Volumes discharged :— Cub. ft. per sec.
Cawnpore Division Tail ... 264
" " Escapes ... 337
Etawah " Tail ... 38
" " Escapes ... 187
826

Balance expended ... 3,767

In all divisions demands were small up to the 15th, when rain fell generally and they ceased.

Eastern Jumna Canal.—Demands fair up to the 17th when the canal was closed for repairs.

Dun Canals.—No remarks.

Rohilkhand Canals.—No remarks.

Traffic.—Compared with the corresponding period of last year, these returns show a general decrease attributable in the main to heavy rains towards the end of the month. In the grain consignments there is a large increase, the bulk of which was upwards for Meerut. Compared with last month's traffic, grain has fallen off by nearly one half the quantity.

Allahabad,
The 25th March 1875.

G. H. D. WALKER,
Offg. Asst. Secy. to Govt., N.-W. P., P. W. D., Irrigation Branch.

Remarks.

300·05 cubic feet per second passed out from the several escapes on the Bári Doáb Canal. Notwithstanding the diminished demand for water owing to an abundant rainfall during the month, the result of the irrigation in the present season, as compared with that of the corresponding period of last year, shows a considerable increase.

626·53 cubic feet per second passed out of the "Budha Khera" escape on the Western Jumna Canal. There is an increase of 71,038 acres in the irrigation of the present season, as compared with that of the corresponding period of the preceding year.

The increase of irrigation from Perennial Canals is satisfactory. It is caused principally by the failure of the winter rains, no rain having fallen till the middle of February, but partly also by the Zemindars on the Delhi Canal wishing to resume the irrigation which they dropped with the view of getting light assessment.

W. BROADFOOT, *Captain, R. E.,*
Asst. Secy. to Govt., Punjab, P. W. D., Irrign. Branch.

RESOLUTION—By the Government of India, P. W. DEPT.

Read again—

Public Works Despatch to the Secretary of State, No. 164 R., dated 14th November 1874, and enclosures.

Read also the following reply:—

No. 21 P. W., dated 11th March 1875.

From—The Secretary of State for India,
To—The Government of India.

I have perused with much interest the Resolution of your Government, copy of which accompanied Your Excellency's letter No. 164 of 14th November last, on the subject of railway and irrigation works for the tracts north of the Ganges, recently afflicted by scarcity.

2. This document is of the more importance as exhibiting the views of your Government in regard to the proper mode of dealing with projects for railways and canals designed for the prevention or mitigation of famine, and I have much pleasure in signifying my cordial concurrence in the opinions expressed.

3. The immediate object, as Your Excellency points out, is "not to bring waste lands into cultivation or to increase the wealth of the country by improving the present means of communication," but to guard as much as possible against a recurrence of such disasters, both to the people and the State, as resulted last year and previously in the year 1865-66 from failure of rain and consequent failure of the principal food-crop of extensive tracts of country. Although, too, irrigation works alone can prevent such evils, improved lines of communication afford the best means of alleviating them when they occur, as, in spite of the utmost precaution, they everywhere may, and therefore, however desirable it be that some at least of the more imminently threatened districts should be protected from drought by irrigation works, it is even more essential that all of them should, as you say, be "brought into nearer communication with the main arteries of trade."

4. With only limited funds at command, however, it is impossible for the Government to supply these desiderata except very gradually, and too much caution cannot be exercised in selecting the works to be undertaken, nor too much stress laid on the necessity of rigid economy in their construction. The principles which should govern the choice are clearly set forth in the Government Resolution, where I note with particular satisfaction what is said in favor of multiplying wells and tanks, and of utilizing nullahs, in preference to the too exclusive elaboration of grand schemes on the scale of those in Orissa and elsewhere, and also the intimation given to the officers charged with the preparation of a railway scheme for connecting Mozufferpoor and Durbungah with the Ganges, that they will be expected to be upon "their mettle to design the cheapest railway that has yet been made in India, both as regards construction and working."

5. The railway in question is apparently the only project of magnitude the early execution of which is distinctly contemplated by the Resolution. Before being undertaken, it will of course be submitted for the sanction of Her Majesty's Government. Surveys, however, have, I observe, been ordered, with a view to the construction in Sarun and Chumparun of inundation canals in connection with the recently authorized embankments of the Gunduck, and of minor irrigation works in Rammugger and elsewhere, and I shall await with interest a report upon the results of these surveys.

ORDER.—Ordered, that a copy of the foregoing be forwarded for information to the Government of Bengal in the General and Irrigation Departments, and also that a copy be forwarded to the Home Department for publication in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

Prices Current of Food-grains throughout India for the 1st half of April 1875.

QUANTITIES PER RUPEE IN SEERS OF 80 TOLAHS.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RECENT ACCIDENTS ON THE NORTH-WEST LINE OF THE MADRAS RAILWAY.

The following papers relating to the progress made in repairing the damaged bridges on the Madras Railway are published for general information in continuation of the papers published in the Supplement to the *Gazette of India* of 5th December 1874.

No. 159, dated Madras, 19th March 1875.

From—Lieutenant-Colonel J. H. M. Shaw-Stewart, R. E., Consulting Engineer for Railways,

To—Colonel G. W. Walker, R. E., Secretary to Government, Madras, Public Works Department.

I have the honour to report, for the information of Government, that the operations in progress for the repair of the damaged bridges on the North-West Line were inspected by me during last week in company with the Chief Engineer of the Madras Railway.

2. At the Cheyair the work is well advanced. The embankment in the centre of the river has been restored, with both abutments; and of the four masonry piers which failed in the north portion of the bridge three have been replaced with screw piles. At the site of the fourth pier the bed of the river was found to be so much encumbered with old masonry as to render the screwing of piles almost impossible, and it has been necessary to alter the design and to construct the new pier of masonry resting on wells nine feet in diameter and carried down to a depth of 35 feet. The bricks for these wells are ready, and the work is now in progress. At the pier which failed in the south portion of the bridge, the clearing away of the old foundation has been attended with some trouble on account of the compactness of the masonry and the quantity of water in the river; but the work is making steady progress, and the new foundations will soon be got in.

3. At the Chittravatty the work is also well advanced. At this river nine of the masonry piers failed, and they are being replaced by ten piers formed with screw piles. Of these nine are now completed, and in the tenth pier all the piles are screwed into position

with the exception of one which came in contact with a large block of masonry about nine feet below the bed of the river. The removal of this obstruction has caused some delay, but I trust that all the piers will soon be ready to receive the girders.

4. At the Paupugnee little has been yet done beyond getting all the material into position. The work here consists solely of forming new piers with screw piles in the positions occupied by those which were carried away, and it was thought advisable to concentrate the whole available labour on to the Chittravatty bridge in the first instance, as greater difficulties were anticipated there. The large gangs of trained labour will now be brought to the Paupugnee, where it is expected that the construction of the new piers will soon be pushed through.

5. At the Pennair it has been found necessary to modify in some particulars the mode originally proposed for reconstructing the two piers which failed. The river bed was found to be encumbered with old masonry to such an extent as to render it impossible to support the girders temporarily, as was proposed, upon screw piles. The difficulty of dealing with this bridge is increased from the fact that the traffic over it has not been diverted, as in the other cases, to a temporary road laid across the river bed; and it is therefore necessary to provide for the repair of the piers without interfering with the passage of trains over the bridge. The obstructions which have been come upon unexpectedly in the river bed, and which prevent the screwing of piles, render the progress of work under these conditions a matter of considerable difficulty. A revised method of supporting the girders during the operation of building the piers has now been adopted, and this is shown in the accompanying plan. Another modification in the original design which it has been found necessary to introduce, is the substitution of well foundations for solid ones in rebuilding the two piers. This change is due to the depth of sand, 15 feet, overlying a solid substratum. The wells will be 9 feet in diameter, and bricks for the purpose are now being conveyed to the bridge.

6. Adverting to the letter from this office, dated the 8th instant, No. 145,* I have the honour to report that, unless unforeseen difficulties occur, the completion of the repairs to the Cheyair, Chittravatty, and Paupugnee bridges may be looked for during April. The extent of the progress made towards the reconstruction of the damaged piers is explained above, and in each case the necessary girder material is on the ground, and the girders are being rapidly rivetted and got ready.

* G. O. No. 784, dated 20th March 1875.

7. It is more difficult to name the date when the repairs to the Pennair bridge will be finished. The obstructions found in the river bed have retarded the work very considerably, but I am still in hopes that the repairs will be completed, or nearly so, by the end of May. The Government may rest assured that every effort to attain this object will be made by the Railway officers.

8. The unusual amount of water in the beds of the Chittravatty and the Pennair has made it impossible to make any examination as yet of the pier foundations, and this must in all probability be postponed for another month.

No. 949, dated 10th April 1875.

Order thereon by the Madras Government.

His Excellency the Governor in Council is glad to find that steady progress is being made with the restoration of damaged bridges on the Madras Railway. Difficulties met with in the execution of the work have been overcome by what appear to be judicious modifications of the original designs. The completion of the repairs to the Cheyair, Chittravatty, and Paupugnee may, it is stated, be expected during April, while the Pennair bridge will probably be ready by the end of May.

2. His Excellency the Governor in Council accepts the assurance given that every effort will be made by the railway officers to ensure the completion of the work by the time specified.

a. Nearly stationary.
b. Barley and rice falling.
c. Rice falling; bájra and gram rising.
d. Barley falling; wheat, jowár and gram rising.
e. Wheat, barley, jowár, and gram falling.
f. Barley, jowár, and gram rising.
g. Jowár falling and gram rising.
h. Wheat, barley, and gram falling.
i. Barley, jowár, and gram rising; bájra falling.
j. Stationary.
k. Prices rising.
l. Barley and gram rising; jowár falling.
m. Barley falling; gram rising.
n. Barley and bájra falling; gram rising.
o. Barley rising; jowár falling.
p. Bájra and jowár falling; gram rising.
q. Barley falling; rice, jowár, and gram rising.
r. Barley and jowár rising.
s. Wheat and barley falling; gram rising.
t. Bájra and gram falling.
u. Wheat, bájra, and gram falling.
v. Barley, bájra, jowár, and gram falling.
w. Wheat, barley, bájra, and gram falling.
x. Jowár falling.
y. Bájra rising; gram falling.
z. Wheat falling; barley, bájra, and Indian corn rising.

* Maize or Indian corn.

Description of Lesser Millets.

Bájra.

† Sawan. ‡ Kodo.

Prices Current of Food-grains throughout India for the 2nd half of April 1875—concluded.

QUANTITIES PER RUPEE IN SEERS OF 80 TOLAHS.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIRCULAR No. 8 RAILWAY.

Accidents and injuries to life and limb which have occurred on all Railways open for traffic in India during the year 1874.

SIMLA, JUNE 5, 1875.

RESOLUTION—By the Government of India, Public Works Department.

READ—

Returns of the number and nature of accidents and injuries to life and limb which have occurred on all Railways open for traffic in India during the year 1874.

OBSERVATIONS.—In the following table the total number of accidents of all kinds connected with the working of the trains on the several Indian Railways, are compared for four consecutive years :—

YEARS.	East Indian.	Eastern Bengal.	Oudh and Rohilkhund.	Punjab and Delhi.	Sindh.	Calcutta and South-Eastern State.	Nulhatee State.	Rajpootana State.	Holkar State.	Madras.	South Indian.	Great Indian Peninsula.	Bombay, Baroda and Central India.	TOTAL.
1871 ...	151	2	4	87	51	1	...	...	...	68	2	146	36	548
1872 ...	691	8	26	114	49	5	2	...	...	60	4	150	44	1,153
1873 ...	216	3	36	76	41	2	1	14	...	64	19	111	38	621
1874 ...	267	2	55	57	44	37	6	43	2	92	24	106	32	767

The figures of the East Indian Railway show an unusual increase in 1872, but this, as pointed out in Circular No. 16 R of 10th June 1874, is due to the inclusion, at that time, of every accident of a minor character. Owing to this fact, no comparison between the returns of 1874 and 1872 is possible, but, compared with 1873, the total of 1874 exhibits an increase of 146 accidents. The increases occurred chiefly on the East Indian, Oudh and Rohilkhund, Calcutta and South-Eastern State, and Madras Railways. On the East Indian, and

Oudh and Rohilkhund Railways, the numbers have increased with increased train.mileages, caused partly by the famine traffic, and partly by the opening of new lengths of line. On the Rajpootana State Railway the mean open mileage was 173 miles in 1874, against 91 miles in 1873, and the number of accidents increased from 14 to 43.

The total casualties from all causes to passengers, railway servants, and others were—

Years.	Killed.	Injured.	Total.
1871	177	204	381
1872	211	224	435
1873	166	272	438
1874	221	278	499

Collisions.

East Indian Railway.—Thirty-six collisions took place against 34 in the previous year. Of this total, 4 occurred to passenger trains, 20 to goods trains, and the rest to pilot engines, &c. In 21 instances the drivers were to blame, in 4 the guards, in 3 the station staff, in 4 the pointsmen, and in the remaining number the staff of both the Locomotive and Traffic Departments are held to be in fault.

The casualties, fortunately, consisted of only 5 passengers injured, of whom 4 were hurt in a collision at Benares, and of one Railway servant killed and 14 servants injured. One collision, in which 5 Railway servants were injured, occurred at the Junction Station at Allyghur between a ballast train and its engine. This collision appears in the returns of both the East Indian, and Oudh and Rohilkhund Railways.

It is worthy of being noted that in a collision which occurred on the 3rd July 1874 between Mugra and Khanyan between two goods trains, almost all the axle boxes of the up-train were broken.

Eastern Bengal Railway.—The only collision on this line occurred between two goods trains at Chogdah Station through the fault of the pointsman. It was not attended with any casualty.

Oudh and Rohilkhund Railway.—Of the 5 collisions on this line, one has already been referred to, one occurred to a mixed train through mismanagement in shunting, and the third to a goods train which was too long and struck against a wagon standing at the end of passenger platform. In one instance a trolly was run over. The casualties were 5 servants injured, caused by the accident to the ballast train mentioned above.

Punjab and Delhi.—The number of collisions decreased from 12 to 6. In 2 cases trollies were run over, and in 2 others, the accidents were due to carriages having been blown out of the station yards by storms. In one instance a pilot engine ran into the rear of a long goods train, a truck of which was standing foul of the points. There were no casualties.

Calcutta and South-Eastern State Railway.—Two collisions occurred on this line. In one case a trolly was run over by a shunting engine, and in the other a garden-produce-train ran against some travelling tanks, &c., through the fault of the pointsman. No injury happened to life or limb.

Rajpootana State Railway.—Two collisions were caused by careless shunting. In one instance the brake-van and a 4th class carriage of a mixed train were upset, but no human being received any injury.

Holkar State Railway.—A material train ran against the mail train at Khundwa, causing much damage to stock and works, but fortunately not hurting any one. This was the only collision.

Madras Railway.—On this line also there was only one slight collision between two trains.

Great Indian Peninsula Railway.—There were 12 collisions on this line, of which one occurred between a special troop train and a goods train between Burhanpore and Chadni, causing the death of 4 railway servants and injury to 23 passengers and 2 railway servants. In 6 cases lorries were run over, owing to carelessness on the part of workmen in charge of them. In one of these accidents 3 servants were killed and 1 injured, and in another one servant was injured. Of the remaining 6 accidents, 4 were due to shunting operations and one to the fault of the Station Master, who gave line-clear orders to opposing trains on the single line. The total casualties consisted of 5 killed and 32 injured.

With regard to the frequency of lorry accidents, the Government of Bymbay has already taken measures.

Bombay, Baroda and Central India Railway.—Two collisions occurred on this line, one between a goods train and some wagons which were being shunted, and the other between a mail train and some wagons standing on the siding at Ahmedabad. The former happened through carelessness of a signalman, and the latter through that of a pointsman. They were fortunately free from casualties.

Taking all Railways together, there were 68 collisions, of which 34 are attributed to the fault of the drivers, 12 to the station staff, 9 to pointsmen, and 9 to workmen employed on the line. As compared with the previous year, the total shows a reduction of 8 accidents of this sort. The total casualties were 6 killed and 56 injured.

Of the total number of collisions, more than half occurred on the East Indian Railway alone, though the casualties to life and limb were not proportionately numerous.

Leaving the line.

East Indian Railway.—There were 21 accidents of this description, of which 13 were due to defects in axles and journals, and 4 to defects in roads and works; 2 only were connected with shunting operations, against 10 in the previous year. The casualties from these accidents were 13 men injured, of whom 12 were passengers injured in one accident to a passenger train near Kanoo Station during the cyclone in October.

On this railway the weaker axles are being replaced by stronger ones. Some Bessemer steel axles have broken, and in the accident of the 26th April 1874 the quality of the metal of the Bessemer steel axle is reported as hard and brittle. This is a matter which demands the close attention of Railway Boards.

An endeavour has been made to introduce registration of the mileage made by axles in view to reducing this class of accidents, but there are difficulties in regard to the proposal which have not yet been overcome.

Oudh and Rohilkund Railway.—There were 7 cases of vehicles leaving the line, of which 1 was caused by a storm, 2 by defects in way and works, 2 by fault of the Traffic Department and 2 by faults of pointsmen. No injury resulted to life and limb.

Punjab and Delhi Railway.—There occurred 14 cases of getting off rails, of which 11 where due to carelessness of pointsmen, 1 to breakage of an axle, 1 to a piece of firewood dropping out of the train across the rails, and 1 to the fault of the traffic staff. In 2 cases only were passenger trains concerned. There were no casualties.

Sindh Railway.—There was only one accident of this description: the engine of an up-train left the lines through the rails being out of gauge.

Calcutta and South-Eastern State Railway.—Out of 4 cases of leaving the rails, 2 were in connection with shunting. In two instances the drivers were in fault; in the other two defects in the way and works were the causes.

Nulhattee State Railway.—Only one such accident, due to defects in road and works, occurred on this line.

Rajpootana State Railway.—Of the 19 reported cases of leaving the line, 7 were connected with shunting; in one case owing to the prohibited arrangement called fly shunting. Of these 19 accidents, 3 were unavoidable, 3 were due to defects in stock, 2 to defects in road and works, 2 to drivers, 1 to guards, 5 to pointsmen and 3 to workmen. There were no casualties.

Holkar State Railway.—One such accident only occurred on this line, and this was unattended with casualties.

Madras Railway.—There were 18 cases in which engines and vehicles left the line, against 7 in the previous year: 11 of these were caused by

carelessness of pointsmen and 2 by running over cattle. In one case the axle was broken, and in another the Deputy Chief Engineer's inspection train, while passing over the Paupugnee bridge at high speed, got off the line, and was precipitated into the bed of the river. The Fireman and Permanent Way Inspector were killed and 4 others injured by this accident.

South Indian Railway.—On this line there were two accidents of this description due to the breaking of axles.

Great Indian Peninsula Railway.—Out of 15 cases in which the engines and vehicles left the line, 6 were due to the breakage of axles, 3 to pointsmen, 3 to bad loading, 1 to workmen, and 1 to the wearing-out of rails. There were no casualties of any kind.

All Railways.—There were altogether 103 cases in which trains, engines, and vehicles left the line, but in 27 only were passenger trains concerned:—27 of these accidents were caused through defects in rolling stock, 14 through defects in way and works, 8 through faults of the Locomotive Department staff, 8 through faults of the Traffic Department staff, and 33 through carelessness of pointsmen. The total casualties were 2 killed and 17 injured, of which, as mentioned above, 12 were injured in one accident on the East Indian Railway, and 2 killed and 4 injured in an accident on the Madras Railway.

Fire.

The total accidents from fire increased from 70 in 1873 to 92 in 1874, of which 39 occurred to passenger trains. On the East Indian Railway there was an increase of 5 accidents; on the Punjab and Delhi 5; on the Madras 14; and on the Great Indian Peninsula 3; on the Oudh and Rohilkund a decrease of 1, and on the Sindh of 4. Not a single accident of this description occurred on the Eastern Bengal, Calcutta and South Eastern State, Rajpootana State, Holkar State, South Indian, and Bombay, Baroda and Central India Railways.

Of the total of 92 accidents from fire, 8 were owing to unavoidable causes, 82 to sparks from engines, one to faults of the Locomotive and Traffic staff, and one to faults of the Traffic Department.

Spark-arresters are used on all Railways, but not on the East Indian Railway throughout its length; the exception being the Bengal Division of that line. It is noticeable that, though coal is used throughout the entire length of this line, it stands at the top of the list as regards this class of accidents. But it is to be remembered that the traffic on this line is far greater than on any other, (the train mileage being 43 per cent. of the total on Indian Railways), and, having regard to this fact, the number of accidents from fire is not, by comparison, large.

Of the 20 cases of fire on the East Indian Railway, 9 took place in the Bengal Division and 11 in the North-West Provinces, including the Jubbulpore line. In 15 cases fire was caused by sparks from the engine; in 2 cases by the friction of the bottom boards of brake-vans with wheels, owing to overloading; and, in one case, the contents of a wagon had been loaded in a wet state and produced spontaneous combustion. In another instance fire was caused by native passengers throwing ashes out of their pipes.

It is desirable that the East Indian Railway should, as is the practice on other Railways, state, in all cases of fire, whether spark-arresters were in use.

On the Oudh and Rohilkhund Railway all the 12 accidents were caused by sparks from the engines which burn wood chiefly, and are almost invariably fitted with spark-arresters.

On the Sindh, Punjab and Delhi Railways the accidents from fire were also solely due to sparks from the engines. On the Punjab and Delhi section the engines were generally fitted with perforated plate arresters and lengthened ash-pans, and on the Sindh, with perforated arrester cages in the smoke box.

On the Nulhatee State Railway the only instance of fire was very destructive, two 4th class carriages being burnt. Of the 3 passengers who, on this occasion, jumped out of the train, 1 was killed and 2 were injured. It is understood that, on this line, on which coal is used, there are no spark-arresters, but it should have been stated if this was the case or not, when the accident was reported.

Madras Railway.—Of the 19 cases of fire, 2 are shown as unavoidable and 17 as due to sparks from the engines. In 5 of these the engines burned coal, and in 7 wood. As regards the rest, it is not stated whether coal or wood was used. All the wood-burning engines were fitted with arresters, but apparently not the coal-burning engines. It is desirable in all cases of fire to state whether the fuel is wood or coal, and whether the engines are provided with spark-arresters; and this should be done in future.

Great Indian Peninsula Railway.—Of the 11 accidents from fire, 9 took place from sparks from the engines: the cause of one is not known; one was caused by a shepherd who was smoking while travelling in a sheep truck in charge of sheep.

Running over Cattle.

All Railways.—There were 407 cases of running over cattle, against 283 in 1873 and 296 in 1872. Of the increase of 124 accidents, 69 appear on the East Indian Railway and 29 on the Calcutta and South-Eastern State Railway. The total accidents from this cause on the latter Railway during 1872, 1873, and 1874 were 4, 2, and 31 respectively. It is understood that, in former years, all cases were not reported.

About 93 per cent. of this class of accidents were due to the defective state of the fencing, and 5 per cent. to faults of gatemen and policemen. In more than half of the cases passenger trains were concerned. In one instance the driver of a bullock cart which was run over was injured as well as his cattle.

On the East Indian Railway the number of cases in which cattle were run over was 184; on the Eastern Bengal, 1; on the Oudh and Rohilkhund, 18; on the Punjab, 4; on the Sindh, 15; on the Calcutta and South-Eastern State, 31; on the Nulhatee State, 2; on the Rajpootana State, 12; on the Madras, 48; on the South Indian, 22; on the Great Indian Peninsula, 45; and on the Bombay, Baroda and Central India, 25.

East Indian Railway.—The animals were thrown off the line in 5 instances and, in the remaining number, were run over. Once only did a train suffer, the truck of a goods train, on that occasion, being turned off the line in passing over the carcase of a bullock. It should always be stated whether cow-catchers are used or not. This remark applies to the Punjab, Calcutta and South-Eastern State, Nulhatee State and Rajpootana State Railways, as well as to the East Indian Railway. In one instance a pony jumped out of a train and was run over, and in another, two horses jumped out of a special train, one being killed and the other escaping unhurt.

Oudh and Rohilkhund Railway.—The engines were all fitted with cow-ploughs, but the report shows that 11 animals were, notwithstanding, run over, and that, in only one case, was the apparatus effective in removing the animal from the line.

The *Punjab Railway* shows a satisfactory reduction in this respect, the number of accidents of this class being 4 against 11 in 1873.

It is worthy of note that, in all the 15 cases on the Sindh line, the cattle were thrown off the line by the cow-catchers.

There were 12 cases of running over cattle on the Rajpootana metre gauge State Railway, but it is satisfactory to learn that, in no instance, did an engine leave the metals.

The engines on the *Madras and South Indian Railways*, it is said, are not provided with cow-catchers. The total accidents from running over cattle on these lines number 70. In one instance of collision with cattle on the Madras Railway, the wagon of a mixed train was derailed and the engine injured, and in another instance the composite carriage of a mail train was derailed and the permanent way injured.

The engines of the Railways in the Bombay Presidency are provided with cattle ploughs. Of the 45 cases of running over cattle on the *Great Indian Peninsula Railway*, 34 were due to the defective state of the fencing and 8 to fault of gate-keepers. In 9 cases the fencing is said to be low. One case occurred on the Oomraotee State Railway which has no fencing.

On the *Bombay, Baroda and Central India Railway*, 21 accidents of this description were caused by defect in fences, 1 by the negligence of the Traffic Department, and 3 by the carelessness of the gate-keepers.

OTHER CAUSES.

Under this head there was a total of 97 accidents, of which 28 happened to passenger trains. Two were due to unavoidable causes, 13 to defects in rolling stock, 4 to defects in way and works, 8 to fault of drivers, 7 to faults of the Traffic Department staff, 1 to carelessness of pointsmen, 20 to faults of gatemen and police, 6 to fault of workmen, 1 to improper interference by persons not under the control of the Railway Company, and 6 to malicious attempts on the part of persons not connected with the Railway establishments to throw off the trains. The total casualties were 5 killed and 3 injured.

Six of these accidents took place on the East Indian, 13 on the Oudh and Rohilkhund, 14 on the Punjab, 18 on the Sindh, 2 on the Nulhatee, 10 on the Rajpootana, 6 on the Madras, 23 on the Great Indian Peninsula, and 5 on the Bombay, Baroda, and Central Indian Railways.

As compared with the previous year, the *East Indian Railway* shows a diminution of 21 accidents. Of the six accidents which occurred on this line, 4 were caused through defects in the rolling stock.

Out of the 13 accidents on the *Oudh and Rohilkhund Railway*, 5 were due to faults of gatemen. In two instances the gate-keepers were asleep, but on one of these occasions there was a red light and the driver was to blame in advancing.

On the *Punjab Railway*, gate-keepers fell asleep on 2 occasions, and on 2 occasions were absent from their posts. In 5 instances the accidents were due to the breakage of axles caused by flaws in the iron.

Sindh Railway.—Fifteen out of 18 miscellaneous accidents were caused by the bursting of the tubes of the engines, resulting, it is said, from fair wear and tear. The water of Sindh is known to be bad, and the subject should, consequently, receive careful attention. The circumstances connected with the bursting of a boiler on this line, have still to receive investigation by a testing of the plates of the burst boiler in a more perfect manner than has hitherto been done. The test awaits the arrival of more accurate apparatus than was at hand at the time; and until this test has been made, the explanation of this accident cannot be positively determined. It is a question for consideration whether some system of examination may not reduce the number of accidents from this cause.

On the *Rajpootana Railway* the buffer of a wagon gave way in one instance, and in another the tyre of one of the wheels of a brake-van. In two cases wagons were blown over scotch blocks.

Four attempts were made on the *Madras Railway* to throw the train off the line by placing stones and chairs on the rails, but in no case were the persons convicted. In one of these instances some boys confessed, but were acquitted on the ground of tender age. The remaining two miscellaneous accidents on this line were the results of defects in rolling-stock.

Great Indian Peninsula Railway.—Of the 23 miscellaneous accidents, 9 were due to defects in rolling-stock, 4 to defects in road and works, 1 to faults of the Traffic Department, 5 to neglect of gatemen, 2 to carelessness of workmen, and 2 to malicious attempts of boys to throw the train off the line by placing stones on the rail.

In 4 cases the axles broke, in 2 the couplings parted, and in 3 stones fell from rocks above, and obstructed the line. It is satisfactory to note that there is a marked diminution in the number of landslips at Bhore Ghaut, of which there were 12 in 1873 and 11 in 1872. The danger of these slips may be appreciated by the fact that one boulder, which fell, weighed no less than 10 tons. On the 25th July, the Sewjee bridge was washed away by a heavy flood, and a goods train consisting of 33 empties, 2 loaded wagons, and 2 brakes, with engine and tender, was, with the exception of 5 vehicles, precipitated into the river: 4 persons met their death by this accident. On another occasion 3 persons were injured in consequence of a lorry running into a stone which had fallen on the road from the hillside at Bhore Ghaut. Of the 2 boys, who placed stones on the rail, one was sentenced to one year's rigorous imprisonment, and the other to receive 30 stripes.

Bombay, Baroda and Central India Railway.—There were 5 accidents from miscellaneous causes, of which 4 were due to negligence of gatemen and police. In one of these a cartman was killed, and in another instance the sun-shades of several carriages of a passenger train were damaged, owing to the train coming in contact with a load of hay overhanging the sides of a truck.

The points to which attention is needed are indicated by the accidents detailed above, and the Government of India trust that the Railway Companies, and the officers of Government in charge of Railways, will take the necessary steps to apply such remedies as are possible. The accidents reported as due to defects in the road, stock, and works, should aid, to some extent, in the prevention of similar accidents in the future by showing in what direction defects may be guarded against. Carelessness and misconduct of the staff have produced many accidents. The only remedies for these causes are improved discipline and habits.

ACCIDENTS AND INJURIES TO PASSENGERS.

The total killed and injured—as compared with the four previous years, was as follows:—

	Killed.	Injured.	Total.
1870	13	63	76
1871	9	29	38
1872	9	58	67
1873	13	83	96
1874	13	70	83

The numbers of passengers killed and injured from causes beyond their own control were 1 and 43 respectively; and from their own misconduct or incaution 12 and 27 respectively. Out of the 43 cases, in which passengers received injuries from circumstances over which they had no control, 40 were due to accidents to trains. Those injured and killed from their own misconduct and want of caution consisted almost entirely of those who attempted to get in or out of trains in motion. In one instance, a passenger, while passing from the up to the down platform at Mokameh on the East Indian Railway, was run over. An overbridge has now been provided at this station. In another case 3 prisoners, though in charge of police, jumped out of the train. Two of these escaped and 1 was injured. Two constables who had jumped out after the prisoners were also seriously hurt. The orders recently issued for the conveyance of prisoners in well-secured carriages will, it is hoped, prevent casualties of this sort.

The numbers of passengers killed and injured per million of passengers carried were:—

	Causes beyond their own control.	From their own misconduct or incaution.
1865	3·64	1·37
1866	0·84	0·61
1867	3·1	1·22
1868	3·58	1·9
1869	6·66	1·81
1870	2·53	1·65
1871	0·47	1·53
1872	1·9	1·4
1873	2·54	1·74
1874	1·79	1·59

The passenger mileage, as observed on previous occasions, is a better measure of this class of accidents, but it will be seen, from table II, that the passenger mileage has not been reported in all cases.

The figures, as compared with those of the previous year, are not unsatisfactory.

ACCIDENTS TO RAILWAY SERVANTS.

The following figures exhibit the numbers of accidents to railway servants throughout India :—

From causes beyond their own control—

	Killed.	Injured.
(1)—Employed on trains in motion ...	10	29
(2)— Ditto in stations or on line ...	3	12
	13	41

From incaution or misconduct—

	Killed.	Injured.
(1)—Employed on trains in motion ...	25	55
(2)— Ditto in stations or on line ...	68	85
	93	140
TOTAL ...	106	181

The distribution of the casualties to servants from causes beyond their own control is—

	Killed.	Injured.
East Indian Railway	1	13
Oudh and Rohilkhund Railway	1	8
Madras Railway	3	6
Great Indian Peninsula Railway	7	12
Bombay, Baroda and Central India Railway ...	1	2

Of the numbers 93 killed and 140 injured from incaution or misconduct, 20 were killed and 38 injured from imprudent acts when engines or carriages were in motion, and 35 were killed and 32 injured while incautiously standing or walking upon the line; 10 persons were killed and 18 injured while in the act of coupling or uncoupling carriages and wagons, and 13 were killed and 17 injured while engaged in shunting operations.

The following table exhibits the casualties to Railway servants, train mileages, &c., for 10 consecutive years :—

	Killed and Injured.			Train mileage.	Reported number of servants employed.
	From causes beyond control.	From misconduct or incaution.	Total.		
1865 ...	57	136	193	9,400,823	49,398
1866 ...	48	152	200	11,073,968	54,084
1867 ...	33	213	246	11,766,389	69,796
1868 ...	60	239	299	11,431,656	68,398
1869 ...	42	213	255	13,703,381	104,558
1870 ...	33	214	247	15,502,339	76,013
1871 ...	24	222	246	13,814,840	74,650
1872 ...	47	214	261	14,525,990	80,258
1873 ...	30	206	236	15,145,205	82,201
1874 ...	54	233	287	17,982,403	77,595*

Taken in connection with the train mileage, the casualties during 1874 do not compare at a disadvantage with those of the previous year.

The numbers of servants hitherto shown as employed on the several railways were not reckoned on an uniform basis. In order to secure uniformity, instructions were issued on 2nd March 1874 and 12th June 1874 as to what classes of servants should be exhibited in the returns of accidents, and the reduction in the number of servants employed compared with previous years, is believed to be due to the classification of servants according to the orders contained in these circulars.

* The number of servants employed on the East Indian Railway is shown in Table IIA as 35,674, but in a statement subsequently received this number is stated to be 21,217. This alteration reduces the total number of servants from 77,595 to 63,138.

The miscellaneous casualties were as follows :—

	Killed.	Injured.
At level crossings	11	2
Trespassers including suicide	77	16
Miscellaneous	14	9
Total 1874	102	27
„ 1873	79	27
„ 1872	94	13

DEATHS IN TRAIN AND STATIONS.

A detailed list of deaths of passengers and intending passengers in carriages and stations from causes unconnected with the working of railways, is, as usual, appended at the end of the returns. The total number of casualties of this sort was 133 against 185 in 1873 and 149 in 1872. Of these 79 occurred on the East Indian, 6 on the Eastern Bengal, 8 on the Oudh and Rohilkhund, 8 on the Punjab section of the Scinde, Punjab and Delhi, 2 on the Rajpootana, 5 on the Madras, 1 on the South Indian, 23 on the Great Indian Peninsula, and 1 on the Bombay, Baroda and Central India Railway. Most of these casualties are apparently due to passengers' undertaking journeys when in bad health.

ORDER.—Ordered, that these proceedings be communicated to the Governments and officers noted in the margin for information and guidance, together with copies of the returns compiled.

Madras.
Bombay.
Consulting Engineers, Calcutta, Lahore and Lucknow.
Director of State Railways.

Home Department.
Government of Bengal.
Ditto of North-Western Provinces.
Ditto of Punjab.
Chief Commissioner of Oudh.
Ditto ditto, Central Provinces.
Resident, Hyderabad.
Chief Commissioner, British Burmah.
Ditto ditto, Mysore.
Agent, Governor General, Central India.
Ditto ditto, Rajpootana.

Ordered also, that these papers be forwarded to the Departments, Governments, Administrations and Officers marginally noted for information, and that copies be forwarded to the Secretary of State for Her Majesty's Government.

Ordered further, that the papers be published in the Supplement to the *Gazette of India*, Table I excepted.

C. H. DICKENS, *Colonel, R. A.*,
Secretary.

TABLE No. I A.

Abstract of the Number and Nature of the Accidents, and of the Injuries to Life and Limb, which have occurred on all Railways open for Traffic *in India during the year* 1874.

	Mean mileage open.	Railways.		Classification of Accidents to Trains, &c. — Main Heads: I. Collision.	II. Getting off proper line.	III. Fire.	IV. Running over cattle.	V. Other causes.	Total.	Passengers — From causes beyond their own control: Killed.	Injured.	Passengers — From their own misconduct or want of caution: Killed.	Injured.	Servants of Companies or of Contractors — From causes beyond their own control: Killed.	Injured.	Servants of Companies or of Contractors — From their own misconduct or want of caution: Killed.	Injured.	Others — Whilst crossing at level crossings: Killed.	Injured.	Others — Whilst trespassing (including suicide): Killed.	Injured.	Others — Miscellaneous: Killed.	Injured.	Total Persons of all Classes: Killed.	Injured.	Killed and Injured.

* Information not received for all Railways.
† Includes the Wardha Valley State Railway, the Nizam's State Railway and the Berar Branch Railways, which are worked by the Great Indian Peninsular Railway. The Dubhoe Branch is also worked by the Bombay, Baroda and Central India.

GOVERNMENT OF INDIA.

FINANCIAL DEPARTMENT.

EXPENDITURE INCURRED IN THE RELIEF OF THE DISTRESS IN THE NORTH-WESTERN PROVINCES RESULTING FROM THE DROUGHT OF 1873.

No. 430A., dated Naini Tal, the 1st May 1875.

From—A. COLVIN, Esq., Offg. Secretary to Government, North-Western Provinces,
To—The Secretary to the Government of India, FINANCIAL DEPT.

With reference to your letter No. 1910, dated 31st March 1875, and previous correspondence, I am now directed to forward, for the information of His Excellency the Viceroy and Governor General in Council, a Resolution in the Department of Public Works of this Government, Nos. 453—51A, dated 29th March 1875, showing that on the principle laid down in the Resolution of the Government of India in the Department of Public Works, Nos. 717—20, dated 25th November 1874, Rs. 7,72,856 of the expenditure on famine relief works are chargeable to Imperial Funds.

2. If the principle that the expenditure on account of charitable relief should also be debited to Imperial Funds be approved, as proposed in my letter No. 10A, dated 10th February 1875, Rs. 53,171 must be added in this account. The details of this amount have not yet been received from the Accountant General, but will be submitted with as little delay as possible.

3. I am also to invite attention to my letter to the Department of Revenue, Agriculture and Commerce (copy appended), No. 22A, dated 15th March 1875, and to state that if the proposals therein made be sanctioned, a further sum of about Rs. 14,200 will be spent, thus making the famine expenditure in these Provinces chargeable to Imperial Revenues amount in all to Rs. 8,40,227, or in round numbers Rs. 8,41,000.

No. 1455, dated Allahabad, the 16th March 1875.

From—HARRY MARTEN, Esq., Controller, Public Works Accounts,
To—The Secretary to Government, North-Western Provinces.

I have the honor to forward herewith, for the information of Government, a statement of expenditure incurred in 1873-74 and 1874-75 on works carried out for relief purposes, and its adjustment against the Public Works Provincial and Famine Relief, under the orders contained in the Resolution of the Government of India, No. 717—20A-G., dated 25th November 1874.

2. I beg also to forward a note explanatory of the work done, and the data on which the adjustment has been arrived at.

3. The following table shows in abstract for each district wherein relief works were necessary what the total expenditure was, and the value of the work done to the Public Works Department :—

DISTRICTS.	CHARGEABLE TO		Total Outlay.	PERCENTAGE.	
	Famine Relief.	Public Works.		Famine Relief.	Public Works.
	Rs.	Rs.	Rs.		
Banda	10,382	9,283	19,665	33	47
Jhansi	7,298	16,497	23,795	31	69
Jalaun	2,095	1,930	4,025	52	48
Mirzapur	11,649	6,525	18,174	64	36
Azamgarh	...	168	168	...	100
Gorakpur	8,730	4,448	13,178	66	34
Basti	3,02,912	41,145	3,44,057	88	12
Hamirpur	4,23,674	33,625	4,57,299	...	...
	6,116	2,863	8,979	68	32
TOTAL ...	7,72,856	1,16,484	8,89,340	87	13

4. The whole of the Rs. 8,89,340 has been kept in the accounts as Famine Relief Works. The portion now found to be chargeable to Public Works, *viz.*, Rs. 1,16,484, will now be written back to its proper head.

No. 1130, dated Simla, the 31st May 1875.

From—R. B. CHAPMAN, Esq., Secy. to the Govt. of India, FINANCIAL DEPT.,
To—The Secretary to the Government of the North-Western Provinces.

I am directed to acknowledge the receipt of your letter No. 430A., dated 1st May 1875, from which it appears that the entire expenditure for the relief of the distress in the North-Western Provinces resulting from the drought of 1873, has amounted to about Rs. 8,41,000.

2. The Governor General in Council is pleased to decide that the whole of this expenditure shall be adjusted as a charge against the Imperial Revenues, and I am directed to express the satisfaction of His Excellency in Council at the care that has been taken by Sir W. Muir and Sir John Strachey to exercise a strict supervision over the expenditure required to anticipate and alleviate the effects of the drought in some portions of the North-Western Provinces.

																						(b.) The figures shown in the last return represented leases granted in December 1873. It was by a mistake that these were assumed to be included in the statement from December 1874 to March 1875.

* The weather, cloudy with seasonable showers, has been favorable for the rubbee crops. The Kendrapara Canal was closed for repairs on the 28th of April. There was very little demand for water towards the close of the month owing to the rain-fall.

† The figures entered in the returns since December last included by mistake acres 510, at Rs 1-8 per acre, which pertained to the year 1873-74; commencing from the 1st December 1873, and which have been omitted from the present return.

G. A. SEARLE, *Lieut.-Colonel, S. C.,*
Offg. Asst. Secretary to the Government of Bengal,
Public Works Department, Irrigation Branch.

FORT WILLIAM,
The 20th May 1875.

A. O. HUME,
Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Return showing the Quantities of Cotton exported from the several Ports of India to British and Foreign Countries during the month of May 1875.

| Names of Ports in India where Cotton is exported. | | Quantities of Cotton exported to | | |

pouring this into a boiler containing 200 gallons of water, they boiled it all up, on which the natural impurities of the water rose in a scum to the surface. This they skimmed off carefully, and then put in 14 lbs of hard white curd soap; as soon as this was thoroughly dissolved, they put in 100 lbs of the silk, enclosed by small quantities in bags made of cotton net, to prevent the silk becoming entangled. This water was kept boiling for several hours until the gum was thought to be thoroughly cleared out of the silk, which was then dressed, but some of it, being found to be still foul, was boiled up a second time in the same amount of water, but with only 6 lbs. of soap. This process would, they said, dissolve the gum of every kind of silk; but some kinds of cocoons might require to be boiled longer than others. Messrs. Mason kindly gave me specimens of the above-mentioned wild silk, of which I attach samples to this report.

(*b*) *Reeled raw silk.*—My information concerning this article was principally obtained from the leading member of the Silk Supply Committee of the Society of Arts, Mr. Henry Tucker, of 30, Gresham Street, London, and from the managers of his silk mill at Macclesfield, where I went to see the manufactured articles, and to make enquiries. They kindly showed me several specimens of what they had turned out, and informed me that within the last three years they had received over 150 bales of tussur raw silk, principally from China, at the rate of 6*s.* and 7*s.* per lb.; and also a few bales from India at 9*s.* per lb. (Mr. Tucker informs me that this has now fallen to 5*s.*) This they had manufactured into dress and fancy goods; the dress pieces were about 60 yards long by 2 feet broad, and were sold by them at the wholesale price of 2*s.* to 4*s.* per yard. In some instances they had made them of pure tussur, in others of tussur and silk, and in some again of tussur and cotton, according to the orders which they had received from the retail dealers. At first these fabrics were fashionable and sold well, but latterly great quantities of tussur goods manufactured in China and India had come into the English market, and although these could not be compared in point of brilliancy and finish with what had been manufactured in England, yet they were much cheaper, and at a distance looked much the same, so these, and many other cheap materials of the same peculiar colour as tussur, had helped to lessen their trade, brilliant and beautifully-made though their fabrics were. They too had tried to dye the tussur silk, but had found that the only colours which it would take well were dark green and dark brown; the other colours were all dull and not striking. They could, however, by careful cleaning and a certain amount of bleaching, take a good deal of the original colour out of it, and they preferred to make the dress pieces of the undyed silk, and only to use up dyed silk for small fancy articles as scarves and hair nets. The unmixed tussur fabrics wore and washed much better than those made of the mixed fibres. Mr. Tucker kindly gave me specimens of the tussur silk which he had received and of the fabrics which he had made at his mill; and of these I attach samples to this report.

(*c*) *Fabrics.*—Of these I am sorry to say that I can give no positive information. There is no doubt that many pieces of tussur have been imported from China and from India, and that they are exhibited in the shop windows at prices varying between 1*s.* 6*d.* and 4*s.* the yard, but whether these are made entirely of tussur silk, or of other wild silks, or are mixed fabrics, it is impossible to say. I asked one large firm, who professed to have received a large quantity of genuine tussurs, to put me in the way of obtaining accurate data, and they simply said that "they could not." From independent sources I hear that tussur is not nearly so fashionable now as it was three years back, and that many cheaper articles similar in appearance are used instead.

5. *The opinions favourable and otherwise of the manufacturers about the article*—are that tussur is very strong and durable; great brilliancy can be imparted to it when scientifically manipulated; but, being harsh and fuzzy, it has not the beautiful softness and smoothness of good silk; and in its present state can never show the soft glossiness nor the stiff smoothness so much admired in true silk. Its capriciousness in taking dye; the irregularity and looseness of the reeled fibre; the uneven winding of the skeins; the variety in colour and manner of reeling of the numerous skeins in each bale; and the very bad smell of the bales when opened, are all against it. The tussur trade in England is yet in its infancy, but culture and careful manipulation may do much to remedy the above defects. I am inclined to think that the chief cause of the discolouration of the tussur fibre, and its harshness, is due to what I in my pamphlet, alluded to in paragraph 2 of this report, designate the "*cement*," the account of which I reproduce in order to make my argument clear. All caterpillars, when spinning their cocoons, emit a kind of gum which causes the filaments of the silk to adhere together; but the tussur worm, in addition to this gum, emits a kind of cement which, permeating the whole cocoon, renders it hard and impervious to wet and heat. I think that this cement, chemically acted upon by the atmosphere, stains and renders harsh that which was in its original state pure albumen. This is very evident in a thoroughly dissolved cocoon, where the inside silk will be seen to be nearly white, and the outside of all is dark red, while the intermediate portion varies between these extremes in proportion to its propinquity to either. If therefore the cement be got out of the cocoon as soon as it appears, which might easily be done if the culture of this silkworm were carefully attended to, the silk will be purer and the reeling will be easier to do. It may be that the harshness of the fibre is owing to the leaves of the trees on which the caterpillar feeds: this can only be ascertained through experiments, and here we have an ample field to work in, inasmuch as I have collected evidence of its being found on six kinds of trees in the South Mahratta Country; and in *Silk in India* ten other trees are mentioned as supplying it with food. Again, it may be owing to the size and thickness of the fibre itself. I have carefully examined it through powerful microscopes, and in comparison with that of *Bombyx Mori*, than which it is 2½ times larger, *B. Mori* measuring $\frac{1}{1750}$ inch and *A. Paphia* $\frac{1}{700}$ inch. I find that this latter appears flatter, more twisted, and has more minute particles (the cement I presume) scattered over the surface. The tussur silkworm, being so much larger, has (I fancy) a different-shaped spinnaret to the ordinary silkworm, and this would be the reason of its silk being flatter. I account for its being twisted by the fact that the caterpillar spins the cocoon in layers of zigzag lines, as explained by me in my pamphlet. If after careful manipulation it be found that these twists are a cause of its being less lustrous, I have no doubt that a little extra rotatory motion imparted to the cocoons at reeling would smooth them out; this again would be another experiment to be tried.

6. *The results of my experiments, and the opinions of the manufacturers thereon.*—I first of all tried to find out whether (*a*) there was a market in England for the cocoons themselves as gathered from the trees. Colonel W. C. Parr, Political Agent at Kutch, who was at that time at home, kindly went to the mill of Messrs. Lister & Co., at Bradford, and made enquiries for me which resulted in the head of that firm (in answer to a letter from me enclosing a sample) advising me to collect as many of the tussur cocoons as I could on my return to India, and to allow the moths to come out, putting by the cocoons until I had collected a ton, when he would be happy to take them from me, giving a fair market value for them, which he would think would be about 2*s.* to 2*s.* 6*d.* per pound; but he would require the large quantity he named; it would not be worth his while to take less than a ton. I can form no opinion as to how long it would take to get together this amount; but the fact remains that this firm of manufacturers can use up the cocoons in their natural state, and it might be worth while to apply to them if any person had a large supply to dispose of.

(*b.*) My next enquiries were directed towards finding out whether there was any possibility of converting my cocoons into unreeled raw silk in England, and I was fortunate enough to get an introduction to Messrs. Satterthwaite, "long and short silk-spinners," of Galgate near Lancaster, and they kindly offered to try whether they could not dissolve the cocoons, convert them into "unreeled raw," and spin them into a yarn. Accordingly, I sent them a few hundred cocoons, some containing live, some dead, chrysalids, others damaged in every way, stained, cut, gnawed by rats and squirrels, and by simply boiling these up with soap, in the manner which Messrs. Mason had described to me, they effectually cleansed this unpromising material, and spun the beautiful two-twenty-fold yarn, of which I enclose a sample. The cocoons were, as I have mentioned, in all conditions, and Messrs. Satterthwaite worked at cleansing them during their spare time, and while the work at their mill was slack, consequently they could not give me any data by which to calculate the cost of converting cocoons into "unreeled raw," or into "spun silk;" but they have kindly offered to work up a large amount, and say that if I could send them a hundred pounds or more, they would then be able to put a definite value on the material in its various stages. Here then is a manufacturing agency willing to work with the Indian producer.

(*c.*) When I began to enquire whether it was possible to have my cocoons converted into reeled raw silk, I was assured on all sides that this could not be done satisfactorily in England; that all the best reeling was done in Italy or in France. In this matter, too, I was fortunate enough to get an introduction to Chevalier G. Jervis, Conservator of the Royal Industrial Museum at Turin, who took a warm interest in the matter, informing me that he was the more ready to do so as his father, the late Colonel Thomas Best Jervis, Bombay Engineers, had taken an interest in this same subject upwards of thirty years ago. I accordingly sent some cocoons to Chevalier Jervis, and he succeeded in getting a spinner to try experiments with them, and reported to me that the result is perfectly satisfactory; that the silk can be wound off the cocoons with ease; that the spinners estimate the cost of converting tussur cocoons into unreeled raw silk at £2 per cwt., and into reeled raw silk at a trifle more, but they have no doubt that eventually they could do it much cheaper after they had perfected the process and adapted the machinery to this particular kind of silk. Chevalier Jervis returned me my silk as "unreeled raw" and "reeled raw," and I attach samples of the same to this report. He concluded with offering to become my channel for Italy, through whom I might have my cocoons worked up. Here then is another manufacturing agency willing to convert tussur cocoons into "unreeled raw" and also into "reeled raw" silk.

(*d.*) When I was at Macclesfield, I called upon Messrs. C. & H. Scanlon, skein-silk dyers, and finding that they were willing to help me in carrying out further experiments, I sent them some of the yarn which Messrs. Satterthwaite had spun for me; and this they kindly dyed "dahlia," "scarlet," "black," "sultan," "blue," and "violet," and gave it as their opinion that tussur will not dye colours so fine, rich, and bright as China silk. I send samples of what they have done, and must own that I am much disappointed, for the dyed yarn is much less lustrous than the original silk itself. This, however, quite coincides with what both Mr. Tucker and Messrs. Mason had told me, and plainly shows that we have not yet succeeded in getting tussur silk pure and colourless as it is when it first issues from the silkworm's spinnarets. Up to this time my idea always had been that the harshness and discolouration of the fibre, and its inability to take all dyes, were owing to the caustic solvents used by the natives of India when reeling it off, but we now see the same results with silk which has been treated with pure curd soap as a solvent, so, as I have before said, the first thing to do is to get the silk free from the "cement" as soon as possible.

(*e.*) I called upon Mr. Tucker at his London house and showed him the specimens of the tussur silk which had been reeled at Dharwar, and also the fabrics which had been woven there for me; the silk which had been reeled for me at Turin; and the yarn which had been spun for me at Galgate. He said that he considered the Dharwar specimens as fully equal to anything of the kind which he had received from India or China; that the reeled raw

silk from Turin would be worth from 1*s.* to 2*s.* per lb more; and, having kindly had the yarn woven into a cloth so as to be able to give an opinion on it, he said that "as a plain fabric it is a strong serviceable material, with a certain amount of glossiness about it; that, inasmuch as it washes" well, and does not readily catch fire, it would be invaluable for children's and young people's dresses; but still it does not look like silk, has more the appearance of alpaca, and at a little distance has a very ordinary look, and it is not an article that would meet with a ready sale in England, as it still has the crisp feeling of tussur without the smooth stiffness of silk, and although by using soap alone for a solvent, instead of a caustic, some of the harshness has been got rid of, still the objectionable fuzziness remains. As regards colour, that is, he assures me, a matter of no consequence, for it can easily be made less pronounced than in this sample; but judging from what he sees of it, now that it has been made up as a dress piece, he does not think that this is the use to which purchasers of the yarn would put it; but he has no doubt that the yarn would meet with a ready market, and that its value would be about the same as the best "reeled raw" tussur. In conclusion, he strongly urged me to investigate the matter of the "cement" fully, and to collect it, as it oozes from the freshly-spun cocoons, and then have it analysed; from this we should be able to prove whether, so doing, we could obtain a purer and more valuable fibre. I enclose a sample of the cloth woven from the yarn.

7. *The scheme which I recommend to the notice of Government*—I think that I have clearly shown what is the present position of tussur silk in the English market, and in what manner attempts should be made to better that position. There is no doubt that this silkworm is indigenous to a large portion of the Bombay Presidency, and the question is, whether the culture of it on a large scale would prove remunerative? I believe that large quantities could be easily raised, and in my pamphlet I have attempted to show what natural peculiarities of the insect should be studied. It feeds upon common trees which require no irrigation nor expense in cultivation; the best time for collecting the cocoons from the jungle would be from the beginning of December to the end of April (I only speak about the country in which I myself have seen them); and I should propose to send specimen cocoons to the various collectors and forest officers, whose districts include the jungles of the ghâts between Tanna and Coompta, and ask them to give them to their mamledars and overseers, directing them to show them to the villagers, and informing them that there was a demand for similar cocoons, to find out at what price they could be collected, say 200 or 300 for the rupee. A central depôt should be established at Satara; and the officer in charge should periodically visit the mamledars and the villages where the cocoons might be collected between these months of December and April, pay for the cocoons, and taking them to the depôt, sort them, and select those which were to be kept for breeding purposes, and those which were to be converted into unreeled raw silk, and those which were to be sold in the bulk. I name Satara as the best station for the depôt, as it is about central, and has besides a great quantity of "nandrook" (*Ficus Benjamica*) trees planted about it, the leaves of which are, in my opinion, a very good, if not the best, food for the worms. There is besides a good deal of rough grazing land about, on which, I dare say, some more of these common hardy trees may be planted. From May to the end of November the rearing of the worms would take place, and I recommend that great care should be taken to clear the cocoons of the cement as thoroughly as possible, as soon as it was seen oozing through the silk; and that the cocoons should be finally baked, until the worms were thoroughly desiccated, when they might be stowed away for the winter. The supply obtained might be worked up for the first few years in England and Italy, but after the experiment was thoroughly proved and found to be successful, I expect that the manufacturing processes could be carried on in our own presidency, where so many mills have lately been erected for spinning and weaving purposes. Such are the outlines of the scheme which I submit to the favourable notice of Government. To enter into all the details about collecting, breeding, and rearing the silkworms, preparing the cocoons for the market, &c., would greatly amplify this report. If, however, Government should take the matter into its serious consideration, I would be happy to attempt to particularize each detail. I cannot guarantee that the culture of the tussur silkworm would prove a financial success, still I myself am very sanguine on the subject, and can only point out the measures which I should propose to adopt; and nothing but experiments and careful observation can prove whether these are the best or no. I think that everybody will allow that it is the duty of each servant of Government to point out the methods by which neglected natural products may be utilised, and fresh means of earning their livelihood be placed before the masses.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE PUNJAB FOR THE YEAR 1873-74.

No. 198—213 I, dated Simla, the 3rd July 1875.

READ—

Letter from the Government of the Punjab, Public Works Department, Irrigation Branch, No. 5071 I. dated 22nd December 1874, forwarding a copy of the Revenue Report of Irrigation Works in the Punjab for the year 1873-74, and of the Resolution of that Government reviewing the same.

OBSERVATIONS.—The submission of this report is nearly a month behind time. The delay is attributed to the non-receipt of the statements of accounts from the Controller's Office in time to be used by the Superintending Engineers in the preparation of their reports. The Accountant General, Public Works Department, will be instructed to report on the cause of the delay.

2. The operations of the year having been reviewed in detail by the local Government, only the general results and a few points requiring attention will be noticed here.

3. In the abstract of general financial results annexed to the Chief Engineer's report there are some errors which will be separately remarked on. The correct figures will be found in the two accompanying statements, the first of which shows the results according to the actual cash receipts during the year, and the second according to the assessments for the year. The amounts shown as "indirect" or enhancements of land revenue due to the irrigation will probably be subject to alterations on account of remissions of demands and other causes, which will not, however, materially affect the general financial results. From the above statements it appears that—

	£
On the whole the total capital outlay on Irrigation Works in the Punjab to the end of 1873-74 has amounted to	2,684,279
Of this amount, the sum spent on canals under construction is ...	798,182
Leaving as the capital outlay on works in operation, including the Madhopoor workshops	1,886,097
The net return derived by Government from these works by direct receipts from water-rates and miscellaneous items of income, and after deduction of working expenses during 1873-74, and after providing for an adjusting charge of £29,109 for the Madhopoor Workshops, is	48,555
And the increased land revenue due to the works is reported to amount to	96,856
The result being a net profit of	145,411

or 7·72 per cent. on the capital outlay—a decrease of 1·14 per cent. from the result of the previous year. This is due to an increase in the capital outlay of £108,317 and a decrease in the net receipts of £5,962.

4. The decrease in the receipts is accounted for by a diminution of the area irrigated during the year, the causes of which are shown to be in the case of the permanent canals a fairly abundant rainfall generally, and in one instance also to a temporary decrease of cultivation owing to a revision of the land revenue being in progress; and on the inundation canals to an exceptionally unfavorable condition of the rivers, which rose late and fell early—contingencies to which works of this nature are occasionally liable.

5. On the Western Jumna Canal the decrease in the last two years below the average is very marked, owing mainly, it would appear, to the disturbing influence of the land settlement operations, which however is not likely to continue long. Unsatisfactory as the result is as regards the canal finances, it is not, as remarked by the Chief Engineer, an unmitigated evil, the effect being

most beneficial in many instances to the land which required rest after years of continuous cultivation and over-irrigation.

6. The Baree Doab Canal, though not up to the standard to be expected from it, still shows an area of 3,350 acres in excess of the previous year. The income from water power on this canal, it is satisfactory to observe, is rapidly increasing,—having reached the sum of Rs. 34,204 in the year under review, or more than double the return from this source two years ago.

7. Of the inundation canal series, the Upper Sutlej shows the largest decrease. In addition to the causes affecting all these works equally, the introduction of new water-rates and system of assessing for the first time during the year under review tended to lessen the area irrigated from this series.

8. On the whole, considering the adverse influences at work during the year, the results are fairly satisfactory.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Secretary of State, and to the Financial and Revenue, Agriculture and Commerce Departments for information.

Ordered also, that copies of the Resolution be forwarded to the Government of the Punjab, and the several other* local Governments and Administrations in the Public Works Department, Irrigation Branch, for information, and to the Accountant General, Public Works Department, for the purpose indicated in para. 1.

Proceedings of the Hon'ble the Lieutenant-Governor of the Punjab and its Dependencies, in the Public Works Department,—No. 5032 I., dated 21st December 1874.

Read—

Revenue Report for 1873-74 by Chief Engineer, Irrigation Works, with enclosures.

RESOLUTION.—The expenditure brought to account during the year has added a sum of Rs. 13,23,819 to the capital debit of the works under the control of the Irrigation Department, including such as are yielding income, and those under construction which now yield no revenue, but excluding such portions of the Sirhind Canal as are debitable to Native States. The sum expended on account of these States amounts to Rs. 25,44,921. If to the above interest charges be added, the Controller's account shows that the Capital Account of Government Irrigation Works in the Punjab has been increased by Rs. 21,86,025, and that it amounted at the end of the year to Rs. 3,85,90,349, or a little short of four millions sterling. Including interest, the portion of the increase debitable to the Government works yielding income amounted to Rs. 13,36,083.

2. Canal water was in less demand than usual; and the area of irrigation in the districts watered by the Western Jamna Canal was intentionally diminished in the erroneous hope of evading the operation of the revised assessment of land revenue. The result has been that 164,315 acres less were irrigated in 1873-74 than in 1872-73. The principal falling off has been in the irrigation under Inundation Canals; but that is due to the fact that during 1872-73 this was exceptionally high. In 1873-74 it returned nearly to its normal amount; whereas the irrigation under permanent canals, which in 1872-73 had fallen very much below its average, fell again to the extent of 36,723 acres in 1873-74.

3. The net revenue credited to the canals during the year, including the owner's rate, amounted to Rs. 15,75,404, which is about 8·45 per cent. on the capital expended to the end of 1872-73. When interest is added, however, the capital debit is increased from Rs. 1,77,56,580 to Rs. 3,05,05,460 for canals yielding income. Of this latter amount the net revenue is only about 5·35 per cent. It is to be noted, however, that as yet the "owner's rate" has not been fully credited to the canals. In canals which may hereafter be constructed the realization of "owner's rate" for irrigated lands will prevent much of the excessive accumulation of interest, by which the Capital Account of the irrigation works in this province has been so greatly enlarged.

4. The rainfall and areas irrigated during the past eight years were as follow:—

SERIES OF CANALS.	1866-67.	1867-68.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.

Indus Inundation Canals ...	8·2 „ 3·2	15·92 „ 8·76	9·0 „ 0·63	10·85 „ 0·96	6·5 „ 1·4	3·0 „ 1·3	14·20 „ 2·50	8·1 „ 0·7
AREA IRRIGATED.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Permanent Canals...	675,592	593,492	786,713	730,470	741,917	731,455	580,616	543,993
Inundation „ ...	324,945	431,674	376,270	530,940	464,299	431,749	573,522	445,930
TOTAL ...	1,000,537	1,025,166	1,162,983	1,261,410	1,206,216	1,163,204	1,154,138	989,923

5. The most remarkable feature in this statement is the simultaneous diminution in the rainfall and in the areas watered by Inundation Canals in the southern portions of the province. This is due to the fact that this kind of irrigation being imperfect and uncertain, the lands watered by it are partly dependent upon rainfall, by which, when plentiful, its deficiencies are supplied. The case is different under permanent canals wherever rainfall is also not very small. There a plentiful rain is a rival of the canals, though not a completely successful one in any portion of the plains of the Punjab.

6. Owing to the diminution in the area irrigated, the working expenses are not so low as they would have been if the area had not fallen below its average.

7. As usual, the Western Jamna Canal brings in a handsome return in 32·17 per cent., credit being taken for the "owner's rate." The Lower Satlaj and Chináb Inundation Canals bring in a net revenue of no less than 162·34 per cent. on the capital expended, excluding accumulated interest. On the total capital, including interest accumulated, the net returns are for the Western Jamna Canal 15·5 per cent., and for the Lower Satlaj and Chináb Inundation Canals 105 per cent.

WESTERN JAMNA CANAL.

8. The area of irrigation on this canal is less than that of the previous year by 40,074 acres, mainly due to the reduction in the cotton crop and partly in wheat crop. The former reduction is chiefly to be attributed to the state of the market, the latter to the rainfall during

the rabbi season being sufficient, without much aid from irrigation, to mature the crops. The areas of the principal crops irrigated during the last six years were as follow :—

Principal crops.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Sugarcane	38,435	45,126	39,877	31,325	40,566	42,068
Rice	33,491	46,705	45,863	32,974	43,144	43,818
Cotton	74,875	80,093	98,446	100,951	96,131	54,806
Wheat	209,980	177,300	182,072	181,573	93,600	86,355
TOTAL ...	356,781	349,224	366,258	346,823	273,441	227,047

9. The area under wheat has, it will be seen, fallen from 209,980 acres in 1868-69 to 86,355 acres in 1873-74, the greatest reduction having been from 181,573 in 1871-72 to 93,600 in 1872-73. It appears, however, from the last year's Revenue Report that there was an equally sudden rise from 100,937 acres in 1867-68 to 209,980 in 1868-69, due, no doubt, to an increased demand during the scarcity in the neighbouring districts during the latter year. There has been a marked increase in the area under indigo, which amounted to 12,165 acres.

10. The duty obtained from the water this year was small, owing to an abundant supply and a limited demand for water.

11. The outstanding balance of collections was reduced from Rs. 3,30,394 to Rs. 1,81,555, which is satisfactory.

12. There has been a reduction in the working expenses, as compared with the previous year, from Rs. 4,01,178 to Rs. 3,72,982.

DELHI AND GURGAON WORKS.

18. With the "owner's rate" these works, which have hitherto appeared to be maintained at a loss, now shew a gain. The area irrigated has increased from 11,087 acres in 1872-73 to 16,533 in 1873-74. This is chiefly due to a more plentiful supply of rain, upon which these works, situated in a very dry district, depend.

UPPER BARI DOAB.

14. The net revenue from this canal, direct and indirect, amounts to 3·77 per cent. of the capital expended, excluding accumulated interest, and about 2·29 per cent. on the capital, including accumulated interest. The capital on which the former percentage is calculated is greater by Rs. 2,58,280 than that on which the percentage for 1872-73 was calculated, owing to expenditure on the Sobráon and Kasúr Branches which did not yield income.

15. The areas irrigated during the past five years were as follow :—

	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
	Acres.	Acres.	Acres.	Acres.	Acres.
Kharíf	115,524	88,643	76,412	96,718	100,913
Rabbi	118,403	190,567	210,658	132,078	131,233
Total ...	233,927	279,210	287,070	228,796	232,146

16. Owing partly to the abundant and seasonable rain, and probably also to the state of the market, there has been but a small increase in the area irrigated. This, it will be seen by the next table, has taken place in sugarcane, rice and cotton; the area under wheat having slightly diminished. The latter, as under the Western Jamna Canal, fluctuates considerably from year to year.

Principal crops.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Sugarcane	9,811	11,623	6,904	6,287	9,170	10,305
Rice	41,256	76,709	24,535	11,598	29,100	32,882
Cotton	8,205	11,671	10,640	20,387	24,879	27,868
Wheat	175,619	87,399	156,375	167,214	99,417	94,731
Total ...	234,891	187,402	198,544	205,486	162,566	165,786

17. The area irrigated per cubic foot per second utilized appears less than it was last year. Colonel Brownlow has pointed out, moreover, that the figures which have hitherto been given by the Executive Engineer as representing this area need correction. His attention is being directed to this matter, which is important from a statistical point of view.

18. The mill rents, an increase in which was noticed in last year's Revenue Report, have again increased. In the last two years this item of revenue has more than doubled. It is satisfactory to note that there is reason to expect that it will continue to increase.

19. The balance of unrealized revenue has this year been reduced by Rs. 6,930.

INUNDATION CANALS.

UPPER SATLAJ SERIES.

20. During 1873-74 new rates of assessment were introduced, and the measurements for assessment were for the first time conducted by the Patwáris or Village Accountants. The supply of water was also unusually low. The result of these several causes has been a diminution in the area irrigated, and a small decrease in the income. With an average area of irrigation, and with the new rates, the income will exceed the outlay, and the financial results of these canals will appear in a more favorable light than they have done hitherto.

LOWER SATLAJ AND CHINAB SERIES.

21. Including "owner's rate" the net revenue for the year 1873-74 has amounted to Rs. 1,70,778, or 162·34 per cent. on capital, excluding interest accumulated. Of the capital, including accumulated interest, the net revenue amounts to 105 per cent.

22. The areas in acres irrigated during the last six years were as follow :—

	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharíf	142,849	157,504	133,365	127,472	149,143	108,528
Rabbi	56,614	85,590	68,671	60,993	93,361	88,536
Total ...	199,463	243,094	202,036	188,465	242,504	197,064

23. The increase of the previous year has, it will be seen, been nearly lost again in 1873-74. There was a decrease in all crops, except wheat, owing to a short supply during the kharíf season.

24. The cost of maintenance during the last three years has been—

	Rs.
For 1871-72	0·76
„ 1872-73	0·67
„ 1873-74	0·83

The increase in the last year is due to the area irrigated having been less than it was in the previous year.

INDUS SERIES.

25. Including the share of the land revenue due to the canals, the net income amounts to Rs. 62,175, or nearly 14·2 per cent. on the capital, excluding accumulated interest, or 9·65 per cent. on the capital, including accumulated interest.

26. The areas in acres irrigated during the last five years were as follow :—

	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
	Acres.	Acres.	Acres.	Acres.	Acres.
Kharíf	103,207	125,186	104,872	132,818	115,590
Rabbi	25,970	49,156	39,462	47,319	47,430
Total ...	129,177	174,342	144,334	180,137	163,020

27. There has been a decrease in the year of 17,117 acres, of which 15,751 are on the lands producing millets; the differences in wheat, cotton, indigo and rice, are trifling. Since 1870 the area under indigo has nearly doubled, while that under rice has been reduced by 36 per cent. The variations in the other crops mentioned above have been small as between the two years 1870 and 1873.

SHAHPUR CANALS.

28. The area irrigated by these two canals was 4,079 acres, or 366 acres less than in 1872-73. The net income amounted to Rs. 1,148, or 5·41 per cent. of the capital debited against the canals.

By order of the Hon'ble the Lieutenant Governor,

P. O'CONNELL, COLONEL, R. E.,
Offg. Joint-Secy. to Govt. Punjab, P. W. D., Irrigation Branch.

CHIEF ENGINEER'S REVIEW OF REVENUE REPORTS FOR 1873-74.

WESTERN JAMNA CANAL CIRCLE.

WESTERN JAMNA CANAL.

