LAHORE,
The 9th December

W. BROADFOOT, *Captain, R. E.,*
Asst. Secy. to Govt. P[illegible] W. D., Irrign. Bran

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

WORKING OF THE PUNJAB TENANCY ACT XXVIII OF 1868.

No. 342, dated Lahore, the 3rd April 1872.

From—W. M. YOUNG, Esq., Offg. Secretary to the Financial Commissioner, Punjab,
To—The Officiating Secretary to Government, Punjab.

I am directed by the Financial Commissioner to report the completion of the work of revising tenant entries under Act XXVIII of 1868 in the Amritsar, Gurdáspur, Siálkot, Lahore and Gujránwála districts. The revision was conducted by the following Extra Assistant Commissioners, who were specially appointed for the work by orders of Government conveyed in your letter No. 103, dated 4th February 1870:—

Report on revision of tenant entries under Act XXVIII of 1868.

Amritsar	...	Agha Kulbábid.
Gurdáspur	...	Káim Ali.
Siálkot	...	Wazir Ali.
Lahore	...	Ghulám Nabi Khán.
Gujránwála	...	Fakír Zahur-ud-dín.

2. In Amritsar the work, as far as concerned the revision of entries in the settlement records, was commenced at the end of April 1870, and completed by the 31st of August 1870; in Gurdáspur the work was commenced in February 1870, and completed in November 1870; in Siálkot it was commenced in May 1870, and completed in October 1870; in Lahore it was commenced in May 1870, and finished in August 1870; and in Gujránwála it was commenced in May 1870, and brought to a conclusion in July 1870.

Dates of commencement and completion of work in the five districts named.

3. But a number of suits for matters connected with the Act were instituted after the actual revision of entries took place, and it was desirable to allow these cases to be decided by the officers named in your letter No. 103, dated 4th February 1870, and to receive reports as to the general working of the Act before closing proceedings. The officers employed in revision were therefore directed to send in final reports showing the result of their proceedings.

Suits instituted after actual revision of entries.

4. Reports have accordingly been submitted from all the above-named districts, giving an account of the method by which the revision of entries was carried out—the last of these was received, on 3rd June 1871, from the Commissioner of Lahore.

Reports of the five districts.

5. A recapitulation of the orders of Government with reference to the subject, and of the principles laid down for the guidance of the officers conducting the revision, is here given.

Recapitulation of the orders of Government on the subject.

6. The following instructions, contained in paragraphs 2 and 3 of your letter No. 898, dated 1st December 1868, form the basis upon which action has been taken:—

"Section 45 of the Act declares that 'all proceedings of officers of Government in making or revising, prior to the passing of this Act, settlements of land revenue shall, so far as such proceedings are consistent with the provisions of this Act, and subject to appeal and revision when an appeal and revision is provided, be deemed to have been taken in accordance with the law;' and section 6 provides that 'every tenant whose name appears in the records of a regular or revised settlement heretofore sanctioned by the Local Government as having a right of occupancy in land which he, or the person from whom he has immediately inherited, has continuously occupied from the entry of his name or the name of such person, as the case may be, shall be presumed to have a right of occupancy in the land so occupied, unless the landlord shall, in a regular suit, prove—

(1)—'That within the 30 years immediately before the institution of such suit other tenants of the same class in the same or in adjacent villages have ordinarily been ejected from their holdings at the will of the landlord; or

(2)—'That the tenant has voluntarily admitted before any officer employed in making or revising a regular settlement of land revenue, or before any officer authorized to attest the entries in the record of such settlement, that he is a tenant not having a right of occupancy, and that such admission has been recorded at the time by the officer so employed or authorized.'

"It follows that all proceedings in the recent settlements of the districts of Gurdáspur, Amritsar, Gujránwála, Siálkot, Kángra, Lahore, and Gujrát, whereby tenants previously recorded as tenants with a right of occupancy have been recorded as tenants-at-will, must be deemed invalid."

7. It was subsequently decided that of the districts mentioned in the latter paragraph, two, *viz.*, Kángra and Gujrát, should be excluded from the number of those in which a revision of the entries in the settlement papers was deemed imperative; and the reasons for this exclusion, which it is not necessary to recapitulate here, were set forth, as regards Kángra, in this office No. 606—4554, dated 29th July 1869, and accepted in your predecessor's No. 955 A, dated 7th August 1869. In Gujrát there had been no wholesale alteration of tenant status at the second settlement, because the entries of rights of occupancy at the first settlement had been made in Gujrát with much more care than elsewhere, and after consideration of the nature of the occupancy as well as of its duration. Accordingly this report deals only with the five districts—Amritsar, Gurdáspur, Siálkot, Lahore, and Gujránwála.

Exclusion of Kángra and Gujrát from revision of entries.

8. In paragraph 4 of the letter of Government above quoted it was recorded as desirable that, besides the revision of the records of the recently-settled districts with reference to section 6 of the Act, the opportunity should be taken for classifying under sections 5 and 6 the several classes of tenants therein mentioned. But in Government letter No. 1196, dated 6th October 1869, it was considered that this classification of tenants with rights of occupancy would necessitate the employment of extra establishments and expense which there would be difficulty in meeting, and the plan was abandoned.

Classification of tenants necessary.

9. The operation of revision thus became much simplified, and, in accordance with the orders of Government in the same letter, the Financial Commissioner proceeded to consider the question of the agency to be employed in making the revisions, and of rules for their guidance. The Financial Commissioner's proposals on the latter subject were set forth at length in my predecessor's letter No. 870, dated 3rd November 1869, and approved by Government letter No. 1344, dated 22nd November 1869. In Government letter No. 103, dated 4th February 1870, the officers mentioned in the first paragraph of this report were entrusted with the task of revising the entries in the records of the several districts, and the instructions laid down in the letters No. 1196, dated 6th October, from Secretary to Government, and No. 870, dated 3rd November, from Secretary to Financial Commissioner, declared to be the principles on which they should base their operations.

Agency employed in making the revisions.

10. A copy of the rules framed in accordance with these instructions was given to each of the revising officers, and one is appended to this report. The instructions conveyed by them may be epitomized as enjoining the following procedure:—

Instructions conveyed by the rules epitomized.

I.—To revise the entries by which tenants who were recorded at the previous settlement as having a right of occupancy had been deprived of that right otherwise than by a decree of court, or by a special written agreement, by erasing the invalid entries and making a fresh entry in red ink, stating that the tenant has a presumptive right of occupancy under section 6 of the Act, and informing the parties interested,—leaving it to the proprietor, on the one hand, to take the necessary measures for rebutting the presumption of occupancy rights should he think fit to do so, and to the tenant, on the other hand, to take the necessary measures for obtaining an authoritative declaration of his precise status as a tenant under class 1, 2, 3 or 4 of Section 5, or the classes described in Sections 6 or 8.

To this was added a negative injunction, to the effect that the revising officers were not to undertake the work of classification of tenants *proprio motu*.

II.—To record on each settlement misl in red ink an entry to the following effect:—

"Nothing in this misl, which relates to the subjects treated of in Section 16 of Chapter 3, or in Chapters 4, 5, and 6 of the Punjab Tenancy Act, shall be considered valid if opposed to the entries made in the first regular settlement, unless it is supported by an agreement or a decree of court, or is valid under Section 45 of the Act."

With regard to Sections 10 to 15 of Chapter 3, treating of "rent," it was noted that, as the rates of rent of tenants with rights of occupancy were fixed at the first settlement for the term of settlement only, and were therefore liable to revision when the assessment was revised, the enhanced rates of rent imposed at the revised settlements were protected by Section 45 of the Act, and were not to be altered without a decree.

The correction of the entries of status of cultivators and the insertion of the general note in the patwari's copy of the settlement misl was ordered to be made simultaneously with the correction of the Government copy (or copies), and it was ordered that each entry should be signed by the Extra Assistant Commissioner.

Thus the correction of the official records of the settlements was provided for. In order to provide for a corresponding revision of the title-deeds in the hands of cultivators and their landlords, it was provided—

III.—That all such title-deeds should be collected, and entries corresponding to the revised entries in the settlement records regarding the status of cultivators be made in them and attested by the Extra Assistant Commissioner, or his responsible subordinate, the qánúngo acting under his orders; and further that on any

document supplied to the people by the settlement authorities, whether an extract of the above nature or an extract from other parts of the settlement record touching upon the subjects treated of in Section 16 of Chapter 3, or Chapters 4, 5, and 6 of the Act, should have the general remark quoted above recorded on it, the meaning of which was to be explained to the parties concerned, after which process the papers, whether title-deeds or extracts, were to be returned to the people.

The revising officers were enjoined to undertake the work tahsil by tahsil, and they were empowered to make use of the whole staff of qánúngos and naib qánúngos for the purpose. They were enjoined to use dispatch in making the corrections, and not to delay making the rectifications, because they might anticipate that numerous suits would be brought to set aside the record of the first settlement. They were not to consider themselves precluded from hearing suits brought under the Act, but to decide them as they arose as promptly as possible, making any alterations necessitated by decrees in such suits as the decrees were passed.

With these rules for their guidance the revising officers were started on the work.

An additional ruling found necessary; account given.

11. In the course of operations an additional ruling was found necessary, an account of which may be here given.

From an inspection of some cases relating to the status of cultivators with right of occupancy, it came to the notice of the Financial Commissioner that petitions for restoration of the status recorded at the first settlement were rejected, because that status had been lowered by a judicial order passed during revision of settlement; and on examining some of these judicial orders the Financial Commissioner discovered that the officer deciding the case had, in his judicial decision, awarded the cultivator whose status had been degraded a lease for a term of years instead of the tenure recorded at the first settlement.

12. In three cases, marginally noted, it had been decided by the Chief Court that to award a lease for a term of years in a judicial decision without the consent of either party was illegal, and the Financial Commissioner, concurring in this view, considered it hard as well as illegal that decisions founded on a principle which had been declared wrong should be allowed to prejudice the rights of those who petitioned for a restitution of their status under Section 6 of the Tenancy Act. On the ground therefore that the revising officers were officers of the districts concerned, with jurisdiction and powers co-ordinate in respect of such suits with the officers who passed these orders, the Financial Commissioner gave instructions in his circular memorandum No. 4171, dated 19th July 1870, to the effect that a petition for restitution of status in such cases should be treated, if practicable, as a petition for review of judgment, and regarding the disposal of such cases where no petitions should be presented announced that orders would subsequently be issued when the number of them was ascertained.

Gopal Singh *versus* Jowahir Singh.—Punjab Record No. 1, dated 5th December 1867.
Nathu Khán *versus* Sultán.—Punjab Record No. 18, dated 24th January 1868.
Het Rám *versus* Turti.—Punjab Record No. 42, dated 15th February 1868.

Account of three cases decided by Chief Court.

This circular memorandum formed the subject of some correspondence, which, it is sufficient here to state, resulted in a ruling of the Government of India, No. 151, dated 17th March 1871, in which the correctness and legality of the circular memorandum were asserted.

13. The results of the proceedings of the revising officers will now be reviewed generally and severally with reference to—

Proceedings of revising officers reviewed.

I.—Revision of settlement records.
II.—Judicial cases.

14. It has been found during the preparation of this report that the number of judicial cases decided while the revision was in progress does not afford a sufficient basis from which to draw conclusions of much value as to the operation of the Act through the courts. Under these circumstances the Financial Commissioner has thought it best to embody in this report the returns of judicial cases instituted during the whole of the years 1870 and 1871, and notice of these cases will accordingly be made after the revision operations of each district have been separately reviewed. Separate statements of the judicial cases decided during the years 1870 and 1871, numbered II and III, are appended to this report. The former comprises results from February to the close of the year. This statement will not in every case correspond with the returns of judicial suits heard during the revision, as in every case the period of revision was not co-extensive with that of the statement. In reviewing the results in each district separately, notice will be taken of the judicial suits heard during the revision period; the whole results of the executive process, and of the judicial cases for the period during which revision was being carried on, as well as for the year 1871, will then be summarized, and general conclusions drawn.

15. This report deals primarily with the five districts where revision took place; but the opportunity has also been taken to review the effect of Section 11 of the Act in other districts,—separate statements, Nos. IV and V, having been compiled under the Financial Commissioner's order for all suits brought under this section in every district of the province up to the month of October 1871.

Review of the effect of Section 11 in other districts.

PART I.

District Results.

16. The Extra Assistant Commissioner, Agha Kulbábid, has submitted a brief report on the revision effected under his superintendence.

Amritsar district work reviewed.

There are 1,076 villages in the Amritsar district. In 637 of these revised entries have been made regarding the status of cultivators who lost their right of occupancy during the operations of the recent settlement. The number of entries so revised in these villages amounts to 11,951. The number of settlement misls on which the entry given in paragraph 10 of this report have been made is 868; while the title-deeds in the hands of proprietors and cultivators have had this entry recorded on them, or been otherwise revised with regard to the status of cultivators in the same villages. The Extra Assistant Commissioner reports that in about 6,000 holdings no alterations were made. It is supposed that this refers to the holdings of cultivators who had been degraded by the recent settlement operations to whom the right of occupancy was not restored during the revision.

17. The litigation caused by the introduction of the Act was not heavy during the revision. The following table shows the cases decided during that period:—

Litigated cases.

Nature of claims.	*Instituted.*	*Decided.*	*Pending.*
Rebuttal of presumption of right of occupancy, Section 6	153	43	110
Claims to rights of occupancy, Section 5	163	28	135
„ for enhancement of rent, Section 11	15	8	7
„ for abatement of rent, Section 14	28	28	0
Total ...	359	107	252

Suits entertained prior to revision under what circumstances.

18. But prior to the revision suits had been entertained in the district courts under the following circumstances:—

Punjab Gazette Notification No. 912, dated 4th December 1868, declared the Amritsar district to be again under settlement. Thereupon suits for restoration of status were instituted in great numbers. The orders of Government in Secretary's No. 569, dated 14th April 1869, were to the effect that these petitions should be received and recorded, and a list prepared of them,—the petitioners being informed that they would be taken up and disposed of when revision proceedings were set on foot. When, however, the orders contained in Government letter No. 834, dated 25th June 1869, were promulgated, suits under the Act were heard and disposed of by selected officers; and Extra Assistant Commissioner Agha Kulbábid, who afterwards was employed for the revision, was the officer selected in the Amritsar district. The number of cases instituted during the remainder of 1869 was 370, of which 154 were decided by the Extra Assistant Commissioner. The whole of these petitions were brought under Sections 5 and 6 of the Act by tenants claiming restoration to the status of which they had been deprived at the recent settlement. During February, March, and April the number of cases of this nature instituted amounted to 1,716, while 1,925 such suits were decided during the same period. After April the majority of the suits still pending were treated on the executive side in the revision; the results of the judicial inquiries previously held must be added to those of the revision in order to obtain the total of cases disposed of. This gives nearly 13,000 cases in which the former status was restored to cultivators.

19. It will be observed that suits for enhancement of rent were only instituted in very small numbers. There can be no doubt that the power given to proprietors by Section 11 of the Act was not at first understood; and this being the case, it would not be fair to gauge the future effect of the Act by the feeling of the proprietors during the revision, since that which they had to gain by it was not then appreciated. This feeling has notwithstanding been far from adverse, according to the opinions of the officers of the district. The Extra Assistant Commissioner makes the following remarks upon this subject:—

Suits for enhancement of rent.

"1. Tenants are generally satisfied with the revision, and are eagerly engaged in getting hold of their land and holdings.

"2. Landlords consider that the rights of tenants recorded in former settlement have been established by the introduction of the Act. They, however, bring suits for ejectment of such tenants as had been put out of possession, but the suits of the kind are not very numerous as yet."

Deputy Commissioner's remarks.

20. The Deputy Commissioner on this subject makes the following remarks:—

"The general feeling, so far as it has come under my observation, is undoubtedly favorable to the Punjab Tenancy Act. It has done much to secure the contentment of the masses of the population, who do not ordinarily, or until hard pressed, give vent to their opinions. The rush which was made by the tenants to obtain reinstatement in their hereditary rights, of which they were only now beginning to feel the loss as the protective leases fell in, shows how deeply they valued them, and how radically they had been affected by the operations of the recent settlement."

21. On the subject above referred to of the compensating clauses of the Act as regards proprietors, he adds: "It is probable that as the advantages conferred on proprietors by the Act become better known, the courts will be more resorted to by them. But in its present phase of working and effect of restoring the rights of hereditary tenants, the Act has excited no opposition. Whenever I have been in the district I have found no eagerness evinced on the subject, and the fact appears to be that the land-owners are not really averse to a hereditary tenure, as it secures to them permanent, and therefore better, tenants.

Compensating clauses of the Act: Deputy Commissioner's remarks.

22. The total number of villages in this district in which the revision of settlement records was effected is 2,250. In 1,030 of these cultivators have received back their rights of occupancy during the revision to the number of 10,578. On all the copies of settlement misls the prescribed entry has been made, and the title-deeds of each village corrected according to the instructions.

Gurdáspur district work reviewed.

23. The number of judicial claims decided during revision was as follows:—

Judicial claims decided.

Nature of claims.	*Number of suits.*
Claims to right of occupancy by tenants, Section 5	5
„ for rights of occupancy by tenants, Section 6	1,430
Rebuttal of presumption of right of occupancy by landlords, Section 6 ...	17
Claims for enhancement of rent, Section 11	24
„ abatement of rent, Section 14	38
Disputes regarding alienation, Section 34	2
„ „ succession	3
Total ...	1,519

The number of cases pending at the close of the operations is not shown. As the revision lasted from February to November 1870, and the number of cases decided during the year only amounted to 1,797, this result may be accepted as embracing only all the cases heard under the Act up to the latter month.

24. Here again the proprietors do not seem to have been fully aware at first of the privileges conceded to them under the Act of bringing suits for the enhancement of rent. The remarks of the Extra Assistant Commissioner are for this reason the more intelligible. He says the provisions of the Tenancy Act are not sufficiently understood. Landlords and tenants have in many cases privately agreed as to the rent payable by the latter. The introduction of the Act has created a feeling of bitter animosity between landlord and tenant, which will probably subside as the people become accustomed to the change.

Proprietors not fully aware of the privileges conceded to them.

25. The Deputy Commissioner says: "There can be no doubt that the changes made in the status of tenants by the present revision have caused feelings of bitter animosity between landlord and tenant, which, it is hoped, will gradually subside as the people become accustomed to the change."

Deputy Commissioner's remarks.

26. Corrections were made in the papers of all the villages in this district,—2,234 in number.

Siálkot district work reviewed.

The Extra Assistant Commissioner reports that at the first settlement of this district 33,831 persons were recorded as having rights of occupancy in the settlement misl; of these 7,768 had abandoned their holdings previous to the recent revision of settlement.

At the latter settlement the remaining 26,063 were accounted for as follows:—

9,735 were accorded a perpetual lease,—1,896 by a judicial suit and 7,829 in a summary process; 16,328 persons received conditional lease for fixed periods,—1,059 by a judicial suit and 15,269 by a summary process.

27. After the completion of the settlement operations, 1,211 tenants were deprived of their holdings with their own consent in accordance with the provisions contained in the settlement papers, and 2,955 were judicially restored to their original status by the operation of the courts.

Number of tenants deprived of their holdings, and number restored to original status.

28. The Extra Assistant Commissioner considered himself precluded from making any summary corrections with regard to the following of these classes:—

Number of persons in whose favor revised entries were made.

Those to whom perpetual leases had been accorded in judicial suits	1,896
Those to whom temporary leases had been accorded in judicial suits	1,059
Those who were deprived of their status by their own consent	1,211
Total ...	4,166

There remained 21,897 persons, in whose favor the revised entries were accordingly made.

29. No report has been received of the number of judicial suits instituted during the revision. It is therefore not clear whether to any extent the ruling given in Financial Commissioner's circular memorandum No. 4171, dated 19th July 1870, was brought into operation for the restoration to their former status of those cultivators to whom in judicial suits temporary or permanent leases were accorded. The return of judicial

No report received of the number of judicial suits instituted during the revision.

suits instituted in accordance with the provisions of the Act in the Silákot district during the year 1870 are given in the subjoined table :—

Nature of Claim.	No. of Suits instituted.	Decided in favor of Plaintiff.	Decided in favor of Defendant.	Pending.
By tenants for declaration of status, Section 5 ...	78	29	48	1
By tenants for declaration of status, Section 6 ...	556	204	302	50
By landlords for rebuttal of presumption of occupancy, Section 6	143	60	79	4
By landlords for enhancement of rent, Section 11 ...	17	9	5	3
Number of successions by collaterals, Section 36 ...	1	0	1	0
TOTAL ...	795	302	435	58

With regard to the effect of the operations in this district, the Deputy Commissioner remarks :—

"I have mixed freely with the people in my district of late, and have visited most parts of it on circuit, and have as yet had no complaints brought forward to me by any (proprietors or cultivators) on the subject; neither have any of my assistants brought to my notice any such complaints or petitions.

Lahore district work reviewed.

30. The Extra Assistant Commissioner, Ghulám Nabbi Khán, has submited an exhaustive and interesting report on the operations of revision in the Lahore district, a translation of which by Mr. Barkley is herewith forwarded.

In 1,068 villages the work has been carried out; of 22,812 persons recorded in the first settlement as possessing right of occupancy, only 2,745 had been so recorded at the recent settlement, which gives 20,057 as the number who were deprived of this right at the recent settlement.

Of this number, 12,416 were summarily restored to their status during the revision of the papers; 931 had been previously restored to their status by judicial decisions, and the remaining 6,710 are accounted for as follows :—

Suits dismissed	193
Left their holdings	3,362
Lost their lands by diluvion	983
Granted leases	2,172
TOTAL ...	6,710

The Extra Assistant Commissioner reports, with reference to the last-named number, that, under instructions from the Commissioner of the division, all those tenants who had signed agreements with their landlords for leases for fixed periods were considered to be barred from the privilege of a summary revision, and referred to regular suits; and the 2,172 above entered represent the cases which had not been taken up by the Extra Assistant Commissioner when the Commissioner's instructions were received. But previous to this the leases had been disregarded by the Extra Assistant Commissioner, and in the case of 1,421 persons cancelled on the executive side, the tenants being restored to their status. These were not, however, cases decided judicially at settlement. These 1,421 cases are included in the 12,416 in whose favor entries were made without judicial enquiry.

Table showing litigated cases decided.

31. As regards judicial returns, the following table gives a complete result of all the litigation which took place under the Act up to the time of submitting the report. The cases decided by other judicial officers of the district are included in this statement.

Nature of Claim.	No. Instituted.	Decided in favor of Plaintiff.	Decided in favor of Defendant.	Pending.
Suits by tenants for right of occupancy under Section 5	33	33	.....	.....
Suits by tenants for right of occupancy under Section 6	518	518	...	... ...
Suits by landlords for rebuttal of presumption of right of occupancy under Section 6	24	6	18	... ...
Suits by tenants for right of occupancy under Section 8	2	1	1	... ...
Suits by landlords for enhancement of rent, Section 11	74	20	49	5
Suits by tenants for abatement of rent under Section 14	12	.....	11	1
Suits by landlords for ejection on compensation, Section 19	3	1	2	.....
Suits regarding succession	4	1	3	... ...
Other suits	6	4	2	... ...
TOTAL ...	676	584	86	6

Of the large numbers of suits in the second line, 518 were decided by the courts previous to the institution of revision, in all of which decrees were given. It will be seen that in none of these cases was an order adverse to the cultivators recorded. The fact is that all these cases,

with the exception of 21 in which a judicial inquiry was instituted after the close of the revision, might have been decided executively in accordance with the orders subsequently followed.

In these 518 suits 931 persons were restored to their status as cultivators with right of occupancy.

The number of tenants thus restored, added to those who recovered their status under the summary revision, amounts in all to 13,347, or about two-thirds of the number, 20,057, who lost their status in the recent settlement.

Claims by landlords for enhancement of rent.

32. The Extra Assistant Commissioner reports that he at first refused to take up claims by landlords for enhancement of rent, on the ground that a revision of rents had taken place at the revised settlement, and that under section 13 of the Tenancy Act no claim for enhancement could be heard until five years had elapsed from the last enhancement. It was pointed out to the Extra Assistant Commissioner on appeal that section 13 applied only to cases in which decrees for enhancement had been passed under section 10 of the Act, and that by Rule 8 of the rules issued by the Financial Commissioner for the revision of tenant entries it was only intended that no alterations should be made in rents fixed by the Settlement Officer at the revised settlement except by decrees passed in suits brought under the Act. The result of this ruling is described in the Extra Assistant Commissioner's report as follows :—

"The number of cases has been increasing to such an extent that, as it were, cases of enhancement of rent may be said to be pending against all the hereditary cultivators in the district. It has been ascertained by scrutiny that at settlement the malikana to be paid to the owners by hereditary cultivators was fixed at from 1 anna to 12 annas on the rupee of Government revenue; but recently in the cases of enhancement of rent which have been decided it has often been awarded at the rate of one rupee per rupee of revenue. It is very probable that in many cases the rate will exceed this, and when proprietors are authorized by law to claim an increase of their share, it is not to be expected they will let the advantage slip."

Sections 37 to 40 of the Act have been, the Extra Assistant Commissioner observes, carefully kept in view, and rents have not been enhanced until a tenant has been compensated for his improvements.

Twenty-nine cases occurred in which a review of judgment was applied for by tenants who had received leases for a term of years in lieu of their right of occupancy in judicial decisions passed at the recent settlement.

In 20 suits the petition for review was admitted, the lease being set aside; 5 were dismissed, and 4 still pending.

Provisions of the Act are understood by the people.

33. The provisions of the Act are said to be generally understood by the people of the Lahore district. The Extra Assistant Commissioner anticipates that the passing of the Act will be for some time regretted by the proprietary class, but the enhancement of rent which proprietors can obtain under its provisions are a great salve to the wounds which the passing of the Act has caused them. He says that although the Act is very favorable to the tenant class, yet when they find that their rents can be so largely increased upon them, "their joy is turned into sorrow." He adds: "In short, in my opinion, the rights of both the proprietors and the tenants are equally well protected by the Act."

Gujránwála district work reviewed.

34. During the revision of the records of the Gujránwála district by Extra Assistant Commissioner Fakir Zahur-ud-din, 6,230 tenants who had been deprived of their rights of occupancy in the recent settlement were summarily restored to their former status. The number of villages in which these corrections have been made amounts to 786, out of 1,201 villages in the whole district. The settlement misls and title-deeds of the same villages have been duly corrected in accordance with the instructions.

Judicial cases instituted and disposed of.

35. The judicial cases instituted in consequence of the Punjab Tenancy Act during the year of revision are as follows,—no separate returns of the suits heard during the period of revision has been received :—

Nature of Claim.	No. Instituted.	Decided		Pending.
		In favor of Plaintiff.	In favor of Defendant.	
1.—Suits by tenants for declaration of status under Section 5...	77	24	39	14
2.—Ditto ditto Section 6...	380	213	144	23
3.—Ditto by landlords for rebuttal of right of occupancy, Section 6	39	20	12	7
4.—Ditto ditto for enhancement of rent, Section 11 ...	1	...	1	...
5.—Ditto by tenants for abatement of rent, Section 14	2	1	1	...
6.—Ditto for ejectment of tenants with right of occupancy on payment of compensation, Section 19, Clause 2 ...	11	9	2	...
7.—Number of cases of alienation of rights of occupancy, Section 34	11	7	4	...
8.—Number of cases in which landlords have obtained preemption	10	3	3	4
9.—Number of successions by collateral, Section 36 ...	8	4	2	2
TOTAL ...	539	281	208	50

Thus, combining the two results, 6,467 tenants have been restored to the status of which they were deprived in the recent settlement.

Judicial cases decided at the recent settlement.

36. It was found that at the revised settlement 73 had been decided judicially at the recent settlement in which tenants with rights of occupancy had been reduced to the position of tenants with leases for a term of years.

Only 3 petitions were presented for a review of judgment in these cases. The Deputy Commissioner remarks that the permission for such review being instituted does not seem to have been generally known.

Number of tenants whose status was reduced at the recent settlement.

37. The total number of tenants whose status was reduced at the recent settlement amounted to 10,451; of the 3,984 not accounted for above, 702 died childless, and 3,282 are said to have voluntarily surrendered their holdings. The Extra Assistant Commissioner considers that the revision of tenant entries could not well be otherwise than distasteful to the village proprietors; and Mr. Wood, the Deputy Commissioner, endorses this opinion. It will be observed that only in one case during this year was recourse had to the privilege conferred by section 11 of the Act for enhancement of rent. This provision does not appear to have been understood, and there is nothing remarkable under those circumstances in the opinions expressed by the officers above mentioned.

PART II.

General Results.

Number of tenants in the five districts restored to their former status.

38. Thus, in the five districts where revision has been effected, 63,072 tenants who were deprived of their right of occupancy by the recent settlement operations have been restored to their former status by a correction in the misls of 5,755 villages. The entry given in paragraph 10 of this report has been made on the records of 7,206 villages, and the title-deeds of proprietors and cultivators have been accordingly corrected in 6,904 villages. As the latter operation was not complete in the Lahore district when the return was submitted, it is probable that in all villages for which the former process has been effected the latter will also be carried out. In the other four districts the two processes have been carried on simultaneously in each village.

Number of tenants in Amritsar division with right of occupancy reduced to tenants-at-will.

39. It was alleged in the debate on the Punjab Tenancy Bill that in the Amritsar division alone there were 46,000 tenants with the right of occupancy who had been reduced to the position of tenants-at-will during the recent settlement. The number in that division who by the executive process alone have now been restored to the position amounts to 44,426.

It appears that these corrections have been fully and carefully carried out, and without inconvenience to the people. More than one-third of the number of corrections in the status of cultivators have been effected in the Siálkot district.

The numbers are as follow:—

Amritsar	11,951
Gurdáspur	10,578
Siálkot	21,897
Lahore	12,416
Gujránwála	6,230
Total ...	63,072

And to these must be added the number of those tenants to whom the status of cultivator with right of occupancy was decreed in a judicial decision.

Suits brought under the provisions of the Act.

40. A statement of suits brought under the provisions of the Act has been prepared, but must be accepted with some qualifications. The general results are as follows:—

	Amritsar.		Siálkot.		Gurdáspur.		Lahore.		Gujránwála.		Total.	
	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.
1. Suits by tenants for declaration of status under Section 5 ...	10	105	29	48	187	119	31	...	24	89	281	311
2. Suits by tenants for declaration of status under Section 6 ...	2,120	100	204	302	1,089	809	500	76	213	144	4,076	931
3. Suits by landlords for rebutting presumption of occupancy under Section 6	70	73	60	79	32	23	7	35	20	12	191	222
4. Suits by landlords for enhancement of rent under Section 11 ...	12	2	9	5	25	15	8	2	...	1	54	25

6. Suits for ejectment of tenants with right of occupancy on payment of compensation, Section 19, Clause (2)	...	2	...	...	...	...	..	...	9	2	9	4
7. Number of cases of alienation of rights of occupancy under Section 84	...	...	..	...	1	1	...	..	7	4	8	5
8. Number of cases in which landlords have obtained pre-emption ...	...	...	...	...	3	...	...	...	3	3	6	3
9. Number of successions by collaterals under Section 36	...	...	...	1	2	1	106	2	4	2	112	6
Total ...	...	...	...	...	...	...	...	...	...	...	4,761	1,609

Cases instituted during the earlier months of the year.

41. Among the suits by tenants for declaration of status under Section 6 a majority of cases were those instituted during the earlier months of the year, when it was not known that a restoration of the status of those who were deprived of it under the recent settlement operations would form an executive, and not a judicial, process.

Suits for declaration of status under Section 5.

42. The number of suits instituted by tenants for declaration of status under Section 5 cannot be accounted for in the several districts by any local influences. In Gurdáspur nearly half the total number of these cases took place. It will be observed that nearly half the number of those who sought thus to enhance the value of their status were successful.

Suits for rebuttal of presumptive right of occupancy.

43. Suits for rebuttal of presumptive right of occupancy did not reach in number more than 1 in every 14 villages where corrections were made, and not 1 per cent. on the number of tenants restored to their status.

Suits for enhancement of rent.

44. Suits for enhancement of rent, which are rightly considered by Extra Assistant Commissioner Ghulám Nabbi Khán as the means by which the landlords are compensated under the Act for the loss of their short-lived advantages, were instituted in very small numbers—not more than in the proportion of 1 to every 60 villages under revision; but in the case of the Lahore district the Extra Assistant Commissioner expressed his opinion that these suits will be largely resorted to. Further on, it will be seen that this anticipation was correct, and that the landlords of other districts were not slow to avail themselves of the same advantages.

Judicial suits subsequently entertained during the year 1871.

45. The judicial suits brought during revision operations having been considered under the head of each district separately and collectively for the five districts, those subsequently entertained during the year 1871 will now be reviewed, as intimated in paragraph 14 of this report. A statement of these cases is given among the Appendices to this report as No. III.

Four classes that call for remarks.

46. Four classes only of the suits therein detailed call for remarks, the remainder not being in sufficient numbers to establish any conclusions of value. These classes are,—suits by tenants for declaration of status under Sections 5 and 6 of the Act, suits by landlords for rebuttal of presumptive rights of occupancy under Section 6, and for enhancement of rent under Section 11. The number of pending suits in the last column but four of the statement corresponds with the number shown in the appropriate column of the statement for 1870,—with one exception, that the number of suits by tenants for declaration of status under Section 5 of the Act in the latter is 73, and in the former 71; and this is explained to be due to an error in the Gujránwála returns for the former year, as stated in the column of remarks.

Table showing the number of cases under these classes.

47. The following abstract shows the number of cases for each district under these four classes decided during the year:—

	Amritsar.		Siálkot.		Gurdáspur.		Lahore.		Gujránwála.		Total.	
	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.	For Plaintiff.	For Defendant.
Suits by tenants for declaration of status under Section 5 ...	51	105	45	35	1	4	...	...	57	81	154	225
Ditto ditto Section 6 ...	19	8	87	69	193	105	...	...	95	123	394	305
Suits by landlords for rebuttal of presumption of right of occupancy of tenant under Section 6 ...	149	103	81	20	92	97	4	6	15	40	291	266
Suits by landlords for enhancement of rent under Section 11 ...	26	25	62	20	278	135	67	2	8	2	441	184

As might have been anticipated, the number of suits by tenants for declaration of status shows a small proportion to the number of similar suits decided during the year in which the revision was being affected. Most of the claims were then brought forward and disposed of. The total absence of such suits in the Lahore district would point to the completeness of the investigation made by Extra Assistant Commissioner Ghulám Nabi Khán, as it cannot fail to be noticed from a perusal of his report; but ordinarily in the case of each district the numbers of these suits diminished in each succeeding month, until towards the close of the year a minimum was arrived at.

Suits by landlords for rebuttal of right of occupancy.

48. The same process may be traced with regard to suits by landlords for rebuttal of right of occupancy; but the number of such cases slightly exceeded the number decided in the previous year, showing an increased appreciation of this provision of the Act.

Suits by landlords for enhancement of rent.

49. Further, when we consider the suits by landlords for enhancement of rent we find that the number decided was nearly eight times as large as that of the previous year. Moreover, the number of decrees granted to landlords out of the number decided bears a much larger proportion to the total number than is apparent with regard to any other class of suits, from which it may be inferred, not only that the people are aware of the privilege conceded to the landlords by Section 11 of the Act, but also that the courts are not slow to confer it.

Statements showing the number of such cases in which enhancement was decreed.

50. With regard to this subject the statements Nos. IV and V are appended, giving the number of suits for enhancement of rent in which enhancement was decreed for every district in the province, as intimated in paragraph 15 of this report. The results shown by these statements are not remarkable, but they show that in some parts of the country, besides those in which revision of entries has brought the Act to their doors, its provisions in respect to enhancement of rent are not wholly lost sight of by the landlords. Mr. Egerton has reason to believe from inquiries made by him in Siálkot and Gurdáspur, that the number of suits does not represent anything like the number of cases in which enhancement of rent has taken place. The figures in return No. V show in some degree the extent of the enhancement which has been decreed by the courts under the provisions of the Tenancy Act.

Number of tenants whose status has been restored.

51. The total number of tenants whose status has been restored, or declared to be that of cultivators with rights of occupancy, up to the close of 1871, for the five districts in which revision took place, is as follows:—

	Persons.
By executive process	63,072
„ judicial ditto, 1870	4,357
„ ditto, 1871	548
TOTAL ...	69,977

This result, combined with the increase of suits by landlords for enhancement of rent, leads to the following general conclusion, *viz.*, that the effect of the Punjab Tenancy Act has been to re-establish to a very great extent the former status of cultivators, while, as a compensating element, the powers of enhancement of rent thereby conferred upon the landlords are being gradually brought into exercise, dispelling the notion that the provisions of the Act are entirely in the interests of the cultivators. If the power of enhancing the rent of tenants with right of occupancy during the period of settlement had been granted sooner, there would have been much less difference of opinion on the subject of these tenants.

Conclusion.

Extra Asst. Comr. Agha Kalbábid.
„ Syud Káim Ali.
„ Syud Wazír Ali.
„ Fakír Zahur-ud-din.
„ Ghulám Nabbi Khán.

52. In conclusion I am to observe that the officers who were entrusted with the duty of revising the entries in the settlement records have performed their work well.

No discontent likely to arise from the operation of the Act.

53. There has been none of the extensive discontent which it was apprehended might arise from the operation of the Act; nor does the Financial Commissioner think it likely that any will hereafter arise.

Withdrawal of special appellate jurisdiction conferred on Financial Commissioner.
No. 912, dated 4th December 1868.
No. 1194, dated 4th October 1869.

54. The work of revision has been completed, and the greater number of the cases arising out of the revision have been decided. The Financial Commissioner considers therefore that the special appellate jurisdiction in cases relating to the status of tenants which was conferred on him by the Government notifications marginally noted may now be withdrawn.

Rules for carrying into effect the Punjab Tenancy Act (XXVIII of 1868) in districts recently settled.

The Punjab Tenancy Act is in force in all districts, and claims instituted under it will be disposed of by the ordinary civil courts, except in districts where the jurisdiction of the revenue courts, described in Section 21, Act XIX of 1865, has been continued or revived *quoad* cases under this Act, and districts where settlement operations are in progress.

2. The effect of the Act and of the orders of Government issued in connection therewith is that, as regards the rights of tenants, the records of the first settlement are presumably correct. The records of the recent settlements in the districts of Amritsar, Siálkot, Gurdáspur, Lahore, and Gujránwála must therefore be revised.

3. This revision is ordered by Government as an administrative matter. It is therefore not necessary to wait for tenants to petition for restoration to their former status. It should be made generally known that no such petitions are required, and that the entries of the record of the first settlement will be restored without them.

4. The settlement establishments having been withdrawn from the above districts, it has been determined by Government that the work of revision shall be carried out under the superintendence of selected Native Extra Assistant Commissioners, of whom one has been appointed for each district.

5. As regards occupancy rights (Chapter II of the Act), the duty of these officers will be to revise the entries made in the recent settlements,—to erase the invalid entries in red ink, and to make in each case a fresh entry in red ink, stating that the tenant has a presumptive right of occupancy under Section 6 of the Act, and to inform the parties interested, leaving it to the proprietor to take the necessary measures for rebutting the presumption of occupancy rights should he think fit to do so, and to the tenant to take the necessary measures for obtaining an authoritative declaration of his *precise* status as a tenant, *viz.*, whether he belongs to class (1), (2), (3) or (4) of Section 5, or to the classes described in Sections 6 or 8.

6. The revising officers must not undertake the work of *classification* of tenants *proprio motu*.

7. Entries relating to the matters treated of in Section 16 of Chapter III, and in Chapters IV, V and VI of the Act, *viz.*, commutation of rent, ejectment, relinquishment, leases, alienation and succession, and compensation for tenants' improvements, are also affected by the terms of the Act and of the Government orders, and, strictly speaking, should be revised in the same way as the entries affecting occupancy; but it has been determined by Government that it will be sufficient to record on each settlement misl in red ink, under the signature of the Extra Assistant Commissioner, both in the Government copy (or copies) and in the patwari's copy, an entry to the following effect:—

"Nothing in this misl which relates to the subjects treated of in Section 16 of Chapter III, or in Chapters IV, V, and VI of the Punjab Tenancy Act, shall be considered valid if opposed to the entries made in the first regular settlement, unless it is supported by an agreement or a decree of court, or is valid under Section 45 of the Act."

8. With regard to Sections 10 to 15 of Chapter III, treating of "rent," it must be noted that, as the rates of rent of tenants with right of occupancy were fixed at the first settlement for the term of settlement only, and were therefore liable to revision when the assessment was revised, the enhanced rates of rent imposed at the revised settlement are protected by Section 45 of the Act, and are not to be altered without a decree.

9. In cases where the entry in the recent settlement is in accordance with a degree of court, or an agreement in writing between the parties of the nature described in Section 2 of the Act, no correction of the new record is to be made.

10. The correction of the entries of status of cultivators, and the insertion of the general note in the patwari's copy of the settlement misl, should be made simultaneously with the correction of the Government copy (or copies), and each revised entry should be signed by the Extra Assistant Commissioner.

11. The above procedure will provide for the correction of the official records of the settlement. But provision must also be made for the correction of the title-deeds in the hands of the cultivators and their landlords.

12. The correction both of the official records and of the extracts in the hands of the people should be effected according to patwaris' circles of villages.

Each patwari must collect the extracts from settlement records held by cultivators and their landlords, and must bring them with him to the court of the revising officer (Extra Assistant Commissioner). They will there be altered in accordance with the alterations made in the settlement records; the alterations will be attested and signed by the Extra Assistant Commissioner, or by his responsible subordinate, the qánúngo acting immediately under his orders, and will be restored to the parties under the orders of the Extra Assistant Commissioner.

13. No fee is to be charged for these alterations of extracts under any pretence whatever.

14. Any document supplied to the people by the settlement authorities, whether an extract of the above nature or an extract from other parts of the settlement record, which touches upon the subjects treated of in Section 16 of Chapter III, or Chapters IV, V, and VI, should have the above-quoted general remark recorded on it, and the meaning of the remark should be explained to the parties concerned. The procedure with regard to this operation will be the same as the above.

15. The Commissioners will direct the qánúngos, naib qánúngos and patwaris of each district to be placed under the orders of the revising officers.

16. The work of revision should be undertaken tahsil by tahsil, and there will be no objection to employing the whole staff of qánúngos and naib qánúngos of the district in supervising the correction of the records of a single tahsil if it is found convenient to make this arrangement.

17. It is of great importance that the rectifications which the Tenancy Act renders necessary should be made quickly and correctly. Any alterations which may be required in consequence of decrees passed in suits brought under the Act can be made when each decree is passed, and there is no need whatever to delay making the rectifications because it is anticipated that there will be numerous suits brought to set aside the record of the first settlement. With reference to paragraph 6 of letter No. 103, dated 4th February, from Secretary to Government, Punjab, to Financial Commissioner, the revising officers are not to consider themselves precluded from hearing suits brought under the Act. The work of rectification of the new settlement record is the work for which they are specially appointed, and the hearing of suits must not be allowed to interfere with this work; but with this proviso the revising officers should decide cases as they arise as promptly as possible.

18. Section 43 of the Act and the stamp clauses of Sections 17 and 40 having been repealed by the Court Fees' Act VII of 1870, the proper stamps for cases between landlord and tenant will be found in the last part of Section 8 of that Act and in Article 5 of Schedule II.

19. A selection of the correspondence on which the present orders are based will be circulated for information.

Report by MUNSHÍ GHULÁM NABI KHÁN, *Extra Assistant Commissioner, on the revision of Settlement Records with regard to hereditary tenure of tenant, &c., under Act XXVIII. of* 1868.

SECTION I.

INTRODUCTORY.

The revision of settlement records under Act XXVIII of 1868 was commenced about the month of December 1869, and as no other instructions than those contained in the Financial Book Circular No. 18 of the 23rd December 1868 had been till then issued as to the mode of carrying out the provisions of the Act, the procedure prescribed in that circular was followed.

2. It was provided in paragraphs 4 and 5 of the letter from the Secretary to Government, Punjab, subjoined to the above circular, that in revising the records the opportunity should be taken of classifying tenants having, or presumed to have, a right of occupancy under Sections 5 and 6 of the Act. But as this could not be satisfactorily ascertained without judicial inquiry, the applications of tenants for the restoration of occupancy rights which had already been received and had been collected in the office, as also those subsequently presented, were treated as regular suits, and this procedure was continued until the new rules were issued.

3. As the investigation of the hereditary tenure of the tenants thus depended on the presentation of applications by them,—on this becoming known to them they began to present their applications, and up to the date of the issue of the new rules with reference to revision in April 1870, 1,107 such applications were received.

4. On receipt of the new rules judicial inquiries in these cases were entirely discontinued. The applications already received from the cultivators, with the exception of those in which judicial investigations had been completed, were all filed on record, and the revision was carried out according to the new rules.

5. This process of revision was taken in hand on the 10th May 1870. The Shurrukpur tahsil was first taken up; and the patwaris and naib qánúngos were summoned and placed under the superintendence of Wali Rám, the Sadr Qánúngo, and the work was carried on under my general supervision. When the work of that tahsil was completed, the other tahsils were taken up successively, and the revision of the entire district was thus brought to a conclusion in August 1870.

6. A summary investigation was made with reference to each holding by inquiry from the patwari, and in special cases by examination of the rent-roll, &c., of past year; and further inquiry was made through the tahsildars as to whether the cultivator was recorded as hereditary at the previous settlement, or his legal heirs had remained in possession and continued to cultivate the land until the preparation of the statement of investigation into the rights of hereditary cultivators prepared at the present settlement. All those whose possession was found to be continuous had revision effected in their favor, whilst those who had ceased to be in possession before the preparation of that statement were not affected by the revision, and any tenant of the latter class who put forward his claim to revision was instructed to institute a regular civil suit.

7. The revision was effected in the following manner:—

1*st*.—An entry of the purport of Rule VII of the rules issued by the Financial Commissioner, given in the margin, was made on each of the settlement misls, *i. e.*, that in the district office and that with the patwari. The following entry was made in red ink against each holding in the statement of the fields contained in each holding and against each field in the khasrah: "This tenant has the right of occupancy in the land under Section 6, Act XXVIII of 1868." These words, however, were not repeated in each individual instance, but as far as possible this entry was made once for all against one holding, and a reference to it was inserted against the remaining holdings. In the "extracts of khateonis" and "agreement of proprietors" given at settlement to the land-owners similar entries were made in red ink with reference to the cultivators. Wherever any change was made in a settlement file I attested it with my signature; the extracts of the khateonis were similarly attested by Wali Rám, Sadr Qánúngo.

Nothing in this misl which relates to the subjects treated of in Section 16 of Chapter 3, or in Chapter 45 and 6 of the Punjab Tenancy Act, shall be considered valid if opposed to the entries made in the first regular settlement, unless it is supported by an agreement or a decree of Court, or is valid under Section 45 of the Act.

SECTION II.

Tenants whose tenures were recorded as hereditary at the revision of settlement.

8. In Appendix A, columns 6 to 13, a detail is given of those tenants who at revision were recorded as having hereditary rights in accordance with the former settlement record; of those the rights of 931 persons (in columns 7 and 8) were ascertained by judicial investigation prior to the receipt of Financial Commissioner's instructions, as mentioned in paragraph 2 of this report.

9. In this class of suits the only point for investigation was to which of the classes described in Sections 5 and 6 of the Act the plaintiffs belonged. The proprietors who were the defendants utterly denied the truth of the claims preferred, without rebutting the presumption in their favor in the manner described in the latter part of Section 6 of the Act. None of the proprietors met the claims in these cases in this manner. The determination of the status of tenants in the cases above-mentioned should therefore be considered as sufficient and final, and no tenants should, except by appeal to a higher court, be allowed to institute a suit for the investigation of his tenure; but the proprietor may bring regular suits under the last portion of Section 6 to rebut the presumptive rights of occupancy awarded in favor of tenants under first portion of same section.

10. In column 9 are entered 1,421 tenants holding leases. These are the persons who on the investigation made into occupancy rights at the late settlement obtained leases from the proprietors for fixed periods and were recorded as tenants-at-will. At the commencement of the revision it was thought that no regard should be paid to those agreements, the proprietors being left to bring regular civil suits upon the leases granted by them if they thought proper to do so. It was, however, urged in one case by a proprietor that the deed executed by his tenant had been attested before the Settlement Officer, and that therefore under the latter part of Section 6 the tenant was not entitled to claim the right of occupancy in opposition to his own contract. The Commissioner being referred to on the point, considered the proprietor's objection valid owing to this, while all such cases in which revision had taken place were allowed to stand. Subsequently tenants who had executed such leases were excluded from the benefit of revision. Column 9 shows the number of tenants on lease who obtained the benefit of revision prior to the receipt of the above instructions.

11. Column 10 of the Appendix is very clear. In it are entered those tenants who were recorded as hereditary after the summary inquiry mentioned in paragraph 6 and in the manner described in paragraph 7.

SECTION III.

Tenants regarding whom no revision has taken place.

12. The following are the particulars of tenants excluded from the benefit of revision:—

I.—At the late settlement, besides the summary investigation into the rights of tenants effected by the aid of assessors, &c., regular suits were also instituted either by the proprietors against the tenants recorded as having rights of occupancy (prior to the preparation of the lists of tenants), or by the tenants who were deprived of rights of occupancy at the summary investigation to establish their occupancy rights. With reference to the second division of the latter part of Section 6 of the Act, no revision was made in favor of the tenants who had not succeeded in establishing their claims in such cases. A reference to column 15 will show that the number of such tenants was 193.

II.—Under the provisions of Section 6 of the Act the revision was made in those cases only in which the tenants had continuously occupied the land ever since the previous settlement; while the names of all those who appeared to have been out of possession at the time of the preparation of the list of hereditary tenants, or those who had subsequently given up the land and settled in some other village, or had died, were omitted. The number of such tenants, as per Appendix A, column 16, is 3,362.

III.—In column 17, Appendix A, 983 persons are shown whose land was carried away by the river after the previous settlement, and had remained under water until the late settlement. No revision could be made in such cases. They were left to be settled in case of dispute between the landlord and the tenant by a regular suit when the land was recovered.

IV.—It has been stated in paragraph 10 that it was directed by the Commissioner that those tenants who had obtained leases as tenants-at-will should not be admitted to the benefit of revision. Hence no revision has been made in such cases after the receipt of the order referred to, and the entries made at the present settlement have been allowed to stand. The number of such tenants, who are entered in column 18, was 217.

V.—It may be mentioned that the number of leases executed at the late settlement in the Kasúr tahsil exceeds by far the numbers in other tahsils. In column 5, Appendix A, the number of tenants deprived of rights of occupancy is shown to be 7,296. Of these there were 2,968 who obtained leases. The percentage of tenants who obtained leases is thus 40.

13. It appears from Appendix A that in Lahore district there were at the former settlement 22,802 hereditary tenants; of these 2,745 only were recorded as hereditary at the late settlement, and 20,057 were deprived of rights of occupancy. At the present revision 13,374 have been restored to their former position, and 6,720 have not been admitted to the benefit of revision. In other words, about two-thirds of the number recorded as hereditary cultivators at the former settlement have retained their status, and the remaining one-third have lost it.

SECTION IV.

Procedure adopted in cases instituted and decided under Act XXVIII of 1868.

14. Appendix B shows the cases which were filed after the revision under the provision of the Act by the proprietors against the tenants. The statement includes all such cases decided by judicial officers of the Lahore district; for though such cases are generally received and heard in my court, they are by no means exclusively restricted to it, but are also filed and heard in other courts.

15. The particulors of the single case entered in column 1 of Appendix B are as follows:—

On revision the tenant was entered in red ink as hereditary under Section 6 of the Act. The proprietor filed a suit on the ground that on a previous suit brought by him against the tenants the latter had agreed to quit the land and a decree had been passed. Accordingly, on investigation, the proprietor's statement was found to be correct, and a decree was therefore given in his favor under Section 2 of the Act, and the alteration made in the revision was set aside.

16. In column 5, Appendix B, are entered 24 cases; of these 6 are cases in which decrees were passed. In all these the proprietors' claims were admitted by the tenants. In 4 of them tenants agreed, the confession of judgment was owing to an agreement between the proprietors and the tenants that a portion of the land should be restored to the former, and the remainder retained by the cultivators as permanent occupants. Decree was accordingly passed in favor of the proprietors for the portion given up by the tenants. In the other 2 cases the tenants agreed to give up their claim to occupancy rights on condition of being allowed to cultivate the land for ten years. In the remaining 18 cases the plaintiff's claim could not be proved, as in these cases of the 30 years mentioned in the 1st clause of the 2nd part of Section 6 of the Act seven years belonged to the time of the Sikh Government, when the land was not of any great importance, and when there was little difference between the proprietary and non-proprietary class of cultivators. The jagirdars realized their demands from the cultivators, whether proprietors or not, by appraisement or division of crops. It is therefore very difficult now to ascertain what tenants were ejected from their holdings at the will of their landlords during that period. As regards the remaining 23 years, it has not been shown that any tenants by any sufficient precedent entitled to rights of occupancy were ejected from their holdings at the will of the proprietors. Clause 2 comprises cases in which tenants have voluntarily admitted at the revision of records or investigation of claims that they would resign their title to land, or that they would in future cultivate subject to the proprietor's will. In suits of this description wherever investigation was made it was ascertained that no tenant agreed before any Settlement Officer of his own free will to resign his occupancy rights. On the contrary, it appears that it was then currently rumoured that no cultivators would be allowed to retain hereditary rights, and therefore these men, considering that if they opposed the wish of the proprietors they would be ejected at once, contrived to retain possession by assenting to a postponement of the proprietor's claim; but such consent is clearly not what is contemplated by Clause 2 of Section 6 of the Act.

17. The following are the particulars of the case entered in column 9 of Appendix B. The village was a pattidari one, and the tenant, besides holding occupancy rights in the land in dispute, had also proprietary rights in the village. The proprietor (plaintiff) alleged that the land was village common before the previous settlement, and that it was allotted to him in a division then effected, and that therefore under the latter part of Section 9 the tenant had not acquired occupancy rights in the land. The case, however, was dismissed on the grounds that the land claimed is not village common, and that Section 9 applies to those cases only which do not fall under any of the previous Sections 5, 6, or 8, and accordingly in the present case, as the occupancy rights of the tenant had been admitted under Section 6, the plaintiff had no remedy under Section 9.

18. Suits for enhancement of rents under Sections 10 to 13 of the Act were more numerous than any other class, and are still being instituted. They will probably continue to be instituted in large numbers, as the proprietors of land, which was at the recent settlement declared to be held at their will, and which has now been restored to the cultivators under the Act, whose rights of occupancy they would find it difficult, if not impossible, under the provisions of the Act to set aside, will endeavour to obtain compensation by enhancement of rents.

19. At first I thought that the number of cases for the enhancement of rents would not be large, as I supposed that when Settlement Officers had awarded an enhanced rent, the proprietors would not be at liberty to sue for enhancement of from five to seven years afterwards, as it had been provided in Clause 8 of the Financial Commissioner's instructions issued with the sanction of Government, that any enhancement of rent made at the settlement should be considered valid under Section 45 of the Act. Although, from the terms of the rule above referred to, it is clear that it was intended to prevent tenants from bringing frivolous suits to set aside the decisions of Settlement Officers enhancing the rent, yet when it is read in connection with Section 45 of the Act, the natural conclusion is that no proprietor could until five years had elapsed claim enhancement of the rent rate; for Section 45 distinctly provides that all proceedings of officers of Government prior to the passing of the Act should be considered to be proceedings under the Act, so far as consistent with its provisions. If therefore the enhancement effected by Settlement Officers be considered to have been made in accordance with the Act, Section 13 of the Act will prevent the proprietors from bringing any suit for further enhancement within five years from the conclusion of this settlement. Two cases of this kind were filed in my court in which the Settlement Officer had increased the rent rate, and the proprietors, considering the enhancement awarded to be insufficient, applied for further enhancement. I dismissed these cases on the ground that a suit for enhancement would not lie until five years had elapsed, but on appeal my decision was overruled, and it was laid down that the rule, with

instructions issued by the Financial Commissioner, simply meant that no alteration should be made in the course of the revision in the rent fixed by the Settlement Officers, and that it was in no way intended to debar any one from having recourse to regular suits. Since then the number of cases has been increasing to such an extent that, as it were, cases of enhancement of rent may be said to be pending against all the hereditary cultivators in the district. It has been ascertained by scrutiny that at settlement the malikana to be paid to the owners by hereditary cultivators was fixed at from 1 to 12 annas on the rupee of Government revenue, but recently in the cases of enhancement of rent which have been decided, it has often been awarded at the rate of one rupee per rupee of the revenue; and there is no limit to the rate at which enhancement may be awarded, as at present cases of enhancement of rent are decided in accordance with Clause 3, Section 11 of the Act, under which the rate can be increased to any amount which is not in excess of the rates paid by tenants-at-will holding similar land in the same or neighbouring villages, less the percentage specified in that clause, so that there is no limit to the rate at which rent may be fixed. It is very probable that in many cases the rate will exceed one rupee per rupee of the revenue, and when proprietors are authorized by law to claim an increase of their share, it is not to be expected that they will let the advantage slip.

20. It should also be noted that in dealing with applications for enhancement of rent in addition to Section 11 the provisions of Sections 37 to 40 were kept in view. For instance, where it appeared that the tenant had within the last 30 years constructed a masonry well or repaired an old one, or had dug a canal-cut, or had broken up waste or otherwise improved the land, inquiry was made as to the amount laid out by the cultivators upon such improvements. It was then considered within what period the amount laid out upon improvements could be made up by remitting the difference between the enhanced rate awarded and the former malikana, and the proprietor was then instructed to pay at once the whole amount laid out by the tenant upon improvements, in which case he should be entitled to receive the rent at the enhanced rate; or, if he did not do so, that the tenant should be entitled to hold at the former rate until he was compensated by the difference for his outlay, or until the proprietor should pay him the amount due as compensation, which, in consideration of his holding at the lower rate, would decrease year by year.

21. In column 14, Appendix B, decree is shown to have been given in 20 cases. Of these, two cases were decided on confession of judgment, the rule of malikana being fixed at 9 annas per rupee as Government revenue, by consent of both parties. The remaining cases were decided on the merits, besides th einvestigation in court,—commission being issued for local inquiry to the naib tahsildar, or in some cases to the sadr qánúngo, who were instructed to ascertain the annual produce of the land. The cases were then disposed of under Clause 3 of Section 11 of the Act, by comparison with the rate of rent paid by tenants-at-will. In column 15 49 cases are shown as dismissed. Of these, 45 cases are of the single village of Tat, and they were disposed of by the Assistant Commissioner of Kasúr in the earlier part of the inquiry. The remaining four cases were decided by this court. Of these, two cases are those which have been already mentioned in paragraph 19. In the other two cases defendant produced an agreement from the plaintiff fixing the rent, and therefore, with reference to the provisions of Section 2 of the Act, no enhancement could be decreed contrary to the terms of the agreement. In appeal in all the above cases, except the last two, in one of which no appeal was preferred, the Commissioner, after such further inquiry as was necessary, reversed the orders of the first court, and awarded an enhancement of rent.

22. Up to the present time only three suits, which are shown in column 17 of statement B, have been instituted by proprietors under Clause 2 of Section 19 of the Act to deprive tenants of rights of occupancy. In two of those the plaintiffs' claims were dismissed, it having been found that the cultivator had been in possession for more than 30 years. In the third case decree was given to the plaintiff, and after local inquiry compensation was fixed at Rs. 13-2-6 per ghumao. I believe this rate to be quite sufficient, considering that the land was simply barani (rain cultivation). The plaintiff has accepted this rate, and paid Rs. 361-8-0 for 27 ghumaos 4 kanals of land, but the tenant is altogether dissatisfied, and has appealed to the Commissioner's Court.

23. Only one suit was brought under Section 36 of the Tenancy Act to dispossess the collateral relatives of a deceased tenant with rights of occupancy. On inquiry it was found that the cultivation of the land had been commenced by the grand-father, present occupant, and cultivator of the deceased, and that after his death his sons jointly cultivated the land, and that it was only recently that the deceased and the present occupant, who were full cousins, separated their holdings. The suit of the plaintiff was therefore dismissed.

24. Out of the four cases shown in column 25, two were decided by Mr. F. D. O. Bullock, Assistant Commissioner, and two by Diwán Byjnáth, Honorary Extra Assistant Commissioner, and no further mention of these cases is necessary beyond this that, when the case was dismissed, the judgment of the court of first instance was reversed by Commissioner on appeal.

25. Appendix C includes all the suits instituted by the cultivators; columns 1 to 28 show those suits which were decided before the issue of the Financial Commissioner's rules for revision of settlement were judicially decided, as has been mentioned in paragraph 2 of this report; column 29 shows such applications as under the new rules were filed in the record office, without judicial inquiry, as explained in paragraphs 3 and 4 of this report.

26. Suits instituted by tenants after the revision of the settlement was completed are shown in columns 30 to 57. With reference to these, it need only be mentioned that the 21 cases in column 46 under Section 6 of the Act are those which are noticed in column 74 of this statement, and in column 6 of the second part of Statement C, and which will further be noticed in paragraph 29 and clause 1 of paragraph 33 of this report.

Column 50 shows two cases under Section 8 of the Tenancy Act. These were cases in which the cultivators, contrary to the entry in the record of the former settlement, claimed the right of occupancy on the ground of long possession. The facts of the case, in which decree was given in favor of the cultivator, were as follow:—

"The land of a nazul garden, known as Jowála Singh's garden, has since the Sikh government been always under the cultivation of Iláhi Buksh. Pír Buksh, Daliwálla, the lessee of the garden for life, ejected the cultivator. On inquiry the long possession of the plaintiff was established, and it was also found that in 1850 Mr. Raikes, Commissioner, had ordered that he should not be disturbed in his possession by any lessee; decree of the right of possession was therefore given in his favor under Section 8 of the Act. In the second case it was at first found plaintiff had no rights of occupancy, but on further inquiry being made by order of the appellate court, it was found that the cultivator had held adverse possession for 28 years, as he had never paid anything to the proprietor as rent beyond the Government revenue and the village expenses, and that 18 years ago he had constructed a masonry well in the land at his own expense. The right of occupancy was therefore admitted under Section 8, and his status was declared to be that of hereditary cultivators under Clause 1 of Section 6, except that he was protected from any action which might be brought by the proprietor under the latter part of Clause 2 of that Section.

27. In columns 58 to 69 are shown the suits instituted by cultivators complaining of excessive rents having been fixed by the Settlement Officers. All these applications were dismissed, as the causes of action were in neither of the two mentioned in Section 14 of the Act. Two suits were brought under Section 16 of the Act. In one of these the claim was dismissed, as the proprietor claimed commutation of a cash rent to a share in the produce without the defendant's consent, and contrary to the former settlement. The second case is still pending. It is one in which at the previous settlement payment in kind at one-fourth the produce was fixed; but the cultivator contends that he never paid a share of the produce, but has always paid cash. The proprietor claims payment of a share in the produce at the rate paid by tenants-at-will of similar land in the same and adjacent villages, less 15 per centum on Government revenue. As the defendant does not agree to pay rent in kind, inquiry is being made as to whether, after the previous settlement and up to the commencement of the present settlement, the rent was paid in kind or in money, and the case will be decided on the merits after this has been ascertained.

28. Of the three cases contained in column 70, one is a case in which a nephew claimed succession to the hereditary cultivation of his deceased uncle. Decree was given in favor of the claimant under Section 36, it having been found that the land was originally cultivated by the grand-father of the claimant, on whose death the claimant and his uncle had cultivated jointly. In the remaining two cases the claimants in one were the wife and the nephew of the deceased. No decree could be given in favor of either, as the wife has no right of succession under Section 36 of the Act, and as the conditions contained in that Section in regard to the rights of nephews were not fulfilled in the case of second claimant, it not being proved that the common ancestor of the claimant and the deceased had been in possession of the land. It was proved that the cultivation commenced with the deceased. In the third case it was proved before the Assistant Commissioner of Kassúr that the custom in the village Tat in which the land was situate was that on the death of a hereditary cultivator without issue the land lapsed to the proprietor; and as the hereditary cultivator had died before Act XXVIII of 1868 came into force, the claimant, who was his nephew, was excluded from the succession, and the land was brought under the personal cultivation of the proprietors, it was held that the plaintiff's claim could not be revived by the passing of the Act.

29. It has already been stated in paragraph 6 of this report that no revision of the records was made in the case of such cultivators as were found not to be in possession before the preparation of the statement of cultivator's rights. One of those cultivators brought a regular suit to establish his right. On inquiry it was found that shortly before the late settlement the cultivator had been ejected by the proprietor, and brought a suit for possession, in which he obtained a decree which was upheld on appeal. The cultivator had then applied for execution, but the proprietor having preferred a further appeal to the Financial Commissioner, execution had been postponed;—afterwards, when the investigation of the rights of tenants in the Settlement Department commenced, as he was out of possession, he was not recorded as having rights of occupancy. The tenant, considering that the occupancy rights of tenants generally had been set aside by the Settlement Department, and that there was therefore no chance of a hearing, took no action whatever. Under these circumstances his dispossession has been taken to be of the same sort as that of the other tenants whose occupancy rights were set aside at the time of settlement. He has therefore obtained a decree of right of occupancy under Section 6 of the Act against the proprietor. This case is shown in column 74 of statement C, Part I.

30. In statement C, Part II, are shown the regular suits instituted by hereditary cultivators after the completion of the revision. Further mention of these cases will be made in the succeeding paragraphs.

31. Since in the case of those cultivators who were ejected from the land held by them under the statement of investigation into the rights of cultivators prepared at the present settlement, and who have been restored under Section 6 of the Tenancy Act, in some of the earlier cases, as mentioned in paragraphs 3 and 4 of this report, they were reinstated; after judicial investigation they were put in possession on summary applications by way of execution of decree. But on further consideration it appeared that these judicial decisions, like the revision as a matter of course, related only to the maintenance of rights of occupancy and not to delivery of possession; and the cultivators were therefore directed to bring separate suits to obtain possession. The regular suits thus instituted are exhibited in columns 1, 2 and 3 of statement C, Part II. Out of the suits thus instituted, nine were dismissed under the following circumstances: In one case it appeared that two years before the late settlement the proprietor had ejected the cultivator, and that the cultivator had not sued for possession until now. As under Clause 4, Section 7 of Financial Commissioner's Book Circular No. 46 of 1860, only one year is allowed for suits brought by tenants to recover possession, and this does not appear to have been repealed by any subsequent Act or order, the claim of the tenant was dismissed as barred by limitation. In the second case it was found that the tenant had not been dispossessed, but that he sued owing to the proprietor's demanding that he should quit the land. The third case was dismissed by Mr. Macauliffe, Extra Assistant Commissioner, as during the inquiry made by the Settlement Department into the rights of cultivators the tenant (plaintiff in the present case) had admitted before Agha Muhammad, Superintendent of Settlement, that they had given up the land in the previous "har," and had asked that the land should be entered as being under the cultivation of the proprietor himself. The remaining six cases were dismissed for default.

32. Columns 5 to 8 contain the cases in which Settlement Officers had fixed a term for protection in the cultivation in favor of hereditary cultivators by a judicial decision, and in which review was applied for under Financial Commissioner's Circular No. 4171 of 19th July 1870. They also include suits in which review was granted under instructions from the Commissioner, where no protection had been granted by the Settlement Department, but the right of occupancy had been entirely set aside.

33. In column 6, 20 cases are shown in which review has been admitted. The judgments passed in these cases at the time of settlement were not in accordance with the law relating to the decision of civil suits then in force. In eighteen of these cases rights of occupancy were restored under Section 6 of the Tenancy Act, and the proprietors were informed that if they wished to eject the cultivators, they must prove one of the two states of circumstances mentioned in Clauses 1 and 2 of that Section. In two instances the proprietors expressed their readiness immediately to prove that within the last 30 years such cultivators in the same and adjacent villages had been ejected at the will of the proprietors. The cultivators maintained that their ancestors had settled as cultivators in the village along with the proprietors when it was originally founded, and that they had ever since been in possession. On investigation the cultivators clearly established their allegation, and the proprietors failed to prove what they had alleged. The defendants were accordingly declared to be tenants with rights of occupancy under Clause 3, Section 5 of the Tenancy Act. In five cases review was refused, as there was nothing in the original order opposed to law.

34. Only one case is shown in column 9. This was a case in which the land had been swept away by the action of the river after the previous settlement, and was thrown up again at the late settlement, when the proprietors took possession. The tenant sued for possession, but his suit was dismissed, as under the terms of the administration paper of the former settlement land lost by diluvion which had been in the occupancy of a tenant could only be claimed by him when again recovered in case he had remained in the village during the period in which the land had been in the bed of the river. In the present case the tenant had left the village, and after the land was swept away, and had not returned for three years.

35. From Clause 4 of paragraph 12 of this report it will appear that under Section 2 of Act XXVIII of 1868 rights of occupancy were not restored to certain tenants whose hereditary tenure had been set aside at the recent settlement, but who had obtained leases for terms of years instead when their rights were not recognized, as of course at the revision many of these had recourse to the civil court and instituted suits to set aside the contract contained in the lease as invalid on the ground that the Settlement Officer contemplated the ejection of all cultivators who did not enter into agreements for terms of years with the proprietors. The suits shown in column 14 were tried by me and by Mr. Bullock, and as it was found that at the settlement it was generally believed by the cultivators that rights of occupancy would altogether be set aside, and that on this account, in order to retain the land under their cultivation, they entered into leases, and that had they not been influenced by this fear or mistake, they would not have voluntarily abandoned their rights of occupancy, decree was accordingly given under Clause 2, Section 12 of the Punjab Civil Code, Part I. The percentage of hereditary cultivators who entered into leases with the proprietors at settlement was about 25.

36. In column 15 seven cases are shown as dismissed. In three of these it was found that at the settlement the proprietors sued to eject the tenants, and the tenants, agreeing to give up their hereditary rights, accepted leases protecting them for a term of years. Three cases were dismissed by Mr. Bullock on account of the suit not having been properly instituted.

In two other cases the tenants voluntarily agreed to give rent in kind to the proprietors at one-fourth produce, and as they had thus not succeeded in gaining what they had sued for, these suits are returned in the statement as dismissed, it having been deemed unnecessary to add a column for "Razinama" to the statement for two cases only.

V.—Miscellaneous.

37. It was necessary that the landlords and tenants should understand the process of revision and the more important points of the Act. I have no doubt that both the parties, as far as they were capable of comprehending them, have well understood the points affecting their interests, as in the first place the patwaris came to the district head-quarters with the settlement files and khateonis, and were employed for some time in the work of revision; and this gave publicity to it throughout the district, and the proprietors and cultivators ascertained what had been done in the revision from the patwaris. Accordingly many of the tenants whose names were not retained in the list of hereditary tenants for the reasons given in paragraph 12 of this report presented petitions to be maintained in their tenures, and the proprietors likewise filed cases to set aside the hereditary rights of tenants under Clauses 1 and 2 of Section 6 and Section 9, and for the enhancement of rent under Section 11, and to eject tenants under Clause 2 of Section 19 of the Act. All this shows that the effect of the revision and of the Act are generally known to the people. Besides this, the proprietors and tenants who attended court from time to time were also made acquainted with any necessary particulars. Lastly, in January 1871, I went on tour in the district, and on my route inspected some villages in all the tahsils, except the Shurrukpur tahsil, where there are few hereditary tenants, and every halting place, and in the surrounding villages explained the nature of the revision which had been effected and the purport of Sections 5, 6, 8, 11, 14, 19, 32, 34, 36 and 37 of Act XVIII of 1868, in public assemblies. It thus appears that sufficient publicity has been given to the rules, and if further diffusion of this information be desired, explanations may be printed and given to each tenant and landlord.

38. As cases under the Tenancy Act have been heard in my court for more than a year, during which period I have had a great deal of business, and many cases connected with the Act, it is necessary that I should state to the best of my judgment the impressions produced in the minds of the people by the operation of the Act. The passing of the Act will for some time be regretted by the proprietary class, who had obtained an unexpected advantage, and have been at once deprived of it, especially by those who are most intelligent and disposed to reflection, and who by their ability and economy could make a profitable use of their proprietary rights. But when they come to take into account that formerly they usually received merely a nominal sum as malikana from the cultivators, *i. e.*, in the proportion of one anna to the rupee of Government revenue, or a little more in some exceptional cases, and that by means of this Act instead of one anna they are beginning to receive varying amounts up to one rupee, and that there is no limit to still further enhancement, they will become contented as that of the entire proprietary body only those aim at cultivating their proprietary lands in person who had been absent from home in search of service at the commencement of British rule and for some time after, and who are therefore not in possession of so much land as they are themselves able to cultivate. These are comparatively few; and, leaving them out of account, the main object of the proprietors is to obtain an increased income from these lands, and to these the Act is very favorable. With regard to the tenants, although the Act is *primâ facie* exceedingly favorable to this class, yet when they learn that instead of one anna they may have to pay one rupee, their joy is turned into sorrow. Still when they consider that previously they were being deprived of all connection with the land and had ruin and banishment staring them in the face, and that they have now obtained the right of permanent occupancy, they will not be much dissatisfied with this increase of the malikana payable. In short, in my opinion, the rights of both the proprietors and the tenants are equally well protected by the Act.

39. In conclusion it is necessary to bring to prominent notice the exertions of Wali Rám, the Sadr Qánúngo, in the revision of the settlement records, which owing to his aid has been completed in a short time, notwithstanding the press of work, and without any additional expense to Government. Under these circumstances I beg to recommend a reward of Rs. 50 to Wali Rám out of the sum of Rs. 2,867-14-4, being savings from the pitwaris' fees, which is in hand, which would be a reward not inconsonant with the generosity of Government.

Statement showing the Work performed in the Revision of Tenant Entries in five Districts of the Punjab.

	Gujranwallah.	Gurdaspur.				Sialkot.				Amritsar. †				Lahore. †				Gurdaspur.				Total.	Remarks.
	460 villages.	269 villages.	Hafizabad, 492 villages.	Laboure.	Chuniun.	Kusur.	Sarrakpur.	Amritsar, 376 villages.	Tarn Taran, 361 villages.	Ajnala, 340 villages.	Sialkot, 663 villages. Minute by the Honorable R. H. DAVIES, *Lieutenant-Governor of the Punjab.*

I HAVE purposely delayed reviewing the report of the Financial Commissioner, dated the 3rd April 1872, as I thought a better opinion could be formed of the working of Act XXVIII of 1868 after longer observation. But the Act having now been in force for six years, a sufficient experience of its operation has probably been obtained.

2. At the revised settlement, commenced in 1863, large numbers of cultivators in the districts of Siálkot, Amritsar, Gurdáspur, Lahore and Gujránwálah, recorded as hereditary at the first settlement, were recorded as tenants-at-will. The total number of hereditary tenants originally recorded is not given, but the following is the detail of those restored by revision of the record under the terms of the Act:—

Siálkot	...	21,897
Amritsar	...	11,951
Gurdáspur	...	10,578
Lahore	...	12,416
Gujránwálah	...	6,230
		63,072

3. The statistics are most complete for the district of Siálkot, where 33,831 tenants were at the first settlement recorded as hereditary. Of these no less than 7,768 had abandoned their holdings previous to the initiation of the second settlement. The remainder, 26,063, were entered as tenants-at-will.

4. The main object of the Act, namely, to set up, in respect of hereditary tenants, the record of the first settlement, was thus by process of summary revision to a great extent secured in the districts where it had been altered. In other districts the record remained intact, but the Act gave to proprietors therein the right to rebut the presumption attaching to the entries of hereditary tenancy.

5. While the Act was under discussion, much apprehension was expressed that this provision would lead to excessive litigation: but this is now proved to have been groundless. A return of the number of suits instituted from 1870 to the close of 1873-74 shows that there were, under Section 6 by landlords for rebuttal of presumptive right of occupancy, 2,907 suits, and of these 2,504 were in the districts of Amritsar, Gurdáspur, Siálkot and Lahore, where the record had been altered at the second settlement.

6. In contrast to these districts are those of Ambálah, Ludiánah, Jálandhar and Hoshiárpur, where, in the same period, suits under Section 6 numbered only 105.

7. I am personally aware that the entries of hereditary tenancy were, at the first settlement in Jálandhar and Ambálah, made under precisely the same rules as in the Bári Doáb; for I myself obtained from the Settlement Officers, Messrs. Wynyard and Pearson, the vernacular rules by which their establishments were guided, and prescribed them, without variation on this point, for the direction of my own. This course was in accordance with the orders of the Government of India, dated 31st March 1849, prescribing the instructions in force in the North-West Provinces as the "Revenue Code" of the Punjab. I attribute the greater litigation under Section 6 in the Amritsar, Gurdáspur, Siálkot and Lahore districts, as compared with those on the left banks of the Bias and Satlej, entirely to the modifications made in the tenant entries in the former at the second settlement. It is impossible for me to come to any other conclusion when I learn from the last Revenue Report* that there are in the Jálandhar district alone 18,174 tenants with a right of occupancy, 14,784 of whom pay cash rents fixed for the term of settlement, and thus furnish a strong provocation to the disturbance of their position to landlords really aggrieved by it; and that nevertheless only 14 suits have been instituted by landlords since the passing of the Act for the rebuttal of the presumption created by Section 6.

* "In 1868-69 cultivators with right of occupancy had increased to 18,146, holding about 59,000 acres, and there are now 18,174, holding 59,524 acres, * * * and 3,390 pay a share of the produce, the value of which fluctuates according to the character of the harvest and according to the prices of produce." *Vide* Commissioner's reports, page 23.

8. As the officer who commenced and completed the first and regular settlement, made after the annexation of the Punjab Proper, I endorse as perfectly correct the following statement by Sir James Hogg in his minute, dated 28th October 1869:—

"In 1849 the Punjab was annexed, and a regular settlement was then commenced. A regular settlement is a proceeding of great formality and publicity. It is the duty of the Settlement Officer to give notice to all parties interested in the land; besides which, the presence of the Settlement Officer, with his numerous staff in a district is a matter of notoriety, and all his orders are open to inspection. He fixes the amount the villages are to pay to the Government, and examines and records the rights and interests of all concerned. It appears from the proceedings that in consequence of the difficulty of ascertaining local usages, the Settlement Officers recorded a tenant who had been in possession 12 years or upwards as entitled to a right of occupancy, thereby declaring that he could not be evicted as long as he paid his rent, and further, that his rent could not be raised, except in a prescribed manner. The question arises why was that course adopted?

"We must look at the state of the Punjab at that time. It was then emerging from anarchy, and during the Sikh rule land was nearly valueless. Proprietors were subject to any exaction the Government chose to impose and were well pleased to get tenants, as the occupant was held liable to the imposition, while tenants subject to such arbitrary exactions attached little value to their holdings. When the rights of both proprietors and tenants were so dubious and insecure, it was not to be expected that they would appear before the Settlement Officers to urge their respective rights. It is stated by all the local authorities that there were special rights and privileges to which many tenants were entitled, under various local usages. Under these circumstances the Settlement Officers, anxious to maintain existing rights, thought that their safest and most equitable course would be to apply to the Punjab the 12 years' occupancy rule, which prevailed in the settled provinces, by express enactment, and the principle of which had been adopted in the settlement of the North-West Provinces; and it is not alleged that any objection to that course was taken during the progress of the settlement. Now when under British rule order and security have been established, and the value of land greatly increased, parties would fain repudiate what they agreed to 15 years ago. I am strongly of opinion that the rights of the parties, as recorded in the first settlement, ought to be maintained. That settlement was made by competent officers with the usual forms and publicity.

"All parties interested had an opportunity of being present if they chose.

"The settlement, when made, was duly approved by the Government."

9. I still regard the procedure followed as that best adapted to the circumstances of the time, and although it was subsequently set aside in the districts north of the Chenáb, it is stated (paragraph 303* of Settlement Report for Ráwalpindi) that after some tentative divergences "the practice at last resolved itself into this, that 12 years' clear occupancy prior to British rule, *i. e.*, A. D. 1848-49, should under any circumstances constitute a title to an hereditary cultivating tenure."

10. I consider it satisfactory that there has been a gradual diminution year by year in the number of suits by landlords under Section 6. The figures are as follow:—

1870-71	...	...	...	1,454
1871-72	...	...	...	838
1872-73	...	...	...	423
1873-74	...	...	...	192

11. On the other hand, there has been an increase in the suits by tenants for rights of occupancy under Section 5, attributable to settlements being in progress in several districts:—

1870-71	...	...	...	1,351
1871-72	...	...	...	1,451
1872-73	...	...	...	1,745
1873-74	...	...	...	2,272

In his despatch No. 1, dated 28th October 1869, the late Secretary of State wrote—

"I am glad to observe that the clauses providing for augmentation of rent during the period of settlement are such as materially to mitigate the hardship of any mistakes which have occurred in granting rights of occupancy as against the landholder, when none such really existed."

12. On this point Mr. Egerton (paragraph 50 of his Report) observes—

"that the results shown by the statements giving the number of suits for enhancement of rent are not remarkable, but show that in some parts of the country, besides those in which revision of entries has brought the Act to their doors, its provisions in respect to enhancement of rent are not wholly lost sight of by the landlords."

He also thinks that the number of suits does not represent any thing like the number of cases in which enhancement has taken place.

13. The number of enhancement suits for the whole province is here given:

1870-71	...	...	...	...	...	109
1871-72	...	...	...	...	...	638
1872-73	...	...	...	...	...	555
1873-74	...	...	...	...	...	461
						1,763

Considering the very prosperous state of the country generally this number cannot be considered large. In his Revenue Report for 1873-74 the Financial Commissioner remarks—

"One of the reasons why suits for enhancement are not more frequent is that the people consider themselves bound to abide by whatever rent was fixed at settlement, whether or no it was entered in the record and attested. Such entries, if made and attested previous to the passing of the Punjab Land Revenue Act of 1874, have the force of agreements under Section 2 of the Punjab Tenancy Act as regards the rate of rent for the term of settlement."

14. Although the number of enhancement suits is few and declining, the rate of increase on the original amount of rent is high, averaging, during the past year, 162 per cent. It may be inferred that while there exists at present no bitter or widespread contention about rent, landlords have acquired under the Act the power of raising rents in an equitable degree at any time, instead of, as formerly, only on the termination of a settlement.

15. The litigation which has taken place during the past four years under the other sections of the Act does not, as will be seen from the following statement, call for particular notice :—

(1.)	Suits under Section 5 by tenants for rights of occupancy ...	6,819
(2.)	Suits to establish right of occupancy under Section 8, on other grounds than those mentioned in the previous sections of the Act	938
(3.)	Suits under Section 6 by landlords for rebuttal of presumptive right of occupancy	2,907
(4.)	Suits under Sections 10 and 11 for enhancement of rent ...	1,763
(5.)	Suits under Section 14 for abatement of rent	272
(6.)	Suits for arrears of rent when remission is allowed under Section 15	94
(7.)	Suits under Section 18 to set aside award of division or appraisement of produce taken for rent	563
(8.)	Suits under Section 19 by landlords for ejectment of tenants with rights of occupancy (Section 19, clause 1) ...	353
(9.)	Suits under Section 19 by landlords for ejectment of tenants with rights of occupancy (Section 19, clause 2) ...	233
(10.)	Suits under Section 20 by landlords for ejectment of tenants without rights of occupancy	2,952
(11.)	Suits under Section 25 by tenants to contest notice of ejectment	498
(12.)	Suits under Section 26 by tenants on account of illegal ejectment	1,035
(13.)	Suits under other sections	180

Besides the above, 2,968 suits, which have not been classified, were instituted in 1869.

16. In his Revenue Report for 1873-74 the Financial Commissioner states that in his opinion the Punjab Tenancy Act has worked well, and that the excitement which attended the discussion of its provisions six years ago has completely subsided. In this opinion I generally concur.

17. The thanks of the Government are due to the Financial Commissioner and to the officers marginally noted, who, under his orders, superintended the correction of the records.

No. 1093, dated the 23rd December 1874.

From—C. J. LYALL, ESQ., Under Secretary to the Government of India, Dept. of Revenue, Agriculture and Commerce,

To—The Secretary to the Government of Punjab.

I AM directed by the Governor General in Council to acknowledge the receipt of your letters* submitting a report by the Financial Commissioner of the Punjab on the working of Act XXVIII of 1868 (The Punjab Tenancy Act), and a minute recorded thereon by His Honor the Lieutenant-Governor, and in reply to say that the results appear to be very satisfactory.

* Nos. 584 and 1878, dated respectively the 31st March and 17th November 1874.

2. The papers will be published in the *Gazette of India*.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

THE JUTE TRADE AT DUNKIRK.

No. 63 (Statistics and Commerce), dated 26th November 1874.

From—Her Majesty's Secretary of State for India,

To—The Government of India.

I forward herewith, for your Excellency's information, a copy of a report, which has been drawn up by the Vice-Consul at Dunkirk, on the jute trade at that place.

Dated 6th October 1874.

2. You will observe that the Dunkirk spinners desire that the attention of the Indian Government should be called to three special points, *viz.*, the establishment of a Government scale of marks or brands, the frequent change of seed, and greater care in the preparation of jute for the market. I shall be glad to receive your remarks upon these suggestions; but with respect to the first, I must observe that the system of Government marks or brands attached to articles of trade has, in most cases, been found in this country to be inexpedient and not permissible.

3. Your Excellency will, no doubt, take such measures as may be most suitable for drawing the attention of the trade to the other points, which are of great importance.

A Report on the Jute Trade in the Vice-Consular District of Dunkirk, by Vice-Consul TAYLOR.

In the year 1845 the firm of Dickson & Co. established the first jute mill in this district, and worked it with a fair amount of success for several years. No statistics of the jute trade in its infancy are in existence, but it is a fact that until the year 1860 the Messrs. Dickson were without a rival. Between 1860 and 1865 no less than eight jute mills were erected in and around Dunkirk, chiefly by the energy and capital of Scotchmen. These mills operated successfully till 1866, when the trade received a very serious check. Two of the mills ceased spinning, and the remaining six suffered severely. In 1867 the trade began to revive, and down to the commencement of the Franco-German war the spinners who survived the disasters of 1866 made fair profits. The war between France and Germany almost completely paralyzed the operations of our jute spinners. At its termination the trade immediately revived again, and it has been fairly remunerative down to the spring of the present year 1874.

The jute imported into Dunkirk comes from London for the most part. The spinners would be glad to import direct from Calcutta if it were possible to do so successfully, but the lack of a sufficient depth of water to admit of the entrance of large vessels into the port of Dunkirk renders direct importation almost out of the question. To pay a ship-owner a fair profit a ship must carry a large cargo of jute, and this of course can be done only in vessels of large tonnage. The difficulty on account of the want of water at the entrance to the port is becoming greater every day, and in consequence ship-owners object strongly to sending vessels laden with jute to Dunkirk. Indeed, it is rapidly becoming the practice to insert the following clause in the charter-parties to Dundee: "Available for the same freight as to London from all the ports on the Continent from Havre to Hamburg (*Dunkirk excepted*)." Last year one vessel of considerable tonnage arrived with a cargo of jute from Calcutta, but the experiment is not likely to be repeated until the authorities undertake to improve the condition of the port. They are said to be contemplating taking action in the matter, and we hope to see the entrance to the port deepened, so as to admit vessels drawing twenty feet of water, within a reasonable period from the present time. If this be done, London will cease to be the chief source from which the Dunkirk spinners draw their supplies.

An attempt is being made to establish an emporium for jute at Havre, and our spinners are inclined to look upon this attempt with favour, although the expense of transport from Havre is a little higher than from London. The rates from London are usually ten shillings per ton by steamer, and eight shillings by sailing vessels. Frequently spinners charter small sailing ships, and take the jute direct from the Indian ship in the London docks. From Havre the rates are twelve shillings per ton by steamer, and ten shillings in sailing vessels. The communication between Havre and Dunkirk is excellent, so that there is no difficulty on that score. The spinners cheerfully submit to the freights both from Havre and London, but they complain of being at the mercy of their agents, and this alone is sufficient to make them desire the direct importation of jute from Calcutta.

The imports and exports of jute, as shown in the tabular statement below, have varied considerably during the last ten years. From 1864 to 1866 we observe a fair rate of progress in the imports, whilst in 1865 the exports were almost nil, from which it may be presumed that the French market in that year was unusually good. In 1866 the trade received a serious check, and consequently we find a falling off in both imports and exports in the following year. In 1868 the trade partially revived, and remained fairly remunerative till the outbreak of the Franco-German war in 1870. Owing to that disastrous struggle, the years 1870 and 1871 were unusually bad. In 1872 and 1873, jute was imported largely, and the trade has been good down to the spring of the present year. The following table shows the imports and exports of jute at the port of Dunkirk during the last ten years :—

Years.	Imports.	Exports.
	Kilos.	Kilos.
1864 ...	6,059,300 ...	45,832
1865 ...	8,357,714 ...	405
1866 ...	11,391,455 ...	178,435
1867 ...	11,030,150 ...	134,824
1868 ...	11,231,188 ...	29,593
1869 ...	10,340,284 ...	24,555
1870 ...	9,604,737 ...	82,846
1871 ...	8,427,449 ...	142,503
1872 ...	13,635,260 ...	172,157
1873 ...	15,265,140 ...	241,576
1874 ...	5,665,812 ...	154,675

(the first seven months.)

In comparing the first six months of the present year with the corresponding period of 1873, a marked falling off in the imports for the current year is observable. In the first half of the year 1873 the imports were 7,318,020 kilogrammes, whereas up till the end of June of this year the imports did not exceed 5,238,154 kilos.

The jute spinners at the present time complain of a restricted market and a generally depressed state of trade. The depression complained of does not appear to be traceable to any

special cause affecting this branch of industry only. It is so great, however, that one firm has ceased to spin jute, and two others are said to be existing on the profits of former years.

Our spinners are well supplied with capital and machinery, but as regards labour there is much to be desired. The present rate of wages is by no means high, and consequently factory hands are not easily obtained. Those to be had, too, are not of the highest order, possessing neither the intelligence nor the working capabilities of the Scotch labourers of Dundee. Notwithstanding this, the cost of production at Dunkirk compared with that in Scotland is so much lower that our spinners are able to export to Dundee with a small profit. When it can be done to advantage, the Dunkirk spinners readily seek a foreign market in order to keep down the stock and to keep up the prices at home.

The duties on the importation of jute are very trifling, and offer no impediment to the trade. During the government of M. Thiers an attempt was made to impose much higher duties, but it was met with such vigorous opposition on the part of those interested that it failed completely. It is now thought that no change will be made in the import duties until 1877, when the existing treaties with Austria and Italy come to an end. At the present time England enjoys the privilege of the most favoured nation.

Notwithstanding the depression so much complained of by our spinners, there are six jute mills in operation at Dunkirk at the present time. These mills consume on the average about two hundred and twenty-eight thousand kilogrammes (or, say, two hundred and twenty tons) of jute per week. The following table shows the average weekly consumption of each firm :—

	Kilos.
Messrs. Kyd Brothers (two mills)	92,000
Messrs. Cuenin & Son	40,500
Messrs. Vancauwenbergh & Co.	36,000
Messrs. Ravineh & Co.	33,000
Messrs. Guibet & Co.	27,500
TOTAL ...	229,000

The Messrs. Dickson, who established the first jute mill in Dunkirk, have recently abandoned that branch of their trade, and now confine themselves to the spinning of flax. It may be remarked here that the management of most of these mills is in the hands of Englishmen and Scotchmen.

Messrs. Vancauwenbergh and Messrs. Cuenin are manufacturers as well as spinners.

It cannot be doubted that jute has a great future in store for it in spite of the present unsatisfactory condition of the trade. Every day it is becoming more largely employed in the manufacture of silk, linen, and cloth. Its presence is readily detected in these textiles from its lack of durable qualities, but none the less is it made use of to the great profit of the manufacturer. It is now extensively consumed by carpet manufacturers, who, by its help, are able to produce a cheap, if not a durable, article. At Dunkirk the demand for coarse bags is very considerable, owing to the exportation of beetroot, sugar, and corn in large quantities from this port, and in supplying this demand jute finds its most legitimate employment.

The establishment of a Government scale of marks or brands, a frequent change of seed, and greater care in the preparation of jute for the market, are the three chief points to which the Dunkirk spinners would respectfully call the attention of the Indian Government. There is but one opinion with respect to the innumerable marks or brands employed in the jute trade. New ones appear almost every day, and the result is that even the most experienced persons are unacquainted with the half of those in use. The native merchants find their advantage in the present confusing practice, and tax their ingenuity to discover under how many different brands they can classify their crop. To obviate this difficulty, our spinners suggest that the Indian Government should establish a scale of marks which all the native traders should be forced to adopt. In the Russian flax trade this has already been done with success, and it is thought that a similar system applied to the jute trade would be equally successful. The jute plant is said to be becoming impoverished from the bad system of cultivation pursued by the native cultivators. They appear to be entirely ignorant of the advantages which would result from a frequent change of seed. Again, the colour of the jute sent to market is growing worse and worse every year. This is owing to the careless treatment it receives at the hands of the growers. Apparently, the same water is used throughout the whole steeping process which the jute undergoes, and the result is the bad colour complained of by our spinners. These points are respectfully recommended to the attention of the Indian Government.

HENRY C. TAYLOR.

Dunkirk, 6th October 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

SUBSCRIPTION TO BENGAL FAMINE FUND BY INDIAN IMMIGRANTS IN TRINIDAD.

No. 2823.

Extract from the Proceedings of the Government of India, Department of Revenue, Agriculture and Commerce,—dated 31st December 1874.

Read the following despatch from Her Majesty's Secretary of State for India, No. 62, dated 26th November 1874 :—

Despatch from the Secretary of State for India, to the Government of India,—No. 62, dated 26th November 1874.

I forward herewith, for the information of Your Excellency in Council, copy of a letter from the Colonial Office, and of a despatch from the Government of Trinidad, announcing a subscription of £62-17-9½ to the Bengal Famine Relief Fund by Indian immigrants in that colony.

Dated 2nd November 1874.

2. I am confident that the sympathy evinced by these immigrants towards their countrymen at a period of severe trial will be very gratifying to Your Excellency in Council.

Letter from JULIAN PAUNCEFOTE, Esq., to the Under Secretary of State for India,—dated 2nd November 1874.

I am directed by the Earl of Carnarvon to transmit to you, to be laid before the Marquis of Salisbury, a copy of a despatch from the Governor of Trinidad, reporting the subscription of a sum of money by the Indian immigrants in that island in aid of the Indian Famine Relief Fund.

No. 206, 8th October 1874.

Despatch from J. SCOTT BUSHE, Esq., to the Right Hon'ble the Earl of Carnarvon,—No. 206, dated 8th October 1874.

I have the honor to report for Your Lordship's information that a subscription amounting to £62-17-9½ has been raised among the coolie labourers on 18 estates in the colony for the relief of their suffering brethren in India, and I have instructed the Emigration Agent at Calcutta to pay over this sum (which has been deposited in the treasury here) as a contribution to the Famine Relief Fund.

As an act of generosity the circumstance reflects credit on the individual contributors; while viewed in connection with the working of the immigration system, it is, I think, gratifying to see that these people are not only alive to the necessities of their poorer countrymen, but are also sufficiently sensible of their own bettered condition to be induced to spare something, however small, from their earnings for the relief of those necessities.

RESOLUTION.—The Government of India have received with much gratification this substantial proof of the sympathy felt by the Indian immigrants in Trinidad for the distress of their fellow-countrymen in India, and are glad to find in it also evidence of the prosperous condition of the donors in the colony where they have settled. As, however, relief operations in Bengal have now closed and no more subscriptions towards the Famine Relief Funds are required, the Governor General in Council will await a reference to the subscribers in Trinidad as to the purpose to which they would wish their charity to be devoted.

ORDER.—Ordered, that this Resolution be published in the Supplement to the *Gazette of India*.

(True Extract)

C. J. LYALL,
Under Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 31st DECEMBER 1874.

GENERAL REMARKS.—Rain has fallen in fair quantity in the southern districts of Madras: slight showers are reported from the Southern Mahratta Country, Coorg, and parts of the Punjab and Oudh: it is much wanted in the Deccan districts of Bombay, in the districts of the Punjab where none has fallen, and in the North-Western Provinces. Prospects however continue generally good. In Bengal the rice harvest progresses as before, and the spring crops are flourishing.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras— (Dec. 31st)		
Kistna (31st)	...	No rain; canal supply sufficient—4 feet 3 inches of water over anicut; later dry crops alone suffering from grub and insufficiency of water in parts; paddy being cut; cholum produced ¼ in Repalee taluk; prices stationary; mild small-pox and fever prevalent—the latter fatal in the jungle taluks; cattle healthy except in three taluks; pasture sufficient; markets well supplied locally.
Trichinopoly (30th)	...	Favourable rain throughout the river-valley; no other change of importance.
Malabar (31st)	2·05	Season favourable for second crop cultivation; supply of grain sufficient from local and foreign sources; slight fever and small-pox—the former in hilly tracts; cattle healthy; pasture good; prices stationary.
Tanjore ,,	0·07 at Nagapatam, elsewhere very slight.	Freshes in rivers decreasing; no fresh supply to tanks; no water over upper and lower anicuts; cultivation of wet and dry crops continues in some parts; standing crops good; a few dry and wet crops yield a fair harvest; pasture sufficient; prices stationary; markets well supplied; public health generally good; small-pox here and there; one death from cholera in Negapatam taluk; cattle disease in Tanjore taluk—some loss.
Kurnool ...	...	No report received.
Bombay— (Dec. 31st)		
Sindh.		
Hyderabad ...	...	Young wheat and other rabi crops healthy; rabi sowings still continue; all kharif harvesting over, save cotton, which is being picked; fever abating; weather colder; cattle disease continues.
Upper Frontier ...	...	Weather mild and cloudy; kharif harvest completed; wheat and barley still being sown.
Shikarpur ...	...	Severe frosts, but no damage reported; crops healthy; weather cloudy; rain expected.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Gujarat.		
Ahmedabad ...	...	No change.
Surat ...	...	Rabi tolerably well; fever in Pardee.
Broach ...	...	Kharif crops mostly harvested; no change in the state of rabi crops; weather cold; health generally good.
Kaira ...	...	Crops, weather and health good.
Khandesh and Nasik.		
Khandesh ...	...	Rabi crops withering in some talukas for want of moisture; cotton brisk—rate 43; cattle disease and fever prevailing in some talukas.
Nasik ...	...	No change since last report.
Konkan.		
Tanna ...	...	Weather cool; public health good; fever in Mahim, Wada, Shahpur, Moorbaur, Kalian and Bhewndi talukas; cough in Wada taluka; rabi crop good in Moorbaur, Bassein and Bhewndi talukas; middling in Shapur and Kalian talukas, but not good in Kurjut taluka, and has slightly suffered in Wada taluka.
Deccan.		
Poona ...	...	Standing rabi crop doing well, excepting in Bhimthadi, where it is dying for want of moisture in many places; a fall of rain has been very anxiously looked for in almost all the talukas; a few cattle died in a village in Bhimthadi; climate and public health good.
Ahmednuggur ...	...	Crops withering for want of rain, and have suffered in some places from severe cold; health good.
Sholapur ...	...	Cotton, toor and rabi crops generally damaged by cold weather everywhere, especially in Kurmala and Sangola; rain wanted; health good.
Satara ...	...	Early crops nearly all harvested; late crops promise average harvest for want of rain; weather cloudy and warm; slight fever and bowel complaint in Walwa, and ague in Pahtun.
Southern Mahratta Country.		
Belgaum ...	·5	Rabi crops thriving; fever in Sumpgaon, Gokak and Uthni; cattle disease in some parts of Uthni.
Dharwar ...	·35	No change.
Kaladgi ...	...	Rabi crops middling, except jowari, which is slightly blighted in Bijapur, Sindgi and Bagewari; eleven deaths from fever in Judi taluka.
Kanara ...	...	Prospects of second crop satisfactory; fever, small-pox and cattle disease slightly prevalent.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Rabi crops promising; weather cold; public health good.
Wudwan ...	...	Weather cloudy; a few drops of rain fell on Saturday last; health indifferent; cattle disease in Luctor taluka; state of crops the same as before.
Baroda ...	...	Cotton and rabi prospects good, but will partially suffer from cloudy weather during the week; public health good.
Karachi ...	...	Kharif crops almost all harvested; late rabi sowings continue as flooded lands dry up; fever and colds prevalent; cattle disease in some talukas, but nothing serious.
		General Remarks.—Rabi prospects good, except in the Deccan, where rain is much wanted.
Bengal— (Dec. 29th)		
Burdwan ...	*Nil*	Slightly cloudy; weather warmer. Late rice nearly harvested. Prospects of spring crops good.
Bankura ...	,,	Weather cool and dry. Haimunta, or late rice, almost all reaped. Winter crops generally doing well.
Beerbhoom ...	,,	Weather milder than last week. State and prospects of crops good. Harvest nearly home. Cold-weather crops doing well.
Midnapore ...	,,	Weather clear and cold. Harvest of late rice still progressing. No change since last report.
Hooghly ...	,,	Weather clear throughout. Wind from north. Prospect of rice where planted out is good; that of cold-weather crops very good.
24-Pergunnahs ...	,,	Weather dry and cool. The harvest of the late rice continues. Cold-weather crops doing well.
Nuddea ...	,,	Seasonable weather. The state and prospects of the crops continue satisfactory.
Moorshedabad ...	,,	Seasonable weather. Wheat wants rain; other crops going on well.
Dinagepore ...	,,	Bright and cold weather. An excellent winter crop is being cut; prospects of other crops are good.
Maldah ...	,,	Weather fair. The reaping of the late rice is still going on. Mustard has begun to ripen. The prospects of the cold-weather crops are good.
Rajshahye ...	,,	Fine weather, cold with north wind. State of the crops generally unchanged. The cold-weather sowings have been completed. Sugarcane and kalai pulse are being cut with good results. The fall in prices continues.
Rungpore ...	,,	Weather generally clear and seasonable. Rice harvest is going on well. The general outturn is expected to be good. Cold-weather crops have already been sown.
Bogra ...	,,	Weather same as last week. No change in the prospects of the crops.
Pubna ...	,,	Fine, clear, cold, and seasonable weather. Harvesting of amun, or late rice, and moong pulse nearly finished; and that of kalai and arahur pulses commenced. The prospects of matore and khesari pulses, &c., good.
Dacca ...	,,	Seasonable weather. State of crops very favourable.
Patna ...	,,	Weather seasonable. Rice crop has been nearly harvested, and the prospect of the cold-weather crop is excellent.
Gya ...	,,	Cold and seasonable weather. The harvesting of the aghani, or late rice, is almost completed; the outturn has been a full sixteen annas. The prospects of the rabi, or cold-weather crops, continue good.
Shahabad ...	,,	Weather cool and fair. Aghani, or late rice, all reaped. Rabi, or cold-weather crop, very promising.
Tirhoot ...	,,	Fine weather. There is no material change in the prospects of crops since last report. Price of food grain continues to fall.
Sarun ...	,,	Weather seasonable and cold, with westerly wind. The aghani, or late rice, has been harvested, and the new rice is coming into the markets in small quantities. Prospects of the cold-weather crops are excellent. Rain is wanted. In some places the crops are being irrigated. Indigo fields are being prepared for the next year's crop. Poppy plant is everywhere very forward, and is looking very well. Prices stationary.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*			
Chumparun	...	*Nil.*	Weather continues fine and cold. Rabi, or cold-weather crops, coming up very well; also opium. No lack of moisture at present.
Monghyr	...	„	Very cold, with westerly wind. State of crops everything that can be desired.
Bhágalpur	...	„	Nothing could be more satisfactory than the state of the rabi, or cold-weather crops, and the outturn of the aghani, or late rice crop.
Purneah	...	„	Seasonable weather. Present harvest and prospects of the mustard crop as good as can be wished.
Sonthal Pergunnahs	...	„	Fine weather. Winter paddy three-fourths cut; outturn very good. Mustard crop unusually good.
Balasore	...	„	Weather continues fine and dry. Harvesting of the sarud, or late rice crop, occupies all available labourers. General prospects of crops satisfactory.
Lohardugga	...	„	Bright and cold weather. The reports from all parts of the district are good; and the outturn of the rabi, or cold-weather crops, is expected to be large.
Maunbhoom	...	„	Weather fair and set. Nothing to add to remarks of last week. The rice harvest all but completed. Outturn good. Cold-weather crops good.
			PUBLIC HEALTH.
			Burdwan: fever as before. 24-Pergunnahs: cholera prevailing in Thannahs Bhongar, Mathoorapore, Dehepore, and Kalaroa; fever has somewhat abated at Barripore. Moorshedabad: cholera still present in a slight degree. Rajshahye: little or no sickness reported. Pubna: fever continues. Furreedpore: public health steadily improving. Chittagong: cholera continues to rage, mostly in the Sudder station. Patna: health good. Tirhoot: public health good. Sarun: general health good. Bhágalpur: general health very good. Lohardugga: general health good.
			General Remarks.—The prospects of the rice crop continue favourable all over the country. Harvesting is progressing with very good results, and is nearly complete in several districts. Sugarcane and certain of the pulses are also being harvested in places, with good results. All cold-weather crops are doing well. Here and there rain would be desirable.
N. W. P.—	**(Dec. 31st)**		
Meerut	(Dec. 30th)	...	Weather cloudy; no rain; prospects unchanged.
Agra	...	...	No report received.
Allahabad	(Dec. 30th)	...	No change since last report; everything promises well.
Bareilly	„	...	Rain needed for rabi crops.
Benares	„	...	Clouds have cleared away without rain having fallen; otherwise no change.
Jhansi	„	...	Weather cloudy, and prospect of rain which is urgently required for rabi crops.
Punjab—			
Delhi	(Dec. 30) ...	...	Slight drizzle of rain; health good.
Hissar	„ ...	...	Ditto ditto; crops progressing favourably, but rain wanted; health good.
Umballa	„ ...	·2	Crops and health good.
Jullundur	„ ...	...	Ditto ditto.
Lahore	„ ...	...	Rain urgently wanted; health good.
Mooltan	„ ...	...	Harvest prospects good; slight fever prevails, otherwise health good.
Rawul Pindi	„ ...	...	Rain wanted; prospects fair; health good.
Pesháwar	...	...	Ditto; slight fever prevalent.
			General Remarks.—Usual rain much wanted; health of province generally good.
Oudh—			
Lucknow	(Dec. 30th)	*Nil*	Prospect of crops good; weather clear; public health good.
Fyzabad	„	Slight.

A. O. HUME,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA,

HOME DEPARTMENT.

CORRESPONDENCE CONCERNING THE ALLEGED NANA DOONDHOO PUNT, OF BITHOOR.

Dated Fort William, the 15th December 1874.

From—D. FITZPATRICK, Esq., Deputy Secretary to the Govt. of India, Legislative Dept.
To—ARTHUR HOWELL, Esq., Offg. Secretary to the Govt. of India, Home Dept.

I HAVE the honour to report that on the receipt of your No. 1393, dated 11th ultimo, I proceeded immediately to Cawnpore and subsequently went on to Gwalior with a view to investigating the case of Jumna Dass, the man supposed to be the Nana, and his attendant Pemraj.

2. As the charge against both the accused rested entirely on the allegation that the former was in fact the Nana Doondhoo Punt, it seemed clear that it was to the question of his identity with that person I ought first to apply myself, and I accordingly at once entered upon it with the very able assistance of Mr. H. Goad, the police officer specially deputed by the Government of the North-Western Provinces in this matter.

