"The objection as to the inflexibility of a Code seems as futile as those already discussed. It comes, in India, to this, that it is better for the barrister-judges (who, as a rule, lead the High Courts) to make the law as they go along, than for the legislature, aided as it is by the advice of every capable person in the country, to make the law as a guide beforehand. I feel as strongly as any one that the development of a country's law should be, as far as possible, the natural outgrowth of its material and social wants and of its highest ethical ideas. But for ascertaining these wants, for recognizing these ideas, the supreme Indian legislature is, and must always be, far more favourably situated than a body of judges whose experience is, as a rule, limited to their courts, who are generally ignorant of the languages of the people, and whose ability and learning (considerable as they are at present) will steadily deteriorate as the pecuniary attractions of India diminish. We should remember, too, that the machinery of Indian legislation is singularly swift and simple, and that as soon as the expediency of any amendment is established there is no difficulty in having it at once effected.

"The last objection—that certain foreign Codes have been failures, and that therefore all codification must fail—hardly requires to be answered. But the answer may as well be given. The Codes referred to—that of Napoleon and the Prussian Code of the Great Frederick—were first attempts, framed when the science of law-making was not understood as it is now. For instance, those Codes contain no definitions of technical terms, no explanations of leading principles and distinctions. The result is that they have not superseded the old law, and that they have had to be supplemented by numerous volumes of more or less authoritative interpretations. But such defects are obviously accidental, not inevitable, and they have been avoided in framing the recent German Commercial Code (*das allgemeine Deutsche Handelsgesetzbuch*, 1869) and Penal Code (*Deutsches Strafgesetzbuch*, 1870), the Italian *Codice Civile* (which is an admirable model), Livingston's Louisiana Codes, and, I believe, other Codes (those of Holland, Austria, Spain, Lower Canada, Portugal, Brazil), of which I do not speak positively as I have not seen them.

"Another objection (chiefly made by critics with a smattering of German jurisprudence) is that our Codes are not scientific enough; while a still larger body of critics, who are wholly innocent of law, declare loudly that they are

too scientific, reminding one of those would-be military authorities who assert that already the arms put into the hands of infantry are superior to the average human capacity for using them with effect. But these criticisms are mutually destructive and may be left without further notice.

"So much for the practicability of codification and for the objections usually taken against it. Now as to the expediency of continuing and, if possible, completing the work which has been so well begun in India.

"First of all, it will save the Judges and Pleaders the vast amount of labour now forced upon them in searching for precedents in reports and text-books, which, in the mufassal at least, are seldom thoroughly understood. This, of course, will facilitate the despatch of business, cheapen the cost of litigation, and in some places, perhaps, enable us to diminish the number of our Judges.

"Secondly, an untrained Judge (and most of our Judges in India are and will probably always be, untrained) is far less likely to go wrong in construing a well-framed Code than in drawing inferences from a crowd of half-understood decisions, or in submitting to the guidance of English text-books, written solely with reference to the system of English law—a system from which we, in India, have widely diverged in many important particulars. It is obvious that the number of appeals will thus be greatly lessened, and one urgently needed reform of our system of civil procedure will thus be effected without depriving the Natives in any degree of a right which they have come to regard as an indispensable security.

"Thirdly, the reduction of the whole of our law to a Code would necessarily have the effect of precluding our barrister Judges (and our Civilian Judges misled by barristers) from introducing into India English technicalities and doctrines unknown to litigants and unsuited to this country. Even before the amalgamation of the Supreme and the Sadr Courts this practice had begun, and I could easily produce the most amazing rulings as to champerty, estoppel, laches, inadmissibility of oral evidence, and opening conditional sales which have become absolute. Since that amalgamation the technicalizing of our law has gone on with renewed vigour, and Your Lordship will remember that the Judicial Committee of the Privy Council has recently recommended us to abolish by legislation one of the doctrines so introduced.

"Fourthly, the process of codification affords an opportunity for settling, by legislative enactment, many disputed questions which the Courts would never be able to settle. Take one or two illustrations of what I mean. For years our High Courts had been disputing whether title could be acquired by positive prescription, and as to the time necessary to give an absolute right to the use of light, of a way, of water, or other easements. One learned Judge thought the proper time might be 'four, five, or six years;' some said it was twelve; others twenty; others that the law applicable to India was the English law before the passing of the Prescription Act in 2 & 3 Wm. IV; others that there was no law at all on the subject. The result was constant and ruinous litigation and great waste of time on the part of the Courts. At last the legislature interposed, and by two short sections (27 and 28 of Act IX of 1871) settled the matter apparently for ever. So far as I know, not a single serious doubt has been raised during the past six years as to the meaning of these sections. Take, again, the subject of Majority. Hindús, Muhammadans, East Indians, Europeans, Jews, Párs'is, had each a different law on this subject. The age of majority according to the Hindú law was, in Bengal, the commencement of the 16th year: elsewhere, the commencement of the 17th year. Then the Courts held that Natives under eighteen were minors for some purposes, but not for others. Till the legislature interposed the state of affairs might be described as insoluble doubt and endless expense and litigation. But the Mahárájá of Vizianagram passed his Act (IX of 1875), and in three months the Courts were happily relieved of a useless and time-consuming branch of their business. Take, again, the question as to what offences can legally be compounded. As to this the High Courts are hopelessly at variance. A single section would remove the difficulty.

"Fifthly, codification would be the safest and easiest method of introducing into the social law of the Natives reforms which are urgently needed, but which only a few of them are enlightened enough to demand. Take, for instance, the abolition of infant marriages. The Courts would never venture to hold such marriages illegal; and the legislature might well hesitate to raise, by an isolated measure, such a storm of excitement as was produced by the Act (XXI of 1850) declaring that rights should not be forfeited by loss of caste, or by the Act (XV of 1856) permitting Hindú widows to marry again. But I believe that by a comprehensive measure dealing with the whole law of Husband and Wife, a measure framed with due regard to social needs and physiological laws, we might abolish infant marriages without meeting anything more than the trival and transitory opposition of few professional agitators. I mention this merely by way of illustration of my meaning. There is no intention of passing any such law.

"Sixthly, when we possess a complete Code the decisions of the Courts will necessarily be nothing but decisions as to its construction, and the system of reporting which we have established for the four High Courts at the annual cost of about Rs. 50,000, may then be replaced by the inexpensive practice of periodical communications from the Registrars of those tribunals to the Government of India in its Legislative Department. The amendments thus suggested could then be considered and (if approved) made by the legislature.

"I might dwell on other benefits sure to accrue from codification—the diminution of the bulk and expense of the libraries with which lawyers and judges must now be provided at their own cost, or at that of the Government: the improvement in the character of the legal profession which would result from making the law simple and scientific: the diffusion among the people of a more accurate knowledge of their rights and duties than could be obtained in any other manner: the effectiveness of good Codes as instruments of education: the beneficial influence which our Codes would exercise on the legislation of England and some, at all events, of her Colonies. But these results are remote and comparatively unimportant.

"I will now describe with some particularity the work which remains to be done before Indian law can be said to be completely codified.

"First, we have to finish and then to arrange our Code of the law of Contract. Here the following subjects have still to be dealt with: Sales of immoveable property; Mortgages and charges on land; Leases; Fixtures: Settlements; Powers; Exchanges; Insurance (Marine, Fire and life); Carriers (Marine and Inland); Bottomry, Respondentia and other liens on Moveables; Negotiable Instruments. All these subjects, with the exception of Exchanges, Carriers, and certain liens on Moveables, were handled by the late Indian Law Commission: we possess their drafts in the Legislative Department; and on one of these drafts the Bill which I now ask leave to introduce is founded.

"As regards the law relating to Persons, we already possess Acts dealing directly or incidentally with Minors and Lunatics; and no further legislation seems necessary at present in this respect.

"Save as regards the infractions provided for by the Penal Code, the law relating to Personal Rights is almost wholly untouched by our legislature. So far as regards the right of protection from bodily injury, defamation and insult, it would be most conveniently dealt with in a Code of the law of Torts or Actionable Wrongs; but to deal with Wrongs one must obviously first know the correlative Rights, and as in many cases these have not yet been ascertained and declared, I would not now take up this subject of Torts.

"We then come to the law of Personal Relations, namely, Husband and Wife, Parent and Child, Guardian and Ward, Master and Apprentice,

Master and Servant. So much of the law of Husband and Wife as relates to the solemnization of Marriage and to Divorce, has already been codified so far as regards Christians and persons not professing the Christian, Jewish, Hindú, Muhammadan, Pársí, or Buddhist religion; and I have here only to suggest that it would be convenient to amalgamate the Marriage Acts III and XV of 1872, and to withdraw the anomalous power to grant marriage-licenses, which the Presidency High Courts now possess.

"As to Parent and Child, their respective rights and duties, our Statute-book is almost a blank; and some painful litigation as to the rights of fathers to the custody of their children has, consequently, been the result. The law on this subject might easily and usefully be codified; but of course the proposed measure should leave untouched Hindús and Muhammadans, whose parental rights—at all events in the Presidency towns—are secured to them by statute. It might fitly apply to Europeans domiciled in India, East Indians, Armenians, Jews, Native Christians and, probably, Pársis.

"The law of Guardian and Ward is already codified, so far only as regards Europeans, their children and grand-children, in territories not under a chartered High Court, by Act XIII of 1874. I would extend this law to the rest of British India, and make it apply to the whole population except Hindús, Muhammadans and, perhaps, Buddhists.

"The law of Apprentices has been dealt with by Act XIX of 1850 and a section in Act I of 1859. But the law of Master and Servant is still uncodified, though various Acts (such as XIII of 1859 and IX of 1860), have been stuck patchwise on the mass of reported cases in which the bulk of it is contained. Many of these cases are contradictory: all (except to lawyers in the Presidency towns) are inaccessible; and I think there is no subject which might more fitly be taken up and dealt with in a spirit of fairness to the employer, as well as to the employed. Much of the harshness with which Europeans and East Indians sometimes treat Native servants is due, I am convinced, to the absence of any distinct, ascertainable law as to their respective rights and duties.

"The law of Property, which would stand next in a scientific arrangement of a complete Civil Code, is, to a large extent, dealt with by one of the drafts already mentioned. There seems no pressing need for declaring the law as to certain matters not so covered, such as the property of the State and the ownership of animals wild by nature. There remain the three subjects—all of peculiar importance in India—of Trusts, Servitudes (or Easements) and Boundaries. As to Trusts, though one learned Judge has held (4 Beng. O. C. J. 231) that trusts cannot be created by Hindús, another learned Judge of the same High Court (*ibid.* 134) lays down (I venture to think correctly) that there is no country in the world where fiduciary relations exhibit themselves so extensively and in such varied forms as in India, and that possession of dominion over property, coupled with the obligation to use it, either wholly or partially for the benefit of others than the possessor, is familiar to every Hindú. Nevertheless we have no law on this subject save what is scattered through the library called the Equity Reports. Except so far as regards the acquisition of a prescriptive title, the law of Servitudes has also been left untouched by the legislature; and the Indian Courts are consequently left to the guidance (when they can get it) of a host of English cases often conflicting and sometimes unintelligible. The subject of Boundaries in their civil aspect is also untouched save by some local laws dealing with petty matters, such as disputes and the erection and repair of boundary-marks.

"The subjects of Shipping, Corporate Property, Patents, Copyright and Trade-marks may also here be mentioned. But with the exception of Copyright, they have already been dealt with by the Indian legislature, well enough at all events, to render immediate codification unnecessary. As to Copyright, our present law (Act XX of 1847) does not provide for works of the fine arts, photographs and lectures. It is also defective as to piracies by translations. Our law as to Patterns and Designs (Act XIII of 1872) is a dead letter.

"We now come to the law relating to the acquisition of Property, by (1) Occupancy or Prescription; (2) Accession; (3) Transfer *inter vivos*; (4) Will; and (5) Succession.

"Prescriptive titles are sufficiently dealt with by the Limitation Act IX of 1871.

"As to acquisition of property by Accession, we have no law as to Fixtures, except what may be revealed by English text-books. The Bill which I now ask leave to introduce deals, I hope satisfactorily, with this subject. The law of Alluvion and Diluvion is in a land like this, of huge, silt-laden and shifting rivers, obviously of the very first importance; but it is still contained in an old Bengal Regulation (XI of 1825), which is not only incomplete but obscure; and which is encrusted with decisions of the late Sadr Courts, the High Courts, and the Judicial Committee of the Privy Council, many of which are conflicting. Moreover, it does not apply to Sindh, where I believe the only rules on the subject are certain executive orders which, under the Indian Councils Act, section 25, have gained the force of law. The law of Accession to Moveable property is untouched, save by sections 155, 156, 157 of Act IX of 1872.

"Transfer *inter vivos* has, so far as regards sale of moveables, been dealt with by the Contract law, and will, as regards land, be dealt with by the Bill which I now ask leave to introduce, supplemented, as that measure will be, by the Registration Act. But the subject of Gifts *inter vivos* is as yet untouched, though Donations *mortis causâ* are dealt with by the Succession Act.

"Acquisitions under Wills are provided for by Act X of 1865, so far as regards Europeans, East Indians, Armenians, Jews, Pársis, and Native Christians; so far, also, as regards Hindús in the Lower Provinces and the Presidency Towns. The testamentary portion of this Act might now, I think, usefully be extended to Hindús in the rest of British India. But on this matter the Local Governments must first be consulted.

"Succession *ab intestato* is provided for by the same Act, so far as regards the whole population except Hindús, Buddhists and Muhammadans.

"I have hitherto said nothing as to the possibility or the expediency of codifying the Native laws. But as the Advocate General of Madras, in a book of which a large number of copies has been sent to the Legislative Department, proposes to codify "the whole Hindú law"—(including, I presume, the law of Ordeals),—a few remarks may be made on this subject.

"There would obviously be great political danger and no practical advantage in codifying the Muhammadan law, which, as every one knows, is founded on the Kurán, and the Traditions and the Maxims which have been developed out of them.

"Speaking roughly, the only parts of the Hindú law (by which I mean the inspired *Dharmaçástra*) which are now administered by our Courts relate to Inheritance, Maintenance, Partition of undivided Property, Widow's Estate, Mortgages and Adoption. I exclude the law of Hundís (Native bills of exchange), which, so far as I know, is not divinely revealed, but is merely part of the custom of Hindú merchants. There are serious difficulties in the way of touching any of these laws: first because they are all believed to be founded on a divine revelation, and great suspicion would certainly be excited if we *mlechchhas* attempted to meddle with them; secondly, because they vary, more or less, in Bengal, Madras and Bombay (take, for example, the power of a widow to adopt a son to her deceased husband), and uniformity, one great object of a Code, could not therefore be secured save with the certainty of change and the probability of much irritation;

thirdly, because many of the sources of the Hindú law have either not been translated at all, or (like the *Vyavahára Mayúkha*) translated so badly as to mislead rather than guide; fourthly, because even supposing we succeeded in codifying the Hindú law, the result would certainly not be applicable to the Hindús and Síkhs of the Panjáb, nor to the non-Aryan and non-Brahmanic population of the south of India, nor, I believe, to the Hindús in the Central Provinces, where local custom overrides Brahmanic jurisprudence, nor to the aboriginal hill tribes anywhere; lastly, because by codification we should stereotype laws which, however interesting from the archæological point of view, have (like all laws based on theological ideas) something irrational and inhuman about them. For instance, suppose we codified the Hindú law of Inheritance, we should have to found it on the notion that the right of each relation to succeed depends on his comparative efficacy in performing the obsequies of the deceased, and we should consequently have to exclude sons who chanced to be either blind or deaf, and brothers who were addicted to any vice. Suppose, again, we codified the Hindú law of Adoption, we should have to declare that an orphan could not be adopted, because, forsooth, there is no one to give him to his adoptive parent (2 Madras High Court Reports, 129). This, surely, is not the kind of jurisprudence that a civilized nation should try to perpetuate. The wisest and, I believe, the most welcome measure that could possibly be passed affecting the Hindús would be an Act enabling them to discard their own law of property, in other words to adopt (without prejudice to vested rights) the legal status of Europeans domiciled in India, the change of status being formally registered, publicly announced, and, when once made, absolute and irrevocable. This suggestion is immediately due to Mr. J. D. Mayne's paper (*Madras Journal of Literature and Science*, 1864-65) on the administration of Native law in the Courts of the Madras Presidency, the ablest essay that I have ever read on the subject of the law which should be applied to a conquered nation. The ultimate source of the suggestion is of course the well known decision of the Privy Council in *Abraham* v. *Abraham*, 9 Moore, I. A. 195.

"I have thus, I hope, shewn—

(*a*) that laws may be successfully codified in India:

(*b*) that the current objections to codification are groundless:

(*c*) that it is expedient to continue the work of codification except as regards the Native laws:

(*d*) that much remains to be done before that work is complete.

"In determining the order in which subjects should be taken up for codification, we should, of course, be influenced more by the actual wants of the country than by any love for logical arrangement, legal symmetry or scientific completeness. Bearing this in mind, we should, I think, first take up the three Bills which the late Indian Law Commission framed with a view of completing their Code of Contract law (Act IX of 1872). These are:—

"The Transfer of Property Bill, which deals with sales of land, mortgages, leases, fixtures, settlements, and powers, and which I now ask leave to introduce:

"The Insurance Bill, which deals with fire, life and marine insurance:

"The Negotiable Instruments Bill, which deals with bills of exchange, cheques and promissory notes, and which we propose to make an embodiment of the actual law on the subject in India and England.

"These three Bills no doubt require considerable modifications; but they could in a few months be made most useful measures, and would be welcomed by every one whose interest is not to keep the law obscure and inaccessible. The subject of Fire, Life and Marine Insurance is one of growing importance in

India, but (like the law of Master and Servant) it is contained in about two thousand reported English cases, patched with four Acts of the Indian Legislature. The Natives have no other law on this subject, though I believe that Hindú merchants have a custom of insuring goods sent by land or river from one part of British India to another. As regards Negotiable Instruments, no doubt we should abstain from contravening the custom of Hindú merchants as to hundís. But the proposed law need not be inoperative as to these instruments, for the Calcutta High Court has held that when the analogy between hundís and bills is complete, the English law applies. The opportunity, too, might be taken to remove the doubts whether a hundí payable to order is negotiable without the written endorsement of the payee (1 Hyde, 155); whether notice of dishonour is necessary in the case of a hundí (Coryton, 56). Of course the provisions as to cheques and promissory notes would extend to Natives as well as Europeans.

"We might then take up the subject of Master and Servant, to which I have already referred. The opportunity might be used to amend the law as to the right of servants to compensation for injury caused by the negligence of foremen in their master's employment, and to enable the Local Governments to establish a system of registering domestic servants.

"The subjects of Alluvion and Diluvion might then be dealt with. In Lower Bengal, in the Panjáb and in Sindh a clear and comprehensive law on these subjects is very necessary, and the text-books in the library of the Legislative Department by American and Italian writers would aid us effectively in working up the decisions of the Indian Courts and the Privy Council.

"I would then take up the law of Servitudes or Easements. The subject is, no doubt, most difficult and complicated. But we have the materials collected in England by Mr. Goddard, one of the gentlemen lately employed under a Royal Commission to prepare a specimen Digest, and we should doubtless receive on such a matter useful suggestions from the local authorities.

"We might then deal with Boundaries. An Act of a few sections would contain all the rules that are needed on this subject, [illegible] as to lateral and subjacent support, trees growing on or near boundaries, the rights of owners of land bordering upon water or bounded by roads, the duties of conterminous owners to maintain boundaries and fences.

"When these measures have been passed it will be found that the rights of the population will, to a large extent, have been ascertained and defined. Then (but not till then) we should take up the subject of Torts or Actionable Wrongs, laying down clear rules as to the measure of damages in the case of each. It has been objected (strange to say by a judge of the Calcutta High Court) that a Code of the law of Torts would suggest kinds of litigation now very rare, if not wholly unknown, in India. What if it would? Because the people are now unaware of the existence of their power to obtain redress by civil suit from those who infringe their rights, are we always deliberately to keep them in ignorance of such power?

"But let us examine the learned judge's [illegible] A collection of our law reports will shew that the Natives [illegible] for each of the three great classes of wrongs, namely, wrongs to the person (such as assault, malicious prosecution, libel, slander), wrongs to immoveable property (such as trespass, stoppage of water, obstruction of lights), wrongs to moveable property (such as wrongful distress, wrongful attachment, [illegible] representation).

thirdly, because many of the sources of the Hindú law have either not been translated at all, or (like the *Vyavahára Mayúkha*) translated so badly as to mislead rather than guide; fourthly, because even supposing we succeeded in codifying the Hindú law, the result would certainly not be applicable to the Hindús and Síkhs of the Panjáb, nor to the non-Aryan and non-Brahmanic population of the south of India, nor, I believe, to the Hindús in the Central Provinces, where local custom overrides Brahmanic jurisprudence, nor to the aboriginal hill tribes anywhere; lastly, because by codification we should stereotype laws which, however interesting from the archæological point of view, have (like all laws based on theological ideas) something irrational and inhuman about them. For instance, suppose we codified the Hindú law of Inheritance, we should have to found it on the notion that the right of each relation to succeed depends on his comparative efficacy in performing the obsequies of the deceased, and we should consequently have to exclude sons who chanced to be either blind or deaf, and brothers who were addicted to any vice. Suppose, again, we codified the Hindú law of Adoption, we should have to declare that an orphan could not be adopted, because, forsooth, there is no one to give him to his adoptive parent (2 Madras High Court Reports, 129). This, surely, is not the kind of jurisprudence that a civilized nation should try to perpetuate. The wisest and, I believe, the most welcome measure that could possibly be passed affecting the Hindús would be an Act enabling them to discard their own law of property, in other words to adopt (without prejudice to vested rights) the legal status of Europeans domiciled in India, the change of status being formally registered, publicly announced, and, when once made, absolute and irrevocable. This suggestion is immediately due to Mr. J. D. Mayne's paper (*Madras Journal of Literature and Science*, 1864-65) on the administration of Native law in the Courts of the Madras Presidency, the ablest essay that I have ever read on the subject of the law which should be applied to a conquered nation. The ultimate source of the suggestion is of course the well known decision of the Privy Council in *Abraham* v. *Abraham*, 9 Moore, I. A. 195.

"I have thus, I hope, shewn—

(*a*) that laws may be successfully codified in India:

(*b*) that the current objections to codification are groundless:

(*c*) that it is expedient to continue the work of codification except as regards the Native laws:

(*d*) that much remains to be done before that work is complete.

"In determining the order in which subjects should be taken up for codification, we should, of course, be influenced more by the actual wants of the country than by any love for logical arrangement, legal symmetry or scientific completeness. Bearing this in mind, we should, I think, first take up the three Bills which the late Indian Law Commission framed with a view of completing their Code of Contract law (Act IX of 1872). These are:—

"The Transfer of Property Bill, which deals with sales of land, mortgages, leases, fixtures, settlements, and powers, and which I now ask leave to introduce:

"The Insurance Bill, which deals with fire, life and marine insurance:

"The Negotiable Instruments Bill, which deals with bills of exchange, cheques and promissory notes, and which we propose to make an embodiment of the actual law on the subject in India and England.

"These three Bills no doubt require considerable modifications; but they could in a few months be made most useful measures, and would be welcomed by every one whose interest is not to keep the law obscure and inaccessible. The subject of Fire, Life and Marine Insurance is one of growing importance in

India, but (like the law of Master and Servant) it is contained in about two thousand reported English cases, patched with four Acts of the Indian Legislature. The Natives have no other law on this subject, though I believe that Hindú merchants have a custom of insuring goods sent by land or river from one part of British India to another. As regards Negotiable Instruments, no doubt we should abstain from contravening the custom of Hindú merchants as to hundís. But the proposed law need not be inoperative as to these instruments, for the Calcutta High Court has held that when the analogy between hundís and bills is complete, the English law applies. The opportunity, too, might be taken to remove the doubts whether a hundí payable to order is negotiable without the written endorsement of the payee (1 Hyde, 155): whether notice of dishonour is necessary in the case of a hundí (Coryton, 88). Of course the provisions as to cheques and promissory notes would extend to Natives as well as Europeans.

"We might then take up the subject of Master and Servant, to which I have already referred. The opportunity might be used to amend the law as to the right of servants to compensation for injury caused by the negligence of foremen in their master's employment, and to enable the Local Governments to establish a system of registering domestic servants.

"The subjects of Alluvion and Diluvion might then be dealt with. In Lower Bengal, in the Panjáb and in Sindh a clear and comprehensive law on these subjects is very necessary, and the text-books in the library of the Legislative Department by American and Italian writers would aid us effectively in working up the decisions of the Indian Courts and the Privy Council.

"I would then take up the law of Servitudes or Easements. The subject is, no doubt, most difficult and complicated. But we have the materials collected in England by Mr. Goddard, one of the gentlemen lately employed under a Royal Commission to prepare a specimen Digest, and we should doubtless receive on such a matter useful suggestions from the local authorities.

"We might then deal with Boundaries. An Act of a very few sections would contain all the rules that are needed on this subject, such as rules as to lateral and subjacent support, trees growing on or near boundaries, the rights of owners of land bordering upon water or bounded by roads, the duties of conterminous owners to maintain boundaries and fences.

"When these measures have been passed it will be found that the Rights of the population will, to a large extent, have been ascertained and declared. Then (but not till then) we should take up the subject of Torts or Actionable Wrongs, laying down clear rules as to the measure of damages in the case of each. It has been objected (strange to say by a judge of the Calcutta High Court) that a Code of the law of Torts would suggest kinds of litigation now very rare, if not wholly unknown, in India. What if it would? Because the people are now unaware of the existence of their power to obtain redress by civil suit from those who infringe their rights, are we always deliberately to keep them in ignorance of such power?

"But let us examine the learned judge's vague prophecy. The most cursory inspection of our law reports will shew that the Natives are in the habit of suing for each of the three great classes of wrongs, namely, wrongs to the person (such as assault, malicious prosecution, libel, slander), wrongs to immoveable property (such as trespass, stoppage of water, obstruction of lights), wrongs to moveable property (such as wrongful distress, wrongful attachment, false representation).

"Besides these, the Indian legislature has expressly recognized or provided for suits for loss of caste, which, I presume, means suits for compensation for expulsion from caste (Act VIII of 1859, section 298), false imprisonment (IX of 1871, schedule II, No. 21), seduction (*ib.* No. 27), obstructing ways and diverting water-courses (*ib.* Nos. 31, 32), taking, damaging or wrongfully detaining moveable property (*ib.* Nos. 26, 33, 34), *misuser* of property (*ib.* No. 38), infringement of patents (XV of 1859, sections 22, 23) and of copyright (XX of 1847, section 7), death caused by actionable wrong (XIII of 1855), negligence of carriers (III of 1865, sections 7 and 8), cattle-trespass (I of 1871, chapter VII), damage done to goods in a bailee's possession (IX of 1872, section 180), injury caused to an agent by his principal's neglect or want of skill (IX of 1872, section 225). It must be admitted that the whole of the English law of torts, except perhaps the law relating to slander of title, has been introduced into, and is actually administered in, British India; and if, in codifying that law, it be thought desirable to declare that certain injuries for which an action would now lie in England should not be actionable *in India*, what can be easier than to do so? I do not know what those injuries are, nor I suspect, does the learned judge; but we ought to make three amendments in our law of torts: first, we should bar suits for mere oral abuse (6 Beng. Appendix 99); secondly, we should finally get rid of suits for criminal conversation, which may apparently still be brought by Hindús; and thirdly, we should alter the law in the Presidency towns so as to allow an injured person to bring a civil suit without instituting criminal proceedings.

"The outline of a complete Civil Code would then be nearly filled in. There would remain the subjects of Parent and Child: Trusts: Gifts *inter vivos*: Accession to Moveables: certain Liens on Moveables: Carriers (Marine and Inland). The order of dealing with them is unimportant.

"The difficult task of arranging scientifically the various chapters of the Civil Code thus produced would then remain; and to the finished work we should either prefix or subjoin a chapter containing rules for its interpretation. The materials for this chapter are already collected in the works of Dwarris, Maxwell, and the American Sedgwick; and its enactment would afford a good opportunity for getting rid of the pernicious and illogical distinctions between the modes of construing remedial statutes, penal statutes, and statutes imposing charges on the subject, which have been imported from England by judges more familiar with the common-law than impressed by the importance of giving effect to the wishes of the legislature.

"And now, my Lord, I have nearly done. In carrying out this great work of codification the Government of India is well aware that it will meet with the hostility of many and (what is worse) the indifference of most of those for whose sake it is undertaken. Some of the judges will, I fear, oppose codification, because when once it is achieved it will limit their discretion and reduce them from their present position of judicial lawgivers to the comparatively humble, but useful, employment of interpreting and carrying out the will of the legislature. The baser sort of my own profession (not, I am glad to say, the more enlightened and unselfish members of it) will naturally oppose everything that tends to make the law clear and accessible, and thus to diminish litigation. The Indian public will doubtless be as indifferent to codification as the English public has hitherto proved to be. Nor can Your Lordship, or any of my colleagues, or I myself, hope to earn the fame which is justly due to those who finish a vast and useful work. For the measures which I have sketched out cannot possibly be prepared, criticised and passed into law in less than nine years, and before that time expires we shall all, so far as India is concerned, have

attained to official *nirvána*. But let the judges and lawyers be comforted with the assurance that we shall alter as little as may be the substance of the laws with which they are so familiar. The Eumenides shall not say to us, as they said to the younger gods, 'Ye have overridden the ancient laws' (*palaious nomous kathippasasthe*). Let the public be consoled with the pledge that no pains will be spared to make our drafts clear, brief and accurate, and that all competent criticism will be heartily welcomed and carefully utilised. And for us, my Lord, let us be satisfied with the consciousness that we shall have resumed, and to some extent carried out, the policy of providing a simple, compact and uniform system of law for the countless millions who now are, and hereafter will be, living and working and gathering wealth, gaining legal rights and incurring legal liabilities, under the beneficent rule of the Empress of India and Her successors."

His Excellency THE PRESIDENT said:—"The very able exposition of principles, and the lucid and interesting narrative of facts, which the Council has just had the advantage of hearing from the Hon'ble Member, who has asked leave to introduce this Bill, make it unnecessary for me to remind Hon'ble Members that the Bill is part of a great undertaking, and that this undertaking, commenced by men of great eminence and ability, has been, for some time, suspended. But I believe I am in a position to inform the Council that the Government of India now resumes the task of codifying the substantive law of India, not only with the sanction, but I think I may say with the sympathy, of the present Secretary of State. This is an encouraging fact.

"My hon'ble colleague has reminded us that codification has been regarded, not only with reluctance, but with some degree of mistrust, by a large and influential body of legal opinion, which has lent its authority to confirm the impression that codification is either not feasible, or, if it be feasible, not beneficial. However, I noticed with considerable satisfaction some months ago that the Chief Justice of England—of whose genius and patriotism all England is justly proud—did not hesitate, in a public speech he then made, to declare that, in his opinion, the time had come for England herself to follow the example of other civilized States, and make haste to get rid of what a great English Poet has called:

> 'the lawless science of our law,
> That codeless myriad of precedent,
> That wilderness of single instances.'

"Now it so happens that my own official life, although wholly unconnected with the legal profession, has led me, at various times, to reside in different continental countries, all of which already possess a completed Civil Code. For instance, I may mention France and Prussia, to which my hon'ble friend has referred; also Austria, Portugal, Italy and Denmark; which latter country was,—according to Bentham,—the first in Europe to codify its law. Perhaps, then, I may be allowed to record the fact that, in all these countries, codification has been found to be not only feasible but exceedingly beneficial to the whole community, and very conducive to the comfort of all classes. I am quite certain that, both in Prussia and France, the present Civil Code, as now revised and amended, is regarded by the whole population as one of the greatest blessings which Government could have given it. Therefore, I think I am entitled to congratulate my hon'ble colleague, Mr. Stokes, upon having inaugurated his administration of the great Department of Government over which he now presides by the question which I have now to put to the Council."

The Hon'ble SIR EDWARD BAYLEY said that he did not wish for a moment to dissent from the broad principles which his hon'ble friend Mr. Stokes had laid down, or in any degree to depreciate the very great and important task which he had taken upon himself; but at the same time there were passages in his speech, and details of his aspirations, with which he (SIR E. BAYLEY) felt he could not altogether concur; such, for example, as the hope expressed that by codification we should be able to deal eventually with the question of infant marriages. That question, he personally believed, was not matter for legislative action at all. He was by no means prepared to concur in a measure of this kind, and, although in the main agreeing with his hon'ble friend, he wished to record his dissent from any such proposals.

The Hon'ble MR. STOKES explained that he had mentioned infant marriages merely by way of illustration of his meaning. He had expressly stated that the Government of India had no intention of passing any law on the subject.

The Hon'ble SIR EDWARD BAYLEY said he demurred even to the employment of such an illustration.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 14th June 1877.

SIMLA,
The 31st May 1877.

A. PHILLIPS,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

Proceedings of the Board of Revenue, Madras, No. 2374, *dated* 24th *May* 1877.

Read relief reports for the week ending 12th May 1877, from Kistna, dated 15th May, and from Kurnool and South Arcot, dated 16th May 1877.

The Board submit to Government, in continuation of their Proceedings No. 2297, dated 18th May 1877, the detailed relief reports for the Kurnool, Kistna and South Arcot districts for the week ending 12th May 1877.

2. Prices in *Kistna* show continued tendency to rise, but not seriously. In *Kurnool* the prices of all food-grains have risen in Nandial, those of ragi and cumbu heavily. Ragi has also risen about 11 per cent. in Koilkuntla. Other changes are unimportant. In *South Arcot* prices have risen, but they are still considerably lower than in most of other districts.

3. There was one inch of rain in the north-west of the Kistna district; as a slight shower (0·1 inch) at Ramalkota in Kurnool, and 1·7 inches at Trikalore in *South Arcot*.

4. In *Kistna* a small sum was spent on the Bank Canal, but the numbers employed are not reported. There were 2,149 persons on the Commamur Canal, on which Rs 1,468 were spent. In *South Arcot* a few minor works employed 1,627 persons. In *Kurnool* the details of numbers by taluks are as follows:—

	5th May.	12th May.	
Ramalkota	32,863	32,610	— 253
Nandikotkur	15,249	20,307	+ 5,058
Nandial	23,571	28,644	+ 5,073
Sirwell	18,044	19,672	+ 1,628
Koilkuntla	31,670	28,452	— 3,218
Pattikonda	27,578	16,946	—10,632
Cumbum	47,684	47,932	+ 248
Markapur	8,130	10,295	+ 2,165
Total	204,789	204,858	—69

The increase in Nandikotkur is due to coolies on works stopped on 5th May having joined the Bairlooty road to which they were directed, and partly to influx from Hyderabad. In Nandial the increase is due to a cause similar to the first of these, in reference to the trunk road under the Department Public Works; in Sirwell to increased distress, and in Markapur to persons improperly admitted to village relief having been drafted to the works by the inspecting officers. The decrease in Pattikonda is ascribed to concentration and to emigration to the East Coast Canal, and in Koilkuntla to the latter cause only. The rates of wages are the same as in last week, except in Cumbum, where the money-wages have been slightly reduced, and the wages in grain alone converted into grain and money as ordered by Government.

5. Gratuitous relief was given to 382 persons in Kistna, of whom 288 were in camps in Bapatla, Guntoor and Bazwada, and the rest 94 in 31 villages. The Vennukonda camp has not been started yet. In *South Arcot* there is one relief house at Chengam, with 751 persons, and relief was given in 65 villages to 9,015 persons. Of these, 1,827 were in 40 villages in the Trinomalai and Tindivanam taluks. In Kurnool the number in camps are 6,903 against 6,864 on 5th May; those in villages 13,394 against 14,037; and the young children receiving 3 pies are 40,752 against 43,916. The decrease under the last class is satisfactory, and the Collector is doing all to prevent fraud under village relief, the dimensions of which, however, are not at all extreme considering the condition of the district. In Ramalkota the numbers of young children are nearly one-third, and in Cumbum one-fourth, of the total number on the works. These propositions are far too high. There were 27 deaths in the Ramalkota relief houses; it is doubtful whether report as to mortality has been furnished from other taluks:

	5th May.	12th May.	
Ramalkota	15,363	14,239	— 1,124
Nandikotkur	3,533	5,742	+ 2,209
Nandial	8,128	4,642	— 3,486
Sirwell	6,470	6,510	+ 40
Koilkuntla	5,772	6,093	+ 321
Pattikonda	6,977	4,618	— 2,359
Cumbum	13,071	13,861	+ 790
Markapur	5,503	5,344	— 159
Total ..	64,817	61,049	— 3,768

The details of total numbers are given marginally.

H. E. STOKES,
Secretary.

Talukwar Abstract of relief in certain districts of the Madras Presidency, for the week ending Saturday, the 12th May 1877.

(Signed) H. E. STOKES,
Secretary.

REVENUE BOARD OFFICE,
MADRAS;
The 24th May 1877.

Memorandum as to the Dynamic Value of the task exacted from Labourers on relief works.

Parkes' (Manual of Hygiene, page 389) states:—"It would, therefore, seem certain that an amount of work equal to 500 tons lifted one foot is an extremely hard day's work, which, perhaps. few men could continue to do. 400 tons lifted a foot is a hard day's work, and 300 tons lifted a foot is an average day's work for a healthy strong adult."

"The Reverend Professor Haughton, D. M., has shown that walking on a level surface is equivalent to raising $\frac{1}{20}$ part of the weight of the body though the distance walked. * * * The formula is $\frac{(W+W')\times D}{20\times 2240}$, where W is the weight of the person, W' the weight carried, D the distance walked in feet, 20 the co-efficient of traction, and 2,240 the number of pounds in a ton, the result is the number of tons raised one foot" (Parkes *loc cit*).

Taking 105 lbs. as the weight of a native labourer, and reducing Parkes' estimate of an average day's work in proportion to this weight as compared with 150 lbs. (the weight of an average male European adult), we have as 150 : 105 : : 300 : 210. 210 tons lifted a foot is, therefore, Parkes' estimate of an average day's work, reduced proportionally to weight.

Using Haughton's formula, we find that a man weighing 105 lbs. and carrying 10 lbs., walking on a level does work equal to lifting 13·51 tons one foot for each mile walked; for $(105+10)\times 5280\div 20=30{,}260$ foot-pounds $\div 2{,}240=13{\cdot}509$ foot-tons.

Also $210\div 13{\cdot}51=15{\cdot}55$. Hence, a man weighing 105 lbs. and carrying 10 lbs. in walking on a level 15·55 miles, does work equal to raising 210 tons one foot, *i. e.*, an average day's work of 300 foot-tons reduced proportionally to his weight.

"The basis of the task system upon irrigation works is that in ordinary times, when the lift does not exceed 4 feet, and the lead does not exceed 50 feet, 100 cubic feet of black or red soil can be excavated and disposed of by one man, one woman, and one child, and therefore at the present time 75 cubic feet only is to be exacted. * * * * I am therefore of opinion that under the existing orders of Government the present task set by Colonel Finch is too high, and should be reduced to 75 cubic feet for Public Works Department, and to 50 cubic feet for Civil Agency Works."—(Colonel Merriman, B. E., Chief Engineer for Irrigation, Bombay. No. 1516, dated 5th March 1877, para. 3).

Estimation of the Dynamic Value of a task of excavating and disposing of 75 cubic feet of black or red soil with a 4-foot lift and 50 feet head, the task demanded on relief works under Public Works superintendence from a man, woman, and child.

For the purpose of calculation, the above task may be stated something in the following way:—

1. Excavation and filling baskets, say 3 baskets to a cubic foot.

2. Lifting the baskets on to the heads of the carriers, say 5 feet 6 inches; say 80 lbs. to the cubic foot; allow 2 lbs. for weight of basket.

3. Carrying away the earth and returning with the empty baskets.

1. *Excavation and filling baskets.*—A rather low estimate of a day's work for an English labourer employed in excavating earth and filling wheel-barrows is 270 cubic feet. Taking the dynamic value of this to be 350 foot-tons, 75 cubic feet=97·2 foot-tons.

2. *Lifting the baskets on to the heads of the carriers.*—$86\times 75\times 5\frac{1}{2}=35{,}745$ foot-lbs. $\div$ $2{,}240=15{\cdot}84$ foot-tons.

3. *Carrying.*—Take for this $75\times 3=225$ trips. The work of each trip consists of *a'*. 105 lbs. (weight of body)+5 lbs. (for clothes and baskets)+26·66 lbs. (=80÷3 or weight of earth) lifted 4 feet+50÷20 (for lead)=total lift $6\frac{1}{2}$ feet=136·66 lbs.$\times 6{\cdot}5$ feet=888·3 foot lbs.; *b'*. Return with empty basket $110\times 2{\cdot}5=275$ foot-lbs.—Hence $888{\cdot}3+275\times 225\div 2{,}240=116{\cdot}85$ foot-tons.

Hence, supposing the whole task to be done by a man weighing 105 lbs., its dynamic value is $97{\cdot}2+15{\cdot}84+116{\cdot}85$=say 230 foot-tons. This, however, is the whole task demanded from a man, woman, and child. Taking the man's work at half of this, we have 115 foot-tons as the dynamic value of the day's work of a man weighing 105 lbs. employed on relief works under Public Works superintendence.

Again, on relief works under Civil Agency two-thirds only of the above task is required $=153\frac{1}{3}$ foot-tons for the whole task of a man, woman and child; and taking, as before, half of this to be the proportion done by the man, we have $76\frac{2}{3}$ foot-tons as the dynamic value of the task demanded from men weighing 105 lbs. employed on relief works under Civil Agency.

Hence, taking 210 foot-tons as an average day's work for a man weighing 105 lbs, (see *ante*) the task of 115 foot-tons demanded from a man (weight assumed as 105 lbs.) on relief works under Public Works superintendence amounts only to 54·75 per cent. of an average day's work. Similarly, $76\frac{2}{3}$ foot-tons, the task demanded on relief works under Civil Agency from a man (assumed weight 105 lbs.) amounts only to 36·6 per cent. of 210 foot-tons, *i.e.*, 36·6 per cent. of an average day's work.

Stated in another way:—it has already been shown that a man weighing 105 lbs. and carrying 10 lbs., walking on level ground does work=13·51 foot-tons for every mile walked. Hence, as 115÷13·51=8·52, and as 76⅔÷13·51=5·68, the task demanded from a man weighing 105 lbs. on relief works under Public Works superintendence is just equal to the work which he would do in walking 8·52 miles on level ground carrying 10 lbs. Similarly, the work demanded from a man weighing 105 lbs. on relief works under Civil Agency is just equivalent to the work which the same man would do in walking 5·68 miles on level ground, carrying 10 lbs.

To show now that natives of India are capable of doing work in proportion to their weight, reckoning 300 foot-tons as an average day's work for a man weighing 150 lb., I cite the two following instances:—

1. An ordinary day's work for 12 palkee bearers is to carry a palkee down from Matheran to Narel and bring it back from Narel to Matheran with a person inside. The distance from Narel to Matheran is 7 miles; the height of Matheran above Narel is 2,377 feet. One of the palkees was found to weigh 195 lbs., and the average weight of the bearers was found to be 117 lbs. as they stood, say 115 lbs.+2 lbs. for clothes. Taking the up-journey only, and supposing the individual inside the palkee to weigh 125 lbs., the load of each bearer=195+125÷12=26·66 lbs; and 26·66+117=143·66 lbs., lift 2,377 feet;+for the 7 miles carried 5,280×7÷20=1,848 feet; 143·66×(2,377+1,848)÷2,240=270·96 foot-tons. The work, therefore, of the up-journey only=270·96 foot-tons, considerably above 230 foot-tons, *i. e.*, 300 foot-tons reduced in the proportion 150 to 115.

2. The recognized load for a Narel cooly is 40 lbs. This, although brought up to the same height, is carried generally a part of the way by short cuts, reducing the distance walked to about 5 miles. Hence, 117 + 40=157 lbs. lifted 2,377 feet + for the 5 miles 5,280 × 5÷20=1,320 feet, and 157 × (2,377 + 1,320)÷2,240=259 foot-tons. Taking no account of the walk back unloaded, this is also considerably above 230 foot-tons, *i. e.*, 300 foot-tons, reduced in the proportion 150 to 115.

I. B. LYON, F.C.S., Surgeon-Major,
Chemical Analyser to Government.

Bombay, 12th May 1877.

Correction of certain errors in Rainfall statement of Mysore.

No. 2076-240G., dated Bangalore, 29th May 1877.

From—MAJOR T. G. CLARKE, Officiating Secretary to the Chief Commr. of Mysore,

To—THE HON'BLE T. C. HOPE, C.S.I., Additional Secretary to the Government of India, Department of Revenue, Agriculture and Commerce Dept.

SOME errors having been found in the statistics of rain fall furnished by one of the Amildars of Taluks in the Chitaldroog District, I am desired by the Chief Commissioner to request that you will be good enough to cause the following corrections to be made in the statements attached to the Special Famine Reports, as denoted hereunder:—

	Inches.	Cents.
Against Chitaldroog in column 33 of the return No. 11, insert ...	1	30
Ditto in column 32 of the returns Nos. 12 and 13, for ...	10	8

Condition of Native States in Bombay.

No. 480, dated Simla, 28th May 1877.

From—The Honourable T. C. HOPE, C. S. I., *Additional Secy. to the Govt. of India,*
To—The Secy. to the Govt. of Bombay, Public Works Dept.

I AM directed to acknowledge the receipt of your letters quoted in the margin, forwarding, as requested in paragraph 6 of my letter of November 30th, 1876, information regarding the condition of Native States comprised in the portion of the Bombay Presidency affected by famine.

No. 20E—85 of January 17th.
No. 177E—627 of March 20th.

2. This information being in some cases imperfect as regards area, population, revenue, or proportion of kharif and rabi cultivation, it has not been found possible to compile it into a definite review such as that regarding the British districts which was issued in the Resolution of the Government of India, No. 212, dated February 21st. In view, however, of the difficulty which has no doubt been experienced in obtaining reliable statistics regarding Native States, and of the general view of their condition which has been afforded by the weekly statements, and by the correspondence which has passed in certain cases, His Excellency the Governor General in Council considers it unnecessary to trouble the Government of Bombay with further calls upon the subject.

3. From the various sources of information which are available, it would appear that the States which have been affected by famine, or the condition of which, in view of their probably becoming so, has been the subject of careful enquiry, comprise, roughly speaking, an area of 9,708 square miles and a population of 2,073,066, and that the portion actually suffering from scarcity is at present estimated by the Bombay Government at 4,804 square miles, with a population of 847,848 persons. The following table shews some of the more prominent points regarding each State:—

Names of States.	Approximate gross revenue.	Area.		Population.		By latest accounts.		
		Total.	Affected.	Total.	Affected.	Numbers on works.	Actual expenditure.	Price of staple grain in lbs. per rupee.
	Rs.						Rs.

4. As regards failure of crops the case of each State appears to be somewhat as follows :—

Akalkote.—The failure has been about five-sixths of an average crop, or nearly as bad as in the adjoining district of Sholapur.

Jinjeera.—Half the rice crop and three-fourths of the warkas crop have failed, and heavy remissions have been given, but the proximity to Bombay has prevented scarcity of grain.

Jath.—The failure has been almost complete, and the distress similar to that in the adjoining Sholapur and Kaladgi districts.

Phaltan.—Failure nearly the same as in Jath.

Pant Pratinidhi.—A portion of the State is alone much affected, but the failure there has exceeded half the crop.

Pant Sachiv.—This State, owing to its proximity to the Ghauts, has almost entirely escaped loss.

Kolhapur.—The eastern taluks have alone suffered, and that not very severely. The four feudatories likewise have done fairly. On the whole, it would seem that the average loss in affected parts does not exceed half the crop: about two-thirds of the land revenue will be recovered.

Sangli has lost nearly the whole of both *kharif* and *rabi* crops.

Miraj.—Both the senior and junior branches of this State have saved about one-fifth of their crop, on an average, but in some parts the failure has been complete.

Kooryndwar.—The senior branch has got about a half crop, and the junior branch considerably more, so the distress is very slight.

Jamkhandi.—The failure may be said to be complete.

Mudhol.—About one-fifth of the crop has alone been saved.

Ramdurg.—Nearly the whole *kharif* crop has been lost, but the *rabi* has yielded about one-third of an average.

Savanur.—The failure has been slight, except in a few villages.

Sawant Wari.—The yield has been from one-half to three-fourths throughout, so that the distress, if any, is very slight.

5. The circumstance that Akalkote, Jath, Kolhapur with all its four feudatories, Miraj (senior), Sangli, Mudhol, and Sawant Wari, are all under British administration, in consequence of the minority of their chiefs, has tended materially to strengthen the hands of the Government in extending to the suffering people of the territories under their political jurisdiction the measures of relief applied to British subjects. The same fact has tended to render available ample funds for the purpose, the accummulated revenues of Kolhapur and its feudatories, for instance, aggregating twenty-seven and a half lakhs of rupees, and those of Miraj (senior) and Mudhol about fifteen lakhs more.

6. The organization of relief works has been found necessary in all the States excepting Jinjeera, though in some the works are only of a trifling nature. The necessity of every State providing for its own distressed population was brought prominently to the attention of the Bombay Government by the Government of India (No. 1 T, dated December 20th, 1876), and the principle was approved of by the Secretary of State in his despatch No. 21 of the 28th February last. His Excellency the Governor General in Council fully concurs in the efforts in this direction which have been made by the Bombay Government in its orders quoted marginally, and has every confidence that at the present time, when the famine is pressing with daily increasing stringency, no means will be spared to ensure that the relief works in Native States, and the house to house visitation, shall be equal to the occasion.

No. 276E—892 of 19th April.
No. 317E—1021 of 2nd May.

7. With reference to the important question of the freedom of the grain trade, His Excellency the Governor General in Council has only to repeat the full concurrence, expressed in my letter No. 272 of March 7th, in the efforts of the Government of Bombay to suppress the tendency to interference which has been somewhat marked in certain cases, especially in the recent one of Sawant Wari.

8. In conclusion, I am desired to express the sympathy of His Excellency the Governor General in Council with the Political Officers of Bombay in the arduous and delicate task which has fallen to them, and his appreciation of the measure of success which so far, under the guidance of the Local Government, appears to have attended their labours.

Weekly condition report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 15.)

Condition report for week ending 19*th May* 1877.

Bangalore District.—Markets continue fairly supplied, and prices were, on the whole, steady. Rain fell throughout the District, the quantity gauged at head-quarters of taluks ranging from 20 cents to 2·25 inches and some tanks received from 15 to 60 days' supply of water. Heavy rain fell at Bangalore on the 17th and 18th May, and 1·30 inches were registered at the Government Observatory. These showers have largely benefited the standing crops, and enabled the ryots to resume their agricultural operations. The prospects of the season have consequently improved somewhat. Cholera and small-pox are still prevalent, and cattle suffer from want of good and sufficient fodder.

Kolar District.—Markets fairly supplied. Prices remained steady, except in three taluks where they fell slightly. Rain had fallen in all the taluks, the quantity registered at head-quarters varying from 1 to 3 inches. Some of the tanks in the District received a fair supply of water. These showers have so far proved favourable to the standing crops. Cholera, small-pox and fever still prevail. Cattle suffer generally from want of forage.

Tumkúr District.—Markets continue fairly supplied. Prices remained stationary, excepting in the Chiknayakanhalli and Kunigal Taluks where they fell slightly. Rain fell throughout the District, and as much as from 21 cents to 2·04 inches were gauged at head-quarters of taluks. Eleven tanks in the Koratagere Taluk and a few more in other parts of the District received from 8 to 60 days' supply of water. The rainfall during the week has infused hope and induced the agricultural classes forthwith to commence ploughing operations. New jwari crops are being sown in some places. The standing paddy crops under wells are promising well and the condition of the gardens is improving somewhat. Cholera, diarrhœa and small-pox are prevalent.

Mysore District.—Markets continue fairly supplied, but prices have risen slightly in some taluks. There was no rain during the week in Yedatore and Heggaddevankote Taluks where the crops are reported to be withering. The rainfall in the other taluks was scanty, but has slightly benefited the standing crops. Fresh sowings were carried on in parts of Chamrajnagar, Mysore, Periyapatna and Gundlupet Taluks. Cholera is still prevalent throughout the District, and cattle suffer from want of forage and also, in some places, from murrain.

Hassan District.—Markets continue fairly supplied. Prices fluctuated. Light showers of rain fell in all the taluks of the Districts except two, and a small supply of water was stored in some tanks. The standing crops of paddy, javari, gingelly, oil seed, and other cereals in the Hassan, Arkalgúd, Belur, Harnhalli and Narsipur Taluks, are suffering from want of rain. Paddy is being harvested in the Manjarabad Taluk. Cholera is prevalent in all the taluks, and also small-pox, fever and dysentery in Belur, Manjarabad and Narsipur.

Shimoga District.—Markets fairly supplied, except in some villages of the Channagiri and Honnali Taluks, where cholera prevented importation on a large scale. Prices pretty steady. There was a slight shower of rain in three taluks only. The sugarcane crop in the Shikarpur and Ságar Taluks is suffering from want of rain, while in the Kavalédurga Taluk the standing crops are doing well. There was no improvement since the submission of the last report in the prospects of the season. Cholera prevails in all the taluks except Nagar, but is on the decline.

Kadur District.—Markets sufficiently supplied. Prices unsteady. Rain fell in three out of six taluks, the maximum quantity registered being 50 cents at Lakvalli. Paddy, javari, ragi and other cereals are being sown in the Lakvalli, Koppa, Chikmagalur and Banavar Taluks. The prospects of the season are indifferent and the public health is bad, cholera and fever being prevalent throughout the District.

Chitaldroog District.—Markets continue fairly supplied, except in three taluks where cholera checked importation. Price of ragi has risen in some places. Rain fell in all the taluks, the quantity registered at the head-quarters ranging from 60 cents to 3·05 inches, and some tanks received a supply of water. In many places the ryots have commenced ploughing operations. The standing crops are generally in a fair condition. Prospects remain unaltered. The health of the people has improved somewhat, although cholera still prevails more or less throughout the District. Cattle suffer much from want of fodder.

GENERAL REMARKS.

During the week ending 19th May, rain had fallen very generally in the Province; but in the Mysore, Hassan, Shimoga and Kadur Districts, the rainfall was rather scanty. In the Nundydroog Division, however, there have been constant and copious falls which, to some extent, have relieved the apprehensions of the agricultural classes in the three most distressed districts of Bangalore, Túmkúr and Kolar. The south-west monsoon has not, as yet, set in, but, in expectation of getting more rain, the ryots have resumed ploughing operations, and fresh sowings have taken place in some taluks. In parts of the Mysore, Hassan and Shimoga Districts, the young crops, it is reported, begin to show signs of withering and are, therefore, absolutely in need of rain.

2. Prices of food grains were, on the whole, steady. There was a slight fall in the Kolar District and a rise in the Shimoga and Kadur Districts.

3. Public health has not much improved, as epidemics of cholera and fever are still prevalent. The number of deaths from cholera, reported during the week, was 1,096 as shewn below, being 150 less than that of the previous week:—

Bangalore District	... 169	Shimoga District	... 100
Kolar „	... 125	Kadur „	... 15
Túmkúr „	... 149	Chitaldroog „	... 123*
Mysore „	... 234		
Hassan „	... 181	Total	... 1,096

4. The number of works in progress under Revenue Officers was 2,276 as against 2,200 of the previous week. The daily average number of distressed persons employed was 29,933 or 2,348 less than in the preceding week. There was, however, a small increase of 244 persons on works under officers of P. W. D., the average daily attendance being 34,466 as against 34,222 of previous week. The heavy rainfall on the 16th instant has, it is said, induced a certain number to forsake the works and to return to their villages to commence ploughing. In some places outbreaks of cholera have seriously impeded work. The Executive Engineer of the Kadur Range reports that cholera has been so bad on one work (opening out Basavankanave ghât) that hardly a cooly will work on it.

5. The daily average number of persons, who were recipients of gratuitous relief at the kitchens, was 108,482, or 6,083 more than in the previous week. The numbers have been steadily increasing in almost every District which, the Commissioner of Ashtagram Division explains, is due, partly, to the prosecution of house-to-house inspection, and partly, to increasing applications from wandering paupers, many of whom are not fit to be employed on works, the majority of them being women with young children. The proportion of men, women and children fed at the kitchens is shewn in the following table:—

	No.	Percentage to the total No.
Men	25,478	23·5
Women	39,066	36·0
Children	43,938	40·5
Total ...	108,482	100·0

* The number of deaths from cholera in the Chitaldroog District for the week ending 19th May was 123, but ten cases were, by mistake, omitted to be included in the season telegram of the 24th idem.

6. It has been ascertained that there were only 36 Mysoreans employed on works in Madanapalli Taluk, Cuddapah District, of H. M.'s Territory. Arrangements have been made to bring them back to their own taluks.

7. The number of persons belonging to Her Majesty's Territory, who were fed at the kitchens in Mysore, was, during the week under review, 826 as against 880 of the previous week.

8. The weight of grain received by rail, during the week, was 3,661 tons as shewn below, being 47 tons more than in the previous week:—

From Madras	2,651 tons.
„ Beypore	456 „
„ Sholapur and Nagpore on the G. I. P. Railway ...	47 „
„ Negapatam and other stations on the S. I. Railway...	400 „
„ Kolar district	8 „
„ the neighbouring districts of the Madras Presidency	99 „
Total ...	3,661 tons.

The daily average amounted to 523 tons.

9. About 2,263 tons of grain were exported from Bangalore into the interior of the Province to the frontier taluks of the Madras Presidency as noted below:—

Towards the Túmkúr district	882 tons.
„ Bellary and Chitaldroog districts ...	189 „
„ Mysore district	285 „
„ Oossoor in the Salem district ...	291 „
To the taluks adjoining Bangalore	616 „
Total ...	2,263 tons.

10. The supply of grain appears to be ample for all present needs. The Commissioner of Ashtagram Division reports that markets continue fairly supplied, partly by home-grown produce and, partly, by importation. The taluks of the Mysore District, with the exception of Mandya, are, it is believed, self-supporting, the home-grown produce, chiefly from lands under the river channels, being sufficient for the population. But the greater part of Hassan District is dependent for supplies on the Mysore District and the inland markets of Bangalore and Tiptur on one side and on the Western Coast on the other. "Great efforts," Colonel Hay writes, "are being made by local traders and ryots to bring Canara boiled rice from Mangalore before traffic is stopped by the monsoon, and an entirely new trade in ragi brought by sea to Mangalore has been developed by the present scarcity."

11. The difficulty of procuring forage for cattle is said to be decreasing owing to the recent rainfall, but the great mortality which has already taken place, as reported in the last narrative, has impoverished many a ryot and deprived him of his agricultural stock. In the Ashtagram Division, the condition of the cattle is said to be improving in some places. Grass has sprung up along the water-courses, pasture lands, &c., by which the sheep are specially benefitted. A greater portion of the cattle sent to the jungles has returned. The Commissioner reports that, owing to the great demand for dry straw from the Túmkúr and other districts to the eastward, the thatch of houses has, in some instances, been sold, and the Malnad ryots, who were in the habit of using the straw for manure, have this year used nothing but tank silt, as they have sold off their whole stock of straw.

"By Order,"

T. R. A. THUMBOO CHETTY,

Assistant Secretary.

Weekly Relief Report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, Madras, No. 2535, dated 1st June 1877.

Maps for—

Nellore.
Bellary.
Cuddapah.
Chingleput.
North Arcot.
Kistna.
Madura.
Coimbatore.
Salem and South Arcot.

Statements.

No. 1. Prices.
„ 2. Relief Report
„ 3. Talukwar Abstract of Relief reports.
„ 4. Talukwar Statement of gratuitous relief.
„ 5. Districtwar ditto.
„ 6. Memo. of sums sanctioned.
„ 7. Works under supervision of Department Public Works.
„ 8. Number and description of works.

The relief reports for the week ending 26th May are submitted to Government with Maps and Statements as per margin.

2. *Prices.*—The steady rise of prices which had been going on for some weeks appears to have been checked by the rains of the week ending 19th May, and the district averages for the 26th show a generally stationary condition of prices. In the *Kistna* district rice has fallen and dry grains risen, but very slightly. The *Nellore* prices, especially in the Northern taluks, tend to fall. There is scarcely any change in *Cuddapah*; a tendency to fall in Madanapalli and Kadiri is apparent, but at Peelan all grains except cholum and at Chitwail all except ragi have somewhat risen in price. In *Bellary* prices are stationary at head-quarters, but in the western taluks of Kudligi and Hadgalli all prices have risen, especially those of rice. At Aden also rice, ragi and cumboo have risen, but at Tadpatri all grains are cheaper. In the southern taluks prices are either stationary or falling, and except for rice which is dearer the district averages show slightly easier prices. In *Kurnool* and in *Chingleput* and *South Arcot* prices are almost stationary. In *North Arcot* they tend to fall, rice being cheaper at 4, cholum at 3, and ragi at 6 stations. Cumboo, however, shows a small rise. In *Trichinopoly* ragi has risen at Udayarpalem and in *Madura*, though rice has risen in the Sub-division, dry grains are cheaper. In *Tinnevelly* there is no change of importance. In Collegal in the *Coimbatore* District, there has been a fall of about 10 per cent. on the very high rate for rice noted last week. The price of ragi is stationary in the taluk. In Pollachy all rates have risen, as have those for cholum and ragi at Coimbatore, there is no other marked change. In *Salem*, the only changes calling for notice are a sudden rise in the price of rice at Tripatoor from 8 to 6·4 seers, and a fall in cholum at Ahtur from 10·01 to 13·56 seers per rupee.

3. *Rainfall.*—There was rain in all the distressed districts during the week. A heavy fall occurred in the western taluks of the Guntoor Division of the *Kistna*, 5·65 inches having been received at Narasarowpett, 3 inches fell at Masulipatam. In *Nellore* rain varying from 0·45 to 1·5 inches fell in the central taluks. Rain fell in all taluks of Cuddapah except Pulivendala and Kadiri. In *Bellary* 1·5 inches were received at Penkonda, but only trifling showers in two other taluks; and in *Kurnool*, there were showers at Nandial. *Chingleput* had rain in 3 taluks, and in *North Arcot* rain was general; but it would seem that some of the previous week's fall has been included in the present return. In *South Arcot* rain fell in all taluks except Tindivanam. In *Trichinopoly* and *Madura* the fall was general but light. Pulni however received 1·5 inches. In *Tinnevelly* 1 inch fell in Sattur. At Collegal in *Coimbatore* 4·5 inches were registered and lighter rain in the northern and eastern taluks. All talooks of *Salem* except Kistnagiri received rain. Except in *Bellary* and *Kurnool* the rainfall of the week was on the whole favourable.

4. The grants made to the 26th May for district relief amounted to Rs. 1,58,35,283 and the outlay against them was as follows:—

	In the week. Rs.	Up to the week. Rs.
Relief works	4,53,789	1,30,97,349
Gratuitous relief	1,17,070	10,44,700
Total ...	5,70,859	1,41,42,049

5. *Numbers on relief works.*—The district totals are compared below with the returns for the previous week:—

	19th May.	26th May.	
Kistna	2,765	706	—2,059
Nellore	24,445	26,731	+2,286
Cuddapah	77,876	80,643	+2,767
Bellary	288,179	261,482	—26,679
Kurnool	203,742	207,836	+4,094
Chingleput	6,146	12,123	+5,977
North Arcot	38,892	49,621	+10,729
South Arcot	2,235	1,830	—405
Madura	12,681	12,314	—367
Tinnevelly	463	410	—53
Coimbatore	22,801	25,679	+2,878
Salem	55,209	56,146	+937
	735,434	735,521	+87
East Coast Canal	62,098	42,481	—19,617
	997,532	778,002	—19,530

6. The numbers on district works have fluctuated considerably but the total reported is nearly the same as on the 19th May. The decrease in *Bellary* is however, as will be seen below, to a great extent unreal. There is a great and unexplained decrease, nearly 20,000, in the numbers on the East Coast Canal. The decrease in *Kistna* is probably due to the recommencement of agricultural operations. In *Nellore* the increase occurs almost entirely in the Zemindari divisions. In *Cuddapah* numbers have increased in Jammalamadugu by 2,830, owing to increased pressure; in Budwail by 4,140, since emigration to Nellore has been discontinued, and in the subdivision taluks of Rayachoti and Madanapally, reason not stated. In all the other taluks, numbers have fallen owing to employment being obtainable in agriculture.

	19th May.	26th May.	
Adoni	64,636	63,460	−1,176
Alur	28,203	31,383	+3,180
Gooty	11,755	12,530	+775
Tadpatri	11,463	11,743	+280
Anantapur	14,352	15,927	+1,575
Dharmaveram	9,131	1,186	−7,945
Pennakonda	9,982	7,045	−2,937
Hindupur	2,866	1,226	−1,640
Madakaira	24,335	20,851	−3,484
Raidrug	10,166	10,063	−103
Bellary	27,283	21,785	−5,498
Hospett	22,857	26,315	+3,458
Sundur	3,276	2,980	−296
Kudligi	18,412	15,839	−2,573
Harpanhalli	10,425	10,492	+67
Hadgalli	19,037	8,657	−10,380
Total ...	2,88,179	2,61,482	−26,697

7. The *Bellary* numbers, which decreased by 26,697, are compared by taluks in the margin.

The decrease is to a great extent nominal, the returns for Dharmaveram and Hadagalli being imperfect. Of the increases, that in Hospett is ascribed to influx of coolies from other taluks as to which report should be furnished, and those in Alur and Anantapur to increased pressure. The Kudlighi report explains an increase by influx from other taluks but the numbers show decrease. The Collector will explain. In the Bellary taluk the decrease is due to the completion of the Gooty road work and to drafts of men to the railway, which however employs only 3,615 persons, that in Hindupoor is ascribed to a fall of rain on the date of the return; in Madakaira to Mysore coolies who had again apparently gained admittance being sent away. In Penkonda partly to demand for agricultural labor and partly to incorrectness of return, and in Adoni to drafts to the railway.

The increase in *Chingleput* is chiefly due to the Chingleput-Conjeveram railway, which employed 5,548 persons on the 26th against 2,607 on the 19th May. The numbers on ordinary relief works have also generally increased. The increase in *North Arcot* is mainly due to the fact that there was no return from the Vellore taluk (7,418) in last week, but the numbers in Palmanair, Arcot and Wallajah have also gone up. Those in the Eastern Zemindaries have decreased by 2,063; 1,447 persons were still at work on the Madras railway line. In *Madura* there is decrease in all taluks except *Pulni* where fresh works have been opened. Works have been ordered to be stopped in *Tinnevelly*, but one minor work, incomplete, is still in progress. In *Coimbatore* numbers have gone up in Erode, Bhowany, Pollachy (where distress has recently appeared) and Dharapuram. In other taluks there has been decrease. The *Salem* increase occurs chiefly in Dharampuri and Kistnagiri.

8. *Wages.*—The increase of wages ordered in G. O. 22nd May, No. 1788, had not yet taken effect, and the rates underwent no change in the week except in some taluks of Cuddapah.

9. A statement is annexed showing particulars for works under the Public Works Department. The number of coolies is 1,58,138 against 1,69,619, on the 19th May. The falling off is due to the decrease of 19,617 coolies on the East Coast Canal. Particulars are still wanting for two districts, and the Board believe that the return understates the numbers employed under skilled supervision. The present reported total is 20·3 per cent. of the whole number on works.

10. *Gratuitous relief.*—The total numbers gratuitously fed in each district and the numbers in camps and relief houses on village relief and of 3 pie children are compared below with the return for the 19th May.

	19th May.	26th May.	
Kistna	259	179	−80
Nellore	18,217	18,873	+656
Cuddapah	27,434	26,321	−1,113
Bellary	132,394	136,110	+3,716
Kurnool	61,759	62,486	+727
Chingleput	11,540	16,751	+5,211
North Arcot	12,304	14,753	+2,449
South Arcot	3,443	4,108	+665
Trichinopoly	32	103	+71
Madura	8,905	9,106	+201
Tinnevelly	786	738	−48
Coimbatore	16,234	21,220	+4,986
Salem	56,026	58,237	+2,211
Malabar	...	6	+6
In camps, &c.	103,289	116,887	+13,598
Village relief	94,454	100,588	+6,134
3 pie children	151,590	151,516	−74
Total ...	349,333	368,991	+19,658

11. The numbers in camps and relief houses and on village relief have increased, but the numbers of 3 pie children are stationary. The increase in camp relief has been considerable in Chingleput, Coimbatore, Salem and Nellore, excluding Kurnool (for which details are not yet available) there were 247 camps and relief houses against 225 on the 19th May. The increase in these relief centres occurs in Bellary, Coimbatore, Madura and Salem. A camp has been opened at Trichinopoly for wandering paupers.

12. The numbers on village relief have increased in less proportion than that in camps owing to the system of sending persons from the villages to the camps when they can be moved. The number of inspecting circles (excluding Kurnool) is 620 against 587 on 19th May. The organization of inspection is extending in Nellore, Cuddapah, Bellary, North Arcot and Coimbatore and is now nearly completed. Relief was given in 4,970 villages, or nearly one-fifth of the whole. In Bellary, Cuddapah and Salem the proportion is one-half, but the relief appears especially inadequate in Nellore, Chingleput and North Arcot, while in South Arcot it is probably excessive. The numbers have increased considerably in Cuddapah, Bellary and South Arcot, and decreased in Nellore and Kurnool.

In the districts there is no great change. It is satisfactory that the apparently too rapid increase of this relief in Salem has been checked.

13. The 3 pie children have increased in Kurnool and North Arcot, but decreased in Nellore and Cuddapah and slightly in Bellary. In the southern districts the allowance has not been yet extensively given.

14. The following table shews the mean strength (an average between the numbers on 19th and 26th May) in camps and relief houses and on village relief, the number of deaths reported, and the equivalent returns per mille per annum:—

	Camps and relief houses.			Village relief.		
	Mean strength.	Deaths in the week.	Ratio per mille per annum.	Mean strength.	Deaths in the week.	Ratio per mille per annum.
Kistna	145	...	...	64	...	...
Nellore	14,702	144	511	704	...	...
Cuddapah	7,703	259	1,753	4,666	29	324
Bellary	32,836	176	280	26,057	25	50
Kurnool	6,503	Not	reported.	6,557	Not reported.	
Chingleput	12,506	37	154	1,485	...	...
North Arcot	5,138	140	142	1,029	18	912
South Arcot	754	6	415	2,954	...	...
Trichinopoly	26	...	...	41	...	...
Madura	7,693	35	237	1,082	7	338
Tinnevelly	748	9	627	4	1	13,040
Coimbatore	12,939	30	121	5,244	10	99
Salem	8,390	204	1,267	47,877	114	124
Malabar	3	...	...	...	...	...
	103,585	1,040	524	91,187	158	90
	6,503			6,557		

The rates are, of course, calculated on too short a period, and in some cases on too small numbers to give reliable results; but they show terrible mortality in the Cuddapah and Salem camps. Of the 259 deaths in Cuddapah camps 187 occurred in the sub-division.

15. The following statement shews advances under the Land Improvement Act. The large sum shewn in Nellore is the result of several weeks' payments now reported:—

	In the week.	To the end of the week.
	Rs.	Rs.
Nellore	44,245	61,447
Cuddapah	4,974	1,14,457
Bellary	...	10,515
Kurnool	1,000	1,350
Chingleput	430	66,718
North Arcot	1,000	2,000
Madura	14,700	42,781
Tinnevelly	...	32,900
Coimbatore	1,100	6,235
Salem	10,922	38,537
Total ...	77,471	3,76,940

Rupees 44,059 have been advanced to weavers.

16. The establishment statement is annexed :—

Total ...	3,925	99,062	532	6,085	582	8,785	5,039	1,13,932	86	39,469

17. The sum sanctioned by the Board up to 31st May amounts to Rs. 1,59,99,493.

18. The report of the Commissioner of Police, Madras, gives the following details. Average daily strength, resident 18,097, non-resident 151,175. Of those resident on 26th May 7,324 were from Chingleput, 5,995 from North Arcot, 4,340 from Nellore and 155 from other districts, total 17,824; the fresh admissions numbered 1,124; 546 remained in hospital, and the deaths were in hospital 134 and out of it 29, total 163 or 470 per mille per annum. The outlay during the week was Rs. 40,827, and up to the week Rs. 5,44,760.

19. The President, Municipal Commission, Madras, had 1,819 persons in the camp at Sathankad on the 26th May and 803 persons on relief works. His expenditure in the week was Rs. 285 and up to the week Rs. 44,694.

(Signed) H. E. STOKES,
Secretary.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 7TH JUNE 1877.

General Remarks.—In Madras good rain has fallen in Tinnevelly, Malabar and South Arcot, and parts of Madura, Trichinopoly, Coimbatore, Bellary, Kistna and Salem: the fall elsewhere was light; general prospects are the same as last week: pasture is improving. The numbers reported by Madras Government on relief works are 789,233, and on gratuitous relief 431,637; but these figures do not agree with the district totals, which give 751,075 (Nellore Canal figures wanting) and 417,809 respectively. General heavy showers are reported from Mysore: the number on relief works is 56,631, on gratuitous relief 107,814: the former is 7,768 and the latter 668 less than last week. In Bombay 2 inches of rain have fallen in Kanara, and showers in Poona, Ahmednagar and Khandesh: signs of the approach of the monsoon are reported from Bombay. In the Central Provinces slight rain has fallen in Saugor, Jubbulpore and two other districts: ploughing for the *kharif* is in progress. Showers have fallen in Berar. In Central India showers are reported from Gwalior and Sutna, and in Rajputana from Mhairwara, Ulwur, Jeypore and Bhurtpore. In Bengal moderate rain has fallen in almost all districts except those of Chota Nagpore: the crops are generally promising. Slight rain has fallen throughout the North-Western Provinces and Oudh. Showers are reported from all districts of the Punjab except Mooltan; prospects are good. The monsoon rains continue in British Burma. In Assam there has been little rain in the valley, and in Sylhet only a trifling fall.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 5th)	1·0 in Repalli; 0·20 in Gudivada.	One-fifth foot over anicut on 30th May, now below anicut; *sajja* and *jonna* soon after rains in Vinukonda failed; *jonna*, *cumboo* and *raggi* harvested, outturn ¼, ½ and full, respectively; prices slightly fallen in Vinukonda and Narsarowpett, stationary elsewhere; seers of Rs. 80 weight, rice 8·45, *cholum* 11·15, *raggi* 12·9, *cumboo* 10·38; imports by land from Godavery at Guntur, rice 23·44 tons, *cholum* 15·06; number on relief works 1,826; number fed gratis by Government 399, by people 1,203; cholera and small-pox here and there; cattle disease reported; want of fodder seriously felt in some taluks; markets fairly supplied.
Nellore („ „)	·40 in Venkatagiri.	Average prices second sort rice 7·78 seers per rupee, *cholum* 9·64, *raggi* 11·74, *cumboo* 10·06; imports by sea on behalf of Government none, on behalf of merchants rice 617 tons; by land into the town of Nellore, rice 72 tons, *raggi* 14 tons, *cumboo* 1 ton; number on district relief works 28,002, District Engineer's return of canal coolies not received; number fed gratuitously in camps 13,933, village relief 597; children of coolies employed on works 3,252; 52 deaths from cholera; cholera, small-pox, fever, dysentery, guinea-worm and diarrhœa, prevalent in some taluks; water-supply assured for drinking and sufficient for agriculture; *sajja*, indigo, and *jonna* crops are being raised in some taluks; prospects of cattle better.
Cuddapah („ „)	Average ·08 in four taluks.	Average prices seers per rupee, second sort rice 7·73, *cholum* 8·66, *raggi* 9·25, *cumboo* 8·92; people on relief works 89,010, increase 9,298 due to cessation of recruiting for Nellore; gratuitously fed in camps 8,695, otherwise fed 24,629, increase on the whole 6,933 owing to pressure of distress; deaths from cholera 170; number of cattle died for want of fodder and disease 790.
Bellary („ „)	Slight drizzle at Bellary; 1·65 at Hospett; ·25 at Gooty; slight rain at Anantapur; ·5 at Tadpatry; ·45 at Hindupur.	Average prices second sort rice 6·83, boiled rice at Bellary 8·1, *cholum* or great millet 7·56; Jubbulpore *cholum* at Bellary 8·76, *raggi* or lesser millet 8·25, *cumboo* 7·29 seers of 80 tolas; import 384 tons; accounts from one railway station only; 264,990 persons on relief works, increase as compared with return for previous week 6,239, this is owing to the increased pressure of the famine in most taluks; 157,078 gratuitously fed, of which 30,374 fed in relief houses, and 4,544 in relief camps; increase as compared with return for previous week 5,962, this is chiefly due to the increased number of children of coolies; 2,127 gratuitously fed by private charity aided by Government grant; cholera decreasing but still in all taluks; small-pox and fever prevalent; cattle still perishing from want of fodder; supply of drinking water much improved by recent rain.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Kurnool (June 5th)	·14 reported in 4 taluks.	Weather exceedingly muggy and oppressive; town water abundant; slight fresh continues in Tumbudra; agricultural operations progressing in some taluks; cholera, small-pox and fever continue; cholera seizures 86, deaths 67; cattle still suffering for want of fodder, but the late rains have improved their prospects; second sort rice per rupee in Imperial seers 6·95, *cholum* 8·06, *raggi* 9·51, *cumboo* 8·92; number on relief works 205,208, gratuitously relieved 60,611, of whom 1,411 people fed at Khaderbagh camp, no other camps being opened in district yet; the rest includes 49,208 under seven years, 4,614 fed by village heads and 5,305 fed in relief houses; no importation of Government grain reported; private grain 136 tons; the decrease of 2,628 in the number of coolies is the net result of 1,937 increase in 4 taluks, and of 4,564 decrease in others; village relief well in hand and working satisfactorily; physique of coolies indifferent.
North Arcot („ „)	0·91 average of 6 stations.	Average prices in Government seers, second sort rice per rupee 7·9, *cholum* 9·98, *raggi* 9·8, *cumboo* 8·2; relief works coolies 56,691; persons gratuitously fed in camps alone 7,026; persons otherwise gratuitously fed 13,861; cholera still prevalent; fever and small-pox in some places; pasture insufficient; cattle are dying of disease and starvation in some parts.
Chingleput („ „)	*Nil*	Prices rice second sort 8·90, *raggi* 10·72, *cholum* 9·05; imports rice 141·25 tons, *raggi* 29; cholera in some of the villages of the Madurantakam taluk; cholera, fever, small-pox and dysentery in Sydapet and Ponneri; condition of cattle poor; pasturage insufficient; water abundant; 3,860 heads of cattle reported to have died in Trivellore taluk; on relief works 7,220, gratuitous relief in camps 7,872, in other places 8,838.
South Arcot („ „)	1·25 at Tindevanum; 3·25 at Trinamalay and about Tricalore and Verdachellam; ·25 at Kallakoorchy.	Rice second sort 8¾ seers, *cumboo* 11⅜, *raggi* 11½, *cholum* 11; rice little dearer, *raggi* little cheaper, other two stationary; imports by sea, rice 247, *raggi* 9 tons; by rail, rice 314 tons, dry grains 7⅓; number employed last day 622; gratuitously fed in relief house at Chengam 772, in villages 3,748; children paid three pice 10; no relief camp; people healthy, cholera deaths 192 against 251 attacks; cattle disease in some villages; pasture improving.
Tanjore („ „)	About 1·0 at Tanjore town on 1st instant, elsewhere none.	Prices seers rice 8, *raggi* 12⅝, *cumboo* 10⅛, *cholum* 16; imports by sea rice 8 tons; relief works none; some freshes in rivers; deaths from cholera 189; small-pox throughout the district, some loss of life; cattle disease in Combaconum, Sheally, Nunnelum and Managoody taluks with some loss of life; fodder available.
Trichinopoly („ 6th)	1·27 (average)	Second sort rice 7⅜ seers, *cholum* 13½, *raggi* 10 ⅗, *cumboo* 9⅛; import of grain during week 43 tons; no relief works; number fed in hospital camp on June 2nd 322, by private subscription 2,173; cholera deaths 335, small-pox 54; cattle disease in some parts; pasture and water-supply improving.
Madura („ 5th)	Rain fell in a few villages of all taluks, Polani excepted.	Rice second sort 8½ seers, *cholum* 10⅜, *raggi* 9½, *cumboo* 9⅗; imports, rice 1,780 tons, other grains 61; number on relief works 13,445; gratuitously fed in camps 8,216; otherwise fed 3,232; cattle disease in Madura and Melur; cholera continues generally throughout the district, deaths 420.
Tinnevelly („ „)	Heavy rain on 3rd; 2·5 at head-quarters; good rain in three distressed taluks and Tenkari; slight showers in two taluks.	No freshes; some tanks in distressed taluks received partial supply; standing crops in good condition except in Nanganery and Tinnevelly taluks; 215 deaths to 279 attacks of cholera; cattle disease continues with slight mortality in four taluks; prices almost stationary; average prices per rupee, second sort rice 8½ seers of 80 tolas, *cholum* 11½, *cumboo* 11 and *raggi* 10¼; import of grain, rice 751 tons; number on relief works 102; number gratuitously fed in camps 709; number otherwise fed 36.
Coimbatore („ 6th)	·61 average of district; 2·05 in Coimbatore town on 29th May; ·70 in two days at Sattiamangalum; 1·35 in Collegal; ·49 in 3 days at Erode; ·40 at Palladum on 29th May; ·65 in 3 days at Caroor; light showers elsewhere except in Pollachy.	Prices nearly stationary, rice second sort 7·40, *cholum* 8·41, *raggi* 8·89, *cumboo* 8·61; imports estimated rice 1,057 tons, other grains 229; severe cholera in all taluks, attacks 1,223, deaths 1,004; fever and small-pox in Pollachy and Erode; some tanks in Palladum, Collegal, Erode and Caroor have received water, some tanks 15 days' supply and some tanks more; cultivation is going on to a small extent in seven taluks; *nunjah* lands in Sattiamangalum are being ploughed, but the channels are not well supplied; standing crops in Caroor and Bhowany in tolerable condition; cattle poor; losses in Pollachy, Collegal and Sattiamangalum; fodder and water scarce; on relief works 25,439; no observable deterioration of physique; gratuitously fed 24,713, in centres 19,942, in villages 4,771.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Salem (June 6th)	1·06	Prices of grains seers of 80 tolas, rice 7 7/10, *raggi* 8 1/8, *cumboo* 8⅛, *cholum* 9; import of all grains 1,000 tons; number on relief works 54,000; number gratuitously fed in camps 9,700, otherwise 62,800, by private charity 700; cholera in all taluks; gratuitous relief number rising 23 per cent., due to large numbers in villages relieved in Kistnagherry and Oossoor.
Malabar („ 5th)	2·63 average of 9 taluks.	More rain wanted in some places for first crop cultivation; markets well supplied; imports by sea and land, rice 989, *raggi* 72, and *cholum* 582 tons; exports, rice 1,566 and *raggi* 671 tons; prices of rice slightly risen in Wynaad, Ernad, Palghaut and Ponani, stationary elsewhere; highest 6¾ Indian seers in Wynaad, lowest 10¼ in Cochin, average 9 7/11 Indian seers per rupee; *raggi* 9 Indian seers per rupee in Wynaad, average elsewhere 12½; small-pox in 8 taluks, cholera in 9, deaths from latter 394; cattle healthy; pasture improving everywhere; 1,268 coolies on Kolathur roads; gratuitous relief given to 12 Mysoreans at Vythery. *General Remarks.*—General prospects not altered; coolies on Arconum and Ambathur Railway works *nil*; earthwork believed to be completed; number fed gratuitously 431,637; number on relief works 789,233; exports of grain from Madras by rail during the week ending the 2nd June 8,511½ tons.
Bombay— (June 7th)		
Sind— („ 6th)		
Kurrachee ...	Rain in Dadu taluka on 23rd May.	Total fall since 1st January in Jahi ·95, Kotri and Ghorabari ·25, and Shahbandar ·27; freshes in Gaj on 24th; only two cases of small-pox remaining in Kurrachee; river at Kotri on 4th 9 feet 11 inches against 11 feet 10 inches on same date last year; locusts appeared in Dadu taluka on 23rd, and Mirpur Batoro on 20th, doing a little damage; Punjari commenced to flow on 21st.
Shikárpur ...	...	Locusts seen in six talukas, destroyed young cotton in two talukas; river 10 feet 5 inches, last year on same date 11 feet 10 inches; *kharif* preparations in full progress; cattle disease in four talukas.
Hyderabad ...	...	River risen a little on the 6th; weather again sultry; rain probably near.
Upper Sind Frontier ...	...	Weather hot; water admitted into Begari.
Guserat— (*June 6th*)		
Ahmedabad ...	...	No change.
Kaira ...	...	Weather extremely hot.
Surat ...	...	Twenty-one cholera cases in Pardi; 14 fatal.
Broach ...	...	Agricultural preparations in progress; violent dust-storm in Broach on 5th; weather oppressive.
Khandesh and Násik.		
Khandesh ...	·23 at Sauda.	A heavy dust-storm with slight showers of rain passed over Dhulia on 5th; the river near it has flooded on account of rainfall in the western talukas; cattle disease and ague continue.
Násik ...	...	Two deaths from cholera in Sinnar.
Konkan.		
Tanna ...	...	Cholera in six and small-pox in four talukas.
Deccan.		
Poona ...	·02; ·14 in Indápur; ·28 in Sirur.	
Ahmednagar ...	·34 on 5th	Cholera in six talukas, cases 230, deaths 98.
Sholapur ...	...	
Satara ...	...	Weather warm and cloudy; six deaths from cholera in Lalsúpur and four in Pingli works, total deaths in the district 280.
Southern Mahratta Country.		
Belgaum ...		
Dharwar ...		
Kanara ...	2·0 in Karwar on 6th.	Cholera continues, deaths 29.
Kaládgi ...		
Kattywar and Gaekwar's Territory.		
Rájkot ...	...	Weather hot; health generally good.
Wadhwan ...	Few drops of rain.	Weather hot and cloudy.
Baroda ...	...	No change. *General Remarks.*—Weather hot in Guserat and Sind; slight showers in the Deccan; no telegrams received from the Southern Mahratta Country except Kanara; signs of monsoon being at hand in Bombay.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal— (June 7th.)		
Chittagong ...	·81	Cholera still reported from several stations.
Noakholly ...	·23	Stray cases of cholera reported from Dalál Bazár; fever prevalent in Fenny sub-division.
Chittagong Hill Tracts	1·6	Cholera still prevalent in Chengri valley.
Hill Tipperah ...	1·25	
Backergunge ...	1·42	Cholera and fever in a sporadic form still continue, but the district is generally healthier than it was; the cattle everywhere are remarkably healthy.
Furreedpore ...	·57	
Dacca ...	2·09	
Tipperah ...	2·10	
Mymensingh ...	·95	
24-Pergunnahs ...	1·67	Public health generally good.
Jessore ...	·81	
Nuddea ...	·39	
Moorshedabad ...	·27	Cholera has much abated.
Pubna ...	*Nil*	
Rajshahye ...	1·58	
Bogra ...	1·31	
Maldah ...	·06	Cholera has much abated; 7 deaths from small-pox.
Dinagepore ...	·73	Cholera decreasing.
Rungpore ...	·50	Public health on the whole good, though fever and cholera are still reported from Gaibanda sub-division.
Cooch Behar ...	2·09; 9·92 in Mekhaliganj; 5·69 in Dinhâta; 1·3 in Mátabhánga.	Public health good.
Jalpáiguri ...	1·95	
Darjeeling ...	·53	
Midnapore ...	2·61	
Howrah ...	1·36	
Hooghly ...	4·62	
Burdwan ...	·78	Fever prevalent.
Bankoora ...	·97	
Beerbhoom ...	·70	
Sonthal Pergunnahs ...	·41	
Bhágalpur ...	1·07	
Monghyr ...	·09	
Purneah ...	1·32	
Durbhunga ...	1·16	
Mozufferpore ...	1·80	A few cases of cholera have been reported from different parts; small-pox reported in Belsund outpost; otherwise general health good.
Sarun ...	·45	
Chumparun ...	·92	
Patna ...	*Nil*	Sporadic cases of cholera reported throughout the district.
Gya ...	·46	Public health fairly good.
Shahabad ...	·15	
Hazáribágh ...	*Nil*	General health good.
Lohardugga ...	*Nil*	There have a few more cases of small-pox in Sudder sub-division and in Pálamow, but no more cholera or cattle disease has occurred.
Manbhoom ...	·69	
Singhbhoom ...	*Nil*	District healthy.
Balasore ...	1·90	Cholera still exists here and there throughout the district.
Cuttack ...	·55	General health good.
Pooree ...	·11	Public health good.
		General Remarks.—Rain has fallen in nearly all the districts, and the crops are generally promising; in Rungpore, however, damage is reported to have been caused by the late heavy rain. There was a severe storm in the Kishorganj sub-division of the Mymensingh district which did some mischief.
N.-W. P. and Oudh— (June 7th)		
Benares (June 6th)	Slight rain on 3rd.	Weather hot.
Allahabad („ „)	1·3 on 1st...	Weather continues hot; dust-storm.
Jhansi („ 7th)	1·3	
Agra („ 6th)	·1 to ·5.	
Meerut („ „)	Slight rain ...	Cloudy.
Bareilly („ „)	Rain fell in most parts of district.	Cloudy; weather fair.
Almora („ 4th)	...	Weather stormy and cloudy; on Saturday rain from eastward, cloudy since.
Lucknow („ 6th)	...	Condition satisfactory.
Sitapur („ „)	3·2 at head-quarters.	Rains appear to have set in; still a great deal of grain on the threshing floors.
Fyzabad („ „)	1·0 at Sadar; elsewhere slight.	
		General Remarks.—Slight rain has fallen throughout the Provinces.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab— (June 7th)		
Delhi ...	·7	Health good.
Hissar ...	2·3	Young *kharif* crops doing well; health good.
Umballa ...	·9	Crops harvested; health good.
Jullundur ...	·6	Crops reaped; health good.
Lahore and Rawálpindi	Slight rain	Agricultural prospects and health good.
Mooltan ...	*Nil*	Cloudy; crops being gathered; health good.
Dera Ismail Khan ...	·5	*Kharif* sowing in progress; health good.
		General Remarks.—Agricultural prospects and public health good.
Central Provinces—		
Upper Godávari ...	...	Health good; prices rising.
Bilâspur ...	...	Sugarcane flourishing; ploughing continues; prices steady.
Raipur ...	...	Cloudy; *kharif* ploughing continues; cholera abating; prices rising.
Bálaghát ...	...	Cloudy; *kharif* ploughing continues; cattle disease continues; prices falling.
Chhindwára ...	...	Cloudy; *kharif* ploughing in progress; sugarcane good; health good; prices steady.
Chánda ...	...	Cloudy; *kharif* ploughing in progress; cattle disease continues; prices stationary.
Betúl ...	...	Winnowing nearly completed; prices stationary.
Bhandára ...	...	Cloudy; *kharif* ploughing continues; small-pox and cholera prevalent; prices rising.
Nágpur ...	...	Cloudy; *kharif* ploughing continues; health good; prices steady.
Wardha ...	...	*Kharif* ploughing in progress.
Nimár ...	...	Sultry; small-pox continues; prices rising.
Hoshangabad ...	·32	Small-pox continues; prices unchanged.
Narsinghpur ...	...	Harvest fair; prices rising.
Jubbulpore ...	1·09	Stormy; *kharif* ploughing in progress; cattle disease prevalent.
Saugor ...	1·38	Threshing and winnowing completed; *kharif* ploughing in progress.
Seoni ...	·15	*Rabi* winnowing continues; prices stationary; health good.
Mandla ...	...	Cloudy; threshing *rabi* finished; *kharif* ploughing in progress; prices stationary; fever continues.
Damoh ...	...	*Kharif* ploughing in progress; prices fallen.
		General Remarks.—Weather cloudy; slight rain in four districts; *kharif* ploughing in progress.
British Burma— (June 7th)		
Arrakan Division ...	1·0 in Akyab town.	Slight cholera in Akyab jail and in one township of Akyab district, otherwise public health good.
Pegu Division.		
Rangoon ...	5·65	Public health and agricultural prospects normal.
Thonkwa ...	...	Health generally good; 40 deaths from cholera in Phyapoon township.
Henzada ...	Slight rain	Public health good; slight cattle disease in Mengyee township.
Prome ...	1·21	Two deaths from cholera in Prome town; otherwise healthy.
Bassein ...	...	Reports not received.
Thayetmyo ...	...	Reports not received.
Tenasserim Division.		Public health fair.
		General Remarks.—In Amherst, Shwegyeen and Tounghoo districts rainfall copious.
Assam—		
Gauháti (June 7th)	1·03 during week.	Weather for the most part clear, hot and dry; *sales* cultivation and tea manufacturing in progress; public health on the whole good; diarrhœa reported in mauzas Ramsah and Ráni.
Sylhet („ „)	0·02	Weather sultry and hot; new sown crops injured by want of rain.
Mysore and Coorg— ...	Bangalore 1·15; Coorg ·26.	Heavy showers have been general in the provinces; ordinary rice continues to sell in Bangalore at 14 pounds per rupee; deaths from cholera in Mysore Province 842, in Coorg 43; daily average number on relief works and charitably relieved as per last tabulated statement is in—

Bangalore district including town ...	4,796	and	55,199
Kolar	4,887	„	10,860
Túmkúr	4,712	„	18,059
Mysore	876	„	5,587
Hassan	1,736	„	5,004

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR THE YEAR 1875-76.

Nos. 129-142 I, dated Fort William, the 9th March 1877.

Read—

Letter from the Government of Bengal, in the Public Works Department, Irrigation Branch, No. 497 I—A, dated the 8th February 1877, forwarding a copy of the Revenue Report of Irrigation Works in Bengal for the year 1875-76, and of the Resolution of that Government reviewing the same.

OBSERVATIONS.—The capital sunk up to the close of the year amounts to Rs. 4,07,30,312.

2. The gross revenue, Rs. 2,30,434, shows some slight improvement over the previous year's returns (Rs. 2,17,593), and the charge for revenue management was less by Rs. 595 than in the previous year; but the total loss on working was considerably greater than before.

3. In the year under review the working expenses on revenue-paying canals exceeded the income by Rs. 2,99,056, exclusive of the interest charges, which amount for the year to Rs. 16,02,853, and the total loss on all accounts in the Irrigation Department amounts to Rs. 20,39,174 for the year, and Rs. 88,41,689 for the accumulation up to the end of the year.

4. The area irrigated shows a considerable falling off in both Orissa and Midnapore, the result of a rainfall of 70 inches in one case, and 55 inches in the other. In the district traversed by the Sone Canal the rainfall, although as much as 40 inches, was not timely, the fall in September being small, and in October none; the consequence was an urgent demand for water, and though the arrangements for distribution were incomplete, an area of 75,565 acres was irrigated, or more than the aggregate irrigation from both the Orissa and Midnapore Canals.

5. The working expenses compared with the irrigable area in Orissa are much in excess of those on canals in Northern India; this is no doubt in a great measure due, as remarked by the Chief Engineer, to expenses connected with flood embankments which are not required in the irrigated tracts of the North-Western Provinces and Punjab.

6. The transfer of the duty of distributing the water to the Engineers in charge of the canals is reported to have worked well. The remarks of the Chief Engineer regarding the poverty of the ryots of Midnapore, as affecting the development of irrigation, point to a state of things which requires investigation. The result of the enquiry which has been instituted by the Government of Bengal will be awaited with interest.

7. The results of the navigation operations during the year are perhaps as fair as can be expected until the through lines of communication are completed; this in the case of the canal from Cuttack to False Point Harbour and the collateral line to the port of Chandballee, as well as in that of the line between Calcutta and Midnapore, will shortly be attained.

8. The deficit has been increased this year by the inclusion for the first time in the revenue account of the Sone Canals, of which the maintenance charges are at first necessarily in excess of the receipts. But the prospect of remunerative returns from the Canals in Bengal under the present system are very unpromising, and the Government of India concurs with the views of the Lieutenant-Governor that some scheme should be devised by which the bulk of the charges for interest and working expenses should fall upon the people who are protected by these works.

ORDER.—Ordered, that copies of this Resolution, the figured statements attached thereto,* and of the Report, be forwarded to the Secretary of State, and the Financial and Revenue, Agricultural and Commerce Departments, for information.

Ordered also, that copies of this Resolution and the statements above referred to, be forwarded to the Government of Bengal and to the several† and other Local Governments and Administrations in the Public Works Department, Irrigation Branch, for information.

Ordered further, that this Resolution with the statements attached thereto, the Resolution of the Local Government and the Chief Engineer's Report, together with a few selected statements, be forwarded to the Home Department for publication in the Supplement to the *Gazette of India*.

W. A. CROMMELIN, *Major-Genl., R.E.,*

Extract from the Proceedings of the Hon'ble the Lieutenant-Governor of Bengal in the Public Works Department, Irrigation Branch, No. 334-I.A., under date the 31st January 1877.

The total capital invested by the State in irrigation works in Bengal up to the close of 1875-76 aggregated Rs. 4,07,30,312. Of this amount Rs. 42,14,204 were expended during the year under review, showing a progressive reduction of outlay in this branch of the Public Works since 1873-74 as shown in the margin.

	Rs.
1873-74	52,26,403
1874-75	49,97,142
1875-76	42,14,201

2. The total outlay is debitable as follows :—

(*a.*)—*Canals more or less incomplete, but in operation and yielding revenue.*

	Rs.
Orissa Canals	1,65,75,664
Midnapore Canal	64,46,310
Hidgellee Tidal Canal ... ... — ...	17,98,424
Sone Canals	1,52,16,546
	4,00,36,944

(*b.*)—*Projects under investigation.*

	Rs.
Tirhoot Irrigation Scheme	3,92,676
Hooghly „ „	1,43,058
Damooda Canal	1,57,634
	6,93,368

3. The gross revenue for the year from all sources was Rs. 2,30,434 against Rs. 2,17,593 collected during the previous year. The results might have been more decidedly favorable in a revenue point of view, if, in Lower Bengal, where the facilities for irrigation are more complete, the rains had not been so copious and well-timed as of necessity to have very considerably narrowed the area that might otherwise have had to be watered from the Midnapore and Orissa Canals. In Behar also, although the past season was highly favorable for irrigation, the temporary opening of the Sone Canals during the drought of 1873-74 had so much interfered with the progress of those works, that they could not be utilised to the extent that would otherwise have been possible during the year under review. Some loss of revenue has also been incurred by an unexpected decline in the traffic on the Tidal Canal in Hidgellee.

4. The expenditure incurred during the same period for maintenance and repairs amounted to Rs. 4,68,398, as against Rs. 2,98,298 during the previous year, while the charge for revenue management was reduced from Rs. 61,687 in 1874-75 to Rs. 61,092 in 1875-76. The increased expenditure on maintenance and repairs is chiefly due to the cost of maintenance of the Sone Canals, having for the first time been charged to Revenue instead of to Capital.

5. The working expenses exceeded the revenue by Rs. 2,99,056, as against Rs. 1,42,392 in the previous year. The following comparative statement explains how the excess occurred :—

	1874-75. Rs.	1875-76. Rs.
Orissa Canals	1,47,942	1,62,128
Midnapore ditto	12,807	56,290
Tidal Canal	18,357	16,103
Sone Canals	.....	64,535
Total ...	1,42,392	2,99,056

6. The charges for interest on capital invested in revenue-paying canals amounted for the year to Rs. 16,02,853 against Rs. 10,13,912 for the previous year. The total charge for interest on account of these canals to end of 1875-76 amounted to Rs. 73,87,969. The increase is due to the Sone Canals, the revenue account for which has now been opened, the past year being the first in which these works paid any direct revenue to the State.

7. The excess of working expenses over income for the year was Rs. 2,99,056 and to the end of the year Rs. 10,96,845.

8. The combined charges for interest and deficit on working in revenue-paying canals were for the year Rs. 19,01,909, and to the end of the year Rs. 84,84,814.

