F.—Charitable Relief.

26. Relief by distribution of cooked food has been afforded in the Sudder, Aurungabad and Nowada, sub-divisions.

27. The persons thus relieved are lepers and persons incapable of earning a livelihood for themselves, and who, as far as can be ascertained by summary inquiry, have no relatives capable of supporting them. In the Sudder a daily average of 147 persons have thus been fed. The daily average in Aurungabad is 35 persons, and in Nowada 14 persons.

28. The giving of raw cotton to be converted into thread has also been had recourse to as a method of relief in Aurungabad and Sudder station. In the former locality seven females are thus assisted and in the latter 227.

Statement showing the progress of Charitable Relief during the fortnight ending 4th April 1874, *called for in Bengal Government No.* 1251, *dated 5th March* 1874.

Number of committees and sub-committees as yet appointed.	Number of work-house or centres for the distribution of food gratuitous relief.	Number of men, women, and children with total in receipt of gratuitous relief in any shape, &c.
Sudder Sub-division 1	1	2,066
Nowada 1	3	194
Jehanabad 2	.....	.....
Aurungabad 4	1	248

N. B.—It has been settled by Sir Richard Temple that no special relief circles are required in this district. That eight special officers will be appointed to thoroughly examine any tracts likely to be distressed, and to visit generally the villages in the mofussil with a view to employment being found or relief administered.

29. It may not be out of place here to mention that for famine relief purposes a sum of Rs. 18,254-13 have already been collected within the district, and that this amount will still further be supplemented. The contributions are very creditable to the contributors.

G.—Financial Results.

30. The total expenditure shown in the last narrative was Rs. 77,920-12-8. During the fortnight under review the following is the expenditure :—

On account of Grain.

	Rs.	A.	P.	Rs.	A.	P.

No. 28 F., dated Arrah, the 7th April 1874.

From—H. W. Alexander, Esq., Collector of Shahabad,
To—The Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my 9th narrative for the fortnight ending the 4th April.

A.—State of the Country.

Abundance or scarcity of supplies in the bazars.

The supplies in the local markets in the Arrah, Sasseram, and Buxar sub-divisions have not in the aggregate fallen off in quantity.

In Bhubhooa matters in this respect are reported to be normal.

Large quantities of grain are still being imported into the district by rail, and the new rubbee is coming into the market.

Kinds and prices of grain selling at one or more specified principal marts.

2. In appendix A is given the kind and prices of grain selling at the chief marts in the district. It will be noticed that, on the whole, the prices are slightly more favorable than they were last fortnight.

Rainfall if any, state of corps, condition of the people, actual facts as to any known cases of misery and starvation, grain-thefts and robberies, condition of any particular tracts.

3. No rain has fallen. The rubbee has been generally harvested, and I think may be regarded as a much better crop than was at first anticipated. In the Arrah and Buxar sub-divisions, excluding the Deearah lands, the crop may, I think, be estimated as a fair average one; similarly so in the Sasseram sub-division.

In Bhubhooa sub-division Mr. Eyre estimates it as a 12-anna or ¾ crop, while the Deputy Collector estimates it as less. I am inclined to accept the former's as the more accurate calculation.

In regard to the condition of the people I have nothing new to add to my last report. In large towns, such as Arrah, Buxar, Chousa, Sasseram, Nasrigunge, Akherpore, Bhubhooa, Chynepore, where professional beggars congregate, and where many helpless indigent people belonging to the lower class are living, gratuitous relief and in-door subsidised relief has become now necessary, and in part has been commenced in one or two of the above-named places. In rural tracts no such necessity has at present arisen.

No cases of actual misery and starvation have as yet been brought to light. There has been no remarkable increase in the number of grain-thefts and robberies. Most of the cases reported have been petty thefts of crops, which are of yearly occurrence.

In the Sasseram sub-division, one theft occurred in a building, in which case 6 maunds 20 seers of wheat were stolen, and in another case 4 maunds 9 seers of rice were taken.

The comparative statement of crimes (Appendix B) shows an increase by 88 over the cases in 1873, and by 121 over the cases in 1872.

I have nothing more to add in regard to the condition of any particular tracts; if any material change does take place, it will, I think, show itself in June.

B.—Relief Works.

Full details in regard to all such works will be furnished in the statement called for in circular No. 5718, dated the 3rd December last, which is due on the 8th instant.

In the Arrah sub-division, work will be started immediately on the road from Gurahnee to Bihta *viâ* Sikrita.

In the Buxar sub-division, the village road from Chousa to Jumooaon has been completed, and the continuation of it from Jumooaon to Dhunsahi has been commenced.

In the Sasseram sub-division, work is being carried on upon the roads from Chenari to Mullipore, and from Akherpore to Juddoonathpore. There was a considerable falling-off in the number of laborers at the relief works during the cutting of the rubbee crops. Now that the harvest has been gathered, the numbers resorting to the works are daily increasing, and will continue to do so, I am inclined to think, up to the end of this month.

C.—Transport of Food.

There has been no falling-off in the importation by rail of grain by private traders in the Arrah and Buxar sub-divisions. The quantity so imported will be submitted in a separate return (which will follow), directly I receive detailed figures from the Traffic Department, East Indian Railway.

By river no importations are reported.

	Maunds.
The private importation in the Sasseram sub-division during the fortnight have been—By rail	3,865
From other districts	3,373
In Bhubhooa—	
By rail	210
From other districts	222

The means of transport are at present sufficient for all requirements. The Collector of Sarun is anxious now to employ only carts of this district for conveying his grain from the Arrah railway station to the river ghât; in other words, something more than 600 carts.

I now expect that further consignments of grain will be sent to me very shortly for this district, and I shall certainly not be able to convey it away if the Sarun grain is to absorb so much of the means of transport belonging to this district. One result has already shown itself, and that is, that I cannot convey grain at the same rate as I did when storing grain in January and February owing to the demand for carts which has thus arisen.

D.—Storage of Government Grain at Relief Works.

In the Arrah sub-division, 117 maunds 7 seers of rice was received during the fortnight and despatched and stored at once.

In the Buxar, Sasseram, and Bhubhooa sub-divisions, no grain has been received or stored during the period under report.

E.—Advances to Private Parties and their Results.

In the Arrah sub-division, an advance of Rs. 2,000 has been made to Nowrun Singh of Chandi for land improvements, and Rs. 300 to Jugdeo Singh of Aeer for the purchase of grain. No other advances of any kind have been made.

F.—Charitable Relief.

I have nothing further to add to my last report in regard to headings Nos. 1, 2, 3, 4, 5 of circular No. 1251 S.-R., dated 5th March.

For the Arrah sub-division, three supervising relief officers have been appointed on Rs. 40 a month, whose chief work at present will be to make a village-to-village enquiry in order to ascertain what persons are fit subjects for gratuitous relief, or subsidised in-door relief, or who can be employed on light out-door labor, such as rope-making and cotton-spinning. Poor-houses will be at once opened at Gurhanee and Arrah, at which it is supposed that the chief recipients of charity will be professional beggars, who, from physical infirmities, are incapable of performing any work.

Rope-making and cotton-spinning will be provided also for those who are able to do such light work; 36 persons are now receiving subsidised in-door relief, and 44 persons gratuitous relief daily at Arrah.

In the Buxar sub-division, 119 persons in all, including men, women, and children, have received gratuitous relief daily at the following places:—Buxar, Doomraon, Nawanuggur, Choura Khyree. Two supervising relief officers on Rs. 40 a month have been entertained for this sub-division.

In regard to the Sasseram and Bhubhooa sub-divisions, Mr. Eyre reports—"no charitable relief has yet been commenceed in Sasseram beyond the subsidised in-door relief of rope-making specified in my last narrative. The weekly returns of this relief are not to hand, and I cannot therefore supply them. Gratuitous relief has been commenced in Bhubhooa. I visited that place on the 31st ultimo, and personally supervised the relief. I could only find 41 persons fit recipients of relief, and some of these were fitted for light work. I left full instructions, and have since sent registers-tickets, and iterated the instructions already given. I am afraid this relief is being misapplied. The day after I left, the number of recipients is entered as 81, 40 was the number of the previous day. I will be at Bhubbooa on the 8th, and will specially report on this matter. Details regarding sex have been called for, and will be submitted in the report.

G.—Financial Result of the Fortnight.

Total expenditure from the district and sub-treasuries as shown in last narrative, full details of which were therein given, Rs. 24,963.

Expenditure during fortnight under report.

Arrah,
The 7th April 1874.

K. C. Mitter,
Court-Inspector.

H. W. Alexander,
Collector.

No. 891F., dated Mozufferpore, the 8th April 1874.

From—C. F. Worsley, Esq., Officiating Collector of Tirhoot,
To—The Officiating Secretary to the Government of Bengal, Statistical Dept.

I have the honor to submit my narrative of scarcity and relief in the Tirhoot district for the fortnight ending Saturday, 4th April 1874.

A.—State of the Country.

2. In Seetamurhee sub-division the supply of grain is sufficient, except in Cherout and Jalley, where the people are dependent on Government supplies.

3. In Durbhunga sub-division, the supply in the Durbhunga and Rowserah bazars "still continues ample," but in the interior all articles of food are dear and scarce. In Hattee sub-division, it has been found necessary to supplement private trade by Government sales.

4. In Mudhoobunnee sub-division the sale of Government grain at Mudhoobunnee has caused much grain of all kinds to be brought to market, and has also had the effect of lowering prices generally. The bunyas, however, are stated to have recouped themselves to a certain extent by diminishing the number of local pice given in exchange for rupee coins, and the sub-divisional officer considers that it would be a good opportunity to introduce the standard pice coins. I would recommend that two lakhs of pice be forwarded if possible *viâ* Barrh and Chumpta Ghât for circulation in Durbhunga and Moodhubunnee sub-division.

5. In Hajeepore, Tajpore, and Sudder sub-divisions the bazars have been sufficiently supplied.

6. The subjoined statement shows the kinds and prices of grain selling at some of the principal marts:—

Names of Marts.	Wheat.	Barley.	Common rice.	Lesser millet.	Maize or Indian-corn.	Gram.
Seetamurhee	10½	14	10	14	14	14
Jalley	.....	.....	10	.....	.....	.....
Mudhoobunnee	10	14	10	12	12	12
Khajowlee	11	16	11	12	12	13½
Durbhunga	12	.....	10	13	12½	.....
Bahera	11½	.....	9½	13	14½	.....
Singhya	9½	.....	9	12½	11½	.....
Hajeepore	13	19	11	.....	16½	16½
Mohoowa	13½	18	11	.....	15	17½
Dulsingserai	12½	17	11	.....	15	16½
Sarmastipore	13	16	9	.....	14	15
Mozufferpore	10	.....	9	.....	12½	14

7. In some of the western parts of Seetamurhee sub-division the majority of the ryots are reported to have sufficient grain for their own wants. Elsewhere no additional information has been obtained regarding stocks, though the hoards of grain invariably disclosed by outbreaks of fires indicate the existence of hidden stores. I have directed the district superintendent to depute clever officers to specially investigate these cases, which have of late been very frequent.

8. There has been no fall of rain in any part of the district.

9. In Seetamurhee sub-division the cheena and moong crops are suffering from the drought, and the same may be said of these crops in all parts of the district. In the western part of the Sudder sub-division, where sowings were probably made under as favorable circumstances as in any portion of the district, these crops are being fast dried up by the scorching west winds that have prevailed during the last fortnight, and when I was in that direction a week ago, the cultivators thought that they could not hold out for more than 10 or 12 days without rain.

10. In Seetamurhee sub-division the condition of the people has improved generally, but isolated cases of distressed women and children are still to be found. For all such cases the sub-divisional officer is specially providing. The condition of the people (some 50,000) who attended the recent large Seetamurhee fair was very fairly good; and as all came provided with grain for their own consumption and fodder for their cattle, no difficulty was experienced in supplying them with food.

11. In Durbhunga the sub-divisional officer has observed a marked improvement among the people, especially in the direction of Bahera. He writes: "I had myself grouped round Bahera, where I have no doubt the distress was as pronounced as in any other village in the sub-division. These were the villages in which I, in a former report, declared that famine had commenced; as then, so now. I had all the poor assembled, and were it not that I was assured by the jeyt ryot putwaree and group inspector that no famine-deaths had occurred, and that in the people now before me I saw the starving creatures of a month ago, I scarcely could have credited the change. I visited the village when the putwaree was distributing the daily allowance. There were no complaints whatever, and the improved condition of the recipients proved that the village headmen had not deprived them of the Government charity. Indeed, this system of village relief everywhere I went I found working well. Mr. MacDonnell and the sub-divisional officer of Hattee are now directing their attention to the relief of cultivators and small farmers whom it is difficult to bring to our relief works. To these they are making advances in money for seed-grain and in grain for their own support. The principle they have adopted is that of making advances to the applicants by whole villages, the applicants entering into an association or system of frank pledge for repayment, their estimate being based on returns submitted by putwaree showing the quantity of land cultivated by each applicant, and the quantity of seed-grain required being calculated at the rate of 20 seers per beegha. In some instances they have persuaded zemindars to take the seed

advances into their own hands, and one zemindar, Babu Bunsee Dareer, of Ragopore, proprietor of nearly half the Lehra circle, is specially mentioned for the public spirit and humanity which he has displayed in this respect, and in the administration of relief operations on his estates under their directions."

12. The *Mudhoobunnee* sub-divisional officer writes: "The time has now come when I must say that distress is general throughout the sub-division. A few favoured tracts, such as the neighbourhood of Ladma and Hurlaki thannahs, are still comparatively fairly well off, but the fact that we have little less than half the population on our hands shows that distress is severe in general. But for the Government roads we could not have hoped to cope with it; and, though, as our organisation becomes more complete, we may hope that village works will relieve us of the feeble part of the population, it is idle to suppose that anything but a vastly increased superintendence, much more largely supplemented than it is at present by European energy, will enable us to bring food to the mouths of four-fifths of the population (whom I expect to have to feed), if we have them scattered throughout the country in their own villages."

13. In *Hajeepore sub-division*, excepting perhaps the extreme northern tract, the condition of the people has not changed for the worse. There is still little demand for employment, owing, as the sub-divisional officer considers, to the high rates of wages paid on the Gunduck embankment by the Public Works Department. Local agency at present is quite sufficient to deal with all cases of distress.

14. The sub-divisional officer of Tajpore reports that "the people seem to keep up fairly," but that in the direction of the Tal Bareyla they are becoming pinched, and he looks for a marked deterioration in their condition in the next month or six weeks. The south-east portion of the sub-division also causes him some anxiety. The difficulty of disposing of tobacco produce, on which this sub-division greatly relies for its means of support, is thus noticed by Mr. Wace: "I should not be far out in saying that anxiety in the sub-division centres chiefly now in the question what is to be done with tobacco. There are a few buyers going about, but there is a considerable balance over from last season and a very fair crop of this year to be disposed of. The North-West merchants have, I suppose, taken alarm at the famine, and if they were here I do not know how they would transport their purchases. The carts now carrying rice to the north-east would in ordinary years be carrying tobacco up to barter for rice to bring down, or carrying tobacco down to the river. The matter deserves our earliest attention, for we have reckoned much on the wealth of Saraisa to tide it over the coming trial, and its chief source of wealth is tobacco."

Mr. Wace suggests that the tobacco might be conveyed down to the Ganges foom Nagarbasti by rail, or that advances should be given by Government on security of the tobacco. Both suggestions are good under certain provisoes. If purchasers can be found in the Patna district, the conveyance of the tobacco to the bank of the Ganges will be a great boon to the cultivators; and I would be glad if the Commissioner would kindly authorise the Collector of Patna to ascertain whether purchasers are likely to be found in his district. With regard to advances, they might certainly be made; but if the tobacco is to be treated as actual security, it must either be delivered and stored at Poosah, in which case a temporary special establishment must be entertained, or loans might be attempted through zemindars, who could be left to arrange the question of security between themselves and the cultivators. The only other course that occurs to me is for Government to buy up all the tobacco at the ordinary current rates, and to despatch and consign it to agents in the North-West Provinces for sale.

15. In the Sudder-division the condition of the people is good, so far as their outward appearance is concerned, but the demand for employment is increasing daily. I have lately made a tour through the whole of the western portion of the sub-division comprised within the jurisdiction of thannah Paro, and have met with no cases of distress except such as are being relieved gratuitously through the managers of factories. Having previously seen bad accounts of the extreme western tracts, I sent notice of my visit to the inspector of the thannah and desired him to produce before me some of the worst cases which he had reported. On my arrival however I was told that no "real distress" existed, but that professional beggars required relief and work was wanted. On a tank-work adjoining the thannah, which had been opened two days previously, I found about 200 laborers, all of whom were in very fair condition. Similarly on all the works which I visited (some 10 or 12) I found the people healthy and strong, and I was particularly struck with the good appearance of the children. I think very few of the laborers had become so destitute as to be wholly dependent on relief works for their support, but that they were certainly glad to avail themselves of employment offered to them near their houses. A large proportion of the population in this part consists of gowalas and other agricultural castes, and I have no doubt that the numbers on our relief works will increase very largely during this month, as there will be no work in the fields to employ the people, and they have not sufficient food or means to maintain themselves in idleness for the next few months. Distress (which term I understand to mean actual bodily suffering and enforced privation of food) did not appear to me to have yet arisen to any extent. The state of things however will require constant watching, and the arrangements now made with the Commissioner's sanction, and which will be detailed further on, will be quite sufficient for all purposes of relief.

In the north and north-east of the sub-division the condition of the people, as reported by the police, gives cause for more anxiety. I intend to take an early opportunity of visiting those parts. In the meantime Mr. Deputy Collector Warde-Jones has been deputed to make inquiries, and the relief superintendents are engaged in organising their circles and opening works.

16. Some cases of death from starvation are reported from the Mudhoobunnee sub-division, but from the accounts given of them it is impossible to say how far they were owing to want of food. The following is Mr. Magrath's description of the cases :—

"Of known cases of starvation I have few to report; notably two people have died at Mirzapore; one man was found by Mr. Metcalfe and myself, the other, an old woman, by myself some days after. The man was not so attenuated but that other causes than starvation may have led to his death, and had come along with all his people who however decamped when they heard that I was inquiring for them. The old woman was very old, and died within 20 yards of where grain was being distributed. The report of the circumstances of death has not reached me, and as the police do not make any inquiry but merely state that so many persons died of starvation in their reports, I do not hope for any additional evidence in the matter."

From Kutchra circle four cases of death were reported in mouzah Dhangah, pergunnah Jorail, the property of the Maharajah of Durbhungah. I at once sent notice to Mr. Nicholay, sent off an officer to the village, and late in the day visited it myself. After a careful inquiry it appeared that not one of the cases reported had occurred within the month, and that the friends of the people who died were not in a starving condition, and that there was reason to suppose the whole story untrue, more specially as the Beneputtee head constable, who reported the matter, had not been in the village for two months, and had made no inquiry whatever, taking the statement of the chowkeedar for gospel.

As however there were a certain number of helpless people in the village, Mr. Nicholay made arrangements for their receiving a sufficient supply of rice on the ticket system. I have had only one other report of the sort from that circle, *viz.*, of an old man in ill health at Damodarpore, and as Mr. Nicholay has 26 tanks, and the ticket system is at work in all but one of his eight circles, I have little doubt that the distress there will be efficiently met.

Mr. Williams reports that soon after his arrival in Motipore, seven deaths from starvation were reported in that circle, two of very old women, one at Bijai and another at Thowa (these persons were in receipt of Government relief); the third death was that of a mushar, who came to work on the Motipore road from the village of Chapahi. As the Chapahi zemindar (a woman) has been giving relief largely to her people, the reason of his leaving his village is not apparent. A fourth came from a great distance, no one knew whence, for relief. He must have passed by places of relief whatever way he came. The other three died in the villages of Gandanti and Sima, to which Mr. Williams called attention on his first arrival at Motipore, and where relief has been extensively given, though unfortunately too late to save the lives of these people. Had my circle officers been sent to me at the time I joined, as I was promised they should be, I have no hesitation in saying that most of these deaths would have been avoided. In his latter letter Mr. Williams, who has now visited his whole circle, takes a more hopeful view of the general state of things and concludes: "As long as the Mirzapore and Motipore road is in construction, I have no reason to apprehend any heavy distress in the villages in the west and north of my circle."

From the Mudhoobunnee circle Baboo Ishree Pershad reports that of the four cases of starvation reported to him, one was of a man found in good health working on the roads, a second that of a person who on inquiry proved never to have existed, the third case was not traced, and the fourth proved to be that of a man who, after working for one month on the Government road, died of dysentery from which he had long been suffering. He observes that the villages near and about Pandaul are those in the greatest distress, and attributes the poor condition of the Dosadhs to the difficulty they have now in finding anything to steal. Mr. Kisch from Bhakwa, which he has only recently joined, reports that of two cases of starvation reported to him one man died of a disease from which he had been suffering for two years, and the other of old age. He however found severe distress in Barawn, but relieved it at once. Whilst I was with him distress in Dhatwar was brought to his notice, but he took prompt measures for its relief."

"Mr. Azanne from Jhanjarpore reports one death at Meljhain from starvation. This village, although very close to Jhanjarpore, appears to have suffered considerably from distress. Mr. Azanne, however, on his arrival at once relieved those who were in want. Four deaths also occurred at Jhanjarpore; two of them had been fed for 19 days; the third man came from a distance, and was very ill when he came; the fourth had been at work on the tank for seven days. He reports the village of Nanour as in great distress, but has only heard of one death there, which was not alleged to have been from want. He also found five children deserted by their parents, and made arrangements for their support."

17. No cases of starvation are reported from other sub-divisions.

18. The annexed statement shows the number of thefts, &c., committed during the month of March :—

Sub-division.	March 1874.	March 1873.
Mozufferpore	87	50
Tajpore	28	19
Durbhunga	29	21
Hajeepore	Figures not given.	
Seetamurhee	65	28
Mudhoobunnee	Figures not given.	
Total ...	209	118

B.—Relief Works.

19. The number of laborers employed on relief works is as follows :—

Seetamurhee sub-division—	
160 Government works	32,547
Private works	5,000
Total ...	37,547
Of the Government works, 46 have been taken in hand during the past fortnight—	
Durbhunga sub-division—	
Village works in Hattee sub-division	16,000
Ditto in Durbhunga circle	2,352
Ditto in Mohomedpore ditto	30,000
Durbhunga Bahera road	38,754
Bahera Poopree road	2,643
Durbhunga Mohomedpore road	1,364
Anar road	4,145
Railway embankment	5,122
Works under executive engineer in Hatti sub-division ...	47,000
Works under Mr. Stevens	5,829
	153,209
Mudhoobunnee sub-division—	
80 works	196,486
Hajeepore sub-division	4,400
Tajpore sub-division	2,550
Sudder sub-division under executive engineer	1,624
Under planters, 49 works	21,900
Roads, tanks, &c., under local agency	8,695
Total ...	32,219
Grand total of laborers ...	426,411

C.—Transport of Food.

20. Of private importations the sub-divisional officer of Tajpore writes: "I can say but little. Zemindars and traders find in the difficulty of procuring carriage a ready and plausible excuse for a natural disinclination to turn southwards instead of northwards for supplies." The other sub-divisional officers do not notice this subject. As regards the Sudder sub-division I have observed that grain still finds its way into Mozufferpore town in sufficient quantities, and the difficulty, or rather the increased cost, of procuring carriage seems to have produced no worse result than a slight enhancement of prices. At Sahebgunge too, a large mart on the river Gunduck, I found the grain-market well supplied, and the dealers admitted to me that they experienced no difficulty in obtaining boats to import grain either from Patna or Revilgunge (in Sarun), both which places they have been drawing on for supplies. In short, all that I have seen and learnt confirms me in the opinion that the allotment of grain for which we have applied will be quite sufficient. It may perhaps be objected that if private trade is doing so much, there can be no necessity for laying in more Government grain at all; but to this I would reply (1) that the sub-division has not hitherto depended wholly on imported food for its support, and that it would therefore be hazardous to trust entirely to private dealers when local stocks are exhausted; (2) that we ought to be able to exercise some control over our prices, which we can only do by becoming grain-holders; and (3) that it is desirable during the season of cultivation and in the rains to lower prices to at least 12 seers per rupee.

21. Transport arrangements having been now placed under the immediate direction of Colonel MacGregor, it is unnecessary for me to say more on this head than that the companies on the western side of the district are working thoroughly well, and that the Durbhunga sub-divisional officer reports a great improvement on the part of the Southern Alliance Company. Though he declines to commit himself to any distinct statement, he believes that the company will henceforth be able to carry between 3½ and 4 lakhs a month.

D.—Storage of Grain.

22. The amount of food-grain already stored is as follows :—

Seetamurhee	333,678
Durbhunga	132,312
Mudhoobunnee	291,458
Hajeepore	5,179
Tajpore	19,624
Muzufferpore	44,677
Total ...	826,928

E.—Advances.

23. During the fortnight the following advances have been made—

Sub-division.	Nature of Advance.					Total.
	To grain-dealers.	To zemindars for support of their ryots.	To ryots for their own support.	For wells.	For land improvement.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Seetamurhee	50	1,050	1,100	40	1,260	3,500
Durbhunga	Not specified.				.....	4,700
Mudhoobunnee	.....	.....	.....	.....	2,400	2,400
Hajeepore	.....	.....	.....	525	.....	525
Tajpore	.....	.....	.....	.....	.....	.....
Muzufferpore	.....	.....	.....	.....	100	.....

On the subject of advances Mr. Magrath writes:—"My remarks apply to the case of respectable ryots to whom at present no advances are being made. I should like something to be done for them at once, as otherwise they will go in with the rank and file of paupers. The working of Sir Richard Temple's loans up to the amount of Rs. 50, through the relief superintendents would, I am sure, be a great boon. The landholders also apply for loans; I was granting loans to them till the Additional Commissioner stopped me. I should like permission to be given to the relief superintendent also to give such advances up to Rs. 50."

F.—Charitable Relief.

24. The Seetamurhee officer under this head submits only a statement which I insert below:—

Number of sub-committees and committees as yet appointed ...		1
Ditto of special relief sub-divisions opened and officered ...		2
Ditto of regular relief circles opened and manned by special officers		10
Number of relief circles opened and managed by planters, zemindars, and other residents		10
Number of work-houses, or centres, for the distribution of food and gratuitous relief		8
Number of men, women and children, in receipt of gratuitous relief in any shape, through the charitable relief organisation daily.	Men ...	3,000
	Women ...	1,500
	Children ...	800
	Total ...	5,300

25. The sub-divisional officer of Durbhunga thus reports:—"I have already explained the machinery of charitable relief as it existed when first set in action. I have now to refer to an extension of the system, by which, while retaining our former organisation, we are enabled to render the administration of relief more searching and certain. It consists in having prepared through the jeyt ryot-putwarree of each village a list of all these who are in want of relief in the village, and according to this list the group store-keeper dispenses weekly to each village in the group the quantity of grain required for the week's consumption. The distribution is made in the village, by the village headmen and the putwari. Among the other duties of the inspector will be that of seeing that in this respect the village headmen are up to their work. The sub-division has been divided into 12 circles. The Banhar and Warisnuggur circles being outside the area where distress was most pressing, were not taken in hand till now. Of the other circles, the grouping has been completed in all except Lehera, Gungdak, and Hya ghat, where some villages still remain ungrouped. But before this week ends the work will be completed in these. In all of these villages the officers are at work, having the village list of distressed people made out, and looking to the fact that as our groups are made up, and inspectors appointed, this work can go on simultaneously in every group, it ought to be completed within a fortnight at farthest. My returns of those on charitable relief are incomplete, some circle officers having been unable to send in any returns, and others only returns for some groups. From these fragmentary returns, I learn that the daily average on charitable relief is 14,563. I believe this, however, to be much under the real number."

26. The Mudhoobunnee officer writes:—"Charitable relief is now everywhere at work on the ticket system. The system of giving out cotton, too, is taking root, particularly under

Messrs. Ozanne, Williams, Nicholay, and Baboo Ishree Pershad. I am establishing, through the relief superintendent at most places *quasi* hospitals under the native doctors, for care of those who are, either by starvation or disease, unfitted to go to their own people or to work. I would have the distribution of cooked food, where it is given, also under the superintendence of native doctors if a European is not present, as natives are slow to enquire into cases in which care and extra attention is required."

27. The Hajeepore officer reports—"I have appointed three inspectors on Rs. 70 per mensem to carefully find out all the really indigent in the north part of the sub-division. I have advanced Rs. 1,200 to the gentlemen noted in the margin who have all undertaken to relieve the really distressed round them at the rate of Rs. 1-8 to Rs. 2 a month. I have directed the inspectors to put themselves directly in communication with these gentlemen, who have shown the most earnest desire to co-operate with me, and in whose hands we may safely leave the distribution of charitable relief. I have received one return, *viz.*, from Mr. James Smith of Shahpore. The others promise returns next week. With this organisation we shall be able to meet all cases of distress as they arise; at present they are scattered about the place, and I have no apprehension that in any part will there be any thing like universal distress."

C. Blake, Esq. ...	... 200
R. Park, Esq. ...	... 100
—McGregor, Esq.	... 100
	1,200

28. The Tajpore officer reports:—"It has been arranged that we should start at once a regular system of village supervision. The manager of every factory will receive through his putwaries, and jeyt ryots of the villages in farm to him, reports of the state of the village. For villages not in farm to a factory, which will be picked out on receipt of lists now coming in from factories, there will be a special organisation, either through sub-committees of which we propose to have four, or paid agency, reporting either to the nearest factory or the nearest sub-committee.

"It is further arranged that for the present every manager should give, in bad cases, gratuitous relief from the grain at his factory whether bought under Government advances or not, and that the price of this should be made good to him out of the relief funds.

"A subscription list has been opened. The donations made and promised up to date amount to only Rs. 676, and the monthly subscriptions to Rs. 67; no factory has yet subscribed. Three managers have promised subscriptions, while two have replied that they prefer to dispense charity from factory and private funds on the spot, to contributing to a general fund."

29. In the Sudder sub-division, gratuitous relief is administered in the town by a sub-committee as previously reported. The subjoined statement shows the numbers relieved during the past week:—

Date.	Member of committee in attendance.	Adult men.	Adult women.	Children.	Total.	Approximate amount of food distributed.	Kind of food.	Remarks.
						M. S.		
29th March ...	R. J. Richardson, Esq.	58	173	7	237	2 36½	Janera, salt, and gram.	None but the blind, lame, aged, sick, very poor, and weakly have been relieved; each adult has received ½ seer, and each child ¼ seer of jenera or gram (uncooked), with a small quantity of salt daily. The distribution each morning at 7 A. M., has been made under the superintendence of a member of the committee. A long shed is available for those who may wish to reside on the spot; as yet the building is unoccupied. Professional beggars and persons at all able to work have not been received.
30th ,, ...	Babu Wooma Churn Bose.	56	170	8	234	2 35		
31st ,, ...	Babu Poorna Chunder Mitter.	52	153	11	216	2 25½		
1st April ...	Mahomed Ally Khan...	269		16	285	3 18½		
2nd ,, ...	Baboo Nobin Krista Banerjee.	235		16	251	3 1½		
3rd ,, ...	Baboo Kooldeep Sahey	323		16	239	2 36½		
4th ,, ...	Baboo Wooma Churn Bose.	249		29	278	3 11½		
					1,740			

In the interior, gratuitous relief is given in the western part of the sub-division by the managers of the Sahebgunge, Seraiah and Jeypore factories, and in other parts by superintendents of relief circles. The officers having only recently joined their appointments, have been fully occupied in arranging their circles, and reports of progress made will be submitted in next Narrative.

30. With the Commissioner's approval, I have arranged to place all the villages in the Paru thannah and some in the head-quarters thannah, amounting together to about 700 under the direct management of planters and their assistants. I found, on making enquiry, that six factories held in lease or owned 695 villages; and as each manager was willing to take charge of his own villages, and of any others lying within the outermost limits of his lands, and to give the aid of his assistants for supervision of relief works, and administration of

charitable relief, I considered the scheme to be admirably suited for the particular locality. The circles will be constituted as follows:—

Name of head factory.	Names of managers.	Names of out-works.	Names of Assistants in charge of out-works.	Number of villages.	Cost of supervision monthly.
Kantee	Mr. Browne ...	Rajshye ...	Mr. Llewhellin .	140	546
Moteepore	„ Fraser ...	Muradpore, Chak Larwan.	„ Barclay, Mr. Abbott	135	606
Shahebgunge	„ J. Macdonald ...	Manain ...	Both, one other to be appointed.	115	556
Dooria	„ Studd ...	Majowbe, Karrumwaree.	Mr. Hamilton, Mr. Robertson.	130	596
Seraye	„ H. Macdonald ...	Kewulpoora, Azeezpore.	Mr. Mackintosh, Mr. Thomas.	125	576
Jeytpore	„ Abbott ...	.....	.....	50	188
					3,068

31. It will be seen that the superior agency consists of 6 managers and 9 assistants. The former give their services gratuitously, but to each of the latter a remuneration of Rs. 100 per month will be allowed. A local man on Rs. 10 is to be placed over each group of four villages. The rest of the establishment is composed of clerks, golahdars, payadas, and peons, details of which it is unnecessary to mention here. The supervision of these six circles will be my own special duty, and Mr. Gordon will have similar charge of the other circles in the sub-division, *viz.*, Belsund, Toorkee, Katra, Raj Khand, and the Sudder, which will be worked in the ordinary way by relief superintendents.

32. The main advantages of administering circles through planters are—(1) that we shall always be able to prevent the congregation of people in large numbers; (2) that the planters' local knowledge and experience will enable them to detect all cases of imposition; (3) that planters can, and do succeed in extracting from laborers more real work than we can hope to get by direct management; (4) that Government grain can be stored in the factories, and sold at the local hâts with great facility and without disturbing the markets, and (5) that the system is economical.

I do not propose to try the system more extensively in the Sudder sub-division, because factories in other parts are comparatively few, but I think it may be applied, if necessary, in the Tajpore and Hajeepore sub-divisions.

33. Good progress appears to have been made in the grouping of villages in circles of the Durbhunga and Mudhoobunee sub-divisions.

34. I would respectfully suggest that the form and headings of some subjects of the fortnightly narrative be now altered, as they seem scarcely suited to the system of relief circles, and there appear to be some points on which it is no longer necessary for district officers to report (*e. g.*, transport); uniformity of practice in reporting on relief circles is very desirable. I would also recommend that more detailed instructions be issued regarding the information to be submitted under head (F), charitable relief.

G.—Financial Results.

No. 1477F, dated Sarun, the 8th April 1874.

Memo. by J. E. Drummond, Esq., Officiating Magistrate-Collector, Sarun.

Forwarded to the Secretary to the Government of Bengal in the Statistical Department, Calcutta, for information, with reference to his circular No. 80 of the 17th November 1873.

Narrative of Scarcity and Relief in Sarun District for the fortnight ending 4th April 1874.

A.—State of the Country.

Abundance or scarcity of supply in the bazar.

1. With the exception of Bussuntpore, where supplies are reported to be somewhat scarce, the bazars of the district are everywhere sufficiently supplied with grain, and though the importations have somewhat fallen off, private trade still holds out.

2. In the Sudder sub-division, during the fortnight the private importations were, to Revelgunge, 63,365, of which 12,750 were maize, 7,600 barley, 4,600 wheat, 7,050 rice, and the rest other grains; to Dooreegunge, 2,625 maunds, and to Maharajgunge, 1,382 maunds; while the imports from Chumparun were only 268 maunds. The exports of grain to Tirhoot and Chumparun amounted to 6,164 and 848 maunds respectively.

3. Mr. Hudson writes as follows of his sub-division:—

"My own observations made in the Parsa thana assure me that the bazars are very well supplied indeed with every kind of grain and every description of ordinary food—vegetables, small fish, goor, &c. In Bussuntpore and Mashrakh the result of my inquiries shows supplies to be running short. In the latter thana I have the testimony of 103 putwarees to the existence of a deficiency."

4. The following is Mr. Wright's account for the Sewan sub-division:—

"There is no falling off in the supplies in the bazars of this sub-division; the supply is always more than the demand. During the fortnight under report the private importations amounted to 8,861 maunds at Guthoni, Siswan, Darawlee, and Sewan. The above amount was made up of 2,836 maunds rice, 693 maunds gram, 308 maunds Indian-corn, and small quantities of barley, wheat, and other grains. These importations were chiefly from Ghazipore, Azimgurh, and Goruckpore, on the other side of the Ghogra River, and small quantities from Patna and Bhagulpore."

Mr. Rattray reports under this head as follows:—

"Importations still continue, and the supply in the market is equal to the demand. The importation of Indian-corn has stopped, as the grain will not keep, and the stocks are said to be sold off."

5. Of the Hutwa estate Mr. Hodgkinson writes:—

"There has been no failure in the supply of grain during the past fortnight, but the firmness of the prices after the harvest points to the necessity of the supply being supplemented by sales of raj and Government grain before very long. Rice has, I regret to say, risen in price, only 15 and 16 seers kucha (9 to 9¾ pucka) being now procurable for a rupee. But as other grains, of which the late harvest has given a new supply, form the staple-food of the poorer classes of the people at this season, I do not propose to open our stores while these may be expected to hold out, although rice has gone below the limit of 10 seers.

Prices of Grain in Pucka Seers.

	Hutwa Bazar.	Meergunge Bazar.		Hutwa Bazar.	Meergunge Bazar.
Common rice ...	10⅝	10¾	Barley and gram ...	16	16
Makai	14¾	14¾	Wheat (jow kerao) ...	13	13

It is observed that Mr. Hodgkinson's prices differ from those returned by the police, and that the price of rice quoted in his remarks is not borne out by the price-current given by him below.

Kind and price of grain.

6. The kind and price of grain selling at the principal marts and at the thanas and outposts are given in the annexed statement. Prices are exceptionally high at Garhha, Bussuntpore, Dighwara, Goothnee, and Raghoonathpore, where, while the price of rice ranges at less than 11 seers, at the same time more than 14, 15, and 16 seers of grain of any kind are not procurable for the rupee.

Stock of food in the hands of the people.

7. Opinions seem to differ as to the ultimate destination of the crops just harvested, but, as stated in the last narrative, my own view of the matter coincides with that of the sub-divisional officer of Sewan, who reports as follows:—

"Up to the present, almost the whole of the grain of the rubbee crops which have just been reaped is in the hands of the cultivators; but they will not, I feel certain, retain much of it; the greater portion will be sold in the bazars, and a large quantity will also find its way into the hands of the mahajuns. It is only the better class of cultivators who will store any of it. The common class of cultivators in this district are not in the habit of storing grain, but depend on the bazars for their supplies. Very little of the food-grain sold in the

markets by the cultivators is carried out of the district. Most of it is bought up by the dealers in the bazars, who keep it to resell at a profit afterwards."

Mr. Rattray says that "the yield of the rubbee harvest has been reserved for private consumption, except where proprietors are much in debt to mahajuns." The Sub-Deputy Collectors, on the contrary, says "that they are paying the greater portion to their creditors and keeping the smaller for their own use.

"Besides satisfying the mahajun's debts, the cultivators have to pay their rent to their landlords, very few of whom, including even the largest zemindars in the division, will forego or even postpone their demands, and to meet these claims, the poorest class of ryots must dispose of the grain obtained from their rubbee crops, and would therefore be able to store very little for their own consumption even if they wished to do so; but, as I have already stated, it is not their custom to store it; they prefer depending on the local marts for their daily wants."

A contrary report, however, is made by Mr. Hudson, who writes:—

"(1) From personal inquiries made by me in the villages chiefly of the Parsa circle,

"(2) From the report of the police of same circle made after investigation,

"(3) From information given by the putwarees of 130 villages in the Bussuntpore and Mashrakh circles, it appears that the rubbee harvest, which has just been reaped, has been stocked by the ryots for their own consumption, and has not found its way into the hands of the zemindars and mahajuns."

And again he writes:—

"It is generally ascertained that the rubbee harvest throughout the three thanas is stocked by the assamees for their own consumption, and this supply, it is estimated, will last them for about two months. There can be no doubt that zemindars have stocks of grain in many places, but it is not generally admitted. At Sotihar, however, and other places in Parsa thana, where I made inquiries, the zemindars informed me that they were supporting their ryots with advances of grain; and this proves that they must have grain in stock.

"Two-thirds of the putwarees of Mashrakh and Bussuntpore, who have been questioned on the subject, deny that there are any stocks of grain at all; but as regards the recent harvest, I am convinced that this is a misrepresentation; and indeed the rest of the putwarees examined admit stocks in the hands of both ryots and zemindars, and confirm the result of my own investigation as to the rubbee crop."

Of course the crops just reaped are yet in the hands of the cultivators, but I doubt much their being permitted to retain them.

Rainfall.

8. There has been no rainfall during the fortnight.

State of the Crops.

9. The rubbee crops have now nearly everywhere been gathered, but complete returns of the yield have not yet been received. The principal planters have been asked to furnish information on this head, but answers have as yet only come in from a few. In the next narrative I hope to give the final result for each thana. As feared, the damage done by the hail-storm of the 16th has proved on inquiry to have been very serious. From the report of the canoongo it appears that the destructive part of its course was in a north-easterly direction from Ghorahat on the Gogra, 5 miles north-west of Manjhee, and that it extended thence for a length of 18 miles to within a few miles south of Mashrakh, with a breadth of from 2 to 4 miles. The thickness of the hailstones on the surface of the ground is reported to have been somewhere three inches and somewhere four to five inches, while in some places they are said not to have melted away within 50 or 60 hours after the shower. The area affected by the storm is computed to be 45 square miles in extent, and about 80 villages are reported to have suffered, in more than 30 of which the loss to the crops has been 8 annas and upwards. It is estimated by the canoongo that one-third of the rubbee food-crops on an area of about 10,000 acres has been altogether lost. He writes also that "the villages that happened to be on the skirts of the storm line have suffered far less than those occurring in the centre of it, which have sustained damage nearly 10 or 12 annas," and he adds that "the grain recovered after the hail-storm will barely suffice for a month's consumption." The action of the landholders in preventing cutting of the crops pending settlement of the rents has occasioned greater loss than would otherwise have occurred.

10. Mr. Macrae, of the Arrowah indigo concern, who has outworks also in the Mashrakh and Parsa thanas, writes as follows with regard to the crops:—

"About 12 annas only of the land usually applied to rubbee were actually sown, and the rest abandoned for want of moisture and facilities of irregation in the pergunnahs of Bal and Goa. In the month of January, the intense cold for some days greatly injured the crops of rahar, cotton, kerao, and mussur (pulses), and reduced their outturn to only about 4 annas yield; but the wheat and barely, which were helped by irrigation and some rainfall in February, have been very successful, and fully more than an average yield generally; but in the middle of March a destructive storm of hail and rain passed over a portion of the above pergunnahs, taking a direction from the village of Roosee to Mashrakh, some 10 koss in length and from ½ to 2 koss in breadth, and within that space the injury to the rubbee crops generally has been very serious. Of the opium crop, about 12 annas had been collected previous to the storm, and the balance was lost.

"Exclusive of the poppy, there has been of all rubbee crops about an average yield of 10 annas in pergunnahs Bal and Goa.

"In pergunnah Makair crops have been generally worse. A less area has been sown in rubbee, and less secured by irrigation from want of water, and the loss by cold and frost was in the same proportion as in the other pergunnahs, and little more than a 6-anna crop is reported."

Pergunnahs Goa and Makair comprise the whole of the Parsa thana and considerable portion of Mashrakh.
J. E. D.

11. Mr. Tullock, of the Nowadah factory, in the south of Parsa thana, writes that he estimates the actual yield of the rubbee crops in his "dehat" as under:—

Barley	8	annas.
Wheat	8	,,
Rahar	12	,,
Gram	8	,,

12. The report of the yield to the north of the Bussuntpore thana is, as was expected, very unfavorable, Mr. Exshaw, of Bala factory, writing that the rubbee crop has not yielded more than 4 annas in his neighbourhood.

13. Mr. Hudson writes as follows:—

"The outturn of the rubbee crop for Parsa circle may be taken at 12 annas for half the cultivated area, and 4 annas for the remainder, the former representing the irrigated and the latter the unirrigated soil. The outturn for Bussuntpore may be estimated at 4 annas."

14. The following is Mr. Wright's account of the state of the crops in the Sewan sub-division:—

"The rubbee crops are now almost entirely cut. A field or two of rahar may still be seen in places, but otherwise the country looks bare. The ryots are busy having their crops trodden out, and, as far as can be known as yet, the yield is pretty fair throughout the division."

Mr. D. N. Reid of Saddowah has been good enough to supply the following estimate of the rubbee crops in the Barowlee thana for this season, as compared with that of former average seasons:—

	Season 1873-74.	Former Season.
Wheat	9/16	14/16
Barley	7/16	16 annas.
Peas	7/16	16 ,,
Gram	4/16	16 ,,
Rahar	10/16	16 ,,

Of the crops in the Darawlee thana, the Sub-Deputy Collector reports that "the average outturn of barley and wheat is 13 maunds* per beegha against 15 maunds of previous years. Rahar yields at an average rate of 7 maunds per beegha."

* Probably kutcha maunds.—J. E. D.

Of the Sewan thana, the Sub-Deputy Collector says that "the average outturn of these crops (wheat and barley) in the jurisdiction of this thana is 9 maunds per beegha against 11 maunds of previous year," is confirmed by my further inquiries.

And Mr. Rattray, in reporting of the crops throughout pergunnah Pachlakh, states as follows:—

"I have been over the whole of the Pachlakh pergunnah. There are scarcely any crops to be seen in the fields, as the gathering of the harvest is nearly completed. Rahar and a few fields of sugarcane are all that remain to be cut of the rubbee crops. The yield of the rubbee has not, on the whole, been very much below the average of previous years."

After all, the present state of prices is the best test of the yield of the recent harvest, and under the circumstances one is justified in distrusting the view that the outturn "has not, on the whole, been very much below the average of previous years," save in the case of dearah lands, and where exceptional means of irrigation were available.

15. Regarding the Hutwa estate, Mr. Hodgkinson writes as follows under this head:—

"I have nothing to add to my remarks in last report regarding the crop outturn. Cheena has been largely sown in opium and potato lands where water is procurable. The crop, as far as I have seen it, is healthy but certainly thin."

Condition of the People.

16. The continuous high prices of food are beginning to tell still more upon the people, as is evident from the increased numbers on the relief works, but owing to the ample means of employment provided for the people in the immediate vicinity of their homes, there is no general distress of an extreme nature.

17. Mr. Hudson reports as follows:—

"There is no alteration, as far as I have had the means of judging, in the condition of the people. My experience in Parsa thana during the past fortnight tells me that they are in tolerably easy circumstances. Noteably I have received spontaneous replies to this effect at Sotehar, Dhernee, Dighwara, Rasoolpore, and many other places throughout the south and west of the thana circle. I inquired at nearly every village along the road on my way from Garka to Teraiza, and everywhere received the answer 'hal achha hae.' All is well here at Mashrakh itself, and the Sub-Inspector makes a good report of the surrounding neighbourhood, but the putwarees of Mashrakh and Bussuntpore generally report distress amongst the people

of their villages, and say that there is considerable resort to the relief works. I have not had much opportunity lately of forming a personal opinion myself as to the condition of these two circles, having been absent in Parsa during the past fortnight. The planters whom I have met with continue to assure me that there is no distress in the villages leased to them."

18. Under this head the following is the report of the sub-divisional officer of Sewan :—

"There has been no material change in the condition of the people since the date of my last report. They are still employed in the rubbee harvest and on the numerous relief works throughout the division.

Under this head Mr. Rattray says "that the laboring classes are finding work in the gathering of the harvest, and there is ample work for the poorer classes on the public roads and tanks which are keeping many, now pinched for food, from lapsing into a state of starvation, and, so far as I can judge of the prospects before us, it appears to me that relief measures will have to be continued for the next five or six months."

The following is extracted from Mr. Rattray's diary of the 27th March, written from Sreenugger in the vicinity of Mairwah :—

"Bhaban Singh, the principal zemindar in the neighbourhood, informs me that there is no distress, and that the poorer classes are finding work in the gathering of the harvest and on the tanks being excavated in this part of the country. He tells me that there is no want of grain in the markets, though not to be had except at high rates; rice selling at 12 seers for the rupee. He does not think matters any worse than when I was in the neighbourhood in the beginning of January last. On the contrary, he thinks that matters are somewhat better with the gathering of the harvest. So far as I can gather from him, he does not think that matters will be any worse at any time during the year than they are at the present moment."

It is to be hoped that Bhaban Singh's sanguine view of the situation may be justified.

Known cases of Misery and Starvation.

19. There have been no cases of starvation, and the means of relieving distress, which cannot be met by the relief works, are largely available throughout the district.

20. Mr. Hudson reports as follows :—

"No cases of starvation have occurred (as far as can be ascertained), nor have any exceptional cases of distress come within my experience, or been reported to me."

21. And Mr. Wright makes the following report from Sewan :—

"No cases of the kind have been reported. Mr. Rattray says that there is no serious distress at present, and I have seen no misery or destitution in the villages."

Grain-Thefts or Robberies.

22. There have been ten cases of grain-thefts during the fortnight.

23. The accompanying comparative statement shows the number of offences against property involving an intention of theft committed in the month of March during the years 1872, 1873, and 1874, as called for in Government Circular No. 4081, dated 20th December last.

It will be seen that the number of such offences is slightly fewer than in the two previous years, a result which, considering the nature of the season, is, I think, attributable only to the exceptional means of relief afforded to the people in the present year.

Condition of any Special Tracts.

24. The Chupra, Manjhee, Bussuntpore, Mashrakh, and Parsa thanas are the worse situated so far as the numbers on the relief works afford an indication of distress, the numbers in the Sewan sub-division being comparatively few, owing probably to the extensive sugarcane production in that sub-division having given employment to the poorer classes for some months past.

B.—Relief Works.

Progress of Relief Works, &c.

25. The annexed statements show the relief works in progress, and the number employed thereon. The average number daily employed during the fortnight has been 120,129, and the number on the last day was 135,079.

Now that the numbers are showing a rapid tendency to increase, it is of the last importance that the great works of the bank channel to the north of the district, and the proposed Gogra embankment to the south, should be put in hand at once. Already many have had to be placed on village roads to find employment for the people, and during the rains it will be still more difficult to provide continuous work. The percentage of persons belonging to the non-laboring class amongst those now employed is 33 per cent. During the fortnight ten additional works have been started.

26. Mr. Hudson writes as follows:—

"The results of personal inquiries made at random amongst the coolies show that they receive their due amount of wages in the currency of the place, and that the work is freely open to all classes."

27. Under this head Mr. Hodgkinson reports as follows :—

"Harvest operations have continued to keep down the number employed on relief works. The cowrie system, which has been invariably adopted on the raj works, has, after an experience of four months, been found to work admirably. The condition of the laborers is itself a sufficient proof that no evil results have followed from exacting work under this system, and it is most satisfactory to find that while persons of all ages and sizes, young and old, weak and strong, have been employed and none turned away who sought work, the outturn of work has been proved by measurement to be in almost every case not less than half the amount which able-bodied laborers alone would be expected to show in ordinary seasons; in other words, the cost is only double the amount which the cost estimated at the ordinary ticca rates would come to. In places where the works have been more directly under European supervision, still more favorable results have been obtained. The payment of the coolies for each basket-full of earth has been so regulated, that even the weakest and youngest on the works can earn sufficient for their livelihood; and it has not been found that the stronger have been able to make more than a fair day's wage. While the works have drawn the women and children of the laboring population to them in large numbers, the men of the family have kept to their field work and not been enticed from it, as they would have been if they found the cowrie system yield them unduly high wages."

28. The cowrie system is being tentatively introduced by the Executive Engineer, but unless increased remuneration is given to those who are old and infirm or of tender age, in which case many complications might ensue, it is difficult to understand how these can earn sufficient for their livelihood, while at the same time only subsistence allowance is obtained by the able-bodied for a full day's work. It is not enough that none should be turned away who seek work on the conditions offered, but it is also necessary that the system should be such that none are deterred from seeking work by the conditions of employment given. Mr. Wright reported that the introduction of the cowrie system at Sewan resulted in large numbers deserting the works, a result which was claimed by him as an advantage; but as the presumption is that these would not have come on the works at all, unless in need of the means of subsistence, the probability is that the relief intended to be given *failed* in a corresponding degree. Mr. Hodgkinson, with the extensive agency available on the Hutwa estate for seeking out and relieving in other ways cases of distress not met by the relief works, could perhaps afford to overlook this consideration, but with the limited agency at command at the outset in other parts of the district, serious danger might have been incurred by the general introduction of the cowrie system. Doubtless that system is the best, as far as the cost of the work is concerned, but it seems to me that the element of cost is quite a secondary consideration, and that the question is how best to ensure the saving of the lives of the people, and not how best to carry on the work given for that end. Perhaps the best solution of the problem would be to have the two systems in operation together on one and the same work, the one for the able-bodied and the other for the weak and infirm. But there are difficulties attending this plan also. As to the argument that persons would have deserted their field work for the relief works, if they had found the cowrie system yield them unduly high wages, I do not think that there is much force in it, as practically the ordinary wages of agricultural labor, being paid in kind, are much higher in a season like the present than any that could be carried on relief works, and where such laborers come on the relief works at a time of agricultural operations, it is because their employers prefer, during a period of scarcity, to perform themselves the labor which they would have hired in ordinary years, while if the cultivators who employ such labor are alluded to, it may be pointed out that it has never yet been found in any famine that this class are in the habit of neglecting the agricultural operations on which they depend for subsistence for the sake of a merely temporary employment on relief works, nor is it reasonable to suppose that they would do so. The comparatively low rents prevalent on the Hutwa estate, affording as they must exceptional facilities for the employment of agricultural labor, probably go far to account for the comparatively small numbers on the relief work there.

29. The relief works on the wards' estates were temporarily stopped owing to the Commissioner having demurred to the cost of such works being borne by the Court of Wards, except in the case of entire estates owned by minors in a thoroughly solvent position; and having objected also to loans being raised for the purpose. But the Commissioner having since explained that he did not mean to refuse conditional sanction to such works being carried on in certain cases, the general manager has been authorized to re-open the works to the limited extent conditionally sanctioned by the Commissioner.

State Emigration to British Burma.

30. Ninety-three emigrants have been despatched to Calcutta during the fortnight. More are coming into the depôt here.

C.—Transport of Food.

Approximate amount of private food-supplies, &c.

31. Such information as is available under this head has already been given.

32. Regarding the Hutwa grain supplies, Mr. Hodgkinson furnishes the following statement :—

	Mds.
Stored Hutwa granaries	66,016
Embankment granaries	4,874
Returned by Collector	13,006
Revelgunge	6,900
Between Patna and Revelgunge	1,000
	91,796

33. The Commissioner having refused to sanction the 28,000 maunds contracted for, for the General Wards' estates, at a time when the prospects of the future food-supply for those estates warranted alarm and seemed to justify the fullest precaution, basing his refusal apparently on the alteration for the better, caused by the more favorable outturn of the rubbee crops, the grain delivered at Revelgunge in accordance with previous contract should, if not sanctioned for the Wards' estates, be taken over on behalf of Government, and can, if so directed, be made available in reduction of the balance of the district allotment still remaining to be received.

D.—Storage of Government Grain.

34. The accompanying statement shows the storage places, the distribution thereat of the grain allotted, and the amount of grain received at the different storage places up to the end of the fortnight. The total amount of grain received had been 4,02,920 maunds, of which 3,74,003 maunds had been finally stored and 24,334 maunds were in transit.

E.—Advances to Private Parties and their Results.

35. Rs. 177-7 have been advanced during the fortnight for purchase of grain for sale, and Rs. 35,817 to zemindars for grain or money advances to their ryots, making up the total as yet advanced on these accounts to Rs. 1,39,877-7 and Rs. 3,44,904 respectively; and for land improvement Rs. 18,872 have been advanced, bringing up the total on this account to Rs. 81,146.

F.—Charitable Relief.

36. The number receiving charitable relief, so far as the returns obtained show, is noted below—

Thana.	Names of circles whence relief has been given.	No. of persons relieved.	Amount paid.
1 Chuprah	1 Arrowah	79	90 0 0
	2 Garbha	78	78 0 0
2 Manjhee	3 Banwar	141	95 9 3
	4 Parsa	294	8 15 4
	5 Ramghar	7	7 0 0
3 Dighwarah	6 Dighwarah	23	7 0 0
4 Parsa	7 Parsa	165	10 15 0
	8 Sitalpore	15	13 0 9
	9 Tehtee	47	100 0 0
	10 Jelalpore	49	100 0 0
5 Bussuntpore	11 Bagowra	58	81 13 0
	Total	956	592 5 4

37. Mr. Wright reports as follows under this head :—

"During the fortnight, the subscription to the charitable relief fund amounted to Rs. 140; the sums collected during the same period amount to Rs. 157."

In my last report I mentioned that Rs. 3,150 had been sent to the different circles for gratuitous relief of poor people who may be found unable to work. Up to date I have received intimation of only Rs. 3-13 having been paid. Of this sum Mr. D. N. Reid of Suddowah gave one rupee to a woman "whose husband was reported as having died from starvation," but on enquiry Mr. Reid discovered that the report was false, and that the man had died from natural causes. The balance (Rs. 2-13) was paid by Moulvi Golam Abbas of the Harpore circle to six persons.

38. And Mr. Hodgkinson writes thus :—

"The number receiving charitable relief still continues very small.* The enquiries through village agency have been completed in some instances, and tickets will now be distributed to those who are reported to be incapable of working for gratuitous relief. In some cases this has been already done. Judging from the returns sent in I don't think that gratuitous relief will be necessary in more than for 800 to 1,000 cases in the Hutwa sub-division; but even after tickets are distributed, I do not expect that this number will be reached for some time to come. In my next fortnightly narrative I hope to be able to give the results of the enquiry and the steps taken on it in detail."

J. E. DRUMMOND,
Offg. Magistrate-Collector of Sarun.

CHUPRAH MAGISTRATE'S OFFICE,
The 6th April 1874.

No. 967F, dated Champarun, the 9th April 1874.

From—H. KEAN, ESQ., Collector of Champarun,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit the fortnightly narrative of scarcity and relief for this district for the fortnight ending 4th April.

A.—STATE OF THE COUNTRY.

I propose to deal with each relief sub-division according to its number.

Sub-division No. 1.—This sub-division, which comprises thanas Moteeharee and Adapore, is in charge of W. B. Oldham, Esq., C.S. He reports—"that none of the bazar supplies of the grain usually offered for sale at this time of the year have fallen short, but rice is scarce, while there is still an abundance of maize, and gram is quite equal to the demand." At Segowli (the head-quarters for the present of this sub-division), coarse rice has been selling at 11 seers for the rupee. At Ramgurwa, six miles to the north of Segowli, it was rather dearer. The great annual *mela* at Adapore (on the Nepaul frontier) had been held during the fortnight, and there Mr. Oldham found that common rice was selling at between 10 and 11 seers.

At Kutkenwa (another frontier outpost) 7 miles east of Adapore, and where the supply had shown signs of running short, the same price (nearly 11 seers for the rupee) obtained, while there was an abundance of maize at nearly 15 seers. The market at Kutkenwa had suddenly lightened within the fortnight, which Mr. Oldham assigns to the excellent *rubbee* crops existing just north of Kutkenwa in the Nepaul territory, and which had begun to be harvested.

With regard to supplies of grain in the hands of zemindars, &c., Mr. Oldham says:—"There are indications that the people still have considerable supplies; a large fire occurred at Segowli which destroyed 35 houses; only one of these was a grain dealer's, the others belonging to petty tobacconists and shop-keepers. In several of the latter, I found large supplies of *maize* and oilseeds, and some rice. One tobacconist stated that he had lost 600 maunds of rice. Another indication is the fluctuation in the numbers of the laboring gangs. In checking the relief distribution at Koraiya, a frontier village, reported as the most distressed in this sub-division, I found some persons who had been relieved, and despatched to the relief works lately opened there, in their houses. They explained to me that they did not care to work every day. Again, at Kutkenwa which was also thought to be badly off, on very light task-work being introduced on the relief-works there, the number of laborers fell one day from over 1,300 to 600."

There had been no rain during the fortnight. The crops, with the exception of "cheena," were being harvested; the barley, wheat and dal crops have been and are certainly not less than 8 annas of an average season. The poppy crop is said to be very fair. The "cheena" was looking poor at present, on account of the west winds, where not irrigated. A large portion, however, had been irrigated from the local streams, and none is irrecoverable if even a little rain would fall. Of the rice lands, *i. e.*, those unfit for any cultivation but rice, fully two-thirds have been prepared for the next sowings.

Of the condition of the people Mr. Oldham reports very favourably; he says:—"Their condition is very much better than I expected, and they show no signs of sinking. All the gangs employed on the relief works consist of able-bodied people, all of whom are fit to have task-work exacted from them. They still swarm to the works, but show an independence both as regards their choice of sites for working, and when it is attempted to make them give a due return of labor, which is very significant; for instance, I found numbers of persons from villages near to and south of Segowli on Mr. Lethbridge's works at Ramgurwa, while work on the tanks being made here by the Public Works Department is very poorly attended. On the works under me I have been trying to introduce light task-work, that is, to exact at least 1,000 cubic feet from each gang of 50 persons, containing not less than 15 able-bodied men with tools. The result of trying to get only two-thirds of this work from the laborers at Kutkenwa has already been noticed. On introducing it at Sripore, 13 miles north of Motiharee on the road there, the coolies employed struck work altogether."

This description of the condition of the people is very significant and speaks for itself. Mr. Oldham had only seen two cases of emaciation during his tour through his sub-division. One was an old Mussulman cultivator who had come into the Ramgurwa poor-house for food. He lived only two miles off and had three beegahs of land, which his son cultivated; he was himself long past work.

The other case was that of an old Rajpoot in a village about three miles from Ramgurwa factory; his grandchildren were in good condition, and he had two bullocks. He said he had starved himself to give his grandchildren food. He was supplied with a maund of maize and 20 seers of rice.

The spinning relief which Mr. Oldham is introducing will meet these cases.

Just before Mr. Oldham went round his sub-division, charitable relief had been distributed. This no doubt accounts partly for the good condition of the people. The usual number of beggars swarmed, Mr. Oldham says, at the Adapore "mela," and they were all in good condition. The mela, however, was not so numerously attended as usual. Of the whole sub-division the northern two-thirds, Mr. Oldham says, is the portion which will

require most attention, and of that tract, the fifty square miles adjoining the Ramnuggur country (*i. e.*, sub-division of Bulthur, which forms a portion of the Ramnuggur relief sub-division) are the worst of. This portion consists almost entirely of only rice soil, and is, moreover, more thickly populated than the rest of the rice tracts.

Relief sub-division No. 2.—This subdivision, comprising thanas Dhaka and Modhubun, is in charge of Mr. S. Kilby. Regarding bazar supplies Mr. Kilby says :—"There is no difficulty experienced in obtaining supplies at any of the bazars; a very small quantity of the new rubbee crop had found its way into the markets, as the cultivators seem very loth to dispose of it." With regard to the prevailing rates of food, Mr. Kilby gives the following table :—

Rice	...	...	9 to 10 seers.	Rahar	...	...	16 seers per. Re.
Maize	...	...	12½ to 13 „	Cheena	...	...	15 „
Barley	...	...	13 „	Kodo	...	...	15 „
Wheat	...	...	12 „	Murwa	...	...	15 „
Gram	...	...	13 „	Mussur	...	...	16 „
Peas	...	...	17 „	Oorid	...	...	13 „
Kerao	...	...	17 „				

There had been no rain, and the prospects therefore of the "cheena" crop (which is not irrigated to any large extent in these thanas), are very bad; indeed, unless rain falls shortly, this crop will be a failure except in low-lying and irrigated lands. Regarding the condition of the people, Mr. Kilby reports that in consequence of the numerous relief works that have been opened out, their condition is satisfactory. No cases of death from starvation have occurred, though some cases of emaciation have been met with. These persons have been regularly fed, and they are now able to work on the roads. Funds have been supplied to each member of the sub-divisional committee, and to the police at Dhaka and Madhubun to enable them to provide gratuitous relief to all who from bodily infirmity cannot be referred to the works. About 80 persons had been thus relieved during the fortnight.

The central portion of this sub-division is stated by Mr. Kilby to be the worst, as it is for the most part a rice-growing country. The "rubbee" was being harvested, and a great portion had been threshed. The outturn, it is estimated, will be about as follows :—In the north of the sub-division (around Ghorashan), a ten-anna crop is expected; about Meerpore not more than a five-anna crop; further south to Seeraha about a four-anna, and in the neighbourhood of Modhubun and south to the Tirhoot boundary, an eight to ten-anna crop.

Relief sub-division No. 3.—This sub-division, comprising thanas Gobindgunge and Kessuriah, is in charge of Mr. Weekes, C. S. He reports as follows :—

"The state of the crops is again altered for the worse. There is hardly any moisture in the soil, except in some of the lowest lying lands. The indigo *does not* germinate, or germinates and dies, and the millet is being scorched up." With regard to the rubbee, Mr. Weekes reports that the crops are very much better in the west and north-west of his sub-division than in the north and south-east; the crop is being rapidly harvested, but the produce is in many places indifferent. The "kodo" crop is also said not to have germinated.

The harvesting of the cold-weather crop had caused a lull in the progress of distress. He is of opinion that the agriculturists will be able to tide over April, and the more fortunate part of them half through May with the assistance of the cold-weather crop.

In particular tracts, *i. e.*, from Gobindgunge along the Gunduck, past Burhurwa, Serni, and along towards Arrey Ra, the fortunate villagers will be able to last through the whole of May and longer, but it is different, he thinks, with the rest of the division; no confidence can be placed in the millet crop. The two lowest classes (the incapables and the day-laborers) are provided for by the relief works and charitable relief. The royts of all grades are clamorous for loans. If this estimate of the condition of the people is correct, Mr. Weekes should lose no time in organising village-to-village relief, and this I am glad to see he is doing. He says,—

"The relief works reach most of the day-laborers. To ensure the relief of those unable to work, the aged, infirm, and the sick, I have been constantly in tents and on the move, and, with the assistance of the planters, have established a satisfactory system. The principle is to keep the people as much as possible in their villages. The putwaree of each village brings all incapables in his villages to the planters (who are members of the sub-divisional committee and relieving officers of the several circles), and their names, caste, residence, &c., as guaranteed by the putwaree are entered in a register; each putwaree then receives every 7 or 15 days enough rice at ½ seer per head, to support those who are entered in the register, and residents of his village." This plan, Mr. Weekes says, is answering very well. Store-houses and centres are being selected, but he does not propose to build many granaries as there are many empty ones, he says, which he intends to fill when the need arises from the main stores, which are situated principally at factories within easy reach of each centre. Mr. Weekes has also used every endeavour to promote cotton-spinning and weaving, and with considerable success. All the putwarees have been directed to extend this kind of relief, and are strictly enjoined to see that each person in want applies for and obtains the mode of assistance best suited to his or her case. Domes have either had separate earth-work assigned to them or been employed in making baskets; this has been

found necessary, as other people object to work in company with Domes. Mr. Weekes has also pushed on the work of granting land improvement applications as fast as possible, and the pains he has taken has had the desired effect of increasing the number of applicants. The putwaree agency is indented upon largely also in this species of relief, each putwaree having to testify to the quality of the security tendered in every case in which Mr. Weekes does not personally inspect the property, and in each case in which money is advanced inquiries are made into the use to which it has been devoted. Another class of loans had been made through the European planters who have, both in this sub-division and in all the others (where planters reside), taken advances from Government for the assistance (in grain or money) of their ryots. These gentleman, as Mr. Weekes observes (and as has already been frequently brought to the notice of Government), have shown great public spirit and humanity in this and in many other ways.

These loans (for assistance to ryots) have been of great value, reaching (as Mr. Weekes points out), "the main body of the middle class, who are the only large body, and at the same time by far the most important class, who are not reached by other relief measures."

Relief sub-division No. 4.—(Thanas Bettiah and portion of Lowrya).—Mr. Samuells reports that the state of the bazars remains as before, and that no scarcity of supplies is felt. The price of rice was reported to have risen about 10 seers at Rutwal, but it was found to be incorrect, and when Government grain was offered for sale it found no purchasers. The people are said to be fully employed in harvesting the rubbee, and in their sugarcane fields. The price of rice had been steady at 10 to 11 seers. No cases of starvation had occurred and no increase in crime.

Relief sub-division No. 5.—(Bugha and portion of Lowrya).—Mr. Howe reports from this sub-division, as follows:—

"No rain has fallen during the past fortnight, and matters are much the same as when I last wrote. The sale of Government grain has proved a great success, and is much appreciated; it will, I think, have soon to be extended to the east of the sub-division, where supplies, though procurable, are getting scarcer. Rice has been selling during the last fortnight at the following rates:—

Ramnuggur, Government rice through the traders, 11 seers cleaned, 12 seers uncleaned.
Shikarpore, varying from 9 to 10.
Harnatour, 10 seers.
Bughaha, from 9 to 10½ seers.

"Makai' has and been selling at Ramnuggur at 13 seers, at Shikarpore at 12; it has been procurable in sufficient quantities. In the east, rice (as above stated) had become more scarce, and the sale of grain will soon be necessary; at Harnatour (north-west) on the other hand, it had become more plentiful." This Mr. Howe attributes to the fact of sufficient advances having been given. The Jharoos are more or less independent, and the demand being less, the owners of grain stores are more anxious to sell, perhaps, because they fear that Government rice may be brought to the market.

With regard to the general condition of the people, Mr. Howe reports—"Generally speaking, our relief measures have very beneficially affected the condition of the people. During the fortnight the daily average receiving support by working on the roads was over 9,000 during the first, and over 12,000 during the second week, and the total number employed was 143,000. Large advances (*vide* heading E) have been made to Assamees, and though the condition of the latter in some part of the sub-division is still far from satisfactory, there can be no doubt that the advances already made have saved the Assamee population from starvation. The sale of Government grain, by bringing ample supplies into the most distressed parts at cheaper rates, has greatly diminished the general distress, and restored the confidence of the people, whose condition by these measures has been assimilated to that of ordinary years." There had been no cases of starvation, nor had grain-thefts occurred, and fires had been much fewer, and all were accidental. Speaking of special tracts, Mr. Howe says—"In Tuppah Butsura I have been able to obtain, through the European members of the sub-committee, accurate statistics of the 'cheena' and rubbee crops. The area under cultivation was as follows:—

Cheena	347	beeghas.
Rubbee	365	„

"Owing to insufficiency of rain the outturn has not been good. As mentioned in my last narrative, the manufacture of sugarcane gives employment and support to many, and the worst time for the tuppah will be when this employment ceases. The arrangements for meeting distress are, however, fully advanced, so that we are prepared for the worst."

"In the Ramnuggur tract, and generally, throughout the east and south, there has been no "rubbee" to speak of.

"In Ramnuggur and the south, the people now, in some form or other, depend almost entirely on indirect Government help; while in the east we are rapidly coming to this condition. By this, I mean that in the former tract trade has failed to bring in supplies, and that but for the sale of Government rice there would be great scarcity and suffering; secondly, that the Assamees depend for food-supplies on advances made, and to be made, by Government; and thirdly, that our works keep alive a large portion of the population. But the number of persons who receive direct gratuitous aid from Government is compara-

tively trifling. In the east, food is gradually becoming scarcer, and as soon as the necessity of selling Government grain becomes inevitable the measure will be adopted.

B.—Relief Works.

The following is a list of the relief works, and the number of persons employed :—

Sub-Division No. 1.

Roads.	Men.	Women.	Children.	Total.
Motiharee station road	9,579	8,205	2,422	20,206
Segowlee to Rajoul	23,965	13,142	11,451	48,558
Ramgurwah to Adapore	11,954	4,448	3,470	19,872

Lower Gunduck Embankment	79,189	406	840	80,435

Therefore, the grand total number employed is 832,290 and the daily average is—

59,449	
18,000	Upper Gunduck Embankment.
77,449	

Regarding circle No. 1, Mr. Oldham writes :—

"There is a full supply of food in the neighbourhood of all the works, except at Ramgurwa, where temporarily grain payments are being made. At some of the works, where the men were getting only 4 pice on the task-work system, when the 6 pice rate was started, they refused to work, saying that they preferred the 4 pice without the measurement."

All the laborers, Mr. Oldham says, are in a fit state for task-work to be rigorously exacted, and, indeed, for the able-bodied to be turned away and drafted to the Public Works Department works.

To prevent the task-work system pressing too hard, an invalid gang has been started at each work, to be composed purely of persons who are unfit for task-work. Experiments in spinning relief on a small scale have been made, and were eminently successful. Cotton was given to some 20 persons only, all of whom gladly received it, and have spun it into very fair thread, and accounts strictly. Unfortunately, cotton is not procurable in any large quantities, and Mr. Oldham has therefore written to Gazeepore for some.

Mr. Kilby also reports that in circle No. 2 food is procurable near all the works, and that no complaints had been made to him on that score. Wages are distributed daily. The work-people bring their own tools, and higher wages are given to men who bring their own kodalis, *viz.*, 9 pice (1¼ anna). Mr. Kilby has started the "cowri khep" system, and finds that it works admirably. The maximum wage of 9 pice is given only to men who perform a full day's work, 7 to 8 pice being given to others. The Public Works Department has lately taken charge of most of the relief works in this sub-division, and much credit is due to Mr. Eckstein, the Assistant Engineer, for the trouble he has taken to break up the gangs, which were getting unwieldy and putting matters altogether on a better footing. He has commenced several tanks, and has introduced the petty contract system, under which men with kodalis get on an average 2 annas a day, and others 6 or 7 pice. Baboo Durgapersad, of Modhubun, a wealthy landed proprietor, is constructing a road from Modhubun to Kodudporeghat, for the relief of his ryots.

In circle No. 3 Mr. Weekes has several tanks in progress, and he also has tried the "cowri khep" system with success. Mr. Weekes has been working hitherto without assistance from the Public Works Department. Mr. Arnot, who has lately joined the district, has now, however, been deputed by the Executive Engineer to the charge of the works in this circle.

Sub-Division No. 4.—In this circle, Mr. Samuells has also been working without assistance, except from the planters. The district has now been divided into East and West Champarun, and an Executive Engineer and staff* of officers placed in charge of each division. It will now be possible to systematise matters, and put the whole of the relief works on a more satisfactory footing.

Bettiah sub-division, styled West Champarun :
Mr. Armstrong, Executive Engineer.
" James ... } Subordinates.
" Smart ... }
" Scallon ... }
Sudder Division, styled East Champarun.
Mr. Handcock, Executive Engineer.
" Eckstein ... }
" Arnot ... } Subordinates.
" Wells ... }
" Johnstone ... }
" Saunder ... }

Some of these officers have been deputed to Mr. Howe's circle also. The daily average in this sub-division, No. 5, has reached 12,000 or 3,000 more than in the previous week. "People of all classes," Mr. Howe says, "flock to the roads and tanks, the poorer among the cultivating classes coming in very large numbers. The roads which attract most laborers are those around Ramnuggur, in which tract distress has been more severe than in any other part of the sub-division. The health of the laborers is good, and a *marked* improvement in their condition is perceptible. They have now had regular employment and good pay for some months, while food has become plentiful and comparatively cheap since Government rice has been sold to the public. These causes have had the effect of considerably improving the condition of the laboring classes, and of all who come to the relief works,

there are, however, of course a large number still who, from weakness, are unable to perform a full day's work." "On the three roads branching from Ramnuggur, traders who purchase rice from Government retail it to the workmen at 11 seers. In the east and west portions of the sub-division, where the system of selling rice to the public has not yet been introduced, sales to our workmen under rule A continue. At Harnatur and Bughaha the rate is 10 seers. The Executive Engineer, Upper Gunduck embankment, reports that rice was less plentiful than before, and was selling at 9 seers per rupee. The laborers are still purchasing maize and other grains at 12 seers and 13 seers. The Government sale had been very small. He states that the Burmah rice is not liked, and that a good deal of paddy is mixed with the rice.

About half of the earth-work has been finished. He complains of the inefficiency of the sub-overseers, and states that as portions of the embankment are finished, the coolies working thereon return to their villages, and are seldom persuaded to go further on for work. Out of the total assignment of grain, 150,000 maunds, 128,000 had been stored. The daily average of persons employed was 18,743.

C.—Transport of Grain.

The contract for the transport of grain is working most satisfactorily, even more than the stipulated amount having been conveyed per week into the district. The contractors complain that grain is not delivered to them fast enough at Bunkurghat. The route through Sarun to Gobindgunge is in full working order.

D.—Storage of Grain.

The construction of storage golahs is still going on. The following is the amount actually stored on the 3rd April :—

	Mds.	
In the Ramnuggur tract	168,543	Includes embankment grain.
In the Bettiah sub-division	175,457	
In the Sudder district	153,247	

E.—Advances to Private Persons.

The following sums were advanced during the fortnight :—

	Rs.
I. For storage of grain	Nil
II. For assistance of ryots	7,500
III. For land improvement	2,315

The total amount expended up to date under these three heads has been—

	Rs.
I.	1,32,000
II.	1,33,726
III.	22,507

F.—Charitable Relief.

Sub-Division No. 1.—Mr. Oldham reports as follows, regarding this heading—"The arrangements for charitable relief are completed. I have now the following members in my sub-committee, and shall have added to their number within the next fortnight :—

Mr. R. Lethbridge, Ramgurwah factory.
„ Thorp, Huroliah.
Captain F. Knowles, Commanding 2nd B. C., Segowlie.
Mr. A. Edwards, Motiharee.
„ W. F. Gibbon, Tirkowleah."

Mr. Oldham has also two sub-committees under him. He say : "Mr. Lethbridge's assistance is invaluable. He has undertaken, and is actually looking after, the whole of the tract in farm to his factory, which embraces a great part of that which will require most attention. There is a poor-house and hospital at Ramgurwah, both of which are being enlarged under Mr. Lethbridge's supervision. I found that he had started the ticket system as followed in Orissa, and up to date tickets for grain have been issued from his centre to 320 persons. The two inspectors under me have now visited almost every village in the sub-division, and distributed money relief as they went, as have also done the Sub-Deputy Collector, Baboo Jugeshwar Singh, and Moonshee Durbari Lal. These distributions, with Mr. Lethbridge's arrangements, have fully alleviated all present distress, and left time for the grain-ticket system, which has now been started in all but the south-west portion of the sub-division, to come into operation. The inspectors have also convened and established 'punchayats' in all the villages visited by them, to whom they have made over the sums for the maintenance of the persons charitably relieved, and, on checking the visitations, I have found that the 'punchayats' had acted very well, nor did I hear a single complaint against any of them."

Sub-Division No. 2.—Mr. Kilby writes—"The sub-division is being divided into ten circles, each containing 40 villages ; a member of the sub-divisional committee will be placed in charge of each circle, having an inspector and 3 sub-inspectors under him ; each sub-inspector will be put in charge of 15 villages."

In this way Mr. Kilby proposes to account for the whole of his sub-division, each portion being placed under the charge of some responsible person, and each village provided for. This scheme differs from the system adopted by Messrs. Oldham and Weekes in the 2nd division, and Messrs. Samuells and Howe in the Bettiah division. In that the sub-agency to be employed is paid, and will be somewhat costly, but it has its own advantages. One of the members, Mr. Macqueen, has started the system in 90 villages. Mr. Begg, another

member, is making arrangements for his circle, and Mr. Kilby has commenced the scheme in 60 villages. These three circles comprise the worst portions of the sub-division, and the other circles will shortly, Mr. Kilby reports, be in working order. Mr. Kilby states that he is almost swamped with applications for loans, which, although not really required in most cases, necessitate enquiry in all ; arrangements are being made to provide Mr. Kilby with assistance. A hospital has been erected at Pakree, but the health of the people is so good that there have been no admissions. A village-to-village enquiry has been, and is being made by Mr. Kilby and his inspectors ; those who are incapable of working, receive gratuitous relief from the members of the sub-divisional committee, and in a few instances funds have been supplied to the village punchayats for distribution.

The measures adopted for charitable relief in sub-division No. 3 have already been notified in this report. In sub-division No. 4 (as reported in a former narrative for the fortnight ending the 21st February), Mr. Samuells has divided his jurisdiction into eight relief centres, each centre being placed in charge of some responsible person. The agency employed is altogether unpaid. Poor-houses have been opened at Rutwal and Bettiah, and about 4,000 persons receive charitable relief daily throughout the sub-division.

Sub-division No. 5.—Regarding the arrangements in this sub-division, Mr. Howe writes : "The questions of the most pressing importance are, first, to provide the 'Assamee' population with sufficient good grain ; secondly, to provide them with, or to enable them to obtain, seed grain. Almost the entire population of the sub-division is agricultural, and the proportion of the cultivating class that comes to our works is small, though the actual numbers are large. The remainder now depend almost entirely on the advances they have received either from their zemindars or from Government, nor have they anything except advances to look forward to until the next rice crop is reaped. The best of them are poor and in debt, and it is from this fact that the question of advances becomes so difficult. On the one hand, unless advances are immediately made on a large scale, the 'Assamee' population will be reduced to starvation ; while, on the other hand, there is the risk that, unless great care is taken in investigating each case, the security will be insufficient. To make advances too readily (except in the comparatively small class of cases coming under Rule F), tends to demoralise the people, and renders them reckless in getting still further into debt. The difficulty is to combine sufficient promptness with sufficient caution, and to make a searching investigation without thereby losing the right moment for action." Mr. Howe has submitted a scheme which has been sanctioned, and on which he has been acting. The following is an outline of this : a register (mouzahwar) is prepared in each tuppah, in which the amount required approximately for each village is entered. This register is prepared in the first instance by the inspector of the circle, assisted, where possible, by any influential member of the committee resident in the tuppah. It is then carefully tested by the officer in charge of the circle, who can alter (increase or lessen) the total amount fixed in round numbers. As soon as this has been done, a certain quantity of grain is sent to each village, where it is kept in charge of the headmen of the village, from whom due security for its safe custody is taken. The class of cases requiring most immediate relief, *i.e.*, "Assamees," coming under Rule F (which fortunately are comparatively few), will then be taken up and disposed of summarily. These men can be readily found, as there are but few in each village. The object of sending grain to each village, Mr. Howe explains, is—"first to give confidence, for experience shows that the mere presence of grain in a village (if the object of its being brought is known) has this effect ; secondly, to enable the advances under Rule F to be made at once. The summary inquiry preceding distribution under Rule F will be carried on simultaneously, and, having once decided to whom to give under this rule, there is nothing like *immediate action*, which of course can only be taken if the grain is ready. Thirdly, because now is the best time for carrying grain throughout the interior, and we should therefore avail ourselves of it. Having provided every village with an amount of grain which, approximately, will suffice for advances, and having relieved the worst cases under Rule F, a register in the following form will be prepared and carefully tested by circle inspectors and officers in charge of circles :—

1	2	3	4	5
Name of Mouzah.	Amount already distributed either by Rajah of Bettiah, or under Rajah of Ramnuggur's loan.	Number and names of Assamees requiring advances, with amount required by each.	Nature of security.	Remarks.

When this return has been carefully tested, the zemindar will be called upon either to make the advance or to go security, Government making the tuccavee distribution. If he declines, the best security available will be taken, and the procedure laid down in Circular No. 1088 of 25th February will be followed, *i. e.*, the zemindar will be warned that Government reserves the right to recover the advance by legislation or otherwise. There are numerous landholders, jaghirdars, aritdars, &c., whose security will be sufficient. The other landholders in the sub-division are the Rajahs of Bettiah and Ramnuggur. Mr. Howe has addressed Mr. Gibbon, the manager of the estates belonging to the former, and he will no doubt afford his cordial co-operation. Under the Rajah of Ramnuggur's security Mr. Howe has advanced 5,094 maunds, and Colonel Boulderson about 4,000. There are numerous villages, he reports, not belonging to the Rajah, where advances have to be made direct to Assamees, and where the procedure under Circular 1088 of 25th February will have to be followed. The tuppahs in the south belonging to the Rajah of Bettiah also require attention, the advances made by Mr. Gibbon being either incomplete, or having proved insufficient. Mr. Gibbon has been addressed on this subject, with regard to the very important question of providing seed-grain to the Assamees. Mr. Howe promises to submit a report as soon as he has completed some further inquiries he is making. There is very little seed-grain, he says, in his sub-division, and he fears that it will be withheld in order that high prices may be obtained. Under the special head of charitable relief, Mr. Howe writes:—"The sub-division has been divided into four large circles with 11 sub-circles (corresponding with tuppahs), in each of which there is a sub-inspector who prepares and tests the register of those unable from weakness to work. The poor-houses at Ramnuggur and Bagaha are in full working order. The principal feature in the charitable relief scheme is the village-to-village relief system (Rule 4); about 1,400 poor are supported each day. Colonel Boulderson manages the circle in the east (Balthur), with five sub-circles; Mr. Joakim is at Hurnataur, where a similar system is in force; while I manage the Ramnuggur circle with four sub-circles. The Bagaha sub-committee supervises tuppah Butsorah and the poor-house at Bagaha. In this way every part of the sub-division has proper supervision, and the rules are being carried into practical effect. The congregation of large masses at any place is avoided, while no case of distress can occur without being brought to notice and relieved.

G.—Financial Results of the Fortnight.

H. Kean,
Collector.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th April 1874.

Read—

The district narratives of the Bhagulpore division for the fortnight ending on the 4th April.

Resolution.—*Monghyr.*—The supplies in the bazars of the Monghyr district appear to be sufficient, and all who have money can get food; prices, except in Buktiarpore, are nowhere below 11 seers per rupee. The condition of the people generally is unchanged. Village-to-village visitation is going on in the worst tracts, and the people are found to be generally in good case, except in Buktiarpore, where the relieving officer had, at his village visitations, to deal out grain to 350 persons. It is reported that no deaths have occurred from actual starvation; at the same time it is said, that on a road near Buktiarpore was found the body of an old traveller who must have suffered from want.

2. Relief work can, it is said, be had by all who want it, yet the numbers so relieved are not large, *viz.*—

On Government relief works	3,071
Commissioner of Wards' works	4,000
On works executed from advances	1,103
Total ...	8,174

It is explained, however, that the people have not yet come back from their work in the harvest fields. The Magistrate-Collector and the Commissioner must be careful to watch the rubbee country, wherein a considerable quantity of Government grain is already stored, so that they may be able to declare, as soon as possible, how much of the grain may be held as reserve, available for the wants of more necessitous tracts.

3. The Lieutenant-Governor agrees for the most part in the views expressed by Mr. Lockwood, in regard to making advances for purchase and storage of grain; he believes that Collectors and their subordinates exercise an intelligent discretion in the matter. And that being so, public money will go further in advances for purchase of grain, and in advances for land improvements than it could do in any other shape. It is satisfactory to learn that in all cases of advances to ryots, the Monghyr authorities have been able to employ the services, and get the security of superior landholders. At the same time it must be remembered, that where ryots are really in need, advances of grain should by no means be withheld merely because the superior landholders will not come forward to share the responsibility. On this particular point the Lieutenant-Governor does not at all follow the view of the Collector. It ought to be possible to afford some aid to distressed ryots, to sustain life till the new crop shall come in, without causing the abuses and demoralisation which the Collector seems to apprehend.

4. 3,459 maunds of grain have been sold to the public, and about 20 maunds to work-people. 1,367 persons are daily in receipt of relief; and the relief officer in the worst part is sending grain to distressed villages, and distributing it through the local village agency in a manner which seems to be successful.

5. *Bhagulpore.*—Though the spring harvests have been decidedly good, yet prices have not fallen in Soopole and Muddehpoorah. Nothing is said of the condition of the cheena crop, of which the breadth is said to be beyond anything known in previous years. No ascertained cases of famine-death are reported, except that of an infant of thirteen months. The numbers employed on relief works have risen greatly during the fortnight, and are now—

On Government relief work	...	8,300
On Soopole works, under the Court of Wards ...	...	25,435
Total	...	33,735

The number employed on private works seems to be less considerable than in Monghyr.

6. The transport of Government grain has gone on very satisfactorily and efficiently, except that the supply delivered at the railway stations, was for some days less than the transport contractor required. Four lakhs of maunds of Government grain were stored in North Bhagulpore before the end of March. 157 maunds was sold to relief laborers, and 340 maunds to the public. The sales to the public appear to have operated satisfactorily, and not to have stopped such private trade as there was. Sales to the public are now beginning at three other places in North Bhagulpore. 1,633 people are in daily receipt of charitable relief; many of the applicants are people from Tirhoot. Registers of people for house-to-house relief are being completed. Zemindars have taken considerable advances for helping their ryots; but it has not been necessary to make direct advances to ryots on any considerable scale.

7. *Purneah.*—The supply of grain in the bazars would seem to be fuller than at the time of last Narrative. The Lieutenant-Governor approves Mr. Kemble's action in stopping sales to the public at Dengraghat, when he saw that local traders were coming forward to sell; still we need not regret that sales were temporarily begun, seeing how very low the supply in the bazars at one time fell. On the whole, the condition of the people seems certainly not to have grown worse during the fortnight, and the information obtained regarding the possession and importation of seed-grain by the Purneah ryots is satisfactory.

8. The Lieutenant-Governor thinks that there is much merit in the plan described by the Collector of advancing grain to village communities, on the collective security of the community; and this method will be suggested for consideration in other districts.

9. The number of people on the relief works has risen greatly during the fortnight, the daily average being now 17,250. Government grain is being sold at 12 out of 16 of the larger relief works; but the quantities as yet taken are not large. The transport operations in Purneah are well forward. The charitable relief arrangements appear to be working well, and the circle officers are carrying out the rules intelligently. The average number of people in receipt of this form of relief is 2,178 daily.

10. The Sonthal Pergunnah's Narrative has not yet (10th April) been received.

By order of the Lieutenant-Governor of Bengal,

C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

No. 2374 S.-R.

COPY, with copies of the district narratives, forwarded to the Commissioners of Patna, Bhagulpore, Rajshaye; to the Relief Commissioners, Dinagepore, and Durbhunga, and to the Magistrate-Collectors of Monghyr, Bhagulpore, Purneah, and the Sonthal Pergunnahs. The attention of Commissioners is invited to paragraph 8 of the present orders regarding the advisability of making advances to ryots on the collective security of the village community.

By order of the Lieutenant-Governor of Bengal,

C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

CALCUTTA,
The 14th April 1874.

P. S.—The Sonthal Pergunnahs' Narrative has now (13th April) been received. The Lieutenant-Governor is glad to find that Mr. Boxwell has visited the neighbourhood of which the Reverend Missionaries reported so badly, and has found the people all in very good condition, though there is cause for fearing much scarcity and distress a month hence. The works which have been at once opened, and the Government grain which is being carried into the district should enable the Magistrate fully to relieve distress, and to give advances of food to carry ryots through the rainy season. The goodness of the mowah crop will greatly help the people. The great rise in the numbers of the work-people, who now amount to 26,869, would seem to show that the people had been much in want of work. There seems as yet to be no need for charitable relief in the Sonthal Pergunnahs; but the Deputy Commissioner will have to arrange by what means he will make advances of grain to ryots such as he adverts to at paragraphs 30 and 31 of his Narrative. Happily the village organisation in the Sonthal Pergunnahs is very well preserved, and the Government officers will be able to work through village headmen, as well as through zemindars.

Narrative of Scarcity and Relief of the District of Monghyr for the fortnight ending 4th April 1874.

A.—STATE OF THE COUNTRY.

THE bazars generally continue to be well supplied, and the price of grain remains almost stationary. The rubbee grain has not yet come into the market in large quantities, but when it does come in, I do not anticipate much change. Rice is selling from 10 to 12 seers per rupee, gram and peas from 17 to 18, and wheat from 15 to 16 seers per rupee. The deficiency in the Buckteerpoor market, however, continues, and had it not been for the prompt measures taken in opening the Government golas, there would have probably now been a famine in that part of the district; as it is, about 2,000 maunds of grain have been disposed of, and Mr. Manson, the Relief Superintendent, anticipates that all our stores there will be readily purchased before the next rice harvest. Mr. Manson with the zemindars calculates that the rubbee grain cut in those parts will only feed the people for a fortnight; but as I have been over a good deal of that part of the country myself I consider that this estimate is understated. I calculate that the rubbee now cut should supply the Buckteerpoor market for at least two months, particularly as high local prices and scanty carriage will, I hope, induce the owners to sell what they have in the pergunnah instead of exporting it as is generally done in favorable years.

In consultation with Relief Superintendents, I am of opinion that during the fortnight the condition of the people has not materially changed. The poorer classes have not yet returned in any considerable numbers from the rubbee cutting, but the harvest will not last much longer, and the miserable hovels of the low-caste people found in every village will soon be occupied again. I have made inquiries from every one likely to give me information on the subject, and it appears that each person employed as a labourer in cutting the crops, on an average, will bring home about a maund of grain, so that these persons, numbering probably 600,000, will have at least a month's supply to go on with. Indeed, if all goes well with the crops remaining to be gathered during the year, the poorer classes will probably look back on the past time between the rice and the rubbee harvest as the most trying period of the year. The mowah prospects are excellent. Mr. Roberts at Khurrukpore agrees with me in putting it down as a 16-anna crop, and the mango prospects, although not so good as at first anticipated, promise fairly. On the whole, the cheena is looking well, but the Indian-corn sown after the February rain looks poor, except where it has been freely irrigated. The early maize will not have any perceptible influence on the price of grain as it is too limited in extent. Mr. Currie, Mr. Baillie, Mr. Money, and their assistant Shah Abdool Hossein, express anxiety for the next three months; but I think the gigantic efforts which have been taken to give relief wherever necessary should remove all real anxiety as to the future, supposing that prices return to their normal state after the next general harvest. There has fortunately been no rain during the fortnight, and the district has reaped a good rubbee crop under very favorable circumstances. Khalians with piles of grain are now to be seen all over the rubbee country, and the samples of corn, barley, gram, and rahur which I have examined have been excellent; even the oats, which in most years are little better than wild oats, have some little amount of grain within the husk.

I have lately sent to the Asiatic Society Museum in Calcutta specimens of 27 kinds of jungle roots and seeds which are largely consumed by the poor people in this district. They were collected by Major Waller during his recent cold-weather tour of police inspection. The native names and manner of cooking them are described, and Major Waller has also recorded his opinion regarding their flavor and general advantages as food. Some of them appear to be highly poisonous unless carefully prepared, and I hope that some one sufficiently learned in botany may be able to indentify them.

Mr. Roberts, the Assistant Manager at Karakpore, continues to report favourably on the Durbhunga estate at Khurrukpore. He has issued notices inviting persons to apply to him for *bonâ fide* tuccavi advances, and on any local distress being reported he at once goes to the place, and if necessary affords work or gratuitous relief. In all the other Court of Wards' estates and Government estates labour is being provided whenever necessary, but fortunately these are nearly all favorably situated, and require very little assistance. A report just received

from Mr. Currie shows that since the 1st of April, Mr. Wight, Superintendent, Luckhiserai, and his assistant Nowab Willayet Hossein, have visited 44 villages, and that although relief has been given without stint, the total amount given is small. Regarding the country north of Luckhiserai Mr. Currie writes—"The people say they are provided for the next month or six weeks, and here about the Mushurs, &c., who have returned from the rubbee harvest, say with perfectly happy faces that they have grain for 10 days. They take no thought for the morrow of the 10th day. The sickly smell of mowah is strong round their villages, and that will support them a few days more. I should not be surprised if in a fortnight or three weeks, we had distress rather bad; the mowah and mango crops may help to eke out a living, but I cannot think they will support the people altogether. For myself I do not know how the people live, yet with the exception of one or two in every village, and six or seven in the large villages, they seem plump and happy.

"I was at Owri on the 1st and found the place in a bad way; the ground looks as if it had been fallow; not a grain was got from 1,072 beegahs either of paddy or rubbee. Large tuccavee advances are being taken by the zemindars, but the place is cursed with the bane of this country,—numerous owners of minute shares.

"I have sent grain to the putwari for distribution to some people whose names were taken down."

From the tenor of all the reports received by me, as well as from my own observations, the condition of the district may be stated as follows:—

All who have money to purchase it can get as much grain as they want. The owners of the rubbee grain are well off, and happy in consequence of the high prices. The ryots on the Jumooee rice-country, and those to the north Furkya towards Buckteerpoor, as well as the entire purely labouring population are hard pressed for food, in consequence of high prices. But work can be got by all who require it, and actual distress is being relieved by the Government officers wherever they find it.

B.—Relief Works.

Since the commencement of distress in this district, I have done my best to persuade the zemindars and ticcadars to come forward and provide work or money for their ryots wherever necessary. Most of the zemindars have come to me and given an account of what they are doing and intend to do. I have given advances to all who appear to require them under the law for the improvement of estates, and these advances, already amounting to Rs. 40,000, have certainly taken away a good many laborers from our works. As I have remarked in former narratives, I have been particularly anxious to encourage irrigation works in the distressed parts of the Jumooee sub-division, because since November I have visited nearly every village there, and in each have found signs of departed prosperity in immense silted-up tanks, probably two or three hundred years old, most of which were dry even before the end of the year. I calculate that the money now advanced in this district will give employment on irrigation works to nearly 10,000 people until the rains set in. This and considerable tuccavee advances should do a great deal of good and take off pressure from our relief works.

No Government roads other than those already in hand have been commenced during the fortnight, but I have submitted to the Commissioner a map showing 17 villages where if necessary most useful tanks can be dug out under the Public Works Department, and 41 villages where light labor tanks may be dug out under superintendents of circles. These tanks will afford labor to 150,000 persons for two months if necessary. The 300,000 persons lately employed in the poppy fields have not much to do at present, but the six lacs of rupees distributed amongst them by the opium agent should keep them from starving until they can get labor elsewhere either gathering mowah or ploughing their fields as they will do after the first good fall of rain.

The rubbee harvest is drawing to a close, but immense numbers of persons are still in the fields or at the threshing floors, and I hope they may find employment there for a week or two longer.

The zemindars have not got into the groove yet for submitting returns of laborers punctually, but I find that the following number of persons are employed either in wards' estates or in estates where relief works have commenced by Government advances:—

	Men.	Women.	Children.
Kamasi	41	21	9
Lakhochuck	38	29	0
Kewl	75	63	0
Damodurpur	15	13	0
Kharagwara	23	22	0
Sondhi	64	25	0
Phulwaria	44	0	0
Burara	50	30	0
Pertabpore	500	0	0*
Ekara	250	0	0*

Besides the above about 4,000 persons are employed at Karakpore.

* These returns were verbally given by the zemindar.

C.—Transport of Grain.

I annex a statement shewing the movement of private grain by rail. As might be expected, it is inconsiderable. Seeing that there is a vast quantity of grain in the district, and although a very considerable proportion is set aside for exportation, it will not leave the district until the rains finally set in and render the Ganges navigable.

Vast quantities of carts have been attracted here through the agency of Mr. Thomas, the contractor, moving on grain to Northern Bhagulpore. The only drawback is that the railway cannot supply grain fast enough, and the cartmen, who are an independent race, go away unless their carts are loaded as fast as they wish. I found great want of grain at Surroop Gita Ghât, where large bodies of men connected with transport are collected, so I sent a petty trader with grain and an assistant to set up a shop at the place at once. The Durbhanga grain also arriving at Monghyr is shipped off at once, and no block of any kind has occurred. I give all parties any assistance which they may require directly it is asked for.

D.—Storage of Government Grain.

The only places now to which the Government grain is being moved is to Sondhi and Girna Pursunda between Jamooee and Luckhiserai. It is proposed to store a total of 25,000 maunds at Sondhi and 10,000 maunds at Girna Pursunda. The gola at Sondhi is nearly ready, and as there was great difficulty in getting materials for building at Girna Pursunda, I went to the place myself and got the loan of a good gola, where 8,051 maunds have already been stored. A little addition to this place will give all the accommodation we require. I do not see any reason for changing my opinion, already expressed in former narratives, that unless some unexpected change in the condition of the district takes place, we have sufficient stores of grain to meet any demands on us. Although immense purchases of Monghyr rubbee are being made on all sides for exportation, I think that what will remain, supplemented by our stores, will prevent actual famine in the district. It must also be remembered that I have advanced Rs. 61,000 to private parties for the purchase of grain, and although the first purchases have in many instances been disposed of, the money is being used again to buy more.

There is a considerable amount of Government grain now stored in the good rubbee country. It was stored there before the January rain, at a time when the rubbee prospects were bad. It will not, I think, be quite safe to dispose of this grain yet, but the golas are to be sealed up for the present and placed under the least possible establishment.

Arrangements are being made for taking stock of all the golas on the 15th. Copy of circular No. 1828, dated 26th March, has been supplied to each officer, and I hope that there will be no delay whatever in the matter.

E.—Advances to Parties and their Results.

The advances for purchase and storage of grain have formed one of the principal and most satisfactory methods of relief in this district. All the money advanced has been received by gentlemen who have not only taken a good deal of interest in the matter, but who have personally seen that the grain is retailed to those who most require it at cost price. Advances to private parties for land improvements form also, I think, an excellent scheme for relief, and although only Rs. 40,690 have been hitherto advanced, the total amount of applications I have received is very great. It is said that some of these advances will not be properly applied, but I am myself of a different opinion, for, besides having put the credit of the applicant and his security to a reliable test, I think that very few persons will consider it worth their while to misuse the money, particularly as the works are visited from time to time by Government officers. Hitherto reports on these works have been very satisfactory, and the zemindars know that if the reports do not continue satisfactory, the full amount advanced with interest will at once be demanded back by me.

Another excellent form of relief is that of tuccavi advances to ryots through zemindars, and here also, although I have only been able to advance Rs. 18,900 as yet, the applications for advances are very numerous. It will be difficult for the landholders to misappropriate the money when they have in each case to furnish lists of the persons to whom the money is advanced.

All the persons to whom I have advanced money are zemindars, ticcadars, or persons who have given full and ample security. I have not made any direct advances to ryots. If once such a course was followed to any extent, it would I think be impossible to prevent the most widespread and demoralizing abuse, besides causing endless trouble and loss to Government.

F.—Charitable Relief.

Mr. Currie, the additional sub-divisional officer, reports that during the fortnight 95 villages (names given) have been visited in his sub-division. This number will be largely increased during the next fortnight, now that the relief officers are settling down to their work and deputy assistants have been appointed. On reading Mr. Currie's report the most noticeable points are that the poorer classes are still away from their homes cuttting the crops on dearah lands; that although in almost every village destitute persons are to be found amongst the aged women and children, no deaths from actual starvation have occurred; that grain is procurable in all the bazaars throughout the sub-division, and that although the people at present appear pretty well off, yet considerable anxiety is felt for the time when the temporary relief afforded by the rubbee harvest has worn off. Mr. Currie reports that he has visited several

works commenced with money advanced by Government, and except in one instance the result was satisfactory. The complaint, however, is general that during the rubbee harvest laborers are procured with difficulty, and, as we have no desire to press labor, I have told all zemindars taking advances that I am not for the present very anxious to see their works progressing.

I have seen Mr. Money, the Superintendent of the Sheikpura circle, and he reports that there is hardly any perceptible change in the condition of the people during the fortnight; that the hovels of the poorer classes are still deserted; only very few persons have returned from their migrations, but that those who have returned have brought back a maund of grain each, which will carry them on for another month at least. Mr. Money gives a good account of his assistant Shah Abdool Hossein. This gentleman has an elephant and horses, and he gets over a good deal of ground during the day.

Since his arrival at Bucktiarpore on the 11th March, Mr. Manson, Superintendent, has been actively engaged in visiting the villages within his circle, and affording relief wherever necessary. On the whole, I consider this part of the district more distressed than any other, and indeed in two villages, Sitanabad and Hurewa, Mr. Manson found the people so famine-stricken that he was compelled to deal out grain to no less than 350 persons. These persons were chiefly the old and very young of the lowest classes, whose rice crops almost entirely failed. The system followed by Mr. Manson is that which has been generally adopted in the district of sending grain to the village, and dealing it out daily through the most respectable persons in the village. I feel confident that this system will not be abused, and indeed, considering that each receiver of the Government bounty is registered, and a calculation of the total requirements made, the person to whom the grain is entrusted, even supposing him dishonest, would hardly consider it worth while to appropriate the grain for himself. Most of the villages within the circle have been visited and timely relief afforded. The total amount of persons who have received out-door relief during the month in the Bucktiarpore circle is 741, making a total of 1,156 persons relieved. Mr. Manson has a good active assistant in Baboo Bhola Nauth Dutt. the zemindar of Burowni. An English-speaking deputy assistant, Baij Nauth Sahai, has also joined, so that part of the country is well provided for. There is no doubt that the gigantic exertions we have been making to pass grain into Tirhoot and Bhaugulpore has raised the rates of carriage here, and consequently private trade at and round Bucktiarpore has not lately been so active as it probably would otherwise have been. I think, however, that whatever damage we may have done has been amply compensated by our sales of grain and Indian-corn, amounting already to 2,000 maunds, at a fairly cheap rate.

Mr. Manson during his tours found by the road-side two miles north of Bucktiarpore the body of an old man who had evidently died, if not from actual starvation at all events from the effects of want. Although Mr. Manson made all possible enquiries, he was unable to learn the man's name or his place of residence; apparently he was a traveller going north. Mr. Manson also found an infant deserted by its mother, who probably knowing that he would have it taken care of, threw it in his way.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

E. LOCKWOOD,
Offg. Collector.

Rules for the guidance of Relief Superintendents.

The poor-houses which have been erected at Monghyr, Jumooe, Begoo Serai, Sikandra, Bucktiarpore will remain under the management of the officer of the circle to which they belong, and all the expenses connected with them will be defrayed from the money at the disposal of the Superintendent. Very few persons have as yet taken advantage of the accommodation afforded, apparently preferring to hang on in their own hovels, however wretched; but by degrees, particularly when the rains commence, many persons will come in, and a medical officer will, if necessary, be provided for each poor-house. Cooked food will as a rule be distributed at these poor-houses, and each Superintendent will provide any food which appears necessary for the patients from the funds at his disposal.

A sum of one thousand rupees has been placed to the credit of each Superintendent, either at the Government treasuries or at the cutcheries of the nearest banker or zemindar The first persons who should receive the attention of Relief Superintendents are respectable ryots and others who, in consequence of their crops failing, have been reduced to poverty, and who only require small pecuniary assistance for purchasing food to help them over the present season of scarcity. These persons have not an equal chance with common laborers and professional beggars in the struggle for existence.

The best plan to provide for these persons is to give them money advances through the zemindar, ticcadar, or mahajun. On arriving at a village the first care of the Superintendent will be to ascertain the number and names of such persons, and then call on the zemindar and ticcadar to advance them money at once, say ten or twenty rupees each, according to circumstances. If the landlord pleads inability to advance from his own funds, the Superintendent may advance up to Rs. 200 to any single zemindar, ticcadar, or mahajun, and take from him a bond on plain paper according to the sample furnished. This advance will at once be reported to the Collector, and the amount will be adjusted. If, however, the landlord refuses, or is unable to furnish good security for repayment, special report of his case should at once be sent to the Collector for disposal or report to Government under Circular No. dated . Such reports, however, will I think be rare, as I have found landlords very willing to make advances where necessary. In the meanwhile, if delay appears dangerous, the Superintendent may advance not more than Rs. 20 either in money or grain to ryots direct, merely taking a note of hand under promise to re-pay the amount when the next crop is cut. A respectable jeth ryot may perhaps be induced to stand security for several such persons. Respectable purda-nisheen women might be included in this system of advances, but the Superintendent must be on his guard that he is not imposed on; he should insist on the women's names being recorded, notwithstanding any alleged breach of etiquette in doing so. If they can be persuaded to re-pay the amount advanced by spinning so much the better. A list of persons to whom money is advanced with the amount should be demanded in every case where the advance is made with the Government money, and the Superintendent on visiting the village, without in any way appearing to doubt the probity of the landlord, should ascertain whether the money has actually been advanced or not.

Superintendents will find particularly as the season advances in almost every village many persons of low caste who are regarded by their more aristocratic neighbours very much in the same light as the village pigs. These persons have little money and less credit, and as they are the first to die of starvation in times of scarcity, they form the greatest source of anxiety. The able-bodied amongst these races can work, and they should at once be directed to the relief roads and tanks, but those to whom the labor test cannot be applied, must be relieved. It will generally be found useless to tell such persons to go and get cooked-food at our centres. I have myself tried the experiment, and found that many of them would probably die on the road.

The only practical method of relief is for each officer either to send or take grain to the villages, and having registered the persons requiring relief leave sufficient food with the headman to support them until he can visit the village again. The headman should be treated courteously, and in ninety-nine cases out of a hundred he will readily and faithfully discharge the duty of dealing out the grain daily to the poor. The chowkidar should be called on to attend daily the distribution of food to keep order, and as he will probably be found badly off, he should receive half a seer of rice daily for his trouble. Money for the purchase of salt, dâl, &c., may, if necessary, be also given.

Superintendents will be careful to enquire regarding the sufficiency or otherwise of seed-grain in each village, and if he finds that reported deficiency cannot be met by small advances through the zemindar, the matter should be reported at once to the Collector, who will see that the necessary supply is given. But I do not anticipate much want in this particular, for I have seen seed-grain religiously sealed up even in the most distressed villages.

Each Assistant Superintendent of circles will have a permanent advance of Rs. 50, and as each Assistant is a zemindar of high standing, he should receive the full confidence of the Superintendent, and he be allowed to distribute tickets and money for dall, salt, &c., to those whom he finds starving in the villages within his circle. He should also bring at once to the notice of the Superintendent any cases where an advance of money can be recommended.

Rules regarding light labor relief have already been circulated.

E. LOCKWOOD
Offg. Collector.

No. 398. R., dated Bhagulpore, the 7th April 1874.

From—V. T. TAYLOR, ESQ., Collector of Bhagulpore,
To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honor to forward my tenth fortnightly narrative.

A.—STATE OF THE COUNTRY.

2. The Soopool sub-divisional officer reports:—"There is very little difference between the present supply of food-grains in the various bazars and what it was at the date of the last fortnightly narrative, but on the whole prices of all grain, except wheat and barley, have an upward tendency, and, contrary to expectation, the harvesting of the rubbee crops has had little or no effect on the general condition of the market." At Soopool itself rice is selling at 9 seers, and murwa at 12, and throughout the sub-division prices range, for rice from 9 to 11 seers, and for murwa from 10 to 15 seers.

3. The Muddehpoora officer writes:—"Supplies are more plentiful than they were at the the time of my last narrative, owing chiefly to the sales from the Muddehpoora Government golahs, and from the private stores of Baboo Hurbullub Narain Sing at Sonebursa. Barley was selling at the Sonebursa market at 20 seers the rupee (80 tolahs weight); at the Muddehpoora market, held on the 3rd, clean rice was selling at the rate of 5 pice a seer (64 tolahs weight), and coarse rice at 4½—or 10 seers 3 chittacks and 11 seers 7 chittacks, standard weight, against 8½ the previous week.

4. The Banka officer reports that the supply of food-grains is more abundant in consequence of the rubbee harvest, and murwa being available; the price of rice has remained unchanged, but that of wheat has fallen by 1 to 2½ seers, and that of gram has fallen by ½ to 1½ seers; new barley is selling at 22½ seers.

5. At the head-quarters there has been a very slight fall in the price of common rice, and a slight rise in the price of wheat.

6. The rubbee harvest is now almost over, and in pergunnah Chye and the head-quarters sub-division the crop may be safely put down as a very good one indeed, and above an average crop of ordinary years. In Banka sub-division what rubbee there was has also yielded above an average crop. In Muddehpoora the sub-divisional officer reports an 8-anna crop to the north of his sub-division, but taking the whole sub-division together, I am not wrong in putting it down as a 12-anna one. The Soopool officer admits a 12-anna or an average crop. The cheena cultivation, which is far beyond anything ever seen in this district, is not taken into account; it is still in all stages of growth.

7. The mowah is reported as excellent, but the mango crop, it is said, now will not be so good as was at first anticipated (in some parts of the north of the district).

8. The Soopool officer writes:—"No cases of misery and starvation* have come to light; a large proportion (on one occasion, when an account was taken at the centre here, it was found to be nearly 50 per cent.,) of our paupers are from the Tirhoot district, and most of them are most worthsome objects; as yet very few others than the very lowest classes, and those who in the best of years would have been to some extent dependent on charity, have been attracted to our relief centres, though I recognise the fact that nothing but the most careful village-to-village inquiries—and these are now in progress—can insure that many fit objects of relief are not holding out in their own houses.

9. The Muddehpoora officer writes:—"I have heard of no new cases of deaths from starvation; in fact, from inquiries made by me during my late tour to the west no starvation is likely."

10. There have been a few deaths at some of the relief contres in the Soopool sub-division which cannot in any way be put down to starvation, and are not to be wondered at when one sees the class of persons who come to them. Mr. Smith says:—"Five out of seven deaths were those of residents of the Tirhoot district, and in most of them I can certify that disease (in many cases of long standing) was the cause, though possibly the end has been accelerated by privation)." Many of the persons who died had been for a long time in the relief poor-house with a doctor in attendance and properly looked after and fed.

11. There is no actual distress in either the head-quarter nor Banka sub-division.

12. The following statement shows the difference in prices of some of the food-grains now and at the corresponding period of 1866:—

	Rice, 1st sort.		Rice, common.		Murwa.		Indian corn.		Wheat.	
	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.
Soopool	.....	9 10	.....	10 0	.....	.....	.....	.....	.....	12 8
Muddehpoora	.....	11 0	.....	13 0	.....	13 0	.....	.....	.....	10 0
Head quarters	11 6	10 3	12 0	11 6	.....	.....	15 2	15 2	11 6	14 8
Banka	.....	11 0	14 0	12 0	.....	.....	18 0	14 0	.....	15 0

* Two deaths have been just reported at the Mullarh tank (Court of Wards): a child o f13 months from inanition and one of the working coolies. The Deputy Collector, Baboo Ram Sunker Sen, says he received the body, and considers starvation to have been the cause; but Mr. Duff does not say so. The deceased's wife and three children were working at the tank as well, and were not new-comers.

13. The theft and grain robbery statement for March is annexed.

B.—Relief Works.

14. I annex a statement showing what has been done under this head during the fortnight, as also one showing the number of persons employed on the Durbhunga Court of Wards' estates in this district. Now that the rubbe harvest is over, an increase may be expected in the number of laborers on all works.

15. Some 157 maunds 23 seers of grain have been actually sold to laborers on the relief roads, and arrangements are being made to have rice for sale on every work, so that those at work may have the option of purchasing it in preference to other grains in the bazars.

16. As regards the works being carried on by private individuals or zemindars, it is next to impossible to procure any information as to the *total number or daily average of* persons employed. Baboo Hurbullub Narain Singh is the only honorable exception, and is the only man who shows he is taking a real interest in what he has undertaken, and the only one who voluntarily supplies any information; he has in hand one bandh, eight tanks, and what he calls miscellaneous work; he shows a total number of 7,121 men, women, and children employed. *There* are other works being undertaken, but Mr. Kirkwood remarks he is afraid none with any vigour; they are carried on by fits and starts; payments, whether in cash or in kind, very irregular; and in the case of Mr. John Christian, who has undertaken an extensive work in the shape of bandhs, he writes—"Mr. Christian has a bandh in progress near Bungaon, but the wage given appears very inadequate for all but the sturdiest laborers." The fact is, that none of the zemindars have attempted to raise their rates when we did on our works. Though it is almost impossible to get any statement approaching to accuracy from any private works, yet it is satisfactory to know that works of this kind are being carried on, and a certain number of persons, however small, being benefited thereby.

C.—Transport of Grain.

17. At the Bhagulpore railway station but little has been done during the fortnight in the way of imports or exports. The exports were only 6,949 maunds, of which 571 were *local*, and the rest 1,947 maunds wheat and 4,431 oats, to Howrah. The imports were about 6,000 maunds only, the chief being 1,362 maunds Indian-corn, 491 maunds wheat, 1,138 maunds gram, 891 maunds rice, and 975 maunds paddy; about 292 maunds of rice were imported at the Pointee station, 574 at *Colgong*, 28 at Ghogha, and 729 at Sultangunge, exclusive of Government rice. The exports were almost nothing.

18. There is but very little private importation going on, and nothing is heard now of exportation from the interior of the district; there is a small amount of private importations in the north from Monghyr.

D.—Storage of Government Grain.

19. The following shows the quantity of grain stored at each of the places of storage in the district as far as is known:—

Muddehpoorah Sub-Division.

Kutoorya ...	...	...	4,773	4,773
				7,023

20. The Phoolout route is closed, and the two contractors are carrying away the grain from Jugdis Chuck and Monghyr very rapidly.

21. Mr. Smith has been sending rice from the Soopool golahs as fast as he can, and all the outlying golahs will now soon have their full allotment.

22. It will be seen that about 1,20,000 have been stored during the fortnight, and over four lakhs stored in all, and it is possible that more has been actually stored in some places than I have as yet received intimation of; some grain has reached Pachgachia, but I have not heard how much.

E.—Advances to Private Parties.

No further loans were granted during the fortnight under Act XXVI of 1871.

The following zemindars received advances for helping their ryots:—

Name of zemindar.	Place of residence.	Amount. Rs.	A.	P.
Hur Narain Singh	... Beerwa	... 1,000	0	0
Mr. Bowers	... Bhuptiahi	... 15,000	0	0
Baboo Hirun Gurbh Narain Singh	Sookpore	... 3,000	0	0
„ Thakoor Man Singh	... Ditto	... 2,500	0	0
„ Ram Lall Sahoo	... Kushur	... 4,000	0	0
	Total	... 25,500	0	0
	Altogether to end of fortnight	... 62,900	0	0

Rs. 5,000 have since been sanctioned by the Commissioner for payment to Mr. Bowers.

Rs. 5,000 have been advanced to the municipality under Government orders No. 1242, dated 4th March 1874, and only Rs. 200 to a petty shop-keeper for purchase of grain from the nearest bazars.

F.—Charitable Relief.

23. All the circles in this district referred to in my previous narrative are now officered, and it is unnecessary for me to rewrite the details.

24. Under this head sales to the public may be properly dealt with. As mentioned in paragraph 36 of the last fortnightly narrative, arrangements were made to sell to the public at the rate of 12 seers for the rupee, in quantities not greater than one maund, nor less than one rupee's worth, from the Ekar and Bhowanipore golahs at the head-quarters of circles of the same names. But Mr. Kirkwood writes, owing to the delay in receipt of the letters (the moving about) the sales from Ekar and Bhowanipore could not commence before the 4th April. The results will be fully detailed in the next narrative.

25. I considered it advisable to open the Muddehpoora golah, as rice was only, so it was alleged, procurable in the bazars at 8½ to 9 seers the rupee. Orders were issued to this effect, and the result is thus reported by Mr. Kirkwood: "The effect of the sales at Muddehpoora has been as may have been anticipated,—the price current in the bazar has fallen from 9 to 11 seers per rupee, and 11 seers is now the retail rate" (see Mr. Martin's remarks, para. 3); "but it is only the very poor who buy at that rate, all who can club together to make up a rupee, buy at the golah. The sales at Muddehpoora during the five days ending 3rd April show 597 purchasers of 340 maunds 19 seers, at 12 seers the rupee. All the proceeds, except Rs. 595-15 realized on the 2nd and 3rd, have been paid into the treasury; that amount has not been paid in as the treasury was closed. As on the first day only 25 maunds were sold, we have 315 maunds, or an average of 79 per diem, for the other days."

26. The rule as laid down by me originally and approved by the Commissioner, was that not more than 100 maunds should be sold in any one day, and not more than one maund or less than one rupee's worth to be sold to any one person. I further added a restriction that no person purchasing one maund should purchase any more for 30 days; this restriction was objected to on the ground that a person with a large family could not live on a maund a month; though this may be the case, my own idea was that the purchaser of one maund of rice could easily supplement his purchase with murwah and other cheaper grains. Mr. Kirkwood, moreover, remarks:—"A rule that no man is to buy more than a maund a month is of course practically defeated every hour; such a rule, it may safely be asserted, is one impossible of enforcement."

27. There cannot be any doubt that great difficulty will be experienced in preventing the system of sales to the public being abused; but with the quantity of grain we shall have stored in this district, if the rice thus sold gets into the hands of those for the benefit of whom the sales are intended, there will not be many persons left to be gratuitously relieved.

28. The golahs of Ekar and Bhowanipore are now open, and I am now issuing orders for sales from Soopool.

29. In the Muddehpoora sub-division there are two circles only, and the undermentioned five relief centres are open, *viz.*, Muddehpoora, Byjnathpore, Ghylar, Gummeria, and Sonebursa. The average number of persons gratuitously relieved at each is given by Mr. Kirkwood thus:—

Muddehpoora	16
Byjnathpore	31
Ghylar	5
Gummeria	19
Sonebursa	15
	86

30. These relief centres will be removed altogether as soon as the house-to-house relief system is in full operation, and a very fair commencement has been made in this direction. Poor-houses will take their place, and are already in course of erection at Kamp and Bhowanipore, the head-quarters of the circles. These will have a doctor attached, and all the houseless, poor beggars, lepers, and other diseased and miserable objects will be collected and properly looked after; deaths may be expected to occur among them, but such deaths of such objects cannot be called deaths from starvation.

31. Mr. Kirkwood reports:—"At some of the golahs, notably those at Bhowanipore and Ekar, considerable numbers of light laborers have been employed on earth-work, rope-twisting, &c. At Ekar, too, about 800 people have been daily relieved by receipt of pice in exchange for baskets of grass as fodder for cattle; these were nearly all women and children. He adds—"No regular relief has as yet been issued to these people; the registers for house-to-house relief are in course of preparation. Urgent cases of distress here and there have been relieved by money gratuity."

32. In the Muddehpoora sub-division five ryots have been advanced Rs. 72 for the purchase of grain and seed, and four more applications had been received, not yet dealt with.

33. The following shows the daily average of persons gratuitously relieved at the centres in each of the circles of the Soopool sub-division:—

Soopool Circle.

Soopool, daily average	100
Sookhpore	43
Chandail	31
Burooari	57
Khoknaha	45
Total ...	276

Narredigur Circle.

Nawabakkur	31
Deeghia	20
Bhuptiahi	99
Dugmurah	64
Burhurra	35
Chandpeeper	33
Total ...	282

Ekar Circle.

Ekar	41
Patchgachia	112
Murwullah	10
Bungaon	234
Muheshi	134
Koond Birhat	46
Burgaon	26
Notha	131
Total ...	734

Simrahi Circle.

Dharrara	99
Battaneah	61
Bhulooa	62
Khubdah	13
Nathpore	20*
Total ...	255

34. Most of these, again, it is hoped, will be closed as soon as the house-to-house registers are complete and the poor-houses erected; these have been commenced at Soopool, Ekar, and Burgaon, and also at Nawabakkur and Simrahi. At Soopool 50 per cent. of those relieved are from Tirhoot; and Mr. Kirkwood found many of those relieved at Bungaon unfit recipients of entirely gratuitous relief; these were sent off to work.

35. Mr. Smith, the Soopool Sub-Divisional Officer, remarks: "The tract to the west *along* the Tiljooga is undoubtedly the worst off, and will doubtless be the only tract where, at all events for some time, general distress may be expected. It is, however, the object of special attention, and fortunately the *population* is very thin. The careful diaries of Mr. Fanshawe, the Soopool circle officer, show that he is working exceedingly well, always on the move, and constantly visiting village after village, and I think with care and a little system, we have not much to fear as regards this circle.

36. About 157 maunds 23 seers of grain have been sold on the Government relief works; the laborers, as a rule, supplied themselves from the markets, but in the case of the Durbhunga Court of Wards' tanks, a system had been commenced of payment of grain; this was considered objectionable, especially, as Mr. Smith remarks, as it amounted to little short of gratuitous distribution to all applicants without any attempt at getting any return for it; and payment in cash has been ordered, the laborers being at liberty to purchase Government rice, which is ready for them.

37. Spinning and weaving have not yet been commenced, but cotton has already reached Soopool and Muddehpoora ample for a fair start in this direction.

* Approximate return not received.

Number of committees and sub-committees as yet appointed.	Number of special relief sub-divisions opened and officered.	Number of regular relief circles opened and manned by special officers.	Number of relief circles opened and managed by planters, zemindars, and other residents.	Number of work-houses and centres for the distribution of food and gratuitous relief.	Number of men, women, and children in receipt of gratuitous relief in any shape through the charitable relief organization daily.
District committee, three sub-divisional committees, and six circle sub-committees, have all been appointed.	1	All are now manned: in all six.	Part of the Ekar circle is looked after by Mr. J. Christian.	Four in Muddehpoora, 26 in Soopool.	1,633

G. Financial Results of the Fortnight.

38. Total expenditure from the district and sub-divisional treasury as shown in last narrative, Rs. 2,87,845-7-3, minus Rs. 5,000 refunded by Mr. Hensley, remaining Rs. 2,82,845-7-3.

BHAGULPORE,
The 8th April 1874.

V. T. TAYLOR,
Collector.

No. 1451F., dated Purneah, the 7th April 1874.

From—W. KEMBLE, ESQ., Magistrate and Collector, Purneah,
To—The Secretary to the Government of Bengal, Calcutta.

I have the honor to submit herewith my fortnightly narrative for the period ending Suturday, the 4th April 1874.

Narrative of Scarcity and Relief for the fortnight ending the 4th April 1874.

A.

During the fortnight I have visited Arrareah; Dengra, Kusba Amour, Bulrampore, Barsoe, and Kudba.

At Barsoe, where from reports I had been led to believe that there was a serious deficiency of grain in the market, I found a good supply, several boats laden with rice, kullai, &c., had come up the river, and the quantity not only of grain but also of sugar, fish, &c., was abundant. In this neighbourhood I also found that the villagers had generally a good supply of seed-grain.

Prices at Barsoe hât—

Rice brought from Hyatpore and other places in the Maldah district ... ... 10 to 11 seers, 85 sicca weight.
Potatoes ... ... 20 „
Kullai ... ... 16 „
Indian-corn ... ... 11 „

Mustard was selling at Rs. 3-2 a maund, and was being taken away in the boats which had brought up the rice; dried fish was being sold for export to Rungpore and Dinagepore at Rs. 16 a bundle; and sugar, brought from those districts, was sold at Rs. 3-2 a maund. Private trade being so active here, I did not avail myself of Sir Richard Temple's permission to sell Government grain to the public. Matters are looking brighter near Kudba owing to private trade, the good rubbee in the south, and the relief afforded by Government works.

At Bulrampore the people have a larger stock of grain than in any other part of the district I have visited as distressed; they have no rubbee, and consequently will feel the pressure more later on. Mr. Meeklejohn and Captain James are organising relief measures here.

At Dengra and Kusba Amour there is less private trade than in other parts, but the scarcity is beginning to encourage private enterprise here as elsewhere. A cloth merchant of Kissengunge has opened a large store on the banks of the river, and keeps his supply up by small boats. In this neighbourhood I last fortnight authorised the sale of Government rice. Mr. Gouldsbury sold 10 maunds at Rata hât, and Mr. Wyer 16 maunds at Mathour, and 107 maunds 11½ seers at Ootri, 15 seers per Burma and 12 seers Bengal. The consequence of this was that on the next hât day, at Rata and Mathour, not a single private trader appeared. I consequently reduced the rates to 12 seers, and forbid the sale of Government grain at the public hâts. This has restored confidence, and the baparees are now buying as fast as ever from the Purneah bazar from the merchants who import it from Caragola.

I have directed the relief officers at Dengra and Kusba Amour to sell at 12 seers and 10 seers at their relief centres on fixed days; and after inquiry, to village communities, or group of villages, not more than 100 maunds is sold at each circle until further orders. In villages, when the people are badly off, grain is advanced on credit, the village community

giving a joint bond for the repayment of the advance. This system works capitally, it keeps the people in food, it allows them to spend their money on seed, which is procurable in nearly every hât, and is being imported largely from the north, and it enables us to distribute our grain at no cost at a time when carriage is available. Mr. Wyer at sudder has worked this system, and found that it succeeds better than any other, the people like it, and it is far better than making them advances in money, except in places (which are, in my opinion, very few) where there is no seed-grain to be had.

In most villages the well-to-do ryots have seed-grain which they are ready to advance to their poorer neighbours if they see any prospect of being repaid. An advance of Government grain for food on joint security, or its sale in some cases, prevents the seed-grain from being eaten, keeps the poorer people in their homes, and enables them to cultivate their fields. The brisk trade in seed-grain is a good sign. At head-quarters there has been a rise in the prices, but this is owing almost entirely to a large quantity of coarse rice brought up by a few traders being nearly all consumed. There has been no great general rise in prices, as the price currents sent up would lead one to suppose. Private traders as well as Government have suffered from the inability of the railway company to supply carriage. Mr. Rattray from Arrareah reports prices much easier. Rice was selling in the north of his sub-division at 9⅔, and 10 seers at Turkeli, and wheat at 12¼. The rubbee crop up here has been first-rate.

Mr. Craven reports from North Kishengunge that if Government Burma grain were offered at 12 seers to the people, they would not take it, as rice was selling there at 12 and 13 seers the rupee, and throughout the sub-division there had been a general fall in prices from 1½ to 2 seers the rupee.

Here, as elsewhere, rain is now wanted for the rice sowings, and for the kauni and cheena. Mr. Craven however reports that the lower classes are beginning to show signs of distress, and that beggars are increasing. This is the case everywhere, but the relief afforded by our works, and by the charitable committee, will, I hope, prevent any severe distress being felt. During the fortnight three deaths have occurred at our relief-houses, two at Barsoe and one at Kusba. I inquired into those at Barsoe myself, and found that both the deceased had been sufferers for some time from disease, and that their deaths could not be attributed to want; they had both for some weeks been inmates of the poor-house. The case at Kusba Amour was of the same description.

We have now native doctors at all our circles, except Bahadurgunge, who will be of great use in treating these cases of diseases, which are, in the present time of scarcity, brought so prominently to our notice. Mr. Craven reports that he notices that much charitable relief is given in every village by well-to-do Mahomedans, and this is, I believe, the case everywhere, and amongst Hindoos also.

The most unfavorable symptom I have to report this fortnight is the frequency of fires, which both Messrs. Rattray and Craven assert are the work of incendiaries; from enquiries which I had made myself I think they are right. It seems that these fires generally occur in some village where there are a number of fairly-stocked golahs. In Belgachi, Saifgunge, Kusba, and Raneegunge, and in many other places, there have lately been large fires.

Zemindars are at last getting alive to the necessity of helping their ryots. Aga Saifulla Khan is making advances near Kusba Amour, where they are wanted, and I have advanced to a good many putneedars in Kishengunge.

Of the crops at present much cannot be said as the rubbee is all cut.

The number of grain-thefts amounts to 26 during the fortnight. The value of the property stolen is Rs. 167-4. This is not very alarming.

B.

The progress return of Mr. Cordner is annexed. I have during the past fortnight been with him over the greater part of his roads, making arrangements to enforce some task from the large numbers of all able-bodied men who flock now to our works. I have no doubt that this will soon be managed; it is everywhere found that the village people soon get accustomed to use the kodali and prefer contract work. A few beldars, who under orders should have been drafted off to the north road, have been allowed to remain on each work, as they distribute themselves among the villagers, serve as duffadars, and teach them to measure.

Under orders from the Commissioner, for women, children, and others who cannot do a fair day's work, employment will be provided by the relief officer on petty works.

The number of persons employed on these last is increasing. The returns do not show all the persons relieved by road-work, as considerable sums of money have been given out for village roads which have been made by villagers, who cannot be got to send in return of laborers. I have sent up this week a map showing all the works opened or proposed, except petty village roads, including sites selected for tanks, in case there should be a greater demand for employment than our roads can satisfy. This, however, is not likely to be the case, while I trust that we shall be able to finish the work laid out. Huts have been built at each work but are not patronised by the workmen.

Mr. Rattray pays his coolies in grain, at 15 seers the rupee for Burma rice, to the amount of their daily earnings. The average number of laborers engaged on the Department Public Works works by last return is 14,669, and on the relief officers' petty works 2,587; this gives a total of 17,250. Grain is now sold on all the works at 12 seers and 15 seers, which is above the rate at which it is sold to the villagers.

It is not necessary to copy here the returns which have already gone up; the above figures differ from them, and slightly, as the latter did not include 64 persons employed on roads and 140 on tanks at Assaragurh by Mr. Craven, and 9 employed by Mr. McQueen. The last-named gentleman's figures, which include no women or children, show that in Dhurumpore the demand for work is far less than in other parts of Purneah.

PURNEAH DISTRICT.

Progress Report of Famine Relief Work for the week ending 28th March 1874.

Name of roads.	Progress in marking out relief works.	Progress in opening work.	No. of laborers thereon.	Supply of food thereat.	Condition of people and general feature of the country.	Mode of payment.	Rate of wages.	Arrangements for tools.	Disbursement during the week.
									Rs. A. P.
No. 1, Purneah to Kowsiya road.	The whole line from Purneah to Kooligama has been laid out.	Two parties, one at Purneah and another at Baikuntha, have been started.	1,473	Procurable in the local markets.	**No active distress** has as yet appeared in this part of the district. The people were somewhat backward in coming to work, but now they are beginning to come in. Women and children are in excess of men. Almost all the laborers work by contract or task-work.	The mode of paying laborers in the whole of this district is now as follows:— Laborers working by daily wages receive their pay every day. Those working by contract receive the full value of work done by them as each tank or side-cutting is completed. Where a tank is so large that it cannot be completed in a couple of days, the gang at work on it gets an advance for the amount of work done whenever it is required, and the balance is handed over as soon as the work is finished; the laborers are perfectly satisfied with this arrangement.	The contract rates are as follows:— For class No. 1, ordinary earth-work in banks up to 5 feet in height, at 3 annas per 100 c. ft. Ditto, in banks above 5 feet, 3¾ annas; earth-work on hard ground 4 annas per 100 c. ft. up to 5 feet, 4 annas per 100 c. ft. Ditto, in banks above 5 feet, 4½ annas. In exceptionally hard ground, rates up to 6 annas may be granted at the discretion of Executive Engineer. The tank-work rates for Class II, *Division A*, are as follows:— Men ... 2 annas. Women ... 1½ ,, Children ... 1 ,, In order to earn the above rates each man must excavate 50 c. ft. in ordinary ground for banks up to 5 feet, and 45 c. ft. in banks above that height. In hard soil a man must do 40 c. ft. on banks up to 5 feet, and 35 c. ft. in banks above that height, except in the case of beldars. Women who work with their husbands at contract rates in Class I, it is very difficult to lay down a task, as in most cases they refuse to carry earth. We therefore but few women in Class IIA. In laying down each man's task, I have been guided by the fact that a non-professional laborer, after he has been at work for some time, can earn from 2 annas to 3 annas per day at our present contract rates by working really hard.	Every effort has been made to induce the laborers to bring their own tools, but it is to be regretted that this has not been attended with any very great success, and especially since we began to issue large quantities of Government tools to each of the works. When the works were first started, but very few Government tools were issued, and most of the laborers who came to our works brought their own. It was feared, however that if villagers were beginning to think that it was no use applying for work unless they brought kodals, so that after a consultation with the Magistrate, tools were issued to each work, and now, as a rule, the laborers work with Government tools. These remarks only apply to the unprofessional laborers, as the others, as a rule, have their own tools, and bring them to the works.	144 0 3 2,916 0 0 461 9 9 288 4 0
No. 2, Nathpore to Atwaree.	The whole road, 90 miles in length, has been laid out, 65 miles of it having been levelled and surveyed.	6 parties at work...	19,607	Government stores are opened for sale.	**People are seeking work** on this road in increasing numbers. Very few cases of severe distress have appeared. The huts built as they prefer to quarter themselves in the adjacent villages. As the country is almost a dead flat there is a very scanty supply of spring water, and there are but few people employed on contract laborers.				
No. 3, Kissengunge to Titalya.	40 miles at old Ganges and Darjeeling road laid out, and estimate submitted.	2 parties at work ..	3,465	Government stores are opened for sale; average price in markets is about 10 seers.	**The people appear** to be in distress about here, and are now eagerly asking for work. Rubbee crops are very scanty. Nearly all the laborers are employed on contract and task-work; as a rule they prefer the former.				
No. 4, Kissengunge to Nalkmard.	Whole line laid out. Estimate submitted for sanction.	2 parties at work ...	1,826	Government stores have been opened; the average price in the market is about 10 seers.	**The number of laborers** along this road is increasing, and work is now eagerly demanded. Rubbee crops are very scanty all along this road. Nearly all the laborers are employed on contract or task-work. The condition of the laborers is very good.				

PURNEAH DISTRICT—*continued.*

Name of roads.	Progress in marking out relief works.	Progress in opening works.	No. of laborers thereon.	Supply of food thereat.	Condition of people and general feature of the country.	Mode of payment.	Rate of wages.	Arrangements for tools.	Disbursement during the week.
									Rs. A. P.
No. 5, Dengrah Ghat to Turkeli.	All marked out and levelled.	4 parties at work ...	28,826	Government stores have been opened.	The laborers, as a rule, are in a fair condition when they come to our works; there are, however, cases in which some rather emaciated persons come to us, but they soon pick up when they get regular food. Up to the present about half the laborers only are doing contract and task-work, but arrangements are now made to task every able-bodied man. The women and small children do little or nothing in the way of actual work. The former refuse to work near the men, or to carry earth, so that *it is difficult to know how to employ them.* Some more suitable employment might, I think, be found for them. The same people do not come every day to the work, as they divide their time between the road and their fields which is very satisfactory, as it allows them to keep up their cultivation. There are not now 20 beldars employed on this road; they have all been sent up to the north road. None of the people remain at night in the huts provided for them, as they prefer to return home, even to a distance of 5 miles.	.....	It may be observed that the rate per 100 c. ft. for task-work is in excess of that for contract, but then it must be remembered that a man can never earn more *than* 2 as. as long he elects to do task-work, and he can at any time join the contract gangs where, by real hard work, he may get up to 3 annas a day. All able-bodied men must now join either the contract, or task-work gangs, and subsistence allowance will only be granted to such as are really unable to do earth-work; they will be chiefly employed breaking clods, dressing slope and surface of roads. The pay for this class, *viz.*, Class IIB, is— Men ... As. 1 6 Women ... „ 1 0 Children ... „ 0 6	.....	2,353 10 3
No. 6, Dingraghat to Bhopia.	All marked out and levelled.	3 parties at work ...	4,441	Government stores have been opened for sale of rice.	The condition of people on this road is fair; there are but very isolated cases of emaciation. The numbers on the work are rapidly increasing. About half the laborers are employed on contract and task-work, but arrangements have now been made to put every able-bodied man into Class I or Class IIA.	.....	Clods, dressing slope and surface of *roads.* The pay for this class, *viz.*, Class IIB, is— Men ... As. 1 6 Women ... „ 1 0 Children ... „ 0 6	.....	519 0 3
No. 7, Raigunge to Bolrampore.	All marked out, levelled, and surveyed.	4 parties working ...	16,154	Government stores have been opened; the average price of rice in the markets *is about* 10 seers.	Although many of the laborers, when they first join the work, look rather out of condition, yet, after working and getting regular wages, they rapidly improve. Work is eagerly sought for, and people are rapidly flocking to the works. As most of the laborers have never worked before, they require a great deal of training before they can be made to adopt task-work, with the exception of about 50 beldars scattered about the works. These beldars have proved very useful in showing the villagers how much more beneficial it is for them to go in for contract in place of day labor; crop very scanty.	.....	.....	.....	1,991 9 3
No. 8, Maldah and Horinkooree road.	Line laid out and estimate submitted for sanction.	Work can be commenced as soon as it is considered advisable to do so.							
No. 9, Kudba to Barsoe.	Ditto ditto ...	3 parties working...	7,474	Government stores have been opened.	On the western portion of this road distress is not so evident as at the eastern portion, towards Barsoe, where numbers are now flocking to the work. As the work has only lately been started, *we have not got the* contract and task-work system into full swing, but arrangements are now made to make them the rule and not the exception on this road. A good deal of grain has been sown along the road; other rubbee crops very scanty.	.....	.....	.....	721 12 6
No. 10, Purneah and Nathpore road.	Repairing old embankment.	1 party working ...	451	Procurable in the local markets; common rice from 12 to 13 seers for the rupee.	Condition of laborers satisfactory.	.....	.....	.....	46 4 0
No. 12, ditto and Mattiaree road.	Ditto ditto ...	2 parties ditto ...	565	Ditto ditto ...	Laborers to all appearance strong and healthy; no distress visible. Rubbee crop being now cut. On the 27th about half of the large and populous village of Kusba was burnt down.	.....	.....	.....	50 0 0
No. 16, road from Purneah to Kudha	Embanking existing road.	2 ditto ...	3,866	Government stores have been opened.	The number of laborers on this road is less than that reported last week, as nearly all the beldars have been drafted off the road No. 1. About half the people on this road have been engaged on daily pay, and the rest on contract and task-work. Arrangements are now made to put every able-bodied man on task or contract work. Laborers do not remain in the huts provided for them. There is a good deal of ploughing going on for the spring sowings.	.....	.....	.....	273 9 6
No. 23, road from Kissengunge to Bahadoorgunge.	Ditto ditto ...	1 party ditto ...	3,518	Government stores have been opened, Market price of rice about 9 seers.	The people about here are now more eager for work, and but very few are employed, except on contract or task-work, the former being the more popular with the laborers. Crops poor and scanty.	.....	.....	.....	289 5 3
No. 35, road Saifgunge to Mohenderpore.	Repairs and embanking district road.	1 ditto ...	639	Government stores have been opened.	Condition of the laborers is good.	.....	.....	.....	66 3 9
No. 38, Chownagra to Bulrampore.	Line marked out; estimate submitted for sanction.	2 parties ditto ...	7,554	Ditto ditto ...	The people are now flocking to this work. More than half the people are employed on contract and task-work.	.....	.....	.....	640 14 6
Bahadoorgunge to Torubarree.	Line marked	1 party ditto ...	2,821	Ditto ditto ...	Distress is commencing to be felt along this road, and the laborers are increasing on the work. Nearly every laborer is working by contract or task-work. Few signs of rubbee crops.	.....	.....	.....	299 9 1
		Total number of people employed during the week.	102,685	.....	.....	.....	.....	.....	11,051 12 4

R. A. CORDNER,
Executive Engineer, Purneah District.

C.

I have not received any return from Caragola this week to show me the quantity of private grain imported. From reports in the bazar I fear it has fallen off a little, owing doubtless to the same cause which brought about the stoppage in the importation of Government grain last fortnight.

The means of transport have not failed as in the district yet, nor is it likely that any difficulty on this head will arise. Private trade continues as active in the south-east of the district as ever. The Morung authorities have either found that they have some spare grain across the border, or they are not so vigilant to prevent smuggling as they were, as Mr. Craven reports that rice is being brought in for sale; he also reports large quantities brought from Julpigoree.

D.

Mr. Mulock's note on the golah and carting arrangements is annexed.

All the golahs are being or have been leeped, and special arrangements made to protect them from fire at Saifgunge. Last week, when half the bazar was burnt down all round them, the golahs were preserved. I hope soon to have arrangements complete for distributing the grain to the villages and smaller golahs.

During this fortnight 4,727 carts left Caragola carrying 27,267 bags, or 54,534 maunds of grain. This is an average of 339 carts per day, a great falling off from our former averages. This is caused by the causes mentioned in the last narrative, namely, the sudden running short of our stores of grain at Caragola, and the consequent impression among the carters that no more grain was coming to the district. Our liberal rates, however, are again drawing them back, and Mr. Munro writes that he expects to have carted away five lakhs of maunds from Caragola before Thursday next.

All the golahs for the reception of Government grain are being fast completed, and the sub-divisional relief officers are looking after their construction; sites have been chosen at Kooti, Rudail, and Azimgunge; the three new golahs decided on. The new golahs at Palankof and Sirsee are completed.

Preparations are being made for the general stock-taking on the 15th current. I have distributed personally the forms to eight goladars, and thoroughly explained the principle of the accounts and forms; and Mr. Craven, who was in the station on Saturday, took away the forms for eight more to explain to his chowkeedars. It will be very difficult to have European officers present at all the golahs, but at Dingra, Turkeli, Mutiari, Kishengunge, Bahadurgunge, Kusba Amour, Bulrampore, Barsoe, Kudba, and Purneah, I expect to be able to have European officers to check the stock-taking. In any golah where the amount at stock-taking is stated to be much less than our register shows, it will be necessary to have a European officer deputed to recount the bags. The coolies who take out the grain will be paid in grain, which will be more acceptable than money, and will obviate the necessity of sending large sums of money to the goladars.

I have received 38 bales of 30-seer gunny bags from the Allipore Jail, which I have distributed, with 4 packing needles and 2 maunds of twine, to all the principal golahs.

E.

The advances to private parties have this fornight been small, amounting only to Rs. 3,000 to two persons, Gopaul Sing and Udhan Mull, for purchase of grain, and Rs. 3,000 to Srikant Jha and Aga Saifulla Khan to help their ryots.

The last-named gentleman has, however, asked for Rs. 3,000 more, which I have recommended shall be given.

Advances have been made by relief officers to ryots and others, but I much prefer to help the poorer classes of people by advancing food-grain to them, and thus prevent them from eating their seed, which they would have to do in many cases if not helped.

I hope that the example set by Aga Saifulla Khan would have been more generally followed, and trust yet that it will be.

Since the end of the fortnight under review further advances have been made.

F.

Charitable relief has been generally and freely given throughout the district. The report of Mr. Wyer, the relief officer, submitted a few days ago, was very incomplete, as the sub-divisional officers had not fully understood that their reports were to go to him.

I can from personal inquiry state that the relief officers are generally actively engaged in their work, and I am sure that the existence of relief centres and relief works is known in every corner of the district, and that if any person in want does not get relief it is his own fault. Mr. Wyer, at head-quarters, has visited most of the villages in the distressed part of the sub-division; he has advanced money for seed to those ryots whose landlords would not help them, and has, under my orders, sold and advanced grain to villagers where the need of such help was apparent; he has not given any relief by cooked food.

Mr. Thornton and Mr. Gouldsbury, at Dingra and Kusba Amour, have been very active in giving out twine and cotton and jute, and in arranging circles of villages for the sale and distribution of grain.

Mr. Perry, at Kusba, has been more active in opening out road and tank work; he finds but few applicants for relief at poor-houses. He and the Dengra and Kusba Amour relief officers work the ticket system very successfully, and check the lists. The active and intelligent way in which Lieutenant Thornton has taken to this work, which is quite new to him, is very creditable.

Mr. Craven, at Kishengunge, and Mr. Bertleson, at Bahadurgunge, are working on the ticket system, and are opening a number of useful works both in roads and tanks. Some bunds for irrigation purposes have been taken in hand by Mr. Bertleson. Both these officers have done well in looking after the larger Department Public Works works in their circles; they have been directed to open more petty relief works.

Mr. Rattray, at Arrareah, has started a very large number of petty roads, and has worked the ticket system fairly; but I fear that he has been too indiscriminate in his charity.

Instead of advancing cotton and twine to indigent persons for spinning, he has advanced a large sum in cash for the purpose, he explains, of enabling such persons to buy the raw materials. The plan I cannot approve and have stopped.

The average number of persons, according to the last return, who are in receipt of charitable relief, is 2,178. This is far below the real number.

The return does not include persons in receipt of relief by spinning, and has not been received from some centres at all. Regular rules and tables for returns about which up till lately there has been some misunderstanding have been sent out now. The rules are based on those circulated in Tirhoot.

G.—Financial Results of the Fortnight.

The expenditure reported last fortnight amounted to Rs. 2,79,355-12-6+Rs. 1,46,240-2-3=Rs. 4,25,595-14-9.

W. O. LEWIS,
Court Inspector.

PURNEAH,
The 8th April 1874.

Dated Camp Sibpore, the 8th April 1874.

From—A. BOSWELL, ESQ., Offg. Deputy Commissioner of Sonthal Pergunnahs,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit a narrative for the fortnight ending 5th April 1874.

2. For the last fortnight I have been travelling fast, and never staying more than three days in any place. I have left my office all behind me, and have found it necessary to sacrifice report-writing considerably.

A.

3. I.—Supplies are not said to have failed anywhere. Food is reported plenty in the Deoghur sub-division, except at head-quarters, where the demand is very great; it is surprising that a resort of beggars and devotees like Baidzanath has not furnished a good deal of distress before this.

4. In Godda the laborers are chiefly supplied from the Government golah at Doi.

5. It is impossible to say whether the local markets would have stood the strain or not unhelped.

6. Anyhow there is food for the people, and they are able to get it.

7. I have not heard from Rajmehal.

8. There is a considerable quantity of rice stored in Sultanabad; but the mahajuns are unwilling to sell, wishing to force up prices. It is likely enough we shall have to import a little to prevent prices rising too high.

Extract from Price Current A—II, 9th paragraph.

Market.			Wheat.	Rice, best.	Rice, common.	Bajra.	Maize.	Gram.
Doomka	...	...	12	10	11	16	16	12½
Pakawar	...	...	17½	13	14	19½	17¾	20
Deoghur	...	...	12	12	13	...	13	15
Jamtara	...	...	...	12	13	...	...	13
Katikund	...	...	...	11	12	18	18	...
Barhait	...	...	...	11	13	...	16	...
Sahibgunge	...	...	16	12	13	18	18	16

10. The cheapest rice is 14¼ seers at Patrol. The cheapest food is 80 seers of barley at Pakauri. Prices are generally steady, with slight local fluctuation.

11. III.—An agent of the Rajah of Sultanabad has 6,000 maunds of rice stored at Pakauri.

The Rajah has a good deal of rice stored at Maheshpore. Six mahajuns in the neighbourhood are believed to be holding up considerable stores for famine prices.

12. IV.—On Friday last there was rain with hail from Maheshpore to about 6 miles west. I do not know how far north or south it spread.

13. The hail damaged the mango crop a good deal. The rain has helped ploughing much. I have not received any registered rainfall.

14. The mohwa flowers are the chief crop coming in now. I am sorry that the last weekly weather and crop return but one gave a misleading account. It was made up at Doomka, where some of the trees were late in flowering.

15. I have myself seen mohwa trees in full flower from Benajarhia to Doomka and Maheshpore, and I have heard of the crop from Deoghur and the Hendwa pergunnah. It is quite first-rate nearly everywhere, and is bad nowhere. The best is so good that the whole crop may be put down as excellent. I have breakfasted on boiled mohwa flowers, and I can say that they are wholesome and valuable food.

16. The mango crop is not so good, and the kend trees are promising badly.

17. I find that, beside the flower, the mohwa fruit yields an edible seed, with oil.

18. There is no ordinary rubbee in any part of the south of the district. I have heard of about 200 beeghas of good grain in Sultanabad, and literally nothing else.

19. The Godda report gives no details of the rubbee crop.

20. In Deoghur sugarcane is doing well.

21. People look well everywhere. I have seen one half-starved boy of about 7. His parents were beggars, who died about two months ago. He is a dome by caste, and has no rela-

tions. He came to show himself to me. He was very thin. His ribs could be counted, and the big lean joints showed out the miserable leg and arm bones. He had been living on scraps from door to door since his parents died. I gave him in charge to a comfortable Brahman. This I should think must count as a case of actual distress.

22. One man has died, and another man is said to be dying near Maheshpore from combined disease and poverty.

23. The wonder is that we have not heard of dozens of such cases, as they are constantly occurring all over the world.

24. I was for three days at Benagurhia with Mr. Bœrresen, the missionary, last week.

25. The complaint is, that the people are nearly at the end of their stores, and that there is danger of great distress once the rains begin.

26. If people are going to starve six weeks hence, their being well and hearty now won't alter the fact. But it is impossible to trust the accounts the people give of their own condition. This is one of the greatest difficulties we have to fight against. The first answer to any inquiry is always, "our crops all died; we have nothing; the Sarkar is our father and mother; if the Sarkar helps us we may escape." This is the refrain to nearly every song all over the district. When pressed to give details the people let out that their case is by no means so bad. They admit that they had very uneven crops; that most villages had a share of good and bad luck.

27. In the hill country west of Benagurhia there was fair maize, and a little good rice. The population is thin, and mowah trees are plenty. In spite of some complaints I consider this region safe.

28. The people of the plains or rolling country of Dari Maleshwar are much worse off. The villages are thicker and larger than in the hills; the people trusted more to rice and lost more.

29. They are coming in great numbers to works I opened in concert with Mr. Bœrresen last week. But they are in excellent condition so far. The men are strong and the girls tall and good-looking. I did not see a thin, weak frame, or a woe-begone face among a thousand laborers.

The cattle also are in good case.

30. Still, it would be very wrong to let such appearances mislead. In about six weeks the first rains may be looked for; the people must plough their land, and they must be able to live while they have to be engaged on work which does not bring them in their food for the day.

31. As has been long foreseen by every one, the time of greatest difficulty will be from June to September, when men must be ploughing their fields, or there will be no crop next year; when transport will be most difficult, and when the last grain of the old harvest will be eaten, possibly before the first of the new harvest is eatable. Sontals would be merry, and eat full meals up to their last handful of maize.

32. Therefore about Benagurhia and Dari Maleshwar generally, I say the people are still in very good condition. Scarcity up to this has not affected them, but I believe the accounts of their short supplies to be true. They will not get so much mowah as the people in the hills. They are much more numerous in an equal area.

33. Supplies in the local markets are believed to be nearly sufficient. I have, with the help of the missionaries, opened relief works which I mean to extend.

34. A gentleman who lives in the neighbourhood, and who trades in country produce, has engaged with me to buy any required quantity of rice from the Government, and sell it to the laborers at the prescribed rates.

35. I think by working one day on a road or a tank, and another day on his own field, the poor cultivator will be able to pull through.

36. The poor laborers will also pull through, because, though their resources are less than the cultivators, they can give all their time to immediately paying work.

37. I should not like to try to give a more minutely accurate description than this of the condition of the people of Dari Maleshwar, and I think this will do to work on.

38. I am just now in the middle of Sultanabad, about which I had heard alarming reports. Mr. Wood has been here for some time, and I have had the very great advantage of meeting him.

39. I saw a good deal of this country in November. I reported then that the rice crop was most uneven, but that I thought it averaged 8 annas. I am not able now to say whether the estimate was right or wrong. I can only say that the people's own accounts of their condition are ridiculously untrustworthy. I give an instance. In November I was going through a village. I was talking to my mahawal; we were admiring some magnificent rice that was growing along a deep khal full of water. The khal ran winding almost like a tangled rope, and for a considerable distance on each side for a long stretch of the khal this very fine rice was growing. The uplands had not been ploughed. The village was not large, and a

number of the villagers stood looking at my elephant. I said to them, "the whole country is going to ruin. What about you?" They answered laughing, "we are all right, we have got our's safe." A week ago I passed through the same village, and I was told that not a grain of rice had been saved. The water in the khal is not dry yet. Cows drink it and buffaloes lie in it.

40. The tenants of Sultanabad are not on good terms with their landlord. They are constantly asking me what the Sarkar is going to do, and they are inclined to convene meetings to make proposals, and hear news.

41. The Rajah of Maheshpore has promised to spend Rs. 5,000 borrowed, and Rs. 2,000 of his own money on tanks and bands. Work has already been begun on a very good line of road and on several tanks.

42. I consider that relief works are necessary in Sultanabad, and, as I have already said, we shall probably have to import some rice.

43. In Maheshpore laborers are refusing task-work. Daily labor attracts many hundreds of persons, who like pay for lazy work. Number rolls of day-laborers are apt to mislead.

44. Crimes does not appear to be increasing.

B.

45. Yesterday I received the district progress report, which I have to submit in original as I am alone in the interior, without a clerk.

46. In addition to the works reported in this sheet, I opened work last week by the kind help of Mr. Bœrresen on a tank and a band near Benagurhia. I gave Mr. Bœrresen Rs. 1,000 to carry on the work. In four days the number of laborers increased from 200 to 1,100, almost all Sontals.

47. Mr. Meara has opened work on the Bario and Pratapore road, but finds that laborers will not come to it. They prefer the Barahat road. This requires investigation.

48. As I have said, the people of Sultanabad are working on a road and on tanks selected by Mr. Wood. These works will now come on the regular list.

C.

49. I have nothing of importance to report.

D.

50. I have nothing to report. I have not received details from Doi, our only working golah. I have not received sufficient information from Rajmehal to make any report.

E.

51. As I have said, Rajah Gopal Chundra Singh Bahadoor, of Maheshpore, is borrowing Rs. 5,000 for tanks, of which he is going to begin twenty immediately.

No high caste coolies, such as Brahmins, Kayasts, &c., have yet appeared. The laborers generally belong to lower classes, such as Sonthals, Dhangers, Baoorys, Vooyas, Kaots, &c.

DENONATH MOOKERJEE, *Accountant,*
for Offg. Executive Engineer on tour.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th April 1874.

READ—

The fortnightly narratives for the Rajshahye Division, for the period ending 4th April.

Moorshedabad.—The effect of the reaping of the rubbee crop is perceptible in the markets of this district, for though rice is a little dearer, averaging 12¼ seers per rupee, wheat and gram are at 17 and 18 seers, and other grains cheaper.

2. As before reported, it is only the begging and indigent non-laboring classes that are suffering from actual want, and to whom it has been found necessary to give gratuitous relief. For the laboring classes, work is provided, and is readily taken where the pressure is at all severe. Difficulty is said to be felt in undertaking tank-work for want of a supervising agency. It is thought that the headmen of villages cannot be trusted with the disbursement of money on this account without a tolerably active supervision. The Lieutenant-Governor thinks that this difficulty is exaggerated. It is hoped that the arrangements recently made, under the Commissioner's orders, for dividing the district into circles, with an officer in charge of each, will make it easy to introduce this form of relief more freely where required. The Lieutenant-Governor was prepared, from his own knowledge, to find the necessity of such circles in the western half; but he hopes that in any case a full circle organisation will not be found necessary in the eastern half; that is on the east of the Bhagirattee river. If however the Collector thinks that it does, then the Lieutenant-Governor will be glad to receive a special report.

3. The average number of persons on relief works daily, is 3,464. The daily number receiving charitable relief is 379. It is stated that the manufacture of jute-cordage has proved a useful form of light-labor, and more popular than thread-making. The relief committees of other districts may, perhaps, try this. Government grain when sold to an independent relief committee need not continue to be shown as Government grain.

4. *Rajshahye.*—Though prices are easier here, owing to private importations, than they have been for some time, the failure of the silk crop which is now reported, will, it is to be feared, cause much distress than would otherwise have been avoided. The district has, however, been divided into circles under the Commissioner's orders, and a careful watch must be kept upon the condition of the poorer classes. The average number of laborers on relief works had risen to 6,587 in the first week of the fortnight. The return for the last week is not submitted. 185 persons daily receive charitable relief at poor-houses, but these returns are also incomplete.

5. *Maldah.*—The Collector notes a marked decrease in the supply of rice and paddy in the local markets. Prices are nowhere less than 11 seers per rupee, and go as high as 9 seers. Wheat and other rubbee grains are however coming in, and helping to relieve this extreme pressure. The rubbee harvest has fortunately been above the average. Seed for the bhadoi dhan sowings has been procurable, though at very high rates, and a much greater area than usual has been laid down.

6. Mr. Alexander thinks the condition of the people getting worse by degrees, and now anticipates that village-to-village inspection will be necessary; arrangements for this seem to have been made. The Lieutenant-Governor observes that this process can only be necessary in the tracts on the west banks of the Muhanuddee and its affluent. It can hardly be required in the tract between the Ganges and the Muhanuddee. If it be, however, the Lieutenant-Governor would be glad to receive a special report. In the very bad parts, the increase in the number of ordinary villagers coming for cooked-food to the depôts, indicates the growth of distress. It is not, however, understood why these people should receive cooked-food; they should be set to work on relief works. 3,160 persons daily find employment on relief works, while 684 are receiving charitable relief.

7. *Dinagepore.*—Mr. Lowis' report is as usual full and interesting. Rain is much required in this district to enable the ryots to complete the sowing of the light lands for the bhadoi crop, and to plough up the heavier soils. The Collector believes that seed-grain exists in the country in sufficient quantity, though the prices of it will range high. He proposes to put some pressure on the zemindars to induce them to assist ryots who have no means of their own to purchase seed. Probably it will be found that the zemindars will do this readily enough for their own sakes, if the grain exists. But it is right to devote constant attention to the matter. It is, as Mr. Lowis says, better for Government to avoid direct dealings with the cultivators, and get the zemindars to perform their natural duties.

8. The facts related by the Collector confirm the conclusion to which he had already come, that the general stocks of the district are now fast failing. Fortunately the Government rice is available in sufficient quantity to meet all distress.

9. The numbers on relief works have risen to 74,806.

10. Transport is working smoothly and well. The Collector would like to take 40,000 maunds more *vid* Dingraghat, in addition to the 1,50,000 already sent through Purneah, but the present arrangements cannot be again disturbed, and the East Indian Railway cannot be further burdened. It is to be hoped the Collector may find the forms of the stock accounts less complicated than he expects them to prove.

11. The arrangements for charitable relief are complete; 1,791 persons were receiving this form of aid.

12. *Rungpore.*—The Rungpore report is on this occasion sufficiently lengthy, and gives a very fair idea of the state of the district, and the local distribution of distress. It might, however, with advantage have been more condensed. The worst tract is that in the south by Govindgunge, where village inspection has disclosed even greater distress than was anticipated. In some parts the people have been reduced to something approaching extremity, though no deaths are reported. It is hoped that the Collector can show that he has from the first exercised sufficient vigilance in this respect. The Lieutenant-Governor warns him most earnestly, both as to the present and the future. No shortcoming in this vital respect can be overlooked or permitted. Relief measures seem now to be on an efficient footing; work is provided; advances are being made to zemindars and jotedars for their ryots, while the latter eagerly watch the due application of the sums so lent by Government.

13. The total number on relief works is not given. They are said to be much the same as before, except in Govindgunge, where about 10,000 people are on the roads. Last narrative showed 3,465 laborers for the whole district.

14. The transport of grain is said to be going on smoothly, though complaints are made that private trade is interfered with by the Government demand for carriage. It can hardly be the case that a district like Rungpore should feel seriously the withdrawal of 653 or even 1,000 carts. The special report of the burning down of a Government rice golah will be awaited. 162,828 maunds of rice have reached the district.

15. Over 4,000 persons are said to be in receipt of charitable relief. They are chiefly of the begging class.

16. *Bogra.*—The Collector reports that no change has taken place here during the fortnight in the condition of the people; but the numbers on relief works have risen from 9,686 to 24,951 persons, of whom only 7,980 were men. It is evident from Mr. Kelly's account that the population of the villages is turning out to perform nominal labor on the roads. If these people are really distressed, work must be found for them in their villages. But it is stated as a fact that well-to-do people come on the roads bringing their laborer-servants with them. Certainly in such cases the labor test should be made a reality. Mr. Robinson's attention is invited to Sir George Campbell's "Note" published in the last *Gazette*, where this question is discussed. He should take steps to have the works classified as there directed. The Lieutenant-Governor begs that Mr. Robinson will take the earliest opportunity of visiting the Bogra district.

17. The Collector thinks the land carriage of the district insufficient to carry off the whole of his increased allotment. In that case, he must arrange to store it at places from which it can be conveniently distributed in boats later in the season. Mr. Robinson should, however, look into this question without delay and report the result. The Lieutenant-Governor has hitherto been under the impression that there is enough land carriage in the district for so small an allotment.

18. Charitable relief is being given to 588 persons.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

Copy forwarded to the Commissoner of Rajshahye, the Relief Commissioner of Rajshahye, and the district officers of the division for information and guidance.

No. 2387—S.R.

Copy forwarded to the Commissioners of Patna and Bhaugulpore.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 14th April 1874.

Narrative of Scarcity and Relief in the Moorshedabad District for the Fortnight ending Saturday, the 4th April 1874.

A.—STATE OF THE COUNTRY.

1.—*Abundance or scarcity of supply in the bazaar.*

The supply of food-grains other than rice is reported to be increasing in the bazaars and hâts of the Sudder sub-division, and the prices are easier. There is still sufficient rice for daily consumption, but the stock is reported to be gradually decreasing. In the Lalbag sub-division there is still an abundant supply in the bazaar. The mahajuns of Baloochur and Azimgunge have opened their stores and are supplying the bazaar. In the Rampore Haut sub-

division the markets are in a similar state to what was reported in the last narrative. In the Jungipur sub-division it is reported that the supply of rice and dhân in the market of Dhulian, from East Bengal, is abundant. The Sub-Divisional Officer saw a number of Dacca rice-boats in the Ganges near Dhullian on last Monday and Tuesday. The supply of rice in other bazaars is reported to be scantier than in other years; but there is always enough to meet the daily demand.

2.—*Kind and price of grain selling at one or more principal marts.*

In the Head-quarters sub-division the price of common rice is somewhat higher than at date of last narrative; the average of 12 of the principal marts gives 12¼ seers per rupee. It is cheapest at Nowada, where the rate is 15 seers per rupee, and dearest at Kallyangunge, where it is 11 seers per rupee. The price of wheat and gram has fallen; of the former the average is 17 seers, and of the latter 18 seers per rupee. Other food-grains such as kulai, dâl of different sorts, &c., are somewhat cheaper, but the whole of the rubbee crops have not yet been gathered. In the Lalbag sub-division coarse rice still remains generally at 12 seers per rupee. Wheat has fallen one seer, and barley two seers. In the Rampore Haut sub-division the price of fine and coarse rice are as follows:—

	Fine rice.	Coarse rice.
Khurgram	$10\frac{2}{16}$	$11\frac{12}{16}$
Pulsa	10	12
Rampore Haut	12	14
Nulhattee	12	14

It will be observed that in the market of Rampore Haut the prices have fallen by one seer in comparison with those mentioned in the last narrative. In the Jungipur sub-division the price of new "hoimonto" rice is given at 12 or 12¼ seers per rupee.

3.—*Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.*

The stock of food-grains in the hands of zemindars, mahajuns, and others in the Sudder sub-divison is said to be much the same as before. No. precise estimate has been attempted. The Lalbag Sub-Divisional Officer still adheres to his former opinion. No further information has been obtained on this point, as no special ennquiries have been made. The Sub-Divisional Officer of Rampore Haut, as stated in the last narrative, states that there is little in store in the hands of zemindars and mahajuns.

4.—*Rainfall, if any.*

There was a slight fall of rain on the 24th ultimo in the following station jurisdictions:—Jellinghee, Nowada, and Bhurtpore; and on the 1st instant in Gowas, Dewanserai, and Jellinghee. Hail fell in the latter place on the same date, which is said to have partially injured the crops in the ground. It appears from a report since made by the Sub-Divisional Officer of Jugipur that ·88 inch of rain fell in the afternoon of the 3rd instant (accompanied by gale and hailstones). The rain will greatly benefit the cultivation of the early rice, do material good to the boro dhan now on ground, and prepare lands for the ploughing of the late or hoimonto rice.

5.—*State of the Crops.*

The prospects of the early rice, indigo, and mulberry crops are good. The Sub-Divisional Officer of Lalbag reports that the rubbee crops on the "dearah" lands are all being reaped, and will give a very fair outturn. Mulberry, especially, is doing well, and this is a great thing for the people who depend to a great extent in some parts upon silk. Unfortunately a somewhat considerable proportion of the worms have died, and the mulberry leaves fetch a small price and will be partly used for feeding cattle.

In the "rarh" country most of the lands have been turned up and are being manured. In the "dearah" lands the ryots are busy in turning up the ground for the "aus" sowings. The Sub-Divisional Officer of Rampore Haut states that the outturn of boro paddy in his sub-division will probably be fourteen-sixteenth of an average crop. He does not speak well of the state of the rubbee crops which have been somewhat injured by the late hailstones. In the Jungipur sub-division the spring crops are reported to be good. Wheat and barley are nearly harvested. The yield will be a good one, but notwithstanding this the price of rice shows a tendency to rise.

6.—*Condition of the people.*

There is hardly any change in the condition of the people from what was stated in the last narrative, but in some parts the people are reported to be in great want and to require assistance from the relief sub-committees. The Sub-Divisional Officer of Lalbag reports that in his present tour he had only come across some three or four cases of real distress, the persons in distress all belonging to the beggar class, and in these cases he had given money relief. He had gone through a good many villages in thana Bhadureehaut during the last few days and in the villages neighbouring Sagurdighee, and he had seen some persons to whom it would be soon necessary to give gratuitous relief. For this purpose a relief house will soon be started at Sagurdighee, and gratuitous relief in the shape of uncooked food will be given. There are a good many laborers about here who are in want of work. The Executive Engineer has been requested to have the repairs of the part of the Nulhattee and Azimgunge road in

the neighbourhood of these villages started at once. The Sub-Divisional Officer had gone through several villages in these parts and had demarcated the boundaries of tanks to be taken up as relief works under the sub-divisional relief committee. He states that the great difficulty as regards the excavation of these tanks as relief works is the want of competent persons to supervise the work. He does not think that it would be safe to make over the money for these tanks to the headmen of the several villages, and that he has no other agency at his command. He could start work almost immediately on these tanks had he any one who could supervise the work, and on whom he could rely to see that the work was fairly done, and that the laborers were properly and promptly paid. I have, in a report to the Commissioner made some little time ago, recommended the appointment of a Superintendent or Assistant for relief purposes by whom works such as tank excavations could be supervised. It is not advisable in many cases to entrust such works to the headmen of villages at any rate without tolerably regular supervision. In some of the villages near Sagurdighee the Sub-Divisional Officer remarked that some of the dried-up tanks had been dug over, and on his asking the reason was informed that the poorest people had dug up the ground in search of "mattans" (earth root honey-combed inside, which when boiled is eaten with salt). This root is probably only used as an addition to the usual food, but still from this it would seem that the time for gratuitous relief in these parts has come, otherwise, he says, he has seen no signs of distress. I believe that these roots are consumed to a certain extent every year, whether there be good harvest or bad. The Sub-Divisional Officer of Rampore Haut states that the people that appear to be in want of food are principally, as reported in the last narrative, the old, the infirm, and the beggars, and that the poorer class of people are in difficult circumstances. This remark may be applied to the district generally. The laboring class have been extensively employed in carrying the mud from dried-up tanks and putting it in their fields by way of manure. Works have been started for this class of the people, and other works will soon be started, so that I believe that no anxiety need be felt for them. These people, it appears, have not flocked in great numbers to the works which have been going on. Near Nulhattee the people were employed and paid at first at a daily rate, and when the work was offered them by contract they went away. This shews very plainly that their circumstances are not very bad. As regards the Jungipore sub-division I think I may give a general view of the country in the following words:—It may be said that the fortunate parts of this sub-division are the "dearah" or alluvial lands near the Ganges, which yielded a good "bhadoi" harvest last year, and have yielded very good winter and spring crops in the present, and the worst parts are west and south Mirzapore, of which "hoimonto" rice may be said to be the sole crop, though there is a little boro dhan on the margins of two extensive tanks. Shumshergunge is so well off that for some time at least it may be left to take care of itself. There is an active demand for labor at Dhulian, and the rate of wages is one rupee for a batch of five laborers, a rate higher than any obtaining elsewhere in this sub-division for unskilled manual labor. Mirzapore is the thana which will continue for some months to come to be the object of most anxious solicitude. Two relief sub-committees have of late been formed in this thana, and 100 maunds of rice have been despatched from Jungipore to the sub-committee at Mirzapore and stored in the thana godown. The Juroor and Nowada road, on which work is going on, passes through west Mirzapore, the most distressed part of the sub-division. From the above it will appear that the people of the Jungipore sub-division are well off in Shumshergunge and Dewanserai, and badly off in southern and western parts of Mirzapore. In the north-west portion of thana Sooty, the mals and krores who have no lands of their own are suffering.

7.—*Actual facts as to any known cases of misery and starvation.*

No cases of death from actual starvation have come to light. There was a rumour about a woman of a certain village in the Jungipur sub-division having been starved. The Sub-Divisional Officer enquired into the matter on the spot and found it to be utterly unfounded. Many such rumours, I believe, when tested by personal enquiry, will be found to be entirely groundless. Many cases of distress and misery have been relieved by the relief committees, and though it is impossible, with the agencies at my command, to search out every case of great misery among the most helpless, there are, I think, sufficient means for them to make their distress known to the officers of Government in the various parts of the district, and to the various relief committees.

8.—*Grain-thefts of robberies.*

Eight cases of petty thefts of grain were reported during the fort-night in the Sudder sub-division, two of which were of such a petty nature that enquiry was refused. There have been four grain-thefts in the Rampore Haut sub-division, and no cases have been reported from the Lalbag and Jungipur sub-divisions. A crime statement is annexed.

9.—*Conditions of any special tracts.*

Small-pox and cholera are both very prevalent in parts of the Head-quarters sub-division. The former is most prevalent at Salar and Kandi in the Bhurtpore thana. Cholera prevails in the Sujagunge and Borooah stations. In the Lalbag sub-division small-pox is still prevalent, though decreasing in the city of Moorshedabad. There have been some cases of cholera in Baloochur. In the Rampore Haut sub-division small-pox is still raging in the villages of Doonigram and Autkoola, and the villagers are reluctant to be vaccinated. The vaccinator

sent here for vaccination has been sent back, as the season for vaccinating is over. Cholera had made its appearance in the village of Mulsa, and indent has been made for cholera medicines. The public health in the Jungipur sub-division is reported to be generally good except that there are some sporadic cases of small-pox here and there.

B.—Relief Works.

The average number of persons employed on the several relief works is 3,464. The laborers are generally in good condition, and can obtain food easily except in the case of the Juroor and Nowada road at which food is obtainable in small quantity. The rate of task-work varies from 3 annas 6 pie to 2 annas per 100 cubic feet throughout the district, and cash payments are made at the rate of 2 annas per diem. The men generally bring their own tools, but in a few cases they are supplied with them. A statement showing the expenditure on relief works is submitted. Several relief works have been started under the City Moorshedabad Municipality; the number of laborers daily employed has been 85, and the total cost during the fortnight has been Rs. 126. There has been a falling off in the number of the laborers owing to some of them having left to reap the rubbee harvest. The condition of the laborers are reported to be good. They are paid at the rate of Rs. 2 per 1,000 cubic feet of earthwork. Tools, when required, are supplied by the Municipality.

Some difficulty has been experienced by the Sub-Divisional Officer of Rampore Haut on one road for want of picks. The Executive Engineer has been requested to send 30 of these to him.

C.—Transport of Food.

It appears that importation is still going on *vid* Allatuli; 9,910 maunds of food-grains have been exported from the Rampore Haut sub-division, and 921 maunds have been imported into the sub-division by railway during the fortnight ending 21st March 1874.

D.—Storage of Government Grain at Relief Works.

The rice received from Mr. Toynbee for the Jungipur sub-division was found by actual measurement to be 491 maunds 39 seers 9 chittacks; of this 100 maunds have been dispatched to the relief sub-committee at Mirzapore, and stored in the thana godown. As the rice has been paid for by the relief committee, I have some doubts whether it should now be considered as "Government grain at relief works." In the Rampore Haut sub-division seven places of storage for grain have been selected, but it has been resolved to store grain at present only at Khurgram, Bhuddevpore, and Jhillee. A golah will be erected at Khurgram thana for the purpose.

E.—Advances to Private Parties and their Results.

Nineteen applications under the Land Improvement Act were received in the head-quarters sub-division during the fortnight under report, and a sum of Rs. 2,140 has been disbursed on this account. The Rampore Haut Sub-Divisional Officer reports that 50 similar applications have been received by him during the fortnight. Additional funds have been supplied to him for the purpose of making advances. A sum of Rs. 100 has been advanced by the Sub-Divisional Officer of Jungipur during the fortnight for the excavation of a tank.

Charitable Relief.

In compliance with the orders conveyed in the Government letter No. 1251 S.-R., dated the 5th ultimo, the following statement is submitted:—

1	2	3	4	5	6			
Number of committees and sub-committees as yet appointed.	Number of special relief sub-divisions opened and officered.	Number of regular relief circles opened and manned by special officers.	Number of relief circles opened and managed by planters and zemindars and other residents.	Number of workhouses or centres for the distribution of food and gratuitous relief.	Number of men, women, and children (with total) in receipt of gratuitous relief in any shape, through the charitable relief organization *daily*; this should include people employed or relieved by the relief committees or relief officers under any of the heads of the "Instructions."			
					Men.	Women.	Children.	Total.
23	.....	.....	18	2	4,348	715	244	5,307*
					Daily average.			
					311	51	17	379

* Out of this number, 305 persons have been relieved gratuitously, and the rest by employment in road-repairing, jungle-cutting, and tank-digging. Reports from the relief sub-committees of Saktipore, Hhurtpore, and where relief works have been started, have not yet been received. Of the number given above who have been gratuitously relieved, a considerable proportion consists of the inhabitants of a village in the Baroosh thana who were suddenly reduced to destitution by the destruction of their houses by fire.

Column 1.—These committees consist of the district relief committee, its executive sub-committee at head-quarters, 12 sub-committees in the Sudder sub-division, 3 sub-divisional relief committees, and 4 sub-committees under the Rampore Haut sub-divisional relief committee, and 2 sub-committees in the Jungipur sub-division.

The committees entered in column 4 are the 12 sub-committees in the Sudder sub-division, 4 in the Rampore Haut sub-division, and 2 in the Jungipur sub-division. During the fortnight under report a sum of Rs. 150 has been sent to the Secretary of the Kattamaree sub-committee for the repair of a road in order to give employment to able-bodied men seeking relief, and another sum of Rs. 150 has also been sent to him for the purpose of excavating a tank at Lakrajparah in thana Gowas. A sum of Rs. 180 has also been sent to the Hurhurpara relief sub-committee for the repair and construction of certain roads. Rs. 100 were sent out to the relief sub-committee at Bhurtpore for construction of a bund in a village named Syed Koolut, and a sum of Rs. 276-9 was sent to the Secretary of the Hurhurparah relief sub-committee for the purchase of paddy. The Gokum relief committee have been supplied with ten maunds of jute for relief purposes, and 200 maunds of rice have been despatched from the Berhampore co-operative store to Bhurtpore for sale to poor people on advantageous terms, the price of rice in the village being somewhat high as compared with other markets. A portion of this rice will also be available for gratuitous relief to persons in distress from whom no labor can be exacted. The sub-committee has started the system of relief by grants of cotton and jute for the manufacture of thread and cordage, and some manufactured material has been received. There was very little desire on the part of the poor, at first, to avail themselves of this means of relief, as owing to the decline of the thread manufacture, caused by the introduction of English thread, the profits yielded by one day's work were quite inadequate for one day's subsistence. More advantageous terms have now been granted as remuneration for work done, and there will, in all probability, be a considerable increase in the number of persons who will accept relief of this kind. The manufacture of cordage being far more remunerative than that of thread, no difficulty is experienced in inducing persons really in distress to take grants of jute on the condition of their receiving the value of their labor as ascertained by the difference n the prices of raw and the manufactured material.

The Gokum sub-committee having reported the great difficulty felt by the poor in the village and its neighbourhood in procuring rice, has been authorized to sell rice to such people from the stock already stored there. Both in this case and that of Bhurtpore, necessary instructions to secure the correct working of this measure and the submission of accounts have been issued.

The Sub-Divisional Officer of Lalbag reports that gratuitous relief is about to be organized in thana Bhadreehaut, and possibly in thana Bhugwangola, though he does not think there is any pressing need for it in the latter thana. There are no persons receiving regular gratuitous relief in his sub-division. He had given the sum of Rs. 2 only to two distressed-looking beggars, Re. 1 each, during the last fortnight. Charitable relief is given in Jungipur on every Thursday and Sunday; 129 persons were relieved by wages for jute-spinning; 39 received doles of pice; and between a hundred and two hundred persons, chiefly professional beggars, who cannot procure alms enough for subsistence, received doles of rice.

It should be remarked here that the average number of persons relieved as given in the last narrative was by no means complete; several returns were received too late to be incorporated in the narrative, and information as much as was available at the time of the submission of the narrative was given. The sub-committees have been again reminded on the subject of the punctual submission of these returns.

W. WAVELL,

Offg. Magte. and Collr. of Moorshedabad.

No. 622—S. R., dated Dinagepore, the 6th April 1874.

From—E. E. LOWIS, ESQ., Offg. Magistrate of Dinagepore,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honor to submit my narrative for the fortnight ending 6th April.

A.—STATE OF THE COUNTRY.

There has been no rain during the past fortnight, and the want of it is beginning to be felt, as until some does come the bhadoi sowings cannot be completed. The rain that fell so opportunely during February was taken advantage of to break up the land for the early rice; the sowings, however, were not completed, and a considerable amount of land still remains unsown. The earth in fact had become so dry that the rain we had did not suffice in all places to afford moisture enough for sowing, though it moistened the ground sufficiently to enable ploughing operations to be carried on. The above remarks apply only to pali or light soil, on which bhadoi is generally grown. This crop, it is true, is also cultivated on khiar or stiff soil, but there has not yet been rain enough to enable the cultivators to plough such lands, much less to sow them on the khiar lands; however, if the cultivators fail to get any bhadoi, they will, if the weather be favorable, be able to fall back on hemantee or winter rice. The time for bhadoi sowing has not yet passed however, so that though rain now would be welcome, no present anxiety is experienced at its absence. The bora rice promises well, though in some places the water necessary for its preservation, it being a crop dependent entirely on irrigation, is beginning to fall short. To the north of the district a very large area has been devoted to the cultivation of kaon; which is, I believe, a species of millet. This crop is generally sown in February and ripens in June, but this season it has been put in without much regard to proper seasons, and plants are to be found in Thakurgaon thana in every stage of progression, some just coming up, while other fields are beginning to ripen. As the bhadoi sowings have not yet been completed, it is not easy to determine with certainty the question of sufficiency of seed-grain, to which the attention of all circle officers has now for some time been directed. The impression, however, is, as I stated in my last report, that seed-grain both for bhadoi and hemantee will be forthcoming, though at high rates. Bhadoi seed-grain, at one place I visited, was selling a week ago at 9 seers per rupee, a rather higher price than was fetched for clean rice in the same locality. The inquiries made by the circle officers show that the people are themselves fully alive to the difficulty, and that dealers are purchasing and storing the produce of last harvest, while those who have stocks are holding back, in the hope that the price of seed-grain will eventually be high. I am more and more convinced that there is a sufficiency of seed-grain in the country, a stock which the sale of Government rice will tend to keep up. But admitting that there will be a sufficiency, the question has been raised by more than one relief officer, how far will the poorer cultivators be able to provide themselves out of the stock in the market? And the result of their inquiries seems to show that some of the laborers on the relief works will be unable to command means enough to enable them to buy seed-grain. Some of our coolies have come on the works before exhausting all their resources, and have something at home to fall back upon to help them in this difficulty; others, again, are able, by laboring diligently at task work, and by living economically, to save something, while others will obtain help from their zemindars or rich neighbours. There remains, however, a certain proportion, so it is reported, who have no means to fall back upon, who are unable to earn more than a bare subsistence, and whose zemindars will not help them, and as regards this class it becomes a question how far and in what way assistance should be afforded. It is most obviously the duty of the zemindar to help men of this class, and it is a duty cheerfully undertaken by all liberal and intelligent landlords; there are, however, it is said, landlords who are neither liberal nor intelligent, and such should be compelled to perform the duty. There is, I believe, a feeling among the people that Government which has done so much, will step in and undertake this burden too; but I do not at all consider that the feeling should be encouraged. Government have agreed to advance money to zemindars on most liberal terms; those who expend money in helping their ryots have been promised indulgence as regards payment of Government revenue; arrangements have also been made whereby the ryots working on our roads can obtain subsistence while absent for purposes of cultivation. Government have done all that can be done to ensure that the next harvest shall not be a deficient one, and the further task of providing seed-grain need not be undertaken by them, but should be made incumbent on the zemindars. I propose directing my circle officers to inquire on whose estates the laborers who say they cannot afford to get seed-grain reside; they will then inform the zemindars in question that certain of their ryots are in want of seed-grain, remind them of the offer of Government to advance money and grant indulgences to those who assist their tenantry, and warn them that if they decline to undertake so obvious a duty that Government will be moved to make the advance, holding the zemindar personally responsible for the debt. The responsibility will thus be cast on the right shoulders, and a safeguard afforded against any unnecessary advances being given, for we may be quite sure that any zemindar thus called on to help a ryot, who has means at his disposal, will take very good care to let the circle officer know that advances are not needed. I do not myself think that landlords will be so forgetful of their own interests as not to take care that their ryots have the means to raise the next crop. If, however, it is found that such is indeed the case, some such

measure as I have suggested will have to be adopted. I would deprecate any direct dealings between the Government and the ryots in this matter. Government have not the same facilities for testing the *bonâ fides* of an application, or for recovering the advance, as are possessed by the zemindars, and if the responsibility must be incurred, it should be incurred by those best fitted to sustain it. The prices ruling at the different hâts and the scarcity of the supply in many places still point to exhaustion in the stocks of food-grain. Rice is now sold in Thakurgaon, the northern thana, at Rs. 4 a maund, and at few places can it be obtained at a cheaper rate, while sometimes it goes as high as 8 seers per rupee. In Habra and Chintamon, where there was some rice, and which are places that in ordinary years export largely, prices are rather easier, and rice is being taken from thence to other parts of this district, as well as to Rungpore and Bogra. As I noticed in my last report, prices rose very suddenly at Datiram, and distress began to be felt there and at Patintala; the rice, however, was at hand, ready to supply the market, and a European was at once despatched to take charge of the latter circle. What distress exists is met as it arises, and the panic has been allayed. Within the last week the supply of rice in the Gungarampore division fell short in the same sudden and unexpected manner; there was, however, an officer at hand, sale of rice in this circle had been sanctioned, and the arrangements for selling it in train; no difficulty was therefore experienced. The circle officer reports, however, that but for the timely arrangements made on receipt of orders sanctioning sale of Government rice, there would have been much distress. In Bhadooria circle there has been no sudden falling off of supplies, but though gradual, the falling off has been steady. The sudden failures of supply which have occurred at Patiram and Gungarampore show how thin a wall often divides scarcity from famine, for until the market day there seems to have been no suspicion at Gungarampore that the supply would fall far short of the demand. Prices at the station itself are touching Rs. 4 per maund, and the people are clamorous to have the Government golahs thrown open. I am waiting, however, for prices to rise above the present rates, or until there is some indication that the supply is not ample should occasion arise, I am quite prepared to sell. As I write, a storm has passed over the station attended with but little rain; the heavy clouds, however, betoken rain to the north and north-west.

B.—Relief Works.

The number of persons employed on the relief works is daily on the increase; the only officer whose return shows any decrease is Mr. Scanlan, but that is accounted for by the fact of his having introduced taskwork throughout all the roads under his charge. The greater number of his coolies at first left; but finding that he remained firm, and that by working diligently an able-bodied man can earn more than ten pice a day, they are gradually coming back, and by this time I have no doubt he has as many as ever. It must not be supposed that Mr. Scanlan is applying a severe and rigid labor test. All women and children, as well as infirm and old men, are admitted at daily wages; but the able-bodied are obliged to do task work, and are paid according to the amount of earth excavated. Women are employed on all the works; they are all of the *lower* class of agriculturists, but are not generally accustomed to work in the fields. They seem to take very kindly to the work, however, now that they have overcome their first scruples. As I have already pointed out, many of our relief laborers have joined the works before being reduced to absolute want, some of them having small stores of seed-grain in their houses; and as soon as the weather is favorable for agricultural operations, these men will leave the works for a time. I may add that some of them employed the early morning in ploughing up their lands before coming to work on the roads. In the month of June there will, I fear, be some difficulty in providing work for laborers, for road work will be finished and tanks cannot be dug after the rains have begun. There will, however, be a demand then for agricultural labor which will absorb a good many. The weekly reports called for from circle officers render it almost unnecessary for me to notice the number of laborers employed; but as the return has perhaps not been correctly given this week, I subjoin a list compiled from the latest information at my disposal; the numbers are even larger than those mentioned, for the coolies daily increase. In the Kaliagunge, Tambolee, and Bindol circles there are 9,698 persons at work. Mr. Jones finds employment for 27,472; these numbers probably include Chooraman. Mr. Scanlan has under him 8,785; Baboo Hari Mohan Chand, 11,427; Mr. Finucane at Datiram has about doubled his number, and now employs 7,099. At Patnitolla there are 3,700 under Baboo Poorno Chunder Goopto, at Bhadooria 3,360, and in the Sudder circle, 693; while the Public Works Department find employment for 2,572 more.

C.—Transport.

Our transport arrangements continue to work smoothly, and rice is being brought in as rapidly as could be expected; our allotment for Dinagepore is almost all in now. Mr. Westmacott at Maldah, therefore, has been directed to discontinue his service here, and to fill in the Tamboolee golahs, which he ought to do, with the large number of carts at his disposal, in the course of a month or so. Mr. Scanlan at Rani Sonkoil has got in already very nearly one lakh out of the 140,000 maunds allotted for his division; the rest of the rice Mr. Scanlan must get through Raigunge, for the Purneah authorities, as the present arrangements stand, only supply us with 150,000 maunds in all, of which 39,000 maunds have gone to Bindoil and Hemtabad. I

would suggest the advisability of at least the balance of Mr. Scanlan's allotment, say another 40,000 maunds, being put down for us at Dingraghat; it is a mere step across from that place to Hurreepore, and other golahs in the Rani Sonkoil division, and if we have to bring from old Maldah or Hyatpore, it is a much more tedious and expensive journey. For Patnitolla and Patiram, I learn from Lieutenant Hawkes that he can put down 2,000 maunds a day at Nowgong if I can carry it, and more if I like to take more. There ought to be no difficulty in taking 2,000 maunds a day by cart from Nowgong to Patnitolla, and at that rate another month or so should see Patnitola and Patiram full also. There is now no difficulty about carts; the men find they are liberally paid and well treated, and work therefore willingly. There was some slight hitch about getting carts to go across the water, and serve on Mr. Reily's line from Hyatpore to Chooramon, but the men have been persuaded to go, and the difficulty got over. Pack-bullocks we do not employ at all; some were taken on to carry rice from Maldah to Kalikamora, but as a complaint was made that private trade was being interfered with, and as plenty of carts were procurable, the bullocks were given up; nor do I think there will be any necessity to fall back upon their services again.

D.—Storage of Grain.

Rice is being distributed throughout the country at the different golahs, for it is clear the time is not far distant when we shall have to supply the market to a considerable extent. Forms for stock accounts are beginning to come in; they have not all arrived, but from what I have seen, they promise to be somewhat elaborate, rather too much so for ordinary golahdars on Rs. 15 or 20 a month. For these accounts to be of any value, we must assume that the quantity stored has been, in the first instance, accurately calculated; but this is just what we do not know, and what it would be now almost hopeless to attempt to ascertain. As I pointed out in previous reports, we have never been provided with proper weights and scales, so that the rice could not be weighed at the golahs even if we have wished to do so; but even if the weights and scales had been forthcoming, they could not have been made use of, for at the rate rice was poured into the district, it was as much as we could do to stow away our grain without stopping to weigh. A grain officer has now been nominated, but it will be quite impossible for him to go round, as the printed instructions seem to contemplate and weigh the grain in each golah. The instructions again seem to contemplate the ascertainment of the wastage during the journey to Calcutta, from thence to the points of receipt into the district, and from such points to final destination. As a fact, the bags have not, I believe, been weighed anywhere on the journey, and the deficit to be found now will be the wastage during the entire journey. I have not, however, seen all the accounts, so I am perhaps premature in judging of their adaptability.

E.—Advances.

There have been no further applications for advances.

F.—Charitable Relief.

The district relief officer has been entrusted with the duty of filling in this head of the narrative, and his report is appended. It seems to me advisable, however, first to mention the general principles on which our scheme for charitable relief is founded. The first idea was to have a central executive committee in the station, who should direct relief operations through sub-committees scattered about throughout the district. This was before I was aware of the extensive agency that was to be placed at my disposal. It was soon apparent that the committee system would not work, there was a feeling of divided responsibility; the action of the Magistrate was also liable to be hampered, since a measure that seemed advisable to him was liable to be vetoed. I therefore, acting under the directions of Sir Richard Temple, did away with the agency of committees as a directing power altogether, and impressed on all circle officers that as I am responsible for my district, so each officer is responsible for his own circle, such responsibility being shared by none; that the aid of the respectable local authorities is to be sought, and their counsel and advice treated with respect, but that each officer is to use his own discretion in acting on it, though, in the event of an officer acting in direct opposition to local experience, he is bound to report the action taken by him. Each officer, with the aid of two or more Inspectors, manages his own circle with the assistance and through the co-operation of the respectable inhabitants, and reports weekly to the District Relief Officer all that he is doing. The District Relief Officer has general control over all the circles, subject to the direction of the Magistrate and Collector, and is independent, except in so far that he is to be guided by the spirit of the instructions issued by me to all circle officers. The District Relief Officer is in fact in charge of a particular department, much in the same way as the Superintendent of Police is in charge of his, subject to the general control of the head of the district. The report of the District Relief Officer is subjoined.

"Arrangements for giving charitable relief within this district have been in force for about a month, but it has only been within the last fortnight that the necessity for the syste-

matic disbursements of charity has arisen. The figures at my disposal for the present report show the following result for the first half of the fortnight under report:—

Place.	Week ending 7th March.	Week ending 14th March.	Week ending 21st March.
Bhadooria	No return ...	...	51
Bindoil	Ditto ...	...	80
Dinagepore	Ditto ...	...	2
Kaliagunge	Ditto ...	1	...
Patiram	...	...	208
Rani Sonkoil	No return ...	...	No return.
Nekmurd	Ditto ...	...	20
New bazar	Ditto ...	...	44
Tamboolee	Ditto ...	No return ...	4
	Ditto ...	Ditto ...	65
	Ditto ...	3	18
Total ...	...	4	492

The 'places,' it will be observed, do not correspond with the fourteen circles into which the district is now divided, because these circles were constituted subsequently to the date of the returns tabulated above. The returns given below for the second week of the fortnight correspond accurately with the new circles.

Charitable relief is granted to all persons who have no money wherewith to buy food, and who cannot, by reason of age, caste, or other adequate excuse, earn a livelihood for themselves. Light work, as spinning and gunny cloth work, is provided for the better ranks of females, and for males who cannot do hard work; inquiries are duly made into the circumstances of persons who apply for charitable relief, but relief, when obviously required, is never withheld during the progress of inquiries. The agency of Mandals and other heads of villages is employed both in making inquiries and in distributing rice. The rice is bought from Government stores at 12 seers a rupee for fully husked rice, and at 14 seers when the grain has not been completely cleaned before being packed in the bags. In either case, the daily dole amounts to half a seer of clean rice for adults, and a quarter seer for children under 12. The question has been raised by two officers whether this quantity is sufficient, and no doubt it is a minimum allowance. But I think we should not at present increase it; our work is still before us; we know not with accuracy how many months we may yet have to feed, and should husband our resources accordingly. It has yet to be proved, moreover, that half a seer of rice, supplemented as it is with the sum of one pice per adult for the purchase of salt and other seasoning ingredients, is insufficient to keep a man in a fair condition. One case has been reported in which a woman preferred to work and get eight pice a day to accepting her half seer of rice and one pice; but if the woman's labor was worth eight pice, it is clear that the arrangements by which one charitable relief elicits working power instead of encouraging idleness is altogether good, and, as far as my present information enable me to judge, half a seer is just that quantity which will suffice for the support of weak and infirm persons, and at the same time not afford any inducement to those who are able to work to abstain from exerting themselves for their better support. The following table gives the number of persons receiving charitable relief on the dates shown in column 2. No comparison is made of details of the circles this week with details of the last week shown above, because this week the district is divided into different circles from those in which it was divided last week.

	Circle.	Date of report.	Number receiving charitable relief.	Total of this report.
1	Bhaduria	...	96	
2	Bindoil	31st March ...	146	
3	Chooramon ...	No return ...	...	
4	Dinagepore ...	2nd April ...	193	
5	Doorgapore ...	No return ...	...	
6	Gungarampore ...	31st March ...	112	
7	Kaliagunge ...	2nd April ...	100	
8	Luskerhat ...	1st April ...	86	
9	Porsha	31st March ...	11	
10	Patnitolla	28th March ...	219	
11	Patiram	31st March ...	697	
12	Rani Sonkoil ...	31st March ...	123	
13	Tamboolee ...	31st March ...	8	
14	Bochagunge ...	No officer yet appointed.	...	
	Total ...	...	...	1,791

This gives a daily consumption of, say, 850 seers, or a little over 21 maunds, which is a monthly consumption of 651 maunds; and if the people be fed up to the end of September (six months from date), 3,906 maunds will be consumed. The number of applicants for relief will increase as time passes.

Patiram, it will be observed, is far ahead of any other circle in the amount of charitable relief given; but I have perfect confidence in Mr. Finucane, and feel sure that he will not give relief where relief ought not to be given. The professional beggars, deprived of their sustenance as ordinarily obtained through the charity of their friends, contribute to the number of applicants for charitable relief. Every possible endeavour is made to induce them to work, and it seems a fair question whether strong-bodied men, who are by caste beggars, have any claim to support when they refuse to work. A few men have been discovered about Dinagepore who come for charitable relief in the morning to the Government place of distribution, and at a later hour resort to a distribution of food given to professional beggars by the Dinagepore agent of the Banker, Dhanpat Singh Roy, Bahadoor. Inquiries are under progress with the object of striking the names of these men off the list of paupers who receive charitable relief from Government.

Except in Patiram, it will be observed that the number receiving charitable relief is still small. The organisation by means of circle officers, aided by their assistants, and advised but not controlled by their sub-divisional (or circle) committees, is admirably adapted to the requirements of the work in hand, while local agency, chiefly in the form of sub-committees for small groups of villages, renders important services in distributing rice almost at the very door of each recipient of charity. Cases *may* occur in which extreme apathy or caste prejudices, honoured even *in extremes*, may induce people to be still and die rather let their cases be known about; but excepting these, not likely under any circumstances to be numerous, it is not probable that any deaths from starvation will occur within this district.

The collection of private subscriptions is now nearly over. Several sums, promised when the relief schemes were first commenced, remain to be collected, and I trust will be paid by those who promised them. Of new subscriptions, only 25 have been collected during the past week, making the total local subscriptions actually paid Rs. 7,170.

The committee has received also 20,000 as a subsidy from the Central Relief Committee, and as I write, a cheque has been brought to me for another sum of the same amount from the same committee.

The following table shows the number of criminal cases in connection with scarcity that occurred during March 1874:—

			Number of cases reported, excluding cases declared to be false and never to have occurred.
Dacoity (heading 30 and 31 of Crime Return) ...	Month of March	1874 ...	1
	„ „	1873 ...	1
	„ „	1872 ...	*Nil.*

No. 90, dated Bauleah, the 7th April 1874.

From—W. H. D'Oyley, Esq., Collector of Rajshahye,

To—The Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my narrative for the fortnight ending 4th instant, and regret that it has been unavoidably delayed till to-day.

A.—State of the Country.

In the Sudder sub-division there have been large importations, and rice and paddy is getting cheaper. In Bauleah and Charghat common rice is selling at from 13 to 13½ seers (80 tolahs' weight) per rupee. In parts of the Nattore sub-division, also, prices have improved. At the same time, in some places the supply in the markets has not been sufficient, and the prices have been very high, notably at Sahebgunge on the Attrai and Sooktigatchee. This the Deputy Collector of Nattore attributes to the strain on the local markets caused by the outsiders who have come to work on the railway drawing their supplies from them. I have written to Major Lindsay on the subject. I have lately received reports of short supplies at Bhundaikhara; but last Wednesday the price of rice was by no means high there, 12 seers (80 tolahs' weight) being procurable per rupee; while at Godagree, a few days ago, I ascertained that rice was cheaper at Gobindpore Haut (the market which supplies a great portion of the Godagaree thana) than it had been a short time back. While the rice has in many places improved, I regret to have to report that the silk bund, which was looked forward to with so much hope, has proved a failure, and this no doubt will cause a great deal of distress. I am, however, hopeful that the work provided in several parts where the pressure is most felt will prove sufficient for the able-bodied, while those unable to work will get relief at poor-houses.

2. There have been no cases of starvation; the condition of the laborers on the roads is still good. Petty thefts have been more numerous than they were in the corresponding months in 1872 and 1873, and I think there can be no doubt that this increase is owing to the high price of food. The number of cases of house-breaking is smaller than that for the corresponding month of the last year, and the number of cases of theft and house-breaking during March last is considerably smaller than the number reported during February.

B.—Relief Works.

I have only been able to send the return for the first week of the fortnight, as that for the last week reached me only last night, and was found to be incorrect. I hope to be able to forward it in a few days. It will be observed that the total number of laborers during the first week was still large. I have advanced Rs. 1,000 to the manager of the Tahirpore estate to improve the road from Bauleah to Tahirpore, as relief was much required in these parts. Mr. Durand was also entrusted with the repairs of a portion of the road from Bagmara to Bhundaikhara, and the remaining portion has been done by a Sub-Inspector of Police.

C.—Transport of Grain.

The means available for the transport of grain are ample, and far exceed what was expected. It is now quite clear that by giving fair rates any amount of carriage is available. It is doubtful whether public trade has been interfered with by the employment by Government of such an enormous quantity of carts and boats. I have heard complaints that a cart is not to be had for love or money, but at the same time importations continue.

D.—Storage of Government Grain.

The annexed statements show the progress. There has been no falling off in the amounts forwarded through for other districts.

E.—Advances to Private Parties.

	Rs.
Advanced up to the date of last narrative	43,850
Advances in course of last fortnight under Land Improvement Act	1,600
Advances to ryots	1,025
Advances for purchase of grain	1,700
	48,175

F.—Charitable Relief.

In the Bauleah sub-division there are at present three poor-houses, and the following statement shows the average number of persons fed daily at each:—

Bauleah ...	... 61	Pootea ...	... 23
Nowhatta ...	... 33		

These are chiefly poor women without the means of support, blind, and lame.

2. In the northern Bhurind sub-division there are at present four poor-houses, and the average number fed daily at each is as follows:—

Bagsole ...	... 22	Larupara ...	... 10⅔
Saljore ...	... 23	Bamneegram ...	... 13

In the south Bhurind division there are four poor-houses, but the sub-divisional officer has not been able to send the accounts as yet, as he had not received them from the several poor-house-keepers when he submitted his report.

In the Nattore sub-division there is one poor-house, which was lately opened by Rai Baboo Grish Chandra Lahory, but which is now under the management of the sub-divisional committee. No accounts have been received from this institution.

I have directed the sub-divisional officer of the northern Bhurind to collect kunker at convenient places, paying women and children at the rate of one anna per cubic foot for it. There is a good deal of kunker in the Bagmara elaka, and there will be water-communication in the rains, by which it can be brought to Bauleah.

The district relief committee have applied to the Central Relief Committee for a grant to relieve the poor sufferers whose houses and property were destroyed by the fires which occurred lately in the town of Bauleah. Of course money will only be given to those who are fit objects for charitable relief, and of these there are a great many; and it is estimated that Rs. 3,000 will be required for this purpose. The amount of suffering caused by the fires can be imagined from the fact that upwards of 76,000 rupees worth of property was destroyed. A sub-committee has been formed to enquire into the matter, and to discover who are really deserving of charitable relief.

G.—Financial Result.

	Rs.	A.	P.
Total expenditure, as shown in last narrative ...	1,23,642	1	11
Details of the above—

RAJSHAHYE COLLECTORATE, *The 10th April* 1874.

W. H. D'OYLEY, *Collector.*

J. O'FLAHERTY, *District Engineer.*

No. 42—F, dated Maldah, the 8th April 1874.

From—F. J. ALEXANDER, Esq., Offg. Magistrate-Collector of Maldah,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

IN continuation of this office letter No. 929F of the 24th ultimo, I have the honor to submit herewith the fortnightly narrative of scarcity and relief in the Maldah district for the fortnight ending 4th instant.

Fortnightly Narrative of Scarcity and Relief in the Maldah District for the fortnight ending the 4th April 1874.

A.—STATE OF THE COUNTRY.

THE supply of rice and paddy in the local market is less abundant in a noticeable degree than hitherto, and is gradually decreasing in quantity each successive market-day at a great many of the local hauts and bazars.

The importations of rice and paddy through private sources from the eastern districts are also comparatively small, and arrive at irregular intervals. New wheat in considerable quantities has come into the local markets, but has not had much effect on the quotations of rice and paddy, the supplies of which (rice and paddy) so far as the central and southern tracts has been barely equal to the demand, and that is all. In the north-west tracts considerable importations of food-grains from Sahebgunge *viâ* Hyatpore were reported during the early parts of the fortnight, but had fallen again during last week. The reason of the decrease, so Mr. Reily thinks, may be indirectly caused by the fact that the Dinagepore officials are selling rice at 13 seers for the rupee to the public, "but it is hard to estimate," he says, "to what it is owing."

Prices have been unsteady and fluctuating with the deficiency in the rice supplies. During the early part of the fortnight there was a marked and sudden rise, 9 seers to 10 seers being the price then quoted for ordinary rice at most of the principal markets in the central and southern tracts, where supplies had hitherto been plentiful. At the close of the fortnight prices were rather more favorable again, 10½ to 11 seers of 80 tolahs per rupee being the quotation for ordinary rice at the sudder station, and to-day 11 to 12 seers is obtainable.

The following are the latest prices of paddy and ordinary rice for the fortnight at the undermentioned principal markets in different parts of the district (wheat is selling at the sudder station at 15 seers of 80 tolahs per rupee) :—

Central part of the District.

	Seers of 80 tolahs per rupee.
At Englishbazar sudder station—	
Ordinary rice	10½
At Bulbul Chandee—	
Paddy	15½
Ordinary rice	11
South-east of the District.	
At Gazole—	
Paddy	20
Ordinary rice	11

	Seers of 80 tolahs per rupee.
At Bamongola—	
Paddy	20
Ordinary rice	1
North-west of the district.	
At Chanchal, Tulseegunge, Shumsee, Abadpore—	
Ordinary rice	10
South-west of the District.	
At Sheebgunge—	
Ordinary rice	9
South-east of the District.	
At Kohunpoor—	
Paddy	15
Ordinary rice	10½

Note.—At Kohunpore, on the last market-day, 1,000 maunds of paddy and 125 maunds of rice are reported as brought for sale, the gradual decrease in the supply will thus be noticed in comparison with last fortnight.

RAIN-FALL.

During the early part of the fortnight, strong westerly winds prevailed, succeeded by south and south-east winds, with excessive heat till Friday, 3rd April, when a heavy thunder-storm, accompanied by hail and rain, passed over the district from south-west to north-east. Since then the weather has been cooler, and at times cloudy, but without more rain. The rain-fall of the 3rd is recorded at the sudder station (which was quite in the centre of the storm) at 0·88. The north-west of the district got little or no rain.*

STATE OF THE CROPS.

The wheat and barley harvest is almost completed, and these crops have turned out above the average. The cheena (millet) and the gram crops, now harvesting, are also turning out well.

Before the rain of the 3rd a good deal of the bora dhan crop was in a very critical condition; the extensive area cultivated this year, and the difficulty of irrigating the drier portions of it, owing to the low states of the jheels, had made it very problematical whether a very considerable portion of the plant would not dry up, and every effort was being made, where such was the case, by cutting bunds to save as much of the crop as possible. The rain of Friday last has, however, I am glad to be able to report, come in time to save much of what was drying up; and if we have another shower within the next fortnight the bora dhan will give a considerable out-turn and help a good deal to supplement the food-supply at a most critical time. It will be ripening in another 20 or 25 days. I have visited in the centre of the district an extensive area of the crop, both before and after the rain, and am glad to be able to report so far well of it. Accounts of it from the south-west are also good, but in the north-west it is stated to be much in need of a shower of rain.

The sowings of the bhadoi dhan crop have been commenced, and a very much larger area than in ordinary years is reported to have been prepared for the reception of this crop. The want of proper seed has, however, been severely felt, the price of such seed having risen to Rs. 6 a maund.

The mango crop promises fairly well. In the "Parooa" jungles the bamboos (known as the beora bans) have this year flowered and produced grain in abundance, and many of the poorer classes have within the last few days been collecting this grain as an article of food.

CONDITION OF THE DISTRICT.

The health of the district continues generally good, but the poorer classes are feeling the high price of rice very much. About the towns and large villages especially, there are many women, some with families and some without, who in an ordinary year manage to support themselves by husking rice, but are now reduced to great proverty for want of their ordinary occupation. The plentiful wheat-harvest and comparatively cheaper rice of the same has, with the help of the previous "kalai" crop, helped to sustain the poor; but the fact that numbers of people have lately been collecting the bamboo rice in the Parooa jungles shows that the scarcity is beginning to tell heavily on many, even in the richer tracts, where the necessity for very extended relief has hitherto not been thought necessary. Disastrous fires, too, during the week at the sudder station have caused additional trouble to many of the lower classes. The sudder relief committee are getting up a subscription for those who have really suffered from these fires. Hitherto, our charitable relief operations have in the central and southern tracts been confined to a few relief centres at the chief places, where the old and the sick and infirm have received gratuitous help; but the present condition of the district assures me that throughout the district our relief operations must now be extended, and village-to-village visitations be made even in those tracts which hitherto have not been considered distressed. No cases of starvation are reported from any part of the district, but instances of old and infirm people in real distress have come to light.

* *N. B.*—After writing so far last evening (April 7th), a heavy thunder-storm from the north-west came up, accompanied by heavy rain and hail. The rain-fall recorded at the sudder station was 0·69. No reports received from out-stations.

The 8th April 1874.

F. J. ALEXANDER.

I annex a comparative statement of cases of robbery and theft, &c., for the month of March; it does not call for special remark; there is no remarkable increase of crime, and no sort of disorganization of society, by people leaving their homes in numbers in search of relief; but that many families are on "short commons" is only too significantly indicated by the fact which I have mentioned, of many persons collecting bamboo rice in the Parooa jungle. The medical officer cannot say that it is unwholesome, or actually injurious to health, but if eaten for several days together he thinks it would produce sickness. It has all the appearance of a fine rice (which, indeed, I suppose it is), and it is a fact that it is being eaten by many, if not in place of ordinary rice, still as a supplement to other ordinary food. The natives say, with superstitious dread, "in a famine year the bamboo flowers and produces grain."

CONDITION OF ANY SPECIAL TRACT.

From the distressed tract (thana Khurbah and part of Goregoribah) no cases of starvation are reported; but Mr. Reily in his latest report writes: "The numbers availing themselves of the distribution of food at the kitchen at Chanchal increase daily, the maximum being 500 in one day. The majority of these recipients are villagers of the neighbouring estates, and are persons who would not, unless driven by necessity, accept food in a cooked state without loss of caste privileges, and this may therefore be taken as a genuine instance of distress among the ryots of this tract."

B.—RELIEF WORKS.

During the fortnight work has been going on in the north-west tracts under Mr. Reily on 12 roads and 8 tanks. Three of the roads have been completed. Government rice is sold to persons laboring on the relief works at 12 seers per rupee: but the details of the quantity sold have not been furnished. Mr. Reily says:—"I have not thought it necessary to sell Government grain to the public up to the present moment, as, from diligent enquiries, I find that the supplies of the private marts are quite equal to the demand. Government grain will be sold by me at the sanctioned rates directly. I see that there is a necessity for supplementing the private supplies."

Work is also going on on the ordinary district roads and municipal roads, and on the other relief works noted below.

During the fortnight two new relief roads have been started, *viz.*, one at Bulbul Chandee in thana Maldah, under Mr. Livesay, district relief officer, and another near Gomastapore under Lieutenant Burgess.

Shops, where Government grain is sold at 12 seers per rupee, have been opened at several places where the local supplies were failing, or the local rates very high. On the Dinagepore road, beyond Maldah city, I found a day or two since that the workmen (Beldars) were daily taking their supplies from a Government shop close by, and were fairly contented with what they got, and ignored "bamoo rice." Further on, however, in the Parooa jungles, I found that all the local villagers (Polis, Rajbangsis, &c.) had *deserted* the road-work to go and pick up "bamboo rice." At Englishbazar the coolies object to the "Alooa-rice" at 12 seers, and the moodee has sold but little yet, nor is it likely he will do so as long as Poorbi-rice is obtainable (as it now again is at 10 to 12 seers).

The following quantities of Government grain have been sold at the undermentioned places to workmen employed on relief works, but the information is incomplete, as the returns from some of the shops have not been received:—

	M.	S.	C.
At Bulbul Chandee	4	5	12
„ Balia Nowabgunge	18	8	8

The total daily average of persons employed on the works for the fortnight is as follows:—

	Men.	Women.	Children.	Total.
On ordinary district roads ...	969	238	68	1,275
On municipal roads and tanks ...	72	12	3	87
On relief roads	906	64	75	1,045
On relief tanks	662	86	5	753
Total	2,609	400	151	3,160

Statement shewing the total number of persons employed on road and relief works during the fortnight ending 4th April 1874.

Total	36,020	5,517	2,105	43,642

C.—TRANSPORT OF FOOD.

Private trade in paddy and rice is very dull; the small local craft that ply on the Mahanuddy, between Roharpore and the chief bazars, are barely sufficient to keep up the necessary supplies, while the private trade in these articles with the eastern districts is very irregular and fluctuating. The fact is that every available boat on the Mahanuddy has been taken up in the Government transport work, and private trade must necessarily be slack.

The trade in new wheat, which is brought from the dearah to the bazars and huts on pack-bullocks, is fairly brisk.

The transport of Government grain goes on satisfactorily. Up to the end of the last week, *i. e.*, April 4th, the grain return shews 4,43,404 maunds received into the district, of which 4,01,668 maunds had passed through the district, or was in transit for Dinagepore, and 26,741 maunds was stored in the district. By the Hyatpore route, Mr. Reily had carried some 75,000 maunds up to the 2nd April, *via* Domroil, for the Dinagepore district, and his average despatches for last week have been over 2,000 maunds a day. He is expecting 600 carts from Dinagepore, and with this will be able to raise his despatches to 3,000 or 4,000 maunds a day, and in that case expects to complete by the end of the month the quantity of grain to be carried by that route.

Mr. Westmacott's despatches for the last week by the land-route, from Old Maldah to Dinagepore, averaged 1,844 maunds per diem, and by the water-route from Neemaserai to Raigunge and Chooramon (Dinagepore), 1,219 maunds per diem.

The Manickchak route is to be closed, and the remainder of the grain carried by the Godagaree and Hyatpore routes. The carts now employed on the Manickchak route, between that place and Neemaserai, should, if possible, be put on the Hyatpore route.

D.—STORAGE OF GOVERNMENT GRAIN.

The grain-return for the last week shows 26,741 maunds stored in the district, but there have been some additions and changes in the disposition of the grain, and I am not sure that these figures are quite correct. The returns of stock, which will be taken this week, will enable me to state precisely what quantity is in store at each golah.

The falling off of the local supplies and the consequent rise in the prices has necessitated my distributing grain to localities where it was not expected it would be needed so soon, if at all, but where it is now required for the charitable relief committees and laborers on relief works.

Up to the close of the fortnight the arrangements as to storage of grain at main golahs and distribution to subsidiary ones were as follow:—

Main golah No. 1, at English Bazar—

	Maunds.
In stock previously	3,396
Received during the fortnight	1,588
Total	4,984

Distributed to subsidiary golahs during the fortnight from Englishbazer main golah, as follows:—

	Maunds.
To Bulbul Chandee	200
„ Bholahat	50
„ Nowabgunge	200
„ Seebgunge	50
„ Kansat	50
„ Mohodeepore	50
„ Kaliachak	50
„ Gomastapore	250
Main golah No. 2, at Old Maldah—	
In stock	6,870
Main golah No. 3, at Gazole—	
In stock	5,394
Main golah No. 4, at Khurbah Dumroil—	
In stock	4,000
In stock at subsidiary golahs, *viz.*—	
At Soroopgunge	1,500
At Tulseegunge	1,300
Main golah No. 5, at Futtehpore Hyatpore—	
In stock	1,475

The arrangements for storage-room for a large quantity of grain at Neemaserai and Old Maldah are being made by Mr. Westmacott.

E.—Advances to Private Parties, and their Results.

The advance of Rs. 50,000, applied for by Raj Nath Guho under clause [illegible] ragraph [illegible] of Government Circular No. 80, dated 17th November 1873, and [illegible] already been advanced under sanction of the Special Commis[illegible] in full by Government, and is available as soon as the amar Sen. Rs. 100 has been ordered to be advanced to one [illegible] ..nment estate, to assist his ryots (Government Circular Singh. [illegible] December 1873) (this money has since been paid). No other adv[illegible] ..ade; several have been sanctioned, and are available when the parties come for ssrs. Jugge ister their agreements.

Chan

F.—Charitable Relief.

82—
66—32580 ... regard to charitable relief are progressing; several new centres
L 70—24565 ... 1,00 tted to different officers; and inspectors deputed to visit villages,
69—46715 ... 1 es of distress that come to their notice.
and repo[illegible] ...

Looking at the food a[illegible]dition of the people, and the pressure caused by the high prices, and want of means in city of these recipients are I have deemed it advisable to start arrangements whereby the inspectidess driven by necessity, of the admittedly distressed portion of the district, but of each thana may therefore be take than hitherto.

The present arrangements are as

Special Relief Circles.

1.—*Chanchal Circle.*—Head-quarters, Chanchal, under Mr. Reily, with Lieutenant Kellie to assist him. One relief inspector at his post, one appointed, and ordered to join at once. One native doctor arrived, and sent to join his post.

2.—*Gazole Circle.*—Head-quarters, Gazole, under Baboo Okhoy Kumar Bose, Sub-Deputy Collector. One relief inspector at his post. One native doctor arrived, and ordered to join his post at once.

3.—*Maldah Circle.*—Head-quarters, Bulbul Chandee, under Baboo Hem Chunder Kerr, Deputy Magistrate and Deputy Collector. One relief inspector at his post. One native doctor.

Sub-Divisional and Thana Circles.

Sudder Sub-Division.—Includes Englishbazar, Kaliachack, and Seebgunge, and part of Goregoribah, under Mr. J. J. Livesay, C.S., district relief officer. One relief inspector (Mr. Christopher Owens) deputed to Seebgunge, at his post.

2.—*Gomastapore Thana Circle.*—Head-quarters Gomastapore, under Lieutenant Burgess. One relief inspector at his post.

Nawabgunge Thana Circle.—Head-quarters, Nawabgunge, under Baboo Isan Chunder Sein, Sub-Deputy Collector. One native doctor at his post.

Note.—All the officers placed in charge of the above circles are at their posts. The appointment of an additional road overseer has been intimated, but I have not heard of his arrival yet.

The results of charitable relief operations for the past fortnight, so far as reported, are as follows:—

1.—*Chanchal Relief Circle.*

Name of Centre.	Total of persons relieved.
Chanchal ...	4,217
Maltipore ...	522
Khurbah ...	392
Futtehpore ...	110
Soroopgunge ...	158
Toolsigunge ...	644
Debeegunge ...	102
Goregoribah ...	25
Arhidangah ...	4
Total ...	6,174

The expenditure was 72 maunds, 26 seers, and 2 chittacks of rice, and Rs. 1-15 cash.

2.—*Gazole Relief Circle.*

Name of Centre.	Number of persons relieved.
Gazole ...	86

The expenditure was 33 seers, 12 chittacks of rice, and 2 annas cash.

3.—*Saldah Relief Circle.*

Name of Centre.	Number of persons relieved.
Maldah ...	238
Bulbul Chandee ...	118
Total ...	856

The expenditure was 4 maunds, 3 seers of rice, and Rs. 3-10-6 cash.

4.—*Sudder Sub-Division.*

Name of Centre.	Number of persons relieved.
Englishbazar ...	760
Kaliachak ...	816
Kansat ...	248
Seebgunge ...	275
Total ...	2,099

The expenditure was 26 maunds, 7 seers, and 2 chittacks of rice, and Rs. 4-0-6 cash.

5.—*Gomastapore Sub-Division.*

Name of Centre.	Number of persons relieved.
Gomastapore ...	279
Shirshi ...	88
Total ...	367

The expenditure was 4 maunds, 20 seers, 8 chittacks, and Rs. 1-6-6 cash.

6.—*Nawabgunge Sub-Division.*

Name of Centre.	Number of persons relieved.
Nawabgunge ...	428
Anupnuggur ...	10
Lukhinarainpore ...	84
Shurullah ...	2
Jhelim ...	27
Total ...	551

The expenditure was 6 maunds, 8 seers, 2 chittacks of rice, and 1 anna 9 pie cash.

The total number of persons relieved during the fortnight is thus 9,583, at an average per diem of 684 persons.

	Rs.
The total amount of local subscriptions up to date amounts to ...	7,383
Add Central Committee's grant—	
1st instalment ...	10,000
2nd „ ...	10,000
Total ...	27,383

The following sums have been paid to the Secretaries to the undermentioned committees through Baboo Isan Chunder Sein, Sub-Deputy Collector, as the Government contribution equivalent to the amount locally subscribed, *viz.*:—

	Rs.
For Kansat ...	813
„ Seebgunge...	400
„ Nawabgunge ...	589
„ Gomastapore ...	280
„ Rohunpore...	197
Total ...	2,279

G.—Financial Results of Fortnight.

	Rs.	As.	P.
Total expenditure from District Treasury, as shewn in the last fortnightly narrative	1,10,899	3	9
Details of the above total—

Maldah,
The 8th April 1874.

F. J. ALEXANDER,
Offg. Magistrate-Collector.

No. 10, dated Rungpore, the 6th April 1874.

Memo. by—R. Porch, Esq., Joint-Magistrate and Relief Officer, Rungpore.

Forwarded to the Secretary to the Government of Bengal.

Narrative of Scarcity and Relief in Rungpore District for the fortnight ending 4th April 1874

A.—State of the Country.

In the part of the district north-east, towards Kurigram, the importation of grain is active, and the supply at the hauts and bazars is reported to be as plentiful as it used to be in ordinary times. The weeding of the early rice has everywhere begun, and in some parts near Kurigram laborers are in consequence leaving the relief works. There is no change in this quarter in the condition of the people, which occasions little anxiety at present, and is as satisfactory as can be expected while prices are so high. The grain market continues the same, both as to supplies and prices, which are from Rs. 3-8 to Rs. 4 per maund of 80 tolahs weight.

At Borobaree in the same direction the relief officer observed, on road No. C6, that women of low caste and prostitutes had come out to work, and it was assumed that the circumstances of the poorer people in that neighbourhood were getting bad. The zemindar of Bhitarband opened an annachatra at Didhata, and the daily average of those who attended was 35, and has not increased. No cases of actual distress were discovered. The wheat and pulses recently harvested have temporarily improved the condition of the people in this neighbourhood. The importations there are by land from Cooch Behar, and by water from Gowalparah and Eastern Bengal. The supplies are fairly maintained by both routes. In Fulbarya Chakla distress is general, but it has not assumed any severe form among the poorer classes. The Cooch Behar officers are doing a great deal towards relief by providing work on roads and in digging wells. Want of water here, as in many other parts of the district, is complained of.

2. Passing to Kishoregunge and Juldhaka, and that quarter on the north-west, the reports are, that the supplies of rice in the chief markets are well maintained, and that prices remain the same,—from Rs. 3-8 to Rs. 4 a maund of 80 tolahs weight. The standing crops are all doing well, and prospect is good. The condition of the people in that part of the dis-

* 13 cases grain-theft.

† 8 cases grain-theft.

trict is in no degree critical as yet, though, from the dearness of food and straitened means, many isolated cases of distress have come to notice, and have been relieved.

From Kallygunge, on the south-west, Mr. Blair reports:—"The price of best rice at the river ghâts is Rs. 4-2 to-day, April 3rd 1874, and the lowest-priced rice Rs. 3-14. The price has been rising steadily during the fortnight. The supply has been very deficient; the average daily amount at the Premgunge and Kolmoo ghâts has been about 500 maunds at the former, and 600 maunds at the latter—1,100 maunds. There is, I hear, a large supply of grain at Chellobaree, about one day's journey south of this, and rice is selling there at Rs. 3-5. The dalals of this ghât have sent word there, and have no doubt that a lot will come up. The rise here is stated to be owing to the deficiency of the supply and the great want of grain.

"There has been no rainfall during the fortnight, and the early crops are in consequence suffering much. The 'cheena' is all on ear, and very much dwarfed and withering up; the known crop is also suffering much, and it is stated that unless rain falls soon both crops will be a failure. Wheat and other cold weather crops have all been gathered, and are good." Between the 1st and the 4th rainfall has been reported, and appears to have been tolerably general. The country looks bright and green, and the crops still promise well.

3. Towards Gaibanda and Bhowanigunge, south-west and southwards, and towards Sadullapore, south-east of Gaibanda, the supplies of rice in the bazars are reported to be scanty, owing to the falling off of imports from the neighbouring districts of Bogra and Dinagepore, and prices vary from Rs. 3-9 to Rs. 4 per maund of 80 tolahs weight.