3. The result of the inquiry we have made, shortly stated, is that the attempt to identify the prisoner Jumna Dass with the Nana has utterly failed, and that in consequence I have felt it to be my duty to advise Mr. Goad to apply for the discharge of both the prisoners. This he did on the 10th instant, and his application was at once acceded to by the Magistrate (Mr. Clarmont Daniell).

4. As matters have turned out there has been, contrary to what was at first apprehended, so little in the way of conflict in the evidence, that I deem it unnecessary to trouble you with any minute discussion of it, and shall accordingly confine myself to the following brief remarks.

5. Not one of the witnesses examined has positively declared the man Jumna Dass to be the Nana.

Colonel Mowbray Thomson.
Baba Aptieh.
Unna Bhut.
Dada Bhut.

The nearest approach to an identification is to be found in the statements of the persons named in the margin.

6. The statement of Colonel Mowbray Thomson is of course above suspicion; but it must be remembered that celebrated as Colonel Thomson's name is in connection with the Cawnpore rebellion, he appears to have seen the Nana but twice; and I may add that his recollection of that person was so faint in the year 1862 that he then wrote to the Magistrate of Cawnpore saying that he did not think he could recognize the Nana if put before him. This being so, it is no matter for surprise that Colonel Thomson should decline, as he does, to express any positive opinion.

7. The circumstance that Colonel Thomson found on the prisoner a mark which he had before seeing him stated that he would expect to find on the Nana would undoubtedly be one of great importance if the other evidence in the case left room for any doubt, but in the face of the evidence to which I shall presently refer it cannot be looked upon as anything more than an accidental coincidence.

8. Baba Aptieh, though he positively identified the prisoner as the Nana before Colonel Osborne, has since considerably modified his statement. He now can say no more than that the prisoner *appeared to him* to be the Nana, and he explains his former positive assertion by saying that he saw the prisoner only from a distance and was ill at the time.

9. Unna Bhut has completely withdrawn the positive statement he made before Colonel Osborne. He now goes no farther than to say that the prisoner is like the Nana, particularly about the forehead.

10. As for Dada Bhut, he clearly desires to convey the impression that he believes the prisoner to be the Nana, but all attempts to get a direct statement from him on the point have failed. For reasons with which it is unnecessary to trouble you here, I regard the evidence of this witness with much suspicion.

11. Any account of the evidence bearing in favour of the identity would be incomplete if it omitted to notice the so-called identification by the Maharaja Scindiah which has been so much dwelt on, especially in the newspapers; but the truth is His Highness has never professed to recognize the prisoner as the Nana. All he has said amounts only to this, that from the knowledge displayed by the prisoner of the circumstances of an interview which took place between the Nana and the Maharaja before the mutiny of 1857, and in particular from the prisoner's being aware that a sword of a peculiar description (termed a "Sosun putta") was presented to the Nana at that interview, he "*infers* that the prisoner *must be*" the Nana. But such facts, though useful auxiliaries to other evidence leading the same way, do not of themselves warrant the inference drawn. The circumstance of a sword of the description referred to having been presented must of necessity have been known to several persons besides the Nana, and any one designing to personate the Nana would have little difficulty in obtaining a knowledge of it.

12. I may add that since an interview he had with the prisoner in our presence on the first instant, at a time when the case was much more developed, the Maharaja has been much shaken and seems to admit that he was misled.

13. In concluding my remarks on this part of the case, I ought to mention that two witnesses named Roshun Khan and Mahomed Mookeem examined by Colonel Osborne, and who may be termed witnesses in favour of the identity, were unfortunately forgotten when we were at Gwalior, and we accordingly had not the advantage of hearing their statements from their own mouths; but as neither of them professed actually to identify the prisoner as the Nana, it did not, seeing the absolutely conclusive nature of the other evidence, seem worth while to delay the application for discharge by sending for them to Cawnpore.

14. Such is the evidence that might be adduced in favour of the identity. Against it we have the evidence of the twenty-seven witnesses named in the margin, almost all of whom seem highly competent to speak on the point. Some of these witnesses say the prisoner is like the Nana, others say he is not, but all agree in declaring most positively that he is not the man.

J. N. Tresidder, Deputy Surgeon General.
John Power, Judge of Moradabad.
Mussamut Adla.
Suddack Wrestler.
Nana Narain Rao.
Mundey Gunga Poote.
Kesho Rae Baid.
Cheddie Mistree.
Sarasheo Shastree.
Jogul Kishore.
Hoormusjee Bazoon Moodi.
Jewan Singh.
Hillalloodeen.
Noor Mohummud.
Deen Mohummud.
Ruggoonundun Sehae.
Ram Newaz.
Luchmun Singh.
Buldeo Singh, Ressaldar.
Gunput Rao.
Ram Chand.
Dada Bhut.
Ruggonath Rao.
Govind Pundit.
Ruggonath, son of Balkishen.
Dada Mahajun.
Buldeo Singh, son of Esaree Singh.

We considered the evidence of the first eighteen of these witnesses amply sufficient. The remaining nine were subsequently examined at the request of the Maharaja.

15. The conclusion at which I have arrived on the evidence of these witnesses is strongly confirmed by the circumstance that, while the Nana ought now to be over 50 years of age, the prisoner is, in the opinion of Dr. Norman Chevers and the other Medical Officers who have examined him, not more than about thirty-five, forty-five being the utmost limit which any of them think it within the range of possibility that he could have attained.

16. This conclusion is further confirmed by the following circumstances:

1*stly*:—That the Nana is clearly shown to have worn an ear-ring of the description termed *bhik balee* which the medical officers are unanimously of opinion must have left a mark in the upper rim of his ear, while no trace of such a mark can on the most minute examination with lenses be detected on the prisoner.

2*ndly*.—That Kesho Rae Baid states that the Nana had sustained a considerable loss of tissue by sloughing from a virulent disease, while the prisoner shows no sign of having suffered in this way.

17. Finally, notwithstanding what has been said by some persons to the contrary, the prisoner's entire appearance, bearing and mode of speaking are unmistakeably those of a person of a very low rank of life. I myself was quite startled on first going into his cell at finding the sort of person I had before me, and I subsequently observed the same effect produced on General Daly when he first saw him. Mr. Goad, who is as competent to form an opinion on a matter of this sort as a Native would be, assured me that from the first moment he met the prisoner on his way up from Gwalior he felt satisfied that he could not be the man: I may add that Mr. Goad judged from his accent that he was a native of the country about Benares, and this he has since declared himself to be.

18. Under the circumstances, I have deemed it unnecessary, for the purposes of the question we are now considering, to institute any special enquiry as to the Marathi signature affixed to the letter which the prisoner sent to the Maharaja; but I may mention that Nana Narain Rao, when shown that signature, declared without one moment's hesitation that it was not the handwriting of the Nana; and indeed any person can see for himself that it is altogether of a different character from the signatures of the Nana on the Government Promissory Notes produced from the Loan Department. The prisoner, I may add, states that he can neither read nor write the Marathi character.

19. In conclusion, I have only to say that the prisoner (Jumna Dass) has entirely withdrawn the statement he originally made before Colonel Osborne, and has given us a detailed history of his life which he describes as having been from his eleventh year that of a wandering fakeer of the most ordinary description. I await the instructions of the Governor General in Council as to any further enquiries regarding him that it may be deemed advisable to make.

No. 1648, dated Fort William, the 31st December 1874.

From—ARTHUR HOWELL, Esq., Offg. Secretary to the Government of India.

To—D. FITZPATRICK, Esq., Deputy Secretary to the Govt. of India, Legislative Dept.

I AM directed to acknowledge your letter of the 15th instant, reporting the result of your investigation into the case of the man arrested at Gwalior as the Nana Doondhoo Punt, of Bithoor, and of Pemraj, his attendant.

2. The Government of India entirely concur in your conclusion that the man is not the Nana.

3. The report of your proceedings will be published in the *Gazette of India* for general information. And I am desired to convey to you the thanks of the Government of India for the care you have taken in conducting the investigation. I am further to acknowledge the services rendered by the officers attached to the Government of the North-Western Provinces, particularly Mr. C. Daniell, Magistrate of Cawnpore, and Mr. H. B. Goad, District Superintendent of Police, and also of Dr. Chevers who was specially deputed from Calcutta to aid you in your enquiries.

4. Instructions will be given as to the disposal of the prisoner as soon as the Government of India receive a reply to a communication which they have addressed to His Highness the Maharaja Scindia upon the subject.

Printed and published for the GOVT. OF INDIA *at the Office of* SUPDT. OF GOVT. PRINTING, 8, *Hastings Street, Calcutta.*

SUPPLEMENT TO

The Gazette of India.

Public Works Department, Irrigation Branch.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 5th January 1875.

PRESENT:

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K.C.S.I.

NEW MEMBER.

The Hon'ble SIR DOUGLAS FORSYTH took his seat as an Additional Member.

DISTRESSES (PRESIDENCY TOWNS) BILL.

The Hon'ble MR. HOBHOUSE said that, instead of the first two items in the list of business, he wished now to present a Supplementary Report of the Select Committee on the Bill to regulate Distresses for Rents in the Presidency Towns. The publication of the former Report of the Select Committee and the observations made in Council had elicited some new suggestions, and the Committee had found it desirable to make further alterations. He desired to allow some further time to elapse before asking the Council to take the Committee's Reports into consideration.

INDIAN LAW REPORTS BILL.

The Hon'ble MR. HOBHOUSE also presented the Report of the Select Committee on the Bill to diminish the multitude and improve the quality of Law Reports and to extend the area of their authority.

HIGH COURTS CRIMINAL PROCEDURE BILL.

The Hon'ble MR. HOBHOUSE also presented a further Report of the Select Committee on the Bill to regulate the procedure of the High Courts in the exercise of their Original Criminal Jurisdiction. He said that this was a Bill which the Council would remember was framed on the principle of applying a great many of the clauses of the Criminal Procedure Code to the High Courts in the exercise of their original criminal jurisdiction. In the Bill as introduced, the clauses of the Criminal Procedure Code were referred to merely by the numbers they bore in the Code. But owing to representations received from the High Courts of Calcutta and Bombay, which he was informed by his hon'ble friend, Mr. Dalyell, were concurred in by the highest judicial authority in Madras, the Committee had thought it right to alter the principle upon which the Bill was framed; and, instead of referring to the sections of the Code by their numbers, the Bill now set them out *in extenso*, making the alterations necessary in consequence of differences between the High Courts and the Courts of Session. That made the Bill very much larger and to a certain extent different from what it originally was. MR. HOBHOUSE had no doubt, from the work the Committee had to do in the matter, that the High Courts were perfectly right in urging upon the Committee to do what they had done, and the work would by this means be more complete than by incorporating merely by reference the clauses of the Code of Criminal Procedure.

But the amount of alteration was substantial, and it would not be safe to go on with the Bill without a republication for a sufficient time, in order that the learned Judges might send in such suggestions as occurred to them. The Committee therefore recommended that the Bill be republished and not be brought again before the Council before a sufficient time should have elapsed.

OUDH LAWS, INLAND CUSTOMS, PANJAB LAWS AND OUDH LAND REVENUE BILLS.

The Hon'ble MR. HOBHOUSE also moved that the Hon'ble Sir Douglas Forsyth be added to the Select Committees on the following Bills :—

For declaring what laws are in force in Oudh.

For regulating Inland Customs Duties on Salt and Sugar, and for other purposes.

For the better administration of the law in the Panjáb.

To consolidate and define the law relating to the settlement and collection of Land Revenue in Oudh.

The Motion was put and agreed to.

The Council adjourned to Tuesday, the 19th January 1875.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 5th January 1875.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 7th JANUARY 1875.

GENERAL REMARKS.—There have been slight falls of rain in Satara, Chota Nagpore, the Patna Division, and several districts of the North-Western Provinces and Oudh. In the Punjab the showers were confined to Umballa and the Delhi Division, and to only one or two districts in the Central Provinces. Falls are also reported from Bhurtpoor, Gwalior, and Mysore, and a heavy fall of more than an inch from Assam. Heavy falls are also believed to have occurred in Bengal subsequent to the date of the report. Want of rain is still much felt in the Deccan districts of Bombay and in the greater part of the Punjab. Prospects are however generally satisfactory.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Jan. 7th)	...	No rain; canal supply sufficient; four feet two inches of water over anicut; later dry crops suffering from want of rain, but recovering from grub; other crops good; castor, dry and wet paddy harvested in some taluks; outturn three-fourths; markets well supplied locally; prices steady; mild small-pox general; fever fatal in jungle taluks; cattle healthy only in a few taluks; pasture sufficient.
Kurnool (6th)	...	Season favourable; no rain; standing crops good; second crop paddy being sown; markets well supplied; prices generally stationary; water and pasture abundant; fever in several taluks.
Trichinopoly „	...	No rain; season favourable and no change of importance.
Malabar (7th)	...	No rain; harvesting of second crop begun in some places; markets well supplied; prices steady; fever and small-pox slightly prevalent; cattle healthy; pasture good.
Tanjore „	...	No rain; freshes in rivers decreasing; no fresh supply to tanks; water over upper and lower anicuts none; cultivation of wet crops almost over, that of a few dry crops continues in some parts; standing crops good; harvest some dry and wet crops yielded satisfactory; markets well supplied; prices tending to fall; public health generally good; small-pox here and there, one death by cholera in Negapatam; cattle disease in Sheally; pasture sufficient.
Bombay— (Jan. 6th)		*General Remarks.*—Prospects satisfactory.
Sindh.		
Kurrachee ...	...	No change; rain still holds off.
Hyderabad ...	...	State of crops same as before; weather changing; fever increasing in consequence; no change in cattle disease.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Shikarpur ...	...	Weather much warmer; rain required; no other change.
Upper Frontier ...	...	Rabi crops thriving; rain wanted; weather mild; fever decreasing.
Gujarat.		
Ahmedabad ...	...	Rabi crops progressing well.
Surat ...	...	Spring crops progressing favourably; fever in Pardee and Ulpar.
Broach ...	...	Kharif crops completely harvested; rabi crops generally good, excepting til, jowar, and cotton, which have suffered in some places from cloudy weather and want of later rains; fever slightly prevailing.
Kaira ...	...	Crops, weather, and health good.
Khandesh and Nasik.		
Khandesh ...	...	State of rabi and cotton crops unchanged; traffic increasing; water-supply failing at Juljaum; cattle disease and fever still continue.
Nasik ...	...	No improvement in rabi crops, which are suffering from want of rain in some talukas and slightly blighted in others from cold and heavy dew; fever and cattle disease prevailing slightly.
Konkan.		
Tanna ...	...	Weather hot; public health good; fever in Dhanoo, Wada, Shahpur, and Bhewndi talukas; cough in Wada taluka; rabi crops good in Bassein and Kurjut talukas, and middling in almost all other talukas.
Deccan.		
Poona ...	...	State of rabi crops same as before; weather and public health good.
Ahmednuggur ...	...	Rain wanted; crops withering; health good.
Sholapur ...	...	Prospects of standing kharif and rabi crops unaltered; no disease.
Satara ...	·38	Kharif crops harvested; rabi crops average from want of rain; weather cold; ague in Pahtun.
Southern Mahratta Country.		
Belgaum ...	...	Rabi crops good, except in portions of Chikodee and Uthni, where wheat and gram have been partially injured by insects; fever in Sumpgaum, Uthni, and Gokak; cattle disease in Uthni.
Dharwar ...	...	Outturn of early crop estimated to be equal to ten annas in the rupee; late crop good, except in Karazghi, Ranibednur, and Hangat; blight has appeared in cotton of these talukas and in Bankapur and Petha Mundargi; public health good in Ranibednur; in other talukas same as before; cattle disease decreasing.
Kaladgi ...	...	Kharif harvested except toor; rabi fair; cotton middling; fever prevalent, except in Bagulkot.
Kanara ...	...	Prospects of second crop continue satisfactory; fever, small-pox, and cattle disease prevalent.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Rabi crops promising generally; weather cold; health good.
Wudwan ...	...	Weather fair; health indifferent; cattle disease in Luctor taluka decreasing; state of crop same as before.
Baroda ...	...	Cotton-picking commenced; rabi crops fair; public health good. *General Remarks.*—No change; rain much wanted for rabi crops in the Deccan; prospects fair elsewhere.
Bengal— (Jan. 5th)		
Burdwan ...	*Nil*	Rain would do spring crops good. Rice harvest nearly finished; outturn middling.
Bankura ...	„	Weather dry and cool. The haimunta, or late paddy, is being thrashed. State and prospects of the winter crops continue satisfactory.
Beerbhoom ...	„	Weather mild. State and prospects of crops good; harvest nearly home. Cold-weather crops doing well.
Midnapore ...	„	Cold and clear weather, light dews beginning to fall. No signs of rain. The harvest is still progressing, and, except in the east, is nearly finished. Experiments show that even in the irrigated area affected by the cyclone the outturn does not exceed 10 annas.
Hooghly ...	„	Clear throughout; wind from the north. Prospect of rice where planted out is good; that of cold weather crops very good. Amun, or late rice, is nearly reaped.
24-Pergunnahs ...	„	Weather dry and cool. The harvest of the late rice continues. Spring crops doing well.
Nuddea ...	„	Seasonable weather; rain would now do good, but the prospects of the cold weather crops are generally very good.
Moorshedabad ...	„	Seasonable weather; slightly warmer than during the past week. Amun, or late rice, almost all harvested; outturn about 12 annas. The cutting of black pulse is in progress; outturn is expected to be below the average. The standing crops are reported to be promising. The price of common rice at eleven stations of the head-quarters sub-district is on an average 19·8 seers per rupee. It is cheapest at Kalliangunge, where it is 25 seers; but dearest at Bhurutpore, where it is 17·8 seers.
Dinagepore ...	„	Weather bright and cold. Gathering of the winter crop nearly finished. Other crops doing well.
Maldáh ...	„	Fair and cold weather. Kalai pulse is being reaped, and mustard is beginning to ripen. Haimunta, or late rice, reaping still going on. Prospects of the cold-weather crops are fair.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Rajshahye ...	*Nil.*	Weather clear and warm for the time of year. The state of the growing winter crops continues to be promising. Kalai pulse and sugarcane are being cut. The late unusually heavy inundation, and the long continuance of deep water, has destroyed some of the late rice cultivated in the beels in the interior of the district; some portion of it is now being cut.
Rungpore ...	„	Weather clear and cold, with light winds. Mustard is in flower, and promises well. Harvesting of the amun, or late rice, is going on rapidly; the crop is a good one. Prospects of cold-weather crops are favourable.
Bogra ...	„	Weather unchanged. State and prospects of crops same as last week.
Pubna ...	„	Fine, cool, and seasonable weather. No rain. Harvesting of amun, or late rice, moong, kalai, and arahur pulses, still going on. The matore and khesaree pulses, rye, linseed, wheat, and barley seedlings, promise well. Harvesting of sugarcane and turmeric not yet commenced.
Julpigorie ...	„	Weather fine and favourable. Harvest operations almost brought to a close. Produce abundant, and prices very low.
Dacca ...	„	Weather warm for the time of the year. State of crops favourable.
Patna ...	Slight	Slight rain on the morning of the 4th January. Prospect of the cold-weather crops favourable in all parts of the district, and bumper crop expected.
Gya ...	*Nil.*	Cool and fine weather. The late rice crop has nearly been harvested. The prospect of the cold weather crop is excellent.
Shahabad ...	„	Weather fair and cold. Cold weather crops promise well.
Tirhoot ...	„	Weather cold and dry, with westerly wind. The rice crops have been harvested, and in some places the outturn is more than the average. The prospects of the cold weather crops are good.
Sarun ...	„	Weather cold and seasonable, with westerly wind. The prospects of the cold weather crops continue excellent. A shower of rain will much benefit the crops, and will ensure a full harvest. In some places the crops are being irrigated. Indigo fields are still being prepared for the next year's crop. Poppy plant is everywhere doing well. Prices of common rice, Indian-corn, barley, and gram, have slightly risen owing to falling off in the supply in the markets.
Chumparun ...	„	Weather continues fine and cold. The prospects of the cold weather crop are favourable. No important change to report.
Monghyr ...	„	Fine and cold weather; a few drops of rain on Tuesday. State and prospects of crops excellent.
Bhágalpur ...	„	No change since last week, *e. g.*, nothing could be more satisfactory than the state of the cold-weather crops, and the outturn of the late rice crop.
Purneah ...	„	Seasonable weather; rather warmer than last week. No change in the prospects of the crops from last week. Great demand for laborers for cutting the crops.
Sonthal Pergunnahs ...	„	Weather fine; not very cold. Paddy nearly all cut. Cold-weather crops good. A little rain would do good in some places.
Cuttack ...	„	Cold and foggy in the early part of the week; warmer the last three days, with clouds and threatening rain. The prospects of the cold-weather crops continue excellent, and the heavy rice crop is now being reaped with an excellent outturn.
Balasore ...	„	Weather fine. Harvesting of rice crop progresses rapidly; outturn good. General prospects of crops satisfactory.
Lohardugga ...	Slight	A very few drops of rain. Weather cloudy and warmer than last week. The cold-weather crops, especially surgoojah (oilseed) and sursoo (mustard), and orid pulse, are reported to be excellent in all parts of the district. The prospect of the rahar pulse crop is also very good, though accounts are received from Palamow of damage apprehended from excessive dews.
Maunbhoom ...	*Nil.*	Rather warm during the past week, but sky cloudless, and no rain is usual about this time of the year. Harvest all but completed, and outturn generally good. The condition and prospects of the crops on the ground are favourable.
		PUBLIC HEALTH.
		Burdwan: fever as before, a few cases of cholera. 24-Pergunnahs: a few cases of cholera reported from thannas Baraset, Hobra, Kalaroa, and Bhangore; it has abated in Barripore and Diamond Harbour sub-divisions; fever decreasing at Barripore. Moorshedabad: cholera in Barwa, Bhurutpore, and Soojagunge, and fever in some villages at Jungepore. Rajshahye: public health good. Pubna: fever decreasing. Furreedpore: cholera reported in Ainpore. Patna: health excellent. Tirhoot: public health good. Sarun: general health good. Balasore: health of district favourable. Hazáribagh: small-pox hanging about the station itself. Maunbhoom: public health good.
		General Remarks.—Light showers have fallen in two or three districts during the week. The prospects of the cold-weather crops continue favourable, but rain is desired in many places. The rice harvest is progressing rapidly with very good results, and is nearly complete in some districts. Sugarcane and certain of the pulses are also being successfully harvested.
N. W. P.—		
Meerut (Jan. 6th)	...	Slight rain, more wanted.
Agra ...	...	No report received.
Allahabad (Jan. 6th)	...	Very slight fall of rain; across Jumna crops looking well.
Bareilly „	·2	Rabi prospects good.
Benares „	...	Slight showers; condition of crops continues favourable.
Jhansi „	...	Weather cloudy; no rain; rabi prospects declining.

CALCUTTA,
The 13th January 1875.

A. O. HUME,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

PROPOSED CONSTRUCTION OF A FACTORY IN CALCUTTA FOR THE MANUFACTURE OF CEMENT.

No. 720 I, dated 7th August 1874.

From—COLONEL H. W. GULLIVER, *Offg. Joint Secy. to the Govt. of Bengal, P. W. Dept., Irrigation Branch,*

To—The Secretary to the Government of India, P. W. Dept.

I am directed to forward herewith a rough estimate for the construction of a factory in Calcutta for the manufacture of Portland cement. There is an annually increasing demand for this article for Government works, and it will be seen from the Chief Engineer's note, attached hereto, that a very large saving will probably be made.

2. I am to ask the approval of the Government of India to the project, on receipt of which the detailed estimates will immediately be prepared.

3. Copy of Mr. Dejoux's report* accompanies.

* Under cover of Colonel Stoddard's No. 1761, dated 27th June 1874.

Dated 7th August 1874.

Note by COLONEL H. W. GULLIVER, R. E., *Offg. Chief Engineer, Bengal Irrigation Branch, on the proposal to construct a factory in Calcutta for the manufacture of Portland cement.*

From the report of the experiments made by Mr. Dejoux, it is evident that Portland cement of a fair character can be made in Calcutta.

The only doubtful point appears to be whether a continuous supply of chalk would be obtained from England at the rate set down, from Rs. 11 to 13 per ton; but it appears probable that it can be, as one of the largest firms in Calcutta consulted by Mr. Dejoux has expressed its willingness to enter into a contract for the delivery of it.

Taking Mr. Dejoux's estimate, the cost of the buildings will be Rs. 52,605, but he has only allowed 5 per cent. for contingencies, which on such a rough calculation is scarcely sufficient, and I should make it 10 per cent. both in that and the estimate for tools and plant.

The cost of the land is not shown in the estimate for the buildings, but as an annual charge in the working expenses. When the detailed estimates are prepared, it may be considered whether it is cheaper to purchase the land and increase the capital charge, or to pay the rent.

The cost of establishment has not been entered. Mr. Dejoux, in his calculation of working expenses, has put down 10 per cent. for supervision and contingencies; but this is not more than enough for contingencies only in such a case.

I have added 25 per cent. on the cost of establishment for share of pensions, as I note has been done in the Tidal Canal statement returned by the Government of India to this office. I should therefore make the estimate as follows:—

	Rs.
Buildings	55,100
Erecting machinery	4,400
	59,500
Establishment, at 25 per cent.	14,875
Pensions, at 6¼ per cent.	3,719
	78,094
Tools and plant	31,905
	1,09,999
Or nearly	1,10,000
Interest while under construction, 4½ per cent.	4,950
	1,14,950

Allow that the capital amounts to Rs. 1,20,000.

Cost of turning out 100,000 cubic feet of Portland cement:—

	Rs.
Mr. Dejoux's estimate, including the rent of land, amounts to	95,205
Establishment, at 25 per cent.	18,800
Pensions, 6¼ per cent.	4,700
Interest on capital Rs. 1,20,000	5,400
	1,24,105

Or, per barrel of 5 cubic feet, nearly Rs. 6-8.

The cost of English cement is Rs. 12-4, so that the saving by manufacturing on the spot would be Rs. 5-12 per barrel, or on the 100,000 cubic feet (20,000 barrels) it is proposed to manufacture, Rs. 1,15,000; so that, if these calculations are correct, the cost of the factory should be recovered in the first year.

The Chief Engineer of Irrigation in the North Western Provinces has already enquired when it will be possible to supply him; so that the demand will probably increase largely.

I have only one addition to propose, which is, that, with the prospect of increase in the demand, it would be advisable to secure the land for doubling the factory in the first instance, otherwise it may rise in value when it may be required.

No. 1761, dated the 27th June 1874.

From—COLONEL J. F. STODDARD, Superintending Engineer, South-Western Circle,

To—The Officiating Chief Engineer, Bengal Irrigation Branch.

I have the honor to forward a report received from Mr. P. Dejoux on the proposed manufacture of cement in Calcutta.

Mr. Dejoux's experiments have now reached such a point that there seems to be no shadow of a doubt that cement quite as good as the best "Portland" can be made in Calcutta at a price varying from one-third to three-eighths of that at which Portland cement is now procurable.

For the present it might perhaps be advisable to limit the manufacture to the quantity which will be required by Government, say, 75,000 cubic feet, or 15,000 casks per annum.

Taking the larger of the two estimates made by Mr. Dejoux, and the present market price of Portland cement, there will be a difference of Rs. 7½ per cask in favor of the Calcutta article, or 1⅛ lakhs of rupees' saving per annum.

Even allowing the saving for the first four years to be only 1 lakh of rupees per annum, the entire cost of the building, plant, and establishment, will be paid off in the very first year.

No. 462, dated the 25th June 1874.

From—P. DEJOUX, ESQ., Executive Engineer, Cement Experiments Division,

To—Superintending Engineer, South-Western Circle.

With reference to paragraph 9 of my letter No. 402, dated 27th February last, I have the honor to forward herewith a report on the proposed manufacture in Calcutta of cement equal to Portland cement.

2. This report is divided into the following heads, *viz.*:—

Part I.—Description of Portland cements and experiments.

Part II.—Sketch of process of manufacture.

Part III.—Probable cost of cement to be made in Calcutta, and comparison of it with the price of English Portland cement imported to India.

Part IV.—Rough estimate of buildings and tools and plant required for the cement factory.

Part V.—Statement of experiments on the tensile strength of the cement.

Report on the proposed manufacture in Calcutta of artificial cement, equal to English-Portland cement.

PART I.

1. *Definition of Portland cement.*—Portland cement consists of chalk and clay mixed in certain proportions, and burnt to a degree approaching incipient vitrification.

2. *Definition of ordinary artificial cement.*—Ordinary artificial cement is made with a mixture of clay and slaked lime burnt to a low temperature.

3. *Materials obtainable in Calcutta.*—The materials which can be obtained in Calcutta are pale-blue and dark-blue clay, of which an unlimited supply can be found, and ghooting, Sylhet limestone, or chalk from Akyab.

4. *Clay.*—Both analysis of Calcutta blue clays and experience show that it can be used for the manufacture of either Portland or ordinary artificial cement.

5. *Limestones.*—The ghooting limestones vary much in composition and contain generally too much clay, and as they are naturally very hard to reduce when unburnt into fine powder, they could only be used in the manufacture of ordinary artificial cement.

The Sylhet stone is a very nearly pure carbonate of lime, but too hard to be pulverized; therefore only slaked lime could be used.

This lime is very extensively used in Calcutta, and costs Rs. 90 to 110 per 100 maunds, but the lime of the market not having been prepared sufficiently carefully, contains a large percentage of impurities, and could not consequently be used for cement manufacture.

The raw limestones imported from Sylhet will cost, including delivery in Calcutta, Rs 85 per 100 maunds.

6. *Akyab chalk.*—The chalk from the coast of Akyab is a kind of very hard chalk, which is rather expensive to grind. Its cost will be Rs. 70 per 100 maunds.

7. *Ghooting or Sylhet lime expensive for artificial cement.*—With such materials in hand, some of them, as ghooting or Sylhet lime, requiring double calcination, the cost of the cement would have been rather expensive; and further, if ordinary artificial cement had been manufactured, the result would have given a cement of strength much inferior to Portland.

8. *Substitute for the above in imported English chalk.*—Numerous experiments having confirmed this opinion, I tried to use a cheaper substitute for Indian limes, and this consists in chalk imported from England as ballast.

9. *Quantity of such import in* 1873.—The import list of chalk shows the import during the year 1873 of 5,030 tons, which is about the quantity that will be required for cement manufacture.

10. *Price of chalk.*—Enquiries from some of the Calcutta firms lead to the conclusion that chalk could always be imported at a price not exceeding Rs. 11 per ton, or Rs. 40-12 per 100 maunds, and generally lower.

11. *Positive manufacture of cement, equal to Portland in Calcutta.*—Soon after this important point was ascertained, I commenced a series of experiments on mixtures of English chalk and Calcutta blue clays, and am glad to say that after a certain time I obtained a satisfactory result, answering fully to the desired object of Government, "that a cement of the quality of English Portland" can be made in Calcutta at a cost of very nearly one-third of the price paid for Portland imported from England, which is now sold at Rs. 12-4 per cask.

12. *Chemical composition of Portland cement.*—The composition of the mixture for Portland cement is about the same as intermediate limes (*chaux limites* of M. Vicat), and it is by calcination to a high temperature that the dangerous properties of the intermediate limes disappear entirely, and thus the best hydraulic cement known is produced.

13. *Analyses of raw mixtures.*—As I have not as yet seen in any treatise on Portland the analysis of raw mixture, but only analysis of cement when calcined and ground, I consider it will be useful to publish the seven following analyses (of the former), which I selected from those conducted by me:—

	A.	B.	C.	D.	E.	F.	G.
Clay	20·50	21·80	22·20	22·80	23·50	24·00	24·60
Sand	1·20	1·00	1·40	1·00	1·00	1·30	1·40
Oxyde of iron	0·85	0·90	1·40	0·70	0·80	0·90	0·90
Carbonate of lime	75·75	74·50	73·00	73·60	72·50	71·45	70·70
Ditto of magnesia	0·70	0·80	0·80	0·90	0·90	0·95	1·00
Alkalis	1·00	1·00	1·20	1·00	1·30	1·40	1·40
TOTAL ...	100·00	100·00	100·00	100·00	100·00	100·00	100·00

The best is D, but the two limits after which Portland cement, of even inferior quality, cannot be manufactured are A and G.

These analyses correspond in bulk with the following proportions of English chalk and Calcutta blue clay:—

	Parts of	
	Chalk.	Clay.
A	6	$1\frac{3}{8}$
B	6	$1\frac{1}{2}$
C	6	$1\frac{5}{8}$
D	6	$1\frac{3}{4}$
E	6	$1\frac{7}{8}$
F	6	2
G	6	$2\frac{1}{8}$

14. *Analyses of Calcutta clays.*—The analyses of Calcutta pale-blue and dark-blue clays, as also of English chalk, are as follow:—

	Materials.	Composition.	
Pale-blue clay		Silica	88·00
		Alumina	
		Free sand	2·20
		Oxyde of iron	3·90
		Carbonate of lime	3·00
		Ditto of magnesia ...	1·40
		Alkalis	1·50
		TOTAL ...	100·00

	Materials.	Composition.	
	Dark-blue clay	Silica	91·00
		Alumina	
		Free sand	1·00
		Oxyde of iron	1·80
		Carbonate of lime	3·80
		Ditto of magnesia ...	0·60
		Alkalis...	1·80
		TOTAL ...	100·00
Analysis of English chalk.	Chalk from England imported to Calcutta.	Clay	1·00
		Sand	0·40
		Oxyde of iron	Traces.
		Carbonate of lime	98·60
		TOTAL ...	100·00

15. *Erratum to General Gilmore's treatise on limes and cements.*—I take this opportunity of rectifying a mistake which I found in the valuable treatise of General Gilmore on limes and cements.

In page 90 it is stated that the proportions of clay for Portland cement are—

By weight.—100 lbs. of pure dry chalk to 137½ of blue clay, being equivalent to 4 of chalk to 5½ of clay.

By measure.—1 cubic foot of stiff chalk paste to 1½ cubic feet of fresh blue clay.

These proportions may be applicable for the manufacture of Roman cement, but evidently contain too much clay for Portland cement. The correctness of this opinion is proved at page 89, in which General Gilmore gives an analysis by M Vicat on a sample of burnt cement from the manufactory of White & Sons, with the following results:—

Lime	68·03	
Silica	20·67	31·97
Alumina	10·43	
Oxyde of iron	0·87	
TOTAL ...	100·00	

which is equal to—

68·03 of lime.
31·97 „ clay.

Not estimating certain small losses, which, however, inevitably must take place, it is to be admitted that the effect produced by calcination is only the total expulsion of the carbonic acid contained in the chalk, but 68·03 of lime must combine with 53·53 of carbonic acid for forming a carbonate of lime, of which the weight will be 121·66.

Therefore, theoretically speaking, the composition of the raw mixture was—

Carbonate of lime or chalk	121·66
Clay	31·97
TOTAL ...	153·63

which is equal to—

Chalk	79·2
Clay	20·8
TOTAL ...	100·0

or, in weight 4 of chalk to 1 of clay, instead of 4 of chalk to 5½ of clay, as stated by General Gilmore. I obtained nearly the lastnamed result in the composition of the raw Portland cement made in Calcutta.

16. *Description of the experiments: Washing the mixture.*—The chalk and clay were first separately pulverized and put in certain proportions into a reservior, then water was added so as to make a thin paste, which was well agitated by means of wooden shovels in such a manner as to cause perfect homogeneity.

Analysis of the mixture.—On the following day, after the deposit of the mixture, a small quantity of it was taken and analysed, and then, as analysis showed, either more clay or more chalk was added.

Drying the mixture.—On the mixture proving correct, the superfluous water was let out every day by means of alternative plugs inserted on the side of the reservoir.

Mixture made into balls.—The mixture was then allowed to dry till it acquired the consistence of a stiff paste, and then balls of 2 inches in diameter were made and dried in the sun.

Loading the kiln.—When sufficiently dried, the sample kiln, of which a drawing was sent with my letter No. 5, dated 15th November 1871, was loaded with these balls, 9 inches of wood being first laid at the bottom of the kiln, and then alternative layers of 3 inches of coke and 6 inches of balls.

The proportion of coke necessary was ascertained by experience, and is equivalent to 7½ cubic feet of coke for 10 cubic feet of balls.

Fire was then put, and the drawing-hole left open until the fire appeared at the top of the kiln, and then either entirely shut or left with a small opening, according to the state of the weather.

Duration of calcination.—The calcination took an average of 16½ hours.

Unloading the kiln.—When cool, the kiln was unloaded by withdrawing the fire-bars, and then the well-burnt balls were picked out, broken into small pieces and so pulverized as to pass through a sieve of 3,600 meshes per square inch.

Grinding the cement.

Testing the cement.—The cement was then tested, first by making three cakes with the addition of the least possible quantity of water and working it well with a small trowel, and then one, which I will call No. 1, was put into a tumbler and immersed; another, No. 2, when sufficiently dry, was disposed of in the same way; and the last one, No. 3, left in a dry place.

The time at which No. 1 was immersed was carefully noted, and the time of its setting ascertained by means of Vicat's needle, that is to say, that the cement was considered set when it could support, without any sensible depression, the weight of 10½ ounces (avoirdupois) on an area of one-twenty-fourth of an inch.

After 24 hours, samples 2 and 3 were carefully examined.

When the proportion in the mixture was found correct, the dry sample was of grey color, without stains or brown specks, and the water sample free of cracks, and the setting under water took place after a time varying from 3 to 9 hours.

But on the contrary, when there was too much clay, the samples set very quickly—at times as quick as 5 minutes, and remained sound under water; while the dry sample showed a brown color, and after a few days their hardness did not increase.

In case of too much lime, the water samples cracked and gave way.

17. *Sample bricks.*—When the proportions of clay and chalk were found correct, sample bricks were at first made after the cement was ground for four or five days; but I eventually found that it was much better to leave the cement exposed to air, but under cover, for a fortnight before making the sample bricks.

Bricks were made in gun-metal moulds, and then pressed out of them by a press, and left for 24 hours before immersion in water.

Test of sample bricks.—When they were to be tested, they were taken out of the water 24 hours previously, and then their tensile strength was ascertained by Adie's machine.

Statement A gives the results thus obtained.

An abstract (B) of some tests made at the Mint by Mr. Sills, Executive Engineer, Public Works Department, shows that this cement can be very well compared with the average of Portland cement imported to India.

Weight of cement.—The weight per bushel when put slowly into the measure, without being either shaken or pressed, is 111 lbs., and when shaken down hard, 144 lbs.

Samples of clay cement (raw and burnt) and sample bricks accompanied my letter No. 402, dated 27th February 1874.

PART II.

18. The experiments having been made on a scale large enough so as not to leave any doubt about the feasibility of good Portland cement being manufactured in Calcutta, I feel now no hesitation in proposing the construction of a cement factory for the manufacture of 20,000 casks = 100,000 cubic feet a year.

This quantity has been reckoned according to the import list, which shows that, from the 1st January 1872 to the 31st December 1873, 51,957 casks of Portland cement were imported from England to Calcutta, of which the largest number were for Government works.

19. I will now submit a sketch of the process I purpose adopting.

System of manufacture.—After having tried both the English wet and the German dry systems of manufacture, as described by Mr. Lipowitz, I am of opinion that the dry system, even with its peculiar advantages, is too complicated for adoption in India, as it requires, more machinery and greater care, and besides involves difficulty and expense in the correction of the mixture, as will be seen from the following explanation:—

Supposing that, by the use of the wet system, too much clay has been put in the mixture, such excess could easily be ascertained by analysis of that mixture in the reservoir.

Or, if a reservoir contains a mixture over-clayed, and another in which lime is in excess, the mistake could easily be corrected by mixing their contents in certain proportions.

Or, even admitting that both of them contain too much clay or too much lime, a certain quantity of one of these materials can be passed through the wash-mill and added proportionally, and the extra cost of labor will be comparatively little.

But, on the contrary, in the dry system, if a mixture is not correct, the analysis can be made only after the mixing process is complete,—that is to say, after it comes out of the pug-mill,—and the whole process of mixing in the cylindrical vat and passing through the edge-runners and pug-mill must be repeated.

Wet system to be adopted.—The wet system is evidently much more simple and better applicable to India, and I would therefore adopt it.

20. *Site of factory.*—The factory should be constructed alongside of the river bank or the circular canal, as thereby the carriage of chalk and fuel would be both easy and as cheap as possible.

It must also be in such a place where the blue clay can be extracted easily.

The most convenient place (on the river bank) would be either at Howrah, Cossipore, or Dhappa, along the canal.

Breaking the raw material.—The clay and chalk will be separately ground in an ordinary soorkee-mill, so as not to exceed the size of a pea.

This process is not generally carried out in England, but I believe will only slightly add to the cost, considering the softness of both materials; lead to more correctness in measuring the quantities, and enable the wash-mill to work quicker; and the mixture besides will have more chance of becoming perfectly homogeneous.

Washing the materials.—When ground, the clay and chalk will be put in due proportions in the wash-mill.

I will select a wash-mill of the same sort as that described by Mr. Reid, and which can wash from 40 to 50 tons of chalk and clay per day of 10 hours.

Reservoirs.—The mixtures will be taken from the wash-mill to the reservoirs by descending drains; the reservoirs will be 80 × 50 feet each, made in brick work, but plastered with cement. Each reservoir will be provided with a sluice, so as to regulate the passage of superfluous water.

When the reservoirs are filled, the materials will be mixed by means of small agitators worked by hand, so as to procure perfect homogeneity.

Testing the mixture.—A small quantity of the mixture from each reservoir will be dried on a hot iron plate, burnt in the experimental kiln, and when ground, tested in the manner described above in paragraph 17, and then an analysis will be made of it, but it will not be necessary to proceed further with it, beyond separating the clay and sand, which can easily be done in a short time.

But if the contents of some reservoirs are over-clayed, they may then be mixed in known proportions with those containing excess of lime; or some clay or lime passed through the wash-mill may be added to those requiring it, and fresh analysis must be made until the proportions are found correct. Then the water will be let out of the reservoir.

Upon the mixture being found sufficiently consolidated, it will be removed to the drying ground; the natural heat here will be quite sufficient to do without drying plates (as done elsewhere).

When the mixture is dried sufficiently to a consistent paste, balls or cakes will be made, and afterwards taken to the kiln.

Kilns.—I will use kilns built on the principle, but on a larger scale, of my experimental kiln, and they will be able to hold 30 tons of materials each.

Loading the kilns.—Movable iron-bars will be inserted at the bottom of the kiln, fire-wood placed on them, then large pieces of coke, and then alternative layers of coke and raw cement.

Burning the cement.—The regulation of the fire must be attended to very carefully, as being one of the most important parts of the manufacture.

Unloading the kiln.—When the kiln is quite cool, the cement will be removed by drawing the movable bars.

Selection of materials.—The clinker or burnt cement presents, when well burnt, a dark greenish appearance; some parts not well burnt are yellow, which may be mixed with the clinker, but every part presenting a dirty white appearance must be rejected; these last parts, when left exposed to air, crack between time varying from 24 to 48 hours and fall in powder.

Breaking the burnt cement.—A stone-breaker, or an American cracker, or Carr's disintegrator, will be used to reduce the cement into small pieces.

Grinding the cement.—The cement will be ground first into coarse powder by edge-runners, and then in horizontal mill-stones, and so pulverized as to pass through a sieve of 60 meshes to the lineal inch, or 3,600 to the square inch.

Storing the cement.—The cement when prepared will be left under a shed well ventilated for not less than a fortnight, and then packed if required.

Packing the cement—Strong gunny bags will answer very well for packing the cement. These should be 3 feet in length and 1 foot in diameter, so as to hold 2½ cubic feet.

Such bags are easily borne and do not burst under the weight of cement as larger bags will do.

PART III.

Probable cost of the Portland cement to be manufactured in Calcutta.

21. *Raw materials.*—For manufacturing 20,000 casks of cement = 100,000 cubic feet, 6,000 tons of raw materials will be required, as follows:—

4,500 tons of chalk.
1,500 ditto clay.

22. *Chalk.*—The average price of chalk delivered at the factory will not exceed Rs. 11 per ton, and there will be every probability of its being lower if the following precautions be taken:—

The contract should be given for one or two years, and the contracting firm bound to deliver 400 tons a month, but with the option of taking advantage of the fluctuation of freight and supplying accordingly either, say, a moiety at a time, or the whole quantity, as may best suit it.

However, as one of the largest firms in Calcutta has expressed willingness to take any contract for the supply of chalk at a higher rate than the one abovementioned (which I believe to be the average), *viz.*, Rs. 13 per ton, I make two estimates of the price, *viz.*, 1 at Rs. 11, and the other at Rs. 13, per ton.

23. *Clay.*—The cost of extracting the clay has been estimated at Rs. 5 per 100 cubic feet = 1 rupee per ton.

24. *Coke.*—The quantity of coke necessary for the calcination of the cement will be 800 tons, at 8 annas per maund = Rs. 13-8 per ton.

25. *Coal.*—The coal for the engines will amount to 300 tons, at 5 annas per maund = Rs. 8-8 per ton.

26. *Labor.*—Mr. Lipowitz states that for 20,000 casks a year, the cost of labor will be Rs. 8,000 in Germany.

But in his process the amount of labor is in excess of the wet system, and I therefore think that Rs. 7,200 a year will be sufficient, as will be seen from the following details:—

		Rs.
Engine drivers, 2, at Rs. 15 per month		30
Firemen, 2, at Rs. 8 per month		16
Head mistry for soorkee and wash mills, 1, at Rs. 15 per month		15
Ditto for reservoirs, 1, at Rs. 15 per month		15
Ditto for kilns, 1, at Rs. 15 per month		15
Ditto for stone-breaker, edge-runners and horizontal-mill, 1, at Rs. 15 per month		15
TOTAL		106
Coolies for loading and unloading wagons, &c.	20	
Ditto for soorkee mill	4	
Ditto for wash-mill	4	
Ditto for reservoirs	6	
Ditto for loading and unloading kilns and packing cement	20	
Ditto edge-runners and horizontal-mill	15	
Ditto packing	6	
TOTAL	*75	
* of whom 35 will be at Rs. 6 per month		210
and 40 „ „ 7 „		280
TOTAL		596

or, in round numbers, Rs. 600 per month × 12 = Rs. 7,200 per year.

27. *Land rent.*—The land may be purchased, but if taken on lease for a certain number of years, or in perpetuity, the area required, *viz.*, 16 beegahs, may be had at a price not exceeding Rs. 150 per month, and probably cheaper.

Percentage added to total expenditure.—I have added Rs. 10 per 100 to the total expenditure for supervision, contingencies, &c.

ESTIMATE No. 1

	Rs.
Chalk, 4,500 tons, at Rs. 11 per ton	49,500
Clay, 1,500 „ at Re. 1 „	1,500
Coke, 800 „ at Rs. 13-8 „	10,800
Coal, 300 „ at Rs. 8-8 „	2,550
Labor at Rs. 600 per month × 12	7,200
Oil, grease, &c.	1,200
Bags for cement	3,000
Land rent, at Rs. 150 per month × 12	1,800
	77,550
Supervision, contingencies, &c., at Rs. 10 per 100	7,755
TOTAL	85,305

Note.—The cost for 100,000 cubic feet of Calcutta Portland cement will be Rs. 85,305, or 13 annas 8 pie per cubic foot; or for 5 cubic feet, equal to an ordinary cask of English Portland cement weighing 400 lbs., Rs. 4-4-4.

Taking the actual market price of imported Portland cement at Rs. 12-4 per cask, the cost of the cement to be manufactured in Calcutta will be nearly one-third.

ESTIMATE No. 2.

	Rs.
Chalk, 4,500 tons, at Rs. 13 per ton	58,500
Clay, 1,500 „ at Re. 1 „	1,500
Coke, 800 „ at Rs. 13-8 „	10,800
Coal, 300 „ at Rs. 8 8 „	2,550
Labor at Rs. 600 per month × 12	7,200
Oil, grease, &c.	1,200
Bags for cement	3,000
Land rent, at Rs. 150 per month × 12	1,800
	86,550
Supervision, contingencies, &c., at Rs. 10 per 100	8,655
TOTAL	95,205

Note.—The cost for 100,000 cubic feet of Calcutta Portland cement will be Rs. 95,205, or 15 annas 3 pie per cubic foot; or per 5 cubic feet, equal to an ordinary cask of English Portland cement weighing 400lbs., Rs. 4-12-3.

Taking the actual market price for Portland cement at Rs. 12-4 per cask, the cost of the cement to be manufactured in Calcutta will be nearly three-eighths.

N. B.—If from the 100,000 cubic feet of cement to be manufactured yearly, Government orders the sale to the public of, say, 30,000 cubic feet = 6,000 casks, at the low rate of even Rs. 8 per cask, a profit of Rs. 22,375 may be effected, and applied towards the redeeming of the capital invested for the construction of the factory.

P. DEJOUX,
Exe. Engr., Cement Experiments Division.

PART IV.

No. 9.

Rough estimate for the construction of buildings connected with the Cement Factory in Calcutta.

No. of items.	DESCRIPTION.	Quantity.	Rate.	Amount.
			Rs.	Rs.
1	Shed for steam engine, soorkee-mill and wash-mill	1	3,600	3,600
2	Shed for engine, stone-breaker, edge-runner and horizontal mills	1	4,800	4,800
3	Shed for storing cement before packing	1	5,000	5,000

P. DEJOUX,
Exe. Engr., Cement Experiments Division.

No. 3 P. W., dated Fort William, the 7th January 1875.

From—The Government of India,
To—Her Majesty's Secretary of State for India.

We have the honor to forward for your Lordship's information the accompanying correspondence from the Government of Bengal, having reference to the proposed construction of a factory in Calcutta for the manufacture of cement.

2. It will be perceived from Mr. Dejoux's letter that cement, equal, if not superior, to that known as "Portland," can be manufactured in this country at about half the cost for which that cement can be imported: this fact is worth consideration when taken in connection with the fact that considerable quantities of Portland cement are used on Government works in this country, and that the demand appears to be yearly increasing.

3. But bearing in mind that the value of Mr. Dejoux's process is largely dependent on the continued importation of chalk in present quantities, and at present prices, it seems to us advisable, before establishing a factory for the article in this country, to make the matter publicly known in the hope that either the manufacture may be undertaken by private enterprise, or that it may lead to a reduction in price.

4. We have accordingly directed the publication of the papers in the *Gazette of India*, and we request that your Lordship will cause inquiries to be made of some of the large building firms in England, as to whether more advantageous terms cannot be obtained in the event of Government giving large orders, or contracts, for all the Indian Government requirements in England.

5. Should these means fail to bring about the desired reduction, we can then re-consider the expediency of the proposal of the Government of Bengal to establish a factory for the manufacture of the cement in this country.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REVENUE ADMINISTRATION OF THE CENTRAL PROVINCES FOR THE YEAR 1873-74.

No. 693, dated the 17th August 1874.

From—A. O. HUME, ESQ., Secy. to the Govt. of India,
To—The Chief Commisssioner of the Central Provinces.

I am directed to acknowledge your Officiating Secretary's letter No. 2660—131, forwarding with your review the report on the revenue administration of the Central Provinces for the year 1873-74.

2. In reply, I am to express satisfaction at the generally favorable results attained, and the large proportion of the land revenue realized within the year.

3. As regards coercive processes, while admitting that on the whole great moderation has been exhibited in recourse to them, the President in Council concurs with you that further information in regard to some districts would have been desirable. That in the Mandla district alone it should have been found necessary to imprison 190 defaulters, whilst in the other thirteen districts only 222 persons altogether were imprisoned; and again that in two districts, Bhandara and Balaghat, there should have been 314 cases of distraint of personal property in realization of the Government demand, and only 148 such cases in all the other twelve districts; —are facts that required careful investigation and fuller explanation than has been furnished. In both the lastnamed districts rice is very extensively cultivated, and possibly in the adoption of coercive measures the local authorities may not have made sufficient allowance for the failure of the staple crop. You are, however, fully alive to the necessity of carefully watching the proceedings of local officers in these respects and further comment is unnecessary.

4. The improved prospects of the Murwara and Hatta tahsils are noted with satisfaction, and the promised recommendations in regard to Bijeragogarh will be awaited.

5. As regards forests, some progress seems to have been made towards a rational and economical system of management; but this subject need not be further noticed here, and I am only to add that your views as expressed in paragraphs 21 to 24 of the report meet generally with His Excellency's concurrence.

6. In regard to the pandhri-tax, the arrangement whereby 85 per cent. of the tax-payers have been absolutely exempted and only a loss of 35 per cent. of revenue incurred seems very judicious.

7. It is noted that the total number of the sales of whole estates or shares therein has fallen from 792 in 1872-73 to 676 in the year under report: this is so far satisfactory; but on this point further remarks are reserved pending your promised report on the transfers of landlords' properties in the Central Provinces.

8. The question of the extinction of absolute occupancy rights is another subject to which much importance is attached, and in regard to which full and trustworthy information

will shortly be required. It will be sufficient to remark here that if these tenures are being extinguished deliberately and on any large scale by the malguzars refusing to make the customary grain advances, it may become a question whether Government should not interfere to provide facility for these ryots to obtain such advances elsewhere. The State has purposely confirmed to one section of the community certain rights and privileges, and it should not be in the power of any other section deliberately to nullify them. This seems to be doubly important in the present case, in which the rights conferred probably represent far less than what their holders were equitably entitled to or would have received had the true nature of the existing tenures been thoroughly understood when the recent settlement was made.

9. As regards patwaris, the correct maintenance of whom is so important to the welfare of the agricultural classes, it is hoped that no pains will be spared to secure better results than would seem on the whole to be at present achieved.

10. Much as he regrets it, His Honor in Council is not surprised at the small extent to which advances for improvements have been taken. It is probably, as stated by the Commissioner of Nagpur, "repellant to native feeling to draw upon the future for present improvements." In fact, it is only in quite recent times that the more enlightened Governments have come to consider themselves entitled to do this, and a certain amount of what may be termed financial education will be necessary before native landholders or any large proportion of them can be brought to recognize the propriety or wisdom of borrowing money for permanent improvements; and this must be the work of time.

11. In conclusion, I am to convey to you the thanks of His Honor the President in Council for the able report which records the successful revenue administration of the Central Provinces during the past year.

No. 65, dated India Office, London, the 10th December 1874.

From—Her Majesty's Secretary of State for India,
To—The Government of India.

The despatch of your Excellency in Council dated 18th August, No. 18 of 1874, forwarding a report on the revenue administration of the Central Provinces for the year 1873, has been considered by me in Council.

2. The report may be regarded on the whole as satisfactory. The season, unfavorable for rice crops, was very suitable for other grains, and may be pronounced to have been of average fairness for general agricultural operations. Prices throughout the provinces in no instance pressed with severity on the poorer classes, except perhaps in the Bilaspur district of the Chattisghar division, which is inhabited by a rice-consuming population. Here the price of rice rose from 52 to 28 seers per rupee, but this, though causing some distress, compares favorably with 1869, when, under a similar failure of rain, the price of rice was 12 seers for the rupee.

3. The general health of the people, notwithstanding a visitation of small-pox in some districts, is pronounced by the Chief Commissioner to have been unusually good.

4. The revenue returns of the year present the following results:—

	Rs.
Demand	60,45,328
Collections	60,30,559
Balance ...	14,769

In comparison with the returns of the previous year, the demand is a little more, and the realization a little less. Of the balance of the present year, the sum of Rs. 6,449 has been remitted, the remission consisting, with an insignificant exception, of a reduction of jumma granted under the sanction of Government to the Patehrá Raja, with the view of assisting him in freeing his estate from debt.

5. The collection of so large a portion of the revenue demand within the year is very creditable to the administration, and it is still more satisfactory to receive the assurance of the Chief Commissioner that the completeness and punctuality of the realizations have been effected without recourse to unusual coercive processes.

6. It is satisfactory to find that the Chief Commissioner is able this year to submit a much more favorable report of the tahsils of Murwara and Hatta, the condition of which in the former year attracted the grave attention of the Government of India and of the late Secretary of State in Council. With respect to Hatta, there is now, in the opinion of the Chief Commissioner, no ground for future anxiety. The condition of the pargana of Bijeragogarh, in the Murwara tahsil, is stated to be still doubtful, and the question of a reduction of jumma is under the consideration of the local authorities.

6. The statement of revenue from the forests exhibits a marked increase. The return from the reserved forests shows an increase from Rs. 73,705 to Rs. 104,027, that from the unreserved forests, from Rs. 407,968 to Rs. 464,339; or a total advance from Rs. 481,673 to Rs. 568,367. The reserved forests are under the management of the Forest Department; the unreserved are controlled by the Deputy Commissioners. It has been the aim of the Chief Commissioner with respect to the latter to preserve the forests rather than to enhance the revenue; nevertheless the care bestowed on the first object has in a few years nearly doubled the receipts under this head.

8. The statements of the Chief Commissioner relative to the pandhri-tax are very satisfactory. It would appear that the incidence of the tax is now only on those who, as a rule, are in a position to pay it, and who contribute in no other form to the imperial revenues.

9. The Chief Commissioner, in the course of his review, discusses the following subjects:—

I.—Proprietary and occupancy mutations.

II.—Revenue litigation.

III.—Patwaris' papers.

The first of these subjects is of the very greatest importance, and is still under the special consideration of the authorities. The actual transfers of estates during the year under review have been considerably less than in the previous year, and there is some reason to believe that the same estates are continually transferred and re-transferred. The Chief Commissioner does not think that sufficient data have yet been collected to enable him to form a decisive opinion. He apparently at present leans to the conclusion that the transfer of lands from the agricultural to the banking class is a remote, and perhaps imaginary, contingency.

10. The questions of whether the rights of absolute occupancy ryots are in a course of extinction, and whether resort should not be had to artificial means to arrest the progress of such extinction, have attracted the attention both of your Lordship's Government and of my predecessor in Council. The Chief Commissioner has called for further returns embodying more accurate information of these vexed questions, but in this instance also he would seem to doubt whether eventually there will be any real ground for anxiety. I shall await with interest the result of this reference.

11. The statements of the Chief Commissioner with respect to revenue litigation do not, in his opinion, show that there is any prevalence of a general feeling of antagonism between landlords and tenants. Complaints of exaction, and suits connected with ejection, are stated not to be numerous. The courts having immediate cognizance of revenue suits appear to give satisfaction, appeals being few, and reversal of decisions comparatively infrequent. I observe that the Revenue Bill for this province, which is to supersede in it the operation of Act X of 1859, has been made the subject of special consideration.

12. Patwaris' papers are stated to have been filed with fair punctuality, and some improvement, it is added, has taken place with respect to their accuracy. I fully concur with your Excellency in Council as to the great importance to the agricultural classes of the correct maintenance of these papers, and I trust that no pains will be spared by the local authorities to improve the imperfect results already obtained.

13. In conclusion, I would record my opinion that the revenue administration of these important provinces, as exhibited in this report, reflects much credit on the zeal, judgment, and ability of Mr. Morris, the Chief Commissioner, and of the officers serving under him.

SUPPLEMENT TO THE STATEMENT OF PRICES-CURRENT OF FOOD-GRAINS FOR THE 1st HALF OF DECEMBER 1874, PUBLISHED IN PAGES 72, 73, 78 AND 79 OF THE SUPPLEMENT TO THE GAZETTE OF INDIA, DATED 9TH JANUARY 1875.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 14th JANUARY 1875.

GENERAL REMARKS.—A good fall of rain throughout Bengal is reported: it was heaviest in the central and lightest in the western districts, and has done much good to the spring crops. Rain has also fallen in Assam, and rain with hail in Allahabad. Elsewhere none has fallen. It is still much wanted in the Deccan districts, the Punjab, the Meerut and Bundelkhand divisions of the North-Western Provinces, and parts of the Central Provinces. Prospects are however still fair in most places, and excellent in Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Jan. 14th)	...	No rain; canal supply sufficient; four feet over anicut; some of the later dry crops suffering from want of rain and from grub; other crops good; outturn of castor and paddy in Vinukonda full; green gram half; markets well supplied locally; prices steady; mild small-pox and fever general; latter fatal in Bezwarrah; cattle generally unhealthy; pasture sufficient.
Kurnool (13th)	...	No rain; season favourable; standing crops generally good; second crop paddy being sown; markets well supplied; prices generally stationary; water and pasture abundant; severe fever in several taluqs; cattle generally healthy; no water over Sunkesala anicut.
Tanjore (14th)	...	No rain; water in rivers scanty; no fresh supply to tanks; water over anicut none; cultivation of wet crops almost over; that of a few dry crops continues in some parts; standing crops good harvest; some dry and wet crops yield satisfactory; markets well supplied; prices steady; public health generally good; small-pox here and there; cattle healthy; pasture sufficient.
Trichinopoly (13th)	...	No rain; water-supply sufficient; condition of crops good; outturn up to average; public health good; pasture ample.
Malabar (14th)	...	No rain; harvesting of second crop begun; markets well supplied; prices steady; fever and small-pox slightly prevalent; the former especially in hilly parts; cattle healthy; pasture withering. General prospects satisfactory.
Bombay— (Jan. 13th)		
Sindh.		
Shikarpur ...	...	Crops healthy; weather continues warm; without rain; no other change.
Hyderabad ...	...	State of crops same as before; weather unseasonably mild; public health improving; cattle disease in three talukas still continues.
Upper Frontier ...	...	No change; weather mild; fever continues.
Gujarat.		
Ahmedabad ...	...	No change.
Surat ...	...	Spring crops progressing; fever in Mandvee.
Broach ...	...	State of crops same as before; cotton reaped in some places; public health generally good.
Kaira ...	...	Rabi crops progressing favourably; cotton good.
Khandesh and Nasik.		
Khandesh ...	...	State of rabi crops unchanged; cotton supplies increasing; trade active; rate 47; cattle disease and fever continue.
Nasik ...	...	No change.
Konkan.		
Tanna ...	...	Weather warm during the day; cold during the night; public health good; fever prevailing in Mahim, Wada, Shahpur, and Moorbaur talukas, and slightly in Dhanoo, Callian, and Bhewndi talukas; guinea-worm in Wada taluka; rabi crops same as before in Kurjut taluka; good in Mahim, Moorbaur, Bassein, and Bhewndy talukas; and middling in Dhanoo, Wada, Shahpur, and Callian talukas.
Deccan.		
Poona ...	...	Standing rabi crops doing well, excepting in talukas of Bhimthadi, Sceroor, and Indapur, accounts from which are not satisfactory; climate and public health good.
Ahmednuggur ...	...	Crops of inferior land withering for want of rain; health good.
Sholapur ...	...	Except toor and cotton all kharif reaped; harvest average; rabi not promising anywhere; health good.
Satara ...	...	Early crops all harvested; late ones promise average harvest for want of rain; ague in Pahtun.
Southern Mahratta Country.		
Belgaum ...	...	Rabi crops good, except in portions of Uthni, where rats have damaged crops; cattle disease in Uthni abated; cotton crops Chikodee partially injured by locusts.
Dhagwar ...	...	No material change.
Kanara ...	...	Prospects of second crop fair; fever, small-pox, and cattle disease slightly prevalent.
Kaladgi ...	...	Rabi middling in Bagulkot and Moodebihal; promising in Badami and Hungund; wheat and gram good in Bijapur; fever in all talukas, except Bagulkot and Indi.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Kathiawar.		
Rajkot ...	...	Rabi crops good; weather cold; public health good.
Wudwan ...	...	Weather and health indifferent; state of crops same as before. *General remarks.*—Prospects good; rain still much wanted in the Deccan.
Bengal— (Jan. 12th)		
Burdwan ...	·45	Rain fell at Raneegunge 1·03, Bood-bood ·97, Culna ·13, Jehanabad *nil*, Cutwa 2·3. Damage reported from hail in Cutwa and North Bood-bood, otherwise prospects as before.
Bankura ...	·15	Weather cloudy; during the 4th and 5th slight rain fell almost all over the district. The state and prospects of the winter crops continue satisfactory. The rain has done good to them.
Beerbhoom ...	1·01	Character of weather uncertain. Rain has fallen in the district. State and prospects of crops good in every respect.
Midnapore ...	0·31	Somewhat cloudy, but little rain, and cool. Harvest nearly got in. Account of the cold-weather crops favourable.
Hooghly ...	·05	Cloudy and drizzling rains on the 5th, otherwise clear and cold; wind chiefly from north. Main rice crop reaped; a fair crop, except in two thanas. Other crops good and fair. Water required for potatoes, onions, and for drinking and bathing purposes.
24-Pergunnahs ...	1·35	A sharp storm on the 5th accompanied by heavy rain and hail. The cutting of the late rice progressing rapidly. The hail and rain on the 5th did some slight damage to the rice in Diamond Harbour, that had been cut, but not carried; and to the vegetable crops in part of Busseerhaut sub-division. In other parts of the district the rain has benefited the cold-weather crops.
Nuddea ...	1·17	About an inch of rain has fallen almost everywhere. Tobacco has been slightly injured by the rain, but all other crops are flourishing.
Moorshedabad ...	1·78	Rain on the evening of the 4th and during the 5th instant. Since the rain it has been slightly colder. The rain during the week has greatly improved the cold-weather crops: it appears to have been general. In Jungypore the mangoe season promises well. Prices almost stationary, except common rice, which has fallen a little.
Dinagepore ...	·5	Seasonable rain has fallen. Unusually good crops, such as the district has not had for some years. Reaping in full progress.
Maldah ...	0·90	The first two days cloudy; rain on the night of the 4th and day of the 5th; the rest cloudy and fair alternately. Rain fell during the week, and did a good deal of good to all the cold-weather crops, except mustard, some of which being in flower has been damaged by the rain.
Rajshahye ...	2·14	There was a heavy fall of rain on the 4th and 5th. Weather cloudy and warm, giving probability of more rain. The heavy rain of the week has not, so far as is reported, materially affected the growing cold-weather crops; but to a small extent, in parts, the ripe ears of paddy have been knocked off. The injury from this cause is unimportant. Slight damage to mustard crops that were in flower is reported from Nattore. The condition of all crops is promising.
Rungpore ...	0·38	Some rain has fallen during the week; since then the weather is fine and cold. The cutting of the amun, or late rice crop, is still going on. Prospects of the cold-weather crops are favourable.
Bogra ...	1·70	Rain has fallen in the district. Weather cloudy and foggy in the morning, especially somewhat cold. A slight shock of earthquake was felt about 9 o'clock on the 6th instant. A bumper rice crop mostly cut.
Pubna ...	1·07	Fine, cold, and seasonable weather. Storm of thunder and lightning with heavy rain on the night of the 4th, and rain during the 5th instant. The harvesting of amun, or late rice, is finished; that of kalai and moong pulses is going on. Sugarcane and turmeric nearly ripe.
Jalpaiguri ...	·50	Rain has fallen in the district. Weather cold. Harvesting nearly completed. The rain has, to some slight extent, it is feared, affected tobacco, early surso (mustard), and kalai (pulse).
Dacca ...	0·57	Seasonable weather. Some rain has fallen. Prospects of crops favourable.
Patna ...	0·78	Slight showers in the first part of the week. Great benefit to backward rabi or cold-weather crops. Outturn of paddy reported favourable from all parts of the district.
Gya ...	0·14	In the beginning of the week the weather was cloudy, and rain fell on the 4th and 6th instant: on the last day it was attended with a slight fall of hail. The harvesting of the rice crop is nearly over. Such an abundant harvest has not been seen for many years. The cold-weather crop, which has been considerably benefited by this timely rain, looks very promising.
Shahabad ...	0·50	Cloudy at the beginning of the week; slight rain fell on the morning of the 4th. A severe storm occurred that night, accompanied by heavy rain and hail; since then the weather has cleared and become much colder, and is all that could be desired. Prospects of crops very good. The rain which fell has done much good; the hail has injured in places the poppy and some of the cold-weather crops. Inquiries in regard to the extent of the damage so caused were at once ordered to be made. The rain has, however, done infinitely more good than the hail has occasioned harm.
Tirhoot ...	1·04	Rain has fallen during the week. Weather cold. The rain that fell during the week has been beneficial to the cold-weather crops, which are everywhere promising. The state of the country and the people is quite satisfactory.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Sarun ...	·24	Cold and foggy in the early part of the week; clear and seasonable the last three days, both east and west wind prevailing. There was a slight fall of rain on the 3rd and 4th instant. It is reported that this rain was accompanied by hail in thanas Mushruck, Pursa, and Bussuntpore in the Sudder sub-division, and Sewan, Durowlee, Buragown, and Burowlee in Sewan sub-division. The prospects of the cold-weather crops are generally favourable. The rain has on the whole done some good to them. The hail may have done some damage to wheat and barley in ears, peas in flowers, and poppy. Except in thana Mushruck, where hail storm seems to have been very severe, serious injury is not apprehended. Indigo fields being prepared for next year's crops. Prices of Indian-corn have slightly risen, owing to a falling off in the supply in the markets.
Chumparun ...	·25	Mornings very foggy, days cloudy, and nights clear. Rain fell on the 4th instant. Recent rain will bring forward winter crops, and give sufficient moisture for spring crops.
Monghyr ...	·58	Weather cold, mornings misty. Some rain has fallen during the week. The rain makes the prospects of the cold-weather crops even more favourable than they were.
Bhágalpur ...	·40	Rain on 5th and 6th instant. Over an inch in Soopool; severe hail in the south, but crops not much damaged, as there was but little cold-weather crops. Cold-weather crops still promise to be very fine.
Purneah ...	0·61	Very cloudy. Rain in the commencement of the week. There will be a 16-anna return from the aughani, or late rice crop. The recent rain has been beneficial to the cold-weather crops, which promise very well. The state of the crops is everything that can be desired.
Sonthal Pergunnahs ...	1·31	Rain fell in the district. At Deoghur ·48, Rajmehal a few drops, Jamtara ·71. Hail in many places. A little damage done to mustard in Rajmehal. Paddy nearly all cut; everything else doing very well.
Cuttack ...	*Nil*	Rather warm for the time of year. Winter crops coming on well. Late rice crop being reaped.
Balasore ...	·65	Weather occasionally cloudy, with one or two slight showers of rain. Harvesting of rice crop coming to a close. General prospects of crops good.
Lohardugga ...	·26	Some rain has fallen in the district; cold again since the rain. Cold-weather crops cut to a great extent and reported excellent, both in the Sudder sub-division and in Palamow.
Maunbhoom ...	0·27	Some rain has fallen in the district. Weather seasonable. All the rice has now been cut. The cold-weather crops promise well.

PUBLIC HEALTH.

Burdwan: fever as before. 24-Pergunnahs: cholera is abating in thanas Busseerhat, Hosnabad, Bhangore, Bankipore, and Mothoorapore, but continues in thanas Kallygunge and Devipore. Moorshedabad: cholera has greatly abated in the Sudder sub-division. Rajshahye: public health good. Pubna: fever on the decrease. Furreedpore: health good, excepting at Ainpore, whence an outbreak of cholera is reported. Patna: health good. Sarun: general health good. Cuttack: public health good. Balasore: a few cases of small-pox. Lohardugga: general health good; small-pox reported here and there.

General Remarks.—There was more or less rain throughout Bengal in the week ending 12th instant. The hail-storm that visited Calcutta on the 5th instant seems to have been widespread, but the hail does not appear to have done serious damage anywhere, while the rains have been seasonable and done appreciable good to the cold-weather crops, which are doing well everywhere. Slight injury is reported here and there from the hail to crops in flower or ear, but in very limited areas only. The harvesting of the late rice is not yet complete, but is progressing rapidly, and the outturn is excellent. Spring rice is being sown in parts of Orissa. In Hooghly water is still required in places, both for agriculture and domestic purposes.

N. W. P.—			
Meerut	(Jan. 13th)	...	No more rain; want of rain felt.
Agra	„	*Nil.*	Prospects favourable.
Allahabad	„	...	Hail caused some damage in limited area; otherwise prospects good.
Bareilly	„	*Nil.*	Rabi prospects good.
Benares	„	...	No more rain; prospects unchanged.
Jhansi	„	...	Prospects unchanged; rain much wanted; prices still rising.
Punjab—			
Lahore	(Jan. 14th) ...	...	No rain during week ending 13th instant; rain very much needed, otherwise agricultural prospects fair; health of province generally good.
Oudh—			
Lucknow	(Jan. 13th) ...	*Nil*	Prospects of crops favourable; weather fair; public health good.
Fyzabad	„		

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
C. Provinces—		
Sambalpur (Jan. 9th)	...	Weather clear; kharif crops gathered in; sugarcane cutting commenced; fever still prevalent.
Bilaspur ...	...	Weather clear; prospects of crops good; prices falling.
Upper Godavari ...	...	Ditto; rain wanted for jowar; fever continues; prices easy.
Raipur (Jan. 10th) ...	...	Ditto; prospects unchanged; health good; prices easy.
Chanda ...	...	Ditto; kharif prospects good; rabi attacked by grub; small-pox prevalent; fever decreasing; prices fluctuating.
Chhindwara (Jan. 11th)	...	Weather clear; rabi crops healthy; poppy sowing commenced; health good; prices steady.
Balaghât ...	...	Weather clear; threshing rice continues; rabi promises well; health good; prices fallen.
Chanda (Jan. 12th) ...	...	Threshing rice completed, yield favourable; cutting jowar commenced; rabi crops healthy; small-pox abating; fever still prevalent; prices easy.
Nagpur (Jan. 13th) ...	...	Weather clear; prospects good; cattle disease prevalent; prices risen in Katol tahsil.
Wardha ...	...	Cotton picking completed; rabi promising well.
Seoni ...	...	Rain required for rabi; fever prevalent.
Saugor ...	...	Weather clear and cold; rain required for rabi; prospects favourable; small-pox prevalent; prices stationary.
Jubbulpore ...	...	Weather clear and cold; prospects favourable.
Dumoh (Jan. 14th)...	...	Rain required; prices risen; small-pox continues.
Mandla ...	...	Ditto; prices fallen.
British Burma— ...	...	Report not received.
Mysore and Coorg—		
Mysore, Coorg (Jan. 14th)	...	No rain in Mysore or Coorg this week; crops good; harvesting almost completed; cattle disease continues in parts of two districts; public health generally good; picking of coffee continues in Coorg. *General Remarks.*—Agricultural prospects good.
Assam—		
Gauhâti ...	·18	Sky more or less overcast and cold, light rain on two nights; reaping of salee paddy almost finished; winter crops progressing; public health good; no case of cholera at Burpetta.
Sylhet ...	...	Some damage reported by late storm to spring crops; in the south cholera and small-pox still prevalent.
Hyderabad Assigned Districts—		
Umraoti ...	...	Rabi crops flourishing.
Rajpootana—		
Deolee (Jan. 9th)	*Nil*	Prospects and health unchanged.
Jeypore (14th)	...	Agricultural prospects unchanged; public health good.
Bhurtpore „	...	Weather mild; health and prospects fair.
Ajmere ...	...	No change since last report.
Central India—		
Indore (Jan. 13th)	...	No rain; health and agricultural prospects continue good.
Rutlam „	...	
Neemuch „	...	
Nepal ...	...	Report not received.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

WORKS ERECTED AT DEOLEE BY THE MEN OF THE DEOLEE IRREGULAR FORCE.

Circular No. 5, Public Works, dated Fort William, the 11th January 1875.

From—CAPTAIN G. T. SKIPWITH, Assistant Secretary,

To—The Government of India, Public Works Department.

I am directed to forward, for general information, the accompanying copies of papers with a lithograph sketch descriptive of works executed at Deolee by the men of the Deolee Irregular Force under the orders of Colonel J. D. MacDonald.

Enclosure to Circular No. 5, Public Works.

Memorandum by LIEUTENANT-COLONEL J. M. WILLIAMS, *Superintendent of Works, Ajmere and Mhairwarra, on the various works executed at Deolee by the men of the Deolee Irregular Force under the supervision of* COLONEL J. D. MACDONALD, *Commanding,—Dated Nusseerabad, the 21st February* 1874.

The majority of the works executed by the Deolee Force have already received the commendations of high authorities, and it is only needful for me to add my testimony to their being at the present time in a state of perfect preservation owing to the quality of the work employed in their original construction, and to the subsequent attention bestowed upon them. Amongst these are—

1*st*.—The "Nek Chal" embankment.

2*nd*.—Bathing ghât, weir, and guard-room.

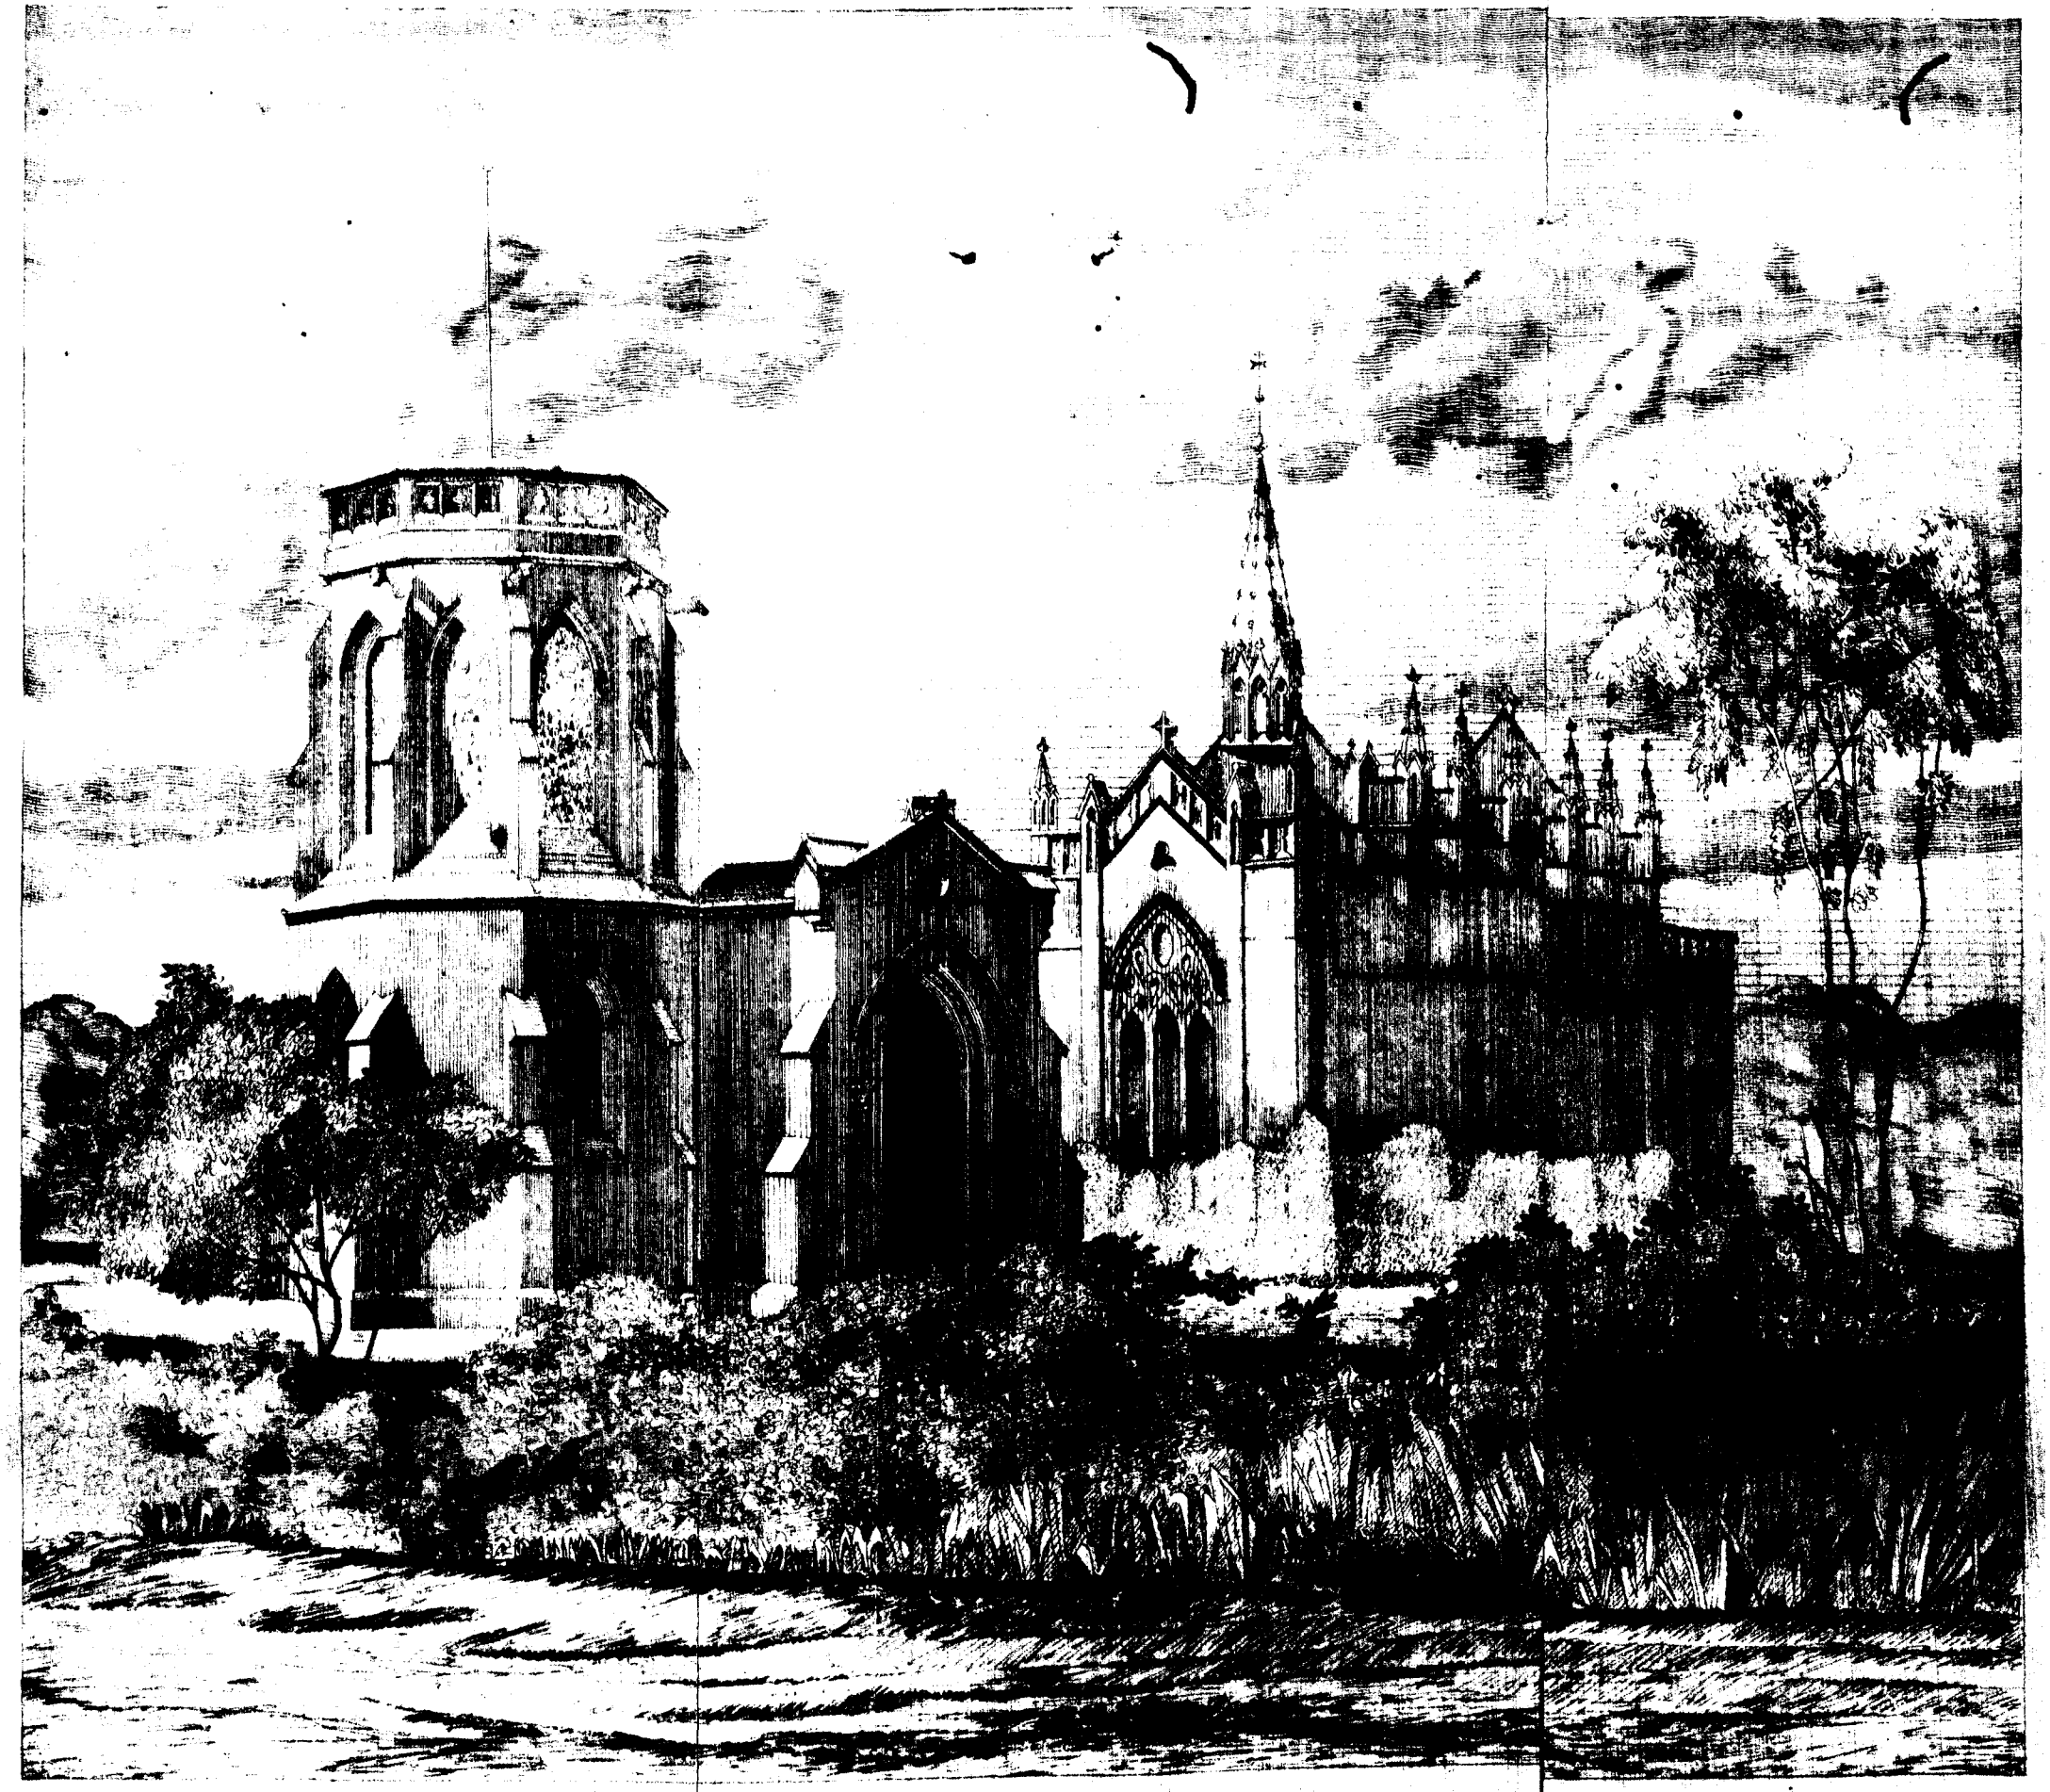
3*rd*.—Chowkeedar's hut in cemetery.

4*th*.—Hindoo temple on Clay's Island.

5*th*.—Out-offices to hospital: this last erected for the Public Works Department at contract rates.

It is much to be regretted that, in consequence of the "Nek Chal" being outside the limits of the cantonment, a difficulty has arisen regarding the provision of funds for an ornamental weir on the northern face of the embankment, which was designed by Mr. Gael, formerly Assistant Engineer, Public Works Department, at Deolee.

This weir, I understood, was designed to aid one of the existing weirs, the discharge over which in heavy floods threatens its foundation, the soil not being good. It will be a matter of lasting regret should the embankment on which so much care and taste has been displayed be destroyed in consequence. Its destruction would moreover prove a most serious loss to the station.



There are two buildings which have been lately built, and which, not having been previously reported upon, leave room for further remark than those abovementioned—

1*st*.—The "Hall of Justice."

2*nd*.—The bathing-shed for the hospital of the Deolee Force.

The "Hall of Justice" has been constructed by Colonel MacDonald as his orderly-room, in which also he conducts his duties as Cantonment Magistrate. It is built in a picturesque spot in his garden in front of his residence, and has been most tastefully constructed. The roof rests on a front and rear wall, pierced with artistically designed arches for the doors and windows, and at the sides on two columns. The space between the columns and end walls are filled with handsomely-designed trellis work executed in chunam. The painted windows in the front consist of single slabs of slate cut through in elaborate and handsome patterns. The centre and also the walls in several places are further decorated with various heraldic devices from designs by Lieutenant Neville, 14th Bengal Lancers, and Lieutenant Montague James, 3rd Bombay Cavalry, carved on slate and emblazoned. Amongst these are the arms of the Deolee Irregular Force, of the Agent, Governor General and Political Agents, of Colonel MacDonald and of other officers connected with the station. The ceiling is of lathe and plaster perfectly executed, and is colored a pale-blue in panels; the panels being enclosed by a narrow gold beading. The blending of the colors in the decorations is almost effective and pleasing.

The bathing-shed adjoining the hospital is an uncovered enclosure. The side walls are pierced with gothic arches, which are filled with the same perforated work in chunam above

CHURCH AND CHURCH GUARD-ROOM, DEOLEE.

ERECTED BY THE MEN OF THE DEOLEE IRREGULAR FORCE

LITHOGRAPHED IN THE R.A.D. SECRETARIAT, FROM A WATER COLOR PAINTING BY DR DE FABECK

referred to in describing the "Hall of Justice." The entrances are at each end through gothic arches, and over the main arch facing the entrance to cantonment is inscribed on a scroll in gothic letters "*Siste Viator,*" then several similar scrolls with appropriate mottos inscribed on various parts of the walls.

Water is supplied from a well, and flows into a handsomely designed cistern, which is constructed at one end of the room, and the drainage is perfectly effected. The privacy of the shed, in addition to that caused by the arches having been filled in with the perforated work, is further secured by a luxuriant growth of creepers.

In addition to the several works already enumerated, there are also under construction a *pucka* ghât or landing-place on Clay's Island and the church: this last will form the subject of a separate report.

Having always been an advocate for the employment of regimental labor, it has afforded me much pleasure to see how successfully and persistently it has been employed at Deolee for the last eight years. That it has been so cordially rendered by the men is most creditable to them, and deserving of all praise, and its results will prove a lasting monument to the energy and taste of Colonel MacDonald, and the interest he has taken in his men. This alone could have elicited from them the spontaneous exertions by which Colonel MacDonald's projects have been so successfully executed.

Memorandum by LIEUTENANT-COLONEL J. M. WILLIAMS, *Superintendent of Works, Ajmere and Mhairwarra, on the Church which is being built at Deolee,—Dated Jussakhera, the* 12*th March* 1874.

The church is being built entirely under Colonel MacDonald's supervision by the men of the Deolee Irregular Force, and stands in a central position in the cantonment of Deolee in a portion of the compound belonging to the Presbyterian Mission.

There are no plans, sections or elevations of the building, which is unfortunate, since during my short visit to Deolee of one day I was unable to get out proper plans, and was obliged to depute an officer to send me a plan and section, which I enclose.

Colonel MacDonald has been guided throughout by the illustrations contained in a book of ecclesiastical architecture which he possesses, and has certainly been very happy in the combinations he has formed.

The building has reached the height shown in the accompanying section, and is built of coarse rubble masonry in lime mortar, well and solidly put together. The windows, of which there are eight in the body of the church and three in the chancel, to be filled with whole slabs of slates cut through in appropriate handsome patterns by men of the Deolee Force. One window, the central one in the chancel, had already been so filled on the occasion of my visit: in its centre is an illuminated scroll bearing the words "Faith, Hope, and Charity." The effect is exceedingly pleasing, and, next to stained glass, is more effective than anything I have previously seen. To prevent dust entering through the opened carved work, the windows will be protected with a covering of perforated zinc.

Colonel MacDonald proposes to place a pointed roof of slabs on the building slightly above the present level of the walls, and above this, for the sake of coolness, and to prevent leakage, inverted ghurras or chatties, bringing the surface nearly, if not quite, to the appearance of flat roofs. I suggested that the building would be more in keeping with its style of architecture if he does not conceal the pitch of the roof, which he need not do if he places one layer of small inverted chatties over the whole surface of the slabs, and then covers them with terracing.

The walls are to be finished off with a battlemented parapet in early English style, and the buttresses with facials in keeping with the parapet.

The building has cost in material up to the present Rs. 2,100, and with chowkeedar's house and improvements to the ground, it may be approximately estimated to cost Rs. 3,000 more.

The church will accommodate about 30 sittings, which are ample for the station. In a military station the Government grant for a church providing this number of sittings would be from Rs. 2,500 to 3,000, and if this amount can be granted in the present instance, it will prove a great boon to the station, and enable Colonel McDonald to complete the church in as thorough a manner as he desires.

It was certainly a most spirited and enterprising undertaking of Colonel MacDonald to commence the building with only the local subscriptions to depend upon, and that these have been so readily forthcoming, speaks volumes for the confidence all have in his ability to carry out the work successfully.

[The plans and sections referred to have not been printed.]

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

NOTE ON JUTE MANUFACTORIES IN HOLLAND.

The provinces in Holland in which there are jute manufactories are North Brabant, North Holland, Utrecht, Friesland, Overyssel, and Dreuthe.

In North Brabant there are nine factories, which use from 460,000 to 467,000 kilogrammes of jute annually. Two are at a place called Boxtel, one at Geldrop, five at Goirle, and one at Helmond. At Boxtel the factories are worked by steam. In North Brabant the jute is used for making grain and meal sacks, for paper hangings, and for packing cloth; none for coffee bags.

In North Holland there are six factories, using 214,500 kilogrammes of jute a year; one at Amsterdam, three at Goven, and two at Naarden. Of this quantity, 185,000 kilogrammes are used for coffee bags; and at Goven 9,500 kilogrammes are used up for making covering cloths for cows.

In Utrecht there are four factories, two at the town of Utrecht, one at Rhenen, and one at Amersfoort. They work up from 251,550 to 251,650 kilogrammes of jute a year; of which only 20,000 are used for coffee bags at Amersfoort. About 230,000 kilogrammes are worked up also at Amersfoort for making onion, sugar and meal sacks, rough cloth* coverings for cows, and common carpets.

* Interwoven with flax: the warp of linen, and the woof of jute threads.

In Friesland there are three factories, using 46,425 kilogrammes of jute—at Dokkum, Horlengen, Weststellingward; at the latter place 13,000 kilogrammes are used for coffee bags.

In the province of Overyssel there are six factories, but a great deal of jute is also worked by hand in the houses of the work-people for pack cloth. The whole quantity annually used is 3,593,000 kilogrammes, of which 1,921,500 is for coffee bags. The rest is made into meal sacks, packing cloth, mattresses, stair carpets and salt and potato sacks. At Enschede and Goor all the jute work is done in the houses by hand. At Holten there is a factory, at Oldenzael three, at Steenwyk one, and the largest of all is at Ryssen, where 2,500,000 kilogrammes of jute are annually used.

In the province of Dreuthe, there are two factories at Norg and two at Vledder, using 240,666 kilogrammes of jute, of which 236,000 are for coffee bags.

Altogether there are 32 jute manufactories in Holland, besides the hand-weaving in the houses of the work-people. The quantity of jute annually worked up is from 4,006,141 to 5,120,241 kilogrammes, of which from 2,375,500 to 2,680,000 are used for coffee bags; and from 2,430,641 to 2,439,741 for other purposes.

CLEMENTS R. MARKHAM.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 21st JANUARY 1875.

GENERAL REMARKS.—There has been no rain in Madras, Mysore, the Central Provinces, Berar, Central India, and Rajputana. Slight rain has fallen in the Deccan districts of Bombay, several districts of Bengal, Benares and Allahabad in the North-Western Provinces, Fyzabad in Oudh, and Rawalpindi and a few other places in the Punjab. The heaviest falls have been in Assam and the eastern districts of Bengal. Prospects continue universally good, although the want of rain is complained of in parts of the North-Western Provinces, the Punjab, and the Deccan districts of Bombay.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Madras—			
Kistna	(Jan. 21st)	*Nil*	Canal supply sufficient; three feet seven inches over anicut: later dry crops suffering from grub, bad weather, and want of rain in parts; other crops fair: markets well supplied locally: mild small-pox general; fever virulent: cattle healthy, only in three taluks pasture diminishing.
Kurnool	(20th)	"	Season favourable; no rain: standing crops good; second crop paddy being sown: markets well supplied; prices falling in Nundil, rising in Nandikotcoor, and stationary elsewhere: water and pasture abundant: fever generally prevalent: no water over Sunkesala anicut.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Tanjore (21st)	*Nil*	Water in rivers scanty, no supply to tanks; water over anicuts none: cultivation of wet crops over that of a few dry crops continues in some parts; standing crops good; harvest of some wet and dry crops completed, yield satisfactory: market well supplied; prices steady: public health generally good; small-pox here and there; one death by cholera in Combaconum: cattle disease in Sheally, some loss; pasture sufficient.
Trichinopoly (20th)	„	Water sufficient; Cauvery beginning to fall low: crops in good order; outturn generally up to average: public health good: pasture ample.
Malabar (21st)	„	Harvesting of second crop in progress: markets well supplied; prices steady: fever and small-pox slightly prevalent: cattle disease in Walluvanad; pasture withering.
Bombay— (Jan. 20th)		General prospects satisfactory.
Sindh.		
Kurrachee ...	...	Rabi crops looking splendid; ahur (mustard) still being sown on Manchar lands: weather colder.
Shikarpur ...	...	Rabi crops generally doing well, but want of rain, sharp frosts on nights of 15th, 16th, and 17th, injured the more advanced rape crops.
Hyderabad ...	...	Cotton all picked—heavy outturn: rabi crops looking very well: slight fever in low-lying districts: weather changeable: state of cattle disease the same as before.
Gujarat.		
Ahmedabad ...	...	No change.
Surat ...	...	Spring crops progressing: fever in Pardi.
Broach ...	...	Cotton and til being reaped; other standing crops and public health generally good.
Kaira ...	...	Cotton-picking commenced: crops and public health good: weather very cold.
Khandesh and Nasik.		
Khandesh ...	...	State of crops and public health the same as before: cotton good; demand brisk; rate 49.
Nasik ...	...	Rabi crops good in some talukas, but partially blighted from want of moisture and heavy dews in others, where loss is estimated at four annas in the rupee: excepting slight fever, public health good.
Konkan.		
Tanna ...	...	Weather cool: public health good; fever prevailing in Mahim, Wada, and Shahpur talukas, and slightly in Bhewndy taluka; ague in Moorbaur taluka; guinea-worm and cough in Wada taluka: rabi crops good in Mahim, Shagur, Bhewndy, and Bassein talukas, but middling in Dhanoo, Moorbaur, and Kallian talukas: rabi crop especially good in Kurjut taluka.
Deccan.		
Poona ...	0·06	Rabi crops continue in the same condition as before: climate and public health good.
Ahmednuggur ...	...	Crops slightly damaged by cold: health good.
Sholapur ...	...	No change.
Satara ...	...	State of late crops the same as before; in Kurar oomari crops injured by blight: weather cloudy and chilly: ague in Pahtun.
Southern Mahratta Country.		
Belgaum ...	...	Rabi crops good; cotton indifferent: fever in some talukas: murrain has disappeared.
Dharwar ...	...	Wheat injured in Petta Moondurgi; state of other late crops the same as before; cotton and health unchanged.
Kanara ...	...	Sowing operations for second rice crop commenced; sugarcane being reaped produce middling; fever prevalent.
Kaladgi ...	...	No change.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Rabi crops and public health good; weather windy and very cold.
Wudwan ...	...	Cold wind and occasional frost in Chotila district: crops the same as before: health good.
Baroda ...	...	Cotton-picking continues; rabi crop fair: public health good.
		General remarks.—Rabi crops are very good in Sindh; poor in the Deccan; fair elsewhere: rain in the Deccan still required: kharif outturn good.
Bengal— (Jan. 19th)		
Burdwan ...	*Nil*	Weather cloudy and windy. Late rice harvested. Prospects of cold-weather crops good.
Bankura ...	„	Weather dry. The state and prospects of the winter crops continue satisfactory.
Beerbhoom ...	„	Bright and dry weather. Harvest home. Cold-weather crops doing well.
Midnapore ...	„	Foggy in morning and less cold than before. Harvest nearly all in. Cold-weather crops fair.
Hooghly ...	„	Clear throughout; wind from north and south-west. Prospects of cold-weather crops fair, but water required.
24-Pergunnahs ...	0·05	Cool and occasionally cloudy. The harvest of the late rice is almost completed. Cold-weather crops doing well.
Nuddea ...	*Nil.*	Weather rather warm for the time of the year. Some damage was done to crops in parts of the Chapra and Nakasipara thanas by hail in the week before last, otherwise crops of all sorts have been progressing favourably on the whole.
Moorshedabad ...	„	Bright and seasonable weather. Nights cold. Cold-weather crops continue to promise well. Aous, or early rice cultivation, is proceeding. The price of rice has risen slightly.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Dinagepore ...	*Nil*	A very slight fall of rain last Monday; weather cold and foggy. The cutting of the winter crops not quite finished yet; the harvest has been above the average. Late rain has done good to cold-weather crops. Mustard, though sown late, is looking well.
Maldah ...	„	There has been some rain during the week in a few localities. Generally it has been dry and cool. The winter crop of rice has turned out well; the other crops are promising. The late rains have done some damage in a few places. The kalai pulse is turning out well.
Rajshahye ...	„	Clear and fine weather. No rains during the week. The condition of the cold weather crops continues to be most promising. The kalai pulse harvest is nearly completed; and there is a fine mustard crop on the higher lands, almost ready for cutting.
Rungpore ...	„	Weather cold and somewhat cloudy, with fogs in the morning. Reaping of the amun or late rice crop is nearly finished. Cold-weather crops are doing well.
Bogra ...	„	Weather fair. Cold in the morning and evening. State and prospects of crops excellent. Reaping of the amun or late rice not finished as yet.
Pubna ...	„	Weather fine and seasonable; occasionally cloudy and foggy. No rain; harvesting of kalai pulse nearly finished, and of sugarcane and turmeric commenced; the outturn does not appear as good as it was expected. Matore and khesari pulses and rye are in flower. Cheena millet is being sown.
Jalpáiguri ...	0·12	Weather cloudy and cold. Some rain has fallen. All crops promise well.
Dacca ...	*Nil*	Weather cool and fine. Clouds still hanging about. Crops very good, mustard crops especially.
Patna ...	„	Seasonable weather. Paddy nearly harvested; moosoor pulse slightly injured by the late heavy fog. Prospect of cold-weather crops otherwise excellent.
Gya ...	„	Weather cool. The rubbee or cold weather crops continue in flourishing condition.
Shahabad ...	„	Seasonable and cold. Prevailing wind west. Prospects of crops very promising. The late rain has done much good. As far as has been ascertained, the hail which fell last week has not caused any serious damage to the cold-weather and poppy crops.
West Tirhoot ...	„	Weather seasonable and cold. Prospect of rabi or cold weather crops very fair.
Sarun ...	„	Fine, cold, and seasonable weather. West wind prevailing. The prospects of the cold-weather crops are generally favourable. Wheat and barley in ears. Sugarcane is being cut and put into the mills. Poppy everywhere forward. Indigo fields are still being prepared for the next year's crops. The hailstorm of the 4th instant caused no serious injury, except in a portion of Mushruck Thana, in a tract from east to west, *i.e.*, from Moharajgunge to Ramcollah, where damage to the crops in 12 villages, to the extent of from 2 to 12 annas, has been reported. Prices (jowar and cheena excepted) stationary.
Chumparun ...	„	Cold and clear weather. Prospects of crops excellent.
Monghyr ...	„	Weather clear and cool. Rice crop harvested and being thrashed out. Outturn good. Cold-weather crops promise a full crop.
Bhágalpur ...	„	Light showers on the morning of the 18th instant. Crops on the ground could not be better.
Purneah ...	„	Cold with westerly wind. The state and prospects of the cold-weather crop, on the whole, are very satisfactory. Recent rain has done much good.
Sonthal Pergunnahs ...	„	Weather fine, and not very cold. Light winds. Crops good everywhere.
Cuttack ...	„	Colder than the previous week. Late rice harvest drawing to a close. Prospects of cold-weather crops very good.
Balasore ...	„	Weather warmer and occasionally cloudy. Harvesting of rice crop all but concluded. Outturn good. Sugarcane crop being cut. General prospects of crops good.
Lohardugga ...	„	Weather bright, clear, and cold. Cold-weather crops reported at 14 and 15 annas outturn. Palamow reports also very favourable.
Maunbhoom ...	„	Favourable weather. Cold-weather crops promise well.

Public Health.

Burdwan: fever and a little cholera. 24-Pergunnahs: a good deal of cholera still prevailing in thanas Bhangur, Devipore, Bankipore, Muthoorapore, Protapnagore, and Nyhatty. Fever decreasing in Barripore, Moorshedabad. Cholera has disappeared from the Sudder sub-division. Rajshahi: no sickness reported. Furreedpore: health good; a few cases of cholera reported from the south. Gya: health of the people good. West Tirhoot: public health good. Bhágalpur: general health very good. Cuttack: public health good. Hazáribagh: small-pox is hanging about Hazáribagh, and cattle disease also; otherwise the health of the district is good. Lohardugga: health good; small-pox still reported here and there, chiefly in Palamow.