1. The debit to Capital, exclusive of interest, was increased by Rs. 2,25,228. Of this, the expenditure on works was as follows :—

	Rs
Jamna dam and head works	75,317
New distributaries	10,944
Surveys	724
New pipe tiles	5,808
Land for Superintending Engineer's office	9
Jagadhri chauki and Pandoe nallah	3,265
TOTAL ...	96,067

The remainder consists of charges for establishment and tools and plant, and balances of suspense accounts.

2. REVENUE ACCOUNT CURRENT.

EXPENDITURE.	Rs.	RECEIPTS.	Rs.
Extensions and improvements ...	694	Water-rate on irrigation ...	8,10,302
Maintenance and repairs	1,11,465	Miscellaneous	41,594
Plantations	8,003		
Compensation	1,313		
Establishment—Executive	1,92,419		
Direction	55,937		
Tools and Plant	3,151		
Total ...	3,72,982		
Balance, profit @ 15·36 per cent. on Capital, Rs. 31,16,931	4,78,914		
GRAND TOTAL ...	8,51,896	GRAND TOTAL ...	8,51,896
		Land Revenue irrigated ...	3,72,563

3. The profit for the year therefore amounts to Rs. 4,78,914, or 15·36 per cent. on the capital debit at beginning of the year without taking the enhanced land revenue into consideration; adding this the income becomes Rs. 8,51,477, or 27·32 per cent. on the capital.

4. The results for the past three years are as follow :—

			1871-72.	1872-73.	1873-74.
			Rs.	Rs.	Rs.
INCOME	Water-rates on irrigation ...		10,83,758	9,03,116	8,10,302
	Miscellaneous ...		*47,552	*47,782	41,594
	TOTAL	...	11,31,310	9,50,898	8,51,896
EXPENDITURE	Works, &c. ...	...	98,749	1,43,762	1,24,628
	Establishment—Executive	...	*2,28,211	2,06,540	1,92,419
	Direction	...	*49,494	51,876	55,935
	TOTAL	...	3,76,454	4,01,178	3,72,982
PERCENTAGE ON CAPITAL FROM NET	Direct income ...	...	27·04	18·44	15·36
	Direct plus indirect	...	53·07	30·95	27·32

* Corrected as per Financial Results.

5. The unsatisfactory decrease is due to the diminished area irrigated: the expenditure being Rs. 28,196 less than during the previous year.

6. The areas in acres irrigated during the year 1873-74 and the four preceding years were as follow :—

	Kharif.	Rabbi.	Total.
1869-70	234,464	262,078	496,542
1870-71	218,585	244,172	462,707
1871-72	187,647	256,738	444,385
1872-73	202,371	149,450	351,821
1873-74	171,630	140,117	311,747

7. The Superintending Engineer, in the 34th paragraph of his report, attributes the decrease of irrigation to an increased and unseasonable rain-fall, and to the fact that the settlement operations were in progress in the Karnál, Delhi and Rohtak Districts. The kharíf crop has suffered from the Zamíndárs not sowing cotton, owing to the price not giving them a sufficient return.

8. An examination of the statement of rain-fall during the year 1873-74 will show that, except in the Rohtak and Hissár Districts, the fall was considerably greater than that in the previous year, which in turn was above the average, especially in the districts where there is most irrigation. The season may therefore be fairly considered singularly unfavorable.

9. A very great part of the decrease may also be attributed to the disturbing influence caused by the revision of settlements. As noted by the Superintending Engineer, large numbers of villages resigned the canal water, and threw their land out of cultivation, in order that they might be lightly assessed. This was duly reported, and the settlement and canal officers were authorized to explain to the leading men that they would gain nothing by the course they had adopted, because it was intended to assess all the land as unirrigated (baráni), and to impose an owner's rate in lieu of the enhancement of land revenue due to the presence of the canal water. This has already to some extent had the desired effect, half of the villages having applied to be re-admitted to the privilege of using canal water.

10. The decrease of irrigation on this account is by no means an unmitigated evil, though the canal has thereby lost revenue. The land in most instances urgently required a rest to recover from the exhaustion consequent on over-cropping, and the evils resulting from over-irrigation have been somewhat checked.

11. The following figures are abstracted from Form No. VII which accompanies Colonel Fulton's report, and from previous Revenue Reports, and show the areas irrigated of the four principal crops for the last six years:—

Principal crops.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Sugarcane	38,435	45,126	39,877	31,325	40,566	42,068
Rice	33,491	46,705	45,863	32,974	43,144	43,818
Cotton	74,875	80,093	98,446	100,951	96,131	54,806
Wheat	209,980	177,300	182,072	181,573	93,600	86,355
Total ...	356,781	349,224	366,258	346,823	273,441	227,047
Other crops ...	130,097	147,318	96,449	97,562	78,380	84,700
GRAND TOTAL ...	486,878	496,542	462,707	444,385	351,821	311,747

12. From this it is manifest that the most striking decrease during the year is in cotton. On reference to the "Report on cotton cultivation in the Punjab," it is ascertained that the unseasonable rains in the Karnál and Hissár Districts prevented the cultivators from sowing as much as usual. It is further reported that the market was dull, and the prices not so good as during the previous year. That in the Barwálla and Bhiwáni Tahsíls with 70 acres sown, the produce was *nil*; the best outturn being in the Hánsi Pargannah, the result being attributed to the presence of canal water.

13. The increase in the cultivation of indigo is remarkable: 12,165 acres being irrigated in the year under review, as compared with 6,489 acres in 1872-73, and 3,937 acres in 1871-72.

14. The area irrigated by—

		Acres.	*Per cent.*
Overflow was	...	272,424	87·39
Lift	...	39,323	12·61
Total	...	311,747	100·00

15. For the last three years the percentages were—

	1871-72.	1872-73.	1873-74.
Overflow	90·73	88·08	87·39
Lift	9·27	11·92	12·61

16. The area of double-cropped land was 30,935 acres, leaving 280,812 as the aggregate area to which water was supplied during the year. The percentages for the past three years were—

	1871-72.	1872-73.	1873-74.
Of aggregate area measured in both seasons	13·50	11·17	9·92
Of land to which water was supplied during the year ...	15·61	12·57	11·02

17. The duty obtained from the water is calculated as in previous years—

	Kharíf.	Rabbi.
	Acres.	Acres.
Total area irrigated	171,630	140,117
Deduct above Dádupur	3,312	3,961
Irrigation below Regulating Head	168,318	136,156
	Cubic feet per second.	Cubic feet per second.
Average supply entering at Dádupúr	2,035	2,287
Deduct loss at Escapes	288	525
Supply utilized	1,747	1,762

18. The area in acres irrigated per cubic foot per second of average supply for the past three years was as follows :—

		1871-72.	1872-73.	1873-74.
KHARIF	On total discharge at head	94	89	82
	On supply utilized	102	105	96
RABBI	On total discharge at head	109	71	60
	On supply utilized	114	85	77

19. The duty per cubic foot obtained this year is small. The reasons for this are explained by Superintending Engineer in his 52nd para. to be, that water was everywhere plentiful and therefore not economically used, and that, in order to have the level of the canal water sufficiently high to irrigate the upper parts, a considerably larger supply had to be kept up than was necessary. In certain cases when, owing to rainfall, the cultivators closed their water-courses, the canal banks had to be cut to prevent their bursting in places where the damage to cultivation would have been serious.

20. The average water-rate per acre for the three past years was as follows :—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Kharíf	2·46	2·92	3·07
Rabbi	2·17	2·09	2·03

21. The water-rate per cubic foot of supply utilized was—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Kharíf	316	311	301
Rabbi	279	183	161

22. The maintenance charges for the year were—

Whole canal ... ... $\frac{\text{Rs. } 37\,2\,9\,8\,2}{\text{Acres } 3\,1\,1\,7\,4\,7}$ = Rs. 1·20.

Repairs, distributaries ... $\frac{\text{Rs. } 1\,8\,4\,6\,1}{\text{Acres } 3\,1\,1\,7\,4\,7}$ = Rs. 0·06.

For the last three years the rates were—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Maintenance, whole canal	0·85	1·14	1·20
Repairs, distributaries	0·07	0·09	0·06

These figures do not call for special remarks. As the Superintending Engineer remarks, the establishment charges do not vary much, whether the year is a good or bad one for irrigation, so that the rate of maintenance per acre increases as the area irrigated decreases.

23. The state of the collections at the close of the year was as follows :—

	Balance from previous year.	Rabbi, 1872-73.	Kharíf, 1873-74.	Total.
	Rs.	Rs.	Rs.	Rs.
Demands	3,27,356	2,99,670	5,16,220	11,43,246
Realizations	3,27,371	2,99,655	3,34,665	9,61,691
Balance unrealized	—15	+ 15	1,81,555	1,81,555

The balance unrealized is therefore Rs. 1,81,555, while last year the outstandings were Rs. 3,30,394. This is so far satisfactory as showing an improvement on the previous year. A reference, however, to the table in paragraph 63 of Superintending Engineer's report shows a reprehensible delay in forwarding the demand statements for the kharíf to the Deputy Commissioners in the Karnál and Hánsi Divisions. The dates fixed by the rules are, 15th December for the kharíf statements, and 15th June for the rabbi. The measuring work was especially dilatory in the Hánsi Division. The Superintending Engineer's attention was directed to this at the time, and steps were taken which will, it is believed, result in an improved rate of work next year.

24. Field maps are being prepared by the officers employed on the revision of settlement; when these are ready, a further improvement in the punctuality of despatching the demand statements will be effected.

DELHI AND GURGAON IRRIGATION WORKS.

25. The Capital Account amounts to Rs. 1,83,410, having been increased during the year by Rs. 25 on account of capitalization of the rent of land taken up for work.

26. REVENUE ACCOUNT CURRENT.

EXPENDITURE.	Rs.	RECEIPTS.	Rs.
Maintenance and repairs	4,311	Water-rate on irrigation	6,586
Plantations	411	Miscellaneous	1,021
Compensation	5		
Establishment—Executive	7,973	Total ...	7,607
Direction	1,253	Balance, loss @ 3·56 per cent. on capital of Rs. 1,83,385	6,522
Tools and plant	176		
GRAND TOTAL ...	14,129	GRAND TOTAL ...	14,129
		Land revenue irrigated	24,528

27. The results from direct income, and direct plus indirect income, for the past three years, were as follow :—

		1871-72.	1872-73.	1873-74.
		Rs.	Rs.	Rs.
INCOME	Water-rate on irrigation	3,173	4,455	6,586
	Miscellaneous	*2,011	*1,203	1,021
		5,184	5,658	7,607
EXPENDITURE ...	Works, &c.	4,120	3,104	4,903
	Establishment—Executive	6,795	7,220	7,973
	Direction	607	639	1,253
		11,522	10,963	14,129
PERCENTAGE ON CAPITAL FROM NET	Direct income	—3·44	—2·89	—3·56
	Direct plus indirect	9·89	10·48	9·82

* Corrected as per financial results.

There is, therefore, an increased income of Rs. 1,947, which is simply due to the increased rain fall, the supply of these reservoirs being immediately dependent on it. The same cause, however, produced increased expenditure on repairs and maintenance—the floods of July and August breaching five of the bunds.

28. An error is apparent in the amount debited to "Direction" during 1873-74 in Controller's Revenue Account of these works, it being almost double the sum charged during the past year. A reference has been made to Controller on the subject, and the error will be corrected in the accounts of current year.

29. The area irrigated was in acres—

	Kharíf.	Rabbi.	Total.
Total from tanks and jhils	684	15,849	16,533
Of this—			
The tanks contributed	...	...	8,652
Najafgarh and Chandani jhils	...	...	7,881

The area in—

	Acres.
1871-72 was	7,794
1872-73 ,, ...	11,087
1873-74 ,, ...	16,533

30. Of the total area irrigated during the year, there were 13,423 acres of wheat, 3 of cotton, 2,970 of miscellaneous crops, and 137 of grass. The cotton crop throughout the Gurgáon District failed almost entirely from too much rain having fallen; the outturn per acre being quoted in the "Report on cotton cultivation" as 16 pounds of cleaned cotton, while during the previous year it amounted to 106 pounds.

UPPER BARI DOAB CIRCLE.

BARI DOAB CANAL.

31. The capital debit to this canal, exclusive of interest, was increased by Rs. 3,01,207; of this, the expenditure on works was as follows :—

	Rs.
Rávi weir and head-works	24,396
Main line	13,886
Main branch, upper	1,008
Kasúr branch	83,586
Subráon branch	72,544
Water-course heads, main branch, lower	7,811
,, ,, Lahore branch	2,053
TOTAL ...	2,05,279
Deduct write back on account of remodelling main branch, upper ...	347
Balance	2,04,932

The remainder consists of charges for tools and plant, establishment and balance of suspense accounts, and capitalization of abatement of land revenue.

The aggregate capital debit, excluding interest, at the close of the year, amounted to Rs. 1,37,50,775, and including interest Rs. 2,31,34,468.

32. REVENUE ACCOUNT CURRENT.

EXPENDITURE.	Rs.	RECEIPTS.	Rs.
Extensions and improvements ...	3,774	Occupiers' rates	6,12,844
Maintenance and repairs	1,26,531	Miscellaneous	52,270
Plantations	8,517

Direction ...	46,718		
Tools and plant	7,816		
Profit and loss	100		
	3,46,086		
Balance, profit @ Rs. 2·37 per cent. on capital, Rs. 1,34,49,568 ...	3,19,028		
TOTAL ...	6,65,114	TOTAL ...	6,65,114
		Owners' rates	1,88,446

33. The owners' rate assessed by the canal officers for both crops amounted to Rs. 1,79,388, to which Rs. 9,058 were added for the kharíf crop of 1873-74 by the civil officers on account of resumed jághír lands which are liable to water-advantage-rate and to *cháhi* lands which have given up well-irrigation and have used canal water, making the total for both crops Rs. 1,88,446.

34. The details of the assessments are as follow :—

						Rs.	
317 acres @ Re.	1	8	0 per acre		... ...	476	
2,109 " "	1	4	0 "		... ...	2,615	
26,018 " "	1	2	0 "		... ...	29,068	
83,062 " "	1	0	0 "		... ...	83,062

3,625 " "	0	6	0 "		... ...	1,359	
203,714							1,79,388
Additions made by civil officers, as explained above ...					... ...		9,058
					TOTAL		1,88,446
Deduct—Remissions to jághírdárs					... ...	15,326	
On account *cháhi* lands ...					... ...	10,069	
" other causes ...					... ...	3,146	
							28,541
					Net balance		1,59,905

The remissions shown above are only for the kharíf crop; the charges for the rabbi not being leviable till the ensuing year.

The average rate per acre is Re. 0·88.

35. The total assessments and remissions up to the end of the year under review are as follow :—

			Rs.
Total assessments to end of 1872-73, as per para. 26 of Revenue Report for that year			15,29,411
Assessed for 1873-74			1,88,446
Additions made by civil officers in rabbi, 1872-73, on account of *cháhi* lands			11,689
	TOTAL ...		17,29,546
Deduct—Remissions to end of 1872-73 ...	Rs.	4,17,852	
Remissions in 1873-74, as per Appendix E. of Superintending Engineer's report ...	"	1,22,027	
			5,39,879
Net balance realizable			11,89,667

The total remissions therefore granted from the water-advantage-rate amount to Rs. 1,22,027; of this Rs. 38,720 and Rs. 23,767 are on account of assessments on *jághír* and *cháhi* lands, Rs. 9,412 due to other causes; the balance, Rs. 50,128, being on account of arrears on crops previous to the kharíf of 1868-69. The sanction to this remission is contained in Secretary to Government, Punjab, Civil Department, No. 894, dated 16th June 1873, to Secretary to Financial Commissioner.

36. The Revenue Account shows a profit of Rs. 2·37 per cent. from direct income; that is, all income, save that from the "owners' rate;" adding the latter the percentage rises to

Rs. 3·77. These results are very nearly the same as those for the previous year, as will be seen from the following table, in which the income and expenditure for three years are shown :—

		1871-72.	1872-73.	1873-74.
		Rs.	Rs.	Rs.
INCOME	Occupiers' rates	6,72,884	5,93,785	6,12,844
	Miscellaneous	36,428	32,908	52,270
	TOTAL ...	7,09,312	6,26,693	6,65,114
EXPENDITURE	Works, &c.	1,38,146	1,13,244	1,46,738
	Establishment—Executive ...	1,66,587	1,65,052	1,52,630
	Direction ...	43,250	37,406	46,718
	TOTAL ...	3,47,983	3,15,702	3,46,086
PERCENTAGE ON CAPITAL FROM NET	Direct income	2·84	2·36	2·37
	Direct plus indirect	4·81	3·83	3·77

37. A reference to the Report for the previous year will show that the figures used in the above table differ considerably from those in the similar return for 1872-73. Those now used are taken from the Statements of Financial Results published under the authority of the Government of India.

38. The Capital on which the percentage for the year is calculated, is increased by Rs. 2,58,280 as compared with that in 1872-73.

39. The expenditure—charges on works, &c., are Rs. 33,494 more than those of the previous year, caused mainly by the outlay on repairs during the closure of January and February 1874, and by the adjustment of an old outstanding due to the Mádhopur Workshops. The decrease of Rs. 12,422 in the cost of Executive Establishment is mainly due to the transfer of Officers to Bengal to assist in the famine works there. The increase of Rs. 9,312 under "Direction" is due to the income and expenditure during the year being Rs. 9,64,482, against Rs. 9,04,989 during previous year.

40. There is again a large increase in miscellaneous revenue, which is highly satisfactory, as it mainly consists of mill-rent, an item only now beginning to assume importance, but which, with proper attention, is one capable of very considerable extension. The income from this source is, for the year under review, Rs. 34,204; the increase, however, during the last two years is no less than Rs. 18,495, or, in other words, the revenue from mill-rent has more than doubled itself during the last two years. With care, and with attention to the wants of the public, especially near Amritsar, there can be no doubt but that revenue from the use of water-power may be largely increased at a moderate outlay; and the attention of the Superintending Engineer will be directed to this important matter.

41. The areas irrigated for the past five years, in acres, are—

	Kharíf.	Rabbi.	Total.
	Acres.	Acres.	Acres.
1869-70	115,524	118,403	233,927
1870-71	88,643	190,567	279,210
1871-72	76,412	210,658	287,070
1872-73	96,718	132,078	228,796
1873-74	100,913	131,233	232,146

Considering that the rain-fall was abundant and seasonable, it is satisfactory to observe that the irrigation has not suffered in consequence, there being a small increase of 3,350 acres in comparison with last year.

42. The following figures are collected in the same way as was previously done for the Western Jamna Canal, and show the areas irrigated of the four principal crops for the last six years :—

Principal crops.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
Sugarcane	9,811	11,623	6,994	6,287	9,170	10,305
Rice	41,256	76,709	24,535	11,598	29,100	32,882
Cotton	8,205	11,671	10,640	20,387	24,879	27,868
Wheat	175,619	87,399	156,375	167,214	99,417	94,731
Total ...	234,891	187,402	198,544	205,486	162,566	165,786
Other crops ...	64,948	46,525	80,666	81,584	66,230	66,360
GRAND TOTAL ...	299,839	233,927	279,210	287,070	228,796	232,146

43. Doubtless the favorable rains allowed the wheat ploughings and sowings to be managed without canal water, and we have accordingly an unfavorable return as regards this crop. The figures are encouraging as regards sugarcane; and cotton and rice appear to be slowly recovering the check which resulted from the enhanced rate imposed a few years ago. The latter fact is not entirely a matter of congratulation: the crop is one requiring a

lavish expenditure of water to bring it to maturity, which, if saved and sent down the canal to the districts with smaller rain-fall, would yield a far higher return.

44. The proportion of flow to lift irrigation for the past three years is as detailed below:—

	1871-72.	1872-73.	1873-74.
Overflow	89·33	89·92	89·98
Lift	10·67	10·08	10·02

45. The area of double-cropped (or *do-fasli*) land was 24,672 acres during the year under review, while for 1872-73 it was 14,996 acres only. This increase, as Colonel Brownlow points out with great justness, is likely to damage the land from over-cropping, and should, it is considered, be discouraged. At present it is somewhat encouraged by charging only half owners' rates on the *do-fasli* lands.

46. The average water-rates for the past three years were—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Kharif, per acre	2·64	3·16	3·25
Rabbi, do.	2·06	2·17	2·17

47. The value of the cubic foot per second of water-supply utilized was as follows:—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Kharif	109·3	250·9	150·1
Rabbi	248·0	239·9	201·1

These values do not include the water advantage rate or owners' rate, nor the miscellaneous revenue, but only occupiers' rates.

48. The supply of water in the river appears to have been sufficient throughout the year to meet the demand. Colonel Brownlow, in the 16th para. of his report, shows conclusively that the figures regarding the volumes of water discharged by various channels—in the Revenue Report of 1872-73 and in Executive Engineer's Reports—are utterly unreliable, and that no confidence can be placed in them. The matter is of great importance, and is receiving full attention from Colonel Brownlow. In making his deductions, the Superintending Engineer has very properly eliminated the doubtful discharges.

49. The duty obtained from the water during the past five years is detailed below:—

	1869-70.		1870-71.		1871-72.		1872-73.		1873-74.	
	Kharif.	Rabbi.	Kharif.	Rabbi.	Kharif.	Rabbi.	Kharif.	Rabbi.	Kharif.	Rabbi.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Total entering at head	47·70	80·20	37·07	94·71	34·73	108·25	47·90	79·28	40·24	82·43
Utilized	67·40	90·60	52·39	98·53	41·42	111·28	79;70	110·43	46·40	92·87

50. The maintenance charges for the past three years, per acre irrigated, are as follow:—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Total current charges	1·21	1·38	1·45
Rajbaha repairs	0·13	0·17	0·16

51. The cost of assessments was slightly greater than during the previous year, caused by sickness among the measuring establishment of the 2nd Division. Commendable punctuality in forwarding the demand statements to Deputy Commissioners is observed.

52. The state of water-rate collections was as follows:—

	Balance from 1872-73.	Rabbi, 1872-73.	Kharff, 1873-74.	Total.
	Rs.	Rs.	Rs.	Rs.
Demands	34,607	2,84,850	3,26,051	6,45,508
Realizations	33,137	2,76,189	3,06,976	6,16,302
Balance at close of year	1,470	8,661	19,075	29,206

This is again an improvement on the results of the previous year.

53. The state of the collections of owner's rate is shown below:—

	Balance of assessment from 1865-66 to 1867-68.	Balance of assessment from 1867-68 to Kharif, 1872-73.	Rabbi, 1872-73.	Kharif, 1873-74.	Grand Total.
	Rs.	Rs.	Rs.	Rs.	Rs.
Total demands	56,038	10,729	1,16,009	92,339	2,75,115
Deduct remissions	50,128	113	43,245	28,541	1,22,027
Net demands	5,910	10,616	72,764	63,798	1,53,088
Realizations	...	10,505	71,149	57,233	1,38,887
Balance unrealized at close of year	5,910	111	1,615	6,565	14,201

Which, too, is satisfactory; only Rs. 14,201 remaining unrealized.

LOWER SATLAJ AND CHINAB INUNDATION CANALS.

54. The capital was decreased during the year by Rs. 488 on account of a write back; the total Capital to end of the year, exclusive of interest, being Rs. 1,04,709, and including interest Rs. 1,66,407.

55. The Revenue Account corrected is as follows:—

Expenditure.	Rs.	Receipts.	Rs.
Extensions and improvements	1,402	Water-rate	679
Maintenance and repairs	33,066	Miscellaneous	7,550
Plantations	626	Expenditure from Fine Fund	23,708
Establishment—Executive	35,236		31,937
Direction	3,942		
Tools and plant	186	Value of statute labor	89,535
	74,458	Total	1,21,472
Value of statute labor	89,535	Balance, loss @ 40·42 per cent. on capital of Rs. 1,05,197	42,522
Grand Total ...	1,63,993	Grand Total ...	1,63,993
		Land revenue irrigated	2,13,299

The result, therefore, of the operations during the year is a loss of Rs. 42,521, or 40·42 per cent. on the capital, if the enhancement of land revenue due to the canals be neglected; taking this into consideration, we have a profit of Rs. 1,70,778, or 162·34 per cent.

56. The income of the last three years, excluding the value of statute labor, was as follows:—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Miscellaneous revenue and water-rate	5,510	7,916	8,229
Drawn from Fine Fund	11,167	31,965	23,708

The increase in miscellaneous revenue is mainly due to the sale of grass.

57. The expenditure on maintenance during the past three years, excluding the statute labor, was as follows:—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Works defrayed from Imperial Funds	7,577	4,132	11,572
„ „ „ Fine Fund	11,167	31,965	23,708
Establishment	35,865	37,991	39,178
Total ...	54,609	74,088	74,458

The only point requiring remark is the excess on works paid from Imperial Funds. A reference to the Superintending Engineer's report shows that this excess appears more than it really is, owing to a write-back of Rs. 4,116, which were wrongly charged in 1866-67. The excess, then of this year over the previous one is reduced to Rs. 3,324, and is owing to extensive repairs to the Chinab bunds.

58. The abstract of expenditure from Fine Fund is as follows:—

	Rs.
Repairs and silt clearance	22,821
Improving banks	749
Making a regulator	138
Total ...	23,708

59. The number of statute laborers present, and the defaulters, during the ast three years was as follows—

	Present.	Absent.
1871-72	537,117	72,878
1872-73	512,358	73,199
1873-74	451,759	55,586

The percentage of absentees was smaller somewhat than during the previous two seasons.

The value of the statute labor for the year is estimated by Superintending Engineer to be Rs. 1,69,410 at the current rates of payment.

60. The cost of maintenance per acre for the past three years has been—

	1871-72.	1872-73.	1873-74.
Total charges, in rupees	1,44,144	1,63,623	1,63,993
Area irrigated, in acres	1,88,465	2,42,504	1,97,064
Per acre irrigated, rupees	0·76	0·67	0·83

The increased percentage is simply due to the decreased area irrigated, which was caused by the late rising of the Satlaj and Chinâb rivers.

61. The following table gives the irrigated area for the last five years :—

	Kharíf.	Rabbi.	TOTAL
1869-70	157,504	85,590	243,094
1870-71	133,365	68,671	202,036
1871-72	127,472	60,993	188,465
1872-73	149,143	93,361	242,504
1873-74	108,528	88,536	197,064

62. A statement of the areas of the principal crops for the past six years is given in Superintending Engineer's 14th para. The most remarkable feature in it is the gradual decrease in the cultivation of indigo. As anticipated by Colonel Crofton in the 55th para. of his review of last year's (1872-73) operations, this decrease has continued ; it was attributed to the want of a good market for the produce. A reference to the table showing the estimated value of the crops shows that, while in 1872-73 the price of indigo was Rs. 60 per maund, in 1873-74 it had risen to Rs. 70. Doubtless, if the demand increases and the season be favorable for irrigation, the cultivation will again increase, though possibly it may not equal the extent of cultivation which it reached in 1868-69.

63. There is a satisfactory increase in wheat cultivation. It is believed that some wheat was exported from Sindh and the lower parts of the Punjab to France. This might be verified, if thought advisable, by reference to the returns of exports from Kurrachee.

64. The proportion of overflow to lift for the last three years in acres, was—

	1871-72.	1872-73.	1873-74.
Over flow	83·6	80·9	77·7
Lift	16·4	19·1	22·3

65. The percentages of double-cropped lands for the last three years were—

	1871-72.	1872-73.	1873-74.
On aggregated area measured in both seasons	2·27	2·64	4·22
Area to which water was supplied during year	2·92	2·61	4·40

66. The Superintending Engineer has observed the want of the details of discharges of these canals, and has promised to supply the deficiency if possible. An interesting comparison can then be instituted between the duty got out of the water here and in other localities watered by Inundation Canals.

LOWER BARI DOAB CIRCLE.

UPPER SATLAJ INUNDATION CANALS.

67. The Capital debit of these Canals, exclusive of interest, was decreased by Rs. 209, on account of write-backs in the Suspense Account.

The Capital debit at the close of the year, exclusive of interest, amounted to Rs. 4,42,710, and including interest to Rs. 7,31,590.

68. REVENUE ACCOUNT CURRENT.

	Rs.		Rs.
Extensions and improvements	1,436	Water-rate on irrigation	76,423
Maintenance and repairs	59,385	Miscellaneous	3,368
Plantations	552	Contributions	1,436
Establishment—			*153
Executive	31,842		81,380
Direction	23,217	Balance, loss at 8·05 per cent. on Capital of Rs. 4,42,919	35,654
Tools and Plant	602		
GRAND TOTAL ...	1,17,034	GRAND TOTAL ...	1,17,034

* Omitted in receipts for 1868-69.

Of the sum entered above as "Water-rate on irrigation" the greater portion, Rs. 73,178 is stated by the Controller to be on account of the Montgomery District, and therefore is Fluctuating *Land*-Revenue credited to the Canals, in accordance with the orders of the Government of India, No. 803, dated 29th September 1873, Department Agriculture, Revenue and Commerce.

69. The areas irrigated for the last five years are as follow :—

	Kharíf.	Rabbi.	TOTAL.
	Acres.	Acres.	Acres.
1869-70	81,220	67,704	148,924
1870-71	59,828	17,242	77,070
1871-72	64,213	22,830	87,043
1872-73	74,904	60,446	135,350
1873-74	33,935	31,298	65,233

The area irrigated is less than half that of the previous year; the supply of water was unusually small; new rates were introduced; and the measurements for assessment were, for the first time, conducted by the Patwárís or Village Accountants. Considering these facts, the decrease in irrigation ceases to be a matter of surprise.

70. Notwithstanding the smallness of the area irrigated, the income is not proportionately diminished, while the average rate per acre is the largest yet realized. To approximate to an average income an average area of irrigation must be taken : for this purpose the average of the four years commencing with 1869-70 and ending with 1872-73, which is 112,097 acres, multiplied by Re. 1-2-10, the average rate per acre—*vide* para. 34 of Mr. Palmer's report—gives an average income of Rs. 1,31,947. This income is Rs. 14,913 more than the expenditure in 1873-74, and would show that a profit of 3⅓ per cent. might be expected on an average.

71. The following table gives the detail of the demands, collections and balances, with explanation of the latter :—

Fluctuating Land Revenue to be credited to Canals in the Montgomery District.

Tahsil.	Crop.	Demand.	Collection.	Balance.	REMARKS.
		Rs. A. P.	Rs. A. P.	Rs. A. P.	
Dipálpur ...	Kharíf ...	35,787 8 10	34,707 2 7	1,080 6 3	Rs. 1,020-0-5 nominal on account of villages whose term of settlement has not expired. Rs. 60-5-10 in train of liquidation.
	Rabbi ...	20,382 15 2	18,978 7 4	1,404 7 10	Rs. 435-15-3 nominal on account of villages whose term of settlement has not expired. Rs. 968-8-7 in train of liquidation.
Pák Pattan ...	Kharíf ...	7,753 2 1	7,599 15 1	153 3 0	Nominal on account of villages whose term of settlement has not expired.
	Rabbi ...	2,269 0 5	2,261 11 4	7 5 1	Ditto ditto ditto.
	TOTAL ...	66,192 10 6	63,547 4 4	2,645 6 2	

From this table we find that the actual credit to the canals will probably be Rs. 64,576-2-9, of which Rs. 63,547-4-4 has already been collected. Of the total demand, Rs. 1,616-7-9 has to be remitted, or to write more accurately, is not properly due, as it falls on villages whose term of settlement has not yet expired. These are doubtless the same villages to which Mr. Palmer refers in the 43rd para. of his report. It appears that their leases will expire on dates varying from 1883 to 1887.

72. The result of the year's operations is a loss of Rs. 35,654, or 8 per cent. on the capital, an unsatisfactory one, but owing directly to the unusually small area irrigated during the year. As shown in para. 70, it is justifiable to expect better results in future.

73. A considerable increase in Revenue Establishment is required, and will of course tend to reduce the income; this matter will, however, form the subject of a separate letter or application to the Government of India, and it is unnecessary here to do more than mention it.

74. The average duty of the water for the past two years is shown below :—

	1872-73.	1873-74.
	Acres.	Acres.
Kharif	38	32·2
Rabbi	79	110·0

75. The proportions of overflow to lift for the past three years were—

	1871-72.	1872-73.	1873-74.
Overflow	89·15	90·26	81·89
Lift	10·85	9·74	18·11

76. For the past three years the income and expenditure were as follows :—

	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Income—			
Water-rates	56,231	62,707	76,423
Miscellaneous	* 4,815	3,158	3,368
Contributions	1,788	1,205	1,589
TOTAL ...	62,834	67,070	81,380
Expenditure—			
Works	* 86,681	61,554	61,975
Establishment—Executive	35,319	35,544	31,842
Direction	27,226	27,863	23,217
TOTAL ...	1,49,226	1,24,961	1,17,034
Maintenance charges per acre irrigated	1·71	0·92	1·79

* Corrected as per Financial Results.

77. The state of the water-rate collections was as follows:—

	Balance on 1st April 1873.	Rabbi, 1872-73.	Kharif, 1873-74.	TOTAL.
	Rs.	Rs.	Rs.	Rs.
Demands	237	27,168	45,625	73,030
Realizations	...	27,168	41,764	68,932
Balance on 1st April 1874 ...	237	...	3,861	4,098

The uncollected balance is somewhat larger than that of the previous year. This may partly be attributed to delay in completing the assessments, which, as previously stated, were made by the village patwáris for the first time.

The experiment was not successful: it is being repeated again with a promise of better results, but at present it would be premature to express an opinion for or against the system.

DERAJAT CIRCLE.

INDUS INUNDATION CANALS.

78. The Capital debit, exclusive of interest, was increased during the year by Rs. 254, Rs. 197 of which is due to the Suspense Account and Rs. 57 to capitalization of rent of land.

The total debit at the close of the year, exclusive of interest, amounted to Rs. 4,37,613, and including interest to Rs. 6,65,377.

79. REVENUE ACCOUNT CURRENT.

EXPENDITURE.	Rs.	RECEIPTS.	Rs.
Extensions and improvements	11,895	Contribution for Silt clearance	45,000
Maintenance and repairs	80,047	Miscellaneous	5,516
Plantations	4,647		
Establishment—			50,516
Executive	38,575	Balance, loss @ 24·58 per cent. on Capital of Rs. 4,37,539	1,07,543

Tools and Plant	513		
Profit and Loss	300		
GRAND TOTAL ...	1,58,059	GRAND TOTAL ...	1,58,059
		Land Revenue irrigated	1,69,718

80. The income and expenditure for the past three years were as follow:—

	1871-72.	1872-73.	1873-74.
Income—	Rs.	Rs.	Rs.
Clearance rate	55,874	71,846	45,000
Miscellaneous	2,805*	6,312*	5,516
TOTAL ...	58,640	78,158	50,516
Expenditure—			
Works	1,04,281	1,31,219	97,402
Establishment—			
Executive	35,064	33,849	38,575
Direction	18,481	15,396	22,082
TOTAL ...	1,57,826	1,80,464	1,58,059
Maintenance charges per acre irrigated	1·09	0·99	0·97

* Corrected as per Financial Results.

The general result is an apparent loss of Rs. 1,07,543, or 24·58 per cent. on the Capital, adding the share of land revenue due to the Canals, which, as in the case of the Upper Satlaj Canals, is this year for the first time properly ascertained, we have a *profit* of Rs. 62,175; or very nearly 14·2 per cent.

81. The share of land revenue to be credited to these canals was originally fixed at the recent settlement to be Rs. 1,71,599; it has been, however, subsequently reduced to the figures above used in the Revenue Account. Arranged by Tahsíls the sums are as follow:—

	Rs.
Tahsíl Dera Ghazee Khan	1,13,519
„ Jámpur	39,421
„ Rajunpore	16,786
TOTAL ...	1,69,718

These figures are fixed in accordance with the orders contained in the Resolution by the Hon'ble the Lieutenant-Governor in the Foreign Department, No. 18, dated 2nd January 1874. The proportion of income to be credited to the canals was, along with other matters regarding the administration of these canals, communicated to the Government of India in this Office letter No. 988 I, dated 17th March 1874, supplemented by this Office No. 2313, dated 13th June 1874, and duly approved. It is unnecessary here to repeat the sanctioned procedure.

82. The decrease in expenditure on maintenance is mainly due to the embankments having stood well and not suffered from floods.

83. The area of irrigation for the past five years, and the rainfall at Dera Ghazee Khan, are given in the following table:—

	1869-70	1870-71.	1871-72.	1872-73	1873-74.
	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif	103,207	125,186	104,872	132,818	115,590
Rabbi	25,970	49,156	39,462	47,319	47,430
TOTAL ...	129,177	174,342	144,334	180,137	163,020
	Inches	*Inches.*	*Inches.*	*Inches.*	*Inches.*
Rainfall	10·85	6·50	3·00	7·70	8·10

The area irrigated during the year is 17,117 acres less than that of the previous year, which was the largest on record. The decrease was in the kharíf crop, and was due to the unfavorable state of the river during the months of June and July.

84. In paragraph 7 of Mr. Garbett's report the areas of the principal crops irrigated are given. The uniformity during four years is somewhat remarkable; the only change of any importance being the decrease in rice cultivation as compared with that in the year 1870.

85. The discharges of the River Indus are given in Superintending Engineer's 20th paragraph. They are higher than those of the two previous years, but more nearly agree with those observed in 1870-71. The figures are—

	DECEMBER.	JANUARY.
1870-71	24,883·51	22,650·93
1871-72	21,219·87	18,656·75
1872-73	21,878·26	20,780·90
1873-74	24,031·62	24,370·53

86. The area under flow and lift irrigation for the past five years was—

	Overflow.	Lift.	Total.	PERCENTAGE	
				Overflow.	Lift.
	Acres.	Acres.	Acres.		
1869-70	109,232	19,945	129,177	84·56	15·44
1870-71	156,876	17,466	174,342	90·00	10·00
1871-72	128,807	15,527	144,334	89·24	10·76
1872-73	165,002	15,135	180,137	91·60	8·40
1873-74	150,370	12,650	163,020	92·24	7·76

87. The cost of measurements and preparation of demand statements is slightly greater than in 1872-73; the detail is given by the Superintending Engineer in paras. 14 and 15 of his report.

88. **The sum of Rs. 45,000 is credited to the canals in lieu of the former clearance rate; it is fixed for a term of five years, after which it will be reconsidered and, if necessary, altered. In order to obtain data for such alteration, the Lieutenant-Governor has directed that the statistics detailed in Mr. Garbett's 16th para. be compiled. The experience of a few years will show whether the Canal Department loses by the arrangement.**

SHAHPUR CANALS.

89. There was no addition to Capital during the year.

90. REVENUE ACCOUNT CURRENT.

EXPENDITURE.	Rs.	RECEIPTS.	Rs.
Maintenance	4,000	Water-rates on irrigation	5,335
Establishment—Direction	187		
	4,187		
Balance, profit @ 5·41 per cent. on capital of Rs. 21,221	1,148		
GRAND TOTAL ...	5,335	GRAND TOTAL ...	5,335

91. The area irrigated was 4,080 acres—a decrease of 365 acres as compared with the previous year. The maintenance charges remain unchanged.

The average water-rate was $\frac{5335}{4080}$ = Rs. 1·37.

The rate of maintenance $\frac{4187}{4080}$ = Rs. 1·02.

92. The management of these canals is vested in the Deputy Commissioner of Shahpur. They were purchased by Government from the local and municipal funds but the charge is too small at present for the formation of a separate division for their management.

* * * *

97. The following statement shows the expenditure on all the new works from which no return is yet realizable:—

WESTERN JAMNA CANAL.

			Rs.	Rs.
Total as per Capital Account			2,25,228

101. The season, as explained in the remarks about the Western Jamna and Bári Doáb canals, was a singularly unfavorable one for irrigation; in addition, the revision of settlement in the districts watered by the former canal affected irrigation injuriously. The area irrigated by inundation canals is a fairly average one, while the financial results, owing to the exhibition of a proper share of land revenue in part of the country watered by the Upper Satlaj series, and by the canals on the Deráját, are satisfactory.

* * * *

104. By great exertions this report has been written only a week later than last year's. The delay was caused by the non-receipt of the Controller's figures in time to be used by Superintending Engineers, who were therefore obliged to use the figures supplied by Executive Engineers and in consequence time and labor have been expended in this office in altering and reconciling them with those afterwards supplied by the Controller.

The probable delay on this account was brought to the notice of Government of India, and permission asked to delay the submission of this report. The reply (Secretary to Government of India, Public Works Department, No. 536 I, dated 31st August 1874) was to the effect that the Controller must in future supply the figures as correctly as possible in proper time, leaving discrepancies to be adjusted after closing his books, the date for which, under the orders of the Supreme Government, has been postponed till the 15th July.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

TRAFFIC REPORT OF THE GOVERNMENT TELEGRAPH DEPARTMENT FOR THE YEAR 1874-75.

No. 94, dated Simla, the 25th June 1875.

From—Lieut.-Colonel R. MURRAY, Offg. Director General of Telegraphs in India,
To—The Secretary to the Government of India, PUBLIC WORKS DEPARTMENT.

I have the honour to submit Return of the number and value of State and Private Messages transmitted from each Division of this Department during the year 1874-75, showing the Collections on, and the Number of Inland and Foreign Messages separately. The Abstract in the margin exhibits in one view the percentage of increase and decrease in the number of paid Messages and Indian share of Collections under each head, as compared with those of the last year.

A. O. HUME,
Secretary to the Govt. of India.

P

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

REPORT ON THE MILITARY OPERATIONS CARRIED ON IN THE NAGA HILLS, BY THE FORCE UNDER THE COMMAND OF COLONEL J. N. NUTTALL, C. B.

No. 42, dated Samaguting, the 30th April, 1875.

From—CAPTAIN JOHN BUTLER, Political Agent, Nága Hills,
To—The Secretary to the Chief Commissioner of Assam.

In compliance with the instructions contained in your letter No. 1063, dated the 6th instant, I have now the honour to submit the following full report on the military operations carried on in the Nága Hills with a view to the punishment of the tribes who were concerned in the terrible massacre * of Lieutenant Holcombe and his party at Ninú, on the 2nd February last, by the force under the command of Colonel J. N. Nuttall, C. B.

* A massacre at which in the incredibly brief space of a few minutes eighty men were most treacherously murdered, and fifty-one others wounded, out of a total of 197 all told.

2. You are already aware that I had just conducted the Western Nága Hills exploration expedition up from Samaguting, through Wokha, Núnkam, Lákhuti, and Assiringia to Déká Haimong, when I first received news of the sad disaster that had occurred to the Eastern expedition. On the 17th February, I received your letter, No. 12 T., of the 14th idem, intimating that the Chief Commissioner had been pleased to appoint me political officer, under the orders of the military officer in command of the field force which was about to enter the Eastern Nága Hills, with a view to punish the tribes concerned in the massacre, and directing me to proceed at once with my party to Búrúárcháli (near Jáipúr), there to assume charge of political affairs from Major W. C. S. Clarke, Deputy Commissioner of Lakhimpur.

3. On receipt of these instructions, I at once marched, *vid* the Nága villages of Náogáon and Kánching, to Názirah, in the Sibságar district. Thence I marched up the Dhúdoráli, through Towrok and Sápákoti to Búrúárcháli, which I reached on the 24th February, and at once assumed charge as political officer. The road between Sápákoti and Búrúárcháli was in a terribly bad state, consequently we felt the marches a good deal.

4. At Búrúárcháli I found Major Tulloch, with a detachment of the 44th Regiment, and learnt that measures had already been set on foot for the prompt collection of supplies. Huts were already built for the force expected.

5. Having received no letters since the date I left Názirah, and being anxious to ascertain the strength and nature of the force that was coming up, so as to have some idea of the work before me, and of the scale on which arrangements should be made, I determined to visit Dibrugarh. I was also anxious to learn who was to be the commander, in order that I might place myself under his orders and receive his instructions at once. Accordingly, on the 25th I went into Jáipúr. The following day I rode straight into Dibrugarh where I found the Chief Commissioner had already arrived. Here I learnt that Colonel Nuttall had been appointed to the command of the force. Having been furnished with a copy of the letter of instructions for the political conduct of the expedition (quoted in the margin), and having seen the Chief Commissioner and received his orders in person, I went over to Colonel Nuttall, and thoroughly discussed with him the nature of the work before us, and the whole question of our future operations.

No. 19 T. of 24th February 1875, from the Personal Assistant to the Chief Commissioner, to Colonel Nuttall, C. B.

6. I may here briefly explain that the duty we had to perform was, *to punish, as might be best possible, all the villages which joined in the treacherous massacre at Ninú, and to recover as many as possible of the arms and heads taken by the enemy.* The first and most difficult task, therefore, before us, was to ascertain exactly which were the villages implicated, for it must be remembered that the only information we possessed upon this point up to date was that contained in Captain Badgley's letters quoted in the margin. I considered that I should best obtain this information by quietly

No. A. of 7th February 1875.
No. 8 B. of 10th " "
No. 6 B. of 22rd " "

preceding the force by two days' march, that is to say, as far as Bor Mútan, where I felt sure I should be better able to glean more trustworthy intelligence than if I were to stay in the plains with the troops. Besides this, anxious as I was that no guilty village should get off, I was more anxious still that no innocent village should suffer. I saw that the only way to ensure this was to proceed on ahead with a sufficient escort, and ascertain all I could about the villages implicated, assuring the rest that they had nothing whatever to fear at our hands. As Colonel Nuttall fully concurred with me in the view I had taken, on the 27th I returned to Jáipúr. On the 28th, passing through Búrúárcháli, and having seen that all my arrangements there were complete, I moved camp to Halwa, a small village at the foot of the hills, about two miles west of Búrúárcháli.

7. Whilst at Jáipúr I received several deputations from the villages of Námsáng (or Lásá), Bordúár (or Lánú), and Dádam, and from them I elicited the fact that Ninú and several villages in its neighbourhood were all in the habit of visiting the plains through the Bordúár pass, but that they also had a road of their own. I may mention here, that long subsequently, on the occasion of my receiving a deputation from Voká, a village some eight or ten miles' march further in, and beyond Ninú, and within two miles, as the crow flies, of the Pátkái watershed (a village which I afterwards visited, and which has been entered on the map herewith attached), I was amused at one of the deputation being recognized by Shadhon, the Lakhimpur Agency Sheristadar, as a man who had been in the Dibrugarh court-house with reference to some case, a matter which the man at once acknowledged. I have deemed it right to record this here, as I believe that it has been said that "the offending tribes are inner Nágas, who have no communication with the plains," and because I am aware that it has long been generally believed, that no Nágas except those living along the border line of low hills ever visit the plains or know anything about us; whereas, I believe it will be found that the Nágas along the whole frontier, living within four or five days' journey from the plains, are in the habit of visiting us, and know, or rather fancy they know, a good deal about us. In illustration of this view, I may remark that the far distant "Nunkam Abor Peak" of the old north-east frontier maps turned out (on our visiting it this year) to be a fine large village, one of the leading villages of the Háttigoriá tribe, many of whom spoke Assamese, and told us that they regularly visited Assam *viá* Titabor. Whilst on this subject, I would invite attention to the concluding portion of a very old letter, No. 259 of 7th November, 1843, from the Political Agent of Upper Assam to the Agent to the Governor General, North-East Frontier, where the "*Nágas on the Patkai*" are mentioned as having been active in furnishing "information, guides, and porters" in the expedition against the Singphús. The Tiráp river therein alluded to rises due east of Nisá, and within some six or eight miles of it. Thus it would seem to appear that our intercourse with, and knowledge of, these tribes was much more constant, intimate, and cordial in those days than it has ever been since.

To return to my subject, these Bordúáriás and Námsángiás also informed me that the Ninú men were more or less allied to the Bánferá and Mútan lot. After much cross-examination, I managed to gather that they had heard that the villages concerned in the massacre were Ninú, Nisá, Káimoi, Lonkái, Kámhúá, Senúá and Niáonú, besides Khánú and Khásá, which they were not quite sure about. I then ordered the chiefs of Námsáng and Bordúár to furnish me with twenty good men, each party under a responsible chief, to accompany me for the purpose of acting as interpreters, scouts, guides, coolies, and in fact to do any and every kind of work that I might want at their hands. This order, although demurring to it a little at first, they finally carried out most cheerfully, the Námsáng Vángam himself accompanying me in person. The chief reason I had for taking these men on with me, was that I was confident they were all well acquainted with the country, and could give me every information about it if they liked. I knew they both cordially hated one another, Lánú and Lásá having been at constant feud for something like twenty years. I proposed to check the one's statements against the other, and be thus able, by also examining third parties, to ascertain the truth as nearly as possible. This is exactly what occurred.

8. On the 1st March I entered the hills, and, passing through the village of Khúlan-Mútan,* moved into Bor-Mútan.† There, after thorough search, scrambling down precipitous khuds, I finally determined upon pitching camp on a spot a little to the west of and just outside the village, where the slopes were gentle, where there was abundance of room to house any number of men, and abundance of good water. The Bor-Mútanias turned out most willingly and helped to build our huts, and, indeed, gave us every assistance that lay in their power during the whole time of our stay among them. The Khúlan-Mútanias did the same. I must not forget to mention here that both these two villages, together with Horú-Mútan, Bor-Bánsáng, and several other neighbouring villages, including (after some little delay) Bánferá, all sent in their quota of coolies, who were employed in pushing up stores from the plains to our camps at Bor-Mútan and Bor-Bánsáng.

* 2,150 feet above the sea-level.
† 2,650 " " "

9. On the evening of the 2nd March, Colonel Nuttall and Major Heathcote joined me. The latter left us again the following morning to supervise the arrangements for the final advance of the troops. For the greater part of that day I was occupied in receiving deputations from several of the neighbouring villages, which included a long palaver with the men of Bor-Bánsáng, who at first had sent in a message to the effect that the chief was too ill to come. However, a second message, telling them that in that case they must send in the second chief, or Vánsá, had the desired effect, and the Vánsá, with a number of others, came in. Although very suspicious and uncommunicative at first, after much beating about the bush, they gave me a lot of information, which almost exactly corroborated the story I had previously heard. As I saw they were in a great state of fright, fearing that they too might suffer punishment in some way or another, I reassured them, by telling them that, unless they had had any hand in the massacre, they need be under no apprehension whatever, and that, to show them that we looked upon them as friends, I would visit their village the next day in person.

10. Early on the morning of the 4th, taking an escort of forty of my police with me, and accompanied by Lieutenant Woodthorpe, I went over to Bor-Bánsáng* and was there met, about half a mile from the village, by the Vángam (or chief), Vánsá (or second chief), and a number of their followers, who conducted us to the chief's own house. There we sat down and chatted together for several hours. At first the chief declared that he had seen nothing, he had heard nothing, and knew nothing about the massacre. But, on my reminding him that he had received a visit from the Ninú chief only a short time after the occurrence (of which fact I had become cognizant through the Bor-Mútan chief), and that it was therefore absurd for him to pretend that he had heard nothing about it, he at once confessed that this was quite true, that about ten days after the massacre he had received a visit from Kiváng, the Vángam of Ninú, who had told him that the chiefs of some ten villages had combined together to oppose the further progress of the survey party, but that some had not been in time to be present at the massacre. That he had heard that the persons actually present were from Ninú, Nisa, the two villages of Ḳamhúá, Káimoi and Lonkái, and that five men, three of whose names he then gave me as Nokdon, Chúnle, and Mikbong (the other two he said he could not remember), of Senúá, who had accompanied Lieutenant Holcombe, had returned with five guns and ten heads,—which latter statement was afterwards ascertained to be incorrect. He added that Niáonú had also joined in the pursuit of some of the survivors whom they had cut up on the banks of the Dilli. The Vángam also went on to tell me that he could not say for certain what the Senúá men intended doing, but that he had heard that their chief, and the people generally, were originally much opposed to the part taken in the massacre by the five men above alluded to, but that since they had been fortifying their village. The Ninú chief had informed him that if the "Assam Rajah" came out to fight, he had got all his men ready, and would meet the Sahebs at Senúá. After this, I went out to search for a suitable place for our camp, and, whilst looking for it, about half a mile from the village, on the

* 3,800 feet above the sea-level.

road towards Senúá, I suddenly came upon a party of some fifty or more Nágas fully armed. We were about three hundred yards apart when we first, apparently simultaneously, caught sight of each other. I at once through my Dobashias called out to know who they were, and what they wanted. After some hesitation, apparently passed in consultation, they replied that they were Senúá men, "come out to meet the Saheb as friends." To this I replied as nearly as possible in the following words:—"Is this the way you come out to meet me, fully armed, with dao, shield, and spear? Some of your men have killed some of mine. You are at peace with Bor-Bánsáng, and yet you come fully armed, and say you have come as friends. If this is true, and you really have come as friends, let two or three of your chiefs come on unarmed, and I will hear what you have got to say." When this occurred I had only got my own orderlies, three Dobashias, and some half a dozen Bánsáng men with me, having left the rest of my escort behind in the village, where Lieutenant Woodthorpe was still busy sketching in the country. To this invitation, they replied that they would come in and talk to me; but, instead of doing so, they sat down in large groups. One man ran back and called out something to others, who were coming up all along the road in parties of two, three, and four together. Although I repeatedly invited them to come on and speak to me, not a single man could be induced to come forward. After waiting for half-an-hour, which I passed by taking some luncheon under a tree, and having been joined by Lieutenant Woodthorpe, I retired to the village. After another long talk with the Vángam, in which I instructed him to erect huts for us, we returned to camp. There, on the following day, I laid the whole information I had gathered up to date before Colonel Nuttall, who fully concurred with me in thinking that the evidence, as far as it went, tended to show that Senúá, as a whole village, had not joined the enemy, but that the five men who accompanied the survey party had been probably won over by the (to a Nága) irresistible prospect of heads and loot, and had then gone in with the rest; that the Senúá men, having received them back, together with their plunder, were probably now afraid we should hold them all in the same category, and were consequently hesitating which they should do,—surrender at discretion and throw themselves on our mercy, or fight it out to the utmost. Colonel Nuttall then decided that, if this surmise proved correct, and if it was satisfactorily shown that Senúá as a whole village really had not taken any part in the massacre, and did not oppose our advance, the unconditional surrender of the five men, together with the restitution of the guns, &c., which they had brought back, would amply satisfy the ends of justice. Thus, with Senúá untouched, it would be all the easier to organize a simultaneous attack upon some of the other more important villages, including Ninú, the actual scene of the massacre, which we considered of all others to be the village where, if possible, punishment should fall heaviest.

11. From the 5th to the 12th of February, all hands were hard at work pushing up supplies, improving the camps, stockading the store-depôts, opening out the several roads, and building bridges over the Tevai, Tising, and Dilli rivers. This was very hard work, as we had to work against time, and the incessant rain rendered the hill-paths so extremely slippery that it was almost impossible at times to keep one's footing, even empty-handed, and much more so with a heavy load. I cannot refrain from saying here that I think very great credit as due to Captain Wauchope and his transport corps for the manner in which they persevered in, and performed their laborious task. I must, however, add that I do not consider the Punjábi plainsmen, as a rule, make the best coolies for hill work.

12. Colonel Sheriff, with the 42nd, having arrived at Bor-Mútan on the 6th, Colonel Cory, with the 44th, on the 10th, and the last detachment, with the remainder of the transport crops, on the 11th, the following arrangements were made by the Officer Commanding to keep open communications in rear, namely:—

No. 1.—At Júipár, were posted one Native officer, twenty-seven sepoys, and twelve police.
No. 2.—At Bárúárchúli, Major Tulloch, 44th Regiment, with Mr. J. B. Goad, District Superintendent of Police, and one Native officer, thirty sepoys, and six police.
No. 3.—At Halwa, two Native non-commissioned officers and eight sepoys.
No. 4.—At Khúlan-Mútan, two Native non-commissioned officers and ten sepoys;
No. 5.—At Bor-Múan, Mr. H. M. Hinde, Extra Assistant Commissioner, and Dr. McKay, with one Native officer and thirty sepoys.

On the evening of the 12th, Colonel Nuttall issued the order, copy of which I have attached (*vide* Appendix A.) This was most carefully explained to every man accompanying the force. I am extremely glad to be here able to record that throughout this short campaign, notwithstanding that we had come to avenge the treachery of the foul plot by which so many of our soldiers and followers had lost both friends and relations, and notwithstanding that our force was composed of very various races, I never saw or heard of any act of barbarity or cruelty towards the enemy. Had there been such acts they would assuredly have come to light—and this, too, although numbers of poor helpless women and children were captured from time to time, found hiding in their mountain fastnesses, where they vainly imagined that the inaccessible approaches up precipitous cliffs and dense jungle, had secured them a temporary, but safe, retreat from all pursuit. These unfortunates were, without exception, invariably brought into camp, fed and kindly treated, and, after being questioned about the movements of their people, &c., were told that we did not make war against women and children. They were then given their liberty to their intense joy, and often still more intense astonishment; for of course you are aware that the Nága himself spares neither age nor sex,—with him all is fair, and he neither gives nor expects quarter.

13. On the morning of the 13th February, the Nága field force, consisting of the numbers given in the margin, marched out of Bor-Mután, and moved camp to Bor-Bánsáng, where we found huts already erected for us on the spot I had previously chosen. Our reception here was most cordial in every way, but I failed to elicit any further intelligence of the movements of the enemy, including Senúá. It was therefore left quite an open question whether we should be opposed on the morrow or not. Early on the morning of the 14th, having left behind one Native officer and thirty sepoys at Bor-Bánsáng, we started for Senúá. About half a mile from the village, and a few hundred yards from the first or lowest stockade, we were met by a party of Senúá men, who called out to us, saying they had come to inquire whether we meant peace or war. To this we replied that such questions could only be discussed with the chief himself. On their promising that the chief would come down to meet us, we halted, and, after waiting impatiently for about an hour, Sombang, the Vángam, accompanied by two others, came in. I taxed him with having sent five men from his village with Lieutenant Holcombe's party, who had joined in the massacre, and had brought back some guns and heads, &c. To this he at once replied that it was quite true that he had sent five men, whose names he then gave me as Mokdon, Chúnle, Mikbong, Jánphúá, and Jánchoi, three of which tallied exactly with the names I had previously got. He added that these men had afterwards joined in the massacre, in spite of his orders telling them to be careful that no harm happened to the Saheb, and that they had brought back four guns with them, but no heads. He most emphatically denied that either he or his village had had any hand in the matter, and added that, far from that, he considered that they had saved the lives of a party escorting a dâk which had arrived the very morning of the attack, and which was going on to Ninú, had they not prevented it from doing so. On hearing this, and after consultation with Colonel Nuttall, who thought with me that we had no fresh grounds for reversing the decision which he had previously come to with regard to Senúá, and which I have already explained above in the latter portion of paragraph 10, but, on the contrary, reason for adhering to it, I explained our conditions, namely, the prompt and unconditional surrender of every man, at present believed to be only five, who was present at the massacre, and the immediate restitution of the guns. With these conditions the chief promised full compliance. We then detained him, and sent off his two companions to carry out the orders they had received. They left us, saying they would bring back the five men and four guns as soon as possible.

Another whole hour and ten minutes passed, during which time much animated conversation passed between the chief and his people in the village, whom we could see assembled in great force, fully armed, occupying every point of vantage. These men for a long time kept on repeating that they were just going to bring in the men, until at last one of them called out that the men had gone to their fields, and hence the delay. As the chief himself had only a short time before told me that they were in the village, this decided the question. It was already late, and it would have been impolitic to delay our advance any longer, so the Officer Commanding, having detached Colonel Sheriff, with the 42nd, to march round the western flank, and thus take the village in rear, advanced himself with the rest of the force from the north. We were considerably delayed in cutting our way through the two strong stockades, with thickly-panjied ditches, which had evidently only very lately been erected right across the road leading up the northern spur. We met, however, with no other opposition, for the Senúá men fell back as we advanced. Having made good our entrance into the village* we again halted, and reiterated our conditions with exactly the same result, namely, replies that they would surrender the men and guns as soon as possible,—but the excuse now was that the men had gone out fishing, and hence the delay; so we advanced again, and finally took up our position in the very centre of the village, on a fine, broad rocky plateau, commanding the approaches, which were almost perpendicular on three sides, a position so strong, that it might easily have been held for a considerable time by a handful of determined men against almost any odds. Here we were met by Colonel Sheriff and his party, who had been allowed to pass round almost unnoticed, if not unperceived, so that, had there been any opposition, the enemy would probably have suffered severely. The force having been billetted off into the several houses abandoned by their owners, and the Vángam himself having been safely lodged in honourable confinement in his own residence, I sent out messages to the Senúá people, telling them that we had no wish to confound the innocent with the guilty, but that we were quite determined that the guilty should not get off, that we should therefore hold the Senúá people and their chief responsible that those men of Senúá who had taken part in the massacre were promptly made over to us, unconditionally, to be treated in such manner as we might decide upon hereafter.

* 4,250 feet above the sea-level.

14. The following morning I took down briefly the Vángam's statement (Appendix B). Shortly afterwards some of the Senúá men sent in three guns (two long Enfields and one short carbine). Immediately after that, again, who should come in with the Vángam's food but Janphúá, one of the very men we wanted, who was recognized and secured at once. I immediately took down his statement too (Appendix No. 1), from which I first learnt that there were six men of Senúá all present at the massacre, a fact which was never afterwards disputed. A few hours after this, with the assistance of our Nága allies, we managed to secure Nokdon and Mikbong, two more of the men implicated. Their statements were also taken down at once (Appendices Nos. 2 and 3); after which Nokdon, who, you will remember, was the man alluded to by Captain Badgley as having been seen carrying off Lieutenant Holcombe's double-barrelled gun, voluntarily pointed out and produced the said gun carefully hidden away under a bundle of straw, close to the chief's house. From these several statements, which all told almost exactly the same story, which, as regards all the main facts, was in almost every respect the one story we had heard all along, reported to us from such very different and opposite sources, I felt quite convinced that there was now not the slightest reason to doubt that the villages really implicated in the massacre were Ninú, Nísá, Káimoi, Loukái, the two villages of Kámhúá and Niáonú. My view of this matter was more than ever confirmed afterwards,—both by the fact of the loot taken at the massacre being found at every one of these villages, and by the statements subsequently taken down. To the task of punishing these villages we now set ourselves. The Senúá chief, promising to bring in the other three men if allowed his full liberty, was then released, after having been duly warned of the serious consequences that would result from any breach of faith.

15. On the morning of the 16th February, leaving Lieutenant Abbott, with some eighty fighting men, to hold Senúá, Colonel Nuttall, with the rest

of the force, marched out, with the intention of attacking Ninú, but, on arriving at the Dilli, or Tisa, below Senúá he found the river had risen so high, owing to the constant rain we had had ever since entering the hills, that it was quite impossible to cross it. Seeing some bamboo rafts on the other side, head-constable Korom Sing, of the Nága Hills Police, at once volunteered to swim across and try to fetch them back. He very nearly succeeded in doing this, but the current was eventually too strong for him, and he only just managed to save himself by abandoning the raft. The attempt had so very nearly been a success, that we thought he might have succeeded if he had only had a few others to assist him. On other volunteers being called for, three more constables and a havildar and sepoy of the 44th joined him, and they all* swam across again. It was of no avail, for, notwithstanding the plucky pertinacity with which they one and all worked through several long hours (with only two daos and a hatchet between them, and expecting every moment to be attacked), it was at last seen that it was quite hopeless to think we could ever work rafts across, even with picked men stript to their waists, much less with armed parties, so long as the current continued as strong as it was then. Indeed, we began to notice with much apprehension that the river was rising rapidly, and that it had already risen nearly two feet during the time we had been endeavouring to cross it; Colonel Nuttall then at once determined to recall the party, and retire to Senúá. The six men then got on to a raft, and a most exciting scene ensued on their passage back. The raft was swept with incredible speed down the stream, and, seeing their only chance for life was to swim for it, about midway they all jumped into the roaring torrent, and struck out for shore, where a long line of officers and men were ready to receive them. Although carried some distance down, they all landed safely, with the exception of one unfortunate sepoy, who seemed to have either been struck on the side by a rock, or to have lost his head, for he suddenly turned round, and, in a few seconds, having been carried several hundred yards down, he disappeared, apparently worn out by his terrible struggles.

* I deem it right here to record the names of all these men, as deserving special praise for their gallant conduct on this occasion:—

Nága Hills Police.
Head-constable Korom Sing.
Constable Dhon Sing.
" Khonthui Ram.
" Sikidao.

44th Regiment.
Havildar Hemachand.
Sepoy Choull (drowned).

16. On the 17th, a large working party of sepoys and police, under the able and active superintendence of Lieutenant Woodthorpe (of the Royal Engineers) was occupied all day in endeavouring to throw a trestle-bridge across the river. By evening they managed to reach about half way. As the river had been falling again, on the following morning the whole force marched down once more and bivouacked at the bridge for the night. Working parties were put on again at once next morning, and by dint of working incessantly all day, by evening we were delighted to have the bridge completed. The Nágas from the opposite side fired into us, but without effect on two separate occasions. Their fire was immediately replied to and silenced by the line of skirmishers which had been thrown out to cover our advance on the bridge. When men could cross over, a picket was placed on the right bank to defend any attack that might be made on the bridge. As it was considered possible that an attempt might be made to cut the bridge away, under cover of the darkness and roar of the river, the picket remained posted there for the night. As we were not quite sure how far we might have to cut our way through the jungle, in order to reach the path leading to Ninú, I got together some twenty of our Nága allies and with much difficulty, for they were terribly afraid of being cut up, I succeeded in getting them to accompany me to search for it. After cutting through the jungle for about a quarter of a mile, we struck into the first path leading up the north-western spur to Ninú. Thence about half a mile more brought us to the second path, after exploring which sufficiently to ascertain the nature of the country before us, I returned to camp a little after sunset, and laid what information I had collected before the Officer Commanding. That night Colonel Nuttall was pleased to discuss with me and decide the question of our operations for the morrow. The plan was briefly as follows: that the baggage should be placed under a separate guard, which should act, so far independently as to follow the main or left column, conforming and regulating their movements according to circumstances in front. The rest of the force was divided into two columns, the one under the command of Colonel Sheriff,

with the 42nd, to advance by the path on the right; the other, under Colonel Nuttall himself, with Colonel Cory and the 44th and the Nága Hills Police to advance by the path on the left. Each column was to time its movements so as to attack the enemy simultaneously from two sides, and then, if all was well and time permitted, to push on at once and attack and take Nisa the same day.

17. In this order, on the morning of the 19th, the two columns started together, *en route* for Ninú;* Major Heathcote, Lieutenant Woodthorpe, and I accompanying Colonel Nuttall, with the main, or left, column. Whilst advancing up the hill we noticed large numbers of armed Nágas on our left, issuing out of Lonkái, some of whom came down the Lonkái spur as if with the intention of attacking us in the rear. We pretended to take no notice of them, and steadily marched to the front. When we had arrived within about half a mile of the village, we saw smoke and flames bursting out of the houses below and nearest to us. We then thought the enemy were about to beat a hasty retreat; but, on our hastening on, we saw that the houses, which by that time had been nearly burnt down to the ground, belonged only to a small detached portion of the village, and were quite outside the very strong defences they had erected all round the main portion. It then seemed to us that the houses had been burnt to prevent our taking advantage of the cover they would otherwise have afforded. We had no sooner crossed the sites of these smouldering houses, and got within one hundred yards of the stockade, when the enemy called out to us to "come on," and followed up this invitation by opening fire upon us. Shortly after this, whilst advancing up to the assault as quickly as we possibly could through the mass of bristling panjees with which the whole ground was strewed, we heard a regular volley from the other side, which told us that the 42nd had also arrived. This steady advance, notwithstanding the heavy fire which they poured into us, which, however, did no injury, seemed to strike terror into the Nágas, who were now seen flying in every direction, setting light to their houses as they went, apparently in order to check pursuit. Thus, long before half our men were through the stockade, the whole village was in flames. I very shortly afterwards found myself, with Major Heathcote, Lieutenant Woodthorpe, and about sixty men (of the 44th and police) passing over the site of the fearful tragedy of the 2nd February last, where the headless bodies, now almost skeletons, of our unfortunate people were still lying about in every direction, vividly recalling to mind the terrible scene that had been enacted there. Without delay, we followed up the fugitives towards, and right through, Nisa,† where they again played us the same game as they had done at Ninú. Thus we were enabled that day thoroughly to carry out the previously arranged programme to a most complete and successful issue. That night the force encamped, divided as follows, namely, at Nisa, Colonels Nuttall and Cory, Major Heathcote, Lieutenants Woodthorpe and McGregor, Mr. McCay, and myself, with the 44th Regiment and Nága Hills Police; at Ninú, Colonel Sheriff, Captain Wauchope, Lieutenants Ridgeway and Egan, Doctors White and Wilson, and Mr. Chennell, with the 42nd Regiment.

* 3,350 feet above the sea-level.

† 4,250 feet above the sea-level.

The 19th, I must here mention, was one of the first really fine days we had experienced, and the heat in the afternoon was very trying indeed. This intense heat was dispelled, about 10 o'clock that night, by a succession of very severe thunder-storms, which covered the hill-tops for several inches in depth with a coating of large hail-stones, which had all the appearance of a heavy fall of snow.

18. On the 20th Colonel Sheriff, with a party of some sixty men from the Ninú column, attacked and destroyed Lonkái. The Nisa column was split up into detachments of from twenty to forty men under European officers, who scoured the country in every direction for a circuit of several miles, discovering and destroying several hundred huts, containing much grain and other (to the Nágas) valuable property. This had been very carefully stored away, under the belief that, hidden far away, amid dense jungle, and generally in places only to be approched by the most difficult and precipitous paths, it was perfectly safe. I have since learnt that this, to them unprecedented, system

of following them up and attacking them in their mountain fastnesses, terrified them much more than anything else. That we could attack, take and destroy their villages, they appear to have thought possible, though they had taken care to guard against that, by removing all their property out of them; but that we, and specially the Saheb portion, whom they had been accustomed generally to see on the top of a horse or outside an elephant in the plains, should be able to follow them on their own almost inaccessible hill-sides, they looked upon us almost miraculous. It is worthy of note that, after the expedition was over, the Nágas everywhere openly confesssed that they had never seen such a thing before, indeed, it was repeated to me that they declared with astonishment—"What kind of Sahebs are these? They beat the Nágas in their own hills; they fear nothing, and nothing seems to stop them; no jungle is so thick but what they go through it; no precipice so steep but what they get over it." And I think it would be very difficult indeed to find words conveying higher praise of the conduct of the officers and men engaged in this expedition than these few brief but expressive sentences.