9. The total accumulated debt on account of interest and excess of expenditure over income on all the irrigation works in Bengal was Rs. 20,39,174 for 1875-76 and Rs. 88,41,689 to the close of the year.

10. The total area irrigated during the year was 1,50,343 acres against 94,777 in 1874-75, by far the largest breadth of land having been, as will be seen below, watered from the Sone Canals.

11. The rainfall in Orissa was 70 inches. The demand for irrigation was, therefore, necessarily limited. The areas irrigated were in—

	Acres.
1873-74	12,571
1874-75	22,459
1875-76	18,409

12. In Midnapore, also, the rainfall was both plentiful and well-timed; 55 inches was registered. The consequence was a large reduction in the breadth of land under irrigation from the canals. The areas irrigated were in—

	Acres.
1873-74	36,349
1874-75	72,318
1875-76	55,961

13. On the other hand, on the Sone, where the canals came into regular operation for the first time during the past year, the rainfall was nearly as small as in 1873, and the area brought under irrigation was 75,973 acres.

14. The Chief Engineer in his report has remarked upon the heavy arrears of canal revenue in Midnapore, which he believes to be due in part to the general poverty and indebtedness of the ryots in that district. The special attention of the Commissioner and Collector will be drawn to this question.

15. The navigation receipts were in—

	1874-75, Rs.	1875-76. Rs.
Orissa	21,412	16,377
Midnapore	44,886	51,810
Tidal Canal	52,209	22,540
	1,18,509	90,727

or Rs. 27,780 less than the realizations of the previous year.

16. The tonnage of cargoes carried in boats paying tolls during the year was—

	1874-75. Tons.	1875-76. Tons.
Orissa	57,312	60,574
Midnapore	168,090	189,414
Tidal Canal	132,282	67,997
	357,684	317,985

showing a falling-off of about 40,000 tons from the traffic of the previous year.

17. The total value of the tonnage was estimated at Rs. 1,74,38,537.

18. The outlay on construction, inclusive of surveys and investigation of new projects during the year, was—

	Rs.
Orissa Canals	10,56,156
Midnapore „	3,15,907
Tidal „	241
Sone „	25,91,918
North Behar	1,82,803
Hooghly	67,604
Damooda	425
	42,14,204

19. The Lieutenant-Governor will watch with interest the progress of the experiments which are being tried, with the view of ascertaining the comparative yield of paddy from irrigated and unirrigated lands.

20. The report shows clearly that, as matters now are, there is little hope of the existing schemes in Bengal ever paying their working expenses

and the interest on the outlay for their construction. In bad seasons the people gladly avail themselves of the water and are ready to pay for it. In seasons of plenteous rain they take no water. The cost of these works, which are nothing more nor less than a form of insurance against failure of crops for the districts in which they are situated, falls upon the people at large; obviously the main cost of maintaining them should fall upon the people who are protected by them, and the officers of the Irrigation Department and the officers of the districts in which these works are situated should consult together and consider if some scheme could not be devised with a view to producing this result. It is quite possible that the people of the districts in question cannot pay the whole cost of the works, but the bulk of the charge for interest and working expenses should fall on them.

Note on the Canal Revenue Reports for the year 1875-76, by COLONEL F. T. HAIG, R. E., *Chief Engineer, Bengal Irrigation Branch.*

1. The outlay on irrigation works in Bengal in 1875-76 was — Rs. 42,14,204
   Viz.,— Rs.
   Extraordinary... 39,64,222
   Ordinary 2,49,982
2. The total capital invested by the State in irrigation works to the close of 1875-76 was thus brought up to ... 4,07,30,312
   Viz.,— Rs.
   Extraordinary... 4,00,36,944
   Ordinary 6,93,368
3. The receipts for the year under all heads amounted to 2,30,434
   The working expenses to 5,29,490
   Leaving a deficit or balance against the canals of ... 2,99,056
4. The annual charge for interest was 17,40,118
   Thus the total balance of unpaid charges for the year amounted to 20,39,174
   It is to be noted that of this amount Rs. 6,90,946 were on account of the Sone Canals, which have as yet come into operation only to a very limited extent.
5. With one trifling exception there has always hitherto been an annual loss on the working of the canals.
   The accumulated deficit on this account to the end of 1875-76 was 10,96,845
   Interest on the gross outlay to the same date amounted to 77,44,844
   And the total debt under both heads to 88,41,689
   Of the latter sum, the proportion debitable to the Sone Canals and surveys for new works is 21,80,429

6. The year was unfavorable to irrigation in Lower Bengal on account of the copious and well-timed rains, and highly favorable in Behar, where the rainfall was nearly as small as in 1873. There was consequently a falling-off in the areas irrigated in Orissa and Midnapore, while the Sone Canals watered a very considerable proportion of the lands within their reach. The latter canals may be said to have come into operation for the first time this year.

7. The areas actually irrigated in each province or district were—

	1875-76.			1874-75.		
	Khurreef.	Rubbee.	Total.	Khurreef.	Rubbee.	Total.
Orissa ...	14,305	4,104	18,409	20,007	2,452	22,459
Midnapore ...	55,887	74	55,961.	70,424	1,894	72,318
Behar (Sone) ...	42,077	33,896	75,973	...	...	...
Total ...	112,269	38,074	150,343	90,431	4,346	94,777

8. The revenue for the year was Rs. 2,30,434 against a budget estimate of Rs. 3,41,000, and regular estimate of Rs. 2,97,000.

The difference is mainly attributable to an unexpected falling-off in the traffic on the Tidal Canal in Hidgellee, and to the large outstanding balances in Midnapore due to collections deferred on account of the general and extreme impoverishment and indebtedness of the ryots in that district.

9. The several projects in hand will now be described in detail. The following is a statement of the outlay upon each:—

Projects.	Outlay during the year.	Outlay to the end of the year.
Extraordinary.	Rs.	Rs.
Orissa Works	10,56,156	1,65,75,664
Midnapore Canal	3,15,907	64,46,310
Hidgellee Tidal Canal	241	17,98,424
Sone Project	25,91,918	1,52,16,546
Total Extraordinary ...	39,64,222	4,00,36,944
Ordinary.		
Tirhoot Irrigation Scheme	1,82,803	3,92,676
Hooghly ditto	67,604	1,43,058
Damooda Canal	— 425	1,57,634
Total Ordinary ...	2,49,982	6,93,368
Grand Total ...	42,14,204	4,07,30,312

ORISSA PROJECT.

10. The Capital and Interest Accounts of the canals comprised in this project are as follows:—

CAPITAL ACCOUNT.

Particulars.	Mahanuddy Canals.		Brahminee and Byturnee Canals.		Total.	
	Outlay during 1875-76.	Outlay to end of 1875-76.	Outlay during 1875-76.	Outlay to end of 1875-76.	Outlay during 1875-76.	Outlay to end of 1875-76.

Add capitalised Land Revenue.	—4	21,253	—13	2,198	—17	23,451
Total ...	5,87,227	138,87,550	4,68,929	26,88,114	10,56,156	165,75,664

The financial limit of the Orissa Scheme was finally laid down by the Secretary of State during the year under review. The works comprised are those in the above statement, and the total amount of the sanctioned estimates is Rs. 1,92,95,684, exclusive of indirect charges. Of this, it will be observed, Rs. 1,65,52,213 were expended up to the close of the year—

INTEREST ACCOUNT.

	Mahanuddy Canals.	Brahminee and Byturnee Canals.	Total.
	Rs.	Rs.	Rs.
Interest Charges to end of 1874-75 ...	27,65,788	1,66,684	29,32,472
Ditto for 1875-76 ...	6,12,993	1,11,725	7,24,718
Total Interest Charges to end of 1875-76..	33,78,781	2,78,409	36,57,190

11. The following is a statement of the Revenue Account of the Mahanuddy Canals. The Brahminee and Byturnee Series not having yet been brought into operation, a similar account for them has not yet been opened :—

	Expenditure			Receipts	
	During the year.	To end of the year.		During the year.	To end of the year.
	Rs.	Rs.		Rs.	Rs.
Works—Maintenance	1,36,856	7,09,769	Water-rates ...	20,330	1,16,639
Establishment ...	64,939	3,71,632	Navigation ...	16,377	99,715
Tools and Plant ...	5,823	29,576	Miscellaneous ...	8,783	66,252
Profit and Loss ...	...	640			
Total Expenditure...	2,07,618	11,11,617	Total Receipts ...	45,490	2,82,660
			Deficit ...	1,62,128	8,28,957

12. The total debt for interest and unpaid working expenses on account of the Mahanuddy Canals amounted to Rs. 42,07,733 to the end of 1875-76; of this Rs. 7,75,121 was for the year only.

13. These unsatisfactory results are attributable to two causes,—the small demand for the water, and the low price (Re. 1 per acre for rice which constitutes the greater portion of the irrigated crops) at which it is sold—

	Acres.
The area which could have been irrigated in 1875-76 was ...	1,31,981
That actually irrigated only	18,409

It is believed that the proportion of irrigated to irrigable area was really larger than these figures indicate, inasmuch as the latter includes a considerable extent of undrained land for which, in its present state, artificial irrigation would be useless. The drainage of the country commanded by the canals has in fact not kept pace with the extension of the distributaries, and the results are now felt in a diminished available irrigable area.

The attention of the local officers has been drawn to the point.

14. The areas irrigated are shown in the following table:—

Particulars.	1872-73.	1873-74.	1874-75.	1875-76.
	Acres.	Acres.	Acres.	Acres.
Khurreef	3,799	9,104	19,740	13,991
Rubbee	941	3,291	2,452	4,104
12-month crops	13	176	267	314
Total ...	4,753	12,571	22,459	18,409
	Inches.	Inches.	Inches.	Inches.
Rainfall	73·00	40·31	64·00*	70·00*.

* These are the mean of observations at Cuttack and Marsaghai.

The income from water-rates has, with the exception of that from rubbee crops, not materially advanced since the period when systematic irrigation was first introdued. The demand for rice, which is the principal crop, still fluctuates with the state of the seasons, or, as regards leases at the lowest rates which must be taken before 1st May and which constitute the bulk of the irrigation, with the prognostications of the weather-wise as to what each coming season is likely to be.

There is a steady increase in the area under rubbee which has risen from 941 acres in 1872-73 to 4,104 acres in 1875-76.

15. The income from tolls on the navigable canals was steadily rising up to the year under report when it suddenly declined, owing apparently to the cessation of the export of rice to Behar.

16. The following table presents at one view the income from each source during the period above mentioned :—

Year.	Water-rates.	Navigation.	Miscellaneous.	Total.
	Rs.	Rs.	Rs.	Rs.
1872-73	19,071	10,044	7,508	36,623
1873-74	17,412	18,577	7,846	43,835
1874-75	20,382	21,412	6,691	48,485
1875-76	20,330	16,377	8,783	45,490
Total ...	77,195	66,410	30,828	1,74,433

17. The working expenses for the same period are shown below :—

	1872-73.	1873-74.	1874-75.	1875-76.
1. *Maintenance*, viz.,—	Rs.	Rs.	Rs.	Rs.
Works	1,63,884	74,505	1,17,547	1,36,856
Establishment, including Direction and Accounts	26,552	9,568	20,100	33,501
Tools and Plant	...	683	18,070	5,823
Profit and Loss	30	...	...	...
Total Maintenance ...	1,90,466	84,756	1,55,717	1,76,180
2. *Revenue Management*, viz.,—				
Irrigation Establishment ...	41,382	38,607	35,016	25,785
Navigation ditto ...	6,154	5,828	5,694	5,653
Total Revenue Management ...	47,536	44,435	40,710	31,438
Total Working Expenses ...	2,38,002	1,29,191	1,96,427	2,07,618

18. Although there are no authentic figures on record showing the actual extent of the irrigable area at the commencement of the period comprised in this table, it is probable that it was then not above two-thirds of what it is now. On this view the cost per irrigable acre of working expenses has gradually declined. For the year 1875-76 these expenses were for—

	Rs.
Maintenance	1,76,180
Revenue Management	31,438
Total Working Expenses ...	2,07,618

which is at the rate of Rs. 1·57 per acre irrigable.

19. The circumstances in Orissa, where so small a portion of the available water-supply is used, are so different from those in other provinces that it would seem that no comparison can be made of the cost of working expenses; but taking the charge for maintenance alone, the result appears very unfavorable for Bengal. In the North-Western Provinces and Punjab the working expenses of the canals generally appear to be about Rs. 1·2 per acre irrigated, of which rather more than half is for maintenance. In Orissa during the year under review maintenance cost Rs. 1·57 per acre *irrigable*, or more than double that per acre *irrigated* in the North-West. This may possibly be satisfactorily accounted for, but the point requires explanation. When the receipts are so small, economy in working expenses becomes doubly necessary. It is to be noted, however, that in Orissa there are included under the head Maintenance, the repairs of extensive flood embankments and weirs commanding a vastly larger area of country than that supplied by existing canals. These are items which probably do not enter into the same accounts in the canal systems of the more northern provinces.

20. Compared with original cost of works, the expense of maintenance does not appear high, as the following statement shows :—

	1874-75.			1875-76.		
	Capital Outlay to end of 1874-75.	Outlay on repairs in 1874-75.	Percentage.	Capital Outlay to end of 1875-76.	Outlay on repairs in 1875-76	Percentage.
	Rs.	Rs.		Rs.	Rs.	
Head Works ...	28,93,996	41,254	1·4	29,10,198	46,912	1·6
Toldunda Canal ...	9,48,984	19,013	2·0	9,70,491	23,625	2·4
Matchgong ,, ...	4,99,580	11,444	2·3	5,33,444	11,709	2·2
High Level ,, Section I ...	20,19,380	20,830	1·0	20,43,627	21,144	1·0
Kendrapara ,, ...	20,38,873	25,006	1·2	22,28,577	33,466	1·5
TOTAL ...	84,00,813	1,17,547	1·4	86,91,337	1,36,856	1·6

Establishments are not included in this table, but that probably does not affect the percentage shown.

21. The following table shows the mileage cost of repairs of distributaries for the past three years, which appears moderate :—

DISTRIBUTARY REPAIRS.

	1873-74.		1874-75.		1875-76.	
	Length open	Repairs per mile.	Length open.	Repairs per mile.	Length open.	Repairs per mile.
	Miles.	Rs.	Miles.	Rs.	Miles.	Rs.
Kendrapara Canal	252	35·8	308	25·5	308	29
High Level ,, ...	90	47·6	99	58	99	50
Toldunda ,, ...	64·5	47·2	65	52	65	54·5
Machgong ,, ...	74	0·74	77	54	77	70
TOTAL ...	480·5	16,333	549	21,166	549	22,806

22. The duty realized from the canal water, 1875-76, is not clearly stated by the Superintending Engineer. This is, however, a matter of no importance when the proportion of the whole supply utilized is so small.

NAVIGATION.

23. The length of canal open for navigation during the year remained, as before, 110 miles, *viz.*,—

	Miles.
High Level	37
Kendrapara	40
Toldunda	27
Machgong	6

The two last canals are as yet but portions of what they are eventually intended to be, and can have only a very insignificant traffic. The same remark will apply to the High Level until its 2nd and 3rd Sections are opened. These three lines at present act mainly as feeders to the Kendrapara Canal, which is the only line of importance, and is the channel for nearly all the export and import trade by sea of the Cuttack District.

24 The toll collections in 1875-76 were—

	Rs.
High Level	3,143
Kendrapara	12,452
Toldunda	782
Machgong	0
Total ...	16,377
In 1874-75	21,412
1873-74	18,577
1872-73	10,044

25. The decrease was on the Kendrapara line only, and was due to a falling off in Government rather in private traffic.

26. Of the total receipts, Rs. 2,782 or 16 per cent. were on account of materials carried for Government works in progress. It need hardly be said that this item of revenue is fictitious, the amount being debited to the works.

27. The cost of collecting establishments was Rs. 5,651, or 35 per cent. on the collections, a portion which must be pronounced excessive, the percentage on the Midnapore Canal being 4, and on the Tidal canal 3·8. Even if the amount includes the whole navigation establishment, (which is not stated) the cost is nearly three times that in Midnapore, where the cost is only 13 per cent. of collection.

28. Notwithstanding the decrease in collection the tonnage moving on the canals was larger than in the previous year, there being a large increase on the shorter lines, which more than counterbalanced the falling-off on the larger one.

29. Compared with the previous year the tonnage was as 60,574 tons to 57,312, and the value of cargoes Rs. 38,92,178 against 32,81,053. It should be explained that the tonnage here spoken of is that obtained by measurement according to the rules in force for that purpose, and is really about 30 per cent. more than the weight of cargoes carried.

30, Further details of the traffic are given in the following table :—

CANAL.	NUMBER OF BOATS PASSING THROUGH THE CANALS INCLUDING EMPTY BOATS.				ESTIMATED VALUE OF TRAFFIC.				TONNAGE EXCLUSIVE OF THAT OF EMPTY BOATS.			
	1873-73.	1873-74.	1874-75	1875-76.	1873-73.	1873-74.	1874-75.	1875-76.	1872-73.	1873-74.	1874-75.	1875-76.
	No.	No.	No.	No.	Rs.	Rs.	Rs.	Rs.	Tons.	Tons.	Tons.	Tons.
High Level Canal ...	772	1,067	2,514	2,396	51,415	1,03,040	2,49,870	3,73,508	3,190	6,375	8,608	13,253
Kendrapara Canal ...	3,947	6,166	4,821	4,178	47,10,966	42,55,389	30,10,897	23,50,397	26,313	50,377	41,758	34,486

TOTAL ...	5,101	8,117	7,742	7,627	47,83,653	43,99,273	32,81,053	38,92,178	31,955	65,860	57,312	60,574

31. The only point worthy of record in connection with the canal administration during the year, is the final separation of the work of distributing the water-supply, from that of revenue management. The former has been

transferred, as in Midnapore, wholly to the Engineer Department, the latter is in the hands of the Revenue Officers. The system has worked well.

32. With regard to Engineering operations, there is nothing worthy of note. The works of the 2nd and 3rd Sections of the High Level Canal, together with the weirs on the Brahminee and Byturnee, were the only ones of much importance under execution. The extension of the Kendrapara Canal to False Point, was proceeded with, as well as the branch line called the Gobri Canal, but the progress in both was disappointingly slow, owing in part to frequent outbreaks of cholera among the work-people.

MIDNAPORE CANAL.

33. The capital, interest, and revenue accounts of this canal are as follows :—

CAPITAL ACCOUNT.

	Outlay during 1875-76.	Outlay to end of 1875-76.
	Rs.	Rs.
Works	2,02,065	44,96,700
Establishment	69,697	15,20,433
Tools and Plant	14,602	3,03,483
Suspense Balance	35,511	1,38,480
TOTAL ...	3,21,875	64,59,096
Deduct receipts on Capital Account	5,968	12,786
BALANCE ...	3,15,907	64,46,310

* * Of the outlay of 2,02,065 in 1875-76, Rs. 63,470, were for land, and Rs. 1,33,642 for distributaries :—

INTEREST ACCOUNT.

	Rs.
Interest to end of 1874-75	12,44,059
Ditto for 1875-76	2,82,532
Total to end of 1875-76 ...	15,26,591

REVENUE ACCOUNT.

	Expenditure.			Receipts.	
	In 1875-76.	To end of 1875-76.		In 1875-76.	To end of 1875-76.
	Rs.	Rs.		Rs.	Rs.
Works. Extensions and Improvements ...	2,206	5,559	Water-rates ...	52,791	2,30,266
Works. Maintenance ...	1,11,019	4,12,022	Navigation ...	51,810	1,90,349
Establishment ...	50,010	2,14,914	Miscellaneous ...	6,508	29,590
Tools and Plant ...	4,164	5,178			
Total Expenditure ...	1,67,399	6,37,673	TOTAL ...	1,11,109	4,50,205
			DEFICIT ...	56,290	1,87,468

34. The following is a comparative statement of the gross revenue for the past four years :—

Year.	Water-rates.	Navigation.	Miscellaneous.	TOTAL.
	Rs.	Rs.	Rs.	Rs.
1872-73	23,556	35,448	7,304	66,308
1873-74	35,823	34,104	2,711	72,638
1874-75	67,015	44,886	4,316	1,16,217
1875-76	52,791	51,810	6,508	1,11,109
TOTAL ...	1,79,185	1,66,248	2,839	3,66,272

35. In the receipts under Navigation and Miscellaneous, it will be observed that there is a steady increase, but in those from water-rates, there is a falling off in 1875-76 as compared with the previous year. This was due to a decrease in the area leased owing to the discouragement caused by the losses inflicted by the cyclone of 1874, on one of the finest irrigated crops the ryots had yet raised.

36. It can hardly be said that irrigation independently of the seasons has advanced more in Midnapore, than in Orissa, though the Bengalee ryot is decidedly superior in intelligence to the Ooria. The great drought of 1873, caused an immense demand for water. Every drop that could be drawn from the river was utilized, and the profits of the irrigators in that year of high prices were so great, that the Collector states that it was then a common saying among them that "the profits from a beegah of irrigated land, would buy a beegah of lakhiraj." The consequence was that, in the following year the leased area went up to about 72,000 acres. The crop was a remarkably fine one, but just when the ear was forming, a cyclone swept over the district and so devastated the fields that what remained of the irrigated rice yielded little more of outturn than the unirrigated; the irrigated crop in fact suffered more than the other from the greater height and weight of the plants. This disheartened the ryots again, and the irrigated area fell in 1875-76 to 55,995 acres. Discouragement still followed the irrigators; the rainfall was 55·55 inches, not a large amount for that district, but the fall was so equable and well-timed that the unirrigated rice crop was a bumper, and though careful experiments have shown that in spite of this there was nevertheless an undoubted superiority in the irrigated over the unirrigated rice; yet this was not generally apparent to the eye, and those who had taken water and had to pay for it wished that like their neighbours, who had not done so, they had trusted to the chances of a good season instead. Hence at the close of the year under review the cause of irrigation was perhaps lower in popular estimation than ever before. Nor indeed is this to be wondered at if the circumstances of the case are considered. With a people so steeped in poverty as the Midnapore ryots appear to be, and so hopelessly indebted, the mere average profit, taking one year with another, from irrigation does not appear to hold out much of an inducement to irrigate even with water-rates so low as Rs. 1-8 per acre. This will be more fully apparent from the following extract from the Collector's report, to which I would ask special attention :—

"This decline has been discussed very fully in paragraphs 27 to 30 of the Deputy Revenue Superintendent's report, and I can only add that the explanation given is absolutely correct. Never in any preceding year were such efforts made to realize a large amount; the collecting staff was strengthened, and daily reports made to me by the treasury showing the amounts paid in. The tehsildars were spurred on by every possible inducement to exert themselves and yet their outturn was poor. The same result has been often before observed in years following famines or other disasters; the debts of the previous year have accumulated with interest. The crops being very luxuriant prices fell, while the creditors come to the conclusion that now, if ever, they must recover their debts.

"In the present instance the ryots were almost to a man in debt to the mahajans; they were in arrears to their zemindars, and in arrears to the Deputy Revenue Superintendent. Hence all these pressed the ryot simultaneously. The Deputy Revenue Superintendent says that the zemindars were not more successful than the Government, and certain it is that they very much resented the water-rate collections; and I hear that certain of their number, even those who try to stand well with Government, have issued peremptory but secret instructions, that they will bring their whole power to bear on any of their tenantry who lease in future.

"On the other hand, the mahajans have been very successful in collecting their dues. The ryots know that it is a matter of life and death not to deprive themselves of future loans, and when they saw that they could not keep the crop themselves they preferred their mahajans to the other creditors.

"It seems to me worthy of special attention that it is this state of indebtedness of the ryots which makes it impossible for them to appreciate the benefit of the canal water, except in years in which almost the entire crop is due to it. In the present year our statistics show that the water was worth to the ryots more or less 5 maunds of rice per acre and 12 maunds of straw, which even in this year of low prices would bring them in Rs. 3 to 3-8 an acre against Re. 1-8 payable as water-rate. On the other hand, it is quite certain that the ryots almost to a man think themselves losers by their leases last year. The explanation of this is not far to find. The mahajans take from the ryots interest at from 33 to 75 per cent., but they are

quite satisfied with actually netting 15 to 20. The balance represents remissions of interest and bad debts. The effect of the better crops is to diminish their amount of bad debts, and and enable them to collect a larger proportion of their outstandings; but they do not leave much more with the ryot than heretofore. Thus a mahajan to whom the ryot owed in 1875 Rs. 40 has recovered Rs. 30 instead of (say) Rs. 24, because the ryot's land produced 21 instead of 16 maunds per acre; but he has left the ryot enough only to pay his rent and carry on 3 or 4 months until the next crop is sown.

"To a ryot in this position, the Government demand of Rs. 1-8 per acre acre comes in the aspect of pure loss. That he has reduced his mahajan's debt to Rs. 10 instead of Rs. 16 is, to an improvident man, a matter of very little consequence; all he looks to is that he has recovered his credit with the mahajan and can rely on getting another advance in the approaching rains. On the other hand, the Government demand is obtrusive and urgent, and is a very definite and practical evil. No wonder therefore, if they seem to themselves to be no better off at the end of the year than their non-irrigating neighbours, while they have the Government due to meet in addition to the rent, which is common to both.

"This difficulty is so serious, that I suggested in the course of the year an experiment to see whether, if Government advanced the funds to pay off the debts of a selected number of the most regular lessees, they would re-pay the loan regularly with interest at 6¼ per cent; in which case, if the experiment proved successful, it might be gradually developed.

"I have no doubt that if Rs. 10,000 had been allowed to experiment upon, it would have given a great impetus to irrigation, and ultimately have freed many of the irrigators altogether from their present state of indebtedness, but it was thought by Government that the practical objections were so great that the proposal was negatived.

"Still it remains that as long as the bulk of the cultivators remain deeply indebted, only a succession of bad seasons can make irrigation really popular."

37. The extreme difficulty of collecting the Government dues still further illustrates the impoverished condition of the people. The following is a statement of the collections and arrears in each of the past five years. The collections are those for water-rates and miscellaneous only. Those from navigation are omitted, as these dues are of an altogether different description and from their very nature are realized without difficulty:—

	Collections of water-rates and miscellaneous receipts.	Arrears.
	Rs.	Rs.
1871-72	27,616	20,705
1872-73	30,270	15,498
1873-74	38,534	55,911
1874-75	71,331	90,023
1875-76	59,299	96,526

38. These constant accumulations of arrears have not been lost sight of in this office. They have been noticed, though not so prominently, perhaps as now, in former annual reports, and the attention of the Collector has been repeatedly drawn to them. In reply, Mr. Harrison has always sent full explanations, which amounted simply to this, that it was impossible to screw the money out of the ryots any faster, and I believe this to be strictly true. The condition of the wretched people in a year like 1875-76, a year of bumper crops it must be remembered, may be gathered from the extract above given and from the following, taken from the report of the Deputy Superintendent, Baboo Jadunath Mookerjee. I hope that the length of the extracts will not prevent their being read. The subject is a painful one, and is deserving of the most careful study:—

"The collections this year were made by the Government officers of the Canal Revenue Department, and no outsider, whether a landholder or ryot, applied for the appointment of Collector under paragraph 9 of the rules. Since the year 1872 a large number of applications were made almost every year by the leading ryots for the appointment in question, but not one was made during the year under review. I attribute the absence of application to the knowledge of the applicants that the ryots as a body were deeply plunged in debt, and that their creditors, the money and paddy lenders, as also their zemindars, would leave no stone unturned for the realisation of their dues. They also knew that the irrigated paddy crop was the only resource at command of the Government lessees for the repayment of their debts, and that the same would be attached and sold by their creditors, whether with or without the help of the legal proceedings. It was also anticipated from the latter end of the last irrigating season that the paddy would be sold this year at a very low price, and that this circumstance alone would greatly reduce the fund at the disposal of the lessess for the liquidation of their debts and all these considerations had conspired to deter the leading men of the villages from making their applications for the appointment in question.

"The collections of the current year's demand could not be regularly commenced till after the 20th January 1876. The collecting establishment were set to work from the third week of December 1875, but it could make no progress till after the lapse of a month. The 12th of the next month was one of the heaviest sunset days for the payment of the Government revenue, and it was from the beginning of December that the myrmidons of the zemindars were posted in the villages and these men to the best of their power were trying to screw out of the ryots every farthing that they could pay. Our irrigators, therefore, as a body everywhere resisted our attempts for realizing the water-rates before the sunset day aforesaid, and they sent our men back with the assurance that the Government dues would be paid up as soon as they could meet the zemindars' demand for the payment of their land-tax.

About one-third of the demand for the year is payable in this district on 12th January.
H. L. H.

"The collections of the water-rates, current demand and arrears, were undertaken with all earnestness from the middle of January 1876, but as before, our debtors were found quite unprepared for the payment of their debts. Paddy was now being sold at a very low price, so much so that it was far below the different prices obtaining in the district for the preceding ten or twelve years. It furnished our lessees with excuses for delaying the sale of their paddy, and they pretended to wait for the most favorable opportunity for selling it to advantage. But in the middle of February the majority of the cultivators were run out of it. And the officers of the Department had no other alternative but to proceed against them under the Certificate Act VII of 1868; and up to the 31st of March 1876 applications were made to the Collector of the district for filing certificates against 2,562 defaulters of the year under report; and even with the assistance of the law, not more than Rs. 25,556 of the current demand could be realized within the year. The drought of the year 1873 and the cyclone of the following year, 1874, had reduced the ryots of Midnapore to a very pitiable circumstance, and during these two years heavy loans of paddy and money were made by them without being able to repay any good portion of the same. Their creditors also knowing the bad crop harvested by them during the two years aforesaid had remained quiet until the crop of the past year was reaped by their debtors, and it is almost certain that more than half the out-turn of it has been made over to them by the latter; and it is these men only who have nearly recovered the debts due to them. Although the crop was a rich one no doubt, the zemindars, with few exceptions, have not been able to collect more than half of what was due to them, and the Government in the Irrigation Department not even $\frac{5}{16}$ths of the total amount which they had to collect during the year under review. The total demand under all heads, arrears and current revenue being Rs. 1,94,786 and the collections Rs. 59,269. This indeed is not satisfactory, but the slow progress is due solely to the impoverished condition of our customers, and it is to be added here that throughout the whole year the best time for the cultivators to pay their debts is the few months which follow the harvesting of the paddy crop, but it is to be remembered that during these three months they have to meet the heaviest demand of the zemindars for the payment of their land rent, whose heaviest kists, two out of the four fixed for paying in the Government revenue, fall within the said period, *viz.*, one on the 12th January and the other on the 28th March. As in January, so in March, there occurs a sad interruption to the collection of the Government irrigation revenue, for from the 15th of that month the zemindars' agents do not hesitate to commit all sorts of excesses for the recovery of the land-rent."

In all $\frac{14}{16}$ths of the land revenue is payable on 12th January and 28th March.
H. L. H.

39. Ground between the zemindars, the mahajans, and the Government, stripped of all the fruits of their toil, but just what suffices to keep body and soul together, who can wonder that the poor people should be tempted to gamble for their crop, and if the profits of irrigation in ordinary years are not more than the margin of interest due to the mahajan will alone swallow up, that they should make irrigation a mere matter of venture, refusing it if the forecast of the season by some local astrologer is favorable, and only resorting to it in the prospect of general failure of rain, high prices, and excessive profits.

40. It is probable that the present state of indebtedness and poverty of the people is exceptional in degree, and is traceable to the losses caused by the epidemic fever, the drought of 1873 and the cyclone of 1874. But I have a distinct impression that however intensified by these special visitations, the poverty of the cultivating classess of that part of the Midnapore District has always been extreme, and that this is mainly due to the peculiar conditions of land settlement and tenures. I believe this to be especially true of the Pergunnahs of Dhenkiah Bazar and Shahpoor lying north of the canal, where rents in kind, varied in some instances by payment in cash, at a commutation rate fixed annually and arbitrarily by the zemindars, prevail. Certain it is that the miserable poverty of the people has been a constant theme of remark and plea for forbearance in the enforcement of the Government demands ever since irrigation was introduced. The Deputy Superintendent has repeatedly referred

to it in his reports, and has expressed himself much more strongly to me in conversation on the subject.

41. The question as to what can be done to better the condition of the people is, no doubt, one of extreme difficulty, yet it is surely urgent and pressing. No stronger illustration could be desired of the desperate straits in which the ryot is now placed than the fact vouched for by the Collector of the district, that even when the yield of his crop is increased 25 per cent. by irrigation, almost the whole of the profit is swept into the pocket of the mahajan, and the ryot left little better off than before. No relief is apparently to be gained by deferring the Government collections to a later period when prices are usually higher. If this is attempted the only result is that some other creditor carries off the crop. There is nothing for it but just for the Government to go in for what it can get in the general scramble, and the returns above given seems to show that it has little more success than the other creditors. Such a state of things seems to me to amount to nothing less than a grave scandal upon our administration, and it is undoubtedly, as the Collector has pointed out, the chief hindrance to the spread of irrigation.

42. The following is a statement of the working expenses of the Midnapore Canal for the past four years:—

	1872-73.	1873-74.	1874-75.	1875-76.
	Rs.	Rs.	Rs.	Rs.
1. *Maintenance*, viz.,—				
Works	62,844	88,486	92,185	1,18,225
Establishment, including Direction and Accounts	9,705	15,474	19,425	26,808
Tools and Plant	...	...	714	4,164
TOTAL MAINTENANCE ...	72,549*	1,03,960	1,12,324	1,43,787
2. *Revenue Management*, viz.,—				
Irrigation Establishment ...	9,316	10,701	11,006	16,493
Navigation ditto ...	5,133	5,896	7,097	7,119
TOTAL REVENUE MANAGEMENT ...	14,449	16,597	18,103	23,612
TOTAL WORKING EXPENSES ...	86,998	1,20,557	1,30,427	1,67,399

The cost of maintenance as here shewn for the last two years includes special repairs rendered necessary by the cyclone of 1874. If these be deducted, the working expenses would be as follows:—

	Rs.
1872-73	86,998
1873-74	1,20,553
1874-75	83,123
1875-76	1,28,447

43. The irrigable and irrigated areas in the same years were—

	Irrigable Acres.	Irrigated Acres.
1874-75	89,150	72,318
1875-76	107,800	55,995

In the former year therefore the ordinary working expenses came to Rs. 1·15 per acre irrigated, which is as low as on any of the North-Western Provinces or Punjab Canals. In the year under report it rose again, owing to the decrease in irrigation, to more than Rs. 2 per acre. Pehaps these are as favorable results as we can expect under present circumstances.

44. The mileage cost of maintenance of the main canal was in—

	Rs.
1872-73	1,356
1873-74	1,592
1874-75	1,606*
1875-76	1,857*

* Inclusive of special cyclone repairs.

These amounts seem high. They are not nearly covered by the tolls, which amounted to the following sums per mile of canal—

	Rs.
1872-73	874
1873-74	710
1874-75	935
1875-76	1,079

It is well to record these figures, though I am not at all prepared to say that the expenditure is more than is necessary to keep the canal in proper order.

45. Maintenance of distributaries was as follows:—

	Length open.	Cost.	Cost per mile.
	Miles.	Rs.	Rs.
1872-73	102¾	11,310	110
1873-74	146	10,114	69
1874-75	178	13,714	77
1875-76	182	21,879	120

The mileage rate appears very high. It is more than double that in Orissa and far higher than in the North-West where the rates in 1874-75 were—

	Rs.
Ganges Canal	42·5
East Jumna	53·8
Bijnour Canals	38·0
Rohilcund	54·2
Bari Doab Canal	63·0

The point calls for explanation, which the Superintending Engineer will be asked to furnish.

46. Under the head of Revenue Management there was a considerable increase in the cost of establishments, with a falling-off in receipts, so that the percentage on collections rose from 16·4 the previous year to 31·0 during that under report. It was found necessary to employ additional establishment to help in bringing up arrears both in the Deputy Superintendent's Office and in the collections, and an Assistant Superintendent was employed. There can be little doubt that the revenue establishment had previously been too low and could not keep pace with the work and this may have had something to do with the heavy arrears of collections already remarked upon. The following table shews the cost of the revenue establishments,—both Irrigation and Navigation,—for the past four years:—

YEAR.	IRRIGATION.			NAVIGATION.		
	Cost of Establishments.	Collections.	Percentage on Collections.	Cost of Establishments.	Collections.	Percentage on Collections.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1872-73 ...	9,316	23,556	39·5	5,133	20,994	24·4
1873-74 ...	10,701	35,823	29·8	5,896	34,104	17·3
1874-75 ...	11,006	67,015	16·4	7,097	44,886	15·8
1875-76 ...	16,493	52,791	31·0	7,119	51,810	13·75

NOTE.—The amounts shown under "Collections" are exclusive of Miscellaneous Revenues.

The establishment here shown under the head of Navigation includes that for working the locks. That employed in collecting the tolls is but a small part of it, and cost only Rs. 2,103 in 1875-76 or about 4 per cent. of the collections.

47. The duty realized from the water supplied for irrigation is a question which is receiving more and more attention. It cannot apparently yet be stated with much confidence what the duty is for the Midnapore Canal, as the Superintending Engineer states that there are discrepancies as yet unexplained between the results obtained from the various methods of calculating the discharges of the distributaries. Taking, however, the mean of these, he shows that the duty in 1875-76 was in the case of—

1. The Midnapore Weir, 92 acres per cubic foot of supply.
2. The Panchkoora „ 96 „ „ „ of „

These results are for the khureef rice crop.

48. Some experiments of considerable importance were made during the year 1875-76 to ascertain the actual outturn of paddy, both irrigated and unirrigated, within the tract under the influence of the canals. The question has never been raised as to the value of the canal water in years of deficient rainfall, but it was a matter of considerable interest to ascertain whether any and what increase is due to it when the rains are plentiful. Now 1875 was an admirable year in this respect, the rainfall having been copious, exceedingly well-timed, and the unirrigated crop allowed on all hands to be a bumper. The Executive Engineer, Mr. Apjohn, whose able management of his division well deserves a passing note, made arrangements by which the services of nearly all his subordinates were utilized for the purpose of cutting and measuring the yield of selected portions of fields, the plan being to take a plot measuring 60 feet by 12 feet, and to cut, thrash, and weigh the paddy and straw on the spot, in the presence of the ryots. The Revenue Department made similar arrangements, and hence we have two sets of experiments by independent departments as a check upon each other.

49. The experiments numbered in all 784, and extended over the 10 pergunnahs watered from the two weirs. Nine of those pergunnahs lie under the Midnapore weir, and one under that at Panchkoora. Of the former, experiments were made by both departments in five pergunnahs only, but these numbered 603.

50. The results thus obtained were as follows:—

MIDNAPORE WEIR.

Outturn per acre of Paddy and Straw.

Average of 431 experiments by the Engineer Department—

	Irrigated. Maunds.	Unirrigated. Maunds.	Difference. Maunds.
Paddy	23·76	17·79	5·58
Straw	58·86	38·82	20·04

Average of 172 experiments by the Revenue Department—

	Irrigated. Maunds.	Unirrigated. Maunds.	Difference. Maunds.
Paddy	21·61	16·03	5·58
Srtaw	46·42	31·94	14·48

The exact accordance in the results as regards the difference of yield obtained by both departments is important. It would appear that as a rule the Revenue Department selected a lower average standard of crop than the Engineers, but the result, as between irrigation and non-irrigation is the same.

51. The area under the Panchkoorah Weir is much more limited; but the soil richer than in the other tract. The results obtained there were as follows:—

Average of 78 experiments by the Engineer Department—

	Irrigated. Maunds.	Unirrigated. Maunds.	Difference. Maunds.
Paddy	28·86	22·56	6·30
Straw	53·01	37·26	15·75

Average of 50 experiments by Revenue Department—

	Irrigated. Maunds.	Unirrigated. Maunds.	Difference. Maunds.
Paddy	28·60	25·30	3·30
Straw	61·73	52·27	9·46

The results in this case are discrepant. The outturn of irrigated rice found by both departments is the same, but the difference between this and the unirrigated is shown by the Revenue Department as only half as great as by the Engineer. This has not been explained.

52. The general result may be said to have been that irrigation increased the yield by 5½ maunds of paddy, and half a ton of straw per acre. The Collector thinks that the paddy is not worth more to the ryot than 10 annas per maund. It is difficult to assign a value to the straw. At present is is not exported from the Midnapore reach of the canal, though it is from the more easterly reaches in large quantities to Calcutta. Rs. 4, however, seems a fair estimate of the value of increased yield. The water-rate was Rs. 1-8.

53. Similar experiments were made to the number of 220 in the unirrigated rice district of Hidgellee, a flat plain, usually reported to be very rich, close to the Bay, and having a heavier rain-fall than Midnapore. The acreage yield there obtained was 22·97 maunds of paddy per acre. This is not much more than half the popular estimate of the outturn of that district, and shows how fallacious all estimates based on such data must be. The *average* outturn given by Lieutenant Ottley in 1874, taken from the best available sources of information, was 36 maunds, whereas here, in a *bumper* crop, it is found to have been 23 only.

54. The experiments will be repeated and extended to Orissa. A few only are reported from the latter province for the year under report.

NAVIGATION.

55. There is a steady increase in the traffic and tolls. The latter amounted for the year to Rs. 51,810 against Rs. 44,886 for 1874-75, and this notwithstanding the very unsatisfactory condition of one of the tidal reaches.

56. The following table compares the state of the traffic for the past four years:—

	1872-73.	1873-74.	1874-75.	1875-76.
Number of miles open at the end of the year ... ... No.	24	48	48	48
Toll collections ... ... Rs.	20,994	34,104	44,886	51,810
Rate of tolls per mile ... „	874	710	935	1,079
Number of boats, including empties ...	26,407	29,997	29,967	36,433
Measurement tonnage of boats, exclusive of empties ... ... Tons	103,314	120,098	168,090	189,414
Estimated value of traffic ... Rs.	76,25,108	91,65,525	1,18,23,308	1,22,07,919

The actual tonnage of goods carried was probably about 60 per cent. of the measurement tonnage here given.

57. The following is a simple classification of the traffic:—

	1872-73.	1873-74.	1874-75.	1875-76.
	Tons.	Tons.	Tons.	Tons.
Articles of food	39,574	50,541	61,407	69,425
Stimulants	2,971	4,382	4,327	8,228
Clothing	7,601	7,073	7,355	6,558
Staples of manufacture	11,269	14,610	14,760	20,172
Building materials	4,895	5,028	7,240	11,140
Fuel	18,173	15,009	5,606	4,707
Cooking utensils and other domestic implements ...	2,533	1,951	1,769	2,135
Miscellaneous	16,630	16,366	65,629	67,021

58. As previous reports have furnished no general description of the canal traffic and its effect upon the Midnapore and surrounding districts, the subjoined extracts from a recent article in the *Statistical Reporter* will be of interest.

"The actual amount of paddy conveyed by the High Level Canal during the year was 1,80,000 maunds, valued at Rs. 2,20,000, nearly the whole of which stopped at the Damuda and was consigned for Amtah and other places on that river. As a set-off against this, nearly 50,000 maunds of paddy travelled westwards, no doubt from the Hooghly for the Damuda or Roopnarayan.

"Besides the paddy, 60,000 maunds of husked rice were conveyed eastward by the canal during the year.

"The jungle mehals, and especially the banks of the Sooburnrekha, abound in land producing linseed, mustard, castor, and other oil-seeds; and although the demand in the district is by no means small, the supply from the west is sufficient for Calcutta to claim a large and constantly increasing share. During the year under review close upon 1,50,000 maunds oil-seeds of all descriptions, valued at Rs. 4¼ lakhs, were dispatched eastward, On the other hand there was a return traffic of 40,000 maunds, valued at Rs. 1,30,000.

"The extent to which the canal assists the forest trade of the jungle mehals and Mohurbhunge may be judged from the following figures. It conveyed eastward during the year:—

	Rs.
35,000 maunds of charcoal, valued at	22,000
3,600 ditto of firewood, ditto at	2,600
2,800 rafts of timber, valued at	35,000
8,000 beams, valued at	10,000
200 planks, ditto at	200
480 maunds of gum and resin, valued at	1,800
2,500 ditto of sâl leaves, valued at ... ... stitched together and used by the lower classes in Calcutta as plates.)	2,200 (these are

	Rs.
100 maunds stick-lac	200
24,000 sâl piles, valued at	22,000
21,000 maunds of dried fruits, valued at	55,000
915 bamboos, valued at	50

"The cargoes of a similar character going westward into the heart of the district are—

	Rs.
Coal, 22,000 maunds, valued at	8,000
Canes, 305 maunds, valued at	235
Fuel (chiefly on the two east end reaches), 3,000 maunds, at ...	1,400
Planks, 100, valued at	300
Beams, 717, valued at	5,400
Bamboos, 1,600, valued at	200

"The cargoes in metals (tamba, pital and kansa) are almost as large going east as going west. This is entirely due to the trade of Kharar, a large place close to Ghatal, which receives its metal in the unwrought state from Calcutta, and returns it manufactured into cups and vessels. The maundage going eastward (from Kharar to Calcutta) was 13,500, valued at Rs. 4,00,000, while wesward the bulk was 15,800 maunds, valued at Rs. 2,70,000. The difference in value, is no doubt due to the metal on its return to Calcutta being in the manufactured state. Stones, cups and plates are made from a soap-stone in the Western Hills, and are exported from Singbhoom. No less than 5,000 maunds of these, valued at Rs. 20,000, found their way to Calcutta during the year by canal. Owing to the excellent pasture-grounds found in the undulating country in the west of the district cattle are abondant, and the produce of horns and hides far exceeds the local demand. The surplus is exported to Calcutta, the canal being a very favourite route. During the year, over 25,000 maunds passed eastwards, valued at Rs. 2,30,000. This is, of course, a one-sided trade, and no appreciable amount is imported in return. Pottery is also a one-sided trade—nearly 11,000 maunds having been conveyed eastwards by the canal.

"The most valuable cargoes conveyed by the canal are silk and indigo, all going eastwards. During the greater part of the year, these cargoes are shown together, and it is not practicable to indicate separately the amounts of each which were exported. Taking the two products together, the total amount conveyed during the year was 5,000 maunds, valued at Rs. 8,70,000. Valuable cargoes like these go far to redress the balance of trade on the High Level Canal, and to make the cargoes going east approximate to the value of those imported into the district.

"Sugar is a two-sided trade, the balance being in favour of Calcutta, which sent down 30,000 maunds, and only took 9,000 maunds. The last two reaches of the canal send a good deal of straw to Calcutta, the returns showing that 63,000 maunds were conveyed by canal during the year. Sand stands at 22,000 maunds.

"IMPORTS.—Turning now to the special imports, by far the most conspicuous is salt, which stands at 3,60,000 maunds, valued at Rs. 15,15,000. If it is remembered that this amount of salt is the natural supply for close upon 3,000,000 persons, some idea may be formed of the extent to which the canal has attracted the salt trade. The entire population of this district is only 2½ millions, and at least 1,000,000 of these do not draw their supply of salt by the High Level Canal. It is evident, therefore, that Midnapore has become the focus of the salt trade of Mohurbhunge, Singbhoom, and parts of Manbhoom and Bankoora,

and that the High Level Canal is the trade route by which it receives its supply in the first instance.

"Tobacco shows an import of 42 maunds, valued at Rs. 2,50,000. If the assumption is correct that people of this part of the country consume one maund of tobacco to six maunds of salt, and if allowance be made for the local production, which may perhaps amount to 20 per cent. of the demand, it will appear that the canal supplies tobacco over almost as wide an area as salt.

"The amount of thread, cotton and twist conveyed into the district by the High Level Canal during the year was 76,000 maunds, valued, at a rate of Rs. 78 per maund, at nearly Rs. 19,00,000. The amount of European cloth received amounted to 17,000 maunds, valued at 13¼ lakhs. On the other hand 4,000 maunds of cloth of native manufacture were despatched to Calcutta for sale, valued at a rate of Rs. 150 per maund, at six lakhs of rupees. There is no doubt about the fact that native cloth generally is a higher priced meterial than the imported European cloth; and it will be observed that the contrast in the valuation according to the canal returns is very marked. The district of Midnapore exports more native cloth to Calcutta than any other district.

"Fruit, vegetables and garden produce, show 29,000 maunds carried towards Calcutta, against 23,000 maunds from Calcutta; while gram, pulses, wheat, and other grains, show 1,30,300 maunds imported against a very insignificant amount exported. Even cocoanuts show an import of nearly 8,000 maunds. The passenger traffic is very large compared with that of the Low Level Canal. The returns show close upon 70,000 persons carried as passengers west, against about 60,000 carried east. The Juggernauth pilgrims contribute in no small degree to make up this total.

"The total traffic by the canal amounts to 7,50,000 maunds proceeding eastwards or towards Calcutta, valued at 52¼ lakhs; while the traffic westwards imported into the district amounted to 9,00,000 maunds, valued at nearly 70 lakhs. The totals slightly exceeded Rs. 50,000.

"The foregoing account indicates clearly how much Midnapore is indebted to the canals for the impulse given to the trade of the district. Only twenty-five years have elapsed since Mr. H. V. Bayley, who was for a long time Collector of Midnapore, expressed his regret that there was not even a good road to Calcutta by which the surplus produce of the district could find its way to a market. Now water carriage is brought to within a few miles of every field over two-thirds of the district, while, as regards the remaining one-third, the west and north-west of the district, the canal is destined to work still greater changes. Already all the country west of the canal obtains its salt by the canal; and as trade generates return trade, so it only needs that the roads to Keonjhur and Chyebassa be placed in first-rate order to quadruple the supplies of oil-seeds, hides, and jungle produce of all kinds which will be brought to the canal head."

HIDGELLEE TIDAL CANAL.

59. In 1875-76, Rs. 241, only was added to the Capital account of this canal which stood at Rs. 17,98,424 at the close of the year.

60. The interest for the year amounted to Rs. 80,917, bringing up the total amount on this account to Rs. 4,45,169.

61. The following is the Revenue account of the canal:—

	Expenditure			Receipts	
	During the year.	To end of the year.		During the year.	To end of the year.
	Rs.	Rs.		Rs.	Rs.
Works; Maintenance..	26,756	1,23,707	Water-rates ...	...	2,611
Establishment ...	10,640	42,604	Navigation ...	22,540	1,48,509
Tools and Plant ...	1,642	3,510	Miscellaneous ...	395	2,816
TOTAL ...	39,038*	1,69,821	TOTAL ...	22,935	1,53,936
			Deficit ...	16,103	15,885

* 22 per cent. on Capital.

62. The receipts during 1875-76 amounted to Rs. 22,935 against Rs. 52,891 of the previous year. The decrease of Rs. 29,856 was mainly due to two causes, the cessation of the abnormal export of rice to Behar of previous years, and the great destruction of the rice crop wrought by the cyclone of October 1874. The traffic of the canal is mainly rice and paddy, and the district had little of either to spare in the year under report.

63. The following is a comparative statement of the traffic for the past four years:

		1872-73.	1873-74.	1874-75.	1875-76.
Miles of canal open ...	No.	26	29	29	29
Toll collections	Rs.	14,454	27,978	52,209	22,510
Rate of toll per mile of canal	Rs.	556	965	1,800	777
Number of boats	No.	7,721	13,918	15,443	10,958
Measurement tonnage of boats exclusive of empties	Tons.	19,153	63,077	1,32,282	67,997
Estimated value of traffic ...	Rs.	10,35,238	14,33,724	28,96,109	13,38,440

The net tonnage of cargoes may be taken at about 60 per cent. of the measurement.

64. The principal articles carried were—

	1872-73.	1873-74.	1874-75.	1875-76.
	Tons.	Tons.	Tons.	Tons.
Articles of food	15,430	53,669	87,525	37,852
Stimulants	1,257	1,852	3,005	896
Clothing	23	194	306	40
Staples of manufacture	67	786	971	1,341
Building materials	851	1,249	3,183	3,758
Fuel	509	575	1,144	1,678
Cooking utensils and domestic implements ...	32	318	336	434
Miscellaneous	927	14,042	35,100	22,004

65. An effectual remedy has, it is hoped, been found for the excessive deposits of silt which have hitherto been so fruitful a source of expense, in the exclusion of the muddy waters of the Huldee from the canal by means of porte valets fixed to the lock-gates of the Huldee termini this year.

SONE CANALS.

66. The Capital, Interest and Revenue Accounts of these important works are shown below:—

CAPITAL ACCOUNT.

	Expenditure	
	In 1875-76.	To close of 1875-76.
	Rs.	Rs.
Head Works	1,33,348	21,77,397
Main Canals and Branches	10,32,889	72,86,065
Distributaries	7,21,852	10,06,803
Drainage Works	57,576	1,04,150
Field Survey	1,56,391	2,00,170
TOTAL WORK ...	21,02,056	1,07,75,125
Establishment	5,01,698	27,44,302
Tools and Plant	74,180	11,45,216
Suspense Balance	—82,454	6,45,514
GRAND TOTAL ...	25,95,480	1,53,10,157
Deduct receipts on Capital Account	20,341	1,10,390
BALANCE ...	25,75,139	1,51,99,767
Add Capitalized Land Revenue	16,779	16,779
TOTAL CAPITAL OUTLAY ...	25,91,918	1,52,16,546

INTEREST ACCOUNT.

	Rs.
Amount of interest due on 1st April 1875	14,11,017
Charge for 1875-76	6,26,411
TOTAL DUE ON 1ST APRIL 1876 ...	20,37,428

1875-76 being the first year in which the Sone Canals have yielded direct revenue, the Revenue Account was opened in that year, and is as follows:—

	Expenditure, 1875-76.		Receipts, 1875-76.
	Rs.		Rs.
Maintenance	89,832	Water-rates	50,865
Establishment	25,603	Miscellaneous	35
TOTAL ...	1,15,435	TOTAL ...	50,900
		DEFICIT ...	64,535

67. Water was first supplied from these canals during the great drought of 1873. It was then given in a very rude manner by simply cutting the canal banks, and no charge was made for it.

68. The rainfall in 1875-76 was nearly as low as in 1873-74, *viz.*, 39·80 inches, against 34·64.* The fall in September was quite as small, *viz.*, 2·88 against 2·72, and October was perfectly dry. The consequence was that by the end of September a large extent of the rice crop was in the utmost peril, and by the close of that month there was a general rush of applicants for canal water. This had to a considerable extent been anticipated, and though the distribution was necessarily rude, the Patna Canal having no distributaries, and the Arrah only a few, a rough and ready form of lease was devised, and the water was supplied with some regard to rule. In this manner 41,669 acres of khurreef crops and 33,896 acres of rubbee were watered, the total area irrigated being thus 75,565 acres. The khurreef was almost wholly rice, and the rubbee wheat and other spring cereals.

* These figures are the mean of the registered falls at Dehree and Arrah.

69. The assessments during the year amounted to Rs. 1,03,193, of which Rs. 50,865 were realized, and Rs. 15,154 remitted, leaving an outstanding balance of Rs. 37,174 at the close of the year.

70. The results of the year's operations was, upon the whole, quite as good as could have been expected under the circumstances. The only Irrigation Acts in existence did not apply to Behar, and the new Act only received the assent of the Governor General on the 24th April 1876. Hence there were in reality no legal powers to frame rules or to assess. The simple method devised answered the purpose in a general way, objections to assessment were dealt with in a liberal spirit, and though considerable remissions of demand were unavoidable, the proportion realized was far from inconsiderable.

71. The water-rates, fixed for the year only, were Rs. 2-8 per acre for both khurreef and rubbee crops, with the exception of sugar and opium which were charged at Rs. 5.

72. None of the canals were open for navigation throughout during the year, but several miles of the Western Main and Arrah Canals were utilized for the carriage of materials for the works.

DAMUDA CANAL.

73. This scheme, in its original form as projected by Colonel Rundall, and actually commenced in 1869, *viz.*, a canal from Ranegunge to Calcutta, has been abandoned, but the Capital and Interest Accounts are still kept up. The capital invested was reduced by Rs. 525 by some trifing receipts, and stood at Rs. 1,57,634 at the close of the year. The accumulated interest to the same time amounted to Rs. 54,144.

74. It seems desirable that the account should be closed.

HOOGHLY IRRIGATION SCHEME.

75. This is a project for throwing the water of the Damuda into some of the old flood channels of the district by means of a canal taken off from the river at Burdwan.

76. Some expenditure was incurred during the famine year, but the project has since been in abeyance pending inquiries as to the price at which the land in the beds of the flood channels might be acquired. The inquiries have been of a very tedious character and were not complete at the close of the year.

77. The Capital and Interest Accounts are as follow :—

CAPITAL ACCOUNT.

	Expenditure	
	In 1875-76.	To close of 1875-76.
	Rs.	Rs.
Works	62,291	1,21,992
Establishment	4,103	14,841
Tools and Plant	1,315	6,330
TOTAL ...	67,709	1,43,163
Deduct Receipt on Capital Account	105	105
NET OUTLAY ...	67,604	1,43,058

INTEREST ACCOUNT.

	Rs.
Interest to 1st April 1875	2,071
Ditto for 1875-76	4,604
Total to 1st April 1876 ...	6,711

TIRHOOT AND SARUN IRRIGATION SCHEME.

78. Surveys for several projects of irrigation from the Gunduk, the Bagmutty, Kumla, Kosi, and some smaller streams, were in progress during the year, and two or three projects were submitted to the Government of India, but for various reasons were not accepted. Modifications of them are now under investigation, and it is hoped that something may in the end be accomplished.

79. The total outlay on these surveys to the end of 1875-76 amounted to Rs. 3,92,676, of which Rs. 1,82,803 were expended during the year, *viz.*,—

	Rs.
Preliminary Expenses	14,762
Establishment	1,67,356
Tools and Plant	1,411
Suspense Accounts	—676
TOTAL ...	1,82,853
Deduct Receipts on Capital Account	50
NET OUTLAY ...	1,82,803

DRAINAGE WORKS.

80. This class of works seems likely in time to figure largely in our Irrigation reports. The only scheme of the kind actually in operation during the year was the Dancuni scheme. The works are all that can be desired in an engineering point of view, but the process of distributing the outlay over the improved lands with a view to its realization from the proprietors still drags its slow course along, and it is not possible as yet to speak confidently as to the financial result of the undertaking.

81. Meantime surveys for other and more important schemes were commenced during the year. In a minute dated 26th September 1875, His Honor the Lieutenant-Governor reviewed the whole question of drainage in Bengal, and directed that certain specific schemes should be investigated. Three of these are in the Hooghly District and two in the 24 Pergunnahs District. The surveys for these were commenced, as were also those for two larger projects in which drainage forms only a subsidiary part of the improvements contemplated. These are the protection of the Moorshedabad, Nuddea, and part of the Jessore Districts from inundation by a comprehensive system of river embankment, and navigable canals to connect the Pudda at Khoostea and at Madaripore with the Hooghly at Calcutta. All these projects were in too embryo a condition at the end of the year to admit of detailed description. The expenditure on them amounted to Rs. 39,589.

ESTABLISHMENT.

82. Towards the close of the year under review the Department was deprived, temporarily, of the services of Mr. Levinge, C. E., the Superintending Engineer of the Sone Circle, who went home for a well-earned two years' furlough after a continuous service in India of over 20 years, 13 of which were spent upon in the great works in Orissa and Behar, either in the service of Government, or of the Irrigation Companies which eventually transferred their works to the State. Independently of the important services rendered by Mr. Levinge in Orissa, as Chief Engineer in the days of the Irrigation Company, his name will probably be chiefly remembered in connexion with the great canals from the Sone. The ability and signal success with which he designed and carried out, well nigh to completion, the colossal system of irrigation canals from that river have been cordially acknowledged by the Government of India, and his return to the scene of his labors will be heartily welcomed alike by the Government and the officers and subordinates who have served under his orders. He was succeeded by Major J. G. Forbes, R. E.

83. Without particularizing the services rendered by the other Superintending Engineers I may say that the Government is, as a rule, well served by its officers of all ranks in this Department, and that among the Executive Engineers the names of Major Heywood, R.E., Captain MacArthur, R. E., and Messrs. Fouracres, Stoney, Whitfield, Kimber, Apjohn, Dejoux and Vertannes are deserving of special mention.

F. T. HAIG, *Colonel, R.E.*,
Chief Engr., Bengal Irrign. Branch.

The 13th December 1876.

COMPARISON BETWEEN RAINFALL IN THE YEARS 1875-76 AND 1874-75.

		Khurreef.							Rubbee.							Total of year.	Remarks.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

Prize offered for the best Essay on the vicissitudes of Aryan civilization in India

No. 44P., dated India Office, London, 26th April 1877.

From—Secretary of State for India,
To—Government of India.

MY LORD,—I forward, for the information of Your Excellency in Council, copy of a letter* from the Foreign Office, with a translation of its enclosed communication† setting forth the particulars of a prize to be awarded at the International Congress of Orientalists to be held in Florence in 1878 for the best Essay upon the vicissitudes of Aryan civilization in India.

* Dated 3rd April 1877.

† Dated at Rome, 12th January 1877.

2. Your Lordship in Council will doubtless give due publicity to this matter.

Dated Foreign Office, the 3rd April 1877.

From—T. V. LISTER, Esq., Under Secy. of State for Foreign Affairs,
To—The Under Secretary of State for India.

THE Italian Ambassador at this Court has announced to the Earl of Derby that at the meeting of the 4th International Congress of Orientalists to be held in Florence in 1878, a prize will be given of five thousand Italian Lire by the Minister of Public Instruction in Italy to the author of the best Essay upon the vicissitudes of Aryan civilization in India.

5,000.

The character of the Essay, the Regulations under which competitors for the prize are to submit their Essays to the judges and every necessary detail will be found in the accompanying programme.

I am directed by Lord Derby to request that you will lay this paper before the Marquis of Salisbury, and that you will move His Lordship to take such steps as may appear to him best suited to give general publicity to its contents.

TRANSLATION.

Particulars of a competition for a Prize Essay on Oriental history on the occasion of the 4th Oriental Congress about to be held in Florence.

THE first thought of His Excellency the Professor Michele Coppino, Minister of Public Instruction, when the intention of convening in Florence the 4th International Congress of Orientalists was intimated to him, was to promote on this auspicious occasion some important work connected with oriental matters, and after having consulted the General Committee of the Congress, His Excellency has resolved to award a prize of five thousand Italian Lire to the Essay which should be adjudged to be best in the following respects:

The subject will be: the changes of Aryan civilization in India. The Essay will be a historical and critical one on the characteristic and constituent elements of Aryan civilization from its first immigration into the Punjab, such as can be determined from the language, customs, religious creeds, manners, and will be a particularized history of that civilization in India, with an examination of the elements which have modified it in the different Indian countries.

Savants of any country are invited to compete.

Every one will be required to address his own manuscript post paid, either to "Professore Michele Amari, Senatire del Regno e Presidente del detto quarto Congresso e del Comitato ordinatore," or to the Italian Legation in any European or American State, not later than the 31st December 1877.

A

Each manuscript shall bear a motto (the author's name being omitted therefrom) and the same motto is to be repeated on the cover of a sheet of paper folded and sealed which shall contain the author's name and address. This cover shall be forwarded together with the said manuscript either to the Senator Amari at Rome or to one of the said Italian Legations.

The merit of the work will be decided by five persons already chosen by the General Committee, from among the most eminent authorities in the culture of Aryan literature. The votes of these judges, given separately, will be taken by the General Committee and the prize shall be awarded to that writing which has gained the votes of the majority or of all the judges. The sealed cover containing the name of the author shall then be opened and all the others burnt.

The author of the Prize Essay shall retain the proprietary right to his own work; the other essays will be returned to their authors on their application and at their expense. At the opening meeting of the Congress the President will announce the result of the competition and the names of the judges.

The essay may be written in Latin, Italian, French, English, or German.

Neither members of the General Committee nor judges of the competition will be allowed to compete for the prize.

Delegates of the General Committee are begged to give as much publicity as possible to the present announcement, and to procure its insertion in the public press.

In the name of the General Committee.

M. AMARI,
President.

ROME;
The 12th January 1877.

A. DE GUBERNATIS,
Secretary.

ARTHUR HOWELL,
Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Relief Report for the Kurnool District for the week ending 19th May 1877.

Proceedings of the Board of Revenue, dated 31st May 1877, No. 2497.

Read Relief Report from Kurnool district for week ending 19th May 1877, dated 25th May 1877.

The Relief Report for the Kurnool district for the week ending 19th May 1877 is submitted to Government, in continuation of Board's Proceedings, 25th May 1877, No. 2389.

2. *Prices and Rainfall.*—Prices showed tendency to rise. Rice was dearer in Ramalkota, Cumbum, Nandial and Sirwell; cholum rose in five taluks; ragi was not on sale in Ramalkota, Nandikotkur or Koilkuntla, and of the remaining five taluks, the price rose in two; cumboo was quoted only in Pattikonda, Cumbum and Markapur, and the price was rising in the first named taluk. There was a good fall of rain throughout the district, ranging from 3·55 inches at Cumbum to 1·4 inches at Pattikonda and averaging 2·27 inches.

3. The following abstract shows the numbers on relief works in comparison with those on 12th May:—

	12th May.	19th May.	
Ramalkota ...	32,610	32,281	— 329
Nandikotkur ...	20,307	19,518	— 789
Nandial ...	28,644	26,693	— 1,951
Sirwell ...	19,672	17,433	— 2,239
Koilkuntla ...	28,452	28,266	— 186
Pattikonda ...	16,946	23,573	+ 6,627
Cumbum ...	47,932	46,447	— 1,485
Markapur ...	10,295	9,531	— 764
Total ...	204,858	203,742	— 1,116

The decrease in Sirwell is reported to be due to defective return; that in Nandial to cholera and concentration of works, and that in Cumbum to emigration to Nellore and transfer of coolies from small works to the trunk road. The increase in Pattikonda is partly nominal and partly due to the temporary closure of a large work last week in view to promotion of emigration to Nellore and the Hooblee railway. The fluctuations in the other taluks call for no remark.

4. The present is the first report from the district in which the D. P. Works have been separately marked. In the statement given with the Proceedings above quoted, the Board entered 50,446 being the number on 12th May on certain large works which, they were aware, were under officers of the department. The present return is still imperfect as regards these taluks, but gives the figures noted in the margin. The total number is nearly 68,000 or one-third of the numbers employed in the district.

Taluk.	Number of works.	Outlay. In the week.	Outlay. Up to the week.	Number of coolies.
Ramalkota ..	5	9,073	53,430	14,492
Pattikonda ..	8	2,779	29,933	3,634
Nandikotkur ..	4	3,769	27,617	12,367
Nandial ..	3	18,415	77,163	22,102
Sirwell ..	2	7,513	53,963	15,049
Total ..	22	41,549	2,52,316	67,961

5. *Rates of wages.*—The wages are correctly regulated with reference to the price of cholum or ragi.

6. *Gratuitous relief.*—The taluk totals and distribution under the several classes of relief are shown below:—

	12th May.	19th May.	
Ramalkota ..	14,239	12,369	— 1,870
Nandikotkur ..	5,742	6,307	+ 565
Nandial ..	4,642	6,539	+ 1,897
Sirwell ..	6,510	6,915	+ 405
Koilkuntla ..	6,093	6,454	+ 361
Pattikonda ..	4,618	4,711	+ 93
Cumbum ..	3,861	15,079	+ 1,218
Markapur ..	15,344	8,385	— 1,959
	61,049	61,759	+ 710
Camps ..	6,903	6,490	— 413
Village relief ..	13,394	7,433	— 5,961
Children under 7 ..	40,752	47,926	+ 7,174
Total ..	61,049	61,759	+ 710

It will be seen that there is a large decrease in village relief and increase under children allowed 3 pies a head; and the increase in the different taluks in every case except Sirwell results from similar change. The Collector regards the decrease in village relief as a satisfactory feature and as due to the repression of fraud. The Board think, however, that there must be more than 13,833 persons in need of gratuitous relief in the district at the present time. The increase in the numbers of children indicates fraud. It has occurred in all taluks except Ramalkota and Sirwell. In the former, however, the proportion to the population on works is still 23 per cent., and the variation in the different taluks is very great, *viz.*, from 14 per cent. in Markapur to 23 in Ramalkota. The proportion is above 17 per cent. in the last-named taluk, and in Cumbum and Pattikonda, which have 22 and 20 per cent., respectively. The cost of gratuitous relief during the week was Rs. 12,240.

7. The Ramalkota taluk is the only one against which deaths of persons on gratuitous relief are shown. There were 18 in camps and relief houses in the taluk, and 12 among those relieved in the villages.

(True Extract.)
H. E. STOKES,
Secretary.

REVENUE BOARD OFFICE,
MADRAS;
The 31st May 1877.

(Signed) H. E. STOKES,
Secretary.

Scarcity in the Deccan and Southern Mahratta Country.

STATEMENT No. XXIX regarding the scarcity in the Deccan and Southern Mahratta Country, together with a summary of Government Orders issued during the period between 25th May and 7th June 1877.

Districts.	Area in square miles.	Affected area in square miles.	Population of district.	Affected population.	Collectors' reports by telegram, dated 29th May to 7th June 1877.	Works in progress.	Number of people employed. During the week last reported on.	Number of people employed. During the week ending 2nd June.	Number of people employed. Percentage of labourers to population of district.	Grants, including the large works authorized in Government Resolution No. 6152 of 27th Oct. 1876.	Expenditure up to latest known date.	Prices of staple grain in lbs. per rupee. Ordinary prices.	Prices of staple grain in lbs. per rupee. During the week last reported on.	Prices of staple grain in lbs. per rupee. During the week ending 2nd June.	Average rainfall, *i. e.*, the average of all the talukas for five years.	Average rainfall during the past season of all the talukas.
										Rs.	Rs.					
Khandesh ...	10,162	5,500	10,28,642	6,46,944	23 cents of rain in Sowda, and rain in western talukas. Cattle disease and ague prevalent.	Roads ... Tanks ... Miscellaneous*	2,771	2,690	·26	2,46,733	1,73,373	Jowari ... 56 Bajri ... 54	29¼ 26¾	27⅓ 25	24·94	14·4

Sholapur ...	4,496	4,496	7,18,034	7,18,034	20 cents of rain at Madha and Malsiras. Large grain importations. 93 deaths from cholera.	Ditto ...	59,571	68,279	9·5	30,36,850	12,60,143	Jowari ... 66 Bajri ... 60	18 ...	16¼ ...	25·21	8·11
Satara ...	4,988	2,682	10,64,002	4,61,000	About an inch and a quarter of rain in 4 talukas. Weather warm and cloudy. Land being prepared for monsoon crops. Grain supply sufficient. 280 deaths from cholera.	Ditto ...	43,783	49,026	4·6	6,45,869	5,49,658	Jowari ... 39 Bajri ... 35	15¼ 16¼	15½ 16½	54·60	25·43
Kaládgi ...	5,695	5,695	8,16,037	8,16,037	30 cents of rain in Bagalkot, and 15 cents in Kaládgi. Grain supply as before. 157 deaths from cholera.	Ditto ...	76,752	84,256	10·32	15,03,447	7,40,636	Jowari ... 56 Bajri ... 76	13⅓ 13½	13 12½	22·43	6·13
Belgaum ...	4,591	2,660	9,38,750	5,01,000	1 inch and 15 cents of rain in Belgaum, rain in all the talukas. Most of the rice lands sown, and the young crops springing up. More rain required for sowing early crops. Grain supply plentiful. 148 deaths from cholera.	Ditto ...	45,000	41,000	4·36	8,23,574	5,16,331	Jowari ... 43 Bajri ... 54	15 14	15 15	30·48	21·34
Dharwar ...	4,564	3,000	9,88,037	6,30,000	5½ inches of rain in the Nowalgund taluka. An average of 2 inches 31 cents in 8 talukas. Rice and early crops, where sown, thriving. Ploughing in progress. Imports low owing to high cartage rates. Cattle disease in two talukas. 128 deaths from cholera.	Ditto ...	53,808	57,141	5·78	12,79,499	6,10,813	Jowari ... 43	14¼	13	26·39	13·81
Total ...	54,355	34,183	79,63,927	50,18,992			8,67,307	3,87,075	4·86	1,09,15,640	53,90,192					

* Such as digging and repairing wells, prickly-pear clearances, &c.

There has been a considerable fall of rain in Násik, Poona, Satara, Belgaum and Dharwar, and there have been showers in the remaining affected districts. The sowing of rice and of quick-growing crops is making considerable progress in parts of the Belgaum and Dharwar Collectorates, and the young plants are reported to look promising. The ordinary early crops have also been sown in a few places in those two districts, but there must be more rain before this can be generally done.

The weather is very sultry, and appears to indicate an early commencement of the monsoon.

2. Grain has again slightly risen in price, the average of jowari throughout the affected area being 19 lbs. per rupee, as compared with 19½ lbs. during the week last reported upon.

3. The number of people upon relief works in the nine affected districts is 387,075 against 367,307 in the week last reported upon, and there are also 5,128 hill-men and immigrants employed in Ratnagiri and Kanara. The net increase is not large, and there is a slight decrease in some districts, while the decrease in Ratnagiri and Kanara is very great.

4. There is a decrease in the number of deaths from cholera in the Southern Mahratta Country, and an increase in Satara.

5. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 26th May, the number of people upon Civil works in the nine affected districts was 33,749, the number upon works under Public Works Department agency being 340,709. The proportion of people upon the former continues, therefore, less than 10 per cent. of the total. It is to be noted that the figures given in these tables are taken from the Progress Returns of the works, and are brought up to the week ending 26th May, while the figures in the table prefixed to this summary are taken from the Collector's telegrams, and refer to the week ending 2nd June.

6. The following table gives the expenditure by Government, during the week ending 19th May, upon charity in the relief of the aged and infirm poor; and in payments made to the young children of labourers employed upon relief works; this latter allowance, which has been paid since December, is debited to the works upon which the parents are employed, it being regarded as an increment to their wages to enable them to support their young children. Comparing the results shown in the table below with those shown in the last summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 28,666 to 32,524, while the number of children under 7 years of age has increased from 106,167 to 111,213:—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children, and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.
	No.	Rs.	Rs.	No.	Rs.	Rs.

7. The following table gives the distribution of the people among the relief works in the nine affected districts employing 1,000 labourers, or more. It will be seen

that 313,526, or about five-sixths, of the labourers are now concentrated upon the works enumerated:—

Districts.	Works.	Number of labourers.	Total.	Remarks.
Khandesh ...	Songir-Nandurbar Road ...	1,105	1,105

	Hullial-Annigerry Road ...	1,978		
	Grand Total ...	...	313,526	

8. Maps are not sent with this Summary, as they would merely repeat the information already given.

9. A table is appended, showing the condition of the affected Native States.

10. With regard to the movements of food-grains, 7,919 tons were exported from Bombay to the Southern Mahratta Ports during the week ending 31st May, and during the same week 4,253 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 12,172 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the end of May to the Southern Mahratta Ports and the Railway Stations in the distressed districts. It will be seen that the total amount delivered up to the end of May was 298,823 tons :—

Food-grains sent to	In October and November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	In April 1877.	In May 1877.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports.	26,903	17,312	13,459	16,075	16,798	21,399	28,657	140,603
South-Eastern line, from Poona to Sholapur.	41,697	25,498	15,471	12,477	13,760	12,856	12,594	134,353
North-Eastern line, from Nasik to Bhusawal.	9,223	3,606	1,615	2,622	3,234	2,346	1,221	23,867
TOTAL ...	77,823	46,416	30,545	31,174	33,792	36,601	42,472	298,823

11. On the whole, the slight improvement in the general situation noticed in the last Summary is maintained. The food-supply is sufficient, and the rise in prices is not great. The grain trade continues active, especially that down the Coast, the large amount of 7,919 tons having been despatched from Bombay to the Southern Mahratta Ports during the past week. The condition of the cattle is fair, except in parts of Poona, Sholapur, and Kaladgi, where it is not so favourable. The heavy rainfall in Belgaum and Dharwar has assisted the crops already sown in those districts, and enabled others to be sown, and the rice and quick-growing crops are promising. The net increase of 15,283 in the number of labourers is not large, nor is the increase of 3,858 in the number of people upon charitable relief excessive. Emigrants continue to return to their homes, and the number of those people employed upon relief works in Kanara and Ratnagiri has decreased by nearly 50 per cent. The condition of the people continues to be fairly good, especially upon the works where the relief afforded seems to be sufficient in all cases, and the general prospects are very encouraging if the monsoon be favourable. Cholera is not on the increase.

M. K. KENNEDY, Major-General, R. E.,
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women, and children, as in a few returns these particulars have not been given, the total number of labourers as having been entered.
These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

T. C. HOPE,
Additional Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 14TH JUNE 1877.

GENERAL REMARKS.—In Madras more or less rain is reported from every district; in Malabar the monsoon has set in, and 5½ inches fell during the week: elsewhere the fall has been fairly general, and in tolerable quantity in some parts of nearly every district; prospects are said to be promising, and the starting of agricultural operations and improvement of pasturage and water-supply are mentioned in most of the district reports. The number on relief works is 847,602, and of those on gratuitous relief, according to the Madras Government, 461,010; but the district totals for the latter give 431,349: the former are 58,369, and the latter 29,373 more than last week. In Bombay reports are wanting from Khandesh and all the districts of the South Mahratta Country except Kanara; but the monsoon appears to have set in in the latter, and to have already extended over the greater part of the Deccan; rain has also fallen in Guzerat; ploughing and sowing have begun in the Deccan districts and Násik, and the fields are being prepared for the *kharif* in Sind. In Mysore heavy showers have fallen throughout the province; ploughing and sowing are going on and prospects are encouraging; the number on works is 58,477 and on gratuitous relief 108,557: the former is 1,846 and the latter 743 more than last week. In the Central Provinces more or less rain has fallen in all districts except Narsingpur, but the monsoon has not regularly set in: sowing and ploughing are going on. From Berar a little rain is reported: the land is ready for sowing. In Central India and Rajputana showers have fallen in several places: prospects are good. From Bengal general rain is reported: it has been heavy in the Eastern, Northern and Delta districts, moderate in Chota Nagpore, and light in Behar and Orissa: and crops are doing well, and the cultivation of the winter rice is being pushed on. Copious rain is reported from Sylhet, and frequent showers from Upper Assam. In Burma the monsoon rains are general and copious. In the North-Western Provinces and Oudh settled weather prevails, only a few showers having fallen at the beginning of the week. In the Punjab there has been slight rain in three districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 11th)	1·95 in Masulipatam; ·90 in Bapatla; ·85 in Palnad; ·40 in Repalli; slight rain in some other taluks.	*Sajja*, *jonna*, maize and *gingelly* being sown in Bapatla, Repalli, Nuzvid and Nandigama; maize and *jonna* in Bunder taluk doing well; prices slightly falling in Bapatla and Narsarowpett, elsewhere stationary; seers of Rs. 80 weight rice 8·53, *cholum* 11·22, *raggi* 13·04, *cumboo* 10·77; imports by land from Godavery at Guntur, rice 39·06 tons, *cholum* 31·25 tons; 1,511 on relief works; number fed gratuitously by Government 319, in camps 39, in villages by people 1,273; mild cholera and small-pox here and there; cattle disease reported in 5 taluks, and deaths in Bapatla, Narsarowpett and Vinukonda taluks for want of fodder; markets fairly supplied.
Nellore („ 12th)	·42 in Nellore; 1·0 in Atmakur; ·20 in Kavali; 1·55 in Darsi; ·70 in Raput; 1·10 in Udayagiri; ·07 in Kandukur.	Average prices second sort rice 7·81 seers per rupee, *cholum* 9·68, *raggi* 11·80, *cumboo* 10·31; imports by sea on behalf of merchants, rice 126 tons, by land into the town of Nellore rice 117 tons, *cholum* 5 tons, *raggi* 7 tons; number on district relief works 25,725; number on canal 45,154, number fed gratuitously in camps 13,528, village relief 572; children of coolies employed on works 2,878; returns from Addanki and Naidupett not received, so that there is probably no diminution; 26 deaths from cholera; cholera, small-pox, fever; dysentery, guinea-worm and diarrhœa prevalent in some taluks; water supply assured for drinking and sufficient for agricultural purposes; standing crops doing well; prospects of cattle better.
Cuddapah („ „)	·77 (average of 10 taluks); fall heavy in 3 taluks, namely, 3·32 in Mudunapelly, 2·45 in Pulivendala, 2·07 in Cuddapah.	Average prices seers per rupee, second sort rice 7·38, *cholum* 8·65, *raggi* 9·18, *cumboo* 7·87; people on relief works 105,085, increase 16,075, due to cessation of recruiting for Nellore and to rates of wages being increased; gratuitously fed in camps 9,667, otherwise fed 26,647, increase on the whole 2,990, owing to pressure of distress; cholera deaths 444; number of cattle died from want of fodder and disease 480.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Bellary (June 12th)	1·7 in Bellary; 2·0 in Hospett; heavy rain in Kudlighi; partial rain in Hadgally and Harpanhally; 1·2 in Alur; 1·6 in Adoni; 1·3 in Gooty; 1·4 in Tadpatry; ·7 in Raidrug; heavy rain in Anantapur; slight rain in Dharmaveram.	Average price second sort rice 6·82, boiled rice at Bellary 8·1, *cholum* or great millet 7·35, Jubbulpore *cholum* at Bellary 7·73, *raggi* or lesser millet 8·06, *cumboo* 7·36 seers of 80 tolas; import 2,964 tons; accounts from 2 Railway stations only; 287,903 persons on relief works, increase on return for previous week 25,913*, due to increased pressure of famine in most taluks; 149,824 gratuitously fed, of which 30,429 fed in relief houses and 5,034 in relief camps, increase on return for previous week 12,746, chiefly due to increased number of children of coolies; 1,561 gratuitously fed by private charity aided by Government grant; Singanamala and other tanks received two months' supply of water; ryots sowing early dry crops; cholera decreasing, but still in all taluks; small-pox and fever prevalent; cattle still perishing for want of fodder, which recent rain will soon make procurable; supply of drinking water much improved.
Kurnool („ „)	1·35 throughout the district, except in Cumbum taluk.	In Kurnool town water abundant; freshes continue in Toombudra and Hindey; agricultural operation progressing throughout; cholera, small-pox and fever continue; cholera seizures 111, deaths 70; the late rains have improved the prospect of cattle; second sort rice per rupee in imperial seers 6·97, *cholum* 8, *raggi* 9·51, *cumboo* 8·92; number on relief works 210,365; gratuitously relieved 60,582, of whom 1,634 people fed at Khaderbagh camp, the rest include 48,738 children under seven years, 5,610 fed by village heads and 4,600 in relief houses; Nandial camp finished, particulars next week; import of Government grain 53 tons in Sirwell taluk; private grain 124 tons in three taluks; the increase of 5,157 in the number of coolies is the net result of 7,548 increase in four taluks, and of 2,391 decrease in others; physique fair; Markapur figures estimated, returns not being received.
North Arcot („ „)	1·17 (average of 13 stations).	Average prices in Government seers, second sort rice per rupee, 7·6, *cholum* 8·7, *raggi* 9·5, *cumboo* 8·0; relief works coolies 55,105, decrease in Chendragherri taluk, cause not explained; persons gratuitously fed in camps 8,900; persons otherwise gratuitously fed 13,496; cholera still prevalent; fever and small-pox in some places; pasture insufficient; cattle still dying of starvation in some parts.
Chingleput („ „)	Rain fell more or less in all taluks except Ponnery.	Rice second sort 8·63, *raggi* 10·37, *cholum* 9·05; imports, rice 142 tons, *raggi* 29·33; cholera has disappeared from Conjeveram and Trivellore, but is present in some villages of the other four taluks, where also small-pox, fever and dysentery are more or less prevalent; condition of cattle unhealthy in Trivellore and Saidapet; pasture insufficient; water abundant; 4,889 head of cattle reported to have died in Trivellore alone of diarrhœa brought on by feeding on tender grass; on relief works 27,744; gratuitous relief in camps 9,638, in other places 8,942.
South Arcot† („ „)	·36; 1·0 in Kallacoorchy; from ·2 to ·5 in Tricalore, Tindevanum and Trinomalay.	Rice second sort 8·12, *cholum* 10·$\frac{9}{10}$, *raggi* 11$\frac{1}{8}$, *cumboo* 11$\frac{1}{8}$, little dearer than last week; grains imported by sea none, by rail 7$\frac{1}{4}$ tons dry grains; number employed last day, men 111, women 75, children 12, total 198; gratuitously fed in relief house at Chengam, men 67, women 346, children 460, total 873, deaths 5; fed in 79 villages 1,214 men, 1,438 women, 2,673 children, total 5,325, death one; no relief camp; people healthy; cholera deaths reported 206 against 237 attacks; cattle disease in some villages; pasture improving.
Tanjore („ „)	From ·15 to 2·0 in different localities of Tanjore, Combaconum, Shealy, Nunnilum and Negapatam taluks on the 5th & 6th instant.	Prices, rice 7$\frac{3}{4}$ seers, *raggi* 10$\frac{5}{8}$, *cumboo* 11$\frac{3}{8}$, *cholum* 9$\frac{13}{16}$; imports by sea, rice 4,739 tons; relief works none; rivers rising; deaths from cholera 291; small-pox throughout the district; fever in some parts; cattle disease in Combaconum and Tritrapundi taluks with some loss of life; fodder available.
Trichinopoly („ „)	·4 (average).	Third sort rice 7$\frac{1}{2}$ seers, *cholum* 13$\frac{3}{8}$, *raggi* 10$\frac{1}{4}$, *cumboo* 9·$\frac{9}{10}$; imports of grains during the week 413 tons; no relief works; number fed in hospital camp on 9th June 392; by private subscription 2,415; cholera and small-pox continue; cattle disease in some parts; pasture and water-supply improving.

* The increase is 23,913 compared with the figures telegraphed by the Madras Government last week.

At pages 1546 and 1609 of the Supplement to the *Gazette of India*, dated the 2nd and 9th June 1877, opposite Bellary for "151,116 gratuitously fed" and "157,078 gratuitously fed" read respectively "131,116" and "137,078."

† At page 1610 of the Supplement to the *Gazette of India*, dated the 9th June 1877, opposite South Arcot for "children paid three pice" read "children paid 3 pies."

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Madura (June 12th)	Rain fell in several villages of Madura, Dindigul and Periacolum; slight rain fell in Polany.	Rice second sort 8$\frac{3}{16}$, *cholum* 9$\frac{2}{5}$, *raggi* 9·$\frac{7}{10}$, *cumboo* 9$\frac{3}{4}$; import, rice 806 tons; number on relief works 13,501; gratuitously fed in camps 978, otherwise fed 4,563; cholera deaths 431.
Tinnevelly („ „)	Moderate showers on hills.	Fresh in Tambrapurni; standing crops healthy, except in Nangunari; cholera and small-pox still prevailing, 213 deaths from the former; water-supply and pasture sufficient on the whole; cattle disease in three taluks with slight mortality; prices rising slightly; average prices per rupee second sort rice 8 seers of 80 tolas, *cholum* 11$\frac{1}{2}$, *cumboo* 10$\frac{1}{2}$, *raggi* 10$\frac{3}{4}$; import of grain, rice 3,203 tons; number on relief works *nil*; number gratuitously fed in camps 827, number otherwise fed 8.
Coimbatore („ „)	Pretty general in all taluks; 1·51 average of week ending the 9th instant.	Prices nearly stationary, rice second sort 7·44, *cholum* 8·41, *raggi* 8·82, *cumboo* 8·40; imports estimated rice 900 tons, other grains 246; severe cholera in all taluks, attacks 1,549, deaths 1,155; fever, small-pox, dysentery and diarrhœa to a small extent; slight freshes in Ambravatty in the Danapoorum taluk; cultivation to some extent in several taluks; standing crops benefited by rain; cattle poor, losses in parts of the district from disease and want of fodder; wells but slightly affected by rain; on relief works 23,699; appearance of coolies unaltered, but diminished power to work reported in four persons in Oodoomulpetta; gratuitously fed in relief centres 21,212, village relief 6,990, total 28,202.
Salem („ „)	1·75	Prices of grains (seers of 80 tolas) rice 7·$\frac{5}{16}$, *raggi* 8$\frac{7}{8}$, *cumboo* 7$\frac{7}{8}$, *cholum* 9$\frac{1}{8}$; imports of all grains 1,350 tons; number on relief works 50,800; number gratuitously fed in camps 9,400, otherwise fed 69,700; fed by private charity 800; cholera in all taluks, village gratuitous relief number 11 per cent. increase due to large number admitted.
Malabar („ 11th)	5·51 average. GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

Abstract of the Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 & 25 Vic., Cap. 67.

The Council met at Simla on Thursday, the 14th June 1877.

PRESENT:

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb.
His Excellency the Commander-in-Chief, K. C. B.
The Hon'ble Sir E. C. Bayley, K. C. S. I.
The Hon'ble Sir A. J. Arbuthnot, K. C. S. I.
Colonel the Hon'ble Sir Andrew Clarke, R. E., K. C. M. G., C. B.
The Hon'ble Sir J. Strachey, K. C. S. I.
Major-General the Hon'ble Sir E. B. Johnson, K. C. B.
The Hon'ble Whitley Stokes, C. S. I.
The Hon'ble T. C. Hope, C. S. I.
The Hon'ble F. R. Cockerell.
The Hon'ble B. W. Colvin.

BRITISH BURMA EMBANKMENTS BILL.

Colonel the Hon'ble SIR ANDREW CLARKE moved that the Bill to provide for the execution of works urgently required in connection with embankments in British Burma be referred back to the Select Committee. He explained that, in consequence of a communication received from the Lieutenant-Governor of the Panjáb, who had acquired very valuable experience in dealing with a similar Bill for Northern India, he wished to delay the consideration of the Select Committee's Report for the present, and to make the motion above indicated.

The Motion was put and agreed to.

Colonel the Hon'ble SIR ANDREW CLARKE then moved that His Honour the Lieutenant-Governor of the Panjáb be added to the Select Committee on the Bill.

The Motion was put and agreed to.

BOMBAY REVENUE JURISDICTION ACT AMENDMENT BILL.

The Hon'ble SIR ALEXANDER ARBUTHNOT introduced the Bill to amend the Bombay Revenue Jurisdiction Act, 1876. He said:—"When I asked for leave to introduce the Bill to amend the Bombay Revenue Jurisdiction Act of 1876, which I now lay before the Council, I said that the practical changes which the Bill would effect in the law, as it now stands, were very slight, and that I would explain on this occasion the precise nature of those changes.

"The Council are aware that the main object of the Act passed last year was to exclude from the jurisdiction of the Civil Courts, disputes connected with the amount, the incidence, the mode or the principles of the assessment and collection of the land-revenue in those districts in the Bombay Presidency commonly known as the Old Provinces, wherein such jurisdiction either was exercised, or was held to be capable of being exercised as the law then stood. Another, and on the whole less important, object of the Act was similarly to exempt from the jurisdiction of the Civil Courts claims connected with property appertaining to hereditary offices and also claims to hold land either wholly or partially free from assessment, and claims to receive payments charged on, or payable out of, the land-revenue. Some other matters were dealt with in the Act; but those to which I have alluded, are the only matters to which I need refer in connection with the Bill now before the Council.

"Now, as the Council are aware, the measure which eventually took the form of Act X of 1876, was under the consideration of this Council for a very considerable time. It was introduced in 1873 by my predecessor, Sir Barrow Ellis, at the instance of the Government of Bombay. The measure encountered a great deal of opposition in Bombay; and eventually the Government of Bombay, at whose instance it had been introduced, deprecated its being passed, and, in recommending that it should not be passed, they received the support of many authorities, some of those authorities being very high authorities in the Presidency. The Government of India gave the most careful and anxious consideration to all the arguments which were advanced, and to all the objections which were adduced against the passing of the Bill. They attached great weight to the observations which were made by the Local Government, by the Judges of the High Court, and in many of the memorials which were addressed to them; but after the fullest, gravest, and most anxious consideration, they came to the conclusion that, under all the circumstances and looking to the importance of the revenue interests involved, they would not be justified in abandoning a measure which would assimilate the law in that portion of the Bombay Presidency to which it referred, to the law as it stood in other parts of that Presidency, and as it stood, practically, in every other part of India. The Bill was subjected to very careful examination, and after having undergone some by no means unimportant alterations, it received the assent of Your Lordship's predecessor on the 28th March 1876.

"My Lord, it was not without the most anxious consideration that the Government of India came to the conclusion that in this matter the views of the Local Government, supported as they were by a large consensus of local public opinion, and by the views of authorities entitled to the highest respect, ought to be overruled. It is often said that the Government of India are too much addicted to overruling the views and opinions of the Local Governments, and interfering with matters which had better be left to the discretion and superior knowledge of the local authorities. Some years ago, and especially during the twenty or twenty-five years which elapsed after the passing of the East India Company's Charter of 1833, there may have been, and undoubtedly there was, more or less foundation for those allegations; but, for many years past, there has been a very great change in this respect; and speaking as one who has had an opportunity of studying this question from the two opposite points of view,—from the point of view of an official of one of the minor Presidencies, including during my service in that Presidency a close connection with its Government for a considerable number of years; and looking at it also from the point of view afforded to me more recently as a Member of this Government,—I think I am in a position to affirm that, with the rarest exceptions, the interference of the Government of India, whether it be in regard to questions of legislation or in regard to questions of executive administration, is confined to matters which are either essentially matters of principle, or are of such importance that it is the duty of the authority responsible for the safety of the Empire to deal with them. Now the questions dealt with in the Act of last year are questions of principle concerning that which is the most important branch of our revenues, and which it is, in my humble opinion, the essential duty of the authority responsible for the financial administration of the Empire to guard and protect; and it was the deliberate opinion of the Government of India, after giving, as I have said, the most careful consideration to the arguments advanced by the Government of Bombay, and to the remonstrances contained in the various memorials which were addressed to us, that in the Old Provinces of that Presidency the law relating to the assessment and collection of the land-revenue should no longer be allowed to remain as it then stood, but should be brought into conformity with the law and practice which existed in regard to such matters throughout the rest of India.

"Well, my Lord, the Act of 1876 was passed and transmitted in the usual course to the Secretary of State. By that authority the most essential provisions of the Act—those connected with the assessment of the land-revenue—were fully approved and pronounced to be valuable provisions which, in the then doubtful state of the law, had become absolutely necessary; but the Secretary of State took exception to those provisions which likewise exempted from the jurisdiction of the Civil Courts objections to the proceedings of Revenue officers regarding claims to hold land, altogether, or in part, free from

payment of land-revenue; to receive payments charged on, or payable out of, the land-revenue; and also claims relating to any property appertaining to any hereditary office. In objecting to these exemptions, which I may observe are in force throughout the rest of India, the Secretary of State adverted to the fact that for a long series of years a different law had prevailed in the Provinces in question, and that for this and other causes its abrogation might be distasteful to the population which had been accustomed to it, and whose pecuniary rights were deprived by the new law of a protection to which they had been habituated.

"Now, my Lord, it is not necessary, nor would it be proper, that I should offer any remarks on these observations and instructions of the Secretary of State. The Secretary of State has had the whole case before him, and this is his decision. He has accorded his full approval to the most important provisions of the Act; but on three points, two of which, as I shall show presently, are of comparatively trifling importance, he has directed the Government of India to amend the Act. These instructions, I submit, it is our plain duty to obey, and I have no doubt that this will be the view taken by my hon'ble colleagues.

"My Lord, I should, perhaps, apologise for having trespassed at so much length on the time of the Council with these preliminary observations; but I have thought it well to state as plainly as I could, how the case stands, and the circumstances under which this Bill is now presented to the Council. I will now endeavour to explain its few and brief provisions.

"The main provisions of the Act of 1876 which it is now proposed to amend, are contained in section 4, and the provisions which I propose to alter, are the first article of sub-section (*a*) and the first two articles of sub-section (*f*). The first article of sub-section (*a*) runs as follows:—

"'claims against Government relating to any property appertaining to the office of any "hereditary officer appointed or recognized under Bombay Act No. III of 1874, or any other "law for the time being in force, or of any other village-officer or servant.'

And the two first articles of sub-section (*f*) of the same section include:—

"'claims to hold land wholly or partially free from payment of land-revenue, or
"'to receive payments charged on, or payable out of, the land-revenue.'

"Now if honorable members will turn to the Bill, they will find the amendments which we propose contained in the first section under the heads (*a*), (*b*) and (*c*). They add to section 5, which I may call the saving section of the Act, three clauses restoring to the Courts in the Older Provinces any jurisdiction which, but for the passing of the Act of last year, they would have exercised in the three descriptions of claims to which I have just referred. Now, the only amendment which, in my humble opinion, is of any real or practical importance is that contained in clause (*b*), which restores to the jurisdiction of the Civil Courts claims "to hold land wholly or partially free from payment of land-revenue." This jurisdiction was vested in the Civil Courts in the Old Provinces of Bombay up to the time of the passing of the Act of 1876, and had been so vested in those Courts—as the Secretary of State observes—for upwards of half a century. This jurisdiction will now be restored, and in this respect the Civil Courts in the Older Provinces of Bombay will again exercise a jurisdiction which is not exercised by the Courts in the other Provinces of Bombay or in other parts of India.

"The other two clauses, (*a*) and (*c*), of the Bill are far less important.

"In regard to clause (*a*), I may remark that very few suits can possibly lie for property of the nature of that referred to, which are not and were not barred by other laws in force when the Act of 1876 was passed, and which are still in force; but it has been thought that cases might possibly arise which are not so barred, and should cases that are not so barred arise, the Court will have jurisdiction.

"Then again with regard to clause (*c*), most of the claims referred to will be barred by the Pensions Act; but should it be otherwise, this clause will give jurisdiction to the Courts.

"It will thus be apparent to the Council that it is only on one point that the Bill makes any alteration of importance in the Act of 1876; and it may be doubted whether this alteration is really of very great or practical importance, for I understand that the number of claims to hold land wholly or partially free from the payment of land-revenue which can arise in the dis-

tricts included in the Schedule appended to the Bill, is comparatively small. The Bill is so short and simple that I have not thought it necessary to propose that it be referred to a Select Committee. My intention is to move at an early meeting—after the Bill has been published, and there has been time to receive any observations the local authorities may wish to make on it—that it be taken into further consideration with a view to its being passed".

The Hon'ble SIR ALEXANDER ARBUTHNOT then moved that the Bill be published in the *Gazette of India* in English, and in the *Bombay Government Gazette* in English and in such other languages as the Local Government directs.

The Motion was put and agreed to.

CHUTIA NÁGPUR ENCUMBERED ESTATES ACT AMENDMENT BILL.

The Hon'ble SIR ALEXANDER ARBUTHNOT also introduced the Bill to amend the Chutia Nágpur Encumbered Estates Act, 1876. He said that at the last meeting he stated very briefly the objects and reasons for amending the Act in question. It had been found by experience in other provinces, where similar Acts had been brought into operation, that the period of six months allowed by the Act of last year, was too short to enable the Government authorities to decide whether an estate should be retained under management, or relinquished; and it had been thought advisable that the period should be increased to twelve months. For reasons very similar to those which he had given in the case of the Bombay Revenue Jurisdiction Bill, he had not thought it necessary that this Bill should be referred to a Select Committee; and he proposed that at the next meeting it should be taken into consideration and passed.

The Hon'ble SIR ALEXANDER ARBUTHNOT then moved that the Bill be published in the *Gazette of India* in English, and in the *Calcutta Gazette* in English and in such other languages as the Local Government directs.

The Motion was put and agreed to.

TRANSFER OF PROPERTY BILL.

The Hon'ble MR. STOKES introduced the Bill to define and amend the law relating to the transfer of property and moved that it be referred to a Select Committee. He said—"The primary object of this Bill is to complete our Code of Contract Law, so far as relates to immoveable property, and thus to carry out, to some extent, the policy of codification which the Government of India has at last happily resumed. Its secondary object is to bring the rules which regulate the transmission of property between living persons into harmony with the rules affecting its devolution upon death, and thus to furnish the necessary complement of the work which the late Indian Law Commissioners commenced in framing the Law of Succession, now Act X of 1865. Another great object of the Bill is to improve the law relating to Mortgages and Conditional Sales, which seems to have got in the minor Presidencies into a somewhat unsatisfactory condition. The expediency of legislation on this subject was recently affirmed by the Judicial Committee of the Privy Council in the case of *Tambasámi Mudali* v. *Muhammad Husain*, Law Rep., 2 Indian Appeals, 241.