General Remarks.—Rain fell in almost all the eastern districts during the week under review, and in parts of Tipperah and Hill Tipperah was accompanied by hail, which has done some slight injury to the standing crops. A light rainfall is also reported in certain districts of the Rajshahi and Cooch Behar Divisions, and in parts of the Burdwan and Presidency Divisions. The harvesting of the late rice is still not completed, but is progressing rapidly, and the out-turn is excellent. Cold-weather crops are progressing satisfactorily. Early rice and cheena millet cultivation is proceeding in a few places. Sugarcane and some of the pulses are being harvested.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. P.—		
Meerut (Jan. 20th)	...	Rain wanted for the crops.
Agra „	*Nil*	Prospects generally favourable; arhar somewhat injured by frost, and gram in some places said to be attacked by insects.
Allahabad „	...	Weather cloudy; slight rain since morning; prospects good.
Bareilly „	*Nil*	Rabi prospects unchanged.
Benares „	...	Some rain accompanied by hail; condition of crops continues favourable.
Jhansi „	...	Rabi prospects unaltered; prices standing.
Punjab— (Jan. 20th)	·2 in Rawalpindi.	Two-tenths of rain in Rawalpindi and a sprinkling in a few other places; rain very much wanted; crops favourable, considering drought; pleurisy and small-pox prevalent in Hissar, and slight fever in Peshâwar, otherwise health of province good.
Oudh—		
Lucknow (Jan. 20th) ...	*Nil*	} Prospects continue to be good; weather cloudy; public health good.
Fyzabad „	Rainfall slight.	
C. Provinces—		
Sambalpur (Jan. 16th)	...	Weather clear: sugarcane cutting; fever less.
Upper Godavari ...	...	Prospects of crops good; fever less; small-pox disappeared.
Bilaspur ...	...	Weather clear; rabi crops good; outturn of rice average; prices steady; small-pox beginning.
Raipur (Jan. 17th) ...	...	Weather seasonable; prospects continue favourable; health good; prices easy.
Balaghât (Jan. 18th)	...	Weather clear; rice threshing continues; rabi crops promising; health good; prices steady.
Chhindwara ...	...	Weather cool; crops look promising; health good; prices slightly changed.
Bhandara (Jan. 19th) ...	...	Weather clear; rabi crops progressing; jowar cutting; small-pox abating; fever prevalent; prices easy.
Nagpur (Jan. 20th) ...	...	Weather cold; prospects good; prices stationary; cattle disease in places.
Wardha ...	...	Rabi crops favourable; prices stationary.
Seoni ...	...	Rabi crops good.
Narsinghpur ...	...	Rabi crops favourable; fever and small-pox prevailing; prices falling.
Betul ...	...	} Prospects good.
Hoshangabad ...	...	
Jubbulpore ...	...	Weather clear; prospects favourable; health good.
Nimar ...	...	Prices stationary; health good; small-pox reported.
Saugor ...	...	Weather clear; rain wanted; rabi prospects favourable; small-pox prevalent; prices stationary.
Dumoh (Jan. 21st)...	} ...	Rain wanted; small-pox continues; prices slightly risen.
Mandla „ ...		*General Remarks.*—Prospects are good and prices are easy.
British Burma ...	...	Report not received.
Mysore and Coorg— (Jan. 21st)	*Nil*	Crops thriving; harvesting nigh completion; cattle disease prevalent in parts of two districts; public health generally good. *General Remarks.*—Agricultural prospects good.
Assam—		
Gauhâti ...	·32	Sky more or less overcast; cool and cloudy days; slight rain on two nights; the greatest part of the sali paddy has been gathered; prospects of winter crops favourable; public health good.
Sylhet ...	...	Cold weather crops doing well; cholera abating, small-pox still prevalent.
Hyderabad Assigned Districts—(Jan. 21.)		
Umraoti ...	...	Rabi crops in good condition.
Rajpootana—		
Deolee (Jan. 16th)	*Nil*	Prospects and health good.
Ajmere ...	...	Harvest prospects good; weather seasonable.
Jeypore	...	Agricultural prospects continue favourable; public health good; weather seasonable.
Central India—		
Indore (Jan. 20th)	*Nil*	} Health and agricultural prospects continue good.
Gwalior „	„	
Rutlam „	„	
Neemuch „	„	
Nepal ...	...	Report not received.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 28th JANUARY 1875.

GENERAL REMARKS.—Frosts have somewhat injured the rabi crops in parts of Bombay and Sindh, and some districts in the North-Western Provinces and Oudh, but prospects are generally favourable in all these provinces, except in the Deccan districts, where the accounts of the rabi are not encouraging. In the Punjab there has been no rain, and prospects are unfavourable owing to the continued drought. In the Hooghly district also drought is complained of, but rain has since fallen there. Rain has also fallen in most other parts of Bengal, and the prospects of the cold weather crops are on the whole favourable, while the rice harvest now nearly completed is generally excellent. In all other provinces the crops are reported to be in good condition. No report received from British Burma and Nepal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Jan. 28th)	...	Rain at Masulipatam 96 cents; slight drizzling in some taluks; three feet water over anicut; some later dry crops suffering from grub and want of rain in parts; other crops good; castor, tobacco, and chillies harvested in Palnad; outturn three-fourths; markets well supplied locally; prices slightly falling in Bapetla and Bezwada, elsewhere steady; small-pox fatal only in Vessinapetta; fever virulent; cattle generally unhealthy; pasture diminishing.
Kurnool (27th)	...	Rain 0·036 inch at Kurnool on one day, none elsewhere; crops in good order; second crop paddy being sown; markets well supplied; prices steady; water and pasture abundant; fever and cattle disease in several taluks; no water over Sunkesala anicut.
Tanjore (28th)	...	Rain in Negapatam ·02 inch, elsewhere scanty; water in rivers very little; no supply to tanks; no water over anicuts; cultivation of wet crops over, that of a few dry crops continues in some parts; crops in good order; harvest of wet and some dry crops, yield satisfactory; markets well supplied; prices slightly falling; public health generally good; small-pox in some places; two deaths by cholera in Negapatam; cattle disease in Sheally, some loss; pasture sufficient.
Trichinopoly (27th)	...	Slight rain in parts of the district; no other change of importance.
Malabar (28th)	...	No rain; harvesting of second crop in progress; markets well supplied; prices steady; fever and small-pox slightly prevalent; cattle disease slight in Wallewanad; pasture withering.
Bombay— (Jan. 27th)		General prospects satisfactory.
Sindh.		
Kurrachee ...	...	Early rabi crops coming into ear; rain again expected; weather cold, with strong breeze from the north; fever continues.
Hyderabad ...	...	Rabi crops still looking well; public health generally good; weather fine; nights very cold; cattle disease continues in three talukas.
Shikarpur ...	...	Rain much required; rabi sowing still continues in several talukas, and every available piece of land is brought under cultivation; severe frosts experienced, but slight damage only to rape crops; cattle disease has disappeared, except among goats.
Upper Frontier ...	...	Weather continues cold; rain wanted; no decided change in state of crops.
Gujarat.		
Ahmedabad ...	...	Slight blight in Duskroee taluka, owing to heavy frost; no other change.
Surat ...	·03	Early crops harvested; rabi crops have slightly suffered in four talukas from cold; fever in Mandvee.
Broach ...	...	Picking of cotton progressing; til almost reaped; other rabi crops good; fever in Ahmood taluka.
Kaira ...	...	Rabi crops thriving well; cotton good; cold severe.
Khandesh and Nasik.		
Khandesh ...	...	No improvement in rabi crops; cotton unchanged; rate 46 to 50; public health improving.
Nasik ...	...	A thin crust of ice was found in water exposed in vessels on morning of 21st, which did considerable damage to rabi crops and fruit trees in several places; excepting a few cases of cold and fever, public health good.
Konkan.		
[illegible] ...	·15	Weather cool; public health good; rain 15 cents on 20th; fever in Wada, Shahpur, Mahim, Moorbaur, and Bhewndy talukas, and guinea-worm in Wada taluka; rabi crops especially good in Shahpur, middling in Dhanoo, Moorbaur, and Kallian talukas, and good in Mahim, Bhewndy, and Bassein talukas.
Deccan.		
Poona ...	·03	Slight fall of rain in Mawul and Khed; prospects of rabi crops generally same as before; climate and public health good.
A[illegible]dnuggur ...	...	Crops good where there is moisture; cotton-picking mostly finished; health good.
Sholapur ...	...	Rabi middling only in good soil; no disease.
Satara ...	...	State of rabi crops same as before; potatoe plantation on banks of the Yenna tank and Mahableshwar blighted; ague in Pahtun, and cough at Khandalla.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Southern Mahratta Country.		
Belgaum ...	...	State of rabi crops same as before; cotton indifferent; fever in some talukas.
Dharwar ...	...	Wheat and exotic cotton unhealthy in Nawalgoond; grain and other late crops promising; slight improvement in public health in Nawalgoond; cattle disease decreasing in Dharwar taluka.
Kanara ...	...	Prospects of second rice crop good; fever in Koompta, Honore, Sircky, and Yellapoor; cattle disease in Koompta, Honore, Sircky, and Hullial; small-pox slightly prevalent in Honore.
Kaladgi ...	...	Kharif all reaped except toor; rabi middling; rats damaging crops in Bagewaree and Shindgi.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Rabi crops promising; picking of cotton in progress; weather cold; health good.
Wudwan ...	...	Frost has injured cotton and wheat in Chotila district, and wheat in Wudwan; weather not cold as before; health indifferent in Drangdla.
Baroda ...	...	Cotton-picking continues; rabi prospects and public health good. *General remarks.*—Prospects good, but the accounts of rabi from the Deccan are still discouraging.
Bengal— (Jan. 26th)		
Burdwan ...	0·91	Weather favourable, but slightly cloudy. Rainfall at Raneegunge ·15, Cutwa ·40, Culna 1·07, Bood-bood ·43, Jehanabad *nil*. Late rice harvested; prospects of winter crops fair. Telegraphed on the 27th January: a further rainfall of ·9 inch.
Bankura ...	0·01	Cloudy during the 18th, 19th, and 20th instant. Pretty heavy rain in the north and slight rain in the rest of the district. The state and prospects of the winter crops continue satisfactory; the rain has done good to them.
Beerbhoom ...	0·35	Weather uncertain. State and prospects of the crops continue good.
Midnapore ...	0·25	Cold and cloudy weather. Rice harvest almost all quite in. Cold-weather crops good, with slight exception.
Hooghly ...	0·61	The weather was rainy on one day; at present cool and dry. North wind. The cold-weather crops which are still in the ground are suffering from drought. The kalai (pulse) crop was a failure. The potato crop which has been got in was, however, a good one. Telegraphed on the 27th January: a further rainfall of ·27 inch.
24-Pergunnahs ...	*Nil.*	Cloudy in the morning during the first four days of the week, and very cold during the last three days. Slight showers have fallen in several parts of the district. The harvest of amun, or late rice, is all but over. The light rain in parts has benefited the cold-weather crops, but slightly injured tobacco. A further rainfall of ·18 inch on the 26th January 1875.
Nuddea ...	0·25	Some rain has fallen; cold since the rain fell. The recent rain is said to have done some harm to gram and tobacco. Other crops, as a rule, have derived great advantage. The coarsest rice sells at from Re. 1-14 to Rs. 2-4 per maund.
Moorshedabad ...	0·08	The beginning of the week was cloudy and cold. A few drops of rain fell on Wednesday. The prospects of the cold weather crops continue good. In Jungipore the gram in one thana is said to have been damaged by insects, while the weather continued cloudy. Rice is rather dearer in the Sudder sub-division.
Dinagepore ...	0·04	There has been rain in parts of the interior. Weather cold and cloudy, with east wind. Reaping of the rice finished; cold-weather crops doing well. Mustard will be rather a short crop, having been sown late.
Maldah ...	*Nil*	Slight rain; generally dry and cold weather. The late rice crop is being still harvested, and is everywhere good. Kalai pulse is also being harvested, and is good. The cold-weather crops generally are promising. Boro or spring rice is being sown.
Rajshahye ...	0·09	Cloudy weather, with very slight rain in parts on two days; otherwise fine and clear weather. No change in the favourable prospects of the crops. Prices of the last amun, or late paddy, are stationary, ranging from 22 to 28 seers for the rupee in different parts.
Rungpore ...	*Nil*	Weather cold and fine. Rice harvest nearly finished. Cold-weather crops doing well.
Bogra ...	0·10	Cloudy in the morning for some days at the beginning of the week; afterwards fair. Cold in the morning and evening. Some rain has fallen. Reaping of the rice continues; a good outturn expected.
Pubna ...	0·22	Cloudy and rainy on the 19th and 20th instant; the rest of the week fair. Harvesting of arhur and kalai pulses nearly finished, and of mustard commenced. The rain has improved the barley and wheat crops. Prospects of the [illegible] and khesaree pulses and oil-seed crops good. Sowing of cheena millet going on.
Jalpiguri ...	0·07	Cloudy during the first part of the week. The mornings and evenings were cloudy. A little rain. No change in the prospects of the crops since last week.
Dacca ...	1·06	Heavy rain on Monday and a little on Tuesday; since then very cold. State of crops, very little damage done by rain; the good will outweigh the harm. Telegraphed on the 28th instant:—A further rainfall of ·06 inch.
Patna ...	*Nil*	Weather bright and seasonable; cold-weather crops continue to progress well.
Gya ...	·21	Weather cold, and at times cloudy; rain fell on the 20th instant. The prospects of the cold weather crops continue very favorable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Shahabad ...	0·10	Cloudy at the beginning of the week; slight rain fell on the morning of the 20th instant; since then the weather has cleared and become much colder. Prospects of crops very good. The slight rain has done some good. No reports from the sub-divisions of Bhubboah and Sasseram. The hail has caused damage, the amount of which is not yet fully ascertained.
West Tirhoot ...	0·7	Weather cold, with west wind; some rain has fallen. Prospects of the cold weather crops are excellent up to date. The harvest of the rice crop is now over, and the outturn is good, say 12 to 14 annas.
Sarun ...	0·34	Cloudy on the 20th and 21st instant. Slight showers on the 20th, within the jurisdiction of thanas Chupra, Manjhi, Pursa, Digwara, in the Sudder sub-division, and Burragaon and Sewan, in the Sewan sub-division. Very cold, with west wind prevailing. The prospects of the cold weather crops are generally favourable; wheat and barley in ear. In consequence of the cloudy state of the weather, slight injury to mustard from labi insects has been reported. Poppy doing well. Indigo fields are ready for sowing Prices stationary.
Chumparun ...	*Nil*	Cloudy and clear alternately. State and prospects of crops excellent.
Monghyr ...	„	Weather cold and fine. State and prospects of crops are as good as could be desired.
Bhágalpur ...	0·06	Slight rain. All crops very fine. Telegraphed on the 28th instant a fall of a few drops of rain on the night of the 24th idem.
Purneah ...	*Nil*	Weather cold. Very slight rain reported from the two sub-divisions. The state and prospects of the cold weather crop remain very satisfactory, as mentioned in the previous reports. No change.
Sonthal Pergunnahs ...	„	Weather very much colder since Tuesday, when rain fell in other parts of the district. Outturn of late rice reported excellent everywhere. Wheat and barley doing well in Godda. Mustard excellent everywhere.
Cuttack ...	„	Weather in Cuttack hot and oppressive. Rain expected. Reported "moderately cold" at Kendraparah, and cold at Jajipore. Prospects of crops remain good.
Balasore ...	„	Slight showers of rain; weather windy. Rice crop harvested with good results. Cold weather crop ready for gathering. (A few cases of small-pox and cholera in the north of the district.)
Lohardugga ...	0·13	The weather has been cloudy at first, and clear afterwards. Crop reports continue favourable from all parts. Palamow report states:—"rabi crops are extremely good, although a good fall of rain is to be wished for."
Maunbhoom ...	0·26	Weather favourable. Some rain has fallen, and more is required for indigo and other crops.

PUBLIC HEALTH.

Burdwan: health unaltered. 24-Pergunnahs: cholera prevailing in thanas Nyhatty, Bassirhat, Hosnabad, Bankipore, Devipore, Mathoorapore, and Diamond Harbour; it has abated in thanas Protapnagur and Bhangore; fever continues to decrease at Barripore. Moorshedabad: public health continues good. Rajshahye: public health good. Pubna: public health improved. Furreedpore: sickness abating everywhere. Patna: health good. Gya: health of the people good. Monghyr: general health very good. Cuttack: public health good generally; but fever is said to be somewhat prevalent in the Jajipore sub-division. Balasore: a few cases of cholera and small-pox in the north of the district; general health satisfactory. Hazaribagh: there are still some cases of small-pox about Hazaribagh. Lohardugga: reports of small-pox more frequent, otherwise health good. Singbhoom: district is very healthy.

General Remarks.—There was rain in almost every district of Bengal during the week under notice. The fall was heavy for this season of the year in some districts and was accompanied with hail in others, but little injury is reported, while the rain has benefited the cold-weather crops upon the whole. The harvesting of the rice crop is drawing to a close, and the outturn as a whole is excellent. Some of the pulses and sugarcane are being harvested. In a few places the early rice and cheena millet crops are being sown with advantage. Cold-weather crops are progressing favourably upon the whole, but Hooghly is suffering from drought.

N. W. P.—			
Meerut	(Jan. 27th)	...	Rain much wanted; prospects unchanged.
Agra	„	*Nil*	Injury from frost to arhar and pulse, otherwise prospects favourable.
Allahabad	(28th)	...	Rabi prospects unaltered.
Bareilly	(27th)	...	Rabi prospects good; a shower or two would do good to the crops.
Benares	„	...	Prospects continue favourable; no more rain.
Jhansi	„	...	Rabi prospects unchanged; arhar and gram have suffered from severe frost.
Punjab—			
Delhi	(Jan. 28th)	...	Crops healthy, but rain wanted; public health good.
Hissar	...	...	Crops progressing favourably; pleurisy, small-pox, and cattle disease prevalent.
Umballa	...	...	Crops suffering from want of rain; health good.
Jullundur	...	...	Rain much wanted; health good.
Lahore	...	...	Rain very much wanted; slight cattle disease.
Mooltan	...	...	Rain much wanted; health good.
Dera Ismail Khan	...	...	Crops deteriorating for want of rain; health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab—continued.		
Rawal Pindi ...	...	Harvest prospects doubtful; cattle disease in some parts.
Peshawar ...	...	Crops sown on unirrigated land suffering from drought; slight fever prevalent. *General Remarks.*—No rain during week ending 27th instant; harvest prospects unfavourable owing to continued drought; public health on the whole good.
Oudh—		
Lucknow (Jan. 27th)	*Nil*	Prospects are on the whole favourable, but a fall of rain would do good to the crops; peas, grain, arhar, and masur partially injured by frost; cattle disease prevails in some parts; public health good.
Fyzabad „	Slight rain	
C. Provinces		
Bilaspur (Jan. 23rd)	...	Weather cloudy; rain required for rabi; small-pox and cattle disease prevalent.
Upper Godavari ...	...	Weather clear; prospects favourable; fever abating; prices easy.
Sambalpur ...	...	Weather clear; harvest over; health good.
Raipur (Jan. 24th)	...	Weather clear; prospects favourable; health good; prices easy.
Chanda ...	...	Weather cloudy; rabi doing well; cattle disease prevalent; prices rising.
Balaghât (Jan. 25th)	20	Weather cloudy; threshing rice completed; rabi promises well; health good; prices steady.
Chhindwara ...	·15	Weather clear; more rain wanted; standing crops healthy; health good; prices fallen.
Chanda (Jan. 26th)	·30	Weather cloudy; rabi excellent; jowar partial failure; small-pox and fever prevalent; prices easy.
Nagpur (Jan. 27th)	·34	Weather clear; threshing kharif commenced; rabi doing well; cattle disease spreading; prices stationary.
Wardha ...	...	Weather clear; prospects favourable; small-pox prevalent.
Saugor ...	...	Weather clear; rabi promises well; small-pox increasing; prices unchanged.
Jubbulpore ...	...	Weather cloudy; rabi promising; small-pox continues.
Nimar ...	...	Weather clear; prospects good; small-pox and cattle disease prevalent; prices stationary.
Hoshangabad ...	...	Weather clear; prospects favourable.
Betul ...	...	Crops cut; yield average.
Narsinghpur ...	...	Weather clear; rabi prospects favourable; fever, small-pox prevailing; prices stationary.
Seoni ...	·75	Rabi crops thriving.
Mandla (Jan. 28th)	·04	Prices falling.
Dumoh ...	...	Weather clear; small-pox prevalent; prices risen. *General Remarks.*—In some districts the weather has been cloudy, and some rain has fallen during the week; prospects continue favourable, and prices are easy.
British Burma ...	...	No report received.
Mysore and Coorg—		
Mysore ...	*Nil*	Crops thriving; harvesting nearly completed; cattle disease prevalent in parts of five districts; public health generally good. *General Remarks.*—Agricultural prospects good.
Coorg ...	·03	
Assam—		
Gauhâti (Jan. 28th)	·04	Heavy mists in morning; cold nights; some days overcast and cold; reaping of salee crops almost finished; prospects of winter crops favourable; public health good.
Sylhet „	...	Transplanting of bura rice progressing; cold weather crops doing well; cholera abating; small-pox still prevalent.
Hyderabad Assigned Districts—		
Umraoti (Jan. 28th)	...	Rabi crops thriving; weather cloudy.
Rajpootana—		
Kota (Jan. 23rd)	*Nil*	Prospects and health good.
Bhurtpore (28th)	...	Great cold; health and prospects good.
Jeypore „	...	Agricultural prospects continue favourable; public health good; weather seasonable.
Ajmere „	...	Health good; crops hopeful; weather cold; mornings with frost.
Central India—		
Indore (Jan. 27th)	*Nil*	Health and agricultural prospects continue good.
Rutlam „		
Neemuch „		
Baghelkund (Satna) ...		
Nepal ...	...	No report received.

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 19th January 1875.

PRESENT:

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.

DISTRESSES (PRESIDENCY TOWNS) BILL.

The Hon'ble MR. HOBHOUSE moved that the Reports of the Select Committee on the Bill to regulate Distresses for Rents in the Presidency Towns be taken into consideration. He said that the Committee had made two separate reports, and he took the opportunity on one occasion of explaining to the Council what was the subject of the first report. The second report related to a new introduction into the Bill, in consequence of a valuable suggestion received from the Association of Attornies, of a clause to provide for the transfer to the High Court of cases in which the value of the property distrained exceeded one thousand rupees. They pointed out that under this Bill Small Cause Courts would have, or might have, to deal with large amounts of money; that the property distrained was sometimes very considerable; that we should in effect be enlarging the pecuniary jurisdiction of Small Cause Courts a good deal, and that it would be more satisfactory in such cases to enable them to be removed to the High Court. The Committee had therefore inserted a section to that effect, and that was the subject of their second report. He did not know, after what had been already said about the Bill, that he need do more now than give the Council a summary of the alterations it made in the present law. He had already explained that it swept away a great deal of antiquated law, and relieved the statute-book of several statutes which contained a great deal of matter that was of no use, as much as was useful in them being comprised in the Bill. The alterations made by the Bill were these: First, the Committee provided that no distraint should be made for rent due for more than twelve months. That suggestion had been received from the Government of Madras, who had sent in a very thoughtful and carefully considered letter on the subject of this Bill. There seemed to be no such thing as a distraint for rent in Madras, and the Government of Madras thought, and a great many excellent lawyers thought, that the whole system of distresses for rent was a mistake, and that it would be far better to abolish the system altogether. MR. HOBHOUSE was not prepared to do that. The system prevailed largely in Calcutta, and also existed in Bombay; and he thought the Council ought not to interfere with it. That it did not prevail in Madras was a subject of congratulation; but he was not prepared to bring the law in Calcutta and Bombay into conformity with the practice in Madras.

The next alteration made by the Committee was to make it clear that the property to be seized should be the property of the debtor. There were sometimes cases which gave rise to disputes and to much hardship, where the property seized was the property of some person wholly unconnected with

the rent for which the distress was issued. The Committee also provided that certain articles should be exempted from distress. Such articles were now exempted in cases of execution by law, and in practice they were usually exempted from distresses for rent. We did not take a coat off a man's back, and therefore the Committee had provided that things in actual use—a man's necessary wearing apparel and the like—which were protected from being seized in execution, should also be exempted in distresses for rent. That also had been suggested to them by the Government of Madras.

Then the Bill proceeded to deal with claims and disputes which arose out of distresses. The Committee had given to the Court which decided all other questions on the subject of the distress, namely, the Small Cause Court, power to adjudicate claims of third parties, and claims for damages or compensation where the distress was unlawful. Then there was the last alteration to which MR. HOBHOUSE had already referred, that when a distress exceeded a certain value, there should be power to transfer the case to the High Court.

These were the alterations in the law which the Bill proposed to make.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE also moved that the Bill as amended be passed.

The Motion was put and agreed to.

INDIAN LAW REPORTS BILL.

The Hon'ble MR. HOBHOUSE also moved that the Report of the Select Committee on the Bill to diminish the multitude and improve the quality of Law Reports, and to extend the area of their authority, be taken into consideration, and said:—"As it is now some ten months since this matter was before the Council, it will probably be necessary that I should remind them of what has taken place, and recapitulate very briefly the objects and scope of the measure now proposed. It is the more necessary to do so, because there has been an amount of controversy raised in the papers sent in to the Select Committee akin to the controversy raised at this table; controversies, as I shewed before, quite unwarranted by anything comprised in this Bill, and to a very great extent irrelevant to it, and relevant only to a plan contemplated by the Executive Government, or to other plans erroneously attributed to it.

"Before explaining what it was that the Council were asked to do, I told them that it was only a small portion of a larger plan contemplated by the Government of India for improving the condition of the Law Reports. I explained the function of a Law Report, and shewed how it passed into and became part of the general law of the land; how important, therefore, it was to exercise judgment in the selection of cases to be reported, and to issue them with some stamp of authenticity upon them, so that only that which is useful and accurate should be looked on by the lawyer as a necessary part of his library; but that in this country the matter had been left to private speculation with only some pecuniary assistance given by Government; that consequently the public interest, which is to have nothing but good reports of nothing but useful precedents, had become entirely subordinated to the commercial interest of the publishers, which is to have the largest price at the smallest expense and trouble to themselves: that owing to the fact that all reports are received as of equal authority, one man's publications must be bought just as much as another's; and that the consequence was that we have reports bulky, expensive, and to a great extent useless, which nevertheless the profession are compelled to buy. Such is the result of the combination of the two prevailing principles; first, that law reporting is a fit subject for commercial speculation, and next that Law Reports are to be treated as binding authorities from whatsoever source they emanate.

"All this I proved in detail by evidence and authorities of various kinds; and I stated that the Government would attempt to apply a remedy by taking the business of reporting in the High Courts under their own supervision. If that were done, and done with reasonable efficiency, there would at any rate be a set of reports bearing some stamp of authority upon them, and they would be published by those who might be trusted not to allow commercial motives

to outweigh their sense of the public interest. If, again, the Bar would use for the purpose of citation in Court, and the Bench would receive as authorities, only the authorized reports,—a thing entirely within their power,—the professional man, who did not desire to buy others, would not be compelled to do so.

"But such a scheme as that requires no legislation, and I explained that there were only two points on which the authority of the legislature was invoked, and that on one of those points I could hardly say that it was actually requisite.

"The point I have just referred to is that which is embodied in the third section of the Bill, which I will read to the Council.

'No Court shall be bound to hear cited, or shall receive or treat as an authority binding on it, the report of any case decided by any of the said High Courts on or after the said day, other than a report published under the authority of the Governor General in Council.'

"Now that is only what the Courts, or at least the superior Courts, may now do for themselves if so minded. It is what the Bombay High Court, who object to this measure, say is the right thing to be done as between better conducted and worse conducted reports; such publications, for instance, as the Bengal Law Reports and the Calcutta Weekly Reporter. It is what they tell us they are themselves prepared to do as between those two publications, if only the Calcutta High Court will lead the way. But such things have been said over and over again, and occasionally Judges have been found who have tried to work the experiment. But they have never succeeded. There has not been sufficient unanimity or persistence in the attempt, and there is no reason to suppose that there will be more now, if each Court or Judge is left to act entirely on his own motion. With a declaration of the legislature to support them, there will at least be a better chance. And we may by such a declaration free subordinate Courts from the terror and oppression of the numbers of obscurely reported cases with which it is said they are bombarded, so that they shall not be blamed if they refuse to receive those imperfect reports as binding authorities. Such a provision, therefore, as the one under consideration, may strengthen the hands of those who desire to have good reports and good ones alone to guide them. And if we should succeed in supplying that essential article, a good report, and I always say we shall fail unless we do supply it, we may possibly succeed in getting it received as the only authoritative exponent of judicial law, however much others may be used for other purposes. I repeat that we may easily fail; we certainly shall fail unless the Bench and the Bar are disposed to act in the spirit of this section; but I ask the Council to pass it as embodying a principle which even opponents admit to be sound, and as giving some aid to those who desire to improve the present condition of law reporting in India.

"The other object for which the action of this Council is invoked, is not necessarily mixed up with any particular system of reporting; for it would, at least in my opinion, be desirable even if we had no such scheme of reporting as that now contemplated; and again the scheme may work well enough without any such new law. But it is connected with some system of reporting, though not with any particular system, and it naturally falls to be considered when we are dealing with the subject. It relates only to the geographical area within which the decisions of the superior Courts are to be accepted as binding authorities. At present a High Court—say the Court of Madras—may place an interpretation on a general law—say the Penal Code—and that interpretation will have no binding force out of the province. A Bengal Magistrate may disregard it or know nothing whatever about it, and *vice versâ* the Madras Magistrate is a stranger to the Bengal decisions. The reason for that state of things is to be found in the history of the country. The different presidencies had originally a very loose connection with one another, and when Crown Courts were established for them, the law which those Courts administered in common with one another was confined to the presidency towns or to the British people. At the present day all parts of British India are bound up much more closely together: they are subject to a common authority in India, both executive and legislative, and there are great Codes of Law enacted for the whole community. It is now therefore a decided drawback that when a valuable exposition of a portion of that general law has been made by one of the superior Courts, the whole community should not have the full benefit of it.

"I will mention a case which happened soon after I came to India, and which first drew my attention to the existence of this anomaly. It did not arise in connection with law reporting, and it illustrates the remark I made just now, that this portion of the Bill may rest on its own merits, independently of any particular system, and in connection with any system of reporting.

"There are many actions committed by men, which, according to circumstances, may be crimes of a deep dye, or venial offences, or mere personal vices, hardly to be classed among crimes at all. Yet for the legislature to distinguish accurately between such cases is quite impossible. The law must use some general expressions which, if they are to be very rigidly and literally interpreted, might have the effect of subjecting to severe punishment actions which ought only to be punished very lightly, or ought not to be punished by the hand of any human ruler at all. Such is the case with portions of the Penal Code. One section of it in particular, if its language be construed quite literally, visits with the liability to fine and to ten years' imprisonment, an action which in its simplest form is extremely common, which rather bears the character of a vice than of a crime, and so has usually been left by all laws other than ecclesiastical laws to carry its own chastisement with it. But under some circumstances this same action may be a crime of a most odious character, and one affecting society in a vital point. Well, it happened that a person who had committed this action in one of its simpler forms was charged before a Madras Magistrate and sentenced to a severe punishment. On appeal the High Court of Madras reversed this sentence, pronouncing a most sensible judgment, cutting down the literal meaning of the section, putting a reasonable interpretation on it, and confining its operation to what would be really grave offences. Afterwards, a similar case occurred in another province; and again the Magistrate convicted the accused and sentenced him to severe punishment. The Magistrate probably knew nothing of the Madras decision; but if he did know, he was entitled to disregard it, and he preferred the literal construction of the Code. Now, that is a serious matter. Draconian laws invariably bring the whole law into contempt, and set the sympathies of people to work against the law and in favour of offenders. The subject-matter is one on which accurate distinctions cannot be attained by the legislator, and on which I for one think that if we attempt to alter the Penal Code, we are quite as likely to mar it as to mend it. It is one, therefore, eminently fitted for judicial exposition, which can introduce a number of shades and qualifications unattainable in a statute. The thing wanted, therefore, is to bring the Madras decision home to the subordinate Courts in other Provinces, but that, as the law and practice at present stand, is impossible.

"Now I appeal confidently to all who hear me, and ask them whether it is not an inconvenient—not to say an absurd—thing, that a decision by the High Court of Madras on a very important Statute which affects the whole of British India alike, and which touches human actions of very frequent occurrence, should be received as law in Madras, and that, directly it reaches the boundaries of that province, its authority should cease? Is it not clearly right that the whole of British India should have the benefit of an interpretation placed by a Court of the highest rank on a law passed by this Council for the whole of British India? Surely such a decision should be co-extensive with the law, and should carry with it whatever authority its own intrinsic merits and the degree of its harmony with other decisions of co-ordinate Courts may entitle it to have.

"This object, then, is aimed at by section 2 of our Bill, which I will now read:—

'Every judgment delivered on or after such day by any of the said High Courts (whether by a Judge sitting alone, or by a Division Court, or by a Full Bench) and reported in the said Indian Authorized Law Reports, shall have the same authority in all subordinate Courts beyond the limits of the appellate jurisdiction of such High Court as independently of this Act it would have within such limits.'

"The Council will observe that, in this section and also in section 4, we carefully guard against giving to judicial decisions any more binding quality of

authority than they have now. All we seek to do is to extend the area of their authority, and we do it by connecting it with our scheme for reports, and so securing that the decision which is to have this extended authority shall not be one reported at haphazard, but shall be as accurately given and in as useful a shape as a responsible reporter can make it.

"Well, but it may be asked whether this object requires legislation. I will not say that in any strict legal sense it does. It would, I suppose, be competent for the Courts here to say that they would receive one another's decisions as binding equally with their own, and in process of time such a practice would be recognized law, just as much as it is now law that the decision of a superior Court shall bind the Courts subordinate to its jurisdiction. Just in the same way the Courts of the United States have ruled that English decisions are binding authorities there, and that practice has passed into the law of the country; while the English Courts only receive the United States' decisions for purposes of instruction and not as binding authorities. But having regard to the history that I have referred to, and the long course of practice resulting from it, I say that that which is legally possible is practically impossible, and that unless the legislature does it, the thing will not be done at all.

"The main objection raised to this proposal is one which was indicated by my hon'ble friend, Mr. Dalyell, when the Bill was introduced, and I answered it at the time. But as it has been brought forward again in some quarters entitled to the highest respect, I will again give an answer to it, and in somewhat more detail.

"It has been objected to this Bill that it provides no machinery to prevent contradictory rulings. But I never heard of anything that could prevent them. As long as we have independent minds giving decisions on the same subject, so long we shall have contradictory rulings. It does not seem to me desirable, if it were possible, to prevent such a result, nor, if it were desirable, would it be possible.

"It is quite true, then, that it is no part of our scheme to prevent contradictory rulings. It is also true that, when the ruling in one presidency may be quoted as binding authority in another, contradictory rulings are likely to be brought to a direct issue with one another more quickly than before. But that I look upon as one of the advantages to be gained. See the effect of the present system. You may now have two streams of decision at variance with one another, running on side by side in two contiguous territories nominally subject to the same Code of Law, and in which there is no reason why the same law should not prevail. Referring, for instance, to the cases under the Penal Code which I have just stated, we find a class of actions which may be committed with legal impunity in Madras, and just over the border may be the subject of severe punishment. And yet the Penal Code is the law in both places. Referring, again, to an instance I quoted on a former occasion, we find two adverse currents of decision going on in Bengal and in the North-Western Provinces under the same section of the Rent Act; going on for several years, until one of the High Courts alters its views and adopts the views of the other. I say that it is much more for the benefit of the public that when such differences arise, as arise they must, they should be brought face to face, and that each Court should be compelled to revise its work in the light and under the pressure of the other's decision. Of course, if the difference of opinion is found to be final and irreconcileable, it must be settled by some superior authority: either by the Privy Council, which may operate on some cases, or by the legislature, which can operate on all. But, as I have just been showing, there are many cases in which a judicial exposition, if it can be got, is far better than an utterance by the legislature, and in which, therefore, the legislature would only act when its action was found to be absolutely necessary. And in other cases the legislature is not wise enough to know in which direction to settle a dispute until it has been threshed out by a sufficient number of judicial controversies, a point which I illustrated on a former occasion by reference to the history of provisional committees in England. It is therefore in every respect better that the contradictory interpretations of a law common to all India should be brought into collision with one another in a direct, open, and

speedy way, than that they should exist in the more embarrassing form of conflicting laws for places intended and supposed to be under the same law.

"But then it is said; how is an inferior Judge to guide himself? how he is to act when he finds the decision of his own appellate superior conflicting with that of another High Court? I answer that Judges are appointed to settle doubts, and that he must act as other reasonable men act when they find themselves in the presence of a doubtful and debateable question. I know how I should act. The conflict of authority might come to me in many different shapes. It might come on a point on which I myself had a very clear opinion that my own Appellate Court was wrong, and that it would on reconsideration adopt the conflicting judgment. In that case I should follow my own opinion. It might come on a point on which I could form no very decided opinion. In that case I should follow my own Appellate Court. I might find that the opinion of one Court was that of a single Judge not assisted by Counsel, and very briefly delivered; while that of the other was given by a number of Judges, unanimous in opinion, assisted by careful arguments of Counsel, and delivered in a carefully reasoned judgment. In that case I should follow the weightier judgment. I might find that my own Appellate Court had delivered its opinion deliberately, and after full consideration of the conflicting decision. In that case I should follow my own Appellate Court. Many other cases might be put in which a man would be guided one way or another by various circumstances. But no serious practical difficulty that I see would arise: certainly none which English Judges are not in the habit of encountering, and which Indian Judges may not now have to encounter, when the Divisions of their own Appellate Courts have differed in opinion.

"There is another class of objections put forward, which, if I really have understood them aright, are somewhat surprising. We are told that there are different schools of law and different customs prevailing in different parts of the country, and that it will be very dangerous if a decision given with reference to one school and one set of customs is to be quoted as binding authority for another. No doubt it would be very dangerous: but I cannot make out how the danger is increased by this Bill. Nobody supposes that a decision about a promissory note will be quoted as an authority in a horse-cause, though the Court which pronounced it has equal authority in both cases: why then should we suppose that a decision relating only to Hindús will be applied to Muhammadans, or that one relating only to Sunnis will be applied to Shiás, or that one relating only to the Benares school will be applied to the Bengal school, or that one relating only to Bengal customs will be applied to Bombay customs? Local and personal laws and customs are not divided according to the local area of the jurisdiction of the High Courts. The Calcutta High Court, for instance, has Hindús and Muhammadans, Shiás and Sunnis, different schools of law and different local customs, within its jurisdiction. For each set of litigants it decides according to their own law. I have not heard that any confusion is thereby created because the Calcutta decision is authoritative throughout the whole of Bengal. Why then should any confusion be created by giving it precisely the same quality of authority in Bombay? The long and the short of the matter is, that if the law is the same for the two places, there must be conflicts of opinion about it, and then it is better to bring them to issue as quickly as may be; but if it is not the same, no conflict can occur.

"Such, then, is the Bill as the Select Committee presents it to the Council; and before I go on to speak of the plan with which it is connected, I will mention what alterations have been made in Committee. There are only two, and neither is important. One is, that instead of making it come into force on a given day, we say that it shall be brought into force by notification. The reason is that arrangements have to be made with the staffs of reporters. I am not aware of any difficulty in the way of such arrangements, but there has been some delay in making them, and we thought it would be more convenient not to bring the Act into operation until they were concluded. The other is that the Bill as introduced contained a definition of the expression 'Subordinate Court,' which affected the highest Courts of Appeal in the Panjáb and elsewhere. It was not necessary; it has been objected to, and it has

been struck out. The clause being gone, I do not argue about the soundness of the objections; for I have so much still to say that I avoid all unnecessary matter.

"Now, I have been very particular in explaining to the Council the precise extent and character of the contents of the Bill, because they will find that the somewhat emphatic opinions which have been expressed against it are really not directed to anything contained in it, but to a scheme that it is connected with, and to a very erroneous conception of that scheme. The main objection really is to any interference at all by Government with the present system of reporting; and that, under the notion that our object is, not the simple one of getting fewer and better reports, but the very ambitious one of getting a control over the substance of the law by means of reports. And though I have shown that the scheme may well go on without the Bill, and that the only piece of legislation in the Bill strictly so called is to be desired independently of the scheme, yet, connected as the two actually are together, I cannot be surprised if those who object to the scheme endeavour to tack their objections on to the provisions of the Bill.

"Now it might, perhaps, be sufficient on this part of the case to say that the Council have on two occasions accepted the principle of some legislation in connection with a scheme for the supervision of law reporting by Government. When I moved for leave to introduce the Bill, I detained the Council a long time, and I have no doubt they were very weary of me, while I proved in detail the case for interference by Government; and there was no opposition to the introduction of the Bill. When I introduced the Bill and moved to refer it to a committee, there was opposition, and if the Council then incurred any danger, it was not for lack of warning. My hon'ble friend, Sir George Campbell, then occupied that empty chair, and he set forth his objections with all the force of rhetoric of which he was so great a master. The Bill was a revolutionary Bill; it was an unconstitutional Bill; it set up an irresponsible judge over responsible judges; it placed an enormous power in his hands; and in short it would be a very wrong thing to send it into committee. Nevertheless, the Council did send it into committee. I conceive that, if any principle was decided on these two occasions, it was the principle that Government was right in attempting to take the supervision of law reporting into their own hands, and that assistance in some shape should be given to them. At the same time I always feel that in this assembly we discuss matters under great disadvantages, and that on many subjects the communications made to Select Committees have more of the essentials of a public discussion than anything which takes place at this table during the two first stages of a Bill. For this reason, though the previous decisions of the Council are certainly not to be disregarded, yet I am very reluctant to use them as preventing further debate when the ground-work of the measure is attacked from without. I therefore think it right to acquaint the Council with the principal objections made to the whole scheme of reporting under the supervision of Government. I will only ask you to bear in mind the arguments I adduced in its favour and the answer I made to objections advanced here—topics which I have no intention of discussing all over again.

"Neither will I detain the Council by reading the opinions of those who think the measure a right and good one. I will only say that the High Court of Calcutta and some eminent district officers in Bengal approve of its principle; and that the only body in India which has actual experience in the business of law reporting, namely, the Calcutta Council, has cordially acted with the Government from the outset of the scheme. I will now refer to the objections, and first I take those which come from Madras.

"The High Court of Madras have not sent in any collective opinion. But I hold in my hand a Minute written by Mr. Justice Innes, who first states the objection arising from the differences of local laws—an objection I have already dealt with. He then proceeds thus—

'Nor do I believe that the evil aimed at will in the least degree be diminished. The Government Reports will be so scanty that the Profession and the public will demand more, and the demand will certainly be followed by the supply. It is useless for the law to say that the High Court shall not be bound to receive anything as authoritative but what is

in the Government authorized Reports, if other Reports are still sold and consulted, and though not publicly quoted, still used as guides to a decision.

'The Government Reporters under a Central Editor, practically uncontrolled, will determine what to report and what to leave unreported. Important decisions adverse to and disapproved of by the Government may thus be excluded. Nor does there appear to be the smallest guarantee for the qualifications of the Reporters being equal to the delicate duties they will have to perform. I strongly disapprove of the Bill.'

"Mr. Justice Kindersley writes thus:—

'I object strongly to the third section, which places it in the power of the Government to exclude from the law any decision of which it disapproves. The matter is quite beyond the proper scope of legislation; and in my opinion the Act cannot fail to be mischievous.'

"And the Government of Madras say as follows:—

'His Excellency strongly deprecates the institution of the office of Central Editor with the powers of control and selection suggested for him. He is of opinion that, if a High Court interprets the law contrary to the intention of the legislature, the proper remedy is for the latter to pass a declaratory Act.'

"Now the Council will observe that Mr. Justice Innes makes two objections to the whole plan. The first is, that it will fail in checking the multitude of reports. I have already said that in my opinion it may easily do so, and certainly will, if treated hostilely by the Bench and the Bar; and I think that such a failure will be the worst that can come of the attempt we are about to make. The second objection is, that the scheme will not fail; it will not only not fail, but will be so terribly efficacious that no rival will exist in its presence; that the Government will become the sole mouth-piece of judicial law, and will be able to mould it as they please. And in this objection Mr. Justice Kindersley and the Government of Madras express their concurrence.

"Now, I wholly agree with Mr. Justice Kindersley in thinking that to place it in the power of the Government to exclude from the law any decision of which it disapproves is strongly objectionable, and is a matter quite beyond the scope of legislation; and with the Government of Madras in thinking that the proper remedy for inconvenient decisions (at least when they are final) is legislation. But I do not see how those opinions constitute any objection to the scheme of this Government, because it is absolutely certain that no such operations as they imply are contemplated, or will be attempted, or could succeed if they were attempted. But before I go further into the matter, I will read the opinion of the High Court of Bombay, who have enlarged somewhat more upon it—

'We agree in the opinion of the Government of India that it is desirable to diminish the quantity and improve the quality of the reports published for forensic use in British India; but while perfectly satisfied of the excellence of the intentions and single-mindedness of the Government of India in the matter, we think that the proposed legislation is unnecessary, objectionable in principle and unprecedented.

'Law reporting is, in a certain sense, a branch of legislation. Decisions in the Superior Courts of Justice in the United Kingdom and its Colonies, which endure the test of time and free discussion, no doubt become additions to the law; but it does not thence follow that law reporting should be, in any respect whatever, under the superintendence of the most frequent litigant in the Courts of this country, namely, the Government itself, or that the Reporters should be nominated or controlled by that litigant. A proposition more completely contrary to sound principle than that the Reporters should be either under the influence or control of Government, it is difficult to conceive. It is most undesirable to leave room for the belief that Government has secured to itself, or its nominees, the power of preparing or suppressing the reports of decisions which it may suppose to be hostile to its interests or policy. It may be said that it is not to be supposed that Government would stoop to make an improper use of such opportunities. We ardently hope that would be so; but if there be any part of the Brtish Empire in which such a power would be objectionable, it is in India, where the Government is more completely despotic than in any other country under British rule, and where it has not always the most favourable construction placed upon its acts. The legislators, in the case of what Bentham styles 'Judge-made law,' are the Courts, and if the circumstances of this country at present are such that law reporting cannot flourish as a private enterprise, and ought to be supported at the expense of the State, and, with a view to improvement in quality and diminution in quantity, to be placed under some control or superintendence, it manifestly should be placed under the control or superintendence of the Courts, and not of the Government. The tribunals which pronounce the decisions must know best whether or not they are correctly reported, and to what extent it is desirable that they should be reported.

'Honourable and pure as we are assured that the motives of the present Government of India must have been in introducing this Bill, and suggested, as legislation on the subject of law reporting very probably was, by persons not members of Government, yet it is manifest that, as regards law reporting, Government is in the position of Cæsar's wife,

and that no Government, present or future, ought to be subjected either to the temptation or the suspicion of being able to suppress the publication of decisions adverse to it or involving principles which it may deem likely, at some future time, to be inconvenient. The nomination and dismissal of the Reporters ought to rest, as does that of all other officers of the High Courts under the Charters, with the Chief Justice of each High Court, and should not be vested in Government, nor ought it to take any part in the preparation or selection of the cases to be reported. Those who are acquainted with the earlier or later history of British India are not unfamiliar with the exhibition, by executive officers of Government, of jealousy of the Courts of law of this country, and it is an untoward, although of course merely a fortuitous, coincidence, that while Government, at the suggestion of such officers, is, on the one hand, seeking, so far as may be, to exclude by legislation the jurisdiction of Courts of law in matters of revenue, it is, on the other hand, by legislation also, essaying the establishment of a monopoly of all authentic law reporting, whereby (although we cannot suppose its intention to have been so) it will be empowered to suppress at pleasure the publication of the decisions in such Government cases as may still remain within the cognizance of those Courts, and as may be obnoxious to Government. It is said that it is in its Legislative Department that the Government of India is to undertake this new charge; but it is not and could not be asserted that the Legislative Council itself will exercise any supervision in the matter; and it would be wholly unsuitable that it should take any part in it. Law-reporting under this Bill would in fact be in the hands of nominees of the Executive Government, and the circumstance that the chief of those nominees might also be named by that Government to assist the Legislative Council in the performance of its duties, would not remove any one of the objections which exist to the proposed scheme.'

"Then the Government of Bombay, in forwarding this opinion, say as follows:—

'I am to state that these Reports seem to His Excellency in Council to raise many weighty arguments against the measure, and that he is constrained to express his entire concurrence in the objections taken to the centralization in one series of Reports of the decisions given in all parts of India, and to the right of control over the acts of the Reporter, which it is proposed to vest in the Executive Government, instead of in the Courts of law.'

"From that last expression 'instead of in the Courts of law,' I gather that the Bombay Government are labouring under a mistake. There is no control vested in the Courts of law; it is proposed to vest it, though not by this Bill, in the Government instead of in nobody.

"But to go on with the main objection as stated by the learned Judges. I accept with all sincerity their disclaimer of imputing any sinister motive to the Government. But then, what is the meaning of all this that I have been reading? Spotless as we are, what is the danger to be feared from us? Either all this must mean nothing at all, or it must mean that we are going to do a very wrong thing; that, being the most frequent litigants in the country, we shall be tempted, and, in spite of all our purity and innocence, shall fall; that we shall garble reports; that we shall palm off our base coin upon the public as the true issue of the judicial mint.

"Now, if I were of a querulous disposition, I should complain a little of our friends in Madras and Bombay, that they have dealt us somewhat hard measure, for while they impute to us schemes of daring ambition, they do not credit us with as much common sense or worldly wisdom as would suffice to conduct the business of a retail haberdasher. I will not avail myself of the generosity of the Bombay High Court, but will suppose that, instead of being spotless as snow, we are very leopards or Ethiopians, and that we entertain nefarious designs of advancing our own interests through right and through wrong. What is it supposed that we shall do? First, it must happen that some evilly-disposed branch of Government finds that an inconvenient decision has been passed against it: the matter is of importance, but it is not advisable to appeal, nor to attempt any alteration of the law. But the bright idea occurs to them, that if they can only prevent the case from being reported, it will do them some good, though they must obey the decree, and though they must know that the same point, when it occurs again, will probably be determined the same way. So they apply to the Editor of the Reports, and the two conspire together to suppress the decision, though otherwise worthy to be reported and sent up by the Reporter as such. All this is done to gain what? Just the barest chance that the decision may be forgotten, and that when the same point happens to occur again, it will come before another Court who may decide it another way. But what is the risk run? If the decision is of the slightest importance, will the

Court, the Bar, the vakíls, and the public forget all about it? The chances are a hundred to one against it. And then, what will become of our scheme? It will immediately become known that we are using reports to give onesided views of the law; the character of our reports will be blown upon; nobody will be content with authorised reports, because they cannot be trusted to give the really important cases; and reporting on the commercial principle will, by our own folly, be fixed on a firmer basis than ever. In fact, it is a matter of the greatest surprise to me how such an objection can be made otherwise than in the heat of debate and on the spur of the moment; and I feel it difficult to address myself with due gravity to so chimerical an apprehension.

"Well then it is objected that the scheme of the Government is not embodied in the Bill; but that objection does not proceed from any one who is friendly to the scheme. Members of Council have in their hands copies of some rules intended to shadow forth the sort of way in which the Government proposed to start the work of supervision. They will observe that the whole thing depends very much on the relations between the Editor, the Reporters, and the Judges, which must be adjusted from time to time, perhaps at short intervals. At the present moment circumstances point to our learned Secretary as the fittest person to be Editor; but whether that can be a permanent arrangement cannot be told till after actual experiment. In fact it is a new thing, and there is no part of it which it may not be necessary to mould afresh according to circumstances. There is not the least reason why a process of pure administrative detail should be embodied in a law, and if I were asked how to ensure failure for the scheme, I should say that the best plan was to make it rigid and inflexible by law.

"Now I come to the only alternative scheme proposed by those who object so strongly to ours. It will be remembered that the Bombay High Court agree with us that it is desirable to diminish the quantity and improve the quality of the Law Reports. They only object to our method, and they say that the proper course is for the High Courts themselves to undertake the supervision of the reports. They write as follows:—

'We think that the statements of facts and of the arguments, and the head or marginal notes, should be submitted to and revised by the Judges who have presided in each reported case, as well as the judgments, which are, and for a long time past have been, so submitted and revised; and under this being done, we think that the reports should be stated on the title-page to be published under the authority of the Court. The first of the above alterations will subject the Judges to some additional labour, but it is a duty which we are perfectly willing to undertake. Looking to the position of the Editor of the Reports as an officer of the Court, we have no doubt that we have full power to make those alterations in the system at present existing here, and that the Reporter will be perfectly ready to carry our views into effect.'

"Well, that is a proposal often made and never, so far as I know, acted on with any persistency. We cannot make the Judges do this work. We have no such offer from any other High Court, and from what I learn from conversation with Judges here, I do not believe that they would, or properly could, undertake the business. And I must say that I feel a little sceptical about the time at the disposal of the Bombay High Court, with all their good-will. I hear of them sometimes in connection with other things besides Law Reports. I remember their making an application for an additional Judge on account of the arrears of business, which application was successful. I am not sure that there are no arrears now. I observe that their letter on this very subject concludes in these terms:—

'We must apologise for the delay in replying to your Excellency's communication as to the Bill, the subject of our letter. The pressure of our ordinary business is such that we have much difficulty in finding time to write upon new projects of legislation.'

"The letter is a very full and very able one, and it must have cost thought and time; but I fancy that it is a less laborious business than the supervision of a volume of reports. Therefore I cannot help feeling my doubts. At the same time, if the Judges of that Court will be so good as to give attention to the matter, and find that their more immediate business leaves them leisure for it, I most freely and frankly admit that it is sure to be better done than it could possibly be otherwise: their assistance will, I am sure, be most heartily welcomed; and the Editor will probably enjoy almost a sinecure as regards the Presidency of Bombay.

"Indeed, the Bombay Judges give us to understand that their reports are even now to a great extent supervised by them and are on a par with the best reports elsewhere. They may be very good, and if so, it is certain that there will be exceedingly little interference with them. But I still think they would be better for some amount of supervision, and will give an illustration of the way in which I conceive that supervision would work.

"I have not to consult Indian reports very often, and it so happens that, of the Bombay reports, I have only looked at one since I read the letter of the High Court. I wanted to ascertain the exact terms of the decisions on a particular point, and this case was mentioned in a text-book as bearing on it. Well, I read the head-note, which made the decision refer to quite a different point. On dipping into the report, however, I found that the head-note did not state as being decided the point which really was decided, but did mention as the decision that which was only a dictum not necessary for the decision: and I further found that the statements of fact by the Reporter and by the Judge were at variance. Now, those are matters in which supervision would be of use. We are told that unless the Editor has understanding of the special matter reported on, he cannot supervise a report. I think he can usefully do so if he is familiar with reports, and keeps before his eyes the points to be attended to in framing them. In the case in question, I had no special knowledge of the subject; but I could see that neither the head-note nor the statement of facts corresponded with the judgment. If I had been Editor, I should have sent the report back to have a proper head-note affixed, and to have the facts correctly ascertained and stated. How much of such supervision is desirable will be found out by experiment, and it will differ in different places and at different times.

"But I will not pursue the scheme into further detail. I have presented to the Council the main features of the case. I can see that there is dislike and suspicion of the Government plan in some quarters, but I cannot see that there are any valid grounds for it. And I trust that the Council will be of the same opinion."

The Hon'ble MR. DALYELL was prepared to admit that the hon'ble mover of the Bill had, in the observations which he had made, in a great measure met many of the objections which had been advanced against this Bill. But still, when we remembered the high quarters from which those objections emanated, and the very forcible manner in which they had been urged, he thought the Council were bound to exercise the very greatest caution before committing themselves to the measure, and to satisfy themselves that the advantages to be gained by passing this Bill would largely counterbalance the difficulties which, he could not help feeling, must inevitably occur if it became law in its present shape. His hon'ble friend was correct in telling us that most of the objections had been levelled rather at the Government plan of operations under the Bill, than at the provisions of the Bill itself. But he questioned whether his hon'ble friend was equally correct in the opinion which he apparently held that that plan could be carried out without this Bill. No doubt the Government could establish a system of law reporting under a central editor without any enactment on the subject, and it would possibly be within their competence to take under their immediate superintendence the present staff of reporters which was attached to the several High Courts; but the reports published under such a system would have no more authority than the present reports, and two out of the three objects of the Bill would fail to be secured. Under such a plan the reports might be improved in quality, but they would neither be diminished in quantity, nor would the area of their authority be extended. He very much questioned whether it would be worth while to carry out such an expensive plan for the purpose of securing so very partial and probably problematical a benefit. His hon'ble friend had reminded the Council that when the Bill was introduced their late colleague Sir George Campbell had spoken of it in no flattering terms. He had characterized it as a little Bill, but not an innocent Bill, and as one the importance and effect of which was in inverse ratio to its length. He and other members of the Council had also then expressed the opinion that

some indication of the mode in which the Bill was intended to be carried out should be given in the Bill itself. The Bill gave power to the Executive Government to authorize the publication of certain reports, which would then be placed in a superior position to all other reports, inasmuch as the subordinate Courts would not be obliged to permit the quotation of any reports other than these authorized reports. But nothing was said in the Bill as to the mode in which these reports would be authorized, or under what provisions or restrictions (or, as Sir George Campbell expressed it, "safe-guards") this power was to be exercised. It was evident that the effect of the Bill would depend entirely upon the mode in which these reports would be authorized, and MR. DALYELL still thought that the Bill was defective in leaving these matters to be determined in the rules which were to be drawn up by the Executive Government, instead of making distinct provision regarding them in the Bill itself. When we remembered this omission in the Bill, he thought the Council would agree with him that the objections which had been raised, although they did not apply to the Bill itself, but rather to the plan or rules under which the provisions of the Bill were to have effect, were deserving of careful consideration.

So far as he was concerned, however, he had some doubts whether even the Bill itself in its present form was altogether unobjectionable. He questioned whether the Government should take this power to which he had referred—whether, in fact, law reporting in this country should in any way be under the control of the Government? The days of personal Government had passed away, at any rate in the greater part of the country. The reign of law had commenced, and he for one was decidedly of opinion that anything which could possibly be interpreted as an interference with the decisions of the law Courts should be avoided. He submitted that, if this power of giving special authority to certain reports were taken, and was exercised, as it must be, by devolving the duty upon some official or set of officials in the ordinary employment of the Government, it would be quite possible, and not at all improbable, that the outside public might suppose that some sort of interference with the decisions of the Courts was to be attempted. The Council were aware that the subordinate Courts were bound by the decisions of the superior Courts. Now if the persons who reported these decisions of the superior Courts were under the control of the Executive Government and not under the orders of the Judges who pronounced the decisions, there was no safe-guard that some judgment which contained views adverse to those entertained by the Executive would not be omitted from the reports, and a control be thus exercised over the decisions of the subordinate Courts on the same subject. His hon'ble friend laughed at the idea of anything of the kind occurring, and MR. DALYELL did not suppose that it would occur; but still it would be possible, and some of the public might think that it did take place. At any rate, it might often happen that a decision would not be reported in such a manner as to give it that precise bearing which was intended by the officer pronouncing the judgment. When his hon'ble friend asked permission to introduce the Bill, he gave some instances of the power of the law reporter in England. He told us that we had not, in the reports of Lord Ellenborough's decisions, what that learned Judge had decided, but what his reporter, who afterwards became Lord Campbell, had selected. If our reporters were altogether independent of the Judges, we might find ourselves in the same position in India. We might find in our law reports, not what the High Courts decided, but what the reporters, aided by the central editor, selected. His hon'ble friend would no doubt reply that it would be very easy to provide in the rules that the Judge pronouncing the decision should have some control over the report. But MR. DALYELL's answer to that would be that the rules might at any time be altered without any legislative sanction being required.

As far as he could recollect, in the original scheme which had been proposed for the improvement of the law reports, it was intended that the Judges should take a much more active part than appeared in the plan which was now set forth; and in spite of what his hon'ble friend had said that day, MR. DALYELL still thought that the only way of getting over the whole difficulty would be to induce the High Courts to become responsible for their own law reports. He could not help thinking that they would do so if the

Bill were framed somewhat differently; if instead of giving the Executive Government the power of determining what should be authorized reports, the Bill merely declared that the reports issued by the authorized Reporter of each High Court, and no others, should be binding on the Courts below. A Bill in this shape would have the double advantage of clearing up the doubt, whether at present a law report had any binding authority at all, a point which section 4 of the present Bill expressly left untouched, and of putting an end altogether to the unauthorized reports, which at present were a bugbear equally to the judicial officers who administered the law and to the professional gentlemen who practised in the Courts. Such a measure, too, would secure most completely many of the objects of the Bill. The multitude of law reports would be most effectually diminished. Their quality in all probability would be more likely to be improved by placing them under the direct supervision of the highest judicial authorities in each quarter of the empire, who were well acquainted with the law and customs of the place, than by leaving the supervision to any single official, no matter how conspicuous might be his ability. Their authority would be strengthened in all respects save as regards local limits; and although he had carefully considered the arguments which had been advanced, he still thought that the difficulties which would be involved in extending the area within which each set of reports was now supposed to be binding were very great, and counterbalanced any advantages that might be gained by giving the lower Courts a larger range of authorities, or by bringing into prominence any differences of opinion between the superior Courts of different presidencies. He ventured to believe, too, that such a scheme would obtain the cordial co-operation of all the High Courts in carrying out its provisions; a co-operation which, as his hon'ble friend had told the Council that day, was essential to the successful working of any scheme of law reporting.

MR. DALYELL did not know that he need go further into the objections raised to the Bill and to the plan by which it was proposed to carry the Bill into effect, as those objections would be found fully detailed in the papers which had been printed in connection with the measure; but if he was not out of order, he would venture to ask His Excellency the President that the final discussion on the Bill might be deferred to the next meeting of Council, as he believed that further communications on the subject were likely to be received from the Governments of Bombay and the North-Western Provinces, and also as His Honour the Lieutenant-Governor of Bengal was not in his place that day to express in words the objections which he had taken to some of the provisions of the Bill in his Secretary's letter which had been circulated to the Council.

The Hon'ble MR. BAYLEY said that, after so full a statement as that made by the hon'ble mover of the Bill, he should ordinarily not have thought it necessary to add any remarks; but as he had personal experience of the evils of the present system of reporting both in a judicial capacity and as one of the original members of the Council of law reporting, he ventured to offer a few remarks upon the subject.

The crying evil of the existing system was that it ministered to the vicious practice of the members of the Mofussil Bar, who regarded law reports, not so much in the light of guides to show the real condition of the law, as stores from which they could cull precedents to support any view of the law which suited the position they were engaged to maintain—in short, their aim was, usually, not to assist, but to confuse, the Court.

The more numerous and imperfectly stated the decisions were, the better they suited the purpose of the lower class of Mofussil vakíls, and the result of the commercial system of reporting had no doubt favoured the growth of this evil. MR. BAYLEY had himself been often pressed with decisions which were apparently contradictory. Occasionally, by close examination of the reports, he had been able to find clues which shewed the real drift of the decisions quoted; sometimes, when cases happened to be among the records of his own Court, he had been able to send for the original file and ascertain how far the facts and issues of law were really on all-fours with the case before him, but he had not unfrequently also been compelled to abandon all attempt to draw

assistance from the precedents set before him and to decide without any reference to them. He thought that this was not a condition to which the Judges of our Courts, the least of whom held a most responsible position, should be exposed.

As regards the ability of the Courts themselves to issue and superintend the reports, MR. BAYLEY would point out that in fact this had always been within the competence of the Courts, who had indeed made occasional attempts to carry out such a system, but scarcely with success.

The reports of the old Sadr Courts were, he believed, prepared by the Judges themselves and were edited by the Registrar. Unquestionably many of the decisions were of very great value, and conveyed the matured opinions of gentlemen of great experience, some of them perhaps ranking among the ablest who ever came to India.

Nevertheless their reports could hardly be called on the whole successful; arguments of Counsel were rarely, if ever, given; the statements of fact were usually of a somewhat meagre description. A gentleman, whose friendship MR. BAYLEY had formerly the honour to enjoy, the late Mr. Morley, had endeavoured to make a Digest of these cases, but though he laboured at the work with much assiduity for many years, and although he was well known within and without the legal profession for his ability and his acquirements both as a scholar and as a lawyer, his Digest was certainly not received by any means as a satisfactory work. And this result was owing, MR. BAYLEY believed, not so much to any fault of the compiler of the Digest, as to the unsatisfactory character of the reports with which he had to deal.

It might, however, be said that these reports were the production of untrained men, and that it was not fair to accept them as examples of the existing style of law reporting.

But what was the case in the old Supreme Courts? The Judges of those Courts made no special effort to secure good reporting. He believed that almost from the earliest institution of the Supreme Courts the decisions of those Courts were left to the unassisted efforts of private reporters. Reports were no doubt published; some of them good, some of an inferior quality, and there were periods, MR. BAYLEY believed, for which no reports at all existed, and during which there could be no doubt many valuable decisions passed altogether unreported.

After the establishment of the High Court of Calcutta, a special Reporter was sanctioned for the appellate side of the High Court, who was salaried by Government; but it was not long before that arrangement broke down, and after various attempts to meet the desired object, the establishment of the Council of Law Reporting in Calcutta was encouraged, if it was not actually suggested, by the late learned and able Chief Justice, Sir B. Peacock. He did not wish in the least to disparage the Bengal Law Reports; on the contrary he believed that they had done a very useful work very well—quite as well, probably, as any law-reporting had been done in India before, and in a way most creditable to the gentlemen employed, and it was probable that the work of Government reports under the new law would be done much on the same lines and by the same Reporters. The Government reports would, however, have the further advantage of being subjected before publication to strict supervision and skilful professional criticism.

Still the Bengal Council for Law Reporting themselves admitted that the result was not what they aimed at. In a letter addressed to Government by that body they said: "The Bengal Law Reports have not yet attained the high standard of excellence which their originators hoped for;" and they attributed this in part to "the necessity of departing from the principle of selection," going on to explain that this necessity arose from the Council of Law Reporting being compelled to defer to the "commercial principle" to which the hon'ble mover of the Bill had more than once alluded, and which induced them to meet the vicious demand for numerous cases by reporting many which in themselves were such as should not have been reported. In fact the Council may almost be said in the same letter to have suggested the present measure, for they said "it is hardly a less important part of the duty of the Govern-

ment to publish that part of the law which is enunciated by its tribunals, than to promulgate its legislation."

So far, therefore, as past experience was any guide, there was not much to be looked for from the persistent action of the Courts themselves, even if the Government could be assured of the continued willingness and leisure of the learned Judges to superintend the reports of their judgments.

No doubt objections had been raised and urged with much force, both by his hon'ble friend who last spoke and by the High Court of Bombay, as to the danger of putting so much power into the hands of Government, and it might be conceded that a corrupt Government, aided by corrupt reporters, might attempt to misreport or suppress a case; but the answer to that objection was, no doubt, that the attempt would so certainly be futile, and the attendant danger and disgrace would be so great, that, practically, no such attempt ever would be made.

As regards the conflict of decisions, MR. BAYLEY would also wish to say a few words in further illustration of the argument used by his hon'ble friend the mover of the Bill. The effect of the provisions in the Bill would not be to aggravate such conflicts, but to accelerate their termination. It might be in the remembrance of some of those who heard him that for a long time a series of opposing decisions on the effect of the law of limitation had been passed by the Courts of Calcutta and of the North-Western Provinces. The legislature did not intervene, for it was not clear that any intervention was necessary. It was only after many years that the point arose in a case of sufficient importance to bring it before the cognizance of the Privy Council, who then upheld the view of the Calcutta Court as being in accordance with the wording of the law. The effect of that decision, authoritatively pronounced, was no doubt to settle the real state of the law, and the Government then stepped in and amended the law in the sense of the North-Western Provinces decision, as being most in accord with public convenience.

Again, not long ago, a question arose as to the construction of a law of a general application, by which certain officers of Government were guided in the performance of their duty. Some of these officers applied accordingly through their Local Government for instructions. On reference to the Government Law Officers it was found that the point raised had twice come before the High Court of Calcutta; had twice been fully argued, and in both cases the decision was the same, a decision moreover known to be in entire accordance with the intention with which the law was framed. The Government of India accordingly referred the officers to the decisions in question. But it then was found out that, in another High Court a single Judge, on a reference from a lower Court, and without any argument before him, had expressed a contrary opinion, which had been reported as a precedent, and which, therefore, Courts in his province were, as the law now stood, bound to respect; and thus, in a matter in which uniformity of action was not only desirable but important, no such uniformity was possible, until one Court or other on its own motion reviewed its existing decisions, for which no opportunity might arise for years.

But under the provisions of the present Bill, the Judge of any subordinate Court having the opportunity of following whatever precedent commended itself to his judgment, the conflict was sure at once to be brought under the attention of the Superior Courts, and to be fully argued. It was to be hoped that in the majority of these cases the law would settle itself; but if it should in any instance prove otherwise, the remedy of appeal to the Privy Council or of legislative interference would still be as available as before, only the necessity of one remedy or the other would be more promptly shown. MR. BAYLEY, in conclusion, requested the Council to excuse the length to which his expression of opinion had extended.

The Hon'ble MR. HOBHOUSE had a few observations to make in answer to the remarks which had fallen from his hon'ble friend Mr. Dalyell. One point he mentioned was, that he considered the outside public would be suspicious of the correctness of the reports if they were conducted by the Government. We were told, too, elsewhere, that the Government must be like Cæsar's wife. above suspicion. But probably when Cæsar was speaking of his wife, he was

MEMO.

To be substituted for pages 165 and 166 of Supplement to the Gazette of India for Saturday, January 30, 1875.

thinking of the opinion of reasonable men who formed their judgment on reasonable grounds. Even Cæsar must have known that the tittle-tattle of the Roman boudoirs was beyond control. So MR. HOBHOUSE supposed that, by the outside public, his hon'ble friend meant those who paid attention to the subject and took an interest in Law Reports. To that, all that need be said was, that if an outside public of that kind were dissatisfied with the Law Reports, the remedy was in their own hands. All they would have to do was to get some painstaking person like Mr. Sutherland to publish the judgments of the High Courts.

The object of the Government in supervising reports would be completely frustrated if intelligent persons suspected the thoroughness of the product. As for any other outside public, MR. HOBHOUSE suspected that they would never know or care anything about the matter.

Then his hon'ble friend said there was no safeguard provided by the Bill. MR. HOBHOUSE had not heard what safeguard his hon'ble friend would propose. MR. HOBHOUSE could not think of any mechanical safeguard nor had any been suggested. The true safeguard was to get men of intelligence and honour to undertake the work, whose interest would be to frame good reports.

Then his hon'ble friend made some observations as to the power of the Law Reporter. But that power existed now, as MR. HOBHOUSE had been at pains to show, and it was one of the things which rendered it desirable to have Law Reporters under public and responsible supervision. Such supervision as was exercised by Lord Campbell over the decisions of Lord Ellenborough was doubtless very beneficial to the public. In that case a strong lawyer with a reputation of his own at stake made selections from judgments of which some were useful and some otherwise. In other hands the process might not be so useful. But the power of selection must be somewhere, and the object was to have it in a quarter where there was every motive to exercise it well. If it were not exercised well, he again said that the whole plan must fail, and the lawyers would continue to be burdened with a number of reports that were useless to them.

The hon'ble Mr. Dalyell had said, again, that our object should be to induce the High Courts to become responsible for the reports of their decisions. MR. HOBHOUSE did not know how we could induce them to do so. If they were ready to do it, he admitted that that would most completely meet the object in view. His hon'ble colleague, Mr. Bayley, had just shown by referring to instances how difficult it was for the High Courts to perform that duty with sufficient promptitude and persistency, and MR. HOBHOUSE had nothing more to add to what had already been said.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE also moved that the Bill as amended be passed. He would give two reasons against the proposal to postpone the passing of this Bill. It was true that His Honour the Lieutenant-Governor was not present in his place, but that was not of itself an objection to the passing of the Bill. The letter sent to the Committee on behalf of Sir Richard Temple dwelt a great deal on the mischiefs of the present system, and mentioned the objections to the plan of the Government in a very brief and cursory manner. There was nothing in the letter which led MR. HOBHOUSE to believe that the Lieutenant-Governor wished to oppose the passing of the Bill. He had not read the letter to the Council because it touched only very lightly on objections which he had to-day stated fully as they were put forward by others. It was true that an alternative suggestion was made, but that, as MR. HOBHOUSE understood it, amounted to something like a reconstitution of the business of the High Courts ; a very large and difficult arrangement, which would take long to effect, and was beyond the scope of the Council's business. Moreover, if Sir Richard Temple had wished to take part in this debate, he would have said so for himself. With regard to the Civil Appeals Bill he had expressed such a wish, and MR. HOBHOUSE had immediately acceded to it, and made arrangements not to bring on that measure until a time when Sir Richard Temple could conveniently be present. Otherwise he should have brought the Civil Appeals Bill before Council at an earlier date. But with regard to the present Bill Sir Richard Temple had been silent, and MR. HOBHOUSE declined to accept from his hon'ble friend Mr. Dalyell a suggestion about Sir Richard Temple which he had not made for himself.

The other consideration on which MR. HOBHOUSE objected to a postponement was personal to himself. These matters could not be taken up without a good deal of labour. He was responsible for the conduct of the business, and he was always liable to have questions asked him upon any point of difficulty that occurred. In order to be able to answer any question or objection with the requisite promptitude and accuracy, it was necessary that he should prepare himself, and the consequence was that, in every case in which he thought it possible that questions could arise, he always made it a rule to read through all the papers the day before the Council met. The result was this. It was the practice, when no amendment was made, to pass a Bill at the same sitting at which the Report was taken into consideration, there being opportunity then for full discussion. The practice was a very convenient one. To justify a departure from it, a good reason should be given, and MR. HOBHOUSE thought that none such had been given. He should, therefore, ask that the motion might be put.

The Hon'ble MR. DALYELL said that his hon'ble friend Mr. Hobhouse had omitted to mention two other grounds which had been advanced in favour of the postponement of this motion, namely, that communications were expected from Bombay and the North-Western Provinces. They had as yet had no representation of any kind from the North-Western Provinces. He believed that some of the Judges of the High Court of the North-Western Provinces were very strongly opposed to the Bill.

The Hon'ble MR. BAYLEY explained that the rules to be framed under this Bill, which were circulated to hon'ble members, had been confidentially circulated some time since to the Judges of the High Courts: objections might be received regarding those rules, but he did not think that, after such a length of time, they might expect to receive further objections to the Bill itself.

His Excellency THE PRESIDENT said:—"I am sure the general feeling of the Council always is, that if any member wishes any particular measure to be postponed for a short time, in order to give further opportunity for discussing its details, such postponement should be acceded to. At the same time we must all feel that the manner in which business has to be transacted by my hon'ble friend, Mr. Hobhouse, deserves every possible consideration. Of course it would be a very great convenience to him that this Bill should be disposed of in order that his whole mind may be applied to the other Bill to which he has referred as standing for consideration at our next meeting. I should, therefore, be inclined to suggest to my hon'ble friend, Mr. Dalyell, that if he does not desire to propose any substantial amendment to the Bill, it would be more convenient that it should be passed to-day."

The Hon'ble MR. DALYELL said that, if the objections to delay were put upon the personal grounds to which His Excellency the President had adverted, he was willing to withdraw his proposal for the postponement of the motion before the Council.

The Motion was put and agreed to.

MERCHANT SHIPPING ACT AMENDMENT BILL.

The Hon'ble MR. HOBHOUSE also presented the Report of the Select Committee on the Bill for the further amendment of Act I of 1859 (for the amendment of the law relating to Merchant Seamen), and for other purposes.

SIR JAMSETJEE JEEJEEBHOY'S LOAN BILL.

The Hon'ble MR. ELLIS asked leave to postpone the motion for leave to introduce a Bill to secure the repayment of a loan by the Government of India to Sir Jamsetjee Jeejeebhoy, Baronet.

Leave was granted.

The Council adjourned to Tuesday, the 2nd February 1875.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

REPORT ON CANAL PLANTATIONS IN THE NORTH-WESTERN PROVINCES FOR 1873-74.

No. 1118 W., dated 17th October 1874.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces.

Read—

Report of the Inspector of Canal Plantations, and reports of Superintending Engineers, 1st and 2nd Circles.

REMARKS.—Surgeon-Major Jameson has submitted his report on the plantations of the Ganges, Eastern Jumna, Dun, and Agra Canals. The condition of the majority of the plantations is said to be satisfactory; in certain divisions it is not so good as might be wished.

2. The total expenditure on maintenance, as shown in the appendix, deducting the amount for establishment in the Ganges and Eastern Jumna Canals, was Rs. 69,261, against an allotment of Rs. 79,623, of which Rs. 32,223 was for the Agra Canal from Loan Funds.

	Rs.
1871-72	65,305
1872-73	83,037
1873-74	93,378

Omitting the Agra Canal, the net profits for the year were Rs. 33,592, showing a net increase of Rs. 14,472 over last year's returns, and a gross increase of Rs. 10,341. The gross income for the last three years is shown in the margin. The gradual increase is satisfactory.

GANGES CANAL.

3. The expenditure on maintenance was Rs. 42,642, against an allotment of Rs. 40,400; the excess being on the Anupshahr and Bulandshahr Divisions.

The total receipts were Rs. 62,347, and the total expenditure, including establishment, was Rs. 50,765, giving a net profit of Rs. 11,581, against Rs. 6,046 of last year's. The analysis of receipts in Superintending Engineer's report shows the increase to have been due principally to the sale of Sardhana mango garden in Meerut Division, which raised the receipts for this year, under the head of sales of fruit, to Rs. 11,648, against Rs. 2,511 of last year. There was also an increase of Rs. 6,000 on sales of grass, due to the receipts in Cawnpore and Etawah Divisions, for which no revenue was realised last year. The increase would have been larger had it not been for a considerable decrease under sales of timber and firewood in Meerut Division, which neutralised the increase derived under this head from Cawnpore and Etawah.

In addition to the actual receipts from sales should be taken into account the increasing value of the plantations themselves, which is now rated at Rs. 10,00,000.

It is noticed that there is a loss in the Bulandshahr Division this year; but it is understood that some wood sales were not credited within the financial year.

It is satisfactory to notice that the Northern and Aligarh Divisions have been this year worked at a profit.

The loss on the Anupshahr Division is still greater than last year, which means probably a large increase of young trees ; but there is no specific mention in the reports of Superintending Engineer or of Inspector of Canal Plantations.

The return from the Etawah Division has slightly improved.

The increase to the number of trees on the canal banks transplanted from the nurseries is most satisfactory in the Northern, Meerut, and Aligarh Divisions, and is creditable to the officers concerned. Care should be taken to supply the gaps made in the nurseries by the transplanting that has taken place : the decrease in seedlings which the Inspector of Plantations notices should be at once rectified.

Below is a statement showing the progress that has been made in fencing the plantations ; all this work has been carried out subsequently to 1872-73, and the best progress has been made in the Aligarh and Bulandshahr Divisions. The return shows that there is still much to be done. His Honor trusts that this subject will meet with the particular attention of canal officers, and directs that a return for each division may for future years be furnished with the report, showing the length to be fenced, length fenced last year, total completed, total remaining to be done. The Superintending Engineer, 2nd Circle, will report specially whether the ditch running along the entire length of the Eastern Jumna Canal plantations precludes the necessity of other kinds of fence. A return will also be made by Superintending Engineer of the entry which should be made under column ' balance to be fenced :'—

Division.	Length of plantation boundaries.	Length protected by distributary channels and cuts.	Miles fenced in		Balance to be fenced.	Remarks.

* Deducting úsar, 157.

EASTERN JUMNA CANAL.

4. The expenditure was Rs. 6,838, against an allotment of Rs. 7,000 ; the establishment charges were Rs. 1,805, the receipts were Rs. 30,552, and the net profits were Rs. 9,467 more than those of last year. This return is most satisfactory, and the large sum of Rs. 28,114 realised by the sale of timber, taken in combination with the excellent order in which the trees and banks are reported to be, reflects great credit on the officers of the Division. The Inspector appears to consider the enumeration of the trees not as complete as could be wished on his inspection : he could obtain from the foresters no account of the number of smaller trees in the nurseries. A report on this subject was subsequently received. Care should be taken to keep these registers accurately, and it may be laid down as a rule that the plants must not be allowed to fall below the numbers necessary to supply the place of felled trees.

DUN CANALS.

5. There is nothing special to notice this year.

AGRA CANAL.

6. *1st Division.*—Has the credit of being the first Division in the North-Western Provinces whose plantations are completely fenced.

2nd Division.—The mistake has been made of planting trees before a fence is made. Definite orders have been passed which will allow of the early completion of fences.

The orders prohibiting planting until land is fenced, published in the Resolutions of 1870-71 and 1871-72, are not carried out strictly, and a wasteful expenditure is the consequence. It is necessary that Superintending Engineers should pay special attention to the above orders.

7. The experiments upon the reclamation of úsar soil, of which the history has been detailed up to September 1873 in a resolution in this Department, have been continued in the Aligarh Division. In January 1874 an estimate was submitted for preparing and maintaining a plantation of a few acres in úsar soil for ten years. The anticipated net profits at the end of twenty years were stated at Rs. 3,862, and an estimate for Rs. 400 for preparing the ground and starting the plantation was sanctioned under the recommendation of the Inspector of Canal Plantations, and with the intimation that a yearly report of the proceedings and the accounts should be submitted with the plantation report.

No. 02476 I.-C., dated 9th September 1873.

In addition to this a report was submitted by Mr. McArthur, the Subdivisional Officer in charge of the agricultural experiments on úsar lands, of the results attained up to the end of last financial year. The accounts showed an expenditure of Rs. 891 (against receipts of Rs. 794, or a deficit of Rs. 97), and the forecast for the current year showed charges Rs. 110, income Rs. 306, or an anticipated net income of Rs. 196. The fields were divided into classes according to the number of years during which the process of reclamation had been going on, varying from one year to four, and the results tend to show that úsar land can be reclaimed thoroughly after four years' silting and manuring ; but the question whether the cost of reclaiming is less than the price of good land, remains to be determined. The experiment of treating the soil with *ák (Catatropis gigantea)* according to the practice of Utah, U. S., was tried, and the results show that there is no more virtue in *ák* than in any other fibrous plant, similar results being obtained from fields on which this plant had been ploughed in, and from others which had been manured with water grasses. These results establish the conclusion that for land near the canal the natural manure will be water grasses. It is clearly proved that where water is attainable rice can be grown upon úsar. Superintending Engineer has noticed that in calculating the results of these experiments no account was taken of the water-rate, which should be debited : this should doubtless be done. Superintending Engineer has been instructed to submit a report showing the account-current of each field, and instructions have been given to continue the experiments.

GENERAL.

8. The need of Mr. Jameson's manual is very urgent. The greater part of the work is in the Press, and its early publication is expected. Full and complete instructions are detailed in it as to planting and tending trees of all kinds suitable for the canal banks, and it is expected that it will prove of great service when put into the hands of canal officers.

Order.—Ordered, that copies of this Resolution and of the reports be forwarded to the Government of India and the Controller, Public Works Accounts, for information ; also to the Inspector of Canal Plantations and all Superintending and Executive Engineers for information and guidance.

By order, &c.,
W. H. GREATHED, *Col., R. E.,*
Joint Secy. to Govt., N. W. P.

Nos. 26-28 I., dated Fort William, the 26th January 1875.

OBSERVATIONS—By the Govt. of India, Public Works Dept.

Read—

A letter from the Government of the North-Western Provinces, Public Works Department, Irrigation Branch, No. 1254 W., dated 23rd November 1874, forwarding copy of the report on canal plantations in the North-Western Provinces for the year 1873-74, and of the Resolution of that Government reviewing the same.

Observations.—The report is, on the whole, satisfactory and shows material progress, but does not call for any special remarks by the Government of India.

2. A copy of the report on the úsar experiments, alluded to in the second clause of paragraph 7 of the N. W. P. Government's Resolution, should be forwarded for the information of the Government of India.

3. The Resolution of the local Government should be published in the *Gazette of India* for general information.

Order.—Ordered, that a copy of this Resolution be forwarded to the Government of the North-Western Provinces, Public Works Department, Irrigation Branch, for information and guidance, and to the Department of Revenue, Agriculture and Commerce, with a copy of the report, for information.

Also, that a copy of this Resolution and of that of the local Government be forwarded to the Home Department for publication in the Supplement to the *Gazette of India.*

G. T. SKIPWITH, *Captain, R. E.,*
Asst. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

G. A. SEARLE, *Lieut.-Colonel, S. C.,*
Offg. Asst. Secretary to the Government of Bengal,
Public Works Department, Irrigation Branch.

The 22nd January 1875.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 4th FEBRUARY 1875.

GENERAL REMARKS.—Rain has fallen in the northern districts of Madras, parts of Sindh, and generally though in small quantity throughout Bengal. There have been slight scattered falls in the North-Western Provinces, Oudh and the Central Provinces. In the Punjab, where its want is most felt, slight showers are reported only from Jullundur and Lahore. Damage from frosts continues to be reported from Sindh, parts of Nasik, the North-Western Provinces and Oudh. In the latter provinces the gram and arhar have suffered. With the exception of the Deccan districts of Bombay and parts of the Punjab and North-Western Provinces prospects appear generally to be satisfactory. The winter rice harvest in Bengal has closed with excellent results.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Madras—			
Kistna	(Feb. 4th)	·64 at Masulipatam. 2·0 at Guntoor.	Rainfall slight elsewhere; two feet four inches water over anicut; canal supply sufficient; little improvement in dry crops; varagu and cotton harvested in Vinnukonda; outturn half; markets well supplied locally; prices steady; mild small-pox continues; fever abating; cattle generally unhealthy; pasture getting scarce.
Kurnool	(3rd)	*Nil*	Season favourable; second crop paddy still being sown; crops good order; markets well supplied; prices steady; water and pasture abundant; fever and cattle disease in several taluks; no water over Sunkesala anicut.
Trichinopoly	,,	,,	Water-supply generally sufficient; crops good order; prices steady; public health good; pasture on the whole sufficient.
Malabar	(4th)	,,	Harvesting of second crop in progress; markets well supplied; prices steady; fever in some parts; small-pox slightly prevalent; cattle disease slight in Palliswanad; pasture withering.
Tanjore	...	·03 at Negapatam	Rainfall elsewhere scarce; water in rivers and tanks scarcity; water over anicut none; no wet cultivation, that of a few dry crops continues in some parts; crops good order; harvest wet and some dry crops yield satisfactory; markets well supplied; prices steady; small-pox in some places; cattle disease in Sheally taluk; some loss; pasture sufficient. *General Remarks.*—General prospects satisfactory.
Bombay—	**(Feb. 3rd)**		
Sindh.			
Kurrachee	...	...	Fever continues; late rabi crops damaged by frost in Sakra, Bela, and Kotree, and sugarcane in Sakra and Bela; good shower of rain in Sakra on 23rd January, and a little in Khetty on 30th; cattle in Jerruck and camels in Sadatupa suffering from disease.
Shikarpur	...	...	Very slight damage generally from frosts; weather warmer and cloudy with hopes of rain, which is much wanted.
Hyderabad	...	...	Rape and oil-seeds injured to some extent by frost; no other change.
Upper Frontier	...	·41	Wheat, barley, and pulse slightly injured by frost, early oil-seed crops more so; prospect of season improved.
Gujarat.			
Ahmedabad	...	...	Crops doing well, except cotton in Sanund, a small portion of which has suffered from frost.
Surat	...	...	Rabi crops progressing; fever and injury to crops in Pardee.
Broach	...	...	Wheat and jowar ready for harvest; cotton-picking progressing; weather good, except in Ahmod, where fever continues.
Kaira	...	...	Rabi crops and public health good; weather continues cold.
Khandesh and Nasik.			
Khandesh	...	...	Rabi crops unchanged; cotton market dull; rate 47.
Nasik	...	...	Further damage to rabi crops and fruit trees from frost; ice an inch thick found on morning of 31st ultimo; no change in public health.
Konkan.			
Tanna	...	...	Nights and days cool; public health good; fever and ague in some talukas; rabi crops good in Mahim, Shahpur, Bhewndy, Bassein, and Kurjut talukas, and middling elsewhere.
Deccan.			
Poona	...	...	Prospects of rabi crops same as before; in some places it is being reaped; climate and public health good.
Ahmednuggur	...	...	Harvesting of rabi commenced; health good.
Sholapur	...	...	State of crops same as before; weather good.
Satara	...	...	State of crops same as before; jowari in Kurar blighted; reaping commenced in Maun.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Southern Mahratta Country.		
Belgaum ...	...	Rabi and cotton crops good, except in Uthid taluka, where rats are damaging them; weather fine; public health good.
Dharwar ...	...	Wheat, grain, cotton, &c., same as before; health improving, particularly in Dharwar and Nawalgoond; cattle disease in Hangul and Kod talukas.
Kanara ...	...	Prospects of sugarcane crop good in Karwar, Ankola, and Yellapoor; fever in Sirci, Yellapoor, and Hullial; small-pox in Sirci; slight cattle disease in Carwas, Sirci, and Hultial.
Kaladgi ...	...	Rabi middling, cotton indifferent; fever prevalent, except in Bagulkot and Bagwadi.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Crops generally good; weather cold; public health good.
Wudwan ...	...	Weather cloudy; state of crops and health same as before.
Baroda ...	...	Cotton-picking continues; rabi prospects and public health good.
		General Remarks.—No change of importance; rabi in Sindh a little damaged by frost.
Bengal—		
Burdwan ...	·27	Rainfall at Cutwa ·49, Raneegunge ·21, Culna and Jehanabad *nil;* week cold and cloudy; west wind, and clear on the 1st February; crops flourishing.
Bankura ...	0·25	Slight rain on the 26th January, rest of the week was dry. Winter crops doing very well. The rain has allowed preliminary ploughings for next season's rice crop to commence.
Beerbhoom ...	0·50	Some rain has fallen. Weather uncertain. Cold weather crops, &c., doing well. Ploughing for oilseeds in progress.
Midnapore ...	0·23	Weather cold and cloudy. Harvest all in. Prospects of cold weather crops are good.
Hooghly ...	0·28	Cloudy on one day and some rain has fallen, remainder of the week clear. Wind from north and north-east. The rain has been good for potatoes, but may injure the peas. Onions and other vegetables doing well.
24-Pergunnahs ...	0·18	Cloudy in the mornings during the early part of the week. Slight showers have fallen during the week all over the district. The harvest of late rice has been nearly completed. Cold weather crops generally doing well.
Nuddea ...	0·15	Seasonable weather. Little rain. The cold weather crops generally are getting on well. The Collector has received several petitions from the villages in the Chupra and Teyhuttee thannas, informing him that their rice crops were destroyed by inundation, and that their cold weather crops have been destroyed by hail, and that consequently they will require help, as they have had no means of recovering from the late famine. An assistant has been deputed to inquire into the matter for special report.
Moorshedabad ...	0·14	Slight rain fell. Weather bright and seasonable, mornings occasionally foggy. No change to report on the state of the crops. The prospects of the cold weather crops continue good. There is a difference of 10 seers between the reported prices of best rice in the east and west of the district. Common rice averages 18 to 12 seers the rupee.
Dinagepore ...	*Nil*	Cloudy and foggy during the early part of the week, afterwards the weather has become cold and bright. The mustard crop will be below the average. Other cold-weather crops looking well. Land in some places begun to be broken up for the bhadoi or early crops. Telegraphed on the 4th February: ·13 inch of rainfall since the date of report.
Maldah ...	,,	Weather cold but occasionally cloudy and foggy. Boro or spring rice is now being grown. Prospects of all cold-weather crops are good.
Rajshahye ...	...	Return not received.
Rungpore ...	*Nil*	Weather very cold; some days cloudy and thick. Reaping of late rice is finished. Cold-weather crops doing pretty well. Mustard is being gathered here and there, and its outturn is not favourable. Sugarcane looks well.
Bogra ...	,,	Weather very cold in the morning and evening. The reaping of the late rice crop is not yet finished.
Pubna ...	0·06	Little rain has fallen. Weather cold, fine, and seasonable. The chaitali or April crop seedlings are well above the ground, and promise well. Some of them are in flower. Harvesting of sugarcane and turmeric going on rapidly. The jally and boro, or spring rice crops, are being sown.
Jalpáiguri ...	*Nil*	Weather cold; mornings foggy. All crops doing well.
Dacca ...	0·11	Weather cold and cloudy. Little rain has fallen. Crops very good.
Patna ...	0·37	Very little change since last report; some light showers of rain fell, but not sufficient to make any appreciable difference either for good or bad. The weather is bright and clear again and exceedingly cold. Health of the district good.
Gya ...	*Nil*	Cold and cloudy towards the end of the week; a very slight shower of rain fell on the 30th January. The prospects of the cold-weather crops continue excellent. Health of the people good.
Shahabad ...	,,	Weather cloudy with east wind. There is reason to fear blight and caterpillars injuring the standing crops, if the weather does not clear up soon. The subdivisional reports show that the damage done by the hail was very trifling. Rainfall since reported: Arrah 0·3, Buxar 0·25, Sasseram 0·2.
East Tirhoot ...	...	Return not received.
West Tirhoot ...	*Nil*	Cold and cloudy weather. Prospects of the cold-weather crops continue good; harvest of rice is over. Telegraphed on the 4th February: ·16 inch of rainfall, 30th January to 3rd February.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Sarun ...	*Nil*	Clear and seasonable up to 29th January; cloudy and very cold on the 30th, west wind prevailing. The prospects of the cold-weather crops are generally favourable. Wheat, barley, rahur (pulse), and peas doing well; poppy everywhere forward; mustard is being gathered; very slight injury to rahur and peas from frost has been reported, within the jurisdiction of Baneapara outpost, thannas Mushruck and Goothni of thanna Durrowli. Indigo fields are ready for sowing. Prices stationary. General health good.
Chumparun ...	,,	Weather cloudy and clear alternately; mornings generally foggy. The cold-weather crops are excellent; late rice has been harvested.
Monghyr ...	,,	Cloudy weather. The crops are looking well all over the district. Telegraphed on the 4th February: rainfall of 0·39 inch to evening of 3rd February.
Bhágalpur ...	0·38	Rain general on the south of the Ganges, on the night of the 30th January, and cloudy on the 1st instant. Weather very cold. No report from the north. Rain of great benefit to all standing crops.
Purneah ...	*Nil*	Cloudy weather; the state and prospects of the cold-weather crops are excellent. There will be a sixteen-anna return from them.
Sonthal Pergunnahs ...	0·40	Cloudy with drizzling rain from 2 P. M. of the 29th January; bright morning; clouds over about noon; a little fear expressed that continued rain may damage mustard and what rice is lying on the threshing floor. Wheat and barley doing very well in the north.
Cuttack ...	0·5	A very slight shower of rain on the 19th January. Weather cold at the Sudder station. A fall of 0·2 of rain is reported from Jajepore, where the weather is also cold. Late rice harvest almost over. Winter crops ripening; in some places the harvest has already begun. Cotton and tobacco crops doing well. Telegraphed on the 4th February: rainfall of 0·10 inch on the 31st January.
Balasore ...	0·23	Weather variable with a slight fall of rain in some parts of the sub-division. Harvesting of rice crop satisfactorily completed. Crushing of sugarcane going on. Cold-weather crops good.
Lohardugga ...	0·41	Weather fair and cold; was raining hard at the time of report. Crops still reported as excellent. Slight damage done to rahur pulse by frost. Rain will do good.
Maunbhoom ...	0·23	Weather favourable; some rain has fallen. The little rain that fell has done a great deal of good.
		PUBLIC HEALTH.
		Burdwan: fever less; cholera in places. 24-Pergunnahs: cholera prevailing in several parts of the Sudder, Diamond Harbour, Barripore, and Baraset subdivisions; fever decreasing in the sub-division of Barripore. Moorshedabad: public health good. Furreedpore: general health good. Chittagong: there has been a slight outbreak of cholera in the village of Ghoramara, thanna Koomeria; nine cases are reported. Patna: health of the district good. Gya: health of the people good. West Tirhoot: public health good. Sarun: general health good. Bhagulpore: general health very good. Cuttack: public health good. Balasore: general health satisfactory. Hazareebagh: small-pox appears slightly on the increase in Hazareebagh.
		General Remarks.—The weather has been cold and cloudy generally throughout the week, and rain has fallen in more than half the districts. The damage caused by the hailstorms of previous weeks was slight, and the harvesting of the late rice has been completed in most of the districts with very satisfactory results. The cold-weather crops are still progressing favourably, but in a few limited tracts have suffered a little from frost. Spring rice is progressing with fair prospects. Lands are being broken up for the ensuing crops.
N. W. P—		
Meerut (Feb. 3rd)	*Nil.*	
Agra ,,	·3	Rainfall three-tenths in one pargana; arhar and gram considerably damaged by frost, the latter also attacked by insects.
Allahabad ...	...	Not received.
Bareilly (Feb. 3rd)	·1	Arhar, gram, and sarsun injured by frost, the first considerably; more rain wanted.
Benares ,,	...	Enough rain for rabi; no damage from frost and little from hail; every prospect of a really good crop, especially wheat, peas, and barley.
Jhansi ,,	*Nil*	Weather cloudy.
		General remarks.—Arhar and gram considerably injured by frost; damage by frost is also reported from Mirzapore.
Punjab—		
Hissar (Feb. 3rd)	*Nil*	Weather cool and cloudy; crops still doing well, but little or no rabi cultivation on irrigated lands.
Delhi ,,	,,	Crops healthy but likely to suffer if rain keeps off longer; weather cloudy.
Umballa ,,	,,	No rain; crops suffering in consequence.
Jullundur ,,	...	Rain much wanted; a slight fall on 3rd instant.
Lahore ,,	...	Slight rain on 3rd instant; crops good.
Rawul Pindi ,,	*Nil*	Weather cloudy; prices rising.
Peshawar ,,	,,	Crops on barani lands suffering.
Mooltan ,,	,,	Weather cloudy; rabi crops suffering from want of rain.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab—*continued.*		
Dera Ismail Khan (Feb. 3rd)	...	Rain wanted. *General Remarks.*—Rain wanted throughout the province; health generally good; a few cases of measles and small-pox in Lahore district, and small-pox in Hissar; a few cases of rinderpest in Rohtak, but in Rawul Pindi district cattle disease in fatal form prevails exclusively.
Oudh—		
Lucknow (Feb. 3rd)	Rainfall slight.	Gram, peas, and arhar have suffered from frost, but the rain has somewhat repaired the damage; hail is reported to have fallen in a village in Lucknow district; prospects on the whole favourable; public health good; cattle disease still prevails in some parts.
Fyzabad ...	·3	
C. Provinces—		
Bilaspur (Jan. 30th)	...	Weather cloudy; slight showers of rain; prospects of rabi good; few cases of small-pox; prices steady.
Sambalpur ...	·75	Crops harvested; health good.
Upper Godavari ...	·29	Weather cloudy; prospects good; fever prevalent; prices easy.
Chanda (Jan. 31st)	·06	Ditto; rabi progressing favourably; fever and cattle disease prevalent.
Raipur ...	·25	Rabi prospects good; health good; prices easy.
Balaghât (Feb. 1st)	...	Weather cloudy; prospects good; health good; prices steady.
Chhindwara ...	...	Ditto; rabi promising; health good; prices falling.
Bhandara (Feb. 2nd)	...	Ditto; threshing of finer rice completed; rabi favourable; fever and small-pox prevalent; prices easy.
Nagpur („ 3rd)	...	Ditto; rabi doing well; health good; cattle disease continues; prices stationary.
Wardha ...	...	Weather clear; rabi favourable; cattle disease continues.
Jubbulpore ...	·20	Fears of blight entertained; small-pox prevalent.
Saugor ..	...	Weather clear; rabi promises well; small-pox prevalent; prices stationary.
Seoni ...	...	Weather clear; rabi thriving; sickness decreasing.
Nimar ...	...	Weather clear; prospects of rabi favourable; small-pox and cattle disease continue; prices falling.
Narsinghpur ...	...	Rabi crops good; fever and small-pox prevailing; prices falling.
Hoshangabad ...	...	Prospects continue good.
Betul ...	...	
Mandla (Feb. 4th)	·05	Prices fallen.
Dumoh ...	...	Small-pox prevalent; prices risen.
		General Remarks.—Prospects generally continue good and prices all easy. In the Jubbulpore district alone are fears of blight entertained.
British Burma ...	...	Report not received.
Mysore and Coorg—		
Mysore (Feb. 4th)	*Nil* ...	Harvesting of early crops nearly completed; later crops sown in some districts; cattle disease prevalent in parts of four districts; public health generally good.
Coorg „		*General Remarks.*—Agricultural prospects good.
Assam—		
Gauhâti (Feb. 4th)	*Nil* ...	Weather settled, cool overcast mornings, cool dewy nights, days clear, becoming hot; reaping of sali finished, outturn is good; pulses, oilseed, and other winter crops progressing; public health good.
Sylhet „	...	Spring crops progressing; small-pox still prevalent.
Hyderabad Assigned Districts—		
Umraoti (Feb. 4th)	...	Rabi crops ripening, expected outturn good.
Rajpootana—		
Deolee (Jan. 30th)	*Nil*	Prospects and health good.
Jeypore (Feb. 4th)	...	Agricultural prospects not discouraging; rain wanted; public health good.

Central India—		
Indore (Feb. 4th)	*Nil*	Health and agricultural prospects continue good.
Rutlam „		
Neemuch „		
Nepal ...	...	Report not received.

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 2nd February 1875.

PRESENT:

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.
The Hon'ble Ashley Eden, C. S. I.

NEW MEMBER.

The Hon'ble Mr. Eden took his seat as an Additional Member.

MERCHANT SHIPPING ACT AMENDMENT BILL.

The Hon'ble MR. HOBHOUSE moved that the Report of the Select Committee on the Bill for the further amendment of Act I of 1859 (*for the amendment of the law relating to Merchant Seamen*) and for other purposes, be taken into consideration.

When he had introduced the Bill he stated that it had three objects. It was then entirely confined to the one subject of tribunals for enquiry into marine casualties, and into the misconduct of masters and officers of ships; and the objects of the Bill were, first, to improve these tribunals in their composition; secondly, to arm them with larger powers for obtaining evidence; and thirdly, to explain some ambiguous passages in Act XV of 1863 which related to the same subject of enquiry as to shipwreck or other casualties at sea. The Bill was still mainly occupied with the same three objects, but had assumed a somewhat different shape, and also embraced one or two other matters owing to the circumstance that it was found desirable wholly to repeal Act XV of 1863, and that it therefore became necessary to re-enact one or two sections of that Act which related to different matters.

The Council were aware that Act I of 1859 was the Act which contained the body of the Indian Merchant Shipping Law, and that there had been pending for some time a Bill for the consolidation and amendment of the whole of that law. He thought that Bill was some eight or ten years old, but it had not come before the Council for a long time for this reason, that the Indian law of merchant shipping was so interlaced with the English law, that it was desirable to have them as much in accord with one another as was possible, even with regard to the very expressions used. And it so happened that about the time we proposed to consolidate our law, the authorities in England proposed to consolidate the English law on the subject: a great Bill was prepared for the consideration of Parliament, and the Secretary of State for India thought it wiser that we should postpone the consideration of our Bill until Parliament had passed a consolidated measure. That Bill had been before Parliament for six or seven years, and so the Bill pending in this Council had been put off for some time. The consequence was that we had had no large amendment of the merchant shipping law, but from time to time small amendments had, as occasion required, been made.

Now this interlacing of the English and the Indian law was sometimes rather embarrassing. He would mention a case which occurred a short time ago, which showed the expediency of endeavouring to make the law on the subject clear. He spoke from memory, but the case to which he was about to refer was well known to the Hon'ble Mr. Eden, who would be able to correct him if he stated it incorrectly. There was a certain person named Horatio Walters, who was the master of a British ship which put into Rangoon. When at Rangoon, a charge was brought against him of cruelty to the crew. The charge was enquired into and some evidence was taken; and when the evidence had proceeded a little way, a compromise was effected, as was often done in cases of personal injury, and the matter was settled out of Court. Shortly afterwards some fresh information came before the Magistrate, which convinced him that the case had a much wider range and was very much worse in its bearings than he had at first been led to suppose, and he thought that proceedings ought to be taken to punish the Captain and deprive him of his certificate. Accordingly the Magistrate took such proceedings as he thought the law prescribed, but here he got entangled in the meshes of the law, and the proceedings that were taken proved ineffectual. The result was that the Captain took the ship back to England with a lascar crew, and was guilty of horrible and shocking brutalities on the voyage, for which he was tried in London and sentenced to penal servitude for life. MR. HOBHOUSE threw not the slightest blame on the person before whom the Captain was brought up in Rangoon: the failure of justice clearly arose from the complications existing between the English and Indian Acts. So far from blaming any body who tripped in this matter, he sympathized with him, for he had been very much puzzled himself. He probably would not have understood the law even now if he had not had before him a very valuable paper sent up by the Madras Government, containing criticisms on the earlier form of our draft, and a paper written by Mr. Norton, the then Advocate General of Madras, in which he worked out with the greatest clearness and ability the state of the law as it existed in the year 1865, when it was in the same state as now. If, therefore, we had been so lucky as to avoid flaws and to make our Bill exactly square with the English Acts, it was very much owing to the assistance received by the Council from the Madras Government.

The law relating to these enquiries into accidents and misconduct had its origin in the English Merchant Shipping Act of 1854. That Act gave power to the Board of Trade to cancel the certificates issued by it on adverse reports made by various Courts and tribunals, and amongst others, by any Court or tribunal established by a legislature such as ours, for the purpose of enquiring, either into marine casualties, or into cases of misconduct.

The Indian Act I of 1859 followed the English Act of 1854. By that Act the Local Governments were empowered to embody a special Court or tribunal for the purpose of enquiring into marine casualties. They had nothing to do with questions of misconduct, but only with cases of damage and loss arising at sea; and their function was to report to the Local Government. They had no power of their own to cancel a certificate granted by the Board of Trade. This legislature could not give them that power: so it was left to the Board of Trade to exercise their power of cancellation on the footing of the report submitted to them by the Local Government.

In 1862 an important amendment was made in the English law. By the Act which was passed in that year, the power of cancelling a certificate was taken away from the Board of Trade, and given to the local Court which had the function cast upon it of making enquiries. And at the same time some particular methods of procedure were prescribed for the local Courts, such as these: they were to state their decision in open Court, and were never to cancel the certificate unless a copy of the statement or case on which the investigation was founded had been furnished to the holder of the certificate before the commencement of the investigation. That latter provision was extremely embarrassing, and it was that provision which was the cause of the failure of the proceedings at Rangoon. Of course it was obvious that in many cases an investigation might commence without knowledge of any misconduct. All you knew in the first instance might be that some disaster had happened. It was impossible to tell at the outset of an enquiry to what extent it might go or whom it might affect.

After the English Act of 1862 was passed, we passed our Act XV of 1863. By that Act power was given to all Courts of Admiralty, and, where there was no Court of Admiralty, to the principal Court of criminal jurisdiction on the spot, to enquire both into marine casualties and into charges of misconduct in merchant-vessels; and they were also empowered to cancel certificates given by the Board of Trade if their report was confirmed by the Local Government. Again by the same Act the Local Government might direct any Board or officer to enquire into cases of misconduct not arising out of any casualty, and to report thereon to the executive, and then the Local Government might cancel any certificate given by it. Where the Board of Trade had given a certificate, the enquiry was to be made, either by a special tribunal appointed under Act I of 1859, who had only power, as far as that Act went, to report, or by an Admiralty Court or a Court of criminal jurisdiction, which was empowered by Act XV of 1863 both to enquire into the case and to cancel the certificate. If the certificate was an Indian certificate, then the Local Government might appoint a tribunal constituted under Act I of 1859 in case of some disaster having happened, or any Board or officer in case only of a charge of misconduct, and, on a report being made by either of such tribunals that there had been misconduct, might cancel the certificate.