19. At Ninú we found the whole of the seventy-one heads which had been taken at the massacre, carefully arranged in a long basket placed under a large clump of very old trees in the centre of the village, where such trophies are usually exhibited. This number of heads corresponds very nearly with the total number of men known to have been murdered, *viz.*, seventy-nine, and the slight discrepancy is easily accounted for when we remember that a small party is reported to have been cut up by the Niáonú men on the banks of the Dilli, whose heads of course would not have been found here. One head was afterwards recovered at Kámuhuá. These heads, and all the bones and other remains of the massacre, were now most carefully collected and burnt, and the ashes buried, so that no trace whatever of the sad event was left behind.

20. On the 21st, Lieutenant Ridgeway, with a party of 46 men detached from the Ninú column, marched upon and destroyed Káimoi, a comparatively small village, which was undefended. The same day I accompanied Colonel Nuttall, with a party of 120 men detached from the Nisa column, which attacked and destroyed in rapid succession both the villages of Kámhúá.* These villages, although strongly defended with double stockades, evidently only lately erected, offered but a feeble resistance. The enemy, who were out in considerable numbers, giving way as we advanced, fled precipitately on the first volley. This was a severe day's work for the troops, for Kámhúá was at least seven miles distant from Nisa, with a deep valley between, and the stream we had to cross was only fordable with great difficulty. I think we were all very glad to get back into camp again a little after sunset.

* 3,900 and 4,600 feet each respectively above the sea-level.

21. The two following days (22nd and 23rd) scouting parties were out again in all directions, discovering and destroying fresh huts and more grain, which had been passed over on the previous occasions. A good deal of miscellaneous property, in the shape of waterproof-sheets, caps, boots, a telescope, bayonet-scabbards, sepoys' accoutrements, &c., taken by the enemy was recovered and brought into camp.

22. On the 24th, Colonel Cory, with a detachment of the 44th, was instructed to revisit Kámhúá, and pass the night there, whilst Lieutenant Ridgeway and a party of the 42nd was in like manner deputed to revisit Lonkái with a view to show the Nágas in what opposite directions we could strike simultaneously, and also with the hope that they might possibly be able to recover some of the guns. The same day, accompanied by Lieutenant Woodthorpe, I visited the friendly village of Voka† (already referred to in paragraph 7), where we were most cordially received, and presented with a large elephant's tusk, measuring sixty-one inches in length and sixteen inches in circumference. This I returned to them, explaining that I had not come to see them for the purpose of receiving presents, and recommending them to take the tusk to Jáipúr, where they would probably get at least Rs. 150 for it. This they did not like, at first thinking I had refused it because I did not wish to be on friendly terms with them; but on my consenting at last to accept a spear instead, which I explained would answer all the purpose of proving how

† 5,000 feet above sea-level.

friendly my feelings really were towards them, they were, childlike, quite delighted again, and were most profuse in their offers to assist me in any way they could. On our way back we saw the broad high Tablung Hill standing out in strong relief against the clear sky at an angle of 253·deg., or nearly W.-S.-W. This day's work enabled the officer in charge of the survey to map in the whole country up to the summit of the Patkai, and finally complete an area of about 300 square miles on the scale of two miles to one inch, a most creditable result, considering the time, weather, and circumstances under which it was executed. A special and very interesting report on these operations, together with illustrated notes on the people and country by Lieutenant Woodthorpe, I have now the honour to attach hereto (*vide* Appendix X). These valuable notes, you will observe, have so fully and graphically described both the people and the country visited by us, that I have refrained from touching upon those subjects myself.

23. On the 25th Colonel Corry rejoined us, bringing back a prisoner named Chaokat (of Kámhúá), who had been recognized by sepoy Bhawan Singh of the 44th, as one of the Nágas whom he had noticed cutting down two of our men at the massacre. I afterwards took down his statement (Appendix No. 4), which, as regards all the major points, corroborated the evidence we had previously got.

24. On the 26th Colonel Nuttall and staff, with the whole of the Nisa column, including the survey officers and myself, rejoined the rest of the force at Ninú, where we received several deputations from Dádam, Khetri, and other villages in the neighbourhood, two and three days' journey off. These all came in to assure us of their friendly feelings. We then again endeavoured to open communications with the enemy by sending messages through these men, demanding the restitution of the guns. I must explain here that we never had an opportunity of speaking to a Ninú or Nisa man face to face throughout the expedition, although, after punishment had been inflicted, we repeatedly sent word, through the women who were released, telling them that the bearers of any flag of truce, which the Nága generally represent by a green bough, bringing in guns would always be respected and allowed to depart again in peace. Although subsequently women were sent in to speak with us, in no instance could we ever get a man to do so. The fact was I suppose, that they had learnt that we really did spare women, and that therefore *they* would be quite safe,—but that we should ever spare a man under any circumstances, after the fearful and wanton provocation they had given us, was a thing utterly beyond their belief. On the 27th we at last received word that the enemy were quite ready to give up the guns, but that their people had been so scattered in every direction, that they did not know where half of them had gone. Hence there would be some delay in collecting all the guns, but that they would bring them in as fast as they could. True to their promise, the following morning two guns (one B. L. Snider and one M. L. Enfield) were brought in, and the same evening three more (two B. L. Sniders and one M. L. gun), together with some waterproof-sheets and great-coats. Although the men bringing them were invited to come right into camp with them, a promise being made that they might depart again at once untouched, for I was naturally very anxious now to see and talk to some of them, not one of them, as I said before, could be induced to do so. The way they used to give them up was by placing them under a big tree about half a mile off, and then shouting to us to come and take them,—immediately our men went forward to do so, they used to disappear into the jungle. One of these parties having informed us (from a distance) that two of the guns were at Voka, two at Kámhúá, and one at Khanú, it was determined these villages should be again visited. Three parties started off early the following morning, and returned to camp in the evening, each reporting that the several villages (Voka, Kámhúá, and Khanú) had most emphatically denied having received any of the guns, which they declared most positively had been all kept by the Ninú and Nisa men, the truth of which of course it was impossible to be certain about. That same evening Captain Badgley's double-barrelled rifle, with some more great-coats and blankets, was surrendered to us. As the 30th passed without any other guns being given up, and we learnt through the Dádam and Khetri men that a great

number of the Ninú people were reported to have fled beyond Láju and were actually preparing to cross the Pátkái to seek refuge among the tribes towards Húkong, it was considered inexpedient to wait any longer on the mere chance of getting back some more of the guns, especially as it was evident that the recovery of the guns was only a question of time, and as we had still got to settle accounts with Niáonú. So it was determined we should now march back to Senúá. The following day (the 31st) the whole force was once more assembled at that village. The chief was again warned that, believing in the innocence of himself and his village generally, we had every reason and wish to avoid doing him or his men any injury whatever, but that if he failed to surrender those among his people who were guilty, we should be then forced to consider what means we could employ in order to compel him to do so, and it would be unadvisable for him to try our patience too far;—in reply to all of which he reiterated his former promises, that he would assuredly give them up as soon as he could catch them.

25. On the morning of 1st April, Colonel Nuttall, with a force of 120 fighting-men, all told, marched upon Niáonú* attacked, and burnt it to the ground. The defences were comparatively weak, and the resistance feeble, for, although numbers of Nágas were seen, both on entering the village and afterwards in the jungles, they never made a stand anywhere. Thus our work was satisfactorily over at last, and glad we all were to come to an end of it. The task of punishing savages, ignorant and barbarous, bloodthirsty and treacherous, who never, or seldom dare to meet their foe in the open, as man to man, is not a congenial one. I think we all felt it was like giving a dose of medicine to a sick child or cutting off the injured limb of a friend, a dire duty that must be done, and done thoroughly to be of any good,—and thoroughly it was done.

* 4,300 feet above the sea-level.

26. On the 2nd April, Lieutenant Woodthorpe, with an adequate escort, very peaceably visited Niáosá (the village beyond Niáonu), as much with a view to do some survey work there, as to thoroughly assure and prove to the Nágas that we had no quarrel whatever with any villages save those who had taken part in the massacre. The same day, Inspector Mema Ram, of the Nága Hills Police, with twenty constables and a support of a Subadar and twenty sepoys of the 42nd regiment, was deputed to revisit Ninú, in order to see whether any more guns had been brought back. We were glad to see them return the same evening, bringing in no less than seven more guns, which had been surrendered to them with the promise that the rest would all be given up as soon as they could be collected. As Colonel Nuttall had now carried out his instructions to the very letter, and had stayed in the hills fully as long as it was contemplated he should; considering, too, that the surrender of the rest of the guns was simply a question of time, and a matter which might just as easily be arranged for from the plains, he determined that we should commence our march homewards on the morrow. I had ascertained from both father and uncle of the Senúá chief that the three men whose surrender we had demanded were only hiding in the jungle in the neighbourhood of the village, and that two of them had actually slept in their own houses the previous night. Accordingly it was determined to take the chief, as well as Kali, the son of Ponghi, one of the men wanted to act as the chief's servant, on with us, to be kept as hostages until the three men implicated were duly given up. On the morning of the 3rd April, having first of all burnt to the ground the houses of the six men implicated, which were all pointed out to us by the chief himself, taking great care at the same time to do no harm to the rest of the village, the whole forced marched back to Bor-Bansang, where we were again most hospitably welcomed by the chief and his followers.

27. On the 4th we returned to Bor-Mutan. The following evening I received a report that the Senúá men had at last captured Chúnle, their Vánsá, (or second chief), one of the three remaining men whose surrender we had demanded, and that they had brought him down to the Tising, but were unable to cross, as the bridge over it, which we had noticed only the day before as being very shaky, had been carried away in the night. I immediately ordered the Bor-Mutan chief to send a party of his men out early next morning to repair the bridge and bring in the prisoner. To ensure this being done as

quickly as possible, the next morning (the 6th) I sent a head-constable and five constables down to the river. They returned in the evening, escorting Chúnle, who was carried in on a litter by his own people, utterly unable to stand, from two very severe panji wounds, the one through the right leg about mid-way between knee and ankle, the other under the left knee-cap and out through the thigh, which it appears he had received by falling into one of his own pit-falls whilst trying to escape. This man's statement I took down at once (Appendix No. 5). The same day the 44th left us, *en route* for Búrúárcháli, which they intended reaching in two days. On the 7th the remainder of the force marched out of Bor-Mútan, the 42nd to encamp that night at Khúlan-Mútan, whilst I and the survey party went straight on into Hulwa. On the 8th April the whole of the Nága field force was one more assembled at Búrúárcháli, the base of our operations. This place we found in such a terrible state of mud and slush, that we were all glad to get out of it as fast as possible. The fact is, there had been so much rain everywhere during the past month, that even the large rivers were all full to overflowing, and the Dihing had water in it from bank to bank, a most unusual occurrence at this season of the year. By the 12th April, everyone was back again at Dibrugarh. Thus ended our brief but decisive campaign,—a campaign which I am sure will not only be remembered for ages to come by the tribes who suffered by it, but one the fame of which will be handed along the whole line of Nága frontier to be a warning to all.

28. To sum up results, I may briefly say that we first of all clearly ascertained and thoroughly satisfied ourselves that seven villages had really undoubtedly taken an active part in the massacre we had come to avenge. That important question being decided, every one of those seven villages was attacked in turn, burnt to the ground, and all their household property destroyed. I must explain that the Nága's house is a solid structure, only erected with much time and labour, a fact that can easily be understood when I give the actual dimensions of one of them, which was measured with a tape, and found to be 200 feet in length and 42 feet in breadth; nor is the furniture by any means valueless or easily replaced,—for, to say nothing of the huge pounders hewed out of solid trees, with which each house is invariably furnished, there are the seats, large planks for sleeping on, and numerous wooden platters to eat off, &c., all cut and carved out of solid wood. One has only to try to purchase some of these articles to find out how much they are valued. Besides all this, the savages lost several hundred head of cattle, mostly magnificent mithon, whose value is well known, pigs, goats, fowls, and a very large quantity of rice and other grain. Some of them must have been killed and wounded. On this subject I have purposely heretofore refrained from making any statement,—as in all jungle warfare, where the enemy are in the habit of carrying off their killed and wounded, it is one of the most difficult things to estimate. From first to last I do not believe there were less than fifty killed, nor do I think there could have been very many more, besides possibly as many wounded. I base this estimate not only upon what I saw myself, but also upon Nága report. Then, from a total of seventy-nine heads missing, we have recovered seventy-two, the other seven having (so Nága report says) been thrown into the Dilli by the Niáonú men. Out of the thirty guns lost, we have got back nineteen, and the enemy have promised to return the remaining eleven as soon as they can collect them. These facts may be all left to speak for themselves. From the narrative of the daily events of the campaign, related in the sequence in which they occurred which I have endeavoured to make brief, but clear, I trust it will be now seen how thoroughly and completely orders have been carried out, in no spirit of "contemptuous devastation," but rather with a forbearing hand. The punishment of the guilty has been summary and severe, without being cruel, while the innocent have been met in a kindly spirit of friendship and conciliation. The resulting political effect I honestly believe it would be difficult to exaggerate.

29. It is not within my province to speak of the conduct of the troops and police employed in this expedition, and yet I feel I cannot well bring this report to a close without expressing my admiration of the courage and activity, good discipline, and persevering endurance that was shown by all ranks on every oppor-

tunity that presented itself. I think we may well congratulate ourselves on possessing such a force in a province where, as I have heard it aptly put, we are 'all frontier," and exposed to the attacks of hardy mountaineers, who used, and still continue in many parts, to be the terror of the plains they hem in.

30. I must beg leave to express my obligations to Majors Clarke and Lance, the Deputy-Commissioners of Lakhimpur and Sibsagar, for the assistance they so kindly rendered me throughout, as well as to Messrs. Goad and Hinde, for the manner in which they performed their allotted task of pushing up provisions to the front, and keeping open communications in rear. I must not omit to mention the very valuable services rendered by the two Native officers, Sheristadar Shadhon and Inspector Mema Ram, whose names I beg leave to bring forward most prominently for the favourable notice of the Chief Commissioner. I consider them, each in his own line, to be two of the very best Native officers I have ever come across,—intelligent, brave, truthful and thoroughly trustworthy. They worked in a manner which elicited universal praise, and I shall be very glad, indeed to see their services duly recognized. Finally, I would take this opportunity of publicly thanking the several private gentlemen of the Dibrugarh and Sibsagar districts, who all so kindly rendered me such hearty assistance, both with carriage and supplies on the line of march, when I was hastening up to join the force.

31. In addition to the several annexures already alluded to, I beg to attach a map of the country traversed by the force, as well as copies of the statements made by Captain Badgley, his chaprassee, Adle Sing, Sepoy Bhowan Singh, and Tolong, a Banfera Nága (Appendices C., D., E., and F.,), as well as a copy of my letter No. 38T., dated the 14th ultimo, to the Deputy-Commissioner of Lakhimpur (Appendix G.), regarding the disposal of the prisoners and hostages, pending the receipt of further orders from the Chief Commissioner.

32. On a perusal of the statements marked Nos. 2 and 5, it will be observed that the two prisoners, Nokdon and Chunle, both state that the Bordúárias instigated the massacre. I have heard it said, both at Dibrugarh and in the hills, that the Bordúárias were much incensed at the orders passed regarding their exclusion from any and all claim to any portion of the amount of compensation paid for the Hukanjari and Namsang tea-gardens,—which of course savage-like they would make a personal matter with the officer (Lieutenant Holcombe) through whom the ordere were received. Hence I think it is possible that the Bordúárias may have sent such a message as that mentioned by Nokdon. Still there was no actual proof of the matter, and of course the Bordúárias denied it *in toto*. From the statemcnts marked B and Nos. 1 and 2, it will be seen that Khanu is stated to have been engaged in the massacre. Neither in this case, nor yet in that of the Bordúárias, did Colonel Nuttall consider there were sufficient grounds to justify any action.

33. As for *the real reason for the massacre*, the question, in my opinion, is very simply answered in one word,—" Opportunity." Had no opportunity been given, no massacre would have occurred, notwithstanding any number of messages or any number of plots. For as I have repeatedly said before, as an open and declared foe, the Nága *as a rule*, has such a dread of firearms, that he is simply contemptible before any force thus armed, whatever he may be when fighting against his brother Nága. The very story of Captain Badgley's able retreat, with a mere handful of men, who must have been more or less demoralized by what they had undergone, hampered with wounded, and laden with ammunition, most clearly proves this to be the case. It is curious to note that the "sulky" demeanour, followed afterwards by more peaceful overtures of the Ninú men, noticed by Captain Badgley (and referred to in his first report is, if you remember, very similar to the demeanour and conduct of the Wokha men towards me (as reported in my letter dated the 7th January last); and I feel quite convinced now, that had I allowed those men of Wokha to come into camp then, with their arms in their hands, as they wanted to, we too should in all probability have met as sad a fate as those who fell at Ninú. Then again, if it be asked,—Why should they seek for an opportunity? I would reply,—Long use has made it second nature to the Nága to seek for human heads, which he simply looks upon as the noblest trophies of the chase, with which either to decorate his ancestral halls or to adorn the walls of his assembly

rooms (Deka changs or Merangs), according to the custom of the tribe to which he belongs. In like manner as the civilized man thinks it only fair and right to kill or capture the wild beasts of the field by any and every strategem, so, the savage considers that he may circumvent and capture or kill not only the wild beast, but his fellow man as well, by any and every kind of means that lie in his power. What we term "foul treachery" he looks upon as "skilful strategy." Notwithstanding what we occasionally hear about the "truthful savage" and his "good faith," my own experience has been that, with few exceptions, savages in their natural state do not know the meaning of these terms as we understand them. I must do them the justice to say that they can easily be taught their significance, and learn thoroughly to appreciate and admire the virtues which they even then find it difficult to practise. I must beg that it may be clearly understood here that I am not stating these facts with any view to the utter condemnation of the savage,—far from it, for I have often known and proved him to possess many most noble and endearing qualities. I consider the highland savage of Assam, with all his faults, to be a more manly, loveable being than many of his lowland neighbours.

34. I have now only to add that I trust the surrender of the two remaining men of Senúá, together with the eleven guns still unaccounted for, and believed to be in the hands of the Ninú and Nisa men, will be duly insisted upon. I would go further than this, and most strongly recommend that the actual site of the village of Ninú be declared waste for ever, as was done with such good results once before in the case of Razephemah, a village close to Samágúting,—a beacon to all evil-doers, and a lasting memento of the just blow that was so promptly struck by the great Maharani to avenge her murdered subjects.

APPENDIX A.

Extract from Nága Field Force Orders issued by COLONEL J. M. NUTTALL, C. B., *Commanding, dated Camp Bormutan, the 12th March* 1875.

No. 51.—*Discipline.*—As the Nága Field Force is about to enter the enemy's country, the Officer Commanding thinks it advisable that every man employed in the force, whether soldier or camp-follower, should be informed that he will not permit any departure from the rules of civilized warfare, in punishing the enemy to whom they are opposed, and he hereby calls on every officer in the force, both European and Native, to assist him in sternly repressing any barbarities towards the enemy which would tend to disgrace our arms, and place us on a footing with the savages we are about to punish.

Any ill-treatment of the women and children of the enemy will be sternly punished, and the Officer Commanding trusts, that in protecting them, he will be assisted by every soldier with the force, who must be well aware that a force under the command of British officers can never, even under the greatest provocation, disgrace themselves by warring against those who owing to age or sex, cannot defend themselves. Any mutilation of the dead by those attached in any way to the force must be also rigorously repressed.

The above Field Force Order will be translated into the vernacular, and read, at an evening parade appointed for the purpose, to every soldier in the camp, and the same made known to all camp-followers attached to the force.

APPENDIX B.

Shombang the Vangam (or Chief) of Senua duly warned and questioned, states—

Kamhua, Nibang (or Ninu), Nisa, Noksa, Lonkai, and Khanu were the seven villages engaged in the massacre. I learnt this from Nokdon and the other four men who went with the Saheb, and took part in the massacre. The names of the five Senua men who were engaged in the affair at Ninu are Nokdon, Chunle, Mikbong, Janphua, and Janchoi. I heard a long time ago, before the Saheb went to Ninu, that the Ninu men had sworn to cut up his party, and I warned the Saheb of this; but he insisted upon going on, and ordered me to furnish guides, and I furnished them, and the Saheb (Holcombe) was pleased with me and gave me Rs. 3. I told Nokdon and the other four men to be careful to see that no harm came to the Saheb; but their desire to possess the guns and other loot overcame them, and they joined the Ninu men, and I hear that Nokdon himself killed two men, and he it was who carried off the double gun. Chunle brought back the small short gun; Mikbong and Janchoi brought back the two long guns; and Janphua brought back a thing like this (pointing to a small looking-glass suspended round his neck) which I hear belonged to the Saheb. No heads were brought back into my village, and I heard that the Nibang (or Ninu) men would not allow them to take any. When the attack occurred at Ninu a party of men with a dâk for the

Sahebs wanted to go on, but I warned them that a row had taken place, and told them that they had better stay in my village or return to their old camp until we knew what had happened, and they stayed until the following morning, when the other Saheb* returned, and they then went off with him.

* Captain Badgley.

Read and explained, and admitted correct,

JOHN BUTLER, *Political Agent.*

The 15th March, 1875.

This man also afterwards informed me that he, too, had heard that Niaonu had cut up some of our men near their fields above the Dilli.—J. B.

APPENDIX C.

CAPTAIN W. F. BADGLEY, *Deputy Superintendent, Topographical Survey of India, in charge No. 6 Party, on oath, states—*

I can recognize Nokdon, who came with us from Senua to Ninu, and I remember seeing him in the camp about two minutes before the attack commenced, on the 2nd February last. He came down with the Ninu men to talk with Holcombe. I can also recognize Chuule, the second chief of Senua, who I believe accompanied the Ninu men with presents on the night we marched in. Nokdon was standing close to and just before Holcombe's tent, which was not two paces from my own at the time I allude to having seen him in the camp. I saw Holcombe struck down. It occurred thus: Our two small tents were close together. There was a fire to the left front of mine. I was dressing and looking through the front of my tent, the doors of which had been thrown back. A sentry was in front and between our two tents. Holcombe took the rifle out of the sentry's hands and handed it to a Naga close by, who was between Holcombe and myself. The Naga took the rifle on his shoulder and began to dance about, flashing his dao. Holcombe then turned towards the sentry, and another Naga then stept across the front of the tent and struck him down with one blow across the side of the head. I cannot recognize this man, for I did not see his face, but I could recognize the other man who took the rifle, because I saw his face when he happened to look into my tent. Besides Chunle and Nokdon, I can recognize others as Senua men only, but cannot say positively whether they were present at Ninu or not. (Having been now shown the several prisoners in the jail, namely, (1) Nokdon, (2) Janphua, (3) Mikbong, (4) Chaokat, and (5) Chunle, Captain Badgley is here asked if he can identify any of them and states)—Yes; I can recognize Chunle and Nakdon, there they are (pointing to them). Those two Nagas (pointing to Janphua and Mikbong) I can recognize as being men of Senua, but don't know their names. That man (pointing to Mikbong) I remember having seen the first day I got to Senua; and the fifth man (pointing to Chaokat), I don't remember having seen him before. (Captain Badgley is now taken to the ward where Shombang, the Vangam of Senua, and Kali, the son of Ponghi are kept as hostages, and is asked to say whether he can recognize either of them, and states)—Yes; I recognize that man (pointing to Shombang) as the individual who introduced himself to us as the chief of Senua. The other man I don't know.

(Sd.) W. F. BADGLEY, *Captain,*
Survey of India.

JOHN BUTLER,
Political Agent.

The 13th April, 1875.

APPENDIX D.

Adle Sing, on solemn affirmation, states—

My name is Adle Sing. I am a chaprasi in Captain Badgley's service, and accompanied him this season (1874-75) into the Naga Hills with Holcombe Saheb.

On the 1st February I accompanied the Saheb from Senua to Ninu which we reached between 3 and 4 p. m. From Senua four men started ahead of us, saying they were going to fish, and we never saw them again. With us came four other Senua men, one of whom spoke Assamese fluently, and one man of Banfera, who also spoke Assamese. Of the four Senua men, two returned from the Dilli, the river that flows between Senua and Ninu; the other two, one being the man who spoke Assamese, and whom I can recognize anywhere, together with the Banfera man, came on to Ninu. After this I accompanied Badgley Saheb to a ridge some way off, where he put up his board, and we did not return to camp until the evening. About 6 or 7 p. m. some ten or twelve Ninu men, together with the two Senua men and the Banfera man, came into camp with some goats, which they presented to Holcombe Saheb and then returned to the village. I did not hear what they said to the Saheb, nor do I know anything about the conversation which passed then, as I was looking after my own work in Badgley Saheb's tent. On the following morning (2nd February 1875) the two Senua men, together with a great number of other Nagas, came into camp, some with fowls, some vegetables, and all with their daos, some with their daos in their hands, others with their daos stuck into their waist-belts. It was very early in the morning, when they came in, about 6 a.m., I should think. The Banfera man did not accompany them. I don't know what became of him then, nor did I see him again until I saw him the other day at Buruarchali.

When the Nagas came into camp they immediately began to divide into groups, some selling things to the coolies, some speaking to the Saheb (Holcombe), and some simply sat

down in front of us, who were busy cooking, and rested their chins on their hands and dao-handles. Shortly after this I heard a gong strike, and a little while after that again a great simultaneous shout was raised (the Naga war-cry—J. B.), and I saw the Nagas striking right and left. Two men who were eating with me were cut down on the spot, and as I ran off I was met by a man who made a cut at my head, which I dodged, and the cut just grazed the top of my head, taking off a bit of skin (shows the wound, which is exactly what he describes it—J. B.). I then ran back across the little stream near which I had been cooking, and was again met by another Naga, whom I also dodged, but he managed to give me a click over the back, and I again got off with only a slight touch (again shows the wound, just between the shoulders). After this I ran for the huts occupied by the sepoys, and there picked up an empty rifle, which I pointed at my pursuers, who immediately turned and fled, and I then picked up some ammunition and began firing. In the meanwhile, others had got hold of their guns and had also commenced to fire, and the Nagas then retired; and I then went to search for the Sahebs, and first of all came on Holcombe Saheb lying dead; I next met Badgley Saheb, who then wanted to go on and attack the village, but he could not get the havildar to follow him, and we then got together all the wounded, ammunition, and rifles we could lay hand on, and began to retire, the Nagas following us the whole way. On nearing Senua we were surrounded on every side. I can't say what villages the Nagas belonged to, but there were large numbers of them on all sides, and the Senua men then sent out some men to meet us, who invited us to enter their village, but we feared treachery and wouldn't go in. And then two Bormutan men, who stated that they had been there to sell cloths, came out of the village and offered to show us the road round the village, and we then followed that route, and were pursued again by large numbers of Nagas right up to the open fields near the survey mark on this side of Senua. We left Ninu about 9 or 10 A. M. on the 2nd February, and, by going all that day and all that night, we reached Senua early in the morning of the 3rd and, having halted for a short time and eaten something, we again pushed on and reached Borbansang at about 6 P. M. that evening (3rd); we slept one night at Borbansang, and then marched the following morning (4th) to Bormutan, where we arrived about 4 P. M We then got some food, and marched on again all night until about half past 4 in the morning (5th), when we halted and slept for about an hour or two in the jungle, and then marched on again and reached Buruarchali about 1 P. M.

Read over, and acknowledged to be correct,

JOHN BUTLER, *Political Agent.*

The 12th March 1875.

APPENDIX E.

Bhagan Sing, Sepoy, No. 1 Company, 44th Regiment, A. L. I., son of Khelaram, on solemn affirmation, states—

I accompanied the detachment of my regiment which was sent to revisit the two villages* on the hill which we had attacked and burnt two days before, and I there recognized the man whom we made a prisoner and brought back with us as a man who had attempted to kill me on the 2nd February last, when the great massacre (larrai) took place. (He is now taken to the jail and confronted with the five prisoners, and asked to point out again what man it is he refers to, and at once points to (4) Chaokat, and states)—That is the man. I can swear he is one of the men who came up to sell fowls, &c., and then began to cut us down. This man's face (Chaokat's) I can remember quite well. He came up with a fowl in his hand, pretending he wanted to sell it, when I was washing up my plates; and then, when the row commenced from the direction of the Saheb's tents, I saw this man cut down sepoys Dola Ram and Singbeer Kharja, who were both kneeling over making up their bedding into a bundle, and when I tried to bolt off to seize my rifle, I was met by another man who gave me a cut over the head and one on the back, but neither blows penetrated to the skin, and I got off unwounded; and I never saw this man again until the day I accompanied Colonel Cory to the village, where I recognized him at once among a crowd of some twelve or thirteen who had come in to talk with the Saheb (Colonel Cory).

* Kamhua.

Read over and admitted correct,

JOHN BUTLER, *Political Agent.*

The 13th April 1875.

APPENDIX F.

Tolong, of Banfera, warned and cautioned, states—

On hearing that Sahebs had come up from Assam, I left my own village and went to meet Holcombe Saheb at Joboka, together with "Alai," of my village. Having learnt from the Saheb that he would visit Banfera in abont five days, I returned home, and we then prepared huts, &c., for the Saheb's reception; but when the Saheb came, he would not stop at the houses we had prepared, but, after having had a talk with our Vangam (or chief) Tingpao, he went on and encamped on the banks of the Tivai. From the Tivai the Saheb crossed the Tising, and, passing through Bansang, he encamped below the survey mark near Senua, in the huts which you saw still standing yesterday when we came up together with the sepoys.

I accompanied the Saheb by his orders, and assisted in procuring russud for him. The next morning the Senua chief, Shombang, sent off Chunle and another man very early in the morning to Ninu to give the news that the Saheb was coming. He also sent off Nokdon, who speaks Assamese, Mekbong, and Zanphua (or Janphua) with the Saheb, and we then all went off to Senua, where we again met Chunle and the other man. The Saheb then passed the village and encamped close to it on the other side. None of the Ninu men came to speak with the Saheb, and he then ordered me and the five Senua men to go back into the village and tell the Ninu men to bring in some russud. I then became rather afraid, for I had never entered Ninu before, and did not wish to go; but Nokdon assured me that it was all right, and so we all went off together and collected two goats, four fowls, and about ten seers of rice, which we then took back to the Saheb, accompanied by about twenty or thirty Ninu men. I did not accompany the men back, because the Ninu men told me to stay in the Marang. I did not mean to say that I was one of the men who accompanied the twenty or thirty Ninu men. The Senua men accompanied them, and Nakdon told me I could go with the rest of the russud in the morning. But I never saw the Senua men again from the time that they went off that evening to present the goats, fowls and rice. That night I heard a lot of talking going on, and men passing to and fro, but I could not make out what was up, and when I wanted to leave the Marang the Ninu men prevented me from going out. I passed the night in a great fright and the next morning, leaving my spear and dao behind in the Morang, I pretended I wanted to satisfy a call of nature, and was allowed to leave the house. I then saw a great crowd of Nagas, assembled at the gate leading towards the camp, and so made for the opposite gate and got outside the village unperceived, and immediately I had got well out of the village I heard loud cries and shouting, and I then ran away straight over to the Dilli River, and came into Senua and inquired what had become of the five Senua men. I met a great number of Senua men fully armed just outside their village who had turned out on hearing the firing, and these men went on towards Ninu, saying that the five Senua men who had gone with me had not returned. At Senua the chief sent ten men with me to show me the road back to my village, and I reached Banfera the same night. This is all I know about the affair. At the time I was at Ninu I did not know that there were any other Nagas there but the Nagas of Ninu itself, but since then I have been told by the men of Niaonu that the massacre was committed by men from Kamhua, who have got two heads and one hand (of the Saheb), and one gun; Longphong, who is said to have only got a box; Nisa is said to have got nine guns and some heads, how many I don't know; and Kaimoi and Lonkai are also reported to have had a hand in the massacre. Niaonu and Niaosa have both told me that they had had no hand in the affair, and I don't think they had, but I don't know for certain. You know the Nagas tell lies sometimes. But I believe Niaonu is at war with Ninu, and in that case they could not have joined them.

Read and explained, and admitted correct,

JOHN BUTLER, *Political Agent.*

The 15*th March* 1875.

APPENDIX G.

No. 38T., dated Camp, Dibrugarh, the 14th April 1875.

From—CAPTAIN JOHN BUTLER, Political Agent, Naga Hills,

To—MAJOR W. C. S. CLARKE, Deputy Commissioner, Lakhimpur.

I have the honour to make over to you Shombang, the Vangam or Chief of Senua, and Kali, the son of Ponghi, of Senua, for safe custody. These two men (Shombang and Kali) are simply to be kept as hostages until the Senua men surrender up two men, named respectively, Janchoi and Ponghi, of that village, who are believed to have been implicated in the massacre of Ninu, and whose unconditional surrender has been demanded and promised; and as soon as these latter have been given up to us, Shombang and Kali should at once be released, and allowed to return to their village. And I must here beg you will kindly do me the favour to issue such instructions as will ensure these two men receiving as kind treatment as it is possible to show them, consonant with their condition as hostages; for I may explain to you that I do not believe that either of them were in any way implicated with the sad affair that led to our late expedition; and it has only been through stern necessity that I have been compelled to bring these men in here at all,—and I sincerely and heartily wish them a speedy release.

2. With regard to the other five prisoners (namely (1) Nokdon, (2) Janphua, (3) Mikbong, (4) Chaokat, and (5) Chunle, previously made over to you, I have the honour to inform you that I firmly believe every one of them took an active part in the terrible massacre above alluded to, and I must therefore request you will do me the favour to see that they are all kept in the most careful custody, pending the receipt of further instructions from Government as to their final disposal, treating them in the meantime as men over whose heads a most serious charge of murder is now hanging; and I especially mention this to you, so that you may be on your guard against their attempting to escape, which I am sure they will do if they see the very slightest opportunity,—indeed, two of them have already made the attempt once, and were only secured again by the pluck and activity of the men in charge.

APPENDIX No. 1.

Janphua, of Senua, duly warned and questioned, states—

Chunle, Janchoi, Nokdon, Mikbong, Ponghi, and I were at Senua, and present at the massacre. I only took away some cloths, which were taken away from me again by the Nibang (or Ninu) men. Yes; I also took away a looking-glass (sanching). Nokdon killed two men, and carried off a double gun, but I did not kill any one. Mikbong also killed two men and brought back a gun, Chunle did not kill any one, but he also brought back a gun. (On being asked again whether he was sure that Chunle had no other part in the affair, he replied)—Chunle also killed some men; Ponghi also got a gun, but it was taken away from him by the men of Nibang. We did not bring away any heads with us, because the Nibang men would not allow us to do so. We only got the four guns. Nokdon persuaded us all to join, but I am innocent of killing any one. The plot was all arranged long before the Saheb went there. Ninu, Nisa, Kaimoi, Lonkai, Kamho, Khanu, and Pongsong, were all engaged in the massacre, and Niaonu cut up a number of fugitives who fled in that direction. They were cut up on the banks of the Tessa (or Dilli). Tolong, of Banfera, accompanied us to Nibang,—but in the morning, when he learnt what was up, he fled.

Read over and explained, and admitted to be correct,

The 15*th March* 1875. JOHN BUTLER, *Political Agent.*

He now adds—I hear that Tolong has been given a buffalo to get the Niaonu men off. Niaonu is at war with Ninu, and that's why they did not join the plot, but they cut up the fugitives who escaped.—J. B.

APPENDIX No. 2.

Nokdon, of Senua, duly warned and questioned, states—

Chunle, Mikbong, Janphua, Janchoi, Ponghi, and I were all present at the massacre of the Saheb and his men, but I never killed any one. None of us killed any one except Chunle, who cut down a sepoy, and Vanting, the Vansa (or second chief) of Nibang, cut down the Saheb himself. The villages engaged in the massacre were Ninu, Kaimoi, Nisa, Kamhua, Lonkai, and Khanu, and after that Niaonu cut up some of the fugitives down on the banks of the river. But the real reason for the plot was a message sent by the Borduarias to Kaimoi, who sent a packet of salt across, and said that unless they cut up the Saheb they were never to eat salt together again, and that they, the Borduarias, would smash up their village. None of us brought back either any guns or heads, but the Nibang Vangam (or chief) presented the Vangam of my village with four guns, including one double gun. I was the man who used to wear the monkey-skin hat.

Read and explained, and admitted correct,

JOHN BUTLER, *Political Agent.*

The 15*th March* 1875.

This man speaks Assamese very fluently indeed, and afterwards informed me that he was formerly a Joboka man, and that he had visited Tezpur, Gauhati, and Goalpara.—J.B.

APPENDIX No. 3.

Mikbong, alias *Khutpho, of Senua, duly warned and questioned, states—*

I had nothing to do with the cutting up of the Saheb and his men at Nibang. I don't know why I am to be killed. I have done nothing. It is true, I was present at the massacre, but I did not join. Vanting (the Vansa, or second chief), of Nibang, and Janphua, of Senua, cut the Saheb down, and Janphua cut down the sepoy close to him, and Nokdon cut down three men. We brought back four guns. I took one, Nokdon took a double gun, Chunle took one, and Janchoi took the fourth. Ponghi only brought back some rupees, and Janphua brought back clothes. None of us brought back any heads, because the Nibang chief would not give us any, saying that the men having been killed at his village, they belonged of right to him. Ninu, Lonkai, Kaimoi, Ninoksa (or Nisa) Kamho, and Niaonu, combined together and killed the Saheb and his men. It is true that Ninu and Niaonu were at war. But Niaonu did not go to Ninu, they killed the men they came across, near the bed of the Tessa (or Dilli). Why do you punish me, Nokdon is the man to punish.

Read over and explained, and admitted to be correct,

JOHN BUTLER, *Political Agent.*

The 15*th March* 1875.

APPENDIX No. 4.

Chaokat, of Kamhua (arrested by Colonel Corry on the 25*th, having been recognized by Bhewan Sing, sepoy of the* 44*th Regiment, as one of the men who took an active part in the massacre at Ninu on the* 2*nd February* 1875*), duly cautioned and questioned, states—*

I was not present at the time the "men of Assam" were killed by the Ninu men. Tangpa and Nivang, of Kamhua, were present, and joined in the affair. No guns were given to us; the Ninu and Nisa men kept all the guns. Kamhua got a hand. There were seven men of

Kamhua present, I think,—their names are Tangpa, Nivang, Pongpha, Lemchung, Lemtun, Vaopha, and Iton. Neither Khanu nor Voka had anything to do with the massacre, nor had Kamhua. The seven men of Kamhua went out to meet the Saheb as friends, but before they got to Ninu the affair had commenced. I don't know whether they joined, but they only brought back a gun. Niaonu is at war with Ninu, and they therefore did not come to join them, but afterwards, when some of the "men of Assam" fled and turned up near their fields, they cut them up. Lonkai and Kaimoi both joined with Ninu in the massacre. I do not think the Senua chief or the villagers generally had anything to do with the massacre, but I believe it was the work of Chunle and Nokdon. I think there were five Senua men engaged in the massacre,—their names are Nokdon, Mikbong, Janchoi, Chunle, and Janphua. Vanting, the Vansa (or second chief) of Nibang (or Ninu), was the man who cut down the Saheb. The Senua men got five guns, and all the rest were taken by the Ninu and Nisa men.

Read over and explained, and admitted correct.

JOHN BUTLER, *Political Agent.*

The 30th March 1875.

APPENDIX No. 5

Chunle, the Vansa (or second chief) of Senua, duly warned and questioned, states—

The day the Assam Saheb (Holcombe) went to Ninu, I and Janchoi went on ahead to warn the Ninu men not to injure the Saheb; and Nokdon, Janphua, and Mikbong, accompanied the Saheb to show the road, and Ponghi went to do some barter. We had warned the Saheb that mischief was intended by the Ninu men, and the Vangam of Senua, our chief, had ordered us to see that no harm happened to the Saheb. That night there was a meeting in Ninu, and they declared then that they had determined to cut up the Saheb, happen what might. The Ninu chief said that the Borduarias had advised them to cut up the Assam people, and they would do so, and the next morning they cut them up, but I did not join nor did the Senua men. The only men of Senua who were present at the massacre were Nokdon, Janphua, and Mikbong, but I don't know whether they killed any one there. Vanting, the Vansa (second chief) of Ninu, cut down the Saheb. Nokdon brought back a double gun, and Mikbong a single gun,—the other two guns were afterwards presented to us by the Ninu chief, in order that we might give them news of the approach of any force that might be sent up from Assam afterwards. The villages engaged in the massacre were the two villages of Kamhua (called Kamhua Noknu and Kamhua Noksa), Ninu, Nisa, Kaimoi, and Lonkai, and I heard from the Kamhua men that the Niaonu men cut up some of the Saheb's men near the Tessa (Dilli), and had carried off their heads. But, why ask me? the Lanu (Borduaria) men can tell you everything. They it was who put the Ninu men up to doing what they did. The Borduarias sent Vanpho, the Vansa of Chasa (or Horu Bansang), with a message to the effect that the Sahebs were coming up to avenge the massacre, and gave news of all your preparations: and the Ninu men when entering the plains always go through the Lanu (or Borduaria) village. Senua used to be at war with Lanu, but we are at peace now, and have been so for six years. I have nothing more I can tell you.

Read over and admitted correct,

JOHN BUTLER, *Political Agent.*

The 6th April 1875.

APPENDIX X.

Dated Shillong, the 29th April 1875.

From—LIEUTENANT R. G. WOODTHORPE, R. E., Assistant Superintendent, Topographical Survey,
To—CAPTAIN J. BUTLER, Political Agent, Naga Hills.

I have the honor to forward a few notes on the tribes visited by the late expedition to the Naga Hills. The area of the country passed through being necessarily limited, and our opportunities of observing the natives of the villages which our troops were sent to punish being few, I can only describe with any minuteness the men of the Mutan, Bor-Bansang and Senua villages, premising, however, that the men of Ninu and Nisa judging from what we were able to note, do not seem to differ materially from them, and that they are all probably members of the same tribe. We were accompanied by a small detachment of Borduarias and Namsangias, of whose personal appearance and decorations I am therefore able to say something, though I had no opportunity of seeing their villages or country, except from afar.

Men. 2. The men are of average height and nearly all well-made and well-developed, and, as is the case among most hill tribes, their complexion comprises very shade of brown. They would be good-looking as a rule very often, but for the tattooing on their faces, which in some makes it appear perfectly black, where the tattooing has been heavily done; in others the tattooing is blue, and then the bare portion of the face, especially in those of fair complexion, appears pink by contrast. The tattooing in the face, called in Naga language "ak," as shown in fig. 1, consists of four continuous lines carried across the forehead, round and underneath the eyes up to the nose, back over the cheeks, and round the corners of the mouth to the chin; rows of

Fig. 1.

spots follow the outside lines, and two fine lines mark out the nose in a large diamond space. The Mutans and Senua men do not tattoo very much on the body, but their thighs are tattooed in several places, with lines and spots, or diamond and egg-shaped patterns; the upper portion of the tattoo being continued round to the back as in fig 2, which represents one of the Namsangias These men and the Borduarias do not tattoo the face at all, but their shoulders, wrists, bodies and thighs are very much covered, as shown in figs 2 and 3; the latter is a Borduaria in war-dress. The men of Voka, Khanu, &c., in addition to the tattooing of the Senua men frequently cover their chest with fine lines, either horizontal or zig-zagged; all the men dress their hair apparently in the same fashion, *i. e.*, shaving that just above the ears, and taking the remainder back off the forehead and face, and tying it in a knot behind, through which are passed curved strips of horn carrying waves of red and white or black hair. Some men have a small moustache, but very few show anything like a beard.

Fig. 2.

Man's dress. 3. The dress and decorations of all the men we saw were essentially the same; the only differences perceptible being in the style of ornamentation,—differences due to the various tastes of individuals, rather than to any attempt at distinction, clan or village. The helmet is conical in shape, and made of plaited cane, either plain or having patterns of coloured straw worked over it. A large plume of black or red hair passes over the helmet from front to rear, and long horns, carrying toucan feathers or tufts of hair, spring from the sides; some helmets are covered with leopard or bear-skin and have a wreath of red or black hair round the base. Another head-dress is shown in fig. 2; it is a circular band of coloured cane and straw, ornamented with bits of a large shell and a fringe of hog's hair, which lies on the forehead. Their ear-ornaments are generally strings of beads pendant from a piece of shell, and terminating in long tufts of hair, which fall over the chest. They have a very pretty one made of alternate tufts of red, white, and black hair, radiating from a centre of yellow straw work which is fixed in the lobe of the ear. The necklaces are beads some of which, of a yellow opaque colour, are highly valued by the Nagas. From the shoulders to the elbows the men encase their arms in many rings of red and yellow cane, very large at the shoulder, gradually decreasing to the elbow; these give an appearance of great breadth to their shoulders, an effect which is further heightened by the bands of black or yellow cane which are drawn very tightly round the waist, and this effect is still further increased by the lines drawn by the Borduarias from their breasts to their navels. One man had as many as nineteen turns round his waist, giving a total length of cane of over forty feet. It is amusing to see them winding this cane round them, and it is a matter of time to get it all properly twisted on. Large belts, very broad at the back, fastening in front, and made of plates of polished brass or of colored cane and cowries, are also worn. A broad piece of blue cloth hangs from the waist, ornamented with red fringes and rows of white seeds; a portion of the cloth is taken up between the thighs and secured at the back as an extra piece of decency by those who visit the plains most frequently. On the wrists are worn deep bracelets of cowries, and below the knee strings of the same are also tightly tied. These Nagas are very skilful in devising little adornments from palm leaves, making coronets, wristbands, anklets of them. These have a most picturesque appearance. A curious custom prevails at Voka, and I fancy also in the neighbouring villages,—it is this, that till a young man is married he goes perfectly naked, and he at once adopts a waist-cloth when he takes a wife to himself. Every Naga carries about with him a small basket or bag for his food and pan, &c. In wet weather he has a cloak made of grass on a small string foundation. The large cloths worn in the cold weather are generally of Assamese silk; but at Khanu I saw a cloth of black and orange stripes, identical with those we saw last year in Thetchumi, on the Lanier.

Women. 4. The women are short in stature generally, and their figures are remarkable rather for strength than beauty, to which very few have any pretensions. They tattoo a good deal on the shoulders, body, and legs, but not on the face. The shoulders are tattooed with diamond patterns, three horizontal lines are taken across the body, above the breast, between which eight lines go down to the waist, narrowing gradually to a point; the navel is the centre of a Maltese cross, each arm about five inches long, consists of three lines with a pointed finial. The leg tattoo is done with an admirable sense of fitness, that on the thighs consisting of close vertical lines, and on the calves of horizontal lines, a small break occurring in each on the shin-bone; this has the effect of increasing the apparent rotundity of the legs between the knees. The women wear their hair braided and tied in a knot at the back, or else gathered up, and tied into a small bamboo tube covered with parti-colored cloth or beads, the lower end decorated with a red fringe or a long tuft of hair.

Fig. 5.

Women's dress. 5. The dress of the women consists principally of a very small petticoat, two feet two inches long and six inches deep, ornamented occasionally with bells, beads, and shells; this only comes a little more than half way round the body, leaving the right thigh bare,—it is attached at the ends and middle to a string passing round the waist. Sometimes a small cloth is worn round the shoulders. Many strings of beads fall low down over the breasts. Small fillets of coloured straw adorn their brows, and several massive white metal rings are worn above the elbow. Their ear-ornaments are principally small strings of beads passed through various holes in the ear.

6. The arms of this tribe are the dao, spear, and cross-bow. The first is a most formidable weapon, the blade is generally trinagular, about eight inches long, straight at the back, and four inches wide at the top, narrowing gradually, with a slightly convex edge towards the handle, which is two feet long, ornamented with tufts of coloured hair; sometimes, instead of being straight all the way up, the back of the blade swelling out towards the top in a semi-circular projection,—both forms are shown in fig. 6. The spears are not by any means such handsome or formidable weapons as those used further west, and this is due, I fancy, to the fact that with the eastern tribes the dao, and not the spear, is the principal weapon of offence The spear heads are small, and resemble very similarly in shape and ornamental workings those found at Thetchumi and Primi; the shaft, though short and slender, is strongly made of bamboo, and decorated with red and black hair in various fashions. The cross-bow is exactly similar to that described by me last year in Captain Butler's report, as being used by the Lhota, Melomi, and Primi Nagas. The shield is small, about four feet long by two feet wide, and made of buffalo hide, decorated along the upper edge with a fringe of red hair, and on the face with two or four tassels of grass. Every man carries with him on the war-path a large supply of panjies, which he plants in the road to cover his retreat. These are carried in a horn suspended at the back, or in a small basket, to which is attached a long tail of bear-skin; sometimes this panjie-holder is the skin of a bear's foot, with the claws remaining, the skin sewn up to form a large bag, a little figure of a sitting man, dressed and painted after life being affixed to the upper part. Some men wear a kind of defensive armour in the way of a leathern corset, which overlaps on the chest, and is kept up by means of straps which pass over the shoulders. The Wokha men also wear a leather corset, but without shoulder-straps.

Arms.

7. We found among these men a large number of gongs, which they probably get in directly from Burmah. I have shown one in fig. 6, which is a very common form everywhere on this frontier. They cast little bells themselves very well in little clay moulds, the material being apparently a kind of gun-metal, and occasionally brass. I have also shown in fig. 6 a woman's walking-staff, a long, thin iron rod foliated at its upper end.

8. The country we passed through was fine and open, except for the first march from Buruarchali, in the plains, to Khulan-Mutan—the path lying through dense forest and following the course of sluggish streams with muddy bottoms. But on reaching Bor-Mutan, the first extensive view of the country beyond is obtained. It is well watered by several large tributaries of the Delli or Disang river, as it is called in the plains, and Tisa, as it is called by the Nagas themselves, meaning the "large stream,"—"Ti" being the prefix of all river names, and "Sa" an affix signifying large. It was the largest stream we had to cross, and to the strength and velocity of its current when angry we owe the loss of a good sepoy. I append a panorama of the hills and villages, as seen from a point above Ninu looking north, which will give some idea of the general character of the country. Water was abundant along our route, especially beyond Ninu, where the undulating, park-like character of the slopes, backed up by tall, dark wooded cliffs, suggested itself as an admirable site for a station. Metna grazed about the grassy slopes in large numbers, and herds of hill buffaloes were seen at several villages; deer were seen here and there, and about Nisa partridges flew up from the grass on either side of the path at every turn. Tree-ferns, sago, and toko pat palms are seen near most of the villages and in the deep ravines,—the latter are carefully preserved, as they are most valuable for thatching purposes.

9. The villages are not always well placed for defence against rifles, being commanded from some neighbouring height; but others such as Bor-Bansang, Senua Niao, &c., are exceedingly well placed, occupying the highest points of the ridges on which they stand, and commanding all the approaches to them. The defences consist of double stockades made of interlaced bamboo and cane, and panjied ditches. The houses are generally scattered up and down without any attempt at order, and are half hidden among the trees which are not, as elsewhere, cut down to clear a village site, such only being felled as interfere with the houses; these are built on the unlevelled ground, the floor being carried out to the rear on bamboo piles, the back verandah being frequently a great height above the ground. The house is divided into an entrance hall, as it were, where the owner's weapons hang, also skulls of animals taken in the chase, and beyond, into several small apartments terminating with a large open verandah. Trays are suspended over the fire-places (of which there is generally one in each apartment), on which flesh fish, vegetables, and wood are dried. The walls of the houses are of bamboo matting, the roof being thatched with palm leaves or grass; the principal uprights project through the ridge some two or three feet, this portion being thatched also is to keep the rain from running down the post into the house,—this thatching is ingeniously worked into figures of men or animals very often. The reason given of this projection of the posts is that, as the part below the ground decays, it can be cut off, and the post lowered, without damage to the house. The Vangam's, *i. e.*, headman's, house is always very large, and built on the most level site in the village. It is generally about 200 feet long by 40 or 50 broad, and contains two large halls, one at either end, the intervening space being divided up into several apartments and store-rooms arranged on either side of a central passage. Each of the women's apartments has its own door of exit and verandah. On one side of the entrance hall stands the drum,—a large tree hollowed out and carved roughly at either end; it is played upon

Villages.

with clubs shaped like large dumbells. A large number of men perform at once on the drum, and, though each seems to hammer away entirely on his own account, the effect is harmonious and pleasing. They have several tunes, as it were, each being ended by a shout from the leader, responded to by the rest, when a fresh one at once commences. Opposite the drum is the rice-pounder, of great length, giving occupation to nine operators. The other hall is kept as an audience hall, where the chief receives his friends. It has a raised and matted floor, the rest of the building having as a floor the bare ground. This hall opens into a verandah. Every house is furnished with a few small stools on four short legs, and or two large beds, which, with their legs and a slight attempt at a bolster, are each cut out of one log. Tables made of cane-work, shaped like an inverted wine glass, and about two-and-a-half feet high, are used, on which to placed their food at meal-times.* In each village are one or two morangs, or bachelors' houses, in which a drum is kept, and also the collection of heads taken in battle; these are placed in rows of about twenty-five each in a large sloping tray placed in the verandah, just within the shelter of the roof. At Bor-Mutan there were 210 bleached skulls arranged in this way.

* The principal posts in the Vangam's house and the Morangs are generally rudely carved with representations of men and animals.

These villages are remarkable for their sanitary arrangements, small raised houses, in which calls of nature are obeyed, being built in various parts of the village and fenced round. Look-outs are built at all the gateways, and in front of the morangs, and here watches are always kept. These are also erected in the fields. At Kamhua I saw some watch-houses in the fields surrounded by a double stockade, enclosing a passage all round, and over the outer gateway a small platform was erected. Between Senua and Niao, by the roadside was a small table raised about eight feet from the ground, approached on either side by a broad wooden ramp. We were told that here peace is concluded between these two villages after a war. The chiefs, walking up each from his own side, meet face to face on opposite sides of the table, and, exchanging "chungas" of wine, drink to each other, and thus declare that peace is made. On the road to Niao also, was a curious mud figure of a man in bas-relief presenting a gong in the direction of Senua; this was supposed to show that the Niao men were willing to come to terms, if possible, with their enemies. Another mode of evincing a desire to turn away the wrath of an approaching enemy, and induce him to open negotiations, is to tie up in his path a couple of goats, sometimes also a gong, with the symbolical palm-leaf planted in the ground hard by.

10. The mode of disposing of the dead is the same in all these villagss in its main point, *viz.*, wrapping up the corpses in cloths and mats, and placing them on platforms under small roofs. The shape of these roofs differs in different villages slightly, but all are decorated with various coloured cloths and streamers, and have at each end a tall figure of wood, dressed, painted, and tattooed after the manner of the men of the village, and carrying imitation spears, daos, and shields,—gourds, baskets, &c., are suspended about the tomb. At Khanu the tombs were enclosed in such sheds with doors. Each shed contained several tombs of adults and children, being in fact regular family vaults. These tombs are all arranged on either side of the principal entrance to the villages. Cairns of stones are also erected, where the heads of the departed villagers, decorated with shells, beads, and bells, are collected, and earthern "gharras," filled with the smaller bones, are ranged among them. Each head is decorated in a slightly different way from the others, in order that they may be recognised by their surviving relatives.

Tombs.

11. The geographical results of the expedition, considering the nature and extent of the operations, were as successful as could be wished, and an area of 300 square miles of previously unmapped country obtained, on the scale of two miles to an inch. Topographically, a connection was made with Captain Samuell's work of last year, but unfortunately a trigonometrical connection was impossible, as Captain Badgley had been unable to carry his triangulation far enough from the west to enable us to continue it on to that of last year. This is to be regretted, but under the circumstances could not be avoided.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

ADMINISTRATION REPORT OF THE POLITICAL AGENT AND CONSUL-GENERAL AT ZANZIBAR FOR THE YEARS 1873 AND 1874.

PART I.—ADMINISTRATIVE.

Extent of jurisdiction.—The political and civil jurisdiction of the Political Agent and Consul-General at Zanzibar, which is co-terminate with the dominions of His Highness the Sultan, extends from Warshaikh (latitude 2° 19′ north, longitude 45° 53′ east) to Cape Delgado (latitude 10° 41′ south, longitude 40° 32′ east), and includes the islands of Pemba, Zanzibar, and Mafia. This stretch of coast comprises to the north of Zanzibar Island the Somali towns of Makdishau or Magadoxo (latitude 2° 1′ north, longitude 45° 24′ east), Marka (latitude 1° 42′ north, longitude 44° 45′ east), Brava (latitude 1° 6′ north, longitude 44° 3′ east), and Kismayu (latitude 0° 36′ south, longitude 42° 22′ east); the large island on which the Wagunya (Arab. Bajûnû, plur. Bajûu) Settlements of Paté, Pazé, and Siyu or Siwi, are situated, and the large Arabo-Swahili towns of Lamu (Amu), (latitude 2° 15′ south, longitude 40° 56′ east), Melindi (latitude 3° 12′ south), and Mombasa (latitude 4° 4′ south, longitude 39° 43′ east). To the south of Zanzibar the only town of any importance is Kilwa Kivinja (latitude 9° south, longitude 39° east approx.), although small villages, each the centre of a lucrative trade in gum-copal and cereal productions, are very numerous. The whole line of coast is indented with creeks and estuaries, many of which are the embouchures of rivers of considerable length, but with the possible exception of the Jub, none of them appear to be navigable beyond a short distance from the mouth, or to be of much service in developing the capabilities of inner Africa.

Population.—Of the varied races who inhabit this vast extent of littoral, the most important, both in point of wealth and influence, is that which, under the designations of Banian and Hindi, has its origin in the East Indies. Nearly the whole of the export coast trade is monopolized by persons of Indian birth or parentage, who in the town of Zanzibar act not only as independent merchants or shop-keepers, but as agents or factors to the various European houses settled in the place. The whole of these Indian residents, with a few exceptions, have a claim to British protection and are amenable to British jurisdiction.

In addition to the Indian and British-born inhabitants of Zanzibar, the Goanese are generally understood to be under British protection, in the absence of an officer accredited by the Crown of Portugal.

It has been impossible to ascertain the exact number of Indians residing in the Mrima, or coast of Zanzibar, but it is believed that the details given in Appendix A. (Statistics of Population), which have been collected by Messrs. Elton and Holmwood, are approximately accurate. Unless the machinery of a census were employed, it would not be possible, generally, to do more than give the number of houses settled on the coast.

In the town of Zanzibar the total population of the Indian community is as follows:—

		Males.	Females.	Children.	Total.
1. Hindu	...	314	0	0	314
2. Khoja	...	850	650	725	2,225
3. Bohra	...	109	78	131	318
4. Memon	...	15	10	16	41
Total	...	1,288	738	872	2,898

The greater number of Hindus or Banians residing on the mainland are merely agents for the houses having their head-quarters at Zanzibar. They are about 500 in number, taking an average of two to a house where the population is not known. The Banians, who chiefly belong to the Wania and Bhattia sects, merely reside in the Zanzibar territories for a few years, and never bring their wives with them.

It is difficult to form more than a rough estimate of the number of Khojas settled on the coast, as in some ports it has only been possible to obtain the number of houses. It is believed that very few Khoja women reside in the Mrima, and that it is the usual custom for Indian Mahomedans to form connections with women of native or servile origin. Taking the offspring of these *liaisons* as legitimate, it is probable that the total number of the Khoja community may amount to 500 souls.

Calculating in the same way, the numbers of Bhoras and Memons settled on the coast may be taken at 225 and 75 respectively. Nearly all the numbers of these two communities reside in the towns and villages to the north-ward of Zanzibar.

The whole number of British Indian subjects may therefore be reckoned approximately as follows:—

		In Zanzibar.	In Mrima.	Total.
Hindus	...	314	500	814
Khojas	...	2,225	500	2,725
Bohras	...	318	225	543
Memons	...	41	75	116
Total	...	2,898	1,300	4,198

The following is the number of the Goanese settled in Zanzibar and in the Mrima:—

		In Zanzibar.	In Mrima.	Total.
Shop-keepers	...	14	7	21
Clerks	...	10	0	10
Tailors	...	12	0	12
Servants	...	14	0	14
Washermen	...	2	0	2
Total	...	52	7	59

The number of British-born subjects resident at Zanzibar is as follows:—

		Males.	Females.	Children.	Total.
Official	...	4	3	2	9
Non-official	...	12	3	0	15
Total	...	16	6	2	24

Jurisdiction.—The jurisdiction possessed by the Consul-General in civil and criminal matters over this large body of British subjects is regulated by Her Majesty's Order in Council of the 9th of August 1866. Under the terms of this order the Consul-General possesses unlimited powers in all suits of a civil nature, subject to an appeal to the High Court of Bombay, where the sum or matter at issue exceeds $200 in money value, and provided that all suits of a value exceeding $500 be heard with assessors. In criminal matters the Consul-General has power to award a fine of $200, or imprisonment not exceeding one month; or should he deem the offence to be inadequately met by the infliction of these penalties, he may with the assistance of assessors award a fine of $1,000, or imprisonment up to twelve months. The Assistant Political Agents having been appointed British Vice-Consuls at Zanzibar have similar powers under the Order in Council.

Under the provisions of the Act of the Indian Legislature, No. XI. of 1872 (the Foreign Jurisdiction and Extradition Act), the Governor-General in Council has conferred upon the Political Agent at Zanzibar (Notification No. 1275 of 13th June 1873) the jurisdiction of a Justice of the Peace and Magistrate of the 1st Class, and by a further Notification No. 770, dated 1st April 1874, the jurisdiction in cases coming under the slavery section of the Indian Penal Code of a Deputy Commissioner under Section 36 of the Criminal Procedure Code. The Political Agent is therefore empowered in certain cases to inflict seven years' rigorous imprisonment subject to no appeal except to the Governor-General in Council.

The following Table exhibits the number of suits filed in the Consular Court during the years 1872, 1873, and 1874:—

Year.	Number.	Value of Suit.	Fees paid.	Remarks.
		$ C.	Rs. a. p.	
1872	45	32,171 25	673 0 0	Four suits for which no money value is claimed.
1873	68	38,909 87½	1,254 13 0	Three suits for which no money value is claimed.
1874	221	73,591 90	1,901 9 7	Four suits for which no money value is claimed.

I am unable to account for the great increase of litigation which is apparent during the past year The Court is now held in an easily accessible building, and every facility is given to suitors; but this is scarcely sufficient to afford an explanation. It may be mentioned, however, that as no Limitation Act is in force at Zanzibar, several claims of many years' standing have lately been brought before the Court; while the present transitional state of affairs here has also induced many people to seek a final settlement with their creditors, which in many cases can only be done through the intervention of the Consular authorities. Whenever practicable, recourse has been had to arbitration.

The number of criminal cases disposed of in the Consular Court during 1873 and 1874 are shown below:—

Year.	Number.	Offences against the Slavery Laws.		Offences against property.		Offences against the person.		Petty offences.		Fees and fines levied.
		Convicted.	Acquitted.	Convicted.	Acquitted.	Convicted.	Acquitted.	Convicted.	Acquitted.	
										Rs. a. p.
1873	18	8	4	3	.....	2	.....	1	.....	2,026 5 6
1874	52	15	2	2	.....	6	2	25	.....	3,131 6 8

In such a community as the Indian Colony at Zanzibar, consisting principally of traders and shop-keepers, offences of serious nature are very rare. The greatest difficulty has been to induce them to attend to ordinary sanitary rules and to keep the narrow lanes in which they reside free from the accumulation of animal and vegetable refuse. Several of the householders, who have shown gross neglect in this matter, have been fined, but continual vigilance is still required.

The most serious cases were those of Indians tried for offences connected with slave holding or dealing. One of these, that of Lalljee Dayal, was committed by Dr. Kirk to the High Court of Bombay, but was dismissed by Mr. Justice Gibbs on the ground of want of jurisdiction, the accused not being a British subject. The matter is now under the consideration of Government, but there is no doubt that the 4th Article of the Treaty of 1873 has had the effect of placing all natives of India residing in Zanzibar on an equal footing with British subjects in all matters connected with the Slavery Laws.

Political.—The political position of the State of Zanzibar and of its Sovereign has been so fully described in the published correspondence respecting Sir Bartle Frere's Mission to the East Coast of Africa that it would be superfluous, without entering into unimportant details, to attempt to add anything to the able paper furnished by the special Envoy on the subject. I shall therefore confine myself to mentioning one or two of the principal incidents which have occurred since the commencement of 1873.

The chief event during the two years under review is the signing of the Treaty for the suppression of the sea-borne slave-trade, which was negotiated by Sir Bartle Frere and concluded after the departure of the Envoy by Dr. Kirk; I shall advert to the effects of this Treaty a little further on.

One incident which should not be left unrecorded is the death of the Munyi Mku, or Sultan of the Wahadimu or original inhabitants of Zanzibar. This lad, who is mentioned by Sir Bartle Frere in his report, was the last of his race, and the tax upon the Wahadimu being no longer continued, they may be looked on as assimilated in every respect, except language, with the other inhabitants of Zanzibar. Sultan Ahmed, the Munyi Mku, died in March 1873 from small-pox.

The year 1873 was darkened by an event of an almost unprecedented nature on the East Coast of Africa.

On the 15th September Lieutenant M. McCausland, of Her Majesty's Ship *Daphne*, was murdered at Kionga, a small village to the northward of Lamoo, by a party of Wagunya. The village was destroyed, and the murderer subsequently arrested and imprisoned in the Fort of Zanzibar, where he died before the orders of Her Majesty's Government as to his disposal could be received. The motive of the crime is supposed to have been connected with our slave-trade policy.

Two other murders of Europeans also took place in 1874. On the 28th January Mr. Benjamin Hartley, a young student belonging to the Universities Mission, was killed at Morongo, a small village near Tanga, where he fell in with a slave caravan, and having injudiciously interfered with the Arabs in charge, he was shot down, and after being barbarously hacked about was left for dead. He was found and removed to Zanzibar, but died from the effects of his wounds on the 15th February following. Every effort was made to discover the murderers, but without success.

On the 10th April Mr. Arthur Heale, the Agent of a German House at Brava, was attacked and speared by two Bush Somalis while returning from a visit to a garden he possessed outside the town, and died a few days afterwards. The Somalis made their escape, but it is believed that they are known, and they may ultimately be captured. No blame appears to be attributable to the authorities or people at Brava.

Nothing further of public interest has occurred during the period under review.

Public revenue.—The revenue of His Highness the Sultan, Syyid Burgash bin Said bin Sultan, is almost entirely derived from the customs duties, which are farmed by the Bombay Firm of Jairam Sewjee. The sum annually paid by this House is $3,00,000, but it is understood that the total purchase money amounted to $5,40,000, the balance of $2,40,000 being employed in paying off the large debt due by the Ruler of Zanzibar to the Customs Farmer. The farm will expire in August 1876, and it is believed that the debt will be liquidated about the same time. In order to expedite this end, His Highness has lately begun to levy some vexatious and restrictive duties upon coast produce, a matter which will form the subject of a separate report.

The Sultan's private estates bring him in an income of $25,000 per annum. He has lately turned his attention to sugar-planting; but as it is very doubtful whether the climate of Zanzibar is suited to the cultivation of the cane, it is not probable that much success will attend his efforts in that direction.

The loss of revenue consequent upon the abolition of the sea-borne slave trade is estimated by Dr. Kirk at nearly £9,000 per annum.

Slave-trade.—Since the conclusion of the Treaty of the 5th June 1873 no large captures have been made by our cruizers of any vessels clearing from ports in the dominions of the Sultan of Zanzibar. In September 1873 a large dhow, containing 217 slaves, was seized by the Arab Governor of Lamoo, but with this exception all the large seizures have been made in the vicinity of Madagascar, and it has been clearly shown that a considerable trade still exists between that island and the small ports in the vicinity of Mozambique. The appointment of a Consul to the latter place will undoubtedly do much to check this traffic.

I annex (Appendix B.) detailed statement of the cases heard and determined in this Vice-Admiralty Court during the past two years, of which the following is a summary:—

Year.	Cases brought into Court.	Decree of condemnation.	Decree of restitution.	Number of slaves liberated.
1873	29	25	4	165
1874	14	13	1	674

So far as the conveyance of slaves by sea is concerned, I am glad to be able to report that to the best of my knowledge the Sultan of Zanzibar has steadily adhered to his engagements, and has, whenever called upon, cheerfully assisted the Political Agent in carrying out the policy of England; but within the same period the slave-trade has been resuscitated in a comparatively new form, and from the

latest intelligence received, there is little doubt that the land traffic, if not speedily checked, will soon grow into a regularly organized system, and eventually prove more lucrative than the maritime trade.

By Article IV. of the Treaty of 1873 natives of Indian States under British protection were precluded from any longer possessing slaves, and with the view of freeing any person who might still be held in bondage by British Indian subjects, Dr. Kirk and Captain Elton respectively undertook missions to the northern and southern portions of the Sultan's dominions, which occupied several months at the end of 1873 and beginning of 1874.

The following Table exhibits the results of these missions:—

Name of Consular Officer.	Owners.	Number of slaves.	Remarks.
Dr. Kirk	145	478	201 elected to remain with masters.
Captain Elton	313	1,409	927 elected to remain with masters.
Total ...	458	1,887	

As all deeds of mortgage in which slaves are held in part security have been declared to be invalid, there is much reason to hope that the stigma of slave-holding has at last been cleared away from the reputation of the subjects of the British Crown residing on the East Coast of Africa, and that the capital which has for years past been employed in promoting this abominable traffic may be now diverted to the higher purpose of developing the legitimate trade of these regions.

