and on board-ship, these are comparatively of trivial importance to the health of the men when considered with reference to the unhealthy conditions to which cooly laborers are exposed in the Mauritius.

"Their accommodation there is bad, and there is no evidence of any sanitary police being exercised in the places where they live.

"Hence the typhoid Bombay fever from which they suffer.

"While, therefore, the depôt accommodation should be kept in a healthy state, it is obvious that the chief causes of these high death-rates to be dealt with are to be sought for on board-ship and in the Mauritius itself."

4. His Grace commends the views of the War Office Sanitary Commission to the particular consideration of this Government, and desires to be furnished with any observations which may occur to the Governor General in Council with reference to the defective arrangements complained of.

5. The remarks of the Sanitary Commission appear to be founded on the following passages of the report of the Mauritius Fever Enquiry Commission, a copy of which was received with the letter from your Office, No. A2238, dated the 18th November 1868:—

"It is painful to have to state that in a small island like this, where inspection could easily be carried out, one finds on all sides over-crowding of Indians and ex-apprentices in low-lying, damp, and badly-ventilated dwellings.

* * * * * * * * *

"Amongst the causes of insalubrity, the Commission give the first place to the over-crowding, small size, and deficient ventilation of the dwellings inhabited by the poorer classes in some parts of the town and suburbs, as well as the improper nature of some of the materials used in their construction, as for instance, galvanized iron, zinc, and tin, which, in this tropical climate, make the atmosphere of dwellings extremely hot and unhealthy."—*(Page* 12.*)*

Again, "over-crowding among the lower classes, though it was not the generating cause of the malarial fever, intensified its ravages, and increased considerably the number of its victims.

"The provisions of Chapter XV. of Ordinance No. XVIII of 1860 are quite insufficient for preventing over-crowding. * * * * *
Over-crowding should be clearly and precisely defined in the Ordinance, and the provisions to that effect circulated among the lower classes in their native language."—*(Page* 31.*)*

6. In the report of the Acting General Sanitary Inspector, which is appended to the report of the Fever Commission, the following remarks on the same subject occur:—

"The houses of Port Louis are built with little symmetry and almost contrary to the primary rules of the plainest architecture; some, however, are lofty, spacious, and well-aired, but there are hosts of others in which there is no ventilation, and where over-crowding passes the limits of credibility. In the wretched tenements inhabited by these Indians, who form nearly three-fourths of the population of the town, it is impossible to fix the amount of cubic space required by law, or to enforce any of those sanitary regulations made for the purpose of protecting public health.

"While these remarks apply forcibly to the huts scattered in the various suburbs, there are in the centre of the town several camps belonging to public companies, in which imperfections of a very serious nature are witnessed. 'These camps,' to use the expressions of the Committee appointed last year to examine their condition, 'are on too small a scale, the buildings far too low, and being invariably roofed either with iron or tin without any intermediate ceiling are intolerably hot. There is little or no ventilation, the doors being generally the only openings. Their drainage is directed into the public streets, whilst others in the suburbs pollute the streams.'"—*(Paragraphs* 33 *and* 34.*)*

7. It would appear from the passages above extracted to be generally admitted that the condition of the dwellings of the lower classes in Mauritius is very insalubrious. And the Governor General in Council observes that this is also acknowledged in His Excellency Sir H. Barkley's despatch to Her Majesty's Secretary of State for the Colonies, dated the 30th December 1869* (paragraphs 8 to 11). In that despatch it was urged as one of the grounds for the surveillance clauses of the Mauritius Ordinance No. XXXI. of 1867, which was submitted for Her Majesty's approval, that a system of registration of *time-expired*† emigrants, to whose insanitary habits the state of things complained of was mainly attributed, was the first condition of any improvement in the dwellings and surroundings of the lower classes. I am to quote, for facility of reference, the passage of His Excellency's despatch above-mentioned:—

* No. 333 (Legislative), enclosed in Sir Stafford Northcote's despatch to the Government of India (Public), No. 80, dated 30th April 1868.

† The provision of proper accommodation for emigrants still under engagement, is secured by Colonial legislation.

"8. In Mauritius, no doubt, the progress of the country has been apparently more rapid; many old immigrants have become industrious and thriving members of society; large villages have sprung up in every part of the island; and the town of Port Louis has, in a few years, doubled its population; but the external air of prosperity thus produced covers many serious drawbacks, as I have often had occasion to remark in my correspondence.

"9. This agglomeration of people of dirty habits in wretched and over-crowded huts, constructed without the slightest regard to sanitary principles, and grouped together often in the most unsuitable localities, is universally regarded as the main cause of the excessive mortality which attended the late epidemic. And when it is considered that some of these villages lost a fourth of their population, and that the death-rate in that portion of the capital known as Malabar town cannot have been much lower, whereas, on the sugar estates in the infected districts, as shown in a recent despatch, the mortality during the first six months of the year in no case equalled 10 per cent., and averaged less than three per cent., it seems impossible to resist the force of this conclusion.

"10. If it be asked why steps were not taken in former days to establish, if not a regular scheme of local self-government, at least some regulations as to drainage, drinking water, size of dwellings, &c., the reply must be that this has been often discussed; but that those who have taken the matter into consideration have one and all ended by declaring that something like a registration of the inhabitants was an essential preliminary to any legislation.

"11. Nothing, in fact, can be less like a well-regulated village community in India, which presents the natural model for this country, than the motley crew from every region and every class of Hindoostan,—Bengallees, Madrassees, Parsees, and Lascars, with a sprinkling perhaps of Arabs, Chinese, Malegaches, Africans, and Euro-Africans,—who constitute one of these nuclei of population in Mauritius; whilst the unsettled habits of the Indian portion, and the uncertain number of inmates contained in their houses, render it almost vain to attempt the introduction of any kind of order."

8. Under these circumstances, I am directed to enquire, with reference to His Excellency Sir H. Barkley's observations above-cited, what steps have been taken to use the means supplied by the Ordinance No. XXXI. of 1867 towards improving the sanitary condition of the lower

classes, and especially of time-expired emigrants. This information is sought in order to enable the Government of India to reply to the despatch of the Duke of Argyll, which is referred to in the 2nd paragraph of this letter. But His Excellency the Governor of the Mauritius will fully believe that the enquiry is one in which this Government must naturally feel great interest as materially affecting the welfare of the many natives of this country who have emigrated to the Colony.

From the Hon'ble the Colonial Secretary, Mauritius, to the Secretary to the Government of India, Home Department,—No. A2070, dated the 21st December 1869.

I AM directed by the Governor of Mauritius to acknowledge the receipt of letters No. 3303 from yourself, and No. 3022 from Mr. Under Secretary Geoghegan, both dated July last, and to apologise for the delay which has occurred in forwarding the six copies of the report of the Fever Enquiry Commission applied for in the latter communication: they are now transmitted by the same opportunity as the present letter.

Two questions raised in the correspondence appear to His Excellency to call for observation on the part of this Government:

1*st*.—The medical one,—whether the fever epidemic which raged in the year 1867 was of the paludal and uncommunicable type, or was not rather, as the Sanitary Commissioner, Major Malleson, supposes, of the same nature as the Jail fevers of Upper India, the more serious form of which has now been ascertained to be highly contagious. On this head I have to communicate to you copy of a report from the Chief Medical Officer of this Colony, to whom the subject was referred, who, from having been present throughout the epidemic, has had ample opportunity of judging of the nature of the fever, both during its intensity and during the modified and apparently diminishing outbreaks which occurred during the hot season of 1868 and of the current year. This experience has, it will be seen, but confirmed the opinion shared by the great majority of the medical men in the Colony that, though there were undoubtedly several types of fever co-existent during the epidemic, their origin was paludal or malarious, and that they were not communicable from man to man, nor allied to the "Bombay fever" as supposed by Dr. Barraut.

2*nd*.—As to the improvements which may have been effected in the sanitary condition of the lower classes of the community, and more especially of the time-expired immigrants, respecting whose welfare the Government of India is not unnaturally solicitous.

The views of the Governor of Mauritius as to the necessity for the adoption of stringent measures by this Colony for the repression of vagrancy and of over-crowding, and for the removal, as far as practicable, of the insanitary condition, more especially of the Indian portion of the lower classes, have been so unmistakeably set forth in the paragraphs quoted from his despatch on the subject of the epidemic, that it appears unnecessary to add any further observations in support thereof.

But His Excellency would beg to remind His Lordship the Governor General in Council that the habits and ideas of the Indian population cannot, by any exertion on the part of this Government, be changed in a day; the class of immigrants who come to this Island has been drawn from a very low stratum of society in their own country, and, if proof were wanting as to the traditions and customs brought with them from their native land, the account given by a traveller in one of the most recent descriptions of Calcutta itself may be referred to as showing that "60,000 miserable looking huts are said to be huddled together with no appearance of order: cows, buffaloes, goats, naked children, lank and lithe Natives move about, giving motion and life to the scene.

Dr. Norman McLeod's "Peeps at the Far East."

"Whilst between this, the Native portion of the city, and the road along which the writer drove, there was a deep ditch that seemed no better than an open sewer: a plank here and there crossing it, by which alone communication with the opposite side is kept up."

That, too, much freedom from restraint had, under mistaken ideas of philanthropy, been allowed to the Indian immigrant in Mauritius when once freed from the five years' contract of service entered into before his introduction, His Excellency will not attempt to deny; but it will be hardly denied that the reclaiming from inborn habits of domestic uncleanliness and insanitation a class so fatalist and so entramelled by the customs of his forefathers as the Indian of the lower class, is a task which only years of supervision and education can be looked to to accomplish thoroughly.

And it is with this object that, following close upon Ordinance XXXI. of 1867, which will be seen from the annexed reports of the Protector and Inspector General of Police to be working well, an Act was passed for regulating the building of tenements in Port Louis and the villages scattered about the Island, while it has been decided by the Council of Government that a new system of taxation for sanitary purposes, founded in great measure on the classification of laborers under it, shall be resorted to, and the Procureur General has been instructed to prepare a revised Sanitary Code on this basis.

Pending also the promulgation of this Code, the existing Sanitary Regulations have been carried out much more strictly than formerly with the best effects in reducing mortality, and when it is added that an efficient system of poor relief has been established, and that other important measures are in preparation for the improvement of the condition of the lower classes, while a general scheme for the drainage of the town of Port Louis is at present under reference to an eminent Engineer in England, His Excellency would fain hope that, after receiving the above information, His Lordship will not fail to recognize that the Government of Mauritius, in its endeavours to improve the condition of the community at large, has not been unmindful of the duties it owes to the Indian immigrant.

From F. REID, ESQ., M.D., Chief Medical Officer, Civil Medical Department, Mauritius, to the Hon'ble the Colonial Secretary, Mauritius,—No. 391, dated the 8th December 1869.

Question of the identity of Indian Jail Fever and Mauritius Epidemic Fever.

"Considering the history of the epidemic fever in Mauritius, the lamentable mortality which is occasioned, and the whole facts which are available, I am strongly of opinion (that Dr. Barraut's view is correct) that two forms of disease of fever prevailed in the Island just as they did in the Jails,—one mild, and the other of a much more fatal character.

"Whether they are both manifestations of the same poison in different degrees, I am unable to say; but, looking to the known contagious nature of Jail fever and its strong resemblance, if not absolute identity, with the severer forms of the Mauritius epidemic, I would strongly recommend that, in addition to all the sanitary precautions which have been urged by the Commission, the disease should be regarded as being of a communicable nature, and, whenever it appears, means of disinfection should be carefully employed."

I HAVE the honor to submit some observations agreeably to the invitation of His Excellency the Governor on the concluding paragraph as quoted on the margin hereof, of the memorandum drawn up by the Sanitary Commissioner with the Government of India respecting the epidemic fever of this Colony (1866-67-68).

2. In that paragraph and the two immediately preceding, it has been assumed or inferred—

(1), that in the Report of the Fever Enquiry Commission, as well as in that of Dr. Barraut appended to it, mention is made only of one,—"a peculiar form of fever,"—as having been "long known in Mauritius under the name of 'bilious remittent or Bombay fever' generally admitted to be contagious," and that its description accords with that of the fever which has of late years proved so fatal in the Jails of Upper India;

(2), that, while in the opinion of the Commission the Bombay fever was not the epidemic fever, "on the other hand Dr. Barraut believes that it was, its type being unchanged, although, under the epidemic influence, it partook largely of a paludal character;"

(3), the Sanitary Commissioner next raises the question whether the Mauritius epidemic fever was "a malarious fever arising from local conditions," or one of "a much more severe nature propagated from man to man;" and, while admitting that the evidence of the Medical Officers "is almost unanimously to the effect that it was not contagious," he adds that a similar view had been again and again expressed by Jail Medical Officers in India, "who have since found the strongest reasons to alter their opinions;"

(4), further, the Sanitary Commissioner observes that, "along with the contagious fever of Jails" in India, "there prevailed at one and the same time a large number of cases of an intermittent type which yielded readily to treatment and were amenable to quinine;" and that, considering the whole facts which are available "regarding the epidemic in Mauritius, he is strongly of opinion that Dr. Barraut's view is correct, that two forms of fever prevailed in the Island just as they did in the Jails,—one mild, and another of a much more fatal character;"

(5), and lastly, he remarks that, while he is unable to say whether these are "both manifestations of the same poison in different degrees," yet, looking to the known contagious nature of the Jail fever and its strong resemblance, if not its absolute identity, with the severer forms of the Mauritius epidemic," he would strongly "recommend that the disease should be regarded as being of a communicable nature, and that * * means of disinfection should be carefully employed."

3. To enter as fully as their importance deserves into the consideration of the several points put forward by the Sanitary Commissioner in the terminal paragraphs of his report, and which have been cited above in a series of five propositions, and which, I need scarcely add, I desire to treat with every respect, would far exceed the usual limits of an official letter; and, indeed, I scarcely think it necessary to do so at full length, being persuaded that a more extended and thorough examination of the report to which he refers, and especially of the medical and other evidence forming the bulk of the volume on the epidemic fever of Mauritius, will induce him to modify, if not entirely to change, the opinions he has therein expressed.

4. Still in regard to these I shall venture to offer some remarks in the hope that they may have influence towards that end, and first I would observe, in regard to (1), that the Sanitary Commissioner appears to have misconceived in some respects, no doubt through inadvertence, the terms of the summary reports of the Commission and of Dr. Barraut in supposing it to be averred in either that only one, "a peculiar form of fever," has been long known in Mauritius "under the name of bilious remittent or Bombay fever," and this generally admitted to be contagious; whereas, on the contrary, in both these reports, it is stated that two distinct diseases,—the one highly contagious, very fatal and confined almost exclusively to Indians, and the other not contagious, not so confined, nor very fatal,—have both been long known by the common designation of "Bombay fever" to the great confusion alike of medical statistics and professional conclusions.

In the report of the Commission it is noted,—"For a long period apparently, and under the name of Bombay fever, at least two kinds of fever have been classed, very opposite as to their origin, form, nature, and treatment. To us Bombay fever, as generally met with among the Indians, and occasionally, though much less frequently, among the general population, appears to be a continued fever, an *enteric typhus* of more correct nomenclature, with hepatic or bilious complication, and is highly contagious. The *other form*, which we may call the spurious Bombay fever, is less frequently met with, not at all contagious, and attacks almost exclusively the Indians. This form appears to be a malarial remittent, showing itself in those persons chiefly who had already imbibed the malarial poison in their own country, and in whom the small amount of malaria possibly existing here (which although apparently it had no sensible effect upon others not so prepared) was yet sufficient to set up an attack of the disease in them. To sum up, the true Bombay fever is a continued fever almost always accompanied with jaundice, does not produce cachexia, is never preceded nor followed by intermittent relapses, resists the action of quinine, may be met with at all seasons and in all situations however elevated.

"It appears to have been introduced in 1838 by new immigrants coming from the Bombay Presidency (hence its local name), and to have been very virulent on certain estates for a considerable time.

"After that period it became endemic in certain localities, taking frequently a greater extension as in the first two years following its introduction, afterwards remarkably so in 1843, and for three years thereafter; again in 1850, and again in 1862, from which date it appears to have caused great mortality at different times in many estates, and in nearly all the Districts of the Island, especially on those estates situate near the coast, and continued its ravages, more or less, up to 1865, when the comparatively little of it that remained was evidently absorbed by our present epidemic of malarious fever."

5. Although not clear and precise in the matter, Dr. Barraut in his report appears also to have recognized two distinct kinds of fever as having been long known in Mauritius under the common name of "Bombay fever," and to admit that the "bilious remittent fever" is not the "Bombay fever" of Mauritius.

It must be observed, however, that it is extremely difficult, if not impossible, to distinguish from his report what is his own opinion on the subject of that fever, and what he quotes as the opinion in regard to it of "the great bulk of the population of Mauritius," as contrasted with that of "some medical men anxious to refer the disease to the form admitted in systematic medical nomenclature." (Paragraph 45.)

From the preamble of paragraph 43 Dr. Barraut seems to give it as the result of his own experience that among the fevers generally met with in Mauritius must be reckoned, "2°, the continued, which includes the typhoid, typhus, simple febricula, and the Bombay fever, called bilious remittent in Mauritius."

But remittent is not, and typhus is, a continued fever.

Further, remittent fevers are quite distinct from continued fever, and typhus properly belongs to the latter class.

Now, in paragraph 47 under marginal index of "nature of Bombay fever," Dr. Barraut places the Bombay fever among the "continued fevers," and ranges it among the typhus

group. In section 1° of that paragraph he styles it "Indian typhus;" in 2° "typhus of Mauritius;" and in 3° and 4° simply "Bombay fever," and that it is communicable. It would appear almost certain, therefore, that he really considers (with the Commission) that the true Bombay fever is a continued and contagious fever, a typhus and not a remittent fever as supposed by the Sanitary Commissioner. But it is not surprising that the misconception of what alone Dr. Barraut himself considers to be "Bombay fever" should have arisen, seeing he includes it in paragraph 43, section 2,° under the head of continued, and yet cities it as "bilious remittent," and besides the matter is still further complicated by the marginal index to paragraph 45—"bilious remittent fever of India, or Bombay fever of Mauritius."

But for the terminal sentence of that paragraph (45), it might fairly have been concluded that "or" had been put by mistake for "not" "Bombay fever of Mauritius." In that paragraph (45) Dr. Barraut allows that "bilious remittent fever of India" is of malarious origin, and not communicable from person to person, and then he affirms of some other disease occasionally observed in Mauritius, but which he does not himself name that it is communicable, infectious, and appears in localities entirely free from malaria.

The latter is evidently a fever distinct from the former in nature and properties,

6. Although Dr. Barraut gives it no name in that paragraph, it is manifest from the context that he must mean it to apply to the true Bombay fever which he describes in paragraph 47 under the names before quoted ("Indian typhus," "Mauritius typhus," "Bombay fever"), the same disease that is recognised in the Commissioner's report, p. 15, as enteric typhus with hepatic or bilious complication, and highly contagious, and which is there contrasted with *spurious* Bombay fever, which the Commission considers to be a malarial remittent, and not at all contagious. It is to be regretted that Dr. Barraut was not equally clear, for it is evident, although he does not call it spurious Bombay fever, he is contrasting that disease* under the names marginally quoted with the true Bombay or Indian or Mauritius typhus. Thus in 2° of paragraph 47—"The bilious remittent fever of India" (*spurious* Bombay fever) "is generally characterized by remissions of some kind; the typhus of Mauritius does not offer these remissions; though detected at times, they only constitute the exception and never the rule; the type of the fever is continued, and it has a decided tendency to run a definite course from 15 to 20 days." Again, "3°, bilious remittent fever is known to be prevalent in localities where marsh malaria undoubtedly exists, and only shows at certain times of the year when the elements of malarious generation are rife. In Mauritius, on the contrary, the Bombay fever shows itself at all seasons,—in the cold and bracing winter, and in the hot, sultry, and damp summer, in low and humid grounds, as well as in dry and elevated parts of the Island where cholera never showed itself.†

* *Vide* paragraphs 45, 46, 47, "bilious remittent fever of India," "malarious bilious remittent," and "bilious remittent fever."

† Nor have cases of epidemic malarial fever even yet appeared in the higher parts of the Island in any form, or in the lower parts of the Grande Savanne, where formerly Bombay fever was prevalent; nor has intermittent, or even a tendency to interpuit, shown itself anywhere either before, during or after true Bombay fever.
(*Vide* Reports of Medical Practitioners, pp. 11, 13, 13, 15, 16, 17 *et seq.*, and Report of Prison Hospitals attached hereto, pp. 6, *et seq.*)

7. On comparing this passage of his report with paragraph 45, it would seem that Dr. barraut desires in the former to repudiate the confounding Bombay fever with bilious remittent fever, as is said in the latter to be done by some medical men and the great bulk of the population of Mauritius, and yet in paragraph 46, while affirming that "from the evidence of the majority of the medical practitioners and of the planters who have contributed to the basis of this report, it is clear that from a comparison of the symptoms which are seen in Mauritius" (in true Bombay fever?), "and those which are described as occurring in India, in the true malarious bilious remittent" (or spurious or mis-named Bombay fever), that "there is a difference not only in degree, but also in kind between the two forms of fever in spite of the similarity and even analogy of their symptoms, and there is no doubt that the difficulty of detecting the difference has led to a great confusion in distinguishing the principal features of the epidemic visitation of 1867.

8. Surely Dr. Barraut does not intend to impute that falling into great confusion to the "majority of the medical practitioners and of the planters who contributed" to a clear understanding of the great difference in kind as regards their nature and degree, as regards certain symptoms between the true or contagious Bombay typhic fever and the malarious bilious remittent.

That confounding of diseases distinct in kind, and that failure "in distinguishing the principal features of the epidemic visitation of 1867," must be meant by him to apply to a very small minority of medical men who were then doubtful (among whom, I regret to have to add, must be included himself as regards the opinion he has broached in the report now under reference) in addition to the large number "of the population of Mauritius" to whom he alludes in the previous section (45).

9. Although, if time and space permit, it is my intention to revert to the erroneous notions which he has mixed up in his comprehensive, but hastily compiled, general report on the epidemic of 1866-67,—notions which I have reason to know from private conversations with him he does not now maintain,—still it may be well in this place to state that the starting points of the erroneous opinions and confusion of things, different as regards that epidemic, appear to me to have been, 1*st*, the doubt which existed for a long while as to its real nature, scarcely a case of intermittent fever of local origin having before been met with by almost any of the profession or the public; 2*nd*, the doubt as to the malarious origin of the fevers of remittent form which had hitherto been met with in the Island; and 3*rd*, the loose and unguarded manner in which the term "remittent" had been applied, even by medical men, equally to non-malarious* or to malarious remittent fever* (simple or bilious,) a fever not contagious, nor commonly fatal, and liable to occur now, and again among all classes and ages, but most of all among the Indians, and applied also to a very different disease, a fever of continued form, very contagious and fatal, and almost exclusively confined to the latter. This, the true Bombay (*a*) fever, was all but extinct in Mauritius as regards outward manifestation for some time before the outbreak of fatal epidemic malarious fever in 1867. It existed in a few places far distant from each other before the epidemic had manifested itself on the leeward side of the Island, and had disappeared from all, save one, before malarious fever showed itself for the first time in the neighbourhood.

* Spurious Bombay fever.

10. In the rural districts visited by the epidemic, the great majority of the cases of malarious fever were of the intermittent form, and the mortality was moderate compared to that of Port Louis, where a much larger proportion of cases were of the remittent and *quasi*-continued forms of paludal fever. But it is in regard to Port Louis chiefly, if not exclusively, that Dr. Barraut's remarks and suggestions apply respecting another form of fever, the "Indian typhus," or true "Bombay fever," having insiduously crept into the town, taken on the mask of the prevailing malarious epidemic and greatly added to the mortality. Still it is a pure assumption that true contagious Bombay fever had even been heard of either by medical men or the public as existing at all during, or for years prior to the incubation of the malarious fever epidemic in 1866 and its violent outbreak early in 1867 in Port Louis and its environs, where privation and overcrowding, and in brief the insanitary conditions, were at a maximum, the poorer people most debilitated and prepared to fall easy victims, quinine and other suitable medicines, medical attendance, sustenance, and comfort being available for only a small porportion of them, and where the enormous mortality occurred. Let Dr. Barraut be judged by his own words in respect of that unfounded supposition of the presence of what he calls Indian typhus or Bombay fever in town during these years. Writing in 1864, he states in his Brochure on "Bombay fever," page 2,—"I recollect having seen a few cases in 1860 in the town of Port Louis" * * * "Since I have held the appointment of Surgeon to the Immigration Depôt, there was only one ship from Bombay with a few fever cases that were sent to the Civil Hospital immediately on their arrival. That circumstance took place in 1861, since that period nearly 60,000 Indians have been located in it since the last four years."

1.—*Etiology and origin of the fever.*

"The origin of this fever is still enveloped in obscurity. It has been known to exist in the District of Riviere-due-Rempart since 1844; of Flacq and Savanne since 1854; of Black River in 1851; of Pamplemousses in 1838 or 1839; of Plaines Wilhems in 1862, and I recollect having seen a few cases in 1860 in the Town of Port Louis. With such heterogeneous data it is next to impossible to arrive at the exact time of its first introduction; there is, however, a general impression that we receive a fresh importation of the disease on the arrival of each new batch of immigrants from Bombay, but this popular notion is not supported by facts. Since I have held the appointment of Surgeon to the Immigration Depôt, &c."

11. Again in his answers to the queries relative to the great epidemic then waning, written by him in July 1867, with the experience of the previous hot season and its sad scenes fresh in his memory, Dr. Barraut entirely coincides with his professional brethren as to the great bulk of the fever cases having been intermittent, presenting the usual stages, yet convertible as paludal fever is, especially in hot climates, into the remittent and *quasi*-continued form, its curability by quinine alone, or after previous treatment, its extreme rarity prior to 1867; and the replies to query VIII.—"In the first part of January 1866 the first cases which distinctly showed the intermittent type were at Rochebois and Cassis (suburbs); they belonged to the ex-apprentice population. The invasion and extension of the disease were quite sudden."

(*a.*) The true Bombay fever, unless it be quenched on its appearance in an Indian [illegible] striking a mortality that, on looking at the returns of sickness on estates, one may be [illegible] much the main cause of death among the Indian population, that it has settled and [illegible] falls have exceeds the moderate average of ordinary times. The death-rate from [illegible] 15 existed exceeded that of the epidemic malarious fever of late years. Happily it had [illegible] were seen there in that year at Belombre Estate, and was said to have carried off 200 persons, [illegible] pp. 13 and 14, till January 1868 after the Bombay fever had ceased. (*Vide* Report of Dr. Goulin, P. [illegible] and early part of attached, Report on Jails, 1867, pp. 2, 3, 7, *et seq.*) Its presence at the [illegible] malarious fever existed, but 1867 is alluded to in Prison Report, manuscript, 1866 (hereto attached), where [illegible] caused no great mortality at Beau Begour, Hive-du-Rempart also, and with the same results.

In answer to X., p. 38—Whether he had observed during the epidemic many instances of the congestive or of the algide form, he states—"Yes, I had about ten cases simulating apoplexy, and about five or six resembling the collapse stage of cholera. Of the former, two died, and three of the latter, generally in four or five hours." And at p. 69 he notes that some of his patients had been struck down almost in collapse with feeble pulse, cold, tremulous tongue, &c., and adds—"But I cannot state that asthenia characterized all the stages of many of my cases." In regard to that true test of paludal fever, the convertibility of its three forms one into the other, Dr. Barraut replies, p. 49—"I have seen the pure intermittent assuming the remittent,* and even continued form in many instances, and especially in badly ventilated and thickly inhabited houses, the proportion being three out of every five cases when no treatment was given. I have oftener seen the remittent pass into the true intermittent form." At page 174 he writes—"I do not think that I ever saw the intermittent precede the remittent, but I have seen in the majority of my cases the remittent pass into the pure intermittent;" and further at page 175—"Out of 2,000 cases† which came under my notice, I saw about one-twentyeth showing no sign of remission and lying in a continued state. These cases, notwithstanding the administration of quinine, died with all the symptoms‡ of typhus fever, but without eruption."

In regard to the localities in which the remittent form of the epidemic fever was met with, Dr. Barraut notes, p. 182—"I generally found the remittent form in localities remarkable for their imperfect sanitary condition and among persons living in great numbers in the most abject destitution."

Again, in answer to question XLIV.—In cases of remittent fever treated by you, has improvement rapidly succeeded free evacuation of bile by vomitting or purging, or both, and the form changing to intermittent, has the disease speedily yielded to full doses of quinine? Dr. Barraut replies—"Yes; for the remittent I have found that, sudorifics, emitics and purgatives were best suited, and that quinine was only good when the intermissions were fully marked." To question XLV. he answers—"The cases of intermittent and remittent fever attended by me had lived in the same locality where they were attacked (Port Louis), with the exception of a few coming from Rochebois and Petite Riviere."

12. In respect of the question of the epidemic fever being communicable from person to person, and as to its being paludal fever, his replies are in the negative as regards the former, and the affirmative as regards the latter, with only a slight theoretical peculiarity rather than reservation; and, if so, it follows that in both these respects the Sanitary Commissioner has been misled by the suppositions, assumptions, and suggestions which have found their way into the report of Dr. Barraut from which he quotes.

In reply to question XLVII. respecting the arrival in a healthy locality of a person having epidemic fever, and the disease appearing or spreading therein, Dr. Barraut states—"Not immediately, and in no instance have I seen a person ill with fever, either the remittent or intermittent type, give it to healthy people with whom he came to reside. This does not, however, imply that fever did not show itself in the house sometimes afterwards."

To question XLVIII. relative to the fever spreading, he answers—"I cannot positively and conscientiously state that the fever spread in directions against the prevailing wind," &c., and adds at the end—"The answers I shall give to the remaining questions will, I hope, show

* 1. Contrast that with paragraph 47, Section 2 of his General Report as under:—

"The bilious remittent fever is known to be prevalent in localities where marsh malaria undoubtedly exists, and only shows itself at certain times of the year when the elements of malarious generation are rife. In Mauritius, on the contrary, the Bombay fever shows itself at all seasons, in the cold and bracing winter, and in the hot, sultry, and damp summer, in low and humid grounds, as well as in dry and elevated parts of the Island."

2. "The bilious remittent fever of India is generally characterised by remissions of some kind; the typhus of Mauritius does not offer these remissions; though detected at times, they only constitute the exception and never the rule; the type of the fever is continued, and it has a decided tendency to run a definite course from 15 to 20 days."

4. "Bilious remittent fever, as all paludal fevers, is amenable to treatment by quinine, whilst the Bombay fever is not; Hæmorrhages are frequent with us, whilst in the true malarious bilious remittent that phenomenon is generally absent. To sum up, the tendency of the disease to run a certain course, its continued type, its communicability from person to person so well traced not only in Indian huts," &c.—*Vide* page 12 of Dr. Barraut's Report.

† In answer to question 7.—Have you met with intermittent fever among individuals of other sections of the population who could not possibly have contracted it out of Mauritius; what number of such cases were observed, and with what termination? Dr. Barrrut states—

"Yes, I have seen in my own practice more than 2,000 cases in other sections of the population in the Town of Port Louis, and generally with a successful termination"—P. 28.

‡ Considering that Dr. Barraut had charge of a dispensary for the poor, and that quinine was extremely scarce and could only be issued now and again and very sparingly, and that the bulk of these classes were among the poorer classes living or trying to live under the great sanitary disadvantages so vividly sketched by him, the rate of mortality is very moderate, 5 per cent. of the cases. But the mortality from true Bombay or "Indian typhus" is from 30 to 50 per cent. The quasi-continued form of malarious fever mistaken by him for typhus is referred to in replies of Dr. O'Beaugard, p. 175, Schmidt, 175, Dr. Hannan, 176, Dr. Penand and Dr. Menneville, Dr. Grivot, Dr. Fressanges, &c., 176-7-8-9, and Report of Prisons, 1867, pp. 8 and 9.

that the soil of Port Louis *possesses* elements *eminently* calculated to *engender, foster*, and *propagate* principles admitted by most medical men as *causes of malarious fevers.*"

In reply to the questions relative to the pre-existent or pre-disposing, and to the exciting or determining causes of the epidemic, and to those concerning measures for preventing its return, Dr. Barraut gives very full replies. In these are prominently detailed the sources of paludal emanations and the co-existence of insanitary conditions, chiefly collections of decaying animal and vegetable matter and the like, which are calculated to intensify the action of those emanations to enervate and debilitate persons exposed to their influence, and render them prone to fall under the attacks of malarious fever and greatly to increase the death-rate from that disease.

13. But nowhere in these or his other replies does he even allude to the possible co-existence of Bombay fever, or its assumed insiduous operations during the epidemic, as he afterwards suggested in his special report.

Far from having any such notion at the close of the first or great epidemic, when he wrote those replies of an intermixture of Bombay typhus or its co-existence, in however small a degree, with the fatal epidemic of 1866-67, he states in reply to question LIV.—Is it your opinion that the epidemic now waning may properly be called one of malarious or paludal fever of the intermittent and remittent forms, generally at first distinct and incomplicated, or the forms interchanging and variously complicated in protracted cases, but all essentially malarious or paludal in their nature? "Yes; but with this distinction I consider the remittent, at least as I see it here, as the result of the absorbtion into the system of an animal and vegetable poison, and the pure intermittent of a vegetable poison alone." For as much as he admits all the forms of the epidemic fever, however complicated and interchanging, the intermittent, the remittent, and the quasi-continued, (which afterwards for a time became his pierre d' achoppement), to have been essentially malarious or paludal in their nature, Dr. Barraut cannot have at that time, with his recent experience present to his mind, had any, the least suspicion that there had been mixed up with the epidemic malarious fever or had co-existed with it, in however moderate number or degree, a fever* which in many parts of his brochure upon it and of his special report on the epidemic he has repeatedly declared not to be malarious fever, and has contrasted with the latter as being essentially distinct "in kind" or nature. But he has nowhere in that report distinctly stated that he had for the time changed his opinion as to the paludal nature of the epidemic fever, nor has he positively declared, he has only suggested another fever poison to have been at work at the same time, having assumed its co-existence in Port Louis, where the great mortality took place, and this contrary to his own previous declaration of its having been absent from the town since 1860, and not re-introduced. These suggestions were put forward also without a shadow of proof, and rest only upon assumptions which are untenable, which are inconsistent with well observed facts and carefully noted experience, as well as upon a misapplication of figures and a misunderstanding of pathological definitions, and are contrary as well as to the bare probabilities as to the actual circumstances of the case. In regard to these opinions and suggestions, however, in the entertaining of which for a time, I believe, he stood quite alone, I have before stated he no longer maintains them.

* The Bombay fever.

14. To resume, it has shown, I trust with sufficient clearness, that both in the report of the Commission and that of Dr. Barraut two different kinds of fever, included under the same vernacular name of "Fievre de Bombay," have been long known in Mauritius; these fevers are recognized in both reports as being distinct in origin, nature, and properties, as also in their subjects and results; that equally with the Commission Dr. Barraut does not consider the epidemic fever of Mauritius to have been contagious, and that, while on the one hand in his answers* to the medical questions he admits with them that the epidemic was really one of "malarious fever of the intermittent and remittent forms, generally at first distinct and incomplicated, or the forms interchanging and variously complicated in protracted cases, but in all essentially malarious or paludal in their nature, originating from elements" admitted† by most medical men as causes of malarious fevers and intensified or exasperated by privations and insanitary conditions, on the other hand he makes no allusion to any severe or deadly fever of another kind‡ as underlying or co-existing with the epidemic, and the opinions subsequently broached (and not now maintained) by Dr. Barraut were mere suggestions based upon assumptions and misapprehensions on his part, as also quite contrary to his own previous evidence, not only in matters of opinion but also in matters of fact.

* Given, it is true, many months before his supplementry report was compiled.

† *Vide* Dr. Barraut's answer, p. 191.

‡ Typhoid (or enteric) fever which used to lurk about the purlieus of Port Louis, and at times to become rather frequent (*vide* Military Medical Notes, Appendix X, p. 71, and report on Prison Hospitals, 1867, pp. 9 and 11) showed itself, but not to a great extent, during the epidemic, modified in its symptoms by the malaria or by the co-existence in its subjects of the paludal fever. Since the epidemic of 1867 and the hurricanes of 1868 it has all but disappeared from Port Louis and the Island generally, probably because its ordinary victims, favoring causes, and most of its latent germs were removed thereby.

15. It seems desirable, however, to quote the passage of his report, which seems in particular to have started the opinions expressed by the Sanitary Commissioner with the Government of India, that the true Bombay fever (or Indian or Mauritius typhus of Dr. Barraut) existed in Port Louis and the parts of the Island in which the epidemic raged during 1867; that its description accords with that of the jail fever of Upper India; that the epidemic fever of Mauritius was mainly constituted of that contagious fever, while at the same time, as in the jails of Upper India, a milder intermittent existed. The passage above referred to is 4° of paragraph 47, p. 12. "Bilious remittent fever, as all paludal fevers, is amenable to treatment by quinine, whilst the Bombay fever is not. Hæmorrhages are frequent with us, whilst in the true malarious bilious remittent that phenomenon is generally absent.

"To sum up, the tendency of the disease to run a certain course, its continued type, its communicability from person to person so well traced not only in Indian huts, on board coolie-vessels, or in jails, the *fact of its attacking* an individual *only once*, and leaving him to return to health after a somewhat protracted convalescence, of its not having the sequelæ of remittent fever, and its breaking out when there are conditions of insalubrity favorable for its spread,* leads us to the conclusion that we have to deal with nothing less than typhus fever with its ever-changing types, &c., which have of late years been brought into such remarkable evidence by the labors of the Medical Officers who have served in Upper India."

Probably Dr. Barraut here alludes to the disease known as Umballa or jail fever—that to which the Sanitary Commissioner refers in his memorandum.

16. In the reports which have been received of that fever, mention is made of cases of common intermittent (and the Sanitary Commissioner also refers to this point) having accidently occurred among the prisoners, and to have led many of the medical attendants to overlook for a time the essentially distinct nature of the fatal contagious fever. The intermittent was occurring as an accident among certain of the prisoners at the same time, and might have co-existed in the same subject with the real jail fever. Putting aside the accidental concurrence of ague in the prisons, what was the nature of that jail fever, and is there any reason to suppose it has even existed in Mauritius? The disease is described to have been the recurrent fever, a disease well known in Europe, and not unfamiliar to several medical men residing in Mauritius before, during and after the epidemic of 1867. It is a *continued* and contagious fever, depending on a specific poison, having no necessary connection or alliance with marsh malaria, and by all the best authorities on the subject (Dr. Christison, Sir W. Jenner, Wardell Murchison, &c.) is held to be distinct from typhus fever. To note the salient characteristics of "recurrent fever," the attack, which is sudden, lasts seven days with greater or less intensity, at the end of which time it abruptly ends in profuse sweating, the patient coming out of it perfectly free from fever, and all its distressing symptoms well, though weak. But on the 14th day from the beginning of the first attack he is again seized with the fever more severely or less sharply than the first time, and he may die or recover after this second or a third similar attack, commencing usually on the 21st day. Further, far from being at one time the subject of this peculiar fever-conferring immunity, it renders its subject all *the more liable* to subsequent seizures on his being exposed to its contagion. "The recurrence or distinguishing feature of this pyrexia is unknown in any other form of fever." Sir W. Jenner's careful observations, confirmed by the experience of many competent authorities, have established that recurrent fever "is capable† only of giving rise to a similar disease; it can engender no other form of fever, and no other form of fever can engender it.

† Quoted from Reynold's system of Medicine, Vol. I., p. 653, 1866.

"Now on contrasting these peculiarities only with the Bombay fever or typhus," described above by Dr. Barraut as having a tendency to run a definite course (as a continued fever), "from 15 to 20 days" (paragraph 47—2°), "and the fact of its attacking an individual only once and leaving him to return to health after a somewhat protracted convalescence" (paragraph 47—4°), no one can correctly say his description of the true Bombay or Indian typhus fever of Mauritius accords with that of the recurrent fever, as it has been described, and as it is accepted by the Medical Officers to be the jail fever of Upper India.

17. I cannot refrain, however, from protesting in this place against Dr. Barraut's intruding in that paragraph such incorrect pathology as, "that we have to deal with nothing less

* This is another instance of the tendency in the report to mix up and confound things which have no necessary connection.

The disease attacks only where a person has come into relation, direct or indirect, with another who is the subject of it, or under the influence of the latent fever poison lurking in some infected hut or clothing. But its spreading, no more than its originating, does not depend on conditions of insalubrity, though these favor and exasperate. It spreads if the patients be not isolated, and the more quickly and extensively, if the fever emanations become concentrated in an unventilated hut. But, however bad may be the sanitary conditions of the locality, it does not necessarily spread if the patient be isolated, placed in a well-ventilated estate-hospital, and his hut and clothes be immeditately destroyed. It appears that when he struck off the sentence quoted above, Dr. Barraut had in view not typhus, but the distinct disease typhoid (enteric) fever popularly called the fever of bad drainage, which some medical men think may originate or break out as a result of sanitary conditions alone.

than typhus fever with its ever-changing types," and his endeavour to support it by imputing such unwarrantable notions to the "Medical Officers who have served in the Upper Provinces."

Typhus fever does not possess, and has never shown, any change of form or "type," as he styles it, still less "ever-changing types." It is, and always has been, a continued fever, and of it may be affirmed the words I have cited regarding the recurrent fever, it is "capable of giving rise only to a similar disease; it can engender no other form of fever, and no other form of fever can engender it." I must protest equally against his note following the referrence to the Indian Medical Officers' experience in the Upper Provinces. It is difficult to find a right motive for contradicting by a note the beginning of his own 4th section of paragraph 47—"Bilious remittent fever, as all paludal fevers, is amenable to treatment by quinine, whilst Bombay fever is not;" and somehow to connect the alteration with the Medical Officers of Upper India, the note runs thus—

"It is universally acknowledged that quinine has no effect on the Bombay fever, and that large doses of that drug are more hurtful than beneficial; it is only when the fever is subdued and when *intermission* is established that quinine as an antiperiodic is really useful."

18. Now the employment of the terms "intermission" and "antiperiodic" would be quite allowable when applied to malarial or paroxysmal fever, but their employment is altogether unjustifiable in regard to a fever which the writer had, in the beginning of the paragraph to which that note is appended, contrasted with a malarious and paroxysmal fever in these terms—"Bilious remittent fever, as *all paludal* fevers, is *amenable* to treatment by quinine, whilst the Bombay fever is not. Further, the tendency of the disease to run a certain course, its continued type, * * * its attacking an individual only *once* and leaving him to return to health after a somewhat protracted convalescence." Such convalescence in a disease, which is stated to occur only *once* in the same subject, cannot be called an intermission without doing violence to the meaning of the term, and, under the circumstances, to something besides. Nor can the use of quinine as a tonic during convalescence be fairly called its "antiperiodic" use without assuming that which had before been denied, a second attack, against the probable period of which return the quinine was to be given as a preventive.

19. The use of the words, however, in connection with the hazy expression of the "ever-changing types" of typhus fever; the coquetting with the term bilious remittent fever; the strange adaptation of figures and facts which, in the judgment of the recorders of them, point in quite a different direction; the unwarranted use of certain medical terms, notably at page 25, paragraph 76, of "intermittent typhus," which is simply an invention, it were hard to characterise.

On a reference being made to p. 464 of the work named in the footnote indicated after the expression "intermittent typhus," no such term or misnomer can be found, nor does the article treat of typhus but of recurrent fever, the essential, distinct, and unchangeable nature of which, as a *continued* fever, have already been given on the highest authorities respecting fevers. There is simply a mention of the opinions of a Dr. Peacock and a Dr. Paterson. The former considering that recurrent fever seems to "approach in its nature some forms of remittent fever on account of the repetition of the rigors often at regular periods for two or three days," and the latter being struck with the marked periodicity of its recurrences "which come on like a fit of ague almost to an hour." Next follows a remark respecting the enlargement of the spleen, pointing to a malarious origin. But this is then met by the observation that epidemics of recurrent fever, as shown by Murchison, appear to commence, progress and decline quite irrespectively of the season of the year, the specific poison, its contagious nature, &c.

But it were needless at present to follow and comment further upon the report from which the Sanitary Commissioner has quoted; and indeed but for its having attracted the attention of that high authority, I should never have referred to, but have treated it, as has been done by the other members of my profession in Mauritius.

20. I can honestly affirm from my own close observation, and because I know that I am supported by the great body* of the profession, men of long and extensive experience, and of careful and exact habits of observation, not only that the epidemics of 1866-67 and 1867-68 were purely and simply of malarious or paludal fever, and were not in any sense or degree of a contagious or communicable nature,† but also that recurrent fever, the contagious jail fever of Upper India, has not yet appeared in Mauritius. I shall add the earnest hope that it may never be introduced here, for it would occasion a lamentable additional mortality, extending to all classes of the community.

* Some of whom have served or lived in Madras, Bengal, Upper India, China, the West Indies, Java, Algiers, or the Coast of Africa, Madagascar, or other parts of the world.

† A reservation is made in my Report of Prison Sickness (1867, note, pp. 9 and 10) respecting the moderate number of instances of typhoid (enteric) fever probably occurring at that time, and in regard to certain cases of tropical remittent at times becoming communicable, but this most likely (2)—*vide* Prison Report (note, p. 7) attached hereto.

But it was introduced into Bourbon with immigrants from Bengal in 1864, and spread in the localities to which these coolies were distributed, occasioning a heavy mortality among them

and others in spite even of the rigid isolation and other preventive measures which were taken after the contagious nature of the disease had become manifest.

That occurrence and its results so well illustrates all the points raised in the memorandum of the Sanitary Commissioner that I shall conclude with a sketch of its main features. Some particulars regarding it I obtained personally when in Bourbon on sick leave in 1868, but it is mainly from an interesting paper* by the French Naval Medical Officer (Dr. Macauliffe) who had charge of the Lazaret, to which the immigrants were transferred on arrival (according to the practice then prevailing at Bourbon in respect of all coolies coming from India for observation during 10 days), and who, after their distribution, had charge of one of the special hospitals opened on an estate to which a band of them had communicated the fever.

* Published in the Archives de Medicine Navale, 1868, T. IX.

21. The ship *Eastern Empire* of 1014 tons brought 450 persons from Bengal, and had been furnished at Calcutta with the usual bill of health, couched in very general terms, and making no mention of cases of the ordinary or of any communicable disease. The ship's Doctor reported that six coolies and a child died during the passage from diarrhœa, dysentery, and debility; that the coolies and their families were in good health on arrival at Bourbon, with the exception of 10, who were "convalescence from diarrhœa, fever, or dysentery." The Medical Officer, however, found the sick list of the batch of coolies more numerous (25) on their reaching the quarantine station,* and that it comprised, besides minor ailments, several fever cases and four of dysentery in the last extremity of weakness. On the ship's Doctor being requested to give information relative to the kind of fever presented by his people, he stated they were instances of remittent or of intermittent (malarious) fever. The close observation of these cases, after their admission to the quarantine hospital by the Medical Officer, led him to conclude that it was with malarious fever only he had to deal, and he was strengthened in that opinion by the fact that the coolies had been recruited at the end of the sickly season of 1864, and that when in Calcutta they had been exposed to the hurricane of 4th October of that year.

* Situated in an isolated nook of an uninhabited part of the coast to which the coolies were transferred by water.

22. During the term of isolation 26 fever cases in all came under Dr. Macauliffe's notice, and in regard to them he reported that they all presented signs of malarious impregnation which showed itself by attacks of fever, some of the intermittent, others of the remittent, and few of the pseudo-continued form of that disease, and that quinine seemed to be the appropriate treatment, a circumstance which confirmed him in the conviction that the patients had paludal fever only. He had no suspicion then of the presence of another and distinct disease lurking among them, though he was struck with the fact that great debility persisted an unusual time after the attack. Of jaundice, which is almost a constant occurrence in the jail fever of Upper India, though less frequent in the recurrent fever of Europe, the Medical Officer observed only one instance, and this he considered an accidental accompaniment, there being no sweating crises, as there was in the cases of fever (and jaundice too) which he had afterwards to treat in the country.

But he had not sufficient length of time to watch the course of the disease at the Lazaret, even supposing that the solitary jaundiced case had been one of recurrent fever, the time of isolation (ten days) covering only the period of one attack and part of an interval of the apyrexia of that disease. One coolie died at the Lazaret of a "pernicious attack of paludal fever."

23. On the coolies being removed from the Lazaret to the depôt in St. Denis, 12 of them affected with fever were sent to the colonial hospital, and several cases subsequently, among whom a considerable mortality took place. The distribution of the coolies to estates was being effected in the meantime, and it was only when several* Indian employés of the depôt at St. Denis and hospital attendants fell sick of fever with jaundice, and the same evidence of communication of fever to the healthy men of the estates to which bands of the immigrant had been allotted, that it became evident a contagious fever had been introduced. That fever spread and caused great loss and consternation in the Island. It has been carefully described by Dr. Azema, as well as by Dr. Macauliffe and others, and by all called the "fievre a rectuites" the recurrent fever or jail fever of Upper India. In this invasion of fever, as in those of the jails they are co-existed instances of malarious fever which threw the Medical Officers off their guard, and it was only after a time that they were convinced by unmistakeable evidence that there had come among them, with these paludal fever cases, another and distinct disease, the contagious remittent fever.

* Thirteen in all, none of whom had belonged to the batch of coolies, nor been sick of fever.

24. The whole history of the outbreak in Bourbon would seem to show, though this is not mentioned, that there being no suspicion of contagious disease, new clothing had not been issued to the coolies after ablution on board ship and at the Lazaret, nor the old and soiled, as well as their other effects washed and aired before being removed thence, and that there was the usual bartering or acquisition of clothing and other effects by the depôt and hospital employés at St.

Denis, and that thence the disease had been transmitted to the Indians in town who had not before had fever.

The case of the introduction of a contagious and very fatal fever, as well as the occurrence of other similar outbreaks and heavy mortality, have naturally made the people and the authorities of the adjoining Island of Bourbon very suspicious and watchful in the matter of quarantine. At first and for some time the epidemic fever of Mauritius was suspected by them to be communicable, and pratique refused; nay at their earnest desire quarantine against arrivals from Mauritius was established at the (British) Seychelles Islands, because the French mail steamers called there *en route* to Bourbon and Mauritius.

But the observation of cases of the Mauritius epidemic fever on board these very steamers and French ships; the occurrence of deaths from it; the free intermixture of healthy passengeners from Bourbon with persons embarked at Mauritius very ill of the fever; their making the voyage to Suez together;* the arrival of persons in quarantine, some with fever, others who had it, and the latter remaining unaffected; persons having returns of the Mauritius epidemic fever and mixing freely with the inhabitants of Seychelles or Bourbon, in fact repeated crucial experience, soon satisfied the authorities and people of Bourbon that our epidemic fever was not communicable, and free pratique was given and never afterwards withheld.

* See Reports on fever, p. 218, Appendix p. 81.

25. Respecting the recommendation contained in the concluding part of the Sanitary Commissioner's memorandum, I have the honor to observe that, from the painful experience of the last 20 or 30 years during which this Island has been visited by several fatal epidemics and local outbreaks of disease, there is, perhaps, no community in the world among which suspicion and watchfulness in regard to disease being communicable, and the practice of having recourse to deodorants and disinfectants* exist to the same extent as in Mauritius.

* Which are kept and sold at a moderate charge even in small shops.

Various preparations,—carbolic acid, carbolates, chlorides, &c.,—were freely used, especially in the early months of 1867, but at last without any regard to disinfecting, because the most credulous and fearful among the population were, almost without exception, convinced that this time the disease raging among them was not communicable. Persons living at a distance from the localities in which fever prevailed, and in which it had not appeared,* continued to use such means until they also were satisfied by the repeated occurrence of persons coming from Port Louis to live among or with them, sleeping in the same room or hut, or even on the same bed or mat, and without communicating the fever.

* In many even to this date free as regards persons who had not left them and slept in places where paludal malaria were being given off or conveyed by the wind.

No disease could have been put to more severe tests as regards the question of contagiousness than our epidemic fever, for most of the Creoles and Indians have the bad habit of closing up their houses and huts at night. The infrequent cases of the only communicable disease then existing—the typhoid fever—occurring at the same time and often traced and recognized formed the exception which proved the rule as concerned the epidemic fever.

26. Before concluding this communication, I take leave to express a hope that the Sanitary Commissioner who has manifested a warm interest in the well-being of the inhabitants of this Colony, may be moved to bring the weight of his influence to bear upon the Government of India in regard to certain matters which nearly concern their sanitary condition and prospects.

These are—

I., as forming an additional safeguard against the transmission of disease, the furnishing in future from the several ports of India connected with Mauritius of bills of health couched not in general terms respecting the non-existence of plague or pestilence, but containing specific statements of the existence or not of cases of cholera, small-pox, contagious fever or other communicable disease in the harbour or town, or its environs at the given date, such statements being based, if possible, upon reports of the occurrence of such cases of disease, these reports or returns being rendered compulsory by law (as in this colony);

II., that the Government of India will be induced, by the considerations he will submit of the vital importance of precautionary measures, not to consider the authorities in Mauritius unnecessarily careful, and exacting in regard to quarantines of observation and of seclusion, and in using all available means for preventing the introduction of disease by infected persons and clothing, as happened at Bourbon in 1864-65 to the great loss of its Indian population especially; that it may rest assured the Indian immigrants coming to Mauritius shall be properly cared for in well-appointed lazarets and in well-found hospitals, when it may be judged expedient to transfer them thither for a time.

P. S.—In reference to the following observation in memorandum of Sanitary Commissioner with the Government of India, page 201, "the number of deaths among the garrison is not given," I beg to note that full information will be found in 2nd Appendix to Reports, Military Returns and Notes, pp. 51 to 89. The total mortality among the troops from fever alone in 1866 was 27, and consisted of 1 from intermittent, 21 from remittent, 1 from pseudo continued, and 4 from typhoid (enteric) fever. During the first half of 1868, the deaths were continued 1, intermittent 3, remittent 12, total 16; also 1 officer in 1868 and during the 18 months, 11 soldiers' wives, 49 children, and 3 followers.

Extract from Return of Diseases treated in the District Prison Hospitals during 1866 *(Mauritius.)*

Fevers.—But the greatest share of the excess of sickness during the past year is borne under the head of fevers.

Although the admission from this class of disease were nearly a third more numerous in 1866, than in 1865, and considerably exceed those of 1864, still the mortality was proportionately very small in 1866, as will be seen from the subjoined statement:—

1864,	total fever cases admitted	741,	died	63	= 85	per 1,000	of cases.
1865,	„	„	658,	„	37 = 56	„	„
1866,	„	„	918,	„	19 = 20	„	„

As showing the forms of fever which occasioned the sickness and mortality under that head in the District prisons during these several years, the following comparative statement will be useful:—

Years.	Fever.									
	Intermittent.		Remittent.		Typhoid.		Typhus.		Com-continued.	
1864 ...	Admitted	12	Admitted	388	Admitted	6	Admitted	0	Admitted	333
1865 ...	„	8	„	141	„	256	„	0	„	205
1866 ...	„	881	„	219	„	15	„	1	„	252
1864 ...	Died	0	Died	46	Died	2	Died	0	Died	15
1865 ...	„	0	„	15	„	23	„	0	„	2
1866 ...	„	0	„	11	„	3	„	0	„	5

The following table giving the ratio of mortality from the different forms of fever to the numbers attacked therewith will be acceptable so far as the death-rate may be considered a direct test of the virulence of fever and of the hardness of the circumstances and the unfavorable kind of subjects in which it occurred and negatively of the reversed state:—

Years.	Intermittent.	Remittent fever.	Typhoid fever.	Continued fever.
1864 ...	Died 0	Died 46=118: 1,000 of cases.	Died 2=333: 1,000 of cases.	Died 15=46: 1,000 of cases.
1865 ...	„ 0	„ 15=106: 1,000 „	„ 23= 89: 1,000 „	„ 2= 9: 1,000 „
1866 ...	„ 0	„ 11= 50: 1,000 „	„ 3=200: 1,000 „	„ 5=14: 1,000 „

Before referring to the subject of the comparatively increased prevalence and the slight relative mortality of fevers occurring among the prisoners during 1866, the difficulty of exactly apportioning these proportions to each of the different forms of fever according to the received nomenclature must be adverted to; for there is a fever, apparently manifesting different characters in different localities, almost peculiar to the Indian population, contagious in its nature, and generally attended with a heavy mortality, 20 to 40 per cent. of those attacked, which is commonly designated "Bombay fever." This by some medical men is considered to be a kind of

remittent and by others a continued fever; by some called bilious remittent fever; by others typhoid fever, while one Medical Officer brackets both these forms in his returns in respect of cases of "Bombay fever" which he had attended as if he considered its form to be various or doubtful.

It is manifestly desirable, if possible, to eliminate the cases of "Bombay fever" (if any) from the total of the remittent fevers; in order to arrive at the number of cases due to other causes than contagion or infection, and especially of those arising from the same cause as produced the remarkable number of ague cases, which so largely figure in the return of 1866.

The fever or fevers commonly receiving the prefix "Bombay" being ordinarily very fatal, it would afford a strong presumption that few, if any, of the cases entered as remittent, that form having been in excess, had been of "Bombay fever" if the rate of mortality were small; and the presumption would be strengthened if it could be shown that, in either of the Districts having that excess, "Bombay fever" had been causing great loss of life during the period. As regards Black River, the means of making that comparison are not available. But as concerns Pamplemousses, not only was the death-rate in the prison of the District very low in 1866, only 5 : 1,000 as against nearly 7 : 1,000 in 1865, and about 12 in 1864, but also it must be stated that, while in the District prison occurred fully one-half of all the cases of remittent fever among the total District prisoners for the year, "Bombay fever" was at the same time prevalent and causing heavy loss; about two-thirds of the total annual mortality among the engaged Indians on one estate alone, at no great distance from the prison; 55 deaths from "Bombay fever" took place during the year = 162 : 1,000 of its strength, while the mortality of all the District prisons during the period was only at the rate of 3½ : 1,000, and in that particular prison 7½ : 1,000.

As I have no note of the number attacked with "Bombay fever" on that estate, an exact comparison of deaths to seizures cannot be furnished. Probably only a fourth or a third were really attacked with that disease. Assuming, however, that every man on the estate had been seized with it, there would be a ratio of deaths from "Bombay fever" to number attacked of 162 : 1,000 as compared to 51 : 1,000 of deaths to cases of remittent fever in the prison. Be it noted too that, while nearly all these cases of remittent fever were among Indian prisoners, there were 12 colored Creoles (one died) and two Europeans affected with that form of fever. Considering, then, the low rate of mortality from remittent fever in Pamplemousses Prison as compared to that usual from "Bombay fever," the very small loss to sick and strength therein as contrasted with the very heavy death list from "Bombay fever" in the District and especially on an estate at no great distance, and keeping in mind its notoriously contagious nature and the immunity of the bulk of the prisoners and of the sick in hospital, its being confined almost exclusively to the Indian population, and yet that there were two Europeans and 12 Creoles attacked with remittent fever in the prison, there is every probability that the majority (excluding cases of simple, non-contagious bilious remittent fever) were malarious in their nature and of local origin. That inference is strengthened by the fact that at the same time there was a considerable number of the prisoners sick of malarious intermittent fever. These the Medical Officer (Dr. Reilly) notes to have been of the tertian type, but he makes no mention of "Bombay fever" having appeared in the prison during the year. He mentions, however, that, for the first time during upwards of 20 years' residence in Mauritius, he had met with cases of intermittent fever in 1866, numerous instances of its having been also observed by him about the same time among Indians on estates as well as among the general population.

Intermittent fever.—During 1866 no fewer than 331 cases occurred among the District prisoners; of these four were Europeans, three Creoles, and 324 Indians. Nearly all the cases of this disease were met with in the prisons of Pamplemousses (1 European, 3 Creoles, and 16 Indians) and Black River, 299, all Indians; at Riviere-du-Rempart, 10 Indians, and at Grand Port, 2 Europeans. This is a notable fact in the medical history of Mauritius, the occurrence in one year of so considerable a number of cases of well marked ague, a disease so distinctive in its features as to be readily recognized by any one and universally believed to be of malarious origin, a disease besides which, as being of local growth, might also be considered quite new to the Colony, and which was the beginning of the most deadly epedimic to which it has ever been subjected. A few scattered cases of intermittent fever have been observed in former years and almost exclusively among Indians or others who probably had, and as regards soldiers who certainly had had it in India or China, or some other malarious country. Among the Natives of Mauritius, who had never left the Colony, the disease, it may be safely affirmed, had shown itself very rarely indeed prior to 1866.

As regards the District prisons, two instances of intermittent fever were remarked in that of Riviere-du-Rempart in 1862.

During 1863 four cases occurred in the Black River Prison, 20 in that of Riviere-du-Rempart, and three in 1865 in the same gaol. In all these instances the subjects of the disease were Indians.

Of 20 cases admitted to hospital in Pamplemousses Prison during 1866, one was a European, three were colored Creoles, and 16 were Indians.

Continued fever.—Although the admissions somewhat exceeded those of the preceding year, the mortality was very slight, and only about one-third of that of 1862.

Almost the whole of the cases entered under this head took place among the prisoners of Flacq and Plaines Welhems, and were attributed to exposure, to gastro-hepatic derangements, and the like.

From J. GEOGHEGAN, ESQ., Under Secretary to the Government of India, to the Hon'ble R. S. ELLIS, C.B., Chief Secretary to Government of Madras, and the Hon'ble A. EDEN, Secretary to the Government of Bengal, Judicial Department,—Nos. 899-900, dated the 15th February 1870.

WITH reference to the accompanying extract from a letter* from the Chief Medical Officer, Civil Medical Department, Mauritius, I am directed to request that the Government of India may be favoured with the views of the Governor in Council / His Honor the Lieutenant-Governor on the suggestion therein contained for the modification of the form of the bills of health granted to vessels proceeding from Madras / Calcutta to that Colony.

* No. 391, dated 8th December 1869, paragraph 26.

From the Government of India, to Her Majesty's Secretary of State for India,—No. 26, dated Fort William, the 8th March 1870.

WITH reference to your despatch No. 23, dated the 13th May 1869, we transmit for your information copy of a correspondence noted on the margin, on the subject of the epidemic fever which raged in the Island of Mauritius in the year 1867, and the improvements effected in the sanitary condition of the lower classes of the community, and more specially of the time-expired emigrants.

Vide Public despatches to Secretary of State, No. 128 of 1867, dated 12th July, and No. 204 of 1867, dated 28th November.
To Colonial Secretary, Mauritius, No. 2850, dated 6th July 1868.
From ditto, No. 2238A, dated 18th November 1868, with a copy of the report therein referred to.
To the Sanitary Commissioner with the Government of India, No. 775, dated 9th February 1869.
From ditto No. 142, dated 5th March 1869.
To the Colonial Secretary, Mauritius, No. 3022, dated 1st July 1869.
To ditto No. 3303, dated 16th July 1869.
From ditto No. A2970, dated 21st December 1869, and enclosures.
To the Governments of Madras and Bengal, Nos. 899 and 900, dated 15th February 1870.

2. We desire gratefully to acknowledge the exertions which the Mauritius Government is making to improve the sanitary conditions of life among Indian emigrants.

From Her Majesty's Secretary of State for India, to the Government of India,—No. 13, dated London, the 5th May 1870.

THE despatch of your Excellency in Council dated 8th March, No. 26 of 1870, transmitting copy of a correspondence on the subject of the epidemic fever which raged in the Island of Mauritius in the year 1867, and the improvements effected in the sanitary condition of the lower classes of the community and more especially of the time-expired emigrants, has been considered by me in Council.

2. I have communicated to the Secretary of State for the Colonial Department the acknowledgment of your Government to the Mauritius Government for its exertions to improve the sanitary conditions of life among Indian emigrants.

3. The Proceedings of your Excellency in Council in connection with the subject of the despatch under reply have my full approval.

GOVERNMENT OF INDIA.

MILITARY DEPARTMENT.

TREATMENT OF EPIDEMIC CHOLERA.

From Her Majesty's Secretary of State for India, to the Government of India,—No.16, dated London, the 19th May 1870.

I FORWARD herewith some remarks by the Army Sanitary Commission on the valuable report submitted to your Government by Dr. Murray, Inspector General of Hospitals, on the treatment of epidemic cholera.

Remarks by the Army Sanitary Commission on Dr. Murray's Report on the Treatment of Cholera.

1. THE Commission have examined Dr. Murray's Report on the treatment of epidemic cholera with great interest.

It includes points of medical doctrine regarding cholera, which it is unnecessary here to notice, as this part of the subject is at present under enquiry in India.

But it also includes a large amount of practical experience contained in replies by 500 medical officers, who have seen cholera in all parts of India, to special questions addressed to them by Dr. Murray.

The Commission deem it to be of importance to call attention to the leading practical points in these replies and in Dr. Murray's report.

2. The first important practical result is one which confirms all other experience, namely,—

That in fully-developed cholera verging towards or already in collapse, medicines are simply of no use: the condition being beyond human aid. Every remedial agent at all likely to mitigate or cure the disease in its advanced stages has been tried and has failed.

Urgent painful symptoms may sometimes be relieved by medicine, but cure of the disease in its stage of collapse is out of the question, unless nature herself does the work.

3. This result of the inquiry proves that all medical relief which has the cure of cholera for its object, must be directed strenuously and systematically against the very beginnings of the disease; for if these are neglected, or if they fail to be benefited by medicine, the patient may be considered as past cure by medicinal agents.

4. There is a concurrence of testimony that whatever may be the cause of cholera (a subject at present under inquiry in India) attacks of the disease are aggravated by defective sanitary conditions, such as the following:—

Malaria.
Crowding.
Defective ventilation.
Fairs, feasts, and their concomitants.
Sudden atmospheric changes in temperature, rain, &c.
Damp subsoil, tainted ground.
Impure air from nuisances.
Tainted water.
Imperfect conservancy.
Fatigue and exhaustion.
Careless dietetic regimen.
Unripe fruit.
Tainted food.

Every agency, in short, which tends to lower the standard of health and excesses of every kind, especially in the use of intoxicating liquors, predispose to attacks of cholera.

5. Nearly all the medical officers are of opinion that cholera can be communicated to unaffected persons by an infected locality, and the opinion is all but unanimous that when cholera invades a station, the safest thing for troops to do is to leave the locality.

6. A large proportion of medical officers express an opinion that the disease is communicable from person to person. This subject is at present under inquiry in India. The chief practicable step on which nearly all are agreed is the isolation of cholera cases.

7. As regards the disease itself, Dr. Murray's report and evidence recognize the following stages or degrees:—

Malaise, generally present, marked by depression of spirits, want of appetite, torpor of the bowels.

When these symptoms show themselves, great care is required in avoiding all excess, especially in eating and drinking, all fatigue, depressing passions, fear, and the like, and it is at this period that most can be done to prevent cholera from becoming developed. Gentle stimulants and tonics, avoiding fatigue, taking rest, and attending to diet, quinine in moderation during the rainy season, are apparently the most suitable means to adopt. Anodynes, opiates, and carminatives are also useful.

8. If the disease is not checked in this stage or gradation, the *malaise* continues, and there is superadded to it other symptoms of a more advanced and dangerous character.

These are, "a copious light-coloured painless purging," the stools gradually becoming more watery, and at length colourless like rice water, feeble pules, cold breath, countenance dark, eyes congested, scanty urine, wandering cramps.

Usually this more advanced degree has been divided into two stages,—"simple diarrhœa" and "choleraic diarrhœa,"—but Dr. Murray, looking to the extreme risk of one state passing rapidly into the other, classes them together.

9. All are agreed that, from the moment the slightest diarrhœa appears, even in its simplest and mildest form, and before it has passed into rice-water purging, treatment is of vital importance.

10. During this earliest diarrhœal period of cholera, perfect rest and a judicious use of opiates, combined with aromatics, carminatives, or astringents, dilute sulphuric acid in drinks, and other measures adapted to particular symptoms, appear from the evidence collected by Dr. Murray to be the most efficacious remedies.

11. In some regiments measures for ensuring the immediate discovery and treatment of diarrhœa are organized whenever danger appears. But this report and evidence show that it is a matter of life and death that sufferers should be brought under treatment in the state of *malaise* if at all practicable, or at least at the very first appearance of looseness of the bowels, and that most efficient and systematic means should be adopted for this object at all Stations.

It is in this stage that the least delay in bringing the patient under treatment may place him beyond all hope of recovery.

12. What is commonly called the stage of "collapse," follows the diarrhœal stages.

This is the stage in which almost every remedy and method of treatment has been tried without any evidence of benefit.

13. As in the previous stages, there must during collapse be observed perfect rest. Medicines are of no use. There is nothing for them to do. Iced water, ice in morsels, cleanliness, warmth applied externally, avoiding everything likely to agitate or exhaust the sufferer, careful regimen, and waiting the result, may be said to include all that can be done. Doing too much may destroy the last chance of life.

14. If "reaction" takes place, this stage gives scope for all the discrimination of the medical officer in guiding his patient through it. Here also rest is one of the cardinal remedies: patients in this state have died suddenly from trivial exertion. Refined and careful management and the sparing and judicious use of remedies are what are most required.

15. The practical results of Dr. Murray's extended inquiry and report may be briefly summed up as follows:—

1*st*.—That the sanitary condition of stations, bazaars, and towns, especially those in the vicinity of troops, should be rigidly attended to.

2*nd*.—That troops should be thinned out of barracks, or removed from Stations where cholera has shown itself, or threatens to appear.

3*rd*.—That as cholera is a disease curable by medicinal agents only at its very commencement, the efforts of medical officers should be henceforth strenuously directed to the immediate discovery and treatment of the first traces of indisposition among the troops when cholera is at a Station, or in its neighbourhood.

4th.—That to enable precautionary measures to be taken with hope of success, the authorities at all Stations should be kept constantly informed of the appearance of cholera among the civil populations, even at a distance from their Stations.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 28th June 1870.

PRESENT:

His Excellency the VICEROY and GOVERNOR GENERAL of India, K.P., G.C.S.I., *Presiding.*
His Excellency the COMMANDER-IN-CHIEF, G.C.B., G.C.S.I.
The Hon'ble JOHN STRACHEY.
The Hon'ble SIR RICHARD TEMPLE, K.C.S.I.
The Hon'ble J. FITZJAMES STEPHEN, Q.C.
The Hon'ble B. H. ELLIS.
Major-General the Hon'ble H. W. NORMAN, C.B.
The Hon'ble F. R. COCKERELL.

MADRAS DISTRICT MUNSIFS' BILL.

The Hon'ble MR. COCKERELL introduced the Bill to consolidate and amend the laws relating to District Munsifs in the Madras Presidency and moved that it be referred to a Select Committee with instructions to report in six weeks. He said that the Bill comprised the re-enactment, in a somewhat abridged and simpler form, of the principal portions of the existing law relating to District Munsifs in the Madras Presidency, together with some additional provisions taken from the Bombay Civil Courts' Act and the Bengal Subordinate Judges' Act. Contrasted with those enactments, the Bill presented the most notable points of distinction in its fourth and sixth sections. The powers, which by those sections were conferred on the High Court, were by the Acts just referred to reserved to the Local Government. The Bill in this matter adopted and proposed to legalize the existing practice. These powers were formerly

vested in the provincial Courts of Appeal. On their abolition the direct control of the Zila Courts, as well as the other principal executive functions of the former courts, devolved on the superior court which was now represented by the High Court. But so far as MR. COCKERELL had been able to ascertain the facts of the case, this result was not brought about, nor was it ever sanctioned by any express provision of the law: hence the subject-matter of the sections just mentioned seemed to present an open question demanding the particular attention of the Committee to which this Bill might be referred. Some of his Hon'ble Colleagues would remember that the question as to the authority on which the power of appointing Munsifs should be conferred underwent considerable discussion at the time of the settlement of the clauses of the Bengal Act; and that, although the power of making such appointments was nominally reserved to the Local Government, it was limited by conditions which in effect gave the High Court a complete control over the individual preferments for the office of Munsif. In the subsequently-passed Bombay Act the power of appointment of the corresponding class of judicial officers was unreservedly given to the Local Government. In both Acts there was this apparent inconsistency that, whilst the power of appointment of those officers was vested in the Local Government, their dismissal from office might be effected by the High Court without any reference to that Government. From these circumstances, MR. COCKERELL would venture to think that the principle of the vesting of these appointments had not yet been settled on any clearly-defined and satisfactory grounds, and that the whole subject demanded re-consideration. The only other provisions of the Bill to which it was necessary to make any special reference at present were contained in section seven. He had explained on a previous occasion the circumstances under which the extension of the pecuniary limits of the jurisdiction of the District Munsifs was proposed. That extension was in regard to suits relating to revenue-paying land scarcely more than nominal, for the effect of the further provision of this section, which substituted the mode of valuing suits of this class prescribed by the Court Fees' Act for that obtaining under the existing law, would probably be to enhance to about three times its present rate the valuation of such suits for the purpose of determining in what court they should be instituted. In other respects, moreover, he thought this provision was important. It supplied a rather marked omission in previous legislation. With the solitary exception of the existing law just referred to, which related exclusively to the courts of the District Munsifs in the Madras Presidency, and was there even only applicable to suits for land, he knew of no law which prescribed any rule as to the valuation of suits for the purpose of determining in what grade of court they should be instituted. The mode of valuation fixed by the former Stamp Laws, or the present Court Fees' Act, was intended for revenue-purposes only and was obligatory for no other purpose. It was possible that in the absence of any express legal provision on this subject, the rule of the Stamp Act or Court Fees' Act had been generally followed, but it was more probable that enquiry would lead to the discovery that there was great diversity of practice in this matter. In this view of the subject, he considered the provision of the Bill as being of special importance. Of course, if ultimately adopted, it would only be applicable to the courts of the Madras Presidency. But though not binding on other courts, it would indicate the principle according to which the question of their jurisdiction in the case of suits, the subject-matter of which was other than a money claim, should be determined. The provision of the Bill, as it stood however, was not adapted to all cases, and would need some modification. There were several classes of suits for which the Court Fees' Act prescribed no mode of valuation, and for such some other rule should be provided.

In the suggestion which he had made when this Bill was last before the Council, as to the propriety of including in the proposed legislation the other civil courts of the Madras Presidency subordinate to the High Court, he referred to the present Zila Courts and Principal Sadr Amíns' Courts. He need only add that if this Bill was referred to a Select Committee, he proposed to prepare and lay before the Committee a revised Bill which would consolidate the existing law relating to these Courts, and deal with the points of difference as to jurisdiction and powers which they presented when contrasted with the corresponding classes of courts in the Presidencies of Bengal and Bombay. If the revised Bill was approved and adopted by the

Committee, it could then be submitted for the consideration of the Local Government and High Court of Madras.

The Motion was put and agreed to.

CUSTOMS DUTIES EXEMPTION BILL.

The Hon'ble SIR R. TEMPLE introduced the Bill to enable the Government of India to exempt goods from customs duties. He had last week fully described the objects of this Bill. It need not be referred to a Select Committee, and he proposed at the next meeting to ask the Council to pass it.

BANK OF BENGAL DIRECTORS' BILL.

The Hon'ble SIR R. TEMPLE also introduced the Bill to enable the Directors of the Bank of Bengal to act by a quorum. He said that this Bill also was of so simple a character that he would not ask the Council to refer it to a Select Committee.

COURT FEES' ACT AMENDMENT BILL.

The Hon'ble MR. COCKERELL introduced the Bill to correct two clerical errors in the Court Fees' Act.

CRIMINAL PROCEDURE BILL.

The Hon'ble MR. STEPHEN moved for leave to introduce a Bill to consolidate and amend the law relating to the procedure of Courts of Criminal Judicature not established by Royal Charter. He said that from its title, the motion might appear somewhat formidable, but in point of fact the Bill was a measure of the smallest kind. It aimed at effecting a reform which might be termed typographical. The Code of Criminal Procedure had been extensively amended last year by Act VIII of 1869, which declared that the Code should be read as if certain new sections were inserted next after certain sections of the Code, and that certain other sections should be substituted for the corresponding sections of the Code which were repealed. The rules of Criminal Procedure were thus contained in two Acts instead of one, and the primary object of the present Bill, which was part of the scheme for the general consolidation of the Indian Statute Law, was to substitute one for two enactments. At the same time the opportunity would be taken to effect a few minor alterations, some of which, though not affecting the general principles of the Code, were of real practical importance. Chapter XIX, for instance, enabled the Magistrate to require security for the good behaviour of persons who would, in England, be termed rogues and vagabonds, and section 301 declared that in the event of any such person failing to furnish the security so required, he should be committed to prison until he furnished the same. The Code contained no provision as to the nature of this imprisonment and great discrepancy of practice accordingly prevailed. In Madras the High Court had left it to the Officer in charge of the Jail to exercise his discretion. But in the Lower Provinces of Bengal, in the North-Western Provinces and in Oudh, it had been ruled that the expression "shall be committed to the Jail" implied simple confinement. The result was that, throughout a great part of the country, many hundreds of persons were practically using the Jails as hotels, and leading lives of utter idleness at a serious cost to the Government. The change which MR. STEPHEN proposed to make would enable the Magistrate, whenever he thought fit, to inflict a sentence of rigorous imprisonment. There were some other small amendments which he would mention when the Bill was introduced.

The Motion was put and agreed to.

The following Select Committee was named:—

On the Bill to consolidate and amend the law relating to District Munsifs in the Madras Presidency:—The Hon'ble Messrs. Stephen and Ellis, and the Mover.

The Council then adjourned to the 5th July 1870.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SYSTEM OF GIVING ADVANCES TO PROPRIETORS OF LAND FOR THE CONSTRUCTION OF PERMANENT WORKS OF AGRICULTURAL IMPROVEMENT.

From E. C. BAYLEY, ESQ., C.S.I., Secretary to the Government of India, Home Department, to the Secretaries to the Governments of Madras, Bombay, and Bengal,—Nos. 323 to 325, dated Simla, the 2nd June 1870.

THE Governor General in Council has, for some time past, been satisfied that measures might be taken with great advantage, in many parts of India, for extending and improving the system of giving assistance to proprietors of land for the construction of permanent works of agricultural improvement. I am directed to request the attention of —— * to this subject, and to state that His Excellency in Council will be glad to be informed of the views of —— † regarding the measures which might properly be adopted.

* *To Madras and Bombay*—His Excellency the Governor in Council
To Bengal—His Honor the Lieutenant-Governor

† the Government of—*Madras, Bombay, and Bengal.*

2. The Government has always, if not by extensive practice, at least by its legislation, recognized the duty which, in this country, devolves upon it of giving advances of public money for the promotion of agricultural improvements. The system of making such advances, usually called *tuccavee*, has existed more or less in the Bengal Presidency almost from the commencement of our rule. The existing law upon the subject is contained in Regulation II. of 1793, Regulation XIV. of 1793, Regulation III. of 1794, and Regulation VI. of 1795. The security is complete, since the land on which the improvement is made is declared

by the law to be responsible for the repayment of the advances, and they may be recovered by the same processes which are applicable to the recovery of arrears of land revenue.

It appears to the Governor General in Council that it would be desirable to consolidate and amend the existing law on this subject. The provisions of the old enactments that have been quoted are obviously incomplete, and they are, in some respects, hardly suited to the circumstances of the present time.

3. The system under which *tuccavee* advances for permanent improvements have been given in many parts of India is identical in principle with that which has been carried out in the United Kingdom, with admirable results, by means of the Land Improvement Acts. The Governor General in Council believes that this principle may receive a much wider and more systematic development in India than has hitherto been given to it; and he believes that no sounder or more useful principle could be acted upon by a Government which desires to make the resources of the State available for the promotion of the wealth and improvement of the people. There is, perhaps, no country in the world in which the State has so immediate and direct an interest in such questions. The Government of India is not only a Government, but the chief landlord. The land revenue, which yields twenty millions of our annual income, is derived from that portion of the rent which belongs to the State, and not to individual proprietors. There can be no doubt that, throughout the greater part of India, every measure which can be taken for the improvement of the land, and for increasing its productive powers, immediately enhances the value of the property of the State, and adds ultimately to the public resources without the imposition of any fresh burden on any class of the community.

4. The class of works, for the construction of which the assistance of the Government might properly be given to the owners and occupiers of land, would not be difficult to define. Advances of money should be usually given for that description of work only which can be designed and carried out, with a small amount of assistance, under the direction of the local proprietors themselves. These advances should not be made for great works requiring, in their design or construction, engineering skill of a high order, or the employment of large bodies of laborers. Such works, if undertaken by the Government, must necessarily be undertaken through the Department of Public Works. The works for which advances might properly be made would commonly fall into some one of the following classes:—

(1.)—Wells and other works for the storage, supply, or distribution of water for agricultural purposes, and the preparation of land for irrigation;

(2.)—Drainage;

(3.)—The reclaiming of land from rivers;

(4.)—The protection of land from floods;

(5.)—The reclaiming, clearing, and enclosing of waste lands for agricultural purposes;

(6.)—The clearing of land from stones or other obstacles to cultivation.

5. It is believed that it would not be difficult to devise and bring into operation a system under which advances of money might be made by the Government for works of this description, mainly through the agency of the Ditricts Officers of the Government, and with complete security against loss; and the benefits derived from such an application of capital to the permanent improvement of the land, might be of almost incalculable importance. His Excellency in Council is disposed to think that there are no objects to which a

portion of the loans, which it is proposed to raise every year for reproductive works, could be more advantageously and properly devoted. Such portion of the borrowed money of the year as, in the opinion of the Government of India, could be usefully lent for such purposes, would be placed at the disposal of the Local Governments. The extension of irrigation canals, and the development of our railway system, will necessarily stimulate agricultural industry, and the importance of facilitating to the utmost the prosecution of minor works of land improvement will, under such circumstances, be specially great.

6. It appears to the Governor General in Council that no elaborate machinery or expensive staff of officers would be necessary for the gradual development of a system which, in all essential respects, has long been known to and approved by the people. In the existing establishments of the Revenue and Public Works Departments, it is probable that we possess already, in the greater part of India, an organization quite sufficient for the purpose. The character of most of the works would be so simple that the Collector or District Officer, on whom would fall the chief duty of making the advances and of supervising the execution of the works, would find little difficulty in taking all necessary precautions to prevent the occurrence of abuses, and to secure the proper application of the money to the purposes for which it was advanced.

7. It appears to the Governor General in Council that, in revising the law upon this subject, some such provisions as the following might be adopted.

8. Any person desiring to make an improvement in his land, of the character referred to in the fourth paragraph of this letter, would be authorized to make an application to the Collector for an advance of money to enable him to make the improvement.

The Local Government, with the sanction of the Governor General in Council, would be authorized to make rules prescribing the manner in which such applications should be made, and in which enquiries relating to applications should be conducted; for determining the conditions under which advances might be made, and under which they would be repayable; for securing the due expenditure of the advances, the due execution, inspection and maintenance of the work for which the advance was made; and for the keeping and auditing of accounts.

9. Advances would ordinarily be made to the landlord, or to tenants whose interest in the land exceeded the term fixed for the repayment of the advance; but they might, with the landlord's consent, be made to any tenant desirous of making an improvement on the land in his occupation.

10. On receiving an application for an advance, the Collector would make such inquiry as appeared necessary in regard to the propriety of making the advance. If the result of such inquiry should be to satisfy the Collector that the proposed improvement would increase the annual value of the land in which the improvement is to be made, to an amount exceeding the sum to be charged annually upon the land for the repayment of the advance, he would be authorized (subject to the rules referred to in paragraph 8) to grant a certificate sanctioning an advance of money for the purpose of making the improvement. The certificate would state the amount of the advance, the conditions under which it was to be made, and under which it was to be repaid by instalments or otherwise; and it would specify the land which, in the event of the conditions not being fulfilled, would become chargeable for the repayment of the advance.

After the certificate was granted, the Collector would be authorized to make the advance.

11. The law would provide that when any sum stated in the certificate became due, it would be recoverable from the person to whom the advance was

made, or from any person who had become security for repayment, as if it were an arrear of land revenue due by the person to whom the advance was made, or by his security. If any sum could not be so recovered, it would be recoverable as if it were an arrear of revenue due on the land specified in the certificate.

Any sums expended by the Collector, in accordance with the rules referred to in paragraph 8, in making local inquiries, or otherwise in carrying into effect the provisions of the law in behalf of a person applying for an advance, would be recoverable in the same manner.

12. It is hardly necessary to repeat that the present proposals refer only to advances for works of permanent agricultural improvement. The Governor General in Council is aware that a vicious system formerly prevailed in some parts of India, under which nominal advances, called *tuccavee*, were often made to liquidate balances of Government revenue, and for other temporary purposes. Such advances, unless under very exceptional circumstances, were clearly incompatible with good revenue administration, and they had nothing in common with the system which it is now proposed to introduce.

13. The Governor General in Council requests that ——* will be good enough to state any opinions which he may hold in regard to the subject of this letter, and that he will favor the Government of India with any recommendations, the adoption of which may appear to him likely to increase the usefulness of the measures, of which a sketch has now been given.

* *To Madras and Bombay* — His Excellency the Governor in Council.
To Bengal — His Honor the Lieutenant-Governor.

14. If ——* should concur with the Government of India in the views stated in this letter, and should consider legislation on the subject desirable, I am to request that ——† will state whether, in his opinion, it would be expedient to pass in the Council of the Governor General a law applicable to ——‡ as well as to other parts of India, or whether ——† would prefer to deal with the subject in his own Council.

* *To Madras and Bombay* — His Excellency the Governor in Council
To Bengal — His Honor the Lieutenant-Governor

† *To Madras and Bombay* — His Excellency
To Bengal — His Honor

‡ Madras, Bombay, Bengal.

From E. C. BAYLEY, ESQ., C.S.I., Secretary to the Government of India, Home Department, to the Secretaries to the Governments of the North-Western Provinces and the Punjab; the Chief Commissioners of Oudh, Central Provinces, British Burmah and Coorg; and the Resident at Hyderabad,—Nos. 326 to 332, dated Simla, the 2nd June 1870.

THE Governor General in Council has, for some time past, been satisfied that measures might be taken with great advantage, in many parts of India, for extending and improving the system of giving assistance to proprietors of land for the construction of permanent works of agricultural improvement. I am directed to request ——* to this subject, and to state that His Excellency in Council will be glad to be informed of ——† regarding the measures which might properly be adopted.

To Chief Commissioner and Resident—your views

2. The Government has always, if not by extensive practice, at least by its legislation, recognized the duty which, in this country, devolves upon it of giving advances of public money for the promotion of agricultural improvements. The system of making such advances, usually called *tuccavee*, has existed more or less in the Bengal Presidency almost from the commencement of our rule. The existing law upon the subject is contained in Regulation II. of 1793, Regulation XIV. of 1793, Regulation III. of 1794, and Regulation VI. of 1795. The security is complete, since the land on which the improvement is made is declared by the law to be responsible for the repayment of the advances, and they may be recovered by the same processes which are applicable to the recovery of arrears of land revenue.

It appears to the Governor General in Council that it would be desirable to consolidate and amend the existing law on this subject. The provisions of the old enactments that have been quoted are obviously incomplete, and they are, in some respects, hardly suited to the circumstances of the present time.

3. The system under which *tuccavee* advances for permanent improvements have been given in many parts of India is identical in principle with that which has been carried out in the United Kingdom, with admirable results, by means of the Land Improvement Acts. The Governor General in Council believes that this principle may receive a much wider and more systematic development in India than has hitherto been given to it; and he believes that no sounder or more useful principle could be acted upon by a Government which desires to make the resources of the State available for the promotion of the wealth and improvement of the people. There is perhaps no country in the world in which the State has so immediate and direct an interest in such questions. The Government of India is not only a Government, but the chief landlord. The land revenue, which yields twenty millions of our annual income, is derived from that portion of the rent which belongs to the State, and not to individual proprietors. There can be no doubt that, throughout the greater part of India, every measure which can be taken for the improvement of the land, and for increasing its productive powers, immediately enhances the value of the property of the State, and adds ultimately to the public resources without the imposition of any fresh burden on any class of the community.

4. The class of works, for the construction of which the assistance of the Government might properly be given to the owners and occupiers of land, would not be difficult to define. Advances of money should be usually given for that description of work only which can be designed and carried out, with a small amount of assistance, under the direction of the local proprietors themselves. These advances should not be made for great works requiring, in their design or construction, engineering skill of a high order, or the employment of large bodies of laborers. Such works, if undertaken by the Government, must necessarily be undertaken through the Department of Public Works. The works for which advances might properly be made would commonly fall into some one of the following classes:—

(1.)—Wells and other works for the storage, supply, or distribution of water for agricultural purposes, and the preparation of land for irrigation;

(2.)—Drainage;

(3.)—The reclaiming of land from rivers;

(4.)—The protection of land from floods;

(5.)—The reclaiming, clearing, and enclosing of waste lands for agricultural purposes;

(6.)—The clearing of land from stones or other obstacles to cultivation.

5. It is believed that it would not be difficult to devise and bring into operation a system under which advances of money might be made by the Government for works of this description, mainly through the agency of the District Officers of the Government, and with complete security against loss; and the benefits derived from such an application of capital to the permanent improvement of the land might be of almost incalculable importance. His Excellency in Council is disposed to think that there are no objects to which a portion of the loans, which it is proposed to raise every year for reproductive works, could be more advantageously and properly devoted. Such portion of the borrowed money of the year as, in the opinion of the Government of India, could be usefully lent for such purposes, would be placed at the disposal of the Local Governments. The extension of irrigation canals, and the development of our railway system, will necessarily

stimulate agricultural industry, and the importance of facilitating to the utmost the prosecution of minor works of land improvement will, under such circumstances, be specially great.

6. It appears to the Governor General in Council that no elaborate machinery or expensive staff of officers would be necessary for the gradual development of a system which, in all essential respects, has long been known to and approved by the people. In the existing establishments of the Revenue and Public Works Departments it is probable that we possess already, in the greater part of India, an organization quite sufficient for the purpose. The character of most of the works would be so simple that the Collector or District Officer, on whom would fall the chief duty of making the advances and of supervising the execution of the works, would find little difficulty in taking all necessary precautions to prevent the occurrence of abuses, and to secure the proper application of the money to the purposes for which it was advanced.

7. It appears to the Governor General in Council that, in revising the law upon this subject, some such provisions as the following might be adopted.

8. Any person desiring to make an improvement in his land, of the character referred to in the fourth paragraph of this letter, would be authorized to make an application to the Collector for an advance of money to enable him to make the improvement.

The Local Government, with the sanction of the Governor General in Council, would be authorized to make rules prescribing the manner in which such applications should be made, and in which inquiries relating to applications should be conducted; for determining the conditions under which advances might be made, and under which they would be repayable; for securing the due expenditure of the advances; the due execution, inspection, and maintenance of the work for which the advance was made; and for the keeping and auditing of accounts.

9. Advances would ordinarily be made to the landlord, or to tenants whose interest in the land exceeded the term fixed for the repayment of the advance; but they might, with the landlord's consent, be made to any tenant desirous of making an improvement on the land in his occupation.

10. On receiving an application for an advance, the Collector would make such inquiry as appeared necessary in regard to the propriety of making the advance. If the result of such inquiry should be to satisfy the Collector that the proposed improvement would increase the annual value of the land in which the improvement is to be made, to an amount exceeding the sum to be charged annually upon the land for the repayment of the advance, he would be authorized (subject to the rules referred to in paragraph 8) to grant a certificate sanctioning an advance of money for the purpose of making the improvement. The certificate would state the amount of the advance, the conditions under which it was to be made, and under which it was to be repaid by instalments or otherwise; and it would specify the land which, in the event of the conditions not being fulfilled, would become chargeable for the repayment of the advance.

After the certificate was granted the Collector would be authorized to make the advance.

11. The law would provide that when any sum stated in the certificate became due, it would be recoverable from the person to whom the advance was made, or from any person who had become security for repayment, as if it were an arrear of land revenue due by the person to whom the advance was made, or by his security. If any sum could not be so recovered, it would be recoverable as if it were an arrear of revenue due on the land specified in the certificate.

Any sums expended by the Collector, in accordance with the rules referred to in paragraph 8, in making local enquiries, or otherwise in carrying into effect

the provisions of the law in behalf of a person applying for an advance, would be recoverable in the same manner.

12. It is hardly necessary to repeat that the present proposals refer only to advances for works of permanent agricultural improvement. The Governor General in Council is aware that a vicious system formerly prevailed in some parts of India, under which nominal advances, called *tuccavee*, were often made to liquidate balances of Government revenue, and for other temporary purposes. Such advances, unless under very exceptional circumstances, were clearly incompatible with good revenue administration, and they had nothing in common with the system which it is now proposed to introduce.

13. The Governor General in Council requests that——* will be good enough to state any opinions which $\frac{\text{he}}{\text{you}}$ may hold in regard to the subject of this letter, and that $\frac{\text{he}}{\text{you}}$ will favor the Government of India with any recommendations, the adoption of which may appear to $\frac{\text{him}}{\text{you}}$ likely to increase the usefulness of the measures, of which a sketch has now been given.

* *To North-Western Provinces and Punjab* — His Honor the Lieutenant-Governor
To Chief Commissioners and Resident — you

14. I am to request the favor of a reply to this letter with as little delay as may be practicable.

APPEALS TO HER MAJESTY IN COUNCIL IN CASES INVOLVING DISPUTED BOUNDARIES, BUT IN WHICH NO QUESTION OF TITLE IS RAISED.

From E. C. BAYLEY, ESQ., C.S.I., Secretary to the Government of India, Home Department, to the Secretaries to the Governments of Fort St. George, Bombay, Bengal, and the North-Western Provinces,—Nos. 907-10, dated Simla, the 27th May 1870.

I AM directed to transmit the accompanying copy of a despatch from Her Majesty's Secretary of State for India, No. 10, dated the 10th March 1870, and of the communication therein enclosed from the Standing Council to the India Office, relative to appeals to Her Majesty in Council in cases involving disputed boundaries, but in which no question of title is raised.

2. I am to request that you will be so good as to submit these papers to the Government of —— * and to move $\frac{\text{His Excellency in Council}}{\text{the Hon'ble the Lieutenant-Governor}}$ to favor the Government of India (after consultation with the local High Court)† with any remarks on Mr. Forsyth's suggestions, and on the general question raised in the third paragraph of the Secretary of State's despatch, namely, whether it be not desirable to limit all appeals from India to questions of law only.

* Fort St. George.
Bombay.
Bengal.
North-Western Provinces.

† These words omitted in the letter to Bengal.

From E. C. BAYLEY, ESQ., C.S.I., Secretary to the Government of India, Home Department, to the Registrar of the High Court of Judicature, Calcutta,—No. 911, dated Simla, the 27th May 1870.

I AM directed to transmit the accompanying copy of a despatch from Her Majesty's Secretary of State for India, No. 10, dated the 10th March 1870, and of the communication therein enclosed from the Standing Council to the India Office, relative to appeals to Her Majesty in Council in cases involving disputed boundaries, but in which no question of title is raised.

2. I am to request that you will be so good as to submit these papers to the High Court and to move the Hon'ble the Chief Justice and Judges to favor the Government of India with any remarks on Mr. Forsyth's suggestions, and on the general question raised in the third paragraph of the Secretary of State's despatch, namely, whether it be not desirable to limit all appeals from India to questions of law only.

Judicial.
No. 10.

INDIA OFFICE;
London, the 10*th March* 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

MY LORD,—I forward herewith copy of a communication from Mr. Forsyth, the Standing Counsel to this Office, relative to appeals to Her Majesty the Queen in Council in cases involving disputed boundaries, but in which no question of title is raised.

2. I desire to be furnished with the opinion of your Excellency in Council, after consultation with the various Local Government and High Courts, on Mr. Forsyth's suggestions.

3. I am inclined to doubt the propriety of exempting any one class of cases from liability to appeal, for all the arguments which may be urged against the expediency of deciding questions of boundary or disputed evidence by a Court of Appeal in this country may be frequently applicable, with equal force, to other appeals in cases where a conflict of testimony occurs. But the whole question is worthy of consideration, whether it be not desirable to limit all appeals from India to questions of law only. Where the local tribunals are well constituted, it is obvious that decisions on matters of fact, with the advantages of oral evidence and confrontation of the witnesses, can be much matter made on the spot than by any Court of Appeal at a distance. It is probable that the time has arrived in India when the local Courts may be trusted, as juries are in this country, to dispose finally of all controverted facts.

4. If, on investigation, your Lordship in Council should think that this principle can be acted on, it would be necessary to alter your procedure in Courts of Appeal, so as to enable those tribunals when dissatisfied with a decision on the facts, instead of reversing the judgment, as it present, to remit the case for a new trial before the same or some other Court in the locality.

5. When you have obtained the information required, I desire that it may be carefully considered by your Excellency's Government, and transmitted to me, with the opinion of your Lordship in Council, both on the specific and on the general question, as a foundation for legislation in Parliament.

I have the honor to be,

MY LORD,

Your Lordship's most obedient, humble Servant,

ARGYLL.

From W. FORSYTH, ESQ., to His Grace the DUKE OF ARGYLL, &c., &c., &c.,—dated Temple, the 6th December 1869.

THERE is a class of appeals which come over from India leading to a great deal of useless and expensive litigation, and in which, I think, some change ought to be made. I allude to questions of disputed boundary, where the only question is, what are the proper boundaries of the disputed lands. They are generally accompanied by Native Indian maps which are hopelessly unintelligible. In almost all these cases the Judicial Committee of the Privy Council upholds the decree of the Court appealed from, as it is reasonable to suppose they would. What I venture to suggest is, that in all such cases where no question of title is involved, the right of appeal to the Queen in Council should be taken away, and the High Court of the Presidency should appoint a surveyor of engineer with or without a barrister, as the case may require, to go to the spot and make a survey map and report, and upon receiving these the High Court should *finally* decide the case. For this purpose, I think, it would be necessary to pass a short Imperial Act, as the Indian Government could not of itself pass an Act taking away a right of appeal which is given by Act of Parliament. This Imperial Act might empower the Indian Government to pass the requisite Act and take away the right of appeal. I believe that if your Grace were to consult the members of the Judicial Committee, they would be found to be in favor of my proposal.

OCCURRENCE OF COAL IN THE COUNTRY BETWEEN BILASPUR AND RANCHI.

From T. OLDHAM, ESQ., LL. D., Superintendent of the Geological Survey of India, to the Secretary to the Government of India, Home Department,—No. 749, dated Calcutta, the 14th June 1870.

IN continuation of Report on the Coal at Korba, in Bilaspúr, submitted with my letter No. 727, dated 17th May 1870, I have now the honor to send a brief Note, also by Mr. W. T. Blanford, on the extension of the coal rocks to the eastwards and north-eastwards.

2. All these papers bear out the promise of a very large area and amount of fairly good fuel in the country referred to, which will at some future time prove most valuable.

Note by MR. W. T. BLANFORD, *Deputy Superintendent, Geological Survey of India, on the occurrence of Coal, east of Chatisgarh, in the country between Bilaspúr and Ranchi,—dated Calcutta, the* 31*st May* 1870.

THE coal-bearing (Damuda) beds of Korba extend for about *forty miles* to the eastward, as far as Rábkúb, in Udipúr (Oodeypore). They also extend far to the south-east towards Gángpúr, and to the northwards towards Sirgúja, and in all probability are continuous, or nearly so, with the deposits of the same nature known to occur in those Districts.

Main Pat and the neighbouring hills, and all the country on the road from Main Pat through Chándargarh and Jashpúr to Ránchi, consist of metamorphic rocks with the exception of a cap of trap and laterite on Main Pat.

The lateness of the season* prevented my searching to any extent for coal seams, indications of the existence of which were afforded by the occurrence of fragments of coal in the rivers, especially in the Mánd. I found a few seams near Chitra, twelve miles west of Rábkúb and nearly thirty east of Korba. Two or three are seen in the Mánd about three to four miles east north-east of Chitra, but they are only from a foot to 18 inches in thickness. In a small stream, the Kopa Naddí, which runs south of Chitra, one seam about three feet in thickness is seen near the village of Tendúmúri, more than a mile south-west of Chitra. It is nearly horizontal, having a very low irregular dip to the west or south-west. Part consists of fair coal, the remainder is shaley.

* After the end of April I had still 250 miles to march to Hazaribagh.

The only seam examined from which it is possible that a useful supply of fuel might be obtained, is exposed in the same stream rather nearer to Chitra, being about a mile from that village, close to the boundary of the village of Tendúmúri. It is very badly seen, but appears to be of considerable thickness, perhaps 20 feet. The upper portion is so much decomposed that no trustworthy estimate could be formed of the quality without digging into the seam; the lower portion appeared to be fair in places. The dip is about 15° to north north-west.

The villagers, as usual, would give no information, so that I could only trace out the coal seams by the laborious process of searching the beds of the streams, and from want of time I was unable to ascertain whence the greater portion of the fragments seen in the Mánd were derived; but when passing through Ránchi, Lieutenant Sale, in charge of the Chota Nágpúr Topographical Survey Party, told me he had found a seam of coal about four miles north-west of Rábkúb in a small stream running into the Mánd, and it is probable that this may be the source of the blocks I saw on the river bed.

I should add that several coal localities have been lately found by the Officers of the Topographical Survey and recorded in their maps. They are all north of Korba and Udipúr.

When passing through Jashpúr, the Rajah told me that coal occurred in his territory in the Khurea country, twenty-four miles north-west of Jashpúr Nagar. This would be about one hundred miles or rather more west by south of Ránchi.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 5th July 1870.

PRESENT:

His Excellency the VICEROY and GOVERNOR GENERAL of India, K.P., G.C.S.I., *Presiding.*
His Excellency the COMMANDER-IN-CHIEF, G.C.B., G.C.S.I.
The Hon'ble JOHN STRACHEY.
The Hon'ble SIR RICHARD TEMPLE, K.C.S.I.
The Hon'ble J. FITZJAMES STEPHEN, Q.C.
The Hon'ble B. H. ELLIS.
Major-General the Hon'ble H. W. NORMAN, C.B.
The Hon'ble F. R. COCKERELL.

CUSTOMS DUTIES EXEMPTION BILL.

The Hon'ble SIR R. TEMPLE moved that the Bill to enable the Government of India to exempt goods from Customs Duties be passed.

The Motion was put and agreed to.

BANK OF BENGAL DIRECTORS' BILL.

The Hon'ble SIR R. TEMPLE also moved that the Bill to enable the Directors of the Bank of Bengal to act by a quorum be passed.

The Motion was put and agreed to.

COURT FEES' ACT AMENDMENT BILL.

The Hon'ble MR. COCKERELL moved that the Bill to correct two clerical errors in the Court Fees' Act be passed.

The Motion was put and agreed to.

COINAGE AND MINT BILL.

The Hon'ble MR. STEPHEN moved for leave to introduce a Bill to consolidate and amend the laws relating to Coinage and the Mint. He said that this Bill formed part of the scheme for consolidating the statutory law of British India. It would replace three ill-drawn Regulations and two Acts, and would, in addition to the provisions therein contained, authorize the destruction of light-weight, called-in, and counterfeit coin. If leave were given to introduce the Bill, it would be carefully settled in consultation with the Financial Department.

Leave was granted.

The Council then adjourned to the 19th July 1870.

WHITLEY STOKES,
Secy. to the Council of the Govr. Genl. for making Laws and Regulations.

SIMLA,
The 5th July 1870.

No. 27 of 1870.

SUPPLEMENT TO The Gazette of India.

SIMLA, SATURDAY, JULY 16, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SANITARY ADMINISTRATION.

From DR. J. M. CUNINGHAM, Sanitary Commissioner with the Government of India, to the Secretary to the Government of India, Home Department,—No. 183, dated Simla, the 28th May 1870.

IN accordance with the orders of the Government conveyed in your No. 461, dated the 27th October 1869, and with reference to the other letters noted in the margin, I have the honor to submit a general review of the annual reports of the local Sanitary Commissioners for 1868.

From	Home Department	No.	391,	dated	1st September	1869.
To	„	„	949,	„	11th October	„
From	„	„	461,	„	27th „	„
„	„	„	55,	„	1st March	1870.
„	„	„	62,	„	7th „	„
„	„	„	80,	„	29th „	„

2. These reports reached this Office in the following order and on the dates which are noted opposite to each :—

For the Central Provinces, on 3rd September 1869.
„ Oudh, on 26th October 1869.
„ North-Western Provinces, on 28th October 1869.
„ Punjab, on 6th December 1869.
„ Central Provinces (supplementary report on cholera), on 21st February 1870.
„ Bengal, on 13th April 1870.
„ British Burmah, on 25th May 1870.

It will thus be seen that out of these five reports for the year 1868, two of them—those for Bengal and British Burmah—were not received till after the first quarter of 1870. As remarked in my letter No. 8, dated the 5th January, some exceptional difficulties were to be anticipated in the first year of local sanitary administration, and delay in the preparation of the first annual reports is readily accounted for.

3. Great delay has, however, occurred, and as the time has now arrived at which I should be in a position to consider the general sanitary history of 1869, it does not appear advisable that I should discuss at any great length the reports of 1868. I propose therefore to confine myself to a short review of the main facts of interest which they contain, and I shall then take the opportuinity of adding a few suggestions as to the manner in which it appears to me that the annual reports should in future be prepared.

Sanitary Report of the Central Provinces. Meteorology.

4. The report of the Sanitary Commissioner for the Central Provinces contains a clear and succinct account of his proceedings during the year under review. Under his care, measures have been adopted for obtaining a more accurate register of meteorological phenomena in the Province. More reliable rain gauges were being supplied, and greater attention devoted to the mode of measurement. Additional stations for meteorological observations had also been sanctioned. The register for Nagpore alone was complete for 1868; but it was hoped that, in addition, Raepore, Jubbulpore, Seonee, Saugor, Hoshungabad, Khundwah, Chandah, and Sumbulpore would in future supply reliable data. In the other Provinces the work of collating meteorological registers has been discharged by a special officer designated the Meteorological Reporter; but as no stations in the Central Provinces supply meteorological records to any of these officers, the arrangements which have been made by the Sanitary Commissioner for obtaining information on this important subject must prove of great value.

General characteristics of the year.

5. The meteorological records for 1868 are thus imperfect, the only complete register, as has been already stated, was supplied from Nagpore; but the main characteristics of the year, which were observed there, were observed generally throughout the Central Provinces. Rain fell on 65 days, and the total fall for the year was only 25·5 inches. The average for Nagpore is 40 inches, and in 1867 there had been 58·1. The chief features of the year thus were a small rain-fall and an early termination of the monsoon.

Vital statistics.

6. To the vital statistics of the Province Dr. Tounsend has paid special attention, and four Tables are appended to show the results during 1868. Registration as yet embraces only about five millions or less than one-half of the total population, and it is evident, as fully acknowledged by the local authorities, that no reliable conclusions can be drawn from the data available. The disparity in both the birth and death rates of neighbouring Districts, to which attention is called by the Sanitary Commissioner, is sufficient to show that registration is as yet very imperfect and incorrect; but the subject is receiving the attention of the Chief Commissioner, and with the hearty coöperation of the District Officers and the carefully supervision of the Sanitary Commissioner, the beginning, which has been already made, will doubtless end in procuring most valuable statistics,—valuable not only in a scientific light, but as affording the only sound basis for sanitary reforms.

Illustrations of the returns.

7. It is not therefore advisable to attempt any full analysis of these returns, and it will be sufficient to state the general results and to illustrate the disparities which indicate defects in the records, and to remedy which the attention of the authorities is being directed.

Birth rate.

8. Out of a population of nearly five millions (4,744,836) 107,199 children were born, of whom 58,804 were males and 48,395 females, giving a total ratio of 22·1 per 1,000, or 24·4 of male and 22·2 of female births per 1,000. The general birth rate varies from 14·6 in Nursingpore to 33·5 in Seonee, and similar discrepancies appear if the relative rates of the sexes be examined in different Districts. The difficulty of registering births with any accuracy is well known, and it is not surprising that the results should as yet be evidently unreliable.

Death rate.

9. The total death rate in the population among whom registration is carried on amounted to 16·5 per 1,000, giving 24·8 in the cities and only 14·7 among the country people. In the body of the report, paragraph 22, the death rate is stated to be 19·7 per 1,000; but this would appear to be a misprint, as the ratio of 16·5 is given in the Tables. Considerable discrepancies are apparent in the statistics, and these have not been lost sight of by the local authorities. It is gratifying to learn that, notwithstanding these defects as a whole, they indicate considerable improvement, and that strenuous efforts are being made to render them more and more trustworthy.

Fevers.

10. Where confidence cannot be placed in the number of deaths recorded, the causes to which the deaths have been due are not likely to be very accurately stated. Sixty per cent. of the whole mortality is under the head of "fevers;" and, although the Sanitary Commissioner is of opinion that deaths from other causes are frequently entered under this head, there is little doubt that malaria is directly or indirectly the cause of one-half of the mortality of these Provinces. In

1868, however, fevers, and specially intermittent fevers, were less prevalent than usual—a fact which he ascribes to the peculiar meteorology of the year, and the accuracy of which is fully borne out by the statistics of the troops and prisoners as given in my annual sanitary report for 1868.

Cholera.

11. The history of the cholera in the Central Provinces is carefully sketched in Dr. Tounsend's general report, and it also forms the subject of a special and very complete report which was separately submitted to the Chief Commissioner. In 1867, it is to be remarked, these Provinces were remarkably free from the disease. In 1868 they suffered much, and in 1869, it may also be observed, they have been the scene of a very severe outbreak. During 1868, 7,592* deaths were reported from this disease, but the general impression appears to be that the numbers were considerably under-stated. All of the Districts, except Sumbulpore, suffered more or less, but the severity of the epidemic was confined to Seonee, Mundla, and Jubbulpore. In these three the deaths from this cause are returned as having been, respectively, 1,638, 1,074, and 2,940.

Special enquiry into the cholera epidemic.

12. As soon after the epidemic as the weather permitted, Dr. Tounsend proceeded to these Districts, and, during the course of the cold season, investigated the circumstances connected with the greater or less prevalence of the disease in upwards of 300 villages. His enquiries were directed chiefly to the nature of the soil, the water-supply, and the general sanitary condition, as well as to the circumstances connected with the appearance of the first case in each. Where any village preserved complete or comparative immunity from choleral an explanation of such immunity was sought for on the spot. The result of this persona, enquiry is embraced in the special report to which allusion has already been made, and which is a very valuable record of a most painstaking investigation.

Origin of the epidemic.

13. Dr. Tounsend discusses at some length whether the disease was bred within the localities attacked, or whether it was introduced from elsewhere; and on this point he comes to the conclusions "that, although there was no actual proof of the choleraic influence, or infecting matter having been imported from elsewhere, yet the fact of the first manifestations of the disease having occurred in bodies of men located close by a road daily thronged with passengers from a part of the country in which the disease had previously appeared, afforded strong support to the supposition that the infecting matter may have been imported rather than generated;" and to this statement he adds "the account given of the subsequent spread of the disease and of its appearance in the different towns and villages scattered over the epidemic area, appears to me to favor the opinion that the choleraic influence is diffused by means of human intercourse, and by that means alone."

Difficulty of deciding the question.

14. Numerous instances are adduced in which an outbreak of cholera followed closely on the arrival of some person or persons actually suffering from the disease, and such instances are particularly striking in those parts of the country in which the villages are much scattered. Numerous examples are given in which the meeting together of a number of persons to join in a marriage procession and their subsequent dispersion, appear to have been the means of diffusing the disease. Cases are, moreover, cited, in which it would seem to have been carried from an infected locality by an individual who was not himself suffering from it. Such cases are of much interest, and it is very desirable that they should be carefully investigated and recorded in the manner which Dr. Tounsend has adopted. On the other hand, it is to be observed that in very many villages no evidence of importation could be obtained, while in others the arrival of a person suffering from cholera was not followed by any outbreak of the disease in the community among which he had come. Moreover, the limits within which the severity of the epidemic was confined are not easily explained on the theory of human intercourse.

Quarantine a failure.

15. But, whatever difference of opinion may exist on the general question of the communicability of cholera, and as to the deductions on this difficult problem which are to be drawn from the history of the outbreak in the Central Provinces which Dr. Tounsend has so carefully investigated, there is practically no difference as to the possibility of adopting any repressive measures for meeting such a danger. Quarantine was tried, but "in no case," remarks Dr. Tounsend, "did quarantine succeed in preventing the invasion of cholera, and it may be doubted whether the advance of the disease was in any degree delayed. Quarantine," he adds, "may therefore be said to have failed, and it is probable that when once any portion of the population of a tract of country has become infected with cholera, all attempts to check the spread of the disease by quarantine measures will prove futile." In illustration of the same, he observes that, "early in the present year (1869), when the first outbreak, of cholera were reported, I recommended the

* This is the number entered in Table VI. of Annual Report. In Table VI. of the Special Report the number is given as 9,602. The deaths from cholera for 1869 are given as 47,848.

establishment of quarantine at certain points. Afterwards, however, in the course of my tour on arriving at a point on one of the main lines of communication where quarantine had been established, I found that, although a large number of foot passengers, a drove of pack-bullocks and some 60 carts had been stopped from two to four days, and the progress of important railway works in the neighbourhood greatly interfered with, no passengers of the better class had been detained. Moreover, cholera has passed the barrier, and had already appeared in villages behind it. The uselessness of quarantine of this kind was so obvious, and the obstacles in the way of rendering it more stringent and effectual so great, that I recommended that the general traffic of the country should no longer be interfered with by attempts of the kind."

Minor measures of supervision recommended.

16. But, although strict quarantine must thus be regarded as a failure, Dr. Tounsend is of opinion that certain minor measures of precaution may be adopted with advantage; that bodies of men returning from infected localities should be carefully watched, and, when possible, diverted from the main lines of communication; that accommodation should be provided for the treatment of sick travellers near the approaches of large towns; that the holding of fairs within an epidemic area should be prohibited; that whenever cholera appears at them or other gatherings the meeting should be dispersed; and that marriage processions should, as far as possible, be discouraged whenever cholera is about. Whatever opinion is held regarding the effect of human intercourse in disseminating the disease, there can be no question that congregations of people, and especially large congregations, favor its spread; and the recommendations which Dr. Tounsend supports may therefore be carried out with advantage.

No perceptible influence of site and sub-soil moisture on cholera.

17. In the course of his investigations, the Sanitary Commissioner came to the conclusion that elevation and dryness of site are no safeguard against the invasion of cholera. Villages situated on the tops of rocky ridges or on high, open plateaus, but built on hard impermeable rock, bare of soil and where sub-soil water did not exist, suffered in some cases with extreme severity. The opinion, therefore, at which Dr. Tounsend arrived was this,—"that the notion of there being any relation between moisture of the soil and sub-soil water, and the development of the infecting matter of cholera, derives no support from the study of the disease as it prevailed in these Provinces."

Marked influence of the water-supply.

18. But there was one condition which appeared to exert a very remarkable influence on the progress and diffusion of cholera in this epidemic, and it is to the careful enquiries under this head to which I would draw particular attention. The connection between an impure water-supply and a severe outbreak of cholera in any community has been much insisted on by high sanitary authorities; and the facts collected in the Central Provinces regarding the epidemic of 1869, appear to Dr. Tounsend strongly to substantiate the truth of this opinion. Comparing the different tracts of country, he finds that, where the number of villages attacked and the percentage of mortality from cholera were small, the water was chiefly drawn from deep wells where it was abundant, and that where it fell with the greatest severity the water-supply was both deficient in quantity and especially liable to contamination; or, taking the Districts where the disease was most prevalent, the ratio of mortality, as a rule, was high or low in individual towns and villages in inverse proportion to the measure of good pure water available. Numerous instances are cited in which individual villages in an infected tract escaped the severity of the outbreak, and in some instances escaped altogether, and where no explanation could be assigned for the enviable distinction beyond the fact that the water-supply of that community was more abundant and better than that of their neighbours. On the other hand, the villages that suffered in the greatest degree were all dependent on sources of water-supply more or less evidently liable to all kinds of pollution.

Necessity of improving the water-supply.

19. Without entering into the question of the manner in which an impure water acts in favoring the spread of cholera, whether ordinary impurities alone are sufficient, or whether some special *contagium* is requisite, it is sufficient, for all practical purposes, to admit the fact that one of the most important sanitary reforms which can be adopted for preserving the people against the ravages of cholera is to improve the water-supply. The importance of this matter has been strongly urged on the Local Government and in the orders of the Chief Commissioner which accompany Dr. Tounsend's report, the necessity for this improvement is fully admitted. District Officers have been instructed to call on the landowners to procure for their villages a supply of water which shall, in each case, be pure and sufficient for their wants, and the attention of the District authorities to this important point cannot fail to be productive of much practical benefit to the people.

Small pox.

20. Of the other diseases to which special reference is made, the only one that need be noted is small pox. From this the Central Provinces were unusually free during 1868. Nimar and Hoshungabad were exceptions to this rule, and, with reference to them and other Districts which were affected above

the average, it is remarked that they had enjoyed comparative immunity during the two previous years, and that the increase may in a measure be attributed to the larger number of unprotected persons who were thus exposed to the influence of the poison.

Sanitary condition of individual Districts.

21. The third section of Dr. Tounsend's report is devoted to a short summary of the sanitary condition of the different Districts. Into these details it is not desirable that I should enter. In not a few parts of the country, owing to the unusual drought, provisions were high, and in some cases there was much distress but, as a rule, the abundant demand for labor and the high rate of wages afforded relief. Many defects are brought to notice in conservancy and water-supply, and suggestions made for their improvement. The practice of stalling cattle in large numbers within the villages and even within the houses prevails largely throughout these Provinces, and the evils of such a system are frequently alluded to. Testimony is borne to the general interest which is taken in the sanitary improvement of their Districts both by the District and Medical Officers, and with their valuable aid the people will in time become impressed with the injury to health which arises from this and other customs.

General remarks.

22. Dr. Tounsend's reports are eminently practical. His great object has been to collect facts, and, although a difference of opinion may obtain as regards some of the conclusions which he has drawn from them, it must be admitted that he has spared no pains to make his record of them as full and accurate as possible. His recommendations are simple and to the point, while the remedies which he proposes are, at the same time, such as may be carried into practice without any insuperable difficulties. I have purposely avoided the discussion of any purely theoretical questions. His explanation of the manner in which cholera covered a given area within the Central Provinces may be incorrect, but the value of the sanitary measures, and especially the improvement of the water-supply which he recommends as the best means of escape within an infected area, cannot be questioned.

Sanitary report for Oudh. Part alone received.

23. The sanitary report for Oudh is for the official year 1868-69. It consists of three Parts as shown in the Table of Contents: I., summary report; II., original reports of Health Officers; and III., copies of papers by the Sanitary Commissioner. Part I. alone has reached me (in all probability the other two have not been printed), and to it is appended a copy of the sanitary report of Lucknow by the Health Officer of the city.

Summary report.

24. The summary report is divided into several short chapters embracing the subjects of sanitary police, State medicine, hygiene, and vital statistics; and Dr. Sutherland's remarks on each and all of these questions, although rather too general in their character, are worthy of consideration. From the census taken on the 1st February 1869, it would appear that the population of Oudh, exclusive of the Native Army, numbers 11,205,133, of whom 273,126 reside in the city of Lucknow. The registration of births is obviously incorrect, and the records of the death ratio also extremely imperfect. From the general Table appended to the report it appears that the births registered were in the ratio of 20·2 per 1,000 of the population, whereas the deaths were only 12·9. The birth rate varied from 9·8 in Barábunkee to 30·9 in Kheree. In Barabunkee the deaths were only 5·3 and in Gondah 19·0 per 1,000. The latter is the highest ratio recorded, and it may, I think, be assumed that the mortality thoughout the Province has been greatly under-stated. It is not possible to form any accurate estimate of it during the year, or of the extent to which that mortality was due to individual causes. In the Districts of Fyzabad, Gondah and Seetapore, cholera was more prevalent than in other parts of the country. Small-pox is reported to have been epidemic and very fatal in the winter of 1868-69 and spring of 1869. Under this head 7,728 deaths were recorded during the year, chiefly in the Districts of Oonao and Gondah.

Special report on Lucknow.

25. From the data given by Dr. Bonavia in his special report on the city of Lucknow, of which he was Health Officer, it appears that the year was unusually dry. The rain-fall was less than the average, having measured only 27·07 inches. According to the Table of vital statistics, the deaths in the city were at the rate of 19·2 per 1,000. One hundred and fifty-three deaths occurred from cholera. Dr. Bonavia remarks,—"the disease showed no sign of spreading by contagion, nor could I collect any evidence of its having been imported in the first instance. I particularly impressed on the men employed under me and on the police the importance of ascertaining, in each instance, whether any other cases had occurred in the *same* house during the year; but during the whole time the disease lasted, in only seven cases did a second case occur in the *same* house." Considerable improvements have been made in the city, especially in building and remodelling latrines, and I can bear testimony to the admirable manner in which they were kept.

Sanitary report of the North-Western Provinces mortuary statistics for 1868.

26. Dr. Plank's report is divided into two portions: Part I. relating to the mortuary statistics of the year, and Part II. containing an account of the inspections of a number of towns and villages. The mortuary statistics are given in one general Table, the reader being referred to a separate volume of statistics for any further particulars that may be desired. It would be more convenient if all the detailed information regarding the health of the Province were concentrated in one. According to the general return it appears that the death rate for the whole Province during 1868 was only 10·8 per 1,000 compared with 12·5 in 1867. It is evident that both ratios are altogether untrustworthy. The details of 1868 vary in different Districts from a minimum of 3·8 in Bustee to a maximum of 20 per 1,000 in the Terrai. In all likelihood the latter ratio is considerably under the truth, and the former is incredible. The Sanitary Commissioner is well aware of the inaccuracies, and, taking the case of Allahabad, shews that if the returns were correct the average value of human life in that District would be 153 years.

General greater healthiness of 1868 over 1867.

27. There is evidence, however, in these returns, unreliable as they are, that the general health of the people in the North-Western Provinces during 1868 was better than in 1867, and the accuracy of this fact is attested from other sources. Fevers, small pox and cholera were all much less prevalent than they had been in the year previous. The latter disease was chiefly confined to the Districts in the eastern part of the Provinces—Goruckpore, Ghazepore, Mirzapore, Azimgurh, Benares, Jounpore, and Allahabad.

Personal inspection of cities and villages.

28. In the second and main part of his report (occupying 72 of the total of 80 pages), Dr. Plank gives the result of his inspection of 58 cities and towns which he visited during the year. With the exception of a few important cities, such as Allahabad, Benares, Agra and Meerut, they belong chiefly to the Rohilkhund Division. In marching from town to town the condition of the villages was also noted, and these are specially commented on in a separate chapter. The defects in drainage and conservancy at these several places are recorded, and the orders of the Local Governments, which are appended to the report, show that the attention of the District Officers has been called to them with a view to their being remedied.

29. Dr. DeRenzy's report is full of interest. It is divided into four sections—

Sanitary report for the Punjab.

I.—On the system of sanitary improvements best adapted to the Punjab;

II.—On the subjects enquired into during the year;

General division of the report.

III.—Detailed reports son particular Stations;

IV.—On the result of registration of deaths during the year.

It would be impossible within the limits of a general review to enter on the many important questions which are ably discussed under these various headings, and I shall therefore confine myself to a few general observations.

Sanitary improvement.

30. As Dr. DeRenzy justly observes, the great want in our large towns is works of sanitary improvement, but without money and without specially-trained Engineers, it is a matter of no small difficulty to supply what is desired. When the Bill for enabling municipalities to borrow money for sanitary improvements becomes law, the pecuniary obstacle will be, to a certain extent, removed, but the engineering skill required will remain unsupplied. The Sanitary Commissioner mentions 20 towns in which such works are urgently wanted, and where he suggests that they should be commenced as soon as possible. But in such a scheme everything depends practically on the amount of money available; and, before coming to any definite conclusion on the subject, it would be desirable to know what the proposed works are estimated to cost, and whether the borrowing powers of the municipalities under the new Act will be equal to the strain required.

Delay in the execution of sanitary works inevitable.

31. These points have, I doubt not, received consideration; but, even admitting that the towns in question will be able to provide the works required, a very long time must elapse before a series of sanitary works can be executed throughout the cities of a Province, specially when the special engineering staff available for the purpose must be so limited. It therefore appears to be of great importance that, bearing in mind the future improvements which are to be carried out as soon as money and men can be obtained for the purpose, no effort should, at the same time, be spared to remedy the evils at once, so far as they can be remedied by simpler and less expensive men. Much has, I am aware, been done in the Punjab to impress on the people the benefits of sanitation, and there can be no question that there are many very simple reforms which can be carried out with great advantage to

the public health and at a very trifling cost. It is to be feared lest, in the towns designed for great sanitary works, these simple reforms may not be urged with the vigour which is desirable.

Advisability of inaugurating reforms in both villages and towns.

32. In this point of view, moreover, it appears that too marked a distinction has been drawn between the town and the village population, and the conclusion that it is "inexpedient to attempt the improvement of villages at present further than by advice and endeavours to diffuse among the people a knowledge of the laws of health" might be reconsidered. For the improvement of villages no expensive works as a rule are needed, nor, even where they may be required, is it probable that funds will be available to carry them into execution for some time to come. It is therefore all the more desirable that those simple reforms which may be accomplished should not be delayed. The remark that all real sanitary reforms must be worked out by the aid of the people themselves applies, perhaps, with even more force to the rural population than to the towns, and much may, I believe, be done by District Officers and by all the other officials who come in contact with the people to aid in the reformation. In addition to diffusing a knowledge of sanitary matters among them, something may eventually be done to oblige landowners to provide a good, wholesome water-supply to their villagers, and to attend to other matters of sanitary importance. The manner in which such measures may best be carried out, so that they shall be effectual and at the same time as little distasteful as possible to the prejudices of the people, is a question which might well engage the attention of the local Sanitary Commissioners without interfering with the greater sanitary works which are required for cities, or with any of their other most important duties. The towns named and described by Dr. DeRenzy are much in want of sanitary works. In the necessity for having these wants supplied as early as possible, I fully concur, but I much fear that, if the sanitary improvement of the villages is to be postponed until these and other such works have been completed, much valuable time will be lost.

General supervision and guidance, the work of the Sanitary Commissioner.

33. It must be remembered that the Sanitary Commissioner can himself accomplish but little. The actual designing and execution of works of any description must be done by Engineers, the sanitary improvement of villages and the sanitary instruction of the people must be carried out through the agency of District Officers or of municipalities under the general supervision and guidance of the Sanitary Commissioner, and it does not appear that any good will be gained, or that the work will in any degree be facilitated, by leaving any one portion of it to be commenced only when another part has been completed.

Results of registration of deaths.

34. Leaving the second and third sections of this report which contain a notice of some of the special subjects which the Sanitary Commissioner enquired into during the year, and also his detailed reports of inspection of several Stations which are well worthy of attention, I shall pass on to the fourth part which embraces the results of registration of deaths during the year. The original Vernacular registers are sent to the Sanitary Commissioner's Office weekly, and from them monthly statements are compiled and published in the *Gazette*. Abstracts of the returns from all large towns in the vicinity of Military Cantonments now appear weekly. So far as the results of 1868 are concerned, as the Sanitary Commissioner points out, the records in many places are still of little value. In Districts the death rate fluctuated between 5 and 24 per 1,000, and in the towns similar inaccuracies are evident. The total death rate for the Province, as deduced from the statistics, is 15 per 1,000. To the important subject of registration, Dr. DeRenzy devotes much attention, and the statistics of each year will, I feel sure, show the effect of his careful supervision.

Non-epidemic character of the year.

35. As regards special diseases, the year would appear to have been singularly free from epidemic sickness. There were very few deaths from cholera; and, although the total mortality from small pox was heavy, the violence of the disease was confined to a few Districts.

Sanitary Report for Bengal. General division of the Report.

36. The report for Bengal is divided into four parts. The first, as explained by Dr. Smith in his prefatory note, gives a general outline of sanitary administration in Bengal, and of the work done in the year under review. The second, which forms the most bulky portion, consists of extracts from forty District reports sent in by Civil Surgeons. The third contains special remarks on these reports, and the fourth is a brief review of topics of general sanitary interest. To these are added an appendix, in which papers by the Sanitary Commissioner on certain important subjects are reprinted.

Chief subjects engaging attention during the year.

37. One of the first subjects which engaged attention during the year was the preparation of a series of simple rules for the proper management of village conservancy. The subject of pilgrimage and its effects on the health of the people were carefully studied, and, after visiting Pooree at the time of the great festival, a special report was submitted to the

Government on the subject. The conservancy of Calcutta, and especially the very difficult question of how the night soil may best be disposed, was also enquired into. This matter, as well as a scheme for medical relief of the people, the procedure to be adopted on the appearance of small pox in an epidemic form, the registration of deaths, and sanitary progress in Bengal, were all made the subjects of investigation and of separate communications to the Government.

General opinions on sanitation in Bengal.