Now this law was rather intricate, and when the Council set about making an alteration in the constitution of the special tribunal, which was desired by two or three of the maritime Local Governments—he thought by all—it was desirable to attempt a simplification of the processes, and some elucidation of the parts where people were likely to go astray. The principal alterations proposed would be found in chapter II of our Bill. Sections 3 and 4 of that part of the Bill dealt with the special tribunals of enquiry. Under Act I of 1859 it was provided that that tribunal was to consist of only two persons, of whom one was to be a Magistrate and the other a person conversant with maritime affairs. That tribunal, however, did not in all cases carry sufficient weight. Besides a person conversant with maritime affairs, a person conversant with mercantile affairs was sometimes wanted. It was desired to have the number larger and the elements of the Court more varied. Now it was proposed that the tribunal should be constituted of numbers varying from two or four. One was to be a Magistrate, one was to be a person conversant with maritime affairs, and the other two were to be persons conversant with either maritime or mercantile affairs. Then, section 9 extended to that special tribunal the power of enquiry into cases of misconduct as well as into cases of disaster. So that if either they or the Local Government thought that there was misconduct, they might then extend their enquiry to that. Then, section 5 re-enacted the provisions of Act XV of 1863, which gave power to the Courts of Admiralty jurisdiction and Courts of ordinary criminal jurisdiction to investigate charges of incompetency or misconduct or disaster. Then sections 6, 7 and 9, dealt with that part of the English Act of 1862 which required a statement of the charge to be made to the holder of the certificate. This Council could not repeal or affect the English Act passed in 1862; therefore, what we had to try to do was to make our Act fit into the English Act, and give directions as clear as we could devise under the circumstances. What the Bill provided was that if, in the commencement of the case, the Local Government had reason to think that a charge of incompetency or misconduct should be made, it should state the grounds of that charge, and a copy of these grounds would be given to the person charged. If it appeared in the course of the investigation that such a charge ought to be made, the Court would prepare a statement of the grounds of such charge, and proceed with the enquiry as if it were a new investigation. By that means we hoped to avoid the difficulties which might arise in any case, and which had actually arisen in the case which had occurred at Rangoon; the difficulty that occurred when it appeared for the first time in the course of an investigation that an enquiry into the misconduct of the master or officers ought to be made. Then sections 10 to 16 of the Bill dealt with other questions of procedure, and conferred

extended powers for the taking of evidence. And section 17 provided that all the provisions of this part should be applicable, not only to proceedings where the certificate was held from the Board of Trade, but also where the certificate was held from the Local Government.

Chapter III dealt entirely with the question of Indian certificates, and was principally a re-enactment of Act XV of 1863. The main difference was this—that whereas now the Local Government might set in action either the special tribunal MR. HOBHOUSE had described under Act I of 1859, or a Court of Admiralty, or a Court of criminal jurisdiction, or any Board or officer, we proposed to leave out the investigation by the Board or officer. The extended range of enquiry given to the special tribunal and their extended power to cancel certificates would answer all purposes. He believed that in point of fact the Board or officer was not resorted to for the purposes of these investigations, but that the Local Government conducted the enquiry through either the machinery of a Court of Admiralty or a Court of criminal jurisdiction or by the special tribunal under Act I of 1859.

There were some other amendments made by the Bill which it was not necessary to state at length to the Council. Part IV introduced a new subject into the Bill, but it was one that was introduced merely because Act XV of 1863 was repealed, and therefore it was necessary to re-enact what we wished to retain. It related to agreements with seamen and was only a re-enactment with some small amendments. Such was also the case with Part V.

His HONOUR THE LIEUTENANT-GOVERNOR said there was just one question he would wish to ask the hon'ble and learned member with reference to sections eight and nine of the Bill. Suppose a master or other marine officer was summoned before a Court, either as a defendant or as a witness, and the Court saw *primâ facie* reason for considering him blameworthy, could the Court impound his certificate?

The HON'BLE MR. HOBHOUSE did not think there was any special power to impound a certificate. There was a provision that the certificate could be suspended or cancelled.

His HONOUR THE LIEUTENANT-GOVERNOR said if that was so, he would venture to observe that it was very important that the Court should have the power of impounding a certificate. A case had occurred recently in Calcutta which shewed the necessity of the Court having such power. It sometimes happened that a man appeared before the Court, and on the next day appointed for his attendance he was not present, but had disappeared and taken his certificate with him. He might proceed to distant ports in other countries and practise his profession under cover of the certificate notwithstanding that enquiry in India might shew him unfit to hold that certificate in regard to the safety of life and property entrusted to his care. That might prove a serious difficulty. Should not the Court have the power of compelling a man to produce his certificate and of detaining it pending the enquiry? In a case sent up to HIS HONOUR, difficulty threatened to arise from want of this power, but fortunately the Magistrate did ask the man for his certificate and had managed to retain it.

The HON'BLE MR. BAYLEY thought section 8 met the difficulty referred to by His Honour the Lieutenant-Governor. It gave the Court power to enforce the attendance of any person during the enquiry. It gave, in fact, to the magistrate the same power as to compelling the attendance of accused persons and witnesses and for the regulation of the proceedings as he had in any other case that came before him: while the magistrate possessed this power, the power to impound a certificate seemed little needed.

His HONOUR THE LIEUTENANT-GOVERNOR did not think that that section gave the magistrate power to impound the certificate. He believed there was a paper on the subject sent up by the Bengal Government, with a memorandum which was given by one of the Magistrates of Calcutta.

The Hon'ble MR. HOBHOUSE would suggest that the Council should go on to take the Report of the Select Committee into consideration, but that they

should not pass the Bill on that day. He did not think any such paper as that referred to by the Lieutenant-Governor had been received by the Committee; but in the meantime His Honour might consider the question, and prepare an amendment upon it. The matter might prove to be of importance, and was at all events worth considering.

His Excellency THE PRESIDENT observed that it seemed to him very desirable that the point should be considered, and that the Lieutenant-Governor should have an opportunity of having such a letter addressed to the Legislative Department: it appeared at the present moment that such a letter had not been received.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE asked leave to postpone the motion that the Bill as amended be passed.

Leave was granted.

PROBATES AND LETTERS OF ADMINISTRATION BILL.

The Hon'ble MR. HOBHOUSE presented the Report of the Select Committee on the Bill to amend the law relating to Probates and Letters of Administration.

CIVIL APPEALS BILL.

The Hon'ble MR. HOBHOUSE also presented a further Report of the Select Committee on the Bill to amend the law relating to Civil Appeals in the Lower Provinces of the Presidency of Fort William.

PORT-DUES BILL.

The Hon'ble MR. HOBHOUSE asked leave to postpone the presentation of the final Report of the Select Committee on the Bill to consolidate and amend the law relating to Ports and Port-dues.

Leave was granted.

NATIVE SOLDIERS' RIGHTS AND LIABILITIES BILL.

Major-General the Hon'ble SIR H. W. NORMAN presented the Report of the Select Committee on the Bill to remove doubts as to the rights and liabilities of certain Native Soldiers.

SIR JAMSETJEE JEEJEEBHOY'S LOAN BILL.

The Hon'ble MR. ELLIS moved for leave to introduce a Bill to secure the re-payment of a loan by the Government of India to Sir Jamsetjee Jeejeebhoy, Baronet. The history of the case was this. In 1858, in recognition of the worth, liberality and loyalty of Sir Jamsetjee Jeejeebhoy, Her Majesty was pleased to confer upon him a Baronetcy, the first hereditary title ever bestowed upon a native of India. Sir Jamsetjee was then very wealthy, but saw the possibility of a reverse of fortune, and to provide against it, and anxious to secure a suitable maintenance for the future Baronets, he desired to settle a sufficient sum on the Baronetcy, a wish which was readily responded to by the Government. He accordingly entered into an engagement, but died before legal effect could be given to his wishes. Subsequently, Act XX of 1860 was passed to carry out the arrangement. The purport of this Act was to create a trust, and to vest in the trustees a certain property known as Mazagon Castle, and also an amount of Government promissory notes calculated to produce an interest of £10,000 a year. This sum was vested in the trustees, and was made inalienable by the possessors of the property and title. The wisdom and foresight of these arrangements too soon became apparent. In 1863-64 Sir Jamsetjee Jeejeebhoy's family became mixed up in those speculative transactions which ruined so many of the leading families of Bombay. The share of the present Baronet in these transactions was comparatively small, but he was called upon to meet heavy demands on account of other members of the family, and this led to pecuniary embarrassments. He had cleared off much of the debt then incurred, but there remained some four-and-a-half lákhs which he was unable to meet. Anxious to bear the burden himself and free his successors

from the liability, he applied to the Government for a loan, offering to give up a large portion of his income for a certain term of years to pay off that loan if advanced by the Government. This application was strongly supported by the Government of Bombay, and similar considerations to those which induced the original grant to the Baronetcy induced the Government to agree to afford this relief to a much respected and highly influential family. But there was one condition which it was essential to observe, and that was, that in granting the relief applied for, there should be no risk whatever of any loss to the public. The loan could, of course, be granted by the Executive Government without any application to this Council, but it was in order to secure the public against loss that legislation became necessary. As MR. ELLIS stated above, the property was inalienable under Act XX of 1860, and in order to furnish adequate security for the repayment of the sum which the Government were asked to advance, it became necessary to resort to legislation in order to make alienable the funds which had been vested in the trustees. The sum required was a loan of four-and-a-half lákhs of rupees. To provide this it was proposed to set aside 40,000 rupees annually for a period of seventeen years, which would pay off the whole of the principal with interest at five per cent. There would thus be no loss to the public, and ample security would be afforded by the Bill which he was now asking leave to introduce, inasmuch as the Bill would give the Government legal power to deduct annually from the sum vested in the trustees the 40,000 rupees required to pay off the interest and principal.

There was another matter which had to be attended to. Sir Jamsetjee Jeejeebhoy might have been willing to consent to this alienation for his own life, but in case of his death, there would have been legal difficulty if his heirs had not previously consented. To secure this the Government had obtained the assent of the three next heirs, two of whom had signified their assent by their own hands, they being of legal age, and the third, a minor, was represented by a guardian appointed formally by the High Court. There was thus no difficulty likely to occur in the realization of the loan which Government had decided to give.

The Motion was put and agreed to.

MADRAS SALT LAW AMENDMENT BILL.

The Hon'ble MR. ELLIS also moved for leave to introduce a Bill to amend the law relating to Salt in the Presidency of Fort Saint George. In doing so, he would explain briefly the circumstances which had given rise to the proposed legislation. In all India, excepting Madras, the salt-revenue was raised by an excise or customs-duty. In Madras, however, in lieu of the excise, there was a different system. The Government had a monopoly, and sold the salt at a price fixed by law. This price was at present two rupees per maund, and the theory upon which this particular price had been based was that Re. 1-13-0 would represent the duty which in Madras, as in Bombay, was leviable on each maund of salt, and the balance, three annas, would represent the charges incurred by the Government in producing that salt and bringing it for sale. This theory corresponded with the actual practice in the Eastern Districts, for there the salt could be manufactured and brought for sale at a cost which averaged three annas per maund. The duty levied, therefore, in the Eastern Districts was, as it ought to be, Re. 1-13-0 out of Rs. 2, the selling price. On the Western Coast, however, the case was different. On that coast of the Madras Presidency but a small portion of the salt could be produced by manufacture on the spot, and that salt was of a very inferior quality; consequently the Madras Government resorted to a system of importation by means of contractors, and the salt was brought from Goa, Bombay, and other places in order to be sold by Government to the people. In carrying out these transactions the cost to the Government, independently of the duty, was not three annas as on the Eastern Coast, but a sum estimated at from seven annas ten pies to seven annas eleven pies per maund. The result, therefore, was that when salt was sold at two rupees per maund, the full duty of Re. 1-13-0 was not realized, and so Government lost on each maund of salt the sum of four annas and ten or eleven pies as the case might be. Thus the people in those districts not only shared in the lighter salt-taxation which was sanctioned by law for western

and southern India, but enjoyed an exceptionally light rate of duty as compared with their brethren in the same Presidency. For this favourable rate there was no ground whatever on the score of the people being unable to pay, for the fact was that they were exceedingly well off, and very much better off than the people in most other parts of India. It was hardly fair, therefore, to the rest of the community, that these people should enjoy an exceptionally light taxation in the matter of the salt-duties. Another reason why a change in the present system was expedient was, that so long as it continued, all private trade, all private enterprise, was absolutely impossible. The question with which we had now to deal had been mixed up with a discussion on the merits of the system of monopoly as compared with the system of excise in Malabar and on South Canara, but on this discussion it was not necessary for him to enter, because the present measure would in no way affect it. It was true that so long as the present law existed it was not possible to have a system of excise, but the carrying out of the change that was now proposed would in no way commit the Government to adopt the system of excise. The present law prevented any importation by private parties from Bombay, Cheshire, or other parts, and restricted the sale of salt to the Government monopoly. Thus while under the present system private trade was impossible, under the other system of a fixed excise-duty, which this Bill would empower the Government to carry out, it would be open to the Government to adopt either the system of excise or to maintain the present system of monopoly, just as might seem best.

He had only one other point to mention at this stage of the proceedings. The proposed change had been for a long time contemplated, and it was for some years strongly advocated by the Madras authorities. The Government of Madras indeed applied for the change, and in June 1873, a draft Bill was forwarded to them for their concurrence. In the reply of the Madras Government, however, it was stated that the Government had changed their opinion, and that a majority at least of that Government had decided that it was inexpedient to make any change in the present state of things. Still, for the reasons which had been previously given by the Madras Government and in which the Government of India had concurred, and which might briefly be stated as being three in number,—*first*, that the salt-revenue would be increased; *secondly*, that taxation would be equalized, and *thirdly*, that the door would be opened to private enterprise—for these reasons, the Government of India resolved that it was expedient to go on with the Bill, and he proposed accordingly with the permission of the Council to bring it in. It was only an enabling Bill, and would not make it imperative on the Government to substitute a fixed duty for the selling price now prevailing, but would enable the Government to carry out that measure if it saw fit.

The Motion was put and agreed to.

REPEALING ACT AMENDMENT BILL.

The Hon'ble MR. HOBHOUSE moved for leave to introduce a Bill to correct a clerical error in the Repealing Act, 1874. The error which this Bill was intended to correct was of the simplest description. It had occurred to an Act which was for the purpose of settling matters of jurisdiction in Kulu, and it consisted in having written the word "two" for the word "one." A glance at the schedule of the Act would show exactly how the error happened. In several Acts the repealing clause and the schedule referred to in it had been struck out. That clause happened to be clause two in both the next-door neighbours to this unlucky Kulu Act; so either in the copying or in setting up the type the word "two" got written for "one". However, there the error was, and the effect of it was that, instead of repealing the non-effective part of Act V of 1874, we repealed the effective part; and we proposed now to substitute "one" for "two".

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE also applied to His Excellency the President to suspend the Rules for the Conduct of Business.

His Excellency THE PRESIDENT observed that the President under the Rules for the Conduct of Business had the power for sufficient reason of suspending the Rules. It appeared to him that the reasons given by the Hon'ble Mr. Hobhouse were sufficient and that no inconvenience could result from the suspension of the Rules on the present occasion.

He therefore suspended the Rules.

The Hon'ble MR. HOBHOUSE then moved that the Bill be taken into consideration.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE also moved that the Bill be passed.

The Motion was put and agreed to.

BURMA COURTS ACT AMENDMENT AND BURMA FISHERIES BILLS.

The Hon'ble MR. HOBHOUSE also moved that the Hon'ble Mr. Eden be added to the Select Committees on the following Bills:—

For the further amendment of the Burma Courts Act, 1872.

To regulate Fisheries in British Burma.

The Council adjourned to Tuesday, the 9th February 1875.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

CALCUTTA,
The 9th February 1875.

G. H. M. BATTEN,
Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 11th FEBRUARY 1875.

GENERAL REMARKS.—There has been slight rain during the week in Sindh, most districts of Bengal, and Bundelkhand and Allahabad in the North-Western Provinces. Some has also fallen in Assam and two districts of the Central Provinces. In the Punjab, where its want continues to be most felt, there have been good falls in Rawal Pindi and Peshawar, insufficient showers in Hissar and Umballa, and a fall in Dera Ismail Khan: none elsewhere. Prospects, however, continue to be fairly satisfactory. In Bombay the *rabi* harvest has commenced and a fair outturn is expected. In Bengal the rice harvest has closed and the *rabi* is in good condition. In the North-Western Provinces and Oudh the pulses have suffered much from frost, but except in the Meerut and Agra divisions, where rain is much required, the wheat crop is reported to be good. Elsewhere reports are generally favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Feb. 11th)	...	No rain; navigation canals closed; two feet water over anicut; gram and castor still being sown; growing crops fair; varagu outturn three-fourths; markets well supplied locally; prices slightly fallen in Guntur and Nandegama; stationary elsewhere; fever abating; mild small-pox continues; cattle generally unhealthy; pasture getting scarce.
Kurnool (10th)	...	Season favourable; no rain; crops good order; sowing of second crop paddy still in progress; oil-seeds and pulse being harvested; outturn pretty fair; markets well supplied; prices slightly rising in Ramalkota and Sirwell, falling in Puttikonda, and stationary elsewhere; fever prevalent in several taluks; water and pasture abundant; no water over Sunkesala anicut.
Tanjore (11th)	...	No rain; rivers almost dry; water in tanks scanty; water over anicuts none; no wet cultivation; that of a few dry crops continues in some parts; crops in good order; harvest wet and some dry crops yield satisfactory; markets well supplied; prices steady; small-pox in four taluks; cattle disease in Sheally; some loss; pasture sufficient.
Trichinopoly (10th)	...	No rain; water for irrigation somewhat deficient; crops good order; prices steady; public health good; pasture generally sufficient.
Malabar (11th)	„	No rain; harvesting of second crop almost completed; markets well supplied; prices steady; fever in some parts; small-pox slightly prevalent; cattle disease slight in Walluvanand; pasture withering.
		General Remarks.—Prospects satisfactory.
Bombay— (Feb. 10th)		
Sindh.		
Kurrachee ...	...	Fever continues; rabi crops damaged by frost in most talukas and cotton in Dadoo taluka; slight rain, general on 22nd and 23rd; cattle disease more or less prevalent; camels in Kohistan suffering from disease.
Shikarpur ...	...	Weather continues cloudy; slight fall of rain on 2nd and 6th; no other change.
Upper Frontier ...	·05	More rain wanted; oil-seed, wheat, barley, and grain failed in Jacobabad taluka; in Thul taluka wheat good, oil-seed slightly injured by frost; in Kusmore taluka wheat, gram, and mutter good, oil-seed fair.
Gujarat.		
Ahmedabad ...	...	All rabi doing very well.
Surat ...	...	Picking operations commenced in three talukas; no other change.
Broach ...	...	Wheat and jowar being harvested; cotton-picking progressing; weather good.
Kaira ...	...	Crops thriving well; weather and health good.
Khandesh and Nasik.		
Khandesh ...	...	Reaping of rabi crops commenced; cotton unchanged; rate 48; fever and ague and cattle disease continue in some places.
Nasik ...	...	Wheat, gram, sugarcane, chillies, plantains, and grape vines have suffered greatly from frost in some villages; rabi crops being harvested; no change in public health.
Konkan.		
Tanna ...	...	Weather cool and pleasant; public health good; fever in Wada, Shahpur, and Bhewndy; ague in Dhanoo and Moorbaur talukas; and guinea-worm in Wada taluka; rabi crop good in Shahpur, Bhewndy, Bassein, and Panwell talukas; middling in Dhanoo, Wada, Moorbaur, and Callian talukas, but have suffered slightly in Mahim taluka from fall of rain.
Deccan.		
Poona ...	...	Rabi crops now being generally reaped; prospects continue as before; climate and public health good.
Ahmednuggur ...	...	Harvesting of rabi in progress; health good.
Sholapur ...	...	Reaping of rabi begun in some places; public health good.
Satara ...	...	Crops same as before; ague in Pahtun.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Southern Maharatta Country.		
Belgaum ...	...	Rabi and cotton crops continue well; public health generally good.
Dharwar ...	...	Wheat harvest in Hubli, Ranibednur, and Karazghi not promising; other crops, cotton, and public health same as before; cattle disease in Petta Nargund.
Kanara ...	...	Second crops good; fever general, small-pox and cattle disease prevail to a slight extent.
Kaladgi ...	...	Rabi middling; cattle disease in Bagewaree.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Rabi prospects good; harvesting in progress; weather cold; public health good.
Wudwan ...	...	Weather warm; no other change.
Baroda ...	...	Rabi crops and public health good.
		General Remarks.—Rabi harvest commenced in the Presidency proper; a fair outturn on the whole may be expected.
Bengal—		
Burdwan ...	*Nil*	Rainfall at Raneegunge ·23, elsewhere *nil*. Weather cloudy, then fine and hot, and threatening rain at the time of report. Crops promising. Telegraphed on the 10th February: a fall of ·22 inch of rain.
Bankura ...	0·22	Slight rain on the 31st January; rest of the week dry. The crops continue to flourish.
Beerbhoom ...	0·32	Slight rain fell. Cold during the first half of the week; growing hot during the latter. State and prospects of crops continue good.
Midnapore ...	*Nil*	Weather cold and clear, with keen wind from the north-west. What little cold weather crops there are, are very good. Rain is wanted for further sowings. Prices of rice show a tendency to rise in the east of the district. Telegraphed on the 11th February: a fall of 0·11 inch of rain.
Hooghly ...	„	Weather clear; wind from north and north-east. Onions and vegetables on the ground; prospects good; prospects of peas fair; potato crop almost all gathered in.
24-Pergunnahs ...	„	Weather getting warmer. The harvest of the late rice is complete in all parts of the district, with the exception of a portion of the Sunderbuns. Cold weather crops progressing favourably. Reported on the 11th February: a fall of ·26 inch of rain.
Nuddea ...	0·04	Slight rain. Weather somewhat warmer during the last day or two. The rabi or cold weather crops promise well everywhere. Sugarcane is giving a large yield and has been sown over a larger area than usual.
Moorshedabad ...	0·23	Weather warmer. State and prospects of the crops are very promising.
Dinagepore ...	·13	Weather cloudy, with slight rain in places. Mustard being gathered; a not very good crop. Other cold weather crops looking well.
Maldah ...	0·28	Cloudy and rainy in the beginning; fair and cold afterwards. The harvesting of the mustard crop is going on. The prospects of the cold weather crops continue good. The sowing of boro dhan, or spring rice, has begun.
Rajshahye ...	*Nil*	Clear and fair weather. No rain during the week except a very slight drizzle on the night of the 29th January at the Sudder station. No change in the favourable prospects of crops. Boro dhan, or spring rice, is being sown.
Rungpore ...	0·06	Sun becoming more powerful, but still cold in the morning and evening. Very slight rain a few days ago. Reaping operations nearly over, and very good crops.
Bogra ...	*Nil*	Fair weather. Reaping of the late rice crop not yet completed.
Pubna ...	0·03	Weather fair; dry and warmer. Harvesting of sugarcane and turmeric going on; the yield is not good. Cheena millet, jally, and bora dhan, or spring rice, are being sown. The prospects of the motor and khesari pulses and of rye oil-seed are good. Mango is in blossom.
Jalpáiguri ...	0·02	Little rain has fallen. Cold in the beginning of the week; last two days warmer. State and prospects of the crops are excellent. Ploughing going on for the ensuing early rice crop.
Dacca ...	*Nil*	Seasonable weather; clouds hanging over. State of crops very good. Telegraphed on the 11th February: a fall of 0·03 inch of rain.
Patna ...	·11	Weather cloudy and occasional rain. Rice crop all reaped, and prospects of the cold weather crops are at present excellent, but cloudy weather bringing blight; poppy beginning to suffer.
Gya ...	·68	Seasonable weather; some rain has fallen. The prospects of the cold weather crops continue excellent.
Shahabad ...	0·37	Rain fell on the night of the 30th January and on the 5th February; weather clear; wind variable. Prospects of the crops excellent; the late rains have done much good. Damage from hailstone very slight.
East Tirhoot ...	*Nil*	Pleasant weather. Prospects of crops favourable.
West Tirhoot ...	0·16	Some rain has fallen; weather fair afterwards. The prospects of the cold weather crops continue good.
Sarun ...	·34	Weather cloudy and clear alternately, east wind prevailing. A little rain on the 30th January and on the 4th and 5th February. The prospects of the cold weather crops are generally favourable. Wheat, barley, rabar (pulse), and peas are doing well. Poppy beginning to flower; mustard is being gathered. The late rain has on the whole benefited the crops, but very slight injury to rahar, peas, and barley from frost and blight has been reported within the jurisdiction of Barreapore, outpost of thana Mushruk in the Sudder sub-division, and thanas Baragaon, Darowlee, and Sewan in the Sewan sub-division. Indigo fields are ready for sowing; prices (common rice and wheat excepted) stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Chumparun ...	·22	Weather cloudy and cold, with easterly wind and showers. Crops excellent, and improved, if possible, by recent rain. Opium magnificent; indigo prospects good.
Monghyr ...	0·39	Slight rain followed by intense cold. State and prospects of crops excellent. Telegraphed on the 11th February: a fall of ·11 inch of rain.
Bhágalpur ...	·13	Rain on the night of the 6th February, and sky very cloudy up to the time of report. The cold weather crops throughout the district, unless damaged by hail or too much rain before ripening, must be bumper ones—full 16 annas. Telegraphed on the 11th February: a fall of ·07 inch of rain on Monday night.
Purneah ...	0·07	Slight rain fell. Weather warmer during the last two days. State and prospects of crops, as before reported, are very good.
Sonthal Pergunnahs ...	·59	Some rain has fallen. Weather variable. In some places cool and fine: in others cloudy and warm, with threatening rain. State and prospects of crops are very good.
Cuttack ...	·88	Rain has fallen. Weather cold and cloudy. More rain is expected. Cold weather crops coming on vigorously. Harvest of earlier kinds has begun.
Balasore ...	1·43	Sky dark and threatening on the 30th January. Rain with gusts of wind on the night of the 30th and on the 31st; afterwards fine weather. All crops off the grounds, except a few pulses, &c., on banks of large rivers.
Lohardugga ...	0·90	There has been rain throughout the district during the week. Cloudy at the time of report.
Maunbhoom ...	0·52	Some rain fell during the week. The weather has turned suddenly warm; sky clouded, and there are indications of rain. State and prospects of crops are satisfactory in all respects.
		PUBLIC HEALTH.
		Burdwan: fever less, more cholera and some small-pox. Furreedpore: cholera is very severe on the coast. 24-Pergunnahs: cholera prevailing extensively in thannas Mothoorapore, Bankipore, and Devipore of the Diamond Harbour sub-division; also to a less extent in thannas Tallygunge, Joynagore, Protabnagore, Bestopore, and Acheepore; it has abated in Bhangore and in sub-division Baraset; fever decreasing at Barripore. Nuddea: public health good. Rajshahye: very few cases of cholera reported from Nattore station. Pubna: little or no sickness reported. Furreedpore: general health of the district good. Patna: health good. Gya: health of the people good. West Tirhoot: public health good. Sarun: general health good. Bhágulpur: general health very good. Balasore: cholera reported from tracts affected by cyclone of the 15th October last. Lohardugga: small-pox; reports during the week fewer. Singbhoom: a few cases of cholera have been reported from the most eastern part of the district.
		General Remarks.—More or less rain has fallen in two-thirds of the districts. The harvest of the late rice crop is completed, except in a very few places. Cold-weather crops are still progressing satisfactorily, and in some places harvesting has commenced: spring rice cultivation is progressing with fair prospects. Lands are being broken up for the early rice crops.
N. W. P.—		
Meerut (Feb. 10th)	...	Rain much wanted for all unirrigated crops. Frost destroyed arhar; gram also suffered; weather cloudy.
Agra „	*Nil*	Arhar much injured by frost, gram not seriously; general prospects favourable, but rain would do good.
Allahabad „	...	Slight rain all over district; barring accidents, every promise of an excellent harvest.
Bareilly „	*Nil*	Rabi prospects unchanged.
Banda (9th)	...	Weather cloudy and showery; no other change; some new grain selling at thirty-two seers and peas at twenty-two.
Hamirpur (11th)	...	Rabi prospects are bad. The later rain at the end of September was only of partial extent, hence the rabi in some places germinated badly. Winter rain has not come, and would now be too late for real good. Frost has greatly damaged arhar and gram in many parts; some hail doing no great harm; cloudy weather of late injuring gram.
Mirzapur (10th)	...	Arhar, peas, gram, and masúr injured by frost and insects; sarsou much injured by insects. Cloudy weather threatening blight, but general prospects still good.
Benares „	...	Good sunshine; no other change.
Jhansi „	...	Weather cloudy, with slight rain. Arhar, masúr, and early-sown grain damaged by frost in Jhansi; in Jalaun frost less mischievous, and an average crop is expected.
Punjab—		
Delhi (Feb. 10th)	*Nil*	Weather cloudy; crops continue healthy; public health good.
Hissar „	...	Slight rain; weather cloudy; crops progressing favourably; health generally good.
Umballa „	...	Very little rain; crops suffering; health good.
Jullundur „	...	Rain much wanted; health good.
Lahore ...	...	Rain greatly needed; crops fair; health good.
Mooltan ...	...	Crops suffering for want of rain; health good.
Dera Ismail Khan ...	...	A fall of rain, quantity not given; harvest prospects and health good.
Rawul Pindi ...	·75	Prospects improved; health good; cattle disease continues.
Peshawar ...	·8	Crops benefited by the rain; slight fever prevalent.
		General Remarks.—Rain urgently wanted, except in northern districts; harvest prospects so far fair; public health generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Oudh—		
Lucknow (Feb. 10th)	*Nil*	Arhar, peas, gram, massúr, and mustard injured by frost; wheat crop good; public health good.
Fyzabad „		
C. Provinces—		
Sambalpur (Feb. 6th)	·95	Sugarcane cutting commenced; health good.
Upper Godavari ...	...	Weather clear; prospects and health good; prices easy.
Bilaspur ...	...	Weather clear; prospects good; small-pox and cattle disease prevalent; prices steady.
Chanda (Feb. 7th)	...	Weather clear and warm; rabi fair; fever and cattle disease prevalent; prices rising.
Raipur ...	...	Weather clear; prospects unchanged; health good; prices rising.
Chhindwara (Feb. 8th)	...	Weather cloudy; slight rain; rabi promising; health good; prices rising.
Balaghát ...	...	Weather clear; threshing rice completed; rabi promising; health good; prices steady.
Bhandara (Feb. 9th)	...	Weather clear; bumper rabi harvest expected; fever and small-pox prevalent; prices easy.
Nagpur (10th)	...	Weather clear; oilseeds reaped; health good; prices rising.
Wardha ...	...	Rabi favourable; small-pox prevalent.
Jubbulpore ...	...	Weather warm; slight showers of rain; prospects fair; blight anticipations unrealized; small-pox continues.
Seoni ...	...	Weather clear; prospects good.
Saugor ..	...	Wheat stunted from want of rain; gram promising; small-pox prevalent; prices stationary.
Nimar ...	...	Weather cloudy; prospects fair; small-pox and cattle disease decreasing.
Narsinghpur ...	...	Rabi good; small-pox prevailing; prices stationary.
Hoshangabad ...	...	Prospects continue good.
Betul ...	...	
Damoh (Feb. 11th)	·05	Small-pox prevalent; prices stationary.
Mandla ...	...	Weather clear; prices stationary.
		General Remarks.—Prospects continue good, and prices are easy, though in the districts of Nagpore, Chhindwara, Raipur, and Chanda they have risen.
British Burma ...	...	Report not received.
Mysore and Coorg—		
Mysore (Feb. 11th)	...	Harvesting of early crops completed; later crops sown; in some districts thriving; cattle disease prevalent in parts of four districts; public health good.
Coorg „		
		General Remarks.—Agricultural prospects good.
Assam—		
Sylhet (Feb. 11th)	...	State of cold weather crops good; small-pox and cattle disease prevalent.
Gauháti „	·2	Settled clear hot days; cold dewy nights; hot north-east winds on Wednesday.
		General Remarks.—Prospects of all crops favourable; small-pox has made its appearance at the station of Burpetta.
Hyderabad Assigned Districts—		
Umraoti (Feb. 11th)	...	Rabi nearly ready for reaping.
Rajpootana—		
Jeypore (Feb. 11th)	...	Agricultural prospects unchanged; rain still needed, but no apprehension; public health good.
Ajmere „	...	No change since last report.
Bhurtpore „	...	Crops somewhat damaged by late frost.
Deolee (Feb. 6th)	*Nil*	Prospects and health unchanged.
Serohi (Feb. 1st)	...	Wells well supplied with water; health very good; prospects good.
Meywar (Jan. 29th)	...	Plenty of water; health and prospects good.
Marwar (Jan. 20th)	...	Water in wells sinking rapidly; health good; prospects favourable.
Central India—		
Indore (Feb. 10th)	*Nil*	Health and agricultural prospects continue good.
Rutlam „		
Neemuch „		
Nepal ...	...	Report not received.

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

Addition to Supplement to the Gazette of India for Saturday, February 13, 1875.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 9th February 1875.

PRESENT :

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
His Highness the Mahárájá of Vizianagram, K. C. S. I.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.
The Hon'ble Ashley Eden, C. S. I.

MERCHANT SHIPPING ACT AMENDMENT BILL.

The Hon'ble MR. HOBHOUSE moved that the Bill for the further amendment of Act I of 1859 (*for the amendment of the law relating to Merchant Seamen*) and for other purposes, as amended, be passed. This motion was before the Council on the last occasion when it met, and was postponed on account of a suggestion which fell from His Honour the Lieutenant-Governor that it would be desirable to amend one of the sections of the Bill, and also because a further paper of importance was to be expected from the Government of Bengal. No notice of amendment had been given by his hon'ble friend, but a paper which he held in his hand had been sent in by that Government. In point of form, he supposed that the matter was no longer in the hands of the Select Committee, because their final report was taken into consideration by the Council, and their fleeting existence was thereby terminated. But the gentlemen composing the Committee had been good enough to meet yesterday for the purpose of considering the paper sent in by the Government of Bengal, and the result of their consideration was that, with one exceedingly trifling exception, the Committee thought on the whole it was not desirable to make any alteration in the Bill. MR. HOBHOUSE therefore hoped the matter might be disposed of in the course of that day.

MR. HOBHOUSE trusted his hon'ble friend would not consider that he was hard upon him when he entered a mild protest against the practice of sending in a number of miscellaneous suggestions for the alteration of a Bill after it had been very frequently before the Select Committee and many months before the public, and was in what ought to be its final stage. All the world knew that his hon'ble friend had been personally engaged in a public business of as much magnitude and importance as had ever been undertaken by an Indian Government, and all the world knew how that work had been performed, and might guess without his saying so that that work, coupled with the other weighty work of the Government of Bengal, had prevented the Lieutenant-Governor giving personal attention to a minute corner of legislative territory, such as this was. But it had recently happened several times that, just when the Council were prepared to pass a Bill, sometimes after the Bill was put into the paper to be passed, fresh papers containing a number of miscellaneous suggestions had come in, as to which there was no apparent reason why they should not have come in

long before. That was a matter of considerable inconvenience; he need not enlarge on the reasons why it was inconvenient. Every man of business knew the reasons why a business had better be finished when it had been prepared to be finished, even when it was all in one hand. These reasons were strengthened when the business was conducted by a number of other persons, and still more so when it was conducted by a fluctuating body such as a Select Committee or as this Council. Sometimes of course the thing could not be helped, and we must make the best of it; at other times the new matter was of such importance that it ought to be dealt with even if the Bill was on the very verge of passing into an Act. All MR. HOBHOUSE wished to say was that there was an inconvenience about it, and that as a general rule, and only as a general rule subject to exceptions, it was better to pass our Bills when they reached the final stage in which the Committee had put them, than to re-consider them again with a view to small alterations, and not to alter them unless the changes proposed were matters of considerable importance. When there was a matter of importance in question, it was always competent to any member to have the proposal put into the form of an amendment, and to move it, either upon the consideration of the Report of the Select Committee, or when the Bill was to be passed. Indeed on consideration of the Report he might raise a discussion upon it without moving an amendment. That brought the point to a definite issue; but when such proposed alterations related to a considerable number of small points, a re-consideration at that stage was likely to result in the introduction of some incongruous matter and not to improve the Bill.

Now, with regard to the matter before the Council, this Bill was introduced in July 1873; it was altered by the Select Committee in July 1874, and was sent to the Local Governments on the 13th July 1874; and the letter from the Government of Bengal came in some three days ago. Besides the point mentioned by the Lieutenant-Governor, the letter contained some suggestions for objects which were contained in a former letter of theirs and which were considered but not adopted by the Select Committee, and it contained some suggestions for objects which, on examining the Bill, were found to be already provided for by the Bill, with the exception of one administrative matter which he thought was essentially provided for in the present law.

The letter ushered in an appendix which consisted of sixteen folios of print, and he found, after a careful perusal, that fully fourteen of these pages had nothing whatever to do with the Bill. They referred to proposals for the general amendment and consolidation of the Merchant Shipping Law, which would have been most fittingly sent in if we had undertaken consolidation. But, as he had already explained to the Council, the general consolidation and amendment of this law were not under the consideration of the Council; they had been expressly removed from our consideration, and we were dealing only with the limited subject of courts of enquiry.

The point which was specially mentioned at the last meeting of Council was not the subject of an amendment; but it would be convenient to state what that point was. It was contained in a letter or memorandum of Mr. Marsden sent in to the Bengal Government. Mr. Marsden was speaking of Act I of 1859 and Act XV of 1863: and he said:—

"Neither of the Acts above cited gives any power to the Local Government to detain any person pending the result of an inquiry held under section C, Act I of 1859, or pending the decision of the Local Government on the report furnished by the officers appointed to hold such inquiry; neither is any power given to the officers holding such inquiry to impound the certificates of persons giving evidence before them till the orders of the Local Government be made known. The result of this is obvious; it enables any witness against whom the evidence in the case may be taking an unfavourable turn, to simply leave India and go outside the local jurisdiction, taking his certificate with him. It will be seen that this might occasion serious failure of justice, as a master whose negligence had caused the total loss of a vessel may simply obtain a certificate of clearance for his vessel on the production of his certificate before the Shipping Master, and leave this port; but in the event of his not being able to produce such certificate, he is precluded from obtaining such clearance. What I would suggest is, that power should be given to the President of Courts of enquiry held under section C of Act I of 1859, to demand the certificate of any certificated witness produced before him, and to impound such certificate until the orders of the Local Government be known in the case, or until such time as it may seem expedient to the President to return the same to its owner. This would in no way preclude the vessels being sent away in charge of a competent master, but would, I think, effectually preclude guilty persons leaving the jurisdiction pending an investigation.'

The Bengal Government enclosed a copy of Mr. Marsden's memorandum, and recommended that a marine Court of enquiry should be distinctly empowered to impound the certificate of any certificated witness in a case until the orders of the Local Government be known, or until such time as it may seem expedient to the Court to return the certificate to its owner.

MR. HOBHOUSE must confess that that was a proposal he could not support: on the contrary, if it were made to the Council, he should think it his duty to oppose it. It might be that a guilty person would be precluded from leaving the port under the proposed rule; but then an innocent person might be also precluded. He could not think it right that a person charged with no sort of crime should have his property taken away from him, merely because he happened to be a witness, and merely because he happened to be the holder of a certificate, until the Local Government thought fit to give orders on the subject, and the Court thought fit to restore the certificate. MR. HOBHOUSE thought that such a rule would be of tyrannical character, and he could conceive its being used heedlessly and in a very oppressive way. He did not think that such a power ought to be conferred unless material grounds were shown to prove it necessary for the public good. If, indeed, the proposal were confined to a person actually charged with misconduct, that would be different; and when his hon'ble friend mentioned the matter, MR. HOBHOUSE did not understand that he was contemplating that every person who appeared as a witness should be subjected to the chance of having his certificate taken away. MR. HOBHOUSE supposed that the Lieutenant-Governor was contemplating only those persons who were charged with misconduct. It seemed to MR. HOBHOUSE that there was no necessity, and on the whole that it was not desirable, to introduce a special power such as this. He thought the law as it would now be amended by this Bill would give sufficient power for detaining anybody really wanted. If a man was wanted as a witness—and it was impossible to conceive a person so implicated in the proceedings as to be the subject of a charge of misconduct who would not be wanted as a witness—then he could be detained under section 15. That power was a new and a stringent one; therefore the Committee had thought fit to guard it by some reasonable limit of time, and had provided that "no person should be detained by virtue of this section for more than forty-eight hours." It would be very inconsistent if, with that proviso, that no person should be detained for more than forty-eight hours, we were to give the power of indirect detention by indefinitely detaining a document without which the man could not go about his business. Still, when a person was wanted as a witness he might be detained for forty-eight hours. If you wanted to charge him, nothing was easier than to state the grounds, which could probably be done in half an hour, and then he could be summoned under section 10, which provided that the Court might summon any master, mate or engineer to appear, and should give him a full opportunity of making a defence. The Bill had not said that the master, mate or engineer should be bound to attend. The matter was not a criminal proceeding: it was one in which he was charged with misconduct and of course he ought to be able to defend himself: but if he chose he might let judgment go by default; there was no reason why he should be kept to be tried as criminals were tried. Under section 8, the Court had the same power for compelling the attendance and examination of witnesses and for the regulation of the proceedings as if the investigation were a proceeding relating to an offence or cause of complaint upon which the Magistrate had power to convict summarily. It was important to consider what was the practical difficulty we had to deal with or were supposed to be dealing with. He had shown that there were new and stringent powers for the detention of a person for the purpose of evidence, and he might then be charged and the enquiry might go on either in his presence or in his absence. But MR. HOBHOUSE wished to know whether any person charged with misconduct before Courts of enquiry of this

kind had ever run away. If a person had run away, depend upon it, it was because the case was of so exceedingly serious a nature that no mere detention of his certificate would suffice to detain the man, but to lose the certificate would be a trifle, compared to the other consequences of the proceeding. It was true that it was stated, in the letter from the Government of Bengal, that recent cases had come under notice in which the imperfect state of the present law had had a bad effect; but he had not found the circumstances of any case stated; and seeing that all the suggestions of Mr. Marsden, which were endorsed by the Local Government, referred to witnesses and to witnesses only, MR. HOBHOUSE could not help thinking that the meaning of the passage was that some cases might happen in which the inability of the Court to detain witnesses would have a bad effect. That was one of the original reasons for this measure, and the Bill was so framed as to amend the law in that respect. He believed that the difficulty which was apprehended, of a man holding a certificate and running away in order to avoid being present on a charge, was entirely imaginary. He could not conceive that a person who held a certificate and hoped to retain it would do an act which must be his ruin; for if he ran away the case would certainly go against him by default, and by the act either of the Courts here or of those in England he would lose his certificate.

The result was that in MR. HOBHOUSE's opinion we ought not to give these large indirect powers of detention; they would not be a valuable addition to the Bill. If we wanted more detaining power, we ought to give it directly and not indirectly. But before we gave more power, we ought to be very certain that it was wanted. MR. HOBHOUSE could not say that such powers were wanted, and therefore his own judgment was against the alteration suggested.

The only change which occurred to the Committee which sat yesterday was one of a purely verbal nature—so purely verbal, that it was almost of a clerical nature, and the Committee did not think it necessary to make a report or prepare an amendment on the subject. Section 8 provided that for the purpose of the investigation, the Court, so far as related to compelling the attendance and examination of witnesses and the regulation of the proceedings, should have the same powers as a Magistrate in criminal cases. The Committee proposed to introduce, after the words "examination of witnesses," the words "and the production of documents." In his opinion the clause as it stood would mean the same thing, whether these words were put in or not. But he was told that it was customary to insert them. If His Excellency the President would take this as merely a clerical alteration, perhaps the Council might take it as covered by the Report of the Committee. If it was thought that it was taking too great a liberty to do so, he would prefer that the words should be left out, rather than that the passing of the Bill should be delayed.

His Excellency THE PRESIDENT observed, in regard to the point of form, that the omission to introduce the words "and the production of documents" did not appear to him to be a mere clerical error. They were inserted for the sake of making the meaning clearer. He would therefore put the question that those words be inserted in section 8 after the words "examination of witnesses."

The Motion was put and agreed to.

His Honour THE LIEUTENANT-GOVERNOR asked whether sections 8 and 15 of the Bill would certainly enable the Magistrate or the investigating officer to detain a defendant pending an enquiry.

The Hon'ble MR. HOBHOUSE said he conceived that section 15 gave an absolute power of detention of any person who was wanted as a witness—any person from whom information was wanted. Enquiries under this Bill were not criminal proceedings, and every person who came before the Court was a witness: it was a public enquiry, and the power of detention of witnesses would include the person charged. Section 8 gave to the Court of enquiry the same power as a Magistrate sitting in a criminal case, whatever that power might be: you could hardly give it more power.

His Honour THE LIEUTENANT-GOVERNOR said that, from the explanation just given by his hon'ble friend, it appeared that the Magistrate certainly had the power which HIS HONOUR was anxious he should possess. Then, as regards the remarks of the hon'ble member, he entirely agreed to waive any objections that he might have made at the last sitting of the Council, because he now found on consideration that the power he asked for of impounding a certificate was not only fully granted in effect, but more than granted by section 15; because, if you might arrest a witness and detain him for forty-eight hours, it followed that that detention would necessarily detain the certificate: if you could catch the man, you could catch his certificate; if you had the person of the man, we did not very much care about his certificate. Therefore, as he found, and as his hon'ble friend had said, that this stringent power was given to us, HIS HONOUR refrained from asking for what appeared to him the very small power he ventured to ask for at the last meeting of the Council. But when his hon'ble friend went on to style HIS HONOUR's proposition as tyrannical and oppressive, he must simply reply by expressing surprise that his hon'ble friend failed to perceive that, in using those expressions, he had strained at a gnat, while by section 15 he had swallowed a camel. If to detain a person who was before the Court be tyrannical and oppressive, how much more tyrannical and objectionable was it to enter a ship and detain him forty-eight hours. Therefore, he really must emphatically demur against the application of these phrases to the very harmless proposition he had made. But his hon'ble friend further proceeded to say that this danger was an imaginary one. HIS HONOUR could show his hon'ble friend that the danger was not so imaginary a one as was supposed; because, although it was true that a certificated man who was charged, or a witness who absconded, in the face of a tribunal of enquiry, would sooner or later lose his certificate—if he were certificated by the Local Government, his certificate would be cancelled, and if he was certificated by the Board of Trade, we should hope that they would act upon the report submitted to them—yet there were two uncertainties in favour of the man. In the first place, there was always a doubt as to how far the Board of Trade would act upon a report of a Court of enquiry in India; for there had been at least one unfortunate case in which the Board of Trade did not do so. But the main uncertainty in the man's favour was that he might abscond from this port carrying his certificate with him, and proceed to other ports, and under cover of that certificate obtain ships, and if he were a bad man might cause the loss of life and property. The Board of Trade could not ascertain where a man was; how many ports were there to which such a man might resort, and how long would it take before he was found out, and in the meantime how many ships might have been lost through his fault on the high seas. So the danger was not really imaginary, although HIS HONOUR admitted that his hon'ble friend was correct in one respect, that sooner or later the man would be caught. It was therefore a real danger, but was obviated by the stringent power given by section 15 of the Bill; because, if a Magistrate had reason to think that a witness was involved in a charge and was likely to abscond, he might arrest him under section 15, send immediate notice to the Government, and the Local Government might frame a charge against him.

[The Hon'ble MR. HOBHOUSE—The Court could do it itself.]

Then the power was quite sufficient; so that taking one thing with another, after the explanation given by his hon'ble friend, he begged entirely on behalf of the Local Government to accept the provisions of the Bill. He could assure the Council that these stringent powers were very necessary to ensure the safety of life and property in this port and in the rivers leading to this port, and upon the high seas. For although in cases of emergency the officers and men of the mercantile marine still showed the fine qualities for which their service was famous, yet, nevertheless, the cases in which ships were lost in a manner quite unaccountable occurred a great deal too frequently, and the most stringent provisions acted up to to the letter by the Executive Government, would be necessary to rigidly and promptly investigate the causes of such losses, and so to ensure the safety of life and property in this port. So, being moved

by these considerations, he very cordially and thankfully accepted the very stringent powers conferred by the Bill.

His Honour had only one more remark in reference to the observation by his hon'ble and learned friend Mr. Hobhouse regarding the conduct pursued by the Government of Bengal in this case. Though he was very much obliged for the kind manner in which those observations were conveyed, yet he did regret that the proceedings of any Local Government should be commented upon publicly in this Council; because it was obvious that though he might have something to say on behalf of his own proceedings, yet he did not think that this was the proper place, or that it was at all proper, to enter upon a colloquial discussion on the subject. For all the proceedings he had found it necessary to take, he could assign valid reasons; and if he had occasion to cause inconvenience to his hon'ble friend, he was sorry. He could not promise that he might not still have occasion to cause further inconvenience, but if he had, he should do so as little as he possibly could. He ventured to say that if he had caused any trouble, the trouble was small in comparison to the magnitude of the interests which were involved in the proceedings before this Council. But he was certain that he should have the Council with him when he said that in matters of great importance, certain obstacles raised at the final stages of a Bill—certain delays of a week or a month—were of no importance whatever as compared with the great importance of having our laws framed, not only on sound principles, but also in good practical detail, so that they could be worked thoroughly well. Further, it would appear from the tenor of his hon'ble friend's remarks, that once a Bill was referred to a Select Committee, examined and sent out, all further proceedings were to be stayed; and if, the other members, who had not the good fortune to be on the Committee, had any amendments to make after the report of the Committee had been made, they would be regarded as dealing hardly with the Legislative Department if they should undertake to make exceptions or propose any amendments. His Honour was sure that that could hardly be his hon'ble friend's intention, but so it appeared from the tenor of his remarks, and His Honour must, on behalf of the Bengal authorities, claim that when they had any objections in detail to proposals of the Select Committee, they should be at liberty still to propose for the consideration of His Lordship in Council such amendments as they might think necessary. He was certain it would be found that he had never done so except in the case of a Bill relating solely to Bengal, or in which Bengal had a preponderating interest. They had done what they thought to be their duty, and they did so in a manner calculated to give as little trouble as possible, and certainly insignificant, as compared with the importance of the issues at stake.

His Excellency the President said:—"I am sure that the Council are aware, from the whole course of our proceedings, that no point of form is ever made use of for the purpose of preventing the full discussion of any amendment that may be proposed at any stage of the progress of a Bill.

"If an instance was required, it would be supplied by the course the Council has taken with regard to this Bill, for, in consequence of a suggestion made by my hon'ble friend the Lieutenant-Governor of Bengal, although no official communication had been received from the Government of Bengal on the subject, we at once postponed the passing of the Bill, in order that we might fully discuss the amendment proposed by the Lieutenant-Governor. At the same time I think that my hon'ble friend, Mr. Hobhouse, was justified in the remarks which he made to the effect that it is very desirable that suggestions with regard to Bills under consideration should, if possible, be made during the early stages of their progress. Our forms and proceedings are well known and exceedingly deliberate, and it cannot but be inconvenient that suggestions and objections which might have been made and taken at the proper time should be deferred till the last stage of a Bill.

"In this particular instance, I must say that there seems to have been very considerable delay in the official communications of the Government of Bengal, and I am sure that my hon'ble friend, the Lieutenant-Governor, will excuse me

for suggesting that such delay might, with advantage, be avoided on future occasions. I gather from the paper last circulated, that a circular on the subject of this Bill was issued by the Government of Bengal on the 24th of August last, and communications appear to have been received by the Bengal Government in reply, some time about the middle of December, and yet the Legislative Council were not put in possession of these papers until within the last few days.

"As regards the particular point under discussion, I am glad that my hon'ble friend the Lieutenant-Governor has expressed himself satisfied with the Bill as it stands. It has, I know, been most carefully considered by the Select Committee."

The Motion that the Bill as amended be passed was then put and agreed to.

PROBATES AND LETTERS OF ADMINISTRATION BILL.

The Hon'ble Mr. Hobhouse asked leave to postpone the motions that the Report of the Select Committee on the Bill to amend the law relating to Probates and Letters of Administration, be taken into consideration and that the Bill be passed.

Leave was granted.

PORT DUES BILL.

The Hon'ble Mr. Hobhouse also asked leave to postpone the presentation of the Final Report of the Select Committee on the Bill to consolidate and amend the law relating to Ports and Port-dues.

Leave was granted.

NATIVE SOLDIERS RIGHTS AND LIABILITIES BILL.

Major-General the Hon'ble Sir H. W. Norman moved that the Report of the Select Committee on the Bill to remove doubts as to the rights and liabilities of certain Native Soldiers, be taken into consideration. When he moved for leave to bring in this Bill, he had stated that certain Native Soldiers had not been attested as required by Act V of 1869. It was believed that that omission did not really interfere with the legal obligations of the Soldiers; but to remove all doubt it was determined to introduce this Bill. The Bill had been considered by the Select Committee who had no amendments to suggest and recommended that the Bill be passed.

The Motion was put and agreed to.

Major-General the Hon'ble Sir H. W. Norman also moved that the Bill be passed.

The Motion was put and agreed to.

SIR JAMSETJEE JEEJEEBHOY'S LOAN BILL.

The Hon'ble Mr. Ellis introduced the Bill to secure the repayment of a loan by the Government of India to Sir Jamsetjee Jeejeebhoy, Baronet. He said that the Bill, although it appeared to be a long one, was lengthy only owing to its having been deemed advisable to make certain recitals to show the course of previous proceedings. The operative part of the Bill was exceedingly short; it merely provided that the interest of the promissory notes which had been vested in trustees for the benefit of the holder of the title for the time being, should be withheld by the Government in discharge of the loan advanced for the payment of the debts of Sir Jamsetjee Jeejeebhoy. The trust consisted not only of a sum of money, but also of an estate. It was not necessary to provide for the mortgage of the estate, because the sum receivable as interest on the promissory notes more than provided for the repayment of the principal and interest within a reasonable period. Accordingly, the Bill simply gave power to take for interest and principal the sum of Rs. 40,000 for seventeen years, unless the sum advanced with interest at five per cent. were sooner repaid. As there was nothing in the Bill which demanded consideration by a Select Committee, Mr. Ellis did not propose to refer it to a Committee, but should on a future occasion proceed with the Bill.

MADRAS SALT BILL.

The Hon'ble Mr. Ellis also introduced the Bill to amend the law relating to Salt in the Presidency of Fort St. George, and moved that it be referred to

a Select Committee, with instructions to report in three weeks. He said that he had at present little to add to what he had said on a former occasion. The Bill, as he had then explained, did not render it imperative on the Government of India to carry out at once the measure which it empowered the Government to take, but merely enabled the Government, if on further consideration it should deem fit, to substitute for the present selling-price, an excise-duty at the fixed rate of Re. 1-13-0 per maund or less. The Bill was a short one. It provided that the Governor General in Council should have power to impose a duty not exceeding that amount, and also directed that, if it should be so determined, the selling-price for all salt which the Government of Madras might sell should be so fixed as to produce that duty plus all the charges incurred in the manufacture, storage and transit of salt and from wastage. In the Committee we should have the advantage of the experience of his hon'ble friend Mr. Dalyell in the matter, and we should also give time to the Government of Madras for any suggestions which it might see fit to make in regard to the measure.

The Hon'ble MR. DALYELL said that, as only one week had elapsed since his hon'ble friend had obtained permission to introduce this Bill, he (MR. DALYELL) had not had time to receive a reply to a communication which he had thought it his duty to make to the Madras Government, nor had he had an opportunity of consulting the papers in connection with the Bill, which he understood were now in course of printing for circulation to the Council. Consequently, he must defer any comments on the general policy of the Bill, and any explanation of the change of opinion in regard to the Bill on the part of the Madras Government, to which his hon'ble friend (Mr. Ellis) had adverted, to some future stage of the measure. MR. DALYELL would therefore confine himself that day to a few brief observations which had been suggested to him by the remarks which fell from his hon'ble friend last week. His hon'ble friend had then said that the main advantages which he expected to derive from the Bill were three—first, an increase to the salt-revenue; secondly, the equalization of the salt-duty in southern India; thirdly, the opening out of the salt-trade to private enterprise. As far as MR. DALYELL had been able to make out from the consideration he had been able to give to the Bill during the past week, he questioned very much whether his hon'ble friend's expectations would be altogether realized if the Bill was passed in its present shape and if the powers taken under its provisions were put into operation. As to the anticipated increase of revenue, the Bill, if put into force, would require that a duty of Re. 1-13-0 be charged on all salt sold in the Madras Presidency, and that the price should be fixed by adding to that sum such an amount as the Madras Government might determine to be the proper cost of manufacture, sale, storage and wastage of salt. His hon'ble friend last week had told the Council that, of the present price of two rupees charged on salt sold, three annas were taken to represent the cost of transit, manufacture, and sale, and Re. 1-13-0 the duty; but that practically, this assumption was only correct in regard to salt manufactured and sold on the Eastern Coast, as the salt sold on the Western Coast actually cost the Government something over seven annas the maund. The actual fact was, that this theory of three annas representing the cost of manufacture and sale was not strictly correct as regards salt sold either on the Eastern or the Western Coast. On the Western Coast salt certainly cost considerably more than double this theoretical price; but his hon'ble friend was not perhaps aware that in no district of the Eastern Coast did the cost amount to quite so much as three annas per maund, and in some districts the cost was very much less. He would probably, however, remember when the Salt Act of last year was passed, it was explained that the actual cost of the manufacture of salt in the Ganjam District was not in excess of two annas per maund; and MR. DALYELL quite believed that if a careful investigation were made into all the items of charge in the Eastern Districts, as must be done if the Bill were passed into law and put in force, it would be found that the actual average cost of the manufacture and sale of salt in the Eastern Districts, if only charges properly debitable were included, was not in excess of two and a half annas per maund. The result, then, of passing the Bill in its present shape would be this, as far as the revenue was concerned—that on the Western Coast there would be an increase of four annas on every maund of salt consumed, but on the Eastern Coast there would be a decrease of half an anna upon every maund sold. Now, speaking roughly, he thought he might say that the sales of salt on the East Coast were just about eight times the sales on the Western Coast; consequently, the increase of revenue obtained on the Western Coast by adding four annas to the cost, would be lost on the Eastern Coast by the deficit of half an anna; and he very much feared that his hon'ble friend's anticipated addition to the imperial exchequer would altogether disappear.

Then, as to the opening out of the salt-trade to private enterprise, no doubt if the Bill were passed the Bombay salt-traders would be able to export salt from Bombay to the West Coast of the Madras Presidency, on their own account, instead of on behalf of Government as they did at present. But he questioned whether the Government salt on the East Coast would not be able to undersell them, being carried over by railway, if the full duty of Re. 1-13-0 were charged on all shipments of Bombay salt. Then his hon'ble friend seemed to suppose that this Bill would facilitate the introduction of Cheshire salt into Madras. There was nothing to prevent the introduction of any quantity of that salt at present, except the high price of the article itself; and so long as Cheshire salt cost from twelve to thirteen annas a maund without duty, it was quite futile to suppose that it would ever be able to compete with Madras salt which cost something like three annas, or Bombay salt which cost about seven annas. It was quite fallacious to suppose that, because the salt-tax in Madras was collected under a system of monopoly that therefore the Government was in any way opposed to the introduction of foreign salt. It made no possible difference to the Government whether the duty was collected under a monopoly or by an import-duty; and so far from throwing difficulties in the way of importers, on a recent occasion within MR. DALYELL's knowledge, when a firm in Madras desired to introduce a shipment of Cheshire salt, they were given peculiar and special advantages, which of course would not be continued if the trade became general. In spite, however, of these special concessions being allowed, and every advantage obtained, the experiment proved a complete failure. The greater quantity of the cargo had to be re-shipped and sent to the Calcutta market, and what remained was sold by auction in Madras, at, he believed, something less than the duty which had been paid on it.

The third result which his hon'ble friend predicted for his Bill was that the salt-tax throughout the southern Presidency would be equalized, and this MR. DALYELL admitted his hon'ble friend might reasonably expect to obtain. If the Bill had gone further than it did—if it had equalized the salt-duty all over India—it would certainly have obtained his (MR. DALYELL's) unqualified support. But he questioned whether there was any practical advantage in insisting upon this equality throughout the different localities in a small section of the empire, so long as differential rates of duty were permitted to exist in other Provinces. At the same time, he must confess that there was great force in this part of his hon'ble friend's argument, and MR. DALYELL wished, therefore, to defer giving any decided opinion either for or against the Bill, until he had an opportunity of going more fully into the question than he had yet been able to do, until he had considered the papers in connection with it, and until he had heard the other arguments in its favour, which he had no doubt would be brought forward by his hon'ble friend with his usual vivacity in Select Committee.

The Motion was put and agreed to.

MAJORITY BILL.

The Hon'ble MR. HOBHOUSE moved that the Hon'ble Messrs. Inglis, Dalyell and Eden be added to the Select Committee on the Bill to establish a uniform age of majority for persons domiciled in British India.

The Motion was put and agreed to.

The following Select Committee was named:—

On the Bill to amend the law relating to Salt in the Presidency of Fort St. George ——. The Hon'ble Messrs. Hobhouse, Inglis and Dalyell and the Mover.

The Council adjourned to Tuesday, the 16th February 1875.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

Three *li* equal about one English mile.

NOTES.

1. Hsien, or Hien. A province is divided into *fu*, *chou*, and hien.
2. *Ho* is one term for a river, *chiang*, also pronounced *Kiang* and *Kong*, another term. See below No. 18.
3. *P'u*, properly a shop, is used of market towns or large trading villages.
4. *Yi*, a government postal station.
5. *T'sun*, a village.
6. *K'ou*, a mouth, a mountain pass.
7. *Ling*, a mountain peak.
8. *P'ing*, a mound, bank.
9. *Pa*, a sluice, lock.
10. *Shui*, water.
11. *Ta Ts'ien* (or *ch'ien*) *Lu*, the arrow, forge.
12. *Ch'ia*, pronounced *K'a*, being short for *K'alun*, a customs barrier.
13. *Ssŭ*, monastery or temple.
14. *Wo-lung Shih*, the rock of the recumbent dragon.
15. *Pa chia lou*, the octagonal-storied building.
16. *Chung-tu*, literally signifying mid-ferry.
17. *Li t'ang*, the *t'ang*, or station, within.
18. *Chiang, Kiang, Kong*, river. See No. 2.
19. *Shan kén*, the foot of the mountain.
20. *Li-shu T'ang*, pear tree station.
21. *Kon*, ditch; *Shih-pan-kon*, stone-slab ditch.
22. *Hsün*, military station; technically, a minor division of *Yêng*, a cantonment.
23. *Shan kên*. See No. 19.
24. *Ta pan ch'iao*, bridge of large planks or slabs.
25. *Chü Shui*, winding water.
26. *Ma-lung*, horse dyke.
27. *Pai-ti*, white ground.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 18th FEBRUARY 1875.

General Remarks.—Rain has fallen in greater or less quantity throughout India north of a line drawn from Bombay across the continent to Cuttack. In Sindh the fall is said to have been of great benefit: in Gujarat some damage to the *rabi* is reported. In Bengal the fall was generally slight, but heavy in Chota Nagpore. In the North-Western Provinces rain is reported from all stations except Benares, Jhansi and Hamirpur: it has been of great use. Good and abundant rain has much improved the prospects of the spring crops in the Punjab. The fall appears to have been general throughout Central India: hail fell at Gwalior, and heavy rain at Bhurtpore and Ajmere. Agricultural prospects are generally excellent.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Madras—			
Kistna	(Feb. 18th)	*Nil*	One foot two inches water over anicut; later dry crops not doing well; other crops good; outturn of red gram half, horse gram one-fourth; markets well supplied locally; prices steady; mild small-pox continues; fever abating; cattle healthy in four taluks, unhealthy in others; pasture scarce.
Kurnool	(17th)	,,	Crops in good order; harvest of oil-seeds and pulse still in progress; outturn pretty fair; markets well supplied; prices steady; water and pasture abundant; fever and cattle disease in several taluks; no water over Sunkesala anicut.
Tanjore	(18th)	,,	Rivers almost dry; water in tanks scanty; no water over anicuts; no wet cultivation, that of a few dry crops continues in some parts; standing crops good; yield satisfactory of harvest of wet and some dry crops; markets well supplied; prices almost steady; public health generally good; small-pox slight in some parts; two deaths by cholera in Negapatam; cattle healthy.
Trichinopoly	(17th)	,,	Water-supply limited; condition of crops generally good; outturn up to average; public health good; pasture becoming difficult.
Malabar	(18th)	,,	Harvesting of second crop almost completed; markets well supplied; prices steady; fever in some parts; small-pox slightly prevalent; cattle disease slight in Walluvanad; pasture scanty. *General Remarks.*—Prospects satisfactory.
Bombay— (Feb. 17th)			
	Sindh.		
Kurrachee	...	...	Fever and colds continue; early rabi being reaped in some places, and rice lands broken up for next kharif cultivation; weather very threatening for some days past; on the 16th squally, with winds from north and north-west; rain heavy and likely to last; cattle disease continues, but not very serious.
Shikarpur	...	...	Rain general on 13th and 14th; very beneficial to rabi crops; weather cooler.
Hyderabad	...	·5 on 13th and 14th	No other change.
Upper Frontier	...	·33	Weather now bright and prospects fair.
	Gujarat.		
Ahmedabad	...	·94	Rain has fallen almost throughout the district; rabi crops injured, but to what extent not yet ascertainable; price of wheat and gram already risen inconsequence.
Surat	...	·45	Picking operations continue; weather and crops good; fever and injury to crops in Pardee.
Broach	...	·27	Rain has damaged wheat and jowar lying in the fields; cloudy weather has also damaged tuwar and cotton; fever continues in Ahmod.
Kaira	...	2·02	Rain has fallen throughout the collectorate on 14th and 15th, and caused some damage to tobacco and cumin; other crops and public health good.
	Khandesh and Nasik.		
Khandesh	...	...	State of crops and public health same as before; cotton market slightly changed; rate 49.
Nasik	...	...	Damage by frost to crops estimated in several talukas from one to four annas in the rupee; in Kulwan it is estimated at 8 annas; except a few cases of fever, public health good.
	Konkan.		
Tanna	...	·10 on 16th	Weather cool and public health good; ague in Dhanoo and Moorbaur talukas; fever in Mahim, Wada, Shahpur, and Bhewndy talukas, and chicken-pox in Shahpur taluka; rabi crops stated to be good in Mahim, Shahpur, Bhewndy, and Kurjut talukas, and middling in Dhanoo, Wada, Moorbaur, Cullian, and Bassein talukas.
	Deccan.		
Poona	...	...	The outturn of rabi in talukas Haveli, Jooner, and Poorundher is estimated at full rupee; in Khed and Mawal at fourteen annas; in Siroor twelve annas; and in Indapoor and Bhimthadi ten annas; climate and public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*	...	
Ahmednuggur ...	...	No change.
Sholapur ...	...	Cotton being picked; yield moderate; cattle disease slightly in Sholapur and Sangola.
Satara ...	...	State of crops same as before; reaping commenced in some talukas; ague in Pahtun.
Southern Mahratta Country.		
Belgaum ...	...	Rabi crops are being reaped; cotton continues well; weather fine; public health good.
Dharwar ...	...	Wheat harvest commenced; estimated yield in Ranibednur and Garajgi two-sixteenths; slightly better in Hangul and Kod; and encouraging in other talukas; as regards cotton no material change; health improving, especially in Karghatgi and Bankapur; cattle-disease continues in Hangul.
Kanara ...	...	Second crop prospects generally good; fever prevalent everywhere; cattle disease on the coast and in the ghât villages.
Kaladgi ...	...	Wheat and gram good; cotton and jowari middling; fever in all talukas, except Bagulkot.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	·62	Rain has slightly damaged grain lying in grain-yards; rabi crops and public health good.
Wudwan ...	...	Rain on 14th in different parts of Jallawar, varying from a few cents to nearly half an inch; cotton and wheat suffered; health indifferent.
Baroda ...	...	Cotton-picking continues; cotton and rabi crops have suffered from cloudy weather; public health good. *General Remarks.*—No change of importance since last report.
Bengal—		
Burdwan (Feby. 15th)	0·22	Rainfall at Raneegunge 0·65; Culna 0·17; Bood-Bood 0·43. Beginning of the week was rainy and cold; afterwards sunny and hot. Prospects of the winter crops fair.
Bankura ...	0·30	Weather cloudy during the first three days; slight rain on the 9th and dry during the rest of the week. Sugarcane is being reaped; other crops are doing well.
Beerbhoom ...	0·96	Some rain has fallen; state and prospects of the crops continue favourable.
Midnapore ...	0·11	Getting warmer, with occasional cloudy weather; a short storm and slight showers of rain on Monday. Prospects of crops continue the same; there is very insignificant area under crops.
Hooghly ...	*Nil*	Cloudy weather on three days, and the remaining days of the week clear. Wind chiefly from north and south; prospects of crops good.
24-Pergunnahs ...	0·26	Cloudy in the beginning of the week; some rain has fallen; weather getting warmer. Harvest of the late rice completed. The light rain during the week has been beneficial to cold-weather crops.
Nuddea ...	0·16	A little rain has fallen in most parts of the district. The cold-weather crops are generally doing well, but linseed has been lately somewhat injured by insects. Sugarcane is abundant and good. Ploughing for the coming season is going on.
Moorshedabad ...	0·51	Drizzling rain on the 8th and 9th instant; weather getting warmer. Wheat and linseed very promising; gram slightly injured by the drizzling rain of the 8th and 9th; mustard and rye harvested; outturn good; prices steady.
Dinagepore ...	*Nil*	Rain has probably fallen in some parts, from the changes to hot and cold. With regard to the crops there is nothing to add to last report. Cold-weather crops looking well.
Maldah ...	0·10	The first three days were foggy and cloudy, with slight rain; the rest fair, with gradual rise in temperature. The prospects of the cold-weather crops are good. The sowings of the boro or spring rice is going on.
Rajshahye ...	0·42	There has been good rain in parts of the district on two days during the week. The prospects of the cold-weather crops continue favourable, having been improved by the late rainfall.
Rungpore ...	*Nil*	*Mornings and evenings are still cold, but the middle of the day is hot;* there has been a strong breeze from north-west, west, between 12 and 3 P. M. of the last two days. Reaping operations finished. The winter crops are very good, and there seems to be no want of rain.
Bogra ...	0·11	Weather fine, but a little rain on several nights. The amun, or late rice crop, is nearly all in, and a good one. Cold weather crops also promise to be very abundant; mulberry is doing well.
Pubna ...	0·40	Fine and seasonable weather; rain on the 9th instant; mator, khesari, &c., pulses are in flower and promise well. The harvesting of mustard is nearly finished. The cheena millet, jally, and borodhan, or spring rice crops, are being sown.
Jalpáiguri ...	A few drops.	Weather much warmer than during previous week. No change in the prospects of crops, which are excellent. Ploughing going on for the ensuing early rice crop.
Dacca ...	0·05	Weather very seasonable; slight rain has fallen and is getting hot; crops particularly good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Patna ...	*Nil*	Weather getting warm. Prospects of the cold weather crops are excellent.
Gya ...	0·57	Seasonable weather; some rain has fallen. The prospects of the cold weather crops continue very favourable; a full out-turn is anticipated.
Shahabad ...	0·30	Cloudy weather at the commencement of the week, and some rain has fallen; since then clear, and strong west-wind. Cold weather crops are promising. Peas being reaped, slight damage to mustard. Opium crop looks healthy.
East Tirhoot ...	*Nil*	Seasonable weather; prospects of crops everywhere excellent, save on the Nepal frontier, where the prospects are not so good as elsewhere.
West Tirhoot ...	*Nil*	Fair weather and getting warm. There is no material change in the prospects of the crops.
Sarun ...	*Nil*	Cloudy and clear alternately; a little rain on the 8th instant is reported from most thannas; west wind prevailing. The prospects of the cold weather crops are generally favourable; wheat, barley, and ruhur pulse are doing well. Poppy in flower; peas and mustard are being gathered; sugarcane cuttings are being put into the ground. Indigo fields are ready for sowing. Very slight injury to ruhur, peas, and mustard from frost and blight has been reported from most thannas. Prices on the whole have slightly risen.
Chumparun ...	*Nil*	Clear nights with heavy dew; wind westerly; cold weather crops coming into ear. Poppy promises well. Moisture for indigo plentiful.
Monghyr ...	0·11	Weather fair; slight rain fell; prospects of crops are good all over the district.
Bhágalpur ...	0·07	Slight rain fell. Cold-weather crops first class.
Purneah ...	*Nil*	Weather fair. No change on last week's report as regards the crops, which are good.
Sonthal Pergunnahs ...	0·57	Clouds and light showers in Deoghur and Doomka. Wind with heat in Godda. State and prospects of crops continue excellent.
Cuttack ...	0·10	Weather cold; some rain has fallen. Rainfall at Jajepore 0·5, and at Kendrapara 0·2. The late rice has all been harvested. The cold-weather crops are doing well; the earlier kinds are being cut.
Balasore ...	*Nil*	Weather cloudy and decidedly warmer. Rice crop all gathered in. Some of the minor crops, as pulse and sugarcane, are being harvested. Cases of cholera in north of the district are more numerous.
Lohardugga ...	1·51	Heavy rain in the early part of the week. The cold-weather crops throughout the district, but especially in Palamow, are very fine.
Maunbhoom ...	0·82	Alternately fair and cloudy during the week; days getting warm. Rain reported all over the district. Nothing to add to report of preceding week. Nearly all crops now off the ground, and the outturn has been generally good.
N. W. P—		
Mirzapur (Feb. 17th)	...	Prospects little altered; some rain on 16th; loss from frost to peas, gram, and masur 25 per cent.; mustard quite destroyed in some places; sugar-cane fine.
Benares ,,	...	No change; heavy clouds gathered and cleared away without rain; crops doing well.
Allahabad ,,	...	Showers on 16th and 17th doing much good; bright weather with west wind; prospects very favourable.
Banda (16th)	...	Rain south of Jumna on 16th doing much good; sky still cloudy with east wind; arhar, peas, and linseed damaged by frost, but not generally; sarson in pargana Chibu attacked by insects.
Hamirpur (17th)	...	No change; signs of rain, but none has fallen, and it would now do harm.
Jhansi ,,	...	Rabi prospects unchanged; easterly winds with clouds; temperature high.
Agra ,,	1·4 to 2·1	Rainfall doing much good, especially to unirrigated crops.
Meerut (16th)	1·4	More rain expected.
Bareilly (17th)	1·9	Rainfall doing much good.

Public Health.

Burdwan: fever decreasing; cholera increasing. Midnapore: cholera is still severe in the coast. 24-Pergunnahs: cholera still prevalent in thannas Mathoorapore, Bankipore, Devipore, Sultanpore, and Basseerhat; it has abated elsewhere; fever decreasing at Barripore. Moorshedabad: no cholera or small-pox reported. Rajshahye: a few cases of cholera and small-pox have been reported. Pubna: no sickness is reported. Furreedpore: general health of the district good. Patna: health good. Gya: health of the people good. West Tirhoot: public health good. Sarun: general health good. Bhágalpur: general health very good. Cuttack: public health good. Balasore: cases of cholera in the north of the district are more numerous. Hazareebaugh: small-pox has decreased. Lohardugga: general health good; a few reports of small-pox. Singhboom: the season is feverish. Purneah: disease has appeared among the cattle, and is carrying off a great number.

General Remarks.—More or less rain fell in the great majority of the districts throughout the week under notice; and in the Chota Nagpore division was heavier than elsewhere. The showers have benefited the cold-weather crops, and enabled the ryot to break up the land for the early or *aus* crop, and the sowing of the spring rice, which latter is progressing favourably. The *aumun* harvest is complete, and the outturn, except in very limited tracts, has proved excellent. Some of the pulses and sugarcane are being reaped.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab—		
Delhi (Feb. 17th)	·8	*General Remarks.*—A general fall of rain all over the province has much improved the rabi prospects; health of province continues generally good; small-pox in Delhi and Hissar; cattle disease in mild form in Hissar and Rawul Pindi.
Hissar „	1·3	
Umballa „	2·9	
Jullundur „	1·5	
Lahore „	1·1	
Mooltan „	A slight shower only.	
Rawul Pindi „	1·75	
Peshawar ...	·3	
Oudh—		
Lucknow (Feb. 17th)	·4	Prospects of crops on the whole good; they have benefited by the recent showers; gram, peas, and arhar injured by frost; public health good.
Fyzabad „	·4	
C. Provinces—		
U. Godavari (Feb. 13th)	...	Jowar being gathered; health good; prices easy.
Sambalpur ...	...	Weather cloudy; ploughing continues; health good.
Bilaspur ...	...	Prospects and health continue good; prices steady.
Chanda (14th)	...	Prospects fair; small-pox and cattle disease prevalent; prices rising.
Raipur ...	...	Rabi prospects excellent; health good; prices easy.
Balaghât (15th)	...	Threshing rice; completing rabi cutting; health good; prices steady.
Chhindwara ...	...	Rabi doing well; frost damaged sugarcane; health good; prices steady.
Nagpur (17th)	...	Crops doing well; cattle disease abating; prices stationary.
Nimar ...	...	Weather cool; health good; prices stationary.
Saugor ..	·34	Weather cloudy; rain beneficial to crops; small-pox prevalent; prices stationary.
Seoni ...	...	Prospects of crops and health good.
Wardha ...	...	Reaping of rabi commenced; small-pox prevalent; prices rising.
Hoshangabad ...	...	Prospects good; prices steady.
Narsinghpur ...	...	Crops good; small-pox prevalent; prices stationary.
Jubbulpore ...	...	Weather warm; prospects good. *General Remarks.*—Prospects generally continue good.
British Burma ...	...	Report not received.
Mysore and Coorg—		
Mysore (Feb. 18th)	...	Crops generally thriving; coffee and cardamum being picked; cattle disease prevalent in parts of three districts; public health generally good. *General Remarks.*—Agricultural prospects good.
Coorg „		
Assam—		
Sylhet (Feb. 18th)	...	Ploughing for aous crop has commenced.
Gauháti „	·09	Weather settled; becoming hot; morning fog less dense; nights clear, cool heavy dews. *General Remarks.*—Prospects of winter crops favourable; public health good, but small-pox at Burpetta.
Hyderabad Assigned Districts—		
Umraoti (Feb. 18th)	...	Rabi reaping commenced in some places.
Rajpootana—		
Bhurtpore (Feb. 18th)	1·5 at Bhurtpore.	Heavy rain to-day here; smart showers last two days in district; health good.
Ajmere „	...	Steady rain on 14th and 15th; health good; crops hopeful; weather pleasant.
Jeypore „	...	Agricultural prospects favourable; public health good.
Deolee (19th)	...	Agricultural prospects and health unchanged.
Central India—		
Indore (Feb. 17th)	*Nil*	Health and agricultural prospects continue good.
Gwalior „	3·30	Violent hail-storm; crops in places injured; health good.
Rutlam „	·27	Rain favourable for grain crops; slight damage to opium; public health good.
Neemuch „	·85	Health good.
Baghelkhund (Sutna) ...	1	Health and agricultural prospects good.
Nepal ...	...	Report not received.

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 16th February 1875.

PRESENT:

His Excellency the Viceroy and Governor-General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
His Highness the Mahárájá of Vizianagram, K. C. S. I.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.
The Hon'ble Ashley Eden, C. S. I.

CIVIL APPEALS BILL.

The Hon'ble MR. HOBHOUSE asked leave to postpone the motion that the Reports of the Select Committee on the Bill to amend the law relating to Civil Appeals in the Lower Provinces of the Presidency of Fort William be taken into consideration. The reason for the postponement was this. The Council would recollect that, of the objections which were insisted upon by those who opposed to this measure, by far the most substantial was that the state of the Courts in the Mofussil was such that it was hopeless to expect the looked-for results. It was said that those Courts were too weak to bear the extra strain which it was said would be thrown upon them, and that it would be better not to attempt to alter any portion of the system of appeal until they were first strengthened. The answer to that was, that whatever amount of truth there might be in the assertion, it was no sufficient objection to this Bill; that there was no speedy prospect of the improvement of the Mofussil Courts; that it was better to take the partial reform which could be got and which was aimed at by the Bill; and that the principle upon which it was sought to classify appealable cases was a sounder one than the existing principle, and would work in better with any conceivable plan of reform.

Now the position of affairs was very much altered. The Lieutenant-Governor of Bengal had been giving his attention to this difficult subject of strengthening the Mofussil Courts, and he informed us that he was prepared to propound some definite plan upon the subject, and asked us to stay our hand in passing this measure, lest we should do something which should mar or hinder his operations. MR. HOBHOUSE conceived that, under those circumstances, the Council had nothing to do but to accede to His Honour's wishes; to delay the consideration of the Reports of the Select Committee, and thereby to leave the matter yet awhile in the hands of the Committee. But MR. HOBHOUSE must ask his hon'ble friend if he would not join them on that Committee. His Honour thought that the Bill could be amended in such a manner as to introduce the alterations he deemed to be necessary and feasible. How that might prove to be, MR. HOBHOUSE could not yet be quite sure. Perhaps it might be so if all the Council were asked to do was to re-adjust some of the details of the Bengal Civil Courts' Act. But if there was any substantial increase to the judicial staff, or if there was to be any substantial addition of new officers, then he conceived that this Council could not discuss such matters with any advantage, perhaps not with propriety, until the necessary executive decision had been arrived

at. They could best consider in Select Committee what were the exact kind and quantity of the alterations proposed; whether such alterations could be properly embodied in the measure now pending before the Council; and if it turned out that they could not be so embodied, whether it would not still be better to pass the Bill as being a step in the direction of improvement in which all wished to advance, and a step which would not interfere with, but would help and aid, further steps in the same direction. The presence of the Lieutenant-Governor would be of great assistance, indeed under the circumstances almost necessary, for the proper discussion of these proposals: therefore, if MR. HOBHOUSE were allowed to postpone the motion, he would ask His Excellency the President's permission to allow him to move that the Lieutenant-Governor be added to the Select Committee on the Bill.

His Honour THE LIEUTENANT-GOVERNOR had only one word to say, which was to express his satisfaction at the announcement which his hon'ble friend had made, and to convey his thanks to him and His Lordship the President for the consideration shown to the opinions and wishes of the Local Government. HIS HONOUR should of course be most happy to attend the Select Committee at any time they might desire; but he hoped it would be understood that he did so on the condition that it should not prejudice the submission of such executive proposals as he might have to make to the Government of India. He certainly apprehended that the improvements it was desired to introduce into the Bill might so materially alter it as virtually to make it a new Bill, and that there would be involved in the proposition a variety of details and matters which could hardly be considered with advantage in the Legislative Council until some decision had been arrived at by the Government of India in the Executive Department. And HIS HONOUR must say that he could not share his hon'ble and learned friend's opinion that this Bill, if passed as it was, would at all help the progress of the improvements which the Bengal authorities desired to see carried out. On the contrary, he believed that, if the Council should upon this occasion pass this Bill, and thereby fail to adopt the proposals which the Local Government were so anxious to press upon the consideration of the Council—if sanction should not be obtained now to these proposals, he believed that their progress must be indefinitely postponed. He could not too earnestly impress upon the Council that now was the time to take up the whole question of the improvement of the Appellate Law in Bengal. That work should be done deliberately and considerately, with ample time for the Local Government and its officers to submit all they had to say; and after full deliberation, a reform complete, radical and comprehensive should be made—such a reform as would be approved of by the judicial authorities, and, above all, give satisfaction to the Natives of Bengal, whose interests were so deeply concerned in the matter. And HIS HONOUR earnestly submitted that, unless a reform of that kind could be undertaken, it might be better to leave the law alone for the present and not to attempt a measure of this kind, which might do good in some respects, but could not be satisfactory as a whole. Therefore, although he was most willing to attend the Select Committee, and he thought that by that means some advantage would be obtained, that was to say, he would be better acquainted with his hon'ble friend's views, and his hon'ble friend would know the exact propositions which were made by the Bengal Government and its officers, he could hardly hope that such a course would really solve the very grave questions involved in the consideration of the present Bill.

His Excellency THE PRESIDENT said:—"I am sure Members of Council will feel with me that it will be a great advantage that my hon'ble friend, the Lieutenant-Governor, shall join the Committee. The subject of the alteration of the Law of Civil Appeals is of great importance. It has already been long considered, but it is one of those questions upon which, I fear, we can hardly hope to find any great unanimity of opinion. In fact, the interests involved are so different and conflicting, that even when the subject has been thoroughly threshed out—and we shall be very glad, either in the Legislative or the

Executive Council, to take into consideration any views which my hon'ble friend, the Lieutenant-Governor, may, after mature deliberation, express, or any changes which he may advocate in the constitution of the Lower Courts—if any reform is to be made, we shall in the end be compelled, after due consideration of all the arguments that have been adduced, to come to a conclusion as to what should be done, and to carry that conclusion into effect, even though we may find opposition to it in some quarters. I cannot think it would be right for the Government to allow the present unsatisfactory state of the law, which has long existed, and which my hon'ble friend, the Lieutenant-Governor, fully admits, to prevail much longer without applying a remedy, simply because the remedy which it is proposed to apply may not be in accordance with the views entertained by some among those who will be affected, in one way or another, by a change in the law.

"It would be premature now to remark upon any of the proposals which my hon'ble friend may bring forward, because they have not as yet I believe come officially to the knowledge of the Executive Government in a mature form. I can, however, assure my hon'ble friend, that we shall treat his suggestions with all the respect to which they are entitled, both from his own position as Lieutenant-Governor of Bengal, and from the importance of the subject itself."

Leave was granted.

The Hon'ble MR. HOBHOUSE then moved that His Honour the Lieutenant-Governor be added to the Select Committee on the Bill.

The Motion was put and agreed to.

PRESIDENCY POLICE MAGISTRATES' BILL.

The Hon'ble MR. HOBHOUSE also presented the Report of the Select Committee on the Bill to extend certain parts of the Code of Criminal Procedure to the Courts of the Police Magistrates in the Presidency Towns and to increase the jurisdiction of such Courts.

PROBATES AND LETTERS OF ADMINISTRATION BILL.

The Hon'ble MR. HOBHOUSE also presented a further Report of the Select Committee on the Bill to amend the law relating to Probates and Letters of Administration.

BURMA FISHERIES BILL.

The Hon'ble MR. EDEN presented the Report of the Select Committee on the Bill to regulate Fisheries in British Burma. On the introduction of this Bill it was explained by the hon'ble Mr. Hobhouse that its object was to give legal effect to the system long in force in British Burma of raising a revenue from fisheries, which was regulated by rules which had not the force of law, and which it was necessary to revise from time to time. As a thorough revision of the rules had recently taken place, it was considered advisable to pass a Bill to give them legal effect. The changes made three years ago in the mode of working the fisheries were chiefly in consequence of a report by Dr. Day, Inspector General of Fisheries, to the Government of India, after careful investigation on the spot. He pointed out the great evils and abuses which existed under the old system. The terms which had hitherto regulated the leasing of fisheries had been practically made by private contract between the Native officers of Government on the one part, and the persons who desired to work the fisheries on the other. The fisheries were until recently let by annual leases, and very frequently different persons were selected each year. The selection of the lessees was unfortunately, and perhaps unavoidably, left very much in the hands of the subordinate Native officials, and consequently a system of bribery and corruption had sprung up which had led to a most unsatisfactory state of things. But recently, after consultation with the district officials, a new system was introduced, by which the fisheries were let for periods of five years, and the leases were put up to public competition, the bidders being only persons holding certificates of qualification from the district officer. This

qualification was based on the residence of the bidder within a certain distance of the village in the vicinity of which the fishery was situated, the object being to ensure the interests of the villagers in the working of the fishery, and to exclude men from distant parts of the country, who might work it to the detriment of the villagers as a matter of speculation. This system had worked remarkably well, not a single complaint having been made and the revenue having considerably increased. As the people themselves explained, they were now able to pay larger sums for their leases, the money which formerly went in litigation and in bribing the petty officials and intriguing to upset leases, being now paid for their leases at the auction-sales. It might be said that if the rules were working so well, why was it necessary to pass a law to give them legal effect? The reason for passing a law was that there were certain matters—such as the recovery of arrears from defaulters, the enforcement of the responsibility of sureties, the protection of the public rights as to the use of water; the construction of weirs and breaches of fishery rules—which required to be regulated by law.

On the last occasion on which this Bill was before the Council, doubts were expressed by two hon'ble members as to the right of the Government, as defined by the recitals in the preamble, to the fisheries in British Burma. MR. EDEN thought that those doubts arose under some mistaken idea that the Government were now for the first time about to raise a revenue from fisheries in Burma. He could assure the Council that such was not the case: so far from resuming fisheries which had not hitherto been under assessment, the tendency was to release a large number of fisheries to provide water for agricultural and other purposes. All, or nearly all, the fisheries upon which revenue was now raised had been liable to the payment of revenue from the first occupation of the country by the British, and scarcely any fisheries had been brought under assessment within the last ten or fifteen years. On the annexation of Pegu it was found that the Native Government were raising a revenue in this way, and we simply took up their practice. MR. EDEN had, however, with reference to the question which had been raised in the Council, called for a report as to whether any objections had been made as to the right of the Government to raise this revenue, and the result was that not one single individual consulted could call to mind any occasion on which any objection or claim adverse to the right of Government had been made. He had in addition taken the opinion of the old ex-officials of the Native Government, and they stated that the Government had from time immemorial raised a revenue from fisheries, although they said many years ago some rights had accrued to certain hereditary officials—local governors and so forth—but at the time of the Emperor Alomprah, the whole of the fisheries were resumed. The Bill moreover had been published more than a year ago, and every invitation had been publicly made without a single objection having been raised. Therefore, he thought we might assume that the recital contained in the preamble of the Bill was incontestible, and that there was no objection to the Bill.

BURMA COURTS BILL.

The Hon'ble MR. EDEN also presented the Report of the Select Committee on the Bill for the further amendment of the Burma Courts Act, 1872. The Bill had been very considerably altered in Select Committee, but mainly in this respect, that in consequence of a number of small verbal alterations made in the existing Acts on the subject, it had been determined to consolidate the law and to re-enact the whole in one Bill. Such amendments in detail as were made in the Bill he proposed to notice when the Report of the Select Committee came under the consideration of the Council.

BURMA LAND REVENUE BILL.

The Hon'ble MR. EDEN also moved for leave to introduce a Bill to declare he law relating to interests in land and to regulate the assessment and collection of land-revenue, capitation-tax and other taxes in British Burma. The ystem under which the revenue in British Burma had hitherto been raised

had been regulated by certain rules which originally had the force of law, but of which many had become obsolete, and which had been altered and amended from time to time as the altered condition of the Province required: the alterations and amendments made had not, however, the same force of law as the original rules had. Consequently, four years ago the Government directed the preparation of a draft Bill to regulate the assessment and collection of the land-revenue, the salt-tax and other taxes. The whole subject had been under consideration with the most experienced revenue officers since that period, and lately the Government of India had definitely declared the general principles upon which the Bill should proceed.

As the revenue-system of British Burma was different from the systems in force in other parts of India, he should briefly explain the principles upon which that system was based. Perhaps the land-revenue system of Burma more nearly resembled the system in the Bombay Presidency than in any other part of India. It was a ryotwári system pure and simple, there being no intermediate holders between the State and the cultivator: all contracts for the cultivation of the land were adjusted between the Government and the cultivators of the soil. The land was held to be the property of the State, subject to such interests as were allowed to accrue thereon from time to time. When we first occupied the country we found that the Native system of land-revenue took the form of a tax on ploughs and bullocks, the theory of which was that each plough and pair of bullocks cultivated a certain quantity of land. For convenience we at first adopted that system, but it was soon found that that rough assessment affected different classes of cultivation very differently, according to the nature of the soil. When, therefore, Mr. John Colvin was Commissioner of Tenasserim, he, with the assistance of Lieut. Phayre, first attempted to introduce the system of a rate upon land, and the scheme then introduced remained in force until the annexation of Pegu. When Pegu was annexed, the same system was adopted by Sir Arthur Phayre, and the rules he drew up then were the Code which existed up to the present time, subject to certain alterations and amendments. The country was divided into Divisions, each Division being under a Revenue Commissioner; the Division was divided into Districts analogous to the Districts under the administration of Collectors; the District was divided into townships, which might be compared to the tahsíldárships in the North-Western Provinces, and each township was sub-divided into revenue-circles, each of which was in charge of a Thoogyee or collector of taxes, who was responsible for the details of the revenue-assessment and the collection of the revenue in the circle. He again was assisted by an officer who was a volunteer worker, who was the head of ten houses, and who attended to the details of collection. The Thoogyee's duty was to prepare a rent-roll showing the rental of each cultivator, and the quantity of land cultivated by him; this rent-roll was filed in the Court of the Deputy Commissioner, who prepared a receipt or ticket for the rent for which each cultivator was liable; the Thoogyee then went to the tenants, collected the money, and paid it into Court, giving to the cultivator by whom the money was paid his ticket duly endorsed. Where there was default in payment, the Thoogyee presented a petition to the Deputy Collector, who proceeded against the defaulter in the manner prescribed for the recovery of arrears of revenue. But MR. EDEN was happy to say that cases of default very seldom occurred. The measurement and assessment of lands had hitherto been made annually, and although great inconvenience was caused thereby, the cultivators had for a long time preferred that practice to the system of leases; but now that the Settlement Department had been established, the people were taking gradually to a settlement for five or ten years; and preferred it to the annual measurement which formerly prevailed.

The only right in the land possessed by the people was the right of occupancy which accrued by twelve years' continuous occupation of the same land: this gave a complete transferable and heritable right, subject to the payment of the rates and revenue assessed from time to time on the land. In point of fact, the cultivators were perfectly protected by the fixity of the tenure they enjoyed, and this with the very low assessment placed upon the

land had caused a great increase of cultivation within the last twenty years; no doubt the extraordinary prosperity of the cultivating classes was owing to the fact that, except the small proportion which went to the Government, the profits went entirely to the cultivators, and none to any description of middlemen.

Though some alterations were proposed in the details of the revenue-system just described, the general principles of that system would continue as heretofore. The only considerable change which was proposed was with regard to a cultivator having a right of occupancy who abandoned his land and returned to it after the lapse of several years. This it was proposed to provide against in consequence of the mischief done by a person who went away, and after several years returned and claimed the land with all the improvements which were made during his absence by some unsuspecting person who settled upon the land believing it to be waste-land. The right to recover was proposed to be limited to twelve years after the abandonment of the land; and to be subject to the payment of compensation for improvements made by the new comer.

The Bill provided for the levy of a cess of five per cent in addition to the ordinary assessment of the land-revenue. This was no new assessment; it had been levied for many years, in addition to the ordinary assessment, for local purposes; the proceeds of this cess were devoted to particular purposes, such as the maintenance of the Post, the establishment of Schools, and for Police. The Bill also regulated the collection of the capitation-tax, which was a very old tax in force for many years, and which it was not proposed to alter in any way. The salt-tax would be continued to be collected as now. In consequence of the capitation-tax, a very low duty was levied upon salt, and it was collected by a system of excise on the outturn of each boiling apparatus, the local excise-duty being kept as nearly as possible at the minimum rate of the customs-duty: they were both liable to be varied from time to time. The only other tax provided for by the Bill was a miscellaneous tax, or license for the preparation of particular sorts of forest-produce, such as cutch, bees-wax, honey, and the like—all of which were now in force. In no part of the Bill was there any proposal for new taxation.

The Motion was put and agreed to.

The Council adjourned to Tuesday, the 23rd February 1875.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 16th February 1875.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

CORRESPONDENCE REGARDING THE PROCEEDINGS GENERALLY OF THE AGENT TO THE GOVERNOR GENERAL AND SPECIAL COMMISSIONER AT BARODA SINCE THE ASSUMPTION OF THE ADMINISTRATION OF THE STATE UNDER THE ORDERS OF THE GOVERNOR GENERAL OF INDIA.

Baroda, 5th February 1875.

From—COLONEL SIR L. PELLY, K.C.S.I., Agent, Govr.-Genl. & Special Commr., Baroda,
To—C. U. AITCHISON, Esq., C.S.I., Secretary to the Govt. of India, Foreign Dept.

I AM sensible that from the hour when, on the evening of the 13th ultimo, I was called to the Telegraph Office to receive the Viceroy's proclamation and the instructions consequent thereon, regarding the contemplated arrest of His Highness Mulhar Rao Gaekwar, and the temporary change in the administration of the Baroda State which that proclamation announced, I may have appeared to the Government of India to have been somewhat remiss in reporting proceedings by letter.

2. But the duties which then immediately devolved on me and my Assistants became so numerous and detailed in character, that time did not permit of even my fully noting down consecutively what occurred from day to day, far less of reporting in ordinary official form for the information of my superiors.

3. All I could do was to telegraph in a concise manner proceedings and results.

4. It so happened, however, that Reporters from the public Press had arrived at Baroda prior to the crisis, and these gentlemen have by their summaries aided and assisted my memory in regard to many points of detail. I am not prepared to say that their accounts of what occurred have been entirely accurate. But at the same time any member of Government, who may have troubled himself to read these reports, will have received a more or less generally correct impression of the principal events that have transpired here during the past three weeks.

5. I felt that on an occasion like the present, wherein neither His Excellency in Council nor I had any object in view other than to perform a delicate, complicated, and very painful duty in a manner conformable with courtesy, honor, and the necessities of the case, there could not be too much publicity. Therefore the course I have followed has been to act in public as much as possible, to afford every reasonable opportunity for counsel and guidance on the part of those immediately concerned, and to prove both by word and deed that while the paramount power was compelled, as towards the Gaekwar and his evil advisers, to assert its rights and fulfil its obligations, yet that in so doing that power would never for an instant lose sight of the interests of the Baroda State, nor deviate from the policy pre-resolved on, under mutual consent, as between the Gaekwar and the Government of India, for reforming the Baroda administration.

6. Accordingly, I have held almost daily Durbars or interviews or consultations with the leading members of all sections of society, and have everywhere permitted the Reporters from the Press to be present and publish what passed. Down to date I have little or no occasion to regret having given this permission, while, on the other hand, I have found that by explaining my actions and intentions I have carried those concerned with me, and have left no room for reasonable cavil or misapprehension.

7. The more important of the proceedings thus dealt with have already been submitted by me to your Office in the form of *résumés* drawn up by my small staff, accompanied by brief transmitting letters from myself.

8. In now, however, forwarding an account of my recent visit to the leading Bankers and merchants of Baroda, I hope to conclude my *résumés* of the series of interviews and special Durbars which have consecutively devolved on me; and I desire therefore, in transmitting this account, to dwell at somewhat greater length than I have hitherto done on the character of the measures which I have taken with respect to the general administration of the State.

9. But in so doing I would premise that these measures by no means pretend to include all those that have suggested themselves to me or have been placed before me as beneficial in the abstract. My measures have been limited to those which appeared to me to be at once emergent, conformable to instructions, agreeable with what had been previously discussed and arranged for as between myself and the Gaekwar and his Minister, and expedient in themselves, having regard to the abnormal and peculiar circumstances of the time and place.

10. Among the graver questions which on assuming charge I had instantly to consider, as being not only pressing in themselves, but which would have speedily involved danger to the peace had I staved them off, were those of the grievances and complaints of,—1*st*, the nobility and military classes, and, 2*nd*, those of the agricultural classes.

11. It will be in the recollection of the Government, that prior to the date of my assuming the powers delegated to me by the Viceroy in regard to the administration of the Baroda State, I had, in communication with the late Government of His Highness, continued to submit to His Excellency in Council my opinions as to the political combination which existed on the part of the nobles and the military, and the passive resistance almost amounting to rebellion which existed on the part of the agricultural classes as towards the Government and person of Mulhar Rao Gaekwar. I had further submitted my opinion as to the unsoundness of the Baroda financial budget; and these representations, grave though they were, were yet far less emphatic than have been those of my predecessor in office.

12. For I considered that however dangerous and emergent these questions might be, my instructions were to afford the Gaekwar one last opportunity for reforming his departments of State under my advice, and that, in so far as I was aware, His Highness was fully cognizant of the situation, and sincerely desirous of redeeming the past, by carrying into effect a thorough reform of his administration.

13. Nevertheless, when alleged facts were discovered, tending to show that His Highness had, prior to my arrival, instigated an attempt to poison the representative of the British power, I felt that reorganization was for the moment in great part paralyzed, and thus reforms for some days hung in suspense, pending the receipt of instructions from Calcutta.

14. Therefore, when the change came, and the power and authority of the Gaekwar were temporarily vested in me, not a day was to be lost in assuring the community that what had been promised would be fulfilled; that a land revenue settlement and a reasonable and liberal treatment of the cultivators would be introduced; that the grievances and complaints and debts of the Sirdars, Silledars, &c., would be enquired into, and if practicable be arranged; that the lavish expenditure of the past would be reduced; and that income would be made to balance outlay.

15. I acted accordingly, but always with and in communion with those concerned. And two important practical facts have thus ensued. First, the agricultural classes who had previously harassed my premises and the roads in thousands, went away satisfied with my simple assurance, and I have never since seen a complainant of this class. Second, the Sirdars have become quite amenable, and down to date patiently await the results of the Committee of Enquiry recently appointed.

16. In the foregoing and in all other cases I have carefully borne in mind that the task before me was not to form a theoretically perfect administration

regardless of circumstances: but rather to reform an administration already in being, and to do this so far as possible in harmony with the prejudices, usages, and institutions of the State, and so far as practicable to utilize in these reforms the *personnel* and *materiel* which the State itself afforded.

17. I trust that the reports already submitted by me may have convinced His Excellency in Council that I have been consistent in carrying out this policy. As a matter of fact, I have scarcely introduced a single Native officer beyond those who were to be introduced under arrangements previously made with the Gaekwar, or such as have been temporarily introduced for the purpose of investigating the alleged delinquencies of previous *employés*.

18. The only Europeans introduced are the gentlemen who form a portion of my personal staff, and whose aid was rendered essential by the duties confided to me in connection with my conduct of the proceedings about to come before the special Commission of Enquiry into the attempt at poisoning.

19. In regard to judicial reform I had done no more than collect information; confirm the *personnel* already accepted by the Gaekwar, and rule that, where, as in cases of caste dispute, the Baroda Code differed from ours, or, where on points such as that of various descriptions of imprisonment the Baroda Code was silent, we should for the present deal with the former classes by arbitration, and with the latter in a manner conformable with the spirit of our own Code and with the merits of each particular case.

20. As regards waste lands, I issued a proclamation confirmatory of that issued a few weeks previously by the Gaekwar. This confirmation was necessary, because the cultivating classes had lost confidence in the assurances of the late Government.

21. In respect to the mint and coinage, I have received an able report from my subordinates, but have taken, and intend to take, no action unless compelled thereto by deficiency of metallic currency.

22. As regard the enquiries into the tangled mass of complaints of tyranny and so forth which immediately pressed on me, I appointed a Committee, and whenever clear *primâ facie* cases arise they will be referred to the ordinary Courts of Law.

23. I have already reported some of the circumstances which compelled me (much against my wish) to cause treasure concealed in the palace to be disinterred and credited to the State. In conducting this search great care and precaution have been observed; and I closed the search Committee so soon as I felt I could do so without incurring extraordinary risk of a repetition of those proceedings.

24. The examination of suspected goods about to be removed was necessitated by frequent alleged attempts to carry off State valuables. I believe that cash and valuables to an immense amount have been removed, and that a large proportion of the above is *bonâ fide* State property or money fraudulently or irregularly abstracted from the State Funds. Many sums have been recovered. The restriction on the removal of suspected property was not continued a day longer than was absolutely essential for the immediate protection of State interests; and on the 29th ultimo I was enabled to inform the commercial community that all restrictions had been removed, and that trade might resume its natural course without fear of molestation.

25. In respect to charities and religious outlays, I have been careful to refrain from all direct interference. At the Durbars, where the Sirdars and the leading bankers were present, I drew attention to the fact that expenditure under the above heading had increased from 10 to more than 20 lakhs of rupees annually; but having said this I paused and left the matter wholly in the discretion of the Baroda community itself, adding that whatever the community decided on this question I would accept.

26. The question of the Contingent will require minute consideration, but it would be premature to enter on it at present. I am therefore doing no more in this matter than collect information.

27. As to the military strictly so-called, that is to say, the organized regiments and batteries, these have conducted themselves with perfect order, and I have not received a complaint against them. Their Commander-in-Chief visits me every morning and reports. Any necessary orders are then issued direct.

28. I am calling a trustworthy Native Officer of the Public Works Department to scrutinize and settle the claims of contractors and others heretofore employed under the Durbar in constructing bridges, palaces, &c.

29. The adjustment of the accounts as between the Baroda State and its Banks or shops at Bombay I have confided to the Presidency New Bank of Bombay, with a request that in the event of their needing legal advice they will consult Messrs. Hearne and Cleveland. It seemed fitting that matters of the above description should be entrusted to a State Bank in communication with the Solicitors to Government.

30. I fear I may still have omitted mention of some items of interest. But time presses.

31. I am requesting my Private Secretary, Mr. Jeffreys, to draw up in connected form a concise narrative of the events which have taken place since I assumed charge of this State, and the narrative will be submitted to your Office so soon as it shall be completed.

32. If I have not as yet mentioned particularly the names of the officers and officials who have aided me in my administration and other duties, this silence is in no degree consequent on forgetfulness or want of recognition. But I think that my acknowledgments to them and recommendations to Government on their behalf will be most appropriately made when the approaching Commission shall close.

33. I respectfully solicit permission to avail myself of this opportunity for acknowledging the prompt and cordial support I have received from His Excellency the Governor of Bombay in Council in respect to the movement of troops, and placing at my disposal officials subordinate to His Excellency's Government.

No. 635P., dated Fort William, 19th February 1875.

From—C. U. AITCHISON, Esq., C.S.I., Secy. to the Govt. of India, Foreign Dept.,

To—COLONEL SIR LEWIS PELLY, K.C.S.I., Agent to the Governor-General and Special Commissioner at Baroda.

I AM directed by His Excellency the Viceroy and Governor-General in Council to acknowledge receipt of your letter No. 9, dated 10th February 1875, reporting generally on your proceedings since you assumed the administration of the State under the orders of the Governor-General in Council.

2. Your proceedings have been in complete accordance with the policy of the Government of India and with the instructions issued by the Governor-General in Council for your guidance, and I have the pleasure to inform you, by the direction of His Excellency in Council, that you have fully justified the confidence reposed in you, and that your proceedings have the entire approval of the Government of India.

3. The resignation of the late Minister rendered it unavoidable that, on assuming the Government, you should personally take on yourself much administrative detail. But the measures which you have initiated have all been in accordance with the recommendations made by the Baroda Commission in their report of last year, and with the advice given by His Excellency the Viceroy to His Highness Mulhar Rao Gaekwar, which His Highness expressed his intention to follow. His Excellency in Council is satisfied that, considering the attitude assumed by the ryots, Sirdars and Military classes, the initiation of judicious reforms could not have been postponed without danger to the public peace.

CORRESPONDENCE ON THE SUBJECT OF THE SCALE OF CHARGES FOR THE DEFENCE OF HIS HIGHNESS MULHAR RAO GAEKWAR.

No. 616 P.

C. U. AITCHISON, C. S. I.,

Secretary to the Government of India,

To

COLONEL SIR L. PELLY, K. C. S. I.,

Agent to the Governor General and Special Commissioner at Baroda.

Political.

Dated FORT WILLIAM, *the* 19*th February* 1875.

SIR,

WITH reference to my telegram of the 16th, His Excellency the Viceroy and Governor General in Council desires me to address you for the purpose of placing on record the communications that have passed up to the present time on the subject of the costs to be paid from the Baroda Treasury in order to provide His Highness Mulhar Rao Gaekwar with every reasonable facility for clearing himself from the charges made against him.