East African surveys.—As auxiliary to our efforts for the suppression of the trade, the operations of the vessels employed in the survey of the east coast must not be left unnoticed. Her Majesty's Ship *Shearwater* arrived at Zanzibar in July 1873, and before her departure for the Cape in February 1874 had completed the survey of Zanzibar Island and the opposite coast between Pangani and Dar-es-Salam, and had roughly sketched the coast to the southward as far as Kilwa. On the whole, the old charts of Captain Owen were found not so much to need corrections as additions. Her Majesty's Ship *Nassau* arrived in April 1874, and commencing at Kiswere has made a careful survey of the coasts as far as Cape Delgado, including Lindi and Mikindani harbours and the mouths of the Mungulho River. It is impossible to speak too highly of the labours by which Commanders Wharton and Gray, and the indefatigable staff of officers under their respective commands, have added to our previously limited knowledge of the geography and hydrography of this interesting but little known region.

The Consulate of Great Britain was raised to the rank of a Consulate-General on the 18th July 1873, and two officers were appointed as Assistants to the Political Agent in March 1873, and subsequently nominated as Vice-Consuls. I subjoin a list of the *personnel* of the various Consulates as they stood on the 31st December 1874.

Great Britain and Ireland.

Total ...	35	7	0	42

PART II.—Commercial.

Section A.

Trade of Zanzibar.

It will be convenient to divide this portion of my report into two sections; the first comprising a few remarks on the present condition of the trade and navigation of the port of Zanzibar, and the second a very complete and able *résumé* of the commercial state of the principal ports on the mainland of Africa to the northward of Zanzibar which has been drawn up by Mr. F. Holmwood, Second Assistant Political Agent and Vice-Consul, and is the result of the experience gained by that officer during his recent mission to the coast.

It has been frequently pointed out by my predecessors that no great reliance can be placed on the returns furnished to this Agency by the Custom House authorities or by private firms, it

being the interest of the former to exclude competitors from entering the field when the quinquennial sale of the farm takes place, and of the latter to prevent the establishment of rival houses in the place.

It is also impossible to procure trustworthy statistics of the export trade of that port, as no returns are kept except at time of entry when the 5 per cent. *ad valorem* duty is levied. A tolerable idea can, however, be formed of the amount of exported produce from the statements which accompany this report (Appendix C., Statistics of Trade) and which exhibit the totals of the various articles imported into Zanzibar from the mainland. By far the great majority of these articles are exported to Europe, India, and America, and it is on them that the trade of Zanzibar chiefly depends.

The following table exhibits in pounds sterling the total value of the import trade at Zanzibar for the years 1867-68 (the latest period exported on), 1872-73, and 1873-74. The commercial accounts of the place are made up to the 22nd day of August, the date of the Nowroz. Imports at Zanzibar Custom House exclusive of coast produce :—

Year.	Value imported.	Increase.	Decrease.
	£.	£.	£.
1867-68	433,693	.....	.....
1872-73	340,505	.....	93,188
1873-74	395,252	54,747	.....

It will be apparent from the above that the trade of Zanzibar cannot be considered as in a very satisfactory condition just at present. This is, I think, chiefly attributable to the existing transitional state of affairs. The action taken by Her Majesty's Government with regard to the slave-trade has unsettled the minds of the mercantile community, who scarcely know whether to consider the present arrangements as final or not, and it will probably be some time before confidence is restored. A marked improvement is however perceptible in the returns for last year.

The following table exhibits the total value of the import trade from Great Britain, British India, and Kutch for the years 1867-68, 1872-73, and 1873-74 :—

Year.	Value imported.	Increase.	Decrease.
	£.	£.	£.
1867-68	153,305	...	...
1872-73	138,515	...	14,790
1873-74	169,758	31,243	...

The ratio of British interests in Zanzibar as compared with the whole of the foreign trade is thus extremely favourable.

The following are the principal articles in which an increase is observable in the returns for 1872-73 as compared with them for 1867-68 :—Fish, salt; fruits, dried; grain and cereals; ivory; salt; and timber.

A decrease is perceptible in the following articles :—Arms, beads, cotton cloth, cordage, metals, perfumery and drugs, soap, sugar, wines and spirits, and wire (copper and iron).

In 1873-74, as compared with the previous year, the following articles show an increase :—Arms, beads, cotton cloth, crockery, gunpowder, metals, oil and oil seeds, perfumery and drugs, soap, sugar, timber, wax, and wire. A decrease is exhibited in the following items :—Gold lace, grain and cereals, ivory, wines and spirits.

It is impossible, without possessing a more intimate acquaintance with the local conditions which affect the trade of Zanzibar than any one after only a year's residence can pretend to, to account satisfactorily for these fluctuations. I may however allude to the significant fact that the items of arms, beads, and wire, which show a marked decrease in the returns for 1872-73, more than recovered their position in 1873-74. It is no secret that while the negotiations for the Treaty of 1873 were in progress, all orders for these articles (which are chiefly used in connection with the slave-trade, the "arms" being miserable muskets worth a few shillings each) were cancelled, whilst their renewal in the following year affords a melancholy proof of the vitality of the land traffic, to which public attention is now directed.

The value of imports from the coast to Zanzibar during the years 1867-68, 1872-73, and 1873-74 is shown in the following table :—

Year.	Value of imports.	Increase.	Decrease.
	£.	£.	£.
1867-68	321,642	.....	.....
1872-73	366,223	44,581	.....
1873-74	255,937	.....	110,286

The following articles of coast produce show an increase in 1872-73 as compared with 1867-68 :—cloves, cocoanuts, copal, and molasses. A decrease is observable in the following articles :—cassava-root, cowries, copra and coir, ghee, ivory (slight), and orchilla.

In 1873-74 the following fluctuations occur :—Increase—copra and coir, ghee, hides, and sesamum. Decrease—cloves, copal, cereals, ivory and timber.

It is not easy to account for the decrease in the import of cloves during the last year. According to the Custom House returns, the amount imported into Zanzibar from Pemba in 1872-73 was valued at $500,000, and in 1873-74 at $ 200,000, but I am assured by one of the principal merchants of Zanzibar that these figures are not correct, and that the following statement approaches nearer to accuracy :—

Year.	Amount imported. Frasilahs.	Price per Frasilah. $.	Total value. $.
1872-73 ...	80,000	6	480,000
1873-74 ...	50,000	8	400,000

According to the same authority, the crop for 1874-75 is expected to reach 80,000 frasilahs of 35lbs. per frasilah, which at the present price of $9 per frasilah will realize a total value of $720,000.

The falling off in ivory is due partly to the war with Mirambo in Unyanyembe, and partly to the prohibitory duties which have lately been imposed by the Sultan, and which have a tendency to divert the trade to Mozambique and the Somali country.

Orchilla weed, formerly one of the staple products of the coast, is now a drug in the market. Large quantities exported in former years are still lying unsold in the warehouses of Marseilles, and the Californian weed, though not equal to the finer descriptions of Orchilla produced on the east coast, is so much cheaper that it has driven the latter entirely from the field.

The foreign trade at Zanzibar, as distinct from the British, is carried on by two German, one French, and three American houses. I have been favoured by the German Consul with the following details of the trade which has passed through the hands of the two Hamburg houses of O'Swald and Co. and Hansing and Co. during the years 1872 and 1873. The returns for 1874 have not yet come to hand :—

Imports.

Articles.	1872. $	1873. $
Grey and colored cotton goods	165,000	240,000
Sundry manufactured goods	192,000	185,000
Glassware and beads	63,500	84,000
Arms and ammunition	76,000	61,500
Sundry hardware	8,000	5,000
Iron	11,500	6,000
Sundry small ware	33,000	15,500
Sundry merchandise	15,000	37,000
Total ...	563,000	634,000

Exports.

Articles.	1872. $.	1873. $.
Gum animi (copal)	53,000	52,000
Cloves	10,000	17,500
Orchilla weed	81,000	27,000
Timber	2,000	2,000
Hides	122,000	73,000
Cocoanut oil and copra	8,000	2,000
Sugar	21,000	5,500
Sesamum	32,500	56,000
Ivory	19,000	106,000
Sundries	11,500	36,000
Total ...	360,000	377,000

The American houses represented at Zanzibar are Messrs. John Bertram & Co., Messrs. Arnold, Hines & Co., and Mr. John Ropes. During the two years, 1873 and 1874, the value of the inward and outward cargoes (excluding treasure) was as follows :—

	By sailing vessels. $.	By mail steamers. $.	Total. $.
Inward cargoes	619,605	.....	619,605
Outward cargoes	946,516	300,350	1,246,866

The above return does not include $ 600,000 worth of American gold which was imported into Zanzibar by the mail steamers.

The French trade of Zanzibar is in the hands of the Marseilles Firm of Roux de Fraissinet & Co. I have not been able to obtain any details of the transaction of this house.

The establishment of the new lines of mail steamers has effected a revolution in the carrying trade of Zanzibar. The port is now connected with Aden, and thence with Bombay and England, by the monthly mail service of the British India Steam Navigation Company; with the Comoro Island and Madagascar, by the steamers of the same Company serving under contract with the French Government, and with Natal and the Cape by the mail service of the Union Company. It is scarcely too much to say that, with the exception of a few small sailing vessels employed in the coasting trade, the whole of the commerce of Zanzibar is now conveyed in English bottoms.

The following table exhibits the number and tonnage of square-rigged vessels and merchant schooners that have entered the port of Zanzibar during the years 1873 and 1874 :—

Nationality.	1873. Number.	1873. Tonnage.	1874. Number.	1874. Tonnage.	Total. Number.	Total. Tonnage.
English steamers	22	22,639	40	30,874	62	53,513
„ sailing vessels ...	10	3,865	4	1,810	14	5,675
American sailing vessels ...	8	4,964	11	4,449	19	9,413
German steamers	6	7,800	3	3,950	9	11,750
„ sailing vessels ...	8	3,630	9	4,056	17	7,686
French sailing vessels ...	5	1,739	8	2,044	13	3,783
Norwegian sailing vessels ...	1	1,400	2	850	3	2,250
Portuguese sailing vessels ...	3	700	2	500	5	1,200
Dutch sailing vessels ...	...	...	2	1,300	2	1,300
Danish sailing vessels ...	...	...	1	300	1	300

There are no returns of the number of dhows or native vessels entering Zanzibar under English colours, but the number of provisional passes of British registry given to vessels under British or British Indian ownership amounted to 216 in 1873 and to 206 in 1874.

The following statement of the number of dhows bearing French colours, which have entered Zanzibar during the years 1872, 1873, and 1874, may be of interest :—

Year.	Number.	Tonnage.
1872	67	3,406
1873	93	4,906
1874	100	4,868

On carefully reviewing the present commercial position of Zanzibar, it is impossible not to feel that at present it offers by no means an eligible field for the employment of English capital.

The disastrous effects of the hurricane of April 1872 have not yet passed away, and the transitional state of things, to which allusion has been made above, will not, it is to be feared, be remedied until some measures have been taken to place the question of the inland duties upon a sounder basis, and to ensure a sufficient revenue to the State without having recourse to an injudicious interference with the natural course of trade. The whole mercantile community is unanimous in declaring that trade was never so dull as at the present time, and this depression will continue to be felt until some radical change is effected in the conditions under which the commerce of the east coast is carried. Ivory, the staple product of the coast, is, from various reasons, almost excluded from the Zanzibar market; the unsettled state of the Somali ports, which are the chief emporia of the trade in hides, is causing the German houses seriously to take into consideration the advisability of continuing their local agencies; and the only article for which there appears to be a high demand and corresponding profits owes its favourable position in the market to the fact that the hurricane spared the clove plantations of the island of Pemba, and that no competition is to be feared from any other part of the Sultan's dominions. The cultivation of sugar, regarding which such high anticipations were formed some years ago, has only met with very moderate success, owing to the uncertainty of the seasons at Zanzibar. In addition to this, the present state of the currency must be considered; the circulating medium consisting of American gold and Indian rupees, both considerably overvalued, has driven English gold out of the market, and the course of exchange must necessarily be unfavourable to English traders.

At the time the American gold dollar was legalized as the monetary unit, it was anticipated that English sovereigns would be imported in sufficient numbers to counterpoise the impetus given to the introduction of the American coin. This however did not prove to be the case, and the English sovereign has consequently been demonetized. It is now so rare in Zanzibar that, although its value in relation to the gold dollar is 4 dols. 86c., it cannot be purchased under 4 dols. 98c. and remittances on England can only be effected therefore at a heavy loss. The fictitious value of the American gold dollar being now fixed by usage, no fresh importations of English sovereigns would suffice to solve the difficulty, as they would inevitably be undervalued.

Section B.

Agricultural and Commercial Report on the Northern Dominions of the Sultan of Zanzibar.

THE statistics given in the following sketch of commerce and agriculture on the East Coast of Africa, north of Zanzibar, for the commercial year ending 22nd August 1874, cannot be considered strictly accurate, no satisfactory means existing for checking the figures, they are therefore inserted incidentally rather than in a tabular form. Those relating to commerce may be taken as placing trade in a less prosperous light than it actually was.

As far as possible each district is considered separately, though from the general nature of the report this plan cannot be fully carried out.

Mombasa and Takaungu.—Mombasa is a town of about 12,000 inhabitants, mostly Swahilis. The British subjects consist of the Indian community numbering 96 houses, namely, 52 Bohras, 30 Memons and Scindis, and 14 Hindus, and the members of the two Mission Stations at Ribe and Rabai numbering 11 Europeans, including children.

The town is situated entirely on the island of Mombasa, or Mvita as it is called by the natives, a small island about three miles long by one-half broad, lying in a deep bight well sheltered at all seasons of the year. The creeks which separate it from the mainland are deep and accessible to the largest vessels, forming north and south harbours capable of accommodating a fleet of men-of-war and affording the—on this coast—unusual advantage of safe landing during the whole year.

The creeks branch out above the island, and give great facilities for bringing down produce from the Wanyika country for about twelve miles inland.

The town is built along the banks of the north harbour, which alone is now in use, though that to the south is more commodious.

The exports consist of millet (*holcus*), Indian-corn, ivory, copal, and sesamum (oil seed). Rice and a few other cereals, also manioc (cassava) and sugar-cane are grown for home consumption chiefly. Wax and India-rubber might be exported in large quantities, but the natives are everywhere wanting in that enterprise which would lead Europeans at once to prepare these valuable products from the raw material. In the districts around Mombasa I observed cotton of two varieties growing wild, yet quite free from blight or insects.

The whole of the copal and Indian-corn comes from the Wanyika countries, though there are said to be very extensive deposits of the former in the Teita range of hills which trend north and south, averaging ninety miles from the coast. The millet is grown by slave labor in the surrounding plantations, and the ivory comes from Ukamba, Teita, Chaga, and the Masai country.

There is a considerable amount of slave-dealing carried on here, numbers of the people acting as agents for proprietors in the Takaungu districts, also as overseers, guides, &c., in connection with the new land route.

The customs duties for the year just ended are given as follows :—

	$
720 frasilahs ivory, @ $3	2,160
Copal, hippo. teeth, rhino. horns, and miscellaneous produce	1,336
Goods imported direct from Bombay and Kuch (5 per cent.)...	104
Total ...	3,600

The total for the year 1872-73 amounted to $5,115, and there is thus a decrease of $1,515 in the duties for 1873-74, yet the state of trade is declared to be unaltered, except that the millet harvest having far exceeded the average, a much larger export of that grain is taking place. The cause of this decrease in duty is that the mail steamers have taken the import trade out of the hands of the native dhows, so that nearly the whole of the cotton and manufactured goods now come through Zanzibar instead of to Mombassa direct. The 5 per cent. duty is therefore paid at Zanzibar instead of at Mombassa as formerly.

The late Customs Master, Khimji, has been dismissed from his appointment and replaced by Lalji Ananji, a young Wania of very ordinary stamp, who was unable to give me the slightest information. Khimji procured the above statistics, and at the same time informed me that at least a third should be added to any statement of customs receipts procured from Custom House Books at the coast towns. Notwithstanding his dismissal, this Banian seems to be still the leading man among the Indian community here.

The principal exports of Mombasa are millet and Indian-corn, which paid no duty up to the date of this report. The former is grown by slave labour in the plantations, and the latter brought down entirely by the Wanyika, who cultivate it largely.

Takaungu, however, is quite taking the place of Mombasa as a grain port. It is situated about thirty miles to the north. Sheikh Rashid al Mazrui, the Governor, and many of his relatives, being large landed proprietors and cultivators, and being thus identified with the interests of the country, which moreover has been ruled by the house of Mazrui for centuries, may have much to do with this prosperity, but the soil from all accounts of the country above Takaungu, which has lately been brought so largely under cultivation, is unequalled, and the surrounding tribes being peaceable, everything is in favor of this district.

The port of Takaungu is its one disadvantage, it being a tidal creek with a dangerous bar. Several dhows have been wrecked here lately, and Kilife, three miles to the north, will be the future port of this district, as long as the grain trade is confined to native vessels. This place is a broad creek, well sheltered, and without any bar, in fact almost a bay or cove. Dhows of the largest size can enter and lie there during the whole year; a hard and broad road has also been completed between it and Takaungu.

I had no opportunity of visiting Takaungu district this year, and cannot therefore speak with certainty as to the extent of its cultivation; but if the information I received is to be relied on, this place is rapidly rising to importance, and is likely to become one of the future granaries of East Africa.

Malindi and Mambrui.—Malindi is a town of about 5,000 inhabitants, situated 62 miles north of Mombasa. It possesses a fine harbour, but is exposed to rollers during the north-east monsoon.

Mambrui, a town of 500 or 600 inhabitants, is situated in the same bay but outside the harbour, and the only landing is over a semi-circular bar of coral which breaks the rollers to a certain extent, but must be passed at high-water at the risk of shipping a heavy sea which not unfrequently swamps dhows venturing to this place. It is 12 miles from Malindi by land, and the river Sabaki enters the bay half way between the two places. It is under a separate Governor, who however was merely placed there to endeavour to open up the caravan routes through the Galla country. In this he has met with but partial success, and as all business now done there passes through the hands of merchants whose head-quarters are at Malindi, it is hardly possible to look upon these two places as separate districts, they are therefore taken together in this report.

The Indian community comprises 30 Bohra, 5 Memon, 2 Khoja, and 12 Hindu houses.

Here the bulk of the trade is in millet (*holcus*) and sesamum (oil seed), as many as thirty large dhows leave during September and October laden with the former, principally for Makulla, and in February, March, and April from fifteen to twenty are loaded with the latter. The millet harvest is over early in September, the sesamum gets ripe early in November, and is finished gathering towards the end of the year.

The plantations extend for about twelve miles inland, and nothing but the fear of the Galla and Wasania tribes that surround them prevents cultivation from extending as far as at Takaungu. The town pays $ 450 per annum to these tribes to purchase peace, and it is understood that the apprehension and return of runaway slaves is included in the bargain.

The soil is extremely fertile without being either heavy or damp. Bush land after being roughly reclaimed by burning produces heavy crops for five consecutive years without any kind of dressing, the sowing however is carefully performed and weeds are kept under. Insects are not troublesome, but enormous flocks of small birds are the pests of the farmer here, and were the only things greatly complained of when conversing with proprietors of land.

The sesamum seed, which is all of the black variety, grows as cleanly as the grain, and one may walk for miles through fields closely and regularly planted without being able to notice a spot of blight or a patch destroyed by insects.

This year the millet harvest has been exceptionally prosperous, and the sesamum crop bids fair to be equally so, both in quality and quantity. The market price of the former has rapidly sunk from $2-75 per gisleh of 320lbs. to $2-25, and the price of the latter is expected to average $ 4 or $4-25 per gisleh of 250lbs. These rates are lower than have obtained for years past.

The millet is shipped off at once for Makulla and Zanzibar, but the sesamum is mostly stored till the beginning of the south-west monsoon—about 4½ months—when it is shipped to Arabia, but part is sent to Zanzibar during the north-east monsoon.

There is a small export of Indian-corn. The duties on grain up to date of this report were—

				$ C.
Millet (*holcus*)	...	...	...	0 12½ per gisleh.
Sesamum (oil seed)	...	...	...	0 25 „
Indian-corn	...	...	...	5 per cent. *ad valorem*.

I had much difficulty in obtaining the statistics of the customs duties of this district. Premji Oderji, the Customs Master, evidently thinking it against his interests to answer my enquiries, but I obtained the following through Ali Dina, a Khoja, who is quite the leading man in the Indian community.

The duties for the year 1872-73 amounted to $4,000, and for this year, 1873-74, to $3,500.

The decrease, $500, is attributed to the same cause as that at Mombasa. The increase consequent on the prosperity of the harvests does not appear, as it will be credited to the revenue for 1874-75.

Ozy and Tana Rivers.—The district of Kipini, comprising the mouths of these rivers, lies about 25 miles south of Lamo, and is cultivated by proprietors residing generally at that place. There are five British subjects, two Bhoras, and three Hindus in the district, but they are all connected with houses in Lamo, and most of the produce grown or arriving there is exported through that town.

This district is taken separately, because the two rivers, Ozy and Tana, which flow through it and enter Formosa Bay within twenty miles of each other, undoubtedly form one of the natural highways to inner Africa, which have never been explored, but which there is reason to believe will eventually become of the first importance. Having spent a considerable time in questioning natives from various parts of these rivers, and traders and slaves who have traded on them, and finding their testimony agreed in a way most unusual among these people, I give the substance of it at some length.

Kipini and Kao are two small towns near the mouth of the Ozy, from which caravans usually start on this route, but occasionally one is organised at Msmbrui, to which reference has already been made, proceeding *vid* Gulcha and Garawa, two villages in the Galla country, which here reaches nearly to Ras Ngomeni.

The goods taken to purchase ivory are white and blue cottons, beads, red (maskat) dye, thick copper wire, iron hoes, brass rings, and copper chains. $6 to $10 worth of these goods is reckoned as the price of one frasilah (35lbs.) of ivory. The greater part of the route is by water, the canoes used are capable of accommodating fifty men, and four of these is the average number to each caravan.

The usual time for starting is in December or January when the river Tana is at its height and the country flooded, except in a few places where the banks on both sides are high ground. The route soon leaves the Ozy and enters the Tana by a deep but narrow channel, which is said to be an artificial canal. The passage of this canal occupies three hours, and the town of Chara is situated at its junction with the Tana. The next stage is to Simikaro, 4½ hours, and here the Pokomo country is entered, and the river is commonly known as the Mto Pokomo. The Wapokomo are an extraordinary people living in a country which the smallest freshet turns into a vast lake, and which during the annual rise of the river in December, January, and February is always under water. Their huts are erected on wooden stages to keep them out of the water, and from the nature of the country they can only cultivate in small patches, and the consequence is that they are constantly in want. They suffer very little from fever, and two natives from Lamo assured me that for years they had traded on this route, having huts and wives on each important stage; they rarely slept in the boats, yet they were remarkably free from illness. The great drawback they experienced was the plague of mosquitos, which they described as never absent; so numerous are these pests that the largest fires were useless in preventing their attacks, and where a native complains of these insects, they must be indeed venomous.

The Wapokomo are a mild and inoffensive race, and endure the many disadvantages of their country for the sake of the safety it affords them, the Gallas whose territory extends to the right bank of their river, having no canoes, and the Somalis, whose predatory excursions reach the country immediately north of theirs, which is also partly occupied by a Galla tribe, never caring to disturb these swampy villages. There are sixteen other stages in the country Pokomo after leaving Simikaro. The distances always calculated by time are as follows:—

Chadoro	...	...	...	2½ hours.
Kalindi	...	...	...	8 „

There is a large district taking the name of Kalindi, thinly populated, but rich in ivory. Large herds of elephants come down close to the villages during the floods.

Ngao	...	...	...	2½ hours.

Here the river spreads into a lake which is called 'Mchagababu, but the descriptions I got of this water were very vague.

Andamba	...	3 hours	†	Mwina	...	2 days
Betere ...	...	2½ „	*	Ndera	...	12 hours
Miatini ..	...	5 „	†	Gwanu	...	12 „
Yuunda	...	4 „	†	Kinakomba	...	9 „
Buu ...	...	9 „	†	Ndura	...	8 „
* Ngatana	...	8 „	†	Zubakhi	...	1½ days.
Malalulu	...	...	...	2½ days.		

Malalulu is on the borders of the Masanya country, and caravans are refused permission to pass through it; even during the latter stages mentioned the people are more independent, and "garama" or black-mail has to be paid to the Chiefs.

At Malalulu the traders meet the Wasanya and Wakwavi. The former come from Malakote, 12 days' march, and Korokoro, 15 days' march further inland. The latter place is said to be near a large mountain, probably Kenia, where the river possibly has its sources. At any rate it is difficult to

* These two places supply ivory in considerable quantities.
† These places supply some ivory.

account for the flooding of the Tana, except on the supposition that it is caused by the melting of the snows on some lofty range of mountains which would take place during the hottest season, in this latitude about January to March, as the rainy season here on the coast does not commence till the end of April, and travellers report that further inland it comes on in June.

I was informed that although very savage, these tribes would be quite willing to admit strangers amongst them for the purpose of trade, but they insisted on also having the right to bring their produce safely to the coast. It appears that some years ago one of their trading parties which endeavoured to come down the river to Kipini had been seized and one of their number murdered, and that the messenger they sent to obtain redress was told by the Arabs that the Sultan's orders were to refuse permission to all the upper tribes to pass to the coast on any pretext.

The Banians at Lamo were however very enthusiastic as to the advantages to be obtained for their trade by the opening up of these countries.

Much of the ivory of the Ujanda and north Unyamwezi country is said to find its way by this route, this I think doubtful, but it is certain that were the road open it would compete successfully for the ivory from the shores of the Nyanza Lakes which at present goes through Egypt by the immensely long route of the Nile.

Moreover the distance is so short that the cultivation, for export, of coffee, there growing in perfection, and other produce never likely to pay for its carriage *vid* the Nile, may eventually become profitable should communication by this line be established. If the difficult problem of the civilization of the wild tribes of inner Africa be surmountable, it will be by opening up facilities for commerce such as this that it will be solved, for in the absence of such inducements the, to them, distasteful work of cultivation will never progress beyond the servile labours of their women which for ages has sufficed to supply their wants.

Lamo.—Lamo is a town of about six thousand inhabitants, and is situated 2½ miles from the entrance of the harbour which has a somewhat dangerous bar during the south-west monsoon. The harbour shelves off towards the north into a broad but shallow lagoon which meets a creek having its mouth a few miles to the southward forming the island on which Lamo is situated. These creeks branch off in several directions, but the principal arm, called Lamo channel, runs northwesterly for about six miles into Manda Bay forming the islands of Katao and Manda, which are merely separated by a deep ditch entered by an extensive lagoon opposite Shela, the Somali suburb of the town. I believe good anchorage for large vessels will be found at the entrance of this lagoon. At high tide vessels drawing about 12 feet can safely enter the harbour except there is a heavy sea on. Dhows of the largest size enter at all times, and when leaving for the north go by way of the creek to Manda Bay, but there is reason for believing that this channel is gradually filling up, while at the same time the main entrance is said to be getting enlarged.

My impression is that when properly surveyed, Lamo will be found a fine harbour for steamers, and that the bar may be rendered deep enough for those of considerable draught through the medium of very simple artificial appliances.

There are here 51 houses of British subjects, namely, 14 Bohras, 1 Khoja, and 36 Hindus.

The principal exports are ivory, hides, millet, orchilla, sesamum, rafters, and cattle.

Most of this produce finds its way to Zanzibar through the hands of the Indians, and the sources from which it is derived are so varied that business progresses steadily throughout the year, instead of being confined to a few months followed by a long season of almost enforced idleness, as is the case at most of the ports on the coast.

The ivory comes by the Pokomo route above described, the hide and cattle trade is of course confined to the Mussulman community, who deal almost entirely with the Bush Somalis. These savages have a regular suburb of their own at Shela which is a source of considerable anxiety to the Governor. The millet and sesamum is grown in the neighbouring plantations on the mainland, the soil of the island being too sandy for anything but cocoanut and a few fruit trees, but many of these, which were flourishing last year, I found to have been laid waste by the Somalis who are gradually closing on the coast towns, and will, I fear, shortly commence a guerilla warfare which must seriously interfere with trade. Were these Bush tribes to give up their constant petty internal strife and unite against the Arab Government, nothing but European intervention could save the various towns north of the Ozy river from pillage and rapine, and the British subjects at Lamo are strongly alive to this fact, and none doubt that eventually it must happen unless the hands of the Governors are strengthened by the Sultan in a much more practical manner than there seems any probability of.

Orchilla weed is procured from the numerous narrow damp creeks which branch out from the main channel above described, many of them run from ten to fifteen miles inland.

The Indians and even European merchants at Zanzibar contract with the owners of 'Mtepes, who send crews to gather cargoes of this lichen, receiving an advance on signing of contract, but this trade is rapidly falling off in consequence of the low prices at present obtaining for the dye in Europe.

Zanzibar rafters are generally in demand, and are usually contracted for in a similar manner. 'Mtepes are the only vessels suitable for carrying such a cargo.

Abundance of bees wax and doubtless other products might be brought down from the interior, but its present state is entirely unfavorable to commercial enterprise.

The towns of Siwy, Paza, &c., are nominally within the jurisdiction of the Governor of Lamo, but he is instructed in no way to interfere, except in the collection of their customs duties which are supposed to pass through the head office and are included in the following return. In other respects these towns must be considered as belonging to a separate district.

Customs duties of Lamo and District.

				$
Total for the year 1872-73	...	...	...	13,861
Ditto ditto 1873-74	...	...	...	15,362
Increase for the latter year	...	...	...	1,501

The duties on most articles of export, up to date of this report, were calculated at the rate of 5 per cent. *ad valorem*.

The collection from the native and Arab proprietors is here made entirely in kind, a Customs boat with two Banian clerks being constantly employed in visiting the plantations and bringing in the dues.

Patte, Siwy, Paza, and District.—Manda Bay at the north end of Lamo channel is nearly landlocked, but has a good entrance and a stretch of deep water close to Manda Island, which forms a safe anchorage for the largest vessels.

The north shore of this Bay is formed by the southern coast of a large island which contains the towns of Patte, Siwy (or Siu) Paza (or Rasini), Zingatini, and Tundua. The former is interesting only in an archæological point of view, still containing the ruins within well preserved walls of a town of about one hundred thousand inhabitants, but at present having only a population of about one hundred souls.

Siwy, about six miles north, is a town of ten thousand inhabitants, situated about one and a half miles up a strong creek navigable to large dhows only at high water. It is compactly built in a fork of the creek, and its situation is extremely low, yet the place is clean and healthy. The city was originally built in the form of an oblong square within four walls having nine fortified gates. the walls still exist, and some of the gates, and, unlike most of such remains on this coast, bear no trace of European or Persian design, though undoubtedly of some antiquity.

There are six British subjects here, namely, 1 Bohra and 5 Hindus, who all do a thriving trade.

The inhabitants call themselves Pumao, but are nearly allied to the Bajunia tribe, yet they cherish a deep enmity against the neighbouring town of Paza, the head-quarters of that tribe, and were it not for the constant watchfulness and firm government of Sa'id bin Hilal, the Arab Governor, who occupies the strong fort separated by a narrow creek but commanding the town, they would long ago have rebelled and the old strife have been renewed which, until they were conquered by the late Sultan Sayyid Majid, made the island a perpetual battle-field.

Owing to a few years' peace the place is rapidly increasing in commercial importance, and if the Somalis can be kept off from the mainland plantations opposite, this progression is likely to continue.

It is in an agricultural point of view that I propose to consider this island and its plantations on the mainland, particularly that portion included in the district of Siwy.

The soil of the island is extremely light and friable, though not generally sandy, it has everywhere a substratum of porous limestone rock probably of coralline formation. Though not suitable for cereals, it seems all that could be desired for tropical fruits and vegetables, and though skilful cultivation has only been carried on for a few years, the effects have surprised the natives. The great drawback at first was want of water, but a good supply is now readily obtained by sinking wells about twelve feet into the rock. They have begun to import camels, by whose means the regular system of irrigation similar to that employed at Maskat is already commenced; oxen are not found strong enough here for this work.

The products now successfully cultivated are tobacco, tambun, cocoanuts, bananas, and dates, besides water-melons and nearly every kind of tropical fruit.

Tobacco is largely exported to the towns on the coast, and is of a fine quality and flavour. It is likely to become a staple export. Tambun (pân), a leaf much used (in conjunction with betel-nut) by all natives and Indians, grows more readily than in any part of the Sultan's dominions; there are large gardens of it, and during the north-east monsoon it is even sent as far as Zanzibar, where it is found difficult to rear.

Cocoanuts grow in profusion, and are principally used to brew the native beer (tembo) which from Lamo to Tula is generally used as a beverage even by strict Moslems.

Bananas are largely grown, and form almost as general an article of diet as millet, in fact supplying the place of manioc (cassava), which is but little cultivated here.

But the luxuriant growth of the date palm is the most notable feature connected with agriculture in this district. The date has been tried throughout the Zanzibar dominions and has rarely been found to fruit; I believe Dar-es-Salam has proved an exception, but even here the fruit does not ripen properly. At Siwy, however, this palm seems to prosper as completely as in the Persian Gulf. I inspected more than a hundred trees averaging from three to six years old, and though utterly neglected and choked with weeds, all those of five and six years' growth were completely laden with fruit, and many of the mere bushes of three years were in full bearing. The trees were of two kinds, red and white, "kush." I carefully examined them and cut several spikes of fruit and found all without the slightest trace either of insect or mildew, whereas all date trees I have before examined either at Zanzibar or on the coast have been infected with both. The Governor informed me that last year they had nearly as good a show of fruit which ripened thoroughly, early in the north-east monsoon. He has now sent to Maskat for a large quantity of young trees of the best sorts.

This freedom from insects, above referred to, appears to apply to the whole of this district and that of Patte, for during a stay of some days I did not observe an insect of any kind upon the trees or vegetables either under cultivation or growing wild, and the natives assured me they were equally free from them during the wet season.

In concluding a description of Siwy it may be mentioned that more aged persons and very young children were seen here than I ever before observed in a foreign town.

Large herds of cattle and flocks of sheep are reared in this district; the latter are very fine specimens of the Somali breed, and are largely exported, as is also Sumli, or ghee, which is preferred by the Hindus on the coast, who use it with all their food, to that from any other district.

The towns of Tundua and Zingatini on the eastern and north-eastern sides of the island are small, and the inhabitants devote themselves almost entirely to the breeding of cattle, sheep, and goats.

Paza, called generally by the natives Rasini, is a town of about five thousand inhabitants; it is the residence of the Bajunia Chief, Mzee Saif. Though only 5½ miles north of Siwy, one seems to be visiting an entirely different country. Doubtless this is principally owing to the large proportion of black alluvial soil on the banks of the creek up which it is situated, and which is nearly dry at low tide, but the habits of the people, who are dirty and lazy, seriously affect the town, which presents a strong contrast to the cleanliness of Siwy; it is most unhealthy, and both it and the country round are constantly enveloped in a damp mist; mosquitos, ants and other insects swarm everywhere, and cultivation seems to be confined to the necessaries of life.

There are three Hindu British subjects here.

On the mainland opposite the towns of Siwy and Paza large plantations stretch for some miles inland belonging to the respective towns. Here large quantities of millet and sesamum are grown,

but most of the slaves employed in the cultivation go over at daylight and return to the towns at sunset, the country being unhealthy, and lions numerous and unusually troublesome. The channel here is about 3 miles wide. During my visit a fresh trouble occurred, which I fear will ruin these mainland settlements, the Bush Somalis having come down and killed or carried off many slaves and cattle in the most distant of them, at the same time committing other wanton destruction of property.

The Bajunia country proper however is up to the present time free from Somali attacks. It may be said to extend from Taka, nearly opposite Paza creek to the Shamba river, just south of Tula. Here the country becomes more hilly and healthy, and many proprietors resident at Paza have large tracts of country under cultivation. The Chief and his brothers cultivate nearly the whole of the country from Kwyhoo to Kionga, but they are beginning to feel the want of more labour owing to our action with regard to the slave-trade.

Kionga and Shakani are the two other ports in the Bajunia country; their principal trade is in cowries which are dried all along this coast.

Tula can hardly now be included in the Bajunia country, being under a local Chief who is directly responsible to the Governor of Kismayu. He receives, however, no protection from that quarter and every now and then predatory bands of Somalis come across the mainland at low water and lift the cattle of the inhabitants who themselves escape to the bush. The cattle here are extremely fine, and like the Somalis the people live principally on milk.

There are a few large dhow owners here who do a good trade up the creeks, and two Indian houses are represented by Swahili Agents, one of which is thinking of withdrawing, doubtless in consequence of the small demand for manufactured goods since the cessation of the slave-trade which was here carried on to a large extent, but this feature is temporary only, and honest trade will soon be found to replace the illegal traffic. There is a large trade in cowries here.

The mainland opposite which bears evidence of having once been under cultivation, has quite relapsed into forest; within three miles of the shore I observed gazelle, the blue-crested guinea-fowl, in large numbers, also three varieties of antelope, hares, immense baboons, giraffes, and the prints of lions, a plain proof that the country has long been deserted by mankind.

Kismayu.—This town is simply a Somali colony, but is likely rapidly to increase if under a sensible and energetic Governor. The present man is all that could be desired, being extremely firm and, when necessary, severe with these unmitigated savages who are mostly of the Kurblalla tribe, and yet encouraging them to trade and allowing them to settle though only well under the guns of the fort.

The principal trade is in hides, and the customs are collected either at Lamo or Zanzibar, to which most of the cargoes are consigned.

There are two British subjects, Bohras, here and a Hindu house represented by an Arab.

Kismayu is not an easy port to enter, and the landing is very unsafe and inconvenient.

From the river Jub, ten miles north of Kismayu, to Brava the country is entirely in the hands of the Somalis, and dhows give this coast a wide berth, as death or captivity would almost certainly be the lot of any crew stranded thereon. It cannot therefore be looked upon at present as part of the Zanzibar dominions, though the Governor of Kismayu is already talking of annexing the principal mouth of the abovementioned river.

Brava.—This town is situated 130 miles north of Kismayu and in common with all the ports on the Banadir is a most difficult place at which to load or discharge cargo. It is however most conveniently situated as a market for the produce of the south Somali country, and were the Government stronger and the country more safe the export of hides alone would make it a considerable commercial centre.

There are several caravan routes from the interior to this town all suitable during a great part of the distance for camel transport, and one to Bandera on the Jub, 12 days' march, appears once to have been a regular highway to this capital of south Somali land, and would undoubtedly be re-opened were the adjoining tribes once tranquillized. There are three British subjects, two Bohras and one Khoja, residing during the shipping seasons, namely, from March till June and September till November, the exact dates depending on the breaks in the monsoons when alone vessels can lie here.

I was unable to get at the customs statistics here owing to the Customs Master having been driven out of the town by the Somalis who will not tolerate the presence of a Hindu. He had left a Sheheri Arab clerk, who however had no accounts in his possession. The Customs Master was living under the protection of the Governor of Merka, where I was unable to proceed. Cotton grows freely here, it is of good quality and long staple, and is largely woven into a fine cloth by the natives.

Merka.—This town, which is 58 miles north of Brava, is rapidly increasing in importance and, it is said, will shortly become quite a colony of British Indians who have long wished to bring their wives and families to the healthy ports of the Banadir, but have been deterred by fear of the Somalis. Now that the Sultan has provided Merka with a strong force for its protection, they are flocking to it in considerable numbers, and even the Hindus are talking of obtaining a dispensation from their Rajas to permit of their bringing their families to this place.

Mogdisho.—This town has only been conquered by the Sultan's troops a few months. The Governor of Merka skilfully availed himself of the quarrels of two rival factions in capturing this place, and a fort will doubtless be at once erected here.

Washeikh.—I believe His Highness the Sultan lays claim to this town, whose Sultan and people however in no way recognize him, neither has he any representative in the district. This place is beginning to attract caravans from the interior owing to the circumstances detailed in the accompanying report respecting the new scale of customs duties in the Zanzibar dominions.

My object in this first report has been to give a general sketch of commerce and agriculture on this coast hitherto so little visited. I have however carefully prepared the way for obtaining in future years reliable statistics, having spared no pains in impressing upon Customs Masters and other influential British subjects the responsibility incurred in giving other than accurate information to British Consular Officers visiting their districts, and it has generally appeared to me that this advice has been received as appropriate.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

TRADE REPORTS FOR THE PERSIAN GULF AND MUSCAT FOR THE YEAR 1874-75.

No. 624—163, dated Bushire, the 18th June 1875.

From—LIEUT.-COLONEL E. C. Ross, H. B. M.'s Political Resident, Persian Gulf,

To—The Secy. to the Govt. of India, DEPT. OF REVENUE, AGRICULTURE AND COMMERCE, Simla.

I have the honor to transmit to you, herewith, Trade Reports for the Persian Gulf and Muscat for the year 1874-75.

Memo. showing number of Returns accompanying the Trade Report of the Residency, Persian Gulf.

1. Statement showing Imports into and Exports from Calcutta, from and to Persian Gulf, during the year 1873-74.
2. Return showing the Import and Export Trade between Bombay and Persian Gulf for the year 1873-74.
3. Statement showing Imports into and Exports from Kurrachee, from and to Persian Gulf, in 1873-74.
4. Statement showing the declared value of the total Import and Export Trade between Calcutta and the Persian Gulf from 1869-70 to 1873-74.
5. Statement showing the declared value of the total Import and Export Trade between Bombay and Persian Gulf from 1869-70 to 1873-74.
6. Statement showing the declared value of the total Import and Export Trade between Kurrachee and Persian Gulf from 1869-70 to 1873-74.
7. Table showing the average tonnage of vessels entering and leaving the port of Bushire during twelve months in 1874.
8. Abstract table showing the total estimated value of the principal and other Articles of Trade imported into Bushire in 1874.
9. Abstract table showing the total estimated value of the principal and other Articles of Trade exported from Bushire in 1874.
10. Contrasted statement showing the value and description of goods imported into Bushire during the years 1873 and 1874.
11. Contrasted statement showing the value and description of goods exported from Bushire during the years 1873 and 1874.
12. Table showing average tonnage of vessels entering and leaving the Port of Bahrain during twelve months in 1874.
13. Abstract table showing the total estimated value of the principal and other Articles of Trade imported into Bahrain during the year 1874.
14. Abstract table showing the total estimated value of the principal and other Articles of Trade exported from Bahrain during the year 1874.
15. Contrasted statement showing the value and description of goods imported into Bahrain during the years 1873 and 1874.
16. Contrasted statement showing the value and description of goods exported from Bahrain during the years 1873 and 1874.
17. Table showing average tonnage of vessels entering and leaving Arab Coast of the Persian Gulf during twelve months in 1874.
18. Abstract table showing the total estimated value of the principal Articles of Trade imported into the Arab Coast in the Persian Gulf known as the Pirate Coast extending from Ras-el-Khaymah to Aboo Dhebbee during the year 1874.
19. Abstract table showing the total estimated value of the principal Articles of Trade exported from the Arab Coast in the Persian Gulf known as the Pirate Coast extending from Ras-el-Khaymah to Aboo Dhebbee during the year 1874.
20. Table showing average tonnage of vessels entering and leaving the Port of Bunder Abbass during twelve months in 1874.
21. Abstract table showing the total estimated value of the principal and other Articles of Trade imported into Bunder Abbass during the year 1874.
22. Abstract table showing the total estimated value of the principal and other Articles of Trade exported from Bunder Abbass during the year 1874.
23. Memorandum on the Opium Trade of Persia with three accompaniments marked A, B and C.

Report on Trade of the Persian Gulf for 1875.

The Report on Trade for the year 1873 being intended as the first of a series was prefaced by some general remarks on the subject, which, so far as the circumstances are unaltered, need no repetition.

During the year 1874, a weekly line of mail steamers commenced running between India and the Persian Gulf and Busrah, and although the direct line of steamers between London and Busrah was temporarily discontinued, this service is about to be re-established on an improved system by the British India Steam Navigation Company.

The statistical information collected for the year 1874 will be found in a set of tabular statements of similar form to those submitted with the last annual report with the addition of the contrasted statements exhibiting the increase and decrease of imports and exports at the ports of Bushire and Bahrain as compared with those of the previous year.

The memorandum on the subject of the opium trade of Persia drawn up by Mr. G. Lucas, Uncovenanted Assistant Resident, which accompanies the report, will be seen to contain interesting information on that subject.

There has been a very marked falling off in trade as regards the Persian Coast, during the year under report. At the port of Bushire the decrease is shown in both imports and exports and amounts to an aggregate of over eighteen lakhs of rupees. This decrease would have been still greater, but for the removal of the prohibition on the export of grain, and increased exportation of opium.

The Persian market is supposed to be still overstocked, and a further depression of trade may be expected.

The harvests in the south have been but scanty, and though the return probably covers the outlay, it will scarcely do more.

The same impediments to trade as were alluded to in the previous report still exist in Southern Persia, except perhaps it may be allowed that the efforts of His Royal Highness the Governor General of Fars, have rendered the caravan roads in his province more secure than they were.

The hopes that had been formed of reforms and innovations tending to develope the resources and improve the communication seem, as regards the south of Persia, far from realization.

The remarks which were previously advanced regarding the difficulties which beset the British merchants in Southern Persia, and the requirements to facilitate commerce, might be repeated at the present time with increased emphasis.

In 1872-73.		
Decrease from 1869-70	... Rs.	61,70,051
In 1873-74.		
Decrease	... ... Rs.	9,87,878

The tables 1 to 6 which have been obligingly supplied by the Collectors of Customs of Calcutta, Bombay and Kurrachee, show the continued diminution of the value of the trade between India and the Persian Gulf.

N. B.—The above details have been supplied by a British Merchant at Bunder Abbass, and compiled by Mr. George Lucas, Uncovenanted Assistant Resident, Persian Gulf.

Extract from the Administration Report of the Muskat Political Agency for 1874-75.

TRADE.

The annexed returns show the approximate value of imports and exports during the year. A marked increase is observable over those of the preceding year. Though Muskat is by far the principal commercial depôt of Oman, the ports of Soor and Sohar import goods from India and the Gulf independently, and as the enforcement of customs duties is practically in abeyance at those places, they are gradually drawing away a good deal of the trade from Muskat.

The chief production of the country and one of the staple foods of the people are dates, and great losses are suffered this year in consequence of a great portion of the crop being destroyed by heavy and unseasonable rains. This would have caused great distress had it not been for the unusual cheapness of grain in Persia and Busreh which was imported in large quantities.

Rice was also largely imported during the year.

The customs have been farmed for $ 120,000 which is probably much under the actual receipts.

The exchange has averaged during the year from Rs. 208 to 220.

A.

S. B. MILES, *Lieut.-Col.*,
H. B. M.'s Political Agent and Consul, Muskat.

Memorandum on the cultivation and exportation of Opium in Persia.

Opium is cultivated principally in Yezd and Ispahan, and partly in the districts of Khorasan, Kerman, Fars and Shushter.

The opium grown in Yezd is considered to be better than that in Ispahan and elsewhere, owing to the climate and soil of that place being better adapted for the growth of the drug. But the district of Yezd, notwithstanding the existence of a large cultivable area, is not capable of any considerable extension of the cultivation of opium, owing to the insufficiency of the means, both natural and artificial of irrigation.

Ispahan, however, differs from Yezd in this latter respect, as it abounds in streams and rivers, and is capable of greater extension of the cultivation of the drug. But the cultivation of cotton and cereals takes up a large part of those resources and tends in no small degree to reduce the culture of opium.

A few years ago, the profits of the opium trade having attracted the attention of the Persians, almost all available or suitable ground in Yezd, Ispahan, and elsewhere was utilised for the cultivation of opium to the exclusion of all cereals and other produce.

It was then supposed by some that the opium cultivation would be indefinitely extended in Persia. But circumstances eventually showed that such could not be the case.

The attempt of the natives to enrich themselves by cultivation and growth of a profitable article of trade and their neglect to provide for the necessaries of life, combined with drought and other circumstances, resulted in the famine of 1871-72.

The costly experience then gained has made the Persians more careful and provident, and they are now using a limited space for the cultivation of opium.

The largest produce they had in Persia, a few years ago, did not exceed 2,600 cases, it has since been reduced to some 2,000 cases, as shown in the accompanying Table marked A.

The quantity exported during last year, *viz.*, between 1st January and 31st December 1874, was 2,002 cases, as per annexed Table marked B.

Of this 583 cases were the produce of the crop of 1873-74 and 1,419 that of 1874-75.

The probable export for the year 1874-75 is estimated at 2,030 cases, as per appendix marked C.

The crop comes to hand in May and June, and the great part of the opium finds its way at the shipping ports between September and January.

The shipping ports are Bushire and Bunder Abbass. The whole produce of Ispahan and Fars is brought to Bushire. The produce of Khorasan and Kerman is taken to the Yezd market; and this together with that of Yezd itself, are sent partly to Bushire partly to Bunder Abbass.

The opium has hitherto been carried by English steamers running monthly between England and the Persian Gulf. The portion which is intended for China is trans-shipped at Suez on board the P. & O. Co.'s steamers. This route is selected in view to avoid the duty levied at British Indian ports.

The exportation of opium from Persia during the year 1874 was as follows:—

Vide Table B.	To Hong-Kong cases 1339, and Singapore 80 ...	1,419
	To London	583
	Total Cases ...	2,002

The Persian opium, it is said, is not much liked in China, owing to its having a peculiar flavour caused by the mixture of a large quantity of oil during process of preparation, and owing also to its being sometimes found adulterated.

It however finds a somewhat better market in London, inasmuch as it contains, on an average, a large quantity of morphia.

The greater part of the Persian opium taken to London is thence sent to the Continent and to America.

Prior to the opening of steam communication on the Persian Gulf some opium used to be sent from Persia by land to Constantinople, whence it found its way to the Continent. But that route has since been altogether given up.

About 100 cases of opium (in cakes) are brought annually to Persia from Herat. This is taken to the Yezd market. From Yezd also a quantity of opium prepared in the shape of small sticks or cylinders is sent for consumption in Herat.

A small quantity of stick opium is consumed in Persia itself.

No opium whatever is known to be imported into Persia from other places.

The 25th January 1875.

GEO. LUCAS,
Uncovtd. Asst. Resdt., Persian Gulf.

A.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

LADAKH TRADE REPORT FOR 1874.

No. 99, dated Ladakh, the 25th April 1875.

From—Captain E. MOLLOY, Officiating British Joint-Commissioner, Ladakh,
To—The Secretary to the Government of the Punjab.

I HAVE the honour to submit Trade Report for 1874, together with statistics (A. to M.), Joint-Commissioner's accounts, and medical returns, prepared by Hospital Assistant Chirágh Dín.

THE year 1874 will be remarkable in the annals of Ladakh trade as having witnessed the first direct introduction of the fabrics of Manchester to the markets of Central Asia, an enterprising English merchant having himself piloted within the year a considerable caravan of goods from England to Turkistán.

2. Although a journey of this sort is not to be accomplished without confronting difficulties and enduring hardships, the spirit and energy of Mr. Russell were equal to the occasion; and with the exception of an unfortunate mishap which occurred on the desolate steppes of the Changchenmo, where a body of his mule-men, overtaken by a snow-storm that killed a great proportion of their mules, lost heart and deserted their loads, the journey may be said to have been achieved with complete success. Even the loads left on the Changchenmo did not lie there long, for on arrival at Shah-i-dulla Khoja, on the borders of Yárkand territory, Mr. Russell was enabled to arrange for carriage to bring them on at once. From this point the Nomad Khirghiz, whose yáks furnish the only means for the transport of loads across the Sanjer Pass, appear to have given him every assistance; and on his arrival in Yárkand he describes his reception as having been most hospitable and hearty; indeed more recent accounts shew that nothing is left undone to render his stay in the country pleasant and agreeable.

3. As I propose discussing the commercial success that has or is likely to attend his venture further on, it is only necessary to say here that it has of course contributed a large increase to the trade of the past year, the amount of which is no less than Rs. 26,30,932, a figure that has never yet been approached in Ladakh statistics.

4. It may be as well to remark here that in valuing his caravan at Leh, Mr. Russell priced the greater part of his goods at their selling rate in Yárkand, for owing to special arrangements made for its transport, the carriage required was paid for at through rates from the Punjab to Turkistán, instead of as is usually customary, there being a break in these rates at Ladakh, and in consequence it would have been very difficult to make an intermediate estimate of the value of the caravan as it stood in Leh. This fact of course makes Mr. Russell's prices appear disproportionately high when compared with goods figuring at Ladakh prices, and it has, moreover, somewhat unduly swelled the trade totals.

5. These, however, are by no means entirely indebted to the Central Asian Trading Company for the expansion that has characterised them during the past year; for even if no consideration be taken of the importations of that Company which, from Mr. Russell's valua-

tion, may be in round numbers put down at Rs. 3,10,000, we still find that there is a margin of excess of Rs. 2,34,203 on the total recorded for 1873, which is a conclusive and satisfactory proof that 1874 adds one more year to those that have preceded it in bearing witness to the steady and unvarying progress of our trade with Eastern Turkistán.

6. Although the first merchants of last year's caravan reached Leh rather earlier than they did the previous year, that is, in the beginning instead of the end of October, this was not the case with the bulk of the season's importations, which were on the contrary unusually late in arriving here. Owing, indeed, to the restrictions that have for some years past been put by the local authorities on the departure of the annual caravan from Yárkand, it has invariably happened that a certain proportion of goods have failed to reach Leh by the close of the year; and last season it so happened that an exceptionally large amount of merchandise, aggregating about Rs. 15,000, left Turkistán too late to figure among the Ladakh imports for 1874. Fortunately for the traders, by far the greater portion of whom merely halted in Leh a sufficient number of days to recruit their cattle, December and January were particularly fine months, hardly any snow having fallen during either of them, and in consequence the Zojila Pass presented much less formidable difficulties than it usually does at so unseasonable a time of the year. In fact, this pass was crossed last winter at the very end of January by an enterprising body of Afghán merchants, who accomplished the passage with no less than fifty loads of merchandise, without, strange to say, suffering any loss. The feat deserves mention, because, as far as I can hear, it is unprecedented.

7. Notwithstanding a report that was very prevalent in Leh, and which I alluded to once or twice in my diaries at the time, that the caravan of 1874 was not up to the mark of that of 1873, I am glad to be able to say so far from this being the case, last season's caravan was largely in excess of its predecessor. I subjoin below a computation I have made of the value of the caravans of the past five years, including in each one the value of the goods exported from Yárkand during the autumn or winter season up to the close of the year, though they may not have reached Leh until January or February of the ensuing year, that is, the caravan of 1870 includes the Leh imports up to February 1871, and so on. The result presents a strikingly progressive illustration of the value of importations from Turkistán :—

		Rs.
Caravan	1870	2,64,000
Do.	1871	2,66,000
Do.	1872	3,18,500
Do.	1873	3,31,000
Do.	1874	3,92,000

8. Before proceeding to a consideration of the details of trade as exhibited in the various tables appended, I should say I have ventured to make a slight alteration in the system on which these statistics have been hitherto compiled. It has been customary to amalgamate in one table the imports from Turkistán and Changthán, and though the items have been distinguished by being detailed in separate columns, still the fact of their being in one and the same form is, I think, a drawback to the ready recognition of their salient features, which, with the solitary exception of pashm, are as diverse as are the geographical limits of the two countries. I have accordingly disconnected them and have also slightly altered the grouping of the other tables, arranging them so that the import from each country shall be immediately followed by the exports to it.

9. To commence then with imports from Turkistán, Form A; the increase of trade under this head is very marked, much more so, indeed, than it was in 1873; the totals for the two years standing as under—

		Rs.
Imports for Turkistán, 1874	... ...	3,81,802
Ditto ditto, 1873	... ...	3,30,690
Increase in 1874	...	51,112

And the comparative amount of increase being as Rs. 51,112 to 8,927.

The subjoined table of percentages for the two years will at once show the salient characteristics of the different items of importation :—

Proportionate Amounts of Yárkand Imports.

	1874.		1873.	
Gold	24½	per cent.	45	per cent.
Pashm	15½	„	13	„
Silk	13	„	8	„
Silver	12½	„	3	„
Horses	8½	„	8	„
Charras	7½	„	12	„
Coarse cotton cloth ...	7	„	3½	„
Jewellery	3½	„	...	
Other goods	8½	„	7½	„
	100		100	

Although a mere cursory glance at the above list of rates would no doubt lead one to the conclusion that trade during these two years has been characterised by strange fluctuations, a more careful examination of the figures before us will bring out the fact that so far from this being the actual state of the case, the bulk of the importations of both years correspond with an exactitude which is as striking as it is significantly illustrative of the tendency of trade.

10. It may be accepted as a fact that the main object of the merchants of Turkistán is to get their goods direct from the markets of India; for though a certain number of them are content to reap such profits as are to be had in Ladakh, yet by far the greater proportion of them do their business in India, many of them going as far south as Calcutta and Bombay. These men, as pointed out by Mr. Shaw in his report for 1873, appear to select their goods in Turkistán chiefly with a view to their purchasing power. Under this head may be classified such articles of commerce as gold, silver, jewellery, pashm and silk; the two latter because it is not usual to get rid of them by barter, for they will always fetch remunerative prices in the Kashmir or Ladakh markets. To the above may be added horses, for which also it is not difficult to find ready-money purchasers in the Punjab. Taking then these goods as a criterion of Turkistán imports, it will be found that their total percentage in the two past years is represented by precisely the same figure, *viz.*, 77, and that this should be so is I think pretty conclusive proof of the correctness of the above remarks as to the tendency of trade.

11. The importation of gold, as will be seen, is characterised by a remarkable decline, which is, I take it, the chief reason why last season's percentage of the above items of merchandise is only the same instead of being in excess of what it was in 1873. There are, however, two reasons which fully account for this decrease—

(1).—Owing to the issue last year of a gold coinage in Yárkand restrictions have been put by the Amír on the purchase of gold dust.

(2).—The new coin he has issued has been over-valued. It has been coined apparently in imitation of the Khokand tilla, which is valued at Rs. 5-8, but which will sell in the Punjab for about Rs. 5-12. The new Yárkand tilla, however, though its nominal value is the same, is rated in Ladakh as being worth little more than Rs. 5, and though it might fetch more than this in the Punjab, where rates are higher than they are here, it is not likely it would realise the value put on it.

12. The decline in gold has, however, been in a great measure made up by a striking rise in the importation of silver. In 1873 the importation of this metal figured at a valuation of Rs. 10,370, whereas last year it figures at Rs. 48,256. The cause of this is no doubt in some measure attributable to the money left in the country by Sir Douglas Forsyth's Mission, for it is a noteworthy fact that last season was the first one in which English rupees have been brought down in any quantity from Turkistán. As a rule, silver is chiefly imported in the shape of "kúrs" or "yambús," which, as is probably known, are large silver ingots weighing about 162 tolas; they come from China, and are all impressed with a peculiar stamp. Although the quantity imported last year was almost double what it was the year before, still, owing to the fact of Yárkand being no longer under Chinese rule, "kúrs" seldom if ever now-a-days find their way into the country, and as a consequence their importation since the year 1869 has steadily fallen off, and I should be inclined to consider the rise last year as exceptional and not likely to be permanent. The silver of the "kúrs" is very pure, and it will generally sell in the Punjab at a profit of about 5 per cent.

13. *Precious Stones, Jewellery, &c.*—The rise in this item is very remarkable, and is in fact out of all proportion to the importation of 1873, which amounted only to Rs. 1,240, whereas last year it figures at Rs. 13,590. It is a curious fact that almost all these precious stones were originally, that is, some time during the Chinese rule, imported from India to Yárkand; the only exception being turquoises, which reach Yárkand from Nishárpur *viá* Bokhára. These stones are very highly prized in Lhássa, and a large proportion of them are brought up at high rates by traders from Chinese Tartary. It is related here that a pilgrim from Yárkand turned a rupee to very good account a few years ago at the holy shrine by an investment in turquoises. He purchased Rs. 700 worth at Mecca, which on his return here he sold for Rs. 2,000 to a merchant from Lhássa, realising a profit thereby which must have enabled him to perform his pilgrimage at an exceedingly small cost to himself. The fact that these gems find such a good market in Lhássa calls for comment, because they form one of the chief items of importation from that country; but the Lhássa gem is a very inferior stone to the turquoise of Nishárpur, which accounts for the preference shewn for the latter and the consequent demand for it in Chinese Tartary.

14. *Pashm.*—This article holds the second rank among the imports from Yárkand in 1874 as it did in the previous year. The rise it exhibits is striking; the respective amounts for the two years being as Rs. 60,030 to 42,600. There is no doubt about it that pashm is one of the most paying of Central Asian imports; its rise has been unvaryingly regular for the past four years, and there is, I think, every prospect of its continuing to be so. It has the advantage of two remunerative markets,—one in the Punjab and the other in Kashmir. I have made a good many inquiries about pashm since I have been in Ladakh, and as the information I have elicited on the subject is, I think, somewhat different from what has hitherto been written about it, I trust I may be pardoned for making a short digression to

give it publicity. Pashm is a fine downy wool which grows under the coarser hair of the goat. It is, however, confined to the goat species; for though other animals in these high latitudes, the yák for instance, get an extra coat of woolly hair in the winter, it is not pashm, nor, as far as I can learn, is it ever called pashm. Yák-down, for instance, is known in the Bôte language as "khúlú," but it is very different wool from pashm, and is put to a very different use, it being utilised solely in the make of a thick, coarse and warm blanket called *zangose*. In Turkistán, as far as I can hear, yák-wool is put to no use whatever, nor has it any distinct name. Strictly speaking pashm should be described as the wool of the domesticated goat in contradistinction to "*túsh*," which is the wool of the wild goat, or ibex, that is, the ibex of these latitudes, for there is no túsh on the coat of the Kashmir ibex. Túsh, however, is so exceedingly rare that it cannot be said to come under the head of marketable commodities. Very small quantities of it are sent every year from Changthán to Kashmir for the use of the Mahárája. That it should be so rare is not strange, considering that it is only obtained by being picked off rocks and thorny bushes where ibex have rubbed themselves; of course these animals might be shot for it, but even if they were, which apparently is not the case, it would hardly make any perceptible difference in its production, for ibex are by no means common in Tibet, nor are they easy game to bag. There are two kinds of túsh—1, shahtúsh; 2, túsh. Shahtúsh is an exquisitely fine *white* down that grows only on certain parts of the body of the ibex, whereas túsh is the wool of the rest of the body, and it varies in being different shades of brown. I may remark here, by the way, that there is a dye in Kashmir known as túsh, a very rich brown, and this has I suspect led to pashm dyed this colour being confused with túsh. All the same, the two wools are quite distinct. The finest túsh is that of the young ibex, as I had an opportunity of seeing in a specimen I myself got in the winter. To shew how difficult it is to get this wool I may mention that some time ago one of the chief shawl merchants of Kashmir wrote to beg me to send him a small quantity of túsh. After great delay I contrived to procure two seers of it, at the cost of Rs. 5-8-0 per seer, which is about three times the price of the finest pashm to be got anywhere. Pashm is imported from both Changthán and Turkistán, the finest being *Turfán* from the latter country. It is a curious circumstance that whereas in Changthán the pashm is taken once a year out of the coat of the goat, this is not the case in Turfán, where the wool is not touched while the goat is alive. One of several of my authorities for this is an affluent and well-to-do merchant of Turkistán who has been for 25 years engaged in the pashm trade and who therefore ought to know something about it. It is interesting, because it accounts for the difference in texture between the two wools; for naturally wool that is continually being sheared would tend to get much coarser than that which is not touched. In Changthán it is usual to extract the pashm in two ways, it being done always about June, either by combing it out before shearing the animal, when it is called *Kaljak*, or by shearing it with the coarser hairs of the goat, when it is called *Cháng*. The former process, however, produces much finer and softer pashm than the latter. In Turkistán, after the skin of the animal has been taken off, it is steeped for some days in a preparation of lime-water, when the upper growth of coarse hairs are picked out of it, the fine under-growth of wool being then collected and made up into bales for foreign export. Before, however, it is used by the weaver, it is subjected to a further process of cleansing and picking.

15. To return now to our table of imports. We find raw silk to be the third on the list, and the rise it exhibits deserves special remark. In 1873 it stood at Rs. 25,500, which was a considerable increase on the importation of the previous season. It has now, however, gone up to Rs. 50,280, while only four years ago the comparatively insignificant amount of Rs. 3,072 represented the total import of raw silk. The rise may I think be taken as a very satisfactory indication of the vitality of trade; for so long as the demand continues to be as brisk as it is now apparently, there will be a remunerative outlet for one of the chief products of Eastern Turkistán. Yárkand silk, however, is pronounced to be much coarser in texture than that from Bokhára, which according to some accounts would appear to be due to the crude and imperfect way the silk is wound off the cocoon in Yárkand.

16. *Charras.*—Here we have to record a decline in trade, and one has very little compunction in doing so considering the extremely noxious properties this drug possesses, an instructive account of which is to be found in Aitchison's Leh Products. For some years past no good charras has been imported from Yárkand, and the result is it has become a drug in the market. Last season, however, a considerable consignment of *Gange Hissár* charras, which is reputed to be the best grown in Turkistán, was brought down by one of the latest arrivals of the merchants forming the winter caravan; as he happens to be one of the limited class of traders who do not go south of Ladakh, and as when he arrived most of the men who do business here had taken their departure for warmer regions, he has not as yet been able to get the charras taken off his hands. All the same, his chance, though he may have to wait for it, of ultimately making a profitable bargain for his consignment is, I should think, a very good one*; for though inferior charras will not sell readily, the best will always do so, and if a superior description of this drug be now introduced into the market, I think it not at all unlikely that the trade may revive again very rapidly.

17. *Horses.*—Horses afford another very promising illustration of the increase of trade. Their value has risen from Rs. 27,580 in 1873 to Rs. 33,880 in 1874. The Yárkandi horse is probably sufficiently well known to need description; the lot brought down last season, though

* Since writing the above a great portion of the charras has been sold at a profit of 60 per cent.

I did not notice any particularly good horses among them, would no doubt be classed as up to the mark of the average importations. There were among them, however, some splendid mules, the like of which I have never seen anywhere, though I happen to have had opportunities of seeing very fine mules, too, in the mountain batteries of the Punjab Frontier Force.

18. *Gárha and Chakmán.*—As these were amalgamated last year, I have, to facilitate comparison, put them together again this year. The importations are considerably more than double what they were in 1873; in fact the fluctuations in the imports of coarse cotton fabrics have been very marked ever since statistics of Ladakh trade have been recorded. The fact is interesting, because it is in all probability due to the demand for these goods being to a certain extent merely local, for neither gárha or chakmán ever go far south of the Indus, and are therefore not among the commodities that find a sale in the Indian market. Gárha is a very coarse cotton cloth; it is bought up moderately in Ladakh, and small quantities of it go to Baltistán. But its chief market is in Lhássa, where it is extensively used as a material for tents. Chakmán is also a coarse cotton cloth; it is sold in pieces suitable for the lining of chogás and postíns, for which purpose its use is almost entirely confined.

19. Among the minor items of importation from Turkistán a rise is noticeable in *darai*, a coarse silk fabric made in Khotan, and *namdas*, thick felt mats, which chiefly figure among the exports to Changthán and the Máhárája's territory, while a moderate decline has occurred in *jade stone* and *zilchas*. The latter are small woollen carpets about the size of English hearth rugs. They are manufactured in Khotan, and the decline in their importation is reported to be in a great measure due to some special orders lately given by the Amír for some carpets to be sent to India as presents.

20. *Exports to Turkistán.*—It is not necessary to consider this table in detail. Leh may be looked on as the half-way house between India and Central Asia, in which countries the stream of traffic that flow through it have their source, and from which they draw the main volume of their supply; and though they are joined here by side currents in the way of lateral and local traffic, these may be regarded as mere tributary feeders that after junction are lost in the body of the main stream. This we shall be able to gauge better by tracing it to its fountain-head than by intercepting it midway. It will not do though to pass on without pausing for a moment to examine the figures we have here presented to us; for although the exports from Leh to Turkistán are in the main a mere recapitulation of the imports from India to Leh, it happens this year that there is a very remarkable difference in their amounts; and this fact calls for elucidation. The total of trade under this head is no less than Rs. 8,02,563, which is not only a vast increase on the amount recorded in 1873, Rs. 2,55,660, but it is also a very considerable increase on the imports from India, as will be seen below:—

	Rs.
Exports to Turkistán, 1874	8,02,563
Imports from India, 1874	6,61,660
Difference ...	1,40,903

Where has this extra lakh and a half come from?

Of the traffic that reaches Leh from the east and west extremely little finds its way north, last year in fact the trifle of Rs. 1,500 rather more than covering this amount. So these figures will do little to help us. By turning, however, to last year's statistics for the season of 1873 we shall I think get a key to the solution of the puzzle. Comparing these same returns for that year, then—

	Rs.
Imports from India, 1873	4,66,298
Exports to Turkistán, 1873	2,55,660
Difference ...	2,10,638

we find that here the reverse has been the case, the imports having greatly preponderated over the exports. It may therefore reasonably be concluded that of the two lakhs remaining from 1873 about a lakh and a half have gone on to Turkistán with the exports of 1874, leaving still rather more than half a lakh of goods lying in the Leh market. The correctness of this conclusion is corroborated by the fact that from a rough valuation I have made there is an amount of merchandise, aggregating from Rs. 50,000 to 75,000, at present lying in the Leh bazár, which either from the owners not having been able to provide themselves with carriage, or else from an inability on their part to pay the enhanced rates that have lately prevailed, has not yet found onward transport.

21. There is, however, one item in this table of exports which, as it does not figure in the imports from India, should be noticed here, for it is characterised by a very striking rise. The commodity I refer to is opium. The value of its exportation in 1874 as compared with what it was in 1873, is as Rs. 10,260 to 980. This opium is imported into Leh from the Mahárája's territory, the plant being extensively cultivated in the districts of Budrawár and Kishtwár. Though it is reported to be consumed to a considerable extent in Eastern Turkistán notwithstanding stringent prohibitions against its use, its chief market appears to be Almutz, where it is eagerly bought up by Chinese traders. The rise in its exportation is probably in a great measure due to the freer commercial intercourse that has lately by all accounts been established between this Russian outpost and Yárkand.