38. The reports of the Local Medical Officers and the special remarks of the Sanitary Commissioner on each, which form Parts II. and III., deal with matters of detail, into which it would be impossible to enter without occupying much space and time, and I shall therefore proceed to consider the fourth Part, which embraces some general opinions on leading questions connected with the sanitation of the Province. As Dr. Smith observes, the sanitary measures which are most important and most urgently required for Bengal are "good water-supply, efficient drainage, proper conservancy, and careful disposal of the dead."

Importance of improving the water-supply.

39. There is little doubt that here, as in other parts of India, there is almost universal pollution of the water-supply, and the proper remedy for this evil forms one of the most important sanitary questions of the day. On this subject Dr. Smith's remarks are deserving of attention. "I am of opinion," he writes, "that at the expense of every village and town in Bengal a good and abundant supply of water should be systematically furnished to the people by the Government. In outlying places, zemindars and heads of villages should be held strongly responsible that well and tank water within their jurisdiction is not wantonly defiled." It would, I fear, hardly be possible for the Government directy to supervise such a general scheme of water supply; but, by drawing the attention of District Officers to this very important question, and, if necessary, by introducing fresh legislation on the subject, measures may be adopted which will prove of incalculable benefit to the people.

Registration of deaths.

40. The only statistics regarding deaths in Bengal are contained in Tables regarding one or two very small communities of Native Christians. The returns received for 1868, Dr. Smith remarks, are utterly valueless. It is hoped that some progress has since been made in this most important matter.

Fevers in Bengal.

41. In a very brief notice on the fevers of Bengal, Dr. Smith expresses his opinion that "the fever of the Bengal Districts is, beyond all doubt, an endemic malarious disease, due to local causes,—chiefly want of drainage, partial or complete stagnation of water-courses, and saturation of the soil with moisture. It is not contagious. Its remissions and exacerbations are more or less regular diurnally. It is not characterized by a specific crisis or relapse. It is a typical malarious endemic fever." Speaking of the conditions which he believes gave rise to the disease, he adds that they are "want of drainage, the reduction of rivers to a low level, the deposit of silt at the mouths of rivers and on marshy plains, &c. Such causes are quite sufficient to account for all the sickness and mortality that have been reported. For a time they did not produce any marked effect. Cumulative action, however, began at last to tell. Nothing more was necessary; silent and gradual influences culminated, and, in the course of time, a most virulent malarious disease sprang forth." Considering the very great loss of life which has been due to this fever, there is no more important subject for sanitary enquiry; and the collection of accurate facts with reference to its appearance in Bengal, or even in one District of it, is of the greatest importance. A very careful note has, I observe, been prepared in the Bengal Office, summarizing all the information available as to the history of this disease. A very careful enquiry made over at least a portion of the epidemic area in order to ascertain the amount of sickness and mortality in each village, and the local changes, if any, to which the appearance of the disease may justly be attributed, would form the subject of a most useful and interesting sanitary tour.

Cholera.

42. The information regarding the extent to which cholera prevailed in Bengal during the year 1868 is incomplete. From some Districts no reports have been received, and with regard to others, the general tendency of the disease to appear in certain months, and to be at its maximum of prevalence at stated seasons, is given rather than a detail of the facts of the year.

Sanitary Report for British Burmah. General remarks.

43. The Sanitary Report for British Burmah, as has been already mentioned, reached me only on the 25th of this month, and I cannot therefore attempt anything beyond a very brief notice of its contents. The year was not marked by any general or serious sickness. Epidemic disease was confined to a few unhealthy localities, and even in these it did not prevail to any alarming extent. The people were prosperous, labor was abundant, food plentiful and cheap, and trade flourishing. The Sanitary Commissioner travelled over a large part of the country, and inspected many towns and villages.

Statistics of births and deaths.

44. Statistics of the registration of both births and deaths are given in the report, and a careful analysis of them has been made. The returns, however, as the Chief Commissioner remarks, are still unreliable, and much care must be bestowed on their preparation before any trustworthy conclusions can be drawn from them. Taking the population of seventeen cities, the birth rate was 31·5 per 1,000, and the death rate 26·7, but the details are so discrepant that, as Dr. Cowie observes, the figures have little value. No general rate for the Province is given in the Tables. On this subject Dr. Cowie remarks,—"our system of registration has now been under trial for four years. The people of the country are not prejudiced against it, and I have every reason to hope that, when the new forms are issued with greater care in the collection of the vital statistics, satisfactory returns may be looked for."

General remarks on the preparation of the Annual Reports. Importance of mortuary statistics.

45. Having briefly reviewed the reports for 1868, I propose now to offer one or two suggestions for the preparation of future reports. I do not recommend that the local Sanitary Commissioners should be tied down to one uniform method of preparing them, but a few general observations on the subject may not be altogether without use. As the collection of accurate statistics of deaths in the different parts of the country must form the true basis of all sanitary progress, so the annual statements of such mortality must form the ground-work of the sanitary history of the year. A prominent place should therefore be assigned to the results of registration, and an analysis should be given of their results showing how far they are reliable and how far improvement is still required, what measures have been adopted during the year for rendering the system more perfect, and what still remains to be done. The series of Tables which have been introduced under the orders of the Government will contain all the information desired, and there is no more important duty for a Sanitary Commissioner than to scrutinize the registration, and to do all in his power to improve it. All the reports for 1868 contain vital statistics of the population except Bengal, and here the difficulties are even greater than elsewhere. I am not aware how far registration has yet been established in the Lower Provinces, but if the obstacles to its general introduction prove insuperable, it might be brought into play over the area of one division, and thence gradually extended. Several of the Sanitary Commissioners already follow the course now recommended and make the collection of the mortuary statistics the ground-work of all future progress; but in some of the Provinces registration has not received that attention which its importance demands.

History of the chief diseases during the year.

46. A special chapter should next be devoted to a general history of each of the chief diseases throughout the year,—cholera, small pox, fevers and bowel complaints, the four which are entered in the annual Tables;—and in the event of any prevalence of any one of them, and especially of cholera, special efforts should be made to obtain reliable data and to give a connected account of the epidemic showing the distribution of the disease and any facts of interest connected with its progress. In some of the reports these data are spread over a number of different District reports, and it is quite impossible to arrive at the facts without an infinity of labor. The object of one report for a Province is to collect the facts and throw them into a connected narrative, advantage being taken of the detailed information procurable to show how far local conditions affected the results and what were the causes, why particular places suffered more than others.

Meteorology and condition of the people.

47. And in order to judge of this general history, information on two most important subjects is very necessary. We must know what has been the meteorology of the year, whether there has been anything peculiar either as regards temperature, rain-fall, and other atmospheric phenomena, and we must also know what has been the general condition of the people as regards abundance of labor, rate of wages, and price of food; how far any one or other of these has been unusual, and how far it appears to have affected the health of the population. These subjects should form the subject of a separate chapter.

Record of personal inspection and proceedings.

48. A fourth chapter might well be taken up with a short account of the work done by the Sanitary Commissioner during the year, of any tour which he may have undertaken, of the general condition of the places visited, and the measures proposed for their improvement. When such a tour has been undertaken with a view to enquire into the circumstances connected with any outbreak of disease, the particulars may more conveniently be given in connection with the history of the outbreak in Chapter II.; but the general course and extent of the investigation should also be stated in Chapter IV., abstracts of special inspection reports of towns and districts also would appear under this head.

Importance of sanitary tours.

49. In connection with this subject I would observe that it is of the very greatest importance, especially in connection with an unusual outbreak of sickness, that the Sanitary Commissioner should make a tour and ascertain the facts from his own personal observation. Coming in contact with

District Officers and with the people themselves, will act as a great stimulus to sanitary reforms; and, although the Sanitary Commissioner's other duties are many and laborious, he may find time for this important work. Dr. DeRenzy, I would observe, is under an erroneous impression in supposing that he was expected to be "constantly on the move," as the orders of the Resolution dated the 10th September 1868, which have been already referred to, were complete in themselves, and contain no injunction of this nature. The importance of his becoming personally acquainted with the country is generally inculcated.

Sanitary progress during the year.

50. In a fifth and last chapter a short summary might be given of any sanitary progress which had been effected during the year. I propose to devote a special portion of each annual report to this question, and it is therefore important that the data from each Province should be available in a tangible form. I do not anticipate that such statements will every year contain a record of some marked reform. Progress must be slow, but it will be satisfactory to ascertain exactly how far the measures already in force are working, and whether any advance has been made during the year.

Reports to be concise and to the point.

51. The report should be concise and to the point; and, with reference to this very important requirement, it will not be advisable, as a rule, to reprint district reports in full. Their contents should rather be incorporated in the general history of the year, the details under each head being embodied in the chapter to which they properly belong. All extraneous matter should be avoided.

Reports to be of one size.

52. It is very desirable that all the reports should be of one size of page. On this point orders were issued to Madras and Bombay, but, so far as I am aware, no instructions were given for the guidance of the Sanitary Commissioners with the Local Governments and Administrations. For the Tables of vital statistics which have been ordered, this is almost a necessity, and it is advisable on other grounds. The reports for 1868 differ materially in this respect, especially those for Bengal and British Burmah.

To be submitted early.

53. The early preparation and submission of the report is a matter of very great importance, and regarding which the orders of the Government have already been issued. If the report be made a short, plain record of facts, such as I have proposed, one obstacle to its early preparation will be removed. Unless the reports are received each year at an early date, it will be impossible for me to comply with the orders of the Secretary of State, and submit a general report within the time specified.

Information required for a general review of disease for 1868, defective.

54. My general review of the reports for 1868 has been, to some extent, purposely brief; for, as I have already stated, the information they contain is of such old date that it has lost much of its interest. Nearly eighteen months have elapsed since the close of the year to which they refer, and the reports for 1869 are already overdue. But, independent of any consideration of this nature, some of the reports do not contain the data required for preparing a general history of the distribution of disease throughout the country, or of sanitary progress for the year. If the general suggestions which have been made in the concluding paragraphs are adopted, these defects will be remedied for the future.

Extract from the Proceedings of the Government of India in the Home Department (Sanitary),—No. 241—250, under date Simla, the 6th July 1870.

The Annual Sanitary Reports for the North-Western Provinces, the Punjab, and British Burmah for 1868.

And—

A letter from the Sanitary Commissioner with the Government of India, No. 183, dated 28th May 1870, submitting a general review of the above Annual Reports.

RESOLUTION.

THE Governor General in Council observes that the main features of the review submitted by the Sanitary Commissioner with the Government of India, are that very much remains to be effected in the way of sanitary reform, and that the vital statistics in the rural districts are

at present of little value, while even those appertaining to towns are very unreliable. The Governor General in Council is forced to the conclusion that the existing means, financial and administrative, have not generally been fully utilized for carrying out sanitary improvements in most of the cities and towns of India.

2. The suggestions contained in paragraphs 45 to 53 of Dr. Cuningham's letter are approved by the Governor General in Council, and Local Governments and Administrations in the Presidency of Bengal will be requested to instruct local Sanitary Commissioners accordingly. Considering that uniformity of system is very desirable, the Governments of Fort St. George and Bombay will also be invited to issue similar orders, unless they have any special objections to urge against Dr. Cuningham's proposals.

3. The Governor General in Council concurs in opinion with Dr. Cuningham that it is very desirable that all the annual reports on sanitation should be of a uniform size. It will be necessary that these reports should be bound up with the Proceedings of the Local Governments and of the Government of India; and on this account, and in consideration of the fact that there will always be voluminous Statistical Tables attached to these reports, His Excellency in Council believes that folio foolscap size, as already adopted by the Government of Madras, will be found to be the most convenient, and therefore desires that it should be adopted in future. Local Sanitary Commissioners should be instructed accordingly.

ORDER.—Ordered, that a copy of the above Resolution, together with a copy of Dr. Cuningham's letter dated 28th May 1870, be forwarded to the Local Governments and Administrations noted on the margin for information and guidance.

Government of Madras	Chief Commissioner of Oudh.
" Bombay.	" Central Provinces.
" Bengal.	" British Burmah.
" N. W. Provinces.	Resident at Hyderabad.
" Punjab.	

Ordered also, that a copy of the above Resolution be forwarded to the Sanitary Commissioner with the Government of India for information.

Ordered further, that a copy of the above Resolution, together with a copy of Dr. Cuningham's letter dated the 28th May 1870, be published in the Supplement to the *Gazette of India*.

(True Extract.)

E. C. BAYLEY,

Secretary to the Government of India.

REMARKS.

The mean volume of the Ganges Canal passing the Roorkee gauge during the month, was 5,518 cubic feet.

Volumes discharged were—

Tail, Etawah Branch	..	47 cubic feet.
Escapes „ „	..	238 „ „
Tail, Cawnpore „	..	163 „ „
Escapes „ „	..	*Nil.*
Total	..	448 cubic feet.

The Cawnpore and Etawah Branches have alternate weeks of high and low supply. The gauge-readings show the mean of the month.

The demand for water on the Ganges Canal, steady at the commencement, increased towards the close of the month: the chief crops irrigated being indigo, sugar-cane, rice, and cotton.

On the Eastern Jumna Canal the demand at the commencement of the month was moderate, and the Executive Engineer was enabled to close the canal on the 7th instant for a few days to allow of an inspection of the works before the setting-in of the rains.

The canal-supply was lowered gradually in order that too large a body of water might not be suddenly thrown on the Jumna weir at Okla. The canal was opened again, with a good demand, on the 16th, the actual closure having lasted exactly one week. To a steadily-increasing demand for water for sugar-cane, indigo, and rice, the canal was raised as steadily, till quite the end of the month, when, owing to a fall in the river, the supply had to be adjusted to the requirements of the Western Jumna Canal. The demand at this period was very great for the crops above-mentioned. Partial tateels became necessary.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

INDIAN IMMIGRANTS IN THE ISLAND OF GRENADA.

Public.
No. 58.

INDIA OFFICE;
London, the 31*st May* 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

MY LORD,—In continuation of my despatch of the 24th of March last, No. 29, I herewith forward, for the information of your Excellency in Council, a copy of a report for the year 1869, by the Immigration Agent General in Grenada, on the Indian immigrants in that colony, with its enclosed Tabular Returns, Schedules A. and B. I am glad to observe that this report is in all respects satisfactory.

Mr. Munro, to the Colonial Secretary, Grenada, 21st February 1870, and two enclosures.

2. I await a reply to my above-cited despatch to your Lordship in Council relative to the renewal of emigration to the colony.

I have the honor to be,

MY LORD,

Your Lordship's most obedient, humble Servant,

ARGYLL.

From G. G. MUNRO, ESQ., Immigration Agent, to the Colonial Secretary, Grenada,—dated Grenada, the 21st February 1870.

I HAVE the honor to furnish you herewith, for the information of the Executive, an annual return (Schedule A.) of the Indian immigrants who were in this colony on the 31st December last, as compared with those who were in the island the preceding year, showing also those who were in gaol and those in the colony hospital on that day under treatment, with the increase and decrease among them during the year 1869.

2. *Their number in* 1869.—From recent inspection of the immigrants and from the semi-annual returns which employers are compelled by law to furnish this Department, I find that there were in the island, at the close of the past year, 902 men, 358 women, 178 boys, 183 girls under 12 years, and 89 infants, who are located on 33 sugar and six cocoa estates, making a total of 1,702 souls.

3. *The increase in* 1869.—There were no importations of coolies from India this year. Nine male Indians, however, who had taken passports from home some months previously for Trinidad in the hope to better their condition, returned to this colony and resumed their places in the ranks of Indian laborers. These are apparently privileges enjoyed by them on estates here which are not obtained in Trinidad.

The natural increase was 34 boys and 25 girls, equal to 2·46 per cent.

4. *Decrease in* 1869.—The sanitary report hereto attached (Schedule B.) exhibits the mortality which took place among the immigrants during the year. There were 42 deaths, viz., 23 men, seven women, six boys, and six girls, equal to 2·38 per cent., which is less than that of the previous year—the result no doubt of increased acclimatization among them, as well as to better care bestowed on the sick on estates, and to the unprecedented dry season of 1869.

The only casualty requiring explanation is that of the woman Beeporthy, who was found dead under one of the arches of the Paradise Bridge. She was of dissolute and vagrant habits, and, although the Coroner's Jury certified that she died from starvation, yet she was within reach of both food and medical aid had she sought for the same.

5. *Crimes and offences.*—There were 30 convictions and imprisonments of Indians during the year, namely, nine for common assaults, six for petty thefts, three for riotous conduct, three for disorderly conduct in the public streets, one for selling rum without license, and five for breach of contract. There was also one committed for assault with criminal intent, but who was acquitted after trial, and two as dangerous lunatics, but who shortly after recovered, and were, by order of the Executive, discharged, and returned to labor.

6. *Employer and employed.*—The relation between the coolies and their employers continues very satisfactory. I have had no complaints from employers. Indeed, the Indian immigrant is, on many sugar plantations, the chief reliance of the planter for continuous labor.

7. *Service-expired Indians in* 1869.—On the 18th June last, the period of service of the coolies imported by the ship *Goldawar* in 1859 expired. Although the greater number of these people were entitled to the return passage, yet, under the operation of the Act No. 390, which secured to them the back passage at the expiration of the additional term of five years' service, 130 men, 49 women, seven boys and one girl accepted bounties, and were re-indentured for one year in terms of the Act. These bounties amounted in the aggregate to the sum of £1,642-10.

Of this batch of immigrants three men and one girl alone are awaiting an opportunity to return to India, and to whom compensation will be paid in terms of the 49th section of the amended Immigration Law until a ship is provided.

SCHEDULE A.

GRENADA.

Return of the Indian immigrants located on the plantations of this colony in the several Districts thereof, as compared with the previous year showing the increase by births and decrease by deaths or departures to other colonies during the year ended 31*st December* 1869.

	TOTAL...			34	25			TOTAL ...	29	13	

The preponderance of births over the deaths among the Indians in this Return may be regarded as a favorable indication. The births equal to 2·46 per cent., and the deaths 2·38 per cent. The seasons of 1869 were unusually dry and healthy, and the immigrants were found by me during inspections in the month of January to be in general good health. Some cases of yaws were under good treatment on estates, and the disease itself much abated.

COMMISSIONER'S OFFICE,
Kurrachee, June 1870.

W. L. MEREWETHER, *Colonel,*
Commissioner in Sind.

Memorandum by COLONEL W. L. MEREWETHER, K.C.S.I., C.B., Commissioner in Sind,—No. 1683, dated Kurrachee, the 21st June 1870.

SUBMITTED to Government, in reference to their Resolution No. 2679 of the 19th July 1867. The Statement shows a net increase of 846 acres 29 goontas in Native cotton, and a decrease of 116 acres 21 goontas in foreign. From the return of cotton reports during the current year, the trade in this article will far exceed any previous one.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

RULES REGULATING THE RUSSOOMS OF THE DESHMOOKS AND DESHPANDIAS IN THE DOMINIONS OF HIS HIGHNESS THE NIZAM OF HYDERABAD.

Extract translation from "Gazette" of His Highness the Nizam's Government, dated 22nd "Suffur" 1287 "Hijree."

A scheme in regard to the russooms of Deshmooks and Deshpandias.

In former days, Deshmooks and Deshpandias had full power in the adjustment and collection of the revenues of the land; they held in *ijara* (contract) several talooks and villages, and whenever the revenues failed, they were bound to make good the deficit to the Sircar and to grant nuzzurs. They were also required to keep up the establishment of mohurrirs in the dufturs of the Sircar; now these officers are relieved of the above responsibilities, and are free. The russooms or allowances they enjoy are not supported by sanads; it is therefore determined that Deshmooks, whose allowances have up to the present time been above five per cent. on the net revenue of the land after deduction of *dehsadur* (stationery), &c., be allowed only five per cent.

To Deshpandias 2½ per cent., and all income which they now derive from other sources, such as abkaree, grazing tax, &c., to revert to the Sircar, and be included in the general revenue.

2. Zemindars who now receive, and have up to this time received, less than five per cent. russooms, will be permitted to receive the same as usual without deductions of any sort; but they will have no claim whatever to income from other sources of revenue, such as abkaree, *wuncharai* (grazing tax), &c., and their right to the possession of land disallowed; but when they desire to take up land for cultivation, it will be given to them in preference to others on a fixed rental.

3. The amount of russooms which the zemindars receive on lands as *bill-muktah* (tenure fixed rent) will be continued to them as heretofore; but when the amount exceeds the five per cent. allowed, the excess will be struck off. Should the allowance, however, fall short of the five per cent., the recipients will be allowed no more than what they receive, and the difference will not be made good to them; but there is no objection on the part of the Sircar to continue such lands to them on fixed tenure.

4. Others in possession of jagheers, muktahs, &c., will have their title to them enquired into, and their claims disposed of under the rules.

5. Persons who hold authentic and valid sanads in support of their russooms, and who are not willing to abide by the rules now proposed for the settlement of their claims, will intimate the same within three months to the talookdar, who will, after enquiry into the circumstances of the case, submit a final report to the Sircar, when the necessary orders will be issued, as the Sircar is willing to recognize claims based on authentic and valid documents.

6. It is also necessary that persons in possession of jagheers and muktahs should present documents supporting their claims within three months to the talookdars, who will submit the same with the necessary statements in each case for the orders of the Sircar.

7. Zemindars are hereby informed that they should within three months institute their claims before the talookdar; that after that period their representation will not be noticed by the Sircar unless upon the strongest grounds.

8. Deshmooks and Deshpandias are, by this arrangement, relieved of all their former responsibilities and interference; they will, if zealous, no doubt do well. There is no objection to their sending in applications for any appointments under the Sircar which will be glad to save them; but it is necessary that the applicant must possess a thorough knowledge of the language and ability to discharge the duties of the post for which he may apply, and must also be civil and polite in his manners. On receipt of applications as above, the talookdars will consider whether the appointment sought is within their gift, if not, they will refer the application to the Sircar. For certain reasons, it would appear necessary that such wuttundars, if appointed, should at present be posted in other localities than their own.

(True translation.)

C. WODEHOUSE,
Offg. 2nd Assistant Resident, Hyderabad.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

TRAINING IN INDIA OF NATIVES FOR THE POSITION OF FOREMEN MECHANICS.

Resolution by the Government of India, Public Works Department,—Circular No. 35, dated Simla, the 29th June 1870.

READ again—

Public Works Department circular No. 95 of 20th October 1869.

Despatch No. 159 of 29th November 1869, to Her Majesty's Secretary of State.

Read also the following despatch:—

From Her Majesty's Secretary of State for India, to the Government of India,—No. 15, dated London, the 10th March 1870.

I have duly received your Excellency's despatch No. 159 of 29th November last, forwarding copy of a Resolution recorded by your Government on the best mode of recruiting the Upper Subordinate Establishment of the Public Works Department, and recommending that thirty European artificers be engaged and sent out for service in that Department.

2. I have directed that suitable steps be at once taken for complying with this requisition, which I trust, however, is not intended to be frequently repeated. The class of men asked for are not such as it is expedient to introduce in large number into India. Probably the importation from Europe of skilled foremen may have been considered necessary at the commencement of the large railway and irrigation works about to be undertaken, but those works will themselves constitute an unexceptionable training school, and your Government will doubtless impress on the Executive Officers the importance of taking full advantage of the opportunities thus afforded of training both Natives and Europeans for the position of foremen mechanics.

3. I am informed, too, that there are generally in India a good many European artizans and artificers who, having been brought out by railway or other contractors for some special service, remain, after its termination, for a while at large. Others of the same description, who were formerly engaged in the Government Dockyard at Bombay, may not improbably still be in the country without regular employment. How far by keeping a constant look-out for men so circumstanced, and with the assistance to be obtained from Roorkee, it would be possible to recruit the Upper Subordinate Establishment, your Excellency must be best qualified to judge.

OBSERVATIONS.—In dealing with the important question of the best mode of recruiting the Upper Subordinate Establishment of the Public Works Department, it was considered that the demand for artificers, specially experienced in iron-work, machinery, brick-making, &c., which the construction of railways and large irrigation works by the State had created, could not be fully met in India, and that such skilled workmen should be drawn in a great measure from England and other places in Europe. The Secretary of State was accordingly requested to take the necessary steps in the first instance to engage and send out to India thirty men of this class who had complete practical knowledge of their several trades.

2. The Secretary of State intimates in his reply that orders have been issued for meeting the demand; but, for the reasons stated in the despatch, expresses a hope that such requisitions will not be frequent.

3. The Governor General in Council remarks that when it was determined to obtain artificers from Europe, the Government of India was fully alive to the objections to importing this class of men largely into the country, and it was the intention to look to Europe for a supply only until the Public Works Department was in a position to train such men in the large Government works about to be undertaken. There is practically, therefore, no difference in the views entertained by the Government of India and the Secretary of State on this point.

4. But His Excellency in Council considers that the opportunity may usefully be taken to impress strongly on the several Local Governments and Administrations concerned, and on the superior Officers of the Department the great advantage of endeavouring, as far as possible, to train the natives of this country in all those branches of handicraft that are necessary to the construction and maintenance of railways. It may not be possible to dispense altogether with European artizans; but there is little doubt that much more can be done than has hitherto been attempted, in the direction of employing Native artificers, especially in the lighter descriptions of iron-work.

5. As large railway and irrigation works are put in hand, it can scarcely be expected that the local supply will altogether meet the demand for specially-qualified men of the class in question; but every large work of the magnitude of a railway or canal, and every shop in connection with such, forms a training school for artizans; and from these there is no doubt that some suited for the position of foremen could be obtained. To ensure this result it will probably be necessary to attach a school to each large shop, which likely men should be encouraged to attend, and those that give promise of rising to the responsible position of foremen should be helped, and their practical knowledge supplemented with theoretical training and some instruction in drawing. The success of the experiment will of course depend mainly on the tact, judgment, and energy of the men at the head of the shops; but His Excellency in Council sees no reason to doubt the successful issue of the experiment if the object is put before these Supervisors as one to which the Government of India attaches much importance, and if the Local Governments interest themselves in securing its accomplishment.

6. Of course it is to be clearly understood that there is no desire on the part of the Government of India to raise the Natives to the responsible position above indicated, unless it can be clearly shown that their employment is not likely to interfere with efficiency of work. All that is intended is to make well-directed and persistent efforts so to qualify Natives as to justify their employment in the position of foremen.

7. His Excellency in Council cannot too strongly commend this matter to the careful consideration of the Local Governments and Administrations, and will be glad to receive, and consider any suggestions which they may desire to offer, and which are calculated to further the attainment of the important object in view.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Local Governments and Administrations marginally noted.

Governments of Madras, Bombay, Bengal, the North-Western Provinces, and the Punjab.
Chief Commissioners of the Central Provinces, Oudh, British Burmah, and Mysore and Goorg.
Resident at Hyderabad.
Agents to the Governor General for Central India and Rajpootana.

EAST INDIAN RAILWAY—FENCING OF THE LINE IN THE NORTH-WESTERN AND CENTRAL PROVINCES.

From MAJOR J. HOVENDEN, R.E., Officiating Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 802G, dated Fort William, the 17th April 1869.

IN continuation of previous correspondence on the subject, I am directed to forward, for the information of the Government of India, a copy of a communication noted on the margin, from the Secretary to the Chief Commissioner, Central Provinces, complaining of the unfinished state of the fencing on the Jubbulpore line. No provision, I am to state, has been made for a continuous wire-fence along this line. A sum of Rs. 3,58,922 has been entered in the completion estimate of the line, which is intended to provide about 80 miles with a ditch and mound surmounted by a double wire-fence, leaving the remaining 150 miles to be fenced with only a ditch and mound, or with a loose stone-wall.

No. 113—1434, dated 9th April 1869.

2. It is well known that the simple ditch and mound fence will not prevent trespass by cattle, and the black soil through which a great protion of the Jubbulpore line runs, is peculiarly unsuited for the formation of a good fence of this description. The subject has already been brought to the notice of the Government of India, and the question of providing a good fence was discussed in the last Quarterly Inspection Report of the line. It is understood that the general question of fencing for railways is now under the consideration of the Government of India, and I am to request that specific orders may be given respecting the fencing of both the upper division of the East Indian Railway and of the Jubbulpore line.

3. With reference to the remark respecting the promise made by the railway authorities to complete the fencing of the line by the middle of September, I am to state that the Commissioner of Jubbulpore must have misunderstood the railway authorities in thinking that the promise referred to wire-fencing. The existing sanction provides only for a ditch and mound on the length referred to, and this was completed at the time the last inspection of the line was made.

Memorandum by MAJOR C. POLLARD, R.E., Secretary to the Chief Commissioner of the Central Provinces in the Public Works Department,—No. 115—1434, dated Nagpore, the 9th March 1869.

COPY of the following forwarded to Consulting Engineer for Railways, Bengal, and states the Chief Commissioner hopes that the Company may be induced to take steps to remedy the state of the fences on the line of rail.

From the Commissioner of Jubbulpore Division, to the Secretary to the Chief Commissioner of the Central Provinces in the Public Works Department,—No. 986, dated Jubbulpore, the 30th March 1869.

ADVERTING to your No. 89—1175 of the 16th March 1868, I have the honor to forward for the consideration of the Chief Commissioner, a copy of a letter No. 500 of the 18th instant, from the Deputy Commissioner, Jubbulpore, representing the inconveniences and risks arising from the unfenced state of the Jubbulpore Branch of the East Indian Railway, and I trust the Chief Commissioner will deem it expedient to bring the matter before the responsible authorities, as there seems to be no reason why there should be so much delay in completely fencing this line.

2. In September last I was in correspondence with the railway authorities, which terminated with a promise that the portion of the line under Mr. Olpherts would be wholly fenced in "by the middle of September;" and from Major Playfair's letter, which was written a little more than a week ago, the Chief Commissioner will learn that the line is unfenced near Moorwarrah, where Mr. Olpherts resides.

From the Deputy Commissioner of Jubbulpore, to the Commissioner of the Jubbulpore Division,—No. 500, dated the 18th March 1869.

MORE than a year has elapsed since the Government of India exonerated the Deputy Commissioner, Jubbulpore, from enforcement of section 20, Act XVIII. of 1852, and yet up to this time no wire-fencing has been put up in the East Indian line to Allahabad.

2. The people generally along the line complain that the low bank and narrow ditch is no sufficient barrier, and that when cattle are herded near the line, it is impossible to prevent them trespassing. I myself can vouch for this, as I saw a herd near Moorwarrah in charge of one man trespass under circumstances in which he could not be held to be in blame. One cow eyed the green succulent grass on an embankment slope for a few seconds, and then clearing the ditch at a bound and scrambling over the bank was followed by half the herd before the herdsmen knew what they were about.

3. I would point out that section 21 of the Act cannot be enforced if section 20 is allowed to remain in abeyance, and would therefore solicit that the subject may be again forced on the notice of the Railway Company with a view to the bank being crowned with a sufficient wire-fence as soon as possible.

4. Were this done it would be impossible for cattle even to be *driven* on the line except at the level-crossings, which are now being protected by stone-posts and iron-gates, and which are watched by the gate-keepers.

From MAJOR E. C. S. WILLIAMS, R.E., Under Secretary to the Government of India, Public Works Department, to the Officiating Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch,—No. 561 R, dated Simla, the 15th May 1869.

I AM directed to acknowledge the receipt of your No. 802G, dated the 17th April 1869, forwarding a letter from the Chief Commissioner of the Central Provinces regarding the unfinished state of the fencing on the Jubbulpore line, and requesting the issue of specific orders for fencing both the upper division of the East Indian Railway and the Jubbulpore line.

2. In reply, I am directed to invite attention to paragraph 1 of my letter No. 403R of the 14th ultimo, desiring that the Board of Agency may be called upon to complete without delay an efficient fence for the Jubbulpore line in anticipation of the through opening to Bombay; and, in now intimating that the only places in which fencing may be dispensed with, either on the Main or Jubbulpore lines, are those which are naturally fenced, as by swamps, to observe that the Government of Bengal is under a misapprehension in supposing that the general question of fencing is under the consideration of the Government of India.

It is for the Agency to propose an efficient fence of as cheap a description as may be possible, and for the Government of Bengal to see that it is erected without delay as soon as the ordinary procedure as to estimates has been complied with.

Nos. 562—3R.

COPY forwarded for information to the Government of the North-Western Provinces, and the Chief Commissioner, Central Provinces, in the Public Works Department, Railway Branch.

From COLONEL H. D. DALY, Officiating Agent to the Governor General for Central India, to the Secretary to the Government of India, Foreign Department,—No. 13, dated Indore Residency the 16th August 1869.

I HAVE the honor to forward a representation made by Mr. Coles, the Political Assistant and Railway Magistrate in Bundlekhund, on the insufficiency of the fencing along the line of the Allahabad and Jubbulpoor Railway.

No. 375, dated 3rd August 1869, from Political Assistant, to Political Agent, Bundlekhund, received with Political Agent's No. 313, dated 9th idem.

2. Mr. Coles, on 26th April last, directed the attention of the District Engineer, East Indian Railway at Oocheyra, to the defects in detail—

1*st*, that the ditch and embankments were not so constructed as to prevent cattle from scrambling over;

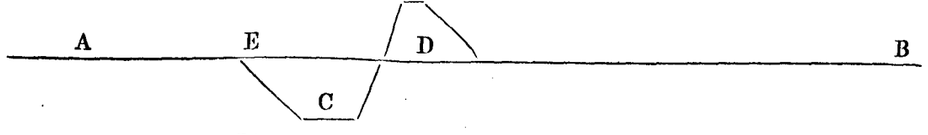
2*nd*, that the level-crossings are without gates to bar cattle from straying;

3*rd*, that at the stations with fencings, there are many unguarded gaps;

4*th*, that some stations are without fencings at all; and

5*th*, that the fencings at most of the bridges are faulty.

3. Again, on 29th May, Mr. Coles addressed the District Engineer that he had understood the Railway Company intended fixing a wire fence along the bank to keep cattle off the line; without this there could be no security, and Mr. Coles begged that early measures might be taken to effect the work.



4. Copies of the above communications were forwarded to me by the Political Agent in Bundlekhund.

5. The correspondence which is now submitted is in reply to my enquiry as to whether it was desired that the matter should be brought to the notice of Government. Defective fencing along a line of Railway has, on several occasions, caused loss of life, and as the local references made in a becoming tone have been without effect, I think the Political Agent has acted wisely in bringing the defects to notice.

From C. R. COLES, ESQ., Political Assistant, to the Political Agent in Bundlekhund,—No. 375, dated 3rd August 1869.

WITH reference to Office Memorandum of the Central India Agency Office, forwarded with docket No. 624, dated 26th June, I have the honor to state that, in my opinion, a representation to Government regarding the insufficiency of the fencing of the Railway line is necessary.

2. The fence is of two kinds: in some parts, there is a wall constructed of loose stone, and this, I believe, is secure; in other parts, a ditch and earthen bank form the fencing, the bank is raised with the earth taken from the ditch. The following sketch represents, as far as I am able, the construction of the *cutcha* fence:—

Line A to B is the ground level.

C is the excavation.

D the bank raised with its contents.

E is the Railway boundary.

3. If ditch C was designed to add difficulty to ingress to Railway lands by cattle, it has failed in effect. The cattle jump easily from point E to some convenient landing place on the bank, and thence stray to the most inviting grazing places on the line, and so occasionally get run over.

4. Such occurrences seldom affect the train, but I presume it is to guard against any chance of accident that a sufficient fence is required.

5. I have myself seen cattle getting over the *cutcha* fence quite easily, and the number of cases of cattle trespass occurring, show that the *cutcha* fence is not calculated to keep cattle out.

Memorandum from DR. J. P. STRATTON, M.D., Political Agent in Bundlekhund, to the Agent to the Governor General for Central India,—No. 313, dated Nowgong, the 9th August 1869.

IN reference to your No. 796, dated 14th ultimo, regarding the insufficiency of the fencing of the Allahabad and Jubbulpoor Railway line, I forward herewith copy of Mr. Coles' No. 375, dated 3rd instant, on the subject. It is but recently that a very serious accident on a Railway in Western India occurred from a stray animal getting on the line.

From the Government of India, Public Works Department, to the Officiating Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch,—No. 1397R, dated Simla, the 15th September 1869.

THE Agent to the Governor General for Central India having brought to notice the insufficiency of the fencing along the line of the Allahabad and Jubbulpoor Railway, I am directed to request that an immediate report may be submitted as to what is being done, or is intended to be done, during the current year by the East Indian Railway Company in the matter of fencing, with reference to the orders communicated in Public Works Department No. 561R, dated the 15th May 1869.

2. The reply to this enquiry should also embrace the main line fencing in the North-Western Provinces which is also reported to be far from efficient.

3. Looking to the magnitude of the existing traffic on the main line, and what may be shortly expected on the Jubbulpoor line, also to the fact that it is carried on by night, it is absolutely essential that this matter should be no longer postponed, and in the event of any undue delay on the part of the railway authorities in doing the needful, it will be the duty of the Supreme Government to call upon the local authorities to enforce the law against the Company.

From MAJOR J. HOVENDEN, R.E., Officiating Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 2093 G, dated Simla, the 23rd September 1869.

I AM directed to acknowledge the receipt of your letter No. 1397 R, dated 15th instant, calling for a report, as to what is being done, or is intended to be done, during the current year, on the matter of fencing both the main line in the North-Western Provinces, and the Jubbulpoor Branch of the East Indian Railway, and, with reference to the state of the fencing along the latter line, I am to forward a copy of the papers noted on the margin, from which it will be seen that the contractors have already been requested to proceed with the completion of the fencing as speedily as possible.

No. 464G, dated 23rd August 1869, from Chairman, Board of Agency, East Indian Railway.
No. 1883 G, dated 28th August 1861, to Secretary to Chief Commissioner, Central Provinces, Public Works Department.

2. A further report on the subject has, I am to add, now been called for from the Board of Agency, East Indian Railway, and will be forwarded as soon as it is received.

Memorandum by C. STEPHENSON, ESQ., Chairman, Board of Agency, East Indian Railway Company,—No. 464 G, dated 23rd August 1869.

COPY of the following forwarded to Consulting Engineer, Government of Bengal, for information, and in reference to his docket No. 1575G of 26th July last.

From G. SIBLEY, ESQ., Chief Engineer, to the Chairman, Board of Agency, East Indian Railway Company,—No. 1579, dated the 20th August 1869.

YOUR docket No. 3132 of 28th ultimo, forwarding Officiating Joint Secretary to Government of Bengal's No. 1575G of 26th July 1869.

I did not reply at once to the above, as it did not appear to call for any immediate reply, and I had, prior to receipt of same on my last inspection of the Jubbulpoor line on 5th and 6th July, called attention to the fencing, and directed that it should be made up to full height and depth immediately that the first rain fell.

With reference to the Chief Commissioner, Central Provinces' letter of 5th June, to the address of Commissioner, Jubbulpoor, I would state that it was impossible that any effective action should have been taken by the East Indian Railway between 31st May and 30th June.

The least regulation height of bund is three feet, and the least depth of ditch is three feet, a continous slope of six feet in height, with a slope of half to one is a sufficient barrier to all but wilful trespass.

In some of the lower portions the bund had been constructed with a berm or bench one foot wide at inner edge of ditch, this is being cut away and the slope made continuous.

The contractors have been desired to proceed speedily with the work.

From MAJOR J. HOVENDEN, R.E., Officiating Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch, to the Secretary to the Chief Commissioner, Central Provinces, in the Public Works Department,—No. 1883 G, dated Fort William, the 28th August 1869.

IN continuation of this Office letter No. 1813 G, dated 21st instant, I am directed to forward, for the information of the Chief Commissioner, Central Provinces, a copy of a letter noted on the margin, from the Chairman, Board of Agency, East Indian Railway, explaining the circumstances under which no steps were taken for repairing the fencing along the Jubbulpoor line at the time of the Deputy Commissioner's inspection, and adding that the maintenance contractors have received instructions to proceed with the repairs as speedily as possible.

No. 464 G, dated 23rd October 1869.

From the Government of India, Public Works Department, to the Officiating Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch,—No. 1531 R, dated the 4th October 1869.

IN reply to your No. 2093 G, dated 23rd ultimo, I am directed to enquire whether the mound fencing of the Jubbulpoor line and Upper Division of the East Indian Railway, which is described in the enclosure to the above letter, is intended to be surmounted by wires, and, if not, whether such a fence is considered efficient by the Government of Bengal.

From LIEUTENANT-COLONEL J. HOVENDEN, R.E., Officiating Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 2279 G, dated Fort William, the 26th October 1869.

IN reply to your letter No. 1531 R, dated 4th instant, enquiring whether the mound fencing along the Upper Division of the main line and the Jubbulpoor line of the East Indian Railway is intended to be surmounted by wires, and if not, whether such a fence is considered efficient, I am directed to state, for the information of the Government of India, that it is intended to surmount the mound with a live-fence; this the Lieutenant-Governor considers will be sufficent.

2. I am to add that the Railway Company hope they will be able to induce the live-fence to grow on the mound in most parts of the line; where, however, the live-fence will not grow, the mound will be surmounted by two wires.

3. The mound alone, in the opinion of the Lieutenant-Governor, cannot be considered an efficient fence.

From the Government of India, Public Works Department, to the Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch,—No. 1921 R, dated Fort William, the 20th December 1869.

I AM directed to acknowledge the receipt of your No. 2279 G, dated 26th October 1869, reporting that the Lieutenant-Governor does not consider a plain mound fence to be efficient, and that on both the Upper Division of the main line and the Jubbulpoor line the existing mounds are to be topped by live-fences, or by wires where the latter will not grow.

2. In reply, I am directed to remark that sufficient experience must have already been acquired at least on many portions of the line to determine at once the practicability of cultivating an efficient live-hedge, and that any further experiment tending to postpone the accomplishment of the object in view should be avoided. The Government of India cannot avoid

remarking that a serious responsibility in case of the occurrence of any accident through want of an efficient fence will rest upon both the Company and the controlling Government, and His Excellency in Council will trust that there will be no further unavoidable delay on the part of the former in complying with the orders on this subject.

From MAJOR F. S. TAYLOR, R. E., Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 684 G, dated Fort William, the 23rd March 1870.

IN reference to Public Works Department No. 1921 R, dated 20th December last, I am directed to forward, for the information of the Government of India, the accompanying copy of a Note dated 14th March 1870, by the Consulting Engineer to this Government, on the subject of fencing the main line and the Jubbulpoor Branch of the East Indian Railway, and to state that copies of the Note have been forwarded to the Lieutenant-Governor, North-Western Provinces, to the Chief Commissioner, Central Provinces, and to the Governor General's Agent for Central India, soliciting expressions of opinion on the question of the fencing of the East Indian Railway, which will be communicated to the Government of India in due course.

Note by MAJOR F. S. TAYLOR, R.E., *Consulting Engineer to the Government of Bengal, on the subject of Railway fencing,—dated 14th March* 1870.

I THINK it will be advisable, after obtaining a further expression of the views of the Lieutenant-Governor, North-Western Provinces, and Chief Commissioner, Central Provinces, to make another representation to the Government of India on the subject of the fencing of the main line of the East Indian Railway in the North-Western Provinces, and the Jubbulpoor Branch in the Central Provinces, with special reference to Mr. Sibley's letter No. 443 G, dated 25th February, received under cover of Agency Memorandum No. 137 G, dated 3rd March, as the points at issue still appear to be imperfectly understood, or the difficulties appreciated.

For instance, I find it stated in Public Works Department letter No. 1397 R, dated 15th September 1869, to this Office, that the Supreme Government contemplate enforcing the existing law against the Company on the ground that the safety of passengers is actually endangered from cattle getting on the line although the necessity for a revision of the law in the interests of the Railway Company has long been recognised, and an amendment embodied in the draft of the new Railway Bill. The most recent communications from the Government of India appear also to ignore the practical difficulty of efficiently fencing a railway through the wild grazing country so graphically described by the Officiating Magistrate of Banda in his letter No. 1518 B, dated 29th September 1869, to the address of the Commissioner of Allahabad. And quite recently the Chief Commissioner of the Central Provinces, on diametrically opposite grounds, has been taking up the question in the interests of the villagers whose cattle, when roaming at large, are often killed by the trains, and appears to contemplate action against the Railway Company on a communication No. 1726, dated 20th May 1869, from the Commissioner of Jubbulpoor. The case is further complicated by a recent communication on the subject of State Railway fencing alluded to by Mr. Sibley in his letter of 25th February, and the Board of Directors have now instructed the Agency to make an official representation on the subject of the proposed fine for trespass, so that to put the law as it stands in force, would, I submit, have a most unfortunate effect.

No. 1531 R, dated 4th October.
„ 1921 R, „ 20th December.

Letter No. 102 of 1869, forwarded under Public Works Department docket No. 78 R of 13th January.

I will therefore take this opportunity to draw attention to some remarks on the subject of fencing in the Note on some distinctive features of railway construction in the United States, which I have laid before Government in hopes that they may be found to contain a practical solution of the difficulty by indicating a principle on which a law applicable to all Railways may be framed.

If, in the case of each railway separately, the Local Government through whose territories the line runs be empowered once for all to prescribe, after due consideration of the circumstances of the country and traffic the form of fence to be adopted, the question of its maintenance can, I submit, occasion no further difficulty; nor under such conditions need any legal distinction be made between high and low speed railways, for the risk, whether to the public or the cattle, is one of degree only.

As respects the fencing of the East Indian Railway in the North-Western Provinces and the Jubbulpoor Branch, I find that Joint Secretary's letter No. 2279 G, dated 26th October 1869, is open to misconception; for it is only on lengths favorable to vegetation on the main

line in the North-Western Provinces that the East Indian Railway Company are growing a fence, while they are only placing the two wires on so much of the mound and ditch fence as they find themselves unable to maintain properly. On the Jubbulpoor Branch the Company has expended during the last two years as much as Rs. 1,50,000 on completing the dry stone fence where the material is available, or elsewhere on the ditch and mound, and I am now strongly of opinion that, if the existing fence on the whole East Indian Railway is properly maintained for the future, it will be found to answer every purpose.

Memorandum from E. PALMER, ESQ., Chairman, Board of Agency, East Indian Railway, to the Consulting Engineer to the Government of Bengal, Railway Department,—No. 137 G, dated 3rd March 1870.

IN reference to Consulting Engineer's No. 419 G of 23rd ultimo, the undersigned has the honor to forward herewith copy of Chief Engineer's letter No. 443 of 25th idem, remarking on the subject of fencing on the North-Western Provinces and Jubbulpoor lines.

From G. SIBLEY, ESQ., Chief Engineer, to Chairman, Board of Agency, East Indian Railway,—No. 443, dated 25th February 1870.

YOUR docket No. 750.

With one exception, all the complaints on the subject of fencing in the correspondence noted refer to the Jubbulpoor line.

There is no doubt but that it was not maintained in an altogether satisfactoy condition, but the attention of the local Engineers was repeatedly called to the subject until the contractors took the matter in hand. On above subject I refer to my No. 1579 of 21st August last. On my recent visit I was informed by Mr. Spencer that there had been no case of cattle tresspass during this year.

With reference to the North-Western Provinces, and on the subject of fencing generally, I beg to refer to my No. 2291 of 11th November 1865, and to my No. 2890 of 8th August 1866.

With advertence to the 2nd paragraph of Government of India's No. 1921 R, calling attention to the serious responsibility in the case of an accident through the want of an efficient fence, which will rest upon both the Company and the controlling Government, I would venture to observe that, in my opinion, we should be weak and scarcely honest if we allowed the bugbear of responsibility to frighten us into incurring a needless and wasteful expenditure of Rs. 5,000 per mile.

That it is needless is proved by the safe working in the North-Western Provinces, extending over 11 years, and for myself, I am quite ready to accept the responsibility which may attach to working with our present fence properly maintained, and planted, with cattle-fenders attached to all trains carrying passengers.

The Locomotive Superintendent and goods drivers are prepared to accept the responsibility of working the goods engines without cattle fenders.

So far on the general question as it stood formerly, but since the date of most of the letters now under reply, we have seen published in Government of India *Gazette*, page 1383 of the Supplement dated 27th November last, under authority of Officiating Secretary to Government, Public Works Department, that it is propable that there will be a change in the law with regard to fencing where slow speeds are adopted, limiting it to the vicinity of stations and other places where absolutely necessary.

Further, under the same authority, it is notified in Supplement to Government of India *Gazette* dated 19th instant, page 291, that on the Punjab Northern (State) Railway, fencing will, for the present, be put up only near villages or frequented localities, and it must be left to time to prove the necessity of fencing the rail, even on one side throughout.

From page 293 of the same *Gazette*, it appears that the sum of Rs. 16,667 is sanctioned as the fit and sufficient sum for fencing the line, 102 miles in length, which would give an average of Rs. 163 per mile, and taking the cost of an efficient wire-fence at Rs. 5,000 per mile, would suffice for rather less than 1-30th of the extent of the line. In page 295 it is stated that this charge may probably be reduced.

From R. D. SPEDDING, ESQ., Officiating Magistrate of Banda, to the Commissioner, 4th Division, Allahabad,—No. 1518 B, dated 29th September 1869.

I CONSIDER it my duty to bring to your notice the large number of cattle that are killed by the trains on that portion of the Jubbulpoor Railway within this District.

2. The subject is one to which, I think, the attention of the Consulting Engineer to Government might fitly be called, as a serious accident similar to that which lately occurred on the Great Indian Peninsula Railway may happen at any time.

3. The accompanying Statement is only prepared for a period of two and a half months, in regard to which I had special enquiries made as to how the cattle got on to the line. The period is from the 13th May till the 26th July. It will be seen that nine cattle were killed, and that in every case the fence of the place near which they were found was of earth, not of stone.

4. While at Kirwee, I have from time to time corresponded with the Engineers of the Railway, and Messrs. Easton, Brandell and Power, Contractors, regarding the state of the earth fence. I have to report that it is kept in very good order, but is, in my opinion, altogether insufficient for the protection of the line.

5. The number of cattle kept on the hills through which the line runs is much larger than those kept on villages on the plains. Immense herds of cattle are sent to graze in the jungles, and they are much more wild and unmanageable than the ordinary village kind. A fence which would effectually stop the cattle on the main line, East Indian Railway, would not afford any obstacle to the cattle near this portion of the Jubbulpoor line. The earth fence is made with a deep trench on the outside, seven feet wide at top and three feet deep, with an embankment seven feet wide at base, and three feet to three feet six inches high. This is not, in my opinion, sufficiently steep to prevent an animal walking up in a slanting direction.

6. I can only say that on several occasions I have, when in the neighbourhood of the line, had cattle driven off, and have seen them walking down it. The inference is clear,—that they can walk up. The earth in this part of the District is not sufficiently tenacious to make a secure fence. I feel sure that exceptionally heavy rain might break it down in many places.

7. During my cold weather tour I had many complaints from the people regarding this earth fence. At that time I thought that the cattle might have got over at some places where it was out of repair. It was on my representation put into thorough repair, but still the cattle continued to come on to the line. In these parts it is impossible to prevent animals from straying, and, even when they are being tended, the herdsman sometimes cannot prevent one from bolting. The zemindars and owners of cattle are in the greatest terror of allowing their cattle to go near the line at all. Besides the loss of their cattle they have the dread of being prosecuted in the Criminal Court. They say that if the stone fence were built all along the line, it would be impossible for these cattle to break in, and I believe them.

8. I will give one instance which was proved to have occurred last year. A tiger or panther frightened a herd of cows; twenty of them rushed with a bound over the earthen fence, and one was killed almost immediately after by a train. The herdsman was near, but could not prevent it.

9. The Engineer in charge of this portion of Railway (Mr. F. B. Wakely, of Manickpore) does not take the same view of the case which I do. He adopts two positions,—*first*, that the fence is sufficient to keep out cattle; and *second*, that the cattle are driven on to the line by the villagers (over the fence apparently) to eat the grass. The two opinions seem to me inconsistent, as, if the fence were sufficient protection, the cattle could not be driven over it. I enclose a copy of one of his letters in which he contends for the correctness of both opinions.

10. The last opinion would be a serious charge against our villagers. I have made enquiries, and feel certain it is without foundation. The people, as above reported, dread the punishment for trespass, and have also the fear of losing their cattle by violent death; but the best proof is that during the greatest part of the period there was no grass whatever, as far as I could see, growing on the line. I visited the railway several times in May and June, and the railway lands were as much parched as any other part of the country. During those two months, the cattle were fed on leaves of trees—fodder there was none. Further, the villagers have permission to cut grass on the line and are glad to do so, whenever there is any to cut.

11. I have gone into the subject at length, as it is one into which, I think, a special enquiry should be made. My own opinion is, that the stone fence which is to be found along the greater part of the line in this District should be continued in an unbroken line. It is perfectly secure, and no cattle can cross it.

12. If it should be found too expensive to move stone to the spots where the earth fence now is, I would suggest a five-wired fence with iron uprights similar to that used on the Delhi Railway, that would effectually prevent the inroads of the hill cattle.

N. B.—Since drafting the above, I have received from Kirwee reports of nine other cattle having been killed; between July 26th and September 18th, seven were killed on one day. This makes the total from May 13th till the middle of September, 18 cattle in this District alone.

Statement showing the number of Cattle run over and killed by trains on the Jubbulpoor Line within the District of Banda, in the months from 13th May 1869 to 26th July 1869.

Name of Police Station.	Date of occurrence.	Number of Cattle.	Remarks.
Markoondee	13th May 1869...	1 bullock ...	Killed near the gate-crossing of Mouzah Bumbeea. Earth fence reported in good order.
Ditto	25th „ „ ...	1 ditto ...	Ditto ditto.
Manickpore	28th „ „ ...	1 cow	Earth fence.
Burgurh	31st „ „ ...	1 bullock ...	Near Mouza Magnoo. Earth fence.
Oochendee	20th June „ ...	1 cow	Killed at a place two miles south of Chowkee Oochendee. Earth fence reported in good order.
Markoondee	24th „ „ ...	1 ditto ...	Killed near the gate-crossing at Tickreea. Earth fence.
Mujgaon	13th July „ ...	1 ditto ...	Killed at a distance of five miles from the station. Earth fence. Mouzah Entowan, Zillah Banda.
Burgurh	15th „ „ ...	1 bullock ...	Near Mouzah Suraee, or at a distance of five miles from station. Earth fence.
Markoondee	26th „ „ ...	1 ditto ...	Killed at a distance of 100 paces south of Markoondee. Earth fence reported in good order.

ZILLAH BANDA;
The 6th September 1869.

R. D. SPEDDING,
Offg. Magistrate.

APPENDIX I.

Abstract of Proceedings of the Chief Commissioner's Office, Central Provinces, Nagpoor, in the Public Works Department, Railway Branch, dated 5th June 1869.

No. 1.

From Commissioner, Jubbulpoor, No. 1726, *dated* 20*th May* 1869.

IN continuation of his No. 986, dated 30th March 1869, forwards copy of a letter from Deputy Commissioner, Jubbulpoor, representing the danger to cattle owners from the want of a substantial fence on the line of Railway, Jubbulpoor, and suggests that the fencing be completed as quickly as possible.

No. 2.

Reply No. 1585—191.

IN continuation of No. 1529—174, dated 31st ultimo, requests he will call upon the Deputy Commissioner, Jubbulpoor, to report after a month whether any, and what, action has been taken by the East Indian Railway Company in the matter.

CHIEF COMMR.'S OFFICE, C. P.;
Nagpore, the 13*th July* 1869.

CHARLES GRANT,
Secretary.

Extract from a letter from the Board of Directors of the East Indian Railway, No. 102 *of* 1869.

PARA. 4. *Trespass of Cattle.*—Lieutenant Pye, the Government Inspector, in his Report for the 2nd quarter of 1869, remarks that in the three months embraced by it the number of cattle killed by the movement of the trains had amounted to 31. He has great doubts whether any fence can be constructed strong enough without inordinate expense to resist the united efforts of man and beast. He ascribes all the cases of cattle trespass on the line to the wilful act or wilful neglect of the villagers. In the course of his inspection, he noticed between two stations 19 cattle on the line which had strayed from seven herds grazing near it, and seven herdsmen calmly looking on without any attempt to prevent it. The herdsmen,

he observes, succeed in keeping off the cattle from their own crops, and those of their neighbours, though they are never fenced. In America the obligation of keeping cattle off the line is thrown on the farmer, and whenever a cow is ran over, the owner is fined; but Lieutenant Pye has been informed that Magistrates in India have no authority to inflict a fine for such an offence. He considers that a slight fine would produce a great change.

5. The Board are deeply impressed with the truth of these observations, the importance of which is increased by the official source from which they emanate. They have long been convinced that the only effectual mode of preventing the trespass and the slaughter of cattle on their line is to impose the small fine recommended by the Government Inspector, and as is the practice in the United States, and they desire you to take an early opportunity of submitting the question to the consideration of Government.

From MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 1104 G, dated Fort William, the 25th May 1870.

IN continuation of this Office letter No. 684 G, dated 23rd March last, I am directed to forward the accompanying copy of a further Note dated 19th May 1870, by the Consulting Engineer to this Government, on the subject of the fencing of the East Indian Railway in the North-Western and Central Provinces, together with the correspondence noted in the margin for the final orders of the Governor General in Council.

No. 899-93, dated 4th April 1870, from Secretary to Chief Commissioner, Central Provinces.
No. 613, dated 26th April 1870, from Acting Secretary, Government of Bombay.
No. 104, dated 4th May 1870, from Secretary, Government of North-Western Provinces, Public Works Department.
No. 298 G, dated 13th May 1870, from Chairman, Board of Agency, East Indian Railway.

2. It seems to the Lieutenant-Governor quite beyond question that the ditch and mound is not an effectual obstruction to the intrusion of cattle on the line, and the real question at issue seems to be, whether the Railway Company are or are not to be required to keep up such a fence as shall prevent an effectual obstruction to the intrusion of cattle.

3. As the law* at present stands, the Lieutenant-Governor thinks there can be no doubt, reading sections 20 and 21 together, that the "good and sufficient fences" prescribed by section 20 must be taken to mean fences which will effectually prevent cattle from getting on the line by their own act merely.

* Act XVIII of 1854.

4. What the law ought to be is a question to be dealt with by the Governor General in Council primarily, and the legislature finally; but so long as the law remains in its present shape, it must, the Lieutenant-Governor believes, rest with the Magistrates to determine whether the fences actually maintained are or are not good and sufficient fences. The power given to Magistrates by the present law was clearly given in the interests of the community, and it may be doubted how far the Government could with propriety seek to restrain the action of the Magistrates in the matter so long as that action is within the obvious meaning of the law. But at present it is further clear that the Government, that is to say, the Local Governments both in the North-Western Provinces and in the Central Provinces, has no desire to restrict the action of Magistrates within the law; on the contrary, they consider that the law should be fully enforced.

5. In this state of the case, the Lieutenant-Governor thinks it is clear that if the Government of India should be of opinion that a case is made out for any relaxation of the existing law, a short enactment relating to this point specially should be passed as soon as possible.

Note by MAJOR F. S. TAYLOR, R.E., *Consulting Engineer to the Government of Bengal, Railway Department, on the subject of fencing of the East Indian Railway in the North-Western and Central Provinces, dated the* 19*th May* 1870.

THE replies of these Governments having been received, a final reference must now be made to the Government of India, as promised in my No. 654 G, dated 23rd March.

As respects Colonel Hodgson's letter No. 104, dated 4th May 1870, it should be noted that, when the control of the East Indian Railway was transferred to this Office, the main line had long been open, and I was given to understand by the Consulting Engineer in making over charge that the Government of the North-Western Provinces considered that on certain lengths (not specified in detail) the existing ditch and mound with its live-hedge was sufficient protection; that for 150 miles, where the hedge would not grow, the existing ditch and mound ought to be strengthened by two wires, and that for 50 miles of swampy ground a complete 6-wire fence

was required. The necessary indents were in due course submitted by the Agency, and were sanctioned by the Government of India in letter No. 202 G, dated 5th February 1866.

2. In 1867 (subsequent to this sanction), at the instance of the Directors, and with the approval of Her Majesty's Secretary of State, a Committee was appointed to consider whether a live-hedge was sufficient protection against cattle, and the conclusion (concurred in by the Board of Agency) was in favor of strengthening the existing ditch and mound by two wires,—a measure which the Agency were duly called upon to carry out on the main line in the North-Western Provinces, by Joint Secretary's letter No. 1334, dated 22nd July 1867.

3. The first official intimation to this Office of the wishes of the Government, North-Western Provinces, on the subject of fencing, will be found in Colonel Hodgson's letter No. 32 R, dated 5th October 1868, and refers to the Jubbulpoor line in particular. That line was opened for traffic on 1st August 1867, with little or no fencing, but the ditch and mound was reported complete in Joint Secretary's letter No. 17 G, dated 5th January 1869, in reply to the above-mentioned letter. Indents for a permanent fence of the approved pattern were submitted by the Agency in September 1867, and sanctioned by the Government of India in January 1868.

4. Colonel Hodgson's letter of 4th May 1870, now submitted, is the first intimation that I can trace of the opinion of the Government of the North-Western Provinces that the existing fence on the main line in those Provinces is deemed insufficient.

5. The first direct representation from the Chief Commissioner of the Central Provinces, on the subject of the fencing of the Jubbulpoor line, appears to be Secretary's letter No. 113, dated 9th April 1869, the reply* to which was sent to the Government of India.

* See No. 802 G, dated 17th April 1869.

A further representation was made in Secretary's letter No. 278-4246, dated 10th August 1869, and under instructions from the Government of India,* the Board of Agency were called upon in Officiating Joint Secretary's No. 2092 G, dated 23rd September 1869, to state what was being done to improve the fences both of the main line North-Western Provinces, and Jubbulpoor Branch; a distinct reply† was elicited in March last, to the effect that the Railway Company are still trying to maintain the original ditch and mound fence, and have taken no steps as yet to supplement it with wires.

* Secretary's No. 1397 R, dated 15th September 1869.

† Agency No. 137 G, dated 3rd March.

6. This reply was communicated to the Government of India and referred to the Local Governments with my letter No. 684 G, dated 23rd March 1870, for a final expression of opinion on the general question of fencing.

The Chief Commissioner in reply reiterates the opinion that the ditch and mound is insufficient, and considers that there is no security for passengers as long as the line is constantly trespassed upon by cattle. He also points out that the Great Indian Peninsula Railway have constructed an efficient wire fence on the Jubbulpoor Extension.

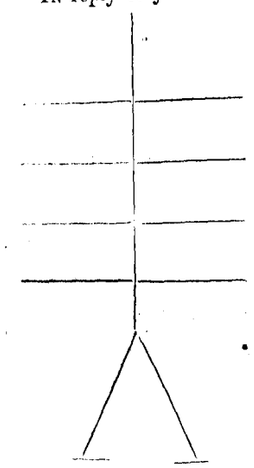
The Secretary to the Government of the North-Western Provinces forwards the statements of the several Commissioners, to the effect that the existing fence both on the main and Jubbulpoor lines in those Provinces is insufficient, with an expression of the opinion of the Lieutenant-Governor that the existing law which requires Railway Companies to maintain sufficient and secure fences should be insisted on.

7. To complete the case, the Board of Agency, in their letter No. 298 G, dated 13th May 1870, now request the intervention of Government against the proceedings of Magistrates until a definition of the term "good and sufficient fence" has been arrived at.

8. My own professional opinion, to which I beg distinctly to adhere, is conveyed in the concluding lines of my note of the 14th March, but I wish it to be clearly understood that I think the Railway Engineers have not bestowed sufficient attention on the maintenance of the fences, either on the main line in the North-Western Provinces, or on the Jubbulpoor Branch, and I believe that the Company would find it the most economical course to put up wire fencing at once on many parts of the line.

In this view, I submit, the action of Magistrates may safely be confined to enforcing the proper maintenance of the existing fence, and the onus will lie on the Railway Companies to add the wire gradually in all places where the soil is unsuitable to the ditch and mound.

From C. GRANT, ESQ., Secretary to the Chief Commissioner, Central Provinces, to the Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch,—No. 899—93, dated Nagpore, the 4th April 1870.



I AM directed to acknowledge the receipt of your letter No. 682 G, dated 23rd March 1870, and in reply to convey to you the Chief Commissioner's opinion on the question at issue as follows.

2. Mr. Morris cannot admit that any good case has been made out by the Railway Company for dispensing with some effectual means of guarding the line, whether by rails, fences, or walls. It seems clear as well from the experience of other jurisdictions as from that of the Central Provinces officials, and, indeed, of the Chief Commissioner himself, that the earthen walls now provided are no adequate protection whatever against the intrusion of cattle; and, even if accidents hitherto have been few in number, it cannot be contended that there is any security, especially in night travelling, on a line on which the trains are bound to run at a high speed, and which is constantly trespassed upon by cattle. This is altogether putting out of the question the annoyance to the people themselves, which cannot be dismissed as unworthy of consideration. Mr. Morris does not think that they are so successful as the Board of Directors* supposes in keeping their cattle off their neighbour's crops, but the result of a trespass of the latter kind would be at worst nothing more than a petty fine, while trespass on the line, as has been seen, often involves entire loss of the cattle. As regards the nature of the country through which the Jubbulpoor line passes, the Chief Commissioner observes that the Great Indian Peninsula Railway traverses tracts of far wilder character and greater extent, and yet the Company has not felt itself justified on this account in neglecting the proper safeguards of a line on which trains travel at a high speed and at night.

* No. 102 of 1869.

From LIEUTENANT-COLONEL F. S. TREVOR, Acting Secretary to the Government of Bombay, Railway Department, to the Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch,—No. 613, dated 26th April 1870.

IN reply to your No. 870 G, dated 19th April 1870, I have the honor to inform you that, on the Jubbulpoor Extension of the Great Indian Peninsula Railway, the fencing consists of four-wire strands supported by iron standards or by wooden posts; a live-fence is also being planted throughout the entire length of the line, which, in a few years, will of itself prove a perfect obstacle to cattle. I may add that the wire-fence above alluded is found to be very efficient in keeping out cattle, and that its cost is about Rs. 1-13 per yard.

Endorsed by the Bengal Public Works Department, Railway Branch,—No. 959 G, dated 2nd May 1870.

COPY of the above forwarded to the Chairman, Board of Agency, East Indian Railway, for information.

From COLONEL C. J. HODGSON, R.E., Secretary to the Government of the North-Western Provinces, Public Works Department, to the Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch,—No. 104, dated 4th May 1870.

I AM directed to acknowledge the receipt of your letter No. 681 G, dated the 23rd March last, regarding the fencing of the Railway line in the North-Western Provinces, and to forward, for your information, a copy of the printed Proceedings of this Government, Nos. 1 to 9, for January 1870, containing the opinions of the several Commissioners of the North-Western Provinces on the subject; also report as in margin, from the Magistrate of Banda of a recent accident on the Jubbulpoor Railway.

No. 450, dated 16th April 1870.

2. I am to state that it is not gathered from your communication what course is advocated by the Bengal Government and yourself; but in the opinion of this Government, the provisions of the law, as it at present stands, which requires Railway Companies to maintain sufficient and secure fences, should be insisted on.

3. Cattle seem to find little difficulty in making paths across the ditch and mound fence, even where this can be maintained to its proper section. A quickset hedge can, it

appears, be made an effective fence; dry stone walling is reported to be so, but where neither of these can be resorted to, an addition of wires to the ditch and mound seems the best contrivance.

4. The accident reported by the Magistrate of Banda shows that the ditch and mound were leaped by terrified cattle, and that the cow-fender attached to the locomotive did not serve to prevent a part of the train being thrown off the rails, and I am to express a hope, therefore, that there may be no further delay in affording the security of proper fences.

From E. B. THORNHILL, ESQ., Officiating Magistrate of Banda, to the Deputy Consulting Engineer to the Government of the North-Western Provinces, Railway Department,—No. 450, dated 16th April 1870.

IN reply to your docket No. 83, dated the 4th instant, I have the honor to forward a copy of a report from Mr. Spedding, the Joint Magistrate of Kerwie, No. 119, dated the 13th instant, from which you will see that the cattle run over, and the running over which caused the accident to the mail train on the Jubbulpoor line on the 3rd instant, were probably pack-bullocks which had broken loose in consequence of fright during the hail storm which raged on the evening of the 2nd instant.

Frightened cattle would cross a fence that cattle grazing would not cross.

I am quite of Mr. Spedding's opinion that a mere earthen bank is not sufficient protection against the trespasses of the active jungle cattle of Bundlekhund (for the pack-bullocks are turned out in the jungle during part of the year). The fact of the fence being crossed without a way being purposely made through it, affords ample proof that the fence is not sufficient.

I am therefore consulting the Commissioner on the subject, and should he think that the matter is not beyond my competence at present, in consequence of the previous reference to Government regarding the fence, I shall serve a notice on the Railway Company, through the District Engineer, under section 20 of Act XVIII. requiring the Company to erect a proper fence against cattle within a reasonable time, to be specified in the notice.

Memorandum from C. STEPHENSON, ESQ., Chairman, Board of Agency, East Indian Railway, to the Consulting Engineer to the Government of Bengal, Railway Department,—No. 298 G, dated 13th May 1870.

THE undersigned has the honor to forward herewith copy of letter* No. 1040 of 10th instant, from the Chief Engineer, pointing out the great inconvenience that would arise if Magistrates were allowed to lay down the law as to what should be considered a good and sufficient fence, and to request the interference of Government in the matter.

* An annexure.

From G. SIBLEY, ESQ., Chief Engineer, to the Chairman, Board of Agency, East Indian Railway,—No. 1040, dated 10th May 1870.

WITH this I send copy of Mr. Spencer's No. 335 C of 6th instant, giving cover to an order issued by the Magistrate of Kerwie to District Engineer of Jubbulpoor line between 36th and 85th mile, directing him under certain pains and penalties to substitute some particular kind of fence for that now existing, and defining, for the purpose of that order, what a good and sufficient fence shall be held to be.

I would suggest that all orders of this kind shall be sent through the Consulting Engineer who is supposed to be the adviser of Government in such matters, and could, from his personal knowledge derived from inspections and returns which are submitted to him, prevent the issue of absurd or inconsistent orders.

I think that it will lead to great inconvenience if each Magistrate and Justice of the Peace is allowed to lay down the law as to what shall be considered a good and sufficient fence in his own District.

In the present case, the Magistrate states that the existing fencing has been found insufficient to protect the said railway from the trespass of cattle; he does not state how it has been so found, and the only apparent possible ground for such a conclusion is the fact that cattle have been run over.

But that that fact is not conclusive evidence of the insufficiency of such a fence, is shown by the fact that, in the Bengal Division (577 miles), which has, what the Magistrate's orders shall be held to be, a good and sufficient fence, there have been 15 cases of running over cattle,

while in the same period there have been in the North-Western Provinces (557 miles) 16 cases, of which two were wild boars, and on the Jubbulpoor line (223 miles) there were five cases.

From C. J. SPENCER, ESQ., District Engineer, Jubbulpoor Line, to the Chief Engineer, East Indian Railway,—No. 335 C, dated the 6th May 1870.

I BEG to forward herewith copy of order received this morning from the Magistrate of Kerwie with reference to railway fence in Banda District.

I shall be glad of your orders on the subject.

Order issued to the East Indian Railway Company, under the provisions of section 20, Act XVIII. of 1854, by R. SPEDDING, ESQ., Magistrate and Justice of the Peace, Kerwie,—dated the 29th April 1870.

WHEREAS the earthen fence at present constructed on each side of such portions of the Jubbulpoor Extension, East Indian Railway, as lie between the 36th and 85th mile has been found insufficient to protect the said Railway from the trespass of cattle, the East Indian Railway Company are hereby required to erect a good and sufficient fence in place of the said earthen fence within three calendar months from the date of receipt of the present order, and failing therein the said Company will be liable to a fine of Rs. 25 for every day after the expiration of such period.

This order does not apply to such portions of the railway as are already fenced by a stone wall.

A "good and sufficient fence" under the terms of the present order shall be held to be—

(1) a stone fence similar to that already constructed on certain portions of the said railway; or

(2) a five-wired fence similar to that on the Delhi Railway in place of the present earthen fence; or

(3) a wire-fencing of not less than two strands to be securely fixed on the summit of the present earthen fence as an addition to the said fence.

This order shall be served on the District Engineer within whose length the portions of the railway above defined lie, and such officer, in regard to compliance or non-compliance with the said order, shall be considered as the representative of the East Indian Railway Company.

From MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 1110 G, dated Fort William, the 26th May 1870.

IN continuation of this Office letter No. 1104 G, dated 25th instant, I am directed to forward, for the orders of the Government of India, a copy of the letter noted on the margin, from the Secretary to the Government, North-Western Provinces, in the Public Works Department, on the subject of the fencing of the East Indian Railway in the North-Western Provinces.

No. 148 G—R, dated 18th May 1870, from Government, North-Western Provinces, Public Works Department.

From COLONEL C. J. HODGSON, R.E., Secretary to the Government of the North-Western Provinces, Public Works Department, to the Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch,—No. 148 G—R, dated the 18th May 1870.

IN continuation of my letter of the 4th instant, No. 104 G—R, I am directed to forward copy of memorandum by the Deputy Consulting Engineer to this Government on the fencing of Jubbulpoor line, as well as copy of papers noted in the margin on the same subject, and I am to remark that His Honor the Lieutenant-Governor, North-Western Provinces, considers that the ditch and mound can only prove efficient when the slope is steep and angles sharp; and these features (unless perhaps in exceptionally stiff soil) are lost in the course of time, and in soft, loose and sandy soil are hardly present even at the first.

No. 96 of 4th May 1870, from Commissioner, Allahabad Division, with enclosures.

2. His Honor has no doubt that the proper remedy is the wire-fence proposed by Major Bonus, and until it is put up, no prosecution for trespass is likely to hold. If this state of things after due warning is continued, it will be necessary to prosecute the Railway Company for neglect of its legal obligations.

Memorandum by MAJOR J. BONUS, R.E., Deputy Consulting Engineer to Government, North-Western Provinces, Public Works Department, Railway Branch.

HAVING recently passed over this line and inspected the fences, I have the honor to offer the following remarks on the subject:—

The fencing consists chiefly of a ditch and bank in section thus, but in the hilly districts a dry stone wall has been put up.

The dry stone wall forms, I think, an efficient fence. I have seen it used in other lines, and it has always stood well where there is no danger of rapid floods; there is no fear of such floods where the walling is used in the Jubbulpoor line. In some places, the wall is crowned with earth with the view, of course, of keeping the top stones from falling off. I think this is a mistake, the earth permits of the growth of reed and small plants which work their roots down into the wall, and as they increase in size, force the stones outwards till they fall. I do not think it necessary to cope this walling at all, but if it is done, it should be done with ordinary mortar.

But the chief fencing of the Jubbulpoor line is the ditch and bank which I consider a most unsuitable fence. When first made in stiff soil, it is doubtless a sufficient protection, but it contains the elements of its own destruction. The bank is soon overgrown with grasses and plants; rain falls and washes the material from the bank back into the ditch, and in a very short time the section is reduced to one which offers scarcely any impediment to the active half-wild cattle which graze in the vicinity of the line.

In order to keep such a fence in anything like an efficient state, parties of laborers must be constantly employed in clearing the ditch and scarping the bank, and the expense of maintenance must be of necessity very great indeed.

I noticed at several points along the line that men were thus engaged, but the greater part—for the greater part—of the ditch and bank fence was covered with a luxurious growth of grass tempting the cattle to cross the ditch and offering really but a trifling obstacle.

The best thing that can be done is to crown the bank with a wire-fence with iron standard. Wooden posts should not be allowed; they decay, get eaten by white ants, or destroyed by fire, when the grass around is ignited by sparks from the engines the fence soon assumes a wretched appearance, and the expense of new posts has to be incurred. Iron standards should be used then, and these should be of sufficient height to take at least four wires, in the first instance a couple of wires would be sufficient I think, but as the ditch gradually fills up, it will probably be found necessary to add a third and then a fourth wire. This wire fence is an excellent one, I have seen it in use in grazing countries for years, and I have never known it fail. The expense of maintenance is very trifling.

It is not impossible that the Railway Company will object to the first expense of the wire fence. In the end, however, they will benefit, the maintenance being so much less costly than that of the bank and ditch. The fact is that the bank and ditch is not maintained as it ought to be, if it is to be preserved in a state at all approaching efficiency. I think, therefore, with a view of enforcing proper maintenance that the Civil Officers should be instructed to levy fines upon the Company in every instance in which they consider that the due maintenance of the fence is neglected.

From F. O. MAYNE, ESQ., C. B., Commissioner of 4th or Allahabad Division, to the Officiating Secretary to the Government of the North-Western Provinces,—No. 96, dated 4th May 1870.

IN continuation of this Office No. 88, dated 25th April, I have the honor to submit a copy of Mr. Spedding's report No. 1518 B, dated 29th September last, on the subject of railway fences on the Jubbulpoor line, East Indian Railway.

2. No reply has ever been received from the Consulting Engineer. The subject is an important one, and I would suggest that the Bengal Government be addressed regarding it.

3. The case of cattle trespassing is somewhat different in these hill tracts to what it is with ordinary village herds. The graziers ordinarily are able to keep cattle out of fields, and to prevent trespass; but in the jungles in the southern tracts of Tirohan large herds are sent to graze, and the herdsmen have little control over these wild animals. The section of the ditch and fence given in the Resident Engineer's letter to Mr. Spedding is manifestly insufficient to prevent animals coming on to the line, a loose stone rubble wall would be far better.

From the Government of India, Public Works Department, to the Joint Secretary to the Government of Bengal in the Public Works Department, Railway Branch,—No. 1185 R, dated Simla, the 5th July 1870.

I AM directed to acknowledge the receipt of your letters No. 1104 G and No. 1110 G, dated the 25th and 26th May 1870, respectively, with copies of a Note by the Consulting Engineer, and of correspondence with the Government of the North-Western Provinces and the Chief Commissioner of the Central Provinces, on the subject of the fencing of the East Indian Railway, and in reply to state that, after full consideration of these papers, the Governor General in Council is of opinion that, so far as this important trunk line of Railway is concerned, the requirements of the existing law should be complied with without further discussion, and the Railway Company should be at once called upon to provide an efficient fence without delay. The definition of what constitutes an efficient fence may, in each case, be left to be settled by the Local Governments concerned. So long as the safety of the travelling public and the proper protection of the agriculturists and their cattle is sufficiently considered, no interference on the part of the Government of India will be called for. It having been decided by the Local Government what constitutes an efficient fence, it must be left to them and their magisterial officers to take such steps, under the law, as may seem called for, to ensure its provision within a reasonable period.

2. The Government of India are not satisfied, however, that, as a rule, proper care has been taken to ensure the success of a live-fence, and they consider that a ditch with mound surmounted by a couple of wires would form as efficient a fence as the ordinary wire-fence of four strands.

Nos. 1186-7 R.

COPY forwarded, for information and guidance, to the Government of the North-Western Provinces, and to the Chief Commissioner of the Central Provinces.

EXTENSION OF RAILWAYS IN HYDERABAD AND CENTRAL INDIA.

Resolution by the Government of India, Public Works Department,—Nos. 1259-61 R., dated Simla, the 15th July 1870.

READ again—

From the Government of India, to the Secretary of State for India,—No. 40, dated Fort William, the 29th March 1870.

We are greatly gratified to be able to inform your Grace that certain negotiations which have been in progress for some months past, relating to the extension of railways in two important Native States, have recently been brought to conclusions which appear to us in every respect highly satisfactory.

2. The first of these cases is that of the line from the Great Indian Peninsula Railway to Hyderabad.

3. In the earlier discussions regarding this Railway, it had been intimated that the British Government would expect the Nizam's Government to bear at least one-half of the cost of construction. When, during last year, we received the authority of Her Majesty's Government to carry out this line as a State work, we again invited the Nizam's Government to consider the terms on which the needful funds could be supplied, and we have now the honor to inform your Grace of the conclusion that has been come to.

4. His Highness Sir Salar Jung proposes that the Nizam's Government shall provide the whole of the capital required, partly from the means of the Hyderabad State, partly by aid of subscriptions of local capitalists. It may amount to about one million sterling. The Railway will be considered to be the property of the Hyderabad State, and the profits of the working will go entirely to that State. But the construction, management and working of the Railway will be carried on exclusively by the British Government under the general supervision of the Resident at Hyderabad, acting in communication with the Nizam's Government.

5. Thus the construction of this important line will be provided for without placing any charge or liability on the British Government or the revenues of India,

a result which we do not doubt your Grace will agree with us in regarding as highly satisfactory.

6. The surveys for this line of railway, as your Grace has already been informed, are in progress, and the commencement of work may be expected in the course of the present year.

7. The other case refers to His Highness the Maharaja Holkar, who has intimated to the Governor General's Agent in Central India that he is desirous of placing at the disposal of the British Government a sum of one million sterling as a contribution for the construction of a railway to unite the Great Indian Peninsula Railway with Indore.

8. The terms which the Maharaja has proposed are, that he shall receive from the British Government 4½ per cent. interest on the capital thus to be contributed by him, and shall share in half the surplus net profits in excess of that amount. We have readily assented to this, which practically places His Highness in the position of a holder of guaranteed capital under terms financially the same as those granted to the existing Guaranteed Companies.

9. The Maharaja proposes to contribute the million as follows :—

	£
In 1870-71	250,000
„ 1871-72	200,000
„ 1872-73	110,000
„ 1873-74	110,000
„ 1874-75	110,000
„ 1875-76	110,000
„ 1876-77	110,000
Total ...	1,000,000

10. The yearly sums are to be paid in quarterly instalments. The capital is left at the disposal of the British Government in perpetuity.

11. The necessary measures will at once be taken by us for commencing the survey of the line of railway in question. The country is difficult, and part of it extremely unhealthy for several months of the year; but we hope to be able to make arrangements under which some part of the line at least may be fixed in time to admit of the commencement of actual operations after the close of the ensuing rainy season.

12. We are at present unable to say what the railway to Indore is likely to cost, but it is not improbable that the outlay will exceed the sum to be given by the Maharaja. The intrinsic importance of the line, however, is so great, and the political advantage to be secured by the arrangement proposed so manifest, that we have not hesitated to give our assent to the Maharaja's terms, and to undertake to proceed at once with the construction of the line, accepting the liability of finding the sum, whatever it may be, necessary for completing the junction between Indore and the Great Indian Peninsula Railway. It will be our chief aim to take every precaution for keeping down the cost of first construction, so as to ensure, as far as possible, the early financial success of the undertaking.

13. We may, we think, properly congratulate your Grace on these events. Two Native Governments have, of their own accord and without solicitation on our part, offered to subscribe £2,000,000 of capital for railway construction in their own territories. It is satisfactory to us to note that in the first year, after the Government had announced its intention of carrying out further extensions of railways in India by its own agency, two Native States should have subscribed such a sum, on terms so favorable as those that we have described, for the construction of lines of railway which, while they will benefit considerably their own States, may also be regarded of primary importance to India as a whole. We cannot but trust that the example set by the Maharaja of Indore and Sir

Salar Jung will be followed by other enlightened rulers, and that we may for the future hope for the more active coöperation of the Native Chiefs and Princes of India in all works of industrial enterprize.

14. We shall take care to keep your Grace informed of our further proceedings in these matters, and of the formal conclusion of the arrangements, an outline of which we have now had the honor to report.

Read also—

From the Secretary of State for India, to the Government of India,—No. 39, dated India Office, London, the 9th June 1870.

I have learnt, with much gratification, from your despatch No. 40 of 29th March last, to how great an extent their Highnesses Sir Salar Jung, on the part of the Nizam, and the Maharaja Holkar, have agreed to coöperate with your Government in the construction of railways through their respective territories.

2. The arrangement made by Sir Salar Jung, on behalf of the Hyderabad State, is especially satisfactory. That the Government of the Nizam should voluntarily take upon itself the entire cost and risk of a railway to connect the capital of Hyderabad with the Great Indian Peninsula line, and should at the same time, propose to entrust the construction and subsequent management of the work to the British authorities, exhibits at once very enlightened liberality on His Highness's part, and affords a very gratifying proof of the confidence which he has learnt to repose in the British Government. The most appropriate return that can be made to His Highness will be the construction of the railway within the shortest time and in the most efficient manner possible, and every exertion will, no doubt, be made for the purpose.

3. The undertaking of the Maharaja Holkar to place a million sterling at the disposal of your Government, in aid of the expense of a railway to unite the Great Indian Peninsula line with Indore, is also entitled to cordial recognition. The terms on which he has arranged to make this contribution, *viz.*, the annual payment to him of 4½ per cent. on its amount, and of one moiety of any surplus profits realized, although, as you say, practically placing His Highness in the position of a holder of guaranteed stock, constitute at the same time an example of a form of guarantee free from some of the worst defects of the system. It will be of no small advantage to your Government to have under its own exclusive control funds obtained on guarantee.

4. I heartily concur with your Excellency in regarding it as a matter for congratulation that two Native Governments should, of their own accord and without solicitation, have already exhibited so decided an interest in railway extension, and I concur similarly in accepting the example set by them as an earnest of active coöperation in future on the part of the Native Princes of India generally, in all works of industrial enterprise.

ORDER.—Ordered, that these despatches be communicated for information to the Foreign Department, the Resident at Hyderabad, and the Agent to the Governor General for Central India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 19th July 1870.

PRESENT:

His Excellency the VICEROY and GOVERNOR GENERAL of India, K.P., G.C.S.I., *Presiding*.
His Excellency the COMMANDER-IN-CHIEF, G.C.B., G.C.S.I.
The Hon'ble JOHN STRACHEY.
The Hon'ble SIR RICHARD TEMPLE, K.C.S.I.
The Hon'ble J. FITZJAMES STEPHEN, Q.C.
The Hon'ble B. H. ELLIS.
Major-General the Hon'ble H. W. NORMAN, C.B.
The Hon'ble F. R. COCKERELL.

COINAGE AND MINT BILL.

The Hon'ble MR. STEPHEN introduced the Bill to consolidate and amend the law relating to Coinage and the Mint, and moved that it be referred to a Select Committee with instructions to report in a month. He said that one object of the Bill was to consolidate the five Regulations and Acts relating to coinage and the mint. No alteration had been made in the substance of the existing law, with the exception of the introduction of a section by which power was given to public servants to deface light-weight, counterfeit and called-in coin. His hon'ble friend, Sir R. Temple, would, Mr. STEPHEN hoped, consent to serve on the Select Committee, and would thus have an opportunity, if he thought fit, of suggesting any alterations which might be desirable from a financial point of view.

The Motion was put and agreed to.

LOCAL ACTS CONFIRMATION BILL.

The Hon'ble MR. STEPHEN also moved for leave to introduce a Bill to confirm certain laws affecting European British subjects. He said that in introducing the Bill he would trespass on the time of the Council for a few moments, as the subject was one of very general importance and interest.

The Council would be aware that the High Court at Bombay had lately held that the local Legislature of Bombay had no power to pass Acts by which European British subjects were subjected to criminal punishment. A European British subject had committed some trifling offence against a local law for which he was fined one rupee. The High Court held that the local Legislature was not competent to pass an Act inflicting such a penalty; that the conviction must be quashed and the fine repaid. The steps by which they arrived at this conclusion were these: The Indian Councils' Act which created the local Legislatures, restrained them from affecting the jurisdiction of the High Court. The High Courts had exclusive jurisdiction in criminal matters over Europeans. Therefore, every Act of the local Legislatures which inflicted criminal punishments on Europeans affected the jurisdictions of the High Courts, and was illegal. Upon each of these

points the High Court entered upon an elaborate examination of all relevant authorities and principles, and they arrived at length at the conclusion above stated. MR. STEPHEN thought that they had a perfect right to do so, and he and the Government generally wished to treat their decision with the utmost respect. He, however, could not help saying that the subject was one on which other Courts might arrive at a different conclusion. He had seen careful and elaborate opinions by two of the most eminent lawyers in India, the effect of which was that the Local Governments had the right to pass Acts of the class in question, inasmuch as they did not affect the jurisdiction of the High Courts, but merely conferred concurrent jurisdiction upon the local Courts, and that there was no ground for the opinion that the jurisdiction of the High Courts was exclusive.

MR. STEPHEN's own opinion was that the point of law was one on which difference of opinion might naturally prevail, inasmuch as it had in all probability escaped the attention of Parliament when the Indian Councils' Act was before them. The matter might probably come before the High Courts at Calcutta and Madras, and if they should take a different view from the High Court of Bombay, the result would be unseemly and highly inconvenient. If, on the other hand, the other High Courts were to concur with the High Court of Bombay, the result would be calamitous, as (amongst others) the Police Acts, the Municipal Acts, and the Gaol Acts, would become a dead letter as regards Europeans. He (MR. STEPHEN) could not regard such a consequence without dismay. Considering that Calcutta and Bombay had each a large sea-faring European population, amongst whom order was preserved principally by the operation of the Police Acts, the consequence of repealing those Acts would be nothing less than disastrous.

Under these circumstances MR. STEPHEN thought it was the clear duty of the Government to interfere. They could not increase the powers conferred by Parliament on the local Legislatures. They could, however, confirm their Acts retrospectively, and give them the same validity as they would have had if they had been passed by the Governor General in Council.

As the Government had no intention of interfering with the privileges of European British subjects, care would be taken to draw the Bill in such a manner as not to subject them to any judicial officer who would not otherwise have jurisdiction over them. Its effect would be to make them punishable for the same offences for which Natives would be punishable under local Acts, but only by the Justices of the Peace who would have jurisdiction over them in respect of offences against the general criminal law.

The Bill would of course contain a clause indemnifying Magistrates who had acted under the Acts intended to be confirmed.

The Motion was put and agreed to.

BENGAL REGULATIONS REPEAL BILL.

The Hon'ble MR. COCKERELL moved for leave to introduce a Bill to repeal certain obsolete Regulations of the Bengal Code. He said that the proposed measure was another step towards the execution of the scheme recently laid before the Council by his hon'ble and learned friend MR. STEPHEN for the consolidation of the existing law. There was certainly no part of the Indian Statutes to which the consolidating process could be more advantageously applied than the Regulations of the Bengal Code. Though not embracing any great variety of subjects—for, excluding revenue matters and punishments for heinous offences, the Regulations could not be said to contain much substantive law,—yet their numerical strength and bulk were excessive. It had been frequently asserted that there was at the present time a tendency to over-legislation. If this could be said with any reason in regard to our modern legislation, what must be said of the legislation of the Regulation era? That period extended—at least as regards extant Regulations—from 1793 to 1833. In 1834 there were on the Statute-book 561 Regulations, excluding those which had been rescinded previous to that time, and

also the Regulations of the Madras and Bombay Codes. If we contrasted those figures with the nett result of the legislation which had taken place from that year up to the present time, a period almost corresponding in length with that in which the Regulations were enacted, we should find that, notwithstanding the vast extent of territory which had been added to the British dominions in India since the period just referred to, and the obviously increased requirements of a more advanced state of civilization, the total number of the unrepealed Acts of the Governor General in Council enacted from 1834 up to the present time, was considerably less than the number of Regulations which were in force in 1834.

It was true that in this comparison he (MR. COCKERELL) had not taken into account the enactments of the different local Legislatures, but, on the other hand, he had excluded the Regulations of the Madras and Bombay Codes. He had simply contrasted the nett result of the legislation of the Governor General in Council for all India during the last thirty-six years, with that of the legislation during the previous forty years for the Bengal Presidency only.

Since 1834 considerable progress had been made in reducing the number of the Bengal Regulations. For a large portion of them, the three great Codes,—the Civil Procedure Code, the Indian Penal Code, and the Criminal Procedure Code,—had been substituted. A still larger number had been extinguished as obsolete, or practically useless, by the repealing Act (No. VIII of 1868), and many others had been absorbed in such consolidating enactments as the Rent Law, the Consolidated Customs' Act, the Abkárí Act, the Registration Act, the Stamp Acts, &c. With all these reductions, however, the aggregate of unrepealed Bengal Regulations was still no less than 224—a number equal to, in fact exactly corresponding with, the number of the extant *general* Acts of the Governor General in Council. Of this number, about 62 might eventually be extinguished or absorbed on the passage through this Council of three Bills now before it, namely, the Bill for declaring the local extent of the general Regulations and Acts, the Jails' Bill, and the Coinage Bill. There would still remain 162 Regulations; and the object of the Bill, which he now asked leave to introduce, was to remove by express repeal so much of these enactments as had become obsolete or was unfit for retention as no longer necessary to meet the requirements of the present time, and thus to clear the way for condensing and reducing into the smallest practicable compass as much of the residue of these Regulations as was capable of being re-abridged by consolidation.

This project did not commend itself to approval solely on the ground of the advantage to be derived from the reduction of the *number* of the existing operative Regulations. Much as there was to admire in many of these Regulations as regards their comprehensive and perspicuous style and the benevolent intentions expressed on the preambles, which generally contained a sort of Statement of Objects and Reasons by which their framers were actuated, it must, he (MR. COCKERELL) thought, be admitted that the terseness of expression and scientific arrangement of matter which marked modern drafting were more suited to the practical age in which we lived than the diffuse language and unconnected sequences in which the substance of the Regulations was expressed and arranged. The Bill would provide for the absolute repeal of 43 Regulations, besides the partial repeal of 95 others. The number of Regulations or parts of Regulations thus left might be about 119, which would be classed as follows:—

Relating to	Land Revenue	57
Ditto	Civil Judicature	12
Ditto	Constitution and Jurisdiction of Courts	6
Ditto	Police, including police functions and responsibilities of landholders	9
Ditto	Pensions	7
Ditto	Personal obligations of the Members of the Covenanted Civil Service	4
Ditto	Native officers	4
Ditto	Rájá of Benares	3
Ditto	Nawáb Názim	3
Ditto	Miscellaneous Revenue and Customs	3

and eleven others relating to different subjects which it was perhaps unnecessary to detail here.

It would be seen that the majority of these Regulations related to land revenue. There was, he (MR. COCKERELL) believed, at the present time, a scheme under preparation in England for the consolidation of the entire revenue law of the North-Western Provinces. This work, which presumably included all the matters contained in the Regulations just referred to, would probably at no distant date become the subject of legislation by this Council. This projected Revenue Code was intended for application to the North-Western Provinces only, whereas many of these Revenue Regulations were in operation in both divisions of the Bengal Presidency. But if the Code was adopted by this Council, and superseded the existing revenue Regulations in the North-Western Provinces, the local Legislature of Bengal proper might be expected to undertake a similar consolidation of the revenue law applicable to those Provinces, and in this way the entire body of Regulations relating to revenue might be eventually extinguished.

The twelve Regulations relating to civil judicature could be conveniently absorbed in the amendment of the Civil Procedure Code whenever we were in a position to proceed with that long-projected measure. As regards the Regulations relating to (1) the Constitution and Jurisdiction of the Courts, (2) Police, (3) Pensions, (4) the personal obligations of Members of the Covenanted Civil Service, (5) Ministerial and other Native officers, he (MR. COCKERELL) hoped, as soon as the present Bill was sufficiently matured to clear the way for further action, to bring forward consolidating enactments on each of these subjects.

If these measures should be eventually adopted by the Council, the Bengal Regulations would be reduced thereby to the narrowest possible limits; and MR. COCKERELL ventured to say that a most useful work, both as regards the convenience of the public and the lessening of the labours of those who had to administer the law, would have been achieved.

The Hon'ble MR. STEPHEN said that the Hon'ble Mr. Cockerell deserved the acknowledgments of the Council for the very great pains which he had taken and for the special knowledge which he had brought to bear on the preparation of his scheme. If the Bill now proposed were passed, the Regulations of Bengal would be brought to the desirable condition to which those of Madras had for some time been reduced, all the dead wood, so to speak, having been cut away. As the present number of Regulations would never be increased, one difficulty in the way of their consolidation would be absent. He hoped that the Government would soon be able to publish all the extant Bengal Regulations in one compact and well-arranged volume.

The Motion was put and agreed to.

HINDU WILLS' BILL.

The Hon'ble MR. STEPHEN moved that the further report of the Select Committee on the Hindú Wills' Bill be taken into consideration. He said that, with regard to the provisions of the Bill, he had nothing to add to what he had said at their last meeting in Calcutta. It had been thought desirable to let the Bill stand over in order to give the Government of Bengal and all persons interested in the measure ample opportunity of expressing their views thereon. No communications on the subject had reached the Legislative Department since the 22nd of March last: the Council had waited quite long enough; and it would be wrong to postpone the passage of the Bill.

The Motion was put and agreed to.

The Hon'ble MR. STEPHEN also moved that in section two, line 16, and in section three, last line, for 'May' the word 'September' be substituted.

The Motion was put and agreed to.

The Hon'ble MR. COCKERELL moved that in section two, line 13, after 'shall,' the following words be inserted:—

'notwithstanding anything contained in section three hundred and thirty-one of the said Act;'

He said that this amendment was rendered desirable by the provision of section three hundred and thirty-one of the Succession Act, which barred the application of the Act to the very persons to whom this Bill was intended to apply.

The Hon'ble MR. COCKERELL also moved that after section three the following section be inserted:—

'4. On and from that day, section two of Bengal Regulation V of 1799 shall be repealed so far as relates to the executors of persons who are not Muhammadans, but are subject to the jurisdiction of a District Court in the territories subject to the Lieutenant-Governor of Bengal;'

and that the numbers of the subsequent sections be altered.

He said that the portion of the Bengal Regulation (V of 1799) which it was proposed to repeal, prohibited any interference on the part of the Civil Court with an Executor acting under a will. This provision would appear to extend to the grant of probates which would be thereby stopped. It might be said that the application of the Succession Act superseded the provision of the Regulation referred to; but the second section of the Succession Act restricted its operation to cases to which no other law for the time being in force was applicable. The proposed repeal was therefore desirable to avoid any difficulty to which this conflict of the provisions of the two enactments might give rise.

The Hon'ble MR. STEPHEN expressed his approval of Mr. Cockerell's Motions, which were then put and agreed to.

The Hon'ble MR. STEPHEN then moved that the Bill as amended be passed.

The Hon'ble MR. COCKERELL said, that as his official duties had been chiefly in connection with the Lower Provinces of Bengal, to which this Bill was intended to apply, he wished to take this opportunity of expressing his great satisfaction in the course taken by his hon'ble and learned friend, the mover of the Bill, in regard to its passage through this Council. Under the strong conviction that, as the practice of disposing of property by will was greatly on the increase amongst the Hindús of Lower Bengal, the restraints imposed by the Indian Succession Act were not only applicable to those territories, but that their application was urgently needed there, he (MR. COCKERELL) advocated in Committee the extension of the Bill to its present dimensions; and when, in April last, the passage of the Bill seemed likely to be indefinitely postponed on account of the strong objections raised on the subject of perpetuities, it was on the sole ground of expediency, to prevent delay in the application of the general provisions of the Bill for regulating the wills of Hindú testators, that he moved an amendment for the temporary exclusion of the clause containing the rule against perpetuities. He was now very glad that the amendment, which he should certainly not have moved could he have anticipated so early a solution of the question, had not been agreed to. He would not, however, take up the time of the Council by saying any more on the subject of that amendment—a subject which had been so ably and exhaustively dwelt upon by his hon'ble and learned friend Mr. Stephen on a former occasion. It was quite clear, as had been said by his learned friend, that we had waited long enough for any further representation on the part of the Local Government, or any refutation by the opponents of the measure of the arguments which had been set forth in support of the clause above referred to. He considered not only that we were fully justified in proceeding to pass the Bill, but that its early coming into operation was on every account most desirable; and he was confident

that the results of its working would be such as to justify the extension of its provisions to Madras and other parts of the Empire.

The Hon'ble MR. STRACHEY said that he did not intend to occupy the time of the Council with any remarks upon the general question regarding which there had been, on former occasions, so much discussion. The admirable speeches of his Hon'ble friend, Mr. Stephen, had really left nothing to be said, and he was sure that every member of this Council, and every reasonable man outside its walls, would agree in thanking Mr. Stephen for the service which those speeches had done to the cause of truth and progress in this country. Those speeches had made it impossible that there should be any difference of opinion in this Council, and had rendered it certain that the Legislature would not hesitate to refuse to take the retrograde step which had been urged upon it by a certain section of the community more distinguished for volubility than for wisdom.

There was only one point which MR. STRACHEY wished to notice, because he thought that it possessed some interest and importance, and it had not been referred to in the discussions which had taken place. The Council would remember the series of Executive and Legislative measures adopted, during the last two years, of Lord Lawrence's Viceroyalty, with the object of settling the many vexed questions which had given rise to trouble and anxiety in Oudh. The last of those measures which, notwithstanding the part which he (MR. STRACHEY) had taken in originating them might, he hoped he might say, now be pronounced to have been successful,—the last of those measures was that which became law as Act I of 1869. It was intended to define the rights of the taluqdárs of Oudh in their estates, and to regulate their powers of bequest, gift and transfer. It was passed by the Legislature after the full and unreserved approval of the taluqdárs to all its provisions had been communicated to the Government by themselves. MR. STRACHEY would ask the Council to allow him to read the twelfth section of that Act.

> "12. No transfer or bequest under this Act shall be valid whereby the vesting of the thing transferred or bequeathed may be delayed beyond the life-time of one or more persons living at the decease of the transferee or testator, and the minority of some person who shall be in existence at the expiration of that period, and to whom, if he attains full age, the thing transferred or bequeathed is to belong."

Now this section was identical with the rule against perpetuities contained in section one hundred and one of the Indian Succession Act, regarding the introduction of which into the present Bill there had been so much discussion.

The high-spirited nobles of Oudh had showed, on many occasions, how well and intelligently they were able to look after their own interests. They had agreed to adopt the rule against perpetuities without (so far as MR. STRACHEY remembered) the slightest objection being even raised, although every portion of the Act had formed for nearly two years the subject of constant and careful discussion with the taluqdárs. This rule, therefore, which we had been told was a violation of Hindú law and Hindú usages, and Hindú ideas of propriety, had been freely adopted by one of the most important and influential bodies of Hindús in India, and it had been for some time past the law to which two-thirds of the landed property of Oudh was subject.

But the Oudh law went further. MR. STRACHEY would not disguise his opinion that there was one blot upon the present Bill. It placed no check upon the power of bequest to religious uses, and MR. STRACHEY thought there was no country where such checks were more required than in this; for the prevention of the gross and shameful abuses which too often occurred. He did not share the opinion that there would have been anything objectionable in placing some check in Lower Bengal upon this power of bequest, and in illustration of his

opinion he would again appeal to the law of Oudh. He w…ould read to the Council section twenty of the Act which he had already quot…ed—

> "20. No taluqdár or grantee, and no heir or lega…tee of a taluqdár or grantee, having a child, parent, brother, unn…arried sister, or a nephew, being the naturally born son of a …brother of such taluqdár or grantee, heir or legatee, shall have p…ower to bequeath his estate or any part thereof or any interest th…herein exceeding in amount or value the sum of two thousand ru…pees to religious, or charitable uses, except by a Will execute…d not less than three months before his death, and registered wi…thin one month from the date of its execution."

Unless we were to suppose that the Hindú taluqdárs of …HEY could not enlightened than the educated gentlemen of Bengal, MR. STR…R to their own believe that a rule which the taluqdárs were willing to appl…ence with the property would have been looked on in Bengal as an interfe…ul religion of the people.

The Motion was put and agreed to.

The following Select Committee was named :—

On the Bill to consolidate and amend the law relating to Co…nd Cockerell, Mint :—The Hon'ble Sir R. Temple, the Hon'ble Messrs. Strachey …nage and the and the Mover.

The Council then adjourned to the 2nd August 1870.

WHITLEY STOKES,
Secy. to the Council of the Govr. …gulations. for making Laws and R…Genl.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

THE COTTON SEASON OF 1869-70 IN THE CENTRAL PROVINCES, AND THE BERARS.

From HARRY RIVETT-CARNAC, ESQ., Cotton Commissioner, to the Secretary to the Chamber of Commerce, Bombay,—No. 1892, dated Camp Boolundshuhur, N. W. Provinces, the 25th June 1870.

As the Cotton season has now closed, I have the honor to submit, for the information of your Chamber, a brief Report on the Cotton trade in the Central Provinces, and the Berars, during the past year. On my return from camp, the Annual Report of this Department, containing a detailed account of the experiments undertaken at the Seed-Farms during the year, and other particulars connected with Cotton cultivation and the Trade, will be prepared and submitted to Government, and copies will, in due course, be forwarded to your Chamber. As, however, I am aware that you are anxious to receive, as promptly as possible after the close of the season, a *resumé* of the operations of the year, the following Report has been prepared, which it is hoped may be found to embrace the points of the most immediate interest to your Chamber.

2. *First*, in regard to the area under Cotton cultivation during the year. In my letter dated the 3rd December last, you were informed that the cultivation had been considerably extended. At that date the figures for all the Districts had not been received. A complete Statement is now annexed, from which it will be seen that in the Central Provinces there has been an increase of 73,152 acres, or about 9½ per cent.; in the Berars, an increase of 129,044 acres, or about 10½ per cent.; or, taking the two Provinces together, a total increase of 202,196 acres, or 10 per cent. Thus in the Central Provinces, Cotton now takes up about 6½ per cent. of the cultivated area; in the Berars, about 30 per cent. of the cultivated area.

Area under Cotton cultivation.

STATEMENT SHEWING THE AREA UNDER COTTON CULTIVATION IN THE CENTRAL PROVINCES AND THE BERARS DURING THE YEAR 1869-70, AS COMPARED WITH 1868-69.

CAMP BOOLUNDSHUHUR;
The 25th June 1870.

HARRY RIVETT-CARNAC,
Cotton Commissioner.

3. It is satisfactory, too, to notice that in the Central Provinces the increase in the cultivation has chiefly taken place in the Nagpore, Wurdah, and Chandah Districts of the Nagpore Division, which supply the best class of, or Hingunghât Cotton.

In the Central Provinces.

The Jubbulpore Division shows an increase, whilst in the Nerbudda and Chutteesgurh Divisions a small decrease is noticeable. In the latter Division, however, the settlement has not been completed; and, as the totals include the estimated area under cotton cultivation in the Tributary States, the figures cannot pretend to great accuracy.

In the Berars.

4. In the Berars an increase is shown in both Divisions, and there can be no doubt that there the crop is a most remunerative and popular one, and likely long to hold its own. The figures now given will be found to differ slightly from the estimates prepared early in the season. The present totals are those most recently received from the District authorities, and are believed to be sufficiently correct to give a fair idea of the area under Cotton cultivation. The increase in the Oomraotee District and the decrease in Ellichpore is owing chiefly to territorial exchanges, a considerable Cotton-growing tract having, during the past year, been transferred from Ellichpore to the former District.

Damage to the Crop by the Rain and Boll-worm.

5. With such a considerable increase in the cultivation, a larger supply of Cotton than usual was, of course, looked for. You are already aware of the causes that have led to the disappointment of these expectations, and my Monthly Reports, and the Export Statements furnished to you by Mr. Dunlop, will have shown your Chamber the effect on the crop and on the trade, of the unseasonable rain that fell late in the season, and continued with more or less persistency until March. The season opened with excellent prospects. There was at first just enough sun and rain, and the crop throughout the country promised well. Then came the heavy rain when the plant was in flower, which did considerable damage not only in Central India, but in the North-Western Provinces and other Cotton-growing tracts. For long it was hoped that the increased area under Cotton cultivation would more than counter-balance the damage done by the rain. Even comparatively late in the season, it was felt that continued fine weather would revive the plants, and perhaps give a larger crop than had been known in any former year. But rain, and what was equally destructive to the Cotton, damp, cloudy-weather continued to the end of March, and the crop, already damaged by the rain, suffered most severely from the "boll-worm," too well known in America, but which has never before been regarded with much anxiety in Central India. Although from the first I had been most anxious not to cause unnecessary alarm, still by the commencement of February there had been so little improvement

that it then became sufficiently apparent that there would be a decrease in the exports; and writing to your Chamber on the 9th of that month, I was obliged to state that there would probably be a falling off of about one-fifth, or, taking the annual exports from the Central Provinces and the Berars towards Bombay at from 250,000 to 275,000 bales, the exports for the season would probably fall to about 200,000 or 220,000 bales.

6. The result has unfortunately proved this reduced estimate to be only too correct. The annexed Statement (**B.**) shews in detail the exports of cotton by Railway from these Provinces to Bombay, made up to the 19th instant, according to the calculation explained in my former Reports. The quantity carried by Railway this season is taken to represent about 208,884 bales of 400lbs. each, or 104,000 Bombay kandies. To this must be added the exports by road from Berar across the Sawurgaon Ghât into the Bombay Territory. The totals then stand thus—

Falling off in the exports.

EXPORTS OF COTTON FROM THE CENTRAL PROVINCES AND THE BERARS TOWARDS BOMBAY, DURING THE SEASON 1869-70.

	Full-pressed Bales.	Half-pressed Bales.	Dokras or loose bags.
By Railway	122,880	69,351	49,959
By Road	.....	.....	17,094
TOTAL BALES ...	122,880	69,351	67,053

Taking the dokra at one-third of a "bale," and the full-pressed bale and half-pressed bale to be equal to about half a "Bombay kandy," or a bale of about 400lbs., the exports towards Bombay for the season 1869-70 are then as follows:—

By Railway	208,884	bales
By Road	5,698	„
Total ...	214,582	bales

making a total of 214,582 bales, and showing a decrease on the exports of the previous year of 61,130 bales, or about 22 per cent., as will be explained by Statement (**C.**) given in the opposite page.

Statement B.

STATEMENT SHEWING IN DETAIL THE QUANTITY OF COTTON EXPORTED TOWARDS BOMBAY FROM THE STATIONS OF THE GREAT INDIAN PENINSULA RAILWAY IN THE CENTRAL PROVINCES AND THE BERARS, DURING THE SEASON OF 1869-70, AS COMPARED WITH THE EXPORTS OF 1868-69.

CAMP BOOLUNDSHUHUR;
The 25th June 1870.

HARRY RIVETT-CARNAC,
Cotton Commissioner.

7. An examination of Statement **B.** will shew that this decrease has been distributed pretty evenly over the whole Cotton-producing country, and that, as compared with the returns of last year, each station shows a falling off in the exports. In fact, the damage to the crop was general throughout the Districts of the Central Provinces and the Berars that supply Bombay with Cotton. It will be noticed that "Khangaon" now appears in the list of Railway stations, and considering that the season was a bad one, and that the station was opened late in the year, the little line may be considered to have done pretty well, having carried about 40,000 bales of cotton, besides a certain quantity of other traffic. From Nandoorah 25,000 bales were despatched during the season, but nearly the whole of this was exported before the line to Khangaon was opened, and in all probability the whole of this quantity would have been sent from Khangaon had not an unfortunate delay occurred in the construction of the Branch Line.

Decrease, Season 1869-70.

Traffic on the Khangaon Branch Line.

8. For the first time, too, some of the Stations in the North-East of the Nerbudda Valley are included in the Annual Statement of Exports. The quantity of Cotton sent to Bombay from these stations is small, and even before the Main Line to Jubbulpore was opened, they contributed some few bales which were sent down by cart to the Railway at Khundwah. But the effect of the opening of the line, and the extension of Cotton Agencies in the interior will, doubtless, be to stimulate the trade, and to encourage the cultivation of Cotton in the neighbouring Districts. I am sorry I am not able to include in this Statement the exports from Jubbulpore towards the West, or to give details of the Cotton sent this season by Railway from the North-Western Provinces to Bombay. I am unwilling to delay this report for this information, which will, however, be given hereafter in my Annual Report. I may mention, however, that I learnt at Mirzapore that the imports to that mart, this season, of Cotton from Jubbulpore and the neighbourhood had much fallen off. This was to some extent to be attributed to the bad season. But it was generally believed that much of the Cotton that would otherwise have come to Mirzapore had been drained off towards Bombay. At Cawnpore and Agra also, I learnt that one or two consignments of Cotton had been sent from those markets to Bombay. But this subject will be treated of more at length in my Report on the North-Western Provinces.

Nerbudda Valley Cotton.

9. Some of the Cotton, for which credit has been taken in the Statement of Exports from the Central Provinces, and the Berars was, doubtless, grown in the Nizam's Territory, South of Berar, and sent to our markets for sale. I am not able at this moment to give the exact figures of such imports, but they will be published hereafter, when the Trade Returns are received. The Territory of His Highness the Nizam, which adjoins the Berars, has almost as much interest for your Chamber as the Berars themselves. As much of the very excellent Cotton

Cotton from the Territory of His Highness the Nizam.

which is exported to Bombay by the Nagpore Extension of the G. I. P. Railway, and the Poonah-Sholapore Line is grown in this Territory, I availed myself of an opportunity, during the presence in the Berars of His Excellency Sir Salar Jung, G.C.S.I., the Minister of His Highness the Nizam, to represent to His Excellency how valuable returns of the area under Cotton cultivation, and periodical information regarding the condition of the growing crop, would be to your Chamber, and to all interested in the Cotton trade. Sir Salar Jung was pleased to express his willingness to consider the matter favorably, and I hope to be able to send you hereafter full information regarding the Cotton prospects in that part of India.

10. Another point to be noticed in the Statement of Exports is the proportion borne by pressed to unpressed cotton. In my last Annual Report it was noticed how the system of full-pressing and half-pressing the Cotton in the interior had extended throughout the Central Provinces and in the Berars. During the season 1868-69, 8 per cent. of the Cotton sent by Railway went down in *dokras* or loose bags, 66 per cent. in half-pressed bales, and 26 per cent. in full-pressed bales: or 8 per cent. of the quantity was sent down as "loose Cotton" and 92 per cent. was "pressed." This season sees a still further advance in the proportion of full-pressed Cotton, 7½ per cent. only of the exports having been sent down in *dokras* or loose bags, 33½ per cent. in half-pressed bales, and the large quantity of 59 per cent. in full-pressed bales. Indeed, although the total exports this season by Railway have fallen short of last year's supplies by 62,405 bales, still 52,699 more full-pressed bales were sent down this year to Bombay than last year, the figures for 1868-69 and 1869-70 being respectively 70,181 full-pressed bales and 122,880 full-pressed bales.

Progress in the system of pressing Cotton.

11. The great progress made during the last few years in pressing Cotton in the Districts will be seen by the accompanying Table.

PERCENTAGE OF COTTON EXPORTED BY RAILWAY DURING THE UNDER-MENTIONED YEARS.

	Dokras or loose Bags.	Half-pressed Bales.	Full-pressed Bales.	Total Dokras or loose Bags.	Total pressed.
In 1865-66	100	0	0	100	0
„ 1866-67	85	13	2	85	15
„ 1867-68	27½	55½	17	27½	72½
„ 1868-69	8	66	26	8	92
„ 1869-70	7½	33½	59	7½	92½

Or, in other words, in 1866 the whole of our Cotton went down to Bombay in loose bags or *dokras*.

In 1867, the system of pressing was commenced. At first "full pressing" did not make much way, 2 per cent. only of the crop passing through the full

presses. The half-presses, however, secured 13 per cent. of the Cotton, and the nett result that in that year 15 per cent. of the crop went down pressed, more or less, against 85 per cent. of *dokra* Cotton.

In 1868, the proportion of full-pressed and half-pressed Cotton advanced to 17 per cent., and 55½ per cent. of the crop, respectively, against 27½ per cent., the figures to which *dokras* had sunk, or nearly three-fourths of the crop was pressed against a balance of one-fourth of loose Cotton.

In 1869, the number of full-pressed bales rose to 70,500, and the half-pressed bales to 177,000 of a crop of 270,000 bales; that is to say, 26 per cent. of the crop went to the full-presses, and 66 per cent. to the half-presses, making the percentage of pressed Cotton to *dokras* as 92 to 8.

Now, during the season that has just closed, the number of full-pressed bales rose to 122,880; the number of half-pressed bales sank to 69,351; and only 49,959 *dokras* were sent by Rail. That is to say, 59 per cent. of the crop exported went to the full-presses, 35½ per cent. to the half-presses, making the proportion of pressed Cotton to *dokras* as 92½ to 7½.

12. The number of full-presses, too, has considerably increased, and the markets of Khangaon, Sheogaon, Akote, Oomraotee, Wurdah, and Hingunghât are now all supplied with machinery for packing the bales for export; and, as noticed in my last Report, the Cotton grown in the vicinity of these markets can now be purchased and pressed under the superintendence of European merchants on the spot, and the full-pressed bales may be conveyed by Railway from the press-houses in the Berars to the wharf at Bombay, and put on board ship without any chance of the bales being tampered with, and the Hingunghât or Oomraotee Cotton which they contain being mixed with Cottons of inferior growths. Believing as I do that this system of purchasing the Cotton at the fountain head, and packing it for export on the spot, is calculated to sustain the fair reputation of the Cotton supplied by our Provinces, and to some extent, at least, to check adulteration, I confess that, with my present lights, I regard the extension of this system with unmixed satisfaction. I believe that contrary views are held by some gentlemen of great experience, and for whose opinions I have the greatest respect. I am not as yet so prejudiced in favor of any particular system as not to be open to conviction, and I should be glad to receive from your Chamber, which, on all occasions, has been good enough to afford me the most cordial assistance, an expression of opinion regarding the working of this system, and of its effect on the Cotton trade.

Increase in the number of Presses.

Merits of the system of pressing in the Districts.

13. It is but fair that I should here mention that there has been no recurrence of the blocks on the Railway line which some years ago used to form a prominent subject in my Report, and that the working of the traffic has been satisfactory.

Satisfactory working of the Railway Traffic.

14. From the Reports that have been from time to time submitted to you, your Chamber must be aware of the steps that, under the orders of His Excellency the Viceroy, have been taken during the year to improve the cultivation of the Cotton crop, and to assist the trade in these Provinces. It may, however, be convenient to follow the plan pursued on former occasions, and, at the close of the season, to recapitulate briefly the chief measures that have been adopted towards these ends. You will, doubtless, remember that, on the samples of exotic Cotton grown in the Berars being submitted to you last season, your Chamber expressed very decidedly the opinion that "no exotic variety that could be grown in the Berars will equal in value and usefulness the indigenous varieties of the country known as Oomraotee and Hingunghât; and the Committee are of opinion that whatever can be done to maintain the present high character of these varieties, or if possible to improve it, would be one of the most important services that can be rendered to the cause of improved Cotton cultivation in the Districts of country under the Cotton Commissioner's superintendence."

Measures adopted to improve the cultivation.

Opinion of the Chamber on the subject.

15. The season in which the samples submitted to your Chamber had been grown had not been a favorable one, and it was therefore determined to try these foreign varieties yet once more. And they have now had another and very careful trial during a season which, although unfavorable to the indigenous plant, may, from the excessive moisture, be considered to be unusually in favor of the exotic varieties. But with all the advantages of constant rain, which the plants seemed thoroughly to appreciate, the result has been unfavorable, the out-turn small, and the produce inferior. Your Chamber will, perhaps, reserve its opinion on the subject until the receipt of the samples of the produce which have been prepared for you. But I shall be surprised if the result should affect the views now held by you on the subject. The exotic plants will receive a further trial this season, and, perhaps, with the assistance of the experienced Gardeners who have recently arrived, some success may yet be achieved.

Failure of the exotic plant.

16. The hybrid plants, sent out by Major Trevor Clarke, have been watched with great attention. It is almost too early yet to give a decided opinion regarding their merits, but the plants are being most carefully studied by the Seed Gardeners, who have already had some experience in such experiments.

The hybrid plants.

17. In accordance with your recommendation, the greatest attention has been paid to the indigenous varieties. Besides the three Assistants appointed at the commencement of last season, the staff of the Cotton Department has recently been strengthened by the appointment of four experienced European Gardeners as Superintendents of experiments. These Gardeners have been placed under the orders of the Assistants to the Cotton Commissioner at the Model Farms of Sheogaon,

Improvement of the indigenous plant.

Oomraotee, and Hingunghât, and the fourth has been attached to the Farm recently established at Boolundshuhur, in the North-Western Provinces. At these Model Farms, indigenous seed, selected during the former season on the plan advocated by Major Trevor Clarke, has been most carefully sown and cultivated.

Selection of Seed.

Various experiments have been tried with more or less success with manures, deep ploughing, &c. Notwithstanding an unusually bad season, the result has been satisfactory, the staple has been pronounced to be excellent, and the out-turn of cleaned Cotton to the acre from the selected seed has been large, and in one case the combined effect of good seed and deep ploughing resulted in an out-turn of 25[illegible]lbs. of cleaned Cotton to the acre. The case was, it is true, an exceptional one, as the soil of the field in which the crop was sown was superior to the ordinary run of the Cotton-growing tracts. But from ordinary fields in the Farm during this, an unfavorable, season, as much as 176lbs. of cleaned Cotton was picked from the acre. The results are, therefore, encouraging.

18. The greatest care has been taken in selecting the seed on the pedigree system from this season's crop, the inferior bolls being kept separate and the *Kapas*, or Cotton in the seed, being divided into four classes. Much of the best selected seed has been distributed among the most intelligent landholders of the neighbourhood, and the remainder has been reserved for sowing in the Model Farms.

19. Whilst the most strenuous efforts are being made to improve the *quality* of our produce—the length and strength of the staple of the indigenous Cotton, at the same time the hardly less important question of the increase of quantity—the out-turn to the acre, has, as will be seen from the above remarks, received some attention; for the measures adopted for the improvement of the staple will, it is hoped, have some effect on the out-turn also; and it may not unreasonably be expected that the produce of the healthy seed, thus carefully selected, may show a marked improvement in quantity as well as in quality. A variety of experiments have been undertaken at the Farms to ascertain the means by which the increase of the out-turn may be most successfully and economically ensured. The respective merits of the various manures are being carefully tested; the "Fertilizer" sent by the Cotton Supply Association; the Australian guano, of which a consignment was received from the Government of India; and the Jail *poudrette*, of which great hopes as an effective and economical manure are entertained, have all been put down at the Seed Gardens. The imported manures were unfortunately received too late in the season to admit of the experiments being made as thoroughly as could have been desired, and the same difficulty prevented the combined effect of irrigation and manure on the Cotton plant receiving a perfectly satisfactory trial.

Increase of the out-turn.

By use of manures.

Experiments with manures.

20. During the ensuing season, however, the experiments with irrigation will be conducted on more advantageous terms. The Seed Farm at Sheogaon has this season been extended to 230 acres. The site is admirably situated, and it is hoped that by damming up the

With irrigation.

neighbouring stream an effective and economical water-supply may be ensured. The Special Irrigation Engineer recently appointed to Berar is now engaged in examining this site. Besides Cotton, a variety of experiments will be undertaken at this and the other Farms with the Rhea plant and a variety of other produce.

At the Sheogaon Farm.

21. The Farm at Oomraotee this season consists of 280 acres of land, and arrangements have been made for a variety of experiments with the assistance of irrigation, manure, &c.

At Oomraotee.

22. The Farm in the Hingunghât country has been moved to a village named Mudnee, in the vicinity of Wurdah, the Head Quarters of the Wurdah District. At Mudnee a special irrigation scheme has been sanctioned and completed, and the experiments will have the advantage of an abundant supply of water.

In the Hingunghât Country.

23. The Farm at the place where I now am (Boolundshuhur, North-Western Provinces), is in the heart of the Cotton country, near the great market of Khoorjah, and on the canal, from which a permanent supply of water is available. The site possesses every advantage. About 150 acres are being sown with selected Cotton seed.

At Boolundshuhur.

24. So far as can at present be judged, it would appear that deep ploughing is of great benefit to the plant, and those parts of the Seed Farms which have been thus treated show very favorably by the side of the fields cultivated according to the ordinary Native method. The plants on the well-ploughed fields were much stronger and healthier than their neighbours, and, as already noticed, 180lbs. of clean Cotton per acre was picked from these fields. This season an ordinary Native field hardly yielded 50lbs. to the acre. The experiments of this season have indeed been so encouraging that it is proposed to order from England a Steam Plough for use in the Central India country.

Deep ploughing.

25. The Seed Farms are also used as Al-fresco Agricultural Schools. The sons of some of the principal cultivators are employed on the Farm, and the various experiments are explained to them, and to the villagers who occasionally visit the Farm to learn the results of our operations, and who express considerable astonishment at the excellent crops, not only of Cotton, but of tobacco, Carolina paddy, and other produce raised at the Seed Gardens.

Al-fresco Schools.

26. The remaining measures adopted by the Cotton Department during the year relate chiefly to the encouragement given to the extension of the trade in Central India. The greatest importance is attached to these measures, as it is believed that the establishment of Mercantile Firms in the interior, who are willing to pay a good

Measures to assist the trade.

price for good Cotton, offers the very best inducement to t[he] nd Berars are far cultivate this crop carefully, and to extend its cultivation as [a]ntity of Cotton At the same time the improved machinery for preparing [a]ny previous year. Cotton introduced by these Firms ensures, there can be [u]ld, undoubtedly, arrival of a large portion of the crop in the European marke[t] [e]ed, the cultiva- condition. [h]ave ruled so high [g]e damage to the [r]ospect of even a

27. Every endeavour has, therefore, again been made to r[emove] which has just from the path of the trade's progress, and to supply its requirem[ents]. Thus the means of communication in the C[otton] Districts have been much improved by the lo[cal] authorities. The arrangements for the Cotton traffic on the Great Indian Peninsula Railway, as already noticed, have been p[er]fected.

Improvement of the means of communication in the Cotton Districts.

28. The construction of the branch line of Railway to Kha[ngaon] was but the commencement of a system for jo[ining] our now isolated Cotton markets to the main l[ine]. As you are aware, this little line was opened in March last, and has alr[eady] done its share in the carrying of this season's Cotton traffic.

The Khangaon Line.

29. The branch to Oomraotee h[as] been surveyed, and it is hoped that the line may be ready for next season's work.

The Oomraotee Line.

30. The line through Hingunghât to Chanda also has been survey[ed], and there is a hope of that market soon enjoying the advantages of Railway communication. I am aware that the importance of the recent discoveries of Coal in this quarter are fully [a]ppreciated by your Chamber. Besides the cheapening of the carriage of goods by Railway which may be expected to follow the employment of this Coal, the discoveries will, it is hoped, prove of great advantage to the Steam Factories for cleaning and pressing Cotton which are now at work in the Central Provinces and the Berars. Surveys of both sides of the Wurdah River are now nearly completed, and it is anticipated that work may be commenced in the early part of 1871. The direction taken by the proposed line of Railway will much depend on the result of the further investigations that are now being made regarding the extent and direction of the Coal Field.

The Branch to Hingunghat.

The importance of the Coal discoveries.

31. The scheme proposed some years ago by Sir Richard Temple for a light Railway or Tramway from Nagpore to the Chutteesgurh country is again under consideration; and, as it has an indirect bearing on the Cotton question, it may be noticed here. Chutteesgurh does not produce much Cotton, but the available supply of grain in those Districts is very large. If this grain-producing country could be tapped by a Railway, and the large supplies of grain poured

The Chutteesgurh Line.

have now commen[ced] to the Nagpore country, the cultivators would be able to fall is given below [to] much of the land which is now taken up with food grains, [ad]on of this line, in addition to the other advantages promised, "Up[on] to extend the cultivation and increase the supply of Cotton. On[e]

[Br]anch Railway from Khundwa to Indore, and that from Goolburgah to Hyderabad, have also some interest for [Ind]ore and the Cotton trade, as both these lines will carry some Cotton. The surveys are now being pushed on.

33. During the past season the Offices of the Government Telegraph were at work in the Cotton markets of Khangaon, Akote, Oomraotee, and Hingunghât, and I think it will be generally admitted that, on the whole, the service was well performed. Some delay in the transmission of messages was temporarily caused during the construction of a new line, which was set up by the Telegraph Department with the special object of providing a separate wire for the Cotton Merchants, and preventing the messages from the Cotton Districts being delayed by the through traffic between Bombay and Calcutta, which sometimes happened when but one wire was available. And some inconvenience was occasioned by the premature closing of the Telegraph Office at Akote. The latter subject has, however, been brought to the notice of Government, and it is not anticipated that any similar inconvenience will occur in future.

Telegraph communication with the Cotton Districts.

34. As your Chamber is aware, I have been for some time past on tour in Bengal, the North-Western Provinces, and the Punjab. A Farm, on the principle which has been found successful in Central India, has, as already noticed, been established in the North-Western Provinces; and it is hoped that other measures conducive to the improvement of the cultivation and the assistance of the trade in Cotton may soon be adopted.

Tour in the North-Western Provinces.

35. In regard to stocks there is, I believe, very little Cotton remaining in the Districts. The prices that have ruled throughout the season have been so favorable that there has been little inducement to either the cultivator or the dealer to keep his Cotton back, and the improved communications now prevent any delay in transit. My Assistants, who have made careful enquiries on this subject, estimate the quantities in stock as follows:—

Stocks.

In the Hingunghât country	2,000	bales.
„ East Berar	4,000	„
„ West Berar	2,000	„

36. In conclusion, I would notice that, although the past season has been, as the preceding paragraphs will have shown, an unfavorable one, and although the exports have fallen short of the supplies of former years, still the

prospects of the Cotton trade in the Central Provinces a[nd] Berars are far from discouraging. A larger qu[antity] of Cotton was sown in 1869-70 than in a[ny previous year.