No reliable information can be obtained regarding private stocks; but it is believed that about one-eighth of the population have about two months' stocks in hand. Wheat and barley and sugarcane are very good. The millets have been suffering from want of rain; early rice continues being extensively sown on the palee lands; but in the direction of Kamdiar (red clay) land, the sowings have not yet been commenced. The condition of the people in the south-east of the district remains unsatisfactory on account of the high prices, but the wheat and pulses have much benefited those who raised these crops. Applications for advances from the ryots are most numerous, and the zemindars and large jotedars are required to help their ryots. Loans are being made, but it is found difficult to manage with the non-resident land-owners.

4. In Nisbetgunge and Kourgunge, on the west of the station of Rungpore, the condition of the people is not less favorable than in the southern parts of the district already described. More active relief is, however, going on in that quarter, and the circumstances of the poor are carefully watched. Information of urgent distress and of a case of starvation was received yesterday, and the relief officer proceeded to Kourgunge to give relief and to ascertain the facts.

5. In Mahigunge, Sundargunge, and Molung active relief work is going on everywhere, and arrangements are well organised in advance of present necessities. The recent sale of the rice saved from the fire at the Mahigunge golahs was so arranged as to be in some degree a measure of relief for the poor people of that neighbourhood. Public relief in the way settled and charitable aid in all its modes, are being actively applied to assist the indigent ryots and their families, who, in many villages, are very hard pressed, and to seek out individual cases of destitution, which might be fatal except for the watchfulness of the relief officers and their assistants. Distress appears both from official and private report to be well got in hand in these parts. Private trade is active. The prices at the chief hâts and bazars are from Rs. 3-9 to Rs. 4 per maund of 80 tolahs

6. Proceeding southward to Peergunge, Sadullapore, Govindgunge, and Kamdyar, owing to the pressure from high prices, local failure, or absence of crops and ill-supplied markets, the condition of those first affected by the scarcity is more critical than in the part of the district last described. The reports have occasioned doubt and anxiety. The promtest action has been taken on the first information or requisition. The staff has been increased in Govindgunge; the transport of grain there has been pushed forward; the relief officer has been kept supplied with funds. Materials for home-relief have been sent, and employment on road-repairing and well-digging has been opened out in every direction through the worst tract for the relief of distress in the neighbouring villages; advances of grain are about to be made to the indigent ryots should circumstances be found to require this.

7. The relief officer, Mr. Damant, reports that the supply to the south and east of Sadullapore "and of Govindgunge is still tolerably well maintained by imports from the eastern districts by the Brahmaputra. In Peergunge, and the west of Govindgunge, the supplies are very small, and may part us at any time. Importation from Dinagepore seems to have entirely ceased. A very little comes from Bogra, but this cannot last long. Prices are excessively high, ranging from Rs. 3-12 a maund on the banks of Brahmaputra to Rs. 5; in some small hâts the price is Rs. 4-4."

"The village inspection has disclosed greater distress, the relief officer reports, than was anticipated. In the tract lying west of the Kurotya, the state of the villages is wretched beyond description; the people have sold every thing they possessed, and are now solely dependent on Government. Many have sold their plough-cattle, the last thing with which a Bengalee ryot parts. I found one instance where a man had sold the roof over his head. Many royts have deserted the place altogether, and gone to Bogra and elsewhere. The relief officer reports that the people seem to be most grateful for the relief works. The villages in this quarter are now quite deserted in the day-time. Every one is to be found on the road; the women are now coming readily, bringing their children with them. All are most anxious

to get Government rice. The want of water is felt nearly as keenly as the want of food. In many villages people have to go two or three miles to bring a *gharah* of water. I have begun to excavate three old tanks in the worst parts, and am digging wells at every mile along the roads. A few cases of cholera, with one death, have occurred among the coolies."

In the neighbourhood of Ramnagar, Dhaperhat, Tremohini, and Peergunge considerable distress is reported. No cases of death have occurred, but many instances of people very much reduced by starvation have been found. There are about 10,000 persons employed on the roads, of whom about half are men, one-third children, and one-sixth women. The women only work on the roads on the west side of Govindgunge, where they come in great numbers.

8. In many tracts on the south and the south-west of the district the poorer classes of ryots have been obliged to sell or pledge the few things they have. Many complain of the difficulty of having only one full meal of rice a day, and of having to eke out the second meal with various coarse substitutes for rice. All those who work on the road earn enough to provide their two meals of rice a day, and a little for their families besides. The ryots in many places from time to time complain of inability to sow their lands from want of seed. The lands, however, where ready, have all been sown, and a far larger area than usual has been cultivated with early rice. Many of the ryots are found after investigation to have complained of their zemindars and of their circumstances without reason. There is, however, much widely-diffused distress which is being carefully looked after, and relief to meet the circumstances that arise in each locality is promptly organised on the spot. People complain of the dearness and of having to live closely, but only in isolated cases has the pressure from high prices produced actual distress. There have been no deaths traceable to the present scarcity. No premature deaths have come under notice for inquiry. The only case that has come under inquiry in the last fortnight was that of a very old woman who died of disease, probably hastened by privation.

6. The wheat and pulses have been stored by the ryots, and are being used for food; very little of it finds its way into the market.

The wheat is not ground in mills and made into flour for bread, but is simply husked and boiled like rice and eaten with salt, chillies, &c.; or else after husking it is made into a coarse sort of meal, and then mixed with water into a mash and sweetened with goor, and so used for food. The poor here do not appear to know the proper use of wheat, and if taught can make nothing of it, as they have no hand-mills for this purpose.

10. All classes understand thoroughly the modes of relief adopted by the Government, and many anticipate the action of the relief officers, by ready complaints of distress, with suggestions for relief works, and annachatras in their neighbourhood. They are very grateful for what is being done, and the laborer-ryots declare that many of them must have perished but for the relief works. Under the present circumstances of the people (except in the worst parts of Govindgunge), small advances are better appreciated and more sought after than any other form of relief.

11. There have been numerous complaints from bodies of dissatisfied ryots as to alleged abuses in manipulating the advances obtained by the zemindars and jotedars without interest from Government. The cases have been disposed of to their apparent satisfaction, and every precaution has been taken to see that the advances are properly distributed among the ryots, and that substantial agreements are executed to guard against possible attempts hereafter at realising prohibited interest from the ryots. The independence of the ryots in Rungpore affords the best guarantee against such endeavours.

12. All complaints regarding scarcity are taken up at once, and assistance and investigation proceed together. Relief works are opened within easy distance of villages where great poverty or distress are believed to exist, and all ablebodied persons requiring means of subsistence are provided for in that way. People unfit for work are sent to the nearest annachatras; if too distant, they get a ticket for 7 days or 14 days' food, or an advance direct. The homeless mendicants are housed at the chatras as long as they choose to remain, but a few beggars unfit for work obstinately refuse to avail themselves of the annachatras, and they have been temporarily relieved with donations of raw rice and a little money at the villages they usually frequent.

13. Complaints of neglect on the part of the zemindars are promptly enquired into, and the attendance of the zemindars or their agents is caused, and they are required to assist their ryots with money or grain from their resources, or else to take advances from the Government for the purpose. The zemindars, as a rule, appear to be behaving well to their ryots, but some of them are still very backward in their duty in this respect. During the last fortnight relief has everywhere, and in every mode, become developed and better organised. The appearance of large bodies of the peasantry has been carefully observed and reported on from all quarters. There are no indications of debility or deterioration from insufficient nourishment among the generality of the poorer classes, who live much from hand to mouth.

14. In the north and north-east of the district near Kulaghat, the relief officer visited a number of villages, and also along the road from Kulaghat to Sapana. There was nothing apparent to indicate distress among the poor of this neighbourhood, and inquiry confirmed this view. In some places the men were very clamorous, and from their behaviour it was clear they were under a false impression, and believed that if they were only sufficiently importunate and complained as loudly as possible the Government would supply them with money by loan or advance, or even as a gift. In the same locality others were found going to the opposite

extreme. They resented the idea of there being distress in their villages, and answered to all inquiries—"there are none in want here." The condition of the people does not appear to be bad in that part of the district (Borobari). It is, however, with the rest being carefully watched. The price of rice there is from Rs. 3-4 to Rs. 3-8 a maund of 80 tolahs weight.

15. In another case a petition from a body of clamorous ryots, giving a very bad description of distress and starving people, and of the neglect of the zemindar, was investigated. It was unfounded in fact throughout. On censuring the ryots, they blamed the mooktears for using exaggerated language. In numerous cases the ryots have complained without cause against their zemindars when they were well-off, and no relief was necessary.

16. In the majority of the villages bordering on the lines of relief works, a considerable percentage of the indigent ryots would have had the greatest difficulty in procuring their proper daily food, if it were not for the relief works; as it is, they are at present enabled to tide over a very critical time without loss of life or bodily injury from privation. It is evident, without referring to the worst parts of the district on the south-west, that within some 15 or 20 miles south of Rungpore, were it not for the timely relief measures, numbers must have been permanently enfeebled, and have perished prematurely from privation; not only many of the beggar-folk, who are now maintained by charitable relief, but some of the peasantry also, who have up to the present time been preserved in good condition, physical and moral, by the relief works now everywhere affording healthy employment.

17. There are no signs among the laborers of weakness or disease attributable to the present restricted means of the classes that supply rural labor. Whenever there has been a *bonâ fide* demand for employment as a relief measure, work has been opened in the neighbourhood requiring it. Where supplies are short, moodies are commissioned to sell Government rice to the coolies at 12 seers for the rupee, and grain can be taken in part payment of work where local supplies run short.

18. To resume: serious anxiety is not felt regarding the condition and prospects of the people in view of the relief measures now organised, except as regards the tract prominently brought to notice in previous narratives, *viz.*, Govindgunge, Sadullapore, and Peergunge. The grain transports have been pushed on in that direction to ensure that the supplies shall be equal to all requirements. Money and materials for relief have been despatched. A native doctor, with medicines, was sent out at the first intimation of a probable outbreak of cholera. It has been arranged that either the Magistrate or myself shall be present at head-quarters, so that any intelligence received may at once meet with proper attention. A Deputy Magistrate was sent to Peergunge, who, with an intelligent assistant, is temporarily supervising relief, and looking out for the occurrence of distress. Previously, a Deputy Collector of considerable experience visited Peergunge, and noted its requirements. An additional officer of experience, Inspector Prokast Chundra Deb, was hurried off from transport work to the relief officer of Govindgunge on the first intimation of anything like an approaching crisis in those parts. The people there are coming in numbers to relief works. The part of the country is in a bad state for supplies by private importation, and the people are generally reported to be very destitute; still Mr. Damant writes that there is no immediate danger of any loss of life from starvation.

The means for relief now being pressed forward appear to be equal to the emergency. The Magistrate has settled to go out to Peergunge and Govindgunge after conferring with the Relief Commissioner, who will be at Rungpore on the 5th or 6th instant.

19. With regard to the details and statistics required, urgent reminders have been sent to the relief officers to obtain these.

The circles have been but recently organised. Many of the officers are new to the work. The necessary subordinate appointments have only just been filled, and clerks are on their way out or have only just joined. Though the relief circles are manned and active work is going on everywhere in the most unsparing way, the results of the work do not come up in detail as required, and the great increase of work makes it difficult with a small staff to keep up the requirements by official communication. Efforts are being made to procure the details and statistics regarding classes of people obtaining charitable relief, and it is hoped that a return may be submitted in the next narrative. There is such a demand for intelligent, trustworthy natives for all kinds of work connected with relief that it is impossible to get an agency of the desired efficiency, as to general attainments, and knowledge of English. All the public offices have been in some degree disorganised by the drafting off good, active officers on relief duty, and still there are difficulties in filling "relief" appointments properly, such as transport-clerks, golahdars, relief officers, assistants and writers, and road sub-overseers.

The relief officers have not the work of supervision well in hand, and they will be required now to submit and procure the submission of the details as to charitable relief required. [While engaged in writing this report, the station was visited by a most remarkable hail-storm. There had been a great increase of heat at about 4 P. M., Saturday, April 4th, when a gale and blinding dust-storm, accompanied with the rumbling of distant thunder, set in from the south-west. It blew a regular hurricane, sweeping the plain with clouds of dust. A drenching rain, which seemed to last two or three minutes only, cleared the landscape almost instantaneously, and then the wind blew very chill, and large hail-stones, bristling with icicles, battered down on the roof and verandah, and kept striking the ground—thud-thud—at intervals of 20 or 30 or 40 yards. They looked like a good handful of hail-stones compactly crystalised into solid lumps. As the wind was strong, they were projected with much force, almost point-blank for about a stone's throw, and then striking the ground with considerable sound, they

bounded along two or three times, becoming suddenly spent and motionless from their spiked shape. The largest of them were, in the solid part, about the size of a tennis-ball, but measured round the short, thick icicles jutting out all round, they were, some of them, about the size of a cricket-ball. Some had a star-fish and coral-like form. All had the flowing stalactite appearance, which makes the rudest outline when frozen over pleasing to the eye. They certainly were most picturesque looking missiles. Some reminded of the spike-balls of iron, found at the end of old maces, and similar mediæval weapons. The storm was soon over, and the rain has done good. Fortunately the tobacco has all been cut and gathered, and none of the present crops have been injured. The mango trees have suffered. Mr. Oram, an old resident of Rungpore, informs me that he saw larger specimens than those outlined, the sketch of which is forwarded.]

20. Eighteen grain-thefts have been reported during the last fortnight. Two constables were detected in dishonestly disposing of a maund of the rice saved from the Moheegunge fire, and from the separate sums of money, aggregating about eleven rupees, found in the waist-cloth of one of them, it appeared probable that the offence discovered was not the only one committed by him. Both were convicted and punished for criminal breach of trust as public servants.

Petty pilferings of the Government rice while on transit to the golahs are attributed to the police and to the gáriwáns; a two-maund bag has been found half a maund short on reaching its destination. Under the present system it is difficult to get a thoroughly satisfactory explanation of deficiencies, or to make the constables and gárriwáns accountable for the same.

THE MARKET QUOTATIONS ARE AS FOLLOWS:—

			S.	Ch.	
Nowabgunge } Mahigunge }	per Rupee	... ...	11	4	of 80 Tolahs.

Govindgunge	,,	... ...	9 to 10	0	,,

B.—RELIEF WORKS.

The number of relief roads has been increased from 49 to 56.

New roads have been opened, and sub-overseers employed on them; 4 roads are still kept in reserve. The numbers remain about the same, except in the Govindgunge circle, where about 10,000 people have come upon the relief works for support. In Govindgunge, the rate has been raised from 3 annas per 100 cubic feet to 4 annas.

In Govindgunge they are employed in excavating tanks and wells also, as water is very scarce. The relief works have been steadily pushed forward during the last fortnight. The laborers have been paid regularly, and there have been no complaints from them. Government rice is being disposed of at twelve seers for the rupee, but no account of the sales has been submitted. In Peergunge, Govindgunge, and Borobaree sales have taken place.

C.—TRANSPORT OF FOOD.

With regard to private imports in Nesbetgunge thannah—in four villages Madupore, Sampore, Basuntpore and Ormaree, the relief officer found five thousand maunds of paddy stored. One resident of Sampore deals extensively in Julpigori rice, keeping a train of 16 carts, and hiring also for that purpose. Private trade is brisk in the interior, and ryots go long distances with their pack-bullocks to purchase grain where the market is slightly easier. Complaints have been made that the hiring of carts and bullocks by the Government has interfered much with private trade; and though the rates are high the cartmen regard it as "begár" or compulsory work, and dislike it, although the rates are high. Formerly private parties could procure a cart and pair of bullocks for about Rs. 14 a month. The rate given a cart and pair of bullocks was first fixed at Rs. 7 a month. Subsequently the last lot were engaged at Rs. 20, and all now demand the same. Pack-bullocks are now being engaged at Rs. 7-8 a month, and a corps is being organised. Several hundred maunds of rice have arrived for the Moharam Farnamagi, and also for the Tagores of Peergunge. The rice transport is working well, and there is no block anywhere. The despatches are less this week—as the carriage by boats has been stopped; 320 carts were received during the fortnight at Kallygunge, and 653 carts in all were at work. Efforts are now being made to bring the number up to a thousand or more. The zemindars have been called upon to assist, and a specially appointed officer deputed to the interior to engage and collect carts.

About 950 maunds were imported for private parties at Kallygunge and 800 maunds at Kolmughat during the last fortnight.

Inquiries were widely set on foot to organise a transport service for shallow water with dug-outs, but it was not practicable. The transport officer is about to visit Gaibanda to see if further means of transport can be opened up to Sadullahpore, partly by land and partly by the Ghaghat.

D.—Storage of Government Grain at Relief Works.

The golahs are ready in part everywhere, and the transport of grain is being steadily effected in accordance with local requirements. The list of completed subsidiary golahs has not been received from each circle; a complete list will be forwarded as soon as possible.

Accommodation is now ready for 1,85,000 maunds.

Besides the above, about 6,000 maunds are being unloaded from boats from Goalundo, and about 22,000 from steamer *Prince of Wales*. The whole of this is being stored in the Peergunge golah.

A special report regarding the circumstances of the destruction of the Mahigunge golah and the disposal of the salvage rice has been submitted through the Relief Commissioner.

E.—Advances to Private Parties.

Numerous applications have been made for advances by all classes of zemindars, patnidars, lakhirajdars, jotedars, great and small. Where they are not known, local investigations are made by the relief officers; and the *bonâ fides* of the application, the status of the applicant, the condition and number of ryots, and the propriety of the loan are reported on, and after such further inquiry as can be made advances are sanctioned under the best safe-guards that can be devised to insure their being applied as intended, and to prevent abuses.

Advances.

The amount of money advanced to the zemindars and jotedars to help their ryots is as follows:—

	Rs.
For purchase of grain	7,500
To zemindars for advances to their ryots	87,650
To jotedars	3,950
Add advances sanctioned during the fortnight, but not yet taken by the parties, previously sanctioned, and still pending	21,250
Total ...	1,20,350

F.—Charitable Relief.

The numbers daily relieved is over four thousand. Exact figures cannot be given, as no returns have been submitted from several of the annachatras.

There has been no instance of severe distress reported during the last fortnight, but many proper cases for relief are discovered by the officers on their village inspection; several new relief centres have been opened. One in particular at Dhaper hât in Sadullahpore, where the poor were found in very bad circumstances. (A road for relief work was opened there at the same time.)

The people who accept relief at the annachatras are nearly all by habit or infirmity unfit for work, and are of the beggar class; such an abundance of relief has been provided for them (they are not a large number for the district) that they are very independent about attending the annachatras for food.

They murmur at the Government annachatra arrangements, and are unwilling to stay at the chatras in the day or to do any work. They object to remain for a second meal, and beg to be provided with the early and late meal together, once only in the morning, so that they may fill their bellies well and take their chance of getting what they can elsewhere for supper.

Where annachatras are near together, as at Sankamari (public), and Radhabullab (private), the more active of them manage to get a meal at both chatras. Ample arrangements have been made so far for relief centres, and if people of this class are found unrelieved, it is because they will not remain where food is provided for them at the chatras. When found in the villages, they are temporarily provided for with an advance of grain and money. At the annachatras every effort is made to see that they are availed of to the fullest extent in accordance with the spirit of the rules, so as to relieve want among a class which is now almost entirely thrown upon organised public and private charity.

The officers in charge of relief centres, public and private, endeavour to keep in attendance those who begin to frequent the chatra, so that their charitable action may contrast favourably with that of other relief centres, and may be as unrestricted as possible.

At the annachatras at Alaikury, the scale of food has been raised from 4 chittacks of rice and 4 chittacks of potatoes, to 6 chittacks of rice and 4 chittacks of potatoes, and half-a-pice for condiments. This scale is general. The average attendance now is 48 Mahomedans receiving cooked food, and 60 Hindus receiving uncooked food. Before the rules of issuing cooked food to Mahomedans was instituted, the number taking relief was about 500 a day; when the cooked food system was adopted, the numbers fell at once to the present average, which has since been steadily maintained there without any complaints of distress.

Home relief in the shape of cotton for spinning and paddy for husking has been freely given. At the annachatras some women, able to do a little work, have been asked to take it, but they refuse, and it has not been pressed on them. In the Gobindgunge annachatras, the relief officer has not adopted the cooked-food system, potatoes are scarce there, and half a seer of raw rice and a half pice are given to each person who comes for relief.

New cotton and rice-distributing centres have been established in the relief circles, and agencies open among the pradhans of the villages. In Sundergunge, the zemindar Baboo Annada Proshad Rai is now opening a cooked-food relief agency in one of his villages (Khamthana).

The arrangement is for the zemindar to supply the rice, and servants to take charge of it and prevent waste and embezzlement, and the ryots with their families will come and eat the rice cooked by some of their own village people, who may be willing to serve at a house selected by themselves.

It will be a kind of co-operative private arrangement, and relief will be given in a form less open to prejudice than in the public or private annachatra as ordinarily unengaged.

R. PORCH,
District Relief Officer.

Memorandum by Magistrate.

During the fortnight I have been through the Mahigunge, Sundergunge and Molong relief divisions and conferred with the relief officers at their work. In Mahigunge distress is spread over a large area, and I have given Munshee Muttiulla an extra assistant for the work. I went over the worst tracts and consider that the relief officers will be able to meet all requirements. Sundergungè is a small circle, distress has been acute there, but the worst has now abated, and all is well in hand. Baboo Okhoy Koomar Sen of the Molong circle thinks his division safe; road works are plentiful, the people flock to them, and a large part of the western area of the thannah is well cared for by Baboos Luchmiput and Dhanput, who take the entire management of all relief in their estates. A large number of boys are everywhere on the roads, and, earning their four pice, materially assist their families. The state of Mr. Damant's sub-division, Govindgunge, Peergunge, and Sadullapore, is the most critical. The relief officer for Peergunge has not yet arrived, and I had sent down there, temporarily, Baboo Brojo Mohun Roy, Deputy Magistrate. In the tract of Govindgunge, west of the Kurutiya, a large part of the population has turned out on the road, men, women, and children, and they are supplied with Government rice; 6,000 maunds have been stored in the thannah, and the whole number of carts under the transport officer will now be employed in carting rice to Govindgunge and Peergunge, where the allotments are 50,000 and 25,000 maunds, respectively. The other divisions will be supplied by boat and pack-bullocks. I am now about to proceed to the circle of Mr. Damant's division.

The registration of importation has been commenced, but the returns are as yet incomplete. For Rungpore itself, I have the returns of one week complete; the supply is a total of 1,837 maunds—

	Mds.
Rice	1,488
Paddy	349
Imported from Dinagepore—	
Rice	1,447
Paddy	157
Local supplies—	
Rice	41
Paddy	192

The Dinagepore supplies come mostly from Habrah; but the Executive Engineer who was lately at Kholahatti tells me that some of the cartmen who brought rice averred they brought it from Dinagepore city, where the price is cheaper than it is here.

At the mouth of the Teesta, the importation by boat was, during the fortnight—

	Mds.
Paddy	1,968
Rice	4,712
Total ...	6,680

No returns have yet been received from the Dhurlah.

Importations at the mouth of the Teesta, and at Kallygunge on the Brahmaputra, were 1,750 maunds.

From here all the river-side and inland markets on the eastern border are supplied either by boat or pack-bullock. At Sundergunge market, where I was a week ago, the supply of rice, 125 maunds, and paddy, 150 maunds, all came either from the mouth of the Teesta, or from Chilmari on the Brahmaputra.

To the north-north-west and north-east trade is active as usual, and the reports show stocks in places. I have no details to show in this report, but hope to have some for the next.

RUNGPORE,
The 6th April 1874.

E. G. GLAZIER,
Officiating Magistrate.

No. 41, dated Bogra, the 6th April 1874.

From—C. A. KELLY, ESQ., Officiating Magistrate and Collector, Bogra,
To—The Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit the fortnightly narrative as follows:—

Narrative of Scarcity and Relief of the District of Bogra for the fortnight ending the 6th April 1874.

A.—STATE OF THE COUNTRY.

There are still supplies in the bazars though at high rates. Ordinary rice at Bogra was selling on the 4th April at 10½ seers of 80 tolas per rupee, at Sultangunge 10½ seers, and at Dupchanchia 11 seers.

	Maunds.
At Sultangunge	1,200
„ Dupchanchia	9,000
„ Hili	5,000
„ Burigunge	4,000
„ Kichak	3,000
„ Bogra	1,000

has been reported as in the hands of traders and petty dealers up to about the 4th April 1874. ·82 inches of rain fell at Bogra on the 1st and 1·82 inches on the 3rd instant. A fair average of matar and other cold-weather crops is expected. The sowing of sesamum and jute has commenced. The aous crop has been partly sown in the eastern part of the district and the sowing continues. As regards the condition of the people, I would beg to repeat the remarks given in my last narrative. I notice in the report of Mr. Gupta, recently received, the case of a person he observed starving in his circle, thannah Shibgunge, and in which I presume (though he does not mention it) that he gave immediate relief. I am calling for further report from him on this point (as he does not give particulars). Fifteen grain thefts during the fortnight. I have already mentioned our particularly bad tracts, and in addition I should now mention the north and east of Shibgunge; but I am of opinion that the whole district requires watching while these high prices continue, as of course isolated cases of hardship may be expected to occur even on the more favoured tracts. I have already submitted a scheme to Mr. Robinson with the view of attaining this object.

B.—Relief Works.

I annex a list of lines of relief roads and works with the number of laborers on the 3rd April on each—

		Men.	Women.	Children.	
1.	Shariakandi road	487	643	1,685	
2.	Sultangunge road	574	1,211	730	
3.	Matidali road	433	857	1,178	
4.	Dupchanchia road	294	1,127	959	
5.	Dinagepore road	2,749	4,063	5,058	
6.	Shibgunge road	660	...	...	
7.	Serpur road	343	282	123	
8.	Nungola road	765	223	569	
9.	Nashipur road	198	170	351	
10.	Dupchanchia to Shynamukhi ...	525	343	231	
11.	Tank at Fuldighi	72	25	...	
12.	Tank at Kahalu	480	...	50	
13.	Tank at Birgaon	45	...	...	
14.	Tank at Goharpara	193	...	93	
15.	Nakhila road	...	...	...	
16.	Tank at Pilkhanj	162	...	...	
	Total ...	7,980	8,944	8,027	24,951

This number is certainly large, but it must be noted that the number of men among the whole is only 7,980. The labour exacted from the women and children is light, the pay comparatively good, and no wonder the works are popular in these times. I have actually heard of persons coming with their own laborer servants on to the road work, and people leave their villages *en masse* for the purpose. I shall direct the circle officers to endeavour to prevent very small children from coming on to the roads, as the people are bringing them very young. They are employed in beating the earth, and of course such relief is practically almost gratuitous, but it is difficult to draw a hard and fast line in such a matter. Another reason which tends to account for such a large influx is, in my opinion, the large proportion of Mahomedans, over 80 per cent., in this district. Hindu women would naturally be averse to leave their homes. I hear of men actually staying at home and making their women go out and work for them. I shall be prepared to sell food when necessary to laborers on the works. *At present they are supplied from the bazars.

C.—Transport of Food.

The reports received show importation of 11,000 maunds of rice from Pubna, Dacca, and Mymensing districts by way of the Daokolea and Bengali rivers. 600 maunds of rice and 500 maunds of paddy from Rajshahye by carts. Now that the very considerable increase of 1,90,000 maunds of rice has been ordered to Bogra in addition to our previous allotment, I am unable to say that our means of transport are sufficient. We have more than 600 carts at work, which nearly, if not quite, exhausts our cart resources. Pack-bullocks and ponies have been called for from all police stations* and out-posts, some of which have been sent in. The Serpur Police have also been told to send small boats to take rice from Bogra to Serpur. I have also asked the Commissioner of the division to have 50,000 maunds of our allotment sent from Goalundo to Joregatcha whence we can convey it in small boats up the Karotaya to Bogra. I have also written to Natore and Serajgunge for more carts, and the Sub-Inspector of Adamdighi has been directed to try and obtain carts from Natore. I really do not see what more we can well do. We might perhaps be able to utilise some of our road labourers as transport coolies, and I will see what can be done in this respect. If the Government or the Relief Commissioner could send a supply of carts or other efficient means for transport from elsewhere, no doubt we could distribute our supplies more quickly; six hundred more carts would be not more than necessary. Meanwhile, we must get on as best we may, and as the district is small, when the rice is once landed at Shohagipara, we could, in case of need, send sufficient for immediate wants to any part of the district from there without much delay.

* Those sent in have been found unfit and returned. We cannot expect effectual aid by this agency.

D.—Storage of Government Grain at Relief Works.

In addition to places of storage previously reported upon, new storage-room has been ordered at places noted in the margin in order to accommodate the increased supplies ordered. Amount of food-grain reported as received up to the 4th April 1874 is 49,729 maunds. The only food-grain as yet distributed has been 150 maunds sold for Rs. 500 on acccount of charitable relief purposes.

1. Bogra.
2. Dupchanchia.
3. Khetlal.
4. Panchbibi.
5. Hilee.
6. Gobail.
7. Shonamukhi.
8. Madhupur.
9. Gayabanda.
10. Durgapore.
11. Dargahat.
12. Jamirbaria.

E.—Advances to Private Parties and their Results.

Several applications have lately been received from persons willing to assist their tenants. Rs. 2,500 have been given out in the period under report as loans in compliance with applications. Some undisposed of applications will receive attention.

F.—Charitable Relief.

I have already reported in my last narrative on our commencement of charitable relief operations on the Government aided system and our committee arrangements. Mr. Atkinson, Mr. Collier, and Mr. Gupta, relief circle officers, have arrived and have gone out to their respective circles, *viz.*, Panchbibi and Badalgachi, Adamdigi, and Shariakandi. Mr. Nugent has also been out in Bogra thannah, of which he is the relief circle officer, and Inspector Umes Chandra Ghose is in charge of Khetlal. I propose now that Mr. Clay, District Relief Officer, has arrived, to put him in charge of Bogra thannah and to send Mr. Nugent, aided by two assistants, to take charge of thannahs Sherepore and Shariakandi, with special reference to the distressed account in these thannahs, which are on the whole comparatively well off.

Statement showing the progress of Charitable Relief in the District of Bogra.

Number of Committees and Sub-Committees as yet appointed.	Number of special relief Sub-Divisions opened and officered.	Number of regular relief circles opened and manned by special officers.	Number of relief circles opened and managed by planters, zemindars and other residents.	Number of work-houses or centres, for the distribution of food and gratuitous relief.	Number of men, women and children (with total) in receipt of gratuitous relief in any shape, through the charitable relief organization daily; this should include people employed or relieved by the relief committees or relief officers under any of the heads of Instructions.
One Committee and seven Sub-Committees.	.....	Five	.....	.....	Up to 4th inclusive, 583* are reported, but the *returns from* Panchbibi and Badalgachi are not yet received. They shall be sent as soon as possible after receipt.

G.—Financial Result of the Fortnight.

For construction and repairs of rice golahs	685	8	0
For transport of Government grain	6,050	0	0
Establishment	57	8	0
Salary of relief Native Doctor	.....		
Total ...	34,281	7	11

I have remarked above on the subject of the increased number of laborers on our works. I am glad to be able to report a most seasonable rainfall on the 1st and 3rd April 1874 at Bogra, which I trust may have extended largely over the khyar land. It has arrived most opportunely and cannot fail to do considerable good. Amun rice was selling at 10½ seers in the Bogra market on the 6th April 1874. I would remark in conclusion that it should not be supposed that the whole of the very large number of persons employed on our relief works are very badly off. It may be taken as a fact that many comparatively well-to-do people have come to them. But with reference to what I have said above with respect to light labor and good pay, I would not be understood as recommending either the increasing of the security of the labor-test or reduction of the wages. The object of Government is to save life, and although in many cases the pay may be received by people who could exist without it, yet on the other hand I consider that it would be unsafe by means of a hard and fast rule to deprive many others, *viz.*, those really in distress and often with large families of what is no more than adequate for their wants. We are in urgent want of at least three native overseers or sub-overseers; I trust they may be sent at once.

* *Vide* my remarks in my last narrative.

BOGRA MAGISTRACY,
The 6th April 1874.

C. A. KELLY,
Offg. Magistrate.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th April 1874.

READ—

The Fortnightly Narratives of the Burdwan Division for the period ending 4th April.

1. ***Hooghly.*—On the whole the account given of the condition of this district is satisfactory. Prices are stationary; there is no marked distress of a general character anywhere, and no very great demand for relief work. Only 1,650 persons are employed on Government work and 7,812 on private undertakings; of the latter, however, only 2,147 are said to be local laborers.** The organisation for charitable relief is very extensive, there being no less than 136 sub-committees, besides four large serais or public kitchens on the great lines of traffic. 901 persons daily are receiving charitable relief.

2. *Howrah.*—Mr. Grant was specially ordered to include in his report the relief works and charitable relief operations in Howrah. It is not satisfactory to find him still omitting to furnish any information on these matters.

3. *Bankoora.*—Prices show here a tendency to fall, and in the distressed tract of Moheshra work has been provided for all who require it. The Commissioner has again sent Mr. Larymore to inspect this pergunnah, and his report will be awaited. The numbers on Government relief works were 2,740 in all, while about 2,000 more are employed on private works. About 1,200 persons daily get charitable relief.

4. *Beerbhoom.*—There is no marked change for the worse in this district as yet. About 3,600 persons are on relief works, and 683 are daily getting charitable relief.

5. *Burdwan.*—The Government has already had special report upon the increase in distress in the Bood-bood sub-division of this district. The Collector has now personally ascertained that things are worse here than he had at all anticipated. The fever has of course reduced the condition of the people of this part below the standard. It is hoped that the Collector will be able to show that he exercised from the first due vigilance as to the consequences of want supervening on chronic disease. Cutwa sub-division also appears to be more distressed. The other parts of the district are not very badly off. The table showing the number on relief works is not very clear, and the column for the average daily number is wrongly totalled. Apparently about 13,000 persons are on the works, while 9,137 persons are in receipt of charitable relief. The charitable relief is administered by the district committee, five sub-divisional committees, and 225 village committees.

6. The Lieutenant-Governor being about to visit the Burdwan District himself, will not here make any further remark.

7. ***Midnapore.*—The state of this district is not now such as to cause any alarm or anxiety. The Jungle Mehals, about which some fears were entertained, are apparently not badly off; and though some distress among the weaving population near Chunderkona had shown itself, this has been met by starting gunny-weaving and opening food depôts for charitable relief. The measures adopted seem sufficient.**

By order of the Lieutenant-Governor of **Bengal,**

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

No. 2378 S.-R.

Copy forwarded to the Commissioner for information and communication to district officers.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 14th April 1874.

No. 17T., dated Burdwan, the 10th April 1874.

From—C. T. BUCKLAND, ESQ., Commissioner of the Burdwan Division,

To—The Offg. Secretary to the Govt. of Bengal, Statistical Dept.

I have the honor to forward herewith, in original, the fortnightly narrative for the district of Burdwan up to the 6th instant.

My previous letters will have prepared the Government for the receipt of more unfavourable accounts of the state of the Bood-bood sub-division, and the Collector states that the number of applicants for relief is increasing at a rate which he did not at all anticipate. It is to be regretted that he did not take earlier and more active measures to make himself acquainted with the state of the sub-division, but now that he has become more alive to the difficulties with which we have to contend, I trust that the measures which are being taken for the organisation of charitable relief will be found sufficient for the protection of the people.

The Collector complains of the non-receipt of the Jehanabad sub-divisional report, but it reached him on the 7th April, and contains no information of any material importance.

The Collector has appended a copy of the proceedings of the charitable relief district committee, and of the rules drawn up for the guidance of the relief sub-committees. I beg to recommend that these may be separately published in the *Calcutta Gazette.*

No. 11, dated Burdwan, the 6th April 1874.

From—E. H. WHINFIELD, ESQ., Officiating Collector of Burdwan,

To—The Commissioner of the Burdwan Division.

I have the honor to submit the narrative for the fortnight ending to-day.

A.—STATE OF THE COUNTRY.

2. The Raneegunge Deputy Collector says that the supply of rice is plentiful; that rice is still flowing in from Midnapore and Bankoora; that the grain trade at Raneegunge town is very brisk; that prices have risen about two annas a maund, and now range from 11 to 12·30 seers of best rice, and 13·5 to 13·91 seers of common rice for the rupee; that no rain has fallen; that there is "no immediate cause for anxiety as to the condition of the people;" that rice is procurable everywhere; that there is no considerable demand for employment on the relief works; that the weaver class has been taken in hand, but even in their case the need is not very urgent; that in places inspected by him during the fortnight nothing like local distress among the weavers was found, but on its becoming known that it was intended to relieve them they applied for relief in large numbers; that a few cases of distress amongst beggars and travellers have come to light, and that even the village sub-committee do not allege the existence of any misery or starvation at present.

For my own part I do not think that there are any grounds for anxiety about Raneegunge at present.

In Bood-bood, I am sorry to say the case is otherwise. The number of applicants for relief in that sub-division is increasing at a rate which I did not at all anticipate. In my last fortnightly report I mentioned that several food depôts for the distribution of cooked food had been opened there, and the attendance at some of these, notably at Gulsee near Kanoo, was very large. I have therefore thought it best to go over some of the more easily accessible parts of the sub-division in company with Baboo Bagalananda Mookerjee, and endeavour to gauge the amount of distress for myself. Accordingly I visited Gulsee and Kamoo villages near Kanoo junction, Oorgram, Mahata, and Dignugger near Gooshkara station, and Pogram, Kolianpore and Bhedia near Bhedia station. Also I have been to Bood-bood itself, and visited the villages of Eral and Bhalkee. The result of my enquiries is that there is most undoubtedly a great deal of distress there. This distress is more severe in the fever-stricken villages, such as Dignugger, Kamoo, &c., but it prevails in a less degree in almost every village I visited. The condition of some of the people I saw was very wretched. One man, who had been worn by long-continued attacks of fever, and recently by want of proper

food, said that he was accustomed to sit all day in a tank to ease his pain. The laborers (Bagdis, Haris, Doms, and so on) complained very loudly of the want of work, and it appeared that many of the men had emigrated to Cachar and elsewhere, leaving the women and children. The so-called respectable classes were nearly as loud in their complaints as the poor. Sonars complained that their trade was at a stand-still; napits, that people have given up shaving; cultivators, that the mahajuns have refused the usual advances of grain; brahmins, that their sources of income have failed; chowkidars, that their chowkiran lands yielded next to no crop, and that their money dues (dwar mashara) are not paid; fakeers, cripples, and lepers, that charity is no more; weavers, that advances were no more to be had. Allowing of course for some exaggeration in all these complaints, still the looks of many of the complainants were enough to prove that they were in the main founded on truth. I should add, however, that I did not hear of any deaths from starvation. When this was asked about, the invariable answer of course was that many had died, but on asking for names and details, I found it impossible to arrive at any single authenticated case of death from starvation in the villages I visited. Deaths of fever-stricken persons of course there have been. The Deputy Collector has visited some villages in the west of the sub-division, and his report is gloomy. The price of rice at the large marts continues nearly as low as in other sub-divisions, but in the interior it is only procurable at the rate of 10 seers the rupee, and even less. At Bhedia, for instance, I found the cutcha seer of only 58 tolahs selling for 5 pice, and at Eral 14 chittacks of the cutcha seer of 72 tolahs cost 5 pice. The wheat and barley on the banks of the rivers has all been cut, but a good deal of teel is still on the ground. In some parts the people are eating the paddy-husks (koonro), which are generally given to cattle.

What has been done in the way of relief is set forth under the proper headings below.

The Cutwa Deputy Collector gives a somewhat less favorable account of his sub-division than in former narratives. He says, however, that rice is everywhere procurable for ready money, and that the allegation to the contrary means only that mahajuns are demanding unusually high terms for making advances, but adds that if the rains set in early and the season proves a good one, they may probably relax their terms. He says teel has been as extensively cultivated in this sub-division as in Bood-bood. He states that the condition of the people, especially in Ketugram and Munglecote, is becoming a greater cause for anxiety day by day; that petty thefts are increasing, and the plea of starvation is more frequently heard from the culprits, and that the number of confessing thieves in March was 9. It is not impossible that some of these confessions were made with the view of getting admission to the jail. At Patna in 1866, if I remember rightly, a number of persons actually petitioned to be imprisoned in the jail. The Deputy Collector mentions that the cultivators are still unwilling to work, but in some cases are beginning to do so, especially in Ketugram. He estimates the number of indigent laborers in Cutwa and Munglecote at over 11,000.

I am afraid distress is on the increase in Cutwa as in Bood-bood. The great rush of applications for relief which has been experienced in the past fortnight has no doubt (as you have observed), been much stimulated by the organisation of village sub-committees all over the country, and by the constant flying visits paid by various officers to almost every quarter, but that distress really is increasing in Bood-bood and Cutwa I have no doubt whatever.

The Jehanabad Deputy Collector has not sent in his fortnightly narrative, and I must beg that some notice be taken of this delay. It was only a month ago that his attention was particularly called to the necessity of submitting these narratives with punctuality.

I may say, however, of both Jehanabad and Cutwa, as well as of the Sudder sub-division, that I consider there is no need for any anxiety about them at present. The only parts where there is any appearance of distress is the western half of Sahebgunge thannah adjoining Bood-bood.

B.—Relief Works.

3. The annexed Statement I. shows all the road and other public relief works now going on under the charge of the Executive Engineer, the Embankment Engineer, the sub-divisional officers, the town committees, and chowkeedary punchayats and private persons. I would particularly draw attention to the circumstance that the demand for work in the Jehanabad sub-division (old Benares road) is very small, as it is also in the Sudder and Culna sub-divisions (Buddipore road and Kana Nuddee works). The demand for employment in Raneegunge, too, would seem to be but small. Work has been commenced on the road from Kanoo to Sahebgunge, but the returns have not yet come in. The numbers shown in the statement of the roads and works in charge of the sub-divisional officers of Jehanabad and Kanoo are estimates, as their returns have not been received. The Maharajah is carrying on tank-works at Culna and Burdwan, and Baboo Hitlal Misser at Bood-bood and Mancoor.

C.—Transport of Food.

4. Importation continues from the districts on the south. The total export by rail during the third week of March was 10,946 maunds, and total import 4,030 maunds. The returns for the last week in March have not been received.

D.—Storage of Grain.

5. The district committees have resolved to store grain at Kanoo and Bood-bood for the food depôts.

E.—Advances to Private Persons.

6. These are shown in the appendix A, Statement II. Advances for purchasing grain continue to be asked for, as remarked in my last report.

F.—Charitable Relief.

7. The arrangements for charitable relief are being extended and adjusted by degrees. The following is an outline of them. A district relief committee and five sub-divisional committees have been organised; 225 village sub-committees have been appointed all over the district, that is to say, rather over 10 to each thannah, or about 1 to every 15 square miles. In the vast majority of cases these village sub-committees now act only as reporting agencies, *i. e.*, as a sort of intelligence department to bring distress to the knowledge of the district and sub-divisional committees. But where the pressure of distress makes it necessary, they are used as administrators, distributors of relief, and managers of the food depôts and relief-houses which are established wherever necessary. The village sub-committees in charge of these food-depôts have received instructions to distribute cooked food to the infirm gratuitously, but to exact some kind of labor from the able-bodied. At the last meeting of the district committee, a set of rules for the guidance of these village sub-committees in charge of food depôts, was approved, which will be translated and circulated to them; a copy is annexed to this report. At the present moment there are no less than 27 food-depôts at work chiefly in the Bood-bood sub-division. The number has been swelled during the past fortnight, not only by the institution of many new depôts but also by the inclusion in the list of all the old fever food-depôts, the cost of maintaining which was accepted by the district committee at their meeting of the 28th ultimo, in consequence of the fever relief funds running short. Besides these, the Maharajah has three food-depôts at Burdwan, Culna, and Bood-bood. Wherever distress increases and the number of food-depôts becomes so large as to be unmanageable by the sub-divisional officer and his committee, as has been the case in Bood-bood, it is intended to appoint relief inspectors at the rate of about two to a thannah to visit and supervise these food-depôts. A mohurir to keep the accounts, cooks at the rate of one to every 100 men, and work overseers at the rate of one to every 50 men, are also attached to each food-depôt. These persons will be selected from among the distressed persons if possible. The sheds required will be built by the recipients of relief. The able-bodied men will be employed on any adjacent road work, or else at a tank in the neighbourhood; women will be employed on the various kinds of light-labor specified in the rules. Provision has also been made for making advances of money or material to weavers, to Beeparies to import grain, and to Pardahneshin women for spinning thread and husking rice. Simple accounts will be kept and abstracts submitted weekly. It is intended to utilise all the existing inspecting agencies, Medical, Educational, and Police, so as to exercise more complete supervision over these food-depôts, and enforce the application of the labor-test in the case of all able-bodied persons. The cultivators, and other so-called respectable classes, have been, of course, kicking against this regulation and holding out for gratuitous relief, but now show symptoms of giving in in some places. Rice for the use of the depôt is about to be stored at Bood-bood and Kanoo. The complete charitable relief organisation above sketched out is at present only required in Bood-bood. But something of the same sort will have to be set going ere long in Cutwa. The relief operations of the whole district are superintended by Baboo Bogolanando Mookerjee and an assistant. The prescribed statement of relief food-depôts will be found marked III in the appendix, as also a list of the food-depôts now opened, and the attendance at them.

The statement does not show the particulars of advances to weavers and others which are made in many cases direct by the district and sub-divisional committees.

Financial Results.

8. The annexed is a statement (IV) of the expenditure of all sorts on relief operations up to date.

9. A copy of the proceedings at the last meeting of the district relief committee and the sub-divisional narratives are sent herewith.

Two more food-depôts are to be opened at Bood-bood sub-division, one at Chuk Tatool, and another at Belgram.	6,987. This is an approximate number. The number of persons actually received will be given when the returns from the sub-division are received. The number of persons fed at Maharajah's depôts is ... 2,150 Total ... 9,137

E. Whinfield,
Officiating Collector.

Rules for the guidance of Relief Sub-Committees.

1. Every person admitted into a relief-house shall be provided with a ticket.
2. The tickets shall be of two descriptions, (*a*) for gratuitous relief, (*b*) for labor-test.
3. The labor-test must be enforced in every possible case, but persons incapable of work shall receive gratuitous relief.
4. Able-bodied men must be sent to the nearest road or tank-work. If no such work be available, the members must devise some suitable work, and report for the approval of the sub-divisional officer.
5. Able-bodied women may be employed as follows :—
   (*a.*) Collecting ghooting or kunkur.
   (*b.*) Picking up cow-dung and preparing it for fuel.
   (*c.*) Mat-making.
   (*d.*) Basket-making.
   (*e.*) Making rope and twine.

6. Women who are unable on account of their social position to do any work of the above description may be employed either in husking grain or in spinning thread in their own houses, and they shall be paid for their labor either in money or in kind as they wish.

7. Work-overseers must be selected from the recipients of relief; one such overseer must be allotted to supervise the work of every 50 person. These overseers shall, in addition to their daily allowance of cooked food, receive the wages of 2 pice per day.

8. Ordinarily cooked food is to be distributed. If any persons, for any sufficient cause, object to taking cooked food uncooked food may be given to them, but all must do some work except the sick and infirm.

9. To each person is to be allowed daily half a seer of rice (pucca weight), 1 chittack of dâl, and 2 chittacks of vegetables, with a proportionate quantity of salt and mussalas; milk and sago may be given only to sick persons who produce a doctor's certificate declaring that they require them.

Milk may be given to children under 3 years of age.

10. One cook is to be appointed for every hundred men.

If possible these cooks should be selected from among the recipients of relief, and should be paid by the fixed allowance of food and wages one anna a day.

11. To every relief-house a mohurir must be appointed to keep the accounts, and if possible he must be selected from among the recipients of relief. Paid mohurirs, coolies, and work-overseers will be allowed only when such cannot be obtained from among the recipients of relief.

12. Each relief-house (hotel) should be under the immediate management of the local sub-committee, subject to the supervision of the circle relief-inspector and sub-divisional officer.

13. Advances of money or thread may be made to weavers.

The cloth prepared, therefore, will either be sold in the local market, or, if that is impossible, will be forwarded to the sub-divisional officer for sale.

The advances to the weavers shall be of sums varying from Rs. 5 to 10, and no second advance shall be made to any weaver till he has produced cloth to the full value of the first advance.

The same rule must be observed in making advances to women of cotton to spin or of paddy to husk.

In giving advances, the accompanying cheque forms will invariably be used.

14. The sub-committee will procure rice and cotton, &c., in the cheapest market open to them. If any saving can be effected by purchasing rice in Burdwan or elsewhere, the sub-committee will address the sub-divisional officer on this subject.

15. The following accounts must be kept by the relief sub-committee :—

1. Cash accounts.
2. Registers of persons fed.
3. „ of advances to weavers.
4. Store-book.

16. The following abstracts of the accounts must be sent to the circle inspector every Saturday.

1.—*Cash Accounts.*

Balance from last week	0	0	0

Total	1,42,597 6 9

E. WHINFIELD,
Offg. Collector.

* Food-depôts marked with asterisks are old fever food-depôts.

† Out of this sum, Rs. 2,000 has been given to the Deputy Magistrate of Cutwa for collecting ghooteems.

At a meeting of the executive committee of the district relief committee held at Burdwan on the 4th April 1874.

PRESENT:

E. H. Whinfield, Esq., in the chair.

Mr. E. H. Ruddock.	Baboo Motilol Chowdhry.
,, J. Cockburn	,, Sriram Ghose.
,, R. T. Serestre.	,, Mohendro Nath Pundit.
Baboo Gopal Chunder Sen.	,, Bugolanando Mookerjee.

The following resolutions were passed—

1*st.*—That the "rules for the guidance of village relief sub-committees," framed by the Secretary, be approved and issued.

2*nd.*—That a sum of Rs. 1,000 be paid to the Culna sub-committee for the purchase of rice.

3*rd.*—That the Cutwa sub-committee be authorised to employ a clerk on Rs. 20 a month.

4*th.*—That a permanent advance of Rs. 100 be made to the Bood-dood sub-divisional committee.

5*th.*—That a sum of Rs. 500 be sent to the Bood-Bood sub-committee for the purpose of trying the experiment of making advances in sums of Rs. 5 to 100 to baparees to enable them to import rice from the south on pack-bullocks.

6*th.*—That the advance of Rs. 1,000 drawn by the Chairman for the establishment of relief-houses be sanctioned.

7*th.*—That 1,000 maunds of rice be purchased and stored at Khanoo Junction, and 1,000 maunds be purchased and stored at Bood-bood.

8*th.*—Various petitions and reports from the village sub-committees in the sudder sub-division were then heard and disposed of.

9*th.*—That Mr. Perkins, station-master of Kanoo, and his assistant, be asked to look after the store at Kanoo, and that a chowkeedar on Rs. 6 be employed to guard it.

10*th.*—That the Jehanabad sub-committee be authorised to expend any sums they may think necessary for the relief of distress not exceeding the amount of the subscription collected in Jehanabad.

E. WHINFIELD,
Offg. Collector and Chairman.

No. 14, dated Midnapore, the 6th April 1874.

From—H. L. HARRISON, ESQ., Collector of Midnapore,

To—The Commissioner of Revenue, Burdwan Division.

I have the honor to forward herewith the report on scarcity and relief in this district for the fortnight ending April 4th. I regret to find that the last report arrived late. It was despatched from this office on the usual date.

A.

2. Grain continues plentiful throughout the district. The surplus stock however of Midnapore is practically exhausted, and what now passes north along the Bankoora road, and north-west along the low level canal, is almost exclusively Orissa rice. This is stated by all the dealers, and a few days ago, at the Sudder ghat, I questioned each of some 50 gareewans and only found one man whose load was the produce of Midnapore. The purchasers first exhausted the nearest centres of surplus stock, and have gradually proceeded further as these have become exhausted.

3. Prices continue stationary with a slight tendency to a rise, especially in the extreme west, where 16¼ can only now be obtained instead of 18 and 17½ as was the case when I last reported. The imports from Singbhoom referred to have ceased; whether the spare stock is exhausted, or whether the low prices which it induced have discouraged further imports, cannot be certainly known till a renewed rise again gives it an opportunity of profitable entry. As a consequence, the supply at the principal hats is decreasing rapidly, as shewn in the following table:—

	Number of maunds produced for sale.			
Dabijuri	160	110	131	66
Ramghur	0	26	26	22
Ghutia	50	30	25	20
Sildah	0	18	13	11
Jhargrom	8	10	10	10
	Up to 21st March.	28th March.	4th April.	

Certainly I do not anticipate any *severe* famine, *i. e.*, scarcity of grain in these tracts this year such as occurred in 1866. If my previous reports gave that impression, it was my failure to express myself correctly. In that year 50,000 persons died; in this year I do not suppose

a tenth part of that number would be in danger, even if we folded our hands, and let matters drift. All I contend for is, that in this tract its own supply will not suffice for consumption, while extreme want will ensue before prices rise so high as to turn back the stream of trade to this quarter from the rest of Midnapore. On the other hand, if the Chota Nagpore Division has a surplus on which we can draw, we are perfectly safe; if it has not, sale of rice on behalf of the committee will afford great relief at the worst period, and greatly diminish the proportion of the population which under any circumstances will have recourse to jungle-roots and fruits, and inferior grains for support, as a mere result of high prices.

4. I also submit that, even if we are taking necessary precautions, we are doing so at no appreciable expenditure, and therefore the error is harmless. Experience already shews that the state of public confidence has much to do with the amount of rice thrown into the market in the jungle mehals. From all sides the report was universal that rice could scarcely be procured even at the hâts; a few hundred maunds came in from Singhbhoom (for it has now been ascertained that it was a very small quantity, and has since quite stopped), and the market remained easy for nearly four weeks. It is now again lightening, and the price at Silda is reported to have risen 1½ seer per rupee. It is therefore extremely probable, that if ever a crisis does come, the benefit which we can confer by promptly tendering a few hundred maunds for sale at convenient places will extend far beyond the mere quantity brought forward. Even the fact that we are known to have these small stores spread over the country, for sale if need be, produces some effect in bringing the stores of petty cultivators into the market, as they see that they incur no risk of starvation if they run short. At any rate, the experiment cannot cost the commitee above Rs. 200 to 300 as the difference between cost price and ultimate sale, which I submit is purchasing confidence at a cheap price.

B.

5. In accordance with your orders, all public employers of labor have been called upon to return the number of laborers on their works; they had not had time however to respond to the call, and on the other hand the occurrence of three holidays in the days preceding this report, has led to the non-receipt of many of the usual returns for relief works. I therefore ask your permission to defer to next report a full account of the laborers on each work. Suffice it to say that this branch of relief is in a more satisfactory state than any other. The Joki embankment has been commenced in Hidgelee; the high level canal is employing large bodies of laborers, and the embankment repairs are doing the same. Our *road* relief worke, therefore, only fulfil the functions of gleaners, and pick up the residue, who either being weak, or not able to satisfy the contractors, or being tied to their homes, are unable to proceed to a distance to labor.

6. It is mainly with this view that I have had recourse to the system of paying a subsistence daily rate on the special relief roads. It does not attract the coolies from other work when obtainable; on the other hand, it is well adapted to enable the feeble and sickly to tide over the crisis, and supports the largest number at the least cost. That it is an expensive form of work admits of no doubt.

7. It at present proves very well adapted to these ends. The numbers fluctuate greatly, as every fall of rain, every local opening for labor, immediately takes off three-fourths of the coolies; as soon as it is over they come back again. Also they of course demur to the rates, which are, however, amply sufficient to support health, and therefore do not come forward till in real need.

8. The general indications of the fortnight are that the demand for labor is not increasing in the jungle mehals. Most of the ordinary working population have long since come on the canal and embankment works; and it is only the portion that does not genetal migrate for labor that we have to assist. The useful rainfall in February has afforded large openings for employment to this class.

9. On the other hand, the demand for labor is visibly increasing in the north-west of the district, specially round Keshpore and Narajole. A new relief road, Keshpore to Narajole, has been marked out and begun, and a declaration sent to you for publication. It has already 500 laborers upon it and will soon be completed; we have two more roads in the same neighbourhood Narajole to Dasspore, and Nowada to Nimtollah to construct, and I hope that this will suffice. The most densely populated thanna of all, Dasspore, appears to be perfectly secure, with its silk bund and general prosperity, as no demand for labor at subsistence rates is made from there.

C.

10. There is no block now at the Sadder ghât, as the stream of exportation towards Bankoora is somewhat diminishing. The 50 garries I refer to in the early part of the report, had, all but five, been ferried over, but they find it convenient to halt on the sands during the day, and reserve their going to Bankoora till nightfall.

D.

11. No Government grain is stored in this district.

E.

12. Advances to private parties for land improvement will not be of any consequence in this district. The favorable rules were only extended to the jungle mehals, the greater portion of which is under Messrs. Watson and Co., either as putneedars or izardars. They of course require no advances, neither do the zemindars of Nyabossan (Moharaja of Mourbhunye) or Nyagram, or Baboo Ramnidhi Coondoo, the mohajun, who is virtually the zemindar of Jhargram and Cheearah. These zemindars and Messrs. Watson and Co. occupy nine-tenths of the Jungle Mehals, hence all the applications have come from *tenure-holders* intermediate between the zemindar and the ryots. In many cases the security was not satisfactory, and the zemindar was generally opposed to the advance, hence I have rejected two-thirds of those that are ripe for decision, and have only sent up eight to you for sanction; even in these the propriety of making the advance is very problematical, and generally against the wish of the landlord. I infer from the decision which you have arrived at in two already rejected by you, that you are averse to making the advance where the zemindar opposes it, and if so probably nearly every application will be ultimately rejected.

13. I must confess that I do not think this result will be much to be regretted. As I have said our means have been husbanded, and we have thus far no difficulty in meeting the demand for labor; and on the other hand, I have little doubt that, with very few exceptions, the main object of the application has been to strengthen the claim of the intermediate tenure-holder by making Government his creditor as regards that tenure.

F.

14. Operations to relieve distress among the weavers, and perhaps also among other traders, such as braziers, have been pressed on during the fortnight. As estimated in a separate letter, I fear that our expenditure in this work may aggregate Rs. 40,000 before the next harvest, though this I look on as a maximum figure.

(1).—We have now four sub-divisional committees. That at Contai however will, I hope, have nothing to do beyond collecting subscriptions.

The subscriptions promised up to date are—

	Rs.	A.	P.
Sudder sub-divisional committee	7,517	0	0
Gurbetta „ „	1,579	0	0
Tumlook „ „	1,144	0	0
Contai „ „	803	8	0
TOTAL	10,543	8	0

The treasury being closed I cannot state the precise amount collected, but it amounts to a reasonable portion of the sum subscribed.

We have three special sub-committees already appointed, one for Chundrokonah, one for Ramjeebunpore, and one for Kuanpore *cum* Mowbunee; several others are in course of formation. Distress is greatest at Chundrokonah and Kuanpore, which is adjacent to it though not in the township.

(2) (3) & (4).—There is only one special relief circle, *viz.*, the thanas of Chundrokonah, Ghatal, Keshpore, and Outpost Narajole, which temporary Deputy Collector Baboo Gossain Doss Dutt is specially entrusted with.

(5).—A large food depôt has been opened at Chundrokonah, which relieves both that place and Kuanpore. Over 100 persons are already fed at it daily. This is independent of the epidemic depôt relief, which, however, is reported as diminishing. No food relief was found necessary at Ramjeebunpore, where the people are much better off than at Chundrokonah, though some distress is apprehended a month hence.

15. As there were many applicants for food-relief at Kheerpoy, some of whom were obviously in great need of it, a depôt was opened, but out of 72 candidates the deputy collector, whose judgment in these matters can be trusted, only passed eight; it is, therefore, at present on a very small scale.

16. The other forms of relief already initiated, besides out-door work from municipal funds, are two: (1)—Husking rice. The rice needed for the food depôts is purchased unhusked and made over to distressed women to husk and give back cleaned rice, reserving the usual proportion as their remuneration. Forty-five women are thus supported at Chunderkonah and four at Kheerpoy; but it is reported that 50 women can advantageously be relieved in this way at the last-named place. (2)—Weaving gunny cloth. I reported last fortnight that I had sent out two convicts to give the necessary instructions. I see that this measure has been disapproved of, and they will be recalled; but I saw no ready means of instruction except this, and the number sent was very small, involving the very minimum breach of jail discipline.

17. The movement is at present succeeding well. Two hundred weavers in Chunderkonah wished to learn, but only 20 from Chunderkonah, eight from Kheerpoy, three from Ramjeebunpore, and three from Kuanpore, could be taught from the jail loom, and paid daily wages while learning: the rest must learn from them; and the Deputy Collector has received authority to advance jute and take back gunny cloth, and advance thread and take back cloth from all distressed weavers, fixing the quantity on the principle of allowing a profit of 9 to 10 pice a day for a full day's gunny work, and 7 to 8 pice a full day's cloth work. The extra profit for gunny is both to compensate the gunny-workers for the novelty of their work, and to offer some inducement to them for learning it; and also because the committee infer from the orders of Government on the subject that they will be able to dispose of the gunny cloth with greater facility.

G.

18. The only Government expenditure during the fortnight has been the contribution to the committee paid to meet collected subscriptions on the 31st March 1874, Rs. 2,754-10: grand total to end of week, Rs. 2,954-10.

19. I enclose the reports from Contai, Tumlook, and Gurbetta. The Gurbetta Deputy Collector has been told before that Thana Gurbetta is especially under his eye, and that he ought to report particulars of any distress he apprehends. He has already ample funds to relieve it. The sub-divisional officer of Tumlook has taken steps to relieve the distress in Kassigorah, which is chiefly due to the inundations of the Cossye in July. The report of the Sub-Deputy Collector will be forwarded when received.

No. 9—S. R., dated Burdwan, the 9th April 1874.

From—C. T. BUCKLAND, Esq., Commissioner of the Burdwan Division,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit herewith the fortnightly narrative for the fortnight ending 6th April 1874, which have been received up to date.

2. *Hooghly.*—The Collector's report is carefully drawn up, and needs few remarks. There has been no change of prices and no marked progress towards distress. The total number of persons employed on public relief works under the district road committee is given as 1,650, whilst 7,812 persons are employed on private works; but of these only 2,147 are returned as local laborers, 109 tanks are being excavated or improved by them. In addition to these, 718 laborers are employed on 85 tanks in the Hooghly and Chinsurah municipality, and 90 men on 8 tanks in the Serampore municipality. Altogether, including some other works, the Collector, in paragraph 22, shows that 12,808 persons are obtaining public or private employment, but there is some apparent inaccuracy in the figures as totalled.

3. As the bulk of the rice exported from Chandernagore by railway is chiefly for distances over 150 miles, it is clear that it passes towards Behar and beyond this division.

4. Charitable relief is being administered through 136 sub-committees, and the numbers receiving relief are given as 234 men, 472 women, and 195 children, or less than 1,000 persons daily. In addition to the sub-committees, there are four serais for supplying food to needy travellers, and these are managed by the police, and this appears to be the best arrangement as explained by the Collector.

5. *Howrah.*—The Magistrate of Howrah has submitted a very brief report, but he will be requested to state in future the number of persons employed on public roads as relief works; for instance, on the Juggutbullubpore road, and also to notice the proceedings of his charitable relief sub-committees at Khanakool and Juggutbullubpore.

6. *Bankoora.*—The report of the Collector is not so full as I could wish. He does not state the price at which rice is being sold in pergunnah Maheshara, which is the most distressed part of the district, although in other parts of the district prices have a tendency to fall.

7. In the fifth paragraph the Collector refers to certain information which I sent him of some Bankoora laborers who appeared at Burdwan, saying that they could get no relief in their own country. Their statements turned out to be rather exaggerated, and when they were provided with work at Burdwan, they soon recovered from their exhaustion of their journey to Burdwan. The statement shows that 2,740 persons are being employed on public relief works; and of these, 679 are on the Gungajulghatty and Saltora road, and 688 on the Moroolee and Mejia road, which roads are intended to provide for the wants of the Moheshara pergunnah.

8. The statement in paragraph 6 regarding persons seeking work from Maunbhoom is probably an exaggeration, similar to that of the Bankoorah people at Burdwan. But provision is being made for a considerable expenditure on a road from Bankoora to Purulia, to meet any possible wants towards the Maunbhoom frontier, and I have applied for a special extra grant of Rs. 16,000 for this purpose.

9. Charitable relief is being given to about 1,200 persons daily, and about one-third of these are in the Bankoora station, and about one-fourth of the number are at Mejia. The proceedings of the charitable relief committee are reported separately, and sent for publication in the *Calcutta Gazette*.

10. I have sent my special assistant, Mr. Larymore, to make a further inspection of the arrangements going on in pergunnah Moheshara for public works and charitable relief, and shall submit a special report if there is any thing requiring the interference of Government.

11. *Beerbhoom.*—The report of the Collector notices a tendency to a rise in prices, but it is very slight, and the average rise in price is only five chittacks in the rupee. The Collector, however, anticipates further pressure; and I have been urging him demi-officially to make full provision to meet it by road relief works and charitable relief organisation. I also sent my special assistant up from Burdwan to meet Mr. Hime and the Executive Engineer at Bhulpore, which is about the centre of the distressed part of *Beerbhoom*, and he brought back a satisfactory report of what he saw, no distress being as yet visible or unrelieved. I have nothing to add to the Collector's report except to notice that the export of rice by the railway still continues.

12. The reports from Burdwan and Midnapore will be forwarded when received. The latter is necessarily a day behind the others, as the dawk takes two days from Midnapore to Hooghly.

No. 2, dated Hooghly, the 4th April 1874.

From—F. H. PELLEW, ESQ., Offg. Collector, Hooghly,

To—The Commissioner of the Burdwan Division.

I have the honor to submit the district narrative for the fortnight ending the 4th April.

A.—STATE OF THE COUNTRY.

2. *Abundance or scarcity of supply in the bazars.*—Reports from all thanas state that there is no security of grain in the bazars, only in thana Pandooah, the Sub-Inspector thinks that the supply of local rice is diminishing, and that imported rice will take its place sooner or later before the aous crop is ripe.

Price-current of Food-grains.

3. *Amount and kind of grain in stock in the hands of zemindars, traders, ryots, &c.*—There has been no change in prices in the fortnight. At Dwarbasinee in Pandooah 600 maunds have been added to the stock of 400 maunds already reported as stored by Baboo Joykissen Mookerjee. In Dhuneakhally a total amount of 61,200 maunds is reported to be now in store in the hands of zemindars. In Hooghly 23,343 maunds are reported. As you have expressed an opinion that it is doubtful whether the enquires into stocks of rice are advisable, I shall order the police to discontinue them. At Govindgunge in the north-east of thana Balagurh on the banks of the river is a large gunge called Govindgunge, here are stored some 7,100 maunds of imported rice, and about 3,000 maunds are stored at Mugragunge, in Bansberia.

4. *Rainfall.*—Rainfall *nil* at the sudder station, but there is a slight fall of rain reported from Serampore, Bydabatty, and Chunditolla. A storm with hail and rain occurred on the 24th March in the neighbourhood of Ooterpara, and did some injury to plantain trees.

5. *State of the crops.*—The til reported to have been planted in paragraph 9 of the last narrative is reported to have failed in thana Bansberia, but is growing in the other thanas. Rain is required everywhere for the til, the vegetable crops, puttle, turmooz, kakoor, &c., and for the aous sowing. The cutting and crushing the sugarcane is still going on. A good deal of new sugarcane was planted out after the rains of the 16th and 18th March, and there is promise of a good crop next year. The crop now in the mill was a good one. The mango crop is good in some thanas, fair in others, and promises badly in Dhuneakhally, Kristonugger, and Bydabatty. The land is prepared everywhere for aous sowings on a very extensive scale. Four or five good showers will be necessary to get the whole crop in, and such may reasonably be expected at this season.

6. *Condition of the people.*—In Pandooa the police report that the smaller agriculturists require employment to enable them to purchase rice and save their stores, but there is no lack of employment at present. The District Superintendent of Police who visited thana Balagurh reports that some Boona coolies on Gooptipara Chur, that were settled there in former years by indigo-planters, though reported to be in distress are not actually so. He says—"They will not leave their churs to look for work. Relief works in that part are not yet a necessity, though a few persons having no cultivation going on are glad to resort to them." The Joint-Magistrate went out last week and started some road repairs close to the chur to which they can come if they want work.

7. Of Dhuneakhally the Sub-Inspector writes that about three-fourths of the population are husbandmen. Though the amun rice yield was small, the people were aware that it would be wise to lay in stocks, and did so as much as they could. When rice rose to 9 seers for two or three days in February last, the people were alarmed, and much rice was imported. In the west of the thana, near the Damoodur, there were rich harvests of sugarcane and vegetables, but distress may arise in the east of the thana unless rain falls and the aous be got in. In that case money and grain will be freely supplied by mahajuns and zemindars.

8. Except isolated cases of indigence arising from accidental causes, the number of which is shown under head "Charitable Relief," there is no distress at present in the district. Work is abundant, and yet the local laborers, who avail themselves of it, are not very numerous. Near the Damoodur there is great difficulty in procuring labor, and it is evident that the good crops of sugarcane, &c., have compensated in the tract along its banks for any failure in the rice crop. The Serampore Sub-divisional officer says there is no want, unconnected with disease, except in the case of a few high caste women who are lakhirajdars and cannot get in their rents.

9. No cases of starvation have occurred during the fortnight. To prevent all possibility of such cases amongst the numerous travelling population, two more serais have been established on the Bydabatty feeder road, as will be stated under head "Charitable Relief."

10. The figures given in paragraph 10 of the last narrative were reported by the police. Since the establishment of the committees of relief, the police have ceased these particular enquiries, and have been instructed to make over their lists to the sub-committees.

11. *Grain thefts and robberies.*—A grain theft of two maunds of rice from a house is reported from Bansberia thana, and another from Kristonugger thana. This last was committed by an old offender. In the former case no clue has been obtained.

12. *Condition of special tracts.*—In the east of Pandooah, in Ballagurh, in the neighbourhood of Bhastara in thana Dhuneakhally, and in parts of Bydabatty, Chunditolla, and Hurripal, cultivators of small holdings are glad to get work. The District Superintendent of Police visited Hurripal on the 24th ultimo. He says that the rains have facilitated the planting of sugarcane and vegetables, the potato crop has turned out much better than was expected, and the sugarcane, of which a good deal is grown, was a fair crop. The profit per beegah of potatoes has been Rs. 40, and of sugarcane Rs. 35. On the immediate banks of the Damoodur there were good crops of all kinds, and his conclusion is that, notwithstanding the failure of the main rice crop, there will be no more distress than at present unless prices rise again.

13. B.—Relief Works.

SUDDER SUB-DIVISION.

Name of Road.	Number of coolies.	Supply of food.	Condition of laborers.	Mode of payment and rate of wages.	Arrangement for tools.	Remarks.
Dhunneakhally road	340	By purchase in bazar.	Good ...	Three to 4 annas per 100 cubic feet; 2 annas khorakee given daily. Women 2 annas 6 pie and children 2 annas daily wages.	Partly supplied by department, partly by contractors.	Half local, the rest from Pandooah and Bullagurh thanas.

Jonye to Bora village road ...	82	Ditto ...	Ditto ...	Ditto ...	Ditto ...	All local. Forty-two cultivators, rest day-laborers: work under Babu Unroop Chunder Mookerjee of Jonye.
Connugger to Jonye road ...	50	Ditto ...	Ditto ...	Ditto ...	Ditto ...	
Total ...	372					
Grand Total ...	1,650					

N. B.—The Chunditolla road shewn in last return is finished. Arrangements are being made through the sub-divisional officer for taking up two new village roads.

14. The Collector of Howrah will give the Howrah works separately.

15. Of the village roads taken up, the most important are the Jamgram to Moolye and the Kulapara to Nischindipore roads which open up Culna market to the people of Ballagurh and Pandooah respectively.

16. The following statement of works undertaken by private persons independently of Government assistance is prepared by the police, to whom persons undertaking such works were requested to furnish information. It is of course defective, but it shows a very large amount of privately undertaken land improvement. I have excluded the Kotrung brick-makers as well as all mill hands:—

	Station.	Number of Coolies.	Remarks.
Sudder Sub-division.	Bansberia	795	Of these 278 are local.
	Ballagurh	416	248
	Pandooah	1,064	182
	Dhuneakhalee	827	254
	Hooghly	523	334
Serampoor Sub-division.	Serampore	1,505	241
	Bydobatty	1,088	109
	Hurripaul	501	166
	Chunditolla	780	184
	Kristonagore	313	151
	Total ...	7,812	2,147

17. The work on which these laborers are employed is almost exclusively tank-digging or re-digging. 109 tanks are being thus excavated or improved.

18. Besides this, Baboos Joykissen Mookerjea of Ooterparah, and Rajkissen Banerjea of Telinipara, are employing a daily average number of 142 coolies, of whom 53 are local, on the excavation of the Ghea Nuddee at their own expense.

19. In the Hooghly and Chinsurah Municipality 718 laborers are employed on 85 tanks at the cost of the proprietors, after notice under Act III (B. C.) of 1864. Of the laborers, 492 are men and 226 women. In the Serampore Municipality the number of laborers thus employed is 90 on 8 tanks.

20. Under the Executive Engineer, northern drainage and embankment division, the following works are in progress:—

Thana.	Name of work.	Daily average of laborers.	Condition.	Remarks.
Bydobatty	Canal to connect Kannuddee and Saruswati.	314	Good ...	All foreign laborers.
Ditto	Dankoonee works ...	Not returned.	Ditto ...	Half local, half foreign.
Dhuneakhalee ...	Ordinary repairs ...	203	Ditto ...	Chiefly local coolies.*
Kristonagore				
Huripaul				
	Total ...	517		

21. On 28 tanks being dug or improved from tuccavee advances, a daily average number of 1,879 laborers, of whom 369 are local, are being employed, as reported by the recipients of the advances.

* In last return I stated that the ordinary repairs were done by foreign coolies. The Executive Engineer now states however—"Ordinary repairs to embankments are chiefly done by local coolies, who combine the work with rice cultivation.

22. The work going on may be summarised as follows:—

		No. of laborers.
(1)	Government works in Hooghly, excluding Howrah—	
	Road committees' work under Executive Engineer... ...	1,405
	Ditto ditto supervised by private parties ...	242
	Embankment and irrigation works	517
(2)	Works under advances from Government	1,879
(3)	Works undertaken by private parties under orders of municipality	808
	Spontaneously, including Ghea Nuddee	7,954
	Total ...	12,808

C.—Transport of food.

23. Private importations still continue. The roads are in good order. The transport of food-grains by railways are as follows:—

Fortnight ending 28th March 1874—

Up.—*Outward traffic*, i.e., *despatched from Station*—

24. There was no up-inward traffic or down-outward traffic, that is to say, no rice or grain brought from Howrah or Calcutta by train was taken out of any of the stations in the Hooghly district, nor was any rice despatched at Hooghly stations towards Calcutta or Howrah. The 31,786 maunds of rice sent up-country from the various stations is, I suppose, Eastern Bengal rice brought by boat to Serampore, Chandernagore, Hooghly, and Muggrah, and in hackeries from Culna and Govindgunge to Pandooah. The Muggrah khall has always two or three boats laden with rice from the eastern districts, and several large merchants are engaged in the trade there.

25. The other food-grains sent up-country are chiefly from Chandernagore station. The grain probably comes from Bhudessurgunge.

26. I have not hitherto given these figures, as the transport of grain by railway through this district did not appear to me to come within the scope of heading C, as detailed in circular No. 80. I have merely, therefore, remarked in former narratives that large quantities of grain are transported up-country from Muggrah and Chandernagore.

D.—Storage of Grain at Government Relief Works.

27. *Nil.*

E.—Advances to Private Parties.

28. Under heading E advances are to be included under three heads according to the directions given in circular No. 80, *viz.*, advances for grain, advances to Municipalities, and tuccavee advances. I give separate figures for each—

	Rs.
Advances for grain already reported	18,000
In fortnight	...
Total ...	18,000
Advance to Municipalities	*Nil.*
Advances under Tuccavee Act up to commencement of fortnight...	25,911

During fortnight.

	Rs.
March 27th, Golak Nath Pyne	200
Ditto 30th, Sreeram Sircar	400
April 2nd, Bulloram Ghose	150
Total ...	26,661

29. The paucity of advances is due to the unsatisfactory nature of the securities tendered by the petty lakhirajdars and mokurareedars, who chiefly have presented applications, and to the difficulty in getting the consent of superior holders when the security is not manifestly an independent saleable interest. Those applicants who offered sufficient security and showed good titles got their advances in a very short time.

F.—Charitable Relief.

30. Under the orders contained in circular No. 1251—S. R. of 5th March, I have the honor to submit a statement—

Number of Committee and Sub-Committee as yet appointed.	Number of special relief sub-divisions opened and officered.	Number of regular relief circles opened and manned by special officers.	Number of work-houses or centres for distribution of food, &c.	Number of men, women, and children (with total) in receipt of gratuitous relief in any shape through the charitable relief organization, daily.
1 District Committee 1 Sub-Divisional Committee. 136 Sub-Committees	*Nil.*	*Nil.*	*Nil.*	Men ... ... 284 Women ... ... 472 Children 195

31. The district committee as established on the 28th February. The subscriptions paid in up to date have amounted to Rs. 5,387, and the disbursements to Rs. 1,775-11-9.

32. The sub-divisional committee was subsequently formed, all sub-committees in the Serampore Sub-division have been made over to it. It receives subscriptions which are paid into the sub-divisional treasury and reported to the district officer, in order that a Government grant of equal amount may be credited, and it expends money from advances made to it by the district committee.

33. The sub-committees at present working are as follows:—

Thana Dhuneakhally	13	Directly under district committee.
„ Hooghly	8	
„ Bansberia	6	
„ Pandooah	17	
„ Bullagurh	10	
Hooghly and Chinsurah Municipality	26	
Thana Bydobatty	3	Directly under sub-divisional committee.
„ Huripaul	21	
„ Chunditolla	11	
„ Kristonugger	11	
„ Serampore	10	
Total ...	136	

34. Besides this serais have been established on a small scale for the relief of travellers on the main roads in the district as follows:—

On Grand Trunk Road	Muggra and Serampore.
On Old Benares Road	Bassooree and Sheakhalla.
On Bydobatty Feeder Road	Nalikul and Tarkessur.
On the banks of the Hooghly	Telinipara.

At these a meal is given to travellers who appear to be in want and wish for relief.

35. These serais are established at police outposts or thanas and are under the police. An establishment of a cook and a sweeper is maintained at each. In paragraph 11 of your letter to Government forwarding my last narrative, you state that they should be made over to relief committees. I would respectfully beg that they may be allowed to remain as they are for several reasons. First, the relief sought at the serais is generally urgent, and it cannot be expected that the members of the sub-committee should be at a relief house day and night whilst the police must be there; secondly, I have tried to get two committees to take charge of such serais, and the result was a failure.

G.—Financial Results.

Expenditure during the fortnight under report—

36. No disbursements were made to the Executive Engineer or others on account of relief works during the fortnight. Rs. 4,725-13-6, being the equivalent of the subscriptions of the district committee, were credited to the district committee during the fortnight. Rs. 750 were paid away for tuccavee advances.

37. These are the only payments made from Government funds. I request to be informed whether it is intended that the accounts of the district relief committee are to be incorporated in this narrative, and if so, in what form? I ask this question in reference to the last portion of paragraph 11 of your No. 328T. to the address of Government, of which I have to-day received a copy.

Dated Howrah, the 4th April 1874.

From—T. Grant, Esq., *Officiating Magistrate of Howrah,*

To—The Commissioner of the Burdwan Division.

In continuation of previous fortnightly reports, I have now only to say again that I have nothing whatever to bring to your notice that has not already been reported. Things remain in all respects unchanged. I have no material whatever from which to make a new report. I could only repeat my two last preceding narratives without addition or variation, and there is nothing for me to say except that those communications are as applicable to the present date as to the dates they bear.

No. 16, dated Bankoora Collectorate, the 6th April 1874.

From—W. R. Larminie, Esq., *Officiating Collector of Bankoora,*

To—The Commissioner of the Burdwan Division.

I have the honor to submit my narrative for the fortnight ending the 6th April 1874.

State of the Country.

2. Rice, wheat, barley, &c., are to be had in sufficient abundance throughout the district, except in Moheshra, which, as I have already observed, is dependent upon imports for its supply. Baboo Ragunath Ghosh has, during the last fortnight, sold a large quantity of rice in the pergunnah at lower rates than those at which the people there had been before able to purchase it. I am still of opinion that money should have been advanced for the purchase of rice in that pergunnah, and I think that the absence of this commodity pinched more than the want of work, for road-making in Moheshra commenced as early as the 15th February, and disinclination to go more than a few miles from their houses was the only obstacle to procuring employment.

3. Prices have been stationary, but the tendency is to a fall. Best rice is selling in Bankoora at 12 seers per rupee, common at 13½, and coarse at 14 seers 6 chittacks. Prices at Bishenpur are slightly lower; new wheat and barley are selling respectively at 15 seers and 24 seers 8 chittacks per rupee.

4. The rubbee crops have been reaped; cotton, til, and indigo are doing well.

5. There has not been much alteration in the condition of the people. The poorer classes are, as might be expected, more or less pinched, and, where work has been provided, I think the laboring classes are better off than the smaller agriculturists. In consequence of information furnished by you that some persons, residents of Meliara, in this district had been found destitute in Burdwan, I instituted enquiries, and found that work in tank-digging, &c., was available in Meliara, and that charitable relief was being given within 4 or 5 miles of that place. I have now commenced a road running from Barjora,

to Gangajalghati, through Meliara. In my last report I mentioned works being ready for the Moheshra people, if the two roads now in progress were insufficient. I referred to the roads from Mejia to Barjora and from Gangajalghati to Barjora, which had been previously reported to your office; these would be, in fact, continuations of the two roads which are being made. There have been no cases of death from starvation, and no grain thefts or robberies have been reported.

6. It may not be out of place to mention here that some 30 or 40 people came from Manbhoom, crying out for work, and stating that none was to be had in their part of the district.

Relief Works.

7. A table is annexed, shewing the various works in progress and the number of people employed. I have been endeavouring to get similar returns from private persons, but they come in irregularly, and are often inaccurate. However, I estimate the total number thus employed at about 2,000 daily.

8. A road will shortly be opened to meet the Purulia road at Moheshra, in the Chatna thana. The Manbhoom authorities have commenced work on their side.

9. It will, I think, be necessary to give more work in Onda thana when the road from that place to Taldangra is completed, or even sooner, and the road cess committee are of opinion that the best line would be from Bankoora to Taldangra, *viâ* Kurpa, as the circuit would thus be completed.

10. From what I have seen myself, and from the reports of others, I believe that the laborers are in good condition. They receive the ordinary wages in actual cash.

11. Besides the regular relief works, we have arranged, from the funds at the disposal of the district relief committee, to re-excavate three tanks, one at Saltora, and one near each of the lines of road under construction, at a point about midway between extreme ends. On these works, those only are to be employed who from physical weakness are unable to earn a sufficiency of food by piece-work on the roads.

Transport of Food.

12. Rice is still being imported from Midnapore. The conveyance of rice to Moheshra is the only transport agency requiring notice.

Advances to Private Parties.

13. The number of applications for tuccavee advances has now reached 373, and sums aggregating Rs. 28,803 have been granted, of which Rs. 21,211 have actually been drawn. The making of new tanks or the re-excavating of old ones are almost the only purposes for which the money is being spent.

Charitable Relief.

14. The total number of persons receiving charitable relief is now about 1,200 daily, as per list annexed. According to promise made in my last report, I visited Mejia and its neighbourhood. The number of persons receiving relief had increased so much that I thought it best to open three new relief centres in the pergunnah, and I have since arranged for the opening of a fourth. All the Moheshra relief centres are now managed by paid overseers, supervised by an officer specially deputed for the purpose, all acting, of course, under the direction of the various sub-committees.

15. The arrangements for relieving weavers have now been completed in Bankoora itself, and the Bishenpoor sub-committee is arranging for the requirements of that town.

Statement of Charitable Relief.

(1)	One central committee.	(4)	None.
(2)	Eleven sub-committees.	(5)	Fourteen.
(3)	Four.

W. R. LARMINIE,
Officiating Collector.

No. 18, dated Soory, the 6th April 1874.

From—R. D. HIME, Esq., Officiating Collector of Beerbhoom.

To—The Commissioner of the Burdwan Division.

I have the honor to submit my district narrative for the fortnight ending 4th instant.

A.—STATE OF THE COUNTRY.

Prices continue almost stationary since last report, but exhibit now a rising tendency; the temporary fall was probably due to the payment of the March Government "kist" forcing rise into the market. There will now, I expect, be a gradual steady rise of prices, and a constantly increasing demand for employment till the commencement of the rains withdraws the labouring population from public works to agricultural operations. Every effort is being made to meet this demand by starting new relief roads and keeping others in readiness for any emergency. There is as yet no difficulty in procuring supplies at the current bazar rates, (*vide* Appendix 1). No grain robberies have occurred, and no cases of starvation have been reported during the fortnight. Helpless want is being relieved by the charitable organization as it shows itself.

B.—RELIEF WORKS.

Three new relief works, Nos. 6, 7, 8, are set on foot since last report, *viz.*, the road from Ilambazar to Doobrajpore (No. 6), that from Burwan to Panchthoopee (7), and that from Gonootia to Kotasoor (8). The last is undertaken by Mr. Jones, Manager of the Gonootia silk concern. Three more relief roads, *viz.*, those from Poorunderpore to the river Adjai (the Burdwan road), from Bulpore to Banglehatra, and from Laghata to Kolgram, will shortly be commenced. I have also under consideration a proposal from the Deputy Commissioner of the Sonthal Pergunnahs to construct the portion of a proposed road from Doomka to Mullarpore railway station, which will come within my district. The surveys for this road will shortly be made. The number of laborers on district works of all kinds is shown in the Appendix, form C.

C.—TRANSPORT OF FOOD.

Exportation continues; that of the fortnight ending 28th ultimo, was 10,655 maunds.

D.—STORAGE OF GRAIN.

The charitable relief committee is buying up 1,000 maunds of rice for storage at Sooreol in anticipation of emergencies.

E.—ADVANCES TO PRIVATE PARTIES.

Shown in appendix, table 11.

F.—CHARITABLE RELIEF.

Continues on the system previously reported, (*vide* Appendix, Statement 2). The disbursements up to 28th ultimo are Rs. 2,764-7-10. No fresh subscriptions have been received during the fortnight. Independent relief operations are carried on in Doobrajpore by Baboo Ram Runjun Chuckerbutty, zemindar of Hetumpore, regarding which a separate report is submitted.

G.—FINANCIAL RESULTS.

Rs. 14,765 have been drawn from the treasury up to date on certificates granted under the Land Improvement Act; Rs. 17,218 have been placed to credit of the Executive Engineer for relief works; Rs. 500 have been advanced to Messrs. Farquharson and Campbell of Ilambazar; Rs. 500 to Mr. Jones of Gonootia; Rs. 500 to Baboo Kishuree Mohun Roy of Nagooree, and Rs. 25 to the munduls of Kuliara, for the construction of roads chargeable to relief; Rs. 940-12-6 have been expended on the municipal light labour gang from the town fund. The Government equivalent of the local charitable subscriptions paid in* have been placed to credit of the charitable relief fund.

* Rs. 3,565-8.

APPENDIX I.

Prices-Current of Food-grains and Salt in the District of Beerbhoom for the week ending Saturday, the 4th April 1874.

| 1 | 2 | | |

in Hazareebaugh and Palamow, the high prices of food are more or less felt by all classes; but it is only in places where food is not only dear but difficult to procure that bad symptoms of distress have been noticed, and our recent action has chiefly been to introduce both employment and food into such localities.

3. The weather has been during the last fortnight, on the whole, bright and favorable. The mowha crop received less injury than was anticipated from the rain which fell at the commencement of the period under review. Accounts received from all quarters, except from some parts of the Hazareebaugh, give fair expectation of its probable yield of flower, which is just now falling. A good mango season is still expected, and the rubbee crop, which is now nearly reaped, will give in most places an average return; but the area of land cultivated this year being so much less than usual, the supply of food thus obtained will not materially affect prices. The prospects of the mowha and the rubbee harvest have, however, temporarily reduced the number of people employed on relief works. For two months or longer the chief food of the poor classes will be mowha.

4. Relief committees have been formed in all the districts and sub-divisions of districts and other places where they were likely to prove of use.

5. *Hazareebaugh.*—Mr. Beadon on returning to Hazareebaugh, after consultation with me, was met there by information that ten deaths had occurred in the north-east of Kodarma, it was alleged from starvation, and a pilgrim was reported to have died from the same cause on the Grand Trunk Road. Further inquiry locally made by Mr. Beadon himself or by his assistant, Mr. Tobin, shewed that with three exceptions each of the deaths could be traced to ordinary disease. The exceptions being (1) Ramni Goalin, a lone woman who lived in an isolated position, and the cause of whose death was uncertain; (2) a woman of 60 years of age who apparently, from all that was known, had sunk under privation; and in regard to the third, it could not be ascertained that any *such person had ever existed.* Mr. Beadon says, *all* who died were "old, infirm, friendless, and isolated." There are no doubt many people so situated and circumstanced in the sparsely inhabited portions of the district, unknown and unthought of till death ensues. It is not an easy matter to find out how such people sink or to know in time that they are in want of food.

6. It was not considered till this occurred that Kodarma was at all in a precarious position. As a Government estate it had met early attention. Mr. Beadon visited it himself in January, and Baboo Rajgopal Roy, Deputy Collector, was subsequently sent there to make advances and to give employment, and a tehsildar was appointed in whom Mr. Beadon had great confidence. Irrigation works projected by Rajgopal were opened in several places; but notwithstanding the indigence now disclosed, very few sought employment. The people on whom the scarcity most told were of the non-working class, and arrangements have now been made to supply to such persons gratuitously with cooked food. There is no want of work; the road from Burhee to Gowa, which will go right through Kodarma, has been commenced, worked both ways from its centre in Kodarma. Orders for opening it had been issued a fortnight before, but the services of the Assistant Engineer, Mr. Pereira, were required to align it, and he could not be spared sooner from other important works. The latest accounts show only 50 persons employed. From this it would be inferred that there cannot be widespread distress; but Mr. Tobin remains in Kodarma, and I have desired that a special report on the condition of the people there may be forthwith submitted. The Kodarma ryots have just received payment from the opium department of a large amount, and this is, no doubt, the reason that few of them care to work.

7. But the inspection tour made by Mr. Beadon in North Khurruckdea forced on him the conclusion that the ordinary means of supply was inadequate to meet the deficiency of food in some portions of that tract and on the Grand Trunk Road, and this induced him to telegraph to Government for 28,000 maunds of rice. The Government have promptly responded, and have ordered by rail to Pachumba 25,000 maunds, which is rapidly arriving. This will, I think, be sufficient, and Mr. Beadon, in a letter dated the 27th, says he will require more unless his projected pilgrim road is sanctioned. He proposes to distribute the rice as shown in the margin. He will have, besides, stores of grain in the bhandars of the Wards' estates, Dhunwar and Gowan. Mr. Beadon is most anxious to undertake the pilgrim road recommended in my letter No. 239T of the 25th February last. It would certainly be a most useful work, and Mr. Parkinson, who has not much to do at present, could be directed to survey and mark it out.

Distribution of Government rice.

3,000 maunds at each of the chuttees on the Grand Trunk Road, *viz.*, Chowparun, Burhee, Barkotta, Bugodhur and Doomree.

2,000 maunds in Kodarma and 10,000 maunds in reserve at Pachumba.

8. Mr. Beadon has advanced to merchants Rs. 33,000 to stimulate and ensure a larger rice importation for Hazareebaugh station and other parts of the district south of the Grand Trunk Road, and has also arranged with the zemindar (styled Rajah) of Koonda for the storage of rice as a reserve in the western parts of the district. The arrangments now effected will, I think, prove sufficient, but if more be necessary, the Ranchee merchants are quite ready to engage to store rice here for Hazareebaugh.

9. I have proposed to them that they should confine their operations to the importation of rice from Gangpore (where a fortnight ago it was selling at 32 seers for the rupee), and from Sumbulpore, where I believe it is cheaper. The Palamow traders are now doing this, but for them it is a three months' journey. If the Ranchee and Lohardugga traders will follow my advice (and if necessary they might be assisted by loans) it would greatly economize carriage and accelerate the delivery. Palamow pack-bullocks travelling only as far as

Lohardugga would carry thence the rice imported from the southern districts, and the Hazareebaugh traders would transport it from Ranchee.

10. A road has been projected as an additional work in Dhunwar (Khurruckdea), from Dhunwar to Darundah (Khurruckdea), to cost Rs. 700,* half of this cost borne by the road committee and half by the estate. This I have sanctioned subject to confirmation by the Board.

* Sanctioned by Board.

11. *Lohardugga.*—On the 28th instant a meeting was held at Ranchee to establish a District Relief Committee; this was not called for by any distress in Chota Nagpore Proper, but as a measure of precaution and to obtain funds for general as well as local relief purposes. Upwards of Rs. 3,000 were subscribed at the meeting.

12. I have, with permission of Government, availed myself of the services of Mr. F. T. Peppe, Sub-Deputy Opium Agent, who volunteered to act as an agent to make advances under the Land Improvement Act in certain detached villages in valleys of Tamar to the south and in Tori to the north-western corner of the Chota Nagpore zemindary. Tori is the only considerable portion of Chota Nagpore which appeared to me likely to need assistance. I reported on it in my letter No. 49T of the 16th January 1874. The manager, Mr. G. K. Webster, has been employed there for some time making settlements. He has opened some small works, sanctioned at the cost of the estate, which gives present employment, and we have road projects which will give more. Mr. Webster reports under date the 28th instant, that with the mowha there is no want of food at present, though in June and July pressure may be felt. This we shall have no difficulty in meeting.

13. *Palamow.*—Since date of my last report Lieutenant Grey and Baboo Gopal Chunder Mitter have been deputed as relief officers to Palamow, the latter with a portion of his establishment as special Commissioner, including a good Native Surveyor and Baboo Prosunno Coomar Daniary, Assistant Engineer, passed through this station on his way to Palamow by dawk, on the 26th instant.

14. Mr. Forbes continues to give unfavorable reports on the condition of the Palamow people resorting to the works. He says when they first make their appearance, that many of them are in an emaciated state, but pick up after working a few days, and are then able to do a full complement of work. This would indicate that the wages of their labor gave them sufficient sustenance, but he finds the price at which the rice is retailed by the bunias to the workpeople employed give them only 8·55 seers for the rupee, and they were clamoring for higher wages. So long as it is found that those who come on relief works thin recover their condition and others retain it, I would deprecate any increase. It appears that it was only at one place, Turhassi, that the Assistant Commissioner found that the rice was being retailed at 8·55 seers for the rupee. He should have interposed and supplied rice from the nearest store at 10 seers. This would have brought down the retail price, for it is to be observed that at the open markets in Palamow proper the highest price quoted is 12·36.* Mr. Forbes informs us that hitherto the market prices, which he calls the wholesale prices, have been given in the price-current statements, and determines in future to give these bunia prices. This I object to, but he may give both as he does in the table in paragraph A of his report of the 21st instant. The bunias in some places set up their shops where the laborers are working, and this of course gives them some claim to add to the market rate.

* And have since fallen.

15. My last report gave 12,562 as the total number employed on the Government relief works; these figures were taken from the February return. The return of the 7th March gives 7,866, and Mr. Forbes' report of the 21st ultimo 7,936. The decrease is said to be owing to the withdrawal of the agricultural laborers for the rubbee harvest, and it is probable that the number will not rise to the February figure till the mowha, which is yelding well, is exhausted. Mr. Forbes is however of opinion that it will reach 20,000 at an earlier period.

16. The harvesting of the cold-weather crop appears to have caused a lull in importation of rice for a short time which made the Assistant Commissioner fear it was falling off. But I am credibly informed it is now brisk as ever, and I have been assured by the traders here that there is no fear whatever of its subsiding. I have however moved for sanction to make further advances to stimulate importation up to Rs. 50,000,* which we can use if we find the trade slackening. I have been informed that rice brought in Gangpore at 32 seers for the rupee was conveyed on pack-bullocks to Gurwah, and might without loss to the importer have been sold at 25 seers, but it was disposed of at from 13 to 14 seers. With such a profit we must expect that the importation of rice from the south will continue till the supply from thence is nearly exhausted.

* Since sanctioned.

17. The Deputy Commissioner received my instructions some months ago to watch narrowly the export trade from Chota Nagpore Proper to Palamow, and he is of opinion, in which I concur, that it is going on satisfactorily.

18. My latest information is in a letter from Lieutenant Grey, dated the 25th instant. On his way to Daltongunge he passed a body of about 400 people going to work, the majority women and chileren, who said they had been sent to work by the head of the family as there was not food in the house sufficient for all its members. Lieutenant Grey found this to apply to other places and gangs seen by him. Only a portion of the family seek work, and I hope it will be found that the withdrawal of so many will leave sufficient in the house to sustain the remainder. A few destitute people were seen in the town of Gurwah whom the local com-

mittee relieved, and on road-work Lieutenant Grey noticed four women claiming to be Rajputins by caste and one Brahmani, but they were people who had long been accustomed to work in the fields. On the whole, the people did not appear to Lieutenant Grey to be very emaciated, and he found them particularly patient.

19. Mr. Forbes tells us of a report that a number of respectable Mahomedans of Hosenabad, most of them widows, were in dire distress, and the Assistant Superintendent of Police was deputed by the relief committee to inquire, and it is presumed to relieve them if necessary. Mr. Forbes has also, he says, been informed by a zemindar, that grain-thefts are occurring daily though not reported to or by the police, and that 75 heads of cattle had been slaughtered, he supposes, by chamars, for the meat and skins. He has directed inquiry by the police, but he must also report how such things, if true, are not known to and reported by the police.

20. *Manbhoom.*—The condition of this district is apparently better than that of Palamow. Grain is still exported from the eastern pergunnahs, and as yet we have had no reason to suppose that the southern zemindaries were in distress. The bad parts are on both banks of the Damoodur, and between the Burrakur and Damoodur, and by the latest accounts, extend to the common boundary of the Hazareebagh district. The Deputy Commissioner, in his report of the 25th to Government observes that there is no appearance of any general distress as yet amongst the people, but isolated cases of suffering for want of food are becoming more common than they were, the great difficulty in the distressed parts of the district was to obtain food, for though in the estimate of the Deputy Commissioner there is still a good stock in the hands of the grain-dealers, they are keeping it back in the expectation of higher prices; it is difficult in many places to obtain what is required for the people on the relief works. I believe that when the Government grain now daily arriving at Burrakur has been distributed amongst the several selected places for storage, that the great pressure now felt will cease, and all danger will for a time be averted. Colonel Rowlatt has arranged for having 5,000 maunds at Rughoonathpore, 5,000 at Gavindpore, 5,000 at Nirsha, 1,000 at Poddardih, 1,000 at Jherriah, and 10,000 will be kept in reserve at Burrakur. I do not think more will be required.

21. The number of people on road relief works is represented in Colonel Rowlatt's report of the 25th as 2,642. He informs me that the laborers are in very good condition, which he thinks is due to the early period at which work on bandhs and roads was provided; but considering that Manbhoom has a floating population of two to three hundred thousand people of low caste, whose ordinary condition is that of the laborer, the number given as taking to road work appears very small. I am inclined to think that one cause of the comparative paucity of workpeople in Manbhoom may be found in the system of contract under which road works are done there. Of course the contractor takes his fair share of work out of each man, and it may be that he is not very partial to weak or sickly workpeople. Colonel Rowlatt's attention will be requested to this.

22. The report of the 25th gives no estimate of the numbers employed on the works for which advances have been given under the Land Improvement Act. Colonel Rowlatt tells me that from want of supervising agency he is unable to obtain accurate returns, but he roughly estimates that there are on all works not less than 20,000 people employed.

23. With my No. 760, of the 25th March 1874, I submitted to Government a report which Mr. Mackenzie, the Extra Assistant Commissioner of Gobindpore sub-division, had received of death of the four boys at villages near the Damoodur, in Jherriah, it was alleged, from starvation. These casualties have not yet been tested. The Zemindar of Jherriah reported that he had heard of two deaths only, and was of opinion that the starvation may have been superadded by the villagers to excite commisseration. If this be so, the ruse was successful as the zemindar, Rajah Rashbehari Singh, has started a tank as a work for the people of the distressed villages, and opened a relief-house within easy distance of them. A branch committee has been established for Jherriah, and subscriptions raised sufficient to meet the relief measures immediately required. This zemindar is apparently doing his duty to his people, and the Sandra Rani is behaving with her usual liberality. I have given my sanction to an additional relief work in the Gobindpore sub-division. A road from Gobindpore, through Beliapore Baghmara, to cross the Damoodur near Ghurbur, which is well calculated to give effective relief to the distressed villages adverted to above. The line has been examined by Colonel Rowlatt and Mr. Mackenzie. By this new route a considerable saving of distance will be effected between Gobindpore and Purulia. I need say no more about Manbhoom, as the Deputy Commissioner's report of the 25th, now before Government, is full and clear, and I have no later information of importance except what is above given.

24. *Singbhoom.*—I have received no report from Singbhoom since the 18th ultimo. Captain Garbett has been in camp all the time, and on the date of the latest letter I have received from him, the 20th ultimo, he was, I am sorry to say, suffering from fever. He says he has been making a thorough inspection of all the new Kolhan reservoirs, and that they are getting on famously. He calculates that about 4,000 people are employed on them daily. This is in addition to the road works, so that labor has been provided for a very fair proportion of the inhabitants of the Kolhan. Captain Garbett concludes as follows:—

"I do not now believe, as I at one time feared, that we shall have general and severe distress in the Kolhan. I am, however, quite sure that but for the assistance rendered we should have now had sore trouble."

No. 2275 S-R., dated Calcutta, the 10th April 1874.

From—A. MACKENZIE, Esq., Junior Secretary to the Government of Bengal,
To—The Commissioner of Chota Nagpore.

I am directed to acknowledge the receipt of your letter No. 874½, dated the 31st March 1874, being your report on the state and prospects of your division for the fortnight ending 30th March 1874.

2. The salient points in this report have, the Lieutenant-Governor observes, been already dealt with in the Government order passed on the District Narratives for Palamow and Maunbhoom, and on the special reference regarding Hazareebaugh.

3. In my separate letter No. 2230 of yesterday's date, you have already been informed that over 20,000 maunds of rice have been sent up to Giridhi for the use of the Hazareebaugh district. I am to request that you will be good enough to report whether you wish any further quantity to be sent up to the same place. In the meantime further despatches have been stopped.

4. An extract (paragraph 7) of your report will be communicated to the Public Works Department of this Government, with a request that the services of Mr. Parkinson, who is a good energetic man, may be fully utilised.

No. 2276—S. R.

Extract paragraph 4 of this letter, with extract quoted, forwarded to the Public Works Department of this Government for information and guidance.

No. 2277—S. R.

Extract paragraph 3 forwarded to Mr. Toynbee for information and guidance.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

CALCUTTA;
The 10th April 1874.

No. 610, dated Purulia, the 6th April 1874.

From—COLONEL E. A. ROWLATT, Deputy Commissioner of Maunbhoom,
To—The Offg. Secy. to the Govt. of Bengal, Scarcity and Relief Dept.

With reference to paragraph 3, Government circular No. 154—S.R., dated the 16th January last, I have the honor to submit my narrative for the fortnight ending the 4th instant.

A.—STATE OF THE COUNTRY.

Since the importation of Government rice has commenced and the mohwa flowers have begun to fall, the price of rice has in some few places become somewhat easier, and supplies are more readily obtainable, as those who have stocks of grain begin to see that it is of no use holding out for excessive high prices. In remote and inaccessible places especially, where there are no bazars or large dealers, great scarcity still prevails, and in these it is reported that the lower classes are living almost entirely on mohwa, which has begun to fall most opportunely, and will yield a full crop in the southern parts of the district, and not much less in the centre of it. It is variously estimated that the mohwa crop will last the people for from one or two months, according as trees abound or are scarce. It unfortunately happens, however, that in the worst parts of the district there are but few trees, in fact that along the road between Raghunathpore and Chandankiari on the Hazaribagh road, which I rode over a few days ago, I saw but very few trees, and in Torang and Hesla I was told they had all been cut down for fire-wood. In the sub-division of Govindpore mohwa trees are pretty thick, and the crop is reported to be a good one. As the consumption, however, of mohwa will be greater this year than is ordinarily the case, it will not last so long as usual, and very little will be left for storage and consumption hereafter.

The prices of rice and pulses by the last reports received from the police up to the 4th instant, are as follow:—

Names of Places.	Coarse rice. Seers.	Fine rice. Seers.	Pulses Seers.
Raipore	17	16	15
Manbazar	16	15	11
Burrabazar	16	12	10
Echagarh	18	16	12
Jhaldah	14	13	12
Purulia	15	12	10
Govindpore	13	12	13
Raghunathpore	12	11	10
Nirsha	12	11	10
Gaurandih	12	11	11

The mango crop will be almost an entire failure.

There are now no crops on the ground except the sugarcane, which has been lately planted. A small quantity of cheena seed has been procured from Arrah with which to make an experiment, but it is too soon yet to know wheather it will succeed or not.

The only people who are at present suffering from actual want of a sufficiency of food are the beggars, numbers of whom abound in all the towns and large villages. These find it no longer possible to pick up a scanty subsistence in their usual haunts, and are, therefore, flocking into the relief centres where large numbers are being fed daily on cooked food. The laboring classes are still in most places pretty well supplied with work, but many of the reservoirs and tanks for which tuccavee advances have been made are now finished or nearly so, and large numbers, hitherto employed on these works, will soon be without employment, so that the resort of larger numbers to the roads until rain again falls may surely be expected. As soon as rain again falls ploughing, which has now almost ceased, will recommence. It is reported that a large number of those just above the class of out-of-door laborers are now living on one meal a day, and distress is, I fear, likely to increase amongst this class.

Cases of distress have been reported from several localities, specially all along the borders of the Damudah river in pergannahs Nowagarh, Jherria, and Pandra, but for all these work has been provided in the construction of reservoirs and on roads undertaken as relief works. In some villages in pergunnah Chelliama great distress is said to prevail, and Captain Samuells, the Relief Officer at Raghunathpore, has proceeded there with a supply both of food and money, and will make the necessary arrangements for the relief of these villages through the sub-committee at Chelliama, which has lately been established. Distress has also been reported in some villages in the north-east of pergunnah Charra, to where rice will be sent to-morrow; and from pergunnah Bagdah thirty-three persons have been sent in by the police to Purulia, who, being beggars, were entirely destitute of the means of subsistence. Several cases of deaths from starvation have been reported, but these, I am happy to say, after full inquiry, have been found to be deaths from disease, and were evidently reported by the villagers as deaths from starvation in order to excite sympathy, and in the hopes of obtaining gratuitous assistance in food and money.

Thefts of grain have increased, and one case of plundering has taken place at Hudlachak in pergunnah Chelliama, the object of which was clearly to obtain food. The number of persons in hajat is also increasing, and getting beyond the powers of the present staff of officers to deal with. An officer with full magisterial powers to take up the police cases is urgently required.

The tracts referred to in my last narrative still continue the most distressed, and I am sorry to say the area still continues to increase by the addition of distress in pergunnah Nowagarh in the west of the Govindpore sub-division, and that of Bagda to the south-east of Purulia, which is now in as bad a state as any of the other pergunnahs of the north-east portion of the district.

B.—Relief Works.

The number of roads now in progress of construction as relief works amounts to 12, and sanction has just been received from the Commissioner to continue work on the Govindpore and Purulia road, which will afford employment to those in distress in pergunnahs Chelliama and Jheria, though which it passes, and in which this road has yet to be completed. The district, however, is suffering for want of supervising agency, as for all these works, measuring 252½ miles in length, we have only one Executive Engineer, one Supervisor, and four Road Overseers, who are quite unable and insufficient in number to superintend the work properly, and orders have been received transferring the Supervisor to Singhbhoom.

The roads are as follows, and their length, and the number of laborers employed on each, is given as near as the returns, which are still imperfect, will admit. I believe that very many more are being employed, and hope shortly to get correct returns of the numbers actually at work on them:—

No.	Name of Road.	Length in miles.	Numbers employed.
1.	Purulia and Chaibassa road	36 miles.	521
2.	Branch from Chaibassa to Burrabazar ...	18 „	118
3.	Purulia and Manbazar road	28 „	708
4.	Purulia and Bankoora road	27 „	922
5.	Branch from Charra to join at Singhbazar ...	4½ „	120
6.	Ludhurka and Gaurandih road	17 „	552
7.	Raghunathpore and Hazareebagh road ...	37 „	1,100
8.	„ „ Bankoora road ...	15 „	685
9.	„ „ Ranigunge road ...	14 „	800
10.	Govindpore and Giridih road ...	21½ „	792
11.	Nirsha and Jamtara road	7 „	126
12.	„ Telkupi road	12 „	...
13.	Govindpore and Purulia road from Chelliama	16 „	...
	Total ...	252½ „	6,444

The roads numbered 1, 2, 4, 5, 6, 8, 9 and 11, have been completely marked out, and parties are at work all along them. Nos. 3 and 7 are marked out, except in a few places, which will soon be done; the work, however, is not interrupted in consequence. No. 10 has been marked out as far as Tundibnagar, and I am now in correspondence with the Deputy Commissioner of Hazareebagh whether it should go on straight to Serampore or join the Hazareebagh and Giridih road at the crossing over the Burrakur river. Nos. 12 and 13 have still to be marked out, and orders have been sent to place laborers on these roads as soon as possible from the distressed villages along the Damudah, and not wait to do so till the whole lines can be completely laid out. The laborers obtain their supplies at the bazars, hâts, and shops in the vicinity of the works, and some of the contractors have also established depôts from which the laborers draw their supplies at the current rates of the neighbourhood. The condition of the laborers on the roads is satisfactory; they are paid, if they work as daily laborers, at 6 pice the men and 4 the women, whilst those who take the task-work make about the same or a little more if they work hard. There has been a difficulty in procuring tools in sufficient numbers fast enough, but this has been pretty successfully met by purchases made at Raneegunge, Bankoora, Jhalda, and other places in the district. The smelters and blacksmiths of the district have been kept in full employ much to their advantage, as the price of kodals has risen from 7 or 8 to 10 or 11 annas each, and the number of kodals and picks purchased for use on the roads, tanks and reservoirs has been very large indeed.

The excavation of three large tanks in Purulia from the municipal loan lately made by Government has been commenced, on which 125 people are employed, and one other has been commenced on as a relief work by the district relief committee, on which 263 persons are employed, who are not able to do a full day's work.

Transport of Food.

Food is still being brought up largely from Singhbhoom and the south and south-west of the district into the central and north-eastern pergunnahs both by pack-bullocks and carts. There appears to be no difficiency of carriage, and every effort it was possible to make has been resorted to in order to improve the road leading from Chaibassa to Purulia after it enters this district at the Mankoi ghat on the Subarnarokha river. The Government grain delivered at Burrakur by the East Indian Railway has been rapidly transported along the Grand Trunk Road to Nirsha and Govindpore, and by the Burrakur and Purulia road to Rughunathpore. To show the immense advantage of having a good road to make use of in a case like the present, I may mention that carts loaded one day at Burrakur delivered the grain the next morning at Rughunathpore, a distance of 21 miles, which, had there been no road, would have taken them at least three days; and this they did although they had to halve the loads and make two trips each across the sands of the Damudah, to prevent the necessity of which, and to guard against the possibility of a block there, in case it may become necessary to transport large quantities of grain from Barrakur to Rughunathpore, a temporary light causeway is being made across the bed of the Damudah, which will effectually prevent any such block taking place.

Storage of Government Grain.

Between the 25th March and 3rd April 1,134 maunds of Government rice have been delivered by the East Indian Railway at the Burrakur station, which has all been despatched by cart and stored, at Nirsha 348 maunds, at Govindpore 286 maunds, at Raghunathpore 5,434 maunds, and 1,060 maunds have been sent to be stored at Poddardih in Pandra pergunnah for the use of the sub-relief committee at that place. Golahs are being constructed at all the above places, and in the meantime storage accommodation has been arranged for in various private and public buildings which have been taken up for the purpose. The sub-district relief committee at Manbazar is also arranging for the storage of 1,000 maunds of rice at that place for the use of the branch committees subordinate to it.

Advances to Private Parties and their Results.

Advances for the purchase of grain have now been made by me to 45 individuals, amounting altogether to Rs. 17,595, out of the lakh of rupees placed at my disposal by the Government for that purpose, and applicants are still coming forward.

A loan of Rs. 4,000 has been received by the Purulia municipal committee with which a debt of Rs. 1,000 has been paid off, and the balance is being expended in the clearing out and improvement of several large tanks in the town, which hitherto have been sinks of filthiness and hot beds of disease. Advances to the extent of Rs. 55,550 have also been made to 228 private parties for land improvements, which have been expended in the construction of reservoirs and excavation of tanks. Most of the persons who have taken these advances have applied them faithfully to the purpose for which the loans were granted; a few, however, have done either little or nothing; and one or two instances have been reported in which the money has been applied to other purposes, such as paying off debts, getting married, &c. I therefore have directed a prosecution under Section 417, Indian Penal Code, to be instituted agaist one person who has thus been guilty of obtaining a loan under fraudulent pretences, which will, I have no doubt, have a very salutary effect, and act as an effectual stimulant on those who may have intended to apply the money to a different purpose from that for which it was advanced. I feal very few others will now apply for advances to whom such could be safely made.

Charitable Relief.

On the 11th of March a district relief committee was established at Purulia, and shortly after sub-divisional committees were formed at Govindpore and Raghunathpore; and on

Saturday, the 4th instant, I presided at a meeting at Manbazar, where a sub-divisional committee was also formed, and arrangements made for setting sub-committees at work at four places in subordination to it. It was arranged that a store of 1,000 maunds of rice be laid in at once, and depôts established at Manbazar and Bagda for the supply of cooked food to all persons in distress who are unable to work, and also to render assistance to all others who might be in need of it. Cooked food is also being supplied daily at Purulia, Govindpore, Podardih, and Raghunathpore to about 600 indigent and diseased persons, who are quite incapable of working, and are no longer able to procure alms in their villages. The arrangements at present are sufficient to meet the necessities of the times; but should distress increase to a greater extent, further measures will have to be adopted, and more officers will be required to carry them out.

At the present date there are the district relief committees at Purulia, three sub-divisional committees at Govindpore, Raghunathpore, and Manbazar, and twenty-two sub committees at work spread over the district from the north-west to the south-east part of it, and at present these will suffice. To each of the sub-divisional committees Rs. 1,000 have been sent in aid of the subscriptions they have raised, to enable them to commence relief operations at once. The most intelligent and respectable persons of the neighbourhood have been selected to form the sub-committees. Where cooked food is supplied, the members of the committees are each provided with a certain number of blank tickets, which are given by them to those seeking such relief, on which the name of the person is written. With these the persons admitted to receive food go to the depôt, when the ticket is numbered, and the number and name of the party entered in the register, and then all who can show a ticket get food and no others receive any. By this means every case is properly inquired into before relief by cooked-food is supplied, and none who are able to work are admitted, but are sent to labor on the nearest relief works. Sheds are being built at the depôts for the accommodation of the lame and blind, and those who are unable to return to their villages after taking their food.

Cotton will also be given out to poor women of respectable families, who may be in distress, to spin into thread, for which they will be paid in rice, and this thread will then be made over to indigent weavers to weave into cloth, for which they also will be paid in rice, and the cloth then be sold or given away on charity to those who are unable to procure any themselves. This will, I consider, be necessary even for decency's sake, as it is pretty certain that those who cannot feed themselves will also be unable to provide clothes. It is also intended to assist indigent silk-weavers in the same way by supplying them with cocoons.

Total expenditure from the district and sub-divisional treasury, as shown in last narrative, Rs. 24,146-6-3.

Expenditure during the fortnight under report.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 9th April 1874.

READ—

The Maunbhoom Narrative for the fortnight ending 4th April 1874.

1. The falling of the mohwa crop and the importation of Government rice are said to have had the effect of rendering prices easier in this district. Common rice is now nowhere dearer than 12 seers per rupee, and in the south of the district can be got at 16, 17, and even 18 seers. The mohwa crop has made a material addition to the food-supply, estimated at from one to two months food, according as the trees are scarce or abound. Unhappily they are scarce in the north, where distress is worst. Only the begging class are suffering from actual want, and are flocking to the relief centres and eating cooked food without scruple. Work is provided for all the laboring poor. All the cases of deaths from starvation that have been reported have proved on inquiry to be deaths from disease.

2. Colonel Rowlatt complains of the weakness of his supervising staff. The wants of more severely distressed districts prevent his getting more men, but if he can find locally any persons fit for employment as sub-overseers he may entertain them. The returns show only 6,444 persons on road work, but the Deputy Commissioner believes that there are in reality very many more. He must arrange to obtain complete information on this matter, which is one of primary importance; any failure in obtaining this information will be regarded by the Lieutenant-Governor as an administrative shortcoming. It is expected that the next report will give a full and correct return. Three hundred and eighty-eight persons are employed on other works.

3. The Government grain received (11,742 maunds) has gone easily forward and been stored. The Commissioner believes that this district will not require more than 27,000 maunds.

4. It is satisfactory to learn that most of the money advanced to private parties has been properly utilised.

5. The arrangements for charitable relief seem now complete and capable of further expansion if need be. About 600 indigent and diseased persons are in daily receipt of cooked food.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

No. 2245—S. R.

Copy forwarded to the Deputy Commissioner, Manbhoom, and to the Commissioner of Chota Nagpore.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 9th April 1874.

No. 3 M.A., dated Calcutta, the 7th April 1874.

From—LORD H. ULICK BROWNE, Commissioner of the Presidency Division,

To—The Secy. to the Govt. of Bengal, Scarcity and Relief Department.

In continuation of my No. 40M.A., dated 26th March 1874, submitting the fortnightly narrative of the Collector of Nuddea for the fortnight ending 23rd March 1874, I have now the honor to submit the Collector's report for the fortnight ending 6th April 1874.

2. *Heading firstly, advances to import grain.*—Blank.

3. *Heading secondly, public works relief.*—There is so much employment afforded by the tank-digging carried out by private individuals that comparatively few relief works are required on the part of Government. This is an excellent thing, as the road work will be useful when the rains set in and put an end to tank work. The last labor return I have received shows rather less than 4,000 people known to be employed on tanks and road work, and 800 less than were shown in the return for the previous week. This is probably owing to some demand for labor in connection with sowing or preparations for sowing the aous crop.

4. *Heading thirdly, provision of food for relief works.*—Blank.

5. *Heading fourthly, charitable relief.*—The Collector has not yet sent me a list of the proposed members of the district relief committee, though I have reminded him on the subject more than once.

He has, however, been in communication with some of the gentlemen selected, and I expect to receive the list at any moment.

6. *Heading fifthly.*—Land-owners and Land-holders continue to take out tuccavee loans for tanks.

No. 368—S. R., dated Kishnaghur, the 6th April 1874.

From—C. C. STEVENS, ESQ., Collector of Nuddea,
To—The Commissioner of the Presidency Division.

I have the honor to submit the following report on the condition of the district during the fortnight ending this day.

2. The reports received from the several sub-divisions show that there is sufficient grain everywhere except in thana Jaguli, where the trade of rice and paddy is very limited. But as most of the zemindars have paddy-lending concerns, and there are also mahajuns who give out paddy to the ryots, there is little or no chance of there being any actual want of food. The sub-divisional officer of Kooshtea reports that "the stock of grain is sufficient to meet the local demands at the current rates." The Assistant Collector of Meherpore says that, as a general rule, there is no great difficulty in getting rice. The Deputy Collector of Ranaghat believes that except in thana Jaguli grains are plentiful everywhere else. The Assistant Collector of Bongong says that "it may be confidently asserted that there is little or no chance of there being any actul want of food in this sub-division." The sub-divisional officer of Chooadanga reports that the coarse varieties of rice are to be had in plenty at all the principal hâts of the sub-division, and that a brisk importation of the better qualities is going on, and the bazars are invariably well supplied. The supply of rice in the north of the Sudder and west of the Meherpore sub-division is scanty.

There has been one slight shower of rain in the last fortnight, but it appears to have been very unequally distributed. The latest news from Kooshtea and Meherpore show a considerable fall of rain on Saturday last. Almost all the rubbee crops have been removed from the fields, and the yield has been more than was expected. The ploughing of lands for the great sowing (aous) of Baisakh has been vigorously prosecuted everywhere, and the land will probably be unusually well-tilled this year. Sowings of aous crop in low lands have commenced in Meherpore.

3. There has been no great fluctuations in the prices of grain. They have continued steady, and the following are the rates of coarse rice which have prevailed in the several principal marts:—

			Per Rupee.		
			Rs.	A.	P.
Meherpore	...	...	... 2	9	0
Bongong	...	...	... 2	4	0
Ranaghat	...	...	... 2	8	0
Santipore	...	...	... 2	8	0
Chogda	...	...	... 2	8	0
Haringhati	...	...	... 2	12	0
Kishnaghur	...	...	... 2	13	0

4. In by far the greatest part of the district I do not think that anything more than "pressure," and that not very severe, is felt. In the north-west of the district, however, there is no doubt that the middle-class people are beginning to suffer want, and measures are now being taken for their assistance. The people of a class accustomed to field labor are somewhat better off in consequence of the large quantity of work being provided for them both from Government funds and from tuccavee loans.

5. The means of transport are sufficient. In Kooshtea, about 8,000 maunds of food-grains have been reported to have been imported, and about 10,000 maunds have been passed through that sub-division during the fortnight. From Chooadanga the through traffic has been reported to have been very considerable; about 20,000 maunds are estimated to have been imported, and 590 maunds exported. In Bongong both the import and export trade has considerably decreased, as the mahajuns everywhere are said to have now opened their golahs. In Ranaghat the supplies received are estimated to be 514 maunds of rice, 365 maunds of paddy, besides other kinds of grains. The Meherpore sub-division is said to have been supplied with 7,000 maunds of rice from Eastern Bengal. The export of rice from the district generally has received natural check from high prices.

6. The portion of the district which is suffering most has been alluded to above. It is satisfactory that, from the manner in which work has been spread, the people have been enabled to attend carefully to their cultivation. I regret to say that there is a good deal of cholera in the distressed parts, and that I have had to provide three native doctors for that tract alone.

7. *Storage of Government grain*—None; nor is any needed.

8. A relief committee has been organized, and subscriptions are being raised, chiefly with the view of affording employment to people who will spin cotton and to the weavers.

9. Twelve cases of grain-thefts have been reported by the police. No cases of death or starvation have come to light.

10. Of the tanks undertaken from Government funds, those at Chandghur, Mirs, and Hatgacha, have almost been finished. More work will have to be provided in those neighbourhoods. The average daily number of persons on the Government works in the distressed parts is about 1,150, and is not at present increasing.

No. 2379—S. R., Calcutta, the 14th April 1874.

From—A. MACKENZIE, ESQ., Junior Secretary to the Government of Bengal,
To—The Commissioner of the Presidency Division.

I am directed to acknowledge the receipt of your letter, No. 3M.A., dated the 7th instant, submitting a copy of the Nuddea district fortnightly narrative ending 6th idem.

2. With reference to the above, I am to say that the summary of results recorded therein affords satisfaction to the Lieutenant-Governor, and His Honor will be glad to have the names of the individuals who have distinguished themselves by providing tank-work for the relief of the distressed in this district.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

PROSPECTS OF TRADE WITH EASTERN TURKISTAN.

No. 139, dated Kashgar, 2nd February 1874.

From—Her Majesty's Envoy and Plenipotentiary to Yarkund,
To—The Secretary to the Government of India, Foreign Department.

In forwarding the Treaty of Commerce just concluded with His Highness the Ameer of Kashgar and Yarkund, I wish to offer some remarks on the prospects of trade between India and Eastern Turkistan, regarding which very widely divergent opinions are held; one class holding the belief that the people of this country are much below the ordinary Hindoo in the scale of civilization and that the difficulties of the Himalayan route must ever prove a barrier to extensive trade; the other class going to the opposite extreme and encouraging the British manufacturers to believe that the conclusion of a Treaty is only necessary to enable them to ship loads of bales consigned to the Yarkund and Kashgar markets.

2. The truth lies in the mean between these two extremes; and whilst those who depreciate the importance of the trade are probably not thoroughly acquainted with the subject, on the other hand, it would certainly save the more sanguine class from disappointment if before despatching their goods they weighed well the following facts.

3. What strikes every Englishman who has visited the Ameer's dominions is the very comfortable condition of the people and the degree of civilization they have attained, considering their entire want of contact hitherto with European nations. They are industrious, peaceful, and, as a rule, remarkably intelligent and very energetic, and would be quick to appreciate and adopt all the advantages offered by European science.

4. Russian and English goods are eagerly sought, and though there are certain prejudices of religion against clothes figured with the resemblances of animal life, there are no such caste difficulties to be overcome as are to this day to be met with in India.

5. The population is much scantier than we had been led to expect, and there is much more land available for cultivation and capable of irrigation by the numerous canals and streams than there are hands for: in fact the prolific crops now raised would feed many more mouths than there are at present. Sheep and fowls are abundant, cows are not quite so plentiful. The disturbances of late years have, of course, much to do with the scantiness of the population, as may be seen in the undue proportion of females to males. This would prove an obstacle to a speedy development of trade on a large scale, but it is an evil which a few years of peace and good-will will soon remedy. Already the population in the cities of Yarkund and Kashgar is on the increase, and everywhere that we have travelled there is the appearance of a thriving people. The bazaars are well filled, trade is brisk, houses are springing up on all sides, and poverty is said to be on the decrease, so that on this head I can speak confidently.

6. Time and peace only are necessary for the production of a large demand for necessaries and luxuries.

7. The next great drawback is the want of proper currency, in consequence of which all commercial transactions have to be carried on more or less by barter. It is the intention of the Ameer to introduce a silver coinage, until which has been fully established merchants must content themselves with taking gold-dust, felts, shawl, wool, churrus, carpets, &c., in exchange for their European goods. If very large consignments of British manufactures came over, the importers would perhaps find the market swamped by consignments from the Russian side, and they might have difficulty in getting loads in exchange which would fetch any fair price in the Indian markets.

8. The next obstacle is the road over the Himalayas. At present mules and ponies are the only beasts of burden employed; and though the road by Kullu and the Bara Lachâ has been rendered practicable for camels, it is exceedingly doubtful if Indian camels could stand the great cold of the higher Himalayas north of Ladakh.

9. For mules and ponies, the road between Leh and Yarkund passes for days over an inhospitable tract, where grass and grain are not to be found, and it would be necessary for traders to carry supplies with them or to lay them out at convenient distances. From the Yarkund side the difficulty of carriage can be met with more successfully, the double-humped Bactrian camel is to be had in any numbers and is bred in the Kogyar district. These animals are well adapted for crossing the high desert plains of the Kara Korum, and if Mr. Johnson has been successful in finding a road down the Shyok practicable all the year round, there is no reason why camels should not go with their loads to Leh. They have already gone there with ease by more circuitous Changchenmoo route.

10. The Yarkundee ponies far surpass all other animals of their kind as beasts of burden, and, for all animals, the difficulties of the mountain route will be immediately reduced by the opening out of the Kogyar line, by which one low easy pass is substituted for the high and troublesome Suget and Sanju passes, and the journey will be shortened by three days.

11. The question of the best line throughout to be adopted must be reserved for discussion when all the information requisite for forming an opinion has been collected. But it may be assumed at once that the Kogyar route between Aktagh and Yarkund will certainly be adopted, and if so, then mules from the plains of the Punjab can without any great risk make the journey to Yarkund. Last year they came across the Suget pass as far as Shahidulla or close to that place, so that they could certainly have crossed the easier pass to Kogyar, and then would have reached the plains of Yarkund.

12. As regards the Ladakh and Cashmere ponies as a means of carriage, the stock is not nearly sufficient for the requirements of the trade as it is at present; and it is not likely that they will increase to any extent, and I look to Yarkund for the supply of carriage.

13. Another supposed obstacle to our trade is the competition of Russia: undoubtedly Russian goods have obtained the chief place in the bazaars of Eastern Turkistan, and the road between Kashgar and Russian territory offers none of the great difficulties to be met with on the Ladakh route. But it is, I believe, a fact that English goods can be conveyed at a cheaper rate through India and over the Karakorum than through Russia to Kashgar.

English goods under Russian covers are sold here, which shows that our manufactures do somehow or other find their way into this country. Russian chintzes have a large sale here: but comparing prices, I find that superior English chintzes could be sold at a much lower figure, and still leave the importer a handsome margin of profit.

At present, the few Indian traders who come over with ventures consider they have not done well if they do not clear 75 or 80 per cent profit.

Unless then the Russian merchants make the same rate of profit, it is clear that English goods ought to hold their own, to say the least, against all others.

* * * * * * * *
* * * * * * * *
* * * * * * * *

23. It may perhaps appear at first sight that I have little faith in the elasticity of the trade which I am specially empowered to foster by treaties and other facilities. But this is very far from the fact, though I believe I am consulting the real interests of our British merchants and of Eastern Turkistan in putting all the circumstances of the case in a clear light.

24. That the trade is capable of expansion experience has proved; when the subject was first brought to Lord Lawrence's notice in 1866, the total amount of annual exports and imports at Leh did not exceed one lakh (£10,000), and Wuzeer Goshaon, whose opinion was sought by the then Viceroy, was considered to have overshot the mark when he suggested a possible increase to ten lakhs (100,000) per annum. From the returns published by the Supreme Government we find that within five years fifteen lakhs (150,000) have been passed, and as the obstacle to which I have alluded to are gradually removed, the expansion of commerce in this direction may spread to a very large extent.

25. But if British merchants try to act in defiance of all prudence, and without proper arrangements, they are sure to meet with disappointment and will cause discouragement to others.

26. I am led to offer these remarks by the receipt of a letter from a gentleman who signs himself as Director of a Company for trading with Eastern Turkistan, in which he informs me that he purposes leaving the Punjab on the 20th of May next with 600 loads of merchandise valued at three lakhs of rupees, and he requests me to order supplies for his animals to be laid out on the road between Leh and Yarkund.

27. It is not for me to offer him advice, and the idea of laying out supplies for him alone is of course not to be entertained, but as other merchants may be disposed to follow his example, I think they would do well to ponder over the facts I have put forth in this letter. There is wisdom in proceeding by degrees and not putting too great a strain on a growing structure.

28. Experience tells me that to convey 300 loads from the Punjab to Yarkund requires an immense amount of forethought and arrangement, as well as a considerable expenditure, without which disaster would have been inevitable in crossing from Leh to Yarkund.

29. Up to Leh the difficulties of supplies is far less, and each year will decrease. In course of time I hope the Maharaja on his side, and the Ameer on the other, may be induced to arrange for supply houses at convenient distances; and possibly by judicious planting, grass and wood may be reared on some parts of the road, but till some such facilities are afforded, I should think small consignments would be more likely to be successful, and the establishment of a market at Leh will give probably a good impetus to the completion of the desired arrangements.

30. To meet the wishes of the various Chambers of Commerce I am making as complete a collection as I can of samples and specimens of all goods in use in this country, whic capable of being manufactured profitably in England or India. The information regarding the travelling stages for merchants, &c., will be given when I submit my report on the various routes over the Himalayas. Meanwhile the following hints and facts may be considered useful.

31. A mule or pony ought not to be compelled to carry more than 225lbs. or 2 cwt., and spare animals in the proportion of 5 per cent. should be taken. The hire of a pony or mule from the Punjab to Yarkund is Rs. 70 or £7.

The number of stages is 75.

32. Goods consigned from England for the Yarkund market should be packed in bales of 1 cwt. each, wrapped in skins or other stout material to resist damp, as well as the thorny bushes in the valleys, which are very destructive. Spare pony or mule shoes at the rate of three sets per animal should be taken, and it is advisable to have amongst one's followers one or more men who can do farrier's work.

33. In selecting goods for the Yarkund market, patterns with figures of birds or animals should be eschewed; stripes find more favor than checks; bright colors are much preferred by the people here; black is not at all approved; tweeds are not appreciated. Glace's chintzes, and all kinds of cotton goods are in great demand, though a common kind of cotton cloth is largely manufactured at Khoten and is even exported to Kokand.

34. All goods should be of the best quality, good prices being readily paid for fine cloth, whereas inferior clothes and sized piece goods though even low priced are not in favor.

35. Having alluded to the fairs in Asia I may give facts as the result of my observation which appear to account for their extensive use and afford at the same time an insight into the character of the people.

36. There are not many large towns in Eastern Turkistan, or villages of any size, such as are to be found in India, but the cultivated portion of the country is studded with separate farms and homesteads, many hundreds forming a kind of circle, or what in India would be called pergunnah.

37. As there is no village bazaar such as we understand in India in order to supply their wants, a custom has grown up of holding weekly markets at different spots in the pergunnah. Thus as we passed along from Sanju to Kashgar, we came across many places called Ekshumba or Doshhumba Bazaar, *i.e.*, held on Sunday or Monday, and so on. Here, for instance, within a radius of 25 miles, there is a bazaar held at one place or another every day in the week except Friday, to which the peasantry flock with their sheep, fowls, cotton clothes, boots, and other articles of daily consumption or requirement. Even in the large cities one day in the week is devoted to the bazaar when the chief business seems to be transacted. Frequently when I have had occasion to send to the city of Kashgar for an article I have been told that it will not be procurable till Thursday, the market day. In this respect and in many others we may welcome a renewal in these parts of our recollections of old England.

38. It is hardly necessary for me to do more than point to the peace and security to property which all this betokens, when a peasantry can live thus unprotected in solitary farms or in small hamlets, there must be little fear of robbers or of violent crime. No need here evidently for enclosing themselves within walled towns, or for the erection of forts, for protection from internal commotions. Though there is no Arms Act in the country, weapons are never carried by the people, and the appearance of arms is a sign that the wearer is employed on duty for the Government.

39. Violent crime is almost unknown and thefts are rare. The Ameer has acquired a character for excessive severity because he punished theft with death. He is undoubtedly a terror to evil-doers, but is acknowledged to be just in his punishments, and the result is a complete stoppage of crime. The peasantry are unmolested, and when peaceful industry is thus allowed to thrive we may with justice form high expectations of the advancement of the people, and be encouraged to aid in the work of improvements.

40. The country is said to be rich in mines of copper, iron, lead, and coal, so that by the aid of European science and skill machinery of all kinds may be introduced, and would be quickly appreciated where the hands are so scarce. The habits of the people, too, are all favorable to industry. Instead of each man cooking his own food, and thus spending a valuable part of the day in culinary occupation as in the case in India, there are innumerable restaurants and bakeries, and bread and meat pies are hawked about the streets, and a very cheap dinner is thus provided for the masses.

41. In conclusion, there is one point on which any British trader or traveller purposing to visit this country ought to be informed, and which he would do well to bear in mind. The people of Eastern Turkistan, though good-natured, friendly, and hospitable to Europeans, own to no inferiority of race, and will not submit to be roughly treated. They meet Europeans with perfect politeness but on terms of equality, and any attempt at hauteur or domineering will be quickly and fiercely resented.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE FORTNIGHT ENDING THE 16th APRIL 1874.

GENERAL REMARKS.—Reports from Madras state that there has been good rain in Kurnool, and a slight fall in parts of the Kistna district; none has fallen in the south, where supply of water is insufficient and prospects not satisfactory. In Sindh the harvest is in progress and prospects are good. There has been slight rain in some parts of the Bombay Presidency; most crops have been reaped, and in the south preparations have commenced for the khurreef sowings. Rain fell during the first half of the fortnight in the northern districts of Central Bengal and also in the east, in some places accompanied by hail; it has greatly benefited the crops where it has fallen; little damage has been done by the hail. In Behar there has been no rain, and showers are anxiously looked for to enable sowings to be undertaken and to save the indigo and push forward the millet and mango crop; the rubbee harvest is now nearly over; the outturn has been good for the area sown. No rain has fallen in the North-Western Provinces; the harvest is in progress in the north-western districts, and has been nearly completed in the eastern and southern; the outturn has been generally good throughout the province, and above the average in the Upper Doab. The numbers employed on relief works have much increased in Goruckpoor and Bustee, but severe distress is reported to be small. In the other districts of the Benares Division the relief works are being gradually closed, except South Mirzapore, where the scattered population is kept from emigrating by local works and advances for the purchase of grain. In Banda and Humeerpoor small relief operations continue; grain is exported thence to Bundelkhund. In Oudh the rubbee has been reaped with a fair outturn. In the Punjab rain has fallen in Rawulpindi and Peshawur; prospects are excellent throughout the province. In the Central Provinces and Berar the harvest has been completed, and operations for the next crop are beginning. In Rajpootana and Central India the harvest has generally been gathered with a fair outturn in most districts and in some above the average; the water-supply is insufficient in some parts of Rajpootana. In Mysore prospects are fair, with some scarcity of water.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Madras (April 16th)		
Kistna („ 15th)	*Nil* at Masulipatam	Slight drizzle in Vinukonda; river 4 ft. 6 in. below anicut: canals closed; standing dry crops fair and being harvested; second rice crop in Gudwada suffering from want of water and being reaped; prices stationary; small-pox in a mild form general; fever in parts; guinea-worm in Palnad; cattle healthy, only in Guntoor pasture scarce; markets well supplied locally.
Kurnool „	1·7 in Murkapur.	Season favourable; later dry crops being harvested; outturn moderate; markets wel supplied; prices stationary; cattle disease in six taluqs, fever in six; small-pox in five and guinea-worm in one taluq; pasture and water sufficient; no water over the Sunkesala anicut.
Negapatam „	*Nil.*	No rain at Negapatam and elsewhere; heat excessive; rivers dry; water in tanks scarce; water over upper and lower anicuts none; cultivation none; standing crops not thriving in some places; some dry grains harvested here and there; yield below the average; pasture scanty; markets sufficiently supplied; prices fluctuating; small-pox in several places; cattle generally healthy.
Trichinopoly „	*Nil.*	Supply of drinking water slightly insufficient; condition of crops as before; market supply sufficient; prices stationary; public health good; pasture scarce.
Calicut „	*Nil.*	Ploughing operations for the first crop in progress; supply of grain from local sources not ample; small-pox continues without abatement; fever slight in hilly parts; cattle disease reported in Calicut taluq; pasture scanty; prices stationery. General prospects not satisfactory.
Bombay— (April 15th)		
Sindh.		
Kurrachee ...	...	River at Kotree on 4th instant 4 feet 6 inches; chicken-pox general; measles at Amri; small-pox in Kurrachee town; and in Joti and Gorabari taluqs; fever prevalent.
Hyderabad ...	...	Weather unusually cool; winds variable.
Shikarpur ...	...	Weather very warm during the day, nights cool; wheat harvest commencing; crops abundant.
Upper Frontier ...	...	Crops harvested; weather and crops fair.
Gujarat.		
Ahmedabad ...	...	Aurree cultivation commenced; cholera has appeared in Duskroi taluq; otherwise public health good.
Kaira ...	...	Weather hot; public health good; cotton being picked.
Surat and Broach ...	...	Weather hot and cloudy; public health good; crops in Surat good.
Khandesh and Nasik.		
Khandesh ...	...	Cotton market unchanged; weather cloudy; dust storms; public health good.
Nasik ...	0·25	Public health good, except in Peint, where fever slightly prevails.
Thanna ...	...	Weather warm; town healthy; slight cattle disease in Salsette and Moorbar taluqs; scarcity of drinking water in Warra taluq.
Deccan.		
Poona ...	...	Slight rain in taluqs Khed, Mowal, and Bhimthurry; hot weather continues; public health good; cattle disease exists in Mowal, Khed Havelly, and Indipore.
Ahmednuggur ...	0·29	Slight cattle disease in taluq Ankola; public health good.
Sholapur ...	...	Public health good; signs of rain; weather very warm.
Southern Mahratta Country.		
Dharwar ...	...	Rain wanted for garden crop; cotton-picking nearly over.
Kaladghi ...	...	Rubbee reaped and fields prepared for seed of khureef crops; cereals cheap.
Canara ...	...	Second crop being reaped; preparations for monsoon crops progressing; small-pox, fever, and cattle disease prevalent.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bombay—*contd.* *Kattyawar and Gaekwar's territory.*		
Wudwan ...	...	Weather warm; state of crops same as before; public health good.
Baroda	...	Weather very hot; a little rain on the 10th instant; public health good.
Bengal (April 14th)		
Burdwan ...	*Nil*	No rain has fallen in the district except a passing shower at Mancoor on the 3rd April; weather hot; teel (oil-seed) is suffering from want of rain; distress increasing in Boodbood and Cutwa; and applications for relief coming in from nearly all parts of the district.
24-Pergunnahs ...	*Nil*	Bright and warmer with occasional clouds and fogs in the morning during the early part, afterwards clear and very hot; sugarcane has yielded a fair crop; no crop on the ground except a few vegetables. Rain wanted for the early rice sowings.
Dacca ...	1·19	Weather very hot; some rain has fallen during the fortnight, and storms in the early part; prospects of crops good; boro paddy yielding well.
Cuttack ...	...	No rain; weather very dry and hot; prospects of crop good.
Distressed Districts.		
Moorshedabad ...	*Nil*	During the first half, mornings and evenings were cool and days hot. On the evening of the 3rd April there were threatening clouds with strong wind, but a few drops of rain fell at head-quarters. There were heavy showers of rain in the Harrihurparah and Nowada thannahs. In the second half there was a severe storm accompanied with rain in thannahs Jellinghee, Goas and Nowada, and in parts of Lallbaugh and Jungypore Sub-divisions. Heat much greater than first week. The harvest of the cold-weather crops is concluded. The outturn has been very fair, but in a smaller extent of country than in ordinary years. Indigo and mulberry are in good condition, but the demand for the latter has not been as active as was anticipated, owing to some disease having attacked the silk-worm reared from the March *bund*. Fields are being prepared for the next early rice sowings; this affords employment to a considerable number of laborers, principally in the eastern thannahs; many villages have recently suffered heavy losses by fire; conflagrations are getting frequent; relief has been afforded to many sufferers. Prices in most markets stationary, common rice is half a seer cheaper in the sudder bazar, but wheat has risen two seers in Gorabazar and Nowada.
Dinagepore ...	1·93	Dry and hot during the early parts; cloudy with showers of rain throughout the district during the rest. The rain has done much good to the early rice, already sown, which is now in some places coming up; it has also enabled ploughing operations to be resumed and pushed on. Boro rice is everywhere reported as looking well. The mango crop will not be as large as it at first promised to be.
Maldah ...	1·57	In the first part, the weather was hot and dry with occasional clouds; storm, rain and hail on the 3rd April, and distant thunders and clouds on the 4th, weather hot in the latter part; storm, thunder, hail and rain on the night of the 7th. The cold-weather crops are almost all safely harvested and have yielded a full average outturn. The cheena (millet) and gram which remained to be harvested, promise a full yield; the rain which appears to have been general, has done much good to the boro paddy crop, which in some places was suffering for want of water; this crop is now in a promising condition. The hail did a little damage to the mango crop in places, but it was not so severe as to do material injury to the early boro rice. The sowings of the early rice has commenced in places, and the weather is favorable for it. Prices which had fallen slightly during the first week remain almost stationary, the prospects and condition of the district are better than in previous fortnight.
Rajshahye ...	0·91	Heavy rain in the afternoon of the 3rd April accompanied with high wind. There was rain accompanied with hail over the greater portion of the district on the 6th and 7th idem. The cold-weather crops have almost all been harvested. The hail of the 6th and 7th did some injury to the standing crops, such as cheena (millet), wheat and barley in Pooteah and Nattore. In Mandah the boro paddy has been somewhat injured by the want of sufficient moisture and the excessive heat; insects have also done some damage to the young plants, rain is wanted for the teel (oil seed) and jute crops. Land is being prepared for paddy sowings; prices have risen in some parts of Bagmaree, Mandah, Godagaree and Bhandarkhara to the extent of 1½ to 3 seers less for the rupee.
Rungpore ...	·79	High winds with cloudy weather but without rain until the evening of the 3rd April, when there was a short but heavy hail-storm and a fall of rain. Rain has been general throughout the district during the early part of the second week; it has since been very hot. The rain has done much good to the kowni and cheena (millets) and the sprouting rice which wanted it. The weather is favourable for the cultivation of early rice, which is going on extensively; wheat and pulses plentiful; crops gathered in. The price of rice has suddenly gone up from Rs. 4 to 6-8 a maund of 90 tolahs weight in the bazars in the immediate neighbourhood of Rungpore, and numerous complaints are made that it is owing to private trade having been paralysed by the employment of the local carriage for transport of Government rice.
Bograh ...	5·76	Fine and pleasant weather; ample rain has fallen in the district. Khasaree (pulse) and other cold-weather crops are reported as having been reaped in parts of the district, with a fair average yield. Early rice is being sown in various parts; jute sowing has commenced in some places, the rain has done much good.
Patna ...	*Nil.*	Weather seasonable, though very cool for the time of the year during the entire fortnight, excepting the last two or three day, which have become very hot. In the first part strong east winds prevailed in the mornings, which turned round in the middle of the day. All the cold-weather crops have been cut and there is little on the ground except patches of cheena (millet) where water is procurable. The crops yielded well.
Gya ...	*Nil*	Seasonable and fine weather. The harvest of the cold weather crops has almost all been gathered in; and the outturn is satisfactory. Cheena (millet) has been sown in larger quantities than was originally reported, and the crop is in all stages of maturity.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bengal—*continued.*		
Shahabad ...	*Nil*	During the first part the sky was murky; strong west wind attended with dust storms prevailed chiefly in the day; mornings were pleasant. Latter half clear, with hot east wind. The cold weather crops have been harvested and have yielded a fair outturn. Cheena (millet) is being cut; mango crop, so far as standing, promises well, and will, if there be no blight, help in the way of giving food to the poor.
Tirhoot ...	*Nil*	Hot and dry in day and cool by night, during the first week; afterwards hot with west winds. In the Tajpore sub-division, the cold weather crops are being harvested. Moong (pulse), kowni and cheena (millets) sowings require rain. Indigo prospects bad; germination was not bad, but the plants die away, and in places caterpillars are doing much damage. No change in the prospects of mango crops. Tobacco traders are not coming forward as in ordinary years. In the Durbhungah sub-division, the mustard and rahur (pulse) are good; the prospects of the cheena (millet) and moong (pulse) crops are unsatisfactory. Rain is much wanted for both these crops and to permit of the ground being prepared for the paddy sowings. Mango crop still promises. In the Seetamarhi sub-division the rahur (pulse) crop has been successful; about three-fourths has been reaped; want of rain is injuring the cheena (millet) which has been dried up in many places, rain is much needed for paddy cultivation; mango is hopeful. In the Hajeepore sub-division the crops, especially at Mehour, have given a good outturn; there is no material change in crops in the sudder sub-divisions. In the Madhoobani sub-division the outturn of rahur (pulse) is reported about 2 annas.
Sarun ...	*Nil.*	Clear and hot; wind variable, both east and west; the cold weather crops are almost all harvested, thrashed and stocked; the produce has been fair, so far as it goes. Cheena (millet) moong (pulse), &c., are still doing well, but are much in want of rain without which a good outturn cannot be expected, sugarcane is being planted for next year's crop. Indigo prospects bad; plants are sickly and withering away for want of moisture, mango crop, so far as remaining, promises well; prices steady.
Chumparun ...	*Nil*	East and west winds. The cold weather crops are still being harvested; the produce is good, so far as it goes. The cheena (millet) is being scorched up and will be a failure without rain. Indigo prospects bad; mango blossoms are said to be withering. Rain wanted.
Monghyr ...	*Nil.*	Seasonable weather; west winds; the cold weather crops have nearly all been harvested and the return is good. Indigo prospects bad, mohwa crop good; mango will probably only be four annas crop.
Bhaugulpoor ...	*Nil.*	East and west winds. Rain fell on the 7th April on the east of Coosy and round Nathpore. Rain necessary before end of April; cold weather crops almost all reaped, outturn very satisfactory; mango crop reported failing in many places.
Purneah ...	*Nil.*	In the early part the weather was very hot and dry; up to the 11th April it has been dull and close with east wind; since then hot west wind. Rain has fallen in Arraoreah, Kishengunge and Bulrampore, but none in the sudder sub-division, where it is much wanted for the millets and rice crop, which have been sown, and to enable further sowing of rice to go on; prices rising.
		Public health.—Burdwan, fever as before, a few cases of cholera in Culna and Cutwa. 24-Pergunnahs, cholera continues in thannahs Bankipore, Mothoorapore, Satkhira, Kaligunge, Kalaroa, Baduria, and Busseerhaut. It has broken out in Barrackpore, Degunga, Joynagar, Protapnagur, Hashnabad, and Harowa, and abated in Barripore. Small-pox reported from Satkhira, Kaligunge and Kalaroa and from near Baliaghatta. Dacca, still some cholera, chiefly in Moonshegunge. Cuttack, public health good. Moorshedabad, small-pox and cholera are still prevalent, the latter disease is spreading fast. Rajshahye, cholera cases are numerous in Maldah and Tanore. Patna, the health of the district is generally good, but the number of small-pox cases in the city increasing, and some cases have been reported from Monair to the west of Dinapore; Gya, small-pox has broken out in several villages, the health of the district otherwise good; Shahabad, the small-pox still prevalent; Chumparun, small-pox prevailing in places; Monghyr, health of the district satisfactory; Bhaugulpore, general health very good.
		General Remarks.—During the fortnight under review more or less rain has fallen in half the districts of these provinces and has done much good. Hail-storms have also been reported from some places, but no material injury appears to have been done by them. Rain is urgently required in the remainder of the districts, and where it has been insufficient, particularly in Behar, for agricultural operations for the next season crops and for saving the crops recently sown. The Boro rice crop is favourably reported on from nearly everywhere. Sowings of the early as well as late rice and jute have already commenced, but in some places rain is necessary for commencing operations. Harvesting of the cold weather crops is nearly over, with fair results on the whole, though the area under cultivation has been less than usual in some districts. Mohwa, an important food crop in the Chota Nagpore and adjacent country, has proved more abundant than was believed.
N. W. P.— **(Apl. 16th)**		
Goruckpoor (12th)	...	Prices somewhat lower as rubbee comes in; numbers on relief works increased, in north 28,600, in south 22,500; most of these are believed not to be driven to work by severe distress; rates of pay lowered to check unnecessary relief; in the city poorhouse 1,060, in tehseelee poorhouse 400. Rs. 1,57,000 have been advanced to traders up to 7th April for purchase of food grains; Nepal Government authorizes sale of surplus jarhan rice seed to persons with passes from Collector.
Ghazeepoor (15th)	...	Prices slightly fallen; on relief works 558; in receipt of charitable relief twice a week 1,200; daily charitable relief stopped.
Mirzapoor (14th)	...	Prices in Ganges valley unchanged; in the south slightly lower; harvest almost over; mangoes promise well, mohwa outturn abundant north of Sone, in south considerably under average; in Doodhee 700 people on nine relief works; in Oopreudh 421; emigration from Doodhee checked by tuccavee advances for purchase of food grain; some import of grain from the south.
Benares (14th)	...	No dirtress; sufficient employment still given by threshing and winnowing.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
N. W. P.—*continued.*		
Azimgurh (12th)	...	Prices stationary; rubbee harvested; good average outturn of wheat and barley; urhur and gram and peas gave from eight to ten annas; poorhouse at head-quarters relieved 100 people.
Jounpoor (14th)	...	Prices stationary; rubbee outturn good.
Banda (14th)	...	Rise of prices at head-quarters due to exportation to Native State and to Cawnpore; employment afforded by threshing and mohwa gathering; mohwa crops said to be abundant in south-east and deficient in north; one poorhouse in Kirwee closed; total numbers in poorhouses 1,286; three relief works with 1,419; money advanced to 34 purdanasheen women for cotton spinning.
Humeerpoor (14th)	...	Prices unchanged; threshing nearly finished; five relief works with 1,285, and charitable relief given to 269; grain being exported to Bundelkund, and imported from Cawnpore.
Jhansi ...	...	Not received.
Cawnpoor (15th)	...	Prices fallen; rubbee harvest continues, average outturn expected.
Futtehgurh ,,	...	Rubbee nearly all harvested; outturn average.
Agra ,,	...	Prices lower as harvest comes in; outturn reported fair.
Allygurh (14th)	...	Rubbee nearly harvested.
Meerut (15th)	...	Harvest continues, outturn promises to be exceedingly good.
Saharunpoor ,,	...	Harvest continues; crops excellent.
Bijnour (14th)	...	Harvest continues; sugarcane sprouting and looks well.
Moradabad (15th)	...	Harvest continues; no exports.
Bareilly ,,	...	Slight fall in the prices.
Bustee ...	...	Harvest nearly threshed out; outturn good; prices unchanged; about 40,000 people on relief works; numbers in poorhouses small.
Allahabad ..	...	Outturn of harvest average; about 200 couples received charitable relief.
Punjab **(Apl. 15th)**		
Rawalpindi ...	1·5	
Peshawar ...	·2	No rain lower down; prospect of harvest of the province very good; public health generally good.
Oudh **(Apl. 16th)**		
Lucknow (Apl. 15th)	*Nil*	The rubbee harvest reaped, and the outturn is fair.
Fyzabad ,,	*Nil*	
C. Provinces—		
Chanda (Apl. 11th)	...	Heat increased; prospects good; prices easy.
Raipur ,,	...	Hot; crops gathered; small-pox prevalent; rice 32 seers.
Mandla ,,	...	Hot winds, prospects good; small-pox in places; prices stationary.
Bhandara ,,	...	Clear; rubbee harvest average; small-pox prevails; prices easy.
Sumbulpoor ,,	...	No standing crops; prices high, steady.
Wurdha (15th)	...	Rubbee harvested; small-pox prevalent.
Nursinghpoor ...	...	Thunder and lightning; slight rain 12th; rubbee harvest good.
Jubbulpur ...	...	Prospects good; prices stationary; small-pox still in Jubbulpore city.
Seoni ...	...	Cloudy; rubbee harvest being threshed; fever declining.
Saugor ...	...	Hot; rubbee prospects favorable; small-pox.
Nagpoor ...	...	Cloudy; no standing crops; small-pox and cattle disease about.
Nimar ...	...	Prospects favorable; prices stationary.
Hoshangabad ...	...	Prospects favorable; small-pox prevailing; cholera report false.
Betul ...	...	Hot; rubbee twelve anna crop.
Hyderabad Assigned Districts—		
East and West Berar (Apl. 16th).	·32	Ploughing in progress; slight storms.
Mysore & Coorg (Apl. 16th)		
Bangalore ...	·14	Agricultural prospects fair, but wet crops suffering for want of water; public health generally good; cattle disease prevalent in parts of two districts.
Coorg ...	·14	
Rajpootana **(April 16th)**		
Serohi (Apl. 6th)	·2	Tanks dry; not much water in wells; crops all in; outturn good; health very good.
Meywar (11th)	...	Tanks and wells in western districts very low; in eastern districts water plentiful; health very good; crops very deficient in western districts; in eastern average.
Harowtee (Agency States) (Mar. 28th)	...	Tanks drying up; wells moderately full; health good; small-pox prevalent; crops fair.
Ulwur (Apl. 9th)	...	Crops good; health good; weather not very hot.
Bhurtpoor (16th)	...	Spring harvest above average; health good.
Jeypoor ...	*Nil*	Crops nearly gathered satisfactorily; public health excellent.
Ajmere ...	...	Health good; harvest good, generally cut; weather warmer, cloudy, and windy.
Central India—		
Indore (Apl. 15th)	...	Weather cloudy and hot; health good.
Gwalior ...	...	Cloudy; crops fair; small-pox diminishing but still in cantonments.
Neemuch ...	...	Few cases of small-pox in the district; hot weather commencing; agricultural prospects appear good.
Rutlam ...	...	Health good; crops being gathered.
Bagelkhund (Sutna) ...	...	Crops average; small pox at Nagode.
Assam **(April 16th)**		
Gowhatty ...	1·84 at Gowhatty.	Weather hot with occasional heavy rains; aus crop is still being sown; cholera and measles have broken out in the interior.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

[TELEGRAPH.]

ADMINISTRATION REPORT OF THE INDIAN TELEGRAPH DEPARTMENT FOR THE YEAR 1872-73.

Nos. 202—19 T., dated 2nd April 1874.

OBSERVATIONS—By the Government of India, PUBLIC WORKS DEPT.

Read :—

Letter No: 386 of 23rd December 1873, from Director General of Telegraphs forwarding the Administration Report for 1872-73.

OBSERVATIONS.—This Report of the Administration of the Telegraph Department for the year 1872-73, though still behind time, is much more punctual than any of its predecessors, and His Excellency in Council trusts that the next Report will be received by the authorized date.

2. The Report is divided as usual into different heads, and attached thereto are five annexures, *three of which are Reports* by principal Subordinate Officers, and the other two abstracts of receipts and expenditure.

3. As Lieutenant Colonel Murray has recently handed over charge of the office of Director General to the permanent incumbent (Colonel Robinson), the Governor General in Council considers this to be a fitting opportunity for placing on record his sense of the satisfactory manner in which Colonel Murray has discharged his duties, and the efficient control which he has exercised over this large and important Department during the past two years.

4. His Excellency in Council has noted with satisfaction the praise awarded by the Officiating Director General to the majority of the Officers and Subordinates under his orders, and more especially to Messrs. Cappel and Lane.

I.—International relations and communications with places Abroad.

5. The working of the International lines connected with India are reported to have been satisfactory, and the interruptions between India and Europe few, and in only one instance of any duration, *i. e.*, for three days.

6. Communication between Europe and Australia *vid* India and Java was established during the year under review, *viz.*, in August 1872, the date at which the landline across Australia from Port Darwin to Port Augusta 1900 miles in length was completed.

7. The Director General shows that, though there was a slight decrease in the number of foreign messages transmitted, there was a satisfactory increase in the revenue realized. The cause of the decrease in number seems reasonably accounted for in the Director of Traffic's Report as due to the opening of the new Australian Line, in consequence of which, messages for Australia, instead of being posted at Galle as formerly, and included among Indian messages, are now sent across India by wire, and necessarily classed as "transit;" and also to the operations of the Packing Agencies.

8. The Packing Agencies seem to have benefited the general revenues on the whole. As however there is no reason why the Telegraph Administration should not arrange to afford the public the same sort of convenience as is afforded by these Agencies, steps have recently been taken to that end.

II.—Local tariff and traffic.

9. The Director General reports that the abolition of the double charge for Code messages has, he considers, been a beneficial change.

10. The total number of messages transmitted has increased from 702,706 in the previous, to 726,341 in the present year, equivalent to 3·36 per cent.; and the revenue has likewise increased from Rs. 16,00,383 to Rs. 17,27,600,* or 7·95 per cent.; which may be considered satisfactory.

	Rs.
*Indian Lines	16,41,775
Ceylon „	85,825
Total ...	17,27,600

11. The actual message receipts appear to have been Rs. 17,03,478 instead of Rs. 17,27,600 as shown in para. 10 of Director General's Report; the necessary corrections should be made.

12. The particulars of the revenue receipts are detailed below—

Inland messages	11,87,363
Foreign „	5,16,115
Total messages ...	17,03,478
Sale of *Telegraph Gazette*	10,329
Guarantees	2,644
Miscellaneous	11,149
Grand total ...	17,27,600

13. The Director General shows that the revenue is, and must be, chiefly dependent on the state of trade; mercantile messages form (numerically) 70·per cent. of the total number of messages transmitted.

14. The number of messages interchanged between the Government and the Railway Telegraph systems has increased by about 13 per cent., but the total number (37,174) is still very small.

15. The concession granted to the public on the 1st January 1872, of giving the address free of charge, has not resulted, as was anticipated, in an improvement in the proportion of undelivered messages; it appears, therefore, that the public have not availed themselves so fully as they might have done of this privilege.

16. The total number of Telegraph Offices open during the year is shown to have been 203 against 199 in the year previous, giving an increase of 4. The average number of messages despatched from each station was 3,119. The classification of stations given in para. 35 shows that nearly one-half of the total number despatched less than 1,000; while there were only five stations at which more than 15,000, and only eight stations at which more than 10,000 messages originated.

17. Of the total number of paid-messages, no less than 91 per cent. were private, and only 9 per cent. on the public service.

18. An analysis of the private traffic gives the following results:—

	Per cent.	Per cent.
Inland private messages.		
Commercial, European	31·46	
„ Native	32·64	
		64·10
Domestic, European	18·10	
„ Native	12·96	
		31·06
Foreign private messages.		
Commercial, European	4·10	
„ Native	0·37	
		4·47
Domestic, European	0·34	
„ Native	0·03	
		0·37
Total ...	100·00	100·00

19. The decrease in the number and percentage of "complaints" is very satisfactory. During the past six years the number of messages (excluding "telegraph service and other free") has increased from 310,944 to 684,388, or more than double, while the number of complaints have dwindled from 588 to 365. For this year the percentage is 0·05, against 0·07 in the year previous. The Governor General in Council considers that these facts speak much for the efficiency of the Department.

20. The Director of Traffic records some interesting remarks regarding a magnetic storm which occurred in the neighbourhood of Madras, and which was violent enough to completely stop the working of the wires for two hours, and to impede their working for a much longer period.

21. The information regarding present and past tariffs to be found in paras. 14 to 22 of the Report of the Director of Traffic is given in a very convenient form for future reference.

22. The Report of the Director of Traffic has been most carefully compiled, and is a very valuable one.

III.—Extensions of lines and wires and line maintenance.

23. The following table gives a few interesting particulars:—

	1st April 1873.	1st April 1872.
Number of miles of line	15,705	15,326
Increase	379	
Number of miles of wire	31,209	28,973
Increase	2,236	
Number of miles of line erected along Railways	5,285	4,602
Increase	683	

24. The Director General reports, however, that these are *nett* additions, the actual number of miles of new line erected being 970, while 591 were dismantled, chiefly in consequence of the removal of the lines from roads to railways.

	Rs.
25. The total expenditure on Construction works has amounted to	7,98,782
From which has to be deducted the value of stores recovered from dismantled lines	1,14,956
Balance ...	6,83,826

This does not include special additional charges, *viz.*, (1), on account of the Looshai Expedition, Rs. 8,730; and (2), on account of the Umballa-Puttialla Line, Rs. 3,802, which latter sum has been re-paid by the Maharajah.

26. The expenditure on line repairs, including special repairs, has been—

	Rs.
Lines in India	1,62,140
„ in Ceylon	2,701
Total ..	1,64,841

It appears probable, owing to the increase of traffic, that additional wires will have to be added to some of the more important lines.

27. The Report of the Director of Construction gives a brief account of the principal works executed during the year, none of which call for any special remark.

IV.—Stores and Workshops.

28. The reduction of the number of Store Agencies spoken of in para. 29 of the Director General's Report seems highly desirable, and should be effected whenever practicable. The utilization of the old posts that have been lying useless for many years is satisfactory, so also is the improvement in the health of the men employed in the Instrument shop, and in the quality of the instruments turned out; the prices at which the instruments can be manufactured reflects credit on the Superintendent in charge.

29. His Excellency in Council is gratified to observe that Captain Mallock has introduced a new kind of telegraph post, which will, it is believed, without any material sacrifice of strength or of height, prove much lighter and cheaper than the old pattern; the saving anticipated amounts to Rs. 5 per post, which will have an appreciable effect upon the amount of Construction estimates; it is not apparent, however, whether these posts have been actually tried.

30. Experiments have been made with various kinds of wooden-posts, and the Governor General in Council is glad to learn that it appears likely that a cheap and serviceable wooden-post will be obtainable from Sarawak; 50 of these posts of the wood of the Bilian tree *(Bihania Borneensis)* have been received and erected in different places, and under different varieties of climate specially deleterious to their preservation, and the reports hitherto received show that they have as yet exhibited no signs of decay; they have, however, been in use for less than three years, and, therefore, a further trial seems desirable before their use is extended to any great degree.

31. The experiments with the Australian Red gum-wood have not proved so successful; others are about to be made with Australian Jarrah (*Eucalyptus Marginala*).

V.—Finance.

32. The figures given under this head are not methodically arranged; thus the amount of revenue realized is shown in para. 57 to be Rs. 17,14,062,* while at para. 10 it is stated to be Rs. 17,27,600;† these latter figures agree with the Figured Abstracts, Annexures IV and V, and relate apparently to *adjusted* receipts, while the former figures refer to realizations.

In page 69, Abstract IV.—	Rs.
Total receipts, Capital and Revenue ...	16,62,011
Add—	
Amount deducted in the Abstract ...	72,287
Gross receipts per para. 57	17,34,298
Deduction on Capital Account, per page 69	20,236
Revenue realised per para. 57 ... ... (for India, exclusive of Ceylon).	17,14,062*
Adjusted receipts in India, exclusive of Ceylon, per Abstract IV	16,41,775
Adjusted receipts, Ceylon, per Abstract V	85,825
	17,27,600†
Total Revenue and Capital receipts, excluding Ceylon, page 69	16,62,011
News free messages, first two items in para. 41, page 22 Rs. 1,11,187	
Less Ceylon 4,363	
	1,06,824
	17,68,835‡

These figures again differ from those given in the table in para. 58, where the amount is put at Rs. 17,68,835,‡ the increase being due to the inclusion of a portion of the nominal receipts.

Amounts noted for reduction from gross figures in the Note at foot of first table in page 69, *viz.*—
700,447 } 747,070
18,559 }
28,064 }

Total expenditure, Capital and Revenue—

	In India.	In England and India.
	Rs.	Rs.
Gross	36,29,554	45,67,910
Deduct as above	7,47,070	7,47,070
	28,82,484*	38,20,840†

33. So, again, as regards the expenditure: the gross amount is stated in para. 57 to have been Rs. 28,82,484,* while in the table given in the following para. it is put down at Rs. 38,20,840;† the former figures relate, it is believed, to expenditure in India only, while the latter refer to expenditure in India *and* Europe. But these different points are not clearly brought out, and it is at first sight difficult to reconcile the various figures with each other.

34. According to the Finance accounts of the year, the total expenditure and receipts of the Department for 1872-73, have been as follows:—

	Capital.	Revenue.	Total.
Indian Telegraph—	£	£	£
Expenditure	133,375	246,877	380,252
Receipts	2,060	171,786	173,846
Net expenditure ...	131,315	75,091	206,406
And for the Ceylon Telegraph the figures are—			
Expenditure		7,733	7,733
Receipts		9,370	9,370
Surplus		1,637	1,637
The totals for both lines are—	£	£	£
Expenditure	133,375	254,610	387,985
Receipts	2,060	181,156	183,216
Net expenditure ...	131,315	73,454	204,869

35. Under the head Capital, the outlay has been as follows:—

	£	£
Construction of new lines—		
From Waddy Junction to Nanapoor	4,343	
From Nanapoor to Hyderabad and Trimulgherry ...	6,116	
From Delhi to Rewaree	10,459	
From Agra to Bhurtpoor	5,807	
From Bhurtpoor to Jeypoor	5,178	
From Mooltan to Bhurtpoor	5,445	
From Jubbulpoor to Saugor	5,502	
Other lines	26,673	
		69,523
Stores—		
In India	47,952	
In England	92,004	
	139,956	
Less issues from Stores	96,643*	
		43,313
Establishment		20,539
Total Capital ...		133,375

36. And under Revenue the charges have been as follows:—

	£	£	£
Establishment—			
Direction	19,777		
Account	5,451		
Superintendence	54,235		
		79,463	
Less chargeable to Capital		9,152	
			70,311
Line maintenance		23,142	
Less chargeable to Capital		3,249	
			19,893
Signal Offices	134,658		
Stores and Workshops	15,579		
		150,237	
Less chargeable to Capital ...		11,169	
			139,068
			229,272
Less debitable to other Departments			635
			228,637
Repairs of lines			18,240
Total Revenue charges ...			246,877

37. On the whole, the operations of the Telegraph Department during the year have resulted in a net deficit under Revenue of £75,091, while on the other hand the Ceylon lines have been worked at a profit of £1,637. In other words, the receipts of the Department have been less than its expenses by the net sum of £73,454.

I.—Ceylon.

38. The arrangement by which this Government works the Ceylon Lines has, according to the Director General's Report, resulted in a present profit of Rs. 20,972; considerable repairs and renewals will, however, have to be undertaken before long, which will probably create a deficit in the accounts.

39. The number of Offices open in Ceylon was 8, the same as in the previous year.

40. The total Revenue receipts and expenditure amounted to Rs. 85,828 and Rs. 77,330, respectively, leaving a balance in favour of the former of Rs. 8,498.

VII.—Miscellaneous.

41. A Special Report by Captain Mallock is annexed, which relates chiefly to the examination and selection of Telegraph materials by that Officer during his absence on furlough in Europe. Captain Mallock deserves credit for his exertions.

42. Part II of this Report relates to the equipment for Military Field Telegraphy, based on information obtained in Europe and at the School of Military Engineers at Chatham, which will be communicated to the Military Department for information.

43. His Excellency in Council remarks with satisfaction that the Department continues to improve in the average speed of transmission of messages which was, during the year under review, 1 hour and 41 minutes, against 1 hour and 48 minutes in the year previous, and 3 hours and 3 minutes in the year before that.

ORDER.—Ordered, that copies of this Resolution, and of the Report with annexures, be furnished to the Secretary of State, to all Local Governments and Administrations, to the Government of Ceylon, and to the Commissioner in Sindh.

Ordered also, that Part II of Annexure III be communicated to the Military Department for information.

Ordered further, that this Resolution and pages 1 to 30 and 55 and 56, also Appendix G and Annexures IV and V, be forwarded to the Home Department for publication in the *Gazette of India*, and a copy of this Resolution to the Director General of Telegraphs for information.

ADMINISTRATION REPORT OF THE INDIAN TELEGRAPH DEPARTMENT FOR 1872-73.

I have the honor to submit the Annual Report on the administration of the Telegraph Department during the year 1872-73.

2. The report will be arranged under somewhat similar heads to those adopted in the report of the previous year, *viz.*:—

I.—INTERNATIONAL RELATIONS. COMMUNICATIONS WITH PLACES ABROAD.
II.—LOCAL TARIFF AND TRAFFIC.
III.—EXTENSIONS OF LINES AND WIRES AND LINE MAINTENANCE.
IV.—STORES AND WORKSHOPS.
V.—FINANCE.
VI.—CEYLON.
VII.—MISCELLANEOUS.

The annexures to the report are as follows:—

I.—REPORT ON THE TRAFFIC OPERATIONS OF THE DEPARTMENT, WITH CONNECTED APPENDICES, BY THE OFFICIATING DIRECTOR OF TRAFFIC.
II.—REPORT ON THE PRINCIPAL CONSTRUCTION OPERATIONS, BY THE OFFICIATING DIRECTOR OF CONSTRUCTION.
III.—REPORT BY CAPTAIN MALLOCK, DIRECTOR OF CONSTRUCTION, ON THE DUTIES ON WHICH HE WAS EMPLOYED IN ENGLAND.
IV.—ABSTRACT STATEMENTS OF RECEIPTS AND EXPENDITURE (INDIA).
V.—ABSTRACT STATEMENTS OF RECEIPTS AND EXPENDITURE (CEYLON).

I.—INTERNATIONAL RELATIONS AND COMMUNICATIONS WITH PLACES ABROAD.

3. During the year under review there occurred little under this head which calls for more than passing notice in the present report. In Annexure I, the Officiating Director of Traffic has detailed fully the changes and events of the year, and it will be sufficient to call attention here briefly to any points of general interest.

Communication with Europe.

4. The working of the lines and cables on the three direct routes of telegraphic communication between India and Europe was most satisfactory throughout the year. The cable between Bombay and Suez worked uninterruptedly during the whole period; on the Indo-European line *vid* Teheran only seven interruptions occurred, six of which were of very short duration; and on the Turkish route only four interruptions, while the speed and accuracy attained, more especially on the two first mentioned routes which carried the bulk of the traffic, leave little to be desired. In the extremely improbable event of all these three routes being interrupted simultaneously, an alternative route is available by cable to China and thence by land line through Asiatic Russia to Europe; the Indian Government and public may therefore fairly congratulate themselves on the security of their telegraph communication with the West. It cannot, however, be too frequently repeated that India should never be dependent on only one telegraphic route to Europe, however good, and all who have the welfare of the country at heart will unite in wishing success to each of the existing routes and in hoping that each may receive a sufficient share of public patronage to enable it to maintain its permanency and its efficiency.

Communication to the east.

5. The cable extensions to the eastward from Madras worked, on the whole, satisfactorily throughout the year. The sections from Madras to Singapore and thence to Hong-Kong were not once interrupted and worked admirably, but the cable between Hong-Kong and Shanghai and Shanghai and Nagasaki were not equally fortunate, and some long interruptions took place in many places.

Principal extensions.

6. Cables were laid during the year from Key West to Jamaica, Porto Rico, and St. Thomas, and from Java to Port Darwin in Australia, and the land line across the Australian continent from Port Darwin to Port Augusta in South Australia, a distance of nearly 1,900 miles, was completed in August 1872. By means of these two latter extensions, the whole system of telegraphs in Australia has been connected *viâ* India with Europe and America. The construction of the land line from Port

Darwin to Port Augusta, for much of the distance through an uninhabited desert, was an undertaking which presented difficulties probably unequalled in the annals of telegraphy.

Changes in rates.

7. The rates for messages between India and Europe remained unchanged till the 1st of July, when the charges fixed at the Rome Conference came into force. The new rates are slightly lower than the former ones; for instance, the cost of a message of 20 words to London became Rs. 42 instead of Rs. 45, but the changes call for no special notice. I may, however, state here that experience has proved that a unit of charge calculated for a message of 20 words, though applicable to messages over short distances, is much too high for traffic between India and Europe, and the introduction of a lower unit has been under consideration, and since the close of year under report has been decided on.

Foreign traffic.

8. The number of foreign messages transmitted was somewhat less than that of the previous year, being 78,094 against 79,403; the Indian share of receipts, however, show a large increase, being Rs. 5,16,115 against Rs. 4,55,850. In Annexure I, the Director of Traffic has given some explanation of the probable causes of the fluctuations, but the final financial result is undoubtedly satisfactory.

II.—LOCAL TARIFF AND TRAFFIC.

Abolition of double charge on code messages.

9. The only alteration made in the Tariff Rules that calls for special notice is the abolition of the double charge on code messages, that is, messages written in the Roman character, but composed of words presumedly of concealed meaning, following each other without forming any apparent sense. These messages undoubtedly give more trouble in transmission than messages in ordinary language, and should therefore theoretically be liable to a heavier charge, but, in practice, the difficulty of drawing the line for uninitiated readers between legitimate brevity of expression with retention of a connected meaning and the loss of ostensible meaning altogether was found so great that it was decided after lengthened consideration to abandon the double charge. The relaxation of the rule came into force from the 1st of January 1873, and it is yet premature to form any opinion on the effect it has produced on the revenue, but the boon it has conferred on the public by removing what was often only a troublesome restriction, and the relief it has afforded to our offices by freeing them from the responsibility of applying fairly a very difficult rule, are in themselves results which amply justify the change.

Traffic return.

10. The total number of messages of all kinds transmitted during the year is 7,26,341 against 7,02,706 last year. The value of the work done in the transmission of messages for which payment was received amounts to Rs. 17,27,600, and that for messages transmitted without payment, for which *pro formâ* credit only is taken, amounts to Rs. 1,52,267 against Rs. 16,00,383 and Rs. 1,21,210 respectively during the previous year. In Annexure I will be found full details of these figures.

Revenue dependent on state of trade.

11. It is satisfactory to observe that the traffic continues steadily though slowly to expand, but at the same time it must not be forgotten that by far the largest proportion of our revenue is contributed by the mercantile community, and that the injurious effect of a year of dull trade could not in any appreciable degree be compensated by the gradually extending use of telegraphy for social and domestic purposes. Our revenue, at all events for many years to come, will not be a true criterion of the value of the telegraph to Government and to the general community, but will represent much more accurately the extent to which the exigencies of trade have compelled merchants to resort to its use. In paragraph 37 of Annexure I, it is shown that numerically mercantile messages form no less than 70 per cent. of the total number; and as it is a well known fact that these messages much exceed in average length all other kinds, the proportion that their value bears to the total revenue is considerably greater.

12. In Annexure I will be found an interesting review by the Officiating Director of Traffic of the various tariffs that have been in force since the department was opened to the public in 1855. The principal changes that have been introduced from time to time in the manner of counting and charging for messages and the incidence of the various tariffs have been brought together in a convenient form and comparisons instituted which will be of the greatest use when future changes come under consideration.

Railway Telegraphs—Traffic interchanged between Government and Railway Offices.

Interchange of messages.

13. The number of messages interchanged between this department and the Railway Telegraphs during the year shews an increase of about 13 per cent. over last year. The total number transferred both ways was 37,174 in all,—a very small proportion of what would probably be interchanged under well defined rules. In January last the Government was addressed on the necessity of regulating this description of traffic with the view of welding all the telegraph lines in India, whether State or Railway, so far as the transmission of paid messages is concerned, into one harmonious system, whose sole object and interest would be to provide the public with the most efficient telegraph service possible. The subject is still under consideration, and though the details of carrying the scheme into effect are not devoid of difficulty, the end when achieved will amply repay the labour spent in gaining it.

III.—EXTENSIONS OF LINES AND WIRES, AND LINE MAINTENANCE.

Extent of system.

14. The number of miles of line on the 1st April 1873 was 15,705, against 15,326 on the same date the previous year; the number of miles of wire, including cables, 31,209, against 28,973. The net increase of line was therefore 379 miles, and of wire and cable 2,236 miles. Of the total length of line, 5,285 miles were erected along Railways, being an increase of 683 miles over the total at the close of the previous year.

Actual work done.

15. These net additions do not, however, show the actual construction work done, but are only the differences between the numbers of miles of line and wire added, and the number of miles dismantled. The real facts are that 970 miles of new line were constructed, and 591 dismantled during the year, the dismantlings being principally due to the transfer of old road lines on to the Oudh and Rohilcund and State Railways.

Classified and descriptive return of lines.

16. The return annexed to last year's report, shewing in detail the lengths of line and wire, section by section, with description of supports, wire, insulators, &c., being very bulky and undergoing comparatively little change in so short a period as a year, will not be republished with this report. It is, however, of the greatest value for departmental reference and is being kept corrected up to date. It will appear as an annexure to the annual report at intervals of two or three years.

17. Annexure II is the report of the Officiating Director of Construction on the principal operations of the year.

Expenditure on construction works.

18. The total expenditure on account of construction works amounted to Rs. 7,98,782, from which must be deducted recoveries amounting to Rs. 1,14,956, which represents almost exclusively the value of stores from dismantled lines, leaving a net balance of Rs. 6,83,826. There were in addition charges incurred on account of the lines connected with the Lushai expedition amounting to Rs. 8,730, and a charge on account of the line from Umballa to Puttiallah Rs. 3,802, which latter sum has been since paid in full by the Maharajah.

Expenditure on repairs.

19. The net expenditure on line repairs, both ordinary and unforeseen, excluding Ceylon, amounted to Rs. 1,82,836, against Rs. 1,62,140 of the previous year, and included, among other exceptional items, some special repairs on account of cyclone damages

and the strengthening of the old coast line between Negapatam and Davipatam, which was in a very dilapidated state, and which cannot be abandoned till the line through Trichinopoly and Madura is constructed.

20. The number of estimates debitable to capital, against which expenditure was incurred during the year, was 92 ; the number on account of maintenance and repairs, including the sub-divisional ordinary annual repair estimates, 164.

21. The following are the principal works executed during the year :—

Division.	Nature of work.
Arracan ...	Insulation, Tounghoop to Padoung.
	Reconstruction, Akyab to Aeng.
Assam ...	Reconstructon, Shillong to Sylhet.
Bengal ...	Completion, new line Raneegunge to Luckhiserai.
	Laying six cables across the Hooghly at Barrackpore.
Bombay ...	Construction, joint line for the use of this department and the Railway on Nizam's State Railway from Wuddy towards Hydrabad.
	Partial suspension of 3rd wire, Bombay to Ahmedabad.
	Construction, Veerangaum to Patree.
	Changing insulators, Bombay to Nassick.
British Burmah ...	Construction, new line Rangoon to Elephant Point.
	Construction, new line Yoonziki to Laingha village, British Frontier.
	Completion, new line Rangoon to Prome.
	Laying a cable across the Irrawaddy at Prome.
	Reconstruction, Prome to Thyetmyo.
Dacca ...	Laying a cable across the Dhullessury river.
Indore ...	Construction, joint line for the use of this Department and the Railway, Khandwah to Nerbudda along Holkar State Railway.
	Spanning the Chumbal between Agra and Gwalior.
Malabar Coast Division ...	Completion of insulation, Belgaum to Tuticorin.
	Reconstruction, Alleppy to Neendacara.
Madras ...	Reconstruction, Tonitory Point to Ramnad.
	Strengthening coast line, Negapatam to Davipatam.
Nagpore ...	Construction, Jubbulpore to Saugor.
	Completion of addition of two wires, Nynee to Jubbulpore, and one wire Jubbulpore to Khundwah.
Oudh and Rohilcund ...	Completion of joint line for use of this Department and Railway from Shajeehanpore to Bareilly and Chandowsi along the Oudh and Rohilcund Railway.
	Construction, joint line for use of this Department and Railway from Fyzabad to Benares.
	Addition of an extra wire, Moradabad to Chandowsi.
Punjab ...	Construction, Delhi to Rewaree along Rajputana State Railway for use of State Railway.
	Construction, Garihusroo to Furrucknagher for use of State Railway.
	Construction, Rewaree to Bundikari for use of State Railway.
	Construction, joint line for use of this Department and Railway from Wazeerabad to Jheelum along the Northern State Railway.
	Completion, line Wazeerabad to Sealkote.
Rajputana ...	Construction of joint line for the use of this Department and Railway Agra to Jeypore along Rajputana State Railway.
Sind ...	Joint line for the use of this Department and the Railway Mooltan to Bhawulpore along Indus Valley State Railway.

22. The largest of the above works have been undertaken with the object of transferring our road lines to the sides of the new railways and adding wires for the use of the railways. Indeed, with the exception of works necessitated by the new railway projects, expenditure on heavy works of construction for some years to come will probably be small. During the last six years the whole of the trunk lines have been reconstructed in the most durable manner in accordance with careful detailed instructions issued from the construction branch of this office, to the close supervision exercised by which, and also to the judicious selection of competent officers to carry out the works, may be attributd the present satisfactory condition of the lines.

Completion of main system.

23. In future, works of construction unconnected with railways will probably be confined principally to the addition of wires to the existing lines in order to prevent delay to messages and provide for necessary traffic. Through work on the international routes and on the direct lines between the great commercial centres is almost unceasing, and leaves little opportunity for small stations on these lines to use the wires without causing delay to the important through traffic, more especially as the busiest hours of the day at the presidency towns are also necessarily the working-hours at the small stations as well. To delay through traffic on the one hand is to bring the department into disrepute with its principal patrons, the mercantile public, while to delay local messages in these days of rapid postal communication is to defeat the object of the messages. The desirability of furnishing local wires for the use of intermediate stations is therefore evident; and though it might occur that the cost of a proposed local wire might appear excessive in comparison with the probable traffic on it, the indirect and possibly very valuable benefit of preventing delay to through messages would have to be kept in view. Another advantage of providing special wires from small stations working limited hours to the nearest large repeating station is that by entirely isolating these stations from any connection with the through lines and enabling them to transmit and receive their local messages without any delay, it is possible to concentrate all the signalling strength at the large repeating centres and reduce the establishments at the small stations to what is actually required for the limited hours of local work. The cutting in of small stations on main lines also interferes with special electrical arrangements that may have been made at the large terminal station for the rapid transmission of through traffic. Experience has shown that the addition of wires under the circumstances described above means the reduction of establishments, and there can be no question that the first cost of erecting extra wires is very soon covered if their addition results in a saving of establishment. With these ends in view, some additions of wire have already been made to our system, and care will be taken not to lose sight of other opportunities that may occur of combining economy with so great an improvement to both through and local traffic.

Addition of wires to existing lines.

24. The line from Jubbulpore to Saugor was constructed purely on military grounds, and cannot be expected to prove remunerative. The extension of the line from Yenizek in British Burmah to the frontier is for the purpose of establishing connection with the King of Burmah's line, thence to Mandalay, and eventually probably to Bhamo and the Chinese frontier. The other works call for no special notice.

IV.—STORES AND WORKSHOP.

25. The total value of the stores received for general issue and for workshop manufacture during the year amounted to Rs. 13,37,939, as compared with Rs. 15,99,787, the value of receipts during 1871-72. The total issues, including transfers from one depôt to another, amounted to Rs. 12,03,761, against Rs. 15,77,290 in 1871-72. The falling off in issues is due to the construction operations of the department having been less extensive than during the previous year.

General store operations.

26. Of the total receipts, Rs. 5,94,076 represent the value of stores received from England, shewing a reduction of Rs. 4,58,309 on the amount, Rs. 10,52,385, under the same head last year. The principal items of stores received from England were 7,200 iron standards, 55,000 insulators, and 1,050 tons of wire of various sizes.

Stores received from England.

27. The other heads of receipt, which make up the balance of Rs. 7,43,863, were as follows :—

	Rs.
Store outturn from the workshop	2,47,777
Purchases in India	1,00,482
Received from other Departments	20,613
Received from dismantled lines or surplus from works ...	1,84,511
Miscellaneous including transfers	1,90,480
TOTAL ...	7,43,863

28. The value of stores issued from Calcutta and the branch depôts and agencies was as follows:—

	Rs.
Calcutta	7,13,880
Bombay	2,32,190
Madras	43,296
Kurrachee	25,751
Rangoon	4,133
Agencies	1,84,511
TOTAL ...	12,03,761

29. As noticed in the last report, the stores supplied from agencies were those obtained from dismantled lines, and from surplus balances from other works. The increase in the issues of stores from agencies this year over last year is Rs. 73,610.

Reduction in number of agencies.

At present the number of agency accounts kept is 126, and efforts are being made to reduce the number by utilising, whenever practicable, the stores at all the small or inconveniently situated agencies, and, when the stocks in them are exhausted, closing the accounts. It is a necessary condition of this department, whose operations extend over so vast an area, that there should be a number of store agencies scattered over the country; and the objects now in view are to locate these only at places situated on the main lines of communication, whence the stores can be readily utilised, and prevent what has been sometimes unavoidable in the past, *viz.*, the accumulation of stores at out-of-the-way places.

30. The following are the principal heads of account to which the stores were issued, as compared with the previous year:—

	1872-73.	1871-72.
	Rs.	Rs.
Construction and improvement of lines	6,31,269	10,53,895
Repairs and renewals of lines	77,623	56,422
Revenue offices	95,274	94,662
Non-revenue offices	19,686	23,741
Issued to other Departments	10,303	4,706
Workshops	1,70,768	1,28,395
Miscellaneous, including transfers	1,98,838	2,15,469
TOTAL ...	12,03,761	15,77,290

Number of indents complied with.

31. The number of indents complied with both from Calcutta and the depôts and agencies show an increase over the previous year in the aggregate of about 25 per cent.; it being satisfactory to notice, with reference to the statement made in paragraph 29, that the number of construction indents that it was found practicable and economical to comply with from local agencies was 50 per cent. higher than the previous year.

Expenditure.

32. The total expenditure of the stores and workshop branch during the year amounted to Rs. 4,11,355 against Rs. 3,97,150 during 1871-72, being an increase of Rs. 14,205.

Causes of excess.

33. The exceptional purchase, under special sanction, of 50 tons of 5½ wire, costing Rs. 17,042, the wire being of the best quality and procurable in Calcutta at a cheaper rate than that ruling in England at the time, more than accounts for this excess. Establishment charges too were unduly swelled by a sum of about Rs. 14,000, owing to a number of Assistant Superintendents on arrival from England being temporarily posted to the store and workshop branch to undergo a course of special training.

Purchase of materials.

34. The purchase of materials in India amounted to Rs. 1,00,482 against Rs. 1,10,637 last year, showing a reduction of over Rs. 10,000, to which may fairly be added in comparing

the results of the two years the sum of Rs. 17,042 on account of the exceptional purchase of the 50 tons of wire above referred to. The real reduction in purchases was therefore Rs. 27,197, which in the face of a rise in the price of metals of from 30 to 50 per cent., and of deal planks of 50 per cent., in fact a rise in everything, is a most satisfactory result, especially when it is borne in mind that the number of offices is increasing, and that new work has been undertaken in connection with the supply of instruments, &c., to the State Railway offices.

35. The expenditure on account of carriage of stores was Rs. 1,02,493 against Rs. 1,06,028 during the previous year.

Workshop expenditure and outturn.

36. The workshop and press expenditure, excluding balances in hand, amounted to Rs. 2,35,693, and the outturn, including percentage, added for supervision, &c., is valued at Rs. 2,47,777.

Utilisation of old material.

37. The workshops have been kept fully employed during the year. In the construction shops, among other articles manufactured were 2,527 bottom pieces and 1,546 top pieces for half standards, and nearly the whole of the latter have been issued and are now in use. By means of these pieces, the half standard, the oldest form of iron post in the country, and which, as originally designed, possesses many defects, and is unsuitable to our present requirements, can be fitted to our new sockets, and an economical and excellent post thereby formed. Fifteen hundred of these posts have been erected, and the same number of half standards that have been lying useless for years have been thus utilised. A large number of measuring chains for the Mathematical Instrument Department were also manufactured out of old wire. These results are most satisfactory, and the whole subject of utilising obsolete material whenever economical to do so shall continue to receive my earnest attention.

Instrument shops.

38. The instrument shops have been very busy during the whole year. The accommodation provided for them was, until recently, most confined and unhealthy, and a great deal of sickness prevailed among the workmen and the clerical establishment. In January last a new building was completed, which admirably answers the purposes for which it was built; better work is turned out, there is much less sickness among the men, and the instruments in store are kept in a good state of preservation.

Instruments manufactured.

39. A large number of instruments have been manufactured, including some of a complicated and delicate nature. Among these I may enumerate six of the insulator and joint detectors described in last year's report, nine of which useful instruments are now doing good service on the lines; a complete Wheatstone's bridge of a very sensitive construction now in use at Paumben in testing the cables between Ceylon and India; a time diffuser, designed by Mr. Assistant Superintendent Luke, which is connected with the observatory at Madras, and gives time instantaneously to a number of stations in Southern India; and, lastly, 45 of the tangent galvanometers referred to in paragraph 54 of last year's report.

Comparison between English and Calcutta prices.

40. Regarding these latter instruments, an enquiry was made from Messrs. Elliott Brothers, the eminent instrument manufacturers in London, as to the rate at which they could supply them. The reply was, £6-15 each if supplied in quantities of not less than one dozen, or, allowing for freight, exchange, &c., about Rs. 75 each. Our Calcutta workshop rate, including a heavy percentage for supervision, &c., is Rs. 70—a result upon which we may fairly congratulate ourselves.

Improvements in workmanship.

41. The style of workmanship turned out of our shops has been much improved of late, and leaves little to be desired; indeed some of the old Hindu mechanics now possess an amount of skill it would be difficult to surpass any-where. Unfortunately, however, the supply of these men is limited.

Time diffuser.

42. The time diffuser having proved a success, two similar instruments are being manufactured for use in Calcutta and Bombay.

Cable manufactured.

43. Fourteen thousand yards of cable were manufactured for river crossings, and the cable machine worked satisfactorily.

Instruments for State Railways.

44. The supply and repair of instruments for the State Railways, the effect of which is just beginning to be felt, is likely to increase largely the work in the instrument shop.

Signalling instruments.

45. The total number of signalling instruments in use in the Department is 553, and a reserve of 97 has been issued from Store and distributed to the large offices for use in cases of sudden injury to instruments by lightning or other causes. During the year all the unserviceable, broken and obsolete instruments lying in the offices throughout the country were directed to be returned into store for the purpose of being repaired or their component parts utilized, and a new form of return of instruments was introduced by which the instrument equipment of offices is kept under better control than was formerly the case.

Improvements in design of posts.

46. The posts received from England during the year are a modification of the former pattern of Hamilton standards, and were designed by Captain Mallock during his recent furlough. Without materially sacrificing strength or height, it has been found possible to reduce the weight of the posts by about 25 per cent., and notwithstanding the great increase in the price of iron, the new posts cost, landed in India, about one rupee less than was paid for the former posts at a time when iron was much cheaper. At the present price of iron the saving to Government on each post by this modification may be estimated at Rs. 5, and in addition, the reduction in cost of transport in this country will be considerable. Another great improvement in these posts, of which there are three or four series, adapted to different kinds of lines, is that the whole of the component parts have been so designed as to be capable of being employed in a variety of combinations not only amongst themselves, but also in conjunction with the old patterns of posts received from time to time during the last 10 or 12 years. The advantages and economy of this design need no demonstration. In Annexure III Captain Mallock has gone into the subject at some length.

Injury to iron posts by salt.

47. Some of the galvanised tubes from England sent out were unfortunately shipped in a vessel which brought out a cargo of salt, and though every care was taken by caulking the decks and laying down mats to prevent the action of salt on the iron, yet the tubes were received much damaged, thus proving that these two descriptions of cargo cannot be safely carried together: measures have been taken to prevent the recurrence of such an event.

Experiments on durability of wooden posts.

48. Experiments are being made as to the suitability of one or two kinds of foreign timber for use in India for telegraph posts. The Agent of the Sarawak Company brought to notice sometime since the great durability of the timber of the Bilian tree *(Bihania Borneensis)* which is largely used in Sarawak for building purposes, it is not attacked by white-ants, and is considered almost indestructible. Fifty of these posts were landed in Calcutta in February 1871 at an average cost of Rs. 11-8-0 each. Some of these were shortly after erected on the River Hooghly lines, and others have been since erected in Cachar, the East Coast, Cawnpore, Arracan and the Malabar Coast, to be reported on annually. The posts have therefore been subjected to great varieties of climate, some of the places chosen being specially deleterious to their preservation. As far as reports have been yet received, the posts shew no signs of decay.

49. A small number of red gum-wood posts from Australia were also received in 1871, and most of them have since been erected on the River Hooghly lines. They cost Rs. 9 each and appear to be very inferior to the Bilian wood posts, as the timber shows a great tendency to split, a peculiarly

bad fault in a telegraph post. Periodical reports on these posts have also been called for. Lastly, two hundred supports of the Australian jarrah timber, the bastard mahogany of Western Australia *(Eucalyptus marginala)*, have been ordered at Rs. 8-8 each delivered for experiment, but have not yet been received.

50. A really durable wooden post, cheap and not too heavy, is a great desideratum for our single lines. The bilian wood, though heavy, seems promising, but a telegraph post half in the ground and half out and exposed to all weathers, is under such unfavorable conditions that it will be premature for some time to come to proclaim bilian timber a success.

Indian woods.

51. The durable woods of India and Burma, such as sâl and iron wood, owing to their great weight, cannot be used economically for telegraph posts at any distance from their source of supply. Deodar has been proved a failure for telegraph lines on the plains of India, as, when thus exposed, the oil it contains is quickly dried out of it, and it is then attacked freely by white-ants.

Depôts.

52. The Superintendent of Stores reports that the large depôts have been worked efficiently during the year under review. A proposal for the transfer of the charge of the telegraph construction stores at Bombay from the Commissary of Ordnance to an officer of this Department was sanctioned by Government in October last, but this desirable change has not yet been carried out in consequence of the ground to be made over to this department not being ready. The construction stores at Bombay have been in charge of the Ordnance Department for many years, and now at the close of our local connection with that Department, I have pleasure in acknowledging the assistance we have invariably received from successive Commissaries of Ordnance. Both in the Bombay and Madras depôts the work has much increased. The depôt at Madras is entirely under departmental control, and has been provided with excellent accommodation in the old gaol in Black Town. The depôt at Kurrachee is in charge of the Assistant Commissary of Ordnance, but the work done has been light. The officer in charge, Lieutenant Halsh, deserves, however, our best thanks for the accurate and punctual submission of accounts and his attention to references.

Accounts up to date.

53. In the foregoing paragraphs some description has been given of the work done by the Store Branch, and I am happy in being able to report in conclusion that although the clerical establishment, admittedly insufficient, has not yet been increased, nevertheless the accounts have not fallen into arrears. The disbursements during the year amounted to Rs. 4,11,355, and on the 1st April last the total unadjusted balances of the various heads of accounts amounted to Rs. 8,885-7-11 only, and a considerable portion of this was adjusted in the following month.

Services of officers.

54. The general results of the operations of the year have been very satisfactory and reflect the greatest credit on Mr. Ffinch, the Superintendent in charge, Mr. L. Schwendler, Electrical Superintendent, and the officers and subordinates associated with them. Mr. Ffinch, who has himself worked most indefatigably, speaks in the highest terms of the willing and efficient service rendered by the officers attached to his branch and by his head assistants, both European and Native. In the approaching re-organisation of the establishment necessitated by the transfer of the store accounts of the department from the Office of the Superintendent of Stores to the Controller of Telegraph Accounts, the high opinion expressed by Mr. Ffinch of some of the native clerks of his office will be borne in mind.

V.—FINANCE.

Statements of receipts and expenditure.

55. Annexure IV is a statement of the receipts and expenditure of the department on account of capital and revenue during the year, obtained from Parts I and VIII of the very complete set of appropriation account statements prepared by the Controller of Telegraph Accounts under the orders of the Accountant General, Public Works Department, and re-arranged to suit the requirements of this Report.

56. In last year's report I stated my inability to furnish at the time complete capital and revenue accounts showing the results of departmental operations up to the end of the year, owing partly to the question of the manner in which the capital expenditure was to be estimated being unsettled, and partly to the state of transition in which the form of rendering the accounts then was. In paragraphs 65 to 68 of that report, I expressed my views on the subject of how the present capital account of the department should be estimated; and as I understand the final decision of the Government on the point raised has not yet been arrived at, I consider it desirable with this report merely to publish in a concise form the transactions of the year under review. I however gladly avail myself of this opportunity of acknowledging the ability with which the appropriation account statements above referred to have been designed, and the complete manner in which they exhibit the financial results of the operations of the Department.

57. The gross receipts in India during the year amounted to Rs. 17,34,298, of which Rs. 20,236 was on account of capital, leaving a balance of Rs. 17,14,062 as the amount of revenue realized. The gross expenditure, excluding Rs. 3,32,761 incurred by the Public Works Department on buildings, amounted to Rs. 28,82,484, of which Rs. 4,13,708 was debited to capital, and Rs. 24,68,776 to revenue. The deficit in the revenue account was therefore Rs. 7,54,714 against Rs. 7,16,474 during the previous year, being an increase of Rs. 38,240, which is by no means an unsatisfactory result when the rigorous economics of the last few years are taken into consideration, and regard is had to the facts that the personnel of the department is almost exactly identical with that of the previous year, that the salaries of the establishment are based throughout on the system of annual increments, and that the amount of these increments at a moderate estimate is not less than Rs. 80,000.

58. The following tabular statement exhibits the yearly aggregate receipts and expenditure of the department for the five years ending 21st March 1873, and admits of an easy comparison being made of the general result of each year's operations:—

	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	
	Rs.	Rs.	Rs.	Rs.	Rs.	
Receipts	12,64,860	12,54,280	13,14,880	15,86,220	17,68,835	Includes value of news-free messages.
Expenditure	51,57,692	35,78,286	30,27,857*	39,47,061*	38,20,840*	Exclusive of expenditure by P. W. and other Departments.

* Inclusive of expenditure for construction of telegraph lines for State and Guaranteed Railways.

VI.—CEYLON.

59. The total receipts during the year on account of the Ceylon telegraph amounted to Rs. 93,696, including a sum of Rs. 7,871 on account of receipts in previous years. The expenditure which was entirely debitable to revenue amounted to Rs. 77,330. The detailed statements are given in Annexure V.

Receipts and expenditure.

60. The Ceylon telegraphs have hitherto proved remunerative, as excluding interest on capital, nearly the whole of which was expended by the Ceylon Government, there has been a net profit to the Indian Government on their working since the transfer of Rs 20,972.

Hitherto profitable.

61. The lines with the exception of the section along the Government Railway from Colombo to Kandy are supported entirely on wooden posts, and from reports received, heavy renewals of these will, it is feared, be necessary. The state of insulation too is very defective generally, and much will have to be done to render it sufficiently high to ensure good working at all seasons in so damp a climate.

State of lines.

62. No extensions were undertaken during the year, and the total lengths of line, wire and cable are given by the Superintendent as follows:—

Extent of system.

Line	482	miles.
Wire	531	„
Cable	3½	„

These lengths are included in the totals given in paragraph 14.

63. No new offices were opened during the year, and the number reported open last year, *viz.* eight, remains unchanged.

Offices.

VII.—MISCELLANEOUS.

64. Annexure III is a report by Captain Mallock, the Director of Construction, on the duties in which he was engaged in England when supervising the provision of stores for the department. This report will amply reward perusal and is a succinct and clear statement of the changes that have been lately introduced in our material. It also contains convincing evidence of the great assistance that an officer thoroughly conversant with the requirements of Indian telegraphy in all its details is able to afford to the India office authorities in respect to the provision of stores. However clearly the specifications of materials indented for may be expressed, it is often impossible to convey a correct idea of exactly what is wanted, of the conditions that have to be fulfilled and the special difficulties that have to be overcome. Personal explanation of these points, and careful tentative experiments before final patterns are resolved on and contracts for them given, are precautions the value of which is much increased if recourse can be had to the advice and assistance of an officer who knows exactly what is wanted, who will himself have to make practical use of the materials in question, and who is directly interested in their success. This fact has been more than once recognised and acted on by Government in connection with the design and supply of telegraph material, and no better proof of the wisdom of the policy followed could perhaps be found than the well-known opinion of Electricians and Engineers at home on the telegraph equipment of the Indian Government supplied within the last six or seven years

Report by Captain Mallock on his duties in England.

65. The portion of Captain Mallock's report which refers to military telegraphy is a valuable addition to what has been already published in this country on the subject, based, as it is, on his own extensive experience of Indian telegraphy, both civil and military, corrected and supplemented by the opinions and practice of some of the best authorities in Europe. It is especially gratifying to note that the experience of the Prussian War and the autumn manœuvres has, to a great extent, confirmed the superiority of the system adopted in the Bhootan, Black Mountain and Lushai campaigns, *viz.*, that of erecting light aerial lines as branches from the main system and using full sized instruments, over the elaborate system of insulated wire laid out on the ground, the reduction of every accessory of a telegraph to the smallest size possible and the use of complicated mechanical contrivances for carrying out simple field operations, which in India, at all events, are better done by hand or rough and ready expedients. I do not wish it to be inferred from the above that I consider the same telegraphic arrangements are necessarily suitable to European and Indian campaigns, more especially in the conduct of field operations in the presence of an enemy, but I think we may fairly assume, so far as present experience goes, that light aerial lines are, as a rule, more easily maintained, and are therefore more efficient than insulated wire laid on or roughly buried in the ground.

Military telegraphy.

66. The instruments and materials for military telegraphs, described by Captain Mallock, will, I have little doubt, be found on trial practical and well suited to the requirements of an Indian campaign. Both in their design, and also in that of the other material described in the report, I consider Captain Mallock has displayed economy, caution, and excellent judgment. He availed himself frequently of Colonel Robinson's advice and assistance, and was careful throughout to obtain that officer's approval and sanction to all important changes.

Speed of transmission.

67. The average speed of transmission of messages over our main lines, including all delays from time of receipt from the sender to time of arrival at station of destination, shows a small but satisfactory increase over the excellent results of last year. The mean time occupied during 1871-72 was 1 hour 48 minutes, against 3 hours 3 minutes during 1870-71. The mean for 1872-73 is 1 hour 41 minutes, though there is a considerable increase in the number of messages. These statistics, particulars of which will be found in Annexure I, furnish in a concise form a very accurate and valuable index to the efficiency of our line maintenance and traffic arrangements.

Complaints.

68. The reduction in the number of complaints continues satisfactory. Out of 684,388 paid messages transmitted, only 365 complaints were preferred by the public, being a percentage of ·05 against ·07 during the previous year. In Annexure I. the Officiating Director of Traffic has shown what a marked improvement in the accuracy has taken place during the last six years, and this improvement has only followed, as one of the natural results, the very gratifying intellectual progress made by the signalling establishment during the same period.

General examination of signalling establishment.

69. In accordance with the practice in force since 1868, a general examination was held of all members of the signalling establishment, both in educational subjects and in subjects directly connected with their professional duties. The nature of the examination, and the results obtained, are fully described in the report of the Officiating Director of Traffic. It is sufficient for me to state here that the examination has proved eminently successful in fulfilling the objects for which it was held; and my best acknowledgments are due to Mr. Assistant Superintendent Williams, who examined the papers and awarded marks, for the conscientious, painstaking, and judicious manner in which he performed most important and at the same time tedious and uninteresting duty. Examinations in professional subjects must necessarily be constantly held, in order to maintain efficiency, and to adequately appreciate the beneficial effect of simple examinations in educational subjects and the services immediately connected with telegraphy, not merely to the Government in the selection of qualified candidates for promotion, but in a much higher degree to the signallers themselves; it is only necessary to compare the signalling establishment of to-day with that of seven years ago. The intelligent study of the technical branch of their profession and intellectual pursuits now occupy much of the time that was formerly frittered away in idleness and in its inevitable results, and I am only doing justice to a very large section of the signalling establishment in bearing testimony to the perseverance and industry with which they have prosecuted their studies, and to the extremely creditable success to which many of them have attained.

Inspection of Controller's Office.

70. Under the orders of Government, the Office of the Controller of Telegraph Accounts was inspected in August 1872 by Mr. Boyce and Captain Conway-Gordon, R. E., two able and experienced officers of the Accounts Branch of the Public Works Department. The transfer from the Office of the Comptroller General to that of the Controller of Telegraph Accounts of the final audit of the accounts, and the great expansion of the department since the formation of the Controller's (then Compiler's) Office in 1865, rendered a thorough re-organisation of that office imperatively necessary. An inspection was accordingly ordered, the object of which may be roughly described as follows:—(1), to ascertain the nature and amount of the work done; (2), to suggest any alterations of system by which efficiency might be increased or labor diminished; (3), to bring to notice any defects that existed; (4), to decide on the steps necessary to place the record and audit of the accounts of the department in all its branches on a thoroughly sound basis; (5), to determine the amount of establishment necessary to carry on the work of the Controller's Office in the manner proposed. The inspecting officers have submitted a valuable and exhaustive report, which is now under the consideration of Government. Meanwhile it is satisfactory to state that the system of cash accounts in force

was found simple and efficient, and the defects discovered were principally due to the long standing insufficiency of the Controller's Office establishment. The disadvantages under which Mr. Palmer, the Controller, had labored for years on this account, and the good work he had been able to render notwithstanding, were both fully and most justly acknowledged.

Inspection of Check Office.

71. The inspection was extended to the Check Office, which is under the supervision of a Superintendent of this department, acting under the general orders of the Director of Traffic; and the system in force, and the manner in which the work of the office was conducted, met with unqualified approval.

Personal.

72. During the year under report, the Direction of the department has remained unchanged.

73. To Mr. Cappel, Officiating Deputy Director General, and to Mr. J. H. Lane, Officiating Director of Traffic, my best thanks and acknowledgments are due for the valuable and ready assistance I have on all occasions received from them, and for the able and zealous manner in which they have invariably performed the important duties entrusted to them.

74. I have also much pleasure in bearing testimony to the ability and zeal evinced by the majority of the officers of every grade in the discharge of their duties, whereby the efficiency and discipline of the department have been maintained, and to the general good conduct of the whole of the signalling establishment.

R. MURRAY, *Lieut.-Col.*,
Offg. Director General of Telegraphs in India.

ANNEXURE I.

REPORT ON THE TRAFFIC OPERATIONS OF THE TELEGRAPH DEPARTMENT FOR 1872-73.

RELATIONS WITH FOREIGN LINES OF TELEGRAPH.

1. At the close of 1871-72, India was in communication with Europe and America to the westward, and with the Straits Settlements, Java, Cochin China, China, and Japan, to the eastward. During the year under report, extensions have been effected to the West Indies and to Australia.

2. *The British Indian Sub-marine Telegraph Company.*—The cable of this Company between Bombay and Suez was worked, without interruption, throughout the year, and the service has been performed with the regularity and efficiency, which have characterized its working since the line was first established. In November 1872, this undertaking was amalgamated with the Anglo-Mediterranean, the Marseilles and Malta, and the Falmouth, Gibraltar, and Malta Telegraph Companies, under the title of "The Eastern Telegraph Company Limited." Of the telegrams transferred at Bombay between the Government and Cable Offices during the year, 28,345 were to or from India, and 11,732 were messages in transit from places westward of India to the Far East.

3. *The British Indian Extension Telegraph Company.*—No interruption to the working of this Company's cable between Madras and Singapore occurred during 1872-73; 6,873 messages for or from India were exchanged at Madras between the Government and Cable Offices, and 14,251 telegrams in transit from the Far East to places westward of India were handed over by the Company at Madras for onward transmission.

4. *The British Australian Telegraph Company, Limited.*—This Company having completed laying its cable between Java and Australia, and a horse express having been organized over the unfinished section of the land line from Port Darwin to South Australia, the line was provisionally opened to the public on the 22nd June. On the 26th of that month the cable became interrupted;

repairs were effected by the 22nd October, on which date the cable was officially opened, the Government land line across the Continent of Australia having meanwhile been completed. The construction of this line (from Port Darwin to Port Augusta, nearly 1,900 miles) was commenced in September 1870, and completed in August 1872. The nature of the country, and the want of water along the route, rendered the work exceedingly difficult and harassing. The line appears to have been substantially constructed, and it worked uninterruptedly to the close of the year, as did also the Java-Australia Cable. The tariff for a message of 20 words from India to Australia was fixed as follows, and no change in these rates has since occurred:—

	Rs.	A.	P.
Port Darwin and South Australia	73	12	0
Victoria	75	0	0
New South Wales	76	8	0
Queensland and Tasmania	79	0	0

5. *China Sub-marine Telegraph Company.*—The cable from Singapore to Hong-Kong was worked, without the occurrence of an interruption, throughout the year.

6. *Great Northern Telegraph Company.*—Eight interruptions occurred on this Company's cables in the course of the year, *viz.*:—

HONG-KONG AND SHANGHAI

16th to 18th April 1872.	12th to 14th November 1872.
10th to 22nd August 1872.	5th January to 21st February 1873.

SHANGHAI TO NAGASAKI.

1st to 9th September 1872.	12th January to 6th February 1873.
2nd to 3rd October 1872.	

NAGASAKI TO WLADIWOSTOK.

30th September to 3rd November 1872.

On the land line of this Company from the Pacific through Asiatic Russia to Europe three interruptions occurred, *viz.*:—

10th to 12th April 1872.	6th July to 10th October 1872.
1st to 6th May 1872.	

On the 24th of February the intermediate Port of Amoy was brought into telegraphic communication with Hong-Kong and Shanghai.

7. *Indo-European Telegraph Company.*—The service of this Company (*viâ* Teheran) has continued to be characterized by a high degree of efficiency; the speed and accuracy with which messages are transmitted leaving little to be desired. Of seven interruptions reported during the year, six lasted less than one day, the seventh three days: 13,160 telegrams passed through Kurrachee by this route, which either originated in, or were destined for, India; and 1,074 were in transit from the westward to the Far East.

8. *The Turkish Line* has been remarkably free from interruptions throughout the year, only four having occurred. In three instances communication was restored on the same day, and on the fourth occasion the stoppage lasted two days only. Since the rates by this route were raised practically to a level with those in force *viâ* Suez and *viâ* Teheran, a very small proportion of Indo-European traffic has passed *viâ* Turkey. Of the messages which passed through Kurrachee by this route, 2,071 were for or from India, while 975 were in transit from the westward for places to the eastward of this country.

9. *America and the West Indies.*—The French Atlantic cable was closed for repairs from the 15th June to the 8th July 1872. On the 5th April 1872, communication by the West India and Panama Company's telegraph cables from Key West to Jamaica, Porto-Rico, and St. Thomas, was opened. Messages posted from St. Thomas to St. Kitts could be telegraphed onwards to Antigua, Guadaloupe, Dominica, Martinique, St. Lucia, St. Vincent, Barbadoes, Grenada, Trinidad, Demerara, or Berbice. On the 25th September 1872, the cable from Key West to Cuba became interrupted, but messages were forwarded by special steamers running five days a week each way.

TARIFFS—MODIFICATIONS DURING 1872-73.

INLAND.

10. From the 1st January 1873, the tariff for messages within the limits of India, British Burmah, and Ceylon, was somewhat modified. The double charge previously levied on messages in Code, in any foreign language, or in the vernacular, was abolished, and such messages written in the Roman character are now considered to be in *ordinary language* and charged at single rate. The rules regarding repetition, advice of delivery, &c., were simplified and assimilated to those adopted for foreign messages at the Rome conference; certain restrictions on messages posted from an out-station to a Telegraph Office, and *vice versâ*, were removed; postage stamps are now accepted at par instead of at 17 annas worth per rupee; and no charge is made for telegraphing the instructions necessary to indicate that a message is to be sent by ordinary post, by registered post, &c.

11. All the changes adopted were thus in favor of senders of messages, and it is believed that these steps towards simplifying the procedure and charges for inland messages must eventually tend to a more extended use of the telegraph both by Europeans and Natives.

12. *Free address.*—This concession made with effect from the 1st January 1872, was based on the desirability of simplifying the mode of counting the words, and on the supposition that the fuller addresses thus invited would reduce the proportion of undelivered messages. The latter result has not been achieved, as the number of messages which it is not found possible to deliver to the addressees shews rather an increase than a decrease.

13. A very careful analysis, made in view to ascertain the average number of words contained in each free address, gives the following result:—

In State messages	5·04
„ Private messages	5·17

and the department transmits also gratuitously in each message in the shape of preamble, official instructions, acknowledgment, &c., an average of 7·20 words: a paid message of 6 words thus entails the transmission of about double that number of words, for which no payment is received. This proportion of unremunerative work is necessarily lessened according as the message increases in length.

CHANGES IN INLAND TARIFF FROM 1855 TO 1872.

14. It may be interesting to review at this stage the several rates of charges for inland messages which have been in force since telegraphic communication was first opened to the public in India.

15. From 1855 to 1866, the unit of length was 16 words, and the unit of distance 400 miles; the charge per group per zone being one rupee.

16. In 1866 the unit of length was increased to 20 words, while half and quarter zones (200 and 100 miles) were established. The charge per group for the first zone was raised to Rs. 1-8 with increment of 8 annas per half group per zone. For the quarter and half zone the rate per group was respectively 8 annas and one rupee. In addition to these rates, a booking fee of 8 annas was levied on each message irrespective of its length.

17. From October 1868 to January 1872, the unit of length was 10 words; zones were abolished, and a 10-word message was sent for any distance within Indian limits for one rupee. From March 1870, the address was made partially free, 3 words being allowed to count as one. This tariff proved unremunerative.

18. From January 1872 up to date, the unit of length has been 6 words, the address being admitted free. The charge is one rupee per group within Indian limits, and 50 per cent. extra to Ceylon or Burmah.

19. The following tabular statement shows at a glance the details of the several systems of charging for inland messages which have been in operation since the lines were first opened :—

Indian Inland Tariff.—Showing changes from the first opening of the Telegraph Lines up to date.

Date.		Rate.		Words passed free in address.	Extra Charges.			Remarks.
From	To	Unit No. of words and charge.	For what distance.		Repetition.	Cypher.	Delivery and other charges.	
Feb. 1855	Apl. 1859	16 per rupee. (From 1st May 1855, increments of half groups at half rate.)	Per 400 miles of *Telegraph Line.*	Names of *Station from* and *Station to.*	50 per cent. extra. (Repetition compulsory for commercial messages.)	350 per cent. extra. (Each figure counted as a word.)	4 annas per mile. Free delivery radius ½ mile.	
Apl. 1859	Jan. 1866	First 16 words one rupee; each additional word 1 anna.	Per 400 miles of *direct* distance.	As above; also ordinary designations, such as "Mr.," "Captain," &c.	50 per cent. extra. (Optional for all messages.)	No extra charge.	2 annas per mile. Free delivery radius 2 miles.	
Jan. 1866	Oct. 1868	1st 20 words: Rs. 0 8 0 „ 1 0 0 „ 1 8 0 „ 2 0 0 Half increments at half rates.	100 miles 200 „ 400 „ Every additional 400 miles.	Only name of *Station from*, free.	As above ...	As above ...	Delivery fee abolished. Booking fee 8 annas per message.	To Ceylon, Rs. 2 per group, and Re. 1 per additional half group, *extra.*
Oct. 1868	Mar. 1870	One rupee per 10 words.	Any distance.	As above ...	100 per cent. extra. (Optional for ordinary messages.)	Cypher and Code 100 per cent. extra.	No delivery or booking fee.	To Ceylon, Rs. 2-8 per 20 words and Rs. 1-4 for every additional 10 words, *extra.*
Mar. 1870	Jan. 1872	As above ...	As above..	Two out of every three; *i.e.*, 3 words counted as 1.	As above ...	As above ...	As above	To Ceylon, Re. 1 per 20 words, *extra.*
Jan. 1872	Jan. 1873	One rupee per 6 words.	As above..	Address entirely free.	As above ...	As above ...	As above	To Ceylon and Burmah, 50 per cent. *extra.*
Jan. 1873	Up to date	As above ...	As above..	As above ...	50 per cent. extra. (Optional for all messages.)	Code charge abolished. Cypher 100 per cent. extra.	As above	As above.

20. The incidence of these several tariffs is exemplified in the following table, which gives the cost of messages of 24 words and under for distances up to 2,000 miles :—

Table showing the comparative cost of Inland Messages of from 6 to 24 words under the several tariffs in force between 1855 *and* 1873.

Distance and Length of Message.	February 1855 to April 1859.	April 1859 to January 1866.	January 1866 to October 1868.	October 1868 to March 1870.	March 1870 to January 1872.	January 1872 to date.

21. Excluding the 10-word tariffs in force from 1868 to 1872, which had after a prolonged trial to be given up as unremunerative, it will be observed that the existing rates are on the whole more favorable to the public than any which have been in force since the lines were opened. Thus, a message of 24 words from Calcutta to Kurrachee cost Rs. 10 in 1855, and only Rs. 4 in 1873. From Calcutta to Bombay a similar telegram now costs Rs. 4, whereas in 1855 the charge would have been Rs. 8. For shorter messages the difference is still more marked.

22. It is true that for short distances the new rates contrast unfavorably with the previous tariffs. This is unavoidable where an uniform charge over a vast extent of territory supersedes a system of rates based on zones; but when it is borne in mind that about 40 per cent. of the entire traffic is that passing between Calcutta, Madras, Bombay, Galle, Rangoon, and Kurrachee, distances which average upwards of 1,000 miles, the importance of the concession of a uniform rate and the liberality of the existing tariff cannot fail to be recognized.

INTERNATIONAL.

23. During the months of April, May, and June 1872, the tariff to Europe remained as detailed in the previous year's report, *viz.*, Rs. 45 by all routes from India to London for a message of 20 words.

24. On the 1st July the changes decided on at the Rome Conference came into force. The unit message was retained at 20 words, but the charge from London to India *vid* Suez and *vid* Teheran was fixed at 100 francs or Rs. 42. By the Turkish route the tariff adopted was slightly lower, *viz.*, 94 francs or Rs. 39-8. The Indian share of the charge on foreign messages to, from or through India is 10 francs or Rs. 4·2.

25. No alterations occurred during the year in the Atlantic Cables tariff.

26. A slight increase in the rates by cable from Madras to Penang, Singapore, Java, Saigon, and Hong-Kong, and a slight decrease in those to Shanghai and Japan were adopted in the course of the year.

NUMBER OF MESSAGES.

27. The following is a synopsis of the number of telegrams originating in India during the year under report :—

State messages	...	58,659
Private do.	...	6,25,729
Total paid messages	...	6,84,388
Add free do.	...	41,953
GRAND TOTAL	...	7,26,341

The percentage of increase in the number of state and private messages, as compared with the previous year, is thus 8·01 and 4·17 respectively, while free messages have decreased in number by 12·11 per cent.

28. Comparing these figures with the statistics of the preceding four years, the growth of each description of traffic is found to be as follows :—

Number of Messages of all descriptions, showing percentage of increase and decrease as compared with previous years.

YEAR.	STATE.			PRIVATE.			PUBLIC NEWS FREE.			TELEGRAPH SERVICE AND OTHER FREE.			TOTAL.			No. OF OFFICES OPEN DURING EACH YEAR.
	No.	Percentage of increase or decrease.		No.	Percentage of increase or decrease.		No.	Percentage of increase or decrease.		No.	Percentage of increase or decrease.		No.	Percentage of increase or decrease.

1872-73	58,659	8·01	...	6,25,729	4·17	...	5,008	32·87	...	36,945	...	16·13	7,26,341	3·36	...	203

29. *State Messages.*—It will be observed that the considerable increase in this class of telegrams which occurred in 1871-72, has been not only maintained but exceeded. The increased use of the telegraph by public officers appears chiefly traceable to the camps of exercise, the *weather* and *crop* reports forwarded periodically from all parts of India to the Department of Agriculture, Revenue and Commerce, and the daily reports of the state of the health of troops during the prevalence of cholera.

30. *Private.*—The increase under this head is solely due to the growth of *inland* traffic; there being a slight decrease in the number of *foreign* telegrams.

31. *Public News Free* and *Telegraph Service Free.*—Certain periodical reports formerly included in the latter classification are now more correctly shown in the former, which consequently exhibits an increase. The combined totals, however, show a satisfactory diminution of unremunerative traffic—Details in appendices F. and J.

32. *International Messages.*—As regards *number*, a slight decrease is observable under this head, though the *value* of foreign messages has increased. The number of inland and foreign messages respectively sent during the past five years is as follows :—

Inland and International Traffic, 1868-69 *to* 1872-73.

YEAR.	Number of inland private telegrams.	Number of foreign private telegrams.
1868-69	3,01,297	32,559
1869-70	4,01,924	43,291
1870-71	4,72,735	67,020
1871-72	5,23,023	77,610
1872-73	5,48,846	76,883

33. *Telegrams exchanged with Railway Telegraph systems.*—Of 37,174 messages which had to be transmitted over portions of both the Government and Railway Telegraph lines, 15,903 were tendered at Railway stations and transferred to the Government system, and 21,271 originated at Government stations and were handed to the Railway Telegraph for delivery at places where this department has no stations. Full details of the traffic exchanged with each Railway Telegraph system will be found in Appendix B.

34. The usual statement of the number of messages to, from and through each station, of their value and of the working cost of every office is annexed (Appendix A). A numerical and valuation return of the traffic of each office, geographically grouped, will be found in Appendix G. The following is an abstract of the distribution of Telegraph Offices according to Presidencies, &c. :—

NO. OF OFFICES IN EACH PRESIDENCY, PROVINCE, &C.

Punjab	29	Bombay, Native States	5
N. W. Provinces	16	Central Provinces and Berars ...	12
Oudh	2	Nizam's Territory	2
Bengal	30	Mysore and Coorg	3
Do., Native States	1	Madras	25
Rajpootana	6	Do., Native States	4
Central India	15	British Burmah	14
Sind	6	Foreign States (French and Portuguese)	2
Bombay	23	Ceylon	8
		TOTAL ...	203

35. Appendix H is a list of Telegraph stations arranged according to their importance, with reference to the number of messages originating at each. Excluding temporary offices, and those closed during the year, the remaining stations may be classified as follows :—

No. of sent paid Messages per annum.			No. of Offices.
Above 1,00,000	... ...	... ...	... 1
Above 75,000	and under 1,00,000	... ...	... 1
„ 50,000	„ 75,000	... ...	... 0
„ 25,000	„ 50,000	... ...	... 1
„ 20,000	„ 25,000	... ...	... 1
„ 15,000	„ 20,000	... ...	... 1
„ 10,000	„ 15,000	... ...	... 3
„ 5,000	„ 10,000	... ...	... 15
„ 1,000	„ 5,000	... ...	... 82
„ 500	„ 1,000	... ...	... 56
„ 100	„ 500	... ...	... 36
Under 100	... ...	... ..	... 5

The average number of paid messages originating at each station during the year is 3,119.

PERCENTAGES OF MESSAGES UNDER SEVERAL HEADS.

36. Of the total number of paid telegrams originating in India during the year, 9 per cent. were on the *public service* and 91 per cent. were *private*.

37. The following analysis of the private traffic of the Indian Telegraph Department for a whole month will be found interesting, as showing the relative

extent to which the telegraph is resorted to by Europeans and Natives, and the proportion which commercial messages bear to those termed 'domestic':—

INLAND PRIVATE MESSAGES.

COMMERCIAL.

Sent by Europeans	31·46 per cent.
„ Natives	32·64 „

DOMESTIC.

Sent by Europeans	18·10 per cent.
„ Natives	12·96 „

FOREIGN PRIVATE MESSAGES.

COMMERCIAL.

Sent by Europeans	4·10 per cent.
„ Natives	·37 „

DOMESTIC.