2. On 19th January last you telegraphed that the Gaekwar had retained Shanteram Narayen, who was to return to Bombay for further counsel; and on 23rd January you telegraphed that Messrs. Jefferson and Payne, the Solicitors for the defence, had proposed to procure counsel from England with a retainer of 5,000 guineas, and that they requested permission to spend up to five lakhs of rupees. You recommended that the Commission should assemble as soon as practicable, not later than 10th February, and asked for an early reply, as the Solicitors were urgent to telegraph for counsel, and wished by the following morning to be informed that the expenses of engaging a Barrister from England would, under any circumstances, be provided. Appendix 1. Appendices 2 & 3

3. In reply, you were on the same date requested by telegraph to inform the Gaekwar's Solicitors that the Commission would proceed on the 18th February (the date originally fixed), and could not be postponed for counsel from England. You were also instructed to allow liberally all proper legal expenses; but you were informed that some explanation must be required before authorizing such an expenditure as five lakhs of rupees, and you were requested, in case of doubt, to refer for instructions. Appendix 4.

4. On 25th of January you telegraphed that His Highness the Gaekwar lamented the apparently unanticipated protraction of his confinement and suspense, and expressed his regret that his trial could not be more speedily brought to an end. Appendix 5.

5. On 27th January you telegraphed that you had advanced Rs. 75,000 to Mr. Jefferson, who demanded an immediate further payment of Rs. 2,89,000 as a portion of the costs, and that the Government Solicitor objected to Appendix 6.

this as extravagant, unnecessary, and unprecedented. On the 28th you were Appendix 7. informed by telegraph, in reply, that Rs. 75,000 were considered ample at present, and that, with every desire to afford the Gaekwar full means of defence, Government could not consider any application for more without full reasons for the application stated in writing.

Appendix 8. 6. On the 29th of January, Messrs. Jefferson and Payne telegraphed to the Private Secretary to the Viceroy, complaining that their case was delayed for want of funds, and intimating that the Gaekwar, who had no funds of his own, was anxious that an advance should be made, and that they required Rs. 2,90,000 in addition to the Rs. 75,000 already spent. They also requested postponement of the opening of the Commission till 22nd February. On Appendix 9. the 31st of January you telegraphed that His Highness the Gaekwar, after consulting his legal advisers, desired the sitting of the Commission to be postponed, Appendix 10. rather than hastened. On 1st February, you telegraphed that the Gaekwar had written to you to say that he was much pained to learn that a further payment had not been granted, that any delay in securing counsel, which could only be done by an immediate payment of money, must imperil his defence, and urging that the money asked for should be at once paid.

7. These communications, which were afterwards received in written detail, were disposed of in my letter No. 335 P., dated 2nd February, from which an extract is given in the margin for convenience of reference; and on 4th February Messrs. Jefferson and Payne were informed that you had received the instructions of Government, and would doubtless make the necessary communication to the Government Solicitor. On 4th February, a telegram was received by the Viceroy from His Highness Mulhar Rao, in which an advance of two lakhs of rupees was asked for. A Appendix 13. copy of the telegram was submitted in your letter No. 1, dated 5th February, together with a letter from the Gaekwar to yourself, dated 4th February, in which the Gaekwar stated that he was particularly desirous to retain the services of Mr. Woodroffe, who would not act unless his fees were paid at once. Appendix 14. On the 5th February I telegraphed to you the Gaekwar's message, and requested you to inform His Highness of the orders already passed on the subject of expenses.

Appendix 11. "5. With respect to the costs of the defence, you were informed in my "telegram of the 28th January that the sum of Rs. 75,000 was sufficient for the present, and that, with every desire to afford the Gaekwar "full means of defence, the Governor General in Council could not consider "any application for more without full reasons for the application stated in "writing. No reasons have yet been given for the very extravagant demand "of an immediate payment of Rs. 2,90,000 and permission to spend up to "Rs. 5,00,000. The Governor General in Council does not think that the "Baroda Treasury should be burdened with extravagant charges, but he will "leave it to Mr. Cleveland to say what would be a fair amount to allow on a "liberal scale for a defence conducted in an ordinary and reasonable way. "The Governor General in Council, however, cannot but consider the sum of "Rs. 5,00,000 as greatly in excess of what would be required under any "circumstances.

"6. Messrs. Jefferson and Payne have applied for a postponement of the "assembling of the Commission till the 22nd February. In your telegram of the "25th January you reported that His Highness the Gaekwar was anxious that Appendix 12. "the assembling of the Commission should be hastened, but in your later telegram "of the 31st you state that His Highness now wishes for a postponement. Under "these circumstances the Governor General in Council is pleased to fix the 23rd of "February as the date for the opening of the Commission at Baroda."

8. The Government Solicitor, after reviewing the case, and on the assumption that Serjeant Ballantyne was to be employed, advised a further advance of Rs. 50,000, and that, if the enquiry should last more than ten days, additional advances should from time to time be made on the same estimates. On the 5th February, you informed Mr. Cleveland that you were prepared to make the advance of Rs. 50,000.

Appendix 15. 9. From your telegram of the 7th February it appears that the sum of Rs. 50,000, making in all $1\frac{1}{4}$ lakhs, was paid on the 6th. But you added that the defence was still dissatisfied, and that Government would either have to accede to unlimited demands, or else draw a line and adhere to it. On the 8th

you telegraphed that Messrs. Jefferson and Payne had returned the Rs. 50,000 Appendix 16. which they had previously accepted, intimating that they could not accept it on the conditions named by Mr. Cleveland,* and that they would at once intimate to the Gaekwar that they could take no further steps for his defence. Messrs. Jefferson and Payne, however, offered to receive the Rs. 50,000 and other moneys, subject to the costs and charges being sanctioned by the Court,—a proposal which you understood to mean that they wished the sum of Rs. 2,89,000 formerly asked for to be advanced to them. While the matter was still under the consideration of Government, you telegraphed on the 9th, requesting that a decision as to the costs of defence should be deferred, and intimating that the demands were exorbitant. The Government of India, however, thought it advisable to communicate to you their views, and the instructions quoted in the margin† were accordingly sent you by telegraph on the 11th.

* These were—

"It was to be distinctly understood that it was not to be considered in any way "as an acknowledgment on part of Government that the fees to counsel and "other payments which Jefferson stated should be made were such as ought pro- "perly to be made, or such as would be sanctioned by Government,—that the "question as to what allowance would be made out of Baroda Treasury for ex- "penses must be left to decision of Viceroy, and that the Rs. 50,000, as well as the "Rs. 75,000 previously paid, must be accepted as a payment on account of expenses "of conducting proceedings in an ordinary and reasonable manner,—that both sums "would have to be accounted for by Jefferson on the basis of the scale of fees, "charges, and expenses which might afterwards be sanctioned."

Appendix 17. † "Inform Mr. Cleveland that we cannot discuss with Mr. Jefferson the pro- "priety of particular items of his proposed expenses. Mr. Jefferson's statement "shows both that he has not contemplated any ordinary or reasonable mode of "conducting the real business to be done for the Gaekwar, and that he has con- "templated business which has nothing whatever to do with the enquiry. We have "endeavoured to form an estimate of the expense of representing the Gaekwar on "the proposed enquiry, and have consulted Mr. Sanderson on the subject. Our "opinion is that one and half lakh is a liberal amount to allow for such expense, and "that two lakhs is an extreme and lavish amount. We are prepared to allow the "latter sum. We reckon that it is about four times the amount which the "machinery employed by us is calculated to cost. If Mr. Jefferson flings away the "money in retaining an extravagant staff of counsel, in taking opinions on points "which cannot be raised, and in other useless ways, that is for him and the "Gaekwar to see to. All that he has done he has done without consulting us, and "we have had neither the opportunity nor the right to object to it. The Gaekwar "should be informed of the position of affairs, and should be asked whether he "wishes the remaining money to be paid to Mr. Jefferson. If he does, Mr. "Jefferson should be asked whether he will undertake to carry the defence through. "If he assents, the money may be paid him by such advances as he requires. If "the answers are different from what is here anticipated, further instructions must "be given. The above amount is calculated on the footing that the proceedings will "not last more than a month. Communicate with our legal advisers. If from "their point of view they are of opinion that the course here prescribed is clearly "wrong, give their reasons. The responsibility of delay must rest with Jefferson "on account of his extravagant mode of proceeding."

Appendix 18. 10. In reply, you telegraphed on the 12th that Mr. Jefferson had been informed accordingly, but had made as yet no reply. You added that your legal advisers were of opinion that, if the terms should be rejected, you should be authorized to guarantee Serjeant Ballantyne's fees and reasonable further expenses to be determined by the Taxing Master of the Bombay High Court,—that Government were committed to the payment of Serjeant Ballantyne's fees,—and that in this view two lakhs might not be sufficient. The following instructions were sent to you by telegraph on the 13th in reply:—

"Unless something has been said to Jefferson, which has not been "communicated to us, we are not committed to fees or to any other "item of expense. Principles of taxation cannot apply to such a case "as this. The proposal of the lawyers is tantamount to a complete conces- "sion of whatever Jefferson demands. If Cleveland has done anything to "commit us to Ballantyne's fees, we must abide by it. In that case the "maximum allowance should be a lakh and a half, besides the charges for "Ballantyne. If Jefferson declines terms offered to him in my telegram of "the 11th, and if legal advisers think we are committed to Ballantyne's fees, "and Jefferson declines the further terms contained in this telegram, inform "the Gaekwar that Government will provide for his defence, and telegraph at "once for instructions."

11. Your telegram of the 15th communicated the substance of the reply of Messrs. Jefferson and Payne to the message of the 11th, in which they stated that "they have given his (Mr. Cleveland's) letter of

"11th their most anxious consideration, and reply to this effect—that "Government must have overlooked important points in making their "estimate of two lakhs,—that they themselves cannot state with any "approach to accuracy the amount that will be expended for defence. All "that they can at present say is that two lakhs will be largely exceeded "if proceedings last as long as a month. They say they do not see why they "should be asked to take up the case on contract for a certain sum, such course "being unprofessional. Say they are unable to give the undertaking asked "for,—that they will do what they can to keep the expenditure down, but will "not imperil the interests of their client, if they can help it, by foregoing one "item of expenditure which they think necessary in his behalf. They say "they will, therefore, carry on the defence up to the last day, to which the sum "named by Cleveland in his letter will permit, and when that sum is expended, "they will, unless further funds are provided, instruct counsel to withdraw "from the case and retire themselves,—that on them who have deprived the "Gaekwar of the means of defending himself, and not on themselves, will "rest the odium of this result. They go on to complain that Government "did not from the first fix a limit within which they could advance. They "say they have been obliged to dispense with Woodroffe's services. They "conclude by saying that Gaekwar will send a *vaid*, asking for Rs. 75,000 "to be paid to them for defence."

You added that your legal advisers adhered to their opinion expressed in your telegram of the 12th, and considered Government committed to Serjeant Ballantyne being retained on the facts already before Government, and not from anything Mr. Cleveland had since done.

12. In reply, the following instructions were telegraphed to you on the 16th:—

"Your telegram of 15th. On reiterated opinion of legal advisers, "guarantee Ballantyne's fees. Supply defence with advances for reasonable "further costs on advice of Cleveland and Scoble. We look to them to pro- "tect Baroda revenues from improper charges. The number of counsel pro- "posed and other items of Jefferson's estimate seem to us to be extravagant "and founded on mistaken view of limits of enquiry. But we give you full "liberty to act as you may be advised by Scoble and Cleveland without further "reference to us."

13. Thus the matter at present stands. His Excellency in Council, however, thinks it necessary now to add his opinion that the estimate quoted in the margin, on which Messrs. Jefferson and Payne based their application for Rs, 2,89,700 as a portion of the cost, exclusive of further large payments to Counsel, Solicitor's fees, and other charges, is extravagant, both in respect to the number of Counsel it was proposed to entertain, the fees allowed, and the charges generally.

		Rs.
Fee to Serjeant Ballantyne for 65 days, the time he will be absent from England, calculating the trial to last 20 days, at Rs. 1,000 per diem		65,000
Fee to Mr. Woodroffe, of the Calcutta Bar, for one month		45,000
Junior Counsel from Bombay, 1st fee on Brief	Rs. 2,500	
Refresher for 25 days, including journeys and one day for consultation	„ 16,200	
		18,700
2nd fee on Brief	„ 2,000	
Refresher for 25 days	„ 12,500	
		14,500
Mr. Shanteram Narayen for two months		30,000
For Mr. Jugonath for two months		25,000
Agent's charges in England and fees to counsel for opinions on cases submitted on International Law		20,000
Other Agent's charges elsewhere		5,000
Short-hand Writer from England		5,000
Travelling expenses of Serjeant Ballantyne and Short-hand Writer to and from England		4,000
Sundry charges, such as railway and suites of tents, carriages, horses, servants, and purveyor's charges		30,000
Telegrams		2,500
Contingencies, say		25,000
Total Rs. ...		2,89,700

N. B.—This estimate is based on the supposition that the trial will last only 20 days, and is exclusive of Solicitors' charges; expenses of Office and of Establishment.

You are aware from the correspondence that has taken place between the

Government of India and the Bombay Government that the fees which have been sanctioned at the recommendation of that Government for the Advocate-General are only Rs. 600 a day, and for Mr. Inverarity Rs. 400 a day. Moreover, Messrs. Jefferson's estimate appeared to us to be framed upon an erroneous conception of the scope of the enquiry to be made by the Commission. While the whole matter is left in the hands of yourself and the legal advisers of Government under the terms of my telegram of the 16th instant, and while it is the desire of the Governor General in Council to supply on the most liberal calculation everything that is really required for the defence of His Highness Mulhar Rao, the Governor General in Council thinks it necessary to point out that it will be the duty of Messrs. Scoble and Cleveland to protect the Baroda revenues from charges of a kind so manifestly extravagant and uncalled for as some of those in the estimate of Messrs. Jefferson and Payne.

14. In some of the telegrams which form the appendices to this letter, allusion is made to other matters than the scale of charges to be allowed for the defence of His Highness the Gaekwar, such as the alleged seizure of jewels and the production of documents. These subjects have been separately disposed of, and, therefore, no reference has been made to them in this letter.

I have the honor to be,

SIR,

Your most obedient Servant,

C. U. AITCHISON,

Secretary to the Government of India.

APPENDIX 1.

Telegram dated 19th January 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

GAEKWAR has retained Shanteram Narayen, who returns to Bombay to-morrow for further Counsel.

APPENDIX 2.

Telegram dated 23rd January 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

JUST had an interview with Jefferson and Payne. They propose Counsel from England with retainer of 5,000 guineas, and request permission to expend up to five lakhs of rupees. Commissioner of Police and myself strongly recommend that Commission assemble as soon as practicable; say not later than 10th February. As yet I have not communicated to Gaekwar any date for assembling. Please reply quickly, as Solicitors are urgent to telegraph for Counsel

---

APPENDIX 3.

Telegram dated 23rd January 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

GAEKWAR'S Solicitors have again addressed me as follows:—We wish to be informed by to-morrow morning that the expenses of engaging the services of a Barrister from England would, under any circumstances, be provided, as in this case we require to remit retainer fee £5,000 by telegram on Monday.

APPENDIX 4.

Telegram dated 23rd January 1875.

From—FOREIGN SECRETARY, *Calcutta.*

To—SIR LEWIS PELLY, *Baroda.*

ANSWER Gaekwar's Solicitors that the Commission will proceed on 18th of February, and cannot be postponed for Counsel from England. All proper legal expenses may be liberally allowed by you, but some explanation must be required before authorizing such an expenditure as five lakhs of rupees. If you have doubts, refer for instructions.

APPENDIX 5.

Telegram dated 25th January 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

DR. SEWARD reports that Gaekwar, on hearing of statement in *Bombay Gazette*, that Commission would assemble on 18th of February, lamented apparently unanticipated protraction of his confinement and suspense, and expressed his regret that his trial could not be more speedily brought to an end.

APPENDIX 6.

Telegram dated 27th January 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

ADVANCE of Rs. 75,000 already made to defence Solicitor Jefferson. Jefferson now demands immediate further payment of Rs. 2,89,000 as a portion of the cost. Cleveland objects to this demand as being extravagant, unnecessary, and unprecedented.

APPENDIX 7.

Telegram dated 28th January 1875.

From—FOREIGN SECRETARY, *Calcutta.*

To—SIR LEWIS PELLY, *Baroda.*

Rs. 75,000 ample at present. With every desire to afford Gaekwar full means of defence, Government cannot consider application for more without full reasons for application stated in writing.

APPENDIX 8.

Telegram dated 29th January 1875.

From—MESSRS. JEFFERSON & PAYNE, *Solicitors to Gaekwar, Bombay,*

To—PRIVATE SECRETARY TO VICEROY, *Calcutta.*

WE beg respectfully to appeal to His Excellency in behalf of Gaekwar in relation to the conduct of the prosecution against His Highness. We have been unable to obtain yet inspection of letters and documents intended to be used against the Gaekwar and said to be found in house of Yeshwantrao and Salim. Denied copies of Baroda Commission, and report and inspection of khureeta and Gaekwar's own records, correspondence, and books, copy of Colonel Phayre's narrative in regard to alleged poisoning and Chemical Examiner's report, also some depositions not yet furnished, nor proceedings of Colonel Phayre's enquiry as to poisoning manifest. All papers submitted to His Excellency on which His Excellency proceeded not furnished to us. Sir Lewis Pelly declined to hold communication direct with us. Refers to Cleveland, who has left Baroda. Great delay in consequence. Our application for further advance not yet complied with. Undertake to account for all moneys received, and that same spent in legitimate legal expenses. Require Rs. 2,00,000 and Rs. 90,000 for out of pocket estimate already furnished. Rs. 75,000 paid to us expended, and large liabilities incurred. Gaekwar is anxious to make advance; but, as he has been deprived of every resource and stripped of every rupee, cannot do so. His Excellency graciously proclaimed that every opportunity will be offered Gaekwar of freeing himself from grave suspicion, but respectfully submit if documents withheld, delay be made and funds not supplied, Gaekwar practically undefended. Respectfully protest in his behalf. Postponement absolutely necessary to the 22nd on account of delay as above, and for properly instructing Counsel expected from England on 18th. Copy this telegram furnished to Crown Solicitor here with explanatory letter.

APPENDIX 9.

Telegram dated 31st January 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

GAEKWAR has politely answered my *yad*, stating Viceroy's wish to afford him every opportunity for clearing his character; but he says that, after consulting his legal advisers, he now wishes the sitting of the Commission to be postponed rather than hastened. I propose merely replying that the 18th February is fixed.

APPENDIX 10.

Telegram dated 1st February 1875.

From—SIR LEWIS PELLY, *Baroda*,

To—FOREIGN SECRETARY, *Calcutta*.

GAEKWAR'S *yad* contains following paragraphs:—

I am much pained to learn from my Solicitor that his request for a further payment out of the Treasury on account of the costs of my defence has not been granted by you.

It cannot but occur to you that any delay in the securing of Counsel, which can only be done by an immediate payment of money, must imperil my defence, and I must entreat of you to urge upon His Excellency the Viceroy my earnest desire that the money asked for should be at once paid.

APPENDIX 11.

Dated 4th February 1875.

From—C. U. AITCHISON, ESQ., C. S. I., *Secy. to the Govt. of India, Foreign Dept.*

To—MESSRS. JEFFERSON, PAYNE, & CO., *Solicitors to His Highness the Gaekwar.*

YOUR letter of 30th January to the Viceroy's Private Secretary having been transferred to this Office for disposal, I am directed by the Governor General in Council to inform you that the Agent to the Governor General and Special Commissioner at Baroda has received the instructions of Government on the matters therein referred to, and he will doubtless make the necessary communication to the Government Solicitor.

APPENDIX 12.

Telegram dated 4th February 1875.

From—HIS HIGHNESS THE GAEKWAR, *Baroda*.

To—HIS EXCELLENCY THE VICEROY, *Calcutta*.

DEEPLY pained to learn from my Solicitors that preparations for my defence at a standstill for want of funds. Their requirements for legitimate expenses not granted. Promises of ample opportunity for vindicating my innocence thus practically ignored; private purse attached; my Ranees' marriage ornaments and moneys seized; my ryots and relations greatly alarmed, and fear to give my Solicitors aid, pecuniary or otherwise. My late Karbharies, from whom alone valuable information can be obtained, under restraint, on matters connected with old charges, and access to them not granted to my Solicitors. My character, liberty, and kingdom at stake. I entreat your Excellency to direct immediate advance to be made out of the Baroda State funds of two lakhs of rupees, Solicitors undertaking to account.

APPENDIX 13.

No. 1, dated Baroda, 5th February 1875.

From—COL. SIR LEWIS PELLY, K. C. S. I., *Agent, Govr.-Genl., & Special Commr., Baroda*,

To—C. U. AITCHISON, Esq., C. S. I., *Secy. to the Govt. of India, Foreign Dept.*

I HAVE the honor to forward copy of a letter from His Highness the Gaekwar, dated 4th instant, also a copy of the telegram therein alluded to, for the information of His Excellency the Governor General of India in Council.

Dated Baroda, 4th February 1875.

From—HIS HIGHNESS MULHAR RAO GAEKWAR,

To—COL. SIR LEWIS PELLY, K. C. S. I., *Agent, Govr.-Genl., & Special Commr., Baroda.*

I AM greatly distressed by what my Solicitors tell me relative to the withholding of funds for my defence.

They inform me Mr. Woodroffe will not act for me unless his fees be remitted at once.

I am specially desirous that his services should be secured on my behalf.

After the repeated promises made by His Excellency the Governor General to afford me every opportunity of clearing my character, I am at a loss to understand why the money necessary for my defence should not be paid.

I have proposed a telegram to His Excellency, which I send herewith, and I beg the favor of your causing it to be forwarded to him without delay. You will see from it what my wishes are.

APPENDIX 14.

Telegram dated 5th February 1875.

From—FOREIGN SECRETARY, *Calcutta*.

TO—SIR LEWIS PELLY, *Baroda*.

FOLLOWING telegram from Gaekwar to Viceroy,—(*vide* Appendix 12).

Acquaint Gaekwar with orders already given on subject of expenses. The general instructions as to affording all proper facilities for defence will be sufficient to enable you to deal with rest of telegram.

APPENDIX 15.

Telegram dated 7th February 1875.

From—SIR LEWIS PELLY, *Baroda*.

To—FOREIGN SECRETARY, *Calcutta*.

Rs. 50,000 paid yesterday to Mr. Jefferson. This makes total advance of one lakh and one quarter. Defence still dissatisfied with amount. Government will either have to accede to unlimited demands or else draw a line and adhere to it.

APPENDIX 16.

Telegram dated 8th February 1875.

From—SIR LEWIS PELLY, *Baroda*.

To—FOREIGN SECRETARY, *Calcutta*.

ON Friday, 5th February, Cleveland wrote Jefferson that Agent authorised payment of Rs. 50,000, because Gaekwar considered an immediate advance urgently required; but, in making it, it was to be distinctly understood that it was not to be considered in any way as an acknowledgment on part of Government that the fees to Counsel and other payments which Jefferson stated should be made were such as ought properly to be made, or such as would be sanctioned by Government,—that the question as to what allowance would be made out of Baroda Treasury for expenses must be left to decision of Viceroy, and that the Rs. 50,000, as well as the Rs 75,000 previously paid, must be accepted as a payment on account of expenses of conducting proceedings in an ordinary and reasonable manner,—that both sums would have to be accounted for by Jefferson on the basis of the scale of fees, charges, and expenses which might afterwards be sanctioned. On 5th February, Jefferson acknowledged receipt of Cleveland's letter, and asked for immediate payment of the Rs. 50,000. On 6th, Baroda rupees, value 50,000 Government rupees, were paid Jefferson, and he gave receipt, stating that money received on terms mentioned in Cleveland's letter. On Sunday 7th, Jefferson wrote that, on re-considering Cleveland's letter, he would not accept the Rs. 50,000 on terms mentioned, as they could not take upon themselves the responsibility. He encloses hoondies on Bombay, which he had purchased with Rs. 50,000, and says they will at once intimate to Gaekwar that they can take no further steps for his defence. He concludes by offering to receive the Rs. 50,000 and other moneys on account of the costs and charges of the defence, subject to their being sanctioned by the Court. I take this to mean that he wants at once the Rs. 2,89,000 before demanded as advance. I understand also that he wants to pay his second Counsel at the rate of Rs. 1,500 per diem. Cleveland has asked defence if it would accept advances to meet expenses on following basis:—Retainer for Ballantyne 5,000 guineas. Fee on brief, 500 guineas. Refreshers Rs. 1,000 a day from 26th January till date of arrival in London on return. Ballantyne's expenses in addition. Second Counsel Rs. 700 a day, commencing on day he leaves, and ending on his return to Calcutta. Third Counsel Rs. 400 a day. First pleader Rs. 200 a day. Second pleader Rs. 100 a day. Expenses of Counsel and pleaders extra. Also an immediate payment of Rs. 10,000 to meet establishment, &c. Government side have two Counsels and a Solicitor only, and are going to pay leading Counsel Rs. 600 a day, and junior Counsel Rs. 500 a day.

APPENDIX 17.

Telegram dated 9th February 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

DEFER decision on costs of defence until I telegraph again. Defence Solicitors' demands exorbitant.

APPENDIX 18.

Telegram dated 12th February 1875.

From—SIR LEWIS PELLY, *Baroda.*

To—FOREIGN SECRETARY, *Calcutta.*

SUBSTANCE of your telegram of 11th has been communicated to Jefferson after consultation with Scoble and Cleveland. No reply hitherto. If they reject terms, legal advisers think I should be authorised to guarantee Ballantyne's fees and reasonable further costs. Such expenses to be determined by Taxing Master of High Court, Bombay. Legal advisers think Government committed to payment of Ballantyne's fees. In this view Rs. 2,00,000 may not be sufficient.

SUPPLEMENT TO

The Gazette of India.

Nº 9. CALCUTTA, SATURDAY, FEBRUARY 27, 1875. Register No. 75.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as to the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

FINANCIAL DEPARTMENT.

ANNUAL REPORT ON THE OPERATIONS OF THE POST OFFICE OF INDIA FOR THE YEAR 1873-74.

No. 5716, dated Calcutta, 23rd December 1874.

From—F. R. HOGG, Esq., *Officiating Director General of the Post Office of India,*

To—*The Secretary to the Government of India,* FINANCIAL DEPT.

I proceed to submit the annual report on the administration of the Post Office of India for the year 1873-74.

2. In the internal administration of the department, the most important events have been—(1) the introduction of the new Post Office Manual described in the report for 1871-72; (2) a radical alteration in the system of accounts; and (3) the application of the revision of inland postage rates and conditions, both as respects official and private correspondence, explained in the report for 1872-73. Changes of so extensive and important a character, affecting the work of the department in almost every detail of its various branches, necessarily entail close application both on the part of those charged with the practical execution of the alterations and on the supervising staff. The year under review has thus been one of real hard work throughout the department.

COMMUNICATIONS WITH PLACES ABROAD.

3. A new mail packet service, plying once in four weeks, has been established between Singapore and Brisbane by way of the Torres Straits: the contract was arranged by the Government of Queensland, and all correspondence for that colony, instead of travelling by Point de Galle and Melbourne, is now conveyed by the newly opened route. The rates of postage on all letters for the Australian Colonies were also reduced from 8 annas 8 pie to 6 annas per half ounce, the rule of compulsory prepayment being still retained.

4. The route to countries in Foreign Europe through Italy and France was abandoned and another route substituted *vid* Bombay, per French packet, through the Mediterranean and thence through France; and coupled with this alteration a reduction in the rates of letter postage was effected.

LOCAL STEAM SERVICES.

5. In anticipation of the new contract, the provisions of which were described in my last annual report, the British India Steam Navigation Company consented to establish the two following lines both deemed important for postal ends, *viz.*:—

(1) Direct weekly communication between Calcutta, Rangoon and Moulmein, with effect from October 1873.

(2) Communication twice a week (instead of once a week only) between Bombay and Kurrachee, with effect from June 1873.

6. This last-mentioned line was temporarily discontinued in January 1874, so as to release a steamer required for relief purposes in connection with the famine; and steam communication with Kurrachee for the time being reverted to single trips in the week.

Thus the lines worked under contract with this Company stood on the 31st March last as follows, *viz.*—

(1) Direct weekly communication between Calcutta, Rangoon and Moulmein, with an extension to the Straits once every four weeks: fortnightly communication between Calcutta and Rangoon, *vid* Akyab: fortnightly communication between Calcutta and Akyab *vid* Chittagong.
(2) Communication once a week between Bombay and Kurrachee, with a continuation once a fortnight to the Persian Gulf.
(3) Four-weekly communication between Madras, Rangoon and intermediate ports on the East Coast.
(4) Fortnightly communication between Calcutta, Bombay and intermediate ports on the East and West Coasts.
(5) Monthly communication between Calcutta, Port Blair and Camorta.
(6) Fortnightly communication between Akyab and Kyouk Phyoo, with a four-weekly extension, except in the monsoon, to Sandoway.

7. A yearly subsidy of Rs. 7,25,000 is paid for the maintenance of all these lines except the Port Blair and Camorta line, for which special contract arrangements exist in respect to the transmission of Government stores.

8. Turning now to steam services performed by companies other than the British India Steam Navigation Company, the only change on record is one under which fortnightly communication has been substituted for monthly communication between Moulmein, Tavoy and Mergui, the contract having been given for three years on a subsidy of Rs. 18,000 per annum. I append a list of these additional services, and would explain that the first two are managed by the Chief Commissioner, British Burmah, the third by this department, and the last by Her Majesty's Government, though paid for out of the Indian revenues.

(1) By the Irawaddy Flotilla and Burmese Steam Navigation Company, for weekly communication between Rangoon, Mandalay and intermediate ports, with a monthly extension to Bhamo, the subsidy being Rs. 5,000 per mensem.
(2) By the Burmese Steam Tug Company, for fortnightly communication with Moulmein, Tavoy and Mergui, on a yearly subsidy of Rs. 18,000.
(3) By Jardine, Matheson and Company (of Hong-Kong) and Apcar and Company (of Calcutta), for the conveyance of mails monthly between Calcutta, the Straits and Hong-Kong, the dates of departure being regulated primarily with reference to the Calcutta opium sales (no subsidy).
(4) By the Euphrates and Tigris Steam Navigation Company, for fortnightly communication between Busreh and Bagdad, the subsidy being Rs. 4,000 per mensem.

9. The "Ethiopia," a contract packet belonging to the fleet of the British India Steam Navigation Company, was wrecked on reef, Cape Negrais, in August 1873, during her voyage from Calcutta to Rangoon, and a large portion of the mail on board lost.

EMBOSSED ENVELOPES.

10. One of the gravest evils with which the Indian Post Office has to contend consists in the deep-rooted native habit of using for purposes of the post the flimsiest of paper and of folding it so minutely as to leave no room for the direction: these directions, which generally contain much superfluous matter, are often spread over the whole space available on both sides of the cover, and the confusion is enhanced by the post marks which, for want of space, have to be impressed on the address itself. It was hoped that the enlargement in 1869 of the unit of letter weight from one quarter to one half of a tola would work good; but the measure was not followed by any marked improvement in the description of paper or size of envelope used by the native public. As a remedy therefore envelopes embossed with half-anna and with one-anna stamps were offered for sale at the value of the stamps they bore, no charge being made for the paper. This change commenced from July 1873 and at once became very popular. The demand for embossed envelopes far exceeded the most sanguine estimate, so much so, that in four months the Superintendent of Stamps at Calcutta exhausted a supply which would otherwise have lasted over a quarter of a century. Since then Messrs. De la Rue and Company have been busy in making envelopes for India, and though for many months they have been turning out this class of stationery at the rate of 57 reams a day, the required quantities have not yet been stored in the several local stamp depôts. It is encouraging to find that the demand for these envelopes springs largely from the principal up-country centres of native commerce, a fact which tends to shew that the envelopes are being used by the class for whose benefit this concession was introduced.

REVISION OF RULES FOR SALE, &c., OF POSTAGE STAMPS.

11. Coupled with the above, the rules for the custody, distribution and sale of postage stamp labels were revised, the principal features of change consisting in the abolition of discount previously granted to the public on the larger purchases of postage stamps made from the Treasury, and in the case of Post Masters and other retail vendors, a reduction from one anna in the rupee, or 6¼ per cent., to half an anna in the rupee, or 3⅛ per cent.

LOSS OF POSTAGE STAMPS EX WRECK "DHOOLIA."

12. In September 1873 the "Dhoolia," a canal steamer, was wrecked in the Red Sea near Suez. She had on board several cases containing Indian postage stamps and embossed envelopes bearing a gross representative value of nearly £ 2,000, together with Indian one-anna receipt stamps, aggregating in representative value about £ 5,000. Some of these stamps recovered from the wreck fell into the hands of Arab hawkers who retailed them at largely depreciated rates to Indian passengers and other persons. In communication with Government, the British Consulate Authorities in Egypt were telegraphed to, the Custom House Officers in Bombay authorised to recover at cost price purchases made by the public

and no efforts spared to lessen the effect of the mischief wrought. The extent of loss to which the Indian revenues were subjected by this unfortunate accident can never accurately be learnt, but I do not think that it could have been great. So far as I have been able to learn, none of the receipt stamps have been offered for sale, and of the postage stamps some were so injured by exposure to sea water that they never could have been used, and many were either recovered in Egypt or obtained by the exertions of the Government of Bombay.

NEW POSTAL CIRCLE FOR ASSAM.

13. Experience having shown the Bengal Postal Circle to be so unwieldly in size that its more remote limits were with difficulty supervised from distant Calcutta, the sanction of Government was obtained to the creation of a separate postal jurisdiction for the province of Assam; the adjoining States of Cooch Behar with the districts of Sylhet and Cachar were added to this charge and the whole constituted into a new postal circle under the control of one Chief Inspector. This measure, while providing a superior postal administration for the states thus detached, has relieved the Post Master General of Bengal of an extensive tract of country beyond the reach of his personal control.

REMOVAL OF POST MASTER GENERAL'S HEAD-QUARTERS TO ALLAHABAD.

14. The head-quarters of the Post Master General of the North-Western Provinces were transferred from Agra to Allahabad, the seat of the Government of those provinces.

CAMP POST OFFICES.

15. Postal services were organised in connection with the temporary camps of exercise established at Bangalore, Chinchwud (near Poona) and Roorkee; and this work was discharged to the full satisfaction of the military authorities for whom the arrangements were made. In Madras the Post Master General introduced a novel measure, having for its object the extension of postal facilities to pilgrims. This class assemble in large masses at fairs and holy places in various parts of Southern India, and Major Bourke has arranged for the attendance at such localities of a special agency whose duty it is, not only to collect and deliver correspondence, to provide and sell postage stamps, but also to furnish cheap stationery and writing materials, for which a trifling additional fee is levied sufficient to cover the cost of original outlay. A correspondence was thus created which Major Bourke thinks will soon develop into large proportions.

OVERLAND MONEY ORDER BRANCH.

16. Arrangements were concluded for the extension to Canada of the means of exchanging money orders with India. Under the orders of Government the overland money order business has been transferred from the management of the Post Office to that of the Civil Account Department, to whom the Indian Inland Money Order Offices are subordinate.

SECTION I.—POST OFFICES, LETTER-BOXES, AND RURAL MESSENGERS.

17. A statement shewing the number of post offices and letter-boxes opened during the years 1872-73, 1873-74, and the total number existing at the close of those official years, will be found in Appendix I: the marginal abstract contrasts the newly established postal receptacles of the year under report with those of the preceding year. Bengal and Madras exhibit the largest extensions, those being the only postal circles where the transfer of the district post to the Post Master General's management is still in progress: in Bengal however some of the new post offices were only started as temporary establishments to meet the exigencies of famine operations. On the 31st March last the number of postal receptacles in India stood at 6,805, as compared with 6,305 on the corresponding date of the previous year, giving a net increase of 500. During the year under report 169 rural messengers were newly entertained and 69 dispensed with, the total number of [illegible] under this class retained on the 31st March 1874 being 1,253.

	Opened in 1872-73.	Opened in 1873-74.
Post Offices	200	234
Letter-boxes	300	514
TOTAL ...	500	748

SECTION II.—POSTAL LINES.

18. Appendix II is a statement shewing the distance over which the mails were carried in each circle by the various methods of conveyance during the years 1872-73 and 1873-74: the general results are given in an abstract form on the margin. The increase under the head "railway" and the decrease under "runners and boats" are mainly due to extensions on the Oudh and Rohilcund and the Rajputana State Railways. The large increase under the head "sea" is attributable to extensions of the local steam services under contract with the British India Steam Navigation Company which have already formed the subject of comment.

Year.	Railway.	Mail cart Horse and Camel dak.	Runners and boats.	Sea.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.
1872-73 ...	5,368½	3,915	33,406	6,367	49,056½
1873-74 ...	5,738½	4,003	32,947	11,928	54,616½
Increase ...	370	88	...	5,561	5,560
Decrease ...	...	...	459	...	...

SECTION III.—CORRESPONDENCE.

19. A recent alteration in the method of preparing the statistical returns of the department and in the headings under which this information is classified, has necessarily interfered with the usual detailed contrast of the correspondence in 1873-74 with that of the previous year: the entries in Appendix III have thus been confined to the figures of the year under report. A comparison has however been exhibited on the margin in an abstract form. The most striking features are (1) the unusually large expansion of letters and (2) the fall under the head of books and patterns (now called packets), a class of correspondence which for many years has been steadily augmenting. Although the increase in the estimated number of letters received for delivery is largely attributable to natural growth of correspondence, it can also to a great extent be explained by the operation of the new official correspondence rules which practically caused the transmission by letter post of all service covers not exceeding ten tolas in weight and their consequent transfer from the head of banghy post to that of letter post. The decline in the number of packets is entirely due to this cause. Notwithstanding the accession of overland parcels and the reduction in the rate of charge on inland parcels, the number of parcels transmitted through the post still continues, as in past years, to fall. Signs of a reaction are however already apparent, and I think it probable that the next annual report will shew a substantial expansion in this class of business.

Year.	Letters.	Newspapers.	Parcels.	Books, patterns and packets.	Total.
1872-73	83,127,099	7,928,092	653,401	1,448,723	93,157,314
1873-74	98,531,628	8,762,200	605,312	1,336,363	109,235,503
Increase ...	15,404,530	834,108	...	...	16,078,189
Decrease ...	...	...	48,089	112,360	...
Increase percentage ...	18·5	1·05	...	...	17·2
Decrease percentage ...	...	...	7·3	7·7	...

20. Last year I alluded to the commencement with effect from the 1st March 1874 of the *overland parcel post*, a system under which parcels can be exchanged between Great Britain and India through the agency of the Peninsular and Oriental Steam Navigation Company on the one side and the Indian Post Office on the other. The British Post Office have no concern with the arrangement. The extent of business done during the year under review is shewn on the margin. The number of parcels received by each mail have averaged 256 against 165 despatched, India having thus sent about two parcels for every three received. The revenue derived by the Indian Post Office from this source has averaged Rs. 3,609 per mensem.

	Total number of parcels despatched in the year.	Average weight of each parcel.	Net revenue derived by the Indian Post Office after deduction of Customs duty, and sums due to the P. and O. Company.
		lbs. oz.	Rs. A. P.
To India ...	13,334	5 8·8	32,946 7 4
From India ..	8,589	2 5·8	10,366 13 0
Total ...	21,923	7 14·6	43,313 4 4

21. A more detailed analysis of the letter returns is given on the margin, and it is satisfactory to find that the ratio of increase of paid letters is greater than that of unpaid: this view will further be confirmed by the appendices which yet remain to be dealt with. It will be found that the sales of ordinary postage stamps have increased in value by 4·27 per cent., while the cash collections have only progressed to the extent of 1·02 per cent.

	Paid and service.	Unpaid.	Registered.	Total.
1872-73 ...	53,060,653	29,205,298	1,841,152	83,127,098
1873-74 ...	66,327,551	29,963,356	2,230,819	98,531,628

Increase percentage ...	27·8	2·5	21·1	18·5

22. On the 31st March 1873, the number of registered newspapers existing in India amounted to 478: during the year under review 131 fresh papers were registered, 59 discontinued, and eight publications included in last years list have been omitted this year as not being newspapers, thus leaving on the 31st March 1874 a net total of 542, the distribution of which among the several postal circles is given below, *viz.*:—

Postal Circle.	English.		Vernacular.		English and Vernacular.		Total.	
	On 31st March 1873.	On 31st March 1874.	On 31st March 1873.	On 31st March 1874.	On 31st March 1873.	On 31st March 1874.	On 31st March 1873.	On 31st March 1874.

23. The correspondence received was disposed of as detailed in the following abstract:—

Given to post office peons or delivered from the window ...	85,230,483
Sent for delivery to branch post offices	17,065,864
Ditto ditto the district post	3,651,176
Given for delivery to rural messengers	3,287,980
Total ...	109,235,503

24. The following statement shews the estimated number of letters and newspapers sent to and received from the United Kingdom both by the Southampton and Brindisi routes: it includes not merely correspondence with England itself, but also transit correspondence, *i. e.*, the correspondence between India and other countries the route for which lies through England:—

	Detail of correspondence with the United Kingdom.		
	Route.	Estimated aggregate number of letters.	Estimated aggregate number of newspapers.
Despatched from India to the United Kingdom ...	*Vid* Southampton	508,240	78,868
	Vid Brindisi ...	1,495,176	295,740
Received in India from the United Kingdom ...	*Vid* Southampton	419,634	508,292
	Vid Brindisi ...	1,196,082	1,102,120
Total ...	1873-74 ...	3,619,132	1,985,020
	1872-73 ...	3,458,056	1,974,830

As compared with the previous year, there has been an increase of letters to the extent of 3·1 per cent., together with a small increase of half per cent. under the head of newspapers. Great Britain sent 69 per cent. of its Indian letters and newspapers *vid* Brindisi, while India forwarded three-fourths of these classes of correspondence by that route.

		Sent and received in India.
By British packet.	Letters exchanged *vid* Italy	115,110
	Letters exchanged *vid* France	76,162
	Letters exchanged *vid* Trieste	19,604
	Letters exchanged with Gibraltar, Malta, and Ports east of Suez	365,517
Letters exchanged by French packets of the Indo-China Line		12,896
Total ...		589,289

25. An abstract is given on the margin containing the total number of letters during the year under report which travelled by each of the main routes employed in exchanging foreign mails with India. The ports described as "east of Suez" include Ceylon, Penang, Singapore, Hong-Kong, Japan, Shanghai, Australia, New-Zealand, and other places in the East.

26. A statement shewing the sales of the various classes of postage stamps will be found in Appendix V, from which the following comparative abstract has been compiled, *viz.*:—

	8-pie labels.	½-anna labels.	1-anna labels.	2-anna labels.	4-anna labels.	8-anna labels.	½-anna envelopes.	1-anna envelopes.
	Decrease per cent.	Increase per cent.	Decrease per cent.	Decrease per cent.	Increase per cent.	Increase per cent.	Decrease per cent.	Decrease per cent.
1871-72 as compared with 1870-71 ...	14·21	13·58	19·64	6·92	2·78	14·35	11·59	35·26
1872-73 as compared with 1871-72 ...	17·78 Increase.	12·66	24·33	3·07	0·22	5·34	7·04 Increase.	20·[illegible] Increase.
1873-74 as compared with 1872-73 ...	2·65	1·21	0·67	2·05	2·74	5·75	3·20	[illegible]

The gross value of stamps sold in 1873-74 has increased by 4·27 per cent. as compared with a corresponding increase of 2·82 per cent. in the previous year. I have already explained the cause of the enormous sales of embossed envelopes, and it is a noteworthy fact that, notwithstanding these sales, the disposal of half-anna labels still exhibits some advancement.

27. Appendix VI contains the sales of service postage stamps which have fallen from Rs. 10,63,847 in 1872-73 to Rs. 10,54,294 in 1873-74. This loss is explained by the operation of the new official correspondence rules, a subject which will, in its financial aspect, be treated at greater length hereafter.

28. Dead letter offices exist at Calcutta, Madras, Bombay, Agra, Lahore, Nagpur, Kurrachee, and Lucknow. Owing to change of system and alteration in the method of classifying the statistical returns, introduced with effect from the 1st April 1873, the results in this branch cannot be properly contrasted with the returns of previous years. The former classification, in many respects faulty, has now been improved, but this reform, as already stated,

renders any fair comparison of results quite impossible. Appendix No. IV has therefore been confined to the figures of the year under report: the general results are given in the following abstract, *viz.* :—

	Number.	Percentage.
Covers received in the several dead letter offices during the year 1873-74 ...	2,472,216	
Covers transferred by one dead letter office to another ...	459,308	
Balance ...	2,012,908	
Disposed of by redirection to addressees and by issue for return to senders ...	977,459	48·56
Deduct covers returned to the dead letter office as undeliverable ...	103,304	10·56
Balance actually disposed of ...	874,155	43·42
Undisposable ...	1,035,449	51·44

29. After the money spent and pains bestowed on this branch of postal work, it is the reverse of encouraging to find that more than half of the covers which reach the dead letter office have to be destroyed. In India, however, the difficulties which beset dead letter office work are exceedingly great, if not almost insurmountable. Not only have we a European population constantly on the move, but an enormous native population speaking many languages, writing divers characters and for the most part ill-educated. Many native letters bear no signature at all, others are only initialled: the town of origin is frequently omitted, and the more detailed particulars of the writer's address are but rarely given. The similarity of native names is another serious obstacle to the disposal of a dead cover. For instance the name "Chuni Lall," written in Shikast Urdu, might also be read as "Jhunee Lall" or as "Jainee Lall," as "Jaintee Lall" or as "Jaithee Lall." Again the attempt to trace a "Verasamy" in Bangalore or a "Mahomed Bux" in Delhi would be almost a hopeless task. Add to this that India does not, like European countries, possess a post office directory or other similar work of reference by which the addresses of the bulk of the native population can be learnt, and some notion may be formed of the difficulties with which the dead letter office in this country has to contend. Yet this work is of such moment to the public that neither expense nor trouble ought to be spared towards its proper performance: these are the views which I have endeavoured to impress on those charged with the working of the department, but it is right that the Government should know how hard it is to obtain the desired efficiency.

SECTION IV.—DISTRICT POST.

30. As explained in previous reports, the district post consists of lines of communication connecting the head-quarters of each district with the revenue and police stations in the interior and is maintained principally for the conveyance of official correspondence. In Bombay, the North-Western Provinces, the Punjab, the Central Provinces and Oude, it is worked entirely by officers of this department, acting under the orders of the local Government. In Madras and Bengal the management is gradually being transferred to the Post Master General. During the year under report a great deal of attention has been bestowed on the district post by the Post Master General of Madras, where rural delivery arrangements are extremely backward: the management of four additional districts has been taken over, a personal visit has been made by Major Bourke to each district under his control, and in communication with the local officials a thorough re-organisation has in each instance been effected. Credit is due to Major Bourke for the labor bestowed on this important branch of postal work. The Post Master General of Madras now manages the district dâk in ten districts out of a total of twenty-one. In Bengal the zemindari dâk of three more districts has during the year passed into the hands of the Post Master General, who now controls this branch of the post office in 30 out of 42 districts.

31. The general results of district post operations, so far as concerns correspondence sent to or received from the imperial post, are given in Appendix VII, from which the following abstract has been prepared, *viz.* :—

Letters and Newspapers.	Number.	Percentage.
Sent to district post for delivery	3,803,869	Being 3·54 per cent. of the total number of covers received for delivery.
Portion of the above received back ...	321,484	Being 8·45 per cent. on the number sent to district post.
Received from district post	2,905,877	Being 2·70 per cent. on the total number received by the General Post Office for delivery.

The proportion of covers received back undelivered continues to improve.

SECTION V.—MISCELLANEOUS.

32. I give below the receipts and charges of the *pro formâ* account kept under the new rules introduced with effect from the 1st April 1873, for taking security from post office servants. Out of some 9,500 subscribers there have been but five defaulters: and the sums decreed against a subscription income amounting to Rs 19,334 have aggregated only Rs. 302-5-3. Should the fund continue thus to prosper, a reduction in the rate of subscription for non-pensionable grades will soon have to be made, but the experience of one year only would not warrant an immediate change:—

Receipts.	Number of employees.		Amount of subscription.			Charges.	
	First half-year.	Second half-year.	First half-year.	Second half-year.	Total.		
A.—Pensionable.			Rs. A. P.	Rs. A. P.	Rs. A. P.		Rs. A. P.
Imperial ...	4,659	4,772	4,659 0 0	4,772 0 0	9,431 0 0	Sums decreed against the fund	302 5 3
District ...	192	175	192 0 0	175 0 0	367 0 0	Establishment ...	1,746 0 0
Total ...	4,851	4,947	4,851 0 0	4,947 0 0	9,798 0 0	Total ...	2,048 5 3
B.—Non-Pensionable.						Balance at credit	17,285 10 9

District ...	2,313	2,198	1,156 8 0	1,099 0 0	2,255 8 0		
Total ...	9,584	9,488	4,792 0 0	4,744 0 0	9,536 0 0		
Grand Total ...	14,435	14,435	9,643 0 0	9,691 0 0	19,334 0 0	Grand Total ...	19,334 0 0

33. Under the head of complaints from the public the principal point for remark consists in an increase from 989 to 1,318 in the number of well-grounded complaints against the department; this increase has for the most part occurred in the mofussil of Madras and Bengal, those being the two postal circles in which postal expansion has mainly taken place. As the department extends, irregularities will occur, and the encouragement of complaints from the public, by courteous notice and prompt attention, is an important duty on the part of the supervising officers of the post office. An increase in the number of such complaints is not to my mind a bad sign, the more so when, as in the year under notice, they have originated in those very localities where new post offices were called into existence.

Postal Circles.	1872-73.			1873-74.		
	British Territory.	Foreign Territory.	Total.	British Territory.	Foreign Territory.	Total.
Bengal	2	0	2	5	1	6

Rajputana	1	3	4	0	2	2
Total ...	13	12	25	21	11	32

34. The number of highway robberies of the mail, which last year fell from 36 to 25, has, as will be seen from the marginal abstract, again risen in the year under review to 32, the increase being restricted to British territory. Twelve of these cases were punished by convictions; the mails were wholly recovered on fourteen occasions, and partially recovered nine times.

The following statement indicates the localities in which the robberies took place, *viz.* :—

Names of Postal Circles.	British Territory.			Foreign Territory.

Total ...	25,220	25,846

35. There are 25,362 persons permanently employed in the post office: the marginal abstract includes all those of a grade below that of Post Master General.

SECTION VI.—NON-POSTAL BRANCHES OF THE DEPARTMENT.

36. Four Bullock Train Offices have been closed during the year under report, thus reducing the total number from 52 to 48. The lines remain the same as those mentioned last year, *viz.*:—

A main line from Calcutta to Peshawar with branches to Jubbulpore, Futtehgurh, Gwalior, Landour, Simla, Ferozepore, Bhawalpur (through Mooltan), Sialkot, and Murree.

37. No alteration has been made in the Punjab Military Van Dâk, the lines of which remain as before, *viz.*:—

Meean Meer to Peshawar.
Wazeerabad to Sialkot.
Rawal Pindi to Murree (during the summer months only).
Umritsur to Pathankote (during the summer months only).

38. Owing to railway extension the passenger service ceased to work between Khandwa and Mortucca; travellers are however still conveyed by the post office between Indore and Mortucca; they are also conveyed between Umballa and Kalka on the Simla line, Caragola and Silligoree on the Darjeeling line, Moradabad and Kaladoongee on the Naini Tal line, and between Mooltan and Bhawalpur.

SECTION VII.—FINANCIAL RESULTS.

39. The new rules for the treatment of official correspondence, which came into force on the 1st April 1873, comprised two principal features of change, *viz.*, (1) an extensive

reduction in the letter post rates, and (2) a total abolition of franking, the secretariat and large military offices who previously enjoyed this privilege being required to prepay their covers by means of service stamps. Thus the correspondence of the largest offices in the country, which under the recent system were never charged at all, now appear again in the accounts, and the revenue thus obtained has proved nearly sufficient to counterbalance the large reduction in the rates of letter postage explained in the report for last year. Instead therefore of the enormous fall in official postage which otherwise would have resulted, a loss of only Rs. 9,792 has to be reported.

40. I will now deal with the revenue derived from private correspondence which exhibits an increase of Rs. 72,102. In truth, however, the improvement is nearly double that amount. For under the new system of accounts commencing from the 1st April 1873, transfer entries were discontinued, actual receipts and payments alone being dealt with: thus items composing fines and savings, instead of being shewn as assets, have, during the year under report, been deducted from the bills and never appeared at all in the account. Had the former system of account prevailed, the decrease of Rs. 20,000 now observable under the head miscellaneous would not have been found. For a proper comparison therefore the income of last year should be reduced to the extent of Rs. 20,000. Again, the postage credited by the British Post Office shews a decrease of no less than Rs. 50,468. It should, however, be explained that the entries under the head of steam postage relate no longer to amounts due by the London Post Office, but are confined to accounts that have actually been adjusted, the object of the change being to bring the accounts of the post office in harmony with the figures produced by the Comptroller General. Therefore, for the purposes of comparison, the amount due by the London Post Office in the year 1873-74 (Rs. 2,28,298) should be compared with the corresponding item of the previous year (Rs. 2,44,747), and the receipts of the year under report will thus be enhanced by about Rs. 50,000. If this addition be made and the income of the year 1872-73 diminished by Rs. 20,000, as explained above, the net improvement in the revenue derived from private correspondence will be, not Rs. 72,102 only but Rs. 1,42,000.

41. Turning now to expenditure it will be seen that the charges of the department have increased to the extent of Rs. 1,88,562. More than half a lakh of this increase was caused by ordinary departmental extension, nearly half a lakh was spent in revising the dead letter offices and other large establishments, while the remainder consists for the most part of contingent expenses. This was to be expected: indeed had not much of the work required been postponed to the following year, the contingent expenditure would have been far greater. With the year under review came into operation a radical revision of the entire system of post office work, requiring the printing of new sets of books and forms, the cutting of fresh stamps and seals, and the introduction of improved mail bags. An extensive measure of this kind requiring the re-equipment of more than 3,000 offices in an enormous department must cost money, and the fact that this is the first general revision of the kind attempted since the reduction of postage in the year 1854, is a sufficient explanation of the need for such an expenditure.

42. The following abstract exhibits the financial results in an abstract form, *viz.*:—

Review of financial results.

	1872-73. Rs. A. P.	1873-74. Rs. A. P.
Purely Postal Service.		
Receipts including sale of service postage stamps ...	55,16,110 7 4	55,78,658 5 2

* Purely Bullock Train ... ... 7,16,198 6 4 / 6,25,513 0 6
Road Steamer charges debited to Bullock Train ... 40,867 15 4 / 51,143 7 3
Postal ditto ditto ditto ... 25,503 13 8 / 1,362 3 7
Camp of exercise ditto ditto ... 836 4 1
Total ... 7,83,406 7 5 / 6,78,017 11 4

† Note.—The "Passenger Service on Mail Cart lines" shows neither loss nor gain, the fact being, as explained in previous reports, that it is impossible to divide the expenses into those incurred for passengers and those incurred for the mails; and that the passenger receipts are consequently treated as a set off against the cost of the mail service, only the net cost being debited to the Postal Department, and the remainder with the corresponding receipts being shown under the head of Non-Postal Branches.

Briefly stated, these results shew—

	Rs.	
(1).—A net revenue in the purely Postal Department of ...	1,57,406	If sale of service postage stamps be included.
(2).—A net deficit in the purely Postal Department of ...	8,96,887	If the sale of service postage stamps be excluded.
(3).—A net surplus in the Bullock Train Department of ...	84,501	Including charges not purely Bullock Train.
(4).—A net surplus in the Punjab Military Van Dâk of ...	40,935	

43. The non-postal branches of the department have worked very well indeed. What is called the Bullock Train has yielded a monthly profit of more than Rs. 7,000 and the Punjab Military Van Dâk has been earning on the average about Rs. 3,400 per mensem.

44. As respects contract subsidies to local steamers, it should be explained that the increase is only nominal, as the disbursements include arrear payments due for the latter months of the previous year.

	Rs.
Railway free service (estimated value)	2,00,000
English stores (estimate)	31,325
Value of service rendered to the post office by the Government press	57,716
Rent of Government buildings occupied by post office (estimate)	1,74,041
TOTAL ...	4,63,082

45. According to custom I give on the margin in an abstract form certain items which are not included in the regular accounts.

SECTION VIII.—GENERAL REVIEW OF PROGRESS SINCE 1854.

Progress of correspondence since 1854.†

Number of letters and newspapers received for delivery in the year under report, as compared with the numbers received in the year prior to the introduction of the Post Office Act of 1854.

A year before the Act XVII of 1854 came into operation	19,082,676 = 100
1869-70	83,032,957 = 435
1870-71	83,868,397 = 439
1871-72	87,476,768 = 458
1872-73	91,055,190 = 477
1873-74	107,293,828 = 509

46. Appendix XII shews the number of letters and newspapers received for delivery year by year since the introduction of the Post Office Act of 1854: it has been abstracted on the margin.

47. Appendix XIII represents the growth of purely postal revenue since the year 1853-54: the abstract on the margin indicates the progress of income derived from private correspondence, that of 1855-56 (the first complete year after the reduction of postage rates in 1854) being represented by 100 and the revenue of the last seven years in like proportion. The fall in 1870-71 is due to the payment in that year of a large arrear adjustment with the British Post Office.

Year.	Per-centage.
1853-54, last complete year of former rates ...	128
1855-56, first complete year	100
1867-68, thirteenth ditto	237
1868-69, fourteenth ditto	258
1869-70, fifteenth ditto	246
1870-71, sixteenth ditto	235
1871-72, seventeenth ditto	272
1872-73, eighteenth ditto	279
1873-74, nineteenth ditto	284

SECTION IX.—NOTICES OF POST OFFICE OFFICIALS.

48. For about three months in the year the post office was administered by Lieutenant Colonel G. M. Battye: during the remainder of the year I officiated as Director General of the Post Office.

49. My thanks are due to many officers of the department, and specially to those in charge of postal circles for their cordial and efficient co-operation. I would particularly mention Mr. C. W. Hutchinson, Post Master General of the North-Western Provinces, for pains bestowed in elaborating a system of test letters, the description of which will fall for notice in next year's report, and Major the Hon'ble E. R. Bourke, Post Master General of Madras, for industry and patient attention to detail in connection with district dâk operations. The names of the following officers have also been brought prominently to my notice by the several Post Masters General and Chief Inspectors, *viz.*, Mr. Alpin and Baboo Durga Narayan Banerjee in Bengal; Messrs. Kistnama Charloo and Combes in Madras; Messrs. Stuart and Hynes in Bombay; Rai Salig Ram Bahadoor and Mr. Goss in the North-Western Provinces; Messrs. Faichnie, Sullen and Le Breton in the Punjab—Mr. Sullen specially distinguished himself in bringing to justice the perpetrator of a daring parcel robbery; Lalla Gunput Lall in Oudh; Lalla Mithun Lall in the Travelling Post Office.

50. In conclusion, I would advert briefly to the death in November 1873 of Rai Dina Bandhu Mitter, Bahadoor, Inspector in Bengal. During a connection with the department of some eighteen years, this valuable officer won the confidence of his superiors and commanded the esteem of those with whom he was brought into official contact.

APPENDIX No. I.

Statement showing the number of Post Offices and Letter Boxes which were opened during the years 1872-73 *and* 1873-74, *and the total number that stood at the end of those official years.*

(a).—Including sale of Service Postage Stamps.
(b).—The apparent reduction is to a large extent nominal, owing to the introduction of a new system of accounting for official postage, under which a portion of the official correspondence between Government officers in the same district is not brought to account.
(c).—These amounts are less by Rs. 1,38,239-13-3 than they would have been under the former mode of calculation, owing to the deduction for the first time in 1869-70 of the discount on sale of stamps.
(d).—Exclusive of Rs. 1,45,639-14-7, being the discount on sale of stamps.
(e).—Exclusive of Rs. 1,46,164-2-1, being the discount on sale of stamps.
(f).—Including Rs. 5,411, on account of Indian share of postage on covers conveyed by Indian post to and from Ceylon.
(g).—Excluding the sum of Rs. 28,378-2-0, an erroneous excess credit on account of official postage in the year 1871-72.
(h).—Only nine months' receipts of service stamps.
(i).—Including Rs. 4,464-4-6, on account of Indian share of postage on covers conveyed by Indian Post to and from Ceylon.

No. 5686, dated Calcutta, the 22nd December 1874.

From—F. R. Hogg, Esq., *Officiating Director General of the Post Office of India,*

To—*The Secretary to the Government of India,* Financial Dept.

Referring to the "Observations," No. 913, dated 4th February 1874, made by the Government of India on paragraph 39 of my annual report, I have the honor to submit for the information of Government a list of Newspapers registered in India at the Offices of the several Post Masters General and Chief Inspectors as they stood on the 31st March 1874.

List of Newspapers registered in India at the Offices of the several Post Masters General and Chief Inspectors, in existence on 31*st March* 1874.

CALCUTTA,
The 22nd December 1874.

E. R. DOUGLAS,
for *Offg. Dir. Genl. of the Post Office of India.*

No. 1253, dated Fort William, the 23rd February 1875.

REVIEW.—By the Government of India, FINANCIAL DEPARTMENT.

Read the Annual Report of the Director General of the Post Office of India on the operations of the Department during the year 1873-74.

Review.—There were few changes of importance in the administration of the Post Office in 1873-74. The history of the year is rather one of consolidation, and of carrying out changes already introduced.

The new contract with the British Indian Steam Navigation Company is now in full operation, though, owing to the many points of detail requiring arrangement, it has not yet been actually signed. The Company rendered timely and valuable aid to the Government in the conveyance from Burmah of the large supplies of rice imported for the relief of the famine-threatened people of North Bengal. The semi-weekly communication between Bombay and Kurrachee having been resumed, the Government of Bombay should again be addressed with a view to the abolition of the costly land line between Bombay and Sindh. Of the yearly sum of Rs. 7,25,000 paid to the British

Indian Steam Navigation Company, Rs. 12,996 is recovered from the Government of the Straits Settlements, and should be shown as a set-off in favor of India.

Para. 10.—The success of the measure devised for introducing the use of embossed envelopes is satisfactory. It is hoped that the necessary stores of these envelopes will soon be complete throughout the country.

The Government of India does not doubt that the sacrifice of revenue involved in the sale of these envelopes free of cost will be amply compensated by the convenience of manipulation which they afford to the postal administration. Moreover, the sacrifice is probably covered by the discount to private purchases of labels, which has been withdrawn.

Para. 15.—Major Bourke deserves credit for his experiment of a "field post" to attend upon large gatherings of the people in South India. The experiment might be tried in other Provinces where there may be large fairs or gatherings of the people.

Para. 17.—The number of post offices increased during the year (by 172) from 3,006 to 3,178, and the number of letter boxes (by 328) from 3,299 to 3,627. It would seem that the returns of these receptacles as shown in the appendices to the report for 1872-73 were wrong. The Director General will be good enough to add in future a column to Appendix No. XIII, showing the number of post offices and letter boxes open at the end of each year since 1854-55; or if that would involve much labor, then for as many years as is convenient.

Para. 18.—*Postal lines.*—Here, again, the statistics of 1872-73 now given differ from those in last report: such differences should always be explained. According to the present report, the gross mail distance has increased during the year by 5,560 miles, chiefly through the extension of the operations of the British Indian Steam Navigation mail contract vessels. An abstract in yearly totals for all India, similar to that called for in respect to postal receptacles, would be interesting, and should in future be added in Appendix XIII.

Para. 19.—Appendix III should in future be prepared so as to show separately, as heretofore, the totals of letters, newspapers, parcels and packets. The growth of the letters from 83,127,098 to 98,531,628, or by 15,404,530 (18·5 per cent.), is remarkable. A part of this increase is no doubt due to extension of the operations of the department over the district post, and to the rules for official correspondence having transferred a large number of packets to the letter post. Still, giving every credit to the operation of these causes, the figures in this paragraph are encouraging.

Para. 20.—The overland parcel post has worked well, and will probably develop into a considerable business.

Para. 21.—There is a large increase of registered letters, from 1,841,152 to 2,230,819 (21·1 per cent). The registration fees are believed to cover all costs of this branch of the administration; and as the increase of registered letters is probably due to the increased use of the post office for the transmission of valuables, it need not be regretted.

Para. 22.—The list of newspapers registered in each province for transmission by post, which was ordered in the review of the last report, will be separately published. The increase in the number of such newspapers, from 430 in 1871-72 to 478 in 1872-73 and 542 in 1873-74, deserves notice.

Para. 23.—The figures here given, to show how the correspondence was disposed of, cannot be compared with those of previous years, and do not show the dead letters. From paragraph 28, however, it seems that the number of covers sent to the dead letter office was 2,012,908, though it is not clear whether this includes the balance undisposed of at the end of 1872-73 or not. Assuming that it does not, it would seem that of the whole number of covers received (109,235,503), only 2,012,908—977,459 (delivered or returned to senders from the dead letter office), or 1,035,449, were not disposed of by delivery or return to senders. This is only one cover in 105, a proportion which speaks fairly for the efficiency of the post office. The operations of the dead letter office are certainly not successful, but the Governor General in Council is fully aware of the special difficulties as described by the Post Master General that have in this country to be contended with.

Para. 24.—The excess of letters sent to Europe (2,003,416) by the contract mail steamers over those received from Europe (1,615,716) continues. The letters by this route have increased from 3,458,056 to 3,619,132 (3·1 per cent.), and the newspapers from 1,974,830 to 1,985,020.

Para. 26.—The sale of postage labels has increased as follows:—

	Rs.
1871-72	30,40,791
1872-73	31,26,699
1873-74	32,60,301

The increase of Rs. 1,33,602 (4·27 per cent.) this year is satisfactory.

The statistics of the sale of service labels in Appendix VI suggest some differences of practice in the different provinces. The official correspondence of the Bombay Presidency can hardly be so nearly equal to that of the Lower Provinces of Bengal as to cost Rs. 1,98,799 as compared with Rs. 2,19,399, and Burmah ought surely to pay more than Rs. 10,015 a year for postage on its official correspondence.

Para. 30.—The management of the district post by the imperial department continues to be successful. The exertions in this department of Major Bourke, Post Master General of Madras, are commendable.

The working of the district post should be brought out in the annual report in greater detail. The district post has a special importance as being the branch of the department which most closely affects the agricultural population. There is nothing in the report or statements to show how it has advanced when compared with previous years, nor to exhibit its comparative efficiency and progress under the several Governments and Administrations. The number of newspapers is greatest, and the proportion of registered and paid letters is far better in Madras than elsewhere, through the exertions of Major Bourke. The use of the district post in that Presidency and in Bombay and North-Western Provinces is much more extensive, compared with the population, than in Bengal, and the Punjab also is backward. The subject should receive special attention in future reports. The extension of the system, the agency for distribution in the villages and for supervision and inspection, the number of receiving and distributing offices, the opening of new ones and the transfer of district post offices to the imperial post, the aid afforded by Government, and the general financial arrangements—are all topics which, from time to time, and as occasion offers, might advantageously be touched upon.

Para. 32.—It seems that Rs. 19,334 was deducted from the allowances of the officers of the department on account of the mutual guarantee fund, of which sum Rs. 1,746 was spent on the establishment necessary to manage the business, and only Rs. 302 decreed against defaulters. The deduction from the allowances of each official is trifling—a good deal less than he would, with interest at savings' bank rates, have to pay to a guarantee company; and, as the whole balance of the fund will be distributed to the contributors as they retire, there seems no occasion to reduce subscriptions at present. The *pro formâ* account of this fund should be brought forward year by year, with interest at the current savings' bank rate: any sum paid to subscribers on retirement being shown among the charges.

Para. 39.—The receipts from official postage have decreased (by Rs. 9,792) from Rs. 10,63,848 to Rs. 10,54,056—a large decrease caused by the introduction of rates especially adapted to official correspondence having been almost counterbalanced by the final abolition of franking. Postage is now paid upon all official covers, and as no complaints have been made during the year by the officers who formerly enjoyed the privilege of sending covers upon Her Majesty's Service without the actual payment of postage, it may be assumed that no very great inconvenience has been felt. This wholesome reform has thus been satisfactorily accomplished.

Paras. 40—44. The receipts of the post office from non-official sources, and not including the bullock train and military van dâk, have increased by Rs. 72,102. The Director General explains that the real improvement is nearly double this sum. The charges have increased by Rs. 1,88,562, of which about Rs. 50,000 are attributed to the ordinary extension of the department, another Rs. 50,000 to the revision of the dead letter offices and other large offices, and

the rest to heavy contingent expenditure incurred in improving the system of work in the department. The expenditure in 1873-74 has certainly been large. The Governor General in Council looks to the Director General to enforce the saving of public money wherever it may be found possible. In a department which involves the administration of so great a mass of details, the Government is peculiarly dependent upon the heads of the department for watchful economy. The authorities of the post office have deserved the entire confidence of the Government in this respect, but continued vigilance must be exercised so that this important department shall be administered at the smallest possible cost consistent with thorough efficiency.

Including the bullock train and van dâk, the service of the post office was conducted at a net cost of Rs. 7,71,451, or, if credit be given for the charge for official postage, then the department yielded, so far, a net revenue of Rs. 2,82,843.

But these figures neither include the indirect, but real, charges given in the margin of paragraph 45 (Rs. 4,63,082), nor any charge for pension and leave allowances, say Rs. 5,00,000, nor any part of the subsidies to the mail contract steamers, as follows:—

	Rs.
British Indian Steam Navigation Company (net)	7,12,000
Irrawaddy Flotilla	60,000
Burmah Steam Tug Company	18,000
Euphrates and Tigris Steam Navigation Company ...	48,000
	8,38,000

It is not easy to say what share of these contracts may properly be debited to the post office. But probably Rs. 5,00,000 would not be too much.

If so, the post office administration costs the State, in 1873-74, net as follows:—

	Rs.
If credit be taken for official postage	11,80,239
If credit be not taken for official postage	22,34,533

There is no doubt that, whether credit be taken for official postage or not, the department is as yet very far from yielding a net revenue to the State.

Para. 47.—The Director General of the post office has already been requested to add in Appendix XIII columns showing the number of post offices and letter boxes open at the close of each year, and also the distance over which the mails travelled. It would be interesting to show the post offices and letter boxes separately, and also to distinguish the distances covered by each kind of conveyance. The Governor General in Council directs that the following columns be also added in this table:—

(1). Covers received for delivery—
- (*a*).—Letters.
- (*b*).—Newspapers.
- (*c*).—Parcels.
- (*d*)—Packets.
- (*e*).—Total.

(2). Finally undelivered, after passing through the dead letter office—
- (*a*).—Number.
- (*b*).—Percentage on total in column *e* above (one in 000).

(3). Received as postage—
- (*a*).—For labels, envelopes, &c.,—
  - (1) from the public,
  - (2) for official postage.
- (*b*).—For cash on bearing letters, &c.
  - (1) from the public,
  - (2) from official postage.

Fractions of a rupee may, in future, be omitted in this table, and in all the tables appended to the report.

Para. 49.—The Governor General in Council is glad to receive the testimony of the Director General to the good services of the following officers:—

Mr. C. W. Hutchinson.
Major the Hon'ble E. R. Bourke.
Mr. Alpin.
Baboo Durga Narain Banarjyá.
Mr. Kistnama Charloo.
„ Combes.
„ Stuart.
„ Hynes.
Rai Saligram Bahadur.
Mr. Goss.
„ Faichnie.
„ Sullen.
„ Le Breton.
Lalla Gunput Lall.
Lalla Mithun Lall.

His Excellency in Council is pleased to acknowledge the efficiency with which the department has been administered by the Officiating Director General, Mr. F. R. Hogg.

ORDERED, that these observations be communicated to the Director General of the Post Office of India, and that the report, with the observations upon it, be forwarded to the Home Department for publication in the Supplement to the *Gazette of India*.

(*k*) Total receipts from 9th October to 26th December 1874.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

MANUFACTURE OF IRON IN INDIA.

The following papers relating to the manufacture of iron in India are published for general information, in continuation of the papers on the same subject published in the Supplement to the *Gazette of India* of 22nd August and 28th November 1874:—

No. 8266, dated 19th December 1874.

From—The Secretary to the Chief Commissioner of the Central Provinces,
To—The Secretary to the Government of India, Public Works Department.

Bunder Coal Fields.

I have the honor, by desire of the Chief Commissioner, to forward herewith the following further information gathered up to date regarding the Bunder Coal Fields.

2. The accompanying plan shows the position of the original bore holes, A, B, C, D, E, F, which pertained to the small field of 100 acres first proved (as shown colored red), the position of the bore hole G, since put down, particulars of which accompany, and the position of another hole H, commenced about the 16th instant.

The plan also gives the respective levels of the ground at the sites of the several bore holes.

3. Bore hole G is situated near 5,000 feet from the centre of the first field proved, and from the results of the bore hole it will be seen that the coal extends over a very large area of ground.

4. A section of bore hole G accompanies, showing the following beds of coal: at 130 feet a 2-feet bed, at 190 feet a 6-feet bed, at 239 feet a 9-feet bed, and at 271 feet a 7-feet bed.

5. The results of bore hole H will be communicated as soon as known.

6. A comparison of the levels of ground at the sites of bore holes D, E, F with the depth at which coal was struck, shows that the coal lies almost at a dead level, and is therefore capable of most economical working.

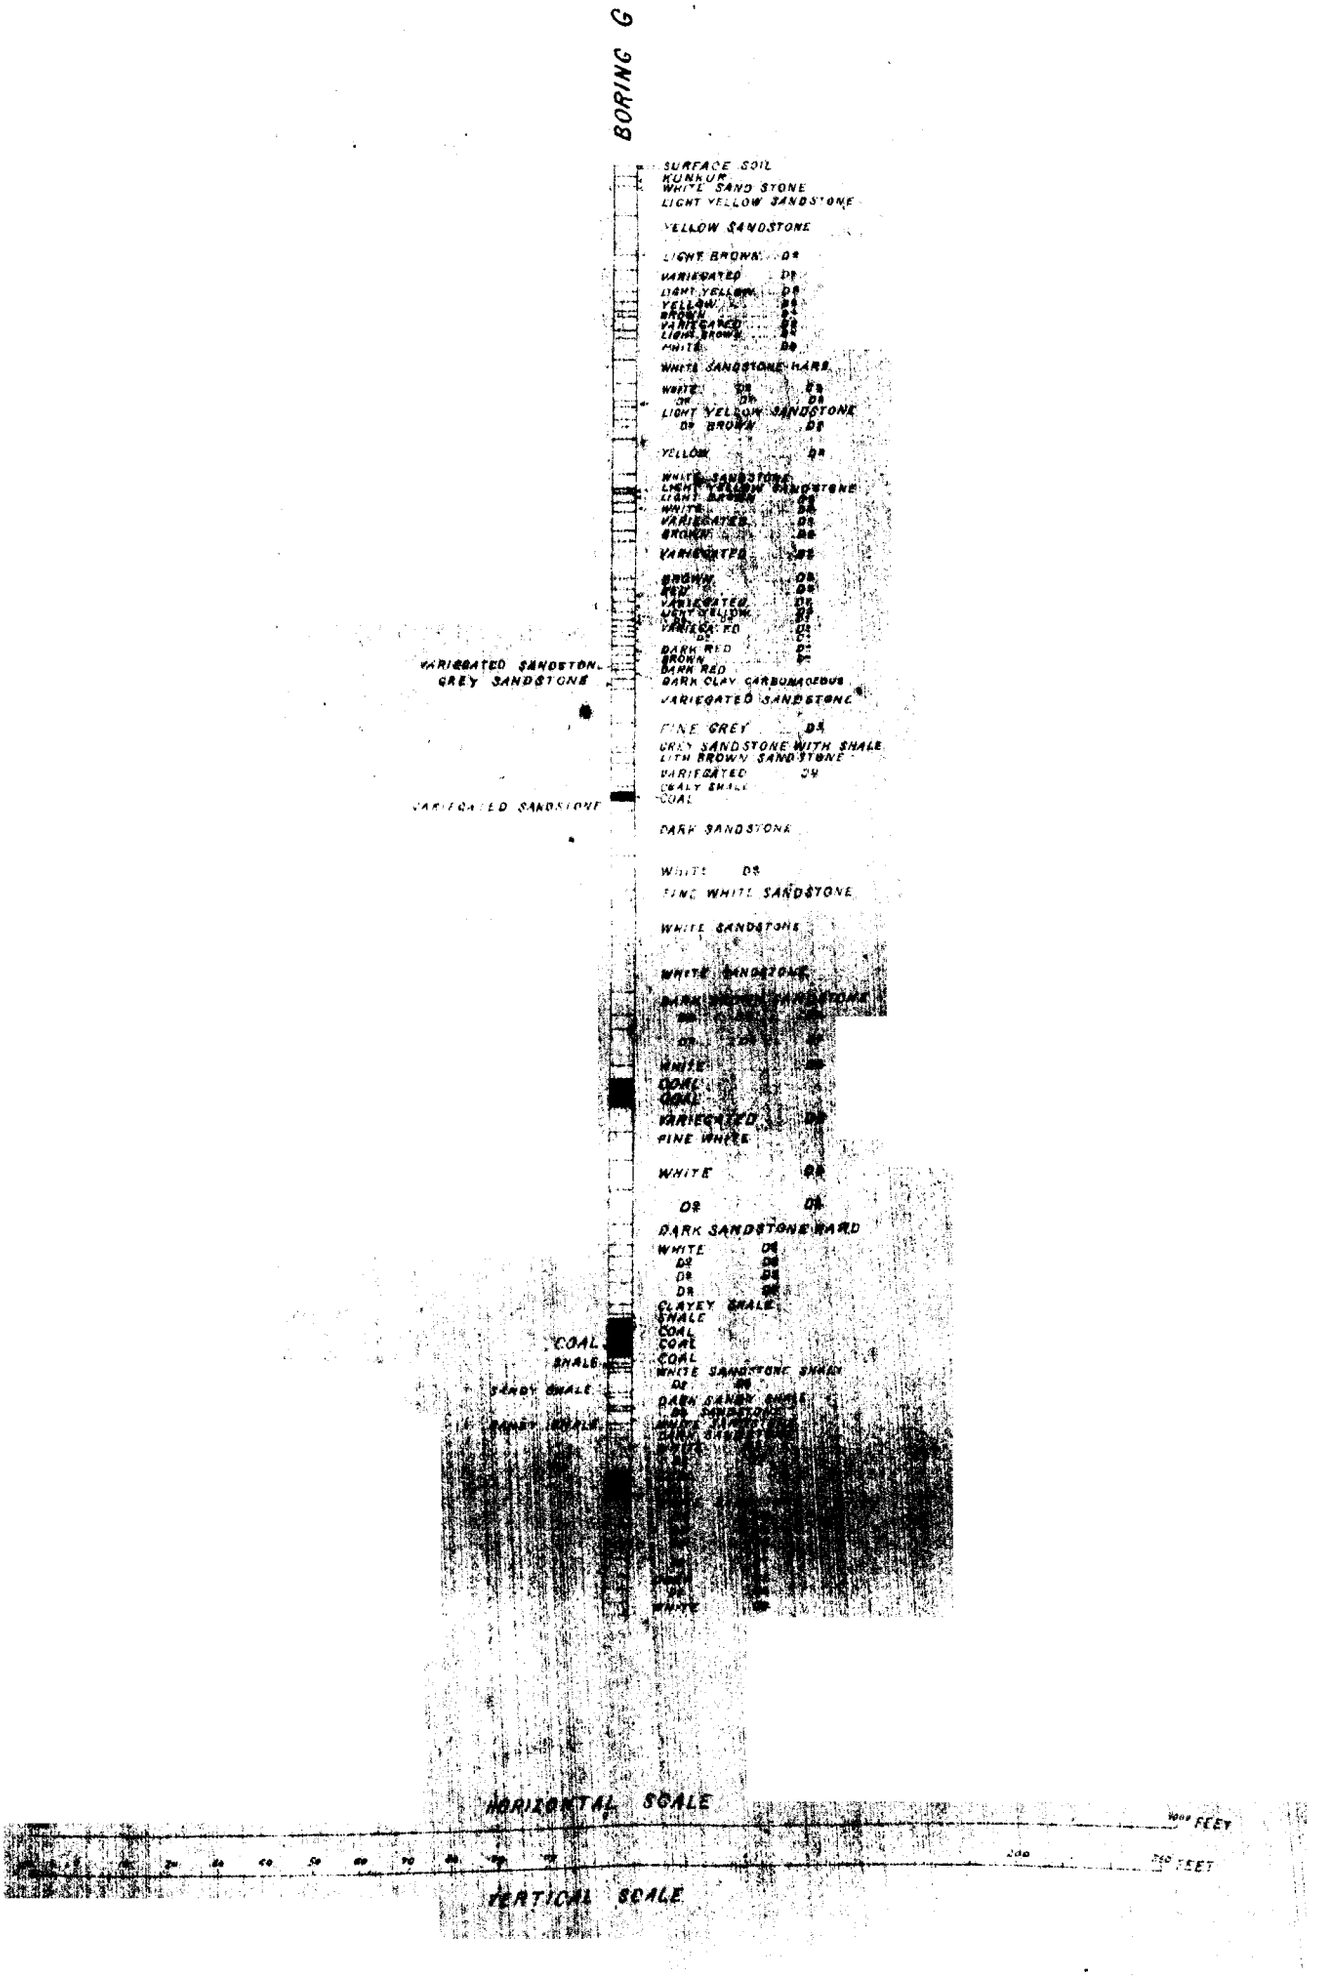
No. 1082, dated 2nd December 1874.

From—The Executive Engineer, Hingunghat Division, Wardha Valley Railway,
To—The Chief Engineer, Central Provinces.

In reply to your letter No. 7523, dated 20th November, I have the honor to state that up to date no reply (beyond acknowledgment of receipt of specimens) has been received from the Government Analyser regarding the specimens of limestone from Meenjerrie sent him.

2. In reply to your para. 2, I beg to forward a report from Lieutenant Call, together with an explanatory map. It will be seen by Lieutenant Call's report that he considers that limestone is to be obtained in sufficient quantities for all practical purposes.

Dated 1st December 1874.



From—Lieutenant C. F. Call, Assistant Engineer,
To—The Executive Engineer, Hingunghat Division, Wardha Valey Railway.

In accordance with your instructions, I proceeded to Meenjerrie to examine the limestone referred to.

2. Leaving *Takoor Morpar*, I went first to a small tank to the north-east, and then followed up its feeder as far as the *Rohunpatel Hill*. I came on considerable deposits of kunkur in the first half mile, and in the next half the nala cuts through a bed of rich marl, underlying black cotton soil, and containing fragments of limestone and sandstone in abundance. I then crossed a sandstone bed running east and west, and met with limestone similar to No. I. A quarter of a mile farther north, the *Meenjerrie* road reaches the nala at the place marked No. II.

3. This road crossing the *Rohunpatel* begins to ascend soon after leaving the nala in a north-easterly direction, passing over the outcrop of the variegated marls Nos. I. and II., and which I presume underlie No. III., as it appears immediately on the plateau above. This bed forms the whole or the greater part of the hill, and is in sufficient quantity, I have no doubt, for all practical purposes. It gives place to basalt on the north of the plateau, which rises in a low hill called *Aswal Hoorkee*, a red earth with variegated marls and kunkur marking the junction.

4. The limestones marked 1 and 2 are visible also in the nala east of Kaislaborie, mixed with porphyry and conglomerate. The vein outcrops again immediately to the north of, and about 400 yards from that village, while a limestone similar in character to No. III is found in the nala to the south in sufficient quantities to supplement the supply if required.

No. 1136, dated 16th December 1874.

From—The Executive Engineer, Hingunghat Division, Wardha Valley Railway,

To—The Chief Engineer, Central Provinces.

In compliance with your No. 7523 of date 20th November 1874, I have the honor to forward copy of letter No. 255 of date 11th December, from the Official Chemical Examiner to Government, Calcutta Medical College, regarding the four specimens of stone sent to him from the neighbourhood of Meenjerrie.

2. The specimens Nos. 3 and 4, favorably referred to, are situated in the positions colored *purple* on the tracing sent with this office No. 1036 of date 19th November.

3. No. 3 is reported by Lieutenant Call to exist in sufficient quantity for all practical purposes, the whole of the hill where it is found being probably formed of this stone.

4. No. 4 is found at a short distance south east of "Kaislaborie," and appears similar in character to No. 3; it exists also in fair quantity.

5. Specimens of the stones Nos. 3 and 4 are forwarded by rail for information.

No. 8267, dated 19th December 1874.

From—The Secretary to the Chief Commissioner, Public Works Department, Central Provinces,

To—The Secretary to the Government of India, Public Works Department.

Limestone in the neighbourhood of Bundur.

I have been desired by the Chief Commissioner to submit for the information of the Government of India the following correspondence, giving the results of further explorations and inquiries regarding the limestone in the neighbourhood of Bundur.

2. As reported in this office No. 7524 of 21st ultimo, specimens of the limestone from the neighbourhood of Meenjerrie had been sent to the Government Analyser at Calcutta.

3. Letter No. 1082 of 2nd instant from Executive Engineer, Hingunghat Division, Wardha Valley State Railway, with its enclosures (copies enclosed), will give full information as to the localities of the specimens sent for analysis.

4. Letter No. 1136, dated 16th instant, from the same Engineer, with its enclosure (copies enclosed), give the results of the analysis, from which it will be seen that either of the specimens Nos. 3 and 4 would form an excellent flux in the manufacture of iron, but that No. 4 is the purer and better of the two.

5. Specimens of Nos. 3 and 4 are forwarded by to-day's post for inspection.

6. From Lieutenant Call's report, accompanying Executive Engineer's letter No. 1082, it will be seen that there is an ample quantity of limestone of the same quality as specimens Nos. 3 and 4, available for all practical purposes.

No. 255, dated 11th December 1874.

From—Surgeon-Major W. J. Palmer, Offg. Chemical Examiner to Govt.,

To—The Executive Engineer, Hingunghat Division, Wardha Valley Railway.

I have the honor to submit the result of analysis of four specimens of stone forwarded for examination with your letter No. 958 of 1874.

Nos. 1 and 2 are flints and not limestones.

No. 3 is a carbonate of lime with admixture in varying proportions of a red crystalline siliceous rock visible to the naked eye.

If separated from this rock by mechanical means, the remaining substance is carbonate of lime with a very minute portion of carbonate of magnesia.

No. 4 is carbonate of lime in a state approaching to purity; the proportion of siliceous matter contained in any given 100 parts would vary in quantity, but would not amount in any case to more than ten per cent., the remainder being pure carbonate of lime.

Either of these two specimens separated from the small quantity of adhering and intermingled siliceous matter by mechanical means would therefore form an excellent flux in the manufacture of iron, but No. 4 is the purer and better of the two.

4. The limestones marked 1 and 2 are visible also in the nala east of Kaislaborie, mixed with porphyry and conglomerate. The vein outcrops again immediately to the north of, and about 400 yards from that village, while a limestone similar in character to No. III is found in the nala to the south in sufficient quantities to supplement the supply if required.

No. 1136, dated 16th December 1874.

From—The Executive Engineer, Hingunghat Division, Wardha Valley Railway,

To—The Chief Engineer, Central Provinces.

In compliance with your No. 7523 of date 20th November 1874, I have the honor to forward copy of letter No. 255 of date 11th December, from the Official Chemical Examiner to Government, Calcutta Medical College, regarding the four specimens of stone sent to him from the neighbourhood of Meenjerrie.

2. The specimens Nos. 3 and 4, favorably referred to, are situated in the positions colored *purple* on the tracing sent with this office No. 1036 of date 19th November.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 25th FEBRUARY 1875.

GENERAL REMARKS.—The fall of rain during the past week has been almost confined to the North-Western Provinces, Oudh, the Punjab, the Central Provinces with the exception of the south-western portion, and Central India and Rajputana. It has been of general benefit and in fair quantity. Disastrous hailstorms are however reported from the districts of Etawah, Fatehgarh and Shahjahanpur in the North-Western Provinces. In Bombay the *rabi* harvest is in progress. In Bengal the cold weather crops are being reaped with a fair out-turn and the *aus* sowings are beginning. Prospects are reported excellent from Northern India generally (with the exception of the tracts visited by hail), and satisfactory everywhere.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Feb. 25th)	*Nil*	Later dry crops good and suffering from grub; castor being gathered; outturn full to three-fourths. *Varagu*, chillies and tobacco, outturn fair; markets well supplied locally; prices steady; small-pox and fever still reported; green fodder scanty, dry fodder available; cattle fairly healthy.
Kurnool (24th)	..	Season favourable; crops good order; markets well supplied; prices falling in three taluqs, stationary elsewhere; fever prevalent in several taluqs; no water over Sunkesala anicut.
Tanjore (25th)	..	Rivers almost dry; water in tanks scanty; water over anicuts none; no wet cultivation; that of a few dry crops continues in some parts; crops good order; harvest wet and some dry crops; yield satisfactory; markets well supplied; prices slightly falling; public health generally good; small-pox here and there; cattle disease in Shealli and Negapatam; pasture sufficient.
Trichinopoly (24th)	..	Water supply on the whole sufficient; crops good order; outturn up to average; public health good; pasture becoming scarce.
Malabar (25th)	..	Harvesting of second crop almost completed; outturn good; markets well supplied; prices show tendency to increase; small-pox prevalent; fever in some parts; cattle disease slight in Walluvanad; pasture withered. *General Remarks.*—Prospects satisfactory.
Bombay— (Feb. 24th)		
Sindh.		
Kurrachee ...	...	Fever continues in southern districts; small-pox in two villages of Shahbunder taluka, which occasioned one death; measles in two tuppas; preparations for kharif continue; weather cloudy and sultry; rain again expected; fall various on 12th, 13th, and 14th.
Shikarpur ...	...	Rabi crops much benefited by rain, but the rape crop has in parts been attacked by small insects; prospects generally good; weather warmer; public health good.
Hyderabad ...	...	Mortality from disease occasioned by cold among people in Hyderabad taluka; fever again prevalent; damage to rabi crops from frost; weather warmer; cattle disease has ceased.
Upper Frontier ...	·03 in taluka Jakobabad.	Wheat and barley good; oil seeds and gram in places completely blighted; in talukas Thul and Kusmore wheat, barley, mutter, and oil seed very fair; weather decidedly milder.
Gujarat.		
Ahmedabad ...	...	Damage by late rain only slight; wheat being harvested in some talukas; other crops doing well.
Surat ...	...	Weather good; picking operations progressing; fever and injury to crops in Pardee.
Broach ...	..	Wheat and jowar almost harvested; cotton pickings progressing; slight drizzling at Ahmod on 21st.
Kaira ...	...	Cotton and other crops thriving; weather and health good.
Khandesh and Nasik.		
Khandesh ...	...	Reaping of rabi crops in progress; cattle disease continues; full presses at Julgaum in full operation; 25,000 docras awaiting compressment; quality good; rate 49.
Nasik ...		Crops being harvested; public health good.
Konkan.		
Tanna ...	...	Weather cool; public health good; ague in Dhanoo and Moorbaur; cough in Dhanoo taluka, and fever in Mahim, Shahpur, and Bhewndy talukas; rabi crops good in Shahpur, Bhewndy, and Kurjut talukas, and middling in Dhanoo, Moorbarr, and Cullian talukas.
Deccan.		
Poona ...	...	Rabi crops being harvested; weather hot; public health good.
Ahmednuggur ...	...	Rabi crops being harvested; health good.
Sholapur ...	...	Weather slightly warm; reaping of rabi continues; harvest indifferent on inferior soil.
Satara ...	...	Harvesting of rabi crops in progress; picking of cotton commenced in Malwa; weather cloudy and warm; ague in Pahtun.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Southern Mahratta Country.		
Belgaum ...	...	Rabi crops being harvested; cotton doing well; weather fine; public health good.
Dharwar ...	...	No material change in state of wheat, gram, cotton, &c.; health improving; sheep disease in Karajgi taluka.
Kanara ...	...	Second crops thriving; slight fever general; small-pox and cattle disease slightly prevalent.
Kaladgi ...	...	Rabi promises fair harvest; rats damaging crops in Bagewari and Mudebehal; state of public health same as before.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Crops same as before; harvesting of wheat and picking of cotton nearly over; weather and health good.
Wudwan ...	...	Cold decreasing; cotton-picking commenced; health generally good.
Baroda ...	...	Cotton crops have suffered from recent falls of rain; picking continues; rabi crops and public health good.
Bengal—		
Burdwan ...	*Nil*	Weather getting warm. Cold-weather crops being harvested. Cholera appearing in Burdwan and Culna.
Bankura ...	,,	Fine and seasonable weather. Sugarcane and mustard being reaped. The prospects of the other crops continue favourable.
Beerbhoom ...	,,	Weather bright and cool. State and prospects of the crops continue good.
Midnapore ...	,,	Weather cool and clear; no change since last report. No crops to speak of on the ground. Cholera still severe on the coast.
Hooghly ...	,,	Clear throughout: wind from north, south, and north-east, during the week. Cold-weather crops are nearly reaped. Yield pretty fair.
24-Pergunnahs ...	..	Clear and warm weather. Harvest of cold-weather crops commenced. Cholera decreasing, with the exception of in parts of the sub-divisions of Diamond Harbour. Fever diminishing in Barripore.
Nuddea ...	..	Very warm for two days early in the week, but cold afterwards. All cold-weather crops progressing favourably.
Moorshedabad ...	..	Fine and seasonable weather, gradually getting hot; occasional clouds. Cold-weather crops generally progressing most favourably. Wheat far advanced in ear; mustard is being cut. Slight injury to linseed by insects in Gokuru. Ploughing for future crops still going on.
Dinagepore ...	,,	Weather colder in the latter part of the week. Cold-weather crops doing well.
Maldan ...	,,	Weather fair, with a strong westerly wind. Except in the Nowabgunge thanna, where the prospects of peas and mushur pulse are not good, the accounts of the crops are satisfactory.
Rajshahye ...	,,	Clear and fine weather, without rain, during the week. The prospects of the crops continue to be good. Sowing of boro or spring rice has been commenced.
Rungpore ...	,,	Weather becoming warm. Winter crops are being cut.
Bogra ...	,,	Weather fine. Cold-weather crops promise to be very abundant. Mulberry is doing well.
Pubna ...	,,	Fine cool and seasonable weather. The spring season crops are all in good condition and promise well. Sowing of cheena millet completed. The seedlings are above ground, and the prospects of the crops are fair, and sowing of jally and boro or spring paddy going on rapidly. Harvesting of turmeric finished, and that of sugarcane going on.
Jalpáiguri ...	Few drops of rain.	On Tuesday night some few drops of rain fell, but too little to be measured. Mornings cool and rest of the day hot. Prospects of crops excellent. Ploughing going on everywhere.
Dacca ...	*Nil*	Weather fair and getting warm. State and prospects of the crops continue good.
Patna ...	,,	Seasonable weather. Prospects of the cold-weather crops are most favourable.
Gya ...	,,	Seasonable weather. The cold-weather crop is splendid everywhere; a heavy outturn is anticipated. Health of the people good.
Shahabad ...	,,	Weather cloudy; winds variable, attended with dust-storms. Mornings cool. The peas on high land are being harvested; the deyara crop has been somewhat injured by frost and caterpillars. Prospects of crops in general are excellent.
Durbhanga ...	,,	Cloudy at times, but generally seasonable; rain reported from several parts of the district. Prospects of crops satisfactory.
Mozufferpore ...	,,	Fine weather. The prospects of the winter crops continue fair. Mustard harvesting has commenced in some places.
Sarun ...	,,	Weather fair, and is getting warm. The prospects of the cold-weather crops are generally favourable; wheat and barley are ripening; poppy in flower; peas and mustard are being gathered; rahur pulse doing well; sugarcane cuttings are being put into the ground. Indigo fields are ready for sowing. Prices stationary.
Chumparun ...	Slight showers	Warm during the early part of the week; since showers fell, cold and clear. Westerly winds. Opium in flower; cold-weather crops coming into ear; lands prepared for indigo; all crops promise well.
Monghyr ...	*Nil*	Strong west winds and two cloudy days. Prospects of crops good.
Bhagalpur ...	,,	Very strong west wind for two days. Cold-weather crops are finer than have been seen for many years.
Purneah ...	,,	Much warmer: 0·10 rain is reported to have fallen at Arrarieah on the 16th instant. The state and prospects of the cold-weather crops are very good.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*			
Southal Pergunnahs	...	*Nil*	In the beginning of the week warm nights and blistering days, with very hazy horizon. In the end cold nights and clear still days. State and prospect of crops continue excellent.
Cuttack	...	,,	Weather hot. Cold-weather crops doing well.
Balasore	...	,,	Weather fine and clear. Miscellaneous crops only being harvested. Prices steady.
Lohardugga	...	,,	Bright and clear weather in the sudder division, but changeable at Palamow. The prospects of the crops still continue good. From Palamow the reports show that there is fear of blight if the cloudy weather continues, but up to date no harm has occurred.
Maunbhoom	...	,,	Favourable weather. State and prospects of crops good.
			PUBLIC HEALTH.
			Burdwan: cholera appearing in Burdwan and Culna. Midnapore: cholera still severe on the coast. 24-Pergunnahs: cholera decreasing, with exception of in parts of the sub-divisions of Diamond Harbour; fever diminishing in Barripore. Moorshedabad: general health good; some cases of small-pox in Moorsungunge and other parts of Assanpore thanna; cholera in Kandi out-post circle not virulent. Rajshahye: a few cases of cholera and small-pox are reported from the interior. Pubna: no sickness reported. Furreedpore: general health of the district good. Backergunge: health satisfactory. Chittagong: general health good, some cholera at Pattea, and small-pox amongst cattle in three or four villages. Patna: health good. Gya: health of the people good. Shahabad: health good. Mozufferpore: public health good. Sarun: general health good. Bhagulpore: general health very good. Balasore: cholera still prevails to some extent in the north of the district. Hazareebagh: small-pox on the decrease. Lohurdugga: general health good.
			General Remarks.—The weather has been seasonable throughout the week, but in some places is getting hot, while light showers of rain are reported from a very few places. The state and prospects of the cold-weather crops continue favourable, and harvesting is going on; spring rice sowings are progressing well, and early *aus* rice is also being sown. Sugarcane is being put into the ground, and lands are being prepared for the next crop.
N. W. P.—			
Benares	(Feb. 24th)	*Nil*	Crops continue in fair condition; masúr and peas are being cut.
Mirzapur	,,	...	Storm on night of 16th doing little damage; cereals everywhere promising; one-eighth of peas, masúr and gram said to be destroyed by frost in Chunar.
Allahabad	,,	...	Slight rain; everything most favourable.
Banda	,,	...	Showery weather; rain has done good to wheat and barley; masúr and gram harvest begun.
Jhansi	,,	...	Thunderstorms on 15th and 21st, with slight rain, doing good to late sown rabi; and slight hail but no harm done; weather unsettled.
Meerut	...	...	Much good done by rain; prospects very favourable for all crops except arhar.
Bareilly	(24th)	...	On 21st rain and hail; extent of damage not yet ascertained.
			General Remarks.—The rain of the 15th to 18th was very general; heavy in the upper Doab, light in the lower Doab and in the Benares Division. In the upper Doab, where the crops are late, it has done great good, in the south-eastern districts it was less wanted, and the crops were almost ripe, but terrible storms of hail are reported from Sháhjahánpur, Fatehgarh, and Etawah, utterly destroying crops over large tracts of country, and it is feared that the damage may have been very widely extended.
Punjab—			
Delhi	(Feb. 24th)	*Nil*	Crops improving; health good.
Hissar	,,	,,	Crops doing well; health generally good; small-pox still in Hissar and Rohtak, and a little rinderpest in latter district.
Umballa	,,	,,	Crops and health good.
Jullundur	,,	1	Crops poor; health good.
Lahore	,,	1	Harvest prospects much improved; health good.
Mooltan	,,	...	Slight showers; more rain wanted; crops average; health good.
Rawul Pindi	,,	1	Prospects fair; health good; cattle disease continues.
Peshawar	...	2	Crops improved, but probable outturn below average; health good.
			General Remarks.—Harvest prospects much improved by recent rain; public health continues good.
Oudh—			
Lucknow	(Feb. 24th)	·6	Prospects of wheat and barley good; gram and peas improved by recent showers; weather fair; public health good.
Fyzabad	,,	*Nil*	
C. Provinces—			
(25th Feb.)			
Bilaspur	(Feb. 20th)	...	Weather clear; prospects and health good; prices steady.
Sambalpur	...	...	Ploughing continues; sugarcane pressing; health good.
Upper Godavari	...	...	Weather warm; jowar gathering; small-pox prevalent; prices easy.
Chanda	(21st)	...	Prospects fair; cattle disease continues; prices rising.
Raipur	...	...	Weather clear; rabi prospects excellent; health good; prices easy.
Chhindwara	(22nd)	...	Weather clear; rabi crops cutting; frost damaged poppy; health good; prices steady.
Balaghât	...	...	Threshing rice continues; rabi crops cutting; health good; prices easy.
Bhandara	(23rd)	·8	Prospects of rabi crops favourable; fever and small-pox prevalent; prices easy.
Nagpur	(24th)	1·55	Rabi crops cut; small-pox and cattle disease prevalent; price of wheat rising.
Saugor	..	·17	Rain beneficial; small-pox prevalent; prices rising.
Seoni	...	·3	Prospects good; small-pox continues.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
C. Provinces—*continued.*			
Jubbulpore	...	...	Weather cloudy; prospects good; small-pox and cattle disease continue.
Nimar	...	1·6	Crops slightly damaged by hail; small-pox continues.
Wardha	...	·71	Crops reaped; small-pox continues; prices stationary.
Narsinghpur	...	...	Prospects good; small-pox prevalent; prices stationary.
Hoshangabad	...	...	Weather cloudy; prospects fair.
Betul	...	1·28	Weather cloudy; hail fell on 23rd; no damage.
Damoh	(Feb. 25th)	·1	Prospects good; small-pox prevalent.
Mandla	...	·05	Prospects good; prices stationary.
			General Remarks.—Prospects continue unchanged; crops still promising.
Mysore and Coorg—			
Mysore	(Feb. 25th)	...	Standing crops generally thriving; cattle disease prevalent in parts of three districts; public health generally good.
Coorg	,,		*General Remarks.*—Agricultural prospects good.
Assam—			
Sylhet	(Feb. 25th)	...	Cold weather crops doing well; small-pox and cattle disease very prevalent.
Gauháti	,,	*Nil*	Dry, hot south-west winds prevalent; nights clear and cool; mustard reaped; good outturn expected, and prospects of other winter crops favourable; public health good.
Hyderabad Assigned Districts—			
Umraoti	...	·6	Rabi reaping in progress; outturn fair.
Rajpootana—			
Bhurtpore	(Feb. 25th)	...	Rain of this and previous week greatly developed crops; atmosphere charmingly fresh.
Deolee	(20th)	1·1	Prospects and health good.
Kota	,,	·6	
Tonk	,,	·9	
Jhallawar	,,	·75	
Ajmere	(25th)	...	Weather clear and pleasant; health good; crops good and benefited by rain.
Jeypore	,,	...	Crops progressing well; public health good; weather seasonable.
Central India—			
Indore	(Feb. 24th)	·13	Slight thunderstorm.
Rutlam	,,	·07	
Neemuch	,,	*Nil*	
			General Remarks.—Health and agricultural prospects continue good in Central India.
Nepal	...	...	Report not received.

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

MODE OF DEALING WITH CASES OF OPPRESSION AND ILLEGAL EXACTIONS BY ZEMINDARS IN THE LOWER PROVINCES OF BENGAL.

From H. J. REYNOLDS, Esq., Officiating Secretary to the Government of Bengal, to the Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce,—No. 351, dated 12th February 1875.

I am directed to reply to your letter No. 326, dated the 24th April 1874, the answer to which has been unavoidably delayed until the Lieutenant-Governor could by travelling see and learn something of the country for himself. This delay is not altogether to be regretted, as the occurrences of 1874 can hardly fail to have contributed towards the settlement of the question upon which the expression of his opinion is called for.

2. Complaints of the excessive levy of illegal cesses by zemindars from their ryots, were first made in the districts of Orissa, and the inquiries which were instituted in those districts were afterwards extended to the other districts of the Lower Provinces. It was the conclusion of Sir George Campbell, after full consideration of the evidence adduced upon the subject, that in Orissa some special measures were necessary for the protection of the ryots and for the punishment of those zemindars who were shown to have most flagrantly violated the law. These proposals were submitted to the Government of India in Mr. Bernard's letter No. 821,

dated the 5th March 1873. The policy which Sir George Campbell desired to pursue in the remaining districts of the Lower Provinces was set forth in a Resolution recorded on the 30th May 1873, and communicated to the Government of India by Mr. Bernard's letter No. 1483 of that date.

3. The Governor-General in Council while approving the policy indicated in the Resolution of the 30th May 1873, declined to sanction the special measures recommended by the late Lieutenant-Governor for the protection of the Orissa ryots. Your letter under reply conveys an expression of the concurrence of the Secretary of State in the decision of the Government of India regarding the action proposed to be taken in Orissa, and draws attention to the 6th paragraph of the despatch, in which it is intimated that a further communication from the Governor-General in Council is awaited on the subject of the measures which may be ultimately deemed necessary for dealing with cases of gross oppression and illegal exactions by zemindars.

4. I am directed to say that in the Lieutenant-Governor's opinion the evidence leaves no room for doubt that cesses unauthorized by law have been very generally levied, that in many, perhaps in the majority, of cases they have been levied with the assent of those concerned, but that in some cases and in some parts of the country, they have been exacted in an oppressive manner.

5. At the same time Sir Richard Temple recognizes the fact that in many districts of Bengal, cesses not authorized by the law have been demanded and paid, by a kind of tacit composition between landlord and tenant, in lieu of any enhancement of rent. This is especially the case in the Eastern and East Central districts, where rents are in general extremely low, and though on some estates they have been raised during the last few years, they have nowhere been enhanced in a degree corresponding with the rise of general prices and the increased value of agricultural produce. In these districts 8 annas and 12 annas per beegah are still common rates of rent for lands of good quality, producing valuable crops. The agricultural classes in Eastern Bengal are in a very prosperous condition, and the zemindars might reasonably claim some share of the increased returns from the land. Rents, however, in these districts are regulated rather by custom than by competition; enhancements are rare, and ejectments are almost unknown. The increased payments by the tenantry consequently took the form of cesses—a form not recognized by the law, but in harmony with native ideas; and the amount of them was seldom more than the landlords might equitably have claimed in the shape of enhanced rent.

6. Under such circumstances, the Lieutenant-Governor thinks that any active and general interference on the part of the officers of Government to prevent the payment of these cesses, would not only bear harshly upon the landholding class, but might lead to consequences greatly to be deprecated. There would be a general rise of rents, and in the end the law would perhaps make the ryot liable for as much as he is now paying, while large sums would have been spent in litigation, and the embittered feelings which the contest would have produced would tend to make a lasting breach between landlords and tenants.