Conclusion.

And had it not been for the exceptional weather, the crop wo[uld, undoubtedly,] have been the largest ever exported from Central India. Ind[eed, the cultiva-]tion has been steadily increasing year by year, and prices h[ave ruled so high] during the season that has just closed, and, notwithstanding th[e damage to the] crop, the cultivators have done so well, that there is every p[rospect of even a] still larger area being sown with Cotton during the season [which has just] commenced. But on this and other subjects connected with t[he state of the] weather and the prospects of the crops, I shall hope to keep [your Chamber] fully informed in my future Reports.

I have the honor to [be,]

SIR,

Your most obedient Se[rvant,]

HARRY RIVETT-C[ARNAC,]

Cotton C[ommissioner.]

Dated Camp Boolundshuhur, 25th June 1870.

P. S., dated Simla, the 4th July 1870.

THIS Report has been delayed for a few days, in order that the la[test informa-]tion regarding the prospects of the season 1870-71, which may n[ow be consi-]dered to have fairly commenced, might be supplied to your Chamber. [Abundant] rain has fallen, and as yet, at least, the prospects are favorable.

HINGUNGHAT.—The Assistant to the Cotton Commissioner, wr[iting under] date the 20th instant, states,—

"On the night of the 17th, we had the first burst of the monsoon, and the weather since then has been almost continuously drizzling rain.

"The cultivators have not yet begun sowing, and will not begin to do so until three or four more heavy showers of rain have fallen, for as yet the rain has not penetrated to any great depth. At the Mudnee Farm we are quite ready to begin sowing as soon as a favorable opportunity occurs."

EAST BERAR (OOMRAOTEE).—Writing under date the 23rd instant, the Assistant to the Cotton Commissioner reports,—

"From the 12th up to date, we have had very heavy showers of rain, by which the soil has become so thoroughly saturated that some of the cultivators

have now commenced to sow their fields with Cotton. The detail of the rain-fall is given below—

				Inches.	*Cents.*
"Up to the 12th June	...	...	...	2	33
On the 16th "	...	...	...	0	5
" 17th "	...	...	...	4	35
" 18th "	...	...	...	0	25
" 20th "	...	...	...	0	33
" 21st "	...	...	...	1	30
" 22nd "	...	...	...	0	7
Total Inches			...	8	68

"The rain which fell on the 17th was exceedingly heavy. Rain fell continuously for nearly 48 hours, and the water has soaked well into the ground.

"The Monsoon has commenced this time earlier than was expected. On account of the heavy unseasonable showers that fell during the past two or three months, the cultivators seemed to fear that the rains might fail us towards the middle or close of the season, when they will be urgently required. This unexpected early rain has hurried on the sowing operations, and many of the fields are yet to be got into order, and the cultivators are now busily engaged in sowing or preparing their fields.

"The work in our Seed Garden was stopped for four days owing to the heavy rain, as was the case everywhere in the country. I am glad to report that since yesterday at noon the weather has been fine, and the work in our garden is now going on rapidly.

WEST BERAR.—The Assistant to the Cotton Commissioner, under date the 10th, writes,—

"On the night of the 7th, we had 1 inch 90 cents. of rain, consequently the ground has been pretty well saturated; in fact so much so that I have not been able to do any thing with it for the last two days."

And again, under date the 24th, he adds,—

"We have had very heavy rain, as much as 8½ inches."

Very heavy rain has fallen in the North-Western Provinces, and in Central India, and, as far as I can learn, all over the country; and the prospects in every direction are reported to be favorable.

The following reports have just been received by Telegraph:—

HINGUNGHAT, 4TH JULY.—Rain-fall up to date 8·49 inches. From the 22nd to the 1st no rain fell. During the last four days the rains have set in again steadily, and the prospects of the crop now look well.

OOMRAOTEE (EAST BERAR), 4TH JULY.—Rain-fall up to date nine inches. Cotton crop most flourishing.

AKOLA (WEST BERAR), 4TH JULY.—Rain-fall 8·75 inches. Weather fine during last fortnight, and Koonbies (cultivators) busy sowing. Rain is now threatening. Prospects could not be more favourable.

SIMLA,
The 4th July 1870.

HARRY RIVETT-CARNAC,
Cotton Commissioner.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

PROTECTION FROM HEAT OF SERVANTS OF RAILWAY COMPANIES AND OF PASSENGERS IN TRAINS.

From MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Offg. Secretary to the Government of India, Public Works Department,—No. 1067 G., dated Fort William, the 18th May 1870.

IN acknowledgment of Resolution No. 614 G, dated April the 5th, on the subject of the protection of Europeans from heat, I am instructed to forward, for the information of the Governor General in Council, the accompanying copy of a letter No. 277 G, with its enclosure, from the Board of Agency of the East Indian Railway Company, expressing an opinion unfavorable to the introduction of tatties.

2. It is, however, the conviction of the Consulting Engineer to this Government, as expressed in the accompanying Note dated 2nd May, that great improvements are possible in the existing first class carriages at a moderate cost, and that carriages so altered might be easily ventilated and cooled with tatties. The Lieutenant-Governor therefore, while regretting the indisposition evinced by the Agency to meet the views of the Government of India, would recommend that these additional papers on the subject of American carriages be forwarded to Her Majesty's Secretary of State in continuation of those sent with my letter No. 594 G, dated 11th March 1870, for communication to the Directors of all Indian Railways for their consideration.

From E. PALMER, ESQ., Chairman, Board of Agency, East Indian Railway, to the Consulting Engineer to the Government of Bengal, Railway Department,—No. 277 G, dated Calcutta, the 3rd May 1870.

IN acknowledging receipt of your No. 918 of 23th ultimo, and in reference to previous correspondence on the subject of the protection of passengers during the hot season, I have the honor to enclose copy of Chief Engineer's No. 978 of 2nd instant, remarking on the matter, and to state that the Agency entirely concur in the views therein expressed.

Upon receipt of Locomotive Superintendent's report, the Board of Agency will be in a position to discuss more fully the question of affording extra protection from the sun for engine drivers.

From G. SIBLEY, ESQ., Chief Engineer, to the Chairman, Board of Agency, East Indian Railway,—No. 978, dated Calcutta, the 2nd May 1870.

YOUR docket No. 1332 of 14th ultimo.

I delayed replying formally to the above hoping to have received the Locomotive Superintendent's views as to whether he thought any modification of the hoods of the locomotives was necessary with the view to mitigate the severe trial which the running and working of the train is supposed to prove, especially to drivers and firemen.

I have not yet had reply, but I hear that he is away up-country and is investigating the question.

With reference to the suggestions to fit tatties to the windows of all first and second class carriages with appliances for watering them, I do not think that the advantage to be derived is commensurate with the outlay necessary for constructing the large reservoirs that would be required over each compartment, with the corresponding feeding, tubing, &c., and, further, with the great practical difficulty of replenishing these at frequent intervals.

That the public would be ready to pay the extra charge requisite to cover such expenses, when spread over only six weeks or two months of the year, I take leave very strongly to doubt. Such luxuries of travelling can be applied to a viceregal suite of carriages built and run regardless of all costs, but would never be paid for by the general public.

As evidence that they are not necessaries of travelling, I may state that I am myself in the habit of travelling at all seasons of the year, and I do not use them.

Note by MAJOR F. S. TAYLOR, R.E., Consulting Engineer to the Government of Bengal, on the subject of the improvement of First Class Carriages in India,—dated Calcutta, the 2nd May 1870.

SINCE the discussion on the subject of an experimental palace car (or grand saloon) for India, which closed with my letter to the Board of Agency, No. 473, dated 28th February, I have taken the opinions of several practical railway men, and have carefully sounded the views of gentlemen in the habit of frequently travelling by rail, both on the East Indian and Great Indian Peninsula Railways.

As there seems, at first sight, no important difference in the latest improved first class carriages on the two lines, I was surprised to find that the balance of private opinion was in favor of the Great Indian Peninsula carriages; but on closer inquiry I ascertained that it was nothing but the longitudinal sleeping couches of the Great Indian Peninsula saloon carriage that had turned the scale in their favor, and on careful consideration I now feel quite satisfied that *the longitudinal sleeping berth* is an absolutely essential feature in the "through carriage" of the future.

In a compartment of the best East Indian sleeping carriage (the full paying load of which is only eight fares in two separate compartments), the two berths next the engine are almost unbearable in the hot weather from want of ventilation, while a great deal of floor space is taken up in providing double the quantity of sitting accommodation required. The Great Indian Peninsula saloon carriage, on the other hand, with a smaller paying load, is unnecessarily lavish of floor space, and is open to the same objection as respects the cross berths next the engine. In neither carriage is any scientific ventilation possible.

These are all radical defects which cannot be removed.

During my recent journeys on the line, while endeavouring to solve the problem at issue and at the same time overcome the objections raised by the Chief Engineer to the interior arrangements of my first design for a palace car, my attention was accidently drawn to the first class American carriage constructed on Mr. Rendel's designs in 1868, described in my Note of 9th April, but now banished from the main line, and it at once struck me that this carriage, if properly fitted up, would be far better adapted to the requirements of the through traffic in India than any English carriage, however improved, and that a single seat in it would be more worth securing than a compartment in the other.

I accordingly prepared a sketch of the alterations I wished to recommend and forwarded it to the Board of Agency, but failed to obtain their consent to the experiment being tried until the Board of Directors have expressed their views on the general question of palace cars for India. They at the same time express an unfavourable opinion of the design.

See my letters No. 876, dated 20th April, and No. 261, dated 26th April, in reply, annexed.

The subject cannot, however, be allowed to rest here, as His Excellency the Governor General in Council has already interested himself in the question of improvement, and I therefore now bring forward standard designs for an ordinary "through saloon" carriage, and a "grand saloon," the latter to be carried on trucks on the American palace car principle,—and challenge further criticism on both.

From a railway point of view, it must be noted that in these designs the paying load as well as the first cost are identically the same as in the existing stock of the English pattern. The public, on the other hand, have the advantage of $1\frac{1}{2}$ feet additional width, owing to the doors being placed at the ends of the carriage; the seats are properly proportioned to the actual number of occupants, thereby doubling the open floor area; all the sleeping berths are arranged longitudinally under the windows; the ridge ventilator raises the height of the carriage in the centre to 9 feet, and the whole carriage can be scientifically ventilated from end to end, and cooled with tatties fixed in the end doors. In an American carriage the air entering from the front is purified by passing it forcibly over water which saturates the dust and deposits cinders and sparks. The supply of air so obtained would be insufficient in this country if the side windows were closed, because a strong current is required; but I am in hopes that the well-known Indian expedient called a tattie will be found an efficient filter as well as refrigerator, and may be used all the year round as a preventive to dust. If these tatties can be damped efficiently by mechanical means, some trouble may be saved, but it is also quite practicable to employ a coolie to water them from the platform.

The grand saloon is simply the equivalent of two ordinary saloon carriages placed upon trucks on the American system, with a view to secure greater smoothness of motion and freedom from jar and noise. These grand saloons would be run probably in connection with the English mail steamer only, and the advantages offered to passengers would be the run "through" with the mails, avoiding hotel expenses at the port; the Railway Company guaranteeing through booking, and finding suitable conveyances to and from the steamers. On board the steamers the Purser might be constituted the Railway Company's Agent for through booking.

Throughout this discussion my aim has been to show that a radical improvement in the system of first class transport was not only feasible, but really necessary if the Railway Companies hoped to compete with the sea route. It has been shown, I think, conclusively that no such expense as that stated by the Chief Engineer need be entailed on the Railway Companies, for existing stock can be altered at a moderate outlay, and new stock built without any additional expense; and also that there is a radical defect in the English pattern of carriage which cannot be overcome by such alterations as those approved by the Chief Engineer; and I must point out, in conclusion, that if the Board of Agency really desire to have the public verdict, they must no longer withhold their consent to an experiment on an adequate scale.

The Chief Engineer, whose views are supported by the Board of Agency, would wish it to be inferred that perfect privacy is obtained in the English carriages; but in fact, unless a whole compartment is taken and paid for, no privacy whatever is secured; and it remains to be seen whether, in a carriage, such as I recommend, fitted with every comfort where a single seat can always be secured and a reasonable amount of isolation and privacy obtained, the standard of manners in this country is equal to the strain of journeying by rail under conditions similar to those obtaining on board ocean steamers.

APPENDIX.

From MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Chairman, Board of Agency, East Indian Railway,—No. 876, dated Calcutta, the 20th April 1870.

ADVERTING to previous correspondence on the subject of American passenger carriages, and with special reference to my No. 834 G, dated 16th instant, forwarding a Government Resolution No. 614 R, dated 5th April, on the subject of the protection of passengers during the hot season, I have the honor to solicit your attention to the accompaying Note dated 9th current, and to inform you that I shall be happy to undertake to superintend the re-fitting of the first class carriages of the American pattern if the Board of Agency will authorize the work being put in hand. The cost will be trifling, and I have every reason to hope that a most comfortable vehicle, fitted with tatties, and adapted for through traffic to accommodate twelve people, can be turned out.

Note by MAJOR F. S. TAYLOR, R.E., Consulting Engineer to the Government of Bengal, on the subject of the construction of passenger carriages on the American pattern,—dated Calcutta, the 9th April 1870.

I FIND that, in the year 1868, sufficient carriages of first, second, and third class for running one train were built by the East Indian Railway Company, with end doors and platforms and a passage down the centre, on the American system, but that the train has never been fairly tried as a whole. The first and second class carriages have already been condemned, and the third class are now being run next the engine on a mixed train, the guard in the front break-van having through communication.

Mr. Pearce, the able Superintendent of the Carriage Department of the East Indian Railway, who built the above-mentioned carriages, had not, I believe, at that time seen drawings of a real American carriage, nor has he or the Traffic Manager had any practical experience of the working of American railways; it can therefore hardly be a matter of surprise that the experiment has failed, for, in my opinion, the only feature of the American system which is unsuited to existing Indian railways, or unnecessary under the English system of working, has been adopted.

The central passage, which here sacrifices so much valuable sitting space, is provided for in American carriages by increased width, some of the larger class of stock having a breadth of 11', with a gauge of 4' 8½"; but unfortunately no such lateral expansion is now possible, even on future Indian railways of the standard gauge of the 5' 6", because the vehicles would not be interchangeable, and this objection, coupled with the fact that the trunk lines are already fully stocked on the English method, are obviously insuperable obstacles to the general introduction of American carriages; but it must, I submit, for ever remain a source of profound regret that Indian railways are debarred from increasing the carrying capacity of their vehicles by lateral expansion, for experience shows that 12' is not an extreme width for a passenger carriage on a 5' 6" gauge, and I fully believe that on the low speed system (now almost universal in America) goods wagons of the same width could also be run with perfect safety.

Although, however, I have endeavoured to show that this first experiment on the American system is a failure, I am very far from saying that Indian railways cannot profit by American experience in carriage-building. To begin with, I have already urged the construction of an experimental palace car (or grand saloon), the main feature of which is the adaptation of the American truck system to the principal working parts of an ordinary vehicle so admirably effected by Mr. Pearce in the design submitted to Government, by which expedient I hope to attain far greater smoothness of motion, and freedom from jar and noise. Another marked feature of the palace car design is the lofty ridge ventilator or lantern extending from end to end of the carriage, raising the roof in the centre to a height of 9 feet, allowing a free circulation of air, and admitting of scientific ventilation. Of the internal fittings, and distribution of the State rooms as designed by me, I will at present say nothing, because on this important question of personal comfort so much difference of opinion exists; but an experiment is now being tried, with the concurrence of the Board of Agency, on an officers' carriage, and I wait the result in perfect confidence that, in respect of comfort also, American experience will prove of the greatest value.

On the question whether any real advantage is gained by the substitution of end doors and a through passage, I will observe that for through or reserved carriages the arrangement adds to the privacy, and admits of additional width, for which reasons I have embodied this feature of an American carriage in the design for an experimental "grand saloon" for India, but I think the plan as applied to an ordinary carriage is a positive disadvantage. Nothing whatever is gained by collecting the tickets inside the carriage; on the contrary, unless the Conductor is extremely sharp, anybody may evade him during his rounds, and slip out at his destination without taking a ticket, and the precautions practised by Conductors "out West" are, as I have seen and felt, more ingenious than agreeable; the fact being, that the through passage was solely designed for the issue of tickets *en route*, and then their collection becomes an idle form.

On the other hand, the system of dividing the third class carriages into distinct compartments, each with its separate door, was adopted after most careful consideration as the only effectual check against over-crowding helpless Native travellers, and it also affords the greatest possible facilities for ingress and egress. I note further that Mr. Batchelor has pointed out the risk of a serious catastrophy in event of a panic among the Natives in a carriage with an open platform, and against all these objections has to be set the very doubtful advantage of an occasional patrol of the train by the guard, who, if anything is really the matter, should be at his brake, or communicating with the driver.

From E. PALMER, ESQ., Chairman, Board of Agency, East Indian Railway, to the Consulting Engineer to the Government of Bengal, Railway Department,—No. 261, dated Calcutta, the 26th April 1870.

IN acknowledging receipt of your letter No. 876 of 20th instant, and enclosures, I have the honor to inform you that as the proposal contained therein appears to present the same objectionable features as your former one, the Agency are of opinion that it would be advisable to await the views of the London Board on the question of the introduction of palace cars in India now before them, as advised to you in Agency letter No. 128 G of 28th February last.

From MAJOR F. S. TAYLOR, R.E., Joint Secretary to the Government of Bengal, Public Works Department, Railway Branch, to the Secretary to the Government of India, Public Works Department,—No. 1088 G, dated Fort William, the 23rd May 1870.

IN continuation of this Office letter No. 1067 G, dated 18th instant, I am directed to forward, for the information of the Governor General in Council, the accompanying copy of a further communication from the Chairman, Board of Agency, East Indian Railway, on the subject of the employment of tatties on engines for the protection of drivers from heat.

No. 301 G, dated 14th May 1870.

Endorsed by E. PALMER, ESQ., Chairman, Board of Agency, East Indian Railway,—No. 301 G, dated Calcutta, the 14th May 1870.

COPY of the following forwarded to the Consulting Engineer, Government of Bengal, for information, in continuation of Agency letter No. 277 G of 3rd instant.

Extract from MR. CAMPBELL's letter No. 2041—673 A, to G. SIBLEY, ESQ., Chief Engineer, East Indian Railway, dated 7th May 1870.

IN reply to your No. 312 of the 21st ultimo, and the Government of India's No. 614 of the 5th idem, I beg to state that after obtaining the views of the majority of our leading enginemen, and from my past experience, I am fully of opinion that our present arrangement of engine awnings affords almost as complete a protection from the sun as could be desired. The only thing wanting is a back purdah to each engine, which I have arranged to supply.

With reference to the use of *khus-khus* tatties for reducing the temperature on the foot plates of our engines, I beg to point out that it is quite understood among the men in the North-West portion of the line that *khus-khus* can be obtained for the asking, but as it has a great tendency to cause rheumatism, it consequently is not much used.

I may mention that it is not while our engines are in motion that our men suffer from the heat, but while they are at a stand at road side stations, oiling their engines, and shunting wagons; while so employed, they are subject to the direct rays of a burning sun with no other protection than small caps which the men usually wear in preference to the usual *sola topies*, they find the latter inconvenient.

Although I am not in favor of weather boards in this country, I intend fitting one or two of our engines with them as a trial, and will see how far they help to add to the comfort of the men, and I will let you know the result as early as possible.

Endorsed by G. SIBLEY, ESQ., Chief Engineer, East Indian Railway,—No. 1087, dated Calcutta, the 9th May 1870.

FORWARDED to the Chairman, Board of Agency, in continuation of this Office No. 978 of 2nd instant.

From the Assistant Secretary to the Government of the Punjab, Public Works Department, Railway Branch, to the Offg. Secretary to the Government of India, Public Works Department,—No. 2096, dated Lahore, the 27th May 1870.

I AM desired to acknowledge the receipt of your letter No. 615R, dated 5th April 1870, suggesting that the attention of the Punjab Railway officials be invited to the necessity of protecting, by every means in their power, railway travellers and servants from extreme heat in trains, and in reply to forward copies of the papers detailed in the margin, which will acquaint the Government with the steps that have been taken in the matter.

Note by Deputy Consulting Engineer, dated 27th May 1870.
* Agent's, No. 2208, dated 26th May 1870. (Not published.)
Minutes of Meeting held on 27th April 1870.
Minutes of Meeting held on 14th May 1870.

2. From the papers it will be observed that the railway authorities have at present been wholly unable to suggest any practical expedient for reducing the extreme temperature that prevails in the carriages during the summer, but that further experiments are being conducted with this end in view, the result of which will be further reported to the Government of India.

Note by the Deputy Consulting Engineer on Government of India's letter No. 615 R, dated 5th April 1870,—dated Lahore, the 27th May 1870.

THE subject of the protection of railway travellers from heat was considered at two meetings held on the 27th April and 14th May, but at neither of these meetings was any plan brought forward which was found, on experiment, to be capable of being practically adopted.

2. As regards the addition of an upper roof to the third class carriages, it is doubtful whether in a carriage with open sides any diminution of temperature can be effected by this means. In experiments made in one of the sidings in the Lahore Station-yard, I was unable to observe any difference exceeding a degree between a single-roofed third class carriage with open sides, a single-roofed third class carriage with fixed venetians, the lower compartment of a double-storied third class, and a double-roofed guards' van. The difference in the temperature as shown by the thermometer when hung in similar positions in the various carriages was less than the difference when hung in different places in the same carriage. Unless some very decided difference can be shown to result from the additional roof, I should be unwilling to see the estimated amount of Rs. 28,800 expended for this purpose.

3. The experiment of fitting a tattie to a passenger carriage has been tried on these railways. The tattie was fixed in an opening made for the purpose in the front end of the carriage, and watered by a bheestee sitting on a low sided truck in the train in front. The effect was that, after a very short run, the tattie got choked with dust. But apart from the trouble of keeping the tattie clean, there would exist an almost insuperable difficulty in keeping the tatties wet were they generally employed. No practical self-acting method appears yet to have been devised without requiring an extravagant supply of water, and to employ the passenger himself to wet his own tattie is hardly feasible. Were the carriage unoccupied, or were the passengers to fall asleep, the tattie would most probably be soon on fire.

The expense of the arrangements, the liability of the tattie when dry to catch fire, the stoppages at stations required to fill the tattie tanks and clean or change the tatties, the waste of motive powers in hauling so much additional weight, are objections sufficiently grave to discourage the use of tatties in carriages, even were the Company's Medical Officer in favor of, instead of opposed to, their adoption on sanitary grounds alone.

4. To subject drivers, guards, and firemen, &c., to the effect of a tattie would, even if practicable, expose them to constant and violent changes of temperature, far more injurious in its consequences than mere heat, the detrimental effect of which can be greatly mitigated, if not entirely removed, by the simple expedients published last year by Dr. Plank.

5. At the first meeting held on the 27th April, the Chief Engineer pointed out that the number of deaths of passengers in carriages during the cold weather of 1868 was actually double of the number during the six hot months of the year, and this remarkable fact is certainly supported by the mortuary returns of the Punjab, so far as showing that the mortality from April to September does not exceed that from October to March.—(*Vide* Table accompanying.)

6. But even if the risk of life is not increased by extreme heat, the object of decreasing the temperature in railway carriages is one so obviously desirable that no efforts will be spared by the Punjab Railway authorities to attain it if practicable. But that this end will be achieved, as long as English models are slavishly adhered to in the construction of carriages, I consider more than doubtful. The construction of the present carriages, small in themselves and divided still further into separate compartments thus necessitating a cooling apparatus for each compartment, and a consequent multiplication of parts, increases the difficulty of cooling the carriages to such an extent that the question becomes one rather of a better construction of stock than of inventing a cooling apparatus which would be worth while to apply to a carriage on an American model.

7. At present I am unaware of any expedient which promises to be more successful than the American plan of forcing the air entering the carriages through a spray of water, thus both cleaning it from dust and cooling it, being both self-acting and requiring a minimum of water.

Mortuary Returns of the Punjab during the three years—1866, 1867, *and* 1868.

Months.	1866.	1867.	1868.	Total.
October	16,909	33,668	21,667	72,244
November	17,975	28,478	25,011	71,464
December	21,826	25,656	20,488	67,970
January	15,632	20,746	43,464	79,842
February	13,754	15,812	18,861	48,427
March	14,463	16,366	19,405	50,234
Total for six cold months ...	100,559	140,726	148,896	390,181

September	17,589	31,134	18,905	67,628
Total for six hot months ...	97,230	165,679	127,815	390,724

No. 20P—20D of 1870.

PUNJAB AND DELHI RAILWAYS.

Extract from the Proceedings of a Special Meeting held on the 27th April 1870, to consider the observations contained in letter No. 615 R, Government of India, Public Works Department, dated 5th April 1870, on the subject of protection from heat of passengers and servants of Railway Companies in trains during the hot season.

Present:

Major-General S. A. Abbott, *Agent.*

L. Conway-Gordon, *Dy. Consg. Engr. for Railways, Punjab.*

R. Bocquet, *Locomotive Superintendent.*

A. Saunders, *Assistant Traffic Manager.*

The mortuary returns of railways for 1868 having been read, show deaths, on all lines, as follows:—

Six cold months ... {November, December, January, February, March and April ...} at 62

Six hot months ... {May, June, July, August, September, and October ...} at 31

I.—The Locomotive Superintendent represents that cost of double roofs to third class carriages would be about Rs. 150 each, and for seventy-four of the Punjab and one hundred and fifteen of the Delhi line the cost would be Rs. 11,100 + 17,700 = 28,800.

II.—That to supply the tattie arrangement to first and second class carriages at about Rs. 96 each, the cost for twenty-six of the Punjab and forty-seven of the Delhi line would be Rs. 2,496 + 4,518 = 7,014 on the plan produced. Proposes an angular tattie to project beyond the window, moveable at pleasure, to be watered by a flexible tube at will of passenger; but his opinion is decidedly against.

It will also be a source of great sickness consequent on sudden changes of temperature, and would be very liable to catch fire, and to keep clean of dirt or dust, would require to be submerged under water, or a hose played upon them about every 30 miles run.

It would also add a weight of half or two-thirds of a ton weight of water to each passenger carriage, representing seven to eight passengers without luggage.

Locomotive Superintendent thinks that hats and *kummarbands* for drivers should be insisted upon, but particularly objects to drivers having tatties on the engines. He would like to have the Medical Officer's opinion on the subject.

The general impression of the meeting is, that tatties are impracticable, but think—

1*st*, that medical opinion should be taken;

2*nd*, that two third class carriages be subjected to experiment of thermometer, one with and another without double roof;

3*rd*, that experiment be made according to two proposals put forward by Messrs. Bocquet and Saunders, and the subject be adjourned for further consideration.

(True Extract.)

L. CONWAY-GORDON,
Dy. Consg. Engr. to Govt., Punjab.

S. A. ABBOTT, *Major-General,*
Agent, Punjab and Delhi Railways.

No. 21P—21D of 1870.

PUNJAB AND DELHI RAILWAYS.

Extract from the Proceedings of a Special Meeting held in continuation of Meeting of the 27th April 1870, dated Lahore, the 14th May 1870.

Present:

Major-General S. A. Abbott, *Agent.*

L. Conway-Gordon, *Dy. Consg. Engr. for Railways, Punjab.*

G. Stone, *Officiating Chief Engineer.*

R. Bocquet, *Locomotive Superintendent.*

G. Finch, *Auditor.*

H. P. Ashworth, *Store-keeper.*

A. Saunders, *Assistant Traffic Manager.*

Read—

Letter of 4th May 1870, from Dr. C. M. Smith, Consulting Physician to the Punjab and Delhi Railways, reporting that he considers tatties to railway carriages impracticable, and that if they could be worked, they would prove more prejudicial than otherwise; but suggesting more ventilation by through draft fore and aft, and that drivers and stokers should wear good *solá hats* and *kummarbands*.

Read also—

Locomotive Superintendent's letter No. 88 of the 11th May, reporting as follows:—

Two descriptions of tatties were applied to a carriage with a trough above, and flexible tube to be used by the passengers.

While in motion the cooling effect was good; but on stopping at a station, the carriage was most uncomfortably hot and steamy, and one tattie caught fire the first half hour.

Proposes, however, to make an experiment with cloth on rollers, revolving in a water trough.

Is opposed to the cutting up of the ends of the carriages as suggested by Dr. Smith, and adds that, if through draft was so obtained, the passengers would suffer from dust, sparks, &c., which would more than counteract any benefits of increased current of air.

Locomotive Superintendent has not made the experiment with thermometer on the third class carriages; but Agent is informed that the experiment made by the East Indian Railway, gave a difference of 1½° in favor of double roof.

No. 174 P—215 D.

RESOLVED that this meeting is fully impressed with the belief that the application of tatties, or any substitute for them, is impracticable; and if practicable, would endanger the health and safety of the passengers.

That under the pressure put upon the Company to exercise economy, the addition to the third class carriages of a second roof, at a cost of Rs. 28,800 would not be compensated for by a diminution of 1½° of temperature to that class of passengers, who, when travelling, are ordinarily content with a thin umbrella or a *sirkee* tattie, or, as in the Government Bullock Train, with a thin canvas cover.

The meeting considers that drivers, firemen, and guards should be made to wear thick head-dresses of approved material and waist bands, and that the Locomotive Superintendent and Traffic Manager be instructed accordingly.

(True Extract.)

S. A. ABBOTT, *Major-General,*
Agent, Punjab and Delhi Railways.

From the Acting Secretary to the Government of Bombay, Railway Department, to the Offg. Secretary to the Government of India, Public Works Department,—No. 790, dated Bombay Castle, the 1st June 1870.

IN reply to Resolution No. 618R of the Government of India, I am directed to inform you that the matter of protecting railway passengers from heat during the hot season is still under discussion with the railway authorities, but that there has not been time yet to carry out the necessary alterations.

2. As regards existing stock, there will probably be a little difficulty in designing an efficient tattie; the attempt was made on a first class family carriage on the Great Indian Peninsula and proved a failure. In the second class carriages, the proportion of European travellers is so small that there would hardly be a demand for such a convenience.

From the Government of India, Public Works Department, to the Acting Secretary to the Government of Bombay in the Public Works Department,—No. 1115 R, dated Simla, the 23rd June 1870.

I AM directed to acknowledge receipt of your letter No. 776, dated 30th May 1870, trasmitting a copy of a plan of proposed sleeping-carriages for the Great Indian Peninsula Railway, with estimate for constructing 14, amounting to Rs. 1,05,700, and requesting that early sanction to put the carriages together may be given, as the frames, now in Bombay, are liable to injury during the monsoon, and as it is expected that increased traffic on the extended railway will render more passenger carriages necessary.

2. In reply, I am directed to state that, although a six-passenger unit compartment is not likely to afford, generally, so much privacy as is usually looked for by English travellers, the proposed arrangements for 12 passengers, and the interior conveniences shown on the tracing, appear to be commodious, nevertheless the Governor General in Council is disappointed with the design. The attention of all railway authorities in this country was lately forcibly drawn to the want of protection of passengers travelling in the hot weather, and, judging from the tenor of your letter No. 790, dated 1st June, the Government of India believed that both the Government of Bombay and the Agents of the Railways in that Presidency were impressed with the necessity of remedying obvious deficiencies in the passenger carriages. An excellent opportunity is afforded now that a proposal to build 14 new carriages, expressly for long journeys, is brought forward, but the old pattern is still closely adhered to, although a decidedly improved distribution of the partitions and sleeping berths is designed.

3. The ill-effects of vibration, noise, heat and dust are felt very severely during the long journeys taken by European travellers in India. The inconveniences experienced from these annoyances (heat excepted) may, it is known, be reduced by the introduction of swivelling trucks beneath the floor of the carriage by extra springs, clamped close-fitting windows and ventilators, by use of modern improvements in India rubber, and by filtration of air through water. The fact that the frames of the vehicles to be erected are already made, may forbid the adaptation of any of the special contrivances adverted to; but the matter is so important that it is well worthy of consideration whether it would not be expedient to use these frames in some other way, and adopt a totally new design for the required carriages. This point, I am to request, may receive the attention of the Government of Bombay and the Railway Officers.

4. But the inconveniences which the suggested modification of design would remove are minor annoyances compared with the suffering and even danger resulting from excessive heat. To protect passengers from the sun, carriage-builders have remained content with the simple expedient of a double roof and sun-shade, but these are insufficient, and more is required. Artificial means of cooling carriages may certainly be applied, be the design what it may, and if the existing carriage frames must be utilized in the manner proposed by the local authorities, it ought not to be difficult to arrange the means of introducing artificially cooled air.

5. With the above remarks, and trusting to the Government of Bombay to see that the best attention is given to the introduction of devices for the protection of passengers from heat, the Governor General in Council instructs me to convey sanction to the erection of these 14 new carriages. Copies of papers and plans, explanatory of modifications in passenger stock on the American model, recommended by Major Taylor, Consulting Engineer in Bengal, are herewith sent for consideration. The Government of India have no doubt that a composite carriage may be designed on bogie trucks, with a proper proportion between the net and gross load, while the increased width obtained by abolishing side-doors opening outwards, will admit of very much improved accommodation being afforded to the occupants. But as to the interior arrangements for privacy, the Government of India are disposed to think that the public will prefer the greater seclusion afforded by carriages on the English model, and they see no reason which should militate against their being ventilated and cooled by proper appliances as readily as carriages on the American model, if not with more facility.

6. This sanction has been registered as No. 12 B—R of 1870.

From the Acting Secretary to the Government of Bombay, Public Works Department, to the Officiating Secretary to the Government of India, Public Works Department,—No. 961, dated Bombay Castle, the 7th July 1870.

I AM directed, in reply to your letter No. 1115R, dated 23rd ultimo, to observe that the plan of the sleeping carriages, forwarded to you with my letter No. 776 of 30th May 1870, was prepared in England, and that the carriages were built at Home to that design.

2. The Railway Company are not unwilling to put up tatties, or introduce any other devices that can be suggested for the comfort of their passengers, but they have not yet settled on any design for tatties, and their attempts in that direction have hitherto been failures. Your letter has been communicated to them, and this Government will endeavour to carry out the wishes of the Government of India, as far as they possibly can do; but they fear that, with the exception of tatties, it is not now possible to do anything to add to the conveniences of the carriages that are about to be put together.

Resolution by the Government of India, Public Works Department,—Nos. 1285—90 R, dated Simla, the 22nd July 1870.

Ditto from the Government of Bombay, Public Works Department (Railway), No. 961, dated 7th July 1870.

OBSERVATIONS.—Early in April last, the Governor General in Council invited the attention of Railway Companies through the Local Governments to the urgent necessity for devising some means for the better protection, from extreme heat, of passengers and of Railway servants employed in working and running trains during the hot season. No definite measures were enjoined, as His Excellency in Council preferred to leave complete scope to the ingenuity and resource of the talented body of men whose services are at the disposal of the Railway Companies in India, and trusted that the Agents would themselves be solicitous on the subject, and would see that the matter was at once taken up with zeal and intelligence by the heads of departments concerned. The obvious advantage which would result from the application of tatties to the windows of carriages and break-vans was, however, alluded to, and special attention was directed to the cabs of the locomotive engines. It was the especial desire of the Government that something should be done during the then impending hot season, as well as hereafter, to mitigate the discomfort, suffering, and danger experienced from extreme heat in travelling by railway.

2. The responses to the invitation of the Governor General in Council are most disappointing, and, in one case, that of the East Indian Railway are characterized by apparent indifference.

The Bombay Government reports that difficulties are experienced, that one attempt has failed, that the subject was still under discussion, but that there had not been time to carry out the necessary alterations. Nothing has, in fact, been done, but there seems to be a prospect of something being done some day.

In Bengal, the Locomotive Superintendent of the East Indian Railway appears to be unable to recommend any improved or additional means of protection for his subordinates. The Chief Engineer, without sufficient reason, appears to assume that the public would not pay any extra charge for the cooling of their carriages. In this opinion His Excellency in Council does not concur; and His Excellency in Council fears that the dissatisfaction and discomfort of the public will not be relieved by the knowledge that the Chief Engineer is not in the habit of using any cooling apparatus in his own private carriage.

The Government Controlling Officer dwells upon the inconvenient form of the existing carriage-stock, and makes proposals for its improvement. This is doubtless a matter for serious consideration, but such improvement must be a work of much time, as well as of very heavy expense unless new stock

be required. What is wanted is the immediate application of some mechanical contrivances capable of easy and general introduction.

In the Punjab experiments have been tried, and others are being conducted. The opinion is recorded that tatties are impracticable, that they are objectionable on sanitary grounds, and that considerations of economy forbid the application of double roofs to third class carriages. The one measure ordered is, that railway servants liable to exposure shall be compelled to wear a suitable head-dress and a sash round the waist. The exposure and suffering entailed on people travelling otherwise than by rail, are referred to as proofs that improvements in the direction indicated are not absolutely demanded in railway carriages; and the trouble and expense of alterations are dwelt upon as if such considerations were of primary importance, compared with the saving of human life. The facts that people suffer and die elsewhere, and that the rate of mortality in some parts of India is less in the hot than in the cold season, appear to be accepted as a sufficient reason for regarding, as not of pressing importance, the removal or mitigation of such a serious cause of suffering and mortality as that under consideration.

3. Whatever may be the habits of individuals, or the possible risks of exposing either passengers or railway servants to alternations of temperature by the adoption of devices for its reduction, there should be no question that such contrivances should be at command, even if it does not suit everyone to employ them; and the opportunity of obtaining the verdict of the travelling public as to their efficacy and, if efficient, as to the prudence of taking advantage of them, should at least be afforded. So far as can be ascertained from the papers, not even a single carriage, fitted with appliances designed to secure the object in view, has been placed at the disposal of the public experimentally.

4. The Governor General in Council would fain hope that the interests of humanity have not been intentionally disregarded by anyone in this matter. Be this as it may, the hot season of the present year has been lost, and the action taken to meet the expressed wishes of the Government has been so inadequate that, so far as this side of India at least is concerned, the subject can no longer be allowed to rest wholly with railway authorities whose coöperation has, at the best, been so lukewarm. Measures should therefore be at once taken to have the various means of effecting the object in view fully considered by competent persons, so that, when the season permits, experiments may be initiated and conducted under their supervision. It is, in the opinion of the Government of India, the undoubted duty of the Railway Companies to prosecute such experiments at their own charges; but rather than risk that another hot season shall come and find the question in the same unsatisfactory state as at present, the Governor General in Council has resolved to authorize a grant of public money not exceeding Rs. 5,000 for the purpose. This expenditure should be limited to the actual cost of experiments. No additional salaries can be granted for such a purpose. The Oudh and Rohilkhund Railway Company is probably as much interested in the practical solution of the question at issue as any other Company; and the Chief Commissioner of Oudh should be requested to arrange for the formation of a Committee, consisting of an Officer of the Consulting Engineer's Department, and such Officers of the Railway as the Agent may nominate, under the presidency of Major-General Beadle himself, if agreeable to him. This Committee should enter on the consideration of the subject without delay, and, as positive conclusions are arrived at, report them for information, bearing in mind that the chief essential is, that the question shall be practically advanced in time to admit of action being taken on other railways before next hot season.

ORDER.—Ordered, that this Resolution be communicated to the Governments of Bengal and Punjab for information.

Also, to the Chief Commissioner of Oudh for information and further needful action.

Also, to the Financial Department for information, with intimation that no additional funds will be required unless the ordinary State grant for Guaranteed Railways should be found insufficient to meet the charge.

Also, to the Governments of Madras and Bombay for information.

Also, that it be published in the Supplement of the *Gazette of India* with the connected papers.

No. 30 of 1870.

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

REPORTS ON THE CONDITION OF INDIAN IMMIGRANTS IN THE COLONIES OF GRENADA, ST. VINCENT, JAMAICA, TRINIDAD, AND BRITISH GUIANA.

Public.

No. 68.

INDIA OFFICE;

London, the 28rd June 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

MY LORD,—In continuation of my despatch No. 58, dated the 31st ultimo, I forward, for the information of your Excellency in Council, copy of a letter from the Colonial Office, with its enclosures, transmitting several reports on the condition of Indian immigrants in the Colonies mentioned by Mr. Herbert.

Dated 31st May 1870.

2. The report for Grenada for the period ending 31st December 1869, was transmitted with my despatch above-cited.

3. I also forward copy of an Ordinance* which has been enacted by the Governor of Trinidad, relating to the feeding of indentured immigrants in the Colony, as well as copy of the report† on immigration for the year ending 30th September 1869, together with a letter‡ from the Chairman of the Emigration Board on both subjects.

* No. 3 of 1870.

† Dated February 1870.

‡ Dated 20th May 1870.

I have, &c.,

ARGYLL.

From A. MUNRO, ESQ., to His Excellency LIEUTENANT-GOVERNOR MUNDY, &c., &c., &c.,—No. 18, dated Grenada, the 27th February 1869.

I HAVE the honor to transmit to your Excellency the Immigration Agent's report on the state and condition of the Indian immigrants in this Island to the 31st December last. I am glad to observe that it exhibits a favorable aspect, as compared with the returns for the same period of the preceding year.

2. Mr. Munro has again drawn attention to the inadequacy of his salary, from which he has to disburse the expense of horse keep. I have no doubt that this subject will receive every consideration when the new Immigration Bill comes before the Legislature.

From G. G. MUNRO, Esq., Immigration Agent, to the Colonial Secretary,—dated Grenada, the 20th February 1869.

I HAVE the honor, whilst reporting upon the immigration service for the year 1868, to furnish you herewith the annual return of Indian immigrants who were in this Colony on the 31st day of December last (Schedule A.), with a comparative Statement of the Indians who were in the Island the preceding year, their increase and decrease in 1868, distinguishing those who were in the Colony Hospital under medical treatment, from those who were engaged in agricultural labor on the plantations.

2. *Their numerical Strength.*—According to the semi-annual returns furnished by employers, there were in the Colony on the plantations on the last day of the year 924 men, 368 women, 153 boys, 142 girls, and 87 infants; 17 men and 7 women were in the Colony Hospital, and 4 men in the common gaol, making in all 1,702 Indians.

3. *Their Increase.*—There were no Indians imported during the year, and the natural increase among them was somewhat less than in the preceding year, namely, 23 boys and 30 girls.

4. *Their Decrease.*—There was one vessel despatched to India during the year—the *Lincelles*—with 40 men, 19 women, and 17 children, returning to their native country; and 3 men departed with pass-ports to the neighbouring Colony, Demerara, making in all 79 souls.

The sanitary reports attached hereto (Schedule B.) for the half years ending 30th June and 31st December, exhibit a decrease by deaths of 31 males and 18 females, equal to 2·08 per cent., against the mortality of 50 males and 30 females of the previous year.

This marked decline in the death-rate is owing in great measure to better medical attendance given to the coolies on estates in the large parishes of St. Patrick's and St. Andrews's, one of the beneficial results of the changes effected among the medical staff of the Colony, and also, no doubt, to increased acclimatization among the last imported people by the ship *Countess of Ripon*. The season in the latter part of the year, which is generally wet and sickly, was remarkably dry, and this also may have contributed to this improvement in the sanitary condition of the Indian laborers.

5. *Crimes and Offences.*—There were only 18 commitments of Indians to gaol during the year, against 46 of the previous, namely, 1 violent and 3 common assaults, 2 petty thefts of rum, 1 drunkenness, 8 breaches of contracts (unlawful absence from work), 1 vagrancy, 1 trespass, and 1 debt.

This calendar exhibits a marked diminution also of offences among the Indians, and is indicative of some little advance in civilization. Receiving no moral or religious instruction, this immunity from offences of a more grave character, among a race so regardless of the value of life, is not a little surprising, and may be conclusive of the immigrants in this Colony being under proper control.

6. *The application of Coolie-labor.*—There has not been any change in the rates of wages paid to the Indian laborers, those of the 1st class, from 16 years and upwards, receive 10 pence;

2nd class, from 8 years to 16 years ... ... 8 „

3rd „ children under 8 years .. .. 6 „

per diem; nor do employers avail themselves of the full amount of labour secured to them by law. Saturday is not considered a working day. On some plantations where daily tasks are given, the robust coolie is able to earn from one shilling to one shilling and three pence per diem; but, in general, employers demand the legal number of hours for labor, namely, nine, with which the coolies are better satisfied.

7. *The relation between Master and Servant.*—It is satisfactory to be able to report favorably on this head. A number of the last imported Indians per *Countess of Ripon*, whose first period of indenture expired on 23rd January of the present year, were desirous of changing employers, a privilege extended to them by the 22nd section of the Act No. 230, and had left without giving the legal notice. Their employer having demanded the proper notice, and finding that the immigrants were not benefiting themselves by the change, they were ordered back to their original employer, to whom they will be re-indentured for another year.

With this exception I have had no complaints, but, on the contrary, learn from all parts that the coolies are working steadily whilst engaged in the legitimate service for which they were introduced into the Colony, namely, the development of the resources of the plantations.

8. *The Back Passage.*—I have annexed hereto a return (Schedule G.) of the number of Indians (76) who availed themselves during the year of the right to the return passage to India, and who embarked on the 21st November last. The return exhibits the amount of passage-money payable to the owners of the ship *Lincelles* by this Colony, £869-7-6; the gratuity to the Superintendent Surgeon, £45-2; deposits of their earnings by the emigrants into the local Treasury for remittance to Calcutta, £804-14-0; together with amount of gold, £424, and value of jewellery, £48-10 carried with them on board, presenting a feature in the immigration service alike creditable to the immigrants as to the Colonial Government.

9. *Service-expired Indians remaining.*—A greater number of the coolies per *Fulwood*, 1858, whose ten years of industrial service expired on 21st May last, had given the notice for the return-passage; but, upon the passing of the County Act No. 390 by the Legislature on the 4th August last (which also secured the back passage to such of them as were wishful of

remaining in the Colony other five years), a large number withdrew such notices and accepted the bounty offered. Accordingly, 131 males and 81 females of this batch received bounties, namely, adults £10, and non-adults, above 10 years, £5 each, amounting to £1,865 paid out of the immigration fund, and who have been re-indentured in terms of the Act, and will annually pass under indentures for a further period of five years—a measure which must prove as beneficial to the immigrants as to the Colony in preventing the former from contracting idle and roving habits, and in securing for the latter their labor on the plantations.

The Act No. 390, however, although extending to the Indians the right to the back passage, makes no provision whatever for contributions to the immigration fund by employers as the Act No. 256 does, namely, the payment of 29-2 on re-indenture. I do not know whether this is an omission on the part of the framers of the Act, but I consider it my duty to call the attention of the Executive to the subject, involving as it does a large draft hereafter on the immigration fund for the service-expired Indians per ships *Maidstone* and *Fulwood*.

10. *Service-expiring Indians.*—On the 18th June of the present year, the Indians who arrived in this Colony in the ship *Jalawar*, 1859, will have completed their term of ten years' industrial service. Of this batch there were on the plantations 133 men, 57 women, 41 boys, 32 girls, and 9 infants, the greater number of whom have claimed the right to the return passage. I do not, however, expect that more than 16 men and 8 women with 2 children will leave the Colony. I shall, for the information of the Executive, in due time prepare a nominal roll of those intending to return homeward, when the immigrants have made the necessary preparatory arrangements for a supply of warm clothing for the voyage.

11. *Insufficient provision for the Immigration Service.*—To the honor of Her Majesty's Government, I do not think that it often occurs that a public servant is permitted in vain to call attention as often as I have done to the disbursements which he has found indispensably necessary, to make to enable him properly to discharge the duties of his office and in obedience to the order of his official superior. There is nothing in the immigration law from which any obligation on me to purchase and keep horses for this service could be implied. Yet, for upwards of three years, it has been necessary for me to disburse out of a small salary of £250, not less than £70 per annum: trusting that the Colonial Legislature, seeing the necessity for the outlay, would reimburse me.

I have by memorial repeatedly, through the Executive, brought this claim for reimbursement before the House of Assembly; but, composed as that body is of those with whom I have had occasion to come in contact whilst protecting the Indian immigrants, my chance of obtaining relief is slender; and as I cannot allow the service to suffer by discontinuing the keep of two horses, and consequently those periodical inspections of the immigrants and their habitations on the plantations which are found indispensable, I am constrained to solicit that the subject may be brought specially under the notice of His Grace the Earl of Granville, who presides over Colonial affairs, fully persuaded that His Grace will not allow a public servant to become embarrassed by disbursements which are not binding on him, although found so essentially necessary for the efficient working of immigration service of the Colony.

From SIR J. W. C. MURDOCH, to SIR F. ROGERS, BART., &c., &c., &c.,—dated Emigration Board, the 27th April 1869.

I HAVE to acknowledge the receipt of your letter of 19th instant, with a despatch from the Lieutenant-Governor of Grenada, enclosing the report of the Immigration Agent of that Island for the six months ending 31st December last.

2. It appears from this report that the number on estates on 31st December last was 1674; that 24 were in the Colonial Hospitals, and 4 in Jail; that there returned to India, in the *Lincelles* in November, 76, and that 3 had emigrated to British Guiana. The deaths during the six months had been 29, equal therefore to a mortality of 1·60 per cent.

3. The coolies are said to be working steadily, and their relations with their employers are satisfactory. The wages paid are to first class laborers 10*d.* a day.* Children between 8 and 16 years, 8*d.*; and to children under eight years, 6*d.* a day. Of those who had become entitled to back passages, and who had given notice of their intention to claim them, 131 males and 81 females withdrew their notices on the passing of the Act granting bounties on re-engagements.

* i. e., those above 16 years of age.

4. The report as regards the coolies is satisfactory. As regards the administration of the immigration law, the Agent again calls attention to the inadequacy of his salary, and to the hardship of leaving him to depend for any increase of it on the good-will of the Legislature, composed almost exclusively of planters. On this point, I would beg to refer to my report of 12th of May 1868.

5. The Administrator, in transmitting the Agent's report, says that the subject will receive consideration when the new Immigration Bill comes before the Legislature. Nevertheless, if Earl Granville should be of opinion that the present remuneration of the Immigration Agent (£250 a year) is inadequate, having reference to the expenses which, he says, he is compelled to incur in the keep of horses for the proper performance of his duties, the expression of his Lordship's opinion to that effect would no doubt assist the Agent very much.

From S. WALCOTT, Esq., to SIR F. ROGERS, BART., &c., &c., &c.,—dated Emigration Board, the 10th May 1870.

I HAVE to acknowledge your letter of the 2nd instant, enclosing the copy of a despatch from the Governor of Grenada with the report of the Immigration Agent of the Colony for the year ended 31st December 1869.

No. 30, dated 22nd March 1870.

2. It appears from this report that the number of Indian immigrants in the Island was 1,702, located on 33 sugar and six cocoa estates; that the births in the year were 59, and the deaths 42: one of the deaths, that of a woman of dissolute habits, was found by a Coroner's Jury to have occurred from starvation. On this the Immigration Agent observes that she was within reach both of food and medical aid, had she sought for them.

3. There were 30 convictions in the year, all for petty offences, including five for breaches of contract.

4. There were no Indian immigrants introduced during the year; but nine coolies, who had gone to Trinidad in the hope of bettering their condition, returned to Grenada and resumed their places among the laboring population.

5. In June last, of the 299 immigrants who arrived in the ship *Jalawar* in June 1859, and whose term of service had expired, 187 commuted their right to back passages for bounties, amounting, in the whole, to £1,642-10, and were re-indentured for one year. Only three men and one girl were waiting for back passages to India, and until an opportunity of sending them home occurs, they will receive the compensation for delay provided by the 49th section of the amended Emigration Act.

6. The satisfactory features in the Agent's reports are the increase of births over deaths,—the former being at the rate of 2·46 per cent. against 2·38 per cent. of the latter, and the satisfactory relations which exist between employers and laborers.

7. The papers call for no action or remark on the part of the Secretary of State; but I would suggest that copies be forwarded for the information of the Secretary of State for India, in reference to the remarks contained in Mr. Merivale's letter to the Colonial Office of the 18th March last.

No. 581, dated Government House, St. Vincent, the 1st April 1869.

From—GEORGE BERKELEY, ESQ.,

To—His Excellency LIEUTENANT-GOVERNOR MUNDY, &c., &c., &c.

I HAVE the honor to transmit the report of the Immigration Agent for the half year ended 31st December 1868.

This document, together with the accompanying returns, presents, I trust, no unfavorable contrast to the previously existing satisfactory state of things in connection with the scheme of immigration in this Island.

Dated St. Vincent, Immigration Office, the 29th March 1869.

From—JAMES H. BROWN, ESQ., Immigration Agent,

To—The HON'BLE E. LABORDE, Colonial Secretary.

I HAVE the honor to present five Schedules,* prepared in usual form, shewing the details of immigration for the half year ended 31st December last.

* A, B, C, D, E.

These Schedules tell so plainly for themselves as to leave little room either for comment or suggestion.

I. *Schedule A.*—Deaths—shews 11, 5 adults and 6 infants; 1 infant died on Orange Hill, three days after birth, from tetanus. The one styled an infant on Langley Park was a boy of five years, and succumbed to low fever. One was a premature birth; one died from convulsions in teething, another from tetanus, and one from ulceration.

Upon the various estates the medical visits were regularly performed, and competent sick nurses are provided.

Amid the adults, there have been five deaths; and when it is considered that two arrived in the Colony with all the symptoms of their disease, consumption, and that another fell a victim to a disease beyond medical control, dirt-eating, I am justified in remarking that the facts speak highly for the sanitary state of the plantations, the care of the employers, and the judicious administration of all regulations. I may here record that, amongst the largest number of coolies placed upon any property, *viz.*, 48 on Orange Hill, in January 1866 (15 of whom were sickly), no death has occurred.

	Total indented.
Coolies and children ...	717

II. *Schedule B.*—Births—gives the number as 23, an increase of 12 as compared with deaths.

III. *Schedule C.*—To account for the decrease of earnings alluded to, I would mention that, as a body, the people last arrived per *Newcastle* are not so industrious as those received per *Countess of Ripon*, and also that the latter half of the year only comprises a small portion of the sugar-making season, when high wages are earned about the mill-yards.

IV. *Schedule D.*—Crime—gives 15 cases, but none of an aggravated character.

Africans	24
Portuguese	3

V. *Schedule E* shews the number of Africans and Portuguese under indenture on 31st December 1868, as compared with numbers on the previous 30th of June.

VI. I am happy to report, as formerly, that the most satisfactory relations continue to exist between the immigrants and their employers, and that I have not had occasion to complain of any evasion of the law.

Schedule A.

Deaths.

Dated Emigration Board, the 8th May 1869.

From—T. W. C. Murdoch, Esq.,

To—Sir F. Rogers, Bart., Colonial Office.

I have to acknowledge your letter of the 1st instant, with a despatch from the Lieutenant-Governor of St. Vincent, enclosing the report of the Immigration Agent of that Colony for the six months ending 31st December last.

2. The number of immigrants onestates on 30th June 1868 was 705. During the six months there were 23 births and 11 deaths, making the number on estates on 31st December last 717. The death-rate was, therefore, 1·51 per cent. rather more than in the previous half-year, when it was only 1·12. Considering, however, the unhealthy condition in which a portion of these

people arrived in the preceding year, this must be regarded as satisfactory. The earnings of the laborers during the last half-year had not been so large as the previous, the portion of crop time comprised in the second-half of the year being less than in the first. There was but little crime among the immigrants, and the relations between them and their employers are said to be very good.

3. On the whole, the report may be considered altogether satisfactory.

No. 864, dated Jamaica, Immigration Office, the 18th October 1869.

From—H. B. Shaw, Esq., Acting Agent General of Immigration,

To—The Hon'ble E. E. Rushworth, &c., &c., &c.

In handing you the following report on the Immigration Department for the year ending 30th September, 1868, for the information of his Excellency the Governor, I have the honor to state that, in consequence of my having only taken charge of the Department in July of that year, and not knowing a report was required from me, I much fear this report must not only be a brief one, but also in a measure unsatisfactory, as what remarks I have to make on Coolie Immigration belong more properly to the next year's report, 1868-69, than to this one.

I find by the records of this Office that, from 1860 until 1863, there were introduced three thousand, three hundred and six males, one thousand, two hundred and thirty-three females, and ninety-six infants, total four thousand, six hundred and thirty-five coolies; the deaths have been seven hundred and six males, two hundred and twenty-five females, total 931 or 20·8 per cent.; and the births have been one hundred and ninety-seven males, one hundred and seventy-nine females, total 376 or 8·11 per cent. Desertions four hundred and sixty-one males and one hundred and thirteen females, total 574 or 12·38 per cent.

In 1867, during the months of May, June, and July, three ships arrived with coolies from Calcutta, *viz.*, the *St. Hilda*, the *Corona*, and the *Salamanca*, landing here one thousand and ninety-one males, four hundred and ninety-eight females, and thirty-six infants, a total of one thousand six hundred and twenty-five coolies. Of these, since their location up to the 30th September 1868, two hundred and thirty-nine males and seventy-five females have died, a total of 314 or 19·32 per cent., and there are thirteen desertions or eight per cent.

I may here remark that the immigrants by the *St. Hilda* and *Salamanca* were a very fair lot, but the people by the *Corona* were a miserably-diseased and wretched set, and have been an endless source of expense and annoyance to those who were unfortunate enough to employ them.

The deaths amongst them were, as could only be expected, numerous, and those that are left are neither strong, nor ever likely to become good agricultural laborers.

Up to the 30th September 1868, applications for one thousand three hundred and forty-two East Indian immigrants had been received and forwarded to India.

Report on Immigration for the year 1868 *by* Mr. H. Mitchell, *Agent General of Immigrants,—dated February* 1869.

I have the honor to submit for His Excellency's information the following remarks on the annual abstract of quarterly returns, together with such general observations as the immigration system of this Colony for the year ending 30th of September 1868 seems to warrant:—

1*st.*—From the above-mentioned abstract, which was submitted to Council in December last, it appears that the number of Indians embarked at Calcutta for Trinidad during the preceding season was 1,196 men, 518 women, 57 boys, 39 girls, and 30 infants = 1,840 souls. Of these there died on the passage 21 men, 18 women, 5 boys, 4 girls, and 6 infants = 54 souls, giving a death-rate of 2·9 per cent. against which may be placed 16 births at sea.

Two of the ships embarked 623 souls. On arrival they reported six deaths and seven births; altogether the Transport Service appears to have been carefully and creditably conducted.

2*nd.*—*Mortality on Estates.*—This amounted to 405 on an estate's population of 14,693 of all ages, indentured and free, = 2·7, or a trifle under that of last year.

It may be remarked that the mortality of this season when it passed the ordinary percentage was confined to 15 estates, on many others it was singularly limited; thus on 68 estates the mortality was 62 on an indentured total of 4,239 Indian immigrants = 1·4 per cent. and on 28 of these same estates, with an indentured population of 1,154 adults, there was no casualty whatever. It remains to be seen how far the measures initiated this year by the Government of the Colony for feeding the new arrivals, together with the care and co-operation

of the employers, may tend to reduce the average death-rate of the whole body of indentured labor towards such limits. In the Wards of Chaguanas, Oropouche, and St. Patrick's, which were, till within the last few years, considered most unhealthy, the death-rate has fallen even lower than in the Naparimas, and this result has been attributed, and I believe justly so, by the Inspector partly to increased care in the direction of Estates' Hospitals, but principally to the increasing abundance of food, the indentured laborers in the two former Wards having raised more provisions than met their own wants, while in Cedros the old coolies who had finished their contract service, instead of leaving the District, had rented land here and there in small patches and occupied themselves as market gardeners. The fact of the Indian immigrant thus more generally engaging in agriculture on his own account is satisfactory as indicating that growing state of independence which alone will induce him to colonize eventually the land where he has served his contract. In one of the latest constituted Wards of the Island, that of Montserrat, upwards of 30 Indians have settled and purchased Crown lands amounting to between three and four hundred acres. Should this movement continue and any considerable number be induced to follow in their wake or to accept an equivalent in land for their return passage, the Colony may congratulate itself on having made its most important step in securing a permanent supply of labor by erasing or deadening a sentiment more potent than that of caste, and hitherto animating all castes alike, *viz.*, the desire of returning to Calcutta and replacing that desire by the possession of a few acres of land not likely to be soon in demand by any one else.

3*rd*.—The hospitals or Estates' sick houses have now gradually taken their places as part of the household accommodation on all estates employing indentured immigrants. With one or two exceptions they, at present, satisfy the Regulations which preclude the distribution of newly-arrived coolies to all estates on which the arrangements are not in complete accordance with established rule. When a single hospital has been set apart for two or more estates, even when belonging to the same proprietor, the results appear rarely so satisfactory as when each estate has its own hospital, that is to say, the results of treatment in such cases appear to be in favor of the estate on which the General Hospital has been erected.

Whether this be due to the conductor of the central estate being more anxious about his own people, or to the more distant estate sending its patients later, or to their suffering from the transport, does not appear; but the fact is so, and in more than one instance parties having central hospitals have altered that arrangement and erected separate buildings. How far the experience should militate against the proposal to establish District Hospitals, I am not prepared to say; but when a similar proposition was made in the Mauritius, although promising many advantages, it was finallly abandoned as too expensive. This might be expected, for such an institution, on anything like a proper footing and on the scale enforced by the Estates' regulations, would require for Couva and Savanetta alone, with their contract population of 2,000, more extensive accommodation than is now provided in Port-of-Spain for its 20,000 inhabitants; but that such arrangements even if practicable are unnecessary may be gathered from paragraph No. 2, where a population of over 4,000 shows only 1·4 per cent. of death-rate. On analyzing this last more minutely, it appears that, with few exceptions, the estates in this last category rarely number 100 indentured laborers. While, as a rule, the heaviest death-rates occur on estates more densely handed; but this I think merely shows that, as the numbers increase, increasing care is required during the earlier or seasoning years of the coolies' industrial residence, for the two largest estates in the Colony, each numbering individually over 200 contract servants, had a death-rate under two per cent.

That District climate goes for little in calculating the salubrity of any part of this Colony for Indian laborers may be inferred from the fact that one of these estates is in the healthiest District of the Island (Tacarigua) and the other on Mosquito Creek and the Great Lagoon; on another estate adjoining this latter, and, if possible, more unfavorably situated for European constitutions, with a population of over 200, the death-rate was, last year, under three per cent., and during the previous year still lower. As the death-rate ranges much higher among contract laborers during the earlier period of their industrial residence, it is to be hoped that the regulation for feeding newly-arrived contract laborers during the first twelve months of their indenture till they become seasoned to the climate and to the unaccustomed variety of labor required from them, will produce the happiest results, and guard against the well-known tendency of the Indian laborer to hoard his wages at the risk of losing strength and health.

4*th*.—The number of absentees is lower than last year and not much more than half what it was in 1866. Without defining any particular cause for this improvement, it may be supposed to indicate diminished inducements on the part of contract laborers to shirk their engagements. That this is to some extent the case, may be assumed from the fact that indentured servants who have been for years absent on the neighbouring continent, have returned in small batches; among these a family consisting of father, mother, and three sons who, shortly after their arrival from India, were induced to leave the estate to which they were assigned in Trinidad and push their fortunes in Venezuela, have returned, after an absence of three years, to their original employer, by no means satisfied with the results of their experiment. The party who took them away had ensured them higher pay, light work, and above all perfect freedom from indentures. But it seems he sold them to an official of some standing who sent them to work

on his Cocoa Estate, and my informant adds that he so worked for three years without further remuneration than his food and clothing. At the end of three years he was promoted to 30 cents per day, when he took the earliest chance of effecting his return along with the other members of his family. He stated further, that there were some 500 coolies in the District where he lived; some of the Cocoa Estates having from 20 to 25 of these laborers. The laws, too, were remarkably simple, at least as affected coolie laborers; those who did not work were flogged, and those who ran away and plundered the provision grounds were shot.

5*th*.—One curious fact elicited from this man and bearing, if reliable, on a question at present deeply interesting to those who employ Indian immigrants and who look to their continuous introduction as essential to the welfare of this Colony is, that in the district of Venezuela where he lived for three years, there have been no cases of coolies murdering their wives, although the country is in itself most lawless and the number of women under 10 per cent. on an Indian coolie population said to be over 500. The same freedom from bloodshed marked the earlier days of Indian immigration into this Colony, when the ratio of females was under 20 per cent., and this I believe to a certain extent to be the experience of the smaller Colonies, where the introduction of Indian immigrants is yet on a limited scale. Should this evidence hold good on more careful examination, it will go far to shake the prevalent opinion that the violence occasionally shown by the men to the Indian women, is due solely, or in great measure, to the disparity of the sexes, as introduced into the West Indies. As far as can be learned here, adult female life is not much more respected in Indian villages than that of female infants. It has been hitherto a point of hereditary and ineradicable belief with the mass of Indian population, that the man has complete jurisdiction over the wife; on that belief he acts in his own country, and carries his creed along with his labor whithersoever he may migrate. That he should act up to it more frequently now than in the earlier days of immigration is simply due to the fact that the number of coolies has greatly increased, some estates being entirely worked by them—they have now the courage which number gives to the mass—and this allows the development of evil habits, and passions which were formerly restrained, a result not altogether unlikely, when it is known that few respectable immigrants take or even allow their wives and daughters to accompany them over the "Black Water," and the appreciation in which they do hold the females who actually embark may be measured by the speed with which they get rid of them after landing.

There is yet a difficulty which complicates the estimate as to what ought to be the fair proportion of females to males in the system of immigation, and this is the habit common among Indians of indulging in a plurality of wives, when their means permit it. Is any allowance to be made for this disturbing element, which no precaution can control? There is now an Indian undergoing a sentence (for assault) of imprisonment for five years with hard labor, who has four wives. It may be said that he is wealthy, and therefore was entitled to indulge in the custom of his country; but in this question of contract, as distinguished from colonization, where the sexes ought, undoubtedly, to be nearly, if not altogether, equal, it is problematical how far it is morally judicious to burden with wives, young men engaged in working out a time bargain, during the earliest part of which they are barely independent, although at its close they may not only be wealthy, but entitled, like soldiers and sailors, to be returned to their homes at the public expense with all their savings.

6*th*.—In a previous paragraph was stated that one of the most powerful feelings which actuates the coolie is the desire to return to India when he shall have terminated his contract or amassed a certain amount of money. This feeling may be wholesomely and effectually appealed to, I think, by enacting that contract servants convicted of violence or attempted violence towards their wives, should in their sentence be adjudged to forfeit all right to a return passage, besides being whipped, subject to certain restrictions, which latter is the punishment provided by the laws of England for brutal assaults on women. There is reason to believe that such punishment following crime with certainty and ever looming in the distance, will have a more deterrent effect on these fatalists than the gallows, even if the latter were sure, which it is not. The Indian is usually a coward, but the objects of his fear are not those which a European dreads. An appeal to the English Law and the fear of losing the return passage, will probably check his criminal propensities more effectually even than increasing beyond certain limits the ratio of women, who, if handsome, are appropriated by the wealthy, and if ugly, are left to themselves till they amass means and become independent.

The propriety of punishing even attempted violence is clear from the fact that the criminal career of the Indian, like that of all other men, is progressive; he passes through many stages of violence open to correction before graduating for the gallows, under the mingled influence of bhang and a debasing creed. In the latest instance where an Indian woman was murdered by her countryman she was not his wife, but they had cohabited for some time; he beat her so often and so severely, that she left him and took refuge with another man, whereupon the first man threatened to kill her and did so. There are said to be no attenuating circumstances, and the murderer will, no doubt, be hanged. Is it not more than probable that an appeal to the lash, from which the Indian recoils with horror, might, in this instance have saved two lives? It may be safely affirmed that the dread of corporal punishment, coupled with the certainty

losing the return passage to Calcutta, will control the Indian's disregard of his own or others life more effectually than any influences borrowed from Western civilization.

7*th*.—The births for the year were 202 as against 132 in 1867; but neither of these figures are reliable as the machinery for ascertaining the increase is very imperfect.

8*th*.—During the last year the number of reported cases of punishment for breach of contract was 686 as against 864 in 1867, while the number of absentees has fallen from 400 to 329—both these items indicate favorable progress.

9*th*.—The number of those who have redeemed balances of industrial residence has fallen from 62 in 1867 to 48 in the last year.

10*th*.—The financial position of the employers of Indian labor, with regard to indenture fees, is most satisfactory, all the monies due for the year amounting to £17,400 having been paid into the Treasury.

11*th*.—The number of laborers arrived in this Colony from the other West Indian Islands is somewhat over 1,700, and presents this peculiarity, that a large and increasing portion consists of Indian immigrants, not only from Grenada and St. Lucia, but also from Guadelope and Martinique. These last have located themselves chiefly in Port of Spain and find employment in sweeping and cleaning the streets.

12*th*.—Since the sailing of the *British Trident* in 1866, with return coolies, the registration of further applicants has been continued; during 1867 the number who presented themselves to enroll for return-passage was very limited, 91, and slowly increased up to the close of the immigration season in October 1868, when 368 additional names were registered, making in all 459—too many for one ship and not sufficient to freight two. As an offset to the return passage inseparable from the system of emigration, several coolies have applied to be allowed to exchange their right to a return-passage for an equivalent in land; under any circumstances this demand marks an important era for the Colony, and if, as may happen, the example be followed by numbers, and suitable crown lands can be found for their settlement in the neighbourhood of their present locations, an economy will be secured to the planter and general revenue, while at the same time a nucleus for free labor may be created in each District round which the coolies will gather and settle, instead of wandering as many of them do now with unsettled aim during the last five years of their residence.

13*th*.—In paragraph No. 3, it was stated that the principal mortality in the island was confined to about 15 estates out of 120, and that these were scattered over every District of the island, irrespective of local climate. Experience seems to indicate clearly enough that the health and lives of the imported laboring class depend more on the individual care of employers than on the position of estates, I have therefore less diffidence in repeating a suggestion made several years since on this subject, namely, that wherever the mortality of an estate exceeded the average of its own District or division, no application from such estate for any future supply of immigrants should be received till the mortality thereon had fallen within the normal limits. Such a rule would enforce the greatest care and in no instance could it be considered too severe, as it is clear that the individual loss on such estates is the direct cause of increased average in its own District.

14*th*.—There are besides one or two other points connected with the application for, and the distribution of, immigrants which merit attention. The average yearly requirements of the Colony lie somewhere between the extreme opinions of those on the one hand who advocate introducing yearly the whole number of immigrants applied for, whatever that may be, and of those on the other hand who would at once cut it down to one-half or less. The true mean may probably be attained without either wasting the resources of the Colony on an unnecessary introduction or crippling the advances of successful enterprise, by ordering the full number applied for so long as satisfactory evidence exists that the immigrants now employed by the applicants are treated in full accordance with the regulations enacted for their welfare, and so long as the applicant offers a fair guarantee that he actually requires the number applied for. This guarantee might vary, but in every instance it should apparently protect against all speculative demands—the Government which pays one-third of the annual immigration outlay from general revenue, and the planter who meets the remaining two-thirds, from fees and export duty. This guarantee might be in the first place direct, and one which admits of no cavil, namely, where an estate is known to yield a fair annual profit, this result, as a rule, can only be due to good management, and good management may be taken as the best guarantee by Government and the public, that the estate will meet its engagements, both as regards indenture fees and the payment of the people,—or the guarantee may be indirect, *viz*., that the house is fully supported by the Bank or other responsible party. In all cases where parties have been proceeded against for indenture fees, their applications for fresh immigrants should be disregarded, as they are probably unable to comply with the other Government regulations for the accommodation, comfort, and payment of the contract servants.

15*th*.—The state of Chinese immigration calls for no further notice than last year's. The number of vagrants steadily increases; and although many of the men by the two ships of 1865 are industrious and steady, yet the generality of employers look upon the whole class with

distrust. They are no doubt more troublesome to manage than the Hindoo races, but as the same difficulty occurred in 1853 and was successfully met, it is matter of regret that so little interest is shown towards a kind of labor on which the West Indian employer must shortly, in all probability, depend. He can scarcely look to India for continued supplies where the money spent of late years on roads, rails, and irrigation already amounting to nearly one hundred millions sterling, has raised ordinary adult labor to a daily rate of 7½, and where estimates have been taken for an outlay of even larger sums, whose results will not only be full employment for the masses, but the production of food at moderate prices. The immigration to the West Indies has been fostered by the continued high price of food which has never fallen since the famine of Orissa, and a state of chronic famine elsewhere has been prevalent up to date. But these conditions must shortly disappear before the present well-directed schemes of irrigation, and as the Indian laborer will, in future, find more remunerative work at home, those who at present depend upon his aid should, without delay, turn their eyes to China, and gradually promote a well selected immigration thence.

I have, &c.,
HY. MITCHELL,
Agent General of Immigrants.

No. 3, dated Trinidad, the 31st March 1870.

AN ORDINANCE

Enacted by the Governor of Trinidad with the advice and consent of the Legislative Council thereof, for extending the time for the feeding of Indentured Immigrants.

ARTHUR GORDON.

WHEREAS an Ordinance was passed in Council on the second day of February, in the year one thousand eight hundred and sixty-nine, entitled "an Ordinance for the feeding of Indentured Immigrants;" and whereas it is expedient to enlarge the time during which such immigrants shall be fed; be it enacted by his Excellency the Governor, with the advice and consent of the Legislative Council, as follows:—

Immigrants to be fed during first two years of Indenture.

I.—The provisions of the said Ordinance of the second day of February, one thousand eight hundred and sixty-nine shall extend and be taken to apply to every indentured immigrant allotted since the first day of January, one thousand eight hundred and sixty-nine, or who may be hereafter allotted to any plantation during the first two years of the term of the industrial residence of such immigrant.

After first year of Indenture, Agent General, &c., may, on application of immigrant, order that the providing of rations to such immigrants be discontinued.

II.—It shall be lawful for the Agent General or any Sub-Agent or Inspector of Immigrants, on the application of any such indentured immigrant at any time, after the expiration of twelve calendar months from the time of the allotment of such immigrant, to make order in writing to be signed by such Agent General or Sub Agent or Inspector in the Return Book of the plantation to which such immigrant shall be allotted, that the providing or furnishing of rations to such immigrant be discontinued, and from the day of such order being so made, the issue of rations to such immigrant shall cease.

Food may be delivered uncooked.

III.—From and after the expiration of twelve calendar months, from the day of the allotment of any indentured immigrant to any plantation, such of the rations of food to be delivered to such immigrant as by the said Ordinance are required to be cooked, may be delivered uncooked.

Passed in Council this twenty-fifth day of March, in the year of our Lord one thousand eight hundred and seventy.

A. C. ROSS,
Clerk of the Council.

Report on Immigration in connection with the Annual Abstracts from Quarterly Returns for the year ending 30th September 1869.

ARRIVALS.—The introduction of immigrants closed for the season by the arrival of the *Flying Foam* in July, with 32 deaths at sea, on a shipment of 479 souls. This heavy percentage, =6·6, was principally due to cholera in the river, and its *sequelæ*, with such accompaniments as usually characterise a protracted voyage of 128 days.

The risk of leaving so late as the month of March, and the disadvantage to the immigrants of arriving in this Colony after the rainy season had commenced, were mentioned in the Special Report on the *Flying Foam* while the causes of the death-rate were so minutely examined as to render further allusion to them, in this synopsis, unnecessary. The whole

number of Indians embarked at Calcutta during the season, for Trinidad, was=2,264 souls, and on these the death-rate was 63 or 2·7 per cent. without making any allowance for 17 births. The death-rate, therefore, when taken altogether, is the lowest as yet recorded. Of 2,201 souls landed, there were sent to hospital as suffering, or to the Convalescent Depôt as unfit for immediate field labor, 211 adults; of these 10 died, and the remainder were subsequently distributed to the estates for which they were originally designed.

The following table exhibits the numbers and rates above-mentioned; and it is but fair to state that, as regards two of the ships, the *Ancilla* and *Sevilla*, whose results are so exceptionably favorable, that they were equally or nearly so in the previous year:—

	Embarked.					*Landed.*					*Died at Sea.*					*Died in Hos. Dep.*

2. General death-rate for the season among Indentured Indians.—The mortality during this year has been unusually heavy among all classes, both in town and country, and the indentured laborers have by no means escaped. On 9,563 of the latter the deaths were 450=4·7 per cent., one of the heaviest rates on record for many years back. As the Ordinance for feeding the newly-arrived contract laborers came into force in January last, it will be interesting to analyse somewhat further this percentage and take the mortality as it affected the newly-arrived, apart from its influence on the arrivals of 1867 and 1868.

This is the more essential, as hitherto the death-rate during the first year of seasoning, not only has always greatly exceeded that of each of the succeeding years of industrial residence, but on individual estates has occasionally surpassed their aggregate. The arrivals of 1865, 1866, and those of previous years, indentured under Bounty, may be eliminated from this inquiry as being already seasoned to the existing vicissitudes of labor and climate. The deaths among them were 157 during the year ending 1st October 1869, consequently the balance of the 450 deaths on those who were introduced in 1867, 1868, and 1869, was 294; these arrange themselves thus, from December to October, respectively:—

90, in their 3rd year of residence, on 2,098 remaining of 2,400 allotted in 1867=4·29 per cent.
109, in their 2nd year of residence, on 1,529 remaining of 1,650 allotted in 1868=7·0 „
75, in their first year of residence, on 1,860 allotted in..... 1869=4·0 „

The result from these figures, which have been carefully extracted from Official Returns, is that under the system of rationing the laborer, the mortality among the newly introduced, as far as those records go, rises to little more than one-half of what it was among those who have been seasoned to the climate by a year's longer residence, and is even less than the death-rate of those who had been two years longer in the island, but who depended for a livelihood on money wages without any allowance of food.

Perhaps this result may be placed in a clearer light by comparing the death-rate of the women, who as being weaker naturally suffer most; it is as follows:—

13, on 543 arrived in 1869, died during 1869; = 2·5 per cent.
32, on 480 „ in 1868, „ „ 1869; = 6·6 „
25, on 717 „ in 1867, „ „ 1869; = 3·49 „

That this timely feeding saved the lives of many laborers, is clear from the fact that during the inclement months of the past July and August, numbers of the newly-arrived were unable to earn the full value of their rations; in other words, had their means of living depended solely on the wages earned, its gradually decreasing amount would have brought them rapidly to the hospital and within the fatal range of any passing epidemic.

What the influence of such epidemic might have been during the last year on strangers scantily fed, we may gather from the Estates' Hospital Returns; meagre as they are in detail, we find from them that ulceration of the extremities and debility, as causes of death among both new arrivals and those of long standing, have been to a great extent replaced by maladies of a more formidable and unusual nature. Yellow fever, malignant, typhoid, and comatose fever are returned in their pages with ominous frequency. These entries show plainly, not only that maladies of most serious nature have been rife among the inhabitants of the Colony during 1869,* but

* On a total of 450 deaths in 1869, 21 were due to ulceration and 55 to debility, but of the new arrivals only two died from ulcers and eight from debility.

also that their characteristics have been differently apprehended by different practitioners, and treated accordingly. "*Tot homines tot sententiæ.*" As fatal fevers are rarely epidemic among the Indian laborers, that of 1869 merits careful study by those who had an opportunity of becoming familiar with its protean phases, that they may determine its nature and fix its general treatment. Allied no doubt to yellow fever by some symptoms, such as black vomit and yellowness of the skin and mucous membranes, it yet differed widely from that scourge in attacking the Indian, hitherto exceptionally exempt from its influence, and in doing so sporadically, with an utter absence of all apparent contagion, under circumstances most favorable for its existence; and also in the suddenness with which death, sometimes in a few hours, followed the incidence of the attack. Till further enquiry, this fever may perhaps, for general purposes, be classed as a variety of paludal poisoning of exceptional severity; the more so as in most features, except that of black vomit, it resembles the Mauritius fever of 1866, 1867, and 1868, which cut off 35,000 Indians, and declared itself under precisely similar climatic influences, *viz.*, after two successive years of unusual drought which dried up lagoons and water-courses, leaving their beds festering under a tropical sun. The Protector of Immigrants at Mauritius reports on this subject, that the mortality among Indians resident on estates was 6·1 per cent. as against 12·9 per cent. among those non-resident, and the "Fever Enquiry Commission," appointed by Governor Barclay, terminate their investigation with the following words: "the average death-rate among engaged laborers was much lower than that of the Colony generally." Now in Mauritius the engaged laborers are rationed, and although on the whole the monthly rate of wages is higher there than in Trinidad, yet the sugar is said to be shipped at a lower rate. This must have been partly due to the regularly-fed laborer turning out better work. While then it is matter of congratulation here that among our indentured classes the total death-rate should have been so low as 4·7 per cent., it should be kept fully in view that it was only 4 per cent. among that portion of them who, as newly introduced, were more liable to casualties, but among whom that liability was markedly diminished by regular feeding. In fact the Manager of Aranjuez assured me that, on that estate, the newly-arrived coolies could not have borne up against the climatic influence of this season without the daily issue of abundant and wholesome food. Experiences of this kind merit the gravest consideration from estate owners in the Colony, as it is more than possible that last year's mortality may prove, as did the epidemic of 1866 in Mauritius, the forerunner of much heavier subsequent mortality. Should this unfortunately occur in 1870-71, its disastrous influence will be better met by the habit of regular feeding than by any amount of occasional care and skill. Of unindentured Indians resident on estates, the numbers are 2,930 men, 1,197 women, 1,467 boys, and 1,228 girls = 6,822. Among these the deaths were 71, so that the total mortality of Indians on estates during 1869 has been 521 on 16,385 = 3·1 per cent. Against this favorable conclusion must however be set the fact that the adults not under contract are a floating population whose mortality is not correctly returned. The births registered were 224, on an adult female population of 3,794 = 5·9 per cent.

3. Absenteeism.—The number of contract laborers absent from their employers without leave is 345; this number on the already-mentioned total of 9,563 = 3·6 per cent.

Of these, 225 arrived in the Colony more than five years since, and a large majority may be safely assumed to be either dead or beyond roll-call on the Spanish Main; these have been already noticed in previous reports and require no further comment. The balance, or 120, if calculated on the original number of 8,165 distributed during the last five years is only 1·4 per cent.; this establishes the fact that absenteeism has much diminished of late, notwithstanding the facility of evasion to the opposite coast of the Spanish Main and to the neighbouring islands, with which there is free and almost daily communication.

Those who interest themselves especially in the welfare of Indian immigrants, particularly those who do so from wider motives than either love to them or their employers, must accept this as a tolerably safe conclusion, that the contract laborer does not abscond, because for reasons of his own he prefers remaining. From the Quarterly Returns, it appears that the tendency to more domestic habits has been gradually increasing up to date, so that the number of absentees on 1,860 immigrants distributed in 1869 is only 5, or ·02 per cent.

To what must this unusual result be attributed? Some ascribe it to the greater interest taken by the employer in his own welfare and in that of his servant; others believe that labor conjoined with rations is more attractive, or rather, less repulsive, to a man who cannot finish a full day's work than when presented alone. Be the cause what it may, the condition remains that absenteeism is scarcely known as yet among the coolies introduced in 1869, and this in face of the well known fact that they dislike the system of rationing. The new coolies certainly prefer receiving all their wages in money, to part in cash, and part in allowances, and the same system is fully as much insisted on by the older resident who has served his time and is in trade, but with widely different purpose and result.

The coolie of the first class, on arrival, is usually indigent; his sole object is money, and he will, as a rule, hoard his wages and stint his food to the certain deterioration of his value as a laborer; this he will even do at the ultimate risk of life as the figures quoted show, and against such a result the Government which sanctions his introduction, is as much bound to guard as the employer for whom he labors. The second class referred to is still more deeply

interested in promoting exclusive payments in money. It consist of old coolies who have served their time; these, when they have means, are generally rice-sellers or money lenders, frequently both; they have powerful connections on many estates; they first advance money or luxuries to every new coolie of likely promise, and once entrapped, then sell him the necessaries of life at famine prices. The road-side shopkeeper, by the rationing of the coolie arrivals of 1869, has lost his profits on the sale of some 500 tons of rice; his secret but not sleeping partner on the adjoining estate, has also lost his share; but the laborer in return has received his food at nearly wholesale prices, while the former gains of the petty trader have nearly or altogether passed to his (the laborer's) credit. This is not to be regretted, as some of the most serious disturbances which have occurred of late years in the rural Districts were connected with, if not altogether due, to the influence of these petty tradesmen over the laborers they supplied. The first year's experiment of feeding the latter has already weakened that influence and broken up some of the shops, and there can be no reasonable doubt that a wise and liberal scale of diet, proportioned to the real wants of every indentured immigrant, would draw much more closely the bonds of union between him and his employer, while it would drive to more wholesome pursuits, those able-bodied men who now betake themselves directly or indirectly to shop-keeping, and whose time is pretty equally spent between squeezing out the laborers' earnings and defrauding the wholesale merchant. The fact of the petty tradesman being occasionally victimised, by both laborer and merchant, does not invalidate the conclusion. Whether due to the increased supply of food or to other causes distinct or collateral, one of the marked features of the year 1869 has been an almost complete freedom from those crimes of violence against managers or superintendents, whose frequency during the two preceding years had caused no small uneasiness to the proprietary body of this Colony, and more than one formal representation to the Government.

4. Return Immigrants.—On the 25th April, 320 Indian immigrants left this for Calcutta on board the Ship *Arima*, 692 tons burthen, Jones, Master. She arrived at her destination in four months, after a stormy passage, and some repairs at Algoa Bay. There were seven deaths on the passage; a very low mortality when contrasted with the bad health of the invalided portion on board; some of these last had little chance of seeing India again, but they were embarked for the return-passage, as entitled by law. The remaining 313 were landed at Calcutta in good health, and Mr. Warner's report on arrival was highly creditable to the care and skill of Dr. Crane, the Superintendent. These coolies took back with them $65,585..... one man Heerah handed over $6,000 for transmission through the Treasury, but was believed to have about him $4,000 more; in fact he had stated as much. This man, originally allotted to the Glenroy Estate, had, after serving out his industrial contract, resided in the neighbouring village of the Mission of Savanna Grande as a shop-keeper and money-lender for the last ten years.

It is not astonishing that men of this class should object to the rationing of the indentured laborers, and stimulate the latter by every means in their power to discontented opposition; but it is difficult to comprehend how the employer should be induced occasionally to look on the rationing system as too troublesome, and thus play into the hands of these petty traders whose interest it is to establish on estates an *imperium in imperie*, directly subversive of the owner's control.

The *Arima* sailed so late in the year that the passengers were much exposed to the winter's cold in rounding the Cape, as well as to the opposing monsoon during the rest of the voyage; these inconveniences might have been avoided by three months' delay, but as many of the people petitioned to be allowed to leave at once, Her Majesty's Commissioners were requested to charter a vessel to carry some 300 return immigrants—about as many as could be safely counted on to start, from the 450 whose names were already registered. Of these last, not 200 eventually came forward on the appearance of the ship; this might have proved inconvenient, had not some 400 more registered to return between January and April; from these the complement of the *Arima* was eventually made up; and it is more than probable that where such substitution took place, some money consideration passed furtively between the parties. Precautions were taken to ensure an abundance of warm clothing to every individual embarked. Those who had the means, if not already sufficiently provided, were required to do so before being passed to the Island Depôt to await the ship, and the poor (who were not numerous) were furnished with the necessary kit by Government. In this transaction, there were some grounds for supposing that the natural simplicity of the officers in charge had been taken advantage of by the more astute Asiatics, and the ship had scarcely weighed anchor when it turned out that the coolies had, by a judicious transfer of kits and re-arrangement of their bundles, made a very moderate quantity of blankets and warm clothing do duty for a very considerable number of passengers:—that this slight of hand had taken place to an inconvenient extent was afterwards corroborated by Dr. Crane's report from Algoa Bay; fortunately it led to no serious results. Any occurrence of this kind will be prevented in future, by an order which was issued by His Excellency the Acting Governor, that no intending return immigrant should register his name for passage without depositing a fixed sum sufficient to meet the expense of the necessary clothing for the voyage. This order has produced very marked and wholesome results. In the first place, during the last eight months, not more than

150 of those who had previously registered have returned and made their deposit for clothing; the remaining 300, who had probably no definite intention of leaving at the time, have settled down, and thus withdraw one great cause of instability from the mass of Indian labor; when these last registered their names on the previous occasion, it might have been simply with the intention of eventually selling their chances to others whose contracts had more lately expired. This sort of gambling has been checked, and the *bonâ fide* applicants know that as soon as 150 more names shall have been entered, a ship will at once be ordered, and further, the Colonial Government knows that when a ship is ordered, there can be little chance of having to pay demurrage or short freight from the non-appearance of the passengers. The Island Depôt, where the immigrants were assembled and lodged for some days previous to embarkation, proved essentially serviceable. Besides the Indian immigrants on board the *Arima* five Chinese, returning to Canton *viâ* Calcutta, went as cabin passengers: they had with them money or bills to the amount of from $2,000 to $3,000 each.

5. Indians who have commuted their return-passage for a grant of land.—This is altogether a new heading in an immigration report, nor has the movement, however important, been as yet of such extent as to require lengthened comment. By reference to the *Royal Gazette*, it will be seen, that a notice therein published by authority of the Government, dated , offers to each coolie, who chooses so to do, a grant of 10 acres of land as full compensation for his return-passage to India. It was not to be expected that the Indian whose habits have been fixed in special grooves for tens of centuries should hurriedly embrace an offer which must strike at the roots of all his prejudices of country and creed and kin. Still, a certain number—about 60—have thus commuted their right to a return-passage, and have been settled within easy distance of the estates in Savonetta and Point-à-Pierre, where their labor will be available during the crop season for the neighbouring estates, while about 30 more have applied for lots.

The comparatively small number of Indians who have taken advantage of these grants, or rather sales of Crown lands, declares plainly the tenacity with which, as a body, they cling to their right of returning to India notwithstanding 25 years' experience of the West Indies; still, an example has been set, and although the leaders may have acted only with the intention of selling their lots when improved at no distant date, others may follow with different views, and strangers, especially our numerous coolie visitors from other Colonies, both French and English, may be induced to settle among them. The former seem to prefer Trinidad, and continue to arrive in considerable numbers, influenced, no doubt, by that provision of the French Regulations which is as follows: "Immigrants over the age of ten years, if they make a fresh agreement, reserve their right of return-passage at its conclusion, but should they remain unindentured after their indenture has terminated, they lose all right to return." Any hesitation, therefore, about re-indenturing may cost the coolies their return ticket, and to this want of decision in renewing the contract, we probably owe their presence here. These people are chiefly Madrassees. It may be mentioned under this heading that several gentlemen largely interested in the introduction of Indian labor believe that it would be desirable to return to a partial introduction of labor from the Madras Presidency. There can be no doubt that its inhabitants are individually superior in physical power to the coolies from Calcutta, and arrive here in better health. The great disadvantage which attended their earlier introduction was their turbulence and excessive intemperance, their wages were for the most part spent on rum, followed by the natural results,—destitution and wide-spread mortality.

These evils may now be in great measure avoided as the rationing system must ensure steadier habits; while in calculating the eventual value of different kinds of labor to this Colony, it must not be omitted that the Madrassees show less fixed resolve to return to India than their brethren of Calcutta. One of the drawbacks to the usefulness of this class when last introduced was the preponderance among them of domestics, over field laborers; this might be guarded against in future shipments, and where exceptions occurred, the necessary steps might be taken to indenture them in their real capacity as house servants. This last arrangement would prove an acceptable accommodation to the general public who already bear a certain proportion of the expense of introduction, and who complain pretty generally of the difficulty of securing domestic service in either town or country where the occupation or proprietorship of small freeholds is so facile and inviting.

6. Indenture Fees.—These have been paid with most creditable regularity. The amount received having been £20,149 18*s.* in 1869 as against £17,661 during the previous year, and no fees remained unpaid at the close of the season. It may be mentioned here that the immigration debt on behalf of the Colony has been gradually reduced from £189,073 0*s.* 8*d.* in 1852 to £30,264 4*s.* 2*d.* in 1869. These figures show, on the one hand, the pressure of circumstances at the earlier date, and, on the other, the subsequent elastic re-action of the Colonial resources.

7. The following figures, of another type, will interest all parties connected with the Colony of Trinidad; they prove the increased, the doubled production of sugar, independent

of Cocoa, since 1845 when Indian labor was first introduced. The average crop of 1843, 1844, 1845 being—

	Sugar.		Molasses.			Rum
	Hhds.	Tcs.	Bls.	Puns.	Tcs.	Puns.
	22,295	1,591	3,703	9,607	359	32
while that of 1866, 1867, 1868, was—	46,437	7,384	4,327	14,666	562	534

Further, that an increase of 10,000 hhds. over the average production of 1863, 1864, 1865, was obtained during the next three years, 1866, 1867, 1868, with the same number or rather fewer contract servants, while in 1869, the first of another triennial period, the crop has still further increased to 56,369 hhds., with every prospect of its ranging higher (weather permitting) for 1870 and 1871, notwithstanding certain heavy drawbacks of blight and fire on the crop of 1870; yet the contract servants are still about the same in number as they were six years before, showing an increase only on the women, while those whose contracts have not expired, are about 1,200 more.

The breadth in canes by published returns was in 1865, 40,437 acres, and in 1868, 41,639 acres, showing an increase of little more than 1,200 acres.

This rapid advance in the production of the chief staple is altogether beyond what can be attributed to the introduction of Indian immigrants, and involves several considerations which need not be dwelt on in this report. The continued influx of labor from other Colonies does not in general direct itself towards the sugar estates.

It has hitherto rather seemed to supply the place of those nomads who leave the suburbs of the towns and road-side villages to settle on Crown lands, and from among whom numbers have lately become fixed as rate-payers, under the superintendence of the Crown Surveyor and Court of Intendant. The arrivals of this kind for the season has been about 1,700 adults, somewhat below the average, as happened also last year.

Altogether unrestricted in their movements, these immigrants follow their own bent after arrival, and leave little trace of their whereabouts; but there can be little doubt that they swell in some way or other the tide of labor, and contribute their quota to the general progress most probably on the minor Cocoa estates or the still smaller holdings and provision grounds from which the former gradually arise.

There can be no doubt that improved tillage and more correct application of manure has powerfully contributed to the present crops, and the increase recorded has corresponded pretty uniformly with the increased use of the fork, which has for some time been gradually displacing that check to all improvement,—the universal hoe. The land has also been broken up to a much

greater extent by the plough, thus relieving the laborer from the severest of all manual tasks. On some estates implemental weeding has been introduced, which when carried out to its legitimate extent, will make the planter more and more independant of his numerous field hands. In more than one District the steam plough has been introduced with great advantage, but its deep tillage, while it saves the oxen, will not vanquish the cohesion of the stiffer soils, and bring out the exhaustless wealth of the Naparima clays till they have been thoroughly aerated by a judiciously applied system of sub-soil drainage.

Perhaps the most important advantage to be derived from the steam plough will be that its more familiar working must inevitably lead to steam traction, at least on flat lands, and displace 5/6 of the mules, whose lives are precarious, and which at present, though necessary, are a most undesirable and losing investment. Any manure they furnished could be produced of more suitable quality from cattle raised for food.

8. Labor-saving machinery has not been altogether confined to the agriculture of the Colony, but in some instances has been applied to the first step in manufacture of sugar, *viz.*, the carrying of canes to the mill.

Cane carriers were, like the vacuum pan, introduced many years since into this Colony, but like the Vacuum Pan were not much appreciated;—from some cause or another they fell into disuse, or were applied on too small a scale to realise their full economy in relieving the people from labor; to what extent may be gathered from the fact, that if the crop of Trinidad be taken at 55,000 hhds., and the high average of 2,000 gallons of cane juice be allowed for each hhd. made, this will indicate a net weight of more than 700,000 tons lifted during the crop season to a height of from four to ten feet above the level of the ground, by the labor of men and women, before being consigned to the crushing rollers; and this weight is in every instance raised above the elbows, generally over the head of the carrying gang. This last is composed for the most part of contract laborers, because the lift is severe and will rarely be undertaken by those who are not under contract; yet the weight might be overcome by the engine, in the same manner as it carries off the ground canes, which have lost two-thirds of their weight. In Cuba, where manual labor is most expensive, the more advanced estates use cane-carriers, 150 feet in length, that is to say long enough to allow of a well-arranged system of carts to be unloaded directly into the cane-carrier instead of being first discharged in the mill-yard as a preliminary to being a second time lifted up by hand.

In Demerara, where the weight of canes ground is about double what it is here, cane carriers are in universal use, in fact the lift by hand would be impracticable. It is perhaps too much to expect such alterations to be carried out fully and at once by the planter, while his time and attention are, as at present, divided between manufacture and agriculture, but the appreciation of all aids and appliances, whether mechanical or chemical, are indispensable steps towards, and must precede the great and impending change, when pure sugar direct from the cane must displace the present muscovado. The West Indian sugar farmer is now in a transition stage towards a result which has been long maturing, not perhaps so much by his own exertions as by the necessities of a great commercial and mechanical age which tells him distinctly, that it must have one of the primary necessaries of life in the pure state in which it is furnished by nature, and that the consumer will no longer both pay the planter for his avoidable errors of manufacture and the refiner for correcting them. He points to the Beetroot juice in Belgium and elsewhere, a complex liquid difficult to handle, from which a white sugar is produced in 48 hours, and calls on the planter to do the same from cane juice, twice as rich and pure and easily worked. He tells the planter further that the manufacture of pure sugar is one of the few trades which requires neither skill nor long practice.

Other arts need a longer or shorter apprenticeship, but the extraction of pure sugar is simply mechanical, implying only the adoption of suitable arrangements, which, however ingenious in their original contrivance, require no greater intellectual effort for their application and direction than that wonder of Art,—the sewing machine. The chief requisite in the manufacture of sugar are a judicious outlay and the constant supervision of the master's eye, both of which (and they are rarely given) the increased quantity and improved quality would soon re-pay. The Trinidad planter has, if true to himself, little to fear from his Beetroot competitor, as he stands at present in the race; his canes contain double the quantity of sugar, and his land yields double the weight of canes. Although the manufacture of Beet sugar has been so much improved of late years as to double the quantity extracted, and the cultivation has been so skilfully conducted as not merely to increase the weight of Beet per acre, but greatly to increase the relative quantity of sugar in the root, yet all these improvements in the future are open to the West Indian farmer in addition to the vast advantages of his start. What he has to fear is not the present application of English capital to the home growth of Beet sugar, but its combination with English enterprise and energy; these last can only be successfully met by their counterparts in the Colony, and without them all the advantages of cane and climate will be unavailing. It is true that, as stated above, the crop of the island has increased some 20,000 tons in a few years with but little extension of hands or acreage, and that land which formerly gave only 1½ hogsheads, now gives 2 hogsheads per acre, but this no longer meets the situation, the same lands must yield 3 hogsheads of good sugar—a result by no means unattainable if every particle of solid and liquid manure now produced on each estate be applied to a soil well adapted by tilth and drainage.

9. While much of the progress of the Colony during late years has been owing to the vigorous development of small properties into large, much has also been done in the way of concentration; few but residents of long standing are aware that since 1840 no less than 78 sets of works on as many estates have been dismantled in this Colony. Of these 40 have had their acreage absorbed into adjacent estates, thus swelling the respective size and produce of the latter while no less than 38 or nearly one-half have been abandoned, not so much from exhaustion as from local difficulties which are fast disappearing before increased facilities of labor supply and intercommunication. The condition, however, which fairly marks the real improvement of the Colony during late years, is neither the re-payment of its public debt, nor its increased export, but the fact, that no less than 17 Cocoa and 17 sugar estates which formerly employed contract labor, now depend entirely on the general population of their respective Districts, although their crops have in many cases doubled, while 31 others, with crops which in some instances range over 600 hogsheads, do not on an average muster 31 contract hands. Of the remaining estates

43 employ under 100 and average 72;
17 employ from 100 to 150;
6, from 150 to 200; and
8, over 200 Indentured immigrants, each.

HENRY MITCHELL,
Agent-General of Immigrants.

IMMIGRATION OFFICE,
February, 1870.

Dated Immigration Board, the 20th May 1870.

From—T. WALCOTT, ESQ.,
To—SIR F. ROGERS, Bart., &c., &c., &c.

I HAVE to acknowledge your letter of 14th instant, with copies of two despatches from the Governor of Trinidad; the first enclosing an Ordinance for extending the time for the feeding of indentured immigrants, and the second enclosing the Annual Report of the Immigration Agent.

2. By an Ordinance passed in February of last year (No. 3 of 1869.) employers were bound to supply their indentured immigrants for the first 12 months, after their allotment with a specified daily ration, and were empowered to deduct from their wages 5½*d.* a head in respect of it. But no deduction was to be made for rations supplied to children under 10 years of age. The amending Ordinance simply extends the period of rationing from one to two years with a proviso (section 3) that, after the first year of indentureship, the Immigration Agent General may, on the application of any immigrant, stop the rations, and where they are not stopped, may allow them to be issued in an uncooked state.

3. These ordinances are to be defended only on grounds of humanity. There is difference of opinion amongst planters on the feeding system; and it is admitted that the immigrants themselves dislike it and prefer cash wages which they can hoard at the expense of their health and strength. The facts, figures, and reasoning however adduced in the speech and Annual Report of the Immigrant Agent, an experienced medical man well acquainted with coolie habits and dispositions, justify this exceptional legislative interference with the liberty of the immigrants.

4. Dr. Mitchell shows that, even in an unusually sickly year, the rationing system, so far as it has been tried in Trinidad, had produced a marked effect. Since its introduction, the death-rate amongst the new comers had been little more than one-half; that amongst coolies who had had the advantage of a year longer acclimatization, and was less even than that amongst the Indians who had been two years longer in the island and had fed themselves out of their money wages. Governor Gordon, too, in another despatch of 8th ultimo, No. 46, on M. des Vœux's letter respecting the condition of immigrants in British Guiana, states that the effects of the Ordinance of 1869 had already been marvellous, and expresses his belief that if its provisions were extended to the whole term of indentureship a vast loss of life would be prevented.

5. The principle of the feeding system has been adopted in several of our coolie-importing Colonies; and the only question has since been as to the extent of its application. This has ranged from three months after arrival as in St. Lucia, up to the whole period of indentureship as in Mauritius and Jamaica. In Mauritius, where it has long been in operation, it appears from a report of the Protector of Immigrants that in the fatal fever years of 1866,'67, and 68, the death-rate amongst coolies resident and rationed on estates was 6·1 per cent., whilst among the non-resident who fed themselves, it was 12·9 or more than double. The system was last year introduced into Jamaica on the strong recommendation of the Governor, Sir John Peter Grant, after a long and careful investigation of the subject.

Act No. 34 of 1869.

6. As regards the amending ordinance, the only other remarks that occur to me are that it makes the operation of the previous ordinance of February 1869 retrospective, so as to include coolies indentured since the 1st of January of that year, and that the 3rd section has a tendency adverse to the main principle of the measure. If it is necessary to issue rations to all in lieu of money wages, it would seem a doubtful policy to issue them in a state that offers facilities for this misappropriation. It is true that the ordinance of 1869 contains a penal prohibition against the sale of rations, but where concealment is the interest of both seller and buyer, the enforcement of the law will rarely take place.

7. Subject to these remarks, I see no reason why the ordinance should not be left to its operation. But in that case I would suggest that its provisions should be made known in India, in order that the coolie may clearly understand before his recruitment the manner in which his wages are to be paid.

8. The report of the Agent General for the year ended 30th September 1869 is, as the Governor observes, more full of interesting matter than usual. The following summary will show its most salient statistical results. The total number of Indians resident on estates were 16,385 of whom 9,563 were indentured and 6,822 non-indentured. The mortality amongst the whole number in the year, so far as that amongst the non-indentured could be ascertained, was at the rate of 3·1 per cent. The registered births amongst a female population of 3,794 were 224 or at the rate of 5·9 per cent. The number of contract laborers absent without leave was 345 or at the rate of 3·6 per cent.; the number of coolies sent back to India was 372 equal to 320 statute adults, and the amount of money they carried with them was 65,585 dollars. Sixty coolies commuted their right to back-passages for a grant of ten acres of land each in the vicinity of estates in Savonetta and Point-à-Pierr, and 30 had applied for commutation. Indenture fees amounting to £20,149-18 had been received, and no arrears were outstanding at the end of the season. The immigration debt had been reduced from £1,89,073 in 1852 to £30,264 in 1869. The production of sugar since 1845, when Indian labor was first introduced, had increased from an average of the first three years of 22,295 hogsheads to 56,369 hogsheads in 1869. But Dr. Mitchell observes, that the fact which marks more than any other, the improvement of the Colony in late years is that 17 Cocoa and 17 sugar estates which formerly employed contract labor now depend entirely on the general population of their respective districts, although their crops have in many cases, doubled; while in the case of 31 other large estates not more than 31 contract laborers are employed. There are only eight estates in the Island which employ over 200 indentured immigrants a-piece.

9. The only suggestion that I have to make on this report is that if Earl Granville thinks fit, it should be communicated for the information of the Secretary of State for India.

No. 172, dated Georgetown, the 28th December 1869.

From—J. SCOTT, ESQ., Governor of Georgetown,
To—The RIGHT HON'BLE THE EARL GRANVILLE, K.G., &c. &c.

I HAVE the honor to transmit the consolidated Half-yearly Return of Immigrants under indenture of service, or residing on plantations, for the half-year ending the 30th of June last, and other documents enclosed in the Half-yearly Report of the Immigration Agent General.

In the Return for the pevious half-year, the estates showing the greatest mortality were Philadelphia, Friends, and Spring Garden. In the Return now transmitted, there are also three estates where the mortality is shown to exceed four per cent., namely, La Grange, Spring Garden, Mainstay; Friends and Philadelphia in this Return exhibit a mortality of less than two per cent., and even Spring Garden, although still classed as "very bad," shows an improvement, the mortality being 4·27 per cent. against 6·94 in the previous half-year. Mainstay now ranks as the worst, exhibiting a mortality of 5·62 per cent.; in the previous return, this plantation gave 3·05 per cent.

It appears to me to be impossible to attribute the increase or decrease in the death-rate shown by the different estates in successive years to any known existing cause, admitting of a remedy, some of the estates nearly always show a greater rate of mortality which may be attributed to the locality, and therefore, beyond the control of the Government. I have called upon the Medical Inspector of Estates Hospitals for a report on the plantations classed as bad, a copy of which I beg to enclose.

28th December 1869.

I may remark that great exertions are now being made to obtain improvements in the construction of the Estates Hospitals and in the immigrant dwellings. All new ones are constructed, as far as practicable, upon plans sketched out by Dr. Shier, and I do not find from the planters any very serious objections to conform to the wishes of the Government in this respect. Many old hospitals and barracks still exist which are faulty in construction, but these are being gradually improved or done away with altogether.

No. 1300, dated British Guiana, the 8th December 1869.

From—JAMES CROSBY, ESQ., Immigration Agent General,

To—The HON'BLE J. MAYER GRANT, Government Secretary.

I HAVE the honor to forward to you, in duplicate, for the information of His Excellency the Governor, and for transmission to the Right Hon'ble the Earl Granville, Her Majesty's Principal Secretary of State for the Colonies, this Report, and "the Consolidated Half-yearly Return of Immigrants, under indenture of service, or residing on plantations in the Colony of British Guiana, for the half-year ending 30th June 1869," and immediately, then, following, there is "an Abstract of such Consolidated Half-yearly Return of Immigrants," together with two enclosures, respectively numbered, Nos. 2 and 3, and hereinafter particularly described. There is also added, in manuscript, a heading, being a statement of complaints against immigrants for breaches of the terms of Indenture, adjudicated on during the half-year," by the Stipendiary Justices of the Peace, in their respective Districts. This statement shows the number of acquittals and the number of convictions on the hearing of such complaints on each estate; and at the foot of the Abstract is shown the percentage of acquittals and the percentage of the convictions on the hearing of such complaints, in each county and throughout the Colony. "The Consolidated Half-yearly Return of Immigrants, &c.," for the convenience of reference, is marked No. 1.

2. Also, "a Return showing the rates of mortality amongst the immigrants under Indenture of service, or residing on plantations in the Colony of British Guiana, for ths half-year ending 30th June 1869, the plantations being arranged and classified according to such rates." The Return is marked No. 2.

3. Also, "an Analysis of the Mortality which has taken place during the half-year ending 30th June 1869, on those plantations on which such mortality has been described as 'bad,' or as 'very bad,' or as 'exceptional' requiring investigation." The Return is marked No. 3.

4. The statement exhibiting the rates of mortality as enclosed in my Report No. 979, Saturday, 18th September 1869, has been omitted, as I propose sending in that Statement only once a year, with my Report in reference to the second-half of each year, so that the statement has reference to the whole year, and draws a comparison between the year just then closed, and the five preceding years.

5. The Return marked No. 1 shows the number of each description of immigrants under indenture of service on each estate, and the total number of such immigrants; the number of each description of immigrants not under indenture of service, residing on each estate, and the total number of such immigrants; and the total number of immigrants made up of those under, and not under, indenture, on each estate; the mortality among each description of immigrants, and the percentage of such mortality, and the total mortality of those immigrants under, and of those not under indenture, and the percentage of such mortality on each estate, as well as the number of births. The statement showing the complaints adjudicated upon by the Stipendiary Justices of the Peace, is not so perfect as I could wish, or desirable for the information of the Emigration Commissioners and the Secretary of State. I hope to remedy its defects early in the year 1870. The "Abstract of the Consolidated Half-yearly Return of Immigrants," &c., shows the matters above referred to, in reference to the several different divisions of counties, in reference to the several counties, and in respect to the whole Colony. And it appears there were located on estates in the Colony, on the 30th June 1869, immigrants under indenture, 27,871 males, 9,195 females, making a total of 37,066 immigrants; and immigrants not under indenture, 5,743 males, 3,814 females, making a total of 9,557 immigrants, making, consequently, a grand total of 46,623 immigrants under the supervision and control of the Immigration Department. The mortality in the county of Demerara has been 1·59 per cent., in Essequebo, 1·36 per cent., and in Berbice, 1·27 per cent, and throughout the Colony, 1·48 per cent. The number of complaints adjudicated or made against immigrants under indenture, for breaches of the terms of indenture, has been 2,044 or 5·51 per cent., and the acquittals being at the rate of 1·84 per cent., and the convictions at the rate of 3·67 per cent., on the immigrant population under indenture throughout the colony.

6. The Return marked No. 2 shows the number of immigrants resident on estates, the number of deaths, and the percentage of such mortality during the first-half of the year 1869, and there is an arrangement and classification of seven separate divisions; and at once shows the graduated rate of mortality of immigrants resident on the respective estates throughout the Colony; and it will be observed, only one estate, the Mainstay Estate, Arabian Coast Essequebo, is classified as "exceptional;" and requiring investigation, only two estates the La Grange, West Bank, Demerara, and the Spring Garden Estate, Arabian Coast Essequebo, as "very bad," and only two estates, the Uitolugt, West Coast Demerara, and the Johanna Cecilia Estate, Arabian Coast Essequebo, as "bad." There were consequently out of the whole number of 126 estates referred to in the Consolidated Return, and on which immigrants are located in the Colony, only these five estates requiring particular observation. There can be no doubt, the sanitary condition of the immigrants improves every half-year, as it is evident the mortality of the immigrants on estates is decreased every half-year. I have no

doubt on the completion of the hospitals about to be erected; and on the late improvements in the construction of the cottages of the immigrants being carried out throughout the Colony, still greater improvements will take place and the mortality, in another year or two, considerably reduced. There will still be room for improvement.

7. In the analysis marked No. 3 is shown the mortality which has taken place during the half-year to which the Consolidated Return marked No. 1 relates in respect to the above-mentioned five estates, classified as "bad," "very bad," and "exceptional," and in the order of such classification. The mortality on each of these five estates is contrasted with the mortality on the same estates, during the four half-years immediately preceding the first-half of the year 1869. The casualties which occurred on these estates would, if deducted, materially decrease the mortality; and, contrasted with former half-years, it is quite possible the cause of such excess in the half-year to which this report refers may be explained.

8. In the county of Demerara, the greatest mortality during the half-year, has taken place on the estates situate on the West Bank, being 1·85 per cent., and the least mortality for the same period on the estates situate in Mahaica, being 1·11 per cent. In the county of Essequebo, the greatest mortality has been on estates situate on the Arabian Coast, and the least mortality on the estates in Tiger Island. In the county of Berbice, the greatest mortality has been on estates situate on the East Bank; and the least mortality on the estates on the Corentyne Coast. The greatest mortality has been among the Indian immigrants from Madras, being 1·99 per cent., and the least mortality has been among the immigrants from Madeira, being only ·24 per cent. The mortality in the three several counties and throughout the Colony has been already stated in paragraph 5.

9. I regret I have been unable to send in this report at an earlier period. The cause of the delay I very fully explained in a similar report, No. 979, Saturday, 18th September 1869, when a much greater delay had taken place than on the present occasion. I hope such delays will not occur during the year 1870.

Remarks by DR. D. SHIER, M.D., *Medical Inspector, Estates Hospitals, on some Cases mentioned in the Half-yearly Report (June* 1869*) of the Immigration Agent General on the Mortality on Estates throughout the Colony,—dated Georgetown, the 28th December* 1869.

THE Immigration Agent General draws attention to two estates on which the ratio of mortality during the period is characterised as *bad*, two on which it is characterised as *very bad*, and one on which it is characterised as *exceptional* (being over five per cent.).

Having recently inspected the Estates' Hospitals of the Colony, the following remarks are offered supplementary to those of the Immigration Agent General:—

Plantation Uitolugt West Coast, county of Demerara.

Of the 12 deaths which occurred, four were of immigrants who had not completed their first year of residence in the Colony. Three of these died of fever and one of jaundice. Three other deaths are attributed to fever. It will thus be seen that half of the deaths occurred from fever.

For several years the mortality on this estate has exceeded the average rate of the District. The site of the hospital is bad, and the hospital itself is inferior. The matter was brought to the notice of the Executive, and the Attorney of the Estate has been requested to erect a new hospital on an unobjectionable site.

Plantation Johanna Cecelia.—Arouabisce Coast, county of Essequebo.

Of the eight deaths, three occurred from dysentery and two from debility. Only one death occurred of an immigrant in the period of acclimation. The rate of mortality on this estate has been on two occasions exceptionally high. It is only recently that immigrants have been settled on this estate, and so eager was the proprietor to obtain laborers, that he indentured many old and feeble immigrants who could not obtain bounty on re-indenture from any other estate. Year by year some of these people die off, and thus swell the rate of mortality.

Plantation La Grange.—River District, county of Demerara.

Of the 15 deaths, four were of immigrants who had not completed their first year of residence. Two of these died of intermittent fever, one from dysentery and one from debility. Six deaths arose from dysentery which prevailed to a greater extent than usual during the long drought which occurred.

The immigrants on this estate are housed in two coffee logies and in the old hospital, which has been fitted up as a barrack. In these dwellings it is impossible to enforce cleanly habits, and the occupants are thus placed not in the most favorable circumstances.

The attention of the proprietor of this estate was drawn to the subject, and a beginning has been made in erecting dwellings of one story and of single apartments.

Plantation Spring Garden.—Arouabisce Coast, county of Essequebo.

Of the nine deaths, three were of immigrants in the period of acclimation. One died of sun-stroke, one died of dysentery, and one (a child four years of age) died from boils on head and body.

This estate has always been an unhealthy one. Much has been done by the proprietor in erecting dwellings of approved construction for the accommodation of the immigrants. A new hospital is about to be erected on what is believed to be a healthier site.

Plantation Mainstay.—Arouabisce Coast, county of Essequebo.

Of the ten deaths which occurred, six were of immigrants in the period of acclimation. Three of these died of dysentery, one of fever, one of pneumonia, and one of debility. The immigrants sent to this estate *ex* ship *Harkaway* were a very inferior lot, and most of them were admitted to hospital on their arrival on the estate. Four of these died. Two *ex* ship *Himalaya* died; one was rated ineffective and the other partially ineffective when sent to the estate. None of these six persons ever did any work.

This estate has always been considered a healthy one, and I attribute the exceptional mortality to immigrants of feeble constitution having been sent to the estate.

Dated Immigration Office, the 16th February 1870.

From—T. W. C. MURDOCH, ESQ.,

To—SIR F. ROGERS, BART.

I HAVE to acknowledge your letter of 7th instant, with a despatch from the Governor of British Guiana, enclosing the report of the Immigration Agent, Mr. Crosby, for the half-year ending 30th June 1869.

2. From this report it appears that, on 30th June last, there were on estates—

	Males.	*Females.*
Under Indenture	27,871	9,195
Not under Indenture	5,743	3,814
	33,614	13,009
Making a total of	46,623	immigrants.

The mortality throughout the Colony had been 1·48 per cent. during the half-year, the greatest being, as usual, in the county of Demerara 1·59 per cent., the smallest in Berbice 1·27 per cent. Of the 126 estates on which immigrants are employed, eight are described as "excellent," having had no death among 729 immigrants. Thirty-one are described as "very good," the mortality among 12,401 immigrants having been on each estate less than one per cent., 70 employing; 29,338 immigrants are described as "good," the mortality on each having been more than one, but less than two per cent.; 12 are described as "fair," the mortality on each having been more than two, but less than three per cent.; two are described as "bad," two, as "very bad," and one, as "exceptional," the mortality on the former having exceeded three per cent., on the second, four per cent. and on the last, five per cent.

3. A report on these five estates by the Medical Inspector of Estates Hospitals accompanies the Governor's despatch. From this it appears that on the two estates (Uitolugt and Johanna Cecilia) described as bad, the mortality has on previous occasions been exceptionally high; and that on the former, the Hospital is badly situated and constructed. That of the two estates described as *very bad* (La Grange and Spring Garden), the houses on the former are of such a description, that "it is impossible to enforce cleanly habits," and that the latter "has always been an unhealthy" estate. The estate described as "exceptional" is stated to have been hitherto healthy, and the unusual mortality is attributed to the bad condition of some of the new immigrants allotted to it.

4. I would submit that, where an exceptional mortality recurs several times on a particular estate, specially when it can be traced to any defects in the houses, or hospitals, or the water supply, the Governor should not allot any new immigrants to such estate, even if he does not see cause to withdraw those that have been already allotted to it. It is of little use calling attention to the mortality and obtaining reports on it if no practical result follows. But if it were once known that no new immigrants would be assigned to any estate on which an excessive mortality was a common occurrence, the proprietors would have the strongest motive to take every means in their power to improve the sanitary condition of their estates.

Dated Downing Street, the 31st May 1870.

From—R. G. W. HERBERT, ESQ.,

To—The Under Secretary of State for India.

WITH reference to the concluding paragraph of your letter of 18th March, relative to the irregularity in the transmission to the India Office of periodical reports on the condition of the Indian immigrants in coolie-importing Colonies, I am directed by Earl Granville to transmit to you, for the information of the Duke of Argyll, copies of the returns that have been received at this Office since the 30th June 1868, but which do not appear to have been sent to the India Office, together with the reports of the Emigration Commissioners, *viz.*:—

Grenada.—Half yearly Reports to 31st December 1868, and 30th June 1869.

St. Vincent.—Half yearly Report to 31st December 1868.

Jamaica.—Report for the year ended 30th September 1868, not received till the 1st of February 1870.

Trinidad.—For the year 1868, not received till the 14th of August 1869.

British Guiana.—Half yearly Report to 30th June 1869, not received till the 1st of February 1870.

I am to request that in laying these papers before the Duke of Argyll, you will inform His Grace that Lord Granville will call the attention of the Governors of those coolie-importing Colonies where there has been delay in sending Home these reports, to the importance of their early and regular transmission.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

Treaty between the BRITISH GOVERNMENT *and* HIS HIGHNESS TUKHT SINGH, G C S I, *Maharaja of Jodhpore, his heirs and successors, executed on the one part by* COLONEL JOHN CHRIS[illegible] *Officiating Political Agent at the Court of Jodhpore, under authority from* [illegible] *Officiating Political Agent in Marwar, and Vakeel in the Court of Jodhpore, duly appointed for the purpose, on behalf of the Government of India, by* HIS EXCELLENCY THE RIGHT HON'BLE RICHARD SOUTHWELL BOURKE, *Earl of Mayo, Viscount Mayo of Monycrower, Baron Naas of Naas,* K P, G M S I, P C, &c, &c, *Viceroy and Governor General of India, and on the other part by* JOSHEE HUNSRAJ, MOOSAHIB *of Marwar, in virtue of the full powers conferred on him by* MAHARAJA TUKHT SINGH *aforesaid*

I.—Subject to the conditions contained in the following agreement, the Government of Jodhpore will lease to the British Government its right of manufacturing and of selling salt within the limits of the territory bordering on the Sambhur Lake, as hereinafter defined in Article IV, and of levying duties on salt produced within such limits

II.—This lease shall continue in force until such time as the British Government desires to relinquish it, provided that the British Government shall give notice to the Government of Jodhpore of its intention to terminate the arrangement two full years previous to the date on which it desires the lease to cease

III.—To enable the British Government to carry on the manufacture and sale of salt in the Sambhur Lake, the Jodhpore Government shall empower the British Government, and its Officers appointed by the British Government for such purposes, to enter and search, in case of suspicion, houses and all other places, enclosed or otherwise, within the limits hereafter defined, and to arrest and punish with fine, imprisonment, confiscation of goods or otherwise, any and all persons detected within such limits in the violation of any of the rules or regulations which may be laid down by the British Government in regard to the manufacture, sale, or removal of salt, or the prevention of unlicensed manufacture or smuggling

IV.—A strip of territory, bordering the shores of the Lake throughout, within the separate jurisdiction of Jodhpore, including Nawa, Goodha, and other villages and hamlets, and averaging two (2) miles in width measured from the high water limits of the lake, shall be demarcated, and the whole space enclosed by such line of demarcation, as well as such portions of the lake itself or of its dry bed as are now under the exclusive and separate jurisdiction of Jodhpore, shall be held to constitute the limits within which the British Government and its Officers are authorized to exercise the jurisdiction referred to in Article III

V.—Within the said limits, and so far as such measures may be necessary for the protection or furtherance of the manufacture, sale, or removal of salt, the prevention of smuggling, and the enforcement of the rules laid down in accordance with Article III. of this Agreement, the British Government, or the Officers by it empowered, shall be authorized to occupy land for building or other purposes, to construct roads, erect barriers, hedges, or buildings, and to remove buildings or other property.

If any land paying land revenue to the Government of Jodhpore be occupied under the authority of the British Government for any of the purposes aforesaid, the British Government shall pay to the Government of Jodhpore an annual rent equal to the amount of such revenue.

In every case in which anything involving injury to private property shall be done by the British Government or its Officers under this Article, one month's previous notice shall be given to the Government of Jodhpore, and in all such cases proper compensation shall be given by the British Government on account of such injury. In case of difference shall be paid British Government or its Officers and the owner of such property as to between the compensation, such amount shall be determined by arbitration. nount of the

The erection of any buildings within the said limits shall not confer on the British Government any proprietary right in the land, which on the termination of the lease shall revert to the Government of Jodhpore, with all buildings or materials thereon by the British Government.

No temples or places of religious worship shall be interfered with.

VI.—Under the authority of the Jodhpore Government, the British Government shall constitute a Court, presided over by a competent Officer, for the trial conviction, of all persons charged with violations of the rules and regulations referred to in Article III., or offences connected therewith; and the British Government shall punishment, on cause the confinement of any such offenders sentenced to imprisonment within the said limits or elsewhere as may seem to it most fitting. authorized to aforesaid

VII.—From and after the date of the commencement of the lease, the British Government will, from time to time, fix the price at which salt manufactured within the said limits shall be offered for sale.

VIII.—The whole of the stocks of salt existing within the aforesaid limits shall on the commencement of the lease shall be transferred by the Jodhpore Government to the British Government on the following terms:—

The Government of Jodhpore will transfer six hundred thousand (600,000) British Indian maunds of salt to the British Government as stock with which to commence operations free of cost. The price to be paid to the Jodhpore Government for the remainder of the said stock shall be reckoned at six and a half (6½) annas per British Indian maund, and payment shall be made at this rate by the British Government to the Government of Jodhpore: provided that the said payment of six and a half (6½) annas per maund to the Government of Jodhpore shall only commence when salt in excess of nine hundred thousand (900,000) British Indian maunds is sold or exported by the British Government in any year, and until the aggregate of such yearly excesses amounts to the full quantity of the stock of salt transferred, over and above the said six hundred thousand (600,000) British maunds, the British Government shall not pay the royalty of forty (40) per cent. on the sale price of such excess, as provided in Article XII.

IX.—No tax, toll, transit duty, or due of any kind whatsoever shall be levied by the Jodhpore Government or shall by it be permitted to be levied by any other person, on any salt manufactured or sold by the British Government within the said limits, or while in transit through the Jodhpore territory, and covered by a British pass, *en route* to any place outside the Jodhpore territory: provided that on all salt sold for consumption within the territory of Jodhpore, the Government of that State will be at liberty to levy whatever tax it may please.

X.—Nothing in this Agreement shall be held to bar the sovereign jurisdiction of the Jodhpore Government within the aforesaid limits in all matters, civil and criminal, not connected with the manufacture, sale, or removal of salt, or the prevention of unlicensed manufacture or smuggling.

XI.—The Government of Jodhpore shall be relieved of all expenses whatsoever connected with the manufacture, sale, and removal of salt, and the prevention of unlicensed manufacture or smuggling within the limits aforesaid, and in consideration of the lease and other immunities hereby granted to it, the British Government agrees to pay to the Jodhpore Government, in two half yearly instalments, an annual rent of three lakhs (3,00,000) of Rupees, British currency, and the total sum of such annual rent, amounting to three lakhs (3,00,000) of Rupees, British currency, shall be paid without reference to the quantity of salt actually sold in, or exported from, the said limits. The above sum of three lakhs (3,00,000) of Rupees, shall include all rights of bhoom, transit dues, and huqs of every kind due to the Thakoor of Koochawun and others which the Jodhpore Government agrees to satisfy.

XII.—If the amount of salt sold in, or exported from, the said limits by the British Government in any year shall exceed nine hundred thousand (900,000) British Indian maunds, the British Government shall pay to the Government of Jodhpore on all such excess (subsequent to the exhaustion of the stock referred to in Article VIII.) a royalty at the rate of forty (40) per cent. on the price per maund, which shall have been fixed as the selling price under Article VII.

In the event of any doubts arising as to the amount of salt on which royalty is claimable in any year, the accounts rendered by the principal British Officer in charge at Sambhur shall be deemed conclusive evidence of the amounts actually sold or exported by the British Government within the periods to which they refer, provided that the Jodhpore Government shall not be debarred from deputing one of its own Officers to keep a record of sales for its own satisfaction.

XIII.—The British Government agrees to deliver annually seven thousand (7,000) British Indian maunds of good salt, free of all charges for the use of the Jodhpore Durbar; such salt to be delivered at the place of manufacture to any Officer empowered by the Jodhpore Government to receive it.

XIV.—The British Government shall have no claim on the land or other revenue, unconnected with salt, payable from the townships of Nowa, Goodha, or other villages or lands included within the limits aforesaid.

XV.—The British Government shall not sell any salt within the Jodhpore territory outside the limits of such jurisdiction as may be assigned to it by this or any other Agreement.

XVI.—If any person employed by the British Government within the said limits shall have absconded after committing an offence, or if any person shall have absconded after committing a breach of the rules laid down under Article III., the Jodhpore Government shall, on sufficient evidence of his criminality, make every effort to cause his arrest and surrender to the British authorities within the said limits, in case of his passing through, or taking refuge in, any part of the Jodhpore territories.

XVII.—None of the conditions of this Agreement shall have effect until the British Government shall actually assume charge of the manufacture of salt within the said limits.

The British Government may determine the date of so assuming charge, provided that if such charge be not assumed on or before the first May 1871, the conditions of this Agreement shall be null and void.

XVIII.—None of the conditions contained in this Agreement shall in any way be set aside or modified without the previous consent of both Governments; and should either party fail or neglect to adhere to these conditions, the other party shall cease to be bound by this Agreement.

Signed at Jodhpore on the eighteenth day of April A. D. one thousand eight hundred and seventy.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 2nd August 1870.

PRESENT:

His Excellency the VICEROY and GOVERNOR GENERAL of India, K.P., G.C.S.I., *Presiding.*

The Hon'ble JOHN STRACHEY.

The Hon'ble SIR RICHARD TEMPLE, K.C.S.I.

The Hon'ble J. FITZJAMES STEPHEN, Q.C.

The Hon'ble B. H. ELLIS.

Major-General the Hon'ble H. W. NORMAN, C.B.

The Hon'ble F. R. COCKERELL.

EUROPEAN BRITISH SUBJECTS BILL.

The Hon'ble MR. STEPHEN introduced the Bill to confirm certain laws affecting European British subjects, and moved that it be referred to a Select Committee with instructions to report in a fortnight. He had fully explained at their last meeting the object of the Bill. A telegram had since been received from the Government of Bombay, in which objections were taken to the measure in its present form. These objections appeared to him ill-founded, but their validity would be considered by the Committee.