"Rules are also laid down on the subjects of settlements, gifts for religious and charitable purposes, apportionment, the rights and liabilities of limited owners, leases and sales of settled estates, powers, property held by several persons, and, lastly, assignments of things in action.

"The Bill was originally framed by the late Indian Law Commission. But it has been most carefully revised, first by myself, then by Sir Arthur Hobhouse, then by Sir A. Hobhouse and myself jointly. The chapters on Powers and Mortgages were then redrawn, the former by Sir A. Hobhouse, the latter by myself. Lastly, here at Simla the Bill has been subjected to renewed examination by my learned friend Mr. Phillips. I mention these facts, not by way of deprecating the criticism which we earnestly desire; but merely to shew that no pains have been spared in the Legislative Department to render the Bill worthy of consideration by the Council and by the judicial authorities to whom I trust the Bill will be submitted.

"The aim of the Commissioners in drafting the Bill, and of the Legislative Department in revising and modifying it, has been to avoid refinements and technicalities, to discard all rules whereby the parties to a transaction are made liable to unexpected consequences, all rules which seem unfair or inexpedient in themselves, all provisions in deeds which are found in practice to lead to embarrassment and litigation.

"I do not propose to trouble the Council with what ancient lawyers would have called a 'reading' on the details of the proposed Act. To do so effectually (so wide is the scope of the Bill) would take not half an hour but several days. But I think I may usefully add to the Statement of Objects and Reasons a few remarks on points which are either not noticed at all in that Statement, or noticed so briefly as to render further exposition desirable.

"Passing over the first chapter, which contains the usual preliminary matter and certain important savings specified in the Statement of Objects and Reasons, we come to the second chapter, which deals with assurances of immoveable property. Section 4 declares that every person competent to contract may make an assurance of any immoveable property of which he is the owner, or which he is entitled to transfer. As words importing the masculine gender include females, and as married women are, under Act IX of 1872, competent to enter into contracts, they will, when this section becomes law, be free to make assurances affecting any land in India to which they may be entitled. And as under section 58 conditions restraining alienations will be void, the well-known exception in the case of property settled on married women with restraint on anticipation will cease to exist.

"Section 6 declares that immoveable property may be granted subject to an obligation for the benefit of the public. And the Bill lays down that whenever such an obligation is created for the benefit of the public it may be enforced by the grantor or his legal representatives, or by the Government as a civil right. This addition to our law is, in a country like India, where the Native Nobles and gentry are honourably distinguished for their liberality to the community, likely to be extensively availed of.

"Section 9 declares that the rules of construction which apply to testamentary instruments shall also be applicable to assurances, so far as the different nature of assurances will permit. As the rules referred to are contained in the Indian Succession Act, and as that Act does not apply to the bulk of the population, who are consequently ignorant of its provisions, I greatly fear that this section, if enacted, may cause some hardship, even though its operation be confined (as it would be) to instruments executed after it comes into force. But in deference to the Commissioners and Sir Arthur Hobhouse, we have allowed it to stand for the present. If, as I anticipate, the criticisms which we hope to receive from the Local Governments, the Judges and the legal profession are hostile to its retention, it can of course be struck out by the Select Committee.

"The last section of this chapter declares that a grant of immoveable property, unless a contrary intention appears by the assurance, comprises trees and all other products of the soil, fixtures, and in the case of machinery affixed to the soil, the moveable parts thereof, and in the case of a house, the locks, keys, bars, doors and windows. This clause, which is one of the many additions we have made to the Commissioners' draft, is in accordance with well-known English law, according to which what are called 'personal chattels incident to the freehold' are subject to many of the rules applicable to fixtures properly so called.

"Chapter III deals with sales of immoveable property and contains nine rules regulating the respective rights and liabilities of sellers and buyers. The first of these rules declares (just as the Contract Act, section 109, declares in the case of goods) that the seller of land shall be responsible to the buyer for loss

caused to the buyer through the invalidity of the seller's title. As the law now stands, with some few special exceptions, a buyer of land has no remedy in respect of any defects in the title, which are not covered by the seller's covenants. The enactment of this rule will render covenants for title unnecessary. The second rule in effect declares that where lands are sold, but the whole of the purchase-money is not paid to the seller, he has a lien on the lands for the amount unpaid. This, so far, is in accordance with the law administered by English Courts of Equity. But, when the property has been subsequently dealt with by the purchaser, questions often arise how far the vendor's lien can be made available against sub-purchasers and mortgagees. Moreover, the lien may be lost without the parties intending it by the seller's accepting independent security for his money, and in various other ways. The Bill proposes to get rid of the difficulties thus indicated by declaring that the lien shall cease as soon as the deed of sale is registered.

"Another difficult head of equity jurisprudence will be got rid of by section 12, which declares that a contract for sale shall not of itself create any interest in or charge upon the property, other than the vendor's lien, but that the parties shall be left to enforce specific performance of the contract according to the general law. As the law stands, as soon as the owner of an estate enters into a binding agreement for its sale he holds it as a trustee for the buyer, subject to the payment of the purchase-money. But he is not under all the obligations of an ordinary trustee, and the buyer's beneficial interest cannot affect the interests of third parties. The Bill will preclude the complications to which this quasi-fiduciary relationship gives rise.

"The next section, 13, perhaps the most important in the Bill, is intended to abolish the doctrine of equitable presumption. According to English equity, the person who pays the purchase-money for property which is transferred to another is generally entitled to the property, and he is treated as the equitable owner, and the transferee as trustee for him. But if the transfer is made to the wife or child of the buyer, or to any one to whom he stands *in loco parentis*, in that case he is supposed to have intended to make the purchase for the advancement of the transferee, who then takes the property for his or her own benefit. This, however, is only a presumption which may be rebutted by evidence, which again may be contradicted by evidence to support the presumption. Contests are often thus produced which cannot be decided on any satisfactory grounds. The section in question runs thus:—

"'13. A person paying the consideration for any immoveable property, but having the transfer of it made to another person, is not, by reason of such payment, entitled to such property or to any interest therein.'

"The result of enacting this section will be, first, to abolish the doctrine of presumption just referred to, and secondly, to render property so transferred the absolute property of the transferee, unless he is made a trustee in some more definite manner. We hope thus not only to prevent litigation of the kind just mentioned, but also to discourage the pernicious custom so prevalent in India of buying land *benámí*, that is to say, in the name of some person other than the purchaser, a custom which often causes great difficulty in making the property available in satisfaction of decrees against the real owner.

"Chapter IV deals with mortgages and charges. It is founded in substance on a note written last year by Sir Arthur Hobhouse, in which that eminent equity lawyer laid down a few general principles on sound and right lines, which he thought would supply a useful basis for a more detailed law at a future period. This chapter provides remedies mainly in accordance with existing contracts and practice, but makes them simpler and more uniform. It seeks to improve the system established in Bengal for *bai-bil-wafá* mortgages, or mortgages by way of conditional sale, and extends it to other parts of the country and to

other forms of mortgage. It rests on the great principle that the proper remedies, on the mortgagee's side, are possession, foreclosure or sale, and on the mortgagor's, redemption. And it attempts to carry out the recommendation of the Judicial Committee of the Privy Council to which I have already referred, that 'an Act affirming the right of the mortgagor to redeem until foreclosure by a judicial proceeding and giving to the mortgagee the means of obtaining such a foreclosure . . . . would probably settle the law without injustice to any party.'

"Further, it shows when the mortgagor or the mortgagee may obtain an injunction to stay waste: it abolishes those implied mortgages called mortgages by deposit of title-deeds, which have met with the disapprobation of many great judges; and it legalizes in the mufassal a power of sale given by the mortgage-deed to the mortgagee, that is to say, an authority to the mortgagee, on default being made by the mortgagor, to sell the mortgaged property and so repay himself without applying to the Court. Owing to a decision of the late Bengal Sadr Díwání Adálat (S. D. A., 1847, p. 354), such a power is, at all events, in the Bengal mufassál, now of no effect. But I will read to the Council what one of the ablest and most experienced of our Judges, Mr. Macpherson, has said as to this decision in the new edition of his work on mortgages:—

"'It may be doubted whether the dread of injustice to the mortgagor, which is the foundation of this rule, is sufficient to outweigh the manifest convenience and advantage to both parties, which arise from a sale unaccompanied by the expense and delay by which litigation is at all times attended. Moreover, except where there are strong reasons for it, interference with arrangements fairly made between individuals is undesirable. There is nothing *primâ facie* inequitable in such a power, and if in fact any great oppression is worked by the mortgagee, or the land is sold for an evidently unfair price, the mortgagor still has his remedy through the Courts.'

"The Bill will also get rid of the system of 'tacking.' To express myself less technically—as the law now stands, where there are several mortgages of the same property, if the first mortgagee takes a further charge or a subsequent advance to the mortgagor without notice of any intermediate mortgage, he will be preferred to the intermediate mortgagee. So, if a third mortgagee who has made his advance without notice of a second mortgage can procure a transfer to himself of the first mortgage, he may attach or 'tack' his third mortgage to the first and so postpone the intermediate mortgagee. In either case it is obvious that if the property be insufficient to pay off all the mortgages, the intermediate mortgagee will, without any fault of his own, lose the benefit of his security. The Bill accordingly provides that no mortgagee paying off a prior mortgage shall thereby acquire any priority in respect of his original security, and that no mortgagee making a subsequent advance to the mortgagor shall thereby acquire any priority in respect of his security for such advance. The Bill also abolishes the technical rule that if A mortgages two estates to B, both estates must be redeemed, or neither.

"The next subject dealt with by the Bill is leases—a matter that, so far as regards leases of houses, concerns us all most intimately. I venture to say that, outside the Presidency towns, where the English law is followed, no lawyer can state with certainty what, in the absence of special agreement, are the respective rights and liabilities of the landlord and tenant of a house in India.

"The Bill lays down twenty-two rules on this subject, most of them in accordance with English law, but some introduce changes which it is to be hoped will be considered improvements.

"Thus by section 44, clause (*b*), the lessor is bound to deliver the property leased in a condition reasonably fit for the purpose of the lease. This obligation

will be particularly useful in the case of leases of buildings intended for the occupation of human beings. If the lessee is disturbed in the quiet enjoyment of the property or deprived of any substantial part of it, he will, under clauses (*c*) and (*d*) of the same section, be not only entitled to compensation but may obtain a decree for the rescission of the lease.

"Clauses (*f*) to (*i*) supply rules upon the subject of repairs which, though little wanted in England, where stipulations inserted in the instrument of lease do all that is requisite, will, it is to be hoped, be of use here in India, where there is what Hamlet would have called a plentiful lack of good conveyancing.

"Clause (*i*) will practically get rid of the absurd rule that the tenant of a house which has been casually burnt down is still obliged to pay the rent.

"Clause (*r*) relates to tenants' fixtures and makes none of the distinctions, which have been such a fertile source of litigation in England, between ornamental, trade and agricultural fixtures.

"The next chapter requiring notice is that which deals with settlements, which are so defined as to include endowments and absolute gifts to children and others. It extends (section 56) to the case of settlements the limitations which the Indian Succession Act has imposed upon the power of tying up any kind of property by will. Such restrictions are founded on considerations of public policy which seem as applicable to India as to England.

"The Bill also makes void (section 53) all conditions or limitations restraining any person from parting with or disposing of his interest, or making an interest reserved or given to any person to cease on his endeavouring to transfer or dispose of it. This is in accordance with the English Common-law. It will not only get rid of the subtle distinction which has been drawn between a condition in restraint of alienation and a gift to a person until he shall alienate and then over to another, but it will also render it impossible to deprive a married woman of the power of dealing with property settled upon her. Such a power is obviously a result of a married woman's capacity under Act IX of 1872 to enter into contracts.

"In accordance with the principles of the Indian Succession Act, chapter VIII prohibits persons who have near relatives from giving their property to religious or charitable uses unless by an instrument executed not less than twelve months before their death and duly registered. While the Bill allows property to be given in perpetuity for such uses (the Council will remember that the Statute 23 Hen. VIII, c. 10, is not in force in India), it requires that it shall be given with the sanction of some public authority to be designated by Government. This provision seems sound in principle, for a gift to religious or charitable uses is a gift to the community, and it is obviously as reasonable that the community by its representative, the Government, should have the right to refuse such a gift, as that an individual legatee should have, as he has, the right to decline to accept a legacy. Moreover, as regards Hindús, I have recently found a passage in the Institutes of the Sage Nárada, translated by Dr. Jolly of the University of Würzburg, p. 115, which bears on this subject:—

"'Whoever gives his property away to Brahmans must have a special permission to do so from the King: this is an eternal law.'

"As Nárada's law-book, like all the Hindú Smritis, was divinely revealed, I need not enlarge on the importance of this text.

"The next chapter consists of a single section dealing with what is called the apportionment of periodical payments. It is founded on the Statutes 11 Geo. II, c. 19 and 3 & 4 Wm. IV, c. 22, and provides for such cases as this:

Tenant for life makes a lease which must expire with him. The rent is payable quarterly. Between two of the quarter-days the lessor dies. At Common-law his legal representatives would not be entitled to any part of the rent reserved from the last rent-day. But under these Statutes and our section they will be entitled (as they obviously ought to be) to a proportional part of the rent from the last rent-day down to the moment of the lessor's decease.

"The next chapter relates to certain rights and liabilities of tenants for life and all other limited owners except lessees. In England tenants for life are punishable for voluntary waste (that is, acts tending to the permanent depreciation of the value of the property) unless these estates are made without impeachment of waste, or unless they are granted with partial powers to do waste. And even when tenants for life are, as it is called, dispunishable for waste, Courts of Equity will interfere to restrain them, not only from destructive acts, but also from interfering with anything set up by the settlor as an ornament. Tenants for years may not commit any kind of waste, unless their estates are made without impeachment of waste; and they are obliged to do repairs. Tenants at will must not commit any kind of voluntary waste, but they are not obliged to repair. The Bill gets rid of all these distinctions by declaring, in section 61, that a person having a limited interest (that is, an interest less than an estate of inheritance), in any property is not entitled to do or omit any act the doing or omitting of which is destructive or permanently injurious to the property. But then we go on to explain that no act done in the reasonable use and enjoyment of property (such, for example, as working a mine) is destructive or injurious within the meaning of this section, though it may exhaust the substance of the property.

"Chapter XI is founded on the English Leases and Sales of Settled Estates Act. It enables certain Courts to deal with lands subject to a settlement or will, on the application of any person having a limited interest in possession in such lands. This jurisdiction has been found very useful in England, where it is exercised by the Master of the Rolls and the Vice-Chancellors. But it seems too delicate to be given to every Court in India. The Bill therefore confines it to High Courts and District Courts.

"The next chapter deals with Powers, that is to say, authorities to determine the disposition of property otherwise than by virtue of ownership. It embodies the principal rules of the English law on the subject, and is almost wholly the work of Sir Arthur Hobhouse. The only important changes which it proposes to make are three. First, an appointment made in excess of the quantity of estate authorized by a power will not be wholly invalid, but will be deemed void only for the excess (section 85). This reverses the doctrine of English Courts of Common-law, but follows the wiser rule laid down by the Court of Chancery in *Campbell* v. *Leach* and many other cases. Secondly, both in the case of the exercise of a power and of giving consent to such exercise, the survivors or survivor of several persons authorized to exercise the power or give the consent may do all that might have been done by the whole number. This will get rid of a most intricate set of rules as to when the power or the right of consent devolves upon the survivors. The third change is the most considerable. The Council is probably aware that English Courts of Equity have given themselves a jurisdiction to aid defective executions of powers in favour of (*a*) charities, (*b*) purchasers from, and creditors of, the donee of the power, and (*c*) the donee's wife and children: in other words, in such cases the Courts compel the person in possession of the property to which the power relates to give it up as if the power had been properly executed. Section 75 proposes to abolish this jurisdiction, for which it is difficult to discover a sound principle and which, indeed, is hardly consistent with a strict system of registration such as we have established in India.

"In the case of joint tenants of property the rule is that on the death of one the whole property vests in the other. In accordance with the general intention of settlors and other persons creating joint-tenancies, section 93 declares that a right to property by survivorship can be created only by express words. Of course property belonging to an undivided Hindú family is expressly saved from the operation of this section. It will be necessary to extend this saving to Buddhists, if, as I have recently been informed, the undivided family exists in Burma.

"The only other point in the Bill to which it seems necessary to call attention is the provision in sections 99 and 100 that the assignee of a debt must complete his title by giving the debtor notice in writing of the assignment. This will prevent what is in England a frequent source of litigation.

"I repeat what is said in the Statement of Objects and Reasons, that the subject of the Bill is one of great difficulty and complexity, and that, notwithstanding all the labour and time that have been bestowed on it, errors will doubtless be found in the draft. I therefore trust that the Council will allow the Bill to be introduced and published, so that it may receive the searching criticism which we court and which alone will enable us to remove these errors."

The Motion was put and agreed to.

The Hon'ble MR. STOKES then moved that the Bill be published in the *Gazette of India* in English, and in the Local Gazettes in English and in such other languages as the Local Governments direct.

The Motion was put and agreed to.

BROACH AND KAIRA THÁKURS INCUMBRANCES BILL.

The Hon'ble MR. HOPE presented the Report of the Select Committee on the Bill to relieve from incumbrances the estates of Thákurs in Broach and Kaira.

The following Select Committee was named:—

On the Bill to define and amend the law relating to the transfer of property:—The Hon'ble Sir E. C. Bayley, the Hon'ble Sir A. J. Arbuthnot, the Hon'ble Mr. Cockerell, the Hon'ble Mahárájá Jotíndra Mohan Tagore and the Mover.

The Council adjourned to Thursday, the 28th June 1877.

SIMLA,
The 14th June 1877.

Weekly condition report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 16.)

Condition report for week ending 26th May 1877.

Bangalore District.—Markets fairly supplied, and prices have slightly fallen in some of the taluks. Rain fell in five out of nine taluks, the maximum quantity registered being 2 inches at Hoskoté. The standing crops are in tolerably good condition. The prospects of the season are improving, and the ryots are engaged in ploughing their lands. Cholera and, in a few places, small-pox continue to prevail.

Kolar District.—Markets fairly supplied. Prices fluctuating. There has been rain only in four taluks, the quantity registered at the head-quarters thereof varying from 40 cents to 1·06 inches. Fresh sowings of javari, ragi and other cereals are being carried on. The standing crops of baragu (a kind of millet) and sugarcane are in fair condition. Fever and small-pox prevail, and also cholera in some places.

Túmkúr District.—Markets continue fairly supplied. Price of rice fell slightly in some taluks. The rainfall was general throughout the district, the maximum quantity registered at the head-quarters of taluks being 3·55 inches at Kunigal. Some tanks received from 10 to 90 days' supply of water. Agricultural prospects are improving, the recent rains having enabled the ryots to commence agricultural operations. Cholera, diarrhœa and fever are prevalent.

Mysore District.—Markets continue fairly supplied, and prices shew a downward tendency. Rain had fallen in all the taluks, the quantity registered at the head-quarters ranging from 40 cents to 4·10 inches, and 7 tanks are reported to have been breached. The dry crops which were withering have been saved in many places, and sowing operations are in progress. Cholera is still prevalent.

Hassan District.—Markets continue fairly supplied except in the Harnhalli and Narsipur taluks, where importation was slack owing to prevalence of cholera. Prices fluctuating. Rain is reported to have fallen throughout the district, the quantity gauged at the head-quarters of taluks ranging from 2 cents to 2·26 inches. Some tanks in the Hassan, Arkalgúd, Attikuppa and Nagamangala taluks received as much as 6 months' supply of water. The young crops in parts of the Channaraypatna, Harnhalli and Nagamangala taluks have benefited by the recent rains. Maize and sesamum were sown in the Harnhalli taluk during the week, and paddy was cut in Manjarabad and Attikuppa. Cholera is still prevalent throughout the district, as also small-pox and dysentery in some places.

Shimoga District.—Markets continue sufficiently supplied. Prices have risen. Rain fell in only 3 out of 8 taluks, the quantity registered being 25 cents at Sorab, 31¾ at Shimoga and 60 at Channagiri. Sowing operations have commenced. The young crops in the Nagar and Honnali taluks are suffering from want of rain. Paddy is being reaped in Nagar, but, in the Ságar taluk, it is reported to have withered for the most part. The state of the sugarcane crop is the same as in last week, and the prospects of the season remain unaltered. Cholera prevails in all the taluks except Sorab and Nagar, and fever also in Shikarpur, Sorab and Kavaledurga.

Kadur District.—Markets continue fairly supplied. Prices unsteady. Rain fell in 4 out of 6 taluks, the quantity registered at the head-quarters varying from 24 cents to 1·15 inches. There are no standing crops in the Tarikere and Mútgere taluks. Those in Chikmagalur and Banavar are doing well, but, in Lakvalli, they need more rain. The prospects of the season are still indifferent. Public health is bad, owing to the prevalence of cholera and small-pox.

Chitaldroog District.—Markets continue fairly supplied except in some villages of the Davangere, Budihal and Hosdurga taluks, where cholera prevailed and checked importation. Prices pretty steady. There has been some rain in all the taluks except Kankuppa, the

quantity registered at the head-quarters ranging from 40 cents to 2 inches. Fresh sowings of javari are being carried on wherever rain has fallen sufficiently for the purpose. The young crops are in tolerably good condition, except in portions of the Pavagada taluk. Cholera and small-pox are still prevalent.

GENERAL REMARKS.

From the reports received for the week ending 26th May 1877, there is reason to believe that the prospects continue steadily to improve. Although the south-west monsoon has not as yet set in, heavy showers have fallen in the Mysore district and in parts of Hassan district of the Ashtagram division. There have been heavy showers also in all the taluks of the Túmkúr district, and in five taluks of the Bangalore and four of the Kolar district of the Nundydroog division. In the Naga division, however, and especially in the Shimoga district, the rainfall was scanty. Agricultural operations are being actively carried on everywhere. The seasonable rainfall in the Mysore district has saved the young crops which were withering, and, in the other districts, ploughing and sowing are progressing favourably.

2. Prices have slightly fallen in some districts, while, in others, they continue stationary.

3. The number of deaths from cholera, reported during the week, was 940 as shewn below, being 156 less than that of the previous week :—

Bangalore district (including town and cantonment)	... 171	Shimoga district	... 8
Kolar district	... 74	Kadur „	... 23
Túmkúr „	... 168	Chitaldroog „	... 173
Mysore „	... 153	Total	... 940
Hassan „	... 170		

4. The number of works in progress under Revenue Officers was, this week, 2,371 as against 2,276 of the previous week, and the average daily number of persons employed thereon was 25,479 or 4,454 less than that of the preceding week. The decrease was only nominal as, in the returns of one of the taluks of the Chitaldroog district, the *total number* employed, during the previous weeks, was entered instead of the *daily average*. The error was rectified this week on receipt of the explanation which had been called for from the Amildar.

5. On works carried out under the supervision of the officers of the Public Works Department, the daily average number employed, during the week, was 31,152, or 3,314 less than in the preceding week. The recent rains have, apparently, drawn away some of the able-bodied labourers to their fields.

6. The daily average number of persons fed at the kitchens and camps was 107,814 or 68 less than that of the previous week. The numbers have been increasing in all the districts excepting Bangalore, Kolar and Mysore. The Commissioner of Ashtagram division reports that much individual distress still prevails in the affected taluks of the Hassan district, and that many, who are averse to accepting relief in the form of gratuitous food at the Government kitchens or on relief works, are supplementing their food with the fruit of the atti and other fig trees, &c. As experience has shewn that the mortality among the poorer classes has arisen chiefly from the disposition they evince to move from one kitchen or relief camp to another, instructions have been issued to restrain this migratory habit by every means practicable. The Commissioner of Nagar reports that a great deal has been done in his division to prevent vagrant paupers moving about from place to place, by providing works in convenient localities and by encouraging people to return to their own taluks, where they have been assured that they will find relief works and relief kitchens as in other places. To prevent fraud and to ensure that the daily allowance of food, in accordance with the prescribed scale, is really given to those fed in kitchens, the Chief Commissioner has directed that cooked food should be served out in a mould or measure. Colonel Campbell reports that this order has been carried out in many of the kitchens with great advantage to the Government and the paupers. Of the total number relieved gratuitously this week, 24,908 were men, 38,478 women and 44,428 children under ten years of age.

7. Many of the destitute children who have found their way to Bangalore have been taken care of by the members of the Catholic and other Missionary Societies; but the Chief Commissioner has considered it desirable to constitute, temporarily, a Government asylum for the admission of such destitute children as may be found by the executive authorities in need of relief; and arrangements have accordingly been made to set apart a portion of one of the existing relief kitchens in Bangalore for this purpose, and to appoint a respectable matron to take charge of the children.

8. The total number of persons belonging to Her Majesty's territory, who were fed at the kitchens of this Province, was 998 as against 826 of the previous week.

9. The returns relating to the movement of food-grains shew a diminution of traffic during the week under review. The cause of this has not been ascertained. The weight of grain imported by rail was—

	Tons.
at the Bangalore station	3,169
„ Kolar road „	273
Total ...	3,442

or 219 tons less than in the previous week, according to the particulars given below :—

	Tons.		Tons.
From Madras	2,753	From Sholapur and Nagpore on the G. I. P. Railway ...	19
„ Beypore and Tiroor in the west	413	„ Kolar district	13
„ Negapatam, Trichinopoly and Tanjore districts ...	222	„ the neighbouring districts of the Madras Presidency ...	22
		Total ...	3,442

10. It has been found necessary to adopt summary measures to prevent the importation into this Province of large quantities of rice which had been damaged by exposure on the sea-shore at Madras or which was otherwise bad and unfit for human food, and which was being brought to Bangalore by rail. The Madras authorities having condemned and destroyed large quantities of such grain, great efforts were obviously being made by owners to remove it thence and bags of damaged rice were selling, it is stated, at one rupee each. As a measure of imperative necessity therefore, a Committee, of which Dr. Henderson, the Acting Surgeon of the Mysore Commission, is President, was appointed to inspect all grain arrived at the Bangalore Railway Station and to condemn such as was found, after examination, to be unfit for human food. The proceedings of the Committee have been conducted with care and discrimination, and with as much consideration as the circumstances permitted.

11. About* 1,552 tons of grain were exported from Bangalore into the interior of the Province as well as to the frontier taluks of the Madras Presidency as shewn below :—

Towards the Túmkúr district	520 tons.
„ Bellary and Chitaldroog ...	88 „
„ Mysore district	200 „
„ Oossoor in the Salem district ...	322 „
To the taluks adjoining Bangalore	422 „
Total ...	1,552 tons.

12. The Commissioner of Ashtagram division has been very successful in the collection of the Government revenue of the two districts of Mysore and Hassan, which comprise his division. In the former, the demand up to date has been fully collected. In the latter the collections amounted to Rs. 6,74,318-15-1, leaving a balance of only Rs. 2,19,993-13-3 out of the demand. Colonel Hay is of opinion that a great number of the ryots in the Ashtagram division, who are perfectly able to pay their khists, have been systematically trying to evade payment in hopes of obtaining remission, the general impression being that remission would be granted under all circumstances. The measures taken to enforce the Government demand have had a good effect, and the ryots have been made to understand that no frivolous excuses for escaping payment of the just claims of Government will be attended to, and that remissions will only be granted upon good and sufficient cause being shewn to justify the adoption of such a course.

"By Order,"

T. R. A. THUMBOO CHETTY,

Assistant Secretary.

* Being 711 tons less than in the previous week.

* Such as digging and repairing wells, prickly-pear clearances, &c.

† Returns of labourers for 9th June not received; last week's figures are entered.

‡ All the labourers upon the Dhond-Manmar Railway have been included under Ahmednagar.

More or less rain has fallen over the greater part of every famine district, and the showers have been very heavy in the eastern talukas of Poona, Sholapur, Satara, and Kaladgi. In addition to Dharwar and Belgaum, land is now sown in parts of Kaladgi, Satara, Nasik, and Khandesh, while agricultural preparations are very general.

This rain will be very valuable, if it is followed up by a favourable monsoon, but as yet the monsoon has not set in above the Ghauts, though it appears to be approaching.

2. The price of grain has scarcely changed from last week, but it is sightly cheaper in Sholapur, and dearer in Satara, Kaladgi, Belgaum and Dharwar.

3. The number of people upon relief works in the nine affected districts is 374,909 against 387,075 last week, and there are also 6,344 hill-men and immigrants employed in Ratnagiri and Kanara. The decrease is most marked in Belgaum, but is not so great as the figures would indicate, as the returns from two talukas have not been received. The only serious increase is in Dharwar, but it is hoped that the recent rain and the consequence resumption of agricultural operations, have sensibly affected the muster-rolls of the current week.

The immigrants into Kanara are now rapidly returning to their homes, and the decrease in the number of labourers employed in that district is very marked. On the other hand, there is a decided increase in the number of people upon relief works in Ratnagiri. This is probably due to the suspension of fodder-pressing operations throwing a number of needy hill-men out of employ.

4. There is a decided decrease in the number of deaths from cholera.

5. During the month of May the average daily attendance of labourers was 362,472, or 137,528 less than the number estimated for, and the number of persons charitably relieved averaged 31,265 per diem, which is about two-thirds of the number expected.

In Statement No. XXIV it was noticed that there was an approximate saving, up to the end of April, of 25 lakhs upon the lowest estimate made of the cost of the famine, and the estimated saving, to the end of May, amounts to upwards of 30 lakhs.

6. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 2nd June, the number of people upon Civil Works in the nine affected districts was 37,804, the number upon works under Public Works Department agency being 354,827. The proportion of people upon the former continues, therefore, less than 10 per cent. of the total. It is to be noted that the figures given in these tables are taken from the progress returns of the works, and are brought up to the week ending 2nd June, while the figures in the table prefixed to this summary are taken from the Collector's telegrams, and refer to the week ending 9th June.

7. The following table gives the expenditure by Government, during the week ending 26th May, upon charity in the relief of the aged and infirm poor; and in payments made to the young children of labourers employed upon relief works; this latter allowance, which has been paid since December, is debited to the works upon which the parents are employed, it being regarded as an increment to their wages to enable them to support their young children. Comparing the results shown in the table below with those shown in the last summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 32,524 to 42,758, while the number of children under 7 years of age has increased from 111,213 to 114,572 :—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children, and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

8. The following table gives the distribution of the people among the relief works in the nine affected districts employing 1,000 labourers, or more, during the week ending 2nd June. It be will seen that 3,33,958, or upwards of five-sixths of the labourers were concentrated upon the works enumerated :—

Districts.	Works.	Number of labourers.	Total.	Remarks.

9. Maps are not sent with this summary, as they would merely repeat the information already given.

10. A table is appended, showing the condition of the affected Native States.

11. With regard to the movements of food-grains, 1,605 tons were exported from Bombay to the Southern Mahratta Ports during the week ending 7th June, and during the fortnight ending 9th June, 10,003 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines. The table below shows the quantities of grain sent by sea and rail from October till the 9th June to the Southern Mahratta ports and the Railway stations in the distressed districts. It will be seen that the total amount delivered up to the end of May was 310,431 tons:—

Food-grains sent to	In October, November and December 1876.	In January 1877.	In February 1877.	In March 1877.	In April 1877.	In May 1877.	In June (up to 9th).	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports ...	44,215	13,459	16,075	16,798	21,399	28,057	1,605	142,208
South-Eastern line, from Poona to Sholapur ...	67,195	15,471	12,477	13,760	12,856	12,594	9,381	143,734
North-Eastern line, from Nasik to Bhusawal ...	12,829	1,615	2,622	3,234	2,346	1,221	622	24,489
TOTAL ...	124,239	30,545	31,174	33,792	36,601	42,472	11,608	310,431

12. On the whole, there is an improvement in the general situation. The food-supply is sufficient, and prices are almost stationary. The grain trade continues active, for though the anticipated decrease in shipments to the Southern Mahratta ports, due to the approach of the monsoon, has taken place, the amount of grain sent by Railway into the famine districts has considerably increased. The condition of the cattle has been improved by the very general, and in some places heavy, rain.* Good accounts are received of the young crops in Dharwar and Belgaum. Sowing has commenced in parts of Kaladgi, Satara, Nasik and Khandesh, and a considerable area of land is being prepared for sowing in the remaining districts. There is a net decrease of 10,950 in the number of labourers, but the increase of 10,234 persons charitably relieved is serious. It is, however, to be remarked that the emigrants are returning in large numbers, and many of them, both on their way to, and after arrival at, their villages, require charitable assistance. The general condition of the people is satisfactory, and upon relief works it is very good. The monsoon appears to be slowly approaching, but western rain has not yet reached the famine districts. Cholera is on the decrease.

M. K. KENNEDY, Major-General, R. E.,
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women, and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.
These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

Proceedings of the Board of Revenue, Madras, No. 2681, dated 8th June 1877.

The relief reports for the week ending 2nd June 1877 are submitted to Government with maps and abstract statements as noted in the margin.

Maps for—

„ 2. Relief Report.
„ 3. Talukwar Abstract of relief reports.
„ 4. Statement of gratuitous relief.
„ 5. Talukwar ditto.
„ 6. Works under supervision of Public Works Department.
„ 7. Memorandum of sums sanctioned.

2. *Prices.*—The district averages show very little change in prices. That for rice has risen by a very small fraction in five districts, fallen in six, and is stationary in one. Cholum was stationary in two districts, rose in four, and fell in six; ragi has risen in six, fallen in four, and is stationary in two; cumbu has risen in seven, fallen in four, and is stationary in one. The changes, however, are very minute, and on the whole, the condition of prices may be described as stationary with tendency to fall, which will doubtless become more pronounced should more rain fall soon.

Turning to details of taluks shown in the district returns in *Nellore*, rice and cumbu have fallen in Kanigiri, cholum risen at Addanki, ragi risen at three stations and fallen at two. There is no other change.

In the *Cuddapah* district, the fall noted last week in Kadiri continues; and in other taluks rates are fluctuating, rice tending to fall, and ragi to rise slightly. Reports from three taluks of *Bellary* are wanting, but as to the other taluks, the changes most important to notice are that a fall has set in in Adoni, and a heavy rise in cumbu (from 8·6 to 5·7 seers) occurred in Dharmaveram. In *Kurnool* rice and cholum have fallen, ragi is stationary, and cumbu has slightly risen. In Chingleput there is hardly any change, but a tendency to rise in Saidapet and Conjeeveram appears. In *North Arcot* prices are unsteady, especially of rice and ragi, both of which are inclined to rise, though a considerable fall at Kalastri (from 10 to 12·7 seers) has produced an apparent fall in the district average rate for ragi. In *South Arcot* there is no change of importance. In *Trichinopoly* the rise in cholum is only apparent, the average for this week including a quotation (9 8 seers) for white cholum at head-quarters, whereas last week's rate is for black cholum only in one taluk, Perambalur. In *Madura* ragi has risen slightly in four taluks, and rice and cumbu each in one, but other rates are stationary or falling. There is no change worth noting in the distressed taluks of *Tinnevelly*. In *Coimbatore* the Collegal rate for rice has again fallen, and stands at 5·36 seers. The price of rice is unsteady in the district, but other grains are nearly stationary. In *Salem*, all prices have risen at head-quarters, but all dry grains in Namakal, and rice, ragi and cumbu in Tripatore, have fallen.

3. In many cases the taluk returns of prices show no quotations for particular grains, indicating sometimes, though by no means invariably, that such grains are not procurable in the market. To illustrate this point the Board present the marginal abstract, showing the extent to which such apparent want of supply is to be gathered from the returns. It will be seen that rice is everywhere obtainable, and ragi almost everywhere. The latter is the most important of the dry grains in the food of the mass of the people in most districts, and consequently the price of it is, as has been apparent throughout, the most sensitive to change. In some districts, *e. g.*, *Chingleput*, cholum and cumbu are comparatively little used.

Districts.	Stations from which reports have come.	Stations at which there are no quotations for			
		Rice.	Cholum.	Ragi.	Cumbu.
Nellore	13	..	6	1	6
Cuddapah	13	..	1	..	1
Bellary	12	..	..	3	2
Chingleput	6	..	5	..	6
North Arcot	16	..	4	..	4
South Arcot	17	1	5	1	7
Trichinopoly	5	..	5	..	2
Madura	7	..	4	..	1
Tinnevelly	5	..	2	3	3
Coimbatore	10	..	1	..	1
Salem	9	..	..	..	1

4. *Rainfall.*—There was rain in all the districts, except *Chingleput*, but the fall was generally very light. For *Kistna*, where the average was 1·56 inches, detailed return is not available. In *Nellore* there was nearly half an inch at Venkatagiri in the south of the district. Showers fell in the taluks on the west and north-west frontiers of *Cuddapah* and the adjoining taluks of *Bellary*. At Hospett, in the latter district 1·65 inches fell. In *Kurnool* 1·4 inches fell in four taluks. *North Arcot* received rain in the south and east of the district only, but some of the rainfall of the previous week has been erroneously included in the return. In *Trichinopoly* the rain was general and was nearly two inches in the taluks north of the Cauveri. All taluks of Madura, except Ramnad and of *Tinnevelly*, received rain which however was light in the Madura sub-division. In Coimbatore itself 2·05 inches fell, and all taluks of the district, except Pollachy, received showers. In *Salem*, rain varying from 0·2 to 1 inch fell in all taluks except Oossoor. On the whole, the rainfall of the week has been favourable, and will at least bring on pasture for the cattle.

5. *Grants and outlay.*—The district grants made by the Board up to 2nd June amounted to Rs. 1,61,85,283, and the outlay against this is as follows:—

	In the week. Rs.	Up to the week. Rs.
Relief works	4,58,742	1,35,54,302
Gratuitous relief	1,31,778	11,74,921
Total ...	5,90,520	1,47,29,223

6. *Numbers on relief works.*—The usual comparison of district numbers is made below:—

	26th May.	2nd June.	
Kistna	706	1,854	+ 1,148
Nellore	26,731	28,002	+ 1,271
Cuddapah	80,643	94,961	+ 14,318
Bellary	261,482	268,030	+ 6,548
Kurnool	207,886	205,208	— 2,628
Chingleput	12,123	18,819	+ 6,696
North Arcot	49,621	55,807	+ 6,186
South Arcot	*1,830	622	— 1,208
Madura	12,314	13,445	+ 1,131
Tinnevelly	410	23	— 387
Coimbatore	25,679	25,439	— 240
Salem	56,146	53,387	— 2,759
	735,591	765,597	+ 30,076
East Coast Canal	42,481	42,481	...
	778,002	808,078	+ 30,076

7. The numbers on the East Coast Canal have not been reported, and the return for the 26th May is repeated in the above abstract. In the rest of the district of *Nellore* the numbers in Rapur and the Venkataghiri Zemindary have increased considerably, and a slight increase in other taluks is counterbalanced by discontinuance of work in Kandukur adjoining the canal.

	26th May.	2nd June.	
Jamalamadugu	9,008	13,551	+4,543
Pulivendla	12,430	14,514	+2,084
Prodattur	1,835	2,112	+287
Cuddapah	2,264	3,163	+899
Budwail	8,171	10,605	+2,434
Sidhout	1,279	1,217	—62
Pullumpett	11,410	10,186	—1,224
Kadri	3,222	3,209	—13
Royachoty	10,310	8,196	—2,114
Madanapulli	10,806	16,137	+5,271
Voilpaud	9,858	12,071	+2,213
Total ...	80,643	94,961	+14,318

The *Cuddapah* numbers show very large increase and the taluk details are shewn in the margin. No explanation is given of the increase in Madanapulli. In Jamalamadugu, Pulivendla, Prodattur and Budwail the cause of increase is the cessation of recruiting for Nellore and the admission of coolies returned thence. In Voilpaud increase is due to the re-opening of works stopped.

8. *Bellary.*—The increase in Dhurmaveram is due to wrong return last week. That in Hadgalli is entirely unexplained in Raidroog the cause is more intense distress, and in Kudlighi opening of fresh works. The large decrease in Madaksira is ascribed to irrigation works, to which only residents of neighbouring villages resort, having been taken up instead of roads; there are only 3,420 labourers on the Bellary-Hubli railway against 3,615 in the previous week.

	26th May.	2nd June.	
Adoni	63,460	62,894	— 566
Alur	31,383	31,910	+ 527

9. The increase in Chingleput is owing to the Chingleput-Conjeveram railway which employs 11,826 coolies against 5,548 on 19th May. No relief work on the Madras Railway is now in progress, but the numbers in *North Arcot* have nevertheless largely increased, chiefly in the Chindragiri taluk and on minor works and in Wandewash. It seems likely the 3-pie children have been included in these returns. The Collector will explain. In the eastern zamindaries numbers have declined. There is no explanation of the decrease in *South Arcot*, but it is probably due to completion of works. In *Madura* and *Coimbatore* there is nothing to note, and in *Tinnevelly* relief works are almost entirely closed. The decrease in *Salem* is accounted for by falling off in numbers in Oossoor and *Trichengode*, for which no cause is assigned.

10. *Rates of wages.*—The enhanced wages have been wholly or partly introduced in all taluks of *Cuddapah*, but as regards the *Bellary* district, the new scale appears only in Adoni and in the western taluks, where rates had already been raised. In the sub-division the enhanced rates have ceased, and the addition made seems to be now given as Sunday wage. The new scale appears in three taluks of *Chingleput* and three taluks of Nellore; not at all in *South Arcot*, but in six taluks of *North Arcot*. The attention of the Collector of *North Arcot* is called to the wages in force in the *Tripaty* division and under the Deputy Conservator of Forests which are not correct to scale. In *Madura* and *Coimbatore* scale I was already for the most part in force, and in *Salem* piece-work rates prevail.

11. A statement shewing numbers, &c., on works under the Department Public Works is enclosed. The total, according to the most recent returns received, is 170,011; besides those employed on the Junction Canal in Madras town. Arrangements have been made in Nellore for transferring considerable numbers of works to the Department Public Works.

12. *Gratuitous relief.*—The total numbers in each district, and in receipt of each kind of gratuitous relief, are compared below with last week's numbers:—

	26th May.	2nd June.	
Kistna	179	382	+203
Nellore	18,873	20,322	+1,449
Cuddapah	26,321	33,629	+7,308
Bellary	136,110	139,886	+3,776
Kurnool	62,486	60,611	—1,875
Chingleput	16,751	19,662	+2,911
North Arcot	14,753	20,622	+5,869
South Arcot	4,108	4,530	+422
Trichinopoly	103	394	+291
Madura	9,106	11,448	+2,342
Tinnevelly	738	755	+17
Coimbatore	21,220	24,713	+3,493
Salem	58,237	74,236	+16,001
Malabar	6	...	—6
In camps and relief-houses	116,887	136,644*	+19,757
Village relief	100,588	123,741	+23,153
3-pie children	151,516	150,807	—709
TOTAL ...	368,991	411,192	+42,201

* Include 382 in Kistna. Particulars not yet available.

13. Thus there is a large increase, but it is so satisfactory to note that the numbers of 3-pie children have apparently ceased to rise. The progress of the organization for gratuitous relief may be gathered from the marginally noted figures. (The details for Kistna and Kurnool for 26th May are here repeated for 2nd June, full reports not having yet come from those districts.) The increase in numbers in *Nellore* is under camp relief. Village relief in the district is extremely small. In *Cuddapah* there is increase under all classes but proportionately greater under village relief. In *Bellary* the number of 3-pie children have decreased, but there is a large increase under village relief and in camps. The *Kurnool* numbers are nearly stationary under all classes. In Chingleput, North Arcot, Madura and Coimbatore the numbers in camps have increased, but village relief is still trifling. The numbers on village relief in *Salem* have increased by no less than 14,486, but it seems doubtful whether the return is correct. The details are given in the margin and the reports for Oossoor and Kistaghiri seem wrong. The Collector will report on the increase.

14. The following statement shows rates of mortality computed in the same way as in last week's report:—

Districts.	Camps and Relief-houses.			Village Relief.		
	Approximate strength.	Deaths in the week.	Ratio per mille per annum.	Approximate strength.	Deaths in the week.	Ratio per mille per annum.
Nellore	15,941	75	245	565	...	...
Cuddapah	8,506	186	1,140	7,110	39	227
Bellary	35,058	164	244	31,460	117	194
Chingleput... ...	15,937	35	115	1,766	...	...
North Arcot ...	6,568	130	1,032	1,602	24	781
South Arcot ...	751	4	277	3,535	...	...
Trichinopoly ...	187	7	1,952	62	...	...
Madura	9,109	35	200	1,048	13	647
Tinnevelly	738	11	777	9	...	...
Coimbatore ...	17,640	43	127	4,640	9	101
Salem	9,412	170	941	55,193	126	119
Total ...	119,847	860	374	106,990	328	160

The mortality in camps was greater in the week ending 26th than in that under report, owing, doubtless, to the heavy rain in some districts in the former week. The deaths amongst persons on village relief are more numerous, but they are probably even yet not fully reported. The rates under camp relief in *Cuddapah* and *Salem* are very high, and the mortality both in camp and under village relief is very high in North Arcot. The rate for the new relief camp at Trichinopoly which has 322 inmates shows that it was not opened too soon.

15. The following statement shows the proportions borne to the distressed population by the numbers on the hands of Government in each district:—

District.	Distressed population.	Number on			Percentage.
		Relief works.	Gratuitous relief.	Total.	
Kistna	308,154	1,854	382	2,236	0·72

18. The amount sanctioned up to date by the Board for district relief is Rs. 1,61,99,493.

19. The average daily residents in the Madras camps were 16,768 and non-residents 13,808, considerable numbers having, the Board believe, been sent to their villages. The fresh admissions in the week were only 424. The strength of residents on 2nd June was 15,397, *viz.*, from Chingleput 5,485, North Arcot 5,663, Nellore 4,174, other districts 125. The number remaining in hospital was 517, and the deaths 129, of which 105 were in hospital. The outlay by the Commissioner was Rs. 10,554 in the week, and Rs. 5,55,814 up to the week. The President of the Municipal Commission had 2,009 persons in the Sattankad relief camp, and 1,238 persons on relief works. He expended in the week Rs. 2,358, and up to the week Rs. 47,051.

Weekly Condition Report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 17.)

Condition Report for week ending 2nd June 1877.

Bangalore District.—Markets fairly supplied. Prices steady except in the Dodballapur taluk, where they have slightly risen. Rain is reported to have fallen in six out of nine taluks, the quantity gauged at the head-quarters of which has varied from 25 cents at Haskote to 1·15 inches at Bangalore. A few tanks in the Kankanhalli and Magadi taluks received from 15 to 60 days' supply of water. Paddy has been sown in some places, and ploughing operations are being carried on generally. The standing crops are in fair condition and the prospects are generally promising. Cholera and, in a few places, small-pox are still prevalent.

Kolar District.—Markets continue fairly supplied. Prices have remained pretty steady except in the Kolar and Betmangala taluks. Rain fell during the week but only in three taluks of the district, the maximum quantity registered being 40 cents. The showers, though not plentiful, are reported to have fellen opportunely at a period very favourable to sowing operations, and sesamum, saije and harka (little millet) are being sown in some places. Cholera is on the decline, but small-pox and fevers are still prevalent.

Túmkúr District.—Markets continue fairly supplied except in the Sira, Kunigal and Honnávalli taluks, where importation was slack owing, it is said, to the difficulty of procuring means of carriage from Bangalore. Prices of food-grains rose during the week in all the taluks except Koratagere where there was a slight fall. Rain fell generally throughout the Sira, Koratagere and Kunigal taluks, the quantity registered at the head-quarters thereof varying from 10 to 80 cents. Fourteen tanks in the last mentioned taluk are reported to have received two months' supply of water. Ploughing operations are going on, but the want of bullocks for the purpose is very much felt. The standing rice crops under wells are in tolerably good condition, and the gardens are improving. Cholera, diarrhœa and fever are still prevalent.

Mysore District.—Markets sufficiently supplied except in some few places in the Heggadevankote taluk, where cholera prevented importation on a large scale. Prices pretty steady. There has been rain in all the taluks of the district except Ashtagram, and the tanks have received an additional supply of water. The standing crops are reported to be generally in good condition. Javari, ragi, gingelly oil seeds, &c., were sown in many places. Prospects are said to be much brighter now than before, but the public health is still indifferent, cholera being more or less prevalent in almost all the taluks. Cattle in the Ashtagram, Maudya and Malvalli taluks suffer from murrain.

Hassan District.—Markets continue fairly supplied except in the Harnhalli and Narsipur taluks, where the prevalence of cholera checked importation on a large scale. Prices shew a tendency to rise in some taluks. Rain is reported to have fallen generally throughout the district, the quantity registered at head-quarters of taluks varying from 2½ cents to 1·55 inches, and some tanks received a fair supply of water. These showers have proved beneficial to the standing crops and have enabled the ryots to continue ploughing and sowing operations. The young crops in the Attikuppa taluk having been destroyed by the ravages of insects before the fall of the recent rains, fresh seed has had to be sown. The paddy crops in the Manjarabad taluk are in need of more rain, but prospects generally are said to be improving. Cholera is more or less prevalent throughout the district, and also fever and dysentery in Manjarabad, Harnhalli and Narsipur taluks.

Shimoga District.—Markets sufficiently supplied except in the Channagiri taluk, where importation was slack owing to the prevalence of cholera. Prices have risen in consequence. Rain fell only in two taluks, and 50 and 20 cents were registered at Shimoga and Honnali respectively. The reaping of the Vaisaki paddy crop in the Nagar taluk was almost finished. The sugarcane and other standing crops are reported to be withering, and the supari blossoms in the Kavaledurga taluk are falling off for want of rain. The prospects have not improved. Cholera still prevails in the Shimoga and Channagiri taluks.

Kadur District.—Markets continue fairly supplied, but prices are very unsteady. Light showers of rain fell in four out of six taluks, the quantity registered at the head-quarters ranging from 2½ to 89 cents at Chikmagalur. Javari and ragi were sown during the week in parts of the Tarikere and Múdgere taluks. The standing crops in Chikmagalur and Banavar taluks are doing well, but in Lakvalli and Koppa, paddy which had been recently sown is reported to be in a bad way owing to want of rain. The prospects continue to be indifferent and the public health bad owing to the prevalence of cholera, small-pox and fevers.

Chitaldroog District.—Markets fairly supplied except in some villages of the Budihal taluk, where importation was checked by an outbreak of cholera. Prices remain, however, pretty steady. There has been no rain except in three taluks, the maximum quantity registered at the head-quarters of which was 70 cents at Chitaldroog. Javari, ragi and other seeds were sown in some parts of the Hosdurga and Hiriyur taluks. The young crops, except in parts of the Chitaldroog taluk, stand in need of more rain. The prospects of the season remain unaltered and the public health continues very indifferent, cholera being still prevalent more or less throughout the district.

GENERAL REMARKS.

During the week ending 2nd June, rain had fallen very generally throughout the Ashtagram division and prospects there have considerably improved. In the Nundydroog division the rains continued to fall, though not abundantly, in six taluks of the Bangalore district and in three of each of the Kolar and Túmkúr districts. These showers have been very favourable to the young crops and have encouraged the ryots to continue the work of ploughing and sowing. In the Nagar division there has been a deficiency of rain, which is reported to have fallen only in two taluks of the Shimoga, three of the Chitaldroog and four of the Kadur districts.

2. Prices of food-grains have slightly risen in the Nagar division, but in the other two divisions they have, with here and there some trifling fluctuations, remained stationary. Markets are, on the whole, pretty fairly supplied, and now that rain has fallen every where and there is a good prospect of an average monsoon, it is to be hoped that the grain which may still remain stored in the country may be brought into the market.

3. The cholera is still prevalent though somewhat on the decline. The number of deaths reported during the week was 842 as shewn below, being 98 less than in the previous week:—

Bangalore district (including town and cantonment)	...	Shimoga district ...	... 45
Kolar district ...	... 45	Kadur „ ...	... 82
Túmkúr „ ...	... 110	Chitaldroog „ ...	... 147
Mysore „ ...	... 144		
Hassan „ ...	... 159	Total	... 842

4. The number of works in progress under Revenue officers was 2,504 or 133 more than in the preceding week. The daily average number of persons employed on them was 28,848 or 3,369 more than that of last week.

5. The labour return of the Public Works Department shews that the daily average number of persons employed this week was 29,629. The falling off in the number, as compared with that of the previous week, is attributed to the prevalence of cholera among the coolies in some places and to the commencement of agricultural operations. It must be remarked, however, that the less able-bodied poor still cling to the relief works where the task is light, in the hope of earning something before returning to their villages or, at any rate of obtaining their subsistence until able to support themselves on agricultural labour.

6. The daily average number of persons who were in receipt of gratuitous relief was 108,557 as against 107,814 of the previous week. The proportion of men, women and children is shewn in the following table:—

	No.	Percentage to the total number.
Men	24,395	22·47
Women	37,597	34·63
Children	46,565	42·90
Total ...	108,557	100·00

7. The setting in of the rains has rendered it necessary to provide additional shelter in the relief kitchens as well as blankets for the infirmaries and clothing, to a limited extent, for such as need it.

8. The attention of the Chief Commissioner has again, of late, been drawn to the difficulty of dealing with destitute travellers moving towards Coorg and the Wynaad. Many of them, it is reported, are in a condition which unfits them to travel or to stand the inclement rains and winds which prevail in Coorg and the Wynaad during the monsoon months. Some of them are helpless women unaccompanied by men. One of the most noticeable features, in connection with the present famine, has been the spirit of restlessness and anxiety to try and better their condition by obtaining employment on the high wages which have always prevailed in the coffee planting tracts, which have led the poorer classes to travel. Every endeavour has been made to dissuade the people from migrating from one part of the country to another by assuring them of the hopelessness of their obtaining employment and of the risk they incur, but without any great measure of success. It has been considered desirable to authorize the Commissioner of Ashtagram division and the District officers subordinate to him to use their own discretion in the matter of altogether preventing the migration of such persons, and to establish fresh camps at convenient localities on the different lines of road, where the condition and circumstances of the emigrants might be properly enquired into, with a view to the detention of such as are physically unable to travel and must be supported gratuitously by Government until they can return to their own villages.

9. The total number of persons belonging to Her Majesty's territory fed in the kitchens of this Province was 1,553, or 555 more than that of the previous week. The increase was chiefly in the Davangere and Dodéri taluks of the Chitaldroog district, where the numbers fed during the week were as noted below:—

Davangere	474
Dodéri	399

10. The weight of grain imported by rail was:—

	Tons.
At the Bangalore station	3,379
„ Kolar-road „	208
Total ...	3,587

being 145 tons more than in the previous week. The imports were drawn from the following places:—

	Tons.		Tons.
From Madras	2,845	From Kolar district	1
„ Tiroor and Beypore in the west	509	„ the adjoining district of the Madras Presidency ...	39
„ Negapatam, Tanjore and Trichinopoly districts...	193	Total ...	3,587

11. About 1,423 tons of grain were exported from Bangalore into the interior of the Province as well as to the frontier taluks of the Madras Presidency as shewn below:—

	Tons.
Towards the Túmkúr district	458
„ Chitaldroog and Bellary	78
„ Mysore district	266
„ Oorsoor in the Salem district	205
To the taluks adjoining Bangalore	416
Total ...	1,423

12. The great mortality amongst cattle and the prolonged drought have deprived a large proportion of the agricultural classes of the means of resuming the cultivation of their lands, and the Chief Commissioner has, after much anxious consideration, resolved to authorize the Revenue officers to grant, within certain prescribed limits, *takavi* advances as a means of enabling the poorer and more needy ryots to purchase plough-cattle and seed-grain which they are urgently in need of. The rules and limitations subject to which the advances may be made are fully detailed in the accompanying copy of Chief Commissioner's Proceedings, No. 2274—Rev. 63, dated the 6th instant.

"By Order,"

T. R. A. THUMBOO CHETTY,

Assistant Secretary.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 21ST JUNE 1877.

GENERAL REMARKS.—In Madras abundant rain has fallen in the Malabar Coast; it has been plentiful also in Cuddapah, Bellary and parts of Kurnool, and moderate in Kistna, Nellore and North Arcot: from all other districts some rain is reported, but the fall has been generally light; cultivation is everywhere progressing, and pasture steadily improving. The reported numbers on relief works are 856,714, and on gratuitous relief 482,999: the former are more by 9,112 and the latter by 21,989 than last week. In Mysore the showers have been light and partial, and more rain is needed; the numbers on relief works are 57,525 and on charitable relief 114,676, being less by 952 under the former and more by 6,119 under the latter head than last week. In Bombay the monsoon rains have fairly set in except in the north of Guzerat; good showers are reported from the Deccan and the Southern Mahratta Country: sowings have generally commenced. The monsoon has apparently reached Berar, where 3·18 inches of rain have fallen and sowings have begun. In the Central Provinces only light showers are reported, and those not in all districts: ploughing is still going on. In Central India rain has fallen at Indore and Rutlam, but not elsewhere; and in Rajputana the weather is still hot and dry. In Bengal copious rain is reported from the Northern, Eastern and Central Delta districts; west of the Hooghly it has been light, and in Behar only partial; all crops are in good condition and prospects favourable. In Assam showers continue to fall in the valley districts; in Sylhet more rain is said to be required. In Burma the rains continue: the fall has been everywhere good except in Prome and Thayetmyo. In the North-Western Provinces, Oudh and the Punjab there are as yet no signs of the monsoon.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 19th)	2·15 in Narsarowpet; 1·0 in Nuzvid; less than 1·0 in Repalli, Sattanapalli and Nandigama; slight elsewhere.	Four feet water over anicut; *cumboo*, maize and *jonna* newly sown in 5 taluks; preparing seed beds in Repalli for wet cultivation; crops sown before this in 7 taluks generally doing well; prices of rice and *cumboo* slightly fallen in 4 taluks, steady elsewhere; seers of Rs. 80 weight, rice 8·66, *cholum* 11·15, *raggi* 12·96, *cumboo* 10·77; imports at Guntur rice 18·75 tons; on relief works 1,856, number fed gratuitously by Government 326 in camp, 61 in villages, fed by people 1,290; mild cholera, small-pox and fever here and there; cattle disease in 6 taluks; grass is growing, but still complaints everywhere; market fairly supplied.
Nellore („ „)	2·20 in Nellore; 2·25 in Gudur; ·75 in Atmakur; ·45 in Kavali; 1·70 in Venkatagiri; 2·20 in Udayagiri; 1·25 in Kanigiri; ·30 in Ongole; 1·55 in Darsi.	Average prices second sort rice 7·72 seers per rupee, *cholum* 9·85, *raggi* 11·80, *cumboo* 10·37; imports by sea, rice 293 tons, by land into the town of Nellore rice 79 tons, *cholum* 2 tons, *raggi* 2 tons; number on district relief works 25,604, number on canal 46,126, number fed gratuitously in camps 22,261, village relief 585; children of coolies employed on works 4,379; 15 deaths from cholera; cholera, small-pox, fever, dysentery, guinea-worm and diarrhœa prevalent in some taluks; water-supply assured for drinking and sufficient for agricultural purposes; standing crops doing well; prospects of cattle better; cattle disease prevalent in Kanigiri taluk.
Cuddapah („ „)	Rain in every taluk; average 3·22; in 2 taluks fall very heavy, *viz.*, Pullampett 6·2; Royacheti 6·37.	Average prices seers per rupee second sort rice 7·16, *cholum* 8·34, *raggi* 9·32, *cumboo* 8·54; people on relief works 106,202, increase 1,117 due to increased wages and pressure of distress, 9,215 fed gratuitously in camps, decrease 452 owing to 334 deaths and transfer to villages; otherwise fed 34,019, increase 7,372 due to fuller extension of the system, transfer from camps and pressure of distress increased; 336 deaths from cholera of which 140 in Pulivendla; number of cattle died from want of fodder and disease 312.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Bellary (June 19th)	1·95 in Hospett; 3·3 in Kudlighi; 4·7 in Hadgally; good rain in Alur, Adoni and Gooty; 1·3 in Tadpatry; 2·8 in Raidrug; 2·1 in Anantapur; 1·2 in Dharmaveram; ·55 in Hindupur; 2·2 in Madaksira; 5·1 in Pennakonda.	Average price second sort rice 6·71, boiled rice at Bellary 7·56, *cholum* or great millet 7·03, Jubbulpore *cholum* at Bellary 7·73, *raggi* or lesser millet 7·76, *cumboo* 7·22 seers of 80 tolas; import 1,428 tons, accounts from one railway station only; 301,346 persons on relief works, increase on return for previous week 10,025, due to increased pressure of famine in most taluks, 153,643 gratuitously fed, of whom 15,877 fed in relief houses, 3,909 in relief camps; increase on return for previous week 1,567, this is chiefly due to increased number of children of coolies; 1,236 gratuitously fed by private charity aided by Government grant; ryots sowing early crops in many villages; cholera decreasing but still in all taluks; small-pox and fever prevalent; cattle still perishing from want of fodder which recent rain will soon make procurable; supply of drinking water much improved.
Kurnool („ „)	1·71 (average): in Cumbum 4·10; ·93 reported in Chanalmarry on 13th.	Tumbudra still in fresh; water in Kurnool town abundant; agricultural operations progressing throughout the district; average price second sort rice 6·95 imperial seers per rupee, *cholum* 7·84, *raggi* 9·39, *cumboo* 8·92; cholera, small-pox and fever continue; cholera seizures 42, deaths 36; condition of cattle poor; coolies on relief works 204,986, gratuitously fed 57,060, particulars of latter are 2,419 in Nandial and Khaderbagh relief camps, 45,375 children under 7 years, 4,741 village relief and 4,526 in relief houses; there is a decrease of 7,237 coolies on relief works, a considerable part of this is nominal owing to defective returns, but it is partly due to agricultural operations being in progress; decrease of 3 pie to children due to improved checks; physique of coolies fair; 115 tons private grain imported in 3 taluks.
North Arcot („ „)	1·75 (average of 16 stations).	Average prices in Government seers second sort rice per rupee 7·4, *cholum* 8·4, *raggi* 9·4, *cumboo* 7·8; relief works' coolies 54,900; persons gratuitously fed in camp 8,995, persons otherwise gratuitously fed 13,371; cholera still prevalent; fever and small-pox in some places; pasture insufficient but just growing; cattle still dying of starvation and disease.
Chingleput („ „)	Rain more or less in all taluks except in Maduran-takam.	Prices rice second sort 8·46, *raggi* 10·08, *cholum* 9·05; imports, rice 144 tons, *raggi* 27·25 tons; cholera, fever, small-pox and dysentery more or less prevalent in all the taluks except Trivellore and Chingleput; condition of cattle improving; pasturage insufficient; water abundant; 550 head of cattle in Trivellore and 300 in Conjeveram reported to have died of diarrhœa and weakness; on relief works 32,315; gratuitous relief in camps 11,634, in other places 15,184.
South Arcot („ „)	1·2 in Chellambram; ·25 in Hoozoor; ·5 to ·75 in Villapooram, Tricalore and Tindevanum.	Rice second sort 8¼ seers, *cholum* 10¾, *raggi* 11 1/10, *cumboo* 11½, little dearer than last week; imports by sea none, by rail *raggi* 16 tons; number employed last day 9 men only; fed in relief house at Chengam 113 men, 339 women and 522 children, total 974, deaths 4; relieved in 81 villages 1,548 men, 2,214 women, 3,560 children, death one; people healthy; cholera deaths reported 221 against 284 attacks; cattle disease in some villages; pasture improved.
Tanjore („ „)	·2 to ·4 in different parts of the district from 12th to 13th instant.	Prices rice 7¾ seers, *raggi* 10 1/16, *cumboo* 11 7/16, *cholum* 9¾; imports by sea, rice 366 tons; relief works none; freshes in rivers moderate; deaths from cholera 231; small-pox throughout the district, 6 deaths reported therefrom; fever in some parts; cattle disease in Tritrapundi taluk with some loss of life; fodder available.
Trichinopoly („ „)	·29 (average.)	Third sort rice 7⅞ seers, *cholum* 13 3/16, *raggi* 10⅜, *cumboo* 9⅝; import of grains 268 tons; no relief works; number fed in hospital camp on 16th June 489, by private subscriptions 2,179; deaths from cholera 141, from small-pox 31; disease and dysentery among cattle in some parts; pasture and water-supply improved.
Madura („ „)	Slight rain fell in western parts.	Rice second sort 8 3/16, *cholum* 10⅜, *raggi* 9 9/16, *cumboo* 10⅜; import, rice 1,654 tons, other grains 12; on relief works 11,977, reduction owing to people being occupied in fields; gratuitously fed in camps 8,280, otherwise fed 2,967; deaths from cholera 717, increase in Dindigul and Periakolum; cattle improving.
Tinnevelly („ „)	Rain fell in hills and in the Tenkasi taluks.	Slight fresh in Tambrapurni, tanks under it received a fair supply of water; *car* cultivation in river valley going on briskly; standing crops good except in Nangunari and Tinnevelly; 19 deaths to 232 attacks of cholera; cattle disease continues with slight mortality in distressed taluks and in Tinnevelly; prices almost stationary; average prices per rupee second sort rice 8 seers of 80 tolas, *cholum* 11½, *cumboo* 10¾, *raggi* 10¾; import of grain, rice 1,615 tons; number on relief works *nil*; number gratuitously fed in camps and relief houses 855, number otherwise fed 11.

At page 1610 of the Supplement to the *Gazette of India* dated the 9th June 1877, opposite Kurnool for "the rest includes 19,209 under seven years" read "the rest includes 49,281, &c."
In the same page opposite South Arcot for "by rail rice 314 tons" read "by rail rice ¾ tons."
At page 1667 of the Supplement to the *Gazette of India* dated the 16th June 1877, opposite Madura for "gratuitously fed in camps 979" read "gratuitously fed in camps 9,779."

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Coimbatore (June 19th)	Partial rain fell in tracts influenced by south-west monsoon, average ·41.	Slight rise in prices, rice second sort 7·35, *cholum* 8·32, *raggi* 8·79, *cumboo* 8·27; imports estimated rice 925 tons, other grains 153; cholera in all taluks, attacks 1,174, deaths 827; fever and small-pox also occur; Sattiamangalum irrigation channels sufficiently supplied; dry cultivation to a small extent in all taluks, except Oodoomulpettah; cattle poor, losses in Collegal and Sattiamangalum; fodder scarce; grass springing up in some parts; water-supply slightly improved; on relief works 23,699; no deterioration of physique of work-people reported; gratuitously relieved in relief centres 26,868, village relief 4,851, total 31,719; increase due to increased distress principally in Oodoomulpettah.
Salem („ „)	·68	Prices of grains, seers of 80 tolas, rice 7 3/16, *raggi* 8 1/16, *cumboo* 7 1/16, *cholum* 8 1/16; import of all grains about 1,000 tons; number on relief works 47,000; number gratuitously fed in camps 11,000, otherwise 64,000, by private charity 300; cholera in all taluks; gratuitous relief in camps 16 per cent. increase, due to large admissions in Namakal, Trichingoody and Tripatore; the decrease in village relief 8 per cent. due to returns not having been received from range officers.
South Canara („ „)	20·0 (average.)	
Malabar („ 18th)	14·35 (average of all taluks.)	Rainfall sufficient in all taluks for cultivation; in certain taluks transplanting of first crop commenced; weather favourable for crops; prospects good; markets well supplied; imports by sea, rice 1,760 tons, *cholum* 19; exports by land, rice 878 tons and *raggi* 479; prices of rice slightly fallen in Cherakal, risen in Koteyam, Kurumbranad and Calicut, Wynaad return not received, elsewhere stationary, highest 7½ Indian seers in Palghat, lowest 10 1/16 in Ponany, average 8 1/16 Indian seers per rupee; *raggi* average 11¼; small-pox in 6 taluks, cholera in 9, deaths from latter 516; cattle disease reported in Ernad; pasture good; 685 coolies on Kolathur roads. *General Remarks.*—Prices rising, but agricultural operations progressing; earthwork of Ambathur to Arconum railway finished; number fed gratuitously 482,999; number on relief works 856,714; exports of grain from Madras by rail during week ending the 16th June 9,085 tons.
Bombay— (June 21st)		
Sind— („ 20th)		
Kurrachee ...	Heavy rain in neighbourhood of Kurrachee on 10th instant.	Locusts on 13th and 14th and slight thunder and lightning at Tatta; river at Kotri on 18th 12 feet 9 inches against 13 feet 6 inches on same date last year; large meteorolite fell at Mirpur Batoro on 2nd; storm in Kohistan on 7th lasting two hours; strong winds in Kohistan, which rooted up large trees; locusts in Dadu taluka on 4th, destroyed 100 acres of *jowari* crops.
Shikárpur ...	...	River 10 feet 5 inches, last year on same date 11 feet 10 inches; water wanted in all canals save Ghár.
Hyderabad ...	...	No change.
Upper Sind Frontier ...	...	Weather close and hot; young locusts doing damage to early *kharif* crops; on desert canal water-supply deficient.
Guzerat— (June 20th)		
Ahmedabad ...	·92	Total rainfall 2·13; weather very warm.
Kaira ...	...	Sowing operations commenced; weather cloudy; rain anxiously expected.
Surat ...	·68	Cholera in Balsar taluka.
Broach ...	1·10	Total rainfall 2·22.
Khandesh and Násik. (June 20th)		
Khandesh ...	Rain at Dhulia ·36.	Sowing commenced in a few places; public health good.

SUPPLEMENT TO

The Gazette of India.

№ 26.} CALCUTTA, SATURDAY, JUNE 30, 1877. {Register No. 33.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

REPORT ON THE VARIATION OF RAIN-FALL IN TROPICAL INDIA WITH THE CYCLE OF SUN-SPOT FREQUENCY.

The pamphlet lately put forth by Dr. Hunter treats of two subjects, which are virtually distinct, *viz.*, the rainfall of the presidency town of Madras, and the occurrence of famines in various parts of Southern India. Amid many fluctuations, which at present are reducible to no law, the annual rainfall of Madras city appears to be subject to a regular cyclical variation, in periods of about eleven years; and the epochs of maximum and minimum precipitation coincide approximately with those of sun-spot frequency, long since established by the labours of Schwalee and Wolf. This fact is, however, not new to science. It was brought to notice originally in 1872 by Mr. Norman Lockyer, and has only received extended confirmation at the hands of Dr. Hunter, who had at his command the more abundant materials lately furnished by Mr. Pogson. That seasons of scarcity and famine in Southern India tend to recur also at intervals of about eleven years, and at the epochs of sun-spot minimum, if satisfactorily established, would be a discovery of very great importance; but it is obvious that the former class of facts can hardly be adduced in support of the latter, unless it can also be shewn that a deficiency in the rainfall of the presidency town indicates a deficiency productive of famine over some considerable area of Southern India. Till this is done, the supposed periodicity of the latter class of phenomena has only such validity as may be warranted by the facts independently adduced in its support. Unfortunately this, which to the administrator is the subject of cardinal importance, is treated of in a very cursory manner in the pamphlet, and I regret that am not able to add anything of importance to Dr. Hunter's data. In order to establish any conclusion which might serve as a guide to the probable necessities of the future, it would be necessary carefully to collect all the available evidence on the extent, intensity, and causes of famines, say, since the beginning of the century; and to subject the whole to a perfectly impartial and rigorous analysis. Whatever may be the law of famine recurrence in Southern India, whether or not these disasters tend to recur, as Dr. Hunter believes, more especially at the epochs of minimum solar activity, or whatever be the numerical expression of that tendency, it does not appear to hold good in Northern India. The years 1836, 1837, aad 1838 were years of maximum sun-spots, but in the N.-W. Provinces these were also years of unusually deficient rainfall, productive of famine. And the famine of Upper India in 1861 followed on the failure

of the winter rains in 1860-61, these being also years of maximum sun-spots. Again, the scarcity in Khandesh in 1872 occurred only two years after the year of most abundant sun-spots of this century, and when the number was still above that of any previous year of maximum except 1837.

As I am not in a position to discuss this important, but at the same time somewhat intricate, question of the relative intensities of past famines, and the causes which in each case have contributed to exacerbate or mitigate their severity, I shall restrict this investigation to the question whether, in tropical India generally, the quantity of the annual rainfall shews any decided tendency to fluctuate in an eleven-year cycle; and thus endeavour to supply the link which is logically wanting to connect the two subjects discussed in Dr. Hunter's pamphlet. The discussion, I must premise, is very far from exhaustive. It has, indeed, been an object of the Meteorological Department, ever since it was first established, to bring together the records of rainfall in all parts of India that relate to past years, with a view to a thorough investigation of the laws of its distribution both in space and time; and thus, amid a large number for shorter periods, I have obtained the registers of seven important stations which extend back thirty years and upwards. These will serve as a basis for the present discussion. But there is little doubt that they are but a small portion of the data actually extant for equally long periods, and I believe that at some future day it may be possible to resume the enquiry with more ample materials, and with far more comprehensive objects.

The seven stations in question are all situated within the tropics. They are Madras, Bangalore, and Mysore, in Southern India; Bombay, Nagpur, Jubbulpore, and Calcutta. In a foot-note below, are enumerated the sources from which the registers have been severally derived, and the following table exhibits the whole of the data tabulated according to the years. The final column gives Wolf's relative numbers of sun-spot frequency up to 1874. The accompanying diagram exhibits the data for the three presidency towns in a graphic form, together with the curve of sun-spot variation according to Wolf's determination.

Table I.—Annual Rainfall registered at seven stations in tropical India.

Year.	Total rainfall in inches.							Wolf's relative number of sun-spot years.	Year.	Total rainfall in inches.							Wolf's relative number of sun-spot years.

Madras, from a printed table drawn up last year by Mr. Pogson.

Bangalore and Mysore up to 1861, from a printed register drawn up in 1862 by Mr. Puckle, of the Mysore Commission. For the years since 1861, I am indebted to the courtesy of the Chief Commissioner, Mr. Saunders.

Bombay, from 1817 to 1846, from a table by Dr. Buist in the British Association Report for 1848. It gives the rainfall of the south-west monsoon months only; but at Bombay the omission of the remaining months is immaterial. That for the subsequent years is taken from the printed volumes of the Colaba Observatory.

Nagpur, from 1826 to 1862, from a paper of Colonel Sykes in the Phil Trans. From 1855 to 1872 from Mr. Binnie's paper on the Ambajhari Tank, read before the Institute of Civil Engineers in 1874.

Jubbulpore, from 1844 to 1850, from a pamphlet printed by the Board of Revenue, North-Western Provinces; from 1851 to 1874 from the local records furnished to me by Dr. Rice.

Calcutta, from the tabular statements published by Colonel Thuillier in the Journal of the Asiatic Society of Bengal.

It is evident on a simple inspection of the diagram that the fluctuations of rainfall of the three presidency towns show no very striking similarity, and only in the curve for Madras can anything like a general coincidence with the variations of the sun-spot curve be detected by eye.

With a view to ascertain what amount of agreement there is in the annual fluctuations of the rainfall at the different stations, the following tables have been constructed. The first (Table II) shows the difference of each year's rainfall at each station above or below the average of that station; and the second (Table III), taking the stations in pairs, shows in how many years these variations are in the same or opposite directions at the two stations compared. Now, if the fluctuations which occur from year to year are mainly due to some one cause of general incidence over the whole of tropical India,—such, for instance, as a deficiency of vapour in the atmosphere,—we may expect that in a large majority of instances the deviations from the average will be in the same direction; that is to say, there will be a very decided majority of years in which pairs of stations, not specially selected, will agree in having a rainfall either above or below the average. The same result will appear if these fluctuations are in any considerable degree due to the vapour-bearing winds being generally diverted from the region as a whole, and carried to discharge their vapour burden elsewhere. But if the fluctuations are chiefly due to local causes, and are such that a deficiency in one part of the region is on the whole compensated by an excessive fall in some other tract, then we may anticipate that in a certain majority of instances the variations will be in opposite directions, provided the stations compared are situated so far apart, that they are not likely to be similarly affected by the same merely local causes.

Table II, showing the fluctuations of the Annual Rainfall above or below the local average.

Assuming that the data here tabulated are sufficient to afford some criterion of the laws of rainfall variation, it appears from Table III that cases in which the deficient or excessive rainfall in one part of the country is more or less compen-

sated by the opposite fluctuation in some other part of the country, and those in which the deficiency or excess is simultaneous at a pair of distant stations, are about equally common. A more detailed examination of the rainfall of the twenty-two years for which we have seven stations shows that on an average 63 per cent. of the stations vary in one direction and 37 per cent. in the other in each year.

Since 1836 (up to which date we have less than five registers) Table II shows not a single year in which the rainfall has been either below or above the average at all the stations recorded. At the same time several years may be pointed out in which there was a considerable deficiency or excess at most of the stations simultaneously, and some in which a deficiency at one or more of the stations was to a certain extent compensated by an equally marked excess elsewhere. Thus in 1837, 1838, 1845, 1855, 1860 and 1876 there was a more or less serious deficiency at the majority of the stations enumerated; in 1852, 1870 and 1874, as striking an excess. The tabulated rainfall of the years 1842, 1850, 1868, 1871, 1872 and 1875 is characterised by great inequalities, some stations showing a fall greatly above the average, and others below it. These remarks, be it observed, have reference to the whole of India lying within the tropics. If, however, we restrict our attention to the three stations of Southern India—Madras, Bangalore and Mysore—we find no evidence of any greater coincidence or regularity, for Table III shows that while at Bangalore the fluctuation agrees with that of Madras in twenty-two years, it is in the opposite direction in eighteen years; and at Mysore, somewhat nearer the west coast, the fluctuation agrees in fifteen years only and differs in twenty-four.

These registers seem to show that the fluctuations of the rainfall registered at the Madras Observatory are no criterion of the existence of similar fluctuations over Southern India generally; and perhaps such a result was to be expected, since the high ground of the western half of the peninsula receives its chief rainfall during the summer months, while the rainy season of Madras and the Carnatic generally is from October to December. The rainfall of the Carnatic and the Northern Sircars may be expected to vary more or less *pari passu* with that of Madras, but I have at present no other register for this tract.

The above is perhaps sufficient to show that the generalisations on rainfall of Dr. Hunter's pamphlet probably require some modification and limitation, inasmuch as he extends to Southern India generally conclusions deduced solely from the registers of the town of Madras; and this procedure appears to be unjustified. But since it may nevertheless be true that there is a marked deficiency in the rainfall of Southern India about the epochs of minimum sun-spots, although not necessarily in the same years as at Madras, it will be more satisfactory if we analyse the whole of the data in the same manner as Dr. Hunter has done for those of Madras. This is done in the following tables.

The first of these (Table IV) shows for each station separately the average annual excess or deficiency of the rainfall in each year of the eleven-year cycle, as compared with the general average for that station; and also the number of years from which each average has been obtained; and in the final column, the average of Wolf's sun-spot numbers. The figures for rainfall in the different columns are, of course, not comparable with each other, since an excess of, say, 20 inches at Madras, on its general average, of 48·51 inches, indicates a much wetter year than the same excess at Bombay with an average of nearly 73 inches. In order, therefore, to admit of these particular results being compared and combined, Table V has been computed, which gives the average excess or deficiency in the form of a percentage of the general average rainfall of each station.

Table IV.—Average excess or deficiency of rainfall at each station for each year of the eleven-year cycle.

	Madras.		Bangalore.		Mysore.		Bombay.		Nagpur.		Jubbulpore.		Calcutta.		Average sun-spot numbers.

1870 „	+ 20·2	— 1·1	— 2·3	— 0·6	+ 6·0	+ 1·3	— 12·3

Of the six stations here collocated with Madras, Nagpur alone shews any approach to that cyclical variation of rainfall which is so distinctly exhibited in the Madras Registers. The group of years including 1870 is that with the greatest average of sun-spot; that including 1866 represents the epoch of sun-spot minimum. In the former year group the rainfall is *below* the average at most of the stations, and in the latter *above* it, thus reversing the hypothetical order of relation. Nagpur is, indeed, an exception in both instances—Jubbulpore in the former, and Bangalore in the latter; but on the whole the 1863 group is that of the heaviest, and the 1865 group that of the lightest, rainfall.

The general result is best exhibited by multiplying each of the percentages in the second table by the number of years corresponding to it in the first, adding the several products of the same year and dividing by the sum of the multipliers. By this means each station contributes to the final result in proportion to the extent of its register, and the result is as follows:—

	Mean Percentage.	Mean Sun-spot number.
1860, &c.	— 3·1	78·9
1861 „	+ 7·1	68·0
1862 „	— 4·5	54·5
1863 „	+ 11·8	42·3
1864 „	— 0·1	30·4
1865 „	— 9·5	17·4
1866 „	+ 0·9	9·6
1867 „	— 1·3	11·4
1868 „	— 3·8	28·6
1869 „	— 0·6	56·4
1870 „	+ 2·6	85·2

The groups of years, including 1861 and in 1863, would thus appear to have an excessive rainfall, and that including 1865 (with 1876) a fall much below the average. But anything like a regular cyclical variation is far from distinct, and there can be little doubt that a large part of the anomaly is fortuitous, and owing to the irregular and non-periodic variations being imperfectly eliminated: so that we should rather expect, in future years, a fall somewhat above the average in the 1865 group, and one below it in the 1861 and 1863 groups, with the result of diminishing the average differences shewn in the table. That there is, however, a certain cyclical variation underlying the irregularities, may be made manifest by the familiar process of taking as a new mean, for each year, the mean of the tabular rainfall of the year itself and half that of the preceding and succeeding years. Dealing with the figures in this way, we obtain the following:—

	Corrected mean.
1860, &c.	+ 0·9 per cent.
1861 „	+ 1·6 „
1862 „	+ 2·5 „
1863 „	+ 4·7 „
1864 „	+ 0·5 „
1865 „	— 4·5 „
1866 „	— 2·2 „
1867 „	— 1·4 „
1868 „	— 2·3 „
1869 „	— 0·6 „
1870 „	+ 0·4 „

Even thus corrected, the figures shew irregularities which render it probable that the real cyclical variation is even smaller than that shewn by their range in the table, *viz.*, about 9 per cent. And, as a final result, the data now adduced seem to indicate that, taking tropical India as a whole, the rainfall is subject to a certain cyclical variation coinciding in length of period with that of the sun-spot frequency, but that this variation has a range of less than 5 per cent. above or below the average; and to no greater extent can the probability of dearth be regarded as subject to a regular periodical increase or decrease. The range of the cyclical variation at the town of Madras itself is, however, very much greater, at least double this amount; it is possible that this is merely local, but it is also possible that the peculiarity may be shared by the Carnatic generally, and by that portion of India (and Ceylon) which receives its chief rain-fall at the same season as Madras. I shall endeavour to obtain any rainfall register for long periods that may be extant for important stations in this region, and should they contribute any further information of importance I shall submit a supplementary report.

With respect to famines, the very meagre data adduced in the earlier part of this report seem to shew that if they are more frequent in Southern India at the epochs of minimum sun-spots, they are more frequent in Northern India at those of maximum sun-spots; but I am far from regarding the present data as sufficient to admit of any useful generalization.

RESOLUTION.

IN exercise of the power conferred by the thirty-third and thirty-fourth of Victoria, Cap. fifty-nine, section two, the Governor General in Council is

pleased to declare that the undermentioned classes of the deeds, contracts and other instruments referred to in the twenty-second and twenty-third of Victoria, Cap. forty-one, section two, may be executed as follows:—

(*a.*)—In the territories under the administration of the Government of Fort St. George—

By Collectors of Districts, Sub-Collectors, Assistant and Deputy Collectors in charge of Divisions, Chief Engineers, Deputy Chief Engineers, Superintending Engineers, all Executive Engineers in charge of Districts, Ranges or Special Works, Inspector General, Deputy Inspector General of Ordnance and Magazines, Superintendent of Gun Carriage Factory, Superintendent Gun-Powder Factory, all Officers in charge of Arsenals, Magazines and Depôts, Commissary General, Deputy Commissary General, and all Executive Commissariat Officers, Superintendent Army Clothing, Agent for Remounts, Barrack Master, Inspector General, Deputy Inspector General and Superintendents of Police, Commissioner of Police, Madras, Master Attendant, Madras, Masters Attendant at Outports, Inspector General of Jails, and Superintendent of Stationery.	Contracts and other instruments for the purchase and supply of stores and building materials, and the provision of labour for buildings or other work, and such like engagements.

(*b.*)—In continuation of Notification No. 1750, dated 2nd November 1876, it is further notified that in the territories under the administration of the Government of Bengal—

By the Chief Engineer, and the Secretary to Government in the Public Works Department, the Chief Engineer, Irrigation Branch, Public Works Department, and the Joint Secretary, Public Works Department, Irrigation Branch.	Contracts, the acceptance of tenders and other instruments for the supply of articles, for securities deposited by subordinates, and for public works generally.
By Superintending and Executive Engineers.	Contracts and other instruments connected with civil and other buildings and with embankments.

(*c.*)—In the territories under the administration of the Government of the North-Western Provinces—

By all Heads of Departments.	Contracts and other instruments for sums not exceeding Rs. 2,000, except those which affect real estate.
By Executive Engineers.	Contracts, security bonds, and the like.
By Collectors, Deputy Commissioners and Senior Assistant Commissioners.	Contracts and other instruments at present executed by Collectors, Deputy Commissioners and Senior Assistant Commissioners.

By subordinate officers appointed by Heads of Departments with the approval of the Government of the North-Western Provinces.	Contracts and other instruments for a sum not exceeding Rs. 500, and not affecting real estate.

(*d.*)—In the territories under the administration of the Government of the Punjab—

By Deputy Commissioners.	Contracts and other instruments connected with leases of land, octroi collections, ferries, grazing dues, fisheries, nazul lands and buildings, spontaneous products and minerals, execution of minor works not under the Public Works Department, and the supply of necessaries for depôts.
By Superintending and Executive Engineers.	Contracts for supply of articles required by or for works executed in the Public Works Department, including the Irrigation Branch.
By Conservators and Deputy Conservators of Forests.	Contracts for supply of articles required by or for works executed in the Forest Department.
By the Inspector General of Police.	Contracts for the supply of clothing, &c., for the Police.
By the Inspector General of Prisons.	Contracts for the supply of articles for use in jails, or regarding the sale of articles manufactured in jails.

(*e.*)—In the territories under the administration of the Chief Commissioner of the Central Provinces—

By Deputy Commissioners.	Contracts and other instruments in matters connected with the lease or sale of land.
By the Chief Engineer and Executive Engineers.	Contracts for supply of articles required by or for works executed in the Public Works Department, including the Irrigation Branch.

(*f.*)—In the territories under the administration of the Chief Commissioner of British Burma—

By Deputy Commissioners.	Contracts and other instruments in matters connected with the lease or sale of land and fisheries.
By the Heads of the Marine, Jail and Police Departments.	Contracts and other instruments for the supply of stores, rations, clothing, &c.
By Executive Engineers.	Contracts and other instruments in matters connected with Public Works in the interior of the Province, *i. e.*, out of the town of Rangoon.

(*g*.)—In the Hyderabad Assigned Districts—

By the Resident at Hyderabad, the First Assistant Resident, Commissioners and Deputy Commissioners in the Hyderabad Assigned Districts.	Ordinary contracts.
By the Superintending Engineer at the head of the Public Works Department, and by Executive Engineers in charge of Divisions, Public Works Department.	Contracts for the supply of articles appertaining to the Public Works Department.
By the Inspector General of Police.	Contracts for the supply of clothing, &c., for the Police.
By Inspector General of Jails.	Contracts for the supply of articles required for jails.

ORDER.—Ordered, that this Resolution be communicated to the Governments of Fort St. George, Bengal, the North-Western Provinces and Oudh, and the Punjab; to the Chief Commissioners of the Central Provinces and British Burma, to the Resident at Hyderabad, and to the Foreign Department for information, and be published in the Supplement to the *Gazette of India*.

* Such as digging and repairing wells, prickly-pear clearances, &c. † All the labourers upon the Dhond-Manmad Railway have been included under Ahmednagar.
‡ Returns of labourers for 16th June not received; last week's figures are entered. § For details see table appended. ‖ Corrected figures given.

There has again been a very general fall of rain throughout the whole famine area, with the exception of Khandesh, and sowing is now in progress in parts of every district. The south-west monsoon set in at Poona, Satara, Dharwar, Belgaum, Ahmednagar and Nasik, between the 19th and 21st, but it is not yet known how far east of these stations its influence has extended. At Poona the rain of the 19th and 20th gauged 4 inches 31 cents.

2. The price of grain has slightly risen, and jowari now averages 18½ lbs. per rupee, but it is hoped that as the prospects of the season become more assured, a very material decline will take place.

3. The number of people upon relief works in the nine affected districts is 363,307 against 397,074 last week, and there are also 2,809 hill-men and immigrants employed in Ratnagiri and Kanara. The decrease is general, and is due to people leaving the works to resume their agriculture occupations. The figures being for the week ending the 16th, the influence of the monsoon in attracting people to their fields and villages had not come fully into play, and it is hoped that next week the decrease in numbers will be more marked.

4. Cholera appears to be decreasing in the south of the Presidency, but the number of deaths has slightly increased in Nasik and Ahmednagar.

5. A table is appended showing the rainfall in the different talukas of the affected districts during the current season. Telegraphic returns of more recent rain have been received, but cannot yet be properly collated.

6. During the monsoon the people who are unable to obtain a subsistence independent of State charity will be concentrated upon a minimum number of large works in the eastern districts. Shelter is in course of construction upon these works, and sections upon each will be set apart for the employment of the less able-bodied. Persons who cannot be received upon these works will be employed upon local improvements in the neighbourhood of the relief houses.

7. It has been determined that no general system of taccavi advances to cultivators can be adopted, and that such special aid of this nature as may be needed, and as can safely be given in particular cases, shall be confined to assisting persons to procure cattle and seed to enable them to resume and carry on their ordinary agricultural operations. It has been held that in the distressed districts the present is not a season in which it is practicable to advance such limited funds as are available for purposes connected with the permanent improvement of holdings, but which are not calculated to meet the existing emergency by facilitating the agricultural operations of the present season.

8. The following table gives the expenditure by Government, during the week ending 2nd June, upon charity in the relief of the aged and infirm poor; and in payments made to the young children of labourers employed upon relief works; this latter allowance, which has been paid since December, is debited to the works upon which the parents are employed, it being regarded as an increment to their wages to enable them to support their young children. Comparing the results shown in the table below with those shown in the last summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 42,758 to 44,710, while the number of children under 7 years of age has increased from 114,572 to 120,731 The number of children varies with the number of labourers, and during the week ending 2nd of June (the latest for which complete returns are available) the number of labourers was greater than now.

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children, and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

9. The following table gives the distribution of the people among the relief works in the nine affected districts employing 1,000 labourers, or more, during the week ending 9th June. It be will seen that 337,164, or upwards of five-sixths of the labourers were concentrated upon the works enumerated:—

Districts.	Works.	Number of labourers.	Total.	Remarks.

10. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 9th June, the number of people upon Civil Works in the nine affected districts was 40,507, the number upon works under Public Works Department agency being 359,682. The proportion of people upon the former continues, therefore, about 10 per cent. of the total. It is to be noted that the figures given in these tables are taken from the progress returns of the works, and are brought up to the week ending 9th June, while the figures in the table prefixed to this summary are taken from the Collector's telegrams, and refer to the week ending 16th June.

11. Maps are not sent with this summary, as they would merely repeat the information already given.

12. A table is appended, showing the condition of the affected Native States.

13. With regard to the movements of food-grains, 1,043 tons were exported from Bombay to the Southern Mahratta Ports during the week ending 14th June. Owing to some mistake the returns of the grain traffic by railway during the past week have not yet been received. The table below shows the quantities of grain sent by sea and rail from October till the 14th June to the Southern Mahratta ports and the railway stations in the distressed districts. It will be seen that the total amount delivered up to the 14th June was 311,474 tons:—

Food-grains sent to	In October, November and December 1876.	In January 1877.	In February 1877.	In March 1877.	In April 1877.	In May 1877.	In June (up to 14th).	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports ...	44,215	13,459	16,075	16,798	21,399	28,657	2,648	143,251
South-Eastern line, from Pooha to Sholapur ...	67,195	15,471	12,477	13,760	12,856	12,594	9,381	143,734
North-Eastern line, from Nasik to Bhusawal ...	12,829	1,615	2,622	3,234	2,346	1,221	622	24,489
TOTAL ...	124,239	30,545	31,174	33,792	36,601	42,472	12,651	311,474

14. On the whole, there has been a decided improvement, the heavy showers which had fallen previously over nearly the whole of the distressed area have been followed by a favourable burst of the south-west monsoon along the whole of the western border of the famine tract, and information may shortly be expected of the extension of the western rain-fall to the more easterly district. Crops already sown have been greatly benefited by the timely and seasonable rain wherever the latter has yet extended, and fresh sowing has been commenced. Cultivation is in process of general resumption to the extent of the ability of the people, and a great portion of the land having been previously ploughed and prepared, the difficulty caused by the losses of cattle will be proportionately lessened.

The food supplies continue sufficient; but the favourable season which promises has not yet been so decisively established as to influence prices, which up to the latest known date, *i. e.*, a date before the setting in of the monsoon, had slightly risen.

The exportation from Bombay to the Southern Mahratta ports has been brought very nearly to an end by the monsoon. The railway returns for the week have not been received, but the amount of grain sent by the Great Indian Peninsula Railway into the famine districts is believed to have been large.

The condition of the cattle which still remain in the country continues generally to improve with the reappearance and growth of grazing.

There is a net decrease of 35,819 in the number of labourers on relief works; the turning point has probably been reached, and it is expected that in the present and following weeks this decrease will be more decided. There has been a slight increase on charitable relief. Emigrants are still returning to their villages, and it is to be expected that, as the number of those on relief works diminishes, there will be some temporary increase in the number of those receiving charity.

The general condition of the people continues good, and wherever favourable rain has fallen, they are cheerful and hopeful.

Cholera is not on the increase.

M. K. KENNEDY, Major-General, R. E.,
Secretary to Government.

* Telegraphic returns of more recent rain have been received, but cannot yet be properly collated.

Dr. D. D. Cunningham's Report on his preliminary investigations into the nature of the diarrhœa and dysentery lately prevalent in Madras.

No. 348, dated Simla, the 25th June 1877.

From—SURGEON-MAJOR S. C. TOWNSEND, *Offg. Sany. Commr. with the Govt. of India,*

To—The Honourable T. C. HOPE, C.S.I., *Additional Secretary to the Government of India.*

I HAVE the honour to submit, for the information of the Government, a copy of Dr. D. D. Cunningham's report on his preliminary investigations into the nature of the diarrhœa and dysentery lately prevalent in Madras.

Dated Calcutta, the 18th June 1877.

From—SURGEON D. D. CUNNINGHAM, *Special Asstt. to the Sanitary Commr. with the Govt. of India,*

To—SURGEON-MAJOR S. C. TOWNSEND, *Offg. Sanitary Commr. with the Govt. of India.*

I HAVE the honour to report that, in accordance with your instructions, I proceeded to Madras in order to ascertain whether any peculiar form of fever were present among the inmates of the relief camps there, and to investigate the pathology of the so-called "famine diarrhœa" and "famine dysentery." I arrived in Madras on the 20th of May and left on the 8th June, reaching Calcutta on the 13th of the month.

2. In regard to the occurrence of any peculiar forms of fever, careful enquiries were made as to the presence, then or at any previous period during the prevalence of the famine, of any forms of fever which could in any way be ascribed to the influence of want. I could hear of no such disease as having occurred previously, and during the whole period of my stay in Madras, fevers of any kind were practically non-existent, hardly a case being present in any of the hospitals or relief camps in spite of the high degree of mortality prevalent at that time among the inmates of the latter.

3. I had, however, ample opportunity of investigating the pathology of the diarrhœa and dysentery so prevalent and fatal in the camps. Careful *post-mortem* examinations were made of the bodies of persons dying in the Monegar Choultry relief camp where the mortality was very high, and almost entirely due to diarrhœa and dysentery. Numerous specimens of the various tissues and organs of such cases have been preserved, and will form the subject of minute microscopic investigation. As this, however, will necessarily be the work of some time, I shall in the meantime give a brief account of such of the results arrived at in the examinations conducted in Madras as appear to be of most practical importance.

4. The general results of such examinations were confirmatory of the belief that morbid conditions exist which may with propriety be termed "famine diarrhœa" or "famine dysentery," as the case may be. There are, without doubt, cases in which the symptoms of disease observed during life can be referred to no other origin save morbid changes and degenerations dependent on mal-nutrition. Many other cases occurring among the inmates of the relief camps are, however, complicated by the supervention of other diseases, such as acute dysentery,

pneumonia, &c., and although in the majority of such cases the conditions leading to true "famine diarrhœa" may be distinctly detected, and in some the complications may be directly ascribed to their agency, yet the fatal termination is caused, or, at all events accelerated, by the complications.

5. The pathological changes essentially characteristic of "famine diarrhœa and dysentery" consist in a softening and subsequent atrophy of the mucous membrane of the intestinal canal, due apparently to a process of fatty degeneration of the tissues, and leading to the destruction of the apparatus provided for the absorption of nutritive material. That such a process is sufficient to account for the phenomena of the disease observed during life, is manifest. The disintegration of the intestinal mucous membrane fully accounts for the disordered state of the alimentary functions. The pathological appearances also account for the failure of curative measures, improved diet, medicines, &c., in the treatment of the disease. Where once the complex structures of the intestinal mucous membrane have been so seriously affected by degenerative changes dependent on insufficient nourishment, they cannot be renewed, and no diet, however careful and generous it be, can be of any avail when once the means, by which alone it can be appropriated to the necessities of the body, have been destroyed.

6. In conclusion, I must acknowledge the great obligation which I am under to the medical officers in Madras who assisted me in obtaining opportunities for investigation, and facilitated my work in other ways—more especially must I acknowledge the aid which was afforded to me by Mr. Cornish, the Sanitary Commissioner for Madras.

Prices of food grains in the distressed districts of the Madras Presidency.

No. 1963, dated Fort St. George, 12th June 1877.

From—J. H. GARSTIN, Esq., *Additional Secretary to the Govt. of Madras,*

To—*The Secretary to the Government of India.*

FOR some weeks there has been a gradual and continuous rise in prices in the districts of this Presidency generally. This rise has left the prices which are now generally stationary at the dates marginally shewn in terms of seers of 80 tolas to the rupee.

Districts.	Rice.		Cholum.		Raggi.		Cumboo.	
	Week ending 5th June.	Price in May last year.	Week ending 5th June.	Price in May last year.	Week ending 5th June.	Price in May last year.	Week ending 5th June.	Price in May last year.

Tanjore	8·	14·7	10·	27·3	12·18	25·8	10·81	
Madura	8·2	14·7	10·4	35·1	9·8	30·8	9·7	
Tinnevelly	8·25	12·3	11·25	24·4	10·75	25·5	11·	
Kurnool	6·96	15·3	8·06	28·3	9·51	28·1	8·92	
Cuddapah	7·73	14·1	8·66	26·2	9·25	27·6	8·92	
Bellary	6·83	14·8	7·56	25·3	8·25	25·4	7·29	
North Arcot	7·9	14·5	8·9	23·0	9·8	23·1	8·2	
Salem	7·43	13·2	9·	21·7	8·81	23·5	8·12	
Coimbatore	7·40	12·7	8·41	20·3	8·59	23·6	8·61	
Nilgris	7·4	10·4	8·45	14·3	9·	16·6	9·	
South Canara	9·73	12·5	...	...	11·84	17·7	...	
Malabar	9·09	13·5	...	...	12·25	19·5	...	