Sent by Europeans	·34 per cent.
„ Natives	·03 „
TOTAL ...	100·00 „

38. For purposes of trade the Indian lines are thus used by Europeans and Natives to about an equal extent, and *numerically* commercial telegrams comprise nearly 70 per cent. of the entire traffic. In *value* the proportion is even greater. Notwithstanding the immense preponderance of the Native population—(even taking into account only those in easy circumstances)—the number of other than business telegrams sent by Natives is less than those sent by Europeans by nearly one-third.

39. About 8 per cent. of the entire traffic consists of messages in *code*, the remainder being in *ordinary*, language.

REVENUE.

40. The cash earnings of the department during 1872-73 were Rs. 17,27,600 against Rs. 16,00,383 for the previous year. The following are the amounts realized under the several heads:—

	Rs.	Rs.
Inland messages	11,87,363	
Foreign messages	5,16,115	
		17,03,478
Sale of Telegraph Gazette		10,329
Guarantees		2,644
Miscellaneous		11,149
TOTAL ...		17,27,600

41. To the above should be added the value of work done without payment, *viz.*:—

	Rs.
Value of "free" messages despatched by order of Government, as per notification in *Gazette of India*, No. 474 of the 9th July 1869	65,236
Value of European news messages delivered free to Government functionaries	45,951
Value of concessions on press messages under the rules which came into force 1st January 1872	41,080
TOTAL ...	1,52,267

The aggregate value of the work done during the year was therefore—

	Rs.
Cash earnings	17,27,600
Pro formâ	1,52,267
TOTAL ...	18,79,867

The corresponding figures for the previous year were Rs. 17,21,593.

42. The usual summary of the number and value of messages under the heads Inland and Foreign, sub-divided into State and Private, is annexed (Appendix C). It shows the following result in comparison with the returns of 1871-72:—

Nature of Collections.	Increase.		Decrease.		Percentage of			
					Increase.		Decrease.	
	No.	Rs. A.	No.	Rs. A.	No.	Amount.	No.	Amount.
State	4,354	...	...	18,542 2	8·01	...	...	8·35
Private	25,096	1,45,427 6	...	...	4·17	10·73	...	...
TOTAL ...	29,450	1,26,885 4	...	...	4·49	8·04	...	...

43. The following is an abstract of the number and value of all messages sent during each of the past six years—showing also the percentage of increase or decrease under each head as compared with the returns for 1867-68:—

Year.	State.				Private.				Total Paid Messages.				Free News Messages.	
	No.	Value.	Percentage of increase or decrease in value.		No.	Value.	Percentage of increase or decrease in value.		No.	Value.	Percentage of increase or decrease in value.		No.	Value.
			Increase.	Decrease.			Increase.	Decrease.			Increase.	Decrease.		
		Rs. A.				Rs. A.				Rs. A.				Rs. A.
1867-68	41,306	1,78,700 15	...	...	2,69,638	9,57,439 7	...	...	3,10,944	11,36,140 6	...	...	8,199	1,60,650 0
1868-69	40,615	1,61,297 7	...	9·75	3,33,856	9,94,795 8	3·90	...	3,74,471	11,56,092 10	1·76	...	6,690	55,990 0
1869-70	39,403	1,37,592 4	...	23·00	4,45,215	10,73,047 11	12·00	...	4,84,618	12,10,639 15	6·50	...	3,595	37,638 10
1870-71	37,606	1,22,760 7	...	31·30	5,39,755	11,78,784 9	23·12	...	5,77,361	13,01,545 15	14·56	...	3,873	49,775 0
1871-72	54,305	2,21,951 13	24·2	...	6,00,633	13,54 641 6	41·48	...	6,54,938	15,76,593 3	38·75	...	3,769	48,982 8
1872-73	58,659	2,03,409 11	13·82	...	6,25,729	15,00,068 12	56·78	...	6,84,388	17,03,478 7	49·93	...	5,008	65,236 4

The percentage of increase in the value of Private and State messages has thus been respectively 56·78 and 13·82 in six years.

44. ***Inland messages.*—The following table shows the growth of this class of traffic (excluding service messages) since 1867-68:—**

Year.	No.	Value.	Percentages of increase.				Remarks.
			Compared with 1867-68.		Compared with previous year.		
			No.	Value.	No.	Value.	
		Rs. A.					
1867-68 ...	2,41,287	7,63,880 11	...	...	...	...	
1868-69 ...	3,01,297	7,96,417 10	24·87	4·25	24·87	4·25	
1869-70 ...	4,01,924	8,17,595 2	66·58	7·03	33·39	2·66	
1870-71 ...	4,72,735	8,51,217 8	95·95	11·43	17·62	4·11	
1871-72 ...	5,23,023	9,22,639 [illegible]	116·76	20·78	10·63	8·38	Free address conceded and 10 words unit adopted, 1st January 1872.
1872-73 ...	5,48,846	9,96,149 15	127·46	31·71	4·93	7·96	Double charge for code given up, 1st January 1873.

The rate of increase in number has, it will be observed, received a check, but the percentage of enhanced value practically maintains the ratio of progression shown last year.

45. ***Foreign messages.*—In paragraph 32, it was mentioned that international messages show a slight decrease in number, although their value is considerably higher than last year. Transit traffic, *i. e.*, that from the westward to the Far East and *vice versâ*, exhibits an increase in number of nearly 50 per cent. It is therefore the telegrams originating in or destined for India itself that have declined in number. This may be partially accounted for by the fact that messages for and from Australia, &c., were prior to the opening of the cable route posted at or to Galle, and thus came into the category of Indian messages, whereas they are now classed *transit*. The incidence of the message packing agencies which collect short despatches from the public and mass them in one telegram before transmission, must also necessarily tend to diminish the *numerical***

returns of messages. An abstract of sent, received, and transit foreign telegrams, and of the Indian share of their value for the past six years, is given below :—

Year.	Number of messages despatched.				Indian share of value.	Percentages of increase or decrease as compared with previous years.				Remarks.
						Increase.		Decrease.		
	To India.	From India.	Transit, *i. e.*, between Far-East and places westward of India.	Total.		No.	Value.	No.	Value.	
					Rs. A.					
1867-68 ...	14,521	13,830	...	28,351	1,93,558 12	...	...	...	...	
1868-69 ...	16,417	16,142	...	32,559	1,98,377 9	14·84	2·49	...	...	Tariff reduced.
1869-70 ...	21,824	21,467	...	43,291	2,55,452 9	32·96	28·77	...	...	
1870-71 ...	28,810	35,115	3,095	67,020	3,27,567 0	54·81	28·23	...	...	
1871-72 ...	28,856	31,889	18,658	79,403	4,55,850 11	18·80	39·16	...	...	Tariff increased, 10-word messages abolished.
1872-73 ...	24,613	25,849	27,632	78,094	5,16,115 6	...	13·22	1·64	...	

46. Annexed (Appendix D) is a summary of the monthly number and value of foreign messages to, from, and through India by the several routes.

47. *Press messages.*—During the year under report 1,945 messages were sent at the reduced rates accorded to *bonâ fide* public news telegrams. The charges amounted to Rs. 11,664, the ordinary rates being Rs. 52,744. The concessions in favor of press messages accordingly aggregated Rs. 41,080.

48. *Expenditure in Signal Offices.*—The following statement gives the work done in, and cost of Signal Offices during 1868-69 and subsequent years, (exclusive of those in Ceylon) :—

Year.	No. of offices open.	No. of messages.	Expenditure in Signal Offices.	Decrease in Signal Office expenditure as compared with 1868-69.
			Rs. A.	Rs. A.
1868-69...	186	433,552	13,47,706 6	...
1869-70...	190	543,435	13,13,425 1	34,281 5
1870-71...	197	629,233	12,49,022 8	98,683 14
1871-72	192	624,746	12,36,566 2	1,11,140 4
1872-73...	195	651,384	12,78,166 3	69,540 0

The increase of Rs. 41,600 in Signal Office expenditure is more than accounted for by the annual increments to the pay of the signalling establishment. This item amounts to about Rs. 54,000. Casualties have been few, and the measures of economy carried out during previous years have left little margin for savings during the period under report.

COMPLAINTS AND REFUNDS.

49. *Complaints.*—The following abstract exhibits the number and percentage of complaints preferred by the public during the past six years :—

Year.	Total number of Private and State paid messages.			Total number of complaints.			Percentage of complaints.		
	Indian.	Foreign.	Total.	Indian.	Foreign.	Total.	Indian.	Foreign.	Total.
1867-68 ...	282,583	28,361	310,944	414	174	588	·15	·61	·19
1868-69 ...	341,845	32,626	374,471	618	285	903	·18	·87	·24
1869-70 ...	441,327	43,291	481,618	418	403	821	·09	·93	·17
1870-71 ...	510,341	67,020	577,361	312	409	721	·06	·61	·12
1871-72 ...	575,535	79,403	654,938	244	240	484	·04	·30	·07
1872-73 ...	606,294	78,094	684,388	217	148	365	·03	·18	·05

The progressive improvement in the Indian telegraphic service is very strikingly shown in these statistics. It will be observed that during the six years under notice the number of Indian messages *increased* by 114 per cent., yet the number of complaints *decreased* within the same period by 90 per cent. The international service exhibits an equally gratifying enhanced efficiency, the number of messages sent having *increased* 175 per cent. and the number of complaints having *decreased* by 92 per cent. between 1868-69 and 1872-73. A detailed statement of the number of complaints month by month will be found in Appendix E.

50. *Refunds.*—The following statement shows the amount of refunds during the year chargeable to India :—

Class of messages.	Amount of refunds chargeable to India.	Percentage of Indian share of revenue refunded.
	Rs. A. P.	
Inland	168 4 0	·017
Foreign	770 13 0	·15

51. In Appendix I is given the average time occupied by telegrams in transmission over the main lines, including all delays from the time the message is tendered by the sender until the time of its reaching the station of destination. These statistics may be summarized as follows :—

	Total No. of paid messages transmitted.	Mean of time occupied in transmission over all main routes.	
		Hours.	Minutes.
1867-68	310,944	12	43
1868-69	374,471	12	52
1869-70	484,618	7	42
1870-71	577,361	3	3
1871-72	654,938	1	48
1872-73	684,388	1	41

Although, therefore, the traffic has more than doubled since 1867-68, the average speed with which it has been passed over the lines has increased sevenfold, and the improvement is shown to have been steady and progressive year by year.

SIGNALLING ESTABLISHMENT.

52. The number of signallers being still somewhat in excess of the requirements of the service, all measures for recruiting have during the year been in abeyance; but 7 lads who had been under training for this department for about 16 months in the Conoor Lawrence Asylum were on being declared qualified as signallers drafted into the service.

53. A general examination of every Telegraph Master and Signaller in the Department was held simultaneously throughout India in October 1872. Mr. Assistant Superintendent Williams, whose services were placed specially at the disposal of the Traffic Branch for the purpose, drew up the papers, examined the replies, and allotted marks according to the value of each. The whole award was thus centralized, and the result is a most valuable record of the relative qualifications of every member of the Signalling Branch.

54. The following were the subjects which examinees were at liberty to take up :—

Educational subjects (optional).

	Maximum marks obtainable.	
Electricity	50	
Magnetism	50	
Arithmetic	50	
Algebra and Trigonometry	50	
Geography (General 50, Indian 50)	100	
History	50	
		350

Subjects essential to the performance of ordinary signalling duty (compulsory).

Signalling	100	
Knowledge of Instruments, &c.	150	
Knowledge of Traffic Rules	150	
Handwriting and Dictation	100	
Conduct	100	
		600
Special Services (Perseverance in the performance of duty under circumstances of difficulty or hardship, &c.) ...		50
Total ...		1,000

55. The grading of examinees on the result of the tests was determined on the following scale :—

	Minimum aggregate marks requisite.
For the Superior grade	500
„ Good „	350
„ Average „	200

Examinees failing to obtain 200 marks to be graded as "indifferent," and warned that failure to improve within a certain period must result in their services being dispensed with.

56. Out of a total strength of 872 men, 855 were examined, 15 were excused on account of sickness or other cause, and 2, who refused to compete, were placed in the average grade.

57. The general result of the examination was as follows :—

Promotions.		Reductions.	
Indifferent Grade to Average Grade ...	3	Superior Grade to Good Grade...	20
Indifferent Grade to Good Grade ...	1	Superior Grade to Average Grade...	4
Average Grade to Good Grade ...	103	Good Grade to Average Grade...	96
Average Grade to Superior Grade ...	6	Good Grade to Indifferent Grade...	1
Good Grade to Superior Grade ...	20	Average Grade to Indifferent Grade...	15
Total ...	133	Total ...	136

58. *Prizes.*—The following prizes were distributed on the result of the Examination :—

	Rs.
To the best Telegraph Master	150
To the best Signaller	100
To the best Mathematician and Electrician, a gold watch, value	250
To the second best Mathematician and Electrician, a silver watch, value	110
Special prize for proficiency in Mathematics	50
For proficiency in Electricity 20 prizes, each worth ...	15
For proficiency in Signalling 45 prizes, each worth ...	10-8

59. Mr. Williams' admirable and exhaustive report on the general examination having been already submitted for the information of the Government of India, it is unnecessary that I should remark on the subject in further detail. I cannot, however, conclude without bearing personal testimony to the very able manner in which Mr. Williams carried out a duty requiring knowledge, patience, judgment and assiduity in no ordinary degree, and to the value of the result of his labor.

60. The following is a return of the casualties which have occurred in the Signalling Branch during the year :—

Grades.	Resigned.	Dismissed.	Deserted.	Services dispensed with.	Pensioned.	Died.	Total.
Telegraph Masters ...	3	1	...	...	1	2	7
Signallers (general service) ...	20	6	2	4	...	9	41
Ditto (local service) ...	1	...	1	...	...	...	2
Probationers ...	...	...	...	...	...	...	...
Total ...	24	7	3	4	1	11	50

MILITARY SIGNALLERS.

61. Up to the end of 1871-72, 77 non-commissioned officers and men had been instructed in telegraphy under officers of this department. This number

was increased during the year under report to 118, certificates of proficiency having been given to 41 men during 1872-73.

62. The newly opened Telegraph Office at Sealkote has been worked by Military signallers under the Brigade Major's supervision.

63. Owing to repeated failure of the attempts to work the Kamptee Office by Military agency caused by the misconduct of the men successively appointed, it was necessary to place a Civil signaller at that station. The Mhow Office has also reverted to departmental agency owing to the transfer to another station of the soldiers who had been employed as signallers.

TELEGRAPH STATIONS OPENED AND CLOSED DURING 1872-73.

64. New offices were opened during the year at the following places :—

Dholepore,	Rajamundry,
Gampola,	Rangamuttee,
Gudduck,	Sealkote,
Hooblee,	Wuzeerabad,
Mortukka,	

and the following stations have been closed :—

Beawur,	Gooty,
Burwai,	Seepree,
Dowlaishwaram,	

resulting in a net increase of four Telegraph Offices. Temporary stations are excluded from this calculation.

ELECTRICAL.

65. *Testing Centres.*—Up to the end of 1871-72 testing stations had been established at the following offices in view to ascertaining and recording periodically the electrical condition of the working lines, and to localizing faults causing imperfect or interrupted communication :—

Calcutta,	Allahabad,
Bombay,	Kurrachee,
Madras,	Bangalore,
Agra,	Deesa,

and during the year under report arrangements were made to add the following places to the list of testing centres :—

Lucknow.	Jubbulpore.
Lahore.	Paumben.
Vizagapatam.	Colombo.

Bellary was also made a testing station in place of *Bangalore*, the former station being more centrically situated since the recent alteration and extension of the system of lines in Southern India. At the close of the year almost every important junction station was thus supplied with the requisite apparatus for ensuring the efficiency of the wires by means of a system of periodical measurements and observations, whereby not only are many slight faults detected and remedied before they develope into serious obstructions, but interruptions due to causes it is not possible to foresee are localized and removed at a minimum of time and expense. The system is also most valuable in affording a reliable index of the relative efficiency of the various descriptions of Insulators introduced into India for experimental use with reference to the determination of the pattern best adapted to withstand the special climatic influences of this country on the insulation of overground wires.

66. *Instructions in testing lines, &c.*—Reference was made in the report for last year to a Pamphlet of testing instructions compiled by Mr. Schwendler, Electrical Superintendent, the issue of which was commenced during 1871-72. Another section of this valuable work was completed during the year under report.

67. *Relay testing.*—By means of a simple formula experimentally arrived at, the efficiency of the telegraphic instruments in use in the Depart-

ment can now be very readily tested. It is found that the relay of any instrument when in perfect order should function with 10 battery elements through no resistance, and with 1 element through an external resistance equal to that of the relay itself, without any alteration of the adjustment being necessary. The first test represents the strongest, and the second the most feeble current of electricity likely to reach the instrument in practice, and the combined tests define the range through which it is capable of working without the necessity for readjustment on the occurrence of every variation of the insulation of the line.

68. *Insulator detector.*—The insulator detector described in the last report has been of great service in the improvement of the insulation of lines at a minimum of labor and expense. It has been used on all important lines throughout India where the presence of defective insulators was most markedly apparent from the result of periodical testing observations, and has enabled us to work better, and in some instances over longer distances, in rainy weather than was previously practicable. Six new detectors were manufactured at the departmental workshops during the year.

69. *Magnetic storms and induction currents.*—The very long distances over which direct signalling is now effected in India, render the effects of natural and induced currents more marked and difficult to overcome than was the case when the working sections were comparatively short; but, on the other hand, the improved electrical appliances available and the concurrent progress of the staff in the faculty of correctly making and recording physical observations on the various technical branches of their work, enables us to organize measures to counteract with more or less success any inconvenience of this nature which we experience.

70. *Magnetic storms.*—A magnetic storm of considerable intensity made itself felt on all the wires running east and west in Southern India on the 15th October 1872, on which occasion the Assistant Superintendent in charge of the Madras Telegraph Office, Mr. W. P. Johnston, recorded a series of very valuable observations. Strong natural currents were first observed on the Madras-Bellary wire, the other wires affected were those connecting Madras with Bombay and Bezwarrah with Hyderabad, Deccan, but that first mentioned exhibited throughout the day the most marked effects. The direction, as well as the intensity of the disturbances, varied with great rapidity. The maximum positive current flowing towards Madras was equivalent to 15 battery elements, while in the opposite direction an electromotive force equal to 22 elements was indicated by the tests taken.

71. The natural currents first attained sufficient strength to interfere with the working of the wires at 6 A. M. By 11 A. M. work on the four Bombay-Madras wires was completely stopped; this continued till 1 P. M., after which hour the effects of the magnetic disturbance became less and less felt up to 6-15 P. M., when it ceased to be observable at Madras. At Bezwarrah, however, the cessation of the natural currents did not occur till 9 P. M., showing that the storm was travelling in an easterly direction. This is confirmed by the fact that, although the observatory authorities were warned by this department soon after 6 A. M., no indication of the disturbance was indicated locally by the magnetometers until near noon, and at the time the storm was shown to be at its height by these instruments at Madras, the wires leading into that city from the westward had for some hours been showing decreased evidence of magnetic disturbance.

Detailed instructions have since been drawn up by Mr. L. Schwendler, the Electrical Superintendent, by the observance of which the inconvenience caused by magnetic storms will be reduced to a minimum. The precautions to be observed are based on substituting a return wire for the usual method of leading the current to the earth.

72. *Induced currents.*—Much inconvenience has been experienced on the through lines from induced currents, a necessary sequent of our improved

insulation, and long distance working, which materially lessens the signalling speed, and consequently the carrying power of the wires. Mr. Schwendler has carried out a series of careful experiments and observations at each end of the Madras-Bombay line, and has been enabled to almost entirely overcome the difficulties resulting from the effects of induction.

73. *Time diffuser.*—By means of an apparatus designed by Mr. Luke during his incumbency as Assistant Superintendent in charge of the Madras Signal Office, correct time (given by signal from the Madras Observatory) has, since February last, been signalled direct to all the stations southward and westward of that city. Similar instruments are being manufactured for Bombay and Calcutta. These will be worked by the Madras Observatory signal, and will automatically re-transmit it to all the stations in Western and Northern India.

CHECK OFFICE.

74. Advantage was taken of the opportunity offered by the deputation of two officers of the Public Works Accounts Department to inspect the Office of Controller of Telegraph Accounts, to procure a similar independent investigation into the working of the Check Office. It is satisfactory to find that, in the opinion of the inspecting officers, the work of this branch is conducted in a thoroughly systematic and efficient manner. Mr. H. E. Thompson, whose thorough knowledge of the work in all its varied details has been mentioned in previous reports, continued to superintend the Check Office throughout the year under report.

CABLE ACCOUNTS.

75. *Adjustment.*—Concurrently with the increase in the number of messages passing through India between the Far-East and places to the westward, the work connected with the adjustment of accounts on international messages has naturally become more heavy. The following is an abstract showing the extent of the [illegible] of traffic of this description. Although messages to and from India are [illegible] it is [illegible] that the increase is independent of the number of telegrams originating in or destined for India itself.—(*Vide* para. 46.)

	No. of messages transferred by Cable to India.		No. of messages transferred by Cable to India.	
	1871-72.	1872-73.	1871-72.	1872-73.
Eastern Telegraph Company	23,429	28,435	22,969	25,371
Eastern Extension Telegraph Company...	9,931	14,762	13,001	17,572

76. *Railway Telegraph Accounts adjustment.*—The value of messages transferred between the Government and Railway Telegraph systems, as adjusted in the Check Office during 1872-73, was as follows:—

		1871-72.	1872-73.
Transfers by Government to Railway	Rs.	16,698	18,972
„ by Railway to Government	„	14,449	14,664
	TOTAL Rs.	31,147	33,636

77. The gross accounts adjustments of the year effected by the Check Office were as follows:—

Collected in India for India and other Administrations ...	Rs.	28,42,407
Credited to India by other Administrations, including Indian and Trans-Indian shares	„	16,59,964
TOTAL Rs.		45,02,371

Complaint Branch.—The following is a synopsis of the complaints received and investigated by the Check Office during 1872-73 :—

	Total No. of messages transmitted.	No. of Complaints.		
		Well-founded.	Groundless.	Total.
Inland messages...	606,294	100	117	217
Foreign messages	78,094	22	126	148
Total ...	684,388	122	243	365

TRAFFIC CODE AND TARIFF PAMPHLET.

78. *Traffic Code.*—A want long felt in signal offices has been met by the compilation of this work. Its issue rendered practicable the cancellation of 269 circulars and standing orders, not only reproducing their contents, but containing much original matter explaining and illustrating every possible contingency of traffic routine.

79. The work was first discussed and edited by a Committee of departmental officers in Calcutta, during a series of sittings extending over several months, but the heaviest portion of the labor devolved on Mr. H. E. Thompson, whose services in connection with the preparation of the Traffic Code deservedly obtained the Director General's thanks.

80. *Tariff Pamphlet.*—This is a compilation of the rules and rates for foreign and inland messages in a convenient form which has proved useful both departmentally and to the public.

J. H. LANE,
Offg. Director of Traffic.

ANNEXURE II.

REPORT OF CONSTRUCTION OPERATIONS DURING 1872-73.

During the past year of 1872-73 the following works of telegraph extension and construction were carried out.

2. In order to provide telegraph communication for the new State Railways, lines of telegraph have been constructed from Delhi for 82 miles towards Ulwar, along the northern branch of the Rajpootana State Railway; this line consists of two wires, both of which are for the use of the railway. A branch has also been constructed from the station of Gari Hasern to Furruknagur, a distance of 7 miles, for the use of the railway line going to the salt depôt at the latter place.

3. On the southern branch of the Rajpootana State Railway a telegraph line has been constructed from Agra for a distance of 85 miles, and has since been pushed up to Dowsa, on the road between Bhurtpore and Jeypore, a distance of 114 miles; this line consists of two new wires for the railway, while we have taken advantage of this opportunity to bring the two wires of this department between Agra and Jeypore on to the new supports which have been erected along the State Railway, the old telegraph line running along the Trunk Road being dismantled as soon as the railway line was erected.

4. In the Punjab a length of 60 miles of telegraph have been put up alongside the Indus Valley State Railway from Mooltan to Adamwaham; this line consists of three wires, two of which are for the railway and one for ourselves. It is in contemplation to erect an extra wire on our present supports from Mooltan to Lahore, and when this is erected, there will then be an alternative route from Mooltan to Sukkur, *viz.*, one by the State Railway and one by Dehra Ghazee Khan and the frontier.

5. In Southern India, a telegraph has been erected from Waddy, 58 miles towards Hyderabad in the Deccan along the Nizam's State Railway; this consists of three wires, one for the Telegraph Department and two for railway use. This line is 120½ miles long, and will provide an alternative means for telegraph communication to Hyderabad in addition to the present existing line by Kurnool.

6. In the Punjab, the former line running along the Grand Trunk Road from Wazeerabad to Jheelum has been repaired and renewed, and two additional wires erected for the use of the Punjab State Railway, a distance of 39 miles.

7. In Kattywar a short railway line of 22 miles, consisting of one wire for the use of the State Railway from Veerungaum to the Patree Salt Depôt, has been constructed.

8. In Western India, a line of four wires, 37 miles in length between Khundwa and Mortukka along the Holkar State Railway, has been nearly completed.

9. As regards lines constructed for Guaranteed Railways, the line of three wires between Fyzabad and Benares (which will complete the system of telegraph along the Oudh State Railway) was nearly finished during the last official year, and has since been brought to completion. Many of the bridges along this line of railway are as yet unfinished, and the telegraph crossings of the various rivers cannot be made permanent until the railway viaducts are complete. An additional wire was also erected for the use of this department from Chundowsie to Moradabad, in order to loop the latter station into our general system of telegraph wires.

10. As regards works carried out for this department, specially in Southern India, the line running along the narrow neck of land carrying our line to Ceylon from the last station in India (*viz.*, Tonitory) was originally erected on Hamilton's standards; the action of sea air and salt water on the zinc coating speedily caused these supports to rust through, and as the line was in a very precarious position, it has been repaired by a new line placed as far from the sea as the narrow neck of land will permit, and constructed with Siemen's posts, the metal of which being thicker will last considerably longer than Hamilton's standards would do in such a situation. A short temporary line to connect this new line from Tonitory to Davipatam has also been made from Ramnad to Davipatam.

11. In the Bombay Presidency, in order to provide increased telegraphic communication between Bombay and the important cotton district of Kattywar, an extra wire has been erected between Bombay and Ahmedabad for a distance of 47 miles (the work on the whole line being now in an advanced state of progress), and as this wire traverses a very damp country through a considerable part of its route, it was determined to select a gauge of more than the ordinary thickness, so as to give increased conductivity; a wire of No. 3 gauge has accordingly been erected.

12. In order to bring the military station of Saugor into telegraphic communication with the rest of India, a line of one wire has been put up between Jubbulpore and Saugor; this wire runs on our posts alongside the railway from Jubbulpore to Kureli Ghât, and thence along the road from Kureli to Saugor on a line of posts erected for the purpose.

13. The line from Rawul Pindee to Kohat has been reconstructed on wooden posts coated with Forbes' priming.

14. Two extra wires have been erected from Allahabad to Nynee, and from Calcutta to Sealdah, in order to complete the system of an increased number of wires erected along the Chord Line, and giving extra facilities for the important traffic between Bombay and Calcutta.

15. In the Arracan Division a distance of telegraph wire, 102 miles long, has been erected on insulators between Tonghoop and Padoung; this line was formerly uninsulated and caused considerable resistance to our traffic on the important overland line between Calcutta and British Burmah. The country through which this line passes is one of the most rainy in the world; it is therefore highly needful that as good electrical methods as possible should be adopted for crossing it.

16. In British Burmah the telegraph line has been shifted from the old road between Prome and Thayetmyo to a new and straighter road between those two places, and a new line for the use of the shipping interest has been constructed from Rangoon to Elephant Point.

17. Our telegraph system has last of all been connected with the Burmese frontier by making a loop line from Yonzike to Thayagoon, and a single line on from Thayagoon to the frontier village of Langha, to which place the above-mentioned King's line will come.

18. The Chumbul river has been successfully spanned by an air crossing which will last until the bridge for the proposed State Railway is built.

JOHN ECKFORD, *Captain, R. E.,*
Offg. Director of Construction.

APPENDIX G.

Return of the Number and Value of State and Private messages sent from each Presidency and Province during the year ending the 31st of March 1873.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

RESULT ON THE EXPERIMENTAL CULTIVATION OF SUN-FLOWER AT BANGALORE IN 1873.

Extent and quality of land.	Weight of seed sown and whether sown in drills or broad cast.	Quantity of manure spread.	Date of sowing.	Date of harvesting.	Outlay incurred. Particulars.	Outlay incurred. Amount.	Realization. Seeds.	Refuse as fuel.	Leaves as fodder.	Oil cake.	Potash.	Total.	Remarks.
One acre, 1st Class Ragi land.	Six lbs., sown in drills one yard apart.	Fifty bandy loads of town refuse manure.	29th August 1873.	Between the 20th December 1873 and 1st January 1874.		Rs. A. P.						Rs. A. P.	
					Manure ...	25 0 0					6	6 0	Six lbs. of Giant Russian sun-flower seed was imported and sown on an acre of good Raggi land, the yield being 1,800 seers yielding 50 gallons of oil. This sun-flower is a very much larger plant than that of the country, growing from 7 to 8 feet in height, and bearing one large head. I measured six of the heads taken from one plot of average growth.
					Ploughing, sowing and harrowing ...	11 0 0							No. 1 35 inches in circumference, weight 3 lbs. 1,875 seeds.
					Cost of seed ...	1 0 0	1,800 seers which will produce 50 gallons of oil, at 9 annas per quart, Rs. 112-8-0						„ 2 29 „ „ 1 lb. 4 doz. 1,427 „
					Assessment of land	4 0 0							„ 3 27 „ „ 1 „ 4 „ 1,140 „
					Harvesting ...	4 0 0		9	5	6		138 8 0	„ 4 27 „ „ 1 „ 4 „ 1,202 „
					Watcher's pay ...	12 0 0*							„ 5 27 „ „ 1 „ 970 „
					Cost of expressing the oil and husking the seed ...	61 6 5							„ 6 25 „ „ 1 „ 1,102 „
					TOTAL ...	118 6 5							and these seeds are nearly double the size of the country sort.
													The leaves were sun-dried and pounded, about 500 lbs. of such dry fodder realized which used mixed with meal and bran, &c., is good food for milch cows and will keep a long time.
													The seed was first husked by women and converted into coarse meal (20 seers of raw seed making 9¼ of meal) and this was then pressed for oil. Fifty *seers of the meal* yielding three gallons of oil, and 35 lbs of oil cake.
													The empty seed heads and stalks make fine fuel which subsequently yield ten Cwts. of ashes very rich in potash, excellent manure for coffee and tobacco.
													The stalks are said to be used in China for fibre to mix for the China Grasscloth.
													I have valued the oil this time at nine annas instead of twelve annas per quart, and with the view of ascertaining its *market* value, a large quantity has been sent for experiment and report to the Agent and Manager, Madras Railway Company, also to the Commissariat and Ordnance Departments, Bangalore Central Jail, Cubbon Hotel keeper, and Government Printing Press, and these departments have been requested to furnish a report of the result of their experiments, and what price they would give per *gallon for the oil.*
												20 1 7	
							Drivers—Outlay incurred						
							PROFIT ...						

* The item 12 rupees incurred for watching the crop is an extraordinary charge, the land available being unenclosed and near the native town, the flowers were liable to be stolen.

E. BODDAM.
On Special Duty.

S. F. MACKENZIE,
Offg. Secretary.

BANGALORE,
The 29th March 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

CONDITION AND PROSPECTS OF THE DISTRICTS OF BUSTEE AND GORRUCKPORE IN THE NORTH-WESTERN PROVINCES.

Letter from C. A. ELLIOTT, Esq., Secretary to Government, North-Western Provinces, to the Secretary to the Government of India, Revenue Department,—No. 348 A, dated Allahabad, the 16th April 1874.

I am directed to forward, for the information of His Excellency the Governor General in Council, a copy of my letter to Commissioner of Benares, No. 341A, dated 16th instant, being a review of the reports of a Committee appointed by the Lieutenant-Governor to visit the districts of Goruckpore and Bustee on the condition and prospects of those districts.

Letter from the Secretary to Government, North-Western Provinces, to the Commissioner, Benares Division,—No. 341A, dated Allahabad, the 16th April 1874.

I am directed to acknowledge the receipt of your letters Nos. 51 A. and 51B., dated the 22nd and 30th March, containing the views of the Travelling Famine Commission which was appointed to report on the condition of the Goruckpore and Bustee districts.

2. Mr. Simson and yourself, with Colonel Davidson, entered the District of Goruckpore at Burhul Ghat, and marched northward to Nichloul, then westward to Bansee, thence diverged towards Mendhawul, and finally proceeded southward to Bustee. All the gangs and poor-houses were visited; the officials and native gentlemen consulted; and a full report is now submitted with proposals for the relief of both districts.

3. Throughout this tract the northern half is by far the most distressed. Rice is there the main staple, and it entirely failed. Where winter crops are ordinarily sown for a second harvest, after the rice has been reaped, these also, from the early cessation of the rains, were not sown. The loss therefore, over all this northern area, has been most disastrous. But it is more complete in the Goruckpore district than in Bustee. The Maharajgunge tuhseel in Goruckpore is the worst; towards the west things are not so bad. It is gratifying to observe that this improvement westward is in some degree due to Messrs. Bridgman and Peppe's irrigation works having preserved much rice on their estates, of which the former lies in both districts, and Mr. Peppe's estate in Bustee.

4. The Committee have closely inspected the labor gangs and also the poor-houses, and their instructions have been on all points judicious. The gangs in Goruckpore were found to be remarkably efficient and orderly. Mr Lumsden deserves great credit for all his arrangements, which are characterized, as you say, "everywhere by forethought, care, and supervision." Mr. Peart, the District Engineer, has also done excellent service, which has been acknowledged by promotion in his department.

5. The organization of the labor gangs was not found to be so efficient in Bustee, chiefly through inattention on the part of the District Engineer. Another officer, Mr. Tait, has now been sent to take his place; the errors and defects noticed by you have been duly remedied; and it may be hoped that the department will now be worked effectively. Mr. P. Wigram's health has broken down under the anxiety of the district charge, which he has administered with much care and good judgment. To Mr. Elliot, who has already had some experience of the district and of the distressed parts, the Lieutenant-Governor looks to see that all the arrangements connected with the relief and supply of grains are adequate and well regulated.

6. The supervision in both districts seems to be for the present sufficient, but if any material increase of labourers should occur, some additional agency may be needed. This will be readily granted. Mr. Mills, an officer of Police, has been deputed to Goruckpore, and he will be able to take the oversight of some of the heavy gangs; he is well qualified for this work by his experience in

similar duty at Lullutpore in 1868-69. The stationing of a European officer at Nichloul is most necessary; and the Lieutenant-Governor would impress on both Magistrates the necessity of having the gangs frequently visited by their European staff and their superior native officials.

7. In a tract so extensive, and in which the failure both of the spring and of the autumn crops has been so general, it may be feared that the present harvest will not bring the relief which it is doing elsewhere; and that the numbers on the works will, especially in Goruckpore, continue to increase till the new crops of rice come. There are, by the last reports, above 24,000 already on the works in Goruckpore, and 21,000 in Bustee; and material relief and abatement are hardly to be looked for till September. It is to be feared that large crowds will be dependent on us throughout the rainy season, and it is a point for timely and serious consideration in what way shelter and suitable work can then be provided for them during the rains. This question should engage the forethought both of Messrs. Lumsden and Elliot. No relief works have yet been opened in Deoree tuhseel, which is said (para. 12) to be next worst after Maharajgunge, and which adjoins a peculiarly bad tract in the Sarun District. The state of this tuhseel should be looked to by the Joint Magistrate of Kussya, and projects for relief work should be matured and held in readiness, to be set on foot whenever they may be found necessary.

8. In regard to the sufficiency of grain in the country, there seems little doubt that Bustee will not suffer anywhere from scarcity of stocks. Still Mr. Elliot should satisfy himself personally on this point, although your conclusions seem based on satisfactory grounds. In Goruckpore, on the contrary, the markets to the north, in the Maharajgunge tuhseel, may run short at a time when importation is difficult in the rains. The population of this tuhseel is about 325,000 souls; of this, Mr. Lumsden calculates that private stores will provide for three-fourths, but that a fourth, or, say (80,000), may have to be provided for by aided importation for five months, say, at half a seer per diem all round, or about 150,000 maunds. To secure this, two courses are proposed: first, to advance money (repayable within a year) free of interest to traders, who will guarantee to store grain at points indicated by the Magistrate. The rate is to be the average prevailing between 15th April and 15th May next, and for every 40 seers so calculated, the contractor is to lay down 30 at the required depôts. The grain is to be imported from the more prosperous tracts, and is to be inspected by the Magistrate. The Government will have power to take whatever quantity of grain they require from these stores, at the rate above indicated, up to 15th October, after which date the contractor may sell the balance as he likes. The advantages of the plan are fully detailed in paragraph 19 of your report.

9. Besides this, advances without interest, but repayable within six months, will be offered to grain merchants, who will import food from the more prosperous tracts into the Maharajgunge Tuhseel, which they can sell at their own discretion. This plan is the more to be commended, because it will interfere as little as possible with private enterprise and trade.

10. Mr. Lumsden will, from time to time, report his proceedings under this authority; and he will, as noted in paragraph 15 of the report, hold his hand at discretion as he finds the pulse of the market growing full and satisfactory. He is, however, responsible for providing that at least 150,000 maunds shall be laid down in the northern depôts, unless he has satisfactory grounds (which should be communicated to Government) for believing that so large a quantity is not needed.

11. The next proposal is the advance of Tuccavee for seed grain. This is an anxious subject: for if seed-rice is only procured with great difficulty, the consequences to agriculture may be serious. The Government of India will be asked to secure the good services of the Nepal Durbar to allow seed-rice to be exported to our zemindars, they supplying other grain, as wheat and barley, if necessary, in lieu of it. A lakh and a half of rupees may be advanced without interest to the zemindars for this purpose (paragraph 14, Goruckpore Report).

In Bustee the same measure will be necessary, but to a lesser degree (paragraph 31). Half a lakh of rupees may be authorized on this account (without interest for one year), the amount in each case to be regulated by the area of rice cultivation. The operations under this head will be reported to the Board, and regulated by them, both as to terms and period for repayment.

12. There remains the question of remission or suspension of part of the revenue demand. The settlement in Goruckpore is, as a rule, very light: but the greatness of the calamity, and the present prostration of agricultural interests, fully justify the Commission in their proposals for a partial remission, which, to inspire confidence and heart, should, as proposed, be definite and final.

13. The calamity having been uniform in its intensity throughout the Maharajgunge Tuhseel, Mr. Lumsden thinks that the remission should also be uniform. This will avoid detailed investigation and all inducements to bribery and corruption. The Collector is right in holding that this measure may be made irrespective of the means of individual zemindars. One-half of the rubbee demand in that tuhseel, or one quarter of the year's revenue, estimated at about Rs. 66,000, may accordingly be remitted. The principle of Section 23, Act XVIII, of 1873, will be applicable, in order that the relief may with certainty reach the cultivator. In the rest of the district the Collector will treat each case upon its own merits, making such recommendations for remission or suspension as the circumstances may justify.

14. Similar considerations, but with somewhat less severity, apply to Bustee. The arrangements settled by you with the Collector will place this matter on a satisfactory basis. The area recorded in the settlement records as under "Jurhun" and "Bhudowee" (or late and early) rice will be noted, and a proportionate reduction made in the demand. The circumstances here not being so urgent as in Goruckpore, it will be open to the Collector to consider whether the relief should be by temporary suspension or permanent remission.

15. It will be useful if the Government and Board were in possession of a map, shewing in colored outline the tracts most affected, or as they are called in Bengal in "black," or worst tracts, and the "grey," or less severely afflicted tracts, and this should be prepared by Messrs. Lumsden and Elliot as soon as they have leisure. The expenditure up to end of March has been about Rs. 51,000.

16. It is roughly estimated that the relief works may cost half a lakh of rupees a month in each district up to September, or (say) six lakhs of rupees. The Government of India and the Accountant General will be apprized of this estimate, including the works in progress or that may hereafter be required in other districts. It is hoped that the whole expenditure may not exceed, both in labor and (contribution to) charitable relief, seven or eight lakhs of rupees; but this estimate is dependent on the full and timely setting in and continuance of the coming rains.

17. The Deputy Surgeon General, Allahabad Circle, will be requested to see that all reasonable requisitions for native doctors and medicines are promptly met. The arrangements of the Committee for Hospitals and for the segregation of infectious and other diseased persons are judicious.

18. I am to request that the thanks of Government may be conveyed to Mr. Warren for his public spirit in undertaking charge of the works at Gopalpore. Orders are under issue, through the Board, directing that a Covenanted Assistant Magistrate from each district should be stationed in direct supervision of the works in the north.

19. During the Lieutenant-Governor's tour in Goruckpore and Bustee, the subject of utilizing the streams running from the Terai was considered by His Honor, and some correspondence ensued. But the Irrigation Department could not spare an officer for the survey at the time. The project will now be taken up again by the Public Works Department, but any design of the kind will take time to mature, and will, it is feared, hardly afford labor soon enough to meet present requirements. It will not, however, be lost sight of.

20. Finally, Sir William Muir's cordial thanks are tendered to Mr. Simson, yourself, and to Colonel Davidson, for the admirable manner in which you have carried out his instructions. Your inspection has been thorough and scrutinizing; your directions have been full and judicious; and by aid of the information and advice thus rendered, the Government is enabled to look forward with confidence to the issue, and to believe that the principle enforced by the Government—that there shall be no loss of any single human life which can, by any reasonable effort or means at the disposal of Government, be saved—will be carried out fully and effectively, and yet without any unnecessary expenditure of the Government resources.

Copy of this letter and of letter No. 51B, dated 30th March, with especial reference to paragraphs 11 and 18 of the former, and paragraph 19 of the G. O., forwarded to the Secretary to this Government in the Public Works Department for consideration.

Copy forwarded to Magistrate of Goruckpore and Bustee, for information and guidance.

Copy forwarded to the Secretary to the Central Famine Relief Committee for information.

Copy forwarded to Officiating Secretary to Board of Revenue for the information and guidance of the Board.

Copy forwarded to Accountant General, North-Western Provinces, for information, with reference to paragraph 16.

Letter from A. P. HOWELL, Esq., Deputy Secretary to the Government of India, Department of Revenue, Agriculture and Commerce, to the Secretary to the Government of the North-Western Provinces,—No. 1384, dated 23rd April 1874.

I am directed to acknowledge the receipt of your letter No. 348A of the 16th instant, enclosing the Lieutenant-Governor's review of the reports of the Committee appointed to enquire into the condition and prospects of the districts of Bustee and Gorruckpore.

2. In reply I am to state that the Government of India approve of the measures adopted, and especially of the particular attention that has been paid to procuring seed rice of proper quality. The Government of the North-Western Provinces have already been informed that the Nepalese Government have agreed to give facilities for the supply of seed grain from Nepal.

3. This correspondence will be published in the *Gazette of India* and reported to the Right Honorable the Secretary of State.

[ESTABLISHMENT.]

RAILWAY.

COMPLETION OF THE TIRHOOT STATE RAILWAY TO DURBUNGA.

No. 416–19E—R., dated 24th April 1874.

RESOLUTION—By the Government of India, PUBLIC WORKS DEPT.

Read:—

Letter No. 4 T, dated Durbunga, 19th April, 1874.

From—C. BERNARD, Esq., *Offg. Secy. to the Govt. of Bengal,*

To—*Secretary to the Government of India, P. W. Dept.*

I am directed to submit herewith, for the consideration and orders of His Excellency the Viceroy and Governor General of India in Council, the accompanying copy of a Minute, in which His Honour the Lieutenant Governor has recorded his satisfaction at the rapid and successful completion of the temporary line of railway from Chumpta to Durbunga, and

his strong appreciation of the valuable services rendered to the Government and the people of this district by the several officers who have been engaged in the undertaking.

Minute by the HON'BLE SIR RICHARD TEMPLE, K. C. S. I.

Dated 18th April, 1874.

Having seen the new Railway from Chumpta to Durbunga which was opened on the 17th current, I desire to add my testimony to the remarkable skill and promptitude with which this undertaking has been carried out. The work was commenced on the 23rd February, and the first train ran through on the 17th April. As the distance amounts to 53 miles (besides sidings), the line must have been constructed at the rate of a mile a day. The materials for the permanent-way and the rolling-stock have had to be transported by boats over the Ganges. The line has been carried over three considerable streams or rivers. The operations have been conducted during one of the most inclement seasons of the year. From such facts some idea can be formed of the extraordinary exertions demanded by this service from all who took part in it.

Those who know the extreme needs of the population, for whose sake the grain transport is organized; the manifold risks and accidents to which such a transport is exposed; the grave consequences which might ensue if such misfortunes remained without remedy; the intense physical strain on the animal power available in the country for such work; the consequent importance of possessing mechanical means in reserve, can fully estimate the almost priceless value of this Railway at the present season.

Under the critical circumstances of the time, this value greatly depended on the line being finished by the middle of April. The securing of this particular result again depended on the efforts of the Engineer-in-Chief, Major Stanton, R. E., who has evinced first-rate aptitude for overcoming manifold obstacles, and great resolution in pursuing the object in view. It will be for his departmental superiors to do justice to the professional skill and ability displayed by him on this occasion.

I learn from him that Lieutenant Rathborne, R. E., Executive Engineer, has been his right-hand man throughout these trying operations, and I desire to record the obligations which this district owes to Lieutenant Rathborne. Major Stanton also has mentioned to me the zealous assistance he has received from Mr. Cochrane, C. E., Executive Engineer, and from Mr. Moore, Mr. Warden, Lieutenant Kunhardt, R. E., Assistant Engineers. These gentlemen should also share in our acknowledgments.

The 32nd Regiment Pioneers, and the 5th and 6th Companies of Sappers, have been employed under Major Stanton's direction in the execution of this work. The efficiency and devotion displayed by these troops in this duty will, I believe, be found to be worthy of the approbation of their Military superiors. Where all have done so well, however, I desire to mention the highly favourable report I have received of the services and abilities of Captain Dodsworth of the 32nd Regiment, and Lieutenant Morgan, R. E., Commanding 5th Company Sappers and Miners.

The co-operation of Mr. Stevens, Superintendent of Works, Durbunga Raj, has proved of essential importance throughout these operations; and it is to his professional supervision and to his vigilant care that we must look for the employment of the time that yet remains before the rainy season for turning this temporary railway into a comparatively permanent line.

Lastly, we are greatly indebted to Mr. Guilford Molesworth, the Consulting Engineer to the Government of India, for the foresight and boldness of conception with which he pronounced upon the practicability (from an engineering point of view) of the project which had been recommended by local authority.

RESOLUTION.—The Government of India have received this report of the completion of the Tirhoot State Railway between the Ganges opposite Barrh and Durbunga with great satisfaction.

2. The Viceroy and Governor General in Council desires that the thanks of the Government of India be given to Major Stanton, R. E., the Engineer-in-Chief. His Excellency in Council also acknowledges the good service rendered to the State by the several officers mentioned by Sir R. Temple, by the Sappers and Miners, and Regiment of Pioneers, whose assistance has been most valuable, and by the Departmental subordinates employed on the line.

ORDER.—Ordered, that this Resolution be published in the Supplement to the *Gazette of India* with the papers read.

Also, that copy be forwarded to the Secretary of State for India.

Also, that copy be forwarded to the Military Department, to the Revenue, Agriculture and Commerce Department, and to the Government of Bengal, for information.

Also to the Director of State Railways, for information and communication to all concerned.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 21st April 1874.

PRESENT:

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K.C.B.
The Hon'ble A. Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble J. F. D. Inglis, C. S. I.
His Highness the Mahárájá of Vizianagram, K. C. S. I.
The Hon'ble Rájá Ramánáth Tagore.
The Hon'ble R. A. Dalyell.
The Hon'ble B. D. Colvin.

BURMA COURTS ACT AMENDMENT BILL.

The Hon'ble MR. HOBHOUSE introduced the Bill for the further amendment of the Burma Courts Act, 1872, and moved that it be referred to a Select Committee with instructions to report in two months. He said that the Council would observe that the Bill in their hands was a very simple one, and was intended for the purpose of compassing the three objects which he had mentioned before. The object of section one was to give the Chief Commissioner the power of creating a Court of Appeal within any district which was not superintended by a Deputy Commissioner; section two was for the purpose of relieving the Recorder of Rangoon from certain forms and requirements of the Code of Criminal Procedure which were not suitable to his Court; and section three was for the purpose of reviving certain Acts which were found wanted in British Burma.

The Motion was put and agreed to.

CRIMINAL PROCEDURE CODE AMENDMENT BILL.

The Hon'ble MR. HOBHOUSE presented the Report of the Select Committee on the Bill to amend the Code of Criminal Procedure. He said this was a matter that consisted almost entirely of details—and details mostly or altogether of a small character—the explanation of which he should not attempt, because it would take up a great deal of time and would produce no good. But he wished, with the permission of the Council and before they were asked to proceed to the consideration of the Report, to mention the principles upon which the Select Committee had proceeded. First, he would say, that they had received an enormous number of suggestions for the amendment of the Code. He did not exaggerate when he said that they had been poured upon them by hundreds. That this should have been the case was easily intelligible. The Code was a great work, having an enormous number of ramifications, and had already been the subject of three or four text-books; and it was part of the daily life of an immense number of officials who were testing it in every possible way. The question was in what way should the Committee deal with these suggestions.

First they thought it their duty not to embark upon any examination of the broad principles of the Code. There was one influential quarter from which they had received an invitation to proceed to such an examination. They were invited by the British Indian Association to reconsider those parts of the Code which dealt with appeals from acquittals, enhancement of sentences, summary trials and so forth. Well, the Committee considered that it would be wrong for them upon such a Bill as this to treat such subjects as thrown open. It seemed to him that the Select Committee, or indeed the Council itself, would be doing a wrong thing if, on mere abstract arguments without any

proof at all of the ill-working of the Code, they were to reagitate that which had been so recently and deliberately settled. In the memorial of the British Indian Association there was no instance adduced of the harsh or injurious working of the Code. All that had been given were abstract arguments which he wished to treat with all respect and which would properly be adduced if the principles of the Code were now being discussed. But these arguments must have been present to the minds of the Council when they determined to pass the Code into law. They certainly were present to the mind of the Secretary of State when he determined that the Code ought to be law, because a memorial couched in the same terms or something very like them was forwarded to the Secretary of State before he gave his assent to the Code. Before the Council proceeded in the direction indicated, there ought to be evidence of practical injustice or hardship on such a scale as would justify legislation. The officials as a body seemed quite satisfied with the working of the impugned parts of the Code and nobody had adduced any evidence against them. It was indeed open to any member of Council to move amendments which should have the effect of raising any of these important questions, and to ask the Council to discuss them. It was another question whether they would succeed. For his own part, he thought that, affairs standing as they did, the Council ought not to discuss them. At all events the Select Committee were clear that they ought not, and they had not done so.

A great many of the other suggestions received were found when examined to resolve themselves into mere matters of drafting. Now amending the Code was one thing; re-drawing it was a totally different thing. In the course of years the Code would no doubt be re-drawn. Then it would be for those who had to perform that work, to consider whether the suggestions made were improvements. We should be only confusing people if we placed side by side with the more substantial amendments a number of alterations adopted for the purpose of making the language clearer without altering the subject-matter.

Again, a number of other suggestions received were in the nature of speculative doubts on the construction of the Code. They were things which occurred to all reasoning men in the course of their working, but the Committee had looked to see what was the substantiality of the doubts, and what the probability that if, and when, those doubts were raised the Courts would not decide according to the intention of the framers of the Code. And they had not proposed any alteration except where they thought that there was reasonable probability of an embarrassing decision.

The result was that the Committee had selected from the suggestions received some thirty or forty in addition to those which were in the Bill as introduced into the Council. And he thought it would be found that every one of these alterations was either founded on some decision by a Court of Justice—by a High Court—or on some material discussion in a High Court, or on the suggestion of some gentleman whose official position gave great weight to what he said and who showed from his own experience that some difficulty or some doubt had arisen which would become more and more embarrassing unless the opportunity of amendment was taken. These were the principles which had guided the Committee in their selection of the very numerous suggestions made to them.

The Report went into the details of the amendments. Hon'ble Members would study it for themselves if they cared to know exactly what had been done. But what he had stated might be useful as a guide to the principles upon which the Select Committee had proceeded.

BURMA FISHERIES BILL.

The Hon'ble MR. HOBHOUSE asked leave to postpone the presentation of the Report of the Select Committee on the Bill to regulate Fisheries in British Burma.

Leave was granted.

PORT-DUES ACT AMENDMENT BILL.

The Hon'ble MR. HOBHOUSE also introduced the Bill to consolidate and amend the law relating to Ports and Port-dues, and moved that it be referred to a Select Committee with instructions to report in three months. He mentioned when he asked leave to introduce this Bill that there were two objects which the Government had in view. One was to enable the levy of a reasonable sum for what we called Hospital port-dues; and this sum was designed to answer the expenses incurred by the authorities in ports for tending sick seamen. The other was to extend certain provisions of the Ports Act to the navigable channels leading to the ports, which were now extended under the general Act only to the ports themselves. There was a third object which he inadvertently forgot to mention at the time, namely, to extend to other ports in India certain provisions now in force in the ports of Calcutta, Madras and Bombay for the arrest of deserters from foreign vessels. Some practical difficulty had arisen in this matter in the ports of British Burma, and some complaints had been made, particularly by the Italian Government, that our law was not sufficient to enable the commanders of foreign vessels to keep their seamen to their duty. In the three ports he had mentioned sufficient provision existed for such cases, and we now desired to extend the same provisions to other ports.

He had also mentioned that the opportunity would be taken of seeing whether the law relating to ports and port-dues could be usefully consolidated. The law was found to be contained in no less than twenty-two enactments. That circumstance spoke for itself. He therefore now presented what appeared to be a long Bill, but what was in fact mainly a repetition of that which was already in the Statute-book. If the Council would look at the first schedule of the Bill they would see a tabular statement of the charges on ships. That statement was the result of the examination of a number of local Acts. Different rates were chargeable on vessels at different places, and again at different periods of time. He thought it would be a much simpler and clearer method to reduce the several local Acts into one Act, and to set forth by means of a tabular statement those rules which now took effect under different Acts. Nearly the whole of the Bill including that schedule consisted, apart from the new objects he mentioned, of a re-arrangement of the present law and some shortening and simplification of its language.

He did not mean to say that the process of consolidation led to no alteration of the law. It constantly did so when a number of local enactments were passed into a general one. But the alteration was only in the way of giving greater local extent to provisions already in force in some places. At present the law on the subject stood as it had been passed in fragments for different parts of the country; and different arrangements had been made at the suggestion of local authorities. No doubt they had been made to suit the accidental circumstances of the ports of those particular places. But on examination many of them were found applicable to all ports. And therefore under a consolidation Act it naturally and easily came about that a provision now extending only to Calcutta, for instance, was extended to other Indian ports.

He would give one or two instances to illustrate what he meant. Look at section seventeen of the Bill. It provided that for the purpose of preventing or extinguishing fire in any port to which this Act extended, the Conservator might require the Master of any ship of more than five hundred tons burden to place at his disposal such number as he required not exceeding three-fourths of the crew. That was a provision in use in the port of Calcutta. It was obvious that the same necessity must exist, and the same provision must be equally useful, in other ports. Therefore, it was a provision which he thought the Council would agree should be extended to the ports all over India. Again, section thirty-seven we had taken also from one of the Calcutta Acts. It was a section which enabled the Local Government to make stringent rules with regard to inflammable oils. There might be ports into which no inflammable oils entered, and to them of course

the provision would be useless; but in all others it would be useful. Again, in section forty-five, there is a provision which was passed last year for the ports of British Burma. There, they were gradually bringing ports within the operation of the Ports Act; but the Government had no power to declare the amount of dues to be taken from vessels entering such ports. Therefore, besides the notification bringing a port within the Act, it was necessary to have an Act of Council on every occasion. The same processes were requisite in other parts of India, only the inconvenience was not so conspicuous, because the process of creating ports under the Ports Act was not going on so fast as in British Burma. Still such a thing would take place from time to time, We therefore proposed to extend the same principle to the whole of India, and to provide that, when a port was brought within the operation of the Act, the maximum amount of port-dues should be declared by the same notification which extended the Act to that port. Again, in section forty-seven there was a power, which the Local Governments of Madras and Bombay possessed, that for the purpose of keeping the accounts of port-dues, a number of ports might be treated as constituting a single port. That seemed to be an exceedingly useful provision, tending to simplify accounts, and probably to render the administration of the ports more vigorous. There appeared to be no reason why that provision should not be extended to other parts of the country. Again, section fifty-six was a section found in several local Acts, namely, that no port-due should be chargeable if a vessel left a port and was compelled by stress of weather to re-enter it. He thought the examples that he had cited were sufficient to show the Council how it came about that in the process of consolidation there was an alteration of the law almost necessarily effected.

He would now explain to the Council what the Bill consisted of. Schedule I he had already explained. There were eight parts or chapters in the Bill, and if the members would cast their eyes down the margins of the sections they would see that very nearly the whole of the sections were repetitions of the existing law. In the first five chapters he thought there was nothing substantially new, except that the Bill compassed one of the objects he mentioned of extending the Ports Act to the navigable channels leading to ports, and that it extracted from the local Acts sections of universal applicability and made them into general provisions applicable to all ports. In Chapter VI he had explained the reason for the introduction of section forty-five. But he did not mention a matter of detail in respect to this section, that there should be a maximum amount fixed in the Act itself within which the Local Government should fix the maximum port-dues. It was so done in the Burma Port-dues Act that he had mentioned. We provided that the Local Government should fix the maximum dues, but that maximum should be within the limits of a statutory maximum. There, it was provided that the statutory maximum should be four annas for every ton of burden of vessels of the burden of ten tons and upwards. Whether that provision would be applicable to the whole of India MR. HOBHOUSE could not tell. Probably it would not; probably we should have to fix a statutory maximum by reference to the actual maximum prevailing in the different localities. At present the clause did not fix any maximum. It must be for the Select Committee to consider how that could best be done.

The same part of the Bill provided for another object which he had mentioned, the important object of hospital port-dues. That was provided for by sections sixty, sixty-one, and sixty-two. Section sixty proposed to empower the Local Government to order that there should be paid in respect of every ship lying in any port, within a reasonable distance of which there might be a public hospital or dispensary suitable for the reception or relief of seamen requiring medical aid, such further port-dues not exceeding one anna per ton as the Local Government thought fit. Then the next section provided that such port-dues should be applied in support of any hospital or dispensary or otherwise for giving medical aid to seamen in the port. And section sixty-two enacted that port-clearances might be refused until all hospital port-dues

incurred had been paid. That had been the law in Calcutta since 1867. It had been found to work well here, and would probably work well elsewhere.

Chapter VII consisted only of penalties, and in it we had exactly followed the existing tariff of penalties. And Chapter VIII consisted of one or two miscellaneous provisions, amongst which was the third object which he had mentioned, namely, to give greater facilities for dealing with deserters from foreign ships. This clause had been taken, he thought *verbatim*, from the existing Bengal Act, and it was already law in the ports of Calcutta, Madras and Bombay.

He did not think it was necessary to call the attention of the Council to any more of the details of the Bill.

The Hon'ble MR. COLVIN said he was quite ready to support the primary purposes of this Bill as set forth in the Statement of Objects and Reasons, and as had been explained by the hon'ble and learned member in charge of the Bill; and he thought the consolidation of the numerous existing Acts relating to ports would be accepted on all hands as an obvious improvement. But as the Bill was somewhat lengthy and had only just been placed in his hands, he was not prepared to offer an opinion as to the detailed provisions to which the hon'ble member referred. As he proposed to refer the Bill to a Select Committee with instructions to report in three months, MR. COLVIN would have an opportunity of doing so at a later stage, and he had no doubt that others interested in the subject would make their views known in the usual manner. He begged to support the motion.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE moved that the Bill be published in the local Gazettes of Calcutta, Madras, Bombay and British Burma.

The Motion was put and agreed to.

SALT LAW AMENDMENT BILL.

The Hon'ble MR. ELLIS moved for leave to introduce a Bill to amend the law relating to Salt, and said that, if this permission were accorded him, he would then ask His Excellency the President to suspend the Rules for the Conduct of Business, and move that the Bill be taken into consideration. Perhaps it would be the simplest plan merely at present to ask for leave to introduce, and if he obtained such leave, he would enter into an explanation of the object and detailed provisions of the Bill.

The Motion was put and agreed to.

The Hon'ble MR. ELLIS applied to His Excellency, the President, to suspend the Rules for the Conduct of Business.

THE PRESIDENT declared the Rules suspended.

The Hon'ble MR. ELLIS introduced the Bill and moved that it be taken into consideration.

The Motion was put and agreed to.

The Hon'ble MR. ELLIS would premise that, although entitled generally "a Bill to amend the law relating to Salt," it did not affect the general Salt-duties of India. It was in fact fiscally a very small measure, but it was a measure of great administrative importance. As the Members of the Council were aware, there ran through a part of India an Inland Customs-line, some 2,400 miles in length, and composed of an impassable hedge or other barrier, with openings at intervals of a considerable distance, through which alone any traffic could pass. These openings were guarded by Customs Preventive Officers, whose duty it was to take care that no salt or other dutiable article should cross the barrier, unprotected by a proper and sufficient pass. He would say that the Department had been supervised with every care for the protection of the people, and that the organization which had been created by Mr. Hume, and had since been efficiently maintained by Mr. Batten, was as good as could be devised, and the supervision exercised was as vigilant as in such cases it could be. But it was not to be denied that, with all the control and supervision which we could bring to bear, there must in some cases be oppression, and it was obvious that the hindrance to traffic and trade must be intolerable. Under these circumstances, it was of course the object of the Government to get rid of any portion of the customs-line that

could possibly be dispensed with, and the present Bill proposed to effect this object as far as we were able now to carry it out.

Besides that line of nearly 2,400 miles, there was also another line of 136 miles of preventive police posts on the frontier of Bengal, where it abutted on the district of Ganjam and the south-east corner of the Central Provinces. The late Lieutenant-Governor represented last year, with great force, the excessive hindrance to trade that this line of posts was, and he said that the hindrance amounted almost to a total stoppage of the interchange of commodities between the Central Provinces and Orissa. In Madras also, the authorities complained that the traders of Ganjam were checked and hindered in their dealings with the Central Provinces, owing to the exit for their salt through Orissa being barred on account of the risk to the Bengal revenue. Then, again, the Government of India had had reason to complain of the Ganjam traders making use of a gap between the Inland line and the Police posts of Bengal; and in order to stop the smuggling into the Central Provinces, it would have been necessary, unless some measure of this kind had been devised, not only to maintain the present posts, but actually to increase their strength. The Government of India, therefore, had for some time been desirous of abolishing so much of the great customs-line as separated one Province of British India from another, and also the whole of the minor frontier line to which he had just referred. But until now it had not seen its way to do so. The Bill did not contemplate the abolition of the whole line. Over two-thirds of the line separated British territory and Native States, and could not now be dealt with. That portion of the line, therefore, which stretched from the Northern Indus down to Burhánpur in the Central Provinces must remain for the present untouched. But he hoped by this Bill to get rid of a line of nearly 800 miles, stretching round the western side of the Central Provinces and Birár, and the southern portion of the Central Provinces, to the boundary between Orissa and the Madras Presidency. In that object he thought he might rely on having the concurrence of every member of the Council.

Hon'ble members would remember that the reason for maintaining this great customs-line was the differential rates of duty. To go into the question of those differences would involve a review of the whole taxation of India. Such a review was in no way necessary on this occasion. We assumed these differences of duty as a fact, and our object in this Bill was, not to equalize the salt-duties, but to abolish the customs-line. The problem, therefore, was how to abolish the line with the least risk to the general revenues, and the least disturbance of the existing channels of trade. He would now explain how it was proposed to effect the object, and, in doing so, he would observe that the measures to be taken were two-fold. In the first place, there was in Western India a duty of one rupee and thirteen annas on salt in the Presidency of Bombay outside the line, and in the Central Provinces and in Birár inside the line a duty of three rupees. We had to see how we could take away the line between the two without preventing a rush of the lower taxed salt, so as to drive out of consumption the higher taxed salt, which now paid a duty of three rupees. The matter, here, was comparatively easy, as we were able to avail ourselves of the railway, and the mode proposed was a graduated scale in the shape of a mileage rate on railway-borne salt, so as to shade off the difference between one rupee and thirteen annas in Bombay and three rupees at Jabalpur. We found we could do this by imposing, in addition to the tax of one rupee and thirteen annas in Bombay, a tax of seven-tenths of a pie per maund per mile on the 320 miles of railway between the frontier station of Ráver and Jabalpur, so that an additional duty of one rupee two annas and eight pies, added to the duty of one rupee and thirteen annas per maund in the Bombay Presidency, would, within four pies, make up the three rupees duty at Jabalpur, which remained untouched. So also on the line of railway towards Nágpur. We proposed there also to adopt the same course and impose a mileage rate, which in this case was only six-tenths of a pie per maund per mile; as by that extra levy we were enabled to attain, at Nágpur, 225 miles from the frontier station of Nárgáon, three pies in excess of a duty of two rupees and eight annas. The duty, therefore, would here be reduced from three rupees to two rupees and eight annas. Otherwise we could not expect the present flow of salt from the west to continue; it would be thrown out

by salt coming in from the Madras side at lower rates of duty, and, besides losing revenue, we should have a disturbance of the ordinary channels of trade, and the railway would carry less salt. It was therefore resolved that it would be better to lower the duty in Nágpur and the surrounding parts, rather than disturb the existing sources of supply by attempting to maintain, at Nágpur, a duty so high as three rupees per maund. In making the arrangements necessary to carry out this scheme, we had been assisted by the co-operation of the Government of Bombay, and we had received most cordial help from the Agent of the Great Indian Peninsula Railway Company. It was obvious that it was not necessary to enlist the direct co-operation of the Railway Company's officers, because it was practicable to levy the tax by officers of the Government at the various stations; but the advantages to the Railway Company and the public, and indeed to the Government, were so great by combining in one levy the mileage-rate of customs-duty, and the mileage-rate for railway-transit—having, in fact, one officer instead of two to do the work—that we thought it better to ask the Railway officers to do it, so that the public might be free from all interference from Customs officers except such as would be necessary in the way of check and control. There would thus be no direct interference of the Customs officers between the place of manufacture on the Western Coast and the Central Provinces and Birár. The loss of revenue calculated from this reduction of duty was only Rs. 1,32,000, supposing that the consumption remained at its present figure. But he had every hope that by lowering the duty there would be some, if not a much larger consumption of salt, and, therefore, the loss would not be so great as had been suggested.

The other portion of the question was somewhat more difficult. On the Eastern Coast there was no railway to help. There was on the Madras side a duty, as in Bombay, of one rupee and thirteen annas, but on the other side of the Frontier was a duty of three rupees and four annas, the rate current in the Lower Provinces of Bengal; nor was the distance so great that we could confidently fix a graduated scale of duty without great risk of the lower paid salt of Madras driving out the higher taxed salt imported into Calcutta. We had therefore, in this instance, to do more than lower the rate in one province; we had to raise the rate in another. It was with the greatest reluctance that we asked the Madras Government to agree to increase the rate of duty on salt in one of their districts; for we felt that the advantage to be derived from this measure would be derived chiefly by other provinces than that of Madras. But still, as it was found absolutely necessary to raise the duty in some portions of the northern part of Ganjam, we applied to the Madras Government to know whether they objected to the imposition of a small increase on the present rate of duty. The requisition was restricted to the smallest amount practicable; and MR. ELLIS might state that, even now, experienced officers well versed in all the circumstances of the Salt-duty in Lower Bengal, said that the amount of extra duty about to be imposed in the Ganjam district of the Madras Presidency was too small, and that there was risk of Ganjam salt superseding the salt of Orissa and of Calcutta, and thus proving detrimental to the revenue. But the Government of India was prepared, out of consideration for the views of the Madras Government, to accept some amount of risk; and in fixing the duty at the low rate proposed there was some risk. If it should hereafter be found that this anticipation was realized, it would be necessary to take other measures. But for the present, we were prepared to take our chance of the risk pointed out.

The mode in which it was proposed to do away with the frontier-line between Madras and Orissa was this. The duty in Orissa would be lowered by a scale descending from three rupees and two annas on the northern frontier of Orissa, where it would meet the rate of three rupees and four annas prevalent generally in the Lower Provinces of Bengal, until at the boundary of Ganjam, the lowest rate leviable in Orissa would be two rupees and four annas. In Ganjam, we came to a somewhat different system. The Madras system was not to charge a duty separately as in Bengal and Bombay, but to charge what was called the selling price—the price at which salt was

sold to the public. The supposition upon which that price was fixed was, that the duty was one rupee and thirteen annas, the same as in the Bombay Presidency; but the selling price, including the cost of manufacture, was two rupees. Here we had to see what was the lowest possible amount by which the Madras price might be raised to prevent Ganjam salt at lower rates displacing the higher taxed salt of Orissa and Bengal generally. We fixed as a minimum two rupees and four annas as the selling price, the selling price being now two rupees. Therefore, the most which would be imposed in any place in the Madras Presidency was an extra charge of four annas per maund, and that only at one station, the station nearest to the Orissa frontier. In the next station, Ichapur, we graduated the duty by fixing the selling price at two rupees and three annas. Therefore the whole measure of alteration of the Madras rates of duty was an extra imposition of four annas at one station, and of three annas at another station in the northern portion of the Ganjam district. Beyond that, the Madras duties remained untouched, and there was no increase to the general rate in the Madras Presidency.

MR. ELLIS was quite aware that logically a graduated rate of duty could not be supported. Of course there was no logical reason why salt as it went farther should pay a higher rate of duty. But practically that was the only mode in which we could get rid of what had been described as an intolerable nuisance, the customs-line, and he thought that the proposed mode was quite defensible where the object to be gained was so important, and could not be otherwise attained. He would add, as showing that the object of this imposition of extra duty was not to increase the revenue, that the Government of India had determined to allot the annual sum of Rs. 20,000 for expenditure in the Ganjam district, that sum being, so far as we could estimate, the amount of additional taxation on the salt manufactured there for home consumption. The Madras Government was naturally and properly very reluctant to see any additional taxation imposed on any portion of the people entrusted to their care. But feeling that this great administrative reform could not be carried out without incurring the risk of loss of revenue greater than the Government of India could reasonably incur, they gave their assent to the proposal to impose this small additional duty.

The loss which would be incurred on this side by the abolition of the customs-line and the consequent reduction of duty in Orissa had been so variously estimated that he was almost afraid to give the figures. Generally it had been put at about five or six lákhs of rupees, against which we might set off a saving in the customs establishment, and no inconsiderable amount due to the future increase in licit consumption of salt in the Central Provinces. He believed also that the Ganjam trade would receive a considerable impetus in consequence of its deliverance from the trammels of the customs-lines, and that the Orissa traders would be enabled to open out communications with the Central Provinces, which had been almost wholly stopped, and that thus the general traffic and the revenue from salt would alike derive benefit.

It remained only to explain why he had ventured to ask His Excellency the President to suspend the Rules of the Council. The reason was not so much that the Government would be deprived, by a short delay, of a small additional revenue in Ganjam; but because, as soon as it was known to the trade that the duty would be raised, it was natural that traders would cease to send salt from Bombay to the Central Provinces, and there might be an undesirable dearth of salt in those districts. For these reasons he asked permission to suspend the Rules, and would move that the Bill be at once taken into consideration.

He believed he had explained sufficiently the provisions of the Bill, but he would briefly refer to the several sections, and he would point out how they would provide for the measures he had explained. The first section affected the district of Ganjam in the Madras Presidency. It provided for the future selling-price being fixed at a sum not exceeding two rupees and four annas per maund. He had before stated that the selling-price was now two rupees, and we could not impose a higher rate without an alteration of the law. The section gave power to the Governor General in

Council to fix a rate not exceeding two rupees and four annas. The price would not be two rupees and four annas uniformly; it would be at that price in only one station, while in another station it was to be two rupees and three annas, and in no other station would it be altered at all.

The second section had reference to the Bengal Presidency. There the salt-duty leviable as an excise in Orissa and other parts of Lower Bengal was necessarily by law the same rate as was levied as a customs-duty. We proposed in this part of the Presidency to lower the duty, and we did not propose to lower the rate of customs-duty; it was necessary therefore to give the Governor General in Council power to fix the duty in the province of Orissa at a lower rate than that fixed under the Customs Act.

The third section was necessary rather with reference to the mode in which the duty was leviable than with reference to its amount. The Governor General in Council had now legal power to lower the duty and to fix it at any sum not exceeding three rupees. The rate henceforth would be less than rupees three all through the Central Provinces to Jabalpur, but the mode in which the duty would be levied was new, and this required legal sanction.

The fourth and last section was simply to transfer to the present Act the sections regarding penalties which existed in the present enactments.

Having thus explained the scope of the Bill and its details, he had every reason to hope that the Council would be unanimous in ratifying the measure.

The Hon'ble MR. COLVIN said the principal point which seemed to him to present itself for consideration with respect to this Bill was merely whether the alteration which it proposed in the Salt-duties in Ganjam, in Orissa, and in the Central Provinces, in order to effect the abolition, in part at least, of the cumbersome and expensive arrangement of our Inland Customs-line, was likely to create any such serious disturbances to the salt-trade in those districts as would counterbalance its claims to support as a means, if not the only means, of attaining that very desirable end, as well as on the more general ground of its being a step towards the equalization of the Salt-duties throughout India, although that was not its more immediate purpose. He could scarcely profess to pronounce a precise opinion as to how the graduated scale of duty proposed by the Bill would work; but the scheme seemed to guard carefully against any sudden fluctuation of price along the line, and he was not aware of any reason why the Council should hesitate to pass the Bill at once. He was, therefore, ready to give the Bill his support, and, in doing so, he trusted he should not be oversanguine if he expressed the hope that what it proposed to effect along the southern portion of the Customs-line might, at some future time, be done in regard to the whole length of that line, and that the result of the approximation of the salt-duties in certain places might hereafter result in their general equalization throughout India.

The Hon'ble RÁJÁ RAMÁNÁTH TAGORE had to say but a few words in regard to this Bill. He remarked that he was not one of those ultra-philanthropists, who were not slow in raising a hue and cry against the salt-tax, and held that salt was not a commodity which ought to be taxed at all. He was not one of those sentimentalists who thought so. He was of opinion that all classes of the people should bear the burthen of taxation each according to its means and circumstances. He had gone over this Bill most carefully, and he did not see any objection so far as the provisions of the Bill were concerned. The first section provided that salt in Ganjam, which was a part of the territories under the Madras Government, should be sold at a fixed price of two rupees and four annas per maund, which, though more than what they used to pay, was much less than what the people of Bengal paid as a tax on salt, and he did not think that the people of Madras would complain, considering the relief it would afford them from the exactions and oppressions of the Customs Police.

The second section of the Bill related to Orissa. The rate of tax upon salt was there fixed at a maximum of three rupees and four annas, and at a minimum of two rupees and four annas. That was not an increase of taxation. Three rupees and four annas per maund was the tax which the people

of Bengal paid for their salt. The tax in Orissa was fixed on a graduated scale, ranging from three rupees and four annas to two rupees and four annas, leaving it to the discretion of the Government to fix the exact amount leviable at any place in that province. None was in a better position to do this satisfactorily than the Government; they would be able to exercise that power beneficially for the interest of the people, and he was quite sure that it would be so done.

With regard to the Central Provinces, the Bill provided for a mileage rate upon salt transported from the Bombay Presidency to the Central Provinces. No doubt this arrangement was a wise one, because, in taking salt from Bombay to the Central Provinces, the people who transported it were subject to the evils of the preventive line, but the fixed mileage rate would do away with those abuses.

He thought that this Bill should pass, because there was a decided advantage to the people, who would be free from the annoyances and oppressions of the Customs Preventive Officers. Indeed, taking the Bill as it was, he thought that it was more in favour of the people than otherwise, for its object was to confer upon them substantial benefit and not to bring in an accession of revenue. With these observations he begged to say that he was glad to support the Bill.

The Hon'ble MR. DALYELL said that on the last occasion on which the subject of salt-duties had been discussed in the Council, some five years ago, hopes were held out that at some future date the high rate of taxation in the northern provinces of India would be reduced. It was then stated that the seventy million people who paid the high rate consumed so little salt, that the sixty millions who paid the lower rate paid more revenue, although the rate of taxation was only one-half. It was indicated on that occasion that the main reason which prevented the Government of India from equalizing the salt-duties all over the Empire, was the then critical state of imperial finance. He would fain hope, therefore, as his hon'ble colleague Mr. Colvin had just said, that the present Bill might be looked upon as an instalment of the larger measure to which MR. DALYELL had referred. His hon'ble friend Mr. Ellis had explained that the Bill would enable the Government to do away with a considerable portion of the customs-line which nearly encircled the Central Provinces, and to abolish entirely the salt-line between the Bengal and Madras Presidencies. It had also been estimated by the Salt Commissioner that the burden of the salt-tax would be very materially lightened to a population of something like three millions in the Central Provinces, and to a still larger population in Orissa and the Tributary Mahâls. So far, then, as one portion of the Bill was concerned, it conferred an unmixed benefit on the poorer classes of the people, and no doubt would receive general support. MR. DALYELL confessed that he himself thought the measure might have been carried out without an increase of taxation and without the slightest risk of loss to the revenue. For in spite of the assertion made by very high authorities, that the high rate of taxation in Northern India did not interfere with consumption, he could not bring himself to that belief. At any rate in support of the view he had taken was a statement recently published in the last Administration Report of the Bengal Government, to the effect that the gross consumption of salt in Bengal had not increased during the past ten years notwithstanding a large increase in the population. If MR. DALYELL's view was correct, any reduction of the higher rate of taxation must result in a very considerable increase of consumption, and would therefore probably eventuate in an augmentation of the revenue rather than in a diminution. This was often found to be the case when the rate of taxation on any article of general consumption in England was lowered. At the same time, with the strongly expressed opinions of those well versed in the subject before them, he could well understand that the Financial Department of His Excellency's Government did not feel themselves justified in taking the view which MR. DALYELL did, and that they were of opinion that the measure before the Council would involve a considerable sacrifice of revenue; and that, in order to meet that sacrifice of revenue, they had felt constrained to ask that the salt-tax should be slightly increased in that portion of

the Madras Presidency from which the populations to which he had referred would mainly draw their salt supply in future.

That brought him to the consideration of another portion of the Bill, and, holding the views he did as to the probable effect of a reduction in the higher rate of tax, he could not consider it to be entirely satisfactory. He need hardly say that he referred to the first section of the Bill, which empowered the Executive Government to increase the price of salt in the Ganjam district of the Madras Presidency by four annas a maund, or 12½ per cent. It had fallen to his lot on more than one occasion to be the exponent of the views of the Madras Government when it had been proposed on former occasions to increase the tax upon salt. So far back as 1867, as Secretary to the Board of Revenue, it had been his duty to explain that the augmentations of the tax which had taken place during the previous eight years had had the effect of raising it to a rate verging upon one which would prove repressive of consumption. Two years later, in 1869, as Secretary to Government, he had proposed to the Imperial Government on behalf of the Madras Government that the salt-duty in Madras should be raised from one rupee and eight annas to one rupee and eleven annas per maund, in view to assist in meeting the financial crisis then supposed, happily incorrectly, to be impending. The Madras Government on that occasion had eventually agreed to raise the price to the extent of five annas instead of three, although they anticipated some check on the consumption. The result fully proved the correctness of their view: for the salt-sales every year since that date had shown a considerable decrease. Under these circumstances, it was not surprising that the Madras Government should object to any further increase in the price of salt in that particular district in which the poverty of the lower classes made them least able to bear such a burden. At the same time, having in view the advantages to be obtained by a much larger portion of the population of the whole Empire, they had signified their approval of the measure. And MR. DALYELL desired to take this opportunity of expressing his appreciation of the careful and favourable consideration which His Excellency's Government had given to the Madras views on this question—a consideration which had, in the first instance, resulted in the reduction of the amount of taxation by one-half, namely, from a proposed increase of eight annas to an increase of four annas, and which would further result in the actual amount of taxation being confined to an increase of four annas in one only of the four salt depôts of the Ganjam district, and to a still smaller rate of increase at another depôt. The grant, too, of an additional provincial assignment to the Madras Government for expenditure in the Ganjam district, was a further earnest that His Excellency desired to deal liberally with the people of Ganjam so far as was consistent with carrying out the administrative reform under consideration. It would doubtless then be satisfactory to His Excellency to be made aware that, so far as MR. DALYELL had been able to ascertain, the increase of the salt-tax which took place in 1869 had not had the same effect upon the consumption in the Ganjam district as it had in other parts of the Presidency. In the year the tax was increased, the quantity of salt issued for use in the district was a little over a lákh of maunds, whereas in the year 1871-72, the last year for which he had received the returns, the salt taken up for home consumption amounted to one-and-a-half lákhs of maunds. We might, therefore, reasonably hope that the present slight enhancement of taxation would not have the effect, to any extent, of depriving the poorer classes of Ganjam of what in this country was a very important necessary of life, though it might have the effect of slightly increasing the price. As to this increase of price, it must be remembered, however, that the State could only endeavour to secure the greatest happiness to the greatest number, and that the minority must be prepared sometimes to undergo some deprivation if a great benefit was secured to a large majority. This seemed to MR. DALYELL to be precisely the case on the present occasion. The advantage gained by the people of Orissa and a large part of the Central Provinces by obtaining a sufficient supply of salt for themselves and their cattle at a moderate price would be very considerable, and the benefits they would secure by the abolition of a portion of the customs-line were, as his hon'ble friend Mr. Ellis had said, incalculable,

To give the Council some notion of the oppression and annoyance caused by this line, he would ask permission to read two extracts from the reports, one from the Commissioner of Chhattísgarh and the other written by their late colleague, Sir George Campbell, when Chief Commissioner of the Central Provinces. Mr. Pedder said:—

"But high as is the duty, it would be paid cheerfully by the people, were it not for the system under which it is levied. Since the first introduction of the customs-line into Chanda, in 1865, I have carefully watched its working, and, in giving the results of my experience, I would refer to Chanda as well as to Chhattísgarh.

"The customs-line runs along the western frontier of Chanda to the junction of the Wardha with the Waingunga; then crosses the latter river, and runs from south to north through the centre of the district, passing out at the Raipúr boundary. It then crosses the Raipúr district in a generally easterly direction, and runs partly through the Sambalpúr district, also with an easterly course, terminating east of the Mahánadí. Its total length in the Chanda district is 200 miles, and in the Raipúr and Sambalpúr districts 265 miles: and as customs jurisdiction extends over a breadth of 15 miles along the line, nearly 7,000 square miles of country in the three districts have been made subject to the intricate rules and heavy penalties of customs jurisdiction, and those rules are worked by a set of officials, who, as a body, are not of a high class, who have a direct pecuniary interest in making out cases of smuggling, and who practically are uncontrolled in the exercise of their powers. Along the 465 miles of road, travellers are liable to be constantly stopped and overhauled at the discretion of the customs peons; and over the 7,000 square miles of country, the possession, or the suspicion of the possession, of salt, carries with it difficulty, vexation and danger."

Sir George Campbell writes:—

"Throughout the Chief Commissioner's tour, it has seemed to him that the customs-line has been felt by the people as a greater grievance than all other grievances put together; no one can travel along the valleys of the Nerbada and the Wardha without being liable to constant search by endless customs officers of low degree, posted at very short intervals, armed with iron search-forks of the nature of cheese-tasters.

"Previous to the establishment of the customs-line, Chhattísgarh was the home of Banjáras, who used to take grain to the south in large caravans, and return laden with salt from the east coast, which they carried over all parts of Chanda and Chhattísgarh. The trade was a very important one, and rendered salt cheap and abundant in the wildest tracts. But the restrictions of the customs-line, not the duty on salt, have nearly destroyed this trade; many of the Naiks have been ruined, and most of the clans have emigrated,—a result deeply to be deplored."

In conclusion, MR. DALYELL would wish it to be understood that it must not be supposed, from the remarks he had felt himself called upon to make on this Bill, that he was at all opposed to a salt-tax as a general measure of taxation. He felt that it was impossible to reach the mass of the population by a direct tax, and even if it were possible to do so, he felt convinced that indirect taxation was much more suited to the circumstances of the country. Salt was the only commodity which was universally consumed, and which could take the place in India of those commodities on which so large a portion of the revenue of Great Britain was raised with such great facility and with so little complaint; and he felt sure that if the tax was moderately and properly worked, it would operate as a moderate poll-tax, and there could be no objection to it. He would, therefore, support the measure before the Council, and would also state that he quite agreed with what had been said as to the necessity of suspending the rules and passing the Bill at once,—a course which had always been taken when the salt-tax had been raised on previous occasions, and if omitted now would be liable to lead to a considerable disturbance of trade.

His Highness THE MAHÁRÁJA OF VIZIANAGRAM said that from what had fallen from his hon'ble friends with regard to the Bill, the objects of which had been so ably explained by his friend the Hon'ble Mr. Ellis, he had only to say a very few words on the Bill.

Its main objects appeared to be a reduction of the salt-tax over a considerable part of the country, and he quite concurred in thinking that lowering the price of salt in Orissa and a large portion of the Central Provinces would have the effect of enabling the masses in those parts of the country to increase their consumption of this necessary of life; and that the measure, although involving a relief from taxation, would, he hoped, result in an increase of revenue. It was of course a subject for regret that, in carrying out the measure, it had been found necessary to raise the salt-tax in the Ganjam district, but from his knowledge

of that part of the country he was not of opinion that the increased tax was at all beyond what the improved circumstances of the people would enable them to bear. With the above remarks and observations he had much pleasure in supporting the Bill.

The Hon'ble MR. ELLIS then moved that the Bill be passed, and said, after what had fallen from hon'ble members of Council, he had no hesitation in asking His Excellency the President to suspend the rules so as to permit the Bill to be passed. The remarks that had been made being generally in accord with what he had himself said, he need not refer to them at any length. He would state, with reference to what had been said by the Hon'ble Mr. Colvin, that it had been the object to take our measures so as to obviate any prospect of great disturbance to the course of trade. It was chiefly with that object the rate of duty in the southern portion of the Central Provinces had been lowered, otherwise there would be a chance of the Bombay salt being displaced by salt brought from the other side. And with a similar object we had graduated the duty on salt to Jabalpur, so as to prevent its displacing salt from Calcutta, except in the natural course of trade. The present Bill would confer on the salt of Western India no advantage, because at Jabalpur the salt would be chargeable with precisely the same rate of duty as now prevailed in that portion of the Central Provinces and in the North-Western Provinces beyond. As regards the increase of duty in Ganjam, to which the Hon'ble Mr. Dalyell had referred, it was not the object to regain a small portion of the loss we were likely to incur by lowering the duty elsewhere, but it was to prevent the lower-taxed salt displacing the higher-taxed salt that we were compelled to place a slight increase of duty on the salt in a very small area of the Madras Presidency. Had the object been an increase of our fiscal resources, we should hardly have presented to the district of Ganjam the sum which represented the additional taxation on that district. Had not steps been taken to prevent salt which paid a tax of one rupee thirteen annas a maund from passing into districts where salt paid three rupees and four annas, the abolition of the customs-line would not only affect the Government duty, but would disturb the course of trade. Therefore, both in Western India and in the Eastern Provinces, we had done our best to prevent such a disturbance.

His Excellency THE PRESIDENT said:—"Having heard the general approval which Members of Council have given to this Bill, and the expression of their opinion that it would be right to pass it into law immediately, in order to prevent possible inconvenience to trade, I have no hesitation in suspending the Standing Orders, in order to allow the motion to be put, that the Bill be passed.

"Before doing so, however, I wish to say a few words. The Council will remember that, in the autumn of the year 1872, the Government of India issued a circular to the different Local Governments and Administrations, calling for the opinions of local officers, both European and Native, of the greatest experience, as to the effect of the existing system of taxation upon the people throughout all parts of the country. The answers to that circular were circulated to the Members of the Legislative Council, and those who have paid attention to Indian finance will have observed that several taxes to which objections were expressed by the most experienced officers have since that time been modified or repealed. The officers of the Central Provinces pointed out that the customs-line, both to the north and south of those provinces, was one of the measures connected with taxation of which the people most complained. My hon'ble friend, Mr. Dalyell, has to-day explained in the graphic language which was characteristic of the late Lieutenant-Governor of Bengal, the manner in which the customs-line operates to check intercourse and trade between one side and the other of the hedge or barrier which extends along many hundred miles of country.

"It has, since the year 1872, been in the mind of the Government of India at any rate to make a step towards the removal of this barrier. It is unfortunately out of our power to attempt to deal at present with the northern customs-line; but the removal of the southern customs-line appeared to us to be a feasible measure, and I am happy to say that, owing to the care and attention of my hon'ble friend Mr. Ellis, and to the co-operation of the Governments of

Madras and Bombay, which I desire to take this opportunity of acknowledging, we shall, when the Council passes this Bill, be able to dispense with it.

"The effect of the Bill, as has been pointed out in the course of the discussion, will be to reduce the tax on salt over a considerable extent of country. On the other hand, it will be necessary that the people in a portion of the district of Ganjam, in the Madras Presidency, shall submit to a slight increase in the tax in a very limited area; but at the same time the Government of India propose to devote the whole of the amount derived from that increase to the district that pays it, by making an additional grant for that purpose to the Madras provincial assignment. Moreover, the people of Ganjam are likely to benefit considerably from the removal of the customs-line. They will be able to obtain grain from the Central Provinces without the intervention and obstructions of the customs-line, and whatever extra charge they may have to pay for salt will, I believe, be recouped by the free opening of their trade with the Central Provinces and Orissa.

"Some observations were made in the course of the discussion as to the general incidence of the salt-tax. I do not propose to go into that question; but to judge from the answers which we received to the Financial circular of 1872, the opinion expressed by Rájá Ramánáth Tagore and other members of Council to-day, that the salt-duties are not oppressive, is correct, for hardly one of the experienced officers, either European or Native, who were then consulted, gave their opinion against the tax. At the same time there is no doubt of the advantage, which, as has been pointed out by the Hon'ble Mr. Colvin, would arise from equalizing the salt-duties over the whole of India, not because those duties are at present excessive, but because their reduction to an uniform rate would enable the Government in times of emergency to raise funds for the service of the State in a safe and unobjectionable manner by increasing those duties.

"This Bill will, in addition to its primary object, also, to a certain extent, enable the Government to judge how far the arguments which have been used by some and not accepted by others, that the effect of reducing the salt-duties would be to increase consumption, are correct or not."

The Motion was put and agreed to.

MAJORITY BILL.

His Highness THE MAHÁRÁJÁ OF VIZIANAGRAM moved for leave to introduce a Bill to establish a uniform age of majority for persons domiciled in British India, and said, "my Lord, I have the honour to ask permission to introduce a Bill which was drafted during the last session of the Council here, and which in the interval that has elapsed since that time has been circulated for the opinion of the Local Governments and other authorities throughout the country. The expressions of opinion which have been thus obtained have encouraged me to persevere in bringing the Bill before the Council in the hope that the measure may, in some form or other, become law at an early date. The Statement of Objects and Reasons prepared in support of the Bill refers to the present unsatisfactory state of the laws regulating the age of majority now in force in this country. I do not propose to recapitulate what is there advanced. The law continues to be in the same uncertain state as it is there shown to be, and I believe I am right in saying that at this moment, for example, no one can state with certainty what is the age of majority for all purposes of a person resident in one of the presidency towns and possessed of property situate in the Mofussil. I shall, therefore, make no further reference to the facts set out in the Statement of Objects and Reasons beyond taking the opportunity of correcting a mistake in that statement as to the age at which Muhammadans legally attain majority. It is there alleged in accordance with a dictum in Macnaghten's Principles of Muhammadan Law that, by that law, the age of majority is the end of the sixteenth year. I have since been referred to the original authorities on which Macnaghten's work is based, and from them it appears that the age of majority established by the Muhammadan Law is the end of the fifteenth year, or in certain cases even earlier.

"The laws of all nations are agreed in recognizing the fact that immaturity of years constitutes to a greater or less extent a personal incapacity to do a legally binding act, and to be personally responsible for one's actions. But the age or ages at which such incapacity and irresponsibility shall cease are purely artificial, and even amongst races exposed to similar physical conditions greatly vary. Thus on the Continent of Europe at the present day the age of full majority in England is twenty-one, in France twenty, in Prussia twenty-five, in Spain twenty-five, in Denmark twenty-five, in Russia twenty-one, and so on. With, however, the exception of this country, I am not aware of any civilized state which does not possess a general law of majority affecting the body of its subjects, and regarded as the territorial law for all persons contracting in that country. The importance of some such uniform law is manifest in the matter of contracts. According to the law of England, the capacity to contract is determined by the law of the place in which the contract is made; and it is plainly equitable that a subject of such place contracting with a foreigner should not be required to look further than the law with which he is presumed to be acquainted, to ascertain whether the person seeking to contract with him is or is not competent to do so. Thus, a person in England about to contract with, say, a Prussian, has only to satisfy himself that the Prussian is over the age of twenty-one to be assured that he cannot afterwards seek to evade his obligations under the contract by pleading minority. In this country we find it difficult to say at what age such Prussian is first competent to contract. It is for reasons such as these that it seems desirable that in this country there should be an uniform age of majority established by law. This object is sought to be obtained by the Bill, which I have the honour to move for leave to introduce in the Council. The question what that age should be is a matter admitting of much difference of opinion, and which may be considered hereafter if your Lordship be pleased to entertain the Bill. In the same way it may then be determined whether it is expedient to have one age of majority for all purposes, or whether it is preferable to have different ages at which persons may first become capable to perform different functions and incur different responsibilities. The question to which the Council will doubtless agree with me in thinking, I have now only to address myself, is whether it is necessary or expedient that there should be a legislative enactment for the purpose of rendering the law on this subject more simple and uniform. On this point I trust I may not be deemed to be out of order in referring to the opinions received from the authorities who, as I have already stated, have been consulted on the matter, and which opinions, I offer my best thanks to my friends, the Hon'ble Mr. Bayley, and the Home Secretary, Mr. Lyall, for kindly permitting me to see. I trust that I may not be thought presumptuous in saying that the Bill need not interfere with the religious rites of either the Hindús or the Muhammadans, and indeed on this point the ruling of this Council is explicit,—*vide* section 19, Indian Council's Act—

"'Provided always that it shall not be lawful for any member or additional member to introduce without the previous sanction of His Excellency the Viceroy and Governor General, any measure affecting * * * * the religion or religious rites and usages of any class of Her Majesty's subjects in India.'

"In fact, in the opinions of all the persons supposed to be affected by that interference, who have expressed their views on the matter to the officers of Government, no such fear exists. This is explicitly stated in the returns made by the Commissioner of Patna and the Government of Bombay respectively, as regards the Muhammadan inhabitants of Patna and Bombay. The one exception is in the case of the Muhammadan Literary Society to which I shall allude, but I need merely say with reference to that, that it is on this point in conflict with the opinions of the great Muhammadan communities of which I have spoken and of such men as Munshi Amír Ali, Khán Bahádur, and Sayyid Ahmad, Khán Bahádur, who had been good enough to favour me with their views on the question. Even in the Muhammadan religion the age of majority, as observed by the commentators of the Koran, "Durrúl Mukhtár" and "Tafsír Husayní,' is as follows. The opinions of these two celebrated commentators are admitted and bowed to throughout the Muhammadan world of Europe and Asia.

In the Koran it is said—

[وابتلوا اليتامى حتى اذا بلغوا النكاح فان آنستم منهم رشداً فادفعو اليهم اموالهم]

"Which means 'Try the orphans until they arrive at the age of puberty, and then if you see and find out that they are able and competent to find out the true path of their life-journey make over to them their property.'

"Tafsír Husayní, commenting on the above—says: Before delivering up to children their property they should be tried, in the case of boys, as regards their judgment, intellect and capability in making bargains and taking care of their goods; in the case of girls, as to their knowledge of spinning, weaving, and proper management of domestic and household affairs in general, even if they have attained 'bulúgh' or the age of puberty. When boys and girls are found thoroughly able to judge good from bad, of understanding religious matters and managing their property efficiently, or, in other words, when they are found to have attained 'rashad,' namely, the true path, their property should then be made over to them. 'Durrul Mukhtár,' which is a fikah, namely, on which all the Muhammadans observe religious acts, rites, &c., says—

فان بلغ الصبي غير رشيد لم يسلم اليه ماله حتى يبلغ خمساً و عشرين سنة

"Which means, 'Though boys and girls who may have attained 'bulúgh' or the age of puberty, be yet found not to have attained 'rashad' (the true path) or sufficiently able to look after their own interests properly at an earlier age, their property should not be made over to them till they are 25 years old. I shall not occupy the time of the Council with further commentaries, which are acknowledged by all the Muhammadans of India, Western Asia and Europe. I merely beg to add that there are innumerable authorities to support the above-mentioned views, which can be produced if required.—*Vide* Maalam uttanzíl Baydhavi commentaries and fikahs.

"It is to be regretted that such high authorities should not have received that attention from the Muhammadan Literary Society which they deserved from a body who make it their avowed object to improve and raise the social and religious condition and status of their Society. Very likely the leading members of that community and its Secretary, Maulaví Abdul Latíf, Khán Bahádur, overlooked their existence. Besides, such an acknowledged and highly respectable Muhammadan authority in Bengal, as my learned friend Munshi Amír Alí, Khán Bahádur, has been good enough to send me the paper containing his opinion on the matter, which I beg to read—

"'His Highness the Maháráját of Vizianagram having referred to me for an expression of opinion upon a *Bill* introduced by *His Highness* in the Legislative Council to establish a uniform age of majority for persons domiciled in British India, I beg to remark that in my opinion the age regarding majority prescribed in 'Shar'a' or Muhammadan Law is virtually with direct reference to young persons acquiring right for practising offices connected with religion, and that, therefore, there does not appear to me any objection for the civil authority to fix by legislative enactment a uniform age of discretion on attaining which individuals of all classes of Her Majesty's subjects of either sex may exercise civil rights and privileges. I think too that the age of 18 years proposed in the Maháráját's Bill is most unobjectionable for starting in civil life.

"'This principle has been in force regarding succession to landed estates under the provisions of Regulation XXVI of 1793, which, as far as I am aware of, has worked over the long period of 80 years without causing dissatisfaction.

"'I assume that the scope and intention of His Highness' Bill is to extend the operation of Regulation XXVI of 1793 to all civil matters and transactions instead of landed proprietary simply, and I am inclined to believe that such extension will in its action be attended with convenience and benefit.

"'Understanding then the proposed Bill as one for fixing a uniform age of majority for purely civil purposes and not for anything provided by the sanction of *religious authority*, I see no reason that there should be any objection to its passing into law.'

"And my learned friend, Maulaví Sayyid Ahmad, Khán Bahádur, to whom I had spoken several times on the subject in Benares, is of the same opinion. If I may be allowed on this matter to bring in my personal feeling and experience as a Hindú, I would say that the question of the age of majority is in no way regarded as a matter of religious sentiment by any sects or individuals of the creed to which I belong. Why, amongst all nations, even after a few days after the birth of a child, he undergoes a religious ceremony, namely, námakar-

nam or christening, but this religious ceremony, as it does not clash with his civil rights, will not be at all interfered with by the principle of this Bill. Manu, the greatest authority in the Hindú religion, whose institutes are highly approved of, nay even venerated in the western world, says, in the first sloka of the 4th Chapter,

॥ चतुर्थमायुषोभागमुषित्वाद्यं गुरौद्विजः ॥
॥ द्वितीयमायुषोभागं कृतदारोगृहेवसेत् ॥ १ ॥

which means, 'one-fourth of man's life should be devoted for the accomplishment of education under the tutor to prosecute the worldly and holy studies. The second part of the life's portion should be entered in a married life.'

"It is said in the Vedas, and very well known in the civilized world, that a man's age is 100 years, and when Manu said one quarter of the first portion of the life should be devoted for prosecuting the different useful and important studies for the accomplishment of a man as a bachelor is 25 years, and, even taking the present average of human life, it may be fairly said to be 75, and a quarter of that is a few months more than 18. From this it is plainly shown that the student should wait till 25 to complete his education, and then he may be called a major. But when the pandits gave the sloka—

॥ गर्भस्थः सहशोज्ञेयः आष्टमाद्वत्सराद्विषुः ॥
॥ बाल आषोडषाद्वर्षात् यौगंडस्त्रेति राथते ॥
॥ परतोत्यवहारज्ञः स्वतंत्रः पितरावृते ॥

which means 'from the moment God gives life till 8 years of age a child may be considered as if in the womb. From his eighth year till his sixteenth year he may be called a boy and then a youth; after that period he can begin to see for himself independent of his parents.' This sloka is from the *Nárada Smriti;* and about 100 years ago, when the pandits in their representation to Government made use of it to establish 16 years as the age of majority, they evidently gave it a wrong interpretation, because at the same place in the Nárada Smriti it is distinctly said thus—

॥ अप्राप्त व्यवहारश्च स्वतंत्रोपिहिनर्भवाक् ॥
॥ स्वांतंचैतु सुतं ज्येष्टे ज्यैष्यं गुणावयः कृतं ॥ १ ॥

which means that, although after attaining the age of puberty if you see that he is incompetent in looking after the affairs in general, you must not recognize him as a major, neither can he have any demand for his property. In the case of orphans the eldest son is merely called the head, but when he has sense enough and competent to look after the affairs properly in all purposes, it is *at that age* that he should be recognized as having attained *the age of majority*. In the words of the Committee of the British Indian Association, speaking for the Hindú community, the question of the limit of minority is not regarded as a matter of religion or conscience, and an alteration of it is not, therefore, open to the charge of religious interference on the part of the Government. The second ground of objection to the measure I am seeking to propose taken by the Muhammadan Literary Society here, is that the Bill may disturb the present law relating to marriage and divorce amongst the Muhammadans. To this I may now merely say that the Bill I propose to introduce will not attempt to interfere with such matters, but will be confined to the general status of a minor with reference to contracts and the disposal of his residence and education. Their Lordships the Judges of the High Court of Bombay have been pleased to say that they all consider that the thanks of British India should be given for such a needed measure. The late Hon'ble Mr. Justice Dwarka Nath Mitra, the only one of the Judges of the Calcutta High Court who furnished the Government with an expression of opinion on the measure, entirely approves of its general policy, and considers legislation on the subject to be absolutely necessary. Similar opinions have been given by the Chief and Judicial Commissioners of Oudh, the Chief Commissioner of the Central Provinces, the late Chief and the Judicial Commissioners of Assam, the Chief and Judicial Commissioners of Coorg, the Commissioners of Orissa, Chutiá Nágpur, the Rájshahai Division and Patna, the Resident of Haidarábád, and

the Hon'ble Mr. Beaufort and Mr. C. D. Field, the then Commissioner of Chittagong. If nothing else were sought to be attained by this Bill than certainty as to the age or ages at which individuals can incur binding legal obligations, it would, I trust, in the admitted uncertainty of the laws on the matter now prevailing in the country, be favourably received by the Council. In the great department of contracts, the recent Act, which is now the general law of the country, has made the agreement of a person who has not attained the age of majority to which he is subject, absolutely void, and not merely voidable, or capable of being ratified on the attainment of majority as hitherto.

"It is obvious that if in any classes of cases it is uncertain what is the age of majority at which a person can make a binding contract, there exists a direct check on the freedom of contracting, and an inducement to persons contracting with those who may or may not be able to repudiate the engagement to exact for themselves such ultra-favourable terms as may compensate them for the risk they incur.

"The Judges of the High Court of the North-Western Provinces fully approve of the principle of the Bill. The members of the Board of Revenue of the North-Western Provinces have certain objections and state as follows—'The Board have grave doubts of the policy of the measure proposed by the Mahárájá of Vizianagram, and suggests that if the Government of India decide in carrying the Act through, that the work should be entrusted to the Law Member of the Council.'

"His Honour the late Lieutenant-Governor of the North-Western Provinces was of opinion that there is much weight in the Board's objections. Therefore, to the Hon'ble Mr. Hobhouse, who is one of the greatest and most learned and eminent jurists in the world, I make over the charge of the Majority Bill, agreeably to the opinions of His Honour the Lieutenant-Governor of the North-Western Provinces and the members of the Board of Revenue of those provinces. I hope my friend the Hon'ble Mr. Hobhouse will kindly take charge of this Bill, and I shall be happy to give him any assistance that lies in my power with regard to this measure."

The Hon'ble MR. HOBHOUSE said the Mahárájá of Vizianagram had appealed to him to take up this Bill. MR. HOBHOUSE answered by saying that he should be very happy to assist the Mahárájá in the progress of the Bill so far as MR. HOBHOUSE was able to do so. The Mahárájá had, however, greatly over-estimated the amount of assistance which MR. HOBHOUSE could give him. He was, he grieved to say, not an eminent jurist. He was only a practising lawyer, of somewhat plodding habits, and some professional experience. Still, such as his faculties were, they were quite at the Mahárájá's disposal; and he should be happy to promote the objects of the Bill so far as they ought to be promoted. Indeed, from a lawyer's point of view, the Bill contained nothing but good, because there would be great legal advantage in simplicity and uniformity as regarded the law of majority. The circumstances which the Mahárájá's industry had brought to light shewed that the law was not in a satisfactory state. It was anomalous that a Hindú should inherit property at one age, a Muhammadan at another age, and a Christian at a third age, seeing that the three were born and bred in the same climate, had like constitutions and capacities, and formed members of one community. It was very absurd that a person born on one side of the Mahratta ditch should attain majority at one age, and another, say his cousin, born on the other side of the ditch, at another age. All anomalies of this kind caused practical difficulties in administering the law. Therefore, so far as the Bill could be legitimately maintained, he should be happy to give it his support.

Of course a statesman's point of view differed from that of a lawyer, but with MR. HOBHOUSE's present information he did not think there would be any political difficulty in proceeding with the measure. He had not seen the provisions of the Bill, and therefore he could not say whether he should approve it or not; before he could say that, he must look into the details. But he judged from the Mahárájá's speech that he would take care to steer clear of rocks, and to see that the feelings and sentiments of the people were not rudely encroached upon. He collected that the Bill would be confined to such

matters as contracts and the custody of the property and person, and that it would not seek to affect such matters as marriage, divorce, adoption, or the performance of religious rites. Indeed, as regards the religion or the religious rites and usages of the people, a Bill could not, as his hon'ble friend had reminded them, be introduced by any member without the previous sanction of the Governor General, which, so far as he knew, had not been accorded. The Mahárájá had argued at some length that the question of majority would not touch any religious question, but MR. HOBHOUSE thought it would be better to provide expressly that it was not intended to interfere with the religious usages of any class of persons.

As to other matters, the Bill steered clear of the matters he had mentioned, and confined as it was in its scope, he did not see any reason why it should not be regarded as a measure of reasonable reform. He must ask the Mahárájá to keep charge of the measure, but either in his presence or in his absence, MR. HOBHOUSE would be glad to afford him such assistance as he could conscientiously give.

If then the Bill steered clear of the perilous matters he had mentioned, MR. HOBHOUSE did not see any reason why it should not effect a very useful reform, not only by giving greater uniformity to the law, but by postponing the age of majority and providing a better measure of the capacity of a young man to manage his affairs, to bind himself by contract to decide upon his own residence and his own education.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE, with the permission of His Excellency the President, moved that the Hon'ble Mr. Colvin be added to the Select Committee on the Bill for the further amendment of Act No. I of 1859 (*for the amendment of the law relating to Merchant Seamen*) and for other purposes.

The Motion was put and agreed to.

The following Select Committee were named :—

On the Bill for the further amendment of the Burma Courts Act, 1872—The Hon'ble Mr. Bayley and the Mover.

On the Bill to consolidate and amend the law relating to Ports and Port-dues—Major General the Hon'ble Sir H. W. Norman, the Hon'ble Messrs. Inglis and Colvin and the Mover.

The Council then adjourned to Tuesday, the 5th May 1874.

SIXTEENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL, FROM THE 16TH APRIL TO THE 30TH APRIL 1874.

The Weather.

1. THE chief characteristic of the weather, up to the close of the fortnight, has been great heat, with a general absence of those storms and showers which are ordinarily looked for in April, and which the country at present much requires. Some districts, however, were exceptionally favored. Bankoora had a little rain in parts. Nuddea, Jessore, Moorshedabad and Rungpore, also received a scanty supply, while in the more eastern districts there were indications that an early fall was by no means improbable. But even those districts, which benefited by showers in the early part of the month, are now crying out for more; while in Behar, the want of water has become serious, the wells and tanks are fast drying up, and much anxiety is felt as to the probable consequences of this long-continued drought. Information has, however, been received by telegraph of a fall of over an inch at Mozufferpore on the 27th, and of over 2 inches in parts of Durbhunga; and news of a similar copious fall is telegraphed from Purneah and Moorshedabad, so that, although further advices are not to hand, it may be hoped that there has been something like a general fall where it was most required. The usual returns will be found at enclosure No. 1.

Price of grain.

2. The general tendency of prices, except in the eastern districts, appears to be upward. In nearly all the districts of Burdwan, the price-current shows a rise in the rates for common rice. In the distressed tracts of Rajshahye, also, there has been no real improvement except in Bogra. The rate quoted in Dinagepore is 9 seers, and in Rungpore 8 seers per rupee. The sale of grain by Government has, in the former district, tended to maintain the rate at the figure quoted, and in the latter, has mitigated the effect of the sudden failure of the local stocks which was noticed in last Narrative. In the eastern districts the rates are slightly better, but still very high. In Behar there is no material change to notice. The rate for rice in the very distressed parts is almost entirely nominal, the staple being in many places quite unprocurable save at the Government golahs. The inferior grains are if anything a little dearer. The prices-current for the fortnight will be found at enclosure No. 2.

In the following table the rates for common rice in the principal districts during the last four months are compared with one another; and the rates now current are contrasted with those of April 1873 and April 1866.

	NUMBER OF SEERS OF COMMON RICE SOLD FOR A RUPEE, 1874.					
	On 31st Jan.	28th Feb.	28th March.	25th April.	April 1873.	April 1866.

State of the crops.

3. Of the state of the crops, there is little to be said. The only food-crops now on the ground are the boro dhan, or spring rice, and the supplementary millets and pulses which are of no very great importance. All have been suffering seriously from want of rain. In Behar, some dependance had been placed on the millets as a quick-growing crop, which would come up in time to assist the people in their present need; but the prospect of getting any material aid in this way is now very doubtful, if not hopeless. If, however, there has been anything like a general fall of rain within the last day or two, the prospects of these crops would still be fair in many parts. The preparations for the sowing of the early rice are well advanced in most districts save those of Behar.

Supply of grain.

4. In the districts south of the Ganges there has nowhere been any failure of supplies. On the contrary, the gathering of the spring and mohwa crops has, without doubt, increased the available stock of food very materially. But north of the river the favorable effect of the harvest on the market has been less general. In Tirhoot, the southern sub-divisions still get sufficient supplies, but in Durbhunga rice has almost entirely disappeared; in Seetamurhee supplies are small; and in Mudhoobunnee only 7 or 8 seers of rice are procurable for a rupee. So, again, in parts of Chumparun, though there was a slight improvement towards the end of the fortnight, the bazar stocks have been extremely short, some of the grains not being procurable at any price, and some only in quantities of one or two seers at a time. In Sarun, however, things had improved, owing to the great activity of private trade, and the completion of the spring harvest. In North Bhagulpore, food is still procurable in the bazars; but in Soopool prices would seem to indicate that stocks are, as was feared, extremely small. In Purneah, too, about the Sudder Station and Dengrah, there has been a failure in the supply, but the completion of the Government allotment of grain will now leave the transport resources of this district available for private trade, of which a good deal has been carried on hitherto, even under considerable disadvantage. In Dinagepore, Rajshahye and Maldah, the indications of short supplies have been getting more marked in sudden fluctuations of prices and limitation of sales. There has been no absolute failure as yet, and Government grain is available for sale if need arises, but the state of the markets is evidently somewhat critical. In Rungpore there has been a general failure of supplies throughout the district, especially along its western border near Dinagepore. It was at first suggested that this was due to the stoppage of local trade by the Government demands for carriage. This surmise has proved to be unfounded. The carriage taken up by Government is in this district comparatively inconsiderable, and the failure of local supply was due to a variety of causes, of which positive lowness of stocks is probably the principal. The Government stores have been opened for sales to the public, and the last reports seem to show that things have become easier. Elsewhere throughout Bengal, supplies are available to all who can afford to pay for them.

Private importations to Behar.

5. The amount of private grain carried by the railway into Behar stands thus:—

For the fortnight ending 18th April—

	Tons.
From the North-West and Punjab	11,781
„ Calcutta and Lower Bengal	18,237
Total	30,018

The figures last fortnight were 15,974 tons from the north-west downwards, and 5,874 tons from Calcutta upwards. There is a great increase in the amount of private grain sent up from Bengal. The imports to Patna from the North-West have not yet actually recovered their former activity, partly owing to the slight lowering of prices caused by the spring harvest, but mainly because the new crops in the North-West have not yet

come freely into the market. Large supplies are, however, it is said, being now ordered by telegraph. Private import to both Shahabad and Sarun has been very brisk. Between 80,000 and 90,000 maunds were brought into the latter district by three of the principal ghauts alone during the fortnight under review. In the Eastern districts high winds have to some extent interfered with the river trade.

Export of grain by sea and movement of food-grains.

6. In Appendix A will be found the usual note on exports and rail and river traffic. The export of food-grains to places beyond Bengal had amounted to 198,644 tons from the 1st October to the latest dates in April.

The condition of the people.

7. As regards the condition of the people in the specially-distressed tracts, there is but little to add to the facts stated in the last Narrative. In most of the worst districts the numbers coming to the relief works continue to increase, but the growth of actual distress has, it may be hoped, been finally stayed. It has, however, become more and more evident that there is no severe Famine simply because Relief has prevailed over Famine. Even in Patna, perhaps the most fortunate of the Behar districts, the Collector writes that but for the Government works, the small cultivators and the laboring classes would have been unable to subsist.

Behar.

The Lieutenant-Governor has himself been on tour in North Tirhoot, and at the close of this Narrative will be found a record of the results of that visit up to date, and a full description of the condition of the people in the North Gangetic tracts. It will be seen, that in the Northern sub-divisions of Tirhoot, the distress is on the whole as great as it was feared it might be. In South Tirhoot, the Sudder sub-division is now feeling the pressure more keenly than at first; and though none of the emaciation apparent to the north and east has shown itself here among the laboring poor, the daily growing numbers on the works indicate that the relief organisation, now provided, was not devised at all too soon. In Sarun it is believed that distress is being sufficiently met; and the payments on account of opium have here, as in other Behar districts, been of material assistance to large numbers of the cultivators. The condition of the people in many parts of Chumparun when they come to the works, is described by the local officers as plainly indicative of want. The infant children especially, are in some places "in a miserable condition, shrunk and emaciated"; and though this is attributed to exposure, and to bad and irregular food rather than to an insufficiency of it, the fact no doubt is evidence that the natural food of infancy has too often been cut off, owing to the hardships endured by the nursing mothers. The following extract from Mr. Howe's report shows that the condition of the people in Ramnuggur is calculated to cause much anxiety:—

"The condition of the agricultural classes continues to be very unsatisfactory. In distributing advances we have made searching and systematic inquiries (village by village), and I can therefore speak not from general impressions and summary investigation only, but with the certainty resulting from having the records of a regular census before me. Although this systematic inquiry is at present far from complete, yet the condition of the remainder of the sub-division closely resembles that of the villages in which the census has been taken, and a description of the village completed will therefore very nearly apply to the entire sub-division.

"The villages of Butsora, Decorar, Chankee, Gopala, Sathee, Bubta, and Bhultur (forming part of the Maharajah of Bettiah's estates), are those in which the condition of the ryots causes most anxiety. In the Rajah of Ramnuggur's estate, very large tuccavee advances have been made with the most beneficial results; and though a good deal remains to be done, the condition of the ryots is far better. In the villages above named, there is a large number of ryots who have nothing, or next to nothing, to live upon; but to whom the alternative of going to our roads is like the prospect of the work-house to the respectable poor at home. These live in the greatest distress, and are rapidly, in spite of their prejudice, being driven to our works. One very noticeable fact during the fortnight has been the steady increase in the number of workmen flocking to our roads and tanks. Colonel Boulderson's daily average in the east, where there are not many works and the attendance has hitherto been small, has increased to about 4,000 a day; and he attributes this entirely 'to the fact that the grain-stores of the cultivating classes have become exhausted.

"Indeed, this is the only way to account for the increase. The laboring class is very small, any reinforcements therefore can only come from the cultivating classes, and nothing but the severest distress would drive the better portion of these to our roads.

"This increase has been general throughout the sub-division, and the daily average now amounts to the large number of 17,389. These, then, *first*, the rapidly diminishing stores of the cultivating classes, and *second*, the increasing dependence of the people on Government, are the two most significant facts during the present fortnight. The census inquiry also shows that there are considerable numbers of respectable widows who in ordinary times depend on their husband's relations, and who are now turned adrift. These cannot work, nor do they (except in a few rare cases) apply for charity, but they are in the greatest distress. It is further proved that some villages have come to the very verge of starvation; while others, and fortunately the majority, can still hold out for some time. But in all there is a general uneasiness, almost amounting to panic, and there is a spreading conviction that beyond a certain time nothing but help from Government will enable them to hold out."

In North Bhagulpore things are better in Muddehpoora than in Soopool. Of the latter sub-division, the officer in charge writes—

"During the past fortnight I have been moving in all directions over the sub-division, and though I have seen a large number of miserable emaciated objects among the lowest classes, still I think the condition of the people generally is surprisingly good. Our relief operations are, however, in full swing, and with the liberal allowance of works recently sanctioned in all directions, our gólahs open for sale to the public and to the laborers on the works, I feel tolerably confident that we shall pull through this season of distress with very satisfactory results." "But" (adds the District Magistrate), "the condition of the people generally is far worse than in Muddehpoora, and the anxiety and work entailed on all is consequently far greater; all that can be done will be done."

The Monghyr Magistrate thinks the people are beginning to feel grateful for the exertions Government is making to relieve them, though hardly understanding its motives. The February rain, and the abundant mohwa crop have done much to improve the state of this district. Serious distress is now not anticipated. In Purneah, things are rather worse in Kusba Amour, Dengra, and to the north of the Sudder sub-division, owing to the continued want of rain, and some failure of supplies. But the opening of the Government stores has met the necessities of the case, and it is reported that the people who come to the roads and poor-houses in a state of emaciation, very soon pick up, and improve in appearance. But, says the Magistrate—"no one who has seen the people coming to work, could say there was no need for relief. Had there been no works opened, and no grain distributed, the distress would have been terrible."

Rajshahye division.

8. There is no special change to chronicle in Moorshedabad, Maldah, or Rajshahye. In Dinagepore, distress has broken out in the Peergunge thana on the Atrai, where it had been supposed relief would not be required, as the tract had had some crop of rice, and an extensive cultivation of tobacco and cold-weather cereals. Steps were at once taken to open works and provide grain. Throughout the rest of this district the pressure is tightening, but the means of meeting it are effective. Rungpore reports are again unsatisfactory. The distress in the neighbourhood of Kamdya, Mallaparah, Aligan and Rajahar is described as "very severe, and most of the people there are entirely dependent on the relief works. About 7,000 people out of a population of 15,000 supposed to be suffering from the most severe distress, are daily working on the roads, and the numbers are still increasing, the mundals and headmen of the villages being utilised as duffadars." So, from other parts of this district, it is reported that distress is spreading, but the relief officers believe that they have it well in hand.

Pubna.

The condition of the people in Pubna which had recently given some cause for anxiety has improved in parts owing to the demand for agricultural labor caused by a heavy fall of rain. The supplies in the bazars had increased, and the numbers seeking relief are as yet insignificant.

9. Fortunately the health of the people in most of the distressed tracts has continued good, and save in Rungpore, Rajshahye, and Moorshedabad, where some cholera had shown itself, there has been no epidemic to add to our troubles. The medical staff asked for by Sir Richard Temple has now been very nearly made up, and medical stores are being forwarded along with the Government grain to all parts of the famine districts.

The health of the people.

10. The state of the Bood-bood and Cutwa sub-divisions of Burdwan was reported in last narrative to have changed for the worse. Since then the Lieutenant-Governor has visited Burdwan, and a Minute, embodying the orders he has seen fit to give, will be found in Appendix D.

Burdwan Division.

The tract which is found to be the most distressed is that between the Adjai and Damoodur, where the rice crop was in many parts less than a quarter crop. Want has here also supervened upon the prolonged sickness caused by the endemic fever, and it is often impossible to say which calamity has had most effect in bringing the people to the state of wretchedness in which many of them appear. Relief, charitable and other, is, however, in this district available in great abundance, and the number of people taking advantage of this is large and increasing. The means of communication are fortunately also many, and it may be hoped that the natural course of trade will maintain the necessary supplies in the bazars. The Lieutenant-Governor has approved of the enforcement of the cooked-food test in towns where it is difficult to ascertain the personal circumstances of each applicant for relief; but a modification of the circle organisation in force elsewhere has been introduced for the distressed tract outside the towns. The subject of advances to ryots is also receiving consideration. In Beerbhoom there has been a good deal of distress, which would have been greater but for the timely provision of work and charitable relief. In Bankoora, also, the numbers dependent on Government aid are fast increasing. The state of Hooghly and Midnapore seems, on the other hand, to be tolerably good, though, of course, the laboring classes are suffering somewhat from the high price of food.

11. From Hazareebagh later reports are more satisfactory. The Lieutenant-Governor, having consulted with the Deputy Commissioner on the spot, has sanctioned the construction of a road along a pilgrim route from Gya to Deogurh as far as this lies within the Hazareebagh district, and has requested the Commissioner to report, after inquiring locally, if more is required.

Chota Nagpore Division.

From Manbhoom, the district officer reports that, notwithstanding the gathering in of the lac crop, and the falling of the mohwa flower, distress is still on the increase, and the people have been driven to consume their seed-grain. Last year was the worst of three bad years in parts of this district, and the people are, many of them, in a very impoverished state. The Deputy Commissioner's opinion is, that the whole population of 16 pergunnahs will need assistance for three months; but that, if Government will help the cultivating ryots, these will find employment and support for the cultivating population. The Lieutenant-Governor has agreed to raise the allotment of Government grain, and directed the Commissioner to visit the district, and report fully on the kind and extent of any further relief required.

The reports from Palamow are decidedly more favorable. The worst parts are the pergunnahs of Jupla and Belounja on the Gya border, for which 10,000 maunds of Government grain are said to be required. In the rest of the district, distress has been relieved by the crop of mohwa.

12. The detailed enquiries made into the condition of that corner of the Jamalpore sub-division of Mymensing called Dewangunge, referred to in paragraph 15 of the preceding narrative, have not established the existence of anything like severe distress.

Mymensing.

It appears from the Magistrate's letters that the population of Dewangunge is 85,000; that the tract produces little winter rice, but depends for food mainly on its autumn rice, and on such imports as it receives from the neighbouring pergunnah of Sherepore; that the Dewangunge people exported their autumn surplus; that Sherepore has now no more winter rice to give them; that stocks are extremely short, but that the people can well afford eventually to pay for any grain that may be advanced to them. It is not, however, made clear why private trade is so little to be depended upon for the supply of a small tract situated upon the great highway of Eastern Bengal, and the people of which are said to be well able to pay for what food may be taken to them. The Lieutenant-Governor would have hoped that a great exporting district like Mymensing, would not have been in this position. He would have hoped that by acting through or advancing money to zemindars and private traders, the local officers of Mymensing and Jamalpore would have been able to promote the supply of grain to Dewangunge; and he finds it difficult to think that there is absolute need for Government to import grain into a part of Mymensing where the principal food-crop gave a twelve-anna yield. Still, as the opinion of the Commissioner and Magistrate has been given very strongly, the Lieutenant-Governor has sanctioned their drawing from the Kaligunge depôt in Rungpore 5,000 maunds of Government grain, to be distributed as advances to ryots and others in Dewangunge, and a further supply of 5,000 maunds will be given subsequently.

13. There is nothing further to report at present regarding the parts of Nuddea and the 24-Pergunnahs that are classed as partially distressed. The measures of relief adopted are sufficient, and preparations are being made to provide work on a more extensive scale, should the demand for it arise.

The Presidency Division.

14. Emigration to British Burmah has not as yet proved a source of material relief to the distressed districts. Of the total number of emigrants despatched up to the 25th April, viz. 2,451, 1,585 were recruited in Calcutta, and the rest came as shown below:—

State emigration.

From Hazareebagh	50
„ Monghyr	348
„ Patna	370
„ 24-Pergunnahs	6
„ Sarun	92

15. The despatches of Government grain from Calcutta amounted during the fortnight to 12,13,923 maunds, making the total amount despatched up to date 77,87,868 maunds or 288,439 tons.

Despatches of Government grain and the transport question.

16. At Appendix C will be found a statement showing the progress made in completing the grain allotments of the various districts. It will be seen that the allotments of Purneah, Bhagulpore, Sarun, Chumparun, and all the districts of the Rajshahye division, have either been completed, or are on the point of being so. The district transport has in fact everywhere, save perhaps in East Tirhoot, proved more than equal to the strain brought to bear upon it. As regards Tirhoot, it will be seen that there are still 17,71,737 maunds to be supplied, of which 14,78,157 maunds have to be sent from Calcutta. There are also considerable balances lying at the ghauts south and north of the river crossings. On the 26th April (the latest date for which returns are available), these amounted to 3,00,217 maunds. The Durbhunga Railway has now, however, commenced running, and will carry off, it is reported, 28,000 maunds of grain daily. (In Appendix E will be found a minute by the Lieutenant-Governor regarding the completion of this work.) A contract has also been completed with the gentlemen to whose exertions the successful cartage of the Bhagulpore allotment was due, under which 2,75,000 maunds are to be delivered at the Durbhunga store-houses by the 10th of June. Bunkur Ghât,

under Major deKantzow's energetic management, is sending away on the average over 17,000 maunds per diem, and can do more easily. Besides which, the reserve Government carriage from the North-West will now almost immediately come into use. This will consist of about 11,000 pack animals, chiefly mules and ponies, besides some 4,250 bullock carts. There is very little doubt, indeed, of the whole of the Tirhoot allotment being successfully placed before the rains. The local transport service has elsewhere, it will be seen, met hitherto all the calls made upon it. It has been found necessary to lower the Government despatches by the East Indian Railway. When the daily despatches of Government grain were raised above 2,500 tons, private trade was interfered with. The figures given in paragraph 5 above show how considerable that trade has become. The Government accordingly first directed that 2,500 tons should be the maximum to be sent daily, until the accumulations of private trade had been worked off, and within the last few days, the Government have, for the same reason, reduced the amount still further to 2,000 tons. This is, it may be hoped, only a temporary stoppage, and fortunately so many districts have been now supplied that it is not a matter of vital importance to press the Railway overmuch. The railway staff has had very hard work for many weeks past, and it has been agreed to lend them twenty steady soldiers to act as guards to supplement the extra staff they have themselves had to engage.

Relief Works.

17. The total numbers on relief works as given in last Narrative were—

	Last Fortnight.
Patna division	806,878
Soane Canal works	33,933
Gunduk embankments	29,299
Bhagulpore division	87,198
Rajshahye „	167,871
Burdwan, Chota Nagpore, Presidency, and Cooch Behar divisions	47,794
Northern Bengal Railway	12,475
Total ...	1,185,448

The figures for the present fortnight may be thus exhibited:—

	Total number of laborers.	Of whom are under circle officers on local and village works.
Patna division	832,855	454,514
Soane Canal works	38,783	.....
Gunduk embankments	24,750	.....
Bhagulpore division	95,294	39,886
Rajshahye „	164,296	121,762
Northern Bengal Railway	18,418	.....
Burdwan, Chota Nagpore, Presidency, and Cooch Behar divisions	63,695	.....
Total ...	1,238,092	616,162

The system of relief works.

18. With respect to the character of these works, it may be said that if we set aside the Soane, Gunduk, and Northern Bengal Railway works, the returns for which are separately shown, there is probably not a single undertaking now being carried out in the distressed tracts which would have been in hand in an ordinary year. The small sums at the credit of the ordinary district road funds have long since been exhausted, and the works now being undertaken, are either works which were specifically held in reserve for famine times, or which have been specially devised to meet the emergency. Of course, every effort is made to plan the relief works in such a manner as to make them of permanent utility, but they are none the less relief works in the very strictest

sense of that term. That difficulties have arisen in the management of them is no doubt true. Famine labor is, and always has been, in India as elsewhere, unprofitable and unsatisfactory, and many difficult questions arise here which have to be solved by local officers, less with reference to an ideal or perfect system of relief labor, than to the exigencies of the present crisis. It may safely be said of most of the tracts where the numbers on the works have seemed excessive, that no middle course existed between employing the people as they have been employed, and maintaining them in their homes in absolute idleness. What efforts have been, and are being made to organise these great masses of people; to draft off the less able-bodied to village works; and to reform the abuses inseperable from the sudden strain brought upon an inadequate establishment, the note by Sir George Campbell appended to the 13th Narrative, and the remarks by the present Lieutenant-Governor at the close of the present Narrative, may serve to show. It is believed that the progress made in the time has been in every way creditable to the local officers; and certainly the Government, imperial and local, has spared no pains to bring the establishment up to a strength more adequate to the demand than it was possible to make it at first. Every province has been indented upon, and almost every department of the public service has contributed its quota of additional aid. As regards professional supervision, all the extra overseers save one asked for in Sir Richard Temple's minutes have now been supplied and all the district indents for tools have been complied with.

Tirhoot works.

19. Turning to the district narratives, it may be remarked that the most noteworthy occurrence of the fortnight has been the temporary desertion of the relief works in Mudhoobunnee in consequence of the sudden substitution by the Public Works Department of a system of piece-work for daily wages. The subordinate local civil officers, as may be gathered from their reports, viewed this movement with considerable apprehension. For an explanation of its nature, and a history of its treatment, reference may be made to the Lieutenant-Governor's remarks in the latter part of this narrative. In Appendix F will be found a copy of the orders issued by Sir Richard Temple regarding the management of relief works generally and other important matters.

Sarun and Chumparun works.

20. In Sarun the system, which was at first so unpopular in Mudhoobunnee, is found to answer well. Though there are over 160,000 laborers on his works, the Magistrate demurs to the statement that the system of relief works in his district has been lax, if more is meant by it than that, generally, the daily-labor system is lax as compared with a system of task-work suited to ordinary times. He says—

"On the works here, the able-bodied men are employed in excavating, in regard to which piece-work (though not, of course, approaching to the task-work of ordinary laborers), is enforced as far as possible, while the women and children carry the earth. The people are employed in gangs; regular registers are kept of the names and residences of all employed; and by means of agency locally engaged every endeavour has been made to prevent peculation. The people here, many of whom are of non-laboring classes, naturally do not turn out nearly as much work as would be obtained under a system of task-work performed by ordinary laborers, but they are all locally employed. Returning to their homes at night, and by their employment in squads under mates, the disorder inseparable from the herding together of large masses is avoided."

The sub-divisional officer of Ramnuggur in Chumparun writes:—

"The distinction between public works managed by engineers and those managed by circle officers is not fully in force as yet. On all our works there is a tolerable outturn, and the most that can be, is exacted. The only works that are really circle works, are the tanks at Dhobenee and Songurh, which are almost entirely managed by Mir Tahurken, an influential resident of Tuppah Sathee. But the distinction is being kept in view, and plans of village works are being prepared, so that in case there is a rush we shall be ready. Gradually the system will be generally applied, and only those who do a really full day's work will be retained on class I roads. At present we are doing our best to extend the system, and on all works the utmost labor that can be, is exacted; and, on the whole, there is a fair outturn."

D

Bhaugulpore works.

21. Generally throughout the Bhagulpore Division, task-work is enforced in the case of the able-bodied laborers on the public works, those who are unfit for this being drafted off to village gangs. In these districts many works are being executed by zemindars and others from advances made by Government. These zemindary works are conducted on a loose system, and probably provide for many who in other divisions come upon the roads. No returns of the numbers so employed are generally obtainable, but in Soopool two native gentlemen between them find labor for over 11,000 persons. In the Sonthal Pergunnahs, a sudden enforcement of the rule of task-work led, as in North Tirhoot, to a desertion of the works. The Lieutenant-Governor here also pointed out that if people are distressed, task-work must only be introduced gradually and judiciously; and really complete arrangements for relieving the weakly at their houses, or for actually drafting them into light-labor gangs must be prepared side by side with the introduction of task-work. There must be a competent officer on the spot when the new system is introduced, to see that the people requiring relief are actually provided for, if the task-work system should cause them to leave the road; and no attempt to introduce the task-work system should be made until these subsidiary arrangements have been matured. There has been some reason to doubt whether in some other districts, besides the Sonthal Pergunnahs, these considerations have been sufficiently attended to.

Rajshahye works.

In Rajshahye, for instance, the substitution of task-work for the daily wage system had a similar effect; and here, too, it was pointed out that there were, in times of scarcity, limitations to the enforcement of the strict rules of Public Works. In most of the works in Dinagepore, the labor test has been pretty strictly enforced from the outset, able-bodied men being made to do task-work, or, which comes to the same thing, being compelled to excavate a certain quantity of earth before they are entitled to full wages; only old men, women, and children being admitted at daily wages. But in Dinagepore the village headmen and respectable inhabitants have lent their aid freely for the management of subsidised house occupation, while a large number of laborers are employed near their homes in digging out and cleaning old tanks, thus making a permanent improvement in the water-supply of the district. Whenever a shower of rain makes tillage possible, it is found that the laborers here readily leave the roads for work in the fields.

The contract system and Government supervision.

22. In Manbhoom the works have, it is now reported, been too generally in the hands of contractors, a system which has, it is feared, had a tendency to keep away those who are hardly fit to labor at contract rates. The argument in favor of a contract system is, that it provides supervision when the number of Government employés is insufficient for this; and it was, as has been already said, difficult, almost impossible, for Government to meet the demands of this kind made on it from the less distressed districts, when so much had to be done for those where the emergency was far more pressing. It was hoped that by a little trouble and energy, Magistrates could have developed a local agency sufficient for their needs. It is, however, remarkable how various the practice has been, even in the greater districts, in connection with this matter of supervision. From Tirhoot, for instance, there has been a constant cry for more professional assistance, for engineers, overseers, sub-overseers, and trained subordinates of every grade. In Dinagepore, on the other hand, the masses on the works have been managed almost entirely by the civil officers and local agency. The administration of some districts has certainly shown much more of the quality of self-help than that of others. This subject has been touched upon very fully in the late Lieutenant-Governor's note of his visit to Tirhoot.

Relief Works' accounts.

23. In order to clear up the accounts of relief works, and put their finance on a proper footing, Captain F. G. Oldham, R.E., Deputy Controller of Public Works Accounts, has been specially deputed to examine the accounts of expenditure on all works,

both provincial and district, which are now being carried out in the distressed districts.

Northern Bengal Railway.

24. The work done on the Northern Bengal Railway is now equivalent to a bank 44 miles long and 4 feet high, while 31 miles of feeder roads have been finished. There are 9,653 laborers on the railway, and 8,765 on the roads, or 18,418 in all, an increase of 5,943 over last returns. The Superintending Engineer reports that the people are not more largely attracted to the railway works, because the line does not happen to run through the most distressed tracts as now known, and the people prefer lower wages on works near their homes, even though these may be only a moderate distance from the railway. It is at Putnitolla, near Dhupchanchia in Bogra, that the demand for labor is most marked, and the people are there evidently pinched. Prices have risen along the line; and the Government grain is selling readily to the laborers at 12 seers a rupee.

Irrgatiion Department Works.

25. The number of laborers on the Gunduk embankments has decreased from 29,299 to 24,750, owing partly to the completion of the portions of the work lying near the villages, and partly to the wanton removal by the villagers of two miles of pegs along the line which necessitated re-lining that distance. Fresh work is now being provided. On the Soane Canal the laborers have risen from 35,893 to 38,783.

Charitable Relief.

26. The numbers of relief centres and of the persons receiving charitable relief by the latest returns were in the principal districts—

	Number of Government relief centres.	Persons relieved.
Gya	8	637
Shahabad	13	413
Tirhoot	250	86,552
Sarun	62	4,076
Chumparun	41	10,641
Moorshedabad	23	661
Dinagepore	19	8,596
Maldah	31	1,495
Rajshahye	19	1,[illegible]8
Bogra	7	1,493
Rungpore	7	1,979
Bhagulpore	32	4,340
Purneah	20	2,547
Monghyr	16	3,661
Burdwan	43	13,370
Beerbhoom	5	1,796
Bankoora	20	3,386
Hooghly	7	1,140
Manbhoom	10	600
Palamow	6	300
Total ...	634	154,241

The return of relief centres is not by any means complete. In some returns only the number of relief committees is given, and in others only the number of relief circles of supervision, within each of which are many centres of distribution. The numbers given are therefore minimum numbers. Charitable relief again is given in several forms, as has been before explained in these narratives. The most common form in Behar is what is called the ticket-system of out-door relief, under which each infirm and necessitous person is registered and receives a ticket entitling him to a daily dole of uncooked rice, generally half a seer, from some Government golah. Thus of Mudhoobunnee, the sub-divisional officer writes: "Charitable relief, on the ticket-system is in full work throughout the sub-division. Cooked rice is also given to persons in want of temporary relief at all relief centres, and at several other places, notably in the Sudder circle. I have endeavoured to confine this to very small numbers by giving no inducement to people to come repeatedly day after

day. Few, except those in extreme want, avail themselves of this mode of relief.' In Sarun 62 relief circles are at work, chiefly under the management of planters, who willingly render the most valuable personal assistance, but cannot be induced to render regular returns. In Chumparun, also, planters devote much time to superintending circles, while punchayets have been formed in the villages to distribute relief and look after the village officers, who in turn are bound to report all distress. In Dinagepore the circle officers work much through local native agency—zemindars, naibs, village headmen, and such like. These find out and register the persons requiring aid, and indent on the Government stores for grain, while inspectors go round and check the lists, ascertaining that the recipients of charity are proper objects of relief. The officer in charge of the Patiram circle, who has worked this system most successfully, declares: "I think that no one, unless determined to rush to death, can now die of hunger; while at the same time the agency at my disposal is sufficient to prevent deception and fraud. It would be trite to observe (whatever may be the ultimate issue), that were it not for the care and forethought with which the present scarcity has been met, hundreds would long since have starved." In Rungpore the system has not yet been well organised. There are many large private food-kitchens which are managed in a demoralising way, cooked food being given to all applicants without enquiry. The village headmen here, also, seem less reliable than those of Dinagepore. The ways of managing them may perhaps differ. In most districts the cleaning and spinning of cotton and other light work has now been introduced for those who can only work at home, or are unfit for out-door labor. No account is taken of private gratuitous relief in the returns.

Sale of Government grain.

27. Full information has been called for as to the sale and disposal of Government grain either to laborers or the public or in charity. The district narratives and returns are as yet very deficient in this respect. The only places where the disbursements of grain have been at all considerable are Tirhoot, Chumparun, North Bhagulpore, North Monghyr, Purneah, Dinagepore, and Rungpore. Sales to the general public are allowed only in parts of Tirhoot, Chumparun, Bhagulpore, Purneah, Monghyr, Maldah, Dinagepore, and Rungpore; grain is offered to the laborers for sale in all districts having Government stores.

The rates charged depend upon the quality of the grain, as the quantity of husk in the Burmah rice varies very much. As a rule, 12 seers per rupee for clean rice is taken as the standard; 15 seers per rupee being the maximum quantity given of the rice having most husk. In Ramnuggur, the rates are one seer dearer, and in Mudhoobunnee and Durbhanga, 10 seers has hitherto been the rate of sale for clean rice. In those parts of Rungpore and Dinagepore, where sales to the public have been allowed, rice is sold to petty dealers at one seer per rupee less than to ordinary purchasers, on condition of their selling to their customers at the standard rate.

Advances.

28. The grants of advances for purposes of land improvement or for the purchase and importation of grain into the distressed districts have now in most places become infrequent. Advances to zemindars for the maintenance of their ryots, or to ryots on their own behalf, are, on the other hand, fast assuming important dimensions. The following are some of the details of advances on this account during the fortnight, which show considerable differences between the results in different districts:—

	Rs.			
In Tirhoot	14,979	(making Rs.	1,00,384	to date.)
„ Sarun	14,467	„ „	3,59,371	„
„ Chumparun	5,500	„ „	1,39,226	„
„ Bhagulpore	23,600	„ „	1,03,200	„
„ Purneah	1,750	„ „	36,900	„
„ Rajshahye	17,700	„ „	22,425	„
„ Bogra	6,600	„ „	10,000	„
„ Rungpore	1,31,310	„ „	1,48,400	„

The Lieutenant-Governor has intimated his wish that advances of this kind should now, as a rule, be given in grain, and not in cash.

Of the Bettiah estates in Ramnuggur, and the system of advances there, Mr. Howe writes:—

"Mr. Gibbon's advances in January and December were well-timed, and have hitherto enabled the cultivator population to hold out. But they were necessarily insufficient, and something on a larger scale must at once be undertaken to prevent general distress and starvation among this the largest portion of the population, where food stores are almost entirely exhausted, and who cannot, as a body, come on our works. For this purpose a scheme has been agreed upon between Mr. Gibbon and myself, which has been approved of by the Commissioner. The principal features of this scheme are these—

"Each village is taken separately, and a tehsildar or naib-tehsildar is deputed to make a detailed inquiry, which almost partakes of the nature of a census. A brief report of each village is drawn up, and registers are prepared showing lists—1*st*, of those not requiring advances; 2*nd*, of those requiring advances, together with a column showing what property they have; 3*rd*, those who work or are able to work on roads; and 4*th*, those fit for charitable relief."

"The tehsildar divides villages into two classes, those (*a*) in which relief is most urgently required, and those (*b*) in which, though required, the urgency is less. The Commissioner has authorised me to make a small advance for a week or ten days in villages coming under class (*a*); and has directed me to send copies of all papers to Mr. Gibbon, who has undertaken to provide for all entered in these lists, or to accept an advance from Government on their account."

"To enable the inquiry to be more complete, Mr. Gibbon has deputed a tehsildar of his own, who knows the parts well, to co-operate with mine. Any case in which there is a difference of opinion will be referred to the Commissioner, who, however, has authorised me in such cases to make a temporary advance, should the necessity appear urgent."

29. The total amount of advances of various kinds up to date as extracted from the district narratives is as follows:—

Advances for purchase of grain	14,01,477
„ for land improvement	8,10,985
„ to municipalties	29,000
„ to zemindars for help of ryots or to ryots ...	10,65,652
Total ...	33,07,114

Lieutenant-Governor's minute regarding his tour in Tirhoot.

30. The Lieutenant-Governor has been on tour in the north Gangetic districts during the fortnight under report, and is still there. Sir Richard Temple has written from Monghyr, on the 27th April, the following passages to be included in this narrative:—

"From April 16th to Sunday 26th inclusive, I was marching about the Durbungah and Mudhoobunnee sub-divisions."

"In the Durbungah sub-division I found the relief 'circle' and 'sub-circle' or 'group' system completely organised in all its details. Every cluster of villages (from five to ten in number), was formed into a group or sub-circle with a native official, and a store of grain with its store-keeper, so that every village could be visited twice a week or even oftener, and Government grain be within reach at a distance of two or three miles at the furthest. Each sub-circle, too, was being frequently inspected by the circle officer and his assistants."

"The organisation as stated above may seem simple enough. Its real magnitude and the difficulty of enforcing it will only be apparent when the area and population are borne in mind."

"Sales of Government grain to the public as well as to the relief laborers were generally going on. Some employment was still being given on the roads, but was for the most part afforded by the excavation of the old tanks in nearly every village. Piece-work (whereby a man receives so much according to a fixed rate for so much work done as ascertained by measurement), was being successfully substituted for the payment of daily wages. The agency of Jeyt Ryots or village head-men was being largely used."

"In one case only did I hear of any serious difficulty occurring from the cessation of daily wages, on a road near Durbungah. I believe, however, that the persons concerned, estimated at 20,000 in number, have by this time been safely drafted on to village works."

"The 'circle' and 'sub-circle' or 'group' officials had gone the rounds of every village in order to search out every fit recipient of charitable relief, and to give to each person of this description a ticket, entitling him or her to receive so much grain from the nearest Government granary. When a whole family was to be thus assisted, one ticket was issued for the family."

"Every circle had competent officers, most of them zealous and able men. I only heard of one exception, and he will be immediately replaced. There were subordinate medical establishments up to full complement. The public works were supervised by professional engineers and overseers."

"Of the sub-circle or group officials, some were good, others indifferent. It is very difficult to find, on the spot, good men of this class, and scarcely less difficult to obtain them from distant districts. I hope, however, to see this branch of the establishment improved week by week."

"The theory of the system, then, as applied to a sub-division like Durbhunga, with a population of nearly a million, is good enough. If the practice is as yet imperfect in several respects, no effort will be spared to perfect it day by day. For instance, there was difficulty in some of the eastern circles in making the 'sub-circle' or 'group' officials search out all the fit recipients for charitable relief. These officials would go their rounds, make a list of such recipients in every village, and cause tickets to be issued. Presently the circle officer would go round to see whether this work had been completely done, and would find still here and there some feeble person who had not got a ticket, and so on. Much, therefore, depends on rigorous inspection."

"Despite shortcomings, however, (which are, I trust, in train of rectification), the general, perhaps the universal opinion, official and non-official, European and Native, at Durbhunga at this moment is, that the famine in that sub-division has been, and is being checked effectually. As to the extent of the famine, opinions will necessarily differ. Those who do not reside in the midst of the distress may sometimes be incredulous of the magnitude of the misfortune. The statistics, however, though not always accurate are, in the main, correct, and they reveal the great dimensions of the affair. The civil officers believe (which belief I fully share), that in most parts of this great sub-division, the scarcity has reduced, or soon will reduce the majority, in some places even the great majority, of the people to a condition of dependence on State assistance for several months."

"In the Mudhoobunnee sub-division I found the first noteworthy circumstance to be this, that the eastern portion known as the Alapore tract, and the extreme north-eastern corner of Tirhoot—where the destruction of the crops was worst, which all native opinion pointed to as the probable scene of the severest distress—is not as yet seriously distressed. The best opinion seems to be that this being a surplus producing tract in ordinary years, there are somewhere on the spot considerable stocks wherewith the people can, for a time, bear up against the total loss of this year. Such stocks may be chiefly in the possession of those who could afford to hold them in the expectation of famine prices, but who prefer to sell now, seeing the Government preparations in all directions round about them. If the stocks are thus held, the question to borne be in mind is how long will they last? If they fail soon, I trust that the preparations are ample to meet the crisis that would immediately occur. Meanwhile the distress though not so serious as elsewhere, is bad, and about one-fourth of the population are receiving assistance from Government in some shape or other."

"In the rest, about two-thirds of the Mudhoobunnee sub-division, where the failure of the crops was not so bad as in Alapore, the present distress is considerably greater. Food-grain is hardly to be bought, even at famine prices in many places, and in some places not at all. Over large tracts there

are no employments, no wages for the rural population. Multitudes more and more day by day seek Government aid either as laborers or as purchasers of Government grain, till at length the whole people, with individual exceptions, will come to be fed from our granaries. There is fair reason to hope, however, that our resources will prove equal even to this strain."

"One critical difficulty in Central and Western Mudhoobunnee claimed my attention immediately on my arrival there. Owing to the extraordinarily sudden manner in which towards the end of March, the people flocked to the central relief roads under the Public Works Department, and to their unreasonable aversion to be separated into moderately sized gangs among the village works, it had been necessary, from regard to their safety, to permit them to stay for a while upon these roads on daily wages. This plan, though quite unavoidable for a time, had a demoralising effect upon the people, and led to many abuses. Accordingly, the local authorities, in pursuance of the sound and excellent principles laid down in the note of Sir George Campbell of the 28th March, determined that the time had come when the plan of piece-work must be substituted for that of daily wages on the roads under the Public Works Department. The hope was that the better portion of the laborers would accept the piece-work terms at once; that another large portion would be successfully drafted on to the village works; and that those who might offer passive resistance by leaving the works, and going out of employ, would very soon see the advantages of the piece-work terms. The intention of the local authorities was good in itself. But the success in its execution was less than they expected. Almost the whole number, estimated at 200,000, left the works, declining the piece-work terms. A very few came back immediately afterwards on piece-work; a large number were drafted on to the village works under the circle officers; many, who were not fit for any save nominal work, were admitted to the lists of charitable relief. After allowing for all this, however, I found that numbers estimated at 80,000 to 100,000 had remained out of employ for several days, subsisting on the little savings from their earnings on the daily wage system, but verging nearer and nearer towards the extremity of destitution. And although the 'circle' officers were busily attracting people to the village works, their complete and speedy success was uncertain. It was necessary, therefore, to immediately reconsider the case. Enquiry shewed that these ignorant people imagined the piece-work terms to be so hard as to prevent an ordinary untrained villager from earning subsistence under them, and thought it better to languish at home than perish on the roads. This erroneous notion had doubtless been propagated by head gangmen and others who gained improperly by the daily wage system. The terms proposed were not really hard; still there was room for doubt whether they were sufficiently liberal, regard being had to the inaptitude of these people for labor of this sort, to the large proportion of women and children, persons enfeebled by age or otherwise, to the hardness of the parched up soil and other local circumstances, and to the high prices of all food-grains, including the Government grain. I therefore decided, after consulting the local authorities, to immediately promulgate new terms much more liberal, indeed as liberal as could properly be offered. In the neighbourhood of my camp large numbers returned to the roads on the new terms. But as the village works have been and are being extended in every direction, almost within reach of every village, large numbers who were once on the roads will prefer to work in the villages, a result much to be desired. But in one way or other, either on the roads or in the villages, I trust that ere this all persons who were ever employed, or who can properly be employed, on relief works, will be receiving assistance in this shape. On the whole, I believe, that the Mudhoobunnee relief works, which did undoubtedly cause us anxiety for several days, will be re-established on a scale as large as, or larger than ever, and this, too, with a distinct improvement in system. From what has been already said of the condition and prospects of the people, these works are needed on the largest scale practicable."

"But here the question arises—what are the village works on which so much reliance is to be placed? They consist almost entirely of the excavation

or deepening of existing tanks, and sometimes of the construction of new tanks. During this season of drought many tanks have dried up. They are now being dug out till springs of water are reached (at say 20 to 25 feet below the general surface of the country). This operation will at once afford some water-supply, the failure of which is much threatened everywhere. Ultimately, it will improve the permanent water-supply of man and beast for future years. One consequence of the present trouble will hereafter be the setting the tanks of the district in good order for very many years to come."

"The next question would be whether the 'circle' and 'sub-circle' or 'group' system in Mudhoobunnee is so well established as to bear the increased pressure that will now be put upon it. Having tested several circles with a view of ascertaining this, I feel a fair hope that it will not be found at all wanting. There are good circle officers (with some few exceptions which will be set right), with competent assistants with adequate supplies at command; there are the officials and the granaries in every group of villages; there are the sales of grain to the public; there are the holders of tickets for charitable relief in every village; there are the petty grain-dealers ready to distribute the Government grain; there are the head ryots ready to help in supervising the tank-digging portioned out to the villagers; in short, all the men in all grades are at their respective posts in a comprehensive and wide-reaching organisation."

"Passing from the particular sub-divisions of Durbhunga and Mudhoobunnee which I have visited, I will add some remarks relating to other parts of the distressed districts, or to those districts generally."

"In Seetamurhee, North-West Tirhoot, and in Bettiah and Ramnuggur, North-West Chumparun, the distress is not as yet so great as was expected. In Sarun the prospect is uncertain. In Soopole, North Bhagulpore, the distress threatens to prove bad; by the most recent intelligence the position has become rapidly worse: while it holds off in the Monghyr district bordering on the Gangetic valley."

"Throughout Behar the want of spring showers has destroyed the hope that had sprung up of aid from various quick-growing supplementary crops."

"On the other hand, the successful harvesting of the fine spring crops on both banks of the Ganges has afforded relief to the neighbouring tracts of the distressed districts."

"As regards the contract arrangements, (both large contracts and petty contracts,) for transport in Behar including the Patna and Bhagulpore Commissionerships)—those in the districts of Purneah, Bhagulpore, Monghyr, Chumparun, Sarun, and in Western Tirhoot, have worked excellently, redounding to the credit of all concerned. Besides commending the officers engaged, I deem it my duty to state that the non-official gentlemen engaged merit the thanks of the Province of Behar. But in Eastern and North-Eastern Tirhoot, the most important parts of all, the arrangements (though made on the same plan and principle as elsewhere) have proved less successful. Whatever deficiencies, however, may exist in this difficult line are being, and will be, promptly and effectually supplied by the two reserve arrangements at the disposal of the local Government, namely, the Durbhunga State Railway, and the organised carriage obtained from the North-Western Provinces. The exertions of the Engineer Officers in charge of the State Railway works, and the co-operation of the Government of the North-Western Provinces, have been of vitally essential service to the relief operations in Eastern Tirhoot."

"Throughout Behar the public health continues more than ordinarily good. There is no sort of epidemic disease among the cattle at present."

"As regards the Rajshahye relief division: the distress in the Dinagepore district is less than was expected; favourable spring showers having fallen there, the period of distress will probably be shortened. In the Rungpore district, the distress threatens to be quite as bad as, and in the Bogra and Maldah pistricts to be somewhat worse than was expected."

"In the Rungpore district, near the valley of the Brahmapootra, some outbreaks of epidemic cholera have disturbed the transit arrangements."

"On the whole, writing at the end of April, I find the situation of the distressed districts north of the Ganges to be not at all worse than the anticipation as expressed in my original estimates of the distress. In many places it is even not quite so bad: in some places (and those the most important) it is quite as bad. Thus, while there is no reason whatever now apparent for doubting the adequacy of the preparations by Government, neither is there any for hoping that we shall escape from a trouble of the magnitude which has been estimated. Under this view it will be found that the utmost activity prevails throughout the whole scene of our operations, in its length from the Gunduk to the Brahmapootra, and in its breadth from the Ganges to the Nepal frontier."

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secretary to Govt. of Bengal.

CALCUTTA,
The 30th April 1874.

APPENDIX A TO THE SIXTEENTH SPECIAL NARRATIVE.

Movement of Food-grains.

1. In last narrative the total export of food-grains from 1st October 1873 to the end of March 1874 was shown as 1,90,094 tons, and the imports (which are chiefly Government) for the same period at 1,98,870 tons. The latest figures available for April are given below:—

Exports.

		Tons.
From Calcutta	(to 21st April)	5,613
„ Chittagong	(to 26th „)	1,768
„ Orissa	(to 15th „)	1,169
	Total ...	8,550

Imports.

To Calcutta, up to 21st April on Government account	...	72,784
„ „ „ on private account	...	5,760
Total	...	78,544

2. From 5th to 18th April 54,287 tons of food-grains have been sent into Behar from stations below Rajmehal and Jamui, making 3,06,795 tons since the 1st October, including Government grain. During the same period (5th to 18th April) 11,781 tons of food-grains have entered Behar from the North-Western Provinces, making a total of 1,37,541 tons since the 1st November. The grand total of these items shows a supply of food poured into Behar, by the railway alone, equal to 4,44,336 tons weight.

The grain which came downwards to Howrah station during March was only about 2,000 tons and consisted chiefly of gram.

3. The importation of food-grains to Calcutta by the Eastern Canals has been, from 11th to 24th April, 3,703 tons, making in all 1,79,349 tons since the 1st October.

4. The private traffic registered at the undermentioned river stations has been as follows:—

Station.	Date.	Direction.	Quantity in tons.
Sahebgunge	(12th to 18th April) ...	Up the Ganges	... 2,819
Ditto	(12th to 18th „) ...	Down „ „	... 50
Goalundo	(12th to 22nd „) ...	Up „ „	... 623
Kooshtea	(12th to 22nd „) ...	Down „ „	... 95

CALCUTTA,
The 29th April 1874.

G. TOYNBEE,
On special duty.

APPENDIX B TO THE SIXTEENTH SPECIAL NARRATIVE.

Return of Grain despatched from Calcutta up to (and including) Monday, the 27th April 1874.

Division in which to be used.	Station to which sent.	Quantity in Indian mds.	Up to date of last statement.	During the two weeks under report.	REMARKS.

A. Mackenzie,
Junior Secy. to the Govt. of Bengal.

Minute by the Hon'ble Sir Richard Temple, K.C.S.I., *dated 20th April* 1874.

Having visited some of the distressed parts of the Burdwan district in company with the Commissioner (Mr. Buckland), the Collector, Mr. Whinfield, and Mr. Cockburn of the Police Department, I desire to record the following remarks:—

2. The food-produce of the district consists almost entirely of rice: the autumn or aous crop amounts to one-eighth, the remainder consisting of the amun or December crop. The spring harvest or rubbee consists of produce not edible.

3. The district consists, in the main, of two parts; 1*st*, that between the rivers Ajye and Damooda; 2*nd*, that south of the Damooda. In most portions of that tract which lies between the Ajye and Damoodur the rice crop has proved more or less bad, having a yield from 2 to 4 annas. In some portions near Burdwan city and station and towards the east, the crop had a yield of 6 to 10 annas. The worst sub-divisions in this tract are those of Bood-bood, Cutwa, and Raneegunge. In the tract south of the Damooda, towards the borders of Midnapore, the crops have been good, and in some places excellent.

4. The season of distress has commenced, and will last till September, after which date it will become mitigated more and more till December, when it will cease.

5. The Collector by my direction made a careful estimate of the number of persons who may be expected to require assistance from Government in each thana of the district. The total amounts to 51,500. Considering that already there are about 9,000 persons on charitable relief, I should regard this estimate as moderate. I should have feared that it may be exceeded by the reality had it not been accepted by the Commissioner.

6. It is to be remarked, however, that this does not include any estimate of the number of ryots and others to whom advances might properly be made. The making of such advances in this district involves several difficult questions. Many ryots complained to me that they had difficulty in finding subsistence till the next harvest should come in, and that they could get no aid from their zemindars. Some of these men seemed to be well-to-do. Others are, I was informed, really in straits. I have addressed the Commissioner on this very important subject, and until I can come to a definite conclusion with the district authorities, no estimate can be formed of the numbers who may receive assistance in this form. It may be considerable. Care must, however, be taken that Government does not assume to itself any duty which can be expected properly and fairly to devolve on the zemindars under the circumstances of the case.

7. I saw in different places several thousands of persons receiving relief in wages or in food. There were some persons emaciated, and many looking wretched from disease; though it is difficult to discern how much of the wretchedness arises from want, and how much from fever. Most of them were in good physical condition. This was to be expected, inasmuch as they had been fed and cared for.

8. Until the epidemic fever set in a few years ago, the district seems to have enjoyed a good share of prosperity. Besides the depopulation from sickness, however, there has been a cycle of unfavorable seasons for the last eight or nine years. Notwithstanding this, the remarkable facilities for communication possessed by the district will probably preserve it from widespread distress, and certainly from any severe and sudden outburst. The public health seems better than it has been for some time past. Still the fact of want supervening upon sickness should induce us to treat the district in a very considerate manner.

9. Looking to the situation of the district, I trust that it will suffice for Government to give aid in cash only, and that no grain from without need be imported by Government.

10. I find that in the Bood-bood Sub-division there are eight small relief circles; but these are not circles in the sense in which the term is used in the more distressed districts; they correspond with the divisions which are called "groups" in Behar, not "circles." As uniformity of nomenclature is desirable, I have directed that they be termed groups. Each of these groups has an inspector on Rs. 50 a month; over these inspectors there is no officer save the sub-divisional officer (a native gentleman), who has many civil and judicial duties, and no experience in relief work. There is a good native relief officer for the district, but he acts with the Collector as an inspector for the whole relief operations in the district. This establishment of inspectors, however good, does yet require some active supervision. I have therefore directed that two circles be formed, in each of which four of the existing groups will be placed. Over each circle one selected circle officer (native) on a suitable salary will be placed. The existing inspectors will be his assistants. Over the two circles the district relief officer (who will not be required under the revised arrangement) will be placed as a sub-divisional relief officer under the rules. In the Raneegunge portion of the district, circle arrangements are not likely to be required; it will suffice to give the European sub-divisional officer two good native assistants for relief work.

11. The system of labor appears to me to be suitable and good. The relief laborers are kept in two classes—1*st*, those who can really work; they are put upon the roads, and do task-work, with a wage of two annas per diem; 2nd, those who cannot, such as women, children, sick, infirm, &c., &c. These are collected at selected places close to their homes, and given light work and supplied with cooked-food. The work often consists of manufacture, sometimes also of tank excavation. The manufacturing work seemed to me to be well supervised, but not so the tank-work. The district authorities assure me that the insisting on the supply of food being cooked is necessary as a test to deter those who are not in absolute need. They consider that this precaution is necessary, inasmuch as the dispensing of relief on account of epidemic sickness during some years past has had an unavoidable tendency to pauperise some classes of the people.

12. I quite accept what is being done at present in this respect. I admit the value of the cooked-food test in many places (especially in towns), where various degrees of need exist, and where it is often difficult to judge whether an applicant is a fit subject for relief or not. I hope it will continue to be enforced at all the towns in the district and such like places. But I should be doubtful of its value in the remote and rural parts of the Bood-bood and Cutwa sub-divisions of this district, where two-thirds of the average crop have been lost this year; this misfortune, too, following several bad seasons, and befalling a population decimated by epidemic disease. There can unfortunately be no doubt that all the village people in these tracts, save the better few, are, or soon will be, distressed. It is hardly necessary to subject them to the taking of cooked food, which it is admitted that they dislike. Moreover, however good the arrangements for cooked food may be, they are, if applied to any considerable area, still open to this objection that they take people some distance, however short, from their homes, whereas the best plan is, if possible, to afford relief in the villages. Again, although the existing plan may suffice as an executive measure while the numbers continue comparatively small, it would prove insufficient if the numbers should largely increase. Further, the plan (if too largely developed) would involve the purchase of rice by Government on the spot (which tends to raise prices) while payment in money would suffice. As long as food is procurable in the local markets it is better to afford relief in cash. I therefore have requested that while all existing relief houses be maintained as they are, yet as distress developes itself and numbers increase, the village system may be carried out, whereby suitable employment at home on adequate wages may be found for those who cannot do hard work.

13. I find that there are sufficient relief roads projected within the afflicted tracts. In every village there are tanks, the clearing or deepening of which will afford excellent employment.

The zemindars of the district have taken advances largely for landed improvements, but only one or two advances in exceptional cases have been sanctioned for the purchase of grain. I have directed that the orders under which advances can be made to zemindars to enable them to help their ryots should be held to be applicable to the Burdwan district.

14. I had the pleasure to inspect a commodious relief-house in the town of Burdwan, where 1,100 persons daily received uncooked food at the expense of the Maharajah of Burdwan, and under the supervision of his Secretary, Mr. Miller.

15. In conclusion, I deem it right to commend the thoughtful exertions of the Commissioner, Mr. Buckland, and the Collector, Mr. Whinfield, in introducing an effective relief system into this district, and I trust that they will be able to give a satisfactory account of this district during the period of distress which is setting in.

No. 28T F., dated Camp Durbhunga, the 23rd April 1874.

From—The Offg. Secretary to the Government of Bengal, Statistical Department,
To—The Commissioner of Burdwan.

I AM directed to forward copies* of a Minute which the Lieutenant-Governor has recorded after his visit to some of the distressed tracts of Burdwan in company with yourself and the Collector.

* Twenty more copies will be sent from Calcutta.

2. I am to invite your special attention to the following points:—

Paras. 3 *and* 13, regarding the need for advancing money or grain to ryots on the security of the talookdars or other superior holders. Owing to the extension of the putnee system, the Maharajah of Burdwan cannot be expected to be responsible for the repayment of advances to ryots on his estates. But the talookdars and other subordinate proprietors must be induced to do their duty in this respect. In cases where the zemindars of all grades are unable to help, advances can be made on the collective security of all the ryots of a village. You will observe that concession G. of circular No. 175, dated 17th January, has been made applicable to Burdwan.

Para. 10 which provides how the distressed area should be administered. A separate relief officer for the whole district will not be required when Baboo Bogola Nand is placed in separate relief charge of a relief sub-division, which will comprise the afflicted parts of Bood-bood and of Cutwa. The relief officials under Baboo Bogola Nand should be appointed at once by you on the nomination of the Collector. They should be chosen if possible from among the Native Civil Service candidates at the last examination; if the Collector cannot nominate fit persons, you must make the appointments yourself. The two circle officers should receive salaries (inclusive of travelling allowance) of Rs. 120 to 150; and the Raneegunge sub-division official should be of the same grade.

Baboo Bogola Nand will control the relief affairs of his relief sub-division under the direct orders of the Collector; and you should decide upon the limits of his relief charge, and on the place he should make his head-quarters.

Paras. 11 *and* 12, where the Lieutenant-Governor's views as to the undesirability of extending the application of the "cooked food" test to large rural areas in the Bood-bood and Cutwa sub-divisions.

3. The Lieutenant-Governor hopes that the Collector, acting under your orders, will be able to carry out the instruction conveyed in the Minute at a very early date.

No. 4T., dated Durbhunga, the 19th April 1874.

From—The Offg. Secretary to the Government of Bengal, Statistical Department,
To—The Secretary to the Govt. of India, Public Works Department, State Railways.

I AM directed to submit herewith, for the consideration and orders of His Excellency the Viceroy and Governor-General of India in Council, the

accompanying copy of a minute, in which His Honor the Lieutenant-Governor has recorded his satisfaction at the rapid and successful completion of the temporary line of railway from Chumpta to Durbhunga, and his strong appreciation of the valuable services rendered to the Government and the people of this district by the several officers who have been engaged in the undertaking.

Minute by the HON'BLE SIR RICHARD TEMPLE, K.C.S.I., *dated* 18*th April* 1874.

HAVING seen the new railway from Chumpta to Durbhunga which was opened on the 17th current, I desire to add my testimony to the remarkable skill and promptitude with which this undertaking has been carried out. The work was commenced on the 23rd February, and the first train ran through on the 17th April. As the distance amounts to 53 miles (besides sidings), the line must have been constructed at the rate of a mile a day. The materials for the permanent way and the rolling-stock have had to be transported by boats over the Ganges. The line has been carried over three considerable streams or rivers. The operations have been conducted during one of the most inclement seasons of the year. From such facts some idea can be formed of the extraordinary exertions demanded by this service from all who took part in it.

Those who know the extreme needs of the population for whose sake the grain transport is organised; the manifold risks and accidents to which such a transport is exposed; the grave consequences which might ensue if such misfortunes remained without remedy; the intense physical strain on the animal power available in the country for such work; the consequent importance of possessing mechanical means in reserve; can fully estimate the almost priceless value of this railway at the present season.

Under the critical circumstances of the time, this value greatly depended on the line being finished by the middle of April. The securing of this particular result, again, depended on the efforts of the Engineer-in Chief, Captain Stanton, R.E., who has evinced first-rate aptitude for overcoming manifold obstacles, and great resolution in pursuing the object in view. It will be for his departmental superiors to do justice to the professional skill and ability displayed by him on this occasion.

I learn from him that Lieutenant Rathbourne, R.E., Executive Engineer, has been his right-hand-man throughout these trying operations; and I desire to record the obligations which this district owes to Lieutenant Rathbourne. Captain Stanton also has mentioned to me the zealous assistance he has received from Mr. Cochrane, C.E, Executive Engineer, and from Mr. Moore, Mr. Warden, Lieutenant Kunhardt, R.E., Assistant Engineers. These gentlemen should also share in our acknowledgments.

The 32nd Regiment (Pioneers), and the 5th and 6th Companies of Sappers, have been employed under Captain Stantion's direction in the execution of this work. The efficiency and devotion displayed by these troops in this duty will, I believe, be found to be worthy of the approbation of their military superiors. Where all have done so well, however, I desire to mention the highly favorable report I have received of the services and abilities of Captain Dodsworth of the 32nd Regiment, and Lieutenant Morgan, R.E., Commanding 5th Company, Sappers and Miners.

The co-operation of Mr. Stevens, Superintendent of Works, Durbhunga Raj, has proved of essential importance throughout these operations; and it is to his professional supervision and to his vigilant care that we must look for the employment of the time that yet remains before the rainy season for turning this temporary railway into a comparatively permanent line.

Lastly, we are greatly indebted to Mr. Guildford Molesworth, the Consulting Engineer to the Government of India, for the foresight and boldness of conception with which he pronounced upon the practicability (from an engineering point of view) of the project which had been recommended by local authority.

No. 48T F.

FROM THE OFFG. SECY. TO THE GOVT. OF BENGAL

IN THE STATISTICAL DEPARTMENT,

TO THE COMMISSIONER OF PATNA.

Durbhunga, the 25*th April* 1874.

SCARCITY AND RELIEF.

SIR,

The Lieutenant-Governor has had, during his recent tour in North-East Tirhoot, an opportunity of learning how the orders for introducing piece-work in place of labor on daily wages have been carried out in the Mudhoobunnee sub-division. And on a review of all the circumstances the Lieutenant-Governor, after discussing the matter fully with yourself, Major Trevor, and other local officers, deems it necessary that the orders* recently issued by Mr. Pothecary, the Superintending Engineer, should be modified.

* Circular memorandum No. 414, dated 10th April 1874.

2. Accordingly, the following revised rules have been issued by the Lieutenant-Governor, are now being acted upon in Mudhoobunnee, and should be acted upon, as far as you see fit, in other distressed sub-divisions of North Behar:—

Rule I.—The piece-work system is to be kept up, as far as possible, on all relief works under the Public Works Department; but the rate for ordinary earth-work is to be raised from Rs. 2½ to 3½ or Rs. 4, according to the discretion of the Executive Engineer.

Rule II.—Daily subsistence wages are to be immediately offered to persons of both sexes and all ages who may apply for labor, and may be unwilling to accept piece-work.

Rule III.—The relief officers are to continue the system of daily subsistence wages on the village relief works; but they are to use their best endeavors to induce the people to accept task-work; when jeyt ryots or other village authorities have succeeded in enforcing task-work, they are to be encouraged to extend that system.

Rule IV.—Public Works Department officers, as well as relief officers, are to give employment, as far as possible, on tanks rather than on embanked roads, the future usefulness of which may be doubtful. This order will not, however, debar public works' officers from completing the banks of any really useful roads on which they may be now engaged.

Rule V.—Each Executive and Assistant Engineer should have supplied to him by the nearest circle officer a certain amount of grain, for distribution in gratuitous relief to those who may come upon the road but be unable to work. He should employ a native clerk, and should account for his expenditure to the sub-divisional officer.

3. The Lieutenant-Governor hopes that the comparative liberality of the contract rates now allowed will suffice to induce all the really able-bodied men

to accept task-work. When once the people are collected together according to villages and pergunnahs in the manner prescribed by the orders of the 10th April, the exercise of tact and firmness on the part of the Public Works officers will, it is hoped, secure the desired result.

4. But on no account are these multitudes to be allowed to leave the work and disperse to their homes, until the relief officer has taken exact account of, and made provision for, every person without a single exception. Looking to the importance of the matter, and to the safety of the people at this critical season, the Lieutenant-Governor enjoins all relief officers, and all Public Works Officers in the sub-division of Mudhoobunnee to use their utmost endeavours to arrange for all distressed persons in the manner prescribed by this letter, the injunctions of which are to be carried out with all promptitude.

5. Sir Richard Temple hopes that the carrying out of administrative reform in relief operations may be made consistent with what at this moment is the paramount object, namely, to prevent danger to health or life from insufficient food among the distressed people of the Mudhoobunnee sub-division.

6. Besides the important question as to the way in which task-work should be introduced on relief works, the following other questions received the Lieutenent-Governor's attention, and were discussed with yourself and the local officers, namely:—

(a). Sale of Government grain.
(b). Payment of work-people in grain.
(c). Advances to ryots.
(d). Treatment of Tirhootea Brahmans.

On the first of these points, namely—

(a). Sale of Government grain—

the Lieutenant-Governor forwarded to you a memorandum, copy of which I am to extract here for facility of reference. In that memorandum Sir Richard Temple wrote—

"*Intermediate orders.*"

"I beg that the Commissioner will be good enough to hold the sub-divisional authorities strictly responsible for the observance of the following points:—"

"Executive arrangements for sale of grain at golahs and bhikarees do not offer sufficient facilities. If there were to be a rush of purchasers, a *block* would ensue, and people might come to buy, and have after all to go away without buying."

"Again, the rules prescribe that the work should be done as much as possible through the local trade. This is *not* sufficiently done. I do not object to salaried bunniahs being employed at the golahs and bhikarees, if the sub-divisional authorities consider that necessary to protect the interests of the people. But the agency of ordinary bunniahs, as private traders, must also be employed."

"I therefore request that at the smaller bhikarees, one bunniah at least be employed as a salaried sale agent; at the larger ones two or three; at the golahs three or four, according to the nature and amount of the business."

"But in addition to this, at every bhikaree or golah *without any exception*, a certain quantity of Government grain, to be fixed by the circle officer, must be made over to some bunniah in his capacity of private trader, to be by him retailed to all comers on the conditions to be fixed by the circle officer."

"We shall then see whether the people prefer going to the private bunniahs or to the salaried bunniahs at the bhikarees. If, as I hope, it be soon found that the people prefer the private traders, then the establishment at the bhikarees can be reduced."

"I further direct that at every work, without any exception, where more than one hundred persons are employed at a distance of more than half a mile from the nearest bhikaree, a bunniah, either as a salaried man or a private trader, be stationed at the work with a sufficient supply of Government grain with instructions to retail to the workmen."

7. In regard to—

(b). Payment of laborers in grain—

By carrying out everywhere implicitly the injunction given in the last clause of the next preceding paragraph, namely, by having close to every work a dealer who shall sell Government grain to the people, payment of wages in grain will indirectly be secured. For in the tracts where the laborers are in great numbers, there is absolutely no private grain for sale. But it is of the greatest importance that the Government grain should in this way really reach the work-people and their families. If, from some defect in management, or by reason of the dearness of the grain, or the lowness of their wages, relief laborers are unable to buy Government grain, and subsist on coarse grain, grasses, or other comparatively in-nutritious food, special arrangments will have to be made for paying the work-people in tokens, and for having an abundance of salesmen or private dealers furnished with Government grain on every tank work, and at convenient distances along every relief road. The Lieutenant-Governor looks to you, and to all local officers to watch and promote this business of selling Government grain to laborers, and to propose other measures, if for some cause or another the grain does not really reach the coolies.

8. The next point is—

(c.)—Advances to Ryots.

On this subject there has been a good deal said in reports and orders, but as yet there has not been much (or indeed any thing) done in Mudhoobunnee. In parts of Chumparun there has been a good beginning made, and lists of all ryots who are fit for or require advances must be made out village-by-village. The matter must now be actively taken up by the circle officers, acting through their group superintendents. Advances to ryots must, wherever possible, be made through and on the responsibility of the zemindars. As each village list of ryots requiring advances is ready, a copy should be sent to the zemindar, and he should be called upon to give his opinion upon the list, and to be responsible for the realisation of the advance in future good years. The zemindar's reply must be preserved, but meanwhile the arrangements for making the advances should go on.

9. It will perhaps be well that the group superintendents should classify the ryots, for whom they may recommend advances under the heads of—

I.—Ryots who are laboring on relief works, but who will want to return to their fields when rain falls. See paragraph 41 of the late Lieutenant-Governor's note on Tirhoot.

II.—Ryots who desire advances on the collective security of the jeyt ryots, and the cultivating community of the village.

III.—Ryots who can give special security in the shape of groves, or gardens;—the Government does not wish to take as security, jewels, cattle, or other moveable property.

IV.—Ryots who cannot give any personal or collateral security, but from whom there is a reasonable hope of repayment.

10. To ryots of classes I, II and III, the circle superintendent may sanction advances, applying such tests as he can to the lists furnished by the group superintendent. To ryots of the IV class, advances must not be made without the sanction of the sub-divisional officer.

11. All advances to ryots must be in grain, and should be in the shape of an order on the nearest golah, or selling place (bhikaree's shop) for sufficient grain to last the ryot and his family for so many months, and the amount so named would be deliverable to the receiver of the advances in half-monthly instalments. Advances in money should not be made, except with the sanction of the sub-divisional officer in each case, and these should be made only for the purchase of seed-grain. The value of the grain advanced should be put at the price at which Government grain may be sold to the public in the neighbourhood. Forms for ryots' applications, or for orders on the shops will not be circulated by Government; but any district or sub-divisional officer requiring lithographed forms, can send a sample to either the Patna Press, Alipore Jail Press, or Bengal Secretariat Press, and ask for the number of forms he requires. Such indents will be reckoned as emergent.

12. There remains—

(*d.*)—*The question of relieving the Tirhootia Brahmans.*

The Lieutenant-Governor has learnt during his tour, that distress is increasing among the Tirhootia Brahmans to a dangerous extent. They will not work on relief roads or tanks, or in other ways. There are in Mudhoobunnee

a great many of this class; and it has come or is nearly coming to this point that the Tirhootia Brahmans must be relieved by Government or they will die. The Lieutenant-Governor is quite aware that it is a serious matter to undertake to give gratuitous relief to a large class of able-bodied men who can work, but are debarred from working by caste-feelings. Still he is satisfied that in the last resort, such of the Tirhootia Brahmans as cannot buy grain for themselves must, if they are ryots, be granted advances of grain, and if they are quite unsubstantial men, they must be granted gratuitous relief in grain. Tickets for a subsistence allowance of grain for themselves and their families will have to be given them; and the circle officers will be responsible that this is done.

13. The Lieutenant-Governor has been much impressed with the view that, for keeping stores (golahs) for selling grain, for distributing charitable relief, for preparing lists of persons requiring relief, and in fact for making the fullest use of the grain which Government has given, a really large (though not a highly-paid) local agency is required. He hopes that the question of sanction to an extra salesman at this grain-store, or to an additional clerk at that relief-tank, will not be allowed to interfere with the prompt distribution of relief. Sir Richard has heard that jeyt ryots sometimes urge that, while they are doing all this work in supervising Government relief operations, they get no acknowledgment for their services. It will always be within the discretion of the circle officer to make a jeyt ryot, who really does good work, a monthly allowance of thirty or forty seers of Government grain, if he be a poor man; or to give him a present of some kind in another shape, if he be a rich man. As has been said in the Lieutenant-Governor's memorandum extracted above, the best way of relieving the pressure upon the Government salesmen will be to sell or advance moderate quantities to private dealers who should be bound to retail it at specified prices.

14. The Lieutenant-Governor has requested you to stay yourself for some days in the Mudhoobunnee sub-division, and to see that these orders are put into practical effect.

I have the honor to be,

SIR,

Your most obedient servant,

C. BERNARD,

Offg. Secy. to the Govt. of Bengal.

No. 2749—S.R.

COPY of the foregoing letter, with sixty printed copies, forwarded to the Additional Commissioner, Dinagepore; Additional Commissioner, Bhagulpore; with the request that these orders may be adopted so far as practicable.

No. 2750—S.R.

COPY, with sixty spare copies, forwarded to the Additional Commissioner, Durbhunga; Special Chief Engineer, Durbhunga; and to the Magistrate-Collectors of Tirhoot, Sarun, and Chumparun.

By order of the Lieutenant-Governor of Bengal,

C. BERNARD,

Offg. Secy. to the Govt. of Bengal.

CALCUTTA,
The 29th April 1874.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 25th April 1874.

READ—

The District Narrative of the Patna Division for the fortnight ending 18th April 1874.

Patna.—The satisfactory result of the effort made by the Magistrate and the railway authorities to remove the block of grain at Patna city and ghât stations has been already reported to Government and duly acknowledged. The Lieutenant-Governor hopes that the increased facilities now to be given to traffic will lead to a renewed activity of private import.

2. Prices have not changed materially during the fortnight, and supplies have been everywhere ample.

3. The attempt which the Collector is making to induce the cultivators in the south of the district to take advantage of local irrigation is praiseworthy, and the Lieutenant-Governor will be glad to know the result of Baboo Nowrung Behary's public-spirited efforts in that direction.

4. About 12,226 persons are said to be on Government relief works; while several well-known and liberal-minded gentlemen are giving much assistance to their ryots by private works. No public charitable relief has yet been found necessary.

5. It is somewhat remarkable that the grain stored in Barh should have gone bad so soon, while that stored in the Sudder sub-division has kept well. The Lieutenant-Governor desires that inquiry may be made as to whether the arrangements for storage in Barh were such as they ought to have been.

6. *Gya.*—The condition of the people here continues good. Prices are, if anything, easier. The opium crop has put many of the ryots in funds, and supplies of grain are ample. The relief works are open everywhere, but attract few, the average daily number of laborers being only 1,515, while 637 persons only are in receipt of charitable relief. The Collector is of opinion that this district will not require the 70,000 extra maunds of grain allotted to it; but that it would be enough if 50,000 maunds were stored at Patna to be drawn upon as required. 25,000 maunds of grain from the North-West have just been ordered to Gya, and the Lieutenant-Governor will pass orders on the Collector's present suggestions hereafter.

7. *Shahabad.*—In this district, also, the state of things continues favorable, and no distress is apparent. The opium returns have been good and the money received on this account has given material assistance to many. On the average 5,255 persons were, however, daily on relief works as against 3,319 in the fortnight preceding. No Government grain has yet been sold. Payment might now be made to some extent in grain. Charitable relief is given to 413 persons.

8. *Sarun.*—Supplies are here still kept up by private trade, and by the coming of the new rubbee crop into the market. Prices, however, though easier in places, have not been materially affected. The Collector enters into a calculation of the probable outturn of the rubbee crop in maunds, which he finds to be sufficient to feed the people for nearly four months. Then, assuming that the population is ordinarily dependent on the rubbee for six months, he arrives at the conclusion that a larger supply of Government grain is necessary. This conclusion puts out of sight all existing stocks from former harvests, and all private importations, and the estimate is at best very rough. More detailed consideration is necessary before the provision ordered, after careful inquiry in the Lieutenant-Governor's minute No. 18, dated 12th February, can be increased. The Lieutenant-Governor will, however, discuss the matter with the Commissioner.

9. The condition of the people remains as before, but the numbers on the works are increasing now that the rubbee harvest is over. The payments on

account of opium have been of material assistance to the ryots. General complaint is made of the want of rain and the failing supply of water.

10. The number of laborers on the relief works was 1,62,556 at the close of the fortnight, while 4,322 persons were receiving charitable relief in one shape or other. The Lieutenant-Governor is glad to see that Mr. Drummond believes the system on the Sarun works to be much better, and less lax than had been supposed. The Collector seems, in fact, to hold that it is only so far lax as is absolutely necessary to make the works efficient for relief purposes. An urgent reminder has been sent to the Public Works (Irrigation) Department, with reference to the Collector's remarks about the channel behind the Gunduk Embankment. The Lieutenant-Governor is prepared to sanction the scheme, if it can be undertaken with safety, and on this Colonel Gulliver has yet to report.

11. The Sarun district has all but received its full present allotment of grain. The Lieutenant-Governor hopes that payment of laborers on the works will now be made in grain as much as possible instead of cash, and that advances to ryots, or zemindars for ryots, may take this form also, both here and in other districts.

12. *Tirhoot.*—Separate reports are submitted for the three southern and the three northern sub-divisions of Tirhoot, and it is proposed that in future the Additional Commissioner should report direct to Government for Durbhunga, Mudhoobunnee, and Seetamurhee. The Lieutenant-Governor will pass orders on this matter on the spot.

13. In Tajpore, Hajipore, and the Sudder sub-divisions, the condition of the people is still satisfactory, and supplies are maintained in the local markets. Mr. Worsley is completing the organisation of his relief machinery, and will, he hopes, be able to meet any distress that may develope itself. The numbers on relief works are now rising fast, there being 70,101 laborers in the three sub-divisions, of whom 63,002 are employed in the Sudder. From the account given of the management of the works under contractors in Hajipore, it appears that not only are the nominal rates there insufficient, but the laborers are fleeced by the contractor or his agents. This must be remedied at once. It is not shown that any labor is found for those who are incapable of making a living by piece-work.

14. The Lieutenant-Governor fully recognises Major deKantzow's energy and the good work he has done at Bunkur.

15. The returns of charitable relief in these three sub-divisions are incomplete. They must, in future, be made up to date for all circles.

16. Turning now to the report drawn up by the district relief officer for Durbhunga, Mudhoobunnee, and Seetamurhee, it may be observed that this consists merely of selections from the sub-divisional officers' reports, no attempt being made, for instance, to explain the statement of Mr. Magrath that "the action of the Government, in suddenly forcing on the system of contract labor on all the roads, &c., under the Public Works Department, had driven from them more than a lakh of persons," and threatened to lead to serious complications. The facts, however, are that Government had given no orders of the kind. So long ago as the beginning of March, Sir George Campbell directed that an attempt should be made to reserve the great public works for laborers who could do a fair day's work for a fair day's wage; while those who were unfit for this should be gradually drafted off to village works and provided for near their own homes. The sudden action to which Mr. Magrath takes exception was not called for nor even justified by the Government order. It was an essential proviso of the scheme, as sanctioned by the Lieutenant-Governor, that none should be turned away till work was available for them suited to their capacity, and the abrupt change introduced by the public works' officers in North Tirhoot was effected through misunderstanding of the case. Fortunately the Lieutenant-Governor was himself near at hand when it was done, and was able at once to give orders calculated to remedy the defect and provide for the safety of the people, and there is every reason now to believe that very soon all persons needing relief

will be fully employed; and that, too, on an improved system. Meantime, the circle system has been completed in Mudhoobunnee and Naraya sub-divisions, and 121 groups of villages have been formed there under proper supervision, while arrangements for village tanks are being made everywhere.

17. The number of laborers in Mudhoobunnee, Durbhunga, and Seetamurhee, as last telegraphed, stands thus—

	Under Public Works Department.	Under Circle Officers.
Durbhunga	55,206	42,893
Hathi	49,592	27,338
Mudhoobunnee }	15,000	170,000
Naraya }		55,000
Seetamurhee }	31,609	13,565
Poopree }		
Total ..	151,407	308,796

The most distressed class at present on works in the north is said to consist of Nepalese immigrants.

18. In Durbhunga the condition of the people is again reported to have improved. But the sudden increase of the numbers on charitable relief about Singhia requires explanation. No change is reported from Seetamurhee. It should, however, be explained why no returns are sent from Poopree.

19. The numbers on charitable relief in the three sub-divisions were as last returned:—

Durbhunga	74,132
Mudhoobunnee	15,729
Seetamurhee	3,074

20. The Lieutenant-Governor will give orders on the spot regarding payment of wages and advances in grain, and any other matters calling for direction.

21. *Chumparun.*—The Chumparun report, is as usual, very late in submission; and late as it is, it does not contain any information regarding or report from Ramnuggur. It would be more convenient also if Mr. Kean indicated his sub-divisions by their names instead of only by numbers.

22. In the sudder sub-division (No. 1) prices have fallen a little, but rice is scarcely to be had, and very little of the rubbee crop has yet come to market. Rain is much wanted. The laborers are said to be in fair condition and to have taken to task-work without much opposition. In the north and north east, however, the condition of the people is worse than it is elsewhere, but it is satisfactory to be told that here also the work is better and more earnest than in any other part. In the Dhaka sub-division (No. 2) prices have risen along the Nepal frontier, but the rubbee crop was fair and Government sales have not yet begun. In Govindgunge (No. 3) rice is very scarce: and the rubbee outturn has not been very good. The people are living on the new crop. In Bettiah (No. 4) as well as in Ramnuggur (No. 5) and the sudder, Government grain is now to be sold to the public.

23. The returns of persons on relief works are incomplete. By the last weekly sub-divisional reports, the laborers were 122,336, of whom 77,786 are under the Public Works Department, and 44,550 under circle officers. The numbers are still increasing. By the same returns, 10,641 were on charitable relief.

24. The Chumparun allotment of grain is now nearly completed.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

No. 2688—S.R.

Copy forwarded to Commissioner and Additional Commissioner of Patna and to the district officers for information.

No. 2689—S.R.

Copy forwarded to Commissioner of Bhagulpore and Rajshahye.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

Calcutta,
The 25th April 1874.

No. A., dated Bankipore, the 19th April 1874.

From—A. C. Mangles, Esq., Collector of Patna,
To—The Offg. Secretary to the Government of Bengal, Statistical Dept.

I have the honor to submit the following narrative for the fortnight ending Saturday, the 18th instant.

A.—State of the Country.

2. The supply of grain of all descriptions still continues to be abundant in the several bazars of this district, and no deficiency has been reported anywhere.

3. I am glad to be able to report that during the fortnight the block which previously existed at the Patna city and ghât stations, has been entirely cleared, so that I have withdrawn the officers I had deputed to assist the railway officials in giving delivery of the different consignments, and now I trust that the Company will be able to keep the work under, especially as they are about to open a new station between the two existing stations and on the main road passing through the Maroofgunge bazar, which is the largest grain mart we have in the city. The opening out of this station will afford great facilities to the local dealers in removing grain to their golahs, and the ghât station will now only have to be made use of by those merchants who intend shipping their goods across the river. All the necessary inquiries regarding the value of the land and houses to be occupied have been made, and the railway authorities can now take possession and begin the work of clearing as soon as they please.

4. The following were the prices of food grain prevailing in the several markets:—

	Seers.
Patna.	
Rice, best	11½
„ common	13
Wheat	16
Barley	19
Jowar	19
Maize	19
Barh.	
Wheat	14
Barley	19
Rice, best	10
Maize	15
Gram	17⅓
Behar.	
Rice	10½
Maize	16
Wheat	13⅓
Barley	21
Gram	19
Dinagepore.	
Rice, common	10½ to 12½
Wheat	14 to 16½
Maize	17 to 19
Gram	17 to 18
Khessaree	18 to 19

In the interior of the sudder sub-division, rice is selling at from 10 to 13 seers, maize from 15 to 18 seers, and coarse rubbee grains at from 17 to 19 seers.

5. We had no rainfall during the fortnight, nor was it required in this district. All the rubbee crops have been gathered and a large portion of them removed from the Khullians and brought into the market, which has served to keep prices steady. Cheena, sugarcane and cotton are the only crops now standing on the ground.

From inquiries made in the sudder sub-division, it would appear that the cultivators, unlike their neighbours in the Behar sub-division, took but little advantage of the February rains in bringing their lands under cultivation, so that it is reckoned that there are not more than some 3,000 beeghas under cheena and Indian corn at present, which is but little more than there would be in an ordinary year.

With the view of rendering them assistance in bringing their lands under cultivation before the ordinary time, *i.e*, before the rains set in. I have deputed Baboo Nowrung Behary, manager under the Court of Wards' a most intelligent zemindar, and one who holds large estates in the south of the district, to see what he can do in conveying water from his bund in the Poonpoon, and from which his villages have already been supplied with water, to the villages belonging to other zemindars lying to the north of his, and he assures me that if they will only render him moderate assistance in opening out the channels, he will be able to bring a good supply of water up to Bankipore itself, thus bringing a very large quantity of land under cultivation, or at any rate give the cultivators the means of so doing if they only choose to avail themselves of it; but it is curious to see how conservative they are, and how they object to any outsider having anything to do with their lands, though they are quite alive to the benefits to be derived from it at the present time.

6. No cases of misery or starvation were reported during the fortnight, and now I trust we shall escape without any such, provided I am able to keep up the supply of labor for the next two months, after which the laboring and poorer classes will be again able to find employment in the fields.

In this district, as I have repeatedly observed, there will be no famine of grain; but owing to the very scanty bhadoi and khurreef crops and consequent high prices of food-grain, there was an unusually large demand for labor among the poorer classes, and had it not been for our starting and keeping in full swing the several local fund and relief works, and giving advances to zemindars for village embankments and other agricultural works, we should have had great distress,—great among the small cultivators and the laboring classes who, usually living from hand to mouth, would have, without the wages paid them for the labor supplied by us, been utterly unable to procure the means of subsistence, so that I look upon the special grants supplied by Government for expending our local fund works as having been the means of warding off very great distress, if not famine itself, in some of the worst parts of the district.

7. No case of grain-robbery was reported during the fortnight. There were eight cases of theft, some of them accompanied by burglary. None of them, however, call for any special remarks.

8. During the fortnight 177 emigrants were recruited for British Burmah, and were despatched to Dr. Payne. Of these, 106 were residents of this district, 32 of Gya, 5 of Sarun, 1 of Chumparun, 7 of Tirhoot, 10 of Shahabad, and 16 of other districts.

B.—Relief Works.

9. The latest returns received from the Executive Engineer's office are those for the week ending the 11th instant, which shows an average daily number of 12,226 laborers employed on the several local fund and relief work roads throughout the district; but, as I have said before, I do not look upon these figures as being entirely to be relied upon, and I have therefore directed the Executive Engineer to insist on his subordinates keeping a nominal roll of all the men, women, and children employed on the different works, with the

names of the villages to which they belong, when, by working them in gangs according to their different villages, it will be comparatively easy to test the correctness or otherwise of the daily attendance registers. During the fortnight Rs. 2,000 was applied for by the Executive Engineer as a further assignment on the road No. 36 from Behar to Asthawan.

10. In addition to the above works I am glad to state that some of the zemindars of the district have gladly responded to my call on them to provide works for their ryots by starting village embankments or digging out tanks.

11. Moharajah Ramkissen Singh of Ticcaree in Gya, who also owns land in this district, has offered to dig a tank at Massowree on the Gya road. The work will be started to-morrow, the Moharajah himself being present to start it, and I have deputed my Deputy Collector Syed Amir Hossen to meet him and assist him in selecting a suitable site for the tank, and settle its dimensions.

12. Syed Mohamed Aboo Sayud, another rich zemindar of this district, has undertaken to excavate a tank at his village, Sonnye, on the south of the district for the benefit of his ryots, and has remitted a sum of Rs. 2,000 or half the rent payable by them on account of the late drought.

13. Syed Shamshool Hoda, another influential zemindar of this district has placed a sum of Rs. 400 at my disposal for tank-work in his village, also in the south; and Syed Wallayet Ali Khan, a leading zemindar and banker of the city, has commenced digging a tank in Patna, whereby some 200 laborers per diem find employment.

14. In the south-west of the Sudder sub-division Mr. Chardon, an influential Indigo planter, and a large farmer of the estates in that quarter, Baboos Brother Singh, Dhunookdhary Singh, and Mohabeer Singh have started village works for the relief of their ryots.

C.—Transport of Grain.

15. The following figures will show the importation of grain into this district during the fortnight ending the 11th instant, as per latest information received:—

	Rice.	Wheat and barley.	Jenera.	Other grain.
By rail	2,58,956	46,078	12,732	99,971
By river	200	200	400	541
Total ...	2,59,156	46,278	13,132	1,00,512

or a grand total of 4,19,078, whereof 1,45,737 maunds was made up of the Government grain sent to Barh and Mokameh stations, and the remaining 2,73,341 maunds were private importations. No figures of the grain received at the Futwah branch line have been furnished to this office up to date.

16. For the last three weeks there has been a comparatively large falling off in the amount of grain imported into the district by private traders, and this, I am told, is partly owing to the harvesting of our own crops which has tended to reduce prices, but chiefly to the fact of the new crops in the North-West not yet having found their way into the market. This, I am told they shortly will do, and that then we may expect the trade to be quite as brisk as ever it was, and that already the merchants are telegraphing to their agents at the different stations to send them large supplies.

17. The rubbee fodder, for the supply of which to Tirhoot to the amount of one lakh and ten thousand maunds, arrangements had been made, has now begun to be despatched both from Behar and the Sudder sub-division. Some 2,000 maunds had been sent to Bunkur ghât when the transport officer of that place, Major DeKantzow reported that there was no use in our sending any more, as not only was there an abundance to be had in that part of Tirhoot itself, but that it was procurable at much cheaper rates than we could supply it at. I have therefore under the Commissioner's orders, stopped sending to Bunkur and

am sending the whole amount to Chumpta ghât. Difficulty is experienced in preventing there being a large wastage owing to the prevailing high west winds both at the place of storage and in the course of transit; so that I have asked the Commissioner to let me have as many of the empty grain-bags from Tirhoot as he can, and in the meantime I have directed the contractors to supply some to be given them back, as soon as the fodder has reached its destination.

D.—Storage of the Government Grain.

18. No change during the fortnight.

All the officers in charge of the several Sudder and interior golahs in the district were directed to take stock of the grain on the 15th instant as directed in paragraph 2 of the Government letter, No. 1828—S.R., of the 26th ultimo. The result has not yet been reported from sub-divisions. In the Sudder sub-division, returns from almost all the golahs have been received, and show that very little or no injury has been done to the grain by insects, damp, &c., and that the number of bags counted, tallies with what was sent them from the Sudder golahs.

19. The grain stored in the Barh sub-division has not yet been sent across the river, owing to the fact that while I asked the Commissioner for permission to remove the whole of the grain, amounting to something a little in excess of 10,000 maunds to Tirhoot, sanction was accorded to the despatch of the Bucktiarpore grain only. Mr. White has again written strongly recommending the removal of the whole of the grain stored in his sub-division, on the grounds that it is rapidly being destroyed by insects, and I am writing to him under the authority conveyed in paragraph 1 of the Government resolution of the 14th instant, passed on my last narrative, to ship off the whole of his grain at once to Chumpta ghât.

E.—Advance to private parties.

20. During the fortnight a sum of Rs. 6,250 was advanced to 9 zemindars in the Sudder and Behar sub-divisions for agricultural improvements. Most of the works have already been begun and are situated in the localities where the failure of the last bhadoi and rice crops was mostly felt.

21. The parties who received advances for the purchase of grain, and who have imported it from distant places, find some difficulty in disposing of it, as the prices in the local markets are quite as low as they can afford to sell at, only covering their expenses and with no profit to themselves. They have been asked with reference to the new cash account rules prescribed by the Deputy Comptroller-General to render a detailed account of the amount of grain purchased and the cost of transport &c., with the prices they are selling at.

F.—Charitable Relief.

22. Up to the present time it has not been found necessary to give any gratuitous relief, the charity of private individuals being found sufficient to meet all requirements. Several alms-houses have been opened in the city by benevolent people and at one of them, opened by Roy Hari Kissen, my Deputy Collector, when visiting it the other day found over 400 beggars receiving half-a-seer of grain a-piece, and was told by them that this was the quantity they received every day. There are besides several large and small alms-houses in the city and the mofussil; to which allusion has been made in my previous narratives.

23. The reclamation of the large pool in the city called Shaik Mattah Garhee has not yet been commenced upon, as before taking in hand such an expensive work I was anxious to obtain the best opinion I could regarding it, and this the Executive Engineer has promised to let me have in the course of the next few days.

G.—Financial Result.

24. As per account already rendered Rs. 1,96,167-7-6.

During the fortnight.

	Rs.	As.	P.	Rs.	As.	P.

No. 573F, dated Gya, the 20th April 1874.

From—A. V. Palmer, Esq., Collector of Gya,

To—The Offg. Secretary to the Government of Bengal, Statistical Dept.

I have the honor to submit my fortnightly report on relief and scarcity in the Gya district for the fortnight ending Saturday, 18th April.

A.—State of the Country.

2. There is no scarcity of food reported anywhere; prices are high, but not as high as they have been, and the harvesting of a well-developed rubbee crop, with the subsequent gleanings, have put field-laborers and the poorer classes in a better position as regards food.

3. From all sides no dearth of food or work is reported.

4. The annexed table shows the comparative prices of food-grains at the principal bazars in the district:—

Bazars.	Wheat.		Barley.		Rice, best sort.		Rice, common.		Millet.		Maize.		Gram.	
	Week ending 18th April.	Week ending 4th April.	Week ending 18th April.	Week ending 4th April.	Week ending 18th April.	Week ending 4th April.	Week ending 18th April.	Week ending 4th April.	Week ending 18th April.	Week ending 4th April.	Week ending 18th April.	Week ending 4th April.	Week ending 18th April.	Week ending 4th April.
	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.	S. Ch.
Gya	12 4	11 8	17 0	17 8	8 4	8 0	10 0	10 0	14 8	15 4	14 4	14 0	14 0	14 8
Nowada ...	12 8	13 8	18 8	18 0	.....	.....	11 0	11 4	15 0	15 0	13 0	13 0	15 0	16 0
Jehanabad ...	13 0	13 0	16 12	15 0	9 8	9 8	10 0	10 0	.....	.....	13 12	13 12	16 0	16 0
Aurungabad ...	13 0	13 10	17 0	16 4	9 12	9 12	10 13	10 12	15 8	15 8	15 8	15 8	15 10	15 10
Daoodnuggur ..	13 0	13 0	17 0	17 8	10 0	10 8	10 8	11 4	.....	.....	.....	16 0	15 0	17 0

5. The statement does not call for remark. The prices have fluctuated but very little.

6. There has ben no rainfall during the fortnight under review. The crops have been harvested, and are everywhere reported to have been as good as could be desired. The opium has been very productive, and will probably yield a larger outturn even than last year.

7. The weighments are now going on and accounts being settled up, and this puts the opium ryot in cash, and in a position to buy food and seed-grain for his autumn sowings.

8. The condition of the people still remains good. There is no clamour for work, and the relief works, which we have open in every part of the district, are but very thinly and insufficiently attended.

9. I have before mentioned that in consequence of the drought this year, agriculturists are looking to the golundazee, and doing a great deal more in that line this year than usual. The consequence is, that employment is found for all, without having recourse to the Government works. How long this will continue is uncertain; but I apprehend no rush for work for another fortnight, and no difficulty in providing employment when the rush comes.

10. No cases of misery or starvation are reported; two cases of distress of women of respectability were ascertained in the Aurungabad sub-division, and relief was immediately given.

11. Both there and at the sudder station relief has been granted to many women by giving them cotton to spin. This will be more properly noted under the head of "relief."

12. Grain-thefts and robberies are reported by the sub-divisional officers (Aurungabad excepted), not to have sensibly increased during the fortnight under review. It is extraordinary that there is so little increase of crime, considering the high prices of food that have for some months past prevailed.

13. There are no special tracts calling for special remark. I may note that I have deputed Mr. Clarke, C.S., sent here on famine relief duty, to Sherghotty, and to supervise measures in the Sherghotty and Borachutti thanas.

14. The sudder sub-division contains an area of over 1,500 square miles, and a subordinate head centre at Sherghotty was desirable. Deputy Supervisors have been appointed, except in Jehanabad, and are hard at work.

15. I have had 250 of the principal villages to the north, east and west of the sudder station carefully visited, and the result shows that neither food or employment is as yet required. In Nowada, an over-zealous deputy supervisor sent in some people to the sub-divisional head-quarters for relief, who on arrival satisfied the Deputy Magistrate that they had both work and food, and who were in no need and desired no assistance.

B.—Relief Works.

16. I note His Honor's remarks on my last fortnightly narrative, pointing out that this report should be complete in itself without reference to another report to be submitted to a different department of the Bengal Secretariat. This shall in future be done, but I desire to explain that, by adopting the method of referring to that return, I brought down the information to the latest possible date, and that in supplying the information in the present report I shall be unable to bring it down beyond the previous week.

17. Relief work is now going on at nine distinct localities as per margin. The average number of laborers daily thus employed is 1,515. An abstract statement is appended.

Daoodnuggur road.
Surbayda road.
Pukreeborwan road.
Rajowlee road.
Warisligunge road.
Hoolosgunge road.
Obra road.
Myabigha road.
Aurungabad tank.

18. The lining out of the Puroya road has not yet been done by the Executive Engineer. I am anxiously awaiting the arrival of the four overseers promised by Sir Richard Temple, as until they arrive, I see no hope of getting any work out of the Executive Engineer, or his subordinates. This road is 9 miles in length, and it is more than five weeks since Mr. Anley was asked to have the centre line marked out.

19. The Executive Engineer is also engaged in making a centre line between Sherghotty and Moyapore on Hazareebagh boundary, and examining a line for the purpose of straightening the road between Sherghotty and Imamgunge.

20. Food is obtainable within a reasonable distance from all the works in progress, and it has not yet become necessary to sell the Government grain.

21. The laborers are, as a rule, able-bodied, and are all in a fair condition. Those that are able to do a full day's work are paid by results—Rs. 1-12 per thousand cubic feet, which is 8 annas in excess of what an ordinarily skilled beldar would obtain. The invalid gangs are paid by 5, 4, and $2\frac{1}{2}$ pice per diem, a mode of payment which is very popular, but open to abuse. This rate I am prepared to increase as soon as I can get a reasonable amount of work from each laborer.

22. A proposition has been submitted to the Commissioner, by which one of the largest zemindars, Baboo Rameshur Persad Singh, is willing to give employment to 1,000 laborers for three months in the vicinity of Rujowlee, in the south of Nowada sub-division.

23. Maharanee Inderjeet Kooer, of Ticcaree, has opened an establishment there to give cooked food to those really requiring it, exacting some small labor from those capable of giving work.

24. The Mohunt of Bodh Gya who daily feeds travellers and the poor, giving to each 1 seer rice or atta, $\frac{1}{4}$ seer dâl, and 1 chittack salt, has also, at my suggestion, opened a large relief work near Mateanee, between Gya and Sherghotty, in the shape of a tank

25. Moulvie Aboo Syud of Kurra, has promised to clean out a tank at Goh, between Gya and Daoodnuggur, but has not as yet commenced operations. I trust that these gentlemen's charitable acts will be approved of.

C.—Transport of Food-grains.

26. The annexed table will give an approxmiate account of food-supplies as certained to have been privately imported during the fortnight.

Bazars.	Wheat.	Barley.	Rice, best sort.	Rice, common.	Millet.	Maize.	Gram.	Total.
Gya	613	362	171	1,347	13	167	384	3,057
Nowada	.....	5	.....	10	.....	6	12	33
Jehanabad	115	141	47	117	.....	100	145	665
Aurungabad	778	.....	16	271	.....	.....	132	1,197
Daoodnuggur	1,300	300	315	225	.....	.....	900	3,040
Total ...	2,806	808	549	1,970	13	273	1,573	7,992

27. This give a total of 7,992 maunds against 11,572 imported during the previous fortnight. The decrease in importation may fairly be accounted for by the fact that private importers have been engaged in getting in their rubbee crops.

28. The following is a table of the private importations in the sudder bazar:—

	Wheat.	Barley.	Rice, best sort.	Rice, common.	Millet.	Maize.	Gram.	Total.
Fortnight ending 4th April ...	476	241	193	1,404	36	228	372	2,950
,, ,, 18th ,, ...	613	362	171	1,347	13	167	384	3,057

29. The slight increase of importation during the fortnight under review does not call for special remark.

30. The ordinary means of transport carts are temporarily crippled in consequence of the large number of carts engaged by the Opium Department for carrying the opium to the factory at Patna.

D.—Storage of Government grain at Relief Works.

31. No more grain has been received during the fortnight in the district. 5,000 maunds have been transferred from Urwul to Daoodunggur within the district, of which 4,549 maunds have been stored and the rest is *en route*.

E.—Advances to Private Parties.

32. 1*st*.—For purchase of grain.
2*nd*.—For land improvement.

1*st, for purchase of grain*.—Two applications have been received, inquired into, and granted during the fortnight.

2*nd, for land improvement*.—The first of the annexed tables will show the transactions during the past fortnight; and the second, the total number of applications presented, and how disposed of.

Advance for Land Improvements.

F. Charitable Relief.

33. Actual relief operations have been commenced on 9 works, as above mentioned (*vide* paragraph 17). From the few people, who attend and from the apathy of these few, it is very clear that nothing like real distress is, as yet, afflicting the country.

34. Charitable relief by issue of cooked food is being continued at Gya, Nowada and Aurungabad, In Gya, the daily average thus relieved was 155 as against 147 during the previous fortnight. These people are nearly all incapables of Gya town itself, thereby showing that the tightness is not so great as to induce people to leave their homes for this relief.

35. In Nowada, the daily average, was 95, as against 102 (erroneously stated in my last report as 14), and in Aurungabad, 85.

36. Cotton-spinning continues in Aurungabad and the Sudder sub-division. The number of women employed in the former is not stated. In the latter, 265 women are thus employed, and 37 convalescents and decrepid individuals on twisting string.

37. Three out of the four deputy supervisiors have been appointed and are at work. I shall give information based on their returns, in my next report. It will be sufficient here to say, that no case of real distress where immediate assistance on the part of Government was necessary, has been brought by them to my notice.

38. There is one point I wish to mention. It is intended, when the more famine-stricken districts have been fully supplied, to send an additional assignment of 70,000 maunds to this district. This requirement was arrived at by calculation on information furnished by me to Sir Richard Temple at Patna.

39. On my return, I consulted my sub-divisional officers, and looking to the fact that we have now got through two-third of April without any material distress being apparent, I venture to think that it may be unnecessary to send this 70,000 maunds to this district at all.

40. What I would suggest for His Honor's consideration, is, that in lieu of this arrangement 50,000 maunds of grain should be located in the Patna golah, to be drawn on by this district should occasion require. There it will be in a central position and should we not require it, available for others.

41. The amount realised by subscription within the district amounts to Rs. 24,043-13.

G.—Financial Result.

42. The total expenditure shown in the last narrative was Rs. 79,878-8-1. During the fortnight under review the following expenditure has been incurred:—

On account of grain purchase of Government Grain.

	Rs.	As.	P.
To Deputy Collector of Aurungabad for purchase of grain for Government	8,752	11	11
Advance to traders for purchase of Grain.			
To Poonic Saho, trader, for dealing in grain... ...	500	0	0

Gya,
The 20th April 1874.

A. V. Palmer,
Magistrate.

No. 137F, dated Arrah, the 21st April 1874.

From—H. W. Alexander, Esq., Collector of Shahabad,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my tenth narrative for the fortnight ending the 18th April.

A.—State of the Country.

Abundance or scarcity of supply in the bazars.—In the Arrah and Buxar sub-divisions, the bazars appear to be well stocked. Grain is still coming into the district by rail in large quantities. In the Sasseram sub-division the local bazar supplies are said to have slightly diminished. The sub-divisional officer reports that "this may be accounted for on the supposition that a number of purchasers are now consuming their own produce at home, instead of purchasing from market." This I think may be accepted as the probable cause of the diminution of supply. In the Bhubbooa sub-division no scarcity is reported.

Kind and prices of grain selling at one or more specified principal marts.—The kind and prices of grain selling at the chief marts in the district are furnished in Appendix A.

In the Arrah sub-division a slight fall in prices is apparent.

In the Buxar sub-division, prices show an upward tendency although nothing very remarkable.

In the Sasseram and Bhubbooa sub-divisions, prices on the whole are more favorable than they were last fortnight.

No rain has fallen in the district. The rubbee is now all harvested. The "cheena" crop is in places being cut, and the young sugarcane is being irrigated every where.

There has been no material change for the worse in the condition of the people, since the date of my last narrative. No actual cases of misery and starvation have as yet been brought to light. Mr. Eyre reports that he has been round both sub-divisions (Sasseram and Bhubbooa), and has arrived at the conclusion that there is as yet no actual distress among the mass of the people, nor do the more substantial cultivators express any alarm regarding the future, and they anticipate being able to carry on with advance from their mahajuns. How far the poorer class of cultivators may receive assistance from the same source is a doubtful question. Those who do not get such aid can avail themselves of the relief works. It is very satisfactory to know that the poppy has given such a good outturn this year, and that in consequence there is no cause for alarm in regard to the condition of the opium cultivators, who form a large proportion of the agricultural class. Provision will have to be made by subsidised in-door or gratuitous relief for many old and infirm persons of both sexes. As yet our arrangements in this direction are I think, a-head of any existing pressure. The great difficulty is to ascertain the number and residence of each person requiring relief. Even in such a matter, inquiries are looked upon with suspicion and evil motives attributed to the State.

There has been no noticeable increase in the number of grain-thefts. No robberies have occurred.

B.—Relief Works.

During the fortnight under review, 72,343 men, women and children were employed upon relief works, giving a mean daily average of 5,255; 5,916 were at work on the last day of the fortnight. During the fortnight which ended on the 4th instant, 45,763 persons were employed, the mean daily number being 3,319, and on the last day of the fortnight 4,006. It will thus be seen that during the fortnight under report, as compared with the previous one, there has been a considerable addition to the number of persons resorting to the relief works; this was expected to occur on the completion of the rubbee harvest. The rates paid to men vary from 1½ to 2 annas according as they complete a full or short day's work; the rate for women are from 1 anna to 1-3 pie and for children from 6 to 9 pie.

In the Arrah sub-division, during the fortnight work has been started on the road from Gurbanee to Bihta, in addition to the works previously commenced.

In the Buxar sub-division work is going on, on the Khiree and Poorunda road which is nearly completed; the Chousa and Jumooaon and Dhunsoohi road is on a fair way to completion; the work on the Doomraon and Nowanuggur road is going on slowly, and the work on the Rughoonathpore and Saraya road has just been started.

In the Sasseram sub-division, work is going on on the roads from Chennari to Mallipore, and from Akherpore to Judoonathpore, started on the 20th and 21st March respectively; during the fortnight work has been commenced on the road between Hatta and Durouli, and arrangements have been made to commence work on the roads between Chand and Kudjura, and Jehanabad and Buraon.

With reference to circular No. 2935—S.R., dated 16th instant, no Government grain has been as yet sold on any of the relief works. Arrangements, however, have now been completed to sell it on the road between Hatta and Durouli, to the workmen engaged. I am given to understand that on some of the Canal relief works, they have commenced to sell grain to the persons employed.

C.—Transport of Food.

Private traders in the Arrah and Buxar sub-divisions are still importing largely from the North-West Provinces. The exact quantity so imported will be furnished in a separate statement to follow.

The imports by river have been very small.

In the Sasseram sub-division, the private importations during the fortnight have been by rail 1,527 maunds; from other districts 2,331 maunds. In Bhubhooa, the sub-divisional officer reports a total importation of 2,250 maunds into the marts of Mohunia, Hatta, Durgouli, and Bhubhooa.

I trust the further consignment of grain allotted to this district may be sent shortly; at present the local means of transport is chiefly taken up in conveying grain for the Sarun and Chumparun districts to the river from the railway.

Mr. Eyre reports:—"My contractors are all waiting at Zumania for grain; their carts are scattered all over the country and will take sometime to get together. In fact, I have now no transport means at all at immediate command, and I shall require ten days' full notice to get my transport together before any despatches are made. I beg to urge this matter, and to request that grain may be sent."

D.—Storage of Government Grain at Relief Works.

No grain has been received and stored during the period under report.

E.—Advances to Private Parties and their Results.

Rupees 400 have been advanced to Ram Churn Jeswar for the purchase of grain, and Rs. 800 to Soomber Chowdhry for the same purpose. No other advances of any kind have been made.

F.—Charitable Relief.

In the Arrah sub-division the three supervising relief officers, alluded to in the last narrative, are now engaged in making village-to-village inquiries in order to ascertain the number of persons who are in need of assistance, either by means of gratuitous relief, subsidised in-door labor, or out-door light labor. They have each had assigned to them a certain circle, to which their inquiries will be confined. A poor-house has been opened at Arrah, and arrangements have been completed to start one at Garhanee. A relief centre has also been opened at Nonore for giving employment in the way of light labor, i. e, rope-making and cotton-spinning. At Arrah 38 persons are now receiving subsidised in-door relief, and 83, including men, women, and children, gratuitous relief.

In the Buxar sub-division, the following is the number of persons who have received gratuitous relief during the fortnight:—

Places.	Men.	Women.	Children.	Total.
Buxar	4	12	2	18
Barumpore	..	8	..	8
Doomraon	4	4	7	15
Nowanuggur	10	13	..	23
Chousa	23	30	7	60
Khyree	4	19	2	25
Total ...	45	86	18	149

In all 149 persons have been relieved. In addition the sub-divisional officer reports that he intends at once to open a poor-house at Chousa, similar to the one at Arrah.

In the Sasseram sub-division, Mr. Eyre reports:—"The rope-making relief is still carried on in Sasseram, and has also been started in Bhubooah. The results continued from my narrative of the 21st March are as follows:—

	Date.	No. of persons.	Daily average.
Sasseram ..	21st to 24th March	82	20·5
	25th to 31st „	155	22·1
	1st to 7th „	181	26·
	8th to 14th „	197	28·

The results of this relief in Bhubooah are hereto appended.

Place.	Number of men.	Number of women.	Number of children.	Total number.	Remarks.
Bhubhooah ...	116	169	47	332	1st week ending 26th March.
Ditto ...	168	255	102	552	Ending 2nd April
Ditto	74	121	61	256	9th ... cooked food last given.
Ditto	18	81	37	136	11th ... cooked food only given
Kochus	3	.....	2	5	Cooked food, 6th April

Cotton to be spun into thread has been distributed in Bhubhooa and Chynepore to 65 persons. Gratuitous relief in the shape of cooked food is being given at Bhubooah, and at Kochus in Sasseeram only. The relief given at Bhugwanpore is uncooked food for 20 days to last a month. The statements have not been submitted in a proper form.

The sub-committee of Sasseeram, Nokha, Nasrigunge, Buhnoul, Dangain, Kochus, and Akherpore, in the Sasseeram sub-division, and of Bhubooah, Chynepore, Chand Kudjura, and Bhugwanpore in the Bhubooah sub-division, have sent in village lists of possible applicants for relief. They were directed to furnish lists after due inquiry.

1*st*.—Of persons physically unable to perform work of any kind, fit recipients of cooked food at a poor-house.

2*nd*.—Of persons of respectable position to whom raw food should be sent.

3*rd*.—Cf persons physically unable to do earth-work on canals or road, but able to do in-door light work, rope-making, basket-making, &c.

4*th*.—Of distressed women of respectable family who do not appear in public, and of other women who will not, or cannot leave their homes to go to relief works. These distinctions have been carefully observed by the sub-committees, and those that have worked have done admirably. A village-to-village inquiry is being made by an assistant supervisor in the jurisdiction of Bhubooah thana, including the police out-stations of Chynepore, Bugwanpore, Adhoura, Mohuma, and Jehanabad, and by a second assistant supervisor in the Ramgurh thana entire jurisdiction. These are for the Bhubooah sub-division. In the Sasseeram sub-division a similar inquiry will shortly be made in the Dunwar and Dinareh pergunnahs, an officer having been appointed for this purpose. The duty of the assistant supervisors will be first to visit the persons residing in villages, a list of which the sub-committees will have previously sent in, and to intimate to the persons named the course they should take to obtain relief. The supervisors will next undertake a general village visit. The list for Sasseeram city has been already tested, and gratuitous and spinning relief can be started there whenever required. Cook-houses have been built at Bhubooah and Sasseeram, and all requisites provided. They are being built at Kochus, Ramgurh, and Jehanabad. Poor-houses have been built at Sasseeram for in-door labor, and are in course of construction at Bhubooah, Ramgurh, Doorgaoti, Jehanabad, and Kochus. I intend limiting the distribution of cooked food to the head-quarter towns, and to the Kochus for the present. The sudden diminution in the numbers at Bhubooha, directly cooked food began to be distributed, shows how very indiscriminately the food had previously been given, and that private charity is as active almost as in ordinary years. As reported for your sanction yesterday, I propose giving over the thread spun by the recipients of spinning relief to the weavers, who now find no employment in their trade, and who are beginning to betake themselves to the canals and other works. Inquiries are being made from their chowdries, and, so far as I have ascertained, the project is likely to be received with favor and without any suspicion."

G.—Financial result of the Fortnight.

Total expenditure from the district and sub-treasuries as shown in the last narrative, full details of which were therein given, Rs. 29,427-13-5 : expenditure during the fortnight under report :—

ARRAH,
The 21st April 1874.

H. ALEXANDER,
Collector.

No. 1079, dated Mozufferpore, the 21st April 1874.

From—C. F. WORSLEY, ESQ., Offg. Collector of Tirhoot,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit my narrative of scarcity and relief in the Hajeepore, Tajpore, and sudder sub-divisions, for the fortnight ending Saturday, 18th April 1874.

2. It is necessary to explain that, with the verbal permission of the Commissioner, I have assigned to the district relief officer the duty of compiling the present fortnightly narrative of affairs in the Seetamurhee, Durbhunga, and Mudhoobunnee sub-divisions, as I find it impossible to spare the time required for the preparation of a full report for the entire district and my own three sub-divisions, for the administration of which I am directly responsible, now demand my undivided attention. I have recommended in a separate letter that a fortnightly narrative may in future be submitted direct to Government from the Additional Commissioner's office, and I venture to hope that my proposal may be sanctioned.

A.—STATE OF THE COUNTRY.

3. The bazars have been sufficiently supplied, and no difficulty has been experienced in procuring grain at the high rates now ruling. The subjoined statement shows the kinds and prices of grain selling at some of the principal marts:—

	Wheat.	Barley.	Common rice.	Lesser millets.	Maize.	Gram.
Hajeepore	13	19	11	.....	16¾	16¾
Mowah	12½	17	9½	18	14	16
Tajpore	12½	16½	9½	16	14	15
Sarmastupore	13	17	9	15	14	16
Mozufferpore	10	.....	9	.....	13	13
Deoriah	14	15½	10½	.....	14	15

The Tajpore officer reports "that the people tell him generally that they can get grain whenever they wanted in the local markets," and such has been my own experience wherever I have been.

4. No additional information has been obtained regarding stocks.

5. There has been no rainfall during the fortnight.

6. The state of the cheena and moog crops is very bad almost everywhere. About Hajeepore and Lalgunge (especially at the latter place), where well-irrigation has been abundant, they are quite luxuriant; but in other parts of the Hajeepore sub-division they will not come to much without early rain. In Tajpore sub-division these crops "cannot," it is reported, "stand much longer," and in most parts of the sudder they have already died off from want of moisture.

7. The condition of the people still remains satisfactory. During the fortnight I have ridden over some 220 miles of country, visiting Lalgunge, Hazeepore, the Toorkee, and Kutra relief circles, and inspecting numerous tank-works. On no work have I seen a single emaciated laborer, or any persons unfit to do a fair day's labor. At Gaighuttee alone (in the Kutra circle) did I meet with anything like real distress, and even there it appeared to be confined to eight or nine persons of the beggar-class. These few were certainly very reduced and weak, but they were in daily receipt of charitable relief which the circle superintendent (who resides at Gaighuttee) administered with his own hands. On 23rd instant I intend to go into camp at Kutra for a few days, and take an active part in the formation of groups of villages in Rajkhund and Kutra circles. I shall be accompanied by an Extra Assistant Commissioner, who has just arrived from the Punjab, and by a risaldar of the Central India Horse, whom I have hitherto found most useful in making inquiries of various kinds, and by dividing amongst us the preliminary work still remaining to be done, I hope to get our subordinate agency appointed and fully employed within a week. These two circles which are bounded on the north and east by bad tracts in Seetamurhee and Durbhunga sub-divisions, seem likely to suffer more than any other part of the sudder sub-division, and as they comprise 360 villages in all, it is possible that some localities might suffer much before the relief superintendents, if left unassisted, could visit them on their tours.

8. No cases of starvation have been reported in the Hajeepore or Sudder sub-division. One doubtful case is reported by the Tajpore officer in the following words:—

"The Dulsingserai police have reported one death from starvation. An old *fakeer* died at a village named Sultanpore, only some eight or nine miles from the Ganges. It is not known to what place he belonged, but he came from the south. He reached the village in a very exhausted condition, too weak even to take the rice that was given him. The police report that the body was emaciated, but I should doubt whether, being strong enough to walk to the village, he would have died with food before him had he not been in some way diseased."

9. There is nothing to note on the subject of crime, except that it has diminished slightly in Tajpore during this month, owing, it is supposed, to the employment afforded by the rubbee harvest.

B.— RELIEF WORKS.

10. The demand for employment, and the number of relief works, are increasing daily in the Sudder sub-division. I am, however, still of opinion that the laborers generally are not yet wholly dependant on the relief works for their support, and that anxiety regarding water and the opportunity of getting work near their homes induce some to work who might not otherwise seek for employment.

The number of laborers daily employed is as follows:—

Sudder Sub-Division.	
Under Executive Engineer—	
14 works	7,055
In Contai Circle—	
10 tanks	5,865
3 roads	
In Motipore Circle—	
14 tanks	10,883
14 roads	
In Sahebgunge Circle—	
8 tanks	4.180
5 roads	
In Deoriah Circle—	
12 tanks	3,607
1 road	
In Toorkee Circle—	
3 tanks	1,128
In Sudder Circle—	
24 tanks	11,604
3 municipal tanks	613
Under Mr. Swaine of Athar factory—	
1 road	8,006
Under Mr. Smith of Bhikanpore factory—	
10 tank-works	4,582
3 roads	
In Serraya Circle—	
2 roads	921
3 tanks	518
In Belsiundh Circle—	
7 tanks	877
3 roads	
In Rajkhund Circle—	
9 tanks	3,163
Total	63,002

No returns have been received from the circles of Jaitpore and Kutra.