The Motion was put and agreed to.

PENAL CODE AMENDMENT BILL.

The Hon'ble MR. STEPHEN moved for leave to introduced a Bill to amend the Indian Penal Code. He said that as the Penal Code had been in force since the beginning of 1862, a sufficient interval had passed since its enactment to enable those who had watched, or were interested in it, to form an opinion of its merits, and to discover its defects. He had himself been led by circumstances to study the whole subject of criminal law with particular attention, and he was glad to be able publicly to express his opinion that the Indian Penal Code was a far better and more philosophical system of criminal law than any other with which he was acquainted, and in particular than any of the systems which were in force in England, France, or America. At the same time it appeared to him to be defective in some particulars. He thought that some of its defects were of considerable practical importance, and required an immediate remedy; others, though serious, were of a sort which might be remedied at leisure. He had given considerable attention to the subject, and should be prepared, he hoped, at no very distant time to make certain suggestions as to the propriety of re-casting the Chapters relating to Homicide, Theft, and the infliction of bodily harm; those suggestions, however, would be made rather from the juridical point of view than with the object of meeting any immediate and pressing want. There were, however, other defects in the Code, which he thought it desirable to remedy at once, as he believed that they were actually producing, in some instances, serious miscarriages of justice, and as they certainly might at any moment result in very serious mischief. He would shortly go through the sections of the proposed Bill, and explain the intention of each of them.

Section three of the Code provided that any person liable by *any law passed by the Governor General in Council* to be tried for an offence committed beyond the limits of British India, should be dealt with as if the act had been committed within British India. As cases might arise in which persons might be tried in India for an offence committed out of India (at sea for instance) not against any law passed by the Governor General in Council, but against other laws the breach of which the Courts in India have power to punish, it was thought best to extend the section to those cases.

Section thirty-four of the Code provided that when a criminal act was done by several persons, each was liable as if he alone had done the act. It was proposed to modify this section so as to make it apply in terms to acts done "in furtherance of the common intention of all." It appeared from a judgment of Sir Barnes Peacock that this was the true meaning of the section, and it was thought better to express it.

The definition of the word "offence," which frequently occurred in the Penal Code, was enlarged by Act IV of 1867. It was proposed to embody the enlarged definition in the interpretation clause of the Penal Code.

Section fifty-six of the Code provided that Europeans and Americans should be sentenced to penal servitude, instead of transportation according to the provisions of Act XXIV of 1865. This Act provided that, instead of a term of transportation not exceeding ten years, penal servitude for a term not exceeding six years should be inflicted, and instead of a term of transportation not exceeding fifteen years, penal servitude not exceeding ten. Now the Courts could award transportation for a term exceeding ten years, but short of life under five sections only. Hence in most cases European and American offenders could not be sentenced to penal servitude for any term intermediate between six years and life. This defect it was proposed to remove by a very simple proviso.

The two next sections were of great importance. For the first of these MR. STEPHEN was personally responsible. The second had been omitted by pure accident when the Code was passed. Each related to the punishment of political offences. Section one hundred and twenty-one of the Code punished with death or transportation for life and forfeiture of property—waging of war against the Queen, attempts to wage war, and abetment of waging of war. Now one form of abetment was conspiracy coupled with any act or illegal omission done in pursuance of that conspiracy. The effect of this was, that the Code apparently did not punish at all a mere conspiracy to wage war, nor did it punish any treasonable practice or conspiracy short of an attempt to wage war. Moreover, there was a good deal of obscurity about the phrase "wage war against the Queen." By the 25th Edward III, by which the law of treason in England was defined, waging war was one form of treason, and many cases, especially in the early part of the eighteenth century, had been decided as to the meaning of those words. Whether or not these cases would be held to apply to section 121 of the Penal Code, if the necessity for putting a judicial construction upon it should unhappily arise, was a question which MR. STEPHEN did not wish to discuss; but as he thought the English Judges had somewhat strained the law in their desire to find out means of inflicting appropriate punishment upon a most serious crime, he thought it would be a pity if the cases in question came under discussion in Indian Courts.

He proposed to remove these defects by a section adapted from the Treason-Felony Act passed in England in 1848. This section would punish, with the severest secondary punishment, conspiracies to deprive Her Majesty of the sovereignty of British India, or of any part thereof, and the waging, or abetment of the waging, or conspiracy to wage, civil war. The term "civil war" was defined to imply permanent and organized hostile operations carried on, for whatever purpose, by one section of the community against another. No act or omission would be necessary to make such conspiracies criminal.

It would be sufficient to prove as against any person the existence of such a conspiracy anywhere within or without British India, and his participation in it by any act which could show his knowledge and approval of the designs of the conspirators. MR. STEPHEN thought that no argument was required to prove that a conspiracy to bring about such a series of events as those of 1857 was as great a crime as could well be committed. The conspirators in such cases were usually more dangerous and more criminal than the instruments who carried out, in practice, their wicked designs.

The next section was one which, by some unaccountable mistake, had been omitted from the Penal Code as ultimately passed. It stood as section 113 in the draft Code published in 1837, and Sir Barnes Peacock was quite unable to account for its omission when the Code was enacted. It punished "attempts to excite feelings of disaffection to the Government," but it distinguished between disaffection and disapprobation, and explained that "such a disapprobation of the measures of the Government as was compatible with a disposition to render obedience to the lawful authority of the Government, and to support the lawful authority of the Government against unlawful attempts to subvert or resist that authority, was not disaffection," so that "the making of comments on the measures of the Government with the intention of exciting only this species of disapprobation was not an offence within this section."

Nothing could be further from the wish of the Government of India than to check, in the least degree, any criticism of their measures, however severe and hostile, nay, however disingenuous, unfair, and ill-informed it might be. So long as a writer or speaker neither directly nor indirectly suggested or intended to produce the use of force, he did not fall within this section. This, however, must be coupled with a warning. The question on trials under this section would always be as to the true intention of a speaker or writer, and this intention would have to be inferred from the circumstances of the case. The most bitter and unfair criticisms published by a newspaper in the common course of its business, might be perfectly compatible with the absence of any intention to advise resistance to lawful authority. Language, temperate in itself and justifiable as far as the express meaning of its terms went, might, if addressed to an excited mob, be the clearest proof of an intent to produce forcible resistance to authority. Whilst genuine criticism had nothing to fear from the proposed section, persons seditiously disposed must not suppose that they could evade its provisions by confining themselves to what, under other circumstances and in other persons, might be genuine criticism.

Passing over a few alterations of minor importance, MR. STEPHEN came to section eleven of the proposed Bill. It proposed to add the material part of the Lottery Act V of 1844 to the Chapter on Public Nuisances, and to repeal the Act itself. He did not know how this Act came to have been omitted from the Code.

The three hundred and seventh section of the Penal Code punished attempts to murder with transportation for life. Two prisoners under sentence of transportation for life,—one at the Andaman Islands, the other in Sindh,—had lately made desperate attempts to commit murder. In one case a most deserving gaol guard had been maimed for life, and had all but died in consequence of the brutal violence inflicted on him. In such cases no punishment at all could be inflicted on the criminal, as it mattered nothing to him how often he was sentenced to be transported for life. MR. STEPHEN proposed to punish such offenders with death.

The last addition which he proposed to make in the present Bill was to the Law of Homicide. The Penal Code strangely omitted to punish what, in England, would be called manslaughter by negligence. If a man killed another by any act which he knew to be likely to cause death, he committed culpable homicide; but if he caused death rashly or by negligence, he committed no offence at all. This was the more remarkable, as punishments were provided

for causing hurt, or grievous hurt, by rash and negligent acts, and as in the draft prepared by Lord Macaulay there was a section which punished the offence now in question. By what accident it had been omitted, MR. STEPHEN did not know. He proposed now to insert such a section. One reason for doing so was, that the Judges had adopted a plan for evading the law which, though ingenious, and, perhaps, necessary, was, he thought, objectionable. They convicted prisoners who had caused death by a rash or negligent act of causing 'grievous hurt' by a rash or negligent act. MR. STEPHEN had heard a Judge direct a Jury that to cause death was "to cause grievous hurt and more." This, he thought, was perfectly good sense; but as the Code defined "grievous hurt" to mean eight specified injuries, he thought it very questionable law. To convict a man who by rashness caused another to be drowned, of having 'deprived him of the sight of one of his eyes,' or of having "caused him to be unable for twenty days to follow his ordinary pursuits," was, to say the least, grotesque. MR. STEPHEN proposed to remedy the omission by providing expressly for the case of causing death by any rash or negligent act.

The motion was put and agreed to.

OUDH TALUQDARS RELIEF BILL.

The Hon'ble MR. STRACHEY asked leave to postpone the presentation of the Report of the Select Committee to which the Bill for the relief of certain taluqdárs in Oudh had been referred.

Leave was granted.

BENGAL REGULATIONS REPEAL BILL.

The Hon'ble MR. COCKERELL introduced the Bill for repealing certain enactments of the Bengal Code, and moved that it be referred to a Select Committee with instructions to report in six weeks. He said that this Bill purported to remove from the Statute-book all the Regulations, or parts of Regulations, of the Bengal Code, which (1) through lapse of time or change of circumstances, had become inoperative, or (2) though not expressly repealed, had been virtually superseded by other provisions of the existing law, or which (3) operated merely to rescind other enactments.

Within one or other of these classes were comprehended all the enactments specified in the Schedules.

He would not at the present time go into the details of these Regulations, which it was proposed to repeal either wholly or in part, further than to notice that some of them at least would appear to have been purposely left out of former repealing Acts, and to state the considerations upon which their repeal was now recommended.

As instances of such omissions, he might cite Regulations VI and IX of 1793 which came within the first, and certain provisions of Regulation IV of 1793 and other cognate enactments which belonged to the second, of the classes above referred to.

Regulations VI and IX of 1793 related to the constitution and function of the late Sadr Díwání and Nizámat Adálat. Although these Courts had been replaced by the High Court, the Regulations which treated of the constitution and functions of the former had clearly no application to the latter whose position and duties were regulated by English statute and letters patent.

In this view, the corresponding Regulations of the Madras Code had been repealed by the local legislature, which, it might here be remarked, could those enactments have been held to apply to the High Court, would have had no power to affect them by its legislation.

The other Regulations above-mentioned provided special penalties for the resistance by a landholder of the process of the Zila Court. Now, the resistance of a Court's process was an offence under the Indian Penal Code, and by the second section of that Code every act done contrary to the provisions thereof was punishable thereunder *and not otherwise*.

It was difficult to understand why, when in accordance with the rule laid down in that section, the other penal provisions of the then existing law were repealed, these enactments were left. It was certain that the extreme penalties which they contained had long since fallen into disuse; in some of the decisions of the High Court, the doubt had been raised as to whether the provisions of those Regulations in regard to the contempt of Court by resistance of its process, could be held to be still in force though they had not been expressly repealed, and it had been shown that at all events their operation was confined to cases of resistance of the process of the Court of the District Judge. When it was considered that these Courts formed a not inconsiderable minority of the Courts in which the litigation of the territories affected by these Regulations was carried on, the above-mentioned consideration afforded in itsef a sufficient argument for abrogating these special penalties; for it was obviously inexpedient to maintain different measures of punishment for the same offence, the application of which was regulated solely by the status of the Court against whose lawful authority such offence had been committed.

He need only add that if the Bill was committed, it was desirable that it should be sent, in the first instance, to the Local Governments of Bengal and the North-Western Provinces.

The Schedules had been carefully prepared with the aid of such local experience as he had been able to bring to bear on their subject, and it was hoped that they would be found to contain every enactment that it was possible to dispense with. A measure of this kind, however, needed in an especial manner the review and criticisms of local experts ere the Committee could be in a position to deal satisfactorily with its details.

We needed to be certified that a wholesome zeal for cutting away the "dry wood" and so compacting the statutory plantation did not result in the destruction of anything that was of practicable use at the present time.

The Motion was put and agreed to.

The following Select Committees were named:—

On the Bill to confirm certain laws affecting European British subjects—the Hon'ble Messrs. Ellis, Cockerell, and the Mover.

On the Bill for repealing certain enactments of the Bengal Code—the Hon'ble Mr. Stephen and the Mover.

The Council then adjourned to the 16th August 1870.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

PROPERTIES OF THE FOREST-TREE "HYMENODICTYON EXCELSUM."

From R. A. DALYELL, ESQ., Acting Secretary to the Government of Madras, Revenue Department, to the Secretary to the Government of India, Home Department,—No. 1064, dated Ootacamund, the 13th July 1870.

WITH reference to paragraph 2 of my letter dated 20th July 1869, No. 2119, I am directed to transmit herewith, for the information of the Government of India, the accompanying letter* from Mr. Broughton, the Government Quinologist (who has undertaken to extend his investigations to the indigenous medicinal plants of India), reporting on the properties of the forest-tree *Hymenodictyon excelsum*.

* Dated 6th June 1870.

2. Mr. Broughton's experiment shows that the bitter principle inherent in the bark of this tree is identical with *æsculin*, which is also obtained from the horse-chesnut tree, but is of little or no therapeutic value where the alkaloids of cinchona are procurable.

Extract from the Proceedings of the Government of Madras, Revenue Department,—dated Fort St. George, the 30th June 1870.

READ the following letter:—

From J. BROUGHTON, ESQ., Government Quinologist, to the Acting Secretary to Government of Madras, Revenue Department,—dated Ootacamund, the 6th June 1870.

CERTAIN chemical researches which I have made on an indigenous febrifuge have just been completed. I herewith beg to communicate the broad results of the inquiry according to Government Order No. 241 of 22nd January 1870.

2. The large forest-tree *Hymenodictyon excelsum* is a Native febrifuge of considerable interest, not so much from its proved efficacy in medicine as from its history and botanical relations. It belongs to the same natural order as the true cinchona, and it so greatly resembles

them in appearance that it was named for many years *cinchona excelsa*. Being thus considered a cinchona indigenous to India, very considerable expectations were entertained that it would be found at least a most valuable febrifuge, if not an actual source of quinine.

3. Writers on Indian *Materia Medica* allude in doubtful terms to the bark of this tree.

4. Ainslie, speaking of the various substitutes that had been recommended for Peruvian bark, mentions the bark of *cinchona excelsa* as having been ascertained to possess powerful tonic and antifebrile virtues.

5. O'Shaughnessy* speaks of the bark as follows:—

> "The two inner leaves of the bark possess great bitterness and astringency; the bark is used by tanners, and also as a medicine among the Hindoos in cases requiring astringents.
>
> "We have analyzed the bark of *cinchona excelsa* from the Botanic Gardens of Calcutta, but could not detect any alkaline ingredient; nevertheless, the trees of hilly regions may furnish the valuable desideratum. The stamina being contained within the tube, affords much ground for expecting the discovery of a febrifuge alkaline in this species."†

The writers of the New Indian Pharmacopœia mention the bark as follows:—

> "Considering the natural order to which the tree belongs, and the sensible properties of its bark, it is not improbable that it may prove a valuable remedy. In all future inquiries into the subject of Indian anti-periodics, this bark should be one of the first to which attention should be directed."

6. These circumstances, therefore, led me to make a full investigation of the chemical constituents of the bark, in the hope that I might be fortunate enough to discover a proximate principle, whose constitution might, perhaps, throw light on that of the true cinchona alkaloids.

7. By the kindness of Lieutenant-Colonel Morgan, Deputy Conservator of Forests, I obtained a supply of the fresh bark from the neighbourhood of Mudumullay, in Wynaad. The bark possesses the remarkble property of being bitter when quite fresh, but of this bitterness diminishing on keeping, so that after a few days it has so decreased that the bark becomes nearly tasteless.

8. After much labour I was enabled to obtain the bitter principle in a pure crystalline state. A full examination and analysis of this substance showed me that it was identical with *æsculin*, the fluorescent and crystalline principle of horse-chesnut bark discovered by Frischmom, and subsequently analyzed by Fromsdorff in 1835. The chemical details of the investigation and the data for this conclusion are scarcely suitable for detail here. They are to be found in the Pharm. Journal, Volume IX., page 418.

9. It is a somewhat singular circumstance that the bitter principle of this Indian tree should be the same as that of the horse-chesnut. It is also remarkable that the bark of the latter has obtained a certain reputation of being like the *Hymenodictyon* in India a good substitute for cinchona bark. Lindley and other authors mention that it has been recommended as a valuable febrifuge in intermittents.

10. The very general impression that this Indian false cinchona contained quinine receives explanation from the properties of *æsculin*. The solutions this substance like those of quinine are fluorescent, and are even more beautifully so. An observer, who did not examine the other very dissimilar re-actions of the two substances, might thus be misled by the coincidence of so peculiar a property.

11. The loss of bitterness undergone by the bark on keeping is now also readily explained, since *æsculin* in contact with decaying organic substances is decomposed, and produces a comparatively insoluble substance, *æsculetin*, which has but a slight bitter taste.

12. Being informed that there were certain differences in the *Hymenodictyon* of Southern India, and that of the mountain ranges of Bengal, I was desirous of testing the latter before communicating my results as being perfectly general. By the kindness of Mr. C. B. Clarke I was supplied with some bark of the original *Hymenodictyon* bark of Roxburgh from the Calcutta Botanic Gardens. This enabled me to prove that there was no essential chemical difference in the bark of the Bengal tree, and that from Southern India.

---

* Bengal Dispensatory, 1842, pp. 394-395.

† I may mention that this structure of the flower does not appear to be coincident with any special excellence in the bark of the cinchonas of the Neilgherry plantations.

13. The bark of *Hymenodictyon excelsum* thus differs entirely in its chemical character and products from cinchona bark. Containing no trace of quinine or related alkaloid, the expectations once entertained of its medicinal value appear to have little support in fact.

14. As *æsculin* will eventually be both a dearer and less plentiful product in this country than the alkaloids of cinchona, and is certainly of inferior therapeutic value, it appears to me to be scarcely necessary to make any medical trials with it. Should it, however, be thought desirable to do so, I shall of course be ready to supply the necessary material in a pure state.

Order thereon, dated Fort St. George, the 30th June 1870, No. 988.

MR. BROUGHTON'S experiment shows that the bitter principle inherent in the bark of the tree *Hymenodictyon excelsum* is indential with *æsculin*, which is also obtainable from the horse-chesnut tree, but is of little therapeutic value where the alkaloids of cinchona are procurable.

2. The report of the Government Quinologist will be communicated to the Supreme Government and to the Inspector General, Indian Medical Department, and a copy of it will be transmitted to the Secretary of State.

(True Extract.)

H. E. STOKES,

Under Secretary to Govt., Madras.

Tail, Cawnpore ,, .. 184 ,, ,,
Total .. 320 cubic feet.

The Cawnpore and Etawah Branches have alternate weeks of high and low supply. The gauge-readings show the mean of the month.

The demand for water on the Ganges Canal continued brisk all over the Doab till the middle of the month. Rain fell about this time. After the 20th instant, heavy falls of rain were general all over the country, and the demand greatly diminished. Crops were all in a flourishing condition. Some reports are received of a worm attacking the Indigo. Futtehgurh Branch was closed on the 27th instant, there being no demand. On the Eastern Jumna Canal there was a great demand for second watering of sugar and planting out of rice. The river fluctuated in an extraordinary degree, and occasionally the supply had to be adjusted to Western Jumna Canal requirements. Some rain fell on the 14th and 17th of the month. After the 20th instant the Jumna came down in flood, and there was an ample supply. Very heavy rain fell from the 21st to the end of the month; 4·3" at Kulsea, 15·3" at Bhynswal, and 8·9" at Barote were registered in this period.

On the Doon Canals there was a good demand. Rain also fell in the Doon after the 20th instant, and the Jakhun Canal had to be closed on account of landslips.

* Average for the past six years. Rain-fall previous to 1864 not given.

ALLAHABAD;
The 14th July 1870.

SUPPLEMENT TO

The Gazette of India.

SIMLA, SATURDAY, AUGUST 20, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

MILITARY DEPARTMENT.

RULES REGARDING THE MEASURES TO BE ADOPTED ON THE OUTBREAK OF CHOLERA AND THE APPEARANCE OF SMALL-POX.

THE following revised Rules regarding the measures to be adopted on the outbreak of cholera amongst British* troops, are published in supersession of all former orders on the subject :—

SECTION I.

PRECAUTIONS NECESSARY IN ANTICIPATION OF THE APPEARANCE OF CHOLERA.

Necessity for constant attention to the sanitary condition of the Station.

1. The outbreak of cholera is often so sudden and virulent that all precautionary measures must be taken beforehand. Experience has shown that, like many other diseases, the extent of its diffusion is in no small degree dependent on local insanitary conditions, and it is, therefore, essential that every station should be preserved in a state of constant preparation to meet a danger which may come at any time. The personal cleanliness of the men is a matter of much consequence as a preventive measure.

Increased vigilance demanded if cholera threatens.

2. General and other officers in command should at all times give their utmost attention to the conservancy and general sanitary condition of a station. If an outbreak appears probable, every ordinary precaution should be attended

* The same principles as are contained in these Rules should govern the measures to be taken when cholera appears among *Native troops*; but as the disease rarely attacks them with any great severity, it is left to the military and medical authorities on the spot to determine in their case how far the procedure herein prescribed ought to be adopted under the particular circumstances.

to with increased vigilance; but if the disease has actually appeared in the cantonment or its vicinity, more harm than good is likely to arise from any attempt at improvement which may then be made. This is not the time to cleanse foul drains or to remove nuisances which may have hitherto been neglected, and such possible sources of disease should, in these circumstances, be left undisturbed.

Duties of Staff Surgeon and Cantonment Magistrate as regards the Bazaars.

3. Whenever cholera is to be apprehended, the Staff Surgeon and Cantonment Magistrate should keep a special watch on the condition of the bazaars, and any case of cholera should be immediately reported to the Officer Commanding the Station. The register of deaths should be carefully scrutinized.

Precautionary measures in Barracks.

4. Especial care should be taken to prevent crowding in barracks and hospitals, and, when considered advisable during the hot season, a portion of the men should be permitted to sleep in the outer verandahs, or in tents pitched for the purpose in the vicinity of the barracks. If cholera threatens, even though the men may have the full regulated amount of space, they should be spread out as much as possible, advantage being taken of any spare buildings which can be conveniently employed.

5. The early treatment of premonitory symptoms is of very great importance, and of these looseness of the bowels is the chief. At seasons, therefore, when cholera threatens, and still more so when it is more than usually prevalent, Commanding Officers should give the most precise orders on this subject, and see that measures are taken for paying the most vigilant attention to the health of the men in barracks, and for treating there, or in observation wards entirely separate from the hospital, all slight cases of diarrhœa or other disease, which, if neglected, might pass into cholera. As the men during cholera time have a natural dread of going into hospital, and are apt on this account to conceal the early symptoms in order to escape being sent there, it is of importance that every facility for the immediate treatment of diarrhœa should be afforded them in barracks. Non-Commissioned Officers in each room should accordingly be provided with suitable medicines, care being taken that the proportion of opium or any other dangerous drug should be small.

Sanitary measures necessary when new buildings are being carried on.

6. Whenever new buildings are being carried on, it is most important, with regard to the health of their future occupants, that the ground and water in the neighbourhood should be protected from pollution. Special care must be taken that proper conservancy arrangements are organized for workmen, coolies, &c., and that the orders are strictly enforced. The workmen should not be allowed to sleep in or about barracks and other public buildings under construction. They can generally find shelter in the neighbouring city or bazaars; but, in exceptional cases, where no such facilities exist, temporary huts should be erected for them outside the boundary pillars.

Communication with infected localities to be prevented.

7. If cholera appears among the Native population in the neighbourhood, communication with the infected locality should, as far as possible, be prevented. The same principle should be acted upon on all occasions during the continuance of the disease, for frequent communication with places where the disease is prevalent will always be likely to cause alarm and to produce bad results. As one valuable means of attaining this object, the provision of stores attached to the regimental canteen should be encouraged, so that soldiers and their families may be able to supply their wants without going to the city or bazaars.

Management of Native Soldiers returning from leave.

8. With the same object, Native soldiers rejoining from leave, or otherwise returning from a part of the country in which cholera was prevailing at the time of their residing in it, or passing through it, should not be allowed to rejoin their regiments until it has been shown that they are free from the disease. This can easily be done by pitching a tent for their temporary accommodation outside cantonments when required.

Military and Sanitary Authorities to make themselves acquainted with the country in the neighbourhood of their Stations.

9. Officers Commanding Divisions, Districts or Stations, as well as all Sanitary Officers, will make themselves thoroughly acquainted with the ground in the neighbourhood of their stations to the extent of twenty miles, with a view to the selection of sites for encampments in the event of cholera appearing, as well as to such measures being taken as they may deem advisable to remove or counteract any probable source of disease.

Officer of the Quarter Master General's Department attached to the command to prepare plan of the neighbouring country.

10. The Officer of the Quarter Master General's Department attached to each command will prepare a plan of the required extent of country, on a scale of one inch to the mile, with the different encamping grounds marked on it, so that the troops may be placed under canvas without delay, whenever such a measure is considered advisable.

Points to be attended to in choosing encamping grounds.

11. In selecting these encampments, enquiry should be made into the previous character of the neighbourhood with regard to liability to cholera or exemption from it. The ground should, when possible, be high, with natural facilities for drainage, with a plentiful supply of good water, and, if possible, easy of access. Although rank vegetation is objectionable, the presence of large trees should be considered advantageous, because they add to the salubrity of the air, and because their shade will be valuable.

Number and situation of such grounds.

12. The circumstances of different cantonments vary so much that no definite rule can be laid down either as regards the number of such encamping grounds or their situations; but it is very desirable that several such places should be selected, and that their distance from cantonments should vary, some being close at hand and others further off.

Selection can best be made in the rainy season.

13. The greatest care is necessary in selecting good sites, and this can only be properly done during those days in the rainy season when sudden and heavy falls of rain afford ready and reliable proof as to the real suitability of any spot for a camp. The selection should be made in communication with the local civil authorities, whose knowledge of the locality will enable them readily to point out the most eligible sites.

The use of selected camps obligatory, except when suitable buildings are available.

14. When sites for camps have been selected and approved by competent authority, care must be taken that they are always kept in a fit state for occupation, and it must be understood that, in the event of the troops going under canvas, these are the places which, as a general rule, are to be used. If, however, during the hot and rainy seasons, any buildings entirely separate and away from cantonments are available, they should be used in preference to

placing men in camp, especially when the ground is either covered with water, or when it is drying up in the months of August and September.

Encamping grounds on great lines of communication are objectionable.

15. The existing encamping grounds, which are ordinarily used by troops on the march, are very commonly situated upon great lines of communication, and are therefore objectionable, for bodies of men supposed to be infected with disease ought always to be isolated as much as possible. For the same reason, if the supply of good water and other circumstances admit of a choice, the vicinity of a village, and especially of any large village, should be avoided.

And should only be resorted to when no others are available.

16. It may sometimes happen that these encamping grounds must be resorted to, either because no other places suitable in themselves can be found, or because during the rainy season they are the only ones easily accessible; but, when it is possible, ground not in the vicinity of great thoroughfares should be preferred.

Expense of preparing the encamping grounds need be very little.

17. In some instances, a slight expenditure may occasionally be requisite in clearing the ground, in improving its drainage, in increasing or improving the water-supply, or in making it easy of access, and these, especially the two first, are matters of very great importance, which should receive frequent and careful attention. If ground be judiciously chosen, the expense need be very little.

Construction of earthen platforms not considered generally necessary.

18. As the sites will be selected almost with the certainty of their being required during the rainy season, they must be in themselves tolerably high and well-drained; the construction, therefore, of raised earthen platforms at these camps is not, as a rule, considered necessary, but where the nature of the ground is such that a dry site cannot otherwise be obtained for pitching the tents, the circumstances should be especially reported to the Quarter Master General, and sanction solicited for any such works of this nature as may be deemed advisable.

Selection of encamping grounds on the line of railway.

19. In all divisions or districts on the line of railway, encamping grounds, in addition to those already referred to, will be selected in suitable localities within fifty or seventy miles of military cantonments on these lines, in order that, should it be considered expedient, regiments or detachments may proceed thence by rail in the hope of getting clear of the radius within which the epidemic may have pronounced itself. In selecting these grounds, the general principles already laid down should be adhered to, but as carriage from the line to the encampment may frequently be a matter of difficulty, the spots chosen should not be further than one or two miles from the railway, and, if possible, in its immediate vicinity.

SECTION II.

MEASURES TO BE ADOPTED ON APPEARANCE OF CHOLERA.

General preparations.

20. On cholera appearing, either in the neighbouring villages or in the cantonments, the authorities must be prepared for immediate action; every ordinary sanitary precaution must continue to receive increased attention, and every necessary measure prepared for placing the troops under canvas, should this be required. Everything must, as far as possible, be considered beforehand, so that, when the necessity occurs, there may be no doubt regarding the course

to be pursued, and no reason for delay. The most suitable encamping grounds must be decided on, the vicinity of places in which cholera is prevalent being, of course, scrupulously avoided. General and other officers in command should act in anticipation of sanction on their own responsibility, and on the advice of the senior Medical Officer, reporting fully at the same time to the Quarter Master General, for the information of His Excellency the Commander-in-Chief, the measures they may have adopted to arrest the progress of the disease.

Preparatory camp.

21. If cholera has been prevalent in the neighbourhood, and there is therefore reason to fear that it may attack the troops, a preparatory camp should at once be formed. This need not ordinarily be done until the disease has actually appeared in the cantonment; but if more than one case occur among the European soldiers or their families under such circumtances as have been above stated, the formation of the preparatory camp should be considered imperative. Tents should be pitched at the nearest selected ground, which, if possible, should not be further distant than two or three miles from the cantonments, so that all may be in readiness for a move in case it may be necessary. The size of this camp will, of course, depend on the strength of the garrison and other circumstances. In some cases it will be advisable to provide for a proportion of the whole garrison, in others only for part of a particular regiment or battery. The exact size of the camp must be decided by the local authorities after a full consideration of all the facts and of the amount of danger to be anticipated. The previous history of the station as regards cholera will afford valuable data on this point.

All unnecessary alarm should be prevented.

22. All unnecessary alarm among the troops or the community should be prevented, yet every arrangement should, under the authority of the Officer Commanding, be made by the Commissariat Department in connection with the civil authorities for providing the carriage required to convey tents and baggage to and from the encamping grounds or railway stations, so that it may be at once available in case of its being required.

Military authorities to send to other stations intelligence regarding outbreak and progress of cholera.

23. It is of the utmost importance that every station should receive notice of the possible approach of danger, and whenever cholera shows itself at a station or in a district, the fact must be at once reported by telegraph, when practicable, to the neighbouring stations. Information must also be sent from time to time of the progress or cessation of the disease, any circumstances being noticed the knowledge of which may appear likely to be useful at other stations. These reports may be always made in a few words, and need give but little trouble.

Military and Civil authorities to communicate freely with each other regarding outbreak and progress of cholera.

24. All information received by the military authorities should be at once communicated by them to the chief civil authorities of the District, who in their turn must be held responsible for obtaining immediate notice of the outbreak of cholera in their jurisdiction, and of communicating the fact to the military authorities without delay.

Transmission of information need cause no alarm.

25. The transmission of information regarding cholera need cause no alarm. If it be thought necessary, the reports may be considered confidential, but it is believed that this will seldom or never be desirable. The knowledge

that the attack of the disease is considered possible will be far more likely to produce beneficial than mischievous results, and the belief that the authorities are alive to the danger and prepared to meet it, will tend to allay rather than to increase unnecessary alarm.

Utmost unanimity in all departments and hearty coöperation with the civil authorities essential.

26. The utmost unanimity is essential in all departments to give effect to the above recommendations: all should work cordially for the public good and in constant communication with the civil authorities, whose hearty coöperation is especially needed with regard to the supply of carriage. They should use every lawful means to prevent delay in obtaining carriage for the troops, as the loss even of a few hours in moving troops away from a station may lead to most serious consequences. On all occasions every use should be made of the moveable column carriage. All movements of troops and changes of camping ground should be at once reported to the civil authority of the District.

Telegraphic communication to be made daily to the Quarter Master General during the continuance of cholera.

27. On the appearance of cholera at any station, and during its continuance, the officer in command of that station is to report daily, by Telegraph, when possible, to the Quarter Master General, for the Commander-in-Chief's information, giving the number of admissions into hospital, the class of persons attacked, and the number of deaths in each corps at the station. Directions to be observed in despatching telegraphic messages are given in Appendix A.

Every effort to be made to provide means of healthy amusement and occupation for the soldiers.

28. Special attention should be paid to everything which can tend to the improvement of the general health of the men. Every effort should be made to relieve them from duties which cause needless exposure and fatigue, and especially to avoid night duty, so far as this may be possible with due regard to military considerations; to ensure that their food is wholesome and their clothing appropriate; and to promote every means of healthy amusement and occupation.

Use of spirituous liquors to be guarded against.

29. It often occurs that soldiers, on a visitation of cholera, indulge in the use of spirituous liquors under the impression that they are a preventive against the disease. Medical authorities unanimously condemn this baneful practice as a certain promoter of the disease, and Commanding Officers should, therefore, exert their influence in every way to prevent it.

Abandonment of buildings in which one or more cases of cholera has appeared, and arrangements for accommodation of the inmates.

30. On a case of cholera occurring in any building occupied by European troops, the room, or portion of the building in which it occurred, should be IMMEDIATELY vacated, and, except for the purpose of purifying it, no one should be allowed to enter it,—if the whole building can be left, it will be still better. This is laid down as an absolute rule; for, although individual cases of cholera sometimes occur when there is no reason for anticipating an outbreak, instant removal from an infected spot is the best safeguard; and besides it is necessary that the room or building in which the disease has shown itself should be vacated for the purpose of being purified. When men, under the above circumstances, are removed from a building supposed to be infected, they must be kept separate so far as may be possible, from the men among whom the disease has not shown itself, and, in arranging for their accommodation, care must be taken that there shall be no overcrowding either of them or of others. Should no separate buildings be available, it is desirable that they be placed under canvas.

31. In carrying out this rule, it is not, however, necessary that the tents should be pitched in one of the encamping grounds. They may be placed in some convenient spot in the cantonment; and where only an individual case has occurred among the body of men so removed, this arrangement will, as a rule, be the best which can be adopted.

Purification of vacated buildings.

32. When any case of cholera occurs, even though it may be but a solitary case, the room in which the disease has shown itself must be thoroughly purified without the least delay. The walls, floors, and punkahs should be scraped and white-washed; the wood-work should be subjected to the action of hot caustic lime-wash, furniture and ropes washed, punkah-fringes boiled, and generally everything possible done for the purification of the building; the latrine, urinary, and wash-house used by the man who was attacked should be instantly closed, and their use must not be permitted until they have been completely purified. Chloride of lime, Condy's fluid, or some other chemical disinfectant should be freely used. All filth and rubbish from the latrine must be burried at a distance, and all vessels used for their removal must be carefully cleaned and disinfected at the place where the refuse is deposited. Until the purification of the buildings is complete, the troops must under no circumstances be be allowed to re-occupy them.

Buildings vacated on account of cholera when to be re-occupied.

33. Ten days after removal, and when the room or building which was vacated has been purified in the manner above described, it may be re-occupied, provided no other circumstances have occurred meantime which may render such re-occupation undesirable. On this point the opinion of the principal Medical Officer on the spot must be taken.

Procedure to be adopted on the occurrence of further cases.

34. If a second case of cholera appears among the particular body so removed, they should be again moved, and the infected building or tent which they occupied should be at once vacated and purified. If a third case occur among this particular body within one week from the occurrence of the first case, then the men composing it should be immediately removed from the station to the preparatory camp.

35. The procedure here laid down, if carried out with promptitude in successive instances, will often be found sufficient to arrest the further spread of the disease; but when cases occur in several buildings, either simultaneously or at short intervals, and especially if there be at the same time any unusual prevalence of diarrhœa, an outbreak of cholera is seriously to be apprehended, and it will, under such cirumstances, be advisable at once to remove the inmates of infected buildings to the encampment outside cantonments.

36. It is to be remembered that, when an outbreak threatens, removal from the infected locality is the only remedy in which any confidence can be placed, and that the earlier the movements are carried out, the greater will be the chance of success.

As a rule, only such buildings to be vacated as have actually presented cases.

37. Cholera evidently attaches itself to particular localities. The principle to be borne in mind, therefore, is that the particular locality in which cholera shows itself must be looked upon as dangerous, that it must be immediately abandoned and all communication with it stopped, and that the body of men who have been exposed to danger by their occupation of the place in which the cause of the disease is presumed to be present, must be separated from the rest of the troops. If, for example, this body consists only of the inmates of some one building, the measure need only be applied to them; if some particular

battery, troop, or company be attacked, it will be similarly dealt with. A whole regiment or the whole of the troops at the station need only be sent into camp when it is found that the measures already adopted have not stopped the progress of the disease, or there is reason to fear they will be insufficient. As a rule, it is necessary only to vacate such buildings as have actually presented cases.

Detachments to be kept separate.

38. When separate detachments are moved into camp in the manner indicated, it is advisable that they should be kept distinct as far as possible. Officers commanding stations are authorized to call freely for medical aid from other stations, districts, or divisions free from cholera. And, where a separate hospital establishment cannot be assigned to each party, it may be convenient to place a hospital in some central position not far removed from two or more camps, the sick from which may be treated together. Such arrangements must be left to the decision of the local authorities. A central cholera hospital should on no account be established in cantonments for the reception of cases from camp and other quarters.

Special preparations necessary on appearance of cholera at stations on the line of railway.

39. On the first appearance of cholera at any of the stations on the line of railway, intimation should be given to the railway officials of the probabilities of a movement being required, in order that the necessary trains may be in readiness, so that if any move be decided upon, it may be carried out without delay. Tents should also be forwarded by rail and pitched at the selected camp.

No move by rail to be made without sanction from Army Head Quarters.

40. As, however, all stations on the line of railway are in telegraphic communication with Army Head Quarters, no move by rail should be made without the sanction of His Excellency the Commander-in-Chief, obtained through the Quarter Master General, every preparation being meanwhile made in anticipation, and the troops, if necessary, being moved temporarily into a convenient camp.

All movements by rail to be made during the day.

41. In travelling by rail it will be better to select the day than the night. On no account are cases of cholera or diarrhœa to be placed in a railway carriage, and any persons who have come in contact with such cases should have their clothes fumigated with sulphur, and their hands and other uncovered portions of the body washed with a solution of McDougal's disinfecting powder before starting.

Camps at station of departure and arrival.

42. In some cases, to avoid fatigue, it may be advisable to encamp the men close to the station of departure, so that they may start by rail in the early morning, and they may encamp again for a night close to the station of arrival before going on to the selected ground next morning.

Trenches should be dug at convenient intervals on the line.

43. Previous to detachments proceeding by rail, the military authorities must arrange for trenches being dug in the vicinity of one or two of the stations at convenient intervals on the journey, so that all discharges may be received in them. The troops on no account should be allowed to use the railway station latrines.

Purification of carriages occupied by troops.

44. After occupation by the troops, and in the presence of the Railway authorities, all the carriages which must be only those of the 2nd and 3rd class, are to be washed under regimental arrangements with boiling water, containing

in each gallon a wine glass-full of carbolic acid, after which sulphur should be burned in each, and the doors and windows kept closed on the sulphur fumes for two hours. These disinfectants must always accompany the troops, and their supply be ensured by the medical authorities.

Conservancy of camps.

45. As the movement will be made in the hope that the troops may be in this manner carried out of the infected area, the camp will probably be occupied for some time, and the strictest possible attention should be paid to the conservancy, trenches should be dug to leeward, tents pitched over them, and all filth instantly covered with earth. A similar system should be adopted for the camp followers and other Natives. The strictest regulations must be laid down and enforced by the commanding officer to ensure attention to this all-important point.

Arrangement of the camp.

46. In arranging the camp the tents should be spread over a large area, and any military considerations or regulations in regard to distances between tents should give place to the desirability of allowing free ventilation so far as this can be done with convenience. Tents should not be pitched immediately under trees as they prevent the free access of air at night, and during the rains prevent their drying.

Number of men in a tent.

47. As a rule, not more than eight men should be placed in each tent.*

Immediate benefit from change not always to be expected.

48. Immediate benefit is not always to be expected from the movement into camp, and the occurrence of a few cases of cholera ought not to be looked upon as proof that the change has proved a failure. It is clear that men often take with them the seeds of cholera, and although the immediate cessation of the disease is by no means uncommon, it is unreasonable to suppose that this will be always the case. Even if the first apparent result be an aggravation of the disease, this need cause no discouragement.

Removal of camps—marches to be short.

49. If the disease continue to be virulent for more than three or four days, a fresh encamping ground may be tried, either on the line of rail, or by a short movement, at right angles, if possible, to the prevailing wind, or track of the disease. The marches should always be short, if possible not more than two or three miles; movements should generally be made in the morning, in time to admit of the new ground being reached soon after sunrise, but if the march is very short, it may be made in the evening, whenever the delay of a night is regarded as an unadvisable risk. The men will be supplied with hot tea or coffee before starting; they will invariably wear flannel belts, and every precaution must be taken to prevent their remaining in damp or wet clothes, especially when the movements are made by rail. It is of the utmost importance that fatigue and exposure should be avoided, and everything possible should be done to keep the men cheerful and in good spirits.

* This rule is to be read in connection with No. 66. It is by no means intended that every regiment should be provided with a double supply of tents. The necessity for vacating *all* the buildings in a station which are occupied by the troops will rarely occur. Experience has shown that many stations have not suffered from cholera with any severity for years, and to provide extra tents for them would therefore be unnecessary. Again, there are other stations which are on the line of rail, and which can thus be supplied with extra camp equipage if required on very short notice. In such stations, whenever cholera appears, notice should be given to the nearest magazine, that tents may perhaps be needed; and when it seems that those on the spot are likely to prove inadequate they can be telegraphed for. In a third class of stations there is an arsenal on the spot.

Isolation of camp hospitals.

50. If any case of cholera or diarrhœa occurs in camp, isolation and disinfection should be had recourse to, and all communication between the camp and any neighbouring station or village should be interdicted. The hospitals in particular should be isolated to as great an extent as may be practicable.

Separate hospitals in camp.

51. When all the troops in a station are sent into camp on account of an outbreak of cholera, all ordinary sick capable of being removed without evident danger should go into camp also; the few patients who cannot possibly be moved should be transferred to one small general hospital, which will usually be found sufficient for all those who must remain in cantonments. Separate hospitals should always be organized in the camps, and under no circumstances should patients be brought for treatment from the camps to a hospital in cantonments.

Cots to be taken into camp.

52. When considered desirable by the principal medical officer on the spot, cots are to be taken into camp for all the men, so that there may be no necessity for their sleeping on damp ground. In the event of carriage being insufficient for the regular cots, the Commissariat Department will usually be able to arrange for the supply of light Native charpoys, which answer admirably. Should the season of the year not necessitate cots being taken, straw will be supplied, on requisition, by the Commissariat Department. If the troops travel by rail, the straw can either be taken in the train, or be furnished by the Commissariat at the selected camp.

Water-supply.

53. The utmost attention must be paid to the drinking water. At encamping grounds which have been frequently used, and which are situated upon great thoroughfares, caution will be especially necessary, and, if considered desirable, temporary wells must be sunk, so that there may be no danger of water contaminated by organic matter being supplied to the troops. As a precautionary measure, the water used for drinking should be boiled, and as the taste of water subjected to this process is insipid, the reason for this proceeding should be carefully explained to the men. It is left to the local military and medical authorities to decide whether the filters belonging to British regiments are to be taken with them when the troops are moved into camp on account of cholera or not.

Wood-fires to be maintained when necessary.

54. Wood-fires may be maintained to the windward of camp when considered necessary by the medical authorities.

Return of troops to cantonments.

55. It not unfrequently happens that troops are allowed to return far too soon to cantonments or to buildings which have been infected with cholera, and the consequence is the re-appearance or aggravation of the disease. The return to cantonments must only be allowed with the greatest caution. No part of the cantonment from which the disease has not altogether disappeared should be re-occupied. Under no circumstances can the re-occupation of any building which has been attacked by cholera be allowed, unless at least ten days have elapsed since the last case of cholera in the building, nor until every measure for the purification of the building, as laid down in paragraph 32, has been carried out. The prevalence of fever or other diseases in camp is no reason for returning to cantonments while danger from cholera remains. It must be accepted as the lesser evil of the two.

All movements to be communicated by post to the Quarter Master General on the day of occurrence.

56. Officers in command of stations are required to communicate by post to the Quarter Master General on the same day the occurrence takes place all movements of troops, including changes of camping grounds consequent on cholera or other sickness, stating the number and class of persons attacked, the number of deaths, and any other matter appertaining to the Quarter Master General's Department.

Weekly communications to be made to the Quarter Master General during the continuance of cholera.

57. During the continuance of cholera at any station, the officer in command is to report by post weekly to the Quarter Master General, for the information of His Excellency the Commander-in-Chief (with respect to the steps to be taken for the mitigation of the evil), on the general sanitary condition of the station, including bazaars, and on the health of the population around on a considerable radius. The report should state in detail the number of cases, the class of persons attacked, the number who may have died, and the general character of the disease, whether virulent or not.

Returns required from Batteries of Royal Artillery and Regiments of British Cavalry and Infantry.

58. When cholera appears at a station, the following returns are to be kept by regiments of British Cavalry and Infantry and Batteries of Royal Artillery:—No. 1 is to be furnished daily by medical officers to the officer commandig the regiment or battery, as the case may be, for the information of the officer commanding the station, and a duplicate to the Deputy Inspector General of Hospitals, Her Majesty's British Forces. At the termination of the epidemic, the Nominal Register (Form No. 2) is to be submitted to the Deputy Inspector General of Hospitals, and by him forwarded for the information of the Inspector General.

No. 1.

No. 2.

*Daily Nominal Register of cases of cholera during the year*_____

STATION_____, *Date*_____

Date.	Rank.	Name.	Age.	Company.	Previous health.	Habits.	Period of service in India.	Whether married or single.	Hour of admission.	Date and hour of attack.	Whence admitted.							Result.				Remarks.
											Barrack No.	Married quarters No.	Hospital and cause of original admission.	Camp at	Camp at	Camp at	Camp at	Died.			Recovered and date.	
																		In stage of collapse.	In stage of re-action.	How long after admission.		

Surgeon in Medical charge.

This Register should include all officers, men, women, and children attacked.

D

Return required from Regiment of Native Cavalry and Infantry.

59. From regiments of Native Cavalry and Infantry Return No. 1 only will be required.

Special report required on disappearance of disease.

60. On the disappearance of the disease, officers commanding divisions and districts in which cholera has recently occurred among the troops are required to submit a special report (in duplicate) to the Quarter Master General for the information of His Excellency the Commander-in-Chief, showing in detail the number of cases, the class of persons attacked, and the number of each who have died, the general character of the disease, and whether any and what extra expense was caused to Government by movement into camp, &c.

Return required showing the further progress of the disease among the inmates of any particular building that has been vacated.

61. In all cases where buildings have been evacuated on account of the appearance of cholera, a very careful record of the further progress of the epidemic among the individual body of men, women, and children who occupied each building so vacated should accompany the above report, prepared according to the following form:—

Progress Report of cholera at _____ in Her Majesty's _____ Regiment, submitted in accordance with No. 61 of the revised Rules regarding measures to be adopted on outbreak of cholera.

STATION.	Corps.	Number or name of building.	Number and detail of occupants.	Date of first case.	Date of evacuation of building.	Number of cases before evacuation.	Number of cases among those occupants after evacuation.	Date of re-occupation.

Surgeon in charge.

Commanding Regiment.

Information required as to size and relative position of huts occupied by Native troops attacked by cholera.

62. When cholera has appeared among Native troops, full particulars are required as to the size and relative position of the huts of each Native regiment which suffered from the disease; the exact accommodation allotted to the several ranks should be shown, and the nature and description of the several buildings should be specified.

Report of any expense incurred for hiring bungalows, &c., to be made at once.

63. When it has been found necessary to incur any expense, such as the hiring of bungalows, &c., for the benefit of the troops during the prevalence of cholera, a special report, giving every particular, should be at once made to the Quarter Master General for the information of His Excellency the Commander-in-Chief and of the Government.

Tents are to be retained for regimental purposes only.

64. Tents belonging to a regiment are to be retained in all cases for regimental purposes, and are not to be lent to the civil authorities for the use of prisoners in the event of epidemics breaking out in jails, or on other occasions.

Oldest and least serviceable tents to be used for cholera cases.

65. When tents are required for cholera cases among the troops, the oldest and least serviceable must be selected, provided they are fit for the purpose.

Supply of camp equipage.

66. In most cases, the established proportion of camp equipage will be sufficient to accommodate that portion of the garrison which it may be necessary to move into camp. Extra camp equipage should, therefore, not be indented for unless the epidemic should prove severe, and render it probable that a larger proportion than half the garrison may have to be removed from cantonments. When the necessity for this has been admitted, Commanding Officers are to indent on the nearest magazine for such additional camp equipage as they may require; the indents to be countersigned by the Deputy Inspector General of the Circle, or the senior Medical Officer on the spot, and by the Officer Commanding the Station.

Hospital management.

67. The question of hospital management during the prevalence of cholera is one of urgent importance. No sanitary precaution must for a moment be neglected; no approach to anything like crowding must be permitted; all unimportant cases, the treatment of which in hospital is not essential, should be discharged; every case in hospital must be carefully watched; and it must be borne in mind that in very numerous instances it is in the hospital, among patients under treatment for other diseases, that cholera first appears. Precautionary measures in the hospitals must be commenced, whenever it may be possible, before the actual appearance of the disease; and, as laid down in paragraph 5, all slight symptoms of disease must be treated in the barracks, or in observation wards entirely separate from the hospital.

Separate temporary hospital to be prepared for cholera cases.

68. If no separate building can be set apart as a temporary hospital, tents should be pitched for the purpose in some convenient place at a little distance. Every arrangement must be made, so that if a case of cholera should occur, it may be immediately removed there, and not be treated in the regular hospital. For the treatment of patients suffering from cholera, tents are unobjectionable at all seasons of the year. The air in a tent is less likely to

become contaminated, and the ground can be changed as often as may be desirable. Medicines, and everything considered requisite for the treatment of the disease, should be prepared in the temporary hospital, and a portion of the establishment should be kept in readiness to be transferred there, so that if a case of cholera occurs, the means will exist for separate treatment, and subsequent communication with the regular hospital will be unnecessary.

Prevention of fresh cases more important than medical treatment.

69. If in spite of every effort, the sub-division of hospital establishment should lead to difficulty in the medical treatment of the disease, this must be accepted as the lesser of two evils; for it must be always remembered that the main object during an epidemic of cholera is the prevention of fresh cases much more than the treatment of those who have already been attacked; that prevention is often possible, but that treatment is almost useless after virulent symptoms have appeared.

Separation of cholera patients and abandonment of hospital buildings if cholera occur in them.

70. No patient attacked by cholera should ever, under any circumstances, be placed in the same ward with patients suffering from other diseases. If a patient in hospital suffering from another disease be attacked with cholera, or if a case occur among the hospital attendants or others, the same system must be adopted as has been ordered in the event of cholera appearing in other buildings occupied by troops. The ward in which the case has shown itself must be IMMEDIATELY abandoned, and every precaution laid down with respect to other buildings must be taken.

Funeral parties.

71. During the prevalence of cholera, funeral parties should be discontinued, and the band should not play at the burial either of officers or men.

Removal of cholera excreta.

72. Every effort should be made, during the actual treatment of the disease, to get rid, as completely as possible, of all the discharges from the sick or to render them innocuous. The vessels in which they are received should contain some powerful disinfectant; they should never be emptied into the usual receptacle, or carried to the common latrine, but taken away separately, and the contents thrown into a trench dug for the purpose and reserved for this use. A man should be constantly employed in the duty of throwing fresh earth over all filth the moment it is deposited, and all vessels should be thoroughly cleaned at the trench into which the filth is thrown.

Supply of extra articles of diet during prevalence of epidemics.

73. During the prevalence of cholera at a station, such changes in the diet and such other medical comforts are to be allowed to the troops as the Deputy Inspector General of the Circle or other principal medical officer may deem expedient. In directing these comforts to be freely supplied, particularly to the women and children, the senior medical officer on the spot will be required to exercise a wise discretion to avoid unnecessary expenditure, and to see that the indulgence is not abused.

Employment of Native servants in attendance on cholera patients.

74. On the occasion of an outbreak of cholera at a station, the entertainment of Natives to attend European soldiers in hospital suffering from that disease is authorized to such an extent as the local medical authorities may consider necessary—the men being provided on requisition by the Commissariat Department.

European soldiers to be employed on hospital duty as seldom as possible.

75. When the employment of European soldiers as orderlies in hospitals during the prevalence of cholera is considered unavoidable, men will be selected, as far as possible, by volunteering in such number as the medical authorities may deem necessary. The complete tour of duty shall in no case exceed 24 hours, and no man who is not in good health shall be thus employed. No orderly is to be kept in actual attendance in the hospital for a longer period than four hours at one time, nor is he to have a less interval of rest than six hours between successive tours of duty, whatever be the period of attendence in the ward. A room entirely separate from the hospital buildings must be provided for the accommodation of men relieved from attendance on the sick, in which they can remain until their tour of duty again comes round. Men not upon actual duty are not to be allowed to remain in the hospital. The strictest precautions must be taken to prevent men employed in the hospital from making use of the latrines, urinaries, or wash-houses used by the sick in hospital. The utmost care must be taken that the hands of all attendants on cholera patients be scrupulously cleaned by means of sand and water containing some disinfectant, or other thoroughly efficacious means; and that if the clothes of any of the men should become soiled by cholera discharges, they be at once taken off and thoroughly purified. Every man employed as a hospital orderly in attendance upon cholera patients is to be provided with tea or coffee before and after each tour of duty.

Female nurses for attendance on women and children.

76. For attendance on women and children suffering from cholera, Native female nurses should, if possible, be procured.

Removal of the sick and of the dead.

77. Careful arrangements must be made for the removal of the sick from the barracks to the hospital, and on no account should the doolie employed for this purpose be made use of for the removal of the dead.

Purification of bedding and clothing.

78. All bedding and clothing used by cholera patients which can be subjected to this process must be immediately purified by being boiled for quarter of an hour in water. There is no difficulty in boiling such articles as bed-tape *(newar)*, blankets, and linen. The bug-boilers offer facilities for boiling the cots. Rezais and other such articles which can never be thoroughly cleansed should be burned.

Purification of cots and punkah-fringes.

79. Cots and punkah-fringes which have been used by cholera patients, or in wards set apart for them, should be subjected, in a similar way, to the action of boiling water when they are no longer required for such cases.

Purification of tents.

80. Tents used by cholera patients before being struck, should be disinfected by one or other of the following gaseous disinfectants:—chlorine, nitrous acid, or sulphurous acid, and then left exposed to the weather for ten days. Tents which have been used for cholera purposes in camps within cantonments, should first be removed to an out-of-the-way but airy spot outside, and then subjected to the process of fumigation.

Burning only to be resorted to when thorough purification cannot be at once carried out.

81. It will only be necessary to burn such articles as bedding, body linen, cots, and punkah-fringes when their thorough purification cannot be at once carried out in the manner above laid down, but with proper arrangements this destruction will rarely be required.

Rules applicable to women and children.

82. It is to be distinctly understood that the above Rules are equally applicable to the women and children if cholera should appear in their quarters, and that they are to be as strictly carried out; but endeavours should always be made to assign available buildings to them, so that the necessity of moving them into camp may, if possible, be avoided.

Measures to be adopted on the appearance of cholera in the sudder or regimental bazaar.

83. On the appearance of cholera or any other epidemic in the sudder or regimental bazaar of a station, arrangements should be made for the isolation and treatment of the cases. One or more grass huts should be placed on the outskirts of Cantonments in a convenient and selected position, a fresh site being selected weekly, as the ground becomes contaminated and proves a source of danger. Stringent orders should be issued to ensure all cases of the disease being sent to this isolated hospital for treatment.

Station Staff Surgeon to have charge of the hospitals for Natives.

84. The hospital will be under the medical charge of the Station Staff Surgeon, or other medical officer selected by the Deputy Inspector General of Hospitals, and the establishment as per margin, to be increased if necessary, will be attached to it—the servants to be discharged on the subsidence of the epidemic.

1 Native Doctor.
1 Compounder.
1 Cook.
1 Bheestie.
2 Sweepers.
1 Doolie with 4 bearers.

Expenses to be defrayed from Cantonments Funds.

85. When cantonment funds can be made available, without withdrawing them from such measures of conservancy as may be considered of even more importance, all expenses incurred by the establishment of these temporary hospitals, including the dieting of the patients, if that be also involved, should be defrayed by them, the primary object of such funds being to secure the proper sanitary condition of a station in every possible way.

Record of buildings and camps in which cholera occurs.

86. As experience in such matters is of great value, a careful record should be preserved in the Brigade or Station Staff Office showing the number of cases occurring in each building, and the number of attacks in the different camps.

SECTION III.

OTHER POINTS REQUIRING THE SPECIAL ATTENTION OF MEDICAL OFFICERS.

Investigation into the circumstances of the first case.

87. In any epidemic, it is of the greatest importance to ascertain all the circumstances connected with the appearance of the first case; and a very careful investigation should be made at once in order to discover, if possible, whether it was due to importation. Such enquiries, if delayed, are usually unsatisfactory.

Condition of camp followers.

88. The condition of the camp followers, of the punkah coolies, and others who come about the barracks should receive attention, and orders should be issued that any suspicious cases occurring among them be reported, so that they may be at once investigated. With the assistance of the Non-Commissioned Officers, such cases of sickness should not escape detection. Arrangements should be made for the early treatment of those attacked either in camp or cantonments, and where the general cholera hospital for Natives is distant, measures

should be adopted for attending to their wants on the spot. A careful note of all such seizures and of the circumstance under which they occur should be preserved.

Abolition of the term "choleraic diarrhœa."

89. In the forms now adopted, the term "choleraic diarrhœa" has been abolished. All such cases distinguished by rice-water evacuations should be returned as cholera.

Disuse of the words "sporadic" and "epidemic."

90. It is very desirable that the terms "sporadic" and "epidemic" should not be used in connection with reports of cases of cholera. There is no means of distinguishing between the two, and the exact significance of individual attacks can be known only when all the facts regarding the prevalence of the disease throughout the year have been ascertained and considered as a whole.

Cholera cases not to be returned as "discharged" until all symptoms of the disease have disappeared.

91. In some instances, cases of cholera in which reaction has taken place have been discharged, and the fatal event which afterwards occurred recorded under the head of fever. This system produces great error in the statistics, and it ought on no account to be followed. No cases of cholera should be "discharged" until every symptom, either directly or indirectly due to the disease, has disappeared.

A lull in the number of cases not to lead to any relaxation of precautionary measures.

92. When no cases of cholera have occurred for several days, an opinion is apt to prevail that the disease has disappeared, but it must be remembered that at certain seasons a lull is to be expected. This generally occurs in the early part of the monsoon. With regard to it no decided rule can yet be laid down, but it is important that the fact of there having been no cases for some time should not lead to any relaxation of the necessary precautions and preparations in anticipation of a further and generally more severe outbreak.

Effect of upper-stories on proportion of attacks.

93. As it is important to ascertain the effect of upper-stories in warding off attacks, a daily register in the annexed Form should be kept:—

DATE.	Number occupying upper-stories on that day.	Number of attacks in upper-stories on that day.	Number occupying lower-stories on that day.	Number of attacks in lower-stories on that day.	REMARKS.*

* In the remarks, the case of any man lately on guard, or particulars regarding other influences which may have caused the attack, should be noted.

SECTION IV.

RESPONSIBILITY OF COMMANDING OFFICERS.

The Rules to be carried out by the Officer Commanding the Station.

94. On the officer commanding the station will devolve the responsibility of having all the directions contained in these Rules, as regards the evacuation and purification of buildings, the movements into camp and all other details, carefully carried out.

Discretionary powers of Officers in Command.

95. These Rules, founded on the general experience of the past, must be considered as the guide on all ordinary occasions. As in outbreaks of cholera, however, so much depends on the judgment and action of general and other officers, they must exercise their own discretion whenever extraordinary emergencies or unforeseen circumstances occur, and, in consultation with the senior medical officer, must take upon themselves the responsibility of action incumbent on their position.

Whenever it may be considered advisable to deviate from the procedure prescribed in these Rules, a special report explaining fully the reasons for so doing must be forwarded to the Quarter Master General for the information of the Commander-in-Chief.

SECTION V.

Rules regarding the measures to be adopted on the appearance of small-pox among British or Native troops.

I.—Whenever a case of small-pox appears among either British or Native troops, it should be immediately isolated, and all communication between the sick person and others, whether direct or indirect, should, as far as possible, be prevented.

II.—In some cantonments a building, no longer required for other purposes, and occupying an unfrequented site, has been set apart for the reception of small-pox cases, and whenever such a building is available, the case should be at once removed to it.

III.—In those cantonments where no such building exists, the case must be removed either to a tent or to a grass hut.

IV.—As cases are most apt to occur in the hot months, a grass hut is in every way better suited for the purpose than a tent. If lined on the sides with a coating of mud, it affords very good protection.

V.—If, owing to the small number of sick in hospital or to other circumstances, a ward or other room well separated from the other patients, or other persons, can be made available for the temporary reception of the case, there is no objection to its being treated there during the first day or two of the disease when the eruption is still advancing, and its power of spreading to a distance is comparatively limited. Time will thus be allowed for the preparation of a grass hut.

VI.—If this course should have been followed, the room temporarily occupied by the case should be immediately purified in the manner described in Rule 32 regarding cholera.

VII.—Whether a tent or grass hut is employed, it should be pitched in some secluded spot, and the shelter of trees, if possible, secured.

VIII.—If a tent is used, the oldest and least serviceable should be selected.

IX.—Good tents should never be employed for the purpose, except in very exceptional cases, which should in each instance be explained.

X.—Unless there is an immediate prospect of their being further required, tents or huts used by small-pox patients should be destroyed by fire, in presence of a responsible person, as soon as vacated.

XI.—If there is an immediate prospect of the tent or hut being again required, it should be purified in the manner described as suitable for buildings in Rule 32 for cholera. It should then be left standing with the sides and doors kept closely shut down.

XII.—Bedding and clothing, cots and punkah-fringes, should be thoroughly disinfected as described in Nos. 78, 79 and 81 for cholera.

APPENDIX A.

Directions to be observed in despatching telegraphic messages regarding cholera.

I.—The message should usually be despatched soon after 8 A. M. so as to agree with the morning state. Form No. 1 required by Rule No. 58.

II.—The number of cases and deaths among men, women and children in each regiment of Europeans at the station during the preceding 24 hours, should be stated separately.

III.—The number of cases and deaths in each Native regiment should also be stated.

IV.—Particulars regarding camp followers or the city and bazaars should be given only when they are important as indicating the advance or decline of the disease.

V.—All particulars regarding movement of troops should be included in the message, and the condition of each detachment in camp.

VI.—When there is no Telegraph Station in or near the cantonment attacked, the message should be sent by Post to the nearest Telegraph Station.*

* As, in such stations, Telegraph Stamps are not generally procurable, officers are required to adopt the procedure set forth in Notification dated Calcutta, 22nd December 1868, paragraph 3, General Order dated 18th January 1869, *viz.* :—

"*Para.* 3. Telegrams can be sent from out-stations by Post, but they must be enclosed in registered covers; at stations where Telegraph Stamps are not procurable, they may be paid for by Postage Stamps at the rate of 17 annas to the Rupee. In such cases, the Post Office Registration Receipt will take the place of the ordinary Telegraph Receipt. If any telegram be received insufficiently stamped, it will be returned bearing to the sender."

VII.—The following specimens of telegrams are appended for guidance :—

From—Allahabad.	To—Army Head Quarters.
From—Officer Commanding.	To—Quarter Master General.

22nd March, one case, 58th Regiment, a soldier. Building vacated and disinfected.

25th March, twelve admissions from British and five from Native troops since yesterday's report.

All soldiers.

Artillery, three in Cantonment.

Artillery, one in Fort.

No deaths.

58th Regiment, eight in new barracks, six deaths, two companies moved to Camp Jhosee. Affected building vacated. Reports from city and district more favorable.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

TRADE BETWEEN INDIA AND THE GULFS OF PERSIA AND OMAN.

From LIEUT.-COL. L. PELLY, C.S.I., Her Britannic Majesty's Political Resident in the Persian Gulf, to the Secretary to the Government of Bombay, Political Department,—No. 86—34, dated Bushire, the 23rd April 1870.

IT may be in the recollection of Government that, seven years ago, I had the honor of submitting a few superficial observations concerning the tribes, trade, and resources around the shore lines of the Persian Gulf.

2. About a year ago I had the honor of submitting another report summarizing the general position and prospects of commerce in these regions.

3. More recently the obliging trouble of the Commissioners of Customs at Calcutta, Bombay, and Kurrachee, has enabled me to abstract in a reliable statistical form the commerce passing to and from those ports and the Gulfs of Oman and Persia.

A.—Statement showing the value of trade between Calcutta and the Persian Gulf Ports from 1860-61 to 1864-65, as compared with the year 1844-45 and 1868-69.

B.—Statement showing the annual trade between Bombay and the Persian Gulf Ports including Muscat from 1860-61 to 1868-69, as contrasted with that of 1844-45.

C.—Statement of exports and imports into the Province of Sind from the Persian Gulf Ports from 1861-62 to 1868-69, and from 1847-48 to 1854-55.

D.—Statement showing quantity of lead exported from Bombay to Persian Gulf Ports during December 1869, and January and February 1870.

4. His Excellency in Council will perceive that this commerce has developed rapidly and largely. It appears, for instance, that in 1844-45 the trade with Bombay showed a gross total of Rupees 79,24,609, that in 1860-61 it amounted to Rupees 1,31,42,602; while in 1865-66 it amounted to Rupees 3,44,37,408. In other words, that between the years 1845 and 1865 the trade quintupled itself, while it nearly trebled itself during the five years between 1861 and 1865.

5. From the Statement of Trade with the Port of Bombay concluding with the year 1869 it will be seen that the trade, as compared with 1865-66, being the highest year of the American war, had apparently fallen off; but this is accounted for by the fact that the cotton trade was abnormally large down to the conclusion of the American struggle; while, on the other hand, successive disturbances on the Arab coast between 1866 and 1869 have, of course, been injurious to trade; so that it may fairly be assumed that, under ordinary circumstances, the general trade would have continued to show a steady increase.

6. As regards Calcutta, it will be observed that the increase, as between the years 1864-1865 and 1868-69, was as follows,—Rupees 27,32,681.

I am anable to include the year 1844-45 in my comparison of this trade, since at that period it was not shown separately from the trade between Calcutta and the Red Sea.

7. As regards Kurrachee, the increase, as between 1847 and 1867, has been as follows,—Rupees 8,33,731.

8. The appended Statement (E) shows the most favourable total of trade, with the above-named three ports for any one year, has been as follows,—Rupees 4,05,55,796.

9. I have not enquired into the trade with Madras, because, although I believe that trade to be considerable, I understand that a large portion of it is indirect through Bombay, and thus, were the Madras trade shown, it might appear twice. It has seemed to me preferable to be rather under the mark than run the risk of exaggerating in statistical statements.

10. But the trade with these principal British ports by no means represents the total of trade with the Gulf, although I am unaware that there are any reliable statistics in regard to trade with other ports. But from the testimonies of numerous Native merchants, I think I am safe in submitting that the subjoined items do not over-estimate the export and import trade with miscellaneous ports:—

	Rs.
Malabar Coast	10,00,000
Cutch and Kattiawar	10,00,000
Jedda and Red Sea	12,00,000
Opium Trade with China, 2,500 chests at Rs. 1,200 per chest of 136 lbs.	30,00,000
Average annual value of Pearl Trade	75,00,000
Trade with Busreh, Baghdad, and Mesopotamian line in general	3,00,000
Trade with Zanzibar and African Coast	3,00,000
Trade with Mauritius—irregular	4,00,000
Trade with England and America in square-rigged vessels unknown, but unquestionably above	20,00,000
Trade with Java	20,00,000
Total Rs. ...	1,87,00,000

11. Thus the gross total of the export and import trade passing up and down the Gulfs of Persia and Oman appear to have totaled Rs. 5,83,55,796, or nearly 6,000,000 sterling, exclusive of the trade carried on in small coasting craft.

12. As affording a more detailed insight into the character of trade, I beg to append some very carefully-prepared Statements (F) with which I have been favoured by the firm of Messrs. Gray, Paul and Co., the Agents for the B. I. S. N. Company at Bushire. In forwarding these Statements to me, Mr. George McKenzie, of the same firm, has favoured me with the following remarks:—

"I now send the papers showing in condensed form annual and monthly shipments, which is, I hope, what you want. I am sorry press of work here prevents my making up like statements of *imports*, which, however, are not so important.

"These statements I send you to Bombay that they may be at hand should you at any time require same for reference.

"I regret exceedingly I cannot give you more serviceable statements showing the actual trade carried on at our ports in *all* kinds of craft. For mercantile purposes, as well as for Government information, such statements would be valuable, and to us, as traders, the want of same is much felt.

"As I said before, we are willing to do all such work, under the Residency, gratuitously in consideration of the personal benefits to be derived therefrom. It only remains for Government to give us the authority and power of gathering reliable statistics, which we would undertake to keep regularly and in proper form.

"Of course, the statements now handed you are not so satisfactory as I would wish. A three years' comparative statement is scarcely a fair criterion, but we have not the means of gathering reliable information for a longer period. What is sent is made up from our own books, and from the date of the firm's opening up here.

"The increase in 1868-69 is very considerable when one keeps in view the number of extra steamers we had running on the line for the past twelve months, besides sailing vessels, of which latter we have more than in former years.

"I would especially draw your attention to the column showing exports of specie, wherein you will observe the steady decrease. This we consider a favourable sign of the times showing the increased prosperity of the country, whereby their increased shipments of produce they are able to keep a better account with their Bombay agents, and prevent the necessity of remitting against imports.

"It cannot, however, positively be attributed to this cause, for the export of pearls, you will observe, is included. It is most unfortunate this was not kept entirely distinct from specie, but for the future this will be done where our steamers are concerned."

13. Of course, the trade referred to in Mr. McKenzie's letter is only steam-borne, and, as evidencing the development of this particular trade, I would recall that eight years ago no mercantile steamer ran in the Gulf; that since that period trading steamers have continued to increase both in number and in tonnage; that during last year the B. I. S. N. Co.'s steamerr of large tonnage ran fortnightly, while other steamers visited the Gulf during the summes and autumn so frequently as to give an average of a steamer per week.

14. I understand it to be in contemplation to run a line of steamers between England and the head of the Persian Gulf, *vid* the Gulf of Suez, and that a similar line is to be opened by the Turkish authorities between Constantinople and Busreh, while for the passage of goods up river I understand there are already some eight river steamers.

15. Referring to the opium trade, I beg to append an Abstract (G) comparing that for the year 1869 with 1868.

16. I append also a Statement (H) showing in detail the manner in which the opium has been exported last year. It is probable that some chests have been exported, of which I have not cognizance; and I understand from good authority that the export for the coming year is estimated at least 3,500 chests of about 136 lbs. per chest. This total is, of course, small as compared with the trade in India; but when we recollect that some fifteen years ago the export of opium from Persia was limited to some dozen chests or so, sent *vid* Constantinople, it must be admitted that the trade has rapidly developed, and that if the quality of the opium be improved, the direct export of opium from the Persian Gulf littoral to the eastward of Singapore may, at some future dates, in some degree affect our Indian opium revenue.

17. As regards the Statistical Statements obtained from the Custom Houses in India, it has not been found practicable to obtain them all for the same years and in uniform details; but I deem it, nevertheless, advisable to submit them in appendices, together with the remarks with which the several Commissioners have favoured me since they form as complete a basis as is obtainable for estimating the past trade with the Gulf.

18. The statistics of trade shown in this report do not (as before mentioned) include the miscellaneous trade carried by the small coasting craft. But the trade so carried on is very considerable, although the means of even roughly estimating it are wanting.

19. There seems to be a tendency in the trade of the world to resume its ancient channels under improved means of communication, and it is possible that what is commonly known as the Euphrates or Persian Gulf route may hereafter resume its position as a main line of commerce between the east and the west.

20. It were much to be desired that the Native Governments *en route* were more alive to the advantages of leaving trade free and uninterfered with.

21. Messrs. Gray, Paul, in addressing me concerning their endeavours to open up trade in the interior of Persia, write as follows, and I venture to think their remarks worthy the consideration of superior authority:—

"While on the subject of trade on these parts, it may, perhaps, be well now to lay two points before you, which we trust, should opportunity offer, you will have fully investigated.

"1*st*, it has always been a matter of doubt with us whether we are at liberty to sell goods imported by us (and on which the stipulated five per cent. duty has been paid) to Native merchants in Bushire, giving delivery of same at towns in the interior, and thereby under cover of Jowaz exempting the goods from further dues in transit.

"Hitherto we have, at considerable loss and inconvenience, refrained from entering into such contracts, being first desirous of ascertaining whether Her Majesty's Government would support such reading of the Treaty.

"We are ourselves inclined to think they would, and our assumption is based on the belief that the Commercial Treaty between Her Majesty's and the Shah's Government might be expected to work in a similar manner to the Treaty at present existing between Great Britain and the Ottoman Empire.

"Turning to Article V. of the last-named Treaty of 1861, you will find such a transaction distinctly provided for in the following words:—

"'If these articles, after having paid the import duty of eight per cent., are sold either at the place of their *arrival* or in the interior of the country, neither the *buyer* nor the *seller* shall be charged with any further duty in respect of them, &c., &c.'

"2*ndly*, as regards drawback, you are aware duties have in Persia to be paid immediately on landing, and at the port where landed.

"No rebate of duty is made should it be found more profitable to export the goods to another mart. Thus virtually prohibiting us here frequently from availing ourselves of the markets along the Arab coast and Turkish Arabia.

"For information on this point also, as to the spirit of the Turkish Treaty, I would beg to refer you to the continuation of the Article afore-quoted, which goes on to say, 'and if such articles should not be sold for consumption in Turkey, but should be re-exported within the space of six months, the same shall be considered as merchandise in transit by land, and be treated as is stated in Article XI.' The last-named article fixing the drawback at seven-eighth pounds.

"Apart from shipping to another country, we are in reality prohibited even from re-shipping to another Persian port, which is a serious hindrance. For example, we have goods now at Bushire which we are desirous of shipping to Bunder Abbass, on these we can obtain no drawback.

"No duty can, of course, be levied on the goods at Bunder Abbass, for they would go protected by a Residency Jowaz, nevertheless the customs authorities at Bunder Abbass, who are influential merchants, feel themselves aggrieved at the demands of their market being supplied by goods on which they receive no benefits, and feeling so bring all their private influence to bear against British enterprise, thereby retarding and injuriously affecting trade in its development.

"Were drawback allowed and granted to customs at port of re-importation, we feel sure many benefits to general trade would arise therefrom.

"I trust it may be found feasible to enforce these points without disturbing the working of the present Treaty.

"Persian merchants in Bombay receive many advantages in drawback from Her Majesty's Indian Government, for which British subjects in Persia have no equivalent return.

"These are points which might be enlarged upon to a considerable extent, but I will now conclude, apologising for so far trespassing on your valuable time."

ENCLOSURE A.

J. A. CRAWFORD,
Collector of Customs, Calcutta.

C. A. TWEEDDALE,
Officiating Superintendent.

CALCUTTA CUSTOM HOUSE;
The 3rd March 1870.

From J. A. CRAWFORD, Esq., Collector of Customs, Calcutta, to Her Britannic Majesty's Political Resident in the Persian Gulf,—No. 340, dated Calcutta, the 3rd March 1870.

I HAVE the honor to acknowledge receipt of your letter dated 22nd ultimo, requesting to be furnished with a Comparative Statement of the value of the trade between this port and the Persian Gulf, including Muscat, during the years 1844-45, 1860-61 to 1864-65, 1868-69 and 1869-70, and have now the pleasure to forward the Statements therein called for.

2. The figures shown for 1844-45 do not represent the value of the trade to the Persian Gulf alone, but include the value of the trade to the Arabian Gulf also.

3. I regret my inability to give the value of the trade to the Persian Gulf separately, as the statistical records of the period show the value of the trade to both places together.

4. In the figures representing the value of imports for the year under review, a sum of sixteen lakhs is included for salt (very likely imported from Jedda) at the rate of Rs. 4 per maund, while the value of salt for the years with which comparison is made is estimated at only one-fourth that amount per maund.

5. On the export side also a sum of eleven lakhs is included, representing the value of indigo, whilst the value of this article exported during the other years amounts to two, and never exceeds three lakhs per annum. Under the circumstances, the comparison made between the years 1844-45 and the years 1860-61 to 1864-65 cannot be accepted as showing the exact fluctuations of the trade.

6. The Comparative Statement showing the increases and decreases in the value of the trade during the years 1860-61 to 1864-65, as compared with 1868-69, is correct, as the trade for those years is confined to the Persian Gulf.

7. For the current year 1869-70, I forward a Statement showing the value of the trade month by month up to 31st January last. Any comparison between this and the other years cannot well be made, as the trade for 1869-70 is only shown for ten months.

8. The transactions of the remaining two months of the current year will be forwarded if required.

ENCLOSURE B.

Statement showing the annual trade between the Port of Bombay and the Persian Gulf, inclusive of Muscat, for the years 1865-66 *to* 1868-69.

KURRACHEE CUSTOM HOUSE,
The 21st March 1870.

W. T. COLE,
Collector of Customs.

Memorandum from COLONEL W. L. MEREWETHER, Commissioner in Sindh,—No. 550, dated Kurrachee, the 24th March 1870.

THE accompanying statements showing the import and export trade of the Persian Gulf from 1861-62 to 1868-69 and 1847-48 to 1854-55 are forwarded to Colonel Pelly, C. B., Her Majesty's Political Resident at Bushire. In forwarding these statements, the Collector of Customs writes that "there being no record in this Office of trade earlier than from 1847-48, I have shown in the statements the value of trade from that year to 1854-55, instead of from [illegible]45 to 1848-49, as requested.

"From 1847-48 to 1853-54, the trade of Persian Gulf and Mekran Coast is recorded lumped together, and as it does not now admit of being separated for these years, I have shown it in the statement as it is, a foot note to that effect being made.

"Total value of imports from Persian Gulf for the expired eleven months of the current year 1869-70 (exclusive of treasure, Rs. 50,265) is Rs. 12,74,408; being an increase over the last year of twelve months of Rs. 7,23,377. This result is owing chiefly to large imports in grain and fruits. Of the former already Rs. 6,35,178 worth has been imported.

ENCLOSURE D.

Exportation of Lead from the Port of Bombay to Ports in the Persian Gulf during the three under-mentioned months.

Name of the Month.	Muscat.		Busreh.		Quet.		Abbass.		Linga.	
	Cwt. lbs.	Rs. A. P.	Cwt. lbs.	Rs. A. P.	Cwt. lbs.	Rs. A. P.	Cwt. lbs.	Rs. A. P.	Cwt. lbs.	Rs. A. P.

Total Exports of Lead for the month of December 1869									72 80	744 6 6
Ditto ditto ditto January 1870									148 66	1,486 0 0
Ditto ditto ditto February 1870									160 25	1,624 9 2
Total									381 59	3,851 15 8

N. B.—It is remarkable that the export of lead to Muscat and Linga suddenly rose in the month of February, when a contest was anticipated at Benaymee between the Muscat State and the Wahabees.

L. PELLY, *Resident.*

ENCLOSURE E.

Statement showing the most favourable total of Trade from the Gulfs of Oman and Persia with the Ports of Calcutta, Bombay, and Kurrachee, as abstracted from the Reports of the respective Commissioners of Customs obligingly furnished to the Resident, Persian Gulf.

Name of Port.	Year.	Amount.	Gross Total.	REMARKS.
		Bombay Rs.	*Bombay Rs.*	
Calcutta	1844-45 ...	48,05,643		In 1868-69, the total of trade with Calcutta was near 40 lakhs, being 8 lakhs less than 1844-45, but almost equal to four years' trade, commencing from 1860-61.
Bombay	1865-66 ...	3,44,37,408		
Kurrachee	1865-66 ...	13,12,745		
			4,06,55,796	

ENCLOSURE F.

STATEMENTS REGARDING TRADE AS BORNE BY THE B. I. S. N. CO.'S STEAMERS, FROM SEPTEMBER 1866 TO SEPTEMBER 1869.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 16th August 1870.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.P., G.C.S.I., *Presiding.*

His Excellency the Commander-in-Chief, G.C.B., G.C.S.I.

The Hon'ble John Strachey.

The Hon'ble Sir Richard Temple, K.C.S.I.

The Hon'ble J. Fitzjames Stephen, Q.C.

The Hon'ble B. H. Ellis.

Major-General the Hon'ble H. W. Norman, C.B.

The Hon'ble F. R. Cockerell.

His Highness Sarámade Rájáhae Hindustán Ráj Rájendra Srí Maháráját Dhiráj Sivái Rám Singh Bahádur of Jaypúr, G.C.S.I.

OUDH TALUQDARS' RELIEF BILL.

The Hon'ble MR. STRACHEY presented the Report of the Select Committee on the Bill to relieve from incumbrances the estates of taluqdárs in Oudh.

PENAL CODE AMENDMENT BILL.

The Hon'ble MR. STEPHEN introduced the Bill to amend the Indian Penal Code, and moved that it be referred to a Select Committee with instructions to report in a month. He had so fully described the Bill when he moved for leave to introduce it, that he would reserve his further observations until the Select Committee should have made its report.

The Motion was put and agreed to.

LOCAL ACTS CONFIRMATION BILL.

The Hon'ble MR. STEPHEN presented the Report of the Select Committee on the Bill to confirm certain laws affecting European British subjects.

REGISTRATION LAW CONSOLIDATION BILL.

The Hon'ble MR. STEPHEN moved for leave to introduce a Bill to consolidate and amend the laws relating to the Registration of Assurances. A draft Bill to exempt title deeds issued by the Inám Commissioner in the Presidency of Fort Saint George from compulsory registration under the Indian Registration Act, 1866, had been recently sent up by the Madras Government with a request that it might be passed by the Governor General's Legislative Council. A somewhat similar enactment had already been passed as Act No. XXVII of 1868, and it was thought preferable to adding a third Act on the subject to the Statute Book to take this opportunity of consolidating and amending the

whole law on the subject. The present was one of three consolidation Bills which he hoped to obtain leave to introduce. When these, and the two great Bills to consolidate the laws relating to Civil and Criminal Procedure, and the other Bills now before the Council, were passed, and when two comparatively unimportant measures relating to Paper Currency and Cattle Trespass had also become law, the process of consolidation, so far as regarded the Acts of the Governor General in Council, would be complete. A similar process, so far as regarded the Bengal Regulations, was now far advanced, thanks chiefly to the industry and knowledge of his Hon'ble friend Mr. Cockerell. The several collections of the rules and orders which, under the Indian Councils' Act, had obtained the force of law in the North-Western Provinces, the Panjáb, Oudh, the Central Provinces and British Burma, would soon be finished, and the result of the whole process would, MR. STEPHEN hoped and believed, be eminently satisfactory to the profession and to the public.

The Motion was put and agreed to.

MARRIAGE LAW CONSOLIDATION BILL.

The Hon'ble MR. STEPHEN moved for leave to introduce a Bill to consolidate and amend the law relating to marriage. That law, so far as regarded Christians (and to them alone the present Bill would apply), was now contained in one Statute (14 & 15 Vic., cap. XL) and in two Acts (V of 1852 and V of 1865). To these might be added the obsolete Statute as to marriages solemnized by ministers of the Church of Scotland, 58 Geo. III., cap. 84.

The Motion was put and agreed to.

CORONERS LAW CONSOLIDATION BILL.

The Hon'ble MR. STEPHEN also moved for leave to introduce a Bill to consolidate the laws relating to Coroners. Those laws were 33 Geo. III, cap. 52, section 157; 9 Geo. IV, cap. 74, sections 5 and 6; Act IV of 1848 and Act XLV of 1850.

The Motion was put and agreed to.

SEA CUSTOMS CONSOLIDATION BILL.

The Hon'ble SIR R. TEMPLE moved for leave to introduce a Bill to consolidate and amend the law relating to Sea Customs. He said that the Consolidated Customs Act of 1863 had already been more than once amended, and certain further amendments having been found necessary, the present Bill would consolidate the whole law on the subject, and make the following changes:—

'Magistrate' would be defined so as to include expressly a Magistrate of Police in the Presidency Towns.

The Local Government would be empowered to declare what should, for the purposes of the Act, be deemed to be the limits of the Custom House.

Section 23 of Act VI of 1863 authorised the Government of India to prohibit the exportation or importation of any particular class of goods. To prevent a doubt which had been raised as to the extent of the power thus intended to be conferred, the words 'by sea or by land, or both by sea and by land,' would be introduced.

In section twenty-seven, for 'Local Government' the 'Customs Duties' Act, 1870' would be substituted.

A new section would provide that, when goods were warehoused, a warrant should be delivered to the person lodging the goods, and that such warrant should be transferable by endorsement. This was now the law as regards the

Bengal Bonded Warehouse. He had reason to know that the change would be welcomed by the mercantile community of Bombay.

Another section, equivalent to section 137 of Act VI of 1863, would provide that the goods on which drawback was allowed should be easily identifiable; that the Governor General in Council might determine what such goods should be deemed to be, and that three-fourths (instead of seven-eighths) should be the amount of drawback, one-fourth (instead of one-eighth) being retained as reserved duty.

Various verbal amendments would be made, and the Bill would be so printed as to facilitate perusal.

Eight Acts and parts of Acts would be repealed and consolidated, and to these he hoped, if the Bill were referred to a Select Committee, to add two other Acts and an old Bengal Regulation. It was needless to dwell on the importance of having all the law on such a subject within the four corners of a single enactment.

The Motion was put and agreed to.

PRISONS' BILL.

The Hon'ble MR. COCKERELL moved that the Hon'ble Messrs. Strachey and Ellis be added to the Select Committee on the Bill to amend the law relating to Prisons in the Panjáb and the Provinces under the immediate administration of the Government of India.

The Motion was put and agreed to.

PRISONERS' BILL.

The Hon'ble MR. COCKERELL asked leave to postpone his motion for leave to introduce a Bill to consolidate the laws relating to prisoners.

Leave was granted.

The following Select Committee was named:—On the Bill to amend the Indian Penal Code, the Hon'ble Messrs. Strachey, Ellis, Cockerell and the Mover.

The Council then adjourned to the 30th August 1870.

WHITLEY STOKES,
Secy. to the Council of the Govr. Genl. for making Laws and Regulations.

SIMLA;
The 16th August 1870.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

NARRATIVE OF EVENTS CONNECTED WITH DR. CAYLEY'S MISSION TO LADAKH

No. 223—380, dated Murree, the 28th July 1870.

From—T. H. THORNTON, ESQ., D.C.L., Secretary to the Government of the Punjab,

To—The Offg. Secretary to the Government of India, Foreign Department.

WITH reference to your No. 1254 P, dated 19th instant, I am directed to forward copy of report by Dr. Cayley, on special duty, Ladakh, No. 1, dated 1st June 1870, together with copy of a letter addressed to the Commissioner of Jullundhur, No. 691 of the 10th idem.

No. 1, dated Nagar Kullu, the 1st June 1870.

From—DR. H. CAYLEY, on special duty at Ladakh,

To—The Secretary to the Government of the Punjab.

I HAVE the honor to commence a weekly narrative of events connected with my mission to Ladakh for the present season.

2. I reached the Kullu Valley on the 29th May, and found that the merchants, both Yarkundis returning from the Punjab and traders of Kullu, had already commenced their journey to Ladakh, and a considerable quantity of merchandise is now on the road. Very little has as yet, however, crossed the Rotang Pass into Lahoul.

3. Very great difficulty is already experienced in getting carriage, and this difficulty is certain to increase as the season advances. I have already passed one Yarkundi merchant unable to proceed for want of carriage, and another, Mahomed Ali, who came over last year as an agent of the Governor of Yarkund, has been supplied with coolies by the aid of the District officials; but this could only be done as an exceptional case.

There is no scarcity of labourers in the Valley, but they do not readily come forward, even for very high rates of pay.

4. When the subject of want of carriage was last year brought under consideration, a very carefully-planned scheme was proposed by Captain Harcourt, the Assistant Commissioner of Kullu, for the establishment of a mule train through the District. In this he showed that, calculating on the large quantity of merchandise passing through, and the great demand for carriage, if the Government started a mule train, it was hardly possible that it could not be worked at a profit, and that receipts would not more than cover the Rs. 3,500, the estimated expenditure for the season. The sanction of Government was given for a trial of the scheme, and the Assistant Commissioner was prepared to start it; but it was thought advisable by the Commissioner that an attempt should first be made to get it carried out by private contract, and notices were circulated but without any result.

In your letter No. 260 of 25th February, paragraph 3, it is stated that a mule train is being organized by Captain Harcourt; but, as stated above, his plan was not adopted, and no arrangements are as yet being made.

5. The road through Kullu is now in first rate order, and remarkably level and easy.

6. With regard to supplies, the Kullu Valley is very fertile and productive, and grain of all kinds is cheap and plentiful, but not so in Lahoul (with the exception of barley). In order to meet the wants of the traders at Lahoul, it would be necessary to establish a grain depôt at Kielang or other suitable place. I doubt if any private individual would, for the first year at least, undertake this without help from Government.

Captain Harcourt recommends that the services of Tara Chund Negi, of Lahoul, should be enlisted, and that he should be aided by a loan to enable him to lay in supplies,—the loan to be repaid in, say, two years. Tara Chund can give no regular security, but he is, I believe, thoroughly honest, and, as he receives a yearly salary of over Rs. 500, there could be no risk in advancing him a sum of Rs. 800 to Rs. 1,000, which would probably suffice.

7. The question of erecting shelter and providing supplies at Lingtee, on the boundary between Lahoul and Ladakh, has often been brought forward, though nothing has yet been done about it. The subject is of great importance to the trades, who have been petitioning me to have the matter arranged. I propose, however, to refer more fully to this after I have passed through Lahoul and made further inquiries.

No. 691, dated Lahore, the 10th June 1870.

From—Lepel H. Griffin, Esq., Under Secy. to the Govt. of the Punjab,

To—The Officiating Commissioner and Superintendent, Jullundhur Division.

Some time ago a mule train was proposed through the District of Kullu by Captain Harcourt, and was sanctioned by this Government in letter No. 3655, dated 8th December last. The Commissioner is understood to have thought it advisable that an attempt should be made to get the mule train organized by private individuals before the Government itself tried the experiment; but Dr. Cayley, writing from Nagar on the 1st of June, states that nothing has been done.

2. I am desired by the Hon'ble the Lieutenant-Governor to request you to take immediate steps to carry out the proposal sanctioned by Government. The season is now far advanced, but whatever is possible to be done in establishing the train should be done at once.

3. Secondly, I am directed to inform you, with reference to the 6th paragraph of Dr. Cayley's letter (a copy of which is herewith sent for your information), that His Honor sanctions an advance of Rs. 1,000 to Tara Chand Negi, of Lahoul, for the establishment of a grain depôt at Kielang, or any other place more appropriate—the loan to be repaid in two years;—and I am to request that you will at once take measures for giving effect to this sanction.

No. 197-757, dated Murree, the 29th June 1870.

From—T. H. Thornton, Esq., D.C.L., Secretary to the Govt. of the Punjab,

To—The Offg. Secretary to the Govt. of India, Foreign Department.

I am directed to forward, for the information of the Supreme Government, copy of a report No. 2, dated 13th instant, received from Dr. H. Cayley, on special duty.

No. 2, dated Kolang—Lahoul, the 13th June 1870.

From—Dr. H. Cayley, Joint Commissioner to Ladakh,

To—The Secretary to the Government of the Punjab.

I have been halting for four days at Kailang to enable Pundit Bukshi Ram, the Joint Commissioner appointed by the Maharaja of Cashmere, to join my camp. He was originally to have gone by Cashmere, Ladakh, and meet me in Lingtee, but he afterwards changed his plans and followed me by Kullu. He is anxious to cross the passes into Ladakh with me, and I have waited in consequence. He is to be here to-day.

2. I found the road through Kullu very easy and good in every way, with the exception of some of the bridges near Pulchan at the head of the Valley, which require repairing and strengthening. Over the Rotang Pass the road is hardly yet sufficiently clear of snow for repairs to be fully executed, but laden horses cross it safely. The descent by the old road to Koksur Village is much easier and less steep than the present road to the bridge four miles above the village; nearly all the coolies with loads and other pedestrians follow the old road and cross by the rope bridge, *Jhula*, opposite the village; but all animals have to go round by the new road and bridge as they cannot cross the *Jhula*.

3. The Koksur Bridge is greatly in need of repairs; but I believe that Captain Harcourt, the Assistant Commissioner in Kullu, is making arrangements for at once improving and repairing the roads, bridges, &c.

The road through Lahoul from Koksur Bridge to Kolang, four marches, is generally good and easy, and very much improved since I passed along it in 1867. In a few places petty repairs are required, which, Tara Chund tells me, shall immediately be done. In two or three places, where the old road was difficult, a new one is being laid out, and the work is rapidly progressing.

4. Nearly one hundred horse-loads of merchandize, the property of Yarkundis returning from the Punjab, have reached Lahoul. For about 65 loads the merchants have to depend upon hired carriage. They experienced some delay and difficulty in Kullu, but less in Lahoul. Tara Chund has as yet only purchased 22 yaks with the money advanced to him for the purpose of providing carriage; but he only received the first instalment of the advance last autumn, and the second half only two months ago. He is arranging for the purchase of more animals.

5. All ordinary supplies can now be obtained by the merchants at Kailang, in Lahoul, though at very high prices. A supply depôt is to be established at Dârcha, two stages higher up the Valley.

6. The first batch of merchants in this season proceeding to Ladakh nearly a month earlier than usual.

No. 212—842, dated Murree, the 16th July 1870.

From—T. H. Thornton, Esq., D.C.L., Secretary to the Government of the Punjab,

To—The Offg. Secretary to the Government of India, Foreign Department.

I am desired to forward, for the information of the Government of India, copy of report received from Dr. Cayley, on special duty to Ladakh, No. 3, dated 21st June 1870.

No. 3, dated Serab Valley, the 21st June 1870.

From—Dr. H. Cayley, Joint Commissioner to Ladakh,

To—The Secretary to the Government of the Punjab.

On the 1st instant I was joined at Kolang, in Lahoul, by Pundit Bukshi Ram, Joint Commissioner appointed by Cashmere, who had followed me through Kullu and Ladakh. He has with him a large camp and escort of twelve sepoys.

His orders are to follow the rules issued for the guidance of the Joint Commissioner, and is authorized, in all ordinary matters, to act without special reference to the Maharaja's Government.

2. We left Kolang on the 14th, and marched by regular stages over the Baralacha Pass to Lingti, and encamped on the Serab River on the 18th.

The road through Lahoul and over the Baralacha to Lingti is vastly improved in the last three years. It is now in very fair order, except where covered with snow, as it still is, for some four miles over the Pass, and quite passable and easy for laden horses. It requires the ordinary repairs in places where portions of the road or bank above have here and there slipped down from the effects of the winter's snows. All this I have pointed out to Negi Tara Chand who accompanied me to the foot of the Baralacha, and he promises to have the necessary repairs at once carried out. On the north side of the Baralacha, just above Kailung, similar repairs are much wanted, and it is very important that the road should be put in order quickly. In two places in Lahoul,—*first*, between Koksur and Sisu, and again close to the bridge over the Bhaga, where great difficulties occur,—an entirely new line of road is being laid out for a short distance, and the work is rapidly progressing under the superintendence of the Assistant Commissioner of Kullu and Mr. Theodore. After its completion, there are some similar portions of new road to be made higher up the Valley between Kailang and Darcha.

The bridge at Putseo, in Lahoul, is very weak and unsafe for animals: the river is, however, almost always fordable.

The bridge over the Yunam at Kailung north of the Baralacha is also unsafe for horses, and should, I think, be improved. The bridge built last year over the Serab below Lingti plains is remarkably good and substantial. A bridge is very much wanted over the Serchu where it crosses the Lingti plain, as the river often becomes dangerous for fording. This road will, of course, always require annual repairs, but when once it is completed they would not be of an expensive character.

3. In consultation with Tara Chand, I selected what appeared to be the most suitable sites for building *serais*, or rest-houses, at Putseo and Zinzingbar. These *serais* should, I think, be of the most simple construction,—merely a row of very strongly-built huts without wooden doors (which are sure to be used as fuel), but with a high wall enclosing a small court in front to keep off wind and snow, and give shelter to horses.

* * * * * * * * *

6. The scheme proposed two years ago of establishing a summer village at Lingti, has not been carried out. The plains, though presenting a fine level expanse of grass with abundance of fuel (the Tama or Tibetan furze), have no surface water and cannot be irrigated, so that in this dry climate cultivation would be impossible. The Lahoulis being cultivators and not a pastoral people, will not settle for the summer with their flocks and herds as the nomad Tartars do in Rupshu and other parts of Ladakh.

It would be a great boon to traders if a small settlement or even a grain depôt could be established at Lingti, as it just breaks the journey of nine marches between Darcha and Ruckchoo, along which no supplies can be procured. A rest-house or rather huts for shelter is much wanted on the north side of Baracha at Kailung.

7. In order to examine the Serab Valley and Pongpo Pass before deciding on the best trade route through Ladakh, I have turned south-east from Lingti, and am now marching up the Serab Valley. Pundit Bukshi Ram is unable to accompany me, as he finds it necessary to travel part of the way in a *dooly*, and the Rupshu people all say that the Pass is not yet open, and no pony can cross it: it would be impossible to carry a *dooly* over safely.

He will go by the Lacha Ling which I already know, and meet me again at Perga.

No. 206—797, dated Murree, the 9th July 1870.

From—T. H. THORNTON, ESQ., D.C.L., Secretary to the Government of the Punjab,
To—The Officiating Secretary to the Government of India, Foreign Dept.

I AM desired to forward, for the information of the Government of India, copy of Report No. 4, dated 28th ultimo, received from Dr. Cayley, on special duty at Ladakh.

No. 4, dated 28th June 1870.

From—DR. H. CAYLEY, Joint Commissioner to Ladakh,
To—The Secretary to the Government of the Punjab.

SINCE my last report I have thoroughly examined the eastern route from Lingti by the Serap River over the Pongpa Pass and along the Isomriri Lake to Puga, and I am fully convinced that it is not only far inferior in every way to the old road by the Lachalang Pass and Rukchen, but that it is almost impracticable as a commercial route, unless enormous

expense is incurred in making a new road for nearly 30 miles over very difficult ground, which would take several seasons to complete, and, when made, would require extensive repairs and partial renewal every year on account of the effects of landslips and avalanches. This route has often been mentioned as possessing many advantages over that by the Lachalang, and from what I had heard from Natives who had travelled along it, I had myself that idea. I now find, however, that it is only traversed late in the autumn by traders with wool, borax, &c., carried on sheep and goats, which easily clamber along the rough stony slopes, and that in August it is looked upon as impassable from the size and force of the river, which has to be crossed several times.

2. I need not give a detailed description of the route, but only mention the following points:—

I.—From the junction of the Yunam and Serap streams at Lingti to Puga is by the Pongpala seven stages; by the Lachalang, Puga is only five, and the marches are as long or longer by the former than the latter route.

II.—Grass is not more abundant than by the Lachalang, although there is one very extensive grazing ground near the foot of the Pongpa Pass.

III.—The first march up the Serap to an encamping ground, called Lama Gura, is tolerably good and easy, but the next stage presents many difficulties. The path runs sometimes in the bed of the stream, which in August becomes a tremendous rushing torrent; at other times it lies along the steep stony slopes of mountains composed of brittle limestone, where, every spring, landslips occur and carry away or cover every vestige of a path.

IV.—The river has to be forded two or three times, and though a very insignificant stream when I saw it, in the height of summer it becomes dangerous and often quite unfordable.

V.—The ascent of the pass is not difficult; the height is, however, nearly 17,500 feet; the Lacha-lang being 800 feet less. The pass is, however, not safely open till late in July on account of some steep slopes of snow under overhanging precipices, from which water drops continually on to snow below, and freezes into a steep incline of smooth hard ice, on which laden horses can never safely pass. The snow is so completely sheltered from the sun by lofty precipices above, that it does not melt till late in summer. On the Lachalang scarcely any snow lies after June 15th, and never offers any difficulties.

VI.—The descent of the pass on the Ladakh side is very gentle and easy, as is the whole road on to Isomriri and Puga. The northern slope of the Lachalang is much more steep, but there is now a fairly good road, which only requires ordinary repairs to render it quite easy. These repairs will at once be commenced. The road from the north side of the pass to Puga is almost a level plain.

3. It admits of no doubt in my mind that the Pongpala route is unsuitable as the main trade road through Ladakh, and the old route by the Lachalang must be taken.

In this opinion Pundit Bakshiram concurs.

4. The next point to be determined is the line of route from Rukchen to the head of the Pangong Lake. There are two ways that are quite practicable,—*first*, the old well-known road which goes over the Taklang Pass to the Valley of the Indus, crosses the river at Machalang, 22 miles east of Lé, then runs up the Chimri Valley and over the Changla Pass to Tantsi and the Pangong Lake.

The other road turns eastward from Rukchen, crosses the Polokonko Pass to Puga, and then runs down to the Indus at Mahie or Nioma, and crossing the river by ford or ferry at high water, goes over a pass to Chushul on the Pangong Lake.

The distance by the two roads is about equal. The old road is well known and well-established, and fairly good, and can easily be improved. The passes, though high, are not difficult, and there is a good bridge over the Indus at Machalang. The other route for the four marches between Puga and Chushul I have not yet seen, but I believe it is very favourable, and the pass easier than the Chungla. A bridge would have to be thrown over the Indus, for which the timber would have to be carried at least 15 days' journey. The essential difference between the two routes is, that the old passes through inhabited and cultivated parts of Ladakh, where supplies of all kinds, grain and fodder, are plentiful, and carriage can more readily be obtained; whereas the Puga route lies through almost uninhabited tracts, where there are only two or three insignificant villages, and where cultivation is hardly carried on at all, and the distances from the sources of supplies so great that I can hardly think it possible that efficient supply depôts can ever be kept up, especially as regards grass and fodder; nor will carriage ever be procurable.

I hope shortly to traverse the portion of this route I have not yet seen, but unless it presents very decided physical inferiority over the other, I do not think it would be advisable

to fix upon it as a commercial road to be in future under the Joint Commissioners: the probable result would be that hardly a trader would ever travel by it.

In discussing the matter at Puga, three days ago, with Pundit Bakshiram, he said he was unable to express an opinion until he had referred to the Maharaja, and I now briefly bring these points to your notice, as I may have to ask for definite instructions on the subject before it can be decided.

5. My original plan was to proceed from Puga by Nioma and Chushul to the head of the Pangong Lake, and there meet the mission going to Yarkund; but at Puga I heard that Mr. Forsyth would not reach Lé till July, and also that messengers had just come over from Yarkund, and I deemed it advisable at once to hurry into Lé and pick up all the Yarkund news and ascertain accurately the state of the country. As this information may be of importance to Mr. Forsyth, I expect to reach Lé July 1st.

The arrivals from Yarkund are two messengers of the Dad Khwah of Yarkund, from whom they have brought letters for me,—one a complimentary letter expressing his wish for a continuance of friendship, and thanking me for some breech-loader cartridges and powder and caps I sent him last year, and sending me some specimens of China and Kashgar silk fabrics. The other letter was asking for medical advice.

The messenger left Yarkund about April 12th, and reached Lé on 16th June.

6. Mr. Shaw's servant and baggage have reached Ladakh. He has not yet arrived, but a dooly dâk is laid for him on the road.

7. Pundit Bakshiram has continued his march on from Puga towards the Pangong Lake.

No. 209-827, dated Murree, the 15th July 1870.

From—T. H. THORNTON, ESQ., D.C.L., Secretary to the Government of the Punjab,

To—The Officiating Secretary to the Government of India, Foreign Department.

I AM desired to forward, for the information of the Government of India, copy of a memorandum No. 5, dated 5th July 1870, from Dr. Cayley, on special duty at Lé, in Ladakh.

No. 5, dated Lé, the 5th July 1870.

From—DR. H. CAYLEY, Joint Commissioner to Ladakh,

To—The Secretary to the Government of the Punjab.

I REACHED Lé on the 1st of this month, and, on arrival, received the customary visits of ceremony from the officials of the District, who, as usual, came out to meet me and conduct me to my residence. Shortly afterwards, Mulla Bákí, the messenger of the Dad Khwah of Yarkund, came to see me, and spoke, without hesitation, about the state of Yarkund, and described everything as being well and prosperous. The Atálík Ghází was at Kashgar; but I gathered that he had been for a day or two at Yarkund to receive the annual tribute or presents.

The messengers left Yarkund about the 12th April, and reached Lé on the 16th June; and no intelligence of any kind has come over since the middle of winter almost immediately after the arrival of the envoy, Mirza Shadi.

In the evening I was visited by Kari Hamad, the Vakeel, sent on last winter from Yarkund to the Maharaja of Cashmir, and who returned from Jammú about ten days ago. He spoke of all being well in Yarkund, and will proceed there as soon as he can procure carriage, having sent on messengers about five weeks ago.

2. Mr. Forsyth and his party arrived here on the 2nd, and are still here waiting for the guns and other property belonging to the Vakeel, Mirza Shadi.

Syud Yakúb Khan, the envoy who went to Constantinople, is with Mirza Shadi. He is a connexion of the Atálík, and evidently much looked up to by all the Yarkundis. The letter he received last year from the Viceroy to convey to the Atálík was forwarded in the winter, and reached Yarkund before Mulla Bákí left.

3. Mr. Shaw arrived here on the 3rd, and has not suffered from his rapid journey. On that evening, I invited Yakúb Khan, Mirza Shadi, and Kari Hamad, the envoy to Cashmir, to dinner to meet Mr. Forsyth's party, and the evening passed most satisfactorily. I mention this, as such friendly intercourse with a man in the position of Yakúb Khan may be of assistance to the mission in Yarkund.

4. There is no news as yet of the kafila from Yarkund. The traders are beginning to arrive from the Punjab.

5. The dispensary is opened here as usual, and during the past week there has been a daily average attendance of 14, and 64 new patients have been admitted.

No. 220—875, dated Murree, the 27th July 1870.

From—T. H. THORNTON, ESQ., D.C.L., Secretary to the Government of the Punjab,

To—The Officiating Secretary to the Government of India, Foreign Department.

I AM desired to forward, for the information of the Government of India, copy of a report No. 6, dated the 14th July 1870, received from Dr. Cayley, on special duty in Ladakh.

No. 6, dated Pangong, the 14th July 1870.

From—DR. H. CAYLEY, Joint Commissioner to Ladakh,

To—The Secretary to the Government of the Punjab.

AFTER remaining a week at Lé, I left on the 7th and am now accompanying Mr. Forsyth's party, with whom are the Vakil Mirza Shadi and also Syud Yakúb Khan. I propose going on with them as far as the Changchenmo Valley. My plans then are to go on ahead and take the north-westerly route to the head of the main branch of the Karakash River, which was discovered by Mr. Hayward in 1868, follow down the course of the river and rejoin Mr. Forsyth on the other branch of the Karakash, and continue with him for four or five marches nearly to Shadula. I then wish to turn back over the Sukait Diwan and make my way across the plains between that and the point on the Karakash called by Mr. Hayward Kush Maidan. In this way I shall see all the routes between the Changchenmo Valley and Shadula, and be able to decide upon the best. Mr. Forsyth will go by the route across the northern plains which I followed in 1868, and which is now well known to Mr. Shaw and to many of the Natives with them. It would not be safe for their large camp to follow a new route unknown to every one present, and where the road might be impossible for horses, or where grass and water might not be procurable. My journey will, of course, take time, which I can with difficulty spare; but it is most important that the future trade route beyond the Changchenmo should be definitely settled, and I can only do this satisfactorily by personally examining all the different routes. I shall be able afterwards, in consultation with Pundit Bakshiram, to lay down the road through Ladakh Proper and arrange for *serais*, &c. The road from the Indus to the Changchenmo by Tantsé is now excellent, and *serais* have already been built at several places which I pointed out last year. The Yarkund envoy is greatly pleased with the road thus far.

2. I submit Tables showing the trade of Ladakh during the winter season. The total amount is a little more than in the corresponding period of last year. As will be seen from the Returns, the Rampúr and Kullu routes were quite closed.

The Srinagur route was open in November and June, and a considerable quantity of merchandise, chiefly belonging to traders of Kashmir, passed along it both to and from Ladakh.

In November about 80 horse-loads of goods went to Yarkund, partly belonging to some of the Yarkundis who remained later than usual in Ladakh, but chiefly in the hands of merchants of Kashmir. At the end of October about 120 horse-loads of goods went to Yarkund by the Changchenmo road and reached Shadula with the loss of only three horses (this merchandise was given in last year's Returns). Very soon afterwards the merchants who went back by the Karakoram lost nearly half their baggage animals. The imports from Chanthang and Shapa were considerable, including 106 maunds of brick tea and 340 maunds of pushm and wool. The exports to Chanthang comprised, rice, flour, and dried fruits.

One hundred and eighty-six maunds of brick tea went to Kashmir, and a small quantity (one maund) was taken for the first time to Yarkund.

3. No intelligence of any kind has come from Yarkund since the middle of June as noticed in my last.

TABLE I.

Exports from Ladakh during the eight months from 1st November 1869 to 30th June 1870.

H. CAYLEY,

Joint Commissioner to Ladakh.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

CONDITION OF IMMIGRANTS IN THE COLONY OF ST. VINCENT.

Public.
No. 75.

INDIA OFFICE;
London, the 14th July 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

MY LORD,—In continuation of my despatch of the 7th of April last, No. 32, I forward herewith a copy of a despatch* from the Lieutenant-Governor of St. Vincent, covering the report of the Immigration Agent in that Colony for the last half of 1869, together with a letter from the Emigration Board to the Colonial Office reviewing the same.

* 9th of May 1870, No. 43.

2. I am glad to perceive that this report is, in all respects, satisfactory.

I have the honor to be,

MY LORD,

Your Lordship's most obedient, humble Servant,

ARGYLL.

No. 43, dated Government House, St. Vincent, the 9th May 1870.

From—The Hon'ble G. BERKELEY, Lieutenant-Governor of St. Vincent,

To—His Excellency GOVERNOR RAWSON, C.B., &c., &c. &c.

I HAVE the honor to forward to your Excellency, for transmission to the Secretary of State, the report* of the Immigration Agent for the half-year ended 31st December last, the delay in furnishing which has arisen, as stated by Mr. Brown, from a want of punctuality on the part of the managers in making their periodical returns.

* 19th April 1870.

2. I trust your Excellency will agree with me in regarding the state of things exhibited in this report as favorable. The principal events of the half-year were the arrival of 343 immigrants from Calcutta, and the commutation of the return passages to which a right had been acquired by 112 of the first batch of coolies (Madrasees) ever introduced. This latter operation of a law recently sanctioned is most beneficial, both as effecting a large saving of expense for return passages (the maximum bounty in lieu being £10), and as retaining in the country laborers who have become acclimated and familiar with their duties.

3. In my despatch No. 689 of the 23rd November 1869, I referred to certain irregularity in the visits to estates of the medical attendants, consequent upon exceptional circumstances which I described. The directions issued by me to the proprietors have resulted in as careful provision as it is possible to make against the recurrence of such irregularity; and I am happy to add that on one estate in the leeward quarter, where the Surgeon's visits had previously been (by special permission) limited to once a month, in consequence of there being no medical gentleman resident within 22 miles, the proprietors have, at increased cost, secured weekly visits of an experienced practitioner from Kingstown.

Dated St. Vincent, the 19th April 1870.

From—J. H. BROWN, ESQ., Immigration Agent,

To—The Hon'ble the Colonial Secretary.

I HAVE the honor to present my Report on Immigration for the half-year ending 31st December 1869.

The reason for its delay I have already communicated to you, *viz.*, the delay in the half-yearly returns from the estates, and from my having to return many of them for amendment.

Half-yearly Visit.—This visit, directed by law, I have paid to the various plantations upon which immigrant laborers are located. I have inspected the immigrants, their houses, and the books required to be kept, and found nothing objectionable. At some places. the buildings, needed white-washing, which I directed to be done. The medicines prescribed by regulation, are in possession of the managers, except on Montrose Plantation, for which, as it adjoins the town, prescriptions as ordered are made up at the druggist.

Medical Visits.—In the month of July, Drs. Arnott and Hughes were compelled to leave the Colony to recruit their health, and, unfortunately, at the same time, Dr. Checkley was attacked by serious illness. These circumstances, beyond control, occasioned suspension of weekly visits to some of the estates. Dr. Cumming has charge of the windward portion. The attention of the Government was directed to the occurrence, and happily it was proved that no sickness prevailed. Upon the return of Dr. Arnott, and the recovery of Dr. Checkley, the punctuality of the visits was resumed, and has since continued.

The following five Schedules convey the information principally looked for, from this report:—

SCHEDULE A.

Births.—The births have been 22. The sexes are detailed, and the plantations on which the deaths occurred.

SCHEDULE B.

Deaths.—The deaths have been 12; the causes of death are shown.

SCHEDULE C.

Exhibits full particulars of the comparative and actual number of Indian immigrants, removals, additions, labor, idleness, and earnings.

Numbers.—The amount of Indian labor was shown to be 722 on 30th June 1869. On 31st December 1869, it has increased to 1,181.

Arrivals.—On the 13th day of July, the ship *Imperatrice Eugenie* arrived and landed 343 souls equal to 306 adults, 200 men, 83 women, 28 boys, 18 girls, and 14 infants. During the voyage, there were six births; and six adults, two boys, and four infants died. The people were landed at the depôt. They were visited twice a day by the Health Officer, Dr. Arnott; the really sick were sent into the Colonial Hospital, where five died; those with slight ailments were placed apart from the body of the people, in a temporary hospital at the depôt. After the lapse of a week, by which time they had recovered from the effects of the voyage, they were distributed as shown in Schedule C. One hundred and twelve people *ex-Travancore* from Madras in 1861, who became entitled to a back-passage, entered into fresh contracts upon the plantations enumerated in same schedule, for a period of three years, receiving a gratuity of $25 equal to £5-4-2 and resigning all claim to back-passage. This arrival, the retention of the *Travencore* people, and the excess of births over deaths, account for the increase in numbers.

Removals.—There have been none during the year.

SCHEDULE D.

Crimes and Offences.—Eighteen immigrants were placed in jail during the half-year Their offences, as shown, were not of a serious nature.

SCHEDULE E.

Particulars of African and Portuguese Immigrants.—The numbers are reduced by five from the last half-year, that number of Africans having passed out of indenture.

Health.—The health of the coolies generally has been favorable.

Relations between Master and Servant—Continue to be satisfactory.

Labor.—The number of days on which labor was performed amounted to 93,694, sickness and holidays to 34·930, idleness to 17·932; the total earnings to $14,866-92c., and the average earnings show an increase upon last half-year. The people received per *Imperatrice Eugenie* have proved well adapted to field work, and are generally pronounced to be the best of the batches of immigrants yet received. Those per *Newcastle* are improving in habits and industry.

The year 1869 closed upon the plan of immigration in as favorable a position as could be reasonably expected and with fair prospects for the future development.

Dated Emigration Board, the 22nd June 1870.

From—Sir T. W. C. Murdoch,

To—Sir F. Rogers, Bart &c., &c.

I have to acknowledge your letter of the 15th instant, with a copy of a despatch from the Lieutenant-Governor of St. Vincent, enclosing the usual report from the Immigration Agent for the half-year ended 31st December last.

2. This report, it is explained, has been delayed from the want of punctuality on the part of managers in making their periodical returns. It is of a satisfactory character, and calls for no comment. The leading statistics are as follows :—

3. The number of indentured Indians on 31st December 1869 was 1,181, including 337 new arrivals in the half-year by the *Imperatrice Eugenie*, 112 who had commuted their right to a back-passage and re-indentured themselves, and 10 the excess of births over deaths. They were all located on 23 estates. The number for the preceding half-year was 722.

4. The deaths in the half-year were 12 and the births 22. The number of offences was 18, of which two were larceny, seven breach of contract, and nine assaults, all committed by coolies *inter se*, and none of them said to be serious.

5. The amount of work performed calculated in days was 936·694, of sickness and holidays 34·930, and of idleness 17·932. The total earnings were $14,866-92c. The health of the coolies was generally favorable, and the relations between them and their employers continue to be satisfactory.

6. Besides the coolies, there were 14 Africans and three Portuguese indentured of five estates. This is five fewer than on the 31st July 1869, that number having passed out of indentureship in the half-year.

MEMORANDUM BY ARMY SANITARY COMMISSION ON DR. BRYDEN'S REPORT ON EPIDEMIC CHOLERA.

Sanitary.

No. 21.

India Office;

London, the 14th July 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

My Lord,—I forward herewith, for the information of your Excellency in Council, 20 copies of a memorandum by the Army Sanitary Commission on Dr. Bryden's report on epidemic cholera.

2. I desire that a copy of this memorandum may be sent to Dr. Bryden.

I have the honor to be,

My Lord,

Your Lordship's most obedient, humble Servant,

ARGYLL.

Memorandum by the Army Sanitary Commission on Dr. Bryden's *Report on the Cholera of* 1866-68, *and its relations to the Cholera of previous epidemics in India,—dated War Office, the 20th May* 1870.

This report is a valuable contribution to the epidemiology of India. It contains a large amount of extremely interesting detail on the subject of cholera, extending over many years, including the first connected view of epidemics of cholera in Bengal, with detailed statistics, for British and Native troops and for jails.

The statistical data are deficient in some necessary particulars. For instance, there are no statistics of cholera among the Native population, such information not having been in existence, and there are in the report no detailed statistics of cholera for Bombay and Madras Presidencies capable of being usefully compared with these for Bengal. Without full statistical information,

such as we have asked for in our instructions for the Indian Cholera Enquiry, the law of movement of cholera cannot be accurately arrived at, and the absence of these data renders it necessary for us to suspend our judgment on Dr. Bryden's views for the present.

The general statistical arrangement adopted by Dr. Bryden includes the following data for British and Native troops :—

(1) years of epidemics;

(2) stations attacked in each year;

(3) strength of troops at each station;

(4) monthly admissions and deaths at each station.

The jail statistics include corresponding data, and are partly placed in the text.

Besides these general Tables, there are numerous summary and analytical Tables giving the details day by day of specific outbreaks of cholera in regiments and jails, and showing the death-rates to strength and to cases.

A few Tables showing the influence of rain-fall are introduced, but the meteorological data are generally deficient.

There is little or no information on the sanitary condition of stations.

The influence of meteorology on the progress of cholera is fully acknowledged, and the probable effect of bad sanitary condition and locality in augmenting the severity of attacks is admitted, as is also the influence of personal communication. But all such influences are considered by Dr. Bryden as subsidiary and subordinate to other laws of epidemic movement.

The view generally held by the author on this point resembles that held in Europe, *viz.*, that there is a movement of epidemic cholera independent of all conditions, but the existing state of sanitary improvement in India does not yet appear to have shown to what extent the fatality of epidemics among a population depends on the conditions under which the people live, and hence Dr. Bryden subordinates the conditions to the general law of movement which his report is intended to illustrate.

The law of movement is arrived at through the statistical data.

From what has been already said respecting the nature of these data for regiments and jails, it will be seen that the dates at which cholera has appeared at any station or jail over the North of India can be obtained, and in this way the movement of cholera in time and space from its beginning to its termination, so far as regards stations, at least, can be shown. But without the evidence which would be afforded by statistics from other Presidencies and Governments, including statistics of the Native population, it is evident that the data from regiments and prisoners cannot by themselves be accepted as affording all the information required on the movement of an epidemic. The military or jail statistician may be able, in his own estimation, to fix the precise date of the arrival of an epidemic from his hospital books, while cholera may have passed the locality long before, and be many miles ahead in its course among the Native population. A similar remark applies to the termination and resuscitation of an outbreak. Again, while the statistician in the North of India may be dealing with one group of facts, there may be phenomena in progress in the South which would materially influence his conclusions.

We have stated in our "Instructions" what appears to us to be the only true principle on which such an investigation can be carried out, as follows :—"Epidemics seize on all classes of the population, and no trustworthy information can be obtained regarding the movement of epidemic cholera, except by including all classes in the same general statistical inquiry."

Taking Dr. Bryden's data as they are, we shall next proceed to state generally the principles at which the reporter has arrived. But in doing so, it is necessary to premise that, from certain obscurities in style in parts of the report, it is not always easy to follow the author's reasoning.

A line drawn along the 86th meridian of East longitude, from the mouths of the Mahanuddy to the roots of the Himalaya, and another line parallel to this, drawn from the North-East angle of the Bay of Bengal to the Himalaya, will form the Western and Eastern boundaries of a great tract of country, with an area of about 122,500 square miles, having the Himalaya for its Northern, and the sea for its Southern limit. It is the country of the great waters, and contains within it the deltas of the Mahanuddy, Ganges, and Bramahpootra.

This great District is, in Dr. Bryden's view, the perennial home of Indian cholera. It was first recognized as a mortal disease within this area. It always exists in its endemic

condition within this endemic country. It never dies out, it appears and disappears at different points and at different seasons, and sometimes even within this area it becomes epidemic without necessarily passing over the ordinary endemic limit. Its climatology is peculiar. The whole region is under the influence of the sea board. It is a region of perennial moisture, from drainage of its own hills and from river outlets. Its rain-fall is double that of any other Province in Bengal Presidency. It receives the full force of the monsoon. Ground moisture is always within a few feet or inches of the surface. Vast tracts are under water every year until the cessation of the monsoon, and the fall of the rivers permits the ground to rise above the water. "It is with the inundation of these tracts that cholera disappears; it is with their re-appearance that cholera re-appears upon the diluvial soil and Districts adjacent, immediately invaded by it"

Besides cholera, the population of this endemic area suffers intensely from the whole group of miasmatic diseases and their consequences.

It may be stated here that Colonel Henderson showed that, of the third of the Bengal Native Army serving in Bengal Proper, the mortality was greater than of the two-thirds occupying the plains to the North-West.

It is the weak point, so to speak, of India, and from among its teeming population spring up those "bodies of cholera," as Dr. Bryden defines them, which overflow the boundary from time to time, and commence their destructive march towards the North-West, or West or South-West, East, or North-East, overflowing at last the boundaries of India and invading the regions of Asia, Africa, and Europe which happen to be in their course.

Much cholera within the endemic area bodes danger to the Districts beyond it.

Little cholera within the area is unfavorable to epidemic advance.

Dr. Bryden appears to hold the view that all cholera occurring outside the endemic area is invading cholera. It is a cholera which originally came from the endemic area. It may have apparently disappeared and died out, and its re-appearance, if this takes place, is simply a revival of the original body of the invading cholera. Such a revival outside the endemic area may itself become the starting point for further progress of cholera into the regions beyond.

India is thus to be considered as divided into an endemic area and epidemic areas. The phenomena may differ in the epidemic areas, but they are to be considered as epidemic phenomena nevertheless.

In the present state of knowledge, Dr. Bryden considers that the ultimate cause or *materies* of cholera, whatever this may be, comports itself more like an organized vitalized body than anything else. That it has a period of growth, existence, decay, re-vitalization, and death, and that these states are under the influence of time, place, and atmospheric conditions.

Hence he holds that when any Station or District, outside the endemic area, is attacked with cholera, with intervals or seasons of entire cessation, the fact is not to be interpreted as showing that cholera is endemic in the station or locality, and has broken out afresh at each increase. He holds that these variations in intensity are influenced by season or by monsoon influences, or by rain-fall or winds, but that they are all part of the original epidemic invasion of the country.

The epidemic itself is made up of these periodical appearances and disappearances, and the *materies* of which it consists may be augmented from time to time by fresh invasions from the endemic area.

The direction which any epidemic may take, depends on the point at which cholera overflows the endemic boundary. If this is towards the North-West it would follow the Ganges Valley upwards. If towards the West, it would seize the Hazareebagh plateau, and proceed Westwards. If towards the South and West, it would cross the country towards Bombay.

Cholera epidemics proceeding Westward would continue their course until met by the South-West monsoon, and would then be turned Northward by the atmospheric influences.

The arrest of cholera at any part of the Indian frontier will depend on the strength of the body moving, and on conditions favorable or unfavorable to its onward progress. It might stop anywhere when exhausted.

A Westward moving cholera is the one which, under favoring conditions, would pass into Arabia, Africa, and Southern Europe; while a cholera moving to the Northward would invade Persia and Russia.

Dr. Bryden considers that the whole bearing of the cholera miasm has a remarkable resemblance to that of the miasm producing malarial fevers, only that it has its own specific character. He holds that cholera miasm may exist without population; that the existence

of population is only the condition under which its presence is manifested; that it will cross unpeopled deserts and attack the Districts beyond, if lying in the direction in which it is progressing, and hence that all attempts to arrest its course by quarantine must necessarily be futile; that, once started on its course, it must fulfil its life period, which, for Northern India, appears to be four years.

There is a most interesting series of maps in the report, illustrating the laws of progress of cholera as deduced from the available statistics over the North-West and West of India.

These maps show cholera always present within the endemic area already described. In the first year of its epidemic progress, it is shown as overstepping the endemic boundary, and occupying a certain region of country to Westward. Next year, as occupying more ground; the third year, as still progressing, but occupying some of the older ground with less intensity, and during the fourth year reaching its most distant limit from the endemic boundary, while the District immediately outside the boundary which was first attacked is free or nearly so.

The next epidemic shows a fresh outbreak on this exempted District, and then a progressive course West and North-West as before for the next four years.

Dr. Bryden appears to consider that the force which moves an epidemic of cholera is the wind. He doubts altogether the alleged fact that an epidemic has ever progressed in a direction contrary to the wind; a resuscitation of cholera in any direction contrary to that of the wind would, in his view, depend on some other cause, possibly a re-vitalization of part of an epidemic which at the very time is moving with the wind.

The course taken by the epidemic in any particular District or Province will be modified by local geographical or topographical conditions, or by meteorological causes of a temporary nature, but all will be subordinate to the great onward primary movement and the force which guides it.

Among subordinate conditions influencing the local course and local severity of an epidemic progressing in obedience to the great primary movement, Dr. Bryden ranks all those causes included under local sanitary condition, local topographical causes, such as wet or marsh land, local rain-fall, changes of temperature, great stillness of atmosphere, personal communication, bad personal habits on the part of troops, intemperance, general want of cleanliness, fatigue, terror, alcoholic poisoning, and the like. He adduces cases which appear to him to prove communication from persons to persons of cholera; but communication would not, in his view, influence the movement of the epidemic itself, which is subject to other laws altogether.

On the other hand, he brings forward long experience in the hospitals of Calcutta within the endemic area, and also of hospitals elsewhere, to show that apparent communication of cholera from affected patients to attendants or to other patients is a rare occurrence, if it ever really takes place.

He calls in question all the recent popular theories of epidemic cholera, and shows that none of them can account for the facts of epidemics. He shows that the dry-earth system, from which so much was expected on account of its supposed more complete disinfection of cholera excreta, had led to no apparent result as regards this disease. He sets aside the decisions of the Constantinople Conference regarding the movement of cholera, as not being in conformity with facts. Dr. Bryden adduces some most interesting, though melancholy, facts, showing the influence of cholera on different races attacked at the same stations and at the same dates.

The general results are as follow:—

Attacks per 1,000—	
European Troops	89·20
Native „	9·56
Died per 1,000—	
Europeans	53·68
Natives	4·11
Died out of every 100 cases—	
Europeans	60·19
Natives	43·02

Goorkhas suffer even more than Europeans from cholera.

These figures represent the terms of the great problem which has to be studied and solved in India.

If cholera depends on a specific cause, what is the reason that it is 13 times more fatal to one class of men than to another? And can we by any procedure reduce the mortality among British and Native troops serving at the same station to the same figure?

Dr. Bryden makes a few important suggestions, and brings forward a few facts on the subject which merit consideration.

The history of cholera and its origin within the endemic area has never been studied. This should certainly be done at once. It would be a special application of our instructions if it were undertaken.

Dr. Bryden has adduced strong reasons for anticipating that the severity of epidemics in India would be materially diminished by attacking cholera in the endemic District. If the waters of this great area were brought under some control; if wet parts were drained; if the localities where cholera is ever present were specially dealt with; if, above all things, this rich Province were to be placed under improved culture and its malaria exchanged for useful produce, should we have reason to anticipate less cholera, or even its extinction?

This is a question to be specially dealt with in India; it can only be hinted at here as an apparent induction from Dr. Bryden's facts.