7. It is not contended that the social condition described in the two foregoing paragraphs obtains generally throughout the districts of the Lower Provinces. The evidence before the Lieutenant-Governor tends to show that in particular places in the Presidency and Burdwan divisions, exorbitant cesses have been levied from ryots who were already paying the full value of their land as rent, and similar cases have been brought to light in some parts of the province of Behar. If there were reason to fear that these evils would be permanent, if it were likely that the power and influence of the landlords would be greater than at present, and that the ryots would remain ignorant of their rights and helpless to enforce them, it would be necessary that Government should be prepared to interfere in certain classes of cases. But the tendency of affairs is in the opposite direction to this. Education is spreading among the ryot class, and there is much of legal protection for probably the majority of ryots, while tenant-right is being more widely recognized, apparently with the tacit acquiescence of the zemindars. Many circumstances have helped to disseminate among the ryots a knowledge of the distinction between the legal dues which they are required to pay, and the illegal cesses which no one has a right to exact from them. In these districts the Lieutenant-Governor does not think that any action on the part of Government is required, beyond such as is indicated in the Resolution of the 30th May 1873. In that Resolution Sir George Campbell expressed a doubt whether any general or very stringent interference by the officers of Government was desirable. District Officers were directed to interfere in the case of any extreme oppression, where inordinate cesses were levied, or where violence was used to enforce the collection of them; but beyond this, matters were to be left to adjust themselves, as the people should get better protected, better educated, and better able to understand and maintain their own rights and position. Sir Richard Temple concurs in these opinions, and desires to carry out this policy. He hopes, however, that the cases which call for interference under the above rule will gradually decrease till they almost cease to appear.

8. The circumstances of the province of Orissa are in some respects exceptional The ryots there are in general poorer and more ignorant than those of Bengal or Behar; and the inquiries made by local officers in 1871 brought to notice numerous instances of high-handed oppression and excessive exactions on the part of the zemindars. These considerations induced

Sir George Campbell to recommend the adoption in Orissa of special measures for the effectual protection of the people. It has been already remarked that these proposals were not approved by the Government of India and the Secretary of State.

9. It appears to the Lieutenant-Governor that if interference is not to be exercised in Orissa in the direction and to the extent which Sir George Campbell desired, no other action need be taken than such as is indicated in the Resolution of the 30th May 1873. And action of this kind, Sir Richard Temple is inclined to think, will now supply all that is necessary. I am to point out that the conditions of the question have somewhat altered since the inquiries on the subject were held in 1871. The peasantry of Orissa are probably still in a more backward state than the ryots of other districts in the Lower Provinces; they are imperfectly acquainted with their rights, and are but little disposed to claim the protection of the law. But from recent reports from the local authorities, and from what the Lieutenant-Governor himself saw of the condition of the province during his recent visit, it appears certain that the ignorance, obstructiveness, and timidity which formerly characterised the people are steadily, though it may be slowly, giving place to a spirit of intelligence and independence. The last administration report of the Commissioner of Orissa contains some striking remarks upon the advance which the province is making, not only in material wealth, but in social and intellectual progress; while there is a noteworthy absence of the complaints which were formerly rife of oppression on the part of the zemindars towards their tenantry. On the whole, the Lieutenant-Governor finds reason to believe that in Orissa the question of zemindary cesses is tending towards a natural and peaceful solution, and consequently he does not think it necessary to recommend that any special measures should be adopted in that province.

10. Finally, I am to represent that the events of 1874 have exhibited the zemindars in a very favourable light. Throughout the distressed districts the great majority of the zemindars have not merely exhibited the passive charity of forbearing to press their ryots for rent, but they have displayed an active benevolence, a readiness to assist and to contribute, which the Lieutenant-Governor has already publicly acknowledged, and without which he feels that the utmost efforts of Government might have failed to wholly avert the impending calamity. Sir Richard Temple hopes and believes that the occurrences of the past year will not be without their permanent fruits; that the zemindars will persevere in moderate courses towards their ryots, and that the questions still unsettled between them will be approached by both parties in a spirit of mutual kindness and forbearance.

11. I am therefore to say, with reference to your letter under reply, that the Lieutenant-Governor has no further suggestions to offer than those which have been already submitted to the Government of India in the Resolution of this Government dated the 30th May 1873. He concurs with his predecessor in thinking that while cases of the extortion of illegal cesses by violence should not be suffered to go unpunished, and while district officers may properly interfere in instances of clear oppression (if such instances should unhappily occur), the question may in general be left to adjust itself in the manner which will naturally result from the gradual spread of education, intelligence, and independence among the classes from whom these cesses have hitherto been levied.

12. Although, as seen above, the Lieutenant-Governor is hopeful that both parties concerned, landlord and tenant, will see that their true interest lies in respecting each other's rights, still he is prepared to watch for and note any indications of a contrary tendency, to collect and compare from time to time the best informed opinion in the interior of the country, and to adopt any protective or preventive measures which may appear necessary, and which may be within the competency of executive authority. If in any case or cases the zemindars were to really oppress the ryots, or if the ryots were to combine to resist the lawful requirements of the zemindars, the Governor General in Council may depend upon prompt action being taken by the Government of Bengal.

No. 169, dated 20th February 1875.

From—C. J. LYALL, Esq., Under-Secy. to the Govt. of India, DEPT. of REVENUE, AGRICULTURE & COMMERCE,

To—The Secretary to the Government of Bengal.

In reply to your letter No. 351, dated the 12th instant, I am directed to say that the Governor General in Council concurs in the views of His Honor the Lieutenant-Governor as to the manner in which cases of oppression and illegal exactions by zemindars in the Lower Provinces of Bengal should be dealt with.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 23rd February 1875.

PRESENT :

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
His Highness the Mahárájá of Vizianagram, K. C. S. I.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.
The Hon'ble Ashley Eden, C. S. I.

CIVIL PROCEDURE BILL.

The Hon'ble MR. HOBHOUSE moved that the Select Committee on the Bill to consolidate and amend the laws relating to the Procedure of the Courts of Civil Judicature be re-constituted, and said :—

"The motion which I have to make is one which is usually put without a word of remark. But the position of the measure to which this motion relates in very peculiar, and I must just explain to the Council how it is situated before I can ask them to appoint a fresh Committee.

"The Bill was framed in the year 1864 under the auspices of Sir Henry Harington, a gentlemen who, I believe, took an active part in the passing of the existing Code, and who certainly was one of the first authorities in India on the subject of Procedure. It was published in the early part of 1864 before its introduction, and it was in the month of November 1864 **that Sir Henry Harington introduced it into the Council. He then gave his reasons for thinking that it was desirable to redraw the Code at that time.**

"So far as those reasons depend on general principles, there is no need to repeat them at this time of day. So far as they depend on circumstances peculiar to the case in hand, the Council, I am sure, would sooner hear them in Sir Henry Harington's words than in mine, and I will make no apology for reading a somewhat long extract from his speech :—

"'Notwithstanding what he had just said in favour of the periodical revision of Codes of Procedure and of substantive law, he should not have taken upon himself to propose, at this particular time, a revision of the Code which now regulated the proceedings of the Civil Courts throughout the British Territories in India, with exception to the few places which he had mentioned, had the sole object of the Bill prepared by him been to supply omissions or to cure defects brought to light in the working of the Code during the period that had intervened since its introduction, or to remove doubts which had arisen as to the intent and meaning of some of the sections. Were this the only purpose for which legislation was now required, he might have been content to allow the Code to remain in operation for some further time before any general revision was attempted. But during the period that had elapsed since the Code became law, great and important changes had taken place in the judicial agency of the country as well as in the substantive criminal law in its relation to the administration of civil justice. As noticed in the Statement of Objects and Reasons published with the Bill, acts committed in the Civil Courts, or in connection with the processes of those Courts, which before the passing of the Indian Penal Code were not offences, had by that Code been made offences, and were now punishable by the Criminal Courts. It had been found necessary to enact rules showing by what Courts these acts were to be taken cognizance of, and how they were to be brought before the Courts who were to try them. The Supreme and Sadr Courts

at the three Presidencies had been abolished, and their places had been taken by High Court, the proceedings of which on the civil side, except in the exercise of their testamentary, intestate and matrimonial jurisdiction, were required to be regulated by the Code of Civil Procedure. The office of Master, in which a large and very troublesome portion of the business which came before the late Supreme Courts was performed, had been done away with. Courts of Small Causes had been established in many parts of the country beyond the limits of the Presidency Towns, the proceedings of which were also required to be regulated generally by the Code of Civil Procedure. The Code had been extended to many places not subject to the general Regulations—such as the Central Provinces, Oudh and British Burma—the circumstances of which were peculiar, but not being known to the framers of the Code they had made no provision to meet them, and under the operation of an Act recently passed, the offices of Hindú and Muhammadan Law Officers had been abolished, and the Courts would no longer have those officers to apply to for an exposition of the law when questions of inheritance and succession, and other questions requiring to be determined according to Hindú or Muhammadan law, arose in suits coming before them.

"'These and other changes had already led to the passing of several Acts to amend the Code of Civil Procedure, and legislation was called for on many points connected with the procedure of the Courts, particularly the High Courts. One of the Acts passed to amend the Code was to some extent a consolidating Act, but still the laws constituting the Code of Civil Procedure were much scattered, and further legislation, as already noticed, being necessary, it seemed desirable, instead of adding to the number of Acts by which the Civil Courts were to regulate their proceedings, that the opportunity should be taken to pass a single or consolidating Act, which should be complete in itself, and which should amend whatever experience might have shown to be defective in the existing Code.

"'Immediately after the establishmeut of the High Court of Judicature at Calcutta, it was found necessary to introduce a temporary Bill to provide for the levy of fees and stamp-duties in proceedings before the Court, and to suspend the operation of some of the sections of the Code of Civil Procedure in their application to the Court.

"'It was pointed out at the time of the introduction of the Bill, that when the Indian Legislature passed the Code of Civil Procedure (from the operation of which, as he had already mentioned, the late Supreme Courts had been expressly exempted), it contemplated that a separate Code of Civil Procedure would be prepared for the High Courts whenever they should be established; and further legislation was promised as soon as the High Courts had been established a sufficient time to admit of an opinion being formed as to whether any, and what other, alterations of the existing Code were necessary. The present seemed to be a fitting time for fulfilling the promise thus given".

"Well, these reasons appeared satisfactory to the Council, and the Bill was referred to a Select Committee. The publication of the Bill produced an enormous volume of commentary, which the Committee proceeded to examine, and the result of their labours was, that they altered the draft in a number of particulars and had it republished in the month of April 1865. That draft of April 1865 is the draft which is still lying before the Council.

"It so happened, however, that the Indian Law Commissioners, from whom the existing Code originally proceeded, took a different view from this Council regarding the expediency of redrawing the Code at that time. They thought that the time was too early for so large an operation, and that for some time to come it would be better to amend particular points as occasion required. The Secretary of State concurred in that view, and so no further step had been taken from that day to this.

"Well, now nearly ten years have gone by, and the reasons for redrawing the Code which existed in 1864, have been considerably augmented. Although it was said that the amendments contemplated by Sir Henry Harington might be effected by separate Acts, yet in point of fact very few have been so effected. Where, however, they have been effected, so much of the Code enacted in 1859 has become obsolete. Again, besides the Acts passed for directly amending the Code, a number of Acts have been passed bearing on it indirectly, each of which renders some alteration desirable. Amongst such Acts I may enumerate the following :—

The General Clauses Act of 1868.
The Prisoners' Testimony Act of 1869.
The General Stamp Act of 1869.
The Court Fees' Act of 1870.
The Limitation Act of 1871.
The Evidence Act of 1872.
The Criminal Procedure Code of 1872.
The Oaths Act of 1873.

"Each of these Acts has the effect of rendering some portion of the Code inapplicable to present circumstances, and it therefore becomes desirable to strike away those dead portions, so that the reader of the Code may not be distracted or misled by finding on the face of the written law that which is not law, or which is expressed elsewhere in some different shape.

"Again, there has been a much larger number of decisions which point to some shortcoming in the Code as it stands; perhaps it may be some defect of expression; perhaps some absence of direction on a point on which the need of direction has been felt; or it may be something in which the best rule for the suitors has not been laid down. Of course it is quite out of the question to embody all decisions into the written law, or even any large portion of the decisions; but it is desirable to embody those which are of a broader scope and are applicable to cases likely to recur frequently.

"For the foregoing reasons, it is proposed to take up now the work which was broken off in the year 1865, and we have for some time been employing ourselves on that business in the Legislative Department. I will explain to the Council the main features of what we have done, and also what I shall ask the Committee to do if it is appointed.

"In the first place we have attempted to make a rather more methodical arrangement of the various parts of the Code. The present arrangement of the Code is so good that I should not wish to recast it for the sake of re-arrangement alone; the gain of such a process would not be worth the disturbance. But when we are making a number of other alterations, the disturbance is already created; people will have to learn the Code in its altered shape; and then something more or less of alteration signifies little. Therefore, we propose to take the opportunity of making those improvements in form which those who come afterwards can always make even in the very best of first attempts.

"The general features of the proposed arrangement are as follows:—

"After a few preliminary sections, we take a suit of the most ordinary description from its commencement by the plaintiff, and we follow it through its chequered career up to its triumphant goal in the execution of the decree. That takes up some 350 sections of our draft; about half of our draft is occupied with the ordinary incidents of an ordinary suit. Next we take events which may or may not happen; what I may call the extraordinary incidents of an ordinary suit; for instance, a party may die or may be married, a witness may be abroad, a local investigation may be wanted, and so forth. This part of the Code shows what is to be done in those cases. Then we deal with particular classes of suits, such as suits by paupers or by mere stake-holders, a suit by or against Government, a corporation, or a lunatic. Then come some chapters on Provisional or Interlocutory Remedies, which are wanted in order to prevent property from disappearing or from being injured pending litigation, such as Injunctions, and Receivers; and then some on special modes of proceeding which are not of the nature of regular suits, such as references to arbitration, and the summary procedure provided for a particular kind of mercantile contract, the contract by negotiable instrument. Having thus exhausted the various kinds of action wanted from the Courts of first instance, we proceed to the important subjects of Appeals, Reviews, and References to the High Courts; we devote a separate part to the High Courts established by Royal Charter; and we complete the body of the draft by a few sections comprising some miscellaneous matters which it is not convenient to classify under any of the other heads.

"We have also taken a considerable number of decided cases, and have attempted to interweave the decisions into the Code, sometimes by inserting a few words in the body of a section, sometimes by adding an explanation, and more often by way of illustration. To some extent this is done by Sir Henry Harington's draft of 1865; but it is done only to a small extent, and the progress of time has enabled us to do it now on a larger scale. We have in some instances added provisions on points of practice which appeared to us to be useful, borrowing them mostly from rules or circular orders issued by one of the High Courts, and occasionally from the New York Code of Procedure, or from the practice of the English Court of Chancery. And finally we have

appended a large quantity of forms of proceedings likely to be useful to country practitioners, and which will tend, as we believe, to make practice more simple and more accurate.

"Of course it would be quite idle for me to attempt to explain here all the alterations which we have introduced into the draft, for though most of them are small and involve no important principle, they are very numerous. But numerous as they are, I can say with truth, as Sir Henry Harington said before, that the main principles of the Code are unaltered, and, indeed, that the bulk of its matter remains substantially intact. I will, however, mention two points on which we have introduced alterations of some importance.

"One alteration relates to the subject of Executions, and it originated in some suggestions made by the High Court of Calcutta. At the present time a decree is treated by many creditors as a rather eligible mode of investing their money. The interest is good and the security very good. It is true that, under the Limitation Act, the creditor cannot enforce his decree if three years have elapsed since some step taken to enforce it; but the only result of that provision is, that some formal step is taken every three years, and, practically, the decree runs on unsatisfied and hanging over the debtor, it may be for fifty years or more. On receiving suggestions from the High Court of Calcutta on this subject, the Government of India consulted the Local Governments, and the result was a very general agreement (of course I do not mean an universal one) that the present state of things was highly inexpedient, and that a change of law should be made in the direction suggested by the High Court for the purpose of checking the practice. It was then decided to propose a modification of the law as follows. We propose to keep the present rule that a decree shall become extinct if unused for three years, and to graft on it two important additions, one being that, on every application for execution after the first, the creditor shall be bound to show that he had really tried to obtain execution, but had failed to do so; and the other being that, however many applications may be made, a decree shall not remain in force more than twelve years, unless the creditor has been prevented from reaping its fruits by some wrongful conduct of his debtor. Then it is proposed to provide that, in the case of decrees for land, mesne profits shall be recovered for only one year after the date of the decree, and that, in order to make a decree operative after a man's death and against his heirs, the creditor must give a written notice to the heirs within a year after they have come into possession of their inheritance. These alterations we have woven into that part of the Code which relates to the subject of execution of decrees.

"The other alteration which I mentioned as being of importance relates to a kindred subject, that of the debtor's inability to answer the decree against him. At present the Code contains the germ of an insolvent law, but it is nothing more than a germ. By section 271, when a sale takes place under a decree, the proceeds are first to be applied in paying the holder of that decree, and then are to go rateably, and without any priority, amongst the holders of other decrees. That provision for rateable distribution is a very rudimentary law of insolvency. Then follow, in section 273 and some subsequent sections, some provisions for the discharge of arrested debtors; but they are very meagre and not very consistent with one another. Their general effect is this, that an arrested debtor may apply for discharge on giving up all his property; that if the court discharges him his person is not to be arrested again under the same decree; and the decree-holder is to be paid out of the proceeds of his property. But his person is not protected as against any debt other than that for which he has been arrested: his property is not protected at all; and no directions are given to the Court what to do with his property after paying the decree-holder. I believe that those sections have been used very little: and if that be so, it is not surprising, for there is very small inducement to the debtor to avail himself of them.

"Now it seems to be the prevailing opinion that the judicial machinery in the Mofussil is hardly adapted to the working of any general and complete law of insolvency. At all events, such a law should be treated as a separate measure and not as part of this measure. But it will probably be better for the present, and be likely to pave the way to some more complete measure for the future,

if we were now to make our law a little less rudimentary than it is at present, and at all events to supplement it where it now seems to be broken off in its natural course. We have therefore framed some sections for the following purposes—to provide that, when a man is tried and finds himself unable to pay his debts, he may apply to be declared insolvent; that the Court may declare the applicant an insolvent and appoint a receiver of his property; that it shall frame a schedule of creditors; that the insolvent's property shall be distributed rateably and without any priority amongst all his creditors; that when the insolvent gets his discharge, he shall be protected from imprisonment in respect of all the scheduled debts; and that his future property shall also be protected unless by order of the Court. There must be some provisions against a fraudulent use of the protection given by the Act. Those provisions should be partly preventive, by way of giving notice to creditors and enabling them to oppose the applicant; and partly punitive, by way of depriving him, whenever he is guilty of bad faith, of the protection which otherwise the Act would afford him.

"There is another subject of great importance, which, under other circumstances, it might have been very difficult to know how to deal with at this stage; I mean the subject of second appeals. But, however much we may hope ultimately to introduce amendment on that subject, under the present circumstances, with which the Council is familiar, we have no option but to abstain from proposing any alterations.

"I have only now to state what I propose that the Committee shall do if appointed. Of course the Committee will be masters of the situation, and will deal with our draft exactly as they think right. But I do not myself intend to ask them to go through it clause by clause and word by word, as we go through Bills the next stage of which may be that they will pass into law. That is a process which would take many weeks of continuous sitting, and it would probably be found that the labour was premature, and to a great extent wasted, because it is certain that very numerous alterations will be required when criticisms come in. What I shall ask the Committee to do is to examine the proposed re-arrangement; to pay attention to the points in which we have been altering the draft of 1865; to adopt or reject them as they think right; to make such new suggestions as occur to them, and to decide whether the draft as they settle it shall be republished. If then it is republished, many months must, in a matter of such magnitude, elapse before we shall have received the necessary comments and criticisms, and we shall then, and not till then, be in the best position to give to the Bill that thorough examination in every detail which is necessary for the detection and avoidance of the errors that have been made in the drafting."

His Honour THE LIEUTENANT-GOVERNOR was not quite sure whether he understood correctly what had fallen from his hon'ble and learned friend regarding the judicial machinery in the Mofussil not being equal to the working of the law of insolvency. HIS HONOUR was not quite sure whether the hon'ble member meant that no cases of insolvency were decided in the Mofussil. In some parts of India, HIS HONOUR was certain they had an insolvency law, but as regards Bengal he ventured to remark that, if cases of insolvency arose in the Mofussil at a distance from Calcutta, the interests of the creditors required that, as far as possible, these cases should be decided on the spot by the authorities and Courts in the districts where they arose, and that the adjudication of such cases entirely in Calcutta was very much to be deprecated in the interests of the people. It might be that the Mofussil Courts were not strong enough, but that would be the most cogent argument for making them stronger on the earliest opportunity, so that they might be able to decide these important cases on the spot to the satisfaction of the people and the local interests concerned.

The Hon'ble MR. HOBHOUSE said the law did not at present provide that a person might become an insolvent in the Mofussil and his insolvency adjudicated on in Calcutta; the fact was that there was no insolvent law applicable to the dwellers in the Mofussil. Setting aside the recent law enacted for the Panjáb, it was only the dwellers in the Presidency Towns who had an insolvency law applicable to them. The alteration proposed did not

tend to concentrate business anywhere. It was intended to give the Courts in the Mofussil somewhat larger powers and clearer directions than the present Code gave, so as to enable them to work out the remedy which apparently was contemplated by the framers of the Code of 1859.

The Motion was put and agreed to.

INLAND CUSTOMS BILL.

The Hon'ble MR. ELLIS presented the Report of the Select Committee on the Bill for regulating Inland Customs' Duties on Salt and Sugar, and for other purposes. He said that several alterations had been made of a verbal character, but not such as to require the republication of the Bill, and accordingly he proposed at the ensuing meeting to proceed to the next stage.

SIR JAMSETJEE JEEJEEBHOY'S LOAN BILL.

The Hon'ble MR. ELLIS also moved that the Bill to secure the repayment of a loan by the Government of India to Sir Jamsetjee Jeejeebhoy, Baronet, be taken into consideration. On a former occasion he had fully explained to the Council the object of the Bill and the mode by which it was proposed to effect that object. The Bill was not referred to a Select Committee and was now the same Bill as had been originally presented to the Council. No objection had been taken in the Council or outside of the Council to any of its provisions, and therefore he need not detain the Council with any further remarks.

The Motion was put and agreed to.

The Hon'ble MR. ELLIS then moved that the Bill be passed.

The Motion was put and agreed to.

MAJORITY BILL.

His Highness THE MAHÁRÁJÁ OF VIZIANAGRAM presented the Report of the Select Committee on the Bill to establish a uniform age of majority of persons domiciled in British India.

BURMA FISHERIES BILL.

The Hon'ble MR. EDEN moved that the Report of the Select Committee on the Bill to regulate Fisheries in British Burma be taken into consideration. He had explained the other day that the Bill did not attempt to regulate in any way the precise details of the system in managing fisheries in British Burma, but simply declared the rights of the Government in respect of these fisheries, and enabled the Local Government, with the previous sanction of the Governor General in Council, to make such rules as might from time to time appear necessary for all purposes of assessment and collection of revenue from fisheries. The fisheries, as he had said, were all along, from the first occupation of the country, subject to the payment of revenue, but hitherto only under rules passed by the Executive Government. The Bill gave those rules, after sanction by the Governor General in Council, the force of law.

The only question ever raised was the question to which he had already alluded, namely, the right of the Government to raise a revenue from this source. He hoped the explanation given in the Select Committee to the hon'ble members who raised that objection, together with the explanations offered in Council on former occasions, had removed the doubts that existed as to that right. The right was declared in the preamble of the Bill, and he thought that any private rights, if they existed, were sufficiently protected by the Bill, that was to say, that all grants of land which happened to include fisheries already made, and all such grants which might hereafter be made, would not be interfered with by the rules laid down in the Bill. With the exception of this declaration of right, there was nothing in the Bill to which he need now call attention. The details of the system for managing and controlling the fisheries were not contained in the Bill, but were left to be regulated by rules.

The Hon'ble MR. DALYELL had, when this Bill was first introduced, stated his concurrence in certain doubts which had been thrown out by his hon'ble friend Mr. Sutherland as to whether the State did possess exclusive rights in all the Burmese fisheries, and had expressed an opinion that it was of somewhat doubtful expediency to subject to taxation an article which entered so largely into the food of the poorest classes, as did fish in British Burma. More than a year had since elapsed, the report of the Council's proceedings had been made public, and the Bill had been made generally known throughout the province to which it related. As no representations had been received from any private quarters, the Council might conclude, as the hon'ble mover of the Bill had told them, that no private rights would be interfered with, and that the interests of the public would not be injuriously affected by the Bill. Much stress had been laid on this point by the Select Committee on the Bill, and although he had a strong opinion that some clause should be inserted saving private rights in some more specific manner than was done in the section to which his hon'ble friend had just alluded, he had been induced, on these grounds, and on the assurance of the hon'ble mover that no such rights now existed in the province, to affix his signature to the report recommending that the Bill be passed. Since the presentation of the Committee's report, however, his hon'ble friend had placed in his hands the whole of the correspondence which had passed in connection with the measure. He found from these papers that, although there was considerable difference of opinion as to whether certain rights in some fisheries were not conferred on certain individuals by the Native Government in former years, and as to whether any such rights were in existence at the period of the British accession, there was no doubt whatever that these rights were invariably exercised subject to the State's demand for revenue, and that the receipts from fisheries had always formed not a very inconsiderable item of revenue in British Burma both before and after the annexation. It was clear then that the Bill did not inaugurate a new taxation, as MR. DALYELL was at one time disposed to believe, but that it merely gave legal sanction to an existing impost. He used the word "impost" advisedly, because, after reading the correspondence, he was quite unable to concur with the hon'ble Mr. Bayley, who on the last occasion on which the Bill was discussed seemed to think that the only question raised by the Bill was a question of property and not of taxation. He could not believe that any private right had ever been put forward to the deep-sea fisheries, and if such right was ever asserted by the State, it must have been in the exercise of its power of taxation and not of its ordinary rights of property. He also found from these papers that the only public right affected would be the right to take fish for domestic consumption from the State fisheries. The balance of evidence on this point was, however, decidedly in favour of the view that this right was conferred for the first time in 1864, and then only as a privilege under the fishery-rules published by the Chief Commissioner. He could quite understand, as the hon'ble mover had told them, that such a privilege had led to constant quarrels, litigation and crime, and he believed that a wise discretion had been exercised in withdrawing this privilege in the new rules framed three years ago. The Bill merely legalized these new rules, and it was satisfactory to know that, whereas, under the old rules, numerous complaints were made against the settlements, under the new rules but few appeals had been received, and these had referred, not to the provisions of the rules, but to the breach of those provisions. Then, as a measure of conservation, the Bill would very much improve the fisheries, and he should be glad to see these sections of the Bill put in force throughout the whole of British India. At the same time he still thought that the provisions of the Bill were somewhat restrictive of the growth of private rights, and that any such restrictions were objectionable in a province which, as it was expressed by his hon'ble friend Mr. Sutherland, had a great commercial future before it. MR. DALYELL could not believe that persons would not hesitate to invest capital in land, if they were aware that under the law the Government, or the lessees of the Government fisheries, had a right of property in all tanks, lakes and rivers within the boundaries of their purchase, and of course, also, a right of way over such lands to exercise their right of property. Therefore he should have been glad to see some provision in the Bill to meet such cases as these, and,

as he had already stated, to preserve any possible existing private rights. At the same time, although he believed that the powers taken were somewhat more arbitrary than was necessary, he was satisfied that they would be exercised with judgment and moderation by his hon'ble friend, with whom would rest the responsibility of carrying out the provisions of the Bill.

The Hon'ble MR. SUTHERLAND asked permission in one word to concur in what had fallen from the hon'ble Mr. Dalyell. When the hon'ble Mr. Hobhouse introduced the Bill, MR. SUTHERLAND ventured to take exception to the assertion in the preamble, namely, "that the exclusive right of fishing in British Burma by the custom of the country belongs to Government." He was bound to say, however, that he had nowhere seen that assertion disproved. He was therefore now ready to accept the preamble as correct, and he accordingly did not feel justified in offering any opposition to the Bill being passed.

With regard to the restrictions in the Bill, he certainly agreed with the hon'ble Mr. Dalyell, but he hoped that the rules which might be issued would be framed in a liberal spirit, and with due regard to existing private rights.

The Hon'ble MR. BAYLEY wished to add a few words in explanation, in regard to what had fallen from his hon'ble friend Mr. Dalyell; for although he did not think the point was one deserving particular attention at this stage of the Bill, he wished to put himself right with the Council as to what he had before said respecting the right of taxation. The question was a question of name and not of substance. Whatever name might be given it, there could be no question that any private person who had the property would get from the fishery at least the same amount of revenue as the Government derived. The question was, not whether this impost should form part of the cost of production, but whether it should go into the hands of the Government or to private individuals.

As regards what his hon'ble friend Mr. Dalyell had said of deep-sea fisheries, MR. BAYLEY thought as a matter of fact it would be found that a great portion of these deep-sea fisheries were fisheries requiring the occupation of a portion of the fore-shore, and the proprietors of the fore-shore where the fishery was carried on could levy the same tax as the Government. He had no doubt that the owners of the land would require at least the same sum for this privilege as the Government where it was the proprietary. Therefore, as a matter of fact, it did not signify whether the impost was called a tax or revenue; it did not affect the consumers of the fish who had to pay it in some shape or other.

As regards the other provision of the Bill to which exception had been taken, it had been distinctly proved that, if there ever were some ancient grants of fisheries, they were resumed by the reigning dynasty whom we found in Burma; a few grants had possibly been made by that later dynasty, but this was doubtful, and at any rate all those grants were disused, and had become extinct by prescription since our occupation of the country some twenty years ago. As a matter of fact there were no existing rights except those conferred by grants of the British Government, which were expressly saved by the Bill. And as respects the future, the Government had the full option of making grants in any shape it liked, and of making grants of the fisheries either separately or with the land; whether or not the right to fisheries was included hereafter in a particular grant of land was a question for the grantee to see to when he got his grant.

The Hon'ble MR. HOBHOUSE said, as this Bill was in his charge in the early stages, and as before it went into Committee he had expressed some degree of sympathy with the doubts thrown out by his Hon'ble friends Mr. Dalyell and Mr. Sutherland, he wished now to express his entire concurrence with them in thinking that those doubts had been removed. The important part of the Bill was the preamble. If the rights asserted in the preamble belonged to the Crown, then all the rights and powers given to the Government might justly be taken; there was a basis of justice for the whole Bill, and the only remaining question was one of expediency—a question which it must be

for the Local Government to decide from time to time as the law was found to work. He considered that the statement contained in the preamble had been proved as satisfactorily as could be expected on such a subject by both positive and negative evidence. It was most useful that such doubts should have been expressed openly in Council, because the attention of those interested had by that means been called pointedly to the matter. The attention of the local officers had been called to the point, and they had with one accord expressed the opinion that the right to these fisheries belonged to the Crown. The attention also of private individuals had been called to the point and yet not a single person had come forward with any exception to the correctness of the statement in the preamble. MR. HOBHOUSE thought, therefore, that we might safely go forward with this Bill.

The Motion was put and agreed to.

The Hon'ble MR. EDEN also moved that the Bill as amended be passed.

His Highness THE MAHÁRÁJÁ OF VIZIANAGRAM entirely concurred with the hon'ble Mr. Dalyell that it was always a difficult matter with regard to deep-sea fisheries to limit the exact boundaries of such fisheries, because the fishermen residing at the sea-port were in the habit of going out several miles into the sea for such purpose, where by means of large nets they caught several maunds of fish of all sizes. Therefore, as regards the catching of fish in deep-sea waters and in large rivers, it was difficult for the local authorities and the officers of Government to investigate the rights of private individuals. No doubt the right of the Crown to levy taxation was one of the important rights which the Government must have. If the Council passed this Bill into law, he was sure, from the experience and judgment of his hon'ble friend Mr. Eden and from what had fallen from other hon'ble members, that every justice and consideration would always be shown to the private rights of individuals, and HIS HIGHNESS had no doubt that this Bill would prove effectual in every respect.

The Hon'ble MR. EDEN might venture to remark that the view of the Hon'ble Mr. Bayley as to the general existence of a practice of raising revenue by making demands on fishermen for the use of lands in the neighbourhood of fisheries was quite correct; the right was exercised by landlords and zamíndárs along the whole coast of India. He was in a position to state that it was extensively exercised by the zamíndárs in Bengal. Last year, when coasting along the shore, he went beyond the limits of his own jurisdiction to a portion of the territories under the control of his hon'ble friend Sir Richard Temple, and he heard complaints of extortionate taxes being levied by the zamíndárs in Chittagong upon sea-fisheries: he found that the practice was to levy a heavy tax in the form of land-rent from persons repairing nets, hauling up boats, and curing fish. Many of the lessees of fisheries in British Burma occupied large pieces of land, and cured fish in such quantities as to supply the whole of Upper Burma, and a great deal of it also went into China, and they paid nothing for the right conferred, beyond the tax on their traps and nets. In Burma, where there were no zamíndárs, the State exercised the right which was recognized elsewhere as belonging to the owner of the land.

Further, as to the fears which had been expressed regarding the discouragement of investments in landed property in consequence of the declaration of the right of the Government to the fisheries in British Burma, he (MR. EDEN) would point out that in all grants of land already made by the Government, that right was distinctly reserved in the Bill, where it was provided that "nothing herein contained shall prejudice or derogate from any express grant of a right to fish heretofore made by the British Government." Consequently, when any person had taken such a grant, his right to fish would not be infringed; and in future a person in taking a grant of land would be in a position to make his own terms. If he desired also to have the right to the fisheries within his land, he could stipulate that his grant should include a grant of all the fisheries. The right to raise revenue from fisheries was not compulsory, but permissive, and it would be in the discretion of the officers of

the Government to state that a grant should include the right to the fisheries contained in the land, or otherwise: there was nothing to prevent any person from acquiring the full benefit of all rights to the fisheries in his land.

The Motion was put and agreed to.

BURMA LAND REVENUE BILL.

The Hon'ble MR. EDEN introduced the Bill to declare the law relating to interests in land and to regulate the assessment and collection of land-revenue, capitation-tax and other taxes in British Burma, and moved that it be referred to a Select Committee with instructions to report in two months.

The Bill had now been prepared and submitted to the members of the Council, and it would be seen that there was nothing in it which laid down any new right, or altered in any way the rights of the people in regard to the land, with one slight exception to which he should presently refer. The only question which had arisen in preparing this revision of the land-revenue system was the right of the people to the soil. There was no question as to the real position of the cultivator in regard to his fixity of tenure. Everybody admitted that he had practically, after twelve years' occupation, a full and complete title without any interference except as to the variation of his rent. But there was a difference of opinion as to what they should be called, whether proprietors, tenants, or occupiers. This difficulty had been got over by adopting a term which was neither the one nor the other, and calling such a cultivator a "landholder." The right given was that which every one agreed they possessed, and which it was desired to continue to them. Sections 6 and 7 of the Bill provided that any person who had been in possession of any culturable land for twelve years continuously became a landholder, and as a landholder obtained a complete right to the land, which he could sell or pass in succession to his heirs, subject to the rate of assessment on the land fixed from time to time.

The alteration to which he had alluded as having been made in the present system was stated in the following sections of the Bill, which related to the relinquishment of his land by a landholder. As MR. EDEN had explained the other day, great difficulty arose from persons leaving their lands and returning after long absence and claiming to be placed in fresh occupation to the exclusion of the temporary owner. Under the Bill as drawn, the right was curtailed so far, that within a certain period after the Act coming into force, any person desiring to leave his land with retention of his right to re-occupy the land, must go through a certain form and give notice of his wish to retain that right to come back to the land at a future time, which must not exceed twelve years from the date of relinquishment. That was the only alteration in the present system made in the Bill. The rest of the Bill was taken up with giving formal effect to the rules at present in force in British Burma. The Settlement Rules were, it would be seen, very simple. Provision was made for the grant of waste-lands and their exemption from revenue whilst they were being brought into cultivation. The procedure had been left in great measure to be determined by rules to be framed under the Act, but in so far as it was defined in the Bill, it gave effect to the procedure now in force, and kept it in as simple a form as it could possibly be.

With regard to the other taxes provided for in the Bill, none of them were new: they were all taxes which had been in force for many years, and were regulated under rules which had not had the full force of law. As the Bill was drawn it met all the requirements of the case, and would give satisfaction to the people and the officers entrusted with the collection of the revenue.

The Motion was put and agreed to.

The Hon'ble MR. EDEN moved that the Bill be published in the *British Burma Gazette* in English and in such other languages as the Chief Commissioner may direct.

The Motion was put and agreed to.

BURMA LABOUR CONTRACT BILL.

The Hon'ble MR. HOBHOUSE moved that the Hon'ble Messrs. Inglis and Eden be added to the Select Committee on the Bill to regulate the transport of Native labourers in British Burma, and their employment therein.

The Motion was put and agreed to.

The following Select Committees were named:—

On the Bill to consolidate and amend the law, relating to the Procedure of the Courts of Civil Judicature——The Hon'ble Messrs. Bayley, Inglis and Dalyell, His Highness the Mahárájá of Vizianagram, the Hon'ble Sir Douglas Forsyth and the Mover.

On the Bill to declare the law relating to interests in law and to regulate the assessment and coliection of land-revenue, capitation-tax and other taxes in British Burma——The Hon'ble Messrs. Hobhouse and Bayley, the Hon'ble Sir W. Muir, and the Hon'ble Sir Douglas Forsyth and the Mover.

The Council adjourned to Tuesday, the 2nd March 1875.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA,

HOME DEPARTMENT.

AGENCY FOR THE CONDUCT OF THE JUDICIAL AND EXECUTIVE ADMINISTRATIONS OF THE PUNJAB.

No. 296, dated Fort William, the 27th February 1875.

From—A. P. HOWELL, ESQ., Offg. Secretary to the Government of India.

To—T. H. THORNTON, ESQ., D. C. L., Secretary to the Government of the Punjab.

I AM directed to acknowledge your letter No. 2528, dated the 25th June 1873, recommending, with certain modifications, a scheme framed by a Committee of several local officers for providing an adequate agency for the conduct of the Judicial and Executive administrations of the Punjab.

2. Concurring with the Committee's conclusion that it is not at present desirable to effect a complete separation between the Judicial and Executive services in the Punjab, the Governor General in Council has adopted, with a few alterations that are explained below, the modified scheme recommended by the Lieutenant-Governor in order to reinforce the weak points of the existing Judicial agency. The revised Establishment now sanctioned with the approval of the Secretary of State for India is detailed in the annexed statement, and involves an additional charge of Rupees 2,05,890 per annum as shewn in the annexed schedule.

3. As regards the lower Courts of original jurisdiction, the Lieutenant-Governor's estimate of the number of Munsifs and additional Extra Assistant Commissioners has been adopted, and the appointment of ten more Extra Assistant Commissioners and of 74 Munsifs may, therefore, be made. The total number of Extra Assistant Commissioners should be graded in seven classes as shewn in the statement appended to this letter; this arrangement produces a saving of Rupees 200 a month as compared with the Lieutenant-Governor's scale. The 74 Munsifs will be arranged in grades by the Punjab Government, the aggregate cost of their salaries not exceeding Rupees 11,840 per mensem; and in case the Ministerial Establishment proposed by His Honor for the Courts of these officers should prove to be inadequate, the Government of India have slightly increased the allotment on that account. The Government of India are not convinced of the propriety of abolishing any considerable number of Naib Tehsildars; but as the new scheme will at any rate greatly reduce the responsibilities of this class of officers, the pay allowed to some of them may to some extent be diminished. The sanctioned scale provides 122 Naib Tehsildars at a total cost of Rupees 5,000 a month, and the Lieutenant-Governor can divide them into grades with salaries of Rupees 30, 40 and 50 per mensem. The reduction proposed in the number of Small Cause Courts is sanctioned.

4. The plan proposed by the Committee for affording relief to the Civil Appellate Agency is to attach Judicial Assistant Commissioners to certain District Courts, and to concentrate upon those Courts the greater part of the appellate business by extending their appellate jurisdiction to suits of the value of Rupees 1,000. Within this limit, the only appeals that would go to Commissioners under the proposed plan would be from the orders of the Judicial Assistants and Deputy Commissioners themselves in their original jurisdiction. And as a vast majority of the suits in the Punjab are valued below Rupees 1,000, the natural incidence of almost all the appeals would be upon District Courts. As this change would also greatly relieve the Commissioners; the Committee would abolish the two existing Additional Commissioners, keeping a Sessions Judge at Peshawar. This part of the Committee's scheme is supported by His Honor the Lieutenant-Governor. But the scheme here involves an alteration in the appellate system established by law; for at present the appellate jurisdiction depends on the grade of the Court originally trying a suit, and the district appellate jurisdiction is thus limited to suits of a money value of Rupees 500. The Government of India do not think it expedient to raise this limit to Rupees 1,000. They are reluctant to make any change in the law which would shift down-

ward on to the districts some of the appeals which now go to the divisional Courts, more especially as the Committee propose to transfer the jurisdiction up to Rupees 1,000 not only to Deputy Commissioners, as in Oudh, but also to Judicial Assistants. The distinction as to grades of Subordinate Courts being removed for purposes of appeal, it may and probably will follow that appeals from the decrees of one Assistant Commissioner will constantly be heard by another Assistant* Commissioner of not much higher standing or greater experience. And although it is part of the plan to reserve the more important cases for the superior original Courts, yet the tendency under pressure of work will be to make over to the minor Courts all suits within their competency. There appears some reason to apprehend that in this way the decrees in appeal of the District Courts may come to be wanting in weight and authority; and that the use of appellate revision by Commissioners as a means of superintending the working of the lower Courts would be lessened. These considerations tell against enlarging the appellate jurisdiction of the District Courts beyond what is absolutely unavoidable for the proper distribution and disposal of business.

* As Judicial Assistant.

5. Moreover, it does not seem plain that the enlargement from Rupees 500 to Rupees 1,000 of appellate jurisdiction is much needed. The number of suits between those values is small, and the appeals would make no great difference either way. The real distribution of the burden of appellate work must still be determined, not by value, but by the use which the Deputy Commissioners make of their discretionary power to allot original suits, according to an estimate of their importance, either to the subordinate or to the superior Courts of their district. If the bulk of the original business is unimportant, as it certainly is of low money value, it can now be easily disposed of by the Subordinate Courts under the new scheme which adds largely to the lower grades of Judges. The result will be that the bulk of appeals will go to the District Appellate Courts, which also are now to be considerably strengthened. And thus the Commissioners will have been sensibly relieved without the necessity of altering the money limit (Rupees 500) of district appellate jurisdiction. If, on the other hand, there are a great many important cases which must be reserved for trial by the chief original Courts, from whom an appeal must always go to the Commissioner, then the work of the Commissioners can be lightened by no shifting of money limit; but in that event the eventual remedy must necessarily lie in strengthening the higher Appellate Courts.

6. It seems impossible, however, to frame any permanent estimate of the proportion in which the appellate work will still fall to Commissioners, so long as the calculation must mainly rest upon the probable discrimination to be made by Deputy Commissioners between important and unimportant cases. It is understood that the general rule of the Civil Procedure Code, that every suit shall go to the lowest Court competent to try it, will be observed ordinarily, and that the numerical augmentation of primary Courts now to be made by this scheme will much facilitate observance of this rule. For the rest, if Commissioners are found still to need relief, the Government of India will be prepared to consider the manner in which it must be given. They are, therefore, not disposed to alter the existing money limit of appeals to District Courts. But the appointment of a Civil and Sessions Judge to Peshawar on a salary of Rupees 2,250 a month, and the grant to 23 Judicial Assistants of the allowances specified in the annexed statement are sanctioned. Steps will immediately be taken to make the necessary amendments in the Punjab Courts Act to enable the Lieutenant-Governor to carry out the new scheme in its entirety.

7. A copy of the Secretary of State's despatch* approving the scheme as modified by the Government of India is enclosed; and I am to request the submission of a report on the subject of the reduction proposed to be made in the Police expenditure of the Province in the letter under acknowledgment. All reductions should proceed *pari passu* with the increases now sanctioned.

G. H. D. WALKER,
Offg. Asst. Secy. to Govt., N.-W. P., P. W. D., Irrigation Branch.

ALLAHABAD,
The 3rd Feb. 1875.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 4th MARCH 1875.

GENERAL REMARKS.—Little rain during the week is reported. Showers fell in Khandesh, a few districts of the Central Provinces, in Jhansi and at Hazaribagh. In the Punjab a copious fall is reported from Dera Ismail Khan, and a fair amount fell in Peshawur. Elsewhere the returns are blank. The *rabi* harvest is drawing to a close in Bombay, where the outturn is fair, except in Khandesh: and in Bengal, where the result has been above the average. It is commencing in the eastern half of the North-Western Provinces with good promise. Further damage from the hail of last week in Rohilkhand and Jhansi is reported.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Mar. 4th)	*Nil*	Unharvested crops fair, cotton yielding half to three-quarters; markets well supplied locally; prices tending to fall; fever and mild small-pox continue; cattle unhealthy; dry fodder sufficient.
Kurnool (3rd)	„	Season favourable; crops good order; white jonna, wheat, and pulses harvested; outturn generally fair; markets well supplied; prices falling in Nundial and Sirwell, elsewhere stationary; water and pasture abundant; fever prevalent; cattle disease in four taluqs; no water over Sunkesala anicut.
Tanjore (4th)	„	Rivers almost dry; water in tanks scanty; no water over anicut; no wet cultivation; that of a few dry crops continues in some parts; crops good order; wet and dry crops being harvested; yield satisfactory; markets well supplied; prices falling; small-pox in some parts; one death from cholera in Coombaconum; cattle disease in two taluqs; pasture sufficient.
Trichinopoly (3rd)	„	Water-supply becoming scanty; crops good order; outturn up to average; public health on the whole good; pasture deficient.
Malabar (4th)	„	Harvesting of second crop completed; outturn good; markets well supplied; prices show tendency to increase; small-pox prevalent; fever in some parts; cattle disease slight in Walluvanad; pasture withered.
		General Remarks.—General prospects satisfactory.
Bombay— (Mar. 3rd)		
Sindh.		
Kurrachee ...	...	Fever continues; weather getting warmer; no other change; small-pox imported into the town of Kurrachee from Kutch and in the taluka of Shahbunder.
Shikarpur ...	...	Rabi prospects continue very good; weather much warmer; public health good; increased disease among cattle.
Hyderabad ...	...	Weather warmer; slight rise in the river; state of crops same as before; sickness continues.
Upper Frontier ...	...	Weather fair; state of crops same as before.
Gujarat.		
Ahmedabad ...	...	No change.
Surat ...	...	
Broach ...	...	Crops reaped, excepting wheat and tuwar in some places; cotton-picking progressing; fever continues in Ahmod and has caused deaths in some cases.
Kaira ...	...	Cotton and other crops good; weather getting warm.
Khandesh and Nasik.		
Khandesh ...	·16 at Edlabad and ·18 at Chalisgaon.	Cotton market active; rate 50; ginning work diminishing; cattle disease continues; state of crop and public health same as before.
Nasik ...	...	No change.
Konkan.		
Tanna ...	...	Days hot and sultry; nights cool; public health good; measles in Tanna; slight fever in Dhanoo, Shahpur, and Moorbaur talukas; and cough in Dhanoo; rabi crop good in Shahpur, Bhewndy, and Bassein, middling in Wada, Moorbaur, Cullian, and Kurjut talukas.
Deccan.		
Poona ...	...	Outturn of rabi crops as previously reported; weather continues hot; public health generally good.
Ahmednuggur ...	...	No change.
Sholapur ...	...	Slight cattle disease in Sholapur and Sangala; no change.
Satara ...	...	Harvesting of rabi crops in progress; weather hot; ague in Pahtun.
Southern Mahratta Country.		
Belgaum ...	...	Reaping of rabi crops in progress; cotton doing well; public health good.
Dharwar ...	...	State of crops same as before: public health improving.
Kanara ...	...	Second crops continue satisfactory, and in ears in some places; slight fever and cattle disease general; a severe outbreak of small-pox in Bhatkhal.
Kaladgi ...	...	Rabi crops being harvested in some villages; wheat and gram specially good; cotton middling; public health improved.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	State of crops same as before; weather hot; public health good.
Wudwan ...	...	Weather getting warm; no other change.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Baroda ...	...	Cotton-picking continues; rabi prospects and public health good.
		General Remarks.—The hot weather approaches, and the rabi harvest, except in Sindh, will soon be over; they are generally good, except in Khandesh.
Bengal—		
Burdwan ...	...	No change in the weather or prospects of the crops. Cold-weather crops being harvested.
Bankura ...	...	Weather fair and getting warm. Some boro or spring rice has been sown in the north and south of the district. Wheat and gram coming to maturity.
Beerbhoom ...	...	Bright and cool for the season. State and prospects of the crops continue good.
Midnapore ...	...	Weather dry and rapidly getting hot; no change in the prospects of the crops.
Hooghly ...	...	Clear throughout; wind chiefly from south. Cold-weather crops are nearly reaped; yield pretty fair. Water rather scarce.
24-Pergunnahs ...	...	Weather rather warm. Cold-weather crops are being gathered.
Nuddea ...	...	Very hot early in the week, but cooler the last day or two. Crop prospects generally good. Indigo very promising in Ranaghat. Prices much as before.
Moorshedabad ...	...	Weather fine and warmer. State and prospects of the crops good.
Dinagepore ...	...	Weather fine and warm. State and prospects of crops good. Lands in some places begun to be broken up for bhadoi or early crops.
Maldah ...	...	The days are warmer, with occasional westerly winds; nights are still cool. A fair harvest of cold-weather crops is expected, but the mustard crop has in some places fallen short. Boro or spring rice is being sown.
Rajshahye ...	...	Return not received.
Rungpore ...	...	Very little change in the temperature. The two last days there has been a strong west wind during the great part of the day. The winter crops are being cut. Mustard does not turn out as well as last year, and the other crops are good.
Bogra ...	...	Weather fine and getting hot. A good crop has been reaped, and the crops not yet reaped are healthy.
Pubna ...	...	Fine, cool, and seasonable weather. Harvesting of mustard finished, and the outturn is tolerable. The prospects of motore, khesarie, &c., pulses continue good. Sowing of cheena millet completed; and in some places the seedlings are above the ground.
Jalpáiguri ...	...	Weather getting warmer. Prospects of crops are satisfactory.
Dacca ...	...	Seasonable weather, rather cooler than usual. Crops very favourable.
Patna ...	...	Mornings and evenings still cool, but hot in the day. The harvesting of the cold-weather crops have now commenced, and the yield is expected to be considerably above the average.
Gya ...	...	Seasonable weather. The prospects of the cold-weather crops continue excellent. In some places peas are being gathered.
Durbhanga ...	...	Seasonable weather. Prospects of the crops generally favourable.
Shahabad ...	...	Seasonable weather. Cool in the mornings and evenings. State and prospects of the crops are very good. Cold-weather crops promise to yield a full harvest. Opium is being extracted from the pods; the yield will be good this year.
Mozufferpore ...	...	Fine weather; prospects of the cold-weather crops are excellent up to date.
Sarun ...	...	Weather fine, clear, and seasonable. West wind (favourable to the cold-weather crops) prevailing. The prospects of the cold-weather crops are generally favourable. Wheat and barley are fast ripening; peas, mustard, moosoor pulse are being harvested. Rahur pulse doing well; poppy heads are being tapped. Sugarcane cuttings are being put into the ground. Indigo fields are ready for sowing. Prices fluctuating. New peas, moosoor, and khesaree pulses are coming into the market in small quantities.
Chumparun ...	...	Hot during the day; morning and evening cool. Cold-weather crops growing well, and if there be no hailstorm for a month, or even a fortnight, there is every prospect of the cultivators reaping more than an average harvest. The lancetting of poppy pods at several places has commenced, and the cultivation of opium is estimated at 14 annas. The season is also good for all the other crops, and indigo sowings.
Monghyr ...	...	Weather fine, with strong westerly winds. State and prospects of the crops are good.
Bhágalpur ...	...	Cold-weather crops are finer than have been seen for many years.
Purneah ...	...	Seasonable weather, with strong westerly winds. State and prospects of the cold-weather crops are good.
Sonthal Pergunnahs ...	...	Weather fair, but little hot during the day. State and prospects of the crops continue excellent.
Cuttack ...	...	Weather growing hotter every day. Cold-weather crops now being reaped with fair outturn. Sugarcane and tobacco promising well.
Balasore ...	...	Weather warmer, and at times threatening. Agricultural operations at a minimum. Prices steady. Deaths from cholera in the north of the district.
Lohardugga ...	...	Cloudy weather during the early part of the week, afterwards clear with strong westerly wind.
Maunbhoom ...	...	Favourable weather. The barley and wheat crops promise to give a fair yield.

PUBLIC HEALTH.

Burdwan: cholera has appeared at Culna. Midnapore: cholera continues bad both in the south and north-east of the district. Hooghly: small-pox and cholera in places. 24-Pergunnahs: cholera still prevailing in thannas Muthurapore, Sultanpore, and Bankipore; fever and cholera decreasing at Barripore. Nuddea: cholera reported in Bongong and Ranaghat. Pubna: small-pox reported from Pubna police station. Furreedpore: general health good. Patna: health of the district good. Gya: health of the district good. Mozufferpore: public health good. Sarun: general health good. Bhágalpur: general health very good. Cuttack: public health good. Balasore: deaths from cholera in the

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*			north of the district. Hazareebagh: small-pox still continues, but cases are few and far between. Lohardugga: general health good. Chittagong: small-pox prevails amongst cattle to some extent. *General Remarks.*—The weather has been seasonable throughout the week, but is getting hot. No rain reported, except a light shower at Hazareebagh. The state and prospects of the cold-weather crops continue favourable. Harvesting is drawing to completion, and lands are being prepared for the next crops. Water is becoming scarce in parts of Hooghly.
N. W. P.—			
Benares	(Mar. 3rd)	...	No change.
Mirzapur	„	...	Harvest begun for wheat, barley, and peas; cereals generally above average; about twenty-five per cent. of peas, gram, and masur lost by frost; arhar above average, except on uplands; crops in Chakia less satisfactory.
Allahabad	„	...	Harvest begun; everything most promising.
Hamirpur	(4th)	...	Weather dry and seasonable; no change.
Jhansi	(3rd)	·3 to ·6	Crops in eight villages completely destroyed by hail on 23rd ultimo.
Agra	„	*Nil*	Prospects good.
Moradabad	(1st)	...	Damage done by hail in a cluster of about fifty villages.
Bareilly	(3rd)	*Nil*	Crops in sixteen villages much injured last week by hail.
Punjab—			
Delhi	(Mar. 3rd)	*Nil*	Crops progressing fairly; health good.
Hissar	„	„	Crops doing well, but rain wanted; health generally good; small-pox still in Hissar and Rohtak; a few cases of rinderpest still in latter district.
Umballa	„	„	Crops and health good.
Jullundur	„	„	Crops much improved; health good.
Lahore	„	„	Crops and health good.
Mooltan	„	„	Rain wanted; crops average; health good.
Dera Ismail Khan	„	...	Copious fall of rain; quantity not stated; harvest prospects very good; health good.
Rawul Pindi	„	*Nil*	Harvest prospects and health good; cattle disease continues.
Peshawar	„	·7	Probable outturn of harvest below average; health good. *General Remarks.*—Harvest prospects fair; health of province generally good.
Oudh—			
Lucknow	(Mar. 3rd)	*Nil*	Prospects of crops favourable; wheat and barley ripening; weather fair; public health good.
Fyzabad	„	„	
C. Provinces—			
Upper Godavari	(Feb. 27th)	...	Weather warm; jowar gathered in; small-pox continues; prices easy.
Bilaspur	...	·1	Prospects good; small-pox prevalent; prices steady.
Sambalpur	...	....	Crops cut; small-pox prevalent.
Raipur	(Feb. 28th)	...	Weather clear; rabi excellent; health good; prices easy.
Chanda	...	...	Few showers of rain; prospects of crops fair; cattle disease continues; prices falling.
Chhindwara	(Mar. 1st)	·7	Cotton-picking completed; poppy damaged by frost; other crops well; health good; prices easy.
Balaghât	...	1·25	Threshing rice continues; rabi being cut; health good; prices steady.
Bhandara	(Mar. 2nd)	...	Weather clear; rabi crops promising; fever and small-pox prevalent; prices easy.
Nagpur	(3rd)	...	Weather warm; crops cut; health good; cattle disease continues; prices rising.
Narsingpur	...	...	Prospect of crops good; small-pox prevalent; prices falling.
Saugor	..	...	Weather clear; hot winds; rabi promising; small-pox continues; prices unchanged.
Seoni	...	·35	Rabi crops cutting.
Nimar	...	...	Cutting of rabi crops commenced; small-pox and cattle disease prevalent.
Jubbulpore	...	...	Weather clear; prospect of crops good; small-pox and cattle disease continue.
Wardha	...	...	Rabi crops cut; small-pox continues.
Damoh	(Mar. 4th)	·25	Prospect of crops good; small-pox declining.
Mandla	...	..	Prospect of crops good; prices stationary.
Hoshangabad	...	...	Prospect of crops good.
Betul	...	·17	Crops injured by hail. *General Remarks.*—Prospects continue favourable; weather sensibly warmer.
Rajpootana—			
Deolee	(Mar. 3rd)	*Nil*	Prospects and health good.
Bhurtpore	(4th)	...	Crops and health satisfactory; weather seasonable.
Ajmere	„	...	No change; weather seasonable; crops good.
Jeypore	„	...	Agricultural prospects favourable; public health good; weather much warmer.
Central India—			
Indore	(Mar. 3rd)	*Nil*	Health and agricultural prospects continue good in Central India.
Gwalior	„	„	
Neemuch	„	„	
Rutlam	„	·03	
Mysore and Coorg—			
Mysore	(Mar. 4th)	*Nil*	Crops thriving; cattle disease prevalent in parts of three districts; public health generally good.
Coorg	„	„	*General Remarks.*—Agricultural prospects good.
Assam—			
Sylhet	(Mar. 4th)	...	Small-pox and cattle disease still prevalent; weather getting warmer; rain wanted.
Gauháti	„	*Nil*	Dry, hot south-west winds prevalent; nights clear and cool; prospects of crops favourable; public health good.
Hyderabad Assigned Districts—			
Omrawti	(Mar. 4th)	...	Rabi reaping nearly completed; outturn fair.

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 2nd March 1875.

PRESENT:

His Excellency the Viceroy and Governor-General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
His Highness the Mahárájá of Vizianagram, K. C. S. I.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.

HIGH COURTS CRIMINAL PROCEDURE BILL.

The Hon'ble MR. HOBHOUSE presented the final Report of the Select Committee on the Bill to regulate the Procedure of the High Courts in the exercise of their Original Criminal Jurisdiction.

PRESIDENCY TOWNS POLICE MAGISTRATES BILL.

The Hon'ble MR. HOBHOUSE asked leave to postpone the presentation of the final Report of the Select Committee on the Bill to extend certain parts of the Code of Criminal Procedure to the Courts of the Police Magistrates in the Presidency Towns and to increase the jurisdiction of such Courts.

Leave was granted.

PORT-DUES BILL.

The Hon'ble MR. HOBHOUSE also presented the final Report of the Select Committee on the Bill to consolidate and amend the law relating to Ports and Port-dues.

INLAND CUSTOMS BILL.

The Hon'ble MR. ELLIS moved that the Report of the Select Committee on the Bill for regulating Inland Customs-duties on Salt and Sugar, and for other purposes, be taken into consideration. The Bill was substantially in the same form in which it was when it was presented to the Council, and the objects intended in bringing in the Bill had been, he believed, attained by it in its present shape. He had stated on a previous occasion that one object of the Bill was the consolidation of the existing law. That that object had been pretty well attained would be seen by reference to the schedule of enactments either wholly or partially repealed; a large number of Acts would be entirely repealed, and sections of several other enactments would be dispensed with.

The Bill had been arranged in six chapters, the first of which was preliminary, and contained definitions, some of which were new, and others modified previous definitions for the greater clearness of the subsequent sections. The second chapter referred to the business proper of the inland customs-line: it defined what was there called the customs-zone, which was a zone of country not exceeding fifteen miles along any portion of the frontier referred to in the Bill. There was one rather important modification of the existing law in reference to this zone. The Bill as now framed gave power to the Governor General to extend the area of the customs-zone, so as to include any portion of a railway, canal or navigable

river entering the zone, and brought under the same condition as the zone itself, such places in these railways, canals and navigable rivers as were places for loading and unloading dutiable goods into or from wagons or boats. The object was, not to increase the area of territory to be included in the customs jurisdiction, but to afford facilities to traders. It often happened that a railway-station where salt was loaded for despatch was outside the customs-zone. The salt was loaded for entry into the zone, and if there was not provision to enable the customs authorities to act at a place of loading outside the zone, the salt would have to break bulk in some place inside it. It would therefore be a great convenience to the traders to have a spot where the goods were loaded made a place where the customs-officers could act as within their own jurisdiction. This chapter explained the result of entering the zone, and showed how salt entering the zone was to be deemed to be imported, and sugar going out of the zone was to be deemed to be exported, and prescribed the several measures which the customs-officers could take under the rules to be framed by the Governor General in Council for regulating the collection of duties and the import and export of goods.

The third chapter related to the internal manufacture of salt and the manufacture and refinement of saltpetre. The latter was included only on account of the salt necessarily made in the course of the refinement of saltpetre. The Bill gave power to prohibit and to regulate by license the manufacture of salt and saltpetre, and prescribed certain rates of fees for licenses for such manufacture.

The fourth chapter dealt with fines and penalties: these penalties were chiefly based on the existing law. He might state that they were in no case enhanced; in some instances they were rendered in accord with similar clauses in the laws regarding excise.

The fifth chapter related to the powers of seizure, search and arrest. Here would be observed some additional restrictions, based on the provisions of the Criminal Procedure Code, in respect of searches in zanánás for property which had been stolen.

The sixth chapter contained merely some usual miscellaneous provisions.

MR. ELLIS thought that no further remarks on the details of the Bill were required. The measure, as had been previously stated, was a consolidation of the existing law, and an attempt to reduce to a compact and convenient form the existing enactments on the subject. He hoped that the Bill would not be a long-lived one, and that it would not remain many years on the Statute-book; he hoped rather that, on an early day, the Government might see its way to abolish the customs-line altogether, and introduce a system which would be a permanent one, and under which all inland trade would be entirely freed from the inconveniences to which it was now necessarily subjected.

The Motion was put and agreed to.

The Hon'ble MR. ELLIS also moved that the Bill as amended be passed.

His Excellency THE PRESIDENT said :—"Before this Bill passes, I wish to say that I heartily agree with the wish that my friend Mr. Ellis has expressed, that this Bill may not remain long upon our Statute-book. It is the opinion of the Government of India that, in the first place, the present export-duty upon sugar manufactured in British territories, when it crosses the customs-line, is one of the worst of our present taxes, and one of the first which the Government would desire to take off. Secondly, we think that the customs-line itself is a great evil. It impedes trade, and it can hardly be supposed that the management of a long line of that kind—although I believe that the rules have been carried out with every care to prevent oppression of the people by the subordinate officials employed—can possibly be carried on without considerable pressure and inconvenience to those who are in the habit of crossing and recrossing the line. It is therefore, in the opinion of Government, most desirable that free trade should be established between the States which are now divided by the customs-line. We have been able already to remove the southern customs-line; but all those who have paid attention to the

subject know that the northern customs-line cannot be removed until arrangements are made with the Native States of Rájputána and Central India, where salt is produced. For, if the line was removed without such precautions, salt would be introduced into British territory without having paid the tax, and our salt-revenue, which in my opinion is one of the soundest sources of revenue in India, would be seriously affected. I am happy to inform Members of Council that I see hopes—indeed I may say that I anticipate with confidence—that arrangements may be made which will enable us to overcome this difficulty. One of the most distinguished of the Princes of India—the Mahárájá Holkár—is now on a visit to Calcutta. I have had the pleasure of some conversation with His Highness upon this subject, and I am happy to be able to say that, so far as the State of Indore is concerned, I believe we shall be able to make a satisfactory arrangement. Therefore, I will go somewhat further than my hon'ble friend, Mr. Ellis, and say, not only that I wish, but that I anticipate, that before many years have passed, this Bill will be removed from the Statute-book."

The Motion was put and agreed to.

MAJORITY BILL.

His Highness the MAHÁRÁJÁ OF VIZIANAGRAM moved that the Report of the Select Committee on the Bill to establish a uniform age of majority of persons domiciled in British India be taken into consideration, and said :—

"My Lord,—It may be remembered by the Council that, in the opinions received on the subject of this Bill from various parts of British India, there was a wish expressed by many persons of influence and experience that the period of nonage should be generally extended to the end of the twenty-first year. This matter has received the serious consideration of the Select Committee, and they have recommended that the third section of the draft Bill, as it last stood, be amended as follows :—

"'3. Subject as aforesaid, every minor of whose person or property a guardian has been or shall be appointed by any Court of Justice, and every minor under the jurisdiction of any Court of Wards, shall, notwithstanding anything contained in the Indian Succession Act (No. X of 1865), or in any other enactment, be deemed to have attained his majority when he shall have completed his age of twenty-one years and not before :

"'Subject as aforesaid, every other person domiciled in British India shall be deemed to have attained his majority when he shall have completed his age of eighteen years and not before.'

"The reasons which have induced the Select Committee not to extend the period of nonage beyond the time originally proposed, except in the case of wards of Court, are substantially the same as those which were given by my friend, the Hon'ble Mr. Hobhouse, in addressing the Council on the occasion of my having the honour to introduce this Bill. Although many have expressed themselves in favour of a uniform age of majority on the completion of the twenty-first year being established for all persons, I have considered it right to be guided by the opinion of the hon'ble members of the Select Committee, who, with far larger capacity and means of forming a judgment on the point than any to which I can pretend, have deemed it unadvisable to at once extend the period of minority so largely as would be the case for many classes were it raised to twenty-one generally. I confess that, so far as I can gather from the opinions which have been received on this matter from leading Natives of the country, and from what I have been able personally to ascertain from those of my countrymen who have favoured me with their views on the subject, I do not think that any substantial dissatisfaction would have been provoked by the measure if it had enacted that the age of majority should be twenty-one for all persons. On the contrary, I am inclined to believe that such an enactment would have met with the approval of the great body of intelligent and thoughtful persons throughout the country. I did not myself, in the Bill as first drawn, venture to propose a uniform age of majority at twenty-one, inasmuch as, at that time, I had not the advantage of knowing the opinions which have since been so influentially expressed on this point, and as all precedent of prior legislation in this country on the matter had put the age of majority at eighteen. Since the Bill was published, there has, however,

as is known to the Council, and as I have already stated, been a remarkable expression of opinion that advantage should be taken of this opportunity to raise the age at which majority is attained to at least twenty, if not twenty-one, years. My own experience fully coincides with that of those who deny that there is any such general precocity of judgment in the youth of this country as to make it expedient that they should be considered to be *sui juris* at an age much earlier than that recognized by any of the States of Europe in the cases of their own subjects or of residents in their home territories. In the case of minors who are wards of Court (or under the jurisdiction of the Court of Wards) the Select Committee is of opinion that it is undesirable to put them in the position of being able to deal in their own right with their property until they have completed the age of twenty-one years. It is perhaps difficult to see why the immaturity which is thus deemed a fitting reason to prolong the period of their legal incapacity to act, should be held to be peculiar to them, and on what grounds it can be urged that other persons are, as a body, fit to be trusted with the disposition or management of their property at an age three years earlier. The education of the minors thus excepted from the general rule of this Bill is looked after by Government; and so far as education and training go, it might be supposed that they would be more fitted to undertake the responsibilities of legal manhood at an earlier age than the body of the youth of the country. But as I have said, it is considered by the other members of the Select Committee that this question of the age at which majority shall be deemed to be attained should be dealt with in the manner proposed in the amended Bill, and to their greater experience and knowledge I willingly defer.

"The only other substantial alteration which has been made in the Bill by the Select Committee, is that in section 4 of the Bill as it now stands, as to the manner in which the age of majority is to be computed. The section as originally framed was in accordance with the English law on the point, which law proceeds on the principle that no notice is to be taken of fractions of a day. The amended section introduces a more obvious and simple mode of calculation, and will probably be approved by the Council.

"In conclusion, I have to express the deep obligations under which I am to my friend the Hon'ble Mr. Hobhouse, the hon'ble members of the Council, and to Mr. Whitley Stokes, for the great and invaluable assistance they have so kindly afforded me in the various stages through which this Bill has passed. It may truly be said that the Bill as it now stands is their Bill; and I cannot adequately express my sense of gratitude for the readiness and kindness with which they have, on every occasion, helped me in this matter with their invaluable advice. To the members of the Select Committee and to this Council, I, with due respect, offer my heartfelt thanks for the kind reception given to this Bill, and for the kind manner in which they have given their time to put this Bill on a sound basis, and for the sympathy, generosity, and support with which the members of this Council have befriended and encouraged me in the task I ventured to undertake. Without such support I could not have hoped to have brought the Bill to its present stage."

The Hon'ble MR. DALYELL said that, whatever view might be taken of the provisions of this Bill, he was sure that it must be a satisfaction to every member present that their hon'ble friend the Mahárájá of Vizianagram should have set so good an example in being the first of his countrymen to bring into this Council a measure of legislation, and that he should have selected a subject the importance of which his intimate knowledge of the wants of all classes of the people should have so well fitted him to understand, and which his experience as a member of this Council had enabled him to put into so proper a form. As representing the Presidency to which His Highness belonged, perhaps MR. DALYELL might be permitted to remind him that his proceedings here were watched by a large circle of friends, both European and Native, in Madras, and by not a few English friends, of older date, who, though no longer in this country, still retained a lively recollection of their agreeable relations with him, both official and private, in the District of Vizagapatam and other places; and MR. DALYELL was confident he only expressed the opinion of all of them when he said that no incident in his

Highness's long career, marked throughout by many acts of usefulness and benevolence, was more to his credit than the attitude he had assumed with regard to this Bill. His anxiety to transfer the conduct of the Bill to the Hon'ble Mr. Hobhouse, the Law Member of the Government, in accordance with what he supposed, MR. DALYELL believed incorrectly, to have been a suggestion of the Government of the North-Western Provinces, was as honourable to himself as were his subsequent endeavours so to frame the measure as to make it harmonize even with the prejudices of his fellow-subjects; and MR. DALYELL desired cordially to congratulate his hon'ble friend on having so successfully brought the Bill to its present stage. He trusted also that His Highness would have the satisfaction to see it passed into law to-day, and would be encouraged to proceed further in the path of reform, and, with the permission of His Excellency the President, to take up other subjects which were equally important, and in regard to which the law was in an equally uncertain condition. He might mention, for instance, the law of Adoption, which he was informed at present was to a large extent based upon decisions of British judges, rather than governed, as it should be, by the writings of the old Native authorities.

As to the Bill itself, he quite thought that an enactment of some sort should be passed to determine the age at which persons should be able to enter into legal obligations; and though he should have been glad to see that age extended to twenty-one in accordance with the opinion of a large number of persons who had addressed the Council on the subject, still the fixing it at the age of eighteen, with the provision that the age should be raised to twenty-one in most of the cases in which inheritance to landed property was involved, would be an immense improvement on the present state of affairs, and he had therefore great pleasure in supporting the Bill.

His Honour THE LIEUTENANT-GOVERNOR desired to say just one or two words to explain why he, for one, had special satisfaction in voting for this Bill. The class described in section 3 (namely, the minors under the jurisdiction of the Courts of Wards) was a very numerous and important class in Bengal, he believed more so than in many other Provinces in India. Very large estates were constantly being brought under the management of the Court of Wards, and they were managed greatly to the advantage of the ward and his family, and to the permanent advantage of the estates which came under their management. When it was necessary to make over those large estates and such very important interests to young Natives just at the age of eighteen, it was impossible not to feel anxiety for the ward and the estate. This anxiety would now be very much decreased by the prolongation of the period of minority to the completion of the twenty-first year. And further it was very satisfactory of course that this Bill should be introduced, not by any European colleague, but by a Native Member of the Council, who deservedly held so high a position in the estimation of his countrymen and whose authority would carry such weight as the Mahárájá of Vizianagram.

The Hon'ble SIR WILLIAM MUIR wished merely to make an observation in reference to the statement of his hon'ble friend, Mr. Dalyell, as to the supposed wish of the Government of the North-Western Provinces, that the charge of this Bill should have been transferred to the Hon'ble Mr. Hobhouse. The surmise must have been based on a misunderstanding; for he could say that it had given him sincere pleasure to see the Mahárájá taking so personal and active an interest in the work of legislation. During his (SIR WILLIAM MUIR'S) administration of the North-Western Provinces, he had had many opportunities, not only for expressing his thanks to the Mahárájá for his munificent liberality in the promotion of useful and benevolent projects, but also of observing the deep and intelligent interest taken by His Highness in the welfare and social elevation of his fellow-countrymen. No person, therefore, could be better qualified than he was for the task; and SIR WILLIAM MUIR cordially concurred in the hope that His Highness might go still further and prepare projects of law on other subjects which he was so well fitted to deal with.

As regarded the Bill itself, now that questions of marriage, adoption and religious customs were excluded, SIR WILLIAM MUIR had no objection to its passing into law.

The Hon'ble MR. HOBHOUSE said:—"Before this matter is disposed of, I wish to make a few observations in further explanation of the precise changes in this Bill proposed by the Select Committee, and of the broader changes which will be effected in the law if the Bill is carried in its present shape. The present law may be thus roughly stated, not accurately, but with enough accuracy for the present purpose. Hindús attain their majority, some at fifteen, and some at sixteen; Muhammadans at fifteen or the age of puberty, whichever happens soonest. If however a young Hindú or Muhammadan is under the tutelage of the Court of Wards or of any other Court, his nonage is prolonged until he completes his eighteenth year. European British subjects, whether having an Indian domicile or not, attain majority for general purposes when they complete their twenty-first year. But with respect to property taken by way of succession, all the communities to whom the Succession Act of 1865 applies attain majority on the completion of their eighteenth year.

"As the Bill was introduced into this Council, it aimed principally at the removal of these diversities of practice, and at the introduction of uniformity, as both its title and its preamble showed; and it proposed for all British Indian subjects alike, that the age of eighteen should, for general purposes, be the age of majority. But on the discussion which followed the introduction of the Bill, our late colleague, the Rájá Ramánáth Tagore, raised the question whether the age of eighteen was not still too tender an age, and stated his own opinion that nonage should be prolonged till twenty-one; and it was agreed that the question ought to be carefully considered in Committee. In point of fact the Committee found that, after the introduction of the Bill, there was only one serious subject of controversy, and that was whether the age of majority should be fixed at eighteen or at some later age. We were recommended in a great number of influential quarters to postpone the age to twenty-one, and were referred to many cases in which injury had occurred to young men by reason of their becoming masters of their property at too early an age. So it happened that, when we came to discuss these papers, the object of uniformity seemed to be less important than the object of framing a law suitable for the needs of Indian society. And we found that, if we prolonged the nonage of those who were wards of Court, though we should not altogether follow the recommendations of those who advocated the age of twenty-one, yet we should substantially satisfy their reasons and meet the cases of mischief which they adduced; while, at the same time, we should avoid so large a change as would be caused by altering the age from that of fifteen years, or less, to that of twenty-one.

"The broad result is that, setting apart the cases of successions and of European British subjects, we have provided that those who are now minors up to eighteen shall remain so up to twenty-one, and that others shall attain their majority at eighteen.

"It is true that, in shaping the measure thus, we are not going so far as the greater number of those interested in the matter would have us go. My hon'ble friend the Lieutenant-Governor of Bengal is an eminent instance of those who wish that the age of twenty-one should be prescribed for the whole community. The Government of Madras wish for the same thing, and so do a great many of the local authorities in that Presidency. Such Native gentlemen as the late Justice Dwárkanáth Mitra, and the members of the British Indian Association have advised us that eighteen is decidedly too low an age. Similar opinions prevail extensively elsewhere. I do not suppose that I am betraying any confidence when I say that such opinions were well represented in our Committee. In particular, Rájá Ramánáth Tagore (who, I am sorry to say, was prevented by illness from joining us personally) wrote a letter strongly urging us to raise the general age to twenty-one, and though he quite approves of the change we have actually made, so far as it goes, yet he would have been better satisfied if we had gone the whole way with him. My hon'ble friend, the Maháráját of Vizianagram, has just intimated to us in no obscure terms what his own opinion is. On the whole, however, we, or the greater number of us, came to the conclusion that it was better to require the age of twenty-one only of those who were wards of some Court. Our feeling is, I think, exactly expressed in a letter from the Government of the North-Western Provinces. It is there said:—

"'There has been a general feeling that if possible it would be better to make twenty-one the limit of minority. It seems clear to His Honour, however, that it would not be advisable to make so great a change all at once.'

"There is one consideration which must always be borne in mind in discussing this subject, and that is, that such a law is very rarely called into action except in the case of the richer classes. I do not indeed doubt but that, taking very long periods of time, a law fixing the term of nonage has a tendency to modify social habits and ideas according to the age at which that term is fixed. But to the great bulk of mankind in any country whatever, the attainment of legal majority is a matter of no particular moment. All the ordinary transactions of life are discharged according to the circumstances of each individual, whether he is legally *sui juris* or not. Therefore, on the mass of the community, such a law as this works very gradually and quite insensibly. It is amongst the class that possesses a substantial amount of property—a class that in every country must be small in numbers, though of great social importance—that such a law works immediately and visibly. As between father and son, as between guardian and ward, as between young heirs and the temptations that assail their youth, the change we propose is calculated to be directly operative. But here it seems to me that we walk on thoroughly safe ground. We are dealing with a class whose nonage, if their fathers are not living, is already prolonged beyond that of their neighbours, or liable to be so prolonged by a simple application to a Court of law. We are dealing with cases in which there will nearly always be property to be protected, and in which we know there is a responsible guardian to look after the interests of the ward. In these cases the change is not so great, and it is accompanied by the best guarantees that it will work smoothly and beneficially for those whom it affects. In the other cases, where there is no property, or where there is no guardian, we are content to raise the standard of age to that which is now appointed for wards, to efface most of the artificial distinctions that have sprung up between those who are entirely under the same law of Nature, and to say that, in the eye of the law, the Indian youth, whether he be a Hindú or a Muhammadan or of any other religion, shall be a minor until he has attained the age of eighteen years at least.

"If we may trust reasoning on general principles; if we may trust the experience of other countries; if we may trust the opinions we have received from a great variety of quarters in this country, we are proposing a beneficial change in the law; and I shall be surprised and disappointed if those who may now think we had better not interfere with such matters, do not, after a little time has passed, agree that we owe thanks to my hon'ble friend the Maháráját of Vizianagram for bringing this subject before the legislature".

The Motion was put and agreed to.

His Highness the MAHÁRÁJÁ OF VIZIANAGRAM moved that the Bill as amended be passed.

His Excellency THE PRESIDENT said:—"I wish to add one word to the observations which have been made with regard to this Bill, and to join with my colleagues in this Council in thanking the Maháráját of Vizianagram for the pains which he has taken in the preparation and introduction of the Bill, and for the manner in which he has met the suggestions and opinions of those who, although they agreed in the general objects of the Bill, had doubts as to some of the details. I agree with those who think that, in a matter of this kind, the Council should be very cautious, and therefore I believe the course taken by the Select Committee in fixing eighteen as the ordinary age for majority was wise, although at the same time there was much to be said in favour of raising the age to twenty-one.

"I am glad to see, from the second clause of the Bill, that it has been carefully laid down that the alteration of the law will not interfere with matters of marriage, dower, divorce and adoption, or affect the religion or religious rights and usages of any class of Her Majesty's subjects.

"The Bill has been very deliberately considered, and may, I believe, safely be passed into law by the Council."

The Motion was put and agreed to.

The Council adjourned to Tuesday, the 9th March 1875.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

ADMINISTRATION REPORT OF THE INDIAN TELEGRAPH DEPARTMENT FOR THE YEAR 1873-74.

Following the precedents of former years, this report has been arranged under the following heads:—

GENERAL, including revenue and expenditure, number of messages—offices opened, &c., &c.

INLAND TARIFF.

INTERNATIONAL TARIFF AND COMMUNICATION WITH FOREIGN COUNTRIES.

EXTENSION OF LINES AND WIRES.

EXTRAORDINARY WORKS.

RELATIONS WITH THE GUARANTEED AND STATE RAILWAYS.

STORES AND WORKSHOPS.

CEYLON.

2. As all the chief events were reported to Government in detail as they occurred, I have given but a brief summary of them in the letter-press of this report. The actual progress and position of the department in its administrative and financial aspect is exhibited in the very detailed tabulated figure statements and diagrams annexed, *viz.*:—

Appendix A. Return of the number and value of Inland and Foreign messages sent and of Foreign messages received and transit during the year 1873-74, showing also the increase and decrease under each head on the figures for the previous year 1872-73.

" B. List of offices arranged according to the number of sent messages during 1873-74.

" C. Return of the number and value of State and Private messages sent from each presidency and province during the year 1873-74.

" D. Return of the number of messages to, from, and through each station, their value and revenue and expenditure of each office.

" E. Synopsis of complaints.

" F. Statement showing the number of errors detected in the transmission of messages for the year 1873.

" G. Statement showing the times occupied in the transmission of messages between the stations mentioned for each month of the year 1873-74.

" H. Statement showing the number and value of news-free messages in each division during 1873-74.

" I. Statement showing the number and value of messages transferred to, and received from, railways during 1873-74.

" J. Statement showing the number of service messages sent from each division during 1873-74.

" K. Return of undelivered messages for the year 1873-74.

" L. Abstract of press messages for 1873-74.

" M. Statements of interruptions (excluding Ceylon).

" N. List of soldiers under training, qualified and employed in offices during 1873-74.

" O. Value of annual increments to Telegraph Masters and signallers.

" P. Return of the number of paid Foreign messages by each route and Indian share of collections for 1873-74.

" Q. Analysis of Foreign Traffic for the first six months of the year 1873-74, showing the countries of origin and destination of the messages, (Indian.)

The five diagrams appended show expenditure on signal offices and revenue, the comparative number and value of messages, Traffic, Foreign, and Inland, Private and State, and also the average time intervals and proportion of detected errors.

GENERAL.

3. The results of the year, of which the details are given in Annexure 1, are on the whole very satisfactory. There has been an increase of revenue, not equal to what was anticipated, yet considerable; a decrease in expenditure, in complaints, in the times of transmission, in errors, interruptions, and generally of defects in working.

Revenue and Expenditure.

	Rs.
In 1872-73, the working expenditure was	25,70,905
the revenue	18,38,788
Difference	7,32,117
In 1873-74, the expenditure has been	25,81,283
the revenue	20,19,617
Difference	5,61,666

4. This difference will annually diminish as the area of our operations extends. The strength of the direction and construction officers is constant; it could not be diminished if the work decreased one-half; it would require but slight increase if the work were doubled. The variable element is the subordinate staff, and that increases in a smaller ratio than the work.

5. It costs little more labor or expense for the Assistant Superintendent, who has executive charge of 400 miles of Government wire and a few offices along a railway, to also maintain that railway's wires, but it is manifestly to the pecuniary advantage of both Railway and Government that he should do so. This year the Department earned Rs. 60,206 as rent for the wires it has let to, and maintained for, railways. Next year, when the State Railways are more advanced, and this Department provides and maintains for the Bombay Baroda and Central India Railway, and probably also for Eastern Bengal Railway, the revenue from this source will be considerably enhanced. The number of guaranteed offices is also increasing, and although directly they earn no more than they spend, work begets work, and indirectly they bring a considerable amount of extra grist to the mill.

6. The commercial part of the traffic *per se* is not unremunerative; it is the political lines and offices chiefly on the frontier that are the drag upon the telegraph prosperity. However large or however small may be the tariff, it is impossible to make the revenue of such offices as Kohat, Abbottabad or Jacobabad, equal the expenditure incurred on their maintenance.

7. For many years few people believed that the guaranteed railways could earn enough to pay their interest; but some now do more and are annually improving in this respect. The Telegraph Department will, let us hope, follow this good example; but whether it does or does not, it is admitted that the immense growth of the total revenues of the country during the past 25 years is chiefly due to its greatly improved communications, and that if these have not paid directly, they have done so indirectly and most profitably.

8. The cash receipts (exclusive of rent due from railways) amounted to Rs. 18,19,456, as compared with Rs. 17,27,600 during 1872-73. The following are the principal items:—

	Rs.	A.	P.	Rs.	A.	P.
Inland messages	12,31,303	3	0			
Foreign messages	5,52,127	15	0			
Total message revenue ...				17,83,431	2	0
Sale of forms, books and maps ...	4,118	0	0			
Telegraph Gazette	13,749	0	0			
Guarantees	11,702	0	0			
Miscellaneous	6,456	0	0			
				36,025	0	0
Total Cash				18,19,456	2	0

Pro formâ charges—

	Rs. A. P.	Rs. A. P.
Value of free messages despatched by order of Government ...	98,157 4 0	
Value of European news delivered free to certain officials ...	40,325 0 0	
Total *Pro formâ* ...		1,38,482 4 0
Total Cash and *Pro formâ* ...		19,57,938 6 0
Earnings		20,19,617 0 0
		61,679 0 0
Difference composed of the following items—		
Claims from Railway		57,894 0 0
	Rs. A. P.	
Do. Guarantees	14,587 0 0	
Less cash received	11,702 0 0	
		2,885 0 0
Ceylon railway maintenance ...	... ...	900 0 0
		61,679 0 0

9. The annual summary statement of the number and value of messages under the heads Inland and Foreign, State and Private, is annexed (Appendix A).

The following are the net results compared with the previous year :—

Nature of Collections.	Increase.		Decrease.		Percentage of			
					Increase.		Decrease.	
	No.	Rs. A. P.	No.	Rs. A. P.	No.	Amount.	No.	Amount.
State	7,883	20,934 8 0	...	0 0 0	13·43	10·29	...	...
Private	53,197	59,018 3 0	...	0 0 0	8·50	3·93	...	...
Total ...	61,080	79,952 11 0	...	0 0 0	8·92	4·69	...	...

10. The large increase in the number of *State messages* (see Appendix A) calls for explanation—

Out of the number 7,883 (increase), Bengal alone sent 6,275 and British Burmah 1,289. The latter was the country called upon to supply the enormous amount of rice required to meet the pressing demands of the former; of the remainder, (only 319,) nearly one-half or 152, came from Assam, and were connected with the arrangements for placing that province under a Chief Commissioner, and the remaining 167 are spread over the whole of India.

Bombay, Rajpootana, and Nagpore certainly exhibit a considerable increase, but there are corresponding decreases in other places, and the whole is satisfactorily explained away when we remember that the famine operations affected more or less remote districts. There is a slight tendency in some offices to do many things by telegraph that could be done, almost as well, by letter, but the strict censorship maintained by this department, coupled with compulsory prepayment, acts as a very effective check on extravagance. I am not inimical to the wires being even more freely used than at present for State purposes, especially on lines that have not heavy traffic; the time, labor, and paper saved by recourse to short telegrams in lieu of the usual cumbrous official communications must often be in itself worth the difference in cost between post and telegraph, irrespective of the gain in acceleration of the transaction of business which may thus be concluded in a few hours instead of having to wait for days for replies.

11. The following return gives the number and value for the past seven years of all messages, except departmental, and the percentage of increase or decrease, as compared with the figures for 1867-68, and shows an increase in value of about 57 per cent. in that time.

Abstract of the Number and Value of Messages, showing percentage of Increase or Decrease as compared with 1867-68.

Year.	State.				Private.				Total Paid Messages.				News-free Messages.	
			Percentage of Value.				Percentage of Value.				Percentage of Value.			
	No.	Value.	Increase.	Decrease.	No.	Value.	Increase.	Decrease.	No.	Value.	Increase.	Decrease.	No.	Value.
		Rs. A.				Rs. A.				Rs. A.				Rs. A.
1867-68 ...	41,306	1,78,700 15	...	...	2,69,638	9,57,439 7	...	...	3,10,944	11,36,140 6	...	...	8,199	1,60,650 0
1868-69 ...	40,615	1,61,297 7	...	9·75	3,33,856	9,94,795 3	3·90	...	3,74,471	11,56,092 10	1·76	...	6,690	65,990 0
1869-70 ...	39,403	1,37,593 4	...	23·00	4,45,215	10,73,047 11	12·00	...	4,84,618	12,10,639 15	6·50	...	3,597	37,638 10
1870-71 ...	37,606	1,22,760 7	...	31·30	5,39,755	11,78,784 9	23·12	...	5,77,361	13,01,545 15	14·56	...	3,873	49,775 0
1871-72 ...	54,305	2,21,951 13	24·2	...	6,00,633	13,54,641 6	41·48	...	6,54,938	15,76,593 3	38·75	...	3,769	48,982 8
1872-73 ...	58,659	2,03,409 11	13·82	...	6,25,729	15,00,068 12	56·78	...	6,84,388	17,03,478 7	49·93	...	5,008	65,236 4
1873-74 ...	66,542	2,24,344 3	25·54	...	6,78,926	15,59,086 15	62·84	...	7,45,468	17,83,431 2	56·90	...	5,777	98,157 4

12. The proportions of the total revenue earned by each class of message were :—

	Private.	State.	Total.
Inland	57·09	11·95	69·04
Foreign	30·32	·64	30·96
Total	87·41	12·59	100· per cent.

Number of Messages.

13. The total number of messages, Inland and Foreign, transmitted was 7,88,048. The particulars are exhibited in the following return. Of this number, 7,45,468 were paid messages, divided as follows :—

	Private.	State.	Total.
	Per cent.	Per cent.	Per cent.
Inland	79·44	8·77	88·21
Foreign	11·69	·16	11·79
Total ...	91·07	8·93	100·

Private messages have increased 8·50 per cent. and State messages 13·43 per cent. as compared with the previous year.

The increase in State messages is in inland traffic only, there having been a slight decrease in Foreign State telegrams. Private traffic shows an increase under both heads.

14. Appendix B is a list of stations arranged in order according to the number of messages despatched from each, of which the following is an abstract :—

No. of *sent* paid messages per annum.	No. of Offices.	
	1872-73.	1873-74.
Above 1,00,000	1	1
„ 75,000 and under 1,00,000	1	1
„ 50,000 „ „ 75,000	0	0
„ 25,000 „ „ 50,000	1	2
„ 20,000 „ „ 25,000	1	1
„ 15,000 „ „ 20,000	1	1
„ 10,000 „ „ 15,000	3	1
„ 5,000 „ „ 10,000	15	18
„ 1,000 „ „ 5,000	82	93
„ 500 „ „ 1,000	56	44
„ 100 „ „ 500	36	34
under 100	5	4

Temporary offices and those open for a portion of the year have been excluded from this calculation.

15. The average number of paid-sent messages per office is 3,313 for 1873-74, against 3,119 for 1872-73.

16. Appendix C is the usual return called for by the Financial Department, showing the extent and value of the traffic arranged according to presidencies, &c.

17. The annual detailed return of the number of messages to, from, and through each station, of their value, and of the expenditure incurred at each office, is also annexed (Appendix D).

18. The amount of Signal Office expenditure, exclusive of Ceylon, is extracted below and contrasted with previous years:—

Year.	Number of Offices.	Message revenue.	Number of Messages.	Signal Office expenditure.	Decrease as compared with 1868-69.
		Rs.		Rs. A. P.	Rs. A. P.
1868-69	186	11,56,093	433,552	13,47,706 6 0	... ...
1869-70	190	12,10,640	543,435	13,13,425 1 0	34,281 5 0
1870-71	197	13,01,546	629,233	12,49,022 8 0	98,683 14 0
1871-72	192	15,76,593	702,706	12,36,566 2 0	1,11,140 4 0
1872-73	195	17,03,478	726,341	12,78,166 3 0	69,540 0 0
1873-74	225	17,83,431	788,048	12,60,401 0 0	77,305 6 0

These figures shew the efforts made to keep down expenditure, and require no comment.

Complaints.

19. The following is an abstract shewing the number and percentage of complaints by the public during the past seven years. The details of the year are given in Appendix E. The results are also a strong indication that the public appreciate the goodness of the service:—

Year.	Total number of "Private" and "State" paid messages.			Total number of complaints.			Percentage of complaints.		
	Indian.	Foreign.	Total.	Indian.	Foreign.	Total.	Indian.	Foreign.	Total.
1867-68	2,82,583	28,361	3,10,944	414	174	588	·15	·61	·19
1868-69	3,41,845	32,626	3,74,471	618	285	903	·18	·87	·24
1869-70	4,41,327	43,291	4,81,618	418	403	821	·09	·93	·17
1870-71	5,10,341	67,020	5,77,361	312	409	721	·06	·61	·12
1871-72	5,75,535	79,403	6,54,938	244	240	484	·04	·30	·07
1872-73	6,06,294	78,094	6,84,388	224	184	408	·034	·209	·054
1873-74	6,57,582	87,886	7,45,468	217	148	365	·035	·189	·053

Errors.

20. A statement is annexed (Appendix F) showing the number of messages compared, and the proportion of detected errors, during the year. It will be seen that, excluding very trivial mistakes, one error was detected in every 217 messages.

Speed of Signalling.

21. Appendix G shows the average time occupied in the transmission of all classes of messages over the principal lines. There has been an increase of speed amounting to 30 per cent., or, excluding the Madras—Galle route, 25 per cent., over the averages of the preceding year.

The following is an abstract of these returns for the past seven years, which explains itself and shows how steady the progress has been year by year. The average time occupied in the transmission of foreign and other precedence messages is far lower:—

Year.	Calcutta and Kurrachee.			Calcutta and Bombay.			Calcutta and Madras.			Bombay and Kurrachee.			Bombay and Madras.			Mean of time occupied in transmission over all five routes.
	Calcutta. Kurrachee.	Kurrachee. Calcutta.	Mean.	Calcutta. Bombay.	Bombay. Calcutta.	Mean.	Calcutta. Madras.	Madras. Calcutta.	Mean.	Bombay. Kurrachee.	Kurrachee. Bombay.	Mean.	Bombay. Madras.	Madras. Bombay.	Mean.	
	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.	H. M.
1867-68	17 48	18 55	18 21	19 34	19 45	19 39	10 29	8 26	9 27	6 0	6 45	6 22	9 15	10 13	9 44	12 43

Free "news messages."

22. 5,777 were despatched against 5,008 in 1872-73. Their value was Rs. 98,157-4. See Appendix H.

Messages exchanged with Railways.

23. Appendix I shows the number and value and description of messages exchanged with the different railway systems. The number is still insignificant. At present barely 41,000, from nearly 700 stations, are sent over the joint lines, but whenever arrangements are made similar to those that exist in England, where the railway transfers at the nearest point to the state offices, they will, I believe, largely increase.

Departmental Service Messages.

24. There is a slight falling off in the number of service messages, the particulars are given in Appendix J. Considering the general increase in the departmental operations, this result exhibits the strict check imposed on the use of the telegraph in respect to its own members.

Undelivered Messages.

25. Appendix K gives a list of undelivered messages for each month of the year. There was a reduction in number of 32·7 per cent., as compared with 1872-73; and if to this difference be added the large increase in the number of messages transmitted, a vast improvement will be shown in this important matter.

Press Messages.

26. Appendix L gives an abstract of all press messages despatched. Their number was only 2,375, and the value of the concession made (the difference between the ordinary rates and those actually levied) was Rs. 44,188-12.

27. These figures exhibit in a marked manner the difference between the enterprise of England and of India. The whole press of India spent only Rs. 14,729, in the year, in obtaining early information on subjects of general interest. The London *Daily News* paid in one day Rs. 1,400 for one telegram containing intelligence from the famine districts.

28. Undoubtedly, in India, there is a lack of sensational occurrences interesting to its residents, and an absence of that perhaps unhealthy impatient curiousity, of that competition and of those press associations that exist in Europe and America, but something more than the meagre information communicated by Reuter might be culled from the newspapers received weekly at

various ports from Australia, China, Europe and America, something worth communicating two or three days earlier than is possible by post, with advantage to the readers, and, I would hope, of the press proprietors. The number of both is certainly far greater in England and America. But how much larger is the area of India and how slow, comparatively, the communication by post. It pays in England and in America to forestall the post by a few hours, but in this country a few days appear to be of little consequence.

Interruptions.

29. The number and duration of interruptions during the past six years are shown in Appendix M. The improvement has been steady and satisfactory. As compared with 1868-69, the number has decreased 40·12 per cent. This, if the extension of the lines be taken into account, represents a decrease of nearly 100 per cent., and a corresponding increase in efficiency. A comparison with the previous year 1872-73 indicates a very decided improvement during the past year, the actual number of interruptions having been 19 per cent., and the relative number nearly 24 per cent. less. The average duration of the interruptions was also less last year—a result doubtless, in some measure, attributable to the action of electrical testing.

Number of Offices.

30. The particulars of all new offices opened during the year are given in the following return. The number working on the 31st March 1874 was 225, being 22 in excess of the number on the same date of the previous year. All those offices opened in the distressed districts that do not pay their working expenses, or are not required for political purposes, will be closed as early as practicable :—

Division.	Name of Telegraph Office.	When opened.	Remarks.
Bangalore	Coonoor	March 21, 1874 ...	Opened on the requisition of the Madras Government.
Bengal	Dinapore	November 19, 1873 ...	Opened at the suggestion of the Director General, and proposed to be worked by soldier signallers.
Bombay	Limree	April 1, 1873 ...	Opened on guarantee by the Chief of Bhownuggur to make good any loss that may be incurred on account of working and maintenance of the lines.
British Burmah ...	Bassein	February 3, 1874 ...	On recommendation of the Chief Commissioner, British Burmah, as affording great facility to commerce of British Burmah.
Ditto	Elephant Point ...	April 3, 1873 ...	Rs. 300 per mensem guaranteed by the Chamber of Commerce.
Ditto	Laiugha	July 9, 1873 ...	Frontier Office. To connect the telegraph system of British and Upper Burmah.
Nagpore	Saugor	April 14, 1873 ...	On the recommendation of the Chief Commissioner, Central Provinces, on political and military grounds.
Punjab	Mean Meer	November 20, 1873 ...	On recommendation of Superintendent, Punjab, as a military office.
Ditto	Shaharunpore ...	December 12, 1873 ...	Experimental. On recommendation of Superintendent, Punjab, who expects it to pay its expenses.
Ditto	Adamwahan ...	July 4, 1873 ...	Opened on guarantee by the I. V. S. Railway to pay all its expenses.
Famine lines ...	Mozufferpore ...	February 18, 1874 ...	Opened under authority of the Government of India for famine purposes.

Signalling Establishment.

31. *Civil Signallers.*—The general conduct of this branch of the department has been excellent; wherever I go, I receive willing testimony to their good conduct and civility from the civil officers and the general residents. The extent of their knowledge of practical electricity and its application to telegraphy would really be very creditable to any signaller in any country in the world.

32. Telegraphing seems to suit the idiosyncrasy of the East Indians exactly and to be very popular with them. The number of applications for admission is far beyond our requirements, which of course gives the power of selection and enables us to secure from the Ootacamund Lawrence Orphan Asylum and other schools really intelligent lads who entering the department young make it their home.

33. *Military Signallers.*—The utility of disseminating a knowledge of signalling throughout the army has lately been well illustrated. The improvements in the insulation and construction of the lines, the adaptation of the instruments to the demands of science, and the limitation of the hours of working, have made it possible to dispense with some intermediate offices altogether, and with a large proportion of the signallers at others.

34. This reduction of establishment which has been going on for some years reached something more than its safest lowest point some months since, and at the time Sir Richard Temple made his application for some dozen extra offices to be opened, the number of signallers of the regular establishment was insufficient to man them. In this dilemma the reserve in the army became of great value. By employing soldiers who had been trained in former years at many of the military station offices, a sufficient number of civilian signallers were released from them to man not only the famine offices, but also to work the telegraph for the Durbungah Railway.

35. I should like to see soldier signallers employed to a much greater extent, but since most serious consequences might ensue if they were suddenly withdrawn, as would be the case in time of war, a sufficient number of civilian signallers must be maintained to meet the absolute demands of the department, and this limits the number of soldiers that can be employed to the number required as supernumeraries to take the place of men sick and on leave, and to work offices that may be closed in time of need.

A sufficient number of probationers are now under training to provide for future requirements.

36. Twenty-three soldiers qualified in signalling and 8 were still learning at the end of this year, 28 men were employed as soldier signallers in the department. A list is annexed (Appendix N) of all men who have been under training during the year.

37. LIST OF CASUALTIES DURING 1873-74.

ELECTRICAL.

38. The practice of systematic testing of the lines has been rigorously maintained with useful results for ordinary working, but its value is enhanced by its bearing on duplex working.

39. In the latter part of the Administration Report for 1872-73, a short reference was made to the transmission of telegrams from the ends of the same wire in opposite directions and independently of each other, commonly called "duplex telegraphy."

The theory of this apparent paradox is no novelty; but practical difficulties have until recently, baffled electricians and delayed its use on long lines.

During the past few years many inventions have been brought forward professing to overcome the said difficulties, but as far as I know, the credit of instituting a really simple, practical means of working duplex telegraphy on long land lines belongs to our talented Electrical Superintendent—Mr. L. Schwendler.

By his solution of the troublesome problem of obtaining absolute balance automatically he has made duplex telegraphy easy to work on long as well as on short lines.

The experiments in connection with it have extended over several months; but since duplex telegraphy more than doubles the working capacity of a wire, the success that has resulted from them will compensate for the trouble and expense, and will, I hope, prove remunerative to Mr. Schwendler, who has patented his invention. A commencement will shortly be made with it on the Bombay and Calcutta line, and if it prove as successful as we are justified in expecting it to be, the necessary apparatus will be constructed as rapidly as possible for Kurrachee—Calcutta, Calcutta—Madras, Calcutta—Rangoon, Bombay—Madras, and eventually for all well insulated lines on which the traffic is too heavy for a single wire.*

40. I have endeavoured in an annexe (Annexure II) to this report to explain, for the benefit of those who think that nothing short of necromancy can persuade two telegraph signals to pass each other on the same wire, the broad principles of duplex work. Little is said in that sketch of the necessity for having an exact balance of capacity in each aspect, but enough is said to show the necessity for knowing the normal state as well as the present capacity of the line.

41. It should, however, be noted that the method therein described is duplex working of the very simplest description, practicable only on a very short line. In practice, something more than mere resistance must be introduced on the

* Since this was written the system has been tried on the Bombay—Calcutta line, and has proved eminently successful, and, by permitting the introduction of improvements in office routine has more than doubled the carrying capacity of the line.

secondary wire to meet the ever-altering conditions of a long line. Not only must the resistance of the line wire be balanced, but also its ever-altering electrical capacity. Each insulator—there are more than 30,000 between Bombay and Calcutta—is a kind of Leyden jar or condenser, whose capacity must be taken into account; but as the electrical condition of the insulators varies irregularly with every change of weather, so must the capacity of the condensers, used to balance the insulators, be adjusted, and this is the chief practical difficulty to be overcome.

42. A very large number of defective insulators have been discovered with the aid of the portable detector and removed from the lines. Many of these defective insulators are to all appearances perfectly sound, and unless submitted to this test might long have escaped observation.

SUMMARY.

43. As before observed, the net results of the traffic operations for the year 1873-74 are very satisfactory. They may be summarised briefly as follows:—

Compared with the previous year 1872-73—

Inland traffic has increased 8·45 per cent. in extent and 8·69 per cent. in value.
Foreign traffic has increased 12·54 per cent. in extent and 6·97 per cent. in value.
Total number of paid messages has increased 8·92 per cent.
The total cash revenue has increased 5·27 per cent.
The average speed of transmission has increased 30 per cent.
Complaints have decreased 16 per cent.
The number of undelivered messages has decreased 32·7 per cent. in number, irrespective of the increase in traffic.
The number of offices has increased 11·82 per cent.
Errors in messages have decreased very considerably, but figures are not available for direct comparison.
Interruptions have decreased 19 per cent. actual; 24 per cent. relative.
Signal Office expenditure has decreased 1·39 per cent. The total reductions in Signal Office expenditure from the year 1869-70 amount to nearly Rs. 3,00,000, notwithstanding the large increase in the number of offices, amount of work, the great improvements made year by year in the manner in which it had been performed, and the unavoidable increase in salaries due to annual increments, particulars of which are given in Appendix O.

LINE CONSERVANCY.

44. An organic change has been made in the conservancy of lines. Formerly, line runners were maintained at the offices whose duty it was, in the event of contact or interruption, and only then, to go forth from the offices at each end of the interrupted section and to pass under the line until one found the fault and repaired it. Sometimes they met without discovering the fault and had then to try again.

This was waste of power. Lines must deteriorate, and if the deterioration is equal on several lines, the faults occur so much about the same time that whilst two men were hunting for one, there was no one available to look for the others.

45. Systematic testing, by shewing deterioration and by enabling the officers to determine the position of the faults, gave the first blow to this practice. When the capacity of lines is known, only one man need be sent out, and he is told, within the limits of a few miles, where to look for the accident.

46. The organic change introduced last year—the application of prevention in lieu of remedy—has been under consideration for some years as part of a large scheme for dividing maintenance from traffic. No one will dispute the truth of the propriety of division of labor, but to carry out the whole is not easy, because of the great distance between offices and the consequent enormous sizes of the separate charges. The first step in this direction has, however, been made. The line runner has ceased to be part of an office. He is now considered as part of the maintenance establishment, and his duty is to prevent, as much as to repair, accidents. He is expected to patrol the lines, to remove incipient faults, and generally to keep the lines clear of everything that can interfere with the unobstructed passage of the electric fluid. Bits of straw and string hanging on the wire, which did no harm when the lines were single, now that so many are multiple, produce leakage or even contact.

PERSONAL.

47. I did not relieve Lieutenant-Colonel R. Murray of the direction of this Department until 25th January of the year under report. The chief credit that is due for progress made during the year under review, therefore, belongs to him and his able assistants Messrs. Cappel, Mallock, and Lane for direction; Mr. Finch and Major Eckford in the store yard; Messrs. Schwendler and Brough as electricians; and Mr. Palmer as controller of accounts. That credit is due has already been acknowledged by His Excellency the Governor General in Council.

48. The officers employed on the famine lines and who erected them with such extraordinary speed and skill under the immediate supervision of Major Mallock, than whom a more loyal, energetic, and intelligent officer does not exist, were Assistant Superintendent Reynolds, as Superintendent of the lines and offices after construction, Messrs. Kirk, Landon, Macleane, Hare on construction; and Sub-Assistant Mr. Webster. Their services also have been acknowledged by Government.

49. The practical usefulness of these Assistant Superintendents, who combine mental with bodily activity, and a more than average intelligence and technical knowledge, with the feelings and education of gentlemen, illustrates to my mind, very forcibly, the superiority of nomination, guarded by a strong qualifying examination, over competition pure and simple for a departmental service such as this.

50. Competition will always produce first class candidates for services which offer, as prizes, great power and handsome emoluments; but for a service that has not these grand prizes to offer, I am satisfied, from the experience of this department, that more *esprit de corps*, more loyalty to Government, a better physique, and, generally speaking, a better cultivated and more intelligent class of men is obtained by careful restricted nomination than by open competition. This department commenced with unrestricted nomination; it then tried open competition, and, on its failure, nomination with qualification, the latter with marked success.

51. With the loyalty and intelligence with which, with rare exceptions, all perform their duties at all times, I am perfectly satisfied and it is not their fault that they have not had the opportunity of more prominently distinguishing themselves.

INLAND TARIFF.