Hajeepore Sub-division.	
Gunduck embankment and road repairs	5,000
Tajpore Sub-division.	
Under Executive Engineer	1,220
Other works	879
Grand Total	70,101

11. I must apologise for the very incorrect return of laborers submitted from my office on 17th instant, or rather for the absence of a note explaining that the return was incomplete, and that many statements had not been received.

12. The sub-divisional officer of Hajeepore, in submitting the above return, remarks: "There are no relief works strictly so called in the sub-division; but, as already stated in my previous narrative, ample work is provided for the able-bodied on the Gunduk embankment at Bunker ghât, and on the several roads through which the Government grain passes; and in his last narrative he observed that the high rates of wages paid on the Gunduk embankment by the Public Works Department attracted all laborers wanting employment. I find, however, that the works referred to are very unsafe tests of demand for employment in Hajeepore sub-division, the road coolies being picked men and paid exceptionally high wages, while the laborers on the embankment receive only one rupee per 1,000 cubic feet of earthwork. I rode along the whole length (about 1½ miles) of this new work a few days ago, and did not see a single woman or child upon it. The men all complained of the low rate paid them by the native contractor, which is 8 annas lower than the ordinary rate per 1,000 cubic feet in this district. The contractor's own agent admitted that he was not paying more than Rs. 1-4; but I quite believe the

laborers' statements, as they could not have expected to see me, and had not had any opportunity of concocting a false story. I have written on the subject to the officer in charge of the embankment, and I would now recommend that this contract system be discontinued, if the embankment is to be regarded as a relief work, for a laborer can scarcely earn an anna a day at the existing rate of wages.

13. The return for Tajpore appears low, but it does not exhibit full results. Mr. Wace writes: "Since the date of these returns two more tanks have been started under Public Works Department, in the north-west part of the sub-division, and two under local agency. I have requested Mr. Anderson to begin work on the Jandaha and Simarwara road midway, and to work outwards north and south, and also on the Narhan road.

The railway has up to date afforded plenty of labor to the south of the sub-division. The men will shortly, I fancy, return, the line having reached Durbhunga; but there will still be plenty for them to do in the making of bricks for the permanent lines. Mr. Dalgleish (of Dulsingserai factory) tells me that he cannot now get enough men to do his weeding, though he is offering one-third more than he ordinarily pays."

C.—Transport of Food.

14. Though I have now nothing to do with transport arrangements, I feel bound to testify to the marvellous energy and ability displayed by Major deKantzow at Bunker ghât. Not only are his despatches of grain made with the utmost possible expedition, no cart being ever detained night or day for more than three-quarters of an hour, but the perfect order, discipline, and conservancy arrangements which he has established in his settlement, deserve the highest commendation. It is, I think, greatly due to his own indefatigable exertions that the Shapore Company has worked so successfully, and there is at present every probability that the quantity of grain to be carried into the interior from Bunker ghât will all be despatched by the 20th May or 1st June at the latest. The average daily despatches of grain during the first half of this month have been no less than 1,136 tons.

D.—Storage of Grain.

15. The amount of food-grain already stored is as follows:—

	Mds.
Hajeepore	5,179
Tajpore	19,624
Mozufferpore	64,677

During the fortnight the arrival of 20,000 maunds of Government grain at Sahebgunge factory has been reported by the manager. Of this quantity, 5,000 maunds will be sent at once to Regai out-work, 5,000 to Contai, 2,500 to Seraya, and 2,500 to Jointpore. The remainder will be kept at Sahebgunge.

16. I have not received from the sub-divisional officers any reports regarding the enumeration of grain bags, which was required to be made on the 13th instant.

17. The quantity of Government grain sold in the sudder sub-division up to date is shown in the subjoined statement:—

Mozufferpore Golah.

Up to 4th April.	From 5th to 18th April.	Total up to 18th April.	
Mds. S. C.	Mds. S. C.	Mds. S. C.	
1,019 37 8	228 32 8	1,248 30 0	Sales to public.
Mixed grain ... 46 8 14	32 9 8	78 18 6	Sold to the charitable relief committee.
Rice	13 34 8	13 34 8	
Total ... 1,066 6 6	Mixed grain 261 2 0	1,327 8 6	
Rice	13 34 8	13 34 8	

No grain has yet been sold in the Hajeepore and Tajpore sub-divisions.

E.—Advances.

18. In Hajeepore sub-division four advances, aggregating Rs. 200, have been made to private persons for digging tanks and wells; in Tajpore sub-division there have been no operations under this head; in the Sudder, applications for loans are rapidly increasing; and in the circles managed by planters, I hope to be much assisted by their local knowledge in dealing with these applications.

F.—Charitable Relief.

19. With the exception of returns submitted by the Mozufferpore and Sahebgunge sub-committees, I have no statistics to show the extent to which charitable relief is being given. The Hajeepore officer reports that several "people are already receiving relief at Shapore, Lalgunge, and Mhowa;" and the Tajpore officer will have three sub-committees at work in the course of a few days.

The operations of the Mozufferpore sub-committee are shown in the following statement:—

Weekly Report of Operations conducted by Mozufferpore Sub-Committee Poor-relief.

April 1874.	Members present at distribution.	Adults.	Children.	Total number.	Approximate quantity of food distributed.	Kinds.	Remarks.
					Mds. Srs. Ch.		
12th ...	Babu Wooma Churn Bose ... / Mr. R. J. Richardson ... / Ditto	171	2	173	2 6 0	Bût. / Salt. / Janera ...	The ticket system is answering well.

15th ...	Mr. R. J. Richardson ... / Babu Wooma Churn Bose ...	191	3	194	2 16 4	Salt. / Janera.	
16th ...	Mr. R. J. Richardson ... / Ditto ... ... / Ditto	192	3	195	2 16 12	Salt. / Rice.	
17th ...	Babu Ajudhia Pershad ... / „ Kirshana Nund ...	213	3	216	2 27 4	Salt. / Bût.	
18th ...	Mr. R. J. Richardson ...	215	3	218	2 28 4	Salt.	
	Total ...	1,341	19	1,360			

In the Sahebgunge circle 224 persons are receiving charitable relief.

20. I have drawn up some simple forms in which relief superintendents will in future show what is being done under this head in each circle.

21. In the Kantai, Motipore, Sahebgunge, Deoriah, and Jointpore circles (under management of planters), all the groups of villages have been formed. I have also no doubt that in Seraya circle (also under a planter) the groups have been completed, though I have not yet received intimation of the fact.

22. Of the sudder circle which contains more than 500 villages, I have appointed Mr. Deputy Collector Warde-Jones as relief superintendent, and have placed under him Mr. Ore, a young officer appointed for relief work, two North-West tehsildars, and a deputy superintendent. Mr. Warde-Jones is engaged in grouping villages in the southern portion of the circle, and each tehsildar is similarly engaged in a special tract that has been assigned to him. I have also temporarily placed at Mr. Warde-Jones' disposal three duffadars of the Central India Horse, who will be employed in supervising tank-works.

23. The Toorkee circle is under the management of special officer Mr. Spry.

24. The Belsundh circle is under Sub-Deputy Collector Baboo Hursonath Gangooly.

25. The Rajkund circle is under special officer Mr. Goldney.

26. The Kutra circle is under special officer Mr. Worman; each of the last four officers is assisted by a competent deputy superintendent.

27. I much regret to state that owing to illness contracted in the discharge of his duty, Mr. Gordon has been compelled to resign his appointment of district relief officer and to apply for furlough. I have arranged, therefore, to take under my immediate supervision all the circles in the sudder subdivision, and to employ his successor, Mr. Coxhead, principally on office work.

G.—Financial Results.

No. 1080F, dated Mozufferpore, the 21st April 1874.
From—T. E. Coxhead, Esq., Assistant Magistrate and Collector of Tirhoot,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I have the honor of submitting my narrative of scarcity and relief for the sub-divisions of Mudhoobunnee, Durbhunga, and Seetamurhee, for the fortnight ending the 18th April.

A.—State of the Country.

2. The Mudhoobunnee sub-divisional officer writes as follows:—

"In forwarding my narrative of scarcity and relief for the fortnight ending 15th April, I have the honor to state that I find my sub-division now in far less satisfactory state than it has been since my incumbency commenced. The state of the people had been rapidly improving, and as the circle organisation became more and more perfect, it seemed likely that deaths from famine would be limited to such occasional cases as may occur even in times of plenty. Now, however, the action of the Government, in suddenly forcing on the system of contract labor on all roads, &c., under the Public Works Department, has driven from them more than a lakh of persons. The closure of the Jhanjharpore tanks by order of the Court of Wards' manager still further complicated the matter, and, but that my relief superintendents have exerted themselves to open new works wherever they seemed required, I have little doubt that more deaths would have resulted, even if they have not resulted already. The rate on works offered by Government is ludicrous. It is the ordinary rate at ordinary times for the work of a man skilled in using the kodalee. Now, in the first place, even the professional diggers are not in such good case as to be up to doing an average day's work next, the price of food being dearer than usual,

the rates ought to have been proportionately increased to allow of the laborer having a chance of a fair meal; thirdly, it has been entirely omitted from the calculation that the bulk of these people in our hands are not professional diggers, though used to do casual labor with the kodalee; fourthly, no provision whatever has been made for the people who cannot do a full day's work. It seems to me absurd that we should have a large staff of officers employed in superintending the work and payment of the comparatively few able-bodied professional laborers who will be able to work at contract system, whilst the whole of the weaker population will be thrown on the hands of my relief superintendents. I may add that the public works' officers have always afforded me every assistance. I have worked with them, and they have worked with me and for me. Now of course they cannot but carry out the order they have received, but to a man they deplore this hasty change at a time when they had begun to get the system of daily payment to a certain extent organised, and were getting more work for the money spent."

3. The bazar supplies in this sub-division are probably much the same as they were, though the rahur crop has not been more than a 2-anna one. In many villages of the Kotchra circle it is believed that stocks of dhan exist. The sub-divisional officer was informed that in the north-west of the Bhakwa circle there was only Government grain to be had; but this he does not believe, as the sales of Government grain were not above the average. With regard to the prices current at Mudhoobunnee, the sub-divisional officer writes that the buniahs, though they attested the rate of rice to be 10½ seers for the rupee, were selling at from 7 to 8 seers only. If this be the case, rice is much dearer at Mudhoobunnee than we believed it to be, and the sub-divisional officer has been instructed to report more fully on this matter.

4. In Durbhunga the stocks are much as they were, though prices have risen. The sub-divisional officer writes as follows:—

"There was an accidental disastrous fire in the Durbhunga grain market last week. To remedy the temporary inconvenience purchasers were subjected to by this, I threw 400 maunds into the market. It has now almost recovered the tone prevalent before the fire. The superintendents have instructions to watch the markets also, and to supplement any deficiency with Government rice. To enable us to do this without anxiety as to the sufficiency of our stock, I think my golahs should henceforth be steadily filled. Indeed, I believe that the time is near at hand when Government, having monopolized the carriage of the district, should throw some of its supplies into the market, and this we can't do without a large stock in hand. Rice has almost disappeared from the dealers' shops, and those who are pressed through want of this staple article of food should have the opportunity of buying it."

5. In Seetamurhee the bazar rice supplies are said to be small, and a slight rise in price has taken place.

6. The appended list will show the current prices of grain at some of the principal marts:—

Names of Places.	Wheat.	Rice, common.	Gram.	Maize.	Lesser millet.	Barley.
Mudhoobunnee	9	10	11	11	12	13
Durbhunga	12	7	12	...	9	...
Seetamurhee	...	9½	...	...	...	...
Deodha	10	13	...	...	...	...

7. There was a slight rainfall, computed at ·8, in Mudhoobunnee on the night of the 14th. The sub-divisional officer does not state whether this was general or not throughout his sub-division.

8. In Durbhunga there has been no rain, and the cheena and moog crops are not flourishing.

9. In Seetamurhee rain fell to the north in the Bela outpost villages about ⅛ of an inch: the cheena and moog crops are not flourishing, and the young mango fruit is suffering from the hot winds.

10. Though Mr. Magrath has not yet observed any change for the worse in the physical condition of the people, the extract given above from his report shows that he apprehends it. One woman who had only come in two days before died in Mr. Ozanne's compound from the effects of starvation; another man is reported to have died in Mr. Kisch's circle from dysentery induced by starvation. Five deaths had occurred among a number of people who had been working at a tank at Gaudauli, but whose work was brought to a sudden stand-still. The work had been opened by Mr. Williams, but was made over to the zemindar on her request. That these five men actually died of starvation is not stated, but the matter is under the investigation of the sub-divisional officer. In Mr. Kisch's circle, the class of persons who show signs of the greatest distress are emigrants from Nepal, two thousand of whom, says the sub-divisional officer, have lately come into the Bhakwa and Kachrah circles.

11. In Durbhunga, the sub-divisional officer reports that the condition of the people has decidedly improved. The number of persons, however, receiving gratuitous relief in the Singhia circle had increased stupendously. He was about to pay a visit to Singhia to investigate the matter. He reports three deaths by starvation, though he remarks that he is not quite certain they were due to that cause; one was that of a child whose mother's power to suckle it failed, though he had received no information of the mother's condition. "The second was the case of a man who died on the Bahua road-work, though on the receipt of daily pay. The third, the case of a man whom Mr. Llewhellin aided with charity, but subsequently found dead."

12. In Seetamurhee the condition of the people does not seem to have undergone any alteration since the submission of the last report. No deaths by starvation are alluded to.

13. Throughout the three sub-divisions under report grain-thefts have not been numerous, and no grain robbery is reported.

B.—Relief Works.

14. There are employed on relief works in Mudhoobunnee 241,891; Durbhunga 206,671 plus the number engaged in three other circles, returns of which had not arrived; Seetamurhee 50,174 plus those working in the Pipree sub-division, return of whom has not been submitted.

15. The Durbhunga sub-divisional officer writes thus under this head:

"Village works are being carried on mostly with the view of providing against the threatening evil of a water famine. This question of water supply is assuming quite serious proportions. Everywhere a scarcity of water is felt in a greater or less degree.

"This date marks the change from the daily wage system to the piece-work system. It has been tried in several places with varying success. But as we are now in a position, from the forwardness of our charitable relief arrangements, to enforce it without running the risk of injury to the weak, we are determined to put an end to the demoralization attendant on the daily wage system."

C.—Transport of Food.

16. The transport arrangements have been progressing satisfactorily, and the railroad has been opened to Durbhunga.

D.—Storage of Grain.

17. There have been stored in—

	Mds.
Mudhoobunnee	4,42,602
Durbhunga	1,75,054
Seetamurhee	4,34,342

E.—Advances.

18. The annexed table will show the result—

Sub-Divisions.	Nature of Advance.			Land improvement.	Total.
	Zemindars for support of ryots.	Ryots for own support.	Wells and tanks.		
Mudhoobunnee	.....	1,330	500	3,870	5,700
Durbhunga	.....	9,699-8*	.....	.....	9,699-8
Seetamurhee	3,950	.....	.....	1,870	5,820

*Including sums advanced for seed-grain.

19. On the subject of advances, the Durbhunga sub-divisional officer writes :—

"All my returns have not yet come in, and I am unable to give you accurate details. I am most anxious about these advances. I am of the distinct opinion that advances should not be made promiscuonsly. I have explained my ideas to Mr. Metcalfe, and I have his sanction to my action. I propose to give no money advances except for seed-grain. All other advances I propose to make in grain."

F.—Charitable Relief.

20. The Mudhoobunnee sub-divisional officer writes as follows :—

"Charitable relief on the ticket system is in full work throughout the sub-division. Cooked rice is also given to persons in want of temporary relief at all relief centres and at several other places, notably in the Sudder circle. I have endeavoured to confine this to very small numbers by giving no inducement to people to come repeatedly day after day; few, except those in extreme want, avail themselves of this method of relief."

7,552 persons were receiving relief exclusive of those in Naraya.

In Durbhunga 74,132 persons were receiving relief, of whom 38,995 belonged to Singhia alone. This matter has been touched upon elsewhere.

In Seetamurhee 3,000 were in receipt of charitable relief, exclusive of those in the Peepree sub-division.

21. The system of grouping has made good progress in the Mudhoobunnee sub-division. The Durbhunga sub-divisional officer reports that in another fortnight everything will be completed. In Seetamurhee the grouping of villages has been completed.

G.—Financial Results.

Expenditure for the fortnight under report.

		Rs.	A.	P.
Mudhoobunnee	Village works	1,04,587	6	3
	Public works	1,49,650	0	0

No. 1689F, dated Sarun, the 22nd April 1874.

Memo. by—J. S. Drummond, Esq., Offg. Magistrate and Collector of Sarun.

Forwarded to the Secretary to the Government of Bengal, in the Statistical Department, Calcutta, for information, with reference to his Circular No. 80 of the 17th November 1873.

Narrative of Scarcity and Relief in the Sarun District for the fortnight ending 18th April 1874.

A.—State of the Country.

Abundance or scarcity of supply in the Bazar.—Private trade is more active, and the bazars of the district continue to be sufficiently supplied with grain, though prices are still exceptionally high at Bussuntpore and also at Mairwa in the Sewan Thana.

2. In Sudder Sub-division during the fortnight the private importations were to Revelgunge 75,900 maunds, of which 17,200 were barley and wheat, 9,400 maize, 5,300 rice, and the rest pulses and other grains; to Dooreegunge 4,738 maunds, principally rice, and to Maharajgunge 2,330 maunds, while the imports from Chumparun were 970 maunds. The exports of grain to Tirhoot and Chumparun amounted to 5,843 and 1,589 maunds, respectively.

3. Mr. Hudson writes from Mashrakh as follows with regard to the portion of the Sudder Sub-division in his special charge :—

"The bazars are still well supplied with grain, as far as my experience tells me, up to the present date. I was even informed by Mr. Phillips, of Masuria factory, that he could not find purchasers for the Government grain which he has in store at the rates fixed by Government.

"Comparing the results of three bazars held here between 6th and 17th instant, I find the prices prevailing to be as follows :—

	Seers.		Seers.
Chaul (1)	9	to	11
Chaul (2)	10¾	„	12
Makai	13¾	„	16
Gram	14¼	„	16
Wheat	12½	„	14
Barley	13¾	„	18
Rahar	15	„	15½
Kerao	13¾	„	15
Dall, Khesaree	12		
Dall, Arid..	13		

"The prices in the Panahpore Bazar, which I visited on 7th instant, were found to be as follows :—

	Seers.
Chaul (1)	10½
Chaul (2)	11
Makai	15½
Wheat	11
Barley	17
Gram	16
Dall, Khesaree..	13
Dall, Masuree	12½
Aloo	25
Salt	8"

4. The following is Mr. Wright's account for the Sewan Sub-division :—

"The supplies in the bazars have increased considerably, as not only do the private importations from other districts continue to come into the markets, but large quantities of the grain of the rubbee harvest, which has just been gathered, are finding their way there also. The private importations during the fortnight amounted to 13,288 maunds at Darowlie, Goothnee, Siswan, and Sewan. The above consisted principally of rice (3,624 maunds), peas (3,191 maunds), barley (2,348 maunds), and paddy (1,133 maunds), and of small quantities of gram, wheat, Indian-corn, and mixed grains. The importations were chiefly from Azimgurh, Ghazipore, Goruckpore, Gonda, Patna and Dacca."

5. As further showing the activity of private trade in the interior of the district, the following extract from one of Mr. Rattray's diaries written at Nowthan bazar in the Sewan Thana may be quoted :—

"From sixty to seventy carts a day have been passing my camp with grain from Goothnee and Darowlie for the Hutwa markets."

6. Of the Hutwa estate, Mr. Hodgkinson writes :—

"There is but little to add to former accounts. Rates of grain are easier all round, owing to the supplies from the new harvest having come more largely into the market lately."

7. *Kind and Price of Grain.*—The kind and price of grain selling at the principal marts and at the thanas and out-posts are given in the annexed statement.

8. For the Hutwa estate, Mr. Hodgkinson gives the following price current :

Description of grain.	Rate per Rupee.	
	Hutwah Bazar.	Meergunge Bazar.
	Seers.	Seers.
Rice	11	11
Makai	15	15
Gram	15	15
Jow	17	17
Dal	13	13
Wheat	13	12

9. *Stock of food in the hands of the people.*—There is the same diversity of statements as to the storing of the rubbee crops. Doubtless the ryots will store the produce of their cultivation where they are in a position to retain it, but that those who are in debt to their zemindars and mahajuns will be able to resist the pressure put on them by their creditors may be questioned.

10. Mr. Hudson writes as follows :—

"It is generally admitted that the rubbee crop lately reaped is in the hands of the ryots, and stored for their own consumption; and it is variously stated as being likely to last them till the end of this month or till the end of Bysak."

11. And the sub-divisional officer of Sewan writes thus under this head :—

"As I mentioned in my last report, there is at present a large quantity of grain, the produce of the rubbee crops, in the hands of the cultivators; but it has begun, as I anticipated, to find its way into the market for sale and into the hands of mahajuns and zemindars in payment of debts and rents."

Mr. Rattray says that :—

"The rubbee is being kept by the people for private consumption, but from all I have been able to learn this is only being done by the well-to-do and better class of ryots, and the poorer classes are parting with it almost as fast as they can get it ready. Zemindars of course have ample supplies for their private consumption. They should also have a good supply of grain in stock for the support of their ryots, considering the large advances they have taken for the purpose from Government. Now that the crops are all off the ground, and there is nothing to be seen in the fields, the Sub-Deputy Collector, Canoongo, and Naib Tehsildar attached to this Sub-Division will have a good deal of spare time on their hands, which I intend they should devote to making inquiries as to whether the persons who have received advances from Government have expended the money taken by them in the manner stipulated."

12. *Rainfall.*—There has been no rainfall during the fortnight.

Mr. Wright observes :—"Rain would be of great benefit just now to the cheena and indigo crops; but during the two years I have been in the district, I have noticed that unlike the districts in Lower Bengal, there is scarcely any rainfall in April here. Last year it measured only ·25 for the whole of April, and in the year before ·05."

13. *State of the crops.*—The rubbee crops have all been harvested, and cheena is the only food-crop now on the ground; but this is, as has been said, a very limited crop, and will, without rain, give, it is feared, but a poor return except where ample means of irrigation exist.

The computed areas this year under rubbee food-crops; the estimated yield in annas, taking 16 annas as an average crop—and in maunds, assuming 8 maunds an acre as a full average yield all round (the highest that can be safely adopted, taking one crop with another); and the period for which such produce will last at the famine rate of half-a-seer per head of the population, are shown below for each thana separately, together with the areas under rice cultivation—

	Rice area in acres.	Rubbee food area in acres.	Rubbee outturn in annas.	Rubbee outturn in maunds.	Period for which it will feed the population.	
					Mo.	Days.
Chupra	60,000	70,000	8	2,80,000	3	0
Manjhee	20,000	40,000	10	2,00,000	4	0
Dighwara	5,000	50,000	14	3,50,000	8	20
Mashrakh	50,000	45,000	8	1,80,000	1	23
Bussuntpore	45,000	50,000	5	1,25,000	1	20
Pursa	30,000	80,000	9	3,60,000	4	10
Burragaon	9,000	75,000	6	2,25,000	2	18
Burrowlee	55,000	40,000	8	1,60,000	2	20
Sewan	60,000	70,000	10	3,50,000	3	8
Darowlie	35,000	80,000	12	4,80,000	6	10
	450,000	600,000	9	27,10,000	3	24

As with slight aid from the "cheena," the period of dependence of the people on the rubbee may be said to extend over the six months from the 15th March to the 15th September, these figures—if at all approximating to the facts—apart from the too probable contingency of a faster rate of consumption, would seem, unless the deficiency can be certainly met from elsewhere through private trade, to point to a necessity for increased supplies of Government grain to be laid in before the rains, as there may be difficulty in arranging for the transport of grain in the interior during the raniny season.

14. Mr. Hudson writes as follows under this head :—

"The crops are all off the land now, with the exception of a few patches of rahar and the cotton crops. The indigo struggles on here and there, and some flourishing crops of millet, in various stages of growth, are to be seen around the villages; but this last crop, as well as the petty cultivation of vegetables and spices, is dependant on well-irrigation. Some of the millet is already nearly ripe, and this crop ought to afford timely relief to all those ryots who are fortunate enough to hold plots in the "Gocar."* I would hazard a conjecture that the extraordinary abundance of the "mohwa" crop in this district, as well as the circumstance that it is dear this season, must also contribute no despicable aid to the ryot, if, as is generally the case, he possesses a few trees in one of the groves of his mouzah. The blossoms are used directly as food for men, being mixed with ata, and they are largely employed to feed cattle, with over and above the means of purchasing grain to be derived from their sale at a pice and a half the seer."

* *i. e.*, lands round the village.

Mohwa trees are not extensively grown in this district, which is mainly dependant on importation from outside for this article, though where available the mohwa will doubtless prove of great assistance.

15. The following is Mr. Wright's report with regard to the Sewan Sub-division :—

"Under this head there is scarcely any thing to report now. The rubbee crops have all been harvested, and no crops are to be seen on the ground now, but cheena, kupass, indigo, and next year's sugarcane crop. Cheena is to be seen in all stages. It is being sown in some places, in others it has just begun to sprout, in some fields it is further advanced, and in some it is almost ripe for cutting. This crop is to be seen in these different stages in fields adjoining each other in most of the villages in the division, especially where there are poppy lands. The crop is a pretty good one what there is of it.

"Indigo this year is an exceedingly poor crop, and does not promise at present to be more thana 4 to 6 annas crop. With a good heavy fall of rain by the beginning of May, planters will be able to resow the lands on which it has not germinated, and may even sow them later, but then it will give them only one cutting known as the 'morran.'

"Sugarcane has germinated very well, but as it takes such a very long time to come to maturity, it is impossible to say what it may turn out. The kupass crop is only grown as a secondary crop in this division along with rahar, and is always a poor one.

"The rubbee food-crops have, as I have mentioned, all been gathered. The outturn has been very fair indeed, and taking the division as a whole, is not less than an 11 annas crop as compared with former average seasons."

Mr. D. N. Reid of Saddowah says :—

"The rubbee has all been harvested safely, and the agriculturalists are busy preparing the fields for their maize and bhadoi crops. Nowhere is the cultivation backward, and there will be sufficient seed to sow all the fields."

Mr. Wright's estimate of the rubbee yield is, I think, unduly favorable, and I doubt their having been more than a 9 annas crop all round.

16. Under this head, concerning the Hutwa estate, Mr. Hodgkinson writes thus :—

"Cultivation of lands for the autumn sowings has been going on satisfactorily ; the cheena which has been largely sown promises fairly."

17. *Condition of the people.*—The relief works still continue to ward off general distress, though the numbers on the works are, as was to be expected, increasing.

18. Mr. Hudson reports as follows :—

"I have not observed any change as yet in the condition of the people, but this appears to differ very much according to locality. Take for instance the statements of the villagers as to the outturn of the rubbee crop, and the length of time that it is likely to last the ryots for consumption. I have before me now the replies obtained to my questions on these heads in three different places within a few miles of each other. At two of those a 4 annas crop is admitted, at the third place only half of that, and whereas at one place they assured me that the whole crop had been already consumed, the zemindars of another told me that it would last the more fortunate ryots for the next six months.

"Between Mashrakh and the Gunduck, in a direct line eastwards, the greater part of the culturable land is 'chur,' and consequently fallow at the present season. The absence of a rubbee crop on this tract must necessarily increase the pressure of want on the villages scattered over it; but I have not received any special application on their behalf, nor had any complaint of distress from any of them, except in the case of Oosree-Chandpoorah. This village I visited and personally inspected some few days since, in consequence of applications from several of the proprietary body for small sums for support of their ryots. I found *bonâ fide* evidence of distress in this mouzah. It is one of those cases of proprietary cultivation in which there is no wealthy landlord who can be made responsible for the safety of the population ; but proprietors and tenants are all equally poor and helpless. I have recommended the grant of a small sum of money for the institution of a relief work at their village, and a remittance of Rs. 500 has reached me from the sudder treasury, which will be applied to the excavation of a tank. Numerous complaints have met me of the want of water throughout the tract here spoken of; but I am unable as yet to suggest the adoption of any remedy. I have not observed any old and dry tanks between this and Oosree; and the villages themselves appear somewhat few and thinly inhabited."

19. Under this head, the following is the report of the Sub-divisional Officer of Sewan :—

"The condition of the people continues good. The gathering of the rubbee harvest has been of great assistance to them, as the grain coming into the markets has reduced the prices, which are now within the means of the poorest. During a trip taken by me round by Gopalgunge, Maniarah and Saddowah, Barowlee and Barhogah, I did not meet with a single case of misery or destitution amongst the people. I visited all the principal relief works that are being carried on along the line I travelled, and I noticed that all the people employed on the works looked healthy and in good condition. Small-pox is very prevalent throughout the division, but it is generally of a mild type, in fact so mild that people suffering from it go about their usual work, covered with the disease. This no doubt has a great deal to do with spreading the infection."

Mr. Rattray, when writing of the people in Pergunnah Dungsee, and in the northern part of Pergunnah Barra, states :—

"There is no serious distress in the villages. The villagers inform me that the relief works in hand have removed the pressure arising from the high prices of grain, and that at this moment there is ample work for the poorer classes."

And again he says—

"The spring crop is supposed to have given an yield which will last till the end of May, after which, in a great measure, the markets alone will have to be depended upon by the poorer classes. So far as traders are to be relied upon, they do not anticipate any falling off in the present importations; and the villagers inform me that, with a seasonable fall of rain in May and June, all fears of distress any more than at this moment may be laid aside."

In writing of the payments which the villagers are receiving at present for their opium, Mr. Rattray says--

"A most material help at this moment is being afforded in the opium payments. There is scarcely a village in the Sub-division in which one or more householders have not benefited by it."

This is a matter that I have noticed in former reports. The advances made by Government for poppy cultivation and the payments for opium throughout the year amount to a very large sum and cannot but be of great assistance to the people. The opium weighments are at present going on at Sewan, and the Sub-Deputy Opium Agent has already paid out nearly four lakhs of rupees,* and before he closes the weighments, the payments will, I understand, amount to upwards of seven lakhs.

* *Note.*—About the same amount is now being paid in the Chupra Sub-Division.

Of the three Native Doctors recently deputed to this district, one is being sent to Sewan; more might be despatched for service in this district with advantage.

20. Regarding the Hutwah estate, Mr. Hodgkinson writes thus :—

"The people are in fair condition still, but small-pox is carrying off hundreds in different vicinities."

Small-pox appears to be of a worse type in Hutwah than elsewhere.

21. *Known cases of misery and starvation.*—There have been no authenticated cases of starvation hitherto reported, and it is believed that distress is being sufficiently met.

22. Mr. Wright reports as follows:—

"No cases of the kind have come to my knowledge, and Mr. Rattray and the Sub-Deputy Collector report that they also have not heard of any such cases."

23. And Mr. Hudson writes thus:—

"Of known cases of misery I have only the following to bring to notice.

"(1.) When at Oosree village, some seven miles from this, a few days since, I called for any persons whom they could produce in a starving condition. They brought forward four or five men; but none of those appeared actually starving, and had they been so, inasmuch as they were mere coolies of low caste, they might have emigrated with their families to the nearest relief work. Their maliks have been written to about them. The only bad case appeared to be that of a very old man, a half-witted dhobee, who turned out to be the professional mendicant of the village. I have since given him a dole of Rs. 5 from the charitable fund.

"(2.) On the road to Oosree, we (that is, my Assistant and myself) were accosted by a man who complained that he was starving; but though directed to seek relief from me here, he has not appeared since.

"(3.) A man named Bishnath Rai applied to me for relief yesterday, and exhibits signs in his person of inanition. But he admits that he was formerly a factory coolie, and was obliged to give up work on account of illness, so that it is probable that his emaciation is due to some disease. He has been placed on the relief register of Rajaputty."

24. *Grain-thefts or robberies.*—There have been seven cases of grain-thefts during the fortnight.

25. *Condition of any special tracts.*—The Bussuntpore thana is now, I am inclined to think, the worst tract in the district, and I am about to proceed there at once.

B.—Relief Works.

26. *Progress of relief works, &c.*—The annexed statements show the relief works in progress and the number employed thereon. The average number daily employed during the fortnight has been 147,708, and the number on the last day was 162,556. I would again urge the immediate commencement of the channel in rear of the Gunduck embankment, if it is to be carried out before the rains. I understand from the Executive Engineer of the Lower Gunduck Division that he is ready to commence it at once, and that it can be carried through from the point originally designed without risk of failure, so that it seems a pity to delay the scheme pending survey from a point higher up the Gunduck. Independently of the need for it as a relief work, the want of such a reservoir would be greatly felt should another season of drought supervene. At a time too, when the fate of the ensuing harvests is so important, an embankment along the Gogra is also much needed to protect the southern portion of the district from constantly-recurring inundations, and if the requisite engineering staff is available, it would be very advisable to put this work in hand at once.

27. While on the subject of relief works, I would respectfully demur to a statement in the Government instructions to Major Trevor (with a perusal of which I have been favored by the Executive Engineer of the Lower Gunduck Division) to the effect that no doubt the system of relief works in this district is lax. I am unaware on what authority this statement rests, but if more is meant by it than that generally the daily labor system is lax as compared with a system of task-work suited to ordinary times, I venture, with due deference to higher authority, to impugn the correctness of such statement. On the works here, the able-bodied men are employed in excavating, in regard to which piece work (though not of course approaching to the task-work of ordinary laborers) is enforced as far as possible, while the women and children

carry the earth; the people are employed in gangs; regular registers are kept of the names and residences of all employed; and by means of agency locally engaged, every endeavour has been made to prevent peculation. It may be that because the employment of large numbers in Tirhoot, with at first an inadequate agency, had been found productive of great confusion and laxity, similar results were inferred in connection with the large numbers employed in this district; but such an inference would be unjust. The people here, many of whom are of non-laboring classes, naturally do not turn out nearly as much work as would be obtained under a system of task-work performed by ordinary laborers, but they are all locally employed, returning to their homes at night, and by their employment in squads under mates, the disorder inseparable from the herding together of large masses is avoided.

28. *State emigration to British Burmah.*—There are 22 emigrants in the depôt here.

C.—Transport of Food.

29. *Approximate amount of private food-supplies.*—All the information available under this head has been given.

From the last statement submitted by Mr. Hodgkinson, it appears that of the 1,50,000 maunds of grain to be obtained for the Hutwah estate, 89,892 maunds have been stored.

D.—Storage of Government Grain.

30. The accompanying statement shows the storage places, the distribution thereat of the grain allotted, and the amount of grain received at the different storage places up to the end of the fortnight. The total amount of grain received, including the 28,000 maunds at Revelgunge, had been 4,89,703 maunds, of which 4,36,919 maunds had been finally stored and 25,586 maunds were in transit.

With respect to the stock-taking ordered, as it was found that it would only be an useless labor and expense merely to recount without weighing the bags already counted and arranged by the police, the golahdars were directed to accept the number of bags as given by the police for the purpose of stock-taking, both they and the police signing the stock statement. As the golahs will remain under police guard, the police can be held responsible for any deficiency in the number of the bags hereafter discovered. Stock receipts have been furnished for 13 out of the 25 golahs in the district.

E.—Advances to Private Parties and their Results.

31. No advance has been made during the fortnight for purchase of grain for sale, while Rs. 14,467 have been given to zemindars for grain or money advances to their ryots, making up the total as yet advanced on the latter account to Rs. 3,59,371-0-0; and for land improvement Rs. 1,947 have been advanced, bringing up the total on this account to Rs. 83,093. The sum of Rs. 400 has also been advanced to persons for the support of their family.

F.—Charitable Relief.

32. The number who received charitable relief, so far as the returns shew, is noted below:—

Names of thanas.	Names of circles.	Number of purda women employed in spinning cotton.	Number of persons paid in cash.		Number of persons who received cooked food
			Number.	Amount.

At the poor-house, opened in Chupra, and also on the Hutwah estate, cooked food is distributed, the number receiving such food being above 206 daily at Hutwah; about 30 to 40 at Chuprah.

33. With reference to paragraph 14 of the Government Resolution on the last narrative, it is explained that all the 62 relief circles in the district have been made open to the public by general notification, funds have been furnished, and that though it is very difficult to obtain the requisite returns from the planters, it is believed that relief is given at the different centres to all unable to work, while cotton for the relief of purdah women as well as funds from charitable advances to ryots who cannot be reached through their zemindars, have been made available for the relief of other classes. For all others who can work, however little, it seems better that they should be employed on the public roads than be receiving gratuitous relief. The circle officers were asked to make out through the putwarees village lists of the persons requiring relief, and it is proposed, on the completion of such lists, to grant fortnightly grain tickets payable in the villages, the payment on which can be easily checked at the time of presentation for renewal by the holder. Mr. Macgregor, who is in charge of the Tehtee and Jelalpore circles, having represented that he was unable to carry out the relief operations as fully as he could wish owing to the extent of his factory circles, Mr. Grant, formerly of the Salt Department, has been deputed to his assistance to organize relief operations in those circles, and when everything is in proper train there, he may be similarly employed in other circles. **It seems a great point to work through the factory agency, which is ready to hand, and for this reason, instead of placing officials in charge of circles as has been done in Tirhoot, it was deemed preferable to utilize to the fullest extent the planting agency nearly everywhere available throughout the district.**

G.—Financial Results of the Fortnight.

34. The financial result of relief operations are given below :—

No. 1104 F, dated the 22nd April 1874.

From—H. KEAN, Esq, Collector of Champarun,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit the fortnightly narrative of Scarcity and Relief for the district, for the fortnight ending 18th April 1874.

A.—STATE OF THE COUNTRY.

Of sub-division No. 1, Mr. Oldham reports thus:—"At the beginning of the fortnight, all grain except the produce of the rubbee harvest, was exceedingly scarce, and in many places the high rates quoted were merely nominal, some of the grain not being procurable at any price, or in larger quantities than one or two seers at a time. Wheat, too, though the harvest was a fair one, was very scarce. The cultivating classes had everywhere stored the produce of their own fields at home. Barley and the pulses are plentiful. Maize, which was fairly abundant a fortnight ago, has become very scarce. Grain is quite equal to the demand, and oats are plentiful. Prices have, however, fallen within the fortnight, and the markets show signs of a good deal of elasticity, and indications that there are still large stores in hand.

This fall in the price Mr. Oldham attributes to the late harvest; and also in some degree to sales of Government rice to workmen on the relief works having been begun, and to these being interpreted as a general commencement of sales at the Government stores. The following table shows the prices at which grain has been sold at Segowlee (the head-quarters of the sub-division, and also the most central market).

Coarse rice	9¼	per rupee.
Wheat	11	„
Barley	16	„
Grain	14	„
Maize	14	„
Murwa	17	„
Rohur Dâll	10	„
Cheena	13	„
Oats	22	„

Of these barley and rohur dâll have been most plentiful.

The rates are rather higher in the north and west of the sub-division, and a little lower in the south and south-east.

A few days ago Mr. Oldham says the coarsest rice was selling nominally at 7½ seers, but was not to be had at that. A very small portion of the late harvest has come into the market, but the fluctuations in the prices consequent on the opening of Government sales, prove that there are reserves. Mr. Oldham has discovered considerable stores in the hands of petty zemindars.

No rain has fallen, and it is very badly wanted. Regarding the rubbee, Mr. Oldham reports that it has mostly been harvested, and has fulfilled all the expectations of his last report. Rohur, he says, has been particularly abundant. The gross average outturn he estimates to be nearer 10 than 8 annas. "Cheena" is the only crop now in the ground, and three-fourths have been destroyed by the drought. This is very much to be regretted. Of the condition of the people, Mr. Oldham speaks as follows:—"The condition of the people is much the same. In the rubbee-growing tract it has improved since the harvest, and nothing like suffering is to be seen. In the rice country to the north-north and north-west, the scarcity is begining to tell. In the extreme north-west corner of the sub-division, several emaciated persons are to be seen; while their work is far better and more earnest than in any other part. The opening of the Rajah of Bettiah's works on the Gadh river embankment, which began on the 12th April, has been of much value—"all now find work near their homes, and their condition is improving. This tract is inhabited by people accustomed to out-door labor only. Generally the gangs are all fit for task-work, and where there is unfitness, it is due to previous habit and ignorance,

and not to want of condition." Mr. Oldham says that the laborers rebelled everywhere at first against the task-work which had (as stated in last fortnight's narrative) been imposed, but that they have now given in. He had not seen or heard of any misery or starvation. As reported in the last narrative, the tract which is worst off, where grain is scarce and supplies fluctuate most, is the rice-producing country to the north of the sub-division, and of it the north-east portion. Many of the infant children of the women employed in the works in this tract are in a miserable condition, shrunk, and emaciated. This, Mr. Oldham says, is due, he hears, rather to exposure and bad and irregular food than to an insufficiency of it.

Sub-division No. 2.

In this sub-division Mr. Kilby reports that food-grains are still procurable, though the prices are rising.

The following table shows the prices obtaining:—

Rice	8 to 8¾	per rupee.
Maize	13⅓	„
Barley	14⅓	„
Wheat	10¾	„
Gram	13	„
Pease	13½	„
Rahur	14	„
Cheena	14½	„
Kodo	20½	„
Murwa	15	„
Mussoor	13⅓	„
Oorid	13½	„

The price of rice along the Nepal frontier, where, until lately, it was tolerably low, has risen considerably, but as the rubbee crop was a fair one, it has not become necessary to commence selling Government rice, though doubtless it will be necessary shortly. Mr. Kilby attributes the rise to the passing of some stringent order by the Nepal authorities prohibiting the exportation of rice. No rain had fallen, and the "cheena" has therefore most unfortunately proved a failure, except in the low-lying and irrigated land. The condition of the people, Mr. Kilby says, is satisfactory. Small-pox was on the increase, but had not assumed a severe type. Some persons suffering from this complaint had appeared on the works, but had immediately been drafted off to the hospitals, and charitably relieved. No death from starvation had occurred, though Mr. Kilby continues to see emaciated persons.

Sub-division No. 3.

In this sub-division Mr. Weekes reports that rice is very scarce in the bazars. It had been selling on an average at 9 seers per rupee, and maize at 13.

No rain had fallen, there is therefore but little hope for the "cheena." The mango crop, Mr. Weekes estimates, will not be more than a 4 to 6-anna crop, although it promised so well. The general average outturn of the rubbee Mr. Weekes calculates as follows:—

In the north half of thana Kessoria, from 3 to 4 annas, proceeding westward 4 to 5, and for the rest 5 to 6. The people are living, it is said, on the newly harvested crop, but as far as thana Kessoriah is concerned, this will not go far. In thana Gobindgunge they are better off.

Sub-division No. 4.

The state of the people in this sub-division, Mr. Samuells reports, continues satisfactory, and has, if anything slightly improved, owing to the labor afforded by the rubbee harvest, which has now been nearly gathered. Prices, he says, have remained stationary, except at Lowriah, where they have risen. This Mr. Samuells attributes to the sale of grain at Ramnugger. Orders have been issued by the Commissioner, who has passed through the district during the past fortnight, to sell Government grain to the public throughout circles Nos. 5, 4 and 1; prices should therefore be equalised. There had been a slight fall of rain along the banks of the Gunduck, accompanied by hail. The

"cheena" had been benefited by the former, and the latter had done but little harm.

The people are by no means, Mr. Samuells reports, in a starving state; and except from disease, no cases of misery have come to light.

B.—Relief Work.

The following is a list of the relief works in hand showing the number of persons employed:—

In sub-division No. 1, Mr. Oldham reports that he has the following reserve work in hand:—

(1) A road from Roxoul to Adapoor.
(2) ,, ,, Adapoor to Moolehari.
(3) ,, ,, Bhowanpore to Thalware.
(4) Works on the Segowlee and Nepal road.
(5) ,, ,, Soogao and Bettiah.
(6) Tank at Goomarea and Bella.

The first four, and number six, are distributed over the tract which Mr. Oldham considers gives most ground for anxiety.

The total mileage of the roads is 30 miles, and the tanks would each give work for 3,000 persons at a time. With this provision, Mr. Oldham thinks he would be able to cope with a rush of 50,000 persons for work. This part of the country also will be traversed by the high-level canal, which will be commenced almost immediately, and no further anxiety on the score of work will be felt. Government grain is being supplied now on all the works in this

sub-division. The laborers are paid as a general rule in cash, through inferior native agency at the following rates:—

Adult male	... .	1½ annas.
Female	... .	1 anna.
Children	... .	½ „

On the large work supervised by Mr. Lethbridge, the workmen are paid in kind, and once a week in cash. Besides the number of persons shown in the relief work, Mr. Oldham employs 600 persons in cotton-spinning, weaving, husking, and corn-grinding; all this kind of work, is much liked. The chief difficulty, so far, has been to procure sufficient cotton.

In sub-division No. 2 the rates have been increased for—

	Pice.		Pice.
Men with Kodalies	7 & 8	to	9
„ Baskets	6 & 7	to	8
„ Women	5	to	8
„ Children	4, 3 and 2		

The tanks under the Public Works Department are being excavated by measurement, the rate being Rs. 4 per 1,000 cubic feet. Government grain has been ordered to be sold to the workmen in the relief works in both these sub-divisions. In sub-division No. 3, Mr. Weekes reports that he has not found it necessary to open out any new works; but notwithstanding the harvest, and the mere subsistence allowances paid to the workmen, their numbers are increasing and he thinks that relief works should be provided in each village. Grain is not sold on the works in this sub-division, but will shortly have to be supplied. At present Mr. Weekes, considers that sales of Government grain would check the private importations that he understands are going on. The condition of the laborers, Mr. Weekes says, is pretty fair. The generality of them, however, are thin, but he has heard no complaint yet of food being scarce to buy. The laborers are paid by the day generally,—seven (lohya) pice per man, five per woman, and two per child.

In sub-division No. 4, Mr. Samuells reports that the relief-works are gradually being taken in hand by the Public Works Department. The number of laborers remains the same; they are wonderfully healthy, and in good condition.

The Engineer in charge of Lower Gunduck Embankment reports that he finds no great demand for labor, that all are employed who apply for work. The embankment is completed up to the 7th mile, and the whole has been marked out along the whole length of 17½ miles. The work is carried out chiefly by task-work, but where weakly persons come for work, they are employed as daily laborers, and paid either under the 'daily-pay' or the 'cowri-khep' system. None are turned away. No fresh cases of sickness are reported. The report from the Engineer in charge of the Upper Gunduck Division has not been received.

C.—Transport of Grain.

The contractors continue to work satisfactorily.

D.—Storage of Grain.

The following amounts have, according to latest returns, been stored—

	Mds.
In sub-division No. 1	1,30,432
„ „ 2	44,442
„ „ 3	59,992
„ „ 4	1,21,000
„ „ 5	1,68,000
Upper Gunduck	1,50,000
Allotment 50,000 } Lower Gunduck	not received.

The allotment for sub-divisions No. 4 and 5 has been lately altered by the Commissioner's orders as below:—

No. 4 ... 2,23,000 maunds, including embankment grain.
„ 5 ... 2,50,000 „ „

E.—Advances to Private persons during the Fortnight.

	Rs.
I.—For storage of grain	Nil.
II.— „ assistance to ryots	5,500
III.— „ land improvement	6,634

The total amount expended up to date under these heads has been—

I.—1,32,000
II.—1,39,226
III.— 29,141

F.—Charitable Relief.

Sub-division No. 1, Mr. Oldham reports as follows:—"The following are arrangements under this head: If the local agency is to be made use of to the utmost extent and expense saved, it is quite impossible to have any systematical scheme which will apply to every part of the country. I have had to work by patch-work, modifying my plans according to the local conditions, but nevertheless hope to embrace every village in the sub-division.

"There are two poor-houses with hospitals attached. These are the centres of the two geographical circles which form the sub-divisions, and as a general rule all wandering professional beggars and helpless people of each class are sent to them for relief by cooked food.

"For house-relief this sub-division is apportioned as follows:—

"1*st*.—That at Behas undertaken Mr. R. F. Lethbridge some 100 villages.

"2*nd*.—The eight villages attached to the Soogawn factory undertaken by Mr. W. B. Stansburry.

"3*rd*.—The villages attached to the Tercowleah factory undertaken by Mr. W. F. Gibbon.

"4*th*.—The villages attached to the Moleehari factory undertaken by Mr. A. Edwards.

"5*th*.—That at Dnhusna comprising 62 villages undertaken by two executive members of the local sub-committee aided by two sub-inspectors.

"6*th*.—A grant of seven villages round Karmawawa looked after by the Karmawawa sub-committee, who are also the zemindars.

"7*th*.—The northern group of villages not included in the above.

"8*th*.—The southern group, not so included, looked after by my own paid sub-inspectors.

"The system everywhere is much the same, the general rules being uniform. In each village a punchayet has been constituted for the distribution of relief. In all the first six the village officers are bound under penalties to communicate all cases of distress directly to the gentlemen who have undertaken charge.

"Relief is given in grain and a little money—a month's supply at a time—or tickets granted either on personal inspection or well verified reports. In the case of distant villages the relief is sent to the punchayet. The tickets are registered, checked monthly, and cancelled or re-issued as circumstances require. A month's supply is seldom more than 20 seers and 4 annas cash. Professional beggars are driven to the poor-houses as far as possible.

"In the seventh and eigthth group the sub-inspectors have to be depended on for finding out all cases of distress. They are empowered to grant tickets which are cashed at the nearest golahs at present. I cannot yet define the extent of this jurisdiction, as the lists have not been completed, but do not anticipate that the northern groups will contain more than 30, or the southern more than 20 villages to be looked after.

"The ticket system has not been started yet in the Karmawa groups (No. 5). The zemindars have promised personally to look after the helpless poor in these villages, and I found them actually doing so. They will apply for Government grain when their own resources fail.

"In the town of Moteehari the hospital is supervised by the Civil Surgeon, and all relief is undertaken by and distributed amongst the members of the committee.

"They have in-door relief; house-to-house visitations, on their works light labor gangs, and the poor-house with its establishment for cooked rations.

"The ticket system was first started by Mr. Lethbridge, who has undertaken absolutely the entire charge of Thapa Behas, including not only the villages in farm to his factory, but all within the Thapa limits. The assistance which he renders by so doing, not only in actual work taken off our hands, but by his example, making it so much easier to start the system elsewhere, is invaluable.

"Three sub-committees have been constituted in the north-eastern part of the sub-division, in the whole of which there are no indigo factories. The first is that for Thapa Duhuswan, circle No. 5, composed of eight members who have subscribed Rs. 766, the whole of which has been collected. Of this Rs. 400 was subscribed by Baboo Doorga Persad Singh of Mudhoobunnee and Rs. 25 by Ramdhar, and Ramadhar Shah, partners. Baboo Doorga Prosad has done nothing further than subscribe.

"The remaining members are persons of humble but respectable social standing, village farmers and pattwaries.

"The most prominent have been selected for executive work as treasurers and grain-keepers, and authorised to grant tickets, and they are aided by two subordinates on Rs. 15 a month, who are local men and utilised as inspectors.

"The next is the sub-committee at Narkuttea, composed of ten native members who have subscribed Rs. 710. Of this amount Rs. 150, has been given by one joint proprietor Fotteh Bahadoor, and Rs. 150, by the other, Mussamut Pranputty.

"Owing to faction-feeling this committee cannot be depended on as an executive body, except for the village of Nerkuttea itself.

"The Karmowah sub-committee is composed of the two joint proprietors of the village who administer their own funds.

"At Segowlee itself, Captain Knowles commanding the squadron of the 2nd Bengal Cavalry stationed there, has undertaken to supervise the gangs of relief laborers employed on the cantonment improvement, without any charge for establishment, and by his own sowars.

"At Moteehari, 2,203 persons have been charitably relieved at an expenditure of Rs. 121-13-3. In the two circles 6,161 persons have been relieved under the ticket system, at an expenditure of 142 maunds, 20 seers, and 3 pows of grain, and Rs. 52-6-3 in cash, Rs. 181-2-6 have been paid to the two inspectors and their establishments as salary."

In sub-division No. 2, Mr. Kilby is rapidly completing the arrangements detailed in last report. "The worst portions of the sub-division have been arranged for. Relief is chiefly given at present under the immediate supervision of one of the sub-divisional committee."

Sub-division No. 3.

Mr. Weekes reports—"charitable relief has been given on a regular system, developed after considerable trouble and experience. It was found unadvisable to relieve beggars unsystematically, as they thought the famine, as do most of the natives, a fine opportunity for cheating. After a time, I made it a rule for the putwaree or gomashta of the village in which the applicant lived to identify him, at the same time that I did not refuse relief in the meanwhile where necessary. On identification by the putwaree, the applicant if unable to work, was numbered, registered, with his caste, father's or husband's name, residence, &c., and a corresponding ticket given. I have been within a mile or two of every village in my sub-division, and every morning had pyadahs sent in every direction to call in the putwarees, &c., with the persons in their villages, that they considered unable to work. These were then inspected, refused, or registered after inquiry. At the same time the putwarees were warned of the consequences of not keeping me informed of any serious distress in their villages. As the planters undertook to look after the incapables in their villages, the incapables in my register were gradually made over to them, and afterwards the putwarees of each factory were assembled, instructed, and made to bring in their villagers

in need. To prevent the poor having to travel long distances it was then determined to make over to the putwaree sufficient rice at half seer per adult to support the incapables of their villages as per register and ticket for a certain number of days. This system is working very well. The poor know exactly what they should receive, and the putwarees, I believe, would not cheat under the circumstances. I think it is a system capable of expansion as scarcity increases. I have not thought it wise at present to store grain in the villages, but have contented myself with making arrangements at fixed places for the hire of numerous granaries at present empty, one available in each village." Punchayets to strengthen the system have been formed, and influential residents will be pressed into service.

The charitable relief operations in sub-division No. 4, have already been detailed. Mr. Samuells reports that he has nothing to add, but promised a description of his proceedings in his next narrative.

The following table shows the numbers relieved at the poor-houses:—

Names of Poor-house.	Number of men.	Number of women.	Number of children.	Total.	Number of men on miscellaneous work.	Number of women on miscellaneous work.	Number of children on miscellaneous work.	Total.
Bettiah	47	20	6	73	6	3	5	13
Rutwal	15	80	.....	95	.....	.....	.....	.....
Total ...	62	100	6	168	6	2	5	13

G.—Financial Results of the Fortnight.

Total expenditure from the district and sub-divisional treasuries as shown in the last narrative, full details of which were therein given, Rs. 12,53,004-2-3.

The Ramnuggur sub-divisional report has not yet come to hand; it will be submitted on arrival.

No. 1160F, dated Chumparun, the 24th April 1874.

From—H. KEAN, ESQ., Collector of Champarun,
To—The Offg. Secretary to the Government of Bengal, Statistical Dept.

IN continuation of this office No. 1104F, dated the 22nd April last, I have the honor to forwarded the Ramnuggur narrative for the fortnight ending Saturday the 18th April 1874, from Mr. Howe. It came too late to be incorporated with the district narrative. Mr. Howe explains that he was prevented by illness from despatching it sooner.

Narrative of Scarcity and Relief of the Ramnuggur sub-division, for the fortnight ending Saturday, 18th April 1874.

A.—STATE OF THE COUNTRY.

THE condition of the agricultural classes continues to be very unsatisfactory. In distributing advances we have made searching and systematic inquiries (tuppah by tuppah), and I can therefore speak not from general impressions and summary investigation only, but with the certainty resulting from having the records of a regular census before me. Although this systematic enquiry is at present far from complete, yet the condition of the remainder of the sub-division closely resembles that of the tuppahs in which the census has been taken, and a description of the tuppahs completed, will therefore very nearly apply to the entire sub-division.

The tuppahs of Butsora, Decorar, Chankee, Gopala, Sathee, Bubta, and Bhultur (forming part of the Maharajah of Bettiah's estates) are those in which the condition of the ryots causes most anxiety. In the Rajah of Ramnuggur's ilaqua, very large tuccavee advances have been made with the most beneficial results; and though a good deal remains to be done, the condition of the ryots is far better. In the tuppahs above named, there is a large number of ryots who have nothing, or next to nothing to live upon; but to whom the alternative of going to our roads is like the prospect of the work-house to the respectable poor at home. These live in the greatest distress, and are rapidly, in spite of their prejudice, being driven to our works. One very noticeable fact during the fortnight has been the steady increase in the number of workmen flocking to our roads and tanks. Colonel Boulderson's daily average in the east, where there are not many works, and the attendance has hitherto been small, has increased to about 4,000 a day; and he attributes this entirely "to the fact that the grain-stores of the cultivating classes have become exhausted."

Indeed this is the only way to account for the increase. The laboring class is very small, any reinforcements therefore can only come from the cultivating classes, and nothing but the severest distress would drive the better portion of these to our roads.

This increase has been general throughout the sub-division, and the daily average now amounts to the large number of 17,389. These, then, 1*st*, the rapidly diminishing stores of the cultivating classes, and 2*nd*, the increasing dependence of the people on Government, are the two most significant facts during the present fortnight. The census enquiry also shows, that there are considerable numbers of respectable widows, who in ordinary times depend on their husband's relations, and who are now turned adrift. These cannot work, nor do they (except in a few rare cases) apply for charity, but they are in the greatest distress. It is further proved that some villages have come to the very verge of starvation, while others, and fortunately the majority, can still hold out for sometime. But in all there is a general uneasiness almost amounting to panic, and there is a spreading conviction that beyond a certain time, nothing but help from Government will enable them to hold out.

What is being done to meet these urgent cases, and generally to provide for the Assamee population, will be described under paragraph E.

Sales of Government rice.—Sales of rice to the general public have now been in force since 12th March, and the scarcity of food supplies which pressed so heavily on all classes has therefore ceased. The amount sold from the beginning up to 19th April 1874, is 1,682 maunds, 34 seers, and Rs. 5,770-2 have been realised. After the system of selling wholesale to the trade had been for some time in force, I found that some of the traders took a portion of the rice to Towriah, where they sold it at 9 seers for the rupee. I therefore opened out retail sales at the Ramnuggur golah, but since the Commissioner's visit, I have in accordance with his directions reverted to the old system, taking still further precautions. The great object of sales, however, is to circulate food-grain freely among the people, and as the Commissioner remarked, as long as this object is attained, it does not much matter if a small part finds its way to other markets, and is sold at higher rates. The system now is thus modified. Two well-to-do bunniahs open a retail shop close by our golah, and near my camp, which is very conveniently situated, and enables me to exercise suitable supervision with ease. Ten bunniahs supply the five village bazars which in ordinary times received their supplies from Ramnuggur. These purchase a sufficient quantity on each bazar day, and retail it in the bazars they have selected, and for each of which two are sufficient. By this means there is always one large retail shop at a central point, where the people can buy daily and where abuses are easily checked, while the bazars in the neighbourhood, a circle of about 8 miles round Ramnuggur, are regularly supplied. At Shekerpore, sales have commenced, and also in the west at Bugahu, though there the system has only just been introduced. Finally in the south, at Lowreah, Mr. Samuells has commenced to sell. By this means abuses can hardly spring up, for there is no longer any temptation for people to take rice to Lowreah where

the same rates now prevail, while supervision is more easy. On each of our roads two or three bunniahs are appointed, who purchase wholesale from us, and retail to our coolies, or to any villagers who find it more convenient to purchase in their immediate neighbourhood.

The rates at which rice is sold, have thus been fixed by the Commissioner—11½ seers clean rice wholesale, and 11 retail to the public—13½ (with husk) wholesale, 13 to the public. By this means a readier sale for rice with husk has been obtained; other grains (mokai especially) are still comparatively plentiful in most bazars.

In the eastern circle, grain is selling at, 11 to 12 seers; barley 14 to 16 seers; peas 13 seers. Rice is still sold at the bazars in the east at 9 seers per rupee, but in very small quantities. The general rate of mokai is from 12 to 13 seers throughout the sub-division.

No rain has fallen during the fortnight, nor have there been any grain-thefts or cases of starvation. A considerable amount of suffering has been caused by the increasing number of fires which have taken place. I regret to have to record that a very large proportion of these are not accidental. On this point, I have during the last ten days made special enquiries, and it is the general opinion of the best informed villagers, that these fires are the acts of incendiaries. Till very lately, from the number of *bonâ fide* accidental cases that had occurred, I concluded that the majority were accidental; but I have ascertained *that many more than usual have this year taken place*, and the people themselves attribute them to the action of an evil sprit, who they say "appeared in the year 1873, and has again come among them." This superstition is, I think, very significant. It shows that the people feel the similarity between this year and 1866; that fires are more frequent than in ordinary years, and it partly accounts for the apathy with which they allow whole villages to be destroyed. During the last fortnight some terrible fires have taken place; the greater part of Shikarpore has been desrroyed; several villages close to Ramnuggur have been burnt to the ground, and in hardly any case could the origin of the fire be traced. A great deal of suffering has been the result, which has been met (as far as possible) by special advances under rule F (Committee Rules).

B.—Relief Works.

Form B (herewith submitted) shows the number of people daily working on our roads and tanks. A new work, the tank near Ramnuggur at Myomra, is paid for by a donation from the Rajah, who has subscribed Rs. 1,000 on condition of Government agreeing to pay Rs. 500. This arrangement the Collector has sanctioned, and the work has been lately commenced. The distinction between public works managed by Engineers and those managed by circle officers, is not fully in force as yet. On all our works there is a tolerable outturn, and the most that can be, is exacted. The only works that are really circle works are the tanks at Dhobenee and Songurh, which are almost entirely managed by Mir Tahurken, an influential resident of Tuppah Sathee. But distinction is being kept in view, and plans of village works are being prepared, so that in case there is a rush we shall be ready. Gradually the system will be generally applied, and only those who do a really full day's work will be retained on class I roads. At present we are doing our best to extend the system, and on all works the utmost labor that can be is exacted, and on the whole there is a fair outturn. The condition of the laborers continues to improve. Payments are in cash, but on every road there is a bunniah selling Government rice at fixed rates, and other grains are also sold to the coolies by private dealers, the bunniahs finding sales on these works to be profitable, as the coolies receive daily payments. As soon as some more overseers or sub-overseers who have been promised, arrive, our arrangements will be more complete.

C.

Nil.

D.

The following statement shows the amount of grain at our various golahs:—

Names of golahs.	Stored. M.	S.	C.	Taken out. M.	S.	C.	Balance in Store. M.	S.	C.
Ramnuggur ...	77,491	20	10	7,235	29	4	70,255	13	6
Chankee	7,514	38	8	143	25	0	7,371	13	8
Chumherdesa ..	9,030	0	0	*Nil.*			9,030	0	0
Shikarpore .. } Bhoura .. .. }	Details not received.						12,035	7	0
Hurnatour ..	10,277	22	0	Details not received.					
Bagaha	60,003	0	0	....			....		

During the Commissioner's visit it was determined to increase the allotment from 1,75,000 maunds to 2,50,000 maunds, and storage for this addition is being provided. Owing to the difficulty of protecting so much property, I have, with Commissioner's sanction, taken steps to increase the storage at our present golahs, instead of selecting new sites. The present storage sites appear sufficiently central for purposes of distribution, and steps are being taken to keep the communication between golahs and the principal markets open during the rains.

E.—Advances to private parties (*Tuccavee*).

(1.) Advances to ryots under Rajah of Ramnuggur's security.

8,940 maunds, 28 seers, have been distributed as tuccavee under the Rajah's security, and the amount fixed upon has almost been reached. This advance has been of the greatest benefit to the Assamee population, who without it must, by this time, have been reduced to a state of starvation. A census enquiry (similar to the one described in paragraph A, for the Bettiah estates) is being conduceted with the view of ascertaining exactly the condition of the people in the Rajah's ilaqua, so that no case may remain unprovided for.

(2.) Estates in the Bettiah ilaqua.

Mr. Gibbon's advances in January and December were well-timed, and have hitherto enabled the Assamese population to hold out. But they were necessarily insufficient, and something on a larger scale must at once be undertaken to prevent general distress and starvation among this the largest portion of the population, where food stores are almost entirely exhausted, and who cannot, as a body, come on our works. For this purpose, a scheme has been agreed upon between Mr. Gibbon and myself, which has been approved of by the Commissioner. The principal features of this scheme are these—

Each tuppah is taken separately, and a tehsildar or naib-tehsildar is deputed to make a mouzawary enquiry, which almost partakes of the nature of a census. A brief report of each village is drawn up, and registers are prepared showing lists, 1*st*, of those not requiring advances; 2*nd*, of those requiring advances, together with a column shewing what property they have; 3*rd*, those who work or are able to work on roads, and 4*th* those fit for charitable relief.

The tehsildar divides mouzahs into two clases those (*a*) in which relief is most urgently required, and those (*b*) in which, though required, the urgency is less. The Commissioner has authorised me to make a small advance for a week or ten days in villages coming under class *a*; and has directed me to send copies of all papers to Mr. Gibbon, who has undertaken to provide for all entered in these lists, or to accept an advance from Government on their account.

To enable the enquiry to be more complete, Mr. Gibbon has deputed a tehsildar of his own, who knows the tuppahs well, to co-operate with mine. Any case in which there is a difference of opinion will be referred to the Commissioner, who, however, has authorised me in such cases to make a temporary advance, should the necessity appear urgent.

Under this system two tuppahs have already been completed, and the result shows that the condition of the Assamese is critical. I have made urgent advances in few villages only, but in all the necessity for advances has been conclusively proved. Mr. Gibbon's tehsildar has arrived, and in due course,

and before any very great distress can break out, Mr. Gibbon will, under this scheme, have provided for these tuppahs. A third tuppah is nearly finished, and as soon as the extra tehsildar, who has been deputed to Ramnuggur arrives, I will undertake a fourth. In this way I hope that all cases of urgency will at once be disposed of, and that all the Bettiah Rajah's tuppas will be properly provided for before any severe distress has commenced.

3. *Miscellaneous advances to sub-proprietors.*—Colonel Boulderson, in the eastern circle, has made a few advances in urgent cases on the best security available in jagheer villages, where the necessity appeared great. In tuppahs Butserah and Chankee, where there are some independent proprietors, viz. the zemindars of Burragaon and other well-to-do Birtdars, I am making similar advances, in order as far as possible to give immediate relief, and in cases in which the Rajah cannot be held responsible. These proceedings will be more fully reported upon hereafter. In special cases where the advance is large, a report has been made for sanction.

F.

The arrangements for charitable relief are now complete. We have four circles with eleven sub-circles or groups, in each of which there is a sub-inspector, whose duty it is to test putwarees' returns, visit each village in his group, and report upon its condition. In Butserah there is the sub-committee of Bugaha, each member of which has charge of a certain number of villages. The distribution of charitable relief to those who are utterly unfit to work is thus duly provided for, and the number who now daily receive relief, either in or near their villages through the sub-inspectors, or at centres, *i.e.*, Ramnuggur, Shikerpore, and Bugaha is now 1,932. At these places there is a poor-house, but the organisation is not such as is contemplated in the rules for large towns. Indeed these poor-houses are rather large relief centres. Hospitals and dispensaries are in full working order at each of these places, and the good done, especially at Ramnuggur, where there is much sickness, is great. Light work is exacted from those who are fed at these centres or poor-houses, if they are in a condition to work, but most are cripples, old men, or persons suffering from disease.

Superior officers (tehsildars and naib-tehsildars) who are engaged in the more important duty of enquiring into tuccavee cases, check the proceedings of the sub-inspectors, and Colonel Boulderson and myself, as well as the circle officers in the west (Messrs. Joakim and Moore), take every opportunity also of making inquiries into the correctness of these lists.

During the fortnight much progress has been made in carrying out rule F. Colonel Boulderson writes "I have, under 'rule F' given assistance in several cases which appropriately seemed to come under it. Thus, to a small community of Brahmuns cultivating a small patch of land, I advanced 16 maunds; and to the widow and daughter of a Kyeth, a sharer in a village, I advanced ten maunds, taking in each case what security they could give."

Similarly Colonel Boulderson gave gratuitous relief under rule F to 31 families of laborers on the Bulthur road, where villages had been burnt to the ground. In this case the workmen and their families were reduced to the greatest distress, and I think Colonel Boulderson's action was very beneficial.

The mahlo of the village came forward and doubled the allowance made by Colonel Boulderson (13 maunds), and thus the villagers were enabled to subsist while rebuilding their houses. Had they not received this, they must have starved, as they could not continue to work on the roads, and at the same time rebuild their village and settle again.

In Ramnuggur, also, I have given assistance in several cases where the peoples property was destroyed by fire, by giving petty advances gratuitously.

The Commissioner has also directed attention to "Home Relief," and I am making arrangements to carry this system into effect.

Finally, in tuppa Deorar and Chankee I have made considerable advances under rule F. During the enquiries made into the condition of the cultivating classes, a large number of cases came to notice, which seemed very peculiarly

to come under rule F. To these I have referred in paragraph A of this report, and I will therefore only add that I have opened a register for such cases, and after a summary enquiry, I make a small advance sufficient to enable the recipient to hold out till next season. In two tuppas there are 24 such cases, and the relief afforded has come when it was most needed, for these people are in very great distress; small quantities, 2 to 4 maunds, are given and the headman generally as security for them. Most of these cases are men and women of good family and caste, who have been reduced to poverty, but who cannot work, and who will rather starve than receive charity.

In this way enquiries are made in every tuppa, and as soon as the register is completed similar relief will be afforded.

No. 41F, dated Bankipore, the 15th April 1874.

From—J. F. K. Hewitt, Esq., Deputy Commissioner of Patna,
To—The Offg. Secy. to the Govt. of Bengal, Statistical Department.

I have the honor herewith to forward the following report for the fortnight ending the 11th April.

2. There is not much change in the condition of the people since the last report. The numbers on the relief works are increasing, and have now probably nearly reached their limit, as field work in connection with the gathering in of the rubbee crop has nearly ceased: while the number of persons who have to be superintended by the officers of Government has increased our means of dealing with them, and have more than kept pace with the growing demand for exertion. We may now say that we have the famine fairly under control, and that we have made good progress towards sifting the people, and determining which should be employed on village, and which on road works; also our means for supervising works are now very nearly, if not quite, sufficient to meet all exigencies.

3. In Mudhoobunnee and Durbhunga the numbers that are employed on the road are still very large, and will probably be considerably reduced, and the number on village works correspondingly increased; though, as the road-works in these sub-divisions are very extensive, a large number of persons can always be profitably employed on the roads without much danger of generating epidemics if adequate precautions are taken.

4. The latest returns of the numbers of persons employed on roads and village works, respectively, in each of the six sub-divisions of Tirhoot, are as follows:—

Name of sub-division.	Public Works roads.	Village works.
Mozufferpore	5,079	45,000
Seetamurhee	21,000	29,862
Mudhoobunnee	1,60,000	81,272
Durbhunga	98,807	37,045
Tajpore	1,220	879
Hajeepore	1,926	3,265
Total ...	2,88,032	1,97,323

5. This return shows that the system of village works has been more fully developed in Mozufferpore and Seetamurhee than in Mudhoobunnee and Durbhunga, but it must also be recollected that the officers in charge of the two former sub-divisions have not had to contend with the difficulties which have beset the officers of the two latter, owing to the sudden way in which famine came upon them.

6. The number of persons receiving charitable relief in each of the sub-divisions is as follows:—

Sub-division.	In poor houses.	At their own houses.
Mozufferpore	400	...
Seetamurhee	...	5,300
Mudhoobunnee	585	5,596
Durbhunga	102	10,242
Tajpore	...	6
Hajeepore	...	221
Total ...	1,087	21,365

7. A telegram has just come in reporting that there are 30,000 people receiving charitable relief at Singhia; but I have telegraphed for further particulars, as it seems impossible to believe that there can be this number of persons requiring relief who are incapacitated for working on public or village works by want of strength or by social position.

A telegram has just come from Mr. MacDonell stating that he was on the point of starting for Singhia to make enquiry on the spot.

J. H.

8. From Chumparun details have only been received from two sub-divisions, but these are certainly satisfactory, and show that the distress in that district will never be any thing like so severe as in Tirhoot.

9. The following are the returns from Ramnuggur and Bettiah:—

Relief Works.

Name of Sub-division.	No. on Public Works.	No. on Village Works.
Ramnuggur	8,226	6,458
Bettiah	3,622	6,027
Total ...	11,848	12,485

Details of charitable relief.

Name of Sub-division.	No. in poor-houses.	No. relieved at home.
Ramnuggur	697	1,237
Bettiah	139	2,303
Total ...	836	3,540

10. None of the other forms of relief permitted, such as advances to ryots of grain for subsistence, and of money to buy seed, have been largely resorted to anywhere as yet. The only places where advances of this kind are reported from the districts of Chumparun and Tirhoot, are Ramnuggur and Durbhunga. In the former sub-division, 8,956 maunds of grain had been advanced to ryots, and in the latter about 10,000 maunds had been issued in loans for the purchase of seed. From the other parts of the division there is nothing new to report.

11. The transport of grain during the past fortnight has been going on very much more satisfactorily than hitherto. As usual, Bunkur Ghât shows far the largest outturn of any of the stations on the north bank of the river. During the twelve days ending with the 10th April, the quantity of grain sent off from Bunkur Ghât was 4,18,808 maunds, or an average of 34,317 maunds a day. For the first two days of the fortnight, the 29th and 30th, nothing was despatched from the Ghât, as at that time, owing to the supposition that the 87,094 maunds accumulated at Bunkur on the 23rd March constituted a sufficient reserve, the despatches from Howrah were very short, but even in spite of this drawback, the average daily quantities of grain sent from the ghât during the fortnight were over 29,000 maunds a day, and in addition to these quantities, considerable supplies of fodder, and a large number of kodalees have been sent up to North Tirhoot from Bunkur. The number of kodalees and picks sent from Bunkur, from the 25th March to the 11th April, was 17,627, besides 10,000 which were sent up by carts previously. As all tools received are being sent at once without delay, the demands of the officers in charge of works for tools ought soon to be satisfied.

12. If the present rate of transport from Bunkur can be maintained (and from all that I can see it will only diminish from lack of grain not from want of carts), all the grain to be conveyed from thence ought to be well on its way into the interior by the 1st of June; and as the railway will now supplement the deficiencies of carriage from the other ghâts, there is now little doubt that the whole quantity of grain calculated to be necessary for the wants of the districts north of the Ganges, will be safely housed by the beginning of the rains, unless they should come on very much earlier than usual.

13. In Sarun and Chumparun the allotments are nearly completed; in the former district, by the latest returns 4,31,711 maunds of grain had been received; and in addition to this quantity, the Commissioner sanctioned the purchase by the Collector, on behalf of Government, of 28,000 maunds of grain, which had been originally ordered for the petty estates under the Court of Wards.' It was, however, found, on enquiry, that very little of this grain would really be wanted by the estates, and it was consequently considered better to buy in on behalf of Government, charging the Wards' estates with the quantities they take for the support of their tenants. This 28,000 maunds, added to what has been already received, will make a total amount of 4,59,711 maunds, so that the district has only very little more than 40,000 maunds to receive to complete its allotment.

14. The quantities sent to Chumparun up to the last advices were as follow:—

	Mds.
From Futwa Ghât	7,36,238
From Arrah	44,293
Total ..	7,80,531

15. The quantities of grain sent to Tirhoot up to the latest dates are as follow:—

	Mds.
From Futwa Ghât	10,59,154
From Barh	5,92,872
From Mokameh	34,618
From Monghyr	1,47,686
Total ...	18,34,330

so that there is still more than half the total allotment due to that district; but with Bunkur sending off 2½ lakhs a week, and the Railway 1½ lakhs, more than the whole allotment of 42,00,000 maunds will be on its way to the interior by the 30th of May.

16. During the fortnight fodder has also been received in large quantities; this is almost all being sent on to Barh, and sent on order to Chumpta Ghât,

whence it is taken to the depôts in the interior. The following are the latest returns of fodder received into the division from the North-West:—

	Chooni. Mds.	Cotton seed. Mds.	Oil-cake. Mds.	Gram. Mds.	Bhoosa. Mds.	Kurbee. Mds.
At Futwa Ghât...	722	13,436	4,114	2,000	2,674	236
„ Barh ...	385	8,370	6,623	21,667	4,070-35*s.*	914

17. There have also been considerable quantities sent by boat from Allahabad to Bunkur and Chumpta ghâts, but the complete returns of these despatches have not yet been received. The bhoosa bought by the Collector of Patna is also now beginning to come in, and the quantities received will be reported in the next fortnightly narrative.

18. In order to provide grain for Bunkur at the time when the supplies there begun to run very low, the Commissioner authorised me to buy 10,000 maunds of mixed grain in the bazar; the whole of the grain has been sent across to Bunkur.

19. The grain bought under the contract of the 9th March from Messrs. Ramnirunjun and Company is now coming in satisfactorily. All arrears have now been made up, and the quality of the grain, and of the bags in which it is packed, is unexceptionable.

20. The total actual receipts of grain under this contract at putwa Ghât up to the 11th April was 77,608 bags, containing 1,55,216 maunds, but they had received up to that date railway receipts for 80,627 maunds which have since been received.

21. I subjoin a note by the Commissioner, showing the relief organisation he has ordered from the Mozufferpore sub-division of Tirhoot.

THE prospects of the Sudder Sub-division have not much altered since I was here three months ago. There has been a marked rush to relief works at some places (1,100 people employed in one small tank at Soomeyra I saw, and 600 on another at Gotturdhunpore); altogether over 30,000 come now to the relief works in the sub-division, but though there is a great demand for work, I do not anticipate any great scarcity of grain, and believe distress will be met by multiplying small relief works, without having to give very largely in gratuitous relief.

2. The Sudder Sub-division will now be organised as follows:—Distress is said to be likely to be most severely felt in the east and north-east, and there the assistant to be obtained from planters is less than in the west of the sub-division.

3. Accordingly, in that part of the sub-division, Mr. Worsely has constituted circles at Belsund, Joorkee, Kuttra, Rajkund and in the Sudder; each of these would have on an average from 180 to 200 villages, except the Sudder circle where the facilities of supervision being greater, as many as 500 villages are included in one circle.

4. The establishment for these circles is as follows:—

Belsund circle officer, Sub-Deputy Collector Hurohurnath Gangoolie.

1 assistant, Sunt Sohai.

2 native assistants on Rs. 30 each.

5. The circle has been divided into groups, but group-officers have still to be appointed.

6. Mr. Gordon will lose no time in nominating respectable residents if possible as group-officers, and putting them in communication with selected representatives of *each* village, usually a jeyt ryot or putwaree, who will give in lists of those who cannot work, and to whom gratuitous relief is absolutely necessary, and who will be remunerated for the work done.

7. It must be recollected that the village is the unit, not the group, nor the circle, and our organisation must be strong at the village, or it will be of no use strengthening it as above.

2.—Joorkee.—Circle officers (not appointed). Mr. Spry, one assistant, Gouri Sunker Sohai (local); one sub-assistant (local.)

8. The remarks as to the appointment of group-officers and village representatives, apply to this circle equally with the last.

3.—Kuttra Circle officer, Mr. Wasman; 1st Assistant, Nazir Ali (local); two sub-assistants (local).

The process of grouping is now going on.

4.—Rajkund Circle officer, Mr. Goldney; 1st Assistant, Bind Basini Persad; 2 sub-assistants (local).

Has still to be grouped.

Sudder.—1st, town; a sub-committee under Mr. Richarson to look after charitable relief.

2nd, village circle, Mr. Warde-Jones. 1st Assistant, Mr. Orr; 2nd Assistant, Bolaki Lall; 3 sub-assistants (local).

9. In addition to the above staff, a North-Western Province tehsildar, and a ressaldar and three duffadars of the Central India Horse are employed in different parts of the sub-division in making enquiries, with a view to relief, and a view to advances.

10. As the circles are organised, it will be desirable to distribute these officers, though it will always be well for Mr. Worsely to keep one good officer, such as the tehsildar, at his head-quarters for enquiries wherever necessary.

11. The Sudder circle is so large that I should recommend its being divided into two, the available staff being quite large enough for the western portion of the sub-division. Mr. Worsely proposes a different system of organisation. This part of the district is very thickly studded with factories, so much so that there is not a village which does not fall geographically within the limits of the ilaka of one or other of these factories.

12. The planters have already rendered much assistance, and have offered to do the whole work of relief in this part. The factories are:—

Kanti, with outwork	Regai.
Motepore, with 2 outworks	Morarpore and Chuk Souran.
Sahibgunge, with outwork	Muwoin.
Dooreah, with 2 outworks	Majoulee and Kurumwari.
Saraya, with 2 outworks, Jyntpore	Kewalpoora and Azizpore.

13. Altogether there are six managers and nine assistants, and the number of villages which would come under their organisation is about 700.

14. We propose to give them as establishment, a group-officer to every four villages, generally a respectable resident, whose remuneration will vary, but may be put down at an average of Rs. 10 a month, and the same arrangement in regard to village representatives will hold good here as elsewhere. They prefer this to larger groups, and more highly paid group-officers.

15. The managers of the factories undertake the duty of looking after village works, and supervising charitable relief without remuneration; but we propose that their assistants, on whom the main labor will fall, should receive Rs. 100 a month each, and we allow a writer on Rs. 25 to each Sudder factory.

16. Mr. Worsley keeps the working of this organisation entirely in his own hands, and as I see great advantages in working through the planters, and some difficulty in starting a fresh organisation independent of them, I quite concur in Mr. Worsley's proposal, and appprove of its being carried out.

17. The duties of getting lists of people from each village, of starting and supervising village works, and giving charitable relief, of sending in regular returns of people receiving relief, of the number of people employed are fully understood and accepted by the managers as what they undertake and are responsible for, in consideration of the remuneration given to their assistants, and of the establishment allowed by Government. I have no doubt that they can and will perform this duty better, and with less waste and less imposition than any outside organisation we could establish. The names of the gentlemen are given below—

Kanti	..	Mr. Brown.
	Regai	*Mr. W. Llewhellin.
Motipore	..	Mr. J. Fraser.
	Morarpore	*Mr. Barclay.
	Chark Soura	*Mr. Abbott.
Sahibgunge	..	Mr. J. MacDonald.
	Munain	*Mr. Booth
	one more assistant to be appointed.	
Dooreah	..	Mr. Henry Studd.
	Munjowlie	*Mr. S. Hamilton.
	Kurumwari	*Mr. Robertson.
Saraya	..	Mr. H. Macdonald.
	Kewalpoora	*Mr. Macintosh.
	Azizpore	*Mr. Thomas.
Jyntpore	..	Mr. Abbott.

Those marked with an asterisk will receive the remuneration of Rs. 100 a month.

The total expenditure of this establishment is estimated at Rs. 3,068 a month, or about Rs. 4 a village, but this is exclusive of remuneration to Putwaries, &c.

18. As previously arranged, the grain for the supply of these circles, so far as it is necessary to supply Government grain, will be met from the assignment of 12 lakhs, which Sir Richard Temple has arranged for transmission into Seetamurhee.

19. There are now some 38,000 maunds in the sub-division, and in addition to this 135,000 maunds more will, it is estimated, be required.

20. The Collector will arrange with Colonel MacGregor for stopping this from the supplies estimated for on account of Seetamurhee, and for distributing it to the storage places.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 24th April 1874.

READ—

The fortnightly narratives for the districts of the Bhagulpore division for the period ending the 18th April 1874.

1. *Bhagulpore.*—Supplies are still said to be procurable in the bazars of North Bhagulpore, but at prices which in Soopool reach 9 seers per rupee for common rice. The accounts from Mudhepoora are more hopeful than before; the ryots have had a fair yield of rubbee and cheena, and with the aid of the Government works will now, it is believed, tide over the scarcity till the next bhadoi crop is gathered. In Soopool matters are less promising, and the pressure of scarcity is greater, but even here the sale of Government grain and provision of work will, the local officers trust, enable the people to pull through. The rain which fell in parts of Soopool has done much good. One death is reported to have taken place on the works in that sub-division, the case being that of a man who had come for employment in a weak state in the morning, who died suddenly in the afternoon. Care should be taken to give a meal at once to all persons applying for work in so weakly a state, as directed by Sir George Campbell in his Durbhunga note; another case is noticed in which the death was certainly not attributable to want of available food.

2. The numbers on Government relief works are increasing being 14,343 daily, as against 8,300 last fortnight, but the numbers on Court of Wards' works (19,096) are below those of last fortnight (27,043), which makes the total less, 33,409 as against 35,343; but on the private works of the only two zemindars who have made returns, upwards of 11,000 persons are said to find employment. A large reserve provision of tank-work has been designed to meet any possible demand hereafter; but, as the Collector notes, it is doubtful if there is time before the rains to complete any very important tanks. Grain is sold on the works to the laborers, and 4,357 maunds were thus disposed of in the fortnight. Now that the Bhagulpore allotment of grain has been completed, and 529,605 maunds have been actually stored, payment of wages should be made as much as possible directly in grain. The Collector has ascertained that grain sold to the public at the Mudhepoora golahs was being retailed in Simrahi at a profit. The remedy for this is to open the golahs in Simrahi, as the Collector has done, and to keep a closer watch upon the sales of the moodies employed to retail the Government rice. 3,278 maunds have been sold to the public.

3. The number of persons receiving daily rations of food is 1,143, besides which, a large number are employed in light labor of various kinds making 4,014 in receipt of charitable relief. The circle organisation is now complete. The health of the people has fortunately as yet been good.

4. *Purneah.*—The want of rain is much felt in all parts of this district save the north, where there has been an abundant fall. Supplies are reported to be falling short in Dengrah, and near the sudder station, but Government rice is now offered for sale to the public at all sub-divisions, and is eagerly bought in the southern tracts; 2,700 maunds had been so disposed of up to date. The number of laborers on roads under the Public Works Department was 22,622 against 17,250 last fortnight. The number of laborers on village works is not stated, but it is gathered from Mr. Kemble's remarks under heading F, that they are paid in grain. More precise details should be given in next narrative. The grain allotment of this district has all been delivered, and payment of wages should be made in grain as much as possible. 780 persons are daily receiving charitable relief.

5. *Monghyr.*—Except, perhaps, in the neighbourhood of Bukhtiarpore, the condition of this district appears on the whole satisfactory. The rubbee has been succeeded by a good mohwa crop; supplies are ample; no very great export of rubbee grain having yet commenced; and prices are not so high as in

many other districts. In Bukhtiarpore, however, supplies are short; there was little rubbee, the zemindars are poor, and but for the Government works the laboring population would be in hard case. In Begoo Serai the relief centres are said to be much frequented by people from Tirhoot, on their way to their own homes. Mr. Wilkins should have made it more clear whether these are people going away from Tirhoot, or inhabitants of Tirhoot returning home.

6. A good deal is being done in Monghyr by zemindars and others, either from private funds or from Government advances. The Collector believes that by this means, and with the roads already in hand sufficient labor will be provided for the population. There is, however, in reserve a comprehensive scheme of tank-works. On Government works 4,300 persons are employed, and 1,064 on Court of Wards' and other works. This shows a decrease from last fortnight when the total figures were 8,174. Only 89 maunds of grain have been sold to laborers as yet, out of a total quantity of 6,012 maunds disposed of. Payment of wages should now be made, in part at any rate, in grain.

7. The Collector is of opinion that the Government stores in Bukhtiarpore should be brought up before the rains to 89,000 maunds; but that there would be no need to increase the present allotment of Jumooee sub-division, the only other part apparently requiring much assistance. The Commissioner must consider and report what course he would recommend as regards Jamooee. Supplies for Bukhtiarpore will be forwarded very shortly.

8. It is very satisfactory to observe, that the Collector believes that all the money advanced to zemindars will be properly applied in relieving those ryots who are in want of seed-grain, and that it will all eventually be recovered. The results of the inquiry as to the sufficiency of the supply of seed-grain in Bukhtiarpore should be reported speedily. It is doubtful whether the unhusked Burmah rice would be suitable for sowing here. The Collector should inquire at once where seed-dhan is to be had, if required.

9. The charitable relief arrangements are now in full operation, and 3,661 persons are receiving aid in some shape or other from charitable funds.

10. *Sonthal Pergunnahs.*—This report contains very little information about the present condition of the people. Supplies have failed nowhere; the mohwa crop is excellent. Some pressure is felt in Sultanabad, but relief works are apparently sufficiently numerous, while no charitable relief has yet been given. The average number daily on works under the Public Works Department was 6,427. The numbers in last narrative, and shown in the progress report, are apparently the total of attendances. This should have been made clear in the report. No return is given of the numbers on bund and tank-work. This should be regularly noted, and the Deputy Commissioner should endeavour to make his report more complete in future, by giving statistics of relief of all kinds as accurately as possible.

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 24th April 1874.

Narrative of Scarcity and Relief of the District of Monghyr for the Fortnight ending 18th April 1874.

A.—STATE OF THE COUNTRY.

THERE has been no rain during the fortnight, and I think rain would do more harm than good before the crops now cut and collected in the fields are properly stored. Until the past few days the ryots have been sitting idle, but the recent high west winds have enabled them to winnow the grain, and now it only remains for them to store it.

The district appears to be remarkably free from the summer storms known as nor-westers, but on the first good rainfall the bhadoi sowings will probably commence over nearly one-half of the cultivated area of the district. There is, however, little use in sowing the bhadoi until the season is sufficiently advanced to ensure successive showers, which alone bring the crop to perfection. The early bhadoi sowings, which Mr. Campbell and I directed with considerable energy in February, against the advice of the ryots, came to nothing, except where the land could be constantly irrigated, and our experiment only illustrates the fact that European interference with the approved native methods of agriculture are generally wanting in success. In the neighbourhood of Monghyr and other large towns, where the industrious race of market gardeners called koirees exists, there are considerable fields of Indian-corn, but this, in its unripe state, will only afford a luxury to the rich, and will not to any appreciable extent affect the general supply of food for the district.

Fortunately, the mohwa crop is an excellent one, and south of the Ganges its value can hardly be too highly estimated. It can be eaten either fresh or dried, and it appears to be very wholesome and nourishing. A very considerable amount of barter goes on between the mahajuns and the poorer classes, who exchange mohwa for grain. In the Jamooee sub-division these trees take the place of the mango topes north of the Ganges, and I must have passed twenty thousand of them in a single day's ride. Each tree produces about 5 maunds of fresh fruit, which is reduced to about a hundred-weight on being dried.

Vegetables, fish, and ghee continue cheap, and are largely consumed by the people; many of the ryots, who in years of plenty sell the milk of their cows, say now that they cannot get their price for it, keep it as food for themselves and their families. I have not remarked any signs of famine amongst the cattle; the large grazing grounds of Furkia, and the jungles south of the Ganges, aided by the rubbee straw, keep them in normal condition, but, like their owners, they are an overcrowded degenerate race, multiplied beyond the supply of food.

The accounts of the mango crop vary a good deal; but I am inclined to think, from all I have heard and seen myself, that the crop will be a poor one. With the exception of Bukhtiarpore and its neighbourhood, the markets continue to be well supplied. At Luckee Serai, on Tuesday last, I found almost every kind of grain exposed for sale. The cheapest was the millet known as *chota janera*, selling at 18½ seers per rupee. The shopkeepers said a good deal of this came from Sheikpura, where only a short time ago I found grain being imported largely from Luckee Serai. At Bukhtiarpore Mr. Manson, the Relief Superintendent, reports that hardly any grain is to be got in the bazar, and he seems inclined to think that the only grain procurable shortly will be that which Government is storing there. The gram and Indian-corn, sold somewhat below the market price, certainly found a ready sale, but it remains to be seen whether the dearer rice will be in equal demand.

It has been brought to my notice that pice are hardly to be obtained in any of the bazars in the district, and that copper can only be obtained in exchange for silver at a discount. It is supposed that the coolies on our works who get the pice hoard instead of circulating them. If this explanation is correct, it speaks a good deal, both as regards our rates and the condition of the coolies, who are not only able to pay their way, but to put by money for the rains, when they cannot work.

Mr. Manson and his Assistant Superintendent have been looking after the people within their circle during the fortnight. The little rubbee has now all been cut, and the cheena on the ground, although good, is as a drop in the ocean, and when cut will afford hardly any perceptible relief to the people. The mass of the laboring population there are sitting idle, and, as the zemindars are not nearly so rich or so liberal as those of other distressed parts of the district, the only labor to be got is on the Government works, and on the works carried on by Government money advanced to the zemindars. I have told Mr. Manson he may commence tank-clearing at Bukhtiarpore, Serbella, Chapraun, Untesra, Ethuri, Kutchout, Sitnabad, and Rasulpore, which appear to be the most distressed villages.

It is to be remarked, however, that the coolies hitherto do not work readily at the rate of six pice for men and five pice for women,—rates, considering the cheap price of grain sold at our golas, quite sufficient to keep the people from want. These rates are paid by the relief committee at Monghyr, and attract a large number of both sexes.

In the Begoo Serai sub-division, the great rubbee country, the crops have all been reaped. The rahar, which is extensively grown, was, as I anticipated, very little injured by the January frost. In many instances the yield has been as much as twenty maunds per beegha. Mr. Wilkins, however, thinks that the general outturn in his sub-division is hardly up to the average of former years. Mr. Wilkins has lately been over a good deal of his sub-division, and has found the condition of the people unchanged, and distress at present very limited in extent. He has, however, opened relief works and relief centres where necessary.

He says—"A good many persons from Tirhoot are fed at the relief centres; they come for relief on their way to their own homes, and go off after a day or two. It is a good thing that some such half-way houses are in existence, otherwise the men would die of exhaustion before they could get home."

In Khurrukpore the people are also being well looked after. Mr. Roberts, who has visited a large number of villages during the fortnight, tells me that he has found very little distress, and that he has been able to meet it wherever found. His offer of advances to needy ryots has not yet been much responded to, which is, I think, a very favorable sign.

In the Jamooee sub-division the inspection of village-by-village is in full operation. Messrs. Currie, Money, Wight, Baillie, and their assistants visited 180 villages between the 1st and 12th April. They found the low-caste people arrived from the rubbee harvest only to start again southward to the mohwa country; when this crop is all gathered they will return, and require work until such time when rain falls, and the fields can be sown. These persons, however, when they can manage to keep sober, are not so badly off as is generally supposed; and at many khalians, I have seen a good stack of sheaves, the *kamiya's* share, waiting to be threshed and winnowed after the landlord's share is finished. The zemindars who have taken advances from Government complain that they find some difficulty in getting labor. I think there is much truth in this, and I have little doubt that in no former year has so much money been in hand for giving labor and for the improvement of the estates.

I urged Ally Khan Sahib, the zemindar of Ekara and Pertabpore, to dig out two immense tanks which I found quite dry in January, and Mr. Money, who has lately visited these places, says of Ekara—"On the 7th I visited Ally Khan's tank, on which 800 laborers are at work. It was a very fine sight. The tank, which covers about 10 beeghas, was swarming with laborers, who have their huts of grass and palm leaves all round the edges of the tank. This work gives employment to the people of seven or eight surrounding villages, and I was assured by the zemindari omlah that there were no *purdah-nishin* women in want." Mr. Money gives a similar favorable account of the Pertabpore tank and other works which he has visited.

The people generally are, I think, beginning to feel grateful for the exertions Government is taking to relieve them; but, perhaps, judging from themselves, they do not understand why Government should feed them from disinterested

motives; and Mr. Wight mentions that, in consequence of some report which had preceded him at a certain village, some poor half-starved women threw themselves on the ground, and, striking their heads against it, declared, as though they were pleading for their lives, that they were *not* in want of food; what the rumour was no one could exactly say, but it had something to do with fattening people up and exporting them to a distant island.

In a letter just received from Khurrukpore Mr. Roberts says—"I have to report that there is as yet no fear of real distress in any portion of the estate under my charge. The people who reside to the extreme south and west of this estate are, comparatively with other portions, badly off, not only by reason of the failure of the amun crop, but because they have not had the chance of cultivating rubbee, which yielded a 16-anna crop in the villages bordering on the river Mun, all owing to the bunding of that river. The janera and cheena crops are progressing favorably in these villages, and we expect a 12-anna crop of the former and a full one of the latter.

"Besides the extensive irrigation works in progress here, I have started repairs and bunds in some villages, pending sanction of estimates already submitted to the Superintending Engineer, so that the villagers, who form a greater portion of the agriculturist class, will earn a livelihood with ease.

"Our forest conservancy work is also giving ample work to those who reside in the extreme south of the estate and appear to be badly off.

"Notices were issued in the interior on receipt of your memorandum No. 175 of 25th March last, with reference to tuccavee advances, but none, except a few ryots (Korahs, Beldars, &c., a list of whose names, with a short statement of their circumstances, will be shortly sent to you) of a village called Moorarah, where both the rice and rubbee crops failed, have applied for it. This shews there are very few respectable ryots who need such advances."

B.—Relief Works.

It has not been found necessary to open any new Government relief works in the Jamooe sub-division, but there are large numbers of relief works, chiefly silted-up tanks which require digging out, held in reserve, on which labor can be commenced at any moment. I hope, however, that the zemindari works, aided by our roads in progress, will find sufficient work for all who require it. In the Bukhtiarpore circle, however, where roads cannot be made with advantage, in consequence of the innundations, there was until recently only one Government work going on. The Relief Superintendent is now commencing relief works at Bukhtiarpore, Surbella, Chapraun, and Rusutpore, and four other villages.

At Begoo Serai Mr. Wilkins and his committee are repairing village roads with funds at their disposal. At Khurrukpore, besides the irrigation works, tank-digging and irrigation embankments are going on wherever necessary.

In a letter just received, the Superintending Engineer complains that a number of Beldars have left the Sultangunge and Arjusgunge road, an important work which must be finished by the rains, to work at a tank at Khurrukpore, and he begs they may all be sent back.

At Monghyr the municipality are about to commence digging out an old tank near the railway station, which, from its filthy state, has for years been a perfect nuisance to the surrounding inhabitants. This will be a most useful work, and will employ 500 laborers for two months.

I annex a memorandum showing the number of laborers at work.

C.

During the fortnight the exports by private parties have exceeded the imports. Grain is beginning to move down the line from Burhea, but, as I have remarked on a former occasion, the main body of the rubbee grain will remain in the district until it can be exported by river. Nearly all the carts in the district, attracted by the rates offered, are collected on the river bank, carting off grain o Bhagulpore and Tirhoot. Fortunately, carts for private trade are not much equired just n ow, otherwise the Government monopoly would have interfered

rather seriously with private enterprise; but, under any circumstances, the tendency of a deficiency of carts for private trade is to improve the condition of the district by preventing exportation of rubbee-grain to other places.

D.

It has been determined, and I think very properly, to increase our grain stores at Bukhtiarpore to a total of 89,000 maunds before the rains commence. This part of the district is very inaccessible during the rains, the whole country is flooded, but in parts the water is so shallow and full of stunted eger trees, that boats of any magnitude can only proceed with great trouble and considerable risk.

Throughout the district it is much easier to carry grain during the dry weather than in the rains; the roads are generally kutcha and unbridged, over which carts pass with difficulty. In the rice-country the fields are generally knee-deep in water, and in the rubbee country the ground during the rains, although passable, is very heavy.

I have lately forwarded a colored map to the Commissioner, shewing the mode of carriage all over the district during the rains, and this demonstrates very clearly the difficulty there would be in moving large masses of grain across country during that season of the year.

There is some difficulty in deciding whether we should increase our stores in the Jamooee sub-division or not. On the one side, a very great responsibility is incurred should our present supplies eventually fall short. Unfortunately, very little reliance can be placed on the statements of those to whom we should look for the best information, namely, the mahajuns or ryots; and the zemindars, although generally willing to assist, are, as a rule, unable to make calculations in times of scarcity, like the present, which can be implicitly relied on. After having seen the whole country, and watched the condition of the people for the past six months, I am of opinion that if we provide labor for the people who require it, they will be able until the next general harvest to purchase food with the wages they receive, either in the bazars or at the Government stores already provided. Although the distressed portion of Jamooee is not so accessible during the rains as it is at present, yet, if we should find our stores in the interior falling short (which I do not anticipate), we could fill our extensive golas at Jamooee and Luckee Serai on the railroad, and any person requiring grain might come and purchase it there within a distance of 12 miles from his home. Such a journey would be no very great hardship, and pack-bullocks laden with grain would be able to move supplies in quantities sufficient, I think, to meet any demands at our relief depôts.

E.

The advances to private parties for storage of grain have not been considerable during the fortnight, but an order has been passed to advance Rs. 10,000 to Mr. MacNaughten, of Begum Serai. The advances made to private parties during the fortnight have been chiefly to zemindars for tuccavee advances. The applications from ryots have been considerable, but I am obliged to throw cold water on them, and either give the ryots a letter to the zemindar, where he has got an advance from Government, or I give them a letter to the Relief Superintendent, who will, if necessary, give gratuitous relief.

When a sleek, apparently well-fed, ryot applies for Rs. 50 for the purchase of seed-grain, and offers his hut as security, it is impossible to fortell whether he will not find it convenient to leave his village for a time when the money becomes due, and very few of his neighbours will care to bid for the property which he may have left behind. Mr. Manson, referring to this subject, says—"I have been overwhelmed with applications. Several wanted money to pay their debts with, one to get married with, and one or two have asked for assistance to give a feast at the burial of some relative or other."

Mr. Baillie on the same subject says—"Wherever I have heard ryots speak on this subject disinterestedly, *i.e.*, when they had no object in perverting the truth, they said the mahajun or zemindar would advance very sparingly, but they

seemed to have no doubt of being able to get sufficient seed for the cultivation of the land. In some villages the seed-grain was stored up in the cutcherry, and in others the ryots said they had each a little seed, and in some they said they had eaten all the seed. In this last case they expected to get seed from the mahajuns, or by buying from other ryots."

I have previously remarked that in the most distressed villages, I have seen dhan religiously sealed up, and the people appeared to think I was joking when I inquired if they intended eating it.

Mr. Money also remarks—"Tuccavee advances are being largely applied for down the east end of Umertha, with a view, I am afraid, rather to pay off debts to mahajuns bearing interest from loans without interest, and other purposes, than genuine seed-grain requirements." I am still certainly of opinion that, wherever practicable, advances to ryots should be made through the zemindars, it would be a task of gigantic magnitude to inquire into each individual application, and the result of the investigation would, in most instances, be very unsatisfactory, and every rogue would come forward for his share of the plunder. Besides, there is, I am told, a very generally believed report amongst the ryots, that the promise of repayment is merely nominal, and that the Government never intends to demand the money back again.

Whilst the Superintendents of Circles are liable to be deceived, the landlord, on the other hand, knows very well whom he can trust, and who is a proper subject for an advance; this is illustrated in the Khurrukpore estate, where, as yet, hardly any one has applied to Mr. Roberts for an advance, although he has invited all his needy ryots to do so. At the same time the Superintendents of Circles have been allowed discretion in the matter, and they have been directed to advance small sums if they are satisfied that such a proceeding is really necessary.

I feel confident that the Rs. 32,140 advanced by me to zemindars will be properly applied, and afford relief to most persons who are really in want of seed-grain, and I certainly do not expect a single defaulter when the time for repayment arrives.

Mr. Manson thinks that there is a deficiency in seed-grain around Bukhtiarpore.

He does not, however, state very fully his grounds for such an opinion. I have requested him, with the aid of his assistant, Baboo Bhola Nauth Dutt, the zemindar of Beerowni, to make a careful report on this subject, and, if it really appears necessary, I propose at once to apply to Government that a portion of the consignments now intended for Bukhtiarpore may consist of unhusked rice fit for seed-grain.

F.—Charitable Relief.

I have received voluminous papers from Mr. Currie, the Sub-divisional Relief Officer, showing what has been done by himself and his three subordinates between the 1st and 15th. 180 villages have been visited, the inhabitants inspected, and relief in the shape of small money donations and dry grain has been afforded wherever necessary. Cotton and sabi grass for rope-making have also been dealt out, though not to any very great extent. In 30 villages only it was found necessary to give relief to a total of 128 persons; besides these, 256 were receiving cooked food at the relief centres, making a total of 384 persons.

The result of this visitation in no way alters former views, which have declared the most distressed portion of the Jamooee sub-division to be that part of the country bounded on the north by the Luckee Serai and the Sheikpura road, on the south by the Jamooee and the Secondra road, on the west by the Luckee Serai and Jamooee road, and on the east by the Secondra and Sheikpura road; even here we have not much distress on our hands, and Mr. Campbell, the Assistant Executive Engineer, says he cannot get sufficient laborers to finish his roads without raising his rates. This, Mr. Currie remarks, would be a great mistake, as it would draw labor from the zemindari works. "Speaking generally,"

Mr. Currie adds "there is no serious distress yet. The lower classes of laborers who worked at the rubbee harvest, have, perhaps, three or four days' more food received as wages. The gathering of mohwa is going on, and in every house a few bushels may be seen drying, and I am assured that this fruit alone will support life, after that a good full mango crop, such as appears to be promised, will help much. I have no idea what amount of distress there will be, but I think we shall have some in May, June, and July. Meanwhile, preparations to meet it are going on."

On the above opinion I have to remark that I consider those persons who were employed, and most of the laboring population in the Jamooee sub-division were employed, in the rubbee harvest have more than three or four days' supply of grain; a maund of grain will last a long time in a poor man's house—half a seer is mixed with not less than two seers of mohwa, vegetables, or jungle roots, and affords subsistence to a family. I am afraid that Mr. Currie's estimate of the mango crop is over-stated, and, although the trees all over the district were covered with blossom, it is not until the trees are examined that the present poor crop is discovered.

The February rain, and the abundant mohwa crop have, I consider, materially improved the condition of the people in these parts. The question is, how long this improved condition will continue. Directly the rain falls, the whole arable portion of the district will be ploughed, and the laborers will not work for nothing. Those who have land of their own, but who are badly off, will, I hope, find little difficulty in getting an advance, either from the zemindar, ticcadar, mahajun, or even their opium-cultivating neighbours, amongst whom no less than six lakhs of rupees are now being divided by the Opium Agents. Regarding the purely laboring population, or kamiyas, who are paid in kind, the question to be solved is, have their employers in the rice-country sufficient grain to pay their wages? If not, and they are paid in money, will they be able to purchase food in the bazars? This question, when put to persons who appear well-informed on the subject, produce such conflicting answers that it is very unsafe to draw any fixed conclusion from them. I think, however, that food will be forthcoming for all who can afford to pay for it, and if the bazars fall short, the grain which we have already stored, 1,26,000 maunds, will supply the deficiency. The exportations of rubbee grain will, I hope, not be so extensive as I at first supposed; and, judging from former years, the cultivators who have grain are, I believe, very loth to part with it this year. Many of them have expressed this opinion to me, and have said that any amount of money would not purchase what they intend storing for themselves and families.

Regarding the Bukhtiarpore circle, Mr. Manson says—"The Bukhtiarpore poor-house is now completed, but no one has come to live in it, except an occasional case for one or two days; but there are many applicants for food. In order to get them to come to the building in the morning to be counted, so as to ascertain the amount of grain to be given to the cook, I had to refuse several of those who came late; and in the same way with their tickets, they used to lose them, or rather, I should say, throw them away. The day they come without tickets they only get a fresh ticket for receipt of food from the following day; of course, for these examples, I picked out the women and children who had got fat, any one who really required food received it.

"I have found it necessary to dig a well as the water in the tank is no longer fit for cooking purposes. The native doctor reported his arrival yesterday, and I consulted him regarding hospital accommodation, and gave orders for the building to be commenced.

"One room in the poor-house I have set apart for the men cleaning cotton. I hope a fresh supply of this is being sent me, as indented for, as I have some days since distributed my first supply." (10 maunds have been sent.)

The daily averages at the two poor-houses for the last three weeks are given in the Appendix.

The village inspection commenced on the 17th of March, and since then 66 villages have been visited, and 1,493 persons have received relief. Besides

these, 208 persons have been fed daily by the Rajah Leela Nund Singh in 8 villages within his zemindaree.

The following information is in accordance with Government letter No. 1250 :—

Committees.

Monghyr, Jamooee, and Begoo Serai.

Sub-Committees.

Luckee Serai, Secondra, Sheikpura, and Bukhtiarpore.

(2.) *Special Relief Sub-Divisions opened and officered.*

Jamooee.

(3.) Luckee Serai, Secondra, Sheikpura and Bukhtiarpore.

(4.) Jamalpore ... Native gentlemen connected with railway.
Chumparun ... Mr. H. Christian.
Bassoni ... Mr. J. Christian.
Gurpura ... Mr. Hooley.

(5.) The annexed statement will give the information required :—

Daily average number of persons relieved at the Relief Centres and Poor-houses in the District of Monghyr for the fortnight ending 18th April 1874.

Names of relief centres and poor-houses.	Men.	Women.	Children.	Total.
Monghyr	92	178	140	410
Luckee Serai	40	34	37	111
Chapran	387	190	202	779
Bukhtiarpore	6	3	79	88
Sheikpura	13	29	11	53
Choara	7	20	3	30
Burbigha	24	20	4	48
Jamooee	4	5	1	10
Secondra	Not received.			
Sondhi	11	14	22	47
Begoo Serai	11	14	14	39
Tegrah	19	38	12	69
Birpur	14	11	7	32
Khurrukpore	9	36	1	46
Gungta	3	3	2	8
Bassoni	22	54	66	142
Total ...	662	649	601	1,912

Besides the above, 256 persons have been receiving relief in their villages in the Jamooee sub-division, and 1,493 persons have been receiving similar relief within the Bukhtiarpore circle.

G.—Financial Results of the Fortnight.

		Rs.	A.	P.
Total expenditure, as shown in last narrative ...	.....	3,35,728	1	7
Details of the above.	Rs.	A.	P.	
Placed to credit of Public Works Department ...	86,175	0	0	
On disbursement to officers in charge of transport arrangements	35,149	7	2

E. LOCKWOOD,
Offg. Collector.

No. 199—S.R., dated Bhagulpore, the 21st April, 1874.

From—V. T. TAYLOR, Esq., Collector of Bhagulpore,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit the eleventh fortnightly narrative for this district.

A.—STATE OF THE COUNTRY.

2. The Soopool Sub-Divisional Officer writes: "The bazars as a rule are still tolerably well supplied; the prices quoted are as under:—

	Coarse rice.	Wheat.	Barley.	Murwa.	Gram.
Soopool	9 0	12 8	16 0	13 0	.....
Pertabgunge	10 0	13 0	.....	13 0	.....
Bungaon	10 0	12 0	17 0	12 8	.....
Dugmurra	10 6	11 3	.....	12 12	.....
Bheemnugur	10 8	14 0	.....	15 0	.....

3. The Muddehpoora Officer writes: "The bazars are pretty well supplied with grain, the rates quoted being:—

	Coarse rice.	Wheat.	Barley.	Murwa.	Gram.
Muddehpoora	13	11	.....	14	9
Sour Bazar	11	15	.....	15	.....
Moorligunge	11	15	17	13	.....
Kissengunge	11	11	20	16	12
Sonebursa	11	13	17½	14	13

4. The Banka Officer writes: "The supply of food-grains is easily procurable in every mart in the sub-division, the price of all of these being the same as in the previous fortnightly report, with the exception of barley, which has risen in some places;" the quotations given being:—

	Coarse rice.	Wheat.	Barley.	Murwa.	Gram.	Indian-corn.
Banka	12 8	15 0	20 0	.....	15 0	15 0
Umurpore	12 8	15 0	20 8	.....	16 8	16 0
Belhur	11 8	15 0	18 0	.....	15 0	13 0

5. At the head-quarters but little alteration is shown, viz.—

Coarse rice	11 6
Wheat	14 8
Gram	17 11
Indian-corn	16 6

6. The mowah has turned out far better than the crop of ordinary years, and though the mango crop is reported as very good, and average in some places, in others it has unfortunately been much injured, and will yield but little.

7. The general accounts from Muddehpoora are altogether more hopeful, though ryots are said not to have very much more grain in store; the zemindars are said to be "using their stocks carefully," and mahajuns, as a rule, not lending except to safe persons. The irrigated cheena has been cut, and has proved a very good crop, so much so, that ryots themselves admit those who were fortunate enough, or wise enough to sow it this year, are "in comfort;" the low land paddy and moong which have already been extensively sown, have "germinated well;" according to some persons they require rain, according to others they do not yet. The mango crop is still looking well; some persons are really beginning to feel pressure, and these are at once relieved. The diaries of the Bhowanipore Circle Officer show that a large majority of the people in the villages thoroughly visited are in good condition and hopeful.

8. Mr. Alexander Christian, of the Patterghât Factory, in the Kamp Circle, has written to me to the effect that "in these parts on the whole the people have not experienced any real distress, and the possibility of it has in a great measure been precluded by the opening of relief works all over the country; that the yield of the rubbee crop has generally been above the average, and will go far to feed the people for some time, which, with the purchase of Government rice, will enable them to tide over the scarcity till the bhadoi harvest is gathered." I trust that the distress in the Muddehpoora sub-division, which must increase in May, June, and July, will be met without much difficulty by the Government officers.

9. Of Soopool, I cannot speak quite so hopefully; now the rubbee harvest is over, the number of our works show that great scarcity does exist, though there will, I am of opinion, be ample work (to be referred to hereafter) for all who require it; a part of the Ekar Circle, a small portion of the Soopool Circle, and a considerable portion of the Nareedeegur Circle being the worst off.

10. There have been luckily two falls of rain, on the 7th and night of 14th, in the Simrahi circle; on the latter date about 1½ inches, extending over a larger area than the fall of the 7th. The weather is said to have been threatening at Soopool, but without rain. Both storms seem to have come south from the Nepal hills, and have been of very great benefit; sowings have already been largely carried on. Rain is undoubtedly required for the whole of the Soopool sub-division, and would greatly benefit the Muddehpoora sub-division also. In Chye it would be better if rain held off a little, as a good deal of the rubbee is still exposed and not safely housed; before the end of the month, however, general rain would be most beneficial throughout the district, as well for sowings already made as for cultivating operations for the bhadoi crops, though these latter even now are said to be forward.

11. The Soopool Sub-Divisional Officer reports—"During the past fortnight I have been moving in all directions over the sub-division, and though I have seen a large number of miserable emaciated objects among the lowest classes, still I think the condition of the people generally is surprisingly good; our relief operations are, however, in full swing, and, with the liberal allowance of works recently sanctioned in all directions, our golas open for sale to the public and to the laborers on the works, I feel tolerably confident that we shall pull through this season of distress with very satisfactory results." But the condition of the people generally is far worse in Muddehpoora, and the anxiety and work entailed on all is consequently far greater; all that can be done will be done.

12. The death of one man is reported by Mr. Smith, which he says certainly looks like a case of starvation; it appears that the man, who was in a weak state, came to work on the road now under construction between Moheshi and Nohatta; he was at once employed, and in the afternoon he suddenly died. No one knew where he came from, but probably from Tirhoot, the border of which is about four miles west of where he died. The Simrahi Sub-Divisional Officer reports a death of alleged starvation, but this cannot, I think, be accepted as the cause of death, and the Sub-Divisional Officer says he only mentions it as an instance to show how difficult it is to distinguish death due to starvation from that which might probably be due to disease. He says a man aged about 40 applied at Simrahi for relief; he, however, refused to partake of cooked or uncooked food, as when he came the second day his rice (uncooked) had not been touched. He was offered "choora" (parched rice), which he also refused, saying he wanted money to spend on his holiday, the last day of Choit; this was refused and he died the same afternoon. I only mention this, as there is, I think, a tendency to ascribe every death in these times to starvation, no matter what the age of the person or the disease from which he may be suffering. Considering the numbers of persons employed on our works, and the frightful objects attracted to our poor-houses, I think that the deaths are very remarkably few in number.

13. The following statement shows, as far as is known here, the difference in prices of some of the food-grains now and at the corresponding period of 1866:—

	Rice, 1st sort.		Rice, common.		Murwa.		Indian-corn.		Wheat.	
	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.
	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.
Soopool	...	9 0	...	9 0	...	13 0	...	...	...	12 8
Muddehpoora	...	11 0	...	13 0	...	14 0	...	...	...	11 0
Head-quarters	11 6	10 1	12 0	11 6	...	...	15 2	15 12	12 10	15 2
Banka	...	11 0	12 0	12 8	...	...	18 0	15 0	...	15 0

14. The theft statement for April will be submitted with the next narrative.

B.—Relief Works.

15. I annex a statement showing what has been done under this head during the fortnight, as also one showing the number of persons employed on the Durbhunga Court estates in this district. There is a very general increase in the numbers.

16. To meet any great rush, sites for 21 large tanks have been selected; many of them have been marked out, and orders for commencing three have been issued. One has actually been begun; these, with the roads we have on hand, will give ample work to all who may require it, but I am afraid the working time is far too short to enable any tank to be finished. No one but the able-bodied will be employed upon them, and strict orders have been given that all unable to give a fair day's work for a fair day's wages are to be drafted off in light-labor gangs to the villages to which they may belong, and there to be employed in deepening out existing tanks. There is hardly a village in the north in which a tank of some kind or another does not exist; as soon as rain falls many of these people now working (as they annually do) will gain a livelihood by digging and sowing the fields, and cultivating operations generally.

17. The numbers on the Court of Wards' works are, I am afraid, scarcely reliable, and the matter is under enquiry. The General Manager has been addressed on the subject, and the Naradeegur Circle Officer and the Sub-Divisional Officer ordered to give their best attention and supervision.

18. As regards the works carried on by private individuals or zemindars, the returns are very incomplete, and I am afraid we shall never get correct information on this head. Baboo Hurbullub Narain Singh, two zemindars of Patoori, maliks of Puchgachia, Boorwari, and Moorho, and others, are digging various tanks and making small roads in the Muddehpoora sub-division, giving thereby a good deal of local labor. In Soopool the Buroasi zemindar has sent in a list of his works, according to which he has 25 works of kinds in progress, on which 5,661 persons were employed; "many of these works are executed by rich jeyt ryots under the zemindar, he in some cases advancing the money and in others lending his security to enable them to borrow." On these works, as I fear is the case on all private works, "the rates are low and the wages irregularly paid;" but it is sufficient to know that work is thus found for many by which they are kept from distress. Baboo Hurbullub Narain Singh has submitted his return, showing over 5,500 men, women, and children employed.

19. Payment to all laborers to our relief works is invariably made in cash, but on all the works moodies have been established for the sale of grain drawn from the Government golas, of which 6,450 maunds have been issued from the golas in the Soopool sub-division for this purpose. The returns furnished by the Department Public Works and Mr. Kirkwood show that up to date 4,357 maunds have been sold on our roads during the fortnight.

C.—Transport of Grain.

20. The imports and exports at the Bhagulpore railway station during the fortnight were 9,299 against 4,652 maunds; amongst the former I am glad to notice 3,211 maunds of seed-grain (paddy); 2,771 maunds were rice from Howrah, and 476 maunds of dhal and kalie, 1,749 maunds were Indian-corn and 1,742 wheat from up-country. The exports were, 991 maunds oats, 1,607 maunds wheat, 505 maunds barley, and 718 maunds gram for Howrah; nearly all the rest were Indian-corn for distressed districts up. The returns from the other stations are very insignificant.

21. Private importations are being carried on to a small extent, especially to the Simrahi Circle, and grain in small quantities is being taken to Pertabgunge, and to a smaller extent in Soopool; local importations into Banka sub-division of rubbee crops from the neighbourhood of Sultangunge are fair, but, I am afraid, the actual stocks of grain of all kinds in the hands of either zemindars or ryots are not very large.

D.—Storage of Government Grain.

22. This work has been progressing in a very satisfactory manner, and our full allotment will soon be stored, as will be seen below:—

Muddehpoora Sub-Division.

		Actually stored.	
Muddehpoora	50,000	33,341	
Bhowanipoor	25,000	9,982*	
Kamp	50,000	45,321	
Soneburs a	12,980	12,980	
Patterghât	2,614	2,614	
Byjnathpoor	15,000	19,584	4,584 excess †
Lalpoor	10,000	10,000	filled.
Total ...	1,33,832		

* 15,018. The balance has probably reached, as it left Jugdis Chuck some days ago.

† This may be a mistake, as I understand from Mr. Hennessy Kamp golas had been filled.

Soopool Sub-Division.			
Soopool	1,30,000	10,123	
Chundail	10,000	1,904	
Rutowlee	8,000	6,444	
Hurdee	10,000	7,240	
Nowabakkur	30,000	29,068	
Dugmurra	40,000	29,902	
Roshwar	40,000	39,801	
Nurgo	20,000	20,000 filled.	
Chandpeeper, Bhaptiahi, Burhurrah } Court of Wards ...	12,000 / 12,000 / 6,000	about 30,000	
Peepra	20,000	17,154	
Pertabgunge	30,000	30,000 filled.	
Bhulooa	20,000	20,000 filled.	
Simrahi	40,000	39,311	
Nathpoor	10,000	10,000 filled.	
Bheemnugur	5,000	5,052 52 too much.	
Arjillee Dulgaon	8,000	8,000 filled.	
Ekar	60,000	38,635	
Pachgachia	20,000	2,183	
Semani	20,000	4,806	
Nohatta	10,000	10,250 250 too much.	
Burgaon	50,000	4,500	
Bungaon	30,000	15,377	
Moheshi	10,000	10,000 filled.	
Total ...	5,96,000	3,89,750	
Sudder Sub-Division.			
Permeshurpoor	1,000	1,000	
Banka Sub-Division.			
Dhooria	2,250	2,250	
Kutooria	4,773	4,773	
Total ...		7,023	

23. Mr. Smith has only a few more maunds to put into the golas at Simrahi, Dugmurra, Roshwar, Nowabakkur, Peepra, Hurdee, and Rutowlee, to fill them. All the southern gola balances will be made up, and the golas filled by the contractors. Mr. Smith has sent down 4,000 carts to the contractor, Mr. Hennessy, at Jugdis Chuck, retaining sufficient to complete his own work. The next fortnightly, I hope, will show transport of Government grain almost, if not entirely, finished.

E.—Advances to Private Parties.

24. During the fortnight Rs. 2,100 were advanced to the following persons as loans under the Land Improvement Act XXVI of 1871 :—

Names of persons.	Amount advanced.	Purpose for which advanced.	Name of village where the work will be carried.
	Rs.		
Khub Lall Sahu	500	For excavating tank.	Puroaha.
Rungi Pare	500	Ditto ...	Kundah.
Kunhaia Rai	300	For cleaning tank	Patori.
Lall Deb	200	Ditto ...	Behra.
Nanhu Rai	300	Ditto ...	Ditto.
Nunu Pare	300	Ditto ...	Gandoul.
Total ...	2,100		
Total up to end of fortnight ...	6,450		

Rs. 2,360 were advanced to zemindars for helping their ryots as noted below :—

Names of Zemindars.	Place of residence.	Amount advanced.
		Rs.
Raja Leelanund Sing	Bunailee	9,000
Mr. T. W. Bowers	Enamputtee	5,000
„ M. B. Morrison	Nathpoor	2,000
Baboo Balajeet Singh	Parsorma	1,500
„ Kishore Narain Singh	Ditto	1,500
„ Poorun Chand Deb	Kuthi	1,000
„ Ramgopal Singh	Mangunge	900
„ Gopal Singh and brother	Patchgachia	2,000
„ Prem Narain Singh	Pursahi	700
Total ...	... ...	23,600
Grand Total up to end of fortnight ...	... ...	86,500

Rs. 4,000 was advanced to a zemindar for purchase of food-grain.

F.—Charitable Relief.

25. During the fortnight the Naradeegur Circle Officer has resigned from ill health, but he is still working until his successor arrives, and has promised to (and I have no doubt will very usefully do so) assist him in every way; his successor has left for his post. The Kamp Circle Officer resigned, and left his post without warning, on the ground chiefly that the work expected from him was far heavier than he could conscientiously perform either to his own satisfaction or that of his employers. Luckily, a very good Assistant Superintendent had arrived, who carried on his duties very well and energetically till the new Superintendent joined, which he has done.

26. The following golas have been opened for sales to the public: in the Muddehpoora sub-division at Muddehpoora and Bhowanipore, and in Soopool sub-division at Soopool and Ekar. Their sales have not to date been perfectly reported in the form directed by me, but only Burmah rice is being sold to the public at present, and this is purchased, not only without objection, but in considerable quantities.

27. The effects of the sales at Muddehpoora were reported last fortnight, and the price of rice in the Muddehpoora market has further fallen; the effect

at Soopool, however, was very different, as for some days after the opening of the golas there, the supply of rice in the market was *entirely* stopped, though other food-grains were procurable as usual; the holders of rice have, however, again commenced selling, and at prices slightly lower than those which prevailed previous to the opening of the golas.

28. The rice purchased from the Muddehpoora golas is being sold in several places in the Simrahi Circle; it is, being Burmah uncleaned rice, purchased at the Muddehpoora golas at 15 seers of 80 tolahs weight, and resold in the Simrahi Circle at 13 seers of 64 weight (?). The Sub-Divisional Officer, Baboo Ram Sunker Sen, has personally seen this, and there cannot be any mistake about the rice. This appears to me to show that, whatever care is taken, it is impossible to prevent some abuses of this kind. I do not understand the object of these sales to be other than to enable a person who cannot procure rice elsewhere except at an exorbitant rate to purchase at a fair rate from Government stores, but here we have persons making large profits by the transaction. I have, however, ordered sales to commence from the Simrahi golas; sales have also been ordered from the Semani golas, no bazars being in the neighbourhood. Moodies are engaged to sell near the golas in addition to sales from the golas with a fair margin for profit, and they are bound to sell at a fixed rate; the arrangements sanctioned for this being that the moodies may obtain not more than 100 maunds a day between them, and not more than 6 moodies to draw from any one gola (opened); the moodi gets 2 to 3 per cent. profit, according to the distance his shop is from the gola; these moodies are not allowed to sell more than 8 annas worth to any one person. A separate report on this has been promised by Mr. Kirkwood. Care is being taken to sell off the perishable grains, and at all golas open for sale to the public only the Burmah uncleaned rice is being sold; clean rice and Indian-corn are being sold on works to laborers and by the retail moodies.

29. From the Soopool golas 1,554 maunds have been sold to the public.
From the Ekra golas 887 maunds.
From the Muddehpoora golas 446½. } From 7th to 11th full information
From the Bhowanipore golas 391½. } not received.

30. The average number of persons fed daily at the different relief centres in the Soopool sub-division is as follows:—

Soopool Circle.

Soopool	67
Sookpoor	22
Chundail	13
Buroary	26
Sesowni	13
Total	141

Ekar Circle.

Ekar	30
Pachgachia	60
Murwalla	10
Burgaon	131
Moheshi	127
Koond Berhat	20
Bungaon	25
Natha	80
Total	483

Simrahi Circle.

Simrahi	15
Pertabgunge	29
Nathpore	35
Khubdah	6
Dhurhurra	52
Bhuttaneah	52
Bhulooa	51
Moheshpore	6
Peepra	5
Total	251

Naradeegur Circle.

Dugmurra	51
Deeghia	40
Bhaptiahi	45
Burhara and Chundpeeper not received	...
Total	136

These show a satisfactory falling off, as all but the very worst and diseased class of persons are being relieved by other measures.

32. In Muddehpoora the daily average appears to be—

Muddehpoora	35
Byjnathpore	50
Ghylar	9
Gumhuria	23
Sonebursa	15
	132

This shows a slight increase.

33. The house-to-house relief operations are well in hand, and very forward in the Soopool and Naradeegur Circles generally; a large number of tickets have been issued, and the registers far advanced. I have no doubt that in the next fortnightly fuller details will be forthcoming, but as it is, a great deal of good has been done.

34. The spinning and weaving relief has not as yet made much progress. Mr. Fanshawe reports that the women declined to take the cotton when they found that they were not to get something in *advance* for their work, but some few have made a beginning, and if they become really distressed and in real want, they will doubtless take to it readily enough; the cotton is there, and it is not for want of exertion on the part of the Relief Officers that hitherto the spinning relief has not been successful.

35. At Ekar people are still employed in bringing in fodder in exchange for pice; their numbers are undiminished; a good deal of fodder has been stored here and there, but it does not appear that the carters purchase it or ask even for it, but it is a useful form of relief for those unfit for hard work, even if it be all left on our hands, the transport being so far advanced.

36. The Soopool poor-house has been some time completed, the poor-houses at Kamp, Bhowanipore, and Nowabakkur are nearly so.

37. Native doctors have arrived and been posted to the following circles: Kamp. Bhowanipore, Simrahi, Naradeegur, and Ekar. There are, in addition, the native doctors at Soopool, Muddehpoora, and Sonebursa, all of whom assist. There is also a doctor at Bungaon. Mr. Kirkwood remarks—"We are well off at present for native doctors, though, with the arrangement of their having to visit and revisit every village once a fortnight, they will have their work cut out for them; all rather disgusted at the discomfort, but willing to go through it with a little encouragement." The general health of the people is remarkably good; a few isolated cases of small-pox and cholera reported from the Simrahi Circle only.

38. Mr. Kirkwood further reports he has "visited Muddehpoora, Soopool, Chandpeeper, Nowbakkur, and Bhaptiahi Relief Centres; they all appear well managed; Bhaptiahi wants weeding, and this has been ordered."

39. In Naradeegur Court of Ward's estate, the Court of Wards is going to advance Rs. 20,000 to ryots; all proclamations are completed, and it merely remains to give the money, which Mr. Duff thinks will be done during the next fortnight. 10,000 maunds of seed-grain also are being procured by

the Court of Wards for distribution in Naradeegur; Mr. Duff is also advancing 500 maunds of seed-grain he had in store. The price of seed-grain, where procurable, is now 14 seers the rupee; a supply of seed-grain (quantity not stated) has reached Nathpoor from Julpigoree; this will be taken at once to Soopool and sold there; there is still a cry of want of seed-grain of certain kinds of rice, but as far as I can ascertain there is a certain amount (though said not to be enough) in the hands of zemindars, which they intend distributing when the time arrives, and I hope that it will turn out that there will be really a sufficient supply; it is quite impossible to get at the truth of this subject, though it is having the best attention of all officers.

Number of Committees and Sub-Committees as yet appointed.—District Committee, three Sub-Divisional Committees, and six Circle Sub-Committees have all been appointed.

Number of Special Relief Sub-Divisions opened and officered—1.

Number of regular Relief Circles opened and manned by special officers.—All are now manned; in all six.

Number of Relief Circles opened and managed by planters, zemindars, and other residents.—Part of the Ekar Circle is looked after by Mr. J. Christian.

Number of Work-houses or Centres for the distribution of food and gratuitous relief.—Soopool 28, Muddehpora 5—total 33.

Number of men, women, and children in receipt of gratuitous relief in any shape through the charitable relief organization daily—4,014.

G.—Financial Results of the Fortnight.

Other roads have not yet been commenced.

V. T. TAYLOR,
Collector.

Abstract Statement of Men, Women and Children employed on Raj Durbhunga Works, in the District of Bhagulpore, during the 14 *days ending Saturday, the* 18*th April* 1874.

Total number of persons employed during the 14 days—		
Men	85,052	
Women	73,667	
Children	29,174	
Total ...	187,893	
Mean daily number of persons employed during the 14 days—		
Men	8,615	
Women	7,475	
Children	3,006	
Total ...	19,096	
Number of persons employed on the last of the 14 days—		
Men	7,158	
Women	5,425	
Children	1,526	
Total ...	14,109	

V. T. TAYLOR,
Collector.

No. 1574, dated Purneah, the 20th April 1874.

From—W. KEMBLE, Esq., Magistrate and Collector of Purneah,
To—The Offg. Secretary to the Government of Bengal, Statistical Dept.

I HAVE the honor to submit my narrative for the fortnight ending 18th April.

A.

I have myself visited the Dengrah, Kishengunj and Bahadoorgunj Circles this fortnight.

In the two last-named places I found the supply of grain in the hâts quite equal to the demand, but in Dengrah and in the neighbourhood of the sudder station, I have seen that supplies are falling short, and that purchasers are entirely dependant upon the small consignments of husked rice bought from the cloth merchants in Purneah and taken into the interior by baparis. At Mathour hât on 10th April, I found coarse rice selling at 9 and 10 seers, and new grain at 16 seers. All brought to market was sold; even in the north but little grain is brought for sale by the villagers; the supplies, mostly unhusked rice, are here obtained either from the Julpigoree district, or are smuggled from the Morung. One or two Kishengunj merchants have lately been importing husked rice from Calcutta at Gangee, the largest hât in the north. I found on 15th April that the following prices prevailed:—

Dhan	15 to 16 seers.
Rice	10 to 11 „
Toori	13 „
New grain	12 „
Kalai	11 „
Wheat	9 to 10 „
Cotton	5½ „

I noticed a good quantity of new wheat in the market; the people have never eaten it before; they say they do not know how to cook it and that it disagrees with them. The Relief Officer told me that they in many cases boiled it and ate it like rice or dhall. Mr. Craven reports that prices are higher in the south and west of his sub-division than the north and east; this I found to be the case.

Mr. Rattray at Arrareah reports that the prices throughout his sub-division are about 9 seers the rupee, and that grain was everywhere procurable in small quantities.

The condition of the people is getting worse in Kusba Amour, Dengrah and in the northern parts of the Sudder and the southern parts of Bahadoorgunj and Kishengunj owing to the want of rain. Up in the north there has been an abundant rainfall, even on Friday and Saturday last, when a hot west wind was blowing in the sudder station and the thermometer in some houses was over 100°, reports from the north road described the weather as cool and comfortable after the heavy rain.

The Koosi and Mahanuddi have risen and benefited the country in the south. In order to get water for the cattle, I have directed Relief Officers to have ponds dug in the old beds of rivers; it is no use digging on ground of an ordinary level when even the deepest tanks are nearly dry.

The rice crops which have been sown look well, though rain would benefit them. The cheena and kainee crops are now coming into ear; though fair they are not so good as they promised to be a few weeks ago.

In the extreme south-east the boro rice is looking well at Barsoe; the supply of grain, which has up to the last few days been kept up from Hyatpore and Maldah, fell off very much last hât day. Empty boats came up to take away the toori.

Cases of incendiarism has decreased; but petty thefts of grain are numerous. In order to keep up the supply of grain at the hâts in the centre of the district, and to check the drain upon Julpigoree in the north, I issued orders last week to all my Sub-divisional Officers to commence sales to the public at 10 seers for Bengal, and 12 seers for Burmah rice. Orders have since been received from the Commissioner to reduce the price in the north to 12 and 15 seers. I should have been obliged to do this even had I not been ordered, as Mr. Craven reports that people will not buy at the higher rates, and that in four days in three bazaars near Kissengunj town he only sold 76 Rs. worth. Mr. Rattray at Arrareah says that people are only inclined to buy; he, however, writes from the neighbourhood of the Morung.

On this side of the Mahanuddy and to the south of Kissengunj every seer of grain offered is eagerly purchased. Mr. Wyer at head-quarters has sold to villagers and in a few hâts the total quantity allowed to his circle for sale this month. The total quantity of grain sold is, as far as known, given in the annexed table—

		Mds.	Srs
At	Head-quarters	1,918	0
„	Kissengunj	..	..
„	Arrareah	..	..
„	Bulrampore	782	7
	Total ..	2,700	7

A few deaths have occurred on our works and in our poor-houses, one at Dengrah, two at the Sudder, two at Bahadoorgunj. In every case the deceased were old, whose diseases had no doubt been brought on or accelerated by want before they came on our hands. At Bahadoorgunj the poor-houses are more patronised than in any other parts. Mr. Bertelsen says that many people came to them in a state of destitution; after being fed for a few days go away in improved health, and work on the roads, or take away cotton or jute for spinning.

B.

Mr. Cordner's progress statement is annexed.

It shows a slight increase in numbers over the last fortnight's return. The petty relief works by relief officers have taken away a good many of his laborers, especially the females and the lazy.

Contract and piece-work appear to be coming into favor wonderfully, and the Department Public Works roads in some places attract more laborers than those worked under daily payment system.

Mr. Craven is doing some good work in cleaning out tanks along the road-side between Dengrah and Kissengunj; he is also repairing some roads. I have seen the people on his works; they are all villagers, many Mussulmans who are no doubt very badly off; he pays them from 1½ to ½ a seer of rice a day according to age.

Instructions have been given to reduce the height of the roads under the Department Public Works' officers so as to get them finished as fair-weather roads at all events before the rains set in; this will be finished in every case. Some roads, for instance that part of No. 5 between Dengrah and Kusba Amour, will be finished as estimated, as will also the Bulrampore and Barsoe road.

The work on the Kissengunj roads has on the whole been very judiciously laid out, and will, I hope, suit our requirements exactly.

The average daily number of persons on the Department Public Works' works by the last return is 18,364

On	Kishengunge relief works	1,270
,,	Arrareah	2,580
,,	Sudder and Dengrah	408
	Total ..	22,622

These figures do not include laborers on numerous village works.

At Kissengunj no women appear.

At Budwah grain is now so plentiful in the local markets that laborers refuse to buy Government grain at 10 seers. The largest quantity of grain sold was at the Dengrah and Kusbah Amour road, 1,538 maunds.

PURNEAH DISTRICT.

Progress Report of Famine Relief Works for the week ending Saturday, the 11th April 1874.

Names of roads.	Progress in marking out relief works.	Progress in opening works.	No. of laborers thereon.	Supply of food thereat.	Condition of laborers and general features of the country.	Mode of payment.	Rate of wages.	Arrangements for tools.	Disbursement during the week.
									Rs. A. P.
No. 1, Purneah and Kolasee road.	The whole line from Purneah to Kholgama has been laid out.	Two parties started	2,161	Government stores have been opened.	No distress visible; condition of laborers generally good.	The mode of paying laborers in the whole of this district is now as follows: Laborers working by daily labor receive their pay every day. Those working by contract receive the full value of work done by them as each tank or side cutting is completed. Where a tank is so large that it cannot be completed in a couple of days, the gang at work on it gets an advance for the amount of work done whenever it is required, and the balance is handed over as soon as the work is finished. The laborers are perfectly satisfied with this arrangement.	The contract rates are as follow: for class No. 1, ordinary earth-work in banks up to 5 ft. in height, at 3 as. per 100 c. ft. Laborers working by daily labor receive their pay every day. Those working by contract receive the full value of work done by them as each tank or side cutting is completed. Where a tank is so large that it cannot be completed in a couple of days, the gang at work on it gets an advance for the amount of work done whenever it is required, and the balance is handed over as soon as the work is finished. The laborers are perfectly satisfied with this arrangement. Earth-work in hard ground banks up to 5 ft., 4 as. per 100 c. ft. Ditto in banks above 5 ft., 4½ as. In exceptionally hard ground rates up to 6 as. may be granted at the discretion of Executive Engineer. The task-work rates for class II, division A, are as follow— Men ... 2½. 2 0 Women ... ,, 1 4 0 Children ... ,, 1 0 In order to earn the above rates, each man must excavate 50 c. ft. in ordinary ground for banks up to 5 ft., and 45 c. ft. in banks above that height. In hard soil a man must do 40 c. ft. in bank up to 5 ft., and 35 c. ft. in bank above that height. In the case of holders, Khondaits, who work with their households, at contract rates in class I, it is very difficult to lay down a task, as in most cases they refuse to carry earth; we have therefore but few women in class IIA. In laying down each man's task, I have been guided by the fact that a non-professional laborer, after he has been at work for some time, can earn from 2 as. to 3 as. under our present contract rates by working really hard. It may be observed that the rates per 100 c. ft. for task-work is in excess of that for contract; but then it must be remembered that a man can never earn more than 2 as. as long as he elects to do task-work, and he can at any time join the contract gangs, where 2 reals for work he may get up to 3 as. a day.	Every effort has been made to induce the laborers to bring their own tools, but it is to be regretted that this has not been attended with any very great success, and especially since we began to issue large quantities of Government tools to each of the works. When the works were first started but very few Government tools were issued, and most of the laborers who came to our work brought their own. It was feared, however, that villagers were beginning to think that it was no use applying for work unless they brought kodals, so that after a consultation with the Magistrate, tools were issued to each work, and now, as a rule, the laborers are supplied with Government tools. These remarks only apply to the unprofessional laborers, as the others as a rule have their own tools and bring them to the work.	320 2 3
No. 2, Nathpore to Atwaree.	The whole road, 80 miles in length, has been laid out, 65 miles of it having been levelled and surveyed	6 parties started ...	40,645	200 maunds of Government rice sold to laborers.	People are increasing on the work, but they all wish for work close to their homes, and very few will work more than 5 miles away.				4,935 0 0
No. 3, Kissengunj to Titalya.	40 miles of old Ganges and Jogidiha road laid out, and estimate submitted.	3 parties at work ...	3,941	99 maunds 34 seers sold; Government grain is being sold.	The distress about here seems to be on the increase, as a large number of people are flocking in from the south. The rubbee crop is very scanty, as the country is chiefly a rice producing one.				552 12 7
No. 4, Kissengunj to Naikmurd.	Whole line laid out. Estimate submitted for sanction.	2 parties at work ...	3,340	69 maunds 20 seers sold during the week.	The number of laborers seeking relief through road-works is increasing, and work is eagerly demanded: contract and task-work in force.				451 2 9
No. 5, Dengrah Ghat to Turkeli.	All marked out and levelled.	4 parties started ...	29,156	665 maunds sold to laborers.	The people are decreasing, owing to the general introduction of the contract and task-work system. The condition of the laborers is generally good.				2,622 12 0
No. 6, Dengra Ghat to Bhopla.	All marked out and levelled.	3 parties at work ...	6,329	40 maunds of Government grain sold to laborers.	The condition of the laborers is generally satisfactory. No cases of distress yet visible. The rubbee crop has been cut and gathered.				861 0 6
No. 7, Bulrampore and Tarabaree.	All marked out, levelled, and surveyed.	4 parties at work ...	16,119	Government grain is sold to the laborers.	People when they first come to work are generally in an emaciated condition, but rapidly improve: distress seems to be very prevalent.				2,069 10 10
No. 8, Maldah and Hurinkhorie road.	Line laid out and estimate submitted for sanction.	Work can be commenced no sooner it is considered advisable to do so.	101,711

W. FERNIE,
For Executive Engineer, Purneah District.

C.

Mr. Mulock has this week made over charge of transport and grain duties to Mr. E. B. Baker.

The transport of our grain from Caragolah has now been nearly finished; the returns on the 18th show that 5,69,584 maunds had been carted away; on the 19th and 20th 12,000 and 16,000 maunds left, and there were 14,000 maunds remaining in store, and more was coming in by boat from Colgong; this makes a total of 6,11,584 maunds. In one or two days the full allotment of 6½ lakhs will have been disposed of.

The rates of cart hire have been reduced by $\frac{1}{6}$th; we get as many carts as we require, and I am arranging to supply the Commissioner of Cooch Behar with carriage to take grain-seed to Nathpore.

D.

The minor golahs in the interior are nearly all completed. I am arranging in many cases with village putwarees and others to take charge of small quantities of Government grain in their golahs for which they have no use at present; many, especially in the Sudder and Dengrah circles, have consented to do this; some relief officers have urged that this plan is open to objection owing to the great risk of loss by fire, but as the quantities in each village will be small, I do not think the risk should be allowed to weigh against the manifest gain in having such village stores ready. Of course these will only be supplementary to the minor golahs which have been settled as below:—

SUDDER CIRCLE ...
(1) Atgoa.
(2) Sudbeli.
(3) Ekumbah.
(4) Bishenpore.
(5) Jelalgurh.
(6) Kusbah.
(7) Bujgowun.
(8) Mujgawun.
(9) Sadelpore.
(10) Mathour.
(11) Milgunge.
(12) Potilwa.

KUSBAH AMOUR ...
(1) Bailgachi.
(2) Dogurriah.
(3) Bussutpore.
(4) Arrareah.
(5) Hurna.
(6) Luchnaria.
(7) Mirzapore.
(8) Nanandea.
(9) Palankaf.
(10) Salta.

KUDBAH ...
(1) Chandpore.
(2) Beni Russoolpore.
(3) Khursail, besides four Government golahs, Kudbah, Azimgunge, Saifgunge, Hurrinkhori or Mynamgore.

DENGRAH ...
(1) Moweea.
(2) Talbur.
(3) Bagle.
(4) Bansbareea.
(5) Bailgachi.
(6) Ganjhur.
(7) Cheeramah.
(8) Saheepore, besides three Government golahs, Dengrah, Kanharia, Raneegunge.

BULRAMPOPE CIRCLE ...
(1) Belwadangi.
(2) Ultapore.
(3) Maloar.
(4) Gopalpore, besides three Government golahs, Bulrampore, Roodail, Barsoe.

ARRAREAH	(1) Dorai. (2) Rampore. (3) Jahanpore. (4) Mirzapore. (5) Lallpore. (6) Chilhania. (7) Palasi. (8) Burdaha. (9) Madhulhatta. (10) Dholbaja, besides Government golahs at Chakai, Toorkeli, Materia, and Koorsakatta.
BAHADOORGUNJ ...	(1) Punas. (2) Gangee. (3) Toolsia. (4) Suriya. (5) Digulbank, besides Government golahs at Kooti, Bahadoorgunj, Powakhali, Bibigunj.
KISHENGUNGE	Assuraghur. Sanavar. Chakalia, besides Government golahs at Kissengunge, Gowalpokhur, Kaleeagunj, Kurkhuree.

It is found that carriage is easily procurable to these golahs, and I have directed that poneys and bullocks should be used at once, so that we may have the working of them organized before the rains, when they can be largely used in distributing food in the villages.

I intend, if possible, to get boats to be used at some of the larger ghâts as floating depôts in the rains, and in these some part of extra 1½ lakhs of maunds which are coming by river might be stored and distributed by means of smaller boats.

Lieutenant Gaselee is now making inquiries into the river routes, and has proposed to me to store this grain at Barsoe, Dengrah, Kusbah Amour, and Raneegunge. A separate report on this subject will be submitted shortly.

E.

The only advances to traders made this fortnight were —

Rupees 1,000 to Juksoo Lall.
„ 2,000 to Mr. R. S. Pyne.
„ 500 to Bhyroo Mundul.

I have already written in favor of the cloth merchants and others of Purneah who have taken advances. These men have done more than any other class to keep up the supply of grain in the district.

The sums advanced to zemindars and others are—

Rupees 200 to Chunder Mohun Thakoor.
„ 300 to Hurday Nath Dass.
„ 250 to Fuddun Lall.
„ 1,000 to Mr. R. S. Pyne.

F.

The charitable relief operations are now in full working order. It is found by Mr. Wyer, the relief officer, that many persons who decline to accept charitable relief gladly purchase or take a loan of Government rice.

Mr. Wyer's report was submitted on Saturday. The circles of villages to be attached to each minor golah have been settled in the Sudder, Dengrah and Kusbah Amour. We can in almost all cases get a putwaree or some such person to look after the work. Each group in these circles contains from 16 to 20 villages. Mr. Bertelson at Bahadoorgunj has made himself thoroughly well acquainted with his charge, and when I visited him last week, was teaching his young assistant his duties in a thoroughly practical useful manner. These assistants from Hooghly and Patna have arrived and have set to work earnestly. I am sorry to state that one relief officer, Captain James, has felt it his duty to resign, as the work is entirely new to him and he cannot perform it in the way in which he considers it ought to be done. It has been arranged that Mr. Meeklejohn shall take charge of his circle, Bulrampore, and that Mr. Wyer shall have charge of the Bulrampore Sub-division as well as his own. I believe that this arrangement will facilitate business. The average daily number of persons who, according to the returns, are in receipt of charitable relief, is 780; this does not include an average of 162 relieved in four places by Baboo Ramchand Setye, Agent for Rai Lutchmeput Sing, nor does it, I believe, include all the persons relieved at Kissengunj. The numbers on the roads and tanks worked by villagers cannot be given, but they are large.

The general system which I have introduced for payment is by grain 1½ seers a day per man; this is that which I find gives the greatest satisfaction, and is most easily worked, and no one who has seen the people coming to work could say that there was no need for relief.

Had there been no works opened and no grain distributed, the distress would have been terrible.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

The expenditure reported last fortnight amounted to Rs. 4,25,595-14-19 + 1,06,737-13-4 = 5,32,333-12-1.

The details are as follow:—

	Rs. A. P.	Rs. A. P.
Village road	9,971 12 0	
District Engineer	1,00,000 0 0	
To planters and others for district road repairs ...	7,700 2 0	
Purchase of tools and plants	5,342 0 6	
Transport of grain	3,05,476 7 0	
Construction of golahs	19,490 1 6	
Advance to residents for purchase of grain ...	63,725 0 0	
Advance to zemindars to assist their ryots in the purchase of seeds	14,950 0 0	
Advance to Lieutenant Coles on account of pay ...	50 0 0	
Office establishment	593 13 5	
Advance for purchase of fodder	2,014 2 0	
Advance for clearing cart tracks	1,500 0 0	
Office contingencies	870 12 1	
Golah establishment	649 9 7	
		5,32,333 12 1

No. 44—S.R., dated Doomka, the 21st April 1874.

From—J. BOXWELL, ESQ., Offg. Deputy Commissioner, Sonthal Pergunnahs,
To—The Secretary to the Government of Bengal, Relief Department.

I HAVE the honor to submit a narrative for the fortnight ending the 18th April 1874.

2. Though this is Tuesday, the 21st, I have not got the Godda and Rajmehal narratives.

A.—STATE OF THE COUNTRY.

1. Supplies have failed nowhere. In Manihari, the only place where they were likely to fail, rice is sold from Government golas. It is impossible to say whether, if rice had not been imported by Government, it would only have been very dear in Manihari by this time, or unobtainable at any price in sufficient quantities.

2. I append an extract from the price-current :—

MARKET.	Wheat.	Common rice.	Bajra.	Maize.	Gram.
	Seers.	Seers.	Seers.	Seers.	Seers.
Doomka	13	13	16	16	13
Katikund	...	12	18	18	...
Noni	12	10	...	14¼	12
Nalla	14	13½	...	...	12
Godda	12	10	...	15½	16½
Barkop	15	12½	16	16	17½
Rajmehal	17	12	17	17	16
Sahebgunge	16	13	20	16	16
Barhait	16	11	16	17	...

The cheapest rice reported is 13½ seers of rice at Nalla. The cheapest food is 22 seers of barley at Rajmehal.

3. I have to correct a statement made in my last narrative. Instead of 6,000 maunds of rice stored in one mofussil cutcherry by the Raja of Maheshpore, there are only 1,700 and odd maunds.

4. There has been no rain anywhere. The mohwa crop is excellent all over the district. Trees are very plentiful in Hendua, Belpatta, the Daman, the west of Sultanabad, and parts of Deogurh; they are scarce in East Sultanabad and in North Godda, away from the hills. The average yield per tree is said to be about 20 seers; large trees give 60 seers, and here and there one gives two maunds. Many villages have 300 to 500 trees. Women and children are largely employed in gathering the flowers. The mango crop promises well in Rajmehal, badly everywhere else.

Hail and fog in the beginning of February, and hail a fortnight ago in Sultanabad, did much mischief.

Kend trees are late and do not look well. In Deogurh sugarcane is being watered. Murwa has been sown, and is coming up well; it is hoped that it will ripen in July. In Godda millet wants rain badly. Wheat, barley, and rahar have been harvested. The quantity sown was small. In Rajmehal boro dhan is doing well. In Doomka there is no rubbee worth speaking of.

I have no cases of starvation or misery to report; grain thefts are not increasing. I can deal with the condition of the people best in connection with special tracts.

The lands of the district may be divided into three classes, (1) the flat country, (2) the rolling country, (3) the hills. As a general rule, wherever the country is flattest there rice beats out other crops, Hindus congregate, population increases, each square mile depends more on its own rainfall, and bad times are most felt. In the hills rice is grown least, there is the greatest variety of crops, both trees and annuals, the population is thin, water is most plentiful, and most easily stored. The rolling country is intermediate in almost every particular.

The flat country is a narrow strip, almost continuous. It begins about Godda and, running from left to right, follows the boundary of the district to Nalla, 12 miles from Maijam, on the chord-line. It is about 170 miles long, and for most of its length lies close about the loop-line. It includes the pergunnahs of Burkop, Manihari, the Rajmehal low-lands by the Ganges, Ambar, Sultanabad, Dari Maleshwar, Muhammadabad, and a great deal of Kundahit, with the Burhait Valley in the Rajmehal Daman. In this region are all our worst tracts, and most of our relief works.

I believe the people of Sultanabad are beginning to feel the pressure of want. They are very careful about economising their grain. The Hindus in Sonthal villages, and the Sonthals in the plains are the worst off. Many of the people who ought to be pretty well off break their fast about 9 o'clock in the morning with "mar," a kind of rice broth, eat a meal of mohwa flowers at noon, and have a scanty supper of boiled rice at night.

Mr. Rowland came back yesterday from Kundahit, where he had been holding inquiries under the Land Improvement Rules. He reports that cholera has come in from the south, and that many deaths have occurred. The native doctor went there last night. The village headmen are giving a good deal of work on tanks. The country is very badly off for water. The cultivation is described as scant, and the villages small and far between. The hill country stretches continuously for 100 miles from Sahebgunge to the Nowbil river, 15 miles south-west of Doomka; where it is broadest it contains the Burhait valley, which I have classed as flat. The hills are inhabited almost exclusively by Sonthals and Paharias. Bengalis and up-country men congregate in the Daman bazars. I consider the hills safe.

The rolling country is quite as extensive as the hills and flat country together. It includes all Deogurh, Pabbia, part of Kundahit, Hendua, South Godda, and Belpatta, outside the hills. This region had tolerably good crops, and is, I consider, out of danger.

B.—RELIEF WORKS.

Besides the works shown in the progress return, the sub-divisional officers of Godda and Rajmehal, and Mr. Barresen, Missionary of Benagarhia, are carrying on work on bunds and tanks, new and old.

A new road, from Maheshpore to Doomka, through Sultanabad, has been projected by Mr. Wood. Work has been begun on it, and an Assistant Engineer is starting from Doomka to lay it out. Mr. Wood had laid out the first five miles from Maheshpore over an excellent line.

Mr. Wilmot is making and mending a number of very large bunds in estates under the Court of Wards, and giving work where it was a good deal wanted.

I have sketched a new road from Doomka to Mallarpore Railway Station on the loop-line. It will save ten miles of distance and the crossing of the Shore, about the worst river in the district, and will give work in Dari Malleshwar. It is the next on the list for the District Engineer to lay out.

C.—TRANSPORT.

I have nothing of importance to say about transport; our distances are short and our carriage sufficient.

D.—STORAGE OF GRAIN.

In addition to the places mentioned in the last narrative, Salimpore and Narayangarh, in Sultanabad, have been chosen for storage. Golas have been constructed at Barhait and Bario in Rajmehal, and storage-room has been provided at Doee and Simra in Godda, and at Patna, Taljhari, and Sahebgunge, in Rajmehal.

Works are probably much more advanced in Godda and Rajmehal than I have positive knowledge of. Goladars have been appointed at all golas, and sales have begun at Taljhari and Barhait, and have been going on for some time at Doee.

On the 15th instant there were in store—

At Patna	...	...	...	438½ bags.
„ Barhait	...	...	...	2,247 „
„ Taljhari	...	...	...	1,410 „
„ Bario	...	...	...	1,212 „

The Godda return has not been received.

E.—Advances to Private Persons.

I have made no advances for purchase or storage of grain, nor to municipalities for any purpose. The only advance for land improvement completed, has been Rs. 1,000 to the zemindar of Belpatta for a bund and a tank. Our want of officers tells very much against us in this respect. I have had very many applications for advances from ryots, but have been greatly delayed from having no one to make any inquiries. It is a common practice to ask for an advance, simply to make or strengthen a little to the land offered as security. Zemindars are very slow and I believe only half in earnest in asking for loans.

F.—Charitable Relief.

Names for a relief committee have been selected at Rajmehal.

G.—Financial Results.

I submit on a separate sheet accounts down to the end of March. Much the heaviest expenditure on any one work has been on the Godda and Barahat road under Mr. Grant. The last approximate account reached Rs. 13,000. None of our heavy expenditure began before the end of February, and a great part of the accounts since then have not been adjusted. I have advanced Mr. Barresen, of Benagarhia, Rs. 3,500 for works in his neighbourhood. He has accounted for the expenditure of Rs. 990 on two works. This sum and the Godda unadjusted Rs. 13,000 do not appear in the statement. The grand total taken from the treasuries for works in the district will therefore have passed Rs. 30,000 up to date.

Statement of amalgamated District Road Works in the Sonthal Pergunnahs under progress from the 1st December 1873 to 31st March 1874.

SONTHAL PERGUNNAHS DISTRICT.

Progress report of Famine Relief Works for the week ending Saturday the 18th April 1874.

Name of work.	Progress in marking out relief works.	Progress in opening relief works.	Number of laborers thereon.	Supply of food thereat.	Condition of the laborers and the general features of the country.	Mode of payment.	Rate of wages.	Arrangement of tools.	Disbursement during the week.	REMARKS.
									Rs. A. P.	
No. 1, Doomka to Jamtarah road.	Estimate being prepared; surveying and levelling completed.	Works opened on the 10th, 15th, 20th, 25th, 27th, 30th, and 40th miles.	CLASS I. Men ... ...2,128 Women ... 508 Children ... 268	Although there is no supply of rice from Government, still arrangements have been made in places with private moodies for supply of rice on the sites of works. Hauts are close also. Reaping of mohwa fruits is almost over. Supply of 1,000 maunds of rice for the present is requested for keeping rice-dealers or mohajuns from increasing the rate of rice. On inquiry, it is learnt that the stock lying in the hands of dealers and goladars may be sufficient for the requirements till July or August, when the bhadoi crop will be ready for reaping.	Laborers are healthy and strong. No symptom of severe scarcity prevails in the localities over which the road runs, and no fear of famine or extreme distress is felt by the laboring class and agricultural men.	On alternate days by sub-cashiers.	Task-work, from 3 annas to 4 annas per 100 c. ft.	Supplied by Government.	281 15 3	No heads of weak constitutional men have as yet appeared for employment on subsistence wages.
No. 2, Katicoond to Amrapara road.	Line chosen ...	Nil	Nil	.....	.....	Nil.	Nil.	Nil.	Nil.	
Constructing a bund at Katicoond.	Plan ready ...	Completely opened.	CLASS I. Men ... ... 105 Women ... 55 Children ... 36	Same as in No. 10.		By overseer in charge and sircar.	Coolies 0 1 9 Women 0 1 3 Children 0 0 9	By Department	17 10 0	
No. 3, Jurmoondi to Deoghur road.	Three miles of sections plotted during the week.	Nicking 23,100 rr. ft., earthwork 36,502 c. ft.	CLASS I. Men ... ... 947 Women ... 132 Children ... 136	Rice and other food-grains are yet procurable in the country. No Government grain has been supplied for this work.	The laborers seem to be strong and able-bodied men. The poorer classes of people in the country seem generally to be distressed.	Made every day.	Task-work. Soft soil at 0-3-0 per 100 cubic feet. Hard soil at 0-4-0 per 100 c. ft.	Supplied partly by Department and partly by the coolies themselves.	81 17 0	
No. 4, Hansdia to Godda road.	Laid out 9 miles, levelled 4 miles and side widths, set out 2 miles.	6 Chains	CLASS I. Men ... ... 89 Children ... 7	The coolies buying food from the bazars. They like mohwa, &c., better than rice.	Condition of the laboring class is very poor and miserable. General features of the country, hilly and jungly. Soil hard in most parts.	Daily, by the head sircar in charge of the work.	Task work, 0-3-5 per 100 c. ft. on *light soil*, and 0-4-0 to 0-6-0 on hard.	Supplied by Government.	17 5 6	
No. 5, Godda to Barhait road.	The work is going on under the Civil Officer.									
No. 6, Tinpahar to Bario road.	Complete project	Completely opened	CLASS I. Men ... 3,119 Women ... 2,432 Children 662	Same as last week.		By sub-cashiers daily.	DAILY LABOR. Duffadars 0 2 0 Men ... 0 1 9 to 0 2 0 Women... 0 1 3 Children 0 1 0 to 0 0 9 Taskwork 0 3 0 to 4 as. per 100 c. ft.	By Department ...	616 0 0	
No. 7, Bario to Manihari road.	Ditto ...	Ditto ...	CLASS I. Men ... 2,479 Women .. 1,743 Children 941	Ditto		Ditto ...	Ditto ...	Ditto ..	502 0 0	
No. 8, Barhait to Sahebgunge road.	Ditto ...	Ditto ...	CLASS I. Men ... 10,726 Women ... 8,985 Children 3,246	This work is going on under the Civil Officers.						
No. 10, metalling Bhagulpore and Soory road.	Ditto ...	Ditto ...	CLASS I. Men ... ...2,098 Women ... 468 Children ... 171	Up to this time difficulty has been felt by laboring classes in obtaining food-grains from the hatias and bazars. The stock in the country is enough for 3ths of the inhabitants till the next harvest.	The condition of the people has not become very miserable yet. Food-grains are still obtainable, but their value is gradually enhancing, so it seems that after a month or two distress will be really felt by the people.	Twice a week by cashier and the overseer in charge.	Digging kunkur, at 4 annas per 100 cubic feet.	By Department.	218 12 0	
No. 11, Kendua road ...	Nil	Nil	Nil	.....	.....	Nil	Nil	Nil	Nil

SONTHAL PERGUNNAHS.—(*Continued.*)

Name of Work.	Progress in marking out relief work.	Progress in opening relief works.	Number of laborers thereon.	Supply of food thereat.	Condition of the laborers and the general features of the country.	Mode of payment.	Rate of wages.	Arrangement of tools.	Disbursement during the week.	REMARKS.
									Rs. A. P.	
No. 30, Godda to Barhait road.	6 miles	Opened on 1st mile, but coolies struck, as they refused to do piece-work.	14 men on survey work.	Good. In the chowkeedar's houses at Moogora, some forty maunds of food-grains was evidentially seen. The house is on the centre line of the road, and a part of the wall was broken, and thus the contents were seen. At Beliaband in all the houses considerable stores of food exist, as 20, 30, or 50 maunds, but food is not sold here or in most of the villages as a rule. The mohwa harvest is very plentiful and is being so gathered that some Santhals refused 2 annas a day for jungle-cutting, preferring to gather mohwa.	All the people look in good health; there seems to be no distress about this road. I never saw Santhals look more comfortable.				Total ... 2,105 5 0	No non-laboring class working as coolies.

DENONATH MOOKERJEE,
Accountant, for Offg. Executive Engineer, on tour.

No. 3186—S. R., dated Bhagulpore, the April 1874.

From—E. J. BARTON, ESQ., C.S., on Special Duty, Bhagulpore,

To—The Secretary to the Govt. of Bengal, Statistical (Scarcity and Relief) Dept.

I AM desired by the Commissioner to submit for this division the fortnightly narrative of relief operations which is now due.

CONDITION OF THE COUNTRY.

2. The last three narratives have prominently dwelt upon the abundant *rubbee* harvest which has been secured in the three districts of Bhagulpore, Purneah, and Monghyr. As the harvest has been now nearly altogether cut, and as the grain is already finding its way into the market, we are now in a position to estimate partially the effect which it will have on the food supply of the country. I append a statement of prices, some of which are down to date, and none of which are older than the 6th instant. This statement shews that as yet the *rubbee* harvest has not had such an effect upon the market as was at one time expected from it.

	Rice.		Wheat.		Maize.		Gram.		Barley.
	Seers.	Ch.	Seers.	Ch.	Seers.	Ch.	Seers.	Ch.	Seers.
Monghyr	12	6	13	6	14	7	16	8	21
Bhagulpore	11	6	14	8	15	2	17	0	19
Soopool	9	0	12	8	.....		.....		.....
Muddehpoora	$10\frac{3}{5}$	0	.....		.....		.....		.....
Purneah	11	0	12	0	13	0	13	0	Not given.
Doomka, Sonthal Pergunnahs	11	0	12	0	16	0	12	8	Ditto.

3. I have compared these prices with the quotations at which food-grains were selling before the *rubbee* came into the market, *i.e.*, at the time of the fortnightly report dated 16th ultimo. I marginally append a condensed summary of that comparison. This table conclusively shews that as yet the effect of the good *rubbee* upon the market has been small indeed. No doubt the reaping of this crop, especially in the Monghyr and Bhagulpore districts, has temporarily relieved the most abject and helpless of the population, such as the Musahars, &c. These creatures, always destitute, have been engaged in the cutting of this crop, and being for the most part paid in kind, have each returned from the alluvial plains to his home with a small quantity of grain, it is reported not more than a maund per head. As long as this lasts, they will live, and when it is eaten, it is expected that they will fall upon our hands.

Name of District.	Food-grains now cheaper than before *rubbee* came into market.	Food-grains same in price as before *rubbee* came into market.	Food-grains dear than they were before *rubbee* came into market.
Monghyr	Maize. Rice. (Very little cheaper).	Wheat. Barley.	Gram.
Bhagulpore... ...	Barley. Gram is half seer cheaper.	Rice. Wheat.	Maize.
Purneah	.....	Wheat. Gram.	Rice.
Sonthal Pergunnahs...	.....	Wheat. Maize. Gram.	Rice.

4. Monghyr being *par excellence* the *rubbee* district of the division, is the most favorably situated of all. The Commissioner has just had an opportunity of consulting certain gentlemen of position in that district regarding their views on the condition of affairs there now. One of the most important bankers in the district, a man of much intelligence and sound sense, who, to the knowledge of the Commissioner, has up till now always taken a sanguine view of the position, and been of opinion that the inhabitants would pull

through the year with comparatively little injury, now says that he has his doubts upon the subject. The grounds of misgiving are stated to be that the district is in danger of being rapidly depleted of the *rubbee*. He says he can gather some index as to the prospect of export by the number of *hoondees* which pass through his hands, and the indication is that this year the exportation will be greater than ever, as already there are signs of the set of trade from Khagureah to Tirhoot. This banker added that for the last ten years he has never known food so dear as it is now, at a time when the *rubbee* should have eased the market.

5. A zemindar of Sheikhpoorah, in Jamooee sub-division, who has been from the beginning most zealous in all relief measures, who has assumed the office of an Assistant Superintendent of a relief circle, and is actively discharging its duties, holds similar views. This gentleman has good opportunities of acquiring accurate information, for he has been travelling much in the distressed tracts; and, having always apprehended slight distress, now assures the Commissioner that at the present time the condition of things is worse than he had expected it would be when the rubbee was cut, and that even well-to-do ryots have smaller stores of food than he had ever thought was the case.

6. The Commissioner had in a previous narrative said, that in view of the excellent *rubbee* he was considering whether the importation of Government grain into the Monghyr district ought not to remain where it then stood. In view of these opinions of men whose statements are at all times worthy of consideration and attention, he is by no means sure that all the grain assigned by Government will not be wanted.

7. Those best acquainted with these districts have always maintained that suffering would begin about the month of June, and the Commissioner thinks that even now there is much to substantiate the soundness of this opinion. The *rubbee* will benefit only those who have it, and so far it will do great good. As yet it does not seem to have benefited the inhabitants at large, for food continues about as dear as ever.

8. The Commissioner is still able to report that nowhere has food disappeared from the bazars, and that it can be got by all who have money to buy it.

RELIEF WORKS.

9. These continue to be actively prosecuted everywhere, and the Commissioner believes that there is work for all willing to labor throughout the division, and this, too, at no great distance from the houses of the people. Everywhere a careful system of payments has been elaborated, which secures that the coolies are paid punctually, regularly, and frequently. I append a statement below for the whole division, showing the numbers engaged on our relief works down to the 4th instant:—

For Fortnight ending 4th April.

	LAST FORTNIGHT.						THIS FORTNIGHT.					
	Average daily number of laborers.				Number working on Wards and other relief works.	Grand total.	Average daily number of laborers.				Number working on Wards and other relief works.	Grand Total.
	Men.	Women.	Children.	Total.			Men.	Women.	Children.	Total.		
Monghyr	2,059	1,350	395	3,704	2,068	5,772	1,700	936	500	3,136	7,628	10,764
Bhagulpore	4,670	1,619	905	7,194	18,256	25,450	7,203	2,657	1,539	11,399	27,043	38,442
Purneah	7,413	631	1,109	9,205	1,253	10,458	12,356	1,138	2,199	15,693	2,426	18,119
Sonthal Pergunnahs	1,290	685	200	2,175	9,000 on Godda road.	11,175	5,266	3,418	801	9,485	.....	9,485
											Add men employed by Hurbullas Narain Sing, zemindar of Sonbursa.	7,421
											Grand Total ...	84,231

This statement shows that, notwithstanding the cutting for the rubbee, the number employed on our works (84,231) for the fortnight ending the 4th instant, is very considerably greater than that shown in the previous fortnight (52,855). I may add that even the large number of 84,000 does not comprise all who are laboring on relief works, for several zemindars and planters, who have got advances for the making of bunds, the digging of tanks, &c., have sent in no returns. This omission is owing to no neglect by this office, for repeatedly and for a long time past have most stringent orders been issued to get in returns of laborers on these extraneous works.

10. Our golas have now been fairly opened for sales to laborers on our works, and with the following result:—

Statement showing Sales of Government Grain to our Laborers.

Name of District.	Grain made over to Government, Department Public Works, for sale.		Value.		
	Bags.	Mds. Srs.	Rs.	A.	P.
Monghyr	9	19 30	64	0	0
Bhagulpore	42	83 26	233	14	6
Purneah	2,694	0	9,402	7	9
Sonthal Pergunnahs, Godda	1,142	4	3,072	1	6
	3,939	20	12,872	7	9

It will be seen that only in Purneah and the Sonthal Pergunnahs have sales to any considerable extent been effected. The Commissioner is by no means sure that due facilities have been given to our laborers in the Soopole sub-division to buy Government grain, although he has issued repeated orders on this subject. The sales at Monghyr have been very small, but food there has been generally procurable by the coolies at very favorable rates in the bazar.

11. The greater part of the total of 4,273 maunds sold to laborers was disposed of in the districts of Purneah and the Sonthal Pergunnahs. The Commissioner has always impressed on district officers to have grain for sale on all the works, so that the coolies may have an option to choose between our supplies and those they can get in the bazar. This order has been carried out in Purneah, and is in course of being put into force in the districts of Bhagulpore and Monghyr.

12. One notable fact in these returns is the great difference between the number of laborers (7,863) engaged in the Bhagulpore district on relief works under the superintendence of the Department Public Works officers, and the number engaged (27,043) under the Durbhanga estate in Nareedegur. It is believed that this is owing to the fact of the Department Public Works officers requiring all able-bodied persons to work on the piece or task system, or, in case of feeble persons, on some kind of work under supervision, while laborers under the Court of Wards are reported to work on a much easier system. One fact is notable in connection with this:—Last fortnight there were more than 10,000 persons working daily on the Godda road, in the Sonthal Pergunnahs. This fortnight the system of piece and task-work for the able-bodied was introduced, and the numbers fell to less than 3,000 daily.

13. The Commissioner has always throughout this division insisted on a strict obedience to that rule of Government, which requires that all able-bodied persons shall be compelled to give a fair day's work for a fair wage. Throughout the four districts, in all works directly under the civil officers, this rule is in full force. Were the Commissioner to relax it, he has no doubt that the numbers upon our works would be quintupled. The Commissioner, however, is of opinion that this rule being a sound and reasonable one, should be consistently maintained throughout, and would be glad to see it

more rigidly enforced on works under the Court of Wards, even though its effect should be to diminish the laborers by one-half or even more. If able-bodied persons on relief works are paid for doing little more than putting in an appearance, the effect will be most unfortunate. It will have a deleterious effect on the labor market, and one legitimate consequence might be, that the supply of labor for ploughing the land for next crop would prove defieient in the neighbourhood of relief works where men were paid in full for what is little better than nominal work. Therefore the Commissioner is most anxious to see that relief works are managed under some such sufficiently rigid system as shall prevent their being an encouragement to idleness, a means of demoralizing the laboring population, and an interference with the regular labor demands of the district.

14. The Commissioner has impressed upon district officers the Government orders rgarding the employment of able-bodied persons on the piece and task systems under the Department Public Works officers, and of non-able-bodied persons on light labor under the relief officers. Also the Commissioner has ordered that, as soon as the numbers and class of persons on a regular work has so increased that the exaction of a fair day's labor from every one, according to capacity, is difficult or impossible, then all the inferior workers are to be drafted upon some work under the relief officers, and to be put on lower wages. By this means also the Commissioner hopes that he will prevent our relief work competing for labor with the regular market as little as possible. The Commissioner will continue as heretofore to exact a fair day's work from each able-bodied person till the increase of distress compels him to organise light-labor gangs.

Transport of Grain.

15. The figures noted below show the movements of food-grain by rail and river for the fortnight ending with the 4th instant. They show that, so far as the trade along the Ganges and by the Railway is concerned, the exportation and importation of food have been slight, if we strike out the figures covered by the Government grain.

Traffic Statement.

By what Route.	Week ending 28th March.		Week ending 4th April.	
	Exports.	Imports.	Exports.	Imports.
River Ganges (past Sahebgunge) ..	5,317	1,565	13,102	3,184
Rail	11,353	198,207	18,068	213,449

N.B.—Railway figures include Government grain.

16. These figures by no means are reliable as showing even approximately the trade in food-grains. They take no account of the internal trade by carts and by boats up rivers other than the Ganges. That this trade is very considerable we know. We know that people from Tirhoot and other districts are carrying the *rubbee* away. There is also, and has for some time past been, a brisk trade in the distressed tracts around Barsoie and Kusbah Amour, in the Purneah district. Of this and much other internal trade these figures take no account.

Government Carriage and Storage of Grain.

17. The figures noted below give the amounts actually stored in the interior down to the dates of our latest information. I may say shortly under this head that everywhere our cartage power is such that we can more than cope with the quantities of grain which we get by railway.

	Fortnight ending 29th March.	Fortnight ending 11th April.
	Maunds.	Maunds.
Monghyr	1,95,933	.....
Bhagulpore	3,56,966	4,00,600
Purneah	4,20,149	5,24,653
Sonthal Pergunnahs	.....	.....

Advances.

18. The following statement shews what has been done in the division towards carrying out the three forms of advances which have been sanctioned by the Government. In the three districts a total of Rs. 3,55,915 has been advanced in this way up to the date of our latest information.

Compiled from the District Fortnightly Reports.

	Total up to last fortnight.			Advances made during this fortnight.			
	For purchase of grain. Para. 4, Cir. 80.	For land improvement. Para. 21, Cir. 80.	Generally for helping ryots under Government order No. 4020 of 18th December 1873.	For purchase of grain. Para. 4, Cir. 80.	For land improvement, Para. 21, Cir. 80.	For helping ryots under Government order No. 4020 of 18th December 1873.	Total.
Monghyr	56,800	33,790	11,300	4,600	7,800	7,500	1,21,790
Bhagulpore ...	67,800	4,350	37,400	200	.....	25,500	1,35,250
Purneah	60,725	.....	11,950	3,000	.....	3,000	78,675
Total ...	.....	.....	.....	.....	.....	.....	3,35,715

19. During the fortnight many applications have been made to Relief Officers by the ryots direct for an advance to buy seed-grain. Although the Relief Officers generally contended themselves with reporting the fact, the procedure of some of them shewed that they were ignorant of the orders of Government bearing on this subject. The Commissioner, therefore, took the opportunity to issue such directions to Relief Officers on this point as shall make their duty clear to them.

20. The Commissioner is far from believing in a general seed famine. The condition, however, of a portion of the Soopole Sub-division is such that Sir Richard Temple, when here, telegraphed to Julpigoree for 20,000 maunds of seed-grain for sale to the ryots there. The seed wanted in Soopole was of a peculiar kind, not procurable everywhere. The Commissioner of Cooch Behar reported that he thought he could get us seed of this kind. A mahajun and some ryots have been sent from Soopole to Julpigoree to identify the seed. If they do so, it will be brought, carried into Soopole, and there sold.

Charitable Relief.

21. The organization for carrying this out is now complete. Superintendents and Assistant Superintendents have been appointed to each circle. During the fortnight the medical staff also has been completed, and a native doctor has been posted at each of the sixteen relief circles throughout the division. Printed books of relief tickets have been sent to the Superintendents everywhere, to enable them to carry out a regular system of house-to-house visitation and relief.

22. The district relief officers, as marginally noted, have also sent in their first bi-monthly narratives. As was to be expected, these bi-monthly narratives are somewhat crude, and represent little more than the beginning of a regular system. Messrs. Wyer and Kirkwood seem to have made the greatest progress; and there is little doubt that shortly, probably by next fortnight, they will have effected a comparatively thorough organization of relief. Mr Currie's report, which is an imperfect document giving little relevant information, shows a certain amount of laxity, want of system, and confusion to exist in Monghyr. The Commissioner has taken steps which will, he hopes, put an end to the unsatisfactory footing on which relief operations are in that district.

Mr. Kirkwood for North Bhagulpore.
„ Currie for Jamooee (Monghyr).
„ Manson for Bukhtiarpore (Monghyr).
„ Wyer for Purneah.

24. The marginally-noted statement shows the numbers relieved at relief-centres during the fortnight to which they refer in the districts. When the house-to-house system of relief has been thoroughly organized, it will not be necessary to increase our relief operations at relief centres. The Commissioner hopes that when poor-houses have been opened for the thoroughly disabled, the homeless, and the destitute, and when house-relief has been introduced into the villages, relief in the form of cooked-food at centres will be found quite unnecessary.

Charitable Relief.

	Last Fortnight, 1st to 14th March.			This Fortnight, 15th to 28th March.

Sales to the Public of Government Grain.

25. The Commissioner considers this to be a very efficient mode of relief, and looks forward to seeing a general selling of Government grain to the public in the three districts of Bhagulpore, Purneah, and Monghyr. The marginally-noted figures show what has been done in this respect down to the date of latest information. The Government will of course note that these sales are quite distinct from the sales to laborers on our works, the particulars of which have been given in paragraph 9 above.

Statement showing the sales of Government Grain to the public from the beginning of operations.

Grain sold to public.			Price realized.	Remarks.
District and sort of grain.	Bags.	Amount.		
		Mds. Srs.	Rs. A. P.	
Monghyr—				
Not stated	1,415½	3,459 21½	7,177 0 0	Up to 31st March.
Bhagulpore—				
Wheat and rice... ...	335	66,215 0	2,168 15 0	
Purneah	.....	2,007 17	4,671 8 10	
Sonthal Pergunnahs—				
Rice	.....	6,129 13½	14,017 7 10	

26. Under the authority conveyed in Sir Richard Temple's minute No. 39, dated 5th ultimo, sales of Government grain, at the rate of 12 seers for cleaned rice and 15 seers (fixed by the Commissioner) for uncleaned rice, have been ordered to be held in Bukhtiarpore in Monghyr district, and in Muddehpoora, Bhowanipore, Ekar, Soopole, and Roshwar, in North Bhagulpore. The orders have only as yet taken effect in certain cases, and even here the sales might have probably been considerably larger than those shown by above

quoted figures had they been made without restrictions, or under restrictions less severe and rigid than those which were prescribed. We shall gather experience upon these points as we go on. In certain places our sales had to be kept within narrow limits in order to prevent the destruction of trade. This was notably the case in Eastern Purneah, where the Collector could have fully sold our grain, but curtailed his operations, because, in these localities, there was a most active private trade which he was afraid to injure—*vide* Collector's last fortnightly narrative.

27. Undoubtedly the time has come in many places when we should conduct sales under fewer restrictions and on a more extensive scale than hitherto, and more specially in several parts of the Bhagulpore district. Here the Commissioner has authorised the Collector to begin sales through subsidised *banias*, which will reach the smallest consumer.

Kind of sales.	Amount of grain sold.	Cash price.
	Mds. Srs.	Rs. A. P.
To laborers on our works ...	3,939 20	12,872 7 9
Sold to public	6,129 13½	14,017 7 10
Total ...	10,068 33½	26,889 15 7

28. I give in the margin a short synopsis of sales of all kinds, viz. to the public and to laborers on our works. They show 10,403 maunds sold in all the three districts.

Local Relief Contributions.

29. As I have not hitherto given any minute account of them, I beg to marginally append a statement showing the sums locally contributed in the three districts for the relief of existing distress. In addition to these funds there have been assigned to each district by the central committee in Calcutta the following grants, viz.—

	Rs.
Bhagulpore	.. 20,000
Purneah	.. 20,000
Monghyr	.. 10,000

District.	Total amount subscribed.		Sum collected.		Remarks.

P. S.—Telegrams have been just received that sales to the public have been started at Soopool, Bungaon, and Ekar, in the Bhagulpore district.

No. 21 T.F., dated Camp Durbhunga, the 20th April 1874.

From—The Offg. Secretary to the Government of Bengal, Statistical Department,

To—The Commissioner of Bhagulpore Division.

I AM directed to acknowledge the receipt of your divisional narrative, No. 3186, dated 9th April 1874. The Lieutenant-Governor is much satisfied with its completeness, and with the assurance it conveys that you have the relief operations of your division well in hand, the tables (at paragraphs 18, 27, and 29) bringing the statistics as to certain forms of relief down to the present date.

2. On certain passages in your narrative, the Lieutenant-Governor directs me to convey the following instructions and remarks:—

Paras 12 *and* 14.—The Lieutenant-Governor desires that task-work be not suddenly introduced upon any relief road where daily payments have been previously in force. He fully agrees in your view as to the propriety of getting work out of able-bodied men who may seek relief from Government. But he views with apprehension the result of a sudden change, such as you describe at your 12th paragraph, whereby out of 12,000 persons, presumably more or less distressed, 9,000 were thrown suddenly on their own resources. If people are distressed, task-work must be introduced gradually and judiciously; and really complete arrangements for relieving the weakly at their houses, or for

actually drafting them into light-labor gangs must be prepared side by side with the introduction of task-work. And there must be a competent officer on the spot when the new system is introduced to see that the people requiring relief are actually provided for, if the task-work system should cause them to leave the road. And no attempt to introduce the task-work system should be made until these subsidiary arrangements have been matured. The Lieutenant-Governor is constrained to say that the proceedings described in your 12th paragraph, as having been taken in such a place as the Sonthal Pergunnahs, seem to indicate some want of carefulness on the part of the officers concerned. His Honor begs that you will ensure due *caution* being exercised in future.

Paras. 18 *and* 27.—The Lieutenant-Governor would hope that, for the future, when zemindars want advances to help these ryots, or where advances may have to be made direct to ryots, such advances may be made in grain rather than in cash.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 24th April 1874.

READ—

The fortnightly narratives of the Rajshahye division for the period ending the 18th April 1874.

1. *Moorshedabad.*—Supplies continue sufficient, and the prices of grains other than rice have somewhat fallen. Rice is, if anything, dearer than before, though a good deal is coming in by river from Eastern Bengal. Rain is much wanted for the early rice sowings, and the water-supply is failing. The condition of the poorer classes has of course not improved; but minor relief works and charitable relief will, with the public roads, meet, it may be hoped; all actual distress. Cholera and small-pox are, the Lieutenant-Governor regrets to see, very prevalent. The number on relief works is 3,808, while 661 are in daily receipt of charitable relief. Since the narrative was printed the Collector has intimated that the rate paid by the Moorshedabad Municipality to laborers is Rs. 2 (and not 2 annas) per 1,000 cubic feet.

2. *Dinagepore.*—This district has benefited much by a recent rainfall, which has done good to the boro dhan, and enabled the ryots to complete the early rice sowings. Supplies are generally becoming short, and Government rice has been sold to the public in several places with good results. Some confusion is caused by the Collector's describing the effect of the Government sales as that of *raising* the price of rice when it is evident he means lowering the price by raising the number of seers procurable for a rupee. The permission to sell to the public seems to have been judiciously made use of, sales being suspended whenever the supplies of private grain in the bazars indicated that the course of trade had made Government sales undesirable. Managed in the way Mr. Lowis describes, there can be no fear of the permission to sell Government grain causing any injury to such private trade as there is. The prompt steps taken to meet the unexpected outbreak of distress in Beergunge were creditable to the district administration; indeed, the whole tenor of this report seems to indicate that Dinagepore is in good hands, and that distress will be effectively met wherever it may show itself. Two deaths were reported as caused by starvation, but were found on enquiry to have been due to sickness. No doubt, however, in these, as in the case of the old beggar woman which is described, privation had something to do with the result. The Lieutenant-Governor believes with the Collector that seed-grain will be forthcoming as required, and quite approves of the view that the zemindars must be induced, if possible, to do their duty to their ryots in assisting them to procure this. It is interesting to note that in this district much more has been done by the mundals and leading villagers to assist the poor than has yet been done by the great proprietors.

3. The number of laborers on the works is said to be increasing daily, though the late rain withdrew many to work in the fields. The management of the works in most of the circles of this district seems to have been tolerably efficient, a labor-test being generally imposed on the able-bodied. In circles where more laxity has prevailed the system is being revised. The Lieutenant-Governor trusts, however, that Mr. Lowis will see that no sudden change is made, such as would entail much hardship on persons really in need of relief. The total number of laborers in the district would seem to be about 1,00,000, and not a million as printed.

4. The transport arrangements have worked smoothly and well, and 7½ lakhs of maunds of Government grain are already finally stored. It is reported that considerable wastage has taken place *en route*, but an attempt will be made now to take stock in detail of the actual quantity received. All the weighing machines indented for have been despatched, but as these had all to be made, some delay was unavoidable. Grain is being regularly sold on all works to laborers, and to the public here and there. Wages should now be paid to a great extent in grain. The Lieutenant-Governor would also hope that, for the future, when zemindars want advances to help their ryots, or where advances may have to be made direct to ryots, such advances may be made in grain rather than in cash.

5. 7,155 persons are in receipt of charitable relief. The Lieutenant-Governor is glad to see that free use is made of local agency, and that the respectable inhabitants show themselves so ready to help. He has again to thank Mr. Lowis for an admirable report.

6. ***Rajshahye.***—Prices which had suddenly risen in this district as suddenly fell again, and the sale of Government rice has not yet been begun. Rain has been very general, and will have done much good. The enforcement of task-work has reduced the numbers on the works, but they are said to be creeping up again. The Lieutenant-Governor trusts that the greatest care will be taken that the imposition of task-work does not bar from relief those who are really unfit. If task-work is rigorously enforced on public roads, the provision of village relief works and light-labor must be sufficiently ample and easily accessible; and it is by no means clear that this is as yet the case in Rajshahye. If people are distressed, task-work must be introduced gradually and judiciously; and really complete arrangements for relieving the weakly at their houses, or for actually drafting them into light-labor gangs must be prepared side by side with the introduction of task-work. And there must be a competent officer on the spot when the new system is introduced to see that the people requiring relief are actually provided for, if the task-work system should cause them to leave the road. And no attempt to introduce the task-work system should be made until these subsidiary arrangements have been matured. The number daily on relief works under the Public Works Department is given at 10,000 for the last week under report. A return should have been made of the number employed under circle officers. The number receiving public charitable relief is 1,558, but private annochattras are said to be distributing food indiscriminately to many more.

7. ***Maldah.***—Prices are stationary here, but supplies are not so abundant as they had been. Rain had fallen, but more was wanted. The daily average number of laborers on relief works was 4,448, and Government grain was being sold to them on most of the works. The numbers daily receiving charitable relief were 869. The applicants for cooked-food in the distressed tracts of Chanchul continue to increase, which is no doubt a sign of increasing pressure. The health of the district fortunately continues good, and it is now fast completing its allotment of rice.

8. *Bogra.*—Prices are easier in this district owing to improvement of prospects through the recent rain, and importations from the east. The number of laborers on works has decreased from 38,000 to 31,099 as far as the reports go, but these are incomplete. The Collector gives no information as to any steps taken to reform the system on the district works, which, as described in last report, was extremely unsatisfactory. The transport arrangements here have also been very backward. The carters were paid by the month instead of by the journey, a plan which, as the Relief Commissioner pointed out, ensures the slowest carriage of the smallest amount of grain. The Lieutenant-Governor trusts that, with the offer of proper rates, the Collector will find that his district, the people of which are ordinarily well-to-do, is not so destitute of carts and bullocks as he still seems to think.

9. The circle organisation is now nearly complete. It might have been so much sooner, had proper vigour been shown in making the most of local resources. 5,881 persons are said to be in receipt of charitable relief.

10. *Rungpore.*—The main feature of the fortnight here has been the sudden failure of local supplies and great rise in prices, which was at first attributed to the stoppage of local trade by the Government demands for carriage. Inquiry has shown that this was a mistake, and that the rise in price was due to a variety of causes in which actual shortness of supply was an important, though not the only element. The Lieutenant-Governor has approved by telegram of the Relief Commissioner's proposals for sale from Government golahs to traders and private persons, and it may be hoped that this step will have a good effect, and prevent any great distress. Rain has fallen generally, and done much good. Cholera has unfortunately broken out and interfered with transport; but Mr. Robinson has, it is believed, reorganised this on a better footing than before. Mr. Damant's measures of relief in Sadullapore seem to be well worked and fairly successful. Elsewhere also the distress seems to be properly kept under. The outbreak of dacoity at Durwani should be carefully investigated. Hitherto there has been very little serious crime in the distressed districts.

11. The charge for demurrage on account of detention of steamers was incurred owing to the short time allowed by the Eastern Bengal Railway steamers for unloading cargo. The Agent has declined to extend this, and Mr. Blair must do what he can to clear these vessels in time.

Proper steps must be taken at once to protect the rice arriving at Kallygunge. Sufficient shed accommodation should have been ready long ago.

12. About 20,000 persons appear from the weekly returns to be on relief works. The district narrative must give correct and full statistics of relief in future. The account given in the narrative of the working of the relief system on the roads and of the charitable relief administration is anything but satisfactory, and Mr. Robinson should give his attention to put things on a proper footing. 2,979 persons got relief at Government annochattras, and 5,902 at private institutions.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 24th April 1874.

Narrative of Scarcity and Relief in the Moorshedabad District for the Fortnight ending Saturday, the 18th April, 1874.

(A.)—STATE OF THE COUNTRY.

1.—*Abundance or scarcity of supply in the bazar.*

There is still sufficient supply for daily consumption in the head-quarters and Lalbaug sub-divisions. In the Rampore Haut sub-division the supply is reported to be abundant in the Nulhattee market, but scarce in the markets of Pulsa, Rampore Haut and Khurgram. There appears to be an active trade in "poorbi" or East Bengal rice at Dhulian, in thana Shamsheregunge, in the Jangipore sub-division. The sub-divisional officer is silent as to the supply generally throughout his sub-division.

2.—*Kind and price of grain selling at one or more specified principal marts.*

2. With the exception of rice, all other food-grains are selling at cheaper rates in the bazars and hâts of the Sudder sub-division. The price of common rice is nearly the same as mentioned in the last narrative. The average in principal marts is 12 seers per rupee. It is cheapest at Nowada, where the rate is 15 seers per rupee, and dearest at Gowas, where it is 11½ seer per rupee. It is said that the rice selling at the former place is very coarse and of a peculiar kind which is not procurable elsewhere. The prices of wheat and gram have fallen slightly. The average price of the former is 18 seers, and that of the latter 19 seers per rupee. In a few station circles the rubbee crops have not yet been gathered. The prices of different sorts of dâl are nearly the same as during the last fortnight. In the Lalbaug sub-division coarse rice is selling generally from 11 to 12½ seers per rupee.

The prices of fine and coarse rice in the Rampore Haut sub-division are as follow:—

	Fine rice.	Coarse rice.
Pulsa	$10\frac{2}{16}$	$11\frac{10}{16}$
Khurgram	9	11
Rampore Haut	11	13
Nulhattee	11	13½

It will be seen that the prices have generally risen from those mentioned in the last fortnightly narrative. In the Jungipore sub-division rice is selling at 12 seers per rupee in the Roghunathgunge bazar, at 12½ seers at Mirzapore, at 10½ seers at Sooty, and at 13¼ seers at Shamsheregunge. The comparatively low price of rice prevailing in the latter place is attributable to the active trade in "poorbi" rice reported above.

3.—*Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.*

No fresh information has been obtained under this head.

4.—*Rainfall, if any.*

Rain fell on the 3rd instant in the station circles of Gowas and Jellinghee. Special report on the subject has already been submitted. There was a fall of rain in the Bhurtpore station circle on the 4th instant. No rain fell in the Jungipore and Rampore Haut sub-divisions, and there has only been ·01 inch of rain in the Lalbaug sub-division during the fortnight under report.

5.—*State of the Crops.*

The prospects of "boro" crop and mulberry and indigo are still very fair. Want of rain is greatly felt at present. Mangoes are suffering from the continuous dry weather. The sub-divisional officer of Lalbaug states that the rubbee crops have been all reaped, and the outturn has been good. *Boro* paddy is doing well. Everywhere the ground has been turned up for the *aous* sowings, and rain only is wanted now. The sub-divisional officer of Rampore Haut reports that the outturn of "*boro*" paddy in his sub-division

will probably be the same as stated in the previous narrative. The sub-divisional officer of Jangipore states the spring crops have been good, but prices are unusually high considering the short time that has elapsed since the harvest.

6.—*Condition of the people.*

Judging from the various reports received, the condition of the people is not satisfactory in some parts of the district. The high prices of food are pressing very heavily on the poorer classes. The sub-divisional officer of Lalbaug reports that the condition of the people is on the whole good, and the only persons to whom he had to give gratuitous relief have been some old or infirm people unable to work. The poorer people of the Rampore Haut sub-division are reported to be much pinched for food. Some of the well-to-do men of Rudronuggur, in thana Pulsa, reported to the sub-divisional officer of Rampore Haut that nearly 300 persons were living upon roots. The sub-committee at Pulsa have been directed to alleviate the distress of the people by repairing the road from Noyagram to Pulsa. The sub-divisional officer of Rampore Haut reports that scarcity is beginning to be felt in portions of his sub-division. All the sub-committees started here have been instructed to start minor relief works and to distribute charitable relief. He has further instructed the canoongo and a relief supervisor to proceed to Khurgram for inquiries and for starting the Khurgram Road, and in anticipation of the sanction of the sub-divisional committee he has sent Rs. 20 for the Pulsa and Noyagram Road and another sum of Rs. 20 for other purposes. The Khurgram sub-committee has been requested, in pursuance of a resolution of the sub-divisional committee, to appropriate for relief purposes some of the money which was sent there for rice. In the Jangipore sub-division, as stated in the last narrative, the ryots are well off in Shumsheregunge and Dewanserai. The people in the west and south-west of thana Mirzapore are most likely to be the greatest sufferers in that sub-division. The pressure of high prices is much felt by the poorest classes throughout the district.

7.—*The actual facts as to any known cases of misery and starvation.*

No cases of death by actual starvation have come to light.

8.—*Grain-thefts or robberies.*

Ten cases of petty-theft of food-grains have been reported during the fortnight under report in the head-quarters sub-division. There has been one grain-theft in the Lalbaug sub-division. Five and six cases of grain-theft occurred in the Rampore Haut and Jangipore sub-divisions respectively. A crime statement is annexed. It shows a very marked increase of crime in the head-quarters sub-division.

9.—*Condition of any special tracts.*

Small-pox and cholera are both prevalent in several parts of the head-quarters sub-division; the former is very virulent at Bhurtpore and Kandee in the Bhurtpore thana, and the latter in Gorabazar and Berhampore. Small-pox still prevails throughout the whole sub-division of Lalbaug, except thana Bhudrihaut. There have been several cases of cholera in Baloochur and Azimgunge, and a few cases in thana Bhugwangolah. In the Rampore Haut sub-division small-pox is still raging in the jurisdiction of thana Rampore Haut. Cholera also has made its appearance in Nulhattee. Scarcity of food and demand for labor are felt greatly in Bhurtpore thana. The people of several parts of the sudder circle have suffered much from the burning down of their houses. There was an enormous fire last Friday in Dowlatbazar. Relief has been and is being given to the poorer sufferers from the relief fund to enable them to rebuild their houses. The Magistrate-Collector has during the past week been in the east of the district. He has found that there is at present no severe distress and no great demand for labor, but that the great want now experienced is of water. He has promised advances to persons desirous of improving tanks which have dried up, or in which the water is

unfit for consumption, and proposes in other cases to assist from relief funds the villagers in excavating tanks which have silted up. The plan generally adopted in the latter cases is that the villagers should contribute in money or in labour a certain amount to be supplemented by grants from the relief funds. Mr. Dixon, Secretary of the Fureedpore relief committee, has supplied a good many villagers with water by damming a channel which drains the Khooyramaree bheel into the Shyalmaree river, a certain amount of water being allowed to run off through a scooped out "tal" tree, in order that the rest may keep sweet; this is a very useful and inexpensive work. About one-fifth of the land in this part of the district has been sown down with aous rice. With the next heavy fall of rain the remaining portion will be sown. It is to be hoped that this fall may come soon. Nowhere has the Magistrate-Collector heard of any want of seed-grain for sowings.

(B.)—Relief Works.

The average number of persons employed on the several relief works is 3,808. The laborers are generally in good condition; food is easily obtained, except in the case of the Juroor and Nowdah road, where it is still procurable only in small quantities, as reported in the last narrative. Cash payments are made at the rate of two annas per diem; and the rates of task-work vary from two annas six pie to three annas per 100 cubic feet. The city of Moorshedabad municipality pay at the rate of two rupees per 1,000 cubic feet and supply men with tools. The workmen, as a rule, bring their own tools on all other relief works. Twenty-five picks have been supplied to the sub-divisional officer of Rampore Haut by the Executive Engineer. A statement showing the expenditure on relief works is herewith submitted.

(C.)—Transport of Food.

It appears that rice is still being imported by rail from Calcutta and from the eastern districts, *viâ* the golahs on the bank of the Pudma; 5,648 maunds of food-grains have, it is reported, been exported from the Rampore Haut sub-division, and 740 maunds imported into the sub-division during the week ending the 4th April 1874.

(D).—Storage of Government Grain at Relief Works.

(Blank).

(E.)—Advances to Private Parties and their Results.

There were 31 applications pending at the end of the previous fortnight under the Land Improvement Act in the sudder sub-division; 20 fresh applications were received during the present fortnight. Out of the total 51, 33 cases are under investigation, in 10 cases orders for payment have been made, in 1 case advance has been refused, in 3 cases applications have been rejected, and in the remaining 4 cases the applicants have not appeared. A sum of Rs. 1,248 has been paid to nine parties during the fortnight under report; 43 applications for advances were received by the sub-divisional officer of Rampore Haut during the above period.

(F.)—Charitable Relief.

In the statement annexed the figures in columns 4 and 5 have been increased by 1 and 5, respectively, above those shewn in the past fortnight, by the establishment of another relief sub-committee at Fureedpore, in the sudder sub-division, and five centres in the Lalbaug sub-division.

Arrangements have been made to establish cook-houses at Kandee and Gokum, where the number of persons seeking relief has greatly increased.

During the fortnight under report the following sums have been disbursed from the relief fund in the sudder sub-division:—

	Rs.	A.	P.
Relief works	2,350	0	0
Tank excavations and wells	2,233	5	0
Rebuilding houses of burnt-out persons	458	0	0
Contingencies, &c.	51	0	0
Total ...	5,092	5	0

In many cases the costs of excavating tanks have been supplemented by private subscriptions.

Several tanks are, it seems, under excavation by private individuals. Whilst at Fureedpore, the Magistrate-Collector was gratified to find that a local headman, Tuffel Mondol, was excavating a large tank and giving employment to a number of persons, and improving the water-supply of the village. I am informed that Baboo Annoda Prosad Roy of Cossimbazar has ordered the re-excavation of a tank in thana Kullyangunge, and, in addition, has commenced the digging of a tank at another village in the same thana, and thus giving employment to many poor people. He has also opened work at Cossimbazar by causing tanks to be improved and excavated, by constructing a road, and by building. These improvements give daily employment to more than 100 men on the average.

The sub-divisional officer of Lalbaug reports that since the submission of the last narrative he has purchased 500 maunds of rice imported by the Berhampore Association, and has stored it at the Assanpore thana. On the 12th instant he proceeded to Sagordighee, in thana Bhudrihaut, with 100 maunds of rice, which he stored there. He had previously sent word that he would distribute gratuitous relief in the shape of rice to all those who were fit objects, and on the 17th distributed to 30 persons ten seers of rice each, being half a month's supply; they will receive a further supply of ten seers after this period. On the 14th instant the sub-divisional officer proceeded to thana Bhugwangolah with 100 maunds of rice, and stored 30 maunds at the thana. On the following day he distributed to 36 persons, who appeared to him fitting objects, ten seers of rice each. He then proceeded to Ranitollah, where he stored in the outpost 20 maunds of rice, and had up to the 17th distributed to 25 persons ten seers of rice each.

In the Rampore Haut sub-division no charitable relief has yet been distributed amongst the people. The sub-committee at Khurgram have been supplied with Rs. 50 for the erection of sheds and other incidental expenses to feed the poor. In thana Pulsa, Moonshee Moula Buksh, putneedar of mouzah Pulsa and other villages, started on the 3rd instant an "annachhatra" in his own house for the distressed Mahomedans of the neighbourhood, and about 100 persons were thus relieved.

Out of the rice received from Mr. Toynbee in the Jangipore sub-division (which by actual measurement was found to be 491 maunds 39 seers 2 chittacks), 100 maunds have been sent to the relief godown at Mirzapore, as reported in the last narrative, and 100 maunds at Beluria. During the fortnight, 98 people were relieved by wages amounting to Rs. 48-2 for spinning jute; 12 people received gratuitous relief to the amount of Rs. 6-12 in cash; 1,150 people received doles of rice, amounting to 30 maunds in the aggregate.

C. D. C. WINTER,
Offg. Joint-Magte. of Moorshedabad.

No. 845—S.R., dated Dinagepore, the 20th April 1874.

From—F. E. Lowis, Esq., Officiating Magistrate of Dinagepore,
To—The Offg. Secretary to the Govt. of Bengal, Statistical Department.

I HAVE the honor to submit my narrative for the fortnight ending the 20th April current.

A.—STATE OF COUNTRY.

Just before my last report was despatched there was some rain, and since then there have been showers; the weather in the interval has been damp and cloudy; the seed sown, therefore, has had everything in its favour, and the bhadoi, I hear, is everywhere doing well. Agricultural operations, as far as bhadoi is concerned, are now over in pali or light lands; khiyar lands have not yet been cultivated with the crop, the rain not having fallen in sufficient quantities for that purpose. This description of land, however, is not well suited for bhadoi, and there is yet plenty of time for the hemanta or winter crop. The jute sowings are progressing, though of course it is too early to make any sort of estimate of the probable outturn. Boro rice has been much benefited by the rain, for in some places insects were beginning to appear; since the rain, they have, I am happy to say, disappeared. About a week ago I heard from Mr. Pellew that there was great scarcity of rice in his circle, and that prices had risen to 7 seers per rupee. He had rice on the spot however, and work chalked out and ready to accommodate an influx of laborers, so no difficulty was experienced: the panic was only temporary, supplies again came in, though not very abundantly, and prices went back to 9 seers per rupee. About the same time the Tamboolee officer reported that rice was very scarce, that his laborers had increased, that he was opening shops for their benefit, and would sell to all comers if necessary. He too has written to say that more rice is in the market again, but prices are still high, being nearly Rs. 4 per maund. In Patiram again, where there was at one time a most unexpected and sudden crisis, matters have mended. As reported in a former narrative, Mr. Finucane, the officer in charge, when the supply was found to be seriously deficient, at once opened the Government golahs and sold to all comers, the immediate effect being to raise the price of rice in the market, but not to any marked degree; the improvement was only temporary for it soon fell again. Now, however, the rice is coming into the market in sufficient quantities, and selling from Rs. 3-12 to 4 per maund; he has therefore stopped selling to the public, and now only sells to relief laborers. At one time there was a considerable run on the golahs at Patiram, and over 2,000 maunds were sold in a short time. In Gungarampore the scarcity still continues, and rice is still sold in that circle to the public; in fact the officer in charge fears that if the demand increases his allotment will not suffice. I am not, however, afraid of that, for I know that until the last few days, there was no rice stored in the neighbouring circle of Luskerhat, and purchasers went from there to Gungarampore. Rice is now selling at the hâts in the Gungarampore circle at Rs. 4-2 per maund. In Durgapore or Raigunge the sales of Government rice have raised the market price of grain. Rice is sold there only to relief laborers, but Mr. Jones is getting alarmed about the sufficiency of his stock in hand. I do not see, however, what grounds of alarm he has; for the amount sold, I believe some 600 maunds, is very small when compared with the vast number of coolies employed under him, and does not represent the amount of rice consumed by them alone. In Bindole rice is sold only to relief laborers, and the officer in charge there, as well as the officer at Durgapore, seem much in dread of paralyzing private trade, and fear that some of the rice finds its way to the public; but in truth the sales at neither place warrant any such fear, for when the total amount sold does not represent a tithe of the rice consumed by the coolies alone, I do not see that much margin is left to be sold to the public and disturb the market. In Raneesunkoil, Government stores are freely sold, and it was only yesterday that Mr. Scanlan remitted Rs. 1,589, proceeds of rice sales, and yet at the same time he can report that the supply of rice continues generally sufficient

for the wants of the public. At Luskerhat the supply is said to be scanty, but so far not deficient; the prices ruling in that circle are Rs. 3-11 to 4 per maund. This circle has not been very long officered. Golahs, however, are being put up, grain has now been stored, and should the supply unexpectedly fall short, as it has done in other places, the difficulty can be dealt with. In Bhadooria circle, rice still sells at Rs. 4 per maund; the supply is scanty, but not actually deficient. Rice is sold to relief laborers through shop-keepers, who obtain their supplies from the Government stores; 1,057 maunds, according to the latest information, have been disposed of. Distress has, I am sorry to say, broken out in an unexpected quarter, but not to an extent to cause any grave anxiety. Thana Beergunge has always been considered a part of the district where relief would not be wanted, for there was some crop of rice there, and the cultivation of tobacco and other cold-weather crops is extensively carried on. That rice was being taken out of that part of the country I knew, and as I passed through a portion of it not very long ago, without detecting any signs of distress, I was not prepared to hear a few days ago, that there was great distress in the portion bordering on Durwani thana in Rungpore. I sent out on officer to enquire, and from his report it appears that relief operations must be opened at once. The stocks of rice have been reduced to such an extent, that it is selling at Rs. 5 per maund, and even higher; many of the villagers are very well off, but the unfortunate few whose crops failed, and those who hold no land, as the Hâries, &c., are very badly off. Two deaths from starvation were reported to me; on enquiry it turns out that though these men did not actually die of starvation, but of sickness, still there is no doubt their deaths were hastened by want of proper nourishment. The officer who went to enquire was also told that one old beggar woman, who had no one to look after her, had died from want of food, her usual alms being refused her by the villagers. The distress appears to be acutely felt in the vicinity of Khánsámá, a large mart on the Atrai, situated in the north-east corner of Beergunge thana. With the Railway works at no great distance, I hoped that all in want of work would have gone there; the villagers, however, do not like to abandon the vicinity of their houses and cultivation, so work must be found for them near their homes. I have appointed an officer, Baboo Ram Chunder Burmon, in charge of that part of the district, who will be assisted by a couple of inspectors; he starts at once and makes arrangements for the storing of rice temporarily, if not permanently, in some mahajun's golah; the rice meanwhile following on carts, which are to-day being collected. Work will at once be opened on the road from Dinagepore to Khánsámá now much out of repair, but an important work, the road being our means of communication with Cooch Behar. Work will also be afforded by making a road from the large mart of Khánsámá to the proposed Railway station at Durwani, and also from Khánsámá to Bhoosee, another large *bundar* or mart on the Atrai. Rice will be sold to the laborers through shop-keepers drawing their supplies from Government stores, which follow the circle officer within twenty-four hours; and if there is any serious deficiency in the market, it can be sold to all comers. The arrangements made, are, I consider, sufficient to meet existing distress. The question of advances to purchase seed-grain, &c., has, during the past fortnight, formed the subject of some discussion with the circle officers, and one or two of them are of opinion that Government should come forward to assist in the matter; one officer going so far as to desire that 1½ lakhs of rupees should be made over to him for that purpose. I do not concur in these views. I consider that Government have done quite enough in this crisis. It is clearly to the zemindars' advantage that their ryots should have an opportunity of paying their rents; and in order that the zemindars should be enabled to benefit themselves by helping their ryots, Government offer them money on most liberal terms. The first outcry raised was that the villagers were too poor to purchase seed-grain, and that there was going to be no seed to purchase: subsequent inquiries have proved not only that many of the laborers at work on our roads have seed-grain at home, but it has come to be pretty generally

accepted now that seed-grain will be forthcoming when wanted. A conviction also seems to be gaining ground among the circle officers, that the villagers will somehow get grain to sow their lands. The zemindars, of course, would be very glad if Government advance money and save them all further trouble; the ryots, too, would be delighted to obtain money in hand, which they hope will bear no interest, and which they really do not expect to be called on to repay, but the idea is not one to be encouraged. The idea has got about that the Sirkar is going to do the needful wherever required, and needful help can be made to include a good many items that are not really necessary. Government has undertaken the duty of saving the people from starvation, but it has not undertaken the duty of relieving the people from all responsibility or from the entire burden of the calamity. I have observed that where a fair return for wages paid has been most strictly insisted on (these are just the places), there is very little talk about advances being absolutely required to enable the villagers to tide over the difficulty; the poople seem to understand that Government is not going to do everything, while they do nothing to help themselves. It may be that the landlords trusting to Government to sustain their burdens for them, may, in some instances, decline all help; in that case, if advances are unavoidedly granted, the zemindar must be held responsible, or the money given not as an advance to be repaid, but gratuitously as charitable relief. I may remark that in the matter of advances, the munduls and respectable villagers seem to have come forward to assist their poorer neighbours in a way the landlords as a body have not done.

B.—Relief Works.

The number of laborers daily increases, but the late rain has caused a considerable diminution, and it is right that it should do so: if the laborers are required to do a fair day's work for their pay, we may be quite sure that they won't be tempted to stay on, instead of going to cultivate for themselves, or obtain work as agricultural laborers. The bhadoi sowings now take away a good many, but the preparation for the hemanta ought to draw away nearly all our coolies. In most of our works the labor test is pretty strictly enforced, able-bodied men being made to do task-work, or, which comes to the same thing, being compelled to excavate a certain quantity of earth before they are entitled to full wages; only old men, women and children being admitted at daily wages. In Doorgapore circle I fear the labor-test has not been applied very strictly, and that partly accounts for the enormous increase of laborers, who are, I suspect, not giving an adequate return for the wages paid them. I have, however, specially deputed the district relief officer to proceed to the spot and to see that a labor-test is applied. There will probably be a falling off in the number of coolies, but that it is not a matter for regret; no person really in want of work will decline to work, simply because he is asked to do a certain amount before he is entitled to full rates. The change is not to be abruptly introduced, but introduced in some shape it must be. The extension of the works has given rise to opportunities for fraud, of which the dishonest have not neglected to avail themselves; the matter was, however, brought prominently to the notice of circle officers, and though attempts have been made, no frauds have as yet been successfully carried on. The district relief officer is now on tour, and will, I hope, be able to draw up some uniform plan for the whole district, embracing the good points in the methods in force in the various circles. Mr. Finucane at Datiram, and Mr. Scanlan at Ranisonkoil, have been most particular in getting an adequate return for the money expended by them: their coolies increase it is true, but by degrees, and their numbers decrease whenever there is a shower of rain; their coolies also seem to be able to procure seed-grain, and are not clamorous for advances. The commencement of the agricultural operations for the hemanta, or principal crop, will probably draw away most of their laborers. Mr. Pollen at Kalliagunge is also doing well, and trying his best to introduce task-work, a difficult business from the lazy habits contracted by the coolies, under the somewhat lax supervision

of his predecessor, Baboo Hara Kalee Mookerjea. In framing general rules for the district, we will have to borrow largely from the rules laid down by Mr. Finucane for his own guidance, in checking the returns of laborers, and the work performed by them. A very large number of the laborers are employed in digging out and cleaning old tanks, thus making a permanent improvement in the water-supply of the district. The number of persons employed in the district amounts to some 1,00,000 persons; as separate returns are sent by the circle officers I need not give the number in detail.

C.—Transport.

There are no private supplies being brought into the district, and from the beginning there have been none, with the exception of rice brought in from Cooch Behar which importation has now stopped. Internal agency for distribution of rice there is plenty of, and by means of it the surplus stocks of one part have been taken to the markets of another. So completely has the work of distribution been performed, that rice is now selling at Thakoorgaon, Nowabgunge, and Chintamon, places where there was a fair crop, at Rs. 4 per maund, a price higher than it fetches in some few places in the distressed tract. The holders of stocks in the favoured tract, are now holding back, and refuse to part with their stores, knowing that seed-grain will command its own price a month or so hence, when it is wanted for hemanta sowings. The sudden fluctuations in the market, noted in the earlier part of my report, seem to indicate that the supply is running short, what rice there is being taken to supply a reported deficiency in any particular locality. Different solutions of this straitened supply, are given by different officers; one officer thinks that the carts being taken by Government for transport purposes, accounts for it, but I know we have not used up all or nearly all the carts in the district, and the above gentleman's next neighbour reports, that carts are to be had for the asking in any reasonable quantity. Another officer deprecates sale of Government rice even to the laborers, as such sales tend to paralyse private trade, but in truth there is little private trade to paralyse, and it is difficult to understand how sales of rice, which do not amount to the total quantity consumed by the coolies, can find its way into the hands of the public; and further we know as a fact, that at Patiram considerable quantities were sold to the public, and the only effect of the deficiency was to attract rice into the market in such quantities, that Mr. Finucane was able to stop sales of Government rice. Prices are rising in every direction, not because trade is paralysed, but because what local agency there is has distributed the surplus stock throughout the district, and such stocks are becoming exhausted. I shall, in the event of prices rising above 7 or 8 seers per rupee in any place, have no hesitation in selling from Government stores to the public, feeling sure that at such rates, the holders of seed-grain will be tempted to part with their stocks for consumption by the people. Our transport arrangements are working smoothly; we have now about 7½ lakhs of maunds stored in the district, and should get the whole of our allotment stored before the end of May unless some unforeseen accident occurs. We are threatened with cholera some cases having occurred in Patiram and Patnitola, but medical assistance is at hand, and I trust there will be no panic among the cartmen. Even if the worst comes to the worst, Mr. Finucane, in whose part of the district cholera has broken out, writes to say that enough rice has been stored to meet all demand until the rivers rise in June, when rice can be brought up the Atrai in boats easily enough.

D.—Storage of Grain.

About 7½ lakhs of maunds have been stored in the district in different golahs; this amount has been distributed throughout the district, and is available wherever required. The rice has not been regularly weighed as stored,

so it is impossible to say exactly how much we really have in store. An effort must be made to take stock, but our action is hampered by want of weights. Some few sets have been sent, and, have been distributed amongst the officers; many more, however, are wanted, but as they are not likely to arrive soon, I have instructed the relief officers to make weights for themselves, taking those supplied to them as standards. When we get the rice weighed there will be a large deficiency, though where it has occurred will be quite impossible to ascertain, for the bags have never been weighed, or the deficiency at different points in the route written off by the proper athority, as contemplated in the rules. That there will be a deficiency I am sure, and it will be large, if the results obtain by Baboo Hurimohan Chanda at Gungarampore, are to be taken as a fair sample. At first this officer found time to weigh his consignments, and one batch of 4,121 bags, said to contain 8,242 maunds, was found to contain actually only 7,423 maunds; the chalan was in fact 800 maunds short. Government rice is sold now at all the works to laborers, and is now being sold to the public in the town, the supply having become scanty, and prices having risen to about $8\frac{1}{2}$ seers per rupee. The rice is sold by respectable mahajuns, who have entered into an agreement to sell at 12 seers per rupee, and not more than 3 seers to any one person, forfeiting 50 rupees for every time they are detected selling at over 12 seers; they are also to permit their sale books to be inspected by the grain officer that he may satisfy himself that what is taken from the golahs is actually disposed of.

E.—Advances.

During the fortnight, only one application for an advance of Rs. 1,000 has been made by Baboo Gooroo Prosad Mozoomdar. I have urged on all circle officers the duty of reminding zemindars of the liberal offer made by Government, to enable them to obtain the necessary funds to help their tenantry; the officers have done so, but none of those appealed to have been moved by the remonstrance: some say if they had known for certain that payment of Government dues would have been postponed for those who took advances, they would have done so; but that now they have incurred heavy debts to meet the demand they do not wish to incur further responsibilities: others again say they cannot afford to incur the debt, others that the ryots can obtain loans from the mahajuns. I believe these are mere excuses, and that the zemindars are waiting to see if Government will not undertake the burden.

F.—Charitable Relief.

The number of persons receiving charitable relief continues to increase; the following table shows the numbers at the different circles as compared with the last return sent.

Circle.	No. receiving relief from last report.	No. receiving relief as per latest information.
Dinagepore	193	612
Ranisonkoil	193	1,842
Bindole	146	580
Durgapore	...	339
Chooramon	...	178
Kaliagunge	100	179
Tamboolee	8	80
Gungarampore	112	1,148
Luskerhat	86	149
Parsha	11	118
Patnitola	219	353
Patiram	697	1,230
Bhadooria	96	347

The circle officers continue to make use of local agency as far as possible, and the respectable inhabitants in most places seem very willing to help. The local authorities are entrusted with the duty of finding out those who require help, and making lists of them; they also indent on Government stores for

grain, and supply the wants of those on their lists, the inspectors going round, and ascertaining that the recipients are fit objects for charitable relief. I have authorised certain villagers being admitted as recipients of charitable relief, who are not absolute paupers. There are some ryots who have patches of bora rice cultivation, who at the same time are very poor, and without the means of obtaining subsistence; they cannot go to work on the roads, for the bora being an irrigated crop, requires their constant attention, and yet they have no present means of subsistence unless they pledge their growing crop to a mahajun, when they will have to pay heavy interest, and part with the crop at a sacrifice. A number of these men applied to the officer in charge of Gungarampore for advances, and he referred the matter to me. The officer reported that the men are really poor, and in want of help; and as it would be poor assistance to advance money now, to be repaid by taking the full value of the crop a couple of months hence, I have authorised the men being admitted for the present as paupers, and receiving their half seer of rice per day as subsistence allowance, until the crop is gathered. To give an idea of the manner in which the system of charitable relief is worked, I append copies of extracts of a letter from Mr. Finucane, the officer in charge of Patiram, and of instructions issued by him to his relief inspectors. Mr. Finucane is managing an important circle with great tact and judgment, and is affording me most valuable assistance:—

"In reply to your No. 736—S.R., dated April 11th, I have the honor to state that I consider that the arrangements made for affording relief in this circle are good, and through them I hope to be able to administer it with efficiency. I think that no one unless determined to rush to death, can now die of hunger; while at the same time the agency at my disposal is sufficient to prevent deception and fraud. It would be trite to observe (whatever may be the ultimate issue), that were it not for the care and forethought with which the present scarcity has been met, hundreds would have long since starved.

"My circle is not too large, if I may consider it to extend no further than laid down in the map forwarded with your circular No. 35; but as you will see by another letter of this date, I am now giving charitable relief at Sujapore, a place 5 miles east of Chintamon police thana, and 12 miles east of the boundary of the Patiram thana. The zemindar of Sujapore reported that the people of that locality were much in need of such relief, and I have therefore been forwarding rice there, for distribution.

"It may be as well to give an outline of the way in which I propose to administer the circle, and would of course be thankful for any suggestion to modify or alter the plan proposed. I have divided the circle into six parts, giving an inspector to each part. I have made the head-quarters of each inspector a centre of charitable relief; relief is distributed not by inspectors, but the zemindars, naibs or other local agents under the supervision of the inspector. The zemindars supply mohurirs and keep accounts. The inspector sends those in distress to the place of relief; sees that no one gets relief who can do without it, makes it a point to count the coolies and also looks after the golahs situate within his local jurisdiction. I append a copy of instructions translated for and explained to the inspectors."

Circular I.—Appendix A. To all Relief Inspectors of the Patiram circle, dated Patiram the April 1874.

"In order to enable you to understand your duties as relief inspectors, the following instructions are issued to you.

"You are aware that in order to avert distress, Government has—

(1.) "Provided employment for all those who can labor, allowing fair wages for fair work.

(2.) "That food is being supplied without cost to those who from old age, infirmity, or any other cause are unable to work.

(3.) "That rice has been imported and is stored for sale to coolies and when necessary to others."

"Your duties under each of those heads will be as follows. You will visit, as often as you can, the works going on in your circle (a list of which works will be supplied to you); you will count the number of coolies at work, examine the lists kept by mohurirs, and see whether the number given in the lists corresponds with the number at work. You will immediately report to me any discrepancy. You will also report whether the coolies are doing the prescribed amount of work, and let me know in each Saturday the length of road that has been completed on the week ending on that day, and the length of time the road is likely to give employment.

"The coolies are to be paid every Sunday evening in your presence. If the number of coolies is too large to have you pay them yourself, you can distribute the work among the overseers and duffadars, supplying them the lists of coolies whom they are to pay, and so manage that no mohurir or duffadar pays his own coolies. The coolies must come in person for their wages. If any of them is not present his wages can be kept till he comes for it.

"2. Your duties in connection with charitable relief will be to visit the villages in your jurisdiction; to make yourself acquainted with the condition of the people, ascertain the names of the munduls and other chief inhabitants, and make lists to send to the places (lists of which will be given you) where relief is being given to all who are fit objects of relief. You will be a member of all relief committees in your circle, all persons to whom you give tickets for relief are to obtain it. You will also take from the books of the relief committees, lists of persons receiving relief and enquire into their condition, and if you find there are any receiving relief who are not fit objects, you will report the matter to the committee and to me, and recommend that such persons be discharged. In short, you will be responsible that all who are in need of relief in your circle obtain it, and that none receive gratuitous relief who might have got on without it. You will, of course, take part in the meetings of the committees, as being not only a member but the member responsible for the state of your circle. Your suggestions will receive every attention from me, and should from the commitees too.

"3. You will visit the golahs in your circle (lists of which will be given you), you will take care that, unless I give an order to the contrary, rice is sold only to the coolies, and that all rice taken by such moodies or mohajuns as are authorised to sell rice, is sold by them before more is supplied. The utmost care must be taken that Government rice is not kept in store by dealers but sold according as they buy it. You will watch carefully the sale of rice in the hâts in your circle, reporting to me the price at which rice is sold, and stating whether the supply is sufficient, that is, whether rice is to be had by all who have money to buy. You are to consider yourself as the Government officer responsible for your circle. You will report to me either in writing or personally, everything that comes to your notice regarding relief operations. More detailed instructions under each of the heads given will be given when necessary; meantime you will work according to these now supplied."

No. 338, dated Rampore Beauleah, the 21st April 1874.

From—W. H. D'OYLY, ESQ., Collector of Rajshahye,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to forward my narrative for the fortnight ending 18th instant.

A.—STATE OF THE COUNTRY.

In the first part of the fortnight prices rose considerably at several places in the district, and at some markets not more than 9 seers (80 tolahs weight) were procurable for the rupee. In my last narrative I mentioned two places, Sahebgunge and Sooktigatcha on the Attrai river, where the price of food was high. Shortly after the prices rose in Bhundaikhara, and at one market in Tannore, and I was about to sell Government rice to laborers on public works, and to the public at Keshore hât and at other market places where the supply was short and the prices high, but prices fell again, and it was found to be unnecessary to bring the Government rice into the market. Arrangements, however, were made on the principal works, and circle officers have been authorised to indent on store-houses provided the price rises above Rs. 4 per maund. The Commissioner has sanctioned sales at the following rates; viz.—Burmah and other rice, with which is mixed a large percentage of paddy, at 12 seers per rupee, and clean rice, at 10 seers per rupee.

On the 6th and 7th instant there was rain in all parts of the district, and along the banks of the Ganges; and for some distance along the banks of the Attrai and Goor, there was an exceedingly severe hail-storm. In the Singrah thana the high wind and the hail did a great deal of damage; several houses were blown down, and several persons were killed. The tobacco crop in a small area in the Bhandaikhara thana suffered most.

Although prices have improved at the few places where they were highest, still at the same time the prices have slightly risen where in the beginning of the fortnight rice was least dear; but nowhere is the price higher than Rs. 4 per maund, while in many places it is procurable at 12 seers per rupee, as will be seen from the following statement :—

Thana.	Name of hât.	Prices on the last market day.

Boriegong ...	...	Prices not reported.				

The condition of the people on the relief works is still good. The Nattore Deputy Collector reports that the supply of rice is equal to the demand; that the outturn of the rubbee crops has been good, and this he thinks has in a measure prevented the price of rice from rising. He believes that when the boro dhan, which promises well and is extensively cultivated, has been harvested, the price of rice will improve still more. The only part of his subdivision he is anxious about is the high tract of land in the north-west and south-east of the Singrah thana; but I have, since receipt of his narrative, received a letter, in which he says he has alarming reports from the north-east of Buraigaon, and indeed from all quarters: at the same time he says that the people are not inclined to work; and it will be seen by the statement given above that the prices of rice cannot be regarded as famine prices. Want of money seems to be the greatest cause of suffering. I have urged zemindars to help their ryots with advances, and to take loans from Government for this purpose, and I am glad to say that a good many of them have responded. The Deputy Collector has been ordered closely to watch the parts bordering on Pubna and Bogra to supply work wherever it is wanted, and to see that the helpless are provided for in poor-houses. The report from Bagmara, Bhundaikhara, and Manda is more re-assuring. The sub-divisional officer, Baboo Hurry Nath Chatterjee, has himself visited a large number of villages, and quiries have been made by a superintendent appointed for the purpose.

in In the southern Bhurind sub-division the chief want is water, and the sub-divisional officer, Mr. Manisty, is providing a good deal of work in deepening tanks. Several tanks are being dug by managers of Court of Wards' estates and by zemindars, who have obtained loans for the purpose. In the north-east of this sub-division prices are higher than in other parts, and there is more distress. The feeder road supplies sufficient employment there for the

able-bodied, and Mr. Manisty has provided light work for those who cannot work on the roads.