22. *Imports from India, Form C.*—We may now proceed to an analysis of this table. As above shewn, the total it exhibits figures at Rs. 6,61,660 as compared with Rs. 4,66,298 in 1873. The increase is considerable, still it must be confessed it is entirely due to the importations of the Central Asian Trading Company, which in round numbers may be put down at Rs. 3,10,000. And although these are as much part and parcel of the year's trade as any others made during the season, still, as they no doubt effected a very abnormal inflation of the value of trade, it may be worth while to examine how the statistics would have figured had the Central Asian Trading Company not appeared on the scene. If we do this we shall find that the importations from India in 1874 were about one and a quarter lakhs less than they were the previous year. Appreciable as the difference is there are not wanting reasons to account for it, which may be briefly stated as follows:—

(1.)—Owing to the vast increase of the importations from India of 1873 over those of the previous year, the Leh market got somewhat over-stocked with merchandise.

(2.)—The consequence of this was that several large traders who had up to that time been in the habit of negociating their business in Leh, in 1873 found themselves unable to do so, and accordingly took their goods on to Turkistán. Among them may be mentioned Jowalla Bhaggat, who early last year crossed the Karakoram for the first time in his life with Rs. 20,000 worth of merchandise; and the amount of goods altogether taken on in this way was probably not less than a lakh.

(3.)—The trip to Turkistán, however, prevented these men making the return journey to India in time to appear again among the importers of goods last season; and as up to that time their consignments have regularly formed no small proportion of the total of Indian imports, in their absence these figures have naturally decreased considerably.

23. I subjoin below a comparative list of percentages of the most important items of importation during the past two years. All the same it should be remarked that owing to the large excess of the total of last year's imports over those of the previous year, the difference of percentage does not give an exact indication of the actual difference in the amounts of importation; for instance, silk in both years is represented by a percentage of 11·3; the value of importations, however, in 1874 were Rs. 25,000 in excess of what they were in 1873.

Proportionate amounts of Imports from India.

	1874.	1873.
Cotton piece-goods ...	24·3 per cent.	41·0 per cent.
Brocade, silks, &c. ...	11·3 ditto	11·3 ditto.
Fire-arms ...	9·9 ditto	·0 ditto.
Tea ...	7·6 ditto	14·3 ditto.
Broad-cloth, serge, &c. ...	7·6 ditto	·0 ditto.
Indigo ...	6·2 ditto	3·8 ditto.
Goat skins ...	5·5 ditto	2·7 ditto.
Otter skins ...	5·3 ditto	3·2 ditto.
Sugar ...	2·8 ditto	3·0 ditto.
Pepper, spices ...	1·5 ditto	7·0 ditto.
Other goods ...	18·0 ditto	13·7 ditto.
	100	100

24. *Bazázi* (cotton piece-goods) still holds the first place among the importations from India, notwithstanding the fact that the figure recorded is not up to the mark of 1873, the comparative totals for the past two years standing as under:—

	Rs.
Imports, 1873	1,91,200
Ditto, 1874	1,61,361
Decrease in 1874 ...	29,839

The decrease becomes the more striking when the importations of the Central Asian Trading Company, which alone amounted to Rs. 62,500, are taken into consideration. The reasons alleged above to account for the general decline of trade under this head apply with equal force to account for the falling off of particular items. In this case, for instance, the decrease is fully accounted for by the largest importers of piece-goods having been doing business in Yárkand instead of conveying fresh consignments of goods from India. It will be noticed that piece-goods figure in two items, the most expensive being those of the Central Asian Trading Company, which were of a much finer and better description than the kind usually imported. It will be interesting to see if they find a good market in Turkistán, my impression, which is of course only formed on hearsay evidence, being that the taste of the Yárkandís inclines much more to quantity than quality. There can be no doubt at any rate that the piece-goods taken to Yárkand as an ordinary rule are of a very coarse description indeed.

25. *Silk Stuffs, Brocade, &c.*—The importations here show an increase, the comparative amounts for the past two years standing as under:—

	Rs.
Imports, 1874	75,265
Ditto, 1873	55,060
Increase ...	20,205

Here again, however, the increase is due to the importations of the Central Asian Trading Company, which alone figure at about Rs. 30,000.

26. *Fire-arms.*—Here we find a considerable increase again, due, however, entirely to the large importations of the Central Asian Trading Company.

27. *Tea.*—The amounts of this article for the past two years stand as follows:—

	Rs.
Imports, 1873	67,013
Ditto, 1874	50,861
Decrease ...	16,152

The decline I attribute to the new market that has been opened out for Turkistán at Almutz, from which Russian settlement large quantities of China teas have lately been finding their way into the territory of Amír Yákúb Beg. It would be a great thing if we could establish a market for our hill teas in Yárkand, and the accounts formerly brought down were encouraging for the likelihood of its establishment, but later information seems to shew that China teas are finding great favour in the country, and those from Kángra are in consequence losing in popularity. Mr. Russell may, and it is to be hoped will, do something to re-establish the reputation of our teas, for he took up a considerable consignment with him.

28. *Broad-cloth, Serge, Merino, &c.*—A large consignment of these fabrics, aggregating Rs. 50,372, has been taken up with the goods of the Central Asian Trading Company; but as they are almost entirely new to the country, it may be questionable how far they may succeed in finding a sale.

29. *Indigo.*—We have here to record a very remarkable rise, the amounts of importation for the past two years figuring as—

	Rs.
Imports, 1874	41,055
Ditto, 1873	15,089
Increase ...	25,966

And I am inclined to view the increase as a most encouraging feature of the trade, for I hear that it is in a great measure due to the large quantities of indigo that have recently been bought up in Yárkand by Russian merchants. A good deal of indigo finds its way to Russian territory *viá* Kabul and Bokhára, but there are reasons, which will be explained further on, for thinking that this route may to a certain extent be given up in favour of that leading over the Karakoram. Should this turn out to be the case, the increase of the amount of last year's importations, considerable as it is, will probably be insignificant to what it may become hereafter.

30. *Láki (goat skins dyed red).*—These are extensively used in Turkistán for boot leather, and they may be said to be another very safe and paying article of commerce. They are chiefly manufactured at Núrpur, in the Punjab, but a good many are also prepared in Kashmir. The importations of last year figure at Rs. 36,525, almost treble the amount of the previous year, Rs. 12,712. This extraordinary increase is stated to be due to a fresh supply of boots and postíns having been issued last year by the Amír to his army (the issue of these articles being triennial), and the extra supply was taken up to meet this demand.

31. *Sag-i-Abi (Otter skins).*—These also are in great requisition in Yárkand for postíns, and the remarks just made with reference to láki will apply equally well here in accounting for the very large increase in the importations of these skins. The respective amounts for the two past years stand as under:—

	Rs.
Imports, 1874	35,383
Ditto, 1873	15,708
Increase ...	19,675

32. *Sugar.*—This article of commerce exhibits only a slight increase, as will be evident from the figures below:—

	Rs.
Imports, 1874	18,542
Ditto, 1873	14,911
Increase ...	3,631

Very nearly half, too, of the total of last year's importations were taken up by the Central Asian Trading Company. A good deal of sugar is imported into Turkistán from Russia. Indian sugars are, however, said to be preferred to those from Russia on account of their superior saccharine qualities. All the same, the importations since 1870, when they rose to

double what they were in 1869, have not varied very much. The figures for the past five years are as below:—

	Rs.
Imports, 1870	16,164
Ditto, 1871	13,024
Ditto, 1872	14,464
Ditto, 1873	14,911
Ditto, 1874	18,542

The only inference to be drawn from which statistics seems to me that the Yárkandís must draw their chief supply of sugar from Russia, or that there must be remarkably few people with a sweet tooth in the country.

33. *Spices, pepper, &c.*—These may be regarded as one of the most important of our importations to Turkistán, as that country depends on India entirely for the supply of them. The comparative amounts for the past two years figure at—

	Rs.
Imports, 1873	33,800
Ditto, 1874	10,908
Decrease ...	22,892

Considerable as the decrease is, it may no doubt be attributed to the same causes that have been adduced to account for the falling off in piece-goods. It may, indeed, safely be predicted that the decline will not be permanent, the chances being that the importations next season will be unusually large to balance the decline we have now drawn attention to.

34. As the above list of articles may be said to comprise the whole that need any special comment, we may now proceed to a consideration of the trade with Chinese territory, passing over in so doing the table of exports from Leh to India which, owing to its being to all intents and purposes a mere recapitulation of the imports from Turkistán, about which detailed explanations have been offered, it would be superfluous to particularise by special comment. It may be worth while just to note the fact that of the Rs. 3,81,802 that comprise the imports from Turkistán, Rs. 3,14,320 were exported on from Ladakh, the small difference being put down as having supplied the limited requirements of local demand.

35. *Trade with Chinese Territory.*—This comprises trade with Changthán, that is, the districts of Rudok and Gartok, situated on the Indus, about 15 days' journey from Leh, and with Lhássa, the distant capital of Great Tibet. The two should be distinguished, because they are carried on under very different conditions. The staple of Changthán commerce is pashm, which is imported in considerable quantities into Ladakh, and its other products may be said to be confined to a very coarse *pattu* cloth and *zangose*, a warm, thick blanket made of the hair of the yák.

36. The system on which commercial intercourse is carried on with Lhássa was described by Mr. Shaw in his report on trade for 1873, and, to quote his words, it is no doubt "more or less a fictitious trade." The officially-appointed agents of the two Governments have not only the advantage of free carriage along the road, but they are treated with the most studious respect in all the districts they have to pass through; indeed, I am informed on reliable authority that the trading agent of the Máhárája is honoured with the second highest seat in the darbár of the Grand Lámá of Lhássa, immediately below that of the Pekin Ambán. This, however, it may be added, is due to his being regarded as the representative of the rájas of Ladakh, a dynasty which, although now extinct as an independent Government, has been from time immemorial almost looked upon with the highest respect and honour by the Lámás of Lhássa. Some idea of the profits reaped by these commercial agents may be formed from the fact that those deputed from this side are bound to pay 100 per cent. on advances made them for purposes of trade, and they nevertheless have a margin of profit for themselves. From a calculation I have made it appears that, allowing Rs. 100 as the cost of hire of one horse-load of goods from Ladakh to Lhássa,—and the allowance would be more than Re. 1 per stage,—a load of tea, after conveyance from Lhássa, could be sold at prices now prevalent in Leh, and these are considerably lower than they were last year, at a profit of from 15 to 20 per cent. The fact is not wanting in significance, because tea is one of the least paying of the imports from Lhássa; it commands only a limited market, its consumption being entirely confined to Ladakh and Kashmir. Indeed, under present conditions of the commercial relations between the two countries, there are no commodities brought down from Lhássa that would produce any great trade, but this is no doubt because as far as trade is concerned, the country is a sealed book to the outer world. Its resources are not only undeveloped, but carefully concealed. If, however, there be any truth in the wide-spread reports very current here of the extent and richness of its gold mines, which are not allowed to be worked from some religious prejudices of the Lámás, things would be very different were the country only opened out to European enterprise. But unfortunately it is from contact with the white man that the priests of Lhássa are most careful to guard themselves and their country. Were it possible to efface this prejudice there would be, I take it, little to prevent the development of a commerce to which the present Ladakh trade with all its branches would be but a drop in the ocean. The barrier is an artificial not a natural one; for distant as the capital of Great Tibet is from the description one gets of the intervening country, the road to it must be an incomparably easier one to traverse

than that to Yárkand. Indeed, one or two men I have had an opportunity of conversing with on the subject who have been over both, one of whom I may mention as having had a scientific training in observing the features of a country, assure me that this is the case.

37. The route is described as extending over 90 stages, for nearly half of which there is a stretch of wild uncultivated country. Still even here all along the road there are to be found the tents of a nomad tribe of Tibetans, known as *Chakpas* or *Khema-nishins*, who graze large herds of sheep, yák and goats, and who are described as living almost entirely on animal food; while grass and fuel of some sort, the absence of which is the main difficulty that has to be contended against in crossing the Changchenmo or Karakoram, are reported to be found in abundance at every camping ground between this and Lhássa. Five passes have to be crossed, three of which are said to be high, but none difficult; in fact, as far as I gather, the slope of the road up to the high table-land about the *Mansoráwar* lake, the water-shed dividing the two countries and the reputed source of three of the great rivers of India, must be gradual and easy, while the descent on the other side to the plains of Lhássa is said to be not more difficult. About 15 stages from Lhássa, *Tashi Lúmbu*, described as a large town, with a celebrated monastery containing several thousand Lámás, is met with; and from this a road branches off which, after skirting Nepál territory, debouches on to Darjíling, and thus to the plains of India. This road appears to be the main, if it is not the only, commercial link between India and Lhássa, and my accounts would shew that a fair amount of traffic must pass along it. It must be of course a much shorter, though I doubt its being nearly such an easy, route as the one I have just been describing; my reason for this being that it must lead directly over the outer range of the Himalaya, in a part of the range, too, where the mountains are particularly lofty, and where the snow-fall is out of all proportion to the amount that falls on the inner ranges in this part of the world. Moreover, two very high and difficult passes are mentioned as having to be crossed.

38. After this digression, which I have been induced to make because the question of opening out Tibet may not unlikely receive some attention from the impending publication by the India Office in London of some interesting papers giving the history of an important mission despatched to Lhássa by Warren Hastings in 1774-75, to proceed to our Changthán trade tables. One of the most remarkable features of these statistics is the vast preponderance of the imports over the exports. The amount of this excess for the past eight years is no less than about 3½ lakhs of rupees. Mr. Shaw drew attention to the fact in his report for 1873, and I refer to it again, because I am glad to be able to verify a very sagacious surmise he put forward in explanation of it. Last year the exports to Changthán were watched and noted with minute care in view to throwing light on the matter, and thanks to the detective ability displayed by Munshi Karím Baksh, I have been enabled to enter in the tables now submitted a sum of no less than Rs. 61,200 in cash and silver among the exports to Chinese territory: more may have gone, but it is something to have got a certain record of even this much; for calculating at this rate for the past eight years,—and it is much more likely that a larger than a smaller sum has been the actual figure of the annual exports,—we are at once able to account for three of the three and half missing lakhs. The reason of this silver having escaped notice before, I attribute to the way traders from Lhássa shut themselves up here. They do their business in the dark, and it is most difficult to get at them anyhow, or to find out what their dealings are, and the fact of Karím Baksh being a Muhammadan is of course an additional hindrance to his direct intercourse with them, which reflects all the more credit on his discovery.

39. I do not think the tables before us merit any very detailed comment; but attention may be drawn to the fact that both the imports and exports exhibit a marked increase on the amounts recorded in 1873, the former having increased by about Rs. 40,000, and the latter by about Rs. 55,000. Among the imports a rise is chiefly observable in tea and pashm, which may be regarded as the staple imports from Chinese territory, while on the other hand among the exports a marked rise is noticeable in saffron, "chakmán" and precious stones, to which must be added the novel item of silver, while a decline characterises the exportation of gárha, zilchas and namdas.

40. *Trade with Kashmir Territory.*—There are only the tables that now remain to be considered. To commence with the imports, Form G. These exhibit a moderate increase on those of 1873, the figures being—

	Rs.
Imports, 1874	95,614
Ditto, 1873	76,386
Increase ...	19,228

But there are some circumstances connected with the workings of the past season's trade that speak a good deal more significantly for its future development than the above figures, for instance, salt. Though it has always come from Changthán, now it is seen for the first time among the local imports. It has been obtained from the Salt Lake in Rúkchin, the banks of which are covered with a thick saline encrustation. The salt that is extracted, though not of a very superior quality, will no doubt from its cheapness prove a great boon to local consumers. Its importation amounts to Rs. 3,928.

41. *Phulli (Soda Salt).*—The rise here is extraordinary. Hitherto the importations have never covered as much as Rs. 500, whereas last year they figure at Rs. 3,400. This is due to the energy of Mr. Johnson, the Wazír of Ladakh, who last season made elaborate arrangements for the collection of phulli, which lies in a thick deposit over a great part of the ground in the Nubra valley.

42. *Borax (Sohága).*—Here again the Mahárája has to thank his Wazír for an extraordinary expansion of trade. As only a very small proportion of the borax is imported through Ladakh, the bulk of it going to India *viâ* Kullu, it is no use quoting the figures from the trade tables; suffice it to say that whereas up to 1873 Rs. 5,000 was the limit of the value of the borax ever imported out of Kashmir territory, last year it exceeded a value of Rs. 15,000. This is due to a system introduced by Mr. Johnson by which the Puga borax mines are now worked much more scientifically than they have been hitherto. The new arrangements have, however, no doubt injuriously affected the profits of a small class of traders from Kullu, who appear to have made their grievance in the matter the subject of a complaint against the farmer appointed by Mr. Johnson to superintend the workings of the mines. So far as I have been able to ascertain, the conduct of this official has given no just ground for these complaints, but all the same it is not difficult to account for them. Up to last year the Kullu traders were allowed to carry away borax in the shape of borax-earth from the mines at the rate of 5 sheep-loads of 16 seers each for the rupee; and this same borax-earth, they could sell on reaching Kullu at from two to three sheep-loads for the rupee, thereby making a profit, straight off, of something like 50 per cent. Last year, however, Mr. Johnson very wisely put a stop to this waste of borax, which is now put to a refining process at the mines before it is sold. In consequence of this, however, its price has risen to 5 seers for the rupee. The Kullu men have naturally found out that borax purchased at this rate is a much less remunerative speculation than at those quoted above; all the same, they were actually favoured in being allowed to purchase it at this rate, for had it been allowed a free market in Leh, the price would have run up a good deal higher: and this there is every prospect of its doing next year, for its rate in the Punjab is about 2½ seers for the rupee. Notwithstanding their grievance, however, in the matter, the Kullu men must have found it worth their while to appropriate the lion's share of the yield of the mines, for only Rs. 2,400 out of the Rs. 15,000 worth that was extracted reached Ladakh.

43. *Saffron.*—

	Rs.
Imports, 1874	7,408
Ditto 1873	3,543
Increase ...	3,865

Here we have a marked increase again. The chief market of saffron is in Lhássa, where it is very extensively utilised by the Lámás in their religious ceremonies as a kind of incense. It is also used as a condiment with food by the upper classes, who spice and colour dainty dishes with it.

44. *Pashmína Shawls.*—

	Rs.
Imports 1874	5,150
Ditto 1873	2,640
Increase	2,510

The increase is considerable. These shawls are chiefly exported to Turkistán, where they are much worn as "pagrís."

45. *Horses.*—We may conclude our notice of imports with this satisfactory item. Horse flesh is at such a premium in Leh that the advent of any animals is a subject of congratulation; and though the Kashmir pony is too undersized to be up to a trip to Yárkand under the present system that regulates the loads to be carried, on which I shall have something to say presently, still as about 50 per cent. of these animals were mares brought up for breeding purposes, they may do something to make carriage more plentiful than it is just now.

46. *Exports to the Mahárája's Territory.*—It would be superfluous to give a detailed analysis of this form, for the commodities it comprises are almost entirely the same as in the table we have just noticed. Let it suffice to say that a slight contraction has characterised this branch of trade, the amount it exhibits being not quite up to the mark of 1873. This may be said to be mainly attributable to a slight falling off in two of the staples of local export, *viz.*, pashm and tea.

47. *Yárkand and Leh Markets.*—In order to carry out as effectively as possible instructions conveyed to me officially to submit special information of the state of the Leh market during the past season, I have made this the subject of very careful investigation, and thanks to the kindness of the officers marginally noted, I am enabled to verify these investigations by most reliable data in the shape of certified price currents of the Káshgar, Yárkand,

Political Agent, Yárkand.
Deputy Commissioner, Amritsar.
Assistant Commissioner, Kullu.

Kullu, and Amritsar markets. For the Yárkand price current, however, I should say I am indebted to Jowála Bhaggat.

48. Before proceeding to a consideration of the condition of commerce in Leh itself, it will, I think, repay us to glance briefly at the comparative rates prevailing in the two countries at the extreme ends of the trade route, for in them are situated the main emporiums of the traffic that passes through Ladakh.

49. To commence, then, with India. We find its staple export, *bazázi* or piece-goods, to be selling at most remunerative rates in Turkistán. In fact, if we except the item of chintzes the rates for all other cotton fabrics may be roughly estimated at 50 per cent. in advance of their cost price in Amritsar.

50. The cost of long-cloth (*lata*) is, by the way, worth noting as significantly illustrative of the description of piece-goods that find favour in Turkistán. The Amritsar quotations are Rs. 5 to 10 for a thán of 40 yards. Now, considering that fine long-cloth costs as much as from Rs. 13 to 16 in Calcutta, the article procurable at Amritsar for the above price can be nothing else but a very common and coarse description of cloth. As to chintzes, I think there can be little doubt about it that, as far as these fabrics are concerned, the Russians have to a great extent secured the command of the Turkistán market. Their chintzes are said to be preferred to ours, because, to begin with, they are cheaper, and though they are very coarse, they are very durable; but their chief recommendation probably is that they are of very gaudy patterns and of *fast* colours. Our chintzes are more expensive on account of their being of finer texture. A proportion of them, too, are of unfast colours. Mr. Russell took up a large consignment of chintzes with him, I believe selected with a view to gratifying the Túrki taste. All the same, there was a report here that the colours of his chintzes were not fast, and should this prove to be the case, I fear he may find some difficulty in meeting with purchasers, for my impression is that a Yárkandi will not look at a fabric that is not dyed with a fast colour.

51. *Spices, Sugar, Tea, Indigo, Dyes, Drugs, &c.*—All these are staple articles of Indian export, and the quotations they figure at speak volumes for the profitableness that must attend their trade.

52. To turn now to Turkistán. Passing over bullion, which in some form or other has been shown to be the chief export from Yárkand, we find the rates obtainable for its next most important production, pashm, to be in India nearly 50 per cent. in advance of what they are in Turkistán.

53. *Silk.*—This should be noticed because it also is one of the chief articles of Yárkand manufacture. All the same, I confess that the prices at which it is quoted do not hold out such promising prospect of profits as the commodities we have just drawn attention to. Possibly some error may have accidentally crept into the quotations, but if not, I fear that the traders who last year brought it down in unusually large quantities from Yárkand may find it difficult to turn their business to a profitable account.*

54. *Charras.*—The prices at which this drug figures would lead one to suppose that its profits must be enormous. They are so no doubt when the charras is quite fresh and of good quality, but for some reason or other the late importations from Yárkand have had neither of these recommendations, and the result is that less money has been turned from charras sales than from almost any other of the staple commodities of Yárkand produce.

55. To proceed now to an investigation of the conditions of trade in Leh itself during the past year. It may be remarked first of all that the inferences that have been drawn from the tables of prices current with regard to the Turkistán market apply with even more force to Leh profits. Even as they stand, it strikes one at once that the difference between Yárkand and Leh prices is not so great as it is between those of Leh and Amritsar. To illustrate this by a few examples from the principal articles of Indian export. The average price of a thán of long-cloth may be put down as Rs. 7 in Amritsar, Rs. 13 in Leh, Rs. 14 in Yárkand; spices, *i.e.*, pepper, ginger, "kachúr," &c., per maund as Rs. 22 in Amritsar, Rs. 40 in Leh, Rs. 62 in Yárkand; sugar, per maund, as Rs. 12 in Amritsar, Rs. 30 in Ladakh, Rs. 50 in Yárkand; goat skins, per score, Rs. 12 in India, Rs. 25 in Leh, Rs. 38 in Yárkand; other skins, each Rs. 4 in Amritsar, Rs. 6 in Leh, Rs. 7 in Yárkand; indigo, Rs. 75 in Amritsar, Rs. 110 in Leh, Rs. 144 in Yárkand. But an utterly inadequate idea of the proportionate difference between these rates will be formed if the cost of carriage be not taken into consideration. This, for one horse-load, may be approximately put down at Rs. 20 to 25 from the Punjab to Leh, and Rs. 40 to 45 from Leh to Yárkand, from which it is manifest that it costs almost twice as much to take a load of goods from Ladakh to Yárkand as it does to convey one from the Punjab to Ladakh; so that as a matter of fact Leh prices are very much more remunerative than those of Yárkand.

56. This being the case, the question naturally arises—why are not traders content to do their business in Leh instead of going to Yárkand? The reply is simple, because it takes two people to make a bargain. Little business has of late years been done in Leh for the very good reason that, owing to the restrictions put on the departure of the annual caravan, merchants from Yárkand have arrived here too late to admit of their delaying at all for the purpose of transacting business. With the certain markets of India before them they have not unnaturally been unwilling to risk the prospect of being weather-bound on this side of the Zojila

* Recent accounts from Amritsar corroborate these low rates, I am sorry to say; one merchant having written to say he can make no profit out of his silk.

Pass for the winter in order to avail themselves of the chance of making a little money in Ladakh.

57. Under these circumstances trade in Leh has of course been cramped and contracted; for it is needless to say that the country itself, which consumes little and produces less, has no internal resources to promote and develope commerce.

58. In order, however, to give some idea of the capabilities of the market even under these disadvantageous circumstances, I have had a valuation made of the amount of business transacted and the profits realized in the more important sales during the past year. The amount of the former may be, in round numbers, put down at Rs. 1,25,000. The latter, however, involves a more intricate calculation, and the result has been obtained with some difficulty.

59. It should be explained, to begin with, that as by far the greater proportion of transactions done in Leh are effected by barter and exchange instead of being specie sales, the rates of profits as given below do not invariably represent so much money actually realised, but rather the amount that may fairly be anticipated to be realized as current prices, stand.

60. This being understood, then, Ladakh profits for the past year stand approximately as follows:—

Tea has yielded a profit of		25 per cent.
Indigo	ditto	25 ditto.
Spices	ditto	25 ditto.
Sugar	ditto	20 ditto.
Goat skins	ditto	25 ditto.
Piece-goods	ditto	20 ditto.

One merchant alone brought up goods from Lahore to the value of Rs. 20,000, the whole of which he got taken off his hands during the year, and though he no doubt would have made larger profits had the Yárkand caravan arrived earlier, nevertheless he himself confessed to me before leaving Leh that he hoped to clear 25 per cent. on his venture, and as he is now arranging to return here with a second consignment of goods from Lahore, I have no doubt that his expectations as to profits have been fully realized, for native traders seem to be of the opinion that 20 or 25 per cent. is the lowest remuneration that would make it worth their while to undergo the difficulties that attend Ladakh trade.

61. *Ladakh Fair.*—As an appropriate conclusion to the above remarks, it may be apposite to say something on the prospects of the annual fair that is about to be established in Leh. The primary condition of its success will of course be the removal of the restrictions that have of late years been placed on the departure of the annual caravan from Turkistán. But as this was one of the conditions of our late treaty with the Amír, it may be fairly anticipated that in future merchants will not be subjected to detention. Although Leh has not the advantages of Pálampur in being the seat of a thriving local trade, it nevertheless is peculiarly favorably situated for an emporium of Central Asian commerce. In addition to being on the high road, and about midway between India and Turkistán, it has the advantage of being the *entrepót* of a considerable amount of traffic that reaches it on the east from Chinese territory and on the west from Baltistán, Iskárdo, and other provinces in the territory of the Mahárájá of Kashmir. Moreover, Ladakh may be said to be within fairly easy reach of the Punjab; a journey to and fro could be accomplished within the year, allowing sufficient time for the transaction of business midway on the road. A trip to Turkistán, on the other hand, is a much more serious undertaking; a trader having got as far as Leh has only traversed half the distance to his destination. The northern half of the road remains to be encountered, and this not only presents incomparably greater difficulties than the southern half, but it is twice as expensive for baggage animals. There is then, I think, very little doubt that our traders would be glad enough to get a chance of doing their business with the Yárkandís without having to cross the Karakoram. The only question is whether the Yárkandís would be as willing to do their business in Leh. There can be no doubt that the system of detention in Yárkand that has lately prevailed has thrown them to a great extent on the markets of India, and now that they have found out what it is to enjoy the profits of direct trade with Calcutta and Bombay, it is probably an open question how far they will forego these advantages in order to be able to limit their travels to Ladakh. On the other hand the Yárkandís are certainly animated by a very enterprising commercial spirit, and I think they would be only too glad to get a prospect of doing a little business here if they could do so without losing the chance of getting on to India afterwards in case they were not tempted by Leh profits. Now, a fair in August or early in September would, if they are only permitted to leave Yárkand in time to attend it, enable them to spend a month in Ladakh without entailing any risk of having to cross the Zojila at an unseasonable time of the year. I have asked a great many traders what they think of the establishment of a fair here, and they all speak most encouragingly of it. The fair, too, once it were established, would in all likelihood be a great inducement to other traders in Turkistán who do not fancy such a prolonged absence from their homes as a journey to India entails to see if they could turn a little money in Ladakh. On the whole, therefore, I am inclined to think well of the prospects of success of the Leh fair.

62. *Carriage.*—This I take to be one of the most pressing questions for consideration in connection with our commercial intercourse with eastern Turkistán. Whatever may be the

limit of the Yárkand market, there can be very little doubt about it that the limit of the supply of carriage available for the transport of goods to it has been very nearly reached. In former years, when trade was in its infancy, there were no goods for the horses to carry; now there is no lack of merchandise, the difficulty is to find carriage for its transport.

63. This difficulty is much increased by the system of over-loading that prevails, custom having fixed a horse-load to be 3 maunds pakka. And though experience proves that this weight can be carried by a Yárkandí horse, still, considering the extremely difficult nature of the ground that has to be traversed, it is no doubt an excessive load. Moreover, the supply of Yárkandí horses is certainly not equal to the present carriage demands, and whatever may be their burden-bearing power the ordinary ponies procurable in this district, or Kashmir, are certainly not up to carrying such a heavy load as this.

64. Traders having been in the habit of calculating a horse-load at 3 maunds are naturally, when they are hiring carriage, disinclined to decrease it, and consequently carriers, if they want service, are as a rule compelled to agree to these terms. The matter is a difficult one to meddle with, because on the principles of free trade I take it that one has no more right to interfere in a bargain concerning the rate of hire than in one concerning the price of goods. All the same, as it seems to me quite certain that so long as the present system of over-loading continues, it will be impossible to increase the number of baggage animals. I intend to bring the matter before a meeting of traders and carriers, to try if arrangements cannot be made that would limit the weight of a load to 2½ maunds; even this I think excessive; but as it seems to be the general opinion that a lower limit than this would never be agreed to, it would be probably useless to try and enforce it.

65. The loads of the Central Asian Trading Company were, I believe, 2½ maunds, and they were all carried by mules. I saw a lot of these animals in Rupshu in October last on their way back to India, and was much struck with their appearance; they looked in excellent working order, hard and fit, notwithstanding the severe work they had undergone. Mule carriage is no doubt very efficient, but all the same both it and horse carriage are very expensive. What I should like to see introduced on this route is camel carriage; and if the Amír of Turkistán would only open out the Kugiár road, there would seem to be nothing to prevent its being introduced.

66. *Roads.*—A very important piece of work was completed during the past year on the Lahul and Ladakh trade route in a new road from the bed of the Tsárap river to the summit of the Lachalang pass. This was constructed by Mr. Morris, Assistant Engineer, who accomplished the undertaking in the face of difficulties that it must have been no easy matter to contend against.

67. On his arrival at the scene of his labors his troubles began by the conduct of a gang of skilled Kabuli coolies he had brought up with him who, not liking the prospect of a stay in such a rigorous climate and desolate district as Rupshu, got mutinous and refused to work, whereupon they were dismissed to a man, and Mr. Morris was left to undertake his work without the aid of a single skilled laborer. Fortunately his energy and skill were equal to the occasion, and with such crude and rough labor as could be supplied him from Rupshu and this district, he managed to complete a road extending over 12½ miles of mountainous country, part of which was difficult cutting through a rocky cliff, within a period of two months.

68. As a detailed report of the advantages offered by the new road has already been submitted, there is no occasion to go into the subject *in extenso* again here; suffice it to say that the new line commences on the right bank of the Tsárap river, about a mile south of the Changlang encamping ground, and after following the course of the stream for a mile, it leaves it by an abrupt turn to the right, whence it is carried by an easy and steadily ascending gradient along the hills, bounding the left bank of the Changlang nallah to the summit of the Lachalang pass, the height of which is 16,630 feet. Although the difference of level between the point where the new road diverges from the old and where it debouches on to the pass is about 3,000 feet, the gradient is nowhere greater than 1 in 10, and the ascent therefore is the easiest climb imaginable. In this respect it presents a striking contrast to the old road, which is nothing but a series of abrupt ascents and descents that are toilsome enough for a man, but must be still more so for a laden animal.

69. Mr. Morris had not time to complete the road all through to what he considers the requisite width for mule traffic, *i. e.*, 7 feet. Widening it out, however, to this extent, he states, would be a very easy operation, and if carried on under skilled superintendence, it might be completed in a month's time at the moderate outlay of Rs. 1,000. I venture to hope, therefore, that, now that so much has been done, nothing may interfere to prevent the completion of the little that remains in order to throw the road open to traffic.

69½. I trust I may be here permitted to bring forward again the question of the Shyok road, a work which, if carried out, would be of the utmost service in facilitating our means of communication with Eastern Turkistán. So much has been done to improve this along the route south of Ladakh, that it seems all the more desirable that the northern portion should get a share of attention too. A road up the Shyok river would avoid the necessity of crossing the Sassir pass, which, on account of its glacier formation, is the most difficult and dangerous pass between this and "Shadidulla Khoja" on the borders of Yárkand territory. It would by

all accounts present a comparatively easy gradient, and it would open out a very easy camel road that would be practicable all the year round. Considering how scanty and expensive the supply of transport has now become, it would, I think, be difficult to over-estimate the advantages that would result from the introduction of camel carriage.

70. Once the Shyok route is opened out, the only remaining obstacle to comparatively easy communication throughout the year between India and Central Asia would be the Zojila pass; and if, as seems to be not improbable, the Kashmir Government be induced to permit the application of English engineering skill to overcome the physical difficulties this pass presents, it will no doubt before long be very easy work crossing the Zojila in mid-winter.

71. I may mention, before quitting this subject, that minor repairs were also carried out during the past year by the Joint-Commissioners to portions of the trade routes running through the Ladakh district.

72. In his report for 1873 Mr. Shaw went to some trouble to show the preference that is evinced by traders for the Kullu over the Kashmir route; this year I have had a table made out (form M.) which shews the comparative amount of goods taken along the two routes during the past season. From this it will be seen that about 5½ lakhs went and came *via* Kullu, and something over 4 lakhs *via* Kashmir. Considering that the Kullu route was only used from July to November for exports, and from June to October for imports, the excess in its favour is remarkable; still there remains the fact that traffic passes along the Kashmir route every month in the year, whereas the year would be an exceptional one that would admit of the Kullu route being utilised for even six months.

73. *Other routes.*—Besides the route over the Karakoram, there are two others by which goods find their way to Káshgar,—one of these runs through Kabul, Badakshán, Zibák, Panja, and Sar-i-kúl, and the other through Pesháwar, Swát, Chitral to Zibák, where it joins the first route.

74. It is worth mentioning that 12 merchants who had been up to last year in the habit of confining their commercial trips to Yárkand to one or other of these routes, in 1874 for the first time piloted their return consignments of goods over the Karakoram. Several of these men complained to me in strong terms of the duties exacted along these routes, and expressed themselves as much pleased with the free system that prevails on the Ladakh trade route.

75. Thinking the subject would repay inquiry I took it up, and the result, which I think well worth inviting attention to, I give below in a detail of the two routes and the amount of duties levied along each:—

Route No. I.

			Rs.	A.	P.
Kabul	... Duty levied on each horse-load	...	6	2	6
Bába Kamar	... Ditto	...	1	12	0
Badakshán	... Ditto	...	3	8	0
Zibák	... Ditto	...	2	0	0
Panja	... Ditto	...	1	0	0
Sar-i-kúl	... Ditto	...	2	0	0
	Total duty levied on each load	...	16	6	6

Route No. II.

			Rs.	A.	P.
Alladáud	... Duty levied on each horse-load	...	1	12	0
Serai	... Ditto	...	0	14	0
Shamshere Khan	... Ditto	...	0	14	0
Dain	... Ditto	...	2	10	0
Dros Chitral	... Ditto	...	1	12	0
Biráz Chitral	... Ditto	...	1	12	0
Chitral	... Ditto	...	3	0	0
Sheghit Chitral	... Ditto	...	3	0	0
Zibák	... Ditto	...	2	0	0
Panja	... Ditto	...	1	0	0
Sur-i-kúl	... Ditto	...	2	0	0
	Total duty levied on each load	...	20	10	0

If the duties have been stated correctly to me—and I see no reason for thinking they have not been so—the merchants have not complained of them without reason.

76. As bearing upon the future of trade, I think the question specially interesting, for several of the traders alluded to expressed their intention of using this route exclusively in future, and should they carry out this intention others no doubt will be induced to follow their example; and I think, therefore, that it is by no means unlikely that Ladakh trade may in this way receive a new and powerful impetus.

GENERAL REMARKS ON THE PAST YEAR'S TRADE AND PROSPECTS OF THE CENTRAL ASIAN TRADING COMPANY.

77. Apart from the actual amount of the trade totals, which is in itself a satisfactory illustration of the progress that has characterised our commerce with Eastern Turkistán during the past year, there are not wanting other indications, such as, for instance, the marked increase of imports from Yárkand, the rise in almost all the chief articles of Indian import, the prospect of a new market for indigo, the rates of prices current in the different markets, &c., &c., all of which may be said to speak well for the present, and promisingly for the future, condition of trade.

78. At the same time I think it as well to say, that such insight as my experience here has given me of the workings of trade certainly lead me to the conclusion that, notwithstanding the elasticity the Turkistán market has hitherto shown, its capacities are nevertheless limited. The steady and unvarying progress that has ever since the record of Ladakh statistics marked the past history of trade is sufficient evidence of this elasticity. All the same, the country is still young, its resources are to a great extent undeveloped, and its wealth certainly at present is inconsiderable, and in guaging the capabilities of its market these circumstances should not be overlooked.

79. In drawing inferences from the statistics of Ladakh trade there is, moreover, another fact which should always be borne in mind, or else erroneous conclusions may be arrived at. It is that almost all commercial transactions are effected by barter, very little money being exchanged; for truth to tell, very few of the traders have any money to exchange. If cash could be realised at the rates that figure in the tables of prices current, it would not take long to make a fortune in this trade; but such is not the case. A trader, for instance, comes to Leh with a consignment of piece-goods, in exchange for which say he makes a bargain for charras and silk. A certain amount of chance, to begin with, must attend the success of this transaction, but his business is as yet only half over; he has still to get rid of the silk and charras, and the profits he ultimately realizes must of course depend on the state of the Indian market as regards these goods. Then, again, in balancing gain, consideration must be taken of the expense of carriage, risk of loss or damage on the road, mortality of horses, &c., &c., and all these contingencies are, it should be remembered, much increased in case of a trader's travels being prolonged to Turkistán.

80. As to the prospects of the Central Asian Trading Company, the accounts first received of Mr. Russell's chance of getting rid of his goods were wonderfully promising. More recent reports, however, do not bear out the sanguine expectations he seems first to have formed of the success likely to attend his sales. But that he should have sold but little of his caravan hitherto is, I think, in no way surprising; for my idea is that even under favourable circumstances it would take a considerable time to effect the sale of so large a caravan—that is, on the condition of the goods being bought up in the ordinary way of trade by the people of the country. It is quite likely, however, that the Amír, if he thinks that Mr. Russell is using his eyes to too good purpose in Yárkand, will, in order to give him his *conge*, treat him as he seems on several occasions to have treated Russian merchants in similar circumstances, and buy up the whole or the greater part of his goods himself. But of course if the caravan were sold in this way it would not afford a reliable test for gauging the capacities of the Turkistán market. I have, however, after having given the matter a good deal of consideration, come to the conclusion that, whatever measure of success may attend his business,—and Mr. Russell's energy and enterprise are deserving of a high measure of success,—we shall still only have an imperfect test of the capacities of the Yárkand market: for it seems to me quite certain that Mr. Russell's goods are not entirely suited to the wants of the country he has taken them to. In the first place they are *universally* spoken of as being excessively expensive, and in the next place, a portion of them at any rate, are quite out of place in the Turkistán bazár.

81. Let us examine some of the principal items of his importations. To begin with the chief article, *piece-goods*, which figure to the extent of Rs. 62,500. As has been already pointed out, these piece-goods are a good deal more expensive than the fabrics that ordinarily find importation to Yárkand. They are no doubt of finer texture and better quality and possibly more worth their price than the inferior kind, but this is not to the point, for it may be no recommendation in the eyes of the Yárkandís, whose taste in the matter will determine the sale of the goods. If they, as would seem to be the case, prefer coarse and cheap long-cloth, it is an open question whether they will purchase finer cloth at an enhanced price.

82. Merino, Rs. 35,644; broad cloth, Rs. 8,155,—total Rs. 43,799. These fabrics have hitherto been imported in but exceedingly small quantities to Turkistán. I should think the demand for them is likely to be very limited, especially as Mr. Russell's prices are more than 35 per cent. higher than other traders.

83. Flannel, Rs. 5,665; alpacca, Rs. 2,490; serge, Rs. 4,377; cotton-cloth, Rs. 3,015,—total Rs. 15,547. These fabrics will be entirely new to the country, and, with the exception, perhaps, of cotton cloth, I do not know what grounds there are for thinking that there will be any

demand for them. Any way, considering their prices, I think the chances of their finding sale somewhat hazardous.

84. Silk fabrics, Rs. 44,514. The average price of these, according to Mr. Russell's valuation, is Rs. 3 per yard, and the silks of other traders Rs. 2-2 per yard. Mr. Russell's silks are probably much superior to other merchants, but so are their prices; and it is, *quantity not quality*, that finds favour in Yárkand.

85. Neck scarves or comforters, Rs. 2,700; jackets, Rs. 2,304; merino shawls, Rs. 3,620; English blankets, Rs. 240; English shawls, Rs. 240; stuff for veils, Rs. 1,624; silk stockings, Rs. 500; curtains Rs. 430,—total Rs. 11,658. It must have cost a good deal of money to transport these articles from Bradford to Yárkand, and whether they would not be much more appropriately placed in an English warehouse than a shop in a Central Asian bazár is a question about which there could hardly be, I should think, two opinions. However, now they have got to Yárkand, let us hope some one will buy them; though should they not find a sale it would be very hard to blame the market of the country. The Túrkís, though they are reported to be an enlightened race, have probably hardly yet advanced sufficiently far in civilization to take to wearing silk stockings.

86. Imitation fur-robes, Rs. 800; 4 were detailed at Rs. 200 a piece. Now considering that an embroidered portion of expensive Russian furs (genuine of course) could be bought for this sum in Yárkand, Mr. Russell will be very fortunate if he succeeds in persuading any body to take his *imitation* fur-robes at this price.

87. Needles, Rs. 100; pins, Rs. 3,434. Needles sell in Yárkand, but pins will be quite new to the country, and Mr. Russell will, I should think, have to enlighten the people as to the uses they are adapted to before he finds any purchasers.

88. Gun caps, Rs. 2,000, priced at Rs. 10 per 1,000. Yárkandís have, however, been accustomed to buy caps that cost only Rs. 6 per 1,000, and though these are no doubt very inferior caps, still they appear to have satisfied their wants, and they will probably think twice before they pay as much as Mr. Russell is asking.

89. Guns, cartridges, &c. Mr. Russell took up a large consignment of both these in his caravan, but his prices seem to be thought excessively high. If he will abate them, however these articles should sell well.

90. I trust my motive in making the above remarks, by no means all that might be said on the same subject, will not be misunderstood. As conclusions will inevitably be drawn as to the probable results of Mr. Russell's venture, I take it to be only my duty to do all I can to contribute to the correctness of these conclusions; and unless some consideration be given to the adaptability in price as well as in kind of Mr. Russell's goods to the wants of the country he has taken them to for sale, I do not see how even approximately correct conclusions can be arrived at in the matter. Their suitability in this respect should, I take it, be not only the standard his success should be judged by, but also the test of the capacity of the Yárkand market. I will only add that Mr. Russell has no doubt had a very difficult task before him, and the pluck and enterprise he has brought to bear on it deserve every success. This I wish him with all my heart, notwithstanding the prominence I have thought it my duty to give to the odds that are against it.

91. *Drawbacks.*—I see in the Punjab report for 1873-74 that it is in contemplation to allow the payment of refunds of duties on goods for Turkistán to be made at Leh by the British Joint-Commissioner, and I trust that nothing may prevent this arrangement being carried out. Ladakh would, I take it, for every reason, be the most convenient place for the payment of drawbacks. Last year all the traders that came *vid* Kullu got their refunds paid by the Assistant Commissioner of that district, and several who came *vid* Kashmir petitioned me for a similar favour and appeared unable to comprehend why I could not grant it them.

Events of the Year.

92. During the early summer of 1874 Sir Douglas Forsyth's mission repassed through Ladakh on their return journey to India, and, thanks to the able way Mr. Johnson carried out the orders of the Mahárája on the subject, the arrangements made for their requirements were very elaborate and complete. Some fears were entertained in the spring that in consequence of the withdrawal of a portion of the cultivators of this district for employment as coolies; &c., the crops might suffer; but such was not the case; arrangements were made for the tillage of the usual amount of ground, and the yield of the harvest was quite up to, if not in excess of, the average of past seasons. The autumn of the year was marked by the death of the Rája of Ladakh, which occurred rather suddenly on the 20th September. Since the Kashmir conquest of Ladakh, in 1834, by Wazir Zoráwar Singh, the Rája has been in the position of a mere stipendiary, retaining the nominal title of Rája but having no authority whatsoever. He is succeeded in the title by his son, a boy of about 10 years of age.

93. The death of the Rája was followed about two months later by that of the "Kahlone," the head Bôte munshi of the Ladakh wizárat. In bye-gone days, when the Ladakh State was independent, the Kahlone was the prime minister of the Rája, and an

limit of the Yárkand market, there can be very little doubt about it that the limit of the supply of carriage available for the transport of goods to it has been very nearly reached. In former years, when trade was in its infancy, there were no goods for the horses to carry; now there is no lack of merchandise, the difficulty is to find carriage for its transport.

63. This difficulty is much increased by the system of over-loading that prevails, custom having fixed a horse-load to be 3 maunds pakka. And though experience proves that this weight can be carried by a Yárkandí horse, still, considering the extremely difficult nature of the ground that has to be traversed, it is no doubt an excessive load. Moreover, the supply of Yárkandí horses is certainly not equal to the present carriage demands, and whatever may be their burden-bearing power the ordinary ponies procurable in this district, or Kashmir, are certainly not up to carrying such a heavy load as this.

64. Traders having been in the habit of calculating a horse-load at 3 maunds are naturally, when they are hiring carriage, disinclined to decrease it, and consequently carriers, if they want service, are as a rule compelled to agree to these terms. The matter is a difficult one to meddle with, because on the principles of free trade I take it that one has no more right to interfere in a bargain concerning the rate of hire than in one concerning the price of goods. All the same, as it seems to me quite certain that so long as the present system of over-loading continues, it will be impossible to increase the number of baggage animals. I intend to bring the matter before a meeting of traders and carriers, to try if arrangements cannot be made that would limit the weight of a load to 2½ maunds; even this I think excessive; but as it seems to be the general opinion that a lower limit than this would never be agreed to, it would be probably useless to try and enforce it.

65. The loads of the Central Asian Trading Company were, I believe, 2½ maunds, and they were all carried by mules. I saw a lot of these animals in Rupshu in October last on their way back to India, and was much struck with their appearance; they looked in excellent working order, hard and fit, notwithstanding the severe work they had undergone. Mule carriage is no doubt very efficient, but all the same both it and horse carriage are very expensive. What I should like to see introduced on this route is camel carriage; and if the Amír of Turkistán would only open out the Kugiár road, there would seem to be nothing to prevent its being introduced.

66. *Roads.*—A very important piece of work was completed during the past year on the Lahul and Ladakh trade route in a new road from the bed of the Tsárap river to the summit of the Lachalang pass. This was constructed by Mr. Morris, Assistant Engineer, who accomplished the undertaking in the face of difficulties that it must have been no easy matter to contend against.

67. On his arrival at the scene of his labors his troubles began by the conduct of a gang of skilled Kabuli coolies he had brought up with him who, not liking the prospect of a stay in such a rigorous climate and desolate district as Rupshu, got mutinous and refused to work, whereupon they were dismissed to a man, and Mr. Morris was left to undertake his work without the aid of a single skilled laborer. Fortunately his energy and skill were equal to the occasion, and with such crude and rough labor as could be supplied him from Rupshu and this district, he managed to complete a road extending over 12½ miles of mountainous country, part of which was difficult cutting through a rocky cliff, within a period of two months.

68. As a detailed report of the advantages offered by the new road has already been submitted, there is no occasion to go into the subject *in extenso* again here; suffice it to say that the new line commences on the right bank of the Tsárap river, about a mile south of the Changlang encamping ground, and after following the course of the stream for a mile, it leaves it by an abrupt turn to the right, whence it is carried by an easy and steadily ascending gradient along the hills, bounding the left bank of the Changlang nallah to the summit of the Lachalang pass, the height of which is 16,630 feet. Although the difference of level between the point where the new road diverges from the old and where it debouches on to the pass is about 3,000 feet, the gradient is nowhere greater than 1 in 10, and the ascent therefore is the easiest climb imaginable. In this respect it presents a striking contrast to the old road, which is nothing but a series of abrupt ascents and descents that are toilsome enough for a man, but must be still more so for a laden animal.

69. Mr. Morris had not time to complete the road all through to what he considers the requisite width for mule traffic, *i. e.*, 7 feet. Widening it out, however, to this extent, he states, would be a very easy operation, and if carried on under skilled superintendence it might be completed in a month's time at the moderate outlay of Rs. 1,000. I venture to hope, therefore, that, now that so much has been done, nothing may interfere to prevent the completion of the little that remains in order to throw the road open to traffic.

69½. I trust I may be here permitted to bring forward again the question of the Shyok road, a work which, if carried out, would be of the utmost service in facilitating our means of communication with Eastern Turkistán. So much has been done to improve this along the route south of Ladakh, that it seems all the more desirable that the northern portion should get a share of attention too. A road up the Shyok river would avoid the necessity of crossing the Sásir pass, which, on account of its glacier formation, is the most difficult and dangerous pass between this and "Shadidulla Khoja" on the borders of Yárkand territory. It would by

all accounts present a comparatively easy gradient, and it would open out a very easy camel road that would be practicable all the year round. Considering how scanty and expensive the supply of transport has now become, it would, I think, be difficult to over-estimate the advantages that would result from the introduction of camel carriage.

70. Once the Shyok route is opened out, the only remaining obstacle to comparatively easy communication throughout the year between India and Central Asia would be the Zojila pass; and if, as seems to be not improbable, the Kashmir Government be induced to permit the application of English engineering skill to overcome the physical difficulties this pass presents, it will no doubt before long be very easy work crossing the Zojila in mid-winter.

71. I may mention, before quitting this subject, that minor repairs were also carried out during the past year by the Joint-Commissioners to portions of the trade routes running through the Ladakh district.

72. In his report for 1873 Mr. Shaw went to some trouble to show the preference that is evinced by traders for the Kullu over the Kashmir route; this year I have had a table made out (form M.) which shews the comparative amount of goods taken along the two routes during the past season. From this it will be seen that about 5½ lakhs went and came *via* Kullu, and something over 4 lakhs *via* Kashmir. Considering that the Kullu route was only used from July to November for exports, and from June to October for imports, the excess in its favour is remarkable; still there remains the fact that traffic passes along the Kashmir route every month in the year, whereas the year would be an exceptional one that would admit of the Kullu route being utilised for even six months.

73. *Other routes.*—Besides the route over the Karakoram, there are two others by which goods find their way to Káshgar,—one of these runs through Kabul, Badakshán, Zibák, Panja, and Sar-i-kúl, and the other through Pesháwar, Swát, Chitral to Zibák, where it joins the first route.

74. It is worth mentioning that 12 merchants who had been up to last year in the habit of confining their commercial trips to Yárkand to one or other of these routes, in 1874 for the first time piloted their return consignments of goods over the Karakoram. Several of these men complained to me in strong terms of the duties exacted along these routes, and expressed themselves as much pleased with the free system that prevails on the Ladakh trade route.

75. Thinking the subject would repay inquiry I took it up, and the result, which I think well worth inviting attention to, I give below in a detail of the two routes and the amount of duties levied along each:—

Route No. I.

		Rs.	A.	P.
Kabul	... Duty levied on each horse-load ...	6	2	6
Bába Kamar	... Ditto ...	1	12	0
Badakshán	... Ditto ...	3	8	0
Zibák	... Ditto ...	2	0	0
Panja	... Ditto ...	1	0	0
Sar-i-kúl	... Ditto ...	2	0	0
	Total duty levied on each load ...	16	6	6

Route No. II.

		Rs.	A.	P.
Alladáud	... Duty levied on each horse-load ...	1	12	0
Serai	... Ditto ...	0	14	0
Shamshere Khan	... Ditto ...	0	14	0
Dain	... Ditto ...	2	10	0
Dros Chitral	... Ditto ...	1	12	0
Biráz Chitral	... Ditto ...	1	12	0
Chitral	... Ditto ...	3	0	0
Shoghit Chitral	... Ditto ...	3	0	0
Zibák	... Ditto ...	2	0	0
Panja	... Ditto ...	1	0	0
Sur-i-kúl	... Ditto ...	2	0	0
	Total duty levied on each load ...	20	10	0

If the duties have been stated correctly to me—and I see no reason for thinking they have not been so—the merchants have not complained of them without reason.

76. As bearing upon the future of trade, I think the question specially interesting, for several of the traders alluded to expressed their intention of using this route exclusively in future, and should they carry out this intention others no doubt will be induced to follow their example; and I think, therefore, that it is by no means unlikely that Ladakh trade may in this way receive a new and powerful impetus.

GENERAL REMARKS ON THE PAST YEAR'S TRADE AND PROSPECTS OF THE CENTRAL ASIAN TRADING COMPANY.

77. Apart from the actual amount of the trade totals, which is in itself a satisfactory illustration of the progress that has characterised our commerce with Eastern Turkistán during the past year, there are not wanting other indications, such as, for instance, the marked increase of imports from Yárkand, the rise in almost all the chief articles of Indian import, the prospect of a new market for indigo, the rates of prices current in the different markets, &c., &c., all of which may be said to speak well for the present, and promisingly for the future, condition of trade.

78. At the same time I think it as well to say, that such insight as my experience here has given me of the workings of trade certainly lead me to the conclusion that, notwithstanding the elasticity the Turkistán market has hitherto shown, its capacities are nevertheless limited. The steady and unvarying progress that has ever since the record of Ladakh statistics marked the past history of trade is sufficient evidence of this elasticity. All the same, the country is still young, its resources are to a great extent undeveloped, and its wealth certainly at present is inconsiderable, and in guaging the capabilities of its market these circumstances should not be overlooked.

79. In drawing inferences from the statistics of Ladakh trade there is, moreover, another fact which should always be borne in mind, or else erroneous conclusions may be arrived at. It is that almost all commercial transactions are effected by barter, very little money being exchanged; for truth to tell, very few of the traders have any money to exchange. If cash could be realised at the rates that figure in the tables of prices current, it would not take long to make a fortune in this trade; but such is not the case. A trader, for instance, comes to Leh with a consignment of piece-goods, in exchange for which say he makes a bargain for charras and silk. A certain amount of chance, to begin with, must attend the success of this transaction, but his business is as yet only half over; he has still to get rid of the silk and charras, and the profits he ultimately realizes must of course depend on the state of the Indian market as regards these goods. Then, again, in balancing gain, consideration must be taken of the expense of carriage, risk of loss or damage on the road, mortality of horses, &c., &c., and all these contingencies are, it should be remembered, much increased in case of a trader's travels being prolonged to Turkistán.

80. As to the prospects of the Central Asian Trading Company, the accounts first received of Mr. Russell's chance of getting rid of his goods were wonderfully promising. More recent reports, however, do not bear out the sanguine expectations he seems first to have formed of the success likely to attend his sales. But that he should have sold but little of his caravan hitherto is, I think, in no way surprising; for my idea is that even under favourable circumstances it would take a considerable time to effect the sale of so large a caravan—that is, on the condition of the goods being bought up in the ordinary way of trade by the people of the country. It is quite likely, however, that the Amír, if he thinks that Mr. Russell is using his eyes to too good purpose in Yárkand, will, in order to give him his *eonge*, treat him as he seems on several occasions to have treated Russian merchants in similar circumstances, and buy up the whole or the greater part of his goods himself. But of course if the caravan were sold in this way it would not afford a reliable test for gauging the capacities of the Turkistán market. I have, however, after having given the matter a good deal of consideration, come to the conclusion that, whatever measure of success may attend his business,—and Mr. Russell's energy and enterprise are deserving of a high measure of success,—we shall still only have an imperfect test of the capacities of the Yárkand market: for it seems to me quite certain that Mr. Russell's goods are not entirely suited to the wants of the country he has taken them to. In the first place they are *universally* spoken of as being excessively expensive, and in the next place, a portion of them at any rate, are quite out of place in the Turkistán bazár.

81. Let us examine some of the principal items of his importations. To begin with the chief article, *piece-goods*, which figure to the extent of Rs. 62,500. As has been already pointed out, these piece-goods are a good deal more expensive than the fabrics that ordinarily find importation to Yárkand. They are no doubt of finer texture and better quality and possibly more worth their price than the inferior kind, but this is not to the point, for it may be no recommendation in the eyes of the Yárkandís, whose taste in the matter will determine the sale of the goods. If they, as would seem to be the case, prefer coarse and cheap long-cloth, it is an open question whether they will purchase finer cloth at an enhanced price.

82. Merino, Rs. 33,644; broad cloth, Rs. 8,155,—total Rs. 43,799. These fabrics have hitherto been imported in but exceedingly small quantities to Turkistán. I should think the demand for them is likely to be very limited, especially as Mr. Russell's prices are more than 35 per cent. higher than other traders.

83. Flannel, Rs. 5,665; alpacca, Rs. 2,490; serge, Rs. 4,377; cotton-cloth, Rs. 3,015,—total Rs. 15,547. These fabrics will be entirely new to the country, and, with the exception, perhaps, of cotton cloth, I do not know what grounds there are for thinking that there will be any

demand for them. Any way, considering their prices, I think the chances of their finding sale somewhat hazardous.

84. Silk fabrics, Rs. 44,514. The average price of these, according to Mr. Russell's valuation, is Rs. 3 per yard, and the silks of other traders Rs. 2-2 per yard. Mr. Russell's silks are probably much superior to other merchants, but so are their prices; and it is, *quantity not quality*, that finds favour in Yárkand.

85. Neck scarves or comforters, Rs. 2,700; jackets, Rs. 2,304; merino shawls, Rs. 3,620; English blankets, Rs. 240; English shawls, Rs. 240; stuff for veils, Rs. 1,624; silk stockings, Rs. 500; curtains Rs. 430,—total Rs. 11,658. It must have cost a good deal of money to transport these articles from Bradford to Yárkand, and whether they would not be much more appropriately placed in an English warehouse than a shop in a Central Asian bazár is a question about which there could hardly be, I should think, two opinions. However, now they have got to Yárkand, let us hope some one will buy them; though should they not find a sale it would be very hard to blame the market of the country. The Túrkís, though they are reported to be an enlightened race, have probably hardly yet advanced sufficiently far in civilization to take to wearing silk stockings.

86. Imitation fur-robes, Rs. 800; 4 were detailed at Rs. 200 a piece. Now considering that an embroidered portion of expensive Russian furs (genuine of course) could be bought for this sum in Yárkand, Mr. Russell will be very fortunate if he succeeds in persuading any body to take his *imitation* fur-robes at this price.

87. Needles, Rs. 100; pins, Rs. 3434. Needles sell in Yárkand, but pins will be quite new to the country, and Mr. Russell will, I should think, have to enlighten the people as to the uses they are adapted to before he finds any purchasers.

88. Gun caps, Rs. 2,000, priced at Rs. 10 per 1,000. Yárkandís have, however, been accustomed to buy caps that cost only Rs. 6 per 1,000, and though these are no doubt very inferior caps, still they appear to have satisfied their wants, and they will probably think twice before they pay as much as Mr. Russell is asking.

89. Guns, cartridges, &c. Mr. Russell took up a large consignment of both these in his caravan, but his prices seem to be thought excessively high. If he will abate them, however these articles should sell well.

90. I trust my motive in making the above remarks, by no means all that might be said on the same subject, will not be misunderstood. As conclusions will inevitably be drawn as to the probable results of Mr. Russell's venture, I take it to be only my duty to do all I can to contribute to the correctness of these conclusions; and unless some consideration be given to the adaptability in price as well as in kind of Mr. Russell's goods to the wants of the country he has taken them to for sale, I do not see how even approximately correct conclusions can be arrived at in the matter. Their suitability in this respect should, I take it, be not only the standard his success should be judged by, but also the test of the capacity of the Yárkand market. I will only add that Mr. Russell has no doubt had a very difficult task before him, and the pluck and enterprise he has brought to bear on it deserve every success. This I wish him with all my heart, notwithstanding the prominence I have thought it my duty to give to the odds that are against it.

91. *Drawbacks.*—I see in the Punjab report for 1873-74 that it is in contemplation to allow the payment of refunds of duties on goods for Turkistán to be made at Leh by the British Joint-Commissioner, and I trust that nothing may prevent this arrangement being carried out. Ladakh would, I take it, for every reason, be the most convenient place for the payment of drawbacks. Last year all the traders that came *vid* Kullu got their refunds paid by the Assistant Commissioner of that district, and several who came *vid* Kashmir petitioned me for a similar favour and appeared unable to comprehend why I could not grant it them.

Events of the Year.

92. During the early summer of 1874 Sir Douglas Forsyth's mission repassed through Ladakh on their return journey to India, and, thanks to the able way Mr. Johnson carried out the orders of the Mahárája on the subject, the arrangements made for their requirements were very elaborate and complete. Some fears were entertained in the spring that in consequence of the withdrawal of a portion of the cultivators of this district for employment as coolies, &c., the crops might suffer; but such was not the case: arrangements were made for the tillage of the usual amount of ground, and the yield of the harvest was quite up to, if not in excess of, the average of past seasons. The autumn of the year was marked by the death of the Rája of Ladakh, which occurred rather suddenly on the 20th September. Since the Kashmir conquest of Ladakh, in 1834, by Wazir Zoráwar Singh, the Rája has been in the position of a mere stipendiary, retaining the nominal title of Rája but having no authority whatsoever. He is succeeded in the title by his son, a boy of about 10 years of age.

93. The death of the Rája was followed about two months later by that of the "Kahlone," the head Bôte munshi of the Ladakh wizárat. In bye-gone days, when the Ladakh State was independent, the Kahlone was the prime minister of the Rája, and an

official of no mean importance. The late Kahlone was a fine specimen of a Bôte, and it will be difficult to replace him in the wizárat. He was on his way to Lhássa as commercial envoy from the Mahárája, when he contracted the illness that brought on his death.

94. *Jurisdiction.*—During the year 29 civil and 6 criminal cases came for jurisdiction before the Joint-Commissioner's court. The civil cases were almost all suits to recover debts, and none deserve special comment. The criminal cases, with the exception of one for theft, tried by Mr. Johnson at Lama Gyrá, on his way to Kashmir, were of a very trivial character.

95. *Leh Dispensary.*—In the autumn of the year the services of Assa Rám, Hospital Assistant, were lost to the dispensary; the duties of which, as well as those of meteorological observer, he had carried on for a period extending over 18 months with great assiduity and attention. I am glad, however, to be able to speak in equally high terms of the efficient way these duties have been since carried on by his successor, Hospital Assistant Chirágh Dín, who has been most regular and attentive in his work. I submit with the dispensary statistics a short report of his, and, with reference to the working of the dispensary during the past year, I should like to say that the great falling-off in the number of vaccinations is due to the circumstance that Lámá Tandúp, on receipt of the reward granted him for his work during 1873, disappeared for some time, and I have only lately been able to unearth him. As he was the means of all the district vaccinations being carried out, of course in his absence there was a cessation of work. Now, however, I am glad to say that he has recommenced his vaccinations again, and I trust that the return for *this* year may be up to the mark of 1873.

96. Karím Baksh, the office munshi, has rendered me invaluable assistance in the compilation of the statistics accompanying this report. The ability and assiduity of Karím Baksh have, on previous occasions, been brought to the notice of His Honour the Lieutenant-Governor, and last year, as on several previous years, His Honour was graciously pleased to grant him, on the recommendation of the British Joint-Commissioner, the gratuity of one month's pay. This year I have, however, ventured to recommend (in a separate letter) the munshi for a permanent increase of pay, and I venture to hope His Honour may not think the reward unmerited.

97. In bringing this report to a close I should like to place on record the thanks I feel are due to Mr. Johnson, the Mahárája's Wazír of Ladakh, for the cordial co-operation he has always given me in carrying out the duties of my office here. Yárkand trade, moreover, owes no little to the help it has had from Mr. Johnson; since his departure on furlough to England, the duties of the wizárat have been carried on by Munshi Bayli Rám, and I have reason to be pleased with the assistance Bayli Rám, as well as officials of the Mahárája's have given me in carrying on my work here.

A.

IMPORTS FROM TURKISTAN INTO LADAKH DURING THE YEAR 1874.

Number.	Name of Goods.		Rate per maund pakka.	Turkistan. Weight.	Turkistan. Value.	Remarks.
			Rs. A. P.	Mds. S.	Rs.	
1	Coarse cotton cloth (" Garha") ...		87 8 0	143 31	12,577

Kashmir Joint-Commissioner.

Dated Ladakh, 23rd April 1875.

From—CHARAG DEEN, Hospital Assistant, 3rd Class,

To—The British Joint-Commissioner, Ladakh.

I have the honor to submit for your information, the annual return of sick treated at the Ladakh dispensary during the year 1874, together with a list of vaccination and European medicines expended.

The number of in-door and out-door patients shows an increase over the number of last year, but this is only natural, as the dispensary was open for 12 months instead of 5 as in 1873.

The general health of the district has been excellent and no epidemic diseases have prevailed; this probably accounts for the decrease in the average of out and in-door patients, which last year was 8·978, whereas in 1873 it was 11·593 only.

During a short stay made here by Surgeon Scully on his way to Yarkand several operations for cataract were made by him, as also were some other operations of a serious character.

During the year a great improvement was made in the dispensary by the enlargement of the sick wards, which were formerly very small and confined.

Thanks are due to Mr. Johnson, the Wazír of the Mahárája, for the carrying out of this improvement.

ANNUAL RETURN OF OUT AND IN-PATIENTS AT THE DISPENSARY AT LADAKH FOR THE YEAR 1874.

[N. B.—The numbers refer to the figures distinguishing the disease in the nomenclature.]

CHARAG DEEN, *Hospital Assistant,*
In Medical Charge of Dispensary, Ladakh.

Proceedings of the Honourable the Lieutenant-Governor of the Punjab in the Foreign Department, No. 1174, dated 18th June 1875.

READ—

Ladakh Trade Report for 1874, furnished by Captain Molloy, British Joint-Commissioner.—Received, May 5th, 1875.

REMARKS.—The value of the trade of Ladakh, that is, the aggregate value of goods imported into and exported from the town of Leh in 1874, is estimated in the returns at Rs. 26,30,932,—a large increase as compared with the trade of 1873, which was estimated at Rs. 17,76,729. But of the above amount (Rs. 26,30.932) the sum of Rs. 1,50,000 represents the value of last year's imports which remained at Leh owing to difficulty of procuring carriage or unwillingness to pay enhanced rates therefor. Deducting this amount from the returns of 1874, and adding it to the value of the trade of 1873, the value of the trade of 1874 becomes Rs. 24,80,932 as compared with Rs 19,26,729 in 1873. But, further, as remarked with reference to last year's report, the system of calculating the value of the trade on the aggregate value of imports and exports is likely to mislead; for, as the same goods figure to a large extent both as imports and as exports, in reality the aggregate value of the trade passing through Leh is little more than half that shewn in the returns, so that in point of fact the value of the trade of 1873 and 1874 respectively, instead of being about 19 lakhs and 25 lakhs, was only 9½ lakhs and 12½ lakhs in value. But even on this more correct system of computation the increase in the value of the trade was great, amounting to 4 lakhs of rupees. Of these 4 lakhs of rupees, however, Rs. 3,10,000 represent the estimated value of the caravan of the Central Asian Trading Company conducted by Mr. Russell; excluding the value of this caravan, which may be considered an abnormal addition to the ordinary traffic, the increase is reduced to less than a lakh of rupees—a satisfactory, but by no means startling, amount.

2. So much for the general statistics of the trade. It will be now interesting to consider the state of trade according to its geographical distribution, that is, as between Leh and the four countries with which it is principally carried on, *viz.*, Turkistán, British India, Changthán and Lhássa (Chinese territory), and Kashmir and Baltistán. This will be seen at a glance in the subjoined statement:—

COUNTRY.	Year.	Imports into Ladakh from.	Exports from Ladakh to.	TOTAL.	CHIEF ARTICLES OF TRADE.
		Rs.	Rs.	Rs.	
Turkistán	1873	3,30,690	2,55,660	5,86,350	*Imports.*—Gold, pashm, silk, silver, horses, charras, coarse cloth, jewellery, felts.
	1874	3,81,802	8,02,563	11,84,365	*Exports.*—Cotton piece-goods, silks, fire-arms, tea, broad-cloth, goat skins, otter skins, spices, sugar.
		+51,112	+5,46,903	+5,98,015	
British India	1873	4,66,298	3,29,036	7,95,334	*Imports.*—Cotton piece-goods, silks, fire-arms, tea, broad-cloth, indigo, goat skins, otter skins, spices.
	1874	6,61,660	3,14,320	9,75,980	*Exports.*—Gold, silk, pashm, silver, charras, horses, precious stones.
		+1,95,362	—14,716	+1,80,646	
Changthán and Lhássa ...	1873	78,511	56,134	1,34,645	*Imports.*—Pashm, pattu cloth, yaks' hair blankets; (from Lhássa) tea.
	1874	1,20,529	1,11,521	2,32,050	*Exports.*—Silver, saffron, Khotan silks, and Yárkand cloth.
		+42,018	+55,387	+97,405	
Kashmir and Baltistán ...	1873	76,386	1,84,014	2,60,400	*Imports.*—Goat skins, saffron, shawls.
	1874	95,614	1,42,923	2,38,537	*Exports.*—Pashm, Lhássa tea, gold and silver, salt, sulphur, piece-goods.
		+19,228	—41,091	—21,863	

3. From this statement it appears that there was a slight increase in the value of imports from, and a large increase in the value of exports to, Turkistán; but of the latter all but about Rs. 50,000 must be considered exceptional, being the result partly of the inclusion of the value of Mr. Russell's caravan, and partly of the large balance of consignments of 1873 remaining for despatch in 1874.