52. During the past year there have been no changes in the local rules. In the previous year they were assimilated as closely as possible to the international rules; but as they have the same defects as have been found to exist in the latter, it is desirable to amend them. The free address is of advantage to all and especially to the natives, who being so much more numerous than Europeans and with fewer varieties of name, require extra detailed indications of their personality and residence. A telegram addressed to a European at any station, even if his name be Smith, is pretty sure to be delivered; but a telegram addressed to Ram Sing, unless the names of the lane and mohulla (generally pretty long,) are also telegraphed, has little chance of reaching that individual.

53. The liberty to telegraph in their own language at the same rates as they can in English is not appreciated, and the natives show sound judgment in so seldom availing themselves of it. Whatever the language be, it must be expressed in the Roman character, and there is more liability to error in making this conversion and in transmitting it when converted, than when the telegraph-master converts the Hindustani message into English for transmission, and the telegraph-master at the terminal translates it back for delivery to the addressee. But neither the very complete address nor the facilities placed at their disposal appear to influence the ordinary Hindu bunniah. With him a penny saved is a penny gained. He therefore prefers the post at half an anna, and has yet to learn the value of time and how many pounds may be earned by spending rupees on the saving of some of it.

The Marwarees are exceptional; they telegraph freely and they enjoy the excitement of gambling. When the cotton season is over, they will make time bargains by telegraph for opium or any other article of fluctuating value.

54. I have often heard it argued that a lower tariff would induce the natives to telegraph more freely. It would, but it would not pay. Unlike the post, the carrying power of a telegraph is limited, the distances in India are enormous, the people are poor, and the cost of all material and skilled labor is great. Hence, even if the quantity did increase in the same ratio as the diminution in price, which I doubt, there would still be the cost of extra labor to be provided for. It can easily be put to a crucial test by trying a special low tariff for telegrams between two places such as Lahore and Umritsur, which are closely connected with each other socially and by business. If the experiment gives a promising result, it can be extended to other places.

55. The number of Inland paid messages transmitted was 6,57,582 (of which 65,339 were state messages); their value was Rs. 12,31,303-3. The transactions for the past seven years are given below:—

YEAR.	STATE.			PRIVATE.			NEWS FREE.			TELEGRAPH SERVICE AND OTHER FREE.			TOTAL.			Number of offices open during each year.	Number of miles of line.	Number of miles of wire.
	No.	PERCENTAGE OF		No.	PERCENTAGE OF		No.	PERCENTAGE OF		No.	PERCENTAGE OF		No.	PERCENTAGE OF				
		Increase.	Decrease.		Increase.	Decrease.		Increase.	Decrease.		Increase.	Decrease.		Increase.	Decrease.			
1867-68 ...	41,306	...	...	2,69,538	...	...	8,199	...	...	54,689	...	...	3,73,732	...	...	171	13,887	18,067
1868-69 ...	40,615	...	1·67	3,33,856	23·82	...	6,690	...	18·44	52,391	...	4·20	4,33,552	18·27	...	186	14,423	21,124
1869-70 ...	39,403	...	2·98	4,45,215	33·36	...	3,597	...	44·73	55,222	5·4	...	5,43,435	48·62	...	198	14,275	21,905
1870-71 ...	37,600	...	4·5	5,39,755	21·23	...	3,873	7·69	...	47,999	...	13·08	6,29,233	15·79	...	205	14,016	23,361
1871-72 ...	54,305	44·4	...	6,00,633	11·00	...	3,769	...	2·68	43,999	...	8·33	7,02,706	11·67	...	199	15,326	28,973
1872-73 ...	58,659	8·01	...	6,25,729	4·17	...	5,008	32·87	...	36,945	...	16·13	7,26,341	3·36	...	203	15,705	31,209
1873-74 ...	66,542	13·43	...	6,78,926	8·50	...	5,777	15·15	...	36,803	...	·38	7,88,048	8·49	...	225	16,136	32,870

The increase over the previous year is not great, being 8·45 per cent. in number and 3·69 per cent. in value, or excluding state messages 7·90 and 2·20 per cent., respectively. The only noticeable feature is the slight decrease in relative value as compared with 1872-73, which is doubtless attributable to the condensation resulting from the more general use of secret codes in mercantile correspondence.

56. In fact, our telegraph revenue varies with, and is almost a meter of, the state of trade. If trade be dull, our receipts are dull; if trade be brisk, our revenue rises. We estimated, on the steady normal increase of former years, to receive for foreign and local messages Rs. 18,87,562; but the stagnation of trade affected the revenue, which produced up to October 1873 Rs. 12,510 less than during the corresponding period of the former year, and probably if the failure of the autumn rains had not, by threatening famine, given an impetus to the rice trade, the total revenue would have been worse than that for 1872-73. As it was, the imminence of a great famine forced an unexpected increase of work, and the year closed with an increase of Rs. 1,07,253, or nearly 6 per cent. better than the revenue of 1872-73, instead of a deficit.

INTERNATIONAL TARIFF

AND COMMUNICATIONS WITH FOREIGN COUNTRIES.

EXTENSIONS.

57. The following are the more important extensions that have been made during the year:—

58. The Eastern Company has laid an additional cable in two sections (Falmouth, Vigo and Vigo, Lisbon) between Falmouth and Lisbon, has connected Otranto to Alexandria *viâ* Candia and Zante, and has also laid cables between the islands Chios, Syra and Tinos.

59. The Brazilian Sub-Marine Telegraph Company has connected Portugal with Brazil *viâ* Madeira and St. Vincent, the last section between St. Vincent and Pernambuco was opened to international traffic on the 24th June 1874.

60. A new undertaking, called the direct Spanish Telegraph Company, has connected Marseilles and Barcelona by cable, and on the 5th May 1874 gave notice of the opening of a sub-marine line between Santander on the north coast of Spain and the south coast of England.

61. On 1st November 1873, Kingston, Jamaica, was connected by cable with Colon (Aspinwall), and on the 1st January following communication was established between Colon and Panama (Isthmus of Panama).

62. A land line in Native Burmah was connected with the Indian system and opened for traffic on the 9th July 1873.

Maintenance of Communication.

63. *The Eastern Telegraph Company.*—The cables between Bombay and Suez have worked without accident during the year.

64. Between Falmouth and Lisbon there were two interruptions lasting from 20th October to 1st November 1873, and from 15th February to 18th March 1874. During their continuance the traffic was diverted through France, and suffered little or no delay. The service by this route has been throughout excellent, the average time intervals have been very low, and the maximum time occupied by any message between Great Britain and Calcutta during the year was 26 hours, while the minimum was as low as 22 minutes.

65. *The British Indian Extension, China Sub-Marine and British Australian Telegraph Company.*—These three Companies were in June 1873 amalgamated under the title of the Eastern Extension Australasia and China Telegraph Company.

66. There were five interruptions on the cables of this company, but with one exception (that between Madras and Penang, lasting from 12th to 26th May 1873) all were of short duration. The Australian land line was only once interrupted, 28th to 30th March 1874, and communication with these distant places has been maintained with admirable regularity throughout the year.

67. *The Great Northern Telegraph Company.*—Eight interruptions occurred on this Company's cable, *viz.*:—

Hong-Kong and Amoy.

1. 18th July to 4th August 1873.

Amoy and Shanghai.

4. 28th June to 5th July 1873.
   24th October to 27th October 1873.
   28th November to 29th November 1873.
   2nd January to 7th January 1874.

Shanghai and Nagasaki.

2. 17th April to 28th April 1873.
   18th July to 21st August 1873.

Nagasaki Wladiwostock.

1. 13th December to 30th December 1873.

68. On the 1st May 1873 the lines of the Government of Japan were opened to the world in connection with this Company.

69. *Indo-European Route.*—The lines on this, the Teheran route to Europe, have been thoroughly well maintained. The speed of transmission has been high, and the service regular and most satisfactory. Of the eight interruptions that occurred, one was under 2 hours, another under 3, and of the remainder, two only lasted more than a day. The highest time interval recorded between Great Britain and Calcutta was 27 hours; the lowest, 19 minutes.

70. *Route viâ Turkey.*—Communication by this route has been fairly well maintained. There were fourteen interruptions during the year, of which two ceased the same day, seven on the following day, four on the second, and one on the third day.

71. The traffic by this line continues to decrease. In 1871-72 it reached 18·08 per cent., in 1872-73, 4·75 per cent., and in 1873-74 only 2·73 per cent. of the whole.

This result was foreseen, but is much to be regretted, as it is only reasonable to suppose that if the entire traffic be diverted to other routes, the efficient maintenance of this line will cease. to be a matter of interest to the Ottoman Administration, and India will lose the great advantage of this valuable alternative route. The line can never under ordinary circumstances compete on equal terms with the Teheran or Suez route, and the policy that forced the Turks to adopt the high tariff of the rival routes appears open to grave objection. A slightly slower service at a reduced rate of charge has undoubted attractions for many, and would therefore prove a public convenience, and one

cannot but feel pained to see all traffic passing away from this route to which we owe so much in the past, and which has been maintained at great expense by Turkey, mainly in the interest of the Indian correspondence.

Growth of Foreign Traffic.

72. The Indian revenue from international traffic amounted to Rs. 5,52,127-15, as compared with Rs. 5,16,115-6 during the preceding year, an increase of 6·97 per cent. The number of messages has increased in a higher ratio, *viz.*, from 78,094 to 87,886, or 12·54 per cent.

The distribution of this traffic is shewn in detail in Appendix P. The following is a summary of it:—

Messages despatched from India.

Westward—		
Viâ Bombay	14,143	
Viâ Kurrachee	11,471	
		25,614
Eastward—		
Viâ Madras	3,813	
Viâ Amoor	40	
To Native Burmah	1,143	
		4,996
Total of despatched messages		30,610

Messages addressed to India.

From the West—		
Viâ Bombay	12,040	
Viâ Kurrachee	11,615	
		23,655
From the East—		
Viâ Madras	3,754	
Viâ Amoor and Kurrachee	32	
From Native Burmah	636	
		4,422
Total of received messages		28,077
Total to and from India		58,687

Messages passed in Transit.

From East to West	14,748	
„ West to East	14,436	
„ West to West	15	
		29,199
Grand Total		87,886

73. The Eastern Company obtained the largest share of the westward traffic, but not so large as in the previous year, as will be seen from the following figures:—

Percentage of total Traffic Westward by each of the three main routes.

	Eastern Company.	Teheran Route.	Turkish Route.
1871-72	52·81	29·11	18·08
1872-73	65·05	30·20	4·75
1873-74	53·14	44·13	2·73

The increase *viâ* Teheran is very marked.

74. From the following statements shewing the nature, extent, and value of foreign traffic for the past seven years, it will be seen that the revenue from this source has very nearly trebled.

Return of the Number and Value of Foreign Messages.

The value of the international traffic amounted to 30·96 of the message revenue, as compared with 30·30 per cent. in 1872-73.

Tariff Changes.

75. One important tariff modification was introduced during the year to which a great proportion of the increase in traffic must be attributed.* From the 15th November 1873, the conventional unit of 20 words was reduced to 10 in respect of messages exchanged with Great Britain and America with single instead of 10-word increments. It has been found that not only has there been a large increase in the number of short messages, but also that in some cases the new tariff has had the effect of increasing the length of messages. This is quite intelligible, as the system of charging for each word removes the necessity for compressing a message within fixed limits, which was unavoidable when the charge was limited to gradations of 10 words.

From the above-mentioned date the charge has been from India to Great Britain:—

Viâ Suez and Teheran ... ... 2-2 per word.
Viâ Turkey ... ... 2- „

with a minimum of 10 words.

I wish that the revenue earned by the alternative lines to Europe was commensurate with the admirable service they render.

The enormous length and costliness of these undertakings compels the imposition of a high tariff, which again prevents any but the wealthy telegraphing on any ordinary business.

The merchant finds his remedy in a code of words or cyphers wherein each word stands for a sentence.

Every merchant has his code; and the general public employ the packing companies; and even the mercantile houses resort to them when they require to send short telegrams.

The earlier codes were constructed of ordinary conversational words in some well-known language, but the manufacturer of the modern code searches diligently in dictionaries and in gazetteers and maps for the longest and the most unfamiliar words† to be found in the 27 authorized languages. Code messages of this nature retard traffic seriously, and of course enhance the working expenses, they ought therefore to pay a higher rate than those in ordinary language.

76. It would obviously be a benefit to the public as well as to the administrations if the constituents dealt direct with the telegraph administrations instead of through agents. This can only be done by reducing the length of the unit to a minimum. A move in this direction was made last year, with results so satisfactory that I believe the unit might with advantage be reduced to 5 or even less, provided the intervening European states can be persuaded to give up the full rate for 20 words which they now take, however few the number of words may be.

Hitherto the older representatives have resisted any change in the unit of 20 words, which they regard as a fundamental principle; but at the conference to assemble at St. Petersburgh in 1875, more liberal principles may prevail, and special rules and special arrangements may be passed for extra European telegrams and codes, which have grown into proportions that were never anticipated.

77. The sudden increase in the value of the receipts which followed the introduction last year of the 10-word minimum with single word increase, is certainly in favor of a single word unit; but the one unalterable, and therefore the only true, basis for a tariff is the letter.

There is nothing lower than a letter—combinations of letters form words of variable length—combinations of words form sentences of various lengths. The length of the letter alone never alters.

* The following figures may be taken as an approximate indication of the financial result:—
For the first seven months of the year, April to October, there was a decrease in number of 537, and value of Rs. 10,721-14, as compared with the same period of the previous year. For the remaining five months of the year there was an increase of 10,329 in number and Rs. 46,734-7 in value.
The unusual stagnation of trade during the earlier months has probably contributed in some measure to this result, but it is believed to be mainly due to the action of the revised tariff; for, although this tariff applies only to the correspondence with Great Britain and America, an analysis of the traffic shows that this represents between 70 or 80 per cent. of the whole (see Appendix Q.)

† The following is an extract from a modern code message:—
"41,477 amuseable (agostonfalva agotha agriainousi agvijador aguijonazo agujetaje agyajbiborla agyhiggadek almotheton agyuminta agyparkanyz ataknafüzer ahijador agyutalpoldal aherrumbroso akolastaino)."

The chief objection raised against a letter unit is the labour of counting, but this is easily simplified. The true obstacle is the novelty of the thing. There were many who condemned the idea of railways, others who argued that the flint was better than the percussion musket, and so on, who, if alive, would now feel ashamed that they ever held such opinions. I anticipate great opposition to the introduction of the letter unit, but trust it will be established eventually. The direct American Company is going to adopt it. Once it obtains a fair trial it will establish itself as firmly or more so than the present unit of words. On the present system, the German, with compound words of seven syllables, or the merchant with his code of long Scandinavian proper names, pays no more for the extra trouble he imposes than the Frenchman or Englishman who uses the ordinary language of his country, the words of which average less than five letters per word, and which, being familiar to the signallers, do not give one-fourth of the labor of the former.

EXTENSIONS OF LINES AND WIRES.

78. The number of miles of permanent line on 1st April 1874 was 15,954, against 15,705 of the previous year. The number of miles of wire was 32,438 against 31,101, and of cables 101 against 108.

79. Advantage has been taken of the opening of direct roads to move the line on to them wherever it was far away and difficult of access.

80. As reported under the head of extraordinary works, 541 miles of temporary line were put up in the districts in the extraordinarily short period of 35 days. Thanks to bamboos being easily procurable all over Bengal, these lines have the great merit of being very cheap, very simple, repairable by any body, and stronger than any of the equipments attached to European army telegraphy.

Instead of having to transport folding iron or wooden supports with insulators, the constructor purchases in the adjacent villages as many bamboos as he requires for four or five rupees a hundred, and can dispense with insulators because the smooth surface of the bamboo broken by knots repels moisture sufficiently well: they have but one fault—they perish rapidly. But for this, many of the permanent lines of India might be erected on bamboos at a cost of three or four rupees a mile for supports instead of on iron posts that cost one hundred times as much. The lines certainly look very like a washerwoman's clothes line, but they are strong. At the angles the wire rests on three, otherwise on only two, bamboos erected as follows:—

The lower ends of the bamboos are inserted into holes about 18 inches deep and 9 feet apart, and the tops are brought together and bound with wire so as to form forks in which the wire rests. Nothing could be simpler or more serviceable.

The chief alterations to the lines of this department were as follow:—

81. *Arracan.*—Owing to the damages which the office building at Moungdoo sustained in October 1872, it was decided to erect a new building in the village of Moungdoo instead of, as at present, on the hill, and the work is now in progress.

82. *Assam.*—About one-third of the line between Goalpara and Shillong was removed from the jungle to the road-side. The re-construction of the line from Terin Ghât to Sylhet has been carried out. Six miles of line have been brought from alongside the Ganges Darjeeling road out into the open field and clear of the avenue of trees, through the branches of which the wire formerly ran. Arrangements have been made for crossing the Teesta with timber masts. Five new 84-foot bamboo masts have been made and erected at three of the eight large rivers between Julpigoree and Doobree. Fifty-four interruptions took place in this division during the year, of which 7 were due to failure of river crossings, 10 to the fall of trees, 6 to lightning, and 31 to miscellaneous causes. Many insulators are annually destroyed on this line by the lightning striking from the wire through the porcelain to the steel insulator stalk. The only remedy is to increase the diameter of the wire.

83. *Bangalore.*—The branch lines to Secundrabad were dismantled owing to the new lines along the Nizam's State Railway being completed.

Short branch lines were erected at Gudduck and Hooblee.

The new line from Coonoor to Mettapolium was connected with the railway office in September 1873.

84. *Bengal.*—Bankipore and the Dinapore cantonment, 12 miles, were connected, 3·3 miles of which line being on new supports. Seventeen miles of the line from Raneegunge to Seetarampore, which ran parallel to, but a mile away from, the Government lines of telegraph along the chord railway, were dismantled and the two wires transferred to the supports of the latter.

Between Toondla and Agra two new wires to serve the Punjab were added, and a wire erected on the existing supports from the Bengal Public Works Department Office in Writers' Buildings to Circular Road, and continued thence to the Bengal Secretariat. A light single line has also been erected along the Eastern Bengal Railway, Chitpore Branch, and rented to the Railway Company for train signalling.

The telegraph wires at Benares are now suspended over the river on two masts, respectively 183 and 178 feet high, instead of being laid in the river in cables as has heretofore been the practice. The Superintendent recommends the erection of two additional new wires on the respective sections from Allahabad to Mogul Serai, and from Raneegunge to Calcutta, in order to complete the system of the division.

85. *Bombay.*—The three-wire line (120 miles) from Waddy to Hyderabad (Deccan) and thence to Trimulgherry and Bolaram, which was under construction last year, has been completed.

The telegraph office at Surat is in a hired building over some shops. On the night of 14th February a fire broke out in one of the shops below, which soon extended to the whole building and destroyed all the instruments, office furniture and stores, amounting in value to Rs. 2,384.

86. *British Burmah.*—A new line has been constructed from Henzada to Bassein along the Irrawaddy embankment to the entrance of the Ngawoon river, thence along the Ngawoon embankment to the town of Ngathmogyoung, then following the line surveyed for the proposed extension of the embankment to the Taboo river, whence into Bassein. The old line from Henzada to Myanoung is in course of re-construction by a new route to admit of easy inspection of the lines. The construction of a third new line from Myanoung to Prome *vid* Poungday to replace the existing line to Padoung is also in progress. This will effect the closing of the Padoung office.

Sanction has been accorded for doubling the line from Rangoon to Prome.

87. *Dacca.*—A new cable was laid across the Pudda on the 18th May last to replace the one which had ceased to work since the 8th of March 1873.

The wooden masts at the principal river crossings have been replaced by iron ones with good effect, as exhibited in the reduction of interruptions.

There has been a marked decrease in the number of interruptions which occurred in the division during the year as compared with those of the two previous years, as shewn below, *viz.*:—

	Number.		Hrs.
In 1873-74	... 24	average duration ...	5·194
„ 1872-73	... 42	„ „ ...	9·09
„ 1871-72	... 57	„ „ ...	12·33

88. *Indore.*—The new line along the Holkar State Railway from Khundwa to Mortukka was completed on 21st April 1873, and arrangements were in progress for the construction of the line from Mortukka to Mhow and Indore.

The span across the Chumbul at Dholepore was carried away by heavy floods on 11th September, when the water rose to 78 feet above lowest level. It is arranged to cross the Chumbul lower down where the high banks approach each other sufficiently near to have the masts on them.

89. *Malabar Coast.*—The construction of a new line from Carwar to Hooblee, the addition of a second wire for 18 miles out of Carwar and a third wire from Hooblee to Dharwar, making an extension of 102 miles of line and 132 of wire, was ordered during this year, and the line Coompta to Mangalore, 118 miles, was dismantled. By this means four cables are cut out of the line, the mileage is reduced by 79, and a considerable saving in supervision and line maintenance is gained.

The construction of the line, Carwar to Dharwar, was commenced on the 5th February 1874.

90. *Nagpore.*—The line Kureli to Saugor, 70 miles, completed.
An office at Saugor opened on 14th April 1873 for military purposes.
A third wire from Hingunghat to Wurdah erected.

91. *Rajputana.*—For many miles in the vicinity of Omerkote what was a dry country when the line was erected in 1867 is now an extensive lagoon; if these lagoons, or as they are locally termed "dhunds," continue to increase,* the line must be shifted to some other position.

92. *Sind.*—A three-wire line from Mooltan to Bhawulpore, commenced at the end of the previous year, was completed and an office opened at Adamwahan.
White-ants have seriously injured the deodar posts on line Dehra Ismail Khan to Bunnoo, notwithstanding the coatings of Forbes' priming.

93. *Oudh and Rohilcund.*—This department, under arrangements with the agent, undertook the technical management of the Oudh and Rohilcund Railway Telegraph lines and offices in addition to that of its own lines and offices.
The whole was divided into two sub-divisions of 351 and 275 miles respectively, and placed under the supervision of Mr. Luke, a young officer of great tact and intelligence.
The agent, after some months' experience, has expressed himself very well pleased with the arrangement, which has been both cheap and economical.
A branch line to the Lucknow city, 3 miles, was erected.
The Government and railway offices at Moradabad, Lucknow, and Fyzabad were connected by wire.
On this railway, needle instruments are used on the local, and Morse instruments with relays on the main line; the former are worked six or seven together in one closed circuit.

94. *Punjab.*—A third wire was erected between Agra and Umbala 282 miles; a second wire Subathoo to Simla, 22 miles, completing the extra wire Agra to Simla.
An extra wire Alligurh to Agra, 66 miles, was put up.
Delhi, was looped into the through local wire, Agra to Umbala, by 13 miles of wire.

95. *State Railways.*—The telegraph erected for the Tirhoot State Railway has been reported upon under "extraordinary operations."
Khirtul to Bandikari, 53 miles, was constructed completing line Delhi to Bandikari.
Shifting line from road and adding two wires for railway Dowsa to Sambhur 74 miles, completing section Agra to Sambhur.
Connecting by wire, offices at Agra, Bhurtpore, and Jeypore.
Construction of line Wurdah to Hingunghat, 43 miles, for the Wurdah State Railway.
Shifting line from road to railway and adding wires for the Holkar State Railway between Kundwah and Mortukka 37 miles.

EXTRAORDINARY WORKS.

96. On the 24th of January, Sir Richard Temple, then special Famine Commissioner, requested that light telegraphic lines to connect Motiharee, Bettiah, Ramnuggur, Seetamaree, Durbungah and Madhobanee, with Bankipore and India generally, might be erected as rapidly as practicable.
The orders of His Excellency the Governor General in Council to comply with this request were received by me on 29th January, and Major Mallock was instructed the same day to make immediate arrangements for carrying them into effect under his personal supervision. Four working parties were at once organized and set to work to collect carriage and bamboos.
On the 3rd February, Major Mallock having seen his Europe stores despatched left Calcutta for Bankipore. By the 13th the stores sent across the Ganges had arrived at Mozufferpore, and by the 20th of March, only 35 days afterwards, the whole of these lines, 541 miles in length, had been completed and thirteen telegraph offices opened.

* At this time, September 15th, 1874 they are 42 miles across, and for 32 miles the depth of water varies from 7 to 14 feet—almost a sea.

After the 20th of March other short lines were erected, and temporary offices opened as called for by Sir Richard Temple, *viz.*, at Rungpore, Dinagepore, at Kissengunge in Northern Tirhoot, at Bhagulpore and Monghyr.

97. The Lieutenant-Governor of the North-Western Provinces also applied for a line from Fyzabad through Bustee to Goruckpore, 80 miles in length. As this line is one that by its position ought to be of considerable value to the province, it has been erected more substantially than the flying lines of Tirhoot and Chumparun.
The supports of the latter, bamboos, may survive the assaults of climate and insects twelve months, but those of the former, bullahs, should, if stout, last at least three years, by which time we shall have ascertained whether it is sufficiently remunerative, or politically useful, to warrant its being made permanent.

98. As the wire and instruments used on these famine lines are uninjured and can be used again elsewhere, the absolute cost of them to Government is merely the price of the bamboos, carriage of stores, cost of labor and travelling allowances of establishment employed, and this is wonderfully small.
The whole cash expenditure of the first was only Rs. 2,645, or less than Rs. 5 per mile; the total working expenses for March Rs. 6,233-4-3, whilst the value of the messages despatched during the same month from those offices was Rs. 10,964.
The cost of the cables which were laid across the Ganges, and which will become part of the permanent line, is not included in the above, nor of the Durbungah Rail Telegraph which is treated separately.

99. The amount of energy expended on these famine lines was necessarily great, but none but the unfortunate horses suffered thereby, and their condition bore testimony at the end of the month of the hard work they had gone through.
On one occasion 31½ miles were completed in 2½ days, and when it is remembered that the Officer in charge had to buy his bamboos in the villages, cart them, lay out the line, and at the same time supervise the holing, poling and wiring parties, it can be well understood that he must have travelled a great many miles in the course of those days.

100. The different offices opened have been given under the head of offices opened during the year.

101. The number of interruptions was wonderfully small, proving how strong a line erected on bamboos can be made, if erected as sheers or better as tripods, instead of being single and upright, as is the usual practice.

102. The Durbungah Railway, 54 miles in length, was opened at the expiration of 57 days from the date of commencing to mark it out.
The works were of necessity of a very temporary character, and there being neither signal posts, time-tables, nor any of the other ordinary safeguards for preventing collision, everything depended on accurate telegraph signalling. This devolved on this department. Here, again, Major Mallock showed his value. He erected the line, arranged an excellent system of block, supervised and worked it himself for some days, and deservedly obtained the warm acknowledgments of the Railway Officers and of the Lieutenant-Governor. On no occasion did the telegraph fail in its duty.

GUARANTEED AND STATE RAILWAY TELEGRAPHS.

103. Although the position this department holds in respect to the guaranteed railways continues widely different from what obtains in England between the post office and the English railway, and also from what was contemplated when licenses were granted to them to carry messages for the public under certain conditions, and although we have not succeeded in establishing that unity of interests, that complete unison in working, and that rapid interchange of messages which for years past I have striven to obtain, and which is so much to the interest of all concerned to obtain, still much progress has been made in this direction, more especially in respect to removing the anomaly of having two sets of wires on different posts where one would suffice.

104. The Agent of the Oudh and Rohilkund Railway was the first to recognize that it was to the mutual advantage of the Government and of the railway that there should be only one system of wires, only one staff of maintenance, and further that, as this department has a large staff for the purpose

and wholly devotes its energies to telegraphy, it could erect and maintain wires and work telegraphs better than they could with a limited establishment without reserves. We have from the first supplied the Oudh and Rohilkund Railway with wires, and technically supervised their telegraph offices, and it is pleasing to find that with all their natural love to be quite independent of the Government, they are well satisfied with the result.

105. On the Bombay and Baroda Railway we had at first but a small section. Lord Mayo had laid down the precept that the Government should not rest satisfied until it possessed and maintained every wire in the country, consequently, when the Bombay, Baroda and Central India Railway desired to extend their lines from Ahmedabad to Veerungaum, this department erected the telegraph and let to the railway such wires as they required. The railway at first objected; they naturally feared that if so important an adjunct for running their trains was removed from their control, the consequences might be serious, but now that they have experience, they have invited the Government to take over their lines and for the future supply them with wires.

106. The Eastern Bengal Railway desire the same thing, and I have reason to expect that the Great Indian Peninsula Railway will also follow suit.

107. I wish that the same success had attended our efforts to obtain a greater speed in the transmission of telegrams over the joint-lines. A few stations have been joined by wire to avoid the loss of time that occurred when messages were interchanged by hand. But more than this is required. On railways the messages of the public have to wait on those on railway business. On the Government lines they take their turn. It is therefore to the advantage of the public that the telegrams should travel as much as possible by the Government and as little as possible by the railway lines, and I believe it to be the advantage of the railways also that they should transfer as soon as possible to the Government lines.

108. When a telegram does not reach its destination until after the arrival of the sender, the inducement to telegraph is nil; yet, this is not an uncommon complaint in respect to telegrams passed over the telegraph wires of a busy railway line. The legitimate work of a railway is the conveyance of goods and passengers and the telegrams connected therewith. These latter retard the public telegrams in proportion as the former increases. Statistics verify this. Railway train traffic has for some years past steadily increased, but its telegraph traffic has fallen off. The whole telegraph revenue of the East Indian Railway is little more than Rs. 57,000. The whole earnings of all the railways from 700 stations is only Rs. 1,74,952, a mere bagatelle compared with the train earnings.

109. I am satisfied that if the railway companies accept rule 9 of the State Railway Telegraph Rules, there will be an impetus given to telegraphy that will quite compensate them for their temporary sacrifice.

STATE RAILWAYS.

110. The position of this department in regard to the State railways is wholly different. We supply the required number of wires and also technical supervision* of the offices; the telegraph staff is part of the establishment of, and is under the orders of the traffic manager, as it ought to be; the supervising officer examines and reports, but does not interfere beyond bringing to the notice of the railway traffic department any thing that requires attention.

As the State railway telegraph works as auxiliary to the Government Department, the delay in the transmission of telegrams should be a minimum and should be satisfactory to the public.

111. On the Rajputana State Railway Mr. Assistant Superintendent Rutherford, who has proved himself a very excellent officer, erected the lines and supervises, but is not responsible for the discipline of the signallers. The difference and peculiarities of management and supervision have already been alluded to.

* See Annexure III.

STORE BRANCH.

112. As compared with former years, the total cash expenditure is considerably smaller than usual:—

	Rs.
Expended in 1870-71	4,05,474
„ 1871-72	3,97,150
„ 1872-73	4,11,355
„ 1873-74	2,92,040

Of this nearly Rs. 72,000 were expended on branch establishments* and contingencies at Calcutta, Bombay, Madras, Kurrachee, and minor places, equivalent to 3 per cent. on the total value of stores received and issued by them, amounting to Rs. 24,35,352.

113. In the Workshops the debits and credits are as follow:—

	Rs.		Rs.
To Workshop labor ...	49,265	By Outturn ...	1,84,283
„ Establishment ...	15,387	„ Balance on 31st March against unfinished works ...	19,598
„ General charges ...	2,715	„ Miscellaneous recoveries ...	159
„ Balance from last year ...	13,165		
„ Materials issued ...	1,16,771		
TOTAL ...	1,88,303	TOTAL ...	2,04,040

This showing a nominal profit of Rs. 15,737.

114. The chief object of the Workshops is to keep the telegraph going. There is an immense amount of petty repairs and miscellaneous job-work, which varies in quantity with circumstances over which we have no control—such as cyclones—and in quality, from cable-making for crossing large Indian rivers and high iron masts for air spans, to odd screws and missing parts required for the repair of some electrical instrument quite out of date.

115. The Workshops are an invaluable and, indeed, a necessary adjunct to the department; they compare favorably as regards their prices with the private firms of Calcutta, but they would do better if they could only be kept supplied with a steady demand for heavy work of a uniform character.

It is the spasmodic and ever varying nature of the demands which keep the rates higher than they otherwise would be. For instance, there was an unexpected and sudden indent to supply famine offices, opened at very short notice, with instruments, batteries, lightning-protectors, seats and tables and other office-fittings, all of which had to be made up, and, at the same time, another urgent indent from the State Railway Department for a hundred instruments. This extraordinary supply was prepared and issued in good time, but only by working extra time, by great exertion, and by employing extra hands, after which a re-action, a dull time, during which work to fairly employ the establishment had to be sought for, and was not found in sufficient quantities.

116. The Departmental Press, which is attached to the Store-yard and under the Superintendent of Stores, turned out Rs. 27,011 worth of printed work,† costing for—

	Rs.
Labor	5,193
Materials	19,504
TOTAL ...	24,697

Endeavors are made to check waste of stationery and printed forms. All forms are valued, issues priced, and ledger-accounts kept with each office and finally reviewed in the store superintendent's office.

CEYLON.

117. Since the Government of India took upon itself the entire charge of the Ceylon telegraphs in 1869, the treasury of India has borne all the expense and

* This sum (Rs. 72,000) covers all expenses for establishment and labor for receiving, taking charge of, marking, packing, and despatching stores, and for accounts connected therewith.

† The estimated rates for printing compare very favorably with other presses.

received all the earnings of that island's lines, just the same as if they constituted an integral portion of the Indian system. For this reason the receipts of Ceylon have been taken in the gross like those of any other division, and no attempt has been made in the accounts since 1869 to 1873 to show its net value.

Had it been to the interest or convenience of India to continue the present contract, no harm would arise from continuing this practice; but as its continuance invites erroneous comparisons between the (telegraph) prosperity of that island, as compared with India, and as these returns are calculated to mislead the respective Governments, I have had the Revenue Statements for Ceylon, for 1873-74, (Annexure IV) made up correctly, and also a Statement prepared showing the estimated loss in working since 1869 (Annexure V).

This is the more necessary, because the Governor of Ceylon has expressed his intention of endeavouring, when in England, to give effect to a vote of the Legislative Council affirming the expediency of resuming the telegraph.

This resolution of the Assembly was based on the facts that the local requirements of Ceylon will naturally meet with more attention from themselves than from the Indian Government; that the submersion of the cables that connect India, *viâ* Madras and Bombay, with Aden, Suez, Singapore, China and Australia, had materially reduced India's interest in the efficiency of the Ceylon telegraphs; and that the receipts slightly exceeded the expenses.

This is all true, except in respect to the net revenue. I am sorry that the Ceylon public should have misunderstood the financial returns, but I agree with them that India has no longer that interest in the Ceylon telegraphs that compensates for the annual loss on working.

118. To obtain an exactly accurate return of the revenue of each office or group of offices, the sum paid on each message must be divided so as to credit the addressed office and all the intermediate offices each with its proper proportion. To carry this out in detail would involve an immense amount of useless labor. A sufficiently close approximation is obtained by ascribing to each office, as its comparative value, the sums it receives for messages sent from it. The total money paid into the Ceylon offices is (1) the revenue derived from the local messages, plus (2) the Ceylon share of all messages sent out, plus (3) what is due to other administrations. The real revenue of that island consists of only the first two, plus its share on all messages received into the island; but as the latter is only one-fourth in respect to Burmah messages, and one-third in respect to Indian messages, it is evident that the real revenue of the Ceylon telegraph must be nearly 25 per cent. less than its actual receipts, and this is what appears to be the case from the returns of the past five years.

Consequently, what appeared at first sight a small profit of three or four thousand rupees, dwindles down on analysis to a loss of twenty-five thousand rupees per annum.

119. Unfortunately, the limited area and revenue of Ceylon also limits the magnitude of her establishments; she cannot afford to maintain a staff of extra men ready to take the place of those who may die, take leave or fall sick, and yet, unless provision of this kind be made, if specially educated, experienced men be not at hand to supply casualties, her telegraph system is liable at any moment to total or partial collapse.

This is a very serious difficulty, but it may be met either by India assenting to continue to work the Ceylon telegraphs on the same terms as in Native States, *viz.*, on a guarantee against loss, or on contract or by lending to that Government one or more qualified superior officers from time to time as required.

CALCUTTA, *November* 1874.

D. G. ROBINSON, COLONEL, *R. E.*,
Director General of Telegraphs in India.

APPENDIX A.

Return of the Number and Value of Inland and Foreign Messages sent and of Foreign Messages received" and "Transit" during the year 1873-74, showing also the Increase and Decrease under each head on the figures for the previous year 1872-73.

NUMBER OF PAID MESSAGES AND INDIAN SHARE OF COLLECTIONS IN 1873-74.

APPENDIX M.

Statement of Interruptions.

(EXCLUDING CEYLON.)

YEAR.	Total number of miles of wire.	Total number of interruptions.	Aggregate duration.	Average duration.	Interruption per every 100 miles of wire.	Percentage of increase in length of wire as compared with 1868-69.	Percentage of decrease in number of interruptions as compared with 1868-69.	Percentage of decrease in aggregate duration of interruptions as compared with 1868-69.	REMARKS.
			Hours.	Hours.					
1868-69 ...	20,597	1,533	36,689	23·9	7·4	... ...	... ...	... ...	The number of interruptions are calculated as follows:—Contact two wires equivalent to interruption on one wire; imperfect communication on one wire equivalent to half interruption on one wire.
1869-70 ...	21,378	1,480	35,430	23·9	6·8	3·78	3·47	3·43	
1870-71 ...	22,834	1,340	31,377	23·4	5·8	10·86	12·58	14·49	
1871-72 ...	28,893	1,220	28,548	23·4	4·2	40·28	20·42	22·17	
1872-73 ...	30,681	1,130	26,345	23·3	3·6	48·95	26·29	28·19

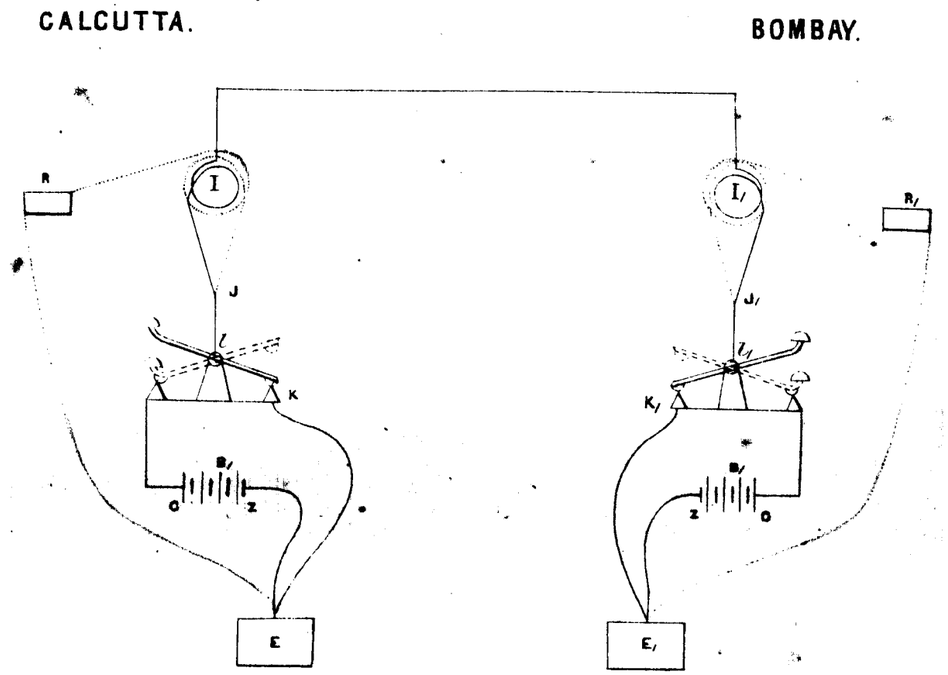
ANNEXURE II.

DUPLEX TELEGRAPHY.

No attempt is made in this note to do more than explain the simple principle by which the antagonism of signals coming from opposite directions is overcome by the artifice of splitting the electric currents and thus making them indicate the required signals at the proper receiving instruments.

Telegraph signals do not travel like trains on a railway or balls from a gun. They are merely exponents to the distant station of the fact of the wire being charged with, or discharged of, electricity by the signalling station.

When one pole of a galvanic battery (the other pole being connected with the earth) is attached to an insulated wire, the other end of that wire being also to earth, the whole wire becomes instantaneously charged with electricity in somewhat the same manner as heat flows into a poker when one end is put into the fire. The instant the battery is disconnected, the wire discharges itself through the other end into the earth. Telegraph signals are produced by a series of charges and discharges of a wire connecting two stations, and exhibited by means of some kind of indicator connected therewith with the earth.



The rapidity with which the wire is charged depends upon its thickness and length; the greater the thickness, the less the resistance; the greater the length, the greater the resistance.

If a silk-covered or otherwise insulated wire be wound in a helix or coil, and a core of soft iron be inserted therein, this soft iron core will become a magnet whilst a current of electricity is passing through the wire, and will cease to be one when the wire is discharged. Similarly, an ordinary magnetized needle, suspended in such a coil, is not affected until the wire be charged, when, what was the north end will point either east or west according as the copper or zinc pole of the battery is attached to the coil, or whether the wire be wound to the right hand or to the left. The indications of all receiving instruments are due to one or the other of these phenomena.

If two precisely similar wires be wound as helices round the same axis, one coiled to the right and the other to the left, and both charged from the same pole of the same battery, no effect will be produced either on a soft iron core or a magnetized needle, the currents moving in opposite directions will neutralize each other.

If two or three wires of equal length and thickness, and having their further ends connected with the earth, are attached to a pole of a battery (the other pole of the battery being to earth), either directly or by a connecting wire, they will be equally charged because their resistances are equal. But should the wires be of unequal resistance, either from difference in length, or thickness or both, the quantity of electricity that will enter each will be in inverse proportion to their resistances; consequently, if it be required to simultaneously send signals of equal strength to two or more places not equi-distant, thinner wire or extra artificial resistance of some other kind must be added to the less resisting wires so as to make them all equal (obtain balance).

Split currents (electricity flowing from one source into more than one wire) are used to send simultaneously the same telegrams to two or more tolerably equally distant stations or to save offices. For example:—During the expedition against the Hussunzaies of Hazara, to save the expense of a junction office at Hussan Abdal—Peshawur, Rawul Pindee, and Abbottabad being not very unequally distant from Hussun Abdal, the current was allowed to split there, and every telegram sent from Rawul Pindee, Peshawur, or Abbottabad, was received at the other two stations, unless one of them

disconnected from earth—when the theoretically infinite resistance thereby introduced into that branch practically sent the whole signals to the other station, the same device is used for transmitting the telegrams of the Press association over England. These telegrams are simultaneously transmitted to several places over carefully balanced lines by a Wheatstone's automatic instrument at the rate of 80 words per minute.

It is also by splitting the current at starting, and making each half-circulate round the home instrument in opposite directions, thereby neutralizing their effects on that instrument, that duplex telegraphy is effected.

Let K K$_,$ (in accompanying sketch) be the two signalling keys at two stations, say Calcutta and Bombay. B B$_,$, the two batteries, the copper poles of each of which are connected with their respective signalling keys and the zinc poles with their earth plates; I I$_,$, the receiving instruments; E E$_,$, the earth plates. Suppose each end of the line wire (shown in black) which connects the keys of the two stations to be wound as helices in the same direction round the axes of the indicators I I$_,$, if the handle of the key K is pressed down so as to establish contact with the battery, the wire will become charged with electricity which will affect both I and I$_,$. But if another wire (marked red) is attached to the line wire between the indicators and the keys, at J and J$_,$ and wound round the former to the same extent as the line wire, but in the opposite direction, and attached to the earth through a resistance R equal to the line between I and I$_,$ on the key K being pressed down the current will split at J, into two equal parts, which will neutralize each other, (the resistance of the red being equal to the resistance of the black wire,) and the instrument I will not, but the other instrument I$_,$ will, be affected.

The instant the key is released the wire discharges itself by its connections with the earth, and the instruments are in their normal state again.

Similar, when K$_,$ is pressed down (K being undisturbed), the fact of the wire being charged by Bombay is indicated to Calcutta by the instrument I being disturbed, and the release of K$_,$ by I returning to its normal state.

But suppose Calcutta and Bombay both desire to communicate* with each other at the same time, and that both press together or nearly together, what happens? The two currents both from the copper poles of two batteries of equal force will flow into the black line from opposite directions, and will therefore neutralize each other.

There will, therefore, be no charge in the black wire, but each of the red wires will be charged, and as there is no black current acting in the opposite directions, each instrument, I I$_,$ will be affected by the red wires, that is to say, each receiving instrument, although unaffected by the far battery, in fact solely affected by its own, really indicates the fact of the opposite key being pressed down.

I shows that K$_,$ is pressed down
I$_,$ „ „ K „ „
but immediately one is released, the affection comes from the far end of the wire, and the charge and discharge are so instantaneous that no change is apparent.

Suppose the instruments to be magnetized needles and that both keys be pressed down, these needles will point east and west, instead of north and south. If K$_,$ be released the current ceases to flow from B$_,$ and that from B is no longer opposed; the black wire therefore becomes charged from B, but so instantaneously, that the needle does not, during the change, deviate from east and west, and still indicates to Bombay that the Calcutta key remains down; the current now flows in from B unopposed, and there are two equal split currents moving round I that neutralize each other, the needle at I therefore returns to its normal state—north and south—and indicates to Calcutta that the Bombay key is released. So instantaneous is this action, that although the duration of the beats (pressing down) be only $\frac{1}{10}$ and $\frac{3}{10}$ of a second, their comparative duration is so well marked that there is no confusion.

This is the whole secret of duplex telegraphy. I have endeavoured, and I hope I have succeeded, in explaining, even to those who had no previous knowledge of the subject, that it is based on the same phenomena as all other telegraphy and that the signals do not pass, but in reality destroy each other.

In practice, as stated before, the working is not so easy. Provision has to be made for many varying contingencies, or the signals would be too confused to be decypherable.

* By means of a code of combinations of pressings down called beats—some lasting three times as long as the others, letters are transmitted, and the words of a telegram spelt out at the rate of 30 words per minute or more.

Nos. 109—26 T, dated 3rd March 1875.

RESOLUTION—By the Govt. of India, P. W. DEPARTMENT.

Read—

Letter No. 350 of 21st December 1874 from Director General of Telegraphs forwarding the Administration Report for 1873-74.

General.

OBSERVATIONS.—This Report is not much (two days only) in advance of the last one, but it is understood that much of the delay is due to the difficulty in getting it set up in type, owing to press of work in the Printing Office. The next Report will, it is hoped, be received in proper time.

2. The heads under which the Report has been arranged differ somewhat from those of the previous Report, but the general arrangement is much the same, and it is better supported by tabulated statements for statistical purposes; indeed, in this respect, it is superior to any of its predecessors.

3. The diagrams attached are especially useful for taking in at a glance some of the principal features in the operations of the Department.

4. According to the Finance Accounts, the Capital and Revenue receipts and the Capital and Revenue expenditure for each of the two years 1872-73 and 1873-74 have been as follows :—

	Indian Telegraph.		Ceylon Telegraph.		Total.	
	1873-74.	1872-73.	1873-74.	1872-73.	1873-74.	1872-73.
	£	£	£	£	£	£
CAPITAL.						
Capital Outlay	62,134	133,375	229	...	62,363	133,375
„ Receipts	2,684	2,060	15	...	2,699	2,060
Net Outlay	59,450	131,315	214	...	59,664	131,315
REVENUE.						
Charges	245,987	246,877	9,724	7,733	255,711	254,610
Receipts	184,401	171,786	9,720	9,370	194,121	181,156
Net charges	−61,586	−75,091	−4	+1,637	−61,590	− 73,454
TOTAL.						
Charges	308,121	380,252	9,953	7,733	318,074	387,985
Receipts	187,085	173,846	9,735	9,370	196,820	183,216
Net ...	−121,036	−206,406	−218	+1,637	−121,254	−204,769

There are certain discrepancies between these figures and those mentioned in the Director General's report and tables, besides other small differences in various portions of the report and tables, which, however, will not be noticed here, but will form the subject of a separate communication. It will suffice to remark here that the figures used in this Resolution refer to the Finance Accounts when they relate to pounds sterling, and to the Director General's Report when they relate to rupees.

5. The expenditure incurred on new Capital Works has been—

	£
Line from Carwar to Dharwar	4,569
„ from Bankipoor to Chumparun	4,463
„ from Henzadah to Bassein	3,282
„ from Rewaree to Bundicara...	2,446
„ from Nanapoor to Hyderabad and Trimulgherry ...	2,400
Other lines	17,204
Total ...	34,364

6. Under Revenue, the deficit has decreased from £ 73,454 to £ 61,590, being a decrease of £ 11,864. This result may be considered as satisfactory, and it may reasonably be hoped that in a few years the receipts will equal the expenditure.

7. The working expenses of the Department have increased during the year by £ 1,101, *viz.*, from a total of £ 254,610 to a total of £ 255,711, but there has been a more than corresponding increase in the receipts, which have risen from £ 181,156 to £ 194,121, showing a gain of £12,965.

8. The sum of Rs. 20,19,617 shown by the Director General as "Receipts" represents the earnings for the year, some of which have still to be realized; but the actual cash receipts also show a marked increase, the figures being Rs. 18,19,456 in 1873-74, as against Rs. 17,27,600 during the year previous.

9. As far as the accounts portion of this Report is concerned, the only other point calling for notice is the arrangement adopted with regard to the Financial Administration of the Department. This portion of the Report should commence by showing the Capital outlay of the Department during the year, and to the end of the year; next, the Revenue Account should similarly show the receipts and charges during, and up to the end of, the year; and lastly, the net surplus, or deficit, as the case may be, should be shown in like manner; and this should be done in all future reports.

10. Under the present arrangement of the financial transactions of the Department, it is somewhat difficult to follow the figures through. For example, in Table 18 the signalling outlay for 1873-74 is set down at Rs. 12,60,401, while in Appendix D the total, after deducting for Ceylon, is shown at Rs. 13,51,698, but in the Finance Accounts the charge is Rs. 13,49,320. These differences are explainable, but the figures should be so arranged as to need no explanation.

11. The net results for the year as regards paid messages are as follows :—

	Increase.		Increase.	
	Number of messages.	Value.	Percentage.	
			Number.	Value.
		Rs.		
State	7,883	20,935	13·43	10·29
Private	53,197	59,018	8·50	3·93
Total ...	61,080	79,953	8·92	4·69

12. The net increase in the number of State messages is thus distributed—

Bengal	...	...	...	...	6,275
British Burmah	...	...	...	...	1,289
Other Provinces	...	...	...	...	319
			Total increase	...	7,883

This result is chiefly due, it is believed, to the famine operations in Bengal. There have been increases in other Provinces besides those named above, but they have been neutralized by corresponding decreases elsewhere. The increase is in inland traffic only; the foreign traffic shows a slight decrease.

13. The table given in para. 11 shows that, while the number of private messages has increased since 1867-68 by 152 per cent., there has been an increase in the value of only 62·84 per cent. The alteration in the tariff standards since that date from 20 to 10, and then to 6, words as the message unit, points to the conclusion that there ought to have been a more than corresponding increase in the value, since the reduction in the unit *length* was equivalent to an increment in the charge. The contrary being the case, while the total number of messages has considerably increased, the inference seems to be that messages are much more condensed now than formerly.

14. The tables given in paras. 11 and 18 agree with each other as regards the amounts of the *message revenue*, but do not agree as regards the *number of messages;* this is due apparently to the inclusion in the latter table of the *unpaid* messages, and if so, the following table shows that the number of unpaid messages has been steadily decreasing, *vide* column 3 :—

Year.	Paid messages.	Unpaid messages.	Total paid and unpaid.
1868-69	374,471	59,081	433,552
1869-70	484,618	58,817	543,435
1870-71	577,361	51,872	629,233
1871-72	654,938	48,788	702,706
1872-73	684,388	41,953	726,341
1873-74	745,468	42,580	788,048
	Figures taken from para. 11.	Difference between paras. 18 and 11.	Figures taken from para. 18.

This decrease is satisfactory.

15. The table given in para. 18 shows that, though the number of Signal Offices has increased from 186 in 1868-69 to 225 in 1873-74, yet that the cost of the Signal Offices has been reduced from Rs. 13,47,706 to Rs. 12,60,401. This fact is creditable to the administration of the Department, and it is all the more so because there is every year an increasing charge for the existing Signalling Establishments on account of the annual increments of salary earned by good conduct and length of service. The aggregate increase of salaries on this account during the past six years is no less than Rs. 2,01,712, and for the year under review, Rs. 29,273.

16. The table given in para. 19 compares the number and percentages of complaints made, the result of which is very satisfactory; but the table has been carelessly compiled, and the figures shown in Appendix E will be adopted in the publication of the Report.

17. Appendix F shows the details of errors detected, the result is as follows :—

$$\frac{89{,}084}{391}\left\{\begin{array}{l}\text{number of messages compared}\\ \text{,, of errors discovered}\end{array}\right\} = 1 \text{ error in } 227{\cdot}83 \text{ messages, not } 217{\cdot}67 \text{ as therein shown.}$$

That statement also shows that only 17·48 per cent. of the messages were examined, and that no messages were compared in the last quarter of the year; why, has not been stated.

18. The table given in para. 21 exhibits the great increase that has been made of late years in the speed of transmission of messages, and speaks highly for the improved efficiency of the Department.

19. The number of messages exchanged with Railways is still exceedingly small, and is scarcely more than it was last year. Appendix I gives the particulars of this kind of traffic, the result being as follows :—

	Number.	Value, Government share.
		Rs.
Messages transferred to Railways—		
Inland	22,394	19,034
Foreign	84	200
Total ...	22,478	19,234
Messages transferred from Railways—		
Inland	18,653	16,938
Foreign	77	151
Total ...	18,730	17,089
From and to	41,208	36,323
Ditto ditto in previous year	37,174	33,638
Increase ...	4,084	2,685

This class of traffic is, however, likely to increase in future years, and it should, in the interests of the general public, be fostered as much as possible under proper regulations. This is the object aimed at by the State Railway Telegraph Rules, which, it is hoped, will shortly be adopted by all Guaranteed Railways.

20. The following is an analysis of the number of undelivered messages due to whatever cause; they have fallen from 2,643 in the previous, to 1,991 in the current year :—

Insufficiently addressed	680
Wrongly ,, ...	540
Addressee left Station (re-despatched)	396
,, left for original Station	256
Refused	69
Other reasons	50
Total ...	1,991

from which it will be seen that the public are themselves chiefly responsible for non-deliveries.

21. The number of "Press" messages is shown to have been exceedingly small, aggregating in number only 2,375, and in *paid* value, Rs. 11,536; this is the more surprising, as the actual value of the messages, calculated at ordinary rates, is Rs. 55,725, or nearly five times as much as the sums actually paid, showing how large is the concession made by Government in the public interest.

22. The number and duration of "interruptions" show great improvement over that of past years; as compared with 1868-69, the *number* has fallen from 1,533 to 918, and the *duration* from 23·9 to 22 hours. Again, while in 1868-69 there were 7·4 interruptions to every 100 miles of wire, there are now only 2·8, or only one-third of that proportion. This is highly satisfactory.

23. Of the number of new Offices opened during the year, more than one half, or 14, were in connection with famine relief in the distressed districts of Bengal; many of these latter will ultimately be closed. The following shows the number of Offices open on 31st March 1874 to have been 225, thus—

Open on 31st March 1873	203
Closed during 1873-74	2
	201
Add number opened	24
	225

This total does not, however, agree with that of the detailed list given in Appendix B.

24. The Governor General in Council is glad to find that the conduct of the Civil Signallers is reported to have been excellent, and observes with satisfaction Colonel Robinson's opinion that telegraphy is eminently suited to Eurasians, and is a very popular employment with them; the number of applications for admission into the Department is stated to far exceed the number of vacancies, and selection can thus be freely exercised.

25. The remarks made by Colonel Robinson in his 33rd to 36th paras. show that, even for Civil purposes, in times of peace, it is very advantageous to possess a reserve of Military Signallers; had it not been for this reserve, the Department would have been unable to meet the sudden demand for new Offices made on it on the occurrence of the recent famine in Bengal. It is satisfactory to find that the efforts made of late years in this direction have borne good fruit.

26. The Director General explains, however, that the number of Military Signallers employed in the Department must, so far as the Telegraph Department is concerned, be limited by the number of soldiers that can be entertained to take the place of Civilians absent on leave, or sick, or for working unimportant Offices that could be closed in case of war or sudden disturbance.

23 soldiers are reported to have qualified during the year in signalling,
8 were under instruction,
28 were employed in the Department as Signallers.

59 Total.

But this number does not agree with the nominal roll shown in detail in Appendix N, where the number amounts to 82.

27. The number of casualties during the year amongst the signalling staff has been as follows:—

Resignations	20
Dismissals	16
Deaths	11
Services dispensed with	1
Unfit for further service	5
Desertion	1
Transferred to other Departments	1
Total	55

28. The Governor General in Council is glad to learn that the systematic electrical testings of the lines have been maintained with useful

results for ordinary working, and that its value will be much enhanced with "duplex" working. By this means a large number of defective insulators have been detected and removed from the lines. Steps have been taken for the introduction of "duplex" working, by which the carrying capacity of the lines will be greatly increased. The principle of this mode of working has been long known, but there have been practical difficulties in the way of its introduction on long lines which have only lately been overcome by the Electrician to the Department (Mr. L. Schwendler).

29. A considerable change has been introduced during the year in the conservancy of the lines, the line-runners have now to regularly patrol the lines, instead of, as formerly, waiting until interruption occurred. The advantages of this system are great.

30. The following is a summary of the results of the year, as compared with the previous year 1872-73:—

Inland traffic has increased 8·45 per cent. in extent, and 3·69 per cent. in value.
Foreign traffic has increased 12·54 per cent. in extent, and 6·97 per cent. in value.
Total number of paid messages has increased 8·92 per cent.
The total cash revenue has increased 5·27 per cent.
The average speed of transmission has increased 30 per cent.
Complaints have decreased 16 per cent.
The number of undelivered messages has decreased 32·7 per cent. in number irrespective of the increase in traffic.
The number of Offices has increased 11·82 per cent.
Errors in messages have decreased very considerably, but figures are not available for direct comparison.
Interruptions have decreased 19 per cent. actual; 24 per cent. relative.

31. Signal Office expenditure has decreased 1·39 per cent. The total reductions in Signal Office expenditure from the year 1869-70 amount to nearly Rs. 3,00,000, notwithstanding the large increase in the number of Offices, amount of work, the great improvements made year by year in the manner in which it had been performed, and the unavoidable increase in salaries due to annual increments, particulars of which are given in Appendix O.

32. On the whole, the operations of the year are considered to have been successful, and the thanks of the Governor General in Council are due to Colonel Robinson and his officers.

Inland Tariff.

33. There have been no changes in the local tariffs during the current year.

34. The number of inland paid messages is stated in para. 55 to have been 657,582, in which were included 65,339 State; but these figures do not agree with the table given immediately below, where they are stated to have been 678,926 and 66,542, respectively. The discrepancy should be explained.

This table shows the number of miles of line, but no distinction has been made between the lengths along railways and those on roads. A return showing this should be included in the next year's Report, and it would be useful also to furnish a table showing the length of each line, and the number of wires of which it is composed; this can probably be done without difficulty.

International Tariff and Communications.

35. A list is given of the principal extensions that have been made during the year. Of these the following concern India—

(1).—The doubling of the Eastern Companies' cable between Falmouth and Lisbon.
(2).—The connection of Otranto with Alexandria *vid* Candia and Zante, made by the same Company, and
(3).—The connection of the systems of British and Native Burmah.

36. The three Companies to the eastward of India were amalgamated into one in June 1873 under the title of the "Eastern Extension Australasia and China Telegraph Company."

37. The communications have been, on the whole, well maintained, the following shows the number of interruptions on the different routes :—

	Interruptions.
Eastern Company's lines	2
Eastern Extension Company's lines	5
Great Northern Company's lines	8
Indo-European " "	8
Turkish lines	14

38. The traffic *vid* Turkey is continuing to decrease, as shown below :—

1871-72 proportion of entire traffic	18·08
1872-73 " of "	4·75
1873-74 " of "	2·73

The sudden fall in 1872-73 appears to be due to the introduction in July 1872 of the new tariffs fixed by the Convention, by which the rate for the Turkish route was very nearly equalized with those *vid* Suez and *vid* Teheran, whereas before it was considerably lower.

39. The revenue derived from the foreign traffic has increased from Rs. 5,16,115 in the past, to Rs. 5,52,128 in the current year, equivalent to 6·97 per cent. The number of messages has, however, increased in a higher ratio, *viz.*, by 12·54 per cent., the actual increase being from 78,094 to 87,886 messages.

40. The following abstract shows the distribution of the westward traffic for the past three years between the three routes :—

	Red Sea route.	Teheran route	Turkish route.
1871-72	528·1	29·11	18·08
1872-73	65·05	30·20	4·75
1873-74	53·14	44·13	2·73

The increase on the Teheran route is very marked. A similar abstract should be given in future Reports for the eastward traffic.

41. The total foreign traffic has increased from 28,351 messages in 1867-68 to 87,886 messages in 1873-74, and the revenue during the same period from Rs. 1,93,559 to Rs. 5,52,128. The increase is entirely due to private messages.

42. Colonel Robinson attributes much of the increase in the traffic to an important modification in the message unit introduced on the 15th November 1873; by it, the 20-word unit for foreign traffic with 10-word progressions was abolished, and a 10-word unit with 1-word progression thereafter was established. One unexpected result of this reduction in the unit has been a positive increase in some cases of the length of the message; this result appears to be due to the removal of the necessity for extreme compression; an extra word or two formerly would have involved a considerable increase in the charge; now the increased charge is comparatively small.

Extensions of lines and wires.

43. It is stated that the number of miles of line and wire open on the 1st April 1874 were, respectively, 15,954 and 32,438, against 15,705 and 31,301 on the same date of the previous year. This does not, however, agree with the figures given in the statement included in para. 55, and the discrepancy should be explained.

44. Assuming the figures given in para. 78 to be correct, the increase has been—

249	in miles of line,
1,337	" of wire, and
7	" of cable.

45. The Governor General in Council is glad to perceive that the management by the Department of the telegraph lines of the Oudh and Rohilkhand Railway system is reported to have been successful. On this point

Colonel Robinson remarks as follows:—"The Agent, after some months' experience, has expressed himself very well pleased with the arrangement, which has been cheap and economical."

Extraordinary Works.

46. This section is devoted to the consideration of the temporary lines put up *on emergency* in Bengal. Five hundred and forty-one miles of temporary lines were erected in the very short space of 35 days for objects connected with famine relief operations. The rapidity with which this work was done was much facilitated by the ease with which stout bamboos are procurable in Bengal. On one occasion 31½ miles of line were constructed in two and a half days, including not only actual erection, but also the purchase of the bamboo standards and their carriage to site.

47. The cash outlay for these lines amounted to only Rs. 2,645, *viz.*, for purchase of bamboos, carriage of stores, labour, and travelling allowances. As the wires and instruments can be used again, their cost has not been charged. The working expenses during March amounted to Rs. 6,233, while the value of the messages despatched during the same month was no less than Rs. 10,964, so that the receipts exceeded the outlay even during the first month.

48. The cost of the cable across the Ganges, which will form part of the permanent line, has not been included in the cost, as shown above, nor has been that of the Durbhunga Railway Telegraph line, which is separately treated.

49. The operations of the Department in connection with these lines are considered highly creditable to all concerned, and the exertions of the Officers concerned have already been acknowledged.

Store Branch.

50. Under this head a considerable reduction has been shown in the amount of cash expenditure, and the workshops show a nominal profit of Rs. 15,737; it is stated that a still more favourable result would be exhibited were it possible to maintain a steady and uniform demand for work for them, but the demand on them is spasmodic; sometimes there is a large and urgent requirement, necessitating the employment of additional hands, often followed by a slack time when the regular establishment has not enough to do.

51. In the Report for the previous year, a reduction in the number of the Store Agencies was spoken of by the Officiating Director General; and in reviewing that Report, the Governor General in Council observed that the reductions appeared to be "highly desirable, and should be effected whenever practicable." It should be reported if anything has been done towards this end during the year under review.

Ceylon.

52. The remarks made by the Director General on the subject of the restoration to Ceylon of the management of its own Telegraph system will be separately considered on receipt of a report that has been called for.

ORDER.—Ordered, that copies of this Resolution and of the Report be furnished to the Secretary of State, to the Local Governments and Administrations, noted in the margin*, to the Government of Ceylon and to the Commissioner in Sindh.

* Madras. Bombay. Bengal. North-Western Provinces. Punjab. Oudh. Central Provinces. British Burmah. Mysore and Coorg. Assam. Hyderabad. Central India. Rajpootana.

Ordered also, that paras. 33—36, and Appendix N, be communicated to the Military Department for information.

Ordered further, that this Resolution, pages 1 to 23, and Appendices A, E (last half only), G., M. and Q., and Annexures I and II (part), be forwarded to the Home Department for publication in the Supplement to the *Gazette of India*.

Ordered lastly, that a copy of the Resolution be forwarded to the Director General of Telegraphs for information.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

IRRIGATION OPERATIONS FOR THE KHARIF, 1874-75.

No. 113 A., dated Allahabad, the 13th February 1875.

RESOLUTION—By His Honor the Lieutenant-Governor, N. W. Provinces.

Read the following papers:—

A7.—Comparative statement of irrigation and rainfall for kharif, 1874-75.
B7.—Statement of crops irrigated by districts.
C7.—Statement of crops irrigated by canal divisions.

OBSERVATIONS.—The results shown in these statements compare favorably with those of previous years. A glance at the table of rainfall for the kharif months will explain the decrease in area of 11,693 acres, as compared with the acreage of the previous year, which was a favorable one for the canals. In the present season the rains began early in June, and continued till the end of September, so that it is not too much to say that the area and corresponding revenue now shown may, with reason, be always counted on, because water could only have been taken for those crops, which require it irrespective of the rainfall:—

TABLE I.

Year.	Acreage.	Revenue.
	Acres.	Rs.
1867-68	289,910	9,27,102
1868-69	484,485	12,19,344
1869-70	501,625	13,39,807
1870-71	396,399	12,07,265
1871-72	333,117	10,42,814
1872-73	353,619	11,01,288
1873-74	401,576	13,17,661
1874-75	389,889	13,94,241

2. Table I. shows that this area is larger than that of any preceding year in which the rain was abundant, and that it is only slightly less than that of last year in which there was a failure of the early kharif rains. The kharif revenue is also higher than in any preceding year. These results confirm the experience of the last few years in the steady increase of area of the valuable staples which depend on ante-monsoon irrigation, and prove that whilst canal irrigation is rapidly developing the wealth of the country, the demand for canal water, and the certainty of increase of canal revenue are constantly augmenting.

3. Statements A. and B. show the general decrease to have been small on the districts watered by the Ganges Canal, the aggregate decrease on that canal being less than 1,000 acres.

4. On the Eastern Jumna Canal there is an increase of 12,335 acres accounted for by the increased area of sugarcane and rice. There is a small decrease upon the Dun Canals: and on all the other smaller undertakings, there is, as might be expected, a great falling off: the majority of these are maintained chiefly as safeguards from famine, having been in several instances thrust upon the hands of this department, and their utility as well as their returns must be judged mainly by their results in critical times and years of unusual drought.

5. It will be observed that the decrease this year is almost entirely due to rice, in which there is a decrease of 15,532 acres in the aggregate, and of 18,840 for Rohilkhand alone; at the same time there is an increase in this crop, both on the Ganges and Eastern Jumna Canals of 2,094 and 6,971 acres respectively. The general decrease in the Bulandshahr and Aligarh Divisions was due to cotton and in the former division partially to indigo.

6. Enquiries have been made as to the causes of large falling off of area in Rohilkhand.

TABLE II.

Year.	Sugarcane.	Rice.	Indigo.	Cotton.	Fourth class crops.
1867-68	87,050	97,867	77,976	8,265	11,836
1868-69	97,555	111,019	76,687	52,992	141,256
1869-70	104,596	117,548	130,248	55,883	83,979
1870-71	112,141	98,479	118,897	35,070	28,087
1871-72	94,816	76,850	119,617	20,365	9,228
1872-73	102,043	83,607	130,982	14,793	12,504
1873-74	130,284	73,875	149,073	16,354	28,035
1874-75	141,662	38,343	156,396	4,923	21,532

7. Table II. gives the areas of all the principal crops, and in a season like that under review deserves close scrutiny; these are the crops referred to above to which we must look for a revenue, upon which we may surely count irrespective of the variation of seasons. The most important crops, not only from a financial point of view, but as being a test of the commercial prosperity of the country, are sugarcane and indigo, and it is satisfactory again to notice an increase of nearly 11,000 acres in the former, and of more than 7,000 in the latter; this increased area results in a revenue which, as shown in Table I, amply compensates for decrease in other crops. There is a very great decrease in cotton, the area of which is lower than it has ever been before. Judging from the returns of previous years, it would seem that its irrigation is dying out, and that, in the opinion of the cultivators, its commercial value does not warrant their supplementing the natural rain by artificial means. Cotton is however replaced by indigo, which appears to have found in the irrigated districts of the Doab an immunity from the perils and vicissitudes which beset its cultivation elsewhere.

8. The decrease in rice, as explained above, is entirely due to the Rohilkhand Canals. After the sudden fall last year on the two principal canals, induced by the introduction of enhanced rates, rice appears to be regaining its equilibrium. The decrease in fourth class crops is amply accounted for by the favorable rainfall; these are the crops which in famine years, such as 1868-69, are saved by the canal, but which happily create no demand upon our supplies in ordinary years.

9. It is most satisfactory to learn from the experience of 1868-69, and from the statistics now before us, that whilst the Ganges and Eastern Jumna Canals are the salvation of their own and neighbouring provinces in famine years, they increase the riches of the people in years of plenty and can now be depended upon for a revenue which is gradually paying the interest accumulated in past years.

The position of the Ganges Canal in this respect is becoming year by year more favorable, while that of the Eastern Jumna Canal is hardly susceptible of improvement.

10. It is observed that the returns from which these papers are drawn up are due in this office on the 15th December.

Those of the Eastern Jumna Canal and Rohilkhand Canals were not despatched until the 21st and 24th December, respectively.

Strict punctuality is required in future both for these and the rabi returns, which are due in this office on 15th June.

ORDER.—Ordered that copies of this resolution be submitted to the Government of India, and circulated as usual, and that it be published in the *Government Gazette*.

G. A. SEARLE, *Lieut.-Colonel, S. C.,*
Offg. Asst. Secretary to the Government of Bengal,
Public Works Department, Irrigation Branch.

The 1st March 1875.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 11th MARCH 1875.

GENERAL REMARKS.—No rain has fallen during the week except in the North-Western districts of the Punjab and a few showers in Chittagong. Harvest operations are general except in the Punjab. In Bombay the *rabi* has been nearly reaped with a good outturn, but cotton-picking still continues; in Bengal the harvest is also nearly over, with good results; in the North-Western Provinces and Oudh it is beginning with generally fair prospects. Reports are upon the whole everywhere favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Mar. 11th)	*Nil*	Standing crops fair to indifferent; Bengal gram yielding one-fourth; markets well supplied locally; prices steady; mild fever and small-pox continue; cattle healthy only in six taluqs; dry fodder sufficient.
Kurnool (10th)	„	Season favourable; crops good order; markets well supplied; prices falling in two taluqs, rising in one and stationary elsewhere. Water and pasture abundant; fever prevalent in six taluqs; no water over Sunkesala anicut.
Tanjore (11th)	„	Rivers almost dry; water in tanks very little; water over anicuts none; no wet cultivation, that of a few dry crops continues in some parts; standing crops generally good; rain wanted in some parts; harvest wet and some dry crops, yield satisfactory; markets well supplied; prices falling; public health generally good; small-pox in some places, two deaths thereby; cattle disease in two taluqs; pasture sufficient.
Trichinopoly (10th)	„	Water supply scarce; crops good order; outturn up to average; public health good, except that small-pox is reported to prevail in one taluq; condition of cattle good; pasture scanty.
Malabar (11th)	„	Markets well supplied; prices show tendency to increase; small-pox prevalent; fever in some parts; cattle disease slight in Walluvanad; pasture withered.
Bombay— (Mar. 10th)		*General Remarks.*—Prospects satisfactory.
Sindh.		
Kurrachee ...	...	Small-pox has disappeared; weather warmer; wind westerly.
Hyderabad ...	...	Weather much warmer; nights cool; reaping of rape crops and oil-seeds and sowing of spring crops commenced; fever continues.
Upper Frontier ...	...	Weather warm; river on 3rd rose 1½ feet and flooded the hollow near Farreedabad; in talukas Jacobabad, Thul, and Kusmore, crops fair; oil-seed in Jacobabad taluka attacked by lice.
Gujarat.		
Ahmedabad ...	...	Rabi harvest continues; cotton being picked.
Surat ...	...	Cotton picking and harvesting of rabi crops progressing; public health good.
Broach ...	...	Cotton picking progressing; wheat and jowar almost reaped; weather generally healthy.
Kaira ...	...	Cotton picking continues; rabi crops being reaped; public health good; weather warm.
Khandesh and Nasik.		
Khandesh ...	...	Reaping of rabi crops finished; cattle disease continues; scarcity of water in eastern talukas; cotton market active; rate 52; supplies becoming exhausted; weather hot.
Nasik ...	...	Rabi nearly all harvested and being threshed; damage by frost to crops is estimated at eight annas in Dindori and Kulwan; and from one to three annas in the rupee in Sinnar, Baglan, Nandgaum, and Niphar talukas; public health good.
Konkan.		
Tanna ...	...	Weather hot and sultry; public health good; ague and cough slightly prevailing in Dhanoo taluka, and slight fever in Shahpur and Moorbaur talukas; rabi crops good in Mahim, Shahpur, Bhewndy, Bassein, and Panwell talukas, and middling in Wada, Moorbaur and Cullian talukas.
Deccan.		
Poona ...	...	Rabi crop wholly harvested; weather continues hot; children confined with measles.
Ahmednuggur ...	...	Harvesting of rabi nearly finished; health good.
Sholapur ...	...	Rabi almost reaped; weather warm.
Satara ...	...	Harvesting of rabi nearly finished; crops in good condition; cotton picking continues in Walwa; weather hot; ague in Pahtun.
Southern Mahratta Country.		
Belgaum ...	...	Rabi crops being harvested; cotton crop in Uthnee taluka damaged by rats; in other talukas not promising; public health good.
Dharwar ...	...	Harvest of late crop nearly over; estimated yield of wheat ten to twelve annas in five talukas, and four to eight annas in four talukas, and of gram, &c., ten to twelve annas in seven talukas and eight annas in four talukas; no change in the state of cotton; health satisfactory; cattle disease in Bankapur taluka.
Kanara ...	...	State of second crop satisfactory; slight fever; small-pox and cattle disease prevalent.
Kaladgi ...	...	No change.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Rabi crops good; weather hot; public health good.
Wudwan ...	...	Weather warm; health good; cotton picking finished.
Baroda ...	...	Cotton picking continues; rabi crops and public health good.
		General Remarks.—Rabi crop nearly harvested; outturn good, except in one or two districts where it is below the mark; in a few talukas the damage has been great from drought or frost.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—		
Burdwan ...	...	Weather warm. Prospects of crops as before reported.
Bankura ...	...	Weather dry; cool in the morning, but hot in the day; no change since last report, *e. g.*, wheat and gram coming to maturity; some spring rice has been sown in the north and south of the district. Rain wanted for indigo.
Beerbhoom ...	...	Weather somewhat hot; state and prospects of the crops continue good.
Midnapore ...	...	Hot weather coming on rapidly; winter crops generally fair.
Hooghly ...	...	Weather clear throughout, but two or three mornings foggy; wind from south. Cold-weather crops not yet gathered; yield pretty fair. Ground unusually dry; water scarce.
24-Pergunnahs ...	...	Weather warm with foggy mornings. Harvest of cold-weather crops progressing.
Nuddea ...	...	Warm and sultry with occasionally cool nights; cold-weather crops generally promising; cereals yielding a good harvest; indigo promising.
Moorshedabad ...	...	Seasonable weather. The cold weather crops are approaching to maturity; some of them are being harvested with fair outturn; prices almost stationary.
Dinagepore ...	...	Weather fine and warm. Nothing to add with regard to the state and prospects of crops, which are good.
Maldah ...	...	Weather seasonable; days warmer and nights cool; cold-weather crops are in fair condition.
Rajshahye ...	...	The weather has been bright and warm throughout the week, and there has been no rain; all the crops on the ground; wheat, barley, millet, gram and other pulses are thriving and promise well. Lands are being ploughed preparatory to clearing them for paddy sowings after next month.
Rungpore ...	...	Weather becoming hotter every day. Winter crops generally good.
Bogra ...	...	Weather fine and getting hot. A good crop has been reaped, and the crops not yet reaped are healthy.
Pubna ...	...	Weather hot and seasonable. The state of the chaitali crops is good and promises well; cheena, millet, jally and boro or spring paddy seedlings are well above the ground, but want rain. Harvesting of sugarcane nearly finished.
Jalpáiguri ...	...	Days are unusually hot for the time of the year. No change to report in the prospects of crops, *e. g.*, they are satisfactory.
Dacca ...	...	Seasonable weather and getting hot, looked like rain on the 8th; state and prospects of the crops good.
Patna ...	...	Weather seasonable; strong west winds; harvesting of the spring crops going on; yield expected to be very good.
Gya ...	...	Seasonable weather. The cold-weather crops are all that could be desired; a full outturn is anticipated.
Shahabad ...	...	Seasonable weather; prospects of the crops excellent. Peas and mussoor pulses being gathered.
Durbhanga ...	...	Mornings and evenings pleasant; days warm; state of crops satisfactory.
Mozufferpore ...	...	Fine weather; prospects of the cold-weather crops are excellent up to date. The harvesting of surso mustard and kerao pulses going on.
Sarun ...	...	Bright, clear and seasonable weather; west wind (favourable to the cold-weather crops) prevailing. The prospects of the cold-weather crops are generally favourable, and the harvest has commenced; rahur pulse doing well; poppy heads being tapped; sugarcane cuttings being put in the ground. Indigo sowing has commenced; new peas, mussoor and khesaric (pulses) are coming into the market. Prices fluctuating.
Chumparun ...	...	Weather becoming warmer, with wind from the west; crops rapidly ripening; poppy in full bloom. Indigo sowings commenced in places.
Monghyr ...	...	Weather fair and hot; the prospects of the cold-weather crops are good all over the district.
Bhágalpur ...	...	Strong westerly winds set in; crops all that could be desired.
Purneah ...	...	Seasonable weather, west winds blowing; the cutting of tobacco and mustard well advanced; outturn very good; the cold-weather crops are very good and ripening fast.
Sonthal Pergunnahs ...	...	Strong westerly wind during the day, and heat rapidly increasing, and evening very close. There is very little crop of any sort on the ground at this time of the year; such as there is, barley, gram, linseed and poppy are doing well; mustard is nearly all cut.
Cuttack ...	...	Seasonable weather; traces of rain only; a heavy thunder-storm early in the morning of the 5th March. Prospects of the crops throughout the district are excellent.
Balasore ...	...	Weather warm and rather close; very little ploughing for next harvest has been accomplished.
Lohardugga ...	...	Weather close and warm; reaping of the cold-weather crops nearly finished. Dalna or spring rice coming on well.
Maunbhoom ...	...	No rain. Weather getting very hot. Crops on the ground (wheat and rahur pulses) good.

PUBLIC HEALTH.

Burdwan: cholera still prevalent in Culna. Midnapore: much sickness prevalent owing to the effects of the cyclone. Hooghly: a good deal of cholera about. 24-Pergunnahs: cholera prevalent in Thannas Joyriagore, Muthoorapore, Sultanpore, Bankipore, and Diamond Harbour; fever decreasing at Barripore. Nuddea: cholera still prevalent in Bongong. Moorshedabad: a few cases of small-pox reported. Rajshahye: a few cases of small-pox reported from one or two police stations. Pubna: a few cases of small-pox reported from the jurisdiction of Pubna police station. Furreedpore: general health of the district good. Chittagong: general health good; there is cholera in the town, and also here and there in the district. Tipperah: health of the district not so good as it was; some cases of small-pox and cholera reported. Patna: a few sporadic cases of small-pox reported, but the health of the district is generally good. Durbhungah: public health good. Mozufferpore: public health good. Sarun: general health good. Bhaugulpore: general health very good. Cuttack: public health good. Balasore: cholera very severe in track of recent cyclone, and a native doctor with medicine has been sent to that locality. Hazareebagh:

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		small-pox diminishing. Lohardugga: general health good; cattle disease is very prevalent throughout the greater part of the district.
		General Remarks.—The weather is getting hot; no rain reported except slight showers north of Chittagong. The state and prospects of the cold-weather crops continue favourable; harvesting progressing with good results; spring crops already sown are progressing fairly, but in places require rain; lands are being prepared for the next crops; water still scarce in parts of Hooghly.
N. W. P.—		
Benares (Mar. 10th)	...	No change.
Mirzapur ,,	...	Harvest in progress: no change in prospects.
Allahabad ,,	...	Harvest continues, with an excellent crop so far.
Banda ,,	...	Harvest begun for gram, arhar, masur and alsi; damage by frost rather under estimated.
Hamirpur ,,	...	No change; harvest general.
Jhansi (9th)	...	No change.
Agra (10th)	...	Every reason to expect a good harvest.
Meerut ,,	...	Prospects very good.
Bareilly ,,	...	High wind blowing which is bad for the crops.
Punjab—		
Delhi (Mar. 10th)	*Nil*	Crops progressing fairly; health good.
Hissar ,,	,,	Cloudy; rain wanted; rabi crops ripening; outturn promising; health generally good; a little small-pox and rinderpest.
Umballa ,,	,,	Crops and health good.
Jullundur ,,	,,	Crops much improved; health good.
Lahore ,,	,,	Crops and health good.
Mooltan ,,	,,	Crops average; health good.
Dera Ismail Khan ,,	,,	Health and harvest prospects good.
Rawul Pindi ,,	1·0	Prospects and health good; cattle disease declining.
Peshawar ,,	1·3	Probable outturn of harvest below average; health good.
Oudh—		*General Remarks.*—Harvest prospects on the whole fair; public health generally good.
Lucknow (Mar. 10th)	*Nil*	Agricultural prospects on the whole favourable; wheat and barley ripening, peas and gram being cut; weather clear; public health good.
Fyzabad ,,	,,	
Sitapur ,,	,,	
C. Provinces—		
Upper Godavari (Mar. 6th)	...	Weather warm; late jowar cutting; small-pox prevalent; prices easy.
Sambalpur ...	...	Weather clear; crops cut; health good.
Bilaspur ...	...	Weather warm; prospects of crops and health good.
Raipur (Mar. 7th)	...	Weather clear; rabi excellent; health good; prices easy.
Chanda ...	...	Weather warm; prospects and health good; prices stationary.
Balaghât (Mar. 8th)	...	Weather clear; threshing of rice progressing; rabi crops cutting; health good; prices steady.
Chhindwara (8th)	...	Weather sultry; rabi well; health good; prices steady.
Bhandara (9th)	...	Weather clear; rabi satisfactory; small-pox and fever abating; prices stationary.
Nagpur (10th)	...	Weather clear; rabi cut; cattle disease abating; prices stationary.
Jubbulpore ...	...	Weather clear; reaping rabi commenced; small-pox prevalent.
Nimar ...	...	Small-pox increasing; cattle disease disappeared.
Saugor ...	...	Weather clear; hot winds; rabi favourable; small-pox prevalent; prices stationary.
Seoni ...	...	Reaping of rabi continues; health good.
Wardha ...	...	Small-pox prevalent; prices stationary.
Narsingpur ...	...	Crops good; small-pox declining; prices stationary.
Damoh, Mandla (Mar. 10th)	...	Prospects good; small-pox declining; prices stationary.
		General Remarks.—Generally the public health is good, and prices of food are easy, Hot winds have commenced to blow.
Mysore and Coorg—		
Mysore, Coorg (Mar. 11th)	...	Crops thriving; cattle disease prevalent in parts of three districts; public health generally good.
		General Remarks—Agricultural prospects good; prices fluctuating.
Assam—	...	Report not received.
Hyderabad Assigned Districts—		
Umraoti (Mar. 11th)	...	Rabi reaping nearly completed; outturn fair; prices falling; small-pox in some places.
Rajpootana—		
Deolee (Mar. 6th)	*Nil*	Prospects and health better.
Ajmere (11th)	...	Weather warmer; prospects hopeful.
Serohi (9th)	...	Tanks dry; wells good; health and prospects very good; weather seasonable.
Meywar (5th)	...	Water supply, health and prospects good; dry atmosphere.
Marwar (Feb. 27th)	...	Water in wells sinking rapidly, in some supply begun to fail; health good; prospects very favourable; weather hotter.
Harowtee ...	...	Tanks and wells full, as usual; health and prospects good.
Jeypore (Mar. 11th)	...	Agricultural prospects continue favourable; public health good; weather seasonable.
Bhurtpore ,,	...	Health and prospects good; weather seasonable.
Central India—		
Indore (March 10th)	*Nil*	Health and agricultural prospects continue good in Central India.
Rutlam ,,		
Neemuch ,,		

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 9th March 1875.

PRESENT:

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble John Inglis, C. S. I.
The Hon'ble R. A. Dalyell.
His Highness the Maháráját of Vizianagram, K. C. S. I.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.

HIGH COURTS CRIMINAL PROCEDURE BILL.

The Hon'ble MR. HOBHOUSE moved that the Reports of the Select Committee on the Bill to regulate the Procedure of the High Courts in the exercise of their Original Criminal Jurisdiction be taken into consideration. He said:—"This is a Bill which in one shape or another has been a long time before the Council, for leave to introduce it was obtained by my friend, Mr. Stephen, in the year 1872. There was considerable delay in introducing it, because, almost simultaneously with its first mention here, the Local Governments were consulted about it, and we could not prudently or properly introduce the Bill until their answers were received. The subject-matter of the measure was a larger one than it now is, because it embraced not only the procedure of the High Courts but that of the Police Courts in Presidency Towns, and it required a careful consideration of the whole Criminal Procedure Code before an opinion of any value could be given on the question what sections we should apply to the High Courts, and what to the Police Courts. At first sight it seemed proper to combine in one Bill two branches of Criminal Procedure, each relating to the Presidency Towns, and the first draft of the Bill, which I introduced in the month of July 1873, combined the two accordingly. That however was a mistake, as we found when we came to work the Bill in Committee. The two portions of the Bill are subject to quite different considerations; they involved communication with different sets of officers; they promised to travel at different paces; and have ultimately been subjected to very different treatment. Accordingly we determined to cut our Bill in two, and to let each half take its own independent course. That was done in the month of April 1874, when we presented our first report.

"Up to that time we had framed our Bill on the principle of applying to the High Courts certain parts of the Criminal Procedure Code in block, and by reference to the chapters and sections of that Code. We were however very much urged, especially by the High Courts of Bombay and Calcutta, not to do the work in that fashion, but to set forth *in extenso* all the sections of the Code which we proposed to apply to the High Courts, making the requisite alterations in the text of each section. On further examination of the subject we thought that the learned Judges were right, and that we should avoid a good many ambiguities and errors by taking the trouble to set out the sections at length. Accordingly we made that alteration, and the Bill was published in its new form about two months ago.

"So much for the shape which the Bill has now assumed. As regards its substance, the Council knows that our objects in introducing it were partly to

consolidate the law relating to the Criminal Procedure of the High Courts, partly to bring it more into accord with the procedure established for the Mofussil, and in some respects to provide simple processes instead of complicated ones. The present practice of the High Courts is regulated partly by several Indian and English enactments, which we propose to repeal and consolidate, and partly by the rules of English common law imported into India by the first Chartered Courts. The Select Committee who sat upon the Criminal Procedure Code reported that the Mofussil practice should, so far as possible, be applied to the High Courts, and the Bill is principally devoted to that operation.

"After some preliminary sections we commence with the commitment of the accused, when the High Court first gets cognizance of the case, and detail the procedure up to the time when a plea of guilty or not guilty is put in. That occupies Chapters III and IV of the Bill, and brings us to the subject of juries, to which Chapter V of the Bill is devoted.

"This part of the procedure is now regulated by special Acts for the High Courts: and in the first instance we contemplated little more than a consolidation of the High Court law about juries. But we were strongly advised by some very high authorities to introduce so much of the Mofussil practice as allows of a less number of jurors than twelve, and so much as dispenses with the necessity for an unanimous verdict. And believing that this practice of the Mofussil was more suitable to the circumstances of India, even in the Presidency Towns, than the English practice, we made some important alterations in that direction in the month of April last year. I then presented our report, and took the opportunity of explaining to the Council the changes that had been made, saying that I anticipated a great deal of controversy and criticism upon them. Events however have quite belied my anticipations, and have proved that men's minds were ripe for the proposed change. Though the proposal has been before the public for nearly a twelvemonth, there has been exceedingly little controversy upon it. The learned Judges of the Bombay High Court are or were not agreed among themselves on the question of unanimity, but that disagreement arose before our alteration was proposed, and was consequent on a proposal spontaneously made by one of their own body to abolish the rule of unanimity. They have said nothing about the reduction of numbers, and nothing further about the rule of unanimity, since the publication of our altered Bill. Possibly they have felt what I have always felt with respect to this matter, that as Judges cannot always attain unanimity among themselves, even after weeks or months of consideration, it is hardly reasonable to expect it all of a sudden of twelve men caught at random and brought together for the first time to consider a wholly new subject. However, let the reason be what it may, the fact is that since the publication of the Bill in April 1874, we have received no objection to the principle of the alteration except from the British Indian Association, who, to use their own words, 'submit that the merits of the jury-system lies in the unanimous verdict of twelve good men and true.' And they think that the liberty of the subject is better guarded by requiring unanimity. An obvious answer to such observations is that the unanimity which is thus talked of does not really exist. Which of us ever knew twelve men agree on any matter which was capable of being disputed with even a shadow of plausibility, or indeed, for the matter of that, without any such shadow? We know that such a thing never happens; and that it is a mere pretence to talk of its happening in the jury-box. The merit of the jury-system, considered as a mode of administering sound justice (for its political and social merits are not under discussion here), has always seemed to me to be that the view which recommends itself to a decided majority of reasonable and impartial people generally prevails. But that advantage is best secured by requiring a decided majority coupled with the agreement of the Judge. It is not secured by requiring an outward show of unanimity. On the contrary, to require that is to put a dangerous power into the hands of any crotchety wrong-headed person who may happen to be upon the jury.

"But I feel relieved from the necessity of arguing this point with any degree of elaboration, because of the great preponderance of authorities in this country in favour of the principle of the change we have proposed. The High Courts of Calcutta, Madras and the North-Western Provinces, and the Chief Court of the Panjáb, all accept it favourably. The Madras Government was the first to urge it on us. The Governments of Bombay and of the Panjáb both express approval of it. The late Lieutenant-Governor of Bengal, who drew his experience of the working of juries from England as well as from India, gave his emphatic approval of it at this table.

"In fact, with the exception I have mentioned, there has been no controversy on anything but the details of the alterations. What we propose is that a jury shall consist of nine persons, the maximum number required for the Mofussil; that when they disagree, a majority of two-thirds shall suffice for a verdict if the Judge agrees with them; but that, if there is no such majority, or if the Judge disagrees, there shall be no verdict, and the jury must be discharged, as it is now in case of disagreement. Well, there are different opinions about the number of the jury, and there are different opinions as to the proportion which should constitute a decisive majority, and as to the exact position which the Judge should occupy. Those opinions conflict with one another: some would urge us in one direction, and some in the contrary one. The result is that on the whole we thought it better to make no alteration in what we proposed by the draft published in April 1874. After all, rules on this subject must be arbitrary: there cannot be any very close argument about them; we can only guess what rules are likely to work most smoothly in practice: we found that we had chosen a middle path between the limits of opinion, and thought that that path would be the safest to continue in.

"Passing from the subject of juries, the Bill goes on to regulate the procedure at the trial and a number of points connected with the evidence: then the Judge's charge, the verdict and the sentence. That takes us to the end of Chapter X of the Bill, and completes the ordinary procedure which is wanted for all trials. Then come some chapters relating to incidents of an exceptional character; one to Previous Convictions and Acquittals; one to Lunatics; one to Prosecutions for offences against the State and affecting public servants; and two to Bail and Security for keeping the peace. Finally there comes a chapter of Miscellaneous matters, some of which are of considerable importance. In section 146 we affirm the right of the Advocate General to intervene on behalf of the Crown to stop any prosecution at any stage of the case prior to the verdict. It is very important always to bear in mind a principle which underlies all criminal proceedings, but which our position in India sometimes tends to conceal: the principle that a criminal suit is not a mere question between the person injured by the crime and the accused, but that the public have an interest, and the greatest interest, in it, and that the Crown is the representative of the public, and is the true plaintiff in every criminal suit, and has dominion over it throughout. That principle we affirm and apply in this section.

"Then section 147 enables the High Courts in the Presidency Towns to draw into their own hands the trial of any criminal case within the limits of their ordinary original jurisdiction; and section 148 enables them to order the attendance before themselves of prisoners in all proper cases. These two sections are intended to take the place of the more cumbrous proceedings by writs of *certiorari* and *habeas corpus*. We have directed the Courts to make rules for the proceedings by way of *habeas corpus*, and I believe it will be found that the procedure will be simpler and less technical than it used to be.

"I have now explained the general scheme of the Bill."

His Excellency THE PRESIDENT said:—"This Bill is, as my hon'ble friend, Mr. Hobhouse, has rightly said, a Bill of very considerable importance, and I am sure that the Council will agree with me in feeling that we are much indebted to Mr. Hobhouse for the great care and attention which he has given not only to this Bill, but also to other complicated and important Bills which have come before us during the course of the year. Opinions upon the provisions of this Bill have been carefully collected from all parts of India, and although the Bill has been accepted by this Council without any lengthened discussion, full explanations have been given from time to time

by my hon'ble friend Mr. Hobhouse, and the Bill has received the most careful consideration in Select Committee.

"The papers that have been circulated to Members of Council show that it may now safely be passed into law.

"I make these observations for the purpose of stating that none of the provisions of this Bill have escaped attention, and that they have been most carefully and fully considered at the different stages of its progress through the Council."

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE also moved that the Bill as amended be passed.

The Motion was put and agreed to.

PORT-DUES BILL.

The Hon'ble MR. HOBHOUSE moved that the Reports of the Select Committee on the Bill to consolidate and amend the law relating to Ports and Port-dues be taken into consideration. He said:—"This is a Bill which I obtained leave to introduce just a twelvemonth ago for the following objects:

"*First*, it was found that the legal powers of the Port-authorities, which extend partly over ports proper, and partly over the channels leading to ports, were not sufficiently extended over the latter area, and the Government had not sufficient control over the traffic in those channels.

"*Secondly*, it was desirable to extend to other parts of India arrangements which have been for some time at work in Calcutta, for providing medical attendance for sick sailors and paying for it by a rate on the shipping in the ports.

"*Thirdly*, it was desired to extend to other parts of India certain powers for the arrest and detention of deserters from ships—powers which are already in force in the Presidency Towns.

"*Fourthly*, it was found that the law was scattered over a great many enactments, there being altogether no less than twenty-six relating to the subject. These we undertook to consolidate, and we proposed to set forth in a single table the tolls and dues leviable in the various ports of British India, and to bring into one enactment all the existing provisions on the subject.

"*Fifthly*, inasmuch as many of these enactments were passed for single ports, we found many useful provisions in force in one place and not in another. For instance, in Calcutta there are some useful provisions respecting fires and combustible materials, which do not exist for other places. No doubt for each place laws were passed according as events suggested them in that particular place; so that there were a considerable number of local powers and regulations besides those I have specifically mentioned which in the process of consolidation we found not to be due to any local peculiarity, but to bear a general character, and to be fitly extendible to all ports. That amount of extension we proposed also to perform.

"When I introduced the Bill, I explained to the Council how it aimed at these several objects, and I may say now that, though it has undergone numerous alterations of small details, as was to be expected and as our reports fully explain, it remains substantially unaltered as regards the five objects I have mentioned. There are however one or two other points to which I ought to call the attention of the Council before proceeding to the consideration of the reports.

"One point is that we have introduced a definition of the expression 'high-water-mark.' The present law says that the Executive may define the limits of a port, and that such limits shall extend up to high-water-mark, but it says no more. Now the expression 'high-water-mark' contains two elements of uncertainty. The principle on which it is to be ascertained may be disputed; and again, when the principle is settled, it may be disputed what is the actual point of space which high-water actually reaches. Of course we cannot help the second of these difficulties: we cannot measure the ground in this Council. But the first difficulty we can help, and we have done so by saying that high-water-mark means the point reached by ordinary spring tides. The principle

on which we have gone is this. The object of a Ports Act is that control may be exercised on behalf of the public over the space ordinarily used for the purposes of a port. When then we find that ground is frequently, regularly and according to the ordinary operations of Nature, covered with water, it is impossible to say that such ground does not fall within the natural limits of the port, or that it does not require the same control as other parts of the port. If a piece of ground is covered with the tide regularly even only once a month, it is used, or may be used, regularly by those who frequent the port: the circumstance that it may not be so used at neap-tides does not prevent its being an integral part of the natural port, and any arrangements which left it out would be defective. We have therefore taken no account of neap-tides; neither have we taken account of extraordinary springs or floods, such as may overflow the adjoining land once in a way; but have taken the flood-water of ordinary springs as the fairest and most probable interpretation of the expression 'high-water-mark' for the purposes of such an Act as a Ports Act.

"Some gentlemen indeed think that we ought to have struck an average between spring and neap-tides; but that seems to us not to answer the purposes of a Ports Act, because it leaves the public without sufficient protection. And if the fact be that in our interpretation we have put too extensive a meaning on the expression 'high-water-mark', the persons to complain would be those who claim to be the owners of the adjoining shore. Now, as I shall show presently, the riparian owners of Calcutta have not gone to sleep over this Bill, but are quite alive to their own interests; and yet on this particular point of the definition they have raised no objection, though it was on the 15th of December last that I mentioned the matter in Council, and the Bill containing our interpretation was published immediately afterwards. I presume that they feel that the definition is only a reasonable one, and I hope that the Council will be of that opinion. After all the point cannot be one of very much practical importance, otherwise it would before now have been the subject of litigation, which I cannot find that it ever has been.

"Now I mentioned that the riparian owners took a lively interest in this Bill, and the reason is that they are engaged in a controversy with the Port Commissioners, or the Bengal Government, or both, respecting some rights claimed by them over the foreshore down to low-water-mark. So they have addressed us on paper, and have also had the kindness to meet us in conference, and have urged that the new Bill ought to contain something to place them in some more favourable position by recognizing the fact of their claims, and at all events the possible validity of them, which they say is denied by their opponents. Now there may be claims to private property of such a kind and on such a scale as to justify the legislature in interfering to settle them. But these Calcutta controversies did not appear to us to be of such a character. They appear to possess the characteristics of ordinary lawsuits, and we could not see why we should be called on to interfere on one side or on the other. Indeed I do not suppose that the riparian owners would be pleased if we interfered on the side of the public; and neither the Port Commissioners nor the Bengal Government have asked us to do so. Well then our position is that, whatever rights the public have against claims of private property, and whatever protection private property has received against the claims of the public, are to be found in the existing Act of 1855, and have been thereby ascertained and regulated for twenty years. It may indeed be for more than twenty years, but we have not looked behind the Act of 1855. At all events for twenty years the public have had the rights which the existing law gives them, and we could find no reason why those rights should now be lessened. If we were to attempt such a thing, I know what would happen: we should find ourselves engaged in a lively controversy with the Port Commissioners and the Government of Bengal, on whom is thrown the duty of protecting the public interests; and there would immediately be a motion by my hon'ble friend the Lieutenant-Governor, or by my hon'ble friend Mr. Bullen Smith, or by both, to reduce the Bill back again into an expression of the existing law. So we determined to keep the Bill confined to an expression of the existing law. I will just read to the Council what the provisions of the law are on this subject. The Exe-

cutive has power to define the limits of ports and to alter those limits from time to time. Then section 4 of Act XXII of 1855 enacts that—

"'Every declaration by which any port, navigable river, or channel shall be made subject to this Act, shall define the limits of such port, navigable river, or channel; and such limits shall extend always up to high-water-mark, and may include any piers, jetties, landing-places, wharfs, quays, docks, and other works made for any other purposes mentioned in the preamble of this Act, whether within or without the line of high-water-mark, and (subject to any rights of private property therein) any portion of the shore or bank within fifty yards of high-water-mark.'

and in a subsequent part of the Act, section 60, it is enacted that—

"'Nothing in this Act shall extend * * * to deprive any person of any right of property or other private right, except as herein before expressly provided' * * *.

"Those are the powers vested in the Executive, and those are the protections thrown around private rights for the last twenty years or more. On this point we only purposed to re-enact the existing law, with such improvements of detail as occur on every occasion of re-enactment, and our duty was to see that the new Act would be substantially neither more nor less than the old. The Bill has been carefully and repeatedly examined for this purpose, and I believe that whatever doubts they entertained at first, the gentlemen who have communicated with us are now satisfied that, so far as regards any prejudice to their interests, the law is substantially unchanged; indeed, absolutely unchanged with the two exceptions I will mention.

"One exception is this. Section 4 of the Act of 1855 says that any wharfs, quays and so forth may be taken as within the limits of the port, and those words, if rigidly construed, would include a private wharf, made at private expense for the convenience of private traffic. We now propose to say that only works made on behalf of the public may be so taken. We do that on the assumption that the literal construction of the section could not have been intended, and that a Court of justice would struggle as hard as it could against such a construction; but whatever the alteration may be worth, it is in favour of the riparian owners.

"The other alteration is a mere verbal one. The present Act says that the Executive may define the limits of ports; and we go on to say that they may do it by notification in the Gazette, or by means of maps, posts or otherwise. But it is quite clear that Government may do that now. He who has power to define the property over which he has control may define it in any way he pleases. He may adopt a mere abstract definition by words, or a pictorial one by maps and plans, or a mechanical one by boundary-marks fixed on the property, or any combination of those modes of definition. Whether the definition is made according to one mode or another of these modes, it may transcend the legal powers of the Executive, and if so it will be *pro tanto* invalid, and will not override any private right. The mere circumstance that the Act mentions some modes of definition does not alter the quality or enlarge the quantity of the original power of definition given by it to the Executive. These modes of definition are indicated on account of a notion prevailing in some quarters that definition means only a verbal definition; they are what theologians would call an accommodation, a concession to human weakness, which we are often obliged to make in our drafts, and which I for one usually make with some reluctance.

"I have thought it right to acquaint the Council with the nature of this controversy so that they may see how matters stand at this moment. But I am glad to think that the riparian owners do not now feel that the Bill is calculated to place them in a worse position by reason of any alteration of the law which it effects. We have now a memorial from them to the Council, which has come in only within the last twenty-four hours, and which shows the position they now take up. They are afraid that the mere re-assertion of the law will place them in some worse position. I will read their own words from the memorial:—

"'Section 5, clause (*c*), of chapter II of the Indian Ports Bill fully guarantees all rights above the high-water-line; but your memorialists fear that after the discussion which has taken place the silence of the legislature on the subject of rights below that line may be prejudicial to them.'

"By 'the silence' of the legislature is meant the fact that we say nothing to the point but that which the law now says. I confess I cannot see how that silence can have the effect ascribed to it. We are passing this measure for the purpose, *first*, of making some substantial alterations of the law; and, *secondly*, of consolidating the law with such small amendments as are incidental to consolidation. Consolidation is in the main re-enactment. How can a Court of justice draw any inference from a mere re-enactment under such circumstances, and for such an object, except the inference that it is intended to leave the law precisely as it stood before?

"Again, if we admit the validity of such a doubt as is here suggested, just see where it would land us. A considerable portion of our work is the consolidation of written law, and I repeat that consolidation means the re-enactment of large portions of the law consolidated. Are we always to hold our hands directly we find ourselves re-enacting something on which a controversy exists? Take, for instance, the Civil Procedure Code on which we are now engaged. In that Code there must at any given moment of time be many passages bearing on some dispute or other. Is it to be said that one party to the dispute is prejudiced because the other puts a hostile interpretation on the Act, and the legislature then repeats the Act without taking notice of the dispute? If we admit that principle we should never effect any large consolidation without entering into a number of controversies which we are not competent to deal with, and for which the fitting arena is a Court of law.

"The memorial suggests that the Executive authorities are unduly straining the law against them. All I can say is that, if that be so, a Court of justice is not likely to look with favour on their case; but that is a matter for the Court to decide.

"I therefore trust that the Council will accept the principle to which the Committee have adhered, namely, that the new Act should upon this point be in substance a repetition of the old one.

"There is only one more alteration which I will mention to the Council. The present law gives the Local Government power to appoint a Conservator, and it says that the Conservator shall be subject to the control of the Local Government. But it does not say how that control is to be enforced. Of course when the Conservator holds other Government employment, as I believe is always the case in the smaller ports, there is no difficulty in controlling him. But when the Conservator is represented by a body of independent gentlemen performing their duties from a sense of public spirit, such as our Port Commissioners and Port Trustees in large towns, the case is otherwise, and I am not sure how, in the event of a vital difference of opinion, the control would be enforced. Possibly the Local Government would find no easier method than the clumsy one of moving for a *mandamus*. We have therefore supplied the requisite machinery, and have added to the powers of appointment and control the power of suspension and removal. Of course such a power would only be exercised on the occasion of some very grave controversy, but then it is only on an occasion of that kind that there would be any practical difficulty about the right of control."

The Hon'ble MR. DALYELL said that there was one point in connection with the Bill which he thought it desirable to bring to the notice of the Council, as it had not been mentioned in either of the reports of the Select Committee, and had not been referred to by his hon'ble and learned friend, the mover, in the remarks which he had just made. Amongst the papers which had been considered by the Select Committee was a letter from the Madras Chamber of Commerce containing many valuable suggestions on an earlier draft of the Bill, most of which had been adopted in the present Bill. In regard to section 45, the Chamber of Commerce had said: "It is observed that no port-dues or fees shall hereafter be levied in any port except under the authority of this Act. The Chamber would remark that it is desirable that this section should not prevent port-dues being levied under a Port Trust Bill at Madras, in the event of a harbour being constructed." Now, when this suggestion had been considered in Committee, there was nothing to show that there was any immediate prospect of the construction of a harbour at Madras, and they did

not feel justified in making a proviso in the section to meet only a possible contingency. Since the presentation of the Committee's report, however, he (MR. DALYELL) had observed a statement in the local journals to the effect that the sanction of the Secretary of State had been received to the construction of the harbour, and it would therefore now be a matter for the consideration of the mover and the Council whether it would be advisable to insert a provision to the effect proposed before the Bill was passed, or whether it would be preferable to leave the matter to be dealt with by special legislation as soon as the harbour was completed. For his own part, he was disposed to think that the latter would probably be the best course, as no doubt, whatever provisions were made in the present Bill, a special Act would be required for various matters when the harbour was completed, and any provision in regard to port-dues which might be inserted in such an Act would of course override the provisions of the present Bill, which would be the earlier measure of the two.