The Collector's reports, however, shew that while in April all markets were supplied with either raggi, cholum or cumboo as

well as rice, at the end of May in Tanjore, no cholum or cumboo was obtainable in four markets out of nine and no cholum or cumboo in two others, while rice was 7·5 seers to the rupee in three markets. In Trichinopoly out of five markets no grain except rice was obtainable at Kulitalai, and rice was 6·5 seers in Udyapolium. In Coimbatore rice was 4·9 seers the rupee in Collegal taluk, and raggi 6·9, while prices were high generally in Pallachi taluk. In Salem prices at Tripatore were, rice 6·42 seers the rupee, raggi 8·12 and cumboo 7·44, while in Salem itself rice was 7·68. In Bellary, though prices are stationary in Kudlighi and Hurpenhully, rice is 5·25 seers the rupee and 5·5 in Hudgully, while cholum is 6 to 6½ seers the rupee. In South Arcot of eight markets cholum was not quoted in four nor cumboo in two. In Chingleput of six markets cholum and cumboo were not quoted each in five markets. In South Canara cholum and cumboo are not quoted, but are not consumed. In Tinnevelly cholum and cumboo were not quoted in four and three markets out of five. In Malabar cholum and cumboo are not quoted; in Madura cholum is not quoted at all in one out of six markets. In Kistna out of four markets cumboo is not quoted in two. On the Nilgiris of four markets cholum is not quoted in one, cumboo in two. In the Godavery of six markets cumboo is not quoted in four. While in Kurnool the price at Ramalcotta was quoted for rice at 6·0, while cholum was 7·1, and no other grain was quoted.

It thus appears that throughout the greater portion of this Presidency prices are at a point which causes a most severe pressure and continually increasing distress.

There are doubtless yet considerable stocks in the Presidency, although it is found impossible to obtain certain and reliable information, and these a favourable south-west monsoon may cause to be brought forward; but that these stocks must have been seriously diminished is apparent from the fact that while the consumption of the population at 1 lb. per head per diem would equal about 3,849,300 tons, the total import of food-grain to the Presidency from August to April has been only 417,839, as shown by the annexed statement prepared by the Board of Revenue. The increasing demand on the stock at Bellary for Mysore territory is also noticeable, the export of grain from Bellary being as shewn below—

	To Mysore.	To Hyderabad.	Total.
From 3rd to 31st March ...	285·8	911·6	1197·2
During April	660·0	1604·2	2264·2
Up to 26th May	822·1	1649·9	2472·0

The stock available at the ports for inland transport was ascertained at the end of last month to be—

		Tons.
Madras	25,000	35,000
On sea	10,000	
Negapatam		8,000
Beypore station and some in boats...		1,500
Total ...		44,500
Say ...		45,000

This stock will be entirely moved up-country in the usual course of traffic by the end of the current month, and Government are not aware of any considerable further quantity being on its way or ordered; and there is no accumulation at the up-country railway stations. While it is very probable that the price grain has now reached may induce increased importations, yet the Governor in Council deems it his duty to point out that while he is under no apprehension as to the means of the railways to carry the daily supplies, yet, if the railway power is not made use of with regularity, there will be very serious ground for apprehension, because the number of trains that can be run is limited by the circumstances of the line and the locomotive power and wagon stock available. If any material diminution of the grain traffic inland occurs for a fortnight, it will probably be found in practice impossible to carry up the quantity which will be thus deficient in addition to the ordinary daily demands.

For these reasons I am directed to state that the present state of trade causes this Government much anxiety, the pressure of the existing high prices is rapidly adding to the numbers whose sole dependence must be State aid, not only in those districts which have been noticed as distressed but even in others; and it is moreover reducing to abject poverty very many of those who should and would have maintained themselves throughout, had prices similar to those which generally prevailed in the famine districts of Bengal in 1874 prevailed in this Presidency.

Movements of food-grains by sea and by the Madras Rail.

REVENUE BOARD'S OFFICE,
MADRAS;
1st June 1877.

(Sd.) H. E. STOKES,
Secretary to the Board of Revenue.

(Sd.) J. H. GARSTIN,
Additional Secretary to the Government of Madras.

Telegram, dated 27th June 1877.

From—Madras,
From—Revenue Additional Secretary,
To—Simla.
To—Revenue Additional Secretary.

PRICES still continue high notwithstanding the rain; rice risen in Vizagapatam, Kurnool, Bellary, Chingleput and South Arcot. Dry grains risen in Vizagapatam, Godavery, Kistna, Kurnool, Bellary, North Arcot, Chingleput, South Arcot, Salem, Madura, Tinnevelly and Malabar. Stocks entirely exhausted in Nilgiris district and in some taluks of Salem and Bellary. Increased prices at Kurnool reported, attributable to decrease of stocks and difficulty of carriage.

No. 557, dated Simla, the 29th June 1877.

From—The HONOURABLE T. C. HOPE, C.S.I., *Additional Secretary to the Government of India,*
To—The Addl. Secy. to the Government of Madras.

I AM directed to acknowledge the receipt of your letter No. 1963 of the 12th instant, and your telegram of the 27th instant, on the subject of the rise of prices of food-grains, the low condition of stocks, and the consequent increasing pressure upon the population of the distressed districts of the Madras Presidency.

2. The prices given in your letter are contrasted in the following table with those of March 31st as given in the Proceedings of the Board of Revenue dated April 6th, which were published in the Supplement to the *Gazette of India* of the 21st idem:

DISTRICTS.	RICE.		CHOLUM.		RAGI.		CUMBOO.	
	June 5.	Mar. 31.	June 5.	Mar. 31.	June 5.	Mar. 31.	June 5.	Mar. 31.
Kistna ...	8·45	8·26	11·15	10·97	12·94	13·9	10·38	10·53
Nellore ...	7·78	7·87	9·64	10·	11·74	11·88	10·06	9·8
Chingleput ...	8·90	9·40	9·05	10·98	10·72	11·26	...	10·78
South Arcot ...	8·75	...	11·	...	11·5	...	11·75	...
Trichinopoly ...	7·6	8·12	13·2	16·8	10·3	10·87	9·7	10·32
Tanjore ...	8·	...	10·	...	12·18	...	10·81	...
Madura ...	8·2	8·47	10·4	12·15	9·8	10·46	9·7	11·08
Tinnevelly ...	8·25	8·40	11·25	9·	10·75	11·47	11·	10·85
Kurnool ...	6·95	7·29	8·06	8·79	9·51	9·92	8·92	8·88
Cuddapah ...	7·73	7·91	8·66	9·53	9·25	9·91	8·92	8·36
Bellary ...	6·83	7·41	7·56	9·05	8·25	9·30	7·29	8·64
North Arcot ...	7·9	8·58	8·9	10·58	9·8	10·38	8·2	8·91
Salem ...	7·43	7·70	9·	9·09	8·81	9·26	8·12	8·93
Coimbatore ...	7·40	7·62	8·41	9·14	8·89	9·55	8·61	10·61

From this it would seem that in Kistna, Nellore, Salem, and Tinnevelly prices were on June 5th pretty much the same as they were at the end of March; that in North Arcot, Trichinopoly and Madura there has been a considerable rise, but only in comparison with a previous lower average; that in Chingleput, Kurnool and Cuddapah the rise has been about half a seer, and in Bellary and Coimbatore about a seer. For South Arcot and Tanjore the prices of March are not available.

3. Since June 5th the general upward tendency of prices has continued, but the table in the margin, which has been compiled from the telegraphic reports of prices on the 19th instant which appeared in the *Gazette of India* on the 23rd instant, shews that except in Bellary a man can still everywhere procure for one anna more than the one pound ration, which in Bombay at least has been found sufficient for maintaining health; that except in Bellary and North Arcot one anna and three pies suffice to procure within about two ounces of what authorities in Madras have admitted to be sufficient, while in seven districts that sum will procure more than 1½ lbs. Under the new scale lately introduced the conditions as regards the labourers on the relief works are still more favourable.

	lbs. per rupee.		For 1 anna.		For 1-3.		For 1-6.	
	Rice.	Dry grain.	lbs.	oz.	lbs.	oz.	lbs.	oz.
Kistna ...	17·84	23·95	1	7·95	1	13·93	2	3·92
Nellore ...	15·90	21·98	1	5·98	1	11·47	2	0·97
Cuddapah ...	14·75	17·98	1	1·98	1	6·47	1	10·97
Kurnool ...	14·31	17·94	1	1·94	1	6·42	1	10·91
Bellary ...	13·82	14·93	0	14·93	1	2·66	1	6·39
North Arcot ...	15·24	16·89	1	0·89	1	5·11	1	9·33
Chingleput ...	17·42	19·69	1	3·69	1	8·61	1	13·53
South Arcot ...	16·99	22·88	1	6·88	1	12·60	2	2·32
Salem ...	14·79	17·55	1	1·55	1	5·94	1	10·32
Coimbatore ...	15·14	17·42	1	1·42	1	5·77	1	10·13
Madura ...	17·09	21·36	1	5·36	1	10·70	2	0·04
Tinnevelly ...	16·48	22·66	1	6·66	1	12·32	2	1·99
Malabar ...	18·17	24·20	1	8·20	1	14·25	2	4·30

4. With reference to the supply of food-grains, I am to remark that although the marginal statement, taken from the returns published weekly in the *Gazette of India*, shews a certain falling off in the imports into the Madras Presidency by sea, the last three weeks have witnessed a very decided improvement in the shipments of rice from both Calcutta and Burmah.

	By sea.	From Raichore.

5. Under these circumstances His Excellency the Governor General in Council is of opinion that the rise of prices which has occurred is not excessive, and considers it, on the whole, a fortunate circumstance that the rates are keeping up for the present, and thus holding out fair inducements for the continued importation of food by private trade. It is indeed not improbable that this rise may lead to some increase in the numbers on the works and in receipt of gratuitous relief, and so may augment the drain on the public treasury, but this His Excellency in Council believes to be a far lesser evil than that which would result from any reversion to the plan of purchasing supplies of grain on behalf of Government—a plan likely to be more costly and less efficient than that of leaving the present high prices to attract importation.

This general principle is, of course, subject to the modification which was referred to in paragraph 9 of the instructions to Sir R. Temple of the 16th January last, in the case of remote localities where private trade may be in active. In such cases the best course would appear to be for the Government to advertise for supplies to be delivered at the nearest spots to which there are facilities for importation, and to give the relief to those who need it in the shape of food. It is obviously most desirable that the measure here referred to should be adopted only on the most clear and urgent grounds, and that if resorted to, it should be carried out with the utmost practicable publicity.

6. In conclusion, I am to state that with the view of informing the trade of the present condition of supplies, and the continuance of the policy of non-interference hitherto observed, this correspondence will be made public with the least practicable delay.

Weekly condition report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 18.)

Condition report for the week ending 9th June 1877.

Bangalore District.—Markets fairly supplied. Price of rice has risen in some talúks. Rain fell in all the taluks of the District except Dodballapur, the quantity registered ranging from 10 cents to 1·08 inches. Some tanks received a fresh supply of water. Agricultural operations are being carried on everywhere, and in some places, ragi, paddy, javari and other seeds have been sown. The standing crops are in tolerably good condition and the prospects have improved considerably. Cholera, fever, and small-pox are still prevalent.

Kolar District.—Markets continue fairly supplied. Prices have risen in some taluks. There has been rain throughout the District, the quantity gauged at head-quarters of taluks varying from 15 cents to 2·57 inches. Some tanks received a small supply of water. Fresh sowings of ragi, javari, sesamum and other cereals are being carried on generally in all the taluks, but more rain is needed. Cholera is on the decline, but small-pox and fevers are prevalent.

Tumkur District.—Markets fairly supplied. Prices have risen except in the Kadaba and Chiknayakanhalli Taluks where they were stationary. Heavy rain fell in all the taluks, the quantity gauged at the head-quarters of which varied from 60 cents to 3·42 inches. Many of the tanks received from 10 days' to four months' supply of water. Ploughing and sowing operations are in progress. Javari, paddy and other seeds have been sown in various parts of the District. The crops under wells are in fair condition and the prospects are reported to be improving. Cholera, fever and diarrhœa still prevail.

Mysore District.—Markets continue sufficiently supplied and prices have fallen in some taluks, while in others they remained stationary. Home-grown grain is beginning to come into the market. Rain fell generally throughout the District, the quantity registered at the head-quarters of taluks varying from 48 cents to 5·20 inches; and there were freshes in the Cauvery and Kapani rivers. The standing crops are "thriving" and prospects have improved. In the Gundlupet Taluk, the early crops of javari, which suffered in the beginning, are reported to be in ear, but the yield is expected to be only one-half of the full or usual out-turn. The public health is indifferent, and cholera prevails in all the taluks, though somewhat on the decline. Forage for cattle is said to be available throughout the District.

Hassan District.—Markets continue sufficiently supplied except in some portions of the Harnhálli Taluk. Prices have risen except in the Hassan and Arkalgúd Taluks where they were stationary. There was a general fall of rain throughout the District, the maximum quantity

registered at head-quarters being 3·80 inches at Channaraypatna. Paddy, ragi and other seeds were sown during the week in the Harnhalli, Arkalgúd and Narsipur Taluks. The standing crops are in good condition and the prospects are said to be encouraging. Cholera, small-pox, fever and dysentery prevailed throughout the District, but the town of Hassan was free from the first two epidemics.

Shimoga District.—Markets sufficiently supplied except in the Channagiri Taluk, where the prevalence of cholera prevented importation on a large scale. Prices continue pretty steady. Rain fell in all the taluks and from 26 cents to 2·30 inches were registered at the head-quarters thereof. The condition of the standing crops was the same as in the last week, but, in those taluks in which rain fell, there were indications of a change for the better. The Deputy Commissioner reports that the south-west monsoon has regularly set in from the 8th instant, and that there has been very good rain. Cholera is on the decline, but fever and dysentery prevail.

Kadur District.—Markets continue fairly supplied. Prices pretty steady. There has been rain in four out of six taluks, the quantity registered at the head-quarters thereof ranging from 13 to 77 cents. The standing crops are in good condition except in the Koppa taluk, where they are said to have withered for want of rain. The prospects are still indifferent and the public health bad owing to the prevalence of small-pox and fever, as well as cholera in the Chikmagalur, Tarikere, Banavar and Múdgere taluks.

Chitaldroog District.—Markets fairly supplied except in some places in the Budihal Taluk where importation was slack owing to the prevalence of cholera. Prices fluctuating. Rain fell in all the taluks except Davangere, and some tanks received from one to four months' supply of water, the quantity registered at the head-quarters of taluks varying from 15 cents to 2·81 inches. The young crops are in fair condition except in the Davangere Taluk, where they are in need of more rain. The prospect of the season continue unaltered and the public health is bad owing to the prevalence of cholera more or less throughout the District.

GENERAL REMARKS.

The reports from almost all the Districts for the week ending 9th June coincide in representing that prospects continue steadily to improve. Rain had fallen generally throughout the province, and agricultural operations are being carried on with much vigor and hopefulness.

2. Owing to a change in the weather, public health has been somewhat indifferent. The Deputy Commissioner of Túmkúr District reports that the heavy fall of rain has, in some places, intensified the sufferings of the pauper class, the cold and wet having carried off many of them. Measures are being adopted to relieve them so far as is practicable. Cholera is reported to be somewhat on the decline. The number of deaths which occurred during the week was 832 as against 842 of the previous week, as noted below:—

Bangalore district (including town and cantonment)	... 74	Shimoga district	... 136
Kolar district	... 30	Kadur „	... 24
Túmkúr „	... 97	Chitaldroog „	... 56
Mysore „	... 102	Total	... 832
Hassan „	... 313		

3. The number of works in progress under Revenue officers was 2,524, and the average daily number of persons employed on them was 29,289, or 441 more than that of last week. The increase was chiefly on works carried out under the orders of the Bangalore Municipality for the relief of the weaver class, of whom a large number is employed on them.

4. The average daily attendance on works carried out under the officers of the Public Works Department was 28,236 or 1,393 less than in the previous week. This result is immediately due to the prospect of employment in agricultural work afforded by the change in

the season. It may be expected, however, that the physical deterioration which has been caused by the protracted period of the existing distress may have reduced the numbers who are able to perform the labor required on works in progress under the professional department.

5. The amount sanctioned up to 9th June for works under Revenue officers was Rs. 14,25,087, of which Rs. 9,60,912 were expended. Sufficient funds have been placed at the disposal of District Officers to carry out such works as are actually required for the relief of the distressed, and it may be anticipated that the Deputy Commissioners will soon find it practicable to curtail the number of the relief works which have been in progress, so as to concentrate the labor on a few large works.

* Men	...	25 269
Women	...	40,801
Children	...	48,606
		114,676

6. The daily average number of persons charitably relieved was 114,676,* or 6,119 more than in the previous week. Nearly two thirds of the above number belong to the Nundydroog Division as shown below :—

Bangalore town and cantonment	...	...	...	11,182
Bangalore district	...	...	...	42,025
Kolar district	...	...	...	12,279
Túmkúr district	...	...	...	17,982
				83,468
Ashtagram and Nagar Divisions	...	...	...	31,208
				114,676

It must be observed that the distress in the Nundydroog division is much severer than in the other two divisions, and that the numbers relieved are proportionately large. Major Cole has been specially deputed to aid the Commissioner in carrying out a systematic inspection of the famine relief measures in this division, and this officer's reports for the Kolar district show that due care and discrimination have been, as a rule, observed in admitting distressed persons to the Government kitchens.

7. Enquiries have been instituted as to the number of outsiders who have flocked into Bangalore and its neighbourhood for relief. From a return dated 13th instant submitted by the Commissioner of Nundydroog division, it appears that the number fed in the kitchens under the management of the Central Famine Relief Committee was 11,529 including 1,657 from the other districts of the Province, and 348 from Her Majesty's Territory. The number fed in the kitchens of the Bangalore district, excluding those in Bangalore town and cantonment, was 37,280 including 3,566 from other districts and 655 from the Madras Presidency. On the whole, the number of persons who have immigrated into Bangalore district is not so large as was anticipated. Steps have, however, been taken to deport them gradually to their homes.

8. The amount expended on kitchens and camps up to 9th June was Rs. 5,13,595 out of a grant, including private subscriptions, of Rs. 5,26,042. This expenditure cannot be considered excessive.

9. The weight of grain imported by rail was—

				Tons.
at the Bangalore station	...	...	...	3,238
„ Kolar road „	...	...	...	412
		Total	...	3,650

being 63 tons more than in the previous week. The imports were from the following places :—

		Tons.		Tons.
From Madras	... ...	3,247	From Tanjore, Trichinopoly and Negapatam	 135
„ Beypore	... ...	176	„ Kolar district	 8
„ Sholapur and other stations on the G. I. P. Railway	...	48	„ the neighbouring districts of the Madras Presidency	... 34
			Total	... 3,650

The small imports from the port of Negapatam are noticeable, and with reference to complaints made by merchants that sufficient facilities are not afforded for the removal of grain by rail, a communication has been addressed to the Agent of the S. I. Railway on the subject.

10. In consequence of representations made to the Chief Commissioner by merchants at Bangalore that they were unable to remove the grain imported to Madras for this Province, some correspondence has passed between this office and the Traffic Manager of the Madras Railway. The system adopted by the Railway Company, it appears, has been to place the carrying trade virtually in the hands of a certain number of merchants, the character of whose business admits of their ensuring to the Company the regular employment of a fixed number of wagons daily. The arrangement is open to some objection, but the explanation of the Traffic Manager makes it evident that having regard to the limited rolling stock, and the difficulties experienced in meeting the requisitions of numerous petty merchants, the plan has been adopted as the best practicable under the circumstances. The Traffic Manager has promised to take steps, however, to grant further facilities so as to remove the specific causes of complaint to which attention had been drawn.

11. About 1,765 tons of grain were exported by road from Bangalore to the interior of the Province and the frontier taluks of the Madras Presidency as particularized below :—

			Tons.
Towards the Túmkúr district	...	...	511

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 28TH JUNE 1877.

General Remarks.—In Madras the monsoon rains continue abundant on the Malabar Coast; in Tinnevelly there has been a good fall, and also in parts of Bellary; elsewhere the fall has been generally light, and none is reported from Trichinopoly; cultivation is progressing in Bellary and Kurnool, and pasturage continues to improve everywhere. The reported numbers on relief works are 836,329, and on gratuitous relief 507,433: the former show a decrease of about 20,000 on last week, but the figures are apparently incomplete; the latter are more by 24,432; the continued rise of prices in some places is causing anxiety. In Mysore heavy showers have fallen in the western districts, but only a little rain in the east; the numbers on works are 56,781, on gratuitous relief 110,808, being a decrease of 844 and 3,868 on last week's numbers. In Bombay general and abundant rain has fallen in the Southern Mahratta Country, Konkan and Deccan; it has been partial, but in fair quantity in Khandesh; in Guzerat but little has fallen, and the monsoon does not seem to have set in there; in Sind the river is extremely low for the time of year, and the crops are suffering. Sowings are in active progress throughout the distressed districts. The rainfall in the Central Provinces has been generally light; sowings are going on. Good rain is reported from Berar, where sowings are in progress. The monsoon does not appear to be yet general in Central India, and in Rajputana only light showers have fallen. In Bengal rain has fallen in fair quantity in the Eastern, Central and Northern districts and in Orissa: little is reported from Behar, and none from Durbhunga, Mozufferpore and Sarun; prospects are good. Little rain is reported from Assam. In Burma the fall is steady and abundant. In the North-Western Provinces and Oudh light rain is reported from many districts, but the monsoon had not set in on the date of the report. No rain fell in the Punjab up to the 27th instant.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 25th)	·28 in Masulipatam; *nil* elsewhere.	2·80 feet water over anicut; in five taluks early crops such as *sajja*, *jonna*, maize, black paddy and *gingelly* sown; standing crops require rain; prices generally stationary; seers of Rs. 80 weight, rice 8·63, *cholum* 11·10, *raggi* 12·95, *cumboo* 10·65; imports by land at Guntur, rice 17·85, *cholum* 17·8 tons; number on relief works 2,863; number fed gratuitously by Government in camps 651, in villages 53, by people 777; cholera, small-pox and fever here and there; cattle disease in few taluks; grass fading for want of rain; markets fairly supplied.
Nellore („ 26th)	·65 in Udayagiri; ·15 in Kanigiri; 1·80 in Kandukur.	Average prices second sort rice 7·74 seers per rupee, *cholum* 9·89, *raggi* 11·82, *cumboo* 10·25; imports by sea none; rice 60 tons, *cumboo* 2 tons and *raggi* 1 ton were brought into the town of Nellore; number on district relief works 23,014, number on canal 45,555, number on relief works under Public Works Department 6,859; number fed gratuitously in camps 24,398, village relief 535; children of coolies employed on works 3,968, returns from Venkatagiri not received; 12 deaths from cholera; cholera, small-pox, guinea-worm, ague and diarrhœa prevalent in some taluks; water-supply abundant except in Kandukur, Gudur, Polur and Venkatagiri where it is sufficient; standing crops thriving; cattle have sufficient forage now in most parts; slight cattle disease in Kavali, Kandukur and Ongole.
Cuddapah („ „)	Rain in three taluks, average ·01.	Average prices seers per rupee second sort rice 7·16, *cholum* 8·41, *raggi* 9·38, *cumboo* 8·49; people on relief works 114,730, increase 8,628, due to pressure of distress and to removal to relief works of persons released from relief camps; fed gratuitously in camps 10,875, increase 1,660, due to transfer of weakly persons from relief works, otherwise fed 34,433, increase 586, due to pressure of distress; cholera deaths 308; number of cattle died from want of fodder and disease 215.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Bellary (June 26th)	0·75 in Bellary ·2 in Kudlighi; ·6 in Hospett; 2·5 in Harpanhally and Adoni; ·1 in Tadpatry; ·15 in Raidrug; slight rain in Dharmaveram; ·275 in Hindupur; 3·6 in Madaksira.	Average price second sort rice 6·48, boiled rice at Bellary 7·83, *cholum* or great millet 6·55, Jubbulpore *cholum* at Bellary 7·73, *raggi* or lesser millet 7·32, *cumboo* 6·77 seers of 80 tolas; import tons 5,615, accounts from two railway stations only; 277,578 persons on relief works, decrease on revised returns for previous week 15,822, this is chiefly due to some coolies having gone for cultivation purposes; 154,184 gratuitously fed, of whom 28,309 fed in relief houses and 2,155 in relief camps, increase on revised return for previous week 1,884, this is chiefly due to relief houses having been opened in most of the villages; 1,165 gratuitously fed by private charity aided by Government grant; ryots are sowing early dry crops in many villages; cholera decreasing but still in 12 taluks; small-pox and fever prevalent; cattle still perishing in some places for want of fodder, but recent rain will soon make procurable; supply of drinking water much improved.
Kurnool („ „)	·34 in Kurnool town and Nandial.	Tumbudra still in fresh; water in Kurnool town abundant; agricultural operations progressing throughout the district; average price second sort rice 6·67, imperial seers per rupee, *cholum* 7·48, *raggi* 8·79, *cumboo* 8·91; cholera, small-pox and fever continue; cholera seizures 80, deaths 57; condition of cattle poor; coolies on relief works 205,649; gratuitously fed 59,937; particulars of latter are 3,254 in Nandial and Khaderabagh relief camps, 45,783 children under 7 years, 5,075 village relief and 5,825 in relief houses; the increase of 663 coolies on relief works calls for no remark; 163 tons private grain imported in 4 taluks; physique of coolies fair.
North Arcot („ „)	·72 (average of 8 stations.)	Average prices in Government seers second sort rice per rupee 7·4, *cholum* 8·4, *raggi* 9·2, *cumboo* 7·8; relief works coolies 52,875, decrease owing to several well works having been stopped; persons gratuitously fed in camps 9,476, persons otherwise gratuitously fed 17,295; cholera still prevalent; fever and small-pox in some places; pasture insufficient, but just growing; cattle still dying of starvation and disease in some parts.
Chingleput („ „)	Rainfall more or less in all taluks except Ponneri.	Prices rice second sort 8·34, *raggi* 9·92, *cholum* 9·06; imports, rice 134 tons, *raggi* 37; cholera in all the taluks except Chingleput; small-pox, dysentery and fever more or less prevalent in the other taluks; condition of cattle slightly amending; pasturage improving; water abundant; 200 heads of cattle in Conjeveram and 162 in Trivellore died of diarrhœa caused by feeding on tender grass; on relief works 28,166; gratuitous relief in camps 12,214, in other places 18,385.
South Arcot („ „)	1·0 in Villapuram and Hoozoor; ·5 in Chillambram; ·25 in Tindevanum.	Rice second sort 8 seers, *cholum* 10½, *raggi* 11, *cumboo* 11½, dearer than last week; import by sea none, by rail not known; number employed last day men 77, women 80, children 3; fed in relief house at Chengam men 65, women 241, children 339, deaths 2; fed in 65 villages men 1,307, women 1,954, children 4,333; people healthy; cholera deaths reported 182 against 224 attacks; cattle disease in some villages; pasture improved.
Tanjore („ „)	Slight rain in some places of Mayaveram and Sheally taluks on 17th and 18th instant.	Prices rice 8½ seers, *raggi* 10½, *cumboo* 11, *cholum* 9½; imports by sea, rice 3,099 tons; relief work none; rivers rising high; deaths from cholera 271; small-pox almost throughout the district, 3 deaths reported therefrom; fever in some parts; cattle disease in Combaconum and Tritrapundi taluks with some loss of life; fodder available.
Trichinopoly („ „)	*Nil*	Third sort rice 7¾ seers, *cholum* 13, *raggi* 10½, *cumboo* 9½; import of grains during this week 314 tons; no relief works; number fed in hospital camp on 23rd June about 500, by private subscription 1,428; deaths from cholera 127, from small-pox 45; cattle disease in Udayarpalliam and Perambaloor taluks; freshes down the Cauvery on 26th; good flood in both rivers.
Madura („ „)	Slight rain fell in Periacolum.	Rice second sort 8 5/16, *cholum* 10 1/16, *raggi* 9½, *cumboo* 9½; import, rice 1,783 tons; number on relief works 3,297; gratuitously fed in camps 1,962, otherwise fed 2,625, Pulni returns not received, hence the fall; cholera 327 deaths; cattle doing badly in Madura, Dindigul, Melur, improving elsewhere.
Tinnevelly („ „)	Good rain on hills, gauged 3·7.	High freshes in Tambrapurni, in the last three days 9 feet, on the 24th many tanks and channels under it received full supply; cultivation in river valley continues to be brisk; standing crops good on the whole; 131 deaths to 167 attacks of cholera; cattle disease continues with slight mortality in two distressed taluks; prices stationary; average prices per rupee second sort rice 8 seers of 80 tolas, *cholum* 11½, *cumboo* 11, *raggi* 10; imports of grain, rice 1,298 tons; number on relief works *nil*; number gratuitously fed in camps 879; number otherwise fed 19.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Coimbatore (June 26th)	Partial, more rain required; ·25 in Collegal; ·77 in Coimbatore during 3 days; ·72 in Pollachy during 3 days; ·20 in Oodoomulpettah on the 22nd.	Prices (slight rise) rice second sort 7·33, *cholum* 8·22, *raggi* 8·63, *cumboo* (slight fall) 8·61; imports estimated rice 1,060 tons, other grains 150; cholera in taluks, attacks 776, deaths 631; fever, small-pox and diarrhœa to a small extent; freshes in Noyel, upper tanks filled in Bhowany, Ambravully and Auliar also in fresh; cultivation in parts of district; cattle poor; pasture available in Collegal and parts of Bhowany, Sattiamangalum, Erode, Palladum and Coimbatore; fodder scarce; water-supply improving; on relief works 27,828, increase chiefly recipients of gratuitous relief sent to works; more applicants and coolies who went to plough returned; no deterioration of physique of work people reported; gratuitously relieved in centres 31,381, in villages 2,692, total 34,073.
Salem („ „)	·43	Prices of grains seers of 80 tolas, rice 7⅛, *raggi* 8 11/16, *cumboo* 7 15/16, *cholum* 8⅝; imports of all grains 1,020; number on relief works 47,300; number gratuitously fed in camps 11,400, ditto otherwise 71,400, ditto by private charity 300; cholera in all taluks; village gratuitous relief number rising 15 per cent. due to extensive village-war relief.
South Canara („ „)	10·29 (average.)	
Malabar („ 25th)	7·13 (average of 9 taluks.)	Rainfall sufficient everywhere for cultivation; in certain taluks transplanting of first crops commenced; weather favourable for crops; prospect good; no imports; exports by land, rice 1,268 and *raggi* 189 tons; prices of rice slightly fallen in Koteyam and Kurumbranad, Wynaad returns not received, stationary elsewhere; highest 7½ Indian seers in Palghât, lowest 10½ in Ponnani, average 8 11/16 Indian seers per rupee; *raggi* average 11⅝; small-pox in 7 taluks, cholera in 9, deaths from latter 862; cattle disease reported in Ernad; pasturage good; 455 coolies on Kolathur roads; gratuitous relief given to 46 persons at Vythery.
		General Remarks.—General prospects unchanged since last report; continued rise of prices and symptoms of stocks of food failing in a few places give room for anxiety; number fed gratuitously 507,433; number on relief works 836,329; exports of grain from Madras by rail during week ending 23rd June 7,802 tons.
Bombay— (June 28th)		
Sind— („ 27th)		
Kurrachee ...	Slight rain at Manjhand on 15th and at Peshet in Gaj on 14th.	River at Kotri on 25th, 10 feet 11 inches against 14 feet 9 inches last year; locusts in Dadu on 12th and 13th destroying 50 acres of cotton, in Manjhand on 7th and 8th entirely destroying leaves of trees, in Sehwan and Kohistan also but no damage; some crops suffering from river being low.
Shikárpur ...	...	Heat very great; river on 26th, 8 feet 9 inches against 11 feet 10 inches on same date last year; cultivation operations stopped for want of water in all canals save Ghár; fever prevalent.
Hyderabad ...	...	River 50 inches lower on the 26th than on same date last year and 40 inches lower than average on same date of ten previous years; loud complaints from rice districts; many canals have ceased flowing; fever and small-pox continue; locusts about, no damage.
Upper Sind Frontier ...	...	Minimum temperature 87·1, maximum 115·9; canals continue low; rain expected; health fair.
Guserat— (June 27th)		
Ahmedabad ...	...	Weather cloudy and warm.
Kaira ...	·80 on 19th.	Sowing operations suspended; monsoon anxiously expected.
Surat ...	·87	Sowing operations commenced; 6 cholera cases in Balsar, 1 fatal.
Broach ...	·98	Total rainfall 3·20, more much needed for agricultural operations; public health good.
Khandesh and Násik. (June 27th)		
Khandesh ...	...	Rainfall general but very uneven, maximum 5·57, minimum ·29; in Dhulia 2·99, total 3·35, more wanted; sowing progressing fairly; public health good.
Násik ...	About 2·0 or more in all talukas; in Yeola only ·40.	Cholera cases 129, deaths 36; sowing in progress except in Yeola.
Konkan—(June 27th)		
Tanna ...	7·56	Total rainfall 13·02; rain fell throughout the district; sowing operations commenced; cholera in seven and small-pox in three talukas.
Deccan—(June 27th)		
Poona ...	3·73	Average rainfall from 5th June 6·88; sowing in progress throughout district; bullocks and seed much wanted in eastern talukas.
Ahmednagar ...	2·97	Total rainfall 9·93; sowing of early crops commenced generally; cholera in eight talukas, cases 297, deaths 137.
Sholapur ...	Rain plentiful.	Forty-eight deaths from cholera; wind, south-west; sowing of *kharif* crops progressing everywhere.
Satara ...	2·2	Total rainfall 5·22, fall general; sowing continues; early crops germinating; 256 deaths from cholera.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
***Southern Mahratta Country*—(June 27th.)**		
Belgaum ...	Heavy rain in western part of the district; less in eastern; in Belgaum 12·93.	Total rainfall from January 20·57; sowing of *kharif* crops progressing; rice crops progressing favourably.
Dharwar ...	Rain general; aggregate of all talukas 25·47.	Young crops good; sowing of early crops progressing in all talukas; cholera continues, 101 deaths.
Kanara ...	7·53 in Karwar.	Total rainfall 23·10; sowing operations nearly finished; rice plants healthy; cholera continues, deaths 64.
Kaládgi ...	·15	Total rainfall 5·23, more wanted; sowing commenced in 6 talukas; cholera in 7 talukas, cases 177, deaths 123.
***Kattywar and Gaekwar's Territory*—(June 27th)**		
Rájkot ...	·94	Weather cloudy; heat oppressive; health good.
Wadhwán ...	·14	Total rainfall ·45; sowing operations continuing in Dossada, Bajrana and Pátri; health good; weather cloudy.
Baroda ...	·87	*General Remarks.*—Extreme heat in Upper Sind; want of water in canals; monsoon expected in Guzerat; rain general in Southern Mahratta Country and Deccan; sowing in active progress; cholera decreasing in Southern Mahratta Country, continues in Deccan and Tanna.
Bengal— (June 26th)		
Chittagong ...	8·29	Fever very prevalent.
Noakholly ...	·03	Fever prevalent.
Chittagong Hill Tracts	1·48	
Hill Tipperah ...	1·14	
Backergunge ...	·14	The cattle continue healthy except in 1 thana; sporadic cases of cholera and fever still occur in almost every thana.
Furreedpore ...	4·54; 1·60 in Goalundo; ·48 in Madareepore.	
Dacca ...	8·15	All favourable.
Tipperah ...	5·34	
Mymensingh ...	·5	
24-Pergunnahs ...	2·32	Public health generally good.
Jessore ...	·87	
Nuddea ...	1·34	Cholera reported from Meherpore sub-division.
Moorshedabad ...	·55	There is cholera still in parts of the district.

Monghyr ...	*Nil*	
Purneah ...	·24	Fever very prevalent.
Durbhunga ...	*Nil*	Sporadic cholera still prevalent.
Mozufferpore ...	*Nil*	Public health good.
Sarun ...	*Nil*; ·07 in Sewan.	
Chumparun ...	·12	
Patna ...	·21	Health generally good.
Gya ...	·22	Public health good.
Shahabad ...	·72	Cholera continues in Sasseram.
Hazáribágh ...	·83	General health good.
Lohardugga ...	·05	There is small-pox in several places in Palamow.
Manbhoom ...	·37	
Singhbhoom ...	1·95	
Balasore ...	8·89	Public health good.
Cuttack ...	1·72	Ditto ditto.
Pooree ...	·19	Ditto ditto.
		General Remarks.—Rain is reported to have fallen in most districts during the week, and the general prospects are good.
N.-W. P. and Oudh—		
Benares (June 27th)	·4 on 25th, none since.	Weather cloudy.
Allahabad („ „)	·2 on night of 26th.	Hot winds during past week; weather cloudy.
Jhansi ...	·8 on 26th.	Weather cloudy.
Agra (June 27th)	·4 on 26th.	
Meerut („ „)	*Nil*	Very hot.
Bareilly („ „)	*Nil*	Weather very hot.
Lucknow („ „)	Light rain on morning of 27th.	
Sitapur („ „)	*Nil* at Head-quarters.	
Fyzabad („ „)	·1 on 26th.	Temperature lowered, but monsoon not set in yet.
		General Remarks.—Slight rain reported in some divisions, weather oppressive and cloudy, and monsoon imminent.
Punjab— (June 27th)		
Delhi ...	*Nil*	Heat excessive; general health good.
Hissar ...	*Nil*	Weather excessively hot; young crops doing well, but they require rain; sowing also retarded for want of rain; health generally good.
Umballa ...	*Nil*	Crops and health good.
Jullundur ...	*Nil*	Crops reaped; health good.
Lahore ...	*Nil*	Crops and health good.
Ráwalpindi ...	*Nil*	Agricultural prospects good; public health fair.
Mooltan ...	*Nil*	Crops and health good; heat intense.
Dera Ismail Khan ...	*Nil*	Weather warm and sultry; crops suffering from want of rain; fever decreasing.
		General Remarks—Reports for the week favourable on the whole; but rain is now wanted.
Central Provinces—		
Upper Godávari (June 23rd)	·15	Cloudy; sowings progressing; more rain wanted; cholera prevalent; prices steady.
Biláspur ...	...	Close; sowings continue; cholera at Nandghat; flight of locusts passed through the district; no damage; prices steady.
Raipur ...	...	Hot; land ready for sowing on first fall of rain; cholera prevalent; prices unchanged.
Bálaghát ...	·85	Cloudy; stormy; rice sowings continue; health good.
Cháuda (June 24th)	·20	Rice transplanting commenced; small-pox continues; prices stationary.
Betúl („ 25th)	·40	Cloudy; sowings commenced; health good; prices rising.
Bhandára („ 26th)	2·27	Rice being sown in places; cholera, small-pox and fever continue; prices rising.
Nágpur („ 27th)	2·4	Close; sowings commenced; health good; prices stationary.
Wardha ...	2·7	Cloudy; sowings commenced; slight small-pox.
Nimár ...	1·63	Sowings commenced; small-pox continues; prices steady.
Hoshangabad ...	·74	Small-pox decreasing; prices unchanged.
Narsinghpur ...	Slight showers.	Close; prices falling.
Jubbulpore ...	·71	Measles continue.
Saugor ...	·23	Cloudy; health good; prices stationary.
Seoni ...	5·80	Ploughing continues; health good.
Mandla ...	·26	Ploughing progressing; fever continues; prices stationary.
Damoh ...	...	Rain anxiously looked for; prices stationary.
		General Remarks.—It has rained more or less in all districts, except Bilaspur, Raipur, and Damoh; sowings continue.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (June 28th)		
Arrakan Division ...	10·0 in Akyab.	Public health good; ploughing commenced everywhere.
Pegu Division.		
Rangoon ...	6·19	Public health normal; ploughing commenced.
Bassein ...	11·0	Health good.
Henzada ...	5·0 in week ending 23rd instant; 1·50 in Myanoung in week ending 16th instant; 4·0 in Yeogheen in week ending 11th instant.	Public health good; ploughing commenced.
Prome ...	3·44	Health good.
Thayetmyo ...	11·68	Public health generally good.
Thonkwa ...	Rainfall steady.	Health generally good; ploughing continues.
Tenasserim Division ...	25·66 in Amherst; 8·0 in Shwegyeen.	Public health good; agriculture impeded by heavy rains.
		General Remarks.—Slight cattle disease in Bassein district, also in Mengyee and Tahpoon townships of Henzada district.
Assam—		
Gauhátí (June 28th)	·92; slight rain on 25th.	Weather hot and oppressive; *sali* cultivation and tea manufacture in progress; diarrhœa disappeared from station; cholera abated in the district.
Sylhet („ „)	1·04	Weather hot.
Mysore and Coorg— (June 28th.)	·265 in Bangalore 12·82 in Coorg.	Heavy showers in westegn districts, but trivial in eastern districts; ordinary rice selling at 13¼ lbs. per rupee; in Bangalore cholera abating; daily average number of persons on relief works and charitably relieved as per statement last tabulated is in—

Bangalore district including town ...	6,056	and	51,142

EXTRA SUPPLEMENT TO

The Gazette of India.

CALCUTTA, TUESDAY, FEBRUARY 13, 1877. { Register No. 33.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

PRESENT STATE OF AFFAIRS IN CONNECTION WITH THE SCARCITY IN THE MADRAS AND BOMBAY PRESIDENCIES.

No. 10, dated 9th February 1877.

From—The Government of India,
To—Her Majesty's Secretary of State for India.

WITH our despatch of the 2nd instant, No. 6, we forwarded to Your Lordship various minutes and memoranda received from Sir Richard Temple principally relating to the condition of the districts of Cuddapah, North Arcot, Coimbatore and Trichinopoly in the Presidency of Madras. We now enclose Sir Richard Temple's reports on the districts of Salem, Madura and Tinnevelly, which continue the narrative of his preliminary survey of the distressed districts in the two Presidencies. The account of the district of Chingleput which adjoins and bounds the town of Madras on the north, west and south has not yet reached us. The Nellore and Kistna Districts have still to be visited.

2. It will be seen from these papers that the state of the districts now reported on, and the same remark applies to the district of Coimbatore, and still more to the district of Trichinopoly, is very much more favourable than that of the Ceded Districts and Kurnool. Although in all these districts there has been serious drought and very extensive failure of crops, and prices are consequently very high, indeed, but little lower than those which obtain in Bellary, Cuddapah and Kurnool, the number of persons admitted to the relief works was, at the time of Sir Richard Temple's visit, comparatively small. It is probable that in Madura and Tinnevelly the numbers in need of relief would have been very much larger, had it not been for the facilities of emigration to the coffee districts of Ceylon, which annually attract a considerable number of the labouring classes of both districts. It is stated that every year tens of thousands of Tinnevelly labourers go to Ceylon to work on the coffee estates and other farms. The day Sir Richard Temple was at Tuticorin, he saw some hundreds of Ceylon coolies returning after their six months' working season. This year, doubtless in consequence of the dearth, the emigration from both districts has been greater than ever. In the Salem District there is no such outlet, and consequently the labourers on the relief works, although the supervision of the relief operations in this district is stated to be exceptionally good, and the population is more than a quarter of a million less than the population of Madura, were more than four times more numerous than those employed on the Madura works, not counting 8,000 people receiving gratuitous relief.

Salem	28,000	
Madura	5,531	
Tinnevelly	2,500	

Salem ...	1,966,925
Madura ...	2,266,615

3. A very satisfactory feature in all these districts is the great activity of private trade. They all are traversed from end to end by railways, and in all the districts roads are numerous and good, especially in Salem and Madura, and there are plenty of carts for the transport of grain. The Madura dealers are men of capital and enterprize, and they are already importing grain to the small ports on the coast, and bringing it up to Madura.

4. In regard to the prospects of these districts during the coming months everything depends on the spring rains. If the usual rains fall in April, things will go well. If they fail, there will be serious distress and heavy relief expenditure for several months. There will also, in such an event, it is to be feared, be a considerable loss of cattle. As regards the water supply there is no serious cause for apprehension.

5. We stated in our despatch of last week that the Madras Government had acceded substantially to all Sir Richard Temple's proposals for economy, and that orders would be issued at once.* Sir Richard Temple has since informed us that the Madras Government have ordered various measures of economy in relief and such restrictions of expense as are compatible with the safety of the people, and that these orders are actually being carried out in the interior of the districts. Though there may yet be important discussions on details, Sir Richard Temple trusts that there is general accord in principle. He cordially acknowledges the support which he has received from the Madras Government and from all its officials, and bears his testimony to the zeal, devotion and humanity with which the relief operations have been undertaken in that Presidency. In his Minutes and memoranda on Bellary, Cuddapah and Kurnool, which have already been laid before Your Lordship, and more particularly in his Minute of the 19th January, he has discussed very fully the necessity of placing some restrictions on the enormous numbers resorting to the relief works in these districts and the mode in which this should be done. Similar suggestions were made to the Government of Bombay, which, however, had anticipated the most important of them, *viz.*, the reduction in the rate of wages.

6. With this despatch we submit a Minute, dated the 24th ultimo, in which Sir Richard Temple has drawn the attention of the Bombay Government to the applicability of certain passages in our letter of instructions to the relief administration in the Bombay districts, including the question of closing many of the smaller relief works. At present we are not aware whether anything has been done in either Presidency in the direction of closing small works; but in connexion with this subject we submit a correspondence which has passed with the Government of Bombay regarding the commencement of the earthworks of the Dhond and Manmar Railway and of the railway some time ago projected between Bellary and Karwar by way of Gudduck and Hooblee. We have authorised the Bombay Government to commence the first of these works at once, if, in their opinion, it is urgently necessary in consequence of more extensive relief works being required than those actually in progress; observing, however, that work should, as far as practicable, be confined to those portions of the undertaking which can be carried out without committing the Government to immediate completion of the line when the present difficulties have ceased. Regarding the Karwar and Bellary Railway we have addressed the Madras Government and Sir Richard Temple, who will shortly again visit the Bellary District. We have reason to believe, although the point is not specially adverted to in any of the official papers before us, except in the memorandum regarding the Tinnevelly District, that difficulties have been experienced, though of what nature we are not informed, in devising large works suitable for relief purposes in the Madras Presidency. The only relief works of any magnitude at present in operation appear to be the East Coast Canal and the Junction Canal. Sir Richard Temple has inspected the line of the proposed extension of the Railway from Conjeveram to Chingleput, but is not in favour of its being taken up as a relief work. We shall probably receive more detailed information on the general question in Sir Richard Temple's final report after the completion of his tour.

* Since this was written we have received copies of the orders of the Madras Government dated the 31st January, Nos. 329 and 330, enclosed in their despatch to Your Lordship, under date the 2nd instant. These orders are entirely in accordance with the policy laid down in our instructions to Sir Richard Temple, on the subjects to which they relate, *viz.*, the restrictions on expenditure and non-interference with trade, and have our cordial concurrence.

7. The question of improving the grain traffic on the Great Indian Peninsula and Madras Railways has been carefully investigated by Captain Bisset, R. E., under Sir R. Temple's orders. We enclose some correspondence on this subject. The officials of both railways appear to be using every effort to meet the emergency. A suggestion made by Sir Richard Temple, that the line from Madras to Arconum should be doubled, is under consideration in our Public Works Department, and will, we hope, be disposed of in the course of a few days. Arrangements have been made for obtaining weekly returns of the grain traffic to the affected districts by rail as well as by sea.

8. Sir Richard Temple has visited Bangalore, and was about to inspect some of the distressed localities in Mysore. We have reason to apprehend that the distress in that province is severe. Regarding Hyderabad we submit a memorandum of the facts ascertained by Sir R. Temple on the occasion of his visit to Hyderabad, from which it appears that the distress in the Nizam's country is likely to be more limited and less serious than was at first apprehended. Sir Richard Temple considers the arrangements made to meet the distress creditable to the prudence and foresight of the Nizam's Government.

9. Among the enclosures of this despatch will be found a correspondence on the subject of remissions of land revenue, to which reference was made in our despatch of the 26th ultimo (paragraph 5). Sir Richard Temple had suggested that suspensions only should be allowed pending further consideration, and that remissions should be prohibited. Both the Local Governments having objected to the course suggested, we have intimated to them that the matter will be left to their discretion, but that the subordinate authorities should be warned against too free remissions, and authorized to hold balances in suspense in cases in which it appears likely that the landholders will, without undue pressure, be able to pay the revenue in arrear during the next season.

10. From the returns of persons employed on the relief works and fed gratuitously which reached us yesterday, it appears that in the former case there has been a diminution of 33,994, and in the latter 12,447. The aggregate number of persons employed on the works was 903,410 and of persons receiving gratuitous relief 60,402 against 947,404 and 72,849, the corresponding numbers for the previous week. The Nellore return, however, does not include the coolies employed on the East Coast Canal, regarding whom it is stated that no return had been received.

11. Since our last despatch was written, we have received Your Lordship's despatch of the 12th January, No. 6. Our despatches and telegrams during the last few weeks, and the weekly despatches and returns which you now receive from the two Local Governments, will have placed you in possession of tolerably full information on most of the points adverted to in your despatch. The detailed reports alluded to in the 24th paragraph are gradually coming in and are undergoing a careful scrutiny, but we are not yet in a position to lay before you a full *resumé* of their contents. In the meantime the clear and full memoranda which have been furnished by Sir Richard Temple regarding the districts visited by him will have enabled Your Lordship to form a clear view of the leading facts of the situation, of its dangers and difficulties, and of the measures which are being taken to meet them. The situation is, indeed, very grave. The extent of the distressed area in length is very great, beginning, as it does, from near the south bank of the Taptee river in Khandesh, and stretching down south, uninterruptedly, almost to Cape Comorin; and in one part its breadth is considerable, extending from the eastern watershed of the Western Ghaut mountains to the East Coast. Including Bombay, the Nizam's dominions, Mysore and Madras, the population affected can hardly be less than thirty millions, possibly a good deal more. The calamity is aggravated by the prevalence of cholera in many of the distressed districts. If it were not for the railways, which now extend from the base of the Himalayas to the extreme south of the peninsula, and the great improvement which has taken place in the communications generally, the difficulty of transporting food in sufficient quantities over this vast area would have practically rendered it beyond the power of Government, however great their efforts and unrestricted their expenditure, to prevent a very heavy mortality in some, at all events, of the drought-stricken districts. As it is, the railways are carrying the

surplus produce of the Punjab, of the North-Western and Central Provinces, and of Bengal, where the harvests have been excellent, to the drought-stricken plains of Sholapore, Bellary and Kurnool; and throughout the distressed districts, owing to the activity of private trade, the markets, as a general rule, are well supplied. There will, we fear, be a heavy loss of cattle in some districts. The apprehensions which were at one time felt as to a water famine are not now generally entertained.

12. We cannot conclude this despatch without expressing our sense of the invaluable assistance which Sir Richard Temple is rendering both to the Government of India and to the Local Governments in the performance of our anxious task.

No. 31, dated [illegible] January 1877.

From—*The Secretary to* SIR RICHARD TEMPLE,
To—*The Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a minute recorded by him regarding relief affairs in the Madura and Tinnevelly districts, together with memoranda setting forth the facts ascertained on the spot regarding those districts.

Memorandum on the condition and prospects of the Madura District, as ascertained by SIR RICHARD TEMPLE *at his conferences with local officers during the 22nd and 24th January.*

AT Madura Sir Richard Temple had the advantage of meeting—

Mr. McQuhae who has been Collector of the district for several years, but who only returned from furlough a month ago and had not yet inspected the more distressed parts of the district.

Mr. Turner, C. S., who has been for some time in charge of the Ramnath Zemindari under the Court of Wards, and who is now Relief Officer of the district; two Deputy Collectors and the Sub-judge, who had served long in the district, and also the Tahsildars of the Dindigul and Madura taluks.

2. The district of Madura has an area 9,503 square miles and a population of 3,366,615 persons. It is traversed by the Southern Madras railway. Somewhat less than one-half the district belongs to Zemindars with the administration of whose estates the Collector has but little concern. The ryotwari portion of the district, managed by the Collector on behalf of Government, is divided into six taluks and contains a population of about 1,300,000. In the north-west of the district are the Pulni and other hill ranges which are sparsely peopled; from Madura town southwards and eastwards to the sea coast the country of the great zemindaris is open and flat.

3. The average rainfall of the cultivated part of the district is 34 inches; during the past season the rainfall has been in some places as little as five inches, and nowhere has it been half the average. In ordinary seasons Madura gets a fall of from 4 to 6 inches in April and May, a fall of 6 to 10 inches in July and August, and a fall of about 13 inches in the October or latter rains. During the past season the district got the April rainfall only. The rain fell unequally over the district;—thus, while Ramnath, as a whole, fared very badly, a belt of land ten miles broad along the coast was favoured with good October rain. The parts where the rainfall was shortest are the whole of the Palni taluk, the north (about ⅓) of Dindigul taluk, and the southern half of the Tenmangalam taluk, and nearly one-third of the great Ramnath zemindari. In these tracts no rain fell after August, and no crop at all has been secured save under wells and river channels. The tanks in these tracts are all rain-fed (as distinguished from river-fed), and they are dry; so no crops have been saved by tank-water. In the rest of the district the failure of rain was not so utter; still the dry crop was extremely poor, where it did not wholly fail. Fair crops have been secured under wells and river channels.

4. The area under different kinds of cultivation and under the main food crops is, in ordinary seasons, as follows:—

	Acres.
Under well irrigation	22,150
Irrigated from river channels	20,183
Sown with rice	137,511
Sown with cumboo (bajra millet)	98,840
Sown with cholum (jowari millet)	162,784
Other food grains	800,000

As there are such great variations in the circumstances of the different taluks, the Collector has difficulty in offering a general estimate of the out-turn for the whole district. He would put—

The dry crop yield at perhaps ...	... 1 anna all round;
Wet crop	... 8 annas under tanks;
Ditto	... 10 annas under irrigation channels;
Crop irrigated from wells. ...	... 12 annas;

and he would put the average yield of the district at a 3-annas crop, or something less than one quarter of an ordinary good yield.

5. The ryots and the people of the Madura District are in ordinary times prosperous, save in part of the Shevagunga zemindari in the south-west corner of Ramnath where the crops often fail. Even this year the ryots are keeping on and supporting their regular farm servants (pádials) everywhere except in a part of the Palni taluk; still there are a good many ryots, 94,000 out of 129,000, who hold less than seven acres a piece. The population living by daily labour and the prœdial serfs (pádials) constitute about one-fourth of the whole population. Pressure on the lowest classes has been considerably relieved by an unusually large emigration of labourers to the coffee lands of Ceylon.

6. The ordinary food of the people is cumboo (bajra), ragi (small millet) and cholum (jowari); in parts, the poorer classes consume a very coarse millet known as *black cholum*. At present all the larger markets are well supplied with grain, principally foreign rice from Bengal; in parts of the south there is black cholum to be had, but the quantity of this grain in the district is not large. Several cases have already come to the Collector's notice in which the supply of grain was not equal to the local demand; still there is food in the district for those who have money to buy, and the Collector believes that private trade will sufficiently supply local needs, though occasionally petty dealers may not be quick enough in supplying the wants of remote localities. Roads are good, and there are plenty of carts. Madura dealers are men of capital and enterprise, and they are already importing grain direct to the petty district ports, such as Kilakari, and bringing it up to Madura.

7. The food crops of the two previous years (1874-75 and 1875-76) in Madura were fairly good all round. Last summer there was at one time promise of a good ragi crop, and much of the old ragi stocks was exported to Mysore where the need was then great. Stocks of common local grains are believed not to be large, but there is already a good deal of foreign rice in the district. Prices at Madura are now quoted at—

	Number of seers per rupee.	
	13th January 1877.	Average of the season in ordinary years.
2nd sort rice	7¼	16
Cholum (jowari)	8½	29
Ragi (small millet)	10¾	35

In the interior prices are much the same, except in the Dindigul taluk, where they are a little dearer. Black cholum is still for sale in the south of the district at 16 seers per rupee; it is eaten by the poor only, and the supply will not last long.

8. At present there are but few labourers on relief works. Local fund undertakings have been pushed forward, such as the clearing of tanks and other such works debitable to the "village improvement fund." On these works people are made to give full tale of labour. In the south of the district and in the Palni taluks some few relief roads were opened; and other works, such as tanks and roads, are ready marked out. The total number of real relief labourers is only 5,531; the numbers decreased a fortnight ago, but are now increasing again. The Collector expects a rush of labourers on the works in the south, where the people are very badly off, and for two months past some of them have prayed to have relief works opened. If it had not been for the outlet by emigration to Ceylon, there would have been danger of starvation down there before now. The Ramnath zemindari is under the Court of Wards, and it can afford to find work for its own people, provided Government will sanction the Collector's proposal to suspend (not to remit) a portion of the Ramnath tribute (peshkush). If these arrangements be sanctioned, then the Collector would hope that the total number of relief labourers chargeable to the State will not exceed Rs. 20,000* during the worst times of the Madura district. If seasonable rain falls in April (and Mr. Nelson's Madura manual shows that in average years 5 or 6 inches fall between April and May), then the people will leave the works and go off to their fields. If no April rains fall, then there may be disaster, and as many as 100,000 people might possibly come upon the relief works. But if the coming season be ordinarily prosperous, Mr. McQuhae hopes that the number of relief labourers will not exceed 20,000.

* Estimates of this kind differ according to the officers who frame them. A previous Collector, it is understood, estimated that Madura would have to employ 100,000 relief labourers before the end of February. There is often a risk of subordinates, without any conscious extravagance, working up to high estimates of this kind.

9. The rate of wages on the relief works is two annas a day for an adult male, and a fair tale of work is exacted from the labourers. In Madura town in ordinary times no man will accept a day's work under four or five annas a day; and though wage rates in the interior may be a little cheaper, still the Collector thinks that a man of the Madura district must be feeling some pressure before he goes on relief works at two annas a day. People who have, as yet, come on the relief works were not in a specially depressed physical condition.

10. In the town of Madura the distribution of gratuitous relief from private charity has begun. In the Palni taluk gratuitous relief, in the shape of cooked food, is being given to some 900 persons at Government expense. The Collector is enquiring into the necessity for continuing this relief. The tahsildar stated that some of the people,—infirm and aged persons from the surrounding villages,—who came for this relief were in a very destitute state.

11. Up to the present time there has been no very great difficulty in maintaining the cattle. There is still some pasture in the tank beds, and in the withered rice and cumboo fields. But difficulty will certainly be felt in Ramnath, and in the Madura, Meloor and Terumangalam taluks and in parts of the Shevaganga Zemindari, if showers do not come. Slight showers, such as usually come in Madura at this time of year, will produce enough pasture to keep the cattle alive.

12. In parts of Ramnath the people will have difficulty in getting water to drink. They may sometimes have to go four or five miles for it. Still, water will not absolutely fail.

13. The Collector expects to have to suspend 15 lakhs of land revenue out of a total demand of 24 lakhs. The whole of the zemindari tribute (peshkush) will eventually be collected. But according to the revenue custom of the Presidency, the Government is more or less bound, * though not absolutely pledged, to remit land revenue due on "wet" lands, which have failed to get any crop by reason of failure of the tank water. The Collector cannot as yet precisely say how much this may be. According to the revenue customs of the presidency, a good deal of the suspended revenue, due from dry crop lands, would also be eventually remitted.

* *Note.* So the Collector of Madura says.

TINNEVELLY,
23rd January 1877.

C. BERNARD,
Secretary to Sir Richard Temple.

Memorandum on the condition and prospects of the Tinnevelly district, as ascertained by SIR RICHARD TEMPLE *during his visit of the 24th January.*

AT Tinnevelly Sir Richard met Mr. Stewart, the Collector, who has had five years' experience of the district, and at Tuticorin he met Mr. Davies, the Head Assistant in charge of the southern taluk of the Tinnevelly district.

2. The Tinnevelly district contains an area of 5,176 square miles, with a population of 1,693,979 persons. It is traversed from end to end by the Madras railway. The (ryotwari) tracts administered directly by the Collector are divided into nine taluks; while the 22 zemindaris constitute one-quarter of the district. The zemindaris are mostly situate in the distressed tracts. Some of the zemindars are poor and unable to do much for the support of their people in the present year; others, and especially Ethiapoorum, which is now under the Court of Wards, can afford to find works for the relief of their tenantry. The zemindari tribute (peshkush) is said to be above two-thirds of the gross rental, so that Tinnevelly zemindars have not so large a margin of profit as in North Arcot and other districts.

3. The district is divisible into two distinct sections,—

(1) the valley taluks of Tenkarai, Tinnevelly, Tenkasi, Ambasamudram, where the lands are for the most irrigated, and where crop after crop is taken off the ground, which is bare for only about two months of the year. These irrigated taluks are the most thickly peopled.

(2) the black soil taluks, where there is comparatively little irrigated land, and where in ordinary years dry crops of cholum (jowari) and cotton are grown.

The average rainfall of the lowlands of the Tinnevelly district is about 20 inches; at Tuticorin on the Coromandel coast it is as low as 10 inches. During the last season the rainfall was in some places as low as 5 inches, and did not anywhere exceed half the average fall of ordinary years. The area of failure of crops is nearly identical with the unirrigated section of the district. The yield is estimated at—

in the irrigated taluks—wet crop, 14 annas, full crop; dry crop, 4 annas, quarter crop.

in the dry taluk—wet crop, 1 anna, no appreciable crop; dry crop, 3 annas, nearly a quarter crop.

The Collector is unable to offer a correct estimate of the yield for the whole of the district because the variations are so great in different parts, but perhaps the yield of the whole district might be put down at about 6 annas, or $\frac{3}{8}$ of a good harvest.

4. The yield of the previous (1875-76) harvest was fairly good all round, while the yield of 1874-75 was good. Stocks are supposed not to be large; but the rice now ripening in the irrigated taluks will, the Collector estimates, give food enough for the whole district for at least four months. The ordinary food of the people is rice over a great part of the district, but in the dry crop taluks cholum and cumboo are the staple food. The breadth put down with the main food crops in the last ordinary year 1875 was—

Rice	...	212,000 acres.
Cholum (jowari) ...	...	66,000 "
Cumboo (bajra) ...	...	195,000 "
Samary (small millet)	...	169,000 "
Ragi	...	49,000 "

The area sown with cotton was 150,000 acres; during the present year the cotton yield will be very small indeed.

5. All the district marts are well supplied with grain. The district possesses plenty of carts for inland traffic; and ample shipping comes to Tuticorin for the maritime trade. At one time the supply was short in places; but during the last few weeks foreign rice has been coming largely into the district* by the port of Tuticorin from beyond the sea. The Collector believes the food supply will be maintained everywhere by private trade. The earliest crop of next season will not come in until September; no harvest will be reaped in August. The present and the ordinary prices of some of the cheap food grains in Tinnevelly town are quoted thus:—

* The imports of grain into Tuticorin have been—

	During December.	During first 20 days of January.
	Tons.	Tons.
Rice	984	1,532
Paddy (rice with the husk on)	...	132
Cumboo (bajra) ...	32	276
Cholum (jowari) ...	...	9
TOTAL ...	1,016	1,949

	Present price.	Ordinary price.
Rice	7¼	11 seers per rupee.
Cumboo (bajra)	11¼	23¼ "
Cholum (jowari)	7¼	24 "
Ragi	12	27 "

At marts in the interior of some of the distressed tracts prices are 20 to 30 per cent. dearer; and four weeks ago, before the trade from across the sea set in, prices were quite 20 per cent. dearer than they are now.

6. In ordinary years the people of Tinnevelly are well off; the ryots have a high "standard of comfort;" and in the irrigated taluks they are sometimes quite wealthy. A large proportion of the ryots, however, have small holdings of 3 to 7 acres each. The Collector estimates that about half the population of the taluks affected by failure (say 400,000 out of 900,000) are daily labourers and farm servants. One great outlet for the poorer classes of Tinnevelly is the labour-field of Ceylon, whither tens of thousands go to work on coffee estates and other farms. The day Sir Richard Temple was at Tuticorin, he saw some hundreds of Ceylon coolies returning after their six months' working season. This year emigration to Ceylon is greater than ever.

7. As yet the condition of the people even in the distressed taluks is by no means depressed. But some weeks ago it became clear that in the distressed taluks were a certain number of people who had not emigrated, had no food and no means of earning any. Accordingly works were opened, and about 2,500 labourers are employed on roads and irrigation channels under the civil officers. The engineer officers help in supervising, and task-work is rigorously exacted from the labourers. Works have been sketched out costing—

8½ lakhs for road work,
8 " irrigation channels,
½ lakh for miscellaneous improvements.

There is no very large work in the district on which a great number of labourers could be usefully employed. But Tinnevelly relief labourers could be taken to the Periyar scheme in Madura, if it were not for the extreme unhealthiness of those valleys in the hot season. The Collector estimates that at the worst time he may have as many as 100,000 persons on relief works; that time will be in May and June, for he considers that the people will not leave to begin ploughing until late in the month of June. The Collector will keep down the numbers on the works as much as he, with safety to the people, can. But there are in the distressed tracts very large number of families who can have no means of earning a living off the works.

8. The rate of wages on the works is 2 annas a day to male adults, and to women and children proportionately lower, as ordered by the Government. The Sub-Collector at Tuticorin appeared to contemplate purchasing a certain quantity of rice for Government and paying the relief labourers in grain. But if the markets are sufficiently supplied, these arrangements will, under present orders, not be required.

9. No relief houses for distributing gratuitous relief at the State cost have yet been opened. About Rs. 500, however, have been spent on such relief by village officials,† who are directed to relieve temporarily casual cases of clear distress and to send in the bill to the tahsildar. The precise number of persons so relieved up to date cannot be stated. If matters get worse, relief houses will have to be opened; but no estimate can be furnished at present of the probable total numbers who may hereafter want relief. There is a private relief house at Vendipattam, and the recipients are mostly the infirm and feeble and the beggars of the neighbourhood. No cases of starvation have been reported up to the present date.

† Called village moonsifs in the Tamil districts.

10. There has not been much loss yet among the cattle. But no doubt the supply of fodder is very short. Some cattle from the western taluks can go to the ghât pastures. But in the south there will be loss of cattle, for, unless plentiful showers come (which is not probable) there will soon be no pasture at all in the black soil taluks.

11. Failure of water supply has not yet been felt to any severe degree. But during the hot months there will be difficulty about water in the unirrigated taluks. Still the Collector anticipates that people will generally be able to get water for themselves and cattle if they go 3 or 4 miles at most for it. There may thus be often dearth of water and difficulty in getting it, but still it will be obtainable.

12. The Collector estimates that he may have to suspend 12 lakhs of land revenue out of a total demand of 27. Probably out of this, 3 lakhs, the estimated (roughly) assessment on wet lands, which got no crop, may have to be remitted. Remissions of the abkaree (liquor excise revenue) will not be absolutely necessary, as the revenue is leased for a term of years, and a bad year might be set off against good ones. The Collector, however, may find it expedient to recommend some remission. The salt revenue as yet is coming in satisfactorily.

TINNEVELLY,
24th January 1877.

C. BERNARD,
Secretary to Sir Richard Temple.

No. 34, dated Madura; 24th January 1877.

From—The Secretary to SIR RICHARD TEMPLE,
To—The Additional Secretary to the Government of India.

IN continuation of my letter No. 27 of the 22nd current, I have the honour, by direction of Sir Richard Temple, to submit copy of a minute recorded by him, in which attention is drawn to the applicability of certain passages in the Government of India's despatch of the 16th January to the relief administration of districts of the Bombay Deccan.

Minute by SIR RICHARD TEMPLE,—*dated Madura, 24th January 1877.*

IN continuation of my minute of the 22nd instant, urging certain measures of economy which would lead to reductions of expenditure on relief, I would beg the consideration of the Government of Bombay to the conditions set forth in paragraphs 2 and 3 of the despatch of the Government of India, dated 16th January 1877. It seems to me that they apply in some degree, not a very great degree perhaps, but still in some degree, to the relief operations which we have conducted in the Deccan districts. While admitting the need of extensive relief in those districts and acknowledging the large amount of good which has been and is being done there by the exertions of the local authorities, I still think that, in the words of paragraph 3, some "persons are employed to whom relief is not absolutely essential, and who without it would have been able to maintain themselves at all events for some time to come."

2. Although there is good supervision on the larger works, yet in many of the petty village works I fear that "the people can obtain almost for the asking, and in return for next to no work at all, wages in money or in grain."

3. I apprehend also that in some places the authorities, in the words of paragraph 2, are "attempting the task of preventing all suffering and of giving general relief to the poorer classes of the community," a task which the Government of India has in this despatch declared itself unable to undertake. These instructions from the Government of India seem to me to render some reconsideration necessary in detail to see especially whether many persons on all the works, larger or smaller, could not be selected to be discharged, and whether some stricter check could not be imposed on admission to the works. In other words, I would say, let every person now on the works be discharged, who apparently can get on for a time without such employment, and let no person in future be admitted unless there be reason to suppose that he or she is absolutely in need and would be in danger of starvation if employment were to be refused.

4. In respect to paragraphs 4 and 5 of the despatch of the Government of India, urging that relief labourers be employed on large works of a permanently useful character, I have represented what occurred to me in my minute of the 12th January.

5. In paragraph 7 of the despatch of the Government of India it is stated that "when distress becomes extreme, and a state of absolute famine has been reached, the Government may be driven to set up relief works near the homes of the people on a scale inconsistent with careful supervision or searching tests."

Although numerous works of this character have been set up in the Deccan districts, I doubt whether the stage contemplated by the above passage has been yet reached, though it may be reached hereafter. And with this view I would recommend that many of these petty works be reconsidered with a view to their being discontinued, wherever possible, for the present at least.

6. I should anticipate that, if the measures recommended in this minute and in my minute of the 22nd January can be at all adopted, a considerable reduction can be effected below the estimate of expenditure, one million and a half, submitted with the minute of the 12th current.

RICHARD TEMPLE.

No. 35, dated 27th January 1877.

From—The Secretary to SIR RICHARD TEMPLE,
To—The Additional Secretary to the Government of India.

BY direction of Sir Richard Temple, I have the honour to submit copy of a memorandum of the facts ascertained by him at Hyderabad on 12th instant as to the failure of harvests and possible distress in the territories of His Highness the Nizam.

Memorandum of the facts ascertained as to failure of harvests and distress in the Nizam's dominions, as ascertained by SIR RICHARD TEMPLE *at Hyderabad on the 12th January.*

AT Hyderabad Sir Richard Temple met Major Euan Smith, C. S. I., First Assistant Resident; His Excellency the co-regent Nawab Shams-Ool-Oomrah and his nephew, also Mukkurrun-Ood-Dowlah, nephew of Sir Salar Jung. The Resident, Sir Richard Meade, and His Excellency the Minister, Sir Salar Jung, had not returned to the capital. But Sir Richard Temple was able, by the courtesy of His Highness the Nizam's Government, to obtain full information as to the condition of the country. The Secretary to Sir Salar Jung in the Revenue Department has charge of relief operations, and he supplied much information. This gentleman had borne a share in relief work during the famine of 1869, on which occasion he was a Deputy Collector, so he was conversant with the relief procedure under British administration. A European gentleman, who holds the office of Superintending Engineer, and who is directing relief works, also gave Sir Richard Temple a memorandum on the subject of the scarcity.

2. Out of the seventeen districts which compose the dominion of His Highness the Nizam there has been bad failure of harvests in parts of six only, namely in East Raichore, in part of West Raichore (known as Lingasoor), in the southern parts of Nalgonda abutting on the Kurnool district, in part of Shorapore, in part of Nuldroog near the Sholapore district, and in a small tract south of Pyton near the British district of Ahmednagar. The failure was most utter in the Alpur sub-division of East Raichore; there no crop whatever was sayed this season. In the rest of the distressed tracts it is estimated that a yield of from 2 annas to 3 annas (one-sixth of an ordinary crop) has been secured. In tracts adjoining the distressed districts the harvests have not been so good as usual; but over the rest of the country the harvests have been fair, while in the districts north of Hyderabad there have been decidedly good crops.

3. The Revenue Secretary was able to speak with confidence about the crops; for a Central Relief Committee had been formed at Hyderabad, and deputations from the Committee had visited the worst tracts, while the district officials had sent in full written reports from elsewhere.

4. The harvests of the two previous years (1874 and 1875) had been good throughout the country, save in one comparatively small tract of East Raichore, just where the present failure is worst. Stocks are probably considerable; the Revenue Secretary estimated that there must be quite a year's food in the country; for the Nizam's dominions always produce and export a considerable surplus of food (rice and jowari or cholum). Cholum (big millet) is the ordinary food of the common people, except in the south-east Telugu-speaking tracts, where rice and ragi are grown largely. The dealers of Hyderabad and other large marts are accustomed to do a large grain business. Even during the present year grain has gone and is still going* away largely to the Deccan and to the Madras Ceded Districts. Some of this grain comes from the country north of Hyderabad, where the crops have been good. The Nizam's country will not require grain from outside, though the southern districts may require and will get some of the surplus of the northern districts. An early but small crop of cholum and lesser millets will be reaped in September.

* *Note*—On the Nizam's State Railway between Shahabad and Hyderabad, Sir R. Temple saw a considerable quantity of grain waiting at the stations for despatch to Bellary.

5. At Hyderabad the price of jowari (cholum) ranges from 8½ to 10 seers per rupee. Rice is dearer. In the south cholum is 8 seers per rupee, and ragi is somewhat cheaper. To the north of Hyderabad prices are cheaper.

6. There have been no known cases of starvation or extreme distress. But some few hundreds of persons from the Alpur taluk in the extreme south went over to the Kurnool relief works. On representation being made relief works were begun on the Nizam's side of the border in East Raichore and also in a very few other places; and there are now (12th January) about 5,000 persons on the relief works. The condition of the labourers is as yet by no means depressed. A gang of about 1,500 labourers on a road in the Alpur taluk in the eastern extremity of the Raichore Doab was inspected as Sir Richard passed along;—men, women and children were all in good physical condition. The Engineer in charge, Mr. Brandt, said that the people were much in want of work, but that he had not seen any cases of great distress. Some hundreds of people had come over to his work from Kurnool, because the authorities there had reduced their wage rate; he intended at once to reduce his rates also. Hitherto he had paid 3 annas a day to adult male labourers.

7. The Relief Committee at Hyderabad expect that, at the worst season, they may have to give relief wages to 25,000 people in all, and that gratuitous relief in the shape of cooked

food may have to be distributed to destitute paupers at some ten or twelve centres. Should necessity arise, then organization for doing all this is ready. The Nizam's Government has no thought of laying in any store of grain, as the local trade will supply all needs of those who can buy.

8. There are plenty of pastures to which the cattle can be driven, though these are rather remote from Alpur and Eastern Raichore. There will be scarcity of water in parts of this tract, but no absolute water famine.

9. Reports have been received from the Nizam's taluks bordering on the Sholapore and Ahmednagar district of the Bombay Deccan to the effect that a large immigration of cattle and men had taken place from those districts into the Nizamat country. The Central Relief Committee did not accept as correct the reported numbers of these immigrants, and have ordered further inquiry. The Revenue Secretary did not think that this temporary immigration was more than the country under His Highness the Nizam could well bear.

10. The Nizam's Government expects to lose a good deal of its land revenue in the tracts affected by failure. Land revenue due for this year on fields of petty ryots, who have lost all their crop this season, will ordinarily be remitted at once and for good.

11. So far as Sir Richard Temple was able to judge, the arrangements made to meet distress and the diagnosis of the coming trouble, were creditable to the prudence and foresight of His Highness the Nizam's Government. The distress in the Nizamat country will be more limited and less serious than was at first feared, and will not, it may be hoped, aggravate the pressure and the trouble in the adjoining British district.

No. 38, dated Madras, 27th January 1877.

From—The Secretary to SIR RICHARD TEMPLE,

To—The Additional Secretary to the Government of India.

BY direction of Sir Richard Temple, I have the honour to submit copy of a memorandum on the condition and prospects of the Salem District, as ascertained by him at his meeting with the Collector on the 25th January.

Memorandum on the condition and prospects of the Salem District, as ascertained by* SIR RICHARD TEMPLE *at his meeting with the Collector,* MR. LONSLEY, *on the 25th January.

THE Salem district comprises 7,483 square miles, with a population of 1,966,995 persons. It is divided into nine taluks, and about one quarter of its area consists of permanently-settled estates. The Madras railway passes through it from one end to the other.

2. The Salem district consists of two distinct sections, the upland section on the Mysore plateau, containing four taluks, and the lowland section containing five taluks. The rainfall of the year was 18 inches as against an average of 30 inches, but the latter rains (October monsoon) have been short all over the district, averaging 2 inches only as against the usual fall of 10 inches. The failure has been greatest in the northern or upland taluks, namely Dharumpuri, Oossoor, Kristnagiri, Trichengode. One taluk only, Ahtoor, which lies just under the hills, enjoyed a fair October rainfall, and its crops are comparatively good. Salem differs from some of the other coast districts, in so far that almost all its "wet" or irrigated land gets water from rain-fed tanks, which this year had failed entirely. Its only river channels come from the Cauvery river and irrigate 12,000 acres. The acreage under "wet" crop is about 8 per cent. of the total cultivated area of the district. And the Collector estimates the out-turn of the year at 6 annas, or less than half an ordinary yield for dry crops, 4 annas, or about one quarter of ordinary yield for wet crop. This would give something better than a 5-anna crop, or about one-third of an ordinary good yield for the whole district. The harvest of last year (1875-76) was poor in the four northern taluks, where the failure this year is greatest. Over the rest of the district there was an 11-anna (about three-fourths of an ordinary yield). The harvest of 1874-75 was a bumper harvest all over the district. In ordinary years the Salem district exports surplus food; the ordinary food of the common people is rági and cholum. The ryots of Salem are well-to-do; the revenue rate for dry crop land is about Rs. 1¼ per acre, for the good soil of Salem is very light. There is a large population of weavers, very few of whom, however, have as yet come on the relief works.

3. The marts of the district, both large and small, are fully supplied with grain. Trade is very active; about 900 tons of food have come in by rail during the last two weeks from Beypore and Madras. The Salem demand will undoubtedly continue to be supplied by private trade. The district roads are very good. The cattle which do the cart traffic are quite distinct from the ordinary plough cattle, and they belong to a class of people in the southern taluks who, in ordinary years, carry away the surplus grain, and now will distribute imported grain. Prices in Salem town are—

	Present prices.	Average of ordinary years at this time.
Rice	7½ seers per rupee	12 seers per rupee.
Cholum	9½ „	24 „
Ragi	11 „	34 „
Kumboo	10 „	32 „

4. There have been no real cases of starvation; but in the northern taluks belonging to the sub-division there was distress among the poorer classes, and relief works were opened about two months ago. One month ago works were opened in the head-quarter taluks. The Collector does not consider the relief labourers to be generally in a depressed physical condition, though they are not so stout as in ordinary years. At first the relief labourers were paid daily wages, 2 annas a day for male adults. About three weeks ago task-work was introduced, and the numbers on the works fell from 21,000 to 10,000. The numbers have gone up again, and now about 23,000 labourers are on the works. The labourers are paid in cash at task-work rates, which are just twice as dear as the Public Works Department rates of ordinary years. At these rates adult males can earn about 2½ annas a day if they work hard. Still, good work is being done, and the labourers are chiefly employed in repairing tanks which were breached in the cyclone of 1872. There is a larger and better organized staff for supervising the works than have been found in many districts. Besides the range officers, each taluk has two overseers; and the affected tracts are divided into circles, which are placed under officials on Rs. 25 a month, who are drawn from the tahsil staff or from pensioned Government servants. The Amins of the Survey Department are also doing good work. The Collector wants more European supervisors for his works, such as pensioned sergeants who know Tamil. Bengal officers who do not know the language would not be so useful.

5. The Collector expects that he may have a maximum of from 70,000 to 80,000 persons on the works by the middle of April, if things turn out badly. If rain were to fall in February, then there would be a great reduction in the numbers on the works, for the beds of the tanks would be sown with cholum which would ripen in May. Government have allowed these tank beds to be cultivated this year at the dry rate of assessment. If the rains which usually fall in April should be favourable, then the number on relief works will materially decrease in the month of May.

6. About 8,000 people are receiving gratuitous relief at the State cost; the numbers increased when task-work was introduced, and some hundreds have come over from the Coimbatore and North Arcot districts. The recipients are being collected into four camps, where they are kept breaking stones all day, and are not allowed to go home. Eventually, the number of such camps may, if things get much worse, increase to 9 or 11. The Collector requires more dressers (Native Doctors) to help in supervising these camps. The cost of this gratuitous relief will probably be kept down to one anna a head per diem; and there will be the value of what work the people do to set against this charge.

Gratuitous relief is also being given through the village officials (Moonsiffs and Karnams,) who temporarily relieve casual cases of distress and send in the bill to the tahsildar. The Collector is not quite satisfied that this money is being well spent; but he sees no alternative way of preventing casual cases of starvation in outlying villages. The village officials are now rather badly off themselves, for, as the land revenue is not coming in, they do not get their percentage thereon. The Collector proposes to pay them out of the savings of the "village officials' fund" of previous years, and so to secure their hearty co-operation.

7. The cattle of the Salem district are as yet fairly well off. Many have been driven to the Shervaroy hills and to the other hills with which the district is studded. They will probably get through the present crisis sufficiently well.

8. Water also is still near the surface in wells all over the district, except in the Dharampuri taluk, where there will be dearth but not absolute want of water.

9. It has been proposed that 10½ lakhs out of a total land revenue of 22½ lakhs should be suspended or remitted. The Collector says that the revenue custom of the Madras Presidency is to remit and not to suspend land revenue due in respect of land whereon the crop has failed. But he also admits that in the case of dry crop lands, whereon the land revenue is very light, the ryots could certainly pay this year's balance out of the profits they may make on good crops during the next two years. He further says that, though the share of the "wet" assessment which may be reckoned as rent for water could not be collected on account of a year when tanks were dry, still the dry rate might be collected on "wet crop" lands.

In regard to the theory that remissions and not suspensions of land-revenue are the custom of the Madras revenue system, I may note here that I learn to-day in Madras that the instructions to assessing officers direct that 20 per cent. be deducted from the full revenue rate in making assessments, so as to leave the ryots a margin for bad seasons; and it is stated in those instructions that remissions will not hereafter be granted on dry crop land. I cannot learn that any distinct provision of law, or any engagement with the ryots exists, whereby Government would be bound to grant remissions, instead of suspensions, of the land revenue which the ryots may this year be unable to pay.

MADRAS,
26th January 1877.

C. BERNARD,
Secretary to Sir R. Temple.

XXIV.

Minute by* SIR RICHARD TEMPLE, *dated Bangalore, February 4th, 1877.

IN reference to minutes and memoranda regarding districts of Kurnool, Bellary, Cuddapah, North Arcot, Salem, Coimbatore, Madura and Tinnevelly, I desire to explain, in case these papers be published, that the Madras Government have ordered various measures

of economy in relief, and such restrictions of expense as are compatible with the safety of the people, which orders are actually being carried out in the interior of the districts. Though there may yet be important discussions on details, yet I trust that there is general accord in principle. I have to acknowledge, in the strongest terms, the kind way in which I have been met by the Madras Government and by all its officials, and the generous support I have received from them. I must also bear witness to the zeal, devotion and humanity with which the relief operations have been undertaken in this Presidency.

RICHARD TEMPLE.

No. 42 E.—126, dated 23rd January 1877.

From—The Secretary to the Government of Bombay,

To—The. Secy. to the Govt. of India, DEPT. OF REV., AGRI., AND COMMERCE.

I have the honour to acknowledge the receipt of your letter No. 1, of the 5th instant, conveying the instructions of the Government of India, that the restriction which had previously been placed on the organization and commencement of large works to afford relief during the present distress in this Presidency has, under certain conditions, been removed.

2. One of these conditions is, that no works shall be undertaken unless, in each case, this Government is satisfied by evidence, which it considers sufficient, that delay in commencing work will involve serious danger to the lives of the people. On this point all that can be said is that the autumn and spring crops over a large area in this Presidency have almost, if not entirely, failed, while in other parts they have been extremely scanty; that the prices of food grains have consequently risen to an abnormal height; that the mass of the people are very poor; and that those who usually depend on the product of their own small holdings, or on agricultural, or other, labour, for subsistence, are now deprived of their means of livelihood, and would probably fall into very great straits, and starve, if aid were not given to them in some shape.

3. In the early part of the season, before there had been time to organize any relief works, the uneasy movements of the people indicated, if not great distress, at least anticipations of it. In some districts signs of disorder manifested themselves, and had the people been of a less patient and docile temperament, they would probably have broken out into serious rioting. When relief works were opened, numbers flocked to them, notwithstanding that the wages offered were more than 30 per cent. lower than the wages of ordinary years, and that the price of food-grain was over 100 per cent. higher. Under these conditions, there are now upwards of 300,000 persons seeking employment on relief works, the mass of whom, this Government believe, would suffer the most serious privation, and many of whom would probably perish, if employment were not given to them; while it is quite certain, that but for the relief offered them, agrarian disorders, dacoities, and crime of every description would prevail, and the country would be greatly disorganized.

4. If these main facts be considered by the Government of India as supplying the evidence required by them, His Excellency in Council will, I am desired to say, consider that he is free to act under the authority which has been conditionally given to him: if these facts are not held to be sufficient to establish the case, His Excellency in Council begs that it may be so intimated to him, in order that he may pause until he is in a position to offer more conclusive testimony.

5. His Excellency in Council, I am desired to add, has repeatedly expressed his sense of the necessity for the most rigid economy, and has endeavoured to practise it, to the extent he considered permissible under the instructions given him in paragraph 19 of your letter, No. 365 of the 25th October last, *viz.*, that he should "exercise the discretion vested in him so as to prevent any loss of the lives of Her Majesty's subjects without incurring an expenditure of public money in excess of the necessities of the case." His Excellency in Council feels strongly that the obligation which rests on him of properly and economically administering the public funds, is not less in degree, though it may be less in extent, than the obligation which rests on the Government of India itself; that in fact, in common with all other public officers administering the resources of the State, it is his duty to enforce such careful and prudent economy as may be compatible with good and efficient Government. It is, therefore, no small cause of satisfaction to His Excellency to find that not only this principle, but also all the others which he has endeavoured to enforce from the commencement for dealing with this famine, is adopted by the Government of India, and embodied in their letter of instructions to Sir Richard Temple. There is, however, undoubtedly one exception of the utmost importance. This Government has been acting on the assumption that no person was to be allowed to die of starvation if the Government could prevent it. But the letter to Sir Richard Temple says, "even for an object of such paramount importance as the preservation of life, it is obvious that there are limits which are imposed upon us by the facts with which we have to deal." The Government of India cannot fail to appreciate the extent to which this limitation, however sound in itself, must increase the responsibility of the Local Government in controlling relief operations.

6. I am now to state that, subject to the stipulation made in my 4th paragraph, His Excellency in Council proposes to proceed with the following works, as soon as he is satisfied

that the time has arrived for providing the means of relief which these works are calculated to afford:—

(a.) *The Malsej Ghaut.*

(b.) *The Nira Canal.*—On the subject of this work, I am to refer you to page 5 of the Statement which accompanied my No. 309 C. W.—1110, of the 23rd ultimo. The complete project is ready and will be submitted, together with a proposal for the modification of the entire scheme to secure a canal for monsoon irrigation as a distinct project to afford relief. This modified scheme is calculated to cost Rs. 19,52,000 to provide water for the irrigation of 56,849 acres, and to yield a net revenue of 4·4 per cent. This work will provide employment for about 30,000 people for six months. The line of canal traverses the Purandhur, Bhimthari and Indapur Talukas of the Poona Collectorate, one of the dryest parts of the Deccan. There are already over 30,000 persons employed on small scattered works under the Collector, for whom it is most difficult to find profitable employment.

(c.) *Dhond and Ahmednagar Road.*—This work is already in progress and cannot be stopped; on the contrary, it will be necessary to grant further funds for it, when the amount already allotted—from which a sum of Rs. 20,000 was temporarily transferred to the continuation of the same road north of Ahmednagar—has been expended. There are now employed upon it 4,378 people.

(d.) *Metalling the main line between Poona and Hurryhur.*—This road traverses the Collectorates of Poona, Belgaum, and Dharwar and the State of Kolhapur. The work will probably be required for extensive relief later in the season. It has the advantage of being placed in a part of the Presidency, where the local distress is not great, where the water-supply is ample, and where communication, and consequently food transport, is easy. It is a work, also, that can be stopped at any moment without involving any after liability, and, on these grounds, it is one peculiarly fitted for relief purposes. This Government have always reckoned on this work as affording a large reserve for relief purposes; and, under the authority now granted in your letter under reply, will hold themselves at liberty to proceed with it, when occasion arises, to any extent that may be needed.

(e.) *Dholkheir and Bellary Road.*—Under the authority granted in your letter, this work will be proceeded with to the extent of the original grant, or to a greater extent should it be necessary to do so. It is not known to this Government that there are many cross-roads in the Kaladgi Collectorate requiring improvement. Certainly, there are no such cross-roads, which would be more useful than the completion of this through line, or which would afford better means of relieving the distressed persons of the district. It is not at this stage (and it is believed that the Government of India will admit this to be the case) desirable to provide work for the people at their very doors. The vast number of persons—some of whom are not thought to be in great distress—which the prosecution of small scattered works have brought on the hands of this Government, are the cause of great anxiety, and His Excellency in Council has adopted every means that have suggested themselves to him to put a stop to this evil, short of organizing the relief works on a more efficient and concentrated scale, and this, in consequence of the orders he has received, he has hitherto been unable to do to the extent that he considered desirable and necessary.

7. Small cross-roads are, for the reasons just stated, objectionable, and, for the same reason, minor tank-clearances are not advisable. Good enough at an early stage of distress when the numbers of applicants for relief are not large, these small roads and clearances are unprofitable at an after period, when strict and complete organization becomes imperative to save great waste of public funds. The small tanks have also this inherent disadvantage that they are useless as regards prospective droughts unless they can be cleared (as is very seldom the case) to hold two or more year's supply. A tank, containing only one year's supply, is useless in season of drought when it does not fill, and it is not very greatly needed in good seasons. Large irrigation works, especially tanks and storage reservoirs, which contain two or more year's supply are, perhaps, the most suitable works to undertake for famine relief, not only because they usually involve heavy earth-works, but because they tend in their immediate neighbourhood to pervent a recurrence of drought; such works usually cost more than Rs. 30,000, and His Excellency in Council now acknowledges gratefully the removal of the restriction that had previously been placed upon this class of works. Were it in his power, His Excellency in Council would gladly undertake works of this character in preference to any others, but it is difficult to find suitable locations, for it is only a concurrence of favourable circumstances as regards rain-fall, cofiguration of ground, and the like, that renders works of this class possible. It is a fortunate circumstance that the investigations of former years have placed within reach a few of such works on the present occasion.

8. In addition to the tank works, which have already been undertaken, His Excellency in Council will, as occasion arises, proceed under the authority now given with the following:—

The Shersoful, Mullet, and Patus tanks in the Poona Collectorate.
The Ojhar Canal extension in the Ahmednagar Collectorate.

The Doni tank in the Dharwar Collectorate.
The Banknari tank in the Kaladgi Collectorate.
The Krishna Canal extension in the Satara Collectorate.
The Chunkapur tank in the Nasik Collectorate.
The Bhokur and Dymel tanks in the Khandesh Collectorate.

9. Information as regards these works is given in the Statement which accompanied my No. 309 C. W.—1110, of the 23rd December, and I am to add, that as regards the Bhokur tank, that the work now contemplated is not the large project which was before the Government of India in 1872, and deferred from want of funds—*vide* the Government of India's letter, Public Works Department, No. 971 I, of 22nd November 1872—but a smaller scheme involving the restoration of an old irrigation work, calculated to cost about Rs. 84,000, nearly the whole of which is for earth-works, and to secure a probable net revenue of 5 per cent. In addition to this work, it may also become necessary to undertake the Gokak Canal in the Belgaum Collectorate, which was not included in the original programme of works by this Government. This canal, for which there are complete plans and estimate, is calculated to cost Rs. 9,62,307, and it will carry water sufficient for the irrigation of 38,200 acres.

10. I am now to observe that should the distress in this Presidency continue to increase, and should the measures which have been adopted by this Government, as regards the labour and wages tests, and the careful examination of applicants for relief, not have the effect of checking the rapid accumulation of persons on relief works, it will become necessary to undertake still more extensive operations than any of those adverted to above, and the only effectual measures which suggest themselves to this Government are the commencement of the Dhond and Munmar Chord line, connecting the two branches of the Great Indian Peninsula Rail above the Ghauts, and the Karwar and Bellary Railway. A proposition has already been before the Government of India as regards the first-named work, and has been rejected by them; but it is understood from paragraph 8, sub-head *a.*, of your letter, No. 521, of the 15th December, and also from the general tenor of your letter, now under reply, that the Government of India are not unwilling to re-open the subject, should occasion arise for doing so.

11. Not to encumber the text of this letter, I am directed to attach a memorandum respecting each of these Railways, containing information as regards its cost and conditions of execution, as well as the extent of relief it is calculated to afford, and I am to add the following observations.

12. The Dhond and Munmar Railway will afford ready means of relief in 3 districts, Nasik, Ahmednagar, and Poona, in which there are already 99,273 persons employed on relief works, many of which are small and over-crowded. It will also afford relief to the people of Sholapur, where there are already 1,18,700 labourers on the relief rolls.

13. On the earth-works of this railway, relief labourers can be properly organized, supervised, and tasked, and the line is admirably situated as regards food and water-supply. If even it be considered unadvisable for the present to carry out the Line to completion, it would still, in the opinion of this Government, be better to undertake the earth-works, which, at some period, will be worth the full amount of money that may now be spent upon them, rather than to fritter away an equal sum on useless works, such as cross-roads and tank clearances, which are not needed: on the earth-works of this railway, a fair proportionate return for the money spent can be secured, which cannot be done on scattered village works.

14. Of course His Excellency in Council would greatly prefer to see the Chord Line commenced and completed without check or stoppage, but if this cannot be at present done, it would still be a measure preferable in every respect, and economical as regards the further prosecution of a work, which, some day or other, must be done, to employ the persons, for whom Government must find occupation, in making the cuttings, which will remain for years without deterioration, and throwing up the embankments which will also stand without material loss or damage, if stopped short of the influence of flood-water at the river crossings, and if protected at such points.

15. Apart from the great and obvious political and military advantage of connecting the two great branches of the Great Indian Peninsula Railway above the Ghauts, and thus connecting the whole Northern and Southern system of railway communication of India, there is this further consideration that, in the event of famine or scarcity prevailing in any part of India at a future period, such as now prevails in the Southern part of the Continent, this Chord Line would be of very great value.

16. The experiences of the present season are sufficient to establish this point. The Great Indian Peninsula Railway, chiefly from having been compelled to work an enormous traffic over both its weak points—the Ghaut inclines—has been unable to deal effectually with the grain that has come upon it, Engine and waggon stock have run short, there has not been enough station and siding accommodation, and the staff has proved insufficient, especially as regards engine drivers. The Railway has carried 857 tons of grain per diem on an average for 82 days, nearly the whole of which has been forced down the Thull and up the Bhore Ghauts; it is still carrying at the same rate, and it may be safely said that if the Chord Line from Dhond to Munmar had been in existence, the railway would have been able to convey double the quantity it has done to the affected districts, and would also have enabled the traders to deliver at cheaper rates. Much too of the valuable food-grain stated to have been recently damaged and destroyed by rain in the North-Western Provinces, would have been preserved to its owners, and for the use of the people suffering from distress. This grain, as the Government of India is aware, had accumulated at stations were there was insufficient shelter for it, having been offered in such quantities that the Railway could not carry it away.

17. What has proved to be the case as regards the grain traffic may, some day, operate as regards Military movements; and should any such occasion arise, the necessity of dealing with two such obstructions, as the Ghaut Inclines, may be found to exert a very detrimental, possibly a fatal, influence on movements that may be of the utmost importance.

18. The line from Dhond to about 10 miles north of Ahmednagar has been finally located and is approved by this Government, the further portion has been surveyed, but not yet finally located; this can, however, be done while the first portion is under construction.

19. The Karwar and Bellary Railway has already formed the subject of a correspondence, which ended with the Government of India No. 2133 R, dated 5th September 1874, which the subject of this Railway, I am to refer you to my letter, No. 367 (Railway), dated 16th March 1874. All necessary details regarding that portion of the line which is suitable for meeting the present emergency in the way of relief, are comprised in the accompanying memorandum.

20. It is believed that the Madras Government are desirous of undertaking the earthworks of this line, as a means of providing employment for distressed persons in the Bellary and the adjoining districts. The work has, therefore, the merit that it would materially aid two or more districts in two Presidencies, and when completed, it would not only, as has been shown in the previous discussions in respect to it, be a valuable commercial line of communication likely to return fair interest on any money borrowed for its construction, but in future season of scarcity or famine in the Southern Mahratta Country, it would greatly add to the power of the Government and of the people to deal with, and meet failure of crops.

21. In Dharwar there are already 30,000 people on relief works; in Belgaum 27,000, and in Kaladgi 41,000, and these numbers are increasing, and, probably, will continue to increase.

22. His Excellency in Council does not, I am desired to say, propose the immediate commencement of this work, though there is reason to apprehend that, if not commenced shortly, many small scattered works must be undertaken, on which it is probable that much money may be wasted.

23. It is probable, however, that the Government of India will be inclined to deal with this question on a general review of the measures to be adopted in both this Presidency and in Madras; and I am, therefore, desired to say that this Government will be prepared to carry out their portion of the line on learning from the Government of India that they have permission to do so, and they are of opinion that it would be a wise and prudent measure to commence it at an early date.

24. Should the Dhond and Manmar and the Karwar and Bellary Railways, either or both be undertaken, it will be necessary for this Government to indent on the Government of India for officers to form the Engineering Staff that will be required to properly supervise and carry out the works.

25. As regards the 5th paragraph of your letter, I am to state that His Excellency in Council understands that the stipulation it contains would not apply to works of imperial character, such as the Dhond and Manmar Chord Rail Line, and the Karwar and Bellary Railway; and as regards the rest, I am to observe that, in applying to them any principle which the Government of India may deem equitable in respect to provincial responsibility for meeting the charges for Extraordinary Public Works, it will not be forgotten that these works are not voluntarily undertaken by this Presidency, but have been forced upon it under circumstances which have left its Government no choice but to undertake an outlay, which, on other similar unhappy occasions, has been met, and provided for mainly as a charge against the General Imperial Revenue of the Empire.

26. In conclusion, I am to add that it is of the utmost importance that this Government should be informed, at the earliest possible date, whether or not the Government of India are prepared to permit the commencement, when needed, of either or both of the two Railways, as, in the event of refusal, this Government will be immediately obliged to apply itself to the very difficult task of seeking for the means of other suitable employment for very large bodies.

DHOND TO MANMÁD RAILWAY.

STANDARD GUAGE.

1st Section.—From Dhond to Ahmednagar, 47½ miles.

State of project. Line completely surveyed, approved, and staked out, plan and section plotted fair. Work could be commenced at once. The plans and estimates for the stations and masonry works are in hand, and will be probably completed by the end of March.

2. The rough quantities of earth-work, ballast, &c., are as follows:—

Quantities of earth-work and ballast.

Earth-work	562,000	in bank.
Moorum	300,000	in cutting.
Soft Rock	158,000	„
Ballast	202,205	

Estimated Cost.

		Rs.
Labour line can employ.	Earth-work	1,40,500
	Moorum	1,87,500
	Soft Rock	1,58,000
	Ballast, getting only	75,000
		5,61,800

at Rs. 3 a month for 5 months, or Rs. 15 per person, about 37,500 persons could be employed.

Section No. 2—From Nagar to Manmád, 84½ miles.

State of project. 3. First 12½ miles to Nimbadana surveyed, plotted, and staked out. Work can be commenced at once.

The remaining 72 miles have been previously surveyed, and a section exists, but it requires to be located afresh and staked out. If this was done at once, it would be ready to commence work on by 1st April, but the complete project would not be ready till 1st June.