Another striking class of facts is the exemption from cholera of well wooded Districts, and increasing liability to the disease apparently in proportion to the denudation of the country.

Allied to this class of facts is the practice successfully followed by Native villagers of flying to the jungle for safety during cholera seasons.

The greater sub-division of Native than of European Regiments, from the practice of Native hutting, is another point worthy of notice.

Cholera is stated to have appeared in double-storied barracks in India, but Dr. Bryden shows that for seven years the new lofty barracks in Fort William have enjoyed comparative immunity from cholera.

An important fact, as bearing on the probable effect of keeping masses of men aggregated on a small surface in augmenting the severity of cholera, is that Native troops crowded together in boats appear to suffer as great a mortality as European troops in barracks.

The argument from this class of facts bears on the necessity of separation among men when cholera is expected, sowing them, as it were, broadcast over the ground.

Dr. Bryden adduces striking proof of great loss of life from increasing the number of men in a barrack during cholera times.

These are the main practical points in the report, which, it must be borne in mind, has for its object ascertaining the laws of movement of cholera, rather than suggesting meansolf diminishing its mortality. If our "Instructions" for the Indian Cholera Enquiry are rigidy followed, additional light will be thrown on all the questions dealt with by Dr. Bryden, as well as on many other questions beyond the scope of this valuable report, which, in addition to its special object, contains a large number of facts of great interest to all engaged on similar enquiries.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

REPORT ON THE DESERT OF BHAWULPOOR.

No. 2453I, dated Lahore, the 1st July 1870.

From—Lieut.-Col. J. Crofton, R.E., Joint Secretary to the Government of the Punjab, Public Works Department, Irrigation Branch,

To—The Secretary to the Government of India, Public Works Department.

With reference to your Office letter No. 347 I of 28th September last, calling for information regarding the tract of culturable land in the so-called "Desert" of Bhawulpoor, I am desired by the Hon'ble the Lieutenant-Governor to forward a letter as per margin, from the Political Superintendent of the State, Major Minchin, with enclosures, and a brief summary by the Chief Engineer in this Department.

No. 38 of 11th May 1870.

2. The apprehensions expressed by Major Minchin of the probable effect on the volume of the Sutlej adjoining Bhawulpoor from the construction of the large irrigation works higher up are not, His Honor considers, without some foundation. In the *Bangur* and even the desert, the wells show a change of water level, one proof of which may often be seen in the upper portion of a well being of large diameter, while a cylinder of smaller diameter has been carried down to the present spring level from the bottom of the large portion. The fact is not noticed in these reports, but it was formerly a subject of much discussion as to the causes of the change in the level of the water.

3. The Political Superintendent will be advised to carry out the annual measurements of the discharge of the river suggested by the Chief Engineer.

4. The papers and maps from Bhawulpoor are forwarded in original, no copies have been kept, and I am to request the favor of 50 copies of all, when printed, being sent to this Office.

No. 38, dated Bhawulpoor, the 11th May 1870.

From—Major C. C. Minchin, Political Agent and Superintendent of Bhawulpoor,

To—The Joint-Secy. to the Govt. of the Punjab, in the P. W. Dept., Irrigation Branch.

Referring to your letter No. 3666I, dated 16th October last, forwarding copy of letter No. 347I, dated 28th September 1869, from Secretary to Government of India, Public Works Department, calling for a report on the tract of arable land in the desert near Bhawulpoor with a plan showing the levels, &c., I have now the honor to submit a report from Mr. Barns, F.G.S., Superintendent of Irrigation, on the subject, together with a map and sections of levels taken during the past 18 months, reduced to the mean sea level, Kurrachee harbour.

2. In this map Mr. Barns has entered all the existing canals having separate heads from the rivers, which will show how largely advantage has been taken of our river board, and how deeply interesting the large irrigation schemes entered upon by Government are to us as affecting or likely to affect, our canal irrigation.

3. The Sirhind Canal is the one I view with the greatest alarm, as it must eventually reduce the volume of water in the Sutlej until it becomes a mere tributary of the Beas; and if, in addition, the dam is constructed at Ferozepoor, we must be prepared to see not only our canals affected, but the water in the wells lowered to an extent that may make them useless for agricultural purposes, as I believe has happened in the Mooltan villages bordering the Ravee.

4. If the Ferozepoor dam is constructed, I trust that Government will consider the regulation and control of the river between the dam and the Bhawulpoor Railway Bridge as an integral portion of the scheme, and affording some hopes of averting the heavy losses which this State must otherwise incur even when the State has obtained a share in the dam and a canal brought down the left bank.

5. The levels taken in this neighbourhood show that a canal from this dam would command the whole Bungur Tract, and as this tract is intersected by long ranges of sand hills running parallel to each other, it would be quite possible to convert some of them into tanks for storing water by closing the ends, as I believe was done in Ajmere.

6. The preparation of this map has been a work of time, as it could only be taken in hand when leisure was afforded from other important works; as, in addition to the ordinary canal clearances, we have excavated this season one entirely new canal and given new heads to five other large canals, which will account for the slight delay in the submission of this report.

Dated Bhawulpoor, the 31st March 1870.

From—J. W. BARNS, ESQ., F.G.S., Supdt. of Canal Irrigation, Bhawulpoor State,

To—The Political Agent and Superintendent, Bhawulpoor State.

THE levels taken last working season by Supervisor Keddar Nath and party over a large portion of the *Bangur* and desert land within this State having now been plotted, I have the honor to forward herewith a tracing of the same, on a scale of eight miles to the inch, on which I have also fixed in the levels of many other portions of the State, which have been taken during the present working season; the bench marks laid down by the officers of the Great Trigonometrical Survey, form the basis of this work, and all levels are reduced to the same datum, *viz.*, that of mean sea level, Kurrachee harbour; simultaneously, the plan itself is simply a copy of the eight-inch scale map of the Great Trigonometrical Survey Department, such points only as are not therein delineated being fixed in by compass traverses; canals shown by dotted lines are merely sketched in; and, as regards the rest, they are fixed in from rough compass Surveys. With this map I also beg to forward the following sections: section from Ameera in the Ferozepoor District along the line of levels taken past Ramnuggur, Wullur, Mojgurh, Trehara, Dilawur to Kundairah, also three cross-sections of the State, *viz.*, one from the river Sutlej through the Great Trigonometrical Survey bench mark at Golam Allee and the arain Great Trigonometrical Survey to Wullur; second, by one from the river Sutlej at Bhawulpoor in a South-Easterly direction through Mojgurh to the confines of the State, and a third from the River Indus near Shahpoor Great Trigonometrical Survey nearly due South to Kundairah.

Sheet of levels of the *Bangur* and desert land of the Bhawulpoor State forwarded.

2. On this plan there will be observed a ridge of low sand hills more or less parallel to the rivers which border the State, and the land on the North side of that ridge is what is called Khadir, being the recent alluvion of those rivers; its average breadth may be assumed as 10 miles and both in the directions of its length, *viz.*, from North-East to South-West, and in the direction of its breadth, *viz.*, at right angles thereto, its slope is from 12 to 13 inches per mile; and although it is within this Khadir that all irrigation is at present for the most part confined, we are gradually extending some of our present canals into the adjoining *bangur* which I will now describe.

The recent alluvion of the rivers bordering the State called Khadir—its description.

3. The *Bangur* forms a second or intermediate strip of land running the whole length of the State parallel to the Khadir from which, on its Northern side, it is separated by the ridge of low sand hills before referred to, and on its Southern side a depression, known as the Hukra or Wahund, separates the *Bangur* from the great desert, a portion of which, as shown on the plan, lies within the Southern boundary of the Bhawulpoor State.

4. This *Bangur* tract covers an area of about 9,000 square miles, large portions of which are covered by sand drift from the adjoining desert; but, on a rough calculation, I consider that about half or, say, 4,500 square miles of first class land is fit for the plough, if water for irrigating it were available. A reference to the sections forwarded will show that at the upper end of the State the highest part of the *Bangur* land is 31 feet above the Sutlej and that at Bhawulpoor it is about 16 feet, and therefore how costly it would be to lead the Sutlej water into any part of the *Bangur* between those points; below Bhawulpoor the difference of level between the two lessens considerably, so much so, indeed, that at a point 36 miles from Bhawulpoor we can command the highest ground to be found; and the line of a new canal past Dairee to Dilawur Fortress, as shown on the plan, has been laid out this season and is now being lock spitted; but should Colonel Anderson's projected dam across the Sutlej near Ferozepore be constructed and a channel be brought down on the left bank from it, we could command every acre of this *Bangur* land for perennial high level irrigation, as far as water could be spared for the same.

High land parallel to the Khadir called *Bangur*—its description.

Aided by a channel from Colonel Anderson's projected dam at Ferozepoor, every acre of the *bangur* land could be irrigated at a high level.

5. Both the soil and the sub-soil of this intermediate tract differ considerably from that of the Khadir; for, whereas the latter consists of alternate layers of clays and silt, in the *Bangur* land the deposit is homogeneous, consisting wholly of clay with an admixture of sand such as is now drifted up from the adjoining desert and is similar throughout from the ground surface to the spring water level; this latter varies in depth from 43 feet at Dilawur where the nearest part of the river is 38 miles distant to 120 feet at Ramnuggur in Bikaneer, where the river is 30 miles distant, the two stations being 180 miles apart, between which the slope of country averages 15 inches per mile, and that of sub-soil water 11 inches per mile; the slope between zero level of the nearest part of the Sutlej and the spring water at Ramnuggur being at the rate of 38 inches per mile, and between the nearest part of the Sutlej to Dilawur being 17½ inches per mile.

Description of the *bangur* land continued.

6. The water met with in the wells within this tract seems to differ but slightly from the water in the Khadir lands, as long as water is being continually drawn from them; but, when allowed to stagnate, it becomes more or less saline. The stratum in which water is tapped is a light bluish silt identical with that found in the present bed of the Sutlej; and although there is an obscure tradition that, at some former period, the Sutlej River flowed through this tract and that,

Water in the wells of the *Bangur* sluice when allowed to stagnate.

even as late as Alexander's invasion of the Punjab, I am rather inclined to consider that the alluvion of the *bangur* was deposited from the waters of the Ghuggur River whose natural exit towards the sea through Sind (where it is known as Hukra and Narra) is in the depression hereinbefore referred to on its passage through this State. It is of course possible that the waters of both these rivers may at one time have mingled together in their downward course; but I do not think it possible, with a volume such as the Sutlej carries, for the main stream of that river to have ever flowed in such a comparatively straight course as the line of depression shows; most probably therefore if ever there was a perennial river there, it meandered through this central tract in the same tortuous manner as other rivers exhibit; and, in such case, further research will probably throw much additional light on the subject. The remains of mounds of brick pottery on the banks of this depression, and which are found also in other parts of the *Bangur*, evidently point back to a time when it must have possessed all the elements necessary for the support of a fair population.

Traditional flow of a perennial river through the *bangur* land.

The Ghuggur River most probably had its exit towards the sea through the Hukra depression.

7. In the present day it is only on occasions of extraordinary rain-fall in the country East and North-East of Bhutneer that any water flows in the depression before referred to, and from its casual nature it would not be sufficiently remunerative to incur any outlay for utilizing it, whilst we have so many calls for expenditure on more productive works within the more thickly populated parts of the State.

The flow of water through the Hukra is too casual to make it worth while to expend capital for utilizing it.

8. South of the *Bangur*, as I have said before, and separated from it by the Hukra or Wahind depression, is a portion of the great sandy desert. Its surface for the most part consists of a succession of undulating sand ridges 40 to 60 feet high, with a vegetation peculiar to sandy tracts; but here there is no soil-down to the lowest depths yet penetrated by wells: all is sand, and bitter water is met with at a depth of 80 feet below the surface. In the valley intervening between the sand ridges, overlying the sand in some of the valleys, as at Ghospoor, Rookunpoor, and Khangurh is found a deposit three to six feet thick of sulphate of lime, which from the absence of any regular crystallization, presents the appearance of having been rapidly desiccated from a concentrated solution; the water in the wells where this gypsum predominates is found in a thin stratum of needles of gypsum, and as these wells are sunk through a stratum of fine sand, the sides are supported by a steining of the lime plaster two or three inches thick, which is added as the excavation proceeds; the wells are seldom more than three or four feet in diameter, and, even with the precaution of steining, the excavation of these wells appears to be looked on as a perilous adventure.

The most Southerly division of the State is a portion of the great sandy desert.

Gypsum beds found at Ghospoor, Rookunpore and Khangurh.

9. **At your suggestion I have subjoined to this a translation of an interesting report on the *Bangur* and desert lands of the State by Syud Morad Shah, Assistant Superintendent.**

10. **I cannot close this report without bringing to your favorable notice the creditable manner in which Lalla Keddar Nath, Supervisor, and the party under him carried out this work at a time when famine increased the difficulties ordinarily met with, and my best acknowledgments are due to Syud Morad Shah for the satisfactory manner in which the party were kept supplied with forage, water, and the necessaries of life during the period the survey lasted**

Memorandum by LIEUTENANT-COLONEL J. CROFTON, *Chief Engineer, Irrigation Works, Punjab on Culturable Land in Bhawulpoor.*

THE Government of India in No. 347 I, dated 28th September 1869, from the Secretary, Public Works Department, called for information on arable land in the so-called desert in Bhawulpoor Territory.

It is submitted with Major Minchin's No. 38, dated 11th May 1870.

From these papers it appears, that the State of Bhawulpoor is divided into three well-defined portions, differing in appearance and nature of soil.

1*st*.—The Khadir or present Valley bordering the Sutlej.
2*nd*.—Bangur or high land.
3*rd*.—Desert.

The Khadir is bounded on the land side by a ridge of low sand hills, which also forms the edge of the high or Bangur land. The latter is bounded on the south or desert side by a deserted nullah, locally known as the Hukra or Wahmul, which, from the old part of Wullur downwards, is evidently the continuation of the old bed of the Cuggur which was traced down to this point, many years ago, by Colonel John Colvin, then Superintendent of the Western Jumna Canal.

The Khadir land is irrigable from ordinary inundation canals which are being extended as rapidly as the available men and means will admit of.

The Bangur land estimated by Mr. Barns, Superintendent of Irrigation in Bhawulpoor, to cover an area of 9,000 square miles, is about half covered with sand drift; the remainder or about 4,500 square miles, on a rough calculation, is stated to be culturable if artificial irrigation could be supplied to it. From the ordinary inundation canals, however, water can only be economically delivered on this tract in the lower portion, from a point about 36 miles below the city of Bhawulpoor downwards, where the average width does not exceed 10 or 12 miles. This is owing to the elevation of the tract above the Khadir, which at the North-East boundary of the State is upwards of 30 feet, gradually decreasing until at a point some distance below that indicated above. The land on either side of the sand ridge is on the same level.

A cross-section (given on the tracing near the South-West boundary of the State, shows a continuous fall from the river to the old bed of the Cuggur or boundary of the "dèsert." The main stream of the Indus probably ran in the old bed at this point at some former period of its history.

For the irrigation of the upper and by far the larger portion of the Bangur channels from the proposed dam across the Sutlej near Ferozepoor (now being worked out) or, perhaps, the branches of the Sirhind Canal are probably the only available sources of economical supply. This, however, cannot be decided until the project above alluded to is completely elaborated. A section (sent up with this report) from the Sutlej at a point about 25 miles below Ferozepoor down the old bed alluded to as the Hukra, which appears to be at present silted up nearly to the level of the adjacent lands, show that a channel on this course, carried at a declivity of half a foot in a mile, and taking its supply at the head, at the level of water in the Sutlej on the 23rd May 1869, would not deliver the water on the surface of the Bangur, at a less distance than 60 miles from the head.

Major Minchin expresses his apprehensions of the results of the construction of the Sirhind Canal, and the channels from the dam at Ferozepoor on the volume of the river where the Bhawulpoor inundation canals are taken off, and mentions that he has heard that the level of water in wells along the Ravee has subsided since the opening of the Baree Doab Canal. I have never heard of this myself, but will have enquiries made. In a very dry year such as 1868-69, the level of the springs in lands adjoining the rivers was affected, but that was owing apparently more to the general desiccation of the country than to the exceptionally low state of the rivers.

In order to give reliable proof hereafter of the effect (if any) of the works mentioned on the volume of the Sutlej, I would suggest that the Superintendent of Irrigation in Bhawulpoor, be directed to measure the discharge of the river near the North-East boundary of the State, annually, at the usual periods of opening and closing the inundation canals, or at the commencement and termination of the period during which irrigation is required to bring the crops to maturity, say on the 15th April and 15th or 20th September.

This is now annually done at the heads of the permanent canals, in order to obtain data for the calculation of the supply available for a Khureef crop in ordinary years.

The report is, I think, very creditable to Mr. Barns; the map will show that Major Minchin and his subordinates are losing no time in developing the irrigation in the State, so far as their means will allow; and increase of water supply in these tracts, means increase of cultivation and population as well as development of trade.

From COLONEL J. ANDERSON, R.E., Officiating Deputy Secretary to the Government of India, to the Joint Secretary to the Government of the Punjab, in the Public Works Department, Irrigation Branch,—No. 344 I, dated Simla, the 19th August 1870.

IN reply to your letter No. 2453I, dated the 1st ultimo, I am directed to request that the thanks of His Excellency the Governor General may be communicated to Mr. Barns, for his highly interesting and valuable report on the desert of Bhawulpoor.

2. The Punjab Government, it appears, have arranged to have the discharge of the Sutlej measured annually at the North-East boundary of the State, with the view of ascertaining the effect of the withdrawal of a large body of water for the Sirhind Canal and proposed additional canal from this river near Ferozepoor. I am to suggest that measures may also be taken to register the surface levels of the river. It does not follow that any great lowering of the surface would be produced by the abstraction of the greater part of the cold weather supply, and at all events since a rise in the floods of 6 or 8 feet only above the cold weather level has the effect, it is believed, of increasing the volume of water 30 or 40 fold, any possible reduction of the volume is unlikely to lower the surface to such an extent as to produce any injurious influence on the wells in the low lands adjacent to the river.

3. Of course, if the project for a dam across the Sutlej near Ferozepoor is recommended for sanction, care will have to be taken that proper provision for the requirements of the Bhawulpoor State should also be made, or, at least, that existing interests in that State will not be liable to sustain injury.

4. In compliance with paragraph 4 of your letter, I enclose 35 printed copies of Mr. Barn's report and other papers on the subject. An equal number of copies of the map will be furnished hereafter. The sheet of levels is herewith returned.

No. 34 of 1870.

SUPPLEMENT TO

The Gazette of India.

SIMLA, SATURDAY, SEPTEMBER 3, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

TRADE BETWEEN INDIA AND THE GULFS OF PERSIA AND OMAN.

From LIEUT.-COLONEL LEWIS PELLY, C.S.I., Her Britannic Majesty's Political Resident in the Persian Gulf, to the Secretary to the Government of Bombay, Political Department,—No. 265—81, dated Muscat, the 10th July 1870.

Dated, I think, 23rd April 1870. But my records not being with me, I quote from memory.

* *Vide* Supplement to the *Gazette of India* dated 20th August 1870, pp. 1049 to 1073.

IN supplement of my recent report* on the trade of the Persian Gulf, I have now the honor to submit a few facts indicative of the development of the steam-borne portion of that trade.

1*stly*.—A few weeks ago the first steamer arrived direct from England, *vid* the Suez Canal.

2*ndly*.—The first of an intended line of steamers between Constantinople and the Gulf arrived. On this subject, the Political Agent, Muscat, writes as follows:—"The Turkish merchant steamer *Babylon* arrived here from Aden on the evening of the 27th (May) ultimo, and left for the Persian Gulf the next morning. This vessel is, I understand, the first of a line of steamers to run regularly between Constantinople and Bussora, and call at the intermediate ports of Jeddah, Aden, Muscat, Bunder Abbass, and Bushire."

3*rdly*.—Two or more steamers have run with corn and dates for Jeddah.

4*thly*.—Two Persian Companies have commenced running between the Gulf and British India. These vessels run under the British flag.

5*thly*.—I understand that the British India Steam Navigation Company have it in contemplation to run a weekly steamer between British India and the Gulf.

6*thly*.—The first of a British line of steamers to run between London and the Gulf, *vid* the Suez Canal, is expected at Bushire about three months hence.

7*thly*.—A steam trade in dates, corn, and dried-fish with Mauritius and Batavia is spoken of.

2. As yet all the steamers appear to have found full cargoes at rates which, although lower than those which obtained in former years, still pay.

3. It is remarkable that the Native merchants, inclusive of those now largely interested in steamers, have from the commencement of steam communication, eight years ago, consistently urged the inconvenience and injury that would result to the Gulf trade from the substitution of steamers for Native craft.

4. The fact seems to be that the Gulf trade is capable of indefinite development, provided freights be sufficiently low to admit of produce competing with that of other countries in foreign markets; in other words, the Gulf being the only ocean basin for a vast range of territories, the resources of those territories will increasingly seek the ports of the Gulf, provided they can be exported at a profit.

NOTE.—The Ganges Canal full supply is 5,387 cubic feet per second. During the khurreef its mean supply while running was 3,983 cubic feet per second. The Eastern Jumna Canal carries a full supply of 1,300 feet per second. Its average supply while running was 1,242 cubic feet per second.

ALLAHABAD;
The 20th May 1870.

W. G. ROSS, *Lieutenant, R.E.,*
Assistant to Chief Engineer, Irrigation Works, N. W. P.

Resolution by His Honor the Lieutenant-Governor of the North-Western Provinces,—No. 1338 I, dated Allahabad, the 26th July 1870.

READ the following Statements:—

No. A.—Comparative Statement of Irrigation and Rain-fall in Canal Districts, North-Western Provinces.

No. B1.—Statement in Acres of Crops Irrigated by Canals in Zillahs.

OBSERVATIONS.—Statement A. records an increase of 16,299 acres, even on the unprecedented khurreef return of 1868-69.

2. Statement B1. is prepared for the first time by zillahs, which makes the return more generally useful. A large increase is noticeable in sugarcane, cereals, and indigo (dyes). The acreage of rice in 1869-70 is 5,998 more than in previous year: in indigo the increase is 52,700 acres, and in sugarcane 6,840 acres.

3. In miscellaneous the decrease amounts to 51,600 acres, showing that farmers do not at present find it answer to irrigate inferior crops, save in a year of scarcity.

ORDER.—Ordered, that the Statements, with this resolution, be forwarded to the Secretary to the Government of India, Public Works Department, and to the Superintending Engineers of the Department in the North-Western Provinces, for information; and also that they be published in the *Government Gazette* for general information.

By Order, &c.,

W. H. GREATHED, *Colonel, R.E.,*
Joint Secy. to the Govt., N. W. Provinces.

From the Government of India, Public Works Department, to the Joint Secretary to the Government, North-Western Provinces, Public Works Department, Irrigation Branch,—No. 342 I, dated 18th August 1870.

THE Statements of irrigation operations in the North-Western Provinces during Fusl khurreef of 1869-70, and the Resolution of His Honor the Lieutenant-Governor thereon, No. 1338 I, dated the 26th July last, have been laid before His Excellency the Governor General in Council, who directs me to express his high satisfaction at the results obtained.

2. Copies of the Statements will, as usual, be forwarded to Her Majesty's Secretary of State for India for information, and to the Home Department for publication in the *Gazette of India.*

THROUGH RAILWAY COMMUNICATION BETWEEN MADRAS AND BOMBAY.

READ the following letter:—

From the Acting Consulting Engineer for Railways, to the Secretary to the Government, Public Works Department,—No. 298 A., dated Kasapoor, the 20th July 1870.

I have the honor to report that a meeting took place at Raichore on the 18th instant, between the Deputy Chief Engineer, with two Engineers of the Great Indian Peninsula Railway Company, and the Agent and Manager, Chief Engineer, and two Engineers of the Madras Railway Company.

2. The arrangements for the Junction Station were fully discussed and agreed upon, with the exception only of one or two minor points that do not affect the general plan.

3. The Government are aware* that a plan was sent from Madras to the Agent of the Great Indian Peninsula Railway for consideration, and the plan was received back by the time we arrived at Raichore. The Agent of the Madras Railway agrees to modify the plan of the station-yard and booking-office; to change the position of the lamp-room, and improve the lavatory in the latter, and to provide only one well and one 40-feet turn-table, instead of having two wells and turn-tables as at first proposed; a question as to the

* *Vide* G. O. No. 1672, dated 12th July 1870.

number of points is reserved for the opinion of the Traffic Manager at Madras, and another question, regarding the position of the engine turn-table, will be referred to the Locomotive Superintendent. A room for the Post Office has been included in the plan as accepted for the station buildings.

4. The officers of the Great Indian Peninsula Railway wish to build their own engine-shed and the quarters for their drivers, firemen, &c., and they will lay the permanent-way up to the outer points at the Bombay end of the station-yard; otherwise all the buildings for general occupation and joint purposes, as well as all material and labor, will be provided by the officers of the Madras Railway.

5. It is expected on the Bombay side that the line will be completed to the Kistna River by December, and to Raichore by the end of March 1871, while there is little doubt about the line from Madras being finished by that time. Hence as the break in the journey will be at the Kistna River, not at Raichore, temporary accommodation will be provided for travellers at the river.

6. The Agent of the Madras Railway expects to have his plans of the station ready early in next month, and is particularly anxious to have authority to commence the construction of the buildings in anticipation of formal sanction of the estimates. If work is put in hand now, it is possible to advance the buildings to that stage that temporary accommodation will not be necessary when the line can be opened throughout; but, on the other hand, if action is not taken at once in getting in the foundations, additional expense must unavoidably be incurred in providing temporary shelter.

7. A large quantity of stone is already quarried, and 1,300 cubic yards brought to the station ground; the station arrangements have been economically devised, and as, in addition to the saving of expenses, the provision of suitable shelter for drivers and other employés in the intense heat during April and May, is of considerable importance, I would request the sanction of Government for the immediate prosecution of the station works, pending final sanction.

Order thereon No. 1939, dated 18th August 1870.

THE Government are gratified to learn from the letter of the Consulting Engineer printed at the head of these Proceedings, that a satisfactory settlement has been arrived at by the officers of the Madras and Great Indian Peninsula Railways in regard to the general arrangements of the joint station at Raichore, and that there is a prospect of the line being opened for through traffic by the end of March 1871.

2. Looking to the extreme urgency of the case, and having in view the expressed wish of the Government of India that through traffic between Madras and Bombay should be established with the least practicable delay, and moreover that a considerable saving is likely to be effected by having the station works at Raichore advanced to such a state of forwardness on the opening of the line as will admit of shelter being afforded to passengers, who would otherwise have to be provided with temporary accommodation, the Government authorize the immediate commencement of the buildings in anticipation of formal sanction.

3. This course, however, being irregular, Captain Prendergast will take measures for expediting the submission of the requisite plans and estimates which the Government are glad to observe are in active preparation.

CHARLES A. ORR, *Colonel, R.E.,*
Secretary to the Government, Madras.

No. 1940.

COPY of the above forwarded to the Government of India in continuation of docket No. 1397, dated 4th June 1870.

CHARLES A. ORR, *Colonel, R.E.,*
Secretary to the Government, Madras.

READ the following letter:—

From the Acting Consulting Engineer for Railways, to the Secretary to the Government, Public Works Department,—No. 302, dated Madras, the 25th July 1870.

IN continuation of my letter No. 298 A of the 20th instant, regarding the arrangements made with the Great Indian Peninsula Railway Company for the Junction Station at Raichore, I have the honor to report that there is every probability of the north-west line being ready for opening as far as the Toongabudra during the month of September. The distance from Ghooty to the Toongabudra is 88 miles, but it has not been proposed to open the line to Adoni, 60 miles, or any other immediate point, for the works have been less advanced on Districts 15 and 16 to the south of Adoni than on the more favorable country further on.

2. I was able to travel by contractor's material train on the 16th instant from Ghooty to the river. The line is in very good order as far as Goondacul,—the branch station for the Bellary diversion,—the ballasting and fencing being completed. As far as Nuncherla there is but little required, the line is well ballasted, but the wire fencing remains to be put up. On the next two Districts up to Adoni, there is nothing but cotton soil, and the heavy rains in the past few weeks have retarded progress; a good deal of ballasting has to be done here and there, and the side slopes require bringing to section. To the north of Adoni the road is again in fair order, though ballasting is not yet completed.

3. The following is the condition of the stations:—

Goondacul.—The double platform is complete and roofed in; the booking-office and adjoining buildings are completed; the walls of the goods-shed are finished, and the roof trusses put up.

Nuncherla.—The platform wall is built, and the walls of the booking-office raised full height; the roofing just begun.

Auspree.—Platform wall built; the walls of the booking-office are raised to the level of the top of the door and window frames; the walls of the goods-shed are nearly completed.

Adoni.—The offices are completed, and have a very good appearance; the roof is being put on the goods-shed.

Kosgee.—Booking-office very nearly finished; goods-shed walls built, and the roof being laid on. The masonry works are all completed, with the exception of coping; there is one temporary bridge near Kosgee, but otherwise all the bridges as far as the Toongabudra are now ready to bear traffic.

4. To the north of the river the works are more backward; no portion of the permanent-way is laid, and a good deal of the masonry remains to be done. This, however, is expected to be completed by the end of the calendar year. At the Mutmurri Station a large quantity of stone has been brought to site. On the banks of the Toongabudra the girders are being set up and rivetted; the masonry of the large bridge is quite complete and ready for the girders.

Order thereon No. 1941, dated 15th August 1870.

ORDERED, that this letter be forwarded to the Government of India.

CHARLES A. ORR, *Colonel, R.E.*,
Secretary to the Government, Madras.

No. 1942.

COPY of the above forwarded to the Government of India in continuation of docket No. 1940, dated 15th August 1870.

CHARLES A. ORR, *Colonel, R.E.*,
Secretary to the Government, Madras.

GOVERNMENT OF INDIA.

FINANCIAL DEPARTMENT.

APPLICATION FROM BENGAL CHAMBER OF COMMERCE FOR THE REDUCTION OF THE RATE OF INCOME TAX.

From H. W. I. WOOD, ESQ., Secretary, Bengal Chamber of Commerce, to the Officiating Secretary to the Government of India, Financial Department,—dated Calcutta, the 10th August 1870.

I AM directed by the Committee of the Bengal Chamber of Commerce to forward the following remarks on the subject of the existing rate of income tax, with the request that you will be good enough to submit them for the consideration of His Excellency the Governor General in Council.

2. I may mention in the outset that, although the Committee of this Chamber did not send up any remonstrance to Government at the time the Act for increasing the income tax was passed, their silence was due, not to approval of the measure, but rather to the belief that the Members of the Chamber unanimously sympathised with, and shared in, the more extensive expression of opinion which was then so unmistakeably pronounced by the community in general. The Committee are, however, of opinion that the time has now arrived when they may, with advantage, make this important question the subject of special representation to the Government of India.

3. When submitting to the Legislative Council the usual statement of ways and means for the current financial year, Sir Richard Temple explicitly and emphatically asserted that this new measure of taxation was forced upon the executive by sheer necessity as an only means of relief from grave financial embarrassment. He declared that without this further increase, *i. e.*, if he retained the impost at the figure fixed in November last, or two per cent., the present year was estimated to close with a considerable deficit, which the raising of the duty to six pies in the Rupee converted into a probable surplus of £163,440. This estimate was founded, according to Sir Richard Temple's Statement, on the assumption that the previous financial year, 1869-70, would close with a large deficiency; but it now appears that a much more prosperous state of affairs actually exists, and that, instead of having to meet a deficit, Government will be in receipt of a surplus from that year.

4. The Committee are aware that they cannot, in support of this statement yet point to any authoritative document from the Government of India, but they believe the same to be substantially correct; and they have observed, with much satisfaction that the Secretary of State, in his recent statement to Parliament, announced the probability of the year in question ending thus favorably.

5. The Committee cannot doubt that a result so happy and unexpected is due, in large measure, to the vigorous policy of retrenchment so properly set in motion in September last, the effects of which, it is not unreasonable to assume, will tell even more strikingly upon the finance of the year now current, leading up to the belief that the expenditure for same under various heads will eventually fall considerably under the amount estimated for in the Budget.

6. In one very important item of revenue, *viz.*, opium, it appears likely that the receipts will prove largely in excess of the figure at which they were put down in the Budget Estimate; nearly half of the current financial year has now expired, and the drug still stands in the market at a figure which, with all deference, the Committee submit, justifies the Government in assuming a considerable further credit under this head.

7. In the abundant rains with which the country generally seems lately to have been favored, giving promise of a plentiful autumn harvest, the Commitee would also recognise another source of hope for the current financial year. The records

of the past few years show, unfortunately only too often, how material have been the calls made on the Government of India when the reverse has been the case,—calls entailing not only much extra expenditure, but, in addition, loss of revenue to a greater or less extent;—and the Committee are encouraged to hope that, should the promise of the present season be realised, and scarcity disappear, Government may find itself in the happy position of being called upon to spend less and receive more than was anticipated.

8. The above and other considerations, on which the Committee need not dwell, lead directly, in their judgment, to the question whether, in connection with the existing rate of income tax, Government can longer maintain the plea of absolute necessity? Whether circumstances any longer justify the retention of what is really a war tax?

9. With the information at present before them, the Committee venture to think that neither of these questions can be answered in the affirmative: they, on the contrary, consider themselves warranted in believing that a state of things which either did exist or at least was supposed to exist, has now passed away; and they would respectfully but earnestly express their hope that the subject of this communication may receive the early and favorable consideration of His Excellency the Governor General in Council, with a view to some substantial reduction in the rate at which income tax shall be leviable for the half year commencing on 1st October next.

10. Such a reduction appears to the Committee not only matter of bare justice but attended, also, with other most important considerations. It is well known that two additions to the income tax within less than a year have given rise to wide-spread feelings of irritation and distrust among the masses of the people,—feelings hardly perhaps suggestive of actual political danger, but still such as it is most desirable to modify and subdue. As already mentioned, the Government of India, when imposing the latter and heavier of these additions, stated plainly that it did so with extreme reluctance as a dire necessity, and the Committee are of opinion that nothing would more tend to soothe the feelings already indicated, nothing be more likely to impress upon the people the justice and good faith of the Supreme Government than the voluntary relinquishment of part of what was so reluctantly taken in the hour of need.

From R. B. CHAPMAN, ESQ., Officiating Secretary to the Government of India, Financial Department, to the Secretary to the Bengal Chamber of Commerce,—No. 3263, dated the 3rd September 1870.

I AM directed to acknowledge the receipt of your letter dated the 10th of August, submitting remarks upon the financial circumstances of the country, with the prayer of the Bengal Chamber of Commerce that the rate of the Income Tax may be substantially reduced for the half year beginning on the 1st October next.

It is a matter of satisfaction that this temperate and clear representation affords an opportunity of explanation on certain points regarding which misapprehension appears to exist.

2. In September last year, decisive steps were taken to remedy a financial condition which was most unsatisfactory, and the course then adopted, appears to have commanded general approval. The measures of the present year were a necessary complement to those of the preceding autumn. It is true that the high rate of Income Tax imposed by Act XVI. of 1870 was forced upon the Government as a means of relief from grave financial embarrassment. It is also true that, in explaining the emergency, the Hon'ble Sir Richard Temple alluded to the "actual deficits which have occurred in past years," and to the apprehension that, despite all the exertions that had been made, the year 1869-70 would "close with a substantial deficit instead of the equilibrium that was expected." The series

of deficits which had occurred, were a cogent additional reason for precaution against any fresh failure of resources. But the deficit of 1869-70 then anticipated, had no direct connection with the estimates for 1870-71, the duty of finding sufficient ways and means for which year would have been quite as clear if it had been known that the accounts of 1869-70 had closed favorably.

3. It is necessary to provide that the ways and means shall fully suffice for the services of each year. If, as has too often been the case in India, it turns out, that the expenditure exceeds the income, the result is fraught more or less, with embarrassment; but it has never been suggested that the country should be taxed in any subsequent year to supply the deficiency. It can hardly be seriously argued, nor, it is observed, does the Chamber of Commerce allege, that, when there is a contrary result, and income exceeds expenditue, the Government ought deliberately to remit taxation in order to bring about a counterbalancing deficit in some later year. Still less can it be contended that because equilibrium has resulted when deficit was expected, the State should purposely allow the income of any later year to fall below its expenditure.

4. The circumstances of each year are considered, beforehand, independently of the out-turn of the accounts of any preceding year, with the sole object of providing sufficient means for current requirements. The arrangements for 1870-71 were made precisely on this principle. The unfortunate "necessity," so "explicitly and emphatically asserted," for the imposition of the present high rate of Income Tax, was the necessity of 1870-71, not of any other year. An argument in support of vigorous measures was naturally drawn from the recent adverse annual balance sheets; but it was the deficiency in the ways and means of 1870-71 alone that justified the fresh taxation imposed.

5. The approximate accounts of 1869-70 this day published are indeed, more satisfactory than was supposed in April last. But without the measures taken in September 1869, there must have been a deficit in 1869-70 of about $1\frac{1}{2}$ million sterling; and, moreover, if equilibrium has been attained, that is due, not to those extraordinary measures alone, but also in part to an excess of credit over debit adjustments, which cannot be again expected.

6. The effect of the retrenchments begun in September last was taken into account in framing the estimates of the present year, and the hopes entertained by the Chamber of Commerce that those measures will tell more favorably upon the finances of 1870-71 than was anticipated, and that the expenditure will be less than the amount estimated, are not likely to be realised. Attention is constantly given to the diminution of expenditure: but measures of reduction, to be efficient and safe, must be, to a certain extent, gradual.

7. The actual accounts of 1869-70, as approximately ascertained, do not support the inference that the estimates of 1870-71 are too unfavorable; nor are any better indications to be found in the experience of the present year hitherto. There is, indeed, promise of a prosperous harvest and of a larger revenue from opium than was anticipated; but, on the other hand, owing to the war in Europe and other causes, there may probably be some failure of revenue and some expenditure in excess of grant. Upon the whole, the general prospects of the year are by no means improved since the financial statement was made.

8. The Chamber of Commerce doubtless admits that the Government was bound to take measures to secure the country against the evil consequences of a deficit in time of peace. While nothing but imperative necessity would have justified the increase of taxation last April, it is right to state that the necessity for what was done is more evident now than it was then. Any sacrifice, therefore, of the resources then provided for the service of the year could only end in serious embarrassment.

9. At the same time, the objections that have been made in many quarters to the present rate of the Income Tax, are not regarded with indifference; though

a very much larger portion of the people bore a similar burden, some years ago, without serious discontent, and a tax to which incomes of less than Rs. 500 a year are not liable, and which is paid by only about one in every three hundred* of the population, can hardly be said to affect "the masses of the people."

* *Note.*—About 477,000 persons not in the service of the State were assessed to Income Tax last year.

10. In the discussion which took place in the Legislative Council on the 5th April 1870, Sir Henry Durand stated the case well when he said, "that as a pure necessity he supported the measure," and that "considering the circumstances and difficulties which surround the Financial Member in this instance, and also bearing in mind how very moderate is the amount which he calculates on as a surplus, how he has limited the taxation which he imposes, which is barely enough to cover the deficit, the anxiety which he has evinced not to impose more than what is absolutely necessary is beyond dispute."

11. A high Income Tax in time of peace is, under ordinary circumstances, undesirable. It is a resource which should be kept in reserve, to be used only in periods of political or fiscal emergency. Act XVI. of 1870 will cease to be in force on the 31st of March, and unless some unforeseen emergency occurs it is not the intention of the Government of India to renew, next year, the present rate of Income Tax. Measures for providing otherwise the needful ways and means for the service of the State are under consideration, and will be communicated to the public as soon as they are sufficiently matured.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 30th August 1870.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.P., G.C.S.I., *Presiding.*
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I.
The Hon'ble John Strachey.
The Hon'ble Sir Richard Temple, K.C.S.I.
The Hon'ble J. Fitzjames Stephen, Q.C.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble H. W. Norman, C.B.
The Hon'ble F. R. Cockerell.
His Highness the Hon'ble Sarámade Rájáhae Hindustán Ráj Rájendra Srí Maháráját Dhiráj Sivái Rám Singh Bahádur of Jaypúr, G.C.S.I.

OUDH TALUQDARS' RELIEF BILL.

The Hon'ble MR. STRACHEY asked leave to postpone his motions relating to the Bill to relieve from incumbrances the estates of taluqdárs in Oudh.

Leave was granted.

PENAL CODE AMENDMENT BILL.

The Hon'ble MR. STEPHEN presented the Report of the Select Committee on the Bill to amend the Indian Penal Code.

COINAGE AND MINT BILL.

The Hon'ble MR. STEPHEN presented the Report of the Select Committee on the Bill to consolidate and amend the law relating to Coinage and the Mint.

EUROPEAN BRITISH SUBJECTS' BILL.

The Hon'ble MR. STEPHEN moved that the Report of the Select Committee on the Bill to confirm certain laws affecting European British subjects be taken into consideration. He said that he need not return to the general question involved in the Bill, but some remarks had been made on it which appeared to require notice. It was said that the Bill was defective in so far as it did not confirm the future Acts of the local legislatures. But the answer to this was, that under the Indian Councils' Act the Governor General in Council had no power to do so. The Government of India would address the Secretary of State with a view to the introduction into Parliament of a Bill to confer power on the local legislatures to deal with European British offenders.

Another objection raised to the Bill was, that it would prevent the local legislatures from modifying their penal Acts heretofore passed, so far at least as those Acts related to European British subjects. This was perfectly true, but the evil was inevitable, and we had to choose the least of two inconveniences. The Secretary of State would be moved to insert in the Bill, to which MR. STEPHEN had referred, a clause enabling the local legislatures to modify those Acts notwithstanding their having been affected by an Act of the Governor General in Council. Lastly, the Governor of Bombay had objected that the present Bill, in so far as it purported to confirm invalid local legislation, was beyond the power of the Council of the Governor General as limited by the Indian Councils' Act. But this objection, MR. STEPHEN thought, rested on a misapprehension. What the legislature of the Governor General proposed to do on this occasion was simply to adopt certain local Acts as its own; and the Bill did not affect in any way the provisions of the Indian Councils' Act.

The Motion was put and agreed to.

The Hon'ble MR. STEPHEN then moved the following amendments:—

That the following words be added to section one:—

"And as if it expressly referred to European British subjects;"

And that the following sections be inserted after section one of the Bill:—

'2. Unless there be something repugnant in the context, all Acts heretofore or hereafter passed by the Governor General in Council, which confer summary jurisdiction over offences, shall be deemed to apply to European British subjects, although such persons be not expressly referred to therein.'

'3. Act No. XVIII of 1859 *(to amend the law relating to offences declared to be punishable on conviction before a Magistrate)* shall be construed as if, in sections one, two and four, after the word 'heretofore' the words 'or hereafter' were inserted.'

And that the numbering of the subsequent sections be altered.

These amendments were rendered desirable by a very recent decision of the High Court at Madras, of which information had been received unofficially,

since the Committee had signed their Report, from Mr. Mayne, the learned Secretary to the Legislative Council of the Governor of Madras. The Madras High Court, it seems, had held that even Acts of the Governor General in Council giving summary jurisdiction over offences did not apply to European British subjects, unless such subjects were expressly named therein. Mr. Mayne had also pointed out the anomalous state of things produced by the fact that Act XVIII of 1859 (as to offences made punishable on conviction before a Magistrate) applied only to enactments passed before the 25th of July 1859. The amendments which MR. STEPHEN now proposed would meet the two difficulties thus raised.

The Motion was put and agreed to.

The Hon'ble MR. STEPHEN then said that the adoption of the first of the amendments just carried, rendered necessary two formal amendments: one in the preamble, the other in section one, and he would accordingly move that the following words be inserted in the preamble:—"and whereas doubts have also been raised as to the application to European British subjects of certain Acts of the Governor General in Council:"

and that in section one, line one, after "Act" the following words be inserted:—

> "passed by the Governor of the Presidency of Madras in Council, or by the Governor of the Presidency of Bombay in Council, or by the Lieutenant-Governor of Bengal in Council."

The Motion was put and agreed to.

The Hon'ble MR. STEPHEN then moved that the Bill as amended be passed.

The Hon'ble MR. COCKERELL said that he believed that the words "unless there be something repugnant in the context," which occurred in the first line of the first amendment, excluded its application to the Code of Criminal Procedure. He had himself no doubt as to this being the effect of those words; but he thought it right to draw special attention to the subject, and to appeal to his Hon'ble and learned friend, the Mover of the Bill, for a confirmation of his (MR. COCKERELL'S) impression, inasmuch as if the full effect of these words was overlooked or imperfectly understood, the idea might get abroad that, through the instrumentality of this Bill, a serious alteration of the law was being brought about. That in short by a sort of side-wind, that is to say, in the form of a hurried amendment of a Bill, in the original form of which no alteration had been proposed by the Select Committee, an attempt was being made to render the European British subject liable to be tried and convicted by tribunals to whose jurisdiction he had never been previously subjected, and to which the propriety of his subjection had been so much canvassed in the discussions which preceded past legislation in this matter.

The criminal law of this country was, as the Council knew, now entirely to be found in, first, the Penal Code and the Criminal Procedure Code (by which latter the jurisdiction in respect of offences made punishable under the former was regulated) which were general, and, second, the various Municipal and Police Acts, the enactments regarding offences against the Revenue, and the laws relating to Military Cantonments (some of which had been enacted by this Council and others by the local legislatures), which were all of mere local application.

Now, the punishments to which persons were liable for offences under this last class of enactments, *i. e.*, enactments the operation of which was confined to particular localities, were, with rare exceptions (notably certain sections of the Calcutta Police Act IV of 1866), fines of greater or less amount in the first place, and imprisonment only in default of payment.

The Bill, therefore, in declaring the European British subject equally with other persons liable to summary conviction and punishment under these laws, in no way infringed, or went beyond, the principle of past legislation—such as for example 53 Geo. III., cap. 155, sec. 105, and Act VII of 1853—in this matter.

But if the amendment were to include the Criminal Procedure Code as an 'Act heretofore passed by the Governor General in Council conferring summary jurisdiction over offences,' the case would be very different, and its effect would be to bring about a grave alteration of the law without due notice or consideration.

The Hon'ble MR. STEPHEN said that the only effect of the Bill was to make the law as to European British subjects that which, till lately, every one had supposed it to be. It increased no powers of punishment possessed, or supposed to be possessed, by Magistrates, and it did not confer jurisdiction on any Magistrate who was not a Justice of the Peace. The Code of Criminal Procedure was clearly not affected by the Bill as now amended.

The Motion was put and agreed to.

INSOLVENCY BILL.

The Hon'ble MR. STEPHEN moved for leave to introduce a Bill to amend the law relating to insolvency. He said that the law relating to insolvency, as it stood at present, was contained, as regarded the three Presidency Towns, in an Act of Parliament, 11 & 12 Vic., cap. 21, which had been adapted to the circumstances of the Presidencies from the English laws relating to bankruptcy then in force. As regarded the Mofussil in general there was no law of insolvency; but there was a section in the Code of Civil Procedure which, to a certain extent, answered the same purpose. This was section 271, which provided that 'if after the claim of the person on whose application the property was attached has been satisfied in full from the proceeds of the sale, any surplus remain, such surplus shall be distributed rateably amongst any other persons who, prior to the order for such distribution, may have taken out execution of decrees against the same defendant and not obtained satisfaction thereof: Provided that when any property is sold subject to a mortgage, the mortgagee shall not be entitled to share in any surplus arising from such sale.' In illustration of the objections to the manner in which this section worked as a substitute for a Bankruptcy Act, he might refer to an able pamphlet lately published by Mr. Broughton, the Administrator General of Bengal, upon the state of the law in the Non-Regulation Provinces. Mr. Broughton's remarks were as follows:—

"By that Law the first creditor who gets a decree and takes out execution "is entitled to be paid in full, while the rest come in *pari passu* and divide "what is left. As a natural consequence in places where there is no Insolvent "Law, that is to say, in all India, except the three cities of Calcutta, Madras, "and Bombay, there is no sooner a rumour of a trader being in difficulties than "all his creditors in self-defence rush into Court and contend among themselves "for the first decree against him; his property is attached and sold on the spot, "always at a considerable loss, and the rival claims of different creditors often "produce a contest, sometimes carried out to physical extremities. Perishable "goods are hurried away at the best to improper receptacles, and in most "instances are considerably damaged, while the judgment-debtor, to avoid these "disastrous consequences, finding that his property is unprotected by the Law, "is tempted to resort to all sorts of fraud and chicanery to avoid the conse-"quences of his position. In the early part of the year 1867 this change in "the Law operated in a manner which for the time caused a complete paralysis "in the trade of Rangoon, and flooded the Courts with litigation." There were also provisions as to insolvency in some particular provinces. For instance, the document called the Civil Code of the Panjáb contained such provisions, and others of a similar character contained in what was called Sparks's Code, after

its author, Major Sparks, had been in force in British Burma. The validity of the Panjáb provisions was, as he (MR. STEPHEN) believed, at the present moment under the consideration of the Chief Court of that province, and there would seem to be considerable doubt as to the legal force of many parts of the Code, upon which different decisions had been given by various authorities. The Burmese Code, or at least that part of it which related to the subject of bankruptcy, had been superseded there by the introduction of the Code of Civil Procedure.

The general extension of commerce into various parts of India, and the variety of the provisions which at present obtained upon the subject, suggested the propriety of introducing a general measure. The one which he now asked leave to introduce had been adapted from the Bill passed last year in England, which might be regarded as embodying the result of controversies carried on, and of experience acquired for upwards of three centuries; for the first English Bankruptcy Act was 34 & 35 Henry VIII, cap. 4, passed in the year 1542-43, and the last was passed in 1869. During the interval between these dates, and especially during the last half century, the subject had been almost continually under discussion, and a long series of important changes had been made in the arrangements by which the object of dividing the property of an insolvent amongst his creditors had been attained.

The system finally arrived at, which it was proposed to introduce into British India, had, at all events, the merit of simplicity, and as, he (MR. STEPHEN) thought, of common sense and justice. Its essential provisions might be stated in a very few words, although unfortunately when they were thrown into a legal shape, and when the persons appointed to act under the Bill had been armed by express provisions with all the necessary powers, the result was a measure of somewhat formidable dimensions.

In a few words the system proposed to be established was as follows:—When a man committed any one of a certain number of acts of insolvency and was unable to meet his engagements, he might be adjudicated an insolvent upon a petition by his creditors. His property would upon adjudication pass to a trustee, whose duty it would be to realize it under the inspection, and according to the directions, of a committee of creditors, and to divide it amongst them rateably. If the dividend paid amounted to eight annas in the rupee, or if the creditors were of opinion that the failure to pay so high a dividend arose from circumstances for which the insolvent could not justly be held responsible, and if they desired his discharge to be granted, he could be discharged. If a smaller dividend were paid, the insolvent would have three years in which to make up his payments to the amount in question, and any balance that remained unpaid at the end of that period would constitute a judgment-debt, which might be enforced by leave of the court. English experience seemed to point to the conclusion (after many experiments), that this was a fair compromise between the object of favouring commerce and the object of enforcing a complete execution of the contracts into which a trader might enter.

These were the main provisions of the Bill, but it contained other provisions, which were unavoidably rather long, upon the various points which it was necessary to provide for, in order that the scheme might be properly worked, such as the appointment and powers of trustees, the meetings of creditors, the effects of insolvency upon the property of the insolvent and that of other persons, the distribution of assets and the jurisdiction of the courts. Provisions also were inserted to enable creditors, if they thought fit, to take the matter entirely into their own hands, and to provide, by a process which had been called liquidation by arrangement, for the objects contemplated by the law.

Every effort had been made to render the Bill complete in itself, so that all the law upon the subject might be contained in one measure, and that as little necessity as possible might exist for subsidiary legislation by the courts in the shape of rules of procedure.

The reason for introducing the Bill at Simla was that it might be published as early as possible in the *Gazette*, so that the Government might have the advantage of receiving the opinions and advice of the mercantile community in general, and especially of the three Chambers of Commerce, before the measure was discussed in committee.

There was only one other subject which he (MR. STEPHEN) need mention. He proposed to follow the English example of separating the two questions of the distribution of an insolvent's assets, and the punishment of fraudulent debtors. The latter question would be dealt with separately, and if it were decided to revise the Penal Code, the addition of several provisions upon this subject would form an important part of that process.

The Council then adjourned to the 6th September 1870.

HOME DEPARTMENT.

IPECACUANHA PLANTS FOR INDIA.

Revenue.

No. 52.

INDIA OFFICE;

London, the 28th July 1870.

To His Excellency the Right Hon'ble the Governor General of India in Council.

MY LORD,—I have considered in Council the despatch from your Excellency in Council numbered 67 (Public), and dated the 10th ultimo, in which, in reply to my despatch of the 20th of April last, No. 27 of this department, you express your thanks for the steps taken to obtain a supply of ipecacuanha plants, and for the information transmitted.

2. In continuation of this correspondence, I send herewith a copy of a letter* from Dr. Anderson, and its enclosure,† reporting the safe arrival in this country of a considerable supply of plants, and also mentioning the satisfactory condition of the other plants under the care of the officers of the Royal Botanical Gardens at Edinburgh.

* July 13th, 1870.

† From Dr. Christison, July 10th.

3. These papers seem to hold out a well-grounded hope that by the time Dr. Anderson is ready to leave this country to return to India, he will be provided with such a number of healthy plants as will enable him to establish this plant in India, and make that country independent of other countries for the supply of this most valuable medicine.

I have the honor to be,

MY LORD,

Your Lordship's most obedient, humble Servant,

ARGYLL.

Dated Herbarium Royal Gardens, Kew, W., the 13th July 1870.

From—Dr. T. Anderson,

To—The Under Secretary of State for India.

With reference to my letter dated the 28th March 1870, stating the steps I had taken to secure a supply of ipecacuanha plants for transmission to India, I have the honor to report, for the information of His Grace the Secretary of State for India, that the first consignment of plants from Brazil has arrived safely in this country.

These plants (living *Thizomes*) have been sent by Dr. Gunning, of Rio Janeiro, to the Botanic Gardens of Edinburgh. I am not yet in possession of full particulars of this transmission, but some information about them, and also of the plants that have been obtained from the old ipecacuanha plants in the Edinburgh Botanic Gardens, is contained in a letter (copy appended) I recently received from Dr. Christison, Professor of Materia Medica in the University of Edinburgh, to whose kind exertions the Government is indebted for this valuable acquisition of ipecacuanha plants. I hope to be able to examine these plants, as well as the considerable stock in the nursery of Messrs. Lawson and Son, during a visit I shall soon make to Edinburgh, and I shall report the result of my inspection of these plants for the information of His Grace.

Dated Edinburgh, the 10th July 1870.

From—R. Christison, Esq.,

To—Dr. T. Anderson.

I do not know whether Dr. Balfour has informed you, or relied on me to inform you, of the recent arrival of the first consignment of ipecacuanha plants from Dr. Gunning, of Rio Janeiro. But you will be none the worse for this missive, though it should be only a second edition of the news. Both Dr. Balfour and I received at the same time a short letter from Dr. Gunning promising more soon. It seems he finds the constant complaints of pharmaceutic writers to be true that the root collectors have now to go very much further away from the port of exportation in order to practise their calling with success, and that consequently he has to communicate with friends at a great distance to procure specimens. We may obviously, however, rely on his goodwill and determination. I went a few days afterwards to inspect the entire ipecacuanha culture at the Garden. I saw a box of about 50 plants, three or four inches high, the produce of Macnab's cuttings planted early in January last, and another box equally populous of smaller plants of more recent growth, and Macnab had already cut and set a multitude of bits from the roots of Gunning's present consignment, which arrived in excellent order covered in mould and without other protection. I suppose, therefore, that there can be no doubt you have already the means of rapid multiplication, and of an early crop for India. Bye and bye the supply will, I hope, be very abundant.

Total	..	..	..	2,767	Total	298,902	..	..

Remarks.

The mean volume of the Ganges Canal passing the Roorkee gauge during the month, was 2,350 cubic feet. Volume discharged were :—

Tail, Etawah Branch	..	80 c. ft. per second.
Escapes, ,,	..	222 ,, ,,
Tail, Cawnpore ,,	..	193 ,, ,,
Escapes, ,, ,,	..	649 ,, ,,
Total	..	1,144 c. ft. per second.

The Cawnpore and Etawah Branches have alternate weeks of high and low supply. The gauge-readings give the means of the month.

There was a slight demand on the Ganges Canal for water during the second week; this demand entirely ceased owing to heavy and general rain about the middle of the month. The main canal was closed twice during the month. The lowering of the supply on both occasions was very gradual. The first closure commenced about noon of the 4th instant, and lasted till noon of the 9th instant. The object of this closure was an inspection of the works below water-line, in anticipation of the annual closure which had been notified in the *Government Gazette* as likely to take place after the 15th instant. This annual closure commenced on 24th at 1 p. m.

Futtehgurh Main Branch was closed all the month: the Jaoli Rajbuha ran for six days in the month.

On the Eastern Jumna Canal, the demand was very slight, and only for rice. On the 17th very heavy rain (8·5" in 4½ hours near Saharunpore) fell all over the upper part of the canal. Considerable damage was done to banks and culverts. The canal supply was shut off on the 18th, to allow of the use of the canal as a drainage channel for the collected water. The floods of the Jumna were exceptionally heavy, the Jumna gauge at Kharra Head stood on the 26th at 11' 6", the highest reading since August 1867. The canal was re-opened on the 28th, to meet an increasing demand for rice.

On the Doon Canals, the demand for rice was fair during the whole month.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 6th September 1870.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.P., G.C.S.I., *Presiding.*
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I.
The Hon'ble John Strachey.
The Hon'ble Sir Richard Temple, K.C.S.I.
The Hon'ble J. Fitzjames Stephen, Q.C.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble H. W. Norman, C.B.
The Hon'ble F. R. Cockerell.
His Highness the Hon'ble Sarámade Rájáhae Hindustán Ráj Rájendra Srí Mahárájá Dhiráj Sivái Rám Singh Bahádur of Jaypúr, G.C.S.I.

OUDH TALUQDARS' RELIEF BILL.

The Hon'ble MR. STRACHEY moved that the Report of the Select Committee on the Bill to relieve from incumbrances the estates of Taluqdárs in Oudh be taken into consideration. He said that the Report described the alterations which it was proposed to make in the Bill. He need not refer to them in detail, because, for the most part, they left the main features of the Bill unchanged. There were, however, a few points which required notice.

An important alteration had been made in section three. As the Bill originally stood, no limit of time was prescribed within which the provisions of the Bill might be made applicable. Since, however, this measure was avowedly of an altogether exceptional character, it seemed right to restrict its operation within such limits as were compatible with the object which it was intended to effect. It was proposed to limit to twelve months after the passing of the Act, the time within which applications must be made. The result would be, if this alteration were approved by the Council, that, although the Government would be prepared to help the Taluqdárs out of their present difficulties by these exceptional measures, it would not continue to do so permanently. If any Taluqdár omitted to avail himself of the opportunity offered to him, or if after the term stated in the Bill had elapsed, he chose to involve his estate in embarrassment, he would have no right to expect that the Government would again interfere to save him from the consequences of his own folly.

When the Bill was introduced he (MR. STRACHEY) said that it would be a question for consideration whether authority might not be given to the Executive Government to extend the provisions of the Bill under certain circumstances for the relief of estates of great and ancient families in other parts of the country.

Representations had been made by more than one Local Government urging the expediency of this course; but, on full consideration of the question,

the Government did not think that any such general extension of the provisions of this measure would be expedient.

It had always been stated that this Bill was introduced for political reasons of an altogether exceptional character, and those reasons were recognised by the late Viceroy, Lord Lawrence, at the last meeting of the Legislative Council at which he was present, as justifying the special interference of the Government.

He (MR. STRACHEY) did not deny that strong political reasons for similar interference might exist in some cases in other provinces, and on more than one occasion lately the Government had endeavoured to assist the heads of ancient families, to whom the people looked up as their natural heads, with the object of relieving them from their difficulties. A law, however, which might be applied generally or arbitrarily at the will of the Executive Government to save landholders from the consequences of their own improvidence, would hardly be justifiable.

The economical results of such a general measure might be very mischievous indeed: it was, perhaps, hardly too much to say that the value of landed property throughout the country might be affected by the passing of such a law. The security, for instance, of mortgagees would be diminished, if at the will of the Executive Government the mortgagee might at any time be compelled to give up his interest, to receive his money, and seek some other investment.

Even as regards Oudh the economical objections to the present Bill could not be denied, but the political reasons which had been held to justify it were altogether peculiar.

He (MR. STRACHEY) asked the Council to remember the origin of the tenure on which the Taluqdárs of Oudh held their estates. They did not hold them by ancient ancestral right. Their rights were entirely created by the British Government itself, and they were held by the free gift of the British Government alone. All rights of property which the Taluqdárs formerly possessed in the land were confiscated by the famous proclamation of Lord Canning in 1858 as a punishment for their rebellion, and every right of property which these Taluqdárs now possessed, they derived from the free gift of Lord Canning's government.

It was the avowed policy of that Government to recreate in Oudh a great aristocracy holding its estates by a tenure of English type unknown to the Hindú or Muhammadan Law, or to the ancient custom of Oudh itself.

The Law of Primogeniture, in a form unknown in any part of India, was established, and the rights of all other parties in the soil were either swept away, or were to be held in entire subordination of the Taluqdárs.

Every Taluqdár received unrestricted powers of disposing of his estate as he pleased. These powers were at variance in their nature both with Hindú law and custom, and with the customs of Oudh itself, and they were practically more extensive than those possessed by almost any great landholder in England itself.

Sir Charles Wingfield, who migh tbe considered, to a certain extent, as the originator of the policy followed after the mutinies in Oudh, strongly protested against giving the Taluqdárs these unlimited powers of disposing of their estates. These powers went very far beyond what he desired, and he predicted (and there was certainly no man living who had a better right to speak upon the subject) that the almost inevitable result of removing the checks imposed by Hindú law and custom on the disposal of ancestral property, would be the ultimate ruin of the families which the British Government desired to maintain. The government of Lord Canning, however, insisted on placing the Taluqdárs in this altogether exceptional position.

The promises made by that Government had to be fulfilled, and they were strictly and scrupulously fulfilled by the government of Lord Lawrence, which,

by the passing of Act I of 1869, gave the force of law to all the engagements which had been entered into with the Taluqdárs. Whether these engagements were wise, time alone could shew; and this was not now a question for discussion.

The result of all that had been done was, that a great experiment was being tried in Oudh, and it was the duty of the Government, which by its own acts had created the existing state of things, to give that experiment every fair chance, and to endeavour to remove all removeable difficulties which might interfere with the possibilities of its success.

This was the object and justification of the present Bill.

It had been ascertained beyond doubt that many of the Taluqdárs of Oudh were so deeply in debt, and their estates were now subjected to such heavy incumbrances, that it was impossible for them to perform their functions as landholders, and that unless some relief was given to them their estates would, sooner or later, be lost to them and pass into the hands of money-lenders and strangers. Thus the political objects with which the system now existing in Oudh was created by the government of Lord Canning would be defeated.

This Bill, if it became law, would give the Taluqdárs of Oudh a chance of recovering and maintaining their position.

The experience that had been gained by the Act of 1862, passed by the Bombay Legislature for the relief of the Taluqdárs of Ahmedabad, on which the present Bill was founded, showed, as he (MR. STRACHEY) had explained on former occasions, that, without any sacrifice of the just rights of creditors, we might hope to free the estates of the Oudh Taluqdárs from their present heavy incumbrances.

The Hon'ble MR. COCKERELL said that, although he had joined the other Member of the Select Committee in recommending the adoption of the amended Bill by the Council, he was far from thinking it as perfect a measure as, even consistently with its political object, it might be; and, in reference to what had fallen from his Hon'ble friend the Mover in regard to its extension to other places, he (MR. COCKERELL) thought we did well to confine its operation to the territories within which, on special political considerations, it was originally designed to have effect.

The great defect of the Bill, as seemed to him, was its want of any provision for the due protection of the interests of the creditors of the indebted Taluqdárs whose estates might be brought under its provisions.

It was doubtless essential to the attainment of the object of this legislation that the action of the civil courts should be barred as was provided by section four of the Bill, and, perhaps, even the enforced surrender by the mortgagee in possession required by section seventeen could not in that view be avoided; but he (MR. COCKERELL) was of opinion that it was not necessary to hand the creditors over to the tender mercies of the manager (tempered only by the control of the Chief Commissioner) so unreservedly as was done by section eleven.

It seemed to him that the creditors, whose ordinary remedy for the assertion of their rights was wholly barred by the combined operation of sections four and twenty-three, and especially the mortgagees who might be deprived of the possession of the property mortgaged to them, were equitably entitled to the protection of some stipulations in regard to the liquidation of their admitted claims by the manager. As the Bill stood, there was no guarantee that the liquidators would be guided by such considerations, in regard to conditions of interest on the loans to the Taluqdárs, priority of lien on their property and other matters, as would be taken into account in the adjudication of the creditors' claims by the civil court; or that the dispossessed mortgagee who had

secured himself in his transactions with the Taluqdár, would be in any better position as regards the recovery of his loan than the other creditors who had no such security.

It had been suggested that the omissions of the Bill in this respect could and would be remedied by the rules to be framed under section twenty. He (MR. COCKERELL) confessed he should have preferred to see the required protection directly secured by the Bill itself.

He did not propose, however, to move any amendment in this sense, but he had thought it right to draw the attention of the Council to the subject, in the hope of eliciting from the Hon'ble mover of the Bill a public declaration that it was the intention of the Chief Executive Government to insist upon the rules to be made under section twenty being so framed as to secure as much protection to the interests of the creditors as was compatible with the political objects of this legislation.

The Hon'ble MR. STEPHEN said that there would be no serious practical difficulty in making rules to carry out Mr. Cockerell's object. It certainly was not the wish of Government to put mortgagees and other secured creditors in a position worse than that which they would have held if the Bill were not passed. But if the Government or the Select Committee had embodied all these rules in the Bill, the measure would necessarily have become elaborate and even cumbrous. The Bill, to a great extent, would have become an Insolvency Bill, and the rules contained in it would, he (MR. STEPHEN) feared, have some times been unintelligible to those who would have to work the present measure. The Local Government would make the necessary rules with a practical regard to the necessities of the case, and before these rules came into force, they would be carefully scrutinized by the Legislative Department.

The Hon'ble MR. STRACHEY wished to add only a few words to what had been said by his Hon'ble friend, Mr. Stephen; and he need say nothing further as to the reasons for which it seemed desirable to leave to the Chief Commissioner and to the Government to provide by rules for all matters of detail which will arise in carrying out the provisions of this Bill.

He was extremely glad that his Hon'ble friend, Mr. Cockerell, had referred prominently to this very important part of the question.

He thought, as to the points to which he had alluded, there could be no possible difference of opinion. To sacrifice the legitimate claims of honest creditors for the purpose of saving the Taluqdárs of Oudh from the consequences of their own folly and improvidence, would be, he thought, not only morally and economically but politically wrong. The objects of this measure were political, and it might safely be asserted that the British Government could never gain politically by adopting measures involving wholesale and deliberate injustice to honest men. It would be the duty of the Local Government in framing rules under section twenty of the Bill, and in supervising the operation of all the measures that were adopted, to take every possible care that the just rights of creditors were respected.

The Motion was put and agreed to.

The Hon'ble MR. STRACHEY then moved the following amendment:—

That the following words be added to clause four of section twelve:—

"and any mortgagee dispossessed under section seventeen shall be reinstated, unless his claim under the mortgage has been satisfied."

He said that this addition was desirable owing to the introduction of a clause in section twelve, providing for the restoration of the Taluqdár to his property if, within six months, the Chief Commissioner thought that the provisions

of the Act should not continue to apply thereto. Thereupon all barred proceedings and debts would be revived; and it was only just that dispossessed mortgagees should be restored to their former position.

The Hon'ble MR. STRACHEY then moved that the Bill as amended be passed.

The Motion was put and agreed to.

PENAL CODE AMENDMENT BILL.

The Hon'ble MR. STEPHEN asked leave to postpone his Motions regarding the Bill to amend the Penal Code.

Leave was granted.

COINAGE AND MINT BILL.

The Hon'ble MR. STEPHEN moved that the Report of the Select Committee on the Bill to consolidate and amend the law relating to Coinage and the Mint be taken into consideration.

He said that this was emphatically a measure of consolidation. Its object was the improvement of the law, and not the settlement of any of the delicate questions which were connected with the state of the currency. On these questions the Bill committed the Government to nothing, and he (MR. STEPHEN) believed that they saw no immediate necessity for entering upon their consideration. He made this statement, because he had seen in the public papers statements which showed that the measure had been misunderstood, and that it was supposed to be something more than it really was, a part of the general scheme of consolidation to which he had so often referred. Had it been a financial or currency measure, it would have been introduced by his Hon'ble friend, Sir R. Temple, who was the proper person to deal with such subjects. Though, however, the measure was a juridical and not a financial one, it had the sanction and approval of the Financial Department, and the opportunity had been taken of making a few alterations in the law which the experience of that Department recommended. Still, with the exception of the clauses relating to the destruction of light weight, counterfeit, and called-in coin, the Bill was little but a re-arrangement, in twenty-eight sections, of the law now scattered through four Regulations and two Acts.

The changes made by the Select Committee might be shortly stated.

As money could only be made exact within a certain limit of error, the Committee had followed the example of the recent English Act (33 Vic., cap. 10), and introduced clauses providing that the 'remedy,' or permissible deviation from standard weight and fineness, for gold and silver coins, should be as follows:—

	Remedy in weight.	*Remedy in fineness.*
Gold Mohur.	$\frac{2}{1,000}$	$\frac{2}{1,000}$
½ ditto.		
⅓ ditto.		
Double ditto.		
Rupee.	$\frac{5}{1,000}$	$\frac{2}{1,000}$
½ ditto.		
¼ ditto	$\frac{7}{1,000}$	$\frac{3}{1,000}$
⅛ ditto	$\frac{10}{10,000}$	

The remedy for all copper coins would be one-fortieth in weight.

In section nine the clauses relating to the receipt of mohurs and sovereigns in payment of Government demands had been omitted. This matter was, the Committee thought, better left to the Executive.

Part VII had been restricted to silver coin: the power to cut light-weight, counterfeit, and called-in coins was confined to such officers as Government would appoint in this behalf; and such power would be exercised subject to rules prescribed by the Government of India. Coins so cut which were counterfeit or had been reduced in weight otherwise than by reasonable wearing, would be returned. But genuine coins so cut, which had lost more than two per cent. in weight, or had been called in, would be received at the rate of one rupee per tola. These alterations rendered unnecessary the section regarding the decision of disputes by a Magistrate.

In Part VIII clauses had been introduced requiring the Mint Master to receive all bullion fit for coinage which might be brought to the Mint in certain quantities, and imposing a charge for melting or cutting of one-fourth per mille on gold, and of one per mille on silver bullion.

Where bullion so brought was withdrawn, the Committee had provided that the withdrawal should be within twenty-four hours after receiving the Assay Master's report, and on payment of a fee prescribed by the Government of India.

Section nineteen, as to the additional duty for coining half and quarter rupees, had been struck out. It would, if enacted, have injured the poorer classes by preventing the free issue of small coin without extra charge.

The Committee had empowered the Governor General in Council to make rules as to the staff and management of the Mint, and also (by notification in the *Gazette*) to diminish the amount of remedy allowed, to call in coins, to prescribe rules for the guidance of officers authorised to cut or break coin, to establish mints at any places in British India other than Calcutta and Bombay, to abolish both or either of the mints at those towns, and to regulate any matters relating to coinage and the mint not provided for by the Bill.

Lastly, Bengal Regulation XIV of 1817 had been added to the schedule of repealed enactments.

The Hon'ble SIR R. TEMPLE desired to express, on behalf of the Financial Department, the obligation it was under to the Legislative Department for the care with which the present measure had been elaborated.

The Motion was put and agreed to.

CORONERS' BILL.

The Hon'ble MR. STEPHEN introduced the Bill to consolidate the laws relating to coroners, and moved that it be referred to a Select Committee with instructions to report in six weeks. He said that this Bill was also a measure of consolidation, and would, if enacted, put an end to the separate existence of five enactments.

The Motion was put and agreed to.

PRISONS' BILL.

The Hon'ble MR. COCKERELL presented the Report of the Select Committee on the Bill to amend the law relating to prisons in the Panjáb, Oudh, the Central Provinces, and British Burma.

PRISONERS' BILL.

The Hon'ble MR. COCKERELL asked leave to postpone his Motion for leave to introduce a Bill to consolidate and amend the law relating to prisoners.

Leave was granted.

LOCAL EXTENT BILL.

The Hon'ble MR. COCKERELL moved that the Hon'ble Mr. Strachey be added to the Select Committee on the Bill to declare and consolidate the law relating to the local extent of the general Regulations and Acts, and the local limits of the jurisdiction of the High Courts and chief controlling revenue authorities.

The Motion was put and agreed to.

MAULMAIN TIMBER DUTIES' BILL.

The Hon'ble MR. STEPHEN moved for leave to introduce a Bill to legalize the levy of duties on certain timber imported into Maulmain between July 1864 and August 1865. He said that duties on foreign timber imported into Maulmain by th e Salween River, which flowed through the Tenasserim Division, had, since 1842, been levied at a place called Kado. Down to October 1864 these duties were supposed to be authorised by Act XXX of 1854, section seven, which provided that 'teak timber floated down any river in the Martaban *or Tenasserim* Divisions, should be charged with the same duty as that chargeable for the time being under section six on teak timber passing a river frontier custom-house,' *i. e.* (as appears from section six), a custom-house on either of the Rivers Irawádi and Sítang. But duties levied on timber passing down these two rivers were abolished by a notification in the Foreign Department made under Act IV of 1863, and dated the 4th June 1863. Thenceforward, therefore, the levy of duties on the Salween River was unauthorised. The change in the law as regards the Salween was, of course, unintentional, and had been, until quite recently, unknown both to the local authorities and the public. The present Bill was intended to legalize the levy of these duties from the 1st July 1864 down to the 2nd August 1865, and to indemnify the officers concerned. For the duties levied before the former date the Limitation Act would provide, while those levied after 2nd August 1865 were legalized by Act VII of 1869.

The Motion was put and agreed to.

EVIDENCE BILL.

The Hon'ble MR. STEPHEN moved that the Hon'ble Mr. Strachey be added to the Select Committee on the Bill to define and amend the Law of Evidence. He said that the Motion afforded him an opportunity of saying a few words on a measure of the very highest importance. The Evidence Act was drafted by the Indian Law Commissioners, and sent out to this country two years ago. It was introduced by Mr. Maine, referred to a Committee, several of the members of which had now ceased to belong to the Council, and published in the *Gazette* for general information.

Objections of great weight had been taken to it by many of the most distinguished lawyers in India, and, no doubt, the subject was one which required the most careful handling. It was impossible to exaggerate the practical importance of the Bill, as it would regulate the most important part of the procedure of every court of justice throughout the Empire. Such a measure would, of course, require the most careful consideration in each of its parts, and it appeared to him (MR. STEPHEN) that the great question which the Committee would have to consider was, what was likely to be practically useful in the various courts, and, in particular, in the courts of the mofussil. The

English Law of Evidence had been gradually constructed by the decisions of successive generations of Judges and by Acts of Parliament, and it assumed throughout that the court had the assistance of a highly-qualified bar, that the facts in dispute were decided by a jury, and that the Judge was to act as an umpire between two litigants, and not as an independent enquirer into facts. The result had been that the object of many of the rules of evidence was rather to bring the proceedings to a point than to aid enquiry into truth. It was not so much a guide to the Judge as a set of conditions imposed upon the parties. He (MR. STEPHEN) felt doubts whether such a system could be advantageously introduced into this country without great modifications.

At the same time it was necessary to take some steps. The law was in a state of great uncertainty. No one could say precisely how far the English Law of Evidence did, and how far it did not, prevail in the mofussil, and the consequence was that the subject caused great difficulty and uncertainty. As a proof of this he (MR. STEPHEN) might observe that in Messrs. Cowell and Woodman's Indian Digest, which contained notes of cases decided in about eight years, the title 'Evidence' filled no less than twenty-three royal octavo pages in small print and double columns. There were probably from four to five hundred decisions noted upon the subject. This was the state of things for which the Committee would have, if possible, to provide a remedy. It was one which in justice to exceedingly hard-worked officials ought not to be permitted to continue.

The Motion was put and agreed to.

The following Select Committee was named:—on the Bill to consolidate the laws relating to Coroners, the Hon'ble Mr. Cockerell and the Mover.

The Council then adjourned to the 20th September 1870.

WHITLEY STOKES,

SIMLA;

HOME DEPARTMENT.

PLAN FOR DESPATCH OF COVERS TO THE ADDRESS OF OFFICERS ACCOMPANYING THE VICEROY ON TOUR.

From F. R. HOGG, ESQ., Officiating Deputy Director General of the Post Office of India, to the Private Secretary to His Excellency the VICEROY and GOVERNOR GENERAL of India,—No. 654, dated Simla, the 12th May 1870.

ON occasions of His Excellency the Governor General proceeding on tour, it is customary for your Office to forward to my Office a tour list with the names of those who accompany His Excellency, with instructions to regulate thereby the transmission of covers by Post. The redirection of covers at a Post Office other than that of the original address involves great trouble, and cannot practically be fully carried out. It has been found also that considerable inconvenience is caused by the redirection of covers in accordance with your instructions, but which, nevertheless, were not intended for redirection by those who posted them.

2. For instance, in the tour list received with your communication dated 26th March, "Major-General H. W. Norman, C. B., Secretary to Government, Military Department," was mentioned as one of the party, and yet great inconvenience was caused by the transmission to His Excellency's Camp of a number of covers addressed to the Secretary to the Government of India in the Military Department, Calcutta or Simla, which were intended for General Norman's Office, and not for himself.

3. It seems desirable, therefore, that there should be some clear and simple rule for the guidance of the Post Office in such cases, and I would propose that future instructions of the kind referred to, be applied only to covers addressed to "The Governor General's Camp," all those addressed to a particular Post Town being forwarded to that Post Town.

4. It would be easy, if His Excellency considers it desirable to except from the operation of this rule the Overland Express Packet for the Viceroy which might be forwarded to the Camp, even though bearing the name of a particular Post Town on its address.

5. This seems to me to be on the whole the best rule; but if any other of equal simplicity can be substituted, I shall of course be ready to carry it out. The great object in framing any

rule is to avoid complication and to provide a form of address which can easily be observed, both by those who post letters, and by the Department which conveys them.

From MAJOR O. T. BURNE, Private Secretary to the Viceroy, to the Officiating Deputy Director General of the Post Office of India,—dated Simla, the 18th May 1870.

IN reply to your letter of the 12th instant, I have the honor to say that His Excellency the Viceroy approves of the plan you suggest for the transmission of letters during future tours as an experimental measure.

FOREIGN DEPARTMENT.

REPORT DESCRIPTIVE OF THE ROUTE TAKEN BY DR. CAYLEY OVER THE MASIMIK PASS, THROUGH THE LINGRI THANG PLAIN, AND UP TO THE KARAKASH RIVER.

From DR. H. CAYLEY, Joint Commissioner to Ladak, to the Secretary to the Government of the Punjab,—No. 7, dated Camp Karakash River, the 28th July 1870.

AFTER leaving the Pangong Lake I accompanied Mr. Forsyth's camp for three marches over the Masimik Pass as far as Pamzal, in the Changchenmo Valley. A good road has been made the whole way, and the pass itself, nearly 19,000 feet high, is particularly easy, and the ascent and descent most trifling. From Pamzal I came on ahead of Mr. Forsyth, and, following the route I took in 1868 through the Changchenmo Valley, and over the lowest of the passes leading across the mountain range to the north, reached the centre of the Lingri-thang plain on the 19th.

The pass by which I crossed out of Changchenmo, and over which, on my recommendation, Mr. Forsyth followed, is by far the lowest and easiest of all; in fact, it has only a perceptible ascent and descent of a few hundred feet with very gentle gradients; but the road made last year by the Kashmir authorities has been carried over a very much higher and steeper part of the range a few miles to the east, although I particularly pointed out exactly what course the road ought to take, and put up marks to define it.

In Lingri-thang I met the messenger sent back by Tara Singh and Hurri Chund from Shahdula, who reported that all was well, and preparations were being made for Mr. Forsyth's receptions; this proves the untruth of the rumours of disturbances in Yarkund.

From camp Lingri-thang I started on the 21st, and leaving the new well-known route to the eastern branch of the Karakash which I followed in 1868, I took a direction north by west across the plain, and reached the southern or main branch of that river in two marches, and, following down its course, arrived this morning at the junction of the two branches of the river where the roads re-unite. I have been making hurried forced marches in order to catch Mr. Forsyth's camp at this point, but now discover that it is a day's march behind, and will not be here till to-morrow. The envoy, Mirza Shádi Sayad Yakúb Khan, and others of the Yarkundis, have gone on ahead towards Shahdula, five stages distant. They have Yarkundi horses as baggage animals, which can make daily marches without getting knocked up, as is not the case with the inferior ponies of Kashmir and Ladak, such as were supplied to carry Mr. Forsyth's camp.

The route I followed is three marches longer than the other, and it is doubtful if it present any special advantages to compensate for the extra distance.

The last six marches are very good and easy, and grass, fuel and water, the essentials for travelling in these barren regions, are abundant; but for two marches beyond Lingri-thang plain, although the road is extremely easy, and the mountain pass, Kizil Pass, hardly preceptible, there is no grass, although water and a little fuel can be found; so that from the Changchenmo Valley to Karakash the caravan would have nearly five consecutive marches without finding grass.

On my return I am in hope of finding an easy route up to the head of the southern branch of the Karakash River and then to the Changchenmo Valley, by which the barren plains would be avoided, or only traversed for a few miles, and along which grass would be found at every stage.

I hear from the Native Doctor whom I have left in charge of the Dispensary at Lé that patients are attending as usual.

The small area under sugar-cane shewn in this Statement is in addition to that already shewn in corresponding Statement for the khurreef.

W. G. ROSS, *Lieutenant, R.E.,*
Assistant to Chief Engineer, Irrigation Works, N. W. P.

ALLAHABAD; *The 27th July* 1870.

No. 37 of 1870.

SUPPLEMENT TO
The Gazette of India.

SIMLA, SATURDAY, SEPTEMBER 24, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

OPERATIONS OF THE IRRIGATION DEPARTMENT IN THE CENTRAL PROVINCES DURING 1869-70 AND UP TO THE END OF JUNE LAST.

From T. W. ARMSTRONG, ESQ., C.E., Officiating Secretary to the Chief Commissioner in the Central Provinces, Public Works Department, to the Secretary to the Government of India, Public Works Department,—
No. 6—58 I., dated Nagpore, the 1st July 1870.

Public Works Department No. 131 I., dated the 13th May 1869.
Public Works Department, No. 205 I, dated the 26th May 1870.

WITH reference to the orders contained in letters noted on the margin, I am directed by the Chief Commissioner to forward a report received from the Irrigation Department reviewing the survey operations carried out during the past offi[illegible] year, and since then up to date, in the Central Provinces.

2. Seven projects have been under survey and examination.

3. The "Shere," a small scheme, has been carried out, and the works necessary were completed in April last at a cost of Rs. 3,136. This little work is described in paragraphs 2, 3 and 4 of the Report.

4. The Kanhan project has been submitted for the orders of Government, and the Pench and Balaghât schemes are now under consideration, and the necessary plans and estimates are being compiled.

5. There remains "The Dham," "The Wurdah," and "The Deo."

The two last have been practically abandoned on financial grounds, but the former presents favorable features which further investigation will, it is believed, develope, and so allow of its being submitted for orders. It will not be an expensive undertaking.

6. On the whole, the Chief Commissioner is statisfied at the progress made and field-work executed. The staff is small; and, owing to the sudden illness of Lieutenant Shepherd, some inconvenience and delay was experienced last working season.

Note by T. W. ARMSTRONG, ESQ., C.E., *Superintending Engineer, Irrigation Works, in the Central Provinces, Public Works Department,—Dated the 30th June* 1870.

REPORT submitted in accordance with orders contained in Government of India's No. 205 of the 26th May 1870.

THE UPPER DHAM PROJECT.

The investigation of this project was commenced, in the first instance, by Mr. Carey, with a view of supplementing the supply in the lower portion of the Wurdah Canal. It was then taken up at the commencement of the last field-season as a separate scheme. The idea entertained was to throw an anicut across the Dham at either "Kachnoor," the site first hit upon, or at "Kharangua," a later and better selected site, and to lead the water of the river off by channels on either bank. Lieutenant Shepherd, however, found that even so early as January, there was a flow in the river of only 2¼ cubic feet per second, and that officer consequently recommended that a reservoir site higher up the river should be searched for with the view either of supplementing the channels below in the drier months of the year, or else of taking out the channels direct from the reservoir itself, and so avoiding the construction of the anicut. Two sites were examined for this purpose by myself and Lieutenant Skipwith, one just above the village of Kachnoor, and the other at the junction of the Mahadeo, and another large nullah with the Dham, near the village of Masodh. This last was found to be the most favourable locality. It has been surveyed and cross-sectioned. The field-work was not completed until the month of May. It was found impracticable from the physical conformation of the country just below the proposed reservoir, to lead out the channels direct from it, except at a great expense, and the project has consequently been designed with a view to storing water in the reservoir at "Masodh," and then passing it down the river bed to the anicut and canals on either bank. This will involve waste from absorption, but it is unavoidable. The scheme sketched out as it stands, is not likely to prove a financial success, but it is known to be capable of modification and extension. The quantity to be stored in the reservoir is in excess of the supply requisite for the area under command as at present surveyed. The project is now under examination with a view to such modification and extension. The preliminary report on it, having been returned for that purpose to Lieutenant Skipwith, who is in charge of the surveys.

The following is a general statement of surveys made and levels taken:—

	Miles.
(1.)—Miles of channel surveyed	31½
(2.)—Subsidiary miles surveyed including check levels ...	101
(3.)—Miles of cross-sectioning	56
(4.)—Standard of supply, 100 acres khurreef crop, ... } 200 acres rubbee crop ... ... }	1 cubic foot per second
(5.)—Trial lines surveyed	59

"THE SHERE PROJECT."

2. This is a small project for "monsoon" irrigation only. It consists of a masonry dam, or little anicut across the bed of the Shere, which is an affluent of the Dham River, an earthen channel and some masonry works as culverts to pass drainage, have been executed also. The little anicut is three feet high, and the length of channel is somewhat over one mile. Its dimensions are, one foot width of bed, height of banks of about 2½ feet. It is intended to carry a depth of water of one foot only. The estimated cost of the whole scheme was Rs. 3,168, and the actual cost of construction was Rs. 3,136. Of this sum about one-half was spent by the close of the past official year, and the balance in the month of April. The channel and works have now been handed over to the Civil authorities for the prosecution of experiments in cotton cultivation, which are undertaken at the wish of the Viceroy, expressed when here in March. Manure of different kinds is to be used, and experience will be obtained as to which class of cultivation and quantity of irrigation water, the cotton plant will best thrive under, and yield more abundantly a supply of staple. Valuable data are expected from the results. The cultivation is under the direct charge of two officials, one a practical gardener or overseer, the other is Mr. Noble, an Assistant to the Cotton Commissioner, Mr. Carnac.

3. The surveys and the levels were carried out by Lieutenant C. E. Shepherd. The works were executed by Mr. Scott, Supervisor, Lieutenant Skipwith being then in Executive charge. The large proportion that the number of subsidiary miles levelled bears to the channel length, is due to the work having been connected with the mean sea-level, which was brought down from the Railway Station at Wurdah, distant some 12 miles, and also to more than one trial line having been surveyed.

4. The project was sanctioned by the Local Administration in Public Works Department Secretary's No. 2—15 I, dated 7th March 1870, and funds were supplied from the grant "Agricultural"—minor works Irrigation. The following is a general Statement of surveys made and levels taken:—

	Miles.
(1.)—Miles of channel surveyed	1⅛
(2.)—Subsidiary miles surveyed, including check levels ...	23¼
(3.)—Miles of cross-sectioning	⅛
(4.)—Number of acres it is proposed to irrigate ...	80 acres.
(5.)—Standard of supply	None.*

WURDAH CANAL PROJECT.

5. The Wurdah Canal was designed by Major Fischer to take its rise from the Wurdah River at the village of Laraigaon, not far from the important Town of Arvee, about 20 miles distant in a direct line from the Great Indian Peninsula Railway at Nachungaon. It was intended for "monsoon" irrigation only, combined with navigation. The line of canal after leaving the Wurdah follows a rough contour line for the first 19 miles of its course as far as the village of Russoolabad, where it divides into several branches, one of which crosses the Great Indian Peninsula Railway near Nachungaon—here it is upon a ridge line which it follows to Kamgaon. Another and smaller channel follows the Deolee ridge. A third and a principal one, after taking a tortuous course along a rough contour line, crosses the Great Indian Peninsula Railway near the Civil Station of Wurdah, and ultimately gets upon the Ulleepoor ridge, throwing out a branch for that of Mandgaon.

6. The anicut was designed by Major Fischer to be 29 feet high, with an estimated rise of flood waters on its crest of 12 feet. As calculated by formula, the rise amounted to 16 feet, but 4 feet were deducted on account of the increased velocity of approach. The canal channel was designed to carry 8 feet depth of water, with a bottom breadth of 41 feet, and side-slopes of 1 to 1. The estimated velocity with a fall in bed of 6 inch per mile, was 2 feet 3 inches per second, nearly. The nullahs and streams met by the channel on its course, were passed by lines of single embankment, provided with escape weirs for the overflow of surplus water. There were scarcely any other masonry works proposed, with the exception of sluice heads and the Baklee Nuddee aqueduct.

7. Colonel Strachey objected to the proposed method of crossing drainage lines by single embankments. Various other objections have been raised from time to time, and several modifications and alterations proposed, the principal of which will be found in the report which accompanied Lieutenant Shepherd's No. 452, dated 17th September 1869. Of the total amount of work done, as shown in the tabular Statement, 412½ miles were executed in the early part of the last official year. Since then, no field-work has been undertaken.

8. Major Fischer estimated that 280,000 acres would be commanded by the proposed channel, after deducting two-fifths of gross area for jungle, waste, village sites, and so on; and of this amount he proposed to irrigate 90,000 acres. The standard of supply being 100 acres for each cubic foot of discharge.

(4.)—The project was reported on by Lieutenant Skipwith in April 1870, as directed by me in March last. Since then, no further investigation of this project has been made and no further enquiry has been undertaken. The report was unfavourable to the scheme, chiefly on financial grounds. One principal point in it being that it was found that only 42,437 acres were under command of the channel estimated for by Major Fischer, instead of 90,000 acres as reckoned on by that officer; and moreover, it being now established that monsoon irrigation schemes will not be remunerative in the Central Provinces, they are rejected by all Departments and by the Chief Commissioner.

9. The following is a general statement of surveys made and levels taken—

	Miles.
(1.)—Miles of channel surveyed	162
(2.)—Subsidiary miles surveyed, including check levels	445
(3.)—Miles of cross-sectioning	551
	Acres.
(4.)—Number of acres it is proposed to irrigate	90,000
(5.)—Standard of supply, 100 acres to 1 cubic foot of discharge ...	
	Miles.
(6.)—Trial lines surveyed	70

* No exact standard is fixed, the project being an experimental one as explained above.

Kanhan Project.

10. By the Kanhan Project, it is proposed to utilize the water of the Kanhan River by storing a portion of the monsoon flow in a large reservoir at the village of Khapa. The water spread will cover 40½ square miles. This reservoir contains, when full, 19,758,000,000 cubic feet of water. The waste weirs are 13,000 feet in length, and in extreme floods, 3 feet is the greatest depth of water which will flow over them.

With the source of supply noted, it is proposed to irrigate a large tract of country, chiefly situated on the right or South-West bank of the Kanhan River, but also including a smaller District on the left bank, lying between that river and the River Pench, at their point of junction and in the Pergunnah Bhewgurh.

The larger District includes lands in the Pergunnah Patunsoungee, Kailod, Hingna, Nagpoor, Boree, and Ambora, and extends from near the town of Khapa to the banks of the Weingunga, near the point of debouchure of the Kanhan River.

11. The cost of the appropriation of the land for this reservoir, with the villages submerged, is estimated by Mr. Bernard, the Commissioner of Nagpoor, at one lakh and-a-half of Rupees. To cover contingent payments, two lakhs are included under this head in the estimate.

12. The channels are laid to command a gross area of 148,000 acres, and on the supposition that three-fifths of this total area will eventually have to be provided with water.

Mr. Bernard reports from actual returns that ·786 or four-fifths nearly of the gross area is either cultivated or culturable. The irrigable duty of the water is taken at the rate of one cubic foot per second for each 200 acres.

13. The estimate for the scheme is 72 lakhs of Rupees for 1,314 cubic feet per second, of Rs. 5,319 for each cubic foot per second of perennial supply.

If the water is charged at the rate of Rs. 3 per acre, per annum, the revenue is estimated at 3¾ per cent. for the first five years, if one-fifth of the gross area is irrigated; 5½ per cent. for the second five years, if two-fifths of the gross area is irrigated; and 11¼ per cent. for the third five years, if three-fifths of the gross area is irrigated. The supply of water is shown by the actual gaugings of the river to be practically perennial.

14. The field-work for the Kanhan Project last year extended from February 1869 to June 1869. Two European Overseers and one Native Sub-Surveyor were engaged taking contour levels on the site of the proposed Store Reservoir at Khapa, whilst the Executive Engineer, Mr. Hooper, was reserved for the important duties of contouring the line of main channel between the reservoir and Nagpoor, a distance of 33 miles, fixing the position of the aqueducts, river crossings, and communication bridges, &c. He also took check levels over the line of head-works at the reservoir, and a large series of check and trial levels in the District to fix contour canals and so on.

15. The following is an outline of the work done by the staff of the Kanhan River Irrigation Project:—

	Miles.
(1.)—Four contours for reservoir	429
(2.)—Section through line of hills forming dam to reservoir ...	5
(3.)—Section for waste weirs	8
(4.)—Check levels of head work at Khapa	2
(5.)—Longitudinal section of bed of River Kanhan	23
(6.)—Cross sections of the River Kanhan	5
(7.)—Trial line of Canal contoured from Khapa to Bunwaree ...	38
(8.)—Trial line of canal from Tegaie to Nagpoor	25
(9.)—Main canal bearing and levels from Khapa to Nagpoor ...	33
(10.)—Checking the same	22
(11.)—Trial levels in the Oomrair District	80
Total Miles ...	670

Balaghat Irrigation Project.

16. The District which can be commanded by the line of main canal, is bounded by the River Mussurra on the East and the Weingunga on the West. The canal after reaching the village of Durpewara about six miles North of Bhoora, or as it is more commonly called Balaghat, is at a sufficiently high level to command the land sloping away towards the Weingunga, and at a point two or three miles North of Balaghat gains the ridge or back-bone of the Doab, and, consequently, the whole of the land East and West of the main canal as far as the Bagh Nuddee, would be capable of irrigation if sufficient water could be obtained.

Proposed Source of Supply.

17. The supply of water will be obtained from two rivers, *viz.*, the Musmer and the Nehra which are affluents of the Weingunga. They empty into the latter river together, at a point near the village of Titwa.

No surveys exist of the catchment basins of these rivers, but cross-sections have been taken and necessary levels, to enable calculations to be made of flood discharges, and the summer season discharge has been accurately gauged at intervals.

These rivers, from their close proximity to the hills are quickly affected by showers, and it has been found that after a little rain, the flow of the Nehra increased from five cubic feet per second to about 30 cubic feet. Then gradually, and in about 10 days, returning again to five cubic feet a second, less than which it has not been. A gauge is now fixed in the Nehra to establish the flow with certainty.

The summer flow of the Musmer is very small, being about 1½ cubic feet per second, as a minimum.

Description of proposed Works.

18. The works proposed to regulate the flow and utilize the waters of these rivers, are as follows:—

(1.)—Store Reservoir on the Musmer at Kinaree Tola.
(2.)—The restoration of a Tank at Saeoree.
(3.)—The construction of a channel of 1½ miles, to convey the water stored in the Kinaree Tola Reservoir to the Saeoree tank.
(4.)—A channel from the Saeoree tank to pass the water stored in the Kinaree Tola Reservoir into the River Nehra.
(5.)—A Store Reservoir on the River Nehra near the village of Tikaree.
(6.)—An anicut across the Nehra near the village of Mondper.
(7.)—A canal from the anicut to convey the united waters of the Musmer and Nehra to the Balaghat Doab,—

Present Condition of the District proposed to be irrigated.

19. The District proposed to be irrigated is already supplied with a system of small tanks, and the ground is laid out for watering. This existing arrangement will suffice for one crop of rice, so that except in years of small rain-fall, none of the stored water will be required, during the months from June to November inclusive, the flow of water in the Nehra during that period will be amply sufficient to supplement the supply in the existing village tanks.

The disposal of the stored water.

20. During the remaining six months from December to June, the stored water will be drawn upon, and the supply that can be affodred, is calculated as follows, *viz.*—

From Kinaree Tola Reservoir per second for 150 days ...	11	cubic feet.
Nehra Reservoir	14	,,
Nehra River minimum flow	5	,,
Musmer ditto	2	,,
Total ...	32	,,

21. The approximate cost of the works to supply 32 cubic feet per second, amounts to Rs. 3,48,974, reckoning that each cubic foot per second will water 200 acres. We have—

Cubic feet per second.		Acres.		Square miles.
32	× 200 =	6,400	=	10

as the area capable of being irrigated by the proposed supply. To obtain 7 per cent. on the outlay, the following figures show that Rs. 24,400 must be received:—

	Rs.	Rs.
7 per cent. on	3,48,974	= 24,428
6,400 acres, @ Rs. 3-13		= 24,400

This is based on the assumption that the whole of the water will be quickly sought after, and it is considered certain that it will be.*

* The Commissioner of Nagpoor is of this opinion.

22. The estimate allows for the canal being carried down the Balaghat Doab as far as the Bagh Nuddee, so that if difficulty is found in the disposal of it in the neighbourhood of Bhoora, it may be advanced down the District at a small cost. The expense of the channel is very slight after reaching the ridge.

23. On the first of last February, field-work was begun in connection with the Balaghat Irrigation Project with a staff of one Executive Engineer, Mr. Hooper, two European Overseers, and one Native Sub-Surveyor. Mr. Anderson, Assistant Engineer, joined the camp on the 23rd February. The following is an outline of the field-work completed on the 3rd of the present month :—

	Miles
Contour levels Musmer Reservoir	18
Saeoree Reservoir cross-sections	2¾
Trial levels for channel between Musmer and Nehra Rivers ...	11½
Cross-sections and longitudinal sections of Nehra River at site of proposed Reservoir	12

Trial levels on banks of Weingunga	11
Trial levels near Punchalla and in the Durpewara Nullah ...	12
Traverse Surveys	7½
Cross-sections of Doab	59
Total number of miles surveyed ...	327

OTHER PROJECTS EXAMINED IN THE BHUNDARA AND BALAGHAT DISTRICTS.

24. When Mr. Hooper proceeded to examine the projects recommended to notice for the Balaghat and Bhundara Districts, he found at Chandpore, a village 30 miles North of Bhundara, a spot where the Lamundoho Nuddee has cut its way through the line of hills lying in the direction of Ambaghur and Chandpore. It is a good site for a reservoir, provided the ground higher up stream is favourable. A dam might be formed at a point near the village of Chandpore, where the hills are not more than five or six hundred feet apart. The banks and bed of the river are rock. The ground which lies between the Lamundoho and Ambaghur Rivers, slopes gently from the hills towards the Weingunga, and contains an area of 40 square miles. The greater portion of this is under rice cultivation, now a single crop, and is at present irrigated by a series of small tanks which often fail and do not afford water till late in the monsoon.

THE DEO NUDDEE PROJECT.

25. Being first under consideration, the Executive Engineer proceeded to Godree, a village on the banks of the Deo, beyond which all is dense jungle—a reservoir in the valley is impracticable. The course of the river has been traced from a point about three miles up stream from Assurma, to the village of Dhutta down the nuddee. It is found that no spot exists suitable for storing water on a large scale, and even if there was, the expense of leading a channel from it to the lands below, would be very great. It would pass through heavy jungle, the ground being cut up in the wildest manner by nullahs, hills, ravines, immense heaps of boulders, &c. It is only on reaching a point, near Dhutta, that any work could be done. Trial levels were commenced from this point, and 30 miles of levels were also taken down the bed of the river from Assurma to Kokha.

There was a considerable stream of water passing down the river in January, which measured as 40 cubic feet per second. It is believed that the river near runs dry, but the "Deo," throughout, is of such a character, that irrigation works from it would be of a most expensive nature, and the land which could be irrigated even at this great cost, is so limited in quantity, that it was not advisable to attempt to lay out a project. Mr. Hooper's attention was, therefore, directed to the Musmer and Nehra Rivers directly North of Bhoora. Trial levels were taken from the Weingunga at several rocky barriers with the idea of leading off a channel from an ancient, but the excavation and head-works would be such a great depth and so expensive, that reluctantly the investigation was abandoned.

PENCH PROJECT.

26. In the latter end of April last, a site for a reservoir on the Pench River, which had been proposed and reported on by Lieutenant Shepherd from some rough measurements, was again examined.

These have been now supplemented by a set of cross-sections within the basin of the reservoir, and a top contour line round its margin at a fixed height above the bed of the river, has been surveyed. At the proposed dam site, an accurate section of the ground along the line of the proposed head dam, completed the data required.

This information is now being worked up into form, and will be submitted as soon as completed.

"ABSTRACT OF FIELD-WORK."

		Miles.
27.	Contour of proposed Pench Reservoir	8¼
	Cross-sections of Reservoir	5
	Flying levels	2½
	Sections of gaps in hills on right and left banks of Pench River and section of river at proposed site of bund	2¼
	Total ...	18

28. From the above detailed report, I trust it will be allowed that the working staff of the Irrigation Department at Nagpoor, have been fully engaged the past year and with good results. The staff is small and the establishment inexpensive.

Practically, it consists of only one Executive Engineer and one Assistant Engineer, assisted by three Overseers. Lieutenant Skipwith is acting as Assistant Secretary, Public Works Department, and Assistant to the Chief Engineer.

29. Every project investigated or under survey, has been recommended, in the first instance, by the Civil Department, and orders were then passed on their proposals by the Chief Commissioner.

30. An abstract of the field-work put out of hands since February 1869, up to the 1st current, is as follows :—

	Miles of Levels, &c.
The Dham Project	247½
„ Shere „	24½
„ Wurdah „	412½
„ Kanhan „	670
„ Balaghat „	327
„ Deo „	30
„ Pench „	18
Total ...	1,729½

No. 341 I, dated Simla, the 17th August 1870.

From—The Government of India, P. W. Dept.,

To—The Chief Commissioner, Central Provinces.

I AM directed to acknowledge the receipt of your Officiating Secretary's letter No. 6—58I, dated the 1st ultimo, submitting a report of the operations of the Irrigation Department in the Central Provinces, during the past official year and up to the end of June last, and in reply to state that the report submitted describes very clearly what has been done, and the work performed is considered by His Excellency the Governor General in Council to be very creditable to the officers concerned.

2. A copy of the report will be forwarded to the Secretary of State for information.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

PLAN FOR DESPATCH OF COVERS TO THE ADDRESS OF OFFICERS ACCOMPANYING THE VICEROY ON TOUR.

From F. R. Hogg, Esq., Officiating Deputy Director General of the Post Office of India, to the Private Secretary to His Excellency the Viceroy and Governor General of India,—No. 654, dated Simla, the 12th May 1870.

On occasions of His Excellency the Governor General proceeding on tour, it is customary for your Office to forward to my Office a tour list with the names of those who accompany His Excellency, with instructions to regulate thereby the transmission of covers by Post. The redirection of covers at a Post Office other than that of the original address involves great trouble, and cannot practically be fully carried out. It has been found also that considerable inconvenience is caused by the redirection of covers in accordance with your instructions, but which, nevertheless, were not intended for redirection by those who posted them.

2. For instance, in the tour list received with your communication dated 26th March, "Major-General H. W. Norman, C. B., Secretary to Government, Military Department," was mentioned as one of the party, and yet great inconvenience was caused by the transmission to His Excellency's Camp of a number of covers addressed to the Secretary to the Government of India in the Military Department, Calcutta or Simla, which were intended for General Norman's Office, and not for himself.

3. It seems desirable, therefore, that there should be some clear and simple rule for the guidance of the Post Office in such cases, and I would propose that future instructions of the kind referred to, be applied only to covers addressed to "The Governor General's Camp," all those addressed to a particular Post Town being forwarded to that Post Town.

4. It would be easy, if His Excellency considers it desirable to except from the operation of this rule the Overland Express Packet for the Viceroy which might be forwarded to the Camp, even though bearing the name of a particular Post Town on its address.

5. This seems to me to be on the whole the best rule; but if any other of equal simplicity can be substituted, I shall of course be ready to carry it out. The great object in framing any rule is to avoid complication and to provide a form of address which can easily be observed, both by those who post letters, and by the Department which conveys them.

From Major O. T. Burne, Private Secretary to the Viceroy, to the Officiating Deputy Director General of the Post Office of India,—dated Simla, the 18th May 1870.

In reply to your letter of the 12th instant, I have the honor to say that His Excellency the Viceroy approves of the plan you suggest for the transmission of letters during future tours as an experimental measure.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Tuesday, the 20th September 1870.

Present:

His Excellency the Viceroy and Governor General of India, K.P., G.C.S.I., *Presiding.*
The Hon'ble John Strachey.
The Hon'ble Sir Richard Temple, K.C.S.I.
The Hon'ble J. Fitzjames Stephen, Q.C.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble H. W. Norman, C.B.
The Hon'ble F. R. Cockerell.

MAULMAIN TIMBER DUTIES BILL.

The Hon'ble Mr. Stephen introduced the Bill to legalize the levy of certain duties on foreign timber imported into Maulmain, and moved that it be referred to a Select Committee, with instructions to report in a week. The Bill was intended to correct a departmental error committed in 1863, and he had already fully described the measure.

TARIFF BILL.

The Hon'ble Sir R. Temple moved for leave to introduce a Bill to consolidate the law relating to Customs' Duties. Various amendments in the present tariff were desirable, and the opportunity would be taken to incorporate the law relating to the import duties on salt and opium.

Leave was granted.

PRISONERS' BILL.

The Hon'ble Mr. Cockerell moved for leave to introduce a Bill to consolidate the law relating to prisoners committed by Courts. This Bill formed part of the general scheme for consolidating the Acts and Regulations, which, commencing with the Administrator General's Act (XXIV of 1867), had since been steadily pursued, and was now being actively carried out. It provided for the re-enactment of the substantial provisions of Acts VII of 1837, XVI of 1840, VIII of 1863, II and XII of 1867, and part of Act XXIV of 1855 relating to convicts and prisoners under confinement by order of any Court.

Those enactments embraced the entire law regarding such prisoners and convicts, as distinguished from the law relating exclusively to the internal management and economy of prisons.

No amendments of the existing law were contemplated by the Bill beyond such as were incidental to the more concise expression and convenient arrangement of the matter to be re-enacted.

Leave was granted.

CATTLE TRESPASS BILL.

The Hon'ble MR. COCKERELL moved for leave to introduce a Bill to consolidate the law relating to cattle-trespass. This also was a purely consolidation measure.

The principle, as he understood it, on which the general scheme of consolidation was being carried out, was that it was to be applied to all enactments, of which there were more than two on the Statute-book relating to the same subject and in operation exclusively within the same local limits.

The law regarding cattle-trespass was contained in Act III of 1857 and its amending Acts V of 1860, and XXII of 1861.

It was now proposed to re-enact in a consolidated form, for facility of reference, and without any material amendment, the extant provisions of those three enactments.

Leave was granted.

The following Select Committee was named:—On the Bill to legalize the levy of duties on certain timber imported into Maulmain, the Hon'ble Mr. Cockerell and the Mover.

The Council then adjourned to Friday, the 23rd September 1870.

WHITLEY STOKES,

Secy. to the Council of the Govr. Genl. for making Laws and Regulations.

SIMLA;
The 20th Sept. 1870.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Friday, the 23rd September 1870.

PRESENT:

His Excellency the VICEROY and GOVERNOR GENERAL of India, K.P., G.C.S.I., *Presiding.*

His Excellency the COMMANDER-IN-CHIEF.

The Hon'ble JOHN STRACHEY.

The Hon'ble SIR RICHARD TEMPLE, K.C.S.I.

The Hon'ble J. FITZJAMES STEPHEN, Q.C.

The Hon'ble B. H. ELLIS.

Major-General the Hon'ble H. W. NORMAN, C.B.

The Hon'ble F. R. COCKERELL.

MAULMAIN TIMBER DUTIES BILL.

The Hon'ble MR. STEPHEN presented the Report of the Select Committee on the Bill to legalize the levy of certain duties on timber imported into Maulmain.

PAPER CURRENCY BILL.

The Hon'ble SIR R. TEMPLE moved for leave to introduce a Bill to consolidate the laws relating to Paper Currency. This was merely intended to consolidate the four Acts (XIX of 1861, I of 1866, XXX of 1867, and XV of 1870) in which the law on the subject was now contained.

CIVIL COURTS BILL.

The Hon'ble MR. COCKERELL moved for leave to introduce a Bill to consolidate the laws relating to the Civil Courts in Bengal. He said that the consolidation of the law relating to the Civil Courts subordinate to the High Courts in lower Bengal and the North-Western Provinces was only partially effected by Act XVI of 1868.

That Act dealt only with the Courts of Principal Sadr Amíns, Sadr Amíns and Munsifs, in fact with all the District Civil Courts, except the District Judge's Court which was left untouched.

The law regarding the chief District (or zila) Courts was spread over the unrepealed fragments of about six Bengal Regulations and a single Act (L of 1860).

The Bombay Presidency, the Panjáb, and the various other territorial divisions of the Non-Regulation Provinces subject to a distinct Local Government had each their separate 'Courts Act' embracing the entire law respecting the constitution and jurisdiction of the Civil Courts within such Presidency or Division; and it had been proposed in Committee to extend the provisions of the Madras "District Munsifs Bill" so as to include, and thus effect the consolidation of the law relating to, all the Civil Courts subordinate to the High Court in the Madras Presidency.

Hence for the sake of general uniformity, no less than for the further development of the scheme of consolidation of the Statutes, it had become necessary to gather together in one Act the now scattered fragments of the law regarding the constitution and jurisdiction of the Civil Courts in Bengal.

As it was well known that very considerable alterations in our present judicial system have been proposed and had undergone much discussion, it seemed fit that he should state here that whatever stage the various questions therein raised might have reached in the deliberation of the Government, they were as yet far from ripe for legislative action, and no such changes were included in the amendments contemplated by the Bill. Those amendments were for the most part of an unimportant character, and chiefly confined to the rectification of omissions in Act XVI of 1868, touching the jurisdiction of subordinate Judges and Munsifs.

In short the aim and object of the Bill, which he asked leave to introduce, were simply to place the law regarding the Civil Courts in Bengal in as compact as the law on this subject already was, or very shortly would be, in respect of all other parts of the Empire.

WHITLEY STOKES,

Secy. to the Council of the Govr. Genl. for making Laws and Regulations.

The Gazette of India.

SIMLA, SATURDAY, OCTOBER 1, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

PLAN FOR DESPATCH OF COVERS TO THE ADDRESS OF OFFICERS ACCOMPANYING THE VICEROY ON TOUR.

From F. R. HOGG, ESQ., Officiating Deputy Director General of the Post Office of India, to the Private Secretary to His Excellency the VICEROY and GOVERNOR GENERAL of India,—No. 654, dated Simla, the 12th May 1870.

ON occasions of His Excellency the Governor General proceeding on tour, it is customary for your Office to forward to my Office a tour list with the names of those who accompany His Excellency, with instructions to regulate thereby the transmission of covers by Post. The redirection of covers at a Post Office other than that of the original address involves great trouble, and cannot practically be fully carried out. It has been found also that considerable inconvenience is caused by the redirection of covers in accordance with your instructions, but which, nevertheless, were not intended for redirection by those who posted them.

2. For instance, in the tour list received with your communication dated 26th March, "Major-General H. W. Norman, C. B., Secretary to Government, Military Department," was mentioned as one of the party, and yet great inconvenience was caused by the transmission to His Excellency's Camp of a number of covers addressed to the Secretary to the Government of India in the Military Department, Calcutta or Simla, which were intended for General Norman's Office, and not for himself.

3. It seems desirable, therefore, that there should be some clear and simple rule for the guidance of the Post Office in such cases, and I would propose that future instructions of the kind referred to, be applied only to covers addressed to "The Governor General's Camp," all those addressed to a particular Post Town being forwarded to that Post Town.

4. It would be easy, if His Excellency considers it desirable to except from the operation of this rule the Overland Express Packet for the Viceroy which might be forwarded to the Camp, even though bearing the name of a particular Post Town on its address.

5. This seems to me to be on the whole the best rule; but if any other of equal simplicity can be substituted, I shall of course be ready to carry it out. The great object in framing any rule is to avoid complication and to provide a form of address which can easily be observed, both by those who post letters, and by the Department which conveys them.

From MAJOR O. T. BURNE, Private Secretary to the Viceroy, to the Officiating Deputy Director General of the Post Office of India,—dated Simla, the 18th May 1870.

IN reply to your letter of the 12th instant, I have the honor to say that His Excellency the Viceroy approves of the plan you suggest for the transmission of letters during future tours as an experimental measure.

FEMALE INFANTICIDE IN INDIA.

Minute by SIR D. F. MCLEOD, C.B., K.C.S.I., *late Lieutenant-Governor of the Punjab, on the Suppression of Infanticide.*

ON the 9th April 1867 a letter was addressed to the Secretary of the Lahore Anjuman (or Literary Society), suggesting that essays on the above subject should be invited by that body, and offering, on behalf of the Punjab Government, the following rewards :—

		Rs.
1.—For the best essay, if deemed worthy of the reward	...	500
2.—For the second best, on the same condition	...	200
3.—For any meritorious essay, not gaining either of the above prizes, an honorarium from	... Rs. 25 to	100

It was at the same time pointed out in the above letter that the idea prevalent amongst some classes, especially of Rájputs, that it is honorable and necessary to marry a daughter to a male of a superior caste or tribe, and humiliating or inadmissible to marry her into the family of an inferior, is, in my opinion, a fertile cause of the prevalence of this crime, so that it seems very desirable to urge on the classes entertaining this idea the expediency of resorting to equal marriages.

The first essay that came under our cognizance, in consequence of its having been sent to me direct, with a letter dated 15th June 1868, was one by Mardán Ally Khan, formerly an official of the Punjab, but latterly in the service of the Maharaja of Márwár (Jodhpur). Of this essay the Mír Munshí, Pandit Moti Lál, was asked to write a *resumé*, which will be found in the file. But, in addition to this, having been requested to record his opinion on the merits of the production, he gave in, on the 23rd December 1868, a very elaborate paper treating of the whole subject in connection with the measures which it is, in his opinion, expedient for the British Government to adopt.

Subsequently, by a docket and demi-official letter dated 27th February 1869, the President of the Anjuman submitted, with a Table of Contents, an essay by Moulavi Muhammad Husain, Assistant Professor of Arabic in the Lahore Government College, which he stated to be, in the opinion of the Anjuman, by far the ablest and best of numerous competitive essays which had been given in. No action, unfortunately, was taken on this communication, although the author himself, on the 18th September 1869, sent in a reminder

on the subject, until the end of last month, when, being anxious if possible to dispose of the matter before making over charge, I requested Pandit Moti Lál to record at once an opinion on the above essay likewise.

He was, however, on his way up to Murree from Lahore at the time, and did not receive my requisition, in consequence, until his arrival here. But on the 5th current he gave in a memorandum intimating that he had read the essay in question before writing his paper of the 23rd December 1868, and had fully considered it in that paper, to which he had nothing to add. In this memorandum he pointed out that the essay, though no doubt drawn up with much labor, contained, in fact, no novel suggestions, while the proposals made by either this writer or Mardán Ally are not such as he could himself approve or recommend. Having been thus prevented from fulfilling my intention of disposing of the case, I must now leave it to be disposed of by my successor; but, as the rewards were originally offered by my desire, it seems right that I should leave my opinion on record.

Both the Vernacular essays which have been submitted to the Punjab Government contain, in fact, but little beyond an advocacy of the persuasive measures heretofore adopted by Government at different times, or of others analogous to them; and, although neither of them is likely, in my opinion, to secure any very practical results, both are well-intentioned and commendable—that by Muhammad Husain, in particular, being drawn up with much ability and apparent earnestness. It is worthy of remark that no essay by a Hindu has been spontaneously submitted to us, though possibly such may have been submitted to the Anjuman. As the crime of female infanticide is confined, or nearly confined, to Hindus, it might reasonably have been expected that more of indignation against its perpetrators would have been felt by good men of that persuasion than by others, and that some of these would have been induced, from this feeling, if not from a desire to compete for the prizes offered, to come forward and lend a helping hand towards bringing the commission of the crime to an end. Such has not, however, proved to be the case.

Pandit Moti Lál's paper is of a very different character from either of the foregoing, and is, in my opinion, a very able document, as well as singularly out-spoken. It appears to me to have a very special interest, as being the production of a Hindu gentleman of liberal views, who thoroughly understands and appreciates our aims, yet unhesitatingly asserts that our policy in this matter has been mistaken and ineffectual, if not positively injurious, and urges in forcible and earnest terms the necessity for its entire reversal. His paper, it is to be observed, was written before the recent legislation on the subject, the tenor of which, so far as it goes, appears to be entirely in accordance with his views.

He points out that it is a great mistake in Government to introduce any social element into this question, both because it is not in a position to deal effectively with social considerations, and because these considerations affect, not only the comparatively small section of the community who are guilty of the commission of this crime, but those also who regard it with abhorrence. He urges that all efforts to check the commission of the crime by advice or conciliatory measures have for the most part, failed, while, by adopting such, Government has appeared to admit that there is some validity in the pleas urged by those who practice the crime, and has somewhat lowered itself in public estimation by ostentatiously enjoining the adoption of measures which it was not prepared to enforce when its counsels were disregarded; and hence he draws the conclusion that it is fully time that coercive and other administrative measures of a decided character were resorted to, and that these alone can secure the end in view.

He refers to the various recommendations that have been made from time to time, such as—

(1) Prohibition of early marriages;
(2) Improvement in treatment of brides by their father and mother-in-law;
(3) Remarriage of widows;
(4) Prohibition of polygamy;
(5) Education of females;
(6) Payment by Government of marriage expenses;
(7) Giving medals to those who preserve their daughters;
(8) Rewarding those who aid us in this matter;
(9) Excluding from Durbars, &c., those who withhold aid or countenance infanticide;
(10) Sending Pandits and others about to persuade the people or European Officers to convey complimentary messages;

all of which he considers to be more or less unsuitable for this particular purpose—some as interfering authoritatively with social usages cherished by the well-disposed amongst the people; others as compromising Government and putting it to needless expense; while those measures of which the desirableness cannot be doubted would be too slow in their operation to justify our waiting until they had taken effect. In short, to use the Pandit's own words, we make a great mistake in "working from cause to effect, instead of from effect to cause"—meaning that if we deal vigorously with the crime itself, whatever may be its cause, the promoters of it will themselves soon find a means of correcting those usages or customs which we at present regard as leading to its commission.

He observes that the great bulk of the people are entirely with us in this matter,—regarding the crime with horror; and that those who practise it are a small minority, wholly unworthy of being treated with any consideration. He considers it quite an error to suppose, as some do, that mothers amongst the latter are opposed to the practice, as it could not possibly exist without their willing countenance and coöperation, and he regards "pride of race," which many consider a chief promoting cause, to be unsuitable for us to deal with in that sense, as it is an entirely false pride, which we should not recognize in any form. This view of the matter is opposed to that expressed by me in the letter to the Anjuman; but I believe the Pandit to be right, on the whole; though, doubtless, Government will do well to treat those classes amongst whom the crime is not practised with an amount of honor and respect not to be extended to those who tolerate it.

The remedies proposed by the Pandit for adoption by Government to enable it to bring the full rigour of the law to bear upon this detestable crime, are the following:—

(1.)—As regards suspected villages, that the services of the wives of headmen and patwáries be secured by half yearly presents for watching expectant mothers in suspected families, being present at confinements, visiting daily for a time where the child born is a female, and recording the occurrence in the patwári's diary: midwives being at the same time bound, under heavy recognizances, not to serve on any such occasion without summoning one of the above women to accompany her.

(2.)—That in every suspected town of considerable size a Sub-Assistant Surgeon, a European midwife, and a strong Police guard be stationed, the Native midwives being bound under recognizances, as above, not to serve in suspected families without the attendance of the European one, by whom, on the birth of a female child, a report shall immediately be sent through a Police Sergeant to the Sub-Assistant Surgeon, until whose attendance and examination

of the child the midwives shall on no account leave the premises,—the surveillance of such child being continued for some days, and a *post mortem* examination held immediately in the event of its suddenly dying.

(3.)—That a tax be levied on all suspected families to meet the outlay incurred in carrying out the measures proposed; there being no reason, in the Pandit's opinion, to apprehend any difficulty in determining what families may be justly suspected, as mutual jealousies will speedily admit of the truth being elicited in this matter so soon as the tax is imposed.

(4.)—That a British Officer of experience be specially deputed to visit all suspected localities, to obtain confidential opinions, to collect and collate information on all points relating to this subject, and furnish reports for the consideration and orders of Government.

This last measure has heretofore been suggested by the Secretary, and all of the Pandit's proposals appear to me to be deserving of consideration when determining the arrangements most suitable for carrying the recent Act into effect. But I very much doubt the practicability of having a Sub-Assistant Surgeon located in each suspected town, and still more so as respects locating a European midwife, as respectable persons of this class must be most difficult to procure.

To advert, in conclusion, to the point with reference to which chiefly this memorandum has been written, *viz.*, the awarding of prizes, it will be seen from the foregoing remarks that I consider Pandit Moti Lál's paper to be beyond all comparison the best of all that have been given in; and I think, accordingly, that, although it was written by order, the first prize should be awarded to him in such form as may be deemed most appropriate; to the second prize I think Moulavi Muhammad Husain has the best claim; and an honorarium might, perhaps, be awarded to Mardán Ally Khan.

I should be glad also to see the Pandit's paper published, for I see that measures similar to those which he condemns are contemplated or in progress elsewhere; and if his views be correct, it will be useful to make them known. I would, however, in this case, ask him to revise it, and to omit or modify any needlessly harsh expressions it may contain.

D. F. McLEOD.

Murree, the 22nd June 1870.

Memorandum on Female Infanticide by PANDIT MOTI LAL, KATHJU, *Extra Assistant Commissioner, and* MIR MUNSHI, *Punjab Secretariat.*

I HAVE given separately an abstract of Mardán Ali Khan's essay.

I here beg to record my views on the subject in obedience to the orders of His Honor.

It is stated in the essay that wherever the crime is perpetrated, it is dictated by the heartless cruelty of the men, and is not approved by the women.

This is true to a certain extent only, though it is an assertion which would be acquiesced in by many, inasmuch as it seems quite natural that women should not be willing instruments for the extermination of their own sex, especially as they are the softer sex, and in many respects more amenable to the softer feelings than men. But I am sorry to express my belief that among the classes which practise this most atrocious crime, the softer sex are as much parties to the deed, if not more, than their sterner accomplices. In the first place, it is evident that women must be the first to announce to their male relatives the sex of the child that is born, and are in almost all cases the parties who accomplish the horrible deed. It is, therefore, difficult to understand how,

if women did not, to some extent at least, approve of the deed, they announce readily the sex of the newly-born child, certain, as they must be, of the fate of the infant which must immediately follow the announcement, more especially if such announcement were delayed, there would be a great chance of the life of the child being spared; for it cannot be denied that the feeling of compunction is inoperative, if at any time, immediately at the moment of the birth of the child, and the natural instinct asserts its sway if the perpetration of the deed is delayed. We find, accordingly, that as a rule the deed is perpetrated immediately after birth.

Those who have observed even superficially the aspect of Native society cannot have failed to notice the great influence which the women exercise in opposition to their male relatives. I need only adduce two well known facts to illustrate this.

In the Punjab it is a common practice with women to bathe in a state of nudity in public; and who has not met female processions in the streets of large cities, composed of most respectable women, singing the most obscene songs which any man would be ashamed to rehearse in public? If the last-mentioned practice has disappeared to a considerable extent, its extinction is due to certain provisions of the Indian Penal Code. But the Code has not penetrated into private houses where mothers, daughters, sisters, and wives still indulge in the use of the most obscene and shameful songs and jokes in the presence of their sons, fathers, brothers, and husbands; and there is no hope that the custom will die out at any early period. The Punjabee men admit, to their shame, that they are powerless to wean their women from such practices, and they speak the truth. If in matters like these the women are so wayward, and the men so utterly helpless, if in matters, I say, which bring disgrace on the women and redound to the dishonor and shame of their male relatives, the women, who cannot plead a single desirable object to be gained as their excuse, can assert their supremacy, and triumph over all opposition, is it reasonable to suppose that the atrocious and most abominable crime of female infanticide could have existed for a day if the women had set their determined faces against it? In my humble opinion it is not.

The probability seems to be, that the man, or men, who first perpetrated this diabolical crime forcibly crushed down all opposition on the part of their female relatives. But women have more imagination than men, and are especially obnoxious to the influence of gloomy pictures of the future. Doubtless the evils which were alleged to follow the preservation of female children were depicted to them in the most vivid colors, and again exaggerated by their own imagination; and impressions formed by them have been retained with a tenacity peculiar to womankind, and led them to act against their own instinct.

As regards the causes which lead to the perpetration of this crime, these are said to be the following, *viz*:—

1*st*.—Pride of race.

2*nd*.—The heavy expenses attending the marriages of daughters.

I think it is not correct to say that pride of race is the cause which leads to the destruction of female children, because, if this were so, there should never have been a time when female children were preserved in the families where they are now killed; whereas, by all accounts, the practice, wherever it originated, was adopted in consequence of such pride having been injured. I am not making any nice distinction of language; but what I mean to shew by this distinction is, that pride of race, as such, *per se* does not repudiate alliances of this nature; it was only when such alliances injured such pride that the unhappy sufferers, in a moment of frenzy, and the dupes of an unfortunate hallucination, instead of taking proper measures to protect themselves from such humiliation, determined to stop up the source from which such injuries might be expected, and decided to destroy their female offspring. And

happily this was the case with a few families only, which were influenced by a morbid sensibility. It is well known that even the proud Rajputs of Rajputana preserved their daughters, and in some cases so far yielded to the strong influences of circumstances brought to bear on them, that Rajput sovereigns under certain circumstances gave their daughters in marriage to the Mahomedan Emperors of India—aliens to them in race, country, and religion. The giving of daughters in marriage to men of their own tribes was not considered dishonorable by the majority of Rajput families of acknowledged rank. The same is the case now. Not all the Rajput families, nor all the Khatri tribes, nor even all the families composing any particular sections of tribes, destroy their daughters. This false pride of race, then, influences a small portion only of certain tribes, into whose families it found admission by the mad caprice of some depraved mind, and the practice has since been handed down as a custom "more honored in the breach than the observance"—that curse of the people of India in many respects. People in these families now practise the crime because their forefathers did so, and for no other reason.

I am so particular on this point, because the conciliatory measures taken by Government in this matter seem to have left an impression on the people who are addicted to this crime that the Government admit in some degree, howsoever slight, the reasonableness or the validity of their plea, or, at any rate, respect their feelings; for otherwise, instead of merely *advising* them to ignore such pride, and *inviting* them in mutual consultation to suggest and carry out such measures as might remove all inducement to destroy their female children, the Government should by this time have themselves taken the most rigorous and effectual measures for the complete extinction of the crime.

The expenses attending the marriages of daughters are pleaded as an excuse for the destruction of female children only by those who practise the crime. The anticipation of such expenditure is not a *cause*, in fact. There is no Hindu family of respectability where heavy expenditure is not incurred on occasions of marriages of daughters, or where the desire does not exist of incurring a considerable expenditure on such occasions. I think the desire is not only laudable, as indicative of a wish to secure respect for the daugther on the part of the family of her husband, but the feeling, I think, is natural. It is admitted on all hands that the practice of demanding and receiving presents from the family of the bridegroom for the hand of the bride, on the part of the parents of the latter, is mean and dishonorable. The reverse of this practice, or giving suitable presents on giving a daughter in marriage, is, on the other hand, honorable. In the great majority of families of all classes, the birth of a daughter leads the parents to habits of economy, to lay by a sufficient amount to defray the expenses of her marriage; and among certain Hindu tribes, if not among all, the daughter performs certain funeral ceremonies after the death of her parents, which cannot be performed by the son. In such tribes the existence of a daughter is much desired.