There is also shewn a large increase in the value of the import trade from British India; but if the value of the Central Asian Company's venture is eliminated, it will be found that there was a considerable decrease, and not an increase, in the trade. This falling-off is, however, explained by Captain Molloy as being owing to the fact that several large traders, instead of disposing of their goods at Leh, proceeded to Turkistán, and were consequently prevented from making their return journey to India in time to appear amongst the importers of last season. In the trade with Chinese territory there was a considerable increase both of exports and of imports; in that with Kashmir and
tistán a falling off.

4. With regard to the articles in which increase or decrease is observable, among the imports from Turkistán there was a marked decline in gold owing to issue by the Amír of Turkistán of a gold coinage and consequent restrictions placed by him on the purchase of gold dust: a considerable rise in silver; a marked increase under *pashm*; a great decline in charras; an increase under horses and coarse country cloths. Among the exports to Turkistán there was a considerable decrease in cotton piece-goods, owing to the principal importers being absent in Yárkand; in tea, owing, it is believed, to the opening of a new tea market at Almaty in Russian territory; but on the other hand an increase in indigo, otter skins, and goat skins.

5. The Lieutenant-Governor will not further follow Captain Molloy in his detailed comments on the rise and fall in the several articles of import and of export, it will suffice to remark that the general result of the year's history must be considered satisfactory; but at the same time His Honour sees no reason to modify the views expressed in his review of last year's report, that too sanguine expectations must not be formed of the prospects of trade with those remote regions; and he perceives that the Officiating Joint-Commissioner has come to the conclusion that "notwithstanding the elasticity the Turkistán market has shown hitherto, its capacities are nevertheless limited."

6. Besides recording and explaining the trade statistics of 1874, Captain Molloy has touched briefly upon other topics of interest, such as the mode of collecting the *pashm* of Changthán, the arrangements made for increasing the production of borax; he has given a sketch of the trade route to Lhássa and a statement of the duties levied on the routes between Kabul and Yárkand *viâ* Zibak and Sirikúl, and between Pesháwar *viâ* Chitrál and Zibak; he has also, under instructions from the Government, prepared a price current of articles in the bazárs of Amritsar, Kullu, Ladakh, Yárkand and Kásghar, and a description of the articles chiefly in demand in Turkistán, and offers remarks on the selection of articles sent by the Central Asian Trading Company. He further expresses the opinion that in the event of caravans being allowed to leave Yárkand in time, a fair at Leh in August or the beginning of September would probably be well attended and successful. Whether any further steps should be taken to induce the Amír to sanction the timely departure of the Leh caravan is a matter His Honour must leave to the consideration of the Government of India.

7. The present difficulty in regard to the supply of carriage, adverted to in paragraph 62, is one which must be left, His Honour thinks, to be remedied by the operation of the law of supply and demand which appears already to have stimulated the importation of ponies into Leh. It will rest with the Government of India to determine whether measures should be taken to induce the Amír of Turkistán to open out such portion of the route by Kugiar as may be within his boundary, and so make the entire route between Yárkand and British territory available for camel traffic.

8. The subject of overloading animals is also one which, under the circumstances, it is difficult to deal with authoritatively, for any regulation in regard to the amount of loads might and would be evaded with the greatest ease; but every measure which aids in removing the physical difficulties of the route to Yárkand will indirectly assist greatly in effecting the desired object, not only by facilitating transit, but by cheapening and increasing the supply of carriage, and thus diminishing the necessity for heavy loads. An important work of this kind was effected during the year under report by Mr. Morris, Assistant Engineer, who was deputed with the cordial assent of the Mahárája to improve the difficult portions of the Kullu route between the British boundary and Leh, and has succeeded under considerable difficulties in re-aligning and greatly improving 12½ miles of mountainous road between the Tsárap River and the Láchalang Pass. This work will be vigorously proceeded with during the present year, and it is hoped that year by year some progress will be made in removing or diminishing obstacles to the traffic and free intercourse between British India and Turkistán. With this view the subject of opening out a road by the Shayok Valley and of removing by professional engineering agency the difficulties of the Zojila Pass will be brought to the notice of His Highness the Mahárája of Kashmir by the officer on special duty; but it is to be remembered that as in the case of the British Government so in the case of the Mahárája of Kashmir the funds available for public works are limited, and too much must not be demanded or expected at one time.

9. The arrangements for enabling refunds of duty to be made at Leh and otherwise facilitating the working of the refunds clauses of the Kashmir Treaty have formed the subject of correspondence with the Government of India, and it is hoped that revised rules will shortly issue.

10. In conclusion, His Honour is glad to be able to express the opinion that Captain Molloy, Officiating Joint-Commissioner, has discharged his duties in a very creditable manner; he learns with satisfaction that there has been perfect cordiality and co-operation between the representatives of the British Government and the Kashmir State. A recommendation in favour of increasing the salary of Karím Baksh, the Joint-Commissioner's Munshi, has been separately forwarded to the Government of India.

ORDER.—Ordered, that the report and returns and the foregoing remarks be printed and forwarded to the Secretary to the Government of India, Foreign Department, and to Captain Molloy, British Joint-Commissioner, for information.

Also, to Major P. D. Henderson, on special duty, Kashmir, for information and guidance.

RESOLUTION.—At various times suggestions have been made for giving greater conveniences to passengers by railway, and the Government of India readily acknowledge how much has been done in this way since railroads were first established in India, both spontaneously by Railway Companies, and in answer to suggestions from without. It is not, therefore, in a disappointed sense that attention is again invited to this subject, but simply in the belief that there are still points which require attention. And the opinions of many officers of Government, who are in good positions for ascertaining the feeling of the natives, corroborate this view.

2. Apart from the interest which the Supreme Government have in the general welfare of the community and in the development of trade by increased facilities of intercourse and communication, they have also, as the guarantors of a high rate of dividend to the shareholders, by far the largest interest in the financial success of railways. And until lines earn more often than they now do the interest guaranted, the Government will practically have to bear on those lines which do not pay 5 per cent. any increased expenditure which the provision of additional conveniences may cause.

3. It is obvious, therefore, that Government have a very strong reason for proposing nothing which is likely to be permanently disadvantageous to the profits of the railways. Measures, which at the outset cost money and seem unpromising, are often in the long run successful. In this view—any measure calculated to simplify the transport of goods, or make railway travelling more easy, is likely to make railways more largely used. Reduced rates and fares which, of course, have the same effect, might at first result in loss, but, if judiciously made, would probably increase receipts, while at the same time they would lead to extended intercourse among the inhabitants of, and interchange of goods between, districts remote from one another. As regards passenger receipts, they are derived chiefly from passengers in the lower classes. In 1873 the receipts were as follows:—

	Rs.
From 1st Class	10,88,933
„ 2nd „	12,47,086
„ 3rd and 4th classes	1,87,31,158

which include intermediate, third, and cooly or lowest class, sometimes called 4th.

4. The receipts from the first two classes were, therefore, but a small, and those of the lower classes, a very large, proportion of the whole. Moreover, while travellers by the lower classes contribute far more in the aggregate than the higher, they are, at present, less able to take care of themselves, and their wants are sometimes not understood. It is to the treatment of the native passengers, therefore, that the Government of India desire more specially to draw attention.

5. Their comforts, and perhaps their strong prejudices are sometimes too little attended to. The Government of India do not, in saying this, desire to endorse complaints which are too often exaggerated and inaccurate, and not unfrequently unreasonable. Nor do they wish to be understood to sanction in the slightest the view that distinction of caste should confer any privileges in travelling, but simply that there are some reasonable improvements which might well be made.

6. For instance, on the Oudh and Rohilkhund Railway, female ticket-collectors have been introduced to the satisfaction of the native community. It is not known how far this plan has been tried elsewhere, but it is clear that an arrangement which has satisfactorily stood the test of experiment on one line might be tried on others.

7. Other points to which attention seems needed are indicated below; some suggestions have been made on previous occasions, and some have, more or less, been adopted on the chief railways.

8. *Overcrowding of carriages.*—Though complaints on this score still appear in the Native Press, it is believed that they are rarely well founded. The best remedy in this, as in all such matters, is to let passengers know what they are entitled to, and thus encourage them to protect themselves; and this can be managed, in respect of overcrowding, by distinctly indicating by notices in the English and Vernacular, in and outside compartments, the number of people they are to hold. With this precaution on every line of railway, and careful instructions to the Companies' servants, cases of overcrowding should altogether disappear. Eventually, perhaps, science may succeed in cooling carriages in the hotter seasons, but for the present the true solution of the comfort of native passengers would appear to lie in an increased quantity of space, sufficient protection from the sun, and ample ventilation; and, in this respect, much as the accomodation has been improved on some lines, upon others it falls short of what in the opinion of the Government of India ought to be given. The rule that, in the hot weather, the number of passengers per bench or compartment shall be reduced is a great step in the right direction. Such a rule has been adopted on some lines. The Government of India would desire to see it in force on all.

9. *Ill-treatment.*—Cases of ill-treatment are happily now rarely heard of, and the improvement which has taken place in this matter is a cause of gratification to the Government of India. But the Railway Companies should not cease to press upon their officers of all ranks the necessity for gentle and patient treatment of the native passengers from whom so large a portion of their earnings are derived.

10. *Uniforms for Railway servants.*—There are rules of some sort on this subject on all railways, but they appear often to be either insufficient or disregarded. Nevertheless the wearing of uniforms or some distinctive badge by railway officials is not in India unimportant; for it is manifestly desirable that passengers, and those interested in the conveyance of goods, should be able to readily distinguish all railway servants, and thus know at once to whom they can refer. Nor should the uniforms or badges be confined to the lower officials, for if this is done, the object of the arrangement to some extent fails. It seems therefore to the Government of India that station masters should especially be easily recognisable by some ornament, badge or peculiarity of dress.

11. *Extra trains during fairs and festivals.*—Complaints have been made that sufficient arrangements are not made for meeting the extra traffic at the seasons of fairs and festivals. Neglect of this important traffic is of course a direct loss to the Companies, and it is not supposed that this is ever wilfully done. But the Government of India think that at such times, if at no others, special facilities might be given for the sale of tickets, either within or without the railway premises, and multiplication of ticket offices, might also be often introduced at large stations with advantage. Ticket offices might also be open for a longer time before the departure of trains. These and similar measures would tend to obviate many of the discomforts which a bewildered crowd of natives have often to bear.

12. *Admission to waiting sheds.*—It is understood to be the rule on some lines, that admission to waiting sheds is not allowed until within a short time of a train starting. But such a rule must often lead to hardship, as the majority of native travellers are ignorant, have little idea of the English hours of the day, and reach stations many hours before the train by which they are to travel is due. If deprived of shelter they would often, therefore, have to endure long, and perhaps severe, exposure to sun or rain.

13. *Vernacular Time and Fare Tables.*—Such tables are now, as a rule, posted at all Railway stations, and the rule should be made absolute in the case of all stations. Similar tables giving the mileage and fare from the chief terminal station to every station on the railway might, it would seem without much difficulty, be fixed in the interior of all 3rd and 4th class carriages. And if, in addition to this, a system of even money in fares were to be adopted it would be a great convenience.

14. *Halts.*—For obvious reasons, there must be halts of longer or shorter duration at certain stations. The complaint has, however, not been uncommon, that passengers of the lower classes cannot leave their carriages until some time after the arrival of the train, and that the object of the halt is thus frustrated. Nor do passengers always know where halts occur, or when they have reached the stations where there are halts. Any information on this head, printed in the vernacular, and exhibited in the lower class carriages, would be of great convenience to the passengers, and the doors of carriages should be unlocked immediately on arrival at stations.

15. *Checking tickets.*—A similar difficulty often arises from the time occupied in checking the tickets of the lower classes of passengers at changing stations; and when, as in India, no means have been adopted for checking tickets when the train is in motion, the promptest measures should clearly be taken for doing this as soon as it stops.

16. *Control and direction of crowds of native passengers.*—It is even still not an uncommon thing to see on a platform a crowd of native passengers knowing neither which way to go, nor what to do to find their train. And they are often equally ignorant as regards the locality of conveniences at stations. The Government of India are quite aware how difficult it is for Railway Companies to control and direct such crowds, but the subject is one to which attention may usefully be invited.

17. *Refreshments at Stations.*—The most essential refreshment in India is certainly water, and Companies have done much in providing this at stations. At the principal stations they have also made arrangements for the sale of food to native passengers. Whether the system, often adopted, of exacting a payment for this privilege of selling sweetmeats and fruit on the platforms is not attended with disadvantage requires consideration. Complaints are still heard in respect of this matter, and if control could otherwise be exercised without any exaction of money, such an arrangement would probably be an improvement. It should also be considered whether suitable refreshment rooms cannot be provided for native passengers, for whom simple food is as much needed as for Europeans. It is not sufficient to say that for that class of native travellers the regular 1st and 2nd class refreshment rooms are available.

18. *Latrines and Urinaries at Stations.*—The necessity of providing them has been so fully recognized that there can be few places which are not now properly supplied.

19. *Cleanliness and Lighting.*—The want of cleanliness in stations is frequently a matter of report, though less so than formerly; but there is still room for improvement. Deficient lighting, especially of latrines and urinaries, is common even on much frequented lines of railway the replacement of broken glasses being often neglected, with the result that though there may be saving in glasses, there is extravagance in oil, and imperfect lighting. Both are matters which should not be overlooked.

20. *Planting trees.*—One of the greatest recent improvements has been the planting of trees in the neighbourhood of stations. Had the advantage of this been perceived in the first instance, native passengers would in many instances have now had shade to sit in where they have none. The Government of India commend this subject to all railways. A vast improvement has also been made in the planting of creepers and shrubs at stations, at the expense of companies. Nor do the Government of India regard this beautification of stations, as of importance chiefly to travellers. It must be a source of considerable pleasure to the companies' servants, and companies have, in the opinion of the Government of India, done wisely, in providing, at what is to them an insignificant expense, a simple means of enjoyment, and an incentive to pride in the stations under their servants' charge.

21. *Locking of carriage doors.*—Some discussion has recently taken place on this subject, and it has been asserted that locking both doors is a protection to passengers. But in this view the Government of India cannot agree. One door, at most, should at any time be locked.

22. *Through booking.*—Is a convenience which makes railway travelling less irksome, and it might be extended to all classes and obtain more widely than at present, with obvious advantage.

23. *Forced breaks in a journey.*—It has been for some time a question which class of train service is most appreciated by the native community. Whether, for instance, they really are alive to the advantage of rapid travelling, or whether they prefer slow travelling, with long halts for the purpose of cooking their food, and so forth. On some lines the power of testing these preferences for one system or the other is absent, because native passengers are compelled to break their journeys whether they will or no, and in some cases to make a halt for the whole night. The Government of India would prefer to see arrangements which admit of some choice on the part of travellers, and believe that nothing would be lost to Railway Companies if this were done.

24. *Return tickets.*—The issue of return tickets to native passengers of the lower classes as an ordinary arrangement and on holidays is a convenience which the public would certain-

ly appreciate. Objections have been made that this would open the door to fraud, &c., but these objections do not appear to the Government of India to be of great weight, and as a matter of fact the Railway Companies in the Bombay Presidency have tried the arrangement successfully.

25. *Reserved accommodation.*—Is a matter in which greater facilities might also perhaps be given to the passengers by the lower classes.

26. *Improvements in carriages.*—The improvements in carriages have been considerable since railways were first opened in India, and this is especially noticeable on the East Indian Railway which has devoted great attention to the subject. In the first class carriages there is little to be desired, and attention has recently been given to the improvement of the second. The lower classes, known as the intermediate and 3rd class, have also been much improved by giving to each passenger greater room than formerly, and by the introduction of sliding shutters. With the system of cross seats and compartments absolutely separated, it is not an easy matter to provide, for the lower classes, conveniences in trains for the offices of nature, and with the provision already made at stations the necessity is less than it otherwise would be. Still, if by some arrangement conveniences of this sort could be moderately given, there would be advantage. The Scinde, Punjab, and Delhi Railway is about to try the plan. On the Rangoon and Irrawaddy Valley Railways on which it is proposed to adopt end entrances to the carriages, refreshment and latrine carriages may with advantage be introduced.

27. *Serais.*—The provision of serais is no part of the business of a Railway Company, but the existence of serais in the neighbourhood of stations is a manifest convenience. This is a question which properly belongs to the civil administration and to private enterprise or munificence, and, probably, in no direction could wealthy members of the community more usefully spend money than in erecting serais near railways, which are now taking the place of the old lines of communication. Railway Companies have already gone far in providing waiting sheds within their premises. For further accommodation beyond this, the general community may fairly be looked to.

28. *Passengers' luggage.*—With regard to passengers of the higher classes, the point which seems to call for reform is the luggage rules. These appear to be needlessly restrictive. The circumstances of Indian travelling are so different from those of Europe that rules which would in the latter case be appropriate are in India, vexatious. For instance, on the East Indian Railway, though a certain amount of free luggage is allowed, a saddle, a basket of fruit, a case of wine or stores, even though within the limit of weight allowed, are proscribed, and must be paid for extra. The rule about the saddle seems singularly out of place in a country when officers on tour ride, and where an officer would often take the train to meet his horse which had been sent on. Nor do the other rules, which might be easily evaded, seem useful or necessary. The rate for luggage is higher than for any class of goods, and a passenger's ticket must be purchased in order that luggage may be carried. It would seem therefore, so long as he carries nothing offensive or dangerous, that a passenger should be almost unrestricted as to the nature of his personal luggage. It would also probably be sound policy to allow native passengers to take a certain weight of baggage with them, no matter whether for sale or not, provided the articles are neither dangerous nor offensive.

29. *Native women.*—It is obvious that if native ladis are to travel by rail, special arrangements of some sort for their convenience must be made. The extent to which these should be carried, is the point upon which difficulty arises, but it is doubtful whether the question generally has been sufficiently considered by Railway Companies.

30. The essentials seem to be—private but not extensive waiting-rooms for that class known as *purdahnasheens*, and accommodation in seraies also of a secluded sort. With regard to the means of private ingress and egress to and from trains, the remedy seems to be in the hands of the ladies themselves, by adopting for this purpose the constume commonly worn in Turkey and Egypt, where seclusion of their sex is as general as in India. It is clear that the Railway Companies cannot provide screens across platforms. All private waiting-rooms and also the carriages should be supplied with complete private accommodation; and there should be means by which water and food could be obtained without any intrusion upon the privacy which it is desired to maintain. How far all this could be done it is not possible to say. Whatever is to be done in connexion with serais concerns the Local Governments and Administrations. The other measures should be considered by the Railway authorities, and His Excellency the Governor General in Council has every confidence that they will endeavour to provide as far as possible remedies for existing defects.

ORDER.—Ordered; that copies of this Resolution be forwarded to the Governments of Madras and Bombay, to the Chief Commissioners of the Central Provinces and British Burmah, to the Resident at Hyderabad, to the Director of State Railways, and to the Consulting Engineers for Guaranteed Railways at Calcutta, Lahore, and Lucknow, for information and guidance.

Also to the Governments and Administration noted in the margin for information.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

EXCURSION TO THE KARCHUNG VALLEY.

No. 67, dated Yarkund, 15th June 1875.

From—ROBERT B. SHAW, Esq., Political Agent on Special Duty, Kashgar,

To—C. U. AITCHISON, Esq., C. S. I., Secy. to the Govt. of India, FOREIGN DEPT.

I HAVE the honor to forward herewith a report of an excursion recently made by me to the Karchung Valley, the head of the canal system of the Yarkund district, together with a sketch map.*

* Not published.

REPORT OF AN EXCURSION TO THE KARCHUNG VALLEY.

The district of Karchung possesses a double interest. It is the head of the irrigation system on which the plains around Yarkund depend for their cultivation; and it is also the actual representative of the mysterious country of *Karchu*, which has for some time perplexed those geographers who have been endeavouring to interpret the records of ancient travellers and the old maps of this region by the light of recent inquiries.

2. I left Yarkund for a visit to this district on the afternoon of the 25th May with a small camp, and accompanied by Mahomed Yakub Yuzbashi, who was charged on the part of the Ameer with the duty of arranging for the supply of our requirements during the trip. For the first few miles the road (leading in a south-westerly direction) passed between avenues of mulberry trees, whose fallen fruit blackened the ground beneath them. The country was rich with crops of young wheat, and with the deep verdure of the thick-growing lucerne, the chief fodder of this country, which reaches an even height of nearly three feet, and is cut four or five times in the year. Fields of flax, grown for the seed, were also common. Walled gardens and orchards adjoining the farm-houses and country abodes of the people, and clumps of tall trees surrounding the shrines and grave-yards, and even an occasional college, close the view a short distance on either side of the road, and give a well-wooded aspect to the country. Canals and water-courses intersect it in every direction. Groups of women and men returning from merry-makings in the neighbouring gardens, cavalcades of donkeys either ridden or driven along laden with country produce, are met with or passed in pretty frequent succession. The loads of these consist chiefly of corn which is exported in considerable quantities to the less fertile neighbourhood of Kashgar, where, moreover, the consumption of food is increased by the presence of the Ameer's troops and of his chief officers and their followers who are cantoned around the city. Salt, in rough earthy-looking lumps, is met with coming in to Yarkund from the mountains.

3. After passing Urda Ustang, some three miles from the city, the trees become wider apart and the country less well cultivated. Occasional waste tracts overgrown with wild plants occur, and it is sometimes difficult to distinguish these from the sown fields, as the latter are not carefully weeded. Many fields were being got ready for rice, Indian-corn, and cotton sowings.

4. At about five miles from Yarkund we descended slightly to the important *Urpa* (or *Opy*) canal, a body of water which has every appearance of being natural, as on its east side it

is divided from an ancient bank by a low flat a little above the present level of the stream; while on the west it flows under a high bank or little cliff which it has cut out of the plain (some 15 or 20 feet above its level) on that side. Notwithstanding these natural appearances, the Urpa is said to be the work of one of the native Kings before the time of the Chinese. I should imagine, however, that it can only have been improved and regulated by human labour, acting upon a natural line of drainage.

5. The road crosses this canal or stream by a substantial wooden bridge (recently erected by the Dad-khwah of Yarkund). Beyond the bridge is a little bazaar, consisting chiefly of empty stalls, lining both sides of the road, and occupied only on the weekly market-day by the itinerant traders, who thus supply the wants of different villages in succession. From this practice (common in Eastern Turkistan) originate the names of many villages and small towns, as *Yak-Shamba* bazar ("Sunday-market"), &c. The name of this bazaar, however, at the Urpa bridge, is Munguchak.

6. Beyond this point sandy tracts alternate with fields and villages, testifying to the natural state from which man has rescued the country. At a little more than a mile from Munguchak bridge we encamped in a shady orchard in the village of Boïla after our first short march. Here we were met by an old acquaintance, the Sarkâr, or Revenue Officer of the Rabatchi district, which extends from beyond the Kashgar road on the north to the mouth of the Karchung Valley on the south; and in breadth from the skirts of the hills to the Urpa canal. It contains eighteen villages. He had now come to escort me through his district until I should pass into the hands of his colleague of Karchung.

7. The next day's march led for the most part through the lands of the Popan and Khojarik villages, latterly keeping to the banks of the small trunk canal (from the Yarkund river) which feeds the greater part of the district of Rabatchi, and is called after its name. After some eight miles of road the cultivation became confined to the neighbourhood of this canal, ceasing to be connected by a net-work of water-courses with that of the neighbouring canals; and we entered an open tract sloping gently up towards the hills (dimly visible through the haze). The ground began to be in part covered with beds of large pebbles, derived from the river which we were now approaching; and here and there with hillocks of blown sand (from the north) which had in one place invaded a patch of cultivation surrounding a rest-house, where the sand had risen around the trunks of the windward trees and had half covered a grave-yard. Thence could be seen straggling and broken lines of trees and fields fringing the courses of the canals across the desert plain. At one of these, the village of Kaltala, situated on the canal which we had been following up, we camped after our second day's march at a distance of some 15 miles by road from our last halting place.

8. On the third day we continued our course in the same direction (roughly S. S. W.), the edges of the cultivation merging into the pebbly and sandy plain, villages and trees becoming scarce in front of us. We made towards a low point of hill stretching out from a rounded mass which showed itself on our right front. To the left of this point the gently rising plain formed a horizon not far off. Shortly before reaching the above-mentioned point whose peculiar shape has earned for it the name of *Tumshuk* (*i. e.*, the "beak" or "bill"), we diverged a few hundred yards to the left of the road to have a look at the Yarkund river which here flows in several branches (only one of which was visible from where we stood) over a broad pebbly bed depressed some eight or ten feet below the level of the sloping plain at that point. Riding along its barren banks studded with occasional patches of green, and crossing two canals (those of Kuzmal and of Yakarik) near their heads we reached the village of Tumshuk-Saraï, situated below the above mentioned point of hill. Here beds of stratified clay cover or replace the pebble beds. From the cliff here (the edge of a higher and absolutely barren plateau, which slopes up to the outer hills, of which it is in fact the skirt), I afterwards obtained an excellent view of the neighbouring district which forms the head of the water-supply of Yarkund.

9. At our feet was a broad green valley covered with marshes and pastures, and bounded on the further or eastern side by a low sandy cliff nearly three miles off under which runs the river. This cliff or bank increased in height as it runs south, as does also that on which I was standing; and far away into the deep bay enclosed between them the valley is covered with groves of trees, marking the sites of villages which become more and more contiguous till they form in the distance a dark line detached against the light sandy sides of the valley. This is Karchung. The further bank seems to curve round to the right (or west), breaking into irregular masses, above which, apparently closing the head of the valley, show themselves, first a ridge of high black mountains, and above this a line of distant snow peaks of bold outline said to be in the neighbourhood of Sarikol.

10. Looking east and north where the river makes its way out to the plains, one can trace the radiating lines of trees and villages marking the course of the canals which are derived from the river at this point. They spread like the ribs of a fan, until they are lost in the continuous cultivation on the horizon. The shape of the ground now becomes evident. It is a very flat cone or "alluvial fan," whose apex coincides with the point at which the river issues from the Karchung Valley. The slope in all directions downward from this point is very gentle, but still sufficiently decided to send natural water-courses, radiating over the surface of the cone whenever a flush of water or the accumulation of material brought down by the river causes a rise of level in the stream where it issues from between the hills.

11. Thus, in opposition to the general rule, we have streams flowing *out of* instead of *into* the river. This contravention to the usual course of nature may perhaps be ascribed to the entire absence of vegetation on the hill sides, which allows the melting snows to carry annually into the river a vast proportion of débris, which would be deposited at the point

where it leaves the mountains, and where the current would no longer have a rapidity sufficient to transport the material. This accumulation in its front would cause the stream continually to seek in every direction from that centre new channels of least elevation, which in their turn would become choked. The stream above this point, confined in the valley, would thus be checked and would consequently deposit its material, thus raising the bed of the river for a certain distance back. So that the formation of the cone at the mouth of the valley, and the elevation of the river bed within the valley, would go on alternately, or in practice simultaneously; and the result would be what we see, a wide alluvial cone *outside*, and a level fluviatile plain *inside*. The phenomenon of conical deltas, or "alluvial fans," as they have been called by Mr. F. Drew in an interesting paper read before the Geological Society of London, is common in Eastern Turkistan, and also, on a smaller scale, in Thibet where many of the climatic conditions are the same.

12. Man has of old interfered with the natural radiation of the streams from the mouth of the Karchung Valley; and taking advantage of the shape of the ground has confined the wandering waters to certain courses where they can be useful to him, deepening their entrances so that the supply which they afford may no longer be precarious. Hence we have a radiating system of canals (or rather canalized streams) which, starting from the mouth of the Karchung Valley or its neighbourhood, spreads over and irrigates the whole Yarkund district, which, but for it, would be a desert, or at best a thin fringe of vegetation confined to the banks of the main river.

13. It is thus evident that before the city of Yarkund can have been built (and its antiquity is supposed to be considerable), the people of the country must have reached a stage of progress that enabled them to construct many canals of considerable length, or at least to canalize the wandering streams derived from the Yarkund river; and thus to establish, on the originally barren land, a settled population of sufficient numbers to require and to support a town in their midst.

14. The probability of already existing water-courses having been utilized, rather than entirely new lines taken, for the trunk canals, is shown by the appearance of ancient banks often divided by flat terraces from the present bed of the stream (as was mentioned above in the case of the Urpa), and by the rarity of any signs of spoil-banks where the excavated soil could have been deposited. In some places a dry channel between steep sides, obviously marking some former course of the stream, diverges from the present line of a canal. In others the stream runs like an English brook deep down between level banks lined with willows that bend over the water. Dry water-courses lined with deposits of clay and probably due to floods, score the surface of the alluvial fan; taking radial directions like those of the present canals from which they probably do not differ in origin. The trunk canals are seldom straight, and it is generally a puzzle to tell whether a given large water-course is natural or artificial. The name "Ustang" is applied to all but the principal rivers of the country, and may perhaps be defined as a 'canalized stream.' The smaller water-courses (or 'ariks') on the other hand bear obvious signs of being the result of man's handiwork, often running along the top of raised embankments. Thus if the people of Eastern Turkistan have shown from early times a considerable aptitude for canal works, it is nature that has been their teacher and their example. It would seem that the very barrenness of the country supplies its own remedy. The unusual proportion of débris washed into the upper course of the river from the naked hill sides is the cause of the alluvial fan which radiates the waters over a broad expanse of country. Were the mountains covered with verdure, the stream would wend its way in unblessed singleness through the plain.

15. The heights obtained from the boiling point of water at the different places show the slopes to be as follows:—

	From Chamasal (Inside the Valley.)	Apex of alluvial cone (near Tumshuk).				
	1 in 190					
(Within the limits of the cone) ...		1 in 249	Viâ main River. 1 in 194	1 in 264	1 in 194 to Kaltala.	1 in 203 to Yakarik.
(Intermediate)			to ford near Otunchi.		1 in 327	1 in 339 on to Karabujash.
(Out in the plains)		to Poskam.		to Yarkund.	on to Yarkund.	1 in 361 on to Kok-Rabat.
		1	2	3	4	5

16. These figures are merely rough approximations, as the boiling point method is not susceptible of very great accuracy, nor are the distances known with any exactness. Columns 4

and 5 give separately the slope down to the limits of the cone, and the gentler inclination onwards in the plain. Columns 1 and 3 (being founded merely on a comparison of the heights of the two ends of the respective lines) show an inclination compounded of the slope of the cone and of that of the plain, and the resultant is therefore intermediate between the two. We may therefore suppose that the slope of the cone, towards Yarkund and towards Poskam, does not differ much from the inclination in the directions of Kaltala and Yakarik. But by column 2 it will be seen that the bed of the main river slopes more steeply down (its compound or resultant inclination as far as Otunchi being equal to the simple inclination of the cone towards Kaltala). It must therefore be depressed below the surface of the cone, as in fact it was seen to be near Tumshuk-Saraï; and this shows that its action must at present be to excavate a bed out of the alluvium deposited by it in former ages. There are numerous instances of this in the alluvial fans of Thibet, where secondary cones are thus formed.

17. Vestiges of a canal constructed by Yunus Wang (a Turki Governor of Yarkund under the Chinese) are to be seen in the form of long parallel mounds of earth and sand, between Kaltala and Tumshuk and again north of Yakarik. This canal (constructed, it is said, at the cost of many lives) succeeded in carrying water to Kok-Rabat where it was intended to put more land under cultivation; but it cannot have been very successful, for on Yunus Wang's death it fell into disrepair. Its course lay athwart the present line of canals.

18. The management of the canals is in the hands of a local *Mir-ab* (Lord of Water) in each district. There is no special taxation, but the repairs of each canal are executed by the inhabitants of those villages all down its course which are dependent on it for irrigation. Smaller canals are kept in order under the authority of the Sarkâr or Revenue Officer of the district; while in the case of the larger ones orders are issued when necessary by the Governor of the province. The work is thus performed by those who have the greatest interest in its being well done; and a journey of three or four days (generally accomplished on the stout asses of the country) is thought nothing of by the cultivators. I have not heard any complaints of other labour being exacted by local officials from the gangs thus assembled away from their homes—an abuse that would be very likely to arise in some oriental countries. In fact the canal management here is merely a system of self-help under the guidance of the authorities.

19. A vast amount of land that now lies waste would seem to be capable of cultivation if irrigated, and the present canals by no means exhaust all the available water. A rough attempt to estimate the amount of water passing Chamasal (above Karchung) at this season of the year (half flood), gave as the result between 6,000 and 7,000 cubic feet per second. This is above all the canal heads; but below them enough remains to form a good sized stream estimated by Dr. Henderson in August 1870 (when at its highest flood) as from 70 to 150 yards in width. Where widest it contained shoals on which a man could stand with water above his middle. All this water runs to waste. But a good deal of the land (especially in the Kashgar Province) is almost useless on account of a salt efflorescence that is brought out by watering it. With regard to the rest, the people say that the present population does not require more land than is now under cultivation, so that it lies waiting till the number of mouths to be fed and of arms to labour shall have increased. There are already signs of this; several places have been brought under cultivation since my first visit and other agricultural settlements are talked of. A certain number of foreigners (especially Baltis) also annually settle in the country. An attempt has been made of late years to increase the amount of land under cultivation, by compelling villagers to pay for land adjoining their fields but hitherto lying waste, so as to induce them to try and make something out of it. The system of taking in lieu of land tax only a fixed proportion of the crops actually raised in any year, allows the peasants to leave a part of their holdings fallow without any loss to themselves, though to the diminution of the general food stock of the country. The formation of gardens and orchards is now discouraged by an increase in the *Tanab* tax, a fixed rate assessed by measurement irrespective of production, and which acts as a differential duty against land devoted to such purposes. It is uncertain whether this effect is intended by the authorities; but the increase in the tax has been productive of some discontent lately, as also has the innovation recently introduced of levying those taxes in advance.

20. To return to the Karchung Valley from whose mouth the canals that water the Yarkund district branch off: the river runs under the right hand or *eastern* bank, a low sandy cliff, the edge of a raised desert plain. On this bank as many as five or six river terraces can be traced in places, showing the former levels of the stream at heights of apparently six or eight feet between each. The *western* side of the valley slopes down very gently from the *talus* of the western cliff to the edge of the river, forming a plain covered for some miles up from the entrance of the valley, with marshes and pastures dotted with cattle. Some four miles up the cultivation becomes continuous extending through the small districts (or scattered villages) of Karayantak and *Karchung*, of which the latter is the more important. In this part of the valley wells for drinking water are occasionally to be seen, where water is found at about 10 or 12 feet below the surface. The wells penetrate into beds of large pebbles, similar to those in the bed of the river. This cultivated part of the valley near its western side is probably on a level with the highest of the terraces seen on the opposite bank.

21. Some four miles above Karchung a long slope of barren alluvium issuing from the hills on the same side, approaches the river and cuts off the cultivation of Karchung from that of Chamasal which is further up, and where a flat partly cultivated plain again extends on the left bank of the river, shut in on the west by a cliff some 25 or 30 feet high cut in the lateral alluvium, whose section shows beds of pebbles (similar to those in the bed of the river, chiefly granite or gneiss) interstratified with a few layers of clay and sand. These cliffs after a while

give way to slopes of gravel from the western hills, and the cultivation of Chamasal extends on to the lower part of these slopes. Its fields have therefore a more diversified aspect than is often seen in Eastern Turkistan. The village is a large one, with numerous groves and avenues of large trees and orchards and gardens. The slopes above it look the more barren from the contrast with the well cultivated fields which appear to be almost on the same level. This desert is considered sacred as containing the graves of a large army of the faithful said to have been slaughtered here in very early times under their leader, Mahomed Sadik Kirmâni, whose shrine situated at the edge of the desert is much venerated. The date of his death is given in an old Turki manuscript, obtained from the shrine, as in A.H. 352 (A.D. 962). Beyond Chamasal there extends another partly cultivated plain for a few miles, after which the valley is uninhabited.

22. On the right or eastern side of the river there are but few villages. The important one of *Kusharâb*, however, is situated opposite a point some three or four miles above Chamasal at the junction of a side stream. Kusharâb, from its high situation, obtains no water for irrigation from the river, but depends on the supply from the side stream which is fed entirely by the melting of the snows and the rainfall on the higher mountains (the Arpatallak Ridge) whence it descends. It is reckoned that if in the course of the spring there are three or four fair showers of rain, this stream will supply enough water for the irrigation of their fields, otherwise their crops are lost. This is said not often to happen however; and the fact indicates a greater rainfall in those mountains than in the plains of Yarkund.

23. Up this side valley runs one of the roads to Sarikol, which seems to be used to the exclusion of the route by the valley of the main river, notwithstanding the fact that the Arpatallak Ridge or Range has to be crossed, in order to rejoin the river further up its course. On the other side of the river too, a road leading from Chamasal avoids the course of the river for some distance up, rejoining it similarly after crossing a ridge. This indicates some difficulties in this part of the main valley. The absence of habitations is said to be one of them. In the side valley above-mentioned (of the Kusharâb stream) there are two villages, Uch-Baldir and Igiz-arik ("the high water-course"), situated at intervals of a day's march apart, counting from Kusharâb. At the latter of these, a fort was built by the Dâd-khwah some years ago where a guard is now stationed.

24. Kusharâb is noted for its mines of lead; but the river being in flood and there being no ferry so high up, I had not the opportunity of examining them. This Kusharâb must not be confounded with the other village of *Kusharâb* situated higher up near the junction of the Sarikol stream with the Yarkund River.

25. Opposite the narrows between Karchung and Chamasal another side stream comes in from the south, which is said to depend in like manner on rainfalls; on a triangular alluvial terrace in the angle between it and the river stands the village of Chumdi. Besides these, the only cultivation on the right bank of the river seems to be at the shrine and grove of Yastung lower down opposite Karayantak, and just above the point where the canal system begins to branch off.

26. A high antiquity is ascribed to Karchung by its inhabitants. It is said to have been settled long before the Yarkund district and other neighbouring parts. This tradition seems to be in accordance with probability; for this plain between the last spurs of the mountains, enriched by fluviatile deposits, covered with natural verdure, and which could be irrigated with little trouble from the neighbouring river, would of course be first occupied by the early settlers, before they had made sufficient progress to undertake the elaborate system of canalization, by which the neighbourhood of Yarkund was reclaimed from its original barrenness.

27. In a country where unburnt bricks are the usual material of construction, remains of very ancient buildings are not likely to be found. Still the rainless climate allows even such materials to retain their form during a much longer period than would be the case in other lands. The ruins caused by the rebellion in this country, 10 or 12 years ago, seem to be absolutely in the same condition as when they were left by the Chinese; and therefore give no standard of comparison for other remains.

28. At the mouth of the Karchung Valley under the "Bill" (*Tumshuk*) there is an old building with its walls still standing, called "Rustam Saraï," and also "Kirk-bir Kurghan," ('the fort of forty-one') from the supposed number of rooms contained in it; though they are said to have the mysterious property of never being counted twice running with the same result. It is separated into four divisions by two passages crossing one another at right angles in the centre. An old man of some 70 years of age, belonging to the spot, remembered playing in these chambers in his childhood when it had the same reputation of antiquity, but the walls were then somewhat higher. This building is ascribed by some to the time of the Kalmak rule, in which case it would be about 150 years old, and this seems not improbable. By others it is said to have been built by *Nukta Rashid* and *Chukta Rashid*, two mythical personages much spoken of in the early traditions of Kashgaria, and who seem to represent the Chinese power in contact with these more western regions in the tenth and eleventh centuries of our era. This date is, however, inadmissible in the present case.

29. About half a mile from this building, on the edge of a bank overlooking the green plain of the river, is a much older ruin called Rustam's or Ali's kitchen, but ascribed by some to Kara Khan, a Kalmak chief. Scarcely any traces remain to distinguish it from the surrounding plain. Compared with this the fort of the forty-one rooms appears an affair of yesterday. Shallow ditches still mark its outline, an oblong about 30 yards by 20; but the

walls have crumbled into low mounds edging the interior (which is higher than the ground outside), and subdividing it into rooms or compartments. At the four angles blocks of earth-work retain somewhat of their former consistency, and probably mark the site of corner turrets more massive than the walls. In the interior, signs of fire are visible in the reddened soil—an appearance which has originated the popular name of the ruin. On the cliff above (about 100 feet high) there is another relic called Ali's manger. It is merely a small earthen mound with a depression in the middle, and might have been a small watch tower or sentinel's post attached to the fort below, the position of which, overlooking the Karchung Valley and the road up it, would have been very suitable for a robber chief, its situation being adapted rather for offence than defence. The vague traditions of Ali and of Rustam give no assistance in the attempt to ascertain the age of this ruin.

30. I am told of other ancient remains situated some distance up a dry side-ravine on the other (eastern) side of the valley. Under a cliff in this ravine some old terraces fit for vine-yards where now no water flows, mark the former existence of cultivation here, and are said by tradition to have belonged to the garden of an ancient chief.

31. The number of old trees in the valley is considerable. On the road between Karchung and Karayantak is to be seen a possible relic of tree-worship. Two large old Kairagach trees (elms) stand by the roadside, and are surrounded by a trench into which water is led from a neighbouring canal to irrigate them. At their side stand a number of long sticks surmounted with rags and yaks' tails, such as are usual on the *mazars* or shrines of saints. These yaks' tails (called "tugh") are the same as those which mark the rank of living dignitaries among the Turks ("three-tailed bashaws," &c.), and probably represent the chieftain's standard stuck on a spear-end in front of his tent during life, and on his tomb after death.

32. On inquiry I learned that no tomb was known to exist under these trees, but that it had been a custom handed down from of old to give them these marks of respect. Some referred it to the fact of the wife of the Holy Haz't (Hazrat) Khoja having been abandoned here in her husband's flight from the Chinese and their Kirghiz allies. Others thought it probable that some Shahid (martyr) must have been buried here, but no tradition of the kind had come down. Now all the cairns erected on passes and other remarkable spots throughout the mountain region north of the Panjah are claimed by the Mussulmans as tombs of saints, though it cannot be conceived that one should have been available for burial on every such spot, which possesses a cairn as a matter of course. Similar cairns occur in similar positions throughout the Hindu and Buddhist mountain regions also; and are then assigned as the habitation of local demons or deities. The Mussulman theory seems invented, therefore, merely to account for existing facts, and to carry on the tradition of reverence for certain previously hallowed spots. This is perhaps the case with the trees at Karchung, whose predecessors may have been the object of worship by the early inhabitants. I have nowhere else in the country heard of an instance of trees being thus honoured and benefited by a special water-cut; though at many *mazars* the old trees seem to be the object of a veneration distinct from that of the shrine itself, and accounted for by the fable that they have sprung from the walking-stick of the saint planted there in the ground by him, and taking root by a miracle. A small modern mosque has been built close to the holy trees at Karchung, and a regular *mazar* exist a short way off.

33. The people of the Karchung Valley do not differ from the inhabitants of the plains, unless it be that there is a greater proportion amongst them of men with regular features and a less Tartar appearance. In the Yarkund villages there is often a small proportion of people thus characterised, besides those in whom the difference is due to their Balti or Badakhshee origin. It is difficult in a flying visit to make certain of such a point, but such was my impression of the inhabitants of Karchung. *Góitre* does not seem to be prevalent in the valley, although the district of Poskam lower down the river (in the plains) is the head-quarters of that affection. The people of Karchung tell me that none of them get it but those that have gone down to Poskam and lived there two or three years.

34. Having said thus much regarding Karchung that now is, I may turn to the mythical *Karchu* of geographers with which I am disposed to identify it; and here I may say that in the slurring manner of speaking common among the Yarkhundis the final consonants of this word are almost lost, and the name as pronounced by them might easily be taken to be Karchu. Colonel Yule (Introductory Essay to Wood's "Oxus," p. lv.) says:—"As regards apocryphal topography we can only briefly notice *Bolor* and *Karchu*, which have haunted the map of Central Asia for the greater part of this century, but neither of which, *as applied therein*, have any corresponding localities *in rerum naturâ*." From the position of the latter Colonel Yule is disposed to consider the name an erroneous transliteration of Katchut, which of course, as he says, must be intended for Kanjut.

35. But it appears that the Karchu of maps occupies a position on the upper course of the Yarkund River; and (notwithstanding the numerous misleading identifications against which Colonel Yule rightly protests) this *Karchu* can be none other, I think, than the *Karchung* lately visited by me, which is actually situated above Yarkund on the river of that name between the skirts of the mountains, and to which both tradition and natural conditions would assign a greater antiquity than to Yarkund itself, though the latter has surpassed it in importance.

36. Like Bolor, which has been so clearly proved by Colonel Yule and others to have no existence in the place assigned to it by fable, and yet to have been a veritable country in another locality; so also Karchu, if it has strayed out of its proper position on our maps, may now be brought back with certainty and placed where the modern Karchung is, some 30 miles up the river from Yarkund between the eastern spurs of the Tsung-ling mountains, and to the east of Sarikol nearly at the intersection of the 38th parallel of latitude with the 77th meridian of longitude.

37. On my return to Yarkund I took a more westerly route than in going, a route which leads almost due north from the mouth of the valley. We followed a course parallel with the Yakarik *(Yaka-arik,* "edge water-course") canal, which probably owes its name to its running along the skirt of the hills. At the village of the same name, where the main road from Badakshan *viâ* Sarikol enters the plains, I visited the fort built by the Chinese whose frontier station it used to be. It is in the usual Chinese style with high walls of hardened mud each side about 100 yards in length, and small projecting turrets at the corners. I was received with all the honours by the officer in command and his small guard of Yarkund troops, and shown over the interior. Heaps of stones are still lying arranged along the battlements, having been placed there by the Chinese to be used as missiles. About a quarter of a mile off on the edge of a higher plain which slopes up towards the mountains are two tall watch towers in the form of truncated pyramids, or large square buildings about 40 feet high, whose bases are much wider than their tops. The interior is hollow, but is roofed over to form a floor at the level of the battlements. An extensive view is obtained both over the higher plateau down which comes the road from Badakshan, and also over the plain below. In the time of the Chinese high masts were mounted on these watch towers, from which telegraphic signals were made by means of flags to other stations said to have formed a line as far as Ila, to whose Governor (or Jang-jung) the Ambans of Kashgar and Yarkund were subordinate.

38. Beyond the village of Yarkarik (where we spent a night) our route diverged to the east from the canal, which continues its course as far as Kok-Rabat on the Kashgar road, which is irrigated from it and forms the limit of the Yarkund Province in that direction. All along this skirt of the cultivated country the villages used to be subject to incursions from the Kirghiz of the neighbouring mountains. The state of affairs seems to have been similar to that of the Scotch counties adjoining the highlands during the middle ages and beyond them. The Chinese took no trouble to protect their subjects from their unruly neighbours. In one or two villages I saw watch towers and fortified enclosures in ruins said to have been raised to keep an eye on the belt of desert sloping up to the mountains. If a Kirghiz band were espied on this kind of neutral ground a signal was made, and all the inhabitants of the scattered farm-houses hastened with their cattle to take refuge in their stronghold. All this, it need scarcely be said, has now ceased. Sarikol has been included within the Kashgar dominions and is garrisoned by the Ameer's troops. The Kirghiz are as much subjects of the State as the villagers are. Their Chief lives at Kashgar the greater part of the year, visiting the scattered tribes occasionally, and the people of the plains carry on a mutually profitable intercourse with the nomads of the mountains, who still however look with somewhat of contempt on the *Sarts*, as they call all people of settled habits of whatever nationality.

39. In compliance with the entreaties of Ayub, the Sarkâr of Rabatchi, I diverged from my direct road home to visit his house at Karabujash, near which he promised us some sport after wild pig on the morrow. He insisted on entertaining our party at his own expense (our wants having during the rest of the trip been supplied from the Government store-houses), and after a successful morning's sport (Ayub keeps a small pack of hounds for hunting the wild pig in the marshes and reeds of that neighbourhood) we reached Yarkund before evening on the ninth day since our departure.

YARKUND,
The 15th June 1875.

ROBERT B. SHAW,
Poltl. Agent, on special duty, Kashgar.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE NORTH-WEST PROVINCES FOR THE YEAR 1873-74.

Nos. 239—53 I., dated Simla, the 26th July 1875.

Read—

Letter from the Government of the North-West Provinces, Public Works Department, Irrigation Branch, No. 76 A., dated the 26th January 1875, forwarding copy of the Revenue Report of Irrigation Works in the North-West Provinces for the year 1873-74, and of the Resolution of that Government reviewing the same.

OBSERVATIONS.—The submission of this Report, though 3 weeks earlier than its predecessor, is nearly 2½ months behind time, owing, it is reported, to the needful statements from the Board of Revenue not having been received. It is observed that this matter has received the attention of the Local Government, so that greater punctuality will, it is hoped, be ensured for the future.

2. The operations of the year having been reviewed in detail by the Local Government, only the general results and a few points requiring attention will be noticed in this Resolution.

3. In the abstract of general financial results annexed to the Chief Engineer's report on which the conclusions in paras. 3—5 of the Resolution of the North-West Provinces Government are based, there are a few errors which will be remarked on separately. The profits are calculated only on the assessments for the year, and the amount of accumulated interest charges is not quite correctly stated. The correct figures will be found in the two annexed statements, the first of which shows the results according to the actual cash receipts during the year, and the second according to the assessments for the year.

4. The general financial results according to these tables are as follows:—

	£
The aggregate capital outlay on Irrigation Works in the North-West Provinces to the end of the year was	3,979,164
Of this amount the sum spent on works in progress not yet yielding revenue is £920,154, and outlay on works abandoned is £22,197, or a total of ...	942,351
Leaving as the capital outlay on works in operation	3,036,813
The gross returns derived by Government from these works by direct receipts of water-rate and miscellaneous items of income during the year under review was	252,785
The expenses of maintenance	123,520
Deducting which the net direct revenue amounted to	129,265
And the increased Land Revenue due to the works is reported to amount to ...	55,405
Making a total net revenue of ...	184,670

This result, based on the cash collections, gives a net profit of 6·08 per cent. on the capital outlay. In the previous year it was 5·35 per cent., so that there is a satisfactory increase in the rate of return.

If the calculations be made on the earnings of the year, *viz.*, on the *assessments* of water-rate on crops irrigated during the year, the results are as follows:—

	£		£
		Gross income	*264,618
* *Vide* Report of the Government, North-West Provinces ...	266,147	Deduct maintenance expenses	123,520
Less remissions of revenue included in that sum	1,529	Net direct revenue	141,098
	264,618	Increased land revenue due to the Works ...	59,150
		Net profit ...	200,248

Or 6·58 per cent. on the capital outlay.

5. If the total net revenue be taken on the entire expenditure, including unfinished and abandoned works, the return is 4·64 per cent.

6. The total charges for simple interest during the year amounted to £146,262, so that the net realizations of the year show a clear excess over all charges of £38,408, which is increased to £55,515 if the calculations be made on the earnings, *viz.*, the assessments of the year.

7. The accumulated simple interest charges up to the end of the year exceeded the accumulated net revenue from all sources by £929,747. This is still a heavy weight on the Canal finances; but it is satisfactory to find that it is annually decreasing, as the following figures will show. The amount of the debt was at the end of—

	£
1870-71	1,009,264
1871-72	972,887
1872-73	968,155
1873-74	929,747

In the review of the previous year's operations a contrary conclusion was drawn owing to imperfections in the accounts of former years, which have since been rectified.

8. In the conclusions arrived at in paragraph 5 of the Resolution of the Local Government there appears to be some error. It is said that "the profits from all sources exceeded the interest charges by Rs. 5,39,863;" but a reference to the statement of general financial results attached to the Report, which is based on *collections*, shows that the net revenue amounted to Rs. 18,46,682, while the interest charges came up to Rs. 14,62,616, from which figures the gain would appear to be only Rs. 3,84,066, instead of Rs. 5,39,863 as stated; and if indirect profits be excluded, there would apparently be a loss of Rs. 1,69,995 on the year's transactions.

Again, it is said that "the accumulated interest charges exceeded the accumulated revenue by Rs. 80,99,002;" but the actual excess seems to be Rs. 92,97,488,* as shewn on the margin. Calculations of this nature should be based on the cash collections and not on assessments.

* See statement of Financial results.	Rs.
Interest ...	2,54,06,499
Net revenue ...	1,61,09,011
Excess ...	92,97,488

9. The working expenses for the year, as shewn in statements at pages I and XXVII of Appendix, do not agree with one another; nor do either agree with the figures given at paragraph 4 of the Chief Engineer's Report. The interest charges, as shewn in Table XXVII, are not quite correct. These and other discrepancies in other portions of the Report need not be further noticed here, but it is hoped that the Local Government will adopt such measures as will insure the accuracy of the figures in future reports.

10. In paragraph 69 of the Chief Engineer's review there is a statement to the effect that the question of removing the debit against the irrigation accounts of the Agra Irrigation Works is now before the Government of India. But there must be some misapprehension on this point, as the question was referred back to the Local Government for further information a year ago; *vide* Public Works Department letter No. 213A.—I. of 6th July 1874.

11. The working expenses were less by £5,481 than in the previous year, which is due in part to a larger expenditure having been debited to capital, and a smaller proportion consequently of the permanent establishment charges having been debited to the revenue account. The maintenance charges for the last six years have been as follows:—

	£
In 1868-69	101,313†
In 1869-70	116,465
In 1870-71	112,659†
In 1871-72	118,953†
In 1872-73	129,001
In 1873-74	123,520

12. The year was, on the whole, a favorable one for the Canal finances. The direct assessed income shows an increase of £34,882 over that of the previous year, and is the largest yet reached, with the exception of that of 1868-69, a year of drought, although the area irrigated was exceeded in three of the previous years. The increase is shewn to be due

† Including charges against the Agra Irrigation Works, which were abandoned.

to the distribution of the rainfall, which, although actually heavier than in 1872-73, fell so as not to relieve the cultivators from the necessity for applying for canal water; also to the considerable increase in the sugarcane and indigo cultivation, the areas of which were the largest yet obtained.

13. It is observed with much satisfaction that the greater portion of the increase is due to the Ganges Canal, which is doubtless owing in a great measure to the careful administration commended by the North-West Provinces Government. The decreasing cost of maintenance on this canal during the last three years is also very noticeable.

14. The increase in maintenance charges on the Eastern Jumna Canal during the year under review is mainly due to the expenditure on works of improvement now charged against Revenue, the effect of which will probably be a decrease in current expenses in future years.

15. The Report shows that the boat traffic on the Ganges Canal is increasing, as the obstructions are being gradually removed. The fact that the capacity of the boats has increased from a maximum of 350 maunds in 1869 to 750 maunds in the year under review, and that of the latter there are now 102 out of a total of 365 plying on the Ganges Canal, is significant. This, with the large passenger traffic which is known to exist, though there are as yet no registers of it, and the increased activity in carrying operations at the Cawnpore terminus, are hopeful signs for the future. A registration of the passenger traffic should be undertaken if it can be managed without additional expense.

16. The praise bestowed by the Lieutenant-Governor on the Canal administration, and the officers to whom its success is mainly due, is fully endorsed by the Government of India. The results of each succeeding year show that the difficulties to be overcome are being gradually surmounted. Improvement is apparent in every branch of the Canal administration.

ORDER.—Ordered that copies of this Resolution and of the Report be forwarded to the Secretary of State, and to the Financial and Revenue, Agriculture and Commerce Departments for information.

* Madras.	British Burmah.
Bombay.	Mysore and Coorg.
Bengal.	Hyderabad.
Punjab.	Central India.
Oudh.	Rajpootana.
Central Provinces.	

Ordered also, that copies of the Resolution be forwarded to the Government of the North-West Provinces and the several* other Local Governments and Administrations in the Public Works Department, Irrigation Branch, for information.

Ordered further, that this Resolution, the Resolution of the Local Government, and extracts from the Chief Engineer's Report, be forwarded to the Home Department for publication in the Supplement to the *Gazette of India*.

C. H. DICKENS, *Colonel, R. A.,*
Secy. to the Govt. of India.

D

IRRIGATION REVENUE REPORT, NORTH-WESTERN PROVINCES, FOR 1873-74.

No. C467A., dated Camp Agra, 26th December 1874.

RESOLUTION—By His Honor the Lieutenant-Governor.

READ AGAIN—

Resolution No. 374A., dated 2nd April 1873, on the irrigation operations of fasl kharif 1873, and Resolution No. C288A., dated 4th August 1874, on the irrigation operations for fasl rabi and year 1873-74.

READ—

Report by the Chief Engineer of Irrigation, with enclosures.

RESOLUTION. *Capital Account.*—There is no addition to the capital accounts to notice this year beyond the expenditure on improving existing works and constructing new ones, which has been already noticed in the Resolution upon the Progress Report. The expenditure was Rs. 44,87,122, which raised the total of capital sunk upon the works to Rs. 3,97, 91,630 (£3,979,163), of which Rs. 3,03,68,121 (£30,36,812) was upon works in operation.

2. *Gross Revenue.*—The gross revenue from all sources was Rs. 26,61,470 (£266,147).

3. *Working Expenses.*—The working expenses amounted to Rs. 12,50,490 (£125,049), about Rs. 48,000 less than last year. The establishment charges were less by nearly Rs. 15,000, whilst the revenue assessed was nearly Rs. 3,50,000 more than that of last year. The percentages of establishment to cost of repairs and revenue assessed stood for the two years, 1872-73 and 1873-74, at 23·63 and 21·44 respectively. The decrease may partly be attributed to the larger expenditure upon new or original works this year, which caused a lighter proportion of establishment charges to fall upon revenue. The decrease in charges is also due in great degree to careful administration.

4. *Profits.*—The profits from direct income amounted to Rs. 14,10,980 (£141,098) 4·73 on the capital sunk on works in operation. The income derived from the enhancement of land revenue, due to the operation of the canals, was Rs. 5,91,499 (£59,149), which raised the percentage of profits to 6·71.

5. *Interest charges.*—The profits from all sources exceeded the interest charges for canals in operation by Rs. 5,39,863 (£53,986) for the year under review; the accumulated interest charges exceeded the accumulated revenue up to the end of the year by Rs. 80,99,002 (£809,900). Last year this excess amounted to Rs. 86,38,865 (£863,886), so that a steady reduction of the interest charges against the canals is in operation.

6. *Statistics of irrigation and revenue—*

I.—COMPARATIVE ABSTRACT OF AREAS IRRIGATED AND GROSS REVENUE, WITH AVERAGE RAINFALL IN EACH YEAR SINCE 1867-68.

Years.	Area irrigated.	Gross revenue.	Percentage of rainfall in irrigated districts.
	Acres.	Rs.	
1867-68	761,460	19,04,172	44·5
1868-69	1,441,918	31,47,160	17·0
1869-70	1,089,673	25,69,792	29·1
1870-71	1,050,808	25,51,168	37·1
1871-72	852,494	21,75,733	38·0
1872-73	940,586	23,12,649	32·4
1873-74	1,049,334	26,61,470	33·9*

II.—COMPARATIVE STATEMENT OF IRRIGATION REVENUE IN 1871-72, 1872-73, AND 1873-74.

Years.	Kharif (Autumn).		Rabi (Spring).	
	Area irrigated.	Gross revenue.	Area irrigated.	Gross revenue.
	Acres.	Rs.	Acres.	Rs.
1871-72	333,120	10,42,814	519,374	11,32,919
1872-73	353,621	11,01,288	586,965	12,11,361
1873-74	401,622	13,17,663	647,712	13,45,807
Increase ...	48,001	2,16,375	60,747	1,32,446

* The rainfalls of the Dun, Tarai, Bijnor, Jhansi, and Hamirpur, where the areas of irrigation are small, are excluded in calculating this average.

III.—COMPARATIVE TABLE OF AREAS OF THE FOUR MOST VALUABLE CROPS—SUGARCANE, RICE, INDIGO, AND COTTON—IRRIGATED DURING THE PAST SEVEN YEARS.

Class.	Crops.	1867-68.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
		Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
I.	Sugarcane	87,050	97,555	104,596	112,141	94,816	102,253	130,578
II.	Rice	97,867	111,019	117,548	96,479	76,850	84,973	74,667
III.	Indigo	77,976	76,687	130,248	118,897	119,617	130,985	144,094
IV.	Cotton	8,265	52,992	55,883	35,070	20,365	14,799	16,353

IV.—TABLE SHOWING WATER-RATES AND GROSS REVENUE PER ACRE ON EACH CANAL FOR THE PAST THREE YEARS.

Canals.	Gross Revenue per acre.			Water-rate per acre.		
	1871-72.	1872-73.	1873-74.	1871-72.	1872-73.	1873-74.
Ganges Canal	2·60	2·48	2·53	2·35	2·29	2·36
Eastern Jumna	2·75	2·86	3·27	2·58	2·66	2·98
Dun	3·90	2·55	3·83	2·05	1·83	1·93
Rohilkhand	0·48	0·47	0·56	0·43	0·43	0·47
Bijnor	2·24	1·28	1·59	1·48	1·18	1·49
Bundelkhand Irrigation Works ...	1·80	1·32	2·17	1·44	1·56	1·88

7. *Area irrigated.*—With a higher average rainfall than that of last year, there was an increase in irrigated area of 110,000 acres. This fact shows how dependent the country is upon seasonable rather than upon copious rains. The increase this year is due partly to the failure of early kharif rains, partly to the failure of winter rains in the lower Doab. There is again a large increase in the area of the more valuable crops of sugarcane and indigo, but a decrease in rice, which is accounted for by the operation of a recently increased rate.

8. *Water-rate per acre.*—The average water-rate per acre irrigated by all canals during the year was 2·32. On the Ganges and Eastern Jumna Canals the average rates were 2·36 and 2·98 respectively, both higher than last year's rate. This increase is due to the irrigation of the more valuable crops in the kharif, which, in the case of the Eastern Jumna Canal, raised the revenue above that of last year, even with a smaller irrigated area. There is an increase in water-rate on all the other canals. The decrease in the average rate on the Dun Canals from that of 1871-72 is caused by the large expenditure debited to revenue, and by the rates having been altered. As this reduction has not caused the anticipated increase n area, the question of raising the rates will be considered on His Honor's approaching visit to the Dun. The high average gross revenue per acre on these canals is due to the profits derived from other sources, chiefly from water-power. That of the Eastern Jumna Canal is augmented by returns from water-power and plantations. The slight difference in the two average rates of gross revenue and water-rate per acre, 2·53 and 2·36 respectively, on the Ganges Canal, shows that water-rate is its chief source of revenue.

9. *Ganges Canal.*—This has been a favourable year for the canal, as is proved by the increased profits from water-rate, nearly Rs. 3,00,000 in excess of last year's return. The successful irrigation in the Etawah division is specially worthy of notice, and does credit to the management of his division by Lieutenant F. V. Corbett, R. E. For the two past years the rabi irrigation of this division has been most favourable. The attention which has been directed to statistics of cost and of revenue of distributaries is bearing good fruit in the decreased charges for maintenance on the Ganges Canal, the result of the careful attention of Major C. C. S. Moncrieff, R. E., Superintending Engineer. The increase in charges on the Eastern Jumna Canal is understood to be temporary, and due to large works of improvement charged to revenue, which will, it is to be hoped, speedily restore the canal to the condition which was a proverb in the department. The charges of the present year were exceeded in 1870-71, but are higher than those of last year, and also of the years preceding 1871-72. The increase in revenue, notwithstanding the decrease in irrigated area, is satisfactory; and the increase derived from plantations has been already noticed in the resolution upon the plantation report.

No. 1118W., dated 17th October.

10. *Collection of Revenue.*—There is a decrease in these charges shewn by the Board's Statement F. The Board is desired to hasten its report on the question of dispensing with the attendance of patwaris, which was referred for their consideration a year ago.

11. There is a deficit in the revenue account of the Bundelkhand Canals for this year of Rs. 4,164, for which the Board will be requested to provide under the arrangements proposed

in their No. 981, dated 22nd September 1871, and concluded in the Resolutions* by His Honor the Lieutenant-Governor in this department, by which the lakes were put in charge of this department.

12. *Enhancement of Land Revenue.*—His Honor notices with satisfaction that some results have ensued from definite steps taken during the previous year to apply the owner's rate, enacted in Act VIII. of 1873, to the proprietors of muafi and settled lands. The Lieutenant-Governor observes with regret that the Board has not yet furnished the corrected returns of indirect revenue due to canals, as required by the orders of November 1873.† Nor have the returns of crops been received, nor have the reports of the increase of indirect revenue credited to canals during the past year been submitted in due time.

These defects have retarded the issue of this report, which includes tabular statements dependent on the figures of the Board.

A distinct explanation is now required from the Board of the measures taken to ensure punctuality in future.

13. Press delays have also occurred, which it is hoped will cease on the occupation of the Government Press buildings at Allahabad.

14. His Honor has much satisfaction in observing the growing prosperity of the canals of the North-Western Provinces, which is evinced in increased revenue, diminished cost of maintenance, ability to meet the annual charges of interest, and to diminish the amount of accumulated interest.

15. These results are due to the slow but certain action of improved administration, and, to the energetic management of the officers mentioned by the Chief Engineer, who have merited the cordial thanks of Government, to Major C. C. S. Moncrieff, R. E., and Mr. C. C. Anderson, Superintending Engineers, and other officers of various grades detailed in para. 102 of the Chief Engineer's Report. Sir John Strachey desires to take this opportunity, the first that has presented itself since he became Lieutenant-Governor, of acknowledging the excellent services which are being rendered to this Government by the distinguished body of officers employed in the Irrigation Branch of the Public Works Department in these Provinces. His acknowledgments are especially due to Colonel Greathed, and he holds himself fortunate in finding at the head of this important department an officer in whose ability and judgment the Government can place such complete confidence.

By order, &c.,

W. H. GREATHED, COLONEL, R. E.,
Joint Secy. to Govt., N.-W. P.

CHAPTER I.

REVENUE REPORT OF CHIEF ENGINEER OF IRRIGATION, NORTH-WESTERN PROVINCES, FOR THE YEAR 1873-74.

SECTION I.

FINANCIAL RESULTS.

Additions to capital account.

1. No further book additions have been made to the capital accounts of the canals since the last report was written.

Capitalization of abatement of land revenue.

The capitalization of abatement of land revenue has, however, been nearly completed, and the capitalized sum will probably in the course of the year be added to the accounts of all the canals. The sum to be added to the account of the Ganges Canal amounts to between eight and nine lakhs; that for the other working canals to about two lakhs more, excluding the Agra Canal, to which a capitalized sum of Rs. 1,09,000 was added in last year's accounts.

* No. 791 I.C., dated 17th April 1872, and No. 2804 I—C., dated 21st November 1872.

† See Resolution, Revenue Department, North-Western Provinces, No. 2472A. of 3rd November 1873, para. 8.

State of capital account.

2. Table A., as usual, shows the capital account for each project at the beginning and close of the year under review, the additions this year being the actual expenditure on the works:—

TABLE A.

WORKS.	OUTLAY ON CONSTRUCTION, INCLUDING SHARE OF ESTABLISHMENT CHARGES.		
	Up to end of 1872-73.	During 1873-74.	Up to end of 1873-74.
	Rs.	Rs.	Rs.
Ganges Canal	2,60,51,782	3,94,471	2,64,46,253
Lower Ganges Canal	5,44,389	26,43,475	31,87,864
Dun Canals	5,72,533	6,539	5,79,072
Rohilkhand Canals	10,36,006	1,54,966	11,90,972
Bijnor Canals			
Eastern Jumna Canal	20,61,773	15,645	20,77,418
Agra Canal	43,22,672	11,89,773	55,12,445
Ditto Irrigation Works	2,21,970	...	2,21,970
Bundelkhand Irrigation Works	72,027	2,379	74,406
Ditto Ditto Survey	1,68,682	61,808	2,30,490
Eastern Ganges Canal	2,52,674	18,066	2,70,740
TOTAL ...	3,53,04,508	44,87,122	3,97,91,630

The capital sunk at the beginning of the year was Rs. 3,53,04,508, of which Rs. 2,97,04,121 was on account of works in operation.

Gross income for the year.

The expenditure during the year on all works was Rs. 44,87,122. Details have been given in the Progress Report. The gross direct income from all sources was Rs. 26,61,470,* which is Rs. 3,48,821 more than the income of 1872-73.

3. The following table shows that there was an increase under every head of revenue that of water-rate being 91 per cent. of the whole increase, and this head of revenue itself 88 per cent. of the whole revenue:—

YEAR.	Water-rate.	Navigation.	Water-power.	Miscellaneous.	Plantations.	TOTAL.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1870-71 ...	23,80,274	32,661	46,034	32,734	58,965	26,51,168
1871-72 ...	19,67,596	58,929	59,378	21,720	68,110	21,75,733
1872-73 ...	21,21,186	32,494	57,512	17,762	83,695	23,12,649
1873-74 ...	24,41,369	33,067	69,093	29,606	88,335	26,61,470

Of this increase Rs. 3,11,234 was due to the Ganges Canal, chiefly under water-rate (Rs. 2,99,385). On all the other canals, except the Dun, there was an increase, that on the Eastern Jumna being comparatively the least.

Working expenses.

4. At the same time there was a decrease in the working expenses of Rs. 46,488, and an increase to the net revenue of Rs. 3,96,309.

Income and expenditure on each canal.

Table B. shows details of income and expenditure for each canal:—

TABLE B.