Quantities of earth-work, ballast, and labour required. 4. The country is of much the same character as between Dhond and Nagar, perhaps rather lighter, but there are three large bridges against one on the former. Taking the mileage rate for earth-work, &c., at about the same ratio as in 1st Section, we should have roughly—

C. Yds.			Rs.
994,740	Earth-work @ 4 as.		2,48,685
531,000	Moorum @ 10 „		3,31,875
279,660	Rock @ 16 „		2,79,660
357,540	Ballast @ 6 „		1,34,077
			9,94,297

at Rs. 3 a month, or Rs. 9 each for three months, 110,000 persons could be employed.

Estimated traffic. 5. Traffic receipts as per Colonel Trevor's estimate:

		Rs.
Passengers ... 132 miles at Rs. 2,560...	... 337,920	[illegible]
Goods ... 132 „ at „ 3,750...	... 495,000	
Working expenses 60 per cent.		4,[illegible]
Net receipts Rs. ...		3,33,168

This statement accompanied letter No. 168 of 1875 to the Government of India, but the capital cost was then shown as Rs. 74,000 a mile.

Cost of line. 6. The late survey has made great improvements in the line, considerably reducing the cost, and it is now estimated at, say, 68,000 a mile, or total Rs. 89,76,000; the line would, therefore, earn on the above data about 3·7 per cent.

Famine traffic. 7. From the middle of October to the end of the year 1876, about 100,000 tons had to be hauled down the Thul Ghát and up the Bhore Ghát to the Famine districts; and in the next few months, 100,000 tons more will probably be hauled round by this circuitous route. This 200,000 tons for 132 miles at 5½ pies per ton per mile alone would have given the line a gross receipt of Rs.7,56,250.

Saving in distance and cost of haulage. 8. The distance from Manmád to Kalyán is ... 128½ miles
From Kalyán to Dhond ... ... 132½ „
260¾ „

and Traffic from east of Manmád to east of Dhond would only have to travel by the Dhond and Manmád line instead of 260¾ miles ... 132 „

The saving in distance hauled, therefore, would be, say, and the saving on hauling this distance at 5½ pies per ton per mile would be Rs. 3 annas 11 per ton to the consignee. 129 miles.

	Miles.
To Poona the distance from Manmád *viá* Kalyán is	128½ + 86¾ = 214
Viá Dhond and Manmád line	132 + 46 = 178
Difference in favour of Dhond line in distance...	Miles 36
In cost, 36 miles, at 5½ pies per ton per mile, Rs. 1-0-6.	

Saving to consignees. 9. Of the 200,000 tons of grain above-mentioned, about 72,000 tons may be taken for Poona stations, and the remaining 128,000 tons for stations east of Dhond.

Therefore the total saving of cost of haulage to consignees by the Dhond and Manmád Railway would have been—

	Rs.
72,000 tons at Rs. 1-0-6	72,375
128,000 „ at „ 3-11-0	4,72,000
	5,44,375

Amended Rough Estimate for Line from Dhond to Nagar, 47½ miles.

	C.Yds.		Rs.
Earth-work in bank ...	562,000	at 4 as. ...	1,40,500
Moorum in cutting ...	300,000	at 10 as. ...	1,87,500
Soft Rock „ ...	158,000	at 1 rupee ...	1,58,000
Ballast, Main Line ...	183,822	at 12 as. ...	1,37,866
Do. Sidings ...	at 10 per cent....	...	13,786
Bhima Bridge 1,120 R. F. say 28 spans 40 ft. arches, piers 30 to 40 ft. high, at Rs. 200 R. F.			2,24,000
Minor Bridges and Culverts 47½ miles at Rs. 7,000 per mile			3,32,500
Fencing Shahabad stone posts and 4 wires (say) 100 miles at Rs. 1,000 per mile			1,00,000
Level Crossings 50 at Rs. 500			25,000
Stations, *excluding Sidings—Nagar*, say			75,000
Intermediate 4 at 20,000			80,000
Inspectors' Bungalow and Staff quarters, say			35,000
Telegraph at Rs. 1,000 per mile			47,500

Bombay, 15th January 1877.

DHOND AND MANMÁD RAILWAY.

STANDARD GAUGE.

	Distance miles.
Dhond to Nagar	47½
Nagar to Manmád	84
TOTAL	[illegible]

Probable cost 90 lacs.
Receipts 8,32,920 rupees.
Working expenses at 60 per cent. 4,99,752 rupees.
Net profits 3,33,168 rupees or about 3·7 per cent.
Number of people it will employ for 5 months—from Dhond to Nagar 37,500 persons: for 3 months from Nagar to Manmád 110,000 persons.

E. MARRYAT, *Captain, R. E.,*
For *Consulting Engineer for Railways.*

NOTE ON THE HUBLI-[illegible]LLARY RAILWAY.

From Kirwatti, on the Canara Frontier, to Tungabuddra River.

Metre Guage.

Quantity of Earth-work and Ballast.

	Earthwork, Cubic Yds.
Kirwatti to Hubli	6,00,000
Hubli to Gudduk	3,78,950
	1,06,745
Gudduk to Tungabuddra	4,86,920
	94,883
TOTAL CUBIC YARDS ...	16,17,498

	Ballast, Cubic Yds.
Kirwatti to Hubli	60,795
Hubli to Gudduk	73,730
Gudduk to Tungabuddra	96,522
TOTAL CUBIC YARDS ...	2,31,047

Calculation of Labour required for above.

	Rs.
2. 16,17,498 cubic yards Earth-work @ 4 annas	4,04,000
2,31,047 cubic yards Ballast, @ 8 annas for getting only	1,15,500
	5,19,500

A man for 5 months at an average rate of Rs. 3 a month, Rs. 15, ... or $\frac{5,19,500}{15}$ = say 35,000 persons.

Labour Line will employ.

3. This line has been completely surveyed, and plans and estimates prepared. The line, from about 18 miles west of Hubli to Gudduk, has been permanently staked out; but beyond Gudduk it has been run, but not finally located.

State of Project.

If work is to commence shortly, a party should *be at once* sent down to pick up the portion staked out, supply any missing links, and locate the remainder.

4. The estimated cost of the whole line from Karwar to Bellary is—

Estimated cost.

Karwar to Gudduk	110 lacs of rupees.	
Gudduk to Bellary	51	do. do.
Total ...	161	do. do.

The total length is 236 miles, of which 27 miles is in the Nizam's Dominions.
Cost—nearly Rs. 70,000 a mile.

Traffic.

5. The Committee that sat in 1873 arrived at the conclusion that the line from *Karwar* to *Gudduk* would give a net return of 4·09, taking the working expenses at 55 per cent. of the gross receipts; or 3·63 per cent., taking the working expenses at 60 per cent. on the 110 lacs of capital required; the gross receipts being estimated at Rs. 10,02,000.

[illegible]bable returns.

No traffic estimate for portion from Gudduk to Bellary has ever been framed; but it runs through a fairly rich and populous district, and should earn about Rs. 7,000 a mile. Until the link connecting it with Karwar is complete, it is impossible to say which course the cotton traffic would take. Taking Rs. 6,000 a mile for the whole section from Kirwatti to Bellary—155 miles—we should have a traffic of Rs. 9,30,000, which, with working expenses at 55 per cent., would give a net return of Rs. 4,18,000; or nearly 4 per cent. on the cost, taken at Rs. 70,000 a mile. But this section of the line would not cost more than Rs. 60,000 a mile including rolling stock, it being the Ghát Section which runs up the total mileage rate; at this cost it would return 4¼ per cent. on capital expenditure.

6. It is presumed this section would be carried out under the orders of the Madras Government, the Tungabuddra Bridge being done by this Government. The following note shows the number of men that this section will employ—

Section—Tungabuddra to Bellary.

	Cubic feet.	Annas.	Rs.
Earth-work ...	561,845	at 4 ...	1,40,461
Ballast	83,163	at 8 ...	41,580
		TOTAL ...	1,82,041

At 3 rupees a month for each person, or 15 rupees for 5 months ... ... $\frac{1,82,041}{15}$

say, 12,000 persons.

Statement of Distribution of proposed Enginering Staff from Kirwatti to Hubli, 29 miles, and Hubli to Tungabuddra River (inclusive) 84 miles. Total 113 miles.

86 miles in British Territory.

Working Expenses at 55 per cent., Rs. 5,11,500.
Net Return, Rs. 4,18,500, or 4·5 per cent.
Number of people it will employ for 5 months, from Kirwatti to Tungabuddra—35,000; Tungabuddra to Bellary—12,000 persons.

E. L. MARRYAT, *Captain, R. E.,*
For Consulting Engineer for Railways.

23rd January 1877.

No. 124, dated Calcutta, the 5th February 1877.

From—The Additional Secretary to the Government of India,
To—The Secretary to the Government of Bombay, P. W. DEPT.

I AM directed to acknowledge the receipt of your letter No. 42E—126 of 23rd ultimo.

2. With reference to its 3rd, 4th, and 5th paragraphs, I am to state that it was the intention of His Excellency the Governor General in Council to leave entirely to the judgment of the Government of Bombay, the question to be decided in each particular case on its own merits, whether the commencement of relief works is or is not necessary. On this point, therefore, it need only now be added that His Excellency in Council leaves the matter to the Government of Bombay, with complete confidence not only that it will be decided rightly, but that a wise economy, consistent with the duty of giving complete protection to the lives of the people, will be practised.

3. The views stated in paragraphs 6 to 9 of your letter are generally approved by the Government of India.

4. With regard to the Dhond and Munmar Railway, referred to in paragraphs 10 to 18 of your letter No. 42E. of 23rd ultimo, the Governor General in Council authorizes the commencement of the work, if, in the opinion of the Government of Bombay, this course becomes urgently necessary in consequence of more extensive relief works being required than those actually in progress. Work should, however, as far as may be practicable, be commenced only on those portions of the undertaking which, as noted in paragraph 14 of your letter, can be carried out without necessarily committing the Government to the immediate completion of the line when the present difficulties have ceased. The Government of India is not at the present time able to decide finally whether this line can be taken in hand with a view to completing the work.

5. With reference to paragraphs 19 to 23 of your letter regarding the Karwar and Bellary Railway, the questions connected with which are considered by you to be somewhat less urgently pressing, the Government of India will immediately place itself in communication with the Government of Madras and Sir Richard Temple on the subject, and the Bombay Government will be informed of the result with the least practicable delay.

6. With regard to the 25th paragraph of your letter, I am to state that the Bombay Government is right in assuming that the stipulations to which you refer would not apply to works of an imperial character, such as the Dhond and Munmar line; and the Governor-General in Council fully admits the justice of the remark that, in applying hereafter any rules that may be laid down in regard to the enforcement of provincial responsibility for meeting the charges for Extraordinary Public Works, due regard must be had to the special circumstances under which some of these works may be undertaken in the Bombay Presidency.

No. 42, dated Madras, 27th January 1877.

From—The Secretary to Sir R. Temple, on Special Duty,
To—The Secretary to the Government of India.

By direction of Sir Richard Temple, I have the honor to submit copies of the under-mentioned papers regarding the railway-borne grain traffic into the famine districts of Madras.

List of papers.

Covering letter to the Madras and Bombay Governments.
General memorandum on the steps needed to improve the railway traffic into the famine districts.
Narrative of Captain Bisset's inspections.
Sketch of the probable weight of grain traffic on the line from Madras to the Arconum junction, with reference to the doubling of this section of the line.

No. 40-41, dated Madras, 27th January 1877.

From—The Secretary to Sir R. Temple, on Special Duty,
To—The Secretaries to the Govts. of Bombay and Madras.

By direction of Sir Richard Temple, I have the honor to forward copies of the papers marginally noted regarding the railway-borne grain traffic into the famine districts of the Madras Presidency.

Memorandum on the steps needed to improve the grain traffic into the famine districts by railway.
Narrative of Captain Bisset's inspections.
Sketch of the probable weight of grain traffic on the Arconum section of the Madras Railway.

2. I am to solicit the attention of the Government of Bombay / Madras to points numbered I, II and V, / III, IV, VI, VII and VIII, in the enclosed memorandum. Sir Richard Temple would be glad to learn whether His Excellency the Governor / His Grace the Governor in Council is disposed to consider favourably the suggestions now submitted.

Memorandum regarding the grain traffic by railway into the famine-stricken districts of the Bombay and Madras districts.

Narrative of inspections and enquiries by Captain Bisset, R.E.
Note regarding the amount of grain to be carried by railway into the famine districts.

By Sir Richard Temple's order, the papers marginally noted are submitted with the following remarks which embody his views and recommendations.

2. Captain Bisset has entered with energy and discretion upon the duty of remedying the block in railway-borne grain traffic into the famine-stricken districts. He has shown that, to

a considerable extent, the want of power on the Madras Railway has re-acted upon the Great Indian Peninsula Railway, and has impeded the transport of surplus grain from Hindustan and Central India into the southern districts. Without following Captain Bisset through the whole of his narrative, it will suffice to note briefly the several points to which he draws special attention, and to state Sir Richard Temple's remarks and suggestions upon each.

The points are:—

I.—The Great Indian Peninsula Railway should again begin to book grain through to stations on the Madras line at the rate of 90 wagons per diem, and should be ready to increase that rate up to 150 wagons a day, as soon as the Madras Railway is able to take and dispose of a larger number.

Major-General Kennedy, on receipt of a telegram from Sir Richard Temple, replied thus;—"Booking through to Madras stations was re-opened on 23rd January. If it is considered advisable, only ninety suitable wagons will be worked into Raichore daily. But Agent and Traffic Manager state that booking cannot in practice be limited. Surplus beyond ninety wagons must be dealt with when possible by Madras Railway."

It therefore appears that the stream of through-booked grain has begun to come on the Madras Railway. If this stream is to be properly dealt with and to be kept up, then the Madras railway must lose no time in strengthening its power of dealing with the grain traffic from the north. And the modes in which, according to Sir Richard Temple's judgment, the increase of power can be best attained are indicated at points III, IV, VI, VII and VIII below.

II.—The booking of grain by the Great Indian Peninsula Railway to Raichore with a view to its being re-booked there for Bellary and other Madras stations should be discouraged.

General Kennedy in the same telegram says "Booking is not now limited to Raichore. Great Indian Peninsula Railway is doing all in its power. Remedy must be found in Madras where it is suggested effective remedy must be applied." On this point Sir Richard Temple has only to express his hope that the Great Indian Peninsula Railway will as little as possible have recourse to the practice of booking to Raichore grain intended for stations further south, and thereby blocking the joint station. But then the Madras Railway must in its turn receive, work off and return the Great Indian Peninsula Railway wagons promptly and regularly; or else there will be risk of the Great Indian Peninsula Railway Traffic Department again resorting to the practice of refusing to book up-country consignments beyond Raichore. At points III, IV, VI, VII and VIII below will be noticed some of the steps which must be promptly taken to enable the Madras Railway to fulfil the reasonable demands of the Great Indian Peninsula Railway.

III.—Additional sidings should be put in at the Raichore station, so as to facilitate prompt disposal of trains.

His Grace the Governor of Madras in Council has been pleased to order the immediate construction of these sidings.

IV.—Crossing stations should be made, so as to divide the long runs and facilitate traffic between the stations of—

Kosgee to Adoni.
Adoni to Auspree.
Auspree to Nancheerla.
Gondicul to Veerapore.

His Grace the Governor of Madras in Council has been pleased to order the immediate construction of these crossing stations.

V.—The Great Indian Peninsula Railway should be requested to observe and fulfil the following requirements, namely:

(a) to deliver up to and not more than the Madras Railway can remove, and to load through grain in suitable wagons.
(b) to marshal their trains regularly and to marshal the covered cotton wagons (if any are sent) all together.
(c) to give the Madras Railway earlier notice of the trains ordered to Raichore and of their load.

Sir Richard Temple would suggest that the Government of Bombay may be pleased to impress these requirements upon the Agent and Traffic Manager of the Great Indian Peninsula Railway and to take such steps as may to His Excellency the Governor in Council seem fit with the view of securing compliance.

VI.—The Madras Railway should be requested to observe and fulfil the following requirement namely—

(a) to keep the Great Indian Peninsula Railway informed how many through booked wagons they can take and promptly dispose of daily.

Sir Richard Temple would suggest that the Madras Government may be pleased to impress this requirement upon the Agent and Traffic Manager of the Madras Railway, and to take such steps as may seem fitting to secure compliance.

VII.—The despatch of additional engines from the Coast section to the Raichore section of the Madras Railway, so as to enable the Railway Company to receive from the Great Indian Peninsula Railway and dispose of 150 wagons daily at the earliest possible date.

On this point Sir Richard Temple would remark that he is aware how large a quantity of grain is waiting at Madras for despatch to the famine districts, and that all the engines on the Coast section have full work there. But he would explain that if three extra engines can be despatched to the Raichore section, they will, if the Great Indian Peninsula Railway deliver 150 wagons daily at Raichore, be able to carry into the famine districts of Bellary and Cuddapah nearly twice as much grain as they could deliver from the Madras terminus. Furthermore, much of the grain coming from the north is of a cheaper and more sustaining kind than the rice which is being sent up from the sea-coast. And moreover, these northern grains, cholum (jowari), and cumboo (bajra) are the natural ordinary food of the poorer classes in the Ceded Districts, whereas those people in ordinary years hardly eat rice at all.

Under all these circumstances Sir Richard Temple earnestly recommends to the Madras Government that additional engines should be detached from the coast section to work, for the next three or four weeks, on the Raichore section. At the end of that time the extra engines, for the construction of which at Bombay Captain Bisset has provided, will be ready. The new engines can work on the Raichore section, while the additional engines belonging to the Coast section of the Madras Railway can return to that section and work on the Arconum section.

VIII.—The improvement and strengthening of the telegraph staff on the Madras Railway, so as to facilitate the expected heavy traffic and prevent avoidable accidents.

Sir Richard Temple would invite the attention of the Madras Government to this requirement, and would suggest that the Madras Railway Agent be pressed to take immediate steps to strengthen and improve the telegraph arrangements and staff on his line.

IX.—The early doubling of the 35 miles of railway from Ambatoor near Madras to the Arconum junction.

Sir Richard Temple has had the honour of conferring with His Grace the Governor on this subject, and he has caused the appended sketch to be drawn up showing the weight of grain traffic, which probably should come upon this section of the line. The Arconum section, it may be remembered, has to feed the two lines which bifurcate northwards to the Ceded Districts and southwards towards North Arcot and Bangalore. Sir Richard Temple considers that if this line can now be doubled without impediment to the working of the grain traffic, and if the doubling could be completed within six weeks or two months, then it ought to be undertaken and to be begun at once.

MADRAS,
28th January 1877.

C. BERNARD,
Secretary to Sir R. Temple.

Narrative of inspections made by Captain Bisset, R.E., who was deputed to investigate and suggest remedies for the block in grain traffic between Northern India and the famine districts of the South.

Khandwa, 19th January.—About 200 tons of grain are waiting for despatch; some for Madras line (Adoni) has been detained for some weeks.

About 100 tons a week have been forwarded from Holkar Railway, but none now accepted by Madras.

On the 1st January there were about 13,000 tons of grain lying at the stations in this district, which extends from Nagpore to Nandgaum, and in addition to this there were 1,000 wagons standing loaded for the south-eastern district, *i. e.*, Lanowlee to Raichore and Madras Railway.

District Traffic Superintendent's Office, Bhosawal, 19th January.

Detail of accumulations of 19th January.

Nagpore	...	8,500 Tons.
Small stations to Khamgaum	...	2,000 „
Mortizapore	...	1,500 „
Badnera	...	700 „
Akola	...	1,700 „
Nandora and Shegaum ...	...	800 „
Bhosawal to Nandgaum ...	...	300 „
Total	...	15,500 Tons.

The accumulations at the stations increased up to a maximum of over 17,000 tons on the 13th, and are on this date 15,500 tons, of which 8,500 tons are at Nagpore itself.

It appears to me that open preference is given to cotton and linseed over grain and other seeds.

The allotment of wagons during a recent period of 6 days was—

525 for cotton.
136 „ linseed.
153 „ grain.

Total 814 „ wagons from Nagpore district. The preference given to cotton and linseed over grain which has been for weeks at the stations is intelligible only on the supposition that the whole of the grain in question is intended for the Madras Railway, for which supplies up to the full working power of the Madras line were already on the road.

I do not think the above supposition is in accordance with the facts, but as the question does not affect the supply to the Madras districts, I do not consider it of immediate importance to dwell on it further.

During the same period 714 empties were given to the Jubbulpore side, and returned chiefly loaded with grain. The estimated maximum capacity of the line here is 18 goods trains or 450 goods wagons.

Full working power of double line, Bhosawal to Egutpura.

This may probably be increased if the Thull Ghât can pass more.

20th January.

The greatest day's work I could find in the recent books* was 451 loaded wagons worked towards Bombay on the 20th December.

* Egutpura,—Thull Ghât.

The highest average of 6 days was on 4th to 9th December when 336 daily were worked towards Bombay.

The average of 9 days, 8th to 16th January, was 263 loaded wagons towards Bombay and 362 wagons (including empties) from Bombay.

The estimated capacity is, however, over 500 wagons, and the present working cannot be taken as a fair average, as the numerous special trains running have not only taken train-room, but have upset the regularity of working of all the goods trains.

Thull Ghât estimated capacity.

The working maximum of the Thull Ghât is not likely to exceed 450 wagons a day, but if this is done, the Ghât is equal to the same work as the line above it.

22nd January.

With the cotton season coming on, a large portion of the 450 wagons will be for Bombay itself, and as the powers of the Bhore Ghât are about equal to those of the Thull Ghât, there is no difficulty to be feared on the former, even allowing for grain traffic and ordinary traffic from Bombay itself.

Bhore Ghât estimated capacity.

Between Lanowlee and Poona, there were difficulties felt early in December, and crossing stations were at once put in at two points between Lanowlee and Poona.

Single line above the Bhore Ghât, Lanowlee to Poona.

When the Sholapur demand increased, the long distance stations between Poona and Sholapur were also divided by crossing stations, four of which have been already opened.

Poona to Sholapur.

Similarly, between Sholapur and Shahabad, a crossing station has been put in to divide Gulburga and Shahabad.

Sholapur to Shahabad.

There are still some long runs between Sholapur and Gulburga and also between Shahabad and Raichore, but the powers of the worst part of the line are equal to about 7 goods trains a day, or much in excess of the working of the Madras Railway.

Shahabad to Raichore.

The promises made by Mr. Conder and the Agent, Great Indian Peninsula Railway, and by the Government officers, that from 150 to 200 wagons a day shall be delivered at Raichore (if required) is apparently practicable without more crossing stations, and the further addition to the carrying powers of this section of the line is considered practicable if the powers of the Madras line are increased so as to make this necessary.

There is ample material for sidings in store, and both the Government and the railway officers are ready to put them in as soon as there are any signs of their being wanted.

The powers of the railways have now been traced from the sources of supply to Raichore, and the powers of the Madras Railway have now to be considered.

Madras Railway, Raichore to Gooty or to Bellary.

If no other circumstance had to be considered than the interval between stations, the line should be able, notwithstanding two or three long runs, to pass about 9 trains a day.

But the long runs of 18, 12 and 14 miles which follow each other from Kongee to Adoni, Adoni to Auspree, and Auspree to Nemcherla, should in my opinion be divided by crossing stations.

Whether the long run of 18 miles between Goonddcul and Vurapoor on the Bellary branch should be divided, or not, depends upon the number of trains required for Bellary.

With two passenger trains and with engines of the same power as those now here, these 9 trains would not carry the 200 wagons which the Bombay Railway can undertake to deliver.

The first difficulty, however, is the want of engines, and whether or not this section has its proper share of the engines on the line, there is evidently work for more.

Want of engines.

Having found in Bombay that there were too few engines here, and that two trains of engine gear for 12 engines were just being despatched to the State Railways, I asked the Director by telegram to suspend despatch, and I received a reply that the Consulting Engineer had been asked to erect and keep in Bombay the 12 engines referred to.

12 State Railway engines ordered to be erected in Bombay.

Colonel Hancock was in communication with the Railway officers about the erection, and I hope the work is now in hand. Unfortunately they are all passenger engines.

Discussions have apparently been going on about this for some time past between the Traffic Managers of the railways.

Want of sidings at Raichore.

Although they did not agree on the subject, neither appears to have referred the question for settlement till within a fortnight.

The reference made by the Consulting Engineer, Madras, was at once replied to by the Consulting Engineer, Bombay, who stated that while he was informed that more might be done with the existing siding accommodation by night working and extra staff, he was directed to consent at once to anything which the Madras Government desired in this matter. On arrival here, I found that the Assistant Traffic Manager attached the greatest importance to a very easily constructed siding, and after looking at the work being done in the yard, and the difficulties which will be noted on hereafter, I sent the following telegram to the Consulting Engineer, Madras:—

Raichore, 23rd January.

"Bombay Government consent to additional sidings here; 12 engines, promised by Director, State Railways, will increase work, and early execution by District Engineer requested."

Telegram asking for execution of additional siding.

I met the District Engineer in the afternoon, and found that materials were available, and that the work could be done within a week of receipt of orders.

Mr. Conder and others say—

1st, that the engine power should be at once increased.
2nd, that the line should be worked night and day.
3rd, that there should be night staff for transferring goods.

Complaints by the Great Indian Peninsula Railway officers.

If it is possible to give more engines from the other parts of the line, there is no doubt that their services on this short run would result in the delivery of three tons of grain at Bellary, for one which they could bring from Madras to the same market.

I propose to discuss this subject at Madras.

The night staff was put on from the 22nd January—

Complaints of Madras Railway officers.

1. The want of proper marshaling of the trains brought in from the Bombay line gives a great deal of trouble at Raichore.

2. The use of the Great Indian Peninsula Railway cotton wagons for through traffic involves transhipment of a good many wagons at Raichore (I talked to Mr. Conder in Bombay about this, and I ascertained that he had issued orders against the use of such wagons when it could be avoided).

On both of these subjects I telegraphed to Mr. Conder yesterday asking him to give the desired assistance.

Telegram to Mr. Conder, despatched 23rd January.

3. Earlier notice of trains ordered for Raichore was also asked for.

This is a grave calamity. It not only harasses traders, but it adds to the cost of transport, and to the time occupied in transport.

Interruption to through booking.

It thus diminishes the powers of the railways.

I have deferred my remarks on this subject till now, because it is at Raichore that its evil effects are most prominent. The yard is now filled with grain, which has been brought to Raichore and stopped there, chiefly because of the interruption to through booking.

The grain blocks the yard, occupies valuable space, and demands infinitely more work and attention than if it was booked through in suitable wagons.

I saw a number of the merchants and brokers here to-day. All were anxious to turn a penny by moving on their grain to Bellary and Adoni.

They have a good deal of grain on the road now booked from Cawnpore and elsewhere to this place, and they all want to pass it on to the more distressed districts.

Some of the grain certainly belongs to Raichore merchants, but much wanted to go on to Adoni, and all of it now wants to go on, as the prices here have fallen to 10 seers and 10½ seers per rupee.

As there is no obstacle now to a limited amount of through booking, I despatched the following telegram to both the General Traffic Manager, Great Indian Peninsula Railway, and the Consulting Engineer for Railways, Bombay:—

Raichore, 24th January.

Telegram asking for re-opening of through booking up to 90 wagons a day.

"Raichore crowded with grain, booked locally from your side, but intended to go on. This is a serious evil. Stop this and re-open through booking as far as Gooty and Bellary, distributing the 90 wagons which Madras can probably take daily in such a way as to keep private trade moving, at the same time avoiding rushes."

The Honourable Mr. Gibbs, whom I met in Bombay, mentioned that he had trustworthy information that the Berars could supply over 200,000 tons of grain without *difficulty*.

Some doubts may exist as to the good quality of all the grain thus taken up, as it must be from pits.

I have sent a letter in continuation, inviting attention to the Nagpur district, and although I do not think it is possible to clear any district without neglecting another equally important one, I trust that the equitable distribution of the wagons according to the register of consignments, and the re-opening of through booking on the limited scale now possible, will restore confidence to the private traders.

After visiting Madras I shall be able to report how soon the limit of 90 wagons can be enlarged; and I trust that the powers of the Madras line may soon be equal to a larger number.

The actual despatches of wagons from Raichore station during the 19 days just ended have amounted in all to 1,367 wagons, or an average of 72 per day. Much remains to be done before the office of the Great Indian Peninsula Railway can be worked up to, but there are hopes that by marshaling of trains, and more care in selecting wagons for through traffic, the present engine stock will be able to carry more than the 90 wagons referred to in my telegram.

Actual despatches from Raichore southwards, 4th to 22nd January.

On my journey here I found everywhere, from Poona onwards, that carriage was wanted for grain to the Madras line; and I learnt from Mr. Hamilton Maxwell of Bombay, whom I met at Shahabad on his return from Hyderabad, that the same demand existed there and especially at Dharur, where the merchants were particularly anxious to get their grain on to Bellary.

RAICHORE,
24th January 1877.

W. BISSET.

Sketch shewing the amount of grain required in the distressed districts and the ability of the railways to carry it, as bearing upon the question of doubling the line from Madras to Arconum junction.

THE districts which must draw their food supplies from Madras and the North, belong to two distinct sections of the peninsula, namely:

A. Bellary, Cuddapah and Kurnool, with perhaps half a million of people on the north-west districts of Mysore; or a total population of (say) 4½ millions.

B. Salem, North Arcot and Coimbatore, with perhaps 1½ millions of people in the south and south-eastern districts of Mysore, or a total population of (say) 7 millions.

Note. The district of Chingleput can best be supplied from Madras itself by cart, or by other means, without any help from the main line to Arconum.

2. Now the districts in class A have suffered the most grievous failure of harvests, and it may perhaps be reckoned that one-third of the population can live on the old food stocks, while two-thirds of the population will require imported grain; that is to say, these districts will require, at the rate of 400 tons a day per million of population, 1,200 tons a day of imported grain.

Now 150 wagons a day from the Great Indian Peninsula Railway will bring in 1,050 tons, or say 1,000 tons, and this leaves to be provided from Madras 200 tons a day.

3. The districts in class B are not quite so distressed; three previous harvests and present harvests were better; and it will be quite safe to estimate that one-half of the population will be fed from old stocks of food. There remains one-half, who will eat imported grain. Of this demand probably one-third will be met from the west coast and from Negapatam; and thus two-thirds of the half, or one-third of the whole seven millions, *i. e.*, 2⅓ millions, must be fed from Madras. And they will require at the rate of 400 tons a day per million (say) 1,000 tons.

4. Thus, the total requirements from Madras will be—

	Tons daily.
For districts in class A	... 200
Ditto B	... 1,000
Total	... 1,200

5. Now the section from Madras to Arconum can (so the Railway authorities say) do at a pinch 9,000 tons a week, and they can do comfortably 7,200 tons a week. Thus, even if they worked quite smoothly, if there were no hitch, and if the supply of grain went on continuously, the Madras Railway from the sea to Arconum could first, by working full power, do the duty required of it. But, practically, things do not always work smoothly and continuously. Storms in May may prevent the landing of grain, and the quantity sent up during March and April ought to be more than the mere 1,200 tons per diem. It therefore seems that, to guard against possible disaster, the line to Arconum should be doubled and the work should be done at once.

6. And further, to enable the proper supply of Northern* grains to come into the Ceded Districts, additional engines ought to be transferred from the Madras to the Raichore section of the Madras Railway. Within a month they can be set at liberty by the new engines borrowed from the State railways; and so they can be back in time for the increased work of the doubled line to Arconum. In order to keep up the supply to the Ceded Districts, it is absolutely necessary to send up these three engines; for the Great Indian Peninsula Railway undertakes to deliver 150 wagons a day at Raichore, and these wagons cannot be carried down, worked off and sent back without extra engines on that length. These engines will, working over the short lead from Raichore to Bellary, bring into that part of the famine country twice as much grain as they could do by working over the long lead from Madras to Bellary.

* *N. B.*—These Northern grains are cheaper than rice; they are more sustaining, weight for weight, and they are the ordinary food of the people.

MADRAS,
27th January 1877.

C. BERNARD,
Secretary to Sir R. Temple.

No. 152, dated Bombay Castle, 2nd February 1877.

From—*The Secretary to the Government of Bombay, Public Works Dept.,*
To—*The Additional Secretary to the Government of India.*

I AM directed to forward for information copy of a letter addressed to the Honourable Sir Richard Temple, Bart., K.C.S.I., on the subject of the grain traffic by Railway into the famine districts of the Madras Presidency.

No. 151, dated Bombay Castle, 2nd February 1877.

From—*The Secretary to the Government of Bombay, Public Works Dept.,*
To—*The Secretary to* SIR R. TEMPLE.

I AM directed to acknowledge the receipt of your letter No. 41, dated 27th January and accompaniments, and, in forwarding copy of a report dated 31st idem from the Consulting Engineer for Railways, to observe that the Great Indian Peninsula Railway Company appears to be doing all that can be demanded of it and even more. The failure to deal with the traffic at Raichore on the part of the Madras Railway Company is what at present prevents more grain being carried to the Madras famine districts, and the Great Indian Peninsula, as is quite manifest, could not afford more help, by doing less, *i. e.*, by limiting the traffic. So long however as the Madras Railway fails to carry away from Raichore what the Great Indian Peninsula Railway brings, the grain must accumulate there; and if a block of wagons results, as was the case early in January, the work of the entire Great Indian Peninsula line and of lines working into it as well as the special grain traffic for Madras is more or less impeded. The only plan to adopt under such circumstances is to stop further accumulation, clear the block and release the stock as soon as possible by emptying the wagons. There is this to be said that grain intended for the Madras Presidency accumulated at Raichore is so much nearer its destination than it would have been if the Great Indian Peninsula Railway had not brought it down at all, but the inconvenience is very serious, and every possible means should be taken to induce the Madras Railway Company to strengthen this weak link in the chain.

Report by Lieutenant-Colonel H. F. HANCOCK, R.E., *Consulting Engineer for Railways, dated Bombay, 31st January 1877.*

THE Consulting Engineer for Railways has the honour to report as follows on points Nos. I, II and V in Sir R. Temple's Memorandum dated 27th January.

I. The Great Indian Peninsula Railway Company recommenced booking grain through to stations on the Madras line on the 23rd January; orders have been given not to send more than 90 through wagons into Raichore daily for the present, and to keep back loaded wagons in excess of this number; but the Great Indian Peninsula Railway Company are prepared if necessary to increase the number to 150 wagons a day or more; and while they will do all in their power to regulate the despatch of wagons, they represent that they cannot control the daily consignments of grain for the Madras line, and should these consignments, which are being poured in from the East Indian Railway as well as their own stations, be greatly in excess of 90 wagon-loads per day, or whatever the Madras Company can forward from Raichore, and should wagons consequently again accumulate on the Bombay side of Raichore to such an extent as again to necessitate a suspension of through booking, the responsibility will rest with the Madras Railway Company.

II. The booking of grain from Great Indian Peninsula Railway stations to Raichore has been discouraged, and for some days during the late block consignees of grain to Raichore were asked to delay booking, but the Company cannot avoid booking consignments to Raichore altogether, and if grain should be consigned again in large quantities to Raichore, consignees should be required to remove it as it arrives, and if necessary the wharfage charge should be raised in order to induce its speedy removal.

The suspension of through booking from the 8th to the 23rd January doubtless encouraged local booking, but was not the sole cause. Some merchants appear to have selected Raichore as a [illegible] position nearly in the centre of the district affected by the famine.

V (*a.*) The Great Indian Peninsula Railway will deliver wagons daily, and if possible not more than, what the Madras Railway Company can remove as above explained. They have also promised to book through as far as possible in wagons suitable for the Madras Railway, and the General Traffic Manager states that practically all will in future be suitable, *i. e.*, any exceptions will be accidental and very rare.

(*b.*) The marshalling of trains is being done. It was mentioned for the first time when Mr. Conder met Mr. Elwin on the 16th January, and was agreed to from the date of resumption of through booking. The Great Indian Peninsula Railway Company represent, however, that it is not properly speaking a duty that should devolve on them, or which imposed according to the usual practice on Railway Companies.

(*c.*) The Traffic Manager, Madras Railway, telegraphed to Mr. Conder *on the 29th instant* it had never been mentioned to him before) to inform him by wire daily how many wagons

were loaded for Madras stations from each station on the Great Indian Peninsula and East Indian. It is not clear what use could be made of this information could it be supplied. What is wanted is, it is presumed, what Sir R. Temple has asked for, *viz.*, "earlier notice of the trains ordered to Raichore, and of their load," and Mr. Conder has given orders to have Mr. Church advised daily by telegraph how many wagons are under load for Madras stations at Shahbad; and also to telegraph to him what trains are ordered into Raichore, information hitherto supplied to the Station Master there.

The Consulting Engineer will defer any general remarks on the papers until the receipt of certain reports about to be submitted by the Agent, Great Indian Peninsula Railway Company.

Telegram, dated 7th February 1877.

From—*Bangalore*,	*To*—*Calcutta.*
From—SIR R. TEMPLE.	*To*—*Revenue Addl. Secretary.*

JUST starting from Bangalore to outlying distressed parts Bellary. Shall pass across worst tracts of Mysore. As we leave telegraph line for next five days, I send following in case of need for next mail. Over whole Madras Presidency famine is successfully combated, and starvation prevented. Physical condition of peasantry good. Relief works, great or small, everywhere open, charitable relief arrangements being well organized at all centres where people congregate. Organization for village to village relief already existing and being now utilised. Some deaths partly or indirectly due to want unhappily occurred at outset in districts near Madras, and some few may still occur despite medical treatment. Government of Madras recent orders on my suggestions for economy will prevent excessive outlay. Numbers on relief works not increasing but rather less than last month; probable increase hereafter, but will be restricted as much as possible. Numbers on charitable relief not yet large but will increase. There is still some want in unity and concentration of control in relief operations. Private grain trade remarkably active and successful everywhere. Shipping and Railways doing great work. Great Indian Peninsula working well and Madras Railway improving. If line to Arconum doubled I think railways can supply all needs. Plenty of country carts and excellent road communication; draught cattle not yet showing any signs of exhausting. Water often scarce, but absolute dearth nowhere. Humanity and zeal of all officials striving against famine praiseworthy.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

STATISTICS RELATING TO THE DISTRESSED DISTRICTS IN THE BOMBAY PRESIDENCY.

No. 212.

Extract from the Proceedings of the Government of India, in the Department of Revenue, Agriculture and Commerce, dated Calcutta, the 21st February 1877.

AGRICULTURE and HORTICULTURE.
Famine.

READ—

Telegram to the Government of Bombay, dated October 22nd 1876, requesting the submission of separate statements regarding each taluka in the distressed districts, showing its area, population, Government realizable revenue in 1875-76, rough proportion of *kharif* to *rabi* cultivation, average annual rain-fall, actual rain-fall up to date, ordinary prices of the staple-food of the taluka at that season, actual prices on the date of the return, probable extent of failure of crops, and amount, if any, sanctioned for relief works and other relief, and adding that the statements might be prepared from the best information then available, and corrected or supplemented afterwards if necessary.

Letters from the Government of Bombay, Nos. 6331, 6406, and 6561, dated the 4th, 8th and 15th November, 1876, forwarding the statements required.

Letter to the Government of Bombay, No. 459, dated 30th November 1876, requesting that the information received might be supplemented by a complete review of the situation, comprising—

"(*a*). A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately. If there be any prospect of further sowings, it should be mentioned.

(*b*). An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.

(*c*). Information as to the mortality past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.

(*d*). The nature of the water-supply, extent of its failure, further anticipated failure to be met, means, and remedial measures possible, if any.

(*e*). The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.

(*f*). The local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.

(*g*). The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.

(*h*). The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.

(*i*). The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.

(*j*). The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.

(*k*). The number of persons whom the Government has on its hands, at date of report, for relief (1) by works, (2) by charitable measures, and the number, roughly estimated, which it is likely to have on its hands on March 1st, May 1st, and July 1st."

Adding that the above information "should be given for each taluka separately, and should be, in the first instance, prepared by the Mamlatdars, the permission already given to place them on special duty being freely availed of for the purpose. The Assistant or Deputy Collector in charge should test, verify, or supplement the statements of each Mamlatdar, and then submit *as his own*, and in his own language, a complete report for the taluka on the points indicated, with full and free expression of his own opinions. Each taluka report should be passed on by the Collector with his remarks to the Commissioner, and by him similarly to the Bombay Government, who will forward it to this Department. No report of any one taluka should be detained anywhere because others have not come to hand, and the whole of the reports should have reached the Government of India by the 15th of January next. As many of the details above specified have already been partially collected, or are in process of collection, and the welding of the whole, including the new matter, into a complete form will be of obvious use to both Governments, the President in Council trusts that the call now made will not prove especially difficult or irksome.

Letters from the Government of Bombay of various dates between the 17th January and the 12th February 1877, forwarding the original reports received from each district, together with summaries of their contents, and a general summary of the whole.

Statement A, compiled from the returns and summaries received in reply to the telegram of October 22nd, and the letter of November 30th above referred to.

Statement B, being an abstract of statement A, with additions from the Bombay weekly returns, and the reports of local officers now submitted.

OBSERVATIONS.

As soon as the Government of India became aware, from the official reports of the Government of Bombay, and other sources, that the scarcity shewing itself in that Presidency was not unlikely to assume formidable proportions, the submission was requested of statements, containing elementary statistical information and a rough estimate of the probable failure of crops, regarding each taluka of the affected districts.

2. This information was supplied by the Government of Bombay with the utmost promptitude, and has since proved extremely valuable. It was, however, necessarily defective and temporary as regards the failure of crops, inasmuch as the careful field inspections which take place annually in the Bombay Presidency had at that date barely commenced, and the period during which local or general rain might have materially altered the aspect of affairs had not altogether passed away. At the same time the particulars which it comprised revealed the very serious nature of the calamity then imminent, and the necessity for full and searching enquiry upon various points not included in the previous returns, with the view of avoiding, on the one hand, expenditure in excess of the requirements of any locality, and, on the other, the occurrence of disaster owing to the deficiency of grain supplies, the failure of water, or the need for further relief, whether by works or charitable measures, having been anywhere overlooked. The Government of Bombay were therefore requested to supplement their previous returns by a complete review and forecast of the situation, and, in accordance with the precedents of the famine of 1874, and the West Behar scarcity of 1875, to forward the original opinions of the mass of local officers, to which, when given deliberately, fully, unreservedly, and promptly, considerable value has always been justly attached. Such a review and forecast, it may be added, is of inestimable service, not only to the high authorities by whom it is eventually considered, but to the local officers themselves, by directing the attention of every one of them to all the points which it is advisable to keep in view, and leading them to endeavour to form regarding each an opinion in the case of their individual charge.

3. His Excellency the Governor General in Council has now to express his warm acknowledgments of the punctuality, care, and ability with which this somewhat onerous requisition has been responded to. The reports of the Assistant and Deputy Collectors in charge of talukas now submitted contain ample evidence both of acquaintance with and attention to their charges on the part

of the several Mamlatdars subordinate to them, and of energetic, watchful, and intelligent supervision on the part of the reporting officers themselves, while the remarks and criticisms of the Collectors and Revenue Commissioners shew that they have fully grasped the situation and the serious responsibilities which it imposes upon them, and will not fail to afford all necessary relief to the suffering multitudes dependent on their care, while not losing sight of the vigilant economy which the financial necessities of the State render indispensable. The Government of Bombay have very properly expressed a desire to "guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters." The Government of India fully acknowledge the difficulties pointed out, and will be careful not to attribute to the Government of Bombay the responsibility thus deprecated. His Excellency the Governor General in Council would have been glad to have fixed a more distant date for the submission of the reports if such a course would not have made them too late for the practical purposes for which they were intended; but, considering the advantages possessed by the Bombay Presidency in a complete system of village agricultural statistics, in a strong staff of officials in each taluka, and in the custom of Assistant and Deputy Collectors travelling about their charges for a large portion of the year, no less than the general evidences of care and acquaintance with the subject afforded by the reports received, His Excellency in Council believes that the information now laid before the Government of India is as complete and trustworthy as it was possible to obtain in time to be of service. His Excellency in Council has much pleasure in making public his general commendation of these reports, leaving it to the Local Government, if they think fit, to express their own approval of individual complete and thoughtful documents comprised in the collection.

4. The review now submitted comprised 90 talukas and 3 pettas, or separately administered portions of talukas, making a total of 93 sub-divisions of nine districts, all of which are situated above the Ghauts, and extend from the Satpura range of mountains, north of the Taptee river, to the southern extremity of the Bombay Presidency. Some failure of crops has occurred in portions of two districts, Colaba and Ratnagiri, on the sea-coast, but their condition is not such as to cause any anxiety, or to call for extensive relief operations. The area and population, both total and affected, of the nine districts, are given by the Bombay Government in their weekly statements at the figures quoted in the margin. These figures of the affected tracts nearly correspond on the whole, though not always in the case of individual districts, with the area and population of the talukas in which, according to the present review, the crop saved is estimated at less than one-half. If talukas in which the crop saved amounts to one-half be also considered as famine-stricken, then the affected area and population will be raised to 41,254 and 6,180,209 respectively.

	Total.	Affected.
Area in square miles	54,355	33,873
Population	7,963,927	4,981,616

5. The rain-fall during the past season, as reported in the returns of November, since which date no fall of any importance has occurred, is shewn in the margin for 86 talukas, for which the information is complete. This summary, however, has an unduly favourable appearance, inasmuch as the rain was in many places not only scanty, but unseasonable, as, for instance, in Satara and Dharwar, where 23 inches out of 30, and 9 out of 15, respectively, fell in the month of July. These inequalities are apparent in the Bombay Government's published statement for the period ending October 31st, and in a useful return published by the Bombay Chief Engineer for Irrigation on the 19th of that month.

Population.	Number of talukas.
Full rain-fall	4
Three-fourths	14
Two-thirds	12
One-half	26
One-third	21
One-quarter	8
One-seventh	1
Total ...	86

6. The proportions of *kharif* and *rabi* crops which have been saved have been stated separately in the several Taluka reports with such accuracy as was under the circumstances practicable. Reducing these to one figure for the taluka, by the aid of the proportions of *kharif* and *rabi* cultivation in the preceding year 1875-76, as given in the returns of November, the proportions of crop saved were, in round numbers, as shewn in the margin. Contrasting these results with those obtained from the November estimates of failure, which were, as already observed, too early in date to be more than a very rough forecast, it is highly satisfactory to find that they shew a more favourable condition of affairs. Whereas, by the

Districts.	Number of talukas in which the crop was—							
	Full average.	Three-fourths.	Two-thirds.	One-half.	One-third.	One-fourth.	One-sixth.	*Nil.*
Khandeish ...	4	3	2	4	6	...	...	..
Násik ...	...	1	3	4	2	1	...	...
Ahmednagar ...	...	...	3	2	3	1	1	1
Poona ...	...	...	...	3	2	1	...	2
Sholapur ...	...	...		...	...	1	...	6
Satara ...	2	3	2	1	1	1	1	..
Kaládgi ...	...	...	...	...	...	1	1	6
Belgaum ...	...	...	1	2	1	...	...	3
Dharwar ...	...	...	...	1	3	2	2	3
Total ...	6	7	11	17	18	8	5	21

by the returns of November, as summarized in the 5th paragraph of the despatch from the Government of India to the Secretary of State, No. 2, dated 12th January, the crop saved was above half in eleven districts only; it is now found to be above that proportion in twenty-four. The districts in which there has been total, or almost total, failure, remain twenty-one in both cases, and the intermediate number (comprising from one-half to one-sixth of crop saved) is consequently reduced from fifty-nine to forty-eight, out of which seventeen have got a half crop.*

8. The information now received on the important subject of remissions is equally satisfactory. The loss of revenue was reported in the 10th paragraph of the despatch above quoted as likely to reach sixty-six lakhs of rupees, of which forty-six lakhs were to fall in the current *financial* year and twenty lakhs in 1877-78. Later on, the estimate of the Bombay Government for the two years was about seventy-six and a half lakhs, and Sir Richard Temple, somewhat later still, gave fifty lakhs as the amount suggested to him by those local authorities with whom he had had an opportunity of conferring. The estimate under the present returns, which seems, like that of Sir Richard Temple, to be for the *revenue* year which ends on July 31st, is Rs. 46,84,732, and there is reason to hope, from the language used by many of the local officers, that this may prove to be an outside estimate. As regards the principles upon which remissions should be granted, the Government of India were in November last in correspondence with the Government of Bombay, and authorized them to abstain from selling the occupancy right of ryots for arrears of land revenue which were attributable to the unfavourableness of the season, and also to extend, by executive order, to the case of any sales of moveable property which might be indispensable, the exemptions which had been proposed in section 266 of the Civil Procedure Code Bill. Subsequently, Sir Richard Temple's suggestion for suspending arrears till the following year, instead of remitting them at once, was communicated to the Local Government for guidance; but on their pointing out objections to the measure arising from the Bombay revenue system, the matter has been left entirely to their discretion, with the request that the local authorities may be again warned against too free remissions, and authorised to hold balances in suspense in cases in which it appears probable that the landholder will, without undue pressure, be able to pay up next season—a course, it may be observed, which is recommended by several officers in the reports now under consideration. The amount of loss of revenue which may occur in the financial and revenue years 1877-78, in consequence of less land being cultivated through the impoverishment of the ryots and their loss of agricultural stock, cannot at present be estimated, and none of the local officers have attempted to do so. Taking all the above circumstances into consideration, however, His Excellency the Governor-General in Council sees reason to hope that the entire loss of revenue in the two financial years may not be so great as was at first apprehended.

* The discrepancy of two is owing to the addition of three *pettas* to, and the omission of Mahabaleshwar from, the present returns.

9. The question of the condition of the cattle and stock, at all times a highly important one, is especially so in the case of the Bombay affected districts, owing to their wealth in this respect, the proportion of animals to population being, it may be observed, 34 per cent. greater than in the affected districts of Madras. In some talukas the mortality has been most severe, the districts of Ahmednagar, Sholapur and Kaládgi having apparently been the greatest sufferers. The cattle have, however, been driven away in masses, in the case of Sholapur to the extent of one half their entire number, to the Ghauts or other accessible pastures, and the early steps taken by the Government of Bombay to throw open the forest reserves, and to facilitate the passage of cattle both by road and rail, have had a highly beneficial result. His Excellency, the Governor General in Council concurs with that Government in the hope that the mortality will, except in certain cases, be found to have been confined to the more old and worthless animals, and trusts that its percentage will be found not to be high on the total number, and that the grant of takávi advances for the purchase of fresh cattle, when the ploughing season approaches, for which the Government of India have already given free sanction, may prevent any great falling off in cultivation during the coming year.

Horses, Ponies, and Mules ...	...	100,997
Oxen, Cows, Bulls and Buffaloes ...	...	4,589,971
Sheep and Goats ...	...	2,549,027
		7,239,995

10. The condition of the water supply is intimately connected with that of the cattle. The Government of Bombay consider it to be satisfactory in fifty-eight talukas, while in thirty-one others considerable expense may have to be incurred in clearing out or deepening existing wells, in sinking new ones, and in other remedial measures. His Excellency the Governor-General in Council has every confidence that such relief as may be possible will be afforded, and is glad to learn that the local Government anticipate no calamity from this source.

11. The course of prices during the critical period from the end of October to the close of the year is very clearly shown in the summary of the taluka reports, statement A, column (c), and is remarkable for the sudden rise which in most cases occurred near the middle of November, and the almost equally rapid fall which followed as soon as the scarcity became known, and private enterprise came forward to supply the deficiency. Severe and extensive, however, as the failure of crops has been, the prices have at no time been generally so high as what are ordinarily understood to be famine prices, and they have become now so favourable that according to the latest accounts there are probably only two or at most three districts where they are on an average higher than ten seers per rupee, which is the rate long since fixed by the Government of India as that on prices rising beyond which grain batta may be allowed to public servants drawing Rs. 16 per mensem and under. The famine is not so much one of food as of money to buy it with, and it must not be overlooked that wherever failure of crops has been only partial, the crop saved will produce an amount far in excess of what it would have been worth in ordinary years. The activity and sufficiency of private trade in the Bombay presidency have been so fully established, chiefly in consequence of the policy from the first pursued, that His Excellency the Governor-General in Council has every confidence that, even if, as anticipated by the Bombay Government, no further material fall should take place, no interference on the part of Government will be required, even in the Southern Mahratta Country, where difficulty of access and local combinations occasioned some anxiety before the close of last year.

12. The character of the population, which in some parts of India is a very important feature in the formation of an estimate of the State relief likely to be required in times of scarcity, would appear to be in Bombay tolerably uniform and little likely to effect the issue. The people are mostly agricultural, the number of peasant proprietors is very great, and there are few large and wealthy landholders who are able to assist their tenantry.

13. The emigration has amounted to 671,405, or about 13·5 per cent. on the affected population, and has been to a large extent induced by the necessity for driving the cattle to distant pastures. One body has passed to the north-west into the Nizam's Dominions, Berar, and even the Central Provinces, while another, probably the larger of the two, has resorted to the Western Ghâts along their whole line. From certain talukas, which annually during the fair season send forth bands of labourers to Bombay, Gujerat and other parts, larger numbers than usual have gone in search of a livelihood. The condition of those who have thus left their homes it is not easy to ascertain, but for the

most part they appear to have been fairly successful in their sojourn. Of all who survive, it may be safely predicted that they will return on the approach of the monsoon.

14. Upon the subject of relief works it is sufficient to observe that at the close of the year two hundred and seventy works, of which eighty-nine were roads and thirty-six were tanks, had been completed, while six hundred and eighteen were in progress, of which thirty-three gave employment to 2,000 labourers and upwards.

15. The Government grants for charitable relief have been large, but the demands on them up to the 9th instant have only amounted to Rs. 38,288, of which two-thirds have been spent in the Poona and Sholapur Districts. The relief is given to the aged and infirm poor, and, in two out of the three Divisions, to the young children of labourers employed on the works. As the total number of persons relieved on the above date was 42,300, there would appear some grounds for the belief that the estimates under this head, which are within that number, are likely to be considerably exceeded. Any notice of this subject would be incomplete without a reference to the action of private charity. His Excellency the Governor-General in Council is glad to embrace this opportunity of again recognising with sympathy and appreciation the remarkable public spirit which has been displayed throughout the Presidency in raising subscriptions for various humane objects, and especially the conspicuous zeal and self-sacrifice displayed by the Sholapur Relief Committee and their coadjutors of the Deccan Famine Relief Fund in Bombay.

16. The Government of India is now in possession of three independent estimates of the number of persons likely to be on the relief works on the 1st of March, 1st of May and 1st of July. The first is an estimate submitted by the Bombay Government on the 30th of November last. It is in a monthly form, and, commencing with 200,000 as the average for December, gives 450,000 as the average of February, 750,000 as that of March, one million for April, and only 300,000 for July. These figures included charitable relief at ten per cent. The second estimate is that of Sir Richard Temple in his minute of January 11th, and allows 540,000 for March 1st, 870,000 for the 1st of May, and 340,000 for the 1st of July. The last is that of the local officers throughout the country, which was made almost simultaneously with Sir Richard Temple's, and amounts to 677,500 for March 1st, 863,220 for May 1st, and 509,370 for July 1st. Sir Richard Temple is thus in accord with the local officers as regards May 1st, but anticipates lower numbers both before and after that date than they do. These startling discrepancies at once show the extreme difficulty of dealing with the subject, and of being prepared, by a reserve of works to be started when indispensable but not otherwise, for any sudden access of distressed persons whom the exhaustion of private stocks or the failure of employment abroad may throw suddenly upon the hands of Government. His Excellency the Governor-General in Council is, however, glad to note that the number on the works on the latest date (February 9th) was only 249,158, and to augur from it that possibly all the estimates may alike be falsified in a manner equally relieving to public suffering and the public purse.

17. In conclusion His Excellency the Governor General in Council has great satisfaction in recording that the reports now under consideration fully bear out and confirm the testimony already borne by Sir Richard Temple to "the zeal and ability with which the famine is being combated by the local officers," and in "congratulating the local Government on the manner in which the substantial safety of some five millions of people is being secured under circumstances of much danger.

ORDERED, that copies of this Resolution be communicated to the Secretary of State for India, the Governments of Madras and Bombay, the Chief Commissioner of Mysore and Sir Richard Temple, and that it be published in the *Gazette of India*. In the event of any part of British India being at any future time threatened with scarcity, the local Government should take measures for obtaining, at the earliest practicable date, information under the several heads comprised in Statement A, with the addition of an account of the nature of the two next preceding seasons and harvests.

(True Extract)

T. C. HOPE,

Additional Secretary to the Government of India.

STATEMENT A.

STATISTICS

RELATING TO THE

DISTRESSED DISTRICTS

IN THE

BOMBAY PRESIDENCY.

N. B.—This statement consists of extracts from the information furnished by the Government of Bombay on November 4th, 8th and 15th, 1876, in accordance with the telegram from the Government of India of the 22nd October, and of summaries submitted by that Government of the reports of each taluka called for by the Government of India on November 30th, 1876.

KEY to the alphabetical headings in the following statement :—

(*a*)—a careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately: if there be any prospect of further sowings, it should be mentioned:

(*b*)—an estimate, as close as may at the time be practicable, of the amount or revenue to be remitted:

(*c*)—information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future:

(*d*)—the nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any:

(*e*)—the course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages:

(*f*)—the local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation:

(*g*)—the character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse:

(*h*)—the movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable:

(*i*)—the relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity:

(*j*)—the nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work:

(*k*)—the number of persons whom the Government has on its hands at date of report for relief (1) by works, (2) by charitable measures, and the number, roughly estimated, which it is likely to have on its hands on March 1st, May 1st and July 1st.

KHANDESH.

DHULIA Taluka (1st Assistant Collector Mr. C. G. Blathwayt's Report, dated 10th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield is 4 annas, and the rabi, which is cultivated only in irrigated lands, promises well. There are no prospects of further sowings this season.	The total amount of revenue is not given, but the probable remissions are Rs. 45,000.	There has been no unusual mortality amongst the cattle, and none is anticipated, as the ryots have imported abundance of grass.	About three-fourths of the water-supply has failed; in 40 villages there will be a total failure of the ordinary supply. To meet this, ziras are being made, and wells deepened and repaired.		There are about 900,480 lbs. of grain in store, and it is imported from the Central Provinces and Cawnpore *vid* Chálisgaon.	The bulk of the population consists of Kunbis who are poor. Sowkars will assist the ryots who work under them.	No emigration has taken place, nor is any anticipated.	No works, except Provincial and Local Funds, are in progress, nor will any be needed.	Rs. 200 have been allotted by the Songir Municipality for charitable purposes, but no expenditure has been made.	Government is not at present affording relief to any persons, either on works or by charity, nor is it probable that help will be required from Government.

PIMPALNER Taluka (1st Assistant Collector Mr. C. G. Blathwayt's Report, dated 10th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield may be taken at 8 annas, and the rabi, which is cultivated only in irrigated lands, promises an average crop. No further sowings are probable this season.	The total amount of land revenue is not given, but the remissions are estimated at Rs. 500.	There is no mortality from starvation amongst the cattle, and none is anticipated.	There will be no scarcity of water, though there is less than usual.		Most of the well-to-do ryots have a year's supply of grain for their own consumption; the amount in store or for sale is not given; but no scarcity is anticipated, though prices are high. If necessary, grain can be imported from Dhulia and Málegaon.	The population is almost purely agricultural; and there are no land-holders likely to aid their tenants should they require help.	No emigration has taken place, nor is any probable.	No relief works are in progress, nor will any be needed.	No charitable relief is given, and none is sought by any one.	It is improbable that Government will have any people to support either on works or by charity.

KHANDESH—continued.

NIZÁMPUR PETHA, Pimpalner Taluka (1st Assistant Collector Mr. C. G. Blathwayt's Report, dated 10th January 1877).

a	b	c	d	e	f	g	h	i	j	k
In about 8 villages the kharif crop has failed; in the rest it has been from 10 to 12 annas. The rabi crops have been equal to or above the average. There are no prospects of any further sowings this season.	The total amount of revenue is not given, but the probable remissions are Rs. 1,500.	No unusual mortality has occurred or is likely to occur amongst the cattle.	There will be no distress owing to scarcity of the water-supply, though it is less than usual.	See below.	Most of the ryots have kept sufficient corn for their own consumption. There are no large grain markets.	The people, except between 50 and 75 sowkars and shopkeepers, are agricultural Kunbis and are poor. There are no large landholders.	There has been no emigration, and none is anticipated.	There are no relief works in progress, nor are any necessary.	The aged and infirm are in no worse condition than in ordinary years.	It is not likely that Government will be called upon to afford relief either on works or by charity.

SHÁHÁDA Taluka (1st Assistant Collector Mr. C. G. Blathwayt's Report, dated 10th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield has been an average one. The rabi crop is good, with the exception of gram and linseed, which will yield only 8 annas.	No remissions are necessary.	No mortality from starvation has taken place, or is anticipated.	There will be no failure of water, the usual amount of rain having fallen.	See below.	There are 1,344,000 lbs. of grain in store, and this is sufficient for local consumption.	The population consists of Bheels, Guzars, and Kunbis. The Guzars and Kunbis, and some of the Bheels, are employed in agriculture. The rest of the Bheels in labour. There are no large landholders.	No emigration has taken place, nor is any probable.	No relief works are in progress, nor are any required.	No special arrangements are necessary for relief either on works or by charity.

NANDURBÁR Taluka (1st Assistant Collector Mr. C. G. Blathwayt's Report, dated 10th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The crop, both kharif and rabi, has reached the average. There are no prospects of further sowings this year.	The total amount of land revenue is not given, but the probable remissions are Rs. 1,000.	There has been no unusual mortality amongst the cattle, nor is any anticipated.	There will be no distress from scarcity of water.	See below.	There is sufficient grain for local use.	Half the population consists of Bheels, and the other half of Kunbis; the former are labourers and the latter agriculturists. Their condition will be nearly the same as in ordinary years.	There has been no emigration, and none is probable.	No relief works are in progress, nor are they necessary.	No special charitable aid is required.	No relief on works or by charity will be required.

AMALNER Taluka (Acting Extra 2nd Assistant Collector Mr. H. T. Ommaney's Report, dated 6th January 1877).

The kharif yield is 5, and the rabi 3, annas. There are no prospects of further sowings this season.	The probable remissions will be Rs. 30,000. The total amount of revenue is not given.	There has as yet been no unusual mortality amongst the cattle, but the Collector thinks many will die. Government have opened forest reserves, and sanctioned advances to Wanjaries.	According to the Assistant Collector, the water-supply is not a matter of anxiety. Old wells are being repaired, and new ones dug. The Collector, however, anticipates a serious failure.		There are no large stocks of grain in store; it is imported as required from Holkar's territories and Jalgaon and Mhasáwad Railway stations. No fall in prices is anticipated, but private enterprize will supply the market.	About one-half of the population consists of cultivators, one-fourth of artizans and traders, and the rest of labourers, mendicants, &c. There are no landholders likely to aid their tenants, but the sowkars may do so.	No emigration has taken place, and none is anticipated.	One road work, the Amalner-Párola road, is in progress, and is at present sufficient. Should it be necessary, the Amalner-Jalgaon road can be commenced.	A fund of Rs. 350, Rs. 100 being Government money, has been raised for feeding the incapable poor.

PAROLA PETHA, AMALNER Taluka (Acting Extra 2nd Assistant Collector Mr. H. T. Ommaney's Report, dated 6th January 1877).

The kharif yield is 5 annas. There is no rabi. There are no prospects of further sowings this season.	The probable remissions are Rs. 4,000. The total revenue is not given.	Some slight mortality amongst the old and worn-out cattle is expected, but no Government aid is necessary.	The water-supply generally has not failed, but the town of Párola itself is badly off. Large wells are being dug there, and failing them a pumping arrangement from a well on the Bori River would be a success, so far as supplying the town is concerned, but enormously expensive.		There are 1,680,000 lbs. of grain in store; it is imported from the western talukas, from Holkar's territories, and the G. I. P. Railway. Private enterprize will supply the market, but prices are unlikely to fall.	The population amounts to 28,000, of whom 10,000 are cultivators and a large number are weavers living in the town of Párola. Half the cultivators are well-to-do, and the other half poor. There are no large landholders, but the cultivators have good credit with the sowkars.	There has been some emigration chiefly from Párola itself on account of the scarcity of water there, but it is not likely to become general.	The Mhasawad Tank and the Amalner-Párola road are in progress. The Bhokar Tank and Amalner-Jalgaon road may have to be commenced, and will probably prove sufficient.	No charitable relief has yet been given, but a fund of Rs. 350 (Rs. 100 being Government money) has been collected, and will be used, if necessary, in feeding the infirm poor.

ERANDOL Taluka (Acting Extra 2nd Assistant Collector Mr. H. T. Ommaney's Report, dated 6th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield is 4, and the rabi 3, annas. There are no prospects of further sowings this season.	The probable remissions are Rs. 30,000. The total amount of revenue is not given.	No unusual mortality has yet occurred amongst the cattle, though it is anticipated to a small extent among the old and worn-out ones. The Satpuras are not far, and the people are sending their cattle there, or importing grass.	The water-supply is not a matter of anxiety, though in some villages it will have to be brought from a distance, and other villages may have to be abandoned for a few months.	Prices—Lbs. per Rupee.	10,752,000 lbs. of grain are estimated to be in store; it is imported chiefly from Jalgaom and Mhásawad Railway stations. Prices have fallen, but are not likely to decline further, and private enterprize will supply the market.	About one-half the population consists of cultivators, one-fourth of artizans and traders, and the rest of labourers, mendicants, &c. A fair proportion of the first two classes is well off. There are no large landholders, but the sowkars will aid the people.	There has been no noticeable emigration, and none is expected.	The Enandol-Meheji and Jalgaon-Girna River roads are in progress. If a further grant is made for the former, and the latter is extended to Dharangaon or Amalner, they will prove ample.	The infirm poor receive gratuitous support from Government funds aided by private contributions.	At present there are 125 people supported on works, and 40 by charity. The number requiring support will be on—

CHALISGAON Taluka (Acting Extra 2nd Assistant Collector Mr. H. T. Ommaney's Report, dated 7th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield may be taken at 9, and the rabi at 7, annas. There are no prospectsof further sowings this season.	The amount of land revenue is not given; but the remissions are estimated at Rs. 6,000.	There has been no unusual mortality amongst the cattle, nor is there any reason to anticipate any, as Government have thrown open the forests of the taluka.	There is no danger of a serious failure in the water-supply. The rivers Girna and Titur and several large nullahs will hold sufficient for the year. In about 15 villages it may be necessary to undertake repairs to wells.	Prices—Lbs. per Rupee.	There is at present a six months' supply of grain in store. It is imported from the Chálisgaon Railway station and the Nizam's dominions. Private enterprize will supply the market, but prices are not likely to fall further.	Out of a population of 45,000, 33,750 are high, and 11,250 low, caste. About one-half may be put down as fairly well off. There are 9,000 cultivators, a small proportion of whom combine other occupations with agriculture. There are no large landholders.	There has been no noticeable emigration, and none is anticipated.	There are no relief works in progress at present; it will, however, be necessary to start one shortly, and improving the Utrán Ghát road to the foot of the ghát is proposed. Should another work be necessary, the Chalisgaon-Lohara road can be improved between Ozur and Waghli.	Demands for charitable aid are met by voluntary subscriptions.	At present Government have no people to support. Relief works may be sought by—

The spontaneous liberality of the richer people will obviate a necessity for Government charity.

PACHORA Taluka (Acting Extra 2nd Assistant Collector Mr. H. T. Ommaney's Report, dated 7th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield may be taken at 7, and the rabi at 2, annas. There are no prospects of further sowings this season.	The total amount of land revenue is not given; but the remissions will probably amount to Rs. 15,000.	No unusual mortality amongst the cattle has occurred, and none is anticipated, except in the case of old and worn-out animals.	This taluka is well watered by the Girna and its tributary streams from the Satmalas. There need be no apprehension of a failure in the water-supply.	Prices—Lbs. per Rupee.	There are at present about 1,344,000 lbs. of grain in store; it is imported by rail and from the Nizam's territories. Private enterprise will supply the market, but prices are unlikely to fall.	One-half the population is well off and the other half poor. Of the latter three-fourths are cultivators and one-fourth labourers. One or two large landholders will probably aid their tenants.	No emigration has taken place, and none is expected.	The road from Páchora to the Titur River is in progress. On its completion, portions of the Chálisgaon-Lohara road will be undertaken.	No expenditure on charity has been incurred.	At present there are 124 persons, chiefly immigrants, on the Páchora road. There will probably be on—

KHANDESH.

*—continued.

BHADGAON PETHA, PACHORA Taluka (Acting Extra 2nd Assistant Collector Mr. H. T. Ommaney's Report, dated 7th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield, which takes up more than three-fourths of the area of the Petha, may be taken at 7 annas and the rabi at 3 annas. Fodder, but no grain, may be sown.	The total amount of the revenue is not given, but the remissions will probably be Rs. 10,000.	No unusual mortality amongst the cattle has occurred, and none is anticipated, except in the case of the old and worn-out animals.	Many villages to the north of the taluka will suffer from scarcity of water; the only remedial measure is to repair such old wells as are promising. The Jamda Canal will, however, greatly alleviate the inconvenience.		The local stocks of grain are not large, but there is no fear of any scarcity. Supplies are imported by rail and from the Nizam's territory. A fall in prices is not anticipated.	The poorer class preponderates over the wealthier. The population, except in the town of Bhadgaon, is almost purely agricultural. There are no large landholders.	No noticeable emigration has taken place, and none is anticipated.	Three relief works are in progress. On their completion, the people must go on to the Chálisgaon-Lohara road.	No gratuitous support has yet been given.	There are 330 persons now on works. The numbers for relief are, on—

VIRDEL Taluka (District Deputy Collector Mr. Shriniwas Balaji's Report, dated 8th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield is estimated at from 8 pies to 8 annas, and the rabi from 1 to 6 annas. There are no prospects of further sowings this season.	The total amount of land revenue is not given, but the Collector estimates the remissions at Rs. 25,000.	There has been no mortality amongst the cattle, and none is anticipated, as Government have thrown open the forest-grazing.	The water-supply is chiefly derived from rivers and good wells, and is on the whole sufficient to last till the next monsoons. There will, however, be scarcity in about eight villages, in which wells must be cleared and deepened.		Supplies of grain can be drawn from the railway stations of Bhasáwad and Chálisgaon; and private enterprize will supply the market.	The population, which is about 20,800, are for the most part high caste, Kunbis and Rájputs, and purely agricultural. About 1,300 are urban or artizan. About ten large landholders may aid their tenants.	No emigration has taken place, and none is likely.	The present relief works, consisting of the Songir-Nándurbar road and a tank, will prove sufficient.	No demands have yet been made for charitable assistance, but the sum of Rs. 3,768 has been raised for the purpose by private subscriptions.	At present 1,219 persons are supported on the works, and none by charity. There will probably be, on—

SHIRPUR Taluka (District Deputy Collector Mr. Shriniwas Balaji's Report, dated 9th January 1877).

a	b	c	d	e	f	g	h	i	j	k
The kharif crop is from 2 to 10, and the rabi from 1 to 6, annas. There will be no further sowings this season.	About Rs. 55,000 will probably have to be remitted. The total revenue is not stated.	There has been no unusual mortality among cattle, and none is anticipated. Fodder is plentiful.	There is no fear of the water-supply failing at present. But in 24 villages wells will have to be cleared out and deepened before the hot season.		The local stocks are estimated at 1,050 tons. Supplies are drawn from the province of Nimad, bordering on the taluka, and the large importations have lowered prices. Private enterprise will meet all demands.	The population consists chiefly of Bheels and Kolis, and is almost purely agricultural. The proportion of the urban or artizan to the whole agricultural class is about 2 per cent. There are few well-to-do people. There are 8 or 10 large landholders able to aid their tenants.	No emigration has taken place, and none is anticipated.	The only relief work in progress is the repairing of the Agra road. The Shirpur-Chopra road, which has been sanctioned as a relief work, will soon be started. If this proves insufficient, the District Deputy suggests the repairing of the Shirpur-Sháháda and Amalner road.	The public have subscribed Rs. 1,537 for charitable relief, but none of this sum has yet been expended.	There are 236 persons on the hands of Government for relief on works, and 28 for gratuitous relief according to the Mámlatdár's report, but the District Deputy doubts the latter statement. The Mámlatdár estimates the number to be relieved by works at, on the—

NUSSEERABAD Taluka (2nd Assistant Collector Mr. J. Pollen's Report, dated 30th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The yield of the kharif crop is 4½, and that of the rabi 3, annas. There will be no further sowings this season.	Rs. 65,000 will have to be remitted out of a revenue demand of Rs. 2,11,532.	Mortality among the cattle and agricultural stock has as yet been little more than nominal; but it is expected that many will die from want of fodder and water before the end of the hot weather. The cultivators are taking every precaution for the preservation of their cattle, and have secured large stocks of hay, and all the cattle not in immediate use have been sent to the hills and forest reserves to graze. The Second Assistant can suggest no further remedies than those already adopted by Government.	The only sources of water-supply are rivers and wells; many of the latter will soon run dry. Deepening them and digging pits in beds of rivers are the only remedial measures possible.	See below.	No trustworthy information is obtainable as to the amount of the local stocks of grain, but they are supposed to be small, and importations will be necessary. Supplies to meet all local wants can be readily procured from the large markets of Jalgaon and Bhusáwal.	The population is chiefly agricultural, and the vast majority of the cultivators are very much in debt; not more than 10 per cent. can commence agricultural operations without the aid of sowkars. The sowkars are the capitalists of the taluka, and many of them are large landholders, both able and willing to aid their constituents.	There has been no unusual emigration.	No large relief works have been started in this taluka.	About Rs. 50 have been spent in relieving travellers and the infirm poor; besides which, Rs. 1,000 have been granted for expenditure on light labour relief gangs, employed in improving the cleaned tracts in the taluka.	The number of persons relieved by works at date of report was 261 and by charity 25. The numbers expected to be on the works hereafter are— On 1st March ... 3,000 „ 1st May ... 5,000 „ 1st July ... 2,000

CHOPRA Taluka (2nd Assistant Collector Mr. J. Pollen's Report, dated 30th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The kharif crop is estimated at 6, and the rabi at 2¼, annas.	Out of a revenue demand of Rs. 1,60,482, about Rs. 50,000 will probably have to be remitted.	No unusual mortality has occurred among cattle and agricultural stock, but it is anticipated that before the end of the hot weather many will die from want of fodder and water. All the cattle not in immediate use have been sent into the hills and forest reserves to graze. The Second Assistant is not prepared to suggest any further action in the matter.	The only sources of water-supply are rivers and wells. Many of these wells will run dry before the end of hot season The only remedial measures possible to improve the water-supply are deepening the wells and digging pits in the beds of streams.	See below.	No trustworthy information can be obtained as to the extent of the local stocks of grain, but they are believed to be small. Grain can, however, be imported in any quantity which may be required from the large markets of Jalgaon and Bhusáwal.	The population is chiefly agricultural, and the vast majority of the cultivators are said to be hopelessly in debt; not more than 10 per cent. can commence agricultural operations without the aid of sowkars. They are the capitalists of the taluka. Many of them are large landholders, and are both able and willing to aid their constituents.	No unusual emigration has taken place.	No large relief works have been opened in this taluka.	About Rs. 50 have been spent in charitable relief to travellers and infirm poor in the larger towns. In addition to this, Rs. 1,000 have been granted for expenditure on light labour relief gangs. These gangs are employed in improving the cleaned tracks of the taluka.	The number of persons, whom Government had on their hands at date of report, was on works 378, on charity 39. The numbers on works will hereafter be— On 1st March ... 700 „ 1st May ... 1,200 „ 1st July ... 1,000 The numbers, who may have to be relieved by charity, are not given.

SANDA Taluka, with its Pethas of Yáwal and Ráver, (2nd Assistant Collector Mr. J. Pollen's Report, dated 30th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The kharif crop is estimated at 5½, and the rabi at 4½, annas.	The remissions will amount to about Rs. 57,000 out of a revenue demand of Rs. 2,78,743.	There has been no unusual mortality among cattle and agricultural stock, but before the end of the hot weather many deaths are anticipated from want of fodder and water. All the cattle not in immediate use have been sent into the hills and forest reserves to graze. The Second Assistant has no further suggestions to offer on this head.	The only sources of water-supply are rivers and wells; many of the latter will run dry before the end of the hot weather, and should be deepened. Jhiras also should be dug in the beds of rivers.	See below.	No reliable information is procurable as to the extent of the local stocks of grain, but they are supposed to be small. Grain, however, can be imported in any quantities required from Jalgaon and Bhusáwal.	The population is chiefly agricultural, and the great majority of the cultivators are said to be deeply in debt; not more than 10 per cent. can commence agricultural operations without the aid of sowkars. These are the capitalists of the taluka, and many of them are large landholders, and both able and willing to aid their constituents.	There has been no unusual emigration.	Only small relief works are in progress.	Rs. 50 have been expended in relieving needy travellers and the infirm poor; besides which, Rs. 1,000 have been granted for expenditure on light labour relief gangs, who are employed in improving the cleaned tracks throughout the taluka.	The number employed on works at date of report was 325, and that relieved gratuitously 32. The numbers will hereafter be— On 1st March ... 2,600 „ 1st May ... 3,700 „ 1st July ... 1,700

KHANDESH-

a	b	c	d	e	f	g	h	i	j	k
The kharif and rabi yields will each be 8 annas. There are no prospects of further sowings this season.	The fixed land revenue is Rs. 2,50,000, and the probable remissions are Rs. 70,000.	No mortality has occurred amongst the cattle, nor is any anticipated.	In about 30 villages, where the wells and nullahs are dry, the people will have to go some distance to fetch water. It is proposed to excavate new wells and deepen old ones, and to attach cattle-troughs to them.	BHUSÁWAL Taluka (Assistant Collector).	Mr. H. Woodward's Report, dated 11th January 1877). The local stocks of grain are sufficient for the year; it can, if necessary, be imported from the Central Provinces, Berar, and Indore. Prices have fallen, and private enterprize will supply the market.	The population is mainly agricultural and very poor. There are no large landholders likely to aid their tenants.	A partial emigration has taken place in the direction of the Central Provinces, Indore, and Berar. Further emigration is expected.	The relief works now in progress, consisting of a tank and 2 roads, are sufficient. On their completion the only works, which can advantageously be undertaken, are deepening and excavating wells.	A sum of about Rs. 600 is available for charitable relief, but few demands have been made.	350 persons are being relieved works, and 40 by charity. T estimate for the future *On Works.* *By Charit* 1st March ... 1,050 1 1st May ... 2,100 2 1st July ... 350

GENERAL OBSERVATIONS.

Of the 15 talukas and 3 pethas, the crops in 10 seem fair and in 8 indifferent.

The proposed remissions amount to Rs. 4,66,000.

The condition of the cattle, except in 4 talukas, appears satisfactory.

The recent heavy rain in Khandesh has probably dissipated all fears regarding the water-supply.

No apprehensions are entertained regarding the grain supply.

The majority of the population of this, as of all other, collectorates is either agricultural, or very intimately connected with agriculture.

There has been scarcely any migration from the district.

The chief relief works are the Dhulia-Pimpalner and Songir-Nandurbár roads.

The expenditure upon charity has been very trifling.

The number of labourers anticipated to be upon the hands of Government is—

On March 1st	
On May 1st	16,950
On July 1st	28,200
	16,650

No return of the Jámner Taluka has been received; it is reported to be unaffected by scarcity.

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. G. M. MACPHERSON,
Under-Secretary to Government.

The 7th February 1877.

CHANDOR Taluka (Second Assistant Collector Mr. F. L. Charles' Report, without date, forwarded with the Collector's remarks, dated 6th January 1877).										
The kharif yield will be 9 annas, and the rabi 4 annas; vegetables and pepper will be sown hereafter in garden lands.	The land revenue is Rs. 81,045, of which about Rs. 25,000 will be remitted.	There has been no unusual mortality amongst the cattle. They are being sent to graze in Dindori and the hills near Chandor, where there is plenty of fodder. Government aid is unnecessary.	The water-supply is failing. There are no large rivers, but a number of small nullahs, the flow of which has already stopped, though there are pools at intervals. In the hot weather water to the north of these nullahs will be scarce, and some villages will have to be abandoned on this account; but to the south water will be plentiful. Some wells will have water throughout the year, but others must be deepened.	Date. / Prices—Lbs. per Rupee. / Rice. / Bájri. / Wheat. / Jowári. 1876. 1st to 15th October ... 21 / 30¼ / 27⅛ / 40 16th to 31st " ... 21 / 24½ / 24⅜ / 39 1st to 15th November... 18 / 24¾ / 22 / 30 16th to 30th " ... 21 / 24½ / 24¼ / 30 1st to 19th December... 18 / 27½ / 27½ / 30 Average of six years ... 20 / 43½ / 33½ / 57	No large stocks are kept. What is required for consumption is brought in by train. Probably large exportations have taken place to the Deccan. Private enterprize will keep up the supply; if grain is largely imported, the prices will fall. No Government interference is deemed necessary.	The population is purely agricultural, being mainly Kunbis. In the southern villages the people are well off; in the north and east they are poor. The Chief of Vinchur is the only large landholder, and he may assist his tenants; no aid from other landholders is expected.	No emigration has taken or is likely to take place, except in the case of people in charge of cattle.	One road-work and one tank have been undertaken. These will suffice for the month. On their completion the Assistant Collector proposes the road from Chandor to Manmad station. The Collector, however, is of opinion that no further works will be necessary.	Rs. 150 have been received to relieve the aged and infirm poor, but nothing has yet been spent. A committee will be appointed at Chandor to administer to travellers' wants.	The number of persons at date of report on the hands of Government for relief by works was 1,742; by charity none. There will be on— 1st March ... 3,000 1st May ... 3,500 1st July 1,000 to 1,500. None are being supported by charity, and it is impossible to say if any such demands will be made.
NIPHÁD Taluka (Collector Mr. H. N. B. Erskine's Report, dated 6th January 1877).										
The kharif yield will be 6 annas, the rabi 5 annas. Indian corn, jowári for fodder, methi, carrots, ratala, onions, and vegetables will be sown in garden lands.	The remissions may perhaps be Rs. 80,000, but the Collector considers this high.	No cattle have died from starvation. The people have sown Indian corn and methi for the support of their cattle, and will afterwards sow "khonde." Some have brought grass from the Dindori and Chandor Talukas, whither cattle to the number of 3,000 have been sent to graze, as also to Baglan and Pimpalner. Government aid seems unnecessary.	There will be a scarcity of water from March to June in about 40 villages, to relieve which ziras should be dug in the beds of rivers at a cost of Rs. 500. Most of the villages have a good water-supply from the Godavery and other smaller rivers, and as yet want is not felt.	For the week ending / Prices—Lbs. per Rupee. / Wheat. / Bájri. / Jowári. / Rice. 7th October 1876 ... 33 / 36 / 44 / 24 15th " ... 31 / 27 / 38 / 21 23rd " ... 30 / 27 / 36 / 21 31st " ... 28 / 27 / 32 / 20 7th November 1876 ... 12 / 22 / 27 / 18 15th " ... 12 / 20 / 26 / 16 23rd " ... 12 / 22 / 26 / 15 30th " ... 12 / 22 / 28 / 15 7th December 1876 ... 27 / 24 / 28 / 16 15th " ... 27 / 24 / 28 / 18 23rd " ... 27 / 24 / 28 / 18 Average of six years ... 35½ / 40 / ... / 20½	There has been no emigration; the people are moving towards the relief works.	Three small road-works are in progress, and two more are required.	Rs. 200 have been granted by Government to aid the helpless, and Rs. 70 have been spent.	On works, 8,926; by charity 30. 1st March, May, and July about 13,000.
IGATPURI Taluka (Assistant Collector Mr. J. A. Baines' Report, without date, forwarded with Collector's remarks, dated 8th January 1877).										
The kharif and rabi yield may each be taken as 8 annas. There is no prospect of further sowings this season.	The remissions will be about Rs. 8,000.	There has been no unusual mortality amongst the cattle, and none is anticipated; precautions are, therefore, unnecessary.	There will be about six weeks' scarcity of water, to relieve which it is proposed to deepen wells and to construct a dam across the Kadwa.	For the week ending / Prices—Lbs. per Rupee. / Rice. / Wheat. / Bájri. / Jowári. / Nagli. 1876. 7th October ... 32 5/16 / 37 3/16 / 36 7/16 / 15⅜ / 39 5/16 14th " ... 32 5/16 / 39⅜ / 34⅜ / 15⅜ / 39 5/16 21st " ... 32 5/16 / 35¾ / 33 11/16 / 17 7/16 / 12⅜ 28th " ... 30¼ / 31⅜ / 31⅜ / 15⅜ / 13 3/16 4th November ... 26⅜ / 28 3/16 / 28 3/16 / 35¼ / 37⅜ 11th " ... 26⅜ / 27½ / 26 1/16 / 35¼ / 35 5/16 18th " ... 30¼ / 29 1/16 / 29 5/16 / 37 1/16 / 39 5/16 25th " ... 33 / 33 / 33 / 37 1/16 / 40 5/16 2nd December ... 32 5/16 / 32 5/16 / 31⅜ / 52¼ / 44 9th " ... 32 5/16 / 33 1/16 / 30 15/16 / 15⅜ / 11 5/16 16th " ... 32 5/16 / 31⅜ / 31⅜ / 15⅜ / 15⅜ 23rd " ... 31⅜ / 31⅜ / 32 5/16 / 46¼ / 40 9/16 Average of four years 34⅜ / 45⅜ / 61⅝ / 68 1/16 / 77 11/16	There are no large stores of grain, but the Assistant Collector hopes to make arrangements with dealers for grain and fodder till the first rain falls.	The majority of the population are agriculturists, and about 3,000 are employed on railway works. Few only of the landholders are able to assist the labouring classes.	No emigration has taken place; but it is expected that after "Shinga" (27th and 28th February) many will go in search of a livelihood.	There are no relief works in progress, but the Sinnar and Goti road will soon reach the taluka; it is, however, a small work, and the dam at Walvihir may have to be undertaken.	A few isolated instances of private charity have occurred.	As no relief works have been started, no correct estimate of the probable number requiring relief from Government can be framed.

NA'SIK—

a	b	c	d	e	f	g	h	i	j	k
The kharif yield will be 4 to 5 annas and the rabi 2 to 3 annas. No further sowings are expected, except a few plots of pepper and vegetables and methi for fodder.	The revenue is Rs. 64,316-10-1, and the probable remissions will be Rs. 45,000.	No unusual mortality has occurred, but large numbers of cattle have been sent to the hills on the borders of Khandesh. Beyond this no measures have been taken, nor are any deemed necessary.	The water-supply will probably fail in the hot weather, in which case the best remedial measure would be for the people to emigrate, as they have done in former years, to the banks of the Godavery. The Collector thinks that the water-supply of the town of Yeola will prove sufficient.		There are no large stocks of grain in the taluka itself, but it can always be had in times of real scarcity from the Lasulgaon Railway Station, where piles of grain bags are heaped, and from the north *viâ* Manmád. Prices have fallen, and private enterprize will be able to supply the market.	The population of Yeola is almost wholly agricultural, the bulk of the people being Kunbis and Mhars. The town of Yeola itself contains 17,461 inhabitants, who are principally manufacturers. There are a few landholders, notably the Vinchurkur, who will aid their tenants.	Out of a population of 59,313, some 3,000 to 5,000, many of them weavers, have left for the neighbouring talukas and for Benares. Further emigrations are probable, unless relief works are started within the taluka.	There are at present no relief works in progress, but two roads will shortly be commenced.	No charitable relief has yet been deemed necessary.	None are employed on works, and none relieved by charity. The number Government will have to provide for will be on—

2,000 to 3,000	200

a	b	c	d	e	f	g	h	i	j	k
The yield of kharif and rabi is estimated at between 4 and 5 annas; the yield of each is not stated. There will be no further sowings this season.	The remissions will probably range between Rs. 80,000 and Rs. 1,00,000. The amount of the ordinary revenue is not given.	There has been no unusual mortality amongst the cattle, many of which have been sent away by the ryots to Khandesh and the hills to graze. Government interference will not be necessary.	There will be great scarcity of water in many villages, to alleviate which "Scindis" will have to be dug, and wells sunk, cleared and deepened.		The present store of grain is estimated by the Mámlatdár at about 74,000 lbs. The Assistant and Collector make no remarks on this estimate. The market will be supplied by private enterprize without any aid from Government.	No reliable information is procurable as to the number of high and low caste people. There are no landholders capable of aiding their tenants.	A few people have emigrated to Bombay and elsewhere in hopes of employment. Others will follow if relief works are started.	The relief work at Ghorwad is sufficient for the present, but two roads will shortly have to be commenced.	Out of Rs. 200 granted for charitable purposes, 97 persons have been relieved, each adult receiving 1 lb. of bájri, 4 ozs. of pulse and 6 pies cash, and each child 8 ozs. bájri, and 1 oz. pulse, and 3 pies cash.	At present 6,000 people are being supported on the works, and 16 by charity. On 1st March 10,000 people will require relief on works, on 1st May 14 to 15,000, and considerably less on 1st July. The infirm requiring support on 1st March and 1st May will be about 150, and on 1st July 300.

The kharif yield may be taken at 6 to 7 annas, the rabi at 5½ to 6½, and the bagayet from 8 to 10. There are no prospects of further sowings this season, with the exception of a few isolated patches of vegetables.	The revenue is Rs. 1,15,578, and the remissions will probably amount to Rs. 40,000.	There has been no unusual mortality among the cattle, and none is anticipated.	Scarcity of water will be severely felt in those villages, 20 or 30 in number, which are dependent on wells alone for their supply. In such villages it will be necessary to deepen and clear the wells, and failing obtaining water by this means, the villagers must move to the nearest river.		There is no deficiency of grain, but no estimate can be made of the stocks. Large importations are made from Niphád and the Peint State. Prices have fallen, and private enterprize will supply the market.	The total population amounts to 68,626, and is almost purely agricultural. The people are chiefly Kolis, and are very poor, and much in debt. There are no landholders who will aid their tenants.	No unusual emigration has taken place, and none is expected.	No relief works are in progress at present; but it may be necessary to start three road works, and make approaches to the Kadwa river.	No charitable relief has yet been given.	No people at present on relief works. There will be probably on—

NÁSIK Taluka (Assistant Collector Mr. J. A. Baines' Report					**forwarded with Collector's Remarks, dated 6th January 1877).**					
The kharif yield will be 6 and the rabi 4 annas. There is no prospect of further sowings this season.	The revenue is Rs. 1,30,000, and the probable remissions Rs. 30,000.	There have been no deaths from starvation amongst the cattle. None have been sent elsewhere to graze, and no precautions are deemed necessary.	The water-supply is less, and scarcity will be felt earlier than usual.	See below.	There is plenty of grain in the taluka, and the railway is at hand to bring whatever may be required. The rates will probably rise after the grain has begun to move from Bombay and other centres. Private enterprize will be equal to the demand.	There is no reliable information on this point. There are no large landholders capable of assisting their tenants.	No emigrations have yet taken place from the villages. The people earn a few pice from the sale of wood and grass, and refuse to labour on distant relief works. Those on the Ghâts may possibly emigrate, but at present they have no such intention.	No relief works are in progress, but the work of metalling the Násik and Trimback road and digging a large tank may shortly have to be undertaken.	No charitable aid has yet been given, and none will probably be necessary.	No persons are maintained by Government either by charity or on relief works. No estimate for the future can be framed.

MALIGAON Taluka (Acting First Assistant Collector					**Mr. W. Woodward's Report, dated 8th January 1877).**					
The kharif yield will be 6, and the rabi 2 annas. There are no prospects of further sowings this season.	The probable remissions are Rs. 40,000. The total revenue is not given.	There has been no unusual mortality among the cattle, and none is anticipated.	About Rs. 5,000 may be required for deepening wells.	See below.	The local stocks of grain are estimated at 740,000 lbs. Supplies are imported by railway from Nandgaon. Prices may fall, and private enterprize will supply the market.	The people are chiefly agricultural, with a sprinkling of well-to-do high caste people. There are no large landholders likely to assist their tenants.	No unusual emigration has taken place, and none is anticipated.	No relief works are in progress at present, but it may be necessary before long to commence the Málegaon-Nandgaon road and some tanks.	A grant of Rs. 200 for charitable expenditure in the taluka has been made. But none of it has yet been spent.	At present no persons are on the hands of Government for relief either by works or charity. It is possible that later on in the year there may be 5,000 people on relief works.

NANDGAON Taluka (Acting First Assistant Collector					**Mr. W. Woodward's Report, dated 8th January 1877).**					
The kharif yield will be 10, and the rabi 4, annas. There are no prospects of further sowings this season.	The probable remissions are Rs. 2,500. The total revenue is not given.	There has been no unusual mortality among the cattle, and none is anticipated. About 2,000 animals have been sent for grazing to the Chalisgaon Taluka, Khandesh.	It may be necessary to expend about Rs. 4,000 in improving the wells of 15 villages.	See below.	The grain supply is ample; the railway station at Nandgaon is the centre for imports. Prices have fallen since October, but are likely to rise three or four months before the harvest. Private enterprize will supply the market.	The population is chiefly agricultural. There are no large landholders able to help their tenants if required.	There has been no emigration, and none is anticipated.	No relief works are at present in progress; but in March it may be necessary to commence the Malegaon-Nandgaon road, and the Rájpur Ghát between Nandgaon and Yeola.	No charitable relief has been necessary. A grant of Rs. 150 is available when required.	At present there are no persons on the hands of Government for relief either on works or by charity. The numbers on relief works may be on— 1st March ... ... 500 " May ... ... 1,100 " July 1,900

BAGLAN Taluka (Acting First Assistant Collector Mr. W. Woodward's Report, dated 29th December 1876).										
The kharif yield will be 6, and the rabi 3, annas.	The probable remissions are Rs. 10,000. The total revenue is not given.	No unusual mortality among the cattle has occurred or is anticipated. About 10,000 animals have been sent to the Dangs, and the Pimpalneir taluka, Khandesh.	The supply of drinking water is sufficient.		Each village has its own stock, and the amount in the taluka will probably prove sufficient.	The population is chiefly agricultural. There are no large landholders able to aid their tenants, if required.	No emigration has taken place, and none is anticipated.	No relief works are in progress; but the road from Bhawarbari to Satara will soon be commenced.	No charitable expenditure has been incurred.	There are at present no persons on relief works, and at the worst period there are not likely to be more than 2,000 people on them.
KALWAN Taluka (Acting First Assistant Collector Mr. W. Woodward's Report forwarded with Collector's Remarks, dated 16th January 1877).										
The kharif yield will be 8, and the rabi 8, annas. No further sowings will take place this season.	The probable remissions are Rs. 9,000. The total revenue is not given.	No unusual mortality among the cattle has taken place or is anticipated. The people of the eastern villages have, however, sent their cattle towards the Dangs.	The water-supply is sufficient.		There is enough grain in the taluka for its wants.	The population is almost entirely agricultural. There are no large landholders who could help their tenants, were it required.	No emigration has taken place, and none is anticipated.	In September and October a few small works were undertaken for the relief of the Bheels. The pressure lasted only till the kharif harvest commenced. In March it may be necessary to commence the Diwathari Kalwan road.	No expenditure has been incurred on charitable relief.	No persons are at present on the hands of Government, and it is doubtful whether there will be any. At the outside there may be 500 on relief works where the pressure is the greatest.

GENERAL OBSERVATIONS.

Of the 11 talukas the crops in 8 seem fair, and in 3 indifferent.

The proposed remissions amount to Rs. 3,69,500.

The condition of the cattle throughout the Collectorate appears satisfactory.

In 5 talukas the prospects of the water-supply seems satisfactory, and in 6 indifferent. No calamity due to failure of water is anticipated by Government.

No apprehensions are entertained regarding the grain supply.

The majority of the population of this, as of all other Collectorates, is either purely agricultural, or very intimately connected with agriculture.

There has been very little emigration.

The chief relief works are the Bawarbari-Vinchur, Kapralla Ghát, Vinchur-Niphar and Niphar-Deopur roads.

The expenditure upon charity has been very trifling.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	43,000
On May 1st	53,100
On July 1st	36,300

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. G. W. MACPHERSON,
Under-Secretary to Government.

The 3rd February 1877.

AHMEDNAGAR.

KOPARGAON Taluka (2nd Assistant Collector Mr. F. S. Hamilton's Report, dated 21st December 1876.)

a	b	c	d	e	f	g	h	i	j	k
5 to 6 annas will be the yield of the kharif, and 2 annas that of the rabi crop. No prospect of further sowings this season.	The Assistant Collector estimates the remissions at Rs. 78,000, which estimate the Revenue Commissioner considers too high.	No cattle are known to have died from starvation. At the commencement of the scarcity, many were sent into the Konkan. The cultivators who have irrigated land are sowing kadwal. Rs. 650 have been given as tagai advances to assist in the purchase of fodder and the improvement of existing wells.	One-third of the villages are situated on or near the Godávari, and will be well supplied unless the river runs dry. The greater number of the other villages have wells which, with a little outlay, will last for the season. Some few villages are situated on nalas which have already dried. Ziras are being dug; and if this source should fail, the villages will probably be abandoned for the season.	For the week ending — Prices: lbs. per Rupee. Jowári. Bájri. Wheat. 1st week in October 1876 ... 42 33 33 2nd " " ... 42 33 33 3rd " " ... 31½ 30 27 4th " " ... 31½ 30 27 1st week in Nov. 1876 ... 33 31½ 28½ 2nd " " ... 33 31½ 28½ 3rd " " ... 27 25½ 24 4th " " ... 27 25½ 24 1st week in Dec. 1876 ... 30 25½ 24 2nd " " ... 30 25½ 24 3rd " " ... 33 24 27 Average of 6 years ... 60 51 36	In the 12 largest villages not more than about 330 tons are stored. Manmád, on the G. I. P. Railway, is 30 miles from Kopargaon, and grain is brought thence in large quantities into the taluka. Prices will probably fall before long, and there is little fear of any subsequent considerable rise.	Out of 72,000 people, about 50,000 are high caste, about 11,000 are purely agricultural, and about 5,000 combine agriculture with other occupations. There are only 3 considerable landholders, and there is no chance of their assisting their tenants.	About 18,000 people have left the taluka. None have returned, nor is it known whether they have bettered themselves. 1,000 more may yet migrate.	Three large road works are in progress, and 3 more may be undertaken on their completion. Tanks and prickly-pear may also be cleared, but sufficient work for more than 2 months cannot be found, unless the Dhond and Manmád Railway or some large irrigation work on the Godáveri be commenced.	So far no large sums have been given in charity, what has been given has been raised from private subscriptions. Government have made a grant which will be availed of later in the season as the distress increases.	On works 3,500. By charity 20. If only men belonging to the taluka be employed, the number will be about 5,000 on 1st March, 6,000 on 1st May, and probably none on 1st July, if rain falls seasonably. The plan of transferring labourers from one taluka to another will interfere with the calculation of each taluka.

SANGAMNER Taluka (2nd Assistant Collector Mr. F. S. Hamilton's Report, dated 23rd December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The kharif 6 annas, rabi 2 annas. There will be no further sowings this season.	About Rs. 76,000 ...	About 300 cattle have died since September, the greater number probably from starvation. Many more will succumb as the season advances. The cultivators who have sufficient water are sowing kadwal. Rs. 750 have been granted as tagai for the purchase of fodder.	The water-supply is rapidly failing. Digging wells and tanks will be useful. Bunding a stream at Pokhvi at a cost of Rs. 5,600 would give water to a few villages and provide work for many persons. Rs. 2,000 have been granted as tagai for wells.	For the week ending — Prices: lbs. per Rupee. Bájri. Jowári. Wheat. 1st week in October 1876 ... 27 30 24 2nd " " ... 27 30 25½ 3rd " " ... 26½ 33 27 4th " " ... 25½ 33 25½ 1st week in Nov. 1876 ... 25½ 31½ 24 2nd " " ... 24 30 22½ 3rd " " ... 24 30 24 4th " " ... 25½ 31½ 24½ 1st week in Dec. 1876 ... 27 33 26½ 2nd " " ... 27 33 27 Average of 6 years ... 61½ 75½ 37½	There are very small stocks in the taluka, but grain comes from the Central Provinces *vid* Deolali on the G. I. P. Railway. Competition is active, and there is no fear of prices being fictitiously forced up.	The whole population 81,000 (except that of the chief town) is agricultural. About 1,000 combine trade with agriculture. There are no large land-holders likely to aid their tenants.	Out of a population of 81,000, about 7,000 have left in search of work. Perhaps 3,000 or 4,000 more will go.	Four main roads are in progress. The Dhond and Manmád Railway would afford relief to the whole of the taluka. The Pokhvi Tank would also be a useful work to undertake.	About Rs. 138 have been spent on charity. A travellers' grain depôt has been opened at Ambi Ghargaon on the Poona and Násik Road. Private subscriptions have been raised. Government aid will be required in the hot weather.	On works 5,620. By charity 111. On 1st March 8,000. On 1st May 10,000, and probably none in July.