The Hon'ble MR. BULLEN SMITH said he had just a single remark to make as to section 5 of chapter II of the Bill, and he could assure his hon'ble and learned friend that, in doing so, he was not insensible of the great trouble both he and the Select Committee had taken on the subject of the definition of high-water-mark. Still the matter was of such importance, that MR. BULLEN SMITH wished to ask the attention of the Council to a suggestion which had been made to him within the last few hours, namely, whether the addition of the word "average" to the explanation of the term "high-water-mark" given in that section was necessary or not. The explanation as it stood effectually excluded from the operation of the law all cyclone-tides, or tides which might be held to be of an exceptional nature; but there were in this Port of Calcutta, and probably in other ports situated on tidal rivers at a considerable distance from the sea, two sets of tides which could properly be called ordinary spring tides, that was to say, one set of spring tides during what were called the freshes when the river was swollen, which could be strictly called the ordinary spring tides for those months, the high-water-mark of which tides was very different from the high-water of the ordinary spring tides of other seasons of the year. It was thought by some that the Local Government, in determining the high-water-mark of "ordinary spring tides," would find itself face to face with a difficulty as to which of the spring tides were alluded to. It had therefore been suggested to him that, if the explanation were to declare that "high-water-mark" meant the average of the ordinary spring tides, it would meet the difficulty. He was not sufficiently acquainted with the language of drafting to know whether the suggestion he had made was sufficient to meet the object in view; but as the suggestion had been made to him, he thought it proper to bring it forward, and he almost apologised for doing so at this late hour, after the great trouble that the Committee had taken in settling the provisions of the Bill.

On one other point he would beg to be allowed to ask a question in connection with the concluding clause of section 60. He would ask whether in the words "or otherwise for giving medical aid to the seamen ashore or afloat in such port" was to be found the authority which would empower a Board of Port Commissioners to apply hospital-dues to the maintenance of a Health Officer. The matter was one of some considerable importance, inasmuch as the Lieutenant-Governor having determined to appoint a Health Officer for the Port of Calcutta, the expense must be provided by the Port Commissioners. But they had for that purpose no funds whatever beyond these hospital-dues and their general revenues. No doubt in a measure the appointment of a Health Officer would be for the good of the seamen; but it would also be largely, if not chiefly, for the good of the town to see that the banks of the river and the Port generally were so looked after as not to become a source of contagion and evil. He was not quite sure whether the expression "giving medical aid to the seamen ashore or afloat in such port" would apply to the payment, by way of salary to a Health Officer, of any portion of such hospital-dues; but if the hon'ble and learned member in

charge of the Bill thought that the words were sufficient to authorize such expenditure, MR. BULLEN SMITH was content.

His Honour THE LIEUTENANT GOVERNOR also had some doubts as to the expression used in section 60. He believed the point had been considered by the Select Committee, and that the Committee thought that the expressions used in that section were sufficiently comprehensive. As had been already explained by his hon'ble friend, Mr. Bullen Smith, it would be desirable to appoint a Health Officer, and to carry out measures of sanitation, and to defray the charge from the surplus-proceeds of these hospital-dues. It was very important that there should be no doubt as to the legality of such proceedings; he believed there was no doubt as to their necessity or expediency. He would suggest the addition of the words "or the carrying out of sanitary measures in such port:" that, he believed, would meet the difficulty.

Then, as regards the definition of the term "high-water-mark", he could not quite follow the argument of his hon'ble friend. It seemed to him that there could be but one set of "ordinary spring tides". He presumed that, in the event of any dispute, the proper authorities would decide as to whether such and such spring tides were ordinary spring tides. If there was any doubt upon the point, perhaps the hon'ble mover of the Bill would consider whether some addition should be made to the phraseology of that particular section.

Then, as regards riparian proprietors, His Honour begged to corroborate and to express his concurrence in all that had fallen from his hon'ble friend Mr. Hobhouse. The fact was that there was no controversy between the gentlemen who had signed the memorial on the one side, and the Port Commissioners and Bengal Government on the other, regarding anything that related to this particular Bill. There was a controversy existing between them undoubtedly, but it related to quite another Act, namely, the Calcutta Port Improvement Act, which was an Act of the local legislature passed in 1870. Well, it appeared to him that the real object of the memorial to which his hon'ble and learned friend had alluded was to get inserted into the present Bill certain expressions which should affect the working of the other Act. He was sure the Council would perceive that such a course would be very inconsistent, inasmuch as that Act did not happen to be before the Council; and unless the present Bill were to be read in conjunction with the Port Improvement Act, it would be impossible for the Council to properly observe the practical effect of the proposed expressions. He had had the advantage of joining the Select Committee on the occasion when this matter was discussed; he had also had the advantage of discussing the question at issue very carefully with the memorialists themselves, and he was satisfied that, whatever claim in law or equity they might have to compensation with respect to the just and necessary action of the Port Commissioners, there was full power vested in the Local Government by the Port Improvement Act to consider those claims and award such compensation as might appear just, and his advice to the memorialists had been that if they considered themselves aggrieved in any way, they could submit their claim for consideration in reference to the Port Improvement Act.

He had now only to express his satisfaction in respect to what had fallen from his hon'ble and learned friend in respect to the question of a Conservator of the Port; whether the Conservator should consist of a single officer, or whether the conservation of the Port should be vested in a body of Commissioners. Having had the advantage of attending the Select Committee, he was satisfied that the power of control vested by the Act as it now stood in the Local Government was sufficient for all practical purposes. He need not point out the great interest which the Local Government had in the maintenance of strict Marine discipline in the Port of Calcutta. If ships were lost or sacrificed, or otherwise endangered or damaged in this important port, it was essential that the Local Government should have the power of enquiring who was to blame, and it was also essential that the Local Government should have the power of punishing the official who might be deemed blameworthy notwithstanding the opinion of any other local authority; and

for the exercise of this discretion the Local Government was responsible to the Government of India alone. Then, that being the case, if the Local Government was to be responsible for the safety of life and property here, it should possess effective power, and he was advised that the Bill as amended by the Select Committee and as it had been explained by the hon'ble and learned mover, was sufficient for the purpose.

He had now only to express his acknowledgments, on behalf of the Local Government and on behalf of the community of Calcutta, to the Legislative Department for the care and attention that they had paid to this important measure, and he only hoped the Council would be kind enough to consider the addition of the words he proposed in section 60, and to consider exactly what should be done with reference to the definition of the term 'high-water-mark' in reference to the remarks which had fallen from his hon'ble friend Mr. Bullen Smith.

The Hon'ble MR. BAYLEY said he had not had the honour of being on the Committee on this Bill, but with reference to what had fallen from his hon'ble friend, Mr. Dalyell, if any amendment of the Bill were contemplated, he thought it would be worth while to consider the point raised by the hon'ble member; for, as MR. BAYLEY understood the wording of the present Bill, it put a maximum limit on port-dues which, Mr. Dalyell seemed to say, would be insufficient to meet the demands of the Madras Harbour, and this provision would have to be modified accordingly by the legislation which the latter undertaking would probably render necessary. If this were so, then any legislation in regard to the Madras Harbour would have to be undertaken in the Imperial Council, for it was beyond the power of a local Council to repeal or modify a law passed by this Council, and yet he (MR. BAYLEY) was not aware that this Council was prepared to undertake legislation as to the Madras Harbour, which seemed clearly a proper subject for the local legislature.

The Hon'ble MR. HOBHOUSE said he would answer the questions put to him in order. The first was as to the proposed harbour for Madras. He thought it was not desirable to introduce an exception into this Bill on account of some contemplated operation which that exception would cover. We were almost sure to find when the change did happen that our exception would not quite fit it; there was always a chance of that when we took a step in the dark, and it was much safer to deal with the case when it arose. The words "no port-dues or fees shall be levied except under authority of this Act" were in the present law. The prohibition existed, and he had no doubt it was proper that there should be that prohibition, so that this legislature might consider whether or not port-dues should be levied which were beyond the amount allowed by the Act. We did not know whether any such operation in Madras would take place, though it seemed likely from what his hon'ble friend Mr. Dalyell had said. But then we did not know how far they would want to impose dues beyond the maximum allowed in the Act. On these grounds he thought it was better to pass the Bill as it stood and to see when the event happened what we were required to do.

His hon'ble friend, Mr. Bullen Smith, had referred to the definition of "high-water-mark." MR. HOBHOUSE knew the extreme difficulty of expressing in words any rule which should apply to the circumstances of all ports, and he thought whatever expression the Council might adopt, there would be difficulty in applying it to some cases. In the generality of cases such a rule would work without difficulty. If you asked a sailor or an inhabitant familiar with any coast what was the ordinary reach of particular tides, he would tell you with sufficient accuracy and certainty in most cases. With regard to the peculiar circumstances of the port of Calcutta which his hon'ble friend had mentioned, it seemed to him that the introduction of the word "average" would not meet the wants of the case, nor accord with the principle upon which the Committee had gone—and he believed it was a sound principle—that when spaces were regularly, frequently and in the ordinary course of Nature, covered with water, those spaces were used by persons who frequented the port and fall within the natural limits of the port. He understood his hon'ble friend to say that in certain months of the year the ordinary spring tides were

higher than in other months, and that there were two sets of ordinary spring tides. Now we had got to consider two questions: one was what was the principle which ought to apply to this state of circumstances? and it seemed to him that the correct principle was to include within the limits of the port that which was so often or so regularly covered with water as to be within its natural boundary, and to say that the high-water-mark of the port was the highest point reached by any ordinary spring tide. The second question was whether the words which were used covered what we wanted to effect. If it were true that the highest tides which occurred in the freshes were correctly designated as ordinary spring tides, then the words now in the Bill met the case, for nothing could be said to be the high-water-mark of ordinary spring tides which fell short of the highest point reached by ordinary spring tides. If however the Council should think differently, and if they thought any alteration of the definition should be made, he would abstain from moving to pass the Bill, because in a matter of such nicety there was difficulty and danger attendant upon alterations made in a debate at this table without preparation beforehand.

Now to pass to section 60, with regard to the application of hospital-dues. It must be remembered what these dues were established for; they were a new rating upon ships in consideration of medical aid given to the crews of those ships, and to support any hospitals which might be established for those crews. The rates might be levied upon all the shipping in the port, and for the common benefit they received all must pay. The Select Committee had an application—he rather thought it came from the Government of Bengal—to introduce some special words in this section providing for the appointment of a sanitary officer and general sanitary inspection. He believed the Committee were unanimous—at all events he would express his own opinion—that the introduction of any such specific words would be a little dangerous and might give rise to complaints from ship-owners. As far as the services of such an officer were necessary or expedient for the sake of the health of seamen either ashore or afloat, so far it seemed to him that the words in the Bill met the case, and it would be perfectly fair, if the Lieutenant-Governor appointed a special officer for that single purpose, to pay his salary from the hospital-dues, and if he appointed an officer for that duty in connection with other duties, to pay a reasonable proportion of his salary out of such dues. But suppose we used the words suggested, that these dues might be applied in paying for sanitary measures, then we might be providing the whole of the town, or that part of the town which lay near the port, with sanitary measures at the expense of the ship-owners alone. If the officer was appointed to superintend the sanitary condition of the whole port and of the persons who resorted to the port, he would be doing a great deal of work for the town and not simply for the ships in the port, and we might have some complaint if the whole of his salary was paid out of the hospital-dues. For that reason MR. HOBHOUSE would keep the words of the section as they were, and he thought it would be found that they covered every reasonable expense that was necessary; but if we went beyond that, he thought there would be complaints founded upon justice and which were not unreasonable.

His Excellency THE PRESIDENT said:—"I think that the point raised by my hon'ble friend, Mr. Bullen Smith, is one of some importance, and I am inclined to agree with Mr. Hobhouse that it requires some further consideration.

"I therefore think it would be advisable that my hon'ble friend, Mr. Hobhouse, should postpone his motion in order to allow the Select Committee to take the point into consideration. At present the words in question appear to me to be open to the possibility of misconstruction."

After some further discussion, the Motion that the reports of the Select Committee be taken into consideration was postponed.

PROBATES AND LETTERS OF ADMINISTRATION BILL.

The Hon'ble MR. HOBHOUSE asked leave to postpone the motion that the Reports of the Select Committee on the Bill to amend the law relating to Probates and Letters of Administration be taken into consideration.

Leave was granted.

CIVIL PROCEDURE BILL.

The Hon'ble MR. HOBHOUSE presented a preliminary Report of the Select Committee on the Bill to consolidate and amend the Laws relating to the Procedure of the Courts of Civil Judicature. He said that it recounted a great many details which it would not be profitable to mention. The Select Committee had made a considerable number of alterations in the draft prepared in the Legislative Department, and they directed that the Bill should be printed and published, and that opinions should be invited specifically upon a number of points and inferentially upon other points included in the Bill.

MADRAS SALT BILL.

The Hon'ble MR. ELLIS presented the Report of the Select Committee on the Bill to amend the law relating to Salt in the Presidency of Fort St. George.

The Hon'ble MR. ELLIS applied to His Excellency the President to suspend the Rules for the Conduct of Business. The reason he asked this of His Lordship was that, in anticipation of the Bill being immediately introduced into some districts of the Madras Presidency, the Madras Government had written to beg that no time might be lost in passing the measure. They had taken steps to prevent any anticipated run upon the salt-districts, and such measures caused inconvenience to the salt-traders and the people generally, inasmuch as the sale of salt would necessarily be restricted. The Madras Government therefore asked that no time might be allowed to elapse before the passing of the Bill.

His Excellency THE PRESIDENT observed that the reasons given appeared to him to be sufficient, and he therefore declared the rules to be suspended.

The Hon'ble MR. ELLIS then moved that the report of the Select Committee be taken into consideration. He had on a recent occasion fully explained the objects and reasons of this Bill, and he need not therefore trouble the Council again at any length. He was afraid that the Bill in its present form was, as a specimen of drafting, hardly satisfactory to the Secretary to the Council. That was not owing to want of ability on the part of the learned gentleman, but owing to the necessities of the case. It was to be remembered that the Bill was an enabling one, permitting the Government to take action if it considered it desirable. The Bill did not render it obligatory on the Government to take action on the Bill being passed. In consequence of the Bill taking that form, the Council could not repeal absolutely such portions of the law as stood in the way of the measure when it was to be brought into force; they could only say that these old laws were to be repealed upon its being determined that the measures which the Bill gave permission to take should have effect. There was therefore not an absolute but a contingent repeal of those laws, and the result was to make it very awkward in drafting. He made this apology, lest it should appear that the result was the consequence of want of skill, whereas it was the consequence of the form which the Bill had to take.

The second section of the Bill gave power to the Governor General in Council to fix the duty on salt in Madras at the rate of Re. 1-13-0 independently of any charge which might be incurred before the salt was brought to sale. On a notification to that effect being made by the Governor General in Council, it became the duty of the Local Government to fix, for all salt which might be sold under their orders, a price which would include the duty together with the charges which might be incurred in bringing the salt to sale. The Madras Government were asked for suggestions, and they had written stating one or two points for which they desired that the Bill should make provision. Their suggestions had been adopted. In one case they proposed the omission of a clause which had been inserted fixing for three years the price which might be determined under this Act, it having been inserted on a suggestion from his hon'ble friend, Mr. Dalyell, as giving fixity to the price, which would be of benefit and advantage to the traders. The Madras Government had objected to that, and consequently the Select Committee omitted the provision. It would be seen that the third section gave the Government

the power of varying the price in any of the local areas in which the Governor General had declared the rate of duty to be Re. 1-13-0, and also to vary it in respect of the quantity which might be sold, or (which was a matter of some importance to the Madras Government) with reference to the description of the salt sold and the manner in which it was procured; the fact being that in some districts salt might be procured from Bombay or other distant places, and so cost a great deal more than salt procured in the district itself and which might be of less value than the salt imported from a distance. The section, it was hoped, was sufficiently elastic to enable the Government to take into consideration all the circumstances necessary to fix the price so as to include all charges. The Bill was a short one, and he did not think there were any other circumstances connected with it which called for explanation.

The Hon'ble MR. DALYELL said that when the Bill had been last under discussion he had expressed some doubts as to whether all his hon'ble friend's anticipations in regard to its results would be realized if it was passed in the shape in which it then appeared. Since that time the Bill had been very considerably modified in Select Committee, and if, as he (MR. DALYELL) understood, it was now the intention to put in force the powers taken under the Bill in the districts of Malabar and Canara only, he quite thought that all the advantages would be secured which his hon'ble friend had predicted for the measure when he first obtained leave to introduce it. It was not necessary that MR. DALYELL should recapitulate the arguments of his hon'ble friend in favour of the Bill. As Mr. Ellis had told the Council, they were mainly the same as those which had been urged by successive Governments of Madras for some years past, and some of them had, he (MR. DALYELL) believed, been brought forward by himself some time back, in his capacity of Secretary to the Madras Board of Revenue. The question was simply whether the people of Malabar and Canara should be required to pay the ordinary salt-tax of Re. 1-13-0 per maund, or whether they should be permitted, as heretofore, to pay this impost at a rate of from Re. 1-8-0 to Re. 1-9-0 per maund, a lower scale of tax than was paid in any other part of the Empire, except Scind and British Burma. There was, however, some force in the reasons which had induced the present Madras Government to differ from the opinion of their predecessors on this question. Their grounds for doing so were concisely stated in paragraph 6 of their proceedings, dated 17th October 1874, which were among the papers which had been printed in connection with the Bill. He would ask the permission of the Council to read to them this paragraph :—

"Independently of the general principle on which this Government have heretofore acted, namely, to charge a uniform monopoly-price for the whole presidency (many local variations notwithstanding), the following reasons have influenced the Governor in Council in his present determination :—

"(1.) The people of the West Coast, if they paid a higher price to Government than other coast-districts, could never be made to understand that they were not unequally and inequitably taxed.

"(2.) To raise the price in Malabar and Canara would be a breach of a long-established arrangement of the nature of a prescriptive right, which has been tacitly acquiesced in for many years and originated in peculiar circumstances connected with the tenure of landed property in these districts.

"On grounds, then, of (1) policy, and (2) justice, the Governor in Council is opposed to any change in the price of salt in Malabar and Canara."

These then were the objections of the present Madras Government to the measure before the Council, and to them might be added the general one to which he had alluded when the Bill was introduced, that it was perhaps hardly worth while to insist upon an equal incidence of salt-taxation throughout the Presidency of Madras, so long as the inequalities of taxation which existed throughout the remaining portions of the Empire were allowed to continue. There was a further argument which had been strongly urged in some quarters in favour of the present state of matters. It was that, whenever the State might find it convenient, for fiscal purposes, to disallow the local manufacture of any article of consumption which was liable to tax, it was the duty of the State so to adjust the rate of taxation in that particular locality as to insure a supply of the article to the public at a price not in

excess of a sum made up of what would be the cost of production on the spot, together with the ordinary rate of duty levied in other places. As it appeared, however, from the proceedings to which he had just referred that it was now the intention of the Madras Government to develope the local manufacture of salt in the Western districts to the greatest possible extent, this argument no longer applied to the particular case under consideration.

As he (MR. DALYELL) had already said the arguments in favour of the Bill had been long familiar to him, and he had lately given his very best consideration to those which had been urged against it, to which he had just drawn the attention of the Council. If these latter were examined from a local point of view only, he thought it would be generally admitted that they were of very considerable weight; but he confessed that if the question was considered from its imperial side, it was somewhat difficult to find any really adequate grounds for opposing the Bill. It was not denied that the people of Malabar and Canara were as well, or even better, able to pay the full rate of salt-tax than their neighbours of the Bombay Presidency and of the other districts of the Madras Presidency, and though long usage might have given them a sort of prescriptive right to obtain their salt at the same price as that charged for the article in the Eastern districts, there was no reason why such a right should be more respected in their case than was a similar right in the case of the much less wealthy populations of the Ceded Districts, who were recently (mainly on grounds of consistency) brought under a more rigid system of salt-taxation by the virtual suppression of the manufacture of earth-salt, which had been permitted for years under a nominal license-fee. But what carried more weight with him than any other argument in favour of the Bill, was that he could not but consider it as the second of a series of measures, of which the first was the Salt Bill of last year, which would eventually result in the entire removal of the so-called customs-line, and in a much nearer approach to a general equalization of the salt-tax throughout India than had yet been attempted. The remarks of His Excellency the President upon the Inland Customs Bill the other day must, MR. DALYELL thought, have been read with satisfaction by every person interested in this question, as intimating that, at any rate so far as the customs-line was concerned, this result was not so very far distant. Any subsequent efforts which might be made to secure a greater uniformity of salt-duty than at present existed, would necessarily involve a considerable reduction in the high rates which were paid in the Northern portion of the Empire. Now when it was remembered that, speaking roughly, the whole population of these localities paid a lower gross revenue, and consumed a smaller gross quantity of salt, than did half their number in the lowly taxed provinces of Southern and Western India, it was impossible to believe that this high rate of tax was not repressive of the general use of this necessary of life, and that a reduction of the tax would not result in an increased consumption and perhaps in an improved revenue. Any measure then which was of such a character as to be likely to facilitate such a reduction in future years was deserving of cordial support, and he believed he was correct in stating that though the anticipations in regard to the effect of the Salt Act of last year had not as yet been fully realized, there was every prospect of their being so to a very large extent before the Council assembled for another session. In conclusion, he desired to express his concurrence in the remarks of his hon'ble friend as to the expediency of the Bill being passed into law at once in order to put an end to that disturbance of trade which was inevitable, whenever it became known that the rate of salt-duty in any particular locality was likely to be altered.

His Highness THE MAHÁRÁJÁ OF VIZIANAGRAM said that in giving his vote for the passing of this Bill, he would beg to say that, owing to the publication of the Bill on its introduction, there had naturally been an apprehension in the mind of the salt-traders that the effect would be to raise the price of salt, and there had therefore been danger of a great run on the salt-stores.

The Madras Government had, His Highness believed, taken precautions to prevent this, but it was evident that the sooner the Bill became law the better.

The recommendation of the Madras Government that District-averages might be struck in each District or group of Districts where a decided difference existed between the cost of imported and that of the home-made salt—for example, in Canara—had fully been complied with in the Bill in its present form, and he was sure that the object of the Madras Government thereby would be obtained.

It was to be hoped that the present Bill might lead to a system of excising salt in the Madras Presidency with a fixed duty, instead of selling it on behalf of Government at a fixed price, and that thus private enterprise in the salt-trade might be created by degrees to take the place of the present monopoly-system.

The Motion was put and agreed to.

The Hon'ble MR. ELLIS moved that the Bill as amended be passed. He said it was with much satisfaction that he found His Highness the Mahárájá of Vizianagram support this Bill, inasmuch as his connection with the Madras Presidency gave his opinion great weight, and it was also a source of congratulation to learn that his hon'ble friend Mr. Dalyell, after full consideration, was able to give the Bill that support which, no doubt from a feeling of allegiance to the Madras Government, he had at first hesitated to give. MR. ELLIS might state, with reference to the observations which fell from the hon'ble member, that the arguments with which he (MR. ELLIS) introduced the Bill were mainly based on what had fallen from the Madras Government itself, and indeed it now appeared that they were based on letters which had emanated from the hon'ble member himself. It was therefore satisfactory to find that he had returned to his first opinion, and that he was no longer haunted with doubts as to the correctness of those opinions. The arguments which appeared to have had some weight with him did not appear to MR. ELLIS to be such as ought to make him hesitate. With all respect for the opinion of the majority of the Madras Government—for they were not unanimous—he did not see that much stress could be laid on the assertion that if this measure passed, the inhabitants would not be made to understand how the price of their salt was greater than elsewhere. It was surely known that the duty throughout Southern India, as throughout the Western Coast of Bombay, was Re. 1-13-0; it would therefore be abundantly clear and easily understood on the Western Coast of Madras that the cost of bringing salt to their doors must be added to the amount of duty before they could get their salt; and as the Bill did not put the selling-price and customs-duty and charges all together, it would be easy for the private trader to understand for himself how the charge to him for salt was made up, or if there was any misapprehension it would be very easy for the officers of Government to make it clear to the people how the price was arrived at.

The other objection was a stronger one if it could be supported, namely, that there was a decided understanding that the people of those districts should have their salt at a lower rate than their fellow-countrymen in other places. If such a proposition had been established, men like his hon'ble friends, Mr. Sim and Mr. Robinson, members of the Madras Government, would have been the last to have supported any appearance of breach of faith, and he was quite convinced that there could not be any solid foundation for such an assertion. On examining the grounds upon which that assertion was based, it did not appear that the people had a decided understanding that they were to get their salt at a cheaper price than others. They were to have salt at a moderate rate; and that salt would still be available at a moderate rate could hardly be doubted when it was considered that other parts of India were paying a much higher rate; they were also to have the privilege of manufacturing salt for sale to Government: as for this, if they chose to do so; it was the intention of the Madras Government to give them every facility for the local manufacture of salt, and he did not see in these arguments any ground whatever for the Council withholding their assent to the measure before them.

With regard to what had fallen from his hon'ble friend, Mr. Dalyell, as to the effect the Bill would have upon the equalization of the salt-duty throughout

India, MR. ELLIS might say that, although the measure in itself was not an important one, and was proposed to be immediately applied to only a restricted part of the Madras Presidency, yet it had an importance as paving the way for the equalization of the salt-duty. So long as there was a selling-price in Madras while in other parts of India there was an excise-duty upon salt, there could be no means of bringing the duty in Madras into conformity with the duty in other Presidencies. For his own part, having regard to the whole system of taxation, he was not prepared to say that they ought to have an absolutely uniform rate of duty throughout India; indeed, he deprecated such a principle being carried to its utmost extent. Yet, on the other hand, there were such wide differences in the rates of duty existing now, and there were such great difficulties in the way of removing the barriers to trade and commerce caused by the Inland Customs-line, that he would be glad to see a large reduction of the duty in some parts of the country, with even a small rise of duty in others, if we could attain such an approach to uniformity as would enable Government to administer the tax with the least amount of vexation to the people, and secure to them a larger supply of salt, while at the same time securing to the Government a reasonable amount of revenue. Perhaps these observations were not wholly relevant to the Bill before the Council, but they had some bearing upon it, as he considered this Bill a step of some importance towards meeting those expectations and hopes which he and so many others entertained of a modification of the present system, though he did not desire a complete and entire equalization of salt-duties in India.

The Motion was put and agreed to.

PANJÁB COURTS AND OFFICES BILL.

The Hon'ble SIR DOUGLAS FORSYTH moved for leave to introduce a Bill to amend the law relating to certain Courts and Offices in the Panjáb. He said that the Bill was intended to give effect to the scheme which had been recently sanctioned for strengthening the judicial and executive administrations of the Panjáb. The peculiarity of the Panjáb, and the Non-Regulation system in general, was such that in addition to the important duties imposed upon the executive officers who had already sufficient work on their hands the whole judicial work was also entrusted to those hard-worked officers. In the early days of the administration, when the population was scant and civil rights were almost unknown, when trade and commerce had not recovered from the harassing effect of Sikh misrule, the administration was carried on by a body of picked officers, who were able to carry on their work most ably—how ably was a matter of history, or if he wished to appeal to a living authority, he could not do better than appeal to his hon'ble friend, Sir Richard Temple, who himself was one of the most distinguished of those officers. In the course of time, as the population increased and trade and commerce extended, litigation in the country sprung up, and the Civil Courts began to be greatly resorted to. The officers found themselves burdened with the duties they had to perform, and the burden was further increased by the creation of separate Departments, the head of every one of which felt that he had a right to claim an important portion of the time of the hard-worked Deputy Commissioner. Notably, the establishment of the Chief Court of the Panjáb, though it was a step taken no doubt in the right direction for the improvement of justice and the better administration of the Province, yet as affecting these executive officers who had to carry out the orders of the Chief Court, it placed them in the unfortunate position of having to serve two masters. There was a great incongruity between the sedentary life of the judicial officer, and the active life of the executive administrator. But the Chief Court said to the officer, "you shall sit at your desk during certain hours of the day to enable you to attend to your judicial work;" the administrative head, on the other hand, said to him, "you must always be in your saddle." It was difficult for a man to be in two places at once, and in these days the tendency was for a man to take to that portion of his work upon which the pressure was the strongest. According to the judicial system, a man's work was judged by the results as they appeared upon paper; the monthly statements were called for, and any dereliction was quickly

noticed. It was not the same in the executive department. The welfare of the people was entrusted very much to the hands of the executive officer, but he was left much to act according to his own discretion and for the good of the people entrusted to his charge. The consequences had been rather injurious to the Revenue administration of the Province, and attention was called to the matter by a former Lieutenant-Governor. About six years ago a very able Minute on the subject was written by a former Law Member of His Excellency's Council, and from that time there had been considerable discussion as to the best means of strengthening the judicial and executive administration of the Panjáb. Some of those who had been consulted were in favour of making a complete separation of the judicial and executive services, and had given their reasons for it. That, however, had not been considered to be desirable, But a scheme had been put forward, and had now been sanctioned, which went a long step in the direction of the separation of the judicial and executive offices, and it was proposed to appoint, in every district where it might be found necessary, a Judicial Assistant who would relieve the Deputy Commissioner of his judicial work and leave him free to apply himself to the management of his executive business. That was to say, the Assistant, so long as he was employed on judicial duties, would satisfy all the requirements of the Chief Court of the Panjáb by being always present in his Court, and at the same time the Deputy Commissioner would be left free to look after equally important business which belonged to his executive capacity. The scheme comprised this arrangement, that the Judicial Assistant should exercise the appellate powers which now belonged to the Deputy Commissioner. In the lower Courts, in the Courts of first instance, hitherto presided over by Tahsíldárs and Náib Tahsíldárs, it was proposed to add a Munsif, who, as a general rule, would take up the judicial duties of the Tahsíldár, but who might be appointed to do any other duty of the Tahsíldár. Thus, while maintaining the peculiar features of the Panjáb system, an almost complete separation of the judicial and executive services would be established. But in order to carry out this scheme, it was necessary to resort to this Council. **Section 20 of the Panjáb Courts Act provided that, whenever the number of cases depending in any district or divisional Court should be so great as to prevent their being disposed of within a reasonable period, the Local Government might invest any officer with civil and criminal powers. Such appointments were therefore, by their nature, temporary, and it was now proposed to make them permanent. In doing so, very little alteration would have to be made in the existing Act.**

The Motion was put and agreed to.

The Council adjourned to Monday, the 15th March 1875.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
24-Pergunnahs ...	*Nil*	Weather warm, mornings slightly cloudy; harvest of cold weather crops progressing; lands being prepared for the next aous or early rice crop.
Nuddea ...	„	The weather is becoming decidedly warmer; nights sultry; the cold weather crops continue to be most promising and are yielding a good harvest; rain wanted for rice and indigo sowings.
Moorshedabad ...	„	Weather much warmer; prospects of all crops excellent; linseed and gram being gathered.
Dinagepore ...	„	Weather fair and very hot; preparations are being made for the sowing of the bhadoi or early crops.
Maldah ...	„	Weather warmer, westerly winds prevailing; excepting the mustard crop, which has fallen short in some places, the cold weather crops promise well.
Rajshahye ...	„	There has been no rain since last report; weather seasonable; no change in the state of the crops on the ground (wheat, barley, and millet), which are all doing well.
Rungpore ...	„	Weather becoming warmer; state and prospects of crops good.
Bogra ...	„	Weather fine and getting hot; a good crop has been reaped, and the crops not yet reaped are healthy.
Pubna ...	„	Weather dry and hot; heavy fogs in the morning; the harvesting of the chaitali crops commenced; the prospects of cheena, millet, boro, and jally paddy are fair; rain however is much wanted.
Jalpáiguri ...	„	Strong easterly wind blowing night and day; weather very cool; tobacco crop not all round as good as usual; rain is now needed to assist the ploughing operations.
Dacca ...	„	Cloudy and boisterous weather; there has been rain in several parts of the district; state and prospects of crops good.
Patna ...	„	Seasonable weather with strong wind; harvesting of the cold weather crops going on fast, and the yield reported to be above the average.
Gya ...	„	Seasonable weather; a full 16-anna cold weather crop expected.
Shahabad ...	„	Seasonable weather, and cool for the time of the year. At the commencement of the week high west wind blew; the last three days the wind has changed to the east; prospects of the crops on the whole very good; mustard and peas in places injured by blight; cold weather crops being gathered; mango trees coming into blossom.
Durbhanga ...	„	Seasonable weather; state and prospects of crops satisfactory; prices high for this time of the year.
Mozufferpore ...	„	Fine weather. Prospects of the cold-weather crops are excellent up to date. The harvesting of sursoo (mustard) and keroo pulse going on.
Sarun ...	„	Bright, clear, and seasonable weather; both east and west wind. The cold-weather crops are being harvested. Rahur pulse doing well. Poppy heads being tapped. Indigo sowing going on. The new pulses are coming into the market; prices show a downward tendency.
Chumparun ...	„	Easterly wind, cool nights; opium harvest commenced. Cold-weather crops already out: indigo sowings going on. Moisture sufficient.
Monghyr ...	„	Fair weather. The harvest of the cold-weather crops has commenced; the crops are good throughout the district.
Bhágalpur ...	„	East winds all the week. Cold-weather crops ripening fast, and reaping will soon become general. Outturn will be excellent.
Purneah ...	„	Very warm; east wind at night and in the morning. Rain is wanted for indigo and for the late pulses.
Sonthal Pergunnahs ...	„	Strong westerly wind, heat rapidly increasing, and evenings close. There is very little crop on the ground at this time of the year; such as there is, barley, gram, linseed, and poppy, are doing well; mustard nearly all cut.
Cuttack ...	„	Hot and windy. Crops nearly off the ground everywhere. Ploughing beginning for next season's crop.
Balasore ...	„	Weather continues very warm and close; the ground mostly remains untouched owing to absence of rain.
Lohardugga ...	Traces of rain only.	Seasonable weather; the hot winds have regularly commenced. The harvesting of the cold-weather crops has commenced, and the outturn is first-rate. The mowah crop promises well.
Manbhoom ...	*Nil*	Weather getting exceedingly hot. The crops now on the ground, *viz.*, wheat and arhur pulse, are good; they will shortly be gathered in. The mowah beginning to bloom.

PUBLIC HEALTH.

Burdwan: cholera prevalent at Culna; fever as before. Hooghly: cholera is rather bad over most of the district and getting worse; small-pox in places. 24-Pergunnahs: cholera prevailing in parts of sub-divisions, Diamond Harbour, Satkera, and Busseerhat. Nuddea: cholera still prevalent in Bongong. Moorshedabad: no cholera reported except one case in the village Pulsa; a few cases of small-pox in parts. Rajshahye: public health good; little sickness reported. Furreedpore: general health of the district good. Chittagong: slight fever and cholera here and there. Patna: health of the district good. Durbhangah and Mozufferpore: public health good. Sarun: general health good. Bhágalpur: general health very good. Cuttack: public health good. Balasore: cholera raging in track of the recent cyclone; another Native Doctor deputed to that locality. Maunbhoom: public health generally good. Hooghly: cattle disease in places. Chittagong: cattle disease still prevalent.

General Remarks.—The weather, in the Western, Central, and Orissa districts and in almost all the districts of Chota Nagpore is becoming very hot. In Behar it is reported to be seasonable, except in Purneah and Sonthal Pergunnahs, where the heat is great. In most of the Eastern districts, the weather was stormy; and more or less rain has fallen in all the districts of the Chittagong division, except Noakhally; in Tipperah and Hill Tipperah the rain was accompanied with hail. The state and prospects of the cold-weather crops continue favourable; harvesting is drawing to completion with good results. Millets and spring rice are progressing well. Preparation of lands for the next crop is in full progress, but is arrested for want of rain in some places.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. P.—		
Benares (Mar. 17th)	...	No change.
Mirzapur „	...	Grain ripening, somewhat damaged by high wind; no other change.
Allahabad „	...	Harvest continues; nothing new.
Hamirpur „	...	No change.
Jhansi (16th)	...	No change.
Agra (17th)	*Nil*	Prospects unchanged.
Meerut „	...	Prospects still very good.
Bareilly „	*Nil*	Prospects favourable.
Punjab— (Mar. 17th)—		
Delhi ...	...	Crops ripening; health good.
*Hissar ...	...	Crops ripening; health generally good; small-pox and rinderpest decreasing.
Umballa ...	...	Crops and health good.
Jullundur ...	...	Crops fair; health good.
Lahore ...	...	Crops and health good.
Mooltan ...	...	Crops average; health good.
Dera Ismail Khan ...	...	Harvest prospects favourable; health good.
Rawul Pindi ...	...	Harvest prospects and health good; cattle disease decreasing.
Peshawar ...	...	Probable outturn of harvest below average; health good.
		General Remarks.—No rain during past week; harvest prospects favourable; public health good.
		*ERRATUM.—In the Supplement to the *Gazette of India* of 6th February 1875, page 185, *for* the words "but little or no rabi cultivation on irrigated land," *read* "except on irrigated land there may be said to be no rabi crop."
Oudh—		
Lucknow (Mar. 17th)	*Nil*	Wheat and gram being cut; prospects of crops generally good; weather clear; public health good.
Sitapur „	„	
Fyzabad „	„	
C. Provinces—		
UpperGodavari(Mar.13th)	...	Weather clear; outturn of rabi below average; health good; prices easy.
Sambalpur ...	...	All crops cut; health good.
Bilaspur ...	...	Weather warm; rabi harvesting; outbreak of cholera in places; small-pox prevalent; prices steady.
Raipur (Mar. 14th)	...	Weather clear; prospects of rabi excellent; health good; prices easy.
Chanda ...	...	Weather hot; cattle disease decreasing; prices falling.
Chhindwara (Mar. 15th)	...	Weather sultry; rabi harvesting; health good; prices steady.
Balaghát ...	...	Weather clear; threshing rice completed; rabi cutting; health good; prices rising.
Bhandara (Mar. 16th)	...	Weather clear and close; rabi harvesting; fever and small-pox prevalent; prices easy.
Nagpur (17th)	...	Weather hot; rabi harvesting; cattle disease disappearing; prices rising.
Wardha ...	...	Small-pox and cow-pox prevalent.
Jubbulpore ...	...	Rabi harvesting; outturn good; small-pox continues.
Seoni ...	...	Reaping of rabi continues; prices falling.
Saugor ..	...	Weather clear; hot winds; rabi reaping; small-pox prevalent; prices stationary.
Nimar ...	...	Rabi reaped; small-pox continues; prices stationary.
Narsingpur ...	...	Crops good; small-pox declining; prices stationary.
Hoshangabad, Betul	...	Crops reaped; average yield.
Damoh, Mandla (Mar. 18th)	...	No rain; prospects good; small-pox declining; prices stationary.
		General Remarks.—Outturn of harvest good; weather getting warm; public health not quite so good.
Mysore and Coorg—		
Mysore, Coorg	...	Crops generally thriving; cattle disease in parts of two districts; public health generally good; agricultural prospects good.
Assam—		
Gauháti ...	·25	Weather unsettled, more or less overcast; strong wind during the greater part of the week from the east; heavy rain storms on the 16th and 17th; more rain wanted; land being prepared for asu; cattle disease reported from some mouzahs, and small-pox at Burpetta.
Sylhet ...	...	Storms with heavy rain last few days. Violent hailstorm 17th, and gale of wind last night; hail has damaged spring crops. Cultivation of *aous* also retarded. Small-pox and cattle disease still prevalent.
Hyderabad Assigned Districts—		
Umrauti (Mar. 18th)	...	Rabi reaping completed; outturn fair.
Rajpootana—		
Ajmere (Mar. 18th)	...	Weather, health, and prospects good.
Deolee (18th)	*Nil*	Prospects and health better.
Serohi (16th)	...	Tanks dry; wells good; health very good; prospects good; weather seasonable, but much hotter than former week.
Meywar (12th)	...	Good supply of water; health and prospects good.
Marwar (11th)	...	In some wells water has begun to fail and scarcity already felt; health good; prospects most favourable.
Harowtee (9th)	...	Tanks and wells full as usual; health good and prospects better.
Jeypore (18th)	...	Agricultural prospects promising; public health good; weather seasonable.
Bhurtpore (18th)	...	No change; agricultural prospects and health good.
Central India—		
Indore (Mar. 17th)	*Nil*	Health and general prospects good, but opium harvest in Malwa is damaged by wind and heat.

G. H. M. BATTEN,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Monday, the 15th March 1875.

PRESENT:

His Excellency the Viceroy and Governor-General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
His Excellency the Commander-in-Chief, G. C. B., C. S. I.
The Hon'ble B. H. Ellis.
Major-General the Hon'ble Sir H. W. Norman, K. C. B.
The Hon'ble Arthur Hobhouse, Q. C.
The Hon'ble E. C. Bayley, C. S. I.
The Hon'ble Sir W. Muir, K. C. S. I.
The Hon'ble R. A. Dalyell.
The Hon'ble H. H. Sutherland.
The Hon'ble J. R. Bullen Smith.
The Hon'ble Sir Douglas Forsyth, K. C. S. I.

PORT-DUES BILL.

The Hon'ble MR. HOBHOUSE presented the final Report of the Select Committee on the Bill to consolidate and amend the law relating to Ports and Port-dues, and moved that the reports on that Bill be taken into consideration. He said that this was the motion which was postponed on the last occasion, and he would briefly refer to the points which the Select Committee on the Bill had since considered. The Committee met and discussed the matters for the sake of which the Bill was postponed, and the result was that two small, and as he thought purely verbal, alterations had been introduced in the Bill. The first of these was in section 5, where the Committee had altered the explanation by saying that "high-water-mark was the highest point reached by ordinary spring-tides at any season of the year." As he believed, that was exactly the meaning which would have been assigned to the expression which was used before. Then they spoke of "ordinary spring-tides," and all that would have to be shown was that a tide was an ordinary spring-tide; then the high-water-mark of that tide would designate the limits of the port. At all events the limits of the port would not be of less extent than the high-water of that tide. But as it appeared that there were in Calcutta two ordinary spring-tides, and as it was possible to doubt whether each class of such tides was entitled to be called "ordinary spring-tides," or whether some calculation would be made as to which class of tides was most frequent, so as to call that which was most numerous the "ordinary spring-tide," the Committee had introduced the words "at any season of the year," so that the ordinary spring-tide of any season might be taken as marking the limits of the port. He was sorry to see from a memorial which came in that morning, that the riparian owners were of opinion that they were injured by this alteration. His belief was that they were not injured. If Act XXII of 1855 was to be interpreted in a Court of law, he thought there was as much chance of its being construed more unfavourably to the riparian owners, as there was of its being construed more favourably to them, than was actually done by the Bill. The present law said that "high-water-mark" was to be the limits of the port, and it was just as easy to construe "high-water-mark" to be the highest mark that the water ever reached, as to construe it to be anything less than what the Bill construed it to be. What the Bill did was to eliminate one element of uncertainty. He would not enter again into the arguments upon which the Committee had arrived

at the principle imported into the Bill, but nobody had come forward to say that it was not a reasonable principle, or that it was not necessary for the protection of the public who use a port, to bring under public control all those pieces of ground which, under the ordinary operations of nature, were covered with water.

The next alteration was also, as it seemed to him, of a verbal character: it was in section 60, where, instead of saying merely that hospital port-dues might be applied for providing medical aid for the shipping and seamen in a port, the Bill now said that it might be applied for providing sanitary supervision and medical aid for the shipping and seamen. As he had explained before, if sanitary supervision was necessary for the physical healthiness of the shipping and seamen, it would come under the words "medical aid;" but the Committee had put in the words "sanitary supervision" in order that there might be no dispute but that medical aid did include the more remote operation of sanitary supervision as well as the more direct and immediate modes of aiding the sick.

There was only one other point which the Committee had to consider—whether any exception should be made in the section which said that no port-due should be levied except under the authority of the Act. That was section 45 which enacted as follows:—

"No port-dues or fees shall hereafter be levied in any port except under the authority of this Act."

The question was whether we should take notice of a port that was about to be made at Madras, in which the Madras authorities would desire to levy dues exceeding the maximum fixed by the Act, and whether some exception should be made which would leave the Madras authorities at liberty to levy larger dues. The matter stood thus. According to the present law, Act XXII of 1855, the Local Governments were forbidden to levy any port-dues or fees excepting what might be levied under the authority of the Act. That Act was passed in 1855. Then came the Indian Councils' Act and gave power to the local legislatures by which they might set aside any Act of Council passed previously to 1861; so that in that way the Madras legislature might at this moment set aside any requirement in the Act of 1855 and make an enactment of their own. The principle of the present Bill was to bring the matter back to the position of 1855, and to make the levying of port-dues rather a matter for the supreme legislature than for the local legislatures to consider; and that principle he thought had better prevail even with regard to such a case as the port of Madras. When we knew what was required, we might then relax the limits placed by this Bill. In the first place it would be some few years before the Madras authorities would be in a position to levy dues; the port would not have been made, and they could not judge now what would be the maximum dues they would desire to be levied. It was clear that the maximum would be fixed according to the amount spent in making the port: and that could not be foreseen. As the Bill went on the principle of fixing the highest charges which were to prevail throughout India, it was on the whole better that the scale so fixed should not be altered until we saw exactly what was to be done.

The Hon'ble MR. SUTHERLAND had to apologize to His Excellency the President for venturing at the last moment to trouble the Council with any remarks on this Bill. Although he had not previously addressed the Council on the subject, he had followed with interest the progress of the Bill before the Select Committee, and his hon'ble and learned friend, Mr. Hobhouse, had permitted him to attend the meeting of the Select Committee when he proposed to bring forward the rights of the riparian proprietors as affected by the fifth section of the Bill. Mr. Hobhouse explained there, as he had done previously at a sitting of the Council when MR. SUTHERLAND was not present, that this Bill was a consolidation Bill and altered in no way the existing law. The hon'ble and learned member had pointed out that conflicting interests were at stake, and that was not the time to interpose in favour of either of the litigants. MR. SUTHERLAND admitted the reasonableness of the position taken up by the hon'ble member, and he was content to say nothing further upon the subject; and it was only with reference to the definition of "high-water-mark" that he now desired to say a few words. As he believed, this

last definition affected the rights of the riparian proprietors in a way which the previous definition did not. He admitted that the absence of definition in the existing law by no means prevented this last view being taken by the Courts of law. But if His Excellency would allow him, he would read to the Council the definition under section 5 in the Bill as introduced:—

"In this section 'high-water-mark' means the line of the medium high tide between the springs and the neaps."

That definition was altered in the Bill as published on the 19th December last, which enacted that—

"In this section 'high-water-mark' means the high-water-mark of ordinary spring-tides."

The definition was unaltered in the Bill as printed on the 6th March. In the Bill now before the Council, issued on the 12th instant, as the Hon'ble Mr. Hobhouse had explained, the definition stood thus:—

"In this section 'high-water-mark' means the highest point reached by ordinary spring-tides at any season of the year."

He would submit that this last definition affected the private rights of river-side proprietors. Their contention was, as hon'ble members were aware, that their rights to the foreshore extended to low-water-mark. It was not for him to discuss the question, but he did know that in certain high legal quarters it was thought that their rights were good. Therefore, whilst he admitted that the present definition was much more precise than any of the previous definitions, he submitted that precision was attained at the expense of private rights, and he thought that the definition of 19th December and 6th March should be retained.

His Honour THE LIEUTENANT-GOVERNOR thought it desirable that he should say a word or two in reply to the remarks which had just fallen from his hon'ble friend, Mr. Sutherland. It appeared to him that the remarks which had been made by the hon'ble and learned Mover of the Bill exactly met the point touched. The question was, what should be the definition of "high-water-mark?" We contended that high-water-mark meant the highest point which the water reached at regular and periodically recurring intervals; that if some tides were higher than others, the term "high-water-mark" meant the highest point which was reached by any tide, except of course cyclone-waves and extraordinary physical disturbances: with the exception of those unusual and abnormal occurrences, high-water-mark meant the highest point which the water reached at regularly and periodically recurring intervals. If that were the sound and reasonable acceptation of the term, it seemed right, when you came to consolidate the law and to make every question as indubitable and as indisputable as possible, to make that definition perfectly clear. He therefore concurred with the hon'ble and learned Mover in stating that the Bill did nothing more than give clear expression to the law as it stood since 1855.

His hon'ble friend Mr. Sutherland maintained that certain riparian proprietors had rights not only below high-water-mark, but down to low-water-mark.

The Hon'ble MR. SUTHERLAND—That was their contention.

HIS HONOUR continued:—that certain riparian proprietors contended that they personally and individually happened to have rights not only down to high-water-mark, but down to low-water-mark. The exact fact was that that contention depended upon certain proceedings taken by certain Settlement Officers some years ago. If those proceedings virtually had given away to particular persons rights which belonged to the public or the Government, and the Government now took those rights away, that would be a proper question perhaps of equity, or perhaps for litigation, to determine whether those gentlemen had a claim to compensation or not. The claim to compensation would arise, not in any way from an interpretation of the general law, but merely in regard to the legal consequences of certain acts of the Revenue Officers of Government. If that, then, was the exact question, their proper remedy was first to appeal to the Local Government as a matter of equity, and failing that, to try the question in a Court

of law. The question was not at all the effect of a definition in this Bill upon the Act of 1855, but simply a question as to what were the results and legal consequences of certain fiscal acts of the officers of the Bengal Government: on behalf of the Bengal Government we were entirely prepared to take that question into precise and accurate consideration; and if the riparian proprietors were dissatisfied with the decision obtained from us, they had their remedy in law. But it was not right for them to ask this Council to legislate beforehand on the possible issue of a legal trial, when the Council could not have both sides of the question before them. It was premature to raise the question here, because the Local Government had never refused to give any compensation which a Court of law or even a Court of equity might give. We had had to support the Port Commissioners in the execution of their duty under the Bengal Act of 1870, the said duty being to take up land on the river-bank for certain important public purposes.

Well, then, he had only a very few words more to trouble the Council with, and that was with reference to section 60, as to which the hon'ble and learned Mover had been good enough to explain that the words had been enlarged so as to include sanitary superintendence as well as medical aid to be provided for the port. HIS HONOUR desired to say that that extension of the wording of the Act was extremely necessary, for, as the Council might be well aware, the health of the seamen and mariners who frequented this port was quite as much dependent upon good sanitary supervision as upon medical aid. It was the application of the old proverb that prevention was better than cure, and he was sanguine that the power which the Bill gave the Government to apply hospital-port-dues to the sanitary supervision of ships and of the waters in which ships lay at anchor, would be the means of great improvement, and tend to the welfare of a very important class of British seamen and the mariners of other nations who frequented the port of Calcutta.

Major-General the Hon'ble SIR H. W. NORMAN having been on the Select Committee on this Bill, desired to say that he entirely agreed with what had fallen from his hon'ble friend Mr. Hobhouse and His Honour the Lieutenant-Governor. Infinite trouble had been taken with the Bill, and he did not think it was possible to arrive at a better definition of high-water-mark than that to which the Committee had come, when it was considered that the Bill had to deal with all the varying circumstances of ports and rivers in British India. He thought the riparian proprietors would certainly be in no worse position if this clause were passed than they were in at present. He desired to draw the attention of the Council to the way in which private rights were guarded by the Bill. Clause *(d)* of section 2 provided that nothing contained in the Bill should "deprive any person of any right of property or other private right except as hereinafter expressly provided." Then, in the latter part of clause *(c)* of section 5, it was enacted that the limits of a port to be laid down were "subject to any rights of private property therein;" and by section 6 the Local Government was empowered from time to time, with the like sanction, and subject to the rights referred to in section 5, to alter the limits of any port. Certainly it had been the desire of the Committee to protect in the fullest manner the rights of private owners, and it appeared to him that this was sufficiently done in the Bill.

The Hon'ble MR. BULLEN SMITH having made one or two observations on the last occasion upon the first two points which had been referred to by the hon'ble and learned Mover of the Bill, thought it would not be right for him to let this meeting pass by without expressing his entire satisfaction at the changes which had been made; and further he would assure the Council that, in dealing with the question of high-water-mark, they were not dealing with a matter of theory, but that in this particular port of Calcutta at least the difficulty was already met face to face. The Port Commissioners found, some months ago, that it was absolutely necessary to apply to Government for some definition of the term high-water-mark, and altogether apart from this Bill as a general Bill, if the work of the Port Commissioners of Calcutta was to be carried on, it was absolutely necessary for them to receive from

the Government some clear definition for their guidance. Since the Council last met he had been looking further into the matter, and it might be satisfactory to the members, as it was to him, to know that the definition which the Select Committee had decided upon, and which he hoped would be accepted by the Council, was quite analogous to that which stood in the Bombay Port Trust Act, where high-water-mark was defined to be the high-water-mark of the monsoon-months; and further it would be satisfactory to the Council to know that in the Mersey River Trust Act the definition was nearly analogous to that given by the Select Committee. The Mersey Port Trust Act said that the point of high-water-mark should be the highest point which the water reached except when driven up by high winds, thereby expressly agreeing with this Council as to unusual and extraordinary tides. He entirely approved of the definition as it now stood, and hoped that the Bill would be passed.

The Hon'ble MR. HOBHOUSE only wished to make a few observations upon one topic which had been adverted to by his hon'ble friend Mr. Sutherland. His hon'ble friend contrasted the definition now found in the Bill with that which was in the Bill as it was introduced. The point was a perfectly fair one for the hon'ble member to take, and MR. HOBHOUSE was very much at his mercy on that subject. He quite agreed that the present definition included a great deal more ground than the definition in the original Bill did. All that he had to say in answer was that the first definition was a mistake: it was put in without sufficient consideration, and if it was necessary to apologize for such errors, MR. HOBHOUSE must apologize to the Council for this. It was one of those mistakes which were made on the introduction of a Bill; which were made in the stage before discussion, in the stage when the *idola specûs* prevailed. But those were just the mistakes hit in Select Committee, when the Bill was thoroughly threshed out with the advantage of having a number of different minds applied to it, and with the further advantage of the comments of local authorities and of those members of the public who interested themselves in the business. The fact was that he had too hastily taken up the decision given by a Court of Judicature in England without sufficiently looking at the circumstances under which that decision was given. That decision was not a definition of a phrase occurring in any Statute; it was not for the purpose of ascertaining how far the control of the public was to go in any place used for public objects, but was for the purpose of ascertaining and applying the old Common Law expressions, by which the rights of the Crown, not specially in ports, but in the open sea-beach, were said to extend to high-water-mark; and of settling how far minerals belonged to the Crown, and how far to private owners, all along the British shore. The circumstances were entirely different. When you came to construe the expression 'high-water-mark' in the Ports Act, you must construe it for the purposes of the Ports Act, and if you found that the Act gave to the Government great powers of control for the purpose of protecting the public in the use of the port, then you would say—and it was the duty of a Court of Justice to say—that the words should receive that one of their natural constructions which would afford the full amount of protection aimed at by the Act. His belief was that, if the Act of 1855 was now to be construed, it would not be construed in a less extended way, but might be construed in a more extended way, than was done by the Bill.

He mentioned at the outset that no one had come forward to say that the principle laid down in the Bill was an unreasonable one. He would add that in cases like this, where property was at stake, it was by no means uncommon for those who were asserting the rights of private property to take a legal opinion as to the incidence of the existing law and the rights which they had under it. We had no such opinion here; the riparian owners here had not consulted any lawyer as to the meaning of the expression 'high-water-mark' in the Act of 1855, or else, if they had, they had not communicated to the Council the result of that consultation. Moreover, if we took the more contracted limit provided by the Bill as introduced, we should find that, in point of fact, powers were exercised beyond the limits allowed by that definition, and the definition now taken was, so far as he knew, in accordance with the facts, and it was certainly more in accordance with the facts and a more accurate definition than the one adopted at first.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE moved that the Bill as amended be passed.

His Excellency THE PRESIDENT said:—"In my judgment this is a measure which the Council may pass with confidence. The subject-matter is of considerable importance. To preserve ports and harbours from injury and encroachment, and to regulate their use, are among the most obvious functions of Government. In India, as in other countries, these duties in regard to ports of any considerable importance are usually delegated to public bodies, to whom certain legal powers are given. Here in Calcutta the duty, as I believe, has been very well performed by the Port Commissioners, and from what I have seen and from what I have heard, the arrangements of the port are highly creditable to the Commissioners and to the Hon'ble Mr. Schalch, who has occupied so long the office of Chairman. The Bill we are about to pass places the law on the subject of ports and port-dues upon a sound and intelligible basis. It is now to be found scattered throughout a variety of enactments, and in the second schedule of the Bill we are about to repeal seventeen Acts which now deal with the subject.

"From my experience in Parliament at Home I can fully appreciate the difficulty of consolidating and amending the law on any subject of importance. It is a work of great labour and responsibility, of which much notice is not taken, but which is of the highest benefit to those affected by the law, for, by such consolidation, their duties and responsibilities are placed clearly before them. It has been the constant aim of the Legislative Council of the Governor General of India to pass from time to time measures of consolidation and amendment of the law. My hon'ble and learned friend Mr. Hobhouse has continued with great success the work of consolidation which he found in progress when he succeeded to the office of Law Member of Council. Many measures of consolidation have been passed within the last few years. I have obtained a list of those measures, and I find that since my hon'ble and learned friend Mr. Hobhouse assumed his present office, eighteen Acts of the Legislative Council of the Governor General have been passed for the purpose of consolidating and amending the law. In these Acts twenty-one Statutes of the Imperial Parliament of England have, under the powers given to this Council, been repealed so far as they affect India; one hundred and sixty-seven Acts of the Indian Legislative Council have been repealed, besides one hundred and fifteen Regulations which had the force of law. The effect, therefore, of passing these eighteen measures of consolidation has been to repeal three hundred and three Laws and Regulations, and the eighteen now on the Statute-book stand in the place of the three hundred and three. A great deal has been done in this direction; something more remains to be done, and I do not doubt that my hon'ble and learned friend will continue to direct his attention to this subject.

"I think it is only right and fair to express the sense which I am sure the Council entertain with me of the services rendered in preparing this Bill and others by the learned Secretary in the Legislative Department, with whom the real work of consolidation must of course naturally rest, who has carried it on with great zeal and remarkable ability, and to whom it comes, as I know, as a labour of love. Contrary to the feeling which is supposed to animate some lawyers, our learned Secretary desires to see the law made as clear as possible to those whom it affects."

The Motion was put and agreed to.

PANJAB COURTS AND OFFICES BILL.

The Hon'ble SIR DOUGLAS FORSYTH introduced the Bill to amend the law relating to certain Courts and Offices in the Panjáb, and moved that it be

referred to a Select Committee with instructions to report in six weeks. When he asked leave to introduce the Bill on the last occasion, he had explained what the object of the Bill was, and he had nothing to say now. The Bill was a short one. Section 2 repealed section 20 of the Panjáb Courts Act only for the purpose of further extending the powers of the officers to whom the Executive Department had contemplated to give certain powers for the purpose of trying suits in the appellate and original Courts.

The Hon'ble MR. ELLIS had no intention of opposing the motion before the Council. But he desired to say a few words lest it might be supposed by his silence that he considered the scheme to which the Bill proposed to give effect the best possible one which could be devised for the purpose. He gathered from the speech of his hon'ble friend Sir Douglas Forsyth that he was not altogether without doubts on the subject himself, and if MR. ELLIS was correct, he believed his hon'ble friend only shared with a great many others the opinion MR. ELLIS held in the matter. He regretted his hon'ble friend was not able to bring in a Bill to give effect to a more thorough separation of the judicial and executive services in the Panjáb. He was quite convinced that the fear which existed in some quarters, that a separate judicial service in a country where a strong Government was desirable, could not be kept in subordination to the Executive, was not one which had any foundation: means might easily be devised for keeping the two branches in their proper places. In fact there was already a distinction with regard to the relations which the Chief Court of the Panjáb held to the Government, as distinguished from the relations which the High Courts of other provinces held to their Governments. To his mind it was clear that the combination proposed under the new system was one which, in the present state of the Panjáb, would be to the eye only. There must, in the present state of business, be a division of labour. The only difference under this scheme would be, that persons who by taste and qualifications were better adapted to one particular class of work would be dealing with both kinds of work. Moreover, the difficulty experienced before, and which the Bill was intended to remedy, would remain, namely, the difficulty of working the Chief Court in harmony with the Executive; whereas in the other scheme both difficulties would be avoided. MR. ELLIS had great doubts whether the proposed scheme would work; but he hoped the Council would give effect to the Bill so as to try what had been decided upon by the Government, though he regretted that this scheme was to be carried out, instead of the one which he desired to see, involving a more complete separation of the judicial and executive services in the Panjáb.

His Excellency THE PRESIDENT said:—"There can be no doubt that this is one of the most difficult problems which the Government of India has to consider. As my hon'ble friend Mr. Ellis has mentioned or indicated, some years ago the opinion of the Government of India was expressed to the effect that the time had arrived for the complete separation of the judicial and executive services in the Panjáb. The Government at home expressed a doubt whether this course should be adopted, and I was instructed shortly after my arrival in India to take the subject into consideration. I had the advantage in the autumn of 1872 of conferring with the Lieutenant-Governor of the Panjáb, and almost every one of the officers upon whose opinion the greatest value is to be attached in that province, both from their ability and their position, and I found the balance of opinion to be decidedly against the separation of the judicial and executive branches of the service at the present time. Having that opinion before them, the Government of India decided not to recommend a complete separation, and the measure which has been subsequently adopted with the approval of the Secretary of State in Council, has taken a course between a complete separation and the entire amalgamation of the duties which previously existed. The Bill is brought before the Legislative Council in order to carry out a portion of the executive arrangements which have been thus decided upon.

"Although I quite admit that there are difficulties in the question, and that there are arguments to be used in favour of an immediate and complete separation of duties, I must say that the balance of argument to my mind, and in the opinion of the Government of India, is in favour of not making so great a change at present."

The Motion was put and agreed to.

PROBATES AND LETTERS OF ADMINISTRATION BILL.

The Hon'ble MR. HOBHOUSE moved that the Reports of the Select Committee on the Bill to amend the law relating to Probates and Letters of Administration, be taken into consideration. This Bill had been introduced last November for the purpose of extending the local area over which the grant of probate operated; and the opportunity was also taken of giving to certain persons who had paid too high a Court-fee on probates and letters of administration the right to recover the excess. As regards the main object of the Bill, which was the extension of the area of probate, he might say that the Bill had remained unaltered since it was introduced; the Committee had only added to it one or two provisions for the purpose of preventing any clashing between the different High Courts which might grant probates extending all over India. For those provisions we were indebted to the High Court of Bombay, which sent in a very able paper by Mr. Orr, their Ecclesiastical Registrar, a gentleman of great experience in such matters, who had taken pains to study the subject and to send some suggestions which were now embodied in the Bill.

There were one or two further alterations made for the purpose of putting into the Bill a few additional cases in which a remission of the fee should be granted. With those alterations the Bill was republished, and Mr. Orr had again sent in a paper with one or two practical suggestions which seemed to MR. HOBHOUSE to be very useful. These were not put in the Bill because they were rather matters to be dealt with by the Executive Department than by this Council, and the paper would be forwarded to the Chief Revenue Authorities in order that they might deal with Mr. Orr's recommendations with respect to the fees on probates.

The only other alteration of substance was this. Besides making provision for the remission of the fee when too high a fee was paid, the Committee had introduced a provision taken from the English law for the recovery of the remainder of the fee when too low a one was paid. That seemed to be only fair: if it was just in the one case to allow a remission when too high a fee was paid, it was just in the other to recover the balance in case of the fee paid being insufficient.

They had also altered the shape of the Bill by making it in form what it was before in substance, an amendment of the Succession Act and of the Court Fees Act. For that suggestion they were indebted to the learned Advocate General of Madras, and the Bill would now read as a part of those two Acts, so many sections being inserted in their proper places in those Acts.

The Motion was put and agreed to.

The Hon'ble MR. HOBHOUSE then moved that the Bill as amended be passed.

The Motion was put and agreed to.

The following Select Committee was named:—

On the Bill to amend the law relating to certain Courts and Offices in the Panjáb——The Hon'ble Mr. Hobhouse and the Mover.

The Council then adjourned *sine die*.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 25th MARCH 1875.

GENERAL REMARKS.—There is little change to report. Harvesting has progressed, and is now completed or nearly so in Bengal, the North-Western Provinces, Oudh and Bombay with favourable results generally. In Central India the opium harvest has suffered from heat and wind. In Bengal and Assam *aous* rice is being sown, rain being wanted in Bengal for sowing operations. Rain is wanted also in Nepal, in Madras, and in Mysore for coffee and cardamoms. Prospects continue generally satisfactory everywhere.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Mar. 25th)	1·17 (at Masulipatam).	No rain elsewhere. Some later dry crops fair; wheat yielding one-fourth. Markets well supplied locally; prices steady. Mild fever and small-pox still reported. Cattle unhealthy; dry fodder sufficient.
Kurnool (24th)	*Nil*	Crops in good order; markets well supplied; prices steady; water and pasture procurable. Fever and small-pox prevalent; cattle disease in some taluqs. No water over Sunkesala anicut.
Tanjore (25th)	„	Rivers dry; water in tanks very little; water over anicuts none; crops generally good; rain wanted in some places; harvest of wet and dry crops almost over; markets well supplied; prices steady. Public health generally good; small-pox in some parts; one death by cholera in Negapatam; cattle disease in two taluqs; pasture sufficient.
Trichinopoly (24th)	„	Warter-supply and pasture beginning to fail; no other change of importance.
Malabar (25th)	„	Markets well supplied; prices almost steady. Preparation for sowing first crop begun. Small-pox prevalent throughout; fever slight; cattle generally healthy; pasture withered. *General Remarks.*—Prospects satisfactory.
Bombay—		
Sindh.		
Kurrachee (Mar 24th)	...	Three cases of small-pox in tuppa Babra and talukas Meerpoor and Sakra; no case of small-pox in Kurrachee since 12th, all recovering; weather very warm; hot winds.
Shikarpur „	...	Weather unseasonably hot, but nights cool; blight still continues; increase of disease among cattle in talukas Meerpoor, Shikarpoor, and Tigr; fever slightly prevalent.
Hyderabad „	...	Reaping of rabi crops general; weather warm; fever prevailing; small-pox in Guni and Badin talukas.
Upper Frontier „	...	Weather hot; late wheat and barley crops in Kusmore and Thul talukas below the average; earlier sowings very fair; oil-seed crops in the same state as before.
Gujarat.		
Ahmedabad (Mar 24th)	...	Crops being harvested; weather growing warmer.
Surat „	...	Rabi crops harvested; public health good.
Broach „	...	Cotton-picking progressing; rabi crops reaped; mornings and evenings cool; weather sultry.
Kaira „	...	Rabi crops being harvested; public health good; heat increasing.
Khandesh and Nasik.		
Khandesh (Mar. 24th)	...	Weather hot; outturn of rabi crops six annas less in Chopra and Edlabad; cattle disease continues; cotton market unchanged, Hingunghat 50, American 52.
Nasik „	...	Rabi in dry crop land reaped; some still remains in irrigated lands; weather very warm; excepting a few cases of small-pox, public health good.
Konkan.		
Tanna (Mar. 24th)	...	Weather sultry; public health good; slight ague and cough in Dhanoo taluka, and slight fever in Shahpur taluka; rabi crop middling in seven talukas.
Deccan.		
Poona ...	...	Weather hot; fever in Indapur, and cattle disease slightly in Bhimthurry, Indapur, and Jooner.
Ahmednuggur ...	...	Slight cattle disease in Parnair and Ankola talukas; health good.
Sholapur ...	...	Slight rain in Sholapur and Barsi; cattle disease in Sangola and Sholapur.
Satara ...	...	Crops reaped; average harvest; public health good; days sultry.
Southern Mahratta Country.		
Belgaum ...	...	Harvest of late crop almost completed; fever in Purusgurh, Sumpgaon, Gokak and Uthnee; small-pox and measles in Belgaum.
Dharwar ...	...	No change in the state of crops and health; cotton-picking commenced.
Kanara ...	...	Second crop satisfactory; fever and cattle disease prevalent; small-pox continues in Bhatkal.
Kaladgi ...	...	Rabi harvest middling; cattle disease in Bijapur and Mudebihal; health good.
Kathiawar and Gaekwar's Territory.		
Rajkot ...	...	Rabi crops good; weather hot; public health good.
Wudwan ...	...	Weather warm; health good; crops in the same state as before. *General Remarks.*—Hot weather fairly begun; harvest nearly complete, except in Sindh.
Bengal—(Mar. 24th)		
Burdwan ...	*Nil*	Weather warm; barley about to be cut.
Bankura ...	„	Weather dry, but cloudy in the mornings; winter crops nearly all reaped; rain wanted for cotton and indigo.
Beerbhoom ...	„	Seasonable weather; westerly hot winds commencing; wheat nearly ripe for the sickle; cutting of the sugarcane commenced; prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Midnapore ...	*Nil*	A small shower reported at Gurbetta, otherwise no rain heard of. State and prospects of crops as usual, but a good fall of rain in the course of the next ten days will be very beneficial.
Hooghly ...	„	Hot and dry, clear throughout; wind from south; cold-weather crops not yet all gathered; yield pretty fair; tobacco, melons, palwul, and vegetables want water. Water is very scarce for men and cattle, most of the tanks being dry. Damoodah water now coming down Kanna Nuddee and Suruswattee; great relief to parts watered.
24-Pergunnahs ...	„	Weather warm and occasionally cloudy. Harvest of cold-weather crops all but over. Rain is needed to facilitate agricultural operations.
Nuddea ...	0·06	Weather hot and dry. There was a shower of rain on the night of the 18th instant. The cold-weather crops are everywhere in good condition.
Moorshedabad ...	0·02	Weather seasonable; heavier rain fell on Thursday in the north of the district than at and about head-quarters; hail is also reported. Atmosphere slightly cooled by Thursday's rain. All crops excellent, both those cut and those still standing. Slight damage reported from hail.
Dinagepore ...	0·31	Weather fine and hot, with exception of the mornings, which are cloudy and damp. Slight rain has fallen. State and prospects of the crops are good.
Maldah ...	*Nil*	The weather has become very dry, warm and dusty. The crops are, as last reported, generally doing well.
Rajshahye ...	„	The weather has been sultry without rains. State of the crops unchanged, *e. g.*, doing well. Rain is much desired for the lands which are now being ploughed for rice sowings next month.
Rungpore ...	0·33	Weather decidedly warm in the middle of the day. Slight rain fell, and a little hail also, but it has done no harm. State and prospects of the crops good.
Bogra ...	*Nil*	Cloudy in the mornings for two or three hours, and then fair and hot. The amun or late rice crop is harvested, and the other crops promise well.
Pubna ...	„	Weather cloudy and warm, with south-easterly wind prevailing. The harvesting of the chaitali (March) crops going on rapidly, and of sugarcane completed. The state and prospects of cheena (millet), boro and jally, spring rices, continue good, but rain is much wanted.
Jalpáiguri ...	1·50	Easterly wind; very cool and pleasant for the time of year. Ploughing for the *bhadai* or early rice crop going on. Rain would be beneficial.
Dacca ...	1·73	Weather cloudy; storms threaten almost every night. State and prospects of crops good.
Patna ...	*Nil*	Seasonable weather. Harvesting of the cold-weather crops going on; yield good.
Gya ...	„	Seasonable weather. The rabi or cold-weather crop is being harvested and is a good crop.
Shahabad ...	„	Heat increasing perceptibly. Cold-weather crops being harvested. Prospects generally very good.
Durbhangah ...	„	Seasonable weather. Harvest commencing generally, promises to be excellent, particularly so in the central and southern tracts.
Mozufferpore ...	„	Weather hot and dry. Prospects of the cold-weather crops excellent.
Sarun ...	„	Weather bright, clear and getting warm; both east and west wind. The bulk of the cold-weather crops has been harvested; rahar pulse fast ripening Indigo sowing is being briskly pushed on; the early sowings have germinated. The new crops are coming into the market. Prices show a downward tendency.
Chumparun ...	„	Easterly winds and light clouds appearing occasionally. The prospects of the crops are most excellent. It is many years since there have been crops so good as those now approaching maturity.
Monghyr ...	„	Seasonable weather. The crops are being cut; outturn good.
Bhágalpur ...	„	Easterly wind prevailing. No rain wanted, until all cold-weather crops are harvested. There is sufficient moisture for low land, amun or late rice sowings; a good deal of this has been got through.
Purneah ...	„	Weather hot, sometimes close and sometimes with west wind. State and prospects of crops are good.
Southal Pergunnahs ...	„	Heat increasing, but less windy. Mowah promises well. Rahar pulse and linseed being reaped.
Cuttack ...	„	Hot and cloudy; threatening storms. Hardly any crops now on the ground.
Balasore ...	„	Weather hot and marked by the absence of the thunderstorms usual at this season. Rain much wanted for ploughing.
Lohardugga ...	„	Weather hot, clouds about. The cold-weather crops are being harvested gradually with excellent results.
Maunbhoom ...	„	Weather excessively hot; clouds have been hanging about the last three or four days. Crops being gathered in. Mowah promises to be abundant.

PUBLIC HEALTH.

Burdwan: cholera prevalent in Cúlna and Jehanabad. Bankura: cases of small-pox and cholera reported. Hooghly: cholera increasing. 24-Pergunnahs: fever has considerably decreased at Barripore, but prevails in the neighbourhood; a good deal of cholera, though not of the worst type, is reported in the sub-divisions of Diamond Harbour, Busseerhat, and Satkira; there are also a few cases in the other sub-divisions; sporadic cases of small-pox are also reported. Nuddea: cholera very prevalent. Rajshahye: cases of small-pox and cholera continue to be reported and are more numerous than last week. Furreedpore: general health of the district good; from Deorah station, however, some cases of cholera reported. Backergunge: general health of the district fair. Chittagong: cholera at Sudder station, and rather an epidemic of it near Setakoond; fever prevalent since the rain of last week (a native doctor is on the spot). Patna: health of the district good. Durbhangah: public health good. Sarun: general health good. Bhágalpur: general health very good. Cuttack: a little cholera on the pilgrim routes. Balasore: the ravages of cholera in the track of the recent cyclone continue excessive. Lohardugga: general health good; a few cases of small-pox.

General Remarks.—The weather is becoming very hot. In the Dacca and Chittagong divisions high winds have prevailed and hailstorms and severe gales are reported from some places therein. More or less rain has fallen over about a third of the province, and seems to impend more generally. On the whole, rain is wanted in all the districts, except the few where the cold-

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*			weather crops are yet standing, some damage to which is reported in the Chittagong Division by hailstorm, and from Noakhally, the loss of certain lives from falling of houses through the gales. The prospects of the remaining cold-weather crops continue favourable, and harvesting is progressing rapidly. Indigo sowings have commenced, and spring rice and millets are doing well. Lands are being prepared for the next rice crops, but want of rain interferes with the tillage on many places.
N. W. P.—			
Benares	(Mar. 22nd)	...	No change.
Mirzapur	(24th)	...	Harvest in progress; no change.
Allahabad	(25th)	...	No change.
Banda	(23rd)	...	No change; harvest nearly over.
Hamirpur	(25th)	...	No change.
Agra	(24th)	...	No change.
Meerut	„	*Nil*	
Bareilly	„	„	Barley harvest commenced.
Punjab—			
Delhi	(Mar. 24th)	...	Slight drizzle; health good; crops ripening.
Hissar	„	...	Crops ripening; health generally good; but small-pox, pleurisy and fever in some places; cattle disease over.
Umballa	„	...	Crops and health good.
Jullundur	„	...	Crops and health good.
Lahore	„	...	Crops and health good.
Mooltan	„	...	Crops average; health good.
Dera Ismail Khan	„	0·50	Health and harvest prospects good; cattle disease much decreased.
Peshawar	...	...	Probable outturn of harvest below average; health good.
			General Remarks.—Agricultural prospects on the whole favourable; crops ripening; public health generally good; cattle murrain disappearing.
Oudh—			
Lucknow	(Mar. 24th)	*Nil*	Harvest being gathered; new grain coming into market; prospects favourable; weather clear; public health good.
Sitapur	...	„	
Fyzabad	...	„	
C. Provinces—			
UpperGodavari	(Mar.20th)	...	Weather cloudy; health good; prices easy.
Sambalpur	...	...	Weather clear; harvest over; health good.
Bilaspur	...	...	Slight rain on 19th; rabi good; cholera in places; small-pox prevalent; prices steady.
Raipur	(Mar. 21st)	...	Weather clear; rabi excellent; health good; prices easy.
Chhindwara	(Mar. 22nd)	...	Weather clear and sultry; rabi cutting; health good; prices steady.
Balaghât	...	...	Weather clear; rabi cutting; health good; prices steady.
Bhandara	(Mar. 23rd)	...	Weather clear and close; rabi cutting; small-pox and fever prevalent; prices easy.
Nagpur	(Mar. 24th)	...	Weather warm; rabi threshing; cattle disease abating; prices stationary.
Wardha	...	...	Small-pox prevalent; prices stationary.
Jubbulpore	...	...	Weather clear; outturn of wheat good; small-pox prevalent.
Saugor	..	...	Weather warm; rabi reaping; small-pox prevalent; prices stationary.
Seoni	...	...	Weather clear; reaping of rabi continues.

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

THE ANNUAL STATEMENT OF THE TRADE AND NAVIGATION OF BRITISH INDIA FOR THE YEAR ENDING 31st MARCH 1874.

Extract from the Proceedings of the Government of India in the Department of Revenue, Agriculture, and Commerce,—No. 28 *A., dated the* 30*th March* 1875.

[STATISTICS.]

READ—

The Annual Statement of the Trade and Navigation of British India for the year ending 31st March 1874.

RESOLUTION.

1. The publication of this annual volume has unfortunately been so much delayed that the observations reviewing the results will be comparatively brief. Arrangements have now been made which will ensure the publication of future volumes, commencing with that for the current year, at a very much earlier date.

2. The aggregate value of the sea-borne trade of the country for the year amounted, exclusive of stores and treasure on account of Government, to £128,707,272 against £121,012,648 in the year 1872-73, *viz.*—

	1872-73.	1873-74.	Increase in 1873-74.
	£	£	£
Foreign Trade	91,531,103	94,277,080	2,745,977
Interportal Trade	29,481,545	34,430,192	4,948,647

shewing a total increase of 6·3 per cent. over the value of the trade of the previous year. In 1872-73 the proportion of foreign and interportal trade respectively to the total value was 75·64 and 24·36 per cent., and in 1873-74 73·25 and 26·75 per cent.

FOREIGN TRADE.

3. The total value of the several classes of the foreign trade in 1872-73 and 1873-74, the average annual value for the quinquennial period 1868-69—

1872-73, and the differences in the separate periods, are shewn in the annexed table :—

		1872-73.	1873-74.	Annual average of the five years, 1868-69 to 1872-73.	VALUE IN 1873-74, MORE OR LESS THAN	
					1872-73.	The annual average of the five years 1868-69 to 1872-73.

Government Stores and Treasure		811,617	983,912	516,381	+ 172,295	+ 467,531

This table exhibits once for all the value of Government transactions in the import and export of merchandise and treasure, but in the following remarks and tables only private trade will be taken into account.

4. From this table it will be seen that the imports of merchandise exceeded those of 1872-73 by upwards of a million sterling, but that the value is still a good deal below the average of the five preceding years. The same remarks apply to the imports of treasure.

5. The export of merchandise has again fallen off in value, being a little less than in 1872-73 (when it was less than in the previous year), and considerably less than the average of the five years. The export of treasure has on the other hand increased.

6. The share taken by each of the seaboard provinces of India in the total trade is shewn in the statement below :

	Imports.		Exports.		Total of Imports and Exports.	
	1872-73.	1873-74.	1872-73.	1873-74.	1872-73.	1873-74.
	£	£	£	£	£	£
Bengal — Merchandise	15,318,230	15,008,396	24,618,538	22,778,729	39,936,768	37,787,125
Bengal — Treasure	1,096,552	1,943,506	75,981	423,091	1,172,533	2,366,597
Bombay — Merchandise	10,225,684	11,334,111	19,929,315	20,871,314	30,154,999	32,205,425

Madras — Treasure	597,657	397,247	215,978	639,754	813,635	1,037,001
British Burmah — Merchandise	1,680,202	1,783,054	3,776,980	3,465,599	5,457,182	5,248,653
British Burmah — Treasure	72,920	56,041	18,600	14,808	91,520	70,849
Total of India — Merchandise	30,473,069	31,644,697	55,227,495	54,960,778	85,700,564	86,605,475
Total of India — Treasure	4,556,585	5,792,534	1,273,954	1,879,071	5,830,539	7,671,605
Total	35,029,654	37,437,231	56,501,449	56,839,849	91,531,103	94,277,080

The trade was thus shared in about the following proportions :

Bengal	42·59 per cent.
Bombay	38·60 „
Sindh	1·61 „
Madras	11·55 „
British Burmah	5·65 „

* These totals are exclusive of Government stores and treasure.

Imports from principal Countries.

7. The total value of merchandise and treasure, combined, imported from each principal foreign country in the years 1872-73 and 1873-74 respectively was as follows :—

Countries.	1872-73.	1873-74.	Increase in 1873-74.	Decrease in 1873-74.
	£	£	£	£
United Kingdom and Suez*	27,493,867	28,906,389	1,412,522

Total	35,029,654	37,437,231	2,782,295	374,718
Net increase			2,407,577	

8. The main fluctuations in the trade with each of the countries above named are given below. The causes of the fluctuations in the principal articles of trade, as far as these are known and as far as it seems necessary to refer to them, will be given further on.

9. Of the countries the trade with which increased, the *United Kingdom* (including the transit trade *viâ* Suez) had the largest share. The increase was due principally to larger imports of coal, cotton piece-goods, liquors, machinery, railway materials, and treasure. Decreases occurred in cotton twist and yarn, copper, zinc, woollen goods, and a few other articles. The increases and decreases under each principal head are shewn below.

Nature of goods.	Total value in 1872-73.	Total value in 1873-74.	Increase in 1873-74.
INCREASES.	£	£	
Coal	456,315	672,400	216,085
Cotton piece-goods	14,185,351	14,723,279	537,928
Liquors	1,143,762	1,315,882	172,120
Machinery	500,541	994,975	494,434
Iron	731,171	760,678	29,507
Paper	249,643	291,784	42,141
Railway materials	327,012	438,153	111,141
Salt	711,533	737,267	25,734
Silk piece-goods	266,131	307,191	41,060
Treasure	1,859,146	2,422,777	563,631
DECREASES.			Decrease in 1873-74.
Apparel	529,992	491,142	38,850
Cotton twist and yarn	2,647,581	2,629,359	18,222
Cotton goods, other sorts	2,494	2,399	95
Drugs and medicines	179,997	138,941	41,056
Copper	470,647	393,403	77,244
Spelter or zinc	121,497	48,709	72,788
Umbrellas	106,154	73,820	32,334
Woollen piece-goods	640,609	559,682	80,927

* Being British trade, almost entirely.

Mediterranean Ports.—The large increase in the trade was caused by greater imports of beads and false pearls, corals, cotton piece-goods and twist, liquors, salt, and woollen goods. The direct import trade from the Mediterranean shows a remarkably rapid increase in value. Amounting in 1869-70 to only £12,292, it rose to £135,172, £284,257, and £297,893 in the three following years, and in the year of report the total value was £412,706.

America.—The increase is mainly due to the greater value of the imports of ice, mineral oil, paints and colours, wood and manufactures thereof, and rosin.

Mauritius.—The increase is the result of the revival of the sugar trade from the depression of the previous year. The imports of this article exceeded those of 1872-73 by £148,969 or 52 per cent., though they were still more than 19 per cent. below the imports of 1871-72.

Aden.—The imports of gums, ivory, and metals increased.

Straits Settlements.—Increases appear under many heads, the chief being canes, which increased by £3,148, drugs and medicines by £6,660, earthen and porcelain ware by £5,041, tin (cast) by £61,183, silk (raw) £35,637, silk piece-goods £6,977, tobacco £5,067, and twist £2,048. Treasure also shews an increase of £164,750, or 158·5 per cent. Decreases occurred in candles, cocoanuts, coffee, cotton piece-goods, dyeing and colouring materials, mats, raw hemp, steel and copper, and spices.

China.—The trade increased in glassware by £15,824, grain and pulse by £15,744, rice from Hong-kong representing almost the whole of the imports under this head, spirits £1,590, silk (raw) £111,484, silk piece-goods £38,500, tobacco £6,980; there were also increases in some other articles. Treasure increased by £703,376, or 68·8 per cent. There were decreases in the following articles to the amount stated against each: Apparel £4,321, fireworks £9,148, copper £8,334, paints and colours £10,492, sugar £29,052, tea £50,746, umbrellas £8,851.

10. With the undermentioned countries our trade shews a decrease as compared with last year—

France.—The decrease against France is the result of a decrease in merchandise less an increase in treasure. The chief increases were in apparel £6,630, cotton piece-goods £10,338, and coral, unwrought, £2,864; and the chief decreases in salt £13,427, silk manufactures £11,250, wines and liqueurs £1,630, and spirits £29,217.

Germany.—The decreases are mainly in candles £1,403, cotton piece-goods £1,276, liquors of all kinds £8,062, and machines and machinery, which shew a decrease of £12,840, or more than 99 per cent. on the imports of the previous year. There are small increases in apparel, coal, salt, and woollen goods.

The decrease in the trade with other European countries is not material.

Africa.—The chief decreases were in silk manufactures £14,068, but the imports in the previous year were nearly as much as this in excess of the imports of 1870-71 and 1871-72; spices £24,783, and treasure £39,628. In ivory and manufactures thereof there was increase of £19,453.

Réunion.—The decrease was almost entirely in treasure, of which none was imported during the year against £70,000 in the previous year. The imports of merchandise from Réunion are quite insignificant.

Red Sea.—The chief items of decrease were coffee £6,846, drugs and medicines £3,132, salt £2,191, and treasure £4,494. Fruits and vegetables increased by £3,165, and gums by £4,703.

Persian Gulf.—The decreases occurred mainly in cotton £62,549, precious stones and pearls £24,586, salt £7,942, seeds £4,729, silk (raw) £8,000, wool (raw) £9,158. Treasure increased by £73,057. The principal increase in merchandise was in fruits and vegetables, £33,368.

Other countries in Asia—Shew a considerable increase in consequence of the importation of a large quantity of rice imported from Saigon and Siam on account of Government for the relief of the distress in Behar. This item stands for £180,124 against £5 in the previous year. Omitting this increase, the private trade fell off by £23,067. There was a considerable decrease against copper and tin, the import of which fell off almost to nothing during the year.

Australia.—The decrease is wholly under treasure, which diminished by £191,953. In merchandise there was a considerable increase amounting to £81,880, the great bulk of which was in coal £27,977, and copper (cast) £47,403.

The fluctuations in the trade with the other countries mentioned in the table do not require special notice.

Exports to principal foreign countries.

11. The following table exhibits the value of the merchandise and treasure exported to each principal foreign country during the year as compared with 1872-73:—

Countries.	1872-73.	1873-74.	Increase in 1873-74.	Decrease in 1873-74.
	£	£	£	£
United Kingdom and Suez	28,666,818	28,885,756	218,938

Shewing a nett increase of £338,400.

12. The general increase in the value of the export trade is due entirely to treasure, of which more to the value of £605,117 was exported in 1873-74 than in the previous year, a considerable portion of the increase (£526,177) having fallen to the United Kingdom.

13. In merchandise generally, there was a considerable falling off. The countries with which an increase is shewn are the United Kingdom (including the trade *viâ* Suez), France, the Mediterranean Ports, and "other countries in Europe," the West Indies, Mauritius, the Red Sea, Aden, Ceylon and Australia.

14. The subjoined table shews the articles in which occurred the main fluctuations of trade with the United Kingdom (including the transit trade *viâ* Suez).

Shawls	90,861	68,312	22,549

United Kingdom.—The chief increases occurred in treasure, as said above, in coffee £65,951, indigo £287,684, rice £185,930, wheat £554,454, or nearly

624 per cent.; hides and skins £42,006, seeds £376,845, silk manufactures £10,656, tea £173,945, teak timber £23,373, wool (raw) £107,644. There were decreases in cotton (raw) £941,443, jute (raw) £343,458, oils £74,882, saltpetre £41,347, silk (raw) £229,353, sugar £259,306, and smaller decreases in some other articles.

France.—Coffee increased by £215,053, cotton wool by £173,441, rice by £12,780, and wheat by £12,618. The increase in seeds was very material, amounting to £275,677; raw silk also shows an increase of £95,897, and spices of £59,541. The chief decreases were in indigo £206,321, hides and skins £41,620, jute (raw) £44,147, and shawls £79,000.

The Mediterranean Ports—The following articles shew increases to the amounts noted: coffee £47,600, cotton £155,763, seeds £41,953, silk £53,353, tobacco £17,934. There were decreases in rice £26,309, hides and skins £175,490, and teak, of which none was exported against £7,451 last year.

Other countries in Europe—Shew a remarkable increase in coffee (£100,145), cotton (raw) £143,875, tobacco £14,535. On the other hand, dyeing and colouring materials, rice, and hides shew a considerable decrease. The increases and decreases are thus apportioned: The export of cotton to Russia declined from £148,854 to £56,559; indigo on the other hand increased from £8,582 to £35,409. The total nett decrease was £67,124. The trade with Austria (exclusive of the trade to Trieste, which is classed in the present returns under Mediterranean Ports) increased by £89,094, nearly the whole of which was in coffee. The exports to Holland increased from £141,935 to £238,490. Cotton (raw) increased by £208,834 and teak by £6,111. Rice decreased by £28,755, and of indigo none was exported against £88,142 last year. The exports to Spain increased by £13,882, the increase being due to the exports of cotton (raw) and of tobacco to Gibraltar. The value of this article was £14,587 against £3 in the previous year. Cotton increased from £3,000 to £30,336. Rice and seeds fell off materially.

West Indies.—The increase is due to rice, the value of which was £281,652 against £181,488 in 1872-73.

Mauritius.—The increase is in treasure. Merchandise shews a large decrease generally, the most important fluctuations being in rice and provisions and oilman's stores. Other food-grains, oil, and tobacco increased.

Red Sea.—A large increase in the export of wheat is shewn against a great decrease in the export of rice. Cotton piece-goods also increased.

Aden.—Cotton piece-goods and twist increased, and there were small increases in other articles. Rice and hides fell considerably.

Ceylon.—Cotton piece-goods shew an increase of £21,971, cotton (raw) of £14,111, paddy and rice £323,790. The remainder of the increases are distributed through a number of articles, and are not individually material. Both the increases and decreases indicate ordinary fluctuations of trade.

Australia.—The increase was in merchandise and occurred mainly in rice (£34,206), gunny bags £45,557, and vegetable oil £26,945.

15. Trade decreased with Germany, America, Africa, Réunion, the Persian Gulf, Sonmeeanee and Mekran, Laccadives and Maldives, the Straits Settlements, and China.

Germany.—There was a general and considerable decrease in all enumerated articles of merchandise except teak. No coffee was exported during the year against £57,224 last year. Raw cotton and oils also fell off very much, the former by £56,805, the latter by £18,387.

America.—Seeds improved by £172,177 and indigo by £87,633; raw jute, spices, saltpetre, gunny bags and cloths, and tea fell off.

Réunion—Shews a large decrease (£23,688) in rice, with a set off of £17,200 in wheat.

The *Straits Settlements* also shew a decrease amounting to £127,710 in rice; jade stone fell off to nothing against £15,020, the value of the exports of the previous year. There were also decreases in sundry other articles. The chief increases were in opium (£168,617) and precious stones and pearls (£37,170).

China.—Decreases are exhibited in cotton (raw) £288,573, rice £111,262 or 99 per cent, opium £255,252. Increases occurred chiefly in cotton twist (£13,545) and spices (£21,182).

The fluctuations with the other countries named above are not material, and need not be recapitulated.

Principal Imports.

16. In the following table are shewn the quantities and value of the principal articles of merchandise imported, excluding treasure and Government stores :—

Total		...	...	...	30,473,069	31,644,697	+ 1,171,628 (Net)

17. The table shews a recovery from the depression of the previous year, the increased value of the imports amounting to £1,171,628, or 3·84 per cent. more than in 1872-73, and £833,922, or 2·70 per cent. more than in 1871-72. The articles in which the largest increases occurred were cotton piece-goods, machinery, coal, silk (raw), sugar, railway materials, tin (cast) and iron (wrought). The articles which shew much decrease are liquors, metals (of sorts unenumerated in the returns), spices, tea, and woollen piece-goods.

18. The increase in the value of *cotton goods, viz.*, £550,377, after deducting the small decrease of £8,748 in twist and yarn, is very satisfactory. The value of the imports in this year was in fact the highest on record of any year except 1868-69, when the tariff values were higher than at present by about 15 per cent., and 1870-71, which was a year of excessive importations; and the figures for the first eight months of the current year (1874-75) indicate a probable further increase over the value of last year's imports. There is therefore no indication at present of the realization of the apprehensions expressed by merchants of the effect of the rise of mills in India on this trade. The increase was shared between Madras and Bombay, the largest proportion of the increase falling to Bombay, where the imports exceeded by 19 per cent. those of the previous year. In the other provinces the imports decreased; in Bengal their value was less by 4·60 per cent. than in 1871-72. The cause assigned for this result by the Commissioner of Customs at Bombay in the introduction to the annual volume of the trade and navigation of that Presidency for the year 1873-74, *viz.*, that the lower prices which were the result of the scarcity in Bengal caused the transfer of orders to Bombay, is probably correct.

19. *Coal* shews a considerable increase in both quantity and value, the largest portion being for the account of the Bombay Presidency. *Machinery* also largely increased, the value of the imports being more than 84 per cent. in excess of the average of the five previous years. These figures are satisfactory; they seem to shew that India is beginning to emerge from the state of a country of production only, and is taking its stand among manufacturing nations. The number of cotton, jute and other mills which are springing up in the great centres of production furnish *primâ facie* evidence of the capacity of the country for competing not unsuccessfully with others in the field of manufacturing industry, the comparative want of capital being compensated by the abundant and cheap supply of labour.

20. The *metal trade* generally continued depressed during the year. Iron and tin increased in value by £30,739 and £79,901 respectively, but copper again fell off very considerably, shewing a decrease of £65,766 on the importations of the previous year when they were much below the average value of previous importations. All other kinds of metals also decreased in value by the sum of £108,988. In copper the chief decline occurred again in the imports from the United Kingdom. As observed in the Resolution recorded on the returns for 1872-73, the metal trade has for some time past been declining year by year, and the high prices ruling in England have had much to do with the decline of the trade. To this cause was added in 1873-74 the scarcity in Bengal. In years of plenty in India the people invest freely in utensils of metal, and especially of copper, but in years of distress earthenware vessels must serve their purpose.

21. *Salt* increased in quantity by 2,498 tons, and in value by £6,651 over last year, the imports being materially in excess of the annual average of the past six years.

22. *Silk (raw)* shews the large increase of £127,434. Of the total quantity imported (2,282,758 lbs. valued at £786,914), the great bulk came from China and the Straits Settlements, the former country sending 1,899,637 lbs., valued at £631,433, and the Straits 320,834 lbs. valued at £129,791. Most of the imports were directed to Bombay (£697,856) and Burma (£80,319).

23. *Sugar* has improved. It is still below the import of 1871-72, but as observed in the Resolution on the returns of 1872-73, the importation in that year from Mauritius was uncommonly large.

24. *Tea* shews a diminution in quantity and value, doubtless the result of the increasing competition of Indian-grown teas with foreign imports.

25. The imports of *woollen goods* are rather less than they were in 1872-73, but in that year they had exceeded by 40 per cent. the importations of 1871-72. The value of the trade (£668,911) was still well above the average (£635,389) of the five previous years. The decrease was important in Bengal; Bombay shews a greatly augmenting trade in these goods.

Principal Exports.

26. The following table shows the quantities and value of the principal and other articles exported, excluding treasure:—

Grand Total ...	...	...	...	...	55,227,495	54,960,778	— 266,717 (Net)

27. The chief increases were in coffee, wheat, indigo, lac of all kinds (not including lac-dye), seeds, silk manufactures, spices, tea, teak timber, tobacco, and raw wool.

Coffee increased in value by £358,918, while the quantity diminished considerably. The bulk of the exports is sent to the United Kingdom, France, the Mediterranean Ports and Austria.

The increase in *Wheat* is satisfactory. The duty on this article was taken off in January 1873 on the representation of the Bombay Chamber of Commerce, who urged that the weight of the duty and the length of the sea voyage practically rendered it impossible for Indian wheat to compete successfully in the English market with any country except perhaps California and Australia. The argument seemed sound, the amount of duty realised from wheat was comparatively small, and it was clearly an object to induce in a country like India the extended cultivation of the best of food-grains for which large tracts in many provinces are admirably adapted. The duty was accordingly remitted, with the result that the trade leaped from an export of 394,010 cwts., valued at £167,690 in 1872-73 to 1,755,954 cwts., valued at £827,606 in 1873-74, and the figures for the first eight months of the current year indicate little if any falling off. The average export for the five years preceding 1873-74 was 326,664 cwt. valued at £127,702, and this average was swelled by an unusually large export in 1871-72, caused by the prevalence of distress in Persia. The bulk of the increase was caused by the trade with the United Kingdom.

In *Indigo* the figures shew a very much larger proportionate increase in value than in quantity. In Bengal there was a deficient crop, and the quantity exported from Calcutta was consequently much smaller than in the previous year (73,707 cwts. against 85,496 cwts.), but the prices obtained, in consequence of an active demand, were good. The exports from Madras, Bombay and Sindh were larger than in the previous year both in quantity and value.

Lac (*Shell and Stick*) shews a considerable increase in value, the result, according to the returns, of an increased quantity exported. But in fact the value recorded is only the tariff value, the real value being very much higher. Prices for all kinds have reached during the current year an unprecedented level. On the other hand the trade in lac-dye, which has to compete with cochineal and other dyes, was and continues to be depressed, notwithstanding the remission of the export duty in November 1874.

Seeds.—The trade recovered to a great extent from the depression of 1872-73, the demand for the American and European markets, which had fallen off in the previous year, having revived, and the crops being good.

The trade in *Indian tea* largely increased. The exports amounted to lbs. 19,324,235, valued at £1,742,926 against lbs. 17,789,911 valued at £1,577,691 in the previous year. In 1863-64 the Indian tea trade amounted to only £220,394.

The increase in the export trade in *tobacco* is noteworthy. It is the result of a demand which arose in 1871-72 for the European Continental market, and which has continued steadily to increase. Much the largest share of the exports is furnished by Bengal.

28. The articles in which the principal decreases occurred were cotton (raw), rice, hides and skins, jute (raw), oils, opium, saltpetre, shawls, silk (raw), sugar and other saccharine substances, and all other, or unenumerated articles.

In *cotton* the decrease was in value, the quantity exported having exceeded that of the previous year by nearly ten million pounds. The increase is due to Bombay alone, the exports from that Presidency having exceeded those of the previous year by more than 73½ million pounds. From other provinces the exports diminished, and notably in Bengal, where the decrease amounted to upwards of 46 million pounds. The decreases in Madras, British Burmah, and Sind were 6½ million pounds, 9,160,676 lbs., and 1,806,357 lbs. respectively. In Bengal cotton the decrease lies in the exports to the United Kingdom, which fell off by more than 34¾ million pounds, to China (3,203,917 lbs.), to France (3,036,139 lbs.), the Mediterranean Ports (2,917,700 lbs.), and other countries in Europe (2,308,646 lbs.). The lower prices realised are not supposed to be due to any deterioration in the quality of the cotton shipped from India, but to the English market being well supplied at moderate prices with better cotton from

America and other producing countries. It should not be inferred, however, that the lowness of prices has necessarily materially affected the area of production of cotton, for the demand for local consumption in mills now absorbs a substantial proportion of that share of the crop which was formerly available for export.

The scarcity in Bengal explains the decrease in *rice*. The crop in Burmah, from which most of the rice exported from India is sent, was extraordinarily large, but a very considerable portion of it was sent to Bengal and was not available for exportation to foreign countries.

In *hides* and *skins* the decrease is considerable, amounting to £303,197. But the exports in 1872-73 were £395,556 in excess of those of the previous year. The present decrease may therefore be merely a fluctuation of trade. It admits of doubt, however, whether the decrease of this trade is much to be regretted. The number of cattle slaughtered in India is insufficient for the supply of any very large trade in hides, and an increase in the exports generally indicates heavy mortality in beasts, the result of plague, drought or other extraordinary causes, while a falling off in the trade in any year may perhaps be taken to mean that cattle have not suffered materially, and that agricultural prosperity in the districts has not been checked by the loss of the stock which is the cultivator's and carrier's capital, and of which at the best there is hardly enough in the country.

Jute (*raw*) was depressed consequent on previous over-trading. The area of cultivation was restricted coincident with lower prices offered to cultivators when the reaction commenced, and the home markets having been glutted, the exports fell off in quantity and value.

Saltpetre fell off both in quantity and value, but was still in excess of the average of the five years previous to 1872-73. In that year the trade was unusually active.

Shawls shew a considerable decrease in value, but there was a very large increase in the previous year, during which the trade seemed to have more than recovered from the shock of the Franco-Prussian war, and the present depression, which has been the cause of some distress to the shawl industry of the Punjab and Kashmir, may be merely the result of over-stocked markets. It appears, however, that shawls are not at present in fashion in Europe.

Silk (*raw*) also shews a great reduction in value, much greater than in quantity. With the revival of the silk industry in Europe after the partial disappearance of the silk-worm disease, and the rise of a considerable trade in raw silk produced by Japan and China, Indian silk has been greatly depreciated in value, and the prospect of a revival in the face of prices which yield little if any profit to shippers is not hopeful.

Sugar has fallen off by £264,920 from the exports of 1872-73, when they were £204,695 in excess of 1871-72, and largely in excess of the average export since 1868-69.

Customs Receipts.

29. The gross amount of customs duty collected on Imports and Exports was :—

	1872-73.	1873-74.	Decrease in 1873-74.
	£	£	
On Imports	4,177,102	4,161,716	15,386
On Exports	798,975	724,072	74,903
Total	4,976,077	4,885,788	90,289

30. The gross amount of duty collected on the principal and other dutiable articles of import and export is shown in the following statements :—

Imports.

Articles.	1872-73.	1873-74.	Increase or decrease in 1873-74.
	£	£	
Apparel	44,704	42,861	— 1,843
Cotton goods	816,334	842,510	+ 26,176
Drugs and medicines of all kinds	23,419	20,267	— 3,152
Fruits and vegetables	25,627	27,846	+ 2,219
Metals	99,035	92,931	— 6,104
Provisions, &c.	23,463	24,406	+ 943
Salt	2,530,325	2,485,921	— 44,404
Silk, raw, and silk goods...	72,903	81,855	+ 8,952
Liquors—Malt liquor	9,452	8,852	— 600
Spirits	184,067	193,261	+ 9,194
Wines	67,549	64,275	— 3,274
Sugar, &c.	32,693	41,475	+ 8,782
Woollen goods	35,876	33,210	— 2,666
Other articles	211,655	202,046	— 9,609
Total	4,177,102	4,161,716	— 15,386

31. **The chief increase was in cotton goods, and the chief decrease in salt, though the quantity imported was greater than in the previous year. This feature was reversed in 1872-73 when, though the quantity imported was less than in 1871-72, the duty realised was larger. The bonding of salt is the explanation of the apparent anomaly.**

Exports.

Articles.	1872-73.	1873-74.	Increase or decrease in 1873-74.
	£	£	£
Cotton goods	13,166	15,797	+ 2,631
Grain—Rice	606,677	516,266	— 90,411
Paddy	10,820	13,420	+ 2,600
Other sorts	28,977	13,751	— 15,226
Hides and skins (Tanned)	20,858	18,899	— 1,959
Indigo	47,210	47,290	+ 80
Lac of all kinds	8,177	10,334	+ 2,157
Oils	10,709	8,557	— 2,152
Seeds	47,172	72,601	+ 25,429
Other articles	5,209	7,157	+ 1,948
Total	798,975	724,072	— 74,903

32. The chief increase in the export duty is attributable to seeds, and the chief decrease to rice and grain of other sorts. The decrease in the duty on rice mainly occurred in Burmah, the large quantities which would have been available for export to foreign countries having been diverted to Bengal for the relief of distress.

Shipping.

33. The following statement shews the total number and tonnage of vessels which entered and cleared with cargoes to and from foreign ports:—

	1872-73.		1873-74.		Increase or decrease in 1873-74.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
Entered	3,509	1,708,339	3,557	1,647,617	+48	—60,722
Cleared	5,628	2,287,763	5,600	2,253,910	—28	—33,853
Total	9,137	3,996,102	9,157	3,901,527	+20	—94,575

shewing an increase in the number of vessels and a decrease in the aggregate tonnage. Of the vessels which entered, 2,912, aggregating 1,439,156 tons, were British and British Indian craft. The remainder, *viz.*, 645 vessels, measuring 208,461 tons, sailed under Foreign colours. Of these 298 were Arab ships, 64 were French, 40 American, 37 Italian, 17 German, and the rest of various other nationalities.

34. Of the vessels cleared 4,614, measuring 1,829,226 tons, were British and British Indian; of the 986 Foreign vessels (424,684 tons) which cleared, 254 were Arab, 219 French, 149 Italian, 66 American, and 44 German.

Interportal Trade.

35. The following statement shews the share of each Presidency and Province in the interportal trade:—

	Imports.		Exports.		Total Imports and Exports.	
	1872-73.	1873-74.	1872-73.	1873-74.	1872-73.	1873-74.

Burmah ... Treasure ...	1,511,471	2,425,309	197,458	548,394	1,708,929	2,973,703
Total ... Merchandise ...	11,603,526	12,862,506	13,306,265	14,485,610	24,909,791	27,348,116
Total ... Treasure ...	2,645,596	4,105,792	1,926,158	2,976,284	4,571,754	7,082,076
Total ...	14,249,122	16,968,298	15,232,423	17,461,894	29,481,545	34,430,192

The trade being shared in about the following proportions: Bengal 33·52 per cent., Burmah 23 per cent., Bombay 22·17 per cent., Madras 13·95 per cent., and Sindh 7·36 per cent.

36. The chief articles of the coasting trade are apparel, coffee, cotton (raw) and cotton piece-goods, drugs and medicines, dyeing and colouring materials, fruits and vegetables (mainly cocoanuts) grain and pulse, gums, hemp, hides and skins, jute (raw), and manufactures of jute, metals, coir and coir rope, provisions, salt, seeds, silk, raw and manufactured, spices, sugar, tobacco, wood, wool (raw) and woollen goods. The trade has been steadily progressing, and the increase last year was considerable.

37. The following statement shews the number of shipping employed in the coasting trade which entered and cleared with cargoes during the year, as compared with the previous year:

Nationality.	1872-73.		1873-74.		Increase or Decrease in 1873-74.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
Entered.						
British	960	816,389	1,129	994,659	+ 169	+178,270
British Indian	574	272,081	594	335,363	+ 20	+ 63,282
Foreign	1,169	90,355	921	75,017	— 248	— 15,338
Native craft	8,739	396,567	8,429	355,561	— 310	— 41,006
Cleared.						
British	1,144	937,246	1,301	1,163,461	+ 157	+226,215
British Indian	529	257,565	521	305,399	— 8	+ 47,834
Foreign	874	64,024	722	53,191	— 152	— 10,833
Native craft	8,745	429,375	7,607	376,397	— 1,138	— 52,978
Total entered and cleared ...	22,734	3,263,602	21,224	3,659,048	— 1,510	+395,446

38. This table shews a nett increase of 395,446 tons in the shipping employed in the coasting trade.

39. British and British Indian vessels increased in numbers and tonnage, while Foreign vessels and Native craft decreased. The Native craft are no doubt being gradually displaced from the carrying trade by larger and better equipped vessels.

Ordered that the foregoing remarks be published in the Supplement to the *Gazette of India*.

(True Extract)

A. O. HUME,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

PRICES-CURRENT of Food-grains and Salt in the undermentioned Districts of Bengal on the 27th March 1875.