But, be this as it may, it is by no means pretended that it is necessary in every case, on the occasion of the marriage of a daughter, to incur expenses out of all proportion to the means of the parents. In this matter, as in every other, improvident parents must find themselves in difficulty when the time comes to incur the expenditure. But, even then, the general recognized custom of the country and the universal feeling of the people tends to relieve the distress. It is a well known fact that among the Natives loans are easily obtainable, and on the most favorable terms, when required to defray the expenses of the marriage of a daughter or sister: friends are extremely accommodating in such cases, both as regards the granting of loans and demanding their repayment. These facts are mentioned to shew what loop-holes exist to escape from difficulty if the worst comes to the worst; but, in point of fact, no such difficulties need exist. The Khatris of this Province are, as a rule, a trading class, and the grasping character of the business they do is well known. Most of them should be able to defray the comparatively small expenditure which they

need incur; and, as a rule, they are so. But, even admitting the inability of parents from want of means to pay the expenses they are required to incur, the proper remedy is that the amount of such expenses should be reduced. On this point, I venture to think the interference of Government, in the manner it has been heretofore exercised, is more injurious than beneficial. The very fact of the Government *advising* the people to reduce such expenses without any provision being authoritatively made to enforce the reduction (the consequence of which is, that no practical result is obtained), produces apathy, and, so far as the question of female infanticide is concerned, taken in connection with the large amount of expenses incurred, is positively injurious. People are impressed with idea—and apparently rightly too—that the Government, among other causes, admits heavy expenditure on occasions of marriages as one of the causes leading to female infanticide; but the Government does not think it expedient to reduce such expenses authoritatively, but only suggests the measure to the people themselves as a desirable one, leaving them to adopt it of their own accord. The impression gains ground, therefore, that, seeing the Government recognizes heavy expenditure as one of the causes which lead to the destruction of female children, yet does not authoritatively remove that cause, it does not care to see the crime extinguished at once. I should not be understood to mean that Government should authoritatively direct the reduction of marriage expenses. What I mean to say is, that Government ought clearly and plainly to ignore this cause of female infanticide, and to make no suggestions for the reduction of marriage expenses as a remedy against this crime.

It will be seen from the foregoing that I do not admit pride of race or heavy expenditure on occasions of marriages to be causes (in the sense in which a cause produces an effect, or an effect follows a cause) of female infanticide. My argument in the abstract is this, that the particular families or tribes of a class which practise the crime are not placed, *quoad* these causes, in a worse position than families or tribes of the same class, or the great mass of the population, who recoil from such crime with horror, yea, have never allowed such a thought to enter their minds. The true cause lies in the moral turpitude and truculence of those families which practise the crime, and the most vigorous measures should be taken in respect to those families and tribes to eradicate this most atrocious practice.

I shall in the sequel propose what appear to me to be the most effectual preventive measures, considering the magnitude and heinousness of the offence. In the meantime, I proceed to discuss the several remedies which have been suggested by Mardán Ali Khan, as well as certain others which I have heard proposed by other parties.

It is proposed to bind Lambardárs and other head men of villages and towns, by agreement, to report cases of infanticide, and to watch closely the families known to practise, or suspected of practising, this crime. It is also suggested that the births of female children and cases of female infanticide should be recorded in the Patwári's diary. It is further suggested that persons killing their female children should, *if possible*, be excommunicated by their tribesmen.

These suggestions are not new, and the last seems to me objectionable on principle. I would introduce no social element into any administrative measures which the Government may deem necessary or expedient to adopt for the purpose of eradicating this crime. I would make no *suggestions* to the people and leave it to their choice to carry them out or not: whatever measure the Government may deem proper to adopt, it is, I think, essential that it should be prepared to enforce it; and I also object, on the principle of equity, to subject innocent Lambardárs, Patwáris and Panches to extra responsibilities on account of professional murderers (for female infanticides are no better than these) with whom they have no sympathy, and over whom they have no control. The measure can, however, be justified as an administrative one on the part of

the Government, and may be carried out; but I think they should be provided with the means of watching suspected families, and that some inducement should be held out to them to do the work assigned to them properly and cheerfully, so that, if an extra responsibility is imposed on them, the labor may, as it were, be one of love, and successful so far as circumstances may permit.

With this view, I think the female members of the family of the Lambardár and Patwári should be required to watch every expectant mother in a suspected family, and one such member of the family of the Lambardár and Patwári each should be invariably present at the time of confinement. The midwife should be bound by heavy recognizance on no account to serve on such occasions without summoning the above-mentioned women to accompany her. Should a female child be born alive, the fact to be recorded at once in the Patwári's diary, and reported forthwith to the Police, and entered in the Police diary. The child should be then visited daily by the Lambardár's and Patwári's women during the first year of her existence. A present, say of Rs. 10 or Rs. 20 each, should be given in two half yearly instalments to these women, to be defrayed from the chungi or local funds. No watch after birth to be kept in the case of the birth of a male child, and no presents to be given in that case.

The suggestion to exclude persons suspected of practising infanticide from Darbárs and Government service, as well as from participation in any public institutions, is a proper one, but perhaps hardly necessary to make as too obvious; so likewise is the suggestion to shew consideration to those who aid the Government in its efforts to suppress this crime; only employment in the service of Government must also in a great measure depend on other considerations.

I do not believe that any persons found guilty of concealing or abetting this crime are at present exempted from punishment. Any suggestion to the effect that such persons should be punished is hardly necessary.

As regards fixing a scale of marriage expenses, I have said above that the interference of Government would be injurious: Government cannot order any reductions to be made, authoritatively, and could not afford to see its suggestions treated with indifference, or positively disregarded.

I object strongly to Government affording pecuniary aid from any public funds whatever—Chungi or Láwáris Funds—to parents of girls to enable them to defray the expenses of the marriages of girls on an extravagant scale (extravagant, because beyond the means of the parents). There are such heavy demands already on the chungi funds that it would simply be impossible for those funds to bear the additional charge (which, I am afraid, if once admitted, would increase to a most inconvenient size) without additional taxation; and I question the justice of imposing heavy taxes on the unoffending and well-behaved portion of the community to aid a set of the most unnatural criminals who entertain a false idea of their honor, and are dead to the most natural feeling, and war against their own instinct. And, after all, the sense of honor that would induce the parents of a girl to beg and accept charity to defray the extravagant expenses of her marriage, rather than marry her honorably, though less ostentatiously, appears to me to be rather curious, and certainly one which does not deserve to be accommodated on the part of an enlightened Government like our own.

But the strongest objection of all is, that Government, by consenting to give such aid, admits its necessity, and therefore the reasonableness of the notion that heavy expenses on occasions of marriages of girls are indispensable, even though the parents may, in order to obtain the means of defraying them, be obliged to undergo the humiliation of soliciting charity—strange infatuation, this, and unhappy delusion under which the people are laboring;—and once the necessity for affording such aid is admitted, the Government will find itself involved in peculiar difficulty and embarrassment. I will defy any advocate of

such a measure to gainsay that the Government would be deluged with applications for assistance which it will not have the means of complying with; and the Government will compromise its position, and thus a door will be opened, and apparently with some reason, for a good excuse on the part of the people. If private associations, like the Kangra Social Progress Association, should spring up in the Province to afford pecuniary aid, of course the Government has nothing to say to them; but the Government themselves undertaking to provide such aid is out of the question.

I have myself proposed above to remunerate the wives of Lambardárs and Patwáris of villages for their trouble in watching expected births, and the subsequent progress of the existence of a female child (the expense being defrayed from chungi or local funds); but that proposal has reference to the remuneration of persons employed by the Government as its agents to carry out an administrative measure of its own.

The suggestion to employ Pandits and Brahmins, who should itinerate from village to village, and explain the heinousness of the crime, is one which cannot be entertained for a moment. The Government cannot consent to take any share in the religious instruction of the people, and cannot agree to apply the proceeds from the chungi collections to any religious purpose. But, even disregarding this objection, for the sake of argument, there is no necessity for such preaching. It is not pretended by any infanticide that the act of killing their female children is virtuous: each and all acknowledge and confess the sinfulness of the deed, but excuse it by social and pecuniary considerations.

The allusion to the transmigration of souls and other tenets of the religion of the Hindu is simply preposterous.

I have thus far canvassed the points mooted in Mardán Ally Khan's essay. Several essays have, however, also been written by others for the Lahore Anjuman, of which I have read the one which I believe to be the best.

Before discussing the views set forth in that essay, I may premise that they are chiefly identical with those of Mardán Ally Khan; indeed, it appears to me that all who have written on the subject have taken their cue from the apparent action of the Government in the matter. All appear to believe that the Government is prepared to proceed only so far as it has gone already, and will not advance beyond the line which it has reached; accordingly, it will be observed that they all follow a beaten track, enlarging on the measures which have existed ever since the attention of the Government was first drawn to the existence of the crime; or, if they have suggested any new measures, they are of a nature chiefly conciliatory, or which cannot produce any results within any reasonable time, and are therefore useless as remedies. Some few of the measures seem to me to be positively injurious; all are of a nature which leaves their working entirely in the hands of the people and places the Government in a powerless attitude, entirely dependent on the action of the people themselves—a most unenviable situation, and one unworthy of a powerful and humane Government.

Passing over such suggestions as refer to the reduction of extravagant expenses, and the desirability of foregoing considerations of pride of race, which suggestions I have already discussed, I find that the following are suggested as important remedial measures, *viz.*:—

1*st.*—Prohibition of early marriages.
2*nd.*—Improvement in the treatment of daughters-in-law on the part of mothers and fathers-in-law, and other relatives of the wife's husband.
3*rd.*—Remarriage of widows.
4*th.*—Prohibition of polygamy.
5*th.*—Female education.

I propose to take up these suggestions *seriatim*.

And first, prohibition of early marriages.—This is one of those measures which the Government disclaims (and rightly so) the right or the desire of imposing on the people; and, in fact, the matter is one which no Government could possibly meddle with, with any prospect of success or advantage, in opposition to the wishes or prejudices of its subjects. Moreover, early marriages are enjoined by the religion of the people, and, as such, the institution is one which it is opposed to the professed and deliberate policy of the Government to interfere with. It must, therefore, be left to the people themselves to abolish the custom if they deem it desirable to do so. But, in the present state of Native society, the prospect of a reform in this matter is, to say the least, very distant; indeed, I hope the day is far nearer at hand when female infanticide will be reckoned as a thing of the past, than the time when early marriages will have been abandoned. And, after all, early marriages in this country are not without some advantages; and if bad treatment on the part of the husband's family (see the second remedy proposed) means anything, such marriages are extremely desirable. It is during the childhood of the daughter-in-law that the husband's mother or father have the greatest reason and inclination to treat her with kindness, and the probability is greatest at that age of a permanent affection springing up between these relatives.

The real objection against early marriages seems to be based on the comparatively greater proportion of mortality among children: the girl, in case of the death of the male child, being in her childhood, according to the custom of the country, consigned to widowhood for her life, without the chance of a remarriage. The affectionate parents, anxious to save their daughters from a *possible* calamity of this nature, destroy them when they are born. This is, as the Native proverb says, "taking off one's shoes before coming in sight of the water to be crossed," or to use stronger language, betaking to lamentations before death. Such cases of widowhood, when they do occur, are greatly to be deplored. But the prospect is not gloomy on one side alone, and death does not aim his shafts exclusively at the male children. I observe, in the Annual Administration Report of the Punjab Government for the year 1867-68, that in a population of 15,790,612, the ratio of deaths among females between the age of one year and 14 was for the year ·017, and the ratio among males for the same age, and during the same period, was ·020—the preponderance on the side of the males being only ·003. This includes, of course, all classes, *i. e.*, the female children of the majority of the population, who are not given to female infanticide. No case whatever is, therefore, made out to justify the suggestion that early marriages should be prohibited with the view of preventing the destruction of female children, whatever may be the merits of the custom, taken by itself, or as regards its bearings in other respects.

As regards the treatment received by a daughter-in-law at the hands of the mother-in-law, it cannot be pretended that the treatment received is universally bad; and certainly the possible apprehension of bad treatment cannot constitute a sufficient incentive for the destruction of female children. And furthermore, it is not apparent how any action of the Government can penetrate into the labyrinth of the varied feelings of private families. In fine, the point is one not worthy of much discussion. It might, however, be added that in the Punjab the evil complained of is one which exists more in the imagination of those who are prone to gloomy and melancholy forebodings than in reality; for it is the universal custom in this Province, among the Hindus at any rate, that the sons, with their wives, are separated by their parents on reaching the age of puberty.

The most important measure suggested is the remarriage of widows. This subject is very vast, and no right-thinking man would raise his voice against the desirability of this measure being adopted. But the Native society of this part of India is not yet prepared for it, and I believe that no suggestion that has been made for the prevention of female infanticide would be more suicidal or likely to lead to more dangerous and mischievous consequences than this.

Such a suggestion would make a thousand enemies of one: it would be, as it were, reinforcing the thin and broken ranks of female infanticides by desertions from our own. The great mass of the population, whose feelings are now decidedly hostile to the small body of female infanticides, but even more so to the remarriage of widows, would assuredly go over to the enemy and swell their ranks on the first glimmering of the suspicion that the preservation of female children would sooner or later usher in the remarriage of widows; seeing that the cure suggested by the party which desires to extinguish the crime of female infanticide against the evils of widowhood, the possible apprehension of which induces the destruction of female children, was their remarriage. In this case the remedy would be certainly regarded as worse than the disease.

The suggestion regarding polygamy may be dismissed by the remark that it does not prevail to any extent among the poorer classes; that, wherever it does exist, the evil consequences of it do not affect exclusively the classes which are addicted to the crime of female infanticide; that it is not known to lead to such crime among the Mahomedans; and lastly, it is not one with which the Government can interfere authoritatively, and must be left to be dealt with by the people themselves, who are not prepared to abandon it.

The next suggestion is the introduction and extension of female education. This question is many-sided; but this is not the place to discuss its bearings on the people of this country. Regarding its influence on the crime of female infanticide, there can be but one opinion, and there is no doubt that it will operate in the fullness of time; but I believe no education is needed to convince a mother of the enormity of the sin of taking the life of her own daughter. If it be said that education is needed, not to reveal to her the enormity of the crime, but to impress upon her the meretricious nature of the motives which are paraded before her eyes as prompters of the deed, I reply that we cannot wait for the time when female education shall bear such fruit. The most sanguine advocates of female education will admit that it must require several decades to expand to any desirable dimensions. In the meantime, shall we soothe our consciences by distant hope? Shall we console ourselves with the bare reflection that we have initiated a measure which, though ineffectual as regards several generations to come, shall ultimately eradicate the crime, and thus expiate the blood which must be shed in the *interim*?

The only other suggestions which I have heard made are that, on the birth of a female child in a suspected family, an European officer should visit the family and offer congratulations. This would be a harmless measure, at the same time hardly any good will result therefrom.

The next suggestion is that female children born in suspected families, should be presented with a medal by the Government, with the bust of our Queen impressed thereon, and regarded *par excellence* as daughters of Her Majesty. I think there are grave objections to this suggestion being carried into effect. If the measure should lead to the preservation of the lives of the girls (which, however, I very much doubt), the Government will be expected by the parents to pay the expense of their marriages, and on a comparatively extravagant scale, if not, indeed, to provide for their maintenance. And, moreover, I object on principle to the Government descending so low to flatter the fancy and caprice of its misguided subjects.

Having now discussed the measures which have been heretofore adopted or proposed for the suppression of this most atrocious crime, I proceed now to propose the measures which, in my humble opinion, appear to be worthy of adoption, and likely to prove most successful.

In making my proposals, I assume that the crime still prevails in the Punjab to a considerable extent; that the Government is determined to root

it out with all its power, only stopping short at any measures which should be absolutely pernicious; and, lastly, that so long as a single female child is murdered by her unnatural parents in British territory, owing to the want of effectual measures which the Government could fairly adopt against the perpetration of the crime, the Government will regard the circumstances as a reproach on its administration.

It is evident that the measures heretofore adopted by the Government have not proved thoroughly effectual, and the reason is doubtless that undue consideration has been shown to the feelings of a class of people against whom the most rigorous measures ought to be adopted as a rule. Nearly eighteen years of forbearance has been trifled with by these classes; conciliatory measures have been regarded as evidencing the implied admission on the part of the Government of circumstances extenuating the enormity of the offence; and the most wholesome advice of the most enlightened and humane Government that ever existed in the country has been disregarded, and the want of suitable action thereon excused by the trammels of social, tribal, and even religious institutions, in which the people profess themselves to be involved. But, as the motives of the Government have been misconstrued, as conciliation has proved unsuccessful, and advice has failed, it is high time for the Government to take administrative measures of its own, without reference to the feelings of the particular class against whom they are directed (a class of people, indeed, themselves heartless and devoid of the most natural feeling), but without, of course, inaugurating any measures involving unnecessary severity, which can under no circumstances be imputed to a Government like our own. It must be remembered that the feeling of the great mass of the population is decidedly against the infanticide classes, and that there is no apprehension of the public sympathy being roused in their favor if the Government confine its action to administrative measures alone, and avoid all discussion as regards the merits of social or tribal institutions. The latter concern the mass of the population, with which it is not necessary to meddle, and interference with which would serve no purpose. The Government have already in other cases adopted measures of this nature, without exciting the sympathy or arousing the fears of the great mass of the population, simply because a particular offending class only has been affected. As an instance, may be quoted the rule obtaining in Government gaols, where food is cooked in and served out to prisoners of all castes from a common cook-house, without reference to tribal distinctions or prejudices.

My idea, whatever it may be worth, is that, in dealing with female infanticide a great mistake has been committed in working from cause to effect, instead of from effect to cause; and the Government has found itself checkmated at every move. The action of the Government has heretofore been directed to the removal, in the first instance, of the real or fancied—or, at the best, professed—causes of the crime, in the reasonable and natural hope that the causes once removed, the effect would vanish. But the thousand and one difficulties which have during the course of eighteen years raised their heads were not realized when the movement was initiated, and experience has shown that those difficulties have proved insurmountable. I suggest now that the direction of action be reversed, that all attempts be directed chiefly and exclusively to prevent the perpetration of the crime, and if the efforts made should prove successful, as sure as day is ushered in by sunrise, the causes will one by one vanish of themselves. Once the female children are preserved, they must be married at the proper age; for, among Hindus especially, who compose the bulk of the population, and among whom, unhappily, the crime is chiefly prevalent, it is a sin and a reproach on the family to neglect to provide a suitable match for a female child or other relative; and, on the principle that necessity is the mother of invention, there can be no reasonable doubt that unreasonable prejudices will be discarded, and

sumptuary and other laws will be laid down by the people themselves to extricate themselves from the difficulties in which they will find themselves involved, and to facilitate the marriages of their children.

Then will the country through its breadth and length resound with the heartfelt gratitude of a reclaimed multitude; the Government will have achieved one of its greatest triumphs; and Providence will have been once more vindicated in placing a foreign nation in the country to rule over the destinies of a fifth part of the population of the world. This is no overdrawn picture, nor is the anticipation the phantasm or dream of a visionary. The consummation is within the grasp of the Government if it will only awake to the proper line of action, disregarding all sentimental objections, mindful of its irresistible power exerted in the most righteous of causes, and caring not to be hampered by a too far-sighted policy, which sometimes conjures up imaginary spectres of danger. Let our Government make a clean breast of it, and publish boldly to its subjects that it has determined to eradicate the crime with all its might, and that it has decided to carry out administrative measures for the purpose.

My proposals are these: let the Government appoint a European officer of standing and experience to visit all districts of the Province in which the crime is suspected to be prevalent, and obtain confidential opinions as to its extent, and collate all the information he may be able to collect for the information of the Government. The Government should then take measures for the suppression of the crime, according to the circumstances of each locality and the extent of the crime. In villages where the infanticide population is not large, the deputation of the Lambardárs' and Patwáris' wives, as I have already suggested ought to be sufficient for all purposes. But in large towns like Dera Bába Nának, Anandpur, Makhowál, and other similar places, which are the stronghold of Bedi and Sodhi fanaticism, I would recommend the following arrangement to be adopted:—

Let one or more European midwives be appointed, according to the requirements of the locality, to watch expectant mothers, and to accompany the Native midwife at the time of confinement, the Native midwives being bound under heavy penalties not to serve on such occasions without inviting the European midwife to accompany them. The birth of a female child to be reported at once by the Native midwife by direction of the European woman—or, perhaps better, by a Police officer not below the rank of a Sergeant, who should always accompany the European midwife on the occasion of her visits to the families—to the Sub-Assistant Surgeon, who should be specially located at the town for the purpose; and the Sub-Assistant Surgeon must forthwith proceed to the spot and examine the child immediately after birth, and afterwards as often as may be necessary. The European midwife should on no account leave the premises before the Sub-Assistant Surgeon has examined the child. In any case of sudden death, a *post mortem* examination should be made invariably, and the parents, both mother and father, awarded the severest punishment provided in the Indian Penal Code. A strong Police guard should be maintained in the town for the protection of European midwives. All expenses,—the salaries of the European midwives and the Sub-Assistant Surgeon, and the cost of the Police guard,—should be defrayed from the proceeds of a tax which should be levied on the suspected families. It may be asked, how is it to be determined what families practise the crime? I reply that, no sooner is the tax imposed than people will split on each other, and there should be no difficulty in ascertaining the true delinquents with tolerable accuracy. Even if an error is made, it will be on the safe side, so far as the interests of Government are concerned. But this is a matter of detail which will be best settled at the time and on the spot.

As regards the realization and incidence of the tax, I think there should be no difficulty in determining the rate and the mode of realizing it. In the case of families holding rent-free grants from the Government, a percentage

might be deducted and recovered along with the Government revenue. In the case of families not enjoying such grants, the rate might be fixed with reference to the amount of the license tax assessed on them.

I have suggested the imposition of a tax advisedly, because the loss of money will be felt by the people more than anything else. Fear of punishment alone will not be, as it has not been heretofore, an effectual deterrent; but when the people shall find their purses affected, they will see the folly of persisting in a conduct sure in all respects to involve them in difficulties; and common sense and instinctive affection for their offspring (the last having been heretofore inoperative) will awaken them to the idea that the money paid by them as a fine would be better applied in the preservation and marriages of their daughters.

It will be said, perhaps, that objections will be raised against an arrangement such as that I have proposed. I ask, who will be the objectors?—not the great mass of the population, who will see clearly that the measure is directed only against the class which has seriously offended the Government, outraged morality, and shed innocent blood—a class of people more degraded and depraved than the professional thugs, whose attacks are directed against the lives of strangers, and not of their own offspring. The objections, then, must proceed from the infanticides themselves; and what can the objections be?

Is their domestic privacy interfered with?—they have to thank themselves for it: the crime they practice is perpetrated in the secret apartments of their houses, which must be penetrated to divert their cowardly blows from the heads of their innocent and unoffending victims. Are they subjected to annoyance?—the pain is not keener than that caused by the mortal wound which they inflict on their helpless prey. Are their purses rifled?—the object is to reclaim them from sin, to make them honest members of society, to teach them a better mode of employing their money.

Let the Government carry out the measure boldly and fearlessly; let the Government only show its earnest and determined resolution to put a stop to the crime, and the task set before it is, I say, half accomplished. If the practical details I have suggested should not be approved, let officers of ability and experience propose more suitable arrangements; but any action which the Government may take must be founded on the basis that I have suggested: there is absolutely no other course to follow if the object which the Government has in view is to be gained. I am not carried away by warmth of feeling, nor am I blind to the apprehension that, when the system comes to be worked, there will occur some instances of severity and abuse of authority on the part of the subordinate agents of the Government; but the Government can adopt no measure in any department which shall not be open to such objection. For my part, I can honestly say that I have not used an argument which I do not believe to be sound, nor mentioned a fact as such which I do not believe to be true; and, having been called upon by His Honor to record my views on a subject of such vast importance, I have felt it my duty to state them freely, candidly, and honestly.

PANDIT MOTI LAL.

The 23rd December 1868.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

IRRIGATION OPERATIONS OF PUBL KHUREEF OF 1870-71 IN THE PUNJAB UP TO 31st July 1870.

Goordaspoor ...	10,818	5·25	3·68	Cotton ...	7,805	201·54 cubic feet per second passed down the various escapes, being in excess of the demand for irrigation, 146·73 cubic feet per second discharged by the Boodlia Khera Escape. In comparison with the statement of irrigation up to a similar date of last year, we find the decrease on the Baree Doab Canal was 24,767 acres, and the increase on the Western Jumna Canal 11,149 acres. The reasons for the decrease on the Baree Doab Canal were given in last statement, and are not repeated here. The great increase of area irrigated by the Inundation Canals is principally due to the entry of the area irrigated in the Moolttan District, the return having been received from the Executive Engineer.

J. CROFTON, *Lieut.-Colonel, R.E.,*
Joint Secy. to the Govt., Punjab, P. W. D., Irrigation Branch.

MURREE;
the 5th September 1870.

TEMPORARY REDUCTION OF THE WATER-RATE IN ORISSA.

From COLONEL F. H. RUNDALL, R.E., Joint Secretary to the Government of Bengal in the Public Works Department, Irrigation Branch, to the Secretary to the Government of India, Public Works Department,—
No. 580 I, dated Fort William, the 5th September 1870.

THE advisability of reducing the water-rate in Orissa as a temporary measure has for some time forced itself on the attention of the Lieutenant-Governor, and having, after much consideration, come to the conclusion that it would be expedient to try the experiment during the present year, he authorized the Revenue Superintendent of Canals, Mr. Kirkwood, in the event of his previously ascertaining that such reduction would probably be followed by a large resort to irrigation, to inform the zemindars and cultivators that the Government would reduce the rate as a temporary measure to one Rupee per acre, independent of the description or number of crops that might be grown, but on the understanding that any estate or village desiring to avail itself of the low rate should engage to irrigate a certain definite proportion of its lands. The measure, I am desired to state, has been attended with considerable success, for Mr. Kirkwood, in a letter dated the 15th ultimo, reports as follows:—

"I have the honor to inform you that nearly the whole of the lands irrigable from the Taldundah, Machgong, and High Level Canals, and from the first five distributaries, Kendrapara Canal, have been leased. This area I estimate as follows:—

"Machgong and Taldundah	...	...	15,000 acres.
"High Level	...	...	25,000 "
"First five distributaries of Kendrapara		...	30,000 "
	Total	...	70,000 acres."

2. Since the above was written, further reports have been received stating that more than all the above-mentioned areas on the Kendrapara and High Level Canals have actually been fully supplied with water, and that probably all the lands embraced by the Taldundah Canal, as above stated, would likewise be abundantly irrigated. The area leased under the Kendrapara Canal is about one-third of the quantity of land commanded.

3. For all lands for which leases were not taken out by the 10th August, the Revenue Superintendent proposes to charge the old rate of Rs. 2-8 per acre, on the ground that, as the cultivators of such lands apparently intend to resort to the canal only for the salvation of their crops in the last extreme, there is no reason why the Government should forego the higher rate.

4. Mr. Kirkwood adds that "he has no doubt that this mode of proceeding will prove very salutary in showing the *late* irrigators that they, for the irrigation of a poor half spoilt crop, will have to pay Rs. 2-8, while they see their neighbours with magnificent crops only paying one Rupee, and he anticipates that such a feeling may, for the future, tend to make those who have any connection with lands commanded by the canals somewhat more prudent than they are at present."

5. The Lieutenant-Governor has approved of Mr. Kirkwood's suggestion.

6. The Commissioner of Orissa has likewise expressed himself to the effect that the one Rupee rate is for the present fair and proper, and recommends its continuance for all leases entered into for one year. He is confident that when the cultivators have once become convinced of the value, and have practical experience of the results of irrigation, there will be no difficulty in gradually raising the water-rate as the demand for water increases and its consequent market value is enhanced, and that by resorting to the reduced rate a commencement has been made which will show good and profitable results ultimately.

7. In the District of Midnapore I am to state that the water has been taken very freely since the commencement of the cultivating season, and it is estimated that about 30,000 acres have been irrigated from the Midnapore Canal.

8. The Lieutenant-Governor trusts that the above particulars will prove satisfactory to the Governor General in Council, and that his proceeding in authorizing a reduction of the water-rate will meet with approval. The Lieutenant-Governor has been waiting for the results of this measure before addressing the Government of India on the necessity of pushing on the Orissa works generally to completion. Every year brings reports of a failure of rain in one portion or another of that Province, and of a consequent loss of crops, which cannot but tend to have a depressing effect on the inhabitants generally. He will, however, reserve what he has to urge on this subject for a future communication, as he is desirous of laying the information contained in this letter before the Governor General in Council without further delay.

From COLONEL W. A. CROMMELIN, R.E., Officiating Secretary to the Government of India, Public Works Department, to the Joint Secretary to the Government of Bengal, Public Works Department, Irrigation Branch,—No. 395 I, dated Simla, the 27th September 1870.

IN reply to your letter No. 580 I, dated the 5th instant, I am directed to inform you that His Excellency the Governor General in Council approves of the action of His Honor the Lieutenant-Governor of Bengal in authorising the temporary reduction of the water-rate in Orissa to one Rupee per acre, and is highly gratified at the very promising symptoms which have appeared of the irrigation under the new canals in Cuttack and Midnapore being rapidly and largely extended.

2. I am to express a hope that the people, now that they will have seen the practical effect of a command of river water for their lands when the failure of the ordinary rains may deprive their crops of all chance of coming to full maturity, will gradually come to appreciate the advantage which a moderate payment will secure to them, and will ere long be willing to pay for the water in proportion to the cost of the undertaking.

3. It cannot be said that the rate now levied will be sufficient to cover the interest on the capital outlay and the maintenance charges; but if it can be shown that any deficiency on this account is likely to be made up by a progressive increase of water-rates and of receipts in future years, there will be no reason for dissatisfaction with the results.

4. At all events it is most gratifying that the works, so far as they have gone, appear really in this year to have performed so large a part in averting a repetition of the misfortunes of past years.

No. 39 of 1870.

SUPPLEMENT TO

The Gazette of India.

SIMLA, SATURDAY, OCTOBER 8, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

ANNUAL INTERNATIONAL EXHIBITIONS OF SELECT WORKS OF FINE AND INDUSTRIAL ART AND SCIENTIFIC INVENTIONS.

HER MAJESTY'S COMMISSIONERS FOR THE EXHIBITION OF 1851.

President:

THE DUKE OF BUCCLEUCH, K.G.
THE DUKE OF BUCKINGHAM AND CHANDOS.
THE EARL DE GREY AND RIPON, *or Lord President of the Council for the time being.*
THE EARL GRANVILLE, K.G.
THE EARL RUSSELL, K.G.
THE LORD PORTMAN.
THE LORD OVERSTONE.
GENERAL THE HON'BLE C. GREY.
THE RIGHT HON. W. E. GLADSTONE, M.P.
THE RIGHT HON. BENJAMIN DISRAELI, M.P.
THE RIGHT HON. ROBERT LOWE, M.P.
THE RIGHT HON. SIR S. H. NORTHCOTE, *Bt.*, C.B., M.P.
THE RIGHT HON. H. A. BRUCE, M.P.
THE RIGHT HON. JOHN BRIGHT, M.P., *or President of the Board of Trade for the time being.*
THE RIGHT HON. W. E. FORSTER, M.P., *or Vice-President of the Committee of Council on Education for the time being.*
THE RIGHT HON. SIR ALEXANDER Y. SPEARMAN, *Bt.*
THE RIGHT HON. A. S. AYRTON, M.P., *or First Commissioner of Her Majesty's Works for the time being.*
SIR THOMAS BAZLEY, *Bart.*, M.P.
SIR CHARLES LYELL, *Bart.*
SIR RODERICK I. MURCHISON, *Bart.*, K.C.B.
SIR FRANCIS GRANT, P.R.A.
SIR FRANCIS R. SANDFORD.
THOMAS BARING, ESQ., M.P.
EDGAR A. BOWRING, ESQ., C.B., M.P.
THOMAS FAIRBAIRN, ESQ.
THOMAS FIELD GIBSON, ESQ.
C. H. GREGORY, ESQ., *or President of the Institute of Civil Engineers for the time being.*
PROFESSOR HUXLEY, F.R.S., *or President of the Geological Society for the time being.*
DR. LYON PLAYFAIR, C.B., M.P.
HENRY THRING, ESQ.

A.

Her Majesty's Commissioners for the Exhibition of 1851 announce that the first of a series of Annual International Exhibitions of selected Works of Fine and Industrial Art and Scientific Inventions will be opened at South Kensington, London, on Monday, the 1st May 1871, and be closed on Saturday, the 30th September 1871.

B.

The Exhibitions will take place in permanent buildings, about to be erected, adjoining the arcades of the Royal Horticultural Gardens.

C.

The productions of all Nations will be admitted, subject to obtaining the certificate of competent judges that they are of sufficient excellence to be worthy of exhibition.

D.

The objects in the first Exhibition will consist of the following classes, for each of which will be appointed a Reporter and a separate Committee :—

I.—Fine Arts applied or not applied to Works of Utility.

1.—Painting of all kinds in oil, water-colors, distemper, wax, enamel, and on glass, porcelain, mosaics, etc.

2.—Sculpture, modelling, carving and chasing in marble, stone, wood, terra-cotta, metal, ivory, glass, precious stones, and any other materials.

3.—Engravings, lithography, photography, etc.

4.—Architectural designs, drawings, and models.

5.—Tapestries, carpets, embroideries, shawls, lace, etc., shown not as manufactures, but for the fine art of their designs in form or color.

6.—Designs for all kinds of decorative manufactures.

7.—Copies of ancient or mediæval pictures, mosaics, enamels, reproductions in plaster, fictile ivory, electrotypes of fine ancient works of art, etc.

II.—Scientific Inventions and New Discoveries of all kinds.

III.—Manufactures.

(a.)—Pottery of all kinds, *viz.*, earthenware, stoneware, porcelain, parian, etc., including terra-cottas used in building; with any new raw materials, new machinery, and processes for the preparation of such manufactures.

(b.)—Woollen and Worsted Fabrics; with any raw produce from new sources or newly prepared, and new machinery for woollen and worsted manufactures.

(c.)—Educational.

1.—School buildings, fittings, furniture, etc.

2.—Books, maps, globes, instruments, etc.

3.—Appliances for physical training, including toys and games.

4.—Specimens and illustrations of modes of teaching Fine Art, Natural History, and Physical Science.

Detailed rules applicable to each of the above classes, and lists of the separate trades engaged in the production of objects of manufacture, will be issued.

IV.—Horticulture.

International Exhibitions of new and rare plants and of fruits, vegetables, flowers, and plants showing specialities of cultivation will be held by the Royal Horticultural Society in conjunction with above Exhibitions.

Special rules for Horticultural Exhibition will be issued by the Royal Horticultural Society.

E.

In Classes II. and III. producers will be permitted to send one specimen of every kind of object they manufacture, such object being distinguished for novelty or excellence.

F.

The arrangement of the objects will be according to Classes and not Nationalities as in former International Exhibitions.

G.

One-third portion of the whole available space will be assigned absolutely to Foreign Exhibitors, who must obtain certificates for the admission of their objects from their respective Governments. Foreign countries will appoint their own judges. The remaining two-thirds of the space will be filled by objects produced either in the United Kingdom, or, if produced abroad, sent direct to the building for inspection aud approval of judges selected for the British Exhibitors. Objects not accepted for exhibition must be removed according to the notices given, but no objects exhibited can be removed until the close of the Exhibition.

H.

All exhibitors or their agents must deliver at the building into the charge of the proper officers the objects unpacked and ready for immediate exhibition and free of all charges for carriage, etc.

I.

Her Majesty's Commissioners will find large glass cases, stands, and fittings free of costs to the exhibitors, and, except in the case of machinery, carry out the arrangement of the objects by their own officers.

J.

Her Majesty's Commissioners will take the greatest possible care of all objects, but they will not hold themselves responsible for loss or damage of any kind.

K.

Prices may be attached to the objects, and exhibitors will be encouraged to state their prices. Agents will be appointed to attend to the interests of exhibitors.

L.

Every object must be accompanied with a descriptive label, stating the special reason, whether of excellence, novelty, or cheapness, etc., why it is offered for exhibition.

M.

Due notice will be given of the days for receiving each class of objects, and to enable the arrangements to be carried into effect, strict punctuality will be required from all exhibitors, both Foreign and British. Objects sent or brought after the days appointed for their reception cannot be received.

N.

Reports of each class of objects will be prepared immediately after the opening, and will be published before the 1st June 1871.

O.

Each foreign country will be free to accredit an official reporter for every class in which objects made in such country are exhibited for the purpose of joining in the reports.

P.

There will be no prizes, but a certificate of having obtained the distinction of admission to the exhibition will be given to each exhibitor.

Q.

A catalogue will be published in the English language, but every foreign country will be free to publish a catalogue in its own language if it think fit.

HENRY Y. D. SCOTT, *Lieut.-Col., R.E.,*
Secretary.

ANNUAL INTERNATIONAL EXHIBITIONS OF SELECT WORKS OF FINE AND INDUSTRIAL ART AND SCIENTIFIC INVENTIONS.

THE FIRST OF THE SERIES TO BE HELD IN 1871.

Special arrangements for foreign exhibitors whose objects are sent through the Commissions of their own Countries.

I.—In accordance with the general rule (II), Foreign Commissions must cause the objects to be delivered at the building into the charge of the proper officers, unpacked and ready for immediate exhibition, and free from all charges for carriage, &c.

II.—Foreign Commissioners must state their acceptance of the spaces respectively allotted on or before 1st May 1870. If not accepted by that time, the space will be treated as absolutely resigned.

III.—A preliminary list of the names of the exhibitors in each class to whom Foreign Commissioners have allotted space made out on the following form must be sent to Her Majesty's Commissioners on or before 1st November 1870:—

(a.)—Class.
(b.)—Object to be exhibited.
(c.)—Its dimensions.
(d.)—Exhibitor's name and address.

IV.—Foreign exhibitors by general rule (G) are also permitted to send objects direct to London to be admitted by a British Jury, and therefore it is indispensable that this information be furnished by Foreign Commissions at the time appointed.

V.—Forms, showing the totals of space allotted in each class, are supplied and must be returned filled up by 1st November 1870.

VI.—In accordance with general rule (E), producers of scientific inventions and manufacturers are permitted to send one specimen of every different kind of object they manufacture, such object being distinguished for novelty or excellence, and, according to general rule (L), every object must be accompanied with a descriptive label, stating the special reason, whether of excellence, novelty, or cheapness, &c., why it is offered for exhibition.

VII.—To enable Her Majesty's Commissioners to carry out their engagement to arrange all objects themselves, all objects being machinery or manufactures must be delivered at South Kensington on or before the 31st January 1871; all works of Fine Art must be delivered on or before the 15th February, and no objects sent though Foreign Commissions can be received after those dates.—(See general rule M.)

Exception.—If machinery requires to be fitted, the exhibitor or his agent must do such fittings. Foundations will be provided, but notice of their being required must be sent on or before 1st September 1870.

VIII.—To assist in the preparation of the reports which, in accordance with general rules (N and O), must be published before 1st June 1871, Foreign Commissions are requested to send, as early as possible, the name of one representative for each of the following classes, who should be present in London for the opening on Monday, 1st May 1871, and prepared to commence the consideration of the reports on Tuesday, 2nd May:—

IX.—Painting of all kinds.
Sculpture of all kinds.
Engravings of all kinds.
Photography.
Architecture.
Fine arts applied to industry.
Copies of ancient and mediæval works of art.
Scientific inventions.
Pottery.
Woollen and worsted manufactures.
Education.
Machinery for the manufacture of pottery, and woollen and worsted manufactures.
Horticulture.

X.—Each representative will be at liberty to appoint a deputy to take his place in his absence.

XI.—Her Majesty's Commissioners will defray the cost of drawing up the reports.—*See Appendix B.*

XII.—A specimen of the proposed catalogue is transmitted, and Foreign Commissions are requested to collect the information relating to each individual artist or producer admitted to the Exhibition. Every effort will be made to render the information complete, so as to make the notices in the annual volume of International Exhibitions as valuable as possible, both to the public and to the exhibitor, and to cause the honor of gaining admission to be duly appreciated.

FINE ARTS.

GENERAL REGULATIONS RELATING TO FINE ARTS APPLIED OR NOT APPLIED TO WORKS OF UTILITY.

I.—The following objects will be included in the first exhibition, and will be arranged in the under-mentioned classes for each of which a Reporter and Committee will be appointed:—

Fine Arts applied or not applied to Works of Utility.

1.—Painting of all kinds in oil, water colors, distemper, wax, enamel, and on glass, porcelain, mosaics, &c.
2.—Sculpture, modelling, carving and chasing in marble, stone, wood, terra-cotta, metal, ivory, glass, precious stones, and any other materials.
3.—Engravings, lithography, photography, &c.
4.—Architectural designs, drawings, and models.
5.—Tapestries, carpets, embroideries, shawls, lace, &c., shown not as manufactures, but for the fine art of their design in form or color.
6.—Designs for all kinds of decorative manufactures.
7.—Copies of ancient or mediæval pictures, mosaics, enamels, reproductions in plaster, fictile ivory, electrotypes of fine anicent works of art, &c.

II.—No artist can be allowed to exhibit more than two works in each class, unless under special conditions, but he may send works in as many classes as he pleases; thus the same artist may send for admission two oil paintings, two water-color paintings, two paintings on enamel, porcelain, &c., also two sculptures in marble, wood, &c.

III.—Paintings and sculptures may be either separate works, or form parts of the decoration of some object of utility, *e. g.*, fans, panels for furniture, wood carving for furniture, &c., provided that fine art is the predominant feature of the design.

IV.—The works of deceased artists are not admissible, except as copies or reproductions (Class 7).

V.—All works of art, except reproductions of ancient and mediæval works, must have been executed since 1862.

VI.—No work which has been previously exhibited in the United Kingdom can be admitted.

VII.—A producer may exhibit any number of reproductions of ancient or mediæval art, provided he obtains a certificate for their admission.

VIII.—Foreign Commissions will be required to furnish descriptions of all works, written only on one side of the paper, describing them as they are meant to be inserted in the catalogue, but no advertisement, unnecessary quotation, or narrative can be admitted. At the back of each frame or object must be written the name of the artist, and the number to which it refers in the list of the Commission: particular accuracy is requested in this respect.

IX.—Each picture or drawing must be in a separate frame, except very small miniatures, or sculptured gems, any number of which may be placed in a frame not exceeding six by five, or thirty square inches, and will be considered as one work; but if a series of designs from one story be admitted in the same frame, they must be enumerated as distinct pieces.

X.—All pictures and drawings must be in gilt frames. Excessive breadth in frames, as well as largely projecting mouldings, may prevent pictures obtaining the situation they otherwise merit; and oval frames should be avoided, as they are difficult of arrangement.

XI.—No mere transcripts of the objects of natural history, nor any drawings without backgrounds, excepting architectural designs, can be received.

XII.—The prices of works to be disposed of, carefully described as in Section VIII, may be communicated to the Secretary.

XIII.—To every work will be attached a label containing the following particulars:—

1. The subject. 2. The artist's name. 3. His address. 4. Any explanations.

XIV.—Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

SCIENTIFIC INVENTIONS AND DISCOVERIES.

I.—The exhibition of scientific inventions and discoveries will not be restricted to such as relate to the fine arts and to the three classes of manufactures included in this Exhibition, but will embrace all kinds of inventions and discoveries in physics, mechanics, and chemistry, which may be deemed worthy of admission.

II.—If any object requires for its exhibition fire steam, or water, or any other motive power, the application must distinctly specify what provision is necessary to be made for working it, and what securities are required against danger or accident.

III.—As a general rule, explosive and dangerous substances, including such as are liable to spontaneous combustion, and substances deleterious to other ordinary exhibits, will not be admitted. Any imitations of explosive or dangerous compounds (such as the substitution of coal dust for gunpowder in sections of shells and the like) must be the subjects of special application.

IV.—To every object will be attached a label containing the following particulars:—

1.—The name of the object.
2.—Its use or application.
3.—The exhibitor's name.
4.—His address.
5.—The reasons why it is offered for exhibition, such as—
Its novelty.
Its ingenuity.
Its comparative superiority.
Its peculiar qualities or properties.
Its commercial, artistic, or scientific value and importance.
Its cheapness.
6.—The price, unless the exhibitor objects.
7.—Any explanations, etc.

V.—Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

GENERAL REGULATIONS FOR EXHIBITING POTTERY AS A MANUFACTURE AND NOT AS A FINE ART.

I.—Pottery of all kinds will be exhibited, *viz.*, earthenware, stoneware, porcelain, parian, etc., including terra-cottas used in building, with new raw materials, machinery, and processes for the preparation of such manufactures.

II.—In this class, the following trades, together with any others engaged in the production of pottery, are eligible to send illustrations of their respective branches of production:—*

Brick and tile makers.
Brown stone potters.
Chemical potters.
Chimney top manufacturers.
China and earthenware manufacturers.
„ gilders.
„ menders.
„ riveters.
„ and porcelain door furniture makers.
„ and porcelain manufacturers.
„ drillers.
„ figure manufacturers.
„ ornament makers.
„ painters and gilders.
„ toy makers.
Drain pipe and tile makers.
Earthenware figure manufacturers.
„ manufacturers.
Egyptian blackware manufacturers.
Encaustic tile makers.
Fancy jug manufacturers.
Fire brick makers.
Jug manufacturers.
Melting pot and crucible makers.
Muffle manufacturers.
Parian manufacturers.
Plumbers' pottery makers.
Porcelain letter makers.
„ manufacturers.
Potters.
Potters' engravers.
Rockingham ware manufacturers.
Stone bottle makers.
„ mortar and pestle manufacturers.
„ potters.
„ ware manufacturers.
Terra-cotta manufacturers.
Tobacco pipe makers.
Vase manufacturers.

* This list is of trades existing in the United Kingdom, but it may be suggestive to Foreign Commissions.

IV.—A producer in each of the trades may submit a specimen of each kind of object he manufactures, although such specimen may form only a part of a complete object.

V.—The aim of the exhibition being to bring prominently into notice specimens remarkable for excellence, novelty, invention, etc., it is desirable to have the fewest number of specimens from each producer, and only those which are absolutely necessary: consequently no duplicates of any object can be admitted.

VI.—Thus, it is desirable that exhibitors should send only one specimen of the same kind of object, such, for instance, as one tea-cup, one saucer, and one plate of the same tea service; one dish, etc., being of the same series or pattern; one plate, one tureen, one vegetable dish, etc., of the same dinner service; one jug of a series; one garden vase, one drain pipe, one tile of the same pattern, &c.; one toilet jug and bowl. But they may send several specimens each belonging to a different series or pattern; and if a different pattern is put upon the same shaped cup, the cup may be sent.

VII.—Two objects of the same pattern, such as jugs, differing only in size, cannot be exhibited.

VIII.—To every object will be attached a label containing the following particulars:—

1.—The name of the specimen.
2.—The materials of which it is composed.
3.—The exhibitor's name.
4.—His address.
5.—If of sufficient importance, the name of the designer or actual maker.
6.—The reasons why it is offered for exhibition, such as—
Its body or composition.
Its form.
Its surface pattern.
Its novelty.
Its excellence.
Its cheapness.
7.—The price, if the exhibitor pleases.
8.—Any explanations, etc.

Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

NEW MATERIALS FOR POTTERY.

IX.—Newly-discovered materials used in the production of pottery, new combinations of old materials, and new processes of manufacture may be exhibited.

X.—Persons engaged in the following trades, or any other trades connected with the preparation of the materials used in the manufacture of pottery, may send illustrations of their productions:—

Ash merchants.
Chert stone dealers.
China clay merchants.
Clay merchants.
Flint millers.
Manganese merchants.
Marble clay merchants.
Pipe clay manufacturers and merchants.
Zaffre refiners.

XI.—It is desirable that the specimens of materials should be as small as possible, and such as can be exhibited in bottles or glass cases on a wall. The opportunities of admission will be greatly increased if the object be small.

XII.—To every specimen will be attached a label containing the following particulars:—

1. The name of the material and source from whence it is obtained.
2. The exhibitor's name.
3. His address.
4. The reasons why it is offered for exhibition, such as—
Its value and importance.
Its novelty.
Its superior excellence.
Its cheapness.
5. The price, unless the exhibitor objects.
6. Any explanations, etc.

Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

NEW MACHINERY FOR POTTERY.

XIII.—New machinery and apparatus will be admitted, and recent inventions relating to the different parts of the various machines and appliances used in the manufacture of pottery may be shown either as complete machines, or separately in parts. Machinery in motion and processes may be shown.

XIV.—Persons engaged in the following and other trades in the United Kingdom connected with the manufacture of pottery may send exhibits:—

Brick makers' implement manufacturers.
,, mould makers.
Grinding mill makers.
Kiln builders.
Machinists in general.
Pug mill makers.
Potters' wheel makers.

XV.—To every specimen will be attached a label, containing the following particulars:—

1.—The name of the specimen.
2.—The purpose to which it is applied.
3.—The exhibitor's name.
4.—His address.
5.—The reasons why it is offered for exhibition, such as—
The novelty of its invention.
The superiority of its productiveness or efficiency.
Its increased economy in producing.
Its cheapness.
6. The price, unless the Exhibitor objects.
7. Any explanations, etc.

Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

XVI.—Exhibitors whose machinery is admitted and requires to be fitted together will have to arrange it themselves in the Exhibition, but Her Majesty's Commissioners will, unless otherwise stipulated when the objects are admitted, find the necessary foundations.

GENERAL REGULATIONS FOR EXHIBITING WOOL AND WORSTED FABRICS.

I.—Woollen and worsted fabrics of all kinds will be exhibited—

With the raw produce and machinery for manufactures in the same.

II.—Producers engaged in the various trades, such as the following, connected with the manufacture of wool and worsted fabrics, are eligible to send specimens of the particular work in which they are engaged, although it forms

only part of a complete object. Thus, a "beaver-cutter" may exhibit beaver-cutting; a pulp cloth manufacturer may exhibit specimens of pulp cloth; a yarn manufacturer, yarn, etc.

(a).—Woollen Trades.

Army cloth manufacturers.
Baize manufacturers.
Billiard table cloth manufacturers.
Blanket manufacturers.
„ yarn spinners.
Cloth dressers.
„ drawers.
„ embossers.
„ factors and merchants.
„ finishers.
„ frizzers.
„ fullers.
„ manufacturers.
„ millers.
„ waterproofers.
„ workers.
Doeskin manufacturers.
Drugget manufacturers.
Dyers and scourers.
Felt makers.
Flannel agents.
„ factors.
„ manufacturers.
Fulling millers.
Horse cloth manufacturers.
Hot pressers.
Ironing cloth manufacturers.
Kersey manufacturers.
Machine cloth manufacturers.
Mourning hat band makers.
Navy clothiers.
Painted baize makers.
Pianoforte hammer and damper cloth manufacturers.
Printers' blanket manufacturers.
Pulp cloth manufacturers.
Railway wrapper manufacturers.
Roller clearer and ironing cloth manufacturers.
Saddle cloth makers.
Scribbling millers.
Shag manufacturers.
Ship felt makers.
Shoddy manufacturers.
Table cover manufacturers.
Upholsterers' woollen manufacturers.
Wool carders.
„ sheet manufacturers.
Woollen agents.
„ dyers.
„ factors.
„ cloth manufacturers.
„ cloth waterproofers.
„ manufacturers.
„ spinners.
„ waste dealers.
„ weavers.
Yarn manufacturers.

(b).—Worsted Trades.

Alpacca manufacturers.
„ spinners.
Band and galloon makers.
Bell rope makers.
Berlin wool manufacturers.
Bombasin manufacturers.
Braid makers.
Bunting manufacturers.
Carpet manufacturers.
„ pattern designers.
„ planners.
„ weavers.
„ yarn manufacturers.

III.—The Exhibition will be limited to such specimens as are necessary to show the different fabrics and their patterns in a satisfactory manner, and the specimens will be restricted to goods made entirely of wool, worsted or hair, or of wool, worsted or hair, combined with cotton, silk, or other textile materials.

IV.—Exhibitors must not send whole bales of cloth, rolls of carpet, or complete pieces of goods, and specimens should, if possible, not exceed three yards, unless the pattern requires a greater length. They may be exhibited in glass frames, which must not exceed two inches in depth or one and a half inches in width. The frames must be black.

V.—No duplicates can be admitted, but the same design may be shown with different combinations of colors.

VI.—To every object will be attached a label containing the following particulars:—

1.—The name of the fabric.
2.—The material of which it is made.
3.—The exhibitor's name.
4.—His address.
5.—The reasons why it is offered for exhibition, such as—
Its excellence of manufacture.
Its beauty of design.
Its permanence of dye or color.
Its ingenuity in the application of new materials.
Its novelty of production.
Its cheapness.
6.—The price, unless the exhibitor objects.
7.—Any explanations, etc.

Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

NEW MATERIALS FOR WOOL AND WORSTED FABRICS.

VII.—Wool and hair of various kinds not hitherto used in the manufacture of textile fabrics, and materials recently applied to the cleansing preparation, and dyeing thereof, may be exhibited.

VIII.—Producers, such as the following, engaged in the preparation of the materials used in the manufacture of wool and worsted fabrics, may send specimens of them:—

Alkali manufacturers.
Alpacca wool merchants.
Alum manufacturers.
Ammonia manufacturers.
Annato manufacturers.
Aquafortis makers.
Arsenic manufacturers.
Bleaching liquid makers.
„ powder makers.
Blue manufacturers.
Blue verditer makers.
Camel hair marchants.
Carmine makers.
Chemical color makers.
Chloride manufacturers.
Cobalt refiners.
Colorers.
Color manufacturers.
Copperas manufacturers.
Creosote manufacturers.

Cudbear makers.
Dye manufacturers.
Garacin manufacturers.
Goats' hair merchants.
Indigo blue manufacturers.
,, extract manufacturers.
,, manufacturers.
,, refiners.
Manganese merchants.
Merino wool merchants.
Mecklenburgh blue makers.
Mohair merchants.
Mordant makers.
Ochre manufacturers.
Oil of vitriol manufacturers.
Orchil and cudbear manufacturers.
Smalt manufacturers.
Soda ash makers.
,, crystal manufacturers.
,, merchants.
Spirits of salt manufacturers.
Sulphate of ammonia manufacturers.
,, of barytes manufacturers.
,, of copper manufacturers.
,, of soda manufacturers.
Turpentine distillers.
Ultramarine manufacturers.
Vitriol manufacturers.
Washing compound makers.
,, crystal manufacturers.
Wool factors.
,, merchants.
,, staplers.
Zaffre refiners.

IX.—To every specimen will be attached a label containing the following particulars:—

1.—The name of the material.
2.—The express purpose for which it is used.
3.—The exhibitor's name.
4.—His address.
5.—The reasons why it is offered for exhibition, such as—
Its special mode of preparation for woollen and worsted fabrics.
Its comparative superiority.
Its peculiar qualities and properties.
Its commercial value and importance.
Its novelty of production or application.
Its cheapness.
6.—The price, unless the exhibitor objects.
7.—Any explanations, etc.

Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

NEW MACHINERY FOR WOOL AND WORSTED FABRICS.

X.—New machinery and apparatus used in the cleansing, preparation, and weaving of wool and hair, will be admitted, and improvements of the different parts of the various machines and appliances may be shown separately.

XI.—Manufacturers, such as the following, engaged in the production of machinery and apparatus used in the manufacture of wool and worsted fabrics, may exhibit under this head:—

Bobbin manufacturers.
,, turners.
Card machine makers.
,, makers.
,, teeth makers.
Cloth press makers.
Flyer makers.
Fork manufacturers (weft).
Gear and slay makers.
Hackle and gill pin manufacturers.
,, makers.
Heald and slay makers.
Heddle makers.
Jacquard card cutters.
,, harness mounters.
,, machine makers.
Loom makers.
,, mounters.
,, passers and twisters.
Machine joiners.
Machine makers.
Reed and slay makers.
Shuttle makers.
,, tip makers.
Spindle makers.
Spinner flyer makers.
Tassel and fringe mould turners.
Teazle rod manufacturers.
Weavers' harness makers and enterers.
,, joiners.
,, leash makers.
,, loom makers.
,, mail makers.
,, turners.
Winding frame makers.
Wool card makers.
Wool comb makers.
Woollen card makers.
,, machine makers.
Woolley teeth makers.

XII.—To every object will be attached a label containing the following particulars:—

1.—The name of the object.
2.—The purpose to which it is applied.
3.—The exhibitor's name.
4.—His address.
5.—The reasons why it is offered for exhibition, such as—
Its ingenuity.
Its novelty.
Its improvement on ordinary construction.
Its increased economy in producing.
The superiority of its execution.
Its increased efficiency.
Its cheapness.
6.—The price, when the exhibitor does not object.
7.—Any explanations, etc.

Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

GENERAL REGULATIONS FOR EXHIBITING EDUCATIONAL WORKS AND APPLIANCES.

I.—The exhibition of educational works and appliances will include illustrations of all the subjects belonging to the following branches into which this class is sub-divided:—

1.—School buildings, fittings, furniture, etc.
2.—Books, maps, globes, instruments, etc.
3.—Appliances for physical training, including toys and games.
4.—Specimens and illustrations of modes of teaching Fine Art, Natural History, and Physical Science.
5.—Specimens of school work serving as examples of the results of teaching.

II.—The various trades engaged in the production of educational works and appliances will exhibit under this head, such as:—*

1.—*School Buildings, Fittings, and Furniture.*

Abacus frame makers.
Black board makers.
Diagram stand makers.
Easel makers.
Ink well makers.
Object lesson cabinet makers.
Reading frame makers.
School apparatus makers.
,, building model makers.
,, clock makers.
,, desk makers.
,, fitting makers.
,, form makers.

2.—*Books, Maps, Globes, Instruments, etc.*

Chart sellers.
Copy book publishers.
Engravers—(map).
,, (music).
Globe makers.
Ink powder makers.
Inkstand makers.
Map and chart sellers and publishers.
,, and print colorers.
,, engravers and printers.
,, mounters.
Mathematical instrument makers.
Music copyists.
Pen makers.
Pencil makers.
Penholder makers.
Publishers.
Quill and pen manufacturers.
Raised map makers.
School slate makers.
Slate pencil makers.
Steel pen manufacturers.
Topographers.
Writing ink makers.

* This list is of trades existing in the United Kingdom, but it may be suggestive to Foreign Commissions.

3.—*Appliances for Physical Training, including Toys and Games.*

Archery tackle makers.
Backgammon board makers.
Ball and balloon makers.
Bowstring makers.
Bicycle makers.
Chess board makers.
Cricket bat, ball, and stump makers.
Croquet manufacturers.
Dissected map makers.
Doll makers.
Foot ball manufacturers.
Gilt toy makers.
Glass toy makers.
Gymnasium makers.
Hoop makers.
Map dissectors.
Marble manufacturers.
Pedometer makers.
Puzzle makers.
Rocking horse makers.
Skate makers.
Skittle makers.
Target makers.
Top makers.
Toy makers.

4.—*Specimens and Illustrations of the modes of Teaching Fine Art, Natural History, and Physical Science.*

Anatomical figure makers.
Aquaria makers.
Artists' colormen.
Barometer makers.
Bird and beast stuffers.
Black lead pencil makers.
Botanical collectors.
Camel hair pencil makers.
Chemical apparatus makers.
Colored saucer makers.
Crayon makers.
Drawing board makers.
Drawing instrument makers.
Drawing model makers.
Electric apparatus manufacturers.
Fossil dealers.
Galvanic apparatus manufacturers.
Geological collectors.
Magic lantern makers.
Magnet makers.
Makers of musical instruments for schools.
Mechanical figure makers.
Microscope makers.
Mineralogists.
Naturalists.
Nautical instrument makers.
Optical instrument makers.
Orrery and tellurian makers.
Philosophical instrument makers.
Pink, &c., saucer makers.
Plaster cast figure makers.
Preparers of botanical specimens.
„ of microscopic objects.
Stereoscope makers.
Sun dial makers.
Telegraph instrument makers.
Telescope makers.
Thermometer makers.
Ward's case makers.
Zoological artists.

III.—All the producers named in these lists are eligible to send new illustrations of their respective branches of production.

IV.—The aim of the Exhibition being to show specimens remarkable for excellence, novelty, invention, etc., it is desirable to have the fewest number of specimens from each producer, and only those which are absolutely necessary; consequently no duplicates of any object can be admitted.

V.—Models of school buildings, heating and ventilating apparatus, etc., ought not to exceed the scale necessary to show their construction or working parts intelligibly. But generally drawings showing the buildings, etc., in plan, section, and elevation will be preferred to models, as they can be more easily exhibited.

VI.—Specimens of fittings, furniture, &c., such as desks and forms, must be kept within moderate limits; for instance, the desks and forms ought not to exceed four feet in length.

VII.—The specimens, illustrations, and collections used in teaching Fine Art, Natural History, and Physical Science ought not to be so large or costly as to be beyond the reach of ordinary schools.

VIII.—As far as possible, they should be exhibited in glass frames, which should not exceed two inches in depth and one and a half inches in width. The frames should be black.

IX.—To every object will be attached a label containing the following particulars :—

1.—The name of the specimen.

2.—The purpose for which it is intended.

3.—The exhibitor's name.

4.—His address.

5.—The reasons why it is offered for exhibition, such as—

Its special fitness for its purpose.
Its illustrative character.
Its novelty.
Its ingenuity.
Its comparative superiority.
Its cheapness.

6.—The price, unless the exhibitor objects.

7.—Any explanations, &c.

X.—Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

5.—*Specimens of School Work, serving as examples of the results of teaching.*

XI.—These will be confined to the following :—

(a.)—Writing, plain and ornamental.

(b.)—Drawing and design.

(c.)—Modelling in clay, terra-cotta, wax, &c.

(d.)—Models of machinery, building construction, &c.

(e.)—Needlework, plain and ornamental, lace, knitting, &c.

(f.)—Miscellaneous work by pupils in schools for the blind, reformatories, &c.

XII.—Under *(a) Writing*, will be included examples of dictation, translation, writing from memory, map drawing, and other school work which can be conveniently shown on paper. This should be on good paper, in single leaves not exceeding twelve inches by nine inches, written on one side only, and each complete in itself. No one school must send more than such leaves at the utmost, and the contributions should be chosen with the view of showing the general work throughout the school, and not that of one or two advanced scholars. The name of the school and the age of the scholar, with the time during which he has been under instruction, should be added. As the object is not to compare the work done in different schools in any one country, but rather to furnish the means of comparison between the school work of different countries, a limited number of examples only can be exhibited.

XIII.—Contributions falling under *(d) (e) (f)* must show some special excellence, ingenuity, or originality in order to entitle them to admission. To each of these objects will be attached a label containing the following particulars :—

1.—Name of school.

2.—Age of scholar.

3.—Period of instruction.

4.—The reason why the object is offered for exhibition, such as—

Its excellence of workmanship.
The special circumstances under which it has been produced.

XIV.—Foreign Commissions are requested to furnish these particulars on or before the 15th January 1871.

ANNUAL INTERNATIONAL EXHIBITIONS OF SELECT WORKS OF FINE AND INDUSTRIAL ART AND SCIENTIFIC INVENTIONS.

The objects in the first Exhibition will consist of—

I.—FINE ARTS APPLIED, OR NOT APPLIED, TO WORKS OF UTILITY.

II.—SCIENTIFIC INVENTIONS AND NEW DISCOVERIES OF ALL KINDS.

III.—MANUFACTURES—

(a.)—Pottery.

(b.)—Woollen and worsted fabrics.

(c.)—Educational.

Under fine art, all works must be exhibited in the artist's own name; but the name of the firm for whom the object was designed will be added, or the name of the Rajah by whom the works are sent to the Exhibition. (See specimen of catalogue, page 5, under Carpets.)

The exhibitors from India might exhibit paintings applied to boxes, &c., enamels and the like, ivory carving, mosaics, &c., Cashmere shawls.

The works of deceased artists are not admissible, except as copies or reproductions.

All works of art and manufactures must have been executed since 1862.

A producer may exhibit any number of reproductions or copies of ancient or mediæval art, provided he obtain a certificate for their admission.

The manufactures included in the first Exhibition will be restricted to three classes, *viz.*, pottery, woollen and worsted, and educational classes; but the exhibition of scientific inventions and discoveries will in no way be restricted, but will embrace all kinds of inventions and discoveries in physics, mechanics, and chemistry, which may be deemed worthy of admission.

A producer in each of the classes may submit a specimen of each kind of object he manufactures, although such specimen may form only a part of a complete object.

The aim of the Exhibition being to bring prominently into notice specimens remarkable for excellence, novelty of invention, &c., it is desirable to have the fewest number of specimens from each producer, and only those which are absolutely necessary; consequently no duplicate of any object can be admitted.

Thus it is desirable that exhibitors should send only one specimen of the same kind of object. In the woollen and worsted and educational classes, the specimens should be kept within moderate limits as to size. But producers may send several specimens, each belonging to a different series or pattern, and if a different pattern be put upon the same shaped cup, the cup may be sent. In woollen and worsted manufactures, the same design may be shown in different combinations of colors.

The exhibition of woollen and worsted fabrics will be limited to such specimens as are necessary to show the different fabrics and their patterns in a satisfactory manner, and the specimens will be restricted to goods made entirely of wool, worsted or hair, or of wool, worsted or hair, combined with cotton, silk, or other textile materials. It would be desirable to obtain a specimen of all the different modern woollen fabrics made in each District of India with the prices at which they are sold. India could make a capital collection of toys, games, perhaps apparatus for teaching.

New machinery and apparatus, newly discovered materials, and new combinations of old materials, used in the manufacture of objects comprised in the three classes, will be admitted, and recent inventions relating to the different parts of the various machines and appliances used in such manufactures may be shown either as complete machines, or separately in parts. Machinery in motion and processes of manufactures may be shown.

Appendix B.

FINE ARTS.

PAINTING IN OIL.

Painting in Oil.	Exhibitors' Names.
1 THE BATTLE OF COLIN, 1757 VIENNA. Born at ; pupil of : 2nd Prize, 1867.	S. ALLEMAND, *Jun*
2 THE MUMMY HOLLAND. Born at Dronryp, Friesland; pupil of Baron Leys: Medal, 1864; Second Prize, 1867, Knight of the Order of Leopold.	ALMA-TADEMA.
3 SWEDISH LANDSCAPE; NIGHT SCENE SWEDEN. Born at ; pupil of	E. BERGH.
4 SHEEP ON THE SEA-SHORE FRANCE. *By Commune de Thomery, Seine et Marne.* Born at Bordeaux; pupil of R. Bonheur, her father; 3rd Class Medal, 1845; 1st Class Medal, 1848; 'Exempt from the jury of admission by special decision' ('Moniteur' of the 27th July 1853); 1st Class Medal, 1855; Chevalier of the Legion of Honour, 1865; Second Prize, 1867.	Mdlle. M. R. BONHEUR.
5 CATTLE	Mdlle. M. R. BONHEUR.
6 A SHOEMAKER'S WIFE, WITH HER CHILD AND AN APPRENTICE, WATCHING A MOUSE IN A TRAP WIESBADEN. Born at ; pupil of : 1st Class Medal, 1855; Grand Prize, 1857.	Prof. L. KNAUS.
7 PORTRAIT OF A LADY LONDON. Born at ; pupil of	Sir F. GRANT, P.R.A.
8 THE BATTLE OF POLTAWA RUSSIA. Born at ; pupil of : 3rd Prize, 1867.	A. KOTZEBUE.
9 THE SHREW TAMED LONDON. 1, *St. John's Wood Road.* Born at ; pupil of : Grand Medal of Honour, 1855.	Sir E. LANDSEER, R.A.
10 EXPECTATION FRANCE. *Poissy, Seine et Oise.* Born at Lyons; pupil of L. Coignet: 3rd Class Medal, 1840; 2nd Class Medal 1841; 1st Class Medal, 1843; Chevalier of the Legion of Honour, 1846; 1st Class Medal, 1848; Grand Medal of Honour, 1855; Officer of the Legion of Honour, 1856; Member of the Institute, 1861; Grand Prize 1867.	J. L. E. MEISSONIER.
11 THE FARRIER	J. L. E. MEISSONIER.
12 SERMON IN THE SISTINE CHAPEL MADRID. Born at ; pupil of : 2nd Prize, 1867.	V. PALMORALI.
13 THE VISIT BELGIUM. Born at : Medal, 1851; 2nd Class Medal, 1855; 1st Prize, 1867.	Chevalier A. STEVENS.
14 COURTIERS AND PEASANTS, WURTEMBURG SWITZERLAND. *Lausanne, Vaud.* Born at ; pupil of : 2nd Prize 1867.	B. VAUTIER.

PAINTING IN WATER COLOURS.

Painting in Water Colours.	
1 STAG HUNT LONDON. *President of the Society of Painters in Water Colours.* Born at	FREDERICK TAYLOR, R.W.S.
2 FIRST NOTES OF THE CUCKOO LONDON. 29, *Upper Phillimore Place, Kensington.* Born at ; pupil of	E. G. WARREN.
3 LANDSCAPE, ABINGER COMMON LONDON. *Hyde Park Gate.* Born at : Royal Academician; Surveyor of Her Majesty's Pictures; Inspector General for Art of the Science and Art Department; author of various Reports on Design in International Exhibitions, &c.; Chevalier of the Legion d'Honneur.	R. REDGRAVE, R.A.

PAINTING IN ENAMEL.

Painting in Enamel.	
1 PORTRAIT OF RENEE OF FRANCE, DUCHESS FERRARA. Painted in enamel. Price 1,000 francs PARIS. Born at ; pupil of	A. MEYER.

PAINTING ON EARTHENWARE.

Painting on Earthenware.	
1 THE GENIUS OF PAINTING and the GENIUS OF SCULPTURE. Painting on earthenware. Executed at the Imperial Manufactory, Sèvres PARIS (near), 152, *Rue de la Tour, Passy.* Born at Eschwiller, Moselle; pupil of P. Delaroche: 1st Class Medal, 1848; 2nd Class Medal, 1855; Chevalier of the Legion of Honour 1855; Grand Medal of Honour, 1857; 2nd Prize, 1867.	A. YVON.
2 A VASE IN MAJOLICA—JUPITER AND EUROPA, after Guido, painted for Minton and Co., Stoke-on-Trent STOKE-ON-TRENT. Medal, 1867.	W. ALLEN.

PAINTING APPLIED TO DECORATION.

Painting applied to Decoration. — **Exhibitors' Names.**

1 PORCELAIN PLAQUE. Copy of Mulready's "Crossing the Brook." Adapted to a Cabinet and Stand designed by Professor Semper ... ... G. GRAY.
ENGLAND. Born at ; pupil of Central School of Design.

2 FAN. Ivory, richly carved and gilt. The front of the fan is painted with three medallions representing (1) Before the Tournament; (2) The Tournament; (3) After the Tournament. Painted and designed for M. Alexandre ... ... E. MOREAU.
FRANCE. Born at ; pupil of

3 PAINTINGS for a Cabinet designed by W. J. Burgess, Esq., Architect ... E. J. POYNTER, A.R.A.
LONDON, 106, *Gower Street.* Born at Paris; pupil of the Royal Academy, London, and M. Gleyre, Paris; Associate Royal Academician.

MOSAICS.

Mosaics.

1 A TABLE IN ROMAN MOSAIC ... ... The Cavaliere BARBERI.
ROME. Born at ; pupil of : Council Medal, 1851.

2 MOSAIC WALL PICTURE, in coloured marbles, black inlaid outlines ... Baron H. DE TRIQUETI.
PARIS. Born at ; pupil of

3 MOSAIC—OPUS ANGLICANUM. Figure of Leonardo da Vinci, designed by J. Tenniel; worked by Miss Florence Cole and other students of the School of Art, South Kensington.

4 MOSAIC PICTURE IN VENETIAN GLASS ENAMEL OF SIR JOSHUA REYNOLDS, P.R.A., executed from the design of Mr. H. Phillips for the South Kensington Museum SALVIATI & Co.
LONDON. Established

5 MURAL MOSAIC WORK, Monumental or Byzantine style, in Venetian Enamel, representing Christ on the Judgment Throne, from the design of Gambier Parry, Esq. ... SALVIATI & Co.

CARTOONS.

Cartoons.

1 THE EPOCH OF THE REFORMATION ... ... G. De KAULBACH.
MUNICH. *Director of the Academy of Fine Arts.* Born at : 1st Class Medal, 1855; Grand Prize, 1867.

SCULPTURE.

SCULPTURE IN MARBLE AND STONE.

Sculpture.

1 EQUESTRIAN STATUE OF H. M. KING WILLIAM, erected for the eastern portal of the Bridge of the Rhine at Cologne, by the Administration of the Cologne Minden Railway ... ... Professor F. DRAKE.
BERLIN. Born at ; pupil of : Prize Medal, 1851; Honourable Mention, 1855; Grand Prize, 1867.

2 PIETY—Marble Group ... ... J. DUPRE.
FLORENCE. Born at ; pupil of : 1st Class Medal, 1855; Grand Prize, 1867.

3 NAPOLEON, FIRST CONSUL—Marble Bust ... ... E. C. J. B. GUILLAUME.
PARIS. *Imperial School of Fine Arts.* Born at Montbard, Cote d'Or; pupil of Pradier: Prize of Rome, 1845; 2nd Class Medal, 1852; 1st Class Medal, 1855; Chevalier of the Legion of Honour, 1855; Member of the Institute, 1862; Grand Prize, 1867.

5 SAUL UNDER THE INFLUENCE OF THE EVIL SPIRIT—Colossal Statue in Marble ... W. W. STORY.
Born at ; pupil of

6 CHRISTOPHER COLUMBUS AND AMERICA—Plaster Group ... ... A. VELA.
TURIN. Born at ; pupil of : Honourable Mention, 1855; 1st Prize, 1867.

SCULPTURE IN WOOD.

Sculpture in Wood.

1 CABINET richly carved and inlaid in ebony and stained woods. French Renaissance style. Executed by M. Fourdinois. Price 2,750*l.* ... ... M. NIVILDER.
FRANCE. Born at ; pupil of : 2nd Class Medal, 1855; Silver Medal, 1867.

2 PORTRAIT OF THE PRINCESS MARIA PIA. In carved boxwood. Price 300 francs ... L. FRULLINI.
ITALY. Born at ; pupil of : Silver Medal, 1867.

3 CABINET. Marquetry of variously coloured woods, ornamented with figures, festoons of flowers, &c., in full relief in bronze gilt, in the front and sides are oval plaques of porcelain; the whole surmounted by a mirror in a frame of carved and gilt wood. The top of the cabinet is composed of inlaid marbles. English, modern. Manufactured by Messrs. Jackson and Graham ... ... E. PRIGNOT.
PARIS. 70, *Rue Rochechouart.* Born at ; pupil of : Gold Medal, 1867.

WORKS IN METAL.

Sculpture in Metal.

1 CLOCK. Female figure "Contemplation" seated on a black marble base. Imitation bronze. Manufactured by J. Boy, 106, Rue Turenne, Paris ... ... A. CARRIER-BELLEUSE.
PARIS. Born at ; pupil of : 1st Class Medal, 1855; Gold Medal, 1867; Practised Modelling in the Staffordshire Potteries for Messrs. Minton and Co. and others, about 1851 and following years.

Sculpture in Metal. — **Exhibitors' Names.**

2 A BRONZE CUP encrusted with Gold and Silver. Executed for M. F. Barbedienne, 30, Boulevard Poissonnière, Paris. Price 320*l.* ... ... S. CONSTANT.
PARIS. Born at ; pupil of : Honourable Mention, 1855; Gold Medal, 1867.

3 TWO MEDALS, designed by ... ... E. FERNANDEZ PESCADOR.
MADRID. Born at ; pupil of : 2nd Prize, 1867.

4 SHIELD. Silver and damascened iron. Executed for Messrs. Elkington and Co. ... M. LADUIL.
Born at ; pupil of : Gold Medal, 1867.

5 CUP WITH TWO HANDLES. Silver repoussé work. The design consists of fruits, corn, and foliage. Executed by M. Desiré Attarge for M. F. Barbedienne, 30, Boulevard Poissonnière, Paris. Price 3,000 francs ... ... C. LEONIN.
Born at ; pupil of

6 A SILVER COFFEE POT. Executed for Messrs. Christofle and Co., 56, Rue de Bondy, Paris ... ... M. MADROUX.
PARIS. Born at ; pupil of : Silver Medal, 1867.

7 FRAME. Double in Spanish niello work. Price 260 francs ... ... E. ZULOAGA.
Born at ; pupil of : Silver Medal, 1867.

SCULPTURE IN IVORY.

Sculpture in Ivory.

1 CHRIST ON THE CROSS ... ... J. L. MOREAU.
PARIS. 15, *Rue Tiquetonne.* Born at ; pupil of : Silver Medal, 1867.

2 FEMALE FIGURE ... ... J. L. MOREAU.

ENGRAVINGS, LITHOGRAPHY, PHOTOGRAPHY, ETC.

ENGRAVINGS.

Engravings.

1 THE DISPUTE, after Raphael (line engraving). 1,200 francs ... ... J. KELLER.
Professor in the Academy of DUSSELDORF. Born at ; pupil of : Grand Prize, 1867.

2 THE COUNTESS OF BEDFORD, after Vandyke ... ... J. H. ROBINSON, A.R.A.
PETWORTH. *New Grove.* Born at ; pupil of : 1st Class Medal, 1855.

LITHOGRAPHY.

Lithography.

1 THE CROWNING OF THE VIRGIN, after the Picture by Fra Angelico, in Louvre A. FRANCOIS.
PARIS. 56, *Avenue de Breteuil.* Born in Paris; pupil of M. Hewisquel: 1st Class Medal, 1851; 1st Class Medal, 1857; Grand Prize, 1867.

PHOTOGRAPHY.

Photography.

1 PHOTOGRAPHS AND REPRODUCTIONS in a frame ... ... R. J. BINGHAM.
PARIS. 58, *Rue de la Rochefoucauld.* Born at ; pupil of : Medal, 1862; Grand Prize, 1867.

2 PHOTOGRAPHS in one frame ... ... A. BRAUN.
FRANCE. *Dornach, Haut Rhin.* Born at ; pupil of : 1st Class Medal, 1855; Medal, 1862; Silver Medal, 1867.

3 PHOTOGRAPHIC PLATES for Engraving and Printing; Engraving on Glass; Photographic Enamels and stained Glass, Photographs by the Carbon Process in one frame H. GARNIER.
PARIS. 8, *Rue du Pourtour de l'Eglise-Grenelle.* Born at ; pupil of : Medal, 1862; Grand Prize, 1867.

4 PHOTOGRAPHICALLY ENGRAVED PLATES and PRINTS from the same ... J. W. SWAN.
NEWCASTLE-ON-TYNE. 21, *Leazes Terrace.* Born at ; pupil of : Silver Medal, 1867.

ARCHITECTURAL DESIGNS AND MODELS.

Architectural Designs, &c.

1 RESTORATION OF THE APPIAN WAY. Five Drawings ... ... G. A. ANCELET.
FRANCE, *Biarritz.* Born in Paris; pupil of M. Baltard: Prize of Rome, 1851; Chevalier of the Legion of Honour, 1866; Grand Prize, 1867.

2 PROJECTED BUILDINGS for Vienna, Brunn, and Pesth ... ... Chevalier H. FERSTL.
VIENNA. *Councillor of the Academy, Member of the Imperial Museum of Art and Trade.* Born at pupil of : Grand Prize, 1867.

3 PROJECT FOR THE DECORATION OF THE INTERIOR OF A CHURCH, taken in part from the Apocalypse of St. John; nine sheets of drawings ... ... C. J. LAMEIRE.

ANNUAL INTERNATIONAL EXHIBITIONS OF SELECT WORKS OF FINE AND INDUSTRIAL ART AND SCIENTIFIC INVENTIONS.

ALLOTMENT OF SPACE TO INDIA.

In accordance with the general rule (F) the objects will be arranged in the following classes, and the amounts of space alloted to for each class will be as follows:—

	Horizontal space in glass cases about 7 feet high.	Horizontal space on the floor, unlimited in height.	Vertical space with projection not exceeding 6 inches on walls about 15 feet high, beginning at 2 feet 6 inches from the floor.	Vertical space with projection not exceeding 6 inches on screens about 7 feet high.
	Superficial feet.	Superficial feet.	Feet run.	Feet run.
I.—FINE ARTS:				
1. Paintings of all kinds ...	.....	.....	.....	12
2. Sculpture in Marble, Stone, Bronze, or Plaster.	Unlimited space, but the objects, if many, may be liable to be arranged under open arcades, or in the Royal Horticultural Gardens.			
2*a*. Small Sculptures in other Materials.	80			
3. Engravings, Lithographs, Photographs, &c.	.....	.....	8	12
4. Architectural Designs ...	.....	.....	.....	6
4*a*. Architectural Models ...	.....	20		
5. Tapestries and Carpets, shown for their Fine Art.	.....	.....	40	
5*a*. Shawls, Lace, &c., shown for their Fine Art.	.....	.....	.....	36
6. Designs for all kinds of Decorative Manufactures.	.....	.....	.....	12
7. Copies of Ancient or Mediæval Pictures, Mosaics, &c.	.....	.....	8	
7*a*. Reproductions of large Monuments of Sculpture or Architecture.	Unlimited, if exhibited in arcades or in the open air.			
7*b*. Reproductions of small Objects.	20			
II.—SCIENTIFIC INVENTIONS AND NEW DISCOVERIES OF ALL KINDS.	.....	10	4	
	If any object is above 10 feet high, its height should be specified.			

(True copies.)

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Friday, the 30th September 1870.

The Council adjourned to the 3rd October 1870.

SIMLA;
The 20th September 1870.

WHITLEY STOKES,
Secretary to the Govt. of India.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Simla on Monday, the 3rd October 1870.

PRESENT:

His Excellency the VICEROY and GOVERNOR GENERAL of India, K.P., G.C.S.I., *Presiding*.
His Excellency the COMMANDER-IN-CHIEF.
The Hon'ble JOHN STRACHEY.
The Hon'ble SIR RICHARD TEMPLE, K.C.S.I.
The Hon'ble J. FITZJAMES STEPHEN, Q.C.
The Hon'ble B. H. ELLIS.
Major-General the Hon'ble H. W. NORMAN, C.B.
The Hon'ble F. R. COCKERELL.

MAULMAIN TIMBER DUTIES BILL.

The Hon'ble MR. STEPHEN moved that the report of the Select Committee on the Bill to legalize certain duties on timber imported into Maulmain be taken into consideration. The Committee had made no alteration in the Bill, and recommended that it should be passed.

The Motion was put and agreed to.

The Hon'ble MR. STEPHEN moved that the Bill be passed.

The Motion was put and agreed to.

CORONERS' BILL.

The Hon'ble MR. STEPHEN presented a preliminary report of the Select Committee on the Bill to consolidate the laws relating to Coroners.

PRISONS BILL.

The Hon'ble MR. COCKERELL moved that the report of the Select Committee on the Bill to amend the law relating to prisons in the Panjáb and the Provinces under the immediate administration of the Government of India be taken into consideration. He said, it would be seen that the effect of the proposed amendments was to reduce the enacting matter of the Bill by about one-third of its original dimensions.

The reports of the several officers, experienced in the administration of prisons within the territories to which the Bill applied, who had been consulted on the subject, indicated a general concurrence of opinion that the Bill, as introduced, erred mainly in its attempt to arrange matters of minute detail, which could be better regulated by rules framed from time to time by the Executive.

The original Bill was clearly obnoxious to the criticism that, whilst it aimed at completeness by going into such details as the definition of the minor duties of medical officers, gaolers, and the subordinate officers of prisons, and the regulation of the food, dress, and employment of criminal prisoners, it yet virtually recognized the impracticability of dealing exhaustively with such subjects by express enactment in its supplementary provision, under which the Local Government was empowered to make rules in relation to the same matters.

In the Provinces to which this Bill was not intended to apply, such details in the administration of prisons were provided for by rules made by the Local Governments. That system had been found to work well, and it had this obvious advantage over the plan of the original Bill, that the regulations so constituted could be constantly varied as local circumstances might require, without the necessity of recourse to the intervention of the legislature. The Committee had therefore struck out the clauses relating to the matters above referred to, leaving them to be dealt with by the Local Governments under the general power of making rules conferred by section fifty-four of the amended Bill.

The other material amendments proposed were, in relation to the following subjects, taken in the order in which they occur in the Bill:—

(1) the appointment and removal of prison officers (section eight);

(2) the power of interference in the control of prison affairs vested in the Magistrate or chief Executive Officer of the District by section thirteen;

(3) prison offences (section forty-seven); and

(4) the powers of the Superintendent to punish offences against prison discipline.

The object of these amendments and the considerations by which they were suggested for adoption were so obvious as to call for but few remarks.

The power of appointment and removal of gaolers and the subordinate officers of prisons was, by sections seven and eight of the original Bill, vested in the Local Government. Such an arrangement was not only at variance with the existing practice in regard to such appointments and dismissals, but could not possibly work satisfactorily. The effect of the amendments proposed on this head was to maintain the present system.

As in some prisons the duties devolving on medical officers and gaolers might be more than it would be reasonable to expect a single person to perform in the manner contemplated by the Bill, provision had been made for the appointment, where necessary, of a deputy medical officer and deputy gaoler.

Formerly, most prisons were under the charge of the District Magistrate, who was directly responsible for their good government. The requirements of modern prison-administration, however, demanded a closer and more constant supervision than the other multifarious duties of a District Magistrate admitted of his exercising effectively. Hence the direct connection of the Magistrate or chief Executive Officer of the District with the management and control of the details of management of prisons had been gradually severed, and under the present system such officer was very rarely Superintendent of the prison. In most cases, however, the chief Executive Officer did exercise a general extra-official control over the management of the prison, and it was considered desirable that this practice should be recognized and placed on a legal basis. The amended Bill consequently proposed to give this officer a *quasi*-concurrent authority in the general control of officers of prisons with the Inspector General of Prisons.

The enumeration of prison-offences under Chapter XI had been extended so as to include every known offence against prison discipline, and was believed now to be thoroughly exhaustive of that subject.

Perhaps the most important of the proposed amendments was the enlargement of the powers of the Superintendent of a prison in regard to the punishment of offences. Those powers under the original Bill were limited to the award of sentences of close confinement for very limited periods and the reduction of diet.

Every expert in prison-administration could testify that the person in whom the direct control of prisoners was vested, must have the power of inflicting corporal punishment. Without such power, the efficient maintenance of prison discipline was not to be looked for.

The authority of the controlling officer was likely to be greatly weakened unless corporal punishment—the only punishment of which the majority of prisoners had a wholesome fear—could be inflicted without a regular judicial enquiry and reference even to such comparatively remote authority as the Magistrate.

The Bill as amended consequently provided for the infliction of corporal punishment, and the award of solitary imprisonment upon a summary investigation by the Superintendent of offences against prison-discipline.

It also provided that, where the punishment of imprisonment was inflicted for any offence under the Act, such imprisonment should be 'rigorous.' This was considered equally necessary where the offender was an officer of the prison as in the case of prisoners.

Experience had shown that simple imprisonment had, as a punishment for offences by the subordinate officers of prisons, no deterrent effect. Presumably, the familiarity with prison-life acquired by such persons led them to disregard the disgrace and irksome restraint upon their personal liberty which in the estimation of others imprisonment of any kind involved.

Lastly, it was proposed to extend the operation of the Act to the North-Western Provinces.

An objection to this proposition had been made by the Local Government of those Provinces, apparently on the sole ground that their present system of prison-administration worked well, and consequently no change was required.

That objection, if of weight, as regards the North-Western Provinces, would be equally so as regards the other Provinces to which this Bill was intended to apply; for the system of prison-management now in force in the latter did not differ materially from that of the North-Western Provinces.

But the answer to the objection in either case was that the only material change that would be effected by this Bill was the legalization of the present system of administration, which, as the law stood, had no legal basis whatever.

The existing law on the subject of prisons was contained in the several enactments enumerated in the first Schedule to the Bill. Those enactments were actually in force in the North-Western Provinces only; but the spirit of them (whatever that term might imply) was equally applicable to most of the Provinces affected by the Bill.

This law, whilst it defined certain offences against prison-discipline and prescribed penalties therefor, in no way legalized the rules framed by the Local Governments upon which the present administration of prisons was based. The only possible authority for such rules was in the provisions of Act XVIII of 1844, but those provisions rested on the supposition that the Magistrate or Joint Magistrate of a District, acting under the general supervision of the District Judge, was the centre of the system, and such, as MR. COCKERELL had remarked, was not the case.

The Motion was put and agreed to.

The Hon'ble MR. COCKERELL then moved that in section fifty-one, line two, after the word 'prison' the following words be inserted: "ill-treating the prisoners, or."

He said that complaints of ill-treatment of prisoners by the officers of the prison were, as was well known to all who had had experience of the management of prisons, of constant occurrence. The Bill as amended contained no provision for such cases. This omission, if not rectified, would probably render their reference—though they are generally of a very trivial nature—to some Magistrate necessary, and the form of a regular judicial enquiry would have to be gone through, entailing no small inconvenience and detriment to prison-discipline. He proposed, therefore, by inserting the words above-mentioned to make such cases primarily cognizable by the Superintendent of the prison.

The Motion was put and agreed to.

The Hon'ble MR. COCKERELL moved that the Bill as amended be passed.

The Motion was put and agreed to.

PRESIDENCY SMALL CAUSE COURTS GENERAL FUNDS BILL.

The Hon'ble SIR RICHARD TEMPLE moved for leave to introduce a Bill to transfer to the Government of India the General Funds of the Courts of Small Causes in the Presidency Towns. He said that the nineteenth section of Act No. IX of 1850 provided that the fees payable in each of the Courts of Small Causes at the Presidency Towns should be paid over to an Account, termed the General Fund of the Court. In point of fact, however, this provision had remained a dead letter, and indeed could hardly be carried out consistently with the now recognized financial principle which demanded that all public income should be credited to the general revenues of the State, while all charges were debited to the expenditure of the State. The fees in question had, ever since the establishment of these Courts, been credited to the State as "Judicial Receipts" or "Law and Justice," without any special authority for such procedure. It was obviously desirable to place the matter on a sound financial and legal footing, and to treat the receipts and charges of the Presidency Small Cause Courts in the same manner as the receipts and charges of other Courts were treated, that is, by crediting the fees to the general revenues of British India and meeting the expenditure from the same source. The Bill would, accordingly, repeal the last clause of section nineteen and provide that all fees heretofore

paid over to, and now standing to the credit of, the General Funds of the Presidency Courts of Small Causes, should be paid to the Government of India for the general purposes of the State.

The Hon'ble MR. STEPHEN wished to remove a misapprehension which might, perhaps, arise as to the object of this Bill. It might seem objectionable to take away from the suitors of the three Presidency Small Cause Courts Funds which the Legislature had intended to create for their benefit; but when we looked into the facts of the case, we should find that no injustice would be done. The Funds, if in existence, would belong to no one. Neither the Judges and the other Officers of the Courts, nor the suitors, nor any other assignable person, had any sort of claim upon them. They would represent merely the excess of the Small Cause Court fees over the Small Cause Court expenses, and would, as such, form a part of the public moneys as much as any other portion of the revenue. He (MR. STEPHEN) believed that the Government might from the first have made a rule under the Act that these Funds should be applied to the general purposes of the revenue, and there was, he thought, nothing unfair in doing retrospectively by an Act of the Legislature what might have been done prospectively by an Executive order, and what, in fact, had been done by the Executive without any order. It was impossible to mention any person, or any class of persons, who would be in any way injuriously affected by the passing of this Act.

The Hon'ble MR. ELLIS did not intend to oppose the introduction of the Bill, and would not have troubled the Council with any observations but for what had fallen from his hon'ble and learned colleague MR. STEPHEN. The Hon'ble Member had attempted to combat the objections which he thought it probable the public might take to the retrospective operation of the Bill. Now he (MR. ELLIS) must confess that he shared in the probable opinion of the public in this matter. He quite concurred with the Hon'ble Mover in the view that the principle of forming a special fund for Small Cause Courts was financially objectionable: there was no more reason for such a fund than there was for a special fund for the Court of a Munsif or a District Judge, and he thought it right that the existing law should be repealed, and the Small Cause Court General Funds abolished. But the law had not hitherto remained altogether a dead letter, as the Hon'ble Mover had asserted; for whenever additions to the establishments of a Small Cause Court had been desired, it had always been usual to show that there was a surplus of the special fund available to meet the charge, without trenching on the general revenues. The alteration of the law prospectively was a very different thing from the retrospective action proposed by the Bill, and he (MR. ELLIS) still retained the opinion which he had expressed when the projected Bill was under discussion in the Executive Council. He thought that it would have been far better had the Bill not proposed to sweep into the Treasury the surplus funds which had accrued under the law as at present existing, and in this opinion the public generally would, in all probability, concur.

The Hon'ble SIR RICHARD TEMPLE, in reply, said that the funds had never been formed; that to give effect retrospectively would mean the crediting to some unformed and non-existent fund the surplus, if any, of the fees after defrayal of charges, which again would necessitate the making out a separate account from the beginning for each Court—an operation which could not now be satisfactorily performed.

The Motion was put and agreed to.

PRISONERS BILL.

The Hon'ble MR. COCKERELL introduced the Bill to consolidate the law relating to prisoners not committed by a Court.

This, as before explained, was a purely consolidation measure.

Each part of the Bill contained the substance of a separate enactment, and the Bill, as a whole, comprised the entire law relating to prisoners confined by order of any Court, except that which regulated the internal management and economy of prisons.

Act XII of 1867, the substance of which appeared in the Bill as Part II, was designated the 'Presidency Jails Act;' but, unlike other prison Acts, it had no connection with the government of prisons, beyond providing for the appointment of a Superintendent. The object of that Act was to transfer to the Superintendent the legal authority for the detention and safe custody of prisoners which had theretofore been vested in the Sheriff.

CATTLE TRESPASS BILL.

The Hon'ble MR. COCKERELL introduced the Bill to consolidate the law relating to cattle trespass. This also was a consolidation Bill. It provided for the re-enactment of the extant provisions of the three Acts which now contained the law in regard to cattle-trespass.

The only amendments contemplated by the Bill in its present shape were the provision that damages under section fourteen should be recovered as if they were fines, and the extension of the law in regard to injury done by pigs to private property to the case of a public road similarly damaged.

PENAL CODE AMENDMENT BILL.

The Hon'ble MR. STEPHEN moved that the Bill to amend the Penal Code be re-committed. He said that he had not in any degree changed the views he had expressed upon the main provisions of the Bill, in consequence of the criticisms which had been made upon them by the European and Native Press; but as the subject was an important one, and as certain amendments of detail appeared to be desirable, he made the present motion. He was determined to bring the matter forward at the earliest possible opportunity after the return of the Government to Calcutta, and on that occasion to state, in the fullest and most public manner, the reasons which led to the introduction of the Bill, and the objects which it was meant to effect.

The Motion was put and agreed to.

CRIMINAL TRIBES BILL.

The Hon'ble MR. STEPHEN moved for leave to introduce a Bill to provide for the registration of criminal tribes and eunuchs. He was glad to be able to say that as far as his experience had gone, he did not think that the natives of India were by any means a peculiarly criminal people. He thought that Bombay and Calcutta might, in this respect, compare by no means disadvantageously with Liverpool and Birmingham, and he was informed that many parts of the Mofussil produced far less crime in proportion to their population than parts of England. There were, however, certain parts of India, and in particular the North-Western Provinces, the Panjáb and Oudh, in which crime was carried on in a manner altogether dissimilar to anything which was known in Europe. In certain parts of the country there were tribes of criminals who carried on theft and robbery as regularly, as systematically, and with as little sense of criminality as if they were following the most legitimate pursuits. Accounts of these tribes had reached the Government from various quarters. He (MR. STEPHEN) would read a few selected passages from the papers before him; but, if necessary, he could increase the amount of evidence upon the subject to almost any required amount. The following description of the habits of these tribes was

given by Major Nembhard, the Commissioner of East Berar—a District which did not form the home of these tribes, but was one of their principal places of resort for the purpose of plunder. After enumerating several tribes he proceeds:

"We all know that traders go by castes in India: a family of carpenters now will be a family of carpenters a century or five centuries hence, if they last so long, so will grain-dealers, blacksmiths, leather-makers, and every other known trade. A carpenter cannot drop his tools and become a *banya*, or a *lohár*, or anything else. The only means of subsistence open to him other than the trade to which he is born is agriculture; but in ninety-nine cases out of a hundred, if he is born a carpenter, he will live and die a carpenter.

"If we only keep this in mind when we speak of 'professional criminals,' we shall then realize what the term really does mean. It means a tribe whose ancestors were criminals from time immemorial, who are themselves destined by the usages of caste to commit crime, and whose descendants will be offenders against the law, until the whole tribe is exterminated or accounted for in the manner of the thugs.

"Therefore, when a man tells you he is a Badhak, or a Kanjar, or a Sonoria, he tells you (what few Europeans ever thoroughly realize) that he is an offender against the law, has been so from the beginning, and will be so to the end; that reform is impossible, for it is his trade, his caste, I may almost say his religion, to commit crime."

This general description was fully borne out by other evidence; but a fuller notion of the character of these tribes might be obtained from a consideration of a very full account of one of them, it took, indeed, the shape of a regular history, which had been forwarded to Government by order of the Chief Commissioner of Oudh. This tribe was called the Burwar tribe, and its home was in the Gondah District. Its history began with a very significant and characteristic myth:

"More than four centuries ago, one of the tribes was ploughing a field close to a river. A woman who belonged to the family of a rich banker came to the river bank to bathe, and having taken off her necklace of pearls of great value, put it on the ground and went into the water. A kite or crow took the pearl necklace in its claws or beak and flew away. This jewel fell into the field which the Kurmí was ploughing. He took it up, was pleased with the prize, and went home and gave it to his wife. He then thought to himself that when a bird could take away such a valuable article, why should not he, who was a human being, betake himself to freebooting. After considering this matter deeply, he started on a journey, and in a short time obtained so great a wealth that all his forefathers could not have earned it by means of ploughing. Flushed with this success he spent the whole of the remainder of his life in predatory occupation, and laid the foundation of the Burwar clan. He proselytised a hundred men of his class, who after his death made further improvement in their art of freebooting. But the rest of the clan who still adhered to their peaceful occupation of agriculture, excommunicated and even turned them out of their villages. The party was then small in number, and began to live a nomadic life in the groves of Putna, and subsisted on no other occupation than freebooting. As this kind of robbery, which is done openly and is termed Buryar, these men acquired the same appellation, which was afterwards corrupted into Burwar. About 250 years ago, being chased by the people and rulers of the day, these Burwars left the groves of Putna, and having separated into three gangs, one (from which the Sonoria tribe appear to have sprung up) proceeded towards Delhi; the other, who appear to be the same as the Ahírias and Udhs, went to Sítapúr and Hurdui, and the third to Buhrolí in Zila Gorakpúr."

The custom of these people, as of most of the other wandering tribes, was to live quietly for a considerable part of the year in their own District, and to spend the rest of it in wandering about the country to great distances plundering. They had a regular organization for the purpose, and their pursuits were carried

on under the sanction of religion. Every Burwar child went through a sort of religious initiation on the twelfth day of his life, which was supposed to be essential to his success as a thief. When he grew up, he was a thief, as a matter, so to speak, of duty and necessity. "If a Burwar in his sound body and physical health, and without any sufficient cause, renounce his thieving profession, he is excommunicated from the brotherhood and excluded from participation in its spoils." The brotherhood, as he (MR. STEPHEN) had already observed, was a regular organization. The Burwars were divided into gangs of from 20 to 50 men each under a chief, called Sehwa. "All the household expenses of the family of a Burwar of the gang are supplied on emergency by its head. While the Sehwa remains at home, looking after the families of his gang, the gang goes out to remote places for thieving purposes, and whatever property it acquires in theft, it places entirely before the Sehwa, who divides the same," according to a fixed rule, "among his subordinates. None of the gang is allowed to withhold any portion of his property from the Sehwa, who is looked upon as absolute master of the whole." At the end of the rainy season the Sehwas consult astrologers as to the most auspicious time for starting on their journey. They perform ceremonies, attend to omens, and travel in all directions and for great distances upon their business of plundering. On their return their plunder is divided according to a fixed rule. They first set aside 3¾ per cent. for offerings to their gods; of the remainder 28 per cent. is divided between the thief and the Sehwa, and the remainder equally amongst the whole clan.

He (MR. STEPHEN) had described the proceedings of these people somewhat minutely, because they might be taken as a specimen of the classes against which the proposed Bill would be directed. The Burwars, however, were by no means the most important or dangerous of the criminal tribes. After all they were only petty thieves; but others, as, for instance, the Mínas of Gurgaon, were robbers and dacoits, capable of the commission of the most desperate concerted crimes. Others, as was the case with several of the Panjáb tribes, were habitual cattle-stealers. Mr. Mayne, the Commissioner of Allahabad, and formerly the head of the Police of the North-Western Provinces, had given a list of no less than twenty-nine tribes who lived in the North-Western Provinces and carried on criminal pursuits of various kinds. The proceedings, however, of each of these tribes had this leading point in common; they had during part of the year a fixed residence, and during other parts of it they wandered about for criminal purposes.

This fact suggested the remedy which had, in fact, been tried in the Panjáb with respect to these tribes, and which it was now proposed to establish by law in that Province, in the North-Western Provinces (where somewhat similar experiments have been tried), and in Oudh. The remedy was to put the tribes under supervision in such a manner as to confine them to their homes, or, at all events, to provide the means of giving notice to persons likely to be injured by their depredations. The supervision consisted in forming a register of the members of the tribes, compelling them to reside within certain local limits, forbidding them to leave those limits without permission, and authorizing their apprehension if they should be discovered beyond them, and their transmission to the place where they ought to live. This last provision is the only one in the Bill which would be made applicable to the whole of India. The provisions as to registration would apply to those Provinces only which had been ascertained to form the place of residence of the tribes in question.

This system was in force, and, as the Government are informed, with very good results, for about twelve years in the Panjáb; but, at the end of that time, the question of the legality of the Executive rules upon which it was based was brought before the Chief Court, and they decided that the rules were illegal. The result of this naturally was to put an end to the whole system, and this, in its turn, is stated by the Government to have produced very bad results. In

a memorandum on the subject Sir Donald McLeod made the following remark:—

"The existing law is wholly insufficient, and I do not think that any one who has had much experience in the detection and prevention of organized crime will attempt to assert that it supplies all that is urgently required, while the remonstrances which have poured in upon the Panjáb Government from Police, Deputy Commissioners, and Commissioners, and even from Tahsíldárs and other members of the Native community since the ruling of the Chief Court in regard to the surveillance of criminal classes was issued, sufficiently attest the difficulties which have resulted from this course."

This led him (MR. STEPHEN) to speak of the objections which had been made to the rules proposed to be enacted. They might be resolved into two: one objection was that they would lead to oppression by the police, and another that they constituted an interference with the liberty of the tribes in question, and that the ordinary criminal law, which made it an offence to belong to a criminal tribe, and which enabled Magistrates to take security for good behaviour from habitual offenders and persons of known bad character, was sufficient for all purposes.

With regard to the question of Police oppression, he (MR. STEPHEN) fully admitted that the danger did exist. He thought, however, that it might be guarded against and reduced to a minimum, and he believed that if the Magistrates worked the Act carefully, this might easily be done. That annoyance and interference would be experienced by the tribes subjected to the operation of the Act was probable, but that could not be helped. When it came to a question whether the criminals were to be annoyed by the police, or the public annoyed by the criminals, he (MR. STEPHEN) would prefer the first branch of the alternative.

As to the second objection, he had always observed that English lawyers and law-courts had a most exaggerated estimate of the power of the ordinary criminal law to cope with organized crime. To suppose that the ordinary processes of law would ever put down crime was like supposing that sportsmen would exterminate game. The very utmost that the ordinary course of criminal justice ever had done, or ever would do, was to impose a certain amount of check upon crime, to keep it down to a certain level. A man proposing to commit a crime knew that he ran a risk of punishment, and this no doubt was a motive to a certain extent for not committing it; but all experience showed that the motive was not progressive. Ordinary criminal law did not put an end, or tend to put an end, to crime; it dammed or embanked the stream, but it neither diverted or drained it. When criminals formed, as in the case in hand, an organized class, a sort of body corporate, it was a fortunate circumstance for society, for it rendered them far easier to deal with than if they acted individually. It was possible to attack and break up the organization, and when that was done there was reason to hope that the individuals would not continue the crimes which they learned from it and carried out by its means.

This naturally suggested the question of reform,—a question which had been raised by the High Court of Allahabad in a paper very lately received. This paper admitted that the legislation on the subject was necessary, but suggested that its object should be to encourage the Local Governments to settle the tribes in question upon waste lands or elsewhere, where they might be gradually accustomed to a course of honest industry. He (MR. STEPHEN) thought that such a course might, in many cases, be highly beneficial, but he did not see what legislation was required for the purpose. The course he apprehended might be somewhat as follows:—The Local Government might inform a criminal tribe of their intention to put them under the regulations imposed by the Act. The tribe might then very reasonably enough say,—"give us then the opportunity of living as honest men," and if the

Local Government were able to make a grant of waste lands, and subject the tribe settled on them to rules passed under the Act, the arrangement would no doubt be an excellent one. The Bill, as framed, would enable the Government to make such rules. No Bill was required to enable them to grant lands.

There was one important omission in the Bill on which he (MR. STEPHEN) would say a few words in order that it might not be supposed to have been made through ignorance. No provision was made for the case of wandering tribes who had no fixed place of residence during any part of the year. There were many of these tribes grain-sellers, mat-makers, and others who led a vagrant life, and who, it was said, were much addicted to crime. There was, however, this difference between them and the tribes at which the Bill was levelled. The wandering tribes had, for the most part, honest occupations which were by no means a mere pretence, and which made it necessary for them to wander. Many of the grain-sellers, for instance, were exceedingly useful members of society, and though others frequently committed crimes, they did not make a regular profession of it under the rules of a regular organization like those of the Burwars or the Mínas. Without stronger facts than were at present before the Government upon the subject, it would hardly, MR. STEPHEN thought, be justifiable to subject such tribes to a passport system. If, however, any real necessity for such a step could be shown to exist, it would probably not be difficult to provide the legislative measures necessary to carry it out.

MR. STEPHEN now came to the second part of the proposed Bill which was directed against eunuchs. The subject was so disgusting that he felt the greatest reluctance in approaching it at all, and nothing but an imperative sense of duty could have induced him to refer to so loathsome a subject. The matter to which he was about to refer had been known to the Government of India for many years, as appeared from various papers on official record; but successive Governments had not seen their way to legislation, partly, perhaps, because more freedom of action was formerly entrusted to the Executive than was consistent with our present views, partly because doubts were entertained as to the proper course to take, and, perhaps, to a certain extent, because of the extremely disgusting and filthy nature of the subject. Whatever might have been the cause of the delay which had taken place, MR. STEPHEN was of opinion that it ought now to terminate. The eunuchs of the North-Western Provinces were as great a disgrace to human nature and to every Government which permitted their infamous association to exist as thuggee, infanticide, suttee, or any other abomination of the same sort. In plain words, it was officially proved that there existed in the Provinces in question an organized association of eunuchs who carried on a system of unnatural prostitution. They perpetuated their class by kidnapping and castrating boys whom they either bought from the kidnappers or stole themselves. The boys were used for the purposes of their trade. The men solicited employment by public exhibitions of singing and dancing often dressed as women. These facts had been proved on many occasions from 1852 (to go no further back) down to the present time. In some cases, men had been tried and convicted for kidnapping, mutilation, and other specific offences under the Penal Code, and had been punished with the severity which their crimes deserved; but the system still continued, and MR. STEPHEN was convinced that it would continue till a direct attack was made upon the organization itself, apart from the punishment which would, of course, continue to be awarded to the abominable crimes in which its character was occasionally displayed. It was unnecessary to shock the Council by going into details. They were printed in horrible abundance in the proceedings of the North-Western Provinces Government, and the depositions of the children who had been kidnapped and mutilated were, perhaps, as frightful stories as were ever told in the world. One circumstance specially deserved notice: these wretches had a sort of king or head man, and formed a community having considerable property. The then Inspector General of Police wrote in 1866,—"These creatures live under a government of their own; they have

a king (Dilsukh Raí is his name, and he is, or was, resident in Delhi), and in these Provinces Náibs or Deputy Governors at Farakhabad, Mainpúri, Jaloun, certainly, and it is believed also at Amba in the Bareilly District, and at Jounpúr. Under the Naibs are Gurus who are the Surgeons of the class, and their assistants who were also guardians or keepers of the boys after emasculation and until sold or apprenticed for most infamous purposes." In some instances, persons joined this association voluntarily and with a view to participation in its property.

Such were the facts with which the Government had to deal, and MR. STEPHEN was of opinion that the evil was one which ought to be crushed at all hazards, and no matter who objected to the process. He did not, however, believe that any considerable section of Native society, when they knew these facts, would regret or restrict the interference of Government. He thought, on the contrary, that the vast majority of the people would feel that the existence of an organized class of kidnappers and mutilators of children for such purposes as these was an affront and injury to every honest man in the country.

What, then, were the measures which Government proposed? They were that a register should be formed of all such eunuchs as there was ground to suspect of any connection with proceedings of this sort. Such registers had, in fact, been formed in many Districts, as the facts were notorious, but at present the Government had no legal power to form them, and no legal consequences followed from a man being registered. The task, of course, was one of delicacy and difficulty, and it could be discharged only by the aid of local knowledge and experience. This the Local Governments and District Officers would, no doubt, be able to supply. The course taken would be as follows:—The Local Government would be empowered and directed to form registers of such classes of eunuchs as they thought ought to be registered with a view to the suppression of the system described. It would become their duty to take care that no persons came upon the register to whom the Act was not intended to apply. Domestic servants, for instance, in Muhammadan families of rank would not be registered, and probably other classes might be exempted. When, however, an eunuch was placed on the register, he would be put under very stringent disabilities. He might be required to register his property, and would be incapacitated from disposing of it by will or otherwise, so that none of his associates would get any share of it at his death. He would be prevented from travelling without permission as a member of a criminal tribe. He would be made liable to heavy penalties if he had in his house, or in any way under his orders or control, any boy under sixteen years of age. He would be forced to account for any castrated boy under that age who might be found under his control or care, and would be presumed to have obtained possession of such boy for an unlawful and immoral purpose unless he could prove the contrary. Lastly, all eunuchs would be absolutely forbidden to appear in public in women's clothes, or to dance for hire or otherwise either in the public streets or in private houses. Stringent as such measures might be, he (MR. STEPHEN) believed that nothing less would break up the infamous association to which he had described.

The Motion was put and agreed to.

The Council then adjourned *sine die*.

SIMLA;
The 3rd October 1870.

WHITLEY STOKES,
Secretary to the Govt. of India.

No. 40 of 1870.

SUPPLEMENT TO

The Gazette of India.

SIMLA, SATURDAY, OCTOBER 15, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXPERIMENTS IN SERICULTURE AT DHARWAR AND THE UTILIZATION OF THE ALOE AND OTHER FIBRE-PRODUCING-PLANTS.

Extract from the Proceedings of the Government of Bombay in the Revenue Department,—No. 4413, *dated 14th September* 1870.

READ the following letter:—

From SURGEON M. M. MACKENZIE, Superintendent of Jail, Dharwar, to the Secretary to the Government of Bombay, Revenue Department, —No. 202, dated 15th August 1870.

I HAVE the honor herewith to submit, for the information of His Excellency the Governor in Council, a printed summary of my efforts in sericulture, the utilization of the wild aloe, and to a certain extent also of other plants or shrubs producing fibre; these experiments, with silk and aloes, date from 1866, but with the other articles only from this and the preceding year.

Silk.—When I first commenced my experiments in silk culture, I had no idea that I would carry them out so extensively; but as I found my efforts rewarded, and success undoubted, I was encouraged to go on with them from year to year; but had I in the outset deemed that such would have been the case, I would have submitted regular detailed reports to Government direct.

2. I now beg to present them in a complete form brought up to the end of June of this year; and being now convinced by practical experience of the capabilities of this climate for a great remunerative and successful extension of such works, I will leave it with Government or private parties to carry them out to their full extent, but I will retain only a few of the silkworms for the benefit of any who may desire to have them.

3. My previously *reported* experiments date from June 1868 to September 1869, and this last one from October 1869 up to the end of June of this year, giving respectively three trials of ten, six, and eight months.

4. In order to satisfy myself that my former anticipation and deductions were correct, not only as to the actual production of silk, but through care and attention as to the possibility of a gradually increasing yield, I set apart equal quantities of cocoons chosen promiscuously from each experiment, and the results I beg to present in a tabular form, giving the results as per lbs. 100.

Statement showing results compared with the previous experiments.

First experiments during 10 months.				Second experiments during 6 months.				Third experiments during 8 months.			
Weight of cocoons.	Weight of raw silk.	Yield per month.		Weight of cocoons.	Weight of raw silk.	Yield per month.		Weight of cocoons.	Weight of raw silk.	Yield per month.	
		Cocoons	Raw silk.			Cocoons.	Raw silk.			Cocoons.	Raw silk.
lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.
88 5 8	5 15 0	8 13 0	0 9 8	57 5 0	4 15 8	9 8 0	0 13 4	113 6 12	11 4 12	14 2 0	1 6 9

Statement showing proportionate results compared with previous experiments.

First experiments, 10 months.		Second experiments, 6 months.		Third experiments, 8 months.	
Cocoons.	Raw silk.	Cocoons.	Raw silk.	Cocoons.	Raw silk.
lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.	lb. oz. dr.
100 0 0	6 11 0	100 0 0	8 11 0	100 0 0	9 15 0

The above shows a steady increase in each period, the last yielding 3 lbs. 4 ozs. over that of the first.

5. As in previous reports, I now also append a statement of the monthly yield for the past eight months, showing a product of 11 lbs. 4 ozs. 12 drs. raw silk, out of 113 lbs. 6 oz. 12 drs. cocoons, and which, after deduction of convict labor, leaves a profit of Rs. 48-6-0 out of Rs. 90-6-0, or a clear profit of 110 per cent. on the value of the labor; these rates are of course based upon convict labor, which is taken at an average of 2 annas a day, or 3*d.* in English money. Of course, even with free labor, all of it can be carried out by the employment of women and children, except the throwing or throwsting operation, *i.e.*, removing the silk from the cocoons; this individual (and only one is employed in the jail) may be put down at 12 annas, while in the non-working intervals he may well act as general supervisor. The usual labor rates in these districts are, for male adults, from 3½ to 4 annas per day, women 2½ to 3 annas, and for children, from 1 anna to 1½. Carrying the experiments on still further through their bleaching, washing, and dyeing processes, and taking the Hooblee market rate of dyed and dressed silk at Rs. 18 per pound, it gives a profit, after deducting the convict labor, &c., of Rs. 115-15-6, or 132¾ on the outlay.

TABLE No. 1.

Result of silk cultivation in the Dharwar Jail from October 1869 *to June* 1870, *inclusive, eight months.*

Months.	Weight of cocoons.	Weight of raw silk.
	lb. oz. dr.	lb. oz. dr.
October	4 6 4	0 8 8
November	28 5 8	2 14 0
December	1 15 0	0 2 8
January	5 8 0	0 7 4
February	21 5 0	2 10 8
March and April	25 6 0	3 1 8
May	6 1 0	0 10 0
June	20 8 0	0 14 8
Total ...	113 6 12	11 4 12

TABLE No. 2.

Statement showing results of the above as worked at the Dharwar Jail.

Raw Silk.

	Rs. A. P.	Rs. A. P.
Value of 11 lbs. 4 ozs. 12 drs. raw silk at Rs. 8 per lb. ...	.....	90 6 0
Deduct—		
Convict labor, collecting leaves, feeding worms, &c., 208 aggregate number of days, at 2 annas ...	26 0 0	
Throwsting paid at Rs. 2 per month, or 24 working days in all...	16 0 0	
		42 0 0
Profit on raw silk, Rs. ...		48 6 0

110 per cent. profit on outlay for labor.

TABLE No. 3.

Dressed and Dyed Silk.

	Rs. A. P.	Rs. A. P.
Value of 11 lbs. 4 ozs. 12 drs. dyed silk, at Rs. ...	.....	203 0 0
Deduct—		
Loss in weight while bleaching, at 4 ozs. per lb ...	50 13 0	
Convict labor, carding, twisting, unwinding 112 aggregate number of days, at 2 annas ...	14 0 0	
Bleaching and dyeing, at Rs. 2 per lb (Hooblee rate)	22 9 0	
		87 6 0
Profit on dyed silk, Rs. ...		115 15 6

132¾ per cent. profit on outlay for labor and loss of weight.

6. If free labor is utilized, the profit on raw silk for the outlay, as will be seen from Table No. 4, will be Rs. 46-6-0, or 105¼ per cent. on outlay for labor.

7. Dyed and dressed silk by free labor will give, as shown by Table No. 5, a profit of Rs. 73-15-6, being at the rate of 57 per cent. on the outlay for labor and loss.

8. It will be observed that while dressed and dyed silk carried on by convicts gives the highest profit, the profit is smaller with free labor, the latter being so much higher than the former as to daily wage.

TABLE No. 4.

Statement showing probable results of the above worked by free labor.

RAW SILK.

	Rs.	A.	P.	Rs.	A.	P.
Value of 11 lbs. 4 ozs. 12 drs. raw silk, at Rs. 8 per lb. ...	.....			90	6	0
Deduct—						
Labor for collecting leaves, feeding worms, &c., 208 aggregate number of days, at 2 annas ...	26	0	0			
Throwsting 24 days, at 12 annas	18	0	0			
				44	0	0
Profit on raw silk, Rs. ...				46	6	0

105¼ per cent. on the outlay for labor.

TABLE No. 5.

DRESSED AND DYED SILK.

	Rs.	A.	P.	Rs.	A.	P.
Value of 11 lbs. 4 ozs. 12 drs. dyed silk, at Rs. 18 per lb	.....			203	5	6
Deduct—						
Loss in weight while bleaching, at 4 ozs. per lb ...	50	13	0			
Labor, for carding, unwinding, and twisting 112 days, at 8 annas	56	0	0			
Bleaching and dyeing, at Rs. 2 per lb (Hooblee rate)	22	9	0			
				129	6	0
Profit on dyed silk, Rs. ...	...			73	15	6

57 per cent. on labor and loss.

9. From the above it will be seen that there would be a profit of 105¼ per cent. on the outlay for wages in the production of raw silk.

10. From this would have to be deducted rent of buildings, machinery, cultivation of the mulberry trees, taxes, &c., and which, if required, I may calculate at a future term.

11. I trust that the foregoing statements will tend to prove that my previous anticipations were correct, *viz.*, that by ordinary care and attention to the mulberry plants, keeping up for the worms a full, healthy, and liberal supply of leaves, and by the proper regulation of the ventilation and temperature of the breeding-rooms, the animals will give an increased yield of good silk, although up to what point further experiments only can determine; much will, I fancy, depend on the species tried.

12. Whether other varieties of the worm will succeed here I know not, as the nature of my position and duties obliged me to be contented with those I have (monthly variety), and which have *never at any time since* 1866 *shown the least tendency to disease or decay.*

13. From my previous observations regarding silk production in not only France, Italy, and Switzerland, but in India, China, and Japan, I am more and more convinced that climatic influence has much to do with the successful rearing of the mulberry, as well as that of the worm in all its stages. I have not yet heard or read of *any* climate in Europe or Asia where some blight or disease did not occasionally attack either the mulberry tree or leaf, and in which extremes of heat, cold, or long-continued damp did not tend to destroy the worm in some period of its growth.

14. The climate of Dharwar is such that all the year throughout it never gives extremes, while the rain-fall is spread over almost every month in the year. With such a climate I feel sure that the successful rearing of so delicate an animal as the silkworm would be undoubted, for it is excess of heat, cold, or long-continued damp that has caused the great failures that I have heard or read of in this branch of industry.

15. Should further experiments be made, I would hold out the warning that, if other species of the worm are introduced, they be not mixed up completely with those we now possess, but that a gradual acclimatization be first carried out separately. This will more especially be requisite if other breeds are introduced from a very high latitude, and to the fact of this not being attended to, am I disposed to attribute the great failure of Monsieur De Vecchi's experiments in Mysore a year or so ago (page 16).

16. Finally, while urging that further efforts be made here in sericulture, I do so on the results of my experiments carried over several years, and I found my reasons for this success on the following main points (repeated from page 11), all of which Dharwar possesses in a high degree:—

(1).—A medium degree of moist tropical heat.

(2).—A comparatively (for India) slight fall of rain throughout the year, never severe or long-continued in any one month, but spread fairly over almost every month in the year.

(3).—A slight variation in the temperature, not only by night and day, but all the year throughout.

(4).—Hot season never excessive or of long continuance.

(5.)—Soil rich black or red, and of good depth.

(6).—Ample water supply in the event of very slight or capricious rain-fall.

The following articles have been manufactured in pure silk, dyed of various colours, and always found a ready sale:—

Thirty-one scarves of various sizes—

Dhoturs for the use of Natives, each 12 × 3½; these have been merely made with some gay silk border on either side.

Cholees for women, half silk and half cotton, usually of a black and red stripe.

17. Ova have at various times been sent *viâ* the ordinary letter-post and otherwise to Khandeish, Ahmedabad, Commissioner, Central Provinces, and to Cochin. At the two former places they hatched, but shortly died, perhaps from climatic changes or want of proper care, food, &c. In the Central Provinces, they have, I hear, succeeded well, and I believe at Cochin also. The hatching of the egg of this species is, however, such a brief and rapid process (eight or nine days) that great expedition in transit is a *sine qua non*, and this we cannot always insure; much also depends on the season of the year, and the state of the weather while in transit, and when hatching.

Dharwar temperature and rain-fall for nine months, from October 1869 *to June* 1870, *continued from page* 12, *Silk Report.*

18. *Aloe, &c.*—In addition to a final report on the working and success of the aloe, I have the honor to append also a brief statement of some other plants which have been tried to a greater or less extent, and as, commercially speaking, much depends on the resisting power of fibres in the making of ropes, &c., I have with much care taken the breaking point of each, specimens of which I now forward, each showing the breaking point. As matting, for which coir, aloe, &c., is much used, the breaking power does not so much matter, but it would be of the utmost importance in selecting ropes, &c. For the sake of experiment, I have also given the breaking power of silk :—

	Length of Rope experimented.	Diameter.	Weight.	During trial stretched to.	Weight of breaking point.
	Foot. Inches.	Inches.	Grains.	Inches.	lbs.
Silk	1 4	1/8	82	4	253
Aloe lancifoliata	.....	...	88	3 1/3	155
Calotropis gigantic, or rowee	.....	...	94	3	145
Hibiscus cannabiscus, Daccan hemp, or ambaree	.....	...	83	2 1/3	131
Cannabis sativa, or common hemp ...	.....	...	93	1 1/3	125
Gossipium Indian, common cotton ...	.....	...	83	3	119
Cocos nucifera, coir	.....	...	66	1/4	71

19. These measurements and experiments were taken with the utmost accuracy by me, in presence of, and assisted by, Mr. Scott, Engineer to the Municipal Committee, and of Mr. D'Souza, the Jailor. The fibres of each specimen were twisted by the same man, the length and circumference being made the same of each.

20. According to the above, the actual power of resistance is highest in silk, and then follows, respectively, aloe, rowee, ambaree, hemp, cotton, and, last of all, coir.

21. The article named rowee is extracted from a common weed or shrub growing in all wild and neglected places, but though the fibre is soft and good, yet until some more speedy plan can be adopted in the extraction of it, I fear it can never be brought into general use. It was first brought to my notice by an article in the *Times of India* some months since by R. Spencer, Esq., of Bombay. I beg to forward a small piece of this made into cloth.

22. In continuation of my last report to Government on the manufacture of aloe fibre, I now beg to annex the last statement I have to give on the material, promising that many months often elapse when prisoners being otherwise employed in jail, they cannot be sent out to fetch home the material :—

Manufactured and sold at the Dharwar Jail as matting during six months, viz., from February 1870 to July, inclusive.

Resolution by the Government of Bombay, Revenue Department.

The receipt of Dr. Mackenzie's letter is to be acknowledged with thanks, and copies of it sent to the Secretary of State, Government of India, the Chamber of Commerce, the two Revenue Commissioners and Commissioner in Sind, and the Collector of Khandeish.

Ordered, that copies of the above be forwarded to the Commissioner in Sind; the Revenue Commissioner, Northern Division; the Revenue Commissioner, Southern Division; the Collector of Khandeish; Dr. Mackenzie, Superintendent, Dharwar Jail; and the Chamber of Commerce (by letter No. 4415).

No. 4414.

SUBMITTED to the Government of India.

ANNUAL INTERNATIONAL EXHIBITIONS OF SELECT WORKS OF FINE AND INDUSTRIAL ART AND SCIENTIFIC INVENTIONS.

ADDITIONAL DETAILS OF ALLOTMENT OF SPACE TO INDIA IN THE INTERNATIONAL EXHIBITION OF 1871.

[The space allotted for Fine Arts and Scientific Inventions was published in the Supplement to the *Calcutta Gazette* of the 8th instant.]

ALLOTMENT OF SPACE TO INDIA.

	Horizontal space in Glass Cases about 7 feet high.	Horizontal space on the floor unlimited in height.	Vertical space with a projection not exceeding 6 inches on walls about 15 feet high, beginning at 2 feet 6 inches from the floor.	Vertical space with projection not exceeding 6 inches on screens about 7 feet high.
	Superficial feet.	Superficial feet.	Feet run.	Feet run.
III.—MANUFACTURES—				
a. POTTERY of all kinds ...	60	.....	.....	.....
	An unlimited amount of space is assigned to special objects which may exceed feet in height, which can be shown under arcades or in the open air, but due notice of them, their character and dimensions, must be given before 1st November 1870.			
a1. New Raw Materials, Machinery, and Processes for Pottery.	.....	30	4	.....
b. WOOLLEN AND WORSTED FABRICS.	.....	.....	.....	27
b1. Raw Produce, Machinery, and Processes.	.....	30	4	.....
b2. Woollens of all kinds, except Carpets.	.....	.....	.....	27
b3. Shawls ...	.....	.....	.....	45
b4. Mixed Fabrics ...	.....	.....	.....	27
b5. Carpets ...	.....	.....	40	.....
c. EDUCATIONAL—				
c1. School Buildings, Fittings, Furniture, &c.	12	.....	5	.....
c2. Books, Maps, Globes, Instruments, &c.	12	.....	5	.....
c3. Appliances for Physical Training, including Toys and Games.	12	.....	5	.....
c4. Specimens and Illustrations of the Modes of teaching Fine Arts, Natural History, and Physical Science.	12	.....	5	.....
c5. Specimens of School Work, serving as Examples of the results of Teaching.	12	.....	5	.....

IV.—Her Majesty's Commissioners undertake to find the several spaces before described, and to arrange the objects in large glass cases where necessary. The spaces must not be exceeded, or the excess of objects will be liable to exclusion. Exhibitors who prefer it may place their objects in plain black frames glazed, not exceeding three inches in depth.

V.—Provided the aggregate space of each kind be not exceeded, Foreign Commissions are free to vary the proportions here allotted. Thus, in Paintings (No. 1) and Copies of Paintings (No. 7) to be hung on walls, and with Engravings (No. 3), Architectural Designs (No. 4), Shawls (5*a*), Designs (No. 6), to be exhibited on screens, the exact allotments need not be maintained. If no Architectural Designs are exhibited, the space may be allotted to Shawls or Engravings, provided always that the aggregate space of each kind be not exceeded.

SUMMARY OF ALLOTMENT TO INDIA.

SUPPLEMENT TO

The Gazette of India.

SIMLA, SATURDAY, OCTOBER 22, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

REPORT BY DR. CAYLEY, JOINT COMMISSIONER IN LADAK.

From DR. H. CAYLEY, Joint Commissioner at Ladák, to the Secretary to the Government of the Punjab,—
No. 10, dated Camp Gogra, Chang Chenmo Valley, the 19th August 1870.

MY last report was dated from Balukchi, near Shahdula, on the 5th August. On the following day I accompanied the Yarkand party to Shahdula, where I left them and started on my return journey. Mr. Forsyth and his companions were all quite well, and being taken good care of by the Yarkandís, who were making every arrangement for their comfort and rapid onward journey; and one may feel assured of their meeting with a most friendly reception, and being treated with distinction throughout their visit.

2. I returned from Shahdula by an entirely new route which proved very short and easy, and avoided many of the drawbacks of the Ling-zi-thang and Soda plains north of Chang Chenmo, which, owing to gross mismanagement, have proved so disastrous to Mr. Forsyth's camp. From Shahdula I reached Gogra, in Chang Chenmo, in twelve days' march. The route I took was from Shahdula one march up the Karakash River to Gulbasha, and then turned south over the mountain range to the Malakshah plain, which is traversed along its western side by the old Karakoram road. From the foot of this range of mountains on the southern side I crossed the Malakshah plain to its south-east corner, where grass and fuel were abundant.