B.—Relief Works.

It will be seen from the statements that the number of workmen has considerably decreased. This is chiefly owing to the substitution of task-work for the daily wage system. At first the laborers held out against task-work, but when they found we were firm, and that they really could earn from annas 2 to 2½ a day, they came back by degrees, and the numbers are slightly increasing. Of the works provided by the circle officers, the most important are the deepening of tanks and the collection of kunkur. The latter has given employment to the women, children, and weakly men of 13 villages in one part; and it has also been commenced in other parts. At the poor-houses, jute and cotton has been supplied, which women work into string and thread. Paddy also is husked by them. Village roads are being repaired and improved under the supervision of circle officers. The Beauleah town committee commenced work on two large tanks in the town which they intend to set apart solely for drinking purposes. This work will have to be carried out with relief funds if the loan applied for is not granted, and the Commissioner has advised Government not to grant the loan, as he considers the municipality is not in a position to afford the extra expenditure.

C.—Transport of Grain.

Private importations have not been so extensive during the last fortnight as they were previously. This I believe is the cause of the rise in prices. The risk is greater now, as at this time of year storms are to be expected. **The following statement shows the progress in transport of Government grain through this district. We have now nearly completed the allotments that are to pass through Godagaree.**

D.—Storage of Government Grain.

The following statement shows the amount stored in this district; *first*, in the district golahs; *second*, in railway golahs; of the latter 40,000 is to be kept in reserve for me. The balance is now on its way:—

District Golahs.	Mds.	S.	Railway Golahs.*	Mds.	S.
Manda	2,499	0			
Tannore	8,000	0			
Bagmara	5,000	0			
Gooliahat	4,958	26			
Lallpore	1,961	4			
Nowgong	700	0			

Accommodation is provided for a reserve of 100,000 at Godagaree, and for a reserve of 50,000 at Sahebgunge (on the Attrai). I expect, however, that we shall not have to store so much in reserve at these latter places, as we have despatched much quicker than we expected.

E.—Advances to Private Parties.

	Rs.
Advanced up to date of last narrative	48,175
Advances in course of last fortnight under Land Improvement Act	1,690
For advance to ryots	17,700
For purchase of grain	1,500
Total ..	69,065

* This statement is altogether wrong. I have no time to alter it, as it is now past 10 P. M., and the post goes in the morning I will send a correct statement to-morrow.
21-4-74. W. H. D'Oyly

F.—Charitable Relief.

I will first allude to three private annochattras established by zemindars. Of these two are in the vicinity of Kasimpore, on the banks of the Jaboona, in the north-western corner of the Singra thana. The Deputy Collector was ordered by me to visit this part of the country, as the zemindars who had established these annochattras gave a very gloomly account of the state of the people living in the vicinity. From the Deputy Collector's report, it appears, *first*, that the accounts were much exaggerated; *second*, that the annochattra was not conducted on sound principles. Some who *should* have received food, complained that they were not served at the annochattra. This was brought to the notice of the zemindar, who is a member of the sub-committee for that quarter. The remaining private annochattra is in Bhundai-khara, and was established by a very liberal zemindar named Harnath Rai Chowdhry of Doobalhattee. The sub-divisional officer, Baboo Hurry Nath Chatterjee, visited this annochattra, and found upwards of 800 persons being fed there, of whom, he says seven-eighths were able-bodied men, who were not at all fit objects for charitable relief. He very properly brought this to the notice of the zemindar; but I fear that when once an annochattra is started by a native, he will never allow any one to be refused, whether deserving or not. These private annochattras, I fear, will do harm, as they keep people away from work, and demoralise the whole population of the neighbourhood. Upwards of 5,000 were fed at this annochattra in one week. As regards charitable relief administered by public officers, I will take the four sub-divisions one by one.

Beauleah sub-division.—The sub-divisional officer reports as follows: "Distress is not widespread in this sub-division, though its effects are being gradually felt here and there, but there is no cause of anxiety. Government rice and private charity no doubt would be sufficient to meet any contingencies that may arise. The public works in progress afford employment to the laboring classes; the digging and cleaning of tanks give employment to a large number of village people. **About 10,000 men are daily employed in the silk filatures receiving from Rs. 3 to Rs. 6 per mensem; Messrs. Watson, & Co. are now paying their men half in cash and half in grain. They give 19 seers of rice for the rupee. In the course of another fortnight the relief-houses will be in full operation and on a more systematic plan."**

(*a*.)—Average number of persons daily receiving gratuitous relief:—

Beauleah centre	27

Nowhatta „	36
Total	55

South Bhurind sub-division.—Mr. Manisty reports that the price of rice is rising, and people are more willing to work than they were. Near Saipara and Dhoorail "aous" dhan has grown up to 3 inches in height, and the boro promises well. A relief centre has been established at Dhoorail. Tanks are much wanted in the north-east of Tannore, and relief money is being spent on deepening tanks where necessary. Village roads are being improved.

(*a*) Daily average of persons receiving gratuitous relief :—

Saipara centre	..	346
Chowbeesnugger centre	..	208
Tannore „	..	308
Hatara „	..	172
Kaninugger „	..	27
Mehrapore „	..	0
Dhookail „	..	0
Grand Total	...	1,061

Nattore sub-division.—No poor-houses have been opened except privately by zemindars as above stated. Subscriptions have been raised both by the sub-divisional and sub-committees. The committees have resolved to supply cotton and jute to people in want of light work, but no accounts have been received. The people are unwilling to work on the railway, they say, because they would have to neglect their fields if they did so. In the Chowgong circle, work has been provided on the road leading to Bogra. This is undoubtedly the worst part of the sub-division, and I have urged the Deputy Collector to provide more work here, and to open poor-houses where necessary. No account has been received of the number of persons fed. The number of persons employed on the road amounted only to 170 in the week. The condition of the people in the Kuruchmaria and Sahebgunge circles is reported to be good. An advance of Rs. 200 was made to the Kassimpore sub-committee who have expended Rs. 70-13.

Northern Bhurrind sub-division.—Kunker is being collected at several places at 1 anna per cubic foot. In the north of this sub-division there is a good deal of jungle. I have asked the circle officer to clear it as much as possible; this will afford relief to the people and improve the country.

The number of people fed gratuitously is given below :—

Name of poor-house.		Daily average of persons fed gratuitously.
Bagsole	..	24$\frac{6}{7}$
Bamnigram	..	19$\frac{3}{7}$
Saljore	..	26$\frac{4}{7}$
Laroopara	..	52$\frac{2}{7}$
Nooroollabad	..	11$\frac{1}{7}$
Total	..	134$\frac{2}{7}$

I have told all circle officers that work must be provided much more generally, and I intend to apply to the central committee for a grant of Rs. 20,000 (twenty thousand), as our subscriptions altogether only amount to about Rs. 12,000 only.

The central committee sent me Rs. 3,000 to relieve the poorest of the sufferers from the fires which burnt down so large a portion of the Beauleah town.

G.—Financial result.

Total expenditure as shown in the last narrative Rs. 1,70,374-13-11.

No. 126—F, dated Maldah, the 21st April 1874.

From—BABOO SITA KANT MOOKERJEE, Deputy Magistrate and Deputy Collector in charge, Maldah,

To—The Offg. Secy. to the Govt. of Bengal, in the Statistical Department.

IN continuation of this office No. 42—F, dated 8th instant, I have the honor to submit herewith the fortnightly narrative of scarcity and relief of this (Maldah) district for the fortnight ending the 18th April 1874.

The district officer who has hitherto written the narrative being sick, and consequently unable to write, and Mr. Livesay, the special relief officer, being out in the interior, the duty of writing this narrative was performed by me, and I hope the Government will excuse any shortcomings in it.

Fortnightly Narrative of Scarcity and Relief in the Maldah District for the fortnight ending the 18th April 1874.

A.—STATE OF THE COUNTRY.

The supply of food-grain in the local markets, although equal to the demand, yet not so abundant as heretofore. Imports of paddy and rice from the eastern districts during the fortnight under report has fallen. The importation of other grains into the local markets, the produce of the late rubbee-crops, such as wheat, barley, &c., is tolerably in abundance. Yet the price for rice has not fallen in any perceptible degree except at the district head-quarters, where it is selling at 11 seers of 80 tolahs weight. Prices are almost stationary since last fortnight.

The following are the latest prices current for paddy and rice:—

	Seers of 80 tolahs per rupee.
Central part of the District.	
At English Bazar—	
Paddy	18½
Ordinary rice	11
At Balia Nowabgunge—	
Paddy	17
Ordinary rice	11½
At Bulbul Chandee—	
Paddy	16½
Ordinary rice	10½
North-east of the District.	
At Gazole—	
Paddy	19
Ordinary rice	12½
At Bamongollah—	
Ordinary rice	12
North-west of the District.	
At Chanchal, Tulseegunge, Shamsi, and Abadpore—	
Paddy	16 to 17½
Ordinary rice	11 to 11½
South-west of the District.	
At Sheebgunge—	
Ordinary rice	9
South-east of the District.	
At Rohunpore—	
Paddy	18
Ordinary rice	12

There is a falling off in the import at the Rohunpore market; on the last market-day 500 maunds of paddy and only 50 maunds of ordinary rice were brought for sale. This decrease in the supply appears to have been steady since the last two fortnights.

Rainfall.

The rainfall on the night of the 7th instant kept the weather cool for about 2 or 3 days, but afterwards it was, however, very hot, strong hot westerly winds prevailed, and there was no signs of rain since then, although clouds are seen now and then in the skies in the morning. More rain is wanted.

State of the Crops.

The wheat and barley crops are already harvested, and their respective outturn was quite an average one. Gram, millet, and moong are being harvested, and their probable outturns are above the average; the boradhan is coming into ear, and still looks healthy, a good shower of rain now would do much good to this crop. The intense heat of the past few days has commenced drying up the "bara" lands in some localities, and every reasonable means is being employed for irrigating them by cutting nullahs from the beels.

The sowings of "bhadoi dhan" lands has commenced, and Mr. Reily reports that nearly the whole of the winter crops of paddy in the Chanchal circle, and about 10 to 12 annas of "bhadoi" have already been sown, and that their present condition is very promising.

Condition of the District.

The health of the district continues generally good; no severe outbreaks of sickness are reported in any part of the district, nor have any cases of starvation been reported; even, however, with the comparatively cheaper prices for grains like wheat, barley, kalye, &c., the poorer classes of people cannot but be considered badly off.

There was a fire in the English Bazar gola on the 18th instant, and grains like wheat, pulse, barley, &c., were burnt to the amount of about five hundred rupees. This is likely to affect the prices to a certain extent for two or three days.

Condition of any special tract.

The daily increasing number of persons to whom cooked food is distributed at Chunchal and Goregoribah, in spite of the strong caste prejudices of the people in these tracts, is a sign of increasing distress in these tracts.

B.—Relief Works.

Works are going on on all the roads and tanks reported on in former fortnightlies, and Government rice in being sold to the work-people at the same rate of 12 seers of 80 tolahs for a rupee. Accounts of sales from all the authorized sellers in the furthest parts of the district have not as yet been received. The sales in the following places, however, are as follow:—

	Mds.	Srs.	Ch.
At Old Maldah	89	25	14½
Bholahat	4	11	0
Nowabgunge and Nowagollah	49	37	2
Chanchal Circle...	432	0	0
Total ...	575	34	0½

The total number of persons employed on all the works during the fortnight is as follows:—

	Men.	Women.	Children.	Total.
Ordinary district roads ...	18,111	4,375	1,485	23,971
On municipal roads and tanks ...	881	610	49	1,540
On relief roads	17,294	2,575	1,917	21,786
On tanks	10,468	3,621	2,082	14,371
Total ...	46,754	11,181	3,733	61,668

Statement showing the total daily average number of persons employed on Road and Relief Works during the fortnight ending 18th April 1874.

Road and tanks.	Men.	Women.	Boys.	Total.
Ordinary district roads	1,293	312	106	1,711
Municipal roads	63	43	3	109
Relief roads—				
North-West tract—8 roads	789	54	37	880
„ „ 11 tanks	625	171	18	814
North-East tract—3 roads	106	15	22	143
„ „ 1 tank	14	..	..	14
South-Eastern and Central tract—4 roads..	366	120	91	577
„ „ „ 3 tanks..	112	84	..	196
Total ..	3,368	799	277	4,448

C.—Transport of Food.

Private trade is rather slack in consequence of the Government having taken almost all the available boats and carts for the conveyance of Government grains. Pack-bullocks, however, are being extensively used by private traders in carrying the commodities like wheat, barley, pulse, &c., from the interior to the several market-places.

Up to the end of the fortnight under report, 6,21,155 maunds of Government rice had been received into the district, of which 55,905 maunds stored in the several golabs in this district, and the remaining 5,32,482 maunds had passed on, or are in transit to Dinagepore.

By Hyatpore route only Mr. Reily has sent 1,00,800 maunds up to the end of the fortnight. His daily average despatch in last week amounts to over 2,000 maunds, and he can, he says, increase it to 4,000 maunds with the available carts at his command. He has at present 1,400 carts employed, and he proposes to restrict his daily despatches to not more than 3,000 maunds in order to avoid confusion.

Mr. Westmacott's daily despatches by the land route averaged 2,980 maunds, and that by water route 3,984 maunds.

D.—Storage of Government Grain.

In consequence of the marked falling off in the local trades, the total allotment of the 1,50,000 maunds of Government grain for this district has been allotted as follows:—

	Mds.
For the Chanchal Circle	30,000
For Gazole	10,000
Nowabgunge, Seebgunge, and Goomastapore	10,000
Old Maldah	25,000
English Bazar	25,000
Godagaree reserve	25,000
Old Maldah reserve	25,000
Total ..	1,50,000

The following amounts of grain have been stored in the following golahs out of these allotments up to the end of the fortnight under report:—

	Mds.
English Bazar	18,491
Maldah	10,772
Gazole	5,299
Nowabgunge	3,750
Jhelin	1,000
Seebgunge	1,500
Parbottypore	1,000
Hyatpore	1,475
In all the golahs of Chanchal Circle	15,000
Total ..	53,287

The following amounts of the grain were distributed to the undermentioned subsidiary golahs during the fortnight:—

	Mds.
Bholahaut	1,000
Seebgunge	150
To Charitable Relief Works at English Bazar	98
Ditto ditto Amirtee	50
Ditto ditto Arahpore	20
Ditto ditto Nowabgunge	100
Ditto ditto Kaliachak	100
Ditto ditto Mohodeepore	200

E.—Advances to private parties and their results.

In addition to what has been reported in the last fortnight, the following advances were sanctioned to the undermentioned parties, and as soon as they appear to receive the advance and

give the necessary eckrar, &c., they shall have the money. The Sub-Registrar and the Treasury Officer have already been instructed on the subject:—

	Rs.
Krishtodhun Das for excavating tank	400
Mr. Reily, Manager of the Chanchal Ward's Estate, out of the grant, Rs. 20,000, sanctioned by Government in Circular No. 617—SR, dated 11th February 1874	10,000
Bhoobun Mohun Bannerjee for assisting ryots	500
Hargobind Pandey for ditto	250
Monoharilal Sing for ditto	300
Juggunnath Sing for ditto	100
	11,150

With the exception of Krishtodhun, every one of the above-named parties have received the advance put down opposite his name.

F.—Charitable Relief.

The following result of the charitable relief operations have been arrived at in spite of the returns of the one important sub-division, namely, Maldah, not having been received:—

Chanchal Relief Circle.

At 10 relief centres 4,522 people relieved, at an expenditure of 55 maunds, 24 seers, 12 chittacks of rice, and Rs. 6-9-6 cash.

Gazole Relief Circle.

At 4 relief centres 244 people relieved, at an expenditure of 14 maunds, 17 seers, 8 chittacks of rice, and Rs. 8-11-3 cash.

Sudder Sub-division.

At 9 relief centres 4,787 people relieved, at an expenditure of 58 maunds, 36 seers, 9 chittacks of rice, and Rs. 32-14-3 cash.

Nowabgunge Sub-division.

At 4 relief centres 2,332 people relieved, at an expenditure of 29 maunds, 33 seers, 11 chittacks of rice, and Rs. 24-4 cash.

Gomastapore Circle.

At 4 relief centres 2,618 people relieved, at an expenditure of 34 maunds, 13 seers, 13 chittacks of rice, and Rs. 17-0-1½ cash.

The total number of persons relieved during the fortnight is thus 12,171, at an average per diem of 869.

G.—Financial Results of the Fortnight.

	Rs.	A.	P.
Total expenditure from district treasury, as shown in the last fortnightly narrative	1,48,189	0	0
Detail of the above total—			
Ordinary district roads and relief works, &c.	51,403	13	0
Advances for purchase of grain	40,000	0	0

Maldah,
The 21st April 1874.

Sitakant Mookerjee,
Dy. Magte. and Dy. Collr.

No. 11, dated Rungpore, the 20th April 1874.

Memo. by E. G. Glazier, Esq., Offg. Magistrate and Collector of Rungpore.

Forwarded to the Secretary to the Government of Bengal.

Narrative of Scarcity and Relief in Rungpore District, for the fortnight ending 18th April 1874.

A.—State of the Country.

The main feature of the fortnight has been a general failure of the supplies in the markets throughout the district, and mainly all down the western border of the district from Durwani to Govindgunge. On the 9th instant, I accompanied the Relief Commissioner down the Bogra road through thanas Nolung, Peergunge and Govindgunge, and the tendency of prices was everywhere upwards, and reached Rs. 5 a maund and above, so that I made proposals which have gone up to Government to sell for these thanas from our Kallygunge supplies. During my absence there was a failure of supply in the head-quarter markets of Nowabgunge and Mahigunge; only half the usual quantity was brought to market, and the prices reached Rs. 5-8 a maund. Many would have gone without supply, but that, at the instance of the Joint-Magistrate, Baboo Luchmiput's agent opened his rice stores, and sold to the poorer people under the ruling rates.

The late unfortunate fire at Mahigunge had destroyed the Government reserve stores, and there was only 100 maunds stored at the new golahs at Sonkamaree; but I commenced to sell on Government account on the afternoon of the 15th instant, and up to yesterday had sold 1,500 maunds. The rice is being brought in from Chillakhal and Panial ghât river-side golahs by cart service which will supply easily 4,000 maunds a week at present, and which will soon be increased. The daily demand is about 400 to 450 maunds a day. The rice was sold at 12 seers a rupee. The first lot was good rice. The

subsequent supplies have been rice that contains a large quantity of paddy. I have sold that at the same rate, and have raised the price of the better rice to 10 seers a rupee. The demand has now, I think, a tendency to fall off. Many of the people hesitate before they buy, and the market has come down yesterday at Mahigunge, though the supply was not much more than half the usual quantity. The prices were 8½ to 9½ seers of 80 tolahs per rupee.

Simultaneously, at Peergunge, prices have risen to Rs. 6 a maund, and Mr. Damant was deliberating whether to open Government stores when I last heard from him. If the Government accede to my proposals for sale at Kallygunge, I anticipate fully that any deficiency of supply from the west border marts will be met by the importation of Government rice from that river-side depôt.

This failure of supply was not confined to the western border; it was general on both banks of the Teesta. In Borobari, it was attributed to a rise of price in Goalpara, and to the fact that the ryots were busily engaged in agricultural operations and could not supply the markets as usual. Along the Teesta, too, the winds had delayed the arrival of the usual boat-supply; but the latest reports from all these places shew a renewal of supply and falling prices. At Kallygunge the price is declared from Rs. 4-4 to 5-4 per maund.

The cause of the rise of prices along the western border remains to be dealt with. The Dinagepore stocks, from which comes our importation, must be getting low, and the spring crops are everywhere flourishing, so that it appears to me that the merchants at the larger marts, and the smaller baparies everywhere, are making an effort to raise prices, in order to sell off their stocks at a good profit before the influx of the new rice shall permanently reduce the price. At the same time the people are actively engaged in agricultural operations, and petty trade is consequently less well maintained. An impression is shared among the native residents here that the Government transport arrangements have had a tendency to paralyse the trade, and a bald record of this vague surmise unfortunately found its way in the weekly crop-report sent up in my absence. I have specially reported on this subject, and expressed my dissent from this view *in toto*, and the Relief Commissioner coincides with me in this opinion. Market quotations are as follows :—

	Per rupee. Srs.	Chs.	
Mahigunge	8	14	of 80 tolahs weight.
Nawabgunge	8	14	„
Molung	8	0	„
Gaibanda	9	15	„

Palchora			
Sampore			
Podagunge			
Chandamari			
Bawchundee	7	8	„
Monipore			
Panbazar			
Nunipuekar			
Lalbeg			

The rain here has been slight during the fortnight under report, but at the close of the last fortnight the fall of rain was very general and highly beneficial. Towards the south, as much as six inches fell in the course of one or two days, and I found on my tour south, the ditches full of water. As I have already reported, I took a rapid tour through the three south-western thanas, and accompanied Mr. Damant through the bad tract west of the Kuratoya. Half of the population of a total of 18,000 are at work on the roads, and the relief work seems well in hand. Mr. Damant thus writes of his sub-division :—

"The supply in most of the hâts on the eastern side of thanas Sadullapore, Govindgunge and Peergunge is still tolerably well maintained. These

markets are supplied from the eastern districts through marts on the Brahmapooter and Bengali rivers. On the western side of Peergunge and Govindgunge the supplies are very small, and may fail at any moment. In Kamdya hât a very small supply only is brought, which would be utterly insufficient, but that more than half the people in the neighbourhood are working on the roads and buy their rice from Government stores. Prices are very high on the western side, varying from Rs. 4-2 to Rs. 5 per maund of 80 tolahs. We have had several storms of rain and hail, one of them very heavy; the total rainfall could not have been much less than 6 inches. The rain has been very beneficial both in bringing on the aous and in enabling the kheyar lands to be ploughed up; it has also alleviated the scarcity of water which formerly prevailed. No deaths from starvation occurred, although some cases of great distress have been discovered; one in fact was found lying by the road side in Sadullapore, and taken care of. Cholera has broken out among the cartmen, and seven deaths have occurred; the transport of rice has been somewhat delayed in consequence; pack-bullocks have been engaged locally and the more remote golahs are being filled as rapidy as possible. Rice is being sold to most of the persons working on the roads; they are very glad to get it, and prefer the Burmah rice, which they say is more satisfying than the common rice of Bengal. Steps are being taken to organise rice-husking in connection with each golah, in order to give employment to women and to clean the Saigon rice. The system of making advances to laborers as proposed by Mr. Lowis and sanctioned by Sir Richard Temple, has been introduced and will probably work well; great numbers of women and children are now working on the roads, and will do very well for the present, but no measure has yet been proposed for the relief of this class of people when the rains fairly set in, and it will be impossible for them to remain on the works.

"We may expect to get a little new rice in a month and a considerable portion in two months; the distress in Sadullapore, the greater part of Peergunge, and the portion of Govindgunge west of the Kurotoya will then be nearly at an end; but in certain parts of Peergunge, and the portion west of the Kurotoya no crop can be expected before the middle of September, and this will be very little, so that relief measures must probably be maintained in those tracts till the end of the year. The distress in the neigbourhood of Kamdya, Mallapara, Aligan, and Rajahar is very severe, and most of the people there are entirely dependent on the relief works. About 7,000 people out of a population of 15,000 supposed to be suffering from the most severe distress, are daily working on the roads, and the numbers are still increasing; the mandals and headmen of the villages have been utilised as dafadars; great difficulty was at first experienced in paying the coolies, but they are now paid village by village through their headmen, so that the labor has been greatly lessened. Three tanks are being excavated and several useful roads constructed; their utility would be greatly enhanced could proper bridges be constructed, but as I have no materials at hand except whatever trees can be cut in the neighbouring jungles, the only bridges I can erect will be of a very rough description. Cotton relief is very popular in Peergunge, and has been taken by a very large number of people; it is also appreciated to a less degree in Sadullapore and the east of Govindgunge, but in the west very few of the women are able to spin."

In Molung distress has spread owing to the high price of rice, and the number on the roads has largely increased. I set the relief officer at work on cleaning out a large tank at Meetapukar, the head-quarters of the relief centre. I applied to Baboo Dhunput Dugar, the zemindar, for help in this work but he has refused to give any. The condition of Sundargunge and Mahigunge is much the same; distress is spreading but the relief officers have it well in hand. They have an increasing number of laborers on their roads; the condition of Kumargunge is somewhat worse. Many cases of distress have been searched out and relieved, but no deaths have occurred. The relief officer misunderstood the headings of the weekly report on this subject that goes to Government, and reported as deaths by starvation what were only cases of distress which he relieved. From Durwani, which has not yet been opened as a relief centre, bad reports have been received. Half a dozen dacoities have

occurred, most of them grain ones, and yesterday 98 men were sent on in a case for grain-robbery. I doubt very much whether there is real distress there to any great extent, and it is most probable that the people are merely fulfilling their character as the worst in the district, and taking advantage of the present state of matters to follow their bent of robbing to the full. The District Superintendent of Police left yesterday to enquire into the matter, and with full authority to organise all that is necessary in the way of relief; 5,000 maunds of rice are stored at the thana. It is probable I shall need an experienced officer to take up this thana and Kumargunge. Of Borrobaree the following *précis* is made by the Joint-Magistrate:—

"In Borrobaree, north-east, in the first week of the narrative the condition of the people remained as last reported, if anything slightly better. The people refuse to take any road-work but clamour for advances. The supplies in the markets are more than sufficient; health continues good, and the road-works are largely deserted, as the men have been called to their fields for weeding work. Cotton relief is popular in the neighbourhood, and much charitable relief is being given besides." There is only one annachattra there, with a daily average of 46 persons, almost entirely of the beggar class; many known village idlers came to the chattra to eat, but they were required to work and they withdrew. There were two other private chattras in that circle where 80 persons of the same class are fed daily. Some 12 people, invalids, have been relieved at home by advances of grain on the ticket system. Later reports came of an insufficiency of grain in the markets and of great dearness. It was attributed to an alleged rise of prices in Goalparah, and to the fact that the ryots who supply the hât by petty trade are now busy weeding. Another private chattra has been established, and works were selected and ready to be opened for any probable increase of people requiring relief. Government grain was being rapidly stored at Nulaghat, and the subsidiary golahs at Baroobaree and Kawnia were to be supplied within a few days."

B.—Relief Works.

In Gopalpore about 400 men are daily employed on five roads. They come from Batason pergunnah and Nisbetgunge, and do not belong to the villages in the neighbourhood of the roads under repair. Two roads are kept in reserve should there be an access of numbers for employment when the weeding is over; supplies of Government grain are kept in store along the roads for sale to the laborers. The majority of the laborers are found to be hoarding the greater part of their earnings, in some cases six annas a day, and manage to provide their daily food with very little ostensible means of subsistence; all of them are in good condition. In no part here, nor in the direction of the railway, are the laboring cultivators attracted by road work.

In Mahigunge 1,200 are so employed daily. There are roads in reserve; Government grain is sold to the Government laborers on the spot, and the plan is much liked by them. Here they are reported to be living entirely on their daily earnings at road-work.

In Sundergunge circle on 4 relief roads 623 were employed daily. The numbers rose to 1,956 last week. Moodies have been put on to sell grain to the laborers.

In Borrobaree and Kurigram there was no increase of laborers, but preparations were made in expectation of this.

In Govindgunge, Peergunge and Sadullapore 11,448 men, women, and boys are employed on 25 roads and 2 tanks. Others are also being employed on 2 tanks by private parties—

C.—Transport of food.

Mr. Blair reports—

"Owing to an outbreak of cholera amongst the cartmen, the transport of rice by carts has to a great extent been stopped during the latter half of the fortnight, a panic having seized the men many of whom have absconded.

"The disease now, however, appears to have abated a little and the men are regaining confidence, and are not bolting in the wholesale manner in which they did at first. The transport of rice to Govindgunge, on which route the cholera first made its appearance and is worst, has been wholly suspended for the present, and the carts are now being sent chiefly to Peergunge and Meetapukar; there are now about 300 carts in actual work. The hot weather is also telling upon the bullocks, several of which have to be let off after each trip. About 80 pack-bullocks have also been engaged in carrying rice to Molung, and the transport of rice by boats is proceeding vigorously. Attempts are also being made to obtain carts from the other side of the river, about which there ought to be no difficulty if the authorities there assist."

I have applied to the Collector of Mymensingh for 1,000 carts, and hope to get some from him. When the cholera broke out at Kallygunge, Mr. Blair had nearly 900 carts in employ, but numbers fled or had to be let go when this scourge appeared. Since this, over 200 have arrived from my collecting agents in the north, but the men refuse to go at present to Kallygunge, and I am employing them in bringing on rice here for our daily sales, and shall, when the reserve here is sufficiently supplied, fill up the Molung inside golahs from this end, until all fear of the cholera is at an end; a native doctor and compounder have been sent down to Kallygunge to treat the patients.

The time allowed for landing rice does not appear to be sufficient. Two bills, aggregating Rs. 1,750, were received in the course of week for demurrage for detention of steamers 3½ days, at the rate of Rs. 500 a day.

The balance of the three lakhs of grain is coming in by steamer and country-boats at such a rate, that it has to be stacked on the river-bank, and protected with mats for the present; the advices for one week were—

	Maunds.
11th	28,000
13th	12,000
14th	30,000
17th	20,000
„	20,000
18th	25,000
Total ..	135,000

The importation returns, gathered from the principal markets of the district, shew for the fortnight a total supply of paddy and rice 48,000 maunds—

Of this the amount of	9,000 maunds,	is from local sources in the thanas north and north-central, Jaldhaka, Dimla, Durwanee, Kumargunge and Forenebaree.
Of the imports ..	12,000 „	came from Dinagepore to the thanas Durwanee, Kumargunge, Rungpore, and Molung.
And a further quantity	12,000 „	from Julpigoree, Cooch Behar and Goalparah, to the thanas Jaldhaka, Barrobaree and Alipore.
And a quantity of	15,000 „	from Bogra and Sherajgunge to thanas Gobindgunge, Sundurgunge and the southern thanas generally.
	48,000	

Of the latter amount 9,000 maunds have been registered as imported at the mouth of the Teesta.

From the manifestly incomplete returns from some thanas, and the impossibility of checking all trade routes and all the small markets, I should conclude that this may represent one-half of the actual trade, which would thus amount to one lakh of maunds for fortnight, or two lakhs for month, and represent the consumption at an estimate of one-third maund per month of 6,00,000 people out of our population of 21,79,000. The remaining population

eat their own stores, or purchase at the village stocks. I shall use every endeavour to further complete these statistics.

D.—Storage of Government Grain at Relief Works.

This was everywhere progressing well until the outbreak of cholera interrupted the arrangements. Every effort was made to prevent disorganisation and to keep the men employed on their lines where cholera had not appeared, until the disease abated, and confidence was somewhat restored. The disease was apparently engendered by using unwholesome water from the roadside wells and tanks where the heat had made the water almost as putrescent as the slime which it scarcely covered. The recent rain has rendered the water sources less dangerous.

E.—Advances to Private Parties.

These continue to be made throughout the relief circles with as much judgment as possible, and care is taken as far as possible to ascertain that they are properly applied.

Statements of money advanced to the zemindars and jotedars to help their ryots are as follows:—

	Rs.
For purchase of grain	7,500
To zemindars for advances to ryots	1,07,100
To jotedars for ditto	5,950
Add advances sanctioned during the fortnight but not taken by the parties	10,760
Total ...	1,31,310

F.—Charitable Relief.

Several new private annochattras and some public annachattras have been opened in the district in the last fortnight. At the private annachattras relief is given very indiscriminately. Very little criterion from the approximate figures sent in can be formed as to the severity of distress, as practically all who choose to sit down among the rows on the grass, receive as much as they want. Many also carry the cooked rice home. All well know the different hours of feeding at the annochuttras which are only a few miles apart, and the dietary at each, and as the feeding lasts a long time, many get from one to the other and secure food at both places. It is not desirable at present to interfere with these arrangements, except in notably flagrant cases of abuse. Those who have private annachattras are directed to exercise moderate discrimination or in case of their wishing to supply their relief-stocks by purchase from Government golahs, the rates will be higher than where the chattras show proper management. Relief by distribution of grain at the rate of half a seer of rice a day from private relief centres, to persons registered after inquiry as proper to obtain assistance, is being generally adopted among the zemindars who are really in earnest for the good of their ryots, and this mode of giving assistance is most acceptable and easily freed from abuse.

The beggar class object much to potatoes as part of the cooked-food, saying—"if we have to take your charity, let it be of the best, all rice and no potatoes;" yet almost all people use potatoes, and some very coarse aous as a part substitute for rice, and to vary their diet. In Rungpore, at the private relief-houses to secure attendance, only cooked rice and "dâl" and "tarkary" are given, and the poor people desert the public annachattras, in a great measure for the private one. As to cotton-spinning, this mode of home relief, with employment, is being given as widely as possible. It is an unprofitable kind of work. One seer of cotton, value about 12 annas, is given to a woman with one rupee for gratuitous relief. She has to give back 14 chittacks of spun thread as soon as she can spin it out. The thread may be worth eight annas. So there is an out-going of four annas and one rupee present on every eight annas worth of thread produced. The majority of the women are believed to be hoarding these rupees.

So ready are the natives to abuse every opportunity for their own advantage, that the recent system of distributing cotton and money, and advances for the subsequent delivery of spun thread was gladly availed of by the heads of villages. I was credibly informed that 20 seers of cotton, and 20 rupees, had thus been taken by a prodhan who kept the money, and with part bought the necessary quantity of spun thread, sent it in, and then sold the cotton for his own benefit in the bazar, and kept that amount and the balance of the Rs. 20. No information was to be had about this money when inquiry was set on foot in this village. The prodhan could get any number of women to swear they spun the thread, just as the coolies will be got to falsely say they have been paid extra, when a "bukshi" is detected in embezzling by false charges for jungle-cutting in relief road accounts.

E. G. Glazier,
Officiating Magistrate

No. , dated Bogra, the April 1874.

From—C. A. Kelly, Esq., Offg. Magistrate and Collector of Bogra,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my fortnightly narrative as follows:—

***Narrative of Scarcity and Relief of the district of Bogra for the fortnight ending the 18th April* 1874.**

A.—State of the Country.

I am glad to report that on the whole prices are decidedly easier. A satisfactory importation is going on from the east, and this and the recent most seasonable weather, *viz.* abundant rain followed by a fine dry period, just what is required now for ploughing operations, may be said to have contributed to the above result. Ordinary rice at Bogra was selling on the 19th instant at 12 seers of 80 tolas per rupee, at Sultangunge at 11½ seers, and at Dupchanchia 12 seers.

	Maunds.
At Sultangunge	1,000
„ Dupchanchia	8,000
„ Hilee	4,000
„ Burigunge	3,000
„ Kichak	3,000
„ Bogra	800

has been reported as in the hands of traders and petty dealers up to about the 18th April 1874. 3·14 inches rainfall during the fortnight. Sugarcane is yielding a good outturn. The boro paddy in Khetlal Thana promises well. Aous rice has been extensively sown in the pali land, and is being sown in parts in the khiyar land also. If we have a good crop of aous rice,—and hitherto the prospects of this crop are most favorable,—excellent results may be expected. The condition of the people of course requires careful watching, but things have, generally speaking, assumed a more hopeful appearance. I am not aware of any cases of misery and starvation during the fortnight calling for

report. Eight grain-thefts during the fortnight. I have already mentioned our particularly bad tracts.

B.—Relief Work.

I annex a list of lines of relief roads and works with the number of laborers on the 15th April on each—

		Men.	Women.	Children.	
1.	Shariakandi road	219	388	599	
2.	Sultangunge road	93	677	638	
3.	Matidali road	50	291	212	
4.	Khetlal road	182	.....	.....	
5.	Dupchanchia road	708	2,949	3,943	
6.	Dinagepore road	1,711	4,117	4,736	
7.	Sibgunge road	788	585	532	
8.	Sherpore road	304	320	51	
9.	Nungola road	260	167	332	
10.	Nashipore road	99	287	421	
11.	Tank at Fuldigi	14	.....	.....	
12.	Sona Mai road	824	1,043	552	
13.	Tank at Kahalu	538	24	62	
14.	Ditto Birgao	59	.....	.....	
15.	Ditto Godarpara	42	.....	.....	
16.	Ditto Pilkhanj				
17.	Ditto Jotul	215	.....	.....	
18.	Ditto Gohail	4	32	8	
19.	Ditto Molamgari	.....	.....	.....	Reports have not been received.
20.	Ditto Par Bogra	.....	.....	.....	
21.	Ditto Sukhanpukharia ..	23	.....	.....	
	Total ..	8,133	10,880	12,086	31,099

Work is also going on on the Khetlal and Ghoraghat, and the Nobabgunj and Badalgachi roads, which have been recently opened. The reports of the laborers thereon have not yet reached me. Hitherto the laborers have been supplied from the private resources of the district. The number of laborers, though large, has fallen off since the last week, when over 38,000 were reported.

C.—Transport of Food.

The reports received show importation of 12,000 maunds of rice from Pubna, Dacca, and Mymensing districts by way of the Daokoba and Bengali rivers; 800 maunds of rice and 600 maunds of paddy from Rajshahye by carts. In accordance with the instructions of Mr. Robinson, the Relief Commissioner, who has recently visited Bogra, we have altered our mode of payment from monthly wages to payment by contract. Great exertions are being made to secure more carts and dispose of our largely-increased allotment quickly; but it is a fact, and I trust that this may be borne in mind, that we have great difficulties to contend with in Bogra as regards transport, as every one on the spot will testify. There are no doubt some other carts in the district besides what we have secured; but now that the ploughing season has arrived, the carters, who are cultivators also, are engaged in ploughing their lands by means of cart-cattle, and of course it will be highly inexpedient to put a pressure on them and so stop cultivation, and I am sure the Government would not wish this to be done. As a rule also the Bogra bullocks are of inferior quality and cannot carry heavy loads. I have wished to procure more carts from Badalgachi thana, as I heard there were a large number of carts unemployed there; but it appears that actually only a very few are available, and the cartmen decline to come, as they want their bullocks for their own agricultural purposes. For increased carriage, therefore, we are compelled to look to other districts. I mentioned some efforts in this respect in my last narrative. The district grain officer, Deputy Magistrate Baboo Madhav Chandra Maitra, an intelligent and very experienced officer, has now gone himself to Nattore, where he will endeavour on the spot to secure as many carts as possible from that quarter. I have also written to the Magistrates of Patna, Mymensing, and Rajshahye with a similar object. Rewards have also been offered for persons who will bring carts. On the whole I trust that

by working the contract system introduced by Mr. Robinson, and which no doubt we might have adopted before with advantage (and I fully admit a mistake in system on that respect), and by aid which we hope for from outside and are endeavouring to obtain, we may be able to get in our grain more quickly than hitherto, and when the rains set in we will dispose of what remains with as much expedition as possible aided by water carriage. Meanwhile allowance will, I trust, be made for apparent want of quick despatch when my above remarks are taken into consideration, and it is remembered that the increased allotment was ordered comparatively recently.

D.—Storage of Government Grain at Relief Works.

I have nothing to add with respect to places of storage selected. Amount of food-grain reported as received in the district up to the 18th April 1874, including what has been sent on to Ghoraghat, is 1,11,105 maunds. I may mention here that the 49,729 maunds referred to in the last narrative included only the rice stored in the district and not that sent on to Ghoraghat. In addition to the amount mentioned in my last narrative, 185 maunds has been sold to the relief officers for relief purposes.

E.—Advances to Private Parties and their Results.

People have lately been applying for advances to assist their tenants much more freely than before. Rs. 6,600 have been given out in loans for the above purpose during the fortnight. One application has also been received for a loan on account of digging a tank.

F.—Charitable Relief.

On the occasion of Mr. Robinson's recent visit, the distribution of the whole district into six circles was finally arranged. Each circle officer will be aided by assistants. Five of the six circle officers have joined and have commenced work, and 13 assistants have already gone out to their circles. One circle officer is still required for the Sherepore and Shariakandi circle, and I believe Mr. Robinson will send him soon. Already an assistant circle officer has gone to each of these thanas. Mr. Clay, district relief officer, will exercise general supervision, and receive reports, &c. It has been arranged also that he will, with reference to the last paragraph of circular No. 1802—S.R., dated the 25th March 1874, send in one relief report for the whole district weekly. Village visitation is being carried on, and jute and cotton spinning resorted to. The whole district has now special officers in each thana to provide for the wants of the people. Shariakandi and Sherepore thanas (forming the Shariakandi circle) have each an assistant, and when the circle officer whom Mr. Robinson is going to send us joins us, the whole six circles will be manned. As prices are high at Khetlal, I have authorised the circle officer, if they continue so in the next hat day, to sell to laborers on the relief works there.

Statement showing the progress of Charitable Relief in the District of Bogra.

Number of Committees and Sub-Committees as yet appointed ..	1 Committee and 7 Sub-Committees.
Number of regular relief circles opened and manned by special officers	6
Number of men, women, and children (with total) in receipt of gratuitous relief in any shape through the charitable relief organization daily. This should include people employed or relieved by the relief committees or relief officers under any of the heads of instructions	5,881
Grain disposed of up to date of last report—	Mds.
In charitable relief or in any other way	150
Grain disposed of during the fortnight—	
In charitable relief or in any other way	185

It is satisfactory to note in conclusion that rice was selling at the Bogra market yesterday at 12 seers of 80 tolas per rupee when the last narrative showed 10½ only. The weather is fine and seasonable.

No. 682, dated Pubna, the 24th April 1874.

Memo. by W. V. G. Taylor, Esq., Magistrate of Pubna.

Submitted to the Secretary to the Government of Bengal, Statistical Department, together with the fortnightly special narrative of the Serajgunge distressed tract by Mr. Nolan, which seems to be full and satisfactory, and calls for no special remark.

A.—State of the Country.

There is no special distressed tract in the Sudder sub-division. There are general reports of the people being rather hard pressed for food; that in many instances persons who used to take three meals are now restricted to one; and there is some apprehension that we may have individual cases of extreme destitution among the very poorest classes.

In order to provide against this, it was considered advisable to call a general meeting, at which Rs. 7,203 were subscribed. A central district committee was organised, with sub-committees at various parts of the sub-division, consisting of the most influential residents and the officers in charge of various stations, who have undertaken to inquire into and report on the condition of the people within their respective circles.

There has been no perceptible deficiency in the supply of rice throughout the sub-division. Prices are still high, averaging about 12¾ seers (*paki*) per rupee.

A heavy shower of rain, 1·22° inches, fell on the evening of the 21st, and there is reason to believe it was general. Reports from the more distant stations have not yet been received. If it has been general, it will lead to a very great improvement, both as regards the crops on the ground, and the prospects of the crops now being sown. We are not able to judge at present how far the rain has affected prices.

The condition of the people is generally, as far as known, good. Considering the high prices that have been now ruling for several months, there has been no increase in either crime or sickness. We will be able to speak more confidently on this head in our next report, after the receipt of the several sub-committee reports.

It is extremely difficult to give any trustworthy opinion regarding the amount of grain in the district.

There is no sign of stores being exhausted, and but little probability of this being the case in a district so favorably situated as Pubna.

B.

It has been arranged to open the following relief works:—

1. A road from Tantiband *vid* Satbaria and Nazirgunge, and Maldah to Mothura, a distance of about twenty-two miles.
2. A road from Chat Mohar to Bhownipore, six miles.
3. Chat Mohar to Furreedpore, twelve miles.
4. A road from Dhulauri to Demra, four miles.
5. A road from Pubna to Malanchi, three miles.

The requisite agency has been appointed, and the roads will be opened forthwith.

No arrangements for supplying coolies with grain have yet been made, and it is hoped that such will not be required.

The late rain of the 21st will give much-wanted employment to large numbers of the agricultural classes.

C.

As regards transport of food, private agency is doing all that is adequate at present The central committee will probably have to store grain for the relief of the very destitute and infirm. It is confidently hoped that any supplies of this kind can be obtained from Goalundo or from local sources.

E.

Some few applications have been made for advances by private parties, but none have as yet been granted. The Commissioner has, however, been asked to confer power on the Magistrates to make such to zemindars and mahajuns.

The central committee were unanimously of opinion that at the present time, when many of the agricultural classes must work in their own fields, no better measure of relief could be adopted.

F.

No gratuitous relief has as yet been given. The appointment of sub-committees will form an effective organisation for this purpose whenever the distress reaches a point to justify us in adopting it.

G.

The collections by private subscriptions amount to Rs. 7,203; add an equivalent sum from Government as a grant.

The expenditure up to the present has been small, about Rs. 33-10-3, as detailed below—

Paid on account of laying out the Chat Mohar road .. Rs. 33 10 3

Sixth Fortnightly Narrative from 6th to 20th April 1874.

A.—State of the Country.

There has been some delay in sending this report owing to the transfer of Mr. French, who was entrusted with the writing of it during my absence from the sub-divisional head-quarters.

The supply of rice in the bazar has much increased owing to a rise on the Phooljore rivers which enables boats to come up more easily. The reports for the 18th show that the late abundant rains have produced a slight fall in prices in the distressed tract as elsewhere! At Raigunge the price is now 10½ seers the rupee; at Pangashi, nearly 12 seers; at Ullapora, the principal mart of the distressed tract, 12¾ seers; at Taras, 11¼ seers. This shows a fall everywhere but at Taras. That market was formerly supplied not from the Phooljore, but from the beel country on the south, where there were stocks. These are now becoming exhausted, and it will have to be fed from the river like other places.

The condition of the ryots on the banks of the Phooljore has somewhat improved, as the cheena is being harvested, and there has been a great demand for agricultural labour to take advantage of the opportunity offered by the rains. In the other part of the distressed tract there has been but slight improvement, and but little can be expected, as there are no crops there except the rice. I hope that distress may in the end be confined to this part.

No stocks have been accumulated anywhere. The weekly wants of the tract are supplied by importations up the Phooljore. The panic which existed before the rainfall has passed away, but is likely to be revived.

B.—Relief Works.

The overseer arrived and was employed for some days on the Raigunge road, where there are 244 coolies, but has gone back to Pubna. There are only 60 coolies on the village tracks. In fact, the numbers are insignificant. Some hundreds of persons had engaged to come before the rains, but happily found more congenial employment after the fall. The arrangements for food and so forth are amply sufficient for so small a number.

C.—Transport of Food.

The imports by private persons into the distressed tract during the fortnight I estimate at 1,000 maunds a day. I do so from watching the boats pass Ullapara when I was there.*

* A gentleman who was on the Phooljore on the 19th tells me that he saw about 40 boats laden with rice go up that day.

The committee has bought 525 maunds of rice and 50 maunds of dâl in Serajgunge, and sent it by cart to the relief-houses. We have received accounts for 375 maunds of rice. I find that the cost is Rs. 3-8 per maund when landed at its destination. This is too much, and in future rice will be bought at Goalundo or on the spot.

E.—Advances to Private Parties and their results.

Zemindars have up to date applied, with my approval, for Rs. 18,204 advances to assist ryots, and I have received Rs. 11,004. Of this Rs. 7,542 has been paid out; the rest awaits the arrival of those entitled to it. Baboo Bonwary Lall Roy, who was the first to apply, and whose ryots want the most, has not yet taken his Rs. 2,000.*

* He drew the money to-day.

The ryots are very eager to get the zemindars to take advances, and generally come with them to my office. I have no doubt that in general the money is well applied.

F.—Charitable Relief.

The following annachattras were open during the fortnight for the gratuitous distribution of cooked food to the necessituous infirm :—

Annochattras.	Average daily attendance at 11 A. M.	Average daily attendance at 5 P. M.
Raigunge	36	10
Ullapara	127	15
Taras	3	3
Pangashi	25	20
Chandarkona	23	10
Jamtail	63	..

The opening of another second class annochattra at Soobgacha outpost has been sanctioned by the committee. Some of the persons who eat at this place are in a deplorable condition. Others are professional beggars.

I have unfortunately no account of the number of relief tickets. The average daily issue of rice on this account was small, about 25 maunds. The inspecting agency has not as yet arrived, though it has been appointed at Pubna.

G.—Financial Results of the Fortnight.

		Rs.	
Expenditure on Chandarkona road	1,000	Roads.
Ditto on village tracts	50	
Total ..	1,050	
Expenditure on Jamtail annochattra	50	Annochattras.

Serajgunge,
The 21st April 1874.

P. Nolan,
Joint-Magistrate.

No. 2739—S.R.

From A. MACKENZIE, Esq.,
Junior Secretary to the Government of Bengal,

To the COLLECTOR of PUBNA.

Scarcity and Relief.

Calcutta, the 28th April 1874.

Sir,

I am directed to acknowledge the receipt of your endorsement No. 682, dated 24th instant, reporting on the state of your district. The Lieutenant-Governor gathers from this report, that in the Sudder sub-division,

you only anticipate individual cases of extreme destitution among the very poorest classes, to meet which a relief organisation has been provided under the control of the district relief committee. The late rain has given employment in the fields to the agricultural and laboring class, but road work is laid out and open to meet any demand there may be for relief labor. No importation of Government grain will be required, but it is suggested that advances, apparently for supplying grain, should be made to zemindars and mahajuns. The Lieutenant-Governor will await Mr. Molony's opinion upon this before passing orders.

2. In the Serajgunge sub-division, matters have improved; supplies in the bazars have increased, and distress will probably be confined to a very limited tract. Rs. 11,004 have been advanced to zemindars for the assistance of their ryots, and cooked food is being given from charitable funds to the necessitous infirm. The demand for relief labor on roads is as yet but insignificant. The Lieutenant-Governor hopes Mr. Malony may be able to report more favorably of the sub-division generally than was at first expected. His report is awaited.

I have the honor to be,

Sir,

Your most obedient servant,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

No. 2740—S.R.

Copy forwarded to the Commissioner of Rajshaye for information and guidance.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

Calcutta,
The 28th April 1874.

No. 868—S. R., dated Berhampore, the 13th April 1874.

From—E. W. Molony, Esq., Commissioner of the Rajshahye Division,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I have the honor to furnish a narrative for the fortnight ending Saturday, the 11th instant.

2. The condition of affairs in Moorshedabad and Rajshahye may be said not to have materially changed in so far as latest information goes, but it is a melancholy fact that the silk bund, which was expected to be a good one, has turned out a failure in both districts. This is owing, I understand, to the bad effect on the worms of the very changeable temperature in the end of March and beginning of April, the range of the thermometer being very great, and the cold at night fatal to them. Rain is now much required in the Moorshedabad district, both for the sowing of the early rice crop and on sanitary grounds. Cholera and small-pox both prevail, and the former is now very bad in the neighbourhood of the station. In Rajshahye they have had rain accompanied with hail on the 6th and 7th, which did some harm to standing crops. More rain is wanted for the boro dhan and for the early spring sowings. Cholera also had made its appearance in the Mandah and Tannore thanas, in Rajshahye.

3. The supplies continue to be fairly plentiful, but in the north, centre, and west of Rajshahye there has been a a sudden rise. I think this is fairly attributable to the increased demand on the local markets for laborers, and the Collector intends to open sales to workmen, and the railway officers have done so. I expect a good effect from this, and do not advocate any sales to the public at present. I wrote to Major Lindsay as soon as I heard he had ordered sales to the public at his godowns, to request he would discontinue them.

4. In Rajshahye there have been particularly disastrous fires, and the greater part of the native town of Bauleah has been burnt down. There have been a good many fires also in Moorshedabad. These misfortunes add much to the suffering of people, who were barely able to support themselves, and the Rajshahye committee have appealed to the Central Committee for a grant to aid the poor who have lost everything.

5. The condition of Pubna is just now causing some uneasiness. The last narrative which is before Government gives a worse account than previous information led me to expect. The Magistrate of the district and Joint-Magistrate of Serajgunge appear to have the matter well in hand. I think that perhaps expectation of getting advances have been raised which have led to somewhat exaggerated reports. The Serajgunge committee suggest import of Government grain, but I dissent from their view of the necessity, and propose to rely on the local markets to procure any stores which it may be necessary to supply to laborers or distribute gratuitously. The required establishments for relief will be allowed, and the matter made the subject of a special report to Government.

Relief Works.

6. These are progressing and are at present sufficient to meet demands. There is no unmanageable demand for work just yet. A complaint of a deficient supply of tools is made in Pubna. This I am quite at a loss to understand, considering the few hands they have to employ, and the very early estimates of requirements in this respect which were called for from all districts.

Transport of Food.

7. There is still an active trade in Moorshedabad and Rajshahye, and the supplies in Pubna are not said to be short, except in a very limited tract. Some 1,000 maunds of rice have been ordered by the Joint-Magistrate for gratuitous relief in that part, and will be sent out. The Magistrate of Rajshahye has sufficient supplies to open sales to his laborers, where there is the greatest demands for work and some difficulty in procuring supplies, this will relieve the hauts in the immediate neighbourhood. This tract is to the north of Tannore. The Burmah rice will be sold at 12 seers of 80 tolahs, which is about the equivalent of 10 seers of clean rice. A small quantity of rice has been purchased from Government by the relief committee of Moorshedabad.

Storage of Grain.

8. The transport work goes on very steadily and satisfactorily. There seems to be no reason to doubt that all the Government rice will be in position before the rains come on.

Advances.

9. I have nothing particular to record under this head. There has been no active demand for large loans. Some advances have been already made in Pubna, and others are applied for. The attention of the Collector of Pubna has been called to the rules regarding advances to cultivators, as it seemed that there was a tendency to imagine that Government would step in to advance to cultivators who had no permanent interest in their holdings to pledge as security. Some advances have been made to cultivators in one estate under direct management of Government, and in another the money will be paid away very shortly. These are petty estates, and the amounts given are not large.

10. The relief establishments of Moorshedabad and Rajahshye have been finally settled, and those for Pubna partially so. The committee are rather extravagant, I think, in their requirements in this respect, but a sufficient establishment will be proposed. Poor-houses have been opened in Rajshahye and in Pubna—

In Rajshahye	...	...	... 8
In Pubna	...	...	... 5

No poor-houses for the provision of cooked food have been opened in Moorshedabad, there being a great deal done in this way by annochatras maintained by private individuals; later it may possibly be found necessary to open some. Meanwhile, the committee are doing excellent work in providing employment on village works, and by the subsidiary measures of issuing jute and cotton to be worked up.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 25th April 1874.

Read—

The Burdwan Commissioner's letter No. 23—S.R., dated 23rd April 1874, forwarding the district narratives of his division, for the fortnight ending 20th April.

1. *Bankoora.*—Though prices are easier and no marked change has occurred, the numbers on relief works have risen from 2,740 to 3,135, and the number of persons receiving charitable relief from 1,169 to 3,386. The Commissioner recommends the extension, to the distressed tract of Moheshra, of the concessions F and G of Government circular order No. 175, dated 17th January, *i.e.*, the grant of advances to traders and others to import grain, and to zemindars, to enable them to help their ryots. The Lieutenant-Governor will pass orders hereafter upon this point, which should have been separately submitted.

2. *Beerbhoom.*—In this district the numbers on works have apparently fallen from 3,606 to 3,115, while those receiving charitable relief have risen from 683 to 1,796. The continued want of rain is telling unfavorably both here and in Bankoora. Notwithstanding the case of suicide noticed by the Collector, which is ascribed to want of food, and the reports of other deaths in the native papers regarding which enquiry has just been ordered, it is manifest that in these districts the people have recourse to charitable relief with the utmost readiness, and considerable discrimination is required in its application. The Commissioner has rightly directed that the cloth woven under advances should be sold in Calcutta. A small sample should be forwarded to this office.

3. *Hooghly.*—The condition of this district is on the whole satisfactory. 4,060 persons are employed on works carried on by or with the help of Government, while 7,772 are on private works. There is a slight decrease since last fortnight. The number receiving charity is 1,140 against 901.

4. *Howrah.*—Mr. Grant still omits to give the numbers on the Howrah relief works, and the number receiving charitable relief. He should now be called upon to report this specially, and at once.

5. *Midnapore.*—This district is not one about which much anxiety need be felt; but there are 10,348 laborers on the roads and embankments, and a considerable tract suffers from the endemic fever. High prices, following on a condition reduced by fever, may possibly induce distress here and there. The Lieutenant-Governor does not wish to have the submission of the Midnapore report discontinued, but it may, with advantage, be made very much more concise.

6. *Burdwan.*—While distress is felt to a certain extent by the poorer classes in nearly all parts of this district, the state of things in Bood-bood and Cutwa is unsatisfactory in the extreme. Deaths are reported from both these sub-divisions, and the district officer merely chronicles the fact, without adding a word of explanation or comment. The Commissioner has submitted a special report on the subject and ordered immediate enquiry, the result of which he has been asked to forward. It may very probably turn out to be the fact, that casualties of this kind are to be explained here by the debilitated condition to which unfortunately many of the people are reduced by the endemic fever. Certainly, relief, charitable and other, seems to be afforded in great profusion, and food depôts were opened from fever funds long before any famine depôts were deemed necessary. Still the condition of this district demands serious

attention from the local officers. The number on relief works is 11,869, while 13,370 are in receipt of charitable relief. The numbers last week were about 13,000 on works, and 9,137 receiving charitable relief. The Lieutenant-Governor has himself visited the distressed tracts, and has given separate orders on all matters calling for decision.

7. The stoppage of the consignments of salt from Howrah on account of the demand of carriage for Government grain, referred to in paragraph 14 of the Commissioner's letter, has, the Lieutenant-Governor hopes, been rectified ere now, as the Government of India has definitely limited the quantity of grain to be despatched, in order not to interfere with private traffic. The matter will, however, be brought to the notice of the proper authorities forthwith.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

No. 2659—S.R.

COPY forwarded to the Commissioner of Burdwan for information and guidance.

No. 2659½—S.R.

EXTRACT paragraph 7, and paragraph 14 of the Commisssioner's letter forwarded to the Government of India, Railway Department, for early orders.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 25th April 1874.

No. 23—S.R., dated Burdwan, the 23rd April 1874.

From—C. T. BUCKLAND, ESQ., Commissioner of the Burdwan Division,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit, in original, the district narratives for the fortnight ending 20th April 1874.

2. *Bankoora.*—The price of rice has fallen slightly, and there is no marked change in the condition of the people; but the number of persons employed on relief works and receiving charitable relief has increased considerably. On relief works 3,135 persons, including women and children, are employed daily against 2,740 of the previous fortnight; whilst 3,386 are receiving charitable relief daily against 1,169 of the previous fortnight.

3. The most important point in the Collector's narrative is the recommendation in paragraph 5 to extend concessions F. and G. of Government Circular order No. 175 of 17th January 1874 to the district of Bankoora. This recommendation should have been made the subject of a special report instead of being included in a narrative. I am, however, prepared to recommend that the concession should be at once made in Pergunnah Moheshra, where the condition of the people is much worse than in the other parts of the district. Pergunnah Moheshra was recently a part of Manbhoom, and it is therefore more generally similar to the condition of that district, where I believe that these concessions have been granted. The Collector will be requested to show cause why these concessions should be extended to any other parts or to the whole of the Bankoora district.

4. The heat of the weather, the dryness of the soil, and the absence of rain, are all telling unfavorably on the district.

5. *Beerbhoom.*—There has been a very small rise in the price of rice in this district; but the exportation of rice still continues almost unabated, being 10,359 maunds against 10,655 maunds of the previous fortnight. The number of persons employed daily on relief works appears to have fallen from 3,60[illegible]

last fortnight, to 3,115 in the fortnight under report; but the last returns are manifestly defective. There is a very serious increase in the number of persons receiving charitable relief, which has risen from 683 of the last fortnight to 1,796 in the current fortnight. It is clear from the Collector's report that if great exertions had not been made in this district by the provision of timely relief works and charitable relief, there would have been considerable distress. The Collector mentions one unfortunate case of a chowkeedar who committed suicide owing to his inability to provide food for his wife and five children; but if it is considered how inadequate a chowkeedar's means are, in the best of times and under the most favorable circumstances, to enable him to support a wife and five children, this can hardly be taken as evidence of extreme distress, although the poor chowkeedars as a class, with their petty holdings of chakran lands, and with their miscellaneous sources of income reduced under the general pressure of the hard times, are doubtless great sufferers.

6. On the other hand, the Collector shows that there is a necessity of employing a real test of distress in the form of work, as, what he calls, "the light labor gang of women and children" at the sudder station was reduced from 1,300 to 150 on the application of real task-work, and the Collector describes them as "an idle gang of gossiping impostors," which I fear was true from what I have heard from other sources.

7. The conduct of Baboo Ram Rungun Chuckerbutty, the zemindar of Hitumpore, is again favorably noticed by the Collector, although no particulars are given of the form which his local charity is taking. I propose to instruct the Collector to send his stock of country cloth made from advances to weavers for sale in Calcutta at the best price procurable there, if the central relief committee will organise any agency for the purpose, as this seems to be the best plan of disposing of it, instead of underselling the local markets.

8. *Hooghly.*—The report on the condition of Hooghly is satisfactory. There has been a fall in the price of rice, and the Collector states that there is employment for all who want work. The total number of laborers employed on public and private works is 11,832 against 12,808 shown in the last fortnight; but the attempt to show the number of persons on private works is fallacious, and I think should be discontinued. In charitable relief, the figures of the two fortnights, when compared, show a slight reduction in the number of men relieved, and a not very large increase in the number of women and children :—

		Last fortnight.	This fortnight.
Men	... ...	234	210
Women	... ...	472	636
Children	... ...	195	294
	Total ...	901	1,140

9. *Howrah.*—The Magistrate of Howrah states that there is no danger of distress even in Khanakool and Juggutbullubpore, unless the crop of boro rice fails, and of this there is very little fear, as a fresh supply of water has been given on the application of the ryots to the Collector of Hooghly by reopening the Bachoordah khall.

10. *Midnapore.*—The Collector states that rice continues abundant in the bazars generally, and it is the common impression, founded on very good evidence, that ample stocks are held. The Collector has again visited the Jungle mehals, and it is to be noted that all his apprehensions of there being a scarcity in that quarter are now considered by him to be clearly groundless. It is proposed to open a petty shop at Jhargram to endeavour to sell the rice, which has been purchased by the relief committee, at 16 seers for a rupee, or two seers below the open market rate.

11. There is some slight distress in Pergunanh Kassijorah, which is due to the inundations in July, followed by epidemic fever in October, and ample provision is being made to meet this. I would propose, unless otherwise directed, to discontinue the submission to Government of the fortnightly narratives from Midnapore, unless there is something in them of a grave and unexpected character.

12. *Burdwan.*—I regret to state that the report on the condition of Burdwan is not satisfactory, especially as regards the Bood-bood and Cutwa sub-divisions. I have read with deep concern the bare statements of the Collector, that deaths from starvation have occurred in Eral and Bhatkoondah

in the Bood-bood sub-division, and that many starving persons were found in Majooria and other villages visited by the sub-divisional officer. I have ordered immediate inquiries to be made regarding the time and circumstances of these deaths, and shall submit a special report on the subject, as well as on the two alleged deaths by suicide to avoid starvation, reported to the Cutwa sub-division.

13. At the same time it must be admitted that relief works and charitable relief are being carried out on an active and extensive scale in the Burdwan district. The application for a further grant of Rs. 50,000 for relief works was submitted to Government on 17th instant, the date on which it was received from the Collector, and the Collector has been authorised to advance any funds that are needed from his treasury in anticipation of the arrival of the sanction of Government. There is therefore no ground for the Collector's anxiety on the subject of want of funds for public relief works.

14. The attention of Government is requested to the remarks of the Raneegunge sub-divisional officer, quoted in paragraph 4 of the Collector's report under head "C"—Transport of food, regarding the detention of large invoices of salt at Howrah owing to the necessities of the grain traffic. A topic of this importance should have been at once specially reported by the Collector, instead of being kept for the fortnightly narrative, and I trust that immediate orders may be issued on it.

15. Statement No. 1, shows the average daily number of laborers employed on public relief works as 11,869. I am unable to compare this with the figures of the statement of the previous fortnight, as the figures in the printed copy sent to me by Government in lieu of the original manuscript are rather perplexing.

16. In statement No. 3 the number of recipients of daily charitable relief is returned as 13,370 of whom 2,900 are relieved at the expense of the Maharajah of Burdwan. In the previous fortnight the total daily number was returned at 9,137, of whom 2,150 were fed in the Maharajah's depôts.

17. I beg to annex a statement which I have had compiled in my office to show the comparative prices of rice in the districts of this division in the several months of scarcity in 1865-66, and 1873-74. The prices have been extracted by my Personal Assistant from the *Calcutta Gazette*, but no price-currents were published before November 1865.

18. The comparative prices in *November* 1865 and November 1873 were as follows in seers for the rupee :—

	1865.	1873.
Burdwan	12¾	15
Bankoora	17½	14 13/16
Beerbhoom	13½	15 9/16
Midnapore	13	20 1/16
Hooghly	12⅝	12⅜
Howrah	12¼	13⅜

In April the comparative prices were—

	1866.	1874.
Burdwan	12 7/16	13⅞
Bankoora	12⅝	13 13/16
Beerbhoom	12	13
Midnapore	10⅜	18
Hooghly	11½	12½
Howrah	12 3/16	13½

19. The figures show very clearly how much more favorably Midnapore is situated in 1873-74 than in 1865-66, and the depression of prices in the other districts has been very gradual this season.

20. I also annex copy of a statement showing the process made up to 4th April, in disposing of applications for advances under Act XXVI of 1871 in this division. It is indicative of the very considerable increase of work which has been thrown on the district officers, and also on this office, as every advance sanctioned by the Collectors and their subordinates has to be reported to this office, and there have been several appeals made on account of applications rejected. Out of a total sum of Rs. 3,30,371 applied for, only Rs. 1,51,568 have been granted, and the whole of this sum has not been drawn by the parties entitled to receive it. The figures in the statement are obviously incorrect, and district officers have been supplied with a new form of return to be filled up, which will, I hope, enable me to give [illegible] figures next fortnight.

Comparative Statement of the prices of coarse rice for each month from September 1865 to September 1866, and from September 1873 to April 1874. (Number of seers of 80 tolahs weight retailed for a rupee.)

Name of District.	November 1865.	December 1865.	January 1866.	February 1866.	March 1866.	April 1866.	May 1866.	June 1866.	July 1866.	August 1866.	September 1866.	September 1873.	October 1873.	November 1873.	December 1873.	January 1874.	February 1874.	March 1874.	April 1874.

C. T. Buckland,
Commissioner.

No. 103, dated Bankoorah, the 20th April 1874.

From—W. R. Larminie, Esq., Offg. Collector of Bankoorah,
To—The Commissioner of the Burdwan Division.

I have the honor to submit my report for the fortnight ending 20th April 1874.

State of the Country.

2. The supply of rice and other grains is generally sufficient. Prices have fallen slightly. Best rice is procurable in Bankoora at 12 seers per rupee, common rice at 13¾ seers, and coarse rice at 14 seers 6 chittacks per rupee. Dâl can be had at 14 seers, and wheat and barley at 14¼ seers and 21 seers respectively.

3. No rain has fallen, and it is now required for the growing crops of cotton, teel, and indigo.

4. There is no marked change in the condition of the people; but the numbers receiving charitable relief have largely increased, as have also the numbers on relief works. Weavers are coming in for advances, and the smaller agriculturists are feeling the distress. No cases of starvation have been reported, nor have there been any serious grain-thefts or robberies.

5. The question of giving advances of rice must be settled soon. In pergunnah Moheshra especially the mahajuns are of a petty character, and their stores have been exhausted by three successive bad seasons. They will not, as a rule, be able to advance much rice, if unassisted, but can in most cases furnish security. I therefore urge that concessions F and G, noted in Government Circular No. 175—S.R., dated 17th January 1874, be made applicable to this district.

Relief Works.

6. The annexed table shows the number now employed. The Executive Engineer is laying out three new roads, two in Chatna and one in Ondah. The very dry weather has rendered earthwork difficult, and has in some places stopped the excavation of tanks by private individuals. A heavy shower of rain would be of incalculable benefit.

Advances to Private Parties.

7. The total number of applications for advances is now 428. Orders have been issued to pay Rs. 34,986, out of which Rs. 28,013 have been actually drawn from the treasury.

Charitable Relief.

8. As will be seen from the accompanying table, the numbers receiving charitable relief have largely increased. The system adopted in the relief centres is a simple one. The name of each approved applicant with serial number attached is registered. A ticket with

corresponding number and name is given to the applicant who is entitled, on presentation of his ticket, to his dole of rice, &c. A mark is then placed opposite his name in the register for that date. I have opened another relief centre at Gogra in the south of Moheshra, as Saltora did not appear to be sufficiently near. A number of women are employed in husking paddy. They are allowed to take the grain away to their own homes, and bring back the cleaned rice each day. The weaver class receive advances, and *oooons* are supplied to the women who are accustomed to spin silk thread. Considerable difficulty is experienced in supplying light work to the more respectable women. Trades are so numerous that it is well nigh impossible to suit all; and a confectioner, for instance, cannot spin, nor can a bead-maker weave gunny. Paddy-husking is the best general occupation we have been able to find. Relief is, however, being given wherever required, and labor is exacted as far as possible.

Statement of Charitable Relief.

1. One central committee.
2. Fourteen sub-committees.
3. Nine.
4. None.
5. Twenty.
6. Statement showing average daily number relieved during the last fortnight:—

Bankoorah	633	Tiluri	107
Chatna	36	Kustholia	121
Bishenpore	199	Palera	256

Women	1,332
Children	114
Total employed daily ..	3,135

Bankoorah Collectorate,
The 20th April 1874.

W. R. Larminie,
Offg. Collector.

No. 63, dated Soory, the 20th April 1874.

From—R. D. Hime, Esq., Offg. Collector of Beerbhoom,
To—The Commissioner of Revenue, Burdwan Division.

I have the honor to submit my district narrative for the fortnight ending 18th instant.

A.—State of the Country.

Prices have slightly risen since last report, and continue to show a rising tendency; the prospects of the district have certainly in no wise improved during the fortnight, the continued drought, excessive heat, and parching westerly winds, being very unfavorable to the growing crops, and to all agricultural operations, and exhausting the already scanty stores of water in the village tanks. The corruption of the water-supplies is the probable cause of the virulent cholera-epidemic which has been prevalent throughout the district, for the last month, causing much mortality, and great alarm, especially in the sudder station where there was quite a panic among the natives for some days, many of the upper rank flying the place. The disease is now happily abated, but has by no means disappeared. The is as yet no difficulty experienced in obtaining supplies at the current bazar rates in the principal marts (*vide* Appendix I). No grain robberies have occurred, and no deaths from starvation during the fortnight. I regret, however, to have to report a case of apparent

misery; a chowkeydar, stung by the reproaches of his wife, whom with their five children, he had failed to provide with food for an entire day, having committed suicide by hanging himself from a tree. On hearing of the occurrence I at once ordered the wife and family to be placed on the charitable relief list of the circle, and the fact that they managed to subsist through the interval shows that they were not reduced to the last extremity; the man must have been but a poor creature, as there were relief works not far from his village which he could have had recourse to. Somewhat alarming accounts of the condition of the Sonthals of this district have become current from Missionary sources; but the special enquiries instituted by me have failed to discover any distress calling for immediate relief measures, though the state of many of these people, living from hand-to-mouth, requires watchfulness; in this the Missionaries might, from their position, be of great service but for their unfortunate readiness to swallow and circulate without investigation any stupid story told them by a Sonthal. As regards the other quarters of the district, misery is at yet pretty well kept under by the numerous relief works, public and private, in progress: without them I have no doubt many of the poorer classes would have succumbed before now; but by their aid they are enabled to support themselves, and in many cases helpless people besides, who are unwilling to have recourse to the alms-houses, while the district is at the same time being benefited by works of sterling permanent utility which will well repay the expenditure.

B.—Relief Works.

Three new relief works, Nos. 9, 10, 11, have been started duirng the fortnight, viz. the metalling of the Ahmedpore-Laghatta road (9), the embankment of the Poorunder-pore-Adjai road (10), and the construction of the Mularpore-Mouressur road (11), all absolutely necessary to give employment to the laborers withdrawn from other completed relief-works, and others. Estimates of the proposed roads from Bulpore to Benglehattra, and from Laghatta to Kulgram have been already submitted to you and await sanction; in all probability both will prove necessary as relief works, as well as the proposed road from Mullarpore to Doomka, which would secure the Sonthals of that border. The number of laborers on district works of all kinds is shown in the Appendix form C.; the numbers of the light labor gang of women and children employed by the Soory township suddenly fell from about 1,300 to about 150 on my putting all able for it to task-work some ten days ago, though they can earn more in this way than the daily allowance they before received for doing little or nothing; indeed, I subsequently learned that several left real work at which they were earning two annas per diem to join this idle gang of gossiping impostors, which at once broke up and dispersed when real work was required of them, leaving a small residuum of *bonâ-fide* laborers.

C.—Transport of Grain.

Exportation of rice continues; that of the fortnight ending 11th instant was 10,359 maunds.

D.—Storage of Grain.

None, with the exception of that by the charitable relief committee adverted to in my last fortnightly report.

E.—Advances to Private Parties.

Are shewn in Appendix Table II.

F.—Charitable Relief.

Vide Appendix Statement II. During the fortnight all thanas and outposts (except Soory and Labpore, Mahomedbazar, Ilambazar, Shahpore, and Soorool, at or in the neighbourhood of which relief centres had been already established, and Cynthia, where charitable relief is not yet required) have been made relief centres, and the officers in charge entrusted with the weekly distribution of food to the helpless destitute. A separate relief centre has been established at Ahmudpore under a paid relief superintendent, who has been instructed to employ all the able-bodied paupers in receipt of relief there on the village tanks and roads, and I contemplate extending this system to the thanas and outposts, as the strain on the already overworked police is becoming excessive at Doobrajpore. Extensive relief is given by the generous zemindar, Baboo Ramrunjun Chuckerbutty, both by employment and by charity. A large number of weavers are now on the relief list, some receiving money advances repaid in cloth, and some advances of thread, in the manufacture of which many poor women are employed, the cotton being supplied, with small money advances, by the charitable relief committee.* I have now a large stock of country cloth in store, but unfortunately there is no sale for it here, and I fear it is too coarse to take in Calcutta. The expenditure up to 18th instant is Rs. 5,617-5-1½.

* Husking "dhan" for the relief centres also employs many women on receipt of charitable relief.

G.—Financial Results.

Rs. 26,760 have been drawn from the treasury up to date, on certificates granted under the Land Improvement Act; Rs. 27,459 have been placed to credit of the Executive Engineer for relief works; Rs. 500 have been advanced to Messrs. Farquharson and Campbell of Ilambazar; Rs. 1,000 to Mr. Jones of Gountia; Rs. 750 to Baboo Kishuree Mohun Roy of Naguree, and Rs. 50 to the munduls of Kuliara, for the construction of roads chargeable to relief; Rs. 1,341-5 have been expended on the municipal gang from the town fund; Rs. 3,565-8 have been placed to credit of the charitable relief fund on account of the Government subscription up to date.

2. In conclusion, I may venture to predict that, if we can tide over the next eight weeks safely, and the rains set in, and continue seasonably, with the result of a good harvest, the district is secure; but should the rains be delayed, or insufficient, the strain will be severe and tax our utmost energies.

Abstract Statement of Men, Women, and Children employed on Public Works in the District of Beerbhoom, during the 14 days ending Saturday, the 11th April 1874.

Total number of persons employed during the 14 days—		
Men		32,302
Women		10,685
Children		833
Total		43,820
Mean daily number of persons employed during the 14 days—		
Men		2,299
Women		757
Children		59
Total		3,115
Number of persons employed on the last of the 14 days—		
Men		1,608
Women		308
Children		104
Total		2,020

Appendix Table 2.

Statement showing the number of applications under the Land Improvement Act, XXVI of 1871, up to 18th April 1874.

		Amount. Rs.
Number of applications registered,	557	2,41,202
,, of applications disposed of,	436	1,91,463
,, of applications granted,	180	66,900
,, of applications refused,	256	1,16,547
,, of applications pending,	121	57,755
,, of certificates drawn,	65	26,760

Appendix Statement 2.

Statement showing the progress of charitable relief in the District of Beerbhoom for the fortnight ending 18th April 1874.

Number of committees and sub-committees as yet appointed	7
,, of special relief sub-divisions opened and officered	6
,, of regular relief circles opened and manned by special officers	1
,, of relief circles opened and manned by planters, zemindars, and other residents	6

Number of workhouses or centres for the distribution of food and gratuitous relief 5

Number of men, women, and children in receipt of gratuitous relief in any shape through the charitable relief organization daily .. 1,796

REMARKS:—A central committee and six sub-committees have been formed Rice is distributed gratuitously in Soory, Surool, Labpore, Mouressar, and Batikar, by members of the sub-committees at their own houses. At Soory, Surool, Labpore, and Ilambazar, advances of thread and cotton are made to distressed weavers and poor women by the committee-men. A regular relief circle, manned by a special superintendent, has been opened at Ahmedpore, Thana Kusbah, and rice stored at most of the thanas and some of the outposts for distribution to the helpless indigent by the officers in charge. All accounts are submitted to the district committee.

No. 33, dated Hooghly, the 18th April 1874.

From—F. H. PELLEW, Esq., Officiating Collector, Hooghly,

To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit the fortnightly narrative for the period 4th to 18th April.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supply in the Bazars.

2. A new *hât* has been established at Jadubpore in thanna Hooghly. There is abundance of grain in the bazars everywhere. In Pandooah the five principal *hâts*, Boinchee, Pandooah, Dwarbasini, and Khanyan are well supplied, but the village bazars contain small though sufficient supplies.

Kind and price of rice selling at certain specified principal marts.

3. The annexed price current shews a slight tendency to a fall in price.

Price Current of Food-Grains.

8	Bhudessur...	14	13½	20	20	12	12	13½	14	14	14½

Any information obtained regarding the amount and kind of grain in the hands of zemindars, traders, ryots, and the like.

4. No further information than that supplied in previous narratives has been obtained.

Rainfall, if any.

5. There was no rain any where in the district.

State of the crops.

6. The til crop is suffering from drought except in Dhunyakhalee. Vegetables are suffering from the same cause in Boidyabatty, Hooghly, Bansbarya, and Pandooa. A fair mango crop is expected. 100 beeghas of joli dhan on churs in thana Balagurh are doing fairly.

Condition of the people.

7. There is employment for all who are willing to labor on public and private works, such as thatching, hedging, and ditching, and digging tanks. No deaths from starvation occurred in the fortnight. Isolated cases of distress are relieved by sub-committees in the villages. Indigent travellers are given a meal of cooked rice, dal and vegetables from serais on the Grand Trunk Road. Old Benares Road and Boidyabatty feeder road. Sick travellers are sent into Hospital. There is a good deal of sporadic cholera about.

Grain-thefts and robberies.

8. Two cases of grain-theft were reported, but both turned out false on investigation.

Condition of special tracts.

9. No tracts are in a specially distressed condition.

No. 3.—Relief Works.

Sudder Sub-division.

Name of Road.	Number of coolies.	Supply of food.	Condition of laborers.	Mode of payment and rate of wages.	Arrangement for tools.	Remarks.
Dhanyakhallee Road ..	333	By purchase in bazar.	Good ..	3 to 4 annas per 100 cubic feet, 2 annas khoraki given daily.	Partly supplied by Department, partly by Contractors, partly by Coolies.	Moulders and Cartmen, local; rest foreign.
Tribeny bridge repairs* ..	25	Ditto ..	Ditto ..	Ditto, but carpenters get 6 annas 3 pie per diem.	Ditto	All local.
Pandooa and Culna Road ..	250	Ditto ..	Ditto ..	3 to 4 annas per 100 cubic feet, 2 annas khoraki given daily.	Ditto	175 local, 75 foreign.
Tribeny to Gooptiparah ..	30	Ditto ..	Ditto ..	Ditto	Ditto	All local.
Muggra to Bhastara ..	40	Ditto ..	Ditto ..	Ditto	Ditto	Ditto.
Dhunyakhallee to Khanpore Road.*	34	Ditto ..	Ditto ..	Ditto	Ditto	All Mahomedans and local, some agriculturists, but chiefly laborers.

Mohanad to Gopikantpore ..	25	Ditto ..	Ditto ..	Ditto	Ditto	Ditto being made by Reverend Jogodish Bhuttacharjea, Missionary.
Boinchee village roads ..	82	Ditto ..	Ditto ..	Ditto	Ditto	Ditto Baboo Beharylal Mookerjee, Road Cess Commissioner.
Total ..	1,326, of which 1,068 are local, including day laborers and cultivators.					

* Note.—The Tribeny bridge was taken up in the fortnight, it was found to be in a dangerous state. The Dhunyakhalee to Khanpore road was taken up to give employment during the fortnight. The branch Grand Trunk Road shown in the Sudder Sub-division in last narrative is now shown in Serampore Sub-division to which it properly belongs.

Serampore Sub-division.

Branch Grand Trunk Road	12	Purchase in bazar	Fair ..	3½ to 4 annas per 100 cubic feet, 2 annas khoraki daily.	Partly by Department, partly by contractors, partly by coolies.	Not local.
Boidyabatty Strand Road ..	8	Ditto ..	Ditto ..	Ditto	Ditto	Ditto.
Nowgong to Sheakhalla Road	160	Ditto ..	Ditto ..	Ditto	Ditto	Ditto.
Boidyabatti Feeder Road ..	18	Ditto ..	Ditto ..	Ditto	Ditto	Ditto.
Old Benares Road ..	130	Ditto ..	Ditto ..	Ditto	Ditto	Ditto.
Tarkessur Road ..	12	Ditto ..	Ditto ..	Ditto	Ditto	All local.
Jonye to Bora ..	63	Ditto ..	Ditto ..	Ditto ..	Ditto ..	All local, 14 cultivators, rest laborers, work under Baboo Anuroop Mookerjee, Zemindar.
Connugger to Jonye Road ..	39	Ditto ..	Ditto ..	Ditto ..	Ditto ..	Not local.
Total ..	342, of whom only 75 are local, and only 14 are cultivators.					

Note.—Branch Grand Trunk Road was shown in Sudder Sub-division by mistake in last narrative. Boydyabatty Strand Road taken up in fortnight.

11. The Collector of Howrah will give the Howrah works separately.
12. The following statement is of private works :—

	Thana.	Number of coolies.	Number local.
Sudder ...	Bansberiah ..	1,000	404
	Bullagurh ..	307	262
	Pandooah ..	1,118	241
	Dhuniakhalee ..	830	220
	Hooghly ..	600	414
Serampore ..	Serampore ..	1,219	292
	Boidobatty ..	215	19
	Hurripal ..	474	176
	Chunditollah ..	703	186
	Kristonoghore ..	313	151
	Total ..	6,779	2,365

13. This excludes 2,885 mill hands, and 1,100 men employed on the Calcutta Municipal brick-works at Kotrung.
14. Beside this, Baboos Joykissen Mookerjee and Rajkissen Banerjee are employing 110 foreign and 60 local coolies on the excavation of the Ghea Nuddee in thana Hooghly at their own expense.
15. In the Hooghly and Chinsurah Municipality 823 laborers are now employed in digging 35 tanks, at the expense of the proprietors, under Section 72, Act III (B. C.), 1864, as they were in an offensive state. Of the laborers, 567 are men and 256 are women.
16. From the Serampore Municipality no return has been received.
17. Under the Executive Engineer, Northern Drainage and Embankment Division, the following works are in progress :—

Thana.	Name of work.	No. of coolies.	Condition.	Remarks.
Boydyabatty ...	Canal to connect Kanna Nuddee with Sursutty.	582	Good ...	Not local.
Dhuniakhalee, Hurripal, Kristonoghore.	Ordinary embankment repairs.	About 100	Good ...	Local.

18. The Executive Engineer states that the demand for labor between Burdwan and Ampta, on the banks of the Damoodur, is not much above that of ordinary years, but above Burdwan there is a marked increase.
19. On 28 tanks being dug or improved from tuccavee advances, a daily average number of 1,639 laborers, of whom 464 are local, are being employed.
20. Summary of above works :—

	Number of laborers.
Government works—	
Road Commissioner's works under Executive Engineer ...	1,347
Ditto ditto supervised by private parties ...	392
Embankment and irrigation works	682
Works under advances from Government	1,639
Private works—	
Under Municipal orders	823
Spontaneously, including Ghea Nuddee	6,949
Total ...	11,832

C—Transport of Food.

21. 15,000 maunds of rice and 7,612 maunds of paddy are stated by the police to have been imported into Serampore thana by water.

22. The railway traffic returns give the results shewn in the following statement :—

Fortnight ending 11*th April* 1874.

Chandernagore	....	....	....	....
Hooghly	....	....	....	....
Mugrah	....	....	....	....
Pandooah	88	....	....	88
Total ..	88	....	....	88

In addition 142 maunds up inward to Pandooah
„ 27 maunds up ditto Chandernagore.

Comparing this with the statement submitted with the last narrative, the following results are apparent: Slightly less rice was exported to the stations between Jamtara and Barrh from Chandernagore, and slightly more of other food-grains. The exports up-country from Mugrah have also slightly diminished; those from Pandooah station have ceased. In my last narrative I stated that I believed that the 310 maunds exported from Pandooah to Behar came from Culna or Gobindgunge by bullock-cart. In this fortnight 101 maunds have been imported to Pandooah, probably from the neighbourhood of Mymaree or Saktigurh, and in addition 142 maunds from Calcutta way has been imported to Pandooah, and 27 maunds from the same direction to Chandernagore for the supply of local markets.

D.—Storage of Grain at Government Relief Works.

23. Beyond a maund at each of the serais on the principal roads, there is no storage of grain at relief works.

E.—Advances to private parties.

		Rs.
24.	Advances for grain already reported	18,000
	In fortnight	*Nil.*
		18,000
	Advances to Municipalities	*Nil.*
	Ditto under Tuccavee Act already reported ...	26,661
	Ditto in fortnight	*Nil.*

One tuccavee advance has been ordered, but the party has not appeared to take the certificate.

F.—Charitable Relief.

25.	Number of committees as yet appointed—	
	District Committee	1
	Sub-divisional ditto	1
	Sub-Committees	144
		146
	Number of work-houses or centres for distribution of food and gratuitous relief	7
	Number of persons relieved .. Men	210
	Women	636
	Children	294

The serais shewn in column 4 are described in last report. They are established for relief of travellers, who often enter this district both from the east and west in a very distressed condition. They are given one cooked meal, and if then unable or unwilling to proceed, their condition is inquired into, and they are fed or sent into hospital, as the case may demand. 62 men, 23 women, 12 children, all travellers, were thus relieved in this fortnight out of the numbers given above.

The Maharajah of Burdwan has promised to establish a depôt for cooked food at Bansberiah. I could have wished that it should have been nearer Chinsurah, but it will be of considerable use.

G.—Financial Results.

26. The disbursements made to the Executive Engineer and others during the fortnight were as follows:—

	To Executive Engineer	*Nil.*
	To zemindars, road cess commissioners, &c., for repairs of roads	2,819 0 0

27. Nothing was paid away in tuccavee advances, or to the district committee from Government Funds during the fortnight.

28. The local subscriptions paid in to the charitable committee were—

		Rs.	A.	P.
Up to date of last narrative		5,387	0	0
During the fortnight ... Hooghly		172	15	0
Serampore		250	0	0
Total ...		5,809	15	0

29. No orders for doubling the amount were passed during the fortnight.

30. The disbursements are as follows:—

	Rs.	A.	P.
Up to date of last narrative	1,775	11	9
During the fortnight	1,790	3	0
Total ..	3,565	14	9

Rs. 2,000 has been received in aid of the local subscriptions from the central committee.

Dated Howrah, the 19th April 1874.

From—T. Grant, Esq., Officiating Magistrate of Howrah,
To—C. T. Buckland, Esq., Commissioner of the Burdwan Division.

In continuation of previous fortnightly reports, I have but one thing to add. The boro crop in this district is now in various stages of maturity. Some is even now ready for the sickle, whilst some is still young. By the end of the four weeks from this time the whole will have been reaped. The crop promises very well indeed, and the ryots everywhere express themselves as being content with their prospects; and all people concur in stating that if the crop continues as well as it now promises, there will be no distress from deficient crops in the district.

But there is a very general cry for rain, and the people of Khanakool have petitioned the Collector of Hooghly to let in some more water through the Bachoordah Khall. At Juggutbullubpore also the people are irrigating their lands with all the water that is available.

This supply of water is wanted for such boro rice as is still young, and for such as has this year been grown on land unusually high for such a crop. But it is principally required for the purpose of preparing the lands for the aous crop. It is greatly needed for this purpose. The boro rice, which can still benefit by water, is very insignificant in quantity; but unless we get rain soon, it will be almost impossible to prepare the soil for the aous crop.

As I write clouds are gathering, and there are signs of rain. But even if no rain falls, it is to be remembered that the aous harvest of this district is, at the best, a very small one, and that the boro crop, which is now almost out of danger, is an unusually heavy one.

In every other respect I have no alteration to notify as having occurred since my last report. The people continue to be decidedly cheerful; plenty of food is procurable in every part of the district at prices comparatively low and which have no tendency to rise; the demand for labor still greatly exceeds the supply, and hardly any is procurable for our roads. There is no danger of distress except in Khanakool and Juggutbullubpore, nor any danger in these two thanas unless the boro crop fails—a contingency of which every day materially lessens the possibility.

No. 40, dated Midnapore Collectorate, the 20th April 1874.

From—H. L. Harrison, Esq., Collector of Midnapore,
To—The Commissioner of the Burdwan Division.

I have the honor to submit the fortnightly report of this district for the period terminating on the 18th April.

A.

2. Rice continues abundant in the bazars generally, and it is the common impression, founded on very good evidence, that ample stocks are held. There has been no rain during the fortnight, as it could hardly have been anticipated, it cannot be said to have done unexpected injury, but both the indigo, the mulberry, and the boro rice will be greatly benefited by a few good showers.

3. During the fortnight I have visited the relief works in Beenpore and in the Jambonee estate, and made special enquiries regarding the food-supply. I found in the Dahijuree haut* on Thursday, the 10th April, that the mhowa fruit was particularly abundant, there was even more of it than of rice tendered for sale; it has proved a great resource this year. On the other hand, I found rice being imported from Singbhoom, and even from Mohurbhunje. The crops west of the jungle mehals have been fair, and in some places even good. The bad crops in the jungle mehals have, on the other hand, put an end to the usual exportation eastwards, hence they are at present receiving and not giving out grain, and all my apprehensions of there being a scarcity, which, as my calculations and arguments shewed, were based entirely on the assumption that these thanas could not look for help to Chota Nagpore, are now clearly groundless.

* This is the principal haut in the jungle mehals.

4. Still, it is a fact that there are places where, except on haut days and by going to the hauts, rice is not procurable. The price at Jhargram, the head-quarters of the thana of that name, is quoted at 18 seers the rupee, and all that is sold is sold at that price; but I have it on unquestionable authority that four or five days ago it could not be procured, even though the rate of a rupee for 14 seers was offered.

5. This is easily explicable if the very undeveloped state of trade in those tracts is considered. At Jhargram the whole population, with scanty exceptions, is agricultural; the better-to-do people have their own stores, which they will not sell; several persons hold stocks, but they have laid out a regular policy to hold back till prices are higher, petty purchasers, even at a high rate, will not tempt them to change. On the other hand, Jhargram is surrounded by a belt of jungle, the persons in need of rice are comparatively few, and, looking to the risk and small room for business, importers do not care to trouble themselves about it.

6. I therefore propose to open a petty shop there to sell at 16 seers the rupee (2 seers the rupee dearer than the haut price), and though the amount which will be sold will not be large, I am assured that it will be a great relief to coolies and others who have no rice of their own, to be enabled to buy even at that rate in small quantities and as they need it. The rice sold will be that which has already been purchased by the relief committee, and the sales will be supervised by them, and on their account.

7. The reports of the sub-divisions are annexed. Those for Gurbeta and Contai call for no remark. The Tumlook Deputy Collector has submitted no return, but two reports on the distress in Kassijorah have been received from him, and I annex these for perusal.

8. Kassijora must now be considered a second relief circle under the sub-divisional officer at Tumlook. The villages in distress are so small that I cannot identify them, and I have therefore called for a rough map showing their relative positions. Till this is known it is impossible to decide where the relief centres should be fixed. I have also called upon the Deputy Collector, in reply, to endeavour to introduce some labour test, however light, as a check against fraud, meanwhile to continue his relief operations till the work is organised. On the receipt of the map, at least two food-depôts will be started, and the question of removing any dispensary to one of these villages will be considered. We have two fever dispensaries already in the tract over which these villages extend, while two more are on the margin of it. I am averse to establishing more dispensaries at this season of the year, and in the present state of the fund, but would transfer any dispensary that could be advantageously moved.

B.

9. There would be in Midnapore considerable distress were it not for the ample provision that has been made for labour. The figures given below will shew that the ordinary and special relief works provide for a considerable portion of the laboring population.

10. The following is a return of the laborers employed during the last week :—

	Daily average.

C.

11. Blank.

D.

12. Blank.

E.

13. All the applications for advances that I have submitted have been refused by you, generally owing to the security being an intermediate interest, and to the landlord (usually Messrs. Watson and Co.) being opposed to the advance.

F.

14. Owing to some cause at present unknown to me, the return from the temporary Deputy Collector has not been received, hence the figures under this heading will be given in a supplementary report. One more relief circle has been opened in Pergunnah Kassijora, Thana Panscoora, where the distress is due to inundations in July, followed by epidemic fever in October, which still rages, though with diminished violence.

15. The epidemic food-depôts and the famine food-depôts will be amalgamated under your orders. Only one such depôt will be necessary at Chundercona and Keerpoy instead of two, as formerly.

16. There will be then four food-depôts, and another will probably be immediately added.

17. The precise number receiving food-relief will be given in the supplementary report, it is about 320 per diem.

18. Hitherto under this head we have only shewn advances for the purchase of seed-grain, advances for agricultural improvements, and Government donations to meet subscriptions. The expenditure on these heads was Rs. 2,954-10-0 up to the end of last week, and no further expenditure has been incurred during the week.

19. The expenditure from the district road fund has not been shewn. If this ought also to be included, your instructions to that effect are solicited.

Those marked thus * are special relief roads opened this year, I visited three of them during the fortnight.

Narrative of Scarcity and Relief for the sub-division of Gurbeta, dated the 17th March 1874.

A.—State of the Country.

Abundance or scarcity of supply in the bazar, &c.—Supply of grains in the bazar is equal to the demand, there being no instance of people able to pay remaining unprovided. Prices have undergone no change for the worse; about 16 seers of common rice may be had at one rupee.

2. There has been no rainfall worth mentioning, excepting only a few passing drops. Weather is getting hot in earnest, high winds often prevailing. There is no important food-crop on the ground, excepting the boro, which is doing well.

3. Of the condition of the people the worst feature has not yet appeared. Distress is everywhere being felt amongst the poorest class; but no case of actual starvation has been noticed.

B.—Relief Works.

No relief works have been opened in Bogri, it appears that a road from Kharkusma to Kayapat was contemplated by the former sub-divisional officer. This work, if undertaken, will considerably help the laboring poor of these parts. Moreover, this road, when completed, will benefit the trade with Kayapat.

C.—Transport of Food.

Grain is yet pouring in from the south.

E.—Advances to Private Parties and their results.

There is no likelihood of anyone applying for advances for purchase and storage of grain. Only one more application under the Land Improvement Act has been made during the past fortnight.

F.—Charitable Relief.

A general meeting of the substantial gentlemen of Bogri was held, in which about Rs. 550 was subscribed. Another meeting will be held soon in which the measures for relief purposes will be contemplated.

Narrative of Scarcity and Relief in the Sub-division of Contai, for the fortnight ending Wednesday, the 15th April 1874.

State of the Country.

There is no want of grain in the markets of this sub-division. The rates at which the paddy is now sold in the bazar are Rs. 1-3 and 1-4 per maund. There was no rain during the fortnight, but public health is generally good.

Relief Works.

No other relief works commenced, except that at Juki, mentioned in former reports. No cases of distress have been reported as yet.

No. 26, dated Tumlook, the 14th April, 1874.

Memo. by—Baboo Tarny Churn Mitter, Deputy Collector of Tumlook.

Copy submitted to the Collector of Midnapore with reference to his letter No. 49, dated the 7th instant.

From—Baboo Shama Pada Chowdhry, Sub-Deputy Magistrate of Tumlook,
To—The Secretary to the Famine Relief Sub-Committee, Tumlook.

In conformity with your order dated 2nd instant, directing me to visit the distressed portion of pergunnahs Gagnapore and Kasijora, and to submit my report within the 8th instant, I have the honor to state that I first visited Gurbani (Gagnapore) and its adjoining villages, viz., Aror, Shosia, Rajhati, then went to Agabeaz and Ghosepore, and took down the names of the persons presenting palpable symptoms of fever and famine, and recorded all the particulars you want to be informed of for your report to the District Relief Committee. The people whose names appear in the annexed table are the *sufferers* in the truest sense of the term, having no other means of support than the charity of the well-to-do inhabitants of the villages, and it is to these famished people I distributed grain gratuitously. I have little or no time in drawing up a full and exhaustive report; I shall therefore summarize facts and place before you a tabular view embracing everything that will serve to furnish materials for your report to the District Committee. Next I visited a place named Haur, about half a mile to the south of Ghosepore. This village consists of about 80 or 90 households, which present the most miserable aspect. But inasmuch as the place is not included in the list of distressed villages, I did not venture to distribute grain to its suffering inhabitants. This place ought to receive the first attention the next time that any reliable officer comes to the relief of the distressed in this quarter of pergunnah Gagnapore. I then visited Kannara and Krishnagur. The latter village presents signs of distress, and there are a limited number of actually starving sufferers. After distributing some grain to these helpless people I visited Ratulia and Paltaberia. Here also I met with some famine and fever-stricken sufferers, who are absolutely in want of

food, and after distributing grain to them I started for Nowadah. This place is inhabited by a large number of well-to-do people, several of whom have undertaken to support the comparatively few sufferers who are in absolute want of food. After distributing some grain to those who have been denied the indulgence, I visited Nandbari, which is worse off. I also distributed grain here. I next visited Mankhanda, Alalpore, Rajnagur, Chiana, and Anupgunge. Alalpara is inhabited by a few people, and about a fourth of its population requires gratuitous relief. Rajnagur and Chiana are replete with famished inhabitants. In Anupgunge very few came to seek gratuitous assistance. I distributed grain to those only who are actually starving. The stock of money allowed me to purchase grain for distribution having been exhausted, and the time running short, I was obliged to start for Tumlook without touching other places more or less visited by famine and fever. I may here remark that Garbari, Aror, Soshia, Rajhati, and Haur, and some villages in pergunnah Gagnapore are in a most miserable predicament.

All the places visited by me have been ravaged by epidemic fever. In the villages especially above alluded to in pergunnah Gagnapore, there is not a single soul the health of whom is not affected by malarious fever, and about 12 annas of the population of Ratulia, Paltaberia, Noada, Nundbaria, Allalpur, Rajnagur, Binjarpore, Chiara, and Anupgunge have been laid up with this "fell disease"—a disease which has undoubtedly contributed to incapacitate the lower order of the population. There is no doctor or native medical practitioner in any of the above villages save one at Noada, who is an independent practitioner, and who would not attend the sick except on a valuable consideration which the majority of the people can ill afford. The table will show that the fever-stricken people are too weak and emaciated to go to Pratappore or Shahpore charitable dispensary. I should therefore be the first person to recommend the appointment of at least four native doctors who will visit the above villages at least three days in a week, and who will distribute medicine gratuitously. Unless this be done in concurrence with the gratuitous distribution of cooked food among the famine and fever-stricken population, no good is expected to result by the latter undertaking alone. But if both the schemes be regularly and smoothly worked out at the same time for at least three months, the condition of the people is likely to be ameliorated.

The table will show that the gratuitous distribution of food-grain has been confined to the people who are actually suffering from the effects of famine and fever, and who are entirely dependent on the precarious charity of the people comparatively well off. I have only come across two persons who evidently could work, but work there is none. The table will also show that there are no respectable people who are actually in distress. It will further show the number of people who are almost starving, or who are spending their days on single meal, if both meals are not denied them. The number of persons who are either too young or too old for work is small, they having at present no means of livelihood whatever, and having been left entirely at the mercy of their neighbours, are no doubt the fit objects of charitable relief.

It would not be out of place to observe that head constable Padda Lachone De, of Panscoora, has exerted a great deal to procure grain from different localities. I would, but for this energetic police officer, have experienced considerable difficulty in the purchase of the quantity required for distribution. He spared no pains in rendering me assistance in that direction.

P.S.—Undersigned begs to state that before this a report has been submitted to the famine committee at Midnapore, and that the Sub-Deputy Collector's report had been sent to the sub-inspector of Panchcoora in the meanwhile. Rice is being purchased at Coomar Khally, and some money has been sent to Panchcoora for the purchase and distribution of rice gratis among the starving.

No. 65, dated Tumlook, the 7th April 1874.

From—Baboo Tarini Churn Mitter, Secy. to the Sub-Divisional Relief Committee,
To—The Secy. to the District Famine Relief Committee, Midnapore.

I have the honor to submit herewith a statement which will show that in 44 villages in the pergunnahs of Gagnapore and Kassijora there are about 800 persons, men, women, and children, who are suffering both from fever and from the effects of the famine. The epidemic fever has raged long in this part of Midnapore, and some of the people are quite disabled to work, though they have recovered from the fever, while many others are still suffering from it. In this part of the sub-division the total average of the amun crop has been between 3 and 4 annas, and although a large number of men from Kassijora find employment in Calcutta and elsewhere as day-laborers, the physical inability to work must account for a great deal of the sufferings of these people. I had deputed the Sub-Deputy Magistrate to ascertain how far the information I had received from others was correct, and from his visits to 18 villages, and the information supplied by the police, which I believe to be correct, I am able to report that the distress at Garbari, Andore, Chhasya, Rajbatty, and Hawoor is intense, and, as Rs. 50 have already been expended in distributing food-grains gratuitously among 378 persons in the 16 villages visited by the Sub-Deputy Magistrate, I am this day remitting Rs. 50 more to the Sub-Inspector at Panchkura, directing him to purchase food-grains and distribute the same among such only who are quite unable to work and are starving, and that he must do this personally, and at the average rate of 1½ pooas to each individual.

The Sub-Deputy Magistrate reports that the people are unable to visit the native doctors stationed at Shapore, Nowada, Protappore, and that it is very necessary to employ four additional native doctors, who should visit the sick at their houses, and distribute medicine gratuitously.

The physical condition of the people in the neighbourhood of Gognapore and Nowada calls for immediate attention, and I beg to say that unless they are supplied both with medicine and food gratis, some of them will die. It is not the famine only which is causing distress among these poor people, but the epidemic fever has also added to the sufferings. As it is, I think, that for nearly 3 or 4 months we may have to support about 800 to 1,000 men, women, and children with food and medicine. I have nearly Rs. 771 with me, and I beg you would at once authorize me to purchase food-grains for Rs. 500 at present, and to open relief depôts for distribution of charitable relief in this neighbourhood; and I also beg that you would take steps to send native doctors to this locality.

No. 67—FR, dated Burdwan, the 20th April, 1874.

From—E. H. Whinfield, Esq., Offg. Collector of Burdwan,
To—The Commissioner of the Burdwan Division.

I have the honor to submit the narrative for the fortnight ending to-day.

A.—State of the Country.

2. The Sub-Divisional Officer of Jehanabad writes that the reports of the village sub-committees and the police indicate little or no change in the condition of the people; that prices continue stationary, and the supplies of grain in the bazars show no tendency to fall off; that no deaths from starvation have occurred, but that the aged and infirm find it a difficult matter to obtain sufficient food; that one grain-theft has occurred, but the thief did not appear to be in want; that the weavers in the south-west of the sub-division and at Ekhluky are likely to become distressed, in view of which probability advances have been made to them, and this becoming known has raised up a number of other applicants for similar aid. No emigrants have been registered during the fortnight.

The Culna Sub-Divisional Officer reports that the price of rice has risen one anna per maund; that importation of grain from the Sunderbuns and the eastern districts still continues; that the kinds of rice now being sold are dohonagra, nona rashi, rakum and boda, the prices of which vary from Rs. 3-2 a maund of dohonagra at Culna, and Rs. 3-1 a maund of the same at Nadunghat, to Rs. 2-12 a maund of boda at Culna; that the stocks in hand, which consist chiefly of aous and rashi rice, are not inconsiderable; that no rain has fallen; that there are now no crops on the ground, and consequently the cultivators have, and will continue to have, nothing to do till a heavy shower enables them to prepare the ground for aous paddy, jute, and sugarcane; that well-to-do persons have for the most part stored sufficient grain for their consumption during the year, but the poorer classes have not been able to do so, and the pressure of high prices therefore is telling on them; that distress is worst in 34 villages in thana Montessur,

named in previous reports, and likewise in some villages in Poorbastholi thana; that there is a general complaint of want of water, and cholera and small-pox have made their appearance in parts of Culna and Poorbastholi thanas. No emigrants have been registered in the fortnight.

Regarding the sudder sub-divison, the District Superintendent of Police reports that the supply of grain in all the bazars is abundant; that the price of rice varies from 19 cutcha seers the rupee (equivalent to nearly 15 pucca seers) in thanas Ganguria and Burdwan, to 11½ pucca seers in Sahebgunge; that the price of kalai dhal varies from 15 pucca seers in Ganguria and Khundghose thanas to about 12 seers in Burdwan; that arhur dhal is now selling in Ganguria at the extremely low price of 27 cutcha seers, equivalent to about 21 pucca seers the rupee; that the stocks in hand are considerable; that no rain has fallen; that the only crops now on the ground, viz., til and cotton, are withering for want of moisture; that the poor, especially in thana Sahebgunge (which adjoins Bood-bood and Cutwa sub-divisions) are suffering from the effects of the prevalent high prices; that there have been no reported cases of starvation and no grain-thefts, except in thana Sahebgunge.

The Sub-Divisional Officer of Cutwa, writing on the 18th instant, reports that the price of rice has slightly risen, that common rice now sells at Rs. 3-2 to Rs. 3-4 a maund at Cutwa; that the village sub-committees report prices in the interior to be much the same, but complain of the supply of rice in some places being insufficient, and of the inconvenience of having to send for it to a distance; that the wheat and barley crops (which are very limited) have now been cut, and that the former has turned out well, but the latter badly; that no rain has fallen; that distress is spreading, and applications for relief coming in daily; that all the 30 village sub-committees want relief given in their villages; that the number of laborers on the relief works is increasing; that distress chiefly prevails in thanas Ketugram and Monglecote; that no emigrants have been registered. In a previous letter of the 10th instant the same Sub-Divisional Officer says the Inspector of Police lately visited the villages of Aukhona and Ketugram, and found that scarcely any one of the residents could afford to take two meals a day; that the women looked much emaciated, and that deaths from starvation are sure to occur shortly. The Sub-Divisional Officer adds that two persons in this neighbourhood have committed suicide, owing to starvation it is said. He also says the people in some parts are eating tamarind seeds and the cheapest sorts of dhal, and thinks that this is the cause of cholera having broken out.

The Bood-bood Sub-Divisional Officer reports that the supply of grain in the bazars is abundant, that the price of best rice is 12 seers 11 chittacks a rupee, and of common rice 13 seers 9 chittacks; that the stocks in hand are small; that the only standing crops are til, cotton, and vegetables, which are suffering from drought; that deaths from starvation have occurred in Eral and Bhatkunda; that many starving persons were found in Majooria and other villages visited by the Sub-Divisional Officer; that the cultivators are asking for advances to buy grain; that 122 emigrants were registered during the fortnight.

The Raneegunge Sub-Divisional Officer says that the supply of rice is plentiful, if not in every village, at least in reasonable proximity to every village; that the rice trade is active, that prices vary from 12 seers of best rice (ramshal) to 14 seers of coarse rice (Midnapore sali) per rupee; that reassuring reports as to the stocks in hand have been received; that no rain has fallen; that til and cotton are suffering from drought; that grain-thefts are increasing; that no cases of starvation are known to have occurred, but that actual distress now prevails, and has made its appearance "more suddenly than was thought could be the case when the last narrative went up;" that relief measures have been set on foot, and the distress fully met just about the right time.

Another matter which deserves special notice is the prolonged absence of the usual April showers. The sowing of the aous crop usually begins about the middle of Bysack or a week hence, but it cannot of course begin till the rain falls to soften the soil. If the rain holds off much longer, it will be a very serious matter. On the other hand, some timely showers now would render sowing possible, and thereby restore the cultivators' credit and the mahajuns' confidence in their ability to repay advances.

The Executive Engineer of the Northern Drainage and Embankment Division says that the demand for employment has increased, especially in the country west of Burdwan; the price of rice has slightly diminished, and the supply of rice has been ample in all the localities in this district where his works are going on.

B.—Relief Works.

3. These are shown in the tabular Statement No. I. Besides the works shown therein, the Maharajah of Burdwan is employing some 500 men at Culna, and a large number at Burdwan. The Cutwa Sub-Divisional Officer recommends that the portion of the old Badshahi road from Burdwan to Moorshedabad north of the Adjai be repaired. This portion is partly in thana Ketugram and partly in Beerbhoom, and work on it would afford employment to the people living in the west of Ketugram and in the east of thana Sakulipore in Beerbhoom, the Collector of which district has been consulted about it.

The Cutwa Sub-Divisional Officer also states that the repairs of the Cutwa to Bhulpore, Shambazar and Srikhund, and Udhanpore and Nulleapore roads, are now nearly completed, and recommends the commencement of work in the Srikhund and Monglecote road (10 miles),

and on the Cutwa and Gaffulia road (6 miles). As after the completion of the roads named by the Deputy Collector, there will remain only three works in progress in this sub-division, viz., the Cutwa and Soory, and the Cutwa and Ketugram, and the Badshahi roads, I think the two roads now recommended by the Sub-Divisional Officer must be put in hand, and I shall therefore at once, in anticipation of sanction, make advances to him for this purpose, though (as already reported) the Road Fund is exhausted. With regard to the complaint of under-payment of coolies on the Badshahi road, reported in the the last fortnightly narrative, the Executive Engineer says it is altogether unfounded. He went over that road on the 17th instant and found that the coolies are earning from 2 annas 3 pie to 3 annas a day. They are paid daily from 4 to 6 pice "khoraky," and every second or third day the work is measured up and the balance paid. The Executive Engineer asked each one of some 50 gangs found at work in the road, and they all told him as above stated, and denied that there was any delay in paying them or that "dusturi" was demanded.

The Raneegunge Sub-Divisional Officer reports an increase in the demand for employment on the road in his charge, where the numbers are now 124 daily, and urgently recommends the commencement of five new roads. The Executive Engineer has been asked to prepare estimates of them. I trust my application for another grant to the Road Fund of Rs. 50,000 may be complied with as soon as possible, to enable me to pay for these roads and others in Cutwa and Bood-bood.

C.—Transport of Food.

4. The Jehanabad Sub-Divisional Officer says importation continues, but he is unable to give figures. In Culna about 10,000 maunds are said to have been imported during the fortnight. Importation also continues to be made into Raneegunge and Bood-bood.

The total exports of grain by rail in the month of March amounted to 39,850 maunds, and the total importation during the same period to 21,103 maunds. Of this, however, 6,266 maunds were taken to Burrakur and probably were forwarded at once to Manbhoom by Captain Hare. The figures for the first week of April are 19,829 maunds exported and 2,344 imported. No less than 9,298 maunds are entered as *exported* from Burrakur, which I cannot understand. Whilst on this subject I desire to draw your attention to the following remarks of the Raneegunge Sub-Divisional Officer:—

"No additional remarks are needed, save in the matter of salt, the carriage of which is postponed by the Railway Company, which detains large invoices at Howrah owing to the necessities of the grain traffic. This is really a very serious thing, for salt is an absolute necessity which has to be supplied at relief centres as well as to be made available to all classes of people. There are only a very few maunds in the whole of this bazar, and that in this division implies that there is hardly any in the whole neighbourhood. The dealers complain loudly, and it appears that they have invoices for nearly 5,000 maunds which they cannot get. The interference with trade, serious as it is, is not nearly so serious as would be the failure of the supply, and while it is not intended to suggest anything against the paramount importance of the transport of rice to the Patna Division, yet it would certainly seem that this case should be considered, with a view to the issue of some instructions which they may admit of the passage of moderate quantities."

D.—Storage of Grain.

5. No Government grain has been stored in this district, but the District Relief Committee have resolved to purchase and store limited quantities at Bood-bood and Khanoo to supply the food depôts in Bood-bood. The grain at Khanoo will be kept in one of the vacant railway bungalows at that place. It is necessary to have a store of rice to fall back on, as many of the village sub-committies are constantly complaining of their inability to buy large quantities in their villages. At the request of the Culna Committee Rs. 1,000 have been remitted to them for purchase of rice. The store of rice at Burdwan for the old fever food depôts is nearly exhausted.

E.—Advances to Private Persons and Municipalities.

6. The particulars of tuccavee cases are given in the annexed tabular Statement II. An application has been received from the town committee of Raneegunge for a loan of Rs. 10,000 to enable them to excavate two tanks in that town. This application was forwarded with my No. 139, dated 10th April, 1874, and in support of this application I may here mention that the Executive Engineer of the Northern Drainage and Embankment Division reports a great increase in the demand for employment at Raneegunge. He is employing a number of persons there in picking up ghooting.

F.—Charitable Relief.

7. The Jehanabad Sub-Divisional Officer reports that advances to the amount of Rs. 220 have been made to 34 weavers of Gopeebazar, Debkhunda, and Hazeepore, but no food depôts have yet been established. He proposed to establish one at Hazeepore, but I refused to sanction it, as I think it is not required.

The Culna Committee have advanced Rs. 1,400 to the police of the three thanas in that sub-division for purchase of rice and distribution thereof uncooked to infirm paupers in quantities of 1½ a quarter seer to adults, and 1 quarter seer to children, which allowance seems too small. A week's supply at the above daily rates is given to each person at one time. No particulars of the numbers relieved are given, so I am unable as yet to say for certain how

this system works, but I must say I prefer the District Committee's plan of giving cooked food day by day. I have ordered proper registers to be at once opened and corresponding tickets to be given to the persons admitted to relief, as obviously without some precaution of this sort, the distribution of rice must necessarily degenerate into a mere scramble, wherein the persons most needing relief will come off worst. The Culna Committee have also made some small advances to weavers and others.

In the Cutwa sub-division there are now altogether five food depôts open, three in Ketugram, one in Cutwa, and one in Monglecote. Cooked food is given daily at these depôts to the paupers who have been previously selected and registered. The daily attendance, which consists mostly of women and children, varies from 250 to 450. As before reported, the Sub-Divisional Committee have been authorized to open four more depôts, but have not done so as yet. Application has been submitted to you for permission to appoint Relief Inspectors as in Bood-bood. The Cutwa Sub-Committee are also advancing paddy to women to husk in their own homes, and this system appears to answer. Rs. 102 have been paid to people for collecting ghooting.

In the sudder sub-division the only part where it has been found necessary to establish food depôts as yet is thana Sahebgunge. One was established at Mahata some time back, and at their last meeting the District Relief Committee resolved to establish two more. The cooked food and the labor tests are both enforced in these depôts; and as a satisfactory instance of the working of the latter, I may mention that when a supply of kodalies was sent to Mahata last week, no less than 80 able-bodied recipients of relief at that depôt at once took their names off the books, and were seen no more. In the sudder sub-division likewise small advances of thread, &c., have been made to distressed women of respectable families to be spun in their own houses.

In the Bood-bood sub-division we have some 17 food depôts open under the supervision of seven Relief Inspectors, and considerable sums have been advanced to distressed weavers to enable them to weave koree, tassar, and cloth, and to petty beparies to enable them to import grain on their pack-bullocks.

In Raneegunge the Sub-Divisional Officer has recently reported the opening of 11 food depôts, and he has also made advances to weavers.

The annexed tabular statement III shows separately for each sub-division the number of committies, relief circles, food depôts, &c., now open, and the total daily attendance at the latter, and likewise the total number of weavers, women, beparies, and others relieved by advances, and the total number of persons relieved in money or in kind, as Culna.

G.—Financial Results.

8. The annexed statement IV shows the total disbursements on relief during the fortnight, and likewise the state of the Charitable Relief Fund.

9. I enclose the sub-divisional narratives, and a copy of the proceedings at the last meeting of the District Committee.

I.—*Statement showing Progress of Relief Works in the Burdwan District for the Fortnight ending 18th April*, 1874.

Work done in cubic feet—	
Up to 4th April, 1874	14,077,502
During the fortnight	8,288,917
Total up to date ...	22,366,419
Average daily number of laborers	11,869

II.—*Statement of Progress made in making Advances under Act XXVI of* 1871 *during the Fortnight ending 18th April*, 1874.

	Number.	Amount. Rs.
Applications pending on the last day of the fortnight ending 4th April, 1874	314	1,34,076
Applications received during the fortnight under report	69	32,922
Total ...	383	1,66,908
Applications struck off during the fortnight ...	56	25,351
Ditto on which money has been paid ...	27	7,920
Ditto pending on the last day of the fortnight	300	1,33,727
Total advance made up to date ...	115	35,554

N.B.—Bills to the amount of Rs. 42,054 have been enfaced and passed by this office up to the 18th April, 1874.

III.—*Statement showing Charitable Relief Works.*

Expenditure	16,505	6	6

E. H. Whinfield,
Offg. Collector.

Proceedings of the Burdwan Executive Relief Committee held at the Club Room at 4-30 P.M., *dated* 18*th April*, 1874.

Present:

Mr. E. H. Whinfield, *in the chair.*

Mr. R. H. Ruddock.
„ J. Cockburn.
„ R. T. Sevestre.
„ W. H. Nightingale.
Baboo Digambur Biswas.
„ Dwarkanath Mitter.
Baboo Gopal Chunder Sen.
„ Mutty Lall Chowdhry.
„ Brojo Lall Teory.
„ Poranund Mookerjee.
„ Bogolanund Mookerjee, *Secretary.*

1. Resolved that Rs. 1,000 be advanced to the Deputy Magistrate of Jehanabad for advances to weavers.

2. The balance in the hand of the Raneegunge Sub-Divisional Committee being only Rs. 41-14-6, resolved that enquiries be made if more money is required.

3. Resolved that the food depôt at Kulhanpore be removed to Ramnugore, as recommended by the Deputy Magistrate of Bood-bood.

4. Resolved that the Inspecting Circle Relief Officer of Gooskurrah be directed to report on the petition of the villagers of Bhoota.

5. Resolved that the application for establishment of food depôts and the grant of advances to weavers in village Ramchunderpore be referred to Relief Superintendent for enquiry.

6. Read the Superintendent's report regarding the condition of certain villages in thana Sahebgunge, and resolved that a food depôt be opened at Hargram.

7. Resolved that the eleven food depôts opened by the Sub-Divisional Committee of Raneegunge be sanctioned.

8. Resolved that the Chairman be authorized to incur the expenditure necessary for the maintenance of the 43 food depôts now open.

9. Resolved that the meetings of the Committee be held in future on Fridays at ½ past 4 P.M.

10. Resolved that a clerk on Rs. 20 be appointed to keep the accounts of the District Relief Committee.

E. H. Whinfield,
Chairman.

Copy forwarded to the Commissioner of Burdwan.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 24th April 1874.

READ—

The fortnightly report from the Commissioner of Chota Nagpore on the districts of his division, for the period ending 11th April 1874.

1. The abundance of the mohwa crop and its effect for good on the condition of the people has been the main topic of all the Chota Nagpore reports for the last week or two. When this supply is exhausted, however, there are many indications that prices must again rise.

2. In Hazareebagh the additional relief works considered necessary have been sanctioned, and the Lieutenant-Governor hopes a careful watch will be kept on the doubtful tracts. As regards Mr. Beadon's proposal to import seed-grain, orders have already been given that full enquiry should be made as to the necessity of this before any general operation of the kind is undertaken. In all other districts up to date seed-grain has been forthcoming as required.

3. The improved condition of Palamow is very satisfactory. Private trade has revived, and the mohwa crop brought a most opportune supply of food. Only in Jupla and Belounja, and one or two other small tracts, is there a deficit expected. The Commissioner asks for authority to indent on Dehree for another 10,000 maunds of rice on account of these pergunnahs, and this is sanctioned. Notwithstanding the improvement in the general condition of the people, the numbers on relief works have increased to 8,868. The number receiving charitable relief is as yet small. The account given of the impoverished Mahomedan families of Huseinabad is very melancholy. It is hoped that Colonel Dalton may be able to devise some way of permanently alleviating their condition.

4. Separate orders have been passed on the Manbhoom report. The Commissioner's paragraph 21 would seem to imply that the system of managing relief works through contractors had been done away with. The Lieutenant-Governor did not certainly gather this from Colonel Rowlatt's own report. He would wish to know exactly how the fact is. There is a great want of preciseness in the Manbhoom returns of numbers. The allotment of grain to this district is being increased.

5. The condition of Singhbhoom is apparently satisfactory. There is no distress, and the employment found for the people has been sufficient.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

No. 2626—S.R.

COPY forwarded to the Commissioner of Chota Nagpore for information.

No. 2627—S.R.

EXTRACT paragraph 3 forwarded to the Commissioner of Patna, with a request that he will warn the Superintending Engineer at Dehree that the Palamow authorities have permission to indent on Dehree for 10,000 maunds more of Government rice. A report is requested as to whether it will be necessary to send up to Dehree a corresponding amount from Calcutta.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 24th April 1874.

No. 1097, dated Chota Nagpore, the 13th April 1874.

From—COLONEL E. T. DALTON, C.S.I., Commissioner of Chota Nagpore,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

SINCE my last half-monthly report despatched on the 31st ultimo, the most prominent feature in the accounts received regarding the supply of food and condition of the people, is the thankful tone in which the abundance of the mohwa crop is, from every district, acknowledged. There are now no longer doubts or fears on the subject; for a time, wherever there are mohwa trees, there is cheap food in abundance.

2. The probable duration of this supply, which really seems to have come as providentially as the manna in the wilderness, is variously estimated at from one month to three. The lowest estimate is from Manbhoom. The eastern portion of that district, about Rughoonathpore, has few mohwa trees, and where the supply is more plentiful, the estimated yield of about twelve-sixteenths of a full crop will not, according to Colonel Rowlatt's calculation, give food to the people beyond the 15th proximo. In Pergunnah Tori of the Chota Nagpore zemindaree, where the supply of food-grain was very short, the mohwa will furnish a large proportion of the food of the people for nearly three months; in Palamow, Hazareebagh and Singbhoom, it will help greatly for two.

3. Except in Manbhoom, where the Bengali traders have evinced a disposition to hold back their stocks of rice, or to export rather than make the ordinary advances to ryots who, it is said, had not paid them for two years, and in one or two isolated places in Hazareebagh, the markets have been fairly supplied in the usual way. Prices have remained steady in the importing districts, and parts of districts, but have risen in the exporting tracts, and as this is no doubt owing to an impression that the stocks in the best producing districts of Chota Nagpore have been drained of the bulk of their surplus, we must expect higher prices in the importing tracts, when the mohwa is exhausted.

4. No bad cases of distress have been brought to notice since last report, and in regard to deaths, referred to in paragrah 23 of that despatch, it has now been determined beyond doubt, that what I then stated on the authority of the zemindar of Jherria was quite true. The cry was raised to attract attention and draw relief measures nearer to the doors of the people from whom it emanated. There was no starvation nor even privation in the case.

5. The reports of the condition of the people in distressed parts of the division shew improvement since the first of the month, and I think I may say that up to date the measures taken have sufficed to keep off famine from any part of Chota Nagpore, but we have no doubt still an anxious time before us.

6. Relief committees have now been organised in all the districts, with sub-committees wherever they were wanted; one of the chief duties specially enjoined on the latter is to search out, and bring to notice, all those cases of silent and secluded suffering which are often very difficult to reach; all gratuitous relief is administered through them. The professional beggars are having a fine time of it. I have enjoined that all who are not absolutely incapacitated from work, should be made to give labor of some kind in return for the food and shelter which is accorded to them.

HAZAREEBAGH.

7. The report of the Deputy Commissioner dated 7th instant, is in the hands of Government. I have very little to add to it. The reports since received from the various t tions all show that the condition of the people is much improved since the mohwa flower came into use, and no bad cases of distress had been brought to notice. The most unfavorable of these reports

comes from the Gowan sub-inspector, whose jurisdiction comprises the north-western portion of the district, but there it is said the mohwa had not yet ripened. The newly projected road from Burhee to Gowan, and irrigation works sanctioned for the Gowan estate which is under the Court of Wards' should provide ample employment for people in distress who will work.

8. Local sub-committees have been organised, but, as yet, they have had little to do. Very few beggars even have collected, from which it must be assumed that the ordinary springs of charity have not yet failed. Mr. Beadon notices amongst the most pressing wants, a supply of seed-grain. I have not heard of this elsewhere, and I think the late Lieutenant-Governor was quite right in regarding such a deficiency as entirely abnormal. He proposes to make purchases from the money which he hopes to receive from the investments of the Ramgurh estate, but on that subject the High Court have not yet spoken. I have asked Mr. Beadon if he really has found that the people to any great extent are in want of seed. It would ordinarily indicate of much greater destitution than has yet been reported from Hazareebagh.

9. The letter from the Pachumba officer appended to Mr. Beadon's report gives an unfavorable account of the condition of the people in some of the villages recently visited. Several of the poorer classes had "an under-fed, pinched look," and they appeared to have little grain in their houses. The mohwa was only commencing when this was written, but there are not many fruit trees in that part of Khurakdiah, and no doubt the poor of the sub-division will reqnire assistance for some time. Mr. Campbell proposes, as an additional work, a road running north to Chakai, and Mr. Beadon is in communication with Colonel Rowlatt, regarding the continuation from the Burrakur, of the road from Govindpore through Toondi to Giridih. I approve of both these works.

10. Mr. Beadon has deputed Mr. MacArthy, the recently appointed relief officer, to the Grand Trunk Road, and given him ample and well considered instructions for his guidance. Captain Preston, of the 33rd Madras Native Infantry, who has been placed at our disposal for the same work, will go to Pachumba.

LOHARDAGAH.

11. The Deputy Commissioner started yesterday for Palamow. In Mr. Oliphant's report on the Sudder sub-division of his district, he notes as a reason for the export of rice having become less brisk than it was in a northern direction, that Government rice was being sold at Chattra; there have been no such sales, nor do we contemplate storing any Government rice at Chattra. In paragraph 16 of my report of the 31st ultimo, adverting to Mr. Forbes' remark on this subject, I stated that the lull in the import trade had then ceased. This is fully borne out by Mr. Forbes' later report* which I am now submitting as an appendix. It is however, a fact, that the higher prices now demanded in Chota Nagpore proper, must greatly check exportation. The price of common rice at Ranchee had risen to 14 seers. Last market day, the 11th, it was cheaper by half a seer. We find that rice purchased here at that price could not be delivered at Daltongunge at a lower rate than 9 or 10 seers for the rupee; but in the southern marts of the district, it is procurable at 20 to 24. The local merchants, moreover, are arranging to import rom Gangpore and Sumbulpore.

* No. 268, dated 9th April 1874.

12. I received Mr. Forbes' half monthly narrative (sent to me direct under the resolution on previous narrative of the 1st instant), on the evening of the 11th, and submit it herewith. It will be seen that in the more favorable view of the state of Palamow and condition of its people given in my report of 31st ultimo, I anticipated much of what Mr. Forbes now remarks. He says that as regards Palamow itself, the fears he had expressed that private trade was slackening, were in a great measure dispelled; but he does not feel at all satisfied about the Juplah and Belounja traders, and we should, I think, be prepared with an additional reserve to throw into those pergunnahs if necessary. If the

Government will allow us to draw on the Dehree store for another 10,000 maunds of rice, it will, I think, suffice for this purpose. I have written to Mr. Forbes to enquire if the arrangement he made with Mr. Hodges to transport the rice from Dehree to its destination in Palamow, can be continued.

13. In his narrative for the period ending 21st March, Mr. Forbes gave a very unfavorable report on the condition of the people of Palamow. I had information which enabled me to give a better account of them in my report for the period ending 31st ultimo. Mr. Forbes' present narrative shows that the condition of the people has materially altered for the better; but he repeats that many who might be at once relieved if they came to the roads, had frequently to go a day without a meal, yet preferred sitting idle and hungry. These people, however, the mohwa has relieved, at any rate for the present.

14. Mr. Forbes having himself gone to Hosenabad, found that the account of the impoverished ladies there had not been exaggerated. They are said to be descendants of the former Newabs of Jupla; perhaps if their circumstances were made known, a special subscription might be got up for them by their co-religionists. He also noticed amongst the blind, maimed, halt and aged persons receiving relief, several Mahomedans reported to be of good family. Jupla is a recent addition to this jurisdiction, and I have no personal knowledge of the distressed old families it contains, but I will endeavour to become acquainted with them and report the result.

15. The number of persons employed on the relief works was, according to the latest information, 8,868, the largest number on the Behar and Ontaree roads. Lieutenant L. Henry Grey is now working as a relief officer in that direction. Writing on the 6th instant, he describes the people employed as not, as a rule, in poor condition; and it would appear that there are but a small number of people in that part of Palamow who were considered fit objects for charitable relief, only 57 having been found by the sub-committee in and about Ontaree.

16. An elaquadar named Udaynath of Mokoondpore in Belonujah had reported to Mr. Forbes that some of his ryots were getting a meal only once in four or five days, and Lieutenant Grey went to the village to enquire. He could not find one man who had been even one day without a meal; but they said they had no resources to fall back on when the mohwa was exhausted. At present we have only one road projected for Belonujah: Lieutenant Grey proposes another on which I have called for a report.

17. The prices were found high in Belonujah, 10½ seers for the rupee. Mr. Forbes now states that—"on the whole, the condition of the laborer is good; all persons physically incapable of working have been made over to the relief committees;" but apparently the relief committee have not received more than 250. "There have been no complaints as yet from the laborers that they cannot get food, though they complain bitterly of high prices."

18. On the whole, I am of opinion that the Palamow arrangements have not broken down in any respect. There has apparently been delay in storing the rice in the various golahs agreed upon, but the work is being done, and as it does not appear that it has as yet been necessary to break in upon these stores, we have the whole in reserve. Mr. Forbes reports that he has directed the construction of three additional golahs, one at Gurwah. This last I think quite unnecessary, as the Gurwah mohajuns are, so far as I can see, doing their work right well.

19. It would appear from paragraph 23 that but little has been done in advances to private parties for land improvements. I regret that so much time has been lost, but Mr. Forbes was, till recently, without the necessary agency.

MANBHOOM.

20. Colonel Rowlatt's report of the 6th instant is in the hands of Government, and gives a comprehensive and intelligent review of the condition of his district up to that date. Later reports from the same officer show that the area of that district in which scarcity is felt is still on the increase, but this tendency is carefully watched, and, so far, measures of relief have kept pace

with the augmenting distress. There is still much that must be regarded as anomalous in the condition of Manbhoom. I find from the Hazareebagh police diaries that rice is still imported into that district from Manbhoom; and judging from the number of people who avail themselves of the relief works open to them in all directions, the proportion of distressed people to population is less in Manbhoom than in Palamow. The tract reported as distressed, or at least in which relief measures are deemed necessary and relief committees are working, includes all that portion of Manbhoom which lies between the Burrakur and Damoodur rivers, and south of the Damoodur the eastern half down to the Purulia and Bankoora road, and including Pergunnah Bagda, south of that road; so that in this direction it touches the Kasai. In this portion of the district the average price of common rice is a trifle less than 1 rupee for 12 seers; in the remainder the average is 16 seers for a rupee. As in other districts, the pressure on the people has been greatly alleviated by the bountiful mohwa crop, but it unfortunately happens that mohwa trees are not so abundant in the northern and eastern pergunnahs as in the south and west.

21. The relief works specified in Colonel Rowlatt's last report, consist of thirteen roads, all useful works; and it is clear we are getting very fair work from the people employed, as the day-labor is found to be very little above the cost of the task-work, and cheaper than the work done by contractors. The number of laborers employed on 252 miles of road were shewn in the report of the 6th at 6,444; but the returns were not complete, and Colonel Rowlatt informs me that the actual number cannot be less than 12,000, and all are represented to be in fair condition.

22. On some roads the number of women employed greatly exceeds the men. I am informed that the males of the Baori tribe, who carry palkis, have taken into their heads that it is derogatory to their dignity to carry anything else, or to dig. It has been noticed that for some years this curious notion has been on the increase amongst them. They send out their women with travellers as coolies, but will not go themselves. I have requested Colonel Rowlatt to insist on a fair proportion of Baori males being employed. The works must suffer if there are too many females. The present cost of labor on roads in Manbhoom, is at the rate of about Rs. 10,000 a month.

23. Since the date of Colonel Rowlatt's report, I have sanctioned two new road-works; one from Govindpore to Cheliama, a new line by which the existing road between Govindpore and Purulia will be greatly shortened; the other from Manbazar to Bankoora, which having been included in the road project map, has already received the sanction of Government. It is intended to continue it through Burahbazar till it joins the Purulia and Chybassa road, and it will be, or in fact is, the route by which all the Singhbhoom and Bankoora or Bishenpore trade is carried on.

24. Besides the road-work, a large number of people have been employed under the Land Improvement Act. Their numbers are not given, but as advances amounting to Rs. 53,000 have been made for 228 tanks or reservoirs, and it is represented that most of the works are approaching completion, a large number of people must thus have obtained relief. From what Colonel Rowlatt says on the subject, there is reason to apprehend that most of these works will be completed long before the necessity of employment ceases. I have urged Colonel Rowlatt to make more advances if he can, but he says reliable applicants are now rare.

25. The sub-committees for relief formed in Manbhoom are in full working order. And, in a letter dated 12th instant, Colonel Rowlatt informs me that the number fed at depôts has already, he thinks, reached 1500; about one-half of the number are fed by the Ranee of Pandra, who, I fear, refuses no one, though she has been requested to send the lusty beggars to the relief works.

26. The Government grain sent by rail to Burrakur is being rapidly stored at Govindpore, Nirsa, Raghoonathpore and Poddardih. I believe that it will all be required and probably more. The District Superintendent of Police, writing from the Mohal Pergunnah, south of the Damoodur, on the 7th

instant, reported that a large body of the most *respectable cultivators* of that and the adjoining pergunnahs had represented to him that they were consuming their seed-grain, as their food-stock was exhausted and they had no means of purchasing. To relieve them Colonel Rowlatt immediately ordered the transfer of 1,000 maunds of Government rice to the spot, which he proposed to distribute in loans to applicants of this stamp.

27. In reporting this to Government, I said. I had approved of it as a prompt attention to an urgent requisition, though I knew it was not in consonance with the instructions we had received; and I would myself have preferred cash advances, but there was a difficulty in this case as no zemindar or talookdar came forward, and Colonel Rowlatt did not clearly see what other course to take; but I am glad to learn from him that advances are being pretty freely taken by proprietors to be lent to ryots on the terms and conditions sanctioned in Government orders No. 1799—S.R., of the 25th March last.

28. *Singbhoom.*—In a letter dated 8th instant, Captain Garbett informs me that the mowah in the Kolhan has produced lavishly; and other jungle fruits and roots which the inhabitants of the Kolhan use and relish as food have been equally abundant. The Mankis made arrangements by which all who worked on reservoirs or roads were paid in rice, and as there has been sufficient employment there has been no distress. Several of the reservoirs have been completed, and by the time the rains set in he does not think there will be more than two or three left unfinished. He is generally very well satisfied with the work done.

29. We have had some correspondence about Sarunda, which is a very wild hill tract, sparsely inhabited to the south of the Kolhan. The country is unsuited for cheap road-making, and Captain Garbett wishes to help the Sarunda Kols, whose stock of rice is at a low ebb, by employing them in constructing a tank or reservoir where there is a favourable site, and paying the work-people in rice. He has already stored there Rs. 1,000 worth of rice. I have approved in anticipation of sanction of Government, for which I have yet to apply on receipt of some further information.

No. 268, dated Daltongunge, the 9th April 1874.

From—L. R. FORBES, Esq., Offg. Assistant Commissioner of Palamow,
To—H. L. OLIPHANT, Esq., Deputy Commissioner of Lohardaggah.

I HAVE the honor to submit herewith my fourth fortnightly narrative of scarcity and relief in the Palamow sub-district for the fortnight ending Saturday, the 4th April 1874.

Fourth Narrative of Scarcity and Relief in the Palamow sub-district, for the fortnight ending Saturday, the 4th April 1874, *submitted in accordance with orders contained in Government Circular No.* 80 *of the* 17*th November* 1873.

A.—ABUNDANCE OR SCARCITY OF SUPPLY IN THE BAZARS.

2. In my last narrative I expressed a fear that private trade was beginning to show signs of failure. I am glad to have to report that for the present, at any rate, those fears have, in a great measure, been dispelled as regards Palamow itself. In Belounjah and Jupla, however, the case is different, and I am afraid from what I have learned during the last fortnight, that when the real pressure comes, three weeks or a month hence, that the traders there will not be in a position to meet the demand. I am making strict inquiries regarding the pergunnahs. Since I last wrote the new rubbee grains have appeared in the markets, and the mowha season has opened, and the flower is now falling very freely. The mowha harvest may in fact be designated a splendid one. The amount of relief it will afford is very great; and as regards a large class of people, all fears may be set at rest—at least that is the general opinion. Still the benefit will not be so great as it would have been had the distress been confined to the sub-district. In ordinary years the Behar districts draw off a very large share of this crop, and this year the drain is likely to be very much increased; and further, as I have stated in a previous narrative, a very large portion will be retained in stock by those who can afford it for the coming agricultural operations. In fact, even as regards the poorer ryot classes, the chances are that many, specially those residing in the neighbourhood of relief works, will hoard their stock to serve them when their presence will be requisite on their fields and Government aid no longer available. They will argue in this way: "What is the use of our sitting down at home, doing no work and consuming what little stock we have now, and then having to go to the mahajun

to borrow at ruinous rates when cultivation time comes on; let us shut up the house and go away to work on the roads." Such it appears to me, would, under all the circumstances, be the most natural course, and one that 9 out of 10 would pursue; and supposing this view to be correct the quantity of mowha that would otherwise have come into the general market will be much diminished. In one way certainly this may be considered to be an evil, such as any circumstance may be considered which tends to keep back the supply of food from its natural course; and probably during the short period of real distress that is before us, this special circumstance is likely to be very severely felt; but, on the other hand, it possesses this very great advantage that it will draw off to their fields, much earlier than would otherwise have been the case, the greater portion, if not all, the agricultural relief laborers.

3. *Kind and prices of grain selling at one or more specified principal marts.*—Besides rice, small parcels of the various grains of the new rubbee harvest are to be had in all the marts. These consist of gram, mussoor, wheat, barley, and peas; no large stocks are offered for sale, there being none to offer. I expect, however, that when the Shahabad rubbee has been fully gathered in that district there will be considerable importations from there, particularly of gram and wheat. Mowha is not yet offering in the bazars, though some sales have taken place, it is not yet in a sufficiently dried state for market.

4. The following table exhibits the prices of grain selling in five of the principal marts :—

Names of Marts.	Quantities per rupee by the seer of 80 tolahs.						
	Wheat.	Barley.	Price.		Murwa.	Indian-corn.	Gram.
			Whole-sale.	Retail.			
Daltongunge	12·12	....	11·81	10·69	....	14·62	13·50
Garwah	12·37	13·75	12·37	11·25	15·75	14·62	14·50
Husainabad	13·50	14·62	11·25	10·13	.....	15·18	15·
Satherna	12·	13·75	12·37	11·25	.....	13·50	13·
Manka	13·50	15·25	12·94	11·82	16·	14·6	13·75

5. *Information regarding the amount and kind of grain believed to be in stock in the hands of zemindars and others.*—I have nothing to add under this head beyond what I have already stated in previous narratives.

6. *Rainfall*—There has been no rain during the fortnight. The weather has been real hot-season weather. Strong westerly wind during the day and easterly breezes at night. Temperature at 4 A.M., from 64 to 66, and 3 P.M. in shade, 98 to 101.

7. *State of crops.*—The reaping of the rubbee harvest crops may almost be said to be completed, and the people are now engaged in thrashing it out. I have seen some very fine wheat crops in some of the northern tracts, and I am told that owing to the timely rain in February and March the ears are particularly full. In order to obtain some idea of the proportion of the crop, I am making inquiries as to the outturn of an ordinary season, and the actual of this year. I give as an appendix the result of careful enquiries made in 41 villages in pergunnah Jupla.

8. *Condition of the people.*—In my last I reported the condition of the people as daily getting worse. In the meantime the mowha harvest has set in and is now in full swing, and a large proportion of the population are now engaged upon this work. The condition of the people has materially altered for the better since then, except in those tracts where there is no mowha, such as in pergunnah Jupla and in scattered villages here and there all over Bel ounjah and the western and central tuppehs of Palamow. There is a marked difference between the condition of the people generally residing in these tracts and those of other portions of the sub-district and after careful enquiry during my recent tour I would repeat that many persons have assured me that they frequently have to go a day without food, or in many cases, with such a small modicum of sustenance as can hardly be called a meal, and yet notwithstanding this, so great is the dislike to labor on the roads, that they preferred this state of things to seeking relief. The mowha has in a great measure relieved them at any rate for the present.

9. *Actual facts as to any known cases of misery and starvation.*—In my last, I referred to a report received from the Hosainabad or Jupla sub-committee giving the names of 168 persons residents of Hosainabad, said to be in a state bordering on starvation. On receipt of that report, Mr. Roberts, the assistant superintendent of police, was requested to visit the town and report; after inquiry Mr. Roberts, however, was unable to comply with that request, so I myself proceeded to Hosainabad and held the inquiry. I found that as regards the greater number of the persons named, the report of the sub-committee was in no way an exaggerated one, and the relief already afforded by orders of the sub-divisional committee had not reached a day too soon. More than half of the persons are respectable Mahomedan ladies, the widows and descendants of the former Nawabs of Jupla and the several branches of their families. These people form an exceptional class; most of them have no income to speak of, and

a few only have a few acres of land. Doing no work, and at the best of times living a life of great privation, such times as these press heavily on a class of this kind. A great number of these ladies, I found on inquiry (for of course I could not see them), were old and decrepid, and living almost entirely on what little food their more fortunate friends could afford to spare for them; now of course this small modicum of food was much diminished, in one or two instances indeed stopped altogether, leaving the unfortunate ladies, as described by the sub-committee, literally in a state bordering on starvation. I also found among the list a large number of aged beggars and cripples, some of whom, I found on inquiry, were persons of gentle birth, who had been driven during the distress in 1866 to leave their seclusion and seek for food outside, and who had since then continued to live by begging. I was struck by the very large number of blind persons in the list. I believe out of the 168 persons no less than 40 persons are blind. I also found in the list, some respectable Mahomedan gentlemen, then almost destitute of means, and in some instances quite so. Most of these are well-read men. I issued orders for their employment as far as practicable on the relief works as mates and duffadars.

10. *Grain-thefts and robberies.*—There has been a slight increase in the number of petty thefts during the fortnight, but there have been no robberies or dacoities.

11. *Conditions of any special tract.*—As I have previously reported, real distress is likely to be felt in the western Tuppehs of Palamow, known as Untari, and in the centre of the pergunnah in Tuppeh Pundag; also in the greater portion of Pergunnahs Belounjah and Jupla. It is in these tracts where the relief operations will have to be most active when the time comes about three weeks hence. In the meantime preparations for meeting the distress are being actively pushed forward. The report regarding the condition of the people in the Panki jurisdiction, mentioned in my last, has been inquired into, and it was found that the people, though undoubtedly undergoing privation, were not in any marked manner worse off than those residing in other tracts. There cannot be a doubt that previous to the opening of the mowha harvest, people everywhere were in considerable distress, and their condition was daily becoming worse, but the mowha has come in time to afford them very considerable relief, and for the present at any rate there are no fears. The new road has, however, been partially opened to afford relief to such as have no mowha and no rubbee crops to gather.

B.—Relief Works.

The relief works now open are—

1. Daltongunge station road.
2. Chandwa road.
3. Behar road.
4. Moharajgunge road.
5. Garwah road.
6. Untari road.
7. Manjhiawan road.
8. Jupla road.
9. Petty irrigation works in Government estates.
10. Lesligunge and Balumath road.

The number of laborers according to latest information is as follows :—

No.	1	...	...	343
,,	2	...	...	615
,,	3	...	...	1,318
,,	4	...	...	844
,,	5	...	...	634
,,	6	...	...	2,554
,,	7	...	...	900
,,	8*	...	...	588
,,	9	...	...	763
,,	10	...	...	309
		Grand total	...	8,868

The total exhibited in my last narrative was 7,936, and I then stated my conviction that as soon as the mowha harvest commenced, that number would be still further diminished; contrary to expectation, however, there has been an increase of nearly 1,000 persons.

12. *Supply of food thereat.*—There have been no complaints as yet from the laborers that they cannot get food, though they complain bitterly of the high prices asked by the petty retail sellers. I am under the impression, however, that at some of the stations, food is not available on the spot, and that the laborers have to travel some distance to obtain their supplies. Inquiries are being made on the subject, and if found correct, measures will be taken to remedy this.

* The Jupla returns have not yet reached, the figures here given are those of the 28th March 1874.

13. *Condition of laborers.*—On the whole the condition of the labourers is good. Of course large numbers of them, more particularly new arrivals, are thin, but not more so than might be expected in times like the present; cases of absolute weakness from want of food are rare. Since I last wrote, all persons physically incapable of working from bodily infirmity have been handed over to the care of the charitable committee.

14. *Mode of payment.*—There has been no change in this respect.

15. *Rate of wages.*—These continue the same.

16. *Arrangement for tools.*—I am happy to say that at last my first indent comprising 750 kodalies and 250 picks reached this to-day (the 8th). I have again communicated with the Dihree authorities regarding my second indent for 4,000 tools, but can hear nothing of them.

C.—Transport of Food.

17. *Approximate amount of private food supplies come into the Sub-District during the ortnight.*—I have nothing to say under this head.

18. *Sufficiency or otherwise of means of transport.*—The means of transport is, as I have before said, ample; what is wanted is capital. I again repeat my conviction that the agricultural classes, who are employing their plough-cattle for carrying purposes for the reason given in my last, will discontinue their operations by the middle of May.

D.—Storage of Grain at Relief Works.

19. The following are the places at which golahs have been fixed :—

1. Daltongunge.	5. Morhey.
2. Panaria.	6. Sarkey.
3. Panki.	7. Naggar.
4. Nawa.	8. Sillidag.

Besides the above I have, after careful inquiry into the state of the country, directed the erection of golahs at Garwah in Palamow. Manjhiawan in Pelounjah and Hosainabad in Jupla, all of which will be supplied from the Daltongunge central store, that is to say, the amount to be stored in each of the above will be stopped on its way through from Dihree and sent to each golah. The rice from Dihree is now rapidly coming in; up to date about 8,500 maunds have actually been weighed out in the golah. The reports regarding the amount of rice purchased by zemindars have not yet been received. I trust to be able to give full information on this subject shortly.

20. *Condition of storage-houses.*—No. 1 golah.—The Daltongunge store-house is quite ready to receive the whole of the rice it is intended to hold; with reference to the other golahs, as reported in my last. The Assistant Superintendent of Police had been requested to depute the police members of the sub-committees to inspect these golahs and have the rice weighed in their presence, but up to date no reports have been received.

E.—Advances to Private Parties and their Results.

21. The whole extent of the sum sanctioned for advances to zemindars, viz. Rs. 40,000, has been paid out, and judging from the very great delay that is taking place in the purchase and storage of rice by the gentlemen who undertook the work, I would not advice any further advances of this nature. I think it would be better in every way if we were to give small advances of Rs. 25 to Rs. 200 to heads of villages and respectable ryots for the import of rice, binding them to sell the rice at cost price, first to the inhabitants of the villages in which they reside, and after that to those of the villages in their immediate vicinity.

22. *Advances to Municipalities.*—There are no municipalities in the sub-district.

23. *Advances to private parties for land improvement, &c.*—In my last I stated that several applications were before me for final disposal, but on looking into the applications carefully it was found that in all of them further inquiry was necessary under the law before the certificates could be issued. During the current fortnight, however, I hope to issue certificates and grant advances to the extent of some Rs. 7,000 or 8,000.

24. *Charitable relief.*—Up to the close of the fortnight under review a sum of Rs. 5,231 had been subscribed by the sub-divisional committee, aided by the sub-committees, and the amount collected is Rs. 4,021. Charitable relief is now being given by the sub-committees named in the margin, to whom Rs. 915 have been allotted, but the accounts of expenditure have not yet been received. Except to those persons who are quite helpless and unable by bodily infirmity to perform some work, the committee have determined to insist upon some kind of work being performed in return for the relief afforded. The sub-divisional committee have given orders for the purchase of grain for distribution; rice and dâl will be given only to those persons who are accustomed to it, while for the poorer classes mowha will be provided.

Daltongunge.	Panki.
Garwah.	Chatarpore.
Hosainabad.	Untari.

DALTONGUNGE,
The 9th April 1874.

L. R. FORBES,
Offg. Assistant Commissioner.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 29th April 1874.

READ—

The Manbhoom District Narrative for the fortnight ending 18th April.

THE Deputy Commissioner reports that notwithstanding the falling of the mohwa fruit, and the gathering of the spring lac-dye, distress is still on the increase, and the people are now in several places consuming their seed paddy. The Lieutenant-Governor has himself seen and consulted with Colonel Rowlatt about the state of his district; on the 15th April Colonel Rowlatt then gave a description of his district, much worse than any received previously. It may be considered that he ought to have foreseen this state of things at an earlier date. His Honor then requested the Commissioner, Colonel Dalton, to visit Manbhoom again, and report fully on the extent of the distress, and the condition and requirements of the distressed tracts. His Honor awaits anxiously Colonel Dalton's report, but, looking to the gravity of the statements made, he deemed it necessary to order the despatch of 3,000 maunds of Government grain by rail, daily, to Burrakur for Manbhoom. He further directed Colonel Rowlatt to arrange immediately for carting the supplies from the Burrakur Railway Station into the interrior, and to take such steps to arrest impending distress, as might be instantly necessary pending the arrival of the Commissioner.

2. The return of laborers on relief works is still incomplete, showing 7,586 in all, including those on the municipal works at Purulia; while the

Lieutenant-Governor was informed by the Deputy Commissioner, that over 25,000 were employed on relief works. The latter number probably includes those employed on works executed from advances for land improvements. The comparatively small number on the roads is now accounted for, by the fact that throughout this district the roads are being made under the contract system; and Colonel Rowlatt, remarking that this system is in many respects not well adapted to relief operations, says if he could do away away with it, the numbers seeking employment would immediately increase from 7,000 to 15 or 20,000. The precise import of the term "contract system" is not stated; but the Lieutenant-Governor believes the meaning to be this, that a laborer receives payment at a rate determined before-hand for the work done as ascertained by measurement. This arrangement is well-known by the term "piece-work."

3. The Government has certainly hitherto always gathered from Colonel Rowlatt's narratives, that work was provided in Manbhoom in sufficient quantity for all the laboring class requiring relief; and that they were in fact being so relieved. If the Deputy Commissioner's present statement is intended to convey that there are from 8,000 to 14,000 people who have, while requiring relief, been excluded from it by the system in force, the Lieutenant-Governor must point out that Colonel Rowlatt is responsible to provide relief instantly for all who really need it, according to the best system which he can adopt under the circumstances, be it piece-work, or daily wage, or other method. It appears that the Deputy Commissioner did ask at various times that his professional staff might be strengthened; but looking to the small numbers apparently seeking work in Manbhoom as compared with other districts; to the fact that elsewhere there was a much more pressing demand, and to the general tenor of the Deputy Commissioner's reports as to the sufficiency of the relief provided, the Government believed that with a proper use of local agency, sufficiently satisfactory results would be obtained. The Public Works Department will now be requested to send more assistance to Manbhoom at once, and the Lieutenant-Governor trusts that Colonel Dalton will see that sufficient work is provided in every quarter where required, for those who can execute piece-work, upon the public roads and village tanks; and for those who are physically incapable, upon such minor roads or village works as may be found practicable.

4. The Deputy Commissioner has full discretion to employ on daily wages all those who may be urgently needing relief, yet he must understand that the method is found very difficult in respect of supervision, if the number of laborers is large, and is liable to many abuses. Every effort should be therefore exerted to induce people to accept piece-work; and the terms of the piece-work should be fixed with fair liberality, and with due regard to all the circumstances of the case, so that the people may see that it is to their interest to take the terms. But at first it may happen that ignorant and destitute villagers fail to comprehend the terms; and such persons are not to be rejected merely because they ask for work on daily wages and declare themselves unable to do piece-work. They must be employed on daily wages until they can be induced to take piece-work. The above remarks are based on the supposition that the persons in question really need relief, of which matter the district authorities are to judge.

5. The Deputy Commissioner does not report, as he should have done, the numbers receiving charitable relief. His reports must be made more complete in future as regards the statistics of relief. As above stated, the Lieutenant-Governor cannot decide on a full scheme of relief for this district, until Colonel Dalton's report is received. Meanwhile after the serious report which was made to His Honor on the 15th April, he must warn the district authorities that they will be held strictly responsible for adopting every measure they may consider urgently necessary, until they shall receive the orders of Government.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

EXTRACT also (paragraph 3), to Public Works Department, with a request that Colonel Nicolls will arrange at once for sending two or three more overseers to Manbhoom.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 29th April 1874.

No. 754, dated Purulia, the 20th April 1874.

From—COLONEL E. A. ROWLATT, Deputy Commissioner of Manbhoom,
To—The Junior Secy. to the Govt. of Bengal, Statistical Dept.

WITH reference to paragraph 3 of Government Circular No. 154—S.R., dated the 16th January last, I have the honor to submit my fortnightly narrative ending the 18th instant.

A.—STATE OF THE COUNTRY.

I have not much to add to what I stated in the last narrative under this heading. The plentiful supply of mohwa, which is still falling, has brought great relief in those parts of the district where the trees are numerous; it is being bartered at the rate of 3 seers for 1 seer of rice; it usually sells at this time of year at 5 maunds per rupee, but on account of the great scarcity of other food only 2½ maunds are now procurable. It is being dried and stored, but is being much more largely consumed than usual by the poorer classes, and the respectable classes who do not commonly eat mohwa, are also now consuming it. Had it not been for this very timely supply of food, great distress, if not actual starvation, would ere this have taken place. The spring crop of lăc is also just being gathered, which will bring food to those who cultivate it. This crop is but small compared with that which is gathered in October. It is being exchanged at the rate of 1 seer for 3 seers of rice; nearly all classes engage in its cultivation.

In spite, however, of the falling of the mohwa, and gathering in of the lac crop, distress is reported to be still on the increase in all the distressed part of the district; the people have commenced consuming their seed paddy. This is reported from Mohal and Mourah pergunnahs by the district superintendent of police; from Govindpore by the extra-assistant Commissioner in charge of the sub-division, and by the Dewan of the Pandra Rani, who assured me, when at Burrakar on the 16th instant, that such was unquestionably the case in that pergunnah. I have also received similar reports from the pergunnahs of Khaspel, Bagda, and parts of Supur; this shows conclusively that some at least of the people have come to the end of their stocks of paddy intended for food, and having no other resources left, and being unable to purchase for want of the means, and not being able to borrow, as the mohajuns refuse to advance on loan in consequence of not having been repaid their previous advances, are thus being driven to consume their seed-grain. Complaints of disstress are also being received from people in Raipore, Shamsundarpore and Dhadra in Burrabhoom; but as rice is still selling in those parts at 16 seers per rupee, this can only be that kind of distress which occurs annually amongst the poorer classes generally. The complaints are being enquired into.

The price of rice and pulses by the reports received from the police up to the 20th instant is as follows; that at which they stood in the last report is also given:—

Name of bazar.	Coarse rice.		Fine rice.		Pulses.	
	Last report.	Present report.	Last report.	Present report.	Last report.	Present report.
Raipur	17	16	16	16	15	14
Manbazar	16	16	15	12	11	12
Burrabazar	16	16	12	13	10	12
Ichagarh	18	18	16	16	12	12
Jhalda	14	13	13	12½	12	11
Purulia	15	14½	12	12	10	12
Govindpore	13	13	12	12	13	13
Raghunathpore	12	13	11	11	10	10
Nirsha	12	12	11	11	10	10
Gaurandih	12	12	11	11	11	10

From the above it will be seen, that prices have remained pretty stationary except at Jhalda and Purulia, where a rise has taken place.

The price of wheat and barley is also quoted in the price-currents, but there is little or no demand for these grains; if there was, the supplies being very small, they would be exhausted in a few days.

The only crop on the ground is sugarcane, which has been lately planted out. This is suffering from want of moisture, as the reservoirs and tanks now contain very little water, and in many villages will be soon quite dried up. Great complaints are made in all parts of the district of the want of sufficient drinking water, and during the next two months great distress and difficulty will be experienced both by the people and cattle on this account. Wells are being dug all along the roads now being carried on as relief works; and if the villagers would take the trouble to do so too, the difficulty would be got over, but they apparently prefer drinking the most filthy slush, instead of digging wells for themselves, although they know full well that sickness must ensue from drinking bad water.

In addition to the beggar class, and those reported to be suffering in the last narrative, distress is reported in several villages in the eastern part of Khashpel pergunnah; the district superintendent of police writes:—"16 sonthals come in from the village of Ktwabila in Khaspail pergunnah, saying that unless some help was given them they would die; they were in a most emaciated state. From enquiries I have made of people from the neighbourhood, it appears that there are five or six villages near or about Purroorroo in very great want. It appears to me that there is much more distress here and there than we ever imagined, and that it only comes to light when the people are on the point of starvation." Captain Samuells is now on the spot, and relief has been given to these villages by money, which was at once despatched on receipt of the above intelligence. A feeding depôt will also be started immediately to assist those who are too weak to work, and employment found for those who are still strong.

The tracts mentioned in my last narrative are those most distressed, and will still remain so until relieved; the area of distress has still, I am sorry to say, a tendency to expand, as places hitherto thought to be quite safe, are now reported to be suffering from want of food. In fact, except in the south-west of the district where rain fell in October, all the villages in which the cultivation is chiefly confined to high, or bád lands, may be expected to suffer more or less from want of food.

As far north as Para and Ragunathpore, except in the eastern pergunnahs, the bazars are still fairly supplied with food; but the present state of distress is not so much caused by the want of supplies, as by the want of means amongst the people to purchase food. They have now suffered in the distressed

part of the district from three successive bad years, of which the last was the worst ; from this cause they have gradually exhausted their means, and are no longer able to purchase or borrow, as their credit is gone, and paddy-holders do not care to run the risk of increasing more losses by making further advances. To the north of these places supplies are insufficient and would indeed be so all over the distressed pergunnahs, if the people still had the power to purchase.

B.—Relief Works.

In addition to the 13 roads measuring 252½ miles detailed in my last report, sanction has just been received from the Commissioner to commence work on the road projected to join Manbazar with Bankoora. This is a most important line, as by it all the trade to and from Singbhoom and the southern pergunnahs of Manbhoom with Bankoora and the railway beyond, is carried on. I am happy to say the contract for this road has been taken by Mr. J. O'B. Sceales, the manager of the Bankura Indigo concern, who has also taken the contract on the Bankoora side ; he will also have the line marked out and as under him, I feel sure the laborers will be properly treated, I hope no more distressed persons will have to go over into the Bankoora district for relief and work from that part of the country.

Since the date of my last narrative, I have received information that laborers are now being employed on the road No 12, and work will no doubt be commenced on No. 13, and the Manbazar and Bankoora road to be No. 14, as I have requested Mr. Sceales to start the work at once.

The number of laborers employed on all these roads is now returned at 7,197 ; but no returns have been received from the roads lately started.

	Names of Roads.	Length.	Number of laborers employed.
1.	Purulia and Chibassa road	36	602
2.	Branch from ditto to Barrabazar	18	256
3.	Purulia and Manbazar road	28	400
4.	Purulia and Bankoora road	27	525
5.	Branch from Charra to join at Singhbazar ..	4½	125
6.	Ludhurka and Gaurandi road	17	272
7.	Raghunathpore and Hazaribagh road	37	805
8.	„ „ Bankoora road	15	2,134
9.	„ „ Raniganj road	14	1,533
10.	Govindpore and Giridih road	21½	129
11.	Nirsha and Jamtara road	7	98
12.	„ Telkupi road	12	318
13.	Govindpore and Purulia road from Chelliama ..	16	....
14.	Manbazar and Bankoorah road	..	....
	Total		7,197

The number of laborers employed on the Purulia municipal works is 159, and on the relief work 230. Total 389.

In his review on the narrative for this district dated the 6th instant, the Commissioner remarks on the small number of people employed on the roads, and appears to infer from this that the distress cannot be very great ; but the fact is we cannot, and do not give employment to any thing like the numbers who seek it. From the great want we have labored under in supervising agency, we have been obliged to adhere generally to the contract system of work, which in many respects is not well adapted to relief operations, and which I would at once do away with, if I saw any possibility of procuring a sufficient number of trustworthy overseers, so as to admit of the people being paid as daily laborers. With my present staff, I fear it is not possible for me to undertake more works, and on those in hand not many more can be employed than find work on them at present. If I could abolish the contract system and take up more roads, I believe double, or treble the number of people would flock to them, and that the numbers seeking employment would immediately increase from 7,000 to 15 or 20,000.

C.—Transport of food.

No difficulty has yet been met with in procuring a sufficiency of carriage for the transport of the Government grain, and none is expected to occur. The causeway across the Damooda river is now nearly completed, and will not cost more than Rs. 600; when used, the cost of grain from Burrakur to Roghunathpore will be reduced 1 pice per maund, so that if we have to convey there only 38,400 maunds, this causeway will have covered its own cost, and for every maund crossed over above that quantity, a positive saving will take place.

Food is still being brought up from the south of the district and Singhboom, but none appears to reach the norther pergunnahs; some is still being exported to Hazareebagh, and *viâ* Burrakar, to the distressed districts in Behar and uorth Bengal, and little or none is being imported by private traders from the east, as during March only 127 carts, and in April, up to 15th, only 25 carts laden with grain had passed over the Burrakur Bridge going westward.

D.—Storage of Government Grain.

All the Government grain amounting to nearly 20,000 maunds, except 154 bags, has been despatched from Burrakur to Govindpore, Nirsha, and Raghunathpore, and there stored. Grain has also been purchased privately and stored at Puralia and Manbazar for the use of the relief committees; 1,000 maunds of Government rice was sent to Poddordih in pergunnah Pandra, which is now being used by the sub-committee there, and some has also been sent from Govindpore for the use of the sub-committees at Jheria and elsewhere. 1,000 maunds has also been sent out to pergunnahs Mohal and Maura for lending out to the cultivators, who were reported to be in great distress and consuming their seed paddy. Up to the 18th instant only 103 maunds had been distributed. Orders have been issued that all empty bags are to be returned into store.

Regarding the sufficiency of stocks for Government purposes, this has been reported on specially, and a further supply of 1,25,000 asked for, making, with the 25,000 maunds already allotted to this district, 1,50,000. This has been granted, and orders issued by the Government for 3,000 maunds being sent up daily to Burrakur for this district. It is estimated that out of the 3,46,397 persons inhabiting the eighteen distressed pergunnahs, 1,00,000 are laborers without lands, to whom loans could not be made with any chance of their being paid for, and that out of the remainder who are cultivators, one-half may possibly be able to provide for themselves without Government aid. This leaves in round numbers 1,25,000 or about 36 per cent. who will require assistance, which, at half a seer per diem* for three months, gives a total quantity required in round numbers of 1,40,000 maunds, leaving 10,000 maunds for the use of the sub-committees and laborers employed on the roads. What I propose to do is to assist the cultivators through their difficulties by making them loans of rice, leading them to support the laboring classes by employing them in carrying on their agricultural operations as usual, otherwise the chances are we shall have to support both; should the rains be late it will probably be necessary to increase the quantity applied for, as in that case no crops will ripen by the 1st August which the aous, or gora paddy, and Indian-corn and millets usually do.

* The persons in jail, all full grown, get 10 chittacks of rice per diem, and the Mission orphans, aged between 6 and 18, 7-16th seer a day.

In consequence of the large supply now ordered for this district, a second store-house has been ordered for Ragunathpore, but as the grain will, it is hoped, be lent as fast as it arrives, not much extra storage room will be required.

E.—Advances to Private Parties and their Results.

	Rs.	As.	P.
Advances for the purchase of grain to zemindars and others without interest	8,000	0	0
To traders and others of a safe and responsible character without interest	9,595	0	0
To zemindars and talookdars to assist their ryots ...	5,600	0	0
To landowners for land improvements	60,120	0	0
To Puralia municipality	4,000	0	0

The zemindars and talookdars to whom advances have been made for importing rice, will, I believe, apply the money to the purpose for which it was advanced; but I am doubtful whether such will be done by all those who represented themselves to be traders and respectable characters. I found that a very large number of persons were coming forward for loans on the pretence of importing grain, who had no intention of doing more with the money than support themselves. I have therefore been obliged to refuse most of such applications, and confine these advances to known traders. Had I complied with all such requests, I should have been overwhelmed with applications from the needy respectable classes, who would only have been too glad to obtain Government loans at 6 per cent. interest, to pay their debts and feed themselves, but it would have been hopeless to expect payment.

The zemindars and talookdars have not come forward in any numbers to apply for loans to assist their ryots; only five have applied. They know it would be difficult to recover the loans made by them, and are therefore not willing to take the responsibility of accepting such advances.

The tuccavi advances have, on the whole I consider been a great success; they have been the means of giving employment at a very critical time to a large number of laborers, who otherwise would have been without work; a large number of works will also have been completed which will materially benefit the country, and be a safeguard against repeated failures of crops. It is unfortunate, however, that most of the works are now nearly completed, and that but few are now applying for such loans to whom such advances could safely be made. During the fortnight I have, however, been able to make advances to 23 persons, taking Rs. 5,070, whose works will be carried on in some of the very worst parts of the district.

The works of the Purulia municipality are being steadily carried on, and whilst giving employment to a large number of persons will add greatly to the appearance, convenience and health of the town.

F.—Charitable Relief.

There are now at work in this district, the district relief committee, and sub-divisional committees at Govendpore, Roghunathpore and Manbazar, having under them 4, 3, 10 and 5 sub-committees respectively, at the places noted in the margin. These latter have all been arranged by officers who have visited the places where they meet, and short directions in Bengali, embodying the directions of Government, and the Central Committee &c., have been drawn up by me and issued to them for their guidance; with constant supervision they will, I believe, do us good service, but are not capable of doing much if left entirely to themselves. These numbers will have to be increased as the area of distress is enlarging. Cooked food is being distributed at Purulia, Govindpore, Jheria, Purulia, Govindpore, Sheriah, Podordile, Roghunathpore, Manbazar and Bagda, where large numbers are daily provided with one meal a day.

No. 773, dated Purulia, the 21st April, 1874.

From—Colonel E. A. Rowlatt, Deputy Commissioner of Manbhoom,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

With reference to my narrative dated the 20th instant, I have the honor to forward a corrected return of laborers employed in the Roghunathpore roads, numbering 7,405 instead of 4,472. This corrected list I have only just received; the total number employed on the relief roads of this district is therefore 10,180, instead of 7,197 as stated in my narrative.

Revised Statement showing the number of Coolies employed on the roads from Roghunathpore.

Number of the list.	Name of Road.	Number of coolies employed.
7.	Roghunathpore and Hazareebagh road	2,642
8.	Ditto Bankoora „	2,158
9.	Ditto Ranegunge „	1,854
9½.	Collecting stones for metalling the roads	751
	Total ...	7,405

Purulia,
The 21st April, 1874.

E. A. Rowlatt, *Colonel*,
Deputy Commr. of Manbhoom.

No. A1, dated Calcutta, the 16th April 1874.

From—The Offg. Secretary to the Government of Bengal, Statistical Department,

To—The Commissioner of Chota Nagpore.

I am directed to inform you, that the Lieutenant-Governor has had the advantage of meeting Colonel Rowlatt and Mr. Beadon, and conferring with them upon the condition and requirements of their districts. With Mr. Beadon was Mr. Campbell, the sub-divisional officer of Pachumba.

2. Sir Richard Temple gathered from Mr. Beadon that, though parts of four thanas* with an aggregate population of about 120,000 persons were partially distressed, yet not more than 20,000 people would come on the hands of Government for three months, and 20,000 maunds of grain was all that the Deputy Commissioner deemed to be required. The Lieutenant-Governor sanctioned the immediate commencement of so much of the Gya and Deogurh pilgrim road as goes through the Hazareebagh district, as both Mr. Beadon and Mr. Campbell represented that relief work was very greatly required in that direction.

* Chuttra.
Burhee.
Koderma.
Huntergunge.

3. The Lieutenant-Governor was not fully satisfied that Mr. Beadon sufficiently estimated all his requirements; and I may perhaps have to address you again on this matter. At any rate, the Lieutenant-Governor would wish to be favored with your opinion upon the sufficiency, or otherwise, of Mr. Beadon's estimate. Meanwhile, as Hazareebagh has already got 20,000 or 22,000 maunds of Government grain, there is no emergent need for sending any more at present.

4. The affairs of Manbhoom and its requirements, as set forth by the Deputy Commissioner, are very much more important and pressing. Colonel Rowlatt stated that sixteen pergunnahs to the east of his district (he could not distribute the distressed tracts into thanas) were very badly off; he explained that over a great part of this area there had been little or no rice crop; that prices were 13 seers a rupee (which he said was very high for a poor district like his); that there were already 25,000 people on the relief works, and that there was now very little private trade, and supplies were very short.

Colonel Rowlatt said that the whole population would need assistance, but that, if Government would help the ryots and their families in all, the ryots would find employment and support for the remaining 150,000 of the population. Colonel Rowlatt said that the period for which the people would want assistance was three months; and he gave it as his opinion that 150,000 maunds of Government grain should be provided for his district.

5. The Lieutenant-Governor does not consider Colonel Rowlatt's statement of the case to be absolutely clear; and perhaps some of his deductions may not be quite consistent with his premises. But it is clear that Colonel Rowlatt knows district well, and has visited all its distressed tracts; he has been particularly successful in getting works of local improvement undertaken by landholders, and much weight must be attached to what he says. Sir Richard Temple would not himself have supposed that one corner of a district otherwise well off, could have been in so very bad a condition that four-seventhe of its population will have to be fed with grain imported by Government.

6. Still, looking to the very serious nature of Colonel Rowlatt's report, the Lieutenant-Governor would ask you to be good enough to visit Manbhoom at once, and to favor him with a very early report upon the extent of the distress, and the condition and requirements of the distressed tracts. Sir Richard is aware that you yourself visited these tracts early in the year; but distress has, according to Colonel Rowlatt's account, so much extended, that the Government can hardly decide upon the kind and extent of relief required without the assistance of your judgment and knowledge, exercised after revisiting the district. The Lieutenant-Governor would ask you to make as clear as can be—

(1) the area of distress and its population;
(2) the proportion of failure of the two last crops (aous and amun) expressed in annas;
(3) the percentage and number of people in each of the distressed tracts who are likely to come upon the hands of Government and
(4) the amount of Government grain you would recommend should be imported.

No. 9M.A., dated Calcutta, the 22nd April 1874.

From—Lord H. Ulick Browne, Commissioner of the Presidency Division,
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

In continuation of my No. 3M.A., dated 7th April 1874, submitting the fortnightly narrative of the Collector of Nuddea for the fortnight ending 6th April 1874, I have now the honor to submit the Collector's report* for the fortnight ending 20th April 1874.

No. 448—S.R., dated 20th April 1874.

2. *Heading firstly.*—Advances to import grain.—Blank.

3. *Heading secondly.*—Public Works Relief. As in the previous fortnight, works carried out under the Land Improvement Act have given employment to a good number of people, and it has not been necessary to offer much relief

work on the part of Government. I may here mention that the zemindars who are digging tanks do not, as a rule, send in returns of the number of people employed, and thus, though only about 4,500 persons are reported to the Collector, he believes that the real total is not less than between 8,000 and 9,000.

Arrangements are under consideration for the provision of relief works when the tank-work is finished about a month hence, and I have just applied to Government for permission to entertain overseers to make plans and estimates.

4. *Heading thirdly.*—Provision of food for relief works.—Blank.

5. *Heading fifthly.*—Landholders continue to apply for tuccavee loans, but no more can now be granted for tanks, except for very small ones, as large tanks cannot now be excavated before the rains set in.

No. 443—S.R., dated Kishnaghur, the 20th April 1874.

From—C. C. Stevens, Esq., Collector of Nuddea,
To—The Commissioner of the Presidency Division.

I have the honor to submit my fortnightly report ending this day.

State of the Country.

2. Bazars are generally well supplied with coarse rice, and no complaint of scarcity is heard of. Mahajuns' golahs seem to be well supplied almost all over the country, and both mahajuns and zemindars are making advances of paddy freely to the ryots.

3. Prices are decidedly lower than during the preceding period, and they may be quoted thus:—

	Common rice per maund. Rs. A. P.
Bongong	2 4 0
Chooadanga	2 10 0
Meherpore	2 13 0
Kooshtea	2 12 0
Kishnaghur	2 14 0
Kaligunge	2 15 0

4. There is no information which can be relied on as to the amount of grain in stock, but from the reports received from the sub-divisional officers it is indicated that the existence of stores is considerable.

5. There has been no rainfall at Kishnaghur during the last fortnight. But there has been a little rain in the Kaligunge thana, and in the Meherpore and Kooshtea and Chooadanga sub-divisions. At Kooshtea, on the 3rd and 17th instant, the rainfall is said to have been 1·65 inches, and I have heard that still more than this fell near Allumdanga. The rain has not indeed been universal in the tracts abovementioned, but it has been sufficient in many places to permit the sowing of early rice.

6. *State of the Crops.*—Nearly all the crops which were on the fields have been harvested except boro dhan, which is fast ripening, and which is said to be very promising. The land is said to have been unusually well tilled this season. Rain is much wanted for indigo on the ground, as well as for the early rice sowings.

7. *Condition of the people.*—The condition of the people appear to be generally satisfactory although high prices are prevailing; but laborers are in places, it is said, difficult to get, and wages at the rate offered are not much sought after. This indicates that there is not much apprehension of pressure amongst the people. This satisfactory state of things arises in great measure from the employment given by works undertaken with Government funds either directly or through borrowers under the Land Improvement Act. Want of proper drinking water is greatly felt in many places. In the distressed parts especially much has been done this year to remedy this deficiency. Cholera is, I regret to say, extremely prevalent, especially in the distressed tracts, where it frequently has the effect of driving laborers from the works. In one instance I have heard of 8 men dying out of a gang of 12! Four native doctors are at work.

8. No cases of actual starvation or misery have been reported, but grain thefts have somewhat increased in the sub-division of Bongong.

9. *Condition of any special tracts.*—The distressed tract has not enlarged nor, as I hope, will it do so till the rains are regularly set in. There will be no difficulty, I think, in preparing work enough for the classes accustomed to out-door labour to provide for them till the aous crop is cut. Some of the better class of people have begun to suffer, and the sub-committees have been set to work at Debogram and Muragatcha in order to provide work suitable for them.

10. There have been no particular fluctuations in the excise revenue.

Relief Works.

11. The tanks which had been undertaken at Government expense have been very nearly finished; others have been projected, which will afford employment for the surplus laborers till the rains commence. Many of the tuccavee works are approaching completion, and it will be necessary for us to be prepared to supply their place. This can be done by means of scattered works.

12. There is no necessity for storage of Government grain.

13. The district relief committee, preceiving that it has become necessary for provision of light labor to be made, has commenced operations. Subscriptions have been promised to the amount of Rs. 2,500. The sub-committees of Debogram and Muragatcha have been set to work, and have been supplied with funds for the commencement of cotton-spinning. The Kishnaghur sub-committee will also very shortly commence operations.

No. 2644—S.R., dated Calcutta, the 24th April, 1874.

From—A. Mackenzie, Esq., Junior Secretary to the Government of Bengal,

To—The Commissioner of the Presidency Division.

I am directed to acknowledge the receipt of your letter No. 9M.A., dated the 22nd instant, submitting the fortnightly narrative of the Nuddea district ending 6th instant, and in reply to say that the report in question is generally satisfactory.

2. With reference to paragraph 3 of your letter under reply, I am to note that the entertainment of three overseers for supervising relief works in Nuddea has already been sanctioned in orders No. 2615, dated 23rd instant.

Enclosure No. 9 to the 16th Special Narrative.

Return of Men, Women and Children employed on Relief Works in Districts of Rajshahye, Patna and Bhagulpore Divisions for the fortnight ending 21st April 1874.

A. O. HUME,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE FORTNIGHT ENDING THE 30th APRIL 1874.

GENERAL REMARKS.—In Madras, deficiency of water is still complained of; rain appears to have fallen in most districts, and in quantity in Kurnool; few crops are standing; the harvest has been below the average in the south. In Bombay and Sindh, the harvest has been generally completed, and preparations for the monsoon crops are going on. Rain has fallen in the Deccan and Southern Mahratta districts. In Bengal, there have been thunderstorms and rain in most districts during the latter half of the fortnight; but in the Patna and Bhaugulpoor Divisions it is reported to have fallen only in Tirhoot, Bhaugulpoor and Purneah; it has everywhere done great good; but more is much required for the early rice sowings, and to forward the standing crops. The Mohwa crop has been abundant in Chota Nagpore, and the *boro* rice has been much benefited by the rain in the central districts. In the North-Western Provinces, the harvest is almost over; the out-turn has been average in most districts, and exceptionally good in the Upper Doab. The numbers on relief works in Goruckpore and Bustee continue to increase; but it is thought that a large proportion of the persons on the works are not driven thither by want. Elsewhere in the Benares division (except in the south of Mirzapore) there is no noticeable distress. In Bundelkund, small relief operations continue. In Oudh, the crops have been reaped. In the Punjab, the harvest is being cut, with a very good out-turn. In the Central Provinces, the harvest is either gathered or in progress, and the out-turn good. In Berar, preparations for the next crop are going on. In Rajpootana and Central India, the harvest has been got in, and is good. In Mysore, prospects are satisfactory.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Madras— (Apl. 30th)		
Kistna („ 29th)	*Nil.*	No rain in the district; canals still closed; standing dry crops, where they exist, fail and are being harvested; second rice crop in Gudivada wanting water; prices stationary; mild small-pox general; cattle fairly healthy; pasture very scarce; markets well supplied locally.
Kurnool „	2·4 in Kurnool.	Season generally favorable; slight showers in Sirwell and Nandial; later crops harvested; outturns fair; markets well supplied; prices stationary; water and pasture sufficient; fever, small-pox and cattle disease in five taluqs.
Negapatam „	·4 in Negapatam.	Rain elsewhere very scanty; rivers dry; water in tanks scarce; water over upper and lower anicuts none; cultivation none; standing crops not thriving in some places; a few dry grains harvested here and there; yield below the average; pasture scanty; markets sufficiently supplied; prices stationary; small-pox in several places; cattle healthy.
Trichinopoly „	...	Slight rain in different parts of the district, and heavy thunder-shower here yesterday, which appears to have been pretty general, and will have made the water-supply and pasture sufficient, a fresh having come down the Cauvery; condition of crops generally good; outturn generally below the average; markets sufficiently supplied; prices stationary; public health good but for small-pox; condition of cattle generally good.
Calicut „	·3	Rain-fall heavier inland; sowing for first crop in progress; supply of grain sufficient, small-pox continues without abatement; fever prevalent in hilly parts; heat excessive; cattle healthy; pasture withered; prices stationary.
		General prospects not satisfactory.
Bombay— (Apl. 30th)		
Sindh.		
Kurrachee ...	...	River at Kotree on 27th instant 7 feet 11 inches, against 5 feet eleven inches last year; some large canals flowing; small-pox in places mentioned in last report; cattle disease in Sehwan and Dadu taluqs, preparations for khureef going on; fever prevalent.
Hyderabad ...	...	River rose during the second week of the past fortnight from 6 to 8 feet; hot winds with dust; no disease.
Shikarpur ...	...	Nights continue cool; severe dust-storm, accompanied with thunder and lightning, on night of 27th instant, and slight shower of rain on 28th instant; fever prevailing moderately.
Upper Frontier ...	...	Rubbee harvest continues; weather generally sultry; high winds and dust-storms.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bombay—*contd.*		
Gujarat.		
Ahmedabad ...	...	No change; lands being prepared for next khureef.
Kaira ...	...	Weather hot; public health good.
Surat ...	...	Weather tolerably good.
Broach ...	...	Weather hot; public health good; fields being prepared for monsoon crops.
Khandesh and Nasik.		
Khandesh ...	...	Cotton market brisk; best Ryzapur cotton Rs. 50 per pulla; weather hot.
Nasik ...	...	Public health good; cattle disease in Malligaum and Peint.
Thanna ...	...	Weather hot; heavy dews at night; prevailing diseases, ague, cough and chicken-pox; slight cattle disease in the Salsette, Wada, Shapur and Moorbar taluqs; measles, small-pox and scarcity of drinking water in taluq Wada.
Deccan.		
Poona ...	0·37	Rain at head-quarters 0·37; slightly fallen in Taluqs Jooner, Indapur, Poorundhur and Bhimturry; hot weather continues: public health good; cattle disease has nearly disappeared in Mawal and Havelly; fever to slight extent in Indapur.
Ahmednuggur ...	0·02	Public health good.
Sholapur ...	0·39	Rain 0·39 at Sholapur, 0·32 at Barsee; more rain expected; ague at Pundarpur.
Satara ...	0·04	Weather oppressively warm; fever in Walwa.
Southern Mahratta Country.		
Belgaum ...	0·74	More rain wanted; scarcity of water in the town of Belgaum; prices of provisions reasonable; cotton crops indifferent.
Dharwar ...	2·20	Ground being prepared for monsoon crop; drinking water scarce in Navalgund, Bunkapur, Hangul and Karajgi.
Kaladghi ...	...	Scarcity of water in Sindgi, Moodebihal and Hoongoond; public health good.
Canara ...	...	Preparations being made for monsoon crop; fever, small-pox, and cattle disease slightly prevalent.
Kattyawar and Gaekwar's territory.		
Wudwan ...	...	Weather hot; state of crops same as before; heath good.
Baroda ...	...	Weather very hot; public health good.
Bengal— (Apl. 28th)		
Burdwan ...	1·69	Weather hot and dry. No rain reported from any of the sub-divisions, except Bood-bood and the Sudder, but heavy rain and hail have fallen in Munglecote and Ketoogram. Wheat and barley have been reaped and have yielded a good out-turn in Raneegunge, but not so good in Cutwa. The only crops now on the ground are teel (oilseed), which has been extensively cultivated this year. Cotton and vegetables; rain is much wanted for these crops and to soften the ground for the sowing of the aus or early rice.
24-Pergunnahs ...	0·25	Days very hot, nights cool; clouds gather in the afternoon, but are dispersed by strong winds from the south; a few drops of rain fell in some sub-divisions during the latter half, but not enough to do any good. Rain is much needed for the commencement of the early rice sowings and to replenish the tanks. The few vegetables on the ground are suffering for want of moisture.
Dacca ...	1·25	Very hot and dry weather during the first week; in the second, thunderstorms nearly every day, and warm between rains. Prospects of crops on the ground good. Very favourable for sowing both jute and rice.
Cuttack ...	*Nil*	Warm and cloudy weather during the latter part, but no rain. Dalwa rice being reaped.
Moorshedabad ...	*Nil*	Intensely hot weather, dry winds during the day, frequent dust-storms; a slight fall of rain at Ramporehaut, Gowas, Nowda and Jelinghee on the 21st April, and a hailstorm of considerable violence on the same day in the Bhugwangolah Thannah, causing considerable injuries to mango crops. Indigo and mulberry crops are suffering much for want of rain, which is also required for the preparation of land for rice sowings, and for replenishing the water-supply, which is very much reduced. Boro paddy has been injured by the drought, as many of the beels (marshes) in which it has been cultivated have dried up to a considerable extent. The early rice seedlings in the low lands are still looking well, but cultivation of the higher lands is delayed for want of rain. Prices which were stationary during the first week have risen in many markets from ½ to 1 seer for common rice.
Dinagepore ...	*Nil.*	Cloudy and close; one day west wind at the station; rain has fallen in many places of the district. The rains have enabled the ryots to finish all early sowings on light soils. Jute cultivation is being pushed on. Boro rice is doing well, the late rains having prevented further damage by insects, which were beginning to appear, and it still promises to be a good crop. The early rice crop which was promising is said to be suffering from want of rain. What rain fell has been quickly absorbed.
Maldah ...	*Nil*	Weather very hot; strong westerly winds; dust-storm, thunder and slight drizzling rain on the evening of Saturday, the 18th April. Boro paddy promises well; in most places ears have come out, and are in good condition. Early rice sowings are going on, and in some places plants have come out; a shower of rain would materially assist both these crops. Prices have slightly risen.
Rajshahye ...	·61	No rain during the first week; excessive heat. A fair fall of rain on the 21st April, along the south and west of the district. Notwithstanding the great heat and want of rain, the boro paddy crop is generally reported to be doing well; the grain is now forming in the ear. The early rice has come up well; and is about 3 inches high in some places. Cheena (millet), barley, wheat, gram and linseed have all been reaped, and are now in the markets. Teel (oilseed), sugarcane and paddy crops are thriving as yet, but rain would assist them greatly. The tendency of prices of rice generally is to fall, excepting in Burigong in the south-east, where there has been a considerable rise.
Rungpore ...	1·45	Weather hot, close and cloudy with a slight fall of rain; a small quantity of boro paddy is in ears; much of the aus or early rice crop is advanced; sowing still going on. The crops of cheena and kowni (millets) are generally progressing favorably; to the north-east, where the crops are very forward, rain is much wanted. Prices of rice higher everywhere, from Rs. 4-8 to 6-8 per md. in distressed tracts.
[illegible]ah ...	*Nil.*	Fine and seasonable weather. Boro rice in Bograh and Khetlall, and jute and sesamum in other parts are promising well. The aus or early rice crop has been sown in various parts and the general promise of the crop is good. The cutting of sugarcane has been nearly completed; a decidedly good outturn will result.
[illegible] ...	*Nil.*	Weather seasonable, strong wind from the west during most part of the fortnight, but from the east in last two days. The cold weather crops have now been all reaped and gathered, and yielded well. No crops in the ground, except cotton, [illegible] (millet) and sugarcane in small quantities.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bengal—*continued.*		
Gya ...	*Nil*	Hot and fine weather; rain required; cold weather crops harvested; outturn satisfactory; outturn of opium remarkably good.
Shahabad ...	*Nil*	Hot with west wind prevailing; weather very close, at times threatening rain. The cold weather crops have been all harvested and have yielded a fair outturn. Cheena (millet) being cut. Mango crop promises to be a good one. Sugarcane and vegetables have been sown. In the Buxar Sub-division the boro rice is favorably reported on; the quantity grown is however small.
Tirhoot ...	1·07 on 27th	Seasonable and hot, west wind prevailing. In the Tajpore Sub-division rain is much wanted for the moong (pulse) and cheena and kowni (millets) being prepared for the bhadoi or early crops; the greater part of the has been sown in this sub-division; what paddy has germinated is standing west wind pretty well; but there is much seed yet to germinate. No change in the mango crop. Tobacco still hangs on hand. In the Seetamarhi Sub-division the cold weather crop is harvested; yield less than what was anticipated. Mango blossoms are being scorched, and have suffered from high winds; moong (pulse) cheena and kowni (millets) suffering from drought; one good shower might yet secure a four-anna crop. Weather unfavourable for crops on the ground. Rain is reported to have fallen at Bela outpost on the frontier, and thunderstorm at Seetamarhi on the 14th April; price of rice at Seetamarhi bazar, eight seers per rupee, in other places nine seers. In the head-quarters of the Durbhanga Sub-division, there was slight rain, fell on the night of the 27th April, and 2·2 in the central portion of the sub-division and ·9 at Hati; though the cheena (millet) and moong (pulse) are hardy crops, the sub-divisional officer has grave doubts regarding their ever coming to anything. Rain is much wanted for the early sowings of the paddy crop in the remaining parts of the sub-division. In the Mudhoobani Sub-division rain is much wanted for the early sowings of the paddy crops. Hajeepur Sub-division, the low chur rice is fair; the moong (pulse) has failed to a great extent in the north part of the sub-division and rain is very much required. There is no material change in the prospects of the Sudder Sub-division; 1·07 of rainfall at Mozafferpore on the night of the 27th April which has done good.
Sarun ...	*Nil*	Clear, hot, and dry with strong west winds. The cold weather crops have now been all reaped and gathered; the yield is better than was anticipated. There is nothing on the ground except cotton, cheena (millet), moong (pulse), sugarcane and indigo. The continued drought and west winds are affecting the crops injuriously except where irrigated. One good shower of rain might yet change the prospects for better and enable the ryots to prepare lands for rice sowings. Mango crops also have suffered from recent high wind. Indigo prospects bad; the plants are sickly and withering away for want of sufficient moisture. Prices on the whole steady.
Chumparun ...	*Nil*	Weather very hot, east and west winds. The cold weather crops are almost all harvested. Unirrigated cheena (millet) dried up; indigo prospects unfavorable. Mango damaged. Land being prepared for makai (Indian corn); rain much wanted.
Monghyr ...	*Nil*	Weather set fair. The cold weather crops are all cut, and are being winnowed with the aid of high winds; the return is good. The crops on the ground, cheena (millet) and moong (pulse) occupy a small fraction of the cultivated area; even where irrigated they are much in want of rain. A good mohwa crop is being gathered. Mango crop will be a poor one. Rain is much wanted for rice sowings.
Bhaugulpore ...	·78	During the first week, weather was hot, and strong west winds; good rain at Simrah on the 15th April. In the second week the weather was very cloudy and threatening, with east wind and heavy storm from north-west on the night of the 27th April. Low-land paddy so far promising well.
Purneah ...	*Nil* 1·50 on 27th	Hot west winds and seasonable weather; little rain in Arrareah during the first week except in the north; rain was much wanted for the crops and the cattle; on the 27th April about-one inch and a half of rain fell, which has done much good. For want of rain the sowing of rice had been stopped. Moong (pulse) and indigo both scorched up. The outturn of the kowni and cheena (millets) is not good as was expected.
		Public health.—Burdwan, cholera and small-pox at Culna and Cutwa; fever as before. 24-Pergunnahs, cholera still prevailing in Busseerhat, Kaligunge, Katwa, Protapnugur and Barripore; it has abated in Joynugur, Satkhira and Mothoorapore and disappeared from Diamond Harbour and Bankipore; one small-pox case reported from Kalaroo. Cuttack, public health good. Moorshedabad, small-pox and cholera still prevalent, but not in a virulent form; medicines have been made over to persons in the interior to dispense to suffering. Maldah, health of the district generally good. Rajshahye, cholera has been very prevalent in many parts of the district, one day's report for the entire district having shown as many as one hundred cases (attacks and deaths). Patna, small-pox continues in the city and in some places in the mofussil. Shahabad, small-pox very general, but not of a severe type. Tirhoot, public health good. Bhaugulpore, general health good.
		General remarks.—During the fortnight under report, more or less rain has fallen in certain districts, but none in the Patna and Bhaugulpore Divisions, except in parts of Purneah, Tirhoot, and Bhaugulpore. The fall has done good, but more is urgently wanted everywhere, for preparing the land for the ensuing season's crops, and for saving those lately sown. It is wanted even more in some districts to replenish the failing water-supply which has greatly distressed the people. Boro paddy promises well, except in a few places where it is suffering for want of water, irrigation having failed. It is also being reaped in certain districts, where it will be a great help to the people. Cold weather crops have been harvested with a fair result on the whole, though in some districts the area under cultivation has been less than usual. In the Chota Nagpore Division and its neighbourhood, the mohwa crop is more abundant than was expected, and immense relief has been temporarily given thereby to the poor. The general reports on the jungle products which the people use as food in time of scarcity is reassuring. The mango crop is unfortunately poor in places, and indigo prospects are not favourable in many districts.
W. P.— Bustee (Apl. 27th)	...	Slight rise of prices in north and west; rates reduced on two works, will be [illegible] on other works unless prices rise; numbers on works 75,000, expected to [illegible] 10,000 laborers to be transferred from Bansee road to the Fyzabad [illegible] Belwa Ghât. A new poor-house opened; total number 4 with [illegible] cations for Government advances to buy rice; seed very few; exports [illegible] continues.

Presidency or Province, &c.		Rainfall for fortnight.	State of agricultural prospects.
W.—			
Gorakhpoor	(Apl. 27th)	...	Prices of rubbee grains slightly fallen, except in north; rice stationary. On relief works in north 48,500; in south 36,000; numbers increasing, notwithstanding reduction of rates; about one-third of laborers driven to works by actual want, the rest attracted by the light work; the question now is, how to get a fair day's work from them. In city poor-houses 669; numbers reduced by sending able-bodied to works. In Mofussil six poor-houses with 360. Up to end of week Rs. 2,25,525 advanced for purchase of grain, and Rs. 2,954 for purchase of rice-seed: besides this, 46,000 maunds of grain to be stored at Burhuj by private agreement.
		...	Prices continue to fall slowly. Two relief works with 324 weekly charitable relief to 247 in Ghazeepoor only.
		...	Prices generally unchanged, but rice dearer; mohwa harvest nearly over; unripe mangoes coming into market; south of Soane 9 relief works with 732; north of Soane one work with 347; total ten works with 1,079. Imports into Mirzapoor city fallen by more than one-half.
Benares	(28th)	...	Prices steady; no distress; no charitable relief.
Azimgurh	(26th)	...	Prices on the whole steady; charitable relief twice a week to 300 in Azimgurh only.
Jounpoor	(28th)	...	Prices steady; rubbee outturn good everywhere.
Allahabad	(30th)	...	Prices unchanged, except of bhoosa, which has been raised by purchases for Bengal.
Banda	(28th)	...	No change in prices except a rise in mohwa in west, two relief works and 14 poor-houses, with 922 inmates; Kirwee no relief works, four poor-houses with 996; no unrelieved distress. Kirwee mangoe crop promises well.
Humeerpoor	„	...	Prices of wheat and gram slightly fallen; five relief works with 1,550; four poor-houses with 353; export of gram, wheat and ulsee as before to Cawnpoor-Futtehpoor, Jhansie and Bundelkund.
Jaloun	(27th)	...	Harvest cut; outturn good; threshing going on.
Jhansi	(29th)	...	Prices stationary; harvest labor at an end; about 2,500 on relief works in Mhow; also same charitable relief there.
Cawnpoor	„	...	Prices of chief food-grains slightly risen; prospects unchanged.
Futtehgurh	„	...	Rubbee harvested; outturn average.
Agra	(30th)	...	Slight fall in rubbee grains. Dust-storm and a little rain; rubbee all cut and under threshing.
Muttra	(26th)	...	Prices fallen in south owing to large imports. Rubbee harvest over; outturn average.
Allygurh	(22nd)	...	Prices risen; rubee outturn good, except of urhur; export to Bengal ceased.
	(28th)	...	Rubbee all harvested.
Meerut	(29th)	...	Harvest over; outturn excellent.
Saharunpoor	„	...	Harvest continues.
Bijnour	(27th)	...	Rubbee nearly all reaped. Sugarcane promises well.
Moradabad	(29th)	...	Prices risen, no unusual exports or imports.
Bareilly	„	...	Rubbee harvest nearly over; slight fall in prices.
Punjab—			
Lahore	(Apl. 29th)	...	No rain reported, save a slight shower in Mooltan District; harvest under sickle; expected outturn generally very good; general health of province continues good.
Oudh—			
Lucknow	(Apl. 29th)	*Nil.*	
Fyzabad	„	...	Slight rain this morning; crops reaped, and sugarcane being irrigated.
Central Provinces—			
Chanda	(Mar. 25th)	·43	Weather sultry; crops gathered; fever and small-pox prevalent; prices rising.
Mandla	...	...	Slight rain on the 23rd and 24th; hot winds; full rubbee gathered; prices easy; small-pox still prevalent.
Raipur	...	...	Weather cloudy; crops gathered; small-pox prevalent.
Sumbulpoor	...	...	Sugarcane sowing; prices high; no epidemic.
Belaspoor	...	...	Weather warm and stormy; prospects unchanged; measles and small-pox about; prices easy.
Nursinghpoor	(29th)	...	Weather cloudy and close; slight rain on the 21st; rubbee harvest good.
Nimar	...	...	Prospects favorable; prices rising; water becoming scarce.
Jubbulpur	...	...	Prospects good; prices slightly risen owing to exports; small-pox decreasing.
Dumoh	...	...	Prices fallen.
Saugor	...	...	Weather hot; rubbee prospects favorable; small-pox about.
Seoni	...	...	Weather cloudy; rubbee harvest progressing; cattle disease sporadic.
Wurdha	...	...	Slight rain on the 23rd; land preparing for khurreef; small-pox still prevalent.
Hoshangabad	...	...	Prospects good; health fair.
Betul	...	...	Sugar cane thriving; small-pox prevailing.
Nagpoor	...	...	Weather cloudy; crops harvested; small-pox continues.
Hyderabad Assigned Districts—			
East and West Berar	(Apl. 30th).	...	Land under preparation for ensuing cultivation.
Mysore & Coorg	(Apl. 30th)		Rain in several parts of Bangalore District, only few cents in three other districts.
Bangalore Cantonment	...	0·58	Agricultural prospects generally fair; in some places wet crops suffering for want of water; public health generally good; cattle disease in one district.
Coorg	...	1·0	
Rajpootana—	(Apl. 30th)		
Mhairwarah	(Apl. 27th)	...	Wells running dry; crops all threshed; outturn good; health very good; weather seasonable.
Kherowtee (Agency States)	(Apl. 18th)	...	Wells moderately full; crops fair; health good, excepting small-pox at Jhalawar.
Ajmir	(23rd)	...	Harvest being well got in; health fairly good.
Shahpoorpoor	(30th)	...	Rubbee harvested above average; health good.
Jeypoor	..	...	Slight rain-fall during fortnight; spring crops stored up; public health excellent.
Ajmere	...	...	Weather warm; partial storms; health good.
Central India—			
Indore	(Apl. 29th)	·14	Weather stormy; health good.
Gwalior	...	...	Weather stormy; crops fair; small-pox continues, but in a milder form.
Neemuch	...	...	No important change since last report.
Rutlam	...	·03	Prospects favourable; health good.
Bagelkhund (Sutna)	...	...	No report.
Nepal	(Apl. 22nd)	0·05	State of agricultural prospects good.

SUPPLEMENT TO

The Gazette of India.

CALCUTTA, SATURDAY, MAY 9, 1874.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

MR. SURRENDRA NATH BANERJEA, LATE ASSISTANT MAGISTRATE OF SYLHET.

No. 5443, dated Calcutta, the 20th December 1873.

From—A. MACKENZIE, Esq., Acting Additional Secretary to the Government of Bengal,
To—The Secretary to the Government of India in the Home Department.

I AM now directed to report, for the information of His Excellency the Governor General in Council, the steps taken, in accordance with the instructions conveyed in your letter No. 2820, dated 1st September, for the appointment of a Commission under Act XXXVII of 1850 to inquire into the conduct of Mr. S. N. Banerjea, Assistant Magistrate of Sylhet.

2. The intervention of the Doorga Poojah holidays delayed the arrangements for some little time, but on the 20th October formal notice was given to Mr. Banerjea, under Section 3 of the Act, that the following gentlemen had been nominated Commissioners to inquire into the charges of misbehaviour made against him:—

Mr. H. T. Prinsep, Judge of Hooghly.
Colonel C. F. G. Lamb, Her Majesty's 37th Native Infantry.
Mr. J. H. Reynolds, Magistrate of Mymensing.

Colonel Lamb was nominated by His Excellency the Commander-in-Chief at the Lieutenant-Governor's request, as a military officer of rank and experience wholly unconnected with this Government. His place on the Commission was, owing to his illness, eventually taken by Colonel Holroyd, B. S. C., commanding at Barrackpore, nominated in like manner by the Military authorities. The Commission was directed to sit at Sylhet, where the evidence in the case, oral and documentary, was to be found, and Mr. Banerjea was in an early stage informed of the general nature of the charges on which he would be tried.

3. Mr. O'Kinealy, Officiating Legal Remembrancer, was appointed to prosecute on behalf of Government, and directed to proceed to Sylhet, and after examining the papers and evidence, draw up formal articles of charge. He was also told, to afford Mr. Banerjea every facility for his defence in the way of giving copies of documents or permitting inspection of records, &c., and the Lieutenant-Governor understands that Mr. O'Kinealy carried out these orders in a liberal spirit.

4. On the 5th November the Lieutenant-Governor approved the formal articles of charge, and notice was given by telegraph to Mr. O'Kinealy of the fact, that he might serve them formally upon Mr. Banerjea. They were at the same time forwarded to Mr. Banerjea direct from this office, and a copy was delivered to Mr. Montriou, Barrister-at-Law, who had intimated that he had been retained as Counsel on behalf of the accused. The Commissioners and Mr. Montriou were conveyed to Sylhet by Government steamer, and commenced proceedings on the 19th November.

5. Before noticing the report of the inquiry, it may be mentioned that the Lieutenant-Governor refused a request made by Mr. Banerjea, that the inquiry should take place in Calcutta. It was essential that it should be held at Sylhet, where alone the evidence was fully available, especially as it was quite uncertain how far the Commissioners might feel bound to carry their investigations. Mr. Banerjea was, however, allowed to come to Calcutta to obtain advice and make arrangements for his defence. Subsequently, and before it was known that Counsel had been retained on his behalf, the Lieutenant-Governor caused him to be informed that if he wished for the assistance of any officer in his own service, or in the service of Government, who could be easily made available before the 15th November (the expected date of the trial), the Lieutenant-Governor would take such request into consideration. Mr. Banerjea, in reply, asked for the services of the Advocate-General or Standing Counsel, neither of whom were then in Calcutta, and who would in any case have declined to act, not being in fact officers under this Government. He was referred to the terms of the Lieutenant-Governor's offer, and his request refused. Upon this he asked for the services of either Mr. Bell, the late Official Legal Remembrancer (then at home on sick furlough), or Mr. Field (who had just been appointed as the only officer available to relieve Mr. Prinsep, the President of the Commission, as Judge of Hooghly), or Mr. H. L. Harrison, Magistrate of Midnapore (a great district which, in existing circumstances as to the state of the crops, it was impossible to deprive of its Magistrate). Mr. Banerjea was informed that none of the officers named were available. But the Lieutenant-Governor was made aware at this time that Counsel had been already retained on his behalf. Subsequently the Government Pleader at Sylhet was allowed to be associated with Mr. Montriou to aid in the examination of vernacular papers and witnesses, and generally to assist in the defence.

6. Turning now to the report submitted by the Commission, a copy of which is enclosed, I am to say that the Lieutenant-Governor had no desire to try Mr. Banerjea for any minor irregularities or shortcomings, or for general inefficiency: all *that* the Government could have dealt with. But the officer in charge of the prosecution was allowed to exercise his discretion in respect of the shape of the charges and the addition of some fresh matter brought to light by him; and in the desire to make the allegations as precise as possible, he set out the points of charge under fourteen distinct articles. The Lieutenant-Governor would have preferred two or three charges, in support of which much of the matter now separately charged would have come in as evidence. It will be seen, however, that Mr. Banerjea has in no way been prejudiced by the course the inquiry took.

7. The Commissioners find Mr. Banerjea guilty under thirteen of the fourteen articles of charge. The Lieutenant-Governor does not attribute to the conviction on the first two of the charges, or to the Commissioners' observations on Mr. Banerjea's general conduct as Magistrate, any special importance further than as they testify to what His Honor and the High Court were already satisfied of, viz., that though endowed with good abilities, Mr. Banerjea is a bad officer,—not in respect of those things which might be set down to youth and inexperience, but in respect of application, accuracy, and conscientious discharge of duty—qualities which may be expected from a young as well as from an old officer. The Commissioners say: "We have regretted to find many instances of gross carelessness and inattention to the convenience of parties appearing in his court, which in our opinion cannot but be the result of an absence of all sense of the responsibility of his position." They also say: "We have been much impressed to find that in his letters, Mr. Banerjea has almost invariably evaded giving a straightforward and unmistakeably clear statement in explanation of any point on which his conduct has been questioned." The minor charges found against Mr. Banerjea also show at any rate this much, which the records had indeed already established, that he did study the effect on his periodical returns of the dates and forms of the orders which he passed.

8. Such being the general character and position of Mr. Banerjea, the main charge or group of charges on which he was substantially tried are those connected with the case of Judishthir and Shoroth. It is upon the simple issue of guilt or innocence in respect of these charges that the most serious imputation on Mr. Banerjea's character depends. Such a clear issue was in every way fitted for judicial trial and decision, and on this charge he has been tried by a very independent and competent tribunal, the members of which unanimously find him guilty. Mr. Prinsep is one of our most experienced zillah Judges; Mr. Reynolds, a competition Civilian of a remarkably able, thoughtful, and judicial frame of mind; and Colonel Holroyd, a military officer of standing and position, nominated under the orders of the Commander-in-Chief. The conclusions arrived at by these gentlemen after very careful inquiry are fully accepted by His Honor.

9. The conduct of Mr. Banerjea in eliminating the case of Judishthir and Shoroth from his returns, dishonest and fraudulent though his proceedings in fact were, would not, to the Lieutenant-Governor's mind, have constituted a charge by any means so serious as those now made if he had admitted his error, made a clean breast of it, and pleaded that he had been led into bad practices, which he regretted. It is his subsequent conduct in persistently asserting that which is found to be false, and basely attempting to shift the blame on others, which is the worst feature in the case. If, in fact, Mr. Banerjea understood the orders which he signed on the 31st December, there can be no doubt that his subsequent conduct was false and base in an extreme degree. The tribunal by which he has been tried finds very clearly that he was personally cognizant of the order; that his statement that he could not read

Bengali writing is wholly false; and that he is himself responsible for the proceedings which he attributed to others.

10. In the face of such a finding, the Lieutenant-Governor can only recommend that Mr. Banerjea should be removed from the Civil Service. If we are to have natives of India in the Covenanted Service, Sir George Campbell feels strongly that they must be judged by the same high standard of honor and morality laid down for the European members of that service. Nothing could be more disastrous for Government in India, and nothing worse for the Native Civilians themselves, than to show leniency to gross and persistent dereliction from truth and honesty in work and conduct.

To the SECRETARY to the GOVERNMENT of BENGAL.

Sir,

We have the honor to forward, for the information and orders of Government, our report and proceedings on the inquiry held under Act XXXVII of 1850, into the truth of certain imputations of misbehaviour by Mr. Surrendra Nath Banerjea, late Assistant Magistrate of Sylhet, which have formed the substance of fourteen articles of charge.

2. The prosecution was conducted by Mr. J. O'Kinealy, and the accused was defended by Mr. Montriou of the Calcutta Bar. Our proceedings commenced on the 19th ultimo, and terminated on the 29th idem.

3. It is in evidence that Mr. Banerjea joined his appointment as Assistant Magistrate of Sylhet on 19th November 1871, having successfully passed in England the several examinations necessary for admission into the Indian Civil Service; that at the departmental half-yearly examination held in December 1871, he passed in Bengali by the higher standard; that he was accordingly, on the 7th June 1872, vested with Magisterial powers of a higher grade, viz., with the powers of a Subordinate Magistrate of the first class; that at the half-yearly examination held in December 1872 he passed in Hindustani; and that on the 21st January 1873, he was vested with the powers of a Magistrate of the first class, with effect from the 2nd December 1872.

4. We also learn from a certificate put in for the defence that, previous to proceeding to England, Mr. Banerjea was educated at the the Doveton College, Calcutta, from 1856 to 1867, and that in 1868 he passed the examination as B. A. of the Calcutta University, and proceeded to England.

5. We now propose to consider the several articles of charge *seriatim*.

First article of charge.

6. Mr. Banerjea is first charged with wilfully misdating his decisions in several cases, that is, as this charge has been put before us, that he used to pass verbal orders of conviction and sentence or of acquittal towards the end of a month, and deliver his formal written judgments several days later, and sometimes after considerable delay, at the same time antedating those judgments so as to make them correspond with the entries in his office books of the date on which his orders had been passed verbally.

7. It would seem that notice was first taken of such irregularities on the part of Mr. Banerjea by Mr. Sutherland, the Magistrate of the district, on the 21st June 1873, when he wrote a letter* to Mr. Banerjea forwarding certain written statements made by the several Amlah who had attended Mr. Banerjea since he commenced work at Sylhet, and calling upon Mr. Banerjea to "state *categorically and as briefly as possible* whether the statements made by the mohurrirs are true or not." We think it our duty to note here in passing, and to this we shall presently advert, that Mr. Banerjea's alleged official misbehaviour in the case of Judishthir and Shoruth, which forms the subject of the greater number and the most serious of the articles of charge against him, was reported to the High Court on the 17th June, having been under correspondence for some months previously.

* Exhibit N. 1.

8. Mr. Banerjea's† reply to Mr. Sutherland's letter is to the following effect:—

† Exhibit N. 5. Letter dated 17th July.

"Bharut mohurrir, in his report to you, says that he served under me as mohurrir for four months in 1872, and that during that time he noticed that after the cases were ready I would generally take them home, and after two or three or four days pronounce judgment, and that in some cases I would record the judgments after it had been pronounced. I think this is substantially true."

"Doorga Churn mohurrir says, in his report to you, that after the cases are ready, I would take the records home and pronounce the judgment after two or four or ten or twenty days, and that in some cases, and that chiefly in cases which are dismissed, I would record the judgment after it had been pronounced.

"This mohurrir has served me ever since I came to Sylhet in November 1871, with the exception of four or five months when Bharut and Goluck served me. Now, I began my career as a Magisterial officer here, and therefore he speaks with the experience before his eyes of all cases of delay; the statement may therefore be substantially correct.

"But his statement with regard to recording my judgment after pronouncing it, must so far be qualified that since January last my practice has been in accordance with the express provisions of the new Criminal Procedure Code. Nevertheless, there have been some very few exceptions, but those exceptions would not perhaps amount to half a dozen; and I believe

they occurred at the early part of the year, when I was overwhelmed with work and thought it more important to give judgment and record it afterwards than to keep the parties waiting, as that I *then* thought was the lesser of the two evils under the circumstances. But I should mention that even in these very few exceptional cases, to the best of my belief and recollection, I recorded the finding and sentence before I pronounced it, and then recorded my reasons afterwards. For the last two or three months, I can say with confidence, no such exception has occurred, and I now think that I was wrong in violating the requirements of the new law under any circumstances, for under the repealed law and the High Court's rulings, such a practice was not illegal."

The remaining portion of that paragraph refers to another matter, and in the concluding portion of his letter Mr. Banerjea protests against the course taken by Mr. Sutherland in obtaining and acting on reports of subordinate ministerial officers instead of communicating directly with him on the subject.

9. Now the subtance of the first article of the charge was practically put to Mr. Banerjea by Mr. Sutherland's letter forwarding the reports of the amlah which brought it to his notice, and it will be observed that Mr. Banerjea did not deny the imputation, but replied that it was "substantially true" and "substantially correct." In what respect it was not true or not correct, he omitted to state, which in our opinion gives his explanation a decided appearance of disingenuousness. We are inclined to regard his replies as admissions of the irregularity reported by the amlah; but, however that may be, the evidence submitted to us during this inquiry, both oral and documentary, leaves no doubt in our minds that it was Mr. Banerjea's habit, rather as a rule than as an exception, verbally to pass final orders on cases under trial, to have such verbal orders carried into execution, and thereafter at his leisure to place on the records written judgments bearing dates to correspond with the issue and execution of the verbal orders. We also desire to remark that we have had before us very many records of cases decided by Mr. Banerjea, and in no one instance have we found the finding or sentence recorded separately from the grounds of his judgment; the finding and sentence invariably appear at the end of his judgment, and thus unmistakeably show that they were written and placed on the record simultaneously with the other part of the written judgment; so that he is in error when he writes that to the best of his belief and recollection he recorded the finding and sentence before he pronounced it; and then recorded his reasons afterwards. We also think it necessary to notice the excuse offered by Mr. Banerjea, that he believes that the irregularities which took place during the current year "occurred at the early part," "when he was overwhelmed with work," for a statement of his work submitted to us, and an examination of 55 out of 70 cases decided by him during January, shows that he was far from overwhelmed with work. Mr. Banerjea was, so we learn from Mr. Sutherland's letter of the 11th June, paragraph 5, * and from Mr. Banerjea's own letter of the 7th idem, paragraph 5†, detained at Sylhet at the commencement of 1873 to receive instruction with other Subordinate Magistrates on the alterations of the law effected by the new Code of Criminal Procedure. He proceeded to hold his court at Abidabad on the 21st January, up to which time he did no judicial work; and from that date to the end of the month he decided 70 cases, out of which only 8 convictions and 5 acquittals were recorded, no less than 55 cases being summarily, and we may say generally very indiscriminately and unjustly, dismissed on default, while two cases were ordered to be "placed on the serishta." We do not consider that such a state of things justifies the assertion made that Mr. Banerjea was "overwhelmed with work" at the early part of the year.

* Extract A. U.
† Extract A. T.

10. But while we have thought it our duty to contradict two statements made by Mr. Banerjea, we desire to add that we are willing to believe that these were not wilful misstatements. We are inclined rather to attribute them to an extraordinary careless habit and want of accuracy that seems unfortunately to be natural to Mr. Banerjea, both in his judicial work and his correspondence—a habit that cannot be too severely condemned, but which can best be corrected by a close supervision and more judicious treatment at the hands of his immediate official superiors than we regret to find has been exercised. If the irregularity as to the delivery of his written judgements is habitual, such as we have every reason to suppose that it is, we think that it should have been publicly noticed and repressed by the Magistrate of the district before the 21st June 1873; before Mr. Banerjea had, during one and a half year of office work made it his habit; and we would add that in our opinion the course taken by Mr. Sutherland personally to call Mr. Banerjea to account on written statements called for by him from Mr. Banerjea's own amlah, is unprecedented and calculated seriously to interfere with the independent action of any Subordinate Magistrate and his thorough control over his own ministeral officers. We entirely concur in the propriety of Mr. Banerjea's remonstrances on this subject. We observe that Mr. Banerjea requested Mr. Sutherland to lay the matter before the Commissioner; but whether any further notice was taken of it, the correspondence before us does not show. At all events, we consider it our duty to draw attention to it in this report.

We would also here observe that Mr. Banerjea is mistaken in supposing that the new Code of Criminal Procedure altered the law regarding the delivery of written judgments, for section 429, Act, XXV of 1861, required every sentence or final order, together with the reasons, to be dated and signed by the presiding officer at the time of his making or passing the same.

11. For the reasons stated on the foregoing, we find that Mr. S. N. Banerjea, in the case of Gholami complainant, of Nahir Mahomed complainant, and in several other cases, wilfully misdated his decisions. But we would bring to the notice of Government that that practice was somewhat prevalent, as is shown by the fact that the High Court has only recently thought it necessary to issue a circular* condemning the irregularity, and forbidding it as contrary to law; and this, with the other circumstances above mentioned, may probably induce the Lieutenant-Governor to take a more lenient view of Mr. Banerjea's conduct in this respect.

* No. 13, dated 19th June 1873.

12. The facts upon which the second article of the charge is based are the result of the irregular practice of Mr. Banerjea in putting on the record a written judgment several days after the final order had been expressed verbally and carried into execution. In the case in which Nahir Mahomed was complainant, the two accused, Adil and Asim, were convicted and sentenced to imprisonment and fine on the 8th June 1872, by a verbal order on which a warrant was issued to the jailor to carry out the sentences. In this warrant it was stated that the prisoners had been convicted under section 379 of the Indian Penal Code, *i e*, of theft. The evidence† leaves no doubt that it was not until two or three days afterwards that Mr. Banerjea put in his written judgment containing the regular finding and sentence; and indeed Mr. Banerjea, in his letter dated 24th July 1873, [Exhibit N. 9.] admits this irregularity. It was then brought to his notice that the warrant of sentence had, as already stated, specified that the convictions were under section 379, whereas in the finding and sentence subsequently put on record, the prisoners were entered as convicted, the one, Asim, under sections 379 and $\frac{552}{109}$, that is of theft and abetment of causing criminal force; the other, Adil, under sections 352 and $\frac{379}{109}$ that is, of causing criminal force and abetment of theft. For the defence it is stated that the error was that of the mohurrir, Bharut Chunder, in not recording the proper sections under which the sentences were passed. This is a point not very material so far as the second article of the charge is concerned, though we are inclined to think that in all propability nothing was mentioned in the verbal order delivered by Mr. Banerjea, except the nature of the sentence passed. At any rate Mr. Banerjea signed an English warrant containing what was subsequently asserted to be an incorrect entry of the law under which the sentences had been passed; but the evidence of Bharut Chunder satisfies us that he at once objected to the variation in the convictions; that he presented a written report on the subject; that Mr. Banerjea wilfully abstained from passing any order thereon, and instructed Koylas Chunder Deb, his court head constable, to get the warrant and the entry in the register of cases altered so as to correspond with the judgment subsequently written and put on record. Mr. Banerjea in his letter of July 24th, 1873 [Exhibit N. 9], writes—"I directed one of my establishment to have the warrant corrected to suit the judgment. The court inspector was also directed to make the necessary alterations in his book. The corrections were accordingly made. My head constable, I believe, went to the jail and had the warrant corrected." The *gravamen* of this offence, as represented by the public prosecutor, is not the mere alteration of these documents, for that might be effected to correct a mere clerical error,—which in the present instance would be of little importance,—but it consists in the irregular and improper manner in which those alterations were caused. It should, however, be borne in mind in estimating the character of Mr. Banerjea's misbehaviour in this respect, that at that time he had only been seven months a public officer, and therefore was probably not sensible of the very unfavourable view in which such conduct might be regarded.

† Bharut Chunder Ker. Koylas Chunder.

3. Before leaving this article of the charge, we also think it our duty to call attention to the very unusual conduct of Mr. Sutherland‡ in refusing to allow Mr. Banerjea to have possession of the records of the case, and intimating to him that "the records of the case are in the custody of the head clerk, who will show them"§—conduct which Mr. Banerjea, in our opinion, very properly resented as an insult to an officer in his position. It is true that Mr. Sutherland subsequently sent the records to Mr. Banerjea, but that he should have ever hesitated to do so excites our surprise, and, as we have already observed, seems to indicate an improper idea of what was due to an officer occupying the position of Assistant Magistrate. We accordingly find that Mr. Banerjea on or about the 8th June 1872, in the case of Nahir Mahomed complainant, having convicted and awarded imprisonment to the defendants for an offence under section 379 of the Indian Penal Code, subsequently on or about the 11th of the same month wrote a decision convicting for offences under sections 379, $\frac{552}{109}$ and 352 and $\frac{379}{109}$ of the Indian Penal Code, and that on his mohurrir Bharut Chunder objecting and reporting that the warrant and decision did not agree, he wilfully abstained from passing any order on the said report and improperly changed, in order to meet his subsequent judgment, the previous entries in the warrant and other public documents.

‡ Letter dated 19th July [Exhibit N. 10.]

§ Postscript to letter dated 19th July [Exhibit N. 6.]

Finding on the second article of charge.

14. In the third article of the charge Mr. Banerjea is accused of having dishonestly discharged twenty-three witnesses on Saturday, 31st August 1872, to appear on the following Monday, without having examined them, in order to avoid the necessity of explaining the cause of their unusual detention in his court.

15. The number of witnesses to which this charge applies has been evidently taken from some correspondence on the subject between Mr. Sutherland and Mr. Banerjea, but we have not been able to verify that number, the books of Mr. Banerjea's court showing that only six witnesses, *i. e.*, three on each of two cases, were so discharged.

16. The evidence bearing upon this charge leaves no doubt that on the day in question Mr. Banerjea (who did not attend office till 2 P. M., having been engaged, as he says, from 6 A. M. till noon in writing decisions in other cases,) had a large number of witnesses in attendance, and that he went on taking evidence till 8 or 9 o'clock at night. The mookhtears, who were tired of waiting, urged him to discharge the remaining witnesses, which he at last consented to do. The witnesses do not appear to have been bound over to attend at the next sitting of the court, but they did attend, and their evidence was then taken. The mohurrir Doorga Churn says that he remonstrated with Mr. Banerjea, and told him that such an order for discharge was improper. The Magistrate directed that the amlah should be punished if they had not pointed out the irregularity of the order; but it is certain that the mohurrir Doorga Churn was not fined. Mr. Banerjea denies that any remonstrance was made, and says that it was merely out of kindness that he refrained from fining the mohurrir. With regard to the witness Doorga Churn's version of the story, we have to remark that his account is not corroborated, and that we are inclined to attach very little credit to his uncorroborated statements.

Evidence of Doorga Churn Deb. Exhibit X.

17. That certain witnesses were discharged without examination, and that in consequence of this discharge the entries in the registers of witnesses were calculated to convey a false impression, are facts which are clearly proved, and which indeed Mr. Banerjea does not now attempt to deny. But the *gravamen* of the charge is, that this was done dishonestly, and in order to avoid any explanation regarding the detention of witnesses. We are of opinion that this part of the charge has not been established. The Magistrate, in his several communications on the subject, reports over and over again that Mr. Banerjea does not seem to be aware of the gravity of the error which he had committed. We are inclined to believe that this was really the case; that Mr. Banerjea did not contemplate the consequences of his order; that he had no dishonest intention in passing it, and no thought of avoiding explanations regarding the detention of his witnesses. He was fatigued with six or seven hours' continuous work: he was urged to let the witnesses go; and we think that, in assenting to the request, he merely meant to intimate that it was useless for them to remain in attendance that evening, as it would be impossible for him to record their depositions. We think that he had no ulterior motive in passing this order, and that he is therefore entitled to an acquittal upon this article of the charge. We are strengthened in this view by the consideration that a similar irregularity does not appear to have occurred upon any other date, and from the evidence which has been adduced in support of some of the other articles of the charge, we have no doubt that if the improper dismissal of witnesses had been a practice with Mr. Banerjea, his conduct in this respect would have been brought to our notice. We accordingly find that Mr. Banerjea did not, on or about Saturday, the 31st August 1872, in order to avoid any explanation regarding the detention of witnesses, dishonestly discharge twenty-three witnesses to re-appear on the following Monday.

See correspondence in Exhibit X.

Finding on the third article of the charge.

18. The remaining articles of the charge all arise out of the same case, and therefore, before dealing with them separately, it will be more convenient that we should first state the facts out of which they arise.

19. Joykrishto Koiburto complained that his boat has been stolen, and that he had found it with one Judishthir, who, when called upon to account for having stolen property in his possession, stated that his brother Godadhur had brought it from one Shoruth.

The police considered that Shoruth, and not Judishthir, was the guilty party, and sent the case for trial against Shoruth only, Judishthir being sent as a witness.

20. On 15th July 1872, Mr. Banerjea, to whom the case had been referred for trial, examined the complainant and the witnesses for the prosecution in the presence of both Judishthir and Shoruth. He then recorded a charge of theft and dishonestly receiving stolen property against Judishthir only, and called upon him to plead thereto. After recording the plea of not guilty he next proceeded to examine Judishthir and Shoruth, both as persons accused by the complainant; he resumed the trial on the following day, 16th, by continuing his examination of Shoruth, and the case stood over until 31st July, Judishthir engaging to bring is own witnesses, and both he and Shoruth being released on bail, the former of Rs. 150, the latter of Rs. 50. On the 31st July Judishthir appeared and stated his inability to bring his own witnesses, and applied for a summons, which was granted, and the trial was postponed until 22nd August. We observe, however, that three witnesses, who were part of the evidence for the prosecution in the case as sent up by the police against Shoruth alone, and who were really witnesses to exculpate Judishthir and prove the purchase of the boat from Shoruth, were still examined by Mr. Banerjea as witnesses for the prosecution, though, with the case as tried by the Assistant Magistrate against Judishthir, they were, strictly speaking, witnesses for his defence.