PARNER Taluka (2nd Assistant Collector Mr. F. S. Hamilton's Report, dated 23rd December 1876.)

a	b	c	d	e	f	g	h	i	j	k
4 annas of kharif crop, 2 annas of rabi. No prospect of further sowings this season.	About Rs. 90,000 ...	No cattle have died from stravation. Many have been sent to graze on the Ghâts. The cultivators who have water enough are sowing kadwal to support their bullocks in the hot season. Rs. 2,785 have been granted as tagai for the purchase of fodder and the deepening of wells.	Unless rain falls about Christmas, the scarcity of water will prove fatal to cattle, and possibly to human beings. There is no large river, and the small streams are drying up. The villages to the western edges of the central plateau will be uninhabitable during the hot weather; those at the foot of the ravine will be best off. It is proposed to excavate a tank at Párner. Rs. 958 were given in various villages for improving their water-supply; large bandaras for irrigation purposes might be made at Reewooli and Apdhup Dhond. The Collector opposes the earthen dam advocated by his Assistant, unless competent professional aid is available.	For the week ending — Prices: lbs. per Rupee. Bájri. Jowári. Wheat. 1st week in October 1876 ... 28½ 30 24 2nd " " ... 28½ 30 24 3rd " " ... 27 30 24 4th " " ... 27 30 21 1st week in Nov. 1876 ... 25½ 30 21 2nd " " ... 24 27 21 3rd " " ... 22½ 27 19½ 4th " " ... 21 24 19½ 1st week in Dec. 1876 ... 24 27 21 2nd " " ... 24 28½ 21 Average of 6 years ... 45 59½ 31½	Grain is imported by road from Nagar. There is no Railway in the vicinity. It is thought that prices will continue to fall. There is no large store of grain in any village of the taluka.	Of the total population of 82,000 about half are Kunbis. Of these one-half combine agriculture with trade. There are a few large landholders, who may, the Assistant Collector thinks, be induced to help their tenants. The Collector, however, considers it improbable that the landholders will help their tenants either by making advances or by any other means.	15,000 people have left the taluka. Many went to Bombay, whence they are returning, having been unsuccessful in obtaining employment.	15 small roads are in progress, and 4 more and some tank clearances are proposed. When these are completed, unless some large work like the Dhond—Manmád Railway is commenced, it will be necessary to go on improving the existing roads, as no money will be available to keep any more new ones in repair.	About 250 poor people are daily fed at Párnar. The expenditure has been about Rs. 600.	On relief works 6,000. By charity 250: these will increase largely before long. The number of work-people on 1st March will be 10 to 12,000, 1st May 20,000, 1st July 1,500 to 2,000.

AHMEDNAGAR

—continued.

KARJAT Taluka (Supernumerary

a	b	c	d	e	f	g	h	i	j	k
In garden lands the kharif yielded 4 annas and the rabi 4 annas. There was no jirayet crop whatever, either khari for rabi. There will be no further sowings this season.	The land revenue is Rs. 64,326, of which Rs. 52,543 will have to be remitted.	Of the 24,012 plough bullocks, half have been taken to the valley of the Godáveri and places north, where some have died, and others have been sold. Of the remainder, about 6,000 have already died, and 1,000 more may yet succumb. Nearly all the remaining cattle have been sent away. A large number have no doubt died, or been sold for trifling sums. Rs. 1,350 tagai have been given to help to purchase forage.	The water-supply is reduced by a half and will be very scarce in the hot weather. Wells are being cleared and deepened, and ziras in the beds of streams opened.	For each week in October, November and December. / Prices: lbs. per Rupee. — Jowári. / Bájri. / Wheat. / Rice. 1st week in October ... 31 / 30 / 26 / 18 2nd „ „ ... 31 / 30 / 26 / 18 3rd „ „ ... 27 / 24 / 22 / 15 4th „ „ ... 27 / 24 / 22 / 15 1st week in November ... 24 / 21 / 21 / 12 2nd „ „ ... 24 / 21 / 21 / 12 3rd „ „ ... 24 / 21 / 21 / 12 4th „ „ ... 24 / 21 / 21 / 12 1st week in December ... 24 / 21 / 21 / 15 2nd „ „ ... 24 / 22 / 21 / 13 3rd „ „ ... 25 / 24 / 21 / 13 Average of 6 years ... 58¾ / 46½ / 33 1/16 / 16 11/16	There is five months' supply in the Taluka. There was a large store of grain at Mirajgaon and smaller stores at 3 or 4 other places, from which grain is being exported; it is being imported from Deksál, Pomalwari, and Jámkhed. Prices have fallen slightly. Private enterprize will keep up the supply.	The majority of the population belongs to the Kunbi and other inferior castes. The population is 52,983, of whom 3,447 are wealthy and 49,536 poor. Only 7,579 are returned purely agricultural, but the Assistant Collector believes the majority of the poor must belong to the agricultural class. There are no large landholders, except a few jaghirdars, from whom no aid can be expected.	22,956 people have migrated to the Godáveri and the country north, and probably to the Berars. Some having failed to obtain employment have returned and report that the others are badly off. The people who remain knowing this, will not be likely to emigrate.	3 road works which have been sufficient so far have been undertaken, but the sanctioned amount will be finished shortly. Six road works, to cost Rs. 14,100, and two tanks to cost Rs. 4,000, have been provisionally sanctioned, but will not suffice to give employment to the people. The Assistant Collector recommends clearing and repairing five large tanks.	Rs. 300 from Government and Rs. 50 from the Nagar Relief Fund have been given for feeding the aged and infirm; 1½ lbs. of jowári is given daily to adults, and 12 ounces to children. Provision for assisting travellers is considered unnecessary. The amount actually spent is not stated.	On works 7,210. By charity 173. Labourers likely to be on the works— 1st March ... 9,000 1st May ... 7,000 1st July ... 2,000

SHRIGONDA Taluka (Supernumerary

a	b	c	d	e	f	g	h	i	j	k
The kharif yield was 9 pies and the rabi 9 pies. No prospect of any further sowings except "Kadwal" in garden land for forage.	The land revenue is Rs. 1,08,000, of which Rs. 90,000 will have to be remitted.	It is impossible to give a correct estimate of mortality amongst the cattle. As soon as the forage failed, all the cattle, except those used for gardens, were taken to the Gungathori, or to the Nizam's territory, where many died or were sold for trifling sums. Some are returning in a worn-out state and will probably die. The bullocks used for drawing water will probably be saved. Advances from tagai have been made to about 30 people. Some well-to-do persons have imported grass from the Konkan. The people have been shewn how to prepare prickly-pear, but the process is too expensive to be adopted.	The water-supply for drinking purposes has not yet failed, but will be scarce before the next rains. All the small streams are dry, but there is water in the Bhima, Hanja, and Gornadi rivers. Wells can be deepened and Ziras excavated to provide water in the hot weather.	Date. / Prices: lbs. per Rupee. — Wheat. / Jowári. / Bájri. 15th Oct. 1876 ... 22½ / 27 / 24½ 31st „ ... 18½ / 24 / 21 7th Nov. 1876 ... 17½ / 19 / 20½ 14th „ ... 18 / 18¾ / 20 21st „ ... 18 / 19½ / 22 28th „ ... 18 / 21 / 21½ 5th Dec. 1876 ... 21 / 22½ / 22 12th „ ... 22½ / 24 / 24 Average of 6 years ... 38 / 66 / 53½	Assistant Collector Mr. A. F. Woodburn's Report, dated 20th December 1876.)					
					The local stocks are sufficient to last for 3 months. Further supplies are being brought from Nagar, Mirajgaon, Karjat, and Dhond Station (G. I. P. Railway). Prices have fallen during the last month. Supplies will probably be kept up by private enterprize.	The population amounts to 64,936, of whom 10,234 are purely agricultural, and 5,058 are artizans. The remainder must, the Assistant Collector thinks, be connected with agriculture. The people on the whole are poor. There are no large landholders.	The population is 60,000. About 20,000 have left principally for the valley of the Godaveri and further north. There is no accurate information of what they are doing. A few have returned and many will probably follow. No further emigrations are expected.	Four large road works, three of which have been completed. Tank clearances and cutting prickly-pear are the works which have been undertaken. Seven more roads and a tank have been sanctioned. The works have hitherto been sufficient, but those remaining will not nearly suffice. If the earthworks of the Dhond and Manmád Railways are undesirable, a substitute must be found in some large irrigation work not yet discovered.	The aged and infirm received doles of grain daily, adults 1½ lbs. and children 12 ozs. of jowári. Government granted R. 500 for this purpose, the Ahmednagar Relief Fund Rs. 250 in grain and cash, and Rs. 56-8 have been raised locally. Travellers receive a day's food and enough to take them on to Nagar. The amount spent in charity is not given.	On works 3,846. By charity 200. The number of labourers will be as follows:— 1st March ... 8,000 1st May ... 8,000 1st July ... 4,000

JAMKHED Taluka (Supernumerary

a	b	c	d	e	f	g	h	i	j	k
The kharif yield is 6 annas. The rabi 2 annas. There is no prospect of further sowings this season.	The revenue is Rs. 82,000. Remissions to the extent of Rs. 37,400 will have to be made.	The number of cattle is about 60,000; 29,000 have been taken to the Nizam's territory where many have died or been sold. Not more than 10,000 or 12,000 will return. Of those remaining in the taluka, 10,000 have died or will die. As there is no fodder in the taluka, the only measure that the ryots can take is to grow it in their gardens. Grants of tagai have been made for the purchase of fodder.	The water-supply is only from ¼ to ½ of what is usual, and it will be scarce in the hot weather. Rs. 2,000 are now being expended in deepening wells and excavating ziras in the beds of streams.	Date. / Prices: lbs. per Rupee. — Bájri. / Jowári. / Wheat. 7th Oct. 1876 ... 33 / 33 / 33 15th „ ... 36 / 36 / 27 23rd „ ... 33 / 33 / 27 31st „ ... 33 / 33 / 24 7th Nov. 1876 ... 24 / 24 / 21 15th „ ... 24 / 24 / 21 23rd „ ... 24 / 24 / 21 30th „ ... 25½ / 25½ / 22½ 7th Dec. 1876 ... 25½ / 25½ / 22½ 15th „ ... 25½ / 25½ / 22½ Average of years ... 54 / 66 / 48	Assistant Collector Mr. A. F. Woodburn's Report, dated 20th December 1876.)					
					The taluka has sufficient grain for itself. Prices have fallen owing to the large supplies of grain brought to Poona, Nagar, and other places. The Assistant Collector is of opinion that the Banias will import grain if it is required.	The population is 62,351, of which 1,200 are rich, 22,351 poor and partly connected with agriculture; 5,400 purely agricultural and 33,400 partly agricultural. The majority belong to the Kunbis and other inferior castes. No help can be expected from any landholders to their tenants.	12,565 have emigrated to the Nizam's territory northwards. Some have returned, as they could not find employment. More are expected to emigrate after the rabi is reaped.	There are five road works in progress, and 9 small works for improving the water-supply. The money sanctioned for these will shortly be expended. The Collector has been asked to obtain sanction for 13 roads and 2 tanks. The works so far have been sufficient.	The aged and infirm are supplied with grain daily, adults receiving 1½ lbs. and children 12 ounces of jowári. Rs. 300 have been given for this purpose. A travellers' depôt has been opened at Kudeh, for which Rs. 100 have been sanctioned, where travellers and the aged and infirm of the locality are helped.	On works 2,365. By charity 280. Labourers likely to be on relief works— 1st March ... 6,000 1st May ... 5,000 1st July ... 2,000

AHMEDNAGAR—continued.

SHEOGAON Taluka (1st Assistant Collector Mr. A. H. Spry's Report, dated 30th December 1876 and 6th January 1877.

a	b	c	d	e	f	g	h	i	j	k
The kharif yield will be 8 annas and the rabi 8 annas. No further sowings, except in garden lands, can be expected.	Rs. 3,000 is the probable amount of remissions.	Some cattle brought in an enfeebled condition from other talukas have died, and some have gone on to the Nizam's territory.	The water-supply is sufficient.	For the week ending: 7th October 1876 ... Jowari 30, Bajri 24, Wheat 21; 15th " ... 27, 24, 21; 23rd " ... 27, 25, 21; [illegible] " ... 28, 28, 24; 7th November 1876 ... 30, 24, 21; 15th " ... 27, 24, 21; 23rd " ... 27, 25, 21; 20th " ... 28, 28, 24; 7th December 1876 ... 30, 28, 27; 15th " ... 30, 28, 27; 23rd " ... 32, 30, 28; 31st " ... 30, 28, 27; Average of 4 years ... 24¾, 60¾, 36¼	The local stocks of grain are not large. Importations are made by private persons from the Nizam's territory.	The Mamlatdár reports a total population of 87,974, out of which the Assistant Collector thinks 60,000 are partly agriculture, and belong to the Kunbi caste. Sir Dinkar Rao is the only large landholder, and he will doubtless afford relief to his tenants if necessary.	No emigrations are reported, but considerable immigrations have taken place.	No relief works are considered necessary at present.	Rs. 300 have been assigned for charitable relief. Adults receive 1½ lbs. of grain or flour and children 12 ozs. daily.	About 50 persons are supported by charity. The number of immigrants who may require support on relief works later on in the season is estimated at 7,000.

NEWASA Taluka (1st Assistant Collector Mr. A. H. Spry's Report, dated 27th December 1876.

a	b	c	d	e	f	g	h	i	j	k
The kharif and rabi yield will each be 6 annas. No further sowings are expected this season.	The revenue is Rs. 1,30,000. The 1st Assistant Collector estimates the remissions at Rs. 30,000 or Rs. 40,000; but the Revenue Commissioner sees no reason for remissions, except in some few cases.	Some cattle have died, though probably not from starvation, and a good many have been taken to places where fodder is more plentiful. No unusual mortality is anticipated. No advances have been made by Government.	The water-supply will be sufficient.	For the week ending: 7th October 1876 ... Wheat 30, Bajri 36, Jowari 36; 15th " ... 30, 36, 36; 22nd " ... 27, 27, 33; 31st " ... 27, 27, 33; 7th November 1876 ... 24, 24, 30; 15th " ... 24, 24, 30; 22nd " ... 24, 24, 30; 30th " ... 24, 24, 30; 7th December 1876 ... 27, 27, 30; 15th " ... 30, 30, 33; 22nd " ... 30, 30, 33; Average of 6 years ... 43, 58, 64	Grain is plentiful and is imported from the Nizam's dominions; it is also exported from this taluka to less-favoured localities. Prices have fallen. Private enterprize will supply the market.	The population is 75,000, consisting chiefly of kunbis and agriculturists. There are about 5,000 high-caste people and 4,500 artizans. There are a few jahagidars who may eventually give relief to their tenants.	There is more fear of immigration than of emigration, though some instances of the latter are reported.	No relief works are required for the present. Later on, however, a demand will be made which can well be met by constructing the earthworks of the Dhond and Munmád Railway. There is no other large works which can be undertaken with advantage.	About 50 infirm people are being charitably supported. Their numbers are likely to increase.	On works 50, by charity 50; this number will probably swell to 1,000 by 1st May. The numbers requiring relief on 1st March will probably be about 8,000, 1st May 20,000, 1st July 8,000. The Revenue Commissioner thinks that at the worst the numbers will never exceed 8,000 people.

NAGAR Taluka (1st Assistant Collector, Mr. A. H. Spry's Report, dated 28th December 1876.

a	b	c	d	e	f	g	h	i	j	k
The kharif yield will be 4 annas and the rabi 10 annas in bagayet lands, from 1 to 4 in jirayet lands of most villages, and 4 to 8 in the others. The area of each is not given, but the rabi cultivation considerably preponderates over the kharif. No further sowings of grain crops are expected.	The revenue is Rs. 1,17,597, and the probable remissions Rs. 50,000.	600 cattle are reported to have perished, and 25,000 more are expected by the Mámlatdár to die. This estimate the Assistant Collector and the Revenue Commissioner consider high. A grant of Rs. 2,200 tagai has been made for the purchase of fodder, and two sums of Rs. 2,000 each have been allotted for improving the water-supply and growing kadwal. There are grazing places at Pimpri in the Sangamner Taluka on the bank of the Prawari at Kopargaon, Kokomton and Sannatchar in the Kopargaon Taluka on the bank of the Godáveri, and on the Ghats, where cattle can be accommodated. Some cultivators have purchased and sown fodder for the subsistence of their cattle. Others again are deporting them. The Mámlatdár proposes establishing six pounds for the admission of cattle, on the understanding that the owners relinquish all claims to them after they are put in; that Government should support them till the next monsoon and then sell them, but the Assistant Collector and the Revenue Commissioner are both opposed to entering the market. The Collector supports his Assistant's suggestion to establish temporary Panjrapoles.	Of the total number of villages, 59 are on the banks of rivers, and 59 are dependent on wells for their water-supply. There is no fear of a total failure, provided wells are deepened, ziras dug, tagai liberally advanced, and use made of Norton's screw where practicable.	Prices.:—lbs. per Rupee. Date: 1st October 1876 ... Rice 18, Gram 39, Wheat 30, Bajri 30, Jowari 33; 9th " ... 18, 30, 28½, 24, 30; 17th " ... 18, 30, 24, 24, 28½; 24th " ... 16½, 31½, 24, 24, 30; 31st " ... 16⅔, 26¼, 22½, 22½, 27; 8th Nov. 1876 ... 14½, 24, 20½, 21, 24½; 16th " ... 13½, 25½, 21½, 21½, 24½; 24th " ... 13⅓, 28⅓, 22½, 22½, 25½; 1st Dec. 1876 ... 15, 30, 27, 27, 27; 9th " ... 15½, 31½, 27, 27, 27½; 17th " ... 16½, 32½, 27, 27, 28½; 24th " ... 16⅔, 33, 27½, 27½, 30; Average of 6 years 18 1/15, 36 1/15, 33 7/10, 44½, 55 1/10	There is a stock of 3,303 tons of grain in store; this, with the Dhond and Manmár stations at a distance of 47 and 100 miles respectively, whence supplies are drawn, will suffice. The prices have fallen, and private enterprise will supply the market.	Out of a total population of 67,312, the majority of whom are agriculturists, 65,966 are poor, and 1,346 well-to-do. The proportion of artizans to the total number is about 6 per cent. In the city there are a few landholders likely to assist their tenants, but none in the taluka.	33,082 souls have emigrated, and this number will probably swell as the season advances; their condition cannot be ascertained, but none have yet returned.	There are six road-works and some minor works in progress which are insufficient, and must be supplemented by further road-works, tank-clearances and cutting prickly pear unless the Dhond and Manmár Railway intersecting the taluka is commenced.	6,575 travellers have already been relieved, each receiving 1½ lbs. of jowári flour, 6 ozs. of gram flour, together with chillies, a little salt and 5 cow-dung cakes a day. The aged, infirm, &c., to the number of 15,641, have also been relieved, each receiving 1½ lbs. of grain with a little salt.	The number on relief works is 1,462, by charity 781. The probable number requiring support will be as follows:— 1st March ... 22,000; 1st May ... 39,000; 1st July ... 19,000

AHMEDNAGAR —concluded.

a	b	c	d	e	f	g	h	i	j	k
The kharif and the rabi yield will each be 2 or 3 annas. No further sowings are expected this season.	The revenue is Rs. 1,25,868; the remissions will probably be Rs. 35,000.	No unusual mortality among cattle has occurred, and no great loss is to be apprehended. Rs. 1,100 have been advanced for the purchase of fodder, and more will be given.	The water-supply is plentiful, most of the villages being on the banks of rivers.	**RÁHURI Taluka (1st Assistant Collector Mr. H. P. Spry's Report, dated 26th December 1876.**	Grain is plentiful and is imported from Jubbulpore *vid* Dhond and Manmád stations. Prices have fallen and private enterprise will meet all demands.	The total population is about 59,000, consisting chiefly of Kunbis and other agriculturists. There are about 4,000 or 5,000 artisans. No aid can be expected from landholders.	No general emigration has taken or is likely to take place.	The only relief works started are road-repairs and clearances, which have hitherto sufficed. But the demand for labour will shortly increase, and much more money spent on petty works will simply be wasted: the Dhond and Manmád Railway would afford ample relief.	Rs. 300 have been allotted for charitable support to the needy, but more will be required.	On works 7,000; by charity 300. By works on 1st March 15,000, on 1st May 25,000, on 1st July 10,000, according to the 1st Assistant; but the Collector and Revenue Commissioner hope the number will not be quite so large.

a	b	c	d	e	f	g	h	i	j	k
The kharif yield may be taken at 9 annas and the rabi at 2. There is no prospect of further sowings.	The remissions will probably amount to Rs. 36,000.	No unusual mortality among the cattle has taken place, and none is anticipated, as there is plenty of grazing on the Western Ghâts.	The water-supply seems likely to fail altogether; the Prâora and Mula rivers still contain water, but a large outlay will have to be incurred on deepening wells.	**AKOLA Taluka (2nd Assistant Collector Mr. F. S. Hamilton's Report, dated 27th December 1876.**	There is no large stock of grain in the taluka; it is brought from Sangamner, and the prices will depend on the market rates ruling there.	Except about 500 artisans, the whole population is agricultural, and there are no large landholders among them.	About 1,800 peopled have emigrated, 300 of whom have gone to the Sinnar relief works adjoining Akola, and the rest probably to the Konkan.	Five road works are in progress; and as this is the only taluka in the zila where there are no roads, 6 more are proposed, as well as one or two tank-clearances.	About 50 persons are now being gratuitously supported at 1½ lbs. of flour for an adult and 12 oz. for a child.	There are 650 people now on relief works. This number will rise to 900 in March, 1,200 in May, and fall to 500 in July. The aged and infirm will have to be supported to the extent of 150 in March, 300 in May, and 500 in July.

General Observations.

Of the 11 talukas, the crops in two seem to have been fair, in five bad, and in four very bad.

The proposed remissions amount to Rs. 5,77,943.

In six talukas the condition of the cattle seems satisfactory, in two indifferent, and in three bad.

In four talukas the prospects of the water-supply seem satisfactory, but it is reported that in five, considerable, and in two large, expenditure on this account will have to be incurred; no calamity due to failure of water-supply is, however, anticipated by the Government.

No apprehensions are entertained regarding the grain-supply.

The majority of the population of this, as of all other, Collectorates, is either agricultural, or very intimately connected with agriculture.

128,553 people, out of a population of 773,958, appear to have migrated, but some have returned.

A further migration of upwards of 5,000 people is anticipated. The migration appears to this Government to be due mainly, if not entirely, to the cattle movements, and to the movement of the people towards relief-works.

A considerable number of relief works is in progress, but the local officers are unable to suggest sufficient to meet the future demand for labour, unless the Dhond and Manmar Railway earth-works are undertaken.

The expenditure on charity has not been large.

The number of labourers anticipated to be on the hands of Government is—

On March 1st	98,900
„ May 1st	1,48,200
„ July 1st	47,500

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. W. MACPHERSON,
Under-Secretary to Government.

The 24th January 1877.

BHIMTHARI Taluka [First Assistant Collector Mr. A. Keyser's Report, dated 27th December 1876).

The kharif crop is estimated at 1 pie, and the rabi at 1¼ pie. In the irrigated lands, where the water lasts, there may be sowings of different kinds of fodder crops. There will be no further sowings in dry-crop lands this season.

The First Assistant estimates the probable amount of remissions at about Rs. 2,15,000 on a revenue demand of Rs. 2,30,025. The Collector considers this estimate under the mark, and doubts whether any revenue can be collected at all.

Out of 71,000 head of cattle, about 47,000 have been taken to the Berars, the Nizam's Dominions, and the Western Ghâts. The past mortality is estimated at 15,000, and the anticipated mortality at 7,000, besides such deaths as may take place among the cattle which have left the taluka. It is only the more worthless animals which have died. No further measures are practicable on the part of Government for cattle preservation than those already adopted.

The villages on the Bhima and Nira rivers will have plenty of water. The remaining villages are not so well off, and obtain their supply from wells, many of which will require to be deepened and improved; and a large expenditure (Rs. 40,000) will be necessary for this purpose.

The Mámlatdár estimates the local stock of grain at about 1,714 tons, but the importations are large and regular by railways, there being three railway stations in the taluka—Khedgaon, Pátas, and Dhond—whence supplies are drawn, and these importations have lowered prices considerably; but the First Assistant Collector does not anticipate any further fall. There is no likelihood of the supply failing.

The population numbers about 116,274 souls, of whom 22,070 are of the agricultural class, 1,300 shepherds and cattle-owners, 8,200 artisans, 7,270 traders, shopkeepers and servants, &c., and the remaining 77,434 are pensioners, women and children, and people of no particular occupation. The landholders are nearly all of the class of peasant proprietors, and the few who sublet their land are either traders who will do nothing for their tenants, or Brahmins who are in debt. The Inámdárs are also quite dependent on their land for their livelihood, and are more likely to require assistance than to give it. The cultivators are of the Kunbi and Mali caste.

The people have emigrated in large numbers (upwards of 39,200), to the Berars, the Sátpura Hills, the Nizam's Dominions, and the Konkan, with their carts, families and cattle; and are not likely to return before the next harvest. Most of those who have gone are reported to be doing fairly, of others no information has been received. No further emigration is probable.

The chief relief works in progress are the Mutha Canal, employing about 18,000, and the Mutakmal Tank, employing 5,000 persons, besides numerous minor works which will afford employment to 10,000 for two or three months. Works sanctioned and in progress under civil agency are: clearing the irrigation tank at Wadhani, clearing 7 small tanks for village water supplies, repairing 18 miles of road, making 47 miles of new road, cutting prickly pear, and excavating and deepening wells. As the numbers seeking employment are increasing, the First Assistant thinks that, in addition to the above, one large work is necessary, and names the Nira Canal as a work ripe for commencement and capable of relieving very large numbers. He gives also a list of minor works that might be undertaken.

But little money has as yet been expended on charitable relief to travellers. The aged and infirm poor are allowed 1¼ lbs. of grain a day, besides some salt and chillies.

The number on relief works was about 21,804 at date of report. It will be on—

1st March ...	30,000
1st May about ...	20,000
1st July from ...	5,000 to 10,000

INDÁPUR Taluka (Report of Assistant Superintendent, Revenue Survey (Mr. W. M. Fletcher), on special duty, Indápur, dated 29th December 1876).

The kharif crop has utterly failed, and the rabi is estimated at about 2 pies.

The total land revenue (Rs. 1,15,254) will probably have to be remitted.

The number of cattle in the taluka was 44,216, of which 32,560 have emigrated, about 2,285 have died, and about 7,319 deaths are anticipated, unless special steps be taken to prevent them. No advantage has as yet been taken of the Government permission to graze cattle in the Konkan and Máwals, owing to a belief that those districts are fatal to cattle from the Deccan. The Assistant suggests that Government should send pressed hay to Disksál Station, and advance it as tagai to the cultivators. This plan the Revenue Commissioner considers too expensive, and thinks that it would be cheaper to let the cattle die, and then, if necessary, advance tagai for the purchase of others.

There is no fear of a water famine. 40 villages lie on the Bhima and Nira rivers; the remaining 46 depend on wells, some of which will require deepening and improving.

Of the original local stock of grain, there are about 1,029 tons still unconsumed, and a large quantity sufficient to remove all anxiety has also been imported by rail to Diksal and Pomulwádi. Private enterprise is likely to meet all demands, and prices may yet fall to a slight extent when this season's harvest comes into the market.

Of the total population numbering 67,164 souls, 3,943 are artisans, 11,712 landholders, and 48,737 persons existing by other means. The mass of the population is agricultural. The higher rank of landholders, such as Patels, Kulkarnis, Deshmukhs, Deshpandes, &c., number about 10,000, including women and children, but few can live without work; and most of them differ in no way from the ordinary Kunbi. There are no wealthy landlords.

Of the total population (67,164) about 34,289 have migrated, but some are returning. Only the first to leave their villages appear to have bettered themselves. No further emigration is probable so long as relief works continue sufficient for the population.

The Assistant Superintendent submits a statement of 22 relief works in progress, chiefly roads, tanks and wells, and proposes similar works likely to cost Rs. 39,050, suggesting that wells should precede other works. He does not think that these works will be sufficient to provide employment for all who are likely to need it, but is of opinion that if one or two large works were undertaken, such as constructing dams at favourable sites in the villages of Bhadalwári, Shelgaon, and Kawtali, they would not only be sufficient to provide employment for all, but the prospective benefit, especially in a drought-stricken district like Indápur, would be very great.

Adults receive a daily allowance of 1 lb. of flour with salt and chillies, and those under 15 years of age receive ½ lb. flour with salt and chillies. Travellers in need of food receive the same allowance, but are forwarded at once to the head-quarters of the Mámlatdár, who provides them with work or suitable relief.

The number of persons on the hands of Government for relief by works at date of report was 9,600, and relieved by charity 500. The probable number will be as below:—

	On works.	By charity.
On 1st March ...	20,000	500
„ 1st May ...	25,000	500
„ 1st June ...	25,000	500

The number to be relieved by charity will not alter much, unless increased by strangers from other districts.

POONA

a	b	c	d	e
The kharif crop is estimated at about 5 annas, and the rabi at about 4 annas. There will be no further sowings this season, except in irrigated lands.	The probable amount of remissions is estimated at about Rs. 32,000.	No unusual mortality among cattle has occurred or is anticipated. Many cattle were removed from the district early in the season. Fodder is sufficient, and Government interference unnecessary.	There will be no absolute failure of the water-supply; but as it has failed in some places, and is scanty in others, wells will have to be sunk, and people aided in securing a sufficient supply which will entail an expenditure of about Rs. 12,000.	**PURANDHAR TALUKA (First Assistant Collector Mr. A.**

Keyser's Report, dated 28th December 1876).					
There are no means of ascertaining the local stocks, which are probably not large, but importations are considerable, and no fear of grain proving insufficient is felt. The principal centres, whence supplies are drawn, are Poona, Sáswad, Jejuri, Walhi, and Kikwi.	The population are all of the ordinary Kunbi class, and small peasant proprietors. There are 10 inám villages among those suffering from distress, but the Inámdars are not in good circumstances, and do not assist their tenants.	Only a few have emigrated with their cattle to the Ghâts; the majority of those who have left their villages have gone to the relief works.	The relief works in progress are the Bárámati-Jejuri road, repairs to a small local road, excavating wells, and cutting prickly pear. Repairs to the main road connecting Jejuri with the railway, 15 miles, and a new road from Sáswad to Tásgaon have been sanctioned. A list is submitted by the First Assistant of other projects deemed necessary hereafter to provide employment and afford relief to the people. The First Assistant is of opinion that the Nira Canal, and the Jejuri Tank will absorb all the distressed work-people in the district. The present works are insufficient to provide relief, and some work on a large scale is urgently necessary.	Rupees 150 have been expended in relieving the aged and infirm poor, but travellers have not as yet required such assistance.	There are at present employed on relief works about 5,650 persons, and relieved by charity 71. The numbers will hereafter be on—

	On Works.	By Charity.
1st March ...	9,000 ...	150
1st May ...	6,000 ...	150
1st July ...	1,000 ...	50

a	b	c	d	e
The kharif crop is 7, and the rabi 2 annas. There will be no further sowings this season.	Out of the total revenue demand of Rs. 1,40,000, about 25 per cent., or Rs. 35,000, will have to be remitted.	There has been no unusual mortality among the cattle and agricultural stock, but it is anticipated that from 10 to 15 per cent. of the total number (77,209) will die from starvation. As the forest reserves have already been thrown open for free grazing, the District Deputy can suggest no further remedy.	Partial failure of the water-supply is anticipated later on in the season, and it will be necessary to deepen wells as they run dry.	**JUNNAR TALUKA (District Deputy Collector Mr. Balaji Gungadhur's**

Report, dated 27th December 1876).					
The local stocks of grain are considered sufficient to last for at least 3 months. The supplies are drawn chiefly from Poona, and to a small extent from Sangamner. Private enterprise will supply all demand. No great fall in prices is anticipated.	The population, numbering 106,876 souls, is of a mixed character: 6,294 are high caste, and 105,582 low caste; 99,876 are poor, and 7,000 well-to-do; 81,033 are purely, and 25,843 partly, agricultural; of artisans the number is 5,500. The landholders are mostly involved in debt, but the few who are well-to-do are likely to aid their tenants.	About 2,000 people have emigrated into the neighbouring districts and Bombay. About half the number annually go to Bombay during the fair season, and return before the monsoon. The increase this year is owing to the present scarcity.	No relief work is in progress, but the Sirur-Narayangaon Road, estimated to cost Rs. 9,000, will shortly be commenced. Some other works have been sanctioned, and some proposed, amounting in all to Rs. 1,48,000.	The charitable relief given has been trifling.	There are none on the hands of Government for relief either by works or by charity. The number requiring relief hereinafter will be on—

f	g	h	i	j	k
Report, dated 27th December 1876).					
The local stocks of grain, as far as ascertainable, are sufficient to last till March. Supplies are drawn from Lonauli, Khárkala, and Talegaon Railway Stations, and private enterprise will meet all demands. Prices are falling, owing to large importations, and it is not thought likely that they will rise much.	The population is 56,884, and may be divided as follows: High caste 2,505, low caste 54,329, poor 55,084, and well-to-do 1,800; purely agricultural 51,634, and partly agricultural 5,200; artisans 1,000. The ryots are for the most part very poor and much involved. The few who are well-to-do will aid their tenants.	There has been no large emigration. Between 3,000 and 4,000 persons annually proceed to Bombay during the fair season and return when their presence is required in the fields. It is anticipated that the increase this year will be about 50 per cent.	No relief works have been started yet, but some tanks have been sanctioned and will soon be commenced. Estimates are being prepared for two roads—one from Kharkala to Ambegaon, 11 miles, and the other from Induri to Kusur, 24 miles, which the Collector considers will be of great use in opening out two important valleys.	Charitable relief has been given, both in cash and in food, at the rate of 3 pies and 1 lb. of Jowari per head per diem to 7 individuals.	Three persons have been fed on charity and 4 travellers relieved. Amongst the townsmen of Talegaon a subscription has been raised likely to amount to about Rs. 500 for charitable relief. The numbers of persons likely to be on the hands of Government will be as follows:—

	On Works.	By Charity.
1st March	500 ...	25
1st May	1,000 ...	100
1st July	800 ...	150

POONA —continued.

KHED TALUKA (District Deputy Collector Mr. Balaji Gungadhur's Report, dated 23rd December 1876).

a

The kharif crop is 6, the rabi 1, and the bagayet 2 annas. There will be no further sowings this season.

b

Remissions will probably amount to about Rs. 14,000.

c

There has been no unusual mortality among cattle or agricultural stock, but about 5,500 deaths are anticipated. The Ghodi sub-division of the taluka is the principal pasture ground for all the cattle of Indápur and Bhimthari, and also for a portion of Sholapur, whence thousands of cattle have poured in, thus seriously affecting the pasturage at the disposal of the cattle of the taluka. The District Deputy thinks that Government has done all that is possible in the matter.

d

Water has failed to some extent, and further failure is anticipated. To counteract this, wells are being deepened.

e

Average of six years ...	40	27 1/2	20	50	32 1/4	24

f

The local stocks (quantity not stated) are considered sufficient till April. Grain is imported from the Talegaon and Poona Railway Stations, and private enterprise will meet all demands, but prices are not likely to fall to any appreciable extent.

g

The population, numbering 139,100 souls, is of a mixed character, and may be divided as follows: high caste 6,100, low caste 133,000; of these 123,150 are poor, and 15,950 well-to-do. Purely agricultural number 119,800, and partly so 19,300. The total number of artisans is 10,000. Of landholders there are 13,463, but only 185 of these hold more than 100 acres. These will probably aid their tenants, but many of them are much involved.

h

Emigration has not taken place to any great extent. About 1,500 people annually go to Bombay during the fair season to seek employment, and return about the time the fields are being prepared for sowing. This year about 15 or 20 per cent. more have emigrated. Further emigration is not probable, especially as the people find employment on relief works.

i

The only relief work in progress in this taluka is the Khed-Pabal Road. As this is not sufficient, the District Deputy proposes other works, such as road-making and tank and well-clearing.

j

There are 4 aged and infirm poor people, to whom relief is given in food at the rate of 1lb. of bájri per head daily.

k

The number on relief works is 300, that relieved by charity 4. The number to be employed hereafter will be on the—

1st March	...	4,000
1st May	...	5,000
1st July	...	2,000

HAVELI TALUKA (Acting First Assistant Collector Mr. A. Keyser's Report, dated 30th December 1876.)

a

The kharif and the rabi crops are each estimated at about 6 annas. There will be no further sowings this season.

b

The revenue is Rs. 1,54,289, out of which the 1st Assistant thinks Rs. 25,000 must be remitted.

c

The mortality among cattle has been very small, from 75 to 100, and the measures adopted of throwing open forest reserves for free grazing are considered sufficient to prevent further loss.

d

In the east the water-supply will prove sufficient to last till near rains, but in the west there is always a scanty supply during the hot weather, and some expenditure will be necessary for clearing out wells, &c.

e

f

No statistics of local stocks are obtainable. Poona is the great centre of the grain trade, and large importations continue to be made, which have lowered prices considerably; but a slight rise may be anticipated before the hot weather.

g

Of the total population, numbering 216,885 souls, 46,299 are agriculturists. The land-holders in the distressed part of the taluka are small and of the usual Kunbi or cultivating caste.

h

There has been little or no emigration; the Mutha Canal having given employment to those needing it directly the distress began to be felt.

i

The Mutha Canal and the Pimpri Ghát Road are the principal relief works in progress, and employ about 3,000 people of the taluka. The First Assistant states that these works, in conjunction with certain others he recommends, such as clearing wells and constructing tanks at Vagholi, Walki and Beari, will afford sufficient relief to the people of the taluka.

j

The infirm and the aged poor obtain relief at Poona from the Municipality and the relief funds. Funds are also placed at the disposal of Patels to relieve persons of this class in outlying villages, each person being allowed 1 lb. of grain a day and an anna a week for clothes, &c.

k

The number of persons on relief works is about 3,500, and that relieved by charity 47. The numbers likely to be on hand hereafter will probably be on—

POONA

—concluded.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The kharif crop is estimated at 4, and the rabi at 1½ annas. There will be no further sowings this season.	The remissions will probably amount to about Rs. 1,00,000, out of a revenue demand of Rs.1,64,574.	Out of a total of 75,234 head of cattle, the village officers report that 2,093 have died from starvation, which the Assistant Collector thinks an exaggerated estimate. About 9,745 are reported to have been sold for nominal prices, but the Assistant Collector estimates the number so sold at about 5,000. About 19,751 have been sent out of the taluka for pasture. The cattle that are still left in the taluka will have to be fed with ordinary fodder or prickly pear. Cattle will eat prepared prickly pear, but at present the ryots will not go to the cost of preparing it.	The water-supply will prove sufficient when the necessary improvements to wells, &c., have been made.	**SIRUR TALUKA (Assistant Collector Mr. E. C**	The local grain stocks are considerable. The chief supplies are drawn from Ahmednagar, and importations by private enterprise have lowered prices. Private enterprise will continue to supply the demands of the taluka.	Of the population, numbering 76,984 souls, 21,096 are peasant proprietors, 8,547 are artisans, 1,023 traders, and the remainder labourers. The people are much in debt, and are highly improvident. There are no large landholders who will aid their tenants. A few of the peasant proprietors are free from debt, and comparatively wealthy, and can bear a famine without ruin, but cannot help others. The Soukars have, to a large extent, become landholders, and the peasant proprietors, in many instances, their tenants. They can, but will not, aid their tenants, and are merciless landlords. Of the class of Inámdars, the chief is the Jagirdar of Malthan, a Sirdar of the 1st class, and wealthy. He declined to aid his tenants, and left the taluka for Dhar at the first symptoms of distress. No help can be expected from this class.	About 18,500 persons have left the taluka. Of these about 2,000 are at work in the neighbourhood, About 5,000 have gone to Bombay and to the Ghât districts, and about 3,500 to the Moglai; but they all went with the full intention of returning next rains or earlier. About 300 of those who went to Gangtbari have returned with unfavourable accounts of the place. Further emigration is not probable.	There are sufficient useful works in progress in the taluka, such as tanks, roads, and prickly-pear cutting to afford employment to the people till March; and for the future the Assistant Collector submits a list of works which require inspection by the Irrigation Department.	A village register of persons requiring charitable relief has been prepared, and relief is given through the agency of the village officers —1 3/4 lbs. of grain to an adult, and 11 ounces to a child. One day's supply is given to needy travellers; and clothing for sick and needy persons has been provided from funds allotted by Poona Famine Relief Fund.	The number employed on reli works at date of report w about 6,000, and that relieve by charity about 500. Futu numbers are estimated at on

GENERAL OBSERVATIONS.

Of the 8 talukas, the crops in 3 seem good, in 3 indifferent, and in 2 bad.

The proposed remissions amount to Rs. 5,46,354.

In 5 talukas the condition of the cattle appears satisfactory, and in 3 rather the reverse.

Some expenditure of money will render the water-supply throughout the Collectorate satisfactory.

No apprehensions are entertained regarding the grain supply.

The majority of the population of this as of all other Collectorates is either purely agricultural or very intimately connected with agriculture.

101,989 people seem to have migrated. The movement has now stopped; it appears to be to a great extent caused by the necessity of obtaining pasture for the cattle. The people are expected to return before or during the monsoon.

The chief relief works now in progress are the Moota Canal, the Yewut Tank, the Shirshophul Tank, and the Poona Pond Road.

The expenditure upon charity has been trifling.

The number of labourers anticipated to be upon the hands of Government is—

On March 1st	
On May 1st	80,500
On July 1st	85,500
	45,300

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. G. W. MACPHERSON,
Under-Secretary to Government.

The 30th January 1877.

SHOLAPUR.

SANGOLA Taluka (Supernumerary Assistant Collector Mr. J. Davidson's Report dated 27th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield will be 7, and the rabi 3 pies. There are no prospects of further sowings this season, except fodder in garden lands.	The total revenue is Rs. 85,120, and the probable remissions will be about Rs. 76,252.	Out of 125,140 cattle, 50,000 have left the taluka, many of which are reported to have died or been sold, 6,820 have already perished, and further mortality to the extent of 14,700 is anticipated. As a remedial measure it is proposed to advance tagai, and shortly before the rains to re-transport agricultural cattle by rail at Government expense.	The taluka is dependent on wells and "hels" for its water-supply, which is now very scanty and precarious; wells and "hels" are being deepened, and new "hels" opened in the beds of rivers and nullahs. In some villages it will be impossible to provide water, and they must be deserted.		There are upwards of 518,000 lbs. of grain in the market; private stocks cannot be ascertained, but are small. The chief centres from which grain is imported are Sholapur and Pandharpur. No fall in prices can be expected, but private enterprise will supply the market.	The population amounts to 76,850; of these 65,380 are caste people, and 11,470 Mhárs and Mhangs; 6,800 are well-to-do, and 68,250 poor; there are about 65,000 agriculturists, and 5,000 weavers, &c. There are no large landholders capable of aiding their tenants.	35,000 persons have emigrated to the Berars, Central Provinces, Indore, and the Konkan, and some have bettered themselves. In a few cases cholera broke out and carried off some of the emigrants; a few of those who went into the Nizam's territory are returning; further emigration to the extent of 3,000 or 4,000 is expected.	The seven road works now in progress are insufficient, and must be supplemented by irrigation works in the taluka if found practicable, or by the Nira Canal and Dhond-Manmar Manmád Railway.	Charity at Government expense is given to the infirm at the rate of 1 anna for an adult and ½ anna for each child. Rs. 595 have been expended from Government resources.	At present there are 15,000 persons employed on the works. There will be on—

PANDHARPUR Taluka (Supernumerary Assistant Collector Mr. J. Davidson's Report dated 27th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The kharif and rabi yield are each under one anna. There are no prospects of further sowings this season, except fodder in garden lands.	The revenue amounts to Rs. 1,17,210, and the probable remissions will be Rs. 1,11,226.	Of 72,700 cattle, the Mámlatdár estimates that 63,800 have been taken away, 4,000 have died, and 4,900 still remain in the taluka. The Revenue Commissioner suggests that Government should aid in re-transporting the cattle by rail, and should advance tagai.	This taluka is traversed by the river Bhima and its tributary, the Mann, and the water-supply is not a matter of much anxiety. In some villages, however, where water is very scarce, "hels" are being dug in the beds of nullahs and wells deepened, and where water entirely fails, the people will be removed.		There are 858,400 lbs. of grain in the market, the actual stores cannot be ascertained. It is imported from Sholapur and Barsi Road station; there will be no considerable fall in prices, but private enterprise will supply the market.	The population amounts to 79,314, of whom 63,740 are caste people, and 15,574 Mhárs and Mhangs; 17,722 are well-to-do and 61,592 poor. There are upwards of 60,000 agriculturists and a trifling percentage of artizans. There are no landholders capable of aiding their tenants.	40,000 people have emigrated; those with cattle, as a rule, went to the Berars, the Central Provinces, or Indore, and a few to the Nizam's Ghâts; those in search of employment went to Bombay and the Konkan; 500 have returned, but it is anticipated that there will be some further emigration.	The relief works now in progress, and which will prove insufficient, are tank clearances; seven road works and other minor works. There are no large projects to be undertaken in the taluka itself; but if the works proposed in Sángola and Málsiras are sanctioned, the people can be transferred to them failing the Dhond and Manmar Railway and Nira Canal.	Government have spent Rs. 493 on charitable relief.	There are upwards of 10,824 persons on Government works at present. The Mámlatdár expects there will be on—

SHOLAPUR

—continued.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The kharif yield will be 1 pie and the rabi *nil*. There are no prospects of further sowings this season.	The revenue is Rs. 2,74,000; the Mámlatdár estimates the remissions at Rs. 2,58,000, which the Revenue Commissioner considers too high.	Out of the total number of 71,000 cattle, 20,000 have been sent to Khandalla to graze, 30,000 have been killed by butchers, or have died of starvation, which statement, however, the Revenue Commissioner considers exaggerated, and 20,000 more are expected to perish. The Collector considers advancing tagai to holders of garden land, the only practicable remedy.	In 87 villages the water-supply will be precarious, but the difficulty can in a measure be obviated by temporary wells. Some villages, however, must be abandoned in the hot weather.	**SHOLAPUR Taluka (Deputy Collector's Report**	The local stocks are estimated at 740,000 lbs. of jowári. The railway station at Sholapur is the chief centre from which supplies can be drawn. Prices have fallen, and the Revenue Commissioner considers that private enterprize will do all that is required, though the local officers think that grain supplies will run short in the more distant villages of the taluka.	The total population is 170,600, of whom 128,700 are high caste, and 41,900 low caste, 166,600 poor and 4,000 well-to-do; 82,000 agricultural, and 88,600 non-agricultural, of whom 28,000 are artizans. There are no landholders likely to aid their tenants.	About 20,000 people have emigrated into the Nizam's territory, but, failing to better themselves, are returning. No further emigration is probable.	The present relief works are not sufficient; it is proposed to undertake tank clearances and two irrigation tanks if they prove practicable.	2,800 infirm people are being charitably supported.	At present 17,991 persons are supported on works, 2,800 by charity. There will be on—

forwarded with Collector's remarks, dated 15th January 1877).

KARMALA Taluka (District Deputy Collector's Report

The kharif and rabi yield may each be taken at 1 anna. There are no prospects of further sowings this season, except fodder in garden lands.	The total revenue is Rs. 1,68,000, nearly the whole of which must be remitted.	There were about 130,000 cattle in the taluka, of which 85,000 have been taken away for grazing, 2,500 have perished, and further mortality to the extent of 5,000 is anticipated.	A failure in the water-supply of some of the villages distant from the rivers is apprehended; wells are being deepened and cleared.		There are upwards of 825 tons of grain in store; it is imported chiefly from Khardi and Jeur. Prices have fallen, and private enterprise will supply the market.	The total population is 101,187, of whom 82,243 are high caste, and 18,944 low caste; 100,687 poor, and 500 well-to-do; 8,300 agricultural and 92,887 non-agricultural, of whom 5,000 are artizans. There are no large landholders able to assist their tenants.	Nearly half of the people have emigrated, some to the Nizam's territory and the Berars, others to the Konkan. They do not appear to have bettered themselves, and 2,000 have already returned, and more are returning. No further emigration is anticipated.	The relief works in progress are not sufficient; many others will be required.	Charitable relief to the extent of Rs. 295 has been given by Government in the shape of food.	The number of people on the hands of Government is at present 6,074 labourers, and 518 people receiving charity; and the estimate is, on—

A. Acworth's Report dated 1st January 1877.)					
The kharif yield may be taken at 1 anna 9 pies, and the rabi at 3 annas. There are no prospects of further sowings this season.	The revenue is Rs. 2,05,180, and the probable remissions will be, according to the Assistant Collector, Rs. 1,51,672; but the Revenue Commissioner considers this amount too great.	The number of cattle, including sheep, is 102,164, about 18,000 of which have left the taluka. The Assistant Collector anticipates a mortality of half the remainder, but the Revenue Commissioner thinks the number exaggerated. The people do not take advantage of the means of transport to the Ghâts offered by Government, as they fear finding themselves in a helpless condition far from home.	A considerable sum of money must be spent in the taluka to improve the water-supply, but there is no reason for anxiety, except as regards the town of Bársi.	**BARSI Taluka (Second Assistant Collector** — Prices: lbs. per Rupee. Mr. H. A. Acworth's Report dated 1st January 1877.)					

f	g	h	i	j	k
There are upwards of 763 tons of grain in store; it is imported from Ponialwári, Deolsal, and Bársi Road Stations. Private enterprise will supply the market, but it may be necessary for Government to keep up a small amount of carriage for the grain transport.	The total population amounts to 63,473, of whom 52,127 are Mahrattas and 11,346 low caste; 60,993 are poor, and 2,480 well-to-do; 48,000 are agriculturists and 12 per cent. artizans. There are no land-holders able to assist their tenants.	35,500 have emigrated to the Nizam's dominions, the Berars, Nagpur, and the Konkan; 1,000 have returned, and many more are following. No further emigration is probable.	16 relief works are now in progress; they will prove insufficient, and 4 tanks and 2 roads are proposed.	Destitute people receive flour and a few pice. Rs. 1,687 have been spent in this way up to date.	Government at present support 9,020 on works and 593 by charity. The number to be provided for will be on— *On works.* / *By charity.* 1st March ... 11,000 / 800 1st May ... 26,000 / 900 1st July ... 14,000 / 1,100
There are about 117,600 lbs. of grain in the taluka; the chief trade centre is the village of Kurdowadi at Bársi Road Station; it forms a centre of export from Pandharpur and Bársi. In the interior of the taluka Shetphal has acquired importance as a local trade centre. Prices have fallen, and private enterprise will supply the market.	The population is 103,981, of whom 84,379 are high, and 19,608 low, caste; 17,894 are cultivators, 86,087 non-cultivators, and 1,777 artizans; the people are wretchedly poor, and there are no land-holders capable of aiding their tenants.	31,800 have emigrated into the Nizam's territory, Dehrur, Bhir, Umrawati, &c., the majority of whom have not bettered themselves; more than 2,000 have returned, and others are following; further emigration is expected.	At present there are 8 roads, 22 tanks, and 20 wells in progress. In addition to these, the Ashti tank will be undertaken, and the Dhond and Munmád Railway would afford relief.	A comparatively small number of paupers are receiving gratuitous support.	At present Government support 12,500 on works and 1,355 by charity. The numbers requiring relief on works will be on— 1st March ... 30,000 or 40,000 1st May ... 40,000 1st July ... 10,000 or 15,000 if rain falls early. The Revenue Commissioner and Collector think these numbers over-estimated.
There are upwards of 3,071 tons of grain in store. Bársi Road Station, the chief centre of supply, is 21 miles from the kasba town. There are 5 large market towns well situated to supply the interior. Prices have fallen, and private enterprise will supply the market.	The population amounts to 117,664, of whom 98,187 are high caste, and 19,447 low caste; 8,541 are cultivators, 109,123 non-cultivators, and 4,500 are artizans; about 15,000 are well-to-do and the rest poor. There are no landholders who will aid their tenants.	Many have emigrated, but have not bettered themselves thereby, and are returning: about 1,000 have already done so. Further emigration may be expected.	The relief works in progress are chiefly wells and tanks, and this class of works will be continued till the monsoon.	A number of persons are being fed daily in the kasba town, and all Patels have instructions to relieve and forward all travellers to the Mámlatdárs.	Government at present supports 810 on works and 2,450 by charity. On 1st March the Assistant Collector thinks there will be about 16,000 on works with an increase on 1st May. But the Revenue Commissioner is of opinion that the Assistant Collector's estimate of 15,000 will never be reached.

GENERAL OBSERVATIONS.

Of the seven talukas the crops in two seem bad, and in five very bad.

The proposed remissions amount to Rs. 10,01,169.

In one taluka the condition of the cattle appears indifferent, and in six bad.

In two talukas the prospects of the water-supply seems satisfactory, in three indifferent, and in two bad. No calamity due to failure of water is anticipated by Government.

No apprehensions regarding the grain-supply are entertained.

The majority of the population of this, as of all other Collectorates, is either purely agricultural or very intimately connected with agriculture. The figures given by Mr. Acworth (and by the District Deputy as respects Karmála) regarding the cultivators and non-cultivators, are obviously absurd. He apparently classes khatedars alone as cultivators.

212,300, out of a population of 718,034, seem to have migrated. More are expected to follow their example, but, on the other hand, some have returned. This migration is, to a great extent, a cattle-movement.

The chief relief works are the Ashti Tank ahd the Barsi-Yedsi and Pandharpur-Wangi Roads.

The expenditure upon charity has been considerable.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	... 140,000
„ May 1st	... 186,000
„ July 1st	... 132,000

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these Reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. G. W. MACPHERSON,
Under Secretary to Government.

The 31st January 1877.

SOUTHERN DIVISION.

REVENUE COMMISSIONER—Mr. C. P. ROBERTSON.

SATARA.

WAI Taluka (1st Assistant Collector Mr. W. A. East's Report, dated 22nd December 1876).

a	b	c	d	e	f	g	h	i	j	k
In 18 villages the crop is above the average, in 14 up to it; in 19 it is 10 annas, in 39 it varies from 6 to 3 annas, and in 5 it is *nil*. Kharif and rabi are not distinguished. There are no prospects of further sowings this season.	The probable remissions will be Rs. 12,053. The total amount of revenue is not given.	Five animals have died from starvation, and many have been taken to the Ghâts.	There is no fear of the water-supply failing.	The course of weekly prices from 1st October to 25th December has not been given. The average rate for the last six years is— Bájri. 33 8/16; Jowári. 36½; Wheat. 24⅕; Rice. 18½; Gram. 26½; Tur Dall. 23½; Wari. 36½; Nagli. 57½	The present stock of grain will probably last for 3 months. Prices have fallen, and private enterprise will supply the market.	The bulk of the population of 88,000 belong to the Mahratta caste; there is a small percentage of Brahmins, Mussulmans, Mhárs, Mangs, &c.; 25,000 are wholly, and 53,000 partly, agricultural; the rest are artizans, &c. There are a few wealthy Inámdars who will probably aid their tenants.	About 2,000 people have emigrated to Bombay and elsewhere, and have probably found employment.	No relief works are in progress. Failing the commencement of the Nira Canal, which will absorb all available labour, estimates for 7 road-works are under preparation in case of necessity.	No gratuitous relief has yet been afforded except to one man.	As yet only one man is dependent on Government for charity, but about 3,000 labourers will have to be employed through the hot weather.

SATARA Taluka (1st Assistant Collector Mr. W. A. East's Report, dated 22nd December 1876).

a	b	c	d	e	f	g	h	i	j	k
The kharif and rabi yields (between which no distinction has been made) will be from 7½ to 10½ annas. There is no prospect of further sowings this season.	The probable remissions, according to the Mámlatdár, will be Rs. 23,373, but the Assistant Collector and the Revenue Commissioner consider the amount much over-estimated. The amount of revenue is not given.	No unusual mortality amongst the cattle has taken place, nor is any probable.	No failure of water-supply is anticipated, except in the city and camp of Satara where it will be severely, if not dangerously, felt.	The course of weekly prices from 1st October to 25th December is not given. The average for the last six years is— Jowári. 41⅜; Wheat. 26⅛; Gram. 28⅜; Bájri. 35½; Rice. 21⅛; Tur Dall. 28⅛; Nachni. 34⅜	Grain is plentiful, and is imported from the coast and Poona. Prices have fallen, and private enterprise will supply the market.	The population is 33,000, consisting chiefly of Mahrattas; 5 per cent. are Brahmins, 10 per cent. outcastes, and 1 per cent. Mussulmans. About 25 per cent. are fairly off, and the remainder poor, 50,800 are purely, and 14,523 are partly, agriculturists. There are about 40 Inámdars likely to assist their tenants.	The usual number. About 300 have left for Bombay in hopes of employment.	No relief works are in progress. None are deemed necessary.	No charitable relief is given by Government.	It is unlikely that Government will have any persons on their hands for relief either by charity or by employment.

JAULI Taluka (1st Assistant Collector Mr. W. A. East's Report, dated 22nd December 1876).

a	b	c	d	e	f	g	h	i	j	k
The kharif yield will be 7¼ annas, and the rabi in some villages will be up to the average, in 18 from 3 to 7½, and in one it will be *nil*. There are no prospects of further sowings this season.	The probable remissions will amount to Rs. 2,173. The total amount of revenue is not given.	No mortality amongst the cattle has occurred, or is likely to occur.	No failure of the water-supply is anticipated.	The course of weekly prices from 1st October to 25th December has not been given. The average rate for the last six years is— Jowári. 39; Nachni. 38 4/16; Bájri. 27¼; Wheat. 31 8/16; Rice. 25½; Gram. 29 8/16; Tur Dall. 26½; Wari. 33	The supply of grain has not failed, and it can easily be obtained from the Konkan and Satara.	The population of this Taluka is 58,565, of whom 1,500 are fairly off. Excluding Mahableshwar, only 2,000 are non-agricultural. The bulk of the people are Mahrattas, 2 per cent. are Brahmins, 4 per cent. outcastes, and 1½ Musulmans. There are about 12 wealthy Inámdars.	About 500 people have left, as usual, for Bombay in search of employment.	No relief works are in progress, and none are likely to be required for the Taluka. Should it be deemed necessary to undertake any, the Kas water-supply scheme and 5 road-works would be suitable.	No charitable relief is required.	If relief works are undertaken, about 2,000 people will be on them on 1st March, 3,000 on 1st May, and 4,000 on 1st July, if rain does not fall seasonably.

SATARA

—continued.

KOREGAON Taluka (1st Assistant Collector Mr. W. A. East's Report, dated 22nd December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The kharif yield in some villages is up to the average; in 18 from 8 to 10, in 12 from 6 to 7, and in 17 from 4 to 5 annas. Beyond the fact that the rabi crop is reported to look well, no mention is made of the probable yield. No further sowings will take place this season.	The probable remissions will amount to Rs. 23,000.	No unusual mortality amongst the cattle has taken place, 2,339 have left for the ghâts and Konkan. Some slight mortality may be expected before the rains among the weakly ones retained for field work.	There will be a scarcity of water in the hot weather in villages on the hill-slopes. Takavi will be advanced, and grants from Local Funds made to improve the supply.	The course of weekly prices from 1st October to 25th December has not been given. The average rate for the last six years is—	Grain is plentiful, and private enterprise will supply the market.	The bulk of the people is Mahratta, 6 per cent. are Brahmins, 6 per cent outcastes, and 1 per cent Mussulmans. One-third of the population are fairly off, and the remainder poor. The proportion of the agricultural to the partly agricultural and the artizans is as 4 to 2 and 4 to 1, respectively. There are 22 Inámdars able to assist their tenants.	2,370 people have left for Bombay, Poona, and elsewhere, and others are likely to follow.	Two road-works have been undertaken for relief, and three others can be undertaken if the necessity for them arises.	No charitable relief seems necessary.	618 people are now on the work. No estimate of the future given.

Wheat.	Jowari.	Rice.	Bajri.	Tur Dall.	Gram.

WALWA Taluka (Extra 2nd Assistant Collector Mr. A. Shewan's Report forwarded with Collector's letter, dated 27th December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The kharif yield will be 10 annas, and the rabi 8 annas. There are no prospects of further sowings this season, except in irrigated lands.	The probable remissions will be Rs. 1,05,000, which the Revenue Commissioner considers high. The total amount of revenue is not given.	There has been no unusual mortality amongst the cattle, and none is anticipated.	There will be a general scarcity of water. Tagai must be advanced for deepening and digging wells.		896 tons of grian are estimated to be in store, independent of the current year's harvest; the Collector considers this amount under-estimated, and the Revenue Commissioner considers it quite impossible to form an approximate estimate on this subject. Grain is imported from Bombay *viâ* Chiplun and Poona. Private enterprise will supply the market; the Collector anticipates a rise in prices about two months hence.	The Collector's estimate of the population is 133,122; whereas the Mámlatdár fixes the number at 158,641, of whom 115,728 are high caste, and 42,913 low caste; 37,000 are purely, and 12,700 partly, agricultural. The majority of the people are Mahrattas, among whom there are no large land-holders willing to aid their tenants.	No emigration has yet taken place, but it may be expected about the end of February.	The present relief works are sufficient for the present. As regards the future, the Revenue Commissioner is of opinion that irrigation works should be selected in preference to all others.	About 60 persons are being supported by a Relief Committee at Ashta.	The number at present on relief works is 1,285. Government will have to afford gratuitous relief on 1st March to 200, on 1st May and 1st July to 500; the number likely to be employed on works will be 3,000 in March, 5,000 in May, and 2,000 in July, provided rain falls freely: if it does not, about 10,000.

TASGAON Taluka (Extra 2nd Assistant Collector Mr. A. Shewan's Report forwarded with Collector's letter, dated 27th December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The kharif yield will be 8 annas, and the rabi nothing. There are no prospects of further sowings this season.	The probable remissions will be Rs. 50,000. The total amount of revenue is not given.	Out of 51,674 cattle, 3,952 have died from starvation, and about 10,742 have been sent to the Konkan to graze. Further mortality is anticipated, unless the experiment of feeding cattle on prickly-pear proves a success.	There will be a general scarcity of water. Tagai advances must be made for digging and deepening wells.		There are upwards of 2,866 tons of grain in the Taluka; imports are chiefly from Chiplun and Poona *viâ* Satara. The Collector anticipates a rise in prices two months hence; private enterprise will supply the market.	The Collector estimates the population at 115,491, the majority of whom are Mahrattas, poor and agricultural; whereas the Mámlatdár gives the following estimate:—3,797 high caste, 84,178 low caste, total 87,975, of whom 67,357 are purely, and 9,622 partly, agricultural. There are a few wealthy land-holders from whom, however, no aid can be expected.	14,505 people have emigrated, some to the Konkan, and others to the Berars and Hyderabad. Those who left for the Konkan are returning, the others have remained, having presumably bettered themselves. The Collector anticipates further emigration in a month or two, though the Revenue Commissioner cannot well see where the people can go, as there is distress all around.	The present 9 works consisting of tank clearances, road repairs, and cutting prickly pear, are sufficient for the present.	About 323 infirm people are being supported daily from private subscriptions.	Government have at present 2,7[illegible] laborers on their hands, a[illegible] none requiring charitable relief. The number of the former will swell to about 16,000 on 1st March, 24,500 on 1st May, but probably none will remain in July. The number requiring charitable relief on each of the above dates will be 700, 1,000 and 1,200, respectively.

SATARA—continued.

KHATAU Taluka (District Deputy Collector's Report forwarded with Collector's Memorandum, dated 6th January 1877.)

a	b	c	d	e	f	g	h	i	j	k
The kharif yield is 3 annas, and the rabi 6 annas. No further sowings are probable this season.	The revenue is Rs. 1,01,851, and the probable remissions Rs. 50,925.	Five cattle have died from starvation, and 180 more are likely to succumb. The live stock, other than agricultural, has been removed to the west.	There will be no great distress for want of water. Arrangements have been made to deepen existing, and excavate new, wells in villages where distress is felt.	See table below.	The present supply of grain is sufficient, and is imported from Poona, Satara, Chiplun, and Patan. Prices have fallen, and private enterprise will supply the market.	There is a population of 83,427 divided as follows:—66,859 high caste, of whom 55,199 are poor, and 11,660 well-to-do; and 16,568 low caste, of whom 15,904 are poor, and 664 well-to-do. Of these, 60,552 are purely, and 22,875 partly, agricultural. There are no large landholders likely to assist their tenants.	About 4,000 people have emigrated to Bombay, Berar, and the Nizam's territory, and have bettered themselves.	The Nehr and Pingli tanks and road repairs are in progress, and are sufficient for the present. Bye-and-bye the Waruj—Pusegaon Road, and planting road-side trees should be undertaken.	At present 118 incapables are being supported from private sources.	At present there are 7,681 labourers on relief works; in addition to this number, employment must be found for 10,000 on 1st March, 12,000 on 1st May, and 6,000 on 1st July.

PATAN Taluka (2nd Assistant Collector Mr. C. H. Jopp's Report, dated 24th December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The yield of the kharif and rabi crops will each be at least 7 annas. There are no prospects of further sowings this season.	The probable remissions according to the Collector and his Assistant will be Rs. 50,170, but the Revenue Commissioner considers this amount capable of reduction. The total revenue is not given.	There has been no unusual mortality amongst the cattle, and none is anticipated.	The greater part of this Taluka will not suffer from want of water; in a few villages in the highland and to the north, it will be necessary to dig new wells and deepen old ones.	See table below.	There are stores of about 256,000 lbs. of grain in the Taluka, besides which, almost each family has sufficient for its own consumption for a month or two. Grain is imported chiefly from Bombay and Chiplun. Prices have fallen, and private enterprise will supply the market.	The population is 110,000; of this, 107,844 are low-caste, 1,000 being well-to-do, and 106,844 poor, and 2,000 are high caste, 500 being well-to-do and 1,500 poor, 40,350 are purely, and 69,494 partly, agricultural; a few landholders of alienated villages will grant remissions to their tenants.	About 115 people have emigrated to Bombay and to the relief works at Karad. Further emigration is expected in the hot weather.	There are at present no relief works in progress, but when absolutely necessary, 6 works can be undertaken.	No gratuitous support has been given.	No persons are at present dependent on Government either by charity or on works. The number likely to require relief on works on 1st March is 500, 1st May 1,500 and 1st July 2,000, and by charity on each of the above dates 50, 100 and 300.

KARAD Taluka (2nd Assistant Collector Mr. C. H. Jopp's Report, dated 24th December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The kharif yield may be taken at 11 annas, and the rabi at 10 annas. There are no prospects of further sowings this season.	The Assistant Collector estimates the remissions at Rs. 65,078, but the Collector sees no reason for any remissions save in exceptional cases. The total revenue is not given.	There has been no unusual mortality amongst the cattle, and none is anticipated.	There is no reason to dread a scarcity of water in any but a few hill-villages where wells will be deepened.	See table below.	The local stocks are estimated at 1,296,000 pounds. Grain is imported from Chiplun and Poona in large quantities, and prices have fallen; whether any further fall will take place is doubtful. Private enterprise will supply the market.	There are 13,337 high-caste people, 11,670 being well-to-do; and 1,667 poor; 117,573 low-caste, 29,394 being well-to-do, and 88,179 poor; 35,733 are purely, and 17,866 partly, agricultural; the rest are manufacturers, tradesmen, &c. There are no land-holders who will assist their tenants.	The usual number, *viz.*, about 1,000, have left for Bombay for employment, and more will follow.	The present relief work, the Karad—Tasgaon Road, is found sufficient. Later in the season 4 other road-works will be undertaken.	No charitable aid has been given.	At present there are 500 on Government works, these will increase on 1st March to 1,000, 1st May to 2,500, and 1st July 2,500; no infirm people are being supported at present, but on each of the above dates the numbers will be about 50, 150, 150.

SATARA

—concluded.

a	b	c	d	e	f	g	h	i	j	k
					Jopp's Report dated 23rd December 1876.)					
The kharif yield is 4 and the rabi 2 annas. There are no prospects of further sowings this season.	The probable remissions will amount to Rs. 72,858. The total revenue is not given.	The total number of cattle amounts to 90,000. About 3,042 have left the Taluka for the ghâts, and 251 have died from starvation, but these were chiefly useless animals, and 500 more of them are expected to perish within three months. Towards the end of March there will be a great scarcity both of fodder and water, and most of the cattle will have to be driven to the ghâts, where, should the grazing prove insufficient, as is probable, about 20,000 more may perish. People have been told to try the prickly-pear, but as yet have not taken to it.	Villages on the Yerla have a plentiful supply of water, in other villages it is obtained from wells and holes dug in the beds of nullahs. Where the water-supply entirely fails, the villages must be moved, and where it has partially failed wells must be constructed or deepened.		Local stocks of grain are estimated to amount to 3,360,000lbs; and weekly importations are made from Chiplun, Satara and Poona. Prices have fallen, but the Collector anticipates a rise shortly. Private enterprise will supply the market.	The total population is 84,415, of whom 71,409 are high caste, 64,209 of them being poor and 7,140 well-to-do; 13,006 low caste, 12,746 being poor and 260 well-to-do. Of these again 33,600 are purely, and 35,000 partly, agricultural, one-fourth are money-lenders, and the rest manufacturers and artizans. A few land-holders may grant remissions to their tenants.	4,098 people have emigrated, some to Bombay, others to the Nehr, Pingli and Islampur works, and have not suffered in consequence. There will be further emigration to the Nehr Tank, and large numbers will accompany their cattle to the ghâts.	At present there are 3 road-works, one tank, and digging pits for road-side trees in progress, but they should be supplemented by 3 more tanks.	No charitable expenditure has as yet been incurred.	At present there are 1,254 people on relief works. The number of people requiring relief on works will be 6,000 on 1st March, 7,000 on 1st May, and 2,000 on 1st July; and by charity on each of the above dates there will be 200, 400 and 500.

MÁN Taluka (Distric[illegible] Deputy Collector's Report forwarded with Collector's remarks, dated 6th January 1877.)

The kharif yield is about 3 annas and the rabi nil. There are no prospects of further sowings this season.	Out of the total revenue of Rs. 70,655, the probable remissions will amount to Rs. 52,991.	The total numbers of horned cattle is 42,063, of which 523 have died, and 9,844 more will probably succumb, in fact, the Deputy Collector thinks one-third of the live stock will be lost. No mortality has occurred amongst the 96,217 sheep. Leaves of trees and sugar-cane are being used as fodder. Preparing prickly-pear is found too expensive for the ryots to undertake.	Many villages [illegible] short of water, wells are being deepened and excavated.		The present stock of grain is estimated at 380,856 pounds. It is imported from Satara, Pandharpur, and Diksal *viâ* Phaltan and the Mogoolo ghât. Prices have fallen and private enterprise will supply the market.	The population is 70,572, of whom 51,930 are high-caste, 39,606 being poor and 12,324 well-to-do; and 18,642 low-caste, 17,286 being poor and 1,356 well-to-do; of these, 31,580 are purely, and 29,206 partly, agricultural, and 9,816 urban. There are no land-holders able to assist their tenants.	[illegible]275 people have emigrated, 7,000 to relief works in the Taluka and the rest to Bombay, towards Berar, and the Nizam's territory, and have bettered themselves. None have returned and 5,000 are likely to follow.	The relief works in progress at present consist of two road-works, 3 wells, and a tank and miscellaneous projects for improving the water-supply, but they are not sufficient and must be supplemented by 5 more road-works and 2 tanks.	Persons are at present being charitably relieved.	At present there are 7,266 labourers on the works. Their numbers will increase on 1st March to 22,000, 1st May 27,000, and 1st July 17,000.

GENERAL OBSERVATIONS.

Of the 11 talukas the crops in 7 seem to be fair, in 2 indifferent, and in 2 bad.

The proposed remissions amount, on what appears to be an outside estimate, to Rs. 507,621.

In 8 talukas the condition of the cattle seems satisfactory, in 1 indifferent, and in 2 bad.

In 6 talukas the prospects of the water-supply appear satisfactory, and in 5 indifferent. No calamity due to failure of water-supply is anticipated by Government.

No apprehensions are entertained regarding the grain supply.

The majority of the population of this as of all other Collectorates is either agricultural or very intimately connected with agriculture. 45,163 people out of a population of 1,064,002 seem to have emigrated, some have returned, but further emigration is expected. It appears to be partly a cattle movement, and partly the annual movement in search of labour intensified by the present scarcity.

The chief relief works are the Nehr and Pingli irrigation tanks.

The expenditure upon charity has been trifling.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	70,500
On May 1st	92,500
On July 1st	45,500

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. G. W. MACPHERSON,
Under Secretary to Government.

KANARESE DIVISION.

REVENUE COMMISSIONER—Mr. A. E. D. GREY.

KALADGI DISTRICT.

COLLECTOR—Mr. C. M. HOGG.

a	b	c	d	e
The kharif harvest will yield a half anna crop, and the rabi the same. There is now no prospect of further sowings this season.	The Assistant Collector estimates the probable amount of remissions at about 1/4th (30,598) and the Collector at 1/4 (38,223) of the total revenue (Rs. 1,52,892), but no correct estimate can be given before the jamábundi.	No mortality as yet among agricultural cattle. Among other cattle about 1,000 have died. This taluka is better off for fodder than other parts of the Kaládgi district, there is enough to last till the end of February. The experiment of prickly-pear as fodder has been tried, but not with much success as yet. All valuable animals have been taken to the Kanara jungles to graze. It is anticipated that about 1/15 (3,701) of the whole number in the taluka (59,215) may die hereafter. They will be the worst of the cattle, useless for agricultural purposes.	The water-supply is chiefly from the rivers and from shafts sunk in the larger nullahs; but as the water in the rivers is unusually low this year, it is feared that there will be a failure to a certain extent. Steps are being taken to clear out and deepen existing wells.	**BAGALKOT (Acting First Assistant**

The kharif harvest has yielded a 2-pie, and the rabi a 1-pie crop. The crops have been almost a complete failure. There is no prospect of further sowings this year.	The Assistant Collector considers that about Rs. 30,000 will have to be remitted, but the Collector thinks it probable that the amount will be greater; but the exact sum can be ascertained only at the jamábundi.	About 1,500 deaths have occurred among cattle; how many of these are among agricultural stock is not stated, and about 2,500 more have been sold to butchers at prices varying from 4 annas to Rs. 2. The Assistant Collector thinks it possible that some 25,000 may die before the rains, but this will include a large number of worthless animals. Most of the really valuable cattle were driven out of the district at the commencement of the scarcity. Feeding on prickly-pear is being tried, but without much success.	This taluka is—excepting the villages on the Krishna and the Malprabha, badly off for water, and great scarcity is apprehended in the hot weather. The only remedy will be to clear out and deepen the wells in the hope of thereby reaching more copious springs.	**HUNGUND (Acting First Assistant**

The kharif harvest has yielded a crop of 3, or at the utmost 4, annas. Rabi crop there is none. There is now no prospect of further sowings this season.	The Mámlatdár estimates that 1/4ths (Rs. 1,60,000) of the whole revenue (Rs. 2,00,000) will have to be remitted, and the Assistant Collector thinks this a fair estimate, but the Collector considers it a high one; but no correct estimate can be given before the jamábundi.	About 20,000 cattle have died or been sold to butchers, and an equal number have been conveyed to the Nizam's Dominions and the Ghâts in search of fodder. There is among the wealthy ryots sufficient fodder in this taluka for about 10,000 cattle for 3 or 4 months. The poorer classes are feeding their cattle on the leaves of trees. An attempt has been made to utilize prickly-pear as fodder, but as yet with little success. The Assistant Collector offers two suggestions for preserving the cattle: First, that the best cattle be selected by Government Officers and conveyed to the Ghâts; and secondly, that if prickly-pear can be used as food, Government undertake its preparation and feeding cattle thereon; the Collector thinks it would not be worth while to attempt conveying the cattle to the Ghâts, as many may not survive the journey.	The water-supply is very fair, the taluka being intersected in all directions by nullas, and water can always be had by digging holes in their beds. No scarcity of water is apprehended.	**SINDGI (Supernumerary Assistant**

LADGI.

f	g	h	i	j	k
Collector Mr. J. F. Fleet's Report, dated 21st December 1876.)					
The local stock is estimated at from 5,357 to 7,143 tons. Grain is imported in large quantities from Sholápur and Belgaum, and prices have in consequence declined to some extent and are likely to continue falling should importation be kept up; but some importers have lost by being undersold, and the local dealers have a great command over the market.	The people are generally poor; about 35 per cent. are of the labouring class, including a large number of ryots with very small holdings, who eke out their means by working in the fields of others. The remaining proportion (about 65 per cent.) are ryots, traders, and artisans of fair means, and persons in Government employ. The landholders are rich and able to help their tenants and followers, and will, in the opinion of the Assistant Collector, do so by loans; but the Collector does not think the landholders, with the exception of a very few of the very wealthy ones, are likely to do much for their tenants.	According to the Assistant Collector's report, about 4,000 people have left the taluka and have bettered themselves by so doing; but the Collector thinks the number to be underestimated, and that at least 10,000 people must have left, some with their cattle, and others in search of employment. The commencement of the relief works has, however, stopped further emigration. It is not probable that many will now leave; on the contrary, some who left are already returning.	The Sholapur-Hubli road is in progress, as also the Turchigeri and the Gangershivani tanks and several other relief works. The Belgaum-Hundgund road will be commenced as soon as sanctioned. This work and those already started will, the Collector thinks, suffice for the present.	The Mámlatdár Bilge has 450 and the Bilge Mahálkari Rs. 200 available for charitatable relief to travellers and to the aged, infirm, &c.; but little has been spent on this account, as no such relief has been called for. A fund of Rs. 8,593 has also been raised by private subscription for this purpose.	The number of persons now employed on relief works is not stated, but the Assistant Collector reports that according to the Mámlatdár's estimate, the maximum, prior to 31st May next, will be about 41,000 persons on relief works, and about 6,000 to be supported by charity.
Collector Mr. J. F. Fleet's Report, dated 27th December 1876.)					
It is difficult to obtain accurate information regarding local stocks; the Assistant Collector estimates them at 813 and the Collector at 1,161 tons, which will not last longer than the end of March. There is very little probability of private importations to any large extent, as there are no merchants of wealth and enterprise in this taluka. Supplies come *viâ* Belgaum and Solápur, the former 120 and the latter 150 miles from Hungund.	The proportions of high and low castes are about 3/4 and 1/4 respectively. The agricultural class numbers about 50,000, artisans, traders, Government servants, &c. about 40,000 and the remainder about 10,000, are agricultural and other labourers. The only wealthy landholders are the Amraoti and Hulginhal Desais, both of whom are likely to help their tenants and followers.	Emigration has been checked by relief works being opened and by the return of people who left the district early in the season for the Nizam's dominions and the Ghâts, but failed to better themselves, and brought back reports of cholera.	The chief special relief work in progress is the Sholápur-Bellary road, which passes through Hungund. The Hungund, Amingad, and Yerankeri tanks are also in hand, as well as ordinary local projects, such as roads and tank clearances. It is proposed to take up similar works as occasion may require.	The amount spent in gratuitous relief is small. Subscription funds had been formed at some of the principal towns, but the subscriptions have not been liberal.	In the Assistant Collector's opinion, 38,320 will be the maximum number that the Government will have on their hands during the season, of which 34,597 can be employed on works, and 3,723 will have to be supported by charity. He puts down about 20,000 people on 1st March, 30,000 on 1st April, and the full number on the 1st May. The Collector considers these estimates somewhat high, and that about 25 per cent. of the population may require relief.
Collector Mr. H. Silcoke's Report, dated 22nd December 1876.)					
It is difficult to ascertain exactly what the local stocks are, but they are not large; and the importations from Sholápur are barely sufficient to keep down prices to a fair level. There are not many wealthy merchants in the taluka, and there is a want of enterprise. The condition of the food supply will be a cause of anxiety throughout the season.	The population is of a mixed character. Agriculture is their chief occupation, and the ryots are in general fairly comfortable. The Inamdars are not wealthy, being mostly in debt, and will be unable to help their tenants.	Emigration to the Nizam's dominions has taken place to a considerable extent, the number being between 25,000 and 30,000. As a rule, the people have bettered themselves; it still continues towards the Konkan but at a decreasing rate. Some who left are returning to obtain employment on the relief works.	The relief works already started appear sufficient for the present. The Assistant Collector specifies others which can be taken up as occasion requires. He also recommends the construction, when the works in progress are concluded, of a tank at Hippargi.	No relief has yet been given to travellers, as they have not been found to require it. Private charity has done much to assist the aged and the infirm, &c. The Mámlatdar has been advanced Rs. 450 for charitable relief, which sum seems sufficient for present wants.	The number of persons now employed on relief works is about 4,000; that relieved by charitable measures only 14, which is likely to increase as private charity ceases. The number on relief works on the 1st March, will probably amount to 15,000 or 20,000, and that receiving charitable reliefs to about 500, which number is likely to remain the same up to 1st May. By 1st July, if rain should fall, the number will probably have decreased to 8,000, but the number requiring charitable relief will remain the same.

KALADGI—continued.

BA'DA'MI (Acting 1st Assistant Collector Mr. J. F. Fleet's Report, dated 2nd December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The Assistant Collector estimates the yield of the kharif harvest at 4 annas, and that of the rabi at 5 annas 4 pies, but the Collector considers these estimates incorrect, as only half of the kharif and one quarter of the rabi crop have been sown. The Assistant's estimates may represent, he thinks, the yield of the land actually sown. No prospect of further sowings this season.	The Assistant Collector estimates the remissions to be about Rs. 25,000, which the Collector believes to be under the mark. The exact amount can be determined only at the jamábundi.	5,000 deaths are stated to have occurred among agricultural stock and 3,500 among other cattle; of these, about 1,000 deaths are attributed to want of fodder. It is estimated that the total numbers that may die this year will be, of agricultural stock about 11,000, and of other cattle about 7,000. Fodder is scarce, and numbers of cattle have been and are being sent off to the Ghâts and Kanara. The experiment of utilizing prickly-pear as fodder may possibly be successful, but at present the owners do not care to undertake the trouble and expense of preparing the leaves on their own account.	The Assistant Collector does not apprehend the supply of water running short before the monsoon, as a year's supply was provided by the rains which fell late in the season. The Collector, however, anticipates a scarcity of water next hot season.		The Assistant Collector estimates the local stocks of grain to be small (about 107 tons). The Collector thinks his assistant is mistaken, and that the stocks amount to 1,714 tons. Small quantities have been coming in from Sholápur and from the Hubli and Coomta directions, and prices have in consequence gone down. There are not many traders of wealth and position likely to enter into extensive importations.	Three-fourths of the people (taking the total population at 125,000) are high-caste, the rest low-caste. About 75,000 are purely agricultural, the rest are traders, artisans, Government servants, &c., and ryots who trade as well as cultivate. The only large landholders are Ghorepade of Gajendragad and the Kerur Dessai. The former is much involved and unable to help his tenants, the latter, though well-to-do, is niggardly and not likely to do any thing in the way of help.	About 15,000 people have already emigrated; whether they have bettered themselves by so doing is not known. The Collector does not think that further emigration is probable, but that, on the contrary, many of those who have left their homes will return.	The great special relief work now in hand is the Sholápur-Hubli road, besides which several petty local projects are in progress. Estimates for several tanks are in course of preparation.	The Mámlatdár has Rs. 450 available for charitable relief, but does not state how much of this sum has been spent. Private subscription funds are being formed in the large towns, and the German Missionaries have been asked to co-operate in administering the fund at Gulegud.	The number of persons Government has on their hands for relief at date of report is not stated. The Assistant Collector estimates that by March there will be 15,000 persons seeking employment, and that 3,000 will require charitable aid. The number is expected to diminish in April, if rain falls, or may increase if the drought continues. The Collector expects that he will have 25 per cent. of the people on his hands before the close of the hot weather.

BA'GEWA'RI Taluka (District Deputy Collector Mr. Balkrishna Devrao's Report, dated 28th December 1876.)

a	b	c	d	e	f	g	h	i	j	k
The kharif harvest will yield a crop of one pie, and the rabi ¾ of a pie. No further sowings this season.	The amount that will have to be remitted is estimated by the District Deputy Collector at ¾ (Rs. 155,440) of the whole assessment Rs. 2,07,253. The Collector, however, considers this estimate too high.	Of cattle and agricultural stock numbering 53,875, exclusive of sheep, 8,400 are reported to have died from all causes, and 16,100 to have been taken to Kanara, the Nizam's Dominions, &c., in search of fodder. The Mámlatdár anticipates the future mortality at about 14,700. The permission accorded for free grazing of cattle in Government forests has not been taken advantage of, owing to the length of the journey. A few who can afford it have imported and laid in a stock of kirby, but those who cannot afford to do this feed their cattle on leaves of trees. Experiments to utilize the prickly-pear as fodder have as yet succeeded only to a very slight extent.	The chief source of water-supply is the river Krishna, which, however, is immediately available only to the eleven villages situate on it. The remaining villages depend for their water-supply on wells and pools in beds of nullahs. These sources are likely to fail earlier this year than in ordinary seasons. The remedial measures proposed are the clearance of wells and the sinking of new ones.		There are no means of ascertaining with accuracy the local stocks, but the District Deputy Collector estimates the quantity as sufficient for about 5 months. Sholápur is the central railway station from which supplies are drawn. Private enterprise has imported grain largely, which has had the effect of slightly lowering prices, and of inducing private holders of stores to bring theirs to market. Private importation, if continued, will be sufficient to meet all wants, and another fall in prices may be expected; but it is apprehended that when the supply of fodder, which is not expected to last beyond a couple of months, is exhausted, the importations of grain will cease.	The population consists of all castes, but chiefly of Lingayets. The low castes also form a considerable portion. The population is purely agricultural. The general condition of the people is good. There are no wealthy persons in the taluka, but there are a few large landholders who assist their tenants.	About 6,400 people have emigrated to Kanara and the Nizam's Dominions; but not faring well there, some have returned and others are expected to return. There is no likelihood of further emigration.	Certain tank works are in progress, besides some minor works, such as clearing out wells, repairing roads, and cutting prickly-pear, giving employment to about 1,900 people. The Hubli and Sholápur road is also being metalled by the Public Works Department, and employs about 1,200 men. Certain new works (excavation of tanks in different localities) have been proposed by the District Deputy Collector as relief works, entailing an expenditure of Rs. 38,500. Also the completion of the tanks now in progress at Mulwar-Satibal and Bagewári, at an outlay of Rs. 6,000. These works are considered sufficient to give employment to the able-bodied.	A fund of about Rs. 2,200 has been raised by private subscription. The number of travellers and aged and infirm people fed daily from this fund is 175 at Bágewári, and about 40 at Manogoli. The discretionary allowance made by Government will afford relief to some, and private charity will relieve others.	The number of persons on hand at date of report for relief by works is about 3,200, including those employed by Public Works Department. None are receiving charitable relief from Government, but some may soon be expected. The number which Government is likely to have on its hands hereafter is roughly estimated by the Deputy Collector as follows:— On 1st March. For relief on works ... 4,500 " by charity ... 500 On 1st May. For relief on works ... 6,000 " by charity ... 700 On 1st July. For relief on works ... 4,000 " by charity ... 700 The Collector estimates the maximum number of labourers on-hand in April and May at about 25 per cent. (22,922) of the entire population (91,688 souls) and the number in July will depend entirely on the time the monsoon sets in.

KALA'DGI

—continued.

a	b	c	d	e	f	g	h	i	j	k
				BIJÁPUR Taluka (Supernumerary Assistant						
The yield of the kharif and the rabi crops, where sown, is only 1 anna each.	The Assistant Collector estimates the probable amount of remissions at about Rs. 1,01,500, or about three-fourths of the revenue, Rs. 1,34,000, which estimate the Collector thinks rather high, but no reliable information can be obtained till the jamábundi.	About 12,000 head of cattle, mostly old and useless, have died, out of a total of 60,000. About 30,000 have been driven out of the district for grazing purposes, and 30,000 or 40,000 remain, for which forage is not obtainable. The Assistant has no other suggestions to offer regarding measures to be taken for their preservation than those proposed by him with reference to the Sindgi Taluka, *viz.*, that the best cattle be selected by Government Officers, and conveyed to the ghâts; and secondly, that Government undertake the preparation of, and feeding cattle on, prickly-pear or other suitable food. The prickly-pear experiment has already been tried in this district, and cattle will eat the leaves when prepared, but the owners do not care to undertake the trouble and incur the expense of preparing them on their own account.	The water-supply is fair, the source being wells and nullahs; and there is no apprehension of a scarcity.	For the Week ending: 1st Oct. 1876... 27⅜ … 26⅝ 22⅝ 15⅝ 24; 8th „ … 24⅜ … 22⅓ 19½ 15⅝ 19; 16th „ … 21 … 19 15 13⅓ 14⅓; 23rd „ … 21 … 19 18½ 15 18; 30th „ … 17⅜ … 15 18⅓ 15⅓ 18; 6th Nov. 1876 17⅓ … 16 15 13⅓ 16; 13th „ … 13⅜ … 14 15 12½ 15; 20th „ … 13⅜ … 15 15 13⅜ 15⅓; 27th „ … 15⅓ 15⅓ 16⅜ 17 13⅛ 16⅓; 4th Dec. 1876 16⅛ 17⅓ 18 17⅓ 13⅛ 17; 11th „ … 16⅓ 17⅓ 17 17⅓ 15 17; 18th „ … 16⅓ 17⅓ 17 17⅓ 13⅓ 17; Average of six years. 55⅓ 56 36 39¼ 22 42 (Prices: lbs. per Rupee.)						
				MUDDEBIHÁL Taluka (District Deputy Collector						
The kharif and rabi yield will each be less than one pie. There is no prospect of any further sowings this season.	Last year's revenue amounted to Rs. 1,57,875, and the probable remissions will be Rs. 39,468.	Out of 77,615 cattle, 7,000 have perished, and 13,000 have left the taluka; the rest are emaciated and weak, and only about 20 per cent. will be saved. Government have permitted free grazing in Kanara and other forest districts; but the distances from this taluka are great, and only the more valuable animals are sent.	The taluka is on the whole well off for water, but wells will be dug where required.	Prices: lbs. per Rupee. Average price per Rupee from 1st October to 25th December 1876 ... Jowári. 20; Bájri. 16; Wheat. 18; Gram. 17½; Rice. 13; Toor Dall. 16. 6 years' average: 72; 72; 32; 30; 24; 23. The weekly statement of prices has not been given for this taluka.						
					Mr. H. Silcock's Report, dated 28th December 1876.)					
					The Assistant estimates the local stock of grain at about 1,696 tons, which, with the large importations from Sholápur by private enterprise, will probably suffice to meet the requirements of the taluka till next harvest. Owing to the large importations, prices have slightly fallen.	The inhabitants of this taluka are of the ordinary class, there being but a few high-caste, chiefly Brahmins, priests, &c., not well-to-do. The Lingayets are rather numerous and well-to-do. Of these, a few are merchants, the rest are ryots, who have been supplying grain to the poorer cultivators of their own villages. The majority of the inhabitants are ordinary ryots, who, in general, live very comfortably in their villages, but are obliged to labour this year. There are very few tradesmen and artizans. There are a few wealthy inámdars, but, being in debt, they will be unable to help their tenants.	According to the Mámlatdár's report, about 20,000, out of a population of 85,000, have already emigrated to the Nizam's dominions and the ghâts, and appear to have bettered themselves. A number of agricultural labourers have also left in search of work, but are now returning, preferring to work near their own villages. Further emigration to any great extent is not thought probable.	The works in progress are repairs to the Hubli-Sholápur and Bijápur-Bágewári roads; filling in the moat round the Arkilla in Bijápur, and repairing the tanks at Torsal, Dasgal, and Kunmoocnal. Work can be found in the moat for 4 or 5 months more if an increase is made to the estimate. The above works are sufficient to give employment for 4 or 5 months to the inhabitants of the taluka, but as numbers from other districts are flocking in, and are employed, the works will be finished sooner. The Assistant Collector proposes, as one of the most useful future relief works, the Bijápur Scheme, and station roads. Also repairing the Begum Talao, some hundred acres in extent, and once the principal source of the water-supply of the city. He also proposes repairs to the large irrigation tanks at Mandepur, Koomatgi, and repairs to the Nagathan road.	A monthly subscription has been opened for the relief of the aged, infirm, and those unable to work. The amount not being large will have to be supplemented by Government. Rs. 145 per mensem has been promised. There is a daily distribution of food to the poor. Travellers are very few, and no separate provision has been made for them..	The number of people on relief works is at present 7,000 men supported by charity by Government; but grain is given for or 3 days to those coming from a distance for employment, an without means of support The probable number on relief works in future will be on 1st March ... 2,500; 1st May ... 2,500; 1st July ... 5,000;
					Mr. Balkrishna Devrao's Report, dated 7th January 1877.					
					The present supply of grain is ample, and is drawn chiefly from Sholápur. Prices have fallen, and private enterprise will supply the market.	The population, amounting to 81,638, is purely agricultural consisting of Hindoos, Musulmans, Wadars and Lewans or wandering tribes. A few landholders have assisted their tenants.	Seven thousand five hundred people have emigrated to Kanara and the Nizam's territory, but are returning; there will probably be no further emigration, as those who have returned give unfavourable reports.	Six road works and 2 tanks are in progress, but as these will shortly be completed, they will have to be supplemented by 4 more tank works.	Private subscriptions relieve about 220 infirm people a day.	On works 1,825 and none by charity. It is impossible to say how many will be dependent on Government hereafter.

KALADGI

—concluded.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*

INDI Taluka (Supernumerary Assistant Collector Mr. H. Silcock's Report, dated 12th January 1877.)

The kharif yield will be *nil*, and the rabi 3 annas. There are no prospects of further sowings this season.

The revenue is Rs. 1,95,742, out of which it is estimated that Rs. 1,45,742 must be remitted.

The total number of cattle is 89,000, out of which 15,847 have already died, and it is probable that 25,000 more will die. 40,000 have been taken to the Ghât districts. Prickly pear fodder is not a success, but if Government would carry grass to Sholapur, it is thought that some of the Kaládgi ryots would buy it.

There is not much reason to dread a failure in the water-supply.

There are upwards of 165 tons of grain in store, and it is being imported from Sholápur. Private enterprise will supply the market provided Government will supply fodder along the Sholápur-Hubli and Sholápur-Bellary roads, so far as they pass through this district.

The majority of the population of 105,000 are agriculturists, and fairly off. There are 200 or 300 artizans and a fair sprinkling of Brahmins and Mussalmans. There are a few Jagirdars from whom no aid can be expected.

Forty thousand have emigrated, some of whom have bettered themselves, while others are returning. No further emigration is expected.

The two road-works at present in progress are sufficient. On their completion, four road-works and four tanks will be undertaken, when the necessity arises.

Rs. 500 have been given for charitable aid. Travellers receive a day's food, and the infirm one pound of grain a day.

Thirteen thousand and fifty-eight persons are at present on relief works, and about 70 are receiving gratuitous support. The numbers of the former will swell to 15,000 or 20,000 on 1st March and 1st May, and fall to 8,000 on 1st July, if it rains seasonably. The number requiring charitable relief on the above dates, including children unable to work, will be 1,000 to 1,500.

GENERAL OBSERVATIONS.

Of the 8 Talukas the crops in 3 seem to have been bad, and in 5 very bad.

The proposed remissions amount to Rs. 6,95,373. In one Taluka the condition of the cattle appears tolerably satisfactory, and in 7 bad.

In 5 Talukas the prospects of the water-supply seem satisfactory, and in 3 indifferent. No calamity, due to failure of water, is anticipated by Government.

The local officers appear slightly apprehensive regarding the grain-supply of 5 Talukas.

The majority of the population of this, as of all other Collectorates, is either agricultural, or very intimately connected with agriculture.

One hundred and twenty-three thousand nine hundred, out of a population of 8,16,037 appear to have migrated. This movement seems now to have nearly stopped. It is to a great extent due to the necessity of obtaining pasture for the cattle.

The chief relief works are the Sholápur-Hubli and the Sholapur-Bellary roads.

The expenditure upon charity has been trifling.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	82,000
On May 1st	1,19,500
On July 1st	63,320

This Government must guard themselves against the supposition of being held to accept as accurate or reliable, all the information contained in these Reports; the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. G. W. MACPHERSON,
Under Secretary to Government.