The pass over the mountains above Gulbasha proved to be both high and difficult, and the preferable route to take from Shahdula is for three marches along the regular Karakoram road over the easy Sukait pass to Malakshah. From thence it is one long stage to the camping place at the south-east corner of the plain.

From this point my route lay over a low easy pass in a depression of the Karatagh range of mountains, which bounds the Malakshah plain on the south and east, and after crossing the pass turned south-east down a gently sloping valley to the camping ground, called Shorjilga in Hayward's report and map, the two routes joining at this point.

My two next marches up the Karakash River to Kizilzilga lay along the route taken last year by Mr. Hayward on his return from Yarkand, and which I traversed this season on my way to Shahdula.

From Kizilzilga I turned due south up the main branch of the Karakash for two marches to a point where the main river comes down from high mountains to the west, and then, leaving the river, continued south for about six miles to an easy pass leading over to a plain or wide valley, about eight miles across, which is erroneously marked in all the map as draining into the Shyok River, but which in reality joins by a narrow valley, the south-western extremity of the Ling-zi-thang plain, and has a high range of mountain bounding it on the west. We camped on the south side of this plain or valley, where, however, we found no grass or fuel, but plenty of water, and then in one march crossed the Chang Chenmo range of mountains by a high but very easy pass into a valley running down to Gogra, in Chang Chenmo, and which joins the old route taken by Mr. Forsyth at three miles above the hot springs.

3. The route I have just followed is very short and easy, and keeps generally along the well-sheltered valleys of the Chang Chenmo and Karakash Rivers, in which grass and fuel are plentiful. There are only two marches in the interval between these two valleys where there is no vegetation; but this, when known, is easily arranged for by carrying fuel from the previous stage.

At Shorjilga there is no fuel, but it is plentiful only four miles below.

4. This will be by far the easiest and best route for Mr. Forsyth to take on his return; and I have, by previous arrangement with him, brought with me four men from his camp, one a very active, intelligent servant of Hari Chund, of Lahoul, to learn the way. They are to go back by the same route to Yarkand and accompany Mr. Forsyth's party, and act as guides on its return.

I am now arranging also for the storing of fuel and fodder at the stages where it is not found, so that Mr. Forsyth's camp ought to be able to return without any fear of mishap. They will, of course, experience extreme cold, which can be guarded against.

5. We are unfortunate in encountering very bad weather on our return journey, which, as we were on a new route in an unknown line of country, led us into some difficulties and hardships. First, on the Malakshah plain we had snow all night, followed by a cloudy day, so that we could not see the prominent points of the opposite mountain range, the Karatagh, and had difficulty in finding our way to the low depression in the range where the pass is situated. Again, the night before leaving the head of the Karakash River, and the two following nights, we had heavy falls of snow and cloudy days; and when crossing the two passes and the plain between the Karakash and Chang Chenmo Valley, there was over six inches of snow on the ground, and we had great difficulty in finding our way in a new country when we could only sometimes see the opposite mountains, and had very uncertain knowledge of their distance; we had in consequence the misfortune to be two days and two nights without fuel in most severe weather, and were almost reduced to uncooked provisions. The coolies killed sheep and ate them raw with great relish, as they seem quite accustomed to do; the servants managed to parch a little grain with the planks of a brandy case, and also ate raw rice and corn; and I managed to warm a little soup and flour and water with a spirit lamp, and no one was the worse for the journey. I felt, however, considerable anxiety lest we should have to spend a third night without fuel in the snow near the top of the pass, as the exposure might have killed some of the party who were beginning to get exhausted.

I had with me about 40 men and four ponies, and all arrived safely, and the latter, in spite of the double journey, were in good condition as I had made arrangements and could give them grain where grass was scarce or wanting. When proper care is taken there need be no loss of baggage animals.

6. This is generally the season of unsettled weather in these regions; but it has this year been unusually severe, and the snow very heavy, and I fear that the merchants now coming over from Yarkand, and the large numbers of return coolies from Shahdula, will suffer severely.

7. Mr. Reynolds, the Surveyor, arrived here five days ago, and at once went on to meet me, and as I returned by a new route, we have most unfortunately missed. I have sent messengers after him as quickly as possible, and I hope he will be back very soon, and I propose waiting here for a day or two to meet him, as it is important that I should fully explain to him the routes to be surveyed.

8. I hear from Lé that the Yarkand kafila has not yet arrived. Very large number of traders have reached from the Punjab, and, as I expected, are terrified by the rumours of disasters on the Chang Chenmo route, and will not venture to try it. They of course attribute the catastrophe to badness of the road, and not to its real cause.

9. I hear that the dispensary at Lé, which has during my absence been under the care of the Native Doctors, is well attended.

TRADE OF LADAK DURING JULY AND AUGUST 1870.

From T. H. THORNTON, ESQ., D.C.L., Secretary to the Government of the Punjab, to the Secretary to the Government of India, Foreign Department,—No. 301—1098, dated Lahore, the 17th September 1870.

I AM desired to forward, for the information of the Supreme Government, copy of a report No. 13, dated the 9th September 1870, from Dr. Cayley, Joint Commissioner in Ladák, with Tables showing the export and import of trade during the months of July and August 1870.

Copy of report from DR. H. CAYLEY, Joint Commissioner, Ladák, to the Secretary to the Government of the Punjab,—No. 13, dated the 9th September 1870.

IN the accompanying Tables is shown in detail the trade of Ladák for the past two months.

By the end of August only a few of the merchants from Yarkand had reached Lé, and even from the side of Kullu and the Punjab most of the traders are still on their way. Many of the latter were detained in Lahoul by the breaking of the bridge at Darcha. I was mistaken in supposing that it was the Koksar bridge, as stated in my last report. The broken bridge has now been repaired and traffic re-established.

2. The Yarkandi merchants are generally coming by the Chang Chenmo route. Some praise it loudly, and the loss of baggage animals has been small; but the majority of the Karayakash, the men who hire out their horses to the merchants of Yarkand, are at present against it, partly from old ideas and prejudices, and partly from being really terrified at the sight of some 300 carcases of horses and yaks lying along the road. These men petitioned against being required to return by it. I replied that nothing would be done to force them to take our route more than another, and they were quite free to go any road they liked, and it was only for their advantage that endeavours were being made to open out an easier way; but that the Chang Chenmo route was undoubtedly the best and easiest for general traffic (more especially the new route by which I returned from Shahdula); and that next season it would be greatly improved and more complete arrangements made for the convenience of traders by the establishment of supply depôts, &c.

The arrangements this season have not been so complete as I had hoped for. With some difficulty I have had sufficient supplies of barley, flour, and other necessaries stored at Gogra, in Chang Chenmo, and at Tántsi, for the use of the traders who largely avail themselves of them. The road also has been put in fair order as far as Gogra, and several *serais*, as recommended by me last season, were built early in the year; but lately I have been able to get nothing done, as nearly all the available labor and carriage in the country has been employed in carrying stores, &c., to Shahdula, for Mr. Forsyth's return, and the Ladák authorities say that they can now give little help this season in carrying on other work.

3. The road from Kangra to Ladák, through Kullu and Lahoul, is now in capital order, and traders are all loud in praise of its excellence and freedom from obstacles; and for the first time the mule-owners of Nurpore have brought their mules all the way to Ladák, instead of only to Kullu as formerly. This is an immense boon to the merchants, as the rate of hire is already reduced to Rs. 25 the horse-load of three maunds from Nurpore to Lé, and the traders are no longer entirely dependent on the uncertain carriage procurable in Kullu and Lahoul, and the vexatious delays and high rate of hire. The mule-owners are also fully satisfied with the Rs. 50 they will receive for the double journey, now that the road is so easy and safe.

I hear that a number of laden camels are now on their way from Yarkand by the Chang Chenmo route, and they will easily be able to go on to the Punjab.

4. I have no more recent news from Yarkand beyond rumours that the Atalík has now come to terms with the Tunganís, and the Dáood Khalífa, of Ooramchi, and the fighting has ceased.

I have not yet heard anything definite of the date of Mr. Forsyth's return, or whether he has gone on to the city of Yarkand.

5. The weather this season has been most unusually severe. From the date of my leaving Shahdula till I arrived at Lé, nearly four weeks afterwards, it snowed almost every day, and I fear that many of the Yarkandi merchants will have suffered terribly, and met with serious disasters in consequence. During the last few days it has become perfectly clear and fine, and will now probably keep so for many weeks.

TABLE I.

Exports from Ladák during the months of July and August 1870.

H. CAYLEY,
Joint Commissioner.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

PROGRESS MADE ON IRRIGATION AND OTHER AGRICULTURAL WORKS IN BENGAL.

From COLONEL F. H. RUNDALL, R.E., Joint Secretary to the Government of Bengal in the Public Works Department, Irrigation Branch, to the Secretary to the Government of India in the Public Works Department,—No. 588 I, dated Fort William, the 8th September 1870.

I AM directed to forward herewith the Chief Engineer's Progress Report of Irrigation and other Agricultural Works for 1869-70, together with copy of a Minute thereon by the Lieutenant-Governor, dated the 4th instant.

Chief Engineer's Progress Report of Irrigation and other Agricultural Works for the year 1869-70.

I.—ORISSA CIRCLE.

The works of the late East India Irrigation and Canal Company in Orissa were transferred to the Government on the 1st January 1869.

The circle at present comprises the following *five* Divisions, namely,—

(1) The Pooree Division.
(2) „ Mahanuddy „
(3) „ Beropah „
(4) „ Brahminee „
(5) „ Workshop „

The works carried out during the year 1869-70 in each Division are as follows:—

(A.)—EXTRAORDINARY WORKS.

POOREE DIVISION.

1.—*The Anicut across the Katjooree at Naraje.*—The sluices in this weir, consisting of 15 vents of six feet each, were completed this year. The whole are built of laterite masonry founded on rock, the surface of which, proving to be not very sound, was first removed, and a flooring of "concrete" substituted.

Previous to the floods of last year the weir was strengthened at its left flank by an extension of the apron for a short distance, and, after they had passed, not a single stone was found to have been displaced. It will be proper to notice here the action of this weir, and the changes which have been brought about thereby in the bed of the Katjooree. The contraction of that river (from 6,350 feet to 3,750 feet in width) has led to the shoaling of the bed above the anicut and to the raising of the bed below, and the practical effect of these alterations is that for a flood 21 feet above the low water level of the Mahanuddy at Naraje only about one-half the volume of water which passed down the Katjooree in 1856 now flows past the Lall Bagh, where for the same stage of flood at Naraje itself the surface level of the river has been lowered 15 inches. Even since 1866 the diminution in the discharge of the Katjooree is very marked. The disappearance of the afflux at the north end of the anicut, and the rapid filling up of the basin in the rear, have reduced the plunge and scour on the apron very materially.

The wing wall of the anicut has been completed, and the dividing embankment behind it has been finished, sloped, and trimmed.

MAHANUDDY DIVISION.

1.—*The Mahanuddy Anicut* has been completed, with the exception of the shutters, some trifling upper works to the abutments, and the gearing to the centre sluices. The anicut with its present section has now successfully sustained the action of the floods for three seasons.

The operations of the past year were confined to—

1*st*, the packing of the rear apron, and substituting blocks of laterite for sandstone in the more exposed parts, where experience has shown the superiority of laterite in resisting the wearing action of the current;

2*nd*, the completion of the centre sluice shutters and apron;

3*rd*, the completion of the abutments and wing walls on both flanks.

The sluices in this anicut have been built after one of the French models, and with the exception of some minor appliances were completed in June 1869. Their working has been most satisfactory. On the 24th October last, after having been exposed to a powerful current for nearly four months, they were again raised just as the last flood of the season was passing off. Their action was most efficient, and in less than three hours a discharge of about 30,000 *cubic feet a second* was arrested. Until the present season there has been no opportunity of fairly observing the effects of the wide openings presented in the centre of the anicut where these sluices are placed. In previous years the free discharge of the river was obstructed by the remains of temporary dams which checked the action of the current on the apron below as well as on the sand shoals which have been gradually accumulating above the anicut. No marked effect was produced by the sluices during the floods of 1869 on the sand banks in a direct line with the openings, but the shoals, or rather islands, are so extensive in area, and have attained such a consistency owing to the spread of the reed-grass that the operation of the sluices can only be gradual. The lower edges of the sand banks are, however, being scoured away, and one of the intermediate channels has been deepened by the strong draught towards the sluices.

2. *Head Lock of Toldundah Canal.*—The masonry of this work, which had been begun previous to the commencement of the year under review, was vigorously carried on, and by the 31st March 1870 the sills were laid and the walls raised to a height of four feet above the floor. The lock channel was also completed by the same time.

3. *The Head Sluices of the Toldundah Canal.*—The bridge and roadway over these sluices have been completed, and the river face between the anicut and head lock has been protected by a stepped revetment of dry laterite blocks.

4. *Toldundah Canal.*—The progress on this canal has been retarded from various causes. During the past year the first seven miles as far as Beerabattee were completed, and water admitted early last February. Two bridges leading to the town of Cuttack have also been completed on this portion. The regulating lock at the head of this canal was so nearly completed that it was possible to make use of it for navigation, and local traffic has already commenced on the short distance of the canal opened.

The first lift lock and calingulah at Beerabattee, where the Machgong Canal takes off, have been commenced and a large quantity of material deposited.

Two-thirds of the earth-work of the remaining 17¾ miles of the Toldundah Canal have been completed.

A large irrigation sluice, to supply 12,000 acres with water, has been commenced at the fifth mile. Scarcely any portion of the distributaries from this canal has yet been carried out, but detailed surveys of the tract of country lying between the Rivers Mahanuddy and Katjooree are being made as rapidly as the establishment at disposal will admit of. Upwards of 12 square miles have been covered with a net work of levels, and 26 miles of distributary channels marked out.

5. *Machgong Canal.*—The excavation for the foundations of the lock and calingulah at the head of the Machgong Canal has been completed, and a large quantity of materials (chiefly bricks) have been collected for the locks at Sonepore and Tarpore, and the intermediate syphons.

A length of 14 miles of this canal has been nearly completed. The alignment of three distributaries has also been fixed, but no work has been as yet commenced.

BEROPA DIVISION.

Kendrapara Canal.—This canal was opened for public traffic throughout from Cuttack to tide water at Marsaghai in June 1869.

The following masonry works were completed in the first quarter of the year:—

Locks and calingulahs at Dhanpore, Bouspore, Kulparrah, and Marsaghai, and an escape with iron girder bridge in the middle of the last reach.

Twenty-three miles of main distributaries and seven miles of minor channels have been completed, making a total length of 154½ *miles* of main and branch distributaries. Three of the former have been provided with regulating head sluices, and 26 minor regulating masonry works have been constructed, by which means 13,000 *acres* have been added to the irrigable area under the Kendraparah Canal, making a total of 97,500 *acres*.

BRAHMINEE DIVISION.

1. *Anicut across the Beropa and Head Works.*—The only work executed to this anicut in the past year was the extension of the apron of the under sluices on the right flank and

the substitution of one large bay with the new or French pattern shutters for the old ones, with the view of obtaining increased scouring power and preventing the growth of the sand bank, which has hitherto periodically formed in the portion of the river leading up to the head of the Kendraparah Canal.

2. *High Level Canal, 1st Section.*—The first portion of this canal, 23 miles in length, as far as the village of Nealpore, on the Calcutta Road, was completed in the past year and water admitted in June 1869.

The remaining portion between Nealpore and the Brahminee, a distance of 10½ miles, was progressing well, but unfortunately cholera (supposed to have been brought by the pilgrims to Juggernât) broke out amongst the laborers and virtually dispersed them, as their numbers were suddenly reduced from 5,600 to 1,400 men.

Of the masonry works in this section of the canal, four syphons have nearly been completed, and another was well advanced. The excavation for the foundations of the aqueducts on the Korai and Marthagunga Nullahs, and for the lock and calingula at Emamnugger had been completed; but, owing to the outbreak of cholera above alluded to, the masonry work was delayed.

Five wrought-iron lattice bridges supported on saul-wood piles have also been erected in this section. The progess on the distributary channels has not been satisfactory, as an aggregate length of 32½ miles only has as yet been excavated; but, as the slope of the country admits of the main canal irrigating much land *direct*, the area at present under this portion of the high level canal is about 25,000 acres. Ten regulating head sluices have been completed.

Workshop Division.

The following is a summary of the out-turn of work during the year 1869-70 in this Division :—

135 running feet of centre sluices for the Mahanuddy anicut.

A set of four iron gates for the Kallynugger lock.

291 running feet of iron bridges for the high level canal.

Fitting gates, culvert-gearing, and bridges to four locks on the Kendraparah Canal, besides 216 running feet of calingulah bridges.

Fitting sluices in the Naraje anicut, besides several works of minor importance.

The value of stock used up during the year was in round numbers Rs. 1,12,000, and the value of labor expended thereon Rs. 39,500, making the value of articles turned out from the workshops Rs. 1,51,500.

(B.)—ORDINARY WORKS.

Early in the past year, the embankments of the Orissa rivers were transferred to the Orissa Circle, and accordingly the following distribution of these works, together with the sluices and bungalows belonging to them, was made :—

			Miles of Embankments.	Sluices.	Bungalows.
To the Mahanuddy Division		...	246¾	45	7
„ Brahminee	ditto ...	...	208	7	13
„ Beropah	ditto ...	...	171¼	23	7
„ Pooree	ditto ...	...	368¼	135	10
	Total	...	994¼	210	37

Some important embankments were undertaken during the year as below mentioned, namely,—

In the Mahanuddy Division.—A retired line of embankment at Rytollah was completed, and the foundations of a new bungalow at Juggutsingpore were laid.

In the Beropah Division.—The embankments at Chargong and Benipore were completed, also the retired lines of embankments necessitated by the high flood of 1868 at Nilcunta, Chumparra, and Chota Mungulpore.

In the Brahminee Division.—The Aul embankments have been materially strengthened.

(C.)—REPAIRS.

The extremely high floods of the Brahminee in 1868 did much damage to its embankments, and the expenditure during the past year was chiefly confined to repairing the injuries then sustained, and putting the neighbouring embankments in good order.

The Cuttack city protective works were kept in proper repair, and the short spurs at the base of the revetment wall preserved in good condition.

GENERAL REMARKS.

The rates for earth-work generally in this circle have been lower than the average of the last five years on those sections of the works which offer large and continuous employment. There was an abundant harvest last season, and the price of rice in the early part of the year actually fell below the average rates before the famine. To this, of course, chiefly is to be attributed the favorable rates the Executive Engineers have been able to obtain; but it was not without some tact and firmness on their part that the contractors could be induced to face the works at lower terms than they had been accustomed to.

The supply of labor was not so plentiful in the Mahanuddy Division as might have been expected, but was abundant on the high level canal till the outbreak of cholera above-mentioned dispersed it.

The floods of the past year were moderate, and the rain-fall rather below the average, namely, 53·40 inches at Cuttack against 54·40 in the previous year, and 62·83 the average of the four preceding years.

The month of July was the wettest month, the rain-fall being nearly double that of any of the other monsoon months. A somewhat sudden and unusual flood occurred early between the 10th and 13th of October 1869, when the river rose on the Naraje gauge to within 2′ 9″ of the *highest* fresh of the season. Such a flood so late in the year has not occurred for eight years. For the first 26 days in August so low was the state of the river and so variable the rain-fall that serious fears were entertained for the crops over a large portion of the country. In the higher lands skirting the Delta the want of water for the fields was very severely felt, and even in the Delta it was only by cutting the bunds when the river rose in places where the canals have not been yet made that the crops in those localities were saved.

The following Statement exhibits the highest rise of the several rivers in Orissa above lowest summer level in 1869-70 :—

	Feet.
River Mahanuddy at Naraje	21·50
„ over the crest of the Mahanuddy Anicut	6·20
„ Katjooree at Lall Bagh	24·40
„ Beropah over the Beropah Anicut	6·00
„ Brahminee at the bifurcation	10·24
„ Pattea „ „	13·20
„ Byturnee at Akhooapudda	5·50
„ Salundee at Bhudruck	6·90
„ Kansbans	17·02

With the Naraje Anicut at its present level and in the present state of the gaps in the dividing embankment, the discharge down the Katjooree to that down the Mahanuddy is nearly in the proportion of 2·3 to 5, instead as formerly of 3 to 4.

ESTABLISHMENT.

The greater number of the Officers forming the establishment of this circle were taken into Government service in January 1869 on the transfer of the East India Irrigation and Canal Company's Works to Government.

Two Assistant Engineers and four Upper Subordinates were ultimately transferred from the General Branch of the Department, and the circle formed into seven Divisions including the Workshop Division. Subsequently, the reservoir or Upper Mahanuddy and Balasore Divisions were placed in abeyance, the embankment works in the latter, south of the River Boorabhullung, being attached to the Brahminee Division. These changes and transfers entailed some loss of time, but the Irrigation Company's Officers have now become practically acquainted with the working of this Department; and, although the system and forms of accounts were entirely new to them, they have now become conversant with their duties in Office in all details. For several months back the accounts have been submitted with punctuality from the different Divisions.

II.—SOUTH-WESTERN CIRCLE.

Colonel P. O'Connell, R.E., assumed charge of this circle from Captain J. O. Mayne, R.E., on the 20th December 1869.

On the transfer to Government of the works of the Irrigation Company that portion of the high level canal lying between Midnapore and Ooloobariah was transferred to this circle, which was then formed into *four* Executive Divisions as below mentioned, *viz.*:—

(1) Selye Division.
(2) Cossye „
(3) Hidgellee Division.
(4) 24-Pergunnahs „

This change was effected in October 1869.

The following works were in progress in the year under review:—

(A.)—EXTRAORDINARY WORKS.

MIDNAPORE CANAL.

1. This Canal runs from Midnapore to Ooloobariah and will be the terminal section of the high level canal from Cuttack to the Hooghly. The works comprised in it consist of the anicut and head works at Midnapore and Panchkoorah, the masonry works along the canal itself and the distributary channels.

The main canal is divided into *eight* reaches, the state of the works in each of which at the close of 1869-70 was as follows:—

No. 1 *reach.*—*Six-sevenths* of the earth-work of the canal excavation were completed. The head lock was under construction, and the head sluice completed, with the exception of the gearing for working the shutters.

No. 1 distributary was completed, with the exception of the field sluices which were being provided.

No. 2 *reach.*—*Six-sevenths* of the canal exacavation were completed.

The waste weir at Lutchmutpore was nearly completed. Excavations for lock foundations were nearly finished, and nearly all the necessary materials on the site of the work.

No. 3 *reach.*—*Five-sixths* of the canal excavation were completed, and excavation for foundation of calingulah and lock at Booramoolla in progress. Materials were being collected.

No. 4 *reach.*—*Five-sixths* of the canal excavation were completed. Materials for head works at Debrah were being collected.

No. 5 *reach.*—*One-fourth* of the canal excavation was completed. Materials for head works at Midnapore and for the Korai aqueduct were being collected.

No. 6 *reach.*—This reach has been opened for navigation for some time; the earth-work to the embankments was nearly completed. The foundations of the head lock of this reach on left bank of the Cossye have been laid, and the superstructure in progress. The lock at Dainan, which is at the end of the reach, and which had been under repair, had been re-opened.

No. 7 *reach.*—This is a cut connecting the Roopnarain with the Damoodah, and has been open for navigation for some time. Materials for sluices were being collected. The dressing of the canal embankments was about half finished.

No. 8 *reach.*—Connecting the Damoodah with the Hooghly Rivers. The lock at Bansberriah, the walls of which had failed, was under repair. Materials for the sluices were being collected.

Distributaries.—Some 80 miles of channel for the irrigation of between 50 and 60,000 acres have been excavated. The field sluices and minor channels of distribution are still required.

TIDAL CANAL.

2. This canal connects the Roopnarain with the Russulpore River. It consists of *two* reaches, with locks at the ends of each reach. The progress on this work up to 31st March 1870 was as follows:—

The clearance of the silted portion was completed. The lock at the south end of No. 1 reach at Etamuggra also completed. Half of the masonry work of lock No. 4 at Kalynugger had been done, and the gates were ready. Materials had been collected for commencing the masonry work in the foundations of locks Nos. 1 and 3 at Banka and Terapakea, respectively. Nearly the whole of the drainage sluices were completed.

(B.)—ORDINARY WORKS.

During 1869-70 several works under this head were executed in each of the Divisions of this circle. The works mainly consisted of embankments and sluices. The following were the most important of these:—

SELYE DIVISION.

(1.) The construction of the Ghattal circuit embankment, which was nearly completed.
Amount of estimate Rs. 28,244.

(2.) Reconstruction of the Doro Dumnan embankments. This work was, however, suddenly stopped in October, owing to the restriction on expenditure ordered by the Government of India.
Amount of estimate Rs. 36,639.

(3.) Constructing embankments and sluices for reclaiming salt lands in Tumlook and Mysadal. The earth-work of the Shampoor portion (on the north side of the Kallyaghye River and to the west of the Roi Khallee) was fully completed this year, and that of the Borgodah portion to the east of the above-named khall was about half completed. None of the sluices has been built.
Estimated amount Rs. 1,51,050.

(4.) Constructing a sluice in the Purtabkhally Khall. This work was very nearly completed.
Amount of estimate Rs. 20,427.

COSSYE DIVISION.

(1.) Constructing retired lines of embankments and spurs for the protection of the embankments on the Cossye River. Owing to the failure of a contractor, this work was not more than half completed.
Amount of estimates Rs. 41,680 (local tuccavee).

HIDGELLEE DIVISION.

(1.) The sea-dyke in Hidgellee was fully completed.
Amount of estimate Rs. 6,22,261.

(2.) The embankment at Munder Mohun was also completed.
Amount of estimate Rs. 21,916.

(3.) Of the dam and sluice across the Peechabunnee Khall about five-sevenths of the former were completed, and the masonry foundations of the sluice had been begun.
Amount of estimate Rs. 1,36,354.

(4.) The sluice and dam across the Ramnugger Khall were completed, and were in operation throughout the rains; but owing to the extremely treacherous nature of the sub-soil, a very high spring tide, which occurred after the close of the rains in November, undermined the flooring and caused the destruction of the sluice.
Amount of estimate Rs. 34,943.

(5.) The new alignment of the embankments at Bhograi on the left bank of the Soobunreeka for the purpose of affording greater waterway to that river in *floods*, when it rises from 8 to 10 feet over its natural banks, was stopped in October on account of the restriction on expenditure after rather more than half of the work was done. It was recommenced in March last.
Amount of estimate Rs. 25,799.

(6.) Constructing "groynes" for the protection of the sea coast. These works, though incomplete, acted very satisfactorily, having added both to the length and height of the beach in their neighbourhood.
Amount of estimate Rs. 21,250.

The groynes consist of earth embankments terminating in brushwood spurs.

24-PERGUNNAHS DIVISION.

(1.) The sluices in the Hooghly embankments in Diamond Harbour Sub-Division have been completed, but an accident occurred to the sluice at Chowmooka from a heavy fall of rain occurring while it was under construction, and bursting the mask-embankment by which it was protected.
Amount of estimate Rs. 47,017.

(2.) A retired line of embankment at Rungafullah was about three-fourths completed by 30th March last.
Amount of estimate Rs. 15,430.

(3.) The sluice on the Puschimbahinee Khall was commenced during the year, but little progress had been made on it.
Amount of estimate Rs. 27,236.

(4.) The excavation of Churrial Khall was completed.
Amount of estimate Rs. 22,558.

(5.) The excavation of the Kowrapookeriah Khall was also completed in the past year.
Amount of estimate Rs. 49,666.

(6.) The excavation of the drain on the west side of the Diamond Harbour Road was completed, but only a portion of the masonry work was done.

Amount of estimate Rs. 37,290.

(C.)—REPAIRS.

These consisted of the usual *annual* repairs to embankments, sluices, and bungalows throughout the several Divisions, but none were of sufficient importance to require special notice in this report.

III.—SOANE CIRCLE.

This circle was only formed in 1869-70 on the transfer of the works of the Irrigation Company to Government. Much had been done before the transfer, in January 1869, by the Officers of the Company in the matter of levelling and surveying. Between March 1867 and January 1869 upwards of 2,500 miles were levelled and plotted. The position of the anicut and head works at Dehree had been fixed, nearly 22 miles of the western and 10½ miles of the eastern main canals were staked out, the working sections plotted, land plans prepared, and the boundaries of the land to be taken up were nicked out on the ground. The quarry at Dodand was explored, and the section of the tramway to connect it with the anicut was taken, and the land for it and the quarries marked out. Some valuable information had also been obtained by the Company's Officers regarding the resources of the District in the matter of timber, fuel, limestone, &c.

In addition to the above, detailed designs and estimates for the anicut, head sluices, and locks at Dehree and Baroon; also for bridges, aqueducts, and syphons for the canals, as far as these were laid out, had been prepared, and the estimates for the earth-work calculated in detail.

Thus all was in readiness for a commencement as soon as the staff could be selected and sent up.

The circle is divided at present into the following *five* Divisions:—

(1.)—*The Dehree Division*, comprising the work on the anicut, head locks and sluices at Dehree and Baroon; lock and sluice channels of the eastern and western main canals; the quarries and tramway; and the supply of timber, coal, and lime.

(2.)—*The Sasseram Division*, comprising the works on the western main canal.

(3.)—*The Baroon Division*, comprising those on the eastern main canal.

(4.)—*The Workshop Division.*

(5.)—*The Gunduck Division.*

The last was added to the Soane Circle in December last, when the Gunduck Circle was abolished.

An Executive Engineer (Captain Heywood, R.E.) was appointed in November last to take charge of the survey operations of the Patna, Arrah, and Buxar branch canals.

The work done in each Division will now be briefly described, including the little that was done between the 12th January and 31st March 1869, so that this report, as far as the Soane Circle is concerned, embraces a period of 15 instead of 12 months.

(A.)—EXTRAORDINARY WORKS.

DEHREE DIVISION.

It was not possible to do anything to the anicut or head works before the rainy season of 1869, and it was of the utmost importance to provide accommodation for the large working staff required for the supervision of the work at Dehree and Baroon before the hot whether set in, every exertion was made to erect bungalows, and before the commencement of the rains eight bungalows had been completed at Dehree, two at Dodand quarries, and two at Baroon, besides 12 houses for Native clerks and 14 blocks of cooly huts, each capable of accommodating 60 coolies.

There being still nothing like sufficient accommodation for the staff required for the works, building operations were recommenced on the cessation of the rains, and carried on for the remainder of the year, by which time 17 bungalows were completed and 10 others in progress, 16 houses for Native clerks completed and 4 in progress, 56 blocks of huts for coolies completed and 12 in progress, besides seven temporary sheds for workshops, lime, stores, &c., completed and six in progress.

In addition to the above, an iron shed 112 feet long by 40 feet broad required for immediate use as a temporary workshop was run up out of a large quantity of angle iron which had been left at Dehree at the time the old barracks were dismantled, and a roof of corrugated iron was put up over it.

Quarrying operations were commenced in July 1869, and up to the end of the official year 4,30,377 cubic feet of "off-bearing" had been removed, 4,31,000 cubic feet of "rubble" stone stacked, and 14,020 cubic feet of "ashlar" rough dressed. The rubble stone has cost one rupee per 100 cubic feet stacked and the ashlar four annas per cubic feet. Since the commencement of opeartions 2,60,000 cubic feet of stone have been carted to the site of the anicut and head works, and 1,93,000 cubic feet to the workshops and other buildings. The distance the above stone was carted is about eight miles.

The cost of carting 100 cubic feet per mile was eight annas, or, including the cost of quarrying, Rs. 4-14 per 100 cubic feet delivered on the works.

The tramway embankment from the quarries to the anicut was completed during the year, inclusive of 11 culverts. The rails procured from England were being carted up from Arrah, but more difficulty than had been anticipated occurred in getting a sufficient number of sleepers, owing to the scarcity of labor and the difficulty of getting timber rafted down the Soane. By the end of the year 21,000 sleepers of excellent quality had been cut in the forests at Modkhoopea on the left bank of the Soane 45 miles above Dehree.

Owing to the difficulties just mentioned, only 5,816 out of the 21,000 sleepers had been delivered at Dehree, but the Superintending Engineer hopes to be able to get down a sufficient number of sleepers during the coming rains to lay a single line of rails from the quarry to the river.

The Palamow Forests have yielded a large quantity of "sâl" and other timber suitable for building purposes, but owing to the impracticable nature of the Koel River it was found necessary to have the logs cut up into the requsite scantlings and carted to some point on the Soane, whence they could be boated to Dehree. A cart track has, therefore, been marked out and commenced.

Meanwhile a supply of 560 logs of sâl timber for immediate requirements was obtained from the River Gogra and conveyed by boats to Dehree.

One of the greatest difficulties experienced in the Soane Circle is the procuring anything like a sufficient supply of *fuel* for the works. Some firewood was cut by departmental agency in the forests, and some supplied by contractors, who floated it down the Soane, and delivered it at Dehree at Rs. 12 per 100 maunds.

There is, however, an abundant supply of very excellent steam coal at Rajaharra on the Koel, distant some 40 miles from its junction with the Soane; but unfortunately, owing to the difficulties of carriage, the River Koel being unnavigable up to the collieries in consequence of a barrier of rock which exists at 21 miles from the mouth of the river, loaded boats cannot ply on it even during the rains, and hitherto *pack bullocks* had been the only means used for conveying the coal.

It was, therefore, decided to construct a cart road from the mines to join the local road in the Gya District at an estimated cost of Rs. 7,617. So much of this road had been completed during the year that carts could pass along it, with the exception of one place where it was found necessary to remove a mass of rock which crops out on the line. While the road was under construction coal had to be carted from Hazareebaugh. Its cost, delivered at Dehree, was 12 annas per maund. This coal is, however, inferior in quality to that found in Palamow. When the canals to Patna, Chunar, and intermediate stations on the Railway are opened, there is certain to be a great demand for the Palamow coal.

The excavation of the head sluice and lock channels of the eastern and western main canals was commenced in May 1869, and up to the end of the year, 57,44,946 cubic feet of earth-work had been done. The cuttings in these channels are exceedingly heavy, averaging nearly 30 feet in depth; the soil is very hard, being full of nodular limestone. Owing to this, and the difficulty of obtaining a sufficient number of men for these works, only *one-third* of the work on the Dehree side, and *one-tenth* on the Baroon side, was done during the year.

The work on the anicut was not commenced till December last, and up to the 31st March 120 "foundation blocks" had been built, sunk, and filled in, and 202 more built ready to be sunk. Besides these, 47 blocks were in progress, and two piers of the under-sluices on the Baroon side were founded on *clay*. Each block in the foundation of the main walls is on an average 10 feet long, 5 feet wide, and from 8 to 10 feet in height.

The blocks were sunk by the Fouracres' patent excavator, the efficiency of which is proved by the fact that the sinking of eight blocks of the size above-mentioned to a depth of 10 feet occupied on an average *three* days, but much trouble and delay were caused by the occurrence of logs of wood and beds of coarse shingle at different depths, which impeded the excavation.

Under favourable circumstances, and when no such obstacles are met with, a set of eight blocks can be sunk in *one and a half days* without difficulty. With the old "jham" this work would probably have required not less than 18 or 20 days; the great saving in time that will be effected will be seen when it is stated that 4,211 blocks have to be sunk, exclusive of the honey-comb blocks in the sluice foundations. The cost of sinking will not be more than *one-eighth* or *one-tenth* of what it would be by the old plan.

The work above-mentioned includes the foundation of the under-sluices on the Dehree side, which may be said to have been half finished by 31st March last and 800 feet in length of a double row of anicut walls. A fair commencement had been made on the under-sluices on the Baroon side, where the work for a distance of 200 feet from the face of the abutment will be founded without wells on a bed of *clay* which projects into the river. The head sluices and lock on this side will be founded on *clay* also.

The excavation for the foundations of the head lock and sulices on the Dehree side, and of the lock on the Baroon side, has been steadily progressing, and 6,68,328 cubic feet excavated. The soil is, however, very stiff and full of nodular limestone, which, together with the want of labor, has protracted the work more than was anticipated, and has delayed the commencement of the masonry.

Considering the many difficulties inseparable from starting a great work such as the Soane anicut, the scarcity of labor, the establishing of rates, the intense heat and unhealthiness of the season from March to June 1869, the necessity of building almost a small town for the accommodation of the staff before any work could be begun in the river bed, and the absence of plant, which necessitated the materials being carted from a great distance, the progress on the whole has been very satisfactory, and is highly creditable to the Superintending Engineer and his executive and subordinate officers.

The scarcity of labor is at present a great drawback to the progress of these works, and endeavours will probably have to be made to import it.

The number of men daily employed in this Division, taking the average of the whole year, has been 2,222, but in January and February last the numbers were, respectively, 4,331 and 3,580.

Sasseeram Division.

This Division comprises the works on the main western canal from Dehree to Chunar, a distance of 105 miles.

The excavation of the canal was commenced about the end of March 1869, from which time the progress has been rapid. Upwards of 37 millions of cubic feet of earth having been excavated during 1869-70. This is about $\frac{4}{10}$ths of the work to be done in the first 20 miles of the canal (on the reduced width of 60 feet base), to which alone operations have been restricted during the year.

Nothing has yet been done to the masonry works, with the exception of collecting materials at the Rhotas and Burari road bridge sites, at the Kao syphon aqueduct, and the inlet at the fifth mile.

A quarry has been opened at Korondea on the Grand Trunk Road about five miles from Sasseeram, from which the stone for the bridges will be procured.

The large blocks of stone for the Kao aqueduct will be also supplied from this quarry.

The continuation of the western main canal as far as the Karmanassa had been set out, and plans and sections were under preparation. The Karmanassa is the boundary between North-West Provinces and the Province of Bengal.

In the beginning of March last 500 convicts were sent to Dehree from the Deegah Jail to work on the heavy cuttings at the head of the western main canal. A block of lines, which had been prepared for coolies, was set aside temporarily for their use, and a mud wall built round it. The convicts are a fine set of able-bodied men, and will no doubt prove of great service. It is too soon to judge of what they will do, but for the short time they have worked on the canal itself they earned two annas and nine pie per day each, at the usual rates of work, which must be considered good as a beginning.

The average number of men employed on this canal, averaged 2,180 daily throughout the year. In January and February the numbers averaged, respectively, 4,758 and 4,735 per day.

Baroon Division.

This Division comprises the eastern main canal, the progress on which was not so good as on the western main canal, chiefly on account of the great scarcity of labor. Up to the 31st March 1870, however, 13½ millions of cubic feet of earth-work had been excavated, which, considering the short length of work opened up, and the time in which it has been done, is satisfactory.

Some of the materials for the Grand Trunk Road bridge and aqueduct across the Poon-Poon had been collected, but further expenditure was stopped by order of the Government of India in December last. The head sluices of the eastern main canal were likewise stopped at the same time.

The Bungalow and Office of the Executive Engineer were nearly finished before the close of the year, and an Assistant Engineer's Bungalow had been constructed at the site of the Poon-Poon aqueduct. Twenty coolies' lines capable of sheltering 60 men each were also constructed.

The average number of coolies employed during the year on the eastern main canal was 1,360 per day, but in some months the number has been as high as 3,000. A great number of the coolies were "tank-diggers" locally called *nooneahs*.

Workshop Division.

The principal work done in the shops during the year was the manufacture of a large number of the "Fouracres' excavators," hammers, sledges, *kodalies*, and quarry tools; the fitting up of machinery received from England, and the construction of carts for the conveyance of stores. Plans and estimates were prepared for the permanent buildings.

Very great difficulty was experienced in getting together any skilled labor, such as vicemen, or those accustomed to machinery.

REMARKS ON THE SOANE FLOODS.

During the last rainy season the Superintending Engineer reports that there were two very high floods in the Soane both being above the average,—the first occurred on the 18th of July, and the second on the 9th of October. The water rose so high as to flow through the roads and streets of Arrah.

The flood waters first spilled over the left bank of the Soane seven miles below Bhita, but only in small quantity. The heaviest overflow occurred much lower down, *viz.*, at Sundais and below it. It is satisfactory to know that no spill from the Soane crosses the line of the Arrah branch canal until within one or two miles of the town of Arrah.

On the right bank a spill occurs between Urwal and Ibrahimpore Sakree, but above Urwal no water overflows the ridge on which the Patna canal is laid out; the spill immediately below Urwal passed off into the Poon-Poon, while that occurring lower down, on the right bank, partly follows a tortuous depression, evidently an old bed of the Soane, to Dinapore.

The canal is aligned on the right bank of this depression and follows a ridge well above flood-level to Phoolwary. The great bulk of the spill on the right bank of the Soane is below Mussowrah and passes off into the Ganges west of Dinapore, so that there will be nothing to interfere with the construction of the branch line to Patna.

(B.)—ORDINARY WORKS.

Gunduck Division.

On the abolition of the Gunduck Circle, this Division was formed and added to the Soane Circle in the month of December last.

The work done in it during the past year consisted of the maintenance and remodelling of the embankments on both sides of the Gunduck, extending on the right or Sarun bank to 97 miles, and on the left or Tirhoot bank to 53 miles above its confluence with the Ganges; and of the construction of protective works for the safety of the banks at several places.

Surveys in connection with the upper scheme of navigation and irrigation from the Gunduck were also carried out in the District of Chumparun, and for storing water in the Dhoon Valley, where a favorable site for a reservoir has been found. Plans and sections are under preparation.

The remodelling of the embankments of the Gunduck was undertaken in order to give employment to the famine-stricken people and was carried on as long as the necessity existed. The work was much needed as the embankments had been originally badly aligned, and raised

without any reference apparently to the flood level, being in some places unnecessarily high, and in others much below that level, in consequence of which breaches were of frequent occurrence, causing considerable damage to the crops and to property in general.

The effects of the protective works in the bed of the river have been most satisfactory, in one instance especially where a valuable saltpetre factory was saved at Lalgunge by the diversion of the stream.

About 2,000 miles of cross levels and surveys were taken in the Chumparun District in connection with the scheme above-mentioned and the field work was being plotted.

IV.—DAMOODAH CIRCLE.

(A.)—EXTRAORDINARY WORKS.

The estimates for the Damoodah and Hooghly Canal, which were returned by the Government of India for revision, were resubmitted on the 7th of April last.

Under the sanction conveyed in Colonel Dickens's letter No. 97*I*, dated 22nd March 1869 the following *preliminary* works were carried out in 1869-70 :—

A small bungalow was built at Mungulpore for the officer in charge of the quarries.

Between 80,000 and 90,000 cubic feet of laterite were quarried.

Nine-tenths of the tramway from the quarries to the site of the weir were completed.

Five miles of the canal were set out, plan and longitudinal and cross sections were taken, and the land was acquired on both sides of the river for the head works.

Surveys for six of the distributaries were completed.

The following buildings in connection with the head works were commenced :—

The Executive Engineer's bungalow, of which the walls were completed, and the timber of the roof placed in position.

Materials for the Assistant Engineer's bungalow were collected.

The walls of the bungalow for the officer in change of workshops completed, and the timber for the roof placed in position.

The workshops and store-yard were commenced, and all the materials collected.

(B.)—ORDINARY WORKS.

Under this head the only works carried out in 1869-70 were the protective works in the bed of the river at Ragubpore, Choitpore, and Pullah, which were in progress at the close of the previous year, and satisfactorily brought to a termination in this. The "spurs" were very successful in averting the danger which has been threatening for years, especially at Ragubpore.

V.—LOWER GANGES INVESTIGATION.

During the year 1869-70 the following work was done in connection with this scheme :—

Upwards of 800 miles of fresh levels were taken and 223 miles of former levels checked; 240 miles of surveys were made, and 55 cross sections of rivers taken.

The designing and planning of the larger works have been completed; the levels and surveys are being plotted, and fair copies of all the plans are now under preparation.

A large amount of statistical information bearing on the proposed canal has also been collected. The project will be ready for submission before the end of this year.

VI.—HOOGHLY DRAINAGE.

Early in the year 1869-70 Mr. C. C. Adley, Executive Engineer, was appointed to the special duty of enquiring into the causes of the epidemic fever that had of late years raged with such virulence in the Hooghly and Burdwan Districts, and of suggesting such measures as he might consider necessary for mitigating the evil should it be found that want of drainage was one of the inducing causes of the fever.

Mr. Adley first directed his attention to the Dancoonee swamp west of Serampore, between the Bally and Bidabatee creeks, on the East Indian Railway, and to another swamp on the west of the River Roopnarain, about eight miles north of Ghatal.

In his first report dated 25th June, Mr. Adley, after discussing very fully the nature, origin, and extent of the endemic, and supporting his views by statistical tables, attributes the disease chiefly to the existence of marshes, the silted-up and swampy beds of rivers, excessive damp, jungle and rank vegetation, impure drinking water, and want of sanitary regulations, and concludes that the only effectual remedy is drainage, clearance, cultivation, and conservancy.

In his second report of 10th September last, Mr. Adley enters generally into the measures he would propose for the alleviation and removal of the endemic.

The above reports were submitted in December last to the Government of India, who intimated in reply its readiness to "do all in its power to facilitate the prosecution of works required for improving the drainage of Districts of Bengal subject to these dreadful epidemics : provided that in granting pecuniary aid towards carrying out any projects having this end in view the general revenues of the country shall not be permanently burdened with charges arising from their construction.

"The Government of India," it was further intimated, "will be prepared, when suitable arrangements have been entered into to secure the State against any future risk, to give all help in its power by lending money at the lowest rate of interest possible without actual loss to itself." It was finally left to the Government of Bengal to suggest "how such an arrangement may be best effected, whether by a voluntary association of landholders, or by a cess to be levied under a special law."

In the end of February last Mr. Adley submitted his plans and estimates in detail for thoroughly draining the Dancoonee swamps, amounting, after revision in the Chief Engineer's Office, to three *lakhs* of Rupees, being at the rate of Rs. 7 per acre thoroughly drained, and Rs. 17½ per acre of swamp land reclaimed.

The estimates were forwarded to the Commissioner of Burdwan, with a request that he would give his best attention to the points adverted to by the Government of India, and state in what manner the object of securing the State against future risk could be best attained.

The Commissioner's reply has since been received, and the project will very shortly be laid before Government.

Mr. Adley's services were favorably noticed by both the Lieutenant-Governor and the Governor General in Council.

F. H. RUNDALL, *Colonel, R. E.,*
Chief Engineer, Bengal,
Irrigation Department.

The 11th August 1870.

Minute by the HON'BLE W. GREY, *Lieutenant-Governor of Bengal, dated 4th September* 1870.

THE Chief Engineer having described in detail the progress which has been made on the various works comprised in the respective irrigation projects which have been carried on in these Provinces during the past year, it would be sufficient for me to add that I consider the progress exhibited in the Report to be satisfactory and creditable to all the Officers concerned.

2. I desire, however, to draw attention to one class of works with which I should have been glad to see greater progress had been made, *viz.*, the minor works of distribution from the canals already in operation. The increased demand for irrigation in the present year, at first on the Midnapore Canal and now in Cuttack, points to the necessity for a speedy completion of these minor works. The matter, I am aware, has not escaped the Chief Engineer's attention, but I allude to it now, partly from the satisfaction which I feel at the growing appreciation of the irrigation works amongst the cultivators, and more particularly with a view of specially drawing the attention of the Government of India to that fact, with reference to the doubts which have been expressed in late correspondence as to the willingness of the cultivators to avail themselves of irrigation in Bengal.

3. The Report shows that the head-works at Cuttack and the neighbourhood are now nearly, if not quite, complete. It appears to me, therefore, essential, in order that the greater portion of the expenditure on those works may not remain unproductive, that *all* the main and subsidiary canals which are to be supplied by them should now be carried out as rapidly as possible.

4. There is one work in particular which I had hoped to have seen well advanced during my tenure of office, but towards which, to my great regret, nothing has yet been done. I allude to the extension of the canal from Cuttack to Calcutta; the necessity for completing which is evidenced (if evidence were wanting) by the rapidly-increasing trade at the port of False Point, consequent on the opening of the Kendrapara Canal between Cuttack and the sea-board. What that canal is proving to the district more immediately affected by it, such will the canal to Calcutta prove to the Districts through which it will pass,—Districts which have hitherto suffered grievously not only from drought, but from the want of communications,

and the consequent difficulty and costliness of transport. I would fain hope that the growing trade of Cuttack will lead the Government of India to recognize the importance of the canal to Calcutta to the rest of Orissa, and to the expediency of withdrawing the prohibition for its construction, which, but for that prohibition, would ere this have been far advanced.

5. The progress made on the Soane Works is, I consider, very creditable to the Superintending Engineer, Mr. Levinge, and to all the Officers concerned, especially to Mr. Fouracres, to whose ingenious invention both rapidity and economy in constructing the foundations of the head-works appear to be greatly due.

6. I must not omit to notice the great satisfaction with which I have recently received reports as to the success which has attended the remodelling of the embankments of the River Gunduck during the past year. Excessive and unusally protracted floods, standing, it has been reported, at a high level for 14 days, have been passed off without the slightest injury. Such floods, it has been stated, must, but for the work carried out last year, have inevitably caused most serious loss to the Districts of Sarun and Tirhoot.

7. I take this opportunity also of recording my appreciation of the labor and talents of Captain Garnault in the preparation of the Damoodah Canal Project, and at the same time I cannot help repeating my regret that the unqualified support given to it by the Revenue Officers should have failed to convince the Government of India of the soundness of the scheme, and that the hopes of the zemindars and cultivators, as well as the expectations of the coal proprietors, who are so deeply interested in the projected work, are likely to be still indefinitely deferred.

8. The satisfactory progress which has been made throughout this branch of the Public Works Department is sufficient evidence that the establishment has done its duty in the field. I am glad to see also that the Office duties have not been neglected, and that the periodical accounts have been generally submitted with punctuality.

9. My acknowledgments are largely due to the Chief Engineer, Colonel Rundall, for the great ability and assiduity with which he has conducted the business of his department.

From the Secretary to the Government of India, Public Works Department, to the Joint Secretary to the Government of Bengal, Public Works Department, Irrigation Branch,—No. 419 I, dated Simla, the 10th October 1870.

I AM directed to acknowledge the receipt of your letter No. 588 I, dated the 8th ultimo, and in reply to state that His Excellency the Governor General in Council has perused with satisfaction the full and interesting report therewith submitted, and agrees with the Hon'ble the Lieutenant-Governor in considering that the progress made on irrigation works in Bengal during the past year is highly creditable to the zeal and energy and good management on the part of the Chief Engineer, and of the Officers in charge of Circles and Divisions.

2. With reference to the remarks conveyed in the Lieutenant-Governor's Minute, I am to state that His Honor's suggestion, that no efforts should be spared to push on the distribution channels under the canals already partially opened out in Cuttack, is fully concurred in. His Excellency in Council having on more than one occasion already pointed out the necessity of completing the smaller channels contemporaneously with the main canals, in order that the lands under command may be provided with the means of irrigation at the earliest possible moment, and unless this is done it can hardly be expected that irrigation works will be financially successful.

3. With reference to paragraphs 3 and 4 of the Minute, I am to remark that the Government of India has not restricted expenditure from loan funds on any of the Cuttack or Midnapore works, which had been under prosecution by the late Irrigation Company, unless to a very trifling extent, and with regard to entirely new works, such as the extension of the high level canal from the delta of the Mahanuddy and Brahminee Rivers to Midnapore, that His Excellency in Council must necessarily hesitate to authorise the commencement of such extensive operations before the financial condition of the works already in operation shall have been placed on a secure basis. The recent reports of the spread of irrigation during the present season are, as remarked in a late letter* from this Office, highly encouraging, and, it is hoped, that good reasons will be advanced to show that it is not likely to be exceptional.

* No. 395 I, dated 27th ultimo.

4. The Government of India, I am to add, has as great an interest in the advancement of the various Districts in Bengal as His Honor the Lieutenant-Governor, and has certainly displayed great liberality in its proceedings in connection with the late Company's scheme.

5. With reference to paragraph 7 of the Minute regarding the Damoodah Canal Project, I am to observe that in none of the papers previously received by the Government of India has any allusion been made to the hopes of the zemindars and cultivators in connection with the scheme. The scheme, as is already known, has been suspended on no other ground than because, in the opinion of the Government of India, satisfactory proof has not been adduced of its being certainly remunerative; and, until this is conclusively established, His Excellency in Council does not think he would be justified in permittiug the prosecution of the works.

No. 42 of 1870.

SUPPLEMENT TO
The Gazette of India.

SIMLA, SATURDAY, OCTOBER 29, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

PUBLIC WORKS BUDGET GRANT FOR 1871-72.

Resolution by the Government of India, Public Works Department, Circular No. 61 Public Works, dated Simla, the 19th October 1670.

READ the following papers :—

Public Works Department Circular No. 82 of 1869.
" " " " " 96 of "
" " " " " 104 of "
Orders on the several Provincial Public Works Budget Estimates for 1870-71.

RESOLUTION.—The Governor General in Council having had under consideration the question of the amount of the Public Works budget grant for 1871-72, has decided to sanction an allotment from ordinary revenue equivalent to that allowed for the current year, *viz.*, £3,998,400, distributed as follows, under the main divisions of the budget allotment :—

	£
Military	1,127,400
Agricultural	497,300
Other Services	1,404,310
Establishment and Tools and Plant...	969,390
Total ...	3,998,400

2. It having been represented that by the arrangement at present in force of including the provision for Establishment and Tools and Plant with that for Other Services, any increase found necessary to the charges in question, on account of Military and Agricultural Works, has to be met by a diminution of the allotment for Civil Buildings, Communications, and Miscellaneous Public Improvement, it has been considered desirable to prevent such diminution by providing for the outlay on Establishment and Tools and Plant under a distinct grant, to be augmented, if necessary, by transfer from such other heads of service as the circumstances of the case may require.

3. The grant for Extraordinary Irrigation Works, with its proportion of charges for establishment and tools and plant, is fixed at £1,767,000. In addition to this, there will be the charge for the construction of State Railways and such other objects as have been specially sanctioned by the Government of India as "Extraordinary," the allotments for which will be determined as usual on actual demands.

4. The total grant to be distributed in these orders amounts to £5,765,400 as follows :—

	£.
Ordinary	3,998,400
Extraordinary Irrigation	1,767,000
Total ...	5,765,400

5. The Governor General in Council now proceeds to notify the distribution of the aggregate allotment among the several Local Governments and Administrations.

MILITARY.

6. For next year, the total grant under this head, including value of stores from England, amounts to £1,127,400, which is distributed as follows, as compared with the grant for the current year :—

	Grant 1870-71.	Grant 1871-72.
	£	£
Madras	60,000	50,000
Bombay	277,500	277,500
Bengal	140,000	180,000
North-Western Provinces...	134,500	135,000
Punjab	200,000	192,000
Central Provinces	70,600	60,600
British Burmah	35,000	35,000
Oudh	45,000	35,000
Hyderabad	26,800	26,800
Rajpootana	39,000	39,000
Central India...	94,000	94,000
Coorg	...	...
Port Blair	5,000	2,500
Total ...	1,127,400	1,127,400

AGRICULTURAL WORKS.

7. The demands of the several Governments and Administrations under this head aggregate £2,720,885, but the Governor General in Council considers that this is very much more than can be profitably spent during the year, and the demand is therefore reduced to £2,264,300, being £34,500 more than the grant for the current year, a large part of which it is now certain will not be required. The distribution of this grant as compared with that for 1870-71 is as follows :—

	Extraordinary.		Ordinary.		Total.	
	Grant 1870-71.	Grant 1871-72.	Grant 1870-71.	Grant 1871-72.	Grant 1870-71.	Grant 1871-72.
	£	£	£	£	£	£
Madras ...	220,000	195,000	165,000	165,000	385,000	360,000
Bombay ...	257,500	257,000	90,000	90,000	347,500	347,000
Bengal ...	400,000	375,000	70,000	70,000	470,000	445,000
North-Western Provinces ...	300,000	350,000	60,900	61,000	360,900	411,000
Punjab ...	335,000	350,000	77,400	77,500	412,400	427,500
Central Provinces..	60,000	75,000	5,000	2,500	65,000	77,500
British Burmah ...	...	...	18,500	23,300	18,500	23,300
Oudh ...	160,000	160,000	...	...	160,000	160,000
Rajpootana ...	...	5,000	10,000	7,500	10,000	12,500
Coorg ...	...	...	500	500	500	500
Total ...	1,732,500	1,767,000	497,300	497,300	2,229,800	2,264,300

8. The grant for extraordinary irrigation works is intended to provide for all works sanctioned by the Government of India as debitable to loan under the operations of Public Works Department Circular No. 94 of 1867, and includes a proper share of the cost of Establishment and Tools and Plant employed on such works. The Budget Estimate should be so prepared as to indicate clearly the exact manner in which the provision under these two heads has been arrived at, and should show in the form of Appendix A of the appropriation account the precise amount proposed to be charged to each work. The Controller of Public Works Accounts should be specially consulted in the preparation of this portion of the Budget Estimate, so as to ensure that the extraordinary grant is not debited with a larger share of the charges for Establishment and Tools and Plant than is allowed by the rules in force.

9. The grant under ordinary provides for all agricultural works debitable to revenue, including embankments in Bengal and British Burmah, and state outlay on guaranteed irrigation works in Madras, as also for the maintenance of agricultural works generally.

OTHER SERVICES.

10. The grant allowed under this head for the current year was £2,373,700, of which £969,390 was for Establishment and

Tools and Plant, for which provision is to be made for the future under a distinct head, so that the sum left for expenditure on Civil Buildings, Communications, and Miscellaneous Public Improvement is £1,404,310, which amount is distributed as follows, as compared with the allotment for the current year—

	Grant, 1870-71.	Grant, 1871-72.
	£.	£.
Madras	183,580	183,580
Bombay	262,500	262,500
Bengal	308,300	308,300
North-Western Provinces...	164,800	164,800
Punjab	126,000	126,000
Central Provinces	118,000	118,000
British Burmah	87,800	87,800
Oudh	53,400	53,400
Hyderabad	1,700	1,700
Rajpootana	23,000	23,000
Central India...	63,600	63,600
Coorg	7,030	7,030
Port Blair	4,600	4,600
Total ...	1,404,310	1,404,310

11. It is expected that the several Governments and Administrations will make suitable provision from this grant for the works connected with the Postal and Telegraph Departments. Schedules of the sums to be so provided will be circulated in due course.

ESTABLISHMENT, AND TOOLS AND PLANT

12. To meet the demands under this head a sum of £969,390 is available, which is distributed as follows in accordance with the appropriation made for the purpose in the several provincial Budget Estimates of the current year—

	Establishment.	Tools and plant.	TOTAL.
	£	£	£
Madras	130,920	13,000	143,920
Bombay	150,000	12,500	162,500
Bengal	175,200	9,000	184,200
North-Western Provinces	141,400	6,500	147,900
Punjab	131,300	8,100	139,400
Central Provinces	47,400	6,500	53,900
British Burmah	39,700	1,500	41,200
Oudh	28,100	1,000	29,100
Hyderabad...	5,800	700	6,500
Rajpootana...	12,500	500	13,000
Central India	39,900	2,500	42,400
Coorg	2,370	100	2,470
Port Blair	2,700	200	2,900
Total ...	907,290	62,100	969,390

13. The estimate for Establishment should provide for the salaries of the Engineer Establishment at the consolidated rates of pay ; and if, of the sum required for this purpose, there should be any portion which cannot be met from the grant for Establishment and Tools and Plant it should be provided for by transfers from the other heads of service concerned.

SUMMARY.

14. The table attached to this resolution shows the total grant assigned to each Province. The Budget Estimates should now be framed accordingly, the following conditions being observed :—

I.—That the amount assigned to each Province for Military Works must be considered to be fixed so far, that it is only available for increasing the grant for Establishment and Tools and Plant to such extent as any increase required to that grant may be shown to be due to Military Works.

II.—That in like manner, the grant assigned for Ordinary Agricultural Works, as defined in paragraph 9 of this Resolution, is only available for such works ; and also to supplement the allotment for Establishment and Tools and Plant to the extent of any increase rendered necessary in that grant by the expenditure on Ordinary Agricultural Works.

III.—That the grant assigned for Agricultural Works classed under the heading Extraordinary is only appropriated to works specifically sanctioned by the Government of India to be defrayed from loan funds. On this point attention should be paid to Public Works Department Circular No. 90 of 1869.

IV.—That the sum assigned for other services will be allotted by each Government and Administration according to the requirements under Civil Buildings, Communications, and Miscellaneous Public Improvement ; as also to repairs of works under these three heads.

V.—That the grant for Establishment and Tools and Plant may be increased, if necessary, by transfer from the other three ordinary heads of the allotment. But in case transfers are made from the grant for Military and Agricultural Works, it will have to be clearly and fully shown, by reference to actual figures ; that the sum transferred represents an increase to the charges for establishment caused by expenditure on Military and Agricultural Works.

VI.—That any savings in the grant for Establishment and Tools and Plant may be applied at the discretion of Local Governments and Administrations to augment the allotment for the other heads of service.

VII.—That the amount assigned for each of the main divisions of the allotment includes the value of stores from England,

so that the Budget Estimate should provide for probable payments on this account in the manner prescribed in Chapter XVI., section 1, paragraph 14 of the Code. A memorandum of the sum so provided, with explanation of the grounds on which the sum reserved for expenditure in England has been arrived at, should accompany the Budget Estimate.

VIII.—That the grant for State Expenditure on guaranteed Railways and on State Railways will be in addition to the allotments now assigned, the estimate for each Government and Administration being framed as usual on the actual requirements of the year. Attention should be specially given to the several orders requiring that this part of the estimate may be considered carefully, and made as precise and definite as possible.

15. It should be understood that no entry should be made in the Budget Estimate of any works for which estimates have not been sanctioned by competent authority. On this point attention is requested to Public Works Department Circular No. 90 of 1869.

16. In the preparation of the Budget Estimates, care should be taken to keep in view the principle of concentrating expenditure, particularly that on Military Works, not only upon the completion of buildings that are in progress, but also upon the completion of groups of buildings, station by station. Due consideration must, of course, be at the same time given to economy, by attention to the limits prescribed by the extent of local resources, and to the necessity of avoiding that increase of rates which is apt to accompany the too rapid pushing forward of work at any particular place. The principle which it is desired should be followed, will require establishments to be concentrated, and this can be done by shifting establishments from station to station as the circumstances of the case may require.

17. Special attention should be paid to the preparation of that portion of the Budget Estimate relating to Public Works Revenue, so as to make it, as far as possible, a reliable indication of the actual income of 1871-72.

ORDER.—Ordered, that the foregoing Resolution be communicated to the several Governments and Administrations noted in the margin, for information and guidance, and to the Financial Department for information.

Governments of Madras, Bombay, Bengal, North-Western Provinces, and Punjab; Chief Commissioners, Central Provinces, British Burmah, Oudh, and Coorg; Resident, Hyderabad; and Agents, Governor General, Rajpootana and Central India; Superintendent of Port Blair and the Nicobar Islands.

Ordered also, that a copy of this Resolution be forwarded to the Secretary of State, and published in the Supplement to the *Gazette of India*.

Abstract of the grants assigned from Imperial Funds for expenditure on Public Works in India during 1871-72, *as compared with the grant assigned for* 1870-71, *excluding State expenditure on Guaranteed Railways and expenditure on State Railways.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

PROSPECTS OF THE COTTON CROP IN THE CENTRAL PROVINCES AND THE BERARS.

From HARRY RIVETT-CARNAC, ESQ., C.S., Cotton Commissioner, to the Secretary to the Chamber of Commerce, Bombay,—No. 5617, dated Simla, the 18th October 1870.

In continuation of former correspondence, I have now the honor to submit, for the information of your Chamber, the following further Report on the state of the weather and the prospects of the Cotton Crop in the Central Provinces and the Berars.

2. Since the date of the last Report the weather has been favorable, and, at present, prospects are decidedly promising.

THE WURDAH VALLEY (HINGUNGHAT).

Mr. Noble, the Assistant to the Cotton Commissioner, Wurdah Valley, reports on the prospects of the crop in that tract, under date the 12th instant, as follows :—

"During the week we had one shower which registered 40 cents. The weather now is fine and very favorable. The crops everywhere are looking very well, and good out-turns are expected. The Cotton plants are in full flower, and on the more forward plants "bolls" are already formed."

"From a gentleman who lately came from Nimar, I heard that the Cotton Crop in the Nimar District is very good; the plants in that District were also in flower."

"At the Mudnee Farm irrigation has not been required during the past week, and the only other work carried on was weeding."

The Seed Gardener at Mudnee reports as follows on the experiments there :—

"The land is in readiness for wheat, which will be put in as soon as conditions offer success, which, according to Natives, will be in the course of a fortnight or so."

"During the week I have again gone over the Cotton with the hoe. I trust that it will be the final going over, weeds growing a-pace necessitated frequent hoeings. Otherwise hoeing has for its object keeping the surface loose, thereby preventing cracking and drying of the soil, answering, though in a less degree, the system of mulching at Home."

"I am convinced that planting Hingunghât in lines of two feet six inches or so apart is simply erroneous, unless the ground is extremely rich, causing vigorous growth and frequent pinching, say when the plant is from two to three feet in height, so that the plant may be well feathered to shade the ground, to prevent evaporation in the latter, and coolness as well. But in a general way 18 inches to two feet will give the greatest out-turn, the latter distance only on soil enriched by manure; this does not refer to Dharwar which, to us on the farm, warrants a hardier constitution, a crinoline habit, requiring a greater distance in and between rows."

"Jowaree and Cotton in the neighbourhood for the most part is doing well; a field here and there being below par. But on the way to Hingunghât there is a sensible falling off in both; more rain falling, and drainage defective caused in too many places a second sowing."

3. From the other parts of the Central Provinces, the accounts are good.

EAST BERAR (OOMRAOTEE).

4. The following is the Report of Mr. Nago Rao, the Assistant to the Cotton Commissioner at Oomraotee, dated the 12th instant :—

"In continuation of my letter No. 375—87 of the 5th instant, I have the honor to report that during the past week, one or two showers of rain fell in the

Chandore and Durriapore Talooks (Sub-Divisions), and in some other parts of the country; but since the last few days the weather has been very hot and dry here. The following figures show the rain-fall in the various parts of the East Berar Division since the commencement of the monsoon :—

	Inches.	*Cents.*
"At Oomraotee up to date	30	45
„ Chandore up to 7th October	29	75
„ Moortizapore ditto	28	42
„ Durriapore ditto	36	67
„ Woon ditto	40	0"

"Very favorable reports have been received from all parts of the country regarding the prospects of Cotton and other Khurreef Crops (or crops of the autumn harvest), which are now in a most thriving condition, and a good crop is expected unless something unforeseen happens."

"The cultivators have been engaged in sowing some of the Rubbee (spring harvest) Crops, such as gram, peas, mussoor, &c., and wheat also will be sown by the 20th or 25th of this month."

"One or two more showers of rain are needed in some parts of the country where the Cotton plants are still small, and have but a few petals of flowers on them; but where the plants are already as high as four or five feet, and are loaded with flowers and bolls, a heavy shower of rain will do great harm to the crop. It will, however, prove very beneficial to the jowaree, thoor, tobacoo, and to all spring crops which have been, or are about to be, sown throughout the country."

5. The annexed extract from the Report of Mr. Pillans, the Superintendent of Experiment at the Oomraotee Seed Farm, describes the condition of the experiments in that Division, and some of the remarks apply equally to the state of the crops in the Division :—

"I have the honor to report on the present condition of the Seed Farm."

"During the last week we have had no rain; the weather has been very hot and drying. Our crop altogether is looking very well; and on the portion manured with country manure, the plants (indigenous) are excellent; lots of bolls on them; they promise to give us a very good crop: the effects of that manure is strongly seen now, and I believe that country manure will be the best for Cotton, far better than artificial manures. All the crops in the neighbourhood are very good."

"Our new Orleans, Dharwar, and Egyptian are a little scorched the leaves are brown and curled up. Peruvian is much better. I had to irrigate the exotic species yesterday; some of them look rather bad just now, but we must hope that watering may help to put them right."

"It is my opinion from what I saw of exotics, last season and this season up to this time, that they will not do any good here. I believe they will never suit this part of the Berars, the only thing that I can see to be done with them is to hybridize the indigenous, and try to improve the latter by that means and superior cultivation, which, I think, there is plenty of room for. It may be rather too soon to give an opinion on the exotics, but we shall see better at the end of the season. It will be a good thing to grow a few every year to give us pollen for hybridization."

WEST BERAR (KHANGAON).

6. The Report of Mr. Dunlop is dated Camp Balarpore, the 12th October, and thus describes the state of affairs in that Division :—

"In continuation of my last week's Report I have the honor to inform you that heavy showers of rain have fallen in the last few days, accompanied with thunder and lightning."

"The storms have fortunately been partial, and I do not think they have extended over any very considerable area; but we have had all the rain that we require now, and I fear, if this weather continues, some parts of the country will suffer."

"There is no damage done as yet, however. I have just been talking with some landholders from different parts of the Balarpore Talook, and they all express themselves satisfied with the prospects of the Cotton Crop; and the fields I passed this morning in coming here from Akolah were certainly looking most beautiful."

"I now go on to the Cotton Farm, and from thence to Akote, and in my next Report I hope to be able to give a full account of the Jurree Crop (the crop, North of the Poornah River) from my own observation."

7. The experiments at Sheogaon, near Khangaon, are thus described in detail by Mr. Batcock, the Superintendent of Experiments at the Model Farm. I am sorry to see that the re-appearance of the boll-worm is noticed, but as yet it has only attacked the exotic Cotton:—

"The weather has been favorable to the crops throughout; warm sun and passing clouds, and two light showers have fallen which have refreshed the plants very much."

"The crops are generally looking well, especially the fields of the indigenous varieties of Cotton, the backward portions having made considerable progress. The plants of New Orleans have become much stagnated in growth, and are for the most part at a stand-still. A good number of fine bolls have formed upon them, and are approaching maturity, but many of the latter flowers have fallen, and several young bolls have dropped evidently from the injury done to them by a caterpillar which appears to be the same that caused so much damage last year. The other foreign kinds seem also more or less checked in growth, but not so much so as the New Orleans. A caterpillar has also been found in the soil which cuts off the roots of the Jowaree (millet) plants just below the surface, causing them to die away; a few plants of the New Orleans have also been attacked in the same way. The caterpillar appears to be nearly allied to that of the common cockchafer, and is very similar, but larger. A little before the appearance of this caterpillar, a number of beetles were observed flying about the fields, which may be the perfect insect; it is about 1½ inch long, with a shining dark green body and thorax and light brown elytra."

"The Jowaree fields are looking well. The fields of lakh, gram, &c., last sown are also progressing, but the wheat and flax look badly; the sun is evidently too hot for these yet."

"The work performed has been weeding and 'Dowrie' work. Topping the plants has also been regularly attended to."

"The rain-fall has been 0·53 inches, making a total, since the 1st June, of 24·78 inches."

BOOLUNDSHUHUR FARM (N. W. PROVINCES).

8. A letter from the Collector of Boolundshuhur, dated 7th instant, describes the prospects of the Cotton Crop in his District as follows:—

"The fine and seasonable weather that we have had during the last three weeks has enabled the plants to make much progress. The crop is much behind that of the District Crop, and the Superintendent is of opinion that a few waterings will be beneficial. A requisition has been sent to the Canal Department, and water is promised. The Central India plants seem well suited to the climate of this country, but it has yet to be seen if the American seed will thrive under favorable circumstances. Its failure this year cannot be accepted as the result of a fair trial. The Superintendent is desirous of erecting a masonry forcing house, for the cultivation of the Rhea plants. A very small structure will be required, and I shall address you separately on this subject, submitting for approval at the same time a list of tools and other articles required for the use of the Farm. The Mulberry cuttings, as you will perceive by the Report, have nearly all been destroyed. The Hybrids Cotton plants promise to be well, and the Forest seeds have germinated and are thriving."

"The accounts of the District Crop from all quarters of the District are excellent."

9. In a further letter, under date the 14th instant, the Collector describes the prospects in that quarter as unchanged since the issue of his previous Report.

10. The Reports of the Superintendent of Experiments are dated the 4th and 11th instant, respectively, and here again the boll-worm is noticed. In the first letter Mr. Simpson says,—

"For the week ending 4th October, the weather has been clear and moderately warm, with nice breeze from North and North-West."

"The working operations for the week has been confined to weeding and thinning out some of the late sowings, a part of which are now making great progress; but the ground is getting very dry and hard, and if not irrigated very soon, will be sure to retard their future growth."

"The Egyptian plants are again making some fresh growth, but a good many of them have died. The New Orleans is not improving much; the atmosphere appears to be much too dry for both of the varieties. The Uplands Crosses sent by Major Trevor Clarke have also become very stunted, apparently from the same cause; the other Crosses are looking quite healthy."

"Some of the first sown Hingunghât bolls are now beginning to open, and on examining them, I find several of them are eaten with the worm. The *Rhea* plants are coming on very well, but in another week, I believe, there won't be a Mulberry-cutting alive, the white-ants are so very bad on them."

In the second Report, dated the 11th instant, he adds,—

"For the week ending 10th October, there has been little or no change in the weather, it is still very hot; and with the Northerly wind, every thing is getting very dry."

"The working operations for the week have been much the same as the previous one, with the addition of a few men preparing the water-course for irrigation, which was commenced last night; and if all goes right, I expect to have it nearly finished by Wednesday evening."

"The New Orleans is again becoming a little browned in the foliage, but the rest of the crops is much the same as last week, with a little improvement. The boll-worm is still on the increase, and a great many of the bolls are badly eaten, but the Native cultivators appear to pay very little attention to it."

11. The reports of the growing crops of the autumn crop from other parts of Northern India are, I hear, very favorable.

12. We have then at present every reason to hope for an excellent Cotton harvest. The quantity available for export will, of course, very much depend on the area sown with Cotton. As explained to your Chamber on former occasions it will not be possible to present you with a reliable estimate of the sowings before another month or six weeks. My next Report will, I hope, contain the information required under this head, and to it I shall hope to be able to add my opinion on the prospects of the crop in Central India, based on personal observation during a rapid tour through the Wurdah and Poornah Valleys.

13. Although it is impossible at present to supply reliable statistics of the area sown with Cotton, it is not difficult to predict, with some feeling of certainty, what the result is likely to be. From enquiries made among the people and the dealers, the general impression is that the cultivation has *not* fallen off. The cultivators realized sufficiently high prices last year to encourage them to try Cotton again. The great fall in the price happened comparatively late in the season when the Cotton had left the cultivators' hands, so that the fall has had little or no effect upon them, and it is believed that this season again they have sown Cotton as generally as before.

SUPPLEMENT TO

The Gazette of India.

CALCUTTA, SATURDAY, NOVEMBER 5, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SERICULTURE IN BRITISH BURMA.

The following Note by the Deputy Commissioner, Thayetmyo, on Sericulture in British Burma, with reference specially to the Districts of Prome and Thayet, is published for general information :—

Introduction of Silk-worm.

1. Concerning the period at which and the country from which the silk-worm and mulberry were first introduced into Burma, nothing certain can be ascertained from the traditions of the people themselves. From time immemorial the present silk-growers and their forefathers have been engaged in the manufacture. Neither the worm nor the mulberry are indigenous, *i. e.*, neither of them are found in a wild state. They appear therefore to have been imported, and I am inclined to agree with the prevailing belief that they were introduced by the valley of the Irrawaddy from Assam or China, and not across the mountains from India.

Occupation distasteful.

2. The occupation of manufacturing silk in British Burma is a lucrative one, and many parts of the country are admirably adapted for it. That under these circumstances the occupation is not more extensively followed than it is, is due mainly to the Budhistic prejudice against the taking of life. The manufacture of raw silk of the best quality involves the death of the chrysalis in the cocoon, an act of impiety which is looked upon by orthodox Budhists with horror. The people who live by the commission of this sin therefore are considered by their neighbours as of "low caste," if such a term can be appropriately used with regard to a people who acknowledge no distinction of caste. The silk-growers live in villages by themselves, and hold but little social intercourse with their neighbours for fear of being taunted with allusions to the wickedness of their calling. In the Eastern Yoma range these people, though of pure Burman

descent, have come to be regarded as a distinct tribe and are called Yabaings or Zabaings.

Cultivation of mulberry.

3. The Burman mulberry (*Morus Indica?*) is a thin, lanky shrub throwing out several vertical shoots from near the ground, and growing to a height of eight or ten feet. It has no flower or fruit, and is propagated by cuttings. After about three years a plantation of mulberry trees ceases to produce good and succulent leaves, and is then uprooted or abandoned. The plant is grown chiefly on the slopes of hills, but a small quantity is likewise produced on alluvial soil by the margin of mountain streams, where it appears to thrive well, though the silk produced in such localities is inferior to that obtained on high land. The Burmans call it "Po-tsa-beng" (literally "silk-worm's food tree"). I am not aware whether it differs from the *Morus Indica*, but have sent some plants to the Horticultural Society at Rangoon with the view of ascertaining its species.

If the mulberry leaves fail, the worms are fed on the leaves of the *Broussonetia papyrifera* (Burmese Mahlaing-beng) a tree belonging to the mulberry family from the bark of which Burmans also make their coarse paper known as "*parabaek*." The leaves of the above two trees are the only ones ever used to feed silk-worms upon in British Burma, or at least in this District.

Inferior quality of silk.

4. The silk produced in Burma, though admirably adapted for the manufacture of the strong coarse silks so universally worn by the natives of the country, is of a very rough and inferior description, and would, it is believed, be almost unsaleable in Europe. The European value of a specimen of it was in 1855 estimated by the Calcutta Chamber of Commerce at 5 shillings or 6 shillings a pound, or not much more than half the price which it fetches in the local market.

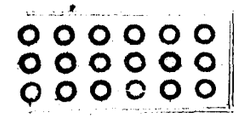
Statistics of production.

5. In British Burma the manufacture of silk is carried on in the Districts of Prome, Thayet, Henzadah, and Toungoo, and in the northern portion of the Rangoon District. The mulberry is grown chiefly on the slopes of the Yoma range—the watershed between the valleys of the Irrawaddy and Sittoung. A small quantity also is grown on the eastern slopes of the Arakan range, and a still smaller quantity in the valley of the Pairee stream which rises on the Arakan range. The silk produced here (on the Pairee) fetches a lower price than that grown on the high lands; but the people make a profit by the sale of the eggs which are taken across to the silk-growing localities on the east of the Irrawaddy and sold there. The whole of the silk produced is used in local manufactures. None of it, it is believed, finds its way to the Rangoon market.

From the information I have collected, the following appear to be the most prominent statistics connected with Sericulture in the Districts of Prome and Thayet, the two northernmost Districts of Pegu extending on both sides of the Irrawaddy, from the Yoma range on the east to the Arakan mountains on the west, covering an area of 5,500 square miles and containing a population of 360,712 souls. The number of persons engaged in silk culture is 713, of whom 422 are men, and 291 women. The number of acres under mulberry cultivation is 452, and the average annual out-turn of raw silk is 5,469 viss (1 viss=3·65lbs.), or about 9 tons. The price of the raw silk when brought to the markets on the river bank varies between Rs. 15 and Rs. 24 a viss, and the average price is about Rs. 20. The value of the whole at this rate will be Rs. 1,09,380, or £10,938. The above statistics for Prome and Thayet may be depended upon as tolerably accurate, though, as the information is obtained from the silk-growers themselves, the out-turn of silk is probably rather under than over the mark. I have no statistics to guide me in estimating the amount of silk produced in the other Districts, but I have travelled through them and believe that the following estimate is not far wrong.

Toungoo probably produces as much as Prome and Thayetmyo together, and Rangoon and Tharrawaddy together about the same amount. This will make the total out-turn of raw silk in Pegu amount to 16,400 viss, or about 27 tons, of the value of £32,800.

Silk is produced also along the Yoma range beyond the British frontier in Burma Proper.



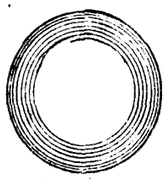
Method of manufacture.

6. The method pursued by the manufacturers of raw silk in British Burma is rude and careless in the extreme. All the processes are carried on in the ordinary bamboo dwelling-houses of the country, which are open to all the elements, and generally smoke-begrimed and dirty. The worms and cocoons share the accommodation with the family of the house-owner, and live and thrive in close proximity to the place where the culinary and other domestic operations of the household are carried on.

The Japanese silk-worm is said to be of such delicate organization as to be seriously affected by bad smells or tainted air. He certainly must be a much more sensitive insect than his Burman *Congener*, and his life in a Burman hut would be a very brief one.

The plant of a Burmese silk filature is simple and inexpensive, consisting only of the following articles:—A number of circular flat trays with slightly raised edges. They are made of strips of bamboo, plaited, and are from 2 to 4 feet in diameter; some neatly made circlets of palm leaves three or four inches in diameter; some strips of coarse cotton cloth; a common cooking pot; a small bamboo reel; a round block of wood with handle and axes turning on wooden or bamboo supports, and a two-pronged fork.

The different processes commencing from the time when the eggs are laid are as follows:—The males and females having completed the procreating process, the males are thrown away and the females placed within palm leaf circlets on a sheet of coarse cotton cloth, two or three feet square. The eggs are then deposited on the cloth, and as they adhere to it the cloth becomes covered with circular cartoons of eggs in this fashion.



These cartoons when sold, are sold at the rate of about eight for a rupee.

The moths having completed the laying of their eggs, which takes them about a day, they (the moths) are thrown away. The pieces of cloth with the eggs are wrapped up and left to themselves. About the eighth day the eggs are hatched: the cloths are then opened and worms begin to appear. As the worms, tiny little black specks, emerge, they are swept by a feather off the cloth on to a tray. The worms cling tenaciously to the cartoons and cannot be shaken off. The feather-brushing operation, though rough, does not appear to hurt them. The produce of one circular cartoon will more than fill one large tray 2 or 3 feet in diameter with worms when full grown. The worms are hatched in the morning. In the afternoon they are fed with finely chopped-up pieces of the tenderest mulberry leaves. This goes on for four or five days, when the worms become torpid, sleep for 24 hours, and shed their skins. They then become voracious and require plenty of strong leaves. Beyond being plentifully supplied with food they receive but little care. Very little attention is paid to cleanliness. They live and thrive on heaps of *excreta* and refuse leaves, and they bear handling of the most rough and reckless description, being scraped up in handfuls and tossed about in a way which looks most dangerous to their delicate frames.

Their only enemy appears to be a kind of blue-bottle fly, which, when a tray is exposed, alights for a second, punctures and lays its eggs on the body of a worm. These worms become unhealthy, and are generally picked out and thrown down through the bamboo flooring to the fowls which lie in wait for

them below the house. If such worms are allowed to make cocoons, the fly eggs develop in the chrysalis and spoil the cocoons. To protect the worm from this fly, the trays are generally kept covered with a cloth.

The silk-worm's existence lasts about 30 days, during which period he becomes torpid and moults four times. When "ripe," or ready to commence cocooning, their colour changes from a blueish to a pinky white. The ripe ones are then picked out by the hand and thrown in heaps on to a small tray, in which they are conveyed to the cocooning tray. This is a large sized tray 3 or 4 feet in diameter, within which a long ribbon of plaited bamboo, a couple of inches wide, is wound round and round with its edges on the flat of the tray, as described by the figure in the margin. The worms are then taken up in handfuls and scattered with as little care as if they were so many grains of corn over the tray. They gradually find their places and then spin their cocoons, attaching them to the walls of the plaited bamboo.

Whilst this operation is going on the trays are covered with a cloth. The cocoons are generally yellow; some few are pure white. In 24 hours the cocoons are completed. They are then torn away from the tray and placed in baskets. In two or three days those cocoons from which the best silk is to be reeled are taken out and placed in a pot (the family cooking pot) of water, which is allowed to simmer over a slow fire. Above the pot is placed a pair of cross sticks from which a bamboo reel is suspended, and beside the pot is a wooden cylinder turning on a trestle. Some filaments of silk are caught and drawn out of the pot, run over the bamboo reel, and fastened to the cylinder.

Then the reeler (generally a woman) with an iron fork in one hand and the handle of the cylinder in the other keeps catching up the filaments in the pot with the fork and reeling them on to the cylinder. The thread produced is coarse and dirty, and brings with it from the pot bits of pupæ and other refuse, all of which goes with the silk on to the cylinder.

The silk in the pot having been exhausted, the denuded grubs are taken out and fried in oil; they form a savoury addition to the family dinner.

Those cocoons which are left to produce moths are ready in about eight days. The moths are then formed. As they emerge they are put into large trays and kept there for a day, during which time the coupling process goes on. The males having been thrown away, the females are arranged on a cloth as before described to lay their eggs.

A coarse and inferior kind of silk is reeled off the cocoons which have been allowed to come to maturity. This silk fetches only a third of the price obtained from those cocoons which are reeled whilst the chrysalis is still in them, but as, by this process, the sin of taking life is avoided, it is preferred by some who are more attentive to the duties of religion than their neighbours.

The length of the different stages making up the cycle of the Burman silk-worm's existence is as follows:—

Eggs	...	8 days or 11 days in cold weather.
Worm	...	30 ,,
Cocoon	....	8 ,,
Moth	...	1 ,,
Total	...	47 days

From the completion of the cocoon to the appearance of the worm therefore there are only 17 days in the hot weather and 20 days in the cold weather. This is altogether too short a time to allow of the Burman species being conveyed to Australia (by one stage at least) with any hope of success.

Improvement of silk manufacture in British Burma.

7. The chief merit of the Burman silk-worm appears to be its extreme hardiness as compared with other species. Whether the coarseness of its silk is inherent in the nature of the worm, or is due to the rough and careless manner in which it is treated, my limited knowledge of silk manufacture does not enable me to say. There certainly appears to be room for improvement as far as concerns the manufacture of silk fitted for the European market. Whether the manufacture of such silk would pay the growers better than the manufacture of the coarse stuff they now produce, I can hardly say. But any recommendations for the improvement of the present system of silk culture made by a person having a competent knowledge of the subject, would not be wasted on the Burman silk growers, provided such recommendations were at all feasible.

The silk growers are quite ready to adopt any measures, whether by the introduction of new breeds of silk-worms or the improvement of their machinery, which may be expected to be profitable.

GOVERNMENT OF INDIA.

FINANCIAL DEPARTMENT.

ANNUAL REPORT ON THE OPERATIONS OF THE POST OFFICE OF INDIA FOR THE YEAR 1869-70.

No. 3188 A, dated, Simla, 27th October 1870.

From—A. M. MONTEATH, Esq., *Director General of the Post Office of India,*

To—*The Secretary to the Government of India,* FINANCIAL DEPT.

I have the honor to submit a report on the administration of the Post Office of India for the official year 1869-70.

2. Before proceeding to give the usual statistics I shall notice briefly a few of the principal events of the year.

COMMUNICATIONS WITH PLACES ABROAD.

3. The most important relations which India has with places abroad are those with the United Kingdom; and I shall therefore allude first to the changes which have taken place in the postage rates and conditions affecting correspondence with that country. The scale of postage chargeable on packets of books and patterns exchanged with England was, during the year under report, altered by the adoption of lower rates for lower weights. Formerly such packets were chargeable at the rate of 2 annas 8 pie per 4 ozs. when sent *viâ* Southampton and at 4 annas per 4 ozs. when sent *viâ* Marseilles; but, under arrangements made during the year, the rates marginally noted were substituted for the above. A one ounce packet posted in India for England is now chargeable with a postage rate actually less than is charged on a packet of like weight intended for delivery in India, this

	Not exceeding 1 oz.	1 oz. to 2 ozs.	2 ozs. to 4 ozs. and for every additional 4 ozs.
	A. P.	A. P.	A. P.
Vid Southampton...	0 8	1 4	2 8
Vid Marseilles ...	1 4	2 8	4 0

some-what anomalous result being due to the high minimum chargeable weight (10 tolas, or about 4 ozs.) prescribed for inland packets; but, as stated in a subsequent paragraph (45), I hope that this anomaly will not long exist.

4. The special privileged rates formerly allowed to Officers of the Army in India in respect of their correspondence with England were withdrawn, with effect from the 1st January 1870, the correspondence of Military Officers becoming thenceforward chargeable with the same postage rates as those applicable to the correspondence of the public generally.

5. The route *viâ* Brindisi was made available experimentally during the year under report, the rates noted on the margin being charged in addition to those prescribed for the Marseilles route. The results show, with few exceptions, a gain of about two days in transit *viâ* Brindisi; and I believe it to be in contemplation to adopt this route next summer in supersession of the Marseilles route by a re-arrangement of the Mediterranean Steam Service, under which the mail steamers of the Peninsular and Oriental Company will ply between Alexandria and Brindisi instead of between Alexandria and Marseilles. I have no information yet as to what the postage rates chargeable on correspondence forwarded by the Brindisi route will be under the new arrangement.

Letters 2 annas per ½ oz. extra.
Newspapers 8 pie each extra.

6. Turning now to communications with places abroad other than the United Kingdom, I may mention that during the year under report the rates of postage to Constantinople, the United States of America, Canada, Nova Scotia, New Brunswick, and other places were reduced. The scale of postage chargeable on packets of books and patterns addressed to various countries in Europe and other places through the United Kingdom was altered by the adoption of two ounces (instead of four ounces) as the minimum chargeable weight.

7. Arrangements were also made with the Ceylon Government providing for the pre-payment of covers of all descriptions to destination in both directions.

LOCAL STEAM SERVICES.

8. The Local Steam Services performed under contract with the British Indian Steam Navigation Company remained much as before, *viz.*:—

(1). Calcutta and British Burmah, *weekly*, with a continuation to the Straits *once every four weeks*, the subsidy being Rs. 21,333 per mensem, of which Rs. 1,083 are paid by the Straits' Government.

(2). Bombay and Kurrachee, *weekly*, with a continuation to the Persian Gulf *once a fortnight*, the subsidy being Rs. 23,111 per mensem.

(3). Calcutta, Bombay, and intermediate ports on the East and West Coast, *fortnightly*, the subsidy being Rs. 10,000 per mensem.

(4). Madras, Rangoon, and intermediate ports on the East Coast, *once every four weeks*, the subsidy being Rs. 6,000 per mensem.

(5). Calcutta, Port Blair, and Camorta, *fortnightly*, without any subsidy, but under contract arrangements in respect of the transmission of Government stores, &c.

The line last mentioned was organised during the year under report, and is still only experimental. At first starting the steamers of this line proceeded on to the Straits, but this extension was discontinued. There are also other steam services with other Companies as follows:—

1. With the Irrawaddy Steam Flotilla Company for communications about three times a month between Rangoon and Mandalay.
2. With the same Company for a monthly communication between Moulmein, Tavoy, and Mergui.
3. With Jardine, Matheson and Company (of Hong-Kong) and Apcar and Company (of Calcutta) for the conveyance of mails monthly between Calcutta, the Straits, and Hong-Kong, the dates of the starting of the steamers being regulated primarily with reference to the Calcutta opium sales.
4. With the Euphrates and Tigris River Steam Navigation Company for fortnightly communication between Busreh and Bagdad.

The last mentioned contract is made by Her Majesty's Government, although I believe that the subsidy (Rs. 4,000 a month) is charged against the Indian Revenue.

9. It is in contemplation, I understand, to extend the communication with Mandalay to Bhamo, the service between Rangoon and that place being performed weekly; but of this arrangement, if carried out, notice will more appropriately be taken in my next report.

MODIFICATION OF INLAND POSTAL RATES AND CONDITIONS.

10. On the 1st April 1869, that is, on the first day of the year now under report, the limits of weight allowed for the several rates of Inland Letter Postage were doubled as per margin. This much needed alteration has proved to be a much less expensive measure than was originally anticipated, but on this point remarks will more appropriately be made in a subsequent section under the head "Financial Results."

Rates of Postage.	Limits of Weight.	
	Former limits.	New limits.
½ anna	¼ Tola ...	½ Tola.
1 anna	½ Tola ...	1 Tola.
2 annas	1 Tola ...	2 Tolas.
and so on.		

11. On the 1st September 1869 the postage rates chargeable on pattern packets which had till then been the same as those chargeable on book packets, *viz.*, one anna per ten tolas, were doubled. The measure was a reasonable one, for there is no good ground for carrying pattern packets at the same low rates as are provided for books. On the same date a change was made in the scale of postage chargeable upon banghy parcels. The former scale of postage varied not merely with weight, but with distance, and the distance limits were so numerous that it was almost impossible for the public to ascertain the rate chargeable upon a parcel without reference to the Post Office; and the constant change of routes, as well as the large increase in the number of Post Offices, rendered it extremely difficult for the Department to keep its own Offices informed of the charges properly leviable. The change made in September 1869 involved a reduction of the distance rates to two, *viz.*, a single and double distance rate. This was a great improvement on the former system, and the Government has since on my recommendation taken a further step in the same direction by making the postage charge on banghy parcels independent altogether of distance. This last step, however, having been taken during the current year will fall more appropriately for remark in my next report.

12. I may here mention that during the year under report a rule was made under which complaints against the Post Office, certified as such under the full signature and address of the sender and addressed to any Officer of the Postal Department, are not chargeable with any postage.

MODIFICATION OF POSTAL ESTABLISHMENTS, &c.

13. The principal modifications under this head appertain to road establishments, which will more conveniently be noticed in a subsequent paragraph (20). I may here mention, however, that in prospect of the junction of the Great Indian Peninsula and East Indian Railways, as well as of the Upper and Lower Sections of the Punjab and Delhi Railway, arrangements had to be made for a radical change in the system of railway sorting. The previous existence of breaks in railway transit gave time for a large amount of sorting in stationary Offices, but the final junction of the railway systems of Bengal, the Punjab, and Bombay necessarily involved the supersession of all arrangements for the sorting of through mails otherwise than during transit. The system of railway sorting previously in force had originated at a time when the lengths of continuous railway were comparatively small and was not adapted to the much more comprehensive requirements arising from continuous lines of such enormous extent as now traverse the continent of India. In view of this alteration of circumstances, it was deemed advisable to organize a system of

what has been called "Frontier Railway Sorting" distinct from the previously existing Local Railway Sorting. Under this system all through mails passing between different provinces through Allahabad are disposed of by a separate Sorting Establishment working on sections of the railway converging at Allahabad. As already stated, steps were taken during the year under report for the introduction of this arrangement simultaneously with the junction between the Bengal and Bombay Railway Systems. Although there is much still to be done in the way of improving railway sorting arrangements, I think that it only requires a careful and systematic working out of the measure which has been introduced. The system will be greatly helped by a proper arrangement of through mail trains, which, after long and troublesome negotiations, has at last been almost brought to a satisfactory conclusion.

14. Under this head I may also refer to the separation at the commencement of the year under report of the postal jurisdiction of Sind from that of the Punjab, the Chief Inspector of the former being invested with the powers of a Post Master General and placed in direct relations with my Office. The opportunity was taken of adding to the jurisdiction of the Chief Inspector of Sind the postal arrangements in Turkish Arabia, including the Offices on the line between Kurrachee and Bagdad. This measure was deemed advisable not merely because the postal arrangements in Sind had no real or direct connection with those of the Punjab, but because the postal service in Turkish Arabia could not be conveniently attended to by the Post Master General of Bombay.

15. It was also found that the postal arrangements in the Berars could be better controlled from Nagpore than from Bombay, the Post Master General of the latter Circle having more than ample work in connection with the postal arrangements of the Bombay Presidency. The Berars were therefore transferred from the postal jurisdiction of Bombay to that of the Central Provinces, with effect from the 1st April 1870.

FAMINE OF 1869.

16. I mention here the famine of 1869, principally because it had a marked effect upon the finances of the year. In a Department like the Post Office, the work of which is largely carried on by runners, who must be enabled to feed themselves and buy horses, camels, &c., the keep of which varies directly with the price of food, a famine like that of 1869 must have a very material bearing on the finances, respecting which more detailed remarks will be made in a subsequent Section (Financial Results).

SECTION I.—POST OFFICES, LETTER BOXES, AND RURAL MESSENGERS.

17. The number of new Post Offices and Letter Boxes opened during the year in each Circle will be found in Appendix No. 1, of which an abstract is given on the margin. As regards new Post Offices, the number opened during the year under report is considerably less than the number opened in either of the two preceding years, the reason of this being the necessity (resulting from financial pressure) of confining the extension of the Department to moderate limits, only those cases being provided for where the need of additional postal facilities was most urgent and where the prospect of increased revenue was most certain.

	Opened in 1868-69.	Opened in 1869-70.
Post Offices	384	262
Letter Boxes	167	515
TOTAL	551	777

18. The number of Letter Boxes opened during the year has been much larger than in the previous year. This mode of extending postal facilities costs but little, and could, therefore, be freely resorted to even during a year when the most rigid economy had to be enforced.

19. The number of additional rural messengers entertained during 1869-70 was 165, against 227 entertained in the previous year.

SECTION II.—POSTAL LINES.

20. The total extent in miles of each class of postal lines at the close of the year as compared with the returns of the previous year is given on the margin; the details for each Circle will be found in Appendix II. The increase in railway line mileage is composed mainly of extensions of the Punjab and Delhi Railway from Umballa to Loodiana, and from the Beeas to Jullundur, of the Great Indian Peninsula Railway from Sholapore to Goolburgah, and of the Madras Railway from Tadputry to Gooty. A further extension of the Great Indian Peninsula Railway to Jubbulpore, thus effecting a junction between it and the East Indian Railway, took place just after the year under review, and is not consequently included in this statement. The decrease under the head of Mail Cart, &c., is the net result of a very large number of reductions and extensions. Among the extensions may be mentioned the substitution of mail carts under contract between Calcutta and Midnapore and between Gya and Patna in Bengal; between Allahabad and Fyzabad (since abolished) in the North-Western Provinces; between Wuzeerabad and Sealkote and Ferozepore and Lahore in the Punjab; and between Munmar and Dhoolia (Tanga Dâk) and Deesa and Anadra (Camel Dâk) in Bombay. Among the reductions may be mentioned the abolition of the line between Cawnpore and Jhansie in the North-Western Provinces, and between the Beeas and Jullundur, Umballa and Loodiana, and Rawul Pindee and Kohat in the Punjab. Besides the above, there were large alterations consequent on the transfer of the trunk route between Bombay and Madras from the old route *vid* Poona, Dharwar, and Bangalore to a new route *vid* Goolburgah and Gooty. The gradual extension of the Madras Railway on the one side and the south-east line of the Great Indian Peninsula Railway on the other led, in the early part of the year under report, to a consideration of the expediency of transferring the mail communication to the route which would eventually supersede the old line of transit through the South Mahratta Country. The absence of anything which could be called a road on the north side of the Kistna and the existence only of a very inferior road south of that river, as well as the numerous intervening unbridged streams, made this Department hesitate to supersede an old and tried line until there was full security of an uninterrupted and quicker transmission of mails by the new route. It was not therefore till the Bombay Railway had opened to Goolburgah and the Madras Railway to Gooty that the measure was carried out, the new line between those places being served on the northern side of the Kistna by a strong runner establishment and on the southern side by a mail cart. At the same time steps were taken for making the requisite modifications in the establishment of the old line, the portion between Dharwar and Bangalore being abolished and that between Poona and Dharwar reduced to the requirements of merely local traffic. The former mail cart line between Sholapore and Hyderabad was likewise abolished, a new and shorter line from Goolburgah to Hyderabad being substituted for it. The change of the route between Madras and Bombay above described resulted in a saving of 24 hours in the transit of the mails. It has already been stated that the junction of the Bombay and Bengal Railways took place immediately after the close of last year. This change had, of course, been anticipated, and all the arrangements for it had been made during the year under review, the Jubbulpore and Nagpore mail cart line being first reduced and shortly afterwards altogether abolished, and the line between Gwalior and Indore (no longer required for through traffic) converted into a runner line.

YEAR.	Railway.	Mail Cart, Horse Dâk, and Camel Dâk.	Runners and Boats.	Sea.	TOTAL.
1868-69 ...	4,234¾	5,460⅜	34,973	5,613	50,281⅜
1869-70 ...	4,433¾	5,333	35,498	5,613	50,877¾
Increase ...	199	.....	525	.....	596⅜
Decrease...	... .	127⅛	.....	.....	.....

21. The increase in mileage under the head of "Runners and Boats" is due to the amount of 300 miles, to the extension of the river steamer line

between Rangoon and Thyetmyo to Mandalay, the remaining portion of the increase being the net result of a very large number of modifications which it would be out of place here to attempt to specify.

SECTION III.—CORRESPONDENCE.

22. Appendix No. III contains the correspondence returns of the year, of which an abstract is given on the margin. In the report of the previous year I stated that the increase (above 10 per cent.) under the head of "Letters" showed a larger development than in any recent year. The returns of the year now under report show an increase (11½ per cent.) of a still larger amount; and although this satisfactory result may be due to many different causes, I think it probable that it is in no small measure due to the increased limit of weight allowed for the several rates of postage. The increase of the limits of weight was a measure which without doubt conferred a great boon upon those who use the Post Office, and it is most satisfactory to find evidence of the appreciation of this boon in the correspondence returns now referred to. In a subsequent paragraph it will be shown that the financial results of the measure are as satisfactory as could have been hoped for. The very high rate of increase under the head of "Books and Patterns" is gratifying. It was in 1867-68 that this class of article first showed a really encouraging expansion, being for that year no less than 19·89 per cent.; and since then this rate of increase has been substantially maintained.

Year.	Letters.	Newspapers.	Parcels.	Books and Patterns.	Total.
1868-69 ...	68,891,232	5,773,585	699,206	623,594	75,987,617
1869-70 ...	76,867,918	6,165,039	764,911	736,710	84,534,578
Increase ...	7,976,686	391,454	65,705	113,116	8,546,961
Increase percentage	11·57	6·78	9·39	18·13	11·24

23. The Letter returns may be further analysed as per margin. It will be observed that the highest rates of increase are under the heads of "Paid" and "Registered." The increase of registered letters is perhaps in some degree due to the compulsory registration of letters containing coin or currency notes.

Year.	Paid.	Unpaid.	Service.	Registered.	Total.
1868-69 ...	38,904,155	24,612,666	4,017,709	1,356,702	68,891,232
1869-70 ...	44,668,194	26,594,484	4,117,424	1,487,816	76,867,918
Increase ...	5,764,039	1,981,818	99,715	131,114	7,976,686
Increase percentage	14·81	8·01	2·48	9·66	11·57

24. The correspondence received was disposed of as shown in the following statement:—

Directly delivered (Appendix III) 81 per cent.	62,375,917
Retained for re-issue, 19 per cent.	14,492,001
Total ...	76,867,918
Details of Re-issue.	
Sent to District Post Office	4,468,154
Sent to Dead Letter Office	2,177,325
Remainder disposed of by redirection to other Offices, or sent to Branch Offices, or in deposit at the end of the year	7,846,522
Total ...	14,492,001

These figures call for no particular remark.

25. I do not think it necessary in this or future reports to submit a statement of missent articles. In my report for the year 1867-68, I observed that the returns of missent articles were incomplete, only those received *for delivery* at the wrong Office being entered, while those missent to the *wrong Sorting Office* were omitted. In the report for 1868-69 I again referred to this incompleteness, remarking that the trouble entailed in remedying it would be quite incommensurate with the advantage; and that the English Post Office for like reasons made no attempt at recording the number of articles missent to a wrong Sorting Office. I see no advantage in continuing from year to year to give statistics which are confessedly incomplete, and which it is

impossible without a large amount of unremunerative trouble to make complete.

26. Statistics respecting the working of the several Dead Letter Offices are given in Appendix IV, and below will be found in the usual form a comparison of the results for the last three years:—

	Number.			Proportion of each class to the whole.		
	1867-68.	1868-69.	1869-70.	1867-68.	1868-69.	1869-70.
Letters returned to senders ...	723,266	880,933	971,405	40·65	42·66	44·61
Letters undisposable ...	1,055,982	1,184,201	1,205,920	59·35	57·34	55·39
Total ...	1,779,248	2,065,134	2,177,325	100	100	100

The proportion of covers returned to the senders continues to increase. Notwithstanding this improvement in the working of the Dead Letter Offices, I feel that there is much improvement still to be looked for. Endeavours have recently been made in this direction by the better organisation of the Dead Letter Office in Calcutta and by the creation of a separate Dead Letter Office at Kurrachee. As a rule, letters that cannot be delivered are sent for disposal to the Dead Letter Office of the postal circle in which they originated, that being the locality where the language and character are most likely to be understood. The province of Sind, including the Offices in the Persian Gulf and Turkish Arabia, gave rise to a number of letters written in languages or dialects (such as Sindee and Hebrew) which could not be satisfactorily disposed of in either of the neighbouring Dead Letter Offices of Bombay or Lahore; and I hope that the establishment of a small Office at Kurrachee will tend to improve matters. Dead Letter Office work in India is beset with special difficulties owing to the great variety of character, language, and dialect; but, as already stated, I feel that even with these difficulties the results are not as good as they might be.

27. The returns of ordinary postage stamp sales are given in Appendix V. The gross value of stamps sold shows a small decrease, *viz.*, from Rs. 28,59,801 to Rs. 28,28,986. Considering that the limits of weight allowed for the several postage rates were doubled at the commencement of the year under report, I consider this result as most satisfactory, but shall reserve further remarks upon that point to a subsequent Section (Financial Results). As might be expected, the sales of 1 and ½-anna labels have largely increased, while those of 1, 2, and 4-anna labels have decreased. The increase and decrease in the sales of the several classes of labels is given below:—

The decrease in the gross value of Stamps sold in 1869-70, *as compared with* 1868-69, *is* 1·07 *per cent. against a corresponding increase of* 12·49 *per cent. in the preceding year.*

	8-Pie Labels.	½-Anna Labels.	1-Anna Labels.	2-Anna Labels.	4-Anna Labels.	6-Anna 8-Pie Labels.	8-Anna Labels.	½-Anna Note Paper.	½-Anna Envelopes.	1-Anna Envelopes.
	Decrease.				Decrease.		Decrease.		Decrease.	
1867-68 as compared with 1866-67, exclusive of Straits' Settlement	22·69	3·76	·83	·99	3·603	253·104	6·79	25·31	44·77	115·68
	Increase.	Increase.	Increase.	Increase.	Increase.	Decrease.	Increase.	Increase.	Decrease.	Decrease.
1868-69 as compared with 1867-68	40·48	4·47	5·28	17·58	7·69	43·88	82·15	146·37	45·69	62·19
			Decrease.	Decrease.	Decrease.			Decrease.		
1869-70 as compared with 1868-69	3·004	12·74	16·64	16·501	4·18	20·76	11·77	44·19	22·001	54·55

28. The returns of the sale of service stamps are given in Appendix VI. The sale of these stamps has decreased during the last two years, but this is

due solely to additions having been made to the list of public Offices with which accounts of postage are kept by the Post Office, the covers sent by such Offices being forwarded under frank without actual payment.

SECTION IV.—DISTRICT POST.

29. As the Government is aware, the district post consists of lines of communication connecting the head quarters of each district with the interior police and revenue stations, and is maintained primarily for the purpose of conveying official correspondence, the expense being met, in some parts of the country, from the proceeds of a special cess levied for the purpose, and in other places forming a charge on the general revenues. As mentioned in previous reports, the management of the district post in Bombay and the North-Western Provinces has for some years been confided to the officers of this Department acting in that respect under the orders of the local Governments. The steps taken of late to obtain a similar control over the district post in other provinces are still in progress. Under an arrangement made with the Punjab Government, the control of the district posts in that province is to be made over to the Imperial Postal Department as the revenue settlement of each district is completed; and there is now an early prospect of the measure being carried out in three districts of the Umritsur Division. As regards Bengal, as mentioned in previous reports, the first step taken was to obtain the management of the district post in a single experimental district. The result being very satisfactory, a like transfer of control has been effected in 17 districts (increased since the close of the year to 22 districts). There was perhaps no province in which more need existed for an improved district post than in Lower Bengal, and I am glad, therefore, to be able to state that the change, so far as it has gone, has resulted in great improvement. In all these districts there has been an increase of correspondence, and in some this increase has amounted even to 100 per cent., while the speed of the mails has also been considerably accelerated. In the Madras Presidency the measure is still under experiment in a single district, but I hope that it will ere long be brought into general operation. In Oude the same difficulty about transfer referred to in paragraph 47 of my report of last year still exists, *viz.*, the fact of that province being postally under the jurisdiction of the Post Master General of the North-Western Provinces, who could not be of the same help to the local administration in the management of the district post as an Officer resident in the province. The remedy previously indicated, *viz.*, the separation of Oude from the postal jurisdiction of the North-Western Provinces and the appointment of a Chief Inspector exercising the powers of Post Master General, was, as stated in my last report, deferred owing to the financial pressure; but I have recently deemed it right to submit the proposition for the orders of Government with reference to the fact that large reductions have of late been effected in the Post Office Department as well as to the circumstance that the district post delivery arrangements in Oude urgently demand attention. The fact, that of the covers made over by the Imperial Postal Department to the Oude district post for delivery no less than 30·72 per cent. are returned as undeliverable, shows how great is the necessity for reform.

30. The result of the district post operations in so far as concerns correspondence passing between it and the imperial post is given in Appendix VII, of which the following is an abstract:—

	Number.	Percentage.
Sent to district post for delivery	4,754,233	Being 5·62 per cent. of the total number of covers received for delivery.
Portion of the above received back undelivered ...	505,900	Being 10·64 per cent. on the number sent to the district post.
Received from district post	12,81,762	Being 3·32 per cent. on the total number of covers received by General Post Officer for delivery.

The proportion of covers received back undelivered, although slightly less than in the preceding year, is still very far from satisfactory; but I hope that the arrangements now in progress in Bengal and the further arrangements still to be effected in Madras, the Punjab, and Oude will have a considerable effect upon this proportion.

SECTION V.—MISCELLANEOUS.

31. The usual statement showing the number of complaints made by the public during the year is given in Appendix VIII. The absence of any returns from Bombay for 1868-69, owing to the destruction of the Post Master General's records by fire, interferes with any comparison between the results of the two years. But, as observed in previous reports, the statement does not under any circumstances afford material for a reliable conclusion as to the working of the Department; and I much doubt the use of including a statement of this kind in my annual report.

32. The number of cases in which punishment has been inflicted upon Post Office employés for offences committed by them is 136 for the year under report, against 130 for the previous year; the number in each Circle is given in Appendix IX.

Names of Postal Circles.	1868-69.			1869-70.		
	British Territory.	Foreign Territory.	Total.	British Territory.	Foreign Territory.	Total.
Bengal	1	0	1	3	0	3
Madras	5	1	6	2	6	8
Bombay	2	8	10	0	2	2
N. W. Provinces ...	9	6	15	4	11	15
Punjab ...	0	0	0	1	1	2
British Burmah ...	0	0	0	0	0	0
Central Provinces ...	0	1	1	0	0	0
Sind	0	0	0	0	0	0
Total ...	17	16	33	10	20	31

33. The total number of highway robberies of mails is slightly less than that for the preceding year, in which they numbered 33. As shown in the marginal abstract the number for 1869-70 is 31. The great bulk of the highway robberies during the year under report occurred in Rajpootana and Central India, and probably resulted in some degree from the severe pressure of the famine in those parts of the country.

34. The localities in which the robberies occurred are given below:—

	British Territory.		Foreign Territory.	
Bengal Circle ...	Midnapore ... 2 Dinagepore ... 1	Besides one attack in Chumparun.		
Madras Circle ...	Nellore ... 1 Bellary ... 1	... ...	Hyderabad ... 5 Mysore ... 1	
Bombay Circle ...	... ...		Guzerat ... 1 Kattiawar ... 1	Besides two attacks. Besides one attack.
N. W. P. Circle ...	Etawah ... 1 Meerut ... 1 Ajmere ... 1 Mozuffernuggur ... 1	Besides two attacks in the Agra District.	Jeypore ... 4 Bhurtpore ... 1 Dholepore ... 1 Gwalior ... 3 Tonk ... 1 Indore ... 1 Rampore ... Maywar ... Dewas ... Marwar ...	Besides three attacks. Besides one attack. Besides one attack. Besides two attacks. Besides one attack. One attack in each.
Punjab Circle ...	Kurnal ... 1	... ...	Puttiala ... 1	
Central Provinces Circle ...	Seonee ... 1			
	Total ... 11	Besides three attacks.	Total ... 20,	Besides fifteen attacks.
	Grand Total ... 31 Besides eighteen attacks.			

35. The persons employed permanently in the Post Office Department number 24,819, as per margin, being an increase of 1,562 as compared with the preceding year. Half of this increase is under the head of peons consequent on the increase of correspondence and the establishment of new Post Offices. The distribution of the establishments in each Circle is given in Appendix X.

	1868-69.	1869-70.
Inspecting Post Masters ...	99	101
Post Masters and Deputy Post Masters	1,903	2,172
Clerks	1,684	1,761
Peons, &c.	4,512	5,248
Road Establishment ...	15,059	15,537
TOTAL ...	23,257	24,819

SECTION VI.—NON-POSTAL BRANCHES OF THE DEPARTMENT.

36. In the Bullock Train Branch of this Department considerable alterations took place during the year under report consequent mainly on extensions of railway. The number of Bullock Train Offices are now 63; and the lines of communication consist of a main line from Calcutta to Peshawur, with branches to Darjeeling, Jubbulpore, Lucknow, Fyzabad, Futtehgurh, Indore, Landour, Simla, Ferozepore, Mooltan, Sealkote, and Murree.

37. The military transport train organised for the first time during the winter season of the preceding year between Jubbulpore and Nagpore, for the purpose of conveying the annual military reliefs, was again organised during the winter of the year under report. This train will not be again required owing to the subsequent completion of railway communication between Bengal and Bombay. The cost of this train has, as in the preceding year, been charged to the Post Office Department, because, although required solely for military purposes, it was organised and worked by this Department.

38. In the Punjab Military Van Dâk considerable alterations were made, owing partly to railway extension and the consequent diversion of the establishment to other lines. The lines now served by the Punjab Military Van Dâk consist of a main line from Lahore to Peshawur with branches to Sealkote and Murree (during summer), of another line from Lahore to Ferozepore, and of another from Umritsur to Pathankote.

39. Passenger services were also maintained on other lines in connection with mail cart establishments.

40. In the Government Resolution of the 31st October 1868, No. 3021, reviewing my annual report for the year 1867-68, it was stated that the contracts entered into by Government with the British India Steam Navigation Company, although based to a large extent on grounds independent of postal considerations, should, as a matter of convenience, be brought under the supervision and control of the Post Office Department, and this was accordingly done from the commencement of the year under review. These lines of steam communication have already formed the subject of remark in a preceding paragraph (8).

41. The financial results of these non-postal branches will be exhibited in the following section side by side with the financial results of the purely Postal Department.

SECTION VII.—FINANCIAL RESULTS.

42. The financial results of the year under report are to my mind extremely satisfactory. To compare these results with those of preceding years, it is necessary to bear in mind that the discount on the sale of stamps (Rs. 1,38,429) has for the first time been deducted from the receipts shown in the accounts, thus showing an apparent decrease of revenue to that extent. The revenue (embracing that derived both from official and private correspondence) has decreased by only Rs. 44,710 (and would have increased by nearly a lakh, but for the above-mentioned deduction). If official postage be excluded, the revenue has fallen by Rs. 1,77,320 (and would have fallen to the extent of only Rs. 38,891 but for the above-mentioned deduction); but when it is remembered that the effect of doubling the limit of weight was originally estimated at a loss of six lakhs, the satisfactory character of this result will be obvious. Although of course the Department has lost its usual annual increment* of revenue, the Government will doubtless consider this loss as one fully compensated by the great boon resulting from the doubling of the limits of weight allowed for letters at the several rates of postage. I am confident that this boon has been fully appreciated by the public in this country, and I feel sure also that it will eventually promote even the financial interests of the Department itself.

43. The expenditure in the purely Postal Department during the year under report has increased by somewhat over two lakhs. I had anticipated a much larger increase, for, as stated in paragraph 63 of my previous report, the effect of various changes involving increased expenditure had only partially affected the returns of the year 1868-69, leaving a considerable portion of their effect to fall upon the year now under report. Besides this the expenses resulting from the severe famine of 1869 were necessarily heavy, increased pay having in many cases to be given to the runners as well as to the horse-owners on some of the principal mail cart lines. Further, the charge for haulage of railway sorting carriages, ordered by Government to be paid for the first time in the middle of the previous year, has of course been greater during the year under report, the amount being about one lakh for 1869-70 as compared with half a lakh for the previous year. This addition of half a lakh to the expenditure is of course more nominal than real, the interest payments to the guaranteed railways being correspondingly reduced. Yet, notwithstanding these circumstances, the increase of expenditure has been very moderate. It would have been much larger but for the strenuous efforts made during the year to curtail expenditure in every possible way. These efforts had a very appreciable effect upon the expenses of the year now under report, but many of the measures resulting from them had effect only from the latter part of the year, and I am happy to be able to assure the Government that the results of the current year will be even more satisfactory than those of the past year.

44. Indeed, I may confidently express the hope that the current year will form an exception to the long list of years in which the expenditure of this Department has increased, and will show, instead of an increase, a very considerable decrease. Financially, therefore, I regard the present prospects of the Post Office as better than they have ever been before, for while I confidently look to an increase of revenue, I look also with equal confidence to a decrease of expenditure.

45. If towards the end of this year I find that actual results confirm the anticipations above expressed, I purpose again bringing under the consideration of Government the question of a half-anna rate for newspapers and book packets, feeling sure that, under the expected favorable circumstances, the Government will feel disposed to introduce a measure which will certainly tend to increase the circulation of newspapers, both English and Vernacular, as well as of trade circulars, books, and other printed matter; and which,

* The following extract from my last report for 1868-69 gives a recapitulation of annual increments:—

"For the nine years from 1858-59 to 1867-68, the yearly increase in the revenue from private correspondence varied considerably, the average increase being 1¼ lakhs, and the largest increase (in 1862-63) Rs. 2,15,886. This year (1868-69) the increase is Rs. 3,31,097."

though it may give rise to some loss on first introduction, will probably after no long time bear fruit in the shape of considerably increased circulation and consequently increased revenue.

46. I now proceed to give the usual financial statistics both as respects the Post Office proper and the several non-postal branches of its administration. These are exhibited in detail in Appendices XI and XII, the general results being shown in the following abstract :—

	1868-69.	1869-70.
PURELY POSTAL SERVICE.	Rs. A. P.	Rs. A. P.
Receipts, including official postage and sale of service postage stamps	68,60,720 12 3	68,16,010 9 4
Receipts, excluding official postage and sale of service postage stamps	41,05,704 4 3	39,28,383 5 10
Disbursements	53,70,201 15 8	55,96,779 11 4
Net revenue, including official postage and sale of service postage stamps	14,90,518 12 7	12,19,230 14 0

Contract Subsidies to Local Steamers engaged primarily for Non-Postal Services.		
Disbursements	*Nil.*	5,05,574 7 8

Briefly stated, these results show—

		Rs.	
(1).	A net revenue in the purely Postal Department of ...	12,19,230	if official postage be included.
(2).	A net deficit ditto ditto of ...	16,68,396	if official postage be excluded.
(3).	A net revenue in the Bullock Train of	31,630	
(4).	A net revenue in the Punjab Military Van Dâk ...	3,657	

47. As already stated, the receipts for the year now under report and the deduced amounts of net revenue have for the first time been reduced by deduction of the amount of discount on the sale proceeds of postage stamps, amounting to Rs. 1,38,429.

48. The comparatively small net revenue derived from the Bullock Train Department is due partly to the famine rates which had to be paid for the bullocks, and partly to the fact that during the year under report certain payments were made from this head in aid of the district dâks the management of which was transferred to this Department.

49. The increased famine rates for horses are also the cause of the small net revenue in the Punjab Military Van Dâk. Had it not been for these rates, there would have been a very handsome profit in this branch of the Department.

50. The "Passenger Service on Mail Cart lines" shows neither loss nor gain, the fact being, as explained in previous reports, that it is impossible to divide the expenses into those incurred for passengers and those incurred for the mails; and that the passenger receipts are consequently treated as a set-off against the cost of the mail service, only the net cost being debited to the Postal Department, and the remainder with the corresponding receipts being shown under the head of Non-Postal Branches.

51. As explained in my previous report, the Military Transport Train shows no receipts, being merely a troop carrying agency managed and paid for by the Post Office, but placed at the disposal of the military authorities. As already stated, the Military Transport Train was finally abolished on the recent completion of railway communication between Bengal and Bombay.

52. The contract subsidies to local steamers paid during the year amounted to only about five lakhs, being about two lakhs less than the amount due under the several contracts for a whole year. This is owing to the adjustment of payments being somewhat in arrear, the Department having undertaken their payment for the first time during the year under report.

53. As in previous reports, I give on the margin certain items not included in the regular accounts. This statement shows a much less total than in previous years, owing to the incorporation in the regular accounts of the greater portion of the charges previously shown under this head, *e. g.*, discount on sale of stamps, which has this year for the first time been deducted from the revenue, and subsidies for local steam services, which have this year been actually paid by the Post Office Department (instead of by local Governments), and have consequently appeared in the regular accounts previously given. The estimate given in respect of English stores is the same as for the previous year, the Government having made no estimate on that account for the year under report, and this Department having been unable to obtain information as to the exact amount spent in England.

Railway free service (estimate)	...	1,50,000
English stores (estimate)	...	31,310
TOTAL	...	1,81,310

SECTION VIII.—GENERAL REVIEW OF PROGRESS SINCE 1854.

54. As usual, I annex a Return (Appendix XIII) showing the number of letters and newspapers received for delivery in each year since the introduction of the Post Office Act of 1854. An abstract comparison of the results is given on the margin, which shows the enormous extension of the operations of the Department during the last sixteen years.

Number of letters and newspapers received for delivery in the year under review as compared with the numbers received in the year prior to the introduction of the Post Office Act of 1854.

A year before the Act XVII of 1854 came into operation	...	19,082,676 = 100
1868-69	...	74,664,817 = 391
1869-70	...	83,032,957 = 435

55. Appendix XIV shows the progress of purely postal revenue from 1853-54 up to date. The abstract on the margin relates to the revenue from private correspondence, that of 1855-56 (the first complete year after the reduction of postage rates in 1854) being represented by 100, and the revenue of the last six years in like proportion. As previously explained, the reduction of revenue from private correspondence in the year under report is due to a very small extent only to actual decrease (caused bythe alteration of the scale of letter postage), the main difference being due to a change in account under which, in accordance

YEAR.	Percentage.
1853-54, last complete year of former rates	128
1855-56, first complete year	100
1864-65, tenth ditto	214
1865-66, eleventh ditto	223
1866-67, twelfth ditto	230
1866-67, (ditto exclusive of Straits Settlement)	227
1867-68, thirteenth ditto	237
1868-69, fourteenth ditto	258
1869-70, fifteenth ditto	246

with recent Government orders, the discount on the sale of stamps has been treated as a deduction from revenue.

SECTION IX.—NOTICES OF POST OFFICE OFFICIALS.

56. As directed in the Government Resolution of the 17th February last, I proceed to name a few Officers in the Department who have merited special mention. And in doing this I ought to explain that it is not my purpose to attempt to bring forward all those who have distinguished themselves by industry and efficiency. To do so in a large Department like this would be almost impossible; and I confine my notice therefore to the cases of those who, having been charged with special duties of importance, have discharged them in a particularly satisfactory manner. In the Bengal Circle, the Officers whom I would mention are Mr. John Dillon, Baboo Deno Bundhoo Mitter, and Baboo Soorjee Narayen Banerjee, all Inspecting Post Masters. The uniform industry and energy displayed by Mr. Dillon in the management of what is called the railway division led to his selection towards the close of the year under report for the difficult duty of organising at Allahabad a new system of railway frontier sorting rendered necessary by the large extensions of continuous railway transit; and, although the working of this system, as yet even in its infancy, will fall more appropriately for comment in the report of the current year, I am glad to be able to bear testimony to Mr. Dillon's exertions in the difficult task connected with its first organisation in the year under report. Baboo Deno Bundhoo Mitter has been mentioned with primary reference to the help which he afforded in the organisation of arrangements for controlling the district posts in the various districts of Bengal where the management of those dâks was made over to the Imperial Post Office. The success of these arrangements has already formed the subject of remark in a preceding section (district post), and I have pleasure in stating here that this success was in no small degree due to the interest and energy displayed by Baboo Deno Bundhoo Mitter. I have also mentioned Baboo Soorjee Narayen Banerjee, because during the year under report, as also in previous years, he displayed unusual energy and fertility of resource in improving the transit of mails in the very difficult Province of Assam. He has since been of great use on the mail cart and bullock train line on the Darjeeling Road, the efficiency of which had been seriously impaired by the maladministration of his predecessor whose connection with the Department has now ceased.

57. In the Madras Circle I would mention Messrs. Kellie and Bonafacio, who were charged with the duty of organising an entirely new route for the mails between Madras and Bombay through a most difficult portion of the country; both of these Officers suffered severely in health from long-continued exposure to which this duty subjected them, and deserve special notice for the success which attended their efforts.

58. In the Bombay Circle one of the principal features of the year was the successful working of the sea-sorting system which had been organised experimentally in the previous year. I think it right, therefore, to mention Mr. Stuart, Post Master of Bombay, whose untiring attention in the control of the sea-sorting establishment was most commendable, as well as Messrs. Barwise and Hutton who have proved themselves to be the best mail officers of the establishment.

59. In the Punjab Circle I would bring to notice the services of Mr. Faichnie, who, during a most trying year of famine, had special difficulties to contend with in the maintenance not merely of extensive lines of mail cart and bullock train, but also of the Punjab military van dâk, the lines of which underwent changes and extension in an unusual degree and at an unusually difficult time.

60. I may conclude this report by expressing my appreciation of the hearty and efficient co-operation received by me from all the Officers in charge of postal circles, including not merely the Post Masters General of Bombay (Major Battye), of Madras (Colonel Pears), of Bengal (Mr. Hogg), of the Punjab (Captain Lane), and of the North-Western Provinces (Mr. Hutchinson), but also the Chief Inspectors of British Burmah (Major Fanshawe), of Sind and the Persian Gulf (Mr. Beauvais), and of the Central Provinces (Mr. Douglas). Mr. Douglas, who acted as Chief Inspector of the Central Provinces during the year under report, was, towards the close of it, appointed to officiate as Compiler of Post Office Accounts, in which capacity also he has rendered eminently good service.

APPENDIX No. I.

Statement showing the number of Post Offices and Letter Boxes, which were opened during the years 1868-69 *and* 1869-70.

Names of Postal Circles.	Post Offices		Letter Boxes		Total

* Including sale of Service Postage Stamps.
† The apparent reduction is to a large extent nominal, owing to the introduction of a new system of accounting for Official Postage, under which a portion of the official correspondence between Government Officers in the same District is not brought to account.
‡ These amounts are less by Rs. 1,38,429-2-3 than they would have been under the former mode of calculation, owing to the deduction for the first time in 1869-70 of the discount on sale of stamps.

No. 2951, dated 11th November 1870.

RESOLUTION.—By the Government of India, FINANCIAL DEPT.

Read—

The annual report on the operations of the Post Office of India for the year 1869-70.

RESOLUTION.—The following improvements were effected during 1869-70 in respect to communication by the Post Office with foreign countries:—

(1). The charge for carrying packets of books and patterns to the United Kingdom below 2 oz. in weight was largely reduced.

(2). Opportunity was given for sending letters to Europe *viâ* Brindisi.

(3). The rates of postage to several foreign countries were lowered.

On the other hand, certain privileges little used were withdrawn from officers in the Army in respect to letters sent to the United Kingdom.

2. There has not been much increase in the employment of steam vessels for the carriage of the internal correspondence of India, nor is much development to be expected in this respect.

The Director General of the Post Office should report whether the service between Bussorah and Bagdad is required by the Indian Post Office. The Foreign Department should be also invited to state, after consulting, if it be thought proper, the Government of Bombay, whether the maintenance of the line is required for the political interests of India.

3. The increase in the limit of weight conceded from the 1st April 1869 appears to have produced excellent results in every respect: the financial loss being very much less than was expected, and a large growth in the number of letters carried being attributed to the measure.

4. The increased charge for carrying pattern parcels was quite legitimate. There appears no reason to think that it has led to any reduction in the number of parcels despatched.

The introduction of a liberal scale of uniform rates for banghy parcels will probably lead to a large increase of such parcels.

5. The measures adopted by the Director General for improving the railway sorting arrangements and for utilising the development of the railway system for the requirements of the Post Office generally, are approved.