21. The witnesses summoned for the defence of Judishthir appeared on the 22nd August, but did not come under examination until the 24th. With this no doubt the case against Judishthir ended; but it, as well as the case against Shoruth, stood over indefinitely, until,

early in September, Shoruth appeared and asked for a summons on his witnesses. Sufficient time was not given for the service of these processes, apparently because, in fixing the date for their attendance, the fact that the men resided in Tipperah and Mymensing was overlooked; so fresh summonses were issued, and the case came on for trial on the 29th October, when these witnesses appeared and were examined on the 30th. On the 30th October also a charge was recorded against Shoruth, and his plea of not guilty was taken. We note here that the examination of many of the records of cases tried by Mr. Banerjea shows that he is in the habit of adopting the unusual procedure of summoning witnesses to the defence not after an accused has formally pleaded to the charge, but at the close of the case for the prosecution, and that the charge is not recorded until the evidence for the defence is in court and is about to be taken. There was at this stage of the case apparently some difficulty in obtaining the attendance of the remaining witnesses for the defence of Shoruth, though we have little doubt that with a more energetic and regular procedure the case would have been brought to an early conclusion, for Shoruth eventually gave up all his witnesses except one, Boidonath. The case may be said to have lingered on almost without vitality until the 28th December, when Kali Koomar Deb was called upon, as bail of Judishthir, to produce him at once. Kali Koomar remonstrated, pointing out that he and other persons connected with the case had understood that it was to come under trial at Abidabad, where Mr. Banerjea's camp then stood, and that Judishthir was at that moment present there. Mr. Banerjea thereupon told Kali Koomar that he must produce Judishthir within three days, that is, on or before the 31st December, the end of the year, or his bail would be forfeited. Kali Koomar again remonstrated, pointing out the impossibility of complying with this order in consequence of the distance from Abidabad. At the commencement of the proceedings of Mr. Banerjea's court on the 31st December, the names of Judishthir and Shoruth were called out several times, and on their non-appearance a report was made by Koylash Chunder Deb, Court head-constable, and on that report the following order was recorded by Doorga Churn Moonshee:—"Let the accused persons be entered in the *mashkabar* (monthly return) as *firar* (absconded), and let warrants be issued for their arrest." This order, which is in the Bengali language, bears the signature of Mr. Banerjea, but he* has stated "with that order I had nothing to do, and the signature to it was taken without my knowledge"

* Letter A, dated 16th May 1873, paragraph 9 [Exhibit A. Q.]

22. Some little time afterwards,—the exact time is doubtful on the evidence, but we would fix it as probably in the course of the afternoon,—Kali Koomar, the surety, appeared with Judishthir in Mr. Banerjea's Court, and in surrendering him, presented a petition for release from his liabilities. What took place on this occasion forms the subject of the 6th, 7th 11th, and 12th articles of the charge, and will be discussed presently; it will be sufficient here to say that after some alteration between the mohurrir Doorga Churn and Kali Koomar, the following order was recorded by Koylas, Court head constable:—"Let it be brought forward at the next sitting" (*agoto mielo pesi*). Kali Koomar, finding that he could not get a proper order passed, left leaving Judishthir in Court, and at the same time reminding some of his brother mookhtears as to what had occurred. There is nothing to show that this order on Kali Koomar's petition was ever carried out, for no further order was passed. Warrants were however issued through the Magistrate of the district for the arrest of Judishthir and Shoruth by the police of Mymensingh and Tipperah, notwithstanding that there cannot be the slightest doubt that Judishthir was all along present at Abidabad before the 31st December, then at Sylhet, and again at Abidabad until the case was finally decided on the 30th January.

23. About the same time that warrants for the arrest of Judishthir and Shoruth were sent by the Magistrate of Sylhet to be forwarded for execution in Mymensingh and Tipperah, Mr. Sutherland wrote the following memorandum* to Mr. Banerjea on the 7th January:—

* Exhibit A. O.

"From his monthly return for December last it appears that a case is pending on his file since the month of September; the explanation furnished by him is not satisfactory. The undersigned requests that he will be good enough to submit a full explanation as to the cause of delay in disposing of the case."

24. To this Mr. Banerjea replied* on the 24th of January from Abidabad, where he arrived from Sylhet on the night of the 19th: "With reference to your memorandum No. , dated , requesting me to explain why the case of Regina *versus* Shoruth Koiburto, and others, has been standing over in my file since September last, I have the honor to submit the following remarks:—

* Exhibit L.

"The defendant Shoruth could not be found in December, and of course no order could be passed in his absence. I understand Shoruth came in only yesterday; nor was the case then ready. Indeed, the case is not ready up to this date, one of the witnesses for the defence having not yet been examined. A great deal of time was lost in procuring the attendance of witnesses for the defence, who had to be summoned from Mymensingh and Tipperah. Of course under the old Code it was impossible to pass any order in any warrant case without examining all the witnesses named by the defendant, unless the Court decided to acquit the accused before examining all his witnesses. As neither witnesses nor defendant was present in December, I could not decide the case. Even if the case were then ready, it would have been impossible for me to pass any order in the absence of one of the defendants. I hope to be able to decide the case in the course of next month."

25. Boidonath, the remaining witness to Shoruth's defence, was examined on the 27th January, and judgment of acquittal was passed on both of the accused on the 30th idem.

26. The next proceeding we find is a report of the Tipperah Police regarding the warrant issued for Shoruth's arrest, to the effect that they had received information that Shoruth had gone to attend the Assistant Magistrate's Court. On this Mr. Banerjea's order, dated 6th February, is that as Shoruth's case had been decided, notice was to be given to the police. About the same time Judishthir had gone home and learnt that the police were on the look out to arrest him, so he left again for Mr. Banerjea's Court, which he found at Shunkerpassa, and their he obtained a *chittee* (note) from Koylas, Court head-constable, exempting him from arrest. It is immaterial for the purposes of this inquiry to determine whether Mr. Banerjea ordered this note to be given, or knew that it was given by Koylas. It was undoubtedly given, for we find that on the 23rd February Judishthir was sent to Mr. Banerjea's court, still at Sunkerpassa, under arrest by the Mymensingh police, and with Koylas's note. It appears that the Mymensingh police were not satisfied with this note, and this is not surprising, since it was not regular that a warrant requiring authority from the Magistrate of the district should be cancelled by an informal note having the signature of only a head-constable; they therefore refused to recognize the note and sent it with the unfortunate Judishthir under arrest to the Magistrate of Sylhet, who passed the matter on to Mr. Banerjea and directed the head-constable, Koylas, to furnish an explanation of this conduct. Judishthir was at last set free. The head-constable Koylas gave his explanation, explanations were called for and submitted by Mr. Banerjea regarding his conduct in the case, which ended in the matter being laid before the High Court.

27. These are the main facts of the case of Judishthir and Shoruth, and we will now proceed to consider separately the remaining articles of the charge against Mr. Banerjea, and how far they are borne out by the evidence which has been laid before us or by inferences fairly deducible therefrom.

28. The first point for our consideration is the fourth article of the charge, in which Mr. Banerjea is accused of having, on the 31st December, dishonestly ordered Judishthir and Shoruth, or either of them, to be entered as *firar* (absconded) in the *mashkabar* (monthly returns).

29. The effect of this order in this particular case would be to cause the case to be excluded from the statement of cases as pending at the end of December or at the end of the year, and thereby render it unnecessary to account for its having remained undecided since July; but as we learn from the record, that order had no other effect, and the case still proceeded without any obstruction beyond what had already occurred through the extreme dilatoriness of Mr. Banerjea, and his failure to understand the legal position of Judishthir, on whom final orders might have been passed so far back as the 24th August.

30. If, therefore, Mr. Banerjea did pass that order, there can be no doubt that he must have passed it dishonestly, since its only object could have been to deceive those officers before whom his statement of work would come under review, by representing the state of his file to be what it was not, and by leading them to believe that the non-decision of the case against Judishthir and Shoruth, about which explanations had been furnished in the returns of former months, was not owing to the neglect of the Assistant Magistrate, but to the failure of the accused to appear at the trial.

31. It is an extremely difficult point to determine whether Mr. Banerjea did pass that order, for the only direct evidence consists of the statements of Doorga Churn Deb, Mr. Banerjea's Court mohurrir, and Koylas Chunder Deb, his Court head-constable, the former of whom wrote that order, while the latter wrote and presented the report upon which it was recorded. But unfortunately, after observing the demeanour of these witnesses while under examination, and giving the most careful consideration to the nature of their statements, we have no hesitation in expressing our decided opinion that, except when corroborated, the evidence of either Doorga Churn Deb or Koylas Chunder Deb is altogether unreliable. We have therefore no direct evidence upon which we can proceed to determine whether Mr. Banerjea did pass that order or or whether, as he has himself stated, "with that order I had nothing to do, and the signature to it was taken without my knowledge."

32. But there is circumstantial evidence of considerable importance bearing on this point which it now becomes necessary to consider and discuss. There is, first of all, the fact that Mr. Banerjea was at that time fully aware of the necessity of disposing of this case somehow or other without any further delay, so as to avoid censure on account of his dilatory proceedings. We learn this from the evidence of Kali Koomar Deb, the surety of Judishthir, who says that when he entered Mr. Banerjea's court on the 28th December, Mr. Banerjea called out to him "produce the accused," and that in spite of his remonstrance as to the impossibility of complying with such an order, Mr. Banerjea ordered him to produce Judishthir on the 31st December. Now, there can be no doubt that Judishthir as well as his surety Kali Koomar did understand that the case was to come on for trial at Abidabad, where Mr. Banerjea had been holding his court during the early part of December and almost up to Christmas, for we have in addition to Kali Koomar's evidence that of Judishthir, and we may add that we have full confidence in the statements of both Kali Koomar and Judishthir.

33. We have next in order of time the fact that the names of both Judishthir and Shoruth were called out several times outside Mr. Banerjea's court early on the 31st December. It is not improbable that Mr. Banerjea's attention was attracted to this, but it is comparatively a point of little importance, and we are willing to believe that he did not notice the calling of the name of the accused. We next have the preparation and presentation of the report by the court head constable of the non-appearance of Judishthir and Shoruth after being

several times. No doubt in the course of ordinary business the report would be laid before Mr. Banerjea, though, on the evidence of Doorga Churn and Koylas Chunder, which is not only generally untrustworthy but is conflicting on this point, we are unable to come to any definite finding. We have next the passing of the order that the accused are to be entered in the *mashkabar* as *firar*, and warrants issued for their arrest, on which again we have only the direct evidence of the same two witnesses. Then follows the appearance of the surety Kali Koomar with Judishthir and the presentation of his petition asking to be released from further responsibility as surety. Kali Koomar gives the following account of what happened on that occasion. "Seeing me at some distance the Sahib (*i. e.*, Mr. Banerjea) said, 'Where is the accused,' I said, 'There is Judishthir, and I give in my *istofa*,' showing it. The Sahib said 'Where is Shoruth, I want him,' I said, 'He is under the bail of Hurree Thakoor. I have nothing to do with him.' The Sahib put his head down to write. I placed Judishthir alongside of the rail on which the mookhtears stand, and said 'Release me.'" Kali Koomar then recites a conversation between himself and Doorga Churn regarding the same matter, and finishes his narrative by stating that he left and Judishthir remained behind in the Court.

34. Judishthir, who is an ignorant man from the interior, states that "Kali Koomar had a conversation with the moonshee which I did not understand; all that I understood was that an *istofa* was given in. The Hakim was there. I don't know whether he saw me. He was writing." It is not improbable that he followed Kali Koomar, and either did not hear or notice the first part of what happened, *viz.*, the conversation between Kali Koomar and Mr. Banerjea. We have little doubt that that conversation did take place as related by Kali Koomar, and we may observe that it is also mentioned by Doorga Churn mohurir in his evidence.

35. The next step is the issue of the *Ghair Zillah* warrants, *i. e.*, warrants to other districts (Mymensingh and Tipperah) for the arrest of Judishthir and Shoruth. Now such warrants can be issued by a Subordinate Magistrate, like Mr. Banerjea, only through his superior, the Magistrate of the district, and it is usual to send them with a *roobocaree* (vernacular proceeding), all these papers bearing the full signature of the Subordinate Magistrate.

36. It was contended for the prosecution that on such occasions it was usual for the ministerial officer not only to remind the Magistrate that his full signature was necessary, but to explain the nature of the papers to be signed. The evidence, however, does not bear this out, and in our experience this is by no means the rule. We cannot, therefore, from this conclude that Mr. Banerjea on the 4th January signed those papers, knowing that they were warrants for the arrest of Judishthir and Shoruth, though we believe from the facts of this case that he deliberately, on 31st December, ordered the issue of such warrants; that he knew that Judishthir was subsequently brought into his court by Kali Koomar, and that he nevertheless failed to withdraw the order for his arrest.

37. But to proceed with the narrative of events which afford circumstantial evidence as to the passing of what we may term the "*firar* order" with Mr. Banerjea's express sanction. Mr. Sutherland's memorandum of the 7th January, calling for a further explanation regarding an old case shown in the statement for December, was, we think we may finally assume, received by Mr. Banerjea in Sylhet on some day before the 18th, when he proceeded to Abidabad. Doorga Churn mohurrir, with his office records, left Sylhet for Abidabad on the 9th. Mr. Banerjea did not reply to Mr. Sutherland's memorandum until the 24th January, when he was holding his court at Abidabad. Now, notwithstanding Mr. Banerjea's habitual careless and dilatory manner of conducting his official business, we think we may reasonably presume that he delayed answering Mr. Sutherland's memorandum until he had joined his office and had an opportunity of ascertaining the facts of the case regarding which he conceived an explanation was called for; and from the omission in his reply to quote the number and date of Mr. Sutherland's memorandum, which are left blank, we are led to believe that he either had left the memorandum at Sylhet or had otherwise mislaid it. There is a letter of considerably later date from Mr. Banerjea, in which he states that he had now found this memorandum, which had been mislaid, and this may in some degree serve to corroborate the view which we have just expressed; but we rely upon his omission to quote the number and date of Mr. Sutherland's memorandum, and also upon the fact that in his reply he wrote regarding the case of Shoruth, to which Mr. Sutherland's memorandum did not refer.

38. Mr. Banerjea, while himself addressing some remarks to us in his defence on this subject, was called upon by us to state whether he had Mr. Sutherland's memorandum before him when writing his letter of the 24th January. He replied—"I cannot speak as a fact, but I have not the slightest doubt that when I wrote the explanation of the 24th January I had before me Mr. Sutherland's memorandum of the 7th." We regret to have to state that we are unable to concur in Mr. Banerjea's impression, which is, we think, opposed to the reasonable inference to be drawn from facts which are unquestioned.

39. We now come to the fact just mentioned, that Mr. Banerjea volunteered information regarding Shoruth's case through inadvertence, and in answer to a call for further explanation regarding an entirely different case.

40. It has been urged with some force in his favor that if Mr. Banerjea had contemplated deception by his "*firar* order," he would not have counteracted its effect by drawing attention to that very case. (This very argument, it appears to us, strongly refutes Mr. Banerjea's statement in court, that he wrote his letter of the 27th January with Mr. Sutherland's memorandum before him.) But if we turn to that letter and examine its contents, this

argument falls to the ground. The letter clearly indicates a device on the part of the writer to keep back all information regarding Judishthir, though the case was against him as well as against Shoruth, and, therefore, to afford a just and proper explanation, some remarks should have been made of the case as it stood against him. This also seems clear from the terms of this letter, and especially from the expression "as neither witness nor *defendant* (in the singular number) was present in December, I could not decide the case. Even if the case were then ready, it would have been impossible for me to pass any order in the absence of one of the defendants."

41. From the terms of this letter we have no doubt that, when Mr. Banerjea wrote it, and, as we have already stated, previously, he was fully aware of the "*firar* order" and of the subsequent appearance of Judishthir on the 31st December; that, from his having mislaid Mr. Sutherland's memorandum, he not only gave the explanation regarding the wrong case, but he forgot that through the falsification of his returns, no explanation would be due regarding Judishthir's case, and he also forgot that Mr. Sutherland's letter had any reference to those returns, and it is extremely probable that the case was running uppermost in his mind, and that he was further reminded of it by the appearance of Shoruth when he re-opened his court at Abidabad.

42. We observe that in paragraph 9 of his letter of the 16th May (Exhibit A Q), Mr. Banerjea argues that as he "was at the time ignorant of the continuance of a *firari* register," he "could not possibly have known what effect the placing of a man's name in the *firari* register had so far as the returns were concerned," but this argument rests on the misstatement or misapprehension of the exact terms of his order, which he previously states to be that "the names (of the accused persons) should be entered on the *firari* register," and this error probably arose from paragraph 6 of Mr. Sutherland's memorandum of the 22nd March (Exhibit A P). Mr. Banerjea, in the course of his own address to us in his defence, endeavoured to argue that because he had in other cases (in evidence) entered persons on the *firari* register, and because in those cases he had so acted only after warrants and proclamations and other processes had been set in motion, he could not in Judishthir's and Shoruth's case have passed the order of the 31st December before the issue of even warrants; but he seems to forget that the instances are not analogous, that in the first mentioned cases there was no object to be gained by putting them out of sight, whereas in the case of Judishthir and Shoruth it was absolutely necessary, for the purpose of avoiding animadversion, to pass some such order to tide over the necessity for giving an explanation. In the cases in which entries on the *firari* register had been made, further judicial action was suspended, whereas, as has been already remarked, in the case of Judishthir and Shoruth the order offered no obstruction to the course of the trial.

Finding on 4th article of the charge.

43. We have endeavoured to view this important point in our proceedings in as favorable a light as possible to Mr. Banerjea, but we regret to be obliged to find that he on the 31st December 1872, in the case of Joykrishto Koiburto *versus* Shoruth and Judishthir, dishonestly ordered the said defendants to be entered as (*firar*) absconded in the monthly returns (*mashkabar*).

Finding on 5th article of the charge.

44. The observations which we have already made in considering the fourth article of the charge contain also the grounds upon which we find that on the same date, viz., 31st December 1872, after Judishthir had appeared in his court, Mr. Banerjea dishonestly returned on the record the order aforesaid (mentioned in the 4th article of the charge,) directing the accused persons Judishthir and Shoruth to be entered as absconded (*firar*) in the monthly statement (*mashkabar*), for as we have already found Mr. Banerjea did dishonestly pass the "*firar* order," and we have no doubt, for reasons stated in the foregoing, that he knew on the 31st December of Judishthir's appearance in his court, and yet allowed that order to remain uncancelled.

45. We have also expressed our opinion that Mr. Banerjea was told by Kali Koomar Deb that he wished to present a petition to be relieved from his responsibilities as surety of Judishthir, and that he had this petition in his hand at the same time that he produced Judishthir. It was, therefore, Mr. Banerjea's duty forthwith to have absolved Kali Koomar Deb from his suretyship; but he intentionally and illegally neglected to pass any order on this verbal representation; he further, in our opinion, intentionally and illegally neglected afterwards to pass a proper order on the written application, and he dishonestly allowed the order "*agoto misle pesh*" (to be brought forward at the next sitting) to be written thereon.

Finding on the 6th article of the charge.

46. We accordingly find that Mr. Banerjea on the 31st December 1873 intentionally and illegally omitted to accept the surrender of Judishthir by his surety Kali Koomar Deb, and to relieve the latter from his engagement as surety; and further that he, on the same date, dishonestly allowed an order to be recorded on the petition of the said Kali Komar Deb (surrendering his client Judishthir) that it be taken up at the next sitting of the Court, instead of immediately passing orders accepting the surrender of Judishthir by his surety aforesaid.

Finding on the 7th article af the charge.

Finding on the 8th article of the charge.

47. It is also unnecessary for us to offer any further observations on the 8th article of the charge, since the grounds upon which our opinion has been formed have been already expressed. We find that Mr. Banerjea on or about the 7th of January 1873, knowing that Judishthir had surrendered on the 31st December 1872, dishonestly issued a warrant to be sent to the Magistrate of Mymensingh for the arrest of the said Judishthir as having absconded (*firar*).

Consideration of the 9th article of the charge reserved.

48. We propose to reserve our remarks on the 9th article charged until we have disposed of the 10th, 11th, and 12th, which more appropriately precede it, in considering the conduct of Mr. Banerjea in the course of the trial of Judisthir's case.

49. In discussing the fourth article of the charge we have stated in detail the reasons upon which our finding on the 10th article must be based. We have stated that in our opinion Mr. Banerjea gave express sanction to the passing of the *firari* order; from this our finding on the 10th article of the charge is obvious. We accordingly find that Mr. Banerjea on or about the 16th February 1873, in his letter No. A of that date, addressed to the Magistrate of Sylhet, falsely denied all knowledge of the first order of the 31st December 1872, directing Judishthir and Shoruth to be entered as absconded (*firar*) in the monthly statement (*mashkabar*), and falsely asserted that with that order he had nothing to do, and that the signature to it was taken without his knowledge.

Finding on the 10th article of the charge,

50. The 11th article of the charge arises out of the statement made in paragraph 14 of Mr. Banerjea's letter of the 16th May (Exhibit A Q).

51. After Kali Koomar Deb, the surety of Judishthir, produced the latter and represented to Mr. Banerjea, showing that his written application on the subject, that he desired to be released from his suretyship, Mr. Banerjea, as we have already found on the 6th article of the charge, intentionally and illegally omitted to accept the surrender of Judishthir and to relieve Kali Koomar from his engagement as surety, and he proceeded to occupy himself in writing. What he was writing, does not appear, but the witnesses all unite in stating that as long as Kali Koomar remained in court after his conversation with Mr. Banerjee, Mr. Banerjea's head was bent down and he was engaged in writing. During this time Kali Koomar and Doorga Churn mohurrir had a somewhat lengthened dispute regarding the reception of Kali Koomar's application for release from his suretyship, and what order should be passed thereon. Mr. Banerjea is charged with having falsely stated that it is clear he could not have heard that conversation. That that conversation did take place the evidence leaves no reasonable doubt, and it is also clear that it was of considerable length, animated, and somewhat acrimonious. Kali Koomar, on the one hand, persistently urged his right to be released from his suretyship, while Doorga Churn evidently with a desire to act consistently with the previous order, termed the "*firar* order," tried to persuade Kali Koomar to keep it back until the following day, when the *sal tamamee din* (the last day of the year) would have passed, and we know that Doorga finally got angry at Kali Koomar's obstinacy, and that Kali Koomar, on the other hand, left the court disgusted at his treatment, having appealed to his brother mookhtears* to recollect what had occurred, evidently in case he should at any future time be called upon to answer for the non-appearance of Judishthir. We have examined the records of the seven cases which Mr. Banerjea states† that he decided on that day, and we have also read the evidence of the four witnesses which he further recorded, and this we gather from his letter of explanation, was the work upon which he was occupied on the 31st December. Now the evidence of Kali Koomar, Kunjo Lall, Prokash Chunder, and Doorga Churn, leaves no doubt that while the dispute was taking place between the first and last mentioned, Mr. Banerjea could not have been examining witnesses, for he is stated to have had his head bent down and been writing the whole time; and even if he had been examining witnesses, it would be almost impossible for him not to have seen and heard Kali Koomar and Doorga Churn while engaged in altercation. But if, on the other hand, Mr. Banerjea was engaged in writing out the decisions in those cases, we think that a perusal of those decisions,—which are of a very ordinary character and generally follow the stereotyped form of decisions in petty cases,—fails to show to our satisfaction that there was anything so completely to absorb Mr. Banerjea's entire attention as to prevent his hearing the angry dispute which was taking place a few yards below his seat. We have inspected Mr. Banerjea's court room, and think that under the circumstances just stated, it is extremely unlikely that he should not have overheard the conversation and dispute, and we therefore feel bound to find that on or about the 16th May 1873, in his letter No. A of that date, he falsely urged that it was clear he could not have heard the conversation which took place on the 31st December 1872 between the said Kali Koomar Deb and the mohurrir, Doorga Churn Deb, regarding the surrender of the said Judishthir.

* Prokash Chunder Dhur. Koonjo Lall Dhur.

† Paragraph 20 of letter dated 16th May (Exhibit A. Q.)

Finding on 11th article of charge.

52. In connection with this subject of the surrender of Judishthir by his security, we think it right to take some notice of an argument employed by Mr. Banerjea in the 11th paragraph of his letter of the 16th May. Mr. Banerjea says that neither Shoruth nor Judishthir was present when the order was passed for the entry of their names as *firars*, and thus far he is no doubt right. He goes on to remark that Kali Koomar's subsequent conduct

in producing Judishthir, and saying that he could not any longer stand as security for him, was a somewhat unusual course for a mookhtear to take, and that the explanation of this is to be sought for in the fact that the mookhtear must have come to know that Judishthir had been entered as a *ferari;* that a warrant had been issued for his arrest, and that perhaps he (the mookhtear) apprehended that he might be asked to show cause why he should not be called upon to pay the amount mentioned in the bail-bond.

53. We find it difficult to believe that this argument can have been intended to be used seriously. The petition discloses upon the face of it very satisfactory reasons for Kali Koomar's wish to resign his responsibility. It recites that the case had been pending for six or seven months; that the accused was a resident of another district, and that the record was about to be taken to the mofussil for disposal. These reasons alone would appear to us perfectly intelligible and sufficient.

54. But had Mr. Banerjea forgotten the order he had passed only three days before this petition was presented? On the 28th December he had called upon Kali Koomar to produce the defendant Judishthir. It was represented that Judishthir was at that moment in attendance at Abidabad under Mr. Banerjea's own order. But Mr. Banerjea repeated that Judishthir must be produced at Sylhet by the 31st, or that the bail-bond of the surety would be declared forfeited. It was urged in vain that compliance with the order was a physical impossibility, and that notice could not be sent to Abidabad in time to ensure Judishthir's appearance on the day fixed. Notwithstanding all remonstrances, the Assistant Magistrate refused to withdraw or modify his order. It so happened that Judishthir got tired of waiting on at Abidabad, and came into the station on the 30th December, in time to allow of his being produced in court on the following day. But it is clear that the mookhtear's wish to resign his security had nothing to do with his knowledge of the "*ferar* order." It arose partly from the circumstances of the case, but principally from the unreasonable character of Mr. Banerjea's order of the 28th December. A surety who found himself required to perform impossibilities would naturally take the first opportunity of withdrawing from his obligation. We would add that Kali Koomar Deb in his evidence distinctly denies that he knew anything of the "*ferar* order," and that in our opinion he is a witness whose statements may be accepted with confidence.

55. If we are correct in finding that Mr. Banerjea did overhear the conversation and dispute between Kali Koomar and Dooga Churn, which form the subject of the 11th article of the charge, it follows that the order on Kali Koomar's petition was passed with Mr. Banerjea's knowledge and express authority, and we would here observe that when Kali Koomar brought Judishthir into court and told Mr. Banerjea that in surrendering Judishthir he applied for a release from his suretyship and at the same time showed and presented his written petition to that effect, Mr. Banerjea's inattention and omission to pass the obvious order of release was entirely in accordance with his subsequent signature and knowledge of the written order on that petition directing it to be brought forward at the next sitting of the court. We accordingly find that Mr. Banerjea on or about the 16th of May 1873, in his letter A of that date, falsely asserted that the second order of the 31st December 1872, directing that the petition of Kali Koomar Deb be taken up at the next sitting was, to the best of his recollection, obtained without his knowing anything about it.

Finding on 12th article of the charge.

56. It is necessary now to return to the 9th article of charge, which has been reserved for consideration in this place. In it Mr. Banerjea is charged with wilfully misdeciding the case against Judishthir and Shoruth.

57. The facts of this case are that Joykrishto Koiburto claimed a boat which was found with Judishthir, stating that it had been stolen from him. Judishthir explained that his brother Godadhur had honestly bought it from Shoruth. The police believed Judishthir, and sent up his witnesses as part of the evidence for the prosecution, charging Shoruth only. The various stages in the trial of this case have already been stated at length, and it will therefore be necessary here only to draw attention to the fact that though Mr. Banerjea at first formally charged only Judishthir, he examined both Judishthir and Shoruth as accused persons, and ordered both to give bail, the former of Rs. 150, the latter of Rs. 50.

58. After the case against Judishthir was finished on the 24th August, no order was passed until Shoruth himself applied for summons on his witnesses. It was on their appearance, in accordance with what we have learnt from many other cases to be his habit, that Mr. Banerjea then drew up a charge against Shoruth, and having called upon him to plead to it, examined his witnesses. The case then lingered on in consequence of the alleged non-attendance of some other witnesses, which were all withdrawn except one, Boidonath. On the 28th December, it would seem that Mr. Banerjea was anxious to obtain Judishthir's attendance, for he ordered Kali Koomar, his surety, to produce Judishthir, but apparently he made no similar enquiry for Shoruth; but on the 31st, when Judishthir did appear, Mr. Banerjea said "I do not want Judishthir, I want Shoruth."

59. Now Doorga Churn mohurrir states that he urged Mr. Banerjea to decide the case, as far as Judishthir was concerned, on the 31st; and though we are not inclined to place much confidence in his statements, we find that in this respect he is to some degree corroborated by Mr. Banerjea himself, for in his letter of the 24th January Mr. Banerjea writes that "even if the case were then, (*i. e.*, on 31st December) ready, it would have been impossible for me to pass any order in the absence of one of the defendants;" and this is also somewhat the argument adopted in paragraphs 28 and 29 of his letter of the 16th May (Exhibit A Q). We therefore conclude that the acquittal or conviction of Judishthir on the 31st December depended on the further evidence to be given by Shoruth's remaining witness, Boidonath. If this were so, we have no hesitation in stating that Judishthir was rightly acquitted, for Boidonath's evidence was worthless. But for obvious reasons we do not approve of this mode of trial, and we are surprised to find that Mr. Banerjea, who presumedly, like all civil servants of the present day, has received some legal education in England, and who can quote Pitt Taylor on Evidence [see paragraph 29 of his letter, dated 16th May, Exhibit A Q], should be so far ignorant of the ordinary rules of evidence as to suppose that the evidence for the defence of one of two persons charged in the same trial could possibly be used against or affect the guilt or innocence of the other. The whole trial from beginning to end was a succession of irregularities.

60. If we now consider the case against Shoruth, we find that Mr. Banerjea relied as much in the case against him as against Judishthir on what Boidonath would say.

Boidonath deposed as follows:—

"I know Judishthir and Shoruth up at the bar. I heard from Godadhur that he had purchased a boat from Shoruth. Godadhur said that the boat had been stolen by Shoruth and sold to him. I had not heard anything against Shoruth."

Such evidence could not properly affect the conviction or acquittal of either of the accused. If, therefore, Mr. Banerjea, before taking that evidence, believed (and we have reason to think that he did so believe) that there was a good *primâ facie* case against Shoruth, he had certainly no grounds for changing his opinion after hearing that evidence. To an ordinary understanding a perusal of the records of the case could lead to no other conclusion but the conviction of Shoruth and the acquittal of Judishthir, and we have no doubt that by the acquittal of Shoruth there has been a failure of justice and a misdecision of the case.

61. Mr. Banerjea has in explanation stated before us that the fact that the offence charged (theft) was a non-bailable offence, and that he, notwithstanding, admitted the accused persons to bail, shows that he must throughout have thought that the case was not satisfactorily made out against either. We cannot but regard this explanation as an after-thought, for if Mr. Banerjea on the 5th July (the date of the order for bail) held this opinion, we cannot believe that he should have examined Judishthir's witnesses on the 24th August, and that he should further on 30th October have called upon Shoruth to plead to the charge, summoned his witnesses, and kept the case pending for upwards of six months; and lastly, this hypothesis is altogether inconsistent with his conduct in passing the "*firar* order" of the 31st December, for had he any doubt of the guilt of one or both of the accused, he could then have easily decided the case by passing an order of acquittal, and so avoided the possibility of any censure.

62. Mr. Banerjea first told us that seeing that he had furnished explanations regarding this case in his returns of September and October, he must have known that he could not have concealed the case, and that it could not have been his desire improperly to acquit Judishthir and Shoruth to avoid drawing attention to his irregular and dilatory conduct. The force of this argument we regret we cannot admit, for, as we have already stated, his letter of the 24th January, inadvertently and unnecessarily giving an explanation regarding this case, shews that he was then under considerable apprehension regarding the detection of the most improper "*firar* order;" and we have further little doubt that he hoped that that explanation would be considered sufficient. He must have known that conviction of either of the accused would most probably lead to an appeal, when the whole of his proceedings would come under review. Under these circumstances we think the reasonable conclusion is that Mr. Banerjea was actuated by a probable and natural desire to bury the case in oblivion, and this conclusion is confirmed by the extraordinary process of reasoning by which Mr. Banerjea justifies the acquittal of both the accused.

63. In connection with this charge, the Public Prosecutor called our attention to a large number of cases decided by Mr. Banerjea during the last ten days of January 1873, the object being to show that about the same time as Mr. Banerjea is charged with having wilfully misdecided Judishthir's case, he also wilfully misdecided a number of others. This evidence was objected to; but it appeared to us to be legally admissible, and it has accordingly been placed upon the record. We do not, however, desire to lay much stress upon it in connection with the present charge, as in our opinion Mr. Banerjea did not wilfully misdecide these cases with the object of getting rid of them, but his action was merely in accordance with the careless and inconsiderate mode of procedure which we have found to characterize his general work. We think it right, nevertheless, to draw attention to the orders passed in these 49 cases, as *primâ facie* they amount to a total denial of justice to the parties, and show Mr. Banerjea to have been quite unconscious of his responsibilities as a judicial officer. In these cases Mr. Banerjea took the depositions of the complainants on various dates during the latter half of December 1872: he issued summonses on the defendants, and fixed the days of hearing on various dates during the first half of January 1873, directing the complainants to attend with their witnesses in most cases at Abidabad; in some instances merely "in the mofussil;" and in a few cases at Hubbeegunge. Mr. Banerjea was detained in the sudder station longer than he had anticipated, and did not begin work at Abidabad till the 21st January, when the dates fixed for the hearings had expired. Finding that the parties were not then present, he appears to have passed a general verbal order that the cases should stand over for a few days to give the parties and their witnesses an opportunity

of coming in; but it does not appear that in any one of these cases the complainant was aware of such order. The complainants failed, however, to appear, and Mr. Banerjea called up the cases during the last few days of January, and struck off all the 49 cases for default. Among the cases thus summarily disposed of were several warrant cases, which could not legally be dismissed without taking the evidence for the prosecution. We think that Mr. Banerjea's proceedings in this matter are deserving of the severest censure. Many of the complainants had never been told to attend at Abidabad at all, and those who were told to attend there had never received notice that their cases would be taken up on the day on which final orders were passed.

64. For the above reasons, although we think that the misdecision of these 49 cases has little, if any, direct bearing upon the misdecision of the case which forms the subject of the present article of the charge, we feel it our duty to find that Mr. Banerjea, on the 30th January 1873, wilfully misdecided the case of Joykrishto Koiburto *versus* Judishthir and Shoruth.

Finding upon the 9th article of the charge.

65. The 13th article of the charge sets forth that Mr. Banerjea has falsely asserted that he could not very well read a mohurrir's handwriting. From this we should ordinarily understand that he meant to intimate that he could not read a running handwriting, such as mohurrirs usually write; but if we turn to the passage of Mr. Banerjea's letter in which this statement is made, we learn from the context that he desires it to be deduced therefrom that he could not have been able to read the order *agoto misle pesh* (to be brought forward at the next sitting) recorded by Koylas, head constable, on Kali Koomar's petition for release from his liability as surety of Judishthir.

66. We will first consider the general statement made by Mr. Banerjea that he could not very well read a mohurrir's handwriting. The statement is somewhat vague; but we may observe that Mr. Banerjea's statement in all the explanations that he has furnished are also singularly vague, and rarely if ever give a definitive or satisfactory answer to the point on which information from him is called for. We have before us the following facts: that Mr. Banerjea is a native of Bengal; that, as he himself admits, he has passed "the periodical examination for selected candidates in Bengali";* that on the departmental examination held in December 1871 he passed in Bengali by the higher standard, which includes rendering into Roman characters manuscript papers in Bengali written in a somewhat difficult and running handwriting; we have it also in evidence, about which there can be no reasonable doubt, that he was in the habit of receiving and reading private letters written in Bengali; that he knew to read Bengali court papers with only occasional assistance when he came across a badly-written letter or word; and we have also before us the records† of two cases tried by him, in which the written evidence was written in Bengali under his own hand, in a running hand such as we have been in the habit of meeting in records of the Courts of Justice in Bengal. Against these facts we have Mr. Banerjea's statement that he never studied Bengali after he was seven years of age; that he never passed an examination in Bengali in his life, except the periodical examination for selected candidates in England and one departmental examination, unless perhaps when he was four or five years of age; that in the University Examination in this country he took up Latin and not Bengali as his second language; that an educated native of this country cannot ordinarily very well read a mohurrir's handwriting; that it requires a considerable practice to be able to read with facility such handwriting; and that even if such a statement of inability to read very well such handwriting be remarkable in the case of any other educated native, it cannot be held to be applicable to him.

Paragraph 19 of letter dated 7th June 1873 [exhibit A T].

† Exhibit A B to A H.

67. Now, with regard to Mr. Banerjea's explanatory statements, we would observe that they first seem to refer more to an examination in the Bengali language in a literary point of view, and not to mere ability or inability to read a running hand; and next, that Mr. Banerjea admits that without considerable practice an educated native would not be able to read with facility such handwriting. We do not think that, weighed against the facts which we have previously stated, these arguments prevail; the practice that Mr. Banerjea contends is required, has, in our opinion, been obtained during his length of service, and without it we do not think he could have passed the departmental examination of December 1871. We are accordingly of opinion that in stating that he could not very well read a mohurrir's handwriting, Mr. Banerjea has been guilty of making a false statement.

68. But when we come to consider the force of this statement as applied to Koylas head constable's writing of the order of the 31st December on the petition of Kali Koomar Deb, we have not the slightest doubt that one who could write a Bengali handwriting, as shewn in the records marked A G, A H, must, as certainly as such matters can be ascertained, have been able to read the order "*Agoto misle pesh.*" It does not follow that Mr. Banerjea did read it; but we have no hesitation in recording our opinion that if he had tried to do so, he could have had no difficulty in reading it.

69. We accordingly find that Mr. Banerjea, in paragraph 11 of the letter dated 16th May 1873, and in paragraphs 18, 19, and 20 of his letter of the 17th June 1873, falsely asserted that he could not very well read a mohurrir's handwriting.

Finding on 13th article of the charge.

70. There is very little to be said on the 14th article of the charge, since we have already found that Mr. Banerjea did pass the two orders of the 31st December, or authorised them to be recorded, and therefore it only remains for us to add that Mr. Banerjea, in his letter of the 16th May, No. A, and in subsequent letters, disgracefully attempted to place on his mohurrir, Doorga Churn Deb, the whole blame of the two orders which were passed on 31st December 1872 in the case of Joykrishto Koiburto *versus* Judishthir and Shoruth.

Finding on the 14th article of charge.

71. The result, therefore, of the best consideration that we have been able to give to the evidence placed before us during this inquiry is to find Mr. Banerjea guilty of all the articles of the charge, except the 3rd article. We have endeavoured to give Mr. Banerjea the benefit of any reasonable doubt that has occurred; but we have been unable, consistently with our duty as public servants, to come to any other conclusion. Our conclusions have been almost entirely based upon the evidence tendered for the prosecution, for we have unfortunately had no further explanation of any practical value suggested to us in Mr. Banerjea's defence, either by his Counsel, Mr. Montriou, or by himself, than what had appeared in his own letters, upon which he is principally accused. There is certain evidence as to character adduced by the defence, but it is not such as would affect our findings on the acts or omissions charged. On the first and second articles of the charge we think that there are some circumstances of extenuation, and that if the Magistrate of the district had exercised over Mr. Banerjea that supervision which is usual and so necessary for the education of young officers in their early career and for the correction of bad habits to which from natural carelessness or some such infirmity they may be unfortunately addicted, we have little doubt that many of the irregularities and departures from honest and straightforward conduct as a public officer and a gentleman, which form the subject of the charges, would never have been committed. Mr. Banerjea is, no doubt, possessed of considerable ability, and we have had constant cause for regret that he should have thought proper to devote it, not to the administration of justice in the execution of public duties entrusted to him, but to writing long explanations of his own shortcomings, and to the display of a desire to evade censure at the expense of truth. We have been much surprised to find that in his letters Mr. Banerjea has almost invariably evaded giving a straightforward and unmistakeably clear statement in explanation of any point on which his conduct has been questioned; and throughout the many cases tried by him which have been laid before us, we have regretted to find many instances of gross carelessness and inattention to the convenience of parties appearing in his Court, which, in our opinion, cannot but be the result of an absence of all sense of the responsibility of his position.

72. In conclusion, we desire to submit for the consideration of Government some observations, which we feel that it is our duty to make, regarding the conduct of Doorga Churn Deb, the mohurrir attached to Mr. Banerjea's Court. This man was examined as a witness for the prosecution, and both by his demeanour and by the nature of his answers when questioned on matters on which his own character was at stake, he showed us clearly that, except when corroborated, he was not entitled to our confidence. The "*firar* order" of the 31st December was written by him; he has admitted that later on the same day he saw Judishthir, but he nevertheless did not hesitate to write out, and on 7th January to get Mr. Banerjea's signature to, a warrant for Judishthir's arrest in Mymensingh, and at a time when he was seeing Judishthir constantly at Sylhet; and eventually on the 9th January he hired Judishthir to row his boat to Abidabad. How far it is owing to this man's pernicious and insidious advice that Mr. Banerjea has been induced to err we cannot say, but we are much surprised to find that notwithstanding that his delinquencies were known to Mr. Sutherland as far back as the 10th of June, Doorga Churn Deb stills remains in his former position as a servant of Government and a mohurrir of the Magisterial Courts of Sylhet.

73. The Court head constable, Koylas Chunder Deb, whose conduct was as disgraceful as that of Doorga Churn, has been allowed to resign his appointment under Government. Mr. O'Kinealy for the prosecution declined to call him as a witness, intimating his desire rather to subject him to cross-examination; and Mr. Montriou for the defence likewise signified that he did not intend to examine him. Under these circumstances we felt that it was our duty to call and examine him. His deposition we think speaks for itself, and we would only add that from the first he, like Doorga Churn, showed an unmistakeable desire to prevaricate and to withhold the truth.

We have the honor to be, Sir,
Your most obedient servants,
H. T. PRINSEP,
C. HOLROYD, *Colonel*, B. S. C.
H. J. REYNOLD.

On board Steamer *Koladyne*,
December 5th 1873.

LIST OF WITNESSES

CALLED BY THE PUBLIC PROSECUTOR.

1.	Chunder Koomar Mitter ...	Canoongoe and Surveyor.
2.	Joynarain Goopto ...	Mohurrir of Magistrate's Office, Sylhet.
3.	Bharut Chunder Kor ...	Ditto ditto, and Mohurrir of Mr. Banerjea's Court from March to June 1872.
4.	Chunder Koomar Ghose ...	Writer in the Sylhet Jail.
5.	Govind Churn Deb ...	Jailor of Sylhet.
6.	Boidonath Deb ...	Formerly Court Inspector of Magistrate's Court, Sylhet.
7.	Kalinath Dey ...	Head Clerk, Magistrate's Office, Sylhet.
8.	Bhagmut Deb ...	Defendant in a case tried by Mr. Banerjea, in which Omed and another were complainants.

9.	Gopeechurn Surma	...	Mohurir of Magistrate's Office, Sylhet, and Mohurir of Mr. Banerjea's court from May to August 1873.
10.	Mr. Aratoon Mackertich	...	Deputy Magistrate, Sylhet.
11.	Doorgachurn Deb	...	Mohurir of Magistrate's Office, Sylhet, and Mohurir of Mr. Banerjea's court from November 1871.
12.	Kalikoomar Deb	...	Revenue Agent, Sylhet, and security for Judisthir Koiburto in the theft case.
13.	Prokashchunder Dhor	...	Mookhtear, Sylhet.
14.	Gungaprashad Surma	...	Mookhtear for Judisthir Koiburto in the theft case.
15.	Hurishchunder Surma	...	Mookhtear and security for Shoroth Koiburto in the theft case.
16.	Konjolall Dhor	...	Mookhtear, Sylhet.
17.	Gopalkishto Deb	...	Copyist in the Magistrate's Office, Sylhet.
18.	Judishthir Koiburto	...	Defendant in a case of theft brought by Joykishto Koiburto.

CALLED BY THE COMMISSIONERS.

19.	Koylash Chunder Deb	...	Late Court Head Constable at Mr. Banerjea's Court.

CALLED FOR THE DEFENCE.

20.	Mr. Joseph Posford, c. s.	...	Officiating Joint Magistrate, Sylhet.
21.	Joygovind Shome	...	Government Pleader, Sylhet.
22.	Hurkhali Mookerjea	...	Deputy Magistrate, Sylhet.
23.	Koylash Chunder Ghose	...	Pleader, Judge's Court, Sylhet.
24.	Grish Chunder Dass	...	Seristadar, Judge's Court, Sylhet.
25.	Doorga Koomar Bose	...	Head-master, Zillah School, Sylhet.
26.	Premchand Nath	...	Ditto, Rasbehari School, Sylhet.
27.	Ishanchunder Potronovees	..	Inspector of Police.
28.	Gourchurn Dass	...	Sub-inspector of Police.
29.	Krishna Chunder Dass	...	Head Clerk, Judge's Court, Sylhet.
30.	Boikantonath Bol	...	Translator, Judge's Court, Sylhet.
31.	Kalihur Mitter	...	Sub-inspector of Police.

List of Exhibits in MR. S. N. BANERJEA'S *Case.*

A.—Plan of Mr. Banerjea's court-room. See evidence of Chunder Koomar Mitter (1).

B.—List of cases decided by Mr. Banerjea from June 1872 to January 1873. See evidence of Joy Narain Goopto (2).

C.—Order recorded in memorandum book by Bharut Chunder Kor (3) in case of Nahir Mahomed, complainant.

D.—Warrant of sentence of Adil Mahee and Asim Mahee. See evidence of Bharut Chunder Kor (3).

E.—Bengali order recorded by Koylas, head constable, after delivery of judgment in the case of Nahir Mahomed, complainant. See evidence of Bharut Chunder Kor (3).

See at end of N. 10.

F.—Jail register of prisoners admitted. See evidence of Chunder Koomar Ghose (4).

G.—General register of cases sent in by the police during 1872. See evidence of Boidonath Deb.

GG.—Extract referring to case of Nahir Mahomed, complainant. See evidence of Boidonath Deb.

H.—Extract from register of Mr. Banerjea's court in Koylas's handwriting about the above cases. See evidence of Boidonath Deb.

I.—Hazree book of Mr. Banerjea's court in Koylas's handwriting. Same evidence.

II.—Entry of 30th August in same handwriting. Same evidence.

J.—Order book of Mr. Banerjea's court kept by Koylas. Same evidence.

JJ. Entry of 22nd January in Koylas's handwriting in that book. Same evidence.

JJJ.—Entry of 6th February in Koylas's handwriting in that book. Same evidence.

K.—Explanation of Koylas, head constable, in his own handwriting, dated 10th April 1873 and 19th March. Evidence of Boidonath Deb.

L.—Letter from Mr. Banerjea, dated 27th January 1873, and written by Koylas, head constable. Evidence of Boidonath Deb.

M.—Copy of the same letter, also written by Koylas. Same evidence.

N.—Correspondence and enclosures of letters that passed between Mr. Sutherland and Mr. Banerjea regarding the practice of Mr. Banerjea, forming subject of charges 1 and 2 and (N. 10). Judgment of Mr. Banerjea in the case of Nahir Mahomed *versus* Adil Mahee and Asim Mahee.

N. 1 to N. 10.

O.—Letter of Mr. Banerjea reporting his arrival at Sylhet, and Gazettes showing his progress in passing examination and obtaining higher powers as a Magistrate.

P.—Date affixed by head clerk on application for copy made by Krishto Chunder Deb. See evidence of Kalinath Deb.

Q.—Order endorsed by Gopee Churn Surma on application for copy made by Bhagmut Deb.

R.—Judgment of Mr. Banerjea in the case against Bhagmut Deb.

S.—Bhagmut Deb's receipt, dated 27th May, of the copy of the judgment applied for. (See Q). See evidence of Bhagmut.

T.—Miscellaneous book of Mr. Banerjea's court kept by Doorga Churn Deb and others. Evidence of Doorga Churn.

TT.—Continuation of same book for 1873. Same evidence.

U-UU.—Entry in witnesses' discharge book of Mr. Banerjea's court.

V.—Order passed in case of Hyder *versus* Gholam Russool, dated September 2nd. See evidence of Doorga Churn.

W.—Order passed in case of Anwar *versus* Bishto Chand and others, dated September 2nd.

X.—Call for explanation by Magistrate of district. Explanation, &c., from Mr. Banerjea regarding discharge of 23 witnesses, &c.

Y.—Warrant for arrest of Judisthir and proceeding relating thereto, dated January 4th. Same evidence.

Z (P).—Order of Mr. Banerjea on second application of Krishto Chunder Deb for copy of judgment in his case, dated 21st January. Same evidence.

A. A.—Judgment of Mr. Banerjea in Krishto Chunder Deb's case.

A. B.—Report of police of Bajitpore regarding warrant of arrest of Judisthir, &c., forwarded by Mr. Sutherland for Mr. Banerjea's information and Koylas's explanation. Evidence of Doorga Churn.

A. C.—Extract from feraree register of February 1872, showing an entry signed by Mr. Banerjea.

A. D.—Bengalee order on the record relating to the above matter. (Doorga Churn Deb.)

A. E.—Order, dated 1st April 1873, passed in the case of Ghoolam Hossein, complainant, *versus* Sabor Manjee, &c., who did not appear.

A.F.—Order of Mr. Banerjea, dated 31st July 1872, in the case of Mariam, complainant, regarding absconding accused Sheikh Fazil.

A.G.—A.H.—Records of two cases in which depositions are written in Bengalee by Mr. Banerjea.

A.I.—Written statement of Kali Koomar Deb, agent, dated 24th Bysack 1280, and P. S., dated 31st idem, furnished to Mr. Banerjea at his request. See evidence of Kali Koomar Deb.

A.J.—Similar written statement furnished by Prokash Chunder Mooktear, dated 9th May 1873. Evidence of Prokash Chunder Dhor.

A.K.—Letter from Mr. S. N. Banerjea to Mr. Sutherland, saying he has found among his papers the original of his office memorandum No. 29 of 7th January last, which was reported to be missing.

A.L.—Explanations by Mr. S. N. Banerjea as to the reasons why cases were pending on his file at the close of June and July last, given in detail with regard to each case on 22nd July and 8th August last, and Mr. Sutherland's remarks on the same.

A.M.—Similar list of cases pending at the close of September.

A.N.—The same for the month of October.

A.O.—Letter from Mr. Sutherland, Magistrate of Sylhet, No. 29 of 7th January 1873, asking for an explanation by Mr. Banerjea of the reason of delay in disposing of a case shown by his monthly returns for December to have been pending since September.

A.P.—Resolution by the Magistrate of Sylhet on Mr. Banerjea's conduct, dated 22nd March 1873, with endorsement, asking him for any explanation he may wish to offer.

A.Q.—Mr. Banerjea's explanation, dated 16th May 1873.

A.R.—Letter from Mr. Sutherland to the Judge of Sylhet, No. 673 of 17th May.

A.S.—Letter from the Judge of Sylhet to the Registrar of the High Court, No. 26 of 27th May 1873, sending up the record and correspondence connected with the charges against Mr. Banerjea.

A.T.—Letter from Mr. Banerjea to the Magistrate of Sylhet, dated 7th June, offering further remarks in his defence.

A.U.—Letter from the Magistrate to the Judge of Sylhet, No. 860 of 11th June 1873, offering further remarks on the case.

A.V.—From the Judge of Sylhet to the Registrar of the High Court, No. 29 of 17th June, sending on with remarks the further correspondence in the case.

A. W.—From Mr. Banerjea to the Magistrate of Sylhet, No.—— of 2nd July 1873, further exculpating himself from the charges of deceit, &c.

A.X.—Written statement of Koonjo Loll Dhor, mooktear, made at the verbal request of Mr. Banerjea, dated 6th May.

A.Y.—Another of the same character, dated 5th May 1873.

A.Z.—Annual crime returns of Mr. Banerjea's Court.

Record of the case of Queen *versus* Judisthir and Shoroth.

List of records of Cases tried by Mr. Banerjea referred to by the Commission.

1. List of defendants in custody under trial before Mr. Banerjea in November 1872.
2. List of persons arrested during November 1872, whose cases have been disposed of.

In accordance with the request of Mr. Montriou, Counsel for the Defence, the 19th November was fixed for commencement of the proceedings, under Act XXXVII of 1850.

November 19*th*.—Mr. James O'Kinealy presented a letter No. H. Z. from the Secretary to the Government of Bengal, dated 21st October last, appointing him to conduct the prosecution of Mr. S. N. Banerjea, on the part of Government.

The articles of charge were next read, and the accused, Mr. S. N. Banerjea, was called upon to plead to each, and pleaded *not guilty* to each article of the said charge.

Mr. O'Kinealy then as Public Prosecutor opened the case.

Proceedings were adjourned at 2 P. M. in consequence of the indisposition of Colonel C. Holroyd.

November 20*th*.—The following witnesses were examined :—

Chunder Koomar Mitter, | Bharut Chunder Kor,
Joy Narain Goopto, | Chunder Koomar Ghose,

and the proceedings were adjourned.

November 21*st*.—The following witnesses were examined :—

Boidonath Deb, | Bhagmut Deb,
Kalinath Dey, | Mr. Mackertich,

and the proceedings were adjourned.

November 22*nd, Saturday*.—Doorga Churn Deb was partially examined, the proceedings being adjourned before the cross-examination had terminate.d

November 24*th, Monday*.—The examination of Doorga Churn Deb was concluded, and the proceedings were adjourned.

November 25*th, Tuesday*.—The following witnesses were examined.

Kali Koomar Deb, | Gangaprashad Surma,
Prokash Chunder Dhor, |

and the proceedings were adjourned.

November 26*th, Wednesday*.—Owing to the indisposition of Mr. Reynolds, the Commissioners did not sit.

November 27*th, Thursday*.—The following witnesses were examined :—

Hurrish Chunder Surma, | Gopal Krishto Deb,
Koonjo Lall Dhor, | Judisthir Koiburto,

and the case for the prosecution terminated.

November 28*th, Friday*.—It having been intimated by the Public Prosecutor and the Counsel for the defence that neither intended to examine Koylash Chunder Deb, and the Commissioners considering that he should be examined in this enquiry, he was accordingly called and examined by the Commissioners.

Mr. Montriou then proceeded to inform the Commissioners that his client was willing to be examined on oath on any point on which the Commissioners desired his statement. The President intimated that the Commissioners were prepared to accept any statement, either written or verbal, made by the accused, Mr. Banerjea, or by his Counsel on his behalf, but that they did not consider that it was their duty to examine Mr. Banerjea.

Mr. Montriou then addressed the Commissioners for the defence, and the proceedings were adjourned.

November 29*th, Saturday*.—Mr. Montriou concluded his address, and Mr. Banerjea was allowed also to make some observations in his defence. The witnesses cited for the defence were examined, and after some explanation on the part of the Public Prosecutor with reference to some reflections made by Mr. Montriou, the proceedings terminated.

H. T. PRINSEP.

No. H. Z., dated Calcutta, the 21st October 1873.

From—C. BERNARD, ESQ., Officiating Secretary to the Government of Bengal,

To—J. O'KINEALY, ESQ., Officiating Legal Remembrancer.

I am directed to inform you that you have been nominated to conduct at Sylhet, on behalf of Government, the prosecution of Mr. S. Banerjea, C. S., whose behaviour is to form the subject of an enquiry before Commissioners, under Act XXXVII of 1850.

MR. SURENDRA NATH BANERJEA, Assistant Magistrate of Sylhet, is hereby charged as follows :—

1*st*.—That he in the case of Gholami, complainant, of Ratan Chung, complainant, of Nahir Mahomed, complainant, and in several other cases, or any of them, wilfully misdated his decisions.

2*nd*.—That he on or about the 8th of June 1872, in the case of Nahir Mahomed, complainant, having convicted and awarded imprisonment to the defendants for an offence under section 379 of the Indian Penal Code, subsequently on or about the 11th of the same month wrote a decision, convicting them for offences under sections $\frac{323}{109}$ and 379 of the Indian Penal Code and that on his Mohurir Bharut Chunder objecting and reporting that the warrant and decision did not agree, he wilfully abstained from passing any order on the said report and improperly changed, in order to meet his subsequent judgment, the previous entries in the warrant and other public documents.

3*rd*.—That he on or about Saturday, the 30th of August 1872, in order to avoid any explanation regarding the detention of witnesses, dishonestly discharged 23 witnesses to re-appear on the following Monday.

4*th*.—That he on or about the 31st of December 1872, in the case of Joykristo Koiburto *versus* Shoroth and Judisthir, dishonestly ordered the said defendants, or either of them, to be entered as absconded (*ferar*) in the monthly returns (*mashkabar*).

5*th*.—That he on or about the same date, after the said Judisthir, defendant, had appeared in court, dishonestly retained on the record the order aforesaid directing the defendants Judis-

thir and Shoroth to be entered as absconded (*ferar*) in the monthly statements (*mashkabar*).

6*th*.—That he on or about the same date intentionally and illegally omitted to accept the surrender of the aforesaid Judisthir by his surety Kali Koomar Deb, and relieve the latter from his engagement as surety.

7*th*.—That he on or about the same date dishonestly allowed an order to be recorded on the petition of the said Kali Koomar Deb (surrendering his client Judisthir), that it be taken up at the next sitting of the court, instead of immediately passing orders accepting the surrender of Judisthir by his surety aforesaid.

8*th*.—That he on or about the 7th of January 1873, knowing that Judisthir had surrendered on the 31st of December 1872, dishonorably issued a warrant of arrest to the Magistrate of Mymensingh for the arrest of the said Judisthir as having absconded (*ferar*.)

9*th*.—That he on or about the 30th of January 1873 wilfully misdecided the case of Joykisto Koiburto *versus* Judisthir and Shoroth.

10*th*.—That he on or about the 16th of May 1873, in his letter No. A of that date, addressed to the Magistrate of Sylhet, falsely denied all knowledge of the first order of the 31st of December 1872, directing the said defendants to be entered as absconded (*ferar*) in the monthly statements (*mashkabar*), and falsely asserted that with that order he had nothing to do, and that the signature to it was taken without his knowledge.

11*th*.—That he on or about the same date in the same letter falsely urged that it was clear he could not have heard the conversation which took place on the 31st of December 1872, between the said Kali Koomar Deb and the Mohurir Doorga Churn Deb regarding the surrender of the said Judisthir.

12*th*.—That he on or about the same date, in the same letter, falsely asserted that the second order of the 31st of December 1872, directing that the petition of Kali Koomar Deb be taken up at the next sitting, was, to the best of his recollection, obtained without his knowing anything about it.

13*th*.—That he in paragraph 11 of his letter aforesaid, and in paragraphs 18, 19, and 20 of his letter of the 7th of June 1873, falsely asserted that he could not very well read a mohurir's handwriting.

14*th*.—That he in the said letter of the 16th of May, No. A, and in subsequent letters, disgracefully attempted to place on his Mohurir Doorga Churn Deb the whole blame of the two orders aforesaid, which were passed on the 31st of December 1872, in the case of Joykristo Koiburto *versus* Judisthir and Shoroth.

No. 1.

NOVEMBER 20TH, 1873.

The evidence of Chunder Koomar Mitter, son of Tilock Chunder Mitter, taken on solemn affirmation.—I am a Surveyor and Canoongoe in this district. I prepared a map of Mr. Banerjea's cutchery. It is this map (A). It has been prepared on the scale of two feet to the inch. It shows accurately the different positions in the cutchery.

H. T. PRINSEP,
President of the Commission,
under Act XXXVII, 1850.

No. 2.

NOVEMBER 20TH, 1873.

Joy Narain Goopto, son of Nor Narain Goopto, on solemn affirmation.—I am mashkabarnuvees of the Magistrate of this district. I was ordered to prepare the list of all the cases decided by Mr. Banerjea. This is the list (B). It commences from June 1872 to January 1873, both inclusive.

Cross-examined.—I have been 12 or 13 years Mashkabarnuvees. I have been in the habit of preparing monthly statements of pending cases and Statement No. 9. In the first part are entered the number of hajut prisoners under trial from the previous month. In the second part are entered the state of the file, the number of persons convicted with punishment, the number of cases decided, and those pending over, whether on bail or in hajut. In the statement of pending cases is entered the number of persons under trial, whether they are on bail, recognizance, or in hajut. Absconded (*ferar*) prisoners are entered in Statement 9 of pending cases only if they have been convicted during the particular month. There is no heading of *ferar*, but in the *kaifyut* it should be entered. I do not remember within the last year or two of its ever having been so entered, nor can I recollect any Statement No. 9 in which it has been entered. I prepare the quarterly and annual statements; the *feraree* prisoners are entered in them. These statements are never called *mashkabar*. There is a circular of Government for the preparation of *feraree* registers. It bears date June 9th, 1859. If the prisoners are in hajut it is a correct order (on being shown the order of 31st December 1872 passed by Mr. Banerjea). A man may be entered as *ferar* if he is in hajut or on bail. A person who is absent at the time of trial is "ferar" when he does not answer the call of the constable, but not when he is present. There was a time when a prisoner under trial was entered as a *ferar* in the *mashkabar*. It was so during my service as Mashkabarnuvees. It might be six or seven years ago, not later. I have never seen Mr. Banerjea in court, but I have learned from the mookhtears that he is rather dilatory and causes inconveniences to parties; but

I have never heard that he has done injustice. I mean that he used to be dilatory in giving judgment. I have never heard that he was untruthful or deceitful. The order of the 31st December is a correct order. I understand from this order that if the prisoners were in hajut the *mashkabar* referred to was Statement No. 9, and the prisoners would be entered as *ferar* in the *kaifyut*. If the prisoners were not in hajut the order would not be correct unless the word *mashkabar* were omitted. I cannot conceive why the order has been so recorded; it has been recorded according to usual rule. It was the custom in former days to write down persons as *ferar* in the *mashkabar*. Doorga Churn was Mr. Banerjea's mohurir. The order of 31st December is in his handwriting. He has been foujdaree mohurir before I was appointed 17 or 18 years ago. I cannot say positively without search whether I can find any similar order. I have seen other orders of the kind when a prisoner is arrested and cannot be found; such an order is correct when he has escaped from bail. The nazir formerly, and subsequently the Court Inspector, used to report a man as *ferar*, and it used to be brought before the mohurir in charge of the record. The foujdaree serishtadar would have nothing to do with it. "Mamoolee" orders are "Place with the record" and such petty orders which are passed. An order for the arrest of a witness is not of a *mamoolee* order, as it has to be brought to the notice of the hakim. It depends upon the nature of the business whether a takeed to the police is *mamoolee*. Warrants for service in other districts are signed with full signature. It is only brought to the Magistrate's notice that it requires a full signature.

Re-examined.—There is always an order for warrant in another district which has a full signature and is a *mamoolee* order. Up to last year I was employed in the Joint-Magistrate's court as misl mohurir. There was another mohurir. There was no division of work between us. The records of petty cases are kept for two years in the Magistrate's court before they are burnt. Other cases are kept longer, but I cannot say how long. They are ultimately burnt.

No. 3.

Bharut Chunder Kor, son of Radhakishto Kor, on solemn affirmation.—I am a mohurir in the Magistrate's office. I was in Mr. Banerjea's court from March to some days of June 1872. I was employed as his mohurir. He had only one mohurir. I recollect Nahir Mahomed's case. I was then misl mohurir. I had some conversation with Mr. Banerjea about that case. Two defendants were punished in that case some day in June. Mr. Banerjea did not deliver the judgment. I wrote on the misl book the order of sentence, imprisonment, and fine, under section 379. The order was passed in the Collectorate *ijlas* where Mr. Banerjea held his court. He gave a verbal order which I recorded in the misl book, but he did not give his *rai* (judgment). I got the *rai* two or three days afterwards in that *ijlas*. I saw that he had added two sections, 352 and 109, in the judgment, whereas section 379 alone appeared in the order. That (C) is in my handwriting. After writing that order I wrote the warrant and sent the prisoners to jail. That was on the same day as the verbal order. That (D) is in my handwriting, except the headings the words "adil 352[illegible], Asim 379[illegible]." These words were not in the warrant when I sent it. I don't know in whose handwriting those words are. When I saw the *rai* I told Mr. Banerjea that "the warrant has been issued under section 379. I now see that two additional sections have been entered in the *rai*. What is to be done?" He replied, "Section 379 is the principal section, and the two other sections are subsidiary. It is no harm that these two sections are not entered in the warrant." I said, "When the warrant is returned, after the release of the prisoners, and it is filed with the record, it will be seen not to correspond, and it will be said to be my fault. If you permit me, I will present a report and you can pass an order on it." I submitted a report; he was displeased, and ordered Koylas, head constable, to correct the warrant. Koylas said, "If the warrant is altered, the notice given to the police, from whom the case came, will also have to be altered." He said, "You had better correct the notice too." He returned the report to me without passing any orders. I have destroyed that report as no order was passed on it. As far as I can recollect, the report was that as I had issued a warrant in a certain case on a verbal order and two additional sections had now been entered in the *rai*, I requested that the warrant might be altered. The *rai* was given two, three, or four days after issue of the warrant. Mr. Banerjea brought it written from his house. When a case was ready for decision it is Mr. Banerjea's habit to take home the record (English and Bengali), the entire record. Mr. Banerjea can read Bengali, but he has sometimes told me to write more legibly because he had difficulty in reading my running (*Thana*) handwriting. I used to prepare his *mashkabars*. When that statement, No. 9, used to be taken to him it used to be explained to him that so many prisoners had been arrested, so many convicted, so many acquitted, so many pending. It was not read to him, but on hearing what I had to say he used to sign it. He did not, that I can remember, look over it himself. He used to use English ink and sometimes from our ink-pot in court. He had an office ink-pot. In warrants for execution in a different district it used sometimes to be told to the Magistrate that they required his full signature, and sometimes that it was a warrant in such a case.

[The following question was then put by Mr. O'Kinealy and objected to by the counsel for the defence]:—"What does a mohurir do with the *rai* after he receives it from a hakim?" Objection withdrawn. *Answer.*—The order in the first book is compared with the English order. If it is found to agree, the Bengali order is recorded by me or by the sub-inspector, or head constable, if he happens to be there. A Bengali order was recorded in the case of Nahir Mahomed. That (E) is in the handwriting of Koylas.

Cross-examined.—I have been mohurir for about 21 years. Only I and the head constable were employed in Mr. Banerjea's court. I don't remember that he ever made any mistakes. The case mentioned is the only occasion on which Mr. Banerjea recorded a judgment discrepant with his verbal order. I cannot say that other Magistrates have taken home records to write their judgments. This case was of assault and theft of rice. I do not recollect what was proved. I do not recollect remonstrating with the Assistant Magistrate that the assault was not proved. I know that they had been convicted of assault from an abstract translation. I do not recollect what the witnesses said; I might have heard. I recollect what passed between me and Mr. Banerjea, because I argued with him and he was displeased with me. When I said I would give a report, he said I may give a report, and I did so. I did not tell the saheb to alter the warrant.

In my opinion, the saheb should have passed an order for the correction of the warrant. I do not recollect that I ever said that I objected that the order should not be in my handwriting, nor can I recollect that I objected that Koylas was a relation of mine. He is a relative of mine (mother's sister's son's son). He can easily be produced in court. I think I destroyed the report then and there, but whether it was before Mr. Banerjea's face or not, I cannot say. He did not tell me to destroy it. He used to take home the records of cases after the evidence had been completed, and used sometimes to summon more witnesses and sometimes to pass judgment. He used to deliver judgment after reading the record. He used to deliver verbal orders and his judgments afterwards. Sometimes he delivered his judgments simultaneously. The head constable sometimes wrote in blue and sometimes in Bengalie ink. After the judgments were delivered I used to show Koylas, who was the only person in the office who knew English. Mr. Banerjea used to work often until 8 or 10 P. M. He did not neglect his work. I do not recollect that he ever told me an untruth. It never happened in a long pending case that an accused, who was present, was recorded as absconded. In takeed orders to the police, the Magistrate is sometimes asked for his order, and sometimes he is not asked. If a warrant is out against an accused, and before conviction he appears of his own accord, the notice to the police not to execute the warrant is considered a *mamoolee* order.

Re-examined.—A mohurir cannot issue an order for arrest without the special order of the Magistrate. If a man is *ferar*, how can a warrant issue without the orders of the Magistrate? Only one order is passed. The orders for entry of the accused as *ferar*, and for a warrant, are simultaneously passed. The amla may ask the hakim whether a warrant should issue. I have never issued such a warrant. I never have recorded an order such as this of the 31st December (in Judisthir's case, shown to him).

To Court.—Mr. Banerjea used generally to come to court at 10 or 11 A. M., and sometimes used to sit until 8 or 10 P. M., with the intermission of half an hour or one hour for tiffin. I used not to remain in attendance for the entire 12 hours.

No. 4.

NOVEMBER 20TH, 1873.

The deposition of Chunder Koomar Ghose, son of Brindabun Ghose, on solemn affirmation.—I am employed in the jail of Sylhet. I take registers of admissions into the jail. I enter the names of the prisoners in the register when they come. [Reads (F), entry of register, dated 8th June 1872—"Adil Mahee, son of Budul Mahee; Asim Mahee, son of Gholam Manjee." I found these names on the warrants. The offence of which these men were convicted is entered as Section 379. I got this information from the warrant. The prisoners were sent to jail on the evening of the 8th June. This (D) was the warrant received by me. The passage within the bracket was written by me. Four or five days after the prisoners were sent to the jail, Koylas Chunder Deb, court head constable, came to the jail and spoke to me that the warrant that was sent along with the prisoners on the 8th should be rectified. He told me he came with Mr. Banerjea's permission (added by witness when read over). I asked what correction he meant to make. He said that the section which was written in the warrant was correct and that two more sections should be added to it. I told him I cannot do it without the permission of the jailor. Koylas was present when I brought it to the jailor's notice The jailor said "You can permit the head constable to put in the sections." I allowed him to do so. I had a pen and he asked me for it, so I wrote in the section. I received no written order; nothing signed by any hakim. Never in my time has any such thing occurred as this It has sometimes happened that the date of release has not been correctly entered in a warrant. I have always taken such matters to the jailor, who has sent the warrant to the amla to be corrected. I never before had a case in which the hakim had sent a head constable to have a warrant altered.

Cross-examined.—Through forgetfulness I did not make any alteration in the register.

H. T. PRINSEP,
President of the Commission,
under Act XXXVII, 1850.

No. 5.

NOVEMBER 20TH, 1873.

The deposition of Gobind Churn Deb, son of Podo Ram Deb, on solemn affirmation.—[Witness tendered by Mr. O'Kinealy for cross-examination by Mr. Montriou for the defence.] When this warrant (D) was brought to me the entries in the bracket were not in it. Koylas, head constable, came and told me that four or five days ago a warrant had been sent in which some sections had been entered by mistake, and that Mr. Banerjea had sent him to add them, I had no objection to make. I had known Koylas for a long time. As far as I know he is a good man. I know nothing against his character. I have known Mr. Banerjea as long as he has been in Sylhet. I do not believe him to be capable of falsehood or deceit.

H. T. PRINSEP,
President of the Commission,
under Act XXXVII, 1850.

No. 6.

NOVEMBER 21ST, 1873.

The evidence of Boidonath Deb, son of Boloram Deb, taken on solemn affirmation.—I was court inspector of the Magistrate's court in Sylhet. I kept the general register of cases. All cases reported by the police are entered in it. This (G) is the general register of 1872. The portion in red ink (GG) is in my handwriting. That entry was changed after it was first made. I cannot recollect how long afterwards it was made. As far as I can recollect, Koylas, head constable, told me he had corrected the warrants in jail, and he wanted to correct this register too; so I corrected it. Koylas was court head constable in Mr. Banerjea's court, and he kept a register called each Magistrate's register book. I know Koylas's handwriting. [Mr. Montriou for defence objects to the witness proving Koylas's handwriting when he himself can be called as a witness.] This (H) is in Koylas's handwriting. This book is the each Magistrate's register of Mr. Banerjea's court [holding book in which H is written]. Every court head constable also keeps the register of parties, including witnesses present, called the hazree register, the register of summons and warrants, register of bail and recognizances, and some other miscellaneous books. If any Magistrate passes any order on the police, the head constable would enter that order in his order book, and send copy to the police. [Mr. Montriou again objects to evidence of Koylas's handwriting.] This (I) is the hazaree book of Mr. Banerjea's court in Koylas's handwriting. This entry (II) of the 30th August is also in his handwriting. The words "Bing jong" mean "Bhina zabanbundee," that is, the witnesses are discharged without having their depositions recorded. This (J) is the order book of Mr. Banerjea's court kept by Koylas. [Objection repeated.] This (JJ) is in Koylas's handwriting (entry of 22nd January *admitted by accused, Mr. Banerjea, to bear his signature*). This (JJJ) (order of 6th February, admitted by Mr. Banerjea to bear his signature) is also in Koylas's handwriting. This (K.) is in Koylas's handwriting. [Objection repeated.] This (L) is in Koylas's handwriting (admitted by Mr. Banerjea to bear his signature.) This (M) is also in Koylas's handwriting (admitted to bear Mr. Banerjea's handwring at the top.)

Cross-examined.—I was court inspector while Koylas was head constable in Mr. Banerjea's court. I ceased to be court inspector from 8th September last, in consequence of Mr. Banerjea's report. I was never charged with criminal misappropriation of property. Yes, when I was naib jailor I was accused of criminal breach of trust, but I was acquitted by Mr. Smith. I was charged with bribery in 1864, and acquitted by Mr. Tayler. I have had nothing to do with Mr. Banerjea's court since I left. I was degraded in rank in consequence of Mr. Banerjea's report. I do not recollect any Magistrate ever writing his judgment after giving his final order. [Witness reminded of the case against Peary Mohun Goho, and question repeated; witness repeats his answer.] I have always recorded every order of the Magistrate as it was delivered. I cannot say how others do. I used to bring the orders of two or three days at the same time for signature by the subordinate Magistrates, and sometimes, when they were in the mofussil, of months. I know nothing of Koylas's practice. I used to sign bail-bonds at once and *mochulkas* next day. (Did you ever know Mr. Banerjea to be guilty of falsehood or deceit?) In the case of Nahir Mahomed the head constable informed me that Mr. Banerjea gave the decision after two or three days. (Anything else wrong about Mr. Banerjea's proceedings?) In my case I was told by Bharut Chunder Mohurir that the complaint made against me by Kassee Dass (of which I asked Mr. Banerjea for a copy, as well as for copies of other papers), was, he thought, torn up. Mr. Sutherland asked Mr. Banerjea in writing if he had anything to say on that point, but Mr. Banerjea gave no explanation. Shortly afterwards Mr. Banerjea was suspended, and Mr. Sutherland took up my case and degraded me for three months.

To Court.—The alteration made by me in the general register (GG) consisted in the addition of 109, 352, and 379, $\frac{352}{109}$.

H. T. PRINSEP,
President of Commission,
under Act XXXVII, 1850.

No. 7.

NOVEMBER 21ST, 1873.

The evidence of Kalinath Deb, son of Sibnath Deb, taken on solemn affirmation.—I am head clerk in the Magistrate's office. In the course of my business I receive papers and reports for distribution. I send them to the sherista. This (P) (words 22-1 and initial) is in my handwriting; it means that I received this paper on the 22nd January. It is my duty to examine the criminal statements, to translate them, and to forward them to the Judge and Commissioner. I send the statement of the files, and the quarterly and the annual statements to the Judge. Any case of long standing would appear in a statement of the files, and explanations are given of cases pending above three months, and are forwarded to the Sessions Judge. Every month explanation of such case must be given. Only pending cases are entered in that statement, as well as defendants in jail or on bail or recognizance. The cases of absconded prisoners would not be entered in that statement, nor would any explanation be entered regarding such cases, nor would absconded prisoners be entered in that statement.

Cross-examined.—I have been for twenty years in the Magistrate's office. Absconded or *feraree* prisoners are entered in a separate book called the *feraree* register. I have nothing to do with that register. I have prepared the statement of the state of the files ever since it has been issued by the High Court. Prisoners who are *ghair hazir* are entered as *feraree*. The former monthly statements *feraree* used to be entered. It was formerly the practice, and is so now, to enter as *feraree* all prisoners who were *ghair hazir* on the last day of the quarterly and annual statements. There used to be a heading of *ferarees* in the former statement. It is now explained in the remark columns of the quarterly and annual statement how many prisoners are *feraree* (order of 31st December in Judisthir's and Shoroth's case put into witness's hand); it is not the custom now to enter orders in that form. The mohurir made a mistake. I have never heard that Mr. Banerjea is capable of falsehood or deceit, but I cannot say so.

Re-examined.—If prisoners were absent at any other time they would not be entered as *feraree*, but a warrant would be issued for their arrest; but in the last day of the year they would be entered as *ferar*.

To Court.—The new statement of the state of the files was issued in 1856 or 1857.

H. T. PRINSEP,
President of the Commission,
under Act XXXVII, 1850.

No. 8.

NOVEMBER 21ST, 1873.

Bhagmut Deb, son of Soobit Narain Deb, on solemn affirmation.—I was an accused in a case brought before Mr. Banerjea by Omed Ali. I was fined by Mr. Banerjea Rs. 30, and Dagoo Singh was fined Rs. 15. I presented an application for a copy of the judgment on the day that the case was decided; but I did not get one. I returned on the following day and asked Gopee Thakoor Moonshee in Mr. Banerjea's sherista for the copy. Gopee Thakoor asked Mr. Banerjea something, and then told me that the judgment was not ready. One or two days afterwards I came and asked Koylas Baboo. Nine or ten days after the case had been decided, I saw the record of my case brought by a Mussalman orderly to Gopee Thakoor's house. I got the copy two days after that.

Cross-examined.—I saw the record brought to Gopee Thakoor's by an orderly whose name I don't know. He brought it from the saheb's house, so Gopee Thakoor said. It was eight or nine days after the case was decided. It was last Joishtee. I told Gopee Thakoor first and afterwards Banerjea Saheb one day when Koylas Baboo said there was no order to give copies. Koylas said this of his own accord. How can I say why he said this? I did ask Gopee whether the judgment was with the record. I don't know when the judgment was written. The judgment covered six pieces of stamp paper.

Re-called.—This (S) was my signature. It is a receipt for the copy of the judgment in my case.

No. 9.

Gopee Churn Surma, son of Sib Churn Surma, on solemn affirmation.—I have been a mohurir for nine or ten years. I have served as mohurir in the sherista of Mr. Banerjea's court, also as an assistant mohurir. I served from 8th May to 6th August last. I wrote this. [Endorsement (Q), order on application for copy made by Bhagmut Deb.] That order was passed on an application for a copy made in a case decided during May. I think that the petition was presented on the very day that the case was decided. The copy was not then given because I did not get either the record or the judgment. The record was with Mr. Banerjea. He had taken it before he passed the order of conviction. I did not see him read out any judgment, nor did I see any judgment when Mr. Banerjea passed the order. I cannot say how many days the record was with Mr. Banerjea. It may be more or less than four or five days, but when I received it I gave the copy. A chuprassee of Mr. Banerjea brought it to me at my house. I copied the judgment and then sent it with the record to Mr. Banerjea for signature. The record again then came to me. Mr. Banerjea in court used

to write with black English ink, and sometimes used to use Bengali ink. I never saw him use blue ink in court. I have seen Mr. Banerjea compare the *mashkabar*. He never complained he could not read it. It was in my handwriting. Mr. Banerjea used to give orders for warrants in some cases and summonses in others. I never issued a warrant or summons without his order. Processes for other districts are always signed with a full signature. A *roobacarree* used to be drawn up and signed. When application for a copy is made, the application and the judgment are sent to the copyist. If they cannot be sent on that day, they are sent on the following day.

Cross-examined.—Mr. Michael made the copy. I cannot say how long he was making it. I cannot recollect whether Mr. Banerjea in passing sentence said anything else. I used to write the *mashkabar* in slightly better handwriting than usual, but still in a running hand. I do not know that Mr. Banerjea has ever been guilty of falsehood or deceit.

No. 10.

NOVEMBER 21ST, 1873.

The deposition of Aratoon Mackertich who on oath saith.—I am a Deputy Magistrate in Sylhet. I have known Mr. Banerjea for one and half years, and also in the Doveton College. I know Doorga Churn, his mohurir. I have seen Doorga Churn pretty often at Mr. Banerjea's house. He used to come with records and used to ask Mr. Banerjea for judgments. He used also to read what Mr. Banerjea wanted from the records. Sometimes Mr. Banerjea used to take the records to his house, that was very often, and sometimes Doorga Churn used to bring them. I cannot recollect the names of the parties, but I recollect one occasion when the party was in jail, and Doorga Churn came and asked Mr. Banerjea for his judgment. That was during September before last. I do not recollect any other particular instances, but I have seen Mr. Banerjea record judgments after the orders had been passed. I know that it was after the orders had been passed, because he used to refer to a private memorandum book and sometimes to pieces of papers. This is the book that he used usually to refer to. [Mr. O'Kinealy then asked Mr. Banerjea to inform him whether there is anything in this book regarding the cases mentioned during the trial. Mr. Montriou, for the defence, declines to allow his client to answer this question.] (The book is not put in. Mr. Banerjea states that the other book required has been telegraphed for.) Mr. Banerjea went out into the mofussil about 8th or 10th December and returned about Christmas, and returned into the mofussil on the night of the 15th or 16th January. I recollect when Doorga Churn was going into the mofussil the second time. He came and asked Mr. Banerjea for the judgments of some cases. Doorga Churn came with ten or fifteen records. That was about 8th January last. I have been present in Mr. Banerjea's court when Doorga Churn used to ask him to sign papers, and Mr. Banerjea used to put him off and sometimes used to sign. Doorga Churn used to complain that his sherista was not in order because cases were not disposed of. I have often been in Mr. Banerjea's cutcherry. The whole record of cases used to be in Mr. Banerjea's house. I have seen him read Bengali letters and one or two petitions. He said he could not read very bad handwriting. I think that this was after he was called upon for explanation, but I cannot positively say. One petition I especially recollect Mr. Banerjea reading, because I assisted partially, as he could not read it all. It was also after this case. I have been in Mr. Banerjea's court after the explanation was called for in Judisthir's case. He called for a *kaifyut* from Kali Koomar Mookhtear. The court was cleared, but I think Koylas remained. Mr. Banerjea asked the mookhtear, or agent, if he knew anything about this case. He said he was surety for Judisthir and had to pass an examination, and he had brought Judisthir into court, asking to be relieved from his suretyship, as he could not always be present. He gave this petition to Doorga Churn, and Mr. Banerjea was writing. Then a conversation took place between him and Doorga Churn, which attracted Mr. Banerjea's attention, when Mr. Banerjea told him that this was not the man that he wanted, that he wanted Shoroth. Then something else passed which I don't recollect, but the end of it was that Mr. Banerjea asked him to write out what he had to say.

Cross-examined.—I am on intimate terms with Mr. Banerjea. We live together. I was first asked about this matter, because I think Doorga Churn mentioned my name. I should not be surprised to hear that Mr. Banerjea cannot read ill-written Bengali. Mr. Banerjea read his explanation to me. I asked him not to write what he did about the *feraree* register, as no one but those who knew him would believe it. I do not believe Mr. Banerjea to be guilty of wilful deceit or falsehood. I have no doubt about it. I recollect one morning an explanation was brought by Doorga Churn to Mr. Banerjea's house. He said to Mr. Banerjea—"I will not give you this until you return me the first explanation." I did not know anything then about it. I think Mr. Banerjea kept both explanations. I went into my room. Mr. Banerjea had one in his record box and one in his hand. I do not recollect having seen the first explanation that morning, but Mr. Banerjea said he had it. I do not know what took place after I left. Those papers (1-2) bear the signatures of Mr. Bruce, Secretary and Treasurer of the Doveton College, and Mr. Roberts, the Principal.

I was not in the Doveton College with Mr. Banerjea, but I have seen him there. The conversation between Kali Koomar and Mr. Banerjea occurred in April, or May, or June last, and it was brought to my recollection when Mr. O'Kinealy sent for me. As far as my recollection goes, it was not in any way different from what I have stated. I have no doubt that I have

correctly stated it. I had no occasion to bring it to my recollection before I went to Mr. O'Kinealy.

Cross-examined by the accused.—Mr. Banerjea read to me the explanation that he first sent. I have passed by the higher standard in Hindustani. I may have read only one or two manuscript papers before I passed; I don't remember. I don't suppose I have ever told you that I firmly believed you were innocent of these charges. I take home my judgments to write them, Bengali *nuthee* and all. I have sometimes delivered my judgments after delivering the final orders, but I have invariably recorded the finding and sentence.

Re-examined.—Mr. O'Kinealy told me not to say anything that had occurred confidentially between me and Mr. Banerjea.

To Court.—I have become a Deputy Magistrate after Mr. Banerjea joined. I have not passed all my examinations. I have to pass in Law and Bengali for the higher standard.

H. T. PRINSEP,
President of the Commission,
Under Act XXXVII, 1850.

No. 11.

NOVEMBER 22ND, 1873.

Mr. Montriou produced this morning the several memorandum books which he said was one of the books spoken to by Mr. Mackertich.

Doorga Churn Deb, son of Gunga Narain Rai Chowdry, on solemn affirmation.—I am a foujdari mohurir, and have been in Government service for 33 years. I know Mr. Banerjea. I was a mohurir under him for about 1½ years from the time he came to this zillah. In the interval I took leave for 5 months on a Government case, and sometimes I have taken leave for 1 or 1½ months. I performed all the work connected with his foujdari sherista, and used to sit in the court. I know Mr. Banerjea's habit to hear the evidence and to deliver judgment of conviction or acquittal, but at the time of the *mashkabar* he used to decide many cases and pass final orders, giving in judgments afterwards. After the final order was passed, I used to enter it in the miscellaneous book. This is the book (T); so far is in my handwriting (passage marked); then follows Bharut Chunder up to this (passage marked); then, mine recommences. This (TT) is the book for 1873; so far (marked) is in my handwriting, the rest is in that of Gopee Surma. The entries in T (*Novishta shood*) mean that the *rais* have been obtained and compared with the Bengali order in the book on which these words are entered on the margin. The absence of these words from this book against several orders is, because I was transferred to the Joint-Magistrate's Court, and many judgments had not been delivered, many cases having been dismissed, and the book was transferred to Gopee Surma. There were many cases in which orders of dismissal were passed, and which were, therefore, not appealable, but in which judgments were delivered afterwards, some in January, some in February, some in March, and some in April. I compared and recorded *Novishta shood* in, I think, nearly all the cases in which I received judgments. I also kept the witnesses' discharge book. This (U) is that book. The entry marked is in my handwriting. Two witnesses are entered as discharged on that date, 29th August, in the case of Hyder, complainant, *versus* Surkoon. On 2nd September there were witnesses of the 29th August in only two cases remaining undischarged, viz., in the case of Shaik Anwar, complainant, *versus* Rotton Deb, and three witnesses, and in the case of Hyder, complainant, *versus* Gholam Russool, three witnesses. The names of witnesses are entered in the book when their examinations commence. This (V) is not in my handwriting, but I caused it to be written by copyist Gopal Kisto Deb. It is signed by Mr. Banerjea. (Reads—"After taking the examination of the witnesses, it is ordered that they be discharged, and the accused be in attendance on bail of Rs. 25.") This order was passed in the case of Hyder, complainant, *versus* Gholam Russool, on the 2nd September. This (W) is in my handwriting. (Reads—"The depositions having been taken, let the witnesses be discharged.") This order was passed on the 2nd September 1872 in the case of Anwar, complainant, *versus* Bishto Chand and others. The witnesses of that two and of two or three other cases attended on the 29th August. On that day Mr. Banerjea sat in court until 8 P. M. The mookhtear was very importunate about the discharge of these witnesses, as he saw they had been suffering much inconvenience. Mr. Banerjea at first said, "Very well; let them be discharged without examination." I remonstrated and said that this could not be done without their being examined. Mr. Banerjea hesitated. The mookhtears again represented, and he eventually said they will be discharged. The court head constable Koylas wrote something in his book. He was sitting on the other side of the table from me. I did not attend whether he wrote in English or Bengali. Next day or the day after a letter came from the Magistrate, and Mr. Banerjea went to the Magistrate and returned to the court. I asked him, "What has happened about the witnesses?" He said, "the saheb has told me to fine you." I said, "What is my fault? I told you not to discharge the witnesses and did not enter it in the report of their attendance made by the court inspector." I was not fined by Mr. Banerjea. For some days of December last year and again in January, February, and March I was in the mofussil. I returned to Sylhet at the latter part of December, and so did Mr. Banerjea. On 11th December Mr. Banerjea held his court at Nubbeegunge. On 23rd December he returned to Sylhet. On 19th January he went to Abidabad. I left for Abidabad on the 8th, and I think I arrived on the 12th. We remained there until the 1st February, when we started for Lushkerpore. We left Lushkerpore for Sunkerpassa on the 17th. We left Sunkerpassa with the records for Lakai on 2nd March, and the saheb left on the 3rd. The saheb took all the records into the mofussil and decided many cases. On the 30th January (reads from TT) Mr. Banerjea decided the case of Joykishto Koiburto *versus* Judishthir and Shoruth, dismissing the case, and ordering the boat to be given to complainant. This is the last order *dated 30th November* before we went into the mofussil. Many parties and mookhtears went into the mofussil with us; we took the record of this case. There was no order passed on the 28th December, the date fixed for the next hearing. The case was then taken up, but the defendants were not found. Shoruth and his mookhtear Hurree Thakoor were present at Nubbeegunge while we were there. They went home when we went to Sylhet. Judishthir's surety, Kali Koomar, agent, was called twice on that day. He came. Mr. Banerjea said, "Produce your defendant." He replied, "I understood that the case was to be taken up in the mofussil; he is there, how can I produce him?" Mr. Banerjea said, "The 31st is the end of the year; you must produce him on that day, or I will proceed against your bail." On the 31st both the accused were called for, but neither they nor their sureties were found. I reminded Mr. Banerjea that this case had been pending since July, and that all the witnesses for Judishthir had been examined and one for Shoruth remains, and that if this case remained undecided the explanation will be given up to Government. I added that the accused might be entered in the *mashkabar* as *feraree*. He replied, "Write them as *feraree*." I said, "That cannot be done so. You must get from the head constable who called them a report of their non-attendance, and on that I will write the order of *feraree*. That report was submitted, and I asked Mr. Banerjea, and he told me to write the order. That order (passed on 31st December, reads from record) was the order recorded by me. The names of these men were struck off the *Bakyát Bakee*, and they were entered as *feraree* in the quarterly and annual returns (first says in the *mashkabar*, but on being asked by the court says as before recorded). If the accused again appeared they were to be again arrested and the case re-entered. On the 31st December, after the passing of this order at 1 or 2 P. M., Kali Koomar, agent, appeared. Mr. Banerjea said, "Where is the accused?" He said, "I have brought him," and he produced Judishthir. He also produced a petition. I said to the saheb, "This man is present and his case is finished. It can be decided, and the case against Shoruth, who is absent, can remain, especially as Judishthir has been entered as *ferar*." He said, "What does it concern you? If the case against him is proved by the remaining witness for the defence, shall I do injustice by passing order on him now?" Kali Koomar urged for an order on this petition, asking for release from his suretyship. The mookhtear represented this three or four times, but the saheb would not pass any order. I said, "Some order must be passed." He said, "Very well; write to be brought forward with the misl." I had occasion to go into the Mohafiz-khana, so I gave the petition to the head constable and told him to write the order. After I returned I saw that the order had been written by the head constable. The warrant against Shoruth and the proceeding at the back dated 7th January are in my handwriting. This warrant (Y) dated 4th January against Judishthir, and the proceedings dated 7th, are in my handwriting. Both these warrants and both these proceedings were signed by Mr. Banerjea with his full signature. The papers requiring full signature were always brought to the notice of the saheb; they were either examined as concerning such a matter, or he read them himself, or they were read to him. The saheb kept some *nuthees* with him in which judgment had to be written, and I took the other *nuthees*, and this among them into the mofussil. The order of the 20th January on this paper (Z) is in my handwriting. I asked Mr. Banerjea and obtained from him that order. The record of that case had remained with Mr. Banerjea from the 31st December or 1st January for the purpose of writing his judgment. On the 8th ultimo, I was going into the mofussil. I took from Mr. Banerjea's house the records of all the cases in which he had to write judgments. The record of the case of Joy Narain Deb alone remained with him. I told him to keep this case and write his judgment, as an application for a copy has been made, and that he could send the papers to the mohafiz to give the copy. (Judgment of that case put in marked AA.) The record of this case and the judgment came into my hands when we returned to Sylhet, and they were then in the Mohafiz-khana. It was my duty to translate the substance of judgments, but I made none of this judgment because it never came to me, and was sent direct to the mohafiz (Mr. O'Kinealy draws attention to the fact that no such translation appears on this record.) We held cutcherry from the 20th January at Abidabad. I recollect seeing Boidonath, witness for defence of Shoruth, under arrest the day after I arrived. (Reads order of 22nd January.) This order was passed because Boidonath was present on that day and Shoruth was absent. When an order was passed on the police, it is entered in the head constable's book, and signed by the saheb; but if it was a judicial and final order requiring an order to the police to stay arrest of any person, or to arrest any of the accused, it would be also entered in my book. The head constable used then to carry out the order which used to be executed by the thannah police. The head constable used also to countersign the original order and mark it as *jaree*. I cannot make out on what day Shoruth appeared while we were at Sunkerpassa before going to Lakai. I learnt that a *nuthee* had been sent for by the Magistrate. I asked Mr. Banerjea, and was told it was Judishthir's *nuthee*. He added that he had sent an explanation from Abidabad.

and that he had lost the letter calling for it. That was the first that I heard of the matter. That record and five or seven others remained with him in his tent. He used black English ink in his court. He can now read Sylhet Bengali, but when he first came he could read clear language and clear writing only; he could not read the language and writing of this country used by Mahomedans. I used to go and read with him before he passed his examinations. He could read my handwriting, and used to read it. I don't write badly. I have seen him read my handwriting, and he used now and then to ask me when he could not read a letter. The last annual statement of Mr. Banerjea's court was prepared in Sylhet. I copied it, and read and showed it to Mr. Banerjea, and then gave it to the Mashkabarnuvees. Gopal Krishto made the fair copy. I read this paper (AB) to Mr. Banerjea, who gave no written order. I gave it then to Koylas, head constable, who furnished an explanation to Mr. Banerjea. This (K) is in Koylas's handwriting. *Question*—Was the order of the 31st December in Judishthir's case on Kali Koomar's petition (shown to witness) obtained by you from Mr. Banerjea without his knowing anything about it? [Mr. Montriou states that this not being a trial he makes no legal objection, but he considers this question part of an improper mode of conducting this inquiry. Mr. Montriou declines to state now what the other part he refers to is.]—It could never have been passed without his knowledge. Mr. Banerjea told me and told the head constable to write it. Mr. Banerjea knowingly gave that order.

Cross-examined.—I have been a fouzdari mohurir in the Magistrate's office since 1849, October, or some month. For some months I have been in the charge of the sheristas of Bejoy Madhob Baboo, Mr. Godfrey, the Joint-Magistrate, the Moulvie Dilawar Ali. I considered it my duty to endeavour to keep Mr. Banerjea from doing wrong; but for six months he did no work, and I had no occasion to tell him anything. He used to act according to my suggestions. But after six months, if I had occasion to say anything, he used to say, "What do you understand; why do you interfere?" I then considered that he was a competent man, and did not think it was my duty to interfere. I cannot say what the hakim does; whether it is justice or injustice. [Witness declines to answer the question as to whether Mr. Banerjea does justice or injustice, saying that he cannot express an opinion in public on such a matter]. During the first six months Mr. Banerjea used sometimes to give judgments from the bench, but at the end of the month, when there were a number of cases, he would write the judgments afterwards, but not often so. Afterwards he had more work. He was not a lazy Magistrate. He used to write the examinations at length, and took four hours to do what other Magistrates would take two hours. For that reason he used to work until nightfall. He used to have a good deal of work to do, but less than Mr. Mackertich has now. He used to ask more questions than other officers did. I should have considered him an ordinary Magistrate if Government had not increased his powers. I cannot interfere with the hakim's work. Why should I tell the Magistrate that Mr. Banerjea was slow over his work? If I had told the Magistrate he would have pulled my ears, as he would say that Mr. Banerjea works from morning until 7 or 8 or 10, and from 12 to 10. I do not consider that his work was foolish. The words *Narishta shood* were my private memoranda. The book is a public book. If I were to see that book some years hence, and I was to notice those words entered in places and omitted in others, I would say that the vernacular order had not been recorded. Gopee Thakoor, my successor, took the book. He did not write *Novishta shood*, because he did not know Persian, and because he knew his own responsibility. I cannot tell any particular case, though there were five or seven cases decided in December, in which he gave in the judgments in April. They were cases which had been dismissed. I cannot say more. The saheb has admitted everything in his *kaifyut*. An order that is not *mamootee* is made known to a Magistrate, and therefore I know that every such order has been made known. When an order has a full signature it must have been explained to the Magistrate. I first gave an explanation to Mr. Banerjea in April. It was not altogether true, for I wrote what an inspector advised me to write. I was reminded of what had occurred ever since what occurred at Sunkerpassa. I did not know that I should be required to give an explanation. I knew it first when Mr. Banerjea called upon me to give a *kaifyut*. He called upon me to give a *kaifyut* in connection with the *ferarre* order. I do not recollect that any one was then present. I sat in the Mohafiz-khana and wrote out a rough copy of a *kaifyut*. I sent it to Mr. Banerjea's court, and he said give it like that [(E.) *Prokare do*]. It was fifteen or sixteen days after he called for it. I refused to give one for that time. I then made the fair copy and gave it to Mr. Banerjea. Five or seven days after, I went to the saheb's house on business. I was also under the impression that the saheb would not give a true explanation, and people said so too. I asked, and he said he had not written an explanation. I said, "What will you write?" He said, "What I will write will not be bad for you or me." I said, "I have heard that there is a *gool*; don't turn it upside down. Write what is correct, and if you clearly state what has happened, I shall not get blamed. You are a young man and have lately got this appointment. God grant that you may be promoted; but don't write anything false." Then I read out a portion of what I had written as a *kaifyut*, but he would not attend, and I went away. Mr. Mackertich was then present. When I said this he was there, but I don't know if he was there throughout the time. I did not give the *kaifyut* into Mr. Banerjea's hand.

NOVEMBER 24TH, 1873.

Cross-examination continued.—It is not my habit to commit irregularities. I may have done so through inadvertence (*bhool*). [Babu Joy Govind Shome, Government Pleader, was here sworn as interpreter.] I first saw this paper (AB) in March, after the 11th; a little after; two or three days after. I know this, because the Magistrate's order on it is dated the 11th. I cannot recollect exactly whether we were in the mofussil or in Sylhet when we received it. I do not remember from whom I received this paper. I received it that the head constable might give *kaifyut*. I cannot say whether the constable had the paper before me. He may have had it, but I do recollect that I showed it to Mr. Banerjea, and then gave it to the head constable to give his *kaifyut*. If it was sent by dâk in the mofussil, it would go to the head constable first. From the misl book it appears that on 13th March we were at Hubbeegunge. It is two days' dâk from Sylhet if there is no interruption. (Attention called to writing in blue ink, 13th March 1873, on AB.) Don't know that this is Koylas's handwriting. If it was Koylas's handwriting it would mean that he received it on the 13th. His duty would be when he got that paper, if he got it, to give it to me. It is not his duty to bring such reports before Mr. Banerjea, unless I should happen to be absent. In the office of the Magistrate of the district it is usual for the court inspector to read the police reports, A and B forms, but sometimes they are read by the amla. Such reports as A B are laid before the Magistrate by the amla. Koylas gave a *kaifyut*. The saheb told me to give the report to Koylas. Two, or three, or four days after Koylas brought it to Mr. Banerjea, who said he would not take it, but that Koylas must send it to the Magistrate. Both I and Koylas asked Mr. Banerjea to put some order on it. It is my opinion that Mr. Banerjea should have written an order *forwarded to the Magistrate*, because Koylas was a subordinate of Mr. Banerjea. I was in Sylhet when Koylas took the *kaifyut* to the Magistrate. I do not know anything about the giving of the "chit" by Koylas. I only know by seeing these papers. Koylas never spoke to me about giving the chit either before or after. I knew of it first when (AB) this paper fell into my hands. I do not consider this chit to be a regular act. Information should have been given by *roobacaree* or regular order. This (3) is the *kaifyut* I gave Mr. Banerjea. One part of it is false. The portion (marked X in 3) is false. I knew it to be false when I wrote it. Mr. Banerjea told me to write it. He told me to do so before I wrote anything. He told me to write such a *kaifyut* that will not make a *goolmal* and settle the matter quietly. He did not leave it to me. He told me simply that there was to be no *goolmal*. I wrote it, and he read it to me, and he said, "Give it to me in this way." When he had accepted it, I concluded that it was what he wanted. It is not true that many cases were decided on that date, nor that many prisoners were discharged or convicted; but it is true that Kali Koomar presented a petition. "*Emot shamoy*" refers to the time of passing orders of acquittal and conviction, which were not many. "While I was busy writing out the orders;" this is false, I was not busy. It is not true, "I could not attend whether he presented a petition about the *ferarre* prisoners or some other prisoners." It is true that I was busy going to the Mohafiz-khana, and that, therefore, the head constable wrote the order. In consequence of what the saheb said I wrote all this. I did not show any *kaifyut* to Kali Koomar, nor did I describe to him what I intended to write. I asked Kali Koomar "What can you say about the petition you gave?" He told me the whole story, about his giving the petition to be released from the surety for a prisoner, of the conversation that had passed with Mr. Banerjea, and all about this matter. I was aware of it all before Kali Koomar was asked. I had seen and heard it. Nothing else passed between me and Kali Koomar. There was nothing agreed upon between us as to what should be written. There was no dispute between us on the subject. I do not recollect whether I sent for Kali Koomar that evening to my house or not. I do not recollect any occasion on which Kali Koomar, Juggut Jeebun Nazir, and I talked as to what should be said. I can say positively that there was no such conversation. I have lands in Sunkerpassa, a little in my own name, and some *benamee*, for which I pay Rs. 100 Government revenue. I do sometimes employ *taid* mohurirs, but that is not regular. I can prepare Statement No. 9 without assistance. I was not obliged to get Gopaul Krishto to prepare this statement, because I could not do it myself. He sometimes wrote the monthly statement because I had no time, not because I did not know how to do it. Judishthir came to see me when I went to Abidabad before the saheb came. He went with me to Abidabad in my boat, because he had no means to go. He came to me on the night of 8th January when I went to the boat. I saw him on the 31st December, but I cannot recollect whether I saw him between that date and 5th January. He came of his own accord on the 8th. He was not under arrest. There was no occasion, as the saheb knew he was here, and saw him on the 31st December, and he was under bail of Kali Koomar. I do not know what became of him after we arrived at Abidabad as we separated. I saw him afterwards occasionally. He used to come to the cutcherry and stop two or four *dandos*. When the warrant was issued for his arrest he was in Sylhet in the house of the collectorate sherishtadar, and I knew that he was there. That (3) was the only *kaifyut* that I gave Mr. Banerjea. I was sorry for giving the false *kaifyut* from the time that I gave it. I first told Mr. Banerjea about my having given a false *kaifyut* when he was himself being called upon for an explanation, and again after he had sent in his explanation. He told me not to be afraid. As far as I know, no one also knew

that I had given this false report. I recollect having a conversation with Mr. Sutherland on the subject. I told him that Kalinath Nundy has told me to give a *kaifyut* that would not give the saheb trouble. He urged me to give a *kaifyut* and not about the *goolmal*. I first told the Magistrate that I had given a false report, but when I cannot say; but on that day he called for the explanation about the witnesses. Mr. Sutherland asked me some questions which I answered, and then I told him that I had given a false report. He reproached me because I had given this false report and for other irregular practices of Mr. Banerjea—that the saheb used to deliver judgments after verbal orders; that he did not sign the witness book; that he kept on the case against other defendants to give them trouble when the case against only one defendant was not closed. He also reproached me for not having told him about the saheb sitting with Bengalis at his house and wasting his time instead of doing his work. Mr. Sutherland told me, "Why did you not report to me all these matters?" Mr. Sutherland was very angry with me about all this, but he did not punish me. I was then employed in the Magistrate's court. I used to go to Mr. O'Kinealy's sometimes twice or thrice a day; some days I did not go. I used to bring him records he required and answer his questions. I have heard that Mr. Banerjea has been charged with improper orders. If these orders were passed without his knowledge, of course I should be to blame. I am in debt. I could not realize my rent, and therefore fell into arrears. I paid up some, and some of my property was sold. Nund Kishore's property was sold for my debt, but I compensated him for it. Ramdyal Shukul has executed a decree and sold some of my property. I was suspended for one year, while I was in the police, on the report of Koylas's father. I was suspended once or twice when I first entered the Magistrate's office. I was also in 1871 recommended for dismissal. Mr. Banerjea fined me Rs. 20 at Sunkerpassa because I was late in arriving there and making use of a mirasdar's elephant. Were you not recommended for dismissal for embezzlement?—No. Were you not reported for keeping money which you ought to have paid to Government?—No. I know Baboo Hur Khally, Deputy Magistrate. I don't remember talking to him about this *feraree* business. I might have done so, but I don't recollect. I told Hur Khally Baboo at his lodging that an explanation had been called for in Mokoondo's case and had been sent for Judishthir's. No such conversation took place at Mr. Banerjea's place in Gopee Thakoor's presence. I can tell from reference to the record book how many cases were decided on 31st December. There may have been five or six cases. The mookhtears who had cases attended. I know Noorooddin Mookhtear, Don't recollect that he was then present, but cannot say whether he was not present. Know Prokash Chunder Dhur, mookhtear. Believe he was present. Believe that Koonjo Lall Dhur was present. Cannot recollect whether Biddyanand was present. Nasiroolla was a mookhtear in a case of that day, but whether he was present or not I cannot tell. Azhur Ali Mookhtear might have been there. There were probably five, seven, or ten persons present. Mr. Banerjea was not harsh in his treatment of me. The head constable used sometimes to get orders signed singly, and sometimes several together. Sometimes Mr. Banerjea used to ask me to read the *juwabs* and other papers, because he was not able to make out some words, not because he could not read them entirely Know Pitambar Chowdhry. Never received any letter from him about Shoruth's security.

Re-examined.—Mr. Banerjea did no Treasury work on 31st December, nor when he was at Abidabad and in the mofussil. The custom I have stated as to explaining orders to a Magistrate was the custom with Mr. Banerjea. I went to Kali Koomar's to learn what he had to say about the matter, because Mr. Banerjea did not wish to make it all known, and to make it *oolta*, and because what Kali Koomar would say would be the foundation of the case. I told Mr. Banerjea the conversation. I told him that Kali Koomar "speaks *oolta*." He said, "Let him say so."

After the close of this written examination, and after his deposition had been put in, Mr. O'Kinealy put in as evidence the *feraree* register, drawing attention to a particular entry marked (AC). He also put in the record of Mr. Banerjea's court in that case containing entry marked (AC). He also put in the record of Mr. Banerjea's court in that case containing the vernacular order of which the entry in the register was an extract. Mr. Montriou objects to the admission of this paper without its being proved. Mr. O'Kinealy claims to have it admitted under section 114 of the Evidence Act, illustration (E.) Mr. Montriou was accordingly allowed to cross-examine the witness Doorga Churn on this matter.

Cross-examination continued.—I recollect when that order (A D) was passed. Before that order was passed the descriptive roll of the accused was proclaimed. That is the usual custom before writing an order of *ferar*. If a man is entered as *ferar* on the last day of the year or of the month, it is not irregular (*be zabita.*) This was always the custom.

Re-examined.—The descriptive roll is issued by the police.

Mr. O'Kinealy puts in A E—A F.

NOVEMBER 25TH, 1873.

Mr. O'Kinealy puts in the records of two cases (A G—A H) in which the evidence was recorded in Bengali by Mr. Banerjea in his own handwriting; admitted by Mr. Banerjea.

MR. O'KINEALY tenders the records of 53 cases, which, he states, had been wilfully mis-decided by Mr. Banerjea, and in proof of the falsehood of his statement that he was over-whelmed with work. Mr. Montriou objects to the admission of these cases as not being properly in evidence before the Commissioners, because the falsehood alleged does not prove part of the charges, and because these cases have nothing to do with the charges under inquiry.

Mr. O'Kinealy contends that the records are evidence under sections 8, 11, 15, of the Evidence Act. The cases were admitted as evidence, and read.

No. 12.

Kali Koomar Deb, son of Manick Ram, on solemn affirmation.—I was surety for Judishthir in a case of boat theft on the 1st Srabun, or the 15th July. I remained surety for five months and seventeen or eighteen days. Mr. Banerjea went into the mofussil in Agrahan; before he went he told me to order Judishthir to attend before him at Abidabad on 28th December. I told Judishthir to attend. So he went away. I was at Sylhet on 15th Pous (28th December). Mr. Banerjea held cutcherry that day in Sylhet. I went to his court of my own accord to learn what he was going to do about Judishthir. Mr. Banerjea was sitting in court. He said, "Produce the accused." I said, "Whence can I produce him? You told him to attend at Abidabad." He said, "Pay up the Rs. 150 bail." I said, "I must pay if he does not attend at Abidabad to-day in accordance with your order." He said, "I know nothing of this: produce him." I asked for two weeks' indulgence to produce him. He gave me two days and said, "Produce him on Tuesday," 31st December. I returned home. On the Monday Judishthir appeared. On the Tuesday, at 10 or 11 A.M., I produced Judishthir, and applied for release from the suretyship. Mr. Banerjea then held court at the Circuit-house. (Reads his petition on the record.) That is the petition I presented. I took it into the court. Seeing me at some distance off, the saheb said, "Where is the accused?" I said, "Here is Judishthir," and I give in my *istofa*, showing it. The saheb said, "Where is Shoruth? I want him." I said, "He is under the bail of Hurree Thakoor. I have nothing to do with him." The saheb put his head down to write. I placed Judishthir alongside of the rail on which the mookhtears stand, and said, "Release me." Doorga Churn Moonshee said, "To-day is the annual and monthly statement; take him away to-day and produce him to-morrow." I was unwilling, and said, "I won't keep him for an hour." Doorga Churn got angry and said to Koylas, giving him my petition, "Write—'Let it be brought forward to-morrow." I repeated two or three times to the saheb, "This is not proper; relieve me from my suretyship and order the accused to give other bail or to go to jail". The saheb gave no answer. I was standing against the rail so far [points about 8 feet from where he was sitting writing.] Koonjo Lall Dhur and Prokash Shoonder Dhur, mookhtears, said to me, "Why don't you go? we saw you give your *istofa*." I left; Judishthir remained behind in the court. I have never paid the Rs. 150, or been called upon to pay it since the 15th Pous. In Bysack Mr. Banerjea called me up and said, "Write what happened or what you can recollect in Judishthir's case." I said, "Will your honor write; I will say what I know." He said, "I won't write; you write what you can recollect." I returned in half an hour and gave in my written statement. Next day or the day after he sent for me and said, "You have not written or recollected all that happened. Take this paper back and think it over and write it out again." I took it away, and on the same day I wrote out this paper (AI) with the exception of the latter part (marked) written in blue ink. When the first statement was returned to me, Mr. Banerjea was in court. I gave this paper (AI) to the saheb also in cutcherry. I cannot recollect whether there was anybody in court when I took the first report away. When I was first called for, Mr. Banerjea's court was closed; no one was allowed to come in, and the glass doors were closed. When I gave in this report (AI) there were persons in court. Two or four days—I cannot say exactly how long—after I gave in this report, a court constable, whose name I don't know, came and told me at my house that Mr. Banerjea was calling me. I went into his court. Mr. Mackertich, Ishan or Kalinath Inspector (who of these two I cannot say), there may have been a constable or orderly of the saheb, but no one of the public were present. It was one or two *dandos* before nightfall. Mr. Banerjea said, "What do you know about the *ferar*?" I said, "I know nothing; I had no conversation about the *ferar*". He said, "Write what you know." So I sat in the court and wrote the latter portion of that paper (AZ). I then left for my house. I know nothing about this affair of the *ferar*.

Cross-examined.—I cannot recollect in what respect the first statement differed from the second (AI). The first was more of an abstract. There was no contradiction. The saheb told me to write a brief statement; that is why I did not mention that he had stated, "I want Shoruth, not Judishthir." I thought that the saheb returned the first *kaifyut*, because there was something too much in it, or he wanted something to be added. I never said these words of Mr. Banerjea's to any one before to-day. One day I told Hur Khally Baboo all about this matter. That was a few days after I gave my *kaifyut*. I never heard that there was an order for a warrant against Judisthir when I produced him. Doorga Churn Moonshee did not tell me so that day. Judishthir remained afterwards a few days in the town. He then went into the mofussil with the saheb. He told me that Doorga Churn Moonshee had offered to give him *khorakee*, if he worked as a rower in his boat. He used to eat in the house of the Collectorate Sheristadar. He did not hide himself after Judishthir went into the mofussil. I have not seen him until now. Doorga Churn and I have once talked about this *kaifyut*. In Joishtee last he sent for me. He asked me what I knew about Judisthir's case, as the saheb had called upon him for a *kaifyut*. He said, "Who gave the order to Koylas

to write '*agoto misle pesh hai?*'" I said, "You did." He then said, "Very well," and tore his paper up. On that evening, or it may be some other evening, he again sent for me. There were some Mussulmans and Jug Jewan Nazir there. He said, "Will you take money and say falsely? You will have to give evidence about that matter. Who told Koylas to write that order?" I said "I shall tell the truth, as I before told you. You told him." I have been in the habit of attending Mr. Banerjea's court. I think he is a good man. I don't think he would tell a falsehood. When I went to his court there were mookhtears and persons about him, so I suppose he was engaged in cases; but when he saw me, he asked me about Judisthir. I went at the opening of his court.

No. 13.

Prokash Chunder Dhur, son of Lall Govind Biswas, on solemn affirmation.—I think on the last day of the year about 3½ P.M., Kali Koomar Mookhtear produced a petition to Doorga Churn Moonshee, when he was sitting before Mr. Banerjea. There was a considerable dispute between Kali Koomar and Doorga Churn about it. By looking at my *kaifyut* I recollect that Mr. Banerjea then said something. What he said or to whom he spoke I cannot recollect. I don't know Judisthir. I gave this *kaifyut* (AJ) to Mr. Banerjea on the 9th May. I was sick for some days at home, when Koylas came to me and said that Surendra Nath Saheb was wanting me. I said, "I am sick; but if it is anything important I will go." Koylas said, "You must write what you can recollect about Kali Koomar presenting a petition on Judisthir's case." I wrote it out; Koylas took it away. Some days after—it may be one, two, or three days, I cannot exactly recollect—I was in Mr. Banerjea's cutcherry on business. He said, as far as I can recollect, "Explain to me what you have written in this *kaifyut*." I did so. He said, "What you say does not correspond with what you wrote." I then had some argument with Mr. Banerjea. I said, "There is no difference." He said, "There is." I cannot recollect whether he told me or whether I offered to write out a fresh *kaifyut*. I took the *kaifyut* and destroyed it, and wrote this (A J). I gave him that second *kaifyut*. He said, "Do you recollect this distinctly?" I said, "I do." After he had returned from Calcutta under suspension, I went to his house to make my *salaam*. We spoke together. Mr. Banerjea never told me that he did not believe me, or that I had contradicted myself. I never made contradictory statements to him. Kali Koomar filed a petition for release from his suretyship.

Cross-examined.—I had not been in court all that day. How many times I went I don't know. I don't remember where I went. I recollect, from looking at this (AJ), that Mr. Banerjea did say something about the matter, but what it was I don't recollect, while Doorga Churn and Kali Koomar were disputing. I told Mr. Banerjea that I did not exactly recollect what had happened. In my opinion the saheb is a very good man. I cannot say whether the saheb can read mohurrir's handwriting, but I have seen him point to some names to have them read for him. (Pointing to the deposition now being written, witness says)—This is what I call a mohurrir's handwriting.

Re-examined.—I cannot say how long I was in Mr. Banerjea's court while this conversation was going on between Kali Koomar and Doorga Churn.

To Court.—This (AJ) is somewhat better than a mohurrir's handwriting. After I gave this in, Mr. Banerjea questioned me and said, "Do you know anything about a *ferar asamee*." I said, "No." He said, "Then write it," and I did so. I cannot recollect whether I had any cases before Mr. Banerjea on the day that Kali Koomar and Doorga Churn disputed, but I think I went to hear a judgment read.

No. 14.

Gungapershad Surma, son of Bhowany Pershad Surma, on solemn affirmation.—I was Judisthir's mookhtears. Kali Koomar was his bail. Judisthir attended frequently in that case. After Mr. Banerjea returned from the mofussil, I was going one day to the Collectorate cutcherry, and I met Kali Koomar, and Judisthir with him. Kali Koomar said, "I am going to petition for release from Judisthir's bail." Four or six *dandos* after I went to Mr. Banerjea's cutchery, and I saw Judisthir sitting in a corner near which the mookhtears stand (marks place in plan). I asked him what has happened. He said, "I cannot say." Mr. Banerjea was then present. I left. I don't remember seeing Judisthir afterwards.

Cross-examined.—I have been a mookhtear for 36 years. I have seen many Judges and Magistrates. I have done business in Mr. Banerjea's court. I consider him to be a good man, and not capable of telling a falsehood.

To Court.—I did not go into the mofussil with Judisthir.

NOVEMBER 27TH, 1873.

Doorga Churn Deb, re-affirmed and re-examined (to the Court at Mr. Montriou's request.)—Mr. Banerjea signed the order of 31st December on Judisthir's case, "*mashkabaree ferar ishha jai,*" immediately after passing it. I think it was before 12 o'clock. The second order *agoto misle pesh* was passed at 2 P. M. I was not present when it was signed. I was absent for four or five minutes, and found it signed on my return. That was about 2 P. M. He (Mr. Banerjea) may have signed whatever papers were left on that day at the close of his court. I cannot recollect what he did on that day, or whether there were many orders. If so, his practice was that of other officers, to sign at the close of the day whatever papers were remaining for signature.

H. T. PRINSEP.

No. 15.

Hurish Chunder Surma, son of Chand Ram Surma, on solemn affirmation.—I was Shoroth's mookhtear, and also his bail. I went to Mr. Banerjea at Nubbeegunge in the cold weather, and so did other mookhtears. I think Soroth went with me to Nubbeegunge. Mr. Banerjea held court there some fifteen or sixteen days. From that place Mr. Banerjea went to Sylhet, and at the time he was going to Sylhet he said—"Let all the persons who are connected with the cases go to Abidabad. I am going to Sylhet for two or three days, and will return and hold court there." After eight days I went home from Abidabad; as the saheb did not come, I returned to Abidabad and remained there some five days; and as the saheb did not come, I went home again. I went to Abidabad a third time, and saw Doorga Churn Moonshee there. He told me that the saheb would probably arrive in a day or two. Mr. Banerjea came on the night of the Kali Poojah. He asked me in court, "Where is your Shoroth? If you don't produce him in three days I will forfeit your bail." I sent a letter to Pitambar Chowdry, Shoroth's master, and two or four *dandos* afterwards Shoroth appeared of his own accord. Mr. Banerjea never demanded the forfeiture of my bail because Shoroth was not present at Sylhet. He never told me that Shoroth was *ferar*, nor do I know that a warrant was issued against him.

Cross-examined.—I was not present in Sylhet at Mr. Banerjea's court on 31st December. I was in the mofussil. I cannot recollect that at Abidabad Mr. Banerjea told me that a warrant had been issued against Shoroth. If such a remark had been made I may or may not have heard it. I am in the habit of attending Mr. Banerjea's court. I don't recollect that Doorga Churn Moonshee ever told me that a warrant had been issued against Shoroth. I am not aware that he was arrested. I do not know that he ever hid himself. I saw him at Abidabad, and then I went home. I saw him at Mathoor Rai's house, where I was staying. Mr. Banerjea's serishta was in charge of Doorga Churn. I have been a mookhtear for ten or eleven years. Doorga Churn used occasionally to make mistakes. In the case of Queen *versus* Wahidoolla and others, in which Mr. Banerjea convicted two persons and ordered a warrant against Wahidoolla, he issued a summons instead, and when this became known to Mr. Banerjea he rebuked Doorga Churn, who excused himself as an old man, and asked to be allowed one year's leave. That was in Cheyt 1279. Doorga Churn and Mr. Banerjea used to have altercations regarding the fixing of dates in the mofussil. I was present on the first day that Mr. Banerjea held court at Abidabad. He took up in the three days 150 to 200 cases. When parties were absent, he gave orders to be brought up in three or five days. I cannot say whether the orders were or were not recorded. I have seen some. I think I heard Mr. Banerjea ask Doorga Churn why he had not recorded an order for putting one Radhanath on bail for Rs. 50. The order for the trial of cases at Abidabad was given to the mookhtears, but to whom I don't know. As far as I know as a mookhtear Mr. Banerjea has never told a falsehood, nor do I think he would wilfully do so.

Re-examined.—The *goolmal* about bail between Doorga and Mr. Banerjea occurred after they had returned from the mofussil.

Mr. Banerjea used sometimes to say that he could no read "*Thánd*" handwriting.

To Court.—I do not know (nor did I see the record) whether the order to produce Shoroth in three days was recorded in writing.

NOVEMBER 27TH, 1873.

No. 16.

Koonjo Loll Dhor, son of Sibnarain Dhor, on solemn affirmation.—I am a mookhtear of the foujdari courts. Used to practise before Mr. Banerjea. This is my *Kaifyut* (AX). One day in December or January last, at the commencement of the chutcherry in Mr. Banerjea's court, Kali Koomar Deb said to me, "This man was a defendant under my bail. I have produced him and applied for a release." Kali Koomar and I were standing there (points to the place marked F), and the defendant to our left and behind. There was a petition in Kali Koomar's hand. He said, "They will not take it." I cannot recollect the exact words. Doorga Churn said in my presence, "It will not be taken;" but whether it was before or after our conversation, I cannot say. I went away, leaving both Kali Koomar and the defendant there. I remained one or two *dandos* there. Mr. Banerjea was in court. Doorga Churn spoke out openly. I could hear what he said. Mr. Banerjea could have heard what passed. He was engaged in some business, but on what business I cannot say. I gave a written statement to Mr. Banerjea twice, but they were both the same statements. I went one day to the post-office, and was told by a constable that Mr. Banerjea was calling me. I went to his court and found he had left. Koylas, head constable, and I, went to Mr. Banerjea's house about nightfall. He was outside; another

saheb was with him. He told me to sit down and write all I knew about the defendant that Kali Koomar had produced. I sat down and wrote, and came and gave it to Mr. Banerjea. I read it to him. He asked me about some matter that I cannot recollect, but which was not entered by me. It was, I think, about whether he had spoken to or answered Kali Koomar, so I wrote a postscript. He said—"It isn't well to write a postscript; take it and write it out in the body and bring it to my cutcherry." I accordingly wrote it all out in this (AX). There is no difference in the substances between this and the previous statement. I had written so far as the words "*abogoto nahin*" (marked). I took both this and the first statement to Mr. Banerjea's cutcherry in case he should say that I had changed anything. I gave him both of the statements, and he asked me and I wrote my answer at the end of the *kaifyut*. I then left, and was again recalled on the same day, and he asked me—"Did you recollect anything about that defendant being entered in the *ferar register*?" So I wrote the postscript. Both the two statements remained with Mr. Banerjea. I cannot recollect what I said, but I asked for the first statement. This (AX) is the first statement. I added these words [reads]. I strongly believe the saheb paid no attention and passed no order.

Cross-examined.—I cannot recollect whether I or Kali Koomar came first, or whether Mr. Banerjee was in court when I came. There were many people in court—about 15 or 20. The cutcherry had commenced about one *dando*. I do not recollect that there was any examination of witnesses going on. I used to think Mr. Banerjea a reliable person, but since this matter has arisen I cannot say. He used to decide his cases in an ordinary way, and with labor, as he used to work until night 8 or 9 P. M. I believe that I have written the statement correctly. He told me to write correctly for my sake.

No. 17.

Gopal Kisto Deb, son of Mohesh Chunder Deb, on solemn affirmation.—I have worked under Mr. Banerjea. I prepared the annual statement of his work. After I faired them I took them to his court to Doorga Churn Moonshee. I said, "A takeed has come for this, do you send it quickly." He said, "Wait, and I will show it to the saheb." I said, "I cannot wait," and I went away. This (A Z) is the annual statement in my handwriting. It shows two men as *ferar*. I wrote the order (at back of K), but I did not lay it before the Magistrate, but I wrote it in his presence. Mr. Posford, who signed it, was empowered to hear the ordinary reports. I cannot recollect whether Mr. Posford or some amla told me to write that order. Among the three amlas in attendance it may be that one read him that report.

Cross-examined.—I have been Nukulnuvees for six years. I entered the two men as *ferars* from the order book. Doorga Churn told me to write the annual statements, but nothing about these *ferars*. I commenced the annual statements in December and finished them on the 1st or 2nd January.

No. 18

Judisthir Koiburto, son of Bharo Dass Koiburto, on solemn affirmation.—Joykishto Koiburto charged me with boat theft before Mr. Banerjea. I came on account of it on the days fixed in Asarh, Srabun, and Bhadur, not in Assin, but nothing was done; and I came in Kartick, but nothing was done. Then I came in Agrahan, when my moonshee mookhtear, Kali Baboo, told me to be present on a certain day in Pous in the mofussil. Before the day fixed in Pous I started from home and went to Lakai. I asked the police amla where the hakim was. Thence I went to Sunkerpassa, thence to Nubbeegunge, where I learnt that the saheb had gone to Sylhet. I went to Sylhet. I went to my mookhtear, Kali Koomar, who took me to the saheb in cutcherry the next day after midday. Kali Koomar had a conversation with the moonshee, which I did not understand. All that I understood was that an *istafa* was given in. The hakim was there. I don't know whether he saw me. He was writing. Kali Koomar left, and I remained standing. Nothing was done that day. I said to Doorga, "My *istafa* has been given, where am I to stay?" He said, "Stay where you were before." I remained at Kali Koomar's. I remained twelve or thirteen days at Sylhet. I went to cutcherry during that time, but I could not see the saheb. I went to Abidabad in the Moonshee Doorga Churn's boat. I remained some times in the boat and sometimes in the moonshee's lodging. I remained fourteen or fifteen days at Abidabad, during which time I went to cutcherry, but I did not see the saheb. I never went inside the cutcherry. Four or five days before the saheb gave his decision he took the examination of a witness. In Phalgoon, while I was at home, I heard that the police were going to arrest me, so I went after the saheb and went to Sunkerpassa. I went to the moonshee, who sent me to Koylas, who gave me a *chittee* to give to the Bazitpore thannah. The daroga refused to accept it, and chellaned me to Lakai, whence I was sent to Sunkerpassa, where I was dismissed at midday while Mr. Banerjea was holding cutcherry. I was kept outside just opposite the cutcherry about five or seven *kaths* distant. Mohesh left me and went into the cutcherry, and shortly afterwards Koylas came out and said, "You may go."

Cross-examined.—I was not Doorga Churn Moonshee's servant. He fed me. I rowed his boat. I did not know him before this case. He fed me two or four days at Abidabad. I ate once or twice with the moonshee before I went in his boat. Every day before I went.

NOVEMBER 28TH, 1873.

Called by the Commissioners under Sections VIII and XIV.

Koylas Chunder Deb, son of Gaur Chunder Deb, on solemn affirmation.—I used to be court head constable in Mr. Banerjea's court. I am now out of employ. I resigned my appointment on 18th June last. It was accepted on 1st July. I continued doing my work up to the end of June. I resigned my appointment through fear, as I had heard from the court inspector that the Magistrate had written a letter to the Judge for my transfer. I have served in the police for about one and half year, and before that I was a keranee in Mr. Peterson's income-tax establishment. I served there for six or seven months. Before that I acted for two months as clerk in the office of Protector of Laborers. Before that I served as naib jailor under Dr. Deacon. I acted as naib jailor for three weeks. Before that I was a village teacher. I was also for two weeks acting as second writer in the District Superintendent's Office, and I also served for one or two days in the office of the Judge of this district. With these exceptions, I never served under Government. I served in Mr. Banerjea's court about one year up to the 18th June last. It was my duty to issue warrants and summonses, and orders to the police, to report the attendance of parties, &c., and, when ordered by the saheb, to write statements (*istefsar*); and when ordered by the saheb, to write orders and to *pesh* papers (corrects himself). I used not to "*pesh* the misls," but used to read orders to the police. It was not my duty to do any business with the misls or special court work, but I used sometimes to assist Doorga Churn Moonshee. I used to write orders sometimes from the saheb's own mouth, and sometimes what the moonshee told me. I used sometimes to write orders, not from the sahib's mouth, but as I was told by the moonshee. I did not do this very often, but sometimes. I know this paper (D). I went to the jail to get this warrant altered in the jail. At that time the two prisoners were in confinement under it in the jail. I went there in accordance with Mr. Banerjea's order. The saheb said, "If it can be corrected, why should it not be corrected." I was in the habit of constantly going to the jail as I was intimate with the people there, so I told some one, whom I cannot recollect exactly, to alter it, and said it was the saheb's order. [Reminded of Chunder Koomar, and asked if he cannot say that it was not Chunder Koomar to whom he told this.] It may have been Chunder Koomar. Mr. Banerjea never told me directly to go and get the warrant altered. He said, "If it can be altered, get it altered." I cannot say to whom he said this; it may have been to me and it may have been to the moonshee. The writing of alteration is Chunder Koomar Ghoses. It may have been that he altered it. It was altered in my presence. Mr. Banerjea knew of this, as he overheard a conversation I had on the subject with Bharut Moonshee. I don't think I told the saheb myself. Since I have given my resignation I have heard that I have been blamed about this matter. I did not hear of it before. This (E) is in my handwriting. I wrote it instead of Bharut Chunder Moonshee, because he must have been busy, and told me to write out the order. I cannot say the date on which he said this. I think it was 3, 4, or 5 days after the date of this order. I don't think Bharut Chunder refused to write it; because if he had done so, I would not have written. If Barut had objected, and Mr. Banerjea had given a special order to me to write it, I should not have done so without consulting Bharut Chunder; and if there had been a *gool*, I should have reported to the saheb. This (K) is in my handwriting, so are (L) and (M).

I do not recollect at what time Mr. Banerjea's court opened on 31st December. That report (reading) regarding the absence of Judisthir and Shoroth on 31st December is in my handwriting. It was, I think, written in the commencement of the cuchery. That is a true report. I did not report to the saheb that Judisthir and Shoroth were absent. I do not know how their names were called out. I believe that their names were called out. I cannot say exactly (*teek*). The Moonshee Doorga Churn told me to write a report of the absence of Judisthir and Shoroth. I asked, "Have they been called." He said, "Yes." I asked, "By whom." He said, "That constable." I asked the constable, and wrote it. I don't recollect the name of the constable. I did not mention his name in the report, nor on whose information I wrote it. I gave the report to the moonshee, who did not *pesh* it, but kept it by him. I did not hear the saheb give any order on this report. I can say so positively, and I think that I saw the moonshee write out the order on it. I think that when I finished gave the paper to the moonshee he had something also in his hand, and that when he was writing that he wrote the order on my report. I think, but I cannot recollect exactly, that I first read this order when a *kaifyut* was called for from the saheb. I knew Kali Koomar Deb by name only when the *kaifyut* was called for from the saheb. Before that I knew him only by sight, but for how long I cannot say. I cannot say whether it was Kali Koomar who filed this petition (petition applying for release from suretyship). I believe some mookhtear presented it. I cannot say when it was presented. I was not paying attention. I don't recollect any conversation that passed on that day in court about that petition, nor did I hear. The order at the back is in my handwriting. I recollect that the moonshee told me to write that order. The saheb never gave that order to me or to the moonshee. I wrote that order at 2½ or 3 watch. I think so. I did not read the petition when I wrote that order. The moonshee gave it to me to write as he was busy. I cannot say that there was any necessity for writing it at once. I cannot say that Judisthir Koiburto was present in court on the 31st December. I did not see him. I think that the case of Judisthir was decided towards the end of January at Abidabad. I don't know that at that

time there was a warrant out for his arrest. (Shown Y.) I see now that a warrant was issued to the police of Mymensingh for his arrest. (Says afterwards). When a *kaifyut* was called for from Mr. Banerjea, I read over the *nuthee* and saw that a warrant had been issued. (Again says) I knew of it before, but I cannot recollect when. A *kaifyut* was, I think, called for from Mr. Banerjea. I think one or two months before I gave my resignation. This (L) is a *kaifyut* of this case.

After the decision of his case, Judisthir appeared under arrest in custody of a constable at Sunkerpassa where the saheb was holding cutchery. This was one to one and half months after we left Abidabad. Along with Judisthir there was a letter of mine *chellaned* in. I gave that letter to the sherista. The letter was addressed to the sub-inspector of some thannah mentioned to me by Judisthir. Ten or twelve days previously (I think it was) Judisthir came to me at Sunkerpassa. He told me that the moonshee had told him to ask me to write a letter to the Bazitpore police to say that his case had been decided and that he was not to be arrested on the warrant. It may have been that before this I first learned that there was a warrant out againt Judisthir. (Again says) I firmly believe that was the first that I heard of the warrant. On being told by Judisthir, I went and asked the moonshee. I did not ask Mr. Banerjea, because I think he was not in his tent, but had gone out in the morning. The moonshee told me to write the *chittee*, so I wrote it. The *chellan* of Judisthir under arrest and the *chittee* came to me. I let him go according to rule without telling the saheb. Mr. Banerjea never asked me why I had released him without telling him. I don't think he ever did. I cannot recollect that any *kaifyut* was ever called for from me regarding this case (shown K). Now I recollect having been called upon for a *kaifyut*. I also was called upon by Mr. Banerjea to give a *kaifyut*. (Told to read K).—You see that you there said that Mr. Banerjea verbally ordered you to give a *chittee* to stop the execution of the warrant against Judisthir? Yes—Is that true? Yes; but I received no verbal order from the saheb—You first said, my *Kaifyut* is true, then you said, I got no verbal order from Mr. Banerjea to write the chit; you have written in your explanation that you acted on a verbal order of Mr. Banerjea. What is your meaning? the *Kaifyut* is true. I did not enter in it that the saheb told the moonshee, and the moonshee told me to write the chit. It is true that the *Kaifyut* is mine. I wrote this *Kaifyut* from what the moonshee told me. I gave it twice to Mr. Banerjea, who on the first occasion got angry and said—"You have asked me to write wrongly. I will report you and the moonshee." That was the substance of what he said. He did not read it, but I told him the substance of it. On the next occasion he said, "Why did you bring this forward before again on that day? I know nothing of this; send it to the Magistrate." After that I added the last part of my *Kaifyut* and sent it to the Magistrate. I wrote the last part in consequence of my conversation with the saheb, and of my own accord and not from dictation. I did not write this part from the moonshee's dictation. This (H) is in my handwriting, so is H. *Bing jung* means discharged without examination. So is JJ; also JJJ.

FOR DEFENCE.

The deposition of Joseph Posford, who on oath duly administered saith.—I am Officiating Joint-Magistrate of Sylhet. I was Assistant Magistrate of Sylhet at the same time with Mr. Banerjea. I know nothing against his character for truthfulness and honesty since he has been here.

H. T. PRINSEP.

The 29th November 1873.

Joy Govind Shome, son of Dhol Govind Shome, who on oath duly administered saith.—I am Government Pleader of this district and a Master-of-Arts of the University and an Elder of the Free Church. I am acquainted with Mr. Banerjea intimately. As far as my knowledge goes, I think him very truthful and a man of honorable feelings. As far as I know, I do not think he would act dishonestly or dishonorably in his office.

H. T. PRINSEP.

The 29th November 1873.

The deposition of Koylas Chunder Ghose, son of Madhub Chunder Ghose, on solemn affirmation.—I was lately acting as Government Pleader, and I am a pleader of the Judge's court. I have been acquainted with Mr. Banerjea ever since he came here. As far as I know him, he is truthful and honest. So far as I know of him, I have no reason to believe him to be capable of dishonesty or fraud.

H. T. PRINSEP.

The 29th November 1873.

The deposition of Hurkally Mookerjea, son of Bhoiro Chunder Mookerjea, who on solemn affirmation saith.—I am Deputy Magistrate here, and have been so for upwards of three years, and I was before that Deputy Magistrate at Cuttack, and before that Deputy Inspector of Schools. I have been very well acquainted with Mr. Banerjea since I have been here. I consider him perfectly truthful and a perfectly honest gentleman. I do not believe him capable of dishonesty or deceitful conduct in his office as Magistrate.

[The Commissioners here intimate to Mr. Montriou that they do not consider it to be their duty further to examine this witness regarding anything that he may have done in this case. Mr. Montriou declines to examine him himself.]

H. T. PRINSEP.

The 29th November 1873.

Doorga Coomar Bosu, son of Shudanundo Bosu, on solemn affirmation.—I am Head Master of the Sylhet Government School, and a graduate of the Calcutta University. I have known Mr. Banerjea for the last two years. I believe him to be a good man, truthful and honest. I don't think him to be capable of deceitful or dishonest conduct in his office as Magistrate.

H. T. PRINSEP.

The 29th November 1873.

Grish Chunder Dass, son of Gopeenath Dass, on solemn affirmation.—I am Judge's Sheristadar, and have been so since 1865. I have known Mr. Banerjea since his residence here. I believe he is an honest and truthful man. I don't think a man of his education would be deceitful or dishonest. I do not believe that he is capable of deceitful or dishonest conduct in his office.

H. T. PRINSEP.

The 29th November 1873.

Ishan Chunder Patronuvees, son of Roghoonath Patronuvees, on solemn affirmation.—I am Inspector of Police in Sylhet, and have been so since 1868. I have been acquainted with Mr. Banerjea since his residence here. I believe him to be an honest man. I certainly do not think him to be capable of dishonesty or deceit in his office as Magistrate.

H. T. PRINSEP.

The 29th November 1873.

The deposition of Prem Chunder Nath, son of Fakeer Chund Nath, who on oath duly administered saith.—I am Head Master of the Rash Behary School. I have been acquainted with Mr. Banerjea during his residence here. I believe him to be an honest and truthful man. I do not think that he is capable of deceit or dishonesty in his office as Magistrate.

H. T. PRINSEP.

The 29th November 1873.

Gour Churn Dass, son of Lukhon Ram Dass, who on oath duly administered saith.—I have been Sub-Inspector of Police in Sylhet for seven years, and am so now. I have been personally acquainted with Mr. Banerjea since his residence here. As far as I know of him, he is a good and honest man. I don't believe that he could be capable of dishonest or deceitful conduct in his office as Magistrate.

H. T. PRINSEP.

The 29th November 1873.

Kristo Churn Dass, son of Kishon Dass, on solemn affirmation.—I am Head Clerk of the Judge's Office, and have been so since 1866. I have been personally acquainted with Mr. Banerjea since his residence here. I believe him, as far as I know him, to be an honest man, and I don't believe that he is capable of dishonest or deceitful conduct in his office as Magistrate.

H. T. PRINSEP.

The 29th November 1873.

Boikanto Nath Bol, son of Hur Persad Bol, on solemn affirmation.—I am Translator of the Judge's Court, and have been so since 1866. I have been acquainted with Mr. Surendra Nath Banerjea since his residence here. He is an honest and good gentleman. I don't believe him to be capable of dishonest or deceitful conduct in his office as Magistrate.

H. T. PRINSEP.

The 29th November 1873.

Kali Hur Mitter, son of Loknath Mitter, on solemn affirmation.—I am Sub-Inspector of Police. I knew Mr. Banerjea since he came to Sylhet. I believe him to be a truthful man. I do not believe him to be capable of dishonesty in his office as Magistrate.

The 29th November 1873. H. T. PRINSEP.

No. 9, dated 6th February, 1874.

From—The Government of India,

To—The Secretary of State for India.

We transmit herewith, for Your Grace's consideration, a copy of the papers cited on the margin, having reference to the official conduct of Mr. Surendra Nath Banerjea, of the Bengal Civil Service, late Assistant Magistrate of Sylhet. From these papers Your Grace will perceive that the charges made against this officer were so serious that we deemed it expedient to direct that an enquiry should be made into them in accordance with the procedure laid down by Act XXXVII of 1850. In so doing we followed the precedent afforded by the case of Mr. P. Humphery, of the Bengal Civil Service, which was the subject of a Special Narrative forwarded to the Secretary of State under our despatch here cited,* and which is in many particulars similar to the case now before us. The enquiry was held at Sylhet under the orders of the Hon'ble the Lieutenant-Governor, and the report submitted by the Commission forms one of the enclosures of the letter from the Government of Bengal dated the 20th December last.

From the Government of Bengal, No. 3489, dated 29th July 1873, and enclosures.
To ditto, No. 2820, dated 1st September 1873.
From ditto, No. 5443, dated 20th December 1873, and enclosures numbered 1 and 2.

* No. 93, dated the 12th August 1870.

2. The nature of the issues referred to the Commission is such that they cannot all be decided with the same degree of certainty; but the Commission have evidently spared no pains in making their investigation, and we find no reason to differ from the conclusions which they have unanimously adopted. We observed that on the 3rd article in the list of charges Mr. Banerjea was acquitted; and we should add that in forming our judgment upon the whole case we have virtually set aside the 1st and 2nd articles, as containing charges comparatively slight and subordinate. Nevertheless we are of opinion that all the charges, except one, are proved.

3. Therefore, as we concur with Sir George Campbell in accepting the conclusions of the Commission, we could hardly avoid concurring in his recommendation that Mr. Banerjea should be removed from the Civil Service, even if we agreed with the Lieutenant-Governor that the worst feature of the case was that which is put forward as such in the 9th paragraph of the letter, dated the 20th December 1873, from the Bengal Government. But while we think that the censure passed in that letter by Sir George Campbell upon this part of Mr. Banerjea's conduct is deserved, we consider that the investigation has disclosed that which in a Judge is a yet worse offence than dishonest fabrication of his judicial record, or than false assertions and attempts to shift the blame upon others. It discloses a palpable abuse by Mr. Surendra Nath Banerjea of his judicial powers, and the infliction by him of injustice on innocent persons for the purpose of screening his own faults. These are the charges which appear to us the most serious. They are numbered 5, 6, 8, 9 in the list furnished to the Commission—and we now proceed shortly to state the nature of them.

4. It will be borne in mind that Mr. Banerjea's irregularities and his dilatory procedure as a Magistrate had already been animadverted on by his official superior, and that at the end of 1872 the case of the prosecution against Judishthir and Shoruth was in such a condition that Mr. Banerjea found himself liable to be called to an account for his slovenly conduct of it. To avoid detection he passed on the 31st December 1872 what has been called the *firár* order, that is, the order to enter the two accused persons as absconded. Now in the latter part of December 1872 Mr. Banerjea was sitting at Sylhet. He had intended, it seems, to go to Abidabád, and there to try this case. Judishthir had been ordered to attend at Abidabád and had obeyed that order. He was at large on bail, his surety being one Káli Koomár, a pleader practising in the Court at Sylhet.

5. In this state of things Mr. Banerjea on the 28th of December suddenly called on Káli Koomár to produce Judishthir at once. Káli Koomár reminded the Magistrate that Judishthir was at Abidabád in obedience to the Court's order,

and asked for a fortnight's time to produce him at Sylhet. Of course such a postponement would have prevented the making of any order recording the man as *firár*, or absconded. But Mr. Banerjea would only allow time until 31st December, and, notwithstanding the remonstrances of Káli Koomár, and his representation that it was physically impossible to send to Abidabád and procure Judishthir's attendance by the 31st, Mr. Banerjea peremptorily ordered Káli Koomár to produce Judishthir by that day under penalty of forfeiting Rs. 150, the amount of his bailbond.

6. Early in the morning of the 31st December the names of Judishthir and Shoruth were called, and on their non-appearance the *firár* order was made, placing the names of these two men upon the register of accused persons absconded; the object being, as the Commission explain, that Mr. Banerjea's neglect to dispose of this particular case within the calendar year might escape censure. It happened, however, that Judishthir, so far from absconding, had of his own accord set out to seek the Magistrate, and so had arrived at Sylhet on the 30th. In the forenoon of the 31st (between 10 and 11 o'clock) Káli Koomár took Judishthir to the Court, and called Mr. Banerjea's attention to his presence. Mr. Banerjea, however, merely said that he wanted the other defendant Shoruth, and then occupied himself with writing. He did not discharge the *firár* order as against Judishthir, though the man was there before his eyes; but on the contrary, after having on the 28th December peremptorily required Káli Koomár to produce the man for whom he was surety, when the man had been produced the Magistrate refused to release the surety; and, instead of releasing him, made an order that his petition to be released should stand over till the next hearing of the case. An altercation took place between Káli Koomár and the Court writer, varied by appeals to Mr. Banerjea himself, all which (according to the evidence) he pretended not to hear, keeping down his head and writing. Ultimately Kali Koomar left the Court, his brother pleaders intimating that they would be his witnesses as to what had taken place.

7. Contemporaneously with the *firár* order was given (as would seem to be the custom) an order to issue warrants for the arrest of the absconded persons. Such a warrant was issued against Judishthir on the 4th of January 1873, and he was subjected in consequence to the hardship of unnecessary arrest and confinement. As to these warrants, the finding of the Commission is that "Mr. Banerjea on the 31st December deliberately ordered their issue, that he knew that Judishthir was subsequently brought into his Court by Káli Koomár, and that he nevertheless failed to withdraw the order for his (Judishthir's) arrest."*

* Paragraph 36 of Commission's Report.

8. Mr. Banerjea's sole defence is that all these things were done quite unconsciously by him, that he knew nothing of the orders recording these men as absconded and postponing disposal of the surety's application to be released, and that his signatures to these orders were taken without his knowledge. He says also that he heard nothing of Káli Koomár's urgent oral application for release. This is a story which no one who has officially enquired into the case has found himself able to believe. We find, therefore, that, both in his treatment of Judishthir and in his treatment of Káli Koomár, Mr. Banerjea committed an intentional violation of justice, and caused substantial wrong, in order to cover his own judicial irregularities.

9. Mr. Banerjea's eventual acquittal of the two defendants is found by the Commission to be a wilful mis-decision of the case. If this be so, it constitutes a third instance of his abuse of judicial powers to screen himself from the consequence of failure in the performance of his duty. But though there is good reason to believe that the Commission are right, it cannot be positively asserted that the acquittal is not explicable by other considerations. We have, therefore, dwelt particularly on his treatment of Judishthir and Káli Koomár, which seems to us absolutely inexplicable on any hypothesis other than the wrong motive which the Commission attribute to him.

10. We doubt whether the interests of justice can ever be safe in the hands of an officer who has shown such a want of conscientious regard either for his own duties as a Magistrate or for the rights of others, and we consider that it would be a very bad example to continue in the service of the Government

one who has manifested such a determination to make his power as a Judge the means of hiding his own misconduct, and who for this purpose has not hesitated to commit acts of injustice toward those who are brought under his judicial authority. We are unable to allow that Mr. Banerjea's youth, or the absence of judicious official supervision to which the Commission have alluded,* can be accepted in palliation of such offences, which are of a kind affecting the public service much more materially than the misconduct for which Mr. Humphery's removal from the Civil Service was recommended in 1870 by the Government of India, in the despatch† which we have already quoted. And we feel that we have no other course than to recommend to Your Grace that Mr. Surendra Nath Banerjea be removed from the Covenanted Civil Service.

* Paragraph 10 of Commission's Report.

† 12th August 1870.

11. If our recommendation in this case be confirmed, Your Grace may probably see fit to permit us to make some compassionate allowance to Mr. Surendra Nath Banerjea, such as has been frequently made to officers who have been dismissed from the Indian Civil Service. Having regard to the circumstances of this case, to Mr. Surendra Nath Banerjea's position in India, and to the fact that Natives of India constantly earn but a small pension after a long and honourable service, we propose that the allowance which may be granted to Mr. Banerjea for his life shall not exceed fifty rupees monthly.

No. 47, dated 31st March, 1874.

From—The Secretary of State for India,
To—The Government of India.

1. The despatch of your Excellency in Council, dated the 6th of February, No. 9 of 1874, relative to the case of Mr. Surendra Nath Banerjea of the Civil Service, has been considered by me in Council.

2. Your Lordship in Council after a full investigation by a commission appointed under the provisions of Act XXVII of 1850, considering Mr. Banerjea to have been guilty of falsehood and of a palpable abuse of his judicial powers, has recommended his dismissal from the service of Government.

3. The Lieutenant-Governor of Bengal has also arrived at a similar conclusion.

4. I am compelled, with great regret, to state that I concur in the views expressed by your Lordship in Council, and that I must direct the removal of Mr. S. N. Banerjea from the Civil Service.

5. I will accord my sanction to the grant of a compassionate allowance of Rs. 50 per mensem to Mr. Banerjea.

Balance expended... 3,340

Rubbee irrigation completed, Sugarcane and Indigo waterings commenced, the areas of which will be included in April's Statement.

E. J. Canal.—Moderate demand for Sugarcane and Indigo.

Traffic.—Traffic Manager reports a slight falling off in grain traffic compared with last month owing to a check in the demand for the Cawnpore market. But compared with the corresponding months of last year, these returns exhibit an increase both in grain and material.

Allahabad, The [illegible] April 1874.

P. S. MARINDIN, *Captain, R. E.,*
Asst. Secy. to Govt., N.-W. P., Irrigation Branch.

Rubbee irrigation completed. Sugarcane and Indigo waterings commenced, the areas of which will be included in April's Statement.
E. J. Canal.—Moderate demand for Sugarcane and Indigo.

Traffic.—Traffic Manager reports a slight falling off in grain traffic compared with last month owing to a check in the demand for the Cawnpore market. But compared with the corresponding months of last year, these returns exhibit an increase both in grain and material.

GOVERNMENT OF INDIA,

PUBLIC WORKS DEPARTMENT.

IRRIGATION OPERATIONS IN THE NORTH-WESTERN PROVINCES FOR THE KHUREEF, 1873-74.

No. 374 A, dated Allahabad, the 2nd April 1874.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces.

READ the following papers:—

A 6.—Comparative statement of irrigation and rainfall for khureef, 1873-74.
B 6.—Statement of crops irrigated by districts.
C 6.—Statement of crops irrigated by Canal Divisions.
Comparative statement of revenue for the khureef, 1872-73 and 1873-74.

OBSERVATIONS.—The results shown in these returns, taken as a measure of the progress of the canals towards a state of sound financial prosperity, are the best which this Government has ever yet had to record.

In a season not marked by any such failure of rain as to require the irrigation of the lower classes of crops, and in which, therefore, the total area irrigated was 100,000 acres less than the maximum attained in the year 1868-69, the gross revenue is still within Rs. 14,000 of the highest ever reached, and is, indeed, one lakh of rupees in excess of the revenue of the khureef of 1868-69, though the area irrigated is 83,000 acres less than it was in that year. The cause of this is the steadily increasing spread of cultivation of the more valuable crops, which has been so marked of late years.

2. Table No. I shows the areas irrigated, and gross revenue assessed in each khureef since 1866-67:—

TABLE I.

YEAR.	Areas irrigated in khureef.	Irrigation revenue from all sources in khureef.
	Acres.	Rs.
1866-67	321,476	8,89,140
1867-68	289,910	9,27,102
1868-69	484,485	12,19,344
1869-70	501,625	13,39,807
1870-71	396,399	12,07,265
1871-72	333,117	10,42,814
1872-73	353,619	11,01,288
1873-74	401,576	13,26,281

The present khureef is thus third on the list as to areas irrigated, and second as to revenue.

3. Statement A6 shows that the increase over the areas irrigated in 1872 is common to all districts except Seharunpore, Moozuffernuggur, Muttra, and Agra. In the two former the decrease is considerable owing to a large falling-off in rice irrigation (explained below), not counterbalanced as in other districts by an increase in indigo, because that crop is not grown to any great extent higher up the Doab than Meerut. The falling-off in Muttra and Agra is trifling. The largest increase of all is in Bareilly, which is highly satisfactory, as showing that the remodelled canals in Rohilkhund are beginning to do good work.

The general failure of the early rains in June may account to some small extent for the increase in irrigation, but the main cause of the good financial result is to be found in the increased cultivation of indigo and sugar-cane.

4. Statement No. C6 shows that all canal divisions contributed more or less to the increase except the Eastern Jumna Canal, which traverses a country wherein much rice and little indigo is grown, and which is therefore more affected by the falling-off in rice than any other division.

The same cause affected the Northern division of the Ganges Canal, where the increase was only nominal: but it is difficult to account for the smallness of the increase in the Allygurgh and Cawnpore Divisions, where it amounted to less than 2 per cent., as compared with an increase in other divisions ranging from 21 per cent. in the Meerut Division to 35 in the Etawah Division.

5. Table II. shows the areas of sugar-cane, rice, indigo, and cotton irrigated in each year since 1866-67, and also the areas of the 4th class crops, principally consisting of the commoner grain and fodder crops:—

TABLE II.

YEAR.	Sugar-cane.	Rice.	Indigo.	Cotton.	Fourth-class khureef crops.
1866-67	76,876	116,355	72,290	27,145	27,475
1867-68	87,050	97,867	77,976	8,265	11,836
1868-99	97,555	111,019	76,687	52,992	141,256
1869-70	104,596	117,548	130,248	55,883	83,979
1870-71	112,141	96,479	118,897	35,070	28,087
1871-72	94,816	76,850	119,617	20,365	9,228
1872-73	102,043	83,607	130,982	14,793	12,504
1873-74	130,284	73,875	149,073	16,354	28,035

The areas of sugar-cane and indigo are higher than they have ever been; cotton, though higher than last year, still shows but a limited area, and there is a large falling-off in rice, owing to the water-rate charged for it on the Ganges and Eastern Jumna Canals having been raised from Rs. 3 to Rs. 5 per acre. This falling-off would have been much larger but for a very large increase on the Rohilkhund Canals, where the rate remained unchanged.

6. As it is important to judge of the effect of the rise in the rate for rice, a more detailed analysis of the returns, as regards this crop, is necessary. From the returns for the past two years it appears that the area has decreased by 5,848 acres, or 21 per cent., on the Ganges Canal, and by 16,271 acres, or 43 per cent. on the Eastern Jumna Canals. And the fluctuations in water-rate derived from this crop in the two years have been approximately,—

Ganges Canal	Increase of Rs. 24,000
Eastern Jumna Canal	Decrease of „ 6,000
	Net Increase Rs. 18,000

This, however, gives rather too favourable a view of the effect of the increased rate; for it is probable that had the rate remained the same, the area irrigated in 1873 would have been larger than in 1872: but it would take 38,000 acres on the Ganges Canal, and 39,000 acres on the Eastern Jumna Canal, to produce at Rs. 3 per acre the revenue derived from rice in 1873 at Rs. 5; and such areas as these have never been irrigated except in excessively dry seasons. It may, therefore, be said that the change has certainly not resulted in any loss to Government in the year under review. The limitation of irrigation on this crop, which requires a large and often wasteful expenditure of water, is, on general and sanitary considerations, not to be regretted. The area of fourth class crops, though much larger than last year, is still very small compared with the enormous area irrigated in the year of drought 1868-69.

7. It is a question of great interest whether, in a future season of drought, equally large areas of fourth-class crops and rice could be protected, without sacrificing the two great staples, indigo and sugar-cane, of which the cultivation has been so largely developed since the last dry year.

Those areas were of rice 87,000 acres, and of fourth-class food crops 113,000 acres in excess of the results of 1873-74. With such additions, the past khureef irrigation would have extended to 550,000 acres, about 50,000 acres in excess of the area of 1869-70: but there is every reason to believe that our resources are equal even to such a strain as this; the irrigation of the additional area of fourth-class crops secured in a year of drought, commences late in the season when the last hopes of rain are fading away; and by this time indigo is matured, and requires no more water. The water employed at present for 130,000 acres of indigo becomes available in due season for the use of 150,000 acres of fourth-class crops, and of rice, of which the irrigation commences as that of indigo is finishing.

Sugar-cane which requires water all the year round, might appear liable to suffer to some extent from the additional demand for food crops in a famine year; but the greatly improved economy which has been effected in the distribution of water since 1868-69, gives reasonable expectation that the sugar crops would not be seriously affected by the additional demand, and that the canal-irrigated districts of these provinces may in future years of trial, again, as in 1868, become the granaries of adjoining countries, without prejudice to the skill, capital, and labour, which is invested in the cultivation of sugar-cane and indigo.

8. It is a matter of much gratification to Sir William Muir to leave the Ganges Canal with its financial prospects in so satisfactory a condition, and with the expectation of its benefits being so largely developed, as they soon will be, by the extension to be derived from the additional volume to be taken off at Nurora. For this prosperity, his best thanks are due to the able administration of Colonel Brownlow, Captain Moncrieff, and Major Jeffreys, and their staff, and to the unremitting labours of Colonel Greathed. To all these officers he tenders his cordial thanks.

ORDER.—That copies of this Resolution be forwarded to the Government of India and circulated as usual, and that it be published in the *Government Gazette*.

By order,

W. H. GREATHED, *Colonel, R. E.*,
Jt. Secy. to the Govt. of the N. W. Provinces.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

BENGAL FAMINE.

SEVENTEENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL, FROM THE 1ST TO 14TH MAY 1874.

Weather and rainfall.

In the early part of the fortnight rain fell over almost the whole of Bengal and a great portion of Behar. During the latter portion of the fortnight the weather has been intensely hot; rain has fallen in some districts; strong winds have prevailed. In the western districts the fall of rain has been general; the amount varying from a maximum of 2·10 in Burdwan to ·12 in Bankoora. Rain, varying in amount from 3½ to ½ an inch, has also fallen in all the central districts. There have been hail-storms in Moorshedabad, Maldah, and Pubna. In the Dacca and Chittagong divisions there have been frequent thunder-storms. In the districts of Behar south of the Ganges, no rain has fallen; it is much required. In Tirhoot 1·07 inches of rain are reported to have fallen, but the fall was not general, being confined to limited tracts of country. The want of water continues to be severely felt, and more rain is urgently required. In the Bhagulpore division rain fell everywhere during the first week of the fortnight. In Orissa rain fell in the Balasore and Cuttack districts, but none in Pooree, where it is much required. In the Chota Nagpore division there has been a general fall of rain. Complaints of the scantiness of the water-supply are, however, still made in Manbhoom.

The usual returns form enclosure No. 1.

State of the crops.

2. All accounts agree in ascribing the most beneficial effects to the recent rains, though more rain is much required. In Tirhoot rice is being sown on the low lands, and in Sarun and Chumparun indigo is being resown. The prospects of this latter crop are, however, not favorable. The rain fell too late to do much good to the lesser millet, which in North Behar is the only food-crop now in the ground. In the central districts the early rice sowings have been generally completed, and, if more rain falls, promise to germinate well. A larger breadth of land than usual is under this crop. The Collector of Dinagepore remarks that if the weather continues favorable, and a full crop of this early rice is reaped, all fear of famine in that district will practically be at an end. The harvesting of the boro rice has commenced, the outturn being generally quite up to the average.

Seed-grain.

3. The reports as to the sufficiency of seed-grain are generally reassuring, though in Manbhoom it is reported that the seed-paddy has been to some extent consumed for food by the cultivators. The Lieutenant-Governor has given the subject of the supply of seed-grain much consideration, and his conclusions are embodied in a minute which forms Appendix D.

Prices.

4. In the western districts there has been little change in the price of common rice; there has been a slight fall in Burdwan, Midnapore, and Howrah, and a slight rise in Bankoora and Beerbhoom. As regards the central districts, the price of common rice has remained stationary in Calcutta, Nuddea, Rajshahye, Pubna, and Darjeeling. In Jessore, Moorshedabad, Rungpore and Bogra prices have fallen; in Dinagepore, Maldah and Julpigoree they have risen, and in the 24-Pergunnahs the rise has been considernble, viz., from 13 seers 5 chittacks to 12 seers the rupee. In the eastern districts there has been a considerable rise of price in the great rice-producing districts of Fureedpore, Dacca, and Backergunge; in the latter district the price has risen from 16 to 14½ seers the rupee. Elsewhere prices have either remained unchanged or are somewhat easier. In the Patna division

there has been a slight fall in the Patna and Chumparun districts, but the general tendency is upwards. In the Bhagulpore division prices are easier in Purneah, but there has been a rise of more than 2 seers the rupee (*i.e.*, from $12\frac{6}{16}$ to $10\frac{5}{16}$) in Monghyr. In the Chota Nagpore division, there has been a marked rise in Singbhoom (from 20 to 16 seers the rupee.) In Manbhoom prices have fallen one seer the rupee. In Lohardugga they are stationary; in Hazareebagh they have risen slightly. There has been no material change in the price of maize or Indian-corn during the past fortnight; but the prices of the various sorts of millet have generally risen in Behar, and fallen in the Bhagulpore division. There has been no material change in the prices of wheat, barley and gram, but a slight upward tendency is perceptible.

Supply of grain.

5. There are as yet no indications of any general deficiency in the food-supplies of the country. The abundant markets of the Punjab continue to meet the large demands which are made upon them. On the other hand the diminution of the Government indents upon the carrying power of the East Indian Railway upwards from Calcutta, has set free an amount of rolling-stock of which traders have availed themselves to a considerable extent to send supplies of food to the famine districts. The eastern districts are also still exporting grain by river, but prices have risen at Backergunge, which would seem to point to a diminution in the available supplies in that important mart, or, it may be that the rise is owing to the prospects of the future crop, which are reported to be unfavourable. A special report on this subject has been called for. On the other hand, many indications point to the rapid diminution, which in some cases amounts to almost absolute exhaustion, of local stocks in those parts of the severely-stricken famine districts which are remote from the great lines of communication. These districts are now largely dependent upon importations from without, and in some limited tracts stores, save such as are provided by Government, are at a very low ebb.

As might have been expected, this exhaustion of stocks is most marked in the three subdivisions of Tirhoot (Durbhunga, Mudhoobunnee and Seetamurhee), which have throughout given greater cause for anxiety than any other parts of the country. In the earlier stage of the famine, although people flocked largely to the Government works, there was little or no demand for Government grain. The whole population was, at that time, living principally on Indian-corn and nurua. Matters have now greatly changed, and there is a great demand for Government grain everywhere throughout these sub-divisions. That stores, however, still exist in some of the bazars in Eastern Tirhoot may with certainty be inferred from the fact that the villagers prefer advances of money to grain, although when money is refused they gladly accept grain in lieu of it. In respect to the remaining portion of the Tirhoot district, it is reported that the bazars in the Tajpore sub-division are sufficiently supplied with grain, but in the Sudder (Mozufferpore) sub-division rice has become very scarce, and in the north-eastern circles it is hardly procurable. Barley, maize and gram are procurable at high prices, but in insufficient quantities to meet the largely increased demands now made upon them.

Private trade has been very active in the Sarun district. During the past fortnight, 68,65½ maunds of grain were imported into the Sudder, and 43,450 maunds into the Sewan sub-division. The bazars are for the moment sufficiently supplied everywhere. The Collector, however, sees reason to fear that the local stoks are nealy exhausted, and has applied for a further allotment of Government grain; but it has not been thought necessary at present to accede to his reques. This district lies in the direct way of private trade from the north-west, which when the rvers open, will probably develop rapidly. Importations are being made into Chumparun from the North-Western Provinces *viâ* Patna; but from the act that it has been found necessary to open the Government stoes very generally throughout parts of the district, it is clear that the amours held by dealers are in some parts insignificant and insufficient to provide for the wants of the people. In all the districts of South

Behar the bazars are well supplied with food, and the minor grains are obtainable at prices which are not very exceptionally high.

In Dinagepore private stocks of rice appear to be at a low ebb; and at Patiram, where the sales of Government grain had been discontinued, it has now been found necessary to recommence them. At the same time rice is generally still procurable in the bazars, though frequently at a dearer rate than at the Government stores. In Rungpore, where very considerable quantities of Government grain have been sold, private trade is now bringing in large quantities. These importations are tending to make prices lower, and to relieve the demands on Government. In the remaining portion of the distressed tracts of Rajshahye, Bhagulpore, Chota Nagpore, and Burdwan, grain is everywhere procurable, though at high rates.

Burmah rice.

6. It is satisfactory to note that the people willingly accept the Burmah rice, although from the fact that in Dinagepore country rice is reported as holding its own at 8 seers the rupee, in the presence of Government sales at 12 seers, it may be inferred that they would rather have the ordinary Bengal rice

Private trade in grain.

7. The amount of private grain carried into Behar by Railway stands thus, for the fortnight ending 2nd May :—

		Tons.
From the North-West and Punjab	...	14,488
„ Calcutta and Lower Bengal ...	...	20,660
Total	...	35,148

The figures last fortnight were 11,781 tons from the North-West downwards and 18,237 tons from Bengal upwards. There has thus been a considerable advance of private trade during the fortnight under review.

The question of the extent to which private trade has been interfered with by the Government operations will be found discused in a paper by the Lieutenant-Governor, embodied further on in this narrative.

Export of food-grain by sea.

8. The usual note on the movement of food-grains, and their export and import, will be found at Appendix A. The sum of the exports of food-grain to places beyond Bengal, from 1st October to 30th April according to the latest returns received, was 205,130 tons.

Condition of the people.

9. The condition of the people is so far satisfactory that they are generally no worse off at the close of the past fortnight than they were at the commencement of it. When it is considered that the present season of the year is one in which there is scarcely any employment available for the agricultural laborer, and that, judging from the experience of past times, the pressure of famine should be now acutely felt, this feature in the reports is decidedly re-assuring. The numbers in receipt of relief, in some shape or other, from Government have increased almost everywhere; but not in numbers greater than or even so great as was anticipated. The relief measures have proved adequate, and have obviated mortality from starvation. On the other hand, the truth of the remark made in the last Special Narrative that "there is no severe famine, simply because relief has prevailed over famine," is confirmed. From the Mozufferpore Sub-division of the Tirhoot district the relief superintendent remarks that he has "no doubt that distress would have been very severe if the people had not been provided with work." The Collector of Sarun says that a zemindar who accompanied him on a tour through the most distressed part of his district, informed him that "thousands of the people would have died ere this had it not been for the relief works." From Chumparun it is reported that the people "are more anxious, and one and all declare that had it not been for the extraordinary exertions and forethought of the Government, thousands must have already perished." In the worst part of the Rungpore district (namely, the country west of the Karutaya) "many hundreds of lives must have been lost but for the relief works." In the Bukhtiarpore circle of the Monghyr district it is reported "that there is little or no grain in the bazars, and but for the Government grain, there would be actual famine there." These reports and other remarks of a similar nature, which will be found in many of the district reports coming from different parts of the country, are sufficiently conclusive as to the magnitude of the danger which has happily up to the present time been almost wholly averted.

North Behar. Tirhoot.

10. In the Mudhoobunnee, Durbhunga, and Seetamurhee sub-divisions of the Tirhoot districts, in which distress was both more severe and earlier to appear than elsewhere, it is satisfactory to note that, in spite of some difference of opinion as to whether the people do or do not present "their normal appearance," all are agreed that there has been a "marked improvement" in their apparent condition recently. The testimony of the medical officer, who is specially employed on famine duties in these sub-divisions, is as follows :—"By actual numeration, with a note-book in my hand, I have observed the following percentages as representing the condition of the people on the works :—

Normal condition	...	49
Under-fed	...	27
Emaciated	...	12
Aged ...	...	10
Actually debilitated through previous want of sufficient food	...	2

REMARKS.—This is the amalgamated result of many observations; the figures vary much with locality, and the emaciated range from 2 to 25 per cent.

I have occasionally inspected the same villages at short intervals, and I can safely assert that I have noticed a decided improvement on every such re-inspection; in not a single instance have I observed deterioration." In the Tajpore sub-division there has been no material change in the condition of the people, but the higher castes just above the laborers are beginning to feel distress more acutely. In the Mozufferpore sub-division the state of things is worse than was anticipated, owing to the failure of the rubbee crops being greater than was expected by the most experienced planters and natives. In most of the circles of this sub-division the remedial measures which have been adopted have proved sufficient to check the distress which, without such measures, would unquestionably have been great; but on visiting Kutrah, Mr. Worsley reports that his tent was surrounded by a crowd of starving and emaciated persons. The measures adopted by the relief superintendent were here inadequate; he has been removed from his post, and a complete system of village relief is now in force, happily before any deaths had occurred or serious evil ensued. The numerous applications for advances made by ryots in this circle testifies to the reality of the distress amongst the middle classes.

Sarun.

11. In Sarun the condition of the people is generally good, but the returns of numbers on the relief works show that distress is increasing. In the Basuntpore thana high-caste people have come on the works in large numbers, and the distressed appearance of the people attracted the special notice of the Collector on a recent tour. But on the whole distress is by no means alarming in this district. In Appendix E will be found a minute by the Lieutenant-Governor on the present state and prospects of the Sarun district.

Chumparun.

12. In the Ramnuggur sub-division, in which the scarcity has been more marked than in other parts of the Chumparun district, the condition of the people generally has undergone no material change in the past fortnight, but Mr. Howe notes a marked amlioration in the present condition of the laborers on relief works compared to what it was early in January. "It is now quite exceptional," he say, "to meet a person with that painful famine-stricken appearance which then was everywhere but too common." The condition of the cultivating classes who do not come to the relief works is not however satisfactory, and advances to these classes, which have already been considerable, will have to be largely increased before the rains set in.

The condition of the people at Sohurrya, which lies at the north-west and therefore most remote corner of the Chumparun district, has given cause for anxiety, and on personal inspection Mr. Howe found matters in a more dangerous state than he had expected. The sale of Government grain was at once commenced, the number of relief works increased, inquiries from village to village were instituted, and everything is now progressing favorably. This tract will, however, require careful watching, and Mr. Howe rightly proposes to visit it again shortly. From the remainder of the Chumparun district there is nothing very special to report. All who require and are able to work find employment; those who are fit objects for charitable relief are relieved. In the Motiharee-*cum*-Adapore sub-division, Mr. Oldham is able to report that after careful inquiry he has found no distress amongst high-caste people. Three Brahmin women were on the works—"a girl of about 14, and her two little sisters of 8 and 9. She was unmarried; her parents, who are alive, being too poor for years back to afford the expense. She came from a village close by." It is satisfactory to note that even in the Ramnuggur sub-division, where the distress is worst, the numbers on the works and in receipt of charitable relief are well within the Lieutenant-Governor's estimate.

13. From South Behar the reports are satisfactory, and the Lieutenant-Governor has satisfied himself that no great anxiety need be felt about any save small exceptional tracts in these districts.

South Behar.

14. The reports from the Bhagulpore division and district are generally satisfactory, as showing that the condition of the people has in most parts not deteriorated, and in those parts where more severe distress has arisen during the past fortnight, the Government measures have been sufficient to relieve it.

Bhagulpore Division.
Bhagulpore.

15. From Purneah the Collector reports that "the numerous works opened all over the country have undoubtedly kept the people from want. Eldery and sickly people who have come upon our hands at relief centres have died; but this would have occurred every year had hospitals and poor-houses been open. Against the few deaths reported must be set the large numbe of persons who come to us sick and weakly, and leave us well and strong. The deaths are—five in Bahadoorgunge, all from diarrhœa brought on from fever; one at Dengra from the same cause; two in the Sudder sub-division due to natural causes. All these cases were inquired into, and it was ascertained that the persons had received relief, and had not died from actual want."

Purneah.

16. In the portion of the Monghyr district south of the Ganges, those ryots who were fortunate enough to secure a good rubbee harvest are storing grain for themselves more than in ordinary years in anticipation of a recurrence of the drought of last autumn. Their anticipations, however, appear mainly to be based on superstitious fear, engendered by the coincidence of three visible eclipses occurring during the current year. Severe distress appears to be confined to the Bukhtiarpore circle; but "even there, thanks to the relief afforded, distress is confined to those who are physically incapable of work. It is wonderful how soon the condition of the people improves under Government relief, and at each centre I visited (writes the Magistrate) several persons who have become almost stout, are reported as having arrived at the relief depôt mere skeletons."

Monghyr.

17. The condition of the people in the Sonthal Pergunnahs, in so far as can be judged from the reports of the responsible officer, continues satisfactory. In those portions of the district which he had visited, he says that "there is not the slightest doubt that the people are still in a fair condition."

Sonthal Pergunnahs.

18. In Dinagepore it is clear that the pressure of scarcity is gradually being felt higher and higher up in the ranks of the agricultural, and still more of the manufacturing classes of the district. In spite of the ample measures of relief which have been adopted by Government, it is reported that "persons who have hitherto struggled to maintain themselves beyond the line at which charity begins, are gradually falling into the ranks of pauperism." In the Rungpore district the large influx of supplies, both from Julpigoree in the north and Serajgunge on the south, has lowered prices and afforded some relief; the operations of private trade have further been facilitated by the rising of the water in the Teesta. In spite, however, of the activity of trade, distress has increased rapidly in thanas Peergunge and Molong. In the former locality the condition of affairs has been aggravated by a severe outbreak of cholera. The relief works, although, as will be subsequently noticed, they have been carried out under too lax a system, appear adequate to meet the wants of the people, and no cases of misery or starvation are reported. In Bogra the condition of the people requires careful watching. It is to be hoped that the cutting of the early rice crop, which will commence next month, will aid in the removal of whatever distress exists. In the Maldah district there has been a marked increase in the numbers of persons on the works and in receipt of charitable relief, the increase being most marked in the Gomastapore thana; and the Collector reports that although no cases of starvation have occurred, at the same time "with the severe distress at present prevailing among the poorer classes, except for relief measures, there would in all probability have been some deaths." In the other districts of the Rajshahye division there is no perceptible change.

Rajshahye Division.
Dinagepore.
Rungpore.
Bogra.
Maldah.

19. The reports from the Burdwan division are fairly satisfactory. In the Burdwan district, as elsewhere, private efforts have failed to support those who usually live upon charity, but who are now thrown upon the hands of the Government. Some deaths which were reported to have been caused by starvation were found, on inquiry, to be due to natural causes. In Beerbhoom and Bankoora also large numbers are coming in for charitable relief, many of them women physically able to work, but who were prevented from doing so, either because they had very young children, or were of too high caste. Arrangements have been made for providing such persons with paddy to husk, or cotton to spin, at their homes.

Burdwan division.

20. In the Chota Nagpore division, where the mohwa crop was unusually luxuriant, it is satisfactory to note that the health of the people does not appear to have suffered from free indulgence in this species of food, which is sometimes regarded as unhealthy. Cholera and small-pox have been reported in some places, but not in an epidemic form. The export and import trade in rice is still active. The Commissioner is about to visit the Hazareebagh district, and has been authorised to open Government stores in Koderma or Kurruckdeeha, and on the Grand Trunk Road, for the sale of grain to the public, should it be absolutely necessary to do so; although relief, either in the form of advances to ryots or as charity to those who are unable to work, is, in the first instance, to be preferred to the general sale of grain. Reports from Palamow are re-assuring. Mr. Forbes, the Officiating Assistant Commissioner of Palamow, reports that "there cannot be a doubt that the people at large are far more hopeful as to the future than they were, and that the rubbee harvest and mohwa crop have gone very far towards alleviating the condition of the poorer classes." The outturn of both of these crops was far greater than was expected. The Commissioner has found the sate of the Manbhoom district to be as bad as the Deputy-Commissioner depicted it, and the Lieutenant-Governor has raised the grain allotment to 2,10,000 maunds, and given other orders which will be found at Appendix F.

Chota Nagpore division.

21. The only district in the Presidency division in which actual distress has appeared is in Nuddea, where the poor weaver class, who are numerous, have given cause for anxiety. It has not as yet been thought necessary to open relief works for them, but they will be ready as soon as required. No actual cases of misery or starvation have as yet been brought to light, and the Collector reports that he has not seen any famine-stricken persons, that the condition of the people generally remains satisfactory, and that there is no increased anxiety or apprehension of famine, although professional beggars are, as might naturally be supposed, not so well off as usual. The water-supply is excessively scanty over the greater part of the district, and had it not been for the abundant rains in January and February, the deficiency would have been very serious. As it is, some portions of the district have suffered severely from cholera, induced, it may reasonably be supposed, to some extent, by the use of bad water.

Presidency division.

22. The despatches of Government grain from Calcutta amounted during the fortnight ending 11th May, to 8,74,997 maunds, making the total amount despatched up to date 86,34,544 maunds, or 319,797 tons. (Appendix B.)

Transport and storage of Government grain.

23. At Appendix C a statement is given showing in detail the present state of the deliveries of Government grain district by district. The Lieutenant-Governor has been able to reduce the allotments of Monghyr, Gya, Shahabad, and the Soane Canal, and has decided after enquiry that Sarun need not at present receive more than was originally intended for it. The only districts to which grain is now being sent from Calcutta are Tirhoot, the Sonthal Pergunnahs, and Manbhoom, and there remain only 25904 tons to be despatched from the Presidency, besides about 16,766 still due from the North-West for Tirhoot, Gya, and Shahabad. The Government is thus beginning to see the end of the great task it undertook, and the local officers have the satisfaction of knowing that they have succeeded in a work that at one time seemed almost hopeless. Tirhoot alone has still a good deal of grain to carry. The Durbhunga Railway has as yet carried only an average of 12494 maunds of grain per diem owing to the demands made on it for the conveyance of railway material, coal, and fodder. The provision of fodder for the cattle, and of material for making the line permanent, is, however, almost as important as the carriage of grain; but arrangements have now been made for carrying the fodder by carts, so that the railway will carry much more grain than before. At enclosure No. 11 will be found papers showing how it is proposed to work the line.

Although both Rungpore and Bogra have, in common with the other districts of the Rajshahye division, received their full allotment of grain, their inland transport has not been very satisfactorily worked. The Lieutenant-Governor has deputed two experienced transport officers from the Bhagulpore division to assist in finishing off the work of these districts. Another experienced officer has been sent to Burrakur to organise a regular transport service into Manbhoom, the allotment of which district it has (as already noticed) been found necessary to raise to 2,10,000 maunds. By these means it is hoped that even in the most backward parts all the grain may be stored before the rains.

Relief Works.

24. The total numbers on relief works as given in last narrative were—

	Last fortnight
Patna Division	832,855
Soane Canal works	38,783
Gunduk Embankments	24,750
Bhagulpore Division	95,294
Rajshahye Division	164,296
Northern Bengal Railway	18,418
Burdwan, Chota Nagpore, Presidency and Cooch Behar Divisions	63,695
Total ...	1,238,091

The latest returns exhibit the following totals:—

	Total number of laborers.	Of whom are under circle officers, on local and village works.
Patna Division	912,074	516,728
Soane Canal works	41,019	.....
Gunduk Embankments	23,964	.....
Bhagulpore Division	100,092	43,272
Rajshahye ditto	209,635	139,495
Northern Bengal Railway	19,452	.....
Burdwan, Chota Nagpore, Presidency and Cooch Behar	67,165	.....
Total ...	1,373,401	699,495

25. The history of the past fortnight, in respect to relief works, is chiefly noticeable in so far as it shows the progress which has been made in the endeavour to substitute piece-work for daily payments concurrently with the developement of the system of village relief.

Patna division.

The system now adopted by Mr. Metcalfe in Mudhoobunnee, is in entire accordance with the principles laid down by the Lieutenant-Governor on the 25th of last month (see Appendix F to last Special Narrative). "On every tank," he says, "laborers have been given distinctly to understand that they were at perfect liberty to work either at task-work or at daily labor. The allowance for daily labor has been so proportioned that it is just sufficient to subsist on with some degree of comfort. On the other hand, the reward for task work has been extremely liberal; this holds out an inducement to those who were willing to work, and able to work, to earn a fair day's pay for a fair day's work. It has always been possible for a man to make his 4 annas a day at task-work. This, with rice at one kutcha seer for the anna, is very high pay indeed, for one who is not a professional coolie. The consequence of this system is, that those who are weak and unable to do much work, find such light work to do on the tank as they are capable of doing, and for this daily labor obtain enough food to last for the day. On the other hand, all the able-bodied men take piece-work, and are the real effective coolies on the tank." The system thus adopted has met with a very fair measure of success in the sub-divisions of Seetamurhee, Mudhoobunnee and Durbhunga. The numbers employed upon works continue to increase, but the returns show that works under the immediate superintendence of circle officers are becoming more numerously attended, thus proving that the system of village relief is beginning to work well. As regards the Sudder, Hajeepore and Tajpore Sub-divisions, the report of Mr. Worsley is satisfactory in respect to the system upon which the relief works are carried on, and the absence of any demoralising effect engendered by undue laxity of supervision. "It is not," he says, "the attractiveness of our relief works, but sheer absolute want that induces villagers to desert their homes *en masse*, and so long as they have or can see means of keeping body and soul together, without migrating elsewhere, they will endure a vast amount of privation and misery without complaint." A judicious selection of laborers has been made; the strong, able-bodied men are being employed on piece-work; the weak men, the women, and children are in receipt of daily wages. No difficulty has been experienced in working the two systems side by side. In Sarun, piece-work has been to some extent introduced; though in this district the daily wage system has worked fairly well, and has not led to the abuses noticeable elsewhere. But the Lieutenant-Governor has directed that piece-work should be enforced as much as possible.

Rajshahye Division.

26. In Dinagepore the task-work system has been introduced. The Collector, Mr. E. Lowis, says: "I am quite sure the introduction, so far, of a labor-test has done good, for the people were getting to depend too much on Government help, and to feel sure that they were to be helped instead of helping themselves." The Lieutenant-Governor, however, is afraid that in one instance the change was too hurriedly made and without due consideration for the weak and sickly. Every effort should now be made to complete the village system of relief before the commencement of the rains, for, as Mr. Lowis observes, "after June our relief operations, as far as employing labor is concerned, will cease; for not only will the rains stop all road-making and tank-digging, but the cultivation of the winter crop demanding constant attention to ensure a good return, the villagers must be a great deal at their homes." The Lieutenant-Governor has urged on the Relief Commissioner the necessity of extending the group system in the more distressed parts of all those tracts, in a letter which will be found at enclosure No. 12. In Rungpore the evils incidental to the system of daily payments, which are to some extent unavoidable if the people are to be kept alive by the State, have shown themselves, but are being rectified.

Bhagulpore Division.

27. In many parts of the Bhagulpore division the people have throughout shown a reluctance to come upon the works. This reluctance is most marked in the Purneah district, where, in spite of the undoubted scarcity, the daily average of persons employed on works during the past fortnight, amounted only to some 25,000 in a population of $1\frac{3}{4}$ millions. The localisation of distress, ever within the boundaries of any one district, is clearly shown by the reports from Monghyr, in which district, although "actual famine" was impending over the people in one tract (the Bukhtiarpore circle), in others "there was some difficulty in getting laborers to work on and complete the roads which have been begun, and the rate of wages has been raised from Rs. 1-14 to Rs. 2 per 1,000 cubic feet. The Khurrukpore works employ 2,881 people only, although 10,000 are wanted."

Chota Nagpore Division.

28. In the Chota Nagpore Division, the completion of the rubbee and mohwa harvest has had the effect of increasing the numbers on the relief works. In the Manbhoom district, the Deputy Commissioner has complained of his inability to give employment to all who seek it, on the ground that the supervising agency is inadequate. He has been directed by the Commissioner not to rely exclusively on professional assistance, but to employ such overseers of moderate experience as may be locally available.

Payment in grain.

29. Recent orders by the Lieutenant-Governor in regard to the more general payment of wages in grain will be found at Appendix G.

The Northern Bengal Railway.

30. The work done on the Northern Bengal Railway is now equal to 66 miles of 4 feet bank; while 47 miles of feeder roads have been made. 19,452 persons were employed during the fortnight. The Lieutenant-Governor has had some doubt whether the comparative failure of the railway works to attract labor from the distressed tracts round has not been due to the too rigorous enforcement of task-work. The matter is under inquiry.

Irrigation Department Works.

31. The number of laborers on the Gunduck Embankments has fallen off in Chumparun, owing partly to the people leaving the works for their fields after the rain of the 20th April, and partly to differences between the contractors and coolies which have now been adjusted. The average number employed during the fortnight was 23,964. The numbers on the Soane works have increased to 11,019. An attempt is being made to get a large gang of laborers over from Sarun.

Charitable Relief.

32. The number of relief centres and of the persons receiving charitable relief at the hands of Government in the chief distressed districts is now as follows:—

	Centres	Persons relieved.
Gya	3	822
Shahabad	13	2,361
Tirhoot	250	108,278
Sarun	65	4,076
Chumparun	63	9,019
Moorshedabad	23	2,739
Dinagepore	152	12,828
Malda	27	3,382
Rajshahye	19	4,192
Bogra	14	8,199
Rungpore	24	8,340
Bhagulpore	32	7,413
Purneah	25	1,395
Monghyr	16	3,176
Burdwan	43	13,725
Beerbhoom	5	3,600
Bankoora	20	6,729
Hooghly	7	1,925
Manbhoom	10	5,776
Palamow	6	426
Total	817	208,401

33. The system of charitable relief was described in the last and preceding Narratives, and need not be here again discussed. The increase of distress in the sudder sub-division of Tirhoot has rendered necessary the extension of the circle and group system of relief. The European planters have here come forward readily to assist, and an account of the arrangements made, together with a Minute by the Lieutenant-Governor acknowledging their aid, will be found at enclosure No. 13.

Reserve of officers.

34. The Lieutenant-Governor, looking to the arduous nature of the relief work and the probability of officers engaged therein being from time to time invalided, has, with the aid of the Government of India, made arrangements for a reserve of officers to fill up vacancies. In Appendix H will be found a letter describing these arrangements in detail.

Medical inquiries.

35. The Royal College of Physicians having called attention to the points which ought to form the subject of special notice at a time of famine, Dr. Coates, the Sanitary Commissioner of Bengal, has been deputed to visit the worst famine districts to consult with the local medical officers, and direct the course of their observations (see enclosure No. 14.)

Emigration to Wynaad.

36. Some correspondence has passed with the Government of Madras regarding a proposal to encourage emigration from Bengal to the Wynaad. The papers form enclosure No. 15. The Lieutenant-Governor has caused the terms offered by the Wynaad planters to be made known, but has pointed out that the plan is not likely to succeed without more elaborate arrangement.

The Telegraph Department.

37. The services rendered by the Telegraph Department during the famine operations have been signal. The rapidity with which temporary lines have been run up, and the efficiency with which they have been worked, have been very creditable to all concerned, and the Lieutenant-Governor has acknowledged the good service done in a Minute which forms Appendix J.

38. Sir Richard Temple writes from Monghyr on the 11th May the following remarks for inclusion in this Narrative :—

"During the fortnight under review, I have been in the districts on the bank of the Ganges, and have had opportunities of conferring with the officers of the districts of Purneah, Maldah, Sonthalia, Monghyr, Shahabad and Sarun, and the measures which were being adopted, were found by me, on examination, to be suitable to the circumstances of each district."

"A part of my time has been occupied in revising the administrative orders regarding the several branches of relief operations, so as to adapt these orders to the circumstances which are now developing themselves at the beginning of the worst period of the scarcity."

"The subjects thus reconsidered in detail were,—

Elaboration of returns of relief laborers;
Introduction of piece-work;
Sale of Government grain to the public;
Advances of food-grain to cultivators;
Support of high-caste people, and others unable to work;
Supply of seed-grain;
Transfer of relief laborers from roads to village works;
Extension of the "group" or sub-circle system in relief operations;
Methods of paying relief laborers in grain;
Reserve of officers and officials to supply casualties in the relief establishments."

"There seem to be apprehensions entertained by some that the sale of Government grain to the public will be so managed as to interfere with private trade; that it will be ordered at places where such trade is active at rates below the market rates; that the places, the conditions, and the prices of such sales, will be left to the discretion of the relief officers on the spot without any fixed principle; that as a consequence these sales will often be carried out at places where, but for them, private enterprise could and would have done all that was required. I think, however, that such apprehensions must arise from imperfect acquaintance with the intentions and policy of the Government. And inasmuch as private trade in the distressed districts is of vital importance—as the Government supplies, however great, could fill only a part of the vacuum caused by the destruction of the harvests—I will endeavour to explain briefly the present position of the case."

"The sale of Government grain to the public is now ordered under clause *g*, rule 3, part II of rules promulgated by the Government of India on the 5th March last, which clause runs thus—

'If a serious deficiency of grain in any part of their district is apprehended, which the 'trade is unable to supply, the sub-divisional committee may under instructions from the 'Collector of the district, make arrangements for the sale of grain from Government stores. 'The arrangement should as a rule be made through the agency of the traders which will 'probably be available everywhere. The selling price should be fixed at that of the nearest 'large mart, where supplies are readily brought in by railroad or river, together with such 'addition representing the cost of transport as may be considered proper. Sales should be 'stopped as soon as the local trade receives sufficient supplies, and any competition with the 'local trade should be carefully avoided.'

"Here, then, is the principle as laid down by the Government of India, by the careful and judicious carrying out of which much suffering may be averted in the most distressed tracts. The sales are being regulated by this rule and no other, and it is the duty of the administration to give the people the benefit intended for them by this excellent regulation. The rule leaves little discretion to the executive save in one respect, namely, the determination of the places where there is apprehension of deficiency, and where consequently the sales shall take effect. That is a matter necessarily dependent on local enquiry. The best way of illustrating the view which has been taken, is to state the places where the sales have, and have not been ordered."

"In the eastern parts of the Mudhoobunnee and Durbhunga sub-divisions, sales were ordered at the very end of February in the recorded expectation that supplies were deficient, and that widespread distress was imminent. This was amply justified by the result, inasmuch as distress did break out in the middle of March. Subsequently, as the distress became worse, and as the grain-dealers stated their supplies to be exhausted, the order for sale was extended throughout the Mudhoobunnee sub-division. The tract is remote, and the traders have been repeatedly appealed to, without effect. It has not yet been extended over the remainder of the Durbhunga sub-division. But in the city of Durbhunga, fires having destroyed part of the private stores, Government rice was sold for a few days till the trade supplied itself. Recently the supplies have fallen short again, and the sale of Government rice has been authorised for a time. Probably the sale will have to be authorised in most of the remaining parts of the Durbhunga sub-division."

"In a tract of country near Mozufferpore, (Tirhoot) sale has been ordered at the urgent representation of the Collector that the people were in straits for food. Recently in the town of Mozufferpore supplies being reported short, sale has been ordered temporarily till the trade can supply itself."

"In those parts of the Seetamurhee sub-division, which are similarly circumstanced with Mudhoobunnee, sale has been authorized, and is going on."

"In the Ramnuggur sub-division (Chumparun district), the markets being empty, the position of the people becoming critical, and there being little hope from trade, sale has been ordered. The local officers describe the effect on the people as excellent."

"In the Sarun district, notwithstanding the increase of distress, it has been decided not to sell, as trade continues very active. A similar decision is formed as regards the Shahabad and Gya districts. In the city of Gya alone the prices have been very dear, and the place is situated in the tract where the crops were worst. It may perhaps be necessary to sell there for a time. The Patna district being not distressed at all, the question of sale has not arisen there."

"In North Bhagulpore (Soopool sub-division distress becoming urgent and supplies short, sale has been ordered, and is being carried out."

"In the Bukhtiarpore sub-division of the Monghyr district sales have been ordered; the Collector reports it to have been the means of averting famine."

"In the Sonthal district the question of sales to the public has not arisen."

"In the Purneah district sale was authorised in March in certain places near the River Mahanuddy. Subsequently, in one of these places, a trader offered to send up supplies, whereupon the sale was suspended."

"In the Dinagepore district the district authorities had recommended selling in January, but the Government deferred giving sanction. Subsequently, sale was authorized at several places in March, the stock available being apparently short, and the local traders having declared their inability to bring in sufficient supplies. The time of beginning sale was, however, left to the decision of the district officers, and they have been so cautious that up to date they have sold but a moderate quantity. Application was made for sale in the northern part of the district by reason of depletion of the market from exportation; this was refused."

"In the Maldah district the importation by private trade was at one time considerable, but it has fallen off recently to a degree which causes apprehension. The authorizing of sale has been considered, but has not been granted."

"In the Rungpore district the state of the grain market caused alarm, and the Collector was obliged to order sales for a time. Subsequently the hope of trade supplying that market being disappointed, the continuance of sale has been authorised, with extension to another market a few miles to the north. Other important sales were ordered at Kallygunge on the bank of the Brahmapooter. This grain was sold to local traders, on condition that they would

convey it to certain marts in the distressed tracts, and sell it there. Owing to epidemic sickness the transport had failed temporarily, and it was hoped that the traders would manage the conveyance. In many parts of the district the import trade from the east bank of the Brahmapooter has been very active."

"In the Mymensingh district it was reported that one tract had exported all its grain to distressed neighbours till the markets were empty; that the people had money, but there was no food to buy; that some Government rice must, to save life, be sent for sale. After some demur this was acceded to."

"In the Bogra district sale was authorised in one place adjoining the distressed parts of Rungpore and Dinagepore."

"In the Rajshahye district a private application was made for sale, but was refused."

"The quantity of grain sold under these limited orders in the several districts is small comparatively, as yet, and is less than 10,000 tons. Those who have heard the eager, nervous, anxiety with which the people would ask when the Government store-houses were to be opened, or who have seen the crowd of expectant purchasers gathering round the Government retail-dealers, know how necessary the measure was, and how much relief may be yet afforded by it."

"From this summary of what has been done regarding sale of Government grain to the public, we see that rule 3, clause *g*, has not been brought into play to any excessive degree, and that it cannot have had any adverse influence on private trade. The places and tracts to which the orders for sale apply constitute but a small portion of the distressed districts,—not more than one-fifth of the whole. The southern half of Tirhoot, the south-eastern part of Chumparun, the whole of Sarun, Shahabad, Gya, and Patna, two-thirds of Bhagulpore, three-fourths of Monghyr, two-thirds of Purneah, the whole of Maldah, the northern half of Dinagepore, four-fifths of Rungpore, almost the whole of Bogra, are as yet entirely free from sales of Government grain, and continue to offer an excellent field for private enterprise. Whether the sales be hereafter extended over these last-named tracts will mainly depend on the action of trade. If it shall be found that the supplies are not being brought in by trade, and distress is threatened, then succour must be immediately afforded to the people from the Government stores. But even the sales which have been ordered would be immediately suspended if the trade brought in supplies."

"The price at which Government grain is sold is fixed with reference to the rule already quoted, that is, according to the prices at the nearest large mart accessible by rail and river, *plus* such addition as may be thought proper. The rates actually ordered range from 10 to 12 seers of cleaned rice for the rupee; the larger part perhaps is sold at 12 seers. The rates are the retail rates at which local dealers sell the Government rice to the people."

"The prices for the Government sales, though more than double as dear as those of ordinary years, are yet considerably cheaper than famine rates, which may be stated at from 5 to 7 seers the rupee, under the status and circumstances of the Behar Province. These famine rates have for a time prevailed in many parts of the distressed districts; but the effect soon becomes neutralized by the relief operations. Whether such a result be open to economic objection or not, it must be attained if the people are to be saved. For the lengthened prevalence of famine rates in any locality means a slow-wasting misery to many thousands, which can end only in death. This dreadful tendency has to be arrested and counteracted And I believe it to be the universal opinion of natives qualified to judge, that, but for the efforts of Government, famine prices and their fatal consequences would have ere this spread all over the distressed districts, but have been averted by the Government operations, and could not have been effectually averted otherwise. The fact that prices have more than once risen to famine rates, 6 and 7 seers of rice per rupee, at the two capitals of Tirhoot, namely, Durbhunga and Mozufferpore, under the freest action of trade, alone shows what the prices would have been in the interior, and what disastrous effects would

have ensued, but for the Government operations. The moral effect, too, as acknowledged by the natives themselves, has been great. On the eve of famine, besides the fear of deficient supply, there is always another fear, namely, this, that those who have grain to sell will nevertheless hold it, hoarding against some future time, harder even than the present, when society itself will be almost broken up by depopulation. I have repeatedly heard such dread expressed by the natives. But persons of this class (which is numerous and influential) seeing the Government enter the field with long strings of grain-laden carts, gather hope and assurance and resume their business of selling. The effect of the Government measures in dissipating these alarms has been beneficial, and this too before any depôt has been opened or any grain sold. Still, however, despite these measures, despite also the high prices and other inducements to sell, there are very many persons who hoard their grain against calamity yet to happen. This alone shows how extensive the hoarding would have been but for our proceedings."

"I have quoted the prices of rice as famine prices. If rice had been the only grain in the market, such prices must have caused great distress before the effect of the Government stores could have been felt. But happily, there have been, and still to some extent are, other cheaper food-grains in the North Behar markets. The Durbhunga and Mudhoobunnee price-currents show, however, that these grains are being exhausted; maize was quoted at 11 seers per rupee in the Mudhoobunnee statement for the 19th April, and the lesser millet at 9 seers per rupee in Durbhunga. In Chumparun and Sarun the quotations for barley are still moderate. But though these grains supply a very substantial part of the food of the poor during a portion of the year, yet they are not largely consumed by the middle and cultivating classes. No large stocks of these grains are ordinarily kept, and according to the careful reports compiled by district officers at the beginning of the scarcity, rice constitutes the largest element in the food of the majority of the people of North Behar. It is therefore by the price of common rice that the natives themselves guage the pressure upon a particular locality, and the Government has therefore adopted that standard in estimating the severity of distress in any sub-division or circle."

"The determination of the place of sale and of the price is not left to the discretion of the local officers; it has in no place been undertaken without the sanction of the Commissioner, and in most places the sanction of the Government has been previously obtained."

"In every mart without exception in the distressed districts special inquiry has been made of the local traders as to whether they would or would not import grain. In the most distressed tracts they generally said they would not. To all of them offers were made of advances of Government money if they would import grain on their own account. To a limited extent only were these offers accepted. At Patna an additional branch was made from the railway for Government grain in order to set free the previously existing branch for private trade in the Tirhoot direction."

"Private trade has been and still is conspicuously active in Rungpore, Maldah, Purneah, and Sarun, and is becoming so in the remainder of the distressed districts. Its general activity has been increasing week by week as the season advances, especially in the direction of Patna, Tirhoot and Chumparun."

"Without undertaking to say whether private trade would have made use of the abundant local carriage of Tirhoot, if Government had not taken it up, I must observe that, up to the end of January, Government had taken up but a small part of the carriage, the greater part being available to traders if they could succeed in engaging it. Up to that time, however, private trade did not undertake much in that district The field was open then, but it was not occupied."

"Owing, however, to the early completion of the transport work everywhere, except in East Tirhoot and in the Brahmapooter valley, the greater portion of the vast amount of carriage recently employed by Government is now liberated for the service of any traders who can succeed in engaging it. The tens of thousands of carts lately in the service of the Government, or of its contractors, in Sarun, Chumparun, West Tirhoot, Bhagulpore, Purneah, Dinagepore, are now available. Further, a large amount of Government reserve carriage, collected beyond the limits of Bengal, is now employed in Tirhoot, liberating *pro tanto* the local carriage for the use of trade."

"Besides the sales to the public, there are the sales of Government grain to the relief laborers. The policy was laid down thus in the Governor-General's resolution of the 7th November 1873":—

"'The State will be in the position of an employer of labor on an unusually large scale, and is justified in doing that which all other employers do, namely, selecting the mode of remunerating its work-people most acceptable to them and most suitable to the surrounding circumstances. Such remuneration will generally be in kind, that is, in food-grain. For this particular purpose, then, supplies of grain will be purchased and laid in both by the Government of India and the local Government.'

"The principle thus laid down has been acted on here and there almost from the commencement; still the progress was slow. Partly, our officers desired to afford every chance to private trade, partly also they were waiting till their own store-houses were filled. The general result was that up to the end of April very little of Government grain was used for the relief laborers. The time has now come for paying them in kind, either by distributing grain, or by giving tokens, on production of which grain can be obtained, or by supplying grain to traders to be retailed by them among the men."

"It has long been urged by the natives of all classes that some means of subsistence should be advanced to cultivators to be repaid at coming harvests. In some districts I have been pressed upon the subject by clamorous crowds of cultivators. Such aid would naturally be given in the shape of food-grain. It was not possible to do this at first, and the aid was given in money; but now we have the means of affording it in grain, and we must be prepared for the demand increasing as the season advances. This proceeding will demand careful and detailed inquiry, so that the advances may be distributed among the right men, with due precautions for repayment hereafter. The agency of the zemindars will be employed in settling these advances, and the old resident cultivators of the villages will be invited to club together. Anxious inquiries on this subject are everywhere made by the natives. When the rains set in the men must be tilling their fields, and are precluded from earning wages elsewhere. But what if there is no food to be bought, or if they have nothing to buy it with; or if to raise the means they part with their little capital, their seed-grain, and their cattle? The consequences of a failure here might be felt long after the period of the present trouble."

"It is this measure which can be most depended upon to prevent that which is so much feared, namely the consumption for food of the grain which ought to be reserved for seed. The motive for this will be removed by a judicious system of food advances. Whether seed will be forthcoming for all the sowings, is a difficult question. Much seed-grain is held both by the trade and the land-holding classes. The sowings for the early crops of rice have been extensive up to date, which promise well for the future. Still deficiences may occur in some localities, and the local officers have been authorised to exchange a limited quantity of their food-grain to seed-grain to be reserved for sowing; and we are endeavouring to purchase a moderate quantity of seed-grain for distribution, if need arises anywhere."

"By some it may be thought strange that if there is so extensive a famine, so small a part of the Government stores should have been expended up to the beginning of May. The explanation is that we have given assistance

to the people in money, lest our depôts should be prematurely drawn [illegible] have postponed assistance in grain, so long as that might be safely poss[illegible] In the first stage of the trouble the dearth was of employment rather than of grain, and we have acted accordingly. In the second stage, just beginning, the dearth may probably be of grain. For that we are prepared, as the stores are now *in situ*."

"Looking at the distressed districts as a whole, I should say that the first ten days of May, forming a brief though critical period, have passed off favorably. A fall of rain has afforded some employment in sowing for the next harvest, and has raised the hopes of the people for the future. Too much regard, however, must not be paid to such hopes. When in February last similar rain enabled the husbandman to sow some supplementary crops to be gathered in May, the people were in high spirits; but those very crops are in many places withered now. The public health has been good. The cattle have been free from epidemic disease. The increase of distress has been gradual; there has been no sudden flocking of people to the relief works. Though prices have risen, in some places touching for a moment even famine rates, there has been no panic anywhere. Though the number of persons receiving relief in its various shapes is rising, still it is becoming more and more possible to deal with the several classes of cases after due consideration and inquiry. The better enforcement of labour system on all the works has progressed without any large numbers leaving the works in the manner described in my last narrative. One case only of this nature, and this in a smaller degree, has occurred (in the Dinagepore district), and that is being inquired into.

"In attempting to enforce any change however excellent, we must observe the shy, timid disposition of these poor, rude, untaught creatures—so prone to believe that any new order must be for their hurt—so ready to face inevitable death instead of trying to work on a plan they do not understand, and then to bear the lingering misery so silently that their state would not be known to us unless we searched it out. This description is drawn from our certain knowledge in many thousands of instances. Such is the character of the majority of the one million and a half of persons on the works, towards whom I have directed that the utmost patience and carefulness be shown, although there is an important minority of sturdy persons from whom a proper amount of work must be exacted."

"Persons of the Brahmin caste are becoming more numerous on the works. This is to be encouraged: high as the caste may be, its members may and do perform manual labor in the field; and where the men work, their families may do the same. So also large numbers of women, who ordinarily work with their hands at home, now work at the village tanks close by. They would not be fit recipients of charitable relief, nor would they be suited for the light work, spinning, &c., provided for women of the classes above them. But careful inquiry has shown that there are no women of delicate nurture on these works. Indeed, they cannot have any motive for resorting there. Such persons have only to apply for relief to the group officer as he visits the village several times a week, and they would obtain suitable relief. I have given reiterated instructions for searching out such persons who are often but too ready to die of hunger without making a complaint to any one."

"The conclusion gains strength everywhere that the excavation of village tanks affords the best kind of relief work. Here is work close to the doors of the poorest. Here can the unpaid supervision of village headmen be obtained. Here is water to be reached in this time of drought."

"During the fortnight under review there has been marked progress in enforcing system on the relief works, and in exacting a reasonable amount of labor from those who are really able to work. Endeavour has also been made

to induce the able-bodied to feel that they truly gain by exerting themselves on piece-work instead of idling on daily wages."

"I will not mention those zemindars who have failed to do what their duty required of them; because whosoever they are, I trust they will improve before the season of trouble is over. But I may say that, in every district north of the Ganges, several zemindars have already distinguished themselves. I have recently had the pleasure of receiving the zemindars of the Monghyr district and of thanking them for their services, which have greatly lightened the work of relief in that district. I expect that, before the close of the operations, there will be a long catalogue of creditable deeds done by the zemindars."

"I have also the satisfaction of acknowledging the assistance in relief operations afforded by the resident indigo planters in North-West Tirhoot, in North Chumparun, and in Sarun. The factories are so dotted over the Sarun district that there the organisation of the circle and sub-circle system has been found unnecessary. The relief circles or sub-circles in these three districts managed by indigo planters are full one hundred in number."

"In several districts the officials for the 'groups' or sub-circles, consisting of from five to ten villages each, are found from among the village accountants (putwarees) and the headmen (munduls); which, again, is a satisfactory circumstance."

"The transport of grain has been completed some weeks before the time in Sarun, Chumparun, Bhagulpore, Purneah, and Dinagepore. Some work, comparatively inconsiderable, remains in Rungpore, Bogra, Maldah and Monghyr, Gya and Shahabad; but in East Tirhoot alone is there anything of consequence remaining; and so many resources are now being brought to bear on that one line that completion within the time is probable. Out of 346,911 tons to be transported north of the Ganges, 293,111 tons have been carried towards the interior from the north bank of the river up to date. Considering the anxiety once felt about the inland transport, I trust that this result will appear satisfactory."

"Finding the distress to be certainly less than the expectation in the Monghyr, Gya, and Shahabad districts, I have made some reduction in their allotments of grain."

"It is very difficult to give a precise number of all the persons who, in some shape or other, are at this date receiving assistance from Government. But taking all those employed on works or on famine service, receiving charitable relief, purchasing Government grain, receiving advances, benefiting by advances made to landholders and traders, I calculate that the total must amount to nearly two millions, though I do not think it exceeds that number. This calculation affords answer to the natural inquiry as to the real extent of the famine. Out of so large a number there must be some unworthy recipients of public bounty, and some who might have tided over the trouble without resorting to relief works; but most of the above number really need the aid they are receiving; many of them would be in dangerous distress without it, and but for it many of them would perish. And besides these there must, I fear, be an unknown number in severe straits who have not yet reached the stage of seeking Government assistance. And from what I have seen I should say that the lowest classes in Tirhoot and in some other districts have a very poor physical constitution, and obtain but a stinted and precarious livelihood in ordinary times. When, therefore, the price of grain is more than doubled, perhaps trebled (as it now is), and simultaneously employment grows slack, these weakly people fall into trouble, under which their little strength fails fast. I have been happy to receive reports from all quarters of the improved appearance of these poor people after they have been on relief works for a short time, which proves that, despite shortcomings and faults in our system here and there, they have been well cared for and punctually paid."

"The reserve of officers and officials on the relief operations (numbering 750 in all) is being formed in the proportion of one-tenth upon the strength now in active employment, in order to replace casualties and to fill up other deficiencies. I have to testify strongly to the humane and devoted conduct of the large body of officials of all grades employed on this difficult service under exposure to a fierce climate at an inclement season. If the famine is to continue, as at present, bound down and confined by the arm of administration, we must largely depend on the skill, foresight, and endurance of our officers of all grades."

By order of the Lieutenant-Governor of Bengal,

CALCUTTA,
The 14th May 1874.

A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

☞ *Appendices and Enclosures will be found in the "Calcutta Gazette" of the 20th May* 1874.

No. 1716, dated the 15th May 1874.

From—A. O. HUME, Esq., Secy. to the Govt. of India, Dept. of Rev. Agri. and Commerce.
To—Junior Secretary to the Government of Bengal.

I am desired to acknowledge the receipt of your letter No. 3125 S-R of the 14th instant, submitting the seventeenth Special Narrative of the Famine in Bengal.

2. His Excellency the Governor General in Council has perused this Narrative with much satisfaction, and I am directed to express his entire concurrence in the explanation given by Sir Richard Temple in paragraph 38 of the Narrative, of the measures adopted by Government for the relief of distress and the disposal of the stores of grain laid in for that purpose.

3. The Government of India fully appreciate and entirely approve of the thorough and judicious manner in which His Honor continues to meet, as they arise, all the exigencies of this great and complicated work.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE FORTNIGHT ENDING THE 14th MAY 1874.

GENERAL REMARKS.—In Madras there has been a general moderate rainfall, with a heavy fall in Malabar, and prospects are reported satisfactory. There have been slight showers in Sindh, and the river is higher than last year at this season. Light rain has also fallen in Khandesh and the Deccan districts, and heavier showers in the South Mahratta Country; operations for the monsoon crops are going on in the last tract. In Bengal there has been general rain in almost all districts, the exceptions being Patna, Gya, and Shahabad; it has been heaviest in the eastern and northern central districts, and lighter in the Bhagulpoor and Patna Divisions and Chota Nagpore; it has everywhere done much good: but more is urgently required in most places. The *boro* rice is a good crop generally, and the millets have been helped by the rain. Sowings for the early rice crop have been pushed forward: indigo prospects are bad. In the North-Western Provinces the *rubbee* harvest is over, and no crops remain on the ground. The numbers on relief works in Bustee and Goruckpoor have increased, although prices have fallen in both districts; Zemindars in Goruckpoor are said to complain of want of labour for preparing land for the rice sowings. The price of rice has fallen in South Mirzapore, and emigration has stopped. In Bundelkhund there is no severe distress, and the numbers relieved are much the same as in last fortnight. In Oudh no rain has fallen. In the Punjab there has been some rain in 3 districts; the harvest is generally above the average. In the Central Provinces and Berar the harvest has ended, and ploughing and sowing for the next crop are going on; these operations have been helped by showers and [illegible]. In Central India and Rajputana the crops have all been reaped; some showers have fallen. In Mysore [illegible] has fallen in all districts, and prospects are good.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
[illegible] (May 14th) („ 18th)	...	Weather rough with violent winds; on the 4th, 5th and 6th, 1·89 inches of rain at Masulipatam and rain reported in all taluqs, but Vinukonda; land winds prevalent; drinking water scarce; standing crops fair, except dalwa which wants water; prices stationary; health good; mild type of small-pox continues; cattle healthy; pasture none; markets well supplied locally.
Kurnool „	·35	Season generally favourable; ·35 inches of rain at Kurnool, and slight showers in five taluqs; second crop paddy harvested in Ramalcottah; outturn fair; markets moderately supplied; prices stationary; water and pasture sufficient; fever in six taluqs; cattle disease throughout.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Madras—*continued.*		
Tanjore (May 13th)	...	52 inches of rain at Negapatam; elsewhere tolerably good; fishes in river; water in tanks scarce; water over the upper anicut, south branch; 4 inches lower now; cultivation none; standing crops somewhat benefited by rain; a few dry grains harvested here and there; yield below the average; pasture moderate; markets sufficiently supplied; prices almost stationary; public health generally good; small-pox in some places; cattle disease in Mazaveram and Manargoode, with some loss.
Trichinopoly ,,	...	Moderate rain-fall throughout the district between the 3rd and 7th, with strong wind and stormy weather; considerable freshes down the Cauvery; water for drinking purposes and for cultivation sufficient in all wet villages; somewhat deficient in dry villages; tanks in latter not filled; condition of crops fairly good; outturn of crops average; supply to market sufficient; prices stationary; public health generally good in Trichinopoly and Museri taluqs; some cases of small-pox and fever in Museri; condition of cattle good; pasture scanty, except in wet villages.
Malabar ,,	6·17	Sowing for first crop in progress; local and foreign supply of grain sufficient; small-pox continues without abatement; fever prevalent in hilly parts; cattle healthy; pasture improving; prices slightly decreasing.
		General prospects satisfactory.
Bombay— (May 13th)		
Sindh.		
Kurrachee ...	...	River at Kotree on 4th instant 7 feet 11 inches against 6 feet 4 inches last year; Buggaur opened on 25th ultimo; caterpillars doing injury to rice shoots in Gorabari taluq; small-pox in Tapas, Bohara, Chillia, and Dooja; rain in Dadoo and Johee on 25th ultimo, followed by small flood from Gaj.
Hyderabad ...	...	Dust storms with rain and hail in various parts from 25th to 27th and on 30th ultimo; river 13 inches higher than last year; canals mostly flowing; no sickness.
Shikarpur ...	...	Showers of rain on 30th ultimo and 1st instant.
Upper Frontier (April 27th)	·3	On 1st and 2nd instant slight showers; hail at Moondranipur and Rojhan; fever and small-pox in that taluq; peshan sowings in progress.
Gujarat.		
Kaira ...	...	Weather hot; slight cholera in Mehmadabad taluq; public health good.
Surat ...	...	Health and weather generally good.
Broach ...	...	Sea-breeze since 9th; sky cloudy; public health good.
Khandesh and Nasik.		
Khandesh ...	...	Cotton market dull; Rs. 49 per pulla; light showers of rain; public health good.
Nasik ...	·70	Rain in Niphar and Chandore; public health good; cattle disease continues in Peint.
Thanna ...	...	Slight showers of rain on 7th; ague and mild small-pox in the district; slight cattle disease in Salsette, Warra, Shapur, Murbar, and Bassein taluqs; measles small-pox, and scarcity of drinking water in taluq Warra.
Deccan.		
Poona ...	·45	Slight fall in four taluqs; hot weather continues; public health good; cattle disease in Indipore and Bhimthadi.
Ahmednuggur ...	1·11	Weather hot; cattle disease in some villages of Aukola and Jamkheir taluqs; public health good.
Sholapur ...	·4	Weather very warm; public health good, except at Punderpur.
Satara ...	...	Weather oppressively hot.
Southern Mahratta Country.		
Belgaum ...	2·77	Scarcity of water in Chikodi taluq; manuring progressing; health good.
Dharwar ...	2·28	In every taluq except Ron rice sowing commenced; preparation for monsoon crop progressing.
Kaladgi ...	·83	Ploughing operations commenced; public health good.
Canara ...	3·	Preparations for monsoon crop being made; public health improving.
Kattyawar and Gaekwar's territory.		
Rajkot ...	...	Weather hot and cloudy.
Wudwan ...	...	Weather hot; slight rain, and crops same as before.
Bengal— (May 12th)		
Burdwan ...	2·10	Weather hot; rain has fallen in all the sub-divisions except Jehanabad and Raneegunge; cotton and teel (oil-seed) crops have much benefited by the rain, and doing fairly; ploughing and sowing progressing; out-turn of wheat and bar in Raneegunge 13 annas.
24-Perguunahs ...	0·90	Weather very hot; some occasional and fairly heavy showers of rain in the first and strong south-wind, with only a few drops of rain here and there, in the part; vegetables have benefited by the rain; no other crops on the gro sowings of early rice and jute commenced in some places, but a good show rain is required.
Dacca ...	2·32	In the first week some seasonable rain fell, but storms almost daily occurred during the second week the weather become very hot with high winds, till th May, when more than one inch of rain fell; prospects of crops are very goo district officer never knew them better; the rain of the 11th was begin much wanted.
Cuttack ...	·42	Weather hot; some rain in the first part; ploughing in progress; rain w
Bankoorah ...	0·12	Weather hot and dry; some heavy showers of rain fell during the first south and south-east, and slight rain at the head-quarters with st has benefited the crops, and enabled the ryots to plough the lands for th crops; rain is much needed in the north of the district.
Beerbhoom ...	0·53	During the first week occasional showers of rain at night-fall, and in week the weather has become dry and intensely hot; a sensible chan worse in the prospects of the crops, owing to the renewed heat and d digo, teel (oil-seed), and mulberry crops failing, and distress i weeks ending 25th April and 2nd May 8,123 maunds, chiefly to Patna Divisions; price show an approved tendency.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bengal—*contd.*		
Moorshedabad ...	2·80	Heavy showers of rain fell in the beginning of the fortnight (26th and 27th April), which cooled the atmosphere for several days, and a slight storm with a little hail passed over a portion of the Gokura thannah, on the afternoon of the 1st May; since then no rain reported up to the 9th instant from any part of the district, and the weather had became intensely hot; a fall of about one half inch of rain has since been reported on the night of the 11th idem, and heavier rains elsewhere, and weather unsettled since; the rain of the first week had enabled the cultivators to sow early rice on all lands adapted to its cultivation, and late rice in low lands; but the sowings have been suffering severely from the subsequent drought, and heat so much so, that it was apprehended that resowing in some places would be necessary if no rain fell in 2 or 3 days, fortunately this rain has fallen; boro rice has also benefited by the rains, but in some places it came too late. This crop is in good condition in thannahs Khargaon and Kalliangunge, and is approaching maturity; it will be of great help to many villages; sugarcane is being planted out, and the prospects of indigo and mulberry are fair; price almost standing.
Dinagepore ...	1.01	Good rain throughout; an unusual breadth has been sown with the early rice, and a good deal of it is well above the ground; and it has benefited by the rain; boro rice is being reaped with a good outturn.
Maldah ...	1·04	Cloudy throughout; the first week stormy and rainy on two days; very hot, with south wind and occasional clouds and distant thunder during the second week; the rain of the 27th and 29th April did much good to the standing crops, and to the agricultural operations generally, especially towards the preparation of lands for the early rice crop, which is now being extensively sown; boro rice is being reaped with an average outturn; in one or two places it was slightly damaged by hail; mango crop has suffered by storm and hail; prices have risen, and supplies scanty.
Rajshahye ...	1.35	Rain in all parts of the district on two or three days during the first week; it has been beneficial to the crops; there being no rain in the second week, except in the north; in the Bhundaikhara thannah, when there was a good shower on the 6th May; the heat has been intense; the early rice, which germinated after the last rains, has suffered from the extreme drought, and unless rain soon falls will be destroyed; sowings of early rice on higher lands suspended; jute and teel (oil-seed) are suffering from want of rain; boro paddy is being cut in several parts of the district, and has yielded generally a good crop; jalee paddy grown along the banks of the Ganges is also a good crop; prices generally not altered; slight rise in the south-west, and considerable fall in the south-east.
Rungpore ...	2·80	In the early part of the fortnight the weather was cool and cloudy, and rain fell on several days; on the night of the 1st May there was hail; since then it has become very hot, though some rain has fallen; prospects of the early rice and kown (millet) very favorable; ground being ploughed for the late rice; boro paddy is being cut.
Bograh ...	3·24	Very hot in the day; sufficient rain has fallen, which has done great good; the early rice has been sown in nearly all parts of the district, and promises well.
Patna ...	*Nil*	Weather seasonable and hot; no crops on the ground.
Gya ...	*Nil*	Fair and hot weather; cold-weather crops harvested; no crops on the ground, except cheena (millet) and sugarcane; rain wanted.
Shahabad ...	*Nil*	In the first week the weather was unsettled, wind easterly, and the nights cool; during the second slight clouds gathered in one or two evenings, but no rain followed; wind west; days hot; mango crop promises well; mohwa crop has given a fair outturn; boro rice and young sugarcane still doing well.
Tirhoot ...	1·07	Weather seasonable and hot, with west winds. Durbhangah sub-division—Some rain has fallen; the sub-divisional officer, after riding over an area of a hundred square miles within the last five days, reports that within that area the crop was *nil*, but in places, where moong (pulse) was sown, the rain of the first week has benefited it; a considerable area of rice land where rain fell was prepared for sowings. Mudhoobanee sub-division—·57 inches of rain fell in the first half of the fortnight; on the night of the 27th April a heavy storm with a light rain; rain is much wanted for the sowings of early rice; indigo is in a very poor state. Seetamurhee sub-division—On the evening of the 27th and morning of the 28th and night of the 29th April ·80 inches of rain fell throughout the sub-division, which is favorable for agricultural operations; cheena (millet) and moong (pulse) will be revived, and the expectation of four annas crop will be realized; ryots are busy at work in the fields, but sowings of crops generally will not begin until after another rain, but in "dhab" lands, mokai (Indian corn) and kown (millet) will be sown; indigo sowing going on; mangoes damaged by storm and hail. Tajpore sub-divison—A rainfall of 0·92 inches has done immense good; it has removed the fear of the paddy in the low churs being so backward at the commencement of the rains that it would be swamped; seed sown will germinate, and lands not yet sown will be prepared and sown. Hajeepore sub-division—On the night of the 27th April, hail with a light rainfall of 0·66 inches, with slight damage to the mango crop, but will benefit the cheena (millet) and moong (pulse); relief works have been started throughout the sub-division, except in the Dearah, and are attracting a good deal of labour. Sudder sub-division—Storm with light rainfall has done a little damage to the mango crop but good to the cheena (millet); want of water is much felt.
...	*Nil*	Weather clear, dry, and hot, with east winds; on the 27th April there was a pretty general fall of rain in the northern portion of the district, which has been of immense benefit to indigo, cheena (millet), moong (pulse), and sugarcane; it has also to some extent enabled the ryots to prepare the fields for the next sowings; but more rain is wanted for early rice sowings; much of the mango crop has been blown down, but what remains is doing well; early cheena (millet) being cut; sugarcane and boro paddy doing fairly; opium weighment nearly completed; outturn good; people in the northern tracts are busy in sowing "Shama" (grass seeds), tangui and cheena (millets), where rain fell; indigo is being resown in lands on which the seeds did not germinate; prices rising a little.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bengal—*contd.*		
Chumparun ...	0·10	Weather very hot; winds variable, east and west; very heavy rain reported on the 27th April in the north-west of the district; towards Bagah and Ramnagar it has done much good; there was also slight rain throughout the district, but not sufficient to be of much benefit; preparations for the Bhadoi or early sowings going on; paddy has also been sown in some places; indigo prospects very unfavourable; rain anxiously looked for for the next sowings.
Monghyr ...	0·31	In the first week the weather fair, with high east winds; some rain has fallen; there have been violent storms over the district doing some damage to the mango crop; the rain has done much good, however, to the country; has brought on the moong (pulse) and early rice crops, and freshened them and enabled the ryots to plough the lands; rain is, however, wanted everywhere.
Bhaugulpore ...	0·98	Rainfall at Banka ·52, at Soopoole 1·23, at Mudhepoorah 2 to 3 inches; the rain has done immense good to the moong (pulse), paddy, and sugarcane now on the ground; ploughing and cultivation operations are being carried on with vigour throughout the north, and early crop sowings commenced in many places; murwa (millet) and Indian corn being sown in hopes of more rain; if it falls within a fortnight these crops will ripen early, and sowings will become general; another good fall of rain anxiously looked for.
Purneah ...	3·05	Heavy showers of rain in the early part of the fortnight; afterwards clear, and hot with east wind; the rain has done much good, and quite changed the crop prospects; the sowings of early and late rice going on everywhere. Early rice especially is promising well; moong (pulse) looking well; many say there will be a better crop than has been known to years; more rain is still wanted in Kissengunge.
Sonthal Pergunnahs ...	0·82	Weather unsettled, with great heat, which extends far into the night. Deogurh—Clouds, dust, and a litte rain. Godda—cloudy. Rajmehal—cool, with two inches of rain. Doomka—clouds and wind, alternately very hot and pleasantly cool, and some rain in the first week; hardly anything on the ground; mohwa all harvested; murwa (millet) and sugarcane doing well in Deogurh; cheena (millet) being cut; in Godda, boropaddy doing well; in Rajmehal ploughing for early rice going on in places. Rain greatly required, and is anxiously looked for.
Lohardugga ...	0·41	Cloudy, with east winds and dust storms with slight rain in the first week; weather unsettled, and south-winds; heavy clouds with little or no rain in the second; no crops on the ground, except the newly-planted sugarcane; mohwa crop has been a splendid one in parts where it was most wanted, and the fruit crops promise well; lands are all ready for sowing; and a good fall of rain is much wanted.
Maunbhoom ...	0·75	Daily storms with rain from the north-west in the early part; afterwards exceedingly hot; ploughing going on vigorously; an average amount of sugarcane has been planted out, but is doing badly owing to the unusual want of water; the crop of the konchra (nut of the mohwa tree) is very much below what was expected from the unusually large yield of blossom; the sál seed is not yet ripe, but will, in a short time, afford an important supply of food in the jungle villages; the leaves of the *pepul* tree (mixed with what little mohwa or rice can be scraped together) are being largely consumed by the poorer classes; distress is fast spreading over parts of the district previously considered safe, and day by day fresh reports are being received by the District Officer of villages requiring urgent relief; the greater portion of the non-laboring classes have now used up the last of their stock of rice, and many of these their seed paddy also.
		Public health.—Burdwan, cholera decreasing, fever as before; 24-Pergunnahs, cholera has abated in thannahs Muthoorapore, Barripore, Baduria, Hurwah, and Husnabad, but still continues; fever continues in Barripore; Moorshedabad, cholera is on the decrease, but still rages with some virulence at Burwa, Sagurdreghi, and Gokurn; Maldah, health generally good; Rajshahye, a good deal of cholera in the town of Beauleah and in thannahs Manda, Tannore, and Bagmara; Rungpore, dysentery prevalent; Patna, health of the district generally good, though small-pox still prevails in the city; Shahabad, small-pox continues; thirty cases reported in the Bhubooah sub-division; Tirhoot, public health good; Monghyr, general health good; Bhaugulpore, general health remarkably good; Purneah, the general health of the district continues better than generally is the case at this season; Lohurdugga, small-pox very prevalent, but otherwise the general health is good; Maunbhoom, the health of the district is not very good, numerous cases of small-pox and cholera.
		General Remarks.—More or less rain has fallen in almost all the districts of these provinces, but none in Patna, Gya, Shahabad, and Pooree. It has done much good, enabling the cultivators to prepare the lands for the next crops, and to sow the early crops, as well as saving and strengthening those lately sown. But more rain is required everywhere, and is urgently needed where it has not fallen or where insufficient; in some districts agricultural operations are suspended by the want of it. In a few places resowings will probably be necessary if rain does not fall soon. Indigo prospects are unfavorable in most parts. Boro rice, which is the chief crop this season, will afford much help to the people of the distressed districts, as well as mohwa and jungle fruits in Chota Nagpore. Distress is reported, however, to places where it was not anticipated.
N. W. P.—		
Bustee (May, 11th)	...	Prices slightly fallen in south, export to Gorucknoor having ceased; [illegible] relief works suddenly increased to 12,500; on Mehudawal works alone [illegible] enquiry making with a view to reduction of numbers; rate of pay [illegible] reduced from 2 pie to 1 pie per diem. The intention of Government to [illegible] works when rains begin generally made known; four poor houses [illegible] import from west almost wholly ceased.
Gorackpoor „	...	Prices still falling; in relief works in north 53,499, in south 40,316, [illegible] of whom only 22,300 are men; payment for infants reduced from [illegible] per diem; zamindars complain that ablebodied laborers cannot be [illegible] the fields for rice sowing; in city poor house 519; in seven mofussil [illegible] advances for purchase of grain up to 11th May Rs. 2,30,348; [illegible] seed up to 7th May Rs. 16,974.