BIDI Taluka (First Assistant Collector Mr. A. Steward's Report, dated 27th December 1876).										
The kharif yield may be taken at 5 annas, and the rabi *nil*. There are no prospects of further sowings this season.	The probable remissions will be between Rs. 6,000 and 7,000; the total amount of revenue is not given.	No unusual mortality has occurred or is anticipated among the cattle of the taluka. About 5,000 cattle have been brought from other districts, out of which 20 have already died; and it is expected that the rough style of living will kill about 500 more of them.	The water-supply of the taluka need cause no apprehension.	PRICES: LBS. PER RUPEE. For each week in October, November and December. / Jowári. / Rági. / Rice. / Túr dhall. / Wheat. 7th Oct. 1876 ... 24 32 18 26 26 15th " " 20 28 16 20 16 23rd " " 18 24 16 20 16 30th " " 16 22 16 16 14 6th Nov. 1876 ... 12 16 13 12 12 13th " " 14 18 16 12 14 20th " " 16 20 16 12 16 27th " " 16 18 16 12 16 7th Dec. 1876 ... 16 20 15 12 14 15th " " 16 20 15 12 16 19th " " 16 20 16 12 16 Average of 6 years ... 39½ 51½ 28½ 23 26½	There are 3,700,000 lbs. of grain in the taluka at present, and supplies are imported from Goa and from Bombay *vid* Vingorla and Belgaum; there is no probability of the grain supplies brought by private enterprise failing.	The Shenvee Brahmins preponderate and are well off. These and the Lingayet Soucars at Nandgad form the wealthy portion of the population; the rest are poor. The richer cultivators may possibly aid their tenants.	Immigration, and not emigration, has taken place. Hard times may compel a few to go to Kanara and Goa for employment.	At present there is only one road-work in progress: this is insufficient, and others will have to be undertaken.	A relief-house has just been started at Khánápur, but the amount of charity dispensed is small.	The Mámlátdar estimates the following numbers will require relief, but the Assistant Collector considers the numbers requiring relief by charity to be under-estimated. / *On Works.* / *By Charity.* On 1st Jan. 400 100 " 1st Mar. 1,300 100 " 1st May 1,300 100 " 1st July 800 100
BELGAUM Taluka (First Assistant Collector Mr. A. Steward's Report, dated 26th December 1876).										
The kharif yield will be 6 annas, and the rabi *nil*. There are no prospects of further sowings this season.	The Mámlatdár estimates the remissions at Rs. 7,000, and proposes to defer the collection of a like sum till another year. The Assistant Collector and the Revenue Commissioner think the amounts ought to be less.	No unusual mortality has taken place amongst the taluka cattle, but about 300 of those brought from other districts have perished. There will be sufficient fodder for all the cattle worth preserving.	There is a fair supply of drinking water in the taluka, and very slight remedial measures are considered necessary.	PRICES: LBS. PER RUPEE. DATES. / Jowári. / Rice. / Bájri. / Rági. / Túr dhall. 7th Oct. 1876 ... 28 18 28 30 20 15th " " 22 14 24 30 20 22nd " " 18 14 22 26 18 31st " " 18 18 18 22 14 7th Nov. 1876 ... 14 12 12 14 12 14th " " 16 14 16 18 16 21st " " 18 14 16 22 14 28th " " 18 14 18 20 14 7th Dec. 1876 ... 18 14 18 26 14 15th " " 2[illegible] 14 18 20 14 Average of 6 years ... 3[illegible] 24 38 38 22	The local stocks of grain, are estimated at lbs. 10,165,380. There is no probability of the supply failing, as it is being largely imported from Bombay *vid* the Coast. Private enterprise will continue to supply the market.	There is no marked preponderance of one caste over another; the total population is 129,292; one-half of whom are engaged in agriculture, the rest are weavers and artisans. There are no landholders likely to assist their tenants.	There has been immigration, but no emigration.	At present labourers are employed on tank repairs and roads; other relief works will be started in January.	There is a relief-house at Belgaum, towards which Rs. 7,000 have been subscribed and which has relieved 9,380 persons. When able-bodied men appear, they are given one cooked meal, and then sent to work on a neighbouring tank.	At present there are 1,000 people on the works; on 1st March there will be 3,000, on 1st May 5,000, and 1st July 5,000. The Assistant Collector considers the numbers over-estimated.
SAMPGAON Taluka (Supernumerary Assistant Collector Mr. G. McCorkell's Report, dated 29th December 1876).										
The kharif crop may be taken at 8 annas, and the rabi at 8 annas. There are no prospects of further sowings this season.	The remissions will be slight.	No cattle have died of starvation, nor are any deaths anticipated from this cause.	The water-supply is not a matter of anxiety.	PRICES: LBS PER RUPEE. CHICKORI Taluka (Acting Frist Assistant Collector Mr.

a	*b*	*c*	*d*	*e*
The Mámlatdár estimates the kharif crop at 1 anna, and the rabi at nearly 2⅓ annas; but the First Assistant considers this estimate unreliable, and calculates that the average throughout the Collectorate is about 5 annas, the crop being almost entirely kharif, and consisting largely of rice. There will be no further sowings this season.	The Frist Assistant estimates the remissions at Rs. 40,000, and suggests that the collection of the revenue to the extent of Rs. 30,000 more may be deferred till next year.	Of the cattle and agricultural stock, numbering 187,734, about 20,000 have been driven to the Ghâts to graze, and about 4,000 worthless animals have already perished, and 1,000 more are likely to die from hunger. There are considerable stocks of kurbi in the taluka, and the Ghâts are near, so there should be little difficulty in feeding all animals worth preserving. The ryots will not go to the trouble and expense of preparing prickly pear for fodder.	Chickori is a well-watered taluka; 90 of its villages being upon the banks of rivers, and no serious inconvenience is likely to be experienced as regards the rest.

f	*g*	*h*	*i*	*j*	*k*
A. Steward's Report, dated 4th January 1877).					
The present supply of grain, added to the vast quantities imported from Vingorla, Chiplun, and other places, is sufficient to last till the monsoon. Prices have fallen, and private enterprise will supply the market.	There is no marked preponderance of any one caste over another. Weaving is the only trade carried on; the cultivators are exceedingly well-to-do, and the population is almost entirely agricultural, though the coolie class is a large one.	About 2,000 people have emigrated towards the Kanara jungles and relief works, and are supposed to have bettered themselves.	At present the eight road works in progress are sufficient; hereafter some large irrigational project in Hukeri Mahál may require to be undertaken.	Relief houses, under Government supervision, are established at four villages, where the wants of travellers and incapables are administered to.	There are at present 5,000 people on the works and 250 in the poor-houses; the numbers of the former will rise to about 14,000 or 15,000 throughout the dry season, and the latter to about 1,000.
G. McCorkell's Report, dated 30th December 1876).					
There are upwards of 3,202 tons of grain in store; importations are large, and there is no probability of the supply failing. Prices have fallen since the large importations, but will rise as soon as the rains close the Southern Mahratta ports. Private enterprise will supply the market.	The prevailing caste is that of the Lingayets; the majority of the population is agricultural, and in poor circumstances. There are no landholders capable of assisting their tenants.	About 5,000 people migrated with their cattle, but are returning. No further migration has taken place. There are a large number of immigrants from Dharwar, Kaládgi, and the neighbouring Jaghir States.	The greater number of the thirteen relief-works undertaken are completed: in addition to these the Assistant Collector proposes fourteen tank-works and two roads.	A relief-house has been established where the wants of incapables are attended to.	At present there are 8,200 on the works: it is expected that there will be— On 1st March — On works. 22,350 — By charity. 1,500 „ 1st May — 16,670 — 1,750 „ 1st July — 12,000 — 2,000
Report, dated 10th January 1877).					
There are upwards of 571 tons of grain in stores. Further supplies are being drawn from Vingorla, Chickori, Bidi, and Sampgaon Talukas. So long as importations from Vingorla continue, private enterprise will supply the market.	The population amounts to 109,697, and is almost entirely of Hindus, 40,063 being high caste and 60,060 low caste. There is a small percentage of Jains and Musalmans; about 27,424 purely and 3,428 partly agricultural; and the rest are urban, artisan, &c. The people, as a rule, are poor, and there are no landholders able to assist their tenants.	About 4,600 people have emigrated towards Mysore and the Western Ghâts; some have returned, and others have found employment. No further emigration is expected.	11 tank works, 1 well and 1 road are at present in progress, but will not meet the demand for labour; and it is proposed to commence the Gokak Canal.	A relief house has been established at Gokak, and the infirm and children are fed daily; the sick are supplied with medicines; and able-bodied travellers are assisted to relief-works, partly by Government and partly by private charity.	7,759 persons are now on the works, and 57 are being supported by charity: the number will probably increase to— On 1st March — On works. 20,000 — By charity. 400 „ 1st May — 27,000 — 700 „ 1st July — 22,000 — 900

ATHNI Taluka (District Deputy Collector Mr. J. A. Guerin's Report, dated 10th January 1877).

The kharif yield may be taken at 4 pies and the rabi 1¾ pies. No further sowings are expected this season.

The probable remissions will amount to Rs. 60,499; the total revenue is not given.

4,300 cattle are reported to have died and 5,000 to have been sold. A further mortality of 16,000 is anticipated.

27 villages of this district derive their water-supply from the Kistna river, which contains sufficient for the season; the other 77 villages, being dependent on wells and nalas, most of which are already dry, will suffer from scarcity. Wells are being deepened and cleared.

Average of six years	51½	26½	24	27½	30½

There are upwards of 1,697 tons of grain in store. Supplies are obtained from Sholapur, Chiplun, and in small quantities from Nipani and Belgaum. Prices have fallen, and private enterprise will supply the market.

The total population of Athni is 114,677, of whom 74,374 are high caste Hindus, and 16,487 low caste, 12,705 Jains, and 11,109 Musalmans. About 21,502 are purely agricultural and 78,840 combine agriculture with other trades; the remaining 14,335 are non-agricultural. The people, as a rule, are poor, and there are no large landholders capable of aiding their tenants.

About 10,000 people emigrated to the Nizam's territory and the Konkan, and a few to Amráoti, but many have returned.

9 tank works and 3 roads are in progress at present, but are found insufficient. In the absence of Government sanction to the Gokak Canal, several smaller works must be undertaken.

A relief house has been established at Athni, and the infirm and children are fed daily with cooked food; the sick are supplied with medicines; and able-bodied travellers are assisted to relief works by Government and private charity.

At present there are 6,931 on works and 140 are supported by charity. The numbers will be—

	On works.	*By charity.*
On 1st March	18,000	300
„ 1st May	25,000	600
„ 1st July	20,000	800

GENERAL OBSERVATIONS.

Of the seven talukas, the crop in four seem fair, and in three bad.

The proposed remissions amount to Rs. 2,50,772.

In five talukas the condition of the cattle appears satisfactory, and in two bad.

In five talukas the prospects of the water-supply seem satisfactory, and in two indifferent. No calamity due to failure of water is anticipated by Government.

No apprehensions are entertained regarding the grain supply.

The majority of the population of this as of all other Collectorates is either purely agricultural or very intimately connected with agriculture: 22,900, out of a population of 938,750, appear to have migrated. This movement appears now to have nearly stopped. It is, to a great extent, due to the necessity of obtaining pasture for the cattle.

The chief relief works are roads.

The expenditure upon charity has been trifling.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	87,650
„ May 1st	98,720
„ July 1st	79,800

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

C. G. W. MACPHERSON,

The 29th January 1877. *Under-Secretary to Government.*

EXTRA SUPPLEMENT TO THE GAZETTE OF INDIA, FEBRUARY 23, 1877.

DHARWAR.

HUBLI Taluka (First Assistant Collector Mr. G. Waddington's Report, dated 30th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The yield of the kharif and the rabi crop where sown is about 4 annas each, but nearly half the culturable area has been unsown. There will be no further sowings this season.	The total land revenue of the taluka is Rs. 2,25,000, and the remission to be given is estimated by the Mámlatdár at Rs. 25,000, which the First Assistant considers somewhat high, as the people are well-to-do.	No unusual mortality has occurred among the cattle, nor is any anticipated. Fodder plentiful. No special measures are required on this account.	The water-supply is fair; the chief source being wells. No scarcity of water is apprehended.	For each week of October, November, and December 1876. — Prices: lbs. per Rupee.	The Mámlatdár estimates the local stock of grain at about 694 tons, which the First Assistant considers absurdly low. He believes there are large stocks in the taluka. There are many rich traders in the town of Hubli, who are importing largely, as also are Messrs. Nicol and Co., of the Karwar Company (Limited); and the effect of this importation is a considerable fall in prices. If it continue, there is no need for apprehension for the taluka.	Of the total population (101,238) of the taluka, 17,170 persons are purely agricultural, 24,410 are artisans, and 59,658 of no special employment. Out of the whole number, about 500 persons are computed to be of independent means, but of these those of the landholding class are heavily involved, and there is no probability of their assisting their tenants.	No emigration has taken place from this taluka, but about 2,500 have immigrated from Kaládgi and elsewhere, who now find employment on the road under construction between Hubli and Konur.	The only relief work now in progress here is the road from Hubli and Konur, upon which about 3,000 persons are employed. There are also minor local fund works sanctioned, which will afford relief. A list is appended of works which can, if necessary, be sanctioned for relief.	No charitable relief has been given as yet, and it is doubted if any such will be required in the town of Hubli itself, where many of the wealthy merchants already distribute food daily to large numbers, and will continue to do so during the scarcity. In the villages also little will be required, as Hubli is the grand centre to which all needing employment or charity naturally gravitate.	The number of persons employed on relief works is at present about 3,000, most of whom are immigrants. The Mámlatdár estimates the probable numbers in future as follows:— On 1st March ... 5,000 „ 1st May ... 5,000 „ 1st July ... 5,000. supposing no rain to have fallen. The First Assistant considers this estimate to be a fair one.

GADAG Taluka (First Assistant Collector Mr. G. Waddington's Report, dated 30th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The yield of the kharif crop is estimated at 3 annas, and that of the rabi at 1 anna: but only a third of the culturable area has been sown. There will be no further sowings this season.	The Mámlatdár estimates the remissions at about Rs. 36,000, out of the total assessment of Rs. 2,46,522. The First Assistant Collector, however, thinks this estimate too low, and puts the amount at about Rs. 60,000.	No cattle have died from starvation, but some have been sent for grazing to the jungles. There are considerable stocks of fodder, and the people will be able to keep alive the best of their cattle, but difficulty in procuring fodder will be felt by the owners of carts coming into the taluka with grain supplies, &c.	In some villages there is already a great scarcity of water, and in seven others there is no supply at all, the villagers having to go two or three miles for it; these are black soil villages and depend for their supply upon tanks, which are filled up by the rain. The only remedial measure that appears feasible to the First Assistant is the sinking of wells to a great depth (100 feet) where good water may be found, that found at a moderate depth being brackish.	For each week of October, November and December 1876. — Prices: lbs. per Rupee.	The Mámlatdár estimates the local stock of grain at about 826 tons, which the First Assistant considers unreliable, but states he is himself unable to supply a more reliable estimate. Grain is largely imported from Bellary, Coompta, and Karwar, and the stock is sufficient for the wants of the usual inhabitants of the taluka, though, in the absence of importation, prices would be high. Importation, too, is requisite, not only to keep down prices, but to provide grain for the people employed on relief works, the majority of whom are immigrants from other districts. Later in the season difficulty will be experienced in procuring fodder for cart bullocks bringing grain into the district. The Revenue Commissioner, therefore, suggests the desirableness of storing, as a precautionary measure, a certain amount of fodder for sale to the public on the main lines of communication.	Of the total population, numbering 120,655 souls, 24,141 are purely agricultural, 1,026 artisans, and 95,488 of no special employment. The people are on the whole well-to-do. There are no large or wealthy land-holders who are in a position to assist their tenants.	According to the Mámlatdár's report about 10,000 people emigrated to the forests; but in consequence of suffering from fever and want of employment, many are returning to their homes. The First Assistant Collector observes that annually considerable numbers of the poorer classes emigrate to the western talukas for employment in reaping the rice crops, and return after harvest, and thinks that these persons form a considerable portion of the number in the Mámlatdár's estimate. Further emigration is not considered probable, if employment on relief works can be found in the taluka.	The relief works in progress are improving the tank at Dambul and making a road between Hurtee and Mulagund, 1,250 persons being employed on the former, and 1,500 on the latter work. A list of other relief works which can be undertaken is also submitted.	The amount of charitable relief has as yet been very small, nor is there any likelihood of its rising to anything very considerable.	At present only about 4,000 persons are employed on relief works. It is difficult to make a forecast of the numbers likely to be so employed in future, as it must entirely depend upon the seasonableness or otherwise of the rainfall. The Mámlatdár estimates the number that will require charitable relief at— On 1st March ... 60 per diem. „ 1st May ... 80 do. „ 1st July ...100 do.

DHARWAR

—continued.

KALGHATGI Taluka (First Assistant Collector

Mr. G. Waddington's Report, dated 30th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The taluka is entirely kharif, and the crop is 5 annas.	About Rs. 500.	No unusual mortality among cattle, and fodder is abundant. A considerable number of cattle, belonging to immigrants from Kaládgi and elsewhere, have died on their way through this taluka to the forests. Many of them were poor, worthless creatures; their deaths are partly attributable to the scarcity of food and over-driving, and partly to the coarse fodder of this taluka not suiting them.	The water-supply is fair, the source being nullahs and holes sunk in the beds of nullahs. Where the want of water is likely to be most felt will be along the road, by cartmen travelling with grain carts from Sangatikop to Hubli. Suggests the sinking of temporary wells at each of the halting places along the line.	Prices: lbs. per Rupee.	The local stock of grain is estimated at 3,117 tons, but the First Assistant does not consider this estimate very reliable. Large imports are being made from Karwar, and Messrs. Nicol and Co. have set up a grain store at Kalghatgi. Private enterprise is likely to provide the requisite supply and prices, which have already fallen, are not likely to rise excessively.	About 10,000 persons, out of a total population of 52,729, are purely agricultural, the remainder are composed of labourers, traders, and artisans and manufacturers. There are no very wealthy persons or large landholders in the taluka, the few that may be considered as such being involved in debt, and there is no probability of their assisting their tenants, though a few are taking advantage of the cheap labour obtainable to improve their lands.	No emigration has taken, or is likely to take place in this taluka; but about 5,000 persons have immigrated into it from Kaládgi and elsewhere, and the number is daily increasing.	No relief work has yet been started nor is any at present needed, as there has been no demand for employment, except to a very limited extent. A list of works that may hereafter be necessary is submitted.	No expenditure has as yet been incurred on charitable relief, but hereafter it may be found necessary to grant such relief to immigrants returning home in April or May, after the first showers.	The number of persons now employed on relief works is only 260. The Mámlatdár estimates on the— 1st March ... 2,000 1st May ... 1,000 1st July ... 1,000 This must depend entirely on the rainfall being early and plentiful or otherwise.

HÁNGAL Taluka (Acting Second Assistant Collector

Mr. C. Wiltshire's Report, dated 23rd December 1876).

a	b	c	d	e	f	g	h	i	j	k
The kharif crop is as follows: rági 5 annas; rice 4 annas; jowári 3½ annas, and tur pulse 1 anna. There has been no rabi crop at all. There will be no further sowings this season.	Rs. 1,000 will probably have to be remitted.	No unusual mortality has occurred, or is anticipated. Fodder sufficient.	From February and March the water-supply will fail in some villages, but no special distress from scarcity of water will be felt, as the ryots will, as usual, sink temporary wells in nullahs, tanks, &c.	Prices: lbs. per Rupee.	The Second Assistant Collector estimates the local stocks of grain at 11,826 tons, but the Collector does not consider much weight is to be attached to this estimate. As Hángal is favourably situated, as regards the ports of Karwar and Coompta, private enterprise is likely to make all requirements.	Of the population numbering 67,390 souls, 28,422 are of high and 35,083 of low caste; 332 men are rich, and of the remainder half are well-to-do and half are poor. There are 36,974 agriculturists, 5,551 artisans, and 500 professional mendicants. Of the balance, one-half are petty shop-keepers, and the other labourers or private servants. There are six wealthy landholders, who are able and willing to aid their tenants. Of these, two at their own expense employ each from 400 to 500 immigrant labourers on works.	There has been and will be no emigration, but 1,000 beggars and 3,000 coolies have immigrated, who are now gradually returning to their homes.	The local fund works are very small. The sum of Rs. 4,331 for small works has been raised by local subscriptions and will be expended in deepening 3 kalwas and 12 tanks. The Collector does not anticipate much demand for relief employment from the population of Hángal itself, but there is a prospect of considerable immigration. At present there is sufficient work for the immigrants. Should the necessity for extensive relief arise, tank-digging is, in the opinion of the Collector, the proper object for expenditure.	No charitable relief has been given. The Second Assistant has on hand a reserve of Rs. 1,000, to be sos pent.	The Second Assistant cannot give accurate information as to the number of persons on relief works. The number is likely to be on the— 1st March ... 4,000 1st May ... 5,000 1st July ... 3,000 On each of these dates 50 persons unable to work will have to be supported by charity.

RÁNIBENNUR Taluka (Acting Second Assistant Collector

Mr. C. Wiltshire's Report, dated 29th December 1876).

a	b	c	d	e	f	g	h	i	j	k
The Assistant Collector estimates the kharif crop at 1½, and the rabi at 6¼ annas. The Collector thinks the Assistant's estimate of the kharif crop is slightly too low. There will be no further sowings this season.	About Rs. 10,000 will probably have to be remitted out of a revenue demand of Rs. 1,33,734.	3,000 cattle have died, of which one-half were valuable agricultural stock. About 33,500 valuable animals have been sent to Mysore and Kanara to graze; of these about 4,200 have died. It is anticipated that about 1,000 more will die, of which only 300 will be valuable animals. The Second Assistant has no other suggestions to offer for the preservation of cattle than those made with reference to Sindgi Taluka.	The tanks of ten villages are dry, and those of fifteen villages will also be dry in a fortnight, when, with the exception of three villages, the inhabitants of which will have to go three miles, all villagers will have to go from one to two miles for water.	Prices: lbs. per Rupee.	The local stocks of grain, as far as ascertainable, are not less than 595 tons. A large quantity is also imported from Coompta and from Mysore. In the opinion of both the Second Assistant and the Collector, private enterprise is likely to be sufficient to meet all demands, but the importations will not be sufficiently large to lower prices to any great extent.	Of the population, 67,730 are high and 15,678 low caste; 1,077 are rich, 21,312 are well-to-do, and the remainder poor. Of the population, 39,200 are agriculturists, 38,720 artisans, 1,908 merchants, 3,800 dealers in cattle, 600 carriers of goods, 3,300 are Government and other servants, 880 are priests, and 3,700 compose the moneyed gentry. There are no large wealthy landholders able to aid their tenants.	There has been no emigration except an exodus of 300 persons, who have taken their cattle to Mysore and Kanara, and who are not likely to return till the scarcity is over. No further emigration is anticipated.	The metalling of the Poona-Hurryhur road is in progress; also the Medleri tank, the former employing 334, and the latter 150 labourers. The ryots have subscribed Rs. 6,440 for famine works. With this sum a well, houd, and dharmsala will be built, and several houds, tanks, and wells will be repaired. A list is submitted of other works, chiefly roads, which are suitable relief works.	No charitable relief has as yet been given.	Government have on their hands about 484 labourers. The number likely to require relief hereafter is, on the 1st March, 4,000 on works and 100 by charity; 1st May, 4,000 on works and 200 by charity; and on 1st July, 3,000 on works and 200 by charity.

DHARWAR.

—continued.

KARAJGI Taluka (Supernumerary Assistant Collector Mr. E.

McCallum's Report, dated 30th December 1876).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The kharif crop is about 1 anna and the rabi ½ an anna.	Remissions will probably amount to nearly Rs. 30,000 out of a revenue of Rs. 1,50,504, but no accurate estimate can be formed till the jamabandi.	No unusual mortality as yet among the cattle in the taluka, but it is anticipated. Of the cattle that have been sent to Malad to graze, about 1,000 have died from the effects of the climate, and some are returning thence. The Collector thinks the effect of the Malad climate exaggerated, and that the animals were weak when they arrived there. He considers that Government cannot do more for the cattle than is being done.	The rivers Warad and Tungabhadra run through the taluka, the former almost through the centre, and the latter bounds the greater part of the eastern side. But in villages where water is deficient measures are being taken to improve the supply.		The Assistant Collector estimates the local stock at about 8,759 tons, but the Collector cannot place any reliance on the estimate. The centres from which further supplies can be drawn are Bellary, distant 14 miles; Coompta, distant 100; and Karwar, distant 112 miles. A good deal of grain is being imported by private enterprize; there has already been a fall in prices and a further decline is probable. No dearth of food is anticipated.	Of the population about 25,000 are well-to-do, the remainder 64,262 are poor. The cultivators number about 23,574, and the artizans 20,384. There are no large landholders likely to help their tenants.	About 3,000 people have emigrated and have bettered themselves by so doing, but owing to sickness some have returned. Further emigration is not anticipated.	Relief works, such as clearing tanks and cutting prickly-pear are being carried on out of voluntary subscription at seven different places. Relief works are also in progress under the Public Works Department, such as clearing out the Gutal houd and metalling the Harrihar road, and making a new line of road near Tahihulli. A road from Gutal to Ranibennur is also in progress. Other relief work recommended is enlarging a tank between the villages of Timapur, Hattimattur, and Neiglur.	Infirm people, unable to work, are at present supported by voluntary subscriptions, 2 lbs. of jowari per day being given to them. In Haveri and Devihosur there are one or two sowcars who give relief gratuitously.	The number of people whom Government had on their hands on the 23rd December for relief by works was 2,000, and by charity 500. Government will probably have on their hands for relief on the— 1st March ... 5,000 1st May ... 3,000 1st July ... 1,500 The Collector supposes that the average number between 1st of March and 1st of June will be 5,000; and that if rain be seasonable and copious, little or no relief will be required in July.

RON Taluka (District Deputy Collector Mr. J. C. Anding's

Report, dated 5th January 1877).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The kharif crop was ½ an anna; rabi crop *nil*. There will be no further sowings this season.	The District Deputy estimates the amount of remissions at about one-third (Rs. 54,000) of the total assessment, Rs. 1,62,679. The Collector thinks it may be brought below this.	About 7,000 cattle and agricultural stock have died from want of fodder, and about as many more deaths are anticipated. Permission to graze cattle in the forests has eagerly been taken advantage of. Some who could afford it have laid in a stock of fodder sufficient to last for two months or more. The attention of the people has been drawn to the advantage of utilising the leaves of prickly pear as fodder.	Of the 58 villages, 53 have a supply of water sufficient till next rains, the remaining 5 have tanks which are now dry; but temporary wells have been sunk in the beds of nalas, one or two miles distant, to supply their need; these wells will have to be made deeper as the dry season advances.		The local stock of grain is estimated at about 231 tons, besides which there have been large importations from the coast *viâ* Hubli, which is the centre depôt for grain, and from which other markets are supplied. The effect of these importations has been to lower prices, but there is no likelihood of any further considerable fall. Private enterprize is considered sufficient to meet all requirements.	Of the total population, numbering 73,606 souls, 9,200 are high caste and well-to-do, the remaining 64,406 are low caste and poor. Of the whole 55,200 are cultivators, 6,900 artisans, and 11,506 urban. The landholders are not very wealthy, and are not known to have aided their tenants.	About 8,000 persons are estimated to have migrated towards Kanara to assist in harvest operations. Of these some have returned owing to the breaking out of cholera and the prevalence of fever. It is expected that in February about 5,000 or 6,000 people will move into North Kanara to gather the seed of the bamboo, which is in full blossom now.	The only relief work in progress is the new Ron-Nawalgund road, on which about 5,000 persons are employed. On its completion the District Deputy suggests the following works: the collecting of moorum for the Palla-Badami road, and improving the tanks at Naregal, Howjgerry, Belwanki, Yavgal, and Halkeri. The Collector and the Revenue Commissioner are of opinion that, where possible, relief works should take the form of tanks, instead of new roads, which over a black soil country are useless, unless metalled and which must in future years be a permanent charge on the local fund of the district.	About Rs. 451 have been spent in minor relief works such as improving tanks, and Rs. 71 in giving purely charitable relief to travellers, and to the aged and infirm poor.	The number employed on relief works is about 3,064, and that receiving charity about 51. The number in future is estimated by the District Deputy as follow: on the 1st March, 6,000 on works and 100 by charitable measures; 1st May, 8,000 on works and 200 by charitable measures; and on 1st July, 6,000 on works and 300 by charitable measures. The Collector assumes that the number seeking employment between 1st February and 1st May will average 7,000, after which date, if rain fall seasonably and copiously, the number will rapidly diminish.

DHARWAR

—continued.

a	b	c	d	e	f	g	h	i	j	k
				DHARWAR Taluka (District Deputy Collector						
The kharif crop will yield as follows: jowári 6 annas, bájri 1 anna, rice 2 annas, túr 2 annas, rági, &c., 3 annas; areas of each not stated. There will be no rabi crop. There is no prospect of further sowings this season.	The District Deputy estimates the remissions at about Rs. 36,268, or one-fourth of the total assessment (Rs. 1,45,072), which both the Collector and the Revenue Commissioner consider excessive, and they are of opinion that the remissions should not exceed Rs. 2,000.	No unusual mortality among cattle, and none is anticipated.	The water-supply is sufficient to last till the commencement of the hot weather in March, after which temporary wells in beds of nalas and in rice lands will have to be sunk and resorted to, as is usually done. The District Deputy recommends the sum of Rs. 400 to be placed in the Mamlatdar's hands to enable him to assist the people in the digging of temporary wells.		**Mr. J. C. Auding's Report, dated 3rd January 1877).**					
				Prices: lbs. per Rupee.	The District Deputy estimates the local stock of grain at about 925 tons, besides which there have been large importations from the coast *viâ* Hubli, the effect of which has been to lower prices considerably. The Collector has no confidence in the above estimate, but agrees with the District Deputy that there is little danger of a failure of food, as private importations will suffice to meet all requirements. He thinks, however, that there is no prospect of a material fall in prices; the imported grain is considered inferior to the local grain and is selling cheaper.	The population is mixed, but the high caste greatly predominates over the low caste. Of the total number 15,532 are cultivators, 23,771 artisans, and 83,427 urban. There are not any very large landholders, and though some are to a certain extent wealthy, they are not likely to assist their tenants.	About 5,000 people have emigrated towards Kanara to assist in harvesting operations. Of these some have returned, owing to cholera breaking out there. It is expected that in February about 10,000 will emigrate thither to gather the seed of the bamboo which is now in blossom.	The Collector states that at present there is no urgent demand for employment in this taluka; the only work in progress is the improvement of the Mavunkope tank on the Dharwar and Hullial road. There are other tank projects which will be taken up as relief works as occasion may require.	The expenditure on account of charitable relief has as yet been trifling, amounting to Rs. 5.	At date of report on relief on works 200. The District Deputy estimates the number likely to be on Government hands hereafter for relief as follows:

					C. Wiltshire's Report, dated 1st January 1877).					
					The local stocks are estimated at from 10,906 to 15,000 tons. Importations are still going on from Karwar and Coompta.	Of the population, 40,000 are high and 38,425 of low caste: 200 men are rich; 40,000 are well-to-do, and the remainder are poor: 41,141 are agriculturists, 50 dealers in cattle, 18,642 are artisans, 600 carriers of goods, 2,000 traders, 1,450 Government servants and their families, 2,000 compose the monied gentry, 50 are private schoolmasters, and the residue private servants. There is no fear of distress among the people. There are no wealthy landholders to aid their tenants.	Tnere has been no emigration, and none is anticipated; about 200 beggars and 1,300 labourers have emigrated.	The Hirekerur tank, on which immigrants are chiefly employed, is being repaired by the Irrigational Department. The ryots have subscribed Rs. 3,795 for famine works, with which amount 7 roads, 2 tanks or houds, and 1 well will be repaired, and 3 tanks deepened. The Second Assistant submits a list of roads as relief works on which people might hereafter be employed, but the Collector shows that the capabilities of the taluka for irrigational reproductive works are very great, and is strongly of opinion that future relief works should be of this nature rather than roads.	No charitable relief has been given, but the Second Assistant has a reserve of Rs. 1,000 to be so spent.	The Government are likely to have on their hands on the—

				BANKÁPUR Taluka (First Assistant Collector						
The kharif and jowári is 6, the rice 5, and the cotton crop 4 annas; relative areas not given. There is no rabi crop in this taluka. There will be no further sowings this season.	Rs. 1,500 will probably have to be remitted, out of a revenue demand of Rs. 1,77,836.	There has been no unusual mortality among the cattle in the taluka, nor is any anticipated. Fodder is tolerably abundant. The Mamlatdar reports that of the cattle that were sent to the jungles to graze, about 1,000 have died.	The water-supply of this taluka is fair, except in 2 or 3 black soil villages in the north-east extremity.

					Mr. G. Waddington's Report, dated 6th January 1877).					
					The local stock of grain is estimated at about 7,143 tons. Large imports are being made from Karwar and elsewhere, and there is no likelihood of supplies for this taluka failing. Prices have considerably fallen, and the Mamlatdar anticipates a further considerable fall, but the first Assistant thinks it probable that prices will remain much as they are for some months to come.	The population of the taluka is 83,175, of whom 52,000 are of the agricultural class and 5,000 are artisans; the remainder 26,175 are traders, including 550 men of some means. There are several landed proprietors of the class of district hereditary officers, who, being involved in debt, are not likely to assist their tenants.	No unusual emigration has taken or is likely to take place. Some labourers who had gone to the jungles to seek employment in the rice harvest have returned.	There has as yet been no great demand for employment. Certain minor works are in progress, such as metal-collecting for the Poona-Harihar road and improving the irrigational tank at Yalwagi. The First Assistant submits a list of projects which, if necessary, can be carried out hereafter as relief works.	There has been no demand as yet for charitable relief, and it is anticipated that in future it will be inconsiderable.	Only about 1,500 persons are at present employed on relief works, but this number will probably increase considerably. The Mamlatdar estimates the numbers likely to be employed hereafter as follows:—

On 1st Mar. ...	4,000
„ 1st May ...	2,000
„ 1st July ...	2,000

if the usual rain should fall in April and May. About 50 may require to be supported by charity.

DHARWAR

—concluded.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*

NAWALGUND Taluka (District Deputy Collector Mr. J. C. Auding's Report, dated 11th January 1877).

a: The yield of the kharif crop is estimated at 1 pie, and that of the rabi at 2 annas.

b: The remissions are estimated at about Rs. 85,000, or nearly one-fourth of the revenue demand, Rs. 3,55,816.

c: About 550 cattle have died from want of fodder, and about 1,180 more deaths are anticipated from the same cause. The people are taking advantage of the permission accorded by Government to graze their cattle free in the forests. The attention of the people has also been drawn by the local officers to the advantage of utilising the prickly pear leaves as fodder.

d: The water-supply is very scanty, except in the very few villages situated on the river Malprabha. Temporary wells will have to be sunk in the beds of nalas to meet the difficulty.

e:

f: The local stocks of grain are estimated by the District Deputy at about 5,457 tons. The Collector, however, has not much reliance on these figures, but agrees with the District Deputy in thinking that the large imports which are being made from the coast *viâ* Hubli by private enterprise will meet all demands, and there will be no serious rise in prices.

g: Of the population, numbering 101,042 souls, 77,200 are high caste and well-to-do, and 23,842 low caste and poor. There are 53,285 cultivators, 4,889 artisans, and 42,868 urban population. The landholders, though wealthy to a certain extent, are not known to have aided their tenants in any way.

h: About 10,600 people have emigrated to Kanara, to assist in harvesting operations; but owing to the breaking out of cholera, and the prevalence of fever, some have returned; but in February large numbers are expected to go there to gather the bamboo seed, which is freely eaten by the poor.

i: The only large relief work in progress in the taluka is the new road from Kanur to Nawalgund (the Hubli-Sholapur road) under the Public Works Department, on which about 10,000 persons are now employed, besides which some minor works are in progress. As these will not last long, the District Deputy recommends for future execution, the Ron-Nawalgund road and improving the tanks at Tirlapur, Halikeri, Bhigranbathi, Jagapur, Nargund, Arekurbatti, Dattanball, Ballarwar, and Nalwadi.

j: Rs. 115-0-9 have been expended on charitable minor works, and Rs. 36-8-3 in relieving travellers and the aged and infirm poor unable to work.

k: The number of persons Government have on their hands at present is 10,213 on relief work and 20 relieved by charity. The number they are likely to have hereafter will be as follows. Of the—

	On works.	*By charitable measures*
1st Mar. ...	12,000	100
1st May ...	13,000	150
1st July ...	16,000	250

GENERAL OBSERVATIONS.

Of the eleven talukas, the crops in five seem to have been tolerable, in two bad, and in four very bad.

The proposed remissions amount to Rs. 2,70,000.

In seven talukas the condition of the cattle seems satisfactory, in three indifferent, and in one bad.

In eight talukas the prospects of the water-supply seem satisfactory, but in one considerable, and in two large expenditure seems to be considered necessary. Government do not anticipate any calamity due to failure of water.

No apprehensions are entertained regarding the grain supply.

The majority of the population of this as of all other Collectorates is either agricultural or very intimately connected with agriculture.

36,600, out of a population of 988,037, appear to have migrated, but many have returned, owing to outbreaks of sickness.

Upwards of 15,000 are shortly expected to go into the Kanara jungles to gather bamboo seeds.

The Poona-Haribar, Ron-Nawalgund, and Hubli-Kaládgi roads and some irrigation tanks are the chief relief works in progress.

The expenditure on charity has been trifling.

The number of labourers anticipated to be on the hands of Government is—

On March 1st	58,000
„ May 1st	51,500
„ July 1st	43,000

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

The 25th January 1877.

C. G. W. MACPHERSON,
Under-Secretary to Government.

SUMMARY

OF THE

GENERAL OBSERVATIONS

APPENDED BY THE

GOVERNMENT OF BOMBAY

TO THE FOREGOING

DISTRICT STATEMENTS.

SUMMARY of General Observations on the Answers to the Questions asked by the Government of India in their letter No. 459 of 30th November 1876, as regards the Districts of Khandesh, Násik, Ahmednagar, Poona, Sholapur, Satara, Kaládgi, Belgaum, and Dharwar.

Collectorates.	*a*	*b*	*c*	*d*	*e & f*	*g*	*h*	*i*	*j*	*k*
KHANDESH ...	Of the 15 talukas and 3 pethas, the crops in 10 seem fair, and in 8 indifferent.	The proposed remissions amount to Rs. 4,66,000.	The condition of the cattle, except in 4 talukas, appears satisfactory.	The recent heavy rain in Khandesh has probably dissipated all fears regarding the water-supply.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ...35½ / 50¾ Bájri ...28¾ / 44¾	The majority of the population of this, as of all other Collectorates, is either agricultural, or very intimately connected with agriculture.	There has been hardly any migration from the district.	The chief relief works are the Dhulia-Pimpalner, and Songir-Nandurbár Roads.	The expenditure upon charity has been very trifling.	The number of labourers anticipated to be on the hands of Govment is on— 1st March. / 1st May. / 1st July. 16,950 / 28,200 / 16,650
NÁSIK ...	Of the 11 talukas, the crops in 8 seem fair, and in 3 indifferent.	The proposed remissions amount to Rs. 3,69,500.	The condition of the cattle throughout the Collectorates appears satisfactory.	In 5 talukas the prospects of the water-supply seem satisfactory, and in 6 indifferent. No calamity due to failure of water is anticipated by Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ...25½ / 48 Bájri ...10¼ / 40¾	The majority of the population of this, as of all other Collectorates, is either purely agricultural, or very intimately connected with agriculture.	There has been very little emigration.	The chief relief works are the Bhawarbari-Vinchur, Kapralla-Ghát, Vinchur-Niphád and Niphád-Deopur Roads.	The expenditure upon charity has been very trifling.	The number of labourers anticipated to be on the hands of Government is about on— 1st March. / 1st May. / 1st July. 43,000 / 53,100 / 36,300
AHMEDNAGAR.	Of the 11 talukas, the crops in 2 seem to have been fair, in 5 bad, and in 4 very bad.	The proposed remissions amount to Rs. 5,77,943.	In 6 talukas the condition of the cattle seems satisfactory, in 2 indifferent, and in 3 bad.	In 4 talukas the prospects of the water-supply seem satisfactory; but it is reported that in 5 considerable, and in 2 large, expenditure on this account will have to be incurred; no calamity due to failure of water-supply is, however, anticipated by the Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ...26 / 59½ Bájri ...25½ / 53½	The majority of the population of this, as of all other Collectorates, is either agricultural, or very intimately connected with agriculture.	128,553 people out of a population of 773,958 appear to have migrated, but some have returned. A further migration of upwards of 5,000 people is anticipated. The migration appears to this Government to be due mainly, if not entirely, to the cattle movements, and to the movement of the people towards relief works.	A considerable number of relief works is in progress, but the local officers are unable to suggest sufficient to meet the future demand for labour, unless the Dhond and Manmád Railway earthworks are undertaken.	The expenditure on charity has not been large.	The number of labourers anticipated to be on the hands of Government is on— 1st March. / 1st May. / 1st July. 98,900 / 148,200 / 47,500
POONA ...	Of the 8 talukas, the crops in 3 seem good, in 3 indifferent, and in 2 bad.	The proposed remissions amount to Rs. 5,46,354.	In 5 talukas the condition of the cattle appears satisfactory, and in 3 rather the reverse.	Some expenditure of money will render the water-supply throughout the Collectorate satisfactory.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ...27½ / 53¾ Bájri ...24¼ / 47	The majority of the population of this, as of all other Collectorates, is either purely agricultural, or very intimately connected with agriculture.	101,989 people seem to have migrated. The movement has now stopped. It appears to be to a great extent caused by the necessity of obtaining pasture for the cattle. The people are expected to return before or during the monsoon.	The chief relief works now in progress are the Mutha Canal, the Yewut Tank, the Shirshopal Tank, and the Poona-Poud Road.	The expenditure upon charity has been trifling.	The number of labourers anticipated to be on the hands of Government is on— 1st March. / 1st May. / 1st July. 80,500 / 85,500 / 45,300

Collectorates.	*a*	*b*	*c*	*d*	*e & f*	*g*	*h*	*i*	*j*	*k*
SHOLAPUR ...	Of the 7 talukas, the crops in 2 seem bad, and in 5 very bad.	The proposed remissions amount to Rs. 10,01,169.	In 1 taluka the condition of the cattle appears indifferent, and in 6 bad.	In 2 talukas the prospects of the water-supply seem satisfactory, in 3 indifferent, and in 2 bad. No calamity due to failure of water is anticipated by Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ... 19¾ / 56¼ Bájri ... 21½ / 49¼	The majority of the population of this, as of all other Collectorates, is either purely agricultural, or very intimately connected with agriculture. The figures given by Mr. Acworth (and by the District Deputy as respects Karmála), regarding the cultivators and non-cultivators, are obviously absurd. He apparently classes Khatidars alone as cultivators.	212,300 out of a population of 718,034 seem to have migrated. More are expected to follow their example, but, on the other hand, some have returned. This migration is to a great extent a cattle movement.	The chief relief works are the Ashti Tank, and the Bársi-Yedsi and Pandharpur-Wangi Roads.	The expenditure upon charity has been considerable.	The number of labourers anticipated to be on the hands of Government is about on— 1st March. / 1st May. / 1st July. 140,000 / 186,000 / 132,000
SATARA ...	Of the 11 talukas, the crops in 7 seem to be fair, in 2 indifferent, and in 2 bad.	The proposed remissions amount on what appears to be an outside estimate to Rs. 5,07,621.	In 8 talukas the condition of the cattle seems satisfactory, in 1 indifferent, and in 2 bad.	In 6 talukas the prospects of the water-supply appear satisfactory, and in 5 indifferent. No calamity due to failure of water-supply is anticipated by Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ... 26¾ / 41¼ Bájri ... 24½ / 37½	The majority of the population of this, as of all other Collectorates, is either agricultural, or very intimately connected with agriculture.	45,163 people out of a population of 1,064,002 seem to have emigrated; some have returned, but further emigration is expected. It appears to be partly a cattle movement, and partly the annual movement in search of labour intensified by the present scarcity.	The chief relief works are the Nehr and Pingli irrigation tanks.	The expenditure upon charity has been trifling.	The number of labourers anticipated to be on the hands of Government is about on— 1st March. / 1st May. / 1st July. 70,500 / 92,500 / 45,500
KALADGI ...	Of the 8 talukas, the crops in 3 seem to have been bad, and in 5 very bad.	The proposed remissions amount to Rs. 6,95,373.	In 1 taluka the condition of the cattle appears tolerably satisfactory, and in 7 bad.	In 5 talukas the prospects of the water-supply seem satisfactory, and in 3 indifferent. No calamity due to failure of water is anticipated by Government.	The local officers appear slightly apprehensive regarding the grain supply of 5 talukas. For October, November, and December 1876. / For six previous years. Jowári ... 19 / 60½ Bájri ... 17¾ / 62½	The majority of the population of this, as of all other Collectorates, is either agricultural, or very intimately connected with agriculture.	123,900 out of a population of 816,037 appear to have migrated. This movement seems now to have nearly stopped. It is to a great extent due to the necessity of obtaining pasture for the cattle.	The chief relief works are the Sholapur-Hubli and the Sholapur-Bellary Roads.	The expenditure upon charity has been trifling.	The number of labourers anticipated to be on the hands of Government is about on— 1st March. / 1st May. / 1st July. 82,000 / 119,500 / 63,300
BELGAUM ...	Of the 7 talukas, the crops in 4 seem fair, and in 3 bad.	The proposed remissions amount to Rs. 2,50,772.	In 5 talukas the condition of the cattle appears satisfactory, and in 2 bad.	In 5 talukas the prospects of the water-supply seems satisfactory, and in 2 indifferent. No calamity due to the failure of water is anticipated by Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ... 17 / 44½ Bájri ... 17½ / 41½	The majority of the population of this, as of all other Collectorates, is either purely agricultural, or very intimately connected with agriculture.	22,900 out of a population of 988,750 appear to have migrated. This movement appears now to have nearly stopped. It is to a great extent due to the necessity of obtaining pasture for the cattle.	The chief relief works are roads.	The expenditure upon charity has been trifling.	The number of labourers anticipated to be on the hands of Government is about on— 1st March. / 1st May. / 1st July. 87,000 / 98,720 / 79,800
DHARWAR ...	Of the 11 talukas, the crops in 5 seem to have been tolerable, in 2 bad, and in 4 very bad.	The proposed remissions amount to Rs. 2,70,000.	In 7 talukas the condition of the cattle seems satisfactory, in 3 indifferent, and in 1 bad.	In 8 talukas the prospects of the water-supply seems satisfactory; but in one considerable, and in 2 large, expenditure seems to be considered necessary. Government do not anticipate any calamity due to the failure of water.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. / For six previous years. Jowári ... 22½ / 64½ Bájri ... 19 / 41½	The majority of the population of this, as of all other Collectorates, is either agricultural, or very intimately connected with agriculture.	36,600 people out of a population of 988,087 appear to have migrated, but many have returned owing to outbreaks of sickness. Bands of 15,000 are shortly expected to go into the Kanara jungles to gather bamboo-seeds.	The Poona-Hurrihar, Ron-Nawalgund, and Hubli-Kaládgi roads, and some irrigation tanks, are the chief relief works in progress.	The expenditure on charity has been trifling.	The number of labourers anticipated to be on the hands of Government is on— 1st March. / 1st May. / 1st July. 58,000 / 51,500 / 43,000
TOTAL ...	.....	Rs. 46,84,732	.....	.....	.....	.....	No. 671,405	.....	.....	677,500 / 863,220 / 503,300

(*a*) Out of the 89 talukas forming the Collectorates of Khandesh,* Násik, Ahmednagar, Poona, Sholapur, Satara, Kaládgi, Belgaum, and Dharwar, the crops of 39 would appear to be fair, of 13 indifferent, and of 37 bad. It must, however, be observed that, as the respective areas of kharif and rabi are not always given, it is occasionally difficult to judge of the position of a taluka from the answer.

(*b*) The estimate by the local officers of revenue to be remitted is Rs. 46,84,732. This would seem to be for the year 1876-77; but the question may have been interpreted in various ways.

(*c*) The condition of the cattle in 54 talukas appears to be satisfactory, in 14 indifferent, and in 21 bad. This Government are inclined to hope that, except in Sholapur and Kaládgi, the mortality among cattle will be confined almost entirely to the old and worthless animals.

(*d*) The water-supply of 58 talukas seems satisfactory, while in 31 considerable expense may have to be incurred. Government, however, do not anticipate any calamity due to failure of water-supply.

(*e & f*) Private enterprise appears quite able to supply the demand for grain, and there are large stocks in the Bombay markets, and on their way from Central India, the North-West Provinces, and elsewhere; but prices seem unlikely to fall materially, as they now appear to be close upon the margin of profit on importation. The average prices throughout the nine districts for October, November, and December are shown to be—

Jowári, 26¼ lbs. per rupee.
Bájri, 21¾ lbs. per rupee.

and the average for the previous six years—

Jowári, 56 lbs. per rupee.
Bájri, 47 lbs. per rupee.

It must, however, be remembered that the great general rise of prices did not occur early in October. The average is now about 23¾ lbs. per rupee.

(*g*) This question has been variously understood. In some talukas Brahmins alone would appear to be entered as high caste; in others all, save Mhars, &c., are so entered. The population of the affected area may be said to be almost entirely agricultural.

(*h*) The migration is stated to amount to 671,405, and is chiefly from Ahmednagar, Poona, Sholapur, and Kaládgi. It is probable that most of these people have simply moved from one part of British territory to another, either in search of work or pasture, and the majority will, no doubt, return to their villages next monsoon.

(*i*) The expenditure of Government money upon charity has not been large.

(*k*) The estimate of the number of people upon relief works is as follows:—

1st March.	1st May.	1st July.
677,500	863,220	509,370

The estimate made by this Government in November was an average of 750,000, 800,000, and 300,000 respectively for the above three months.

* No return of the Jámner Taluka, which is reported to be unaffected by scarcity, has been received.

C. G. W. MACPHERSON,
Under-Secretary to Government.

Bombay, 10th February 1877.

STATEMENT B.

ABSTRACT OF STATEMENT A

AND

OTHER INFORMATION

RELATING TO THE

DISTRESSED DISTRICTS IN THE BOMBAY PRESIDENCY.

N. B.—This Abstract is compiled from Statement A, the weekly progress statements issued by the Bombay Government, and the original reports of the Assistant and Deputy Collectors, Collectors, and Revenue Commissioners.

STATEMENT B.

ABSTRACT OF THE REVIEW AND FORECAST OF THE CONDITION AND PROSPECTS OF THE BOMBAY PRESIDENCY.

STATEMENT

	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas; *kharif* and *rabi* should be shown separately. If there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.	The course of prices wea... of each of the princip... food-grains from Octob... 1st up to the date of r... port in each case, and ... years' averages.
KHANDESH.	After making allowance for the proportions of *kharif* and *rabi* cultivation, the amount of crop saved is approximately as under:— Full average in 4 sub-divisions. Three-fourths „ 3 „ Two-thirds „ 2 „ One-half „ 4 „ One-third „ 6 „ 19 Of these sub-divisions, 16 are talukas, and 3 are pethas, or portions of a taluka separately administered and reported on.	The reduction in the estimate of remissions, resulting from further scrutiny of the effects of the drought, is very remarkable. The original estimate was Rs. 7,56,000. In paragraph 12 of Sir R. Temple's minute of January 12, however, the amount is put down, on the statement of the local authorities, at 5 lakhs, and we now learn that Rs. 4,66,000 is probably a maximum estimate.	There has been no unusual mortality among the cattle and none is anticipated, excepting in a group of four talukas bordering on the Taptee, where want of fodder and water are expected to be severely felt. The throwing open of the Government Forest reserves appears to have had an excellent effect.	No anxiety regarding the water-supply, except in one taluka, where the failure has been serious, and in the group of four already mentioned, where it may be considerable. In other parts scarcity will be felt in individual villages or groups of villages only. The deepening, clearing, or repair of existing wells, and in some cases the sinking of new ones, are recommended for several talukas. The recent heavy rain may have improved matters somewhat.	Famine prices do no... exist in any part o... Khandesh. In the... taluka of Erandole... where they ar... higher than in any... other part, th... number of lbs. o... the four principa... grains which cou... be purchased fo... one rupee was a... follows: bájri o... wheat, 24 lbs.; ... jowári, 28 lbs.; an... túr dal, 16 lbs. Th... average prices dur... ing six years were... 32, 38, 48 and 22 lbs... respectively.
NASIK.	The crop saved is estimated as— Three-fourths in 1 taluka. Two-thirds „ 3 talukas. One-half „ 4 „ One-third „ 2 „ One-fourth „ 1 taluka. 11 talukas.	The remissions are put at Rs. 3,69,000, but the Collector informed Sir R. Temple that they would probably not exceed 3 lakhs.	This district possesses the Ghát mountainous country to the westward, besides the Chaudore range of hills, and other advantages of which the people have freely availed themselves; so the condition of the cattle is generally satisfactory.	In all except three or four talukas, the scarcity of water will be considerable, and in parts of some it will be severe. The habilitation of all existing wells, the digging of holes in beds of tanks and streams, and even temporary desertion of villages will be resorted to.	This district was rathe... pinched by a rise o... prices about the mid... dle of November, but... they rapidly recover... ed, and have since... further improved... though perhaps d... the whole they ar... not quite so low a... in Khandesh.
AHMEDNAGAR.	The crop saved is estimated as— Two-thirds in 3 talukas. One-half „ 2 „ One-third „ 3 „ One-fourth „ 1 taluka. One-sixth „ 1 „ *Nil* „ 1 „ 11 talukas.	The remissions are stated by the local officers to be likely to reach Rs. 5,77,000, but the Revenue Commissioner appears to consider this estimate too high, as the assessment is very light, and people fairly well off ought to pay up.	The condition of the cattle seems satisfactory in six talukas, indifferent in two, and bad in three. One of the latter, which has suffered severely, is expected to lose one-half of its stock of 60,000 head.	There will be a serious deficiency of the water-supply in five out of nine talukas, and considerable expenditure must be incurred in well-deepening and other expedients, especially in two talukas, but the Government do not anticipate any calamity.	Prices appear to ... on the whole some... what easier than i... the Násik District.
POONA.	The crop saved is believed to be— One-half in 3 talukas. One-third „ 2 „ One-fourth „ 1 taluka. *Nil* „ 2 talukas. 8 talukas.	The proposed remissions are Rs. 5,46,000 according to these reports, but 6 lakhs are mentioned by Sir R. Temple. The Revenue Commissioner, however, considers that much of the revenue proposed for remission can be collected either this year or next.	The cattle in Bhimthari and Indapur talukas have suffered considerably, and in three other talukas there has been some mortality. But the bulk of the cattle have been taken off to pastures out of the district.	Considerable expenditure on deepening wells, &c., is contemplated in order to supplement the water-supply, which is failing partially in most talukas.	There are some singu... lar differences of pri... in different talu... but on the whole th... rates are scarcely ... favourable as th... average.
SHOLAPUR.	In one taluka one-fourth of the crop has been saved, but in the remaining six nothing whatever.	The proposed remissions amount to ten lakhs, or nearly the whole realisable revenue of the year, and it would appear that this estimate is not likely to be much improved upon.	Out of 720,646 animals, 344,700 have been sent to other districts for pasture, and 49,000 are believed to have died. Further large mortality is expected in at least four talukas.	The water-supply in three talukas is indifferent, and in two bad. Considerable expense will have to be incurred.	Prices are gene... higher than in t... Collectorates abov... mentioned, and esp... cially so in the Sang... la taluka.

B—continued.

The local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies, are being, or may be drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artizan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve or are they returning), and whether further emigration is probable.	The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.	The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
The local stocks are considerable in some talukas, and importations by railway and from the Nizam's dominions ad equal to all demands.	The population is chiefly agricultural, and in some parts decidedly well-to-do. The western talukas which contain a large proportion of Bhils, who are poor and of unsettled habits, have fortunately escaped the drought almost entirely. There is no large land-holder class, but in three talukas a few individuals will help their tenants, and in six more the money-lenders are said to be likely to make advances freely.	There has been no noticeable emigration except from one taluka, Bhosawul, and there further emigration is said to be probable.	There is no complete list of works, but it appears from the weekly report that on December 31st, 23 had been completed, and 53, nearly all small, except one tank at Mhasawad, were in hand. Of the Pimpalneir locality it is said that "no relief works are in progress, nor will any be needed."	Scarcely any charitable relief has been given, though the public have raised subscriptions in seven talukas; portions of these have been applied with questionable prudence and success, though with the most beneficent motives, in purchasing grain for re-sale to the poor.
The local stocks in nearly all talukas are believed to be small, but the railway being everywhere within easy reach, no apprehensions are entertained, and private enterprize will keep up adequate supplies.	There may be said to be no land-holders, except the Chief of Vinchur, who are in a position to aid their tenantry.	Many people of this district are in the habit of going to Bombay and elsewhere every year, during the fair season, in search of a livelihood. This emigration and that of the people in charge of cattle sent away to graze may be be rather more extensive than usual and will tend to relieve local pressure.	Three roads have been completed, and three more, of which two employ from 5,000 to 10,000 persons, are in progress.	No charitable relief has yet been found necessary in eight out of the eleven talukas, and in the others the expenditure has been small.
Considerable stocks exist in some talukas and importation is going on briskly from both the railway and the Nizam's Territory.	There are a few large landholders, but a fair proportion of the population are tolerably well-to-do.	From eight of the talukas there has been a considerable emigration, estimated at one-sixth of the entire population of the district; some few have returned, but others are going and likely to go.	Fifty-one works have been completed, and 42 more are in progress.	Charitable relief is being dispensed in eight talukas, but on a small scale.
The local stocks of grain in at least half the district are considerable, and the railway will supply all that may be needed.	There are no wealthy landlords in the district to help their tenantry, and the ryots are for the most part deeply in debt.	The emigration from three talukas has been unusually large, and, in all, the district has been relieved of above one-eighth of its population. The care of cattle has been one chief cause, but others have gone for employment. All who survive are expected to return.	56 relief works have been completed, and 99 more are in progress, including the Moota canal, two large tanks, and a considerable road-work. Many small works are also proposed for execution if required.	The demand for charitable relief has been considerable, chiefly for children under 7 years old whose parents are on relief works, and for women taking care of them.
The stocks do not seem to be anywhere large, but the importation by rail will be ample.	The people generally are very poor, and there are no large land-holders.	About one-third of the population of the district have emigrated, and on the whole are understood not to have bettered their condition. Some have returned, and all who survive may be expected to return by the cultivating season.	Thirty-four works have been completed, and 192 are in progress. Some others are proposed, especially irrigation works which are considered to be most likely to be beneficial. The Dhond-Manmar Railway will be some help, but it is at a considerable distance from most parts of the district.	Considerable charitable relief has been given both by Government and the Sholapur Relief Committee, who have influential support from Bombay, and have been most conspicuous for their public-spirited exertions.

STATEMENT—concluded.

	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately. If there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.	The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.
SATARA.	The crop saved is estimated at:— Full average in 2 Talukas. Three-fourths „ 3 „ Two-thirds „ 2 „ One-half „ 1 „ One-third „ 1 „ One-fourth „ 1 „ One-sixth „ 1 „ 11	The remissions are estimated by the local officers at Rs. 5,07,621, but this sum, amounting to half the entire land revenue, is higher in proportion than the estimate for other districts which have suffered more severely, and is considered by both the Collector and the Revenue Commissioner to be capable of reduction.	The condition of the cattle is on the whole satisfactory, and the vicinity of the Ghâts prevents any serious apprehension, but in three Talukas there has been some mortality, and more is anticipated.	Five Talukas will be somewhat short of water, and some expenditure will be necessary in deepening and clearing wells, &c.	There was a sudden and severe rise of prices in November, occasioned chiefly by panic, at the recovery was rapid, as grain was poured in both from the port of Chiploon and Poona, and prices are now fair, though still below Poona and what they might be expected to be. The Collector anticipates a second rise before the rains on exhaustion of existing supplies.
KALADGI.	The crop saved is estimated at:— One-fourth in 1 Taluka. One-sixth „ 1 „ *Nil* „ 6 „ 8	The remissions are put at Rs. 6,95,373, and the local officers do not hold out much prospect of reduction in this amount. Its lowness in proportion to the estimate for Sholapur is probably attributable to the people generally being more thrifty and well-to-do, and less in debt, as also to Kaládgi having had a better harvest in 1875-76.	The loss of cattle has been very severe in two Talukas, and serious in the others, except one. A certain number have been taken to the Ghâts and the Nizam's Dominions to graze, but further heavy loss is expected.	The water-supply is sufficient in five Talukas, and indifferent in three, but no calamity is anticipated.	Prices have been, and continue still to be, to a certain extent, lower than in any other District.
BELGAUM.	The crop saved is estimated at:— Two-thirds in 1 Taluka. One-half „ 2 „ One-third „ 1 „ *Nil* „ 3 „ 7	Remissions to the extent of Rs. 2,50,772, or about one-fifth of the revenue, are proposed, and this amount seems not likely to be exceeded, according to the remarks of the Revenue Commissioner, who has passed some years in the District as Collector.	In two Taluks the cattle have suffered a good deal, and further mortality is apprehended. In the rest they are doing fairly.	There will be some difficulty and consequent expense in two Talukas only.	Prices are still comparatively high, though much improved, and better than in the adjoining Districts of Kaládgi and Dharwar.
DHARWAR.	The crop saved is as under:— One-half in 1 Taluka. One-third „ 2 „ One-fourth „ 2 „ One-sixth „ 2 „ *Nil* „ 3 „ 11	The proposed remissions are Rs. 2,70,000, but this amount appears, from the remarks of the District Officers, to be an outside estimate. On the other hand, 4 lakhs was the figure given to Sir Richard Temple by the late Collector, Mr. Robertson.	Four Talukas have suffered as regards cattle, but not very severely compared with other Districts.	The Government of Bombay anticipate considerable expenditure in one Taluka, and large outlay in two more, in consequence of the failure of the water-supply.	Prices are somewhat higher than in the adjacent District of Belgaum.

	The local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions, urban or artizans; also the character of the land-holders, whether large, wealthy, able to aid their tenants, and likely to do so, or the reverse.	The movements of the people: how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.	The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.	The nature and amount of charitable relief given to travellers and to the aged, infirm, &c., who are unable to work.
SATARA.	Grain is plentiful, local stocks are believed to be considerable, and importation goes on freely from Poona and the port of Chiploon.	Four or five Talukas contain a few wealthy Inámdars who may be expected to aid their tenants.	The emigration is reported to have been 45,163 out of a population of 1,064,002. The emigration during the fair season in search of labour is always considerable in this district, and has been intensified by the scarcity.	The Pingli and Nehr tanks, to cost about 3½ lakhs, were in progress, and the Mhaswar tank, to cost about 18 lakhs, was about to be commenced at the close of the year. Thirty-six other works, mostly small, were also in hand.	No charitable relief has been required, except in four Talukas, where it is given to a trifling extent.
KALADGI.	The local stocks are believed to be generally small, and the importations labour under some difficulties, so that apprehensions of their cessation and of consequent high prices are entertained regarding five Taluks.	There is a certain sprinkling of large land-holders, some of whom will help their tenants.	Fully one-sixth of the population have emigrated, drawn especially from the Indi, Sindgi, Bejapur and Badami Taluks, but the movement has stopped.	The chief works are two main roads. Sixty-five works had been completed at the close of the year and 70 more were in hand, of which one employed above 5,000 and the other above 10,000 labourers.	The expenditure by Government on charitable relief has been trifling, but considerable sums have been subscribed in some places by private parties.
BELGAUM.	Prices have been greatly improved by large supplies from the sea-ports of Goa and Vingorla, and no rise is anticipated, at least till the monsoon closes the coast. The local stocks in some parts are considerable.	There is a fair proportion of well-to-do people, but no body of large land-holders able to help their tenants.	The emigration has been comparatively trifling, and chiefly connected with the cattle. Three Talukas have an influx of persons from other parts.	Sixteen works were completed, and 64 others, mostly small, in progress at the close of the year. The Golkak canal is about to be commenced.	Relief houses have been established, but little relief has actually been given as yet. Private persons have subscribed liberally.
DHARWAR.	The local stocks of grain are fair in some few Talukas, and importation is going on freely from the port of Carwar.	The people generally are well-to-do, and there are some large land-holders, but they are not expected generally to aid their tenants.	The emigration has been comparatively small, and it is not likely to extend, with the exception of a body of 15,000 expected to go to Kanara to gather bamboo seeds.	Nineteen relief works had been completed, and 43 were in progress at the end of the year. Others had been proposed. One work employed over 4,000 and another over 10,000 labourers.	The charitable relief has been trifling.

EXTRA SUPPLEMENT TO

The Gazette of India.

CALCUTTA, SATURDAY, MARCH 10, 1877. Register No. 33.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

STATISTICS RELATING TO THE DISTRESSED DISTRICTS IN THE MYSORE PROVINCE.

Extract from the Proceedings of the Government of India, in the Department of Revenue, Agriculture, and Commerce, dated Calcutta, the 9th March 1877.

[AGRICULTURE & HORTICULTURE.]

Famine.

READ—

Telegram from the Government of India, in the Foreign Department, to the Chief Commissioner of Mysore, dated October 30th, requesting the submission of separate statements regarding each taluk in the distressed districts, showing its area, population, Government realizable revenue in 1875-76, rough proportion of *kharif* to *rabi* cultivation, average annual rainfall, actual rainfall up to date, ordinary price of the staple-food of the taluk at that season, actual prices on the date of the return, probable extent of failure of crops, and amount, if any, sanctioned for relief works and other relief; and adding that the statements might be prepared from the best information then available, and corrected or supplemented afterwards if necessary.

Letters from the Secretary to the Chief Commissioner, Nos. 134, 157, and 175, dated 19th January, and 15th and 28th February 1877, submitting the information required for the Nandidroog, Nagar, and Ashtagram Divisions respectively.

Letter to the Chief Commissioner, No. 470, dated 2nd December 1876, forwarding copy of a letter to the Government of Bombay, No. 459, dated 30th November 1876, and requesting that a complete review similar to that required in the case of Bombay might be submitted for the province of Mysore.

Letter from the Secretary to the Chief Commissioner, No. 131, dated the 17th January 1877.

Ditto ditto, No. 135, dated 20th January 1877.

Ditto ditto, „ 142, „ 26th „

Ditto ditto, „ 144, „ 27th „

Ditto ditto, „ 154, „ 2nd February 1877.

Ditto ditto, „ 155, „ 6th „

Ditto ditto, „ 174, „ 26th „

and telegram, dated 6th March 1877, forwarding translations of the original reports received from each taluk, together with the remarks thereon of the Deputy Commissioners of the districts.

Statement A, compiled from the returns and summaries received in reply to the telegram of the Foreign Department, dated 30th October 1876, and the letter to the Chief Commissioner, dated 2nd December, above referred to.

Statement B, being an abstract of statement A, with additions from the Mysore weekly returns.

RESOLUTION.

The province of Mysore is undergoing, throughout a large portion of its area, the unusual misfortune of a second season of drought. The harvest of

the year 1874-75 was abundant, but the south-west monsoon of 1875 failed so extensively as to cause a loss of the greater part of the dry crops, and the succeeding north-east monsoon was likewise scanty and insufficient to fill the tanks which are relied upon for the irrigation of about one-sixth of the province. The prevalence of distress was brought fully to the notice of the Government of India in January 1876, and aid was afforded by means of relief works and considerable remissions of the land revenue. During the present year both the south-west and north-east monsoons have been even more scanty than before, and distress has consequently been converted into a famine of much severity.

2. In October last the Chief Commissioner reported very fully on the condition of affairs up to date, obtained a grant for relief works, and was requested to submit statistical information regarding each taluk similar to that called for at the same time with reference to the distressed portions of the Madras and Bombay Presidencies. Subsequently, a complete review and forecast, resembling that required for those presidencies, was considered to be necessary. The submission of the information thus expected has been unavoidably delayed by various circumstances, and it has not in all cases been found possible to ascertain details with the precision which might have been desired. The result has, moreover, been to a considerable extent anticipated by the graphic sketch of the condition of the province very recently presented by the minute of Sir Richard Temple dated 14th ultimo, and its accompanying memoranda by Mr. Bernard. At the same time His Excellency the Governor-General in Council considers that there may be much advantage in making public a review of the tract suffering from scarcity which is based upon a comprehensive series of facts, collected by the several local officers who are in actual contact with the people and their difficulties, and expressed as far as possible in their own words.

3. The area of Mysore is 27,077 square miles, and its population 5,055,412, and the province is divided into eight districts, comprising 68 taluks. The Shimoga, Kadur, Hassan and Mysore districts, which lie in order from north to south along the edge of the Western Ghâts, have suffered less than the others, and the two first named have even afforded by the jungles and grazing grounds in certain of their taluks most material aid to the remainder of the province. Chitaldroog and Bangalore come next in order of failure, while Tumkur, lying between them, and Kolar, the eastern-most of all, have virtually lost nearly the whole of their crops. The affected area and population as estimated by the Chief Commissioner are given in the margin, and amount to nearly two-thirds of the whole area and one-half the whole population of the province. If, however, all taluks be considered as affected in which the crop saved amounts to less than one-half, the numbers will be 14,479 and 2,849,329, while if taluks with half crop saved be added the results will be raised to 16,160 and 3,141,747 respectively.

Area in square miles.	Population.
16,812	2,579,827

4. The rainfall during the past season is shewn in the margin. As only one-third of the taluks have had less than half the average, and no less than thirty-one have received above one-half, the general result is more favourable than that of the rainfall in the distressed districts in the Bombay Presidency during the same period. The fact, however, of the present season being the second one of drought renders the deficiency far more serious in its consequences than it otherwise would have been. The Chief Commissioner reports that "the tanks generally are all dry, and the gravity of the crisis is undoubted," and it is to be feared that a considerable increase of suffering to both man and beast is inevitable.

Proportion.	Number of taluks.
Full rainfall ...	8
Three-fourths ...	13
Two-thirds ...	10
One-half ...	14
One-third ...	10
One-quarter ...	9
One-seventh ...	4
Total ...	68

5. The attempt to estimate with any approach to accuracy the failure of crops is in the present case surrounded with considerable difficulties. The province is subject to the influence of two monsoons, and there is also a considerable amount of land dependent on irrigation, which again proceeds from several sources, some of which are less affected by the rainfall than others. In the absence of correct statistics as to the proportions of the total

area under each class of cultivation, it is obvious that a mere estimate of the yield of each such class in annas is usually of little use. In some cases the taluk reports are sufficiently intelligible without such statistics, but in others it has been necessary to fall back upon the estimates prepared for the returns called for in October, which, though doubtless framed with all care, are probably less reliable than the more matured taluk reports of a later date, and which for the most part anticipated a loss somewhat heavier than has eventually resulted. The marginal table is the nearest estimate which, under these circumstances, it has been found practicable to frame. The Tumkur District, it will be seen, has suffered the heaviest loss; but is closely followed by Bangalore and Chitaldroog; Kolar and Kadur hold an intermediate position; Hassan and Mysore have failed but slightly, and Shimoga is almost untouched. Counting by taluks, the crop saved is above half in twenty-five taluks; the failure has been total in ten and nearly so in eight more, while the intermediate number, losing from one-sixth to one-half both inclusive, is twenty-five. These results are more extreme as regards both crop lost and crop saved, than those ascertained in the case of Bombay.

Districts.	Number of taluks in which the crop was:—								
	Full average.	Five-sixths.	Three-fourths.	One-half.	One-third.	One-fourth.	One-sixth.	One-eighth.	Nil.
Bangalore ...	...	...	...	...	...	...	1	7	1
Kolar ...	...	...	....	...	6	2	2	...	...
Tumkur ...	...	...	...	...	...	1	1	...	6
Mysore ...	1	2	8	...	...	...	...	...	...
Hassan ...	...	4	2	3	...	...	...	...	...
Shimoga ...	6	...	...	...	2	...	...	...	...
Kadur ...	2	...	...	1	...	2	...	...	...
Chitaldroog ...	..	...	...	...	...	...	4	1	3
Total ...	9	6	10	4	8	5	8	8	10

6. The estimates of probable remissions of land revenue which were formed in November amounted to no less than Rs. 25,64,956, the total demand for the year being Rs. 68,94,825; but further enquiry has reduced this figure to one-half, or Rs. 12,76,672. It appears probable that still further reductions will be found practicable, especially in the Kolar District. The general principle laid down by the Chief Commissioner has been that eight annas in the rupee may be remitted on wet lands under tanks, if wholly unirrigated, and from four to six annas on dry land holdings, but that if any further concession be needed it must be in the form of postponement of recovery till next year.

7. The resources of Mysore in cattle and agricultural stock generally have not been reported, but they have already been most materially impaired, and it is to be feared that considerable further loss is unavoidable. The condition of the cattle may be said to be decidedly bad in nineteen taluks, indifferent in forty-one, and good in eight only. The districts of Chitaldroog and Tumkur appear to be the worst; the reported losses being 79,700 and 97,600 head respectively. The remedial measures adopted have been the suspension of sales of grass on waste lands, the throwing open of the State forests, and above all, the removal of the cattle to the Ghât districts, particularly to the eight Mulnad taluks or hilly region in the Shimoga and Kadur districts. Prickly pear has not found favour as fodder.

8. The scarcity of water is great through above two-thirds of the province; the condition in this respect of seventeen taluks being bad and of thirty-two indifferent, and the suffering of the people and the cattle will be intensified in the event of no rain falling in the course of next month. The digging of temporary wells in the beds of nullas and tanks is the only measure which can be resorted to.

9. The course of prices during the three months terminating at Christmas is chiefly remarkable as shewing a general and gradual rise, rather than the sudden rise and subsequent recovery which was observable in the case of Bombay. Since that date there has been a decided amendment in the price of ragi, but that of rice has been more stationary. The condition and prospects of the grain trade have been so ably reviewed in the memoranda by Mr. Bernard, to which reference has already been made, that it is sufficient to say that in Mysore, as elsewhere, private trade has shewn great activity, that the demand on the railway is, and will continue to be, in excess of its carrying power, and that there appear to be not inconsiderable stocks in the hands of the people which will not be drawn upon until June and July, when it is to be hoped that rain will have fallen and removed all anxiety regarding the coming season.

10. Mysore, like the west of India generally, does not possess a wealthy zemindari class, who can be relied on to pay their revenue regularly not-

withstanding occasional bad years, and to deal liberally with their tenantry. The population contains a rather larger percentage than usual of high castes, but the majority are poor, excepting, perhaps, in the Mysore district.

11. The number of persons reported to have emigrated is 334,248, or about 13 per cent. on the affected population, but the movement has for the most part been only to the Mulnad taluks of the Shimoga and Kadur districts, for the purpose of grazing cattle, or to the coffee plantations of Coorg and its vicinity, where labour is in request. It is doubtful whether the change of climate has usually been found advantageous.

12. Up to the period when the taluk reports now under consideration were sent in, the organization of relief works had not attained any very large dimensions, and the Chief Commissioner was endeavouring, with equal caution and judgment to meet, without exceeding, the exigencies of the situation. The projects which have been undertaken have, owing to the want of facilities for large undertakings, been of limited extent, and have in the great majority of instances consisted of tank repairs and clearances. As such projects are particularly appropriate to the circumstances of Mysore, and task-work is everywhere enforced, with the cordial co operation of the Public Works Department, there is good reason to believe that the result will be a material improvement of the irrigational resources of the Province. The totals of the general expenditure up to December 31st by means of which much relief will be afforded, are given in the margin. The appropriations for relief works under civil officers were on February 17th Rs. 4,98,568, out of which Rs. 1,92,968 had been actually expended. The relief appears to have been sufficient without being excessive:

	Rs.
District Fund Budget	1,85,323
Special relief-works	1,19,269
TOTAL ...	3,04,592
Imperial Public Works Irrigation Budget ...	3,56,234
Ditto Roads and Buildings ditto ...	8,36,533
TOTAL ...	11,92,767
Civil Budget: petty repairs, &c.	76,831
Municipal Budget	1,19,713
TOTAL ...	16,93,903

13. The organisation for charitable relief has been carefully developed throughout the various districts. Considerable sums have been privately raised for the support of the aged, helpless and infirm, and the Chief Commissioner, in accordance with sanction accorded to him at his request on the 2nd November 1876, has made in all cases an equivalent grant on the part of Government. Recently arrangements have been commenced, at the suggestion of Sir Richard Temple, for a careful house-to-house visitation, with the view of preventing, as far as human agency can effect it, the mortality which might otherwise possibly occur among those who are from any cause prevented from seeking relief on the works.

14. The local officers estimate as shown in the margin the numbers likely to be in receipt of relief. As regards the first-mentioned date, it seems sufficient to say that, according to the latest information obtained by telegraph and relating to the latter part of February, the total on the works and receiving charitable relief was 94,596. The estimate, therefore, while beyond the mark was not altogether excessive, and it seems not improbable that the numbers on the 1st of May may come up to the local calculation. By the 1st of July, however, a considerable reduction in numbers may fairly be anticipated, especially if a favourable commencement of the rains has taken place.

March, 1st	140,000
May, 1st	164,000
July, 1st	166,000

15. In conclusion, His Excellency the Governor General in Council has great pleasure in congratulating the Chief Commissioner and the officers of the Mysore Administration on the zeal, judgment, and humanity which have characterised their arrangements and exertions to meet the great calamity which has fallen upon the province, and the large measure of success which has hitherto attended them.

ORDERED, that copies of this Resolution be communicated to the Secretary of State for India, the Chief Commissioner of Mysore, the Governments of Madras and Bombay, and Sir Richard Temple, and that it be published in the *Gazette of India*.

(True extract.)

T. C. HOPE,
Additional Secretary to the Government of India.

STATEMENT A.

STATISTICS

RELATING TO THE

DISTRESSED DISTRICTS

IN THE

PROVINCE OF MYSORE.

N. B.—This Statement consists of extracts from the information furnished by the Chief Commissioner of Mysore on the 19th January and 15th and 28th February 1877, in accordance with the telegram from the Government of India of the 30th October 1876, and of summaries of the reports on each taluka called for by the Government of India on December 2nd, 1876.

KEY to the alphabetical headings in the following statement:—

(*a*)—a careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas; *kharif* and *rabi* should be shown separately: if there be any prospect of further sowings, it should be mentioned:

(*b*)—an estimate, as close as may at the time be practicable, of the amount or revenue to be remitted:

(*c*)—information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future:

(*d*)—the nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any:

(*e*)—the course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages:

(*f*)—the local stocks, as far as ascertainable; the centres, railway stations, or otherwise whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation:

(*g*)—the character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse:

(*h*)—the movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable:

(*i*)—the relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity:

(*j*)—the nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work:

(*k*)—the number of persons whom the Government has on its hands at date of report for relief (1) by works, (2) by charitable measures, and the number, roughly estimated, which it is likely to have on its hands on March 1st, May 1st and July 1st.

EXTRA SUPPLEMENT TO THE GAZETTE OF INDIA, MARCH 10, 1877.

NANDYDROOG DIVISION.

COMMISSIONER—COLONEL J. L. PEARSE.

BANGALORE DISTRICT.

DEPUTY COMMISSIONER—MR. A. W. C. LINDSAY.

BANGALORE DISTRICT.—CLOSEPET SUB-DIVISION.

CLOSEPET TALUK.

a

DRY.

One-anna crop saved.

WET.

Four-annas crop saved. The present is the time for the sowing of Vyshaka paddy, but or want of water in the tanks, it is impossible.

In this and other talukas about 1½ annas saved in all.

b

Remissions Rs. 35,000 out of a total of Rs. 1,07,000.

c

Deaths among cattle and agricultural stock amount to 2,113, and 2,000 more are expected. State forests opened for cattle to graze in. Fodder consists chiefly of leaves of different kinds of trees. Remedial measures proposed are, that Government should allow the free use of bamboo and toddy leaves, and that the ryots should not sell, but use their rági straw, &c.

d

Both people and cattle suffer much from the want of water. The distress is expected to increase if there be no rain. It is suggested that for drinking purposes wells should, in convenient localities, be sunk in beds of tanks, rivers and nullas.

f

TALUK.

Existing stock estimated to be 3,000 kandies of rági. The chief centre of supply is the Bangalore railway station, where rice is imported from Madras and other places. Merchants and others bring supplies, but they are not sufficient for the requirements of the people. Importation not expected to cause a fall in prices.

g

Out of a population of 88,637, 80,349 are high caste and 8,288 low caste. Its condition is as follows:

Poor ... 60,914
Well-to-do 1,500

There are 19,692 landholders, a few of whom are wealthy, but not one is likely to aid his tenants.

i

There has been no emigration up to the present time.

j

The relief works which have been undertaken are inadequate. The further works practicable are the Closepet-Kankanhalli road, sinking wells in beds of tanks, and removing silt from beds of tanks. The Koodrier Cattah or reservoir project at Chamapatna and the Closepet-Nagode road are under consideration.

h

Rupees 103 have been expended in feeding the poor.

k

	On works.	By charity.
Number on hand	3,000	2,000

KANKANHALLI TALUK.

a

DRY.

Two annas crop saved.

WET.

One anna crop saved.

Vyshaka crop entirely failed, and no prospect of further sowings till next early or Moongari rains.

b

Remissions Rs. 22,000 out of a total of Rs. 71,000.

c

Mortality among cattle and agricultural stock amounts to 3,413, and besides these 5,000 more are expected to die. State forests opened for cattle to graze in. Fodder consists chiefly of leaves of different kinds of trees. Remedial measures as above.

d

All the tanks are dry. Severe distress occasioned by this, and still further expected if matters do not improve. Wells are, however, being sunk in suitable places.

e

f

TALUK.

Existing stock estimated to be 3,400 kandies. The chief centre of supply is the Bangalore railway station. No importation and no private enterprise in this taluk; hence no sufficient importation and fall in prices anticipated.

g

Three-fourths of the population are high caste and one-fourth low caste. The people are three-fourths poor and one-fourth well-to-do; three-fourths are also agriculturists and one-eighth is the number of the landholders. The wealthy landlords are very few, and these do not aid their tenants.

i

One-eighth of the population have emigrated, and their condition is not known. Further emigration probable.

j

The relief works already started are insufficient. Those contemplated are—

1. Kankanhalli-Closepet road.
2. Kankanhalli-Kodihalli road.
3. Kankanhalli-Káveri road.

Besides removing silt from tank beds.

MAGADI TALUK.

a

DRY.

One and half anna crop saved.

WET.

Two annas and one-third crop saved.

For the want of water, sowings of paddy, &c., cannot be made.

No sowings are now practicable till next early rains.

b

Remissions Rs. 25,000 out of a total of Rs. 1,15,000.

c

4,325 head of cattle and agricultural stock have died; 800 more are expected to die. To improve the water-supply, 15 wells have been sunk. State forests have also been opened for cattle to graze in, and prickly-pear authorized to be used as fodder. Disease among cattle from scarcity of water reported.

For the future the digging of more wells is suggested.

d

The tanks and wells have dried up. Wells are being dug, but these are not expected to supply a sufficient quantity of water.

Sinking of more wells recommended.

f

TALUK.

Existing stock estimated to be 2,579 kandies.

g

Seven-eighths of the population high caste, one-eighth low caste. Seven-eighths of the people are agriculturists. There are no wealthy landholders capable of aiding their tenants.

i

Some emigration has taken place, but the condition of the emigrants is not known; some are returning, having failed to procure a livelihood.

j

The relief works already undertaken are the Bisgur and Tammanhalli projects, but these are not considered sufficient. The works practicable are the restoration of some old ruined tanks, and the opening of a road from Magadi to Closepet.

h

Rupees 500 raised by subscription have already been expended for affording relief to the poor, &c.; a contribution of Rs. 500 from Government is to be expended for the same purpose.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The yield of crop has been one anna. The Kartika crop was a failure. Vyshaka paddy was not sown owing to scarcity of water.	Remissions Rs. 32,411-11-8 out of a revenue of Rs. 93,000.	The total number of cattle is 67,954, and of this one-fourth has been sold to butchers. Want of forage is much felt; further sales may therefore be made; and other animals may die from starvation. Prickly-pear recommended as fodder for cattle, but the owners do not like to adopt the plan. It is recommended that Government take charge of the cattle of those people who are unable to feed them. The Deputy Commissioner does not agree to this, as fodder has become dear everywhere. Abandonment of Halbani sales will, it is hoped, have some beneficial results.	Scarcity of water is felt. Hoskote tank contains some four months' supply. All other tanks are dry. In a month or two it is feared that, if matters do not improve, the remaining reservoir will also become dry. The remedial measures recommended are sinking wells, deepening beds of tanks, and removing silt from tank beds and wells.	**HOSKOTE** Prices of the principal food-grains. Week ending: Rice. Abundant supply of grain is imported from kusba town, which is close to the railway stations at Malur, Radgody and Bangalore. Fall of prices is not, however, anticipated.	The population is 69,885. Of this one-fourth are purely agriculturists, and one-fourth partially so; the rest are traders. There are no wealthy landholders capable of aiding their tenants.	One-fourth of the people have emigrated: where they have gone to, and whether they have improved their condition or not cannot be stated. Further emigration possible.	The relief works already started are sinking wells in beds of tanks, cleaning beds, removing silt, and strengthening tank bunds, at a cost of Rs. 4,168-7-8. Works practicable: Levelling ruined fort at Hoskote, filling up pits at kusba, and sinking wells, Rs. 3,000. Restoring weirs and strengthening bunds of ten tanks at a cost of Rs. 8,769. Total Rs. 11,769.	Rupees 77, raised by subscription, have already been expended in feeding travellers, aged and infirm. A grant on this account is asked for from Government.	On works. / By charity. Number on hand... 495 / ... On 1st March ... 250 On 1st May ... 250 On 1st July ... 1,000
The Vyshaka crop was not sown. In parts of waste lands paddy and rági crops were sown but unsuccessfully. The crop realized is estimated at 1½ annas.	Remissions Rs. 28,200 out of a total of Rs. 88,000 in the following scale. *Dry.* Six annas in the Rupee. *Wet.* Eight annas.	Fodder for cattle has become very scarce. A sufficient supply of prickly-pear cannot be had in this taluk. Beds of dried tanks have been sown with China or Bengal gram to produce fodder, but the crop is not thriving. There is, however, two months' supply of rági straw. The deaths are estimated at 1,081. Hulbani sales dispensed with.	In some parts of the Taluk there are reservoirs containing two months' supply of water, while in other parts much scarcity is felt. Some wells have already been sunk, and others recommended.	**ANEKAL** Prices of the principal food-grains. Week ending: Rice. Seers. / Ragi. Seers. / Gram. Supplies imported from Bangalore. Private enterprise not expected to maintain supplies: hence a fall in prices not anticipated.	Of a population of 55,895, only 50 can be classed as extensive landholders and as being wealthy. They are not, however, capable of aiding their tenants. Nearly one-fifth of the population are agriculturists and one-fourth partially so.	Two hundred people are said to have emigrated towards Bangalore to earn their livelihood. Those emigrated have not returned, and further emigration is expected as matters become worse.	More relief works are necessary. Works practicable are: Sinking wells and deepening tanks; also opening new roads.	A subscription of Rs. 335-12 has been raised to feed travellers, the aged, and infirm, &c. This is considered inadequate, and the Deputy Commissioner says that an application for a sum of Rs. 173 has already been made to Government.	On works. / By charity. Number on hand... 600 / ... On 1st March 1877 3,000 On 1st May " 2,000 On 1st July " 1,000 A little seasonable rain may, however, reduce the numbers in May and July.
Dry. One anna of the crop saved. *Wet.* Two annas of the crop saved. Vyshaka crop not raised owing to scarcity of water. No prospect of further sowings. Yield estimated at one anna and a half in all.	Remissions Rs. 18,631-3-10 out of a total of Rs. 98,000. The remission is thus classed— Rs. A. P. Wet... 8,941 7 0 Dry .. 9,689 12 10 Total 18,631 3 10	Mortality among cattle caused not for want of fodder but by sickness. There is fodder for cattle for another month. There is no prickly-pear in this taluk.	Only eight tanks contain water sufficient to supply people and cattle for a fortnight. Wells contain only one or two months' supply. In some villages where there is a scarcity of water distress is felt. Wells will be sunk as soon as relief works are started.	**NELAMANGALA** Prices of the principal food grains. Week ending: Rice. Seers. / Rági. Seers. / Gram. Owners unwilling to sell their grain. Importation of rice takes place from Bangalore. High prices prevail, and a fall in them is not expected.	The total population amounts to 60,469, and of this there are 9,632 landholders, 730 of whom are said to be wealthy. There are none, however, who can aid their tenants.	Four hundred and fifty-six people have already emigrated to coffee estates, and it is expected that 300 more will do so. Whether emigrants better themselves or not cannot be ascertained.	In addition to relief works already started, the following works are practicable: Opening certain new roads, repairing old roads, sinking wells and deepening tanks, to cost Rs. 3,523.	Subscriptions to the amount of Rs. 1,086-12-2 have been received and expended in feeding travellers, the aged and infirm, &c. Rupees 280 have also been raised for opening a chuttrum, and Government aid is asked to finish it.	No information.

BANGALORE DISTRICT—concluded.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
One anna of the Vyshaka crop and from one to two annas of the Kartik crop saved. No prospect of sowings owing to failure of rain. Total failure about 1½ annas.	Remissions Rs. 44,825-2-6 out of a revenue of Rs. 1,49,000.	776 head of cattle have died, and 1,552 more it is expected will die. Remedial measures proposed are suspension of hulbani sales, and use of prickly-pear as fodder for cattle; starcity of fodder it is feared will be much felt if there be no rain.	The want of drinking-water is much felt. Wells have been and will be sunk to relieve distress as much as possible; cases of distress in small isolated villages will require to be carefully watched, and employment given to the lower classes in several large towns.	**BANGALORE** Week. / Prices of the principal food grains: Rice. Rági. Gram. 2nd October 1876 ... 8½ 12½ 11¾ 9th " " ... 8¼ 11½ 12 16th " " ... 8½ 10½ 12 23rd " " ... 7 9 8½ 30th " " ... 7¼ 10 8½ 6th November " ... 6½ 9 8½ 13th " " ... 6½ 9 8 20th " " ... 7 9 8½ 27th " " ... 6¾ 8½ 8 4th December " ... 7 8½ 7¾ 11th " " ... 6¾ 8 7 18th " " ... 6½ 7¼ 6¾ 25th " " ... 6 7 7 Average for the past six years 11¼ 40¼ 25	**TALUK.** Estimated local stock is about 6,000 kandies of ragi. Extensive importation of food-grains from Bangalore, but no prospect of a fall in prices.	Two-fifths of the people are agriculturists. One-fourth of the population are well-to-do and one-tenth are extensive landholders. These latter have been helping their people, but it is feared that they will not continue to do so much longer.	One-twentieth of the population have emigrated, and none have yet returned; whether emigrants have bettered themselves or not is not known. Further emigration probable.	The works set in hand are not considered sufficient to secure a supply of water to both people and cattle. The further works proposed are deepening beds of tanks, improving tank bunds, opening out new roads, dismantling fort walls, and filling in ditches.	There are kitchens at Pettah and Yellahere, and in the cantonment, where the aged, infirm, &c., are daily fed.	The number on the hands of Government on date of report is as follows:— On works ... ... 6,000 By charity ... ... 3,306 The number on the dates specified is approximately as under— On 1st March ... 10,000 „ 1st May ... 15,000 „ 1st July ... 10,000
Three annas of the Vyshaka crop and from two to three annas of the dry crop have been saved. No further sowings until next rains.	Remissions Rs. 27,160-1-4 out of a revenue of Rs. 94,000.	Mortality among cattle amounts to 552 head; 180 more are expected to die. Hulbani sales have been suspended, and people recommended to feed their cattle on prickly-pear.	Much distress felt for want of water. Sinking wells and repairing old ones are the remedial measures suggested. A fair proportion of well cultivation in the taluk has served to mitigate distress. Isolated villages will have to be specially watered, and employment in relief works given in the larger towns, such as Waddaganahalli and the kusbah.	**DEVANHALLI** Weeks. / Prices of the principal food grains: Rice. Rági. Gram. 2nd October 1876 ... 8½ 13 11½ 9th " " ... 8 12 11½ 16th " " ... 7½ 10 10 23rd " " ... 7½ 10 10 30th " " ... 6½ 9½ 8 6th November " ... 6½ 9½ 8 13th " " ... 7 9½ 8 20th " " ... 7 9½ 8 27th " " ... 7 9½ 8 4th December " ... 6½ 8½ 7½ 11th " " ... 6½ 8½ 7½ 18th " " ... 6½ 8½ 7½ 25th " " ... 6½ 8½ 7½ Average for the past six years 14¾ 41 21¾	**TALUK.** Estimated stock of grain in possession of ryots 2,172 kandies. Importations of grain are being made from Bangalore, but not to such large extent as to meet the requirements of the people. No prospect of a fall in prices. Private enterprize may ultimately, it is hoped, maintain supplies.	One-fourth of the population agriculturists. There are a few rich landholders, but it is not thought that they will in any way assist their tenants.	One-hundred people have emigrated: whether they have bettered themselves or not is not known. Further emigration probable.	The relief works already set in hand are not considered sufficient. About Rs. 4,000 are needed for sinking wells. The further works practicable are— (1) To open out a cross road to join Kolar-Sonepur road. (2) To repair Karanji tank at Devanhalli. (3) To repair two kuntas.	No relief kitchens have been opened in this taluk. People have, however, extended their charity to the poor, &c.	The number of persons on the hands of Government is— On relief works ... 290 By charity ... *Nil.* On the dates specified below the approximate number is— On 1st March ... 1,000 „ 1st May ... 1,500 „ 1st July ... 1,000
Half an anna of the Kartik crop and one to one and a half annas of the dry crop have been saved. No prospect of further sowings.	Remissions Rs. 43,239-4-4 out of a revenue of Rs. 87,000.	1,691 head of cattle have died; considerable mortality apprehended in the event of no rain. Hulbani sales suspended.	The water-supply is stated to be failing; but sinking of wells has been undertaken to improve it.	**DODBALLAPUR** Weeks. / Prices of the principal food grains: Rice. Rági. Gram. 2nd October 1876 ... 8½ 12 10 9th " " ... 8 10¼ 10 16th " " ... 6¼ 9 9 23rd " " ... 6¼ 9½ 8 30th " " ... 6½ 9½ 8 6th November " ... 6½ 9¼ 8 13th " " ... 6½ 9½ 8 20th " " ... 6½ 9½ 8 27th " " ... 7 8½ 8 4th December " ... 6¼ 8 7½ 11th " " ... 6¼ 8 7 18th " " ... 6¼ 8 7 25th " " ... 6¼ 8 7 Average for the past six years 16 53½ 27½	**TALUK.** The local stocks of grain are estimated at 360 seers of rági, 8,000 seers of rice, and 400 seers of dhall. This stock is considered inadequate for the people. Importations of grain are being made, but not in such large quantities as to prevent distress. No prospect of prices falling.	One-fifth of the population are agriculturists. The rest are of mixed occupations. There are few landholders capable of aiding their tenants. This taluk causes apprehension as the general state of the inhabitants is that of poverty.	On an average about 8 or 10 people from each village have emigrated to the coffee districts for employment; a few have returned being unable to find means of subsistence.	The minor works that have been started will last for a month and are not considered sufficient. The works proposed are opening of three new lines of roads, improvements of tanks, and sinking of wells in each village of the taluk.	No Government kitchen has been opened in this taluk. Relief funds to the extent of Rs. 2,000 monthly are needed.	The number of persons receiving relief on works on date of report is 1,000. The number estimated on the dates specified is as follows:— On 1st March ... 4,000 „ 1st May ... 4,000 „ 1st July ... 4,000

a	b	c	d	e	f	g	h	i	j	k
Three annas of the crop saved.	Remissions Rs. 20,000 out of a total of Rs. 92,108 estimated by the Amildar, but the Deputy Commissioner considers this too high.	Mortality among cattle and agricultural stock 2,200 head; 9,000 more are expected to die if matters do not improve. Hulbani sales dispensed with, and permission granted to owners to graze cattle in all available State forests. The people have been recommended to feed their cattle on prickly pear.	The people and cattle suffer a little for want of drinking water. Measures for improved water-supply are in progress, such as deepening existing wells, clearing silt, and digging water holes in fit spots.		**TALUK.** Existing stock 4,000 kandies. The railway stations of Kolar road and Malur are the principal centres from which supplies are drawn. Private enterprise considered insufficient. Importation ample, but fall of prices therefrom not expected.	Majority of people are low caste, poor and agricultural. There are no large and wealthy landholders able to aid their tenants.	25,000 people have emigrated, and further emigration probable. This can, however, be checked by taking up more relief works.	Relief works to the amount of Rs. 2,258 have already been started. This is considered inadequate, and more works can be undertaken if money be forthcoming.	There is a feeding kitchen at the Kusba town, and Rs. 2,159 have already been spent. The expenditure last month was Rs. 720.

SIDLAGHATTA TALUK.

a	b	c	d	e	f	g	h	i	j	k
Two annas of the crop saved.	Remissions of Rs. 19,000 out of a total of Rs. 1,34,380.	Mortality among cattle and agricultural stock estimated at 3,900: 8,000 more are expected to die if matters do not improve. Local authorities have dispensed with hulbani sales, and have permitted the grazing of cattle in State forests as well as recommended their being fed with prickly pear.	Improvements in water-supply comprise deepening of wells and digging water holes in fit spots.	PRICES OF THE PRINCIPAL FOOD-GRAINS.	Existing stock estimated to be 17,000 kandies. Supplies drawn from the Kolar road and Malur railway stations, which are the only centres in this taluk. Private enterprise considered insufficient to maintain supplies.	Majority of the people are low caste, poor and agricultural. No large and wealthy landholders able to aid their tenants.	3,000 people have emigrated, and further emigration is probable, unless checked by more relief works.	Relief works to the extent of Rs. 1,040 have already been started. They are insufficient, and more relief works can be undertaken if money be forthcoming.	A feeding kitchen exists at the Kusba town, and Rs. 5,825 have already been spent. The expenditure last month amounted to Rs. 1,950.