WORKS.	Gross Revenue.	CHARGES.			Net profit or loss.
		EXPENDITURE.			
		Maintenance, &c.	Direction and Executive Establishment, including remission.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.
Ganges Canal	20,14,266	4,10,758	5,24,500	9,35,258	10,79,008
Eastern Jumna Canal	5,49,219	84,414	1,25,430	2,09,844	3,39,375
Dun Canals	49,954	14,081	13,428	27,509	22,445
Rohilkhand Canals	38,194	15,435	50,337	65,772	—27,578
Bijnor Canals	5,500	770	3,545	4,315	1,185
Agra Irrigation Works	...	...	...	...	...
Bundelkhand Irrigation Works ...	4,337	4,570	3,222	7,792	—3,455
TOTAL ...	26,61,470	5,30,028	7,20,130	12,50,158	14,10,980

* Of this sum, Rs. 2,288 properly belongs to the year 1872-73, and through an omission in the office of the Executive Engineer, Aligarh Division, has not been brought to the notice of the Controller until lately; the sum being comparatively small, has been added to the assessed revenue of this year, and the tables have been drawn up on this basis. Any other method of accounting for it would involve altering all last year's tables, which would be a matter of some labour.

Percentage of net direct income on capital.

5. The percentage of net direct profits on the capital sunk on works in operation at the beginning of the year was 4·73. This is a higher percentage than has been reached since the prosperous years from 1868-69 to 1870-71.

Net, direct and indirect.

The amount of indirect revenue credited during the year was Rs. 5,91,499, and the net profits from direct and indirect revenue were 6·71 per cent. on the capital. The returns furnished by the Board of indirect revenue are not as accurate as could be wished. This matter is alluded to in another section.

The following Table C. shows the profits from direct and indirect revenue, drawn up from such information as has been furnished :—

TABLE C.

Year.	Capital at beginning of each year.	Profit from direct income.		Profit from direct and indirect income.	
		Amount.	Percentage on capital.	Amount.	Percentage on capital.
	Rs.	Rs.		Rs.	
1867-68	2,52,35,918	8,67,806	3·44	12,14,071	4·81
1868-69	2,58,73,056	21,25,828	8·21	24,72,813	9·55
1869-70	2,63,90,002	13,69,035	5·18	17,17,179	6·51
1870-71	2,71,46,310	13,84,746	5·10	17,52,436	6·45
1871-72	2,73,41,777	9,47,337	3·47	13,62,152	4·99
1872-73	2,92,86,499	10,14,382	3·46	16,66,701	5·35
1873-74	2,97,94,121	14,10,980	4·73	20,02,479	6·71

Interest charges for the year.

6. The charges for interest for works in operation during the year were Rs. 14,62,616; the net profits from all sources exceeded the charges by Rs. 5,39,863.

These results are summed up in abstract on pp. xxvii and xxviii of the appendix statements. It will be observed that these two statements, as last year, are based upon revenue assessed, and so differ slightly from those furnished by Controller, which show actual receipts. The tables of this review are all based upon these two statements.

The accumulated excess of interest charges over direct revenue on 31st March 1873 was Rs. 86,38,865: at the close of the following year the excess was reduced to Rs. 80,99,002.

Comparative results on Ganges and Eastern Jumna Canals.

7. Table D. shows the comparative results attained on the Ganges and Eastern Jumna Canals for the last five years :—

TABLE D.—GANGES CANAL.

Year.	Gross revenue from all sources.	Revenue management.	Percentage on gross revenue.	Maintenance charges.	Percentage on gross revenue.	Total working expenses.	Percentage on gross revenue.	Gross Revenue.				Working Expenses.				Percentage of profits on capital.
								Per cubic foot of discharge at head.	Per mile of canal.	Per mile of distributary.	Per acre irrigated.	Per cubic foot of discharge at head.	Per mile of canal.	Per mile of distributary.	Per acre irrigated.	
	Rs.	Rs.		Rs.		Rs.		Rs.	Rs.	Rs.		Rs.	Rs.	Rs.		
1870-71 ...	19,10,318	4,60,933	24·12	4,16,316	21·80	8,77,249	45·92	441	2,921	622	2·492	204	1,341	285	1·144	4·30
1871-72 ...	15,79,040	4,59,416	29·09	4,57,283	28·96	9,16,699	58·05	376	2,414	513	2·603	218	1,403	297	1·571	2·74
1872-73 ...	17,03,032	4,66,027	27·36	5,29,360	31·08	9,95,387	58·44	356	2,773	547	2·495	208	1,621	320	1·456	2·74
1873-74 ...	20,14,266	4,52,293	22·45	4,82,965	23·97	9,35,258	46·43	427	3,280	615	2·533	198	1,523	286	1·175	4·10

EASTERN JUMNA CANAL.

1870-71 ...	5,66,367	1,10,267	19·47	71,487	12·62	1,81,754	32·09	582	4,356	934	2·192	190	1,396	299	0·854	19·75
1871-72 ...	5,27,824	1,12,238	21·26	86,770	16·44	1,99,008	37·70	538	4,060	871	2·738	203	1,531	328	1·032	16·66
1872-73 ...	5,27,996	1,08,489	20·54	1,11,803	21·18	2,20,292	41·72	502	4,061	844	2·867	209	1,694	352	1·196	15·01
1873-74 ...	5,49,219	1,11,612	20·32	98,232	17·88	2,09,844	38·20	583	4,225	879	3·208	222	1,614	335	1·24	16·45

The results on the Ganges Canal compare very favourably with those of past years; those of the Eastern Jumna Canal not so favourably. These results are reviewed at greater length in the sections devoted to these canals.

Cost of establishment.

8. Table E. compares the cost of establishment with the expenditure on works, revenue management, and maintenance.

TABLE E.

Charge to—	Share of Establishment.		Total cost of establishment.	Other expenditure.	Percentage of Establishment to other Expenditure.	
	Executive, including cost of collection and remission.	Direction.			1872-73.	1873-74.
	Rs.	Rs.	Rs.	Rs.		
Original works	3,70,902	1,34,767	5,05,669	39,01,579	19·18	12·90
Repairs and plantations ...	86,662	18,143	1,04,805	5,30,028	21·74	19·77
Revenue management, including navigation and remissions [Rs. 14,959]	5,25,027	90,630	6,15,657	Assessments 26,61,470	25·63	23·12
Total ...	9,82,591	2,43,540	12,25,799	70,93,077	21·12	17·28
Survey, &c.						
Bundelkhand Irrigation Survey ...	54,857	2,380	57,237	4,571	...	...
Eastern Ganges Canal ...	14,171	676	14,847	3,219	...	...
Miscellaneous	34,197	23	34,220	47,460	...	...
Total ...	1,03,225	3,079	1,06,304	55,250	...	...
Total Original Survey and Miscellaneous Works ...	4,74,127	1,37,846	6,11,973	39,56,829	22·21	15·46
Grand Total ...	10,85,816	2,46,619	13,32,435	71,48,327	24·25	18·63

The reduced percentage upon the cost of these various heads is very satisfactory. This good result is due partly to the increased expenditure on the Lower Ganges Canal, whilst the establishment remains practically the same; but the actual decrease attained in maintenance of running canals is very important, and points to a real reduction in these charges. The results on the two principal canals will be found far more fully discussed below.

Collection of revenue.

9. Tables F. and G., submitted by the Board of Revenue, show satisfactory returns. The uncollected balance in Meerut Division, Aligarh district, is considerably larger than that of last year: in other districts it is smaller.

Table G. shows that the outstanding balances of last year have been accounted for. There are discrepancies in respect of districts Furukhabad and Cawnpore, for which explanation has been asked. There is a satisfactory decrease in the charges for patwaris and lumberdars: although the collections have been larger in 1873-74, the relative percentages for these charges of this year and last year stand at 3·61 and 4·3.

Attendance of patwaris at measurements.

Conclusions have yet to be formed upon Mr. Anderson's suggestion to dispense with the attendance of patwaris at measurements, which was noticed in last year's report. Many replies have been received, but the Board's reply is still awaited.

TABLE F.

STATEMENT OF DEMANDS, COLLECTIONS, AND BALANCES ON ACCOUNT OF CANAL RATES FOR 1873-74.

Division.	District.	Year.	Demands.	Collections.	Remitted.	Balance.	Particulars of Balances. Real. In train of liquidation.	Real. Doubtful.	Real. Irrecoverable.	Nominal. Board of Revenue, N.-W. P.;
Dated Allahabad, the 14th November, 1874.

E. ALEXANDER,
For *Officiating Secretary.*

SECTION II.

AGRICULTURAL STATEMENT.

10. The water and navigation rates in force during the year are shewn in the table below :—

TABLE OF RATES FOR GANGES CANAL AND EASTERN JUMNA CANAL.

Class.	Nature of Crop.	Per acre irrigated. Natural flow.	Lift.	Per
		Rs. A. P.	Rs. A. P.	
I.	Sugarcane, rice	5 0 0	3 5 4	Year.
II.	Tobacco, opium, vegetables, orchards, and water-nuts	3 0 0	2 0 0	Crop.
III.	All rabi crops, indigo and cotton	2 4 0	1 8 0	Do.
IV.	All kharif crops not specified above	1 10 8	1 0 0	Do.

TABLE OF RATES FOR DUN CANALS.

Class.	Nature of Crop.	Rate.
		Per year.
	Bejapur Canal.	Rs. A. P.
I.	Sugarcane	5 0 0
II.	Garden produce, 1st class rice, tobacco, opium, water-nuts (singhara) ...	3 0 0
III.	Indigo, cotton	2 4 0
IV.	Second class rice, wheat, oats, and all other inferior crops	1 4 0
	Rajpur, Katta Putta, and Kalinga Canals.	
I.	Sugarcane	5 0 0
II.	Garden produce, 1st class rice, tobacco, opium, water-nuts (singhara) ...	3 0 0
III.	Indigo, cotton	2 4 0
IV.	Second class rice, wheat, oats, all other inferior crops	0 12 0

Class.	Nature of Crop.	Rate.
		Per year.
	Jakhan Canal.	Rs. A. P.
I.	Sugarcane	5 0 0
II.	Garden produce, 1st class rice, opium, water-nuts (singhara)	2 4 0
III.	Indigo, cotton	...
IV.	Second class rice, wheat, oats, all other inferior crops	0 12 0
	Rate for tea on all canals Rs. 0-12-0 for each watering	..

	Rohilkhand Canals.	Flow.	Lift.
		Rs. A. P.	Rs. A. P.
I.	Garden and orchards, per crop	2 0 0	1 0 0
II.	Sugarcane, tobacco, opium, and water-nuts, 1st watering ...	(*a*) 0 8 0	(*b*) 0 4 0
III.	All cereals, pulses, and oil-seeds, ditto	(*c*) 0 4 0	(*d*) 0 2 0

(*a.*) Increasing 4 annas at every subsequent watering.
(*b & c.*) Ditto 2 annas ditto ditto ditto.
(*d.*) Ditto 1 anna ditto ditto ditto.

Class.	Nature of Crop.	Per acre irrigated. Natural flow.	Lift.	Per
	Hamirpur and Jhansi Lakes.	Rs. A. P.	Rs. A. P.	
I.	Sugarcane	3 5 6	1 10 9	Year.
II.	Rice, tobacco, opium, vegetables, gardens, and water-nuts	2 4 0	1 2 0	Crop.
III.	All rabi crops	1 11 0	0 13 6	Do.
IV.	All kharif crops not specified above	1 2 0	0 9 0	Do.

CHARGES FOR TIMBER RAFTED AND BOATS PLYING ON THE GANGES CANAL.

			Pies.
1st Class.	Logs, whether round or squared, exceeding 2½ feet in girth ...	Per mile per 100 cubic feet or raft	9
2nd Class.	Logs, less than 2½ feet, including karris, bullas, sleepers, &c. &c. ...	Ditto ditto	4
3rd Class.	Bamboos	Ditto ditto	2
4th Class.	Firewood	Per mile per 100 cubic feet or raft	4
			Rs. A. P.
Boats, irrespective of size		Per mensem ...	4 8 0

The only alteration in this table from that shewn in last year's report is that rice has been made a 1st class crop on the Ganges and Eastern Jumna Canals.

The new rates to be levied tentatively on the Rohilkhand Canals, and the water and navigation rates proposed for the Agra Canal, have no connection with the year under review.

Areas irrigated.

11. The areas irrigated since 1867-68 are shewn in Table H :—

TABLE H.

Year.	Ganges Canal.	Eastern Jumna Canal.	Dun Canals.	Rohilkhand Canals.	Bijnor Canals.	Bundelkhand. Jhansi.	Bundelkhand. Hamirpur.	Total.
1868-69 ...	1,078,399	274,101	14,223	70,803	3,052	118	1,222	1,441,918
1869-70 ...	780,406	251,067	10,429	45,433	1,376	122	840	1,089,673
1870-71 ...	766,614	212,715	12,419	56,233	1,882	154	792	1,050,808
1871-72 ...	606,555	192,750	11,039	39,331	1,635	180	1,004	852,494
1872-73 ...	685,170	184,154	14,002	52,244	3,406	441	1,169	940,586
1873-74 ...	795,314	168,048	13,043	67,486	3,449	574	1,420	1,049,334

Increase in area for the year.

The area for this year was 108,748 acres more than that of last year, and only 40,339 less than that of the famine year, 1868-69. Of the increase 48,001 was obtained in the kharif and 60,747 in the rabi.

Table H. shows that the increase has been due to the Ganges and Rohilkhand Canals, while on the Eastern Jumna Canal there is a considerable falling off in area, principally due to the increased rate charged for rice, but also to the fact that the rainfall was favourable for the rabi harvest in the districts of the Upper Doab, which are those watered by the Eastern Jumna Canal.

It is chiefly an increase of the irrigation of the more valuable crops, sugarcane and indigo, which has produced such favourable results in the revenue. This result is especially remarkable on the Eastern Jumna Canal, where, though the average is less, the revenue is higher than that of last year.

The rabi was specially favourable to irrigation in the divisions below Bulandshahr. In the divisions further north, late September rains kept the ground moist until the season was far advanced, and so checked the demand. An unusual quantity of water accordingly was passed down to meet the heavy demand of the lower divisions.

The Etawah division shows the highest increase of irrigation, the area being 42,968 more than in the preceding year. At the same time the increase on the sister Cawnpore division was not 20,000 acres. The Superintending Engineer attributes this to faults of management, consequent on frequent recent changes of officers. But the difference is sufficiently accounted for by the fact that in the Etawah division the principal distributaries are large new ones, constructed on the latest principles, whereas in Cawnpore very defective distributaries have as yet been only partially improved.

Proportion of kharif to rabi.

12. The two following tables show the proportion of kharif to rabi irrigation and the areas of the principal crops :—

Year.	Kharif.	Rabi.	Proportion of kharif to rabi. Percentage of kharif.	Percentage of rabi.
1868-69	484,485	957,413	33·60	66·40
1869-70	501,625	588,048	46·03	53·97
1870-71	396,399	654,409	37·72	62·28
1871-72	333,120	519,374	39·08	60·92
1872-73	353,621	586,965	37·59	62·41
1873-74	401,622	647,712	38·27	61·73

Class.	Crops.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.
		Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1	Sugarcane	97,555	104,596	112,141	94,810	97,814	130,578
2	Rice	111,019	117,548	96,479	76,850	84,055	72,952
3	Indigo	76,687	130,248	118,897	119,617	130,985	144,094
4	Cotton	52,992	55,883	35,070	20,365	14,799	16,353

The second table shows a large increase on sugarcane and indigo over all preceding years.

Rice irrigation on Ganges and Eastern Jumna Canals compared.

13. The total decrease in rice is only 11,103, although the decrease on the Eastern Jumna Canal, caused by increase of rates, is more than 16,000 acres. There was a large increase of rice irrigation on the Rohilkhand Canals, where the rates have not been raised. One good effect may be noticed of raising the rate for rice on the two principal canals, namely, that a good deal of sugar was planted on lands formerly used for rice on the Eastern Jumna Canal.

Wheat and barley irrigation.

14. In the rabi crops of wheat and barley there was an increase of 39,225 and 25,555 acres respectively, while in pulses there was a falling off of about 9,000.

Of the increase in wheat, 19,507 acres, more than 50 per cent. of the whole, was in the Etawah division, and 12,257, nearly 50 per cent. of the barley, was in the same division.

Taking the other extremity of the Doab, a falling off is apparent of nearly 4,000 acres in wheat on the Eastern Jumna Canal, and the area of barley to be quite trifling. As wheat cannot be grown without irrigation, the increase in its area may be attributed not to the variations of the season, but to a development of irrigation, specially apparent in the Etawah division.

Proportion of flow to lift irrigation.

15. The following table of the proportion of flow to lift irrigation shows an increased ratio of lift to flow, which is due to the large rabi irrigation in the lower divisions, where the relative levels of the country and of the canal surface render lift essential :—

Year.	Flow.	Lift.
1869-70	73·5	26·38
1870-71	74·1	25·9
1871-72	76·0	24·0
1872-73	72·3	27·7
1873-74	71·2	28·8

In a country where labour is plentiful, and where, through the saving effected by irrigation, it is 'liberated,' but not utilised, the tendency of lift irrigation to increase is not a discouraging sign, especially as it tends to check the lavish use of water, from which so many difficulties spring.

SECTION III.

1st CIRCLE OF SUPERINTENDENCE.

GANGES CANAL.

Main canal and distributaries. Increase mileage of distributaries.

16. The classification of main canal and distributaries is the same as that of 1872-73, the number of miles of main canal being 614. The mileage of distributaries for 1873-74 is quoted as 3,272 against 3,111 of the previous year. The Superintending Engineer explains that this increase is due partly to the opening out of new distributaries, partly to a re-adjustment of the lengths to be taken: in quoting the above mileage his rule has been to take the length of any State distributary upon which expenditure has been incurred; he should have added, from which irrigation has been practised, and revenue derived; otherwise by increasing the mileage a favourable rate for maintenance may be shewn at the cost of unduly depreciating the rate of revenue, which in a revenue report is undesirable. A further report on this subject has been promised; the materials are being collected from Executive Engineers.

Capital account.

17. The capital account at the beginning of the year stood at Rs. 2,60,51,782, as shewn in last year's report, no book addition having been as yet made, owing to the capitalization of diminution of land revenue not being completed. This will probably be added in the current year and shewn in the next report.

Expenditure on works.

Table I. shows that the gross expenditure on new works was Rs. 5,17,237, of which Rs. 1,22,766 was provided from reduction of stock balances, the net addition to capital being thus reduced to Rs. 3,94,471.

Net direct revenue.

18. The net direct revenue was Rs. 10,79,008, being a return of 4·14 on the capital sunk at the beginning of the year; a most satisfactory result, as compared with the percentage of 27·4 for the two previous years.

Indirect income.

19. The indirect income arising from increased land revenue due to irrigation was Rs. 3,81,708, which raises the percentage of profit to 5·60.

TABLE I.

Particulars.	Main Canal and Branches.	Distributaries and Drainage.	Total.
	Rs	Rs.	Rs.
Actual outlay	2,06,292	1,98,847	4,05,139

Total ...	2,14,207	2,06,476	4,20,683
Share of executive establishment	37,653	36,295	73,948
Direction	11,511	11,095	22,606
Total ...	2,63,371	2,53,866	5,17,237
Deduct decrease in stock and receipts on capital account ...	...	...	1,22,766
Net increase to capital ...	...	...	3,94,471

Net profit.

20. Table J. shows the direct income, expenditure, and profits for the last three years. The year under review was favourable to irrigation, and partly no doubt accounts for the largely increased profits.

TABLE J.

Particulars.	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Direct income	15,79,040	17,03,032	20,14,266
Expenditure	9,16,699	9,95,387	9,35,258
Net return	6,62,341	7,07,645	10,79,008
On a capital of	24,185,342	25,767,303	2,60,51,782
Or	2·74 per cent.	2·74 per cent.	4·14 per cent.

Revenue charges.

21. The details of expenditure debited to revenue, divided between the two heads of revenue management and maintenance, are shewn in Tables K. and L. Under revenue charges are shewn, as in last year's report, remissions, which are treated now as a charge instead of being deducted from the gross revenue. These are all remissions that are made after the delivery of khatiauni to the Collector, and represent revenue remitted or refunded on account of water given, and are rightly accounted for here as a charge. It will be seen that the charges for revenue management compare most favourably with that of the last two years. The charges by civil officers are higher this year in consequence of the increased revenue collected; under all other heads there is a large decrease.

22. Table L. shows that the cost of maintenance has been largely reduced, especially in establishment charges, which show a decrease of more than Rs. 20,000 on the expenditure of the two preceding years.

TABLE K.—REVENUE MANAGEMENT, GANGES CANAL.

Particulars.	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Share of executive establishment	2,91,364	2,84,827	2,77,679
Ditto direction	75,777	84,008	66,448
Navigation	19,259	19,207	18,858
Expenditure by civil officers	70,000	71,311	76,345
Remission of revenue	3,016	6,674	*12,963
Total ...	4,59,416	4,66,027	4,52,293

* This amount is higher than that shewn in Controller's statements by Rs. 332, which amount was subsequently communicated to this office by the Executive Engineer, Etawah Division.

TABLE L.—MAINTENANCE AND WORKS OF IMPROVEMENT.

PARTICULARS.	1871-72.	1872-73.	1873-74.

TOTAL WORKING EXPENSES K AND L ...	9,16,699	9,95,387	9,35,258

Returns from different sources.

23. Table M. shows the returns from different sources of revenue since 1867-68:—

TABLE M.

YEAR.	Water-rate.	Navigation.	Water-power.	Miscellaneous.	Plantations.	TOTAL.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1868-69	22,65,320	38,784	25,793	22,752	88,910	24,41,559
1869-70	17,57,573	33,796	20,637	18,912	60,465	18,91,383
1870-71	17,80,176	32,861	24,668	27,686	44,976	19,10,367
1871-72	14,25,875	58,929	30,495	16,079	47,662	15,79,040
1872-73	15,74,651	32,376	27,833	12,275	55,896	17,03,031
1873-74	18,74,027	38,088	34,301	18,597	54,303	20,14,266

Revenue compared with former years.

24. The total for the present year is only exceeded by that of 1868-69, the year of drought: the increase is principally in water-rate, the collections under which head are nearly Rs. 3,00,000 in excess of those of last year. There is also a satisfactory increase under water-power and miscellaneous collections.

Question of utilising water-power.

25. The question of further utilising the water-power of the canal is receiving attention. Superintending Engineer says that the distance of the canal from large cities is the principal cause of the water-power not being utilised. The deputation of a special officer to consider the question of erecting improved mills on the Ganges Canal has been directed.

Increase in water-rates.

26. Superintending Engineer in his report has pointed out that the increase in revenue from water-rates is largely due to the failure of the rains in June, which caused large demand for irrigation of the more valuable kharif crops of sugarcane and indigo.

27. There is a marked increase in the revenue of every division, as may be seen in page 5A. of Superintending Engineer's report.

Plantations and navigation.

28. The plantation report has been separately reviewed, and a summary of the navigation report will be found at the end of this section. The discrepancies in the figures stated here and in the reports are noticed further on.

Duty on distributaries.

29. It will be noticed that the Superintending Engineer has again this year drawn up both in detail and by divisions a table showing the cost of distribution and of maintenance, and the area irrigated per mile and per foot of discharge of distributaries. As he remarks, these returns are useful for purposes of general comparison, and it would be interesting to compare the results of different years, as well as to compare one set of distributaries with another. The chief benefit of such statistics is to lead officers in charge of the irrigation to consider how they can make the most of their means, and to husband their resources, so as year by year to show a more favourable return for their own division. The difficulties under which the distribution has to be occasionally carried out, owing to excess of water at unseasonable times, and the difficulty of procuring labour when required, is well exemplified in the report of Captain J. C. Ross, R.E.*

* *See page* 23*A., para.* 14.

But the happy results which can be brought about by care and energy have been exemplified in the successful administration of Major Moncrieff, which has invariably met with the approbation of Government during the five years of his career as Superintending Engineer of the 1st Circle.

Regulating supply and demand. *See page* 25 *A., para.* 58.

30. The necessity for husbanding the supply is shewn in the report of the Executive Engineer,* Aligarh Division, where he says that the demand is greater than the distributaries can carry. Captain Home, R. E., Executive Engineer, Eastern Jumna Canal, in paragraph 20 of his report has some useful remarks† on measuring the duty on distributaries for purposes of accurate comparison. The subject is a difficult one, and it is only by constant attention to discharges and close observation of results that scientific results can be attained. A table showing the duty per cubic foot of supply for periods of very high demand would be very valuable, and would be a useful aid to economical management. Such a table would be in fact more useful for questions of irrigating duty than one showing the average duty for the whole year, or even fasl, as there are periods in which the demand varies from time to time; and as Mr. Forrest truly remarks, the problem to solve is the amount of work that can be got out of a given quantity of water at times when every drop is required. The table at paragraph 9 of Superintending Engineer's report shows the best duty to have been obtained in the Aligarh, Cawnpore, and Etawah Divisions, ranging from 370 to 302 acres per mile. These divisions also show best in cost of maintenance and management.

† *See page* 10 *B.*

Insufficiency of rates in Aligarh division. ‡ *See page* 26*A., paras.* 64 *and* 65.

31. Captain Howard's remarks‡ on the insufficiency of water-rates in Aligarh will be read with interest, and taken in connection with those of Mr. Smith, the Settlement Officer, in reference to the same country, already brought to the notice of Government in the discussion upon the Agra Canal rates, are at this time worthy of careful consideration. Captain Howard calls attention to the high water-rate of Rs. 2-3-0 per acre realised in the past year, chiefly due to the improvements that have turned lift irrigation into flow, and he remarks that Government should reap a higher return for the capital sunk. A carefully worked out calculation in Mr. Smith's note shows that in watering an acre of land, lift irrigation has the advantage over well irrigation by a money value of 12 annas, and by a gain in time of four days—not to mention the saving of the cost and keep of bullocks and other expenses incident to wells. The gain of course in flush irrigation, for which two men are only required, and much time is saved, must be out of all proportion, and it is time to consider how much of this gain should be reaped by Government as a return for the works it has created.

Water duty and measurement of discharges.

32. In last year's report the statement of water duty in Table VIII was prepared on the basis of periods of demand, instead of on the number of days for which the canal was open. It is, as Mr. Forrest points out, impossible to ascertain the periods of no demand for the whole length of the canal. Moreover, what Government insists upon knowing, as a proof of financial results, is the duty performed by the gross daily volume entering the canal. This instruction has been repeatedly impressed upon Superintending Engineers, who are at liberty, after giving this information, to add any further remarks they may wish to make upon net results. Table VIII, which shows the gross amount entering Roorkee for the two fasls and for the whole year, is now restored to conformity with the orders of Government. The only point to notice is, that in calculating the column showing the discharge for the whole year, Mr. Forrest has merely taken a mean between kharif and rabi. This is incorrect, and also without precedent. In the Chief Engineer's tables the correct discharge for the year is given, calculated from the data returned. Mr. Forrest has drawn up another table illustrating the quantities of water available and actually utilised during periods of highest pressure, which is useful, especially when taken in connection with the question lately raised as to the water-supply of the Lower Ganges Canal, and of the pressure likely to be put upon it. All such information is invaluable to those engaged in planning new projects. At the same time, for summarising and comparing synoptically the general results of different canals, the method in present use has been adopted and will be maintained.

* Calculation made by W. Smith, Esq., Settlement Officer, Agra, of comparative cost of canal lift and well irrigation. Proceedings $\frac{A}{W}$, September 1874, 129-32, page 13. [Printed at end of the Appendix Statements.

33. Mr. Beresford, Executive Engineer of the Anupshahr Division, gives some useful information* (1) as to discharges and duty of different distributaries, which illustrates remarkably the various results caused by differences of soil through which the distributaries run; (2) as to the water received in the branch and actually passed down distributaries, showing the loss by evaporation and other causes, which amounted to 17·4 per cent. in the rabi. Accurate observations of this kind are most valuable in increasing the general stock of knowledge.

Remarks by Mr. Beresford on discharges of distributaries.

* *See pages* 18 *and* 19 *A., paras.* 20 *and* 21.

34. On the Ganges Canal the average supply passing Roorkee was—

Average supply passing into the canal.

Kharif	141 days,	5,309 cubic feet per second.	
Rabi	174 „	4,228 „ „	
Whole year	315 „	4,711 „ „	

and the amount of actual consumption, excluding the water discharged at tails—

Kharif	4,806
Rabi	3,608
Whole year	4,144

35. Mr. Forrest's table† shows the highest supply for kharif to have been in June 6,022 cubic feet, of which but little passed off. For rabi the highest supply was 5,048 cubic feet, which was nearly all utilised. This is noteworthy, as showing the requirements for a year of unusual demand for irrigation.

Highest supply for kharif and rabi.

† *Page 7 A. of his report.*

36. It will be observed that the water utilised was less than that of last year, in which there was no unusual demand, which confirms the experience of 1868-69, that when water is urgently wanted it may be made to go further than under ordinary circumstances, and that our resources in this respect are still elastic.

Capability for supplying water.

37. The following table compares the duty obtained on the Ganges and Eastern Jumna Canal for the last ten years :—

Comparison between duty of Ganges and Eastern Jumna Canal.

Year.	Acres irrigated per cubic foot per second. Of head discharge.		Acres irrigated per cubic foot per second. Of actual consumption.		Water-rate per cubic foot per second. Of head discharge.		Water-rate per cubic foot per second. Of actual consumption.	
	Ganges Canal.	Eastern Jumna Canal.	Ganges Canal.	Eastern Jumna Canal.	Ganges Canal.	Eastern Jumna Canal.	Ganges Canal.	Eastern Jumna Canal.
1864-65 ...	140	220	...	...	222	314	...	...
1865-66 ...	133	145	...	...	294	374	...	...
1866-67 ...	138	224	154	224	307	498	343	498
1867-68 ...	135	196	156	208	314	496	354	527
1868-69 ...	218	285	232	291	477	623	487	625
1869-70 ...	169	246	188	246	380	572	419	572
1870-71 ...	177	223	198	227	411	572	443	582
1871-72 ...	144	196	188	205	340	507	442	531
1872-73 ...	143	175	162	184	328	468	373	492
1873-74 ...	168	180	191	188	397	539	452	502

The duty for both canals is considerably better than last year, especially for the Ganges Canal. There are several other years which show a considerably higher acreage duty for the Eastern Jumna, while there are few that show a better water-rate duty. On the Ganges Canal the two duties appear to rise and fall together; the reason of this is that the Eastern Jumna Canal has reached its utmost limit of acreage duty, but not of revenue, which admits of large improvement. On the Ganges Canal both acreage duty and revenue duty may yet be improved side by side.

38. Comparing the results of these two canals as shewn in Table D, a marked improvement will be seen to have taken place on the Ganges Canal in the decrease of cost of revenue management and of maintenance charges. The decrease in the former is especially remarkable. On the Eastern Jumna Canal, though these results show far better than last year, there is an increase on the charges for several previous years. The superiority of this canal over the Ganges, when calculating revenue results by the water-supply and length of channel, is again apparent. In working expenses, calculated by the same standard, the two canals have gradually approximated very closely until the Ganges Canal has this year decidedly gained the advantage over the other.

Results shewn by Table D.

Decrease in revenue charges on Ganges Canal.

Comparative results of the two canals measured by the standard of water-supply.

39. The preparation of Table N is complicated by the different methods of calculation adopted by various officers.

TABLE N.—GANGES CANAL.

Year and crop.	Length of canal.	Length of distributaries.	Number of villages irrigating.	Average supply passing Roorkee.	Area irrigated in acres. Total. Kharif and rabi.	Total. Whole year.	Per cubic foot of supply. Kharif and rabi.	Per mile of canal. Kharif and rabi.	Per mile of canal. Whole year.	Per mile of distributary. Kharif and rabi.	Per mile of distributary. Whole year. Rabi ...			5,061	4,618	499,931		108·2					10,08,971	1,543	329	218	2·02
1871-72																
Kharif ...	654	3,078	4,314	4,180	232,688	606,555	55·7	144	197	76	121	6,66,082	1,018	216	159	2·86
Rabi ...			4,407	4,203	373,867		89·0					7,59,793	1,162	247	181	2·03
1872-73																
Kharif ...	614	3,111	4,389	5,164	249,191	685,170	47·8	143	220	79	141	7,06,060	1,149	227	136	2·85
Rabi ...			4,905	4,575	437,979		95·7					8,68,379	1,414	279	190	1·98
1873-74																
Kharif ...	614	3,272	4,438	5,309	287,842	795,314	54·2	168	243	88	155	8,67,229	1,414	265	163	3·01
Rabi ...			4,685	4,228	507,472		120·0					10,06,798	1,640	308	238	1·98

The standard method of finding the discharge for the year consists in dividing the sum of total discharges by the number of days. Superintending Engineer will make a point of ensuring an invariable adoption of this method in compiling returns for the Revenue Report. The results of the table, as compiled in the Chief Engineer's office, compare very favourably with those of other years.

Percentage of executive charges on revenue.

40. Table O. shows the percentages of executive charges for revenue management and maintenance respectively on gross revenue :—

TABLE O.—GANGES CANAL.

Particulars.	1871-72.	1872-73.	1873-74.
Works (maintenance)	4·8	4·2	2·8
Revenue management	18·4	16·7	13·78

The figures shewn are most favourable, and are the result not only of the largely increased revenue, but of reduction of outlay, the result of successful administration.

41. Large outstanding balances of collection of water-rates are shewn in paragraph 13 of Superintending Engineer's report, which comes down only to 31st March; but the latter returns given by the Board in Table F. down to 30th September prove that the balances have been liquidated. Likewise the Controller states that the unrealised balances of miscellaneous revenue (collected by canal officers) are at present small, and restricted to assessments for 1874-75. The Aligarh Division shows a balance of Rs. 10,000, which is much larger than the balance of last year.

42. In future the Superintending Engineer should omit altogether his review of Collectors' collections, and confine himself to consideration of canal collections.

43. The percentage of cost of collections is slightly less than last year; in several districts, however, the cost has exceeded the five per cent. allowed.

NAVIGATION REPORT OF GANGES CANAL.

Discrepancy in statements of receipts.

44. The results of the year in the Navigation Department are detailed both by the Superintending Engineer and the Traffic Manager. The returns of Rs. 54,310, as quoted in those reports, show a large increase over those of last year; but in Appendix Statements 1A, 1B, 1C, of the 1st Circle, the gross revenue appears only as Rs. 33,038.

In the case of such a wide discrepancy as this, some explanation ought to have been submitted with the report. It will be seen that the difference between the two amounts is Rs. 23,462. Of this sum Rs. 6,495 is accounted for as due for outstanding bills, and there is no objection to this being included; but the large remaining balance of Rs. 16,967 is the sum disbursed as expenditure, which Mr. Conner says he was ordered to charge through miscellaneous advances account, and clear it off from receipts; he has, therefore, included this in his gross revenue.* This explanation is not clear. A new system of account has been opened this year, and in future the Traffic Manager's account will be audited by the Controller before being entered in these reports.

* *See page* 32 A.

Increase in carrying operations.

45. The increase in carrying operations is attributed partly to the famine in Bengal, which, in the first few months, drew a large traffic to the canal; but it may also be partly attributed to the increased facilities of traffic and accommodation.

Difficulties with which the traffic had to contend.

There was reason to expect that the famine would have increased the traffic to a greater extent than has been the case, but, as the Traffic Manager remarks, there were several difficulties against which navigation had to contend. Amongst these we may mention periods of low supply, the failure of Salawa lock in the height of the downward traffic, and lastly, the most important difficulty of all, the reduction of the railway rate for grain to one-eighth of a pie per maund per mile.

Traffic returns.

46. The traffic returns show a total of 2,031,873 and 314,543 maunds for the boats and rafts respectively plying throughout the year, being an increase of 829,582 and 78,127 maunds respectively over the returns of last year.

The ton mileage for the year stands as follows :—

For boats, reckoning 18 miles on an average for each boat	13,621,155
For rafts at an average of 50 miles	582,500
Total Ton Mileage ...	14,203,655

Value of goods.

47. A rough estimate of the value of goods conveyed is given by the Traffic Manager at Rs. 35,86,263; the percentage of freight charges on this value is very small.

Table showing freight up and down.

48. A table of rates of up and down freight between the principal stations and Cawnpore, as charged by the boat owners, shows the cheapness of the traffic. Thus, the lowest charge for a distance of 350 miles from Hardwar to Cawnpore was Rs. 18-4 per 100 maunds :—

FREIGHT RULING ON THE GANGES CANAL BETWEEN CAWNPORE AND PLACES NAMED FOR NINE WORKING MONTHS OF 1873-74.

	Miles.	Down.			Up.		
		Highest.	Lowest.	Average.	Highest.	Lowest.	Average.
		Rs. A.	Rs. A.	Rs. A.	Rs. A.	Rs. A.	Rs. A.
Hardwar	350	22 3	18 4	20 3	23 14	21 4	22 9
Roorkee	331	21 1	17 8	19 4	23 12	21 3	22 8
Khatauli	288	22 7	19 3	20 11	16 10	15 4	17 1
Nanu	272	19 10	18 4	18 14	16 11	15 9	16 3
Raotha	181	12 1	11 2	11 10	10 0	8 14	9 7
Fatarpur	144	10 9	9 3	10 2	8 10	7 6	8 0

The reduced railway rate allowed by Government for grain traffic to the famine was one-eighth of a pie per maund per mile, which gives Rs. 6-8-2 per 100 maunds per 100 miles, or Rs. 22-12-7 per 350 miles, against the minimum down canal rate of Rs. 18-4-0.

Construction of boats.

49. It is satisfactory to note the improvement that has taken place in the size and build of boats; the former has been still further promoted by the increased headway of the bridges in the Cawnpore division. The Superintending Engineer observes :—"In 1869 a boat capable of carrying 350 maunds was considered large; now 102 out of 365 boats are plying on the canal, carrying 750 maunds."

50. His remarks upon the increased activity in carrying operations at the wharves at Cawnpore lead us to expect increased returns from this source of revenue. The navigation charges are somewhat less than they have been in previous years.

SECTION IV.

2nd CIRCLE OF SUPERINTENDENCE.

EASTERN JUMNA CANAL.

Capital account.

51. The net increase to capital during the year was Rs. 15,645.

TABLE I.—EASTERN JUMNA CANAL.

Particulars.	Main Canal and Branches.	Rajbahas.	Total.
	Rs.	Rs.	Rs.
Actual outlay	4,799	2,514	7,313
Share of tools and plant	104	55	159
Total ...	4,903	2,569	7,472
Share of executive establishment	953	496	1,449
Ditto direction	269	140	409
Total ...	6,125	3,205	9,330
Add increase to stock and deduct receipts on capital account ...	...	...	6,315
Net increase to capital account ...	...	...	15,645

Percentage of net income to capital.

52. The net income was Rs. 3,39,375, being a return of 16·45 per cent. on the capital of Rs. 20,61,773 sunk on the works at the beginning of the year, or an increase of 1·44 per cent. on last year's return. This is the result of an increased gross revenue and decreased charges against revenue; still the return is not so good as that of 1871-72.

TABLE J.—EASTERN JUMNA CANAL.

Particulars.	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Direct Income	5,27,824	5,27,996	5,99,219
Expenditure	1,99,008	2,20,292	2,09,844
Net return	3,28,816	3,07,704	3,39,375
On a capital of	19,73,320	20,49,353	20,61,773
Or	16·66 per cent.	15·01 per cent.	16·45

Revenue charges.

53. Tables K. and L. give full particulars of revenue and maintenance charges, and show that there is an increase on both heads. The decrease on the total charge is entirely due to a reduction under the head Works of Improvement:—

TABLE K.—REVENUE MANAGEMENT, EASTERN JUMNA CANAL.

Particulars.	1871-72.	1872-73.	1873-74.
	Rs.	Rs.	Rs.
Share of executive establishment	70,108	62,523	64,159

Total Maintenance and Works of Improvement ... ... Establishment ...	15,617	15,774	13,818
... Works and Plantations ...	71,153	96,029	84,414
Total ...	86,770	1,11,803	98,232
Total Working Expenses, K. and L. ...	1,99,008	2,20,292	2,09,844

Increase in charges of Civil Officers.

54. The increase under the head Charges of Civil Officers, which means the cost of collections, is especially unsatisfactory, and, as shewn in paragraph 23 of Superintending Engineer's Report, these charges aggregate more than the sanctioned 5 per cent.

Gross revenue.

55. There is an increase under every head of revenue except Navigation, which is unimportant. This is satisfactory when it is observed that there is a decrease in irrigated area of 16,000 acres. The decrease is partly due to the falling off in rice irrigation from the influence of newly augmented rates, partly to the season in the upper Duab being favourable to agriculture without the use of canal water.

TABLE M.—EASTERN JUMNA CANAL.

Year.	Water-rates.	Navigation.	Water-power.	Miscellaneous.	Plantations.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1870-71	5,44,377	...	7,661	3,052	11,277	5,66,367
1871-72	4,97,838	10	9,434	2,073	18,470	5,27,825
1872-73	4,91,596	118	8,236	3,147	24,839	5,27,996
1873-74	5,01,306	29	11,643	5,164	31,078	5,49,219

Water-rate.

56. The increase in water-rate is entirely attributable to the high rate realised for kharif irrigation, which denotes an increase in the more valuable crops of the early kharif.

Deficiency in supply of water.

57. It is to be noticed that the supply of the Eastern Jumna Canal is at times unequal to the demand; and on this occasion we have a crucial instance of irrigation so strained for a certain period of the year, that the Superintending Engineer affirms that 300 cubic feet more could have been utilised with advantage, and relates that, in order to save the sugarcane, it was necessary to refuse water to the indigo; at the same time the rabi requirements were easily met. The failure was, of course, due not to the capacity of the canal, but to the lack of water in the river.

The whole indigo of the canal, however, was limited to 2,200 acres in 1872-73.

The average volume in April, May, and June, for the last three years, is as follows:—

	1871.	1872.	1873.
April	806	703	998
May	929	1,180	937
June	1,033	1,200	1,222

The tables show that full use is made of the water available.

Table N. Increase in number of irrigating villages, &c.

58. In Table N. the principal facts to notice are the increase in number of irrigating villages, an increase of 9,708 in water-rate, coincident with a decreased area of 16,106 acres, and the increase of kharif water-rate over rabi.

TABLE N.—EASTERN JUMNA CANAL.

Year.	Length of canal.	Length of rajbaha (open).	Number of villages irrigating.	Average supply passing Kalsia.	Area irrigated. Total. Kharif and rabi.	Area irrigated. Total. Total.	Area irrigated. Per cubic foot of supply. Kharif and rabi.	Area irrigated. Per cubic foot of supply. Total.	Per mile of rajbaha. Kharif and rabi.	Per mile of rajbaha. Total.	Water-rate. Total water-rate.	Water-rate. Per mile of canal.	Water-rate. Per cubic foot of supply.	Water-rate. Per mile of rajbaha.	Water-rate. Per acre irrigated.
1871-72															
Kharif	130	606	844	993	72,404	192,749	72·9	195·9	116·1	310·6	2,43,534	1,873	245	400	3·36
Rabi	130	606	874	970	120,345	192,749	124·0	195·9	194·5	310·6	2,54,304	1,956	262	411	2·11
1872-73															
Kharif	130	606	872	1,058	79,699	184,154	75·3	175·4	127·5	294·6	2,72,099	2,093	257·1	435	3·41
Rabi	130	606	803	1,043	104,455	184,154	100·1	175·4	167·1	294·6	2,19,497	1,688	210·4	351	2·10
1873-74															
Kharif	130	625	885	1,029	70,478	168,048	66·5	182·9	112·8	268·9	2,95,376	2,272	287	473	4·19
Rabi	130	625	874	855	97,570	168,048	114·4	182·9	156·1	268·9	2,05,928	1,584	241	329	2·11

59. In Table O. the decrease in executive management due to maintenance is accounted for by the decrease under Works of Improvement :—

Establishment charges.

TABLE O.—EASTERN JUMNA CANAL.

Establishment charged to	1870-71.	1871-72.	1872-73.	1873-74.
Works (maintenance)	1·16	2·41	2·12	1·79
Revenue management	11·5	13·2	11·84	11·86

The increase of the charges of revenue management is again apparent.

60. The holders of contracts suffered no loss from the increased rates for rice, which could not be applied to those who held contracts previous to the enhancement.

Results of contracts.

61. The remissions due to errors are only 0·3 per cent. on the revenue, which is satisfactory. There is only one case of compensation for damages.

Remissions.

62. The measures referred to by Mr. Anderson in para. 26, page 5B., for the improvement of the distribution of water on the Eastern Jumna Canal, are full of promise.

Distribution of water.

DUN CANALS.

63. These consist of five small and inexpensive water-courses from which an increasing revenue is derived.

64. The capital sunk at the beginning of the year was Rs. 5,72,533, increased by Rs. 6,539 during the year. The direct revenue was Rs. 49,954, and the working expenses Rs. 27,509, showing a net return of Rs. 22,405. The direct return is, however, swallowed up by the interest charges, and it becomes a matter for consideration how to remedy this.

Capital account and percentage of profit.

65. Three years ago the water-rates of these canals were lowered upon a representation from land-owners that fresh land would be brought under cultivation and the area of irrigation increased. But no increase of area has followed this reduction; on the contrary both Superintending and Executive Engineers insist strongly on the necessity of raising the rates. The Government declined to terminate the experiment of lowering rates until it had been fairly tried; but as a good deal of money is being sunk in useful improvements, the means of obtaining a fair return must be re-considered. The present interest charge standing against the account of these small canals, with their capital of Rs. 5,72,533, is Rs. 3,02,503; their net profit, however, is in excess of this year's interest charge by Rs. 1,269.

Lowering of rates on Dun Canals.

66. Table O. shows the revenue on these canals for the last four years. There has been a gradual increase, less in the year under review than in previous years, on account of the season having been unfavourable to Dun irrigation, and because the profits of the year under review are diminished by a heavy work of renewal on the Kata Putther being charged to the revenue account, whereby the net direct profit is brought down to 3·91 per cent. on the capital.

TABLE O.—DUN CANALS.

Year.	Water-rate.	Water-power.	Miscellaneous.	Plantations.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.
1870-71	26,940	14,605	1,359	209	43,113
1871-72	22,693	19,338	1,247	576	43,854
1872-73	25,663	21,443	1,942	767	49,814
1873-74	25,129	23,149	1,197	479	49,955

67. The Superintending Engineer should himself address the Superintendent of the Dun, and, if necessary, the Commissioner of the Meerut Division, in respect of the recovery of balances of mill-rent which the Executive Engineer has not been able to realise in the ordinary course, as explained in Mr. Anderson's Report.

Recovery of balances of mill-rent.

Para. 37, p. 7B.

Administration and condition of canals.

68. The administration and condition of the canals is all that can be desired.

Year.	Gross revenue.	Working expenses.	Net direct profit.	Percentage on capital.	Net direct and indirect profits.	Percentage on capital.	Remarks.
	Rs.	Rs.	Rs.		Rs.		
1869 70 ...	38,281	24,327	13,954	2·58	18,701	3·45	The amount of indirect revenue in each of these years is Rs.4,717.
1870-71 ...	43,113	24,672	18,441	3·36	23,188	4·32	
1871-72 ...	43,854	26,358	17,496	3·18	22,243	4·04	
1872-73 ...	49,815	25,470	24,345	4·34	29,092	5·18	
1873-74 ...	49,954	27,509	22,445	3·91	27,192	4·73	

AGRA IRRIGATION WORKS.

Agra Irrigation Works.

69. These have been definitely abandoned after a capital of Rs. 2,21,970 had been spent on them. The interest charges amount to 1¼ lakhs. The question of wiping the debit off the irrigation accounts is now before the Government of India.

SECTION V.

3RD CIRCLE OF SUPERINTENDENCE.

ROHILKHAND CANALS.

Capital and net revenue.

70. The capital sunk at the beginning of the year was Rs. 9,66,040, increased during the year by Rs. 1,54,996, spent chiefly on the construction of two new canals. The gross revenue, direct and indirect, was Rs. 70,801, and the working expenses were Rs. 65,772, so there was a net profit of Rs. 5,029.

Interest charges.

71. The interest charges for the year are Rs. 53,188, or Rs. 48,159 in excess of the net revenue, according to Controller's capital and revenue accounts. The results are shewn at pages xxvii and xxviii of the appendices.

New rates for Rohilkhand Canals.

72. The new rates for these canals, sanctioned by the Government of India as a tentative measure, were not in force for the year under review; and it has been decided not to raise the rate for sugarcane, owing to the discouraging results of the current year. The prospects of increasing the water-supply of these canals from the Sarda having been disappointed, measures have been taken to reduce the cost of management. The policy pursued now is to improve the existing lines, rather than to design new ones. The effect of these remedial measures, and of the completion of the Kicha and Kailas canals, will no doubt greatly improve the financial position of these canals.

73. The effect of the ruling of 1867, which deprived these canals of the power of raising water-rate for irrigation from waters conveyed in natural channels, and created an annual loss of 39 per cent. of the total* irrigated area, is terminated by the powers conferred under Act VIII of 1873.

BIJNOR CANALS.

74. The revenue was Rs. 6,500; the working expenses Rs. 4,315; the net revenue Rs. 1,185.

Discrepancies in financial statements of Collector and Controller.

75. The difference in working expenses, as stated by Collector and as given in Controller's statement, requires explanation. Collector states his working expenses at Rs. 1,831, showing a net revenue of Rs. 3,669: Controller explains that in his accounts the former have been unduly increased and the latter diminished in adjustment of old outstandings in the civil accounts, so that the profits are shewn to be less than they ought to be. It may be noticed that the gross revenue which is correctly stated by Collector has steadily improved for the last five years; the net profits are, however, still swamped by the interest charges. The proportion of flow to lift irrigation stands as last year, at two to one. The Collector explains the cause of the falling off of flow irrigation to be due to the failure of water for the last two years in the Gangan river.

SECTION VI.

BUNDELKHAND.

Financial results.

76. The revenue for the Hamirpur and Jhansi lakes is Rs. 4,337, and the expenditure Rs. 7,792. Of this amount, Rs. 3,647 was upon special repairs, the cost of which is divided proportionally between capital and revenue. Thus, for instance, out of an estimate of Rs. 4,644 for repairs to Muggerwara lake, Rs. 2,379 was debited to capital, and Rs. 2,265 to revenue, which amount forms a large part of the above maintenance charges.

* This, in a good year, similar to 1866-67, would represent a loss of revenue of Rs. 17,000.

Improvements of irrigation channels.

77. The improvements which have been carried out, and which are contemplated, will doubtless bear fruit in future years. Some considerable, but inexpensive improvements have been planned and sanctioned in communication with the Revenue Department this year, amongst which we may mention estimates of Rs. 473 and Rs. 2,500 for the northern and southern channels, respectively, of the Puchwara lake. The execution of the latter project is estimated to bring 500 acres under irrigation, which includes a fine tract of culturable waste. A distinct agreement has been demanded from the Revenue Department that the extra revenue obtained from lands irrigated from the lake will be credited to the canal account.

Effects of *Kadimi abpashi* rights.

78. Turning to a note in 1872 by the Chief Engineer of Irrigation on the subject of irrigation in Bundelkhand, it is observed in paragraph IV that the great difficulty which has presented itself hitherto in the matter of these lakes is, that the returns are insufficient to pay the cost of establishment and maintenance, on account of the depreciation of the revenue by the existence of *Kadimi abpashi* rights. But in paragraph V it is added that the Board has now agreed to recommend that this enhancement shall be credited to irrigation revenue, by which means this department saw its way to a fair return upon expenditure. The arrangement by which this department was ensured against any loss in undertaking the management of the lake irrigation was distinctly set forth by the Board in their letter, and it was on the understanding that this would be carried out that the lakes were given over to this department in a Resolution by His Honor the Lieutenant-Governor. No definite steps, however, appear to have been taken in this matter, and this Government in the Revenue Department has also decided to leave for the present the question of levying owner's rate on the *Kadimi abpashi* lands in Hamirpur in which the period of settlement has expired.

No. 231 *I.-C., dated* 2*nd February* 1872.

No. 921, *dated* 22*nd September* 1871.

No. 791 *I.-C., dated* 17*th April* 1872.

Reimbursement of loss on lakes.

79. The areas irrigated for the year under review are 574 and 1,420 acres, respectively, for the Jhansi and Hamirpur lakes. Including indirect revenue, and exclusive of interest charges, the net loss on the year's operations is 905, which, considering all these adverse circumstances, is less than might have been expected; but it is now necessary that the Board should be called upon to reimburse this loss under the arrangements above alluded to.

Remarks on administration.

80. The Executive Engineer in his report upon the Jhansi lakes remarks upon the necessity of some restriction being put upon the *Kadimi* cultivators with regard to the use of water, and adds that under the present conditions the administration is impeded. It is remarked that the orders upon this point in the Government Resolution,* giving over the charge of the lakes to this department, are distinct, and that no such difficulties should exist.

* *No.* 2804 *I.-C., dated* 20*th November* 1872.

Statement of loss incurred.

81. The following statement shows the loss incurred by this department on the lakes this year:—

† Items as follows:—

Maintenance and Repairs.		*Establishment.*		
Hamirpur ...	2,241	Hamirpur...	1,707	
Jhansi ...	2,329	Jhansi ...	1,439	
	4,570		3,146	
		Total ...	7,716	

Expenditure against revenue, as shewn by Controller	†7,716
Remissions	76
Total Expenditure ...	7,792

The revenue and interest accounts stand thus—

REVENUE ACCOUNT.

	Gross Revenue, including indirect.	Working Expenses.	Net Revenue.
Hamirpur	3,239	3,993	—754
Jhansi	3,648	3,799	—151

INTEREST ACCOUNT.

	Net Revenue.	Interest Charges.	Total deficit.
Hamirpur	—754	44	—798
Jhansi	—151	3,215	—3,366
Total ...	—905	3,259	—4,164

The total amount which should be recouped by Revenue Department is Rs. 4,164.

SECTION VII.

ENHANCEMENT OF LAND REVENUE DUE TO CANALS.

82. A reference to the corresponding section of the Revenue Report for 1873-74 will show that the subject of enhancement of land revenue had been carefully considered in this Department, and efforts had been made to get the amounts of land revenue credited to canals determined under the instructions of the Board on some fixed principles.

Orders passed by Government on enhancement of land revenue.

**A/A, January 1873, Nos. 8—44, and June 1873, 12—17.*

† No. 2472A.

The results of careful enquiries, detailed in Proceedings* of this Department, led to the issue of a Resolution† in the Revenue Department, dated 3rd November, addressing orders on this subject to the Board of Revenue.

The results of enquiry are promised at an early period.

83. The statement of amounts credited in 1873-74 has not been obtained this year, but only a statement showing the increase credited in 1873-74 for four districts, Muzaffarnagar, Aligarh, Etah, and Etawah, which was received on the 21st November.

Increased enhancement in four districts.

I. *Aligarh.*—Shows a net increase of Rs. 566.

II. *Etawah.*—There is an increase of Rs. 7,220 over that of previous years in pargana Etawah.

III. *Etah.*—There is an increase of Rs. 2,081 in pargana Sakit.

IV. *Muzaffarnagar.*—The statement now submitted returns the revenue credited in previous years as Rs. 1,03,000, increased in 1872-73 by a sum of Rs. 2,827 credited for pargana Jansath. In our statements of last year it was shewn that the credit of previous years was to be increased by a sum of Rs. 10,500 obtained from Khatauli and Jansath, and this is the sum (Rs. 1,13,500) which is taken as the credit for Muzaffarnagar in the Resolution‡ in the Revenue Department above alluded to. These figures were based upon information received from the Board in their No. 986, dated 17th September 1872, and as the figures now given can be brought into no degree of accord with the former, the Board will be asked to explain this difference. The additional revenue credited for the year under review is Rs. 35,743. Of the total amount, Rs. 60,000 is credited to the Eastern Jumna, and Rs. 81,071 to the Ganges Canal. The details of the increase are shewn in the tables.

‡ *No. 2472A of 1873.*

It is much to be desired that the corrected returns for 1873-74 and those for 1874-75 may be presented at an early date.

Tables showing progress of settlements in canal-irrigated parganas.

84. The following Tables A, B, and C, are given as usual, showing the progress of settlement operations as far as they concern canal-irrigated parganas:—

A.—COMPLETE ASSESSMENTS DECLARED.

Districts.	Amount of enhancements due to canals.
	Rs.
Saharanpur ...	79,369
Meerut ...	1,25,239
Bulandshahr ...	88,418
Aligarh ...	88,632
Mainpuri ...	23,965

Ditto ...	Shiurajpur.	Ditto ...	Jeitpur.

IMPOSITION OF OWNER'S RATE UNDER ACT VIII OF 1873.

85. During the year under review this question met with full consideration from both irrigation and revenue officers.

Owner's rate.

Steps taken on the issue of last year's report.

A reference to Section VII of Chief Engineer's Review of last year's Revenue Report will show that at the date of issue of that report the opinions of the Board had been taken on the subject, and the procedure to be followed had been laid down by Revenue Department Resolution* on the principles adopted in Sir William Muir's minute.

* *No. 2534A, dated 8th November 1873.*

86. In the course of the year, a rule for the levy of the rate was submitted† to the Government of India, proposing to take, as a tentative measure, one-third of the amount of water-rate levied on occupiers as the rate to be levied on owners. It was proposed to make the rule immediately applicable to muafi or rent-free lands.

Rule submitted to Government of India.

† *No. 415A, dated 14th February 1874.*

The rule has been sanctioned by the Government of India in respect of "all estates into which canal-irrigation has been introduced for the first time since the last settlement or shall hereafter be introduced." But its application to muafi lands has not yet been sanctioned.

SECTION VIII.

ADMINISTRATION.

87. During the year good progress was made on the works of the Lower Ganges Canal, full details of which will be found in the Progress Report.

Progress on works.

88. Shortly after the close of the year two special appointments in connection with the Lower Ganges Canal were sanctioned.

Appointment of special officers.

89. The Executive Engineer, Cawnpore Special Works Division, is charged with the duty of providing (under the instruction of the Superintending Engineer, 4th Circle) for several important issues dependent on the construction of the Lower Ganges Canal, and its connection with the Ganges Canal.

Special Works Division.

At present a larger volume of water than is requisite is thrown into the Cawnpore Branch, in order to maintain a sufficient depth of water for the requirements of navigation, and in consequence a large volume of water is of necessity wastefully returned to the Ganges. It is now intended to deflect the carrying branch of the canal at a few miles distance from the city, with which communication will be maintained by a still-water canal. The waste of water will by this means be limited to that requisite to create the gentle current which is desirable on sanitary grounds.

The execution of these works involves the lowering of the bed of the channel in Cawnpore, and the substitution of girders for arches in the bridges, in order to obtain sufficient headway for the passage up to the centre of trade of heavy-laden boats, which has up to the present time been impracticable.

A special establishment under the executive charge of Captain G. F. L. Marshall, R. E., has been sanctioned by the Government of India* for two year to carry out these improvements.

* G. G. O. 116E-J, dated 14th May.

90. The rapid progress made on the works of the Lower Ganges Canal allows no time to be lost in arranging for the distribution of its water. The execution of this important duty has been confided to Captain J. C. Ross, R. E., an officer who has made the study of the natural contours of the country his special business, and who can consequently be relied upon to work in accordance with physical laws which cannot be transgressed without certain, if tardy, retribution, although their action may only be perceived in the apparently level plains of the North-West by the eye of a practised thoughtful observer.

Special division for laying out distributaries of Lower Ganges Canal.

91. The Agra Canal channel was completed during the year, and was opened on the 5th of March by the late Lieutenant-Governor, Sir William Muir, in the presence of a large number of officials of the various departments, and of the native landholders and inhabitants assembled by special invitation to do honour to the occasion. This is believed to be the first instance of a canal of magnitude being sanctioned and completed under the same Administration.

Completion of the Agra Canal.

92. Shortly after the close of the year, an irrigation establishment was sanctioned for the canal, whose duties were to begin on the 1st of September, and it was determined by the Government of India, on the representation of this Government, that the cost of maintenance should be charged to revenue, and cease to be charged to capital from the 31st October.

Establishment for the Agra Canal.

G. G. O., 216A-I, dated 10th July 1874.

93. The subject of the rates to be levied for this canal was long and carefully discussed, and complete agreement arrived at between the Board and the Settlement Officers on the one side, and the Chief Engineer on the other, before the question was laid before Government.

Rates for the Agra Canal.

Settlement Officers of long experience in irrigated districts were found to be uniformly of opinion that the present rates for flush irrigation on these canals are too low, and out of due proportion to those for lift; and all the deliberative authorities agreed that the rates should be considerably increased. The opening of the Agra Canal in an unirrigated country whose soil is peculiarly adapted for irrigation, at a time when a revision of the settlement is commencing, affords an opportunity of scientific assessment which up to this time has no precedent.

Moreover, the cost of the canal was so increased by the addition of charges which did not exist when the estimates were framed, that an addition to the expected income became a financial necessity.

The result deliberately arrived at by the Government of the North-Western Provinces was to maintain the Ganges Canal rates for lift-irrigation, and to make lift-rates the double of flow-rates, instead of one-half larger, as on the Ganges and other canals. The increase of water-rate practically amounts to about 25 per cent.

The adoption of the highest rates proposed are postponed on the ground that they might be beyond the present capacity of a people unaccustomed to irrigation. Half rates are to be charged for every water-course constructed at private cost during the first two seasons of its working. A modified tariff for navigation was at the same time adopted, which simplifies classification, and promotes employment of narrow boats.

These proposals have received the sanction of the Government of India. The correspondence, which is of great interest, will be found at p. xcvii of appendix.

94. The publication of the rules laid down under Act VIII of 1873 was for some time delayed, pending the settlement of discrepancies between the rules proposed by this Government and those proposed by the Punjab Government. These discrepancies having been reduced to those caused by local differences, the rules were submitted to the Government of India for approval, but these have again been returned for further consideration.

Rules under Act VIII.

95. Orders of the Government of India issued approving, as a tentative measure, of the modifications in classifying expenditure for purposes of account proposed by the Government of the North-Western Provinces.

Classification of expenditure.

96. A new system of accounting for works costing under Rs. 10,000 by the normal outlay proposed optionally by the Government of India to the various local Governments and Administrations was declined by this Government. At the same time the monthly progress report was abolished in this branch. A system has been adopted of submitting a duplicate of every register of works monthly to the scrutiny of Superintending Engineers, by whom a certificate is submitted to Government that the works are being carried on in accordance with the budget allotments and the estimated rates of work.

New system of keeping accounts.

97. It has been found necessary to call attention to the strict orders of the code on the subject of stock-taking at fixed periods, and on the occasion of transfers. The provisions of Circular H will no doubt lead to greater punctuality and system.

Condition of the stock returns.

98. By Circular I the limit of jurisdiction of canal officers was defined in accordance with the orders of the Government of India. But discretion was afforded to Superintending Engineers to sanction journeys within the province for purchase of materials, or for inspection of the larger works which are now in progress.

Limit of jurisdiction.

99. The following statement shows that the majority of the reports were submitted with fair punctuality this year:—

Date of submission of statements from which this report is compiled.

From.	Date received.
1st Circle	5th September 1874.
2nd „	25th July „
3rd „	9th September „
Superintendent of Works	10th August „
Controller	14th „ „
Board	21st November „

100. The present volume would have been submitted to the Government of India by the appointed date, had the statements of the Board of Revenue been received in proper time.

Cause of delay in submission of this report.

The numerous tables for the Chief Engineer's report which relate to income cannot be prepared until the amount of credit of indirect revenue is ascertained.

101. In the review of the Revenue Report for 1872-73 by the Government of India, No. 26781I, dated 12th May 1874, it was remarked that the statement of value of crops irrigated during the year called for in the Resolution on the previous year's Revenue Report had not been submitted.

Statement of value of crops irrigated.

The returns were promised by the Board of Revenue for the current year, but they have not been obtained in time.

There seems to be no reason why the return should not be submitted annually.

102. Great delay has occurred in printing, which will be obviated in future years, by the coming removal of the press into convenient premises.

Delay in preparation of appendix statements.

108. The successful results of the year confirm the opinion of the Superintending Engineers that the labours of all have been successful. The following appear to the Chief Engineer to be most prominently mentioned:—

EXECUTIVE ENGINEERS.

Captain F. V. Corbett, R. E.
Captain F. J. Home, R. E.
Captain J. L. Macpherson, R. E.
Mr. O. Phillpott.

1.—ASSISTANT ENGINEERS.

Mr. C. G. Palmer.
Mr. J. L. Tickell.
Mr. J. Thornhill.
Lieutenant J. Clibborn.
Mr. W. Willcocks.
Mr. R. W. Hawkins.

2.—UPPER SUBORDINATES.

Conductor G. McArthur, Sub-Engineer.
Sub-Engineer Elahi Bakhsh, Supervisor.
Sergeant J. Williams, Supervisor.
Sergeant J. Laing, Supervisor.
Sergeant R. Read.

3.—DEPUTY MAGISTRATES.

Chirinji Lal.	Girdhari Lal.

4.—ZILADARS.

Bhikum Sen.	Narinji Lal.
Sewa Ram.	

104. The direction has sustained a loss in the past year from the transfer of Captain P. S. Marindin, R. E., Executive Engineer, and Captain G. F. L. Marshall, R. E., Personal Assistant, to important divisions on the canals. They have been replaced by Mr. G. H. D. Walker, B.A., and Mr. P. Nelson, Executive Engineer.

Remarks on Direction.

105. In accordance with the orders of the Government of India, a collection has been made of the records of gauges of the various rivers in the North-Western Provinces, ranging from the year 1868 to the present time, and, where they are available, discharges have also been given. The care with which the latter records have been regularly maintained on the rivers in the second circle of superintendence does great credit to Mr. C. C. Anderson, the Superintending Engineer; though greater attention has been paid to the subject on other rivers since the publication of Circular K, there is a dearth of discharges to record in other circles.

Collection of gauge readings and discharges.

106. Simultaneously with the present Revenue Report will be published the diagrams and discharges of rivers for 1873-74, with a map showing the sites at which the gauges are fixed, and also diagrams of the canals.

107. A separate Gauge Atlas is about to be published, which was promised in last year's report, containing all available diagrams and discharges of rivers and canals from the earliest dates up to the end of 1873. The discharges for subsequent years in succession should be stitched or otherwise attached to the volume, which will constitute a record of the highest professional value.

W. H. GREATHED, COLONEL, R.E.,
Chief Engineer of Irrigation,
N.-W. Provinces.

DATED ALLAHABAD,
The 3rd December 1874.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR THE YEAR 1873-74.

Nos. 335—49 I., Dated Simla, the 27th September 1875.

READ—

Letter from the Government of Bengal, in the Public Works Department, Irrigation Branch, No. 112 I—A, dated the 13th February 1875, forwarding a copy of the Revenue Report of Irrigation Works in Bengal for the year 1873-74, and of the Resolution of that Government reviewing the same.

OBSERVATIONS.—This Report has been received three months after the time fixed for its submission; but it is understood that the delay has been occasioned by the Chief Engineer's absence in Orissa on duty.

2. The operations of the year having been reviewed in detail by the Local Government, only the general results and a few points requiring attention will be noticed here.

3. From the abstracts (annexed) of the general financial results of the canals in the province, none of which are as yet complete, it is observed—

	£	£
I.—That the capital outlay on all the Irrigation Works under the Government of Bengal to end of 1873-74, including the Damoodah Project, which has been suspended, has amounted to	...	3,151,898
II.—Of this sum, the amount expended on the Soane scheme, which had not been brought into operation till after the close of the year under review, has been	986,583	
And on the Damoodah scheme which has been suspended ...	15,832	
		1,002,415
III.—Leaving as the expenditure on the Orissa Project		2,149,483
IV.—The gross direct receipts from this project during 1873-74 have amounted to		14,768
V.—And the working expenses to		29,096
VI.—Leaving a deficit in the operations of the year of		14,328

equivalent to a loss of 0·7 per cent. in the operations of the year, exclusive of £91,753 for simple interest on the capital outlay. If the net returns are based on the assessments of the

year, the receipts will amount to £19,484, the expenses to £29,096, and the net deficit to £9,612. This, though unsatisfactory, is still a considerable improvement on the results of the previous year, when the loss was as high as £25,073. The anticipations of improvement in the returns from irrigation, expressed in the review of the previous year's operations, have been more than justified by the results of 1873-74. The Report shows that there are some grounds for expecting that the development of irrigation will be greater than has lately been considered possible.

4. Fourteen miles of new canal and 37 miles of distributaries have been opened during the year under review. The irrigated area has risen from 18,159 acres to 48,920 acres, and the earnings (assessments) have increased from Rs. 470 per mile of canal and Rs. 110 per mile of distributary to Rs. 994 and Rs. 239, respectively. There has also been marked improvement in the navigation receipts, the collections having been Rs. 80,659 against Rs. 45,492 in the year previous.

5. The most marked improvement occurred in the Midnapore series, where the demand for water in the month of October much exceeded the available supply. This deficiency at a critical period occurring so early in the history of the canal, points to the advisability of supplementing the available volume by storage reservoirs if they can be constructed at a reasonable cost, and this point might be enquired into at the first favourable opportunity.

6. The irrigation in Orissa shows about the same ratio of increase as that in Midnapore, though the aggregate result is still insignificant compared with the capacity of the canals. The income from navigation is nearly double that of the previous year; and although this large increase is in part attributable to the demand for grain required for the famine-stricken districts in upper Bengal, there appears to be little doubt that, as the navigable communications with the trading marts in Orissa and arrangements for loading and unloading vessels at the sea-board are perfected, this item of revenue will be largely increased.

7. The income from the Tidal Canal, which is solely a navigable line, was double that of the previous year, owing partly, as in Orissa, to the exceptional demand for grain for other districts in Bengal, but also to the completion of the terminal locks by which the communication with tide water is now practicable at all times.

8. In outlay on repairs there has been in the Orissa series a decrease. On the Midnapore and Tidal Canals there has been a considerable increase, due in both instances to exceptional circumstances which are detailed in the reports.

9. The reports of the revenue officers show that the system of management in revenue matters on both the Orissa and Midnapore series is improving and becoming more efficient, though there are still some grave difficulties to be overcome. Surreptitious irrigation is reported to be still rife, in spite of every effort on the part of the officers to prevent it. This and other matters alluded to in the reports will doubtless be considered by the Local Government, by whom a Bill to regulate Canal administration has lately been introduced into the Bengal Legislative Council.