* Not in original telegram.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
N. W. P.—*contd.*		
Ghazeepoor ...	...	Not received.
Mirzapoor (May 13th)	...	Prices much the same, except in Doodhee, where price of rice again fallen, owing to import from Sirgoojah and Ruttunpoor, and is now selling at 14 seers 6 chuttacks per rupee; north of Soane one relief work with 340; south of Soane 11 works with 1,144; emigration from Doodhee wholly ceased.
Benares „	...	Prices fairly steady; no change.
Azimgurh (10th)	...	Prices in the whole slightly higher; charitable relief thrice a week to 300 in Azimgurh only.
Jounpoor (12th)	...	Prices stationary; no change; import of grain continues.
Allahabad ...	...	No change; prices slightly risen.
Banda (12th)	...	Prices of food-grains and mohwa on the whole fallen; rubbee and mohwa harvest nearly over; distress not increasing; and all reports as to condition of the people good; two relief works, attended chiefly by women and children; at one of these food substituted for wages in cash; 14 poor houses with 828; Kirwee returns not received.
Humeerpoor „	...	Prices slightly higher; on relief works 1,427; in poor houses 395.
Jaloun (11th)	...	Crops all harvested; health good.
Jhansi (12th)	...	Mohwa better than last year; on relief works 837.
Cawnpoor (13th)	...	Harvest over; outturn average, except in one or two pergunnahs; violent dust storm on 12th.
Futtehgurh ...	...	Not received.
Agra (13th)	...	Prices steady; rubbee threshing nearly over; outturn average; violent dust storm on 12th, with 1·3 rain at head-quarters.
Muttra ...	...	Not received.
Allygurh ...	...	
Meerut (13th)	...	Harvest over; slight shower on night of 12th.
Saharunpoor „	...	Harvest excellent; prices fair, but kept up by export eastwards.
Bijnour (12th)	...	Prices unchanged; harvest over; cane doing well.
Moradabad (13th)	...	Prices slightly fallen; new grain not yet much in market; no export.
Bareilly „	...	Rubbee harvested; prices unchanged.
Punjab— (May 13th)	...	Harvest generally above average; fever prevalent in Dehli city, and small-pox in some Hissar villages; otherwise health of province generally good.
Umballa „	·4	
Rawulpindee „	·75	
Mooltan „	·1	
Oudh— (May 14th)	*Nil.*	
Lucknow ...	„	
Fyzabad ...		Sugar-cane and sawan being irrigated, and the latter cut in many places.
C. Provinces— (May 14th)		
Bhandara (9th)	...	Close; rubbee out-turn average; small-pox prevalent; prices easy.
Mandla (7th)	·90	Heat reduced; prospects good; small-pox prevalent; prices stationary.
Sambulpoor ...	...	Cloudy; sugar-cane sowings continue; no epidemics; prices rising.
Belaspoor ...	...	Cloudy; prospects unchanged; fever and small-pox about; prices easy.
Dumoh ...	·30	Prices slightly risen; cloudy; rubbee harvest completed.
Raipur (11th)	...	Thunder storms occasionally; crops gathered; small-pox prevalent; prices rising.
Wurdha (13th)	·32	Ploughing for khurreef; small-pox prevalent.
Nursinghpoor (15th)	·40	Heavy thunder storm.
Nagpoor ...	...	Cloudy; heavy shower on 12th; ploughing commencing; small-pox continues.
Saugor ...	...	Cloudy; hot; threshing, winnowing progressing; small-pox prevalent.
Jubbulpoor ...	·20	Ploughing commenced; small-pox prevalent; prices stationary.
Seoni ...	...	Cloudy; two slight showers; rubbee harvest completed; ploughing commenced.
Hoshangabad ...	...	Prospects good; health fair; small-pox prevailing.
Betul ...	·02	Sugar-cane thriving; small-pox prevailing.
Nimar ...	·06	Water becoming scarce; prospects favorable; prices rising; fever and small-pox prevalent.
Upper Godaveri (May 9th)	...	Stormy; health good.
[illegible]rabad Assigned [illegible]ots—		
[illegible] and West Berar (May [illegible]th).	·50	Land under preparation for next cultivation; slight out break of cholera in Malkapoor, Buldana District; other portions of province free from sickness.
[illegible]ana—		
(May 11th)	...	Wells beginning to fail; health very good; weather seasonable.
[illegible]tee (Agency States)	...	Wells moderately full; health good, except small-pox prevalent at Deolee and Shahpoora.
(May 2nd)		
(Apl. 30th)	0·15	Crops for the most part well in; water supply and health the same.
[illegible]r (May 14th)	...	Two rain-falls during the fortnight; public health good.
[illegible]e ...	...	Easterly wind; weather close; early part of month a good storm and change of wind; a few cases of cholera; no death.
[illegible]ndia—		
(May 13th)	...	Slight rain; weather cooler; health good; prospects favorable.
(13th)	...	Rain yesterday afternoon; crops fair; small-pox the same as before.
[illegible]uch ...	·60	Weather stormy.
[illegible]m ...	...	No rain; prospects favorable; health good.
[illegible]and (Sutna) ...	·10	General health good.
(May 6th)	0·65	Spring harvest good in the hill districts; Gya rice and Indian corn have been generally sown, and are coming up well.
[illegible] Coorg—		
[illegible]e Cantonment ...	6·20½	Rain fell in all the districts of the province.
...	7·44	Agricultural prospects fair; ploughing commenced; public health generally good; cattle disease in two districts; coffee crop good in Hassan and Coorg.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

EXTENT OF THE SCARCITY IN BENGAL AND MEASURES TAKEN TO RELIEVE IT. (CORRESPONDENCE BETWEEN THE GOVERNMENT OF INDIA AND HER MAJESTY'S SECRETARY OF STATE FOR INDIA.)

The following papers are published for general information.

By order of the Governor General in Council,

A. O. HUME,
Secy. to Govt. of India.

No. 17, dated Calcutta, the 20th March 1874.

From—The Government of India,
To—Her Majesty's Secretary of State for India.

WE have the honor to acknowledge the receipt of Despatch No. 2 of the 23rd January from your Lordship's predecessor. We are gratified to learn that the measures and the policy which we have adopted with respect to the present scarcity in parts of Bengal and Behar have met with the approval of Her Majesty's Government.

2. The weekly despatches and telegrams, and the fortnightly special narratives from the Lieutenant-Governor of Bengal, which we have periodically forwarded, have kept Her Majesty's Government fully informed of the progress of events. This information has been furnished as it arrived; it is voluminous, and we recognise the fact that it would be difficult for any one at a distance, who has not carefully watched the current of events in each separate locality, to appreciate accurately the general situation of affairs. Moreover, the anticipated yield of the spring crops is now pretty well known, and we are, therefore, in a position to define with greater accuracy than heretofore the prospects of the year; while the measures which we have adopted for the relief of distress are in a forward condition. We think, therefore, that the moment is opportune for a brief review of the general position of affairs in respect to the policy of Government, the amount of distress which is to be anticipated, and the steps which have been taken to relieve it, and, lastly, to the actual condition of the people in the famine-stricken districts. Her Majesty's Government will thus be able to judge of the adequacy of the measures which we have adopted.

I.—GENERAL POLICY OF GOVERNMENT.

(1.)—POLICY IN RESPECT TO PRIVATE TRADE.

3. It was necessary at the outset to define broadly the duties which Government was prepared to take upon itself, and to decide how far reliance should be placed upon the operations of trade to supply the anticipated deficiency of food in the affected districts. We have from the first considered that any general deficiency in the food-supply of a large continent like India, containing a population of some two hundred millions who live chiefly by agriculture, and comprising within its limits extensive tracts of country subject to very different climatic influences, is in the highest degree improbable. We looked, therefore, to the grain-producing districts of Bengal which had not been affected by the drought, and to the rest of India, to supply the deficiency where the rice crop of 1873 had failed. It appeared to us that it was essential to assure traders that Government did not intend to interfere with their operations.

The importance of this point has throughout been frequently pressed upon the Government. In the early part of November exaggerated rumours as to our intentions were current, and received a certain amount of credence. An impression was getting abroad that Government intended to take upon itself the food-supply of a great portion of the population of Bengal. Any such impression would have been disastrous, because the operations of dealers in grain, upon whom we had mainly to rely, would thereby have been paralysed.

4. A Resolution was published on November 7th, in which the general policy of Government was declared in the following terms:—

"The Governor General has full confidence that the energy and enterprise of those engaged in the internal trade of British India will prove equal to the occasion, and that supplies (excepting under the conditions to be noticed hereafter) will generally be at hand to meet any deficiencies of grain in different parts of the country.

"It has been officially reported that on the very first appearance of the prospect of a short autumn harvest large quantities of grain were imported into the trade centres of Behar, and much evidence has since been received to the effect that grain is being despatched by the merchants without any delay or hesitation to the principal marts in the districts likely to be affected by scarcity. The Governor General is sanguine that the same commercial activity will prevail wherever it is needed, and that it will become greater and greater according as the demand for it may be intensified.

"It has, however, been proved, by the sad experience of famines in India, that exceptional circumstances may arise whereby numbers of persons may be exposed to danger of starvation or to disease arising from want of food. In all such cases, where human life may be at stake, the Government and its officers will do their utmost to apply the most effectual remedy that may be practicable, and will strive, by forethought and management, to prevent the occurrence of any such misfortunes."

We designedly announced the principle which we had determined to adopt before alluding to the exceptions which we anticipated would arise to its application, and we think that the result of the publication of this Resolution, together with the encouragement given to local traders by local officers, who in this respect received precise instructions, has been so far satisfactory that the intentions of Government became gradually well understood, and that trade, save in exceptionally situated localities, has been extraordinarily active.

5. We are anxious that our views upon this important subject should be clearly understood. The ordinary motives which induce a trader to send his grain to the market in which the highest price is to be obtained hold good in India as elsewhere; in fact, the native traders are peculiarly alive to their own interests in this respect, carefully watch the fluctuations of the local markets, and send supplies to those marts in which they can realise the highest profits. We have from the first believed, and we are still of opinion, that in respect to most parts of the country reliance may safely be placed upon dealers in grain to distribute the supplies of food according to the wants of the community, leaving to Government in those parts the task of providing, by means of relief works and gratuitous relief, for those who are too poor to buy food at the high prices which must be expected. At the same time we came to the conclusion that in some parts of the country, which are remote from the great lines of communication, it was necessary for Government, owing to the inactivity of trade, to take upon itself the task of sending in supplies of food. This had to be done early, because traffic is to a great extent interrupted during the rainy months, and the deficiency cannot then be made good.

6. It is in the highest degree desirable that the area in which the Government is obliged to take upon itself the onerous duty of providing food for the whole or the greater part of the population should be as circumscribed as possible. The attempt to feed the whole population of all the districts affected by the drought through Government agency is not only unnecessary, but we believe it to be impossible, and that the attempt would terminate in disaster. For these reasons we have from the commencement done all in our power to encourage trade. Our endeavours have been so far successful that we have reason to hope that the task which we have to perform, although one of great difficulty, is now reduced to manageable dimensions.

7. Another quite separate branch of this subject relates to the exportation of food-grains. Our reasons for not prohibiting that exportation have been expressed in the Viceroy's Minute of January 30th,* and we need not allude to the matter further. We will only add that, so far as we can yet see, there will be no difficulty in procuring a sufficiency of food. The difficulties consist in its conveyance to the distressed districts, and its distribution there, and would not have been alleviated by any prohibition of exportation.

* Despatch No. 8 of January 30th, 1874.

(2.)—MEASURES TAKEN TO ALLEVIATE DISTRESS.

8. We pass on to the chief methods upon which Government rely for the relief of distress. These are—*1st*, the employment of laborers on public works, their wages being paid in money or grain; *2nd*, the distribution of gratuitous or partly gratuitous relief.

(*a.*)—*Relief works.*

9. We look upon the provision of employment upon public works at the outset of a period of scarcity as a valuable preliminary and precautionary measure, whereby the means of providing themselves with subsistence are afforded to the laboring population and to the smaller cultivators, who are not unaccustomed to labor for hire. This application of public works has been proved to be sound by the experience of former periods of scarcity in India.

We, therefore, directed our attention in the first instance to the provision of public works in all those parts of the country which were affected by the drought. Works on a large scale were provided by the Government of India, whilst instructions were issued to local officers by the Lieutenant-Governor of Bengal to provide an adequate number of local relief works within easy reach of all portions of the districts in which severe distress was anticipated.

(*b.*)—*Gratuitous relief.*

10. We have from the first recognised the fact that, besides those whom it is possible to relieve by employment on public works, there are considerable numbers who from age, sickness, caste usages, or other causes will have to receive relief either wholly or partly gratuitous. This relief is given through the agency of Relief Committees acting in communication with, and under the general instructions of, the officers of Government, whom we hold directly responsible that no deaths from starvation shall occur which can be avoided by any exertion or arrangement within their power and the means placed at their command.

11. We have already forwarded to your Lordship a copy of the instructions which we have issued to Relief Committees, but for easy reference we append another copy to this despatch. Briefly, it may be said that the duties of these Committees are to distribute gratuitous relief to persons unable to work; to provide employment at or near the homes of persons who are capable of performing light labor, such as spinning, weaving, &c.; to provide in such a manner as from local experience they may consider best for the relief of women and of persons whose caste usages preclude the application of a labor test; to sell grain under conditions to which we shall presently allude more particularly; and, where distress is general, to adopt a system of village relief. To this latter point we attach great importance, because the congregation of large masses of people away from their homes leads to much mischief. In framing the above instructions, we have endeavoured to provide for all contingencies which we can at present foresee; but, in order that no inconvenience should arise from too rigid an adherence in all cases to the precise terms of the instructions, we have impressed upon Relief Committees and on all Government officers that, should any unforeseen circumstances arise, they are to act promptly on their own responsibility and to the best of their discretion.

Enclosure No. 1.

12. It is not, and it never has been, the intention of Government to require work as an invariable condition to the grant of relief, or, when work is required, to be rigid as to its precise amount. Neither do we desire to use the issue of cooked food as a test by which to gauge the necessity of giving relief to all applicants. In order that there should be no possible misapprehension on this subject, the Resolution of Government of March 6th contained the following passage:—

"The Government has not prescribed the invariable use of any test, either by labor or by the distribution of cooked food, for the purpose of determining who are fit objects for relief. Such tests are desirable and necessary under certain circumstances. It is right that able-bodied men, accustomed to labor, should, as a general rule, be required to work in return for the food or money supplied to them. It is desirable that light work should be found for others, where this can be arranged profitably and without obliging large numbers of people to leave their homes. In dealing with certain classes of distress, especially in towns, the issue of relief in cooked food may be useful as a test. But stringent tests are inapplicable to those limited tracts of country where, owing to the great failure of the crops and the absence of private trade, the Government have, in accordance with their Resolution of the 7th of November last, assumed the task of importing grain for sale and distribution to the people. In such tracts the difficulty will be not to prevent undeserving applicants from being relieved, but to ensure that sufficient supplies reach those who require them."

(3.)—SALE OF GRAIN BY GOVERNMENT.

13. Where large numbers of people have been collected together upon public works, provision has been made for the issue of part of their wages in food, or, what amounts to the same thing, for the sale of food to them at a rate which has been fixed by the Government of Bengal at 10 seers for the rupee. But, besides the provision thus made, it has become necessary, for reasons which have been stated before, to make arrangements in some parts of the country for the supply of food to large masses of the general population. This is a most difficult and delicate task. After careful consideration we adopted the course which was successfully pursued in dealing with the Irish famine. We have directed the Collectors of certain districts to make arrangements, if possible through the agency of traders, for the sale of grain from Government stores, if a serious deficiency of grain in any part of their districts is apprehended. The selling price is fixed at that of the nearest large mart where supplies are readily brought in by railroad or river, together with such addition representing the cost of transport as may be considered proper. Sales will be stopped as soon as the local trade receives sufficient supplies, and any competition with the local trade will be carefully avoided. It is to be observed that the instructions which we have issued on this subject allow of the sale of food below market rates as a means of relief to persons whose cases have been enquired into by Relief Committees or Government officers. In addition to the sale of grain upon the principles above explained, we have directed local officers to make use very largely of the system (well known in India) of making advances to cultivators on repayment after the next harvest. Zemindars will in many cases become security for their tenants; but

where this arrangement is impracticable, advances will still be made to cultivators of the soil if there is a reasonable probability of repayment. We rely very much upon this system for the distribution of food among a large and important class of the population, who should be mainly engaged upon preparing their land for future crops, and, therefore, could not be continuously employed with advantage upon public works.

(4.)—MEASURES OF SECONDARY IMPORTANCE ADOPTED FOR THE ALLEVIATION OF DISTRESS.

14. In addition to the measures which we have already described, some others of secondary importance have been adopted.

(a.)—Remission of Land Revenue.

15. The first of these has reference to a remission of the land revenue. We are of opinion that the occurrence of scarcity is not of itself a sufficient reason for the postponement of revenue instalments in Bengal and Behar, where the land revenue has been permanently settled. In Regulation I of 1793 (the Permanent Settlement), Section 7, Article 6, it was distinctly stated that—

"in future no claims or applications for suspensions or remissions on account of drought, inundation, or other calamity of season, will be attended to."

We wish to adhere rigidly to the principles laid down in 1793 by Lord Cornwallis, but we do not consider that it is inconsistent with those principles that the State should deal liberally with those zemindars who may distinguish themselves by employing labor on works of permanent improvement, or importing grain for distribution, or sustaining their ryots in a season of difficulty, or by any act of munificence towards their tenantry, or of charity towards the people in reference to the scarcity, which may be shown to the satisfaction of the local officers. We accordingly instructed the Bengal Government* that in such cases the Collector should refrain from the application of any coercive process in respect to unpaid arrears of the instalments due on the 12th January, and may postpone part or whole of the coming instalments of the 28th March and the 28th June. The payment of arrears may be distributed over a term not exceeding two years from the date of the original postponement.

* Letter to the Government of Bengal, No. 112 of the 15th January.

(b.)—Other minor measures.

16. With respect to other minor measures, Government has freely granted loans to Corporations, Municipalities, and Trusts, as well as advances of money for agricultural improvements, and to non-official gentlemen and traders who have undertaken to import grain. Authority has been given to make advances for the purpose of purchasing seed-grain. The railway rates of freight have been reduced to one-half their ordinary amount. Aid from the Army, Commissariat, and other Public Departments has been freely afforded. Lastly, facilities have been given to unemployed laborers to emigrate.

II.—AMOUNT OF ANTICIPATED DISTRESS AND MEASURES ADOPTED TO RELIEVE IT.

17. The absence of any trustworthy statistics as to the area under cultivation in each district† and the outturn of each crop has throughout rendered it a matter of extreme difficulty for us to estimate the extent of the danger with which we have to cope. Even at this late period, although the utmost attention has been given to the subject, our estimates are necessarily somewhat conjectural; but, in order to be upon the safe side, we have always accepted the highest estimate which has been made by any responsible authority.

† Bengal is divided for administrative purposes into, 1st, Divisions; 2nd, Districts; 3rd, Sub-divisions; 4th, Thannahs.

18. The tract of country in which distress will be more or less aggravated comprises portions of the Patna, Bhaugulpore, and Rajshahye divisions. The population of the whole of those divisions amounts to about 25 millions. The rough estimate formed by us last November of the number of persons who, judging from the experience of former times, would be likely to come upon the hands of Government, was about 2½ millions, or 10 per cent. of the whole population‡ for a period of seven months. We are now able to form a more detailed estimate of our wants.

‡ Despatch to Secretary of State, No. 8 of 30th January 1874.

19. The amount of distress to be anticipated varies very much in each district, and, indeed, sometimes in each sub-division. In those parts in which a considerable portion of the cultivated land is irrigated, or in which the failure of the rice crop was not very extensive, or in which the spring crops promise a good yield, there is a comparative abundance of food. In others every degree of deficiency exists. In the worst districts, where the rice crop has completely failed, and the spring crops are so small that no material aid can be derived from them, the deficiency of food-supply may be said to be almost absolute.

20. The detailed calculations of the requirements of the affected districts are appended to this despatch. We anticipate that the area of severe distress will be confined to a tract of country having a population of about 15,000,000; of these we estimate that at the worst period Government will have to provide food for about 2,663,000 people, or about 18

Enclosure No. 2.

per cent. of the whole population. The total allotment of grain to these districts is about 327,500 tons. In the remaining districts, containing a population of about 10,000,000, detailed calculations have not been made, but for the most part the percentage of persons who will have to be fed is expected to be comparatively trifling. Allotments of grain, amounting to about 60,000 tons, have been made to these districts.

21. Our original calculations were based upon an average daily consumption of ½ a seer* per head per diem. Sir R. Temple's recent calculations have, however, been based on a daily consumption of ¾ths of a seer per head, and we thought it safer to adopt the higher estimate. The total amount of grain required, according to the best estimate which we can frame, is about 338,000 tons. We have arranged for a supply of about 465,000 tons, which will leave a reserve of about 127,000 tons. Of this about 385,500 tons will come from beyond sea. About 160,000 tons have already arrived, and ships are daily arriving as fast or even faster than the railways can convey the rice up-country. We do not anticipate any difficulty in making further purchases should they be required. We have from the first been of opinion that the greatest difficulty would be experienced not in obtaining supplies, but in the proper organization of the land transport and the detailed arrangements for rendering food available at the right places to those who might be in want of it. The number of people for whom it is possible to provide by grain imported from without is limited by the carrying power of the railways, and, again, the amount which can profitably be sent by rail to the famine-stricken districts is limited by the number of carts which can be procured, and which when procured can be loaded and despatched daily from the railway stations.

* 1 seer=2 lbs.

22. Although some grain, both on account of Government and private traders, reaches the distressed districts by water-carriage, the chief reliance both of Government and the trade must be placed upon the railways. The East Indian Railway traverses Behar, and is throwing grain into that province both upwards from Calcutta and downwards from the North-Western Provinces and the Punjab. The Eastern Bengal Railway takes supplies up from Calcutta to Kooshtea and Goalundo, from whence they are distributed in the Rajshahye division by means of steamers, boats, and carts. The amount of Government grain already sent up the East Indian Railway is about 117,000 tons, and the amount sent up the Eastern Bengal Railway is about 33,000 tons. The East Indian Railway are now taking daily an average of 2,000 tons of Government grain and 400 tons of private grain up-country, and the Eastern Bengal Railway are taking an average of 800 tons of Government grain up to Kooshtea and Goalundo. At the same time the trade is sending large quantities of grain down from the North-Western Provinces and the Punjab into the famine districts. We are informed that 23,580 tons of grain, or sufficient to load 118 trains, are awaiting despatch at stations on the Scinde, Punjab, and Delhi Railway. This accumulation is within the station premises only, and it is believed that the stocks lying in the bazars adjoining the railway stations are more than equal (they are said to be four times as great) to the accumulations inside the station yard, while it is certain that the supplies in the country (independent of the present abundant crop) are scarcely yet affected by the heavy despatches that have been made to Bengal. The daily average amount of grain which is now being brought from the north and west into the famine districts is 1,700 tons, of which some portion is fodder for cattle. Your Lordship will, therefore, observe that, including what is being done by Government and what is being imported by grain-dealers, grain to the amount of about 5,000 tons per diem, or sufficient to provide a daily ration for nearly 8,000,000 people, is converging on the famine districts.

23. Under these circumstances, should it become necessary to make further purchases on Government account, we propose to draw upon the abundant markets of the Punjab and the North-Western Provinces, which, in so far as Government is concerned, are as yet almost untouched.

24. The difficulties connected with the transport of grain by rail are, however, slight as compared to those to be encountered in removing the grain from the railway stations to depôts in the interior of the distressed districts. At the beginning of January we were led to believe, from a careful consideration of the reports submitted by the Government of Bengal, that the arrangements for local transport and the organization for distributing relief were not progressing so quickly as could be wished, and accordingly a Conference was held on the 8th of January, the proceedings of which were submitted to your Lordship's predecessor in our Despatch No. 5 of the 16th January, when the subject was fully discussed. A little later it became evident that, in spite of the endeavours of Sir George Campbell, the arrangements for local transport were insufficient, and that this and other matters demanded earnest attention and prompt action. We considered it indispensable that an officer of high rank, possessing our fullest confidence, should be at once deputed to visit the distressed districts in person with full powers delegated to him to act according to his discretion. At that time Sir G. Campbell's health unfortunately prevented him from going. His Excellency the Viceroy, therefore, with the full concurrence of Sir G. Campbell, deputed our hon'ble colleague, Sir R. Temple, to perform this duty. Sir R. Temple's appointment was accordingly notified in a Gazette Extraordinary of the 21st January, which was sent home to your Lordship's predecessor in our Despatch No. 6 of the 23rd of January.

25. The exertions made by Sir Richard Temple deserve our warmest thanks. In a very short space of time a transport service on an enormous scale has been organised. On the

26th February, Sir Richard Temple reported that arrangements had been made to employ 70,000 carts and over 150,000 bullocks north of the Ganges, and that about 50,000 carts were already at work. Although the number which it has been found possible to obtain has in some parts fallen short of what was expected, at the same time these figures will be sufficient to show your Lordship the scale on which operations have been undertaken. The supplies for Tirhoot and Chumparun, in which districts the worst distress is anticipated, are mainly drawn from the Patna and Barrh stations. From Bunker Ghât, which is a depôt on the north bank of the Ganges near Patna, three million maunds of grain are to be despatched before the commencement of the rains. We are glad to state that the contract for supplying the requisite amount of transport is working very well, and much credit is due both to the contractors and to the Government officers who are superintending the arrangements. About 20,000 maunds a day are being despatched from Bunker Ghât to Chumparun and Western Tirhoot.

26. We regret to say that the contract for sending 1,800,000 maunds of grain from Chumpta Ghât, which is the depôt on the river opposite Barrh station, into Eastern Tirhoot is not working so satisfactorily, but every effort is being made by Sir George Campbell, who is on the spot, to provide adequate means of transport. In the meanwhile the Railway from Chumpta Ghât to Durbhunga is progressing rapidly towards completion.

III.—ACTUAL CONDITION OF THE PEOPLE.

27. The narrative of the Lieutenant-Governor of Bengal and the district reports give full information as to the actual condition of the people and the progress of the measures which have been adopted to alleviate distress. For convenience of reference we append to this despatch a summary of the last district reports. From a careful perusal of these reports we gather that the condition of affairs is this: In South Behar, about which some anxiety was originally felt, it is now clear that distress will not be nearly so great as was at first anticipated. Actual distress, more or less severe, exists in parts of North Behar. For instance, in the Ramnugger tract of Chumparun it is reported that—

Enclosure No. 3.

"during the last few days there is a marked change for the worse in the condition of the people throughout a large part of the sub-division."

Generally speaking, it may be said that distress where it has arisen has been relieved. There is, however, one exception to this generally satisfactory condition of things. Shortly after the publication of the last narrative, accounts from Durbhunga became alarming, and Sir George Campbell thought it best to proceed at once to the spot himself. From the report contained in his special narrative, which we forward to your Lordship to-day, it appears that, on His Honor's arrival, he found that famine of considerable severity had set in through the tracts about Bahera, Hatee, and Singhya in the Durbhunga sub-division. The people were flocking to the relief works in enormous numbers. The organization for the relief of distress was not in a sufficiently forward condition. Many of the poorest laboring classes had become pinched, and a few of the most wretched had reached the point of starvation. Only three or four actual deaths are recorded, but it is feared that directly or indirectly more may have occurred, of which we have no full information. Since His Honor's arrival he has been most active; the local organization has been much improved; village-to-village relief in detail is being arranged; every endeavour is being made to draft off to their homes the large numbers who have congregated on the relief works, and, as far as we can judge, we think that His Honor is justified in reporting that "widely-spreading want has been stayed."

28. While we must repeat the expression of our disappointment* that the preparations in this limited tract were not earlier completed, we fully appreciate the great difficulties with which the Lieutenant-Governor of Bengal and the local officers have had to contend. We feel certain that all are now exerting themselves to the utmost, and it would be unreasonable to expect complete success everywhere in an undertaking of such great difficulty and magnitude.

* Despatch No. 11 of February 13th, 1874.

29. It will be our duty, as soon as the measures immediately necessary for transport and relief have been completed, to obtain full and accurate information as to the means of communication which will remain open during the rainy season to those parts of the country where there may be a deficiency in the supply of food, in order that we may be prepared, if necessary, to increase the supplies. We shall also shortly endeavour to communicate to your Lordship the best comparative statement that we can compile to show the general prospects of the country in respect to food-supplies in this year and in the year 1866.

No. 10 R., dated India Office, London, the 19th March 1874.

From—Her Majesty's Secretary of State for India,

To—The Government of India.

I have considered in Council your despatches and telegrams of the dates noted in the margin.

Agricultural and Horticultural.

Famine.

Despatch No. 2, dated 2nd January 1874.

Telegrams dated 4th March 1874.
" " 12th " "
" " 13th " "

2. My predecessor has already conveyed to you his approval of some of the most important of the measures that you have adopted for mitigating the pressure of famine upon the populations affected by the recent drought. I have to express my complete satisfaction with the vigour and judgment that have marked your policy in the measures that have been reported to me. Your plans have been energetically carried out by the officers under your command: especially by the Lieutenant Governor of Bengal and by Sir Richard Temple. The efforts of your Government have been so far rewarded with success that up to this time no extensive increase of mortality has visited the thickly peopled districts in which scarcity prevails. You anticipate, however, that the pressure of the famine will continue to be felt till nearly the close of the year.

3. I feel great anxiety, in which you will fully share, that no precaution should be neglected, by which the danger still impending over so many millions of people may be effectually averted. You have had to make suddenly, and on an unprecedented scale, provision both for the supply and for the transport of food. The deficiencies of transport from which your present difficulties have principally arisen will scarcely be diminished as time goes on, but will, on the contrary, be rather aggravated when the rains have fallen and the roads have become less serviceable. Against this danger you have provided, at least partially, by commencing a railway from the river side opposite the Barrh Station to Durbhunga, and by ordering the construction in England of ten steamers with five barges attached, to be delivered in India, so as to be able to navigate the secondary rivers when the water rises. I am satisfied that you will spare neither cost nor labour in carrying out any other plans for facilitating the transport of grain into the distressed districts, which the local knowledge of your Officers may suggest.

4. For the provision of grain sufficient to supply the needs of the distressed districts, you inform me by telegram (4th March) that you have secured 420,000 tons of rice. I desire to draw your especial attention to the question whether this supply will be sufficient. In the telegram I have quoted you state that "area of probable severe distress, now well ascertained, comprises parts of districts of Tirhoot, Sarun, Chumparun, Bhaugulpore, Purneah, Dinagepore. Expect at the worst period to have something under three million persons on the hands of Government in these districts for three months from end of May to end of August, a smaller number during April, May, and September, and still fewer in March, October, and November. There will be distress in nine other districts, but it will not be general. Orders of Government rice amount to 420,000 tons, of which 350,000 from beyond sea."

5. The best authorities appear to agree with Sir Richard Temple in fixing the avetage ration necessary for the support of persons under relief at three-quarters of a seer of rice a day. According to the estimate contained in your telegram, you would therefore require for the three months of severest pressure a total quantity of 185,000 tons. If three-quarters of this pressure be assumed for the three months which you place next in severity, and half this pressure for the three months of lightest scarcity, the total amount of rice required, supposing that you have provided no other grain, will be 413,000 tons. Sir R. Temple, in his Minute of the 31st of January, upon the distress in Tirhoot, states that in most parts of Mudhoobunee, and in some parts of Durbhunga, the distress will not disappear "at the earliest till December"; and in these two districts alone he calculates that it will fall to the Government to support more than 800,000 persons. It will not be safe, therefore, to assume for the closing months of the distress less than half the pressure of the famine at its height.

6. If these conclusions are a just inference from the figures with which you have furnished me, it results that you have a supply of 420,000 tons of rice to meet a demand which you estimate at 413,000 tons. But this is the demand of the six most afflicted districts only. You observe that there will be partial distress in nine other districts. Sir Richard Temple apprehends (5th February) that half a million distressed persons from Nepal may come to the relief works and the rice stores of your Government. Moreover, 720 tons a week are destined (14th February) for Gya, Arrah, and the Soane Canal; 25,000 tons have been allotted (12th February) to the districts of Rajshahye other than Dinagepore, and the Lieutenant-Governor is anxious to retain 20,000 tons reserve to meet the probable want of Eastern Bengal. I observe also that Government grain is being stored in Chota Nagpore, and that relief works have been commenced in Burdwan, and that severe distress is reported to exist among the Sonthals. It is obvious, moreover, that, as prices advance, the distribution of Government grain cannot be confined to those who are "on our hands," that is to say, who are in the receipt of the wages or the alms of Government. There will be numbers who have money, or can procure enough to enable them to work on their own land, if only they can turn that money into grain at a reasonable rate, and against these the Government cannot safely

close its stores. Already in the beginning of February in Tirhoot and Chumparun, public grain was being sold to the general customer, and as Government grain becomes the only grain of the district, the stores destined for the three millions who will be on your hands must be everywhere divided in some degree with a less destitute class. You evidently contemplated this method of supply, for I observe that one of the latest of your orders reported to me is a permission, under certain precautions, to sell rice wholesale to the local dealers, in order that in this way the grain imported into the district at public expense may be distributed by the private trade. It is obvious that, under this system, many who are now destitute will share the advantage of the importation, and must be allowed for in the provision that you make.

7. Even, therefore, if no disturbing cause should derange your calculations, and if I may assume, from your silence as to provision of any other grain, that you do not in them rely upon any such provision, it seems probable that 420,000 tons will fall considerably short of the quantity required. But with the starvation of multitudes as the possible penalty of a mistake, I am convinced that you will not trust to any exact calculation. There are numerous contingencies which may diminish your supply, or may increase the demand upon you. A liberal allowance must be made for the possible failure of the arrivals on which you count, for the shrinkage of transport, for the chance of accident, for the loss that may result by the damage of rice by rain, for the mistakes of those who act under you. On the other hand, it may possibly be that the calculation on which you are relying will fall short of the truth. The area or the duration of the distress with which it is your duty to deal may be larger than you anticipate. Past experience will not lead you to place unbounded trust on the estimates that are supplied to you. I observe the following passage in one of your recent Minutes :—

"These documents have been laid before the Government of India, and the Governor General in Council cannot but express the disappointment which he feels at the local officers having for so long neglected fully to appreciate the requirements of those parts of the country, and thereby occasioned the postponement to the present time of arrangements for transport which should have been made many weeks ago."

These inadequate appreciations led you in November last confidently to name 2,500,000 as the number to be relieved. In March you raised that estimate, under the guidance of fuller information, to 3,000,000. It is impossible to assume with certainty that the tendency to an inadequate appreciation of the danger, which you have already noted in some of your local officers, has altogether ceased to operate.

8. These considerations lead me to apprehend that your supplies, as hitherto reported to me, are not sufficient to protect you against the possibility of a serious deficiency. They may be adequate if the most favourable anticipations should be justified by the event, but if any unforeseen aggravation of your difficulties were to occur, your Government might be involved in embarrassment of the gravest character.

9. By telegram of the 10th instant, I directed you to secure rice in the Burmese market up to 200,000 tons. In reply* you state, without indicating their nature, that you have strong objections to increase your purchases in Burmah. I have no wish to limit your discretion as to the mode of providing the requisite supplies. But I request you to take early measures for securing not only the quantity indicated by your present calculations, but also a very ample margin to meet contingencies, the exact nature of which it is impossible to foresee, but which in an emergency of this magnitude are in some form or other likely to occur.

* "40,000 tons will be placed in distressed districts above Temple's estimates of numbers, which are higher than those of local officers. Additional reserve, not appropriated, 105,000 tons. Total reserve, 145,000. No probability that more can be sent up country from Calcutta before rains than ordered. If more wanted I shall draw on North-West Provinces and Punjab where supply available. I have strong reasons for not now increasing Burmese orders. More can be got from Burmah later if required; information you have received to contrary not correct. Real difficulty not supply, but local transport and distribution."

No. 25, dated 24th April 1874.

From—The Government of India,

To—The Secretary of State for India.

We have the honor to acknowledge the receipt of your Lordship's despatch No. 10, Revenue, of the 19th March.

We have to express our sincere acknowledgments for the approval which your Lordship has conveyed of the policy which we have hitherto pursued, and for the assurances we have received of the cordial support of Her Majesty's Government.

2. We fully share your Lordship's anxiety that no precaution should be neglected by which the danger still impending over many millions of people may be effectually averted. In spite of a sudden and severe outbreak of distress in a portion of Tirhoot before the measures in course of preparation to meet it were quite complete, we think that Sir Richard Temple is fully justified in saying, in the words of the last special narrative, "that the famine has been got well in hand, and will, it may be hoped, be effectually met and averted."

3. Our recent despatches have furnished more complete information than was contained in the telegram of March 4th, to which your Lordship alludes in the despatch under reply.

The information with respect to the famine, which we have forwarded home, although very voluminous, has been necessarily sent somewhat in a fragmentary condition. We have been anxious to give your Lordship the latest information before us at the date of the despatch of each mail. We fear, therefore, that the information which we afforded was not sufficiently explicit on some points of importance.

4. In our despatch No. 17 of the 20th March we reviewed the policy of Government and gave a summary of the general position of affairs. We propose in the present despatch to enter into some further explanations which are suggested by the remarks in your Lordship's despatch of March 19th, and in doing so we trust that we shall be able to remove at any rate a portion of your Lordship's anxiety.

5. Your Lordship observes in the 3rd paragraph of the despatch that "the deficiencies of transport, from which your present difficulties have principally arisen, will scarcely be diminished as time goes on, but will, on the contrary, be rather aggravated when the rains have fallen and the roads have become less serviceable. Against this danger you have provided, at least partially, by commencing a Railway from the riverside opposite the Barrh station to Durbhunga." If our intention had been to send into the distressed districts from time to time a sufficient quantity of grain to meet their current wants, the difficulties in connection with local transport would, without doubt, be greatly aggravated after the rains commence. This, however, is not the actual position of affairs. Our arrangements have been made with the object of storing in the interior of each district before the rains commence a sufficient supply of food to last until after the rains have ceased. Your Lordship will observe, therefore, that we hope that, although other difficulties connected with the distribution of food may remain, those connected with the transport of food to the principal local depôts will, for the most part, have been overcome before the commencement of the rains.

The Railway from Barrh to Durbhunga was not intended as a reserve means of transport by which to enable us to supply Eastern Tirhoot during the rains, although it may be useful after the monsoon sets in; it was recommended by Sir Richard Temple as a reserve means of transport, in the event of the contract for the conveyance of grain by road failing, to secure a sufficient quantity of grain in Eastern Tirhoot before the commencement of the rains. The wisdom of Sir Richard Temple's proposal has been clearly shown, for the contract for transport has partially failed, and without the Railway the supplies for North Eastern Tirhoot could not have been completed before the rains.

6. We are as yet unable to say with certainty whether we shall be completely successful in storing the whole of the allotments of grain at the local depôts within the given time, but we trust that we shall be able to do so. Sir George Campbell's note on the transport arrangements, which is attached to the fifteenth special narrative, states that the solution of the problem very much depends upon the carrying power of the East Indian Railway; but he anticipated that "if the Railway can take without fail 2,000 tons a day as now arranged, we may expect that all the grain will be stored before the rains, if the monsoon sets in at the usual time." The officers of the East Indian Railway Company have exerted themselves to the utmost, and for some weeks that Railway has been taking an average of fully 2,500 tons a day. The total amount despatched by the line up to the evening of the 22nd instant was about 203,000 tons, and there remained about 74,000 tons to go. By the Eastern Bengal Railway about 63,000 tons had been despatched up to the evening of the 22nd instant, and there remained only about 3,500 tons to go.

7. In respect to the amount of our reserve, to which your Lordship alludes in the 5th, 6th, and 7th paragraphs of your despatch, the figures have undergone such frequent, although unavoidable, changes by a revision of the estimates, and by making fresh allotments and fresh purchases, that we fear they are somewhat confusing. The matter now stands as follows :—

According to Sir Richard Temple's Minute No. 66 of March 28th,* 10,550,000 maunds, or about 388,000 tons, were allotted to the Patna, Bhaugulpore, and Rajshahye divisions.

* See despatch No. 21 of April 10th, 1874.

In addition to the above, the following allotments have since been made :—

	Maunds.
To the Patna district	67,500
„ Hazareebagh district	25,000
„ Manbhoom district (probable, but not final)	150,000
„ Palamow sub-division (Lohardugga district)	10,000
„ Moorshedabad district	5,000
TOTAL	257,500

or about 9,500 tons.

The total amount of grain allotted to the several distressed districts is, therefore, about 397,500 tons, of which about 50,000 tons are a reserve over and above the calculations of the estimated requirements. We have purchased, or authorised the Government of Bengal to purchase, in all about 490,000 tons. Our unallotted reserve will, therefore, amount to about 92,500 tons, and the total reserve to about 142,500 tons.

Sir Richard Temple's estimates, on which we have mainly relied, have generally been in excess of those made by the local officers; they have been based on an average daily consumption of ¾ths of a seer all round for men, women, and children, which is a high average.

Credit moreover has not been taken for the very considerable stores of grain which have been imported by zemindars and others with money advanced by Government.

8. We gather from the remarks contained in the 6th paragraph of the despatch under reply that your Lordship is under the impression that when, on the 4th of March, we spoke of the number of persons who are expected to be "on the hands of Government," we intended to include only those who would be likely to be in the receipt of wages or alms, and not that portion of the general public to whom, by reason of the absence of supplies in the local markets, we should have to sell grain. Such, however, was not our meaning. When we spoke of the number of persons who would be "on the hands of Government," we included all those for whom we thought it probable we should have to provide food, whether by payment in kind on relief works, by the distribution of food in the form of charitable relief, or, lastly, by the sale of grain. Your Lordship will observe from a perusal of the several minutes which Sir Richard Temple has written that the percentages of the population for whom he recommended that provision should be made in the most distressed districts are very high, being not unfrequently as much as 50 per cent. of their total population. In those tracts we are prepared to sell,—and we believe that the provision we have made will enable us to sell,—sufficient food to provide for the people until supplies are available in the ordinary course of trade.

9. We are now in a position to state that if we succeed in laying down the amount of grain already allotted to the several districts before the rains commence, we shall be able to meet demands considerably in excess of our estimates. Although, according to the latest returns, about 1,185,000 persons are employed on relief works, and over 116,000 are in receipt of charitable relief, the issues of grain from Government stores have, up to the present time, been inconsiderable. The local reserves of food have, therefore, practically been increased by the quantity which we provided for the month of March and a part of April, most of which, as a matter of fact, still remains in the Government store-houses.

10. In the 7th paragraph of the despatch under reply your Lordship alludes to our rough estimate made last November that we might have to provide for 2½ millions of persons for seven months. That estimate was based more on the general results of past experience applied to the whole area affected by the drought than on any attempt to calculate in detail the future liabilities of particular districts. At that time the great rice crop of 1873 had not been all harvested, and the yield was still to some extent a matter of uncertainty. The spring crops were only in course of being sown, and it was impossible for any one to predict with accuracy what the outturn of those crops would be. The estimate was the best which we could make at the time, but it was of course liable to subsequent alteration and amendment.

11. Our present estimate, as will be seen from Sir Richard Temple's Minute No. 66 of the 28th of March, is that about 3½ millions will, at the worst period of scarcity, require aid from Government; on the other hand, during a portion of the period of seven months, for the whole of which we estimated that 2½ millions of people would require support, a very much less number will be upon the hands of Government. We are now in the middle of the second month of the seven named in our estimate, and the total number of persons employed on relief works, or in receipt of gratuitous relief, is about 1,200,000, or about half the number for which we estimated last November. The vast majority, moreover, of these have been up to present time supported by money with which they buy food in the local bazars, and not by the issue of Government grain. As your Lordship is already aware, we have thought it desirable to base our more recent estimates on an average daily consumption of three-quarters of a seer a day; hence the necessity arose for increasing our supplies very considerably.

12. As your Lordship has alluded to our expression of disappointment that the arrangements for local transport were in some parts delayed for too long a time, we think that in justice to Sir George Campbell and his officers we should make some further remarks upon this subject. The letter from which your Lordship has quoted referred only to the transport arrangements of the Tirhoot district. As your Lordship is aware, the present famine affects more or less severely a very extensive and densely populated tract of country. Over the greater portion of that area we believe the local arrangements for the transport of food and the relief of distress to have been carried out in time. In one limited portion only (Eastern Tirhoot) the distress came on very suddenly, and for a short time outstripped the measures which were in course of adoption to avert it. Although we have thought it our duty to express our sense of disappointment at this partial and temporary failure, we have not considered it necessary, in the interests of the public service, to enquire very particularly upon whom the responsibility rested. We wished to encourage all Government officers to further exertions rather than to impute blame for any past shortcomings. We fully sympathised with Sir George Campbell and his officers in the great difficulties which they had to encounter,—difficulties which have strained the weak administrative machinery of Bengal to the utmost, and which were more particularly felt in Tirhoot on account of the peculiar habits and characteristics of the people. We felt sure that all, from the Lieutenant-Governor downwards, were exerting themselves to the best of their ability, and that any partial failure arose from errors of judgment, which would be speedily rectified, or from the fact that the difficulties in the way of rapidly organising the necessary machinery complete in all its branches were well-nigh insuperable.

13. In so vast and novel an undertaking it would be unreasonable to expect complete success everywhere. Speaking generally, we are of opinion that the efforts which have been made by the local officers have been very judicious and successful. Moreover, as will be seen from a perusal of the letters quoted in the margin, we have from the first attached the utmost importance to the necessity of making early and complete arrangements for the transport of grain and the organization of the machinery for the distribution of relief; and although we have throughout felt that it would not be in the interests of the public service to interfere or to give minute instructions as to the detail of those arrangements, at the same time we are fully alive to the fact that upon us rested the responsibility not only of giving instructions, but of seeing that they were everywhere carried out. We fully accept this responsibility, and we, therefore, thought that it was unnecessary and, indeed, unjust to the Lieutenant-Governor and his officers to impute serious blame to them on account of the single exception to their generally successful efforts, especially as the failure was temporary and was speedily remedied.

Enclosures to despatch No. 5 of January 16th, 1874:
- Despatch to Secretary of State, No. 3 of January 9th, 1874.
- From Government of India to Government of Bengal, No. 82 of January 12th, 1874.
- From Government of Bengal to Government of India, No. 112 S.-R. of January 14th, 1874.
- From Government of India to Government of Bengal, No. 83 of January 12th, 1874.
- From Government of Bengal to Government of India, No. 122 S.-R. of January 14th, 1874.
- Proceedings at Conference held on January 8th, 1874.
- From Government of India to Government of Bengal, No. 126 of January 17th, 1874 (Enclosure to despatch to Secretary of State, No. 6 of January 23rd, 1874).

In respect to Sir George Campbell's personal services, we have already* acknowledged the zeal and ability with which from the first he devoted himself to the arduous task of conducting the operations for the relief of distress, and we have particularly recorded our high appreciation of the manner in which he personally directed and supervised the relief operations on the occasion of his visit to North Behar. As regards the officers who acted under Sir George Campbell's orders, in spite of a temporary failure in one portion of the Tirhoot District, we cannot speak too highly of the zeal, energy, and devotion which they have from the first displayed. These officers deserve our warmest thanks; they deserve, and they will obtain, our cordial support in the performance of their arduous duties.

* Resolution of Government of India, No. 1200 A. of April 8th, 1874 (See enclosure 4 to despatch to Secretary of State, No. 21 of April 10th, 1874).

14. Your Lordship will perceive from the explanations contained in this despatch that since the date of the information, upon which the calculations contained in the despatch under reply were based, we have increased our purchases of grain from 420,000 to about 492,000 tons. We have already bought a larger amount of rice than it will be possible to send up the country by railway before the rains commence. The reserve beyond the allotments which have been already made will be held in store at Calcutta. We have availed ourselves of the discretion which your Lordship placed in our hands as respects further purchases; but, bearing in mind Your Lordship's wishes, we shall continue to secure an ample margin to meet contingencies, and we shall not hesitate to order further supplies should there be any probability of their being required. A considerable amount of rice is obtainable from Burmah in the months of June and July, when, from the rising of the water in the creeks, rice, which is now stored in the interior, is brought down to the seaports. Moreover in the abundant markets of Northern India ample supplies of grain can readily be obtained. We are unwilling to purchase largely in those markets until the necessity has clearly arisen, as by doing so we should raise prices and thus interfere with the trade between the Punjab and Behar. This trade, although it has lately somewhat fallen off owing to a fall of prices at Patna, is certain to revive again in the very probable contingency of a rise of price at Patna, or a fall in the northern markets.

[NOTE.—*There were several typographical errors in these papers as printed in the Extra Supplement of the 18th instant.*]

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

[IRRIGATION.]

REVENUE REPORT OF IRRIGATION WORKS IN THE NORTH-WESTERN PROVINCES FOR THE YEAR 1872-73.

Nos. 267—81 I, dated 12th May 1874.

OBSERVATIONS.—By the Government of India, PUBLIC WORKS DEPT.

Read :—

Revenue Report of Irrigation Works in the North Western Provinces for 1872-73.

Resolution of the Local Government, No. 74 A of the 2nd February 1874, reviewing a letter No. C 100 of 18th idem submitting it.

OBSERVATIONS.—This Report is rather over three months behind time; the date fixed by the Government of India for its submission being early in November of each year; and is seven weeks later in coming to hand than the last one, which was the earliest ever received. It is reported that the delay is due mainly to the Controller having furnished the information on which the review is based, in an entirely new form, involving references between the Offices of the Chief Engineer and Controller, and the preparation by the latter of several supplementary statements before the usual tabular statements of the Chief Engineer could be compiled; this explanation is accepted.

GENERAL.

2. Since the submission of the last Report, the Capital and Revenue accounts of all Irrigation Works have undergone a careful revision, and have been compiled on an entirely new system, in accordance with instructions issued by the Accountant General. The effect of this revision has been to add very considerably to the capital account of some of the larger Irrigation Works, while the Revenue charges of all have been more or less materially affected.

3. It is reported that the only future additions to Capital, apart from the actual cost of the works, will be the capitalised value of revenue remitted on account of land occupied by the canals, and that these additions will be effected in accordance with the orders of the Government of India as soon as the necessary information has been supplied by the Board of Revenue.

4. *Capital Account.*—The effect of the revisions alluded to has been to increase the aggregate amount debited to all works, by a sum of Rs. 18,88,918*. The increase is due partly to the corrections of errors of past years, but chiefly to debits of large sums representing the value of stock in hand.

	Rs.
Ganges Canal	10,91,462
Eastern Jumna Canal	70,004
Doon Canals	3,150
Rohilkhund and Bijnour Canals	41,371
Agra Canal	4,78,836
Lower Ganges Canal	1,160
Eastern Ganges „	889
Bundlekhund Survey	28
Total suspense balance ...	16,81,900
Errors, omissions, share of accounts not charged before, and survey establishment transferred from Revenue to Capital	2,07,018
Total ...	*18,88,918

5. The Capital invested in all Irrigation Works in the Province, both those in operation and under construction, amounted at the beginning of the year to Rs. 3,31,13,547, of which Rs. 2,92,86,499 had been expended on works in operation, and yielding a return. The outlay during the year on *all* works was Rs. 22,02,515, reduced by receipts (Rs. 11,554) on account

of Capital to Rs. 21,90,961, inclusive of a sum of Rs. 1,09,000 being the capitalization of rent of land taken up for the Agra Canal. Of which Rs. 5,07,622 had been expended on works in operation, and returning revenue. The total investment on *all* works up to the close of 1872-73 amounted to Rs. 3,53,04,508, or £3,530,450.

6. *Irrigation Operations*—The area irrigated during the year was 940,586 acres against 852,492 acres of the previous year, being an increase of 88,094 acres, of which 20,502 acres were obtained in the autumn, and 67,592 acres in the spring; the greater portion (78,615 acres) of the increased irrigation occurred on the Ganges Canal.

7. The autumn sowings were accompanied like those of the corresponding season of the previous year, with abundant and evenly distributed rain-fall. During the spring sowings however while on the one hand, the rainfall in the districts watered by the lower reaches of the Ganges Canal failed entirely—a circumstance which favoured canal irrigation in that portion of the country—on the other hand, the rainfall in the districts watered by the upper reaches of the Ganges Canal and by the Eastern Jumna Canal was timely and sufficient, and rendered the cultivators to a certain extent independent of artificial irrigation. This circumstance explains how it was that, although the average rain-fall of the year was 5·6 inches less than that of the previous year, there was not so great an increase in the area irrigated as might have been expected.

8. The following table compares the results of the more valuable crops irrigated for the past seven years :—

Class.	Crops.	1866-67.	1867-68.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
I	Sugar-cane	76,876	87,050	97,555	1,04,596	1,12,141	94,816	1,02,253
II	Rice	1,16,355	97,867	1,11,019	1,17,548	96,479	76,850	84,973
III	Indigo	27,290	77,976	76,687	1,30,248	1,18,897	1,19,617	1,30,985
IV	Cotton	27,144	8,265	52,992	55,883	35,070	20,365	14,799
	Total valuable crops ...	2,92,665	2,71,158	3,38,253	4,08,275	3,62,587	3,11,648	3,33,010
	Total area irrigated ..	Acres. 9,83,390	Acres. 7,61,480	Acres. 14,41,918	Acres. 10,89,672	Acres. 10,50,808	Acres. 8,52,492	Acres. 9,40,586
	* Average of rain-fall in irrigated districts ...	Inches. 28·1	Inches. 44·5	Inches. 17·0	Inches. 29·1	Inches. 37·1	Inches. 38·0	Inches. 32·4

* In arriving at the average of rain-fall, the districts of the Terai, Bijnour, Jhansi, Humeerpoor and the Doon have been excluded.

9. The most striking feature, of late years, of canal irrigation in the North Western Provinces is the rapid spread of indigo. Since 1866-67 this crop has increased by more than 100,000 acres. Sugar-cane, too, has during the same period made great progress, being 25,000 acres higher than in 1866-67. Though the favourable nature of the rain-fall in 1871-72 appears to have temporarily checked the spread of irrigation for this crop during the year under review, there has been an increase of 7,000 acres as compared with the preceding year. The areas of cotton and rice show a diminution as compared with the areas of 1866-67. The latter crop as compared with 1871-72, shows a slight increase; it has however received a check from the reduction of supply in the distributaries of the upper reaches of the Ganges Canal, where rice is principally cultivated; the annual canal closures render its irrigation with canal water somewhat precarious.

10. Sugar-cane irrigation, it is thought, cannot increase much beyond its present limits, except by spreading into tracts where it has not been grown before. It would appear as if its area depended directly upon the available labour and

means for expressing and utilizing the cane juice. It is believed that it may perhaps be worthwhile to erect mills at suitable places for pressing the juice, and it is in contemplation by the Local Government to bring forward projects for the purpose. The Government of India is glad to observe that the Local Government propose to utilize some of the superabundant available water-power.

11. The proportions of autumn to spring crops are compared in the following table :—

Year.	Khureef.	Rubbee.	Proportion of Autumn to Spring.	
			Autumn.	Spring.
	Acres.	Acres.	Per cent.	Per cent.
1867-68	289,910	471,571	27·07	72·03
1868-69	484,485	957,413	33·60	66·40
1869-70	501,625	588,048	46·03	53·97
1870-71	396,399	654,409	37·72	62·28
1871-72	333,120	519,374	39·08	60·92
1872-73	353,621	586,965	37·59	62·41

The increase in the proportion of the autumn irrigation since 1867-68 is due, as already shown chiefly to the spread of indigo and sugar-cane. The increase in the spring irrigation was for the most part under barley; and was due to a failure of the Christmas rains in the lower portion of the Doab.

12. The percentage of "flow" to "lift" irrigation is compared in the subjoined table for the past five years :—

Year.	Flow.	Lift.
1868-69	69·4	30·36
1869-70	73·5	26·38
1870-71	74·1	25·9
1871-72	76·0	24·0
1872-73	72·3	27·7

The increase in the proportion of "lift" irrigation as compared with the previous year is due to the greater portion of the increased irrigation during the year having occurred in the Cawnpoor and Etawah Divisions, where "lift" irrigation prevails very considerably.

13. The statement of value of crops irrigated during the year called for in the Resolution on the previous year's Revenue Report has not been submitted. The reason for the omission should be explained.

The portion of the aggregate irrigated area to which water is supplied for both crops should be recorded in order to show the actual area of the tract affected by the irrigation during the year.

14. *Financial results.*—The general financial results of the year's operations are exhibited in the following tables :—

I.

General Abstract of financial results of the Canals in the North Western Provinces (Assessments.)

The difference between tables I and III under head "Revenue" is due to the former being based upon *assessments*, and the latter upon *collections*. The differences under head "working expenses" is due to "remissions" having been charged as outlay in the former table, while in the latter, only the net amount has been brought to book. The best mode of showing "remissions" in the accounts is under consideration.

The figures adopted in the following remarks are taken from table I, which is that used in the Chief Engineer's Report.

15. The following table compares the earnings under each head for the past three years—

Year.	Water-rate.	Navigation.	Water-power.	Miscellaneous.	Plantations.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1870-71	23,80,274	32,861	46,934	32,734	58,365	25,51,168
1871-72	19,67,596	58,929	59,378	21,720	68,110	21,75,733
1872-73	21,21,186	32,494	57,512	17,762	83,695	23,12,649

From which it will be seen that the gross increase over the previous year amounts to Rs. 1,36,916.

The greatest portion of the increase under "water-rate" is due to the Ganges Canal. On the Eastern Jumna Canal, the Revenue was nearly exactly the same as last year; and the returns of the Doon and Rohilkhund Canals and of the other small works show a fair increase.

16. The causes of decrease under "Navigation" and increase under "Plantations" are explained under those sections. The falling off in the receipts under water-power occurred on the Ganges and Eastern Jumna Canals; on the former, it arose from a misunderstanding about the leasing of mills at Cawnpoor; and on the latter, it is ascribed to the year being unfavourable for "Hindoo marriages," and the consequent diminished demand for flour at the usual season.

17. The diminution of receipts under this head from these canals was, however, partially compensated for by a marked increase in the receipt of mill-rents on the Doon Canals.

18. The decrease in miscellaneous receipts is chiefly due to the smaller amount of fines inflicted on irrigators for breach of Canal Rules.

19. *Working expenses.*—The working expenses amounted to Rs. 12,98,267, which is Rs. 69,871 more than the previous year; the Establishment charges were less by Rs. 31,000, but the expenditure on Repairs and Works charged in the Revenue Account was more than a lakh of rupees in excess. Of this sum, Rs. 73,000 was due to an alteration in the system of accounts, by which the cost of minor works of improvement is charged to Revenue, instead of as heretofore to Capital. But for this change the cost of working expenses would have contrasted favourably with that of the previous year.

20. It was observed in the Review of the Report for 1871-72, that while the cost of maintenance and repairs had remained pretty constant for the last ten years, having varied only between $3\frac{3}{4}$ and $5\frac{1}{4}$ lakhs, the cost of Direction and Executive Establishment had more than doubled itself within that period, having risen from $3\frac{1}{2}$ lakhs in 1862-63 to more than $7\frac{1}{2}$ lakhs in 1871-72. The reduction of Rs. 31,000 under this head shows that this point is receiving attention. The Local Government considers that the Revenue Account is unduly burdened with Establishment charges, and a reference proposing a revision of the rules for a more equitable distribution of such charges has for some time past been under the consideration of the Government of India.

21. The following is a table of the working expenses of the canals under operation for the last five years. It will be seen that the total Establishment charges have steadily increased year by year. The share of Direction and Accounts chargeable to Revenue Account has also been increased; but, on the other hand, although the portion of Executive Establishment debitable to Revenue has decreased somewhat since 1870-71, yet the percentage on the

outlay on Works and Repairs supervised is still very high. These points deserve the serious consideration of the Local Government.

	1872-73.	1871-72.	1870-71.	1869-70.	1868-69.
	Rs.	Rs.	Rs.	Rs.	Rs.
Direction and Accounts	1,39,575	1,20,895	96,384	1,29,500	1,01,149
Proportion of Executive Establishment ...	3,25,568	3,56,178	3,63,820	2,96,482	2,84,536
Collection and Police	1,38,181	1,27,282	1,27,962	1,29,037	1,12,190
Fees to Lumberdars and Putwarries ..	88,867	90,260	92,925	40,923	31,161
Navigation	19,207	19,259	11,511	11,368	9,582
Medical	3,969	800	1,500	600	5,200
Plantations	11,625	11,178	10,283	6,932	4,156
Total Establishment ...	7,26,992	7,25,852	7,04,385	6,14,842	5,47,974
Works and Repairs	5,03,278	4,10,164	3,79,034	4,92,363	3,95,616
Maintenance of Plantations	51,582	43,190	35,618	38,265	39,771
Tools and Plant	8,157	7,745	7,557	19,176	27,743
Profit and Loss	...	2,577	...	...	2,025
Total ...	12,90,009	11,89,528	11,26,594	11,64,646	10,13,129

The increase in the outlay under Works and Repairs is, as already stated, due to charges on account of minor extensions and improvements; these charges which have hitherto been charged to Capital, it has been decided by the Government of India, are more properly debitable to Revenue.

22. *Profits.*—The profits from direct income amounted to Rs. 10,14,382 or 3·46 per cent. on the Capital sunk on works in operation, the percentage being nearly exactly the same as in 1871-72. If the indirect revenue derived from the enhancement of land revenue due to canal operations amounting to Rs. 5,54,061, be taken into calculation, the percentage of profits is increased to Rs. 5·35.

23. The only canal which returns a surplus after paying its working expenses and interest charges is the Eastern Jumna Canal, which gave a clear profit of Rs. 2,14,600; all the others show a deficit on the year's operations as follows:—

	Rs.
Ganges Canal	4,58,959
Doon „	1,093
Rohilkhund Canals	62,051
Bijnour „	1,301
Humeerpore Irrigation Works	948
Jhansie „ „	5,130
Total deficit ...	5,29,482
Less surplus on the Eastern Jumna Canal ...	2,14,600
Net deficit ...	3,14,882

The profits of the Eastern Jumna Canal reduces the net loss to Rs. 3,14,882.

24. The aggregate charge for interest from the commencement on the total sum invested in canals in *operation* to the close of 1872-73 amounts to Rs. 2,39,43,883; Rs. 13,29,553 having been added thereto on account of interest for the year 1872-73. Of the total accumulated interest charges, a sum of Rs. 1,20,87,735 has been paid off, leaving a debt of Rs. 1,18,56,148 to be met from the future earnings of the canals. If, however, the indirect receipts of Rs. 32,17,283 be considered, the debt is reduced to Rs. 86,38,865. From the following figures, it appears that the debt is rapidly increasing—

	Rs.
Debt in 1870-71	66,40,896
„ 1871-72	83,57,692
„ 1872-73	86,38,865

The great increase in 1871-72 is due to an addition of nearly Rs. 18¼ lakhs on account of interest charges against the Ganges Canal prior to its opening. The question as to how to deal with the charge for interest when the total capital outlay and interest charges on a project have been repaid is still under consideration.

25. *Demands and collections.*—Great punctuality has been attained in the collection of canal water-rates. The satisfactory state of this account seems to prove that the water-rate assessment is a very light one, as compared with the benefits conferred by the water.

26. The charges for Putwarries' and Lumberdars' fees have reached the large sum of Rs. 90,167, or 4·30 per cent. on the collections, a proposal for dispensing with the attendance of the Putwarrie at measurements by making this a part of the Lumberdar's duty, is now under the consideration of the Local Government.

27. *Enhancement of land revenue due to canal irrigation.*—In addition to direct revenue, a sum of Rs. 5,54,061 is taken to credit during the year as enhancement of land revenue, thus increasing the net profits of the year from all canals in operation to Rs. 15,68,443, or 5·3 per cent. on the total Capital invested in such works, excluding the accumulated interest charges.

28. The amount taken to credit under this head represents the sum that has been actually assessed (and in some Districts realized) since 1862-63. The amount is determined by the Settlement Officers during the revision of the land revenue after a full and careful consideration of all the points affecting the question, such as for instance, the prior prevalence of well irrigation.

29. There is a considerable variation in the incidence of this class of revenue in the different Districts as will appear below—

	Area under irrigation.	Enhancement of land revenue due to canals.	Rate of enhancement per acre.
	Acres.	Rs.	
1. Saharunpoor	67,879	79,369	1·17
2. Mozuffurnuggur	1,19,377	1,13,500	·95
3. Meerut	1,93,693	1,25,239	·64
4. Boolundshuhur	94,000	33,410	·35
5. Allyghur	93,969	88,066	·93
6. Mynpoory	47,097	23,965	·5
7. Furrackabad	19,745	10,410	·52

One of the causes of this great variation is the difference in the principles of calculation adopted by different Settlement Officers; another cause is that the enhancement of revenue was assessed in some cases before the system of irrigation from the Ganges Canal was fully developed. It is expected that, under the

instructions lately issued by the Local Government, the determination of the enhancement due to canals, will, in future, be made on a more uniform and satisfactory system. His Honour the Lieutenant-Governor is in favour of the owner's rate bearing a certain proportion to the water-rate of each class of crop where such assessment is not barred by Section 39 of the Canal Act.

30. The question of assessing Maafee lands with an owner's rate under Section 38 of the Canal Act for the rubbee of 1872-73, has been brought forward by the Local Government, and is now under consideration.

31. The Local Government is reminded of the orders passed in a letter No. 279 I, dated 16th May 1873, not to bind up the Annual Progress Report with the Annual Revenue Report in the volumes intended for the Government of India. If this is done, the bulk of the Revenue Report volumes will be reduced by one-third, and the cost of paper and printing for 95 volumes of about 110 pages each saved.

GANGES CANAL.

32. The gross revenue of the Ganges Canal from all sources during the year amounted to Rs. 17,03,032, of which sum, Rs. 15,74,651, or 92·46 per cent. is derived from water-rate, and the balance, Rs. 1,28,380, or 7·54 per cent. from miscellaneous sources, including Rs. 55,896 from Plantations, and Rs. 32,376 from Navigation. There was an increase of nearly 1¼ lakhs of rupees in the gross direct revenue (*vide* table in the margin), as compared with the previous year, but a decrease of rather over two lakhs as compared with 1870-71. The working expenses amounted to Rs. 9,95,387 or a little more than ¾ lakh over that of the previous year, and 1½ lakhs higher than 1870-71. The net direct returns amount to Rs. 7,07,645, or 2·74 per cent. on the Capital, exactly the same as in 1871-72. If the indirect revenue derived from enhancement of land revenue, which amounted to Rs. 3,44,270, be taken into consideration the percentage of profits will be raised to 4·08. Had it not been for the addition of a large sum to the Capital account chiefly on account of value of stock balances, the percentage of profits would have been 2·88 per cent.

Particulars.	1870-71.	1871-72.	1872-73.
	Rs.	Rs.	Rs.
Direct income ...	19,10,368	15,79,040	17,03,032
Expenditure ...	8,77,248	9,16,699	9,95,387
Net return ...	10,33,120	6,62,341	7,07,645
On a Capital of ...	2,10,24,382	2,41,85,342	2,57,67,304
Or ...	4·30 per cent.	2·74	2·74

33. The increase in the working expenses as already explained is due for the most part to the cost of improvements, such as the restoration of lock gates, works of renewal and minor works of improvement being debited to Revenue instead of as hitherto to Capital. The cost of Executive establishment charged to maintenance and revenue management is less than in the two preceding years.

34. The financial results of the year would probably have been still more successful, but for an accident to the Ranipoor Lock, which necessitated the reduction of supply at a season of high demand for indigo irrigation, a further drawback was the formation of a bar of shingle across the head supply channel which rendered it difficult to get the full volume into the canal, the removal of this bar could not be effected till the middle of November.

35. Taking these reasons into consideration, as also the unfavourable nature of the spring season for artificial irrigation in the upper portion of the canal, the years operations have, on the whole, been fairly successful. This result was due to the increased irrigation in the terminal divisions where the rain-fall was not so favourable. Had it not been for the recent improvements to the distributaries in the Cawnpoor and Etawah Divisions, the Chief Engineer reports that the sudden call for increased irrigation in December could not have been so promptly met, nor the succour of Canal irrigation so extensively afforded.

36. The following table shows that, whereas the cost of maintenance and Repair charges have increased 1¼ lakhs since 1862-64, the cost of Establishment charges have increased by 3 lakhs, or has rather more than doubled.

Year.	Assessments.	Maintenance, repairs and plantations.	Share of Direction and Executive Establishment.	Total working expenses.
	Rs.	Rs.	Rs.	Rs.
1872-73 ...	17,03,536	4,34,650	5,54,063	9,88,713*
1871-72 ...	15,79,710	3,66,087	5,47,596	9,13,683
1870-71 ...	19,11,274	3,35,179	5,33,537	8,68,716
1869-70 ...	19,10,305	4,55,625	4,68,140	9,23,765
1868-69 ...	24,41,559	3,79,033	4,20,589	7,99,622
1867-68 ...	13,63,524	3,49,961	3,46,755	7,96,716
1866-67 ...	15,33,729	4,30,720	3,34,383	7,65,103
1865-66 ...	13,64,504	3,60,280	3,93,474	7,53,754
1864-65 ...	9,88,452	4,45,091	3,72,264	8,17,355
1863-64 ...	7,73,390	3,09,704	2,57,772	5,67,476

* Including remissions.

37. The Revenue has during the same time increased from Rs. 7,73,390 to Rs. 17,03,536, or 2⅕ times; the difference between the rates of progress of receipts and expenditure is therefore very slight.

38. The Governor General in Council is glad to perceive that increased attention is being paid to the statistics of cost of distribution as evidenced by para. 13 of Superintending Engineer's Report, 1st Circle. Where it is calculated that the best ordered Rajbuhas ought in a season of high pressure to irrigate about 400 acres per lineal mile, and that the cost of maintenance should be about Rs. 40; the proper cost of irrigating an area exclusive of maintenance of the canal and establishment charges, would therefore be Rs. 0.1.

39. To the two methods hitherto adopted for calculating the water "duty," *i. e.*, on the discharges at the canal head, and the supply utilized respectively, a third has been added which excludes the period of no-demand for irrigation. This is admittedly a difficult question to deal with on a canal 360 miles long, and subject to large variations of climates and rain-fall. His Excellency in Council has no objections to such calculations being made, but it is requisite that there should be a standard mode of comparison, and the duties should therefore be calculated on the gross and on the utilized supply during the days on which the canal is open; other modes may be given if desired as additional ones.

40. Owing to the exclusion of the period of no-demand in calculating the duty of the Ganges Canal no very reliable comparison can be instituted between the results obtained on the Ganges and Eastern Jumna Canals, but the following table of comparison is probably near enough for all practical purposes :—

Year.	Acres irrigated per cubic foot per second.				Water-rate per cubic foot per second.			
	Of discharge.		Of consumption.		Of discharge.		Of consumption.	
	Ganges Canal.	Eastern Jumna Canal.	Ganges Canal.	Eastern Jumna Canal.	Ganges Canal.	Eastern Jumna Canal.	Ganges Canal.	Eastern Jumna Canal.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1866-67	138	224	154	224	307	498	343	498
1867-68	135	156	156	208	314	496	354	527
1868-69	218	285	232	291	477	623	487	625
1869-70	169	246	188	246	380	572	419	572
1870-71	177	223	198	227	411	572	443	582
1871-72	144	196	188	205	340	507	442	531
1872-73	143	175	162	184	328	468	373	492

On both canals the average discharge was larger than in the previous year, and the area irrigated not having increased in the same ratio, the duty was consequently lower. One reason given for the high duty obtaining on the Eastern Jumna Canal is the probability that it arises rather from the comparatively excessive saturation of the soil in the tracts watered by it, than from perfect arrangements. If so, an equally high duty cannot be expected from the Ganges Canal, and it is scarcely to be desired.

41. The percentages of working expenses on the Ganges and Eastern Jumna Canals have been 58·44 and 41·72 per cent., respectively, the figures for the previous year being 58·05 and 37·70 per cent. These results are in a great measure due to the addition of cost of works of improvement. Also, because the gross earnings per cubic foot of discharge has decreased on the Ganges Canal from Rs 376 in the previous year to Rs. 356, and on the Eastern Jumna Canal from Rs. 538 to Rs. 502, the latter is still far in advance of the Ganges Canal in this respect.

42. The water-rate per acre irrigated during the autumn and spring is Rs. 2·85 and Rs. 1·98, respectively, the figures of the previous year were 2·86 and 2·03.

43. It is reported that the growth of a water-weed, known as Sirwal, in most of the rajbuhas which have drainage inlets has seriously interrupted the flow of water and facilitates the rapid deposit of silt at the head, besides rendering useless all attempts to measure the discharge of many of the rajbuhas after the 30th January. The rapid increase in the growth of this water-weed is a serious evil, and no doubt measures will be taken for its eradication.

EASTERN JUMNA CANAL.

44. The following table compares the results of the income and expenditure for the past three years :—

Particulars.	1870-71.	1871-72.	1872-73.
Direct income	5,66,367	5,27,824	5,27,996
Expenditure	1,81,754	1,99,008	2,20,292
Net return	3,84,613	3,28,816	3,07,704
On a Capital of	19,45,751	19,73,320	20,49,353
Or	19·76	16·66	15·01
	per cent.	per cent.	per cent.

This decrease is due to the continued charge of interest on the Capital outlay, though the Capital outlay has been re-paid.

45. There is evidently a misprint in the figures in table J, the expenditure should be Rs. 2,20,292 to correspond with table D, and to allow of the nett return being as stated, Rs. 3,07,704. There is a mistake, too, in the percentage which should be 15·01, not 16·01.

46. Though there was a decrease of about 8,600 acres in the area irrigated by the Eastern Jumna Canal, which is accounted for by the fact that it traverses the three Districts in which the December rains were timely and sufficient, the decrease in water-rate amounted to Rs. 6,242 only; this seems to show that the decreased irrigation occurred chiefly in the inferior crops. In the previous years irrigation operations it was observed that, though there was a decrease both in the area of irrigation and in the gross revenue, yet that the rent per *acre irrigated* was higher on both the Ganges and Eastern Jumna Canals than in any previous year up to 1868-69, from which it was concluded that the more valuable staples were slowly, but surely, displacing the ordinary crops, and the limit of such displacement had not yet been reached. This conclusion is borne out as regards the Eastern Jumna Canal in the present year's operations.

47. The nett profit on the Eastern Jumna Canal notwithstanding the decrease of area is 15·01 per cent. on the capital expended, exclusive of increase of land revenue.

48. There has been a still further diminution of the contract system. The causes have been carefully investigated, and are ascribed to the impossibility of ensuring a fair division of profits derived among the partners in the contract. The weaker finding themselves imposed upon, are naturally unwilling to continue the arrangement.

DOON CANALS.

49. The gross revenue from these canals has amounted to Rs. 49,815, which is Rs. 5,961 higher than in the previous year. The increase since 1868-69 appears to have been steady and now represents 28 per cent. as compared with that year. This satisfactory result is reported to be due entirely to the efficient management of Captain Willcocks.

50. The largest increase occurs under the head of Mill-rent, it has risen from Rs. 13,783 in 1868-69 to Rs. 21,443 in 1872-73, or about 40 per cent. The water-rates have not increased in the same ratio; but the works now being constructed to ensure a more constant supply on some of the canals will doubtless bear good fruit in this respect.

51. The net profits of these canals have amounted to Rs. 24,345, or 4·34 per cent., the largest yet obtained; if the indirect returns are included, the percentage of profits amounts to 5·18.

ROHILKHUND CANALS.

52. These consist of a number of old and imperfectly-designed lines, which are only being maintained till a better system has been constructed. The Capital Account at the beginning of the year amounted to Rs. 7,67,819, having been increased by about Rs.1,80,000 owing to an adjustment of suspense balances. During the year a further sum of Rs. 1,98,221 were expended on remodelling the faulty canals.

53. From the following figures it will be seen that these canals have been working at a considerable loss during the past four years :—

	Rs.
1867-68 — Gain of	2,349
1868-69 — „ of	3,920
1869-70 — Loss of	25,220
1870-71 — „ of	27,689
1871-72 — „ of	44,450
1872-73 — „ of	23,989

The heavy losses from 1869-70 has been due to a decision of the Civil Courts declaring the levy of water-rate from water delivered from natural channels to be illegal. Advantage, however, has now been taken of the provisions of Act VIII of 1873, to declare the waters of the several rivers in Rohilkhund, on which obstructions are created to afford irrigation, applicable to public purposes, which will tend greatly to improve the financial success of those works.

54. Though these canals have been working at a loss for the past four years, if the aggregate amount of direct income derived up to the end of the year be taken, it will be found to have exceeded the working expenses by Rs. 33,231, and if the amount of the indirect revenue be taken into consideration, the net gain will be found to be Rs. 79,347.

55. Taking into calculation the indirect income for the year, which amounted to Rs. 32,607, the profits of the year will be found to be Rs. 8,618, or 1·12 per cent. on the total investment. There has been a change in the water-rates to be assessed, which will, it is hoped, add considerably to the Canal revenues.

BIJNOUR CANALS.

56. These consist of two small canals in the Bijnour District, the gross income from which amounted to Rs. 4,360, the expenditure to Rs. 2,513, and the net profits to Rs. 1,847, or 2·64 per cent. on the capital expended. These results are rather better than those obtained in the previous year.

BUNDELKHUND IRRIGATION WORKS.

57. These comprise 7 lakes in the Districts of Humeerpoor and Jhansi and are worked at a loss varying during the past three years between Rs. 2,566 and Rs. 3,861. In the Jhansi District a sum of Rs. 2,550 is annually credited as indirect revenue on account of lands watered by the lakes, which, by prescriptive right, pay no water-rate, so that the annual loss is not large, and is believed to be counterbalanced by the good done by the lakes in raising the spring level for perhaps miles round. These canals are capable of irrigating a considerable area, and the necessary works for their improvement in this respect are about to be carried out. They have only very recently been taken charge of by the Irrigation Department.

NAVIGATION.

58. The following table exhibits the revenue derived from this source for the past six years :—

Years.	Revenue.	Increase.	Decrease.
	Rs.	Rs.	Rs.
1867-68	35,218	...	...
1868-69	38,784	3,566	...
1869-70	33,796	...	1,422
1870-71	32,861	...	2,357
1871-72	58,929	23,711	...
1872-73	32,376	...	2,842

It is observed that the gross revenue derived in 1872-73 is the lowest obtained during the past 6 years, while the decrease as compared with 1871-72 is very great, but it is to be remembered that that year's revenue was abnormally high owing to the great increase in the raftage of sleepers for the State Railways, from which source alone Rs. 25,388 were obtained, or nearly one-half the gross revenue, whereas in 1872-73 the receipts from this source had fallen to Rs. 8,801. Other causes, too, have tended greatly to place the year's operations at a disadvantage, among which are the accidents to the Raneepoor and Jaoli Locks, which involved the closure of the former for the whole year, while the latter was with much trouble repaired by November. The rafting traffic was in consequence much injured. In October the Bhola Lock at the 85th mile blew up, and was not restored till January following; this accident injured the corn traffic on the canal, which was very brisk at the time. Apart from the drawbacks above-mentioned, the navigation was practically stopped from the middle of August to the close of October, during which time the canal was closed, or running only a very low supply.

59. Notwithstanding these disadvantages, the number of boats plying on the canal, and the revenue derived from this source, has not diminished.

PLANTATIONS.

60. The plantations of the Ganges, Eastern Jumna, Doon and Agra Canals were inspected during 1872-73 by Dr. Jameson. The Governor General in Council is glad to see the continued improvement in their condition, and the growing interest taken in them by the Canal Officers.

61. The plantation allotments were closely worked up to in all Divisions, except the Cawnpoor and Etawah Divisions of the Ganges Canal where they were slightly exceeded.

62. On the Ganges Canal there has been an increase in the number of trees, and seedlings to the extent of nearly 600,000. On the Eastern Jumna Canal there was an increase of 147,613 timber trees, but a decrease of over 600,000 seedlings. The increase in the number of trees and seedlings on the Dhoon Canals amounts to 2,224; about 85,000 trees have been transplanted along the Agra Canal, with the exception of the decrease of seedlings on the Eastern Jumna Canal, the progress, on the whole, appears satisfactory.

63. Good progress also appears to have been made in fencing operations, and depôts for the stacking and sale of wood are being established at the more important stations on the line.

64. The gross income from plantations on the Ganges Canal amounted to Rs. 57,371, and the total expenditure to Rs. 51,315, leaving a net profit of Rs. 6,056, or Rs. 4,286 more than it was last year.

In table M for the Ganges Canal, the income from plantations is stated to be Rs. 55,896, this discrepancy needs explanation.

65. The results on the Eastern Jumna Canal, it is observed, are far more satisfactory. The gross revenue was Rs. 24,899, and the net profits Rs. 16,695; this is the highest return yet attained, and hopes are held out of ultimately raising the income to Rs. 28,000.

ORDER.—Ordered, that a copy of the report and of the review be forwarded to the Secretary of State for information.

Also, that copies be forwarded to the Financial Department and Department of Revenue, Agriculture and Commerce, for information.

Also, that the review be communicated to the several Local Governments and Administrations in the Public Works Department, Irrigation Branch, for information.

And further, that this Resolution be forwarded to the Home Department for publication in the *Gazette of India*.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

INVESTIGATION OF DISEASES CAUSED BY FAMINE.

Despatch from the Secretary of State for India, to the Government of India,—No. 8, dated 16th April 1874.

The expediency of instituting some enquiry as to the pathology of fevers and other diseases consequent on famines having been suggested to me, I requested the President of the Royal College of Physicians to frame some instructions for the guidance of the gentlemen who might hereafter be entrusted with such an investigation.

2. I now transmit a copy of a memorandum, which has been prepared for this purpose by Sir George Burrows, in conjunction with several physicians of much Indian experience.

3. I concur in the opinion expressed by these gentlemen that the present occasion should be taken of obtaining, as far as may be possible, a complete and scientific record of the diseases and deaths caused by famine, and I have to request that Your Excellency will take steps to give effect to their recommendation by appointing a Commission of two carefully selected officers to undertake the necessary enquiries with special reference to the points indicated in the memorandum.

MEMORANDUM.

I. On the summons of the President of the Royal College of Physicians, the following gentlemen met at the College building in Pall Mall on Tues-

day, March 24th, *viz.*,—Sir George Burrows, BT., F.R.S., President of the Royal College of Physicians; Dr. F. J. Mouat, formerly Inspector-General of Prisons in Bengal; Dr. J. Fayrer, C.S.I., Surgeon-Major in Her Majesty's Bengal Army; Dr. J. M. Cuningham, Sanitary Commissioner with the Government of India; and Dr. Murchison, F.R.S., Physician to St. Thomas' Hospital, and formerly of the Bengal Medical Service.

II. A communication was read from The Most Noble the Marquis of Salisbury, Secretary of State for India in Council, addressed to the President of the Royal College of Physicians, suggesting the propriety of instituting some investigation into the pathology of the fevers and other diseases consequent on famine, and requesting the assistance of the President, in connection with Dr. Cuningham, in drawing up instructions for the guidance of the officers who may be hereafter selected by the Government of India for the conduct of the enquiry.

III. After some discussion it was unanimously agreed—

1*st*.—That the present unhappy calamity in India ought not to be permitted to pass without obtaining a complete and scientific record of the diseases and deaths caused by famine in India, which would be calculated to throw light upon the pathology of many important diseases, and could be referred to for information and guidance on future occasions.

2*nd*.—That it would be desirable to appoint a commission composed of carefully selected officers of the Indian Medical Service, whose sole duty for the time should be to investigate the influence of the present famine on the prevalence of diseases.

3*rd*.—That it would not be expedient to fetter the operations of such a commission with any specific code of instructions, but that their investigation should have special reference to the following points:

(*a*).—The nature of the fevers prevalent in the populations suffering from the famine, careful records being made of their symptoms (including temperature) from their commencement to their termination, in their varieties as well as in typical cases, of their rate of mortality, of their *post-mortem* appearances, of facts bearing on their contagious or non-contagious character, and of all circumstances tending to show how far any fevers are in their origin due to the famine; whether the ordinary fevers of the locality have been merely increased in prevalence, or any new fevers have appeared.

(*b*).—Whether any increase or modification of type of cholera, dysentery, diarrhœa, or other epidemic diseases, can be traced to the famine.

(*c*).—Whether any maladies, or modifications of any maladies, can be traced to special articles of food, such as new rice (*i. e.*, rice soon after the crop is cut) or of any substances which are not commonly eaten.

(*d*).—Whether the diseases or the modifications of them, which may appear to result from the famine, call for any special dietetic or therapeutic treatment.

Endorsement by the Government of India, Home Department,—No. 107, dated 16th May 1874.

Transferred to the Revenue, Agriculture and Commerce Department, for disposal.

From C. BERNARD, Esq., Officiating Secretary to the Government of Bengal in the Statistical Department, to the Sanitary Commissioner, Bengal,—No. 2874 S.-R., dated 4th May 1874.

I am directed to forward copy of a memorandum received from England, indicating the points on which it will be well to make observations during the present famine in Behar and Northern Bengal. I am to request that you will arrange to visit the worst* famine districts, in order to consult with the local medical officers, and to issue distinct instructions to each of the civil medical officers as to what they are to observe, and how they are to record and report their observations.

* Tirhoot. Chumparun. Dinagepore. Rungpore. Maldah. North Bhaugulpore.

2. During your tour you should enquire into the sanitary state of the relief works and of the relief houses. Any recommendations or suggestions you may have to make, should, in the first place, be communicated verbally, and then forwarded in writing from time to time through the Magistrate-Collector to Government. The Lieutenant-Governor is aware that you have had some previous experience of famine affairs, and that you take much interest in the subject. He hopes, therefore, that you will do the best that the time and season permit, both for regulating the sanitation of relief operations, and for observing the circumstances of the diseases which may follow in the way of famine.

Endorsement by the Government of Bengal, No. 2875 S.R., dated 4th May 1874.

Copy, with copy of the memorandum, forwarded to the Commissioners of Rajshahye, Patna, and Bhaugulpore for information, and to the Magistrates of Tirhoot, Durbhunga, Mudhoobannee, Seetamurhee, Chumparun, Bettiah, Dinagepore, Maldah, and Rungpore for communication to their respective medical officers.

Note by J. M. CUNINGHAM, Esq., M. D., Sanitary Commissioner with the Government of India,—dated 20th May 1874.

When the meeting in question took place at the College of Physicians, and the suggestions contained in the memorandum were drawn up, it was supposed in England that widespread distress over a large area in Bengal was inevitable, and that, in spite of all the Government could do, the people must suffer more or less from famine and from the diseases consequent on famine. But no such state of things even now exists; there is no scarcity of food anywhere, and there is thus, practically, no opportunity of studying the various points suggested. I think, therefore, that the appointment of such a special commission as that ordered by the Secretary of State could not at present lead to any results. At the same time it is very desirable that the course of events should be carefully watched, and that everything should be arranged beforehand; so that, in the event of scarcity or distress arising in any quarter, the effects on health may be studied at once by those who are competent to undertake the inquiry.

The memorandum prepared at the College of Physicians has been already circulated to some extent among medical officers, and the Sanitary Commissioner of Bengal has been deputed to visit the worst famine tracts, and to issue distinct instructions as to what should be observed. For the present this will suffice; but if scarcity should occur and bring in its train, as it is sure to do, an increase of disease, and particularly disease of any unusual character, then a more special inquiry will be needed, and two selected officers should be appointed for the purpose as directed. I would suggest that, in the event of this contingency arising, Drs. Lewis and Cunningham, who are attached to my office, should undertake the duty. I have perfect confidence in their doing all that is desired to the full satisfaction of the College of Physicians; and their appointment will have this advantage, that while they can be quite ready to start at a moment's notice, they will be able to continue their other work until they are really wanted, if they should be wanted at all.

I would not call in their assistance merely because disease happened to prevail. Dysentery, diarrhœa, cholera, and fever prevail more or less every year in Bengal, and may be expected independent also either of any deficiency in the food supply of the people. It is more especially for the investigation of fevers, and especially of any fevers that may seem to be connected with famine, that I would reserve their assistance. At the same time other circumstances may

arise in which their scientific aid may be of great value, and arrangements should be made now, so that it may be promptly rendered if necessary.

I would therefore recommend—

1*st*.—That the orders already given to the Sanitary Commissioner for Bengal should be followed, and that they should be communicated, with the College of Physicians' memorandum attached, more widely among the civil surgeons, so that the matters in hand may be observed not only in the special districts where distress may occur, but also in others where there is no chance of any distress; for it will be important to compare the results in the one with those in the other.

2*nd*.—That Dr. Coates should prepare his more full instructions for the civil surgeons; but, in order that there may be some unity in the inquiry, that they should be drawn up in communication with this office. By this means Drs. Lewis and Cunningham will be able to assist, and also lay the foundations of their own subsequent investigations, should they be required.

3*rd*.—That Dr. Coates should keep me informed every week of the health and condition of the people, making reports at shorter intervals in the event of anything unusual occurring. [Reports in the usual sense are not required, a mere line from each district will suffice]; and

4*th*.—That if it should appear to me that Drs. Lewis and Cunningham's services are required, I may be authorized to depute them to visit any particular place at once, and make a personal enquiry into disease on the spot without further reference.

No. 1799, dated 22nd May 1874.

From A. O. HUME, Esq., Secy. to the Govt. of India, to the Secy. to the Govt. of Bengal.

I am directed to enclose a copy of a despatch from the Secretary of State, No. 8, dated 10th April 1874, and its enclosure on the subject of the appointment of a special commission to inquire into the influence of the present famine on the prevalence of diseases, together with a copy of a note thereon by the Sanitary Commissioner with the Government of India.

2. A copy of the memorandum prepared by the President of the Royal College of Physicians has been already communicated to the Lieutenant-Governor by His Excellency the Viceroy, and His Excellency is aware that the Sanitary Commissioner of Bengal has been already instructed to visit the worst famine districts, in order to consult with the local medical officers and to issue distinct instructions as to the points to be observed and the method to be adopted in recording observations.

3. Dr. Cuningham, who was present at the meeting at which the desirability of appointing a special commission "to investigate the influence of the present famine on the prevalence of diseases" was discussed, has explained that when the proposal was made "it was supposed in England that wide-spread distress over a large area in Bengal was inevitable, and that in spite of all the Government could do, the people must suffer more or less from famine and from the diseases consequent on famine." Fortunately such a state of things does not exist, and His Excellency therefore agrees with Dr. Cuningham that there is "practically no opportunity of studying the points suggested," and that, consequently, the appointment of the proposed commission is at present unnecessary. Inasmuch, however, as a condition of things may at any moment arise in which the appointment of the proposed commission would be desirable, His Excellency requests that His Honor the Lieutenant-Governor will take whatever preliminary measures are possible with a view to inquiries being instituted, such as are suggested in the memorandum, in the event of the possibility of conducting such enquiries unfortunately arising.

4. His Excellency approves generally of Dr. Cuningham's suggestions, and would feel obliged to His Honor the Lieutenant-Governor if he would instruct the Sanitary Commissioner of Bengal to place himself in direct communication with Dr. Cuningham on the subject, in order to carry them out, and to make whatever further arrangements may be necessary.

No. 30, dated 22nd May 1874.

From the Govt. of India, to H. M.'s Secy. of State for India.

We have the honor to acknowledge the receipt of your Lordship's despatch No. 8, Sanitary, of the 16th ultimo, enclosing a memorandum which has been submitted to your Lordship by the President of the Royal College of Physicians and other medical men of eminence.

2. Your Lordship will observe from the enclosed letter* addressed to the Sanitary Commissioner of Bengal, that steps have been already taken by His Honor the Lieutenant-Governor to make such enquiries as are possible in the direction indicated in the memorandum.

* Enclosure 1.

3. In respect to the appointment of a special commission "to investigate the influence of the present famine on the prevalence of diseases," we thought it best to consult Dr. Cuningham, who was present at the meeting in London on March 24th, but who has now returned to India. We enclose a copy of Dr. Cuningham's observations.

Enclosure 2.

We agree with Dr. Cuningham that, under present circumstances, it would be premature to appoint a special commission; but should unfortunately a condition of things arise in which the investigations contemplated in the memorandum could be made, we shall at once nominate competent officers to undertake this duty, and we have requested His Honor the Lieutenant-Governor, in a letter of which we enclose a copy, to take whatever preliminary measures are at present possible.

Enclosure 3.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

MINUTE BY HIS HONOR THE LIEUTENANT-GOVERNOR OF BENGAL.

The temporary lines of electric telegraph in the distressed districts north of the Ganges having been now completed, I desire to record some brief acknowledgment of the advantage which has accrued, and will further accrue to the operations from telegraphic communication.

The telegraph lines in Tirhoot, Chumparun, and North Bhagulpore, erected in connection with famine operations, extend over 525 miles in all. Of which 142 miles are permanent line.

They were commenced in the beginning of February, and were completed before the end of March. Cables have been carried across the Ganges at two places.

There are now telegraph offices open at Hajeepore, Mozufferpore, Tajpore, Nagurbustee, Chumpta, Durbhunga, Mudhoobunnee, Nurhaya, Seetamurhee, Motiharee, Segowlie, Bettiah, Ramnugger and Soopool—all which places are in the very heart of the most distressed tracts, and are the most important points of the operations against the famine.

A telegraph office for the Northern Bengal (State) Railway having been established at Parbuttipore, midway between Dinagepore and Rungpore, temporary lines have been made to both of the two last named places, which are the head-quarters of the districts where much distress exists.

Already many thousands of messages have been sent by these new lines, and as the most important of the messages are those sent by, or addressed to, the local Government, I am able to certify to the accuracy and punctuality with which the telegraphic business is done. Already this new telegraph has rendered signal service on many critical occasions; it has been more than once the means of preventing injury to the relief operations, and of averting

danger to life. And on all occasions it affords facilities which could not otherwise exist, for imparting an immediate impulse to local proceedings, or for causing instant rectification of administrative error.

But the securing of all these advantages depended on the lines being constructed in good time. To effect this, a more than ordinary degree of executive promptitude and departmental skill was required, together with general aptitude and energy for the despatch of work in the field. And these are the qualities displayed in the fulfilment of this undertaking by Major Mallock, the Superintendent of the work.

He specially mentions among his Assistants Mr. Reynolds and the Assistant Superintendents Messrs. Landon, Hare, Maclean, and Kirk, as well as the Sub-Assistant Mr. Webster. To them, also, our cordial acknowledgments are due.

I trust, however, that their services are not yet ended, for many parts of the temporary lines have yet to be strengthened, so that they may last through the rainy season; the very season indeed, when the telegraphic service is particularly needed. I am glad to find that this work is receiving due attention, and I trust that this work will be executed with the same efficiency as the original.

It seems to me that the manner in which telegraphic stores and materials were despatched to the necessary points, and in which first-rate men were selected for the work, is worthy of the high reputation of the Director General of Telegraphs in India, and of his department.

* Return not received.
† Return for week ending 16th May 1874.

A In the interior prices range as follow:—Wheat from 10 to 14-8 seers, barley 20 seers, best rice from 10 to 12-8 seers, and common rice from 12 to 13-8 seers, and gram from 14-8 to 16 seers per rupee.
B In the interior prices range as follow:—Wheat from 13 to 13-8 seers, barley from 18 to 24 seers, best rice from 11 to 12-8 seers, common rice from 12-8 to 13-8 seers, maize from 15 to 20 seers, and gram from 13-8 to 15 seers per rupee.
C In the interior prices range as follow:—Wheat from 13 to 15-8 seers, barley from 15-12 to 16-8 seers, best rice from 11 to 12 seers, and common rice from 11-12 to 13-4 seers, and gram 13 to 18 seers per rupee.
D In the interior only.
E In the interior prices range as follow:—Wheat from 12 to 13-8 seers, best rice from 8 to 11 seers, and common rice from 11 to 14 seers, and gram from 11-8 to 14 seers per rupee.
F Price of common rice in the interior ranges from 11-14 to 14-8 seers per rupee.
G Coarse rice at 13-10½ seers per rupee.
H Price of best rice in the interior ranges from 10 to 15 seers, and of common rice from 10 to 18 seers per rupee.
I In the interior prices range as follow:—Wheat from 13 to 14 seers, best rice from 8 to 11 seers, common rice from 9 to 12-8 seers, and gram from 15-8 to 18 seers per rupee.
J Prices of food-grains in the Bhowanigunge sub-division are cheaper.
K The rise is chiefly owing to the Government coming into market as a large purchaser of paddy, which has caused some panic.
L The rise in the price of coarse rice is owing to high winds preventing importations, and to the apprehension of failure of crops on account of present drought.
M In the interior the price of best rice ranges from 11 to 14-4 seers, and of common rice from 13 to 14-4 seers per rupee.
N In the interior the price of best rice ranges from 13-8 to 15 seers, and of common rice from 16 to 19 seers per rupee.
O In the interior the price of best rice from 15 and 16 seers, and of common rice from 17 seers per rupee.
P In the interior the price of best rice from 14 to 18-4 seers, and of common rice from 15 to 21 seers per rupee.
Q The rise in the price of common rice is attributable to less rice being brought to market, cultivators being employed in fields

PRICES-CURRENT of Food-grains and Salt in the undermentioned Districts of Bengal on the 23rd May 1874.—(Continued.)

* Return for week ending 16th May 1874.

R In the interior prices range as follow :—Wheat from 12 to 14 seers, barley from 16-4 to 18-8 seers, best rice from 9-8 to 10 seers, common rice from 9-8 to 11-8 seers, maize from 13 to 17 seers, and gram from 14-8 to 16-12 seers, per rupee.

S In the interior prices range as follow :—Wheat from 14-8 to 15 seers, barley from 17 to 19 seers, best rice from 8 to 9 seers, common rice from 10-8 to 12 seers, and gram 17 and 18 seers, per rupee.

T In the interior prices range as follow:—Wheat from 7-8 to 15 seers, barley from 11-8 to 17 seers, best rice from 7-4 to 13-8 seers, common rice from 8 to 14 seers, maize from 11 to 16 seers, and gram from 11 to 17 seers, per rupee.

U In the interior prices range as follow :—Wheat from 10 to 14 seers, barley from 14 to 17 seers, best rice from 7-8 to 12 seers, and of common rice from 9-8 to 14 seers, lesser millet 13 to 16 seers, maize from 12-8 to 16 seers, and gram from 13 to 15 seers, and Government gram at 20 seers per rupee.

V The price of best rice in the interior ranges from 9-4 to 11 seers, common rice from 9-6 to 13 seers, and gram from 9 to 11 seers, per rupee.

W In the interior prices range as follow :—Wheat from 12 to 14-8 seers, best rice from 8 to 12-8 seers, common rice from 9 to 15 seers, bulrush millet from 16 to 18 seers, maize from 12 to 16 seers, and gram from 12 to 17 seers, per rupee.

X In the interior rice is sold at 34 to 42 seers per rupee.

Y In the interior prices range as follow :—Wheat from 11 to 15 seers, best rice from 11 to 16 seers, common rice from 12-12 to 17 seers, and gram from 10 to 13 seers per rupee.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

Return shewing the Quantities of Cotton exported from the several Ports of India to British and Foreign Countries for the month of April of 1874.

| Names of Port in India whence Cotton is exported. | | Quantities of Cotton exported to | | |

"Government depôts, so that they may thus get a little stock-in-trade whereby "they may make a living. Inasmuch as these persons are ordinarily the sole "retailers of food to large sections of the people, the importance of imme- "diately supplying them with Government grain is manifest. In many "other places an examination by our own officers of the weekly markets has "shewn such a depletion of stocks as to leave hardly enough for the current "supply. In all such cases everywhere the district officers have received the "strictest orders to act on the sale rules; and, as I believe, they are so acting, "to the great comfort and encouragement of the people. Wherever "the depôts have been opened the public have immediately resorted to "them either as purchasers direct, or as dealers to retail to others. At "some points near the northern frontier our officers have been half "afraid to open the depôts lest there should be a run of Nepalese purchasers on "the stores. I have directed however that the depôts must be opened there, "even though numbers from Nepaul should flock to buy. Notwithstanding "this, however, there is still a considerable field open for private trade and "enterprise nearly as large as that indicated in my last narrative."

"The heading of 'cultivators receiving advances of food-grain' has not "largely developed itself as yet; the number hardly exceeds* 60,000. But many "experienced persons warn us that distress has crept up to the middle section "of the ryot or cultivator class; the lower section is already on the relief "works; the middle section will be content with advances of grain, to be repaid "hereafter."

"The second point is the completion of the transport of the Government "grain and the available resources in respect of carriage. Out of the "346,911 tons to be transported north of the Ganges only about 6,000 tons "now remain. The transport by rail, once a matter of some anxiety, is now "concluded. Besides their ordinary traffic the East Indian Railway carried "320,000 tons of Government grain within the space of six months, and the "Eastern Bengal 66,000 tons within the space of five months. In both cases "the work has been finished within the time proposed."

"Of the various lines and routes of inland transport the only one where "anything remains to be done is that of Eastern Tirhoot. Out of 154,000 tons "to be carried away from the north bank of the Ganges for East Tirhoot "135,000 tons have been carried, out of which 77,000 tons have been stored "in the depôts and granaries, the remainder being on its way. Of the "quantity which is thus on its way, some part is within easy distance "of the depôts, while some part has still some distance to traverse. Thus, "while other lines are fortunately closed, the East Tirhoot line is in the "extreme tension of activity, so that the grain may be all stored before "the setting in of the rains. It was unfortunate that on this the most critically "important of all the lines there was the largest defection of the locally hired "carriage. Despite the efforts and services of the many contractors on this line "(all European gentlemen, indigo planters, and landholders of position and influ- "ence), it has been found impossible to produce or to retain anything like the "number of carts necessary for the timely performance of the service which we "required. When these several contracts were undertaken it was understood "that 27,000 carts in all would be brought into the field, and it was certain that "nothing short of this large force would properly suffice. But no more than "20,500 really appeared at the middle of February, and after a time there was "a falling off below even that number: at the end of April there were not more "than 16,500. At the present time, the end of May, the number does not "exceed 14,000. Thus the transport department was actually short of its "compliment by 6,500 carts at the beginning, that is, the middle of February; "by 10,500 carts at the end of April; and by 14,000 carts at the end of May. "These facts are mentioned not at all by way of disparaging the merits and "the exertions of the various contractors. Their difficulties were indeed of

* *Note*.—This number of 60,000 represents heads of families; the number of persons supported by advances given out during the last fortnight must be about 300,000.

"the ordinary kind, namely, the difficulty of keeping the carts in employ "in the midst of much competition with other private employments, "the roughness and heaviness of the cross-country roads; sickness among the "cattle from fatigue in the hottest time of year: scantiness of fodder and of "water. But these ordinary difficulties which befall all our contracts, more or "less, did really beset these particular contracts with more than ordinary "severity."

"But it is evident that had we relied on these contracts alone, a large "portion (from one-third to one-half) of the grain allotments for the most "distressed part of the whole drought-stricken country must have remained "un-carried on the north bank of the Ganges. It is unnecessary to describe "the fatal consequences that might, indeed, perhaps must, have ensued. In "fact, however, we were very far from relying on the local contracts alone; we "were permitted by the Government of India to arrange strong reserves, consist- "ing, *firstly*, of the Railway from the Ganges to Durbhunga; *secondly*, of the means "of transport provided in the North-Western Provinces. The Government "of India itself undertook the emergent construction of the railway; the "obtaining of the carriage from the North-Western Provinces was left to the "Government of Bengal. The railway has carried, or will carry, about 40,000 "tons of grain, not indeed up to the depôts, but for a considerable distance "towards the depôts, thereby saving so much of carting. The reserve carriage "from the North-Western Provinces, now actually serving in the field, "consists of—

"Carts (3 to 4 bullocks each)	3,350
"Pack-bullocks	2,900
"Pack-ponies and mules	7,500
"Camels	1,400

"Besides these, we have recently hired for supplementary service in East "Tirhoot—

	Carts.
"From West Tirhoot, on completion of contracts there ...	2,000
"From the Sarun district	850"

"Lastly, we have arranged with the Monghyr contractor to carry 12,000 "tons to East Tirhoot."

"By these various means all the deficiencies above explained are made up "for, and there is a good hope that this vitally important operation will be "concluded in due time. It may be well to bear these circumstances in mind, "when statements are sometimes made which, if true, would tend to prove that "the organisation of so large a reserve of Government carriage was unnecessary. "It has been seen, however, that it was absolutely necessary—the necessity having "been proved by the event. Instantly on being landed on the north bank of the "Ganges, every cart with its bullock, every pack-bullock, mule, pony, camel, "has been marched off on urgent service. The reserve carriage has been all "brought into action immediately on its appearance on the field."

"That portion of the reserve which consists of camels and ponies collected "in Northern India from great distances may not unnaturally have attracted "some notice, and may perhaps appear at first sight to involve unnecessary "labor and trouble. But reflection on the nature of the case will show the "expediency, almost the necessity, of so arranging, that with so large a number "of animals in service, the whole should not be of one kind. Otherwise an "epidemic might have simultaneously prostrated most of the animals on any "line of transit: and there have been apprehensions especially of such disease "breaking out among the bullocks. At one period such fear much prevailed, "and had the symptoms become at all aggravated, we were quite prepared to "bring into the field ponies and camels to a number double that which we "actually have produced."

"When the main transport work is over, these ponies and mules will be "most useful during the rains in distributing supplies among the villages,

"when all the bullocks of the country are required for agriculture. With this "view, I have further ordered all the pack-ponies, which are abundant in the "Purneah district, to be enrolled and retained for service, if needed.

"The rates of payment arranged with the various contractors were certainly "much higher than those of ordinary times; and from this an inference seems "to have been drawn that undue liberality was shown by the local authorities "in framing the contracts. Such augmentation of rates was, however, to be "expected under the stress of an intense demand when the prices of main agri- "cultural staples were double, or even treble, the average of ordinary years. In "most districts the rates have proved sufficient to ensure success, and doubtless "must have yielded profit to the contractors. But, then, the contractors were "planters and landholders, who had to exert all their landed influence, all the "good-will of their connection, to carry out this work. And such forces could "not be enlisted in the Government service without allowing liberal rates. Those "contractors who have made profits are just those who have done their work well "within the time, thereby rendering valuable aid to the Government and to the "people. In one main line, however, East Tirhoot, the most important of all, "even these rates have proved insufficient, and hardly more than half the "required work was effected under their operation. So far from the high "rates being too high here, the only question could be as to whether they "were high enough."

"In Tirhoot especially the local officers tried for several weeks to work at "lower rates and failed to obtain more than a small part of the carriage required. "In some districts, where the quantity to be carried was less and absorbed "only the spare disposable carriage of the locality, lower rates have been adopted "with success. In other districts, again, where the amount exceeded the power "of such spare carriage, and the agricultural and private carriage came to be "indented upon, the lower rates, which at the outset sufficed, became ineffec- "tual, and higher rates had to be offered. In instance after instance have "our officers held out to the last against raising the rates, but have been "obliged to yield in order to save the business from failure."

"In one only of the several contracts in North-East Tirhoot we found it "desirable to allow some special compensation for the bullocks proved to have "died, and the carts proved to have been broken to pieces, on the service, and "this, too, may be thought at first sight by some to be an unnecessary conces- "sion. But it was allowed at a critical time, when some thousands of bullocks "had died from a disease since allayed, when there had been heavy damages on "a rugged line of country, and when the cartmen were deserting with their carts to "an extent which threatened the breaking up of the transport. It was also limited "to the particular contract which had suffered, and it was offered on the condition "that the carts with bullocks should within a specified date return to the "service. The measure immediately stopped the tendency to desert, and had "some success in recovering the carts: out of 3,500 carts which had been lost "about 1,000 returned. The result shows that the measure was most desirable, "and that the terms were not too liberal."

"With the approval of the Government of India, I have arranged that "the river steamers and barges coming from England, together with those "constructed in Calcutta, and with 800 canoes from Oude, and 4,000 Ganges "boats retained locally for service, shall be divided into appropriate detach- "ments and stationed at the mouths of each of the main affluents of the "Ganges—to be a reserve of water-carriage for inland navigation, and to carry "succour to distressed localities, if necessary, during the rainy-season."

"The third point is the consumption of Government grain, and the amount "remaining in store. Up to the end of April not more than 20,000 tons of "grain were issued from the Government granaries. As these issues are made "from a large number of granaries scattered in remote places, it is hard to "speedily obtain a correct return, and I am not yet able to state precisely the "amounts issued during the first fortnight of May. I calculate, however, that "they can hardly exceed 30,000 tons. Thus we may consider that by the

"middle of May only 50,000 tons can have been issued out of 390,000 tons "provided and allotted, leaving full 340,000 tons in store for consumption "after the middle of May. It is evident, then, that the supplies are adequate "for a consumption greater even than that which has been estimated. But "though the consumption was (for reasons explained in my last narrative) much "less at first, it will probably become much greater from and after the middle "of May. From a statement just received, I learn that in East Tirhoot alone "(that is, the two sub-divisions of Durbhunga and Mudhoobunnee,) the sales of "Government grain to the public are now amounting to 700 tons a day. "In all the distressed districts the persons on relief works and on charitable "relief (about two millions in all) would, at the rate of three-quarters of a seer "per head per diem, be consuming nearly 1,400 tons a day, and I have reiterated "the strictest orders that to all of these the Government grain is to be sup- "plied. I will not at this moment attempt a complete estimate on a subject "which the experience of the next few days will elucidate. But there are "several considerations already patent to show that large as our stores may be, "the demands upon them will be large also."

"The fourth point relates to the system of labor on the relief works, and "the progress of charitable relief."

"During the fortnight under review, piece-work (or the contract whereby "a man is paid at a fixed rate upon the quantity of work he does) or task- "work, whereby a man is obliged to do a certain amount of work in order to "obtain his daily wages, have been enforced throughout the relief works, in "all districts with but few exceptions, which occur in East Tirhoot, where the "laborers are still on daily wages without the exaction of a specified amount "of work. Out of the total of 1,450,000 persons on the works, not more than "180,000 are on daily wages, the remainder being on piece-work or task-work."

"That this system fully affords relief to all who are willing to work, "and is so far entirely effective and successful, is admitted probably by every "one competent to judge. The only doubt which would seem to be felt by "some is whether this system is not too liberal, whether its bounty is not "abused by some, and whether the general result does not tend towards "demoralization, that is, towards rendering the laboring classes disinclined to "labor in future. As we are duly anxious to avoid any such result, I will "endeavour briefly to explain the position of the case."

"It is unquestionable that the daily wage system, as it prevailed for some "short time in many of the relief-works, especially in North-East Tirhoot, did "directly conduce to demoralization. But this was at the moment unavoidable. "A famine panic suddenly set in; crowds in tens of thousands day after day "came trooping to the works; they congregated and clung to particular works, "and refused to obey the orders to separate off into gangs on small works, "where order could be introduced. As they all were in severe straits for food, "it was at the out-set necessary to feed these unmanageable multitudes and to "get what work could be got from them, which proved very little, and the effect "was for the moment demoralizing. This was in the last week of March. "Orders were, however, immediately given for systematically distributing "them among better regulated works, and a beginning was soon made. About "a fortnight afterwards, that is, early in April, an attempt was made to impose "a piece-work system on the whole of them. Thus, no time was lost in "counteracting whatever demoralization may have begun. My narrative of "the 30th April showed that, on receiving the orders regarding piece-work, "the people left the works under some misapprehension, and remained absent "for several days, suffering severe privations. Afterwards, on the promulgation "of revised terms of piece-work, they returned to work, many of them in "a low and reduced physical condition. They have subsequently accepted "piece-work, which virtually compels them to labor. If, then, these poor people "fancied for a time that they could live in idleness on State bounty they "were soon undeceived. Indeed, many of them must, during their week

" of absence, have learnt a hard lesson. The penalty, though self-inflicted, " through their own misunderstanding, must none the less have corrected any " demoralization which might have begun to spring up. I therefore fail to " see how the people of North-East Tirhoot can have been ultimately demor- " alized by the daily-wage system which a brief time prevailed."

" Since the preparation of the last narrative another instance has occurred " in the Dinagepore district. Some large gangs of laborers left the works when " the terms of their employment were rendered more stringent. On inquiry " it was found that they had been saving some part of their daily wages, which " savings were hoarded against the rainy season when the works would be " closed. It is probable that with these hoarded sums they will ultimately " purchase rice from the Government stores. In this case, however, some " demoralization might have ensued had it not been promptly stopped. The " men had been but a short time on the works when they were discharged."

" There are, as already shewn, some considerable numbers still on daily " wages, which however is being constantly reduced. Most of them are very " poor people for whom it is difficult to provide in any better way. And the " wages allowed them—1½ anna a day for a man in Behar, 2 to 2½ annas in " eastern districts—are the lowest possible in such a year as this; enough indeed " to support life in ordinary years; but now, with the great rise in prices, enough " to afford only a meagre and jejune subsistence. Thus no motive is allowed " to exist to induce people to do light work on a closely restricted allowance " when they might earn a comfortable modicum of food by working harder."

" Similarly with the task-work system the wages are kept low; hardly " higher than the daily wages above described; and inasmuch as a day's " work is exacted, the result is that these people are working for what is a " stinted subsistence relatively to the high prices of the day. No process " of demoralization can therefore have developed itself with them."

" For the piece-work the rates now allowed do undoubtedly appear more " liberal for the skilled and the industrious, especially in Eastern Tirhoot, " where the last rate is from 5 to 6 annas per 100 cubic feet of " earthwork. But they were framed in order to suit those large numbers " who, originally of a poor physique, had been recently lowered in condition. " The pressure, so to speak, had to be regulated according to the weakest part " of the beam. Under these rates the people do earn subsistence by giving " a day's work, which they could not be made to give under any other plan. " As their strength and condition become established, and their practice " improves, they can perhaps earn more than a bare subsistence. Being " anxious that the State charity should be administered with as much thrift " as is safely possible, I have authorized a reduction of the rates to 5 annas " per 100 cubic feet, and in some cases to 4½ annas, wherever the relief authorities " think that this can be properly attempted. It is hoped that with firmness " and patience the reduction may be effected in many places. With this " very large class of laborers again there is nothing to bring about demora- " lization."

" But under any of these piece-work rates—indeed under any rate that " would be suitable for the weakly and the unskilled—the strong and the " skilled will make more than a subsistence. Numbers of persons and families " are making more than such subsistence. Some instances are narrated of the " profits of individuals from piece-work labor, which may be exaggerated. But " there are many authenticated instances of laborers, with the help of their " wives and children, earning amounts daily either in kind or in cash, which " prove a diligence and an energy which would hardly be believed were it not " thus demonstrated. The surplus earnings over and above subsistence are " all saved up against that dreaded interval of time between the closing " of the works (ere the commencement of the rains) and the gathering of the " next crop. Such remarkable and praiseworthy conduct is not, I fear, " evinced by more than a small number out of the whole."

" Others manage to earn by piece-work, in a very few hours, enough for " daily food, and then spend the rest of the day in working up their parched " fields in the hope of showers. With some families, again, all the members " used to work; presently the man learns how to earn single-handed enough " for himself and his family. Then he naturally leaves his wife and chil- " dren at home with their domestic duties, and he labours alone on the " works. Such classes of instances and others that might be produced " are creditable to the people, though probably they do not comprise more " than a large minority out of the total. Still, according to the best infor- " mation, it appears that in very many cases, under the liberal piece-work rules, " a family does earn from four to five seers a day, on which quantity they can " live and save a little besides. It is for this reason that I have authorized " the trial of a slightly reduced rate, wherever it is deemed safe by the officers " on the spot."

" I have considered whether the hardest working persons could not be " kept in gangs by themselves on a less liberal rate of piece-work; but all our " officers deprecate this—because it is the presence of these persons, and the " example of their benefit from diligence, that encourage all the inferior " workers to exert themselves."

" Now, in all these cases which I have described, there is no sign of " demoralization—indeed the tendency is in the opposite direction; and the " nature of the contract tends to stimulate industry. The instances of high " earnings which most excite remark, and at first sight seem to portend " demoralization, are nevertheless the very cases which indicate a salutary " moral process, inasmuch as the persons have been awakened and spurred into " a state of diligence and forethought which they had perhaps never evinced " before: and all the other cases of the same kind, though of less degree, " afford evidence of the same healthy moral influences."

" Again, whatever the relief labourers save in grain or in cash in the " months of April and May, is so much to the good as regards expenditure of " Government grain in the months of June, July, and August. For those who " save at the present time will not come on our hands hereafter when the works " will be closed. Had they not saved in this manner, they would either come " on gratuitous relief, or they would obtain advances. But they will do neither " of these things if they succeed in saving now. The savings then only " constitute a slight forestalling of Government assistance; and this in a " manner calculated to have a beneficial effect morally upon the people, and to " cultivate in them some of those qualities in which they are probably deficient."

" Having thus examined briefly each class of cases, I cannot find that any " seeds of demoralization are being sown amongst the laboring classes by the " relief labour system. And wherever anything like incipient demoralization " shewed itself, corrective measures have been adopted. I admit, however, that " the utmost vigilance is necessary to prevent demoralizing influences being " generated. And all those who, as private employers of labour, are justly " interested in the matter, may rely on such preventive watchfulness being " maintained by all our officers."

" As regards the progress of charitable relief, I believe it may be said " that there has been a careful inspection by Government officials village by " village of all the distressed tracts, in order to search out all persons deserving " of this relief, and every such person has been furnished with a certificate " entitling him or her to subsistence. If consideration be given to the extent of " country, 350 miles in length with a mean breadth of 70 miles, comprising pro- " bably 27,750 villages containing 2,096,843 houses, then the nature of the " operation, so comprehensive in its proportions, so minute in its details, can " be appreciated. It is now understood by all concerned that this portion of " the general relief, as it is purely and absolutely charity, will be defrayed from " the moneys subscribed by the benevolent public in England, in India, and " in other countries, supplemented by an equal amount from the Government of " India; also, that the relief thus afforded by public charity may be dispensed

"with a degree of tenderness and generosity which would hardly be justifiable "in the dispensation of State aid. Such liberality will be shewn—

"*Firstly*—By extending assistance largely to classes who, though sorely "straitened, yet cannot work; such as Brahmins, and other high-caste people, "some classes of Mahomedan widows and friendless persons, petty manu- "facturers, and artisans of fabrics for which the demand is temporarily "stopped.

"*Secondly*.—By allowing to persons on this kind of relief various little "comforts and accessories.

"I have earnestly impressed on all our officers what I understand to "be the wishes and intentions of the benevolent subscribers in these respects.

"The fifth point relates to the prospects of the season. From Bhagulpore "eastwards the prospect is good, good showers having fallen from time to time. "But from Bhagulpore westwards, comprising the greater part of Behar, and "especially Tirhoot, the prospect, up to the 24th of May, was unsatisfactory, and "was causing anxiety to the people, little or no rain having fallen during the "month. This uneasiness aggravated the prevailing distress by inducing those "who posessed grain to hold it—in consequence, the food-supply was becoming "deficient in the markets, even of localities previously believed to be safe "from distress. An undefined dread of some misfortune to the next crops, to "be expected in September, is perceptibly influencing and contracting the "internal distribution of food-grains throughout the distressed districts, and "is thereby intensifying the pressure on the State relief operations. This "indirect manifestation of the popular feeling has led us again to consider the "adequacy or otherwise of our preparations. And careful calculations shew "that these preparations are adequate, even to the contingency of a partial "failure of the September harvest, in addition to the contingencies previously "provided for. The maximum number to receive assistance being assumed "at 3½ millions of souls.

"At the present moment of writing, however, timely rain-storms are "descending in various parts of Behar, though I have not yet heard of their "falling in all or the most distressed localities. Wherever they fall, instantly "the drooping hearts of the people revive, and countless ploughs are pushed "on into the furrows.

"The sixth point relates to the general working of the relief system. I "believe that this system, as now developed in its several ramifications—its relief "labour, its charitable relief, its advances to cultivators, its sales to the public— "is calculated to meet, does actually meet, all the existing distress, and will "continue to meet the distress as it assumes modified shapes, together with the "changes of season in all the districts known to be distressed. This general "statement, too, is safely made notwithstanding the occasional accession of dis- "tress as in parts of Cooch Behar, of Manbhoom, of Burdwan. The absolutely "comprehensive character of the system for all the distressed classes being "beyond question, the only question that could be entertained is whether it "does not comprehend some classes or some persons not really distressed. Now, "it is almost certain that those who receive charitable relief and those who "obtain advances, do really need assistance, as each individual case must have "been investigated; also that those who buy from the Government stores "really need the purchases they make, especially as sale is never authorized "in any locality until the European officer has found on inquiry that "food-supply is deficient. The same certainty cannot be declared as "regards the relief works, where it is possible that amongst such large "numbers some persons not really distressed might gain admission. But such "cases are comparatively few, I believe, and so far as I know, every "officer employed believes that nearly all the persons on these works need the "relief more and more each week as the season advances. Most of those who "had any of the slender resources wherewith the poorest classes in all years "have to support themselves through the slack months of early summer,

"exhausted these resources before they came on the works, though some of "them still had or have a little, very little, store treasured up against "extremity. If the relief works did not exist, the great majority would have "literally nothing to eat; some might have enough for a very few days. "None could get any bread-winning employment until the rains begin, and "during the interval, between the middle of May and the beginning of the rains, "it is difficult to understand how any of them could preserve themselves from "miserable emaciation, or how the majority could escape death. A restrospect "of these operations shows that the people were at the outset remarkably slow "to avail themselves of the relief works; that in many tracts severe distress "first became known, not at all by the people using their opportunities of com- "plaining, but by the investigations of our own officers; that in the less "distressed districts, and in the less afflicted parts of the distressed districts, "the people do not resort to the relief works; and that all the localities where "they have largely resorted to the works have been those localities where a "widespread destruction of the crops has occurred."

In addition to the above remarks recorded by Sir Richard Temple, the following specific information, with regard to the various matters noticed in former reports, is added :—

Weather and rainfall.

The latest returns show a general want of rain except in Bhagulpore, Rungpore, Dacca, Sylhet, and the districts of the Chittagong division. In Furreedpore a good fall has been recorded, but it is said to have been partial. Since the date of the returns received by post, telegrams have come in reporting copious rain in the north of Chumparun, and a fall of $\frac{9}{10}$ths of an inch at Mozufferpore, 1·12 fell at Maldah, 1·20 at Moorshedabad, and ½ an inch at Hooghly. Rain is now urgently wanted in all districts where it has not fallen; though, except in districts where much early rice is sown, it may be delayed for some days longer without materially injuring the prospects of the coming crops. The continued drought has, however, caused the water-supply to run short in several districts; and if it were not for the large number of relief labourers available for deepening tanks, considerable suffering would have been felt in many districts from the want of water, and large numbers of cattle would have perished.

State of the crops.

2. At this time of the year the prospects of the crops vary almost from day to day, according to the rainfall, throughout the greater part of Bengal and Behar, while in the eastern districts the state of the rivers must enter as an element into the calculation. From almost every district the latest returns tell the same tale that rain is urgently wanted; and in some districts, as in Rungpore, while the rainfall has secured the crops for the present in the north and east of the district, those in the west and south, where no rain has fallen, are said to have suffered much to be in a critical condition.

In Furreedpore, where rain has not fallen, the late rice is said to be likely to suffer from the rapid rise of the river, as it is not sufficiently vigorous to keep its head above the floods as they rise.

The crops of kaon and boro rice have been harvested, except in Behar, where they are being cut, and are said to have been very good in Dinagepore, Maldah, and Rajshahye.

Seed-grain.

3. Extended inquiry shows that generally the supply of seed-grain, except in certain peculiarly situated tracts and in a few villages, will be sufficient, and but little aid will be wanted from Government except in the way of loans to those that cannot afford to pay high prices. Of the small Government supply reported as ordered in the last Narrative, 68,911 maunds has been delivered in Calcutta, besides 20,000 maunds which has been received up-country. From all accounts it is believed that this quantity will be found amply sufficient to meet all requirements.

Prices.

4. Prices show a tendency to rise generally, though, on the whole, pretty steady. Throughout the Burdwan Division there has been a slight rise in all districts except Beerbhoom. In the Presidency Division grain is decidedly dearer in Calcutta and in Jessore, though in the latter district the last weekly returns show symptoms of a fall. In the Rajshahye Division there has been a rise of prices in Rajshahye, Rungpore, and Bogra; they have fallen somewhat in Dinagepore. In Maldah and Pubna a rise in the middle of the fortnight has been followed by a fall to former level at its end. In Julpigoree there has been a sudden rise from 11 seers to 8, which has caused a good deal of distress. Prices remain steady in Mymensingh and Backergunge, and have risen considerably in Dacca, Sylhet, the Chittagong Hill Tracts, and Hill Tipperah. In Noakhally they are lower; and in Furreedpore common rice remains stationary, while other grains are somewhat higher. Throughout Behar prices have only risen in the Sonthal Pergunnahs, and they have fallen somewhat in Patna (except in the case of barley and gram, which have risen from 19 to 18 seers), Sarun, Chumparun, and Monghyr. In the other districts there is but little change. In Chota Nagpore, prices have risen in Manbhoom and Hazareebagh, while they have fallen somewhat in Lohardugga. In Orissa there is no change in Cuttack, but the market has an upward tendency in Balasore. Prices are falling at Pooree.

Supply of grain.

5. With the exception of the districts mentioned in last narrative as being dependent chiefly on Government grain, no deficiency of supplies has been reported; and except in Mozufferpore, where the supply has been generally more scanty throughout the previous fortnight, the markets have been generally well supplied. We can now confidently say that Government grain is to be had in abundance wherever the supplies furnished by private trade are deficient, and orders have been given to sell in all cases where a deficiency exists.

Private trade.

6. The amount of private grain carried into Behar by railway, for the fortnight ending the 16th instant, shows a considerable increase as compared with the previous return. The figures are as follow:—

	For the fortnight ending 2nd May 1874.	For fortnight ending 16th May 1874.
	Tons.	Tons.
From North-Western Provinces and Punjab	14,488	18,125
From Calcutta and Lower Bengal	20,660	2,870

Now that there is but very little more Government grain to be carried, it may confidently be expected that this trade will increase considerably as long as prices continue to give a profit to importers.

Export of food-grains by Sea.

The usual note will be found in Appendix A. The total quantity exported from the 1st October to the middle of May was 212,763 tons; and the imports to the same date were 355,024 tons.

Patna Division.—State of country.

7. There is a general complaint of the want of rain in this division, and the continued drought has aggravated the distress and increased the numbers on relief works; but since the fortnightly reports were received, abundant rain has been reported from Chumparun, and nearly an inch has fallen in Mozufferpore. In parts of Seetamurhee and in the south of Durbhunga, where rain had fallen, a considerable breadth of land has been sown; but in the greater part of these sub-divisions, and nearly the whole of Mudhoobunnee, no sowings had been practicable. Wherever land could be sown, seed has been procurable by those who had money to pay for it, and the general impression seems to be that, except in Ramnuggur, where the Taroos, relying upon Government aid, have recklessly consumed their seed-grain, and in a few villages scattered throughout the country, sufficient seed will be forthcoming, though its price will be high. In Sarun the lands are said to have been prepared for sowings when the rain falls, though but little has been sown as yet.

Condition of people.

8. The condition of the people remains unchanged; the numbers on relief works have increased, except in Sarun, where there has been a slight decrease, which must be expected to continue till rain falls and field labour can be again begun. But everywhere the people are said to be in good condition, and to have little anxiety for the future; though, with the exception of private stores held for the most part for the consumption of the owners, there is said to be no rice in the smaller bazaars in South Tirhoot, except what has been imported by Government; other grains are not procurable in any quantity, except in the large towns of Durbhunga and Rowsera, and in Mahomedpore and Warrisnuggur among the smaller marts.

North Tirhoot.

9. In the Head-Quarters Sub-division of Tirhoot (Mozufferpore) sales of Government grain have been found to be necessary owing to the deficiency of supplies in the markets; but, judging from the experience of other parts of the country, it is not likely that private trade will leave so accessible and rich a tract of country unprovided, especially as the Gunduk will from this time forward be navigable without difficulty by cargo boats. Imports are already coming up to Chumparun. An outbreak of cholera has been reported in the last weather reports, but the locality is not specified.

Chumparun.

10. In the west of Ramnuggur the people are entirely dependent upon Government grain, but throughout the rest of the district private trade, though not sufficiently active to render sales of Government grain altogether unnecessary, is doing a good deal, and its activity is increasing. The health of the people is good; and though small-pox is prevalent, it is said to be somewhat less so than it usually is at this time of the year.

Sarun.

11. In Sarun trade is as usual very active, and supplies plentiful, though, as was to be expected in a district where the population is over 700 to the square mile, there are very large numbers who can only maintain themselves with difficulty in ordinary seasons, and who would therefore, in the present year, starve in the midst of plenty, if it were not for the aid given by Government works.

South Behar.

12. From South Behar the reports continue satisfactory. Rain was much wanted, and the numbers on relief works had somewhat increased; but on the whole there is little distress in this part of the country, and no scarcity.

Bhagulpore Division.—State of country.

13. In this division distress has been reported from the southern part of the Sonthal Pergunnahs, where none was before anticipated, but the arrangements made to meet it were prompt and apparently adequate. Throughout the rest of the division, though increasing pressure had been reported in one pergunnah in Monghyr, and more relief works had been found necessary in the Begooserai sub-division, as no rain had fallen there, yet, on the whole, there is a decided improvement, especially to the north of the Ganges. There the rainfall has been general, and the Collector of Purneah writes that "the country is now looking very fresh and green; kauni (a kind of millet) is ripening, and moong looking well. The area sown in bhadoe is very large, and the crop is looking well." There has been a slight increase in the number of labourers on relief works in Purneah and Monghyr, and a slight decrease in Bhagulpore; but on the whole there is but little change.

Rajshahye Division.

14. There has been a great change for the better in the prospects of almost all the districts of this division. Rain has fallen generally in sufficient quantities for sowings, though more was wanted in parts of Moorshedabad, the south of Maldah, and in parts of Rungpore. In Dinagepore, Rajshahye, and in the north of Maldah, more land than usual has been sown with bhadoee or autumn grains. There has been no difficulty about seed, and the crops promise remarkably well. In the Govindgunge circle of Rungpore some difficulty in

procuring seed will probably be felt but only from the poverty of the people, and arrangements are being made for giving advances to those who are unable to pay the present high prices. Cholera has appeared in Dinagepore, Rajshahye, and parts of Moorshedabad. Though there has been no great distress in any of the districts of this division, except some bad cases in the Molong and Mahigunge circles, which have been sought out and relieved in time, yet the numbers on relief-work and in the receipt of charitable relief have apparently increased on the whole, though some of the district returns are imperfect, and the increase cannot be accurately stated. Of those districts in which the returns are complete, the increase is most marked in Rungpore, a district which evidently needs, and has received, great attention. The group organisation has been perfected there, and the Relief Commissioner is now encamped in the district, and giving it his special attention. Bogra, which was said in last narrative to be in a critical state, has certainly improved, and the rainfall has been ample.

Cooch Behar Division.

15. Owing to a sudden outbreak of distress in the north of Julpigoree, the Cooch Behar Division must now be added to the list of distressed divisions. Supplies of grain have been sent into the district from Purneah, which will amount to 50,000 maunds; and 40,000 are being kept in reserve in Kaligunge ready to be moved up the Teesta, in case they should be wanted. The stores of the Northern Bengal Railway will also be available to supply immediate necessities. On the representation of the Commissioner that further relief works were urgently wanted in the district, sanction has been given for the extension of a portion of the earthwork of Northern Bengal Railway from Julpigoree towards the foot of the hills. In Appendix H is a minute by Sir Richard Temple on the state of the district and the measures taken to relieve distress.

Mymensingh.

16. The Collector reports that the importation of 5,000 maunds of Government rice has had an immediate effect in lowering prices. He anticipates no futher distress, and states that his district must not be reckoned as one of those where distress exists or is likely to occur.

Burdwan Division.

17. The reports from this division show little change in the condition of the people except in Beerbhoom, where there has been a considerable increase in distress as shown by the increased numbers on relief works and in the receipt of charitable relief. The district organisation has however proved equal to the emergency, and there will be no difficulty in providing work and food for larger numbers than have hitherto presented themselves. In Burdwan the number of persons in the receipt of charitable relief, 14,169, is large, but not larger than is naturally to be expected in a district where the people have suffered so greatly from fever for some years past. It has been considered desirable to provide Government grain for the considerable numbers in this division now receiving relief in one form or other from the public funds, and supplies are now being sent up for the Hooghly, Burdwan, Bankoora, and Beerbhoom districts.

Chota Nagpore.

18. The reports from this division show a great improvement in the condition of the people. Palamow is now said to be quite safe owing to the large crops of jungle produce which have been gathered; but the Lieutenant-Governor still entertains some fear that these and the rubbee crop may not prove sufficient for the sustenance of the people. As there are considerable stores of Government rice in the sub-division which will be used in paying labourers, there is no cause for anxiety about this part of the country. In Hazareebagh relief measures have proved completely successful, and the crops of millet and early rice, which in this district will be reaped in July and August, will, it is hoped, produce sufficient to put an end to all fears of famine in the district. Distress is being relieved by loans of rice to ryots, as well as by the employment of labourers on relief works. From Manbhoom a great improvement is reported; the large loans of grain given out to ryots have produced a most beneficial effect. There was at one time some fear that it would not be possible to store the

whole amount of grain before the rains; but the carriage arrangements are now most satisfactory, and there can be no reasonable doubt that there will be no balance left unstored unless the rains should break unusually early.

Presidency Division.

19. Nuddea continues to be the only distressed district in this division, but the reports show little or no cause for anxiety. With favourable rains, of which there is every prospect, there will be but little distress here.

Despatches of grain from Calcutta.

20. Of the balances due from Calcutta to the various districts as shown in Appendix C of the last narrative, the whole had been despatched on the 26th instant, with the exception of 78,366 maunds, which had still to go to Manbhoom. The last despatch for the Sonthal Pergunnahs left on the 25th, and the last despatch for Tirhoot was made on the 23rd instant. The daily despatches by East Indian Railway for the week beginning Monday, the 25th instant, were 4,000 maunds for Manbhoom, 500 maunds for Moorshedabad, and 1,000 maunds for the Burdwan division. By the Eastern Bengal Railway there are 40,000 maunds to go to Kaligunge *viâ* Goalundo as a reserve for Julpigoree, and 4,000 maunds to Serajgunge by the same route for Pubna district. The great strain put upon the East Indian Railway has thus been removed, and much carriage will be released for the needs of the upper portion of the line. The unremitting exertions and cordial co-operation of the District Traffic Superintendent at Howrah and his staff have greatly aided in the early completion of this work.

The amount of seed-grain despatched up to the 26th May was as follows:—

	Mds.
To Monghyr	... 6,427
„ Suitangunge	... 38,851
„ Futwa	... 20,773
Total	... 66,051

Relief works.

21. The Lieutenant-Governor has fully noticed this subject in his remarks prefixed to this narrative. The following is the number on relief works according to the most recent returns in the office. It will be observed that they are defective, as some returns have not been received, and as they are prepared on different, and with regard to some districts and sub-divisions later, data than those used by His Honor, they necessarily differ somewhat from them.

	Last fortnight's return.	Present return.	
Patna Division ...	912,074	1,112,828	
Soane Canal Works ...	41,019	Not received.	
Gunduk Embankments ...	23,964	ditto.	
Bhagulpore Division ...	100,092	107,269	
Rajshahye „ ...	209,635	180,064	The returns from two circles in Dinagepore not received.
Northern Bengal Railway ...	19,452	18,202	
Burdwan, Presidency, Chota Nagpore and Cooch Behar ...	67,165	69,786	Returns from Cooch Behar not received.

From the above, it will be seen that the numbers have increased everywhere except in the Rajshahye Division, where the decrease is partly to be accounted for by the absence of returns from two circles, one, that of Doorgapore, where important works are going on, and partly from the fact that many labourers had left the works to cultivate their fields; while many women and children had been taken off the works and put on charitable relief.

22. The returns showing the numbers on piece-work and daily wages, respectively, are still too imperfect to be useful in this narrative; but they are improving, and I hope, with next narrative, to be able to submit complete or nearly complete returns.

23. While writing on this subject, I ought not to omit to mention the success attained by Pundit Ajoodya Prashad in making the Tirhootia Brahmins work. He is himself a learned Brahmin of very high caste, and is circle

officer of Putrahee in Tirhoot, where Brahmins are particularly numerous. He practically showed them by using the hoe and pick-axe himself that he did not consider this species of labor to be derogatory to his caste; and the result has been that there are now over two hundred of the poorest members of the caste cheerfully working on the relief-works and earning an honest livelihood instead of subsisting upon public charity.

Northern Bengal Railway.

There have been 39,594,000 cubic feet of earth-work completed during the fortnight ending the 16th instant, on the main line and Rungpore line equal to 82 miles of four feet bank. The rates fixed for labour are 4 to 5 annas per 100 cubic feet, a rate that ought to be quite sufficient to attract labourers really requiring employment.

24. The following is the return of persons receiving charitable relief in those districts whence returns have been received:—

	This fortnight.	Last fortnight.
Tirhoot	140,814	108,278
Chumparun	9,349	9,019
Sarun	9,700	4,076
Gya	845	822
Shahabad	2,827	2,361
Monghyr	2,001	3,176
Bhagulpore	1,418*	7,413
Purneah	5,656	1,395
Maldah	6,349	3,382
Dinagepore	19,526†	12,828
Rungpore	20,346‡	8,340
Bogra	4,643	8,199
Moorshedabad	2,154	2,739
Rajshahye	2,474	4,192
Hooghly	2,383	1,925
Bankoora	8,073	6,729
Bheerbhoon	5,475	3,600
Burdwan	14,169	13,725
Manbhoom	5,451	5,776
Palamow	not received.	426
Total ...	263,653	208,401

* Returns imperfect.
† Imperfect.
‡ Imperfect.

25. The Lieutenant-Governor has thought it right to have a special inspection made of all golahs where grain is stored, in order that any imperfections in the present buildings or modes of storage may be discovered and rectified before the rains. The orders on the subject will be found in Appendix G.

By order of the Lieutenant-Governor of Bengal,

J. F. K. HEWITT,

Offg. Junior Secy. to the Govt. of Bengal.

CALCUTTA,
The 28th May 1874.

A. O. HUME,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE FORTNIGHT ENDING THE 28th MAY 1874.

GENERAL REMARKS.—In Madras the season appears to be moderately favorable; rain has been abundant in Kurnool, but somewhat scanty elsewhere. In Sindh a fair rise of the river is reported. Rain has fallen in quantity in the Deccan and South Mahratta country, and lightly in some other districts of the Bombay Presidency. Abundant rain is reported from the eastern districts of Bengal, and a more moderate falls from the central districts; there have also been good falls in Bhagulpoor, Chumparun, and parts of Tirhoot; none is reported from the other districts of Behar. Great good has been done by the rain where it has fallen, and preparations for the late rice sowings are going on generally. In the North-Western Provinces the harvest has been completed. The numbers on relief works in Goruckpoor and Bustee have decreased slightly, owing to the lowering of the rate of wages and the employment of labourers on agricultural operations; arrangements are being made to substitute work-houses for relief works. Elsewhere there is no serious distress; the number of recipients of relief in Banda and Humeerpoor has very slightly increased. In the Punjab, rain has fallen in Delhi and Umballa; the harvest is nearly gathered in with an outturn above the average. Storms with rain are reported from many districts of the Central Provinces; no crops except sugarcane remain on the ground. In Rajpootana there is some scarcity of water in the south; in the north the supply is good; storms and rain are reported from Jeypoor and Ajmere. In Central India rain has fallen, or promises to fall, in most districts. In Mysore there has been an abundant fall throughout the province.

Presidency or Province and District.		Rainfall for fortnight preceding.	State of agricultural prospects.
Madras—	**(May 28th)**		
Kistna	(„ 27th)	...	No rain at Masulipatam, but in all taluqs, except Bandeo; land winds prevalent; slight freshes; drinking water scarce; second rice crop harvested; out-turn from a quarter to half; prices stationary; health good; mild small-pox general; guinea worm in Palnad and some villages of Guntoor and Suttenapally; cattle healthy; pasture scarce; dry fodder being used; markets well supplied locally.
Kurnool	„	3·31 at Kurnool in six days.	Rain fall good throughout the district, except at Markopur; season favourable; ploughing commenced; markets moderately supplied; prices stationary; water and pasture sufficient; fever, small-pox and cattle disease in several taluqs; 1·7 foot of water yesterday over the Sunkesala anicut.
Negapatam	„	...	Rain at Negapatam none; elsewhere scarce and partial; freshes in rivers moderate; water in tanks scarce; water over upper anicut none, over lower anicut, north and south branches, 3 inches; cultivation almost none; standing crops very few, but they are good; plantain blown down by high wind in Combaconum and Mazaveram taluqs; harvest very little; pasture procurable; markets sufficiently supplied; prices slightly rising; small-pox in several places; cattle disease in three taluqs, with some loss.
Trichinopoly	„	...	Slight rain two or three days in some taluqs: freshes in the Cauvery continue; water for irrigation and drinking sufficient in all wet villages; drinking water supply not ample in dry villages, but still available fron tanks and wells; condition of crops fairly good; outturn slightly below the average in Perambalore; very slight alteration in prices, a little lower in Kulithalay, a little higher in Udegarpalium; public health generally good; in Muserie fever and small-pox prevalent; condition of cattle good; pasture ample in wet villages; scarcity in dry land.
Calicut	„	...	No report received.
Bombay—	**(May 27th)**		
Sindh.			
Kurrachee	...	...	River at Kotree on 23rd instant 10 feet 8 inches; a fair rise; cut from Ochito to Kokawaree completed and opened on 23rd; khureef sowings springing up; small-pox in Tuppas Dooja, Bahadipar and Sutta; cattle in Jangor and Battora Tuppas attacked by "Summara" disease; weather threatening.
Hyderabad	...	...	River failing since 23rd, is 15 inches higher than on same date last year; weather unusually cool; no sickness.
Shikarpur	...	...	River steadily rising; weather sultry; fever still prevailing; slight shower on 14th.
Upper Frontier	...	...	Weather oppressively hot on 13th; slight shower in taluqs Thul and Kasheeore on 13th and 15th; market price of Rubbee staples depressed.
Gujarat.			
Ahmadabad	..	...	Weather tolerable; public health good.
Kaira	...	·96	Health good; cholera prevailing in Anund taluq.
Surat	...	...	Weather cloudy; public health generally good.
Broach	...	...	Sea breeze continues.
Khandesh and Nasik.			
Khandesh	...	...	Cotton market steady, price unchanged; public health good.
Nasik	...	·50	Rain in Nippar and Chandore; public health good.
Thanna	...	...	Weather sultry and cloudy; prevailing disease ague; slight cattle disease in Salsette, Warra, Shapur, Murbur and Bassein taluqs; measles, small-pox, guinea worm and scarcity of drinking water in taluq Warra.

Presidency or Province and District.		Rainfall for fortnight preceding.	State of agricultural prospects.
Bombay—*contd.*			
Deccan.			
Poona	...	...	Heavy rain in Poona on 17th also slightly fallen in Jooner, Indipur, Sinur and Porandur; hot weather still continues; cattle disease in taluqs Bhimthadi, Indipur, Khed and Havelly in which last children are also confined with fever.
Ahmednuggur	...	2·39	Cattle disease in some villages of Aukola, Jamkhed and Parner Taluqs; public health good.
Sholapur	...	·95	Fallen in every Taluq; slight cattle disease at Punderpur and Sholapur; weather warm.
Satara	...	2·52	Weather hot; ague in Patua.
Southern Mahratta Country.			
Belgaum	...	2·44	Manuring and sowing of rice progressing; health good.
Dharwar	...	5·77	Rain fallen in every Taluq; rice sowing in progress.
Canara	...	3·65	Sowing progressing; slight fever prevalent.
Kattyawar and Gaekwar's territory.			
Rajkot	...	...	Weather very hot.
Wudwan	...	...	Weather hot; health good; state of crops same as before.
Baroda	...	...	Temperature still high; south-westerly breeze continues; public health good.
Bengal—	**(May 26th)**		
Burdwan	...	·74	Weather very hot. In the first week heavy rains fell in Cutwa, and slight showers in Bood-bood and Raneegunge Sub-divisions. Rain fell also in the second week in the Sudder and Culna Sub-divisions. Ploughing of lands progressing, but more rain is much wanted for general agricultural purposes.
24-Pergunnahs	...	0·13	Intensely hot with strong south winds and occasional clouds. Good showers of rain in the early part of the fortnight in Diamond Harbour and Satkherah Sub-divisions, where early rice sowings are going on. Agricultural operations elsewhere are at a stand-still for want of rain. In some places the early sowings have come up fairly, but are suffering from want of rain, which is urgently required throughout the district.
Dacca	...	5·14	During the first week the weather was hot with strong winds and occasional storms. In the second week there were storms almost daily. Weather much cooler; state of the crops good.
Cuttack	...	·04	The weather very close during the first week till the afternoon, and then cloudy with high winds till nightfall; slight showers fell on the night of the 23rd; and the weather has since been cloudy and windy. Tillage progressing well. Sowing has also commenced.
Bankoorah	...	*Nil.*	Heavy rains in the south and east of the district on the 13th, the weather very hot, and dust-storms without rain; early rice being sown where the rain fell, and sugarcane being planted; elsewhere rain is urgently wanted; water very scarce.
Beerbhoom	...	*Nil.*	**Cool and damp in the early part of the first week; intensely hot and dry in the second. Prospects of the crops worse by another fortnight of drought; water failing. No change during the second week, but a storm of wind and rain had burst over the station at the time of report; silk almost a total failure; prices almost stationary, but showing an upward tendency. Export by rail during** fortnight ending 16th May 9,167½ maunds to Bhaugulpore and Patna Divisions.
Moorshedabad	...	1·35	Rain on both the 11th and 13th, and a heavy storm on the 22nd with very high wind but little rain; many trees blown down near the station. The storm was repeated in a milder form the next morning. No report yet received from the interior. The heat had not sensibly abated, but the rain had somewhat reduced the temperature. The rain though slight had been beneficial to the seedlings, and would probably enable the cultivators to complete their sowings. The aus or early rice plant which was suffering from drought looks well in most places, except Jungypore, where the rain was not adequate.
			An unusually large area of land is being taken up for early rice. Prices vary largely from week to week in most markets, but a comparison of the last few weeks shows a decidedly upward tendency, and are higher at all the principal markets.
Dinagepore	...	.53	Rain fell in many parts of the district early in the fortnight, but the storms have been very local. The weather afterwards cloudy and threatening, but no heavy rain reported anywhere, though there have been showers in places. Much of the boro paddy has been cut, and is generally a good crop. The bhadoi or early rice has come up well in many places, but is reported in some to be suffering from want of rain, which is required not merely for the early rice, but for ploughing for the winter crop.
Maldah	...	0·38	Weather hot; south-easterly wind; occasional clouds, and distant thunder; slight rain in the eastern part of the district and in Khurba. Reaping of the boro paddy has begun, and there is a good crop. Bhadoi or early sowings have been commenced; the prospect of the crops is, on the whole, fair, but rain is much wanted. Price of rice and grain has fallen.
Rajshahye	...	·66	All parts of this district had more or less rain during the first week, except Manda and Tannore, in the west and north-west. The rain was very favorable for the growing rice crops, and also for the ploughing of lands which were yet unploughed, and the sowings of early and late rice. The prospects of indigo and jute have also improved. In the west and north-west rain is much needed. No rain in the district throughout the second week, and the continued drought and heat are proving injurious to all crops, much land is lying ready ploughed, but sowing is suspended until rain falls. Prices have risen in many places, and to a large extent in Beauleah, where the rice is two seers (*sic*) in the rupee. At Tannore boro rice is already in the market at 13-8 seers per rupee.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bengal—*contd.*		
Rungpore ...	1·54	Hot and oppressive at the commencement, and cloudy afterwards. Rain has fallen copiously during the last two nights. Good rainfall also to the north in the first week, and in the north-east and south-east in the second. All west and south the crops have sustained much damage, and are in a critical state. Much of the millet crop is being cut to the east and south-east. Boro rice has been cut in a few places and is favorable. Prices very high everywhere; 6-8 seers at head-quarters, but easier since.
Bogra ...	1·33	In the early part of the fortnight rain fell, but the weather has become dry and hot since. Boro rice being cut in Bogra and Khetlal, and a fair average expected. The early rice crop will suffer heavily if more rain does not fall soon; until now the prospects of the crops were good, especially in the east of the district, and with a seasonable supply of rain, a good outturn may still be expected.
Patna ...	*Nil*	In the first half of the fortnight the weather was seasonable, but very hot with strong west winds, and in the second the wind veered to the east. No crops on the ground except cheena (millet) which will soon be harvested. Rain wanted for the preparation of lands.
Gya ...	*Nil*	Weather hot; the only crops on the ground cheena (millet) and sugarcane.
Shahabad ...	*Nil*	Very hot with variable winds; sugarcane and vegetables being irrigated, the former doing well, cheena (millet) is ripening and is being cut in places, also boro rice; mango crop still promising.
Tirhoot ...	*Nil*	Weather hot in the early part of the fortnight; west wind prevailed and east wind since. Seetarnurhee Sub-division—0·40 inches of rain fell on the 11th May, very beneficial to agricultural operations. In many places the labourers have left relief works to prepare the fields as the rain has moistened the soil sufficiently to enable the ryots to prepare the land for sowing in the next rain. Makai (Indian corn) was sown in places during the rain which fell in the previous fortnight and has germinated well in some places. The Murwa (millet) seedlings appear to be coming up well. During the last days of the first week, the Deputy Collector travelled in the Amoon, Shewhar, Bhagwanpore, Dynchapra, and Mohind Circles, and noticed ryots ploughing their fields; there was a heavier rain to the north of the sub-division, Mudhoobanee Sub-division, and 0·1 on the night of the 11th May; more rain is much wanted for sowing the early rice. Most of the fields are now ready for paddy crops. In Kutchra Circle the cheena (millet) crop has been in some parts from eight to twelve annas. In Tajpore Sub-division rain is much wanted. Mango knocked about; no change in other crops. In Hajeepore Sub-division the state and prospects of the crops unchanged; the cheena (millet) and moong (pulse) are doing well in the low-lands, but those on the high-lands have suffered from the drought. Sudder Sub-division—Prospects continue much the same as last fortnight; want of rain being much felt. No report from Durbhanga. No material change during the second week; want of rain is much felt on all sides. Prices stationary.
Saran ...	*Nil*	Weather very hot, clear, and dry with east wind prevailing; cheena (millet) in various stages of growth. The early crop is being cut and the late wheat not yet ripe is being irrigated, where practicable. Indigo prospects continue to be unfavorable, and the drought is affecting all crops injuriously. The recent sowings are dying for want of moisture. Agricultural operations are at a stand-still, except in Burrowlee Thanna, and in Sewan Sub-division where paddy is sown in the low-lands, to which moisture was supplied by the recent rains. Rain is most anxiously looked for, for the next sowings. A large number of mangos blown down by high winds. Prices have slightly fallen in the town owing to payment on relief works being made in grain and restoration of private trade which was interrupted by the impressment of carriage for Tirhoot. On the whole, prices are steady.
Chumparun ...	*Nil*	Great heat in the day, with strong winds; prospects of moong (pulse) fair, of indigo very unfavorable; cheena and kown (millets) have entirely failed, except where there was a little moisture or where advances for katcha wells had enabled the ryots to irrigate them. Paddy being sown in places. Rain anxiously looked for. Prices easier in consequence of the general sale of Government grain. A fall of 7-10th of rain has been since telegraphed.
Monghyr ...	*Nil*	Hot winds and intense heat. The few crops on the ground are being parched up. Everything depends on an early setting in of the rain which is much needed.
Bhaugulpore ...	1·48	Hot and strong west winds. Hail and rain on the 12th May, south of Soopool and west of Mudhepoora. On the 25th rain at Banka Sub-division, at Mudhepoora ·78 and one or two inches round south-west of Mudhepoora, on the 23rd. Moong (pulse) ripening fast; rice, murwa (millet) and sugarcane, all reported as flourishing; sowing will now be extensively carried on, and the rain will almost ensure the safety of the crops on the ground.
Purneah ...	0·40	In the early part very hot, and strong east winds blowing during the second week; heat oppressive. The bhadoi or early sowings going on everywhere, and are looking very well, but rain is wanted to enable the plants to meet the first floods. Moong (pulse) is being gathered all over the district with good outturn; kowni (millet) at Kishengunge is reported very good everywhere.
Sonthal Pergunnahs ...	·08	At Rajmehal a little rain fell in the first week, but the weather has been very hot and dry since. Doomka, excessively hot during the entire fortnight except the very end. Distant lightning and a squall and little rain in the first half, since then clouds hanging about and promising rain. A little rain preceded by a storm fell on the evening of the 23rd May. East wind blowing hard the last three days. Bhadoi rice and Kheeree sown in parts of the Dearas at Rajmehal; indigo also looking well there; boro paddy is being reaped. There are no other crops. Rain very badly wanted all over the district. Tanks almost dry.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bengal—*contd.*		
Lohardugga ...	*Nil*	Weather hot and seasonable. In many parts of Chota Nagpore proper, paddy has been sown in very low lands, and the rest are all ready for early sowings. Goondli and gora dhan have also been sown in some places, and general sowing will take place as soon as a shower falls. The mohwa flower crop has been an abundant one in pergunnahs Palamow and Toree, and much relief has been afforded by it to the poor. The fruit crop, too, promises well; also the Surai or fruit of the sâl tree. Jungle produce is abundant this year. A fine crop of mohwa fruit is also coming on. In Palamow the people are preparing for the rains, manuring the fields and burning their cotton lands. No other crops except sugarcane. Prices steady.
Manbhoom ...	*Nil*	Hot, dry and sultry till Saturday the 23rd, when a refreshing shower fell, with promise of more. During the last two days the wind has been easterly. There is nothing on the ground but sugarcane, which is suffering from want of water in the tanks from which it is irrigated. Rain is urgently required for early sowings of millets, grass seeds, and early rice; all these will be late in coming to maturity if rain does not fall soon, and the distress be consequently prolonged.
		PUBLIC HEALTH.
		Burdwan, fever as before; numerous cases of cholera in Raneegunge and Boodbood; Bankoorah, cholera and small-pox daily reported; Beerbhoom, cholera and small-pox prevalent; 24-Pergunnahs, cholera still prevalent in Thannas Mothoorapore, Baduria, and Hurwa. A few deaths from sun-stroke and some cases of cholera and small-pox reported from Baraset, and fever continues in Barripore. Cuttack, public health generally good. Moorshedabad, cholera and small-pox still bad; the former has broken out with virulence at Ramporehaut. Medicines being supplied wherever required. Maldah, there have been several cases of small-pox in Khurba Thanna, and a few cases of cholera. Rajshahye, cholera and small-pox cases are decidedly decreasing in frequency. Patna, with the exception of small-pox in the city, the health of the district continues good. Shahabad, small-pox still prevalent. Tirhoot, cholera has broken out. Bhagulpore, general health remarkably good. Purneah, cholera at Bulrampore reported on the increase. Lohardugga, small-pox is prevalent in parts, but the general health is good. Manbhoom, cholera, on the increase, and very prevalent in some of the villages between Purulia and Burrakar.
		General Remarks.—Rain is urgently required in almost all the districts of these provinces, though more or less has fallen during the fortnight in most of them. The young crops which were suffering badly have greatly benefited where the fall was good. In some places, the rain has also improved the outlook of indigo. Except in Behar, lands have almost everywhere been prepared, but sowings are deferred for want of rain, and in some places agricultural operations are altogether at a stand-still for the same reason. The drought has also affected the early rice crop badly in some places. Jute and other early crops are being sown the moment the soil is capable of receiving the seeds, and in some districts they have succeeded. Scarcity of water is greatly felt in some of the districts; the harvest of *boro* rice is not yet completed, but is in progress almost everywhere with a fair result.
N. W. P.—		
Bustee	(May 25th)	Prices much the same; heavy shower on the 23rd; numbers on Mehudawal road relief works fallen from 51,225 on 20th to 43,726 on 23rd, owing to reduction of wages; further decrease probable. Wages lowered on Domuriagunge works during the week; total number on relief works on 23rd, 140,262; four poor-houses with 280; advances made for purchase of rice seed, Rs. 5,521 up to 23rd; import and export almost ceased.
Goruckpoor	,, ...	Prices steady, with slight upward tendency. Numbers on relief works in north decreased to 47,200 owing to migration to Champaran relief works, where wages are higher, and to the demand for labour to prepare rice lands for sowing. In south numbers risen to 38,800 owing to increase on Deoreea works, and re-employment by mistake of Gola road labourers who refused to move to Cowreeram works. Total number on relief works, 86,000, showing a falling off of 7,800 within the last fortnight. Preparations making to substitute work-houses for relief works when rains begin. In city poor-house 489; in seven district poor-houses 464. Total tuccavee advances for rice seed up to 22nd May, Rs. 42,782.
Ghazeepoor	... ...	Not received.
Mirzapoor	(May 27th) ...	Prices much the same, reports from Doodhee good; north of Soane one relief work with 273; south of Soane ten works with 1,375.
Benares	,, ...	No change; no distress. Cane doing well.
Azimgurh	(24th) ...	Prices generally somewhat higher; charitable relief twice a week to 300 in Azimgurh only.
Jounpoor	... ...	Not received.
Allahabad	(27th) ...	No change; prices stationary.
Banda	(26th) ...	Slight rise in prices of coarser grains. Reports as to general condition of people continue satisfactory. Fourteen poor-houses with 888; able-bodied inmates transferred to relief works, many of these prefer to return to their own houses. In Kirwee price of mohwa risen. Four poor-houses with 1,093; applicants for relief on the increase, chiefly from hilly tracts to the south of Kirwee.
Humeerpoor	May (26th) ...	No noteworthy change, on relief works 1,529; in poor-houses 484.
Jaloun	(25th) ...	No distress; cane doing well.
Jhansi	(27th) ...	Prices nearly stationary; numbers on relief works 1,110.
Cawnpoor	,, ...	No change; weather cloudy; health good.
Futtehgurh	,, ...	Prices stationary.
Agra	,, ...	Prices moderate; dust storms with slight rain; rubbee outturn above average.

Presidency or Province and District.	Rainfall for fortnight preceding.	State of agricultural prospects.
Bengal—*contd.*		
Rungpore ...	1·54	Hot and oppressive at the commencement, and cloudy afterwards. Rain has fallen copiously during the last two nights. Good rainfall also to the north in the first week, and in the north-east and south-east in the second. All west and south the crops have sustained much damage, and are in a critical state. Much of the millet crop is being cut to the east and south-east. Boro rice has been cut in a few places and is favorable. Prices very high everywhere; 6-8 seers at head-quarters, but easier since.
Bogra ...	1·33	In the early part of the fortnight rain fell, but the weather has become dry and hot since. Boro rice being cut in Bogra and Khetlal, and a fair average expected. The early rice crop will suffer heavily if more rain does not fall soon; until now the prospects of the crops were good, especially in the east of the district, and with a seasonable supply of rain, a good outturn may still be expected.
Patna ...	*Nil*	In the first half of the fortnight the weather was seasonable, but very hot with strong west winds, and in the second the wind veered to the east. No crops on the ground except cheena (millet) which will soon be harvested. Rain wanted for the preparation of lands.
Gya ...	*Nil*	Weather hot; the only crops on the ground cheena (millet) and sugarcane.
Shahabad ...	*Nil*	Very hot with variable winds; sugarcane and vegetables being irrigated, the former doing well, cheena (millet) is ripening and is being cut in places, also boro rice; mango crop still promising.
Tirhoot ...	*Nil*	Weather hot in the early part of the fortnight; west wind prevailed and east wind since. Seetarmurhee Sub-division—0·40 inches of rain fell on the 11th May, very beneficial to agricultural operations. In many places the labourers have left relief works to prepare the fields as the rain has moistened the soil sufficiently to enable the ryots to prepare the land for sowing in the next rain. Makai (Indian corn) was sown in places during the rain which fell in the previous fortnight and has germinated well in some places. The Murwa (millet) seedlings appear to be coming up well. Presidency or Province and District.		Rainfall for fortnight preceding.	State of agricultural prospects.
N. W. P.—*contd.*			
Muttra	...	...	Not received.
Allygurh	(May 26th)	...	Prices moderate; health good.
Meerut	(27th)	...	Threshing over; outturn exceptionally good. Large export eastward.
Saharunpoor	,,	·6	Rubbee harvested.
Bijnour	(26th)	...	Prices stationary; rubbee all harvested; cane doing well.
Moradabad	(27th)	...	Slight fall in price of wheat; health good.
Bareilly	,,	...	Prices unchanged; slight rain last night; health good.
Punjab—	**(May 27th)**		
Delhi	...	·5	General health of province continues good; small-pox here and there in Rohtak and sun-fever prevalent at Rawulpindee; harvest nearly gathered in; produce above the average.
Umballa	...	·9	
Rawulpindee	...	A little rain.	
Oudh—	**(May 28th)**		
Lucknow	(27th)	*Nil.*	Sugarcane being irrigated; slight partial storms; hot winds very persistent; public health good.
Fyzabad	,,		
C. Provinces—			
Raipur	(May 23rd)	...	Stormy weather; no standing crops; small-pox prevalent.
Mandla	...	1·3	Weather cloudy; prospects good; small-pox still prevalent; prices stationary.
Belaspoor	...	...	Weather cloudy; prospects unchanged; fever and small-pox about; prices easy.
Sumbulpoor	...	·29	Weather cloudy; sugarcane thriving; prices high.
Bhandara	(May 26th)	·36	Weather clear; ploughing for khureef; small-pox still prevalent; prices easy.
Balaghat	...	...	Weather stormy; khureef operations commenced; small-pox prevalent; prices unchanged.
Chindwara	...	...	Slight rain; weather cloudy; ploughing begun; no epidemic; prices steady.
Wurdha	(May 27th)	...	Ploughing for khureef; small-pox prevalent.
Saugor	...	...	Winnowing rubbee completing; small-pox in places.
Nimar	...	...	Rubbee outturn good; health good; price of rice risen.
Nagpoor	...	·60	Weather cloudy; fields preparing khureef; small-pox continues.
Jubbulpoor	...	·34	
Dumoh	...	1·10	Khureef operations commenced; small-pox decreasing; prices about same.
Seoni	...	...	Weather cloudy; health good.
Nursinghpoor	...	·04	Small-pox prevalent.
Hoshangabad	...	...	Crops gathered; small-pox prevailing.
Betul	...	...	Sugarcane thriving; health good.
Upper Godaveri	(May 23rd)	·45	Weather cloudy; health good.
Mysore & Coorg (May 28th)			
Bangalore Cantonment	...	8·75	Rain fell in all the districts of the province.
Coorg	...	5·56	Agricultural prospects fair; ploughing commenced; public health good; cattle disease in two districts; heavy rain injured coffee blossoms in Coorg.
Hyderabad Assigned Districts—			
East and West Berar	(May 28th).	...	Ploughing continued; no epidemic; public health good; weather warm.
Rajpootana—	**(May 28th)**		
Serohi	(25th)	...	A little water in some tanks; wells beginning to fail; weather seasonable; health very good.
Meywar	(18th)	...	Of the city tanks Goolab Sagur has no water; Ranee Sagur contains three months' supply; wells generally are half full; health good; but guinea-worm and fever prevail; no crops; hot winds blowing; frequent clouds, but no rain.
Bickaneer	(9th)	...	Weather hot; dust storms blowing during the week; health good; a few cases of light fever in the city.
Harowtee (Agency States)	(May 16th)	...	Wells moderately full; tanks drying up; two cases of small-pox at Deolee; general health otherwise good.
Ulwur	(21st)	...	Tanks and wells well filled for the time of year; health good; sowings for early bajra and cotton commenced in many parts.
Jeypoor	(28th)	...	Two heavy rain-falls during fortnight; ploughing commenced in some localities; public health excellent.
Bhurtpoor	...	...	Weather cloudy; health excellent.
Ajmere	...	...	Agreeable change owing to storms accompanied with slight rain; health satisfactory; no more cases of cholera.
Central India—			
Indore	(May 27th)	...	Weather fine; health good.
Gwalior	...	...	Rain and storms frequent; crops fair; small-pox decreasing.
Neemuch	...	...	Weather cloudy and stormy; threatening rain.
Rutlam	...	...	No rain; prospects favorable; health good.
Bagelkhund (Sutna)	...	...	No report.
Nepal	(May 20th)	...	Fair.

SUPPLEMENT TO
The Gazette of India.

CALCUTTA, SATURDAY, JUNE 6, 1874.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

SUPPLEMENT TO THE ANALYSIS OF THE MOVEMENTS AND SCOUR ACTION OF WATER AT OBSTRUCTIONS,

By Dr. J. P. STRATTON, M. R. A. S., Bombay Branch.

[*Published in Supplement to the "Gazette of India," September* 27, 1873, *page* 975.]

TABLE OF CONTENTS OF SUPPLEMENT.

PARA.		PAGE.
1	Essential points of the analysis	1073
2	Action at down-side of island	1074
3	Ditto ditto pier	1075
4	Ditto entrance of feeder stream	*ib.*
5	Ditto debouchure of rivers,—Bars. Varieties of sand terrace extension	*ib.*
6	Form of hollow scoured by water overtaking water	1076
7	Afflux, and silt or no silt, above weirs	1077
8	Hydrodynamics of current impingence and its scour	1079
9	Size of loose material to resist removal by currents	1080
10	Scour at base of sea walls,—and ejection of facing stones	1081
11	Movements and action in eddies, whirls, &c.	1082
12	Seeming parallels from great rivers and ocean currents	1085
13	Scour respectively by clear and turbid water	1088
14	Ditto ditto by shallow and deep water	1089
15	Relation of bottom to surface velocity	1091
16	References to engineering authorities	1094
17	Conditions and localities favorable for observations	1098
18	Movements of water displaced by advancing vessel	1100
19	Miscellaneous :—	
	Some opinions and explanations	*ib.*
	Depth of sand disturbance by unobstructed current	*ib.*
	Reprint of table of contents of analysis	1104
	Contents of Resumè	*ib.*
	Ditto of detail of observations, &c.	*ib.*
	Sub-divisions of foregoing sections	1105
	Corrigenda in analysis	1106
	General index to analysis and supplement	*ib.*

For simplicity in the General Index to both Analysis and Supplement, the paging of the latter has been continued from that of the former, the first 50 numbers referring to the Analysis and other papers printed with it.

PARAGRAPH 1.—ESSENTIAL POINTS OF THE ANALYSIS.

THE main points, to which attention was invited in the Analysis are, for convenience, here recapitulated as follows:—

(1)—The difference in scour effect between water *flowing along* the surface of a body and water encountering it as an obstacle, and so *coming against* it.

(2)—This difference being an excess in the latter case, and the greater as the body is the more transversely opposed to the line of current.

(3)—The deflection on obstacles of moving water into new directions of motion.

(4)—The deflection of moving water (not only by solid obstructions, but also) by other water, whether still or moving more slowly, or in a direction different from the former—such deflection, however, being less abrupt and complete, and more diffused, and requiring considerable velocity, or difference thereof, for marked development.

(5)—The scour action of deflected water in its new direction, corresponding precisely with that of the original current in regard to surfaces respectively opposed or parallel to it.

(6)—The consequent scouring activity of water, thus deflected by obstacles of either kind, when, in its new direction, it encounters an opposing surface.

Some of these points were of course well known before, as *e. g.*, the effect of falling water, or of running water coming against an opposing bank.

But the others also are, under favorable circumstances, demonstrable by experiment—some, which were merely inferences from other facts when I wrote last year, having since then been actually observed.

Perhaps the most interesting points, from having so many practical bearings hitherto obscure, are as follow :—

The consequences of current impingence, which in its primary form may be evident enough—these being deflection and a secondary impingent scour acting in a direction totally different from that of the original and *apparent* current.

Also, the fact that the deflective obstruction to a swift current may be (either a solid body, or) other water, even when the latter is flowing in the same direction, though more slowly.

This last is much as a slow train may be overtaken, and run into, by a quick train, in which case the violence and result of the collision will be in proportion to the difference of speed.

To guard against misapprehension and confusion of the foregoing, with supposed different theories of rotation, &c., it may be well to note distinctly that the matters submitted to consideration depend on no such theories, and are confined to no mere question between them. *Vide* paras. 11 and 19.

Engineers, with canal as well as general experience, to whom the pier action has been shown, have themselves remarked it is quite different from the familiarly known eddies.

As yet I have met with no one to whom the sight of the action has not been the same novelty it was to myself when it first caught my attention.

It has been further remarked that the process and its scope are so definite that the form of the scour excavation at a pier, and the movements in it, might now be drawn almost with precision, though to sketch them from general ideas of eddying and high velocity would previously have been impossible.

In fact the process, *once clearly and completely seen*, effects an immediate revolution—of simplification and definition—in any conceptions regarding pier-scour drawn merely from those general ideas.

It throws light also on the hitherto obscure relation of pier-scour depth to the general scour depth of the channel, and on questions as to protecting piers by complete floorings across the bed, or only by local works immediately around them, or by adopting that form of pier which will excite the least scour.

With the nature and scope of the action now apparent, farther observation and experiment may enable its probable amount, under given conditions, to be estimated, and therefore to be guarded against, beforehand.

The principles deduced are equally applicable to explain many other examples of scour in rivers and canals, besides those occurring at bridges.

Eddies and whirls produce effects of their own; and the Analysis noted the circumstances under which eddies *do* scour actively.

But, as can be seen and shown, *they* are not the danger-workers at a pier.

Indeed, so far from rotation of any kind being an essential of the subject as presented, the case is really simpler when movement of that sort is, for the time, left altogether out of view, and attention given simply to the points already enumerated. This will appear more clearly in para. 11.

A mere negative relation, in not conflicting with known fact or recorded experience, would be nothing; but the positive relation of the principles traced in the Analysis, in bringing together under one connected and connecting explanation so many facts now separately known, appears of greater import, although of course even this gives them no pretension to constitute a theory for *all* water action.

2.—ACTION AT DOWN-SIDE OF ISLAND.

Immediately at the down-stream end of a sand-bank, or other island, there is first some eddying water, which here curves inwards and backwards from both sides.

A little farther on, where the deep streams, obliquely approaching, touch each other, there is, when the velocity and angle of approach are sufficient, a comparatively long and narrow trough scoured below the bed-level of either or of the united current ahead, and extending down-stream, gradually shallowing off.

A weed thrown in, adjusted so as to float with part of it sufficiently submerged, is, when it reaches the above junction in the central line, dragged down to the bottom, swept along,

and gradually rises again to the surface farther on. Here there is evident down-sweep, turning into an onward bottom-sweep, from the oblique collision of the two currents.

The surface at such place is correspondingly rippled and disturbed.

A little back-splay, smaller in proportion as the meeting of the waters is more oblique, doubtless contributes to the eddy above.

3.—ACTION AT DOWN-SIDE OF PIER.

Similarly, in the immediate wake of bridge piers, there is first, a space of eddying water, bordering and beyond which the two spanway streams come obliquely into contact, and the surface rises, according to the velocity of current, into a ripple, wave or breaker, while within the angle of junction, if the force is sufficient, a boiling up action is seen. From this the eddy of each side runs back to the pier, the surface there being lower, just as in the immediate wake of a ship propelled at high speed.

Immediately ahead of the junction corresponding down-sweep is doubtless developed; the scour from which, however, is probably in general merged in or masked by the broader scour directly in front of the spanway streams. I say doubtless as in the turmoil of violent action the movements cannot be traced, though their result is afterwards visible.

4.—ACTION AT ENTRANCE OF FEEDER STREAM.

On mentioning the scour below an island and its cause, as elucidated by the weed experiment, a friend offers, from his fishing experience, an illustration of such scour produced in a river by one current dashing against another, *viz.*, the deep pool commonly found at the entrance of a feeder stream, and in which the biggest fish are usually found. This position of the scour hollow at the very entrance implies a relatively small feeder. When larger, it presses more into the main channel and may affect even the opposite bank, when the volume and velocity are great enough in relation to those of the stream it enters.

5.—ACTION AT RIVER DEBOUCHURES:—BARS, &c.

Varieties of Sand Terrace Extension.

If the sea were a quiet lake, into which rivers impetuously dashed, there might be similar scour pools at their debouchures, * whether with a bar beyond the deepening or not.

* *i. e.*, outlet as more distinctive, for the action here discussed, than "embouchure" or inlet.

I have seen, in an inland stream, something which may be supposed to represent the *river action* in the production of a bar, if the sea were quiet.

When the stream, after being low and feeble, suddenly rises under a single heavy fall of rain, and goes down again as suddenly as it had risen, the long scour pool below a contracted bridge-way is filled up by a single advancing terrace, starting from the upper end (as described in Part XI of the Analysis.

But if merely the *high* flood subsides, leaving a current still of considerable force, the breaker action on the down side of the bridge, though lessened, continues sufficiently to maintain the scour at the upper end of the pool.

The sand brought through the bridge is thus carried along the deep hollow, as far as the current, now weaker than when it scoured out the whole length, is able to carry it.

Then it lingers and halts, *i. e.*, some way short of the down-stream end of the hollow.

The next sand coming on is farther impeded by that which had preceded it, and had begun to linger. A terrace is thus *started in the middle* of the long pool and, by the sand coming in more rapidly than it passes on, the terrace rises to a certain height and progresses in the usual way. It thus fills up the lower end of the hollow, while the upper part is still maintained till the scour action in it also subsides.

But, for a time, the commencing terrace constitutes *a bar* across the middle of the pool; and if, with constancy of current above, there were any abrading action ahead, such as furnished by cross currents, &c., in the sea, it would remain *as a bar*, instead of advancing as a terrace to join the ordinary bed-level of the river.

Matters on the coast are, however, more complicated and inconstant. It is not simply the case of a rapid stream uninterruptedly dashing into quieter water; for with every rising tide, the sea sends a reverse current up the channel; so that if there were a pool scoured out by the river during, and with the ebb-tide, or by the former alone during slack low-water, it might be filled up again by the returning tide; besides which, there are the farther opposing elements of other sea currents, and of storms and waves, bearing directly on, or obliquely across, the river mouth.

The sea also moves material of its own, and there is every variety in the conditions of the channel, volume, and velocity of the river, and of the portion of the sea receiving it, whether it be open, or a sheltered estuary or bay, and whether precipitously deep, or gradually shelving.

Hence bars at some river mouths, and none at others.

It would, however, be interesting to know whether, under those of the foregoing circumstances, favourable to its production, a pool is really maintained in the above locality, and just inside the bar where a bar exists.

The *general* conditions at a river mouth, either with or without a bar, may be intelligible from the ordinary onward action of the stream and ebb-tide, and the opposing influence of the rising tide, sea currents, and waves.

But if, at certain rivers, the bar rises abruptly, without previous long and gradual shallowing of the river channel towards it; and still more if there is just within the bar a pool deeper than the channel immediately above, then this condition does not seem explicable without reference to the present attempted analysis.

The phrase "*deep water within the bar*" is common enough; but it is not distinctively conclusive on the above point, as it may only mean water deep as compared with that on the bar, and deep enough for vessels.

Since writing the above, I have seen the following passage in Cresy's Encyclopædia of Engineering (1856), page 641.

Is the hollow, described in it, produced by the action which I have endeavoured in this paragraph to trace?

"Nature, however, often exhibits at times singular phenomena where rivers discharge themselves into the sea, by spreading their waters over its surface.

"At a considerable distance from the land they often run over a bottom having a very "small declivity; but which at the mouth of the river is bent downwards, forming a deep con- "cavity: this is the case with some of the largest rivers where the tides are apparent at a con- "siderable distance up them.

"The sea water during the time of flood-tide entering the river, and at ebb returning, helps "to produce this effect, and to render the section of the bed a concave line, by sweeping away "all the deposits lodged where this action takes place, so that shoals are not formed so long as "a river can keep its mouth open on a flat shore, the particles brought down being deposited "either above or below the spot where they discharge themselves."

Reverting to the *bar form* of terrace, I have just seen that, after it has advanced down-stream till it joins the general bed-level, and when the scour force lessens but *slowly* at the up-stream end of the pool, the terrace retrogrades. Indeed, it has probably been doing so all along [as well as progressing].

The bottom sweep, gradually weakening, is unable to carry on all the sand passed through the upper and active end of the pool; and this gradually accumulates on the up-stream slope of the bar. A little sand gains the top and is gently swept onwards; but much remains, and thus the up-stream margin grows back in the up-stream direction. Evidently, with a slight difference of current, there might be a retrogressive terrace from the very extremity of the pool.

That such varieties in terrace procedure should be produced in the same pool at different times, simply from variations of current which otherwise might not be noted, is a striking indication of the frequency with which observations and experiments need to be repeated before one can be sure of having seen all the phases which may present themselves.

After seeing some particular action most clearly, I have often been puzzled by a failure or a different result of the experiment, under what seemed only a slight difference in the stream a few days afterwards. Again, with a return to the original conditions, the action has exhibited itself precisely as at first.

What I have called the up-stream slope of a bar, or a retrogressive terrace, is not a clearly-cut definite slope like the down-stream aspect of an advancing one. It is rather a long slow rise running into the upper surface, without a distinct margin between them.

Progressive terraces may grow laterally as well as forwards. A narrow stream feeding a terrace in a wide space prolongs the former in a fan shape, but more rapidly in the onward direction. A long hollow may thus persist at the side, after the pool has been filled up in the centre. But the clear cut lateral margin continues slowly growing outwards, and, under ordinary circumstances, finally completes the filling up.

I may note that the onward movement of simple sand ripples or ridges is mentioned in Robinson, Vol. II., p 465-6, but without any allusion to the comparatively huge sand terraces I have observed, and their part in filling up scour pools, &c.

Sand terraces and their movement indicate a certain velocity of current. Under low velocity they become indistinct and disappear.

6.—FORM OF HOLLOW SCOURED BY WATER OVERTAKING WATER.

The shape of the scour hollow produced by a more rapid current, on escaping from a constriction, the bed of which is firm, and dashing into a wider space of slower moving water, where the bottom can be eroded, is so generally of a particular character that it may be noticed. When the bed in the constriction is equally soft, the extra on-scour depth in it, from the extra velocity there, blends with the pool ahead. Yet I have seen this last the deeper.

The form alluded to is elongated and curved, and deepest near the up-stream extremity.

To use a homely illustration, the shape (at the issue of a strong current) roughly resembles that of a spoon, more or less lengthened in the stream line.

When the stream has been less constricted, and is thus comparatively ineffective, the scour is naturally shallower and more diffused.

And, when still weaker, there may be no scour at all, but rather a silting up of any previous hollow by the current sweeping on sand, or depositing finer material.

For the production of scour by water coming into collision with other water, there must be considerable velocity in the one, and sufficient difference of velocity or direction in the other.

Along the edge, at a *well marked* depression, ejective action goes on, often producing a boiling up appearance on the surface, corresponding with a strong upthrow of sand from the bottom.

This is produced by the water, after its down-sweep, turning into an onward bottom-sweep, and rising up again somewhat abruptly at the sides; while at the down-stream extremity of the hollow it rises more gradually.

In this last direction the water next rushes onward, but that which rises at the sides contributes also to the usual cross-flow from the deep stream towards the bank, in which direction it feeds an eddy circulation.

After the hollow has been scoured out, expulsion of sand still goes on, by a continuance of the same movements, *viz.*, an obliquely rising sweep down-stream, and a more abrupt upheaval laterally, because sand is being constantly brought down by the current into the scour hollow, and has to be passed on. Of course there is here supposed a maintenance of sufficient velocity for scour.

7.—AFFLUX, AND SILT, OR NO SILT ABOVE WEIRS.

Some observations have been noted in connection with the up-stream limit of afflux, and conditions there; but at present it must suffice merely to indicate the tendency of a *rapid* current to suffer deflection on reaching the quieter water in the deeper section of the channel above a weir.

Were the current to come on so violently as to produce, at the point of junction, a *sudden rise* of the surface, actual down-sweep and scour upon and along the bottom might be expected. From my own observation, and Weisbach, Vol. II., pages 122-3, such abrupt rise is not merely conjectural.

But although, ordinarily, the difference of velocities is not so great as to cause this, the tendency referred to may exist in a medium degree, which may help to account for the maintenance of movement along the bottom beneath the level of the weir crest, sufficient, under certain conditions, to prevent silt; as for instance above weirs at canal falls, and, at all events, preventing that bottom water from becoming a mere stagnant pool, over the weir-level plane of which the whole of the real current should run, as might at first be thought.

When, again, the current approaches still more feebly, it may be unable to carry on, through the space affected by the weir, the material it has brought down with it. In this case silt would begin at the up-stream border of the space; and if the material were suitable, it would extend down-stream like an advancing sand terrace filling up a scour pool.

In sundry respects, indeed, there is a similarity between what I may call the weir pool and a scour pool.

When a weir is entirely submerged with a uniform flood surface over it, without sign of obstruction below, the weir represents merely a ridge of rock across the channel with a deep pool on either side.

As to the non-deposit of silt above the low weirs erected on the top of canal falls to check the velocity of approach, and its consequent scour, there may be several matters concerned, as *e. g.* the fineness of the bed material in the canals of Northern India, enabling all that is brought on to be carried over the weir, or the greater "way" which the current gets on it in their straight, uniform, and well-defined channels than in ordinary river beds, which steadier progress will bring it with greater force on to the water in the space affected by the weir, and so tend to strengthen the downward deflection, the subsequent bottom sweep, and the final rise over the weir.

For, in natural channels, the result which I have usually seen and heard of, has been a silting up, in spite of a fall on the downside, so that on the upside such weirs cease more or less to be weirs.

In natural channels the irregularities of depth, breadth, and direction of channel, which is often wider at or above a weir, and which permits still greater expansion of flood waters, are against the current coming on with the uniform and concentrated energy of a canal stream.

Doubtless, however, above canal falls also, silt would be produced, if the weir were raised high enough, *i. e.*, considerably more than sufficient to check the scour from the velocity of approach.

When a channel has been scoured above a fall, and a weir is afterwards added for its protection, the hollow previously excavated becomes more or less silted up again.

An exact adjustment of weir height, to current and bed material, would doubtless equally prevent scour below the normal bed-level, or silt above it.

Since writing the above I have come across what seems a case in point in Colonel Cautley's notes on the Eastern Jumna Canal, pages 117-118. At Selimpore near the lower extremity of the canal, and where, therefore, the current is reduced, there is a stepped descent of 5½ feet. Practically this is a small fall or rapid, as the three falls next higher up are merely from 7 to 8 feet each.

At the head of the descent a moveable dam is constructed with sleepers to a height of 5 feet above the masonry flooring, not to check scour from velocity of approach, but to work a mill. After the dam has been erected for some time, silt accumulates largely in the channel for a long way above it, and in places 5 feet deep.

The dam is removed when not required for the mill, and when floods are coming down the canal. In the former case the silt is only slowly carried away.

The seeming discrepancy of result, as to silt and no silt, at *weirs*, in the two situations respectively, disappears when the initial difference of circumstances is allowed for, or removed.

On the top of a canal fall, a weir or bar is placed to check the scour from the increased velocity of approach to the fall.

In an ordinary part of a channel, there is no locally increased action to check, and *the condition of the bed is so far in equilibrium with the current* that, although, according to the state of the latter from time to time, the former may occasionally be scoured a little or silted a little, yet, on the whole, the same general level is maintained.

Both the silting in the one case, and the check of scour in the other, are evidently due to the same influence operating in the same direction, *viz.*, the tendency of the weir to check the action of the bottom layers of current below its crest level. Of course, by holding up the water it reduces the surface slope, and checks the velocity for some way up, or until near the very plunge over the weir.

When scour, above a fall, has thus been checked by a weir just high enough to produce this effect, *and no more*, the condition, on its upside, is then merely the same as it is (to begin with) in the other supposed case, *i. e.*, an equilibrium of current and bed. If direct comparison of the two cases were desired, the same height would need to be *added* to the canal fall bar, as the whole given to the ordinary weir.

With other things then kept equal or proportionate, even a *seeming* difference of result need scarcely be anticipated.

Whether an accumulation of silt rise flush with the crest of a weir or stop short of this, must depend on its height, on the force of the current, and the nature of the bed material. Often, at the same weir, a part of the bed may be seen silted up flush, while another part, where the current has been strongest, is some feet lower.

But, alike from the silting at the great Madras anicuts; the silting at the new weir on shallow foundations (or almost on none) across the sandy bed of the Jumna near Delhi, where, I fancy, the material is fine; the similar silting at the raised causeway on the Bhurar near Nowgong, which I made in the hot weather of 1872, simply with loose boulders and blocks set in the coarse sand; and from the check of scour above the weirs crowning the falls of the Ganges Canal; I think it may be safely assumed that, whatever may be the depth which remains unsilted on the upside of a weir against which the current comes fair on (*i.e.*, not obliquely,) it is less than the depth which would exist, or would be scoured there, if the weir were not present.

In short that, in spite of seeming diversity of result, the tendency of directly transverse weirs is of itself uniform, and that the discrepancies alluded to are due rather to differences of initial or associated circumstances.

A current coming on a weir obliquely tends to scour down on the skirt of the part it first encounters, even though there be no lateral issue, and this descending water can eventually pass only by rising over the weir farther on. But down-scour movements, once established at an oblique obstruction, are apt to be propagated ahead, where, but for their being communicated from elsewhere, they might not have been locally started.

And though the part first reached may thus be the most liable to scour, yet the extremity near the further bank may finally be most exposed to the onward force of the current.

Scour at a *bridge flooring* is sometimes more complex than at a simple weir.

On the *downside* it may be in one or more of the following ways. In such cases there often is a general scour or lowering of the channel in progress, though originally the flooring may have been laid flush with the bed at the time.

The lowering beyond the floor will retrograde to its edge, and then if there is not sufficient depth of current to preserve a uniform water surface overhead, there will be a rapid or fall, cutting still deeper at the very tail of the flooring. Of course, if the latter was originally higher than the bed, this action will begin at once, provided the stream is shallow enough.

The current may have been contracted, and thus quickened through the bridge; or, without contraction, it may have been somewhat accelerated simply by its easier passage over the smooth masonry; and, in either way, there may be a tendency to deflection and impingent scour on leaving the latter and encountering the water ahead, which, either from its larger section or from its rougher bed, is moving more slowly.

On the *upside* of a flooring scour appears more complex as, from the considerations regarding weirs, even a low continuous bar might be expected to oppose such action.

If the flooring does not extend far enough up-stream to clear the down-sweep from the piers, abutments or wing walls, scour will at once be developed, without such velocity as would lower the bed by ordinary on-scour.

Or, extending far enough for the above purpose, but originally raised above the bed, it may be scoured by an oblique current, flowing at a rate which would be harmless if unobstructed and undeflected.

Otherwise, it would seem that scour there can only be produced by a velocity in excess of what, even in its simple onward progress, the bed can stand without being cut up.

This may be a general velocity of stream from floods coming on from above, or from excessive bed incline generally, causing a general lowering of the channel, or it may be local from a fall or an extra declivity below the bridge, original, or induced by scour on the downside, producing an increased velocity of approach just upside of, and over, the flooring.

The question, however, *seems* still to remain, why the flooring does not act like the bar on the top of a canal fall, and stop or check the scour?

Except in cases where itself contributes to excite local action, I apprehend that *it does similarly tend to check*, though it may not be able altogether to stop, the onward scour.

At a canal-fall at which a bar 5 feet high just stops the scour, it would be found that a bar only 2 feet high would not suffice to do so; and that for the bed to remain unscoured, with the canal flowing as before, it required to be at least 5 feet below the weir top.

Yet if the bed, close to the upper edge of a flooring, were found lowered 5 feet below the masonry surface, *this would be considered active scour.*

In reality, however, the condition would be the same as at the canal-fall weir, at which this state *is considered a stoppage of scour.*

Scour, stability, and silting of bed are merely different degrees of a scale of water action thereon; but, for rightly comparing the action at different places, one needs to see that each is gauged by a similar scale with the same starting point.

Provided always, and strictly, that the flooring or other artificial work be itself no element in the production of the scour, this latter might be remedied by raising the flooring, just as by giving sufficient height to a bar on a canal-fall. Whatever scour there is in such case, is probably less than there would be if the flooring were not there. Of course by raising the floor, extra action would be caused on its downside.

If, however, itself the cause, or an aid, of the scour, it would need, on the contrary, to be lowered; and, if the piers or other works were the cause at a too narrow flooring, an extension of this last up-stream would be the cure.

It merits notice that there is always the risk of scour, started in one way, being propagated or aggravated in another.

Simple weirs, weirs at falls, and bridge floorings, have now been considered.

At canal-falls there is usually a combination at the one place, the fall being crowned by a weir, with a bridge over all; and there being a masonry flooring on the upside at the normal bed-level.

But farther principles than those discussed in the separate cases do not seem involved.

8.—HYDRODYNAMICS OF CURRENT IMPINGENCE AND SCOUR.

The readiest explanation that suggests itself of the difference of effect in what I have styled impingent scour, as distinguished from the ordinary scour of unobstructed streams, is that, in the former, the bank or bottom is attacked by the force of the current coming "end on;" while in the latter, it is merely chafed by the side rub of the moving water.

This seems as correct as it is simple; but if it be sought to trace the difference more precisely, it appears to be as follows:—

As the hydraulic pressure of running water on the surfaces along which it glides, is described to be the statical pressure of the depth, *minus* that of the head which is equivalent to the particular velocity, so the *whole* end-on force of moving water *against* an obstacle seems to be the static pressure for the depth, *plus* that of the head giving the velocity or impulse.

For ordinary purposes, merely the latter, *i. e.*, the velocity pressure or impulse (rising as the square of the velocity) is stated, because the depth pressure, on the up-stream aspect of an immersed body, is balanced by the similar pressure on the downside.

Hence, when such a body is taken as a whole, whether in respect of its resistance to a current—as in the case of a pier, or of its speed through the water, as in that of a vessel—it is the difference merely of pressure which needs to be reckoned, and this corresponds with the impulse or velocity, excepting when a rise of water at the stem, and a hollow in the wake, add something to the difference.

But it is evidently of no consequence to scour or erosion on the up-stream aspect, whether the same process is taking place at the down-stream side or not. Such action in the latter cannot neutralise the process on the former, as pressure counterbalances pressure.

In fact, it is when the resistance, from whatever source, balances the pressure sufficiently to keep the body stationary, that surface erosion goes on most actively; for, if the body were to move freely with the stream, erosion, from the water itself, would be at a minimum. Of course this would imply a body floating or supported clear of the bottom; for if rolled or swept along thereon, it would be more actively eroded than if at rest, but this result would be from collision and friction with other solid bodies, which is not here under consideration.

Counterbalancing is not the same as abolition of pressure, for each influence is still operative in its own sphere, and without including the depth pressure along with the impulse there is not a common basis for comparison of the different pressures.

While the pressure of any kind on every square foot of the bottom is the highest, the pressure to the side ranges from the full amount of the particular pressure at the lowest plane to nothing at the very surface; the average *static* per square foot of a vertical strip being the mean, *i.e.*, the half of the bottom extreme, and the average of the *other* pressures being the same, minus or plus the head competent to the velocity.

When the current is deflected by an obstacle into a down-sweep, there is the full pressure of the depth, including afflux and upswell, and that also of the velocity or impulse, so that the figures for this pressure on the bottom are the highest of all; while, at the same time, the scour is of all the most marked.

It seems also to be the *plus* character of the end-on pressure of running water which operates so powerfully beneath floorings when the current gains admission either directly or by

deflection, while on the surface of the flooring the side pressure of the passing water is *minus* the like quantity.

If—without assuming precise accuracy in the foregoing—the general proportions of greater and less reckoned for the several pressures have been correct, the most difficult question still remains, *viz.*, as to the influence on the scour action respectively exercised by the velocity and the depth.

If an inference were to be drawn merely from the greater scour action, under the full impingent force, than under the side hydraulic pressure at the same velocity, without paying regard to the different direction of movement and action in the two cases, one might attribute special effect to the pressure.

But as the static pressure, which, though less than the impingent, is greater than the hydraulic, produces no effect at all, this would conflict with such view. Indeed, the fact that the scour in a free channel increases, while the hydraulic pressure diminishes under rising velocity, might, if taken alone, suggest that depth pressure only checks scour action.

As the scour of either kind increases very decidedly with the velocity, this shows that motion is the ruling element in the action; and, by itself, might seem to indicate that pressure could be altogether thrown out of the reckoning.

The fact, however, which is stated from observation on a large scale, that deep rivers scour less than shallow streams of the same (or even of somewhat inferior) velocity, would imply that increased depth, *i.e.*, pressure, has an influence, and that under certain circumstances, this operates in the way of clogging or hampering velocity in its scouring propensity.

But some depth is just as essential to any action at all, as some velocity is.

It may be said that the velocity is the power and the water is the tool. It is intelligible that, for a certain power to do a special work in the best way, a tool of particular dimensions and massiveness is most adapted; and that with a smaller or lighter instrument, the power may not produce its best effects, while with a much more unwieldy one the power may be overloaded and wasted.

So with velocity and depth of water. It is reasonable to suppose that, as is evident in so many other water matters, there is a proportion between the different elements concerned in scour action that is the most effective.

Taking the current force on the bed-level at the base of a pier, it is clear that, as it scours below this plane, the water in the artificial hollow resembles deadweight being pushed from above, and increasing with the greater depth attained.

At a scour hollow 30 or 40 feet below the bed of the real current, the pressure must be proportionately great, but there has been no addition to the moving power.

The effect of greater depth of current proper is more difficult to judge. If a thicker layer thereof turn into the down-sweep, this is an increase to the amount, though not to the intensity of the power.

The amount may primarily affect the width of the scour zone, but this, as elsewhere discussed, will probably help the intensity in penetrating deeper

Yet, there are facts on a large scale tending to show that great increase of depth *lessens* the impingement scour effect at piers, as well as ordinary scour in unobstructed channels.—See Parts XXI and XXII of Analysis.

In shallow water the plane at which the up-turn and down-sweep separate is near the surface, possibly corresponding with the plane of highest velocity, which is ordinarily reckoned at one-third below the surface.

If, in very deep rivers, this plane were deeper [though I am not aware that it is so, and indeed it may on the contrary be higher], then this might help an explanation.

But at present it does not seem possible to do more than infer, as most effective, some proportion between depth and velocity, or between these elements reckoned in some other way, as, for instance, between the static pressure for the depth, and the hydraulic difference due to the velocity.

The side prolongations of the scour zone at a pier increase the passage room for that part of the obstructed water which turns downwards.

When the bed is of a material that resists scour excavation, the water coming fair on to the pier has to pass wholly above the bed-level. The down-sweep, having no inferior and lateral issue, is checked, if not, indeed, more or less replaced by mere increased pressure on the hard bottom, corresponding with higher upswell on the surface, and greater rush round the shoulders.

As regards on pushing force, again, it would seem that, where the object is not counter-pressed by the water, then pressure from depth must proportionately aid the velocity, as that pressure, even when alone, is so powerful, *e.g.*, on high embankments of reservoirs.

But, with counter-pressure, the extra pressure from greater depth may, subject to some considerations, be simply neutralised.

The question of depth, as affecting scour generally, requires, however, separate discussion.

9.—SIZE OF LOOSE MATERIAL TO RESIST REMOVAL BY CURRENTS.

Professor Rankine (Manual of Civil Engineering, 1864, page 607, art. 412) gives the following rule:—

"*Stones* and gravel are in general the only materials whose stability can be relied on when exposed to currents in the water, *and the diameter of the smallest pieces should not be less than about one twenty-fourth of the velocity of the current in feet per second.*"

I have italicised part of the above quotation as specially referring to *stone* material and not to *brick* which is lighter; and to *current* force, and not to that of falling water or of waves, the impact of which is much more powerful.

The above rule indicates that, in a velocity of 15 feet per second, the minimum diameter of stones must be $7\frac{1}{2}$ inches.

I apprehend this proportion must have reference mainly to ordinary current flow over a bottom in which the stones may partly imbed and partly pack themselves, so as to form a layer of nearly uniform surface, over which the current may run without much abrupt obstruction.

At all events, whatever size is stable under the side rub of a current in unobstructed flow, I believe that, to resist removal *by the down-sweep* at the skirt of a bluff obstruction in a sandy river, with a current of 15 feet per second (*i.e.*, about ten miles an hour), much larger blocks than of $7\frac{1}{2}$ inches diameter would be required at, or anywhere near, the natural bed-level of the channel.

With increasing depth below this, the conditions under the down-sweep gradually change as its force is expended in scouring out, and in opposing infall from an area ever increasing as the depth is greater, until, at a certain distance below the general bed-level, only infall of sand, &c., can be counterbalanced, and no farther excavation by scouring out, even of sand, can be effected.

The idea, on first seeing the scour action and zone at a bridge pier, was that stones would be less easily removed from such an abruptly deep excavation, than if, as formerly supposed, the action were a more diffused one, scouring the bed generally, and merely doing so worst at the pier.

Further observation, however, did not support that first impression, but suggested rather that stones are there more endangered, than on the ordinary sand-bed where there is no obstruction.

On the latter, if they can resist being swept along at all, they tend to imbed themselves by the down-sweep and under-scour set up against their up-stream extremity.

The more a stone thus sinks, the less surface it exposes to the passing current.

But, if attacked by the down-sweep at a pier cut-water, the fine material around it is scoured away, just as around a boulder in a river bank, *against* which the current sets.

The down-sweep at length gets, at one side or other, below the stone (if not resting deeper than its scouring force can remove the sand), and its next effort, working thus below, is to carry the stone away with it in its own concluding uprush, blended, at oblique obstructions, with outward and onward tendency.

The exclusive force of water, once forced into a space below or behind a body which hampers its equally free exit in another direction, needs no remark; though, doubtless, heavy stones at a pier stem may be moved rather by being gradually rolled to one side, and then onwards in the scour trough, than by actual upheaval, as in the case of sand and gravel.

But, when once enveloped, on all aspects, in moving water, and not merely acted on at one side, stones are much more mobile than under the latter and commoner condition.

I may here mention the circumstance which first suggested the boring penetration of the down-sweep. On making, in the inner scour zone, round a pier stem, an experimental platform of loose bricks, I found great difficulty in arriving at definite results, owing to the work not being close enough. At the very bottom, a diverging pencil of sand would stream or brush out from each unguarded interstice between the bricks, which, when rectangular as at first tried, and placed around the curved cut-water, gave crevices widening outwards. So long as there was any uncovered opening, however small or tortuous, from the top of the platform, the outbrushing of sand from the crevices on its face, down to the bottom, went on; and was evidently produced by the down-sweep boring its way through the upper openings, though it was, at the time of the experiment (with the water clear enough for the bottom to be visible), quite unable to move the bricks.

The above was when experiments were being made to test the narrowest breadth and highest level of platform that would suffice.

It would seem from the above that when loose blocks are used for protection, they should extend to the full width of the down-sweep and inner zone, and even a little beyond it.

Otherwise the outer (radially from the pier stem) layers of down-sweep, which impinge on the sand beyond the margin of the loose blocks, will be aided in scouring, by the currents streaming out from the crevices on the exposed face of the mass.

With a solid platform, even if it is too narrow, the outer layers of down-sweep will not be aided in the above way.

But, again, loose blocks from the pile will doubtless fall out towards their angle of repose, as vacant space is scoured around the margin; and hence, if the material is heavy and abundant enough, it will be self-adjusting to the width of scour.

10.—SCOUR AT BASE OF SEA-WALLS, AND EJECTION OF FACING STONES.

In the Analysis, I ventured, from analogy, and indistinct remembrance, to include the action of sea waves against walls in the same category as that of river currents against obstacles.

Since then writing, I have seen Professor Rankine's Manual, and transcribe, from page 761, the following extract:—

"The undermining action of the waves, on the ground at the foot of a steep wall, is "very severe; and should be resisted by a flat stone pitching (which should have no bond or "connection with the wall), and by a series of groins.

"The undermining action may be somewhat moderated by forming the face of the wall "into steps, so as to interrupt the vertical descent of the water."

This shows another element of attack, *viz.*, in the falling down again of the wave after first being dashed up, and which fall is often very violent.

Professor Rankine mentions, page 760, that "stone bulwarks withstand the waves best "when very flat or very steep. They are of two principal kinds, those with a long slope on "which the waves break * * * * and those with a steep face which reflect the "waves * * *."

I have not observed in the Manual, a distinction made as to the particular circumstances for which the two kinds are respectively best suited; but, so far as I can trace the facts and their bearings, the distinction would seem to be as suggested in the Analysis, Part XXIX.

Regarding *steep* sea walls, Professor Rankine (page 761) remarks that "the chief "danger to the face of such a wall, is that air and water should penetrate the joints, and "by their pressure and elasticity, cause stones to jump out after receiving the blow of a "wave."

May it be that, occasionally also, a stone is forced out by hydraulic pressure, a crevice in the face and a space behind, becoming filled with water, and the column of liquid in the former transmitting to the latter the pressure of the wave blow? This transmission would be slower than the immediate impact of the blow on the face. That blow would, for the instant, be paramount. But its force would cease also more rapidly than the pressure behind could be relieved reversely through the crevice, and a moment might arrive when the influence behind was in excess.

Somewhat as an egg, in a wine-glass, jumps out immediately after a smart puff of breath, down the side, twixt egg and glass; though here, of course, the air, being a very elastic fluid, acts with more vivacity than water.

11.—MOVEMENTS AND ACTION IN EDDIES, WHIRLS, &c.

In some terms connected with water, there is, at least to a non-professional reader, a risk of occasional obscurity as to the exact conditions meant, owing to their being apparently not always used in precisely the same sense by different writers.

Etymologically, according to Webster, eddy signifies back-water,* *i. e.*, backward flow.

In common acceptation it suggests the further idea of a circulating, or sometimes of a revolving current.

Since writing this paragraph, I have seen Cresy's Encyclopœdia of Engineering (1856). In pages 1481-1483, &c., the word eddy is repeatedly used in the sense of general *afflux*, rise, or holding up of the water through contraction of waterway by the piers of a bridge, &c., *e. g.*, in page 1482 the sentence: "To determine the height of the eddy which may be formed above bridge, &."

In page 1510 the same word, evidently from the drawing, means what I have styled the local upswell at a pier stem.

Though radically *eddy* does mean back-water, which latter word is used as just marginally noted for afflux, yet practically, the above seems a stronger illustration than I was at first able to quote of the need of precise definition of the conditions meant by particular terms, and of some general agreement to restrict their use accordingly; more specially when the finer intricacies of movement and action are sought to be traced.

In page 1485, in the sentence: "In great rivers large arches are preferable; above all, "where strong eddies frequently occur," I at first supposed the word "*eddies*" to mean what in this paragraph is styled either an eddy or a whirl, but the steady use of the word elsewhere to mean rise, swell or afflux, and the application of the term "gyration," in page 1509, to what is evidently one or other of the movements I have just referred to, tend to show that, even in the quotation just made, a rise, or swelling (doubtless in this instance from a flood) is intended.

In page 1514 the term "*whirlpool*" is employed for the movements sometimes occurring at the down end of a pier.

In examining *eddies* in one of their ordinary situations, *viz.*, on the *down-side* of a projection of the bank, the movement commonly seen is as follows:—A little beyond the projection, a portion of the water first leaves the side of the deep stream, turns outwards, then runs for some distance upward, *i. e.*, in the reverse direction to its original course; and finally, in the immediate wake or lee of the headland, curves in again to join the parent stream. The reverse flow is sometimes of considerable length and velocity; and often is evidently supplied also from an outward splay of the deep water not easily noticeable on the surface.

* The term *back-water* is, however, often used, as in Rankine's Manual, for the raising or damming up of a current by a weir or obstruction; while, again, at times it seems to be employed with still other significations.

Occasionally the outward crossflow bifurcates, part turning down-stream again and part up-stream; and sometimes this last portion, near the root of the headland, if there is a recess or sufficient room there, *itself* bifurcates, sending a part outward again which curves back on itself, just as the other part re-curves inward on the main stream.

In the centre or, as eddies are commonly elongated rather than circular, in the central line, between the main current rushing on, and the back flow at the side, there is less motion than in either.

A comparatively neutral space can often be seen where a weed remains almost quiet for a time, or it may be slowly revolved, as the edge of the main current drives one end down-stream, while the back eddy turns the other up.

Varying as eddies do according to the conditions of the current and the locality, the two first elements in the definition shortly before quoted, *viz.*, *backward flow and circulation* (as distinguished from abrupt revolution) are probably the most characteristic points of a typical eddy, and it may facilitate exact description to restrict the use of the term accordingly.

But the word is also used at times to signify a *whirl* or a distinctly revolving or rotary motion.

Examination of water action shows, however, that *practically* there is a difference, and that it would therefore be convenient to describe this latter as a whirling or revolving, rather than as an eddying movement.

Often, at the margin of the main stream, between it and the side eddy, or between the former and the upswell from a pier head or other obstruction, small distinct *whirls* can be seen with depressed centre, like that of water in a funnel nearly run out, and revolving as it descends.

The movement of the whirls is similar. They are, in fact, descending or engulphing whirlpools in miniature.

When the spanway of a bridge during a flood is completely filled on the upside, while there is a little vacant space still above the current on the downside, strong descending whirls are usually seen in the former situation; or they may be seen on the upside of a weir with under-sluices.

When a whirl of the above kind (but not above a sluice) is observed in clear water, the disturbance of the bottom sand shows that a descending jet-like column, issuing from the axis, is playing on it, and produces a whirling outsplay of sand which moves along the bottom, according as the whirl is seen to progress on the surface; this being often in the seemingly erratic curving, or gyratory course, in which dust, &c., is attacked on the ground by the miniature windwhirls commonly styled "devils."

Here the action is markedly *circular or revolving*, and becomes concentrated in the axis, differing thus from the quieter *circulating flow* of the simple eddy, with its calmest water in the middle.

Such *whirls* as I have watched are very tiny in comparison with the considerable *eddies* found in the same streams; but as the action is so far distinctive, and as, in certain localities, it may be on a larger scale, and of importance, it may be well, when endeavouring to trace out the details of water movement, to distinguish it from that of an eddy as already described, without prejudice to the question as to what an eddy might become if moving proportionately as fast as a whirl, or if sufficiently concentrated.

Ascending or ejecting whirls are not so often conspicuous, but some sea whirlpools are described alternately to engulph and eject, according to the tide, &c.

Though it is the central hollow of a descending whirl which most readily catches the eye, whirls can be seen without noticeable difference of level, and occasionally a depression ceases and an eminence appears close by.

A boiling-up action is visible in many places of a diffused or elongated outline, apparently derived from the upturn of some deflected under-current, the return upwards of a down-sweep or the collision of two bodies of water moving differently.

But sometimes the boiling-up is so distinctly circumscribed and circular, producing a bluntly conical mound of water, with outflow from the centre, that there seems little doubt it is the axial issue of an ascending or (superficially) ejecting whirl.

In experiments with obstacles partially under-scoured and tilting up-stream, I have seen beautiful ascending whirls in the wake.

Whirls are commonly seen at the side (and near the front) of a rapid current, where it is in contact with quieter water, or water moving in a different direction. The turn is first outward and onward from the more rapid stream, and finally backwards and inwards again, corresponding thus with the general course of an eddy.

Eddies are said to be caused sometimes by the wind. They are, then, probably more superficial than when arising from differences of water movement, or from solid obstructions.

In some places, after escaping from a constriction, the main stream is seen to be bordered, not by an outward cross-current turning backwards and then re-curving on its parent stream, but by a cross-flow running towards the central stream from the bank face, at which the water is, as it were, boiling up.

This I have noticed when the widening is slight, as for instance, below a small bridge opening, on one side of which there is a steep bank very little retired from the line of the abutment face; while on the other side, where the channel opens out widely beyond the bridge opening, a large eddy of the ordinary kind is maintained.

The explanation seems to be that, when the rapid bridge-way stream dashes out of the constriction and begins to expand, the outward splay finds room on the one side to spread out and become weaker as it is diffused, giving rise to an ordinary eddy; whereas, on the other, the deep out-flow is almost immediately checked by the closely opposing bank on which a second deflection occurs.

Where the bottom is of rock, as it happens to be in the particular instance in view, its resistance to the down-sweep doubtless exaggerates the up-swell; and as the surface out-flow of the latter off the bank face is not here directly opposed and masked by the main current as at a pier cut-water, it is, if any thing, perhaps more evident than there.

In such situation there is, from the bank towards the middle of the stream, first a high up-swell of water. This declines towards the main stream, at the margin of which the surface again rises; while, along the line where the cross-flow approaches the onward stream at right angles, occasional descending whirls may be seen progressing with the current, and often in a gyratory or curving course.

When the surface of a locally constricted stream is considerably higher than that of the open water ahead, this circumstance, in addition to its effect on the onward velocity, must tend also to cause a lateral outspread immediately on issuing from the constriction. Of course extra height of the more rapid water implies a higher (and hard) bed there.

A short projection or spur from a river bank, especially when directed obliquely down-stream, may be scoured along its up-stream border, just like the concave bank of a winding stream.

But if it project far and more particularly if turned up-stream, and the current has super-abundant channel-width on the other side, as is the case in many Indian rivers, the direct stream does not penetrate to the angle formed by the spur and the bank, but scours only near the free end of the spur (if not, indeed, altogether diverted to the other side); while in the angle there is quieter water, usually an eddy, and silt is there deposited.

So also in the downside, or lee angle of such a spur, there is a quiet eddy and silt.

But sometimes a river head-land may be so peculiarly circumstanced, that on the upside it neither acts like a concave bank, around the interior curve of which the river sweeps scouring onwards, nor like a long spur which gives, in its up-stream as well as in its down-stream angle, silt depositing water, which is quiet or slowly eddying backwards, but rather produces a violent scouring current in the latter direction, on the up-stream side.

Thus I am told by a friend that on the Jhelum River, some distance (perhaps 15 or 20 miles by land) above the station of that name, there is in a rapid part of the current, and in the concavity of a bend in the bank, a remarkable rock projecting obliquely into and up the channel, with a recess worn out on the bank side. On this projecting stem the deep current is, as it were, split; part passes on; while the other division, thus shunted into the recess, sweeps round its border with immense velocity, turning backwards like an eddy or whirl.

Finally, it comes into contact with the parent river again at the up-stream limit of the recess, *seeming* there to re-enter the regular channel by passing crossways beneath the main current, the margin of which at this re-junction is raised and swollen up.

The eddies and whirls considered in this paragraph are principally those found in, but mostly at, the side of the stream-way.

The movements produced in pot-holes or other abrupt recesses, in the rocky sides of a rushing torrent, have not been touched on, unless, indeed, those in the Jhelum just referred to are of similar nature, though on a magnificent scale.

I now turn to the *scour effects* of the movements described in this paragraph.

In the Analysis and Resumé, I ventured, contrary to the usual opinion, to say that *eddies*, merely distinguished as such from ordinary onward flow, appear to have no special scouring energy; but that, in fact, the same principle applies to both, *viz.*, that when an obstacle is encountered transverse to the line of movement at the place of contact, impingement scour is developed, which is more active than the scour on planes parallel to the line of movement; and that as eddies are usually weaker than the parent current, the scour of either kind produced by them is, in the same proportion, really weaker than the like kind produced, or producible under similar circumstances, by the original current.

For instance, the primary impingent scour, on the opposing bank, by a current entering, at right angles, a canal of otherwise still water, may be expected to be greater than the secondary scour from the eddies which will doubtless be found at each side of the entering current.

I farther remarked that, while the impingent scour of an eddy is stronger than the frictional action of the main current, it is so by virtue solely of its direction of incidence, and not from anything peculiar to an eddy.

It will be noticed that in an elongated eddy, there may be a much greater area of the bottom and bank exposed to its parallel movement, precisely as if it were the main stream reversed, than the space on the bank which is subjected to impingence.

In the case of circular whirls, there seems no reason to doubt that, under the same conditions, the same principle would apply.

But the conditions are usually somewhat different. Thus an eddy has generally (not always, but perhaps most frequently) a side or some part in contact with the bank; while very often whirls are in the midst of water, between different currents, and at a distance thus from

the side. Under these circumstances the revolving periphery has not the chance of scouring the bank either in the one mode or the other.

But whirls have an action peculiar to themselves. I have often seen the impingence of the axial issue of a descending whirl demonstrated by the circular out-splay of sand at the bottom, moving along in various curves whenever the surface showed such progression. When thus moving, their scour effect is shifting and slight; for the onsweep immediately obliterates its traces. Where localised at one spot, the effect must be greater; but, from all I have been able to see and judge, the effect is really small any where in the stream-way, however powerful the movement may be and probably is in pot-hole and other recesses, where it may expel centrifugally all loose and light material, and deepen the bottom by whirling and grinding solid bodies around the cavity.

In ascending whirls again I have seen sand lifted from the bottom, as if by a centripetal indraught there, and whirled upwards, the process ending by the sand partly falling again around the exterior, and partly being carried away by the current. Such action *may* possibly, in some cases, produce deepening scour, but in those I have actually seen, the upthrow seemed rather to be that of fresh sand brought on to the locality by the currents at whose junction the whirl occurred, than of sand belonging to the spot, from the upheaval of which, deepening could result.

It may merit inquiry whether there is any difference between the movement in a whirl, and at a pier stem, beyond that of the plane of revolution in the former being horizontal, and in the latter position vertical.

I specify whirls as the resemblance is greatest, and they are common about pier heads, besides which the various uses quoted of the word eddy render remarks about eddies, without definition of the particular sense in which employed, almost as indefinite, for scientific purposes, as those about the air being in a very electric state, or the weather very trying.

There does appear a difference. An eddy or whirl turns back in most cases, where there is nothing to prevent the water going straight on, except water and some peculiarity in its own manner of movement.

The water of the down-sweep only turns back when absolutely prevented by a solid obstacle from pursuing its own, or an onward direction.

It is merely the downward division of the general outsplay. The side divisions go rushing on. Any equivalent turning back in their case would require to be *outward* from the pier shoulder; but, when whirls are seen there, they turn towards the pier, and are rather from the onward stream coming into contact with the out-sweep.

Nor does the uprise turn back if it can go on, for at an overflow weir where the water rises to the lip and joins the higher current above its level, the quickest of all, in going over, is said to be the lowest layer rushing over the lip surface; thus reversing in a remarkable manner, as that surface here virtually forms the bottom, the ordinary rule as to the position of the least velocity.

The down-sweep itself does not turn till it can excavate no farther; and even then, if it can find or force an opening, the tendency seems to be to go on, instead of turning back, as may be judged from the fact of bridge works being undermined, and tilting up-stream or sinking bodily.

The same inference may be drawn from floorings being hollowed out and destroyed: or even from the simplest experiment with an obstacle suitably placed in a brisk and clear current over sand.

The movements at an under-passage or sluice, with a fair head of water above the upper margin of the opening, seem to point to the same conclusion.

All these illustrations, I think, suggest that turning back and revolving is the last thing the down-sweep tends to do.

Even in the revolving movements when set up by repeated deflection on obstacles (as *e. g.*, first on the pier-face and next on the bed), there appears a difference, for in a whirl the movement can, by its action on weeds, sand particles, &c., be seen to converge to the central axis; while in the revolving movements, when set up from down-sweep, I have as yet observed no such centripetal tendency, as weeds, &c., go whirling round the periphery, rather than seeking the centre.

In a whirl the revolution presents a centripetal indraught at one extremity, and a centrifugal issue at the other, of the central axis; and it is the terminal movement which acts on the bed.

At a pier stem the revolving movement progresses rather as a whole, the issue being bodily in the direction of the axis, rather than concentrated in the central line; and the scour action is at the periphery.

12.—SEEMING PARALLELS FROM GREAT RIVERS AND OCEAN CURRENTS.

If it ever be permissible to compare small things with great, it may be so in the case of natural processes; when it is found that the falling of an apple and the movement of a world afford illustrations of the same laws.

Of deepening at obstructions in the *Po*, I have quoted instances in para. 16.

Niagara.—From a perusal of Professor Tyndall's vivid description (in *Macmillan's Magazine* for May last, 1873,) of Niagara and the action going on at the foot, respectively, of the Horse-shoe and the American fall, in the whirlpool rapids, and in the whirlpool bend, it would seem

(so far as I can judge) that the action there, although on the grandest scale, and with some striking farther developments, is yet of the same nature as here attempted to be analysed in the comparative miniature of ordinary streams and canal falls.

After the river rushes over the cliff in an unbroken sheet, Professor Tyndall notes that "The descent finally resolves itself into a rhythm,—the water reaching the bottom of the "fall in periodic gushes. Nor is the spray uniformly diffused through the air, but wafted "through it in successive veils of gauze-like texture."

The fact that an apparently similar succession of gushes can be seen in small cascades, of sufficient height in proportion to their volume, and even in so humble a fall as that from a good-sized roof-gutter during heavy rain, certainly encourages the idea of merely the scale and not the nature of such movements differing; and that, therefore, if observation tend to the elucidation of action on a small scale, it may, in allied matters, possibly throw light also on the mightiest operations of nature.

Professor Tyndall's exposition of the retrogression of the fall is so instructive that I transcribe it * * * "along the bottom of the cliff," (formed by Goat Island, between the two Falls) "one well-known factor in the formation and retreat of the cata-"ract was immediately observed."

"A thick layer of limestone formed the upper portion of the cliff. This rested upon "a bed of soft shale which extended round the base of the cataract. The violent recoil "of the water against this yielding substance crumbles it away, undermining the ledge "above, which, unsupported, eventually breaks off and produces the observed recession."

Indian canal experience as to the effect of a cushion of water, at the foot of a fall, in lessening the destructive force of the latter, may, perhaps, have a fresh illustration in the smaller erosion and retrogression of the American fall, if there is no exposed Talus* of fallen rocks at its foot, as in that (former) case it must there find a body of onward flowing water independently maintained in the channel by the Greater Horse-shoe cataract close to it, up-stream.

* When a large portion of the cliff after being undermined tumbles down, such talus, one would suppose, may exist for a time, but it must apparently be at length broken up and carried away by the cataract and subsequent onward rush, otherwise it would check the backward recoil and undermining, and thus the perpendicular fall might in time degenerate into a sloping rapid, if the fragments were large and hard enough to resist disintegration and transport.

This may supplement, though, of course, in no way interfere with, the explanation clearly shown in the article quoted as to the greater eroding power of the larger volume of the latter Fall and its consequent relatively rapid recession.

The water, at the foot of the Horse-shoe, is, on the other hand, derived from this Fall itself and partakes of its movements, *viz.*, downward impingence and then deflection and lateral impingence in *all* directions before it settles into onward flow again.

In the Rapids, Professor Tyndall thus describes the action :—

"Two kinds of motion are here obviously active, a motion of translation, and a motion of "undulation; the race of the river through its gorge, and the great waves generated by "collision with and rebound from the obstacles in its way. * * *

"Vast pyramidal heaps leap incessantly from the river, some of them with such energy as to "jerk their summits into the air."

He observed that the wild commotion, most marked in the centre, was not (merely from great boulders and irregularities on the bottom as ordinarily supposed, but rather from the interference or compounding of the several movements, *viz.*, the onward flow of the stream, and the obliquely crossward undulations,) generated against the irregularities of the sides, meeting in midstream, as explained in the following extract :—

"In the first instance" (*i. e.*, on the waves first leaving the sides) "we had a composition "of wave motion with river motion : here we have the coalescence of waves with waves."

"Where crest and furrow cross each other, the motion is annulled; where furrow and "furrow cross, the river is ploughed to a greater depth; and where crest and crest aid each "other, we have that astonishing leap of the water which breaks the cohesion of the crests and "tosses them shattered into the air."

Besides such products of that interference, may it be that some portion of the commotion, boiling up, and mound-like eminences of water in the rapids, are grandly magnified examples of the similar appearances here seen in miniature as described in the preceding and other paragraphs ?

Regarding the action in the whirlpool, the same authority continues :—

"A kind of mystery attaches itself to gyrating water, due perhaps to the fact that we are to some extent ignorant of the direction of its force."

"It is said that, at certain points of the whirlpool, pine trees are sucked down to be ejected mysteriously elsewhere."

The gyration of the water, the sucking in of entire floating trees, and their ejection elsewhere, appear to be magnificent illustrations of the same action, which observers, under commoner circumstances, must be content to trace in a petty stream, with a half floating weed or twig, instead of a forest tree, to mark the engulphing and subsequent rejection.

Ocean Currents.—Varied as are the producing causes of oceanic currents, such as variation of density from difference of temperature or salinity, winds, earth rotation, &c., in comparison with the simple source of movement, *viz.*, declivity in rivers, and varied as are the conditions with which the former come in contact, yet there seems nothing to suggest that, beyond differences arising from such variety of conditions, a sea current, however large, has any tendency of itself to act, as regards the mechanics of its motion, differently from a fresh-water current coming against a solid obstacle, or passing, entering, or traversing other water, on a scale small enough to be within an observer's ken.

If degrees of latitude and longitude were mere fathoms or other moderate units of measure, the description and drawings, in works on physical geography, of sundry great re-curvings of ocean currents, encircling a relatively quiet central sea, covered with the floating fucus or sargasso, would seem singularly applicable also to the elongated eddies with a comparatively quiet middle space described in para. 11, and such as may be seen in any brisk stream with an irregular channel.

Similarly, the whirls, descending and ascending, described in the preceding paragraph, appear to correspond with the whirlpools, respectively engulphing and ejecting, known to exist in some parts of the sea.

On issuing from a constriction, an ordinary current, besides continuing onwards more slowly, spreads out to each side, or sometimes an eddy, *i. e.*, a reverse current, bifurcates into two, each division turning differently.

Drawings of the equatorial current, after traversing the Caribbean Sea, represent it as thus either spreading out, or as dividing, on its issue from the narrowing between Yucatan and Cuba, which connects the above sea and the Gulf of Mexico.

But a stream, on relief from constriction, tends also to press *downsands*, on its coming against the slower water in the wider area.

Does this take place similarly on the great scale ?

Since writing the rest of this Supplement, I have read an article by Professor W. B. Carpenter, in the last January No. of *Good Words*, clearing away, by its lucid exposition, sundry misapprehensions regarding the celebrated Gulf stream.

In this it is specially noted that the warm water of the equatorial current extends to a remarkable *depth* in the Caribbean Sea, and to a still *greater* in the Gulf of Mexico; and that, after passing the (at one place) comparatively shallow outlet of the Florida Channel, whence the Gulf stream is reckoned to begin, it deepens *again* from that shallowing, though the natural tendency of the warm water would be to flow superficially over the colder layers beneath.

Professor Carpenter, after pointing out that the extension of warmth downwards, to such an extent as thus occurs, cannot be due merely to surface heating by the sun, remarks, in regard to the first deepening of the warm water, that "It may, however, be partly accounted for by the propulsive force of the equatorial current, which when checked in its onward direction by the coast line of the American Continent, will operate *downwards*, so as to **make its warm water displace the colder water, over which it would run if it had a ready exit."**

If a map be referred to, it will be seen that the northern division of the equatorial current, passing to the north-west from Cape St. Roque along the Guiana Coast, must, especially in the first part of its new course, before it has accommodated itself thereto as now its straightforward direction, be pressing against that coast as a river does against an oblique obstruction like the concavity of a winding bank.