6. It is satisfactory to find that notwithstanding the financial pressure of the year and the economy enforced in the management of the Department, so many as 262 Post Offices and 515 letter boxes were added to those previously existing. The progress made in Bengal, Bombay, and the Punjab is notable, and compares favorably with the statistics of the other provinces. British Burmah appears to be especially backward, only two Post Offices and no letter boxes having been added in the two years. This is the more remarkable as the knowledge of reading and writing is believed to be more wide spread there than in India. But the number of letters carried in Burmah appears to be remarkably less than in India—scarcely exceeding half a million in the year. Letter boxes appear to be little used also in the Madras Presidency and in the North-Western Provinces. In future, the total number of Post Offices and letter boxes open at the end of the year in each province should be brought forward in Appendix No. I.

7. There has been no great increase in the mileage traversed by the mails during the year. It should be stated whether Appendix II contains the district lines as well as the imperial line.

8. The statistics of the purely postal work of the Department during the year are highly satisfactory, exhibiting, as they do, an increase of 11½ per cent. in the number of letters and 11¼ per cent. in articles of every kind. An examination of Appendix III shows that this increase is very general in every province in India. The apparent decrease in the Punjab is due to the separation of the Sindh Division. Apart from this, the only observable decrease of the least importance is in the number of newspapers carried in the Bombay Presidency, which fell from 1,288,748 in 1868-69 to 1,234,444 in 1869-70. But this also is probably due to the transfer of the Turkish Arabia mails to the Sindh Circle and of the Berars to the Central Provinces. The Governor General in Council is satisfied with the growth of correspondence which has responded to the liberal policy in respect to weight already referred to.

It would be interesting if in future reports the Director General could give himself or reproduce from the report of the British Post Office separate comparative statistics of the correspondence with the United Kingdom.

9. The Governor General in Council, while admitting the peculiar difficulties attending the operations of the Dead Letter Office in India, agrees with the Director General that there is room for much improvement in this Department, and hopes that particular attention will be given to it. Appendix IV should give the *totals* for each Office.

10. It is to be regretted that statistics cannot conveniently be given of mis-sent articles, as it is difficult, without such statistics, to form a complete opinion upon the working of the Post Office. Inaccurate figures are, of course, worse than useless; but the Governor General in Council is desirous that the attempt to secure an accurate account of the facts in this respect should not be given up.

11. The returns of labels sold show, as was to be expected, a great decrease in the use of 1, 2, and 4-anna labels. The fact will doubtless be borne in mind in indenting for supplies from England.

12. The success which has attended the management of the District Post by the Imperial Department is gratifying, and the Government of India hopes that the system will be everywhere extended without delay. The special attention of the several local Governments will be invited to the section of the report which treats of the District Post, and to these remarks. The future progress of the Post Office must largely depend upon the good administration of the District Post, which is very unlikely to be effected by the District Officers, who have their hands full of other work. The appointment of a Chief Inspector in Oudh has been sanctioned separately. The proportion of letters returned undelivered in the North-Western Provinces and the Punjab is especially unsatisfactory.

13. The Governor General in Council agrees with the Director General in doubting the value of the return (No. VIII) of complaints made, and it may be discontinued; but the subject should always be referred to, and specially numerous complaints in any circle reported.

The return of offences committed in the Department shows that, as a body, the officers have behaved well.

14. The special attention of the Foreign Department will be invited to the large number of highway robberies of mails in foreign territories as detailed in paragraph 34 of the report. It is probable that the scarcity in Rajpootana may account for some of these outrages.

15. The administration of the bullock train, the military van dâk, and the passenger service, appears to have been efficient, though the profits have been curtailed by the costliness of forage arising from the scarcity. The profits of the bullock train should always be stated in full, any portion of them expended on other branches of the Department being shown against the branches debitable.

16. The Government agrees with the Director General in considering the financial results of the year's operations generally satisfactory. Some loss of net revenue was, of course, to be expected as the result of doubling the limit of weight of letters. Moreover, there have been many adverse circumstances

affecting the Postal Department during the year, besides the charge of discount for the first time. That the loss should be so little (only Rs. 2,71,288) must be attributed to the success of the measure for increasing the limits of weight being greater and more prompt than was expected, and to the careful economy exercised by the Director General of the Post Office. The charges in England should always be shown as an actual charge of the Department before bringing out the net revenue or deficit.

Some explanation should be given of the considerable increase in the charge for official postage. The increase of Rs. 1,41,920 in the Bombay Presidency is especially remarkable.

17. It is gratifying to learn that the finances of the present year are so flourishing that the Director General hopes to be in a position to propose further concessions to the public. The Government will always be glad to consider any such proposals in a liberal spirit, provided, at any rate, that they involve no encroachment on the general revenues.

18. The progress of the Department since 1854 as exhibited in paras. 54 and 55 shows unmistakeably that the principles which have succeeded in Europe have also succeeded in India beyond the most sanguine expectations. The Government does not doubt that this progress will continue.

19. The Governor General in Council has read with much pleasure the favorable report made of the officers named in the margin, and he desires that the commendation of the Government may be conveyed to them.

Major Battye.	Major Fanshawe.	Mr. Kellie.
Colonel Pears.	Mr. Beauvais.	Mr. Bonafacio.
Mr. F. R. Hogg.	Mr. Douglas.	Mr. Stuart.
Captain Lane.	Mr. John Dillon.	Mr. Barwise.
Mr. Hutchinson.	Baboo Dinno Bundhu Mitter.	Mr. Hutton.
	Baboo Surjee Narain Bannerjee.	Mr. Faichnie.

20. The thanks of the Government of India are again due to Mr. A. McL. Monteath for his zealous, able, and economical administration of the important Department over which he presides.

ORDERED, that the foregoing Resolution be communicated to the Director General of the Post Office of India for information and guidance, and to the Comptroller General of Accounts.

Ordered also, that a copy be forwarded to the Foreign Department for information and further orders.

Ordered further, that a copy of the Report and Resolution be sent to the Home Department for publication in the Supplement to the *Gazette of India*.

SUPPLEMENT TO

The Gazette of India.

CALCUTTA, SATURDAY, NOVEMBER 19, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 11th November 1870.

PRESENT:

His Excellency the Viceroy and Governor General of India, K. P., G. C. S. I., *presiding.*
His Honour the Lieutenant Governor of Bengal.
The Hon'ble John Strachey.
The Hon'ble Sir Richard Temple, K. C. S. I.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble H. W. Norman, C. B.
The Hon'ble D. Cowie.
The Hon'ble Francis Steuart Chapman.
The Hon'ble J. R. Bullen Smith.
The Hon'ble F. R. Cockerell.

PRISONERS' BILL.

The Hon'ble MR. COCKERELL moved that the Bill to consolidate the law relating to Prisoners committed by a Court be referred to a Select Committee with instructions to report in a month. He said that the nature and object of the legislation of which this Bill formed a part, had been so frequently dwelt upon by his hon'ble and learned friend who had especial charge of the Legislative Department (Mr. Stephen) that it was unnecessary for him to advert to

them here. The great advantage to be derived from a complete consolidation of the statutes must be universally acknowledged; and the substitution of one Act for seven could hardly be ranked amongst the measures obnoxious to the charge of over-legislation.

The adoption of such amendments of the existing law as were shewn to be required was of course an important element in the work of consolidation.

As regards the present Bill, the proposed alterations were confined to improvements in wording and arrangement.

The seven Parts of the Bill contained the substance of seven out of the nine enactments cited in the schedule; the provisions of the other two were enacted for a temporary purpose and were now obsolete.

The enactments so consolidated, embraced so much of the entire law (except the recently passed Prisons' Act) relating to prisoners as could not be effected by the action of the local Legislatures.

The Motion was put and agreed to.

CATTLE TRESPASS BILL.

The Hon'ble MR. COCKERELL also moved that the Bill to consolidate the law relating to Cattle Trespass be referred to a Select Committee with instructions to report in a month. He said that this also was a consolidation measure, incorporating with the original Cattle Trespass Act (III of 1857), the substance of the subsequent amending enactments.

When introducing the Bill, he (MR. COCKERELL) explained the grounds of the then proposed alterations. Since the Bill had been drawn, it had been brought to notice that the restriction contained in section 13, in regard to the appropriation of surplus funds accruing from fines and other receipts, worked inconveniently, and that it was desirable to extend the area of the objects on which such funds might be expended.

It had also been suggested that the provisions of section 15 should be enlarged so as to strengthen the hands of the officers employed in the conservation of forests, in the prevention of injury caused by the trespass of cattle.

The Motion was put and agreed to.

BENGAL REGULATIONS REPEAL BILL.

The Hon'ble MR. COCKERELL then moved that the Hon'ble Messrs. Strachey and Chapman be added to the Select Committee on the Bill to repeal certain obsolete Regulations of the Bengal Code.

The Motion was put and agreed to.

The following Select Committees were named:—

On the Bill to consolidate the law relating to Prisoners committed by a Court——The Hon'ble Messrs. Stephen and Chapman and the mover.

On the Bill to consolidate the law relating to Cattle Trespass——The Hon'ble Messrs. Stephen and Chapman and the mover.

The Council adjourned to Friday, the 18th November 1870.

REMARKS.

The mean volume of the Ganges Canal passing the Roorkee guage was 2,839 cubic feet per second.

Volumes discharged were :—

Tail, Etawah Branch 23 c. ft. per sec.
Escapes „ „ 438 „ „
Tail. Cawnpore „ 212 „ „
Escapes „ „ No returns.

673 c. ft. per sec.

The Cawnpore and Etawah Branches have alternate weeks of high and low supply. The guage-readings show the mean of the month.

Futtehgurh Branch main channel was closed during the month.

The demand for water on the Ganges Canal was very slight.

On the Eastern Jumna Canal the highest flood *in the river since* August 1867, was registered on the 3rd instant; the height on the river-gauge was 12·50. The canal was closed from 8th to 12th, both days inclusive, to pass off surplus drainage-water, there being no demand for irrigation. The river fell rapidly and steadily from the 11th till the end of the month. Demand for water, chiefly for *irrigation of rice*, re-commenced on the 13th instant.

On the Doon Canals water was in fair demand for rice.

* Average for the past six years. Rain-fall previous to 1864 not given.

REMARKS.

396·62 cubic feet per second passed down escapes, being in excess of the requirements for irrigation.

430·68 cubic feet per second discharged by the Boodha Khera escape.

In comparison with the statement of irrigation up to a similar date of last year, we find the approximate decrease on the Baree Doab Canal 14,106 acres, and on the Western Jumna Canal 4,034 acres.

The reasons for the decrease in the Baree Doab Canal were given in June's statement.

It is satisfactory to observe that the decrease is reduced during August by about 10,500 acres.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 18th November 1870.

PRESENT:

His Excellency the Viceroy and Governor General of India, K. P., G. C. S. I., *presiding.*
The Hon'ble John Strachey.
The Hon'ble Sir Richard Temple, K. C. S. I.
The Hon'ble J. Fitzjames Stephen, Q. C.
The Hon'ble B. H. Ellis.
Major General the Hon'ble H. W. Norman, C. B.
The Hon'ble D. Cowie.
The Hon'ble Francis Steuart Chapman.
The Hon'ble F. R. Cockerell.

INDIAN PENAL CODE AMENDMENT BILL.

The Hon'ble MR. STEPHEN presented the final report of the Select Committee on the Bill to amend the Indian Penal Code. This Bill had been much discussed. He hoped to explain at a very early opportunity the policy of the Government in respect to it.

LIMITATION OF SUITS BILL.

The Hon'ble MR. STEPHEN, in moving for leave to introduce a Bill to consolidate and amend the law relating to the limitation of suits, said that this

Bill was one with regard to which it would be improper to occupy the attention of the Council at any length, inasmuch as it was a Bill of a most technical character, although he hoped it would prove to be one of great utility. The present law regarding the limitation of suits, as contained in Act XIV of 1859, contained twenty-four sections, and he was very sorry to say that those twenty-four sections had given rise to nearly 1,100 decisions, so that the law had got into a state which could be easily imagined by those accustomed to reading law-books, and which it would be difficult to describe to others.

It was enough to say that since the Act came into force, there had been more than 125 decisions a year upon it. These decisions had been collected with great care, and discriminated with much learning and intelligence, by Mr. Ninian Thomson, a Judge of the Small Cause Court of Calcutta, in a work which he had lately published on the subject. The work was creditable to Mr. Thomson, but the necessity for it was discreditable to the law. MR. STEPHEN thought it was the duty of the legislature, as soon as it could, to reduce this enormous mass of decisions to a certain number of plain enactments. The general principle on which statutes of limitation were framed was plain and notorious. The practical difficulty of framing them lay in the circumstance that it had been customary to provide that actions should be brought within a certain time "after the cause of action arose." To say when the cause of action arose in particular cases was often very difficult. The Bill proposed to deal with the difficulty by setting forth in a schedule every sort of suit, and stating specifically, in the case of each suit, the precise moment at which the period of limitation began to run. The schedule thus prepared contained 157 different items, and was furnished with a copious index, which would enable anybody to find with ease the law relating to the suit in which he was interested. That was the great feature of the Bill.

Besides that feature, there was another of considerable importance in point of simplification. The Bill repealed different portions of no less than 25 enactments. He need not say much about the substance of the provisions of the Bill itself: they did not greatly alter the substantive law, except in introducing provisions which would enable persons to acquire a title by prescription. This would alter rather the theory than the practice of the law. The schedule was long, but he believed it would be found to embody the substance of the whole of that enormous mass of decisions in which the present law was contained, and that it would very much abridge and simplify the existing law.

The Motion was put and agreed to.

INDIAN REGISTRATION BILL.

The Hon'ble MR. COCKERELL asked leave to postpone his motion to introduce the Bill for the Registration of Assurances.

Leave was granted.

CIVIL COURTS (BENGAL) BILL.

The Hon'ble MR. COCKERELL introduced the Bill to consolidate and amend the law relating to the District and Subordinate Civil Courts in Bengal, and moved that it be referred to a Select Committee with instructions to report in six weeks. He said that the Bill had been published in the *Gazette of India* under Rule 19. It purported to consolidate the law relating to the constitution and jurisdiction of all the Civil Courts (except the Small Cause Courts) subordinate to the High Courts in Lower Bengal and the North-Western Provinces.

There was, he thought, no part of the Statutes which stood in greater need of consolidation than that which related to the subject of this Bill, for the

course of legislation had brought the law regarding the Bengal Courts into such a disjointed state that it was no easy matter at the present time to ascertain the precise legal jurisdiction and functions of a District Judge.

The original legislation on this subject, contained in the Regulations of 1793, and the corresponding Regulations of 1795, 1803 and 1805, which virtually extended the provisions of the former Regulation to Benares and the territories which were then known as the Ceded and Conquered Provinces, combined directions as to the application of substantive law and rules of procedure, and applied only to the Zila or District Courts.

The Courts of Munsifs and Sadr Amíns were first established on their present footing by Regulation XXIII of 1814, and those of Principal Sadr Amíns by Regulation V of 1831. These Regulations specifically prescribed certain rules of procedure for the above Courts, and in general terms extended to them the provisions of the older enactments, which regulated the application of substantive law in the adjudication of litigated matters by the Zila Courts.

The Civil Procedure Code superseded the rules of procedure prescribed by the Regulations, and it thereafter became necessary to set aside the latter by express repeal; but, as in the manner just described, rules as to the application of substantive law and of procedure had become so interwoven, especially as regards the inferior Civil Courts, that the repealing process was inadvertently carried too far, and operative rules were extinguished in conjunction with those which had become obsolete.

Thus it happened that, although nearly all litigation was, at least in its primary stages, carried on in the Civil Courts subordinate to the District Courts, the former were not under any law at present in force bound by the very important rule contained in section 18 of the Bill.

The provision of section 17 also was, in the present state of the law, legally applicable only to the Zila or District Courts.

Section 19 contained a new and useful provision, taken from the law in force in the Madras Presidency.

In Part V (section 28) there was a new provision for dealing with charges of grave misconduct on the part of Munsifs. As those officers were removable from office without the sanction of the Government, Act XXXVII of 1850 would not *per se* be directly applicable to such cases.

The existing law on the subject of Part VI was, as regards the District Courts, held to leave the extent of the power conferred on those Courts for the removal of their ministerial subordinates open to some doubt. The High Court claimed to have, and did in fact, he believed, exercise, a power of interference in such cases.

As the Bill now stood this power was disallowed, and it would be a question for the consideration of the Select Committee to which this Bill might be referred, whether the reservation to the superior Court of a power of interference was expedient.

If the High Court was to have the power of removing the ministerial officers of the District Courts from one District Court to another, he thought it should only be exercised at the instance of a District Judge.

It seemed to be essential to the maintenance of a proper control over his office establishment, and the consequent efficient conduct of the routine business both of the District and Subordinate Courts, that the authority of the Judge for the punishment of misconduct on the part of his ministerial officers should not be impaired by the existence of a power of interference *proprio*

motu vested in a remotely located superior Court; and it would surely be contrary to sound policy to fetter the discretion of so high a functionary as the Judge of a District Court in the government of his office establishment, for whose efficiency he was solely responsible.

In other respects the Bill attempted no more than the reproduction of the substance of the existing law in more concise language, and with a clearer and more intelligible arrangement of its subject-matter.

The Motion was put and agreed to.

INSOLVENCY BILL.

The Hon'ble MR. STEPHEN introduced the Bill to amend the Law of Insolvency, and moved that it be referred to a Select Committee with instructions to report in two months. He said that since he had moved for leave to introduce this Bill, it had been printed and published for public information. He had stated on a former occasion what the principles of the Bill were, and pointed out the manner in which it had been framed on the English law lately passed. The Bill was published while the Council was at Simla, in order to afford to the mercantile community, and especially to the mercantile Members of the Council, the opportunity of forming an opinion on the subject. It would be considered during the winter; but he (MR. STEPHEN) might observe, with reference to a remark he had seen made, that it was a mistake to infer, from the first of January next having been fixed as the date for the commencement of the Act, that there would be any particular hurry about passing the Bill. Such dates were always inserted subject to alteration.

In the mean time he hoped to receive the opinions of the mercantile community, and especially the opinions of the three Chambers of Commerce, on the provisions of the Bill. It had been already approved by the Official Assignee at Calcutta, who had made some valuable observations as to the mode by which frauds might be prevented; and MR. STEPHEN hoped that, before the end of the session, the Bill would be passed into law.

The Motion was put and agreed to.

EVIDENCE AND CORONERS' BILLS.

The Hon'ble MR. STEPHEN also moved that the Hon'ble Mr. Chapman be added to the Select Committees on the Bills to define and amend the Law of Evidence, and to consolidate the laws relating to Coroners.

The Motion was put and agreed to.

The following Select Committees were named:—

On the Bill to consolidate and amend the Law relating to the District and Subordinate Civil Courts in Bengal——The Hon'ble Messrs. Stephen and Chapman and the mover.

On the Bill to amend the Law of Insolvency——The Hon'ble Messrs. Cowie, Chapman, Bullen Smith and Cockerell and the mover.

The Council adjourned to Friday, the 25th November 1870.

H. CAYLEY.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

DEVELOPMENT OF COMMERCIAL RELATIONS BETWEEN RUSSIA AND INDIA THROUGH THE SUEZ CANAL.

Memorandum on the probable effect of the opening of the Suez Canal on the trade of Russia with the East Indies, &c., drawn up by MR. THOMAS MICHELL *from statements published in a report to the Society for the Promotion of Russian Trade by Mr. Skalkoffsky, who represented the Society at the opening of the Suez Canal.*

The Society for the Promotion of Russian Trade and Industry having requested Mr. Skalkoffsky, one of their members, to assist at the opening of the Suez Canal, that gentleman has recently presented the Society with a printed report, of which the following is to a great extent merely an abstract:—

Distances.—Mr. Skalkoffsky points to Odessa as the port to which the trade of Russia with China, India, &c., will ultimately be attracted by the great advantages of the canal route. Odessa is seldom frozen in winter, and will soon be connected by rail with the west of Europe. He expects that the merchandise of the Far East will be transported thence to Moldavia, Wallachia, Galacia, East Prussia, Sweden, and other countries. The advantages of Odessa in respect to distance are shown as follows:—

	From Odessa Nearer than from Southampton round the Cape.	
	via Suez.	
	Nautical Miles.	
To Bombay	8,948	6,792
„ Ceylon	4,548	5,912
„ Calcutta	5,688	5,912
„ Singapore	6,078	5,702
„ Hong-Kong	7,508	5,672

Odessa is nearer to Bombay than the following European ports, *viz.*,—

Trieste	by	152	nautical miles.
Liverpool	„	2,060	„ „
London	„	2,076	„ „
Bremen	„	2,462	„ „
Cronstadt	„	3,412	„ „

Steamers can make the voyage from Odessa to Bombay in the following time, *viz.*,—

	Miles.	*Days.*
Odessa to Constantinople, with stoppage there... ...	352	
Constantinople to Port Said	780	
	1,132	7
Passage of canal with stoppage	...	3
Suez to Aden	1,310	8
Aden to Bombay	1,510	8
TOTAL DAYS ...		26

A steamer will therefore take seven days less in performing the voyage between Odessa and Bombay than between Bombay and Southampton. At

the same rate, the time that a steamer will take between Odessa and the more distant parts in India and China will be as follows :—

	N. Miles.	*Days.*
Odessa to Point de Galle	4,588	29
„ Calcutta	5,688	35
„ Singapore	6,078	37
„ Hong-Kong	7,508	43

East Indian cotton shipped at Bombay in sailing vessels reaches Moscow in the following number of days :—

	Days.
Bombay to London	110
London to St. Petersburg in steamer	14*
St. Petersburg to Moscow	4
TOTAL ...	128

whereas if shipped to Odessa *viâ* Suez in a steamer, the time occupied would only be 33 days, thus :

	Days.
Bombay to Odessa	27
Odessa to Moscow	6
TOTAL ..	33

or a gain of 95 days.

The following are the distances between Odessa and Moscow and St. Petersburg by rail now opened :—

	Versts.	*Stat. Miles.*
Odessa to Moscow	1,567½	1,045
„ St. Petersburg	2,171	1,447

Cost of carriage.—The present mean cost of carrying Indian produce to St. Petersburg *viâ* the Cape of Good Hope and England is shown in the following Table :—

Table A.

Goods.	Freight		Total mean freight to St. Petersburg *viâ* the Cape.
	To London.	London to St. Petersburg.	
	Per Ton.	*Per Ton.*	*Per Ton.*
Cotton (from Bombay)	30*s.* to 35*s.*	26*s.* 6*d.*	59*s.*
Tea („ Calcutta)	60*s.*	20*s.*	80*s.*
Indigo („ „)	75*s.*	40*s.*	115*s.*
Coffee („ Bombay)	35*s.*	27*s.* 6*d.*	62*s.*
Pepper („ „)	20*s.*	20*s*	40*s.*
Dye-wood („ „)	20*s.*	30*s*	50*s.*
Oil („ Calcutta)	45*s.* to 50*s.*	30*s.*	77*s.* 6*d.*
Tin („ Singapore)	40*s.* 6*d.*	22*s.*	62*s.* 6*d.*

In autumn the freights from London to St. Petersburg sometimes rise to 45*s.* a ton.

The carriage of the above goods to Moscow, the centre of the internal trade of Russia, is calculated to cost 55*s.* to 83*s.*-4*d.* per ton (33 copecks to 50 copecks per pood†.)

* Inclusive of transhipment at Cronstadt, clearance at Custom House, &c.

† The rouble has throughout been converted at the exchange of 32*d.* The present rate of exchange is 29*d.* to the rouble.

Mr. Skalkoffsky shows that goods of a value of not less than £9-9-0 per ton will alone bear the present cost of carriage by the canal, and that the greater part of the goods carried between India and Europe come under that category, excepting linseed, raw sugar, rice, jute, wood, iron, &c.

The present rate of freight from Bombay to Trieste by the Suez Canal is about £5 per ton, but it will necessarily fall when greater competition comes into play. Although Trieste is further from Bombay than Odessa, yet the freight per steamer to the latter port remains higher on account of the transit dues in the Bosphorus and the greater dearness of coal at Odessa. At the same time, it will always be more difficult to find a return cargo at Odessa than at Trieste.

The following is a complete list of the goods which Russia at present obtains from Egypt, Africa, East Indies, China, Japan, the Indian Archipelago, and Australia :—

Aniseed.
Arrowroot.
Asafœtida.
Camphor.
Cardamoms.
Cassia.
Catechu.
Caoutchouc.
Cigars, Manilla.
Cinnamon.
Cloves.
Clove-heads.
Cochineal.
Cocoa.
Coffee, Mocha.
„ Java.
„ Malabar.
„ Ceylon.
Cotton, Egyptian.
„ Bombay.
Australian copper.
Cubebs.
Dye-woods.
Dates.
Ebony-wood.
Ginger.
Gutta-percha.
Gums, various.
Indigo.
Ivory.
Mace.
Mother-o'-pearl.
Nitre.
Nutmegs.
Nux vomica.
Oil, aniseed.
Oil, cassia.
„ castor.
„ cinnamon.
„ clove.
„ cocoanut.
„ palm.
Pepper.
Plumbago (Ceylon).
Porcelain (Japan and China).
Rice.
Rum.
Rhubarb.
Sago.
Sapan.
Safflower (Bengal).
„ (Bombay).
Sulphur.
Silk, raw.
„ spun.
„ waste.
„ manufactured.
Salammoniac.
Senna leaves.
Spices, various.
Shellac.
Teak.
Tamarinds.
Turmeric (Bengal).
„ (Java).
Tortoise-shell.
Tobacco.
Tea, Canton.
„ Japan.
„ East Indies.
Wool.

The greater part of the goods enumerated in the foregoing list are imported in very small quantities. The principal importations have been under the following heads since 1867 :—

Imported into Russia in 1867, *in* 1868, *in* 1869.

	Poods.*		
Cotton (over the European frontier) ...	2,535,991 ...	2,310,229 ...	2,973,634
Indigo	47,341 ...	47,087 ...	47,030

* The Russian Pood is equal to 36·08lbs. avoir.

	Poods.*		
Silk, raw	5,593 ..	6,035 }	14,807
„ spun...	9,697 ...	8,090 }	
Rice	347,683 ...	385,541 ...	442,835
Sago	1,224 ...	1,944 ...	...
Coffee	407,193 ...	368,177 ...	466,665
Gum	78,541 ...	78,543 }	70,579
Caoutchouc	18,248 ...	30,364 }	
Tin	49,762 ...	50,407 ...	119,073
Pepper	80,155 ...	69,508 }	105,947
Ginger, clove-heads, mace	25,364 ...	16,193 }	
Cloves, cinnamon, nutmegs	12,290 ...	9,238 ...	9,488
Tea over European frontier	465,587 ...	584,785 ...	573,989
Copper	129,819 ...	179,733 ...	181,368
Dye-woods	470,474 ...	404,056 ...	523,322
Nitre	123,397 ...	52,517 }	Included
Gum benzoin	20,845 ...	19,965 }	under
Gall-nuts	16,004 ...	16,006 }	other
Plumbago...	45,785 ...	14,945 }	heads.

On the assumption that one-third of the cotton shown above is Indian, and half of the coffee from Java, &c., and without including some of the minor items, the total weight of Asiatic goods imported into Russia through Custom House on the European frontier is about 40,000 tons, of which a tenth part is brought to ports in the south of Russia.

The trade of those ports, and of Odessa in particular, will, however, be considerably improved by the railway communication now established with Moscow and St. Petersburg.

Mr. Skalkoffsky makes the following interesting observations respecting the goods of Asiatic origin consumed in Russia:—

1. *Cotton.*—Cotton is the most important article of trade between India and Russia. The quantity annually imported on the European frontier of Russia is nearly three million poods (48,000 tons). In 1868 a supply of two and a half millions was drawn from the following countries, *viz.*,—

From England	1,096,130	Poods.
„ Prussia	1,030,206	„
„ Hanseatic towns	52,859	„
„ Austria	12,737	„
„ Turkey	2,916	„
„ United States	1,15,253	„
„ Roumania	128	„

The cotton spinners of Russia purchase the raw material in Liverpool and London through their agents at those ports, but the bulk of the cotton used in Russia, and particularly at Moscow, is imported by the Bremen House of L. Knoop, who have agents at Bombay and New York.

It is chiefly imported at St. Petersburg (1,228,405 poods), but a considerable quantity (848,545 poods in 1868) is brought over the land frontier from Königsberg.

East Indian and Egyptian cotton is now being brought direct to Russia by the Suez Canal route.

The use of Egyptian cotton is very limited in Russia, owing to its price, and particularly from its high quality.

It is used for spinning numbers above 60, whereas the Russian mills chiefly produced the numbers between 6 and 42. It is, however, being more and more used in spinning fine yarns for mixed woollen goods.

* The Russian Pood is equal to 36 08lbs. avoir.

The present price of Egyptian cotton at Moscow is R. 16 to R. 17 per pood (about £6-16-7 per cwt.), or between 1*s.* and 1*s.* 2*d.* per lb.

According to the returns of the British Board of Trade, the cotton imported into Russia in 1867 had been derived from the following countries, *viz.*,—

United States	205,435	cwts.
Brazil	80,920	„
Egypt	3,629	„
East Indies	127,606	„
Other countries	9,880	„
Total ...	427,470	cwts.*

Mr. Skalkoffsky states that the total quantity of Indian or Surat cotton now brought to Russia is 20,000 tons per annum. It is imported from Bremen as well as from Liverpool, and a small quantity comes in by way of Trieste, since the Railway tariff between that port and St. Petersburg has been reduced to 70 copecks per pood (5*s.* 9*d.* per cwt.)

The use of Surat cotton in Russia is constantly on the increase, and keeps pace with the increase in the consumption of all cotton goods that are used by the masses of the people.

The yearly increase in the consumption of raw cotton in Russia is estimated by the manufacturers of Moscow at 3 per cent. It is now an article of prime necessity in Russia, and the slightest fall in its price has the most favourable effect on its consumption.

In 1869 the prices of East Indian cotton at St. Petersburg fluctuated between R. 12¼ and R. 14½ per pood (£5-1-4 and £6-0-0 per cwt.)

In Moscow the prices are generally 50 copecks per pood (4*s.* 2*d.* per cwt.) higher.

The present cost of carrying East Indian cotton to Moscow is about 85 copecks per pood (7*s.* per cwt.), thus:—

To Liverpool *vid* the Cape	30*s.*	to 50*s.*	per ton.
„ „ Suez	60*s.*	to 80*s.*	„
Liverpool to St. Petersburg, 20c. to 25c. per pood ...	33*s.* 4*d.*	to 41*s.* 8*d.*	„
St. Petersburg to Moscow, 35c. per pood ...		58*s.* 4*d.*	„

Taking the freight of cotton from Bombay to Odessa by the Suez Canal at £3 to £4 per ton, and by rail from Odessa to St. Petersburg at 60 to 70 copecks per pood (5*s.* to 5*s.* 9*d.* per cwt.), the cost of carriage by way of Suez will be slightly greater than *vid* the Cape, Liverpool, and St. Petersburg, but the gain in time by the former route will fully make up for the extra cost of carriage. Mr. Knoop, the great importer of cotton, is of opinion that 3,000 to 4,000 bales might at once be imported into Russia each month from Bombay by way of the Suez Canal and Trieste or Odessa, and that as much as a million poods (16,500 tons) per annum will, in all probability, be imported into Russia by that route.†

The East Indian cotton that best suits the Russian market is the saw-ginned Dharwar, both the "fair" and "good" qualities.

There is no duty on the importation of raw cotton into Russia.

* This estimate is probably based on the Russian returns, with which it agrees.

† A great increase has taken place within the last year in the importation of cotton from Central Asia, which is supposed to be capable of producing 3 million poods annually (48,000 tons), *viz.*, Bokhara 2 million poods, Khiva ½ million, independent Khanats ½ million, and Kokan 300,000 poods. The price of raw cotton at Tashkend has this year been R. 5-50 per pood (45*s.* 8*d.* per cwt. at 32*d.*)

2. *Indigo*—Russia makes use of 47,087 poods (757 tons) of indigo each year. It is imported from the following countries :—

England	19,561	Poods.
Prussia	19,933	„
Italy	128	„
Holland	4,476	„
Greece	506	„
France	1,821	„
Austria	668	„

St. Petersburg is the centre of the indigo trade of Russia, as more than 35,000 poods are annually brought to that port.

The prices of indigo were as follows in 1869 :—

AT ST. PETERSBURG—

Bengal	... R.	145	to R.	160	per pood	(£60	to £66-4-0	per cwt.)
Java	... „	135	„	180	„	(£55-17-0	to £74-9-0	„)
Name illegible in original.	„	115	„	125	„	(£47-11-7	to £51-14-5	„)

AT MOSCOW—

Bengal	... R.	138	to R.	170	per pood	(£57-1-9	to £70-8-9	per cwt.)

The Russian import duty on indigo is R. 3 per pood (29*s* 6*d*. (at the par exchange) per cwt.)*

3. *Rice.*—The consumption of rice in Russia is comparatively insignificant (*vide* Table A). The prices were as follows towards the end of 1869 :—

AT ST. PETERSBURG—

Bengal	... R.	2-40	to R.	3-20	per pood	(19*s*. 10*d*.	to 26*s*. 5*d*.	per cwt.)
American	... „	2-25	„	3-50	„	(18*s*. 7*d*.	to 29*s*.	„)

AT ODESSA—

American	... R.	2-20	to R.	2-40	per pood	(18*s*. 4*d*.	to 19*s*. 10*d*.	per cwt.)
Italian	... „	2-60				(21*s*. 6*d*.		„)

The Russian Customs duty on rice is 50c. per pood, or 4*s*. 11*d*. per cwt.†

4. *Coffee.*—Were it not for the competition of tea, coffee might become an article of great importance in a direct trade with the East. Nearly one-half of the coffee consumed in Russia is imported from England.

Notwithstanding a very considerable reduction of the duty on coffee (which is, since 1869, R. 1-50 per pood, or 14*s*. 8*d*. per cwt. at par), its importance is but slightly on the increase. It is mostly used by the German and Finnish population of Russia and by the higher classes. It is also extensively mixed with chiccory.

The prices of coffee were as follows in 1869 :—

AT ST. PETERSBURG—

Best	... R.	13-75	to R.	17	per pood	(113*s*. 8*d*.	to 140*s*. 9*d*.	per cwt.)
Middling	... „	12-75	„	13-75	„	(105*s*. 5*d*.	to 113*s*. 8*d*.	„)
Ordinary	... „	11-50	„	12-75	„	(90*s*. 2*d*.	to 105*s*. 5*d*.	„)

AT MOSCOW—

Round	... R.	14	to R.	15-15	per pood	(115*s*. 10*d*.	to 120*s*.	per cwt.)
Inferior	... „	12-50	„	13-70	„	(93*s*. 5*d*.	to 113*s*. 7*d*.	„)

AT ODESSA—

Ceylon	... R.	10-75	to R.	11	per pood	(89*s*.	to 91*s*.	per cwt.)
Inferior	... „	8	„	9	„	(66*s*. 2*d*.	to 74*s*. 6*d*.	„)

* The present rate of exchange is 29*d*. per rouble or mark, 24 per cent. below par. The above English quotations of the Customs duty should be reduced accordingly.

† Now 24 per cent. less.

Ceylon coffee, of which the excellent quality is well known in Russia, will probably come into Russia in large quantities by the Suez route.

5. *Sago.*—Sago is but little used in Russia. Its average price in Russia is R. 8-30 per pood (68*s*. 8*d*. per cwt.). The import duty is 1 R. per pood (9*s*. 9*d*. per cwt. at par).

6. *Spices.*—The most important of these in the Russian trade are pepper, cloves, cinnamon, cardamoms, nutmegs, mace, ginger, &c. (*Vide* Table A. for quantities imported.) The prices were as follows in 1869 :—

AT ST. PETERSBURG—

Pepper, black	... R.	7	to R.	7-60	per pood	(58*s*.	to 63*s*.	per cwt.)
Cardamoms	... „	120	„	130	„	(£49-13	to £53-15	„)
Cloves	... „	7			„	(58*s*.		„)
Clove-heads	.. „	6	„	7	„	(49*s*. 8*d*.	to 58*s*.	„)
Nutmegs	... „	28			„	(£11-11-8		„)
Mace	... „	26				(182*s*.		„)

AT ODESSA—

Pepper	... R.	7-20	to R.	7-30	per pood	(59*s*. 8*d*.	to 60*s*. 6*d*.	per cwt.)
Clove-heads	... „	5				(41*s*. 5*d*.		„)
Cinnamon	... „	22				(182*s*.		„)

The duties charged on this importation into Russia are as follows :—

Cardamoms, mace, nutmegs, and cinnamon	R.	2-50	per pood	(24*s*. 7*d*. per cwt.)*
Cloves, pepper, ginger, &c.	„	1-50	„	(14*s*. 8*d*. „)

7. *Silk.*—Russia imports only the higher qualities of raw and spun silk. She draws the bulk of her supplies of raw silk from the Caucasus and from Central Asia. Its importation from China and Japan is not expected to increase much. Mr. Skalkoffsky considers that about 6,000 poods (1,980 cwt.) may be annually brought to Russia by the Suez Canal at a cost of £20 per ton. The prices of Chinese silk were as follows at Moscow :—

Floss ...	R.	290	to R.	360	per pood	(£120 to £149 per cwt.)
Organzine	„	450	„	570	„	(£186 „ £236 „)

The import duties in Russia on silk are as follows :—

Silk, raw and waste	50c.	per pood	(4*s*. 11*d*.	per cwt.)†
„ twist, tram, and organzine	R. 5	„	(49*s*. 1*d*.	„)
„ yarn of silk waste ...	„ 4-50	„	(44*s*. 1*d*.	„)

8. *Tin.*—The quantity of tin imported into Russia is small. England supplies almost half the quantity. The prices of tin in 1869 were as follows :—

AT ST. PETERSBURG—

Tin in blocks	... R.	18	to R.	19	per pood	(£7-9-0	to £8-17-0	per cwt.)
„ bars (rods)	„	16	„	17-50	„	(£6-12-5	„ £7-4-10	„)

AT ODESSA—

Tin in bars	... R.	20	to R.	21	per pood	(£8-5-6 to £8-13-9 per cwt.)

The price of tin is rising in Russia. The duty charged on importation is 20 copecks per pood, or 1*s*. 11½*d*. per cwt., at the par rate of exchange.

* At the par exchange; now 24 per cent. less.

† At par; now 24 per cent. lower.

9. The prices of gum and drugs in Russia in 1869 were as follows :—

AT ST. PETERSBURG—

Common incense storax	...	R.	8 to R.	14	per pood	(66*s.* 2*d.* to 115*s.* 10*d.*	per cwt.)
Gum benzoin	...	„	40 „	90	„	(£16-11-0 „ £37-4-9	„)
„ Ammoniac	...	„	8		„	(66*s.* 2*d.*	„)
„ Arabic	...	„	9 „	13	„	(74*s.* 5*d.* „ 107*s.* 6*d.*	„)
Gamboge	...	„	55 „	78	„	(£22-15-0 „ 32-5-0	„)
Copal	...	„	9 „	10	„	(74*s.* 5*d.* „ 82*s.* 9*d.*	„)
Shellac	...	„	12 „	15-50	„	(89*s.* 3*d.* „ 128*s.* 4*d.*	„)
Catechu	...	„	5-50		„	(45*s.* 7*d.*	„)
Kino	...	„	3		„	(24*s.* 9*d.*	„)
Gall-nuts	...	„	13-50 to R. 15		„	(111*s.* 8*d.* to 124*s.* 2*d.*	„)
Camphor	...	„	20-50 „ 23-50		„	(169*s.* 8*d.* „ 194*s.* 5*d.*	„)
Turmeric	...	„	4			(33*s.* 1*d.*	„)

The Import duties to which the above goods are liable are as follows :—

Gums, resins	...	30*c.*	per pood	(2*s.* 11½*d.*	per cwt.)*
Storax	...	R. 1	„	(9*s.* 9*d.*	„)
Gum benzoin	...	„ 4	„	(39*s.* 2*d.*	„)
Gamboge	...	„ 1-10	„	(10*s.* 9*d.*	„)
Gall-nuts	...	„ 5	„	(6*d.*	„)
Camphor	...	„ 30	„	(2*s.* 11½*d.*	„)
Turmeric	...	„ 5	„	(6*d.*	„)
Shellac	...	„ 30	„	(2*s.* 11½*d.*	„)
Catechu, Kino	free.				

10. *Tea.*—Mr. Skalkoffsky advises the merchants of Russia to send their tea to Odessa direct from Shanghai by way of the Suez Canal. By the overland route, through Mongolia, the tea of China takes 14 months to reach the fair of Nijni Novgorod, whereas by the Suez route it could come in 60 to 65 days from China. The sea-borne tea which at present enters Russia is principally shipped from London. Mr. Skalkoffsky does not think that much East Indian tea will enter Russia, where it is almost unknown.

The cost of carriage from Foochoo to Suez is about 95*c.* per pood (7*s.* 10*d.* per cwt.), and that from Suez to Odessa 30 copecks per pood (2*s.* 6*d* per cwt.)

The expense of carrying tea from Odessa to Moscow, inclusive of all charges for commissions, &c., is about R. 1-30 per pood (10*s.* 9*d.* per cwt.) Consequently, the cost of the tea shipped to Odessa from Shanghai is increased by R. 2-53 per pood (21*s.* per cwt.) On the other hand, the cost of carrying it to Moscow by way of Kiakhta is R. 8-80 to R. 12 per pood (£3-12-9 to £5 per cwt.), or 22 copecks to 30 copecks per Russian lb. (8½ to 10½*d.* per lb. avoir.) more than by Suez, independently of the great loss of time by the former route. By way of the Cape, the present cost of carrying tea is as follows :—

Freight, Shanghai to London, £6 to £8 per ton.
„ London to St. Petersburg, 30*s.* „ „
„ St. Petersburg to Moscow, 50*c.* per pood (83*s.* 4*d.* per ton.)†
Total cost, R. 2-40 per pood (£19-16-8 „)

The prices of tea were as follows in 1869 :—

AT ST. PETERSBURG—

Black Congou, 75*c.* to 100*c* per lb (2*s.* 2*d.* to 2*s.* 11½*d.* per lb. avoir.)
„ Souchong, 95*c.* to 100*c.* „ (2*s.* 10*d.* to 2*s.* 11½*d.* „)
Flowery Pekoe, 150*c.* to 200*c.* „ (4*s.* 5*d.* to 5*s.* 11*d.* „)

AT MOSCOW—

Canton (sea-borne) tea, 85*c.* to R. 1 per lb. (2*s.* 6*d.* to 2*s.* 11½*d.* per lb.)

* These duties are calculated at the par exchange. They are now 24 per cent. lower.

† This total does not agree in sterling with the previous items. Mr. Skalkoffsky has probably taken the par exchange in converting sterling into Russian money.

AT ODESSA—

Tea, 1st sort ... 160*c.* to 200*c.* per lb. (4*s.* 8½*d.* to 5*s.* 11*d.* per lb.)
„ 2nd „ ... 120*c.* „ (3*s.* 6½*d.* „)
„ 3rd „ ... 100*c.* „ (2*s.* 11½*d.* „)

The duty on tea, imported on the overland and maritime frontiers of Russia in Europe, is as follows :—

Flowery, green and yellow, R. 22 per pood, or £10-16-3 per cwt.*
Ordinary black and brick tea, R. 15·40 „ or £7-11-3 „ *

Exports.—After passing in review the various articles of commerce that may be brought to Russia by the Suez Canal route, Mr. Skalkoffsky shows that Russia has but few goods to export to the Far East wherewith to pay even for the indigo or coffee which she will import. Among the goods that might, perhaps, be to some extent exported, the following are mentioned :—

1. *Flour and biscuits.*—These find a market even now in Egypt and in the Red Sea. Flour might be exported to the East Indies, as well as maccaroni and vermicelli.

2. *Coals.*—The coal of the Don basin, when reduced in price, which is at present 14 copecks per pood (1*s.* 3*d.* per cwt. at Odessa), might be carried even to Bombay, and sold there at the rate of 55 copecks per pood (4*s.* 7*d.* per cwt.).

3. *Meat, tallow, salt beef, butter.*—All these, Mr. Skalkoffsky thinks, might be exported with profit to Egypt, and even to the East Indies.

4. *Cattle and Horses.*—There is a great demand for Russian cattle at Alexandria.

5. *Candles and Soap.*—Mr. Skalkoffsky thinks that Russian soap and candles might compete in Egypt with similar French and Australian goods.

6. *Ice.*—Large quantities might be shipped to Egypt, the Red Sea, and the East Indies from the Sea of Azoff.

7. *Cordage.*—Russian cordage reaches the East Indies by way of Hamburg and England. If depôts were established at Aden and Bombay, a large trade might be done.

8. *Timber.*—Much required in Egypt, Arabia, and on the shores of the Persian Gulf. Might be exported in large quantities in sailing vessels from Kherson, Taganrog, and the Eastern Coast of the Black Sea.

9. *Kerosine,* made in the south of Russia, might be exported to Egypt, where large quantities of American Kerosine are now consumed. It may become an important article of commerce in the East Indies.

10. *Salt* might be exported to Calcutta from the coast of the Black Sea.

11. *Spirits.*—There is a considerable demand for spirits in Egypt, and Russia can well compete with the spirits distilled in Austria and the United States.

12. *Boots* and *shoes,* cloths, &c., might be sent to Egypt, and particularly for the Army.

13. Brocades and embroidered leather, in great demand in Egypt, Arabia, and on the shores of the Red Sea.

14. Tar, canvas, tow, &c., will be in great demand for ships navigating the canal.

15. Hardware, &c., copperware, cheap fire-arms, stirrups, bits, cast-iron rots, knives, locks, brass coffee pots, dishes, &c., all cheaply made in Russia, would find a large market in the East.

16. *Textiles.*—Mr. Skalkoffsky thinks it possible to send good cotton prints, &c., up the Suez Canal. He quotes the *Times* to show that English

* At the par rate of exchange; now 24 per cent. lower.

cotton goods have acquired a bad reputation in the East, and urges his countrymen to study the Asiatic taste in those goods. He gives no facts or figures in support of his opinion that Russian cotton goods can be exported to India, &c., with profit.*

In summing up this part of his report, Mr. Skalkoffsky says that it would not as yet be safe to reckon upon more than 500,000 poods (about 8,000 tons) weight of Russian goods (irrespective of coal) that might be exported in return for cotton, indigo, &c.

Probable value of exports from Russia.

He thinks that at the utmost the value of the Russian exports by the Suez Canal would not amount to more than 1½ or 2 millions of Roubles (£188,000 or £250,000).

In conclusion, Mr. Skalkoffsky enquires into the position and prospects of the Russian Steam Navigation Company in the Black Sea. He thinks that the Company (being subsidized by the Government) should not be guided by commercial considerations alone, and that it should not, by running steamers, promote the trade of ports in which Russia could have no interest, such as Bussorah and Kurrachee.

It should not look so much to the quantity of goods which it carries as to the duty of extending Russian trade in Egypt on the shores of the Red Sea and in the East Indies.

Russian line of steamers to Bombay.

The Company, he urges, should maintain six steamers (and one in reserve) on the line between Odessa and Bombay. These steamers should not carry Manchester goods, which penetrate into Central Asia and compete with Russian cottons carried there at great cost, nor should they visit Bussorah and Kurrachee, which compete with Russian wools, linseed, &c.

Calcutta, Colombo, Penang, and Batavia are not as yet of sufficient importance to Russian trade and navigation to warrant any Government aid in the establishment of a line of Russian steamers.

Measures recommended for developing trade *vid* Suez and Odessa.

Mr. Skalkoffsky terminates his report by recommending the adoption of the following measures in addition to the establishment of a line of steamers to Bombay:—

1. The reduction of port charges and transit dues.

2. The improvement of the navigation of the Sea of Azoff, which is not, according to Mr. Skalkoffsky, included in the stipulations of the Treaty of Paris, and which should, therefore, he thinks, give shelter to Russian vessels-of-war.

3. The establishment of Bonded Warehouses at Kief and Kharkof.

4. Reforms in the excise laws, which would admit of Russian spirits being exported with greater advantage.

5. A re-arrangement of the rates of coinage, and the classification of goods on Russian railways.

6. The establishment of Russian Branch Banks at Bombay and Shanghai.

7. The laying of a Submarine Cable between Odessa and Constantinople.

8. The immediate appointment of a Russian Consul at Bombay. "He should be a sensible and energetic representative of the merchant class, or a Naval Officer."

9. A careful study of the trade of the Far East.

10. A reduction of Customs duties on goods brought direct from the Far East in Russian ships.

ST. PETERSBURG,
The 1st August 1870.

* In 1867 the number of cotton-spinning and weaving manufactories in the Russian Empire was 48 and 586 respectively, the number of hands employed in those factories being about 97,000.
The value of the cotton goods manufactured in Russia was at the same period about 12 millions sterling.

SUPPLEMENT TO

The Gazette of India.

CALCUTTA, SATURDAY, DECEMBER 3, 1870.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees four annas if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 25th November 1870.

PRESENT:

His Excellency the Viceroy and Governor General of India, K. P., G. C. S. I., *presiding.*
The Hon'ble John Strachey.
The Hon'ble Sir Richard Temple, K. C. S. I.
The Hon'ble J. Fitzjames Stephen, Q. C.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble H. W. Norman, C. B.
The Hon'ble D. Cowie.
The Hon'ble Francis Steuart Chapman.
The Hon'ble J. R. Bullen Smith.
The Hon'ble F. R. Cockerell.

PENAL CODE AMENDMENT BILL.

The Hon'ble MR. STEPHEN moved that the final report of the Select Committee on the Bill to amend the Indian Penal Code be taken into consideration. He said that this Bill had excited, as they were all aware, very considerable discussion; and he proposed to fulfil his promise to enter into a full explanation of the policy of the Government in respect to the measure. He did, in fact, explain briefly the objects of the Bill, when it was introduced into the Council. But the subject appeared to require some further explanation, which he would now proceed to give. Complaints had been made that the Bill was to be passed hurriedly through the Council and at a distance from the centres

of public opinion and discussion. As the fact was that there was really no hurry in proceeding with the Bill, he had proposed that its passing should be deferred, and it had now been more than three months before the public. He did not know that any part of the Bill had attracted the particular attention of the community, with the exception of section five, which referred to the offence of exciting disaffection. He should therefore confine what he had to say to that particular section, but he would first take the opportunity of making one remark on the section immediately preceding it. This section rendered the offence of conspiring to deprive the Queen of the sovereignty of British India or to overawe the Government punishable with transportation for life or for any shorter term, or with imprisonment which might extend to ten years. He had to observe, with regard to that section, that the Committee had thought it right to make the offence of conspiring by criminal force or by the show of criminal force more severely penal than the offence of actually taking part in an unlawful assembly, having for its object the overawing of the Government. The reason was this, that persons who, by conspiring together to bring about such a result, set the whole matter in motion, seemed more criminal and far more deserving of punishment than those who were their mere tools and only took part in such an assembly.

He would now pass to the explanation of the fifth section, which related to the exciting of disaffection. He thought that section had been very severely criticized, or rather it had been severely blamed, for of really intelligent criticism there had been far less than he should have been glad to see. He proposed to state generally the purpose of the section, and how it effected that purpose. The object of the section was this. In connection with the preceding section it embodied, and, he hoped, improved and condensed, the existing English law on the subject to which it related. It might be said of the Indian Penal Code in general, that it was the English Criminal Law freed from the defects which from a variety of causes had affected it. By some means or other the Penal Code as it stood had entirely omitted that branch of the English Criminal Law which consisted of the Treason-Felony Act and the law relating to seditious words and libels. It contained no section by which you could punish conspiracies to wage war against the Queen or deprive her of the sovereignty of British India, unless the conspiracy proceeded so far as to be followed by open acts or actual preparations for rebellion. But besides this, the Code contained no provision whatever with respect to exciting disaffection by speaking or writing, and that, he said, although the contrary had been asserted, was a great defect, and one which ought not to be permitted to exist in any rational system of criminal law whatever. The only means by which offences of that kind could be punished under the Penal Code was by treating them as cases of abetment. It might be said that, if the speaking or writing went the length of advising persons to wage war against the Queen, it was abetment, and those who instigated the commission of the crime were abettors. In some cases it might be so; but in the vast majority of cases he had no doubt it would be otherwise: for the crime of rebellion, speaking broadly, was not a crime committed, like theft, murder, or house-breaking, by one single act, done at one single moment, and proceeding from some one motive. It was, on the contrary, the result of a great variety of feelings excited in various ways, and therefore, if rebellion itself was to be regarded as a crime (and it was needless to argue with those who thought it was not), it was necessary to punish acts which led or were intended to lead to it, even if they did not fall within those narrow limits within which abetment was comprised in common cases. It was necessary to have a wider definition of abetment in the case of rebellion than in the case, say, of murder or theft, because the causes which produced rebellion were wide, and the acts were numerous and were spread over a large space of time. It was on these grounds that he said there was a serious defect in the absence from the Penal Code of all provision for the punishment of offences of this kind.

He now came to the question, whence did this defect arise? When he addressed the Council on a former occasion, and also in the Statement of Objects and Reasons which was before the public, he said that the defect arose from oversight on the part of those who passed the Code. It might be that he ought to have produced at greater length the evidence on which he made that assertion. But he must confess that he felt somewhat aggrieved by the manner in which his assertion had been treated. That the Bill itself should be objected to was natural; that the clauses of the Bill should be the subject of criticism was just what he wished; but when a public man in this country committed himself to a definite statement, the least you could do was to contradict him; this had not been done in the present case. His deliberate statement had been passed over without the slightest notice, and its probability had been discussed upon abstract grounds, as if the fact that he had made it was of no importance whatever. He knew there was a disposition in this country to treat oral evidence with considerable indifference, but he thought an exception should be made in favour of a distinct assertion made by a member of the Government upon a matter regarding which he must be fully informed. It so happened that he had before him information which would convince the public that the assertion was true. It was a letter written so far back as the 7th June 1869 by Sir Barnes Peacock to Mr. Maine, and he would observe, in reference to that date, that, when the late unfounded rumour of disturbances at Allahabad reached England, an English newspaper, *The Spectator*, which was peculiarly well informed on Indian matters, observed, with reference to this Act, that he (MR. STEPHEN) had hastily drawn a Bill for the suppression of seditious language. It appeared from the letter in question that the Bill was under consideration in June 1869, and it was one of the earliest measures to which his attention was directed on his arrival in this country in December last. It had absolutely no connection whatever with the occurrences of the past summer and spring.

The letter of Sir Barnes Peacock to which MR. STEPHEN had referred was as follows. Sir Barnes Peacock said:—

"I have looked to my notes, and I think the omission of a section in lieu of section 113 of the original Penal Code must have occurred through mistake, though I have no distinct recollection of the subject. After the original Code had been carefully revised, the original Code and the revised Code were printed in double columns. I send herewith a copy of the section proposed in the revised Code to be substituted for section 113.

"We had many discussions as to section 113, and I recollect that I thought that the words 'attempts to excite feelings of disaffection to the Government,' &c., were objectionable, and were not much less vague and undefined than the charge in one of the counts in *Reg.* v. *O'Connell*, of 'conspiring to bring into hatred and contempt the tribunals of the country,' as to which, see the arguments in 11 Clarke & Finnelly 195. After the revised Code had been printed, I find that I proposed to amend the section to be substituted for section 113. I send you a copy of my proposed section, as it would have stood if the section in the revised Code had been amended.

"At the foot of that section I wrote 'explanation in margin as amended, *stet*,' that explanation being the explanation as it originally stood to section 113, substituting the words 'within the last clause,' for the word 'disaffection' in the original explanation.

"This leads me to think that, at that time, the clause substituted in the revised Code for section 113 must have been intended to stand, either as originally prepared, or as I proposed to alter it.

"I am strengthened in this view by finding that I have written against the section in the revised Code as I proposed to alter it, 'see new section as taken down by Mr. Morgan' (who was then Clerk to the Legislative Council).

"Looking at this note I feel almost confident that, upon my proposing to amend the substituted section in the revised Code, the Committee, after discussion, must have agreed upon a section to be substituted, and that it was taken down by the Clerk of the Council, and afterwards omitted by some mistake or oversight. I have also got a memorandum 'of publishing false news or reports to induce persons to mutiny or rebel—see Begum's Proclamation,' as a matter for consideration whether the section in the revised Code would meet such a case. I think when you consider section 113 and the explanation, you will find that the explanation very much narrows the definition, and that it will be better to define the offence more accurately than is done by section 113. You will find a good deal upon section 113 in the Second Report of the Indian Law Commissioners on the Indian Penal Code, published in 1847.

"You will also find that Mr. Bethune proposed to substitute, for section 113, two sections, 131 and 132 of his revised Code, upon which Sir Lawrence Peel expressed his views in a letter to the Government of India, dated September 11th, 1851.

"As the report of the Indian Law Commissioners and the letter of Sir Lawrence Peel (with which Sir Arthur Buller concurred generally) may not be at Simla, I have had copies made for you, which I send herewith. Sections 131, 132 of Mr. Bethune's revised Code are set out in Sir Lawrence Peel's remarks. You will bear in mind that 'banishment' is not one of the punishments included in the Penal Code.

"There may possibly be some memorandum in the Legislative Council Office, which may show the precise terms of the section taken down by Mr. Morgan. I am sorry that I cannot throw any further light upon the matter, as I have no note as to the adoption or rejection of that clause. I feel, however, that it was an oversight on the part of the Committee not to substitute some section for section 113."

That, he (MR. STEPHEN) thought, was as strong evidence as it was possible to obtain at the present time for the assertion made by him. He had sent Sir B. Peacock's letter to Sir Walter Morgan, now Chief Justice of the High Court of the North-Western Provinces. Sir Walter said that he had preserved no notes of what took place at the meetings of the Select Committee, and had no recollection of the subject. MR. STEPHEN therefore repeated the statement which he originally made, that there was a section to the present effect, which ought to have been submitted to the Council, and to have been passed, and that it was omitted through a mistake or oversight which it was difficult now to account for. He had referred to the debates which took place in the Council, but there was no reference in those debates to any such provision. The result seemed to him to be clear, that when the Bill was finally passed through the Committee, a section equivalent to the present section was omitted by some mistake. Be that how it might, he proposed to proceed with the subject.

In an event of this kind, what was the duty of the Government? He said that it was to repair the omission, whoever might have been to blame for it. Various objections had been taken to this course. One was that the country was now in so loyal and peaceable a state, and that all things were going on so pleasantly, that no such measure was required. He would answer that that appeared to be the very reason why we should repair the omission, which, upon that view of the case, could not give offence to anybody. Certainly, if no one had the slightest intention of exciting disaffection, no one would have any objection to punish those who at any future time might excite, or be disposed to excite, such disaffection. He must confess that objections of this kind never weighed with him. Any time was good for stopping a gap: stop it as soon as you find it out—in a quiet time if possible, and in troubled times if you must. If you had the opportunity of rectifying mistakes of this nature in a quiet time, it was surely better to do it when the matter could be quietly discussed, than to wait to do it till agitating and exciting circumstances suggested a measure of exceptional severity.

He now had to consider the exceptions taken to the clause. Sir Barnes Peacock had appended to his letter the section as he drew it, and which was proposed to be substituted for one which appeared in the original draft of the Code. A great deal of discussion had taken place on the section now proposed, and after that discussion the Commissioners by whom the Code was drawn adhered to their draft, assigning their reasons, and they had answered the objections, as he (MR. STEPHEN) thought, in a very satisfactory manner. Sir Barnes Peacock's proposed section was in its turn anxiously considered by the Committee whose final report the Council was now considering. The Committee, with all respect to Sir Barnes Peacock, came to the conclusion that it was not an improvement on the original draft of the Commissioners. For one thing, it was very much more severe: the section was as follows:—

"Whoever attempts to excite or to induce, or does anything which he knows to be likely to excite or to induce, the people, or any class or portion of the people, who live under the Government of India, to entertain such feelings of disaffection to that Government or to any

Government in India, as are likely to induce or cause them to resist or disobey the lawful authority of the Government of India or of such other Government, or to abet such resistance or disobedience, or by reason of such disaffection to break the peace or to violate the law, or to abet any such breach of the peace or violation of the law, shall be punished," &c.

The section now before the Council did not make it criminal to do things which people knew to be likely to excite disaffection. To punish the doing of an act which you knew to be likely to produce disaffection might be to punish a man for doing an act which he had a right to do, although it produced disaffection. He could imagine many things which a public man might have a right to do, even at the expense of exciting disaffection, but which, nevertheless, should not be punishable. Then, the section proceeded to describe the kinds of disaffection which it would be a crime to excite. These were such feelings of disaffection as were likely to induce any portion of the people, not only to resist, but to disobey the authority of the Government of India. That was carrying things a very long way, because the mere omission to do what you were told to do was disobedience. The mere non-payment of a tax was disobedience; and to punish a man for doing what was likely to induce people to disobey an unpopular law of any kind was far beyond what in his (MR. STEPHEN'S) judgment was desirable. In short, the Committee came to the conclusion that this clause was considerably more severe than the clause originally drawn by the Commissioners. That clause was greatly discussed at the time, and adhered to after careful discussion; and although he (MR. STEPHEN) was not prepared to say that it was the best that could have been adopted, the Committee unanimously came to the conclusion that the best course was to leave it as the Commissioners had settled it. The clause was somewhat lengthy, but its substance was sound good sense. It provided that anybody who attempted to excite disaffection might be punished; but it insisted on the distinction between disaffection and disapprobation. It expressly provided that people might express or excite disapprobation of any measure of the Government, that was compatible with a disposition to render obedience to the lawful authority of the Government; in other words, you might say what you liked about any Government measure or public man; you might publish or speak whatever you pleased, so long as what you said or wrote was consistent with a disposition to render obedience to the lawful authority of Government. Let it be shown that the matter complained of was not consistent with a disposition to obey the law; let it be shown that it was consistent only with a disposition to resist the law by force, and it did fall under this section. Otherwise not.

He now proceeded to assert that this law was substantially the same as the law of England at the present day, though it was much compressed, much more distinctly expressed, and freed from a great amount of obscurity and vagueness with which the law of England was hampered.

He would shortly refer to a comparison which had been drawn between the section in question and the law of England, in a memorial presented by the British Indian Association—in itself perfectly proper and well expressed, although he disagreed with many of its arguments. That memorial shewed that those who drew it up were under a very false impression as to what the law of England on this subject was. They said:—

"The experiences of England have always been a guide in matters of legislation in India, and it may fairly be asked whether there is any law in force in that country analogous to the one proposed for India? The Committee are aware of none."

They then proceeded to quote at length several passages from a work published by him (MR. STEPHEN) some years since under the title of 'A General View of the Criminal Law of England.' One passage quoted was in these words:—

"In the year 1795 an Act was passed (35 Geo. III, cap. 7) which considerably enlarged the definition of treason, embodying by express enactment, in the old definition, most of the constructions put upon it by Hale and Foster. The definition includes 'any person who shall, within the realm or without, compass, imagine, invent, devise, or intend death or destruction, maim or wounding, imprisonment or restraint of the person of the

sovereign, or to deprive or depose him from the style, honour, or kingly name of the imperial Crown, or to levy war against His Majesty, in order by force and constraint, to compel him to change his measures or counsels, or in order to put any force or constraint upon, or to intimidate, or overawe both Houses or either House of Parliament, or to move or stir any foreigner or stranger with force to invade this realm, or any other His Majesty's dominions, and such compassings, &c., shall express, utter, and declare, by publishing any printing or writing, or by any overt act or deed.' By an Act passed in 1848, on occasion of the violent language used in newspapers and elsewhere by the Irish agitators, this Act was repealed, except in so far as it related to offences against the person of the sovereign; but the other clauses were re-enacted, and their operation was extended to Ireland, though the quality of the offence was altered from treason to felony punishable by transportation."

Upon these passages, the memorial observes :—

"There is nothing in the above to shew the existence of a law similar to the one proposed for India. The Committee need hardly observe that there is considerable similitude between the political relation of India and Ireland to England, though happily the feeling of the people here is one of strong attachment to the British Government; but if the Imperial Parliament has not seen the necessity of restraining the right of speech and writing in Ireland, surely the Indian legislature has much less reason to do so. If the Treason-felony Act, cited by the Hon'ble Mr. Stephen in his book, is deemed sufficient for the safety of the State in Ireland, it may well be deemed equally sufficient for the same purpose in India. The only omission which there was in the Indian Penal Code on the subject has been supplied by section five of the Bill under notice, and the succeeding section is therefore quite superfluous."

The Association would seem not to have understood what they quoted, for the passage which he had read distinctly stated that, to express in writing any "compassing," &c., (which was equivalent to any intention or wish) to compel the Crown by force to alter its measures, or to do many other things, was what is called in England treason-felony, which was much the same as the offence created by the section under consideration.

He would now proceed to state how the law of England to which the Association appealed stood upon this subject. It consisted of three parts. There was, first, the Statute, commonly called the Treason-Felony Act (technically the 11 Vic., c. 12); secondly, the common law with regard to seditious libels; and thirdly, the law as to seditious words. He might observe, in regard to this law, that section 2 of the Penal Code enacted that every person shall be liable "to punishment under this Code and not otherwise for every act or omission contrary to the provisions thereof." Hence, the criminal law which prevailed before the passing of the Penal Code was still in force as to such offences as the Code did not punish. The result might very possibly surprise some gentlemen, especially those who were connected with the Press in the presidency towns, and he would draw attention to it. In the presidency towns, the criminal law of England was still in force, except in so far as it was superseded by the Penal Code. Any person who, within the Mahratta ditch or in Bombay or Madras, wrote anything which at common law would be a seditious libel, would be liable to the penalties which the law of England inflicted, which were fine and imprisonment at least, to say nothing of whipping and the pillory. No doubt the penalties last-mentioned would not now be enforced, but the law still existed, and he (MR. STEPHEN) wished to point out that, so far from enacting a severe law, we were, in truth, doing away to a considerable extent with severe laws. As for the Mofussil, it appeared that the Muhammadan criminal law prevailed so far as it was not superseded by the Penal Code. He had tried to ascertain what the Muhammadan law was. He had found nothing on the subject of seditious libel, but had found much on the subject of rebellion, which, however, was so vaguely expressed, that it might possibly justify the infliction of very strange penalties for sedition and libel.

The first part, then, of the English criminal law was the Treason-Felony, the third section of which was as follows :—

"And be it enacted, that if any person whatsoever after the passing of this Act shall, within the United Kingdom or without, compass, imagine, invent, devise, or intend to deprive or depose our most Gracious Lady the Queen, Her heirs or successors, from the style, honour, or royal name of the Imperial Crown of the United Kingdom, or of any other of Her Majesty's dominions and countries, or to levy war against Her Majesty, Her heirs or successors, within any part of the United Kingdom, in order by force or constraint to compel her or them to change her or their measures or counsels, or in order to put any force or constraint upon or in order to intimidate or overawe both Houses or either House of Parliament, or to move or stir any foreigner or stranger with force to invade the United Kingdom or any other Her Majesty's dominions or countries under the obeisance of Her Majesty, Her heirs or successors, and such compassings, imaginations, inventions, devices, or intentions, or any of them, shall express, utter, or declare, by publishing any printing or writing, or by open and advised speaking, or by any overt act or deed, every person so offending shall be guilty of felony, and being convicted thereof shall be liable, at the discretion of the Court, to be transported beyond the seas for the term of his or her natural life, or for any term not less than seven years, or to be imprisoned for any term not exceeding two years, with or without hard labour, as the Court shall direct."

That long string of words meant in plain English this. Any one who conceived in his heart any one of all these intentions, and who shewed that intention either by any act or any writing (for the provision as to words was temporary), was liable to transportation for life. That section was quoted by the British Indian Association to show that the section proposed was more severe than the law of England. It shewed, in fact, the very reverse, for it shewed that the law of England, though similar to the proposed section, was more severe. The proposed section says, if you excite feelings of disaffection, either by speaking or writing, you shall be liable to punishment; and the law of England says, in substance, that if you yourself feel disloyal towards the Queen and show that feeling by any writing, you shall be liable to punishment. The proposed section did not relate to a man's feelings or wishes, but simply to his writings or words, and the feelings which they were intended to produce in others. But the great peculiarity of the English law of treason was to regard every thought of the heart as a crime, which was to be punished as soon as it was manifested by any overt act. That was the English law as it stood according to the Treason-Felony Act.

He came now to the law of seditious libel; and in the book which was commonly quoted on all subjects connected with English criminal law (Russell on Crimes), there was a very long history about seditious libel compiled from various authorities. The law was very vaguely expressed, and he hoped that some one might soon reduce to a few short sentences the great mass of dicta on the subject.

The following was put forward as the test by which the seditious character of a publication on political subjects might be determined :—

"Has the communication a plain tendency to produce public mischief by perverting the mind of the subject and creating a general dissatisfaction towards Government?".

That was infinitely stronger than anything now proposed. It would make any publication a crime which excited any general dissatisfaction with Government, however reasonable that dissatisfaction might be. The proposed section did nothing of the kind. It said, in so many words, you may create disapprobation as much as you please, so long as it is consistent with a disposition to render obedience to the lawful authority of Government.

He would proceed to notice some of the other objections which had been raised to the proposed clause. He thought that, if those who urged those objections carried them out to their legitimate results, they would see that their objections really proved too much, for they proved, not that the particular section proposed was a bad one, but that there should be no legislation on the subject. It was said that the language of the section was vague; that disaffection was a vague word. He was perfectly willing to admit that that statement had some truth in it. But all human language was more or less vague. In a general way, everybody knew what disaffection was, but in that and every other word of the sort, there must be a good deal of vagueness from the imperfection of the human mind itself. Look, for instance, at such words as "negligence," "morally wrong," "malignantly," "possession," all of which occurred in the Penal Code. They were all more or less vague; but if the law was honestly

administered, it would be found that they really carried out the purposes which they were intended to effect.

The second objection, as to the severity of the punishment, deserved more attention. With respect to that, he had only to say that there were cases known to the law (in English law they were very common) in which persons brought themselves within the same definition with various degrees of criminality. If you looked at any section of the Penal Code and set yourself to conceive possible cases, you would find that, in numberless instances, most severe punishments could be inflicted for very small offences indeed. So strongly had that been felt by the legislature, and so strongly, too, by the framers of the Code themselves, that they had adopted the principle which he (MR. STEPHEN) had always regarded as an extremely sound one, of almost entirely excluding minimum punishments. In a few cases there was a minimum penalty; for instance in the punishments for murder and waging war; but he did not at present remember any other. With those exceptions, in every instance they had left it to the discretion of the person who tried a case to inflict the smallest punishment, imprisonment for a day, or a nominal fine. That was the case with regard to ordinary crimes, such as theft and murder, and other crimes against person and property, but surely there was no crime with regard to which it was so true as the crime of exciting disaffection. He could conceive instances in which a man who had done so was deserving of any punishment which the law could inflict. In 1857, for instance, a man who excited disaffection would have been guilty of a terrible offence. On the other hand, there might be cases where, from the strength of the Government, and the contemptible character of the crime, it might not be desirable to inflict more than a slight punishment. The punishment required did not vary according to the mode in which the disaffection was excited, but it varied according to the state of public affairs, and the position, character and circumstances of the criminal; and for that reason the widest latitude in the punishment for the offence was required. He would observe that, in criticising any provision of law, especially of the criminal law, credit ought always to be given to those who were to administer it for some degree of common sense and moderation. Let him call attention to a law which had originated with his illustrious predecessor—Lord Macaulay—the provisions of the Penal Code about defamation:—

Defamation.

499. Whoever, by words either spoken or intended to be read, or by signs or by visible representations, makes or publishes any imputation concerning any person, intending to harm or knowing or having reason to believe that such imputation will harm the reputation of such person, is said, except in the cases hereinafter excepted, to defame that person.

Section 499 and explanation 4 taken together defined defamation thus—'making any imputation concerning any person intending or knowing or having reason to believe that that imputation will lower the moral or intellectual character of that person.' There were, no doubt, many important exceptions, but that was the general rule, and by section 500 the offence of defamation might be punished by two years' imprisonment and fine.

He (MR. STEPHEN) would ask His Lordship, or any one of his colleagues, whether he could say that he had ever been to a dinner-table at Calcutta, or anywhere else, where that law was not broken; where something was not said by somebody which conveyed an imputation concerning somebody else likely to lower his moral or intellectual character. Why, he saw before him those who were great masters of their pencil, and who had a power of representing persons in a manner which certainly would, by a visible representation or design, lower their moral or intellectual character; and by the Indian Penal Code any person who did this was liable to simple imprisonment for a term which might extend to two years, or to a fine, or to both. In no society in which he had ever been, or which he had ever heard of, would any person escape

punishment if this law were carried out to its full extent, unless, indeed, he were the dullest of mankind. But severe as the law was, it was reasonably administered, and he did not think that either private conversation or public writing on general subjects was, in point of fact, under greater restrictions in India than elsewhere. He mentioned this in connection with the section now under the consideration of the Council, as showing that, in all cases, you must credit the persons who would administer the law with some degree of common sense.

There was another objection which had been urged by the British Indian Association, to which great weight was due. They said that, if legislation once took the shape proposed, there would be no end to malicious prosecutions. This, however, was completely answered by the provision, that no prosecution should be commenced under this section except under the authority of the Government. That shewed that this was a weapon to be used in no case except where the peace of the country was, in the opinion of those who were put at the head of the Government, seriously endangered, and that was a very effectual check to prevent the law being used in an oppressive manner.

Another objection was that the law punished intention, and we were told that the effect of it would be, that people whose intentions were innocent might be convicted. That merely amounted to saying that mistakes might be made; but that was the case with all laws. In the Penal Code, wherever you might refer to it, you would find that the intention made the crime. It was strange that that argument should be used, when it was considered that the Act which declared that the intention of the publisher of an alleged libel should be determined like other questions of fact, had always been regarded as one of the greatest triumphs of the popular cause in England.

There was one last objection to which he would refer in a more general way. It was the general phrase that this was an interference with the liberty of the Press.

Short phrases of this kind involved a surprising quantity of nonsense. He thought that that unfortunate phrase in particular had been made the subject of more fallacies than almost any other sentence. Liberty and law simply excluded each other: liberty extended to the point at which law stopped; liberty was what you might do, and law was what you might not do. To advocate the liberty of the Press absolutely, would be nothing else than to advocate the doctrine that everybody should be allowed to write what he liked. That was obviously absurd. Everybody admitted that personal slander ought not to be permitted: it confused the whole matter. Hence the phrase 'liberty of the Press' was mere rhetoric. It contained no definite meaning whatever. The question was not whether the Press ought or ought not to be free, but whether it ought to be free to excite rebellion. He did not believe that any sane man would say, in so many words, that all people ought to commit any crime whatever, so long as they did not commit overt acts themselves; but no degree of liberty short of this would justify a journalist or any one else in exciting people to commit rebellion. The British Indian Association said:—

"The Committee will be the last persons to believe that the noble Lord at the head of the Government, or his hon'ble and learned colleagues, themselves nurtured under the free institutions of their native land, and some of them, perhaps, once members of the great fourth estate, the claims of which the Committee now advocate, are inimical to a free Press in India; but they will not rule for ever, and it is difficult to say what they or their successors may do in times of political excitement, when passions may be excited by hostile criticisms, and personal feeling may usurp the place of judgment."

With regard to this last observation he had a few remarks to make. He perfectly understood what was meant by some of them "being members of the great fourth estate;" it seemed to say that when he (MR. STEPHEN) was in England he used to write for the newspapers. That was perfectly true,

and he was not ashamed of it. Journalism, when properly conducted, was as honourable a pursuit as any other. He made this personal remark to show that he took a special interest in journalism. He could not imagine a worse policy than to permit journalists to do what they would not permit other people to do. If we wished the Indian Press to be what it ought to be; if we wished it to be conducted honestly and to criticise the proceedings of Government fairly; we could not do worse than treat it like a spoiled child. It would be monstrous to say to any newspapers, Native or English, "We permit you to slander private persons and to excite the public at large to rebellion and massacre, because we want to nurse you up into something great." That was not the way to bring the Press or any other profession to good. We should protect them so long as they did not commit crime, and punish them if they did. It had been said that a few prosecutions would crush the Native Press, and that they were not strong enough to bear the possibility of being misunderstood and punished for expressing intentions which they had never entertained. Such apprehensions appeared to him contemptible. Men must be content to take the risks incidental to their profession. A journalist must run the risk of being misunderstood, and should take care to make his meaning plain. If his intentions really were loyal, there could be no difficulty in doing so. If not, he could not complain of being punished.

Let us consider, however, whether this terrible danger did really exist. He had already shewn what was the law of seditious libel in the presidency towns, and those were the towns in which the great majority of newspapers were published. One paper had said, "if this law passes, we shall never know what we might say and what we might not." If they wanted to see what they might say, all they had to do was to read the English newspapers, which were published under the same law, and they did not write very much as if they were under tyrannical rules. Their liberty included the following items at least. They might refute anything which had been put forward and abuse anybody for bringing it forward; and if they wanted to see more particularly what sort of things they were perfectly at liberty to say, they had only to refer to the files of the English newspapers printed during the last eight months, and read the articles on the Income-tax. Nobody ever said or thought that the authors of those articles were exciting disaffection. If a man was permitted to say everything that had been said about the members of the Government in general, and particularly about his hon'ble friend who was in charge of the Financial Department, and was not satisfied with such liberty, he (MR. STEPHEN) must say that that man had a most insatiable appetite for using strong language. So long as the English papers in this country published what they did publish, about every man, every measure, every principle which they thought it right to discuss, the Native papers need not be under the smallest apprehension that they would fall under the pale of the law. He would appeal to anybody who knew what English public life was, whether any Government which existed in this country was ever likely to bring a newspaper published in this town into Court on a charge of exciting sedition for mere discussion, however violent, personal, or unfair. It was absurd to suppose that anybody here wished to do it, or would dare to do it; it would be altogether repugnant, not only to the law, but to the habits in which English public men were trained up.

So much with regard to what people might say. He would now state what they might not say. They might not say anything of which the obvious intention was to produce rebellion. It might be difficult to frame a definition which would, by mere force of words, exactly include the liberty of saying all that you meant to allow to be said, and exclude the liberty of saying all that you did not mean to allow to be said. But although there was considerable difficulty in framing a definition of the kind, there was none whatever in drawing the line for yourself. Every man who was going to speak, every man who was going to write, ought to know

perfectly well whether he intended to produce disaffection. If he did, he had himself to thank for the consequences of his acts: if he did not, he (MR. STEPHEN) was quite sure of this, that no words which that man could write would convey to other people an intention that he did not intend to express. He (MR. STEPHEN) did not believe that any man who sincerely wished not to excite disaffection ever wrote anything which any other honest man believed to be intended to excite disaffection. You could no more mistake the severity of criticism, or the severity of discussion, for the writing of a person whose object was to produce rebellion or excite disaffection against the Government, than you could mistake the familiarity of friendship for the familiarity of insult. Try to define what it was that made a difference between that neglect of ceremony which you expect from a friend, and that neglect of ceremony which was intended for insult, and you would be unable to express it in words. But no one could mistake the two things, and it was the same with exciting political disaffection.

Finally, he wished to observe that, if any one thought that there was absolutely no occasion for any law of this kind, he ought to look back to incidents which happened not many weeks ago. A man was convicted and sentenced to transportation for life, substantially for committing the very offence at which this section was directed: it was preaching a *Jehád* or holy war against Christians in India. He (MR. STEPHEN) had carefully read the evidence, and supposing it to be true, it proved that this person was in the habit, for weeks and months and years, of going from village to village, and preaching in every place he came to that it was a sacred religious duty to make war against the Government of India. Is that to be permitted, or is it not? If any one really meant to say that it was no crime to go into villages and tell the people that a rebellion against the Government was a sacred duty, he could not argue with such a person. But if such conduct was admitted to be a crime, he would ask any person who objected to the proposed section to frame a better one. Besides the man to whom he had referred, there were eight other men under commitment at Patna, who were charged with very similar offences.

Having referred to this matter of the Wahábí conspiracy, he had just one more remark to make on the subject. We had all seen, in the newspapers published both in England and in India, accounts of the disaffection created by that conspiracy represented in a very formidable manner. It was his belief, however, that although the matter was one which ought not to escape the attention of the Government, and which certainly had been shewn to exist, yet it was the easiest thing in the world to exaggerate its importance and extent. He had read with great pain—and he was very glad to have an opportunity of disavowing and denying—an imputation made in some papers against the general loyalty of the Muhammadan population of India. These imputations were most unfounded and unjust, and he believed that the only class of persons who deserved them were one of those sects of fanatics who were to be found in every creed. Fanaticism was by no means peculiar to the Muhammadan religion. No one who had seen or read much of the world in which we lived, could find it in his heart to speak with disrespect of any of the great religions which had gained the affections of mankind; and he would not say one word against a religion which had preached, with unequalled efficiency, the great cardinal doctrine that lay at the root of all creeds. But it was a common misfortune of all creeds that in every religion there were those who would carry their theories to extreme results, to an extent inconsistent with peace and good order. His Lordship knew better than most of us, that there was no class of people in the world who had greater public virtues of every kind than the Roman Catholics, and there were no better men and women in private life. But there was a way of looking at the Roman Catholic creed which had been adopted by some persons, and which was inconsistent with real allegiance to the civil Government. And the same might be said with regard to the Protestant

religion, although it had been the very life of many European nations, and especially of our own. There had been Protestant fanatics who had been fully as dangerous as Roman Catholics. We had had those who believed that the Pope ought to be able to depose Kings, and we had also had those who preached that there was no King but Jesus, and that they, and they alone, were his representatives. There were some who entertained the opinion that peace between the Muhammadan population and their Christian rulers, however just, was a thing impossible, and that it was a religious duty to make war under such circumstances. He could only say on this subject, that if people would declare war against mankind, they must take the consequences.

It was not with regard to them that he wished to speak. He wished to speak more particularly of the degree in which that doctrine had been rejected by the great body of the Muhammadans. He could not of course enter upon technical questions as to the provisions of the Muhammadan law, but he wished to state as publicly as possible that the Government of this country had no suspicions of the Muhammadan community as such, and knew how to distinguish between the rash opinions of a small and obscure sect, and the sentiments of the vast Muhammadan population, as expressed in the papers he had before him on the subject. He had several letters, but he would only read one: it was the opinion of a large number of Maulavís upon the question of the lawfulness of a *Jehád* in British India, which he would read to the Council:—

"The Mussulmans here are protected by Christians, and there is no *Jehád* in a country where protection is afforded, as the absence of protection and liberty between Mussulmans and infidels is essential in a religious war, and that condition does not exist here. Besides, it is necessary that there should be a probability of victory to Mussulmans and a glory to the Islam. If there be no such probability the *Jehád* is unlawful."

The concluding sentences of the fatwá were to the effect that, if a Christian Government were oppressive and did not afford protection, a *Jehád* would be lawful if there was a probability of success. Upon this he need say nothing more than that it was much like the common European opinion, that when a Government is very bad, the question whether rebellion is justifiable is mainly a question of prudence. In the present case this question did not arise. The substance of the first part of the fatwá was that a *Jehád* was unlawful against a Government which afforded, and by people who had accepted, protection. Whether this opinion was really contained in the Korán and the traditions, was not for him to say; but this he would say most emphatically, that the common good sense and common good feeling of the whole human race would justify it. He should be sorry to believe that the religion of a large portion of mankind could teach the horrible doctrine that it was lawful for a man to pretend to live in peace and good terms with his rulers, to submit to them, to accept offices from them, and to nurse in his mind a fixed intention of breaking out into massacre and plunder against them on the first favourable opportunity. He was glad to believe that this was repudiated by orthodox Muhammadans. The doctrine which the gentlemen in question asserted to be the true doctrine of their religion was that, where protection was given and accepted, there arose a contract between the sovereign and the subject which it was forbidden by every law of God and man to break. If liberty and protection formed a contract, no subject ought to rebel against his sovereign so long as the sovereign discharged his part of the contract; and to break that contract was not only to commit a great crime, but also a most grievous sin. That was a doctrine which certainly commended itself to the reason of the whole human race. It rendered it possible and natural that loyalty should exist, and would, he trusted, continue from generation to generation to bind together the Queen of England, her representatives in this country, and the vast body of her loyal Muhammadan subjects.

The Motion was put and agreed to.

The Hon'ble MR. STEPHEN also moved that the Bill as amended be passed.

The Motion was put and agreed to.

INDIAN REGISTRATION BILL.

The Hon'ble MR. COCKERELL introduced the Bill for the Registration of Assurances, and moved that it be referred to a Select Committee with instructions to report in two months. He said that as, besides the Registration Act of 1866, there were two other enactments appertaining to registration on the Statute-book, the incorporation of the substance of these outlying enactments with the main law fell within the general consolidation scheme, and fresh legislation on the subject must have been undertaken for that purpose. Such legislation was further needed to provide for the exemption from compulsory registration of title-deeds granted by the Inám Commissioner in the Madras Presidency, and to extend the operation of the law to territories in which it was not at present in force.

Moreover, there were certain doubtful points in the existing law regarding which the Civil Courts had pronounced judicial decisions, and questions had arisen from time to time which had been noted as requiring the attention and consideration of the legislature when the occasion for reviewing and amending the law should arise.

The new system of registration had now been in operation, at least in the provinces into which it was first introduced, for the last five years, and the undoubted success of the measure emphatically testified to the wisdom and ability with which the law regulating that system was framed.

The steadily progressive increase, year by year, of the number of instruments registered, which the statistical returns of the Registration Department exhibited, marked the growing popularity of the system. The total number of registrations effected in the last year of report was upwards of 800,000, more than half of which occurred in lower Bengal and the North-Western Provinces. In those territories, the progressive rate of increase had been such, that the number of instruments registered during the latest year of report was considerably more than double that of the first year,—a result which was probably mainly due to the energy and ability of the officers directly charged with the supervision of the local administration of the Registration Department.

To give an idea of the magnitude of the transactions publicly recorded under the present system of registration, he might mention that the estimated value of the property affected by documents registered in 1869-70 was, in lower Bengal, about $8\frac{1}{2}$, and in Madras $7\frac{1}{2}$, crores of rupees.

The returns indicated a remarkable variation of the relative proportions of compulsory and optional registrations.

In the Panjáb notably, and also in the North-West and Central Provinces, the optional registrations largely preponderated, whilst in Madras and Bombay especially, and, in a less degree, in lower Bengal, Mysore and Coorg, the directly opposite result was obtained. This was, no doubt, partly due to the larger number of transactions, forming the subject of optional registration, which presumably took place in and about the great trading marts of Northern and Central India, but it was also, he thought, in some measure to be accounted for by the greater facilities afforded for registration through the lower minimum rate of registration-fee and, the more accessible registering agency which obtained in the provinces in which the excess number of optional registrations prevailed.

The rates of fees charged for registration under the different local administrations varied not only in amount, but also in regard to the principle on which the amount was fixed. In Bengal one *ad valorem* rate obtained for both classes of registrations, whilst in most of the other provinces, with the view of encouraging optional registration, a preferential rate was accorded to that class. He thought the equity of such an arrangement open to question.

Generally, too, it might be said that the average rate of fees was too high even in Bengal proper, where it was lower than in any other province, and some portion of the surplus which now annually accrued from the operations of the Registration Department should certainly be devoted to making registration cheaper, if its utmost practicable development was to be looked for in the future.

At present, the average fee for each registration ranged from one rupee and nine annas, in Bengal, to upwards of two rupees and eight annas, in Madras and Bombay.

Still more essential to the promotion of the successful working of the system was the easy accessibility of the registering officer, and there was doubtless much room for improvement in this respect.

He would not take up the time of the Council by going into any detail of the results of the working of a special registration-agency. It would be sufficient to say that it had everywhere been found eminently successful in inducing registration.

Experience had shown that the multiplication of registration-offices, the devotion of the *exclusive* services of Registrars and Sub-Registrars to the work of registration, and the maintenance of an active supervision had, wherever they had been in operation, been attended by a great increase in the number of registrations, both as regards instruments the registration of which was optional, and those which were by the law declared to be invalid unless registered. So, also, every temporary curtailment of registering agency,—he referred to the case of lower Bengal, where an attempt to place two or more registration-offices under one Sub-Registrar, on the plan of the Small Cause Court administration system, had been made, but was now abandoned—had been followed by a corresponding decrease in the number of registrations.

To promote the development of the registration-system, a larger expenditure was required, and it seemed to MR. COCKERELL that some legal provision was wanted to enforce this. At present, a large surplus accrued yearly to the general revenue. That surplus, reckoned from the commencement of the registration-scheme up to the current year, aggregated no less a sum than thirteen lákhs of rupees. It was never intended that the registration law should be worked so as to make it a source of public revenue. If the Department paid its expenses without any charge, or even with only a small charge, on the public revenue, the anticipations of the projectors of the system would, as regards its financial aspect, have been fully realized.

He was strongly of opinion that greater latitude must be given to the local administrations in the expenditure of the income of the Department for the purpose of increasing its working efficiency.

Much economy of labour might be effected by the relaxation of some of the stringent provisions of the existing law in regard to the forms and records to be prepared and kept in the different registration-offices.

In the interests of the public, it was important to refrain from imposing any legal obligation the public advantage to be derived from which was not commensurate with the expenditure of labour entailed by it, and viewed in this light, Part XI of the Bill certainly went too far.

The number of indexes required to be kept under the present law might be substantially reduced without the smallest sacrifice of public convenience. All that the law need make obligatory on registering officers was the keeping up indexes Nos. I and II. The choice of such subsidiary records as might serve to assist the search for registered documents and the identification of the property affected by them, might be advantageously left to the discretion of the Registrar General, subject to the general control of the Local Government.

The provisions of sections twenty-one, seventy-three and seventy-six, in regard to the transmission of copies, called for amendment. Much unnecessary labour was imposed on registering officers by the present requirements of the law in this matter.

Greater facility for registration would be afforded also by some relaxation of the provisions of section twenty-nine, in regard to the place where an instrument was to be presented for registration. It frequently happened that the convenience of all the parties who had to appear before a Sub-Registrar would be met by power to register at places where no portion of the property forming the subject of the deed requiring registration was situated within the local limits of that officer's jurisdiction. Instances had come to notice where, to meet the conditions of the law, a fictitious tree or strip of land had been inserted in the deed, to make it registrable at a particular office to which it best suited the convenience of the parties to the transaction to take the document for registration.

The Bill now before the Council provided for the consolidation of the existing law and its extension to British Burma. It also proposed—(1*st*) to exempt from compulsory registration Inám title-deeds granted by the Inám Commissioner in the Madras Presidency; (2*nd*) to render compulsory the registration of written authorities to adopt; (3*rd*) to extend to Sub-Registrars the power of registering wills, receiving sealed covers for deposit, and instituting, without reference to the District Registrar, criminal prosecutions; and it further contained amendments of the law on a very few points in regard to which it had not worked satisfactorily, and on others where a certain degree of ambiguity as to the intentions of the legislature had been suggested by the decisions of the High Courts.

One of the two main objects of the registration law was the prevention of fraud, in regard to the devolution and transfer of real property, theretofore so prevalent in this country.

There was no form of transfer of property which was attended with so much risk of fraudulent practices as that which arose out of the law of adoption. Where the authority to adopt was given verbally, there was no means of protecting the person injured by the falsely propounded authority, but the registration law did afford the means of reducing the risk of fraud where the authority was in writing.

It might be said that the written authority to adopt was in the nature of a testamentary document, and should not be treated differently from a will, the registration of which was allowed to remain optional.

But wills, in Bengal at least, where they were to be found in far greater numbers—as the registration statistical returns clearly proved—than in other parts of India, were, by the recent extension of the Indian Succession Act, already subject to the test of probate, and it might reasonably be expected that the testamentary portion of the Succession Act would before long be extended to all places in which the practice of will-making was shown to exist.

The extension of the power of registering wills, which by the existing law was vested in Registrars only, to Sub-Registrars, had been rendered especially necessary, to prevent inconvenience to the public from the creation of special District Registrars, and the consequent reduction of the number of District Registrars' offices. It might be doubted, however, whether the proposed permission to deposit sealed covers at the offices of Sub-Registrars would work well; for, having regard to the expense which such a provision would entail, it would be hardly feasible to supply fire-proof boxes for the safe custody of those covers to all registration offices, and there would be a difficulty in carrying out the provisions of section forty-five as to the identification of the persons by whom such covers had been originally deposited.

Section thirty-six of the Bill required the appearance of all the parties to an instrument presented for registration before the registering officer within the period allowed for the presentation of the instrument. The peculiarity of the existing law was, that it provided for the presentation of an instrument only within a certain period, and placed no limit on the time within which the registration, if admissible, must take place. The limitation as to presentation

might serve the purpose of guarding against fraud, but the completeness of the record of title was impaired by the want of some restriction as to the time within which the registration must be effected.

Connected with this subject was the alteration contemplated by section fifty-seven. The present practice was to enter a copy of any instrument presented for registration in the register at the time of such presentation. This system, obviously in the case of instruments not eventually admitted to registration, not only involved useless labour, but also had the effect of impairing the correctness of the record; and it was therefore proposed to substitute for it the provision of the Bill; unless, however, some limitation was applied to the completion of the registration of an instrument, the practice of transcribing it at the time of presentation could hardly be dispensed with.

Sections forty-one and forty-two of the Bill were framed to meet the present difficulty in securing the registration of all decrees of court affecting the title to immovable property, and in the realization of the fees due on such registrations: the amendments of the existing practice propounded in these sections were in accordance with the suggestions of the High Courts.

Many officers doubted the expediency of maintaining the requirements of the law in regard to such registrations.

It was found impracticable to provide for the registration of decrees and orders of revenue courts and officers, and the theory of working the registration law so as to maintain a complete record of title to real property in the archives of a single Department, was held to be incapable of attainment.

It became then an important question for the consideration of the Committee to which this Bill might be referred, whether the gain to the object of completeness of record was commensurate with the expenditure of time and labour which the maintenance of this class of registrations, numbering about 85,000 per annum, involved.

The case for the maintenance of the provisions of section forty-one was certainly stronger than it was as regards section forty-two, but he was of opinion that both sections might with advantage be omitted.

Of the amendments suggested by the rulings of the High Courts, the most important was to be found in sections forty-eight and forty-nine. Section forty-eight of Act XX of 1866 declared, broadly, that all instruments (excluding wills and authorities to adopt) duly registered, and relating to any property movable or immovable, should take effect against any oral agreement or declaration relating to the same property.

The High Court of Calcutta held, in the case of *Selam Sheikh* v. *Bydonath Ghatuk*, that this provision could not be intended to apply where the parol contract was supported by the transfer of possession, and could not be reasonably construed as entitling a registered deed of conveyance to prevail against a title founded on such possession.

An attempt was made in the Bill to settle this point, by drawing a distinction, such as was believed to be in accordance with the general policy of the registration law, between immovable and movable property, applying the words of the existing law in their widest signification to the case of the former class of property, and narrowing them to the Court's construction as regards movable property.

The question would require the careful consideration of the Select Committee. He was not prepared to say that he thought this provision of the Bill offered the best solution of the doubt. It seemed to him that, even in the case of immovable property, a registered deed could only be regarded as conferring a *primâ facie* paramount title, and that it could not ultimately prevail against possession, fortified by proof of adequate consideration having been given for such possession.

In section fifty-three, an amplification of the provisions of the corresponding clause of the Act of 1866 had been made, embodying the rulings of the Madras High Court in the cases of *Pudiyaporayil Mamy* v. *Madakarath Amman Kutti*, and of *Subbuviyan petitioner*, to the effect that the remedy allowed by the law on this subject could be enforced only by or against the actual parties to the specially registered contract.

To section seventy-five, a new proviso had been added in the sense of the ruling of the High Court of Bombay in the matter of the Will of *Nagin Dass*, authorizing the registering officer to surrender a sealed cover deposited under section forty-four, when such cover was called for by a Civil Court for the purpose of probate.

This, however, left the case of a Will deposited under a sealed cover in a registration office, and required to be produced in a Civil Court as evidence, unprovided for.

The Bill contained other amendments of the existing law on minor points, to which it was unnecessary to make any special reference at the present time; but there was one important alteration of the law, not included in the Bill as it now stood, which was strongly advocated in some quarters, and especially by the Government of the North-Western Provinces.

At present, the registration of deeds affecting title to immovable property not exceeding one hundred rupees in value was optional. This exception to the general rule regarding instruments affecting that class of property was probably intended to prevent the conditions of the law working harshly in the case of transactions of a petty character; but as, in this country, the mass of transactions did partake of that character, the effect of the exception was to check very materially one of the chief objects of the registration-system, the attainment of a complete record of title to immovable property.

The very large number of documents of this class which were now registered, though their registration was optional, pointed to the conclusion that to make such registrations compulsory would entail no hardship or serious inconvenience, whilst the gain to the completeness of the record of title to immovable property, which the registration-system was specially designed to afford, would be very great.

Some exception would of course have to be made in respect of leases for fixed periods not exceeding one year, or the cost of registration might be found to exceed the value of the occupancy; but if the registration-charges were reduced as they ought to be, and the facilities for registering increased by improved agency, in no other cases could the application of compulsory registration be reasonably objected to.

Since the Bill was drawn a proposal had come up to extend the operation of the law to Oudh.

In that province, a rough system of voluntary registration had been in force for the last ten years. In some respects that system had worked well, but the advanced requirements of the province were now thought to call for the more elaborate machinery which was elsewhere in operation, and as the local administrative officers were generally in favour of extending the law, which the Bill made applicable to all other parts of British India, the expediency of obtaining a general uniformity of system through such extension could hardly be questioned.

The Motion was put and agreed to.

PRISONS' ACT EXTENSION (COORG) BILL.

The Hon'ble MR. CHAPMAN moved for leave to introduce a Bill to extend the Prisons' Act, 1870, to Coorg. He said that there was no law in the province of Coorg to regulate prison-management and discipline. At the request of the

Chief Commissioner, it was proposed to introduce Act XXVI of 1870, which was the latest enactment on the subject.

The Motion was put and agreed to.

COMMITMENTS FROM ANDAMANS BILL.

The Hon'ble MR. CHAPMAN also moved for leave to introduce a Bill to authorize the committal of European British subjects by Courts in the Andamans to the High Court at Fort William. He said that European British subjects, who might commit offences at the Andamans not punishable with death and not within the jurisdiction of a Justice of the Peace, were, under Act XXI of 1863, section 41, committed to the Recorder at Maulmain. As there were now no regular means of communication between the Andamans and British Burma, it would be more convenient to have such offenders tried by the High Court at Calcutta.

The Motion was put and agreed to.

CHAUKIDARI ACT EXTENSION BILL.

The Hon'ble MR. CHAPMAN also moved for leave to introduce a Bill to authorize the extension of the Chaukídárí Act (XX of 1856) to places where there is no Jamadár of Police. He said that, at present, the Chaukídárí Act could only be introduced into towns and places where there was a Government Police-station under the charge of an officer of rank not lower than that of a Jamadár. It was proposed to remove this restriction and to empower the Local Governments to apply the Act to all towns. The exemption in favour of agricultural villages would remain unaltered. The proposal had originated with the Government of the North-Western Provinces, and had the approval of the Governments of Bengal and the Panjáb.

The Motion was put and agreed to.

The following Select Committee was named:—

On the Bill for the Registration of Assurances———The Hon'ble Messrs. Strachey, Stephen, Chapman and Bullen Smith and the Mover.

The Council adjourned to Friday, the 2nd December 1870.

ACCIDENT TO STORE-ROOM OF GUN-CARRIAGE FACTORY IN COURSE OF CONSTRUCTION AT ALLAHABAD.

No. 1294-5 B. M.,—dated 30th November 1870.

RESOLUTION—By the Govt. of India, P. W. DEPT.

Read the following :—

Telegram to Colonel Alexander, dated 3rd June 1870.

From Superintending Engineers, 3rd Circle, North-Western Provinces, No. 1774, dated 1st July 1870. No. 1

" " " No. 1809, dated 5th July 1870.

Public Works Department Resolution Nos. 681—85 B.—M., dated 6th July 1870.

Telegram to Lieutenant Governor, dated 5th July 1870.

From Government, North-Western Provinces, No. 1998, dated 2nd July 1870 and enclosures.

Public Works Department Resolution No. 686 B.—M., dated 7th July 1870.

From Government, North-Western Provinces, No. 1618, dated 14th July 1870.

From Government, North-Western Provinces, No. 2403 A, dated 13th August 1870 and enclosures.

RESOLUTION.—At the end of June last, the attention of His Excellency the Governor General in Council was drawn to a report in the public papers that an accident, accompanied by loss of human life, had occurred to one of the buildings in course of construction at the Gun-carriage Factory at Allahabad.

2. His Honour the Lieutenant Governor being at the time absent from Allahabad, the Superintending Engineer at that place was called upon for an immediate report, which was shortly received. From this report it appeared that the accident was of so serious a nature, that the Governor General in Council considered it necessary to appoint a special Committee to investigate the matter fully. The Committee was composed as follows :—

PRESIDENT :

MAJOR-GENERAL TRAVERS, V. C.,
Commanding the Allahabad Division.

MEMBERS :

COLONEL J. C. ANDERSON, C. S. I., R. E,
Officiating Inspector General of Irrigation.

MR. R. M. BRERETON, *Chief Engineer, G. I. P. Railway, North-East Extension.*

The last named gentleman having consented to undertake the duty, his services were placed at the disposal of Government, for the purpose, through the courtesy of the Agent of the Railway.

3. The Committee were directed to report, through the Government of the North-Western Provinces, on the causes which had led to the catastrophe, and on the responsibility of the several Officers of the Public Works Department, Contractors, or others, in any way connected with the design or construction of the building.

4. The Committee were also instructed to examine all the other buildings of the new Factory, particularly those that would be subject to the vibration caused by machinery in motion, and to report on their state.

5. The Committee were further directed to inspect any buildings at Allahabad constructed lately, wholly or in part, by the same agency (whether Officers of the Public Works Department, or Contractors) as that employed on the building which had failed, and to examine and report separately on the general condition of the new soldiers' barracks.

6. The appointment of this Committee was communicated by telegraph to the Lieutenant Governor on the 5th July.

7. The Committee assembled at Allahabad on the 13th July, and submitted their report on the 22nd idem to the Lieutenant Governor, by whom it was sent to the Government of India, with a Minute by himself and a Note by the Chief Engineer.

8. The primary object of the appointment of the Committee will first be considered.

9. The building to which the accident occurred was intended for a store-room, and consisted of three compartments, each compartment being 170 feet long × 45 feet wide, the width being divided by a longitudinal arcaded wall down the centre, having piers 2½ feet square with arches of 14½ feet span and rise of 4 feet, the springing of the arches being at a height of 13 feet above the floor-level.

10. The walls, piers and arches were all of brick-work throughout, as were also the foundations.

11. The roof was flat and composed of sâl beams 13 inches × 9 inches placed 3⅗ feet apart from centre to centre, resting on the outer and centre walls, and supporting stone slabs 2 inches thick, which were covered by terracing 4 inches thick.

12. The Superintending Engineer estimated the weight of the roof covering, allowing for absorption and the weight of work-people employed, at about 120 lbs. per foot superficial.

13. At the time of the accident (the 23rd June) the west compartment had been roofed in; the centre compartment was about three-fourths covered; and the walls of the third compartment were finished, but the roofing of it had not been commenced. Twenty-two work-people were employed in terracing the centre compartment when the whole roof of this compartment gave way, owing, it is supposed, to the failure of the centre wall, and 18 out of the 22 work-people who had been on the roof fell with it, and had to be extricated from the ruins. Of these 18, four were reported to have died by the 1st July, and seven others to have sustained serious injuries.

14. The walls of this building were begun in February 1868 and finished in September of the same year, but were left unroofed

till February 1870, owing partly to delay in the supply of timber, and partly to the reduction made in the Public Works grant.

15. There appears, from the report of the Committee, to be no doubt that the failure of the centre wall was the cause of the accident. The Committee further report that the brick-work of this particular building in question, and, indeed, of all the other buildings of the Factory, so far as the quality of the bricks and their setting is concerned, is excellent; that the pointing of the joints is particularly good and clean, but that the mortar used is of the most inferior description, and that it is to the worthless character of this mortar that the failure of the wall is mainly to be attributed.

16. The weakness of the walls, due to their construction with bad mortar, was, in the opinion of the Committee, increased by the exposure of the walls to the rains of 1869, which, had the mortar been of good quality, would not have been in any way the cause of injury. As a minor cause, which might possibly have contributed, in some degree, to the catastrophe that occurred, the Committee mention that the terracing, being in progress from one side only of the compartment, might have exercised a side thrust on the central longitudinal wall.

17. The bad quality of the mortar was not confined to the one building, but was observable in all the other buildings of the Factory, including sheds for machinery to be driven by steam-power and a chimney-shaft 123½ feet high.

18. There was no sign of settlement in the foundations of any of the buildings, though the Committee turned their particular attention to this point; and as regards the designs, the Committee, referring to the Factory buildings generally, say they consider the whole to be very good; one or two points are mentioned in which improvement is considered by them to be possible, but their suggestions are unimportant, and refer chiefly to the machinery sheds.

19. As regards the mortar, it is reported that it was composed of kunkur burnt with oopla (cow-dung cakes) and soorkhee (pounded brick,) the specified proportions being one part of lime to one part of soorkhee. From evidence adduced, however, there can be no doubt that the lime, which was burnt by a Contractor near the site of the works, was delivered with a large admixture of wood-ashes and the refuse of soap-boiling operations, in both of which materials, it seems from the Committee's report (which has been fully confirmed by a subsequent enquiry made by the Magistrate in conjunction with the Superintending Engineer) a regular trade had long been carried on.

20. But in whatever way the deterioration of the lime was effected, it is clear that the mortar was quite unfit for the purpose for which it had been used, for an analysis made by Assistant Surgeon Hamilton, R. A., of specimens taken at random from one of the walls, showed that it contained only 6 per cent. of lime.

21. Subsequent analyses made by Dr. Murray Thomson also showed that the mortar contained a large proportion of alkaline salts, and that the percentage of lime was very small.

22. The analyses confirm what was evident from an inspection of the mortar, and the Governor General in Council is satisfied that the accident may be attributed almost entirely, if not altogether, to the bad quality of the mortar. It remains, therefore, to enquire in what degree the responsibility for the use of the bad mortar rests on each of the individuals concerned in the execution of the work, both in the building which fell, and in the other buildings of the Factory.

23. The person in immediate charge of the construction of the buildings in question was Supervisor Bartram, who is a Fitter by trade, and who passed out of the Roorkee College and entered the Public Works Department as Overseer in 1862. He appears to have been first employed on the Deccan Road, where a number of masonry bridges were erected under his superintendence, the experience gained on which should have rendered him thoroughly acquainted with the qualities of mortar.

24. In his evidence before the Committee, he stated that he did not consider a specimen of mortar which was shown to him to be good, and that he had, on various occasions, rejected mortar brought for use on the works. Still the fact remains that the building which failed, and many others in the Factory were built under his immediate superintendence with absolutely worthless mortar.

25. His length of service and practical experience on masonry works leave him no excuse for ignorance as to the quality of the mortar he saw daily used, on an extensive scale, on the works under his charge. The Committee and the Lieutenant Governor consider that he has proved himself thoroughly unfit for the place he holds.

26. The Governor General in Council is of opinion that Supervisor Bartram has failed in the proper discharge of one of the simplest, yet most important, of the duties assigned to members of the Upper Subordinate Establishment, and deems it necessary to remove him from the Public Works Department. His removal should be ordered by the Local Government.

27. The Executive Engineers in charge of the works were Major W. Jackson of the Bengal Staff Corps from the time the buildings of the Factory were commenced in March 1867, until the 5th February 1870, when he made over the charge to Mr. R. J. Clarke, the present Executive Engineer.

28. Under the former Officer, therefore, the whole of the work which has failed was carried out, and also the majority of the other buildings in which bad mortar was used.

29. Both the Committee and the Lieutenant Governor bear testimony to this Officer's diligence, to his almost daily attendance at the works, to the general good quality (with the one important exception of the mortar), of the brick work executed under his orders, to the pains and forethought evinced in his correspondence and specifications, and to his unquestionable anxiety to discharge his duties to the best of his ability.

30. The Lieutenant Governor, however, has stated that Major Jackson is wanting in the qualities essential to a successful service in the Department of Public Works, particularly in energy and power

of control, and that he trusted too much to his subordinates. It may be further noticed, that the unfitness of this Officer, for the important post of Executive Engineer, is borne out by the unskilful manner in which, as brought to light in the papers submitted, he designed an ordinary scarf for a beam; the error made was a very flagrant one evincing ignorance of the elementary principles of carpentry. His Excellency the Governor General in Council considers that the opinions expressed regarding Major Jackson are amply borne out by the evidence adduced, and that it is impossible to arrive at any conclusion but that this Officer should be removed from the Public Works Department. He will accordingly be replaced at the disposal of the Military Department.

31. Mr. Clarke is not in any way responsible for the work in the walls of the building that failed. The Committee however report that they saw no improvement in the quality of the mortar used in the Factory buildings during the four and a half months that Mr. Clarke had been in charge of the Division, but mention the fact that he had stopped certain of the Contractors' works elsewhere, in consequence of being dissatisfied with the mortar, which, the Committee add, was much superior to what was being used in the Gun-carriage Factory buildings. The Governor General in Council accepts the opinion of the Committee with reference to this Officer, to the extent that it might reasonably be presumed that he would not much longer have delayed effecting an improvement in the work at the Factory also; but it nevertheless appears to His Excellency in Council that Mr. Clarke is not free from blame, as he should have made a thorough inspection of all buildings in progress immediately after assuming charge of his Division, and that had this duty been properly discharged he ought not to have failed to discover the bad quality of the mortar at once. He should be warned that this instance of remissness will be recorded against him in the Promotion Rolls, and that any further shortcoming on his part that may be brought to the notice of the Government of India, will be dealt with severely.

32. The Superintending Engineers in charge of the Circle whilst the various buildings for the Factory were in progress, were—

Lieutenant-Colonel C. D. Newmarch, R. E. (since dead), from 6th January 1868, to 31st October 1868.

Major F. H. Cobbe, R. A., from 1st November 1868, to 13th April 1869.

Lieutenant-Colonel H. Rose, S. C., from 13th April 1869, to 2nd May 1870.

Lieutenant-Colonel F. Alexander, S. C., from 2nd May 1870, to the present time.

33. The work on the store-room, the failure of which led to the present enquiry, was all carried out during the incumbency of the first of these Officers. He joined the Circle in bad health, having shortly before met with a severe accident, and in consequence of this was permitted by the Local Government, when proceeding on inspection to Raneekhet in April 1868, to remain there for two months to arrange about the laying out of the new Station. In ordinary course, he would have returned to his Head-quarter Station in June of the same year, but

his Medical advisers would not permit this, and His Honor allowed him to continue to perform his duties at Nynee Tal on its being represented to him by Colonel Hodgson, the Chief Engineer, that he (Colonel Hodgson) would be present at Allahabad in case of any emergency arising. Colonel Newmarch's health did not improve, and he was unable to leave Nynee Tal till late in October 1868, when he was transferred to Oudh as Chief Engineer, and not long after was obliged to take leave on medical certificate, and died on his way home. He had previously proved himself to be an efficient Officer. On his case, it is unnecessary to make further comment.

34. Major Cobbe did not assume charge of the Circle until the wall which fell had been completed; but during the whole of the cold season of 1868-69 he held the post of Superintending Engineer, and failed to ensure any improvement, during that time, in the quality of work. An Inspection Report sent in by him in March 1869 makes no mention of any inferiority in the work. The opinion of the Committee that this Officer failed in his duty in not having detected the defects of the mortar used generally in the numerous buildings under construction during his incumbency, is fully concurred in by the Governor General in Council, and the Lieutenant Governor has recorded his opinion that "neglect of duty is more attributable to Major Cobbe, than to any other of the Controlling Officers."

35. It is submitted in extenuation, that he had for a long time been, as indeed he now is (having been obliged lately to take leave on medical certificate) in an infirm state of health; this fact may be admitted, but taken in connection with the reports in this case, and in that relating to bad work in certain buildings in the Cantonment (to be noticed in a separate Resolution), it is clear that it is not desirable to retain him in the Department Public Works. His services, therefore, will also be re-placed at the disposal of the Military Department.

36. Lieutenant Colonel Rose, who was the next Superintending Engineer, and who held charge of the Circle for a year, reports that he visited the works at the Factory four or five times, but that he never made what he calls a "formal inspection" of them, saying that he deferred doing so until he had visited the various other out-lying Divisions of his charge. The division, the inspection of which was thus left to the last, was, in regard to works in progress, the most important one in his circle, and the one in which he usually resided.

37. He, however, commenced the formal inspection of this particular Division; but before he had completed it, he heard of his probable transfer to another Province, and therefore thought it useless to go on with it. In his replies to the Committee he also says that, as he had not occasion to make a "formal inspection," he never thought it necessary to scrutinize the work very closely, and he never brought forward any cases in which he was dissatisfied with Major Jackson's work.

38. The Committee remark with regard to this Officer that, in their opinion, he had no authority for considering an inspection by a Superintending Engineer to be other than a formal one, and that he had ample opportunity for becoming acquainted with the defects of construction noticed. These remarks have the entire con-

currence of His Excellency in Council. A Superintending Engineer who inspects works under his charge without satisfying himself as to the quality of the materials used, omits one of the fundamental duties of his office, a duty the necessity for which must be at once apparent to any Officer who has a proper sense of the responsibility attaching to a Superintending Engineer, and which is, moreover, fully impressed upon Superintending Engineers in the Public Works Code.

39. In the course of a whole year Colonel Rose appears never, in the proper sense of the term, to have inspected the Factory, though many of the buildings then in progress were of an important nature, including a chimney shaft 123½ feet high, a structure requiring a very superior description of brick-work, and the most careful and constant supervision.

40. It appears, moreover, from his examination before the Committee, that Colonel Rose had never even taken an opportunity to make himself acquainted with the arrangements for lime-manufacture that were in force in the Allahabad Division; and the neglect of duty, to which he has confessed, in having avoided an important inspection because he was about to be removed to the Central Provinces, shows that he cannot have a proper appreciation of the interests of the Public Service. In fact, apart from the accident now under review, Colonel Rose must stand convicted on his own evidence of having signally failed to pay due regard to the responsibilities and duties of the important post of Superintending Engineer.

41. His Excellency in Council would have had doubts whether an Officer, who has shown such remissness as is apparent in this case, ought to be allowed to remain in the Public Works Department, but in consequence of Colonel Rose's long service would have been content with depriving him of his position as Superintending Engineer, had he given no other cause for dissatisfaction. Two other serious instances of failure in duty, while he was an Executive Engineer at Rawulpindee, have however been very lately brought to the notice of the Government of India, which, taken in connexion with the present case, have led his Excellency in Council to the conclusion that it would not be right to retain this Officer in the Department. His services will accordingly be re-placed at the disposal of the Government of India, in the Military Department.

42. Lieutenant-Colonel Alexander, the present Superintending Engineer, joined the Circle only two months before the accident occurred; his responsibility is therefore less than that of any of his predecessors. The Committee, however, report that no improvement was apparent in the mortar, used in the chimney-stack, since he assumed charge.

43. His Excellency in Council, moreover, cannot consider Colonel Alexander's own evidence to be satisfactory or worthy of an Officer of his standing and experience, for he too makes use of the term "formal inspection," and under the plea that his visits to the works were not of this nature, attempts to excuse himself for not having looked more closely into the quality of the mortar.

44. In the late re-arrangement of Superintending Engineers that was necessitated by the change in the number of grades, Colonel Alexander has, in consequence of his proceedings in this case, been placed in a grade lower than that in which he would otherwise have appeared.

45. Colonel Hodgson held the combined Offices of Chief Engineer and Secretary to the Government of the North-Western Provinces, in the Public Works Department, during the whole of the period under review; he resided frequently at Allahabad, and on one occasion undertook for a short period the duties of Colonel Newmarch, at that Station.

46. His very onerous duties are doubtless mainly administrative; still His Excellency in Council cannot admit that they are purely so, and is of opinion that in failing to visit frequently and to inspect carefully the work in progress on the very extensive and costly ranges of buildings which were being constructed close to his residence, he omitted an important part of his duty.

47. Colonel Hodgson is an Officer of long service and great experience, and had he made such inspections of these particular works as might fairly have been expected of him, the bad quality of the mortar that was being used could not have escaped his notice. It is also a serious reflection upon him that, as the local Head of the Engineering Staff, he failed to secure such efficient supervision of the work as would have prevented the discreditable failure that has led to this enquiry.

48. The responsibility attaching to him was, moreover, increased by his having undertaken to carry on Colonel Newmarch's duties at Allahabad during this Officer's absence on account of ill health.

49. His Excellency in Council further considers that it is a blot in the administration of the Public Works Department in the North-Western Provinces, for which the Chief Engineer must be held mainly responsible, that Officers who evidently were physically unfit for the proper discharge of their duties should have been allowed to retain their charges. This occurred with reference to both Colonel Newmarch and Major Cobbe.

50. The Governor General in Council sympathises fully with Officers who, after many years' good service, may be obliged through ill health to abandon valuable posts which they may have well-earned, and the loss of which may be to them a source of great hardship, but these are the severe conditions which attach themselves to all efficient service, and more especially to service in India; and His Excellency in Council deems it right here to record his opinion, that all Heads of Departments fail in their duty when, under any circumstances whatever, they sanction, directly or indirectly, the retention in active employment of any Officer who is physically or mentally unfit for the proper discharge of his duty.

51. The Governor General in Council quite appreciates the ability, zeal, method, untiring industry and devotion to his work which have characterized Colonel Hodgson's long service in the Public Works Department, and regrets that a sense of duty renders it necessary to animadvert thus strongly on his proceedings in this case; but His Excellency in Council feels it impossible, under the circumstances, to absolve the head of the Department from blame for a failure which has resulted in the severe punishment of so many of the Officers subordinate to him.

52. With regard to the lime Contractor, separate instructions will be issued for prosecuting him on a criminal charge, as there can be no doubt, from the evidence that has been adduced, that the lime delivered at the works was largely adulterated.

53. Separate instructions will also be issued in respect to the other buildings of the Factory that have been completed, or that are in progress, and the uses to which they should be eventually put. It appears from the Committee's report that, with a few exceptions, the whole of these buildings require considerable works of repair and renewal; and that in consequence of the bad quality of the mortar, the buildings in which it was intended to work the machinery will have to be turned to account for some other purpose.

54. In conclusion, His Excellency the Governor General in Council desires to record that he has reviewed with great sorrow this deplorable history of negligence, incapacity and corruption—negligence in the conduct of every superior Officer who was connected with the supervision of these buildings from the beginning,—incapacity to a greater or less extent of almost every subordinate concerned in the work of construction,—corruption, on the part of those who supplied the worthless materials,—and it is impossible to avoid the suspicion, that some of the inferior subordinates must also have been aware of the organized system in the adulteration of the lime which was practised throughout.

ORDER.—Ordered, that this Resolution be forwarded to the Government, North-Western Provinces, with request that a copy may be furnished to each of the Officers concerned now serving in the Department Public Works of the North-Western Provinces, also that a copy of the Resolution be sent to the Chief Commissioner, Central Provinces, for information and communication to Lieutenant-Colonel Rose.

Ordered also, that this Resolution, together with the connected papers, be sent to the Military Department for information, and for the issue of any orders that may be necessary in that Department.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

REPORT OF SPECIAL COMMITTEE UPON THE DEFECTS IN THE NEW BARRACKS AND OTHER BUILDINGS AT ALLAHABAD.

No. 1296-7 B—M, dated 30th November 1870.

RESOLUTION—By the Govt. of India, P. W. DEPT.

Read—

Public Works Department letter to the Government of the North-Western Provinces, in the Public Works Department, No. 686 B—M, dated 7th July 1870.

Public Works Department letter to the Government of the North-Western Provinces, in the Public Works Department, No. 705 B—M, dated 12th July 1870.

Endorsement from the Military Department, No. 356, dated 18th July 1870.

Public Works Department endorsement to the Chief Engineer, North-Western Provinces, No. 744 B—M, dated 18th July 1870.

Letter from the Government of the North-Western Provinces, in the Public Works Department, No. 2408 A, dated 13th August 1870, and enclosures.

Letter from the Government of the North-Western Provinces, in the Public Works Department, No. 2474 A, dated 18th August 1870, and enclosures.

RESOLUTION.—The Special Committee, appointed for the purpose of reporting upon the circumstances relating to the fall of the store-room in the Gun-carriage Factory at Allahabad, were requested to examine and report upon the condition of the soldiers' barracks lately erected in the new Cantonment, and after a careful inspection of the several buildings, have brought to notice defects in the following instances:—

1.—Insecurity of the planks of the ceiling of the barracks.

2.—Leaky condition of roofs, particularly the terraced ones of the upper-verandahs of barracks.

3.—Want of sufficient connection between the verandah and main walls of barracks.

4.—Variable quality of the mortar and plaster used in the construction of the buildings generally.

5.—Defective drainage of the ground in the neighbourhood of the barracks.

6.—Doubts as to the sufficiency of the foundations of the barracks.

7.—Inferior style of construction of Officers' quarters, particularly in respect to one of the double-storeyed buildings, which will probably have to be re-built.

As regards the barracks, the Committee only lay stress on point No. 3; they remark—"this is, in fact, almost the only point of any importance that has come under our notice," and the Local Government observes that, whilst there are many defects in the workmanship which are very discreditable to the Officers who have been connected with them, no radical defects of construction appear to exist, or only such as admit of being remedied at no very large outlay.

1. *Ceilings.*—The half-inch planks, of which the ceilings are formed, not having been properly fastened, have started under the influence of the alterations of temperature and moisture of the atmosphere. Very simple measures are necessary to make these quite secure; and the Committee express the opinion that "the defects might easily have been rectified

by the Executive Engineer, or at all events by the Superintending Engineer on his own responsibility." The Local Government remarks that "it was through error of judgment on the part of the Executive Engineer that what is required had not already been carried out." Measures have been taken by the Local Government for effecting the necessary repairs, and probably the work has been done by this time.

2. *Leakage of verandah roofs.*—This is partly due to cracks in the terrace-covering, which ought to have been long ago closed up by the Executive Engineer, but mainly to an insufficient number of pipes for the rapid discharge of the rain water. It is proposed to supply an additional number of pipes; but, in view to avoiding the risk of leakage into the walls, it is a matter for further consideration whether it will not be the best plan to dispense with pipes altogether, and to allow the water to pass freely over the eaves, or to discharge by numerous spouts.

3. *Insufficient connection between verandah and main walls.*—The arcaded verandah walls are slight, and the Committee think that they discovered signs of their having been thrust outward by the roof. The evidence is not very positive, but the Committee very properly recommend the precaution of improving the connection between the main and the tops of the vernadah walls by a few iron tie-rods. Orders, which are approved by the Governor General in Council, have been given by the Local Government to carry out this precautionary measure.

4. *Variable quality of mortar and plaster.*—The Committee consider that "the whole of the brick-work, as regards the quality of bricks and setting, is altogether unexceptionable; the bricks have been burnt in the Government yards, and are as good as any we have ever seen, and the joints of the work are remarkably close and true. We cannot, however, say that the mortar is generally of equally good quality. Both as regards the pointing and the plaster, we find that, in some places, the mortar is particularly good, and in others of inferior quality, and in many of the wards, particularly with regard to the plaster, decidedly bad." The security of the buildings does not appear in any way to be affected by the quality of the mortar; but the bad plaster will, of course, involve heavy expense in the annual repairs. The Committee would not permit the use of oopla-burnt kunkur lime; but such lime can be obtained of excellent quality if ordinary care be taken in its preparation, and on economical grounds it would be very undesirable to prohibit the use of lime thus burnt.

5. *Defective drainage.*—The Committee draw attention to this, and particularly urge that arrangements be made to prevent stagnation of water near the foundations of the buildings.

The Chief Engineer explains that projects for the complete drainage of the lines have been approved, and that, for the most part, the necessary drainage channels have been cut. The ground in the neighbourhood of the barracks has, however, been lately ploughed up in view to its being purified by cultivation; some of the surface drains have consequently been choked, and water lies about in various places. A few cuts would have disposed of this water, and the Executive Engineer is justly blamed for not having taken the necessary measures to ensure their being carried out. The report brings to light a want of forethought and consideration in this very simple matter, which it is painful to be obliged to notice, and His Excellency the Governor General in Council

desires that this question of drainage may continue to receive the most careful consideration of the Chief Engineer.

6. *Insufficiency of foundations.*—The attention of the Committee was drawn to this point in consequence of some slight cracks in the Infantry hospital walls. The Committee remark "though to all appearance they are quite insignificant, we feel bound to notice them, owing to the fact that whilst two of the men's hospital ranges were under construction, a portion of one of them fell twice, and an angle of the other three times, and were again re-built on the old foundations after they had been protected by a layer of concrete in front. The foundations are carried to a depth of only 2½ feet below the ground level."

Colonel Hodgson explains that the Committee have not been correctly informed about this point. No portions of the buildings ever fell. Cracks appeared in the corner arches, caused not by any yielding of foundations, but from want of sufficient strength in the supporting end-piers. These portions were taken down and re-built. A worse settlement occurred over a blind well; the injured portion of wall was taken down and re-built, and precautions were taken to secure the foundations.

The Committee would have preferred deeper foundations generally for all the buildings; but these buildings have been more or less completed for two or three years, and there are no manifest signs of settlement. The chief precaution to be taken is to prevent the lodgment of water near the foundations, and to this the Governor General in Council would enjoin the strictest attention.

7. *Officers' quarters.*—These were not commenced until the barracks were nearly ready for occupation. They were, therefore, run up hurriedly, so that they might be ready for the Officers when the men were moved into the barracks; but this is no valid excuse for the very bad quality of work that has been executed. All authorities admit that the construction of these quarters is far inferior to that of the barracks. One of the buildings has settled so seriously that it will probably have to be almost entirely re-built. The cause of settlement has not yet been ascertained, but it is being enquired into, and a further report is promised. This should be submitted with the least practicable delay.

His Excellency the Governor General in Council observes that most of the defects above noticed, and many others in connection with the minor buildings, were reported to the Government of India by the Quarter Master General in January last, and that the representations of the Military authorities were sent to the Government of the North-Western Provinces, on 9th February 1870, with instructions to furnish, on an early date, detailed explanation in regard to each of the defects brought to notice. Orders were also given to the effect that the remedial measures, that might seem urgently necessary in the opinion of the Lieutenant Governor, should at once be set in hand. The instructions of the Government of India appear to have been overlooked by the Local Government, for no report beyond that now under consideration has ever reached the Government of India. The comprehensive report called for should, however, be submitted without further delay, as it ought to embrace points not touched upon in these papers.

In respect to the blame to be attached to the Officers of the Department for the defects that have been brought to notice, there can be no doubt that Mr. Hennessey, one of the Executive Engineers, is

directly responsible for the bad work in the Officers' quarters, which were nearly all built by him. For this, and for other shortcomings, he has lately been reduced to the grade of Assistant Engineer.

The present Executive Engineer, Major Whish, had nothing to do with the construction of any of the buildings; but the Local Government holds him to blame for slackness of duty in respect to his failure to remedy the defective drainage, and to carry into execution the necessary repairs of the barracks. Had he attended properly to the condition of the ceilings and the roofs, many of the defects now complained of would have had no existence. It is said of him—"there has been a want of promptness of action which should not have occurred in an Officer of his long experience."

The remarks of the Lieutenant Governor on this Officer are fully concurred in by His Excellency the Governor General in Council, and he should be told that this instance of failure on his part will be recorded against him in the Promotion Rolls.

It is said of Major Cobbe, Superintending Engineer, that he was of little or no assistance to the Government at the time when work was being pressed forward, and that he failed altogether to notice and check the inferior work in the Officers' quarters. His case has been dealt with in the Resolution regarding the accident to the store-room in the Gun-carriage Factory.

Nothing has been said of Colonel Rose, Superintending Engineer; but he was in charge for 2½ months after the representations of the local Military authorities above alluded to had been pointed out to the Government, North-Western Provinces. The orders of the Government of India must have been passed on to him, and he ought to have paid particular attention to remedying many of the defects that had been so prominently brought to notice, and for which Major Whish has alone been held to blame by the Local Government.

Fort and Government House.—It does not seem necessary to record any remarks on this part of the Committee's proceedings. The suggestions of the Committee may be left to be dealt with by the Local Government.

His Excellency the Governor General in Council desires to record, in conclusion, that the strictures, conveyed in the Resolution Nos. 1294—5, dated 30th November 1870, on the fall of the store-room of the Gun-carriage Factory, in regard to the negligence and incapacity displayed by all the Officers concerned, are applicable, although perhaps in a somewhat less degree, to the case of the new barrack buildings.

ORDER.—Ordered, that this Resolution be sent to the Government of the North-Western Provinces, in the Public Works Department, with a special injunction that the measures (which have already been too long delayed) for placing the buildings in question in perfectly efficient condition may be speedily and thoroughly carried into effect.

Ordered also, that a copy of the Resolution be forwarded to the Military Department for information.