10. The calculations of the value of the crops saved in Behar by the Soane Canal irrigation given in the report, appear to be a moderate estimate of the benefit of these works to the country in years of drought. The Soane Canal, though incomplete, was yet sufficiently advanced to admit of a large supply of water being conveyed to lands on which the crops must have otherwise perished. The area thus irrigated is estimated at 159,470 acres, and the value of the crops as £477,500. This is a prominent instance of the indirect benefits which such works confer on the State. Similarly, the value of the crops saved on the Midnapore Canal is estimated at £52,960.

11. In conclusion, it may be observed that this report is satisfactory in the sense that what was before discouraging is now not only much less so, but is even hopeful as to the future.

ORDER.—Ordered that copies of this Resolution and of the Report be forwarded to the Secretary of State, and the Financial and Revenue, Agriculture and Commerce Departments, for information, and that the attention of the latter Department be drawn to paras. 29—32 of Mr. Wylly's report on model farms.

Ordered also, that copies of this Resolution be forwarded to the Government of Bengal and the several* other Local Governments and Administrations in the Public Works Department, Irrigation Branch, for information.

* The Governments of Madras, Bombay, the North-Western Provinces, and the Punjab.
The Chief Commissioners of Oudh, the Central Provinces, British Burmah, Mysore and Coorg.
The Resident at Hyderabad.
The Agents of the Governor General for Central India and Rajpootana.

Ordered further, that this Resolution, the Resolution of the Local Government, and the Chief Engineer's Report, be forwarded to the Home Department for publication in the Supplement to the *Gazette of India*.

C. H. DICKENS, *Colonel, R. A.,*
Secy. to the Govt. of India.

No. 1101.—A.

Extract from the Proceedings of the Hon'ble the Lieutenant-Governor of Bengal in the Public Works Department, Irrigation Branch, under date the 13th February 1875.

RESOLUTION—By the Government of India, PUBLIC WORKS DEPT.

READ—

Chief Engineer's Report of Irrigation Revenue for the year 1873-74, and annexures.

RESOLUTION.—The capital invested in canals in this province amounts at the end of the year under review to Rs. 3,15,18,966; of this amount, Rs. 52,26,403 had been expended during the year.

The portion of the capital due to works not yet producing revenue (*i. e.*, the Soane and Damoodur Projects) was Rs. 1,00,24,135.

2. The assessments of the year amounted to Rs. 1,94,841, whilst the charges for maintenance and establishment were Rs. 2,90,956, showing a loss of Rs. 96,115 on the transactions of the year.

The actual collections, however, only amounted to Rs. 1,47,688, showing a deficit of Rs. 1,43,268. If to this latter sum be added the charges for maintenance unpaid in previous years, *viz.* Rs. 5,10,726, we obtain as the total deficit on account of current expenses to the end of the year Rs. 6,53,994.

3. The difference between the assessments and collections is heavy, and occurred principally in Midnapore.

It is said to be due to the strain thrown on the establishment by the sudden demand for irrigation in October and November.

4. The interest due for the year on canals returning revenue amounts to Rs. 9,17,537; on canals not yet opened to Rs. 3,82,489; and the total charge for interest up to the end of the year to Rs. 44,61,764.

5. The total deficit chargeable therefore against the department up to the end of the year 1873-74 amounts to Rs. 51,15,758.

6. The lengths of canals open at the commencement and close of the year were as follows:—

NAME OF CHANNEL.	Open at the end of 1872-73.	Open at the end of 1873-74.	Added during 1873-74.
Kendraparah Canal	39·6	39·6	0
Ditto Distributaries	244·8	252	7·2
Ditto Village Channels	59·5	59·5	0
High Level Canal	33·1	37·1	4
Ditto Distributaries	88	90	2
Taldundah Canal	27·3	27·3	0
Ditto Distributaries	64·5	64·5	0
Matchgong Canal	15	15	0
Ditto Distributaries	66·8	74	7·2
Midnapore Canal	38	48	10
Ditto Distributaries	177	197·5	20·5
Ditto Village Channels	77·5	77·5	0
Tidal Canals	29	29	0

7. The area irrigated during the year was 48,920 acres, of which 12,571 were in Orissa and 36,349 in Midnapore. These areas compare favorably with those of the previous year, which were 4,753 and 13,406 acres respectively.

8. The collections on account of tolls on traffic amounted to Rs. 80,659, against Rs. 45,492 the previous year. They were in Orissa Rs. 18,577, in Midnapore Rs. 34,104, and on the Tidal Canals Rs. 27,978, and show a large increase over those of 1872-73, which were Rs. 10,044, Rs. 20,994, and Rs. 14,454, respectively. The increase is due in some measure to the traffic in grain consequent on the scarcity in Behar; but as the Midnapore and Tidal Canals were only open for through traffic in October and September respectively, there are fair grounds for expecting that the traffic on these last canals will be large.

9. The works not yet completed are the Soane and Damoodur Canals; the latter has been, as stated last year, postponed indefinitely. It was hoped that the Soane Canals might have been so far completed as to allow of regular irrigation being carried on during the rainy season of 1874-75, but the temporary opening during the drought in Behar interfered so much with the progress of the works that it was not found practicable to complete them as soon as was expected. They will probably be ready by the end of the working season of 1874-75.

10. In September 1873 orders were issued to turn water into these canals and distribute it by any means. Irrigation was accordingly supplied to an estimated area of 159,470 acres, much of which received two and even three waterings.

11. The value of the crops saved by the irrigation from the Soane was about Rs. 48,00,000, and in Midnapore about Rs. 5,29,000; these would almost to a certainty have perished without the water, so that this amount may be fairly considered an indirect return from the works greater in amount than the whole accumulated deficit.

12. The reports of the Commissioner and Officiating Revenue Superintendent in Orissa and of the Collector and Deputy Revenue Superintendent in Midnapore give details of all that has been done during the year.

13. The Commissioner of Orissa considers that matters are going on very quickly and satisfactorily, and that although progress is but slow it is still steady, and there is reason to be hopeful for the future. The Collector of Midnapore considers the year as the most critical and most successful that has been experienced; the only limit to the amount watered being the quantity of water available, which was unfortunately much reduced by the failure of the rains.

14. On the whole, then, it may be considered that the prospects of canal irrigation and traffic being extended are very much better than when the last report was written, and that there will be some return for the capital invested.

15. The Lieutenant-Governor has much pleasure in acknowledging the services rendered during the year by the Officers of the Irrigation Department.

To Mr. Levinge, the Superintending Engineer of the Soane Canal, and to Major McNeile, Captain Heywood, Mr. Stoney and Mr. Hope, the Executive Engineers under him, especial credit is due, not only for the rapid and excellent work which they have done in carrying on the canal construction, but for their great and untiring exertions in distributing the water to the furthest point which it could be made to reach. In Midnapore, Mr. Harrison, the Collector, Mr. Kimber and Mr. Apjohn, Executive Engineers, and Baboo J. N. Mookerjee, the Deputy Superintendent, deserve great credit for their successful exertions in extending the irrigation. In Orissa, Mr. Walker, the Superintending Engineer, has worked with his usual ability and energy, and Mr. Wylly, the Officiating Revenue Superintendent, has done good work.

16. Although not employed on works returning revenue, the exertions of Mr. Martin, the Superintending Engineer, and Messrs. Vertannes and DeGroussilliers and Cotton, in completing the embankments of the River Gunduk, and of Mr. Whitfield in forcing water into the old bed of the Kana Nuddee in the Hooghly districts, deserve acknowledgment.

17. The best thanks of the Lieutenant-Governor are due to Colonel Gulliver, for his efficient superintendence of the operations of the Department during the year under review.

By order of the Lieutenant-Governor of Bengal,

H. W. GULLIVER, COLONEL, R. E.,
Offg. Joint Secy. to the Govt. of Bengal in the P. W. Dept., Irrign. Branch.

BENGAL PUBLIC WORKS DEPARTMENT.

Irrigation Branch.

Note on the Canal Revenue Reports for the year 1873-74, by COLONEL H. W. GULLIVER, R. E. *Officiating Chief Engineer.*

ORISSA SERIES.

1. The capital invested in these canals on the 1st April 1874 amounted to Rs. 1,39,13,364, exclusive of interest. The following is the detail of the amount added during the year:—

	Rs.
Works and Tools and Plant	13,82,604
Establishment	2,97,706
Capitalization of the rent of land taken up for works	22,877
	17,03,187
D. D. receipts on Capital Accounts	5,596
Net addition to Capital	16,97,591

2. The principal items of expenditure were as follows:—

	Rs.
On Head Works	18,147
„ Taldundah Canal	74,890
„ Matchgong „	84,718
„ Kendraparah „	98,814
„ Patamoondi „	2,55,462
„ High Level „ Section I	47,443
„ „ „ „ „ II	3,50,420
„ „ „ „ „ III	2,79,114
Field Survey	9,495
	12,18,502

so that the greater portion of the money was spent on the Patamoondi Canal and the Sections II and III of the High Level Canal.

3. The interest and charges unpaid amounted on the same date to Rs. 27,86,850, of which Rs. 5,18,887 was the excess of charges for maintenance over receipts, and Rs. 22,67,963 the amount of interest. The portion of this for the year now reported on was—

	Rs.
Balance of Charges	85,356
Interest	5,89,066
TOTAL ...	6,74,422

4. In the statement of charges given above, and in the Revenue Account prepared by the Controller appended to this report, the account is only credited with actual collections. This has been done under directions from the Accountant-General, so that these statements may agree with the Imperial Accounts; but, in order that the results of the working of the canals during the year may be considered in connection with the conditions of the year, it is necessary to show what the earnings have been: and the Revenue Account below is prepared for this purpose.

RECEIPTS.	Rs.	Rs.
Water-rates	18,145	
Navigation Tolls	18,577	
		36,722
Miscellaneous.		
Plantations	161	
Rents of lands and fisheries ...	1,316	
Sales of produce	17	
„ of materials	100	
Fines	2,545	
Rent of buildings	3,101	
Sales of grass	242	
Sundries	364	
		7,846
		44,568
Balance deficit		84,623
TOTAL ...		1,29,191

EXPENDITURE. *Maintenance and Repairs.*	Rs.	Rs.
Main Canal	52,593	
Distributaries	16,044	
Drainage	104	
Navigation	3,704	
Buildings	4,574	
	77,019	
D. D. correction from last year	4,587	
		72,432
Plantations		2,073
Establishment.		
General	9,568	
Revenue	38,607	
Navigation	5,828	
		54,003
Tools and Plant		683
TOTAL ...		1,29,191

5. Hence the deficit, due to the working of the year, is Rs. 84,623, or 0·693 per cent. on Rs. 1,22,15,773, which formed the capital of the canal at the commencement of the year.

6. The above deficit, Rs. 84,623, would seem to show a great improvement over the results of the previous year, when the deficiency was Rs. 2,15,271; but I regret to say that this is mostly fallacious, as the great reduction in the cost of maintenance is due to a re-adjustment of the accounts carried out during the year.

The total expenditure on repairs was Rs. 1,46,818, of which Rs. 74,881 were written back; otherwise the deficit would have been Rs. 1,59,004, which is still Rs. 56,267 less than in 1872-73.

7. The following table gives a comparison between the charges for maintenance in this and the preceding year:—

MAINTENANCE AND REPAIRS.	1872-73.	1873-74.	Difference, 1873-74.
	Rs.	Rs.	Rs.
Main Canals	1,25,603	52,593	—73,010
Distributaries	5,788	16,044	+10,256
Drainage Works	4,587	104	—4,483
Navigation	4,476	3,704	—772
Buildings	2,083	4,574	+2,491
Miscellaneous	21,347	...	—21,347
Plantations	57	2,073	+2,116
Establishment.			
General	26,552	9,568	—16,984
Revenue	41,382	38,607	—2,775
Navigation	6,154	5,828	—326

But this does not give a fair comparison, as has been explained in the preceding paragraph.

8. The following tables give the comparison between the actual cost of the repairs in the two years without allowing for the adjustment of accounts:—

CANAL REPAIRS.

	1872-73.		1873-74.			
	Length open.	Repairs.	Length open.	Repairs.	+	—
	...	Rs. 79,555	...	Rs. 1,13,207	Rs. 33,652	Rs. ...
Head Works—Total ...		Per mile.		Per mile.		
Kendraparah Canal ...	39·6	1,288	39·6	153	...	1,135
High Level „ ...	33·1	454	37·1	287	...	167
Taldundah „ ...	27·3	446·4	27·3	17	...	429·4
Matchgong „ ...	15·0	20·5	15	...	...	20·5
TOTAL EXPENDITURE ON REPAIRS ...	...	1,58,096	...	1,30,480	...	27,616

DISTRIBUTARY REPAIRS.

	1872-73.		1873-74.			
	Length open.	Repairs per mile.	Length open.	Repairs per mile.	+	—
		Rs.		Rs.	Rs.	Rs.
Kendraparah Canal ...	244·8	20	252	35·8	15·8	
Village Channels ...	59·5	Not included	59·5	Not included	...	
High Level Canal ...	88	...	90	47·6	47·6	
Taldundah „ ...	64·5	2·3	64·5	47·2	44·9	
Matchgong „ ...	66·5	12	74	0·74	...	11·26
TOTAL ...	523·3	5,788	540	16,333	10,545	...

9. The cost of general establishments is divided according to the percentage on expenditure, hence the decrease is only nominal as the adjusted accounts formed the basis of the charge.

10. The following shows a comparison between the revenue of the two years. It is useless entering the amounts in former years as the returns of irrigation before 1872-73 are unreliable, as explained in the report of that year:—

ITEMS OF REVENUE.	1872-73.	1873-74.	Increase, 1873-74.
	Rs.	Rs.	Rs.
Water-rates	5,401	18,145	12,744
Navigation	10,044	18,577	8,533
Miscellaneous	7,508	7,846	338
TOTAL ...	22,953	44,568	21,615

11. The increase in water-rates is due to the larger area irrigated, which was 12,571 acres instead of 4,753, and it was distributed between the canals and crops as shown in the following table:—

NAME OF CANAL.	Season.	Area, 1872-73.	Area, 1873-74.	Increase, 1873-74.
		Acres.	Acres.	Acres.
Kendraparah Canal	Khureef ...	3,474	4,807	1,333
	Rubbee ...	844	2,921	2,077
	Perennial ...	...	97	97
High Level Canal, Section I. ...	Khureef ...	237	2,977	2,740
	Rubbee ...	...	36	36
Taldundah and Matchgong ...	Khureef ...	88	1,320	1,232
	Rubbee ...	97	334	237
	Perennial ...	13	79	66
TOTAL ...	... ...	4,753	12,571	7,818

12. The proportions between flow and lift irrigation were as follows:—

	1872-73.			1873-74.		
	Flow.	Lift.	Total.	Flow.	Lift.	Total.
Khureef	3,747	52	3,799	8,859	245	9.104
Rubbee	780	161	941	2,555	733	3,291
Perennial	12	1	13	100	76	176
TOTAL ...	4,539	214	4,753	11,514	1,057	12,571

It will be seen that the larger proportion of lift irrigation is for the rubbee and perennial crops, when the quantity of water in the rivers is small.

13. The following table shows the area irrigated per cubic foot per second of discharge on the several canals: the portion irrigated throughout the year is included under the head Rubbee:—

	Discharge.	Area irrigated.	AREA PER CUBIC FOOT.	
			1873-74.	1872-73.
Kendraparah Canal—	c. ft. per sec.	Acres.	Acres.	Acres.
Khureef	273	4,807	17·6	8·5
Rubbee	233	3,018	12·9	4·3
High Level Canal—				
Khureef	184	2,977	16·1	1·05
Rubbee	141	36	0·25	0·41
Taldundah and Matchgong—				
Khureef	156	1,320	8·5	...
Rubbee	88	416	4·7	...

It will be seen that there is an increase on each canal in both seasons except in the rubbee on the High Level Canal.

14. The water-rates charged are shewn in the table annexed to the report. The details of the area irrigated are as follows:—

		Acres.
Rice ...	leased for before the 1st May	4,504
	leased after the 1st May	3,887
Surreptitious irrigation		732
Dry-weather crops		3,276
Perennial		172
		12,571

15. The nature of the crops grown are shewn in a table attached to the Deputy Revenue Superintendent's Report. The principal are autumn and winter rice crops 9,104, cold-weather rice 1,102, and cotton 2,154 acres.

16. The following table shows the difference in the rainfall in the last three years compared with the average of the last 18 years:—

Looking merely at the totals, it would appear that a much larger area should have been irrigated in this year; but the rain was distributed over the critical months for the crop in such a way as to be most favorable for the cultivation, so that, although there were signs at one time of a large demand for water, rain fell in time to prevent the irrigation being carried out.

1873-74 ...	40·31	inches.
1872-73 ...	73·04	„
1871-72 ...	50·03	„
Average ...	54·69	„

Rainfall in June	2·72	inches.
„ July	11·04	„
„ August	11·06	„
„ September	5·56	„
„ October	2·17	„

17. The increase in navigation returns, Rs. 8,533, is in some measure due to the traffic in grain consequent on the scarcity in Behar; but the canals were also in better order than in the previous year. The increase is mainly in the Kendraparah Canal, as will be seen below:—

	1872-73.	1873-74.	Difference.
	Rs.	Rs.	Rs.
High Level Canal	1,551	1,497	—54
Kendraparah „	8,023	16,087	8,064
Taldundah „	468	987	519
Matchgong „	2	6	4
TOTAL	10,044	18,577	8,533

18. The following table gives the comparison between the toll collections, &c., of the various canals for the two last years:—

NAME OF CANAL.	Number of miles of Canal open for traffic at the end of the year.		Toll Collections.		Rate of Tolls per mile of Canal.		Number of Boats.		Tonnage.		Value of Traffic.	
	1872-73.	1873-74	1872-73.	1873-74.	1872-73.	1873-74.	1872-73.	1873-74.	1872-73.	1873-74.	1872-73. Rs.	1873-74. Rs.
High Level Canal, Section I.	37	37	1,551	1,497	42	40	772	1,087	3,190	6,375	51,415	1,03,040
Kendraparah	40	40	8,023	16,087	206	412	3,947	6,166	26,313	50,377	47,10,968	42,55,389
Taldundah	27	27	468	987	17	36	382	884	2,452	9,108	21,270	30,844
Matchgong	6	6	2	6	...	...	...	...	...	...	...	...
TOTAL ...	110	110	10,044	18,577	265	488	5,101	8,117	31,955	65,860	47,83,653	43,89,273

It will be seen that although the average tonnage has increased from about 6 to 8 tons per boat, the value of the traffic has decreased; but this value is only ascertained by the toll collectors roughly, and is by no means reliable.

19. The following table gives the principal articles carried in the two years:—

	1872-73.	1873-74.	1873-74.	
			+	—
	Tons.	Tons.		
Articles of food	19,667	30,086	10,419	
Stimulants	18	19	1	
Clothing	278	257	...	21
Staples of manufacture	251	1,158	907	
Building materials	1,388	13,380	11,992	
Live-stock	...	45	45	
Fuel	345	2,562	2,217	
Cooking utensils...	46	...	...	46
Miscellaneous	3,059	2,258	...	801
	Number.	Number.		
Empty boats	Not known.	3,199		
Passenger boats	Ditto.	327		

20. The total demand for the year, including arrears of previous years, amounted to Rs. 23,389, of which Rs. 19,889 were collected, Rs. 1,118 remitted, leaving a balance of Rs. 2,382 due at the end of the year, of which only Rs. 17 is for assessment of 1872-73. All previous accounts have now been disposed of. The amount received was Rs. 19,905, a voluntary payment of Rs. 16 having been made in advance on account of perennial crops for 1874-75.

21. The Officiating Revenue Superintendent has remarked on the following points:—

The decrease in the number of men appointed by the cultivators to collect and pay in the rates.—This has been nearly 50 per cent., and is attributed to the collectors having insisted on having something paid them by the cultivators for their trouble. This is extremely probable, and has led to the ryots preferring to pay their water-rates direct to the canal officials.

With regard to surreptitious irrigation, he remarks on the difficulty of proving it, or catching the people in the act. The owners have been made to pay the double assessment in some cases where the field banks were cut, and water was found flowing on to the land, when it was necessary for the preservation of the crop. The Collector considers that such evidence would not suffice if he had to try the case judicially.

Mr. Toynbee, the late, and Mr. Wylly, the Officiating, Revenue Superintendent, consider that if leases are taken for larger and more compact areas, the theft of water will be reduced to a minimum, and the attempt has been made to carry this out in the current year. Up to the date on which the report was written, the average area of leases had been 22 acres against 5 and 9 in 1872-73 and 1873-74, respectively. It remains to ascertain what the result may be.

22. Some experiments on cultivation carried on under the orders of the Canal Officials have resulted in an average outturn of about 20 maunds of paddy per acre. The report does not show the Autumn and Winter crops or the Carolina rice separately, so it is not of much use.

The amount expended was Rs. 333-5-10, and the total outturn 1,006½ maunds, or rather more than 3 maunds for the rupee.

23. The Commissioner considers that matters are going on very quietly and very satisfactorily, and deprecates any change in the rules until the end of the term for which they were provisionally formed.

MIDNAPORE CANALS.

24. These canals consist of two different series,—the Midnapore Canal running from the Cossye River at Midnapore to Oolaberiah on the Hooghly and the Tidal Canals near the sea coast between the Roopnarayan and the Russoolpore Rivers. The accounts of these two series of canals have hitherto been amalgamated, but are now separated by order of His Honor the Lieutenant-Governor.

MIDNAPORE CANAL.

25. The capital invested in this canal up to the 1st April 1874, exclusive of interest, amounted to Rs. 57,97,932. The sum added during the year was Rs. 4,76,298, of which the following is the detail :—

	Rs.
Canal Works	2,25,380
Distributaries	1,31,627
Tools and Plant	5,106
Establishment	90,388
Increase of Suspense Balances	25,691
TOTAL ...	4,78,192
D. D. Receipts on Capital Account	1,894
TOTAL ...	4,76,298

26. The interest and excess of charges over income were on the same date :—

	Rs.
Excess of charges	1,16,968
Interest	9,75,162
TOTAL ...	10,92,130

Of this, the amount for the year 1873-74 was—

	Rs.
Excess of charges	47,919
Interest	2,50,511
TOTAL ...	2,98,430

27. As in the Orissa Canals, the above statement is based on the collections for the year. Taking the assessments of the year as the data for the account, the following shows the transactions of the year :—

RECEIPTS.	Rs.	Rs.
Water-rates	82,243	
Navigation	34,104	
		1,16,347
Miscellaneous.		
Rents of Buildings	670	
Ditto Lands and Fisheries ...	1,608	
Sales of Produce	47	
Tools and Plant	125	
Fines and Refunds	161	
Miscellaneous	100	
		2,711
TOTAL ...		1,19,058
Balance deficit		1,499
TOTAL ...		1,20,557

EXPENDITURE.	Rs.	Rs.
Maintenance and Repairs.		
Main Canal	71,565	
Distributaries	10,114	
Navigation Works	1,190	
Buildings	2,533	
Miscellaneous	1,134	
		86,536
Works.		
Buildings	1,575	
Bridges	375	
		1,950
Establishment.		
General	15,474	
Revenue	10,701	
Navigation	5,896	
		32,071
TOTAL ...		1,20,557

So that the deficit is only 0·028 per cent. on Rs. 53,21,634, which was the amount of the capital at the beginning of the year.

28. The following table shows a comparison between the cost of maintenance in this and the preceding year :—

	1872-73.	1873-74.	DIFFERENCE, 1873-74. +	DIFFERENCE, 1873-74. —
Maintenance and Repairs—	Rs.	Rs.	Rs.	Rs.
Main Canal	47,481	71,565	24,084	...
Distributaries	11,310	10,114	...	1,196
Navigation Works	665	1,190	525	...
Buildings	2,565	2,533	...	32
Miscellaneous (Ferries)	823	1,134	311	...
			24,920	1,228
TOTAL ...	62,844	86,536	23,692	
Works—				
Buildings	...	1,575	1,575	...
Bridges	...	375	375	...
TOTAL ...	...	1,950	1,950	...
Establishment—				
General	9,705	15,474	5,769	...
Revenue	9,316	10,701	1,385	...
Navigation	5,133	5,896	763	...
TOTAL ...	24,154	32,071	7,917	...
GRAND TOTAL ...	86,998	1,20,557	33,559	...

29. The great difference is in the cost of the repairs to the Main Canal Rs. 71,565, of which the following are the principal items :—

	1872-73.	1873-74.	1873-74. +	1873-74. —
	Rs.	Rs.	Rs.	Rs.
Head Works	4,710	28,195	23,485	...
Earthworks	15,714	36,697	20,983	...
Masonry Works	27,057	6,673	...	20,384
TOTAL ...	47,481	71,565	44,468	20,384
			24,084	

The weir across the Cossye at Midnapore was much damaged by a flood in 1873-74, and the repairs to the banks were rendered heavy. The large items under masonry works in the previous year was due to the re-coustruction of the head sluice at Panchkoora.

The length of the canal open in 1872-73 was 38 and now is 48 miles, so that the repairs to the canal this year average Rs. 1,490 per mile against Rs. 1,250 in 1872-73. Both amounts are high, and it is hoped will be reduced in the current year.

The length of distributaries open in 1872-73 was 177½; in 1873-74, 197½ miles, so that the cost of repairs averaged 63·8 and 51·2 respectively. I am afraid this cannot be reduced at present, as the banks are very unsafe in some places still.

30. The works charged to Revenue are in connection with shelter for the revenue officials and three small pile bridges on the tow-path of the tidal range between the Hooghly and Damoodur rivers. The establishment charges increase in proportion to the expenditure.

31. The following is the comparison between the assessments of the two last years :—

	1872-73.	1873-74.	DIFFERENCE. +	DIFFERENCE. —
	Rs.	Rs.	Rs.	Rs.
Water-rates	21,876	82,243	60,367	...
Navigation	20,994	34,104	13,110	...
Miscellaneous	6,714	2,711	...	4,003
			73,477	4,003
TOTAL ...	49,584	1,19,058	69,474	

32. The increase in water-rates is due to the larger area irrigated in the present season. The table given below shows the rainfall compared with that of the previous year, and also the area irrigated :—

Months.	Rainfall.			Area irrigated.		Difference.
	1872-73.	1873-74.		1872-73.	1873-74.	1873-74. +
	Inches.	Inches.		Acres.	Acres.	
May	4·04	8·68	Khureef	13,406	35,996	22,590
June	10·49	6·86				
July	9·06	15·15	Rubbee	...	352	352
August	14·44	6·59				
September	6·66	4·25	Perennial	...	1	1
October	12·49	0·0				
Total ...	57·18	41·53	Total ...	13,406	36,349	22,943

33. The small rainfall in September, and the absence of any rain in October, caused the great demand for water. The following is the detail of the irrigation :—

Area leased for at—

	Acres.	Flow.	Lift.
Ordinary rates before 1st May was	12,208	12,197	11
Penalty rates after the above date	19,865	19,865	...
Surreptitious Irrigation	3,923	3,923	...
Total Khureef, all Winter rice ...	35,996	35,985	11
Rubbee—			
Rice (boro)	310	310	...
Onion	2	...	2
Vegetables	26	6	20
Oil-seed (teel)	14	14	...
Sugarcane throughout the year	1	1	...
Total Rubbee ...	353	331	22
Grand Total ...	36,349	36,316	33

So that of the whole area irrigated, only a little more than one-third was watered from the beginning of the season, the rest only after the commencement of the drought. The irrigation by lift is an infinitesimal portion of the whole.

34. The area irrigated per mile of canal was—

Khureef 750 acres; rubbee 7·4.

The area irrigated per mile of distributary—

Khureef 182 acres, rubbee 1·75,

but the district is not suited to rubbee cultivation, and it is only resorted to on lands damaged by inundation during the rains.

The area irrigated per cubic foot of supply was—

		Acres.
Khureef	$\frac{35,996 \text{ acres}}{350 \text{ cubic feet per second}}$	102·8
Rubbee	$\frac{353 \text{ acres}}{234 \text{ cubic feet per second}}$	1·5

It will be seen that the duty of the water in the khureef is very high in comparison with that on canals in the Upper Provinces, but it must be remembered that here no water beyond the small quantity necessary to allow for absorption and evaporation is admitted into the canal unless it is required for irrigation, as the slope of bed is so arranged that each reach can be reduced to the state of a still-water canal. Moreover, the rainfall is heavy, and cultivators can allow a longer interval between the waterings than in a drier climate.

35. It is probable that a much larger area would have been irrigated in September and October, had the water in the river not fallen so low, and had the weir at Midnapore been raised to its full height. Below is given the previous average and minimum discharges of the river compared with those of 1873 :—

	Previous Years.		1873.		Average utilized.
	Average	Minimum.	Average.	Minimum.	
May	1,000	180	500	200	154
June	3,000	180	1,100	469	341
July	6,000	1,500	2,200	750	409
August	9,000	1,200	8,000	2,750	361
September	8,000	2,000	2,000	641	456
October	4,000	900	700	241	383

From which it will be seen that in October, when the water was most wanted, the average supply was 200 cubic feet per second less than the minimum supply known in previous years, and the minimum was 659 below that quantity. This is the great drawback to which irrigation schemes in Lower Bengal are subject: the supply of water in the rivers is derived only from the rain which falls within the area of their catchment basins, and consequently is liable to fail when water is most required for irrigation. The remedy would of course be to construct reservoirs for the storage of water; but I seriously doubt whether this can be done without incurring an expenditure far beyond that on which there is any probability of a return being obtained.

36. The state of the collections is as follows :—

	Due.	Recoveries and Remissions.	Balance.
	Rs.	Rs.	Rs.
Arrears outstanding on account of previous year ...	12,272	...	...
Assessment of year's water-rates	82,243	45,569	48,946
Miscellaneous	2,711	2,711	...
Total ...	97,226	48,280	48,946

The balances are very heavy; but much work was thrown on the establishment by the sudden demand for irrigation, and they could not attend to the collections.

37. The Navigation Returns have been as follows :—

	Rs.
Tolls collected in 1872-73	20,994
Ditto in 1873-74	34,104
Increase in 1873-74 ...	13,110

This is due to the opening of the canal throughout in October 1873, and traffic was no doubt stimulated by the drought in Behar, as some Patna boats found their way up to Midnapore.

The tollage per mile of canal open was somewhat less than in the previous year, but this was due to the entire 53 miles not having been open during the whole year.* The mean length of canal open for 12 months was 35 miles only, and this gives a mileage rate of Rs. 975 per annum against Rs. 874 in the previous year.

* The tollage of the last half of the year was nearly 50 per cent. in excess of that in the first half.

38. The following table shows a comparison on various points of the traffic in the last two years :—

	1872-73.	1873-74.	Difference, 1873-74.
Number of miles open at the end of the year	24	53	+ 29
Toll collections	20,994	34,104	+ 13,110
Rate of tolls per mile	874	643	— 231
Number of boats, including empties	26,407	29,997	+ 3,590
Value of traffic	76,25,108	91,65,525	+ 15,40,417
Tonnage of boats, exclusive of empties	1,03,314	1,20,098	+ 16,784

39. The principal articles carried were—

	1872-73.	1873-74.	Difference, 1873-74.
	Tons.	Tons.	Tons.
Articles of food	39,574	50,541	+ 10,967
Stimulants	2,971	4,382	+ 1,411
Clothing	7,601	7,073	— 528
Staples of manufacture	11,269	14,610	+ 3,341
Building materials	4,895	5,028	+ 133
Fuel	18,173	15,009	— 3,164
Cooking utensils and domestic implements	2,533	1,951	— 582
Miscellaneous	16,630	16,366	— 264
Government stores and materials	668	5,141	+ 4,473
	Number.	Number.	Number.
Empty boats	3,860	6,174	+ 2,314
Passenger boats	11,877	12,379	+ 502

so that of the total increase in tonnage, two-thirds was due to boats carrying articles of food.

40. There is one benefit gained by a district from a canal in years of drought, which, though it cannot be shewn to its credit in account, should be taken into consideration in calculating the advantages to be gained by its construction, and that is the value of the food-grains produced by the irrigation afforded.

The following statement of the average produce in paddy per acre was furnished by Mr. Anderson, the Manager of the large estate of Messrs. Watson and Company in the Midnapore district:—

	Mds.		Mds.
Land of the 1st quality irrigated from tanks	39	to	42
„ 2nd „ irrigated	33	to	36
„ „ „ unirrigated	18	to	30
„ 3rd „ „ autumn rice (aous)	18	to	30

During the present year, I think it will be fair to assume the produce of the lands irrigated throughout the season as equal to the best unirrigated land in produce, say at 30 maunds per acre, and the remainder as equal to the worst unirrigated land, say at 18 maunds per acre—

	Mds.
We then have 12,208 acres, at 30 maunds per acre	3,66,240
„ 23,788 „ 18 „ „	4,28,184
Produce of grain in maunds ...	7,94,424

	Rs.
The rate for paddy, I am told, was about 1½ maunds per rupee, hence the value of the crop, which would probably have failed without the irrigation, was ...	5,29,616

TIDAL CANALS.

41. These canals are situated near the coast, and consist of two reaches: one extends from the river Roopnarayan to the Haldee, the other from the latter river to the Russoolpore: their total length is 29 miles. It was intended by the East India Irrigation Company, who commenced these works, to connect them with the canal to Cuttack; but at present they are isolated works, carrying the produce of the Hidgellee portion of the Midnapore district and some of that from the neighbouring district of Balasore.

When the sea is smooth many of the boatmen prefer floating with the tide up the Hooghly to Calcutta, instead of towing their boats through the canals; but in the south-west monsoon they take the latter route. The canals were completed and opened for traffic in September 1873.

42. The amount of capital invested in them up to the 1st April 1874, exclusive of interest, was Rs. 17,83,535, of which the following is the detail of the additions made in 1873-74:—

	Rs.
Canal	98,237
Establishment	54,872
	1,53,109
D. D. reduction of Suspense Balances	6,063
Expenditure of the year	1,47,046

43. The amount of charges unpaid—

	Rs.
Up to date is	18,139
Of interest	2,83,746
Total Deficiency	3,01,885

Of the above, Rs. 9,993 and Rs. 77,960 are the amounts for the current year.

44. The Revenue account for 1873-74 is as follows:—

Receipts.	Rs.	Rs.	Expenditure.	Rs.	Rs.
Water-rates	2,598		Main Canal	35,331	
Navigation	27,978		Drainage	1,575	
Miscellaneous	639		Buildings	813	
		31,215			37,719
			Establishment.		
Balance deficiency, being 0·61 per cent. on the capital of Rs. 16,36,489		9,993	General	1,215	
			Navigation	1,933	
					3,148
			Tools and Plant		341
Total ...		41,208	Total ...		41,208

There is an increase of Rs. 31,998 over that in 1872-73 in the expenditure on repairs; this is due to the thorough silt clearance of the canal before the final opening. A large reduction in the executive establishment was made towards the end of the year.

The receipts are mainly for navigation, which was only made practicable at all times of the tide by the completion of the locks in September 1873. The most unexpected increase in the tollage was in some measure due to the demand for rice created by the drought. The crops in the district traversed by this canal were good, and much grain from the lower portion of the Balasore district was exported through it. The canal was closed for traffic from April to the end of August.

45. The following table gives some details of the traffic in the two last years:—

	1872-73.	1873-74.	Difference, 1873-74.
Miles of canal open	26	29	+ 3
Toll collections	14,454	27,978	+ 13,524
Rate of toll per mile of canal	556	965	+ 409
Number of boats	7,721	13,918	+ 6,197
Value of traffic	10,35,238	14,33,724	+ 3,98,486
Tonnage of boats, exclusive of that of empties	19,153	63,077	+ 43,924

46. The principal articles carried were—

	1872-73.	1873-74.	Difference, 1873-74.
	Tons.	Tons.	Tons.
Articles of food	15,430	53,669	+ 38,239
Stimulants	1,257	1,852	+ 595
Clothing	23	194	+ 171
Staples of manufacture	67	786	+ 719
Building materials	851	1,249	+ 398
Live-stock boats	No. 3	No. 2	—No. 1
Fuel	509	575	+ 66
Cooking utensils and other domestic implements ...	32	318	+ 286
Miscellaneous	927	14,042	+ 13,115
Empty boats	No. 2317	No. 5910	+No. 2593
Passenger boats	No. 152	No. 284	+No. 132

Of the total increase in tonnage, 38,239 is due to boats carrying articles of food.

47. The water-rates charged became due in 1870-71 in the following manner:—On the 16th July in that year the Executive Engineer reported that up to that date the rainfall had only been 8·35 inches against an average of 34·44 in the three previous years, and on the 27th that it had only reached 10·03 inches. Orders were therefore given to him to allow the cultivators to take water in any way they could through the canal on their agreeing to pay a charge of 1 rupee per acre. In this way 2,774 acres were irrigated, for which Rs. 2,598 were recovered, and Rs. 8 remitted in the current year, leaving a balance of Rs. 168 still unrealized. No water has been given for irrigation since that year.

SOANE CIRCLE.

48. The canals in this circle are not yet in use. At the time the last Revenue Report was submitted, hopes were entertained that they might be ready to commence irrigation in the current year, but the temporary opening of them during the drought interfered so much with the progress of the works that it has not been found possible to make them available, but they will probably be ready by the end of the working season 1874-75.

49. The Capital Account to April 1874 is as follows:—

	Works and Tools and Plant.	Establishment.	Total.
	Rs.	Rs.	Rs.
Capital on 1st April 1873	57,52,902	11,80,919	69,33,821
Expenditure in 1873-74	24,78,871	4,79,029	29,57,900
	82,31,773	16,59,948	98,91,721
Deduct receipts on Capital Account	25,903	...	25,903
Capital on 1st April 1874	82,05,870	16,59,948	98,65,818

50. The abstract of the year's expenditure on works has been as follows:—

	Rs.	Rs.
Head Works	5,17,650	
		5,17,650
EASTERN BANK.		
Main Canal	17,986	
Patna Branch	5,05,372	
Distributaries	4,301	
		5,27,659
WESTERN BANK.		
Main Canal	1,53,830	
Distributaries	10,144	
Extension	6,967	
		1,70,941
Arrah Branch	5,20,856	
Distributaries	1,23,025	
		6,43,881
Buxar Branch	80,217	
Distributaries	35,716	
		1,15,933
Field Survey		17,365
TOTAL SOANE CANAL ...		19,93,429

51. Total charge for establishment was Rs. 4,79,029, or, exclusive of surveys, Rs. 4,25,118, which gives a percentage of 21·3 on the expenditure.

52. The Interest Account is as follows:—

	Rs.
Amount of interest due on 1st April 1873	5,20,603
Charge for 1873-74	3,74,380
TOTAL DUE ON 1ST APRIL 1874 ...	8,94,983

53. Although these canals were not sufficiently complete to allow of regular irrigation during the year, still, on the occurrence of the drought in September, orders were issued to turn the water into them, and distribute it in the best manner possible. The gates were lifted on the 3rd of October, and irrigation was carried on through cuts in the bank and by means of the natural drainage lines up to the month of February.

During that time water was issued to 702 villages in the Shahabad and 288 in the Patna and Gya districts, or 990 villages in all. The gross area of the lands owned by these villages is 607 square miles, and it is estimated that of this 159,470 acres were watered. It was not thought advisable to make any measurement of the land irrigated as the water was given without payment. Much of the land was watered two and three times.

54. If we consider that each irrigated acre produced a crop of 10 maunds weight of grain, which is a low average, then the quantity of grain provided in this tract of country by means of irrigation was about 15,94,700 maunds, or about 57,000 tons, which must otherwise have been imported for the sustenance of the people. At Rs. 3 per maund, the value of this would have been Rs. 47,84,100, or nearly one-half of what had been expended on the canal up to the end of the year. The rate in an ordinary year is about Rs. 2 per maund, but even at this rate the value would have been Rs. 31,89,400.

DAMOODUR CANAL.

55. Work on this canal has been suspended for the present, but the charge for interest is still accumulating on the capital expended. The following is the account for the year:—

CAPITAL ACCOUNT.

	Rs.
Capital on 1st April 1873	1,84,846
Deduct net receipts	26,529
Capital on 1st April 1874	1,58,317

INTEREST ACCOUNT.

Interest on 1st April 1873	31,801
Charge for the year	8,109
Interest up to 1st April 1874	39,910

The receipts during the year are due to the sale of old stores belonging to the canal.

GENERAL REMARKS.

56. The aggregate increase to the capital invested in Irrigation Works during the year amounted to Rs. 52,52,932 on extraordinary works. On ordinary works the capital invested was decreased during the year by Rs. 26,592. The debit to each series is as follows:—

	Capital on 1st April 1873.	Additions during 1873-74.	Capital on 1st April 1874.
Extraordinary.	Rs.	Rs.	Rs.
Orissa Works	1,22,15,773	16,97,591	1,39,13,364
Midnapore Canal	53,21,634	4,76,298	57,97,932
Tidal Canal	16,36,489	1,47,046	17,83,535
Canals not yet producing Revenue—			
Soane Canal	69,33,821	29,31,997	98,65,818
Ordinary.			
Damoodur Canal	1,84,846	—26,529	1,58,317
TOTAL ...	2,62,92,563	52,26,403	3,15,18,966

57. The state of the account for maintenance charges and interest is as follows:—

	Balance of Charges unpaid.		Interest.		Total.	
	For the year.	Total.	For the year.	Total.	For the year.	Total.
Extraordinary.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Orissa Works	85,356	5,18,887	5,89,066	22,67,963	6,74,422	27,86,850
Midnapore „	47,919	1,16,988	2,50,511	9,75,162	2,98,430	10,92,130
Tidal Canals	9,993	18,139	77,960	2,83,746	87,953	3,01,885
Soane „	...	...	3,74,380	8,94,983	3,74,380	8,94,983
TOTAL EXTRAORDINARY ...	1,43,268	6,53,994	12,91,917	44,21,854	14,35,185	50,75,848
Ordinary.						
Damoodur Canal	...	...	8,109	39,910	8,109	39,910
TOTAL EXTRAORDINARY & ORDINARY	1,43,268	6,53,994	13,00,026	44,61,764	14,43,294	51,15,758

58. The percentage of establishment charges, exclusive of surveys, revenue, and navigation on the total cost of works and repairs, has been only 22·3 per cent. against 23 and 24 in the two previous years.

59. The revenue of each series has been in excess of the estimate.

	Rs.
The amount of the Budget Estimate was	1,06,600
Regular	1,02,189
The receipts	1,47,688

This was mainly due to the unexpected increase in navigation tolls on the Midnapore and Tidal Canals.

60. A list of the officers employed is attached.

61. The following statements and reports are annexed:—

STATEMENTS.

1. Comparative statements of rainfall and irrigation in 1873-74 and 1872-73 (two statements).
2. Comparative statements of navigation in 1873-74 and 1872-73 (three statements).
3. Capital account of the Orissa Project to end of 1873-74.
4. Ditto ditto Midnapore Project to ditto.
5. Ditto ditto Soane Project to ditto.
6. Ditto ditto Damoodur Project to ditto.
7. Revenue account of the Orissa Project to ditto.
8. Ditto ditto Midnapore Project to ditto.
9. Summary of financial results to ditto.
10. Flood diagrams of the Mahanuddy, Katjooree, Brahminee, Byturnee, Beropa, Salundee, and Pattea Rivers in Orissa, and the Cossye River in Midnapore, and the Ganges and the Soane in Behar (14).
11. List of officers employed.

REPORTS.

ORISSA PROJECT.

1. Report by the Commissioner of Orissa and by the Collector of Cuttack, submitting the Canal Revenue Report by the Officiating Canal Revenue Superintendent for 1873-74.
2. Report by the Superintending Engineer, Orissa Circle, on the Navigation Revenue for 1873-74.

MIDNAPORE PROJECT.

3. Report by the Collector of Midnapore, submitting the Canal Revenue Report by the Deputy Superintendent of Canal Revenue for 1873-74.
4. Report by the Superintending Engineer, South-Western Circle, on the Navigation Revenue for 1873-74.

H. W. GULLIVER, COLONEL, R. E.,
Offg. Chief Engineer, Bengal, Irrigation Branch.

RAILWAY.

INVESTIGATION INTO ACCIDENTS ON INDIAN STATE RAILWAYS.

Circular No. 22 R., dated Simla, the 19th October 1875.

OBSERVATIONS.—There are now about 700 miles of State Railways open for traffic, and this length will be added to from year to year. It is necessary therefore to provide for the manner in which investigations into serious accidents should be conducted in the most complete and efficient way.

2. On the Guaranteed Railways when any serious accident, such as a collision with or without injury to life or limb, the breaching of an embankment, or the failure of a bridge occurs, the Consulting Engineer inspects, investigates, and reports on behalf of Government. When an accident occurs attended with fatal consequences, the Magistrate of the District, or an officer deputed by him, conducts the enquiry.

3. The investigations are thus conducted by officers of Government, and not by the servants of the Company directly responsible for the safe working of the Railway on which the accident may have occurred. The same principle should obviously also be extended to the investigation of accidents on State Railways.

4. The Governor General in Council is accordingly pleased to decide, as a provisional measure, that accidents on State Railways when open for public traffic, shall be subject to investigation by the Consulting Engineers attached to the Guaranteed Railways in India. The Consulting Engineer for Guaranteed Railways, Calcutta, will be directed to enquire into any accidents that may occur on the Calcutta and South-Eastern Railway, the Nulhatee State Railway, and the Northern Bengal and Tirhoot State Railways. The Consulting Engineer for Guaranteed Railways at Lahore will perform similar duties on the Punjab Northern and Indus Valley State Railways, and the Consulting Engineer for Guaranteed Railways, Lucknow, on the entire system of the Rajpootana State Railway from Delhi and Agra to Nusseerabad. On the Holkar, Neemuch, Wardha Valley, and Nizam State Railways the investigation of accidents will, with the concurrence of the Government of Bombay, be undertaken by the Consulting Engineer for Guaranteed Railways at Bombay.

5. In regard to the Rangoon and Irrawaddy Valley State Railway, when opened for traffic, the Chief Commissioner should name some Engineer Officer of the Public Works Department under his orders unconnected with the Railway who may be best suited for the duty.

6. The Manager or Officer in charge of a State Railway should, in addition to the reports regarding accidents required to be made to the local civil authorities, promptly send information to the officers mentioned in this Resolution concerning accidents requiring investigation.

ORDER.—Ordered, that this Resolution be communicated to the Government of Bombay, in the Public Works Department (Railway), for information and the issue of the necessary orders to the Consulting Engineer; to the Chief Commissioner, British Burmah, for the purpose indicated in para. 5; to the Consulting Engineers to the Government of India for Guaranteed Railways at Calcutta, Lahore, and Lucknow for information and guidance; and to the Director of State Railways for information and the issue of the necessary orders to the Managers of State Railways opened for public traffic.

Ordered also, that this Resolution be communicated to the Governments and Administrations noted on the margin for information. Also to the Home Department, for information and publication in the Supplement to the *Gazette of India*.

Madras, Bengal, North-Western Provinces, Punjab, Central Provinces, Hyderabad, Central India and Rajpootana.

C. H. DICKENS, *Colonel, R. A.,*
Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 4th NOVEMBER 1875.

GENERAL REMARKS.—In Madras there seems to have been general and sufficient rain and prospects are satisfactory. In Mysore the want of rain has caused serious injury to crops, and though some fell during the week the quantity was quite insufficient. Prospects in this province are not favourable. In Bombay the kharif crops have been reaped and the rabi sowings generally commenced. The young crops are promising, but more rain is wanted in Nasik, Ahmadnagar, and Satara. In Sindh also the crops on unirrigated land in the Sehwan division want more rain. In Bengal plenty rain has fallen in Orissa, but none, or next to none, in Behar and in most districts of the Rajshahye and Cooch Behar divisions, where it is much wanted. Crops in these parts have suffered very seriously from drought; rice on the high lands is dying off, and but a moderate yield is expected from the crop on low lands. The cold weather sowings too are impeded in consequence of the absence of rain. In the North-Western Provinces the kharif has been reaped and rabi sowings are in progress, with good prospects generally, but rain is wanted in some parts of the Mirzapore District. In the Punjab also the kharif harvest has been generally gathered and rabi sowings commenced with a good outlook. In Oudh the late rice in the Terai has suffered from want of rain; otherwise prospects are good throughout the province. In the Central Provinces prospects are generally satisfactory, the recent rain having proved beneficial to the rabi sowings. Some damage however has been done by rain to cotton in the Nagpore and Nimar divisions. In Berar slight injury has been done to crops by rain; the rabi sowings are not quite complete yet. In Central India there has been no rain; prospects are good. In Burmah also, except where damage has been done in the inundated tracts, crops are in good condition. No reports have been received from Assam and Rajputana.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Madras—			
Kistna	(Nov. 4th)	...	Rainfall at Masulipatam 2·56; at Palnad 6, Vinukonda 2·9; elsewhere about one inch; 2 feet 4 inches above anicut; later dry crops sown; standing crops good, damaged by water in few places; markets well supplied locally; prices generally steady; health fair; cattle healthy; pasture sufficient.
Kurnool	(3rd)	0·11 in one day.	Rainfall moderate in three taluks, none elsewhere; standing crops good; sajju and korra being harvested; markets well supplied; prices steady; water and pasture abundant; fever prevalent; slight increase in cholera, 58 attacks, 23 deaths; 0·2 water over Sunkesala anicut.
Tanjore	(4th)	...	Rainfall at Negapatam ·16 inches, elsewhere partial and scanty; freshes in rivers and supply to tanks moderate; water over lower anicut, north 7½ inches, south 8 inches; cultivation wet and dry crops; standing crops good; harvest a few wet and dry crops; yield fair; markets well supplied; prices almost steady; cholera abating, 101 attacks, 85 deaths; cattle disease in some localities, some loss; pasture generally sufficient.
Trichinopoly	(3rd)	...	Rain all over the district ranging from 1½ to 5½ inches; water supply sufficient; crops in good order; prices steady; cholera disappeared in town, a few cases in district; cattle healthy; pasture ample.
Malabar	(4th)	0·05	Second crop cultivation in good state; markets well supplied; prices steady; fever and small-pox slight; bowel complaints in Palghat, Walluwanad, Ponany, and Cochin, 204 cases, 134 deaths; cattle disease in two taluks; pasture good.
			General Remarks.—General prospects satisfactory.
Bombay— (Nov. 4th)			
Sind.			
Kurrachee	(3rd)	...	Barani crops in Sehwan division want rain, kharif harvesting progressing; fever and cattle disease prevalent.
Shikarpur	„	...	Weather unseasonably warm during the day; fever increasing, coughs and colds very prevalent; disease among cattle in taluka Ubaura.
Hyderabad	„	...	No change.
Upper Sind Frontier	„	...	Weather fair; crops as before; Shikarpore road impassable; fever unusually severe.
Guzerat.			
Ahmedabad	„	·28	Total rainfall 22·16.
Kaira	„	...	Early crops mostly reaped; rabi sowing commenced.
Surat	„	...	Kharif outturn more than last year in three talukas, middling in others; rabi crops thriving.
Broach	„	...	Slight rain in Ahmod; kharif crops harvested; crops generally good; fever prevalent.
Khandesh and Nasik.			
Khandesh		...	Kharif reaping and picking of American cotton commenced; slight damage by rain; cholera cases in Chalisgaon 27, deaths 12; cattle disease in two pettas.
Nasik		·29	Total rainfall 35·99; more wanted; kharif harvesting and rabi sowing progressing; cholera and cattle disease in one village.
Konkan.			
Tanna		...	Kharif reaping and rabi sowing progressing; cholera continues very slightly in two talukas.
Deccan.			
Poona		...	Kharif reaping continues; young rabi plants well.
Ahmednagar		·37	Total rainfall 17·84; more wanted; rabi sowing finished, kharif harvest nearly complete; cholera in two talukas; attacks 18; deaths 5.
Sholapur	...	2·22	Total rainfall 23·53; rabi well.
Satara	...	1·49	Total rainfall 5·98, more wanted; crops middling; rabi sowing and kharif harvesting progressing; cholera in Khanapur.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*			
Southern Mahratta Country.			
Belgaum	...	2·55	Total rainfall 56·41; rabi sowing commenced; cholera decreasing; deaths 179.
Kanara	...	·40	Total rainfall 107·98; rice harvest progressing; cholera cases three.
Kaladgi	...	·60	Total rainfall 119·98; kharif and rabi thriving; deaths from cholera 10.
Kattywar and Gaekwar's Territory.			
Wadhwán	...	.....	Crops good; cholera prevalent; 2 cases.
Baroda	...	.....	No change.
			General Remarks.—Rabi sowing general; young crops thriving; more rain still wanted in Nasik, Ahmednagar, and Satara districts.
Bengal—			
Chittagong	(Nov. 4th)	*Nil*; a few drops fell during last week.	
Noakhally	„	*Nil*

Balasore	„	*Nil*	
Cuttack	„	*Nil*	Cholera is still prevalent in several places.
Pooree	„	11·79	
			General Remarks.—Light but seasonable rain is reported from some of the districts of the Burdwan, Presidency, Dacca, Chittagong, and Chota Nagpore divisions, and ample falls in Orissa division, but none in Rajshahye and Cooch Behar and Patna and Bhagalpur divisions, excepting light showers in Bogra and Pubna. Rain is much wanted in Behar and in most districts of the Rajshahye and Cooch Behar divisions. The prospects of the main rice crop are good in the districts of Central and Western Bengal, but even these would be benefited by more rain. In Behar and in the Rajshahye and Cooch Behar divisions the crops have suffered very seriously from the drought. The high land rice is dying off; but the low land rice, where there is water, is expected to give a moderate yield. Cold weather sowings are progressing, but not very favourably at present in the absence of rain.
N. W. P.—			
Benares	(Nov. 1st)	*Nil*	Rabi sowings going on; no change.
Mirzapore	(3rd)		General prospects good; rain in some places needed for late rice; rabi sowings going on.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
N. W. P.—*continued.*			
Allahabad	(2nd)		No change.
Cawnpore	(4th)	*Nil*	Kharif good; rabi sowings nearly completed and seed germinating well.
Banda	(3rd)	*Nil*	Prospects continue favourable.
Agra	„	*Nil*	No change; prospects good.
Meerut	„		No change.
Moradabad	„		Agricultural operations are progressing well.
Bareilly	„		No change.
Almora	(4th)		Weather showery in a few places only, otherwise fine.
Jhansie	„		Slight shower on 28th; rabi sowings almost completed.
Punjab—			
Delhi	(Nov. 3rd)	*Nil*	Rabi sowings in progress; health good.
Hissar ...	...	...	Kharif nearly ripe and partly reaped; slight fever.
Umballa ...	...	...	Health and crops good.
Jullundur ...	...	...	Kharif under sickle; rabi sowing commenced; fever prevails largely.
Lahore ...	...	...	Crops good; health satisfactory.
Mooltan ...	...	...	Crops fair; slight fever.
Dera Ismail Khan	...	...	Health and harvest prospects good.
Rawal Pindi	...	...	Slight fever; harvest prospects good.
Peshawur ...	...	...	Slight fever; harvest prospects good; cattle disease in Yusufzai.
			General Remarks.—Agricultural prospects favourable; with exception of usual autumnal fever in places, public health good.
Oudh—			
Lucknow	(Nov. 3rd)	*Nil*	Prospects continue generally favourable, except in the Terai, where the late rice has suffered for want of rain; public health good.
Sitapur	„	*Nil*	
Fyzabad	„	*Nil*	
Central Provinces—			
Upper Godavari	(Oct. 30th)	1·65	Rain beneficial; health good; prices easy.
Sambalpur	„	·95	Prospects excellent; fever prevalent.
Bilaspur	„	1·15	Rain beneficial; rabi sowings continue; fever prevalent; prices steady.
Raipur	„	·57	Rain beneficial; rabi sowings continue; cholera re-appeared; prices fallen.
Chanda	(31st)	·40	Crops slightly damaged; fever and cattle disease prevalent.
Chhindwara	„	2·75	Prospects unchanged; cholera disappeared; prices steady.
Betul	(Nov. 1st)	...	Weather clear; reaping early kharif; rabi sowings continue; cholera re-appeared; prices steady.
Balaghât	„	1·60	Early rice cutting; rabi sowings continue; fever prevalent; prices steady.
Bhandara	(2nd)	...	Weather clear; early rice cutting; rabi sowings continue; fever and cattle disease continue; small-pox decreasing; 93 cholera cases, 40 fatal; prices easy.
Nagpur	(3rd)	·23	Kharif and rabi doing well; cotton slightly injured by recent rains; cholera disappeared; cattle disease prevalent; prices easy.
Wardha	„	·65	Prospects fair; rabi sowings continue; cattle disease prevalent; cholera disappearing.
Nimar	„	...	Cotton and tur slightly damaged by rain; slight rabi springing; cholera decreasing; prices of jowar risen.
Hosbangabad	„	·38	Kharif below average; rabi progressing; cholera decreasing.
Narsinghpur	„	...	Outturn of kharif average; rabi sowings continue.
Jubbulpore	„	·60	Kharif cutting; rabi sowings continue.
Saugor	„	·10	Rice reaping; rabi sowings continue.
Seoni	„	1·30	Kharif cutting; rabi sowings continue; health good.
Mandla	„	2·60	Rabi sowings continue; health good; prices stationary.
Damoh	„	·50	Rabi sowings continue; health good; prices fallen.
			General Remarks.—On the whole, prospects are promising; the recent rains were beneficial to the rabi, and the kharif outturn is better than expected.
British Burma—			
Arakan Division	(Nov. 3rd)	...	Public health good; agricultural prospects good.
Pegu Division—			
Bassein ...	...	...	Health good; crops doing well.
Thayetmyo	...	...	Health good; crops promising.
Prome ...	...	...	Town and district healthy; crops thriving.
Thonkwa ...	...	...	Health good; crops in northern half suffered considerably from floods.
Rangoon ...	...	...	Public health good; crop prospects good; land damaged by floods being replanted; slight cattle disease.
Henzada ...	...	...	Health good; crops flourishing; 11,000 acres damaged by inundation in Tharawaddy.
Tenasserim Division—			Public health good, except at Shwegyeen, where fever prevails; crops progressing.
Amherst ...	...	·5	
Tonghoo ...	...	2	
Mysore and Coorg—			
Mysore	(Nov. 4th)	·35 in Bangalore.	Cholera prevalent among villagers in the Mysore district, but none in the town; epidemic abated in other districts; rain has fallen in all districts, except Mysore and Chitaldroog, but wholly insufficient for normal supply.
Coorg	„	·15	
			General Remarks.—Agricultural prospects not generally good.
Hyderabad Assigned Districts—			
	(Nov. 4th)	1·29	A portion of the kharif crops has suffered slightly owing to late rains; rabi sowing not quite complete.
Central India—			
Indore	(Nov. 3rd)	...	No change since last report; all well in Central India.

N. B.—1. The nett collections for years previous to 1875-76 cannot be separately given for Imports and Exports, as in the returns furnished by local Governments refunds and drawbacks on Imports and Exports are not distinguished.

2. The figures for British Burma for 1875-76 include collections at Tavoy and Mergui for the months of April to September only.

A. O. HUME,
Secy. to the Govt. of India.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 11th NOVEMBER 1875.

GENERAL REMARKS.—Light rain has fallen in Madras, where prospects continue good. Showers have also fallen in Mysore and Coorg, but more is much required for the crops. In Bombay there has been slight rain only in Satara, Sholapur, Belgaum and Dharwar: more is wanted in the Deccan districts and Kanara; the kharif harvest continues, with a good outturn, and rabi prospects are moderately good. No rain has fallen in the Central Provinces except a shower at Mandla, in Berar, Central India or Rajpootana; prospects are everywhere satisfactory. In Bengal no rain has fallen except a sprinkling at Pooree: the condition of the crops continues unchanged; in the northern districts of Behar and Bengal prospects are bad and extensive failure is expected; elsewhere the crops promise fairly, but would be benefited by more rain. No rain has fallen in the North-Western Provinces, Oudh or the Punjab: the harvest continues, and prospects are good. None has fallen in Assam, British Burmah or Nepal: reports from all three are favourable.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Madras—			
Kistna	(Nov. 11th)	.40 2·3 at Vinnakonda; slight elsewhere.	Two feet 9 inches water over anicut; canal supply sufficient; later dry crops sowing; standing crops good; black paddy harvested; outturn about three-fourths; markets well supplied locally; prices steady; fever general; small-pox continues; dysentery among cattle in mild form in six talúks; pasture sufficient.
Kurnool	(10th)	*Nil*	Standing crops good; jonna, sajja, and korra being harvested; markets well supplied; prices steady; water and pasture sufficient; fever prevalent; cholera 119 seizures, 44 deaths; cattle disease in some villages; 0·2 feet water over Sunkesala anicut.
Tanjore	(11th)	1·14 at Negapatam.	Rain elsewhere almost none; water in rivers decreasing; no fresh supply to tanks; water over anicuts none; cultivation, wet and dry crops; standing crops generally good; rain wanted in some parts; harvest, a few wet and dry crops; yield fair; markets well supplied; prices almost steady; small-pox in some parts; cholera abating, 86 seizures, 55 deaths; cattle disease in some localities, some loss; pasture generally sufficient.
Trichinopoly	(10th)	Slight rain...	More rain wanted; water-supply generally sufficient; crops good, except in two talúks, where they are slightly suffering from want of rain; markets well supplied; prices steady; cholera lingering here and there in the interior; condition of cattle good; pasture generally sufficient.
Malabar	(11th)	1·10	Second crop cultivation in good state; markets well supplied; prices steady; small-pox in Ernad; bowel complaints in Palghaut, Walluvanad, Ponany, Cochin, and Kurumbranad, 291 cases, 170 deaths; cattle disease slight; pasture good.
			General Remarks.—General prospects satisfactory.
Bombay— (Nov. 11th)			
Sind.			
Kurrachee	(Nov. 10th)	...	Rabi sowings continue; fever generally prevalent; cattle disease partially so.
Shikarpur	...	...	Fever of bad form in Rohri, with symptoms of collapse, but not increasing; it is very prevalent in three talukas; cattle disease in Ubaurs; rabi sowing begun.
Upper Sind Frontier	...	...	Weather mild; crops as before; immense junglee formed since inundation of 1874 in Kashmor and Thul talukas; public health improving.
Gujerat.			
Ahmedabad	...	...	No change.
Kaira	...	...	Weather, crops, and cotton good.
Surat	...	...	Kharif crops being harvested; rabi crops good.
Khandesh and Nasik.			
Khandesh	...	...	Sowing of rabi nearly completed; picking of American cotton continues; cotton market steady; acute prevalent in five talukas.
Nasik	...	...	Reaping of kharif crops and rabi sowing in progress; rain wanted for rabi crops.
Konkan.			
Tanna	...	...	Reaping of kharif and sowing of rabi crops in progress; cholera still very slightly continuing in Máhim and Bhiwandi talukas.

Presidence or Provincy and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Deccan.		
Poona	...	Reaping of kharif not completed; young rabi plants well.
Ahmednagar	...	Rain wanted for rabi crops; harvesting of kharif continues; cholera in three talukas; cases 18, deaths 7.
Sholapur ...	·02	Total rainfall 23·53; out-turn of kharif middling.
Satara ...	·30	Total rainfall 53·38; more wanted; early and late crops middling; sowing of rabi retarded in some talukas for want of rain; harvesting of kharif progressing.
Southern Mahratta Country.		
Belgaum ...	·04	Total rainfall 56·45; 130 deaths from cholera.
Dharwar ...	·06	Total rainfall 29·96; slight rain of last and previous week has improved early crops, which in most places are in middling condition and have almost failed in a few places; outturn of jowari and sugarcane is estimated at 10 annas; rice at 8 annas, and that of other early crops from 4 to 6 annas; cotton at 12 annas; sowing of late crops continues; cholera has subsided in Nawalgund and Ron talukas, but continues in Dharwar, Hubli, Bankápur, Kalghatgi, and Gadag talukas, and in two villages of Sawanur State.
Kanara ...	...	Rice harvest continues on coast; slight rain above Ghat; more wanted.
Kaladgi ...	...	Kharif middling; rabi and cotton good; 26 deaths from cholera.
Kattywar and Gaekwar's Territory.		
Rájkot ...	...	Cold weather setting in; cholera disappearing.
Wadhwán ...	...	Crops good; weather cool; one cholera case.
		General Remarks.—Rain wanted in Nasik, Ahmednagar, Satara, and Kanara; cholera still prevalent in Southern Mahratta country; rabi crop prospects moderate.
Bengal—		
Chittagong (Nov. 11th)	*Nil*	
Noakhally „	*Nil*	Several cholera cases occurred in the district.
Chittagong Hill Tracts „	*Nil*	
Hill Tipperah „	*Nil*	
Backergunge „	*Nil*	Cholera prevalent in Dukhin Shabazpore.
Furreedpore „	*Nil*	Cholera has broken out in a few places in the head quarters and Madareepore sub-divisions; medicines have been forwarded to these localities.
Dacca „	*Nil*	Sporadic cholera prevalent in most parts of the district and in the town.

Bengal—*continued.*		
Hazáribágh (Nov. 11)	*Nil*	
Lohardugga „	*Nil*	
Maunbhoom „	*Nil*	
Singbhoom „	*Nil*	District is free of any epidemic, but fever, which occurs at this season of year, is prevalent.
Balasore „	*Nil*	
Cuttack „	*Nil*	Cholera diminishing, but not wholly ceased.
Pooree „	·01	*General Remarks.*—There is no change to report since last week. No rain has fallen in any of the districts, excepting a very slight fall in Pooree. The main rice crop in districts not affected by drought are doing well, but would derive benefit from more rain. The state and prospects of the crops in North Behar and North Bengal are bad, especially in the high lands, and in some places the rice is being cut for fodder. Irrigation is resorted to where practicable. Early amun rice is being reaped in places. In most districts the sowing of the cold weather crops is progressing favourably, but in the affected tracts more moisture in the soil is required.
N. W. P.—		
Benares (Nov. 10th)	...	No change.
Mirzapore „	...	No change; rabi sowing going on; seed germinating well.
Allahabad „	...	Kharif being cut; rabi coming on well.
Cawnpore „	...	Prospects more favourable.
Banda (11th)	*Nil*	Prospects favourable.
Hamirpur „	...	Nothing new.
Jhansi „	*Nil*	Rabi sowing still continues; minor kharif crops cut.
Agra (10th)	*Nil*	Prospects good.
Meerut „	...	No change.
Moradabad „	...	Kharif harvest and rabi sowings approaching completion.
Bareilly „	...	No change.
Punjab—		
Delhi (Nov. 10th)	*Nil*	Kharif cut; rabi sowings in progress; health good.
Hissar „	*Nil*	Crops luxuriant, being harvested; rabi sowings in progress; slight fever prevalent; otherwise health good.
Umballa „	*Nil*	Crops and health good.
Jullundur „	*Nil*	Crops being reaped; rabi sowings in progress; fever prevails largely.
Lahore „	*Nil*	Crops good; health satisfactory.
Mooltan „	*Nil*	Kharif being harvested; rabi sowings in progress; slight fever prevalent; otherwise health good.
Dera Ismail Khan „	*Nil*	Health and harvest prospects good.
Rawal Pindi „	*Nil*	Prospects good; slight fever prevails of ordinary type.
Peshawur „	*Nil*	Kharif reaped; slight fever prevalent; cattle disease in Yusufzai abating.
		General Remarks.—Good harvest being gathered; usual autumnal fevers prevalent, but public health on the whole good.
Oudh—		
Lucknow (Nov. 10th)	*Nil*

OBSERVATIONS.—In 1873 the principle was laid down, that, while the Supreme Government would take on itself the responsibility for the provision of trunk systems of railway throughout India, the provision of feeder roads was left to Local Governments and Administrations. It was added that, "it will no doubt be recognised by the Local Governments that their funds available for expenditure on the construction of roads cannot, in parts of the country bordering on lines of railway, be better applied than by the formation of railway feeders. The completion of these minor works will bring the advantage of Railway communication close to the homes of the people, and as no share of the cost of the Railway itself will be borne provincially, His Excellency in Council believes that expenditure on such roads will afford a more effective and economical result than outlay in any other direction."

It was added that the Governor General in Council trusted that the Rulers of Native States would follow the same course, and Political Officers were desired to draw the attention of the Native Princes to the subject.

2. Of late, representations have been made, both in England and in India, that the railways in this country are not sufficiently supplied with feeder roads. The Government of India therefore called for reports from Local Governments and Administrations and Officers concerned of the progress which is being made in meeting the alleged deficiency of roads communicating with railway stations.

3. The Government of Bombay promises a detailed report on the subject of feeder roads in that Presidency, when doubtless the matter will be fully considered.

4. As regards the Oudh and Rohilkhund Railway, the North-Western Provinces Government has replied that this important question will not be overlooked, and that orders have been given to construct a feeder road between Budaon and Aonlah. The Chief Commissioner of Oudh has submitted a statement showing that 49 roads are asked for by the Oudh and Rohilkhund Railway Company, or are otherwise considered necessary. These roads aggregate 261·75 miles, and the estimated total cost is Rs. 6,74,094. In the statement submitted it is pointed out that no less a sum than Rs. 3,82,331 is included for metalling existing roads, and this in many instances when the necessity is open to doubt. Rupees 80,650 for improvements to existing roads and Rs. 2,11,113 only for new roads are required.

It is added that the estimate is probably within the amount still required for roads, and is therefore allowed to stand as given by the Railway authorities; but that in several instances the lines proposed require re-consideration, and on detailed enquiry others of greater importance may have to be substituted, but that this enquiry will be a work of time. The Government of India trust that the Oudh Administration will give the earliest possible effect to the improvement and construction of the roads enumerated with the local funds at its disposal.

5. The Director of State Railways has forwarded correspondence, together with maps, relating to feeder roads proposed to the Holkar and Neemuch State Railways. To the south of the River Nerbudda, the Deputy Commissioner of Nimar has indicated a few likely roads which may be required as feeders to the Holkar State Railway; but it is said that the country in that direction is so sparsely cultivated, that it would seem probable that any local or provincial development of feeder roads can be permitted to wait until the traffic to the different stations is more declared than at present. This conclusion is sound provided that ordinary tracks fit for the wheeled traffic of the country are already in existence. But obviously some means of communication must be available in order to give the traffic to stations a chance of developing.