On the small scale, and in an ordinary current, the water, from a short distance below the surface, can be seen (by simple weed experiments) to turn downwards, scouring along with an oblique spiral progression in the horizontal direction.

If the downward movement which is inferred to take place on the great scale by such an authority as Professor Carpenter, and that which I have thus actually seen on the small scale, be both of the same nature, the deepening of the warm equatorial current might be expected to be traceable, not merely in the Caribbean, but from its first check and deflection at Cape St. Roque and thence along the coast north-westward to that sea.

But (reasoning from the small scale) if the shore is a gently shelving one, this deepening of the warm water will be much less, even proportionally to the whole depth, than if the coast be bluff and perpendicular with deep water close inshore.

A current, involving the whole depth of water, moving with sufficient velocity, and coming against an obstruction sufficiently friable, would tend actually to deepen its bed, where it is thus obliged to turn, especially if the obstruction were abrupt rather than sloping.

But as the equatorial current is merely an upper layer, there is a difference in this, and possibly in all those conditions, from what would best enable it to affect the bottom itself.

Still the movements may take place, just as they may be traced in a common stream long after the velocity has fallen below the minimum that will sensibly scour or lower the bed.

Beyond this first deepening of the warm layer, from deflection on the obliquely obstructing coast, I venture, however, to suggest a question whether the downward (apart from lateral and upward) tendency of quicker water, on coming against slower water, which I have described in the Analysis, may not also be concerned in carrying to a greater depth the warm surface current on its issuing from constrictions, successively into the Gulf of Mexico and the Atlantic Ocean.

The velocity in the Cuba-Yucatan passage is not mentioned in the article, but I infer that the average rate in it must be greater than in the wider area either behind or ahead.

Nor have I observed mention of the depth of the warm current, or of the whole water, in that narrowing between Yucatan and Cuba.

This point has a bearing on the present matter, as the passage of a broad stream through a narrow channel may be accompanied by greater depth as well as velocity.

But deepening of the whole body of water, or of the upper current in the constriction, simply from that cause [*i.e.*, a narrowing] would be relieved immediately on issuing from it, and the warm water would tend again to spread out superficially and recover *its* shallowness as a mere upper layer.

This might the more be expected seeing (*vide* article quoted) there is a constantly renewed supply of cold water in the basin of the Mexican Gulf by an inward bottom current from the ocean through the Florida Channel, even where it is narrowest and most shallow, and where the warm outward Gulf stream is what appears on the surface.

Whatever is the depth, however, in the Cuba-Yucatan passage, there is in the Florida Channel a shallowing at one part as well as narrowing, and the out-running warm layer, though underlain by a cold stratum, deepens again outside the channel, after it had first become shallower in it.

As regards the deepening of the warm layer, from the cause indicated in the article referred to, the effect, so far as the current in its westerly course through the Caribbean Sea follows the curves of the mainland, may be reinforced on the opposing Mosquito and Yucatan coasts, which face to the east.

In respect to the other cause I have suggested as possibly co-operating, it may be a question whether the chain of islands and reefs, stretching along the eastern entrance to the Caribbean Sea, does not also practically constitute a constriction, the first encountered.

13.—SCOUR RESPECTIVELY BY CLEAR AND TURBID WATER.

In the graphic account of Niagara, by Professor Tyndall, already quoted, he describes the powerfully eroding and grinding effect of water driving, or whirling along, pebbles, shingle or boulders, or rather of these solid bodies when driven by water, as sand is by air in the wonderful sand-blast.

The opinion, quoted in my Analysis, as to water, already laden with earthy matter, being less able to take up fresh material, than water at the same velocity clear and as yet unladen, is not, I conceive, opposed to the preceding observation of that high scientific authority.

With the current strong enough to drive and whirl about masses of stone, it is certainly strong enough to remove or transport whatever fragments or particles are thus broken up small, or worn off immoveable masses.

The opinion referred to concerns rather the transporting power of water on material *already loose, or friable under water action,* and in particles of a size within the moving and carrying power of the stream velocity.

In pamphlets by Mr. T. Login, F.R.S.E., it is strongly insisted that, *with other things equal,* a certain velocity can only carry or transport a certain quantity of bedmaterial; and that a stream, thus once fully laden, will remove no more in its farther progress (under a continuance of the same conditions), or will deposit as much as it takes up.

Here, as regards such portion of the bed as the stream traverses fully laden, there is practically no more scour or lowering of bed; but if the velocity be increased, it will take up more material, *i. e.*, will scour; or, if it be decreased, will deposit some, *i. e.*, will silt.

The above is so conformable with common observation as to a stream eroding more and becoming more turbid, *i. e.*, carrying more, as its velocity increases, and it seems so reasonable and intelligible, that there must be a limit to the carrying power of a particular velocity that it does not seem to need farther discussion here.

It is, I understand (*vide* Roorkee Professional Papers for July last), a point on which different opinions are held by Engineers of experience, as to what the bottom velocity of a deep and rapid river can be, when running over very fine loose material, quicksand, &c., as the rate ordinarily given by hydraulic formulæ and tables for the bottom, in proportion to the upper or surface velocity, which latter alone can be measured, implies a speed under which it is difficult to understand such fine loose material resisting scour to a far greater depth than actually occurs.

May not the point, thus adverted to, be somewhat less obscure, if the principle discussed in the present paragraph be fully traced out? *viz.*, that a stream, after running for a sufficient period at a certain velocity, becomes saturated or fully charged with earthy matter, *i. e.*, burdened with as much of the particular material as that velocity enables it to move or carry; so that, after this stage, whatever material it removes from any place is accompanied by an equivalent deposit, at or near it, of matter brought from higher up stream; and thus no farther lowering of bed at that locality occurs. In this sense the *surface* material, at least, is in movement downstream, during floods, &c., even throughout long stretches, where deepening may not be taking place.

But there is a farther consideration. When water is moving earthy matter *contrary* to the tendency of the latter under *gravitation*, its own motion must be retarded by the work. Of course, in a *free fall,* the earthy matter descends of itself, as well as the water; and, if of a gritty shingly nature, may *increase* the erosive action of the water impingement at the foot.

On a bottom of fine loose material, under a violent flood, it might be hard to indicate to a nicety the precise plane dividing stream and bed, as there is in motion a semi-liquid layer, which is more than an ordinary sweeping of material along the bottom, and less than an actual lifting and transporting in the body of the current.

The water here is, as it were, supersaturated or surcharged with material. More of the latter is stirred up and loosened from the bottom, than can be fairly lifted and thrown higher

than the lowest layers of water. These last, doubtless, become overladen; and, presumably, have their velocity thus reduced more than if they were running over a hard bed, on which, with the same velocity of general stream, the water would be less laden.

This lower semi-liquid layer possibly, and indeed probably, helps to dull and check the action of the more definite current from disturbing the fine material still deeper.

The subjects of the foregoing and the two next paragraphs are, however, I believe of practical interest chiefly in relation to artificial streams, and, in them, more particularly so to the slope and depth (and hence the velocity), most suited for canals, carrying water over bed material of various characters and degrees of admixture with the current.

Their principal bearing also is, perhaps, rather on the movements and scour action of water in free channels; though necessarily they have a relation likewise to the process, which goes on at obstructions.

14.—SCOUR RESPECTIVELY BY SHALLOW AND DEEP WATER.

An opinion based on actual observation is strongly expressed in papers by Mr. Login, that the scouring—meaning here more particularly the *removing*—power of water decreases in some, as yet undetermined, proportion with increase of depth.

This is not what one might, *a priori,* expect, and I have seen no detailed attempt to elucidate the rationale of this result; but, as being the decided conclusion of an experienced professional observer, it naturally calls for attention.

Several circumstances *help,* I think, as remarked in Part XXI of the Analysis, to render it intelligible. But first one must note what the view involves.

In a very deep stream, the total quantity of earthy matter transported may greatly exceed that transported by a shallow stream of equal velocity, but the proportion of material carried to volume of current is described to be less in the deep than in the shallow stream. Also that a shallow current will move heavier material than a deep one of merely the same velocity.

In attempted elucidation of the above, it may first be noticed that the effective scouring part of a stream is its periphery in contact with the bottom and sides.

In a rectangular channel 100 feet broad, if the current is one foot deep, the wetted and scouring periphery of a one foot section is 102 square feet, as compared with a volume of 100 cubic feet.

Double the depth, and the volume is 200, while the channel border is merely 104.

Make it 10 feet deep, and the volume is 1,000, with a periphery of 120.

Under identical velocities, it seems intelligible therefore that, while the scouring action by a periphery of 120 may throw up into the carrying volume of 1,000, more than is thrown up into, or than could be transported by, a volume capacity of 100, from a scour border of 102, yet the shallower water may, per equal volume, be more fully laden than the deeper; for, even supposing an equal tendency in both volumes to re-deposit and get rid of their load, it is evident that the smaller body would, from the much larger proportion of it acting on the bed, be far more rapidly replenished, and so kept fuller than the larger.

Hence it would seem to be readily intelligible that there may be a *greater total,* but a *smaller proportion,* of earthy material transported in a deep, than in a shallow stream of equal velocity.

But it is not clearly certain, that the quality of the power of the scouring periphery, to fill with material the whole volume, is practically as effective in a deep, as in a shallow stream, or that the re-depositing tendency of the former is not greater than in the latter.

I do not, however, insert here the considerations which I have noted on this point, as they are involved with matters observed regarding the movement of water in unobstructed channels and its free onward scour,—a division of the subject quite large enough for separate treatment.

There is another point. On an inclined rocky bed with occasional upstanding ridges, one may see a shallow stream rushing down with steep surface incline nearly to the base of an opposing ridge, and rising abruptly with a jump almost in the air and going over. Any material brought with it is not likely to linger at *such* spot.

But if there be 10 feet of more water, above that shallow flow, pursuing its own onward course with moderate and uniform surface incline, unaffected by the petty inequalities below, which may locally quicken and elsewhere slacken a shallower stream, it is not clear that the bottom layer can rush down the rocky slope and rise with such vivacity at the ridge as it did with varying surface declivity, and merely the air above it.

It seems a question whether, in fact, its movement, out of those uneven hollows, may not be considerably dulled, and its power of moving material therefore reduced.

This is rendered probable by the fact of the action on the downside of a bar or weir being most violent at the time when the current is merely sufficient to give a good fall or rush over it, and being less when the water is high enough to drown the bar altogether, and leave a smooth flood surface, showing no sign of the obstruction below.

Of course at a weir it is not so much the hampering effect of weight overhead, as that, when the water surface ahead is abruptly lower, there is extra velocity down the incline, while, with uniform surface slope there, the variations of local velocity may be less, and in fact the stream finds, in the sudden sinking of the bed, extra channel depth, in proportion to the greater section of which the velocity must be less.

There is still a farther matter, possibly of importance, as regards the rolling or sweeping along of material too heavy to be actually lifted, and so transported in suspension by the current.

Equal force will move such bodies more easily in proportion as it acts down a greater slope.

On a bed of a particular slope, greater depth would be accompanied by greater velocity of current.

When, therefore, a deep current is discussed having merely the same velocity as a shallow one (other things being equal), it implies that the incline of the channel is less in the deeper stream.

But equal force or velocity of stream will move heavy material less easily on a gentler incline than on a steeper one.

Hence, in this respect also, the shallow stream of equal velocity may have the advantage in moving efficacy.

There is an evident connection between the action under consideration and the hydraulic mean depth, which may, perhaps, be thus stated—*viz.*, that while greater hydraulic depth favours higher volocity, still if the velocities in two cases are equal, while the hydraulic depths differ, the greater depth is unfavourable to the transporting action of the current per equal volume, inasmuch as this implies less bed-incline, the diminution of which is unfavourable to the onward sweep or roll of material, either too heavy to be lifted and carried in suspension, or in excess of the amount which can be thus carried.

The case remains as to how the action is affected by greater depth accompanied by higher velocity.

From the following extract of a pamphlet by Mr. Login already quoted (on a method of protecting foundations), it will be seen that the view referred to includes this case also, *viz.*, that deeper streams, even when of higher velocity (within, doubtless, some limit), have less scouring and transporting power than shallower currents of lower velocity (within limits as above inferred) :—

Extract from pages 2 and 3 of Pamphlet.

"Water in motion is not supposed to move in straight lines, but rather rolls; hence there must be ascending and descending currents. Thus we see bodies, of slightly less specific gravity than water, appear floating on the surface, for a time disappear, and once more appear floating down the stream. On this account, therefore, it is probable that good swimmers in a rapid river like the Hooghly are often pulled down by what is called the 'under-current,' and this rotatory motion must be much more rapid in shallow rivers than in deep ones, which accounts for rivers with the same velocity holding such different proportions of solid matter in suspension. I have, when closing the bunds at the head of the Ganges Canal (with perfectly clear water and a narrow gap only remaining to be closed) actually seen boulders larger than a man's head suddenly spring up to the surface, where the rush of water was most violent, and the depth did not exceed 3 or 4 feet, which shows that the ascending action in such cases must be very great. With very deep rivers, this rolling motion must be proportionately slow; therefore, even with great velocities, such rivers may have beds of mud or clay, while shallow rivers, with the same velocity, would set large stones in motion. The difference in velocity that will disturb sand and that which will roll down angular stones may be taken at 3 feet per second with *clear* water in a *shallow* stream, but *deep* rivers, with twice the velocity that would sweep along angular stones, are found passing harmlessly over a bed of light sand or clay, while a mountain torrent with a similar velocity would roll along boulders."

"How much this difference depends on depth, it would be most difficult to arrive at without a careful set of experiments; but from general observation, I am inclined to think that if *sand* withstood abrasion with a depth of water of 10 feet, and a velocity of 7 feet per second, but would scour to a depth of 30 feet or more if the velocity were increased by 3 feet per second (and if there were nothing of heavier nature below the sand), then the scouring action might be resisted at half that depth if angular stones were met with."

With the very violent rush above mentioned in connection with large stones being suddenly lifted to the surface, it may be difficult to say how much was due to the violence, *i. e.*, velocity and pressure of the water, and how much to the shallowness.

The above lifting action on a heavy body appears somewhat similar to that mentioned by Colonel Dyas in Vol. III. of Roorkee Professional Papers, page 76, as to bricks being tossed up out of the water at the foot of a canal-fall by the up-boiling wave in front.

The greater vivacity, if such an unscientific term may be used, of shallow water at obstructions, has already been noticed, due seemingly to the less pressure overhead letting it more freely relieve itself in upward movement from pressure in a horizontal direction, and to the greater room for plunging violently ahead, as *e.g.*, down a slope.

It is not clear how far the grounds already suggested, as explanatory of less scour and transport by deeper water with equal velocity, may account for the like result even when the velocity of the deeper water is higher.

There is, however, also the probability that a deep and rapid current in fine soil is, after running a short time, fully charged with material, and that its lowest layer is surcharged, and thus retarded, as suggested in another part.

Beyond the foregoing, at present, one can seemingly only suppose some proportion between depth and velocity, or other elements in the case, as adverted to in a former paragraph, the best proportion of which, for scouring efficacy, is not maintained in *very deep* streams, even when more rapid than shallower ones.

Or that the bottom velocity is less in such deep streams than is usually reckoned from the surface rate, a point that is considered in the next paragraph.

If it may now be assumed that increase of depth does lessen the scouring energy of water at the same velocity, and does so even when the speed also is somewhat raised, it cannot be supposed that the dulness of depth is supreme against an indefinite rise of speed; and thus the question remains as to what rise of velocity is sufficient to prevent a particular increase of depth from lessening the scour?

According to ordinary observation, scour at any place is actively stimulated by the rise of speed naturally accompanying an increase of depth there from greater influx of water up-stream.

It would seem, therefore, that the power of depth to blunt is superior to that of velocity to sharpen scour action only when the increase of speed is less than would naturally accompany the deepening, if this occurred at the same place, from a rising flood.

But within that limit matters are still undefined.

Thus with two streams, respectively 10 and 30 feet deep, if it be assumed that with the same upper velocity the scouring energy of the deeper will be inferior, the point remains undetermined as to what excess in speed would place it on a par, in that respect, with the shallower stream.

But, as already remarked, the considerations in this paragraph refer principally to the free onward scour of an unobstructed current.

In respect to the impingent action at an obstacle, the question, so far as it has yet occurred to me, occupies the position described in Parts XXI and XXII of the Analysis.

That is, *cæteris paribus*, and within ordinary limits of depth, the perpendicularly longer down-sweep of the current proper in a deeper stream is presumably also wider than the shorter in a shallower one: and this greater width, radially form the pier stem, will, as explained, most probably *aid* the deepening; even if the longer descending column, when merely of the same velocity, were to exercise, *per se*, no stronger influence in virtue of its greater height between the planes of down-turn and bottom of current proper.

The effect of very *great* depth, without corresponding increase of velocity, is more obscure and doubtful. But the views in next paragraph, if correct, may help elucidation here also,—the extra slow bottom layers impeding and clogging the down-sweep from the much quicker upper planes, more than in a shallower stream with less difference of velocity between surface and bottom.

This is besides the lateral interference of the onward current suggested in pages 21 and 23 of the Analysis.

Of course below the bottom of the current proper, *i. e.*, in the scour hollow, the deflected downflow, as it descends the farther, is proportionately counterbalanced by the greater amount of water and material it has to push ahead and raise, so as to make room for its own descent.

15.—RELATION OF BOTTOM TO SURFACE VELOCITY.

In an article on well-foundations in sand, in last July No. of the Roorke's Professional Papers, Captain Allan Cunningham, R. E., mentions (page 275) that it is proposed by some Engineers "to assume the bottom velocity as that which will just move sand," while others adhere to the rates given in hydraulic tables.

In page 277 it is remarked:—

"But farther, the bottom velocity seems (to the author) likely to be so small *for a quicksand bed* (the case in hand); perhaps that which will just disturb loose sand, compared with the surface velocity, that it might be neglected in forming and *approximate* formula."

["*N.B.*—The ordinary hydraulic tables *profess* to give the bottom velocity corresponding to various surface velocities; but the fact is, that such tables are constructed from formulæ in which the 'constants' were derived chiefly from experiments on *artificial* conduits. The results appear (to the author) totally *inapplicable* to quicksand. *Ex*: The surface velocity in the Ramgunga has been recorded as 16 feet (192 inches) per second. By De Buat's formula the corresponding bottom velocity would be 165·3 inches per second, *no matter what the* material of the bed was."

"Is this possible in a quicksand bed? The bottom would be surely scoured away."]

In the foregoing extract there are two points concerned, *viz.*, the velocity at bottom, and its action on the bed.

Some considerations on the latter have been noted in the preceding paragraph of this Supplement.

Sundry points suggest themselves in support of a question as to the bottom velocity, especially in deep streams; *based primarily, however, on the degree of bed-slope* (or the depth as related to the velocity), rather than on the nature of the bed material itself, farther than as already discussed.

Allowing it is surface slope which regulates the movement of water, yet difference in this, and in the accompanying velocity, may be caused in two ways, *viz.*, either by difference of bed-incline with the same depth of current, or by difference in the on-come of water, and hence in its depth, with the bottom slope the same.

These are distinct influences which may operate in very varied proportions; the first being external to the water and acting from below; and the second in the water itself, but acting mainly from above by rise of flood depth.

Omitting, for simplicity in considering the general matter, minute points as to the position of the plane of highest velocity, and as to the gradations of speed at different depths, the proportions of the upper, middle, and bottom velocities are usually given (as by Rankine, &c.,) at 5, 4, and 3.

These figures correspond with a common formula (*vide* Roorkee Manual, No. VI., 1859, pages 90 and 95) by which the bottom velocity is reckoned equal to twice the mean, minus the highest velocity; the mean being taken at four-fifths of the highest surface rate.

They have doubtless been approximately deduced from observation on a moderate or small scale, and under conditions not extremely varied; for I am not aware that it has been possible actually to measure the rate at bottom under extreme velocities or depths.

Assuming, however, that these figures fairly, though perhaps roughly, do represent the gradations under a medium range of conditions, the question remains whether the proportions are maintained unmodified under all variations of depth and velocity, and also of the conditions, *viz.*, bed-slope and current-depth, mutually contributing to the latter.

Besides the mode of ascertaining the surface rate by measurement, and then reckoning therefrom the mean velocity by a simple proportion, the Roorkee Treatise (2nd Edition, 1871, Vol. II, pages 80-83) gives formulæ for computing the surface and mean velocities from the hydraulic mean depth and the bed-slope; the mean velocity being stated at about nine-tenths of the surface rate, when the surface velocity is above 4 feet a second, and about eight-tenths when it is less.

Here a difference in the gradation of velocity from the surface downwards is indicated; and as other things being equal, the less velocity will imply the slighter bed-slope, it may be noticed that, with the smaller bed-slope, the velocity—down at least to the medium layers—decreases more rapidly than in the quicker stream with greater bed-slope.

In Rankine's Manual (1864), page 674, it is stated that in very slow currents the rates are nearly as 2, 3, and 4, rather than the figures already quoted for ordinary streams.

A very slow current may here also be taken to imply a slight bed-slope, and the *bottom* velocity in such a current is thus given at only half of the surface rate, instead of the three-fifths reckoned in a brisker stream.

The Roorkee Treatise (Vol. II., 1871, page 417) gives, as used by Colonel Crofton, from Neville, a formula for finding the mean velocity, in which there is "a co-efficient which he takes at 90 for velocities up to 4 feet per second, and 93 for high velocities, such as those of hill torrents, &c."

With the high velocity of a hill torrent there is steep bed-slope, and here, again, down at least to the medium layers, the gradation of velocity, in relation to the highest rate, falls more slowly than in streams of lower velocity, and presumably less bottom incline.

From such examples of varying gradation stated to accompany difference of velocity, *though perhaps referrible really to difference of bed-slope*, as well as from other instances of variety in water action under differing proportions of the elements concerned therein, it is, I think, fairly assumable that *the gradations of rate may vary also under variations of depth when the surface velocity is the same*, or under variations in the proportions of aid respectively contributed to the velocity by the bed-slope and the current depth.

In a shallow stream, having the same upper velocity as a deep one, the extra bed-slope necessary to give the former the same rate, is proportionally a larger contributor to the velocity than in the other case; and it seems possible, or indeed probable, that this greater bottom influence may give the bottom water a higher velocity in proportion to the upper than in a deep stream, in which the quickening influence acts rather from above.

If this be so, one might expect that in two streams of the same upper velocity, but the one very shallow and the other very deep, the ratio of the bottom velocity to the upper would, in the streamlet, be more than three to five, or any other average proportion assumed; while in the deep flood it would be less.

Thus, supposing these average figures to be fairly accurate for a stream say 5 or 10 feet deep, it seems difficult to suppose that in another only one foot deep, with the upper velocity still 5 feet a second. the change in gradation could now be so much more rapid absolutely, that the bottom rate at a few inches below should only be three; or that in a 50 feet depth, with the same upper velocity, the change could be so much slower that the bottom, now at a distance of many feet, should still be the inexorable three, or indeed any other fixed rate reckoned from the surface velocity alone.

Granting the influence of the quicker upper layers in hastening the slower under layers, the upper velocity of 5 feet a second, and the upper layers in general, must, if they ensure a velocity of three at the bottom, have an immensity more of that work to do in a 50 feet depth with very small bed-slope, than the same upper velocity has to do in a stream one foot deep, with much greater bed-slope to aid the bottom movement.

Of course the influence of the lower layers on the upper has also to be considered; and though that of slower water on quicker is commonly described as a retarding influence, still the under layers form, as it were, antifriction rollers, over which the higher move more rapidly the greater the distance (at least up to the plane of highest velocity) from the retarding effect of the bottom itself.

As the bed-slope is greater, so must the tendency of the bottom layer itself be to higher speed, and thus to acting less retardingly, and more antifrictionally, for the layers above.

The greater assistance, than if the bed-slope were less, can scarcely be supposed to be otherwise than most marked near the plane of its production, *viz.*, at the bottom; just as the assistance to all layers from the surface downwards from extra flood entry may be expected to be most strongly marked at and near *its* plane of production, which in this case is near the surface.

Computing the bottom from the upper velocity may, under uniform and known conditions, be correct enough; but with conditions varying and imperfectly known, is it not reckoning too exclusively from one element only, when really there are others also concerned? Even the mean velocity, however computed, would still be a single element for the purpose if taken by itself, though its relation to the highest might give a clue to the lowest velocity.

A channel which carries a flood depth of 50 feet, with an upper velocity of 5 feet a second, would carry a one foot depth at a greatly slower rate.

Every foot of rise would have a higher rate itself, and would help on the foot below, as the latter also would assist the next lower, and so on.

But even making large allowance for this influence of the upper and quicker layers, it seems stretching a point for the sole and undivided supremacy of the upper velocity to assume that it alone either rules or indicates the velocity at bottom, so as to bring it to a particular fixed rate relative to itself, irrespective of the other influences concerned.

The statement quoted as to the mean velocity being about eight-tenths of the surface rate when the current is below 4 feet a second, and nine-tenths when above that rate, while it seems to favor the idea of a more rapid fall of gradation in slow streams (with, *ceteris paribus*, small bed-slope) appears against applying the principle now discussed to deep streams, which, however gentle their bed-slope, may have a velocity far above 4 feet a second (often three to four times greater).

But this difficulty appears chiefly when the difference of gradation is stated simply in connection with difference of velocity, instead of being traced rather to difference in the elements by which the velocity is produced.

It disappears, I think, when this distinction is made, and the gradation of the lower to the upper velocity is referred to those elements, *viz.*, to the proportions of the bed-slope and current depth respectively contributing to the velocity.

But the statement quoted simply mentions higher velocity, without notice of depth or distinction whether the higher rate be from greater bed-slope or greater current depth; while the considerations noted in this paragraph suggest that, with the same surface (or even mean) velocity, there may be a difference in the gradation of rates from the surface downward, according as the one or other of these elements contributes most to the surface rate observed or the mean rate reckoned.

Thus there may be two streams with the same surface velocity, but differing in depth and bed-slope,—and the considerations adverted to suggest that, in the deeper with the smaller incline, the gradations to middle and bottom velocity will be greater; and that in short *the bottom velocity in the deeper stream of equal surface speed will be less.*

A stream 50 feet deep, with a surface velocity of 10 feet a second, may, if the foregoing be correct, have a considerably (perhaps greatly) smaller bottom velocity than a stream only 10 feet deep, but with the same surface rate; and this may help to account for the deeper having, as asserted, the smaller scouring energy, though the apparent, *i. e.*, the surface speed is the same.

A river, however rapid at the surface, if it owe its speed mainly to depth, may thus, as regards the ratio of its bottom velocity, retain the characteristics of a slow stream in having that ratio less than the average, and much less than in a shallower current of equal surface velocity, but owing more to bed-slope.

Deep streams, however swift, usually have slight bottom incline; for if it were otherwise the combination of both elements of high speed, *viz.*, considerable bed-slope and depth, would generate a velocity great and destructive beyond common experience.

The old reckoning of the highest rate being on the surface was doubtless from observation on a small or moderate scale.

The new reckoning that it is at about one-third the depth below the surface, is from experiments on large rivers like the Mississippi.

If the old reckoning were really correct for small streams, and not from want formerly of sufficiently delicate tests of the rate below the surface, it might imply that the plane of highest velocity is situated proportionally lower in deep than in shallow streams.

Although this would not certify that the rate does not, next, sink with more than average rapidity below that plane in deep rivers, still it would appear to be against the inferences drawn in this paragraph.

At present, however, I can only note the point.

At all events, whatever may be determined on all the foregoing matters by competent investigation, they seem to suggest that *the bottom ratio cannot be accurately reckoned from either the surface, the extreme, or the mean velocity alone*, but that in the reckoning the bed-slope is an essential element of points connected therewith, such as the relation of the depth to the surface velocity, or of the mean rate to the extreme.

There is another matter. Though in some streams there is a clear distinction between the bottom and sides, yet in others the latter merge insensibly into the former.

The smaller velocity at the side is naturally compared with the smaller velocity at the bottom. But there are often also backward eddies, &c., observable at the sides.

Is there anything of this kind at the bottom to a degree affecting either the velocity there or the scour?

On the down stream slope of sand-ripples and terraces a faint reverse current can be detected, by which weeds, &c., are slowly swept up the slope: while heavier particles of sand, &c., are sliding down.

Possibly similar movement takes place also on the downside surface of weirs when wholly drowned under a uniform flood surface.

But beyond such variations from irregularities of bed, I cannot mention anything of this sort which would seriously affect the bottom velocity or scour; unless perhaps a comparatively quiet backward eddy, at the side of a strong current, may sometimes extend so deeply as to intrude on the limits one might consider rather belonging to the bottom.

16.—REFERENCES TO ENGINEERING AUTHORITIES.

The many references I have made will show how often, and naturally so, I have had to consult such standard works as I could obtain at a small out-of-the-way station.

Cresy's Encyclopædia of Civil Engineering (1856), which I have seen after writing the foregoing paragraphs, describes (*vide* Vol. II., pp. 1506 to 1514) the effects of different forms of pier and outlines of cut-water.

It delineates also, from experiments apparently by some French authority, the several *surface* appearances of the current at miniature piers differing in the above respects.

The experiments were (p. 1510) made in a rectangular canal of water 40 millimetres in depth, with a velocity of 3 metres 9 centimetres per second or more, and with models of piers 15 centimetres in thickness.

The velocity of about 10 feet in these experiments in an artificial channel was nearly double that which *best* permitted me to *see* the bottom action in a natural one, though of course the depth of scour could be sounded when the velocity was higher and the water turbid.

Instead, however, of experimental piers 6 inches thick, the clearest observations I had of the *action in progress* were on a pier 3 feet thick.

Though the Bhurar river near Nowgong, which furnished the most convenient demonstration of the action, ranges from 150 to 200 feet in width, and has a flood depth of 12 feet or more, even *it* becomes turbid from rise of velocity, when deeper at the best place of observation than about eight or ten times the depth in the French experiments, *i. e.*, a foot or a foot and a half, the depth in the scour crater being about three times as much.

Elsewhere, with less rise of velocity, the action is visible in considerably deeper water. Medium conditions are, however, best for clearly *seeing* the process, as will be indicated in the next paragraph.

The velocity in the French experiments was such that, with any natural bed material of a sufficiently moveable kind, there must have been turbidity; and hence in those experiments, even if the depth had allowed of loose material, the bottom action could not have been seen.

At all events, while the surface appearances of *ten* experiments are minutely delineated, no mention even of the bottom movements is made.

The abrasion, scour, and undermining of bridges are attributed generally in Cresy to increased velocity (page 1481, &c.), from contraction of water-way, or to eddies and falls (page 1508, &c.), or to gyrations (page 1509) at the pier shoulder.

By eddies and falls are meant (*vide* page 1510, &c.) swellings and sinkings of the surface, with of course increased velocity in the latter case.

Gyrations in the situation indicated, *viz.*, at the shoulders of piers, can be often seen as described in paragraph 11 of this Supplement under the name of whirls.

But the deep action, *when seen*, shows that it is not these which scour and undermine the pier.

In respect to the down-end of piers the Encyclopædia (page 1514) mentions that when starlings are omitted, "the space which they would have occupied is filled by stagnant water or a whirlpool, which it is necessary to prevent," and adds that, under the above circumstances, there "result underminings which are scarcely less frequent below than above."

The tremendous scour action at obstacles, common in Indian rivers, with beds of fine, loose, and deep sand, is naturally less so at home, owing to the generally coarser, harder, and more cohesive nature of the material of our river channels.

The Po however, whose bed material fines down towards the sea, ranging latterly from sand to mud, presents conditions more resembling those of Indian rivers, and it furnishes marked examples, evidently of down-sweep scour, as may be inferred from the following extract from Beardmore's Hydrology (1862), page 166, parts of which I have italicised.

"Between the Ticino and Oglio the Po is no longer fordable, for at low water the least depths on the shoals are 5 feet, in deep pools the depth being 30 to 33 feet, and *where there are defensive works (groins) the depths are from 50 to 55 feet.*"

"Below the Oglio the least depth is 6 feet, and in the pools 30 to 37 feet; and *when defensive works form obstacles, 77 feet of depth is attained.*"

It would be interesting to know the style of foundations used for such works in the Po, and the natural basis on which they rest.

To the Roorkee College publications, as apparent from my constant references, I have turned in every difficulty on professional and special points.

The papers by Colonel Dyas in the first series, Vols. I. and III., were of special aid in connection with canal falls, ogees, and rapids, and indeed had a peculiar interest in the following way.

No sooner had I, as I thought, ascertained the nature of the action at a pier stem, than I was struck by the incompleteness of the knowledge if I could find no explanation of the scour also on the downside of a bridge.

Hesitating next at the idea of water being deflected by water almost as by the pier, and then scouring impingently downwards and onwards, which was the only explanation I could make out where there was no fall from a bridge flooring, it became evident that if the above was correct for the locality under observation where there was a rising breaker-wave, there must be similar down-sweep and scour in places wherever such wave was similarly formed by a rapid current dashing into slower water.

In Neville's Hydraulics and other books to which I could get access, there were drawings of overflow weirs, with the uprising wave below well depicted, but in these drawings the water, under the surface, was left to be understood by a blank or represented by straight lines.

Yet the principle I was testing, if correct, implied that beneath the uprising wave there must be a downward turn, followed by an onward bottom sweep.

Subsequently, on borrowing Vol. I. of Roorkee Professional Papers, I found in a paper by Colonel Dyas, at page 42, a drawing with straight lines indeed beneath the wave, but a remark in the text that protection was needed at a point indicated by letter in the sketch. *That point was beneath the wave.*

This did not of course prove the principle to be corect, as whatever is the true one must be operative in all similar situations.

But it encouraged the hope of being at least on the right track.

This year I have both seen and shown, by simple weed experiments, the down-sweep at the collision of water (*vide* para. 1).

The lateral outturn of the water is still more easily seen, though often it is more in the deep than in the surface water.

From an article in Vol. II. of the Roorkee Professional Papers, 1st Series, suggesting under-sluices at weirs on the top of canal falls, so as to lessen the amount and effect of the *falling* water at the foot, and substitute more of the gliding and less injurious movement of *flowing* water, I quote the following:—

"In a perpendicular fall the injurious action of the water is evidently entirely caused from the water striking the masonry; and even where the fall is a sloping or curved one, the action of the water is more severe than it should be. But if the action could be reduced to gliding only, its injuriousness would be reduced to a minimum; and the masonry which is now destroyed would stand, just for the same reason that the earthen bank of a canal will stand uninjured where there is a velocity of current of, say, 2½ feet per second, while precisely the same material is torn away by an eddy with only one-half that velocity."

The sketch accompanying the article shows a slight depression, and not a deeply sunk cistern below the weir.

So far as I can trace the action under the above circumstances, the sluices, while lessening of course the falling violence, would tend to increase the action above referred to as produced by eddies, just as at the foot of rapids and ogee falls.

Collation of facts is often a useful complement of their collection, if it aid in tracing out any common underlying principle.

The differences of falling and flowing water are familiar enough; but if it be observed that falling is, at its close, merely one, though doubtless the most active natural example of impingence, *i. e.*, of a body in motion coming against another body more or less transversely opposing or retarding its line or rate of movement, this at once suggests that sluices, as above described, would increase the forward, while they lessened the downward, impingence, and that therefore the reduction in the latter respect would not all be clear again.

I purposed here quoting from Colonel Abbott's Treatise on Indian Bridges; but I rather give an extract from the later Roorkee publications, as I find that, up to (at least) 1863, the manuals, which mention the authorities from which they were compiled, contained (*vide* No. IX., Bridges, 1863) the following remarks nearly in Colonel Abbott's words:—

"The accompanying table shows that sand is moved by the smallest velocities, even so little as 6 inches per second, or about one-third of a mile per hour; therefore the beds of our rivers must be continually moving, and the question to be asked is to what depth does this river movement extend under certain velocities of current. * * * Experience alone can be our guide in replying to the above question, but until very lately little or no attention has been paid to the subject." * * *

"Colonel Abbott calculated," &c.

The Roorkee College Treatise (1867), Vol. II., pp. 65-66, repeated the above, merely omitting the remark as to little attention having previously been given to the matter.

In the second edition of the treatise (1871), p. 78, the passage is as follows:—

"The beds of rivers are continually undergoing movement and change, the amount and nature of which depends—1*st*, on the soil of which they are composed; and 2*nd*, on the

velocity of the water, which depends on the slope of the bed; and the question to be asked is to what depth does this river movement extend under certain velocities of current?"

"Experience alone can be our guide in reply to the above question."

The treatise then proceeds (excepting merely transposition of a sentence) as in the manual already quoted as follows:—

"Colonel Abbott calculated the velocity of the flood which destroyed the piers of the bridge over the Hindun at 11 feet per second, and the effect of this velocity was to scoop out the sand to a depth of 25½ feet. It is plain, therefore, that any velocity approaching to 11 feet per second must not be risked in a river having a sandy bed.

"Captain Sharp, in boring the bed of the Jumna at Agra, came upon broken bricks at a depth of 23 feet, and this can only be accounted for by supposing that the bed has been disturbed to that depth by the natural current of the river confined by bold banks 1,300 feet apart. Captain Sharp judged the surface velocity at Agra to be 8 feet per second in high floods. Colonel Abbott calculated it to be not more than 6 feet per second, whilst he states the velocity of the greatest flood at Delhi at probably much less than 6 feet per second.

"There can be no doubt that a velocity of 5 or 6 feet per second is dangerous to bridges whose foundations do not rest on firm soil, or which are not carried to very great depths. This may appear a small velocity to cause so much damage: observation has, however, afforded confirmation of the correctness of the assumption of this limit of velocity under the arches of rivers with sandy beds, unless the foundations are carried down either to a hard stratum or to a depth of at least 40 feet."

Even at so moderate a velocity as to leave the stream clear, there is, with coarse sand, an on-brushing of the bed-surface; and, at higher velocities, there is partly visible, and partly inferrible from the results, a more violent and deeper sweep of a semi-liquid layer.

In fine sand the effect must be still deeper, but I have not seen anything to suggest that a simple unobstructed current, even of high velocity, disturbs the general bed to an excessive depth, or that the whole bed is (at any rate to such extent as to affect ordinary engineering works *which do not oppose the current*) continually moving onwards; or that the intense scour at obstructions is only a part, albeit the worst part, of a general scour, almost as bad throughout the channel, especially at and near the place where increase of velocity is caused by the piers, &c., narrowing the water-way.

See para. 13 (and 14—15) regarding the probable condition of the bottom layer of turbid flood streams. Also para. 19 about depth of Jumna bed disturbance.

Indeed, observation and experiment (in a bed of coarse sand at any rate) are decidedly against such a belief, and indicate that the action at piers is strictly and definitely local; and that if a sufficient margin of protection, placed low enough, be given around each pier, one need have no fear of the velocity in the open part of the spanway, and that thus no complete flooring across the channel is required.

I should, however, refer to the greater co-operation of the current at oblique obstructions (*vide* Analysis, Part XIII), and the consequent greater blending of the special or local scour-depth at them, with the general on-scour depth, than at transverse obstacles, such as piers, &c.; for at oblique obstructions, especially when of great length, like the opposing bank of a winding river, the onward current dips deeply into the scour depression, using it indeed as an important part of the channel, and scouring its slope to greater gentleness, but also to much greater breadth than at an isolated transverse obstacle of limited widthlike a pier.

I quote here as the latest published professional opinion on the subject, an extract from an exhaustive Article in the July (last) No. of the Roorkee Professional Papers, by Captain Allan Cunningham, Professor at the College: on the strength and stability of circular well-foundations and piers in sand. The italics are as in the original.

Extract, page 277, *para.* 31.

"It is probable that the portion of bed scoured out near the piers is often limited to a saucer or funnel-shaped hollow round the pier, inside which there will be sometimes violent eddying and boiling action, but so long as this violent action lasts, *scour is going on*. The most unfavourable time for the pier appears to be, when the scour has reached *its full depth*, after which time the eddying and surging action must be comparatively small; as (by hypothesis) the scour is not increasing. It seems further probable that the most unfavourable time to the pier will be when this scour has been *very extensive in the neighbourhood of the pier*, so that the pier is exposed to a current of the full depth of scour, that is to say, to a current whose bed has been lowered to scour-level, and which is, *throughout its depth, effective as a current in pressing on the pier*.

"This hypothesis enables the *whole effect* of the current to be reduced to a statical problem of pressure: the present state of hydraulic science does not enable the effect of the eddying and plunging action to be in any (beyond a hypothetical) way included, but if this hypothesis be admitted *as the most unfavourable to the pier*, it appears unnecessary further to consider such eddying action.

"Under this hypothesis the depth of river-bed, and of scour in the neighbourhood of the pier, are considered as the same: this must of course be one* of the data, either from actual observation, or as signed by the Resident Engineer."

* "It is a remarkable instance of the imperfection of the practical data for this problem, that this is one of the elements involved in doubt."

The above extract is significant of the position and its difficulties.

Judging from what I have had opportunities of observing here, I have inferred that the scour depth at a pier is distinct from, and additional to, the depth of the current proper, however much the latter may lower its bed generally by ordinary on-scour.

Also that the scour hollow at a pier is a definite zone which, after sufficient observation and experiment, might be estimated beforehand for certain stated conditions.

Likewise that the down-sweep action is going on all the time any scour hollow exists, as follows:—

During rise of current velocity, &c., it is in excess of the on-sweep and in-fall, and thus deepens the hollow.

With velocity, &c., become uniform, the action soon attains its maximum of scour for the particular conditions, and then simply balances the above opposing tendencies.

With current falling in velocity, &c., the action is gradually overbalanced by them, so that *eventually*, when the velocity is sufficiently low, the hollow is filled up.

If the velocity fall too rapidly, however, the on-sweep also may be languid, while the natural in-fall, towards angle of repose, has ceased long previously.

A comparatively small hollow then remains, in which the distinction of inner and outer zone has been obliterated, and in which the down-sweep, far from being able itself to attract notice, can scarcely, if at all, be detected, even by delicate experiments.

This is a stage at which the hollow very commonly becomes visible, by the clearing of the water; and hence doubtless the obscurity, in which the previous action, which excavated the hollow, has so long been veiled.

To one other point I may refer by aid of the same authority. In a notice recently published of the Analysis, it is mentioned as a possible result of scour action during floods in sandy rivers, that a pier sunk to the depth of 50 or 60 feet and exposed to this action would tilt over, generally up-stream.

I may have overlooked something, but certainly have not observed any mention of a pier tilting over up-stream in any book I have seen, including the Roorkee publications, whether the Treatise, or the Professional Papers, up to this time.

In the article just quoted from last July No. of the Papers which is prefaced by the remark (page 258) "that this paper is intended to be a complete investigation of the whole "problem (as far as the present state of science admits)," I do not find any discussion of piers tilting up-stream.

In page 262 it is stated that—"It appears that well foundations, as hitherto constructed, "have usually failed by tilting over as a whole, *i. e.*, by want of stability of rotation. This "problem will therefore receive especial attention, see section IV."

That section, so far as I follow it (treated as it is mathematically) deals wholly and solely with the question of piers being pushed or tilted over down-stream.

Were the tilting so common as to be *generally* up-stream, I think it could scarcely have escaped being considered in so complete an article by a professional author of such position.

In fact, when writing the Analysis last year, I had never even heard of such a tilting. I only mentioned its possibility as seeming to be suggested by my experiments; and subsequently I have heard of merely one instance, *viz.*, that at a pier in the Beas River; while at the Sutlej, piers, *i. e.*, implying more than one, are mentioned as tilting down-stream, the possibility of destruction in which way my Analysis, without information as to the particulars of actual occurrences, but merely from induction, had pointed out, lest scour should be debited with more than its due.

Beyond the above, and a general remark as to the direction of tilting in the former case having been unexpected, I have not even now a single particular.

Instances of *portions* of bridges, of the ordinary style with elongated piers, *falling* on the up-stream side, were, I believe, known; and are, I think, explicable by the same process which I saw could cause a leaning over up-stream; but *tilting* can scarcely be *general* with ordinary long shaped piers, and circular ones in India are of such recent introduction, that there has not been much time yet for such accident, even with them, to become general.

The movements outlined in the Analysis indicate—with a simplicity and ready intelligibility, almost suggestive of self-evidence, that a tilting up-stream is likely to be the general, or indeed almost the invariable, form of injury if circular piers in sand were built with *sufficiently shallow* foundations.

But the general position thus arrived at *after a knowledge of those movements* is not necessarily the same as the *previous position* of the question, whether demonstrated in a comparatively short experience of such piers, or stated in any published opinions.

Since writing the above I have learnt that of *four* piers which fell over, one, *viz.*, at the Beas River tilted up-stream, while the other three, *viz.*, two at the Sutlej, and one at the Guggur, all fell down-stream.

See also the addition to paragraph 19 regarding wells falling over at the Ganges bridge at Cawnpore.

Colonel Sir P. Cautley's notes on the Eastern Jumna Canal, which are a repertory of information regarding the difficulties of our earlier canal operations, and the retrogression of rapids and levels, contain many instances of the scour of bed material, and others of its redeposit farther on, and of this being afterwards cleared away again, as also examples of the silt advancing in some places, and accumulating retrogressively in others.

The explanation suggested in the Analysis appears to fit the conditions described and delineated, in the Roorkee Professional Papers for May 1873, by Mr. Sibold, Executive Engineer, Sirhind Canal, in an article on Retrogression of Levels.

The authors, from whom I have quoted, do not comprise all I consulted; for in my endeavours to find if any notice of the action I observed had been already recorded, I referred to all I could at the time procure, including Dwyer, &c., &c., &c.

But, as many of the works I consulted are confined, or chiefly devoted, to calculations of the supply, storage, conveyance, and discharge of water, while others add simply a brief notice of the engineering or mechanical arrangements concerned therein, it has been possible to cull facts or opinions, bearing on the present inquiry, only from the comparatively limited number of writings which touch on what I may call the fundamental principles or natural philosophy of the subject, *viz.*, the particular modes of movement and action pertaining to water.

17.—CONDITIONS AND LOCALITIES FAVOURABLE FOR OBSERVATION.

Though the scour *hollow* on a large scale may be *sounded* in the part-water line at a pier during flood, yet, for *seeing* the *process* itself, medium conditions are requisite.

Too high velocity conceals the bottom action by turbidity. Too low a speed renders the movements faint and indistinct.

Very fine bed material, clay, &c., similarly clouds the action below, by being lifted and carried in suspension even at moderate velocities; while if very heavy it may not be moveable enough for a hollow to be scoured out at the highest.

A large scale is unfavourable, as with deep water, if it has the requisite velocity, the bottom in general can only be seen indistinctly if at all; and a large bridge, pier or other work, may be inconvenient for close and minute observation.

On the large scale also, though a considerable hollow may be left after a flood has subsided, yet by the time it is clearly visible, that which is seen is only the remains of the original cavity, which has in great part been silted up again, and has lost much of its characteristic form; while the vigour of the action has long ceased. With very fine material, clay, &c., the hollow may even be entirely filled up before the water recovers its transparency; or the hollow at the cut-water may be thus obliterated, while a pool remains some way below the bridge.

A very small scale again is, though in another way, unfavourable, especially at first, as the definite and complete course of the movements is not then easily traced.

But *once clearly seen in their completeness under favourable circumstances*, so that their full course is understood, the action, or recognisable portions thereof, can often be detected by the simplest means and under less favourable conditions.

The most favourable are a velocity sufficient to sweep along the bed material actively and not so high as (with the particular material) to render the water turbid, but yet the highest compatible with clearness.

With the clean coarse sand or small gravel of most of the water-courses in the middle tracts of Bundelkhund, whether the great rivers, the Betwa, the Dessan or the Kane, or small streams like the Bhurar and Koomrari, near Nowgong, circumstances are comparatively often favourable for exhibiting the action at the upside of rocks, opposing banks, masonry works, &c., but even in them the time of the medium conditions must be selected for *properly seeing it*.

Doubtless it is from the relative rarity of the simultaneous occurrence of all the conditions necessary for the action to be visible in its complete and most characteristic form, clearly enough and on a sufficient scale *to attract attention*, that it has remained unnoticed so long.

For to those, from boys upwards, who have ever waded in a burn, fished in a small river, or seen the waves on a sandy beach splashing against a stone and hollowing out at the base, *i. e.*, to almost everybody, myself included, some *portion* of the movements must have been visible many times.

Consideration of this evident fact, and surprise that, seeing part, I had not previously noticed the whole, constituted a first difficulty in the way of bringing the matter publicly forward; for, once noticed, the action was so evident and simple, that it seemed impossible it could have hitherto escaped competent investigation.

But as I could not find that it had hitherto been dealt with, I ventured to bring the matter forward; as, under somewhat similar circumstances, I did with my notes [published in the Supplement to the *Punjab Government Gazette*, dated 16th January 1873] on the spring water-supply of Simla, drawing attention to a probable cause of their falling off seemingly hitherto unregarded, and a simple method of counteraction now being tried.

I say, not hitherto *dealt with*; because, undoubtedly, portions of the diverse movements in different parts of the water, at piers and in the concavities of winding banks, had been previously noticed.

To the growing knowledge thus, that in pier scour, beyond mere extra velocity, as often alone mentioned, there is something else, though this has hitherto been described with comprehensive, if unavoidable, vagueness or inaccuracy, under such terms as eddies, &c., &c., I trust the Analysis has now contributed a degree of definiteness and simplicity.

The rest of this paragraph is inserted after the Supplement was prepared for the press last month (October).

When once a clue is obtained, and attention drawn, to the varieties of action described in the Analysis, illustrations thereof are curiously abundant and ready for observation.

Thus, when merely crossing the Kane river at Banda the other day, three instances presented themselves, two of which were on a large scale.

The first of the latter was the huge pool scoured against the projection from the Bhooragurh rock.

Secondly, the ferry boat had to coast around the clear-cut border slope of a great fan-shaped sand-terrace, which was advancing towards the pool from the shallow part where the fair weather causeway and low pile-bridge were being made, though it seemed doubtful whether it could fill up the whole of the pool, as the dry weather stream keeps rather to the opposite side.

Thirdly, the water repelled by the oars exhibited the characters of quicker water rushing into slower. There was a rise ahead, and an out-curling whirl at each side in front. In the absence of opaque particles, the glancing sunlight and the dancing water prevented one being sure of the deeper appearance of entangled air bubbles being carried downwards near the surface uprise.

The difference of the bed material in the Kane and in the Jumna at Chillatara Ghât between Banda and Futtehpore was striking.

In the former it was a coarse gravelly sand; while in the Jumna it was markedly finer and softer, with only a few large particles interspersed.

On the farther journey by rail, between Futtehpore and Agra, to the Viceregal Durbar, the turbidity of the water seen in the Dooab, even in pools within the railway fence, where there was no current and where cattle did not disturb it, was very noticeable.

It seemed, in fact, to retain clay in solution even when at rest, rather than merely hold it in suspension during disturbance. On the other hand, with the granitic gravel of many Bundelkhund water-courses, the bottom in a shallow stream remains clearly visible under a velocity of several feet a second.

Regarding the Jumna at Agra see the latter part of paragraph 19.

Still more recently (December) I have seen also in the Sind river, between Gwalior and Duttia, a large sand terrace, said by the ferrymen to be slowly growing down-stream, and rendering fordable, as far as it extends, a deep pool there.

The water was fairly clear in spite of a trace of clay mixed with the bed material, which at once induces turbidity on *active* disturbance of the bottom. As at the Kane, the ferry boat had to coast around the terrace border, the course of which (independently of being visible) was indicated on the surface water by the usual ribbon of rippling, where the current changes its rate of going, from the quicker pace *on* the terrace to the slower in the depth ahead.

The water of the Chumbul, too, was clear when I passed it; but the crossing at the Dholepore bridge-of-boats is in a bend where, with the consequent depth, the current is now very gentle.

The Noorabad and Morar streams (the latter at Morar station) had dwindled to narrow shallow streamlets, clear though running briskly in places.

The picturesque old Mussulman bridge at Noorabad, of lofty arches only 20 feet wide, and tall piers 17 feet thick, but with angular cut-waters, resting on a *solid* flooring extending (so far as the surface showed) less than a foot beyond the pier stems, illustrated several matters.

As to be expected from the contraction by such thick piers and small archways, a wide pool had been scoured on the downside.

On the upside there were still left a few small pools, mostly opposite the cut-waters, the down-sweep from the thicker or base half of which had doubtless been received by the flooring, leaving that merely from the thin front half and sharp edge to reach the bed beyond it.

At one place, however, there was a pool, deepest in front of an archway, in the line of a strong current which had made fair for the latter.

Elsewhere the bed on the upside was as high as the flooring or higher, in places where bank and shoals of coarse material (presenting gravel, kunkur, &c.), quite beyond the power of the present current to transport, had been left by subsiding floods.

Some of the comparatively little pools on the upside were being slowly filled up by small terraces of *fine* sand, apparently washed out of the generally coarser mixture. Intercepting thus the material still on the move, these upside pools would be filled up long before the larger and general hollow on the downside could be obliterated.

In the streams above named the sorting by the current, at different stages of its force of the bed material into local aggregations, differing largely in character from others near them, was noticeable; and thus suggested that the more *uniform general size of the bed material*, where I first noticed the action, in which there were few particles of clay, or coarse nodules of kunkur or stone, had been another *element favourable for observation*.

For velocity sufficient to move the coarser portion of the material would generate turbidity with the finer, and if sufficient only to move the latter, could scarcely develope the down-sweep scour in a striking manner.

In the Pahooj at Bhandere, and in the Sooknai at Mow-Ranipore, the current, over clean coarse sand, is now (December) shallow and clear.

The Betwa and Dessan are also clear, though still running strongly.

At the outlet, beneath the Fort, from the Burwa Saugor Lake, near Jhansi, the water, on leaving the masonry channel, is running with great velocity, but perfect clearness, first over stones and then over gravel and coarse sand.

In the long curve now described of 300 miles, from the Jumna at Chillatara Ferry to the same turbid river at Agra, all the chief streams have been clear in November and December, and doubtless were so for some time previously, but the velocity of most of them had, by this time, fallen too low to exhibit the down sweep scour well, except at places in the Betwa, Dessan, and Kane.

Still, localities suited for observation at the proper season are evidently not few when once it is known what is to be looked for.

Hitherto, apparently, in attempts to trace the movements of water, it has been sought to do so mainly by floating bodies or diffused particles; without drawing, also, from suitable bed material as much aid as, it now appears, is possible.

18.—MOVEMENTS OF WATER DISPLACED BY ADVANCING VESSEL.

The oar-action noticed in para. 17 seems to illustrate larger matters.

Whatever effect on the bottom and sides of a canal is produced by a (relatively) large boat being drawn at high speed by animal power working on the tow-path, the effect is specially great when the boat is impelled by machinery working paddles, screw, or water, which last has sometimes been tried by admitting it at apertures in the bow and ejecting it at the stern, under the expectation that this would not injure the bed as the paddles and screw do.

In the former case, *i. e.*, of the towing, the bed is affected merely by the water deflected and set in motion against it by the front end of the boat.

In the case of propulsion by machinery, there is, in addition, the water forced by it rapidly against the still or slowly moving water of the canal, this being followed by deflection and consequent disturbance on the sides or bottom, when the deflected water encounters these transversely. The propelled vessel usually, however, has also greater speed, and this will cause greater disturbance too from the bows.

When instancing, in Part XXIX of the Analysis, the action of a boat in a canal, I was unaware of what I have just been told, *viz.*, that there is high authority in naval architecture and engineering for the opinion that none of the water displaced by a moving vessel passes downwards. Unaware of the basis of this conclusion, it is with diffidence I advert to the different view already advanced, for which, however, several grounds appear to me strong.

I will here, however, only quote the simple experiment of moving a suitable body briskly through clear still water, with a bed of clean sand a little way below the former. The sand is seen to be progressively disturbed under the advancing body in a line corresponding with its breadth, thus showing that, besides the visible up-roll and lateral parting of the water, there is also a downward movement playing on the sand, and of course displacing the lower water to make room for itself.

Indeed, from the greater hydrostatic pressure beneath the up-roll, one might infer that there must be a tendency downwards as well as sidewards.

The disturbance is most easily seen in shallow water, with a body broad transversely but short in the line of movement.

During its constant advance, the part disturbed at one instant is in the next being passed over by the moving body, and the disturbance can thus be seen best by looking below it *from behind*.

As in the case of boats traversing still water canals, the bottom action, likewise travelling onwards, does not continue at any one place so as to excavate a *hollow*, it would seem that the effect *in this direction* can only be a progressive stirring up of the bottom material.

I conclude therefore that actual damage, from the transit of boats, when it occurs is chiefly from the action on the sides of the canal, by the outward deflection of the water, and the surface wave prolonged from the up-roll at the bows.

The material at the sides, on being disturbed and loosened, will slide or fall down, and thus the bottom will be silted, as the sides are cut up.

At the stern the conditions are reversed. Instead of a rising of the water as at the bow, there is a depression, which, like the former, is greater in proportion to the speed, size, and bluff form of the vessel.

To fill up this hollow left in the wake of the advancing vessel, there is from the sides a rush inward, and superficially downwards; while, from below, there doubtless is in the middle a tendency upwards, under the pressure of the taller columns of water around.

19.—MISCELLANEOUS.

Although, of course, there has not been time yet to learn the views elicited from the engineer profession in India since the circulation of the Analysis by Government last month, I have since then otherwise heard a few opinions, in reference to which some explanations may be here advisable.

They may be thus summarised:—That the movements and action concerned in pier scour are already fully known, *viz.*, being eddies and high velocity from obstruction; that the modes of protection employed by the old builders for their bridges of many small arches and

thick piers, show that they also well understood the action and how to guard against it, and that, even if the movements are, as I have described them, this is merely a substitution of revolution around a horizontal, in place of a vertical axis, as hitherto understood and seen in the familiar eddy.

I would premise that in the Analysis no principle is involved beyond those of natural and mechanical philosophy, the outlines of which men of almost every profession learn.

The facts observed stand of themselves; but the inferences attempted on scientific and practical points can, of course, only be judged by the authorities in these respects for whose verdict they have been submitted.

There are naturally many matters which one cannot learn by mere perusal of the opinions of even the highest authorities; but from these I had supposed that the subject of the movements of water was one of the most obscure of common things. Hence the interest with which I seized what seemed unusually favourable opportunities for observing them.

No one can be ignorant that the scour danger has long been known, and that engineering science has risen over every difficulty encountered.

But it seemed to me that *actual sight of the process explained and defined*, more clearly than was otherwise possible, the nature and scope of the danger, the form or arrangement of piers or other works which would excite it least, and the use and limit of the protection needed.

That, in short, this clearer forewarning of the difficulty would facilitate the better forearming, to keep it at a minimum, and so leave the less to be surmounted.

Familiar as the distinction is between friction and impingence, especially with solid bodies, my observations and experiments suggested that, if traced farther than seemed hitherto usual in the case of liquids, it explained sundry scour matters otherwise obscure.

Hence the emphasis with which I tried prominently to draw attention to it *in this subject*.

Such emphasis might have seemed unnecessary, but that even where it has been noticed and commented on as needless, its object has been overlooked; and the subject dealt with merely as a question between different theories of rotation, entirely divested of the point which had been thus strongly emphasised as essential; and without which being grasped, the very subject presented to consideration was untouched.

In respect to a reduction thus of the subject to a mere question between whirling one way or another, I have no doubt that, whatever the ultimate judgment on the matter and its manifold relations may be, more will be found in it than *that*.

The Analysis has been credited with some points not its due, as *e. g.*, suggesting an up-stream extension of floorings. Though it offered an explanation of the need for such extension (*i.e.*, to reach beyond the downsweep from the piers), yet the advantage thereof has, I believe, long been known in Northern India and Madras, even if funds have not always permitted the practice.

The point specially suggested was, rather, that with a sufficient margin of protection, set sufficiently low, all around each pier and especially on the up-side, a continuous flooring is not required.

In respect to circular piers, it seems understood by some that the Analysis states the cylinder to be, of all forms, the one causing the very worst scour. This is more than my observations would warrant, and for a precise determination of the scour, produced by various forms, there would be needed more extensive and detailed experiments than mine.

A body with a semi-circular prow is stated to incur considerably less resistance in water, than a square-headed body of equal cross-section; but the former appears to cause *by no means the proportionately smaller scour* which one might thus expect.

Whether the cause of this be, or not, as attempted to be traced in the Analysis, Part XXII, I remarked therein that "an actually square-headed pier might theoretically seem much the worst of all; but practically the scouring action at a "circular pier has appeared *little inferior*."

This was more specially in regard to the *depth* of scour, for in respect to its superficies, the hollow seems to encircle a *larger* proportion of the border at a circular pier, than at other forms.

Still the impression, from experiment, was that it was merely *among the worst* of the forms I tried, rather than itself the extreme.

An engineer friend tells me he was recently asked if my Analysis did not recommend square-headed piers.

On reference to Part XXII, it will be seen that the form suggested, as productive of least scour, was, within certain limits, an elongated one ending in a sharp cut-water, and the farther remark was hazarded that if the latter were to project somewhat below, like the ram of a warship, it might be still better.

Whether such moderate projection, if continued, at the bed-level, all around the pier, by having the foundation wider in every direction, would suffice for security against dangerous scour, without a more distinct encircling platform, level or sloping, and solid, or of loose but massive material, is another question.

The form exciting least scour is, in fact, pretty much that of the old and commonest style of pier, *viz.*, elongated, and sloped off at each extremity into a cut-water or starling, rather than the bluff circular form lately adopted in sundry instances.

But, so far as is compatible with sufficient strength transversely, the Analysis suggests greater narrowness of pier, and slope-length of cut-water: the reason for the above shape is traced, and the use and limit of the protection which may still be needed, are defined.

The less abruptly the two spanway currents come together again below the pier, the gentler their collision and consequent scour in its wake. Hence the use of a long sloping starling even on the downside.

Of course there are the methods of defying scour and current thrust at simple cylindrical piers, *viz.*, by carrying them so deep that they cannot be underscoured, and by insertion vertically of long iron rods in the masonry to prevent cross fracture under flood impulse, or the collision of drifting bodies.

As with the conclusion of the preceding para., the rest of this, also, is an addition to the Supplement since first in manuscript.

Just now (November) the fair weather stream of the Jumna at Agra flows quietly in a channel on the Fort side of the wide sandy bed. The water is still turbid, and the depth, I am told, is some 15 feet.

The foundation of each pier of the Railway bridge over it is being constructed of three 12 feet wells, set in the stream line, and sunk to a depth of 70 feet.

Long iron tie-rods are inserted vertically in the masonry of the wells to give stability against cross-fracture.

In mid-channel sand and occasional kunkur are all that have been encountered. The sand is fine, containing many light scales of mica, to move which freely a very small velocity of current would doubtless suffice. Near the bank, especially on the left side, and where the left abutment is built, firm earth is encountered, and at a much smaller depth.

No damage from flood force or scour has, I understand, yet occurred; but the descent of one of the wells is impeded by its having come across the trunk of a tree about 30 feet below the bed.

This position of a log corresponds with that of the bricks described in the extract from the Roorkee Treatise (2nd Edition, 1871, Vol. II., page 78,) which, for convenience, I again transcribe here, and some part of which I have italicised.

"Captain Sharp in boring the bed of the Jumna at Agra came upon broken bricks at a depth of 23 feet, and this can only be accounted for by supposing that *the bed has been disturbed to that depth by the natural current of the river,* confined by bold banks 1,300 feet apart. Captain Sharp judged the *surface velocity at Agra to be* 8 *feet per second in high floods.* Colonel Abbott *calculated it to be not more than** 6 *feet per second,* whilst he states the velocity of the greatest flood at Delhi at probably much less than 6 feet per second.

*In Colonel Abbott's Treatise I see that it is the *mean* velocity which he calculated at 6 feet.

J. P. S.

"There can be no doubt that a velocity of 5 or 6 feet per second is dangerous to bridges whose foundations do not rest on firm soil, or which are not carried to very great depths. This may appear a small velocity to cause so much danger."

Supposing the tree to have been water-logged, and thus heavier than water, it and the bricks might be imagined to have reached their position in one or other of the following ways:—

(1) Disturbance of the bed down to that depth by the natural current as stated in the above quotation: such condition of the bed material might be that of a semi-liquid and semi-moving, or slowly moving mass, in which solid bodies heavier than water, or than the semi-liquid compound, might gradually sink during its agitation;—or it might, perhaps, be supposed to be:—

(2) An actual scour or hollowing out of the bed to the particular depth, the tree and bricks having been silted over when deposit began as the current grew weaker.

(3) If any obstruction to the current was concerned, the depth reached by the bricks and tree is more easily accounted for.

Sweeping against a bank on which there was a building, the current would deepen and undermine at its base. With the falling of the bank, and the sweeping away of its earthy substance, the bricks, &c., would speedly reach the indicated, or even a much greater, depth; and as the scour trough is prolonged considerably from oblique obstructions, they might be swept to a distance from the bank and towards mid-channel.

The same course might be supposed for the tree. Or it may have come farther, first floating, then water-logged and sunk, next moved along the ordinary bed, and finally brought up in a deep scour-pool.

The remark, that *the velocities indicated appear small to cause such deep action,* is a suggestive one.

My impression is that where such depths are affected under surface velocities not exceeding 5 to 8 feet a second, obstruction, solid or liquid, with its consequent downward deflection and impingent scour, is co-operating, and that the result is thus not solely due to the natural unobstructed current.

Indeed, from what I have seen, I can scarcely doubt that in coarse sand at any rate such is the case; but how far this may be so also in fine sand, could only be determined by definite observations in a river bed of that character.

At all events the point suggested may *help* to explain what is indicated in the extract as matter of surprise.

The new weir across the Jumna at Okhla, a few miles below Delhi, is described as built without foundations, meaning thereby without the deep well foundations usual in Northern India, as the few feet (not exceeding 8 or 12, I believe) to which the masonry, protected on the up and down stream sides by large quantities of heavy stone packed in slopes of even surface, is set in the sandy beds, evidently constitutes sufficient foundation.

Its stability and immobility hitherto seem against the idea of a general disturbance and onward progression of the bed material to any considerable depth under the *natural* (*i. e.*, uninterfered-with) current or floods, even in rivers with beds like that of the Jumna below Delhi.

If the sand were thus in motion to any such depth as supposed in the quotation regarding the Jumna at Agra (where, however, the material is probably somewhat finer than at Delhi), it could scarcely be stopped by a mere bar of masonry set in, and resting on, the moving mass, which in that case would necessarily carry on the weir with it, tearing it away from its more solid basis at each bank, besides also doubtless letting it gradually sink.

The case, as against any deep progression of the sand, seems still stronger on observing that the water, when raised by such a weir on sand, is not wholly stopped at bottom, but percolates beneath the work, and appears in the channel below, even when there is no overflow. Yet a weir, whether of masonry or of loose but sufficiently massive stones, remains stationary, even in sand, if properly constructed.

At the Railway bridge under construction over the Ganges at Cawnpore, I understand that larger wells are employed, and that extreme trouble and expense have there been incurred through the falling over, under the stream action, and subsequent attempts at the cutting away, of one cylinder, which, though not sunk to the full depth intended, had been carried down somewhere about 40 feet. But I am not sure whether the damage was confined to a single cylinder, or in what direction the fall occurred, beyond hearing a general allusion to falling on the side attacked by scour.

In respect to the wells used on the Ganges bridge, Captain Cunningham's article, quoted in paras. 16, &c., was drawn up specially with reference to the bridge foundations on the Ganges, the Ramgunga, and other rivers crossed by the Oudh and Rohilkund Railway, the bridge over the Ramgunga being taken for an example of the investigation as having the worst kind of sand for foundation.

The plate accompanying the article shows a single well as forming the foundation, with a diameter of 16 feet, and continued upwards with a reduced diameter of 13 feet for the pier.

In mentioning, in Part XXII of the Analysis, that I had heard of no damage to the magnificently massive piers of the Jumna bridge at Allahabad, I should have added—*after completion;* for during construction, some unfinished wells fell over on their side during a flood. They were four up-stream wells (of 13½ feet diameter) in one of the pier foundations, each of which is composed of 10 such wells (*vide* Roorkee Professional Papers, 1st Series, Vol. I., 2nd Ed., pp. 384-5).

Sundry points, noted regarding the movements and scour action of water in unobstructed channels, which were at first intended to be embodied in this Supplement, have finally been omitted, as involving a subject large enough for separate consideration.

Paras. 13, 14 and 15, although their principal bearing is perhaps upon that subject, have, however, been retained as they have a connection also with the present.

This Supplement, like the Analysis, has had to be written by snatches, at spare moments, too short, few and far between, to permit of thoroughly connected arrangement and condensation of the subject, and without a sufficiency of works of reference for consecutive examination before writing. Indeed, some of the most important of the references have only been obtained after penning the paragraphs with which they have subsequently had to be incorporated.

But imperfect as it is, I believe it tends to corroborate the main points, and to fill up some of the gaps in the Analysis; and therefore I print it for similar ventilation.

Hereafter it will be easy to bring together the connected parts of both papers, and to re-state many points simply and briefly which I have now only ventured to advance, accompanied by details of observation and experiment, or of reference and argument.

In Sir P. Cautley's Report on the Dehra Dhoon Water-courses, dated 12th February 1845 (published at Roorkee College with Notes on Eastern Jumna Canal), I find the significant passages, which I here transcribe from paras. 70—72.

"* * * * I cannot too strongly impress on * * * attention the value that might be derived from careful observations on the discharge, as well as upon all points regarding the flow of water, and position of deposits of silt * * *."

* * * * * * * *

"There are many points which, by being brought to notice from observations on these small streams, might be the means of aiding the Engineer who is engaged on larger works, connected either with canals or rivers."

* * * * * * * *

"Observations on the action of water at the tails of falls, or at that point where the current leaves a masonry bed to act upon the natural soil, are very desirable."

* * * * * * *

It would thus seem that, unknowingly, I have been working in a direction suggested, a quarter of a century ago, by so distinguished an Engineer.

NOTE TO PARA. 5, PAGE 58.

In *Good Words* for February 1874, a letter from Professor Wyville Thomson, of the "Challenger Expedition," mentions that the wind-blown sand at the Bermudas encroaches on some parts of the land in thick massive beds, the leading margin of which forms a slope or glacis of about 30 degrees;—and that examples of limestone rock stratified at that dip are seen, evidently formed by the gradual solidification of the coral sand, resting thus at its angle of repose, after being drifted along the surface till it falls over the edge, and adds a fresh layer to the slope.

The foregoing singularly corresponds with the process observed in the advancing sand terraces, and their forward slope, described in pages 11 and 42 of the Analysis, as moving onward under a current of water.

NOTE TO PARA. 19, PAGE 90.

Detail of well foundations [cylindrical] and piers of bridges on Oudh and Rohilkhund Railway, in article by Mr. E. Byrne, M. Inst., C. E., in Roorkee Professional Papers, for January 1874.

1. Over Ganges at Cawnpore ... { One 18 and one 10 feet well, on upstream side, connected at top, and pier for girder built on former.
2. „ „ at Ramghat ... One 16 feet well; pier cylindrical.
3. „ Ramgunga ... { (*a*) One 14 feet well, ditto. (*b*) One 16 feet well, ditto.
4. „ Saie at Jaunpore ... One 16 feet well, ditto.
5. „ Goomti at do. ... { (*a*) One 18 feet well, ditto. (*b*) One 20 feet well; pier elliptical.
6. „ Gurrah ... One 14 feet well; pier cylindrical.

* Return not received.

† Return for week ending 23rd May 1874.

A In the interior prices range as follow:—Wheat from 10 to 14 seers, barley 20 seers, best rice from 10-8 to 11-12 seers, and common rice from 11-8 to 13-8 seers, and gram from 14-8 to 16 seers per rupee.

B In the interior prices range as follow:—Wheat from 13 to 13-8 seers, barley from 18 to 22 seers, best rice from 11 to 12-8 seers, common rice from 12-8 to 13-12 seers, maize from 16 to 20 seers, and gram from 13 to 14 seers per rupee.

C In the interior prices range as follow:—Wheat from 12-8 to 15 seers, barley 15 seers, best rice from 11 to 12 seers, and common rice from 12 to 13-4 seers, and gram 13 to 18 seers per rupee.

D In the interior prices range as follow:—Wheat from 12 to 13-8 seers, best rice from 8 to 10 seers, and common rice from 12 to 13 seers, and gram from 12 to 14-8 seers per rupee.

E In the interior only.

F Price of common rice in the interior ranges from 11-8 to 14 seers per rupee.

G Coarse rice at 13-5 seers per rupee.

H Price of best rice in the interior ranges from 11-8 to 14 seers, and of common rice from 11-8 to 17-14 seers per rupee.

I In the interior prices range as follow:—Wheat from 12 to 13 seers, best rice from 8 to 9 seers, common rice from 10 to 11 seers and gram from 14 to 17 seers per rupee.

J In the interior the price of best rice ranges from 8 to 9 seers and of common rice from 9 to 12 seers per rupee.

K In the interior the price of best rice ranges from 11 to 12 seers, and of common rice from 12 to 16 seers per rupee.

L In the interior the price of best rice ranges from 8 to 9 seers and of common rice from 9 to 12 seers per rupee.

M Large purchases and stormy weather prevailed since last week hence the rise in prices.

N In Patuakhali best and common rice at 14-4 seers per rupee.

O The price of rice has risen generally all over the district, in consequence of the rise in the river having afforded facilities for exportation.

P The price of best rice has risen generally all over the district, in consequence of the rise in the river having afforded facilities for exportation. Large quantities of rice have been exported during the last week from almost every mart, and the dealers are unwilling to sell, in expectation of a further rise.

Q In the interior the price of best rice ranges from 13 to 15 seers, and of common rice from 16 to 19-8 seers per rupee.

R In the interior the price of best rice ranges from 15 to 16 seers, and of common rice from 16 to 17 seers per rupee.

S In the interior the price of best rice ranges from 13 to 16-8 seers, and of common rice from 15 to 21-4 seers per rupee.

PRICES-CURRENT of Food-grains and Salt in the undermentioned Districts of Bengal on the 30th May 1874.—(Continued.)

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 4th JUNE 1874.

General Remarks.—There has been abundant rain during the week in Malabar; it has been slight elsewhere in the Madras Presidency; prospects are reported to be generally satisfactory. In Sindh the river has risen 3 feet above the level of this time last year. There have been good falls of rain in the South Mahratta country, and sowing operations are in progress; in the Deccan districts and Khandesh, there has also been fair rain, and showers elsewhere. There has been good rain during the week in Assam, Eastern and Central Bengal and Orissa, lighter falls in the Bhagulpore division and Chota Nagpore, and showers in some districts of the Patna division; Chumparun and Tirhoot are the only districts of Behar where the fall has been good. Great benefit has resulted from the rain, and sowings are now in active progress. The rain extended into the Benares division of the North-Western Provinces; good showers are reported from Goruckpore and Bustee, in both of which districts the numbers on relief works have diminished owing to the demand for agricultural labour and the exaction of a full task. There have also been showers in Bundelkund. Good rain has fallen in four districts in Oudh, none has fallen in the Punjab, except in Hissar and Rohtak. General rain is reported from the Central Provinces, Central India and Berar, where ploughing is in progress. Showers have also fallen in Rajpootana. In Mysore the rain continues. The season in Burmah is good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras— (June 4th)		
Ootacamund.		
Kistna ,,	1·89 at Masulipatam.	Rainfall general; small freshes in river; two feet water passing over anicut; prices stationary; public health fair; small-pox here and there; cattle healthy; pasture none; dry fodder being used; market well supplied locally.
Kurnool (3rd)	1·29 at Kurnool in three days.	Rainfall moderate in the taluqs; season favorable; cultivation commenced in some taluqs; markets moderately supplied; prices stationary; water and pasture sufficient; fever and cattle disease in many taluqs; freshes in the Tungabadra and Hindri.
Tanjore (4th)	·10 at Negapatam.	Rainfall, elsewhere drizzling; freshes in rivers; supply to tanks none; water over upper anicut none; cultivation almost none; standing crops very few, but good; harvest very little; pasture procurable; markets sufficiently supplied; prices stationary; small-pox in several places; cattle disease here and there, with some loss.
Trichinopoly (3rd)	...	Slight rain in one or two days; only the Cauvery continues in freshes; water and drinking supply as in last report; supply from wells rather better; condition of crops fair; outturn of kodei kar (small quantity reaped) above the average; no change in prices; public health good; condition of cattle good; pasture as in last report, but procurable.
Malabar (4th)	5·35	Sowing for first crop in progress; local and foreign supplies of grain slightly sufficient; fever prevalent; small-pox continues in hilly parts; cattle healthy; pasture much improved; heat abated; prices almost stationary.
Bombay— (June 3rd)		General prospects satisfactory.
Sindh.		
Kurrachee ...	...	River at Kotree-gauge on 30th ultimo 10 feet 5 inches against 7 feet 6 inches last year; Kutree canal opened on 26th idem; heavy rain at Mole in Kohistan.
Hyderabad ...	...	River on 2nd instant 3 feet higher than on same date last year; weather cool; no sickness.
Shikarpur ...	...	Average inundation; preparations for khureef cultivation; general public health fair.
Upper Frontier ...	...	Weather sultry; fever prevailing.
Gujarat.		
Ahmadabad ..	...	Weather growing warmer; was cloudy and equally on night of 1st instant.
Kaira ...	...	Health good; Hurree crop being collected.
Surat ...	...	Weather and public health good.
Broach ...	...	Weather warmer.
Khandesh and Nasik.		
Khandesh ...	...	Heavy shower with thunder on night of 2nd instant at Dhulia; weather and public health good.
Nasik ...	1·37	Land being prepared for sowing; public health good, except in Yeola where dengue fever has appeared.
Tanna (1st instant)	·75	Weather sultry; ague prevalent; fever in Taluq Mahim, and slight cattle disease in Mahim, Shapur, Moorbar and Bassein taluqs.
Deccan.		
Poona ...	1·77	Slight rain in Sirui, Poorundhur and Bhimthurry; weather somewhat cold; cattle disease in taluqs Indapur, Kesed, Bhimthurry and Havelly; fever among children in Havelly.
Ahmednuggur ...	·76	Cattle disease in some village of taluqs Karjat, Jamkhed and Aukola; public health good.
Sholapur ...	2·23	Sowing operations not commenced; public health good.
Satara ...	·62	Public health generally good, except in Malwa where bowel complaint slightly prevails.
Southern Mahratta Country.		
Belgaum ...	2·57	Manuring and sowing in progress; health good.
Dharwar ...	...	Rain general; sowing operations still progressing; no scarcity of drinking water.
Canara ...	5·75	Sowing operations in progress; public health good.
Kattyawar and Gaekwar's territory.		
Rajcot ...	·15	Weather hot.
Wudwan ...	...	Slight rain; health good.
Baroda ...	...	Temperature still high; south western breeze continues; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—		
Burdwan ...	2·41	Rain has fallen freely in all parts of the district, but Jehanabad. The standing crops, cotton and teel (oil-seed), have been benefited thereby, sowing of aous or early paddy progressing favorably.
24-Pergunnahs ...	1·02	Days hot, evenings generally cloudy, and nights close. Rain has fallen throughout the district; during the week, and except in Diamond Harbour and Sathkhira, the showers have been heavy these have done much good: the early rice and jute sowings have now nearly been completed.
Dacca ...	6·23	Rain has fallen; weather very hot last four days; state of crops very good. The only fear now is, a too sudden rise of the rivers.
Cuttack ...	...	Rain and storms in several places on the 29th and 30th May. Ploughing actively progressing.
Bankoorah ...	2·70	Heavy showers fell on different dates throughout the district. Temperature much lower. The general rain has rendered cultivation everywhere possible. The aous or early paddy is being sown, and ploughing progressing. Indigo is flourishing.
Beerbhoom ...	2·06	Damp and cool. Rain has fallen. Prospects improved by the change in the weather, which enables the cultivators to commence ploughing. No crops on the ground except teel (oil-seed), which is being gathered, proving about a 6-anna crop. Exportation by rail for week ending 23rd May 2,866 maunds, chiefly to Bhagulpore Division. Prices show a downward tendency.
Moorshedabad ...	3·16	Rain on three days of the week, and heavy clouds throughout. Temperature somewhat cooled. The seedlings of both the early and late rice are looking extremely well. The heavy storm reported last week passed over a large area; much harm was done to mangoes, a very large number of which were blown down. Prices have not risen much since last report, excepting at Ramporehaut, where there has been a considerable rise.
Dinagepore ...	3·32	Rain general throughout the district. The boro paddy nearly all cut; the crop is a very good one. The rain has done immense good to the bhadoi or early crop, which was in some parts beginning to suffer from want of moisture.
Maldah ...	2·71	Cloudy and rainy, cool easterly winds. There has been rain throughout the district; the only place where it has not been sufficient is Thana Kaliachack. The bhadoi or early crop now promises to be a very good one. Coarse rice is cheaper, 12 seers for the rupee.
Rajshahye ...	6·02	There has been heavy rain all over the district on several days since the 24th May. The rain of the last five days has made a material change in the prospects of the growing crops, the condition of which is now most hopeful. In some of the lower lying parts of the district there has been as much rain as is needed at present, and a further fall without an interval of dry weather will not be beneficial to the growing plants, and will also interfere with ploughing. The boro paddy is still being reaped. In the north-west of the district this crop was a good deal injured by a heavy storm of wind and rain of some seven hours' duration on the 24th May. In a few places prices have risen slightly during the week, the effect of the late rain not having been felt as yet.
Rungpore ...	5·90	Heavy storms and much rain all over the district. The rain has done much good to the rice crop. Millet is being harvested, and the early rice is being cut in many places and brought to market. Much damage was done in the south to the millet and rice for want of rain, but now matters are improving; some early rice has been destroyed by inundation from the Brahmaputer river. Prices still high, Rs. 5 to 6 per maund.
Bogra ...	4·53	Seasonable. Prospects of early rice good.
Patna ...	*Nil*	Hot, with strong east wind. No rain at head-quarters, but slight falls have been reported from different parts of the interior. The cheena (millet) is being cut. No other crops on the ground.
Gya ...	·07	Hot. No crops on the ground except sugarcane. Rain much wanted.
Shahabad ...	*Nil*	Prevailing wind east. Very hot weather, at times threatening; a little rain fell on Sunday, the 24th May, and some hail to the north-east of the district. No change since last week. Sugarcane, cheena (millet), and vegetables on the ground are doing well. Mango crop promising. Rain required to commence ploughing for the bhadoi or early crops.
Tirhoot ...	0·9	Excessively hot, east wind prevailing. The rainfall in the Hajeepore Sub-division was too partial to do much good to the crops, except those in the chur lands. In the high lands it will have done more harm than good by caking the ground. The low-lying moong (pulse) and paddy will have benefited by it. In the Mudhoobunnee Sub-division 1·06 inches of rain fell, and has done much good to the paddy and bhadoi or early crops, as well as to the indigo crop. The people have commenced to sow paddy in low land, but more rain is wanted soon. No report has been received from Durbhunga and Tanjore Sub-divisions. Want of rain is much felt in the Sudder Sub-division. At Seetamarhee Sub-division station the rainfall was 0·82. An inch of rain fell at Dynchapra and 2 inches at Syedpore on the 23rd May, and ½ an inch at Amoora and Seetamarhee; on the 25th May also ¾ inch fell. The rain has done great good; sowing is going on extensively. Many of the petty ryots have deserted relief works for their own fields. Prices remain stationary.
Sarun ...	*Nil*	Hot and clear, with occasional clouds. East wind prevailing. From Police and Sewan sub-divisional officer's reports it appears that on the 25th May there was a good fall of rain within the jurisdiction of Thanas Baragaon and Borowlee, and over the northern and eastern portions of Thana Sewan, and slight rain in Darowlee. The rain has been of very great benefit to the crops, where the fall was sufficient heavy, and will enable the ryots of those parts to sow the remaining lands the bhadoi (early) crops. The sub-divisional officer adds that kodo and other seeds, which were sown in anticipation of rain, will not germinate well. In other portions of the district, however, there was no rain, though it is most anxiously looked for. The continued drought and excessive heat are proving very injurious to all crops. Indigo prospects continue to be unfavorable. Cheena (millet) in various stages of growth. A large number of mangoes have been blown down by the recent high winds. Agricultural operations altogether suspended. Prices steady.
Chumparun ...	1·50	Rain on the 23rd, 25th, and 29th May. Temperature much lower since the rain. East winds. The rain was more or less general throughout the district, and has been of great benefit to the paddy and bhadoi or early sowings, which are now being pushed on briskly.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Monghyr ...	1·67	Strong easterly winds; heavy rain on the 23rd and 25th May. Weather cool and cloudy, very little on the ground. Ploughing is going on actively. If more rain comes within a week, a vast area will be sown down.
Bhaugulpore ...	·58	On 23rd 24th and 28th May rain over all Muddehpoora and north and east parts of Soopool Sub-divisions, very favorable to all crops and cultivation. Ryots engaged in cultivating.
Purneah ...	0·36	Warm, strong easterly winds. Rain general throughout the district on the 23rd, 24th and 25th May. The bhadoi or early sowings are everywhere going on briskly. The rains, especially heavy in the Arrareah, Kusba Amour, and Kissengunge divisions, have benefited the crops immensely. More rain is wanted in the Sudder Sub-division, where the rainfall has been slight. Kowrie (millet) harvested and is giving a fair yield.
Sonthal Pergunnahs ...	1·21	Pretty constant shower and heavy clouds, temperature variable. Wind in the beginning of the week with thunder and lightning. Still dry at Godda. A little rain at Rajmehal and a little more at Deoghur. Ploughing going on fitfully; ground still hard. Sowing begun 29th and 30th May; clouds all gone.
Lohardugga ...	1·20	Weather stormy with south-west winds; there has been rain on three days during the week. Sowing is going on generally in Chota Nagpore Proper. The late rains will prove very beneficial. Jungle produce is very abundant this year, particularly the serai or fruit of sál tree which is largely consumed by the poorer classes. Small-pox is still very prevalent in parts, but otherwise the general health is good. Prices appear to have a tendency to fall.
Manbhoom ...	·69	Stormy with occasional showers of rain. The showers of rain which have fallen have been welcomed both by man and beast; they have cooled the atmosphere, refreshed the withering grass, and checked the ravages of cholera, and have enabled the cultivators to plough and sow the early crops, and given hopes and restored confidence for the future. More rain, however, is wanted to enable the crops which have been sown to germinate freely.

PUBLIC HEALTH.

Burdwan—fever as before; cholera prevalent in the west of the district. Bankoorah—small-pox and cholera still prevalent. 24-Pergunnahs—a few deaths from cholera reported from thannahs Bankipore and Mothoorapore; the disease has abated in thannah Hurwah, but a few cases are still reported from Bodurea; fever continues in Baurepore, Moorshedabad; cholera and small-pox still prevalent in parts of the district. Rajshahye—cholera and small-pox have considerably abated. Chittagong—cholera still very prevalent all over the district. Patna—health of the district good, though cases of small-pox are still reported from the city. Gya—small-pox still prevalent. Shahabad—small-pox still prevalent. Tirhoot—cholera has broken out in some parts. Bhaugulpore—cholera reported from Kootri; health elsewhere very good. Purneah—very little sickness. Cuttack—cholera in a few places; public health generally good. Balasore—cholera disappearing.

General Remarks.—Seasonable rain has fallen during the week under review in almost all the districts of Bengal. In some, the fall was unduly heavy and fears are entertained, owing to the lateness of the sowings, of injury from inundation, should the rivers rise early. In one or two places, early rice on low lands has been already damaged by floods. On the whole, the rain has done immense good to the growing crops of rice, jute, &c., which were suffering from the drought, and in preparing the lands for the ensuing crops, also to the sowing of the early rice which has still not been completed in some places for want of moisture in the soil. Late rice is also being sown. Rain is urgently wanted where none has yet fallen, or where the fall has been insufficient. In Backergunge, the richest rice-growing tract in Bengal, the early rain-fall was scanty and prospects were bad; but the high tides had partially made good the deficiency. Reports just received state that the rains have come at last in time to sow the early rice crop which was suffering severely. In Behar, the rain-fall was too light or partial except in Champarun, to be of much benefit, and more is urgently needed for agricultural operations in general. Though slight and partial, the showers have done some good, and ploughing and sowings have commenced in earnest in some tracts. In the Bhaugulpore division the prospects have been greatly improved by a considerable fall, but more is wanted to complete the sowings. In Orissa dalwa rice and cotton crops are being harvested with good results, and ploughing and sowing are going on vigorously except on Pooree, where operations are at a stand-still for rain.

The general prospects of the season are improving, and an unusually large area of land is said to be under cultivation. The rains have also replenished the tanks which were failing in many places, and cultivators and agricultural laborers are leaving the relief works in some districts for the fields.

N. W. P.—			
Bustee	(June 1st)	...	Prices much the same; heavy shower at head-quarters and Domuriagunge on 30th ultimo. Reports from other parts not yet received; numbers on relief works fallen to 116,397, able-bodied men generally leaving works to labor in the fields; gradual closing of relief works contemplated, and transfer of really necessitous to workhouses. Five poorhouses with about 300.
Goruckpoor	(May 30th)	...	Slight rise of prices; heavy shower throughout the district on 25th, rendering rice-lands fit for ploughing; heavy rain also on 30th; weather continues cloudy and unsettled. Numbers on relief works still decreasing, falling off chiefly among men owing to demand for labor in the fields and exaction of a full task on relief works; 47,200 on works in north, and 37,600 in south, total 84,800; subsequent reports show further decrease of about 12,000 chiefly in north. In city poorhouse 489; in seven mofussil poorhouses 508.
Mirzapoor	(June 3rd)	·6	Prices much the same; cane doing well; storms throughout the district on 1st, but rain only in Doodhee; north of Soane one relief work with 421; south of Soane ten works, returns not received.
Benares	"	...	Wind easterly; slight showers on 29th and 30th ultimo.
Azimgurh	(May 31st)	...	Slight rise of prices; general but slight rainfall on 31st.
Allahabad	(June 3rd)	...	Prices fallen, easterly wind, clouds gathering.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
N. W. P.—*contd.*			
Banda	(June 2nd)	...	Condition of people continues good; slight partial rainfall on 29th ultimo; two relief works with small attendance; 14 poor-houses with 794; in Kirwee mango crop plentiful; four poor-houses with 1,143.
Humeerpoor	(2nd)	...	No noteworthy change; on relief works 1,763, in poor-houses 475.
Jaloun	(1st)	...	Weather cloudy; slight rain in Kobnah on 28th ultimo.
Jhansi	(3rd)	...	Prices slightly falling; thunderstorm and slight rain on 27th ultimo; on relief works 996.
Cawnpoor	,,	...	No rain; easterly wind since the 1st; thunderstorm on 2nd.
Futtehgurh	,,	...	No rain; slight fall in prices.
Agra	,,	...	Cloudy weather and dust-storm.
Allygurh	,,	·2	Prices stationary.
Meerut	,,	...	Cane promising well.
Saharunpoor	(2nd)	...	No rain.
Bijnour	(1st)	...	No rain; prices unchanged; cane doing well.
Moradabad	(3rd)	...	Harvest well housed; no rain; prices unchanged.
Bareilly	,,	...	No change in weather or prices.
Nynee Tal	(4th)	...	Steady rain since night of 3rd.
Punjab—			
Lahore	(June 4th)	...	Rain report 3rd June, two sparing showers at Hissar, none elsewhere; rubbee crop gathered; preparations for khurreef commenced; public health generally good; a little small-pox in Hissar and Rohtuk districts; fever slightly prevalent in Delhi, Sirsa, and Rawulpindee districts.
Oudh—			
Lucknow	(June 3rd)	*Nil.*	There was a good fall of rain in the Akbarpur and Tanda tahsils of Fyzabad, and in the Gonda and Bharaich districts on the 31st May; preparation for khurreef sowing going on; sugarcane and sawan being irrigated; the former coming up well; weather cloudy and cool; public health good.
Fyzabad (Hd. Qrs.)	,,	·1	
C. Provinces— (June 4th)			
Raipur	(May 29th)	·23	Weather stormy; ploughing commenced; health good; water scarce; prices falling.
Mandla	(30th)	...	Cloudy; small-pox still prevailing; prices stationary.
Upper Godavari	...	·21	Weather stormy; health good.
Sumbalpoor	...	1·55	Clear; ploughing for khurreef; health good; rice 35 seers.
Belaspoor	...	...	Cloudy; fever and small-pox about; prices easy.
Chindwarra	(June 1st)	·56	Clear; khurreef ploughing commenced; no epidemic; prices steady.
Chanda	...	...	Slight rain; hot; small-pox prevalent; prices easy.
Wurdha	(3rd)	·17	Small-pox prevalent; prices stationary.
Nimar	...	...	Agricultural prospects and health good; prices stationary.
Seoni	...	·31	Cloudy.
Saugor	...	·15	Cloudy; winnowing completed; ploughing commenced; small-pox continues; prices rising.
Jubbulpoor	...	·38	Hot; health good; ploughing for khurreef.
Dumoh	...	·20	Prices stationary.
Hoshangabad and Baitool...		...	Prospects early rain; rubbee stored.
Nursinghpoor	...	...	Prices stationary; small-pox prevalent.
Nagpoor	...	·4	Cloudy; ploughing commenced; small-pox continues.
Hyderabad Assigned Districts—			
East and West Berar (June 4th)		·47	Land still under plough; public health good.
Rajpootana— (June 4th)			
Serohi	(1st)	...	A little water in some tanks; wells getting rather low; health very good; weather seasonable.
Marwar	(May 24th)	...	Wells getting low; health good; on night of the 23rd storm from north accompanied by light shower, which abated rigour of weather; another storm on evening of the 24th, but no rain.
Harowtee Agency States ...		...	Slight shower at Ootass and Jhallawar; water-supply good; health good; weather-stormy every evening.
Ulwur	(May 28th)	...	Tanks and wells fairly stocked; in parts full; health good; early cotton and bajra sowings effected in many parts; notwithstanding slight rainfall, temperature has risen during week.
Bhurtpoor	(June 4th)	...	Health excellent; weather cloudy and close.
Jeypoor	...	...	One rainfall during week; sowing not yet commenced; public health good.
Ajmere	...	...	Storms from the east with rain; weather pleasant, and health good.
Central India (June 4th)			
Indore	(3rd)	·41	Weather stormy; health good.
Gwalior	...	...	Weather stormy; slight rain; small-pox decreasing.
Neemuch	...	·23	Health good.
Rutlam	...	·55	Prospects of harvest good; health good.
Baghelkhand (Sutna)	...	...	Public health good.
Bundelkhand	...	...	Suffers in places from scarcity, otherwise Central India is prosperous.
Mysore & Coorg—			
Bangalore Cantonment	...	·73	Rain continued to fall throughout the districts.
Coorg	...	·93	Ploughing, sowing operations commenced; agricultural prospects fair; public health good; cattle disease in one district.
Nepal (May 27th)		·75	Fair.
British Burmah (June 4th)			
Arracan Division	...	6·	Public health good; weather fair; ploughing not commenced.
Pegu do.	...	...	Rainfall heavy in coast districts; moderate in the interior; health good throughout; cultivation beginning.
Tenasserim Division	...	...	Health good; heavy rain last week; land being ploughed for paddy crops.
Assam—			
Gowhatty	(June 2nd)	6·56	Weather variable, generally hot and oppressive; aouse crop in low-lands under water; prospects of tea and sugarcane favorable; choleraic diarrhœa, dysentery and fever prevailing.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

REVENUE REPORT OF IRRIGATION WORKS, BENGAL, FOR 1872-73.

Nos. 345—59 I, dated Fort William, the 29th May 1874.

OBSERVATIONS—By the Government of India, PUBLIC WORKS DEPT.

Read—

Revenue Report of Irrigation Works in Bengal for 1872-73.

Resolution of the Government of Bengal, No. 28 I—A, dated the 12th January 1874, reviewing the above.

OBSERVATIONS.—This is the first Report for Bengal which has been prepared with any degree of detail, and the Governor General in Council is gratified to observe the care with which it has been drawn up; it contains much interesting and valuable matter in the way of statistics.

2. The Canal Revenue Superintendent and his Assistants have afforded valuable information on the working of the new system of Revenue management, the modes of cultivation of the several classes of rice-crops, the probable cost of production, the out-turn per acre, and the profits realized by the ryot.

3. The Engineering Branch, too, has contributed useful information touching the available supply of water, the present and probable ultimate duty which may reasonably be looked for from the water, and calculations of the cost of maintenance and repairs per mile of canal, and distributary open, per acre irrigated and commanded, &c.

4. The results as regards irrigation, though very small, seem on the whole to hold out hopes of ultimate, though, perhaps, slow, development of irrigation. The areas irrigated during the current year have reached nearly 50,000 acres in all, or more than double that of the year under review.

5. The traffic and navigation receipts have similarly increased. Still, there is much room for improvement in the Revenue management, and the Government of India trusts that the Government of Bengal will duly impress on the Canal Revenue Officers the necessity of exercising a firm adherence to the regulations laid down for their guidance.

6. The figures given in the Report have been compared with the annual finance accounts, and have been corrected where necessary.

GENERAL.

7. *Financial results.*—The aggregate capital invested in canals in operation and under construction in the Province up to the 31st March 1873 amounted to Rs. 2,62,92,563, of which sum Rs. 44,79,410 were expended during the year. The outlay on works not yet yielding any return amounted at the close of the year under review to Rs. 79,34,059*, leaving Rs. 1,83,58,504 as the amount expended on canals in operation.

* Orissa Project, Ranges II and III, High-Level Canal		8,15,392
Sone Project		69,33,821
Damoodah „		1,84,846
Total ...		79,34,059

8. The following table gives the capital debit to each series :—

Works.	Capital to 1st April 1872.	Additions during 1872-73.	Capital on 1st April 1873.
	Rs.	Rs.	Rs.
Orissa Project, including the Brahminee and Byturnee Series	1,10,49,563	11,66,210	1,22,15,773
Midnapoor Project, including Tidal Canals ...	61,44,973	8,13,150	69,58,123
Sone Project	44,34,726	24,99,095	69,33,821

Damoodah Project, "Ordinary"...	1,83,891	955	1,84,846
Grand Total ...	2,18,13,153	44,79,410	2,62,92,563

9. The gross direct income (assessments) of the year amounted to Rs. 85,541, and the charges for maintenance and establishment, including remissions, to Rs. 3,36,270†, showing a loss on the transactions of the year to the extent of Rs. 2,50,729. No useful or reliable comparison can be instituted with the financial results of the previous year, because of the numerous remissions that took place in that year in consequence of disputes regarding irrigation, and the loose system under which the assessments were then made. It is hoped that matters in this respect are now placed on a sounder footing, and that there will be improvement in the future.

	Rs.
† Actual expenditure	3,34,210
Remissions	2,060
	3,36,270

10. The figures given in different parts of the Report of the aggregate increase to capital invested do not agree. They are Rs. 45,01,611 in para. 33, and Rs. 44,59,127 in the table. The table seems to be correct as it allows for adjustment by receipts and errors, whereas the figures in para. 33 do not.

11. The total unadjusted current and interest charges up to the close of the year on works in operation aggregated Rs. 31,20,060, of which Rs. 26,09,334 are on account of accumulated interest, and the remainder Rs. 5,10,726 for working expenses. The accumulated interest charges on works in progress and stopped amounted to Rs. 5,52,404, which brings up the total amount of the unadjusted charges on all irrigation works in the Province to Rs. 36,72,464.

12. The financial results of the canals in *operation* may be summed up thus—

	Rs.	Rs.
Capital invested to end of 1872-73		1,83,58,504
Accumulated interest charges at 4½ per cent., excluding interest paid to Shareholders while the work was in the hands of a Company, and which has been debted to Capital		26,09,334
Current charges to end of 1872-73	8,52,712	
Deduct receipts to end of 1872-73	3,41,986	
		5,10,726
Total unadjusted interest and current charges ...		31,20,060

13. From the following comparative table of income from the various sources for the past two years, it will be observed that there is an increase in every item but water-rate, the falling off on which is due to the excessive rain-fall, which was above the average of the past 17 years ; and to the heavy and destructive floods of June and July 1872, which damaged the canal works and prevented a larger demand for water. On the whole, however, there is a small increase in the gross income of the year.

Year.	Water-rates.	Navigation.	Plantations.	Sales of produce.	Rent of buildings.	Rents of lands and fisheries.	Sales of tools and plant.	Fines.	Sundries.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1871-72 ...	38,335	41,556	...	116	49	2,779	...	234	...	83,069
1872-73 ...	27,277	45,492	54	598	3,914	5,144	980	641	1,441	85,541

14. From the following figures it will be seen that there was an increase of Rs. 10,567 in the cost of maintenance and repairs as compared with the results of last year. This increase is due to the damage sustained by the canal works during the floods already alluded to. In the establishment charges, however, there was a slight decrease. Such comparisons will be better instituted in future years—

	1871-72.	1872-73.
	Rs.	Rs.
Maintenance and repairs	2,17,661	2,28,503
Establishment	1,05,982	1,05,707
	3,23,643	3,34,210

15. *Balances.*—The year opened with an unrealized balance amounting to Rs. 45,753, the amount falling due within the year under review was Rs. 65,421, bringing up the total demand at the close of the year to Rs. 1,11,174. Of this sum, Rs. 55,453 have been recovered, and Rs. 33,934 remitted and written off as irrecoverable, thus leaving an unrealized balance at the close of the year of Rs. 21,787 only. Owing to the uncertainty of all claims made under the old system of assessment, the writing off and remission of the large sum above shewn is said to have been unavoidable. The Commissioner of Orissa remarks that many of the old leases were so loosely drawn up, and the actual receipt of water so difficult to prove, that the adjustment of the accounts was tedious beyond measure. In the Midnapoor Circle similar difficulties were experienced.

16. The process of remissions, &c., is reported to have been carefully watched by the Commissioner, and all claims for remission to have undergone full and careful enquiry ; and it is satisfactory to learn that the whole of the old outstanding arrears of accounts have now been brought up and cleared, and that the new system of Revenue management and accounts has been placed on a sound and satisfactory footing.

17. *Area irrigated.*—The area irrigated during the year was 18,159 acres, of which 4,753 acres were in Orissa, and 13,406 acres in the Midnapoor Circle. There is, therefore, a falling off in the irrigated area in both the Orissa and Midnapoor Series, as compared with last year. Two special reasons for this diminution are given : (1), the excessive rain-fall and consequent loss of crops, and damage to distributaries by floods ; (2), the pressure put on the ryots for simultaneous payment of four years' arrears, and the uncertain nature of the old demands.

18. The progress of irrigation would, perhaps, be more rapid if water were available for the cold-weather crop, but at that season the rivers are so low that comparatively only a small area can be irrigated. The Sone works, when completed, will, it is believed, possess greater advantages in this respect than the Orissa and Midnapoor Series.

19. *Navigation.*—There is an increase of Rs. 3,936 in the canal traffic receipts for the year as compared with the previous year, which is thus made up—

	Rs.
Increase in the Midnapoor Series	8,759
Decrease in the Orissa „	4,823
Net ...	3,936

The decrease in the latter was due partly to the stoppage of all canal extension works, and in consequence of transport of material for canal purposes; and also partly to a failure of water in the Kendrapara Canal both for navigation and irrigation purposes.

20. The following table gives particulars of the traffic :—

Abstract of Traffic on Canals in Orissa and Midnapoor, including Government stores and material for Government works, during 1872-73.

	No. of Boats.	Tonnage.	Tolls.
			Rs.
Kendrapara Canal	3,947	26,313	10,296
Taldunda and Matchgong Canal	382	2,452	457
Midnapoor High-Level Canal	26,407	103,314	21,165
Brahminee „ „	772	3,190	1,417
Hidgellee Tidal Canal	7,721	19,153	14,161
	39,229	154,422	47,495

21. The toll collections during the year were as follow :—

	Rs.
Orissa	12,170
Midnapoor, including Hidgellee	35,327
	47,497

The opening of the canal throughout from Midnapoor to Calcutta will, it is believed, add greatly to the navigation receipts.

22. *Revenue Administration.*—The whole establishment has been re-organized; its cost though high, as compared with the revenue assessed and collected, is said to be by no means disproportionate to the large area commanded and requiring supervision; and in order to maintain efficiency in issues of leases, delivery of water, &c., and to retain confidence in the people, it is for the present considered indispensably necessary to maintain the Revenue establishment at its present strength.

23. The main feature in the new system of Revenue assessment is the principle of dealing with each individual ryot, instead, as heretofore under the old system, with certain persons farming on account of the whole village. The lease now specifies each ryot's holding, bears his signature, and renders him individually liable to the Department to the extent of his engagement. In the

Midnapoor Division, even the collections have been made by the Government Officers. This practice goes beyond the requirements of the new rules; but it is said to have been much appreciated by the ryots, who everywhere strenuously opposed the nomination of a middle-man to collect the canal revenues.

24. The general impression amongst the local Revenue Officers appears to be that a material improvement has been effected by the introduction of the new system, which has tended to increase confidence, and therefore, it is hoped to the spread of irrigation. Doubtless, some time must elapse before cultivators will thoroughly appreciate the advantages of regular and early irrigation in a country where they have been for so long accustomed to be entirely dependent on the rain-fall.

25. Other causes also apparently tend to check the more rapid development of systematic irrigation, such as—

(1.) The low prices of rice (the principal crop from which canal revenues are derived) in ordinary years.

(2.) The state of indebtedness of the cultivators.

(3.) The nature of the agreements between the landlord and tenants.

Orissa Series.

26. *Irrigation Operations.*—The area irrigated on this series was 4,753 acres, which is 6,900 acres less than that of the previous year. The falling off is ascribed to the increased rain-fall of 1872-73, *viz.*, 63·04* inches, being higher than the average of the past 17 years, which is 55·61 inches. Other causes, too, have aided this result, among them the termination of a lease taken by the Rajah of Durpun on the High-Level Canal; and the heavy injury sustained by the Taldunda Canal from the floods of July 1872, which rendered it useless for the remainder of the season; the distributaries on all the canals were also for a considerable portion of their section so cut up as to render them unserviceable.

* Chief Engineer gives it in para. 7 as 73·04.

27. The following table compares the irrigated areas of the years 1872-73 and 1873-74 :—

	1872-73.	1873-74.	Increase.
	Rs.	Rs.	Rs.
Area taken up for rice at Re. 1	3,646	4,176	530
„ leased for rubbee and sugarcane	954	3,418	2,464
Total	4,600	7,594	2,994

The average water-rate per acre amounts to Rs. 1·13 only.

28. The proportions of autumn to spring, and flow to lift irrigation on each canal, will be seen from the following table :—

Name of Canal.	Description of crop.	Flow.	Lift.	Total.
Kendrapara Canal	Khurreef ...	3,442	52	3,474
„ „	Rubbee ...	685	159	844
High-Level Canal, Section I	Khurreef ...	237	...	237
Taldunda „	Khurreef ...	88	...	88
	Rubbee ...	95	2	97
Matchgong „	Sugarcane...	12	1	13
Total	...	4,539	214	4,753

From the foregoing it will be seen that the proportion of autumn to spring crop is as 80 to 20, and that the percentage of flow to lift is as 95·5 to 4·5.

29. *Channels.*—The length of the canals open at the commencement and close of the year is reported to be as follows :—

Name of Canal.	Open at end of 1871-72.	Open at end of 1872-73.	Added during 1872-73.
	Miles.	Miles.	Miles.
Kendrapara Canal	39·6	39·6	0
Main Channel Distributary Canal	115·3	115·3	0
Branch ditto ditto	129·5	129·5	0
Village Channel	...	59·5	59·5
High-Level Canal	33·1	33·1	0
Distributaries ditto	71·5	88·	16·5
Taldunda ditto	27·3	27·3	0
Distributaries ditto	59·5	64·5	5·0
Matchgong ditto	15·	15·	0
Distributaries ditto	63·	66·8	3·8
Midnapoor ditto	30·	38·	8·
Main Distributaries	102·	177·	75·
Village Channel	...	77·5	77·5
Total	685·8	931·1*	245·3

* Canals ... ... 153·
Distributaries ... ... 641·1
Village Channels ... ... 137·
Total ... 931·1

30. During the year under review, 8 miles of canals, 100·3 miles of distributaries, and 137· miles of village channels, were opened, making the total lengths of the several descriptions of channels at the close of the year,—canals 153 miles, main and branch distributaries 641·1 miles, and village channels 137·0 miles.

31. *Capital Account.*—The Capital Account of the Orissa Series at the commencement of the year amounted to Rs. 1,10,49,563, to which an addition of Rs. 11,66,210 was made during the year under review, bringing up the total investment to Rs. 1,22,15,773 after an adjustment of a small sum credited under Receipts.

32. *Revenue Account.*—The gross income (assessment) for the year amounts to Rs. 22,953 ; the working expenses, including remissions (which should be excluded in future), to Rs. 2,38,224. There was, therefore, a loss of Rs. 2,15,271 on the transactions of the year, which is equivalent to Rs. 1·94 on the capital of Rs. 1,10,49,563 expended to the end of March 1872.

33. *Collections.*—The unrealized balance at the commencement of the year on account of water-rate and miscellaneous revenue was Rs. 22,047 ; and the amount which fell due during the year was Rs. 32,518, making a total of Rs. 54,565. Of this sum, Rs. 22,303 were recovered, and Rs. 28,746 remitted, leaving a balance of Rs. 3,516 at the end of the year.

34. The following table compares the receipts and expenditure under each head for the past two years :—

Actual Receipts.

Particulars.	Receipts in 1872-73.	Receipts in 1871-72.	Difference.
	Rs.	Rs.	Rs.
Water-rates	19,071	17,915	+1,156
Navigation	10,044	14,867	—4,823*
Plantations	54	...	+ 54
Miscellaneous	7,454	11,170	—3,716†
Total	36,623	43,952	—7,329

* The decrease in navigation receipts is due to the floods of June and July 1872 damaging the canals, and necessitating their closure for the season.

† The decrease in miscellaneous receipts is chiefly due to a sum of Rs. 2,696 for rents of buildings.

Expenditure excluding Assessments.

Particulars.	Expenditure in 1872-73.	Expenditure in 1871-72.	Difference.
	Rs.	Rs.	Rs.
Maintenance and repairs	1,63,884	1,45,595	+18,289‡
Establishment	74,088	76,165	— 2,077
Tools and Plant	...	3,574	— 3,574.
Profit and Loss	30	610	— ·580
Total	2,38,002	2,25,944	+ 12,058

‡ Due to injury caused by the floods of June and July 1872.

35. The percentage of cost of repairs on the Taldunda and Matchgong Canals is disproportionately high, owing to the cost of maintenance having been entirely merged in the expenditure on *special flood repairs*, which cost Rs. 23,300 on the canals, and Rs. 11,000 on the distributaries.

36. *Navigation.*—The returns from navigation are stated in para. 12 to amount to Rs. 10,044 against Rs. 14,867 in 1871-72, and the falling off to be due to the closure of the canals rendered necessary from the damage done by floods. This agrees with the tables given in paras. 3 and 5, but not with that for the total traffic, Appendix 3 of the Report, where the figures given are Rs. 16,523 and Rs. 12,170. This discrepancy should be explained.

37. A comparison between the private traffic in 1871-72 and 1872-73 is made in the following table :—

		Number of boats.		Tonnage of cargo.		Value of cargo.		Tolls.	
		1871-72.	1872-73.	1871-72.	1872-73.	1871-72.	1872-73.	1871-72.	1872-73.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Total	...	2,548	2,572	36,375	25,052	29,85,331	42,98,416	8,456	7,476
1872-73 More	...	...	24	...	...	...	13,13,085	...	...
1872-73 Less	...	...	...	...	11,323	...	...	...	980

which shows that the tonnage of cargo has fallen off by 11,323 tons, while there is an increase of Rs. 13,13,085 in its value; the inference appears to be that higher classes of goods are being more largely passed over the canals. The Chief Engineer, however, thinks these values are not to be relied on.

38. The irrigation returns show that the area *irrigated* bears a very small proportion to that *irrigable* from the water in the canal. Better results may be hoped for in future years.

39. *Distribution of water.*—It is reported that a change in the system of water distribution has been resolved upon, and that for the future irrigation will be effected from groups of distributaries, or reach by reach of the canal, in place of the miscellaneous and somewhat desultory way it has hitherto been carried on. Probably this change will result in improvement.

Midnapoor Series.

40. *Irrigation operations.*—The total area irrigated and assessed during the khurreef season of 1872-73 was 13,406 acres, and the only crop for which there was a demand for irrigation was rice (amun). The irrigation was all by flow. During the rubbee season water was given gratis to an area of 724 acres cultivated with Dalwa rice to compensate for damages done to crops by floods owing to accidents to the head sluice at Range III in October 1872.

41. Of the total area irrigated and assessed, 11,488 acres were charged for at the ordinary rate of Rs. 1-8 per acre, leases having been taken before the 1st August; 1,475 acres were charged for at the higher rate of Rs. 2-4 per acre, leases having been taken after the date mentioned above; and the remaining 443 acres were charged at Rs. 3 per acre for surreptitious irrigation.

42. *Capital Account.*—The capital invested in this series at the commencement of the year amounted to Rs. 61,44,973; the outlay during the year amounted to Rs. 8,13,150, bringing up the total investment to Rs. 69,58,123.

43. *Revenue Account.*—The gross income (assessment) for the year amounted to Rs. 62,588, the working expenses, including remissions (which should be omitted in future,) to Rs. 98,046. The loss on the transactions of the year were therefore Rs. 35,458, or Rs. 0·57 per cent. on the capital invested to the commencement of the year, amounting to Rs. 61,44,973.

44. The following two tables compare the actual receipts and expenditure for the past two years :—

Receipts.

Particulars.	Actual receipts in 1872-73.	Receipts in 1871-72.	Difference.
	Rs.	Rs.	Rs.
Water-rates	23,556	23,275	+281
Navigation	35,448	26,689	+8,759
Miscellaneous	7,304	4,545	+2,759
Total ...	66,308	54,509	11,799

Expenditure excluding Remissions.

Particulars.	In 1872-73.	In 1871-72.	Difference.
	Rs.	Rs.	Rs.
Maintenance and Repairs	64,589	67,882	—3,293
Establishment	31,619	29,817	+1,802
Total ...	96,208	97,699	—1,491

45. *Collections.*—The total amount due on account of water-rate and miscellaneous revenue at the commencement of the year amounted to Rs. 31,063, and the assessments which fell due within the year aggregated Rs. 25,546. Of this sum, Rs. 26,775 were recovered during the year, and Rs. 11,563 were refunded, remitted, and written off, leaving a balance of Rs. 18,271 at the close of the year.

46. The remissions, which amounted to more than 43 per cent. of the collections, were chiefly on account of water-rates for 1871-72 and previous years, a sum of Rs. 1,822 only having been remitted from the assessments of 1872-73. Of the balance of Rs. 15,046 outstanding at the close of the year on account of water-rates, Rs. 3,948 only are for 1872-73, and the remainder for previous years.

47. *Navigation.*—The returns from navigation are Rs. 35,448 against Rs. 26,689 in the previous year. It will be seen from the figures in the following table that the increase in the receipts of private traffic in 1872-73 amounts to cent. per cent., notwithstanding that the Hidgellee Tidal Canal remained closed for a considerable part of the year owing to silt clearances. This is encouraging; the increase in the tonnage and value of cargo was, however, much less than what might have been expected from the increased receipts. This result is said to be due to a more strict and careful method of valuation than has hitherto been adopted, and may be considered satisfactory :—

	Number of boats.		Tonnage of cargo.		Value of cargo.		Tolls.	
	1871-72.	1872-73.	1871-72.	1872-73.	1871-72.	1872-73.	1871-72.	1872-73.
					Rs.	Rs.	Rs.	Rs.
Total ...	11,796	34,051	96,008	1,22,740	51,15,282	86,42,263	17,546	35,036
1872-73 More ...	...	22,255	...	26,732	...	35,26,981	...	17,490
1872-73 Less ...	...	...	...	...	...	...	...	...

48. The High-Level Canal from Midnapoor to Oolooberriah was opened for general traffic in October last, and promises to add considerably to the canal revenue.

Sone Project.

49. The sanctioned portion of this project is rapidly approaching completion, and it is anticipated that it will be available for irrigation in 1874-75. The water was freely thrown over the country in the autumn of 1873, in view to save a portion of the rice crops.

50. The praise awarded by the Local Government to the Irrigation and Revenue Officers is endorsed by the Governor General in Council.

Order.—Ordered, that a copy of the Report and of this Resolution be forwarded to the Secretary of State for information.

Also, that copies be forwarded to the Financial Department and Department of Revenue, Agriculture and Commerce, for information.

Also, that this Resolution be communicated to the several Local Governments and Administrations in the Public Works Department, Irrigation Branch, for information.

And further, that this Resolution be forwarded to the Home Department for publication in the *Gazette of India*.

Demand fair for sugarcane and indigo; a good deal of khureef Irrigation was effected last month.

E. Jumna Canal.—No remarks, but there was a fair demand during the month for 'Paleo.'

Doon Canals.—No remarks.

Traffic.—Compared with the return for the same month last khureef, the month's operations exhibit a large decrease in raftage, on the other hand there is a considerable increase in carriage of grain, and it is reported that new crops had begun to arrive on the canal banks at Khuttowlee towards the end of the month.

ALLAHABAD,
The *April* 1874.

G. H. D. WALKER,
Offg. Asst. Secy. to Govt., N.-W. P., P. W. D., Irrigation Branch.

† Return for week ending 30th May 1874.

T In the interior prices range as follow :—Wheat from 12 to 13-12 seers, barley from 16 to 18-8 seers, best rice 9 to 10 seers, common rice from 9-8 to 11 seers, maize from 13 to 16-12 seers, and gram from 14-8 to 16-12 seers, per rupee.

U In the interior prices range as follow :—Wheat from 14-8 seers, barley from 17 to 19 seers, best rice from 8 to 9 seers, common rice from 10-8 to 12 seers, and maize from 15 to 17-8 seers, and gram from 17 to 18 seers per rupee.

V In the interior prices range as follow :—Wheat from 7-12 to 15 seers, barley from 12-8 to 18 seers, best rice from 7 to 13 seers, common rice from 8-12 to 14 seers, maize from 11 to 16 seers, and gram from 11 to 18 seers, per rupee.

W In the interior prices range as follow :—Wheat from 10 to 14 seers, barley from 14 to 17 seers, best rice from 8 to 12 seers, common rice from 11 to 14 seers, lesser millet at 16 seers, maize from 14 to 16-8 seers and gram from 12-12 to 16 seers per rupee.

X In the interior prices range as follow :—Wheat from 11 to 14-8 seers, best rice from 8 to 10-8 seers, common rice from 9 to 12 seers, bulrush millet from 15 to 18 seers, maize from 12-8 to 16 seers, and gram from 11 to 17 seers, per rupee.

Y Rice is sold in the interior from 34 to 42 seers per rupee.

Z In the interior prices range as follow :—Wheat from 11 to 15 seers, best rice from 10-8 to 15-8 seers, common rice from 12-8 to 17 seers, and gram from 10 to 13 seers per rupee.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 11th JUNE 1874.

GENERAL REMARKS.—Good rain has fallen throughout Madras, where prospects are satisfactory. In Sindh the river continues unusually high, and operations for the khareef are progressing. Abundant rain has fallen throughout the Bombay Presidency, especially in Canara, the Deccan districts, and Khandesh and Nasik. In Bengal the monsoon has set in; the rainfall has generally been of the most favourable description, with frequent intervals of sun-shine; good falls are reported from Patna, Monghyr and Bhagulpoor. The prospects of the *aus* rice are good; operations for the *amun* are commencing; and the *boro* crop has been generally reaped, with a good result. The setting in of the rains is also reported from the North-Western Provinces, the Punjab, and Oudh; ploughing and sowing have begun in most districts. The numbers on relief works in Goruckpore and Bustee have greatly fallen since last week; some relief works have been closed. Reports from the Central Provinces, Berar, Central India and Rajpootana all shew the monsoon to have begun. In Mysore the rain continues.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 11th)	2·70 at Masulipatam.	Rain general in the district; in Bapetta, excessive; small fresh in river; four feet six inches over anicut; agricultural operations commencing; gingelly, sajja, millet, and red and green gram sowing; seed beds commenced in parts; prices stationary; public health satisfactory; small-pox in a mild form continues; cattle healthy; pasture scarce; dry fodder being used; markets well supplied locally.
Kurnool (10th)	1·03 at Kurnool on four days.	Season favourable; good showers of rain throughout; early crops being sown; markets well supplied; prices generally stationary; water and pasture abundant; fever and small-pox in some taluqs; cattle disease throughout.
Negapatam (11th)	·97 at Negapatam.	Rainfall elsewhere, scanty; freshes in river decreasing; no supply to tanks; water over upper anicut none; cultivation almost finished; standing crops good, though very few harvested; gingelly, oil seed, &c., in some taluqs yield below the average; pasture procurable; markets sufficiently supplied; prices slightly rising; small-pox in several places; cattle disease in Manargudi taluq, with some loss.
Trichinopoly (10th)	...	Moderate rain throughout the district during the first week of the month; Cauvery continues in fresh; water supply sufficient in rivers, channels and tanks for drinking purposes, the supply being rather better; condition of crops good; carpaddy being sown in wet lands and cholum and other grains in dry lands; outturn of cholum in wet lands up to the average, in dry rather below; supply to markets sufficient; prices stationary, except cumboo and raggi rather higher in Uddazarpoliem; public health good; in Trichinopoly town some cases of small-pox; condition of cattle good; pasture procurable, though still scanty in dry villages.
Calicut (11th)	6·07	Sowing for first crop in progress; local and foreign supplies of grain sufficient; small-pox continues slightly; fever prevalent in hilly parts; cattle healthy; pasture much improved; heat abated; prices stationary.
Bombay— (June 11th)		General prospects satisfactory.
Sindh.		
Kurrachee ...	...	River at Kotree gauge on 6th instant 13 feet 8 inches, being 3 feet 5 inches higher than last year; encroaching on towns of Kothie, Kotree, Gorabaree and Majunda; floods from Gaj in Dadoo taluq on 25th ultimo; promise of good cultivation therefrom; shock of earthquake in Dadoo on 26th ultimo for a minute; great heat; rain expected.
Hyderabad ...	...	River on 9th instant 2 feet 9 inches higher than on same date last year; weather cloudy; slight shower of rain on 10th; no sickness.
Shikarpur ...	...	Khareef sowing progressing; river unprecedentedly high, 12 feet 11 inches on Bukkur gauge; great heat has been tempered by duststorms and rain is threatening; public health good.
Upper Frontier ...	...	Preparations for khareef crops commenced; canals opened and wells supplied; weather during past week extremely hot; fever prevailing; some rabi grain Doras in danger of being flooded and destroyed.
Gujarat.		
Ahmadabad ...	·21	Weather cloudy and hot; public health good.
Kaira ...	·90	Weather and health good.
Surat ...	2·35	Agricultural operations progressing; public health good.
Broach ...	·75	Rain began on 5th.
Khandesh and Nasik.		
Khandesh ...	2·57	Rainfall favorable; sowing in progress; weather and health good; cotton market dull.
Nasik ...	4·44	Sowing of early crops commenced in Baglan; public health good; dengue continues slightly in Yeola Konkan.
Tanna ...	4·73	Weather thundering and rainy; ague and cough prevalent; slight cattle disease in Salsette, Mahim, Murbar and Bassein taluqs; fever in Mahim taluq; guinea-worm and small-pox in Warra taluq.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Deccan.		
Poona ...	·12	Fallen more or less throughout the district; climate good; cattle disease continues in Judapur, Khed, Bhimthadi and Havelly Taluqs; children attacked with measles in Havelly.
Ahmednuggur ...	1·43	Cattle disease in some villages of Ankola, Jamkhed and Karjat Taluqs; public health good.
Sholapur ...	2·38	Sowing begun throughout the districts; cattle disease in Mareh; health good; weather pleasant.
Satara ...	4·4	Sowing of khureef crops partially commenced; fever and bowel complaint in Walwa and ague in Patun.
Southern Mahratta Country.		
Belgaum ...	·92	Sowing commenced; health good.
Dharwar ...	...	Rainfall good in every taluq; sowing of early crops progressing.
Canara ...	11·25	Sowing in progress; fever, cattle disease and small-pox slightly prevalent.
Kattyawar and Gaekwar's territory.		
Rajkot ...	·30	Weather very hot.
Wudwan ...	...	Slight rain; health good.
Baroda ...	·12	Weather seasonable; public health good.
Bengal—		
Hooghly (June 11th)	...	Nearly one inch of rain today.
Burdwan („ 9th)	1·4	Rain has fallen in all the sub-divisions except Jehanabad, but still more is wanted.
(„ 11th)	·83	Sowing of aus or early paddy going on extensively. Prices slightly higher in Burdwan and Raneegunge.
Bankoorah ...	2·01	Generally showery and cool. The rains have apparently set in. Agricultural operations progressing favorably. Aus or early paddy seedlings have sprouted in many places.
Beerbhoom ...	2·10	Rainy in the former and clear in the latter part of the week. No change since last report; planting out of sugarcane commenced. Export by rail 3,866 maunds, chiefly to Bhaugulpore Division. Prices slightly risen.
24-Pergunnahs ...	1·43	Hot and occasionally rainy. Rain has fallen throughout the district. The early rice plants are coming out fairly. Amun or late rice sowings have commenced in some places. More rain wanted in parts of Satkhira Sub-division. The harvest of boro rice will soon commence. Jute plants doing tolerably well.
Nuddea ...	1·15	Seasonable. The prospects of the rice, both early and late, and of indigo, are at present excellent. The rain has been sufficient but not excessive, and comes after intervals of fine weather. The weather could not be more favorable, yet increase of distress must be looked for till the early rice is reaped. Distress is reported in two villages in Ganjni Thana. Prices have a slight tendency to rise.
Moorshedabad ...	0·21	There was some more rain during the week, but not general. In the west, heavy rain fell on the 4th June. The temperature is cooler; heavy showers fell on the afternoon of the 6th. The rice crops are progressing very favorably. In some parts aus or early rice is rather advanced for this time of the year. The amun or late rice nurseries are being prepared, and much of the crop has been sown broad-cast. Other crops, such as mulberry and sugarcane, are in good condition. Prices have been almost stationary since last report.
Dinagepore ...	1·6	Very general and mostly heavy rain. The bhadoi or early crops is all saved, and promises well.
Maldah ...	0·27	Cloudy; westerly winds. Rain seems to have fallen all over the district. The prospects of the crops throughout the district are very good, except in Kaliachuck, where, owing to the scarcity of rainfall, the bhadoi or early and indigo crops do not promise well. The whole of the boro rice has been harvested, and the outturn is a good one.
Rajshahye ...	·07	There has been very slight rain during the week in the Tannore quarter only. There have been considerable sowings of aus or early rice since the late rains, and the sowings are now almost completed. The condition of the growing paddy is excellent, and there is no immediate need of more rain. A very good teel (oil seed) crop (a little less than full crop) is ripe and being reaped in some places; other crops, such as indigo, mulberry, and sugarcane, are doing well. Prices have not fallen, in consequence of the rain of last week, as it was expected that they would do; on the contrary, rice is on all sides dearer than it was, the cause of this being probably a considerable falling off in importation.
Rungpore ...	5·84	Much rain during the nights, and days hot. Crops all in excellent condition. To the south much improvement in prospects of early rice. Much rice is now cut and brought to market: the late rice is sown in many places, and transplanting begun here and there; jute and sugarcane flourishing. Prices lower, Rs. 4 to 5-8 per maund.
Bogra ...	·05	Seasonable. The prospects of the crops are very good. There was propitious rain, which has, it is hoped, made the aus or early rice crop secure. Ploughing for the winter crops has begun.
Dacca ...	0·08	Weather very hot; few showers of rain; prospects of crops most favorable. The rivers have slightly fallen.
Patna ...	·50	Weather seasonable, with strong east winds; there has been much more rain generally throughout the district than there has been at head-quarters. Lands being prepared everywhere for the burhai sowings, and prices at head-quarters fallen in consequence. Just telegraphed good fall of rain on the 9th and 10th, quite enough for all agricultural purposes.
Gya ...	0·77	Stormy. A little rain throughout the district. No crops on ground except sugarcane and a little murwa and cheena (millett). Ploughing commenced generally.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Shahabad ...	1·05	Rain fell on the 2nd June; weather unsettled and cloudy; east wind prevalent. Sufficient rain has fallen in the district to allow land to be prepared for the bhadoi or early crops; cheena (millet) still being gathered.
Tirhoot ...	1·37	Weather close and sultry; east wind prevailing and cloudy in the night. In Mudhoobunnee sub-division 1·73" rain fell during the week; rice and murwa (millet) have been sown in many places, the other lands are being got ready, but a great deal of hard rice land is as yet unploughed. Some of the crops now sown will be ripe by the end of August if all goes well. No report has been received from Hajeepore, but the reports from Seetamurhee are favorable; the rain has enabled the people to sow Indian-corn largely, also about a quarter of the paddy lands are sown. Rice seedlings are placed nearly ready for transplanting. In the sudder sub-division rainfall on the 3rd was ·37 and on 4th 1·12", and in many places the ryots have commenced sowing makai (Indian-corn) and murwa (millet). In Tazpore sub-division there was rain on Monday, Tuesday and Wednesday, but it varied very much locally; in the north it was sufficient for the sowing of makai (Indian-corn); everywhere it has facilitated the preparation of land. In Durbhunga, the rain has materially improved the paddy that has been sown; it is feared that in some places, if general rain comes on, the lower land will be submerged, and no paddy sown; this refers more particularly to Singhia and part of Beherah.
Sarun ...	·72	Hot, with occasional clouds; east wind prevailing. The rain was more or less general, though partial, throughout the district, and has been of very great benefit to the crops where the fall was sufficiently heavy. The ryots are engaged in preparing their lands for the next sowings. Bhadoi or early and aghani or late rice are now being sown. Cheena (millet) in various stages of growth and is a fair crop where irrigated. Mango crop in places ripening. More rain is anxiously looked for. Prices have slightly fallen.
Chumparun ...	·69	Seasonable. No material change since last week. Agricultural operations going on well. Prospects getting better.
Monghyr ...	0·58	Rain all over the district, except Buktearpore, local and on different dates. Strong easterly wind. Storm on Monday. Heavy rain on Friday night. Very little crops on the ground. Ploughing commenced in earnest since the first rain. Every probability of a favorable sowing season. Rainfall of 3⅛ inches to Wednesday, the 10th, since telegraphed.
Bhaugulpore ...	1·05	Rain has fallen in the sudder sub-division; at Banka sub-divison ·11; at Soopool 8·29. Other return not received. Prospects of crops improved.
Purneah ...	4·04	Telegraphed on the 11th June; rainfall from 8th to 10th 2·35. Reports of bhadoi or early crops favorable.
Sonthal Pergunnahs ...	·48	The rains appear to have set in. The sowing of the bhadoi or early crop has been finished, that of aghanee or late rice in progress. Moong (pulse) and kowrie (millet) have been gathered; yield good. Makai (Indian-corn) has been largely sown. Jute and sugarcane promise well.
Cuttack ...	...	Wind variable, clouds gathering and dispersing. Very good shower on the 5th June. Air unusually clear. Showers constantly seen somewhere on the hills. Ploughing and sowing going on. A very little rain reported from Rajmehal. Ploughing going on there. Nothing to report about any crop.
Lohardugga ...	1·96	Frequent and copious rain. Weather cloudy. Sowing going on. Prices of food-grains stationary.
Maunbhoom ...	1·46	Weather stormy, cool, and pleasant; the rain appears to have been general. The cultivating season has opened most favorably, and the prospects at present are all that could be desired. The gora paddy and goondli have been sown, and agricultural operations are being actively carried on. Jungle produce is very abundant this year, particularly the "Serai" or fruit of the Sál tree, which is largely consumed together with mohwa by the poorer classes. In Palamow sub-division good rain has fallen, and the goondli and sawan crops are being sown, and a large number of the laborers have left the relief works for the fields. Prices have a tendency to fall.
		Showery, cool and seasonable. The timely showers of rain which have fallen during the week have enabled the cultivators to plough up their lands and sow the early rice, millet, grass-seeds and Indian-corn. They have also made the grass grow for the cattle and partly refilled the tanks and reservoirs. The general prospects of the country very much improved.

Public Health.

Burdwan, fever decreasing; cholera prevalent in the west of the district. Bancoorah, cholera and small-pox still prevalent. Midnapore, cholera is very prevalent and will be so till the first heavy fall of rain. Twenty-four Pergunnahs, a few cases of cholera reported from Mathoorapore, Baduria and Nyhatty. Fever still prevailing at Barripore. Moorshedabad, small-pox and cholera on the decrease. Rajshahye, small-pox and cholera have almost ceased. Sylhet, a few cases of cholera and small-pox reported by the police, but the district is, on the whole, very healthy. Cattle disease at Gwineghat in Jaintea has carried off a good many heads of cattle. Chittagong, cholera seems to be abating. Patna and Gya, health of the districts good. Shahabad, small-pox still prevalent. Bhagulpore, cholera ceased at Katooria General health good. Cuttack and Pooree, public health good. Balasore, cholera has broken out in several places with some severity. It is hoped that it will cease with the first good fall of rain. Lohardugga, small-pox prevalent otherwise general health good. Singbhoom, small-pox in Kumilulu. Maunbhoom, cholera decreased.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*			
			General Remarks.—During the week under notice seasonable rain has fallen in almost all the districts, though in a few, light or partial. Where injury from heavy rains or from the sudden rise of the rivers was apprehended in the previous week, the fall of the rivers or sunny days there improved the prospects, but in Mymensing there has been partial damage to the teel (oil seed) and early crops on low lands from floods. On the whole, the rain has been very beneficial to the growing crops and favorable to tillage and sowings, but more rain is still urgently wanted in some places. In Behar, except Gya, where little has fallen, and in Chota Nagpore, the districts have had rain enough to commence agricultural operations, but more is greatly needed to complete the early sowings and prepare for the next crops. Standing crops in these tracts have also benefited by the fall. In Pooree and Balasore, and in parts of a few other districts, the rainfall was scanty and partial and agricultural operations are backward.
			The rainfall of the last two weeks has much improved the general prospects of the season. In most of the districts are unusually large area of land has been sown with early rice, which in some places is very forward and promising; cultivation of the amun or late rice is progressing under favorable circumstances. In Rungpore a species of early rice is now cut and brought to market, and prices have also fallen in this district. The prospects of most of the rice-growing districts up to date are very favorable. The harvest of the boro rice is being generally completed with a good result, but in the 24-Pergunnahs has not yet commenced. Pulses, millets, &c. are being harvested.
			P. S.—Since the above "general remarks" were written, telegraphic intelligence has been received from Patna, Bhagulpore and Monghyr of a considerable rainfall at each of those stations.
N. W. P.—			
Bustee	(June 10th)	...	Heavy rain on 6th followed by wet weather, but not much rain; sowing begun everywhere. Two relief works closed; labourers on four works fell from 93,000 on 7th to 60,000 on 10th; new system of poorhouse started at Bustee and Bansee with accommodation for all who apply.
Goruckpoor	(June 9th)	10·0	The usual full weekly report not received; sowing general; some relief works closed and numbers of labourers greatly reduced; admissions to poorhouse few.
Ghazeepore	(9th)	...	Rainfall slight and partial till 8th when a good fall in the west of the district; sowings hardly begun; labourers on relief works 629.
Mirzapoor	(10th)	...	Heavy showers on 2nd, 6th, 7th, and 8th. Rains appear to be setting in, but storms as yet are partial; ploughing begun in parts, but not general; relief works being closed.
Benares	"	...	Rain has fallen irregularly and partially but enough in most places to commence sowing.
Azimgurh	(June 6th)	...	No rain since 31st May.
Jaunpoor	"	...	Prices unchanged; sugarcane flourishing.
Allahabad	(10th)	...	Rainfall irregular, varying from ·5 to ·35; weather cloudy.
Banda	(6th)	...	Rain every day since the 2nd June; one relief work closed, and smaller poorhouses being closed, and inmates drafted into those that remain; prospects good.
Humeerpoor	"	...	Heavy rain falling.
Jaloun	"	...	Slight rain on 4th.
Jhansi	(9th)	...	Daily storms, and slight rain; weather cloudy; labourers on relief works 611.
Cawnpoor	(10th)	1·0	Rain fairly set in; heavy rain throughout district; ploughing begun.
Futtehgurh	"	...	Rains commenced, 3½ inch to 1 inch in most parts, but none in Kanouj; ploughing commenced.
Agra	"	...	Heavy rain; ploughing commenced; prospects favourable.
Allygurh	"	·47	Sowings begun; prospects good.
Meerut	"	2·0	Heavy rain on 6th.
Saharunpoor	(9th)	·44	Sowings begun.
Bijnour	(8th)	·11	Rainfall partial, but ·11 fell on 8th when rain seemed general; ploughing begun.
Moradabad	(10th)	...	Rains set in, but showers partial from ·1 to ·22; sky cloudy.
Bareilly	"	·3	Ploughing begun.
Punjab—			
Lahore	(June 11th)	·5	Rain report week ending 10th June; at Hissar slight showers; at Peshawur nil.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

BENGAL FAMINE.

NINETEENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL, FROM THE 29TH MAY TO 11TH JUNE 1874.

THE Lieutenant-Governor (Sir Richard Temple) writes from Monghyr on the 10th June the following account of the Tirhoot district to be included in the present narrative.

"During the last fortnight I have visited Tirhoot, traversing the district from its south-eastern to its western border. I have conferred with all the principal European officers in the district, with some of the European non-official residents, and with many of the principal natives. Many relief circles and sub-circles were inspected."

"As Tirhoot is by far the most important of the distressed districts, and has to bear the brunt of the present trouble, some account may appropriately be given of its condition during the first ten days of June."

"As regards the weather and the crops of Tirhoot, the month of May has been against the district. *The drought was great—water was only to be* reached at double the usual depth below the surface. The supplementary coarse grains sown in February withered in the heat. The wheat crop was in many places indifferent. The fruit of the mango groves, so abundant in this district, failed to yield the usual sustenance to the people. The indigo production is marred by one of the greatest failures known in this generation; and but little was done for ploughing or sowing the rice for next harvest. June, therefore, opened ominously. But now the preliminary showers have fallen, in some places abundant, in others scanty; in some parts towards the south their coming was so long delayed that a certain proportion of loss at next harvest was thought inevitable. By long-established agricultural practice, the extensive depressions in the surface of the ground ought, by the beginning of June, to have young rice springing up, but are this year only beginning to be broken up. Countless patches of ground, which ought to be filled with plants of rice ready for transplantation, have this year almost nothing. Thus the want of the April and May showers has caused way to be lost for next harvest, which can hardly be made up in full. The rains, however, seem to be coming; the industry of the peasants is stimulated to the utmost; and the next rice harvest may yet escape any serious diminution."

"On the other hand the poppy has flourished, and the opium yield will be favorable. The tobacco crop, too, has proved a source of wealth to the southern part of the district."

"Still the losses which have been superadded to the destruction of the last rice crop, combined with an apparent possibility of some deficiency on the next rice harvest, have produced an effect on the grain trade; have caused much timidity among the dealers in advancing grain to the cultivators, or in producing it for sale in the markets; and have rendered private rice an almost unobtainable article. Great as the losses have been, low as the private stocks may have fallen, one cannot believe that the rice markets would have been so empty as we found them to be before we opened sales of Government grain, were it not that the holders of grain apprehend losses yet to happen, and keep whatever they have in view of such eventualities."

"It is to be remembered that in Tirhoot—unlike other districts—there is no early rice, and but a small September rice crop, and but little Indian-corn. In the eastern and north-eastern parts of the district, where the distress would be worst, there is nothing, save some coarse grains of inconsiderable quantity, to come in till the great rice harvest of December. In other districts fears arising now might happily be dissipated by August, while in Tirhoot they could not be removed till the end of autumn. This consideration enhances the gravity of the situation in Tirhoot."

"As regards the condition of the people of the poorer classes, the improvement in their appearance in full two-thirds of the district is declared by all witnesses to be marked, and the change for the better is the most perceptible in those parts which were in the outset most threatened with distress. Since the middle of March last, at least one-quarter, often one-half, sometimes even three-quarters of the people have been receiving assistance from Government in some shape or other, which assistance has, in the majority of cases, amounted to maintenance. Hundreds of thousands of persons (literally) who came on relief in March last in a thin and weak state, have recovered from the depression; are now in at least an average physical condition, and are as well as they ever would be in ordinary years. It is this, perhaps, which may have caused a supposition to arise that these poor creatures have been too well cared for. They have been properly fed, that is all. We could not do less than feed them properly, as we undertook to rescue them from what must have ended in starvation."

"Still, however, persons are frequently met with in such a degree of emaciation (such severe distress is sometimes unexpectedly encountered in places previously believed to be beyond the reach of danger) as would prove the peril from which the population at large has escaped, and which would again threaten it if any circumstances were to interrupt or weaken the administration of relief. It is, as I believe, the fact that in many thousands of instances relief was afforded only just in time to save life; and that in many hundreds of villages the relief officers arrived only just in time to prevent mortality. If this be so, then looking to the narrow border which separates preservation from destruction, can we reasonably doubt that there must have been some cases which terminated fatally before the arrival of aid? If the people had been ready to ask for aid, our officers might have had some opportunity of acting in such cases. But on the contrary the sufferers were too often disposed to die in silence, and to this day, with all our elaborate organisation of relief, there is the danger to be guarded against of destitute individuals remaining unobserved. The metaphor of ships sinking in sight of port is terribly applicable to emaciated persons lying down to die in the very midst of a relief system."

"I have heard much oral evidence of the sickness and mortality, and the sad scenes in consequence, which occurred during 1866 in those parts of Tirhoot where destruction of the rice harvest had occurred. The area of such destruction is known to have been very much larger on the present occasion than in 1866. The prices in Tirhoot of rice, 9, 8, even sometimes 7½ seers the rupee during the hot months, were as dear, or dearer than they were in 1866; and the dearness began in many places at an earlier date than in 1866, and this, too, notwithstanding the fact that the relief operations are on a much larger scale now than in 1866. From this consideration some notion can be formed of the mortality and its attendant miseries, which must have prevailed in Tirhoot during the spring and summer of 1874 but for the relief operations, and which would still prevail during the summer and the autumn if those operations were to be relaxed. The sad occurrences which, as we hope, were limited in 1866 to a comparatively few places in Tirhoot, would, in 1874, have happened in many places, and would have increased more and more till they spread over perhaps half of this extensive and populous district."

"I have enquired much as to the number of deaths which may be attributable to starvation. As is well known, the authenticated cases are very few. It seems certain that such clear cases of this sad description as could be embodied in official returns are rare. Even if all the deaths in the numerous field hospitals—which deaths are medically attributed to various causes—were deemed indirectly attributable to want of food, still the number would be statistically inconsiderable. And inasmuch as Tirhoot is fortunate in having a great number of well-informed and independent witnesses scattered all over it, who must have stated all they knew, it seems equally certain that no considerable mortality can have occurred in any part of the district. But that the available statistics can show all the deaths from want of food, is, to my mind, incredible. The patience with which, at the first, numbers would pine away without resorting to any authority, and the manner in which individuals will do so even to this day, convinces me that some must have died of hunger of whom we shall never hear."

"My predecessor, Sir George Campbell's view on this matter was expressed in March last to the following effect:—

"'In times of scarcity and the early stages of famine, it is totally impossible to distinguish deaths accelerated by scarcity and bad food from natural deaths. The Lieutenant-Governor has not the least doubt that among a very poor and helpless population, such as exists in North Tirhoot, many people die when food is dear who would not die, or would not die so soon, if it were cheap. He believes that there have not been deaths from direct starvation among healthy adults; but from what he saw of the people about Bahera, and some of those on the works near Durbhunga, he fears that among such a population a good many old, weakly, and sick people must have succumbed to insufficient nourishment.'"

"I entirely subscribe to that view. I am as unable as he was to state any number. But I believe that if it could be exactly known, it would be found so extremely small as not to affect appreciably the death-rate among the large population concerned."

"Looking to all the circumstances, however, and to the numbers receiving some sort of relief in Tirhoot (over 1,100,000 on 1st June, besides the numbers receiving aid indirectly as purchasers of Government grain), I hope that some work of humanity will be found to have been accomplished in this district up to that date. But there remains the anxious question whether that work can be successfully sustained during the trying months yet to come?"

"In respect to the organisation of relief, I found the circles and sub-circles into which the whole country is divided to be in complete working order. And such working order implies that every village, and the majority of houses in every village, are brought under relief inspection; that those who are unable to labor have tickets entitling them to subsistence; that those who are able to labor are employed on digging the village tanks on piece-work, and are paid in rice; that enquiries are going on village by village regarding the cultivators who need advances of grain; that the village grain-dealers have a supply for retail of rice obtained from the Government stores; that the jeyt ryot, or headman of the village, has a supply of rice from the neighbouring granary for the disposal of which he is accountable; that there is a sub-depôt of rice in every sub-circle comprising from ten to fifteen villages, and a depôt for every circle comprising from ten to fifteen sub-circles; that arrangements are being made for regularly conveying rice from the depôts to the villages during the flood season by carriers, by bullocks and ponies, and even by canoes; that in every circle there is a poor-house for the worst cases, and a field hospital with native medical attendants; that every sub-circle has its native officials, and every circle its European officer or its superior native officers."

"In respect to relief-laborers, the number returned is 910,657, the largest yet seen in this district. We may, indeed, hope that this may prove to be the highest point, and that during the month of June the number will decline, as agriculture and other private employments may afford subsistence after the falling of the rains. Great numbers have already gone, and will yet go off to the fields. But in case any should linger on the relief-works, while they might be better engaged privately, orders have been issued to discharge all such persons, and to afford every encouragement for the transfer of the laborers from the works to other occupations. The works will, however, be kept open for all who cannot otherwise obtain employment so long as the weather shall permit. It is to be expected that the rains will soon entirely stop tank-digging, and even impede road-making. This, however, is the very season when the men thus thrown out of work will be able to obtain private employ. If any should fail in this, they will be cared for under the circle system just described. At the worst, they would come on charitable relief, but any augmentation of

this form of relief (already so large) is to be deprecated; and there is the fear that persons discharged from relief-works may try to resort to the public bounty. Orders have issued to guard against this possible abuse. Still, even during the rainy season, there will be intervals of time when people cannot obtain employment either on relief-works or in private employ. Some of these may have to be admitted to charitable relief; others will, it is hoped, be able to support themselves by what they saved from their earnings while on the works. It is very probable that large numbers have thus saved enough to sustain themselves during such intervals, and orders have issued to prevent those who are thus comparatively independent from claiming further relief. In the dispensing of such liberality as that which has been dispensed, some abuses are practically inevitable; but this is all the greater reason why vigilance should be exercised against all those abuses of the State bounty which can be foreseen. In my last narrative (25th May) I stated that rates of pay for piece-work, which had been appropriate in April, were becoming too high under improved circumstances in May and June, and that a reduction would be undertaken. I am glad to find, on the spot, that this is being carried into effect without difficulty."

"As regards charitable relief in the Tirhoot district, the number of the recipients is now returned as 166,477. Of these, many would even in ordinary years be subsisting on private charity; this year, however, they would be foodless, as the donors, being themselves in difficulties, cannot give. Many again belong to the better castes, even to the Brahmin caste. Special enquiries are being made to search out village by village all those who are pining in hunger at home, and from pride or fear are deterred from seeking relief. The fear among some castes of being included in the same category with the paupers is such as to lead them on towards extremities. While craving aid, they will ask that they may pay a little, or be debited with part repayment, in order to avoid being classed as recipients of gratuitous relief. In very many places women are set to work with spinning and weaving, cotton being supplied to them for that purpose. The Tirhoot Brahmins constitute a well known and numerous section of that great caste, and numbers of them are suffering, and will yet suffer more and more, that sort of distress which it appears to be the object of the charitable subscription fund to relieve; distress—borne, perhaps, with false pride, but still with fortitude—enough to straiten them sorely but hardly enough to threaten that immediate danger which State charity undertakes to obviate. Orders have been reiterated to treat these cases according to the generous and considerate intentions of the subscribers."

"As regards advances to the ryot cultivators, there has been, and still is, fear lest this class, the most important class of the community, should incur lasting impoverishment from using up for immediate subsistence that which they ought to keep, namely, their seed-grain, and the little capital of their husbandry—which result, if now allowed to happen, would leave evil traces in the district long after this crisis shall have passed away. The men have got their land, their implements, their cattle, and their own power of labor, but they have not food till next harvest. Ordinarily there are dealers whose business it would be to advance grain for food, but often—perhaps generally—they refuse to do so this year, because the prospect of next crop is not assured. Hence the need of making to the cultivators advances of Government grain repayable hereafter. But as all cultivators are not in need—as many still have small private stores—it is important to make systematic enquiry, village by village, in order to discriminate real from simulated necessity. Such enquiry is being conducted, and it is already seen that the number of really deserving applicants is very considerable. It is better that the advances should be made by the zemindars; and many of the large landlords are doing so. But where the zemindars are petty proprietors (and much of the land in Tirhoot is minutely sub-divided) the advances, if they are to be made at all, must be made by the State. In all these cases, however, the principle is borne in mind (as laid down in the Governor-General's letter of the 16th December

last) of inducing the zemindar to become security, or to allow the land to be virtually pledged, in addition to such security as the cultivator himself can offer. It is hoped that a large part of the advances will be thus covered by security. Many zemindars have already agreed: more, doubtless, will yet agree; and I hope to be able to state ultimately that most zemindars, great and small, have done well in this matter. The number of cultivators in Tirhoot under advances of grain for food will be considerable, but it cannot be stated as yet."

"As I have elsewhere stated, it is on the efficiency of the system of advancing grain for food that we must partly rely for preventing the consumption of seed-grain. The ryots still possess some seed; the dealers certainly possess much, though they defer disposing of it to the last safe moment. Assistance is being rendered by making cash advances to cultivators for purchase of seed-grain; by exchanging Government food-grain for local seed-grain, which latter is afterwards sold to the ryots; by importing Government seed-grain from a distance."

"As regards the sale of Government grain, it has just been stated that there is no private rice in the markets of two-thirds of the Tirhoot District; private stores there must be, but they are not brought forward, and whether they will be, depends on the course of the rainy season. At present the local traders say that they have nothing to sell, and that they will not attempt to import until the rising rivers afford water-carriage, land-carriage being too expensive; they will not promise to do so even then. The ordinary course of trade is the reverse, namely that of exportation; they have rarely or never tried importation; the prices down south, whence rice might be obtained, are too high to yield profit to an importer to Tirhoot; they will be glad to buy wholesale from Government, and with that stock to make some profit by retail. One may pass from mart to mart in Tirhoot, and receive from the grain dealers, great and small, this almost stereotyped reply. One may ask the grain merchants at Patna, which is the great *entrepôt* for Tirhoot, they will say that they have not, as a rule, imported, and do not intend to import rice from the south-east. They do import other grains from the north-west, hundreds of tons daily, and hope to go on importing until the Indian-corn of Behar shall come in, next September. This north-west grain they send daily across the Ganges in quantities; they will send more still when the navigation of the rivers becomes easy; the grain will go all over the southern half of Tirhoot, as far as Mozufferpore and Durbhunga; whether it will go beyond that to the more distressed parts they cannot say; probably not, it never does go ordinarily."

"Meanwhile the markets in two-thirds of Tirhoot are destitute of rice, the staple food of the people. Therefore, sales of Government rice are being opened, under the rules explained in my narrative of the 11th May, throughout the sub-divisions of Durbhunga, Modhoobunnee, Seetamurhee, and a part of Mozufferpore, and are very much resorted to by the people. But orders have been reiterated that such sales will be suspended immediately on the arrival of private supplies, and that the trade be informed accordingly. I believe that every trader must by this time know that if he will import grain, the field which the Government is forced to occupy temporarily will be at once vacated for him."

"In the remaining one-third of Tirhoot, the sub-divisions of Tajpore and Hajeepore, and half the sub-division of Mozufferpore, sales of Government grain have not been opened."

"As regards the allotment of Government grain for Tirhoot, 4,200,000 maunds, or 154,411 tons, the question at once arises, will it bear the depletion to be caused from June to December by all these outgoings, for paying relief-laborers in kind, for feeding the recipients of charitable relief, for advances of food-grain to cultivators, for sales to the public? Up to end of May about 642,000 maunds or 23,600 tons* only have been expended, and this is but a

* This is approximate, I am not able to state the exact figure.

small portion of the whole, and is less than was expected originally. The amount comprises regular issues only as expenditure, and does not include loss or wastage. But then the numbers of persons on relief up to the end of May—

On relief works	...	...	...	...	910,657
On gratuitous relief	...	...	...	...	190,914
			Total	...	1,701,571

somewhat exceeded the estimate of distress (1,000,000) on which the allotment was made. The cause of the excess over estimate is the aggravation of distress in the tract immediately to the west and north of Mozufferpore. The above numbers will, we hope, decrease during June; but that will be more than counter-balanced by the development of advances to cultivators and sales to the public. All the local officers believe that the expenditure of grain will be very great during June: their estimates show an expected consumption of 1,147,000 maunds (42,095 tons) in the Tirhoot district during this month. The progress of the grain expenditure will be watched till the beginning of July, when the allotment will be reconsidered. Under any circumstances, there will be enough for some time to come. If there should be any prospect of deficiency in the autumn, additional supplies can be brought in by water carriage."

"In regard to all the circumstances of Tirhoot, it has been determined to despatch to that district before the heavy rains set in six and a half lakhs of maunds of rice additional, four and a half from the reserve at Calcutta, and two from supplies that could be spared from neighbouring places, equal to about 24,000 tons. The total allotment for this district, originally about 154,000 tons, will therefore now be 178,000 tons."

Sir Richard Temple writes from Monghyr on the 11th June, the following general remarks to be included in this Narrative, in continuation of his special remarks regarding the Tirhoot district:—

"During the fortnight the rains have been abundant in the eastern half of the distressed districts; and sufficient, though long-delayed, in the western half. The river Koosee, running into the Ganges north of Bhagulpore, may be taken as the approximate boundary; to the east of the river the agricultural prospect is very good; to the west, not so good. The improvement in the weather has infused energy into husbandry, and has somewhat raised the local grain markets from the condition into which they were falling, without however, essentially lowering the general range of prices."

"I am not able to state precisely the amount of Government grain expended up to the 1st June, nor to correct properly the figures given in my Narrative of the 25th May. It is difficult to get a timely return from so many granaries scattered in remote localities. But it will probably be found that up to the middle of May the quantity expended was less than that estimated (50,000 tons). The best return that can at this date be made up, shows 57,000 tons expended up to the last week in May (though not up to the last day of May). This figure cannot be put forward as absolutely correct, but it is the best that can be given at this time of writing."

"During the last days of May, however, the expenditure from most depôts increased rapidly: the payment of relief labourers in kind had taken effect; the sales of grain had been largely opened; the cultivators had been receiving the grain advances authorized after enquiry. These causes continued to augment the expenditure during the first days of June, and will, as the local officers believe, still continue during this month. Estimates have been obtained from these officers of the expenditure from the last week of May to the end of June. I have had the advantage of discussing with them on the spot the most important of these estimates. The result of these estimates is that to the 1st July 156,462 tons in all are expected to be expended. This amount means expenditure, and does not at all include wastage or other [illegible]

This figure must not be regarded as more than an estimate. If the actual expenditure shall prove less, then the fact is so far to the good as regards our preparations. If it shall be as much, or more, then it will put our preparations to the test. For, even after the 1st of July, there are, for the most important of the distressed districts, five months of distress yet to come, beginning with July and ending with November."

"As is well known, in most parts of Bengal and Behar, new crops will come in during September, affording relief in some of the distressed districts. There are many distressed localities, indeed, where relief may be hoped for earlier than September. And this may naturally convey the idea that the general distress will, in the main, be over in September. Such is not the case, however, as regards North-Eastern Tirhoot,—by far the most important area of distress—and some other parts of Chumparun and North Bhagulpore. No substantial improvement can happen there till the end of November or beginning of December. If, therefore, 156,000 tons shall prove to have been actually expended, the balance of supplies will not be more than what we ought to have for safety."

"In my narrative of the 25th of May, the number of persons receiving assistance in some shape or other from Government or from the charitable public was estimated to be upwards of 2,500,000, which number was expected to increase daily. A more precise calculation on the 18th May had given the number at 2,224,965 persons.

"The present narrative shews 1,737,768 persons on relief-works, and 307,505 persons on charitable relief, or 2,045,273 persons in these two catagories alone. But, as shewn in the last narrative, there are two other categories of persons who receive assistance, namely, those who purchase, and those who obtain advances of Government grain. On the 18th of May these were estimated to comprise 820,000 persons.* By the 1st of June they would comprise very much more. And this consideration would bring the total from the 2,045,273 for the first two categories to nearly three millions for the whole four categories during the first week in June. I will not, however, attempt an exact figure in a matter where exactness is unattainable. When large quantities of grain are sold wholesale to be retailed, it is impossible to say precisely how many persons will receive assistance from such sales."

"Still the matter is one that has to be examined every fortnight by the light of the best calculations which we can make. And during the first week of June, if we could know the average daily expenditure of grain, we might arrive at a calculation of the number of persons receiving assistance. Such assistance is now, with but few exceptions, afforded in grain. Now, out of the 156,000 tons above estimated up to end of June, 99,000 tons were estimated for the last week of May, and for the whole month of June, say 38 days. This, at ¾ seer per head per diem, would give 3,889,526 persons receiving assistance daily, which number is above the number, 3,500,000, estimated by me in March last. The present estimate of 3,889,526 persons would include all the four categories, and all persons of every sort receiving assistance. It is not, indeed, free from doubts, especially in regard to this, that many of those who purchase in June may be laying in some supplies for June. If this be so, then the calculation may prove to be somewhat too high."

"We shall soon have the means of correcting these calculations, but now that the elements of sale and advance enter into the computation, we shall hardly advance beyond a calculation, and shall not be able to present an absolute statement of fact. Meanwhile, so far as is known at this time of

* See paragraph 8 of Minute dated 18th May—

III	...	...	...	...	529,252
IV	...	...	...	...	291,260
					820,512

writing, the number of persons receiving assistance appears to be as high as the highest for which provision was made in March last, namely, 3,500,000. It has never been expected or affirmed that all who receive assistance would be absolutely maintained by Government. But as the provision had to be made on an estimate of the numbers likely to require it, it was necessary to reckon those who would buy, or would obtain advances of grain, just as much as those who would receive in kind either wages or subsistence."

"Looking to the supplies of Government grain now *in situ*, or in reserve, I am still hopeful that there is enough for such emergencies and requirements as may be reasonably anticipated at present. But I have not met any responsible officer of any grade who thinks that we have more than enough."

"The expenditure of so large a quantity of Government grain must be accompanied by a system of special accounts conducted by selected officers, and for this arrangements have been already made."

"Regarding private trade, I have said that the dealers in the interior of Tirhoot will not import grain until the rainy season causes the rivers to rise; and that they are anxious to take Government grain and retail that. In South Behar, on the banks of the Ganges, and in the Sarun district generally, there is much private trade in grain; even in the Tirhoot bazars there is still some barley, coarse millet, pulse, and a little wheat. But the supply on a market day is speedily exhausted, and there is no hope that private stocks will be replenished from outside until the rivers rise towards the middle of July. The source from which private trade draws its supplies is chiefly Northern India; there are many indications from Serajgunge, Pubna, Goalundo, Julpigoree, and even Dacca, that Bengal Proper has, at present, very little surplus rice to send into Behar. Happily the surplus of other grains in the Punjab and North-Western Provinces appears to be great, and on an average 800 tons a day are received thence by rail at Patna."

"The prices-current reported for the 6th June, show that by that date some of the markets of Behar and Northern and Eastern Bengal had felt the effects of the favorable rain of the previous week. Prices have cheapened materially during the fortnight in Rungpore, Pubna, Julpigoree, and Mymensing; in Central and Western Bengal, prices are as dear as they were a fortnight ago. In seven out of the ten districts of Behar, the price of common rice is now appreciably cheaper than it was a fortnight ago. In the other three districts of Behar prices are unchanged."

"Instructions have been reiterated to the local officers in all the distressed districts to suspend the sales of Government grain, wherever sufficient supplies are brought in by trade, and to inform all traders accordingly."

"At the present time there is beginning a transition from one stage of our operations to another. If the rains shall happily continue, the relief laborers will gradually leave the works, and go to the fields. Every co-operation is afforded by the relief officers by contracting or closing the works, wherever and whenever agriculture or other private employment affords remunerative occupation. The expedience of avoiding economic disturbance by restoring the people as soon as possible to their normal condition, is quite understood. Vigilance will be exercised to prevent those relief laborers who have saved from their earnings during the hot months, enough to support themselves during the rainy months, from coming on charitable relief, or receiving other assistance. But when that which has been heretofore the hardest part, namely, the management of relief works, shall have diminished, the supplying of the empty markets with rice, until trade brings up supplies, or the next crops come in, and the advancing of food to the cultivators until they can reap the fruits of their industry, will come into greater prominence. Perhaps also, the administration of charitable relief will expand. But whatever be the phase, whatever the proportions of the affair, I am sure that the officers of all grades, in all branches of the administration, will evince an unabated spirit of devotion to the humane cause in which they are engaged."

Weather and rainfall.

THE reports from all quarters on this subject have been most satisfactory and encouraging, and with the exception of parts of Monghyr,* Burdwan, Midnapore, Balasore, Pooree, and the Mudhoobunnee sub-division in Tirhoot, the latest returns show an ample fall of rain sufficient for all requirements, and no excessive fall has yet been reported.

State of the crops.

2. The reports as to the prospects of the coming crops are generally excellent, and except in those parts mentioned above, where insufficient rain has fallen, a more than average harvest is expected. In the few places where no rain had fallen up to the latest dates to which returns had been received, there is no cause for alarm, as there is still ample time for sowing.

Prices.

3. Prices have remained generally steady, and on the whole seem to be rather inclined to fall than to rise, especially in the distressed districts, where there has been an almost general fall. In Burdwan, Hooghly, and Howrah, in the Burdwan division, a slight rise is reported. In the other three districts, there has been no change. In the Central districts, prices have risen in Calcutta, the 24-Pergunnahs, Nuddea, and Jessore, and a fall is reported in Rajshahye, Rungpore, Bogra, and Pubna. In the Eastern districts there has been a slight rise in Backergunge, Chittagong, Chittagong Hill Tracts, and Tipperah, and a somewhat greater rise (from 13 seers to 14) in Noakholly. In Fureedpore, Mymensingh, and Sylhet there has been a fall. Throughout the whole of Behar and Chota Nagpore, prices are easier, except in Monghyr, the Sonthal Pergunnahs and Manbhoom, where they are stationary. In Orissa there has been a slight rise in Cuttack, prices remaining as before in the other districts of the division.

Seed-grain.

4. It has been stated in previous narratives that seed-grain for the next crop would, for the most part, so far as Government or its officers could [illegible] the [illegible] stores of grain-lenders, landholders, and cultivators. Some of the ryots would, it was supposed, have insufficient means to purchase seed, and advances of money were made to them for this purpose. At the same time there were apprehensions that in parts of Mudhoobunnee, Durbhunga, Ramnuggur, and Soopole, there might be lack of seed-grain. Further experience has confirmed these views; the ryots have produced or obtained seed-grain sufficient to sow an unusually large breadth of early (September) rice, and every one seems confident that seed will also be forthcoming for the late (December) rice crop everywhere, save in a few particularly destitute tracts of North Behar. For these tracts the Government has bought—

15,000	maunds of seed-grain	from	Julpigoree.
68,000	"	"	Central and Eastern Bengal.
12,000	"	"	certain tracts in South Behar where last season's crop was good.
95,000	"		

The Julpigoree seed was sent to Soopole in North Bhagulpore. At first there was little demand for it, but during the last fortnight, since the rain fell, ryots have become anxious to take it at the rate of 15 seers per rupee. [illegible] order of the seed has been distributed—

[illegible] maunds to Mudhoobunnee.
[illegible] to Eastern Durbhunga and Mudheypore.
[illegible] to Ramnuggur.

[illegible] of seed-grain left Calcutta on the 27th May, and it is [illegible] to the depôts whence it is to be distributed.

* NOTE.—Reports have since been received of rain in Monghyr.

5. The quantity of seed-grain bought by Government for distribution, is thus small in reference to the large area of distressed country; but looking to the comparative smallness of the areas where occasional lack of seed was expected, the Lieutenant-Governor deemed it unnecessary to lay in a larger supply. No arrangements were made to supply seed-grain to Dinagepore or the rest of the Rajshahye Divisions, as those tracts were believed to possess sufficient supplies of their own. During the tour he has just taken in North Behar, Sir Richard Temple learnt that landholders and cultivators were themselves in some cases fetching seed-grain from a great distance, and that in Tirhoot, at any rate, no general complaint had been heard that seed-grain would be wanting over any considerable area.

Private trade to Behar.

6. The usual note on the movement of food-grains will be found in Appendix A. The returns of grain imported to Behar show an increase in the upward traffic from Howrah of 2,829 tons, and a decrease of 3,476 tons in the downward traffic from the North-Western Provinces and Punjab, as compared with the returns of the preceding fortnight; but, as shown in Sir Richard Temple's remarks, the decrease is probably only temporary, and we may expect to see, shortly if not an increase, at least a return to the former level of imports.

North Tirhoot.

7. The rain that has fallen in the last few days has greatly improved the prospects of the worst parts of this district, though in Mudhoobunnee there is said to be a great deal of land which has still to be ploughed. In Seetamurhee the prospects of the crops are very good, and they have greatly improved in Durbhunga. Sales of grain to the public are necessarily almost universal, as private trade seems to have done little or nothing for this part of the country, and supplies were short everywhere, except in Seetamurhee, where they seem to have been fairly abundant. In Durbhunga and Mudhoobunnee almost the only stocks of grain, except those in the Government golahs, are small stores held by private persons for their own consumption.

8. The condition of the people, to judge by the results of an inspection by Dr. MacDonnell of a considerable number of persons in the receipt of charitable relief in Durbhunga, as compared with the statement quoted in the 17th narrative as showing the condition of laborers on relief-works at the end of April, has materially improved; but in order to estimate the great advance shown by the results given in the later returns, it must be recollected that they represent the state of the most distressed section of the population, while Dr. Birch's observations were made on those actually laboring, though at that time the separation between able-bodied and weakly recipients of relief had not been so carefully made as has been done since. The following figures show the results of the two inspections:—

	Dr. MacDonnell.	Dr. Birch.
Normal condition ...	55·5	49·
Under fed ...	23·4	27·
Emaciated ...	17·8	12·

The Additional Commissioner, Mr. Metcalfe, considers that Dr. MacDonnell has adopted too high a standard, and that, as compared with the usual state of the Tirhoot peasantry, the results ought to be even more favorable than those given above; and he is probably right, as the low average physique of the lower classes in Tirhoot has been noticed in the annual jail reports, and remarked on by independent observers.

South Tirhoot.

9. The prospects of this district have materially improved; land is being prepared, and crops sown everywhere. In Hajeepore, distress had increased considerably before the rainfall, and it had been found necessary to institute relief circles and increase the number of relief-works; and though no severe suffering had been experienced, yet numbers of those newly arrived on the works looked thin and pinched, owing to an insufficient diet. In the Head-Quarters Sub-division

sales of grain to the public have been found to be necessary in the east, owing to the insufficient supplies in the bazars. The western tracts and Tajpore and Hajipore have received sufficient supplies from the Patna trade, about 1,00,000 maunds (nearly 4,000 tons), being imported weekly into the district.

Chumparun.

10. The condition of the people continues much as before, while future prospects continue to be most hopeful. Private trade is very active in the Gobindgunge and Dhaka subdivisions, to which grain is conveyed by the Gunduk, and it has consequently been found possible to restrict the sale of Government grain within very narrow limits, only a little over 2,200 maunds having been sold to the public and to laborers up to date. In the rest of the district, supplies have been shorter, and sales have been found to be necessary.

Sarun.

11. This district continues to be well supplied with food, but the laborers increase on the relief works. The causes of the great demand for labor have been explained in previous narratives, and need not be repeated here. Rain has fallen everywhere since the date of the Collector's narrative, and now that cultivation has seriously begun, a diminution in the crowds on the relief works may be looked for. An attempt was made to draft a number of men from the district works to the Soane canal, where they would be able to obtain higher pay at piece-work rates than they could get on the district works, but though a considerable number consented to go at first, yet they afterwards refused, having taken into their heads the idea that the alleged demand for laborers for the Soane canal was merely a pretext for getting them out of the district, and then shipping them off to the Mauritius.

South Behar.

12. The rainfall in the three districts of the Patna division south of the Ganges has been sufficient for ploughing, but sowings have not yet begun. These districts are always later than those to the north of the river, and sowings are not usually made before the middle of June, so that the prospects are still very good. The bazars continue to be well supplied with grain, chiefly through importations from the North-Western Provinces. These average 1,50,000 maunds a week in the Patna district, and the Shahabad returns also show an active trade.

Bhagulpore Division.
Tracts south of the Ganges.

13. In this part of this division, prospects continue to improve, and the rainfall, which has been general except at Buktiarpore* in the Monghyr district, is said to have been sufficient to give every prospect of a most favorable sowing season. Distress is confined almost entirely to the southern part of the Sonthal Pergunnahs, Buktiarpore, and a small tract near Sheikpora, also in Monghyr. Relief measures appear everywhere to be adequate, and there is no anxiety felt by the authorities or the people. Private trade is said to be reviving in Monghyr.

Tracts north of the Ganges.

14. Rain has also been plentiful in these parts, especially in Purneah. The sowings of the autumn crop have been completed, and those of the late rice crop are in progress. Prospects are everywhere most favorable. During the period covered by the Collector of Purneah's narrative, there was a sudden outbreak of dacoities and grain robberies near Kissengunge, a place well known for the turbulent character of its inhabitants, and a panic, accompanied with riots arose among the people owing to a sudden rise of prices resulting from the cessation of imports from Julpigoree, in which district distress had appeared. The panic was allayed by sales from the Government golahs, and the offenders against the law have been arrested and punished. In no case did it appear that crimes were committed under the pressure of want, as all those arrested were hale, hearty men, in good condition.

* Rain is since said to have fallen at Buktiarpore.

Private trade has generally been active except in Soopool, but sales of Government grain have been found to be necessary in Purneah as well as in Soopool. In the latter tract there is said to be little or no grain except that in the Government golahs, and the sales there have consequently been very large.

Rajshahye Division.

15. The prospects in all the districts of this division are excellent, and up to the present time the promise of the coming year's crops is everything that could be wished. Still pressure is being felt in some districts, especially in Dinagepore and Rungpore. In the former district private trade is doing very little, and the people are almost entirely dependent for present supplies on the Government golahs. In Rungpore trade is active along the Teesta and Durlah, but in the west and north no fresh supplies are being imported. In both districts large sales of Government rice have been found necessary, and must in all probability be continued. The health of the people is generally good, and cholera, where it previously appeared, had abated.

Cooch Behar Division. Julpigoree.

16. The district narratives of the Deputy Commissioner of Julpigoree and Commissioner show an improvement in the district. The Commissioner has satisfied himself that the relief-works and organisation will be quite sufficient to cope with any distress that is likely to arise. The only part of the district about which he now feels any anxiety is South Boda, where the people already seem to have suffered somewhat, and to have nearly come to the end of their resources, but arrangements have been made for advancing grain freely to the cultivators, and relief works are being increased. The prospects of the coming crop are excellent, and it is now calculated that only 50,000 maunds of Government grain will be wanted for the district instead of 1,00,000 as was at first calculated. A panic, arising from the distress in the adjoining parts of the district, led to grain riots and robberies in Mynagoori, where no distress has been experienced, and where none is expected to occur. The panic was taken advantage of by the bad characters of the country, who are somewhat notorious for their turbulence, and it was not till a small detachment of 50 men was brought down from Buxa to Mynagoori that confidence and order were fully restored.

Burdwan Division.

17. More rain is reported as being wanted throughout the division, especially in Jehanabad, Burdwan, and in the west of the Midnapore district. On the whole rain seems to have been more partial throughout the Midnapore and Burdwan district than in other parts of the country, and all present anxiety about the coming crops had not therefore disappeared. Cholera is prevalent in Burdwan, Midnapore, and Bankoora.

Nuddea.

18. There is nothing to report about this district except that distress does not appear to be increasing, and that the prospects of the coming crop are good.

Chota Nagpore Division.

19. The reports from this division are improving. In no district is the condition of the people at all critical except in Manbhoom. There, liberal advances of grain have done much to relieve distress, and what remains is amply provided for by the relief works which have been opened. Cholera has somewhat abated, and the prospects of the coming crop are good. In Palamow, the Commissioner confidently expects that in another month there will be an end of distress in that part of the country, and measures are being taken to remove the laborers from relief works to their ordinary agricultural work, where their help is much wanted.

Transport of grain.

20. The transport of grain has now almost actually ceased, except in so far as is necessary to keep the minor golahs stocked from the larger store-houses. The only districts where large quantities of grain have been received during the fortnight have been Tirhoot, the Sonthal Pergunnahs, and Manbhoom. In the first-named district,

Major deKantzow has kept up his very large average to the last, and nearly 30,000 maunds (somewhat over 1,000 tons) of grain, exclusive of engineering tools, fodder, treasure, and Government stores, have been daily sent off on carts from Bunkar ghât. The transport is expected to be completed, and the golahs fully stocked by the 15th June. In Manbhoom, considerable difficulty has been experienced, first from the cholera, and afterwards from the floods in the Damooda, as boats could scarcely be procured, but Captain Grant has successfully overcome all hindrances, and expects to complete the carriage of the whole allotment within the next few days.

Relief works.

21. The numbers of laborers on relief works according to the latest returns available, as compared with previous returns, is given below:—

	Last previous return.	Present.
Patna Division	1,112,828	1,231,496
Soane Canal	41,019	34,850
Gunduk Embankments	23,964	45,247
Bhagulpore Division	107,269	109,417
Rajshahye Division	180,064	194,131
Northern Bengal Railway	18,202	22,129
Burdwan and Chota Nagpore ...	69,786	96,950
Cooch Behar	No previous return.	3,548
Total ...	1,553,032	1,737,768

There has been an increase in almost all districts except Chumparun, Purneah, and Rajshahye. In the two former districts the decrease has been considerable; from 44,122 to 38,952 in Purneah; and from 1,46,285 to 1,29,034 in Chumparun. In the Rajshahye Division, though there is an increase in the numbers as compared with those reported in the last narrative, yet it is probable that this increase is more apparent than real, as the returns for the fortnight are much more complete than those previously submitted. The present returns certainly show a considerable decrease from the total of 209,635, reported in the seventeenth narrative.

22. On the whole, the tendency is undoubtedly to a decrease in the number of relief laborers in those districts where there has been an abundant rainfall; and as the accounts of the last few days show that there are now very few places where enough rain has not fallen, it may be fairly hoped that each succeeding narrative will show a decrease in the numbers on relief-works. Strict orders have been issued that laborers are not to be kept on relief-works where field labor is available; and advances of grain are being everywhere made to ryots to enable them to feed their laborers, wherever food-grains are scarce.

23. In July, and the early part of August, in the interval between the sowing and planting of the winter crops and the reaping of the autumn crop, a considerable number of laborers will probably return to the relief-works in Behar; but in the Rajshahye Division, where the early rice harvest is much earlier than in Behar, we have good ground for trusting that if the prospects of the early rice crop continue to be as good as they are at present, distress will begin to decrease by the end of July or the beginning of August. All accounts agree in stating that the areas sown with early rice and autumn crops are much greater than in ordinary years; and as the districts, as a rule, export rice in large quantities, and as the proportions of the autumn crop vary in ordinary years from one-eighth of the whole food-area in Dinagepore and Moorshedabad, to about one-fourth in other districts, the yield of this crop ought to furnish an addition to the food-supply, sufficient to maintain a considerable percentage of the population till the main rice crop is reaped.

24. The annexed statement shows the numbers employed in each district on relief-works, with details of those working under public works and circle officers,

as far as they can be gathered from the returns received. Also, details of the numbers employed on task or piece-work, and on daily wages, are entered for those districts whence the information has been received; but the returns, it will be noticed, are still imperfect, and by no means represent accurately the real state of things, especially in the Rajshahye Division, whence returns are almost wholly wanting, though it is known that piece-work has been introduced and generally enforced throughout Rungpore and Dinagepore, the two districts where the largest numbers of laborers are employed. In Bogra it is applied to the able-bodied men, but not to the women and children, of whom there are very large numbers on the works.

* These figures differ from those given in Sir Richard Temple's remarks, the latter being based on later returns than those which have reached this office.

25. Of the laborers employed under district officers and engineers, about three-fourths have been working upon roads, and, as these are more wanted in Bengal than in other parts of India, the improvement in the communications, resulting from the large amount of labour expended, will, there is every reason to hope, add greatly to the resources of the country; while the tanks that have been dug and repaired and the improvements effected to the irrigation channels and village roads by the remaining labor will provide against a want of water, which was becoming a subject of complaint in many parts, and increase the fertility of the soil and the comfort of the people.

Upper Gunduk embankment, and high level canal in Chumparun.

26. Out of the whole 69 miles of embankment, 61 have been finished; 19 miles having been completed during the fortnight; so that the work has probably ceased by this time, and the engineers will be able to concentrate all their energies on the high level canal. On this work the centre line has been marked out up to the 68th mile, and 1,283,000 cubic feet of earth-work have been excavated. Considerable numbers have left the work since the rainfall, and the demand for labor is said to have abated.

Soane Canal.

27. The works are progressing, but labor is reported to be decreasing in Arrah, owing to the rainfall, while in the Buxar division the soil is said to have become so hard from the long drought, that the more weakly laborers could not excavate it, and have consequently left the canal for other works.

Northern Bengal Railway.

28. The total amount of earth-work done on the railway up to date amounts to 47,773,700 cubic feet, equal to 100 miles of 4-foot bank, and 78 miles of feeder roads have been constructed.

29. The following statement shows the numbers in the receipt of charitable relief according to the latest returns.

Divisions.	Name of Districts.	Number of centres.	This fortnight.	Last fortnight.
Patna	Tirhoot	279	1,57,477	1,40,814
	Chumparun	59	11,997	9,314
	Sarun	65	12,364	9,700
	Patna	None.	None.	None.
	Gya	12	420	845
	Shahabad	15	410	2,001
	Total ...	430	1,82,668	1,62,673
Bhagulpore	Monghyr	13	2,251	2,001
	Bhagulpore	14	12,783	1,418
	Purneah	87	5,045	5,656
	Sonthal Pergunnahs	.....	100	.....
	Total ...	114	20,179	9,075
Rajshahye	Maldah	32	8,977	6,340
	Dinagepore	342	19,119	19,526
	Rungpore	26	31,680	20,346
	Bogra	30	3,931	4,043
	Moorshedabad	24	2,217	2,164
	Rajshahye	19	11,142*	2,474
	Total ...	.....	66,059	55,492
Chota Nagpore	Manbhoom	.....	8,569	5,454
Burdwan	Hooghly	.....	3,884	2,383
	Beerbhoom	.....	9,803†	5,475
	Bankoora	.....	9,047	8,073
	Burdwan	.....	14,561	14,169
	Midnapore	.....	1,314‡	no previous return.
	Total ...	.....	38,599	30,100
	Grand totals ...	.....	3,07,505	2,57,340

* Of these 6,101 employed in spinning and weaving, and light road work.
† „ 1,693 ditto ditto ditto.
‡ „ 850 ditto ditto ditto.

These returns show an increase in the recipients of charitable relief in all districts except Gya, Shahabad, Purneah, Dinagepore, Bogra, and Manbhoom; but in most districts the increase is not more than might naturally be expected. In Bhagulpore and Rajshahye the great increase is more apparent than real. In the former district the returns for the last fortnight were very imperfect, and a truer line of comparison would be the returns for the previous fortnight, which showed a total of 7,413 persons receiving relief. In Rajshahye, a considerable number is shown as receiving charity who ought more properly to be entered as laborers on relief works.

30. The return printed in the appendix shows that a total number of 3,026 emigrants have been sent up to date to Burmah. Out of these only 957 came directly from the distressed districts, and not one single emigrant from Tirhoot has been yet registered.

Emigration.

By order of the Lieutenant-Governor of Bengal,

J. F. K. HEWITT,

Offg. Junior Secy. to the Govt. of Bengal.

SUPPLEMENT TO

The Gazette of India.

CALCUTTA, SATURDAY, JUNE 20, 1874.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY ACCIDENT RETURNS FOR 1873.

No. 16 R., dated Fort William, the 10th June 1874.

OBSERVATIONS—By the Government of India, PUBLIC WORKS DEPT.

Read—

Returns of the number and nature of accidents and injuries to life and limb which have occurred on all Railways open for traffic in India during the year 1873.

OBSERVATIONS.—These Returns are issued somewhat later than usual. The last of the Provincial Returns was received on the 14th April, and the information regarding passenger mileage not until some days afterwards.

2. In October 1871, the Government of India issued specific instructions as to the nature and classes of accidents that should in future be exhibited in the Returns. These rules provided among other things for—

(1).—The inclusion of all cases of injury to the way, stock and works, whether attended, or not, by injury to life or limb.

(2).—The inclusion of all accidents of any kind likely to have endangered life or limb, or to have caused serious loss of property, such as cases of fire, or of running over obstructions placed on the line.

3. Under these rules, the East Indian Railway Returns for 1872 showed 691 accidents against 151 in 1871, but the increase was more apparent than real, as the Returns for 1872 included many accidents of a minor character, which would not have appeared under the old rules. The rules were consequently again taken into consideration, and the Governor General in Council decided that trivial accidents should be excluded from the annual Returns; that Consulting Engineers should decide what were trivial accidents; and that this being understood, the rules should stand as they were.

4. The Returns for 1873 show that the uniformity hoped for from this measure has now been fairly attained, though some of the East Indian Railway accidents might well have been excluded as coming within the category of trivial accidents.

5. The following table shows the total number of accidents to trains, engines, vehicles, way and works, &c., on the several Indian Railways during the last five years :—

YEARS.	East Indian.	Eastern Bengal.	Oudh and Rohilkhund.	Punjab and Delhi.	Scinde.	Calcutta and South-Eastern State.	Nulhattee State.	Delhi District, Rajpootana State.	Agra District, Rajpootana State.	Madras.	Great Southern of India.	Carnatic.	Great Indian Peninsula.	*Bombay, Baroda and Central India.	TOTAL.
1869 ...	76	3	33	31	14	3	6	...	...	50	41	1	183	131	572
1870 ...	147	8	14	97	28	4	9	...	...	74	1	2	313	75	772
1871 ...	151	2	4	87	51	...	...	...	...	68	1	1	146	36	548
1872 ...	691	8	26	114	49	5	2	...	...	60	3	1	150	44	1,153
1873 ...	216	3	36	76	41	2	1	14	...	64	19	...	111	38	621

6. For the reasons already stated, no useful comparison can be made between the results of 1873 and those of 1872. The year 1871 furnishes a better means of contrast.

7. The foregoing table shows that the number of accidents to trains was greater in 1873 than in 1871. These increases occurred principally on the East Indian, Oudh and Rohilkhund, and Great Southern of India Railways.

8. The total casualties from all causes to all persons, whether passengers, servants, or others, were as follows :—

	Killed.	Injured.
1871	177	204
1872	211	224
1873	166	272

COLLISIONS.

9. *East Indian Railway.*—Thirty-four collisions are reported on this line, but of these 16 occurred in connexion with shunting operations, owing chiefly to want of care on the part of the station staff, and to wagons and carriages having been left foul of crossings, or on the main line. In two cases trollies were run over. In only four instances were passenger trains concerned. In 14 collisions the driver was to blame, and in 7 the pointsman. In the two cases of collision with trollies the fault lay with those who used the trollies. The guards and the traffic staff were responsible for the rest of the collisions.

10. The casualties consisted of 13 passengers slightly injured, all in one collision, in which the train ran against the dead buffers at the Howrah Station, owing to the brake having been imprudently taken off.

11. *Eastern Bengal Railway.*—On this line there were three collisions, of which one was in connection with shunting; in one a trolly was run over. Two passengers were severely injured, and one railway servant was killed.

12. *Oudh and Rohilkhund Railway.*—There were three collisions on this line, of which two were serious in their results. In one case a train ran into a trolly carrying 8 persons, thereby killing one person and seriously injuring another; in another case, a special train overtook and ran into the rear part of the preceding train, killing one passenger and injuring 13 others and one railway servant. Total casualties—2 killed and 15 injured.

13. *Punjab and Delhi Railway.*—Of the 12 collisions on this line half were due (as in the case of the East Indian Railway) to careless shunting and to wagons, &c., being left foul of crossings, or on the main line. In two instances only were passenger trains concerned. In one case a trolly laden with materials was run into. In 5 collisions the station staff were to blame, in 3 the driver, in 2 the pointsman, and in 2 the workmen employed on the line. In no instance, fortunately, was there any injury to human beings.

14. *Delhi District, Rajpootana State Railway.*—This is the first of the metre gauge State Railways open for traffic. It was in working for only the latter half of the year. Two collisions occurred, both in connexion with shunting. One was due to the carelessness of the guard, and the other to defective machinery: the key of the engine brake had dropped out when the engine was in motion, and consequently the brake could not be applied.

15. *Madras Railway.*—One collision only occurred on this line, and this in connexion with shunting. There was no injury to life or limb.

16. *Great Indian Peninsula Railway.*—On this line there were 18 collisions in the half-year, 4 of which were connected with shunting, &c. In 3 cases lorries were run into. The classification shows that 7 of these accidents were due to the driver, 5 to the station staff, 4 to the pointsman, and 2 to the guard. The casualties consisted of 1 passenger and 4 railway servants injured.

17. *Bombay, Baroda and Central India Railway.*—Although the collisions on this line were only 3 in number, 2 were of a very serious character, resulting in the death of 2 railway servants, the injury of 3 railway servants and 9 passengers, and in the death of 2 and injury of 1 person, neither railway passengers, nor servants of the Company. Total—4 killed and 13 injured. In one of these cases a pointsman carelessly turned a mail train into the loop line at Sucheen, where a train was standing, injuring 12 people. In the other case a light engine ran into a lorry on which were a road inspector and 5 others. Four persons were killed and one injured in this accident. The accident itself was due to a breach of the regulations with regard to lorries. A descriptive report of the accident is attached to the Returns.

18. *Taking all Railways*, there were 76 collisions, of which 27 were caused by drivers, 21 by the station staff, 15 by pointsmen, 8 by guards, and 7 by workmen employed on the line. The casualties amounted to 7 killed and 48 wounded.

19. The entries do not in all cases show distinctly where the collisions to trains occurred, but the majority of them apparently took place at stations. There is no means of saying whether any of these accidents were due to want of proper accommodation at stations: this point is, however, one for investigation by railway officers in view to guarding against similar accidents in future. The cases of collisions connected with shunting operations and in consequence of wagons, &c., being negligently left foul of crossings, or on the main line, are such as may be fairly termed preventible accidents, and much might be done to make such accidents extremely rare. Drivers and guards, on the other hand, have in a great measure to act on their own judgment, and cannot be subjected to the same degree of supervision and control as the station staff. Still, something might probably be done to induce greater carefulness in their working.

20. The accidents in which trollies were concerned require special notice. In some cases trollies were so heavily laden with materials, that they could not be removed from the line in time to save a collision; and in others, the regulations regarding their use were broken. The danger in working trollies may be estimated by the fact that, in the year 1873, there were 6 persons killed and 2 injured in collisions with trollies, out of a total of 7 killed and 48 injured from collisions of all kinds. The sufferers were in all cases those connected with the trollies; but there might have been injury to the trains as well, and it is essential that rules with regard to trollies should be enforced.

GETTING OFF LINE.

21. *East Indian Railway.*—There were 25 cases of vehicles leaving the rails, of which 10 were connected with shunting operations; in one case from fly shunting, which is a breach of rule.

22. Of these 25 accidents, 8 were due to defects in the rolling-stock, 8 to carelessness of the pointsmen, 4 to the station staff, 3 to defects in road and works, and 3 to carelessness of the drivers. No damage to life and limb resulted from these accidents.

23. The defects in rolling-stock above referred to consisted mainly of the breakage of axles or their journals. A remedy for accidents of this sort, which are on the increase, might be found in an effective system of registration of all axles in use, with a view to their withdrawal after a certain amount of running. This question has been referred to the Home Government, and is also under consideration in India. As a rule, defects in rolling-stock or in the road may be detected or provided against by greater care and improved system, so that this class of accidents may, it is hoped, become less by degrees.

24. *Oudh and Rohilkhund Railway.*—Two out of the 5 cases of getting off line were connected with shunting. Of the remaining three, one was due to the

pointsman, one to a plank being placed across the rails by persons not under the control of the Company, and one to a piece of firewood dropping out of the tender, across the rails. There were no casualties to life and limb.

25. *Punjab and Delhi Railway.*—There were 24 cases of getting off the line, of which 14 were in connection with shunting. In so many as 19 instances pointsmen were to blame, and in 3 the driver. It is clear that steps might usefully be taken to improve the efficiency of pointsmen.

26. *Scinde Railway.*—On this line there were only 2 such accidents—one due to the pointsman, and the other not accounted for.

27. *Delhi District, Rajpootana State Railway.*—There occurred 4 cases of getting off the rails, of which one was due to defect in the road, and one to the fault of the traffic staff in improperly keeping certain points closed. In another case an engine went off the rails, owing to a stone having been placed under the lever points by some evil-disposed person.

28. *Madras Railway.*—There were 7 cases of getting off the line, of which 3 were due to the wrong handling of points. In one case the railway embankments were damaged by heavy rain, and a mail train was thrown off the line, but no passengers were injured.

29. *Great Indian Peninsula Railway.*—In 27 cases trains or engines and vehicles went off the line, of which 6 were in connection with shunting. The classification of these accidents shows that 7 have been attributed to defects in the rolling-stock, 6 to defects in the way and works, 5 to the pointsmen, 3 to officials of the Traffic Department, 2 to the driver, and 2 to workmen employed on the line. The remarks made in connexion with the East Indian Railway accidents are generally applicable to this and other railways. The casualties consisted of 2 killed and 13 injured, all due to one accident on the 21st September, when the ballast having been washed away by heavy rain, the Madras mail train ran off the line. A detailed report of this accident is annexed to the Returns.

30. *Bombay, Baroda and Central India Railway.*—There were 9 cases of leaving the line; none attended with casualties to passengers or railway servants. Three of these were due to defects in the rolling-stock, and 2 to the pointsmen.

31. *All Railways.*—There were altogether 103 cases of trains, engines, or vehicles leaving the rails, but in only 20 were passenger trains concerned. Of these 103 accidents, 39 were caused by the pointsmen, 19 were due to defects in the rolling-stock, 12 to defects in the road and works, 11 were caused by employés in the Traffic Department, 8 by drivers, and 5 by workmen employed on the line. Only one of the 103 accidents was attended with fatal results—namely, that on the Great Indian Peninsula Railway already adverted to.

Fire.

32. In compiling the Returns for 1872, a change was made in the classification of this description of accidents. They were formerly shown as unavoidable. They are now more properly shown as due to defects in engines, on the theory that a perfect system of protection from sparks and live cinders, if such can be devised, will render these accidents impossible.

33. There were 15 cases of fire on the East Indian Railway, 13 on the Oudh and Rohilkhund Railway, 14 on the Punjab and Delhi Railway, 14 on the Scinde Railway, 1 on the Delhi District, Rajpootana State Railway, 5 on the Madras Railway, and 8 on the Great Indian Peninsula Railway. On the whole, this description of accidents shows a diminution, having been 70 in 1873 against 105 in 1872. Spark-arresters are not used in the Bengal Division of the East Indian Railway, but are in use generally on other lines. It is a matter for notice that 11 out of the total of 15 fires on the East Indian Railway occurred in the Bengal Division, and that though coal is burnt throughout its length, this Railway heads the list.

34. The fires on the Oudh and Rohilkhund Railway exhibit an increase from 4 in 1872 to 14 in 1873. There were 145 miles open, and 649,894 train-miles run in the former period, and 374½ miles open, and 1,310,105 train-miles run in the latter. Still the number of fires is large, and the spark-arrester in use cannot be considered as thoroughly successful.

35. The Punjab and Delhi Line exhibits a remarkable decrease, the number of fires being 14 in 1873 against 63 in 1872. This improvement is partly due to the exclusion of minor accidents from the Returns of 1873, and partly to the more extended use of coal. The subject of providing efficient spark-arresters has been engaging attention, and the Punjab and Delhi Railway has tried the description of arrester said to have been used with considerable success on the Madras Railways, but the results were not satisfactory, owing to the inferior quality of the wood-fuel in the Punjab. The Government of India desire that this subject may continue to receive earnest attention on the railways which use wood-fuel.

36 In one case the khus-khus tattie in a carriage fitted with Saunders' cooling apparatus was ignited by a spark. Two carriages were destroyed and one damaged, and 2 Mahomedan passengers, who jumped out of the carriage, were injured. In another case the fire is alleged to have been caused by passengers smoking in a 3rd class carriage; and in another, some coolies in a ballast train are supposed to have caused the fire by carelessly smoking in a wagon. They jumped out while the train was in motion, and 7 were injured.

37. In two instances on the Scinde Railway wagons laden with cotton and seeds are supposed to have set fire from spontaneous combustion.

38. There were in all 2 passengers and 8 railway servants injured in consequence of accidents by fire. They all jumped off wagons and carriages to escape being burnt.

Running over Cattle.

39. In this, as in previous years, the term "cattle" includes all animals, wild and tame. In a large number of cases the animals were not really run over, but thrown off the line by the guards or cow-catchers attached to engines. The large majority of these accidents are classed as due to defective fencing, on the assumption that a perfect fence will keep out all animals likely to stray on the line. Under the orders for the preparation of the Accident Returns, all cases of cattle run over or thrown off the line by the cow-catchers of engines have to be reported, but it is doubtful whether these orders are strictly followed, and attention is called to this point.

40. There were 115 cases of cattle run over on the East Indian Railway against 128 in 1872. Of these, 111 are classed as due to defective fencing, and 3 to the carelessness of gate-keepers. Dividing these accidents between the Upper and Lower Divisions of the East Indian Railway, it is found that in 65 cases cattle were run over on the Jubbulpore Line and in the North-Western Provinces, while in the Bengal Division these accidents amounted to 49. In one case the locality is not reported. The Upper Division is not so efficiently fenced as the Lower Division.

41. Cattle were run over in 12 instances on the Oudh and Rohilkhund Railway—in 10 on the Punjab and Delhi, and in 13 on the Scinde Railway. It is not stated whether cow-catchers were in use on the Punjab and Delhi Railway. They were on the other two.

42. On the Calcutta and South-Eastern State Railway there were two cases of cattle run over, and on the Delhi District, Rajpootana State Railway, five. In one of the accidents on the last-named metre gauge railway the cow-catcher on the engine did not throw the cow off the line, but dragged it along for some distance, and the engine nearly left the line.

43. Cattle were run over 46 times on the Madras Railway, and 18 times on the Great Southern of India Railway. The engines on these lines are not fitted with cow-catchers. In a few instances the engines were slightly damaged, but only on two occasions did stock leave the rails.

44. The Great Southern of India Returns, singular to observe, show—

1	head of cattle run over	in			1868
41	...	...	...	...	1869
Nil	...	...	...	...	1870
Nil	...	...	...	...	1871
Nil	...	...	...	...	1872
18	...	...	...	...	1873

It is doubtful whether the Returns are always prepared on the same basis.

45. On the Great Indian Peninsula Railway there were 40 cases of cattle run over in 1873 against 72 in 1872; and on the Bombay, Baroda and Central India Railway 22 against 27. Four out of the 40 cases on the Great Indian Peninsula Railway occurred on the Khamgaon and Oomraotee Branch State Railways. These short branches are unfenced, and are worked by the Great Indian Peninsula Railway. In several cases the fencing was admittedly imperfect. On the Bombay, Baroda and Central India Railway 11 out of the 22 cases occurred on the Wudwan Extension, which is unfenced. Though no serious results attended these accidents, the question of the advisability of fencing the Extension deserves consideration.

46. The Returns do not show that any cattle were run over on the Eastern Bengal, Nulhattee, and Carnatic Railways.

47. There were no injuries to life and limb from this description of accidents.

Other Causes.

48. The accidents under this head number—27 on the East Indian Railway, 18 on the Great Indian Peninsula Railway, 16 on the Punjab and Delhi Railway, 12 on the Scinde Railway, 5 on the Madras Railway, 4 on the Bombay, Baroda and Central India Railway, 3 on the Oudh and Rohilkhund Railway, 2 on the Delhi District, Rajpootana State Railway, 1 on the Great Southern of India Railway, and 1 on the Carnatic Railway. Total number—89.

49. Of these, 29 were due to defects in the rolling-stock, of which 8 occurred on the East Indian Railway (chiefly consisting of breakage of axles and of couplings, &c., giving way, owing to flaws in the iron-work), 5 on the Punjab and Delhi Railway, and 9 on the Scinde Railway (consisting mostly of the bursting of tubes in the boilers of engines, and in one case of the explosion of a boiler). A descriptive report of this last accident is attached to the Returns. The cause has been ascribed to carelessness on the part of the driver in allowing the water to get too low in the boiler, but this has not been fully established. The engine had been 13½ years in service, and had run a total distance of 165,489 miles. The water on the Scinde Section is bad. The prevalence of accidents in connexion with boilers is remarkable, and should not escape notice.

50. Thirteen of the miscellaneous accidents were due to the neglect of gatekeepers. Of these, 6 or about half occurred on the Punjab and Delhi Railway. These accidents consisted principally of gates being run through when gatemen were either absent from their posts, or asleep.

51. In 12 cases drivers were to blame, and in 12 malicious attempts were made to send trains off the line by placing obstructions on it. These malicious attempts numbered 31 in 1872. The decrease is satisfactory. The entries do not show whether any prosecutions were instituted and convictions obtained, and it would be as well if this were stated in future.

Summary.

52. The points to which attention is required have already been stated, and the Governor General in Council trusts that the Railway Companies and the Consulting Engineers will apply all the remedial measures possible.

53. In the Resolution on the Accident Returns for 1872, the Government of India noticed the occurrence of 11 land-slips on the Bhore Ghât, Great Indian Peninsula Railway, between the 23rd June and the 27th August. The Returns for 1873 exhibit 12 such land-slips also on the Bhore Ghât. The fallen earth and boulders were generally of a large size, weighing up to 50 tons, and in one or two cases the line was blocked.

54. Though fortunately no accident happened to trains, these slips, which occur chiefly in the rainy season, are a source of some danger. The absence of injury to trains shows that a careful watch is kept for their protection in cases where the line is obstructed, but no watchfulness could protect a train from the risk of boulders falling as it passed, and the question of preventive measures should therefore be further considered.

55. The Oudh and Rohilkhund Railway schedule of accidents shows that certain villages near the railway were set on fire by sparks from engines. In these and other similar cases villagers have been compensated, and the Railway Company has since taken steps, in communication with the local Civil Authorities, to cause the removal to a safe distance of all huts dangerously close to the railway, the cost of such removal, &c., being borne by the Company.

Accidents and Injuries to Passengers.

56. These accidents are shown in a classified form in Table II. The figures are as follows:—

	Killed.	Injured.
From accidents to trains	3	49
„ other causes beyond their own control	...	5*
„ their own misconduct and incaution ...	10	29
Total 1873 ...	13	83
Against 1872 ...	9	58
„ 1871 ...	9	29
„ 1870 ...	13	63
„ 1869 ...	48	92

57. Several of the injuries to passengers from accidents to trains were of a trifling character.

58. The accidents to passengers from their own misconduct or incaution consisted, as usual, mainly of passengers falling in getting in or out of carriages in motion. In several instances passengers fell between the platforms at stations and the carriages. Such accidents are usually of a fatal or very serious character, and a question of some remedy, either in the shape of continuous foot-boards or other contrivances, is being considered.

59. In two instances,—both at Mokameh Station on the East Indian Railway—passengers crossing from one platform to another were injured; one fatally. An overbridge has now been erected.

60. The figures given above, as has been observed with regard to similar figures of previous years, are not a conclusive test of working arrangements, as the occurrence of one or two serious accidents on a line destroys in a great measure a just annual comparison of any one line with others.

61. The following table shows the number of passengers killed and injured per million of passenger journeys for a series of years. It also shows for 1873 the proportion killed and injured per million passenger miles. This last is obviously a more satisfactory test of the risks and contingencies of railway travelling than the number of passenger journeys, as these last are of varying lengths, and the risks of journeys of 500 and 10 miles are not the same:—

	Number per million carried of passengers killed and injured from		Number per million passenger miles of passengers killed and injured from	
	Causes beyond their control.	Their own misconduct or incaution.	Causes beyond their control.	Their own misconduct or incaution.
1865	3·64	1·37		
1866	0·84	0·61		
1867	3·10	1·22		
1868	3·58	1·90		
1869	6·66	1·61		
1870	2·52	1·05		
1871	0·47	1·52		
1872	1·9	1·4		
1873	2·54	1·74	0·04	0·03

62. Compared with results in the United Kingdom in 1872, these figures are not unsatisfactory. The number killed and injured in England from causes beyond their own control was 3·01 per million against 2·54 per million in India.

* Four of these were injured by a lunatic, who stabbed them with a knife. It is doubtful if these are properly accidents under this head of classification.

The English Returns do not afford the means of a comparison on the basis of passenger miles, and it is believed that the average mileage of travellers in India is higher than that of travellers in the United Kingdom. It must not be overlooked that, taking equal lengths of line, a very much larger number of trains is run daily in England than in India, and that the risk of accidents to trains is correspondingly increased in England.

Accidents to Railway Servants.

63. The following were the casualties among railway servants :—

	Killed.	Injured.
From causes beyond their own control—		
Servants employed in trains in motion ...	2	23
„ „ on stations or on line ...	0	5
Total ...	2	28
From incaution or misconduct—		
Servants employed on trains in motion ...	16	36
„ „ on stations or on line ...	56	98
Total ...	72	134

64. The railway servants employed on running trains, who suffered by their own misconduct, were chiefly injured when attempting to get on or off engines or carriages in motion.

65. Of those employed in stations or on the line, a large proportion consisted of persons who were struck while incautiously walking, standing, or sleeping on the line; while 11 were killed and 40 injured while shunting or coupling and uncoupling wagons.

66. In the following table are exhibited the numbers of the casualties to railway servants in the several years since 1865 :—

Years.	Number killed and injured			Train mileage.	Reported number of servants employed.
	From causes beyond their own control.	From their own misconduct or incantion.	Total.		
1865	57	136	193	9,400,823	49,398
1866	48	152	200	11,073,968	54,034
1867	33	213	246	11,766,389	69,796
1868	60	239	299	11,431,656	68,396
1869	42	213	255	13,703,381	104,558
1870	33	214	247	15,502,389	76,013
1871	24	222	246	13,944,840	74,650
1872	47	214	261	14,525,990	80,258
1873	30	206	236	15,145,205	82,201

67. Viewed as a whole, there is a diminution in the total number of accidents, but their number is still large, and the Government of India trust that the Railway Companies will do every thing in their power to reduce it.

68. The number of servants hitherto returned as employed on the several railways were not reckoned on an uniform basis. The point has lately been under consideration, and orders have been issued that in future only the following servants shall be shown in the Returns :—

I.—All persons employed in stations, including Police.

II.—All persons employed in the maintenance of way and works, exclusive of men entertained for special works, that is, for railway works involving no risk from the working of trains, *e. g.*, spurs in a river on which railway work-people are employed.

III.—All persons employed on trains or running engines.

When Returns are received showing separately as above the classes of servants engaged on railway work, it will be possible to estimate the degrees of risk attending the work done in the several departments of a railway.

69. The miscellaneous casualties were as follows :—

	Killed.	Injured.
At level-crossings	9	1
Trespassers, including suicide	58	20
Miscellaneous	12	6
Total 1873 ...	79	27
„ 1872 ...	94	13

Deaths in Trains or at Stations.

70. A complete and detailed schedule of these casualties will, as formerly, be found at the end of the Returns. There were 185 deaths in carriages and at stations in 1873 against 149 in 1872. Of these, 121 occurred on the East Indian, 9 on the Eastern Bengal, 8 on the Oudh and Rohilkhund, 10 on the Punjab and Delhi, 11 on the Madras, 3 on the Great Southern of India, 21 on the Great Indian Peninsula, and 2 on the Bombay, Baroda and Central India Railway. These casualties do not seem to require remark. They were investigated at the time of their occurrence. They were chiefly caused by passengers undertaking journeys by rail when too ill to travel. The reason why this cause should be so much more frequent on the East Indian Railway than on other lines is not known.

Order.—Ordered, that these proceedings be communicated to the Governments and Officers noted in the margin for information and guidance, together with copies of the Returns compiled.

Madras.
Bombay.
Consulting Engineers, Calcutta, Lahore, and Lucknow.
Director of State Railways.

Ordered also, that these papers be forwarded to the Department, Governments, Administrations, and Officers marginally noted for information, and that copies be forwarded to the Secretary of State for the information of Her Majesty's Government.

Home Department.
Government of Bengal.
„ of North-Western Provinces.
„ of Punjab.
Chief Commissioner of Oudh.
Chief Commissioner, Central Provinces.
Resident, Hyderabad.
Chief Commissioner, Mysore.
Agent, Governor General, Central India.
Agent, Governor General, Rajpootana.

Ordered further, that steps be taken for the publication of the papers in the Supplement to the *Gazette of India*, Table I excepted.

H. DRUMMOND, *Colonel, R. E.*,
Deputy Secretary.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 18th JUNE 1874.

GENERAL REMARKS.—In Madras the rainfall continues, but has been scanty in Trichinopoly and Tanjore; prospects are satisfactory. In Sindh the river is still abnormally high. Abundant rain has fallen in Bombay, except in parts of Gujarat, where it has not yet been sufficient to start the sowings; elsewhere these are progressing. In Bengal there has been general rain during the week, and prospects are almost everywhere excellent; sowings for the winter rice crop are being actively pushed forward; the early rice is approaching maturity in some of the eastern districts. Good rain continues to fall in the North-Western Provinces and Oudh, and agricultural operations are in active progress; the numbers on relief works are much diminished. In the Punjab but little rain has yet fallen. Abundant rain in the Central Provinces and Berar has pushed on ploughing for the autumn crop. General showers have fallen all over Rajputana and heavier rain in Central India. The season is favourable in Mysore, Burmah, and Assam.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Madras—	**(June 18th)**		
Kurnool	(June 17th)	3·19 at Kurnool on two days.	Rainfall elsewhere good, except in Markapur and Cumbum; season generally favourable; sowing operations commenced; markets well supplied; prices stationary; water and pasture abundant; small-pox and cattle disease prevailed in most taluqs; fever also to some extent; ·5 of a foot of water over the Sunkesala anicut yesterday.
Tanjore	(18th)	0·10 at Negapatam.	Rainfall elsewhere scanty; freshes in rivers moderate; supply to tanks scarce; water over upper and lower anicuts none; the sowing of inferior paddy commenced; standing crops good, though very few; harvest none; pasture procurable; markets sufficiently supplied; prices stationary; public health generally good; small-pox in several places; cattle healthy.
Trichinopoly	(17th)	...	Little or no rain during the week; the Cauvery one-fourth full; water supply for irrigation in wet taluqs sufficient; deficient in Perambalur; deficiency of drinking water in dry villages only; condition of crops good; supply to markets sufficient; prices generally stationary; very slight rise in Trichinopoly and Udyarpollium taluqs; public health good; a little small-pox still lingers in town; condition of cattle good, but affected by diarrhœa in one village; pasture ample in wet and procurable in dry taluqs.
Kistna	(18th)	·80 in Masulipátám.	Rain general in the district; 2 feet 10 inches of water over anicut; dry cultivation progressing; wet commencing in the delta; prices stationary; public health good; mild small-pox continues; cattle healthy; pasturage improving; markets well supplied locally.
Calicut	(18th)	17·18	Sowing for the first crop almost completed; local and foreign supplies of grain sufficient; small-pox continues slightly; fever prevalent in hilly parts; cattle healthy; pasture improved; prices stationary.
Bombay—	**(June 17th)**		General prospects satisfactory.
Sindh.			
Kurrachee	...	...	River at Kotree gauge on 13th instant 14 feet 11 inches, being 4 feet 4 inches higher than last year; small flood from Gaj on 5th; breaches in Western Narra owing to excess of water; fever rather prevalent; encroachment of Indus continues at places mentioned in last report; weather very warm; prices of red rice and bajree risen.
Hyderabad	...	...	River 4 feet 3 inches higher than on same date last year; weather sultry; rain expected; no sickness.
Shikarpur	...	...	River 12 feet 9 inches on Bukkur gauge; rain in Larkhana division on 8th and 10th; Jally bund breached on 14th and railway embankment breached near Mudaji on morning of 16th; heat moderate; public health good.
Upper Frontier	...	...	Weather oppressively hot; atmosphere hazy; slight shower of rain at Kushenore on 9th; heavy rains and floods in Kutchee; peshrus cultivation flourishing; fever prevalent.
Gujarat.			
Ahmadabad	...	1·61	More rain wanted; weather continues hot.
Kaira	...	·55	Weather and health good; sowing operations not commenced.
Surat	...	·84	Weather and public health good.
Broach	...	3·13	Sowing begun; public health good.
Khandesh and Nasik.			
Khandesh	...	5·43	Rain good; fall 5·43 at Dhulia; cotton market steady; best cotton Rs. 47 per pulla; weather cloudy; public health good.
Nasik	...	3·23	Rainfall general; sowing of early crops in progress; public health good; dengue continues in Yeola Konkan.
Tanna	...	3·19	Ague and bronchitis prevailing; sowing operations in progress; slight cattle disease in Warra and Murbar taluqs; fever in Shapur taluq; guinea-worm and small-pox in Warra taluq.
Deccan.			
Poona	...	3·21	Rain good; 3·21 fallen in all the taluqs; sowing of early crops commenced; climate and public health good; slight cattle disease in Indapur, Khed, and Bhimthadi.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*			
Ahmednuggur	...	1·5	Sowing operations commenced; cattle disease in some villages of Ankola taluq; public health good.
Satara	...	1·94	Sowing of khureef crops generally in progress; fever and bowel complaint in Walwa and ague in Patun.
Southern Mahratta Country—			
Belgaum	...	4·2	Sowing progressing.
Dharwar	...	...	Rain generally light, but good in Dharwar taluq; rice sowing almost completed; sowing of other early crops in progress.
Canara	...	15·5	Weather very stormy; rain 15·5 at Carwar; cultivation progressing. Fever and cattle disease prevalent.
Kattywar and Gaekwar's Territory—			
Rajkot	..	·95	Weather continues hot.
Wudwan	...	1·	Weather warm; sowing not commenced; health good.
Baroda	...	2·69	Cultivation commenced; public health good.
Bengal—			
Burdwan	...	1·11	Rain has fallen in all the sub-divisions except Cutwa and Jehanabad. The fall at Culna has been 3·32 inches. Sowings of paddy are going on all over the district, and in some places the seedlings are well above ground. Telegraphed on the 18th.—Rainfall 1·87 from Monday to Wednesday.
Bankoora	...	0·75	Partial showers throughout the district; weather cool. Agricultural operations going on well; aous or early rice seedlings flourishing.
Beerbhoom	...	1·48	Cool and showery. Prospects good all round so far. Export of week ending 6th June 4,806½ maunds, chiefly to the Bhaugulpore Division. Prices almost stationary with downward tendency.
24-Pergunnahs	...	1·34	Showery; hot in the intervals. The prospects of the early rice crop are good, though more rain is still wanted in places. The sowing of the amun or late rice in nurseries has commenced in Diamond Harbour, and in some places the seed has already germinated.
Nuddea	...	1·43	Occasional rain; everything is most promising. The rain appears to fall just as it is required. There is a little deficiency in seed for the late rice crops; measures are being taken to supply this through zemindars.
Moorshedabad	...	2·42	A heavy rainfall and thunderstorm on the night of the 11th June; cool for this period of the year. The crops are looking well, and have been much benefited by the rain. Prices show no change since last report, excepting a slight improvement in the Sudder Bazar.
Dinagepore	...	2·58	Rain throughout the district. The weather has been most seasonable and all that could be desired for the bhadoi or early and jute crops; lands are everywhere being broken up for the winter crop, and seed sown in seed-beds. ·57 more rain telegraphed on 18th.
Maldah	...	0·80	Cloudy and rainy. The prospects of the bhadoi or early crops are very good. Cultivation for the hymunty or winter crops has begun. The price of rice is 11¼ seers per rupee of the coarse sort and 9½ of the best sort.
Rajshahye	...	1·62	All parts of the district except the south-western quarters have had rains during the week. The coming aous or early rice crop is reported to be in excellent order and to have benefited largely by the recent rain. The amun or late rice, which has been within the last fifteen days sown on high spots, has come up freely and is growing well. There have been extensive sowings of both the early and late rice since the rain has begun to fall steadily. The teel (oil-seed) is now very nearly all off the ground and has been an abundant crop. Oil is considerably cheaper than it was last year. Jute in the north of the district has failed to a partial extent, and in some places fresh sowings of it are being made. Mangoes are plentiful and cheap and are of much assistance to the people as a food article. Prices are high and in some places have risen since last report, especially in those not easily accessible to importation.
Rungpore	...	0·35	More rain has fallen to the east and south; the fall has been very general. All crops have progressed very much. Millets are in the markets in great quantity and early rice in many parts. The sowing and planting out of the late rice is being vigorously proceeded with. Telegram dated 18th.—1·66 inches of rain since the above report.
Bogra	...	5·56	Seasonable. The aous or early rice crop looks excellent. A good crop of boro rice has just been reaped. The ploughing for the amun or late rice has begun. The rains have set in seasonably.
Pubna	...	1·10	Weather generally dry; slight showers of rain every other day which have been most favourable to the growing crops. The teel (oil-seed) crop is nearly all cut. It is an average crop. Jally paddy has nearly been all cut. The early aous is looking very well and will be cut early in July. The kowni (millet) crop promises well. Harvesting will commence at the end of the month.
Julpigoree	...	4·88	7th and 8th June fine; a good deal of rain during the rest of the week with bright sun intervening. The bhadoi or early crop is promising well. Hymunty or winter crop seed is being sown and looks well. Jute is growing up fast. The prospects of all the crops could not be better than they are. Telegram of the 18th.—Rainfall continues favourable. Crop prospect excellent.
Dacca	...	0·41	Weather hot with occasional showers. State of crops very good; aous (early) rice in Bekrampore begun to be cut. Telegram of the 18th.—Rainfall since the above report 0·26. Prospects of crops excellent; rivers rising again.
Patna	...	1·76	Weather all that could be desired for agricultural purposes with slight rain almost every day. Ploughing and sowing going on everywhere; ·63 more rain telegraphed on 18th.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Gya ...	2·37	Seasonable. The rains have regularly set in three weeks earlier than usual. Agriculturists are actively engaged in ploughing and sowing bhadoi (early) and paddy crops. No agriculturist at this season is unemployed.
Shahabad ...	0·30	Rain has been general in the district; very heavy at Arrah. Weather unsettled and threatening. During the last six days sowings have not been carried on everywhere, owing to a superstitious custom of not sowing during the first eight days of the Mirigda Nachatra. Before that in many places "sawan" (grass-seeds) and "murwa" (millet), paddy, and "dhoorya bang" or seed-beds, were sown during Ronni Nachatra. From Monday next, the 15th instant, the bhadoi or early sowings will be carried on everywhere, the late rain being most beneficial for the purpose. Sugarcane and indigo on the ground are promising.
Tirhoot ...	0·95	Weather close and sultry, east wind prevailing, and cloudy. Mudhoobunnee Sub-division.—2·6 inches of rain fell throughout the sub-division. Sowings of paddy and bhadoi or early crops are going on briskly; in some places paddy crop has already germinated, and is doing well; the prospects of indigo are improving owing to the recent showers. No more rain wanted at present. Durbhunga Sub-division.—One inch of rain has fallen all over the sub-division, and thunder constantly threatening heavy rain. Great portion of [illegible] have been ploughed, and a large quantity of bhadoi or early crop seeds sown. In the eastern parts of the sub-division paddy has been sown, and looks well. It is reported that this year lands have been under bhadoi crops that [illegible] rice. Seetamarhee Sub-division.—0·94 inch of rain fell over the sub-division, most favourable to crops on the ground. It is reported that crops [illegible] well, and that the prospects are good. Hajeepore Sub-division.—0·27 inch of rain fell; a heavy fall of [illegible] which must benefit the crops. No report has been received from [illegible] sion. The rain that fell in the Sudder sub-division has done [illegible] early crops, which have germinated, and has enabled the cultivators [illegible] high lands for paddy sowing. Telegram of the 15th.—Police report 7 inches of rain at Lallgunge [illegible] from two to three inches in surrounding country; all tanks [illegible] Bhagmutty risen very much; Gunduck rising.
Sarun ...	1·12	Cloudy, easterly winds. Rain more or less general throughout the [illegible] been of very great benefit to the crops and to agricultural operations. Ryots are engaged in preparing their lands for the next sowings. The bhadoi or early crops and the aghanee or late rice are now being sown. The early sowings are coming on well. Cheena (millet) is being harvested; mango ripening. The cultivating season has opened favourably, and the prospects at present are all that could be desired. Prices of barley, jowar (great millet), and cheena (lesser millet) have slightly fallen.
[illegible]parun ...	12·80	Seasonable. More rain has fallen (on 8th, 9th, and 10th June). Agricultural operations are going on briskly, and the prospects so far are unusually good. Telegram dated 18th.—Weather very windy and cloudy, most favourable for agricultural operations, as sufficient rain has fallen.
Monghyr ...	4·07	Cloudy, and frequent rain general all over the district. Rain has fallen plentifully. Ploughing and sowing going on vigorously. Season favourable so far. Telegram of 18th.—4·09 inches rain since above report.
[illegible]ipore ...	2·64	Total rain since 1st; June 6·63. At Banka since 7th 3·40. About 14 inches all over North Soopool since 1st; 6 inches fell in three hours on 13th; the same quantity fell on same day at Sonebursa, in Muddehpoora. The crops are magnificent; prospects could not be better. Telegram dated 18th.—2·06 inches rain since the above report.
Purneah ...	0·84	Cloudy and showery; rain very partial. More rain is still wanted in the south for the early jally rice and for the bhadoi or early crops. In the north, the transplanting of the aghanee or late rice has commenced. The jamira (very early rice) is in ear in Kishengunge, where the jute is coming on well. Prospects generally very good. No more rain is wanted at present in Arrareah.
Sonthal Pergunnahs ...	·45	Clouds gathering and dispersing. Heavy shower of rain on Monday, the 8th instant, reported from Rajmehal. Wind variable still; good showers of rain all over the district. Ploughing and sowing going on everywhere. The prospects of the crops are favourable. Indigo in the Rajmehal dearas promises well.
Cuttack ...	2·13	Weather favourable to the crops. Sowing progressing satisfactorily. Crops which have been sown are coming up well. Prices of food-grains stationary.
[illegible]ore ...	2·38	Telegram of 18th reports further fall of 5·4 inches.
[illegible]urdugga ...	·50	Telegraphed on 18th.
[illegible]Room ...	2·84	Weather seasonable. The prospects at present are very favourable. Sowing is still going on actively, and the crops which have been sown have germinated well. In Palamow, too, everything promises well, and a very large number of the labourers have deserted the relief works. Jungle fruits and sagh vegetables are in great abundance this year. Prices have fallen slightly. Showery and cool. Rain has continued to fall during the whole week, which has enabled the cultivators to plough up their lands and sow [illegible] gurdul, Indian-corn, and also the seed-paddy for transplanting later in the season. There are some complaints of want of seed, but they are not [illegible]able, if any, land will probably be left unsown for want of [illegible]pects are now very good—in fact, could hardly be better.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
		PUBLIC HEALTH. Burdwan.—Cholera abating; fever as before. Bankoora.—Cholera and small-pox considerably abated. Midnapore.—The town is still suffering from cholera with an average of five seizures daily. 24-Pergunnahs.—Cholera is prevalent in parts of the Sultanpore thanna, but has abated in Baduria; fever in Barripore is reported on the decrease. Moorshedabad.—Cholera and small-pox decreasing. Rajshahye.—A few cases of cholera and small-pox are now reported. Chittagong.—Cholera continues to abate. Shahabad.—Small-pox still in parts of the district. Sonthal Pergunnahs.—A few cases of cholera reported from Bario; no fresh cases brought to notice. Balasore.—Cholera apparently reached its maximum during the week under report and is now on the decline. Lohurdugga.—Small-pox still prevalent, but the general health is very good. Maunbhoom.—Cholera decreasing. Public health good in Nuddea, Mymensing, Patna, Bhaugulpore, Cuttack and Pooree. *General Remarks.*—During the week under review, more or less rain has fallen in all the districts of these provinces, although in Pooree and in parts of three or four other districts more is still required to complete the sowings of the season. The weather has been seasonable throughout the province, and favorable for agricultural operations. Sowing of the early rice and ploughing for the late rice crops are progressing satisfactorily. In parts of Rungpore early rice has been already reaped and is being cut in Bikrampore, Dacca. By the beginning of July, it will be fit for the sickle in some few other parts, but in the districts generally it is only well above the ground. In Backergunge the crop will be a poor one, but in this district is never of any importance The weather for the amun or late rice sowings (the staple crop of this district) was favorable, has been almost completed in some districts, and is being vigorously pushed on in others, and the lands are being prepared for transplanting boro rice, teel (oilseed), and millets are being harvested with good and average result. Indigo, mulberry and other crops have benefited greatly by the rain. Some deficiency of seed for the late rice sowings is reported in parts of Nuddea and Maunbhoom, but steps are being taken to supply the want through the zemindars in the former district. In Maunbhoom the district officer thinks that little land will be left unsown. Prospects in general are very good. In some of the distressed tracts the people are leaving the relief works for their fields, as labor is everywhere on demand at this season. Tanks are well replenished, and pasturage provided by the rains.
N. W. P. Bustee	(June 13th)	1·1 to 2·0	Heavy downpour on 11th, and slight drizzle all the week. Total rainfall from 11 to 20 tenths. Sowings commenced everywhere, and rice and other crops begun to sprout. Numbers on relief works about 55,000. Workhouses at Bustee and Bansee started; numbers about 600.
[illegible]ooks	(17th)	1·2	Rainfall ·5 in east and north; weather all that could be desired. Sowing [illegible] At 3 workhouses 965 persons; no increased symptoms of distress since relief closed.
[illegible]ore	,,	...	Copious rain, 11th, 12th, and 13th. Sowings commenced. Only one [illegible] open; attendance 848.
[illegible]e	(15th)	...	Rainfall not heavy nor equally distributed, but enough for ploughing and coarse khureef grains. Sugarcane very promising. Relief works [illegible] closed; south of Soane 2. Condition of people in Doodhee good.
[illegible]	(17th)	...	Enough rain has fallen for sowing dry crops; not enough for rice.
[illegible]h	(12th)	·5 to 2·1	Ploughing and sowing going on.
[illegible]	(13th)	...	Much rain has fallen on east, less on west; ploughing for the khureef goes [illegible]
[illegible]ad	(17th)	from ·4 to 3·5	Rainfall from ·4 in trans-Jumna to 3·5 in Doab.
[illegible]	(12th)	...	Rain heaviest in the west and centre of the district, where khureef grains are being sown; in the east not plentiful enough for ploughing. One relief work closed; numbers on Kane relief work unchanged; 4 poor-houses in Banda with [illegible]; 4 in Kirwee with 80. Condition of the people improving.
Hameerpore	(13th)	from 1·0 to 4·0	General rain from 3rd to 9th. People will not plough, not believing that the rains have really set in. Numbers on relief works increased from 1,763 to 2,0[illegible] numbers in poor-houses unchanged.
[illegible]wnee	,,	...	Rain variable, and slight in parts; ploughing commenced in many p[illegible]
Jhansi	(16th)	·9	Ploughing commenced. Numbers on relief works 884.
Cawnpore	(17th)	2·0	Ploughing and sowing going on generally.
Futtehgurh	,,	2·0 to 4·5 in north of district.	Hardly any rain in south (Tirwa and Chibeamow); ploughing general.
Agra	,,	...	Cloudy weather; cultivation going on.
Mutt[illegible]	(13th)	2·0	Ploughing general, but little seed sown yet, as people hardly believe the rains have really begun.
Meerut	(17th)	1·0	Sowing general.
Sahar[illegible]pore	,,	1·5	Prospects good.
Bijnour	(15th)	...	No rain for a week; what has fallen was irregular and partial, heaviest in north; ploughing and sowing begun in some parts.
[illegible]adabad	(17th)	2·8	Average rainfall in district 1·3; ploughing general; cotton sown in some places; sugarcane flourishing.
Bareilly	,,	·7	Ploughing going on.
[illegible]njab— Lahore	(June 18th)	...	Showers in Hissar, Lahore, and Dera Ismail Khan. Health of province generally good.