Of the Kartik or kharif, a 2½ annas crop has been saved, and there is no prospect of further sowings this season. As regards the Vyshaka or rabi crop, no seed was sown for want of water. Practically the whole crop has failed.	Rs. 17,000 out of a total of Rs. 99,333.	4,186 head of cattle have died, and the mortality anticipated is 9,500. The hulbani sales have been remitted, and numbers of cattle have been taken to the Mulnad. The grant of takavi for the purchase of agricultural stock has been suggested, but recovery is doubtful.	Water is available for one month; the remedial measures adopted are to sink wells where requisite.		Supplies are being drawn from Bangalore. Local merchants are able to maintain the importation; no fall in prices anticipated.	Three-fourths of the population are high caste and one-fourth low; one-fourth well-to-do, and three-fourths poor. The total population is 57,000, of which 14,000 are purely agricultural and 3,000 partly so; the remaining 40,000 are of other professions. There are a few wealthy landholders.	About 2,000 people have abandoned their villages; none of them have returned. 4,000 to 5,000 more may leave the taluk.	The relief works started in the taluk have consisted chiefly in excavating silt from tank-beds. The collection of metal along the district fund roads has been sanctioned. This measure will provide work for some time to come for those willing to take it.	Kitchens have been opened in two places, in which about 400 and 50 people respectively are fed daily. All the monsoon (Kartik) crops have failed, and there are no prospects of further sowings this season. Some produce of the arecanut and cocoanut only obtained. Of spring or Vyshaka crops nothing has been saved, neither is there any prospect of further sowings this season.	Rs. 15,000 out of a total land revenue of Rs. 97,907.	About 12,766 head of cattle have died and about 17,220 more deaths are expected. Hulbani cess was remitted by Government during this year. Cattle are being taken away to the Mulnad; fodder is brought from the adjoining taluks in the Hassan district at high prices; grant of takavi for purchase of fresh cattle has been suggested, but the recovery of such advances is doubtful.	Want of water is beginning to be felt. The sinking of wells in tank-beds has been ordered.		Grain has been stored by private individuals, who, however, are not inclined to open their pits. Supplies are being drawn from Bangalore and Aloor. Local enterprise is sufficient to maintain the importation. A fall in prices is doubtful.	The population is 57,359 and is generally agricultural. Some wealthy landholders support their tenants. In the Kusba there are some wealthy merchants.	3,256 persons have left the taluk, and some of them have returned, finding no means of subsistence. A few more may leave.	The relief works started in this taluk have consisted chiefly in excavating silt from tank-beds. The collection of metal along the district fund roads has been sanctioned. This measure will provide work for some time to come for those willing to take it.	Several private kitchens were opened in this taluk, but all have been closed. Government kitchen now open at Hundunkere; further kitchens appear necessary and will be opened.	The number of persons on the hands of Government for relief by relief works on date of report was about 70 or 80 persons, most of the works having been finished. The number of persons in receipt of charity amounts to 150. The number estimated to be on the hands of Government on the 1st March is ... 8,000 to 4,000 On relief works— By kitchens ... 1,000 On the 1st May 1877— On relief works . 4,000 By kitchens ... 1,000 On the 1st July 1877— On relief works ... 4,000 By kitchens ... 1,000 NOTE.—This taluk has suffered very severely this year, and is, in fact, almost worse than Sira.

a	b	c	d	e	f	g	h	i	j	k
Of the Kartik or kharif a 4 annas crop has been saved in some of the hublies, and in the rest there has been a total failure. As regards the Vyshaka or rabi crop, jowaree was sown and is still being sown in wet lands. On the whole, only about one anna and a quarter has been saved.	Remissions probable Rs. 18,000, out of a revenue of Rs. 1,23,890.	The mortality which has already occurred is reckoned at 7,729, and the deaths anticipated are 11,593. There has been a great loss in cattle; those surviving are suffering from want of forage. The State forest of Devaroydroog was thrown open for the ryots to cut grass. Fodder is being imported, but at high prices. The use of the prickly-pear for fodder has been suggested, but does not seem to have been adopted. The cess of hulbani has been remitted during the year. Grant of takavi for the purchase of cattle is suggested, but recovery is doubtful.	Want of water is not yet felt; in some tanks there is a supply for one to one and a half months. Wells will be sunk in places where scarcity of water is likely to be felt.		Grain secretly stored. Importations coming in from Bangalore. Some of the merchants are capable of maintaining importation during the present season. No fall in prices anticipated.	Population 97,963, of which three-fourths are purely agriculturists, and one-fourth are urban and artizans. Most of the landholders are very poor and unable to aid their tenants.	About 10 or 12,000 people have already left their villages for the coffee districts. Further emigration improbable.	Relief works have already been in progress for some time. Collection of metal along all the district fund roads has just been sanctioned.	Two Government kitchens opened in this taluk. The poor and helpless are afforded relief in these kitchens, as also by private individuals.	Number of people on the hands of Government for relief— On relief works ... 300 By charitable measures ... 400 *Estimated number* to be on the hands of Government for relief— *On 1st March*— On relief works ... 2,000 By kitchens ... 500 *On 1st May*— On relief works ... 3,000 By kitchens ... 500 *On 1st July*— On relief works ... 3,000 By kitchens ... 500

No monsoon crop has been saved, except under Kuppillary wells. As to Vyshaka (rabi), it cannot be said what amount of crop will be saved, as the water-supply is failing. No prospects of further sowings. Practically, a total failure.	An estimated sum of Rs. 35,000 is entered by the Amildar as requiring remission. Rs. 20,000 would appear to be ample for this taluk. Total revenue is Rs. 91,277.	The past mortality among cattle is reckoned at 16,000, and the anticipated mortality at 30,000. Agricultural stock has suffered greatly. Reserved forests were thrown open to the ryots to cut grass. It is now intended to allow their cattle to graze in these tracts. People imported fodder from different places at heavy cost. Hulbani was remitted.	The want of water is beginning to be felt.		There may be about 500 kandies in stock in the taluk. Supplies are drawn from Bangalore. Prices rising. Private enterprise limited. The Deputy Commissioner says that the state of the taluk is in parts bad. There is, however, a large quantity of grain stored away, but which the owners will not dispose of. Grain has been pouring into the country and is still coming in. Price of ragi is steady, and shews, if anything, a tendency to fall.	Population 73,033, of which three-fourths consist of agriculturists; one-fourth are urban or artizans. There are a few wealthy people, but they are not inclined to aid their tenants.	Four thousand people have left the place, and none of them returned. It is not known whether they have bettered themselves or otherwise. Further emigration is improbable.	The relief works sanctioned in the taluk have consisted chiefly in excavating silt from tank-beds. Collection of metal along the district fund roads just sanctioned. This measure will provide work for some time to come for those willing to take it.	A public kitchen, aided by private contributions, has been opened in the Kusba of the taluk. Additional ones seem needed. If relief works are steadily kept going, matters will go smoothly, otherwise the kitchens will be deluged by starving labourers.	Number of persons on the hands of Government— On relief works about ... 500 By charitable measures ... 164 *Estimated number to be on the hands of Government—* Relief works. Kitchens. 1st March, 1st May, 1st July } 5,000 500

a	b	c	d	e	f	g	h	i	j	k
Regarding Kartik (kharif) the Amildar reports that only a half anna crop has been saved, but this is a very low estimate. More than a fair four annas crop must have been saved in some places. On the whole, only about two annas has been saved.	Estimate of amount of revenue to be remitted Rs. 25,000, out of a total of Rs. 1,37,735.	Past mortality among cattle is reckoned at 10,000; anticipated mortality 2,939. Agricultural stock suffered greatly. Government remitted the hulbani cess and threw open the Reserved State Forests in Devaroydroog to cut grass from; the result was satisfactory so long as grass was available. It is now intended to allow ryots to graze their cattle in the forests. The use of the prickly-pear for fodder has been suggested to the people, but it is not available in sufficient quantities in this taluk.	Want of water beginning to be felt. Orders have been issued for the sinking of wells where necessary.		About 8,000 kandies of grain reported to be in stock in this taluk. Supplies are being drawn from Bangalore. No fall in prices, expected. Private enterprise able to maintain the importation. The Deputy Commissioner reports that the state of the taluk is in parts bad. There is, however, a large quantity of grain stored away, but which the owners will not dispose of. Grain has been pouring into the country and is still coming in. Price of ragi is steady, and shews, if anything, a tendency to fall.	Population 101,981, of which the greater portion are purely agriculturists. Some of them are well-to-do and the rest are poor. The wealthy landholders are not disposed to aid their tenants, though able to do so.	A large number of the people have left their villages for Coorg, Mulnad, &c. A few of them have returned. It is not known whether the emigrants have bettered themselves or not.	The relief works have been in progress for some time. Large relief works sanctioned, which will keep the poor employed two or three months.	A public kitchen, aided by private contributions, is maintained at Tumkur. If relief works are steadily kept going, matters will go smoothly, otherwise the kitchens will be deluged by starving labourers.	The number of persons on the hands of Government is— On Relief Works ... ... 700 By charitable measures ... 150 The number estimated to be on the hands of Government for relief is on— Relief works. Kitchens. 1st March, 1st May, 1st July } 3,500 500

TUMKUR DISTRICT—concluded.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
No Kartik crop has been saved. A little sosi, ragi, and rice has been saved out of the Vyshaka crop. Practically, an entire failure.	Total revenue Rs. 1,12,329. The Amildar has entered Rs. 80,000 to be remitted. The Deputy Commissioner considers this amount far too high; about Rs.25,000 would seem to be the proper amount.	About 20,266 head of cattle have died, and nearly all the rest have been removed to the Mulnad. Only a few have been kept for the working of the Kappelay wells. The agricultural stock has suffered severely. The State forests of Bookkapatna, Muddagiri and Devaroyadroog opened out by Government afforded great relief. It is now under consideration to allow the ryots to graze their cattle in these forests.	In some places though there is no water close to the village, it is procurable at some little distance off; in other places wells are being sunk in the beds of tanks at Government expense. Sufficient water is procurable.	**SIRA** Prices of the principal food-grains:— From October 1st to 22nd— Ragi ... ... 10 seers per rupee. Rice ... ... 7 „ „ From 23rd up to 31st— Ragi ... ... 7½ seers per rupee. Rice ... ... 5½ to 6 „ „ *In November*—Ragi ... 7½, 8, 8½, 9. Rice ... 5½, 5½, 6, 6½. *In December*—Ragi ... 7, 7½. Rice ... 5½, 6. Six years' average— Rice ... ... per kandy ... Rs. 13 A. 0 Ragi ... ... „ ... 4 12 Jola ... ... „ ... 5 12 Paddy ... ... „ ... 5 8 Cleared dhall ... „ ... 19 4 Horse gram ... „ ... 7 4 Bengal gram ... „ ... 19 8	**TALUK.** Grain is stored in the taluk, but the owners will not open their pits. Supplies are being drawn from Bangalore. The prices remain stationary. Private enterprise will probably maintain the importation.	The population is 71,928, and about one-eighth are high caste, and the rest low. The former are well to do and the latter poor; both agriculturists. Some land-holders are able to support their tenants.	About 1,157 persons have left the taluk; none have returned. The relief works now sanctioned will in all probability stop further emigration.	The relief works started in the taluk have consisted chiefly in excavating silt from tank beds. Collection of metal along the District Fund roads now sanctioned. This measure will provide work for some time to come for those willing to take it.	Charitable relief is given to travellers, aged, infirm, to those unable to work, &c., in three different kitchens opened by Government. There were some more of these institutions kept up by private individuals, but they have been closed for want of funds. Additional kitchens will have to be opened at public expense.	The number of persons the Government has on its hands up to date is on relief works about 1,500, by charitable measures 500. The anticipated numbers are:— 1st March, 4,000 on relief works; 800 on kitchens. 1st May, 4,000 on relief works; 800 on kitchens. 1st July, 3,000 on relief works; 800 on kitchens. The Deputy Commissioner remarks that the state of the taluk is very bad; very few cattle left.
In Kartik sosi, ragi, sugarcane, and other grains were sown in wet lands, and a 6-anna crop has been saved. Dry crops failed completely. In Vyshaka jola was sown, and is still being sown in wet lands. Some of these crops promise well. Practically, there will be no appreciable outturn.	Remissions Rs.25,000 out of a revenue of Rs. 1,43,882.	The past mortality among cattle is 5,807, the anticipated is 2,900. The agricultural stock has suffered considerably. Government threw open the reserved forests for the ryots to cut grass in; also remitted the cess of hulbani during the year. The use of the prickly pear for fodder was suggested, but it grows only in small quantities. The only suggestion that can be made is to allow ryots to graze their cattle in all reserved tracts; but even in these places, fodder is not obtainable in any large quantity.	The wells are running dry. If the rains do not fall early, there will be great difficulty in obtaining water. Orders have been issued to sink as many wells in beds of tanks as are necessary to secure water.	**MADDAGIRI** The average price of food-grains is given below:— Rice ... 6 seers per rupee. Ragi ... 8, 7, 7½, 7 „ „ Gram ... 8, 7, 6 „ „ The average price for the last six years is— Rice ... 13 seers per rupee. Ragi ... 45 „ „ Gram ... 28 „ „ The Deputy Commissioner remarks that the price of ragi is steady, and shows, if anything, a tendency to fall.	**TALUK.** There is two months' stock of sosi and ragi. Supplies are coming in from Bangalore in abundance. Private enterprise seems able to maintain the importation. As there is not much competition in trade, no fall of prices is likely to occur. The Deputy Commissioner remarks that there is a large quantity of grain stored away which the owners will not dispose of. Grain has been pouring into the country, and is still coming in.	The population is 86,532. There are people of both high and low caste, of which ¼ are well to do, and ¾ poor; ⅔ purely agricultural, and ⅓ of other professions. There are some large landholders, but they are not likely to aid their tenants.	About 1,000 persons have left the taluk with their families. None of them have yet returned, and it seems probable that about 400 more will leave. The emigration was chiefly to the coffee districts and the Mulnad.	The relief works started in the taluk have consisted chiefly in excavating silt from tank beds. Collection of metal along the District Fund roads just sanctioned. This measure will provide work for some time to come for those willing to take it.	One Government kitchen, aided by private contributions, is established. More kitchens appear to be needed.	The number of persons on the hands of Government is— On relief works ... 1,080 By charitable measures 150 The anticipated numbers are— On March 1st...3,000 relief works 200 kitchens. On May 1st...5,000 relief works; 400 kitchens. On July 1st...3,000 relief works; 400 kitchens. The Deputy Commissioner remarks that the state of the taluk is in parts bad. If relief works are steadily kept going, matters will go smoothly; otherwise the kitchens will be deluged by starving labourers.
A 3-anna Kartik crop has been saved in this taluk. In some hoblies, however, more than a fair 8-anna crop must have been saved. There are no prospects of further sowings. Some Vyshaka crops have been sown, but there does not appear to be any probability of saving anything. The crop saved is about three annas.	About Rs. 18,000 will have to be remitted out of a total of Rs. 90,783.	2,950 head of cattle have died, and 6,000 more deaths are expected. A number of cattle have been sent off to the Mulnad taluks, as also to places in other districts where fodder can be obtained. No measures have yet been adopted by the Government, with the exception of suggesting the use of prickly-pear for fodder. This taluk does not appear to be on the whole so very bad, except in some hoblies where, however, the people can arrange for procuring fodder from adjoining taluks.	Want of water is felt in the hoblies of Yediver, Amrathur and Koppah; orders have been issued to sink wells in places where needed, as also in tank beds.	**KUNIGAL** *Prices of the principal of food-grains.* Weeks. / Price—Seers per Rupee. Rice. / Ragi. / Gram. October 1st week ... 8 12 0 „ 2nd „ ... 8½ 11 0 „ 3rd „ ... 6½ 10 0 „ 4th „ ... 6 9 0 November 1st „ ... 6½ 8 0 „ 2nd „ ... 6 9½ 0 „ 3rd „ ... 6½ 9½ 0 „ 4th „ ... 7 10 0 December 1st „ ... 6½ 8 0 „ 2nd „ ... 6½ 8 0 „ 3rd „ ... 6½ 7½ 0 „ 4th „ ... 5½ 7½ 0 Six years' averages ... 13½ 51½ 26½	**TALUK.** 1,500 kandies of gra in are in stock in the taluk; supplies are being drawn from Bangalore. Prices are daily rising; private enterprise is able to maintain the importation.	The population is 85,661, the greater portion of which are of high caste. Half the number of the whole population are purely agriculturists, one-eighth urban or artizan, one-eighth other professions, and the remainder mixed. The landholders are not capable of aiding their tenants.	About 6,000 people have left the place. About 1,000 of them have returned.	Relief works have been opened; large relief works also sanctioned.	There is one Government kitchen in this taluk.	The number of persons on the hands of Government at date of report is on relief works 419; by charitable measures 144. The future estimate is— On March 1st 2,000 relief works; 600 kitchens. „ May „ 3,000 relief works; 600 kitchens. „ July „ 2,000 relief works 600 kitchens. The Deputy Commissioner remarks that portions of this taluk have suffered very severely, others have done pretty well.

MYSORE DISTRICT.

ASHTAGRAM TALUK.

a

The Amildar reports that from eight to ten annas of the paddy and from two to three annas of the ragi crops saved.

The Deputy Commissioner reports 9¾ annas saved.

b

Remissions Rs. 5,000 out of a total of Rs. 1,50,539.

c

3,822 head of cattle have died, and 2,000 more are expected to die. Hulbani rents remitted. The ryots, who have raised some rice crop on lands under channels, assist the people with grass in villages in which dry cultivation has entirely failed.

d

Villages suffer for want of water; wells having run dry. Wells are, however, being dug, but it is doubtful whether they will contain water till rains set in. The villages situated close to the river Kaveri and its channels have a sufficient supply of water, but those depending on channels suffer temporarily when they are under repair or when water is not let into them. The continual flow of water into the channels is recommended.

e

Months.	Prices of the principal food grains.	
	Rice.	Ragi.
	Seers.	Seers.
October 1876	7 & 8	8
November „	7 & 8	8
December „	7 & 8	8
January 1877	8	10 & 11
Average of the past six years	12	39 or 40

f

Local stocks considered to be sufficient for the people for one year. Additional grain that may be required can be obtained from Ganjam. Large importation of rice from Talkad and Maddalli taluks and from the Aulwur market. Ragi imported from Chamrajnagar, Kankanhalli, Malvalli, and Heggaderankote taluks. A weekly market is held at the French rocks, in which from 6,000 to 8,000 seers of rice and Ragi are sold by the merchants of Ganjam to villagers who have no stock of grain on hand, or who require additional supplies.

g

The population of this taluk amounts to 88,468. Of these 43,573 are males and 44,895 females. There are 17,646 agriculturists, 449 traders, 6,787 labourers, and 4,218 manufacturers. The remainder (59,368) are of miscellaneous occupation. The well-to-do landholders have aided their tenants and jeetgars by lending grain, money, &c.

h

From 500 to 600 people have emigrated to Manantoddy and other places in search of employment. They live upon the wages they earn.

i

The works on hand are repairs to the Erode road and the ordinary annual repairs, and repairs to the Chakderany, Sager, and Kijanadi channels, and Arekere tanks. The work practicable is repair of the Sunkatamur tank.

j

Relief kitchens for destitute travellers, aged and infirm, &c., are opened at Darasakuppa, Palhalli, Serangapatam, and Ganjam Kasbas. The number fed daily at each of these kitchens is from 50 to 1,500.

k

Number of persons receiving relief on date of report is—
On works... ... 1,500
By charity ... 300 or 400

Number of persons Government is likely to have on its hands on the dates specified—

	On works.	By charity.
On 1st March ...	1,000	
On 1st May ...	500	
On 1st July ...	500	

CHAMRAJNAGAR TALUK.

a

The Amildar reports that from fourteen annas of the moongar and from two to ten annas of the rice and ragi crops saved.

The Deputy Commissioner reports 9¾ annas saved.

b

Remissions Rs. 6,000 out of a total of Rs. 1,23,294.

c

Mortality among cattle 1,245 head. No more cattle are expected to die. There is a sufficiency of fodder, and hence remedial measures unnecessary.

d

Abundant water-supply, as there are wells in or near each village. In event of scarcity all that will be needed is clearing wells.

e

Months.	Prices of the principal food-grains.	
	Rice.	Ragi.
	Seers.	Seers.
October 1876	6	9
November „	6	10
December „	6	10
January 1877	8	12
Average for the past six years	12	49

f

About one-third of the population are well provided with a stock of grain for the next six or seven months. The remainder obtain their supplies partly in villages and partly in the local markets. Ryots import Ragi from Kollegal, and rice from Talkad and Yelandoor for their own consumption.

g

The population numbers 94,363. Of these 16,729 are agriculturists, 7,135 labourers, 5,854 traders and manufacturers, and the remainder are of mixed occupation. Three-fourths of the population are well-to-do and able to aid their jeetgars, &c.

h

3,000 people have emigrated to Manantoddy and other places. None have returned, and these are reported not to have bettered themselves. Further emigration probable.

i

Relief works proper have not been started, but sundry works, such as repairing roads and cleaning the Doddahammora tank, have been undertaken. Works practicable are repairs either to the Ramasamudra tank or the cross road between Chamrajnagar and Wellandur.

j

The relief kitchen opened at the kusba of this taluk from private subscriptions affords food to about 50 persons daily.

k

The number of persons Government has on its hand at date of report is—
On works 600
By charity 600
The number on the under-mentioned dates is—

	On works.	By charity.
1st March ...	1,000	
1st May ...	700	
1st July ...	300	

GUNDLUPET TALUK.

a

The Amildar reports from four to eight annas of the moongar crops and from five to nine annas of the paddy and ragi crops were saved.

There is a prospect of the cholum and kar ragi sowings if the rains of March and April do not fail.

The Deputy Commissioner reports nine annas saved.

b

Remissions Rs. 750 out of a total of Rs. 57,600.

c

2,061 head of cattle have died and 47,630 are expected to perish.

Hulbani rents remitted, and State forests opened for the cattle to graze in. Precautions are suggested to protect forests from fire and to keep diseased cattle separate from the healthy.

d

The tanks have all dried up, and most of the wells are also dry. Deepening of wells suggested to improve water-supply.

e

f

Twenty-five thousand people or nearly 43 per cent. of the population possess a stock of provisions to last them for six or seven months. The remainder have to depend for their supplies on the local markets, villages, &c.

g

The population amounts to 57,777. Of these 28,591 are males and 29,186 females. There are 10,725 agriculturists 4,999 labourers, 2,902 traders and manufacturers, and the remainder are of mixed occupation.

Nearly 50 per cent. of the agricultural population are well-to-do. They have rendered aid to their tenants and jeetgars by advancing small sums of money without interest, and by lending grain.

h

About 1,000 persons have emigrated to coffee-growing districts in search of employment. People from Mandla, Najamangala, Hussan, Tumkur and Tarikere taluks pass through this taluk on the way to coffee plantations; 200 persons are, however, daily returning, having failed to get employment. Emigration, it is said, is likely to continue till next rains.

i

No relief works have as yet been started. Some coolies are, however, collecting materials for the roads to be repaired by the Public Works Department. Works suggested are the excavation of three tanks and the dismantlement of the eastern and southern portions of the Gundlupet fort walls.

j

A kitchen has been opened, where from 400 to 500 people are fed daily.

k

The number on the hands of Government on date of report is—
On works 200
By charity 400
The number estimated on the dates specified is—

	On works.	By charity.
On 1st March ...	400	
On 1st May ...	400	
On 1st July ...	400	

MYSORE

DISTRICT—continued.

HEGGADERAN TALUK.

a. The Amildar reports that from four to six annas of the rice crop, and from six to eight annas of the ragi crop saved.
The Deputy Commissioner reports 11¼ annas saved.

b. Remissions Rs. 3,000 out of a total of Rs. 43,876.

c. 209 head of cattle have died, and 3,000 more are expected to die. Cattle driven to the jungles for fodder, and State forests thrown open for them to graze. Water is to be got in the Kapila, the Bruga, and the Karaka rivers.

d. The Kapila, the Bruga, and the Karaka rivers supply water to the villages in their vicinity. Wells are dug in villages not near them. To improve water-supply, the rivers were dammed by anicuts and the water let into an adjoining tank. As this tank needs repairs, water cannot be let into it. Repairs suggested at a cost of Rs. 1,500.

e.

Months.	Prices of the principal food-grains.	
	Rice.	Ragi.
	Seers.	Seers.
October 1876	5	9
November „	5½	10
December „	6	10
January 1877	6 or 7	10 to 12
Average of the past six years	13	52

f. Three-fourths of the population are provided with grain for ten or twelve months. The remainder obtain their supplies from the local markets, villages, &c. A considerable quantity of ragi has been preserved by ryots for future requirements.

g. The population numbers 54,829 souls or 27,256 males and 27,573 females. There are 9,696 agriculturists, 4,039 labourers, 2,206 traders and manufacturers, and the rest are of mixed occupation. Wealthy ryots aid their tenants, jitgars, &c., by lending grain, &c.

h. Except the Kadoo-kandhars, who are described as nomads, no other people have left the taluk in search of relief. Further emigration improbable.

i. No relief works have been started, and there is no necessity for them.

j. No necessity for relief kitchens.

k. The number of persons on the hands of Government on the date of report is—
On works 28
By charity 70

The number likely to be employed on the dates specified is—

	On works.	By charity.
On 1st March ...	32	15
On 1st May ...	...	18

TALKAD TALUK.

a. The Amildar reports that ten annas of the rice crop and from four to six annas of the ragi crop saved.
The Deputy Commissioner reports 10½ annas saved.

b. Remissions Rs. 500 out of a total of Rs. 96,843.

c. 3,430 head of cattle have died, and 2,500 more are expected to die. Ryots have to some extent preserved fodder for their cattle. No relief measures in this respect necessary.

d. There is enough water in the taluk for two months. In the event of water failing, wells will be dug. It is suggested that the Channel Department may be asked to let water into the channels continually.

e.

Months.	Prices of the principal food-grains.	
	Rice.	Ragi.
	Seers.	Seers.
October 1876	7	8
November „	7¼	8

January 1877	8	10 & 11
Average for the past six years	12	39 or 40

f. The population amounts to 82,311. There are 15,497 agriculturists, 6,130 labourers, 6,831 traders and manufacturers, and the remainder are of miscellaneous occupation. Sixty per cent. of the population are wealthy and able to aid their tenants, jitgars, &c.

g. The population amounts to 82,311. There are 15,497 agriculturists, 6,130 labourers, 6,831 traders and manufacturers, and the remainder are of miscellaneous occupation. Sixty per cent. of the population are wealthy and able to aid their tenants, jitgars, &c.

h. About 600 people emigrated to Mannan-toddy, Coorg, and other places, and about 100 have returned on account of insufficiency of wages. Further emigration not probable.

i. No relief works as yet sanctioned; works practicable are repairs of roads to cost Rs. 3,000.

j. Relief kitchen not opened in this taluk, as there has been no necessity for one.

k. The number of persons employed on road repairs is about 60 daily; 37 persons were working on date of report.
The number of persons likely to be on the hands of Government on the dates specified is—

	On works.	By charity.
1st March ...	1,000	
1st May ...	700	
1st July ...	500	

MALVALLI TALUK.

a. The Amildar reports the crops saved in the following proportions: From three to four annas of the cholum crop, three to seven annas of the rice crop, and from three to six annas of the Hyne ragi.
The Deputy Commissioner reports 10½ annas saved.

b. Remissions Rs. 5,000 out of a total of Rs. 60,400.

c. 3,124 head of cattle have died and 20,000 more are expected to die. A large number of cattle have been driven to the jungles for grazing purposes. Fodder is preserved by some ryots for the cattle retained at home. Forest reserves have been thrown open for the grazing of cattle. Grass is scarce owing to the failure of rain.

d. Water-supply very deficient. Wells have, however, been dug, and they, it is supposed, will benefit the people.

e.

Months.	Prices of the principal food-grains.	
	Rice.	Ragi.

October 1876	6	9
November „	6	10
December „	6	10
January 1877	8	12
Average for the past six years	12	49

f. About 53 per cent. of the population are well provided with grain for the next six or seven months. There have been large imports of ragi from Kankanhalli, Kolagul, &c., and rice from Talkad, &c.

g. The population of the taluk is 65,476. Of these 14,263 are agriculturists, 2,684 labourers, 2,873 traders and manufacturers, and the remainder of mixed occupation. The greater portion of the people are well-to-do.

h. Except those who yearly go to work in coffee estates, no people have emigrated. Emigration not probable. Travellers from the Tumkur district of Attikuppa and Nagamangala break their journey in this taluk for one or two days.

i. No relief works have been started as yet, but nine tanks are being repaired at a cost of Rs. 6,300.

j. A kitchen has been opened and about 600 aged persons and boys are daily fed.

k. The number of persons Government is likely to have on its hand on the dates specified is—

	On works.	By charity.
On 1st March ...	1,000	
On 1st May ...	1,000	
On 1st July ...	1,000	

MYSORE DISTRICT—continued.

MANDYA TALUK.

a

The Amildar reports from two to eight annas of the moongar, and from one to ten annas of the Hyne crops saved.

The Deputy Commissioner reports eight annas saved in all.

b

Remissions Rs. 30,500, out of a total of Rs. 88,649.

c

2,003 head of cattle have died, and 25,000 more are expected to die. Cattle removed to places where fodder and water are procurable.

d

Except the tanks in the Kiragandoor and Maddur taluks, no other tanks contain water. Wells have dried up. People dig wells and obtain water for their use. Great scarcity of water, due to there being no rain for the past two years. It is suggested that wells dug by ryots should be further deepened at the expense of Government.

e

f

TALUK.

About 15,000 persons have a sufficient stock of grain for six or seven months. The remainder depend for their supplies on the local shops or markets, and on the importation from Bangalore and Ganjam. The importation will, it is said, be sufficient, and will continue till the moongar crops are reaped in August.

g

The population is 57,286 or 28,254 males and 29,032 females. There are 13,490 agriculturists and traders, 1,370 labourers, and 5,316 manufacturers. The remainder are of mixed and miscellaneous occupation. Twenty per cent. of the population are well-to-do; the rest are poor.

h

5,748 persons have emigrated to coffee plantations in search of food. A few have returned, and further emigration is probable.

i

In addition to relief works in progress, the construction of two new lines of road, *viz.*, the Bararala-Nagamangala road and Kokatty road, is suggested.

j

The relief kitchen opened at this kasba from private subscriptions feeds about 50 persons daily. Arrangements are being made for distributing food to travellers, aged and infirm; &c.

k

Number of persons on the hands of Government on date of report:—
On works 1,000
By charity 1,000
Number of persons Government is likely to have on its hands on the dates specified—

	On works.	By charity.
1st March ...	2,000	
1st May ...	3,000	
1st July ...	5,000	

MYSORE TALUK.

a

The Amildar reports from four to eight annas of the paddy crop and from two to five annas of the Hyne dry crop saved.

The Deputy Commissioner reports nine annas saved.

b

Remissions Rs. 1,000, out of a total of Rs. 79,608.

c

1,648 head of cattle have died and 1,000 more are expected to die. Cattle driven to places where fodder can be obtained. State forests thrown open for the cattle to graze in. A coffee planter in the Wynaad district has consented to cattle grazing on his plantation.

d

Scarcity of water felt in nearly all villages except those on the banks of rivers. The existing supply is not likely to last until next rains; sinking of wells is therefore suggested.

f

TALUK.

There are about 30 respectable merchants in the taluk who trade extensively in rice and ragi. They not only import grain in large quantities, but export it to the Neilgherry, Gudalore, Cananore, Mundriem, Muddoor, Nanjangode, districts which is the cause of prevailing high rates in prices. There is, however, enough grain in the taluk to supply the wants of 45,000 people for seven or eight months. The remainder will have to depend for their supply on local markets, shops, &c.

g

The population amounts to 126,930. Of this number 63,528 are males and 63,402 females. 17,122 are agriculturists, 8,480 labourers. Traders and manufacturers number 8,452, and people of miscellaneous occupation 92,876. Three-fourths of the population are well- to-do.

h

500 persons have emigrated from this taluk; some of them are reported to be starving; further emigration probable.

i

No relief works actually opened, though the municipality have undertaken the construction of a road and the Public Works Department the excavation of a tank, at the former of which 300 persons and in the latter 1,000 persons are employed.

j

Twelve relief kitchens have been opened in the town of Mysore from private subscriptions. These amount to Rs. 9,796, and are to be supplemented by a Government grant of an equal sum, which is to be expended in the purchase of grain in localities where it is cheapest. The daily average of destitute persons fed is 2,140.

k

NAUJANGUD TALUK.

a

The Amildar reports that from four to eight annas of the August crop and from four to ten annas of the November crop saved.

The Deputy Commissioner reports 9¾ annas saved.

b

Remissions Rs. 2,500, out of a total of Rs. 63,563.

c

593 head of cattle have died. Cattle at present graze on the banks of the Kapila and uncultivated fields. In case of scarcity the cattle will be driven to the Chamrajnagar forests for fodder.

d

There is a sufficient water-supply in all the hoblis except one. Water will become scarce if there be no rain. Cleaning of wells and sinking new ones suggested.

TALUK.

The local stock of grain is sufficient to supply the wants of 47,597 persons for six or seven months. The remainder will have to obtain their supplies of rice from Mysore, and ragi from the Heggadarankote Taluk. Fall in prices not anticipated.

g

The population numbers 64,535 souls. Of this 31,899 are males and 32,636 females. There are 11,787 agriculturists, 5,055 labourers, 3,075, traders and manufacturers and the remainder are of mixed occupation. Seventy per cent. of the population are well-to-do.

h

2,000 people have emigrated to coffee plantations, and are doing well. 1,000 persons more are expected to emigrate.

i

No relief works as yet started. Works practicable are repairs to tanks.

j

About 300 persons are fed daily in the relief kitchen opened by private subscriptions at Sindoovally.

k

No information given.

The Amildar reports the crops saved in the following proportions :—Three to eight annas of the ragi crop, six to ten annas of the paddy crop, and one to three annas of the Hyne ragi crop. Deputy Commissioner reports nine annas saved.	Remissions Rs. 11,000 out of a total of Rs. 1,07,386.	Deaths among cattle from disease 2,011. No mortality anticipated for want of fodder and water. Crops have been raised in some places, and there is grass in store. The taluk contains jungles and borders on Coorg. No remedial measures are necessary	One-third of the villages are situated close to the rivers Kaveri and Lakshmantirta; hence no want of water is felt. In a few villages there are small katties and wells, which contain water, while in others there is no water. As wells and katties get dry, people get new wells dug. No remedial measures are therefore necessary.	**PERIAPATNA** Prices of the principal food-grains. Months. / Rice. / Ragi. Seers. / Seers. October 1876 ... 6 9 November „ ... ... 6 10 December „ ... ... 6 10 January 1877 ... 8 12 Average for the past six years 12 49	**TALUK.** About 60 per cent. of the total population have a stock of grain in hand for six or seven months. The requirements of the remainder will be met from supplies available in local markets, villages, &c.	The population aggregates 116,334. Of this number 57,906 are males and 58,428 females. There are 24,798 agriculturists, 5,879 labourers, 4,149, traders and manufacturers, and the remainder are of mixed occupation. Three-fourths of the population are well-to-do.	5,000 or 6,000 people are in the habit of going to Coorg for their food, and after a short stay returning to the taluk.	No regular relief works have as yet been started. The works practicable are the construction of three new roads and excavation of three tanks.	Relief in the shape of food is gratuitously given in seven places to travellers, the aged, and infirm. The daily average is 910.	The number of people Government has on its hands on date of report is— On works ... ... 60 By charity ... ... 1,300 On dates specified below the number estimated is— On works. / By charity. 1st March ... 2,600 1st May ... 5,000 1st July ... 7,000
The Amildar reports that nine annas of the rice crop and one anna of the ragi crop saved. The Deputy Commissioner reports nine annas saved.	Remissions Rs. 10,000 out of a total of Rs. 92,194.	3,057 head of cattle have died and 2,019 more are expected to die. Cattle are driven to graze in the forests of Coorg and Heggaderankote. The ryots fortunate in their cultivation feed their cattle with the straw of ragi, paddy, &c Hulbani tax remitted. Prickly-pear suggested as fodder, and cattle permitted to graze in jungles, and on a portion of the Amvat Mahal Kawal.	Ample supply of water in villages situated on rivers. No scarcity feared in villages into tanks of which nullah water flows. Tanks are becoming nearly all dry. Scarcity is likely to be felt in places where there is no river, and here the digging of wells is suggested.	**YEDATORE** Prices of the principal food-grains. Months. / Rice. / Ragi. Seers. / Seers. October 1876 ... ... 6 9 November „ ... ... 6 10 December „ ... ... 6 10 January 1877 ... ... 8 12 Average for the past six years 12 49	**TALUK.** The local stocks are sufficient for half the population for six or seven months. Ragi is being imported from Arkulgode, Penapatun, and neighbouring taluks.	The population amounts to 65,523. Of this number 32,952 are males and 32,571 females. There are 14,478 agriculturists, 3,058 labourers, 3,189 traders and manufacturers, and the remainder of mixed occupation. Half the population are well-to-do.	Four or five thousand people have emigrated to Coorg and other places. Some have returned and others have sought employment on coffee plantations; further emigration probable.	No regular relief works as yet started; estimates for practicable works are hereafter promised.	Six kitchens from private subscriptions have been provided for travellers, infirm, &c., and from 300 to 400 persons are fed daily.	The number on relief works on date of report was 1,500. The number likely to be on the hands of Government on the dates specified below is— On works. / By charity. On 1st March ... 1,500 On 1st May ... 500 On 1st July ... 500

REMARKS BY THE DEPUTY COMMISSIONER.

(*c*) A special officer, with an assistant and some of the Kedda establishment, have been appointed to assign grazing grounds for the cattle along the foot of the Neilgherries and Western Ghâts and to direct them there. The cattle should be detained there till the rains have undoubtedly set in.

(*h*) Emigration has been chiefly from the Mandya Taluk, where the people are very poor, and the crops have failed almost completely. Elsewhere emigration has been principally for the purpose of taking the cattle to graze.

(*k*) It is difficult to estimate the number likely to be on relief works, as many people come on them who are only passing through the district.

HARNHALLI TALUK.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
In some villages the crops entirely failed; in others the following was obtained:— Annas. Rági ... from 1 to 3 Sávi ... „ 1 „ 2 Ballar ... 1 Bengal gram from 1 to 3 Cholum ... „ 1 „ 3 Rice ... „ 1 „ 8 It was only below the tank of Kamasamudra that any wet crop was obtained. On the whole 6 annas saved.	Out of a total of Rs. 77,885, remissions to the amount of Rs. 20,000, of which Rs. 4,000 will be on account of wet lands. The Deputy Commissioner considers these figures too high.	13,102 head of cattle had died up to the end of December, out of 90,284. Cattle driven into the Mulnad do not thrive, from severity of weather and unsuitability of the grass.	A few tanks have a little water, and the wells are drying up. No rivers or streams in the taluk. Some villages are suffering much from want of water. The Deputy Commissioner considers that the people should dig wells for themselves in beds of tanks, as the work can be easily and quickly done.	*Prices of the principal food-grains.* Dates. / Rice. / Ragi. / Horse-gram. / Dhall. / Ballar. / Wheat. / Cholum. 1876. / Srs. / Srs. / Srs. / Srs. / Srs. / Srs. / Srs. Average of last six years ... 13½ 40½ 25½ 12½ 15½ 9½ 52½	About 500 kandies of rági and 200 of rice are concealed in the taluk for fear of its being looted. Grain is imported but not in sufficient quantities, and the prices are not likely to fall, unless more is sent in.	The population is of both high and low caste; the latter are chiefly agriculturists. No large land-owners.	About 12,000 people have emigrated to the Nilgiris and the Mulnad, including 3,000 who have gone with their cattle. People are continually leaving and returning.	20 relief works have been started at a sanctioned cost of Rs. 8,855 on which 737 coolies are employed. Several other works, chiefly tanks, are in contemplation. This is one of the most suffering taluks.	For relief of poor and those incapable of work, Rs. 636 have been subscribed, of which Rs. 349 have been collected. Government has sanctioned Rs. 70 per mensem for January and February for this taluk.	Number of people now on the hands of Government— On works ... ... 737 By charity ... ... 171 Total ... 908 Estimated number on— 1st March ... ... 1,200 1st May ... ... 800 1st July, in case of rain falling 400

MUNJARABAD TALUK.

Rice and ragi only grown in this taluk; paddy crop estimated at 6 annas; Vyshaka crop grown is very small; ragi estimated at 3 annas. The Deputy Commissioner estimates 10¼ annas saved.	Revenue Rs. 1,46,290. No remissions likely to be needed, though it cannot be stated for certain till the end of the year.	Cattle healthy; mortality low; no remedial measures required.	No scarcity of water in the taluk.	Prices of food-grain not sent up, but owing to large influx of people from the Maidan taluks, the prices are much the same as elsewhere. Although the rice crop has been excellent, dealers have not reduced prices, as they are holding back for higher rates, and selling their straw to pay the assessment.	40,000 kandies of rice and 5,000 of rági in stock.	Both high and low castes are employed on coffee plantations, &c. It is feared that many coolies will be discharged, as the ground is too hard for remunerative labour.	No people have left the taluk, but there has been an influx of about 10,000. From 500 to 800 are employed on a road, also large numbers by the Public Works Department.	The construction of two roads at a cost of Rs. 5,000 is advocated as a relief work for the large number of Maidan taluks' people who have emigrated into this taluk.	A grant of Rs. 50 for the kitchen at Saklaspur for January and February has been sanctioned.	About 2,200 people are employed on district fund and Public Works Department works. Many will return home on fall of rain, leaving 1,000 for relief on 1st March, May and July.

ARKULGUD TALUK.

An average 7-anna crop has been saved; no Vyshaka has been cultivated. The outturn of wet crop below the river-fed channels and jungle nalas in the taluk is estimated at 8 annas, while those below the tanks and katis is said to be from 3 to 4 annas. In some hoblis the outturn of ragi has been 6 annas; other grains, such as gingelly oil-seed, oil-seed, horse-gram, &c., are reported to be 2 annas. In five hoblis the outturn of ragi is 4 annas; other grains 1 anna. The Deputy Commissioner reports 10¼ annas saved.	Rs. 5,000 will have to be remitted on wet lands below tanks out of a total revenue of Rs. 1,39,640.	Deaths among cattle amount to 4,579; 2,000 more are expected to die. Straw has been saved from last harvest, and grass in gomals, as well as pasture lands declared free by Government, has also been used. A large quantity of grass has been consumed by cattle passing through the taluk on their way to Coorg, &c.	About 90 villages are supplied by the Cauvery and Hemavati rivers. In 330 villages the inhabitants have dug and repaired wells at their own expense: 33 villages are suffering from want of water. The Deputy Commissioner considers that the people in all cases should dig wells at their own expense in tank beds, &c., and not receive assistance from Government, as recommended by the Amildar.	*Prices of the principal food-grains.* Grains. / October, 1st fortnight. / October, 2nd fortnight. / November, 1st fortnight. / November, 2nd fortnight. / December, 1st fortnight. / December, 2nd fortnight. / Average of last six years. Rice imported from Coorg and Munjarabad. Traders are encouraged to bring different kinds of food-grains for sale to the weekly fairs of Arkulgud and Marrur.	The population is composed of Mussulmans, Brahmins, and other high caste Hindus. Some of them (Kumaties) are well-to-do, but in no way liberally disposed. Some are employed under Government, others have lands; a few are traders. No wealthy landholders or inamdars in a position to assist their tenants.	About 2,000 or 3,000 people have emigrated to Coorg and Manantoddy. Some of them have returned, being unable to obtain work. No more are expected to leave.	Four relief works are sanctioned at a cost of Rs. 1,755, besides the Channel works under the control of the Irrigation Department. There are three works proposed and estimated to cost Rs. 3,522.	No kitchens have been started.	140 persons are now employed on works. If the proposed works are sanctioned, there will be on the hands of Government on 1st March, May and July, 450. If these are not sanctioned, 300 on each of the above dates. The Deputy Commissioner says there is work for 1,000 coolies on the Kristnoraj channel extension, if they would only come. As this is partly a Mulnad taluk, the distress will not be felt so much as in other places. There are a fair number of works going on, and more ready for submission.

HASSAN DISTRICT—continued.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
No Vyshaka crop was raised for want of water. The Kartik rop was as follows: Rice from 4 to 8 annas. Dry crop from 1 to 10 annas. On the whole about 9 annas saved.	Remissions Rs. 20,000, out of a total revenue of Rs. 1,74,042.	The number of deaths among cattle was 3,485. There is a stock of rice straw, and some grass is still procurable in gomals and kavals. The straw may last three months. Several remedial measures have been suggested, which, it is hoped, will save the more valuable cattle. There is no prickly pear in the taluk. The Mulnad is close at hand.	There are four small streams; the tanks also contain some water, which, it is feared, will eventually dry up. Wells have been sunk in tank beds and other low situations. The supply so obtained, together with the water procurable from rivers, will, it is hoped, be sufficient.	**HASSAN** *Prices of the principal food-grains.* 1876. October 4th: Rice 8, Rágí 13, Horse-gram 9⅓, Ballar 9, Dhall 9½, Wheat 8 " 11th: 7, 13, 10¼, 9½, 9½, 8 " 18th: 5⅔, 10, 9, 8, 8, 8 " 25th: 4½, 8, 7, 8, 8, 7 November 1st: 4½, 8, 6½, 7, 7, 6 " 8th: 5½, 9, 6, 6, 6, 6 " 15th: 6, 9, 5, 6, 6, 6 " 22nd: 5½, 9, 6½, ..., 6½, 6 " 29th: 6, 8, 6½, 6, 6, 6½ December 6th: 6, 9, 7½, 6, 6, 6½ " 13th: 5½, 8, 6½, 5½, 7½, 6½ " 20th: 6, 8, 6, 5, 7, 6 " 27th: 6, 8, 6, 5, 7, 6 January 3rd, 1877: 6, 8, 6, 5, 7, 6 Last six years' average: 14½, 46½, 30¾, 15¾, 13½, 9¾	**TALUK.** Rice is imported from Mangalore; rági, dhall, &c., from Bangalore, but not in sufficient quantities to create a fall in prices.	The population is partly agricultural, partly trading. There are very few wealthy landholders, &c., who are able to aid their tenants.	Eleven thousand seven hundred and sixty-five people have left the taluk; none have returned; more are expected to go.	Twenty-one relief works have been started at a total sanctioned cost of Rs. 8,074. Five more works are proposed at a cost of Rs. 2,101. Many of the former are nearly finished. There are also several municipal works going on, which give employment to 60 or 70 people. This taluk does not require relief works so much as others, as there has been a moderately fair crop obtained, and those works that are now going on have afforded work to those that wanted it.	Three hundred people are daily fed at a kitchen started by the people. The money raised for this purpose is Rs. 481 in cash, and 671 seers of grain. Only Rs. 105 have been collected as yet.	The number on works at date of report is 1,254; the estimated numbers on 1st March, May and July are 150, 450 and 450 respectively. At date of report 300 were maintained by private charity. It is estimated that on the above dates the number will be 400, 400 and 300 respectively. The above calculation appears to be a very hopeful view of the future. There are now 1,254 people daily employed on works; yet it is calculated that on 1st March only 400 will come, as the others will have left in anticipation of commencing agricultural operations again.
Vyshaka crop failed. Out of 411 villages that owed Kartik crop, only 24 have saved anything, *viz.*:— Rágí from 2 to 3 annas. Ballar ... 3 " Oil-seed ... 2 " The seed sown in other villages failed from want of water. *Wet crop.*—In eight villages a crop of sugarcane, calculated at from 5 to 10 annas, was saved. Rice grown under the tank in the village of inám produced a full crop, and is the only village in which any rice was reaped. There is little hope of saving the rice crop in other villages, as there is no water. No prospect of further sowings. About 6 annas saved.	On wet lands Rs. 9,000 will have to be remitted, on dry Rs. 5,000, out of a land revenue of Rs. 1,26,732.	Mortality of cattle 5,843, of which 682 were sheep and goats. About 4,000 horned cattle and 1,000 sheep and goats more will die. Many have been removed to Mulnad. The remainder live on a small supply of ragi straw saved from the last harvest, and what little grass there is in gomals and hulganals declared free by Government to ryots' cattle.	In a few villages there is a little water for people and cattle for from one to two months. Villagers are excavating wells in tank beds and other low situations, and it is this water that is now being used. Eventually Government will have to help.	**CHANNARAJAPATNA** *Prices of the principal food-grains.* 1876. Rice ... 5,000 Rágí ... 1,500 Cholum ... 500 Horse-gram ... 300 A kandy is 160 seers.	Total population, 65,000. All but about 4,000, who are Brahmins and Mussalmans and are very poor, are sufficiently well off for the present; 6,500 are willing to earn wages on relief works. There are no wealthy landholders.	About 24,000 people have left for coffee plantations; about 6,000 are doing well there, the others are not so well off, as their wages are low; 700 have returned, and it is expected that others will return in one or two months more.	Plenty of work for some time to come for the people, unless large numbers come back from the Mulnads.	One hundred poor persons are fed daily by private charity at Nagamangala and Choonchangiri. Two more kitchens at public expense are proposed at a cost of Rs. 100 per mensem, to be supplemented by an equal amount from Government.	Seven hundred and fifty men were employed on 7 relief works; more are expected. People to be maintained by Government— By charity, 1st May ... 300 " 1st July ... 500 On works, 1st May ... 1,000 " 1st July ... 1,000
Average crop saved is given at— Rágí 1 anna. Rice 4 " Horse-gram 1 " Haraka 1 " Ballar 1 " Bengal gram 2 " No Vyshaka crop sown. The Deputy Commissioner reports 6 annas saved.	Remissions Rs. 8,000, out of a total of Rs. 88,176.	Three thousand head of cattle have died, and 4,000 are expected to die, out of a total of 18,896. About five-eighths of the horned cattle have been removed to the Mulnad. There is enough rice and rágí straw to support the remaining for two months.	There is a sufficiency of water for all but 200 villages, in which there is great scarcity. It is recommended that the people dig wells in tank beds for themselves where needed.	**NAGAMAN.** Grains are sold at per rupee— Rágí ... ... 7 seers Rice ... ... 6 " Cholum ... ... 6 or 7 "						

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
					TALUK. The stock of grain in hand is 1,000 kandies of rágí and 300 of rice. Grains are imported in sufficient quantities, but prices do not fall, nor are they likely to do so. At the same time they are not higher than elsewhere, though the taluk is one of the most distressed.	One-fourth of the ryots are purely agriculturists, and the rest partly so; many among the latter are poor. There are about 20 rich men in the taluk, but they do not help the poor. Some four or five gomdahs have hitherto lent grain, but it is now exhausted.	Many people have gone to Munjarabad, where they get bare subsistence on Government works or on coffee estates, as, owing to their condition, they are unable to do much work: 8,000 have left, but are not doing well, as they can only earn small wages. They may return, but none have done so as yet, and people are still leaving.	The following works are considered sufficient: 14 works employing 1,658 coolies at an estimated amount of Rs. 42,722; seven works are proposed to employ 2,550. Some works are also in progress under the Public Works Department.	Money has been raised in the taluk to feed the poor. About 70 aged and infirm who are unable to work are fed; the food given is rágí and rice, conji or gruel. This kitchen has been open two months, and Government has granted it Rs. 50 for January and February.	The number on works is 1,258; supported by charity, 100. Estimate for the future— *On Works. By Charity.* 1st March ... 4,400 200 1st May ... 3,000 100 1st July ... 1,500 50 The Deputy Commissioner considers that 200 will have to be gratuitously fed on 1st March.

HASSAN DISTRICT—continued.

NARSIPUR TALUK.

a

Out of 191 villages in the taluk, 90 lost their crops entirely, and the others obtained dry crops as follows:

	Annas.
Rágí	from ¼ to 2
Horse-gram	¼ to 1
Gingelly oil-seed	¼ to 1
Ballar	¼ to 1
Dhall	¼ to 1
Oil-seed	¼ to 1
Sáve	¼ to 2
Navane	¼ to 1

Rice crops obtained from below river channels are reported to have been excellent; in many cases the ryots had derived a clear profit of over Rs. 100 for every acre of wet land.

The Deputy Commissioner reports 10¼ annas saved.

b

Remissions, Rs. 1,500 land revenue, 500 mohuturfa, Rs. 2,000 out of a total revenue of Rs. 59,047.

c

Total number of agricultural stock was 71,783, of which 2,323 have died, and about 2,000 more will probably die, but they will principally be the old and worthless ones. Many have been removed to better feeding grounds.

d

In some of the tanks there is still two or three months' supply of water: when these fail, the Hemavati River will be the chief source of supply. Some of the villages are situated at a distance from its banks.

f

TALUK.

Local stocks are 300 kandies of rice and rágí in 10 villages The traders have a similar quantity in store. These grains are imported from the Mulnad.

g

There are both high and low castes, the latter predominating, and most of them poor. There are some well-to-do in both classes, but none of them are charitably disposed.

h

About 15,000 people have emigrated, and are no better off by so doing. Further emigration is unlikely, as people have returned from the Mulnad, on account of no work.

i

Rs. 333 have been sanctioned for relief works. As this is, however, insufficient, arrangements are being made to obtain sanction to estimates amounting to Rs. 3,000.

j

Rs. 250 have been subscribed for relief of the poor. It is considered necessary to open a kitchen at Narsipur for four months at a cost of Rs. 1,100. Poor travellers passing through this town are fed nightly at a cost of Rs. 100 per mensem.

k

406 people have been employed on works up to date.

The above is not the daily number, but contains every one employed so far. About 120 persons are gratuitously fed by townspeople.

Estimate for the future is —

	Works.	*Charity.*
1st March ...	150	400
1st May ...	150	400
1st July ...	200	500

BELUR TALUK.

a

No Vyshaka crop was raised. Kartik crop averaged—

Dry.

	Annas.
Rágí ...	2

Wet.

In the Maidan hoblis of Adgur and Halebidi—

	Anna.
Paddy ...	1
Sugarcane ...	1

In the Mulnad hoblis—

	Annas.
Sugarcane ...	2
Rice ...	4½

No prospect of further sowings. The Deputy Commissioner considers the Mulnad crop very much underestimated, as it is generally reported that the rice crop has been excellent this year. He also reports that 10 annas on the whole of the crops have been saved.

b

Remissions Rs. 13,000, out of a total of Rs. 1,16,945, or nearly ⅛th of the revenue. As this is a Mulnad taluk and none of the coffee revenue will have to be remitted, this amount is considered high.

c

Up to end of the year 5,537 head of cattle had died; anticipated deaths 5,000.

d

In five Mulnad hoblis there is a sufficiency of water. In the Mulnad hoblis Rs. 40 have been allowed to excavate wells where required: when this work is completed, a sufficient supply will be obtained.

f

TALUK.

Stock of grain in hand: Rice 30,000 kandies; Rágí 3,000. Rice, salt, dhall, &c., are imported, but not in sufficient quantities.

g

Part of the population is purely agricultural. The high caste people have some grain in hand, though a few of both high and low castes are obliged to beg, or live on jungle leaves, roots, &c. There are no wealthy landholders. The Patels to some extent supply food to their servants, and will continue to do so.

h

1,000 people have emigrated to the purely Mulnad taluks. It is supposed that they have bettered themselves, and there is no likelihood of their return before the rainfall.

i

Relief works at a sanctioned cost of Rs. 4,010 have been commenced. The coolies, however, have not bettered themselves on account of low rates of hire, and because of their weak condition not enabling them to do their required portion of work.

j

The subject of charitable relief is now under consideration.

k

The number of coolies on Government works up to date is 481. Estimated number on 1st March, May and July 200. The Deputy Commissioner remarks that the daily average is not given, that the estimate for the future is very low, and that in all probability nearer 2,000 than 200 people per day will be on the hands of Government later on.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Estimated amount of crop saved is— annas. Rice from 4 to 12 Rágí ,, ½ ,, 4 Horse-gram ,, ½ ,, 1 Dhall ,, 1 ,, 3 Oil-seed ,, ½ ,, 1 Sugarcane ,, 2 ,, 8 In some places rice and sugar cane are reported to have entirely failed. No further prospects of sowing this year, but if early rains fall, cholum, rágí, &c., may be sown. The Deputy Commissioner reports 9 annas saved.	Remissions on wet lands Rs. 7,935, on dry Rs. 7,680, total Rs. 15,615 out of a revenue of Rs. 1,19,912.	The number of cattle at the end of last official year was 105,831, of which 4,715 have died, many of the remainder have been taken to the Mulnad. At present there is a sufficiency of straw for the remainder.	In the majority of villages there is a scarcity of water. A sum of Rs. 2,000 is recommended to be sanctioned for the purpose of digging wells, as the work is very laborious.		**TALUK.** As rice has not been an entire failure, some people have a small supply on hand. The Amildar thinks that unless Government makes arrangements for the importation of grain, there is no likelihood of prices falling.	The population is chiefly agricultural, some are traders, but by no means well-to-do. There are no landholders or others sufficiently wealthy to assist the poor.	About 4,600 people have emigrated to Manantoddy, Coorg, &c., where they are nearly as badly off as before. None of the people have returned, and those left are still going.	A relief work (estimate Rs. 460) is now in progress. This, however, is insufficient. Other estimates have been submitted for sanction. The Deputy Commissioner remarks that works for many hundreds of people are forthcoming about Akkihebbal on the irrigation channel repairs, &c., but the people will not turn out; only about 40 or 50 daily at work. The repair of the Annyana katti will give employment to many people, as also the works on the channels, if the people go to them, and if imported labour is not used. He also recommends the carrying out of several other works.	A sum of Rs. 676, partly in grain and partly in money, has been privately subscribed to feed the poor. Rs. 50 per mensem has been sanctioned for the months of January and February for a kitchen in this taluk.	270 persons are now employed on Channel (Irrigation) and District Fund Works. Fed by charitable institutions, 70. It is estimated that by 1st March, 4 or 5 thousand people will have to be provided for.

Importation is from Comti. Private enterprise is at present sufficient.	Population 68,607; chiefly agricultural and but few of high caste. Very few landlords are in a position to help their tenants.	Some people have come from Dharwar and Chitaldroog with their cattle to the Mulnad. Some ryots of the taluk have gone to the Mulnad, but a few of them have since returned.	Twelve relief works have been sanctioned at a total cost of Rs. 6,182; also some agricultural works and local fund works for about Rs. 1,149. The works in hand and those that will be shortly started are sufficient for the present, and additional allotments to them will be made as required.	*Nil.*	The number of persons whom the Government has on its hands at date of report is—for relief on works 230; by charitable measures, none. The number, roughly estimated, that it is likely to have on its hands is— On Works only. On 1st March ... 1,500 „ May ... 1,500 „ July ... 500

REMARKS BY THE DEPUTY COMMISSIONER.

There is no actual famine in these two taluks, but there will be much distress, and considerable numbers may come on the relief works when the harvesting is over. Remissions will be required, and their amount should be notified as soon as possible, as the fear of levies in the hot weather paralyses the efforts of the people. The repair of two large tanks is desirable, one being kept for the hot weather. Two large road-works also will afford relief as required. The condition of the Honnali Taluk is rather better than that of Channagiri.

BANAVAR TALUK.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The dry crop has been entirely lost; of the wet, about one-fourth, or 3 annas, has been saved.	Rs. 50,000, out of a total revenue of Rs. 1,14,879, must be remitted.	8,952 head of cattle have died, up to date; expected to die 8,500. Halbani rents have been remitted and State forests thrown open for grazing, and some of the ryots have removed their cattle to the Mulnad for grazing purposes. These measures have saved many. Further suggestions on this point will be made after trying the working of the measures now adopted.	Almost all the tanks have dried up. A scanty supply of water is obtained from wells. It is probable that many of the wells from which water is now obtained will dry up. Wells will have to be sunk in the beds of tanks and in low grounds.	*Prices of the principal food-grains.* Rice: 7th October 1876 ... Srs. 9; 14th " " ... 8½; 21st " " ... 8; 28th " " ... 6½; 4th November " ... 5½; 11th " " ... 5½; 18th " " ... 6; 25th " " ... 7; 2nd December " ... 7; 6th " " ... 7½; 16th " " ... 7; 22nd " " ... 6½; 30th " " ... 6½; 5th January 1877 ... 6½. Ragi: 11; 10½; 10; 6; 6; 8; 7; 7½; 7½; 8½; 7½; 7; 7; 7. Six years' average—Rice, 1st sort, 12¼; 2nd sort, 14¼: Rági, 42.	**TALUK.** Local stocks as far as can be ascertained are 7,000 kandies of grain. Hassan, Bangalore and the Mulnads are the centres. Private enterprise is sufficient. There has been no fall in prices, owing to importation.	The population is 55,346, and mostly consists of high caste. Of these about 99 per cent. are poor. There are both pure agriculturists and partly agriculturists. Of the latter class about 50 per cent. are artisans. The landholders are generally poor, and therefore not in a position to aid their tenants.	The percentage of the population who have emigrated is not stated. They are reported to have bettered themselves. Further emigration is probable.	Five kattis and 4 tanks are being repaired and 20 wells sunk, at present at a cost of Rs. 3,814. Advocated are—24 wells, 1 road from Jangut to Arsikere (Rs. 3,900), or in lieu 2 tanks—1 at Yegati (Rs. 10,000), and another at Kadur (Rs. 6,000). Of the first, 20 wells have been sanctioned and taken in hand, and estimates are awaited for the 4 others from the taluk. For the second funds are needed. The Amil has recommended the repair of 2 kattis and 1 well at a cost of Rs. 649, but funds are needed.	A private kitchen is opened at a monthly cost of Rs. 100. A monthly subscription of Rs. 500 has been sanctioned by Government to supplement private donations, of which Rs. 300 have been allotted to Banavar, which amount will be utilised from 1st January 1877.	The number of persons Government has on hand on works is 3,300; by charitable measures, 35. The number that Government is likely to have on its hands, roughly estimated, is— On 1st March ... 9,000 " 1st May ... 19,000 " 1st July ... 49,000

Ragi: 9; 9; 9; 8; 7; 8; 7; 7; 7; 7; 7; 7½; 7½; 7½. Six years' average—Rice, 1st sort, 12; 2nd sort, 16: Rági, 38.	**TALUK.** Mangalore, Hassan and Bangalore are the centres of supply. Private enterprise is considered sufficient. There is about 500 kandies of grain in stock.	The population is 89,919, and mostly consists of high caste. Of these about 99 per cent. are poor. There are pure agriculturists and partly agriculturists. Of the latter class about 15 per cent. are artisans. The landholders are generally poor, and therefore not in a position to aid their tenants.	About 25 per cent. of the people have emigrated. Further emigration is probable.	Three kattis and 4 tanks are being repaired and 6 wells sunk at present, at a total cost of Rs. 2,531. The following works are advocated: 1*st*, 12 wells; 2*nd*, a road from a point in the Hallebede road to the Sakarepatam-Banavar road, or in lieu a tank near Lakke (Rs. 3,900); 3*rd*, to the south-east of the taluk a tank to be selected hereafter. Of the former, 6 wells have been selected and taken in hand, and estimates for the others are awaited from the Amil. The second and third proposals await the orders of Government.	Two private kitchens are opened—one at Chikmagalur and another at Kalsapura—at a monthly cost of Rs. 200 and 20 respectively. A monthly subscription of Rs. 500 has been sanctioned by Government to supplement private donations. Of these Rs. 100 have been allotted to Chikmagalur, which amount will be utilised from 1st January 1877.	The number of persons Government has on hand at date of report is—on works 70, and for charitable relief, 200. A rough estimate of the number which it is likely to have on its hands is given below: On 1st March ... 400 " 1st May ... 200 " 1st July ... 100

KADUR

a	*b*	*c*	*d*	*e*
Kharif 6 annas, or half an average crop; rabi, *nil*. No further prospect of sowings. About half an average crop for the whole taluk will be saved.	Amount to be remitted Rs. 7,000, out of a total revenue of Rs. 1,09,000. Only portions of the taluk have been affected with drought.	5,947 head of cattle have died up to date, and 1,827 more may be expected to die hereafter. The measures already adopted by Government and the people for saving the cattle, their result and suggestions for the future are the same as are given for the Banavar Taluk.	Information given for this column is the same as for the Banavar Taluk.	**TARIKERE** *Prices of the principal food-grains.* Rice, 1st sort. — Srs.: 7th October 1876 ... 9¼; 14th „ „ ... 8¾; 21st „ „ ... 6¾; 28th „ „ ... 6½; 4th November „ ... 6½; 11th „ „ ... 7¼; 18th „ „ ... 7¼; 25th „ „ ... 6; 2nd December „ ... 6; 9th „ „ ... 6¼; 15th „ „ ... 7; 22nd „ „ ... 7; 30th „ „ ... 7¼; 5th January 1877 ... 7¼ Rágí: 9¼; 9¼; 7¼; 7; 7; 7; 9; 9; 9; 8; 8; 8; 8; 8 Six years' average prices—Rice 14, and rágí 34.

f	*g*	*h*	*i*	*j*	*k*
TALUK. The local stocks, as far as ascertainable, are 1,430 kandies of grain. Aymor and Benkipur in the Shimoga taluk, Siralkopa in the Shikarpur taluk, Lakavali in the Lakavali taluk, are the centres whence supplies are drawn. Private enterprise is sufficient.	Population 96,894. Other information is the same as given for Chikmagalur Taluk.	No emigration has taken place in this taluk. No further emigration is probable.	1 tank and 3 kattis are being repaired and 1 well sunk, at a total cost of Rs. 2,097. The following works are advocated: 1*st*, the excavation of 6 wells; 2*nd*, the Adjumpur-Chenegeri Road, Rs. 13,000, or in lieu a tank near Adjumpur, Rs. 5,000; 3*rd*, a tank in the vicinity of Singadanabulli. (Nagananakéré.) The Amil has also advocated the following works being taken in hand: 1*st*, katti for Rs. 219, 2*nd*, for Rs. 178, and 3*rd*, for Rs. 127, or Rs. 524 for all three, but funds are needed to sanction them.	A private kitchen has been established by Mr. Compalais, at a monthly cost of about Rs. 150. A similar kitchen is opened at Adjumpur by private subscription. A monthly subscription of Rs. 100 has been sanctioned by Government to supplement private donations and allotted to this taluk, which amount will be utilised from 1st January 1877.	The Government has 62 persons on hand at date of report on works, and 150 are receiving charitable relief. Rough estimate of number Government is likely to have on its hands on— 1st March ... ... 3,010 1st May ... ... 3,785 1st July 3,375

CHITALDROOG DISTRICT.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The entire crop seems to have been lost.	Half of the wet assessment has already been remitted. It is recommended that the moiety of the dry land assessment, Rs. 6,000 uncollected, should be deferred in preference to being remitted. The total realizable revenue is Rs. 51,753, and the portion remitted appears to be Rs. 19,876.	Mortality among cattle ... 15,257 Mortality among sheep and goats 8,884 Total ... 24,141 It is feared that all the cattle will perish from want of fodder and water and other causes. No prickly-pear to be had in the taluk. Out of the surviving 19,448 head of cattle, about 15,000 were taken to the Mulnad. Half of them are said to have perished there, and the rest are returning.	Up to February next a sufficient supply of water can be obtained from wells and the beds of tanks. After February wells will have to be sunk.	**BUDIHAL** Between 1st October 1876 and date of report the prices of ragi and rice have varied as under:— Ragi, per rupee, from 11 to 7½ seers. Rice, „ from 6 to 5½ „ „ 2nd sort, from 7 to 5½ „ At one period rice fell as low as 4½ seers. Average price of these grains per rupee, for the past six years—Ragi, 50 seers; rice, 14 and 15 seers.	**TALUK.** The quantity of grain in the taluk is estimated to be 300 kandies. This stock of grain is not used; the people live on purchased grain, which is imported from Bellary and Bangalore railway stations. Of late rich royts have imported grain to sell. Further supplies are anticipated from the above places alone. Considering the private enterprise displayed, supplies will be sufficient to meet all requirements. No fall in prices is anticipated.	The occupations of the population of this taluk are as below:— Agriculturists 27,483 Labourers ... 5,342 Traders or dealers ... 620 No particular occupation... 665 Beggars ... 137 Total population ... 34,247 Of the men of each occupation there are both high and low caste. No help to be expected from the few rich agriculturists in the taluk.	Number of people who have emigrated is about 700. Of these some are returning; Further emigration is probable.	The number of relief and other works started since April is as follows:— Works: No. of works; Amount of estimate Rs.; No. of men employed. Relief ... 6; 1,932; 2,180 Irrigation .. 1; 754; 300 Local Fund 7; 4,497; 171 Municipal .. 1; 100; 104 Total ... 15; 7,273; 2,755 Estimates amounting to Rs. 2,391 have been sent up for further works. In case of the above works proving insufficient, estimates for further relief will be submitted.	To afford relief to travellers and aged and infirm, a sum of Rs. 500 has been subscribed. Out of it Rs. 125 have been realized. On the realization of the remainder, application will be made for an equal subscription from the Government.	The number of men whom the Government has on its hands at date of report for relief by works is 2,180; by charitable measures none. The future numbers are expected to be as under:— On works. By charitable measures. 1st March, 1st May, 1st July } 3,000 3,000
The estimated return of crop which has been saved throughout the taluks is 2 annas out of the monsoon crop only, or one anna and a half on the whole cultivation. There is no prospect of further sowings.	Rs. 50,000, out of a revenue of Rs. 5,8644, must be remitted.	The deaths among cattle have been 15,156 up to date, and the anticipated deaths are about 5,000. No steps have been taken by Government or by ryots to stop the mortality. There is no prickly-pear in the taluk.	There is at present sufficient water for drinking in almost all the villages of the taluk, and estimates have been sent in to sink wells in those villages where there is scarcity of water.	**CHITALDROOG** *Prices of the principal food-grains.* Number of seers per rupee. Week ending: Wheat; Rice, 1st sort; Rice, 2nd sort; Cholum; Ragi; Dhall; Horse gram; Bengal gram. 8th Oct. 9 8 10 12 12 8 9 8 15th „ 8 7 8 11 11 8 7 8 22nd „ 7 6 6½ 8 8 7 6 8 31st „ 7 5 6 7 8 6 6 7 8th Nov. 6 5 6 7 7 5½ 6 6 15th „ 6 5 6 7 7 5½ 7 6 22nd „ 5 4½ 6 7 7½ 5½ 6 6 30th „ 5 4½ 6 7 7 6 6 6 8th Dec. 5 4½ 6½ 7½ 8 6 6 5½ 15th „ 5 5 7 8 8½ 6½ 6 5 22nd „ 5 5½ 7½ 8½ 8½ 6½ 6 5 30th „ 5 6½ 7½ 8 8½ 6½ 6 5 Average of last 6 years ... 9½ 11½ 14 35½ 40 9½ 24½ 10½	**TALUK.** Very few families in the taluk have stores of grain. The merchants import large quantities from Bangalore, Bellary and Davangere. The price of grain in consequence of these large importations has slightly fallen.	The population is 69,409; and consists chiefly of the upper classes, only $\frac{1}{10}$th portion being low castes. The people are generally very poor, there being only a very few rich men. The population of the taluk is 69,409. Of these 41,409 earn their livelihood by agriculture, and the remainder by other professions. Among the agricultural classes there are none who are rich enough to afford relief to their tenants and others.	Half of the agricultural classes have gone to the Mulnad taluks, and to the South Canara District. Not finding relief in those parts of the country, some of them have since returned. There is a likelihood of further emigration.	The relief works now in progress in the taluk are given below: Imperial fund works sanction Rs. 480; district fund works sanction Rs. 2,488; relief works sanction Rs. 22,669; grand total Rs. 25,637. Works for which estimates have been received amount to Rs. 11,256. In addition to these, works to the amount of Rs. 30,000 will be required in the taluk.	Private subscriptions have been raised by a famine relief meeting. The money thus collected, having been supplemented by an equal sum from Government, is now being appropriated for feeding the old and sick men, women and children. Ragi is given out as follows:—Twice a week at Chitaldroog, ¾ of a seer for an adult per day, ½ a seer for a boy or girl a day. The number of persons to whom relief is given is about 500.	The number of persons whom the Government has on its hands at date of report is, on works 850 and by charitable measures 500. The number, roughly estimated, which it is likely to have on its hands is, on— 1st March ... 1,000 1st May ... 1,200 1st July ... 1,800
The crops, *viz.*, white jowari, Bengal gram, remaining to be harvested are estimated at 2 annas; but these are only in some swampy parts of the taluk. There is no vyshaka or spring crop in this taluk. The proportion of crop saved is about 2½ annas.	The amount of revenue to be remitted on account of absconding of ryots and failure of crops is estimated at Rs. 15,000. The total revenue is Rs. 91,479.	Mortality among the cattle up to date 2,859, and anticipated up to March next 1,500. No want of fodder is felt. Further measures for the maintenance of cattle will have to be adopted by Government in case of fodder failing.	In most parts of the taluk no want of water is at present felt, but 16 new wells and the deepening of 11 old ones is necessary. Estimates for some of these works have been sent up, and for others they are in course of submission, while in the case of some further works estimates will be prepared and sent in due course.	**DAVANGERE** The weekly prices of rice, ragi, jowari, and dhall have fluctuated from 1st October 1876 up to date of report; but are not specified. The average prices for the 6 years of the grains named is given below:— Rice, 1st sort ... ... 10½ seers. „ 2nd „ ... ... 11½ „ Jowari ... ... 44½ „ Ragi ... ... 55 „ Dhall ... ... 13 „ Bengal gram ... ... 11½ „ Wheat ... ... 12 „ Moong ... ... 17½ „	**TALUK.** The stock of foodgrains probably amount to from 15,000 to 18,000 kandies. Supplies are imported from Dharwar and from the Mulnad taluks of the Shimoga district. Private enterprise exists to a considerable extent, and will have a tendency to lower the prices; this is counteracted by exportation.	The population of the taluk is 99,135 and consists of both high and low castes. One-fourth of it appears to be rich and three-fourths poor. Their occupations are— Agriculturists 67,974 Artisans ... 30,148 No particular occupations 81,161 1,19,278 Of the agriculturists there are many wealthy and able to assist their tenants, but they are not likely to do so.	One-eighth of the population have emigrated to Dharwar and the Mulnad taluks, having no means of earning their livelihood at home. They are stated to have found employment on coffee plantations. These men will be likely to return to this taluk if the next rains fail. Further emigration of some to the Mulnad is probable for the sake of personal subsistance and of fodder for the cattle.	Relief works under execution are— Rs. Imperial Works ... 12,013 Local Fund Works ... 21,789 Total 33,802	The harvest of this year's crop has relieved the people a good deal from the distress which was prevailing previous to it. Up to 31st October last relief was afforded by a subscription raised from well-to-do men both in Davangere and Harihara by distribution of cooked meals. Government has sanctioned a sum of Rs. 200 for the relief of the aged, infirm, &c.; of this a sum of Rs. 37-13 has been spent up to date.	The number of persons whom Government has on hand on works at date of report for relief is 250. The anticipated numbers are— On works— On March 1st, „ May, „ July } 1,000

The dry crops have entirely failed. The yield of paddy, ragi, and jowari crops is estimated at 2 annas where they have not failed. The outturn of the vyshaka crops is also estimated at 2 annas. Besides the food-grain for men, jowari, navany, and kurlay for cattle are being sown for the next vyshaka crop. The whole outturn will not exceed ¼ of an anna.	Out of Rs. 76,884, the amount of revenue to be remitted is estimated at Rs. 74,600. *1st.*—From the desertion of ryots. *2nd.*—From the failure of crop. *3rd.*—From there being no purchasers for the lands of the defaulters.	The mortality amongst cattle amounts to 12,403 up to date, and further heavy loss is anticipated. Ryots refuse to feed their cattle on prickly-pear. Up to date cattle have been fed on roots and leaves of date trees on the banks of nalas and on grass purchased. The straw obtained from the kartik crops harvested, and the remaining date leaves, might serve for fodder for 20 days more. If Kuplay wells are sunk in the extensive tract of uncultivated lands in this taluk, and grass be sown and looked after, and an establishment maintained, it might serve as fodder.	In all parts of this taluk the want of water is felt, but for the villages which are situated near the Haggary and Garanye nalas, the water-supply will answer by daily digging small pits in their beds. The want of water is much felt now by other villagers, and it will be so after two months by the inhabitants of the villages situated close to the above two streams. There will be some relief by the further excavation of old wells, and by removing the silt in the tanks.	**TALUK.** The stocks of food grains might amount to 2,500 kandies. Supplies are imported from Bellary, Ryadroog, and from Chitaldroog. The importation from the above places may be expected to continue, but owing to the limited means at the disposal of the people, the supplies imported are little, and no fall in prices is anticipated.	The agriculturists comprise both high and low castes; they are poor. There are no artizans. Of the agriculturists none are able or likely to aid their tenants. The total population is 71,194.	About 20,000 men have emigrated to other places, where it is said they are starving; some have returned. Further emigration is probable.	17 relief works, at an estimated amount of Rs. 14,553-8 are under execution. These are insufficient. The construction of roads between large villages will be a suitable measure of relief. Exaction of full day's work and daily payments are recommended.	No charitable relief is given.	The number of persons whom the Government has on its hands at the date of report for relief on works is 920. Number of persons, roughly estimated, whom the Government is likely to have on its hands for relief on works— On 1st March ... 1,000 „ 1st May ... ... 800 „ 1st July ... ... 500 No relief is to be afforded by charitable measures.

The crops harvested and remaining to be harvested are estimated to be 1 anna. These are both vyshaka and kartica crops, in the following proportions:— Vyshaka ... ½ Kartik ... ½ Total ...: 1 anna.	The amount to be remitted is estimated at Rs. 50,000 or nearly the full amount realised last year.	The total number of cattle in the taluka in March 1876 was 157,000, of which 20,000 have died, 100,000 have been driven to pasture elsewhere, and 15,000 are expected to die. No special measures have yet been taken by Government to preserve the cattle.	Want of water not much felt, nor is it likely to be so. There are two streams in this taluka, *viz.*, Vedavaty and Soomamukhy. If pits are dug in the beds of these streams, the want of water for the cattle of all the villages situated close to them will be met. To meet the requirements of other villagers, wells may be made in the beds of tanks and other places.	**TALUKA.** The stock of food-grains might amount to 2,000 Krishnaraj kandies. Supplies are imported from Bangalore and Bellary, and from the Mulnad talukas of the Kadur and Shimoga Districts. The importation of supplies is likely to continue from the abovementioned two railway stations. Private enterprise is but limited, and there is a tendency to an increase in prices.	The population of the taluk is 58,530, and consists of three parts high and one-fourth part low castes; of the whole, the well-to-do are about one-sixteenth of the population. The agriculturists number 34,215 and artisans 13,513; of the former none are able to aid their tenants.	One-fourth of the population have emigrated to other places. Of those who have emigrated it is said that some are earning their livelihood by daily labour, some are returning to their places owing to the climate not agreeing with them. Further emigration is probable.	Number of relief works under execution 21; amount of estimate Rs. 14,814. The construction of roads between high roads and villages, and the excavation of wells, will be a measure of relief.	Charitable relief is given to aged and infirm travellers by Government.	The number of persons whom the Government has on its hands for relief at the date of report is— On works ... 500 By charitable measures 100 Number of persons, roughly estimated, whom the Government is likely to have on its hands for relief is— 1st March. 1st May. 1st July. On works } 15,000 15,000 15,000 By charity }

CHITALDROOG DISTRICT—continued.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The estimated amount of the crop which has already been reaped, and which is yet expected to be reaped, is calculated at 2¼ annas, of which nearly all is Kartik or November crop. There is no further prospect of sowings.	Rs. 15,000 may probably have to be remitted out of a total of Rs. 38,206.	12,239 head of cattle and agricultural stock have already died and about 5,000 more deaths are anticipated. There is no prickly pear in the taluk. The people have taken a large number of their cattle to the Mulnad and other places where pasture is procurable, and they are not likely to return till they hear of rain-fall and growth of grass in their taluk. Such of the cattle as have not been so removed are being fed with wild leaves and roots, or with straw or stalks purchased at high prices from persons in good circumstances who may have them in stock. No measures can be suggested for the future.	There is no place which is entirely destitute of water-supply. But in villages where the existing water-supply is scanty difficulty is anticipated up to the next rains, and in such cases, fresh wells as a relief measure may be sunk; for which purpose steps are being taken.	**HOSDOORGA** *Prices of the principal food-grains.* NUMBER OF SEERS PER RUPEE. 5th Oct. 9 10 10½ 7 ... ... 8 8 12th „ 8 11 10 ... ... 19th „ 7½ 8 7½ ... ... 26th „ 6½ 7½ 7 6 ... ... 7½ 6½ 2nd Nov. 5½ 6 6 5 ... 6 7 6½ 9th „ 5½ 7½ 7 5 ... ... 7 7 16th „ 7 8 8 5 ... ... 7 7 23rd „ 7 7½ 7½ 5 ... ... 6 6 30th „ 6½ 7 7 5 ... 6 6 6 7th Dec. 6½ 8 7½ 5 ... 6 6 6 14th „ 6 8 8 5 ... 6 6 6 21st „ 6½ 7½ 7½ 5 ... 6 6 6 28th „ 6½ 7½ 7 5 ... 6 6 6	**TALUKA.** Nowhere in the taluka is there a large supply of grain in stock. The merchants are all of limited means. A certain portion of the ryots who had 5-anna crops have from 4 to 1 month's supply, others have none. Supplies are being imported from Terrihere, Cheemagere, Davangere and Shimoga in this province, and from the Canara zila Huladi, &c., in British India, and these supplies may continue for the future also. Railway stations are too far away from the taluk. A few people of the taluk as well as merchants from abroad import grain for sale. As the demand exceeds the supply, the prices have not fallen.	The population consists of both high and low castes, of whom the former are more than the latter. There are few well-to-do people. The proportions of the population are as follows:—Cultivators and sub-cultivators 38,462. People carrying on other professions or artisans 17,252. People neither agricultural nor artisan 2,029. Total population 57,743. The landholders who are wealthy, able to aid their tenants, and likely to do so, do not number more than 50, and these only help those in whom they are particularly interested.	About 1,591 ryots and others have emigrated with their cattle to the Mulnad country in search after pasture. But as large emigrations have taken place to those parts from other taluks also, scarcity of fodder as well as prevalence of cattle disease appear to be experienced there; but this being the harvest season in those parts in coffee jungle, &c., the emigrants appear to have found means of livelihood. Some of them have returned to their homes after suffering from the climate and from heavy loss of their cattle. Further emigration appears probable.	The number of relief works already started is 29, at a total sanctioned amount of Rs. 11,605-11; but these being insufficient, further works are considered practicable, in the following order of their necessity: 1*st*.—Hollalkere Summuth. Repairing of the Channa-Patna-Katti. 2*nd*.—Repairing of the Arsanagatta tank. 3*rd*.—Ramguri Summuth. Noolenoor, Dunie, Kaneehully tanks and Katti repairs. 4*th*.—Bagur Summuth. Repairs to Katti and tanks of Hebbali and Chicka-ye-guti. 5*th*.—Hosdoorga Summuth. Repairs of Kattis of Athigatta and Hoorlihullee. But the ryots do not take advantage of relief works, on the plea that they are unaccustomed to do earthwork, &c., they prefer emigrating to places where they can find employment, such as coffee plantations, &c., where they expect the work to be easy.	Out of the grant of Rs. 200 from Government, a sum of Rs. 150 has been spent in feeding the needy with ragi balls, &c. The remaining money will, in the same manner, be spent. At the kusbali of Hosdoorga there is a public kitchen opened by private subscriptions, and a similar one is about to be opened at Hollalkere.	The number of persons on hand at the date of report (1) on works, (2) by charitable measures, is 504, and the number, roughly estimated, which the Government is likely to have on its hands on— 1st March 1877 is 700. 1st May 1877 is 400. 1st July 1877 is 300. The small number shown for May and July is in consequence of the rains anticipated in those months, when the ryots may revert to their usual ploughing operations.
In the villages along the course of the Chinna-Huggry river some Kartik crops have been saved by wells dug. The outturn is 10 annas in the rupee. For the Vyshaka crop seed has also been sown and the outturn expected is 6 annas. Excluding black cotton soil, dry crops have been raised in certain localities, and the outturn is 6 annas. As the tanks did not receive sufficient supplies of water this year, the Kartik wet crops have failed, and there will be no sowing for the Vyshaka. In 16 villages of the Bilchode-hobli the lands, almost all black soil, have been left waste. Likewise, in 10 villages of the Soke-hobli, and in 20 villages of the Jagalore-hobli, the dry crops have generally failed. There will be no further sowing during the current year. The yield of the whole taluk is 2½ annas only.	Remissions Rs. 18,921, out of a total revenue of Rs. 26,852.	About 6,268 head of cattle have died, and it is thought that 6,000 more will die before the next rains set in. Some of the cattle have been taken to the Mulnad taluks. The ryots are not aware of any means for saving their cattle. There is little or no prickly pear in the taluk.	Except in 25 villages situated near the banks of the Chinna-Huggry river, scarcity of drinking water is more or less felt. The existing wells will have to be deepened, and new ones sunk wherever they are found to be requisite.	**KAUKUPPA** *Prices of the principal food-grains.* No. OF SEERS PER RUPEE. Oct. 1876. 1st week ... 8 9 13 13 9 9 9 2nd „ ... 7½ 8½ 12 11½ 8 8½ 7 3rd „ ... 6½ 7½ 9 9 8 8 6 4th „ ... 5½ 6 8 8 6 8 6 Nov. 1876. 1st week ... 5½ 6 8 8 6 6 6 2nd „ ... 5½ 6 8 8 6 6 6 3rd „ ... 5½ 6 8 8 6 6 6 4th „ ... 5½ 6 8 8 6 6 6 Dec. 1876. 1st week ... 5½ 6 7½ 7½ 6 6 6 2nd „ ... 5 6 7 6½ 5½ 5 6 3rd „ ... 5 6 7 6½ 5½ 5 6 4th „ ... 5 5½ 7 6½ 5½ 5 6 Six years' average prices... 12½ 13½ 42 47½ 14 15½ 35½	**TALUKA.** Some of the ryots have got sufficient stores of grain. The merchants import grain in small quantities from the neighbouring markets in the Bellary District. The prices are not likely to go down.	Total population of the taluk, 38,782. The people are in general poor. There are only a very few well-to-do families. The number of cultivators is 26,355, and there are 12,427 of other professions. There are about 25 rich men in the taluk, but they are not likely to assist any of the people.	About ⅞ths of the people have emigrated to the Bellary District, and none of them have returned, as they have found relief there. If sufficient relief works are not started in the taluks soon, there will be further emigration to other parts of the country.	Relief works of the value of Rs. 300 have been sanctioned, and estimates for works of the value of Rs. 1,700 are pending sanction. Estimates for more relief works are in course of preparation. If sanction is granted up to Rs. 12,000 for making village roads, raising tank bunds, and repairing and sinking wells, the poor in the taluk will find relief. The anicut across the Chinna-Huggry river, for which an estimate is prepared by the Irrigation Department, may be advantageously built during the present famine season.	Notwithstanding the efforts made, no private subscriptions have been raised in the taluka for feeding the infirm, old, and children. Unless Government sanction a reasonable sum, nothing can be done in this respect.	About 175 men are now employed on district fund works. The following are the estimated numbers that will have to be provided with work in future: On March 1st 1877 ... 800 „ May 1st „ ... 1,500 „ July 1st „ ... 2,000

CHITALDROOG DISTRICT—concluded.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Of the dry crops for Kartik, the outturn is one anna in the rupee only. A small extent of wet land was cultivated for the Kartik crop for want of water in some of the tanks in the taluk. The outturn of the whole was only three annas in the rupee. For the Vyshaka crop, most of the lands have not been cultivated at all. Some lands will be cultivated by means of wells, &c., and the outturn will, it is expected, be about two annas. Most of the trees in the gardens have died.	The yield of the taluk may be about 2 annas in all. In consequence of the scanty falls of rain both during the past year and this year, most of the lands were left uncultivated, and the ryots, with the exception of a few here and there, are in a very reduced condition. Coercive measures have been in many instances adopted for the recovery of the last year's Government demands against the ryots. This year they are scarcely able to maintain themselves and their families, so it is presumed that about Rs. 30,000 will have to be remitted this year, out of a total of Rs. 69,896.	The number of cattle in the taluk was 123,060; of these 4,544 died up to the end of November. About 20,000 cattle have been taken to the Mulnad in search of fodder. It is expected that about half of the present number of cattle will survive. There is very little prickly pear in the taluk. The ryots have done their utmost to save their cattle, even feeding them on leaves of trees. Should permission be obtained for the ryots to graze their cattle in the Amrut Mahal Kavuls lands in other parts of the district, some relief would be afforded.	At present there is sufficient drinking water in all the villages of the taluk. There are many natural springs, wells and tanks in it. Should these dry up, measures will then have to be adopted to remove the silt as well as to deepen them, and in certain localities new wells will have to be sunk.	**POWAGADA** *Prices of the principal food-grains.* Grains. / 1st October 1876. / Last week in December 1876. / Average price for last six years. Rice, 1st sort ... — Seers. 8 — Seers. 5 — ~~Seers. 15½~~ " 2nd " ... — 9 or 9½ — 5½ — 18½ Ragi ... — 11½ — 7 — 37½ Jowari ... — 11½ — 6 — 38 Horse-gram ... — 10 — 6 — 32½ Bengal " ... — 10 — 6½ — 9½ Wheat ... — 8 — 5 — 9	**TALUK.** Only a few families, here and there, have sufficient supplies for their own use. Grain is now being imported from different parts of the Bellary District, as well as from Bangalore. Notwithstanding the importation of grain, the prices have remained stationary.	The total number of people is 52,445; of these 33,800 are cultivating ryots, the remaining 18,645 are of other professions. The people are in general poor. There are a few rich men here and there, and able and willing to assist their tenants and others.	About 5 or 6 thousand people emigrated to the Mulnad country, and about 2 or 3 thousand have gone to the neighbouring taluks of the Bellary District, where extensive relief works are being carried out. Some of the men have since returned from the Mulnad, as they could find no relief there, and the climate is unwholesome. Those that went to Bellary District have not returned, as they found relief there.	Seventeen relief works have been sanctioned. The total amount of estimates for them is Rs. 3,799. Out of this sum Rs. 1,610-15-2 have been spent. The relief works now in progress are not sufficient. Estimates will be submitted for more relief works in due course.	Private subscriptions amounting to Rs. 2,500 were raised, and about 3,800 souls are being fed daily since August last. The money has been almost spent. 200 souls are being fed daily since 14th December 1876 from the Government grant of Rs. 100. More money is wanted.	The numbers relieved at present are— On relief works ... 1,200 On district fund works ... 360 Fed by Government at Powagada daily ... 200 TOTAL ... 1,760 Besides the above, 3,800 men, women and children are being daily fed in the villages by private subscriptions. The number of persons that will have to be maintained on relief works, &c., on 1st March, 1st May, and on 1st July 1877 will be about 10,000 respectively at least. The number would be higher than this, were it not for the extensive relief works that are now in progress in the neighbouring taluks of the Bellary District, to which the people of this taluk resort in large numbers.

OBSERVATIONS BY THE DEPUTY COMMISSIONER.

(*a*).—The district is almost entirely burnt up: the dry crops have been lost in almost all parts.

(*b*).—Large remissions will be required.

(*c*).—Very heavy loss of cattle from starvation has occurred, and a large number of further deaths may be expected. For fodder little can be done, as prickly pear is scarce, importation would be expensive, and even the grazing in the Mulnad is unhealthy for the cattle.

(*d*).—A very large number of wells have been and are under construction, but a water famine is the chief danger.

(*e* & *f*).—The two railway stations have been the saving of the people, and imports are likely to continue.

(*h*).—Emigration has not done the people much good.

(*i*).—A large number of tank repairs and other minor works have been and are in progress. The improvement of the sanitary condition of the villages, and of their communications with market towns, is desirable.

(*k*).—The estimates of relief for the future are a maximum.

STATEMENT B.

ABSTRACT OF STATEMENT A

AND

OTHER INFORMATION

RELATING TO THE

DISTRESSED DISTRICTS IN THE MYSORE PROVINCE.

N. B.—This Abstract is compiled from Statement A, the weekly progress statements issued by the Chief Commissioner of Mysore, and the original reports of the Amildars, Deputy Commissioners and Commissioners.

STATEMENT B.

ABSTRACT OF THE REVIEW AND FORECAST OF THE CONDITION AND PROSPECTS OF THE MYSORE PROVINCE.

* These figures also include the number of persons relieved by charity.

STATEMENT B.

	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shewn separately. If there be any prospect of further sowings, it should be mentioned.	An estimate as close as may at the time be practicable of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.	The course of prices weekly of each of the principal food grains from October 1st up to the date of report in each case, and six years' averages.	The local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being or may be drawn; and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural; and if the latter, in what proportions urban or artizans also the character of the landholders, whether large, wealthy, able to aid their tenants, and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or *merely gone elsewhere to starve*, or are they returning) and whether further emigration is probable.	The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.	The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
BANGALORE.	After making allowance for the proportions of dry and wet cultivation, the average amount of the crop saved is:— One-eighth in 7 taluks. One-sixth „ 1 „ Nil „ 1 „ TOTAL 9 „	The remissions were estimated, in November last, at Rs. 5,63,750; but, according to the taluk returns now submitted, this amount is reduced to Rs. 2,76,460.	The mortality among cattle from scarcity of fodder and water amounts to 13,951 head; and 9,532 more are expected to die. There is little fodder except *leaves of trees*; but State forests have been thrown open and prickly pear recommended as fodder. Hulbani sales have also been abandoned, and ryots have been recommended not to sell but to use their ragi straw, and to sow cheena or Bengal gram in beds of dried tanks, so as to produce fodder for cattle.	Most of the tanks, wells, and reservoirs have become dry. Much distress is expected from the scarcity of water. Ryots have, however, been recommended to sink wells in beds of tanks, rivers, and nullas, and to remove silt from tank beds and wells.	Prices were mostly higher at the close of the year than during the preceding three months, and averaged about 8 seers of ragi and 6 of rice per rupee, but they have since improved.	The local stocks are insufficient for the requirements of the people. Importation of foodgrains is going on through the Bangalore, Malur, and Radgody railway stations; but the supplies are not considered to be sufficient for the requirements of the people. Private enterprise may ultimately maintain supplies but a fall in prices is not expected.	The larger proportion of the population are agriculturists, and the majority of the people are poor. There are a few well-to-do landholders, but they are not likely to aid their tenants.	A considerable number of the labouring classes have emigrated to coffee districts in search of employment. Whether they have bettered themselves or not, is not known; but further emigration is probable.	The minor works which were set in hand at the beginning of the distress were found to be inadequate; and further works—such as constructing roads, sinking wells in, and removing silt from, beds of tanks, strengthening bunds of tanks, levelling ruined fort at Hoskote, and dismantling Bangalore fort walls and filling ditches,—have been recommended to be undertaken.	There are relief kitchens at Peltah and Yellathere, and in the cantonment of Bangalore, where travellers, and the aged and infirm, are fed. Private subscriptions have also been raised in nearly all the taluks for relieving distress among this class of people.
KOLAR.	The crop saved is estimated as— One-sixth in 2 taluks. One-fourth „ 2 „ One-third „ 6 „ TOTAL 10 „	The remissions were estimated, in November last, at Rs. 3,26,226; but, according to the taluk returns now submitted, this amount is reduced to Rs. 2,80,300.	Deaths among cattle and agricultural stock amount to 29,183 head, and 137,000 more are expected. The measures adopted to prevent this as much as possible, are the suspension of Hulbani sales, and the opening of State forests for cattle to graze in. Prickly pear has also been recommended as fodder.	People and cattle suffer a little from the want of water. In order to improve the supply, deepening of wells, clearing silt, and digging water holes in fit spots have been recommended.	Prices on the whole rather dearer than in the Bangalore District.	There is altogether a stock of about 71,800 kandies of grain in this district. The principal centres from which supplies are drawn, are the Kolar road and Malur railway stations. Private enterprise is not considered sufficient to maintain supplies, and hence a fall in prices is not anticipated.	The majority of the population are of low caste, poor, and agricultural. There are no wealthy landholders in this district capable of affording assistance to their tenants.	People to the number of 57,100 have emigrated, and further emigration is probable unless checked by more relief works.	Rs. 13,534 have already been sanctioned for relief works, and if this sum be found insufficient and a necessity arise for them, more relief works will be undertaken.	A feeding kitchen exists in the Kusba town of each of the taluks of this district, where travellers, and the aged and infirm, are gratuitously fed.
TUMKUR.	The crops saved are as follow:— One-fourth in 1 taluk. One-sixth „ 1 „ Nil „ 6 „ TOTAL 8 „	The remissions were estimated, in November last at Rs. 423,543; but, according to the taluk returns now submitted, this amount is reduced to Rs. 163,000.	A considerable number of cattle have died for want of fodder, and further mortality is expected. In order to prevent this as much as possible, Hulbani sales have been abandoned and forest reserves thrown open for cattle to graze, and prickly pear has been recommended as fodder. Grant of takavi for purchase of agricultural stock has been suggested; but the recovery of such advances is doubtful.	In some taluks there is water sufficient for a month or two, while in others the want of it is beginning to be felt. Wells will, however, be sunk in tank beds and in places where required to keep up a supply.	As above.	There is a fair stock of grain in this district, but the owners will not dispose of it. Grain has been pouring into the country chiefly from Bangalore, and is still coming. Private enterprise, it is expected, will maintain supplies.	The population are of both high and low caste, and generally poor. About three-fourths are agriculturists, and the remainder belong to the urban or artizan class. There are a few well-to-do landholders, but the majority of them are disinclined to aid their tenants.	A considerable number of the labouring class have emigrated to Coorg and other districts in search of employment. Very few have returned, and it is not known whether those who have not done so have bettered their condition or not.	The relief works already started consist chiefly in excavating silt from tank beds. The further work to be undertaken is collection of metal along the district fund roads, which, it is expected, will give employment to a number of people.	In every taluk of this district there is one or more relief kitchens opened, where destitute travellers, and people who are unable to earn a livelihood by reason of age or infirmity, are gratuitously fed.
MYSORE.	The crop saved is:— Two-thirds in 1 taluk. Three-fourths „ 7 „ Five-sixths „ 2 „ Full averag „ 1 „ TOTAL 11 „	The remissions were estimated, in November last, at Rs. 355,938 but, according to the taluk returns now submitted, this amount is reduced to Rs. 75,250.	About 26,500 head of cattle have died for want of fodder. A number of cattle have been driven to neighbouring jungles, and to the forests of Coorg and Heffaderan Kote, to graze. In some taluks there is grass sufficient for the remaining cattle. Hulbani sales have been abandoned, and forest reserves generally have been thrown open to cattle. Prickly pear also suggested as fodder.	Villages situated on the banks of rivers have a tolerably good supply of water, while in the case of others a scarcity is apprehended, and deepening of existing wells and sinking new ones are suggested. In parts where people get their supply from channels, it is recommended that the Irrigation Department should let water flow into them continually.	Prices generally, and specially of rice, lower than in any of the other districts. The same is observable in the case of ragi up to the present time.	There is sufficient grain in stock in this district to supply the demands of three-fourths of the population for six or seven months. Besides, importation in large quantities from different parts of the country is going on.	About one-fourth of the population are agriculturists, while the remainder are traders, manufacturers, and of other mixed occupations. The majority of the people are well-to-do.	A number of people have emigrated to Manantoddy, Coorg, and other places in search of employment; some have returned on account of insufficient wages, while others are reported not to be doing well: further emigration is considered improbable.	No regular relief works have been started in either of the taluks of the district, as there was no necessity for them; but minor works, such as repairing roads and tanks, will be undertaken to give work to unemployed labourers.	Except in two taluks where there is no need for them, kitchens have been opened for affording relief to the destitute, and others who are unable from old age or sickness to earn a livelihood.

STATEMENT B—continued.

	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately. If there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.	The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.
HASSAN.	Crops saved:— One-half in 3 taluks. Three-fourths „ 2 „ Five-sixths „ 4 „ TOTAL ... 9 taluks.	The remissions were estimated in November last at Rs. 3,93,247, but, according to the Taluk returns now submitted, this amount is reduced to Rs. 97,615.	There has been a very heavy mortality among cattle in this district and a large number of animals have been driven to the Mulnad to graze. There is a small stock of rice and ragi straw which may suffice for what cattle there are remaining for a couple of months. Besides, of what little grass there is left in the Gunals and Kavals the cattle of ryots are permitted the free use.	There is no general failure of water at present, though a scarcity is apprehended if the rains keep off; and in that case the sinking of wells in tank-beds and in low grounds will be undertaken.	Prices generally the same as in Kolar. There was a remarkable rise at the beginning of November, followed by a gradual recovery.
SHIMOGA.	In each of the two distressed taluks of this district the yield of crops may be taken at one-third. The remaining taluks have a full average crop.	The remissions were estimated in November last at Rs. 44,062, but according to the taluk returns now submitted this amount is reduced to Rs. 38,000.	20,341 head of cattle have died, and 15,000 more deaths are expected. State forests have been thrown open for cattle to graze in.	Except in the villages on the banks of rivers, much scarcity of water will be felt by the drying up of tanks, wells and nalas. Cleaning and deepening of existing wells and sinking of new ones in beds of tanks and low grounds will, it is hoped, improve the supply.	The prices of only the two distressed taluks given. In one of these rice rose to 4½ seers in November, while in the other the prices were fair throughout.
KADUR.	Only three out of the five taluks of the district are affected by drought. In one of these one-half and in the others one-fourth of the crops has been saved. The remaining two taluks have a full average yield.	The remissions were estimated, in November last, at at Rs. 1,46,012,; but, according to the taluk returns now submitted, this amount is reduced to Rs. 64,000.	The mortality among cattle amounts to 18,187 head, and 13,027 more deaths are expected. Hulbani sales have been abandoned and State forests thrown open for grazing. A certain number of animals have also been taken to the Mulnad to graze.	A great scarcity of water is apprehended from tanks and wells running dry. Wells will, however, be made in beds of tanks and in low grounds to improve the supply.	Prices about the same as in the Bangalore District.
CHITULDROOG.	The proportion of the crops saved is as under— One-sixth in 4 taluks. One-eighth „ 1 taluk. Nil „ 3 taluks. TOTAL ... 8 taluks.	The remissions were estimated in November last at Rs. 3,12,478, but according to the taluk returns now submitted, this amount is reduced to Rs. 2,82,041.	The mortality among cattle has been very great in this district from the want of fodder and water, and a large number more are expected to die if matters do not improve. Herds have been driven to the Mulnad to graze. In five taluks there is no prickly-pear to be had, and in those where it is to be procured ryots are disinclined to feed their cattle on it. In two talukas cattle are fed on roots and leaves of date trees, and on the straw and stalks obtained from the Kartik crops harvested. Great relief is expected from the cattle being permitted to graze on the Amrat Mahal Kaval lands.	There is no immediate apprehension of a failure of water in this district, except in one taluk, where excavation of old wells and removal of silt from tank beds are recommended. In the event of a general failure of water, it is said that deepening old wells and sinking new ones will be sufficient to keep up a supply.	Prices mostly rather higher than in Kolar until quite recently. A rise in November very marked in some taluks.

	The local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being or may be drawn; and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions, urban or artizans; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people returned themselves, or merely gone elsewhere to starve or are they returning), and whether further emigration is probable.	The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.	The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
HASSAN.	There is a stock of grain in the district, but it is not expected to last long. Importations are being made from Mangalore, Bangalore, and the Mulnad, but not in sufficiently large quantities to cause a fall in prices.	The population is of both high and low caste, and for the most part poor; about one-fourth are agriculturists, while the remainder are of miscellaneous and mixed occupations. There are no landholders who possess the means to aid their tenants. The patels are said, however, to supply food to their servants.	Considerable emigration has taken place to Coorg, Manantoddy, Nilgiris, and the Mulnad. The emigrants are not supposed to be doing well, both on account of the low wages and because of their weak condition not enabling them to work the full time required of them. Notwithstanding, further emigration is probable.	The relief works to the amount of Rs. 71,209, already started, will afford ample work for the people. If more works are needed they will be undertaken.	In all the taluks, with the exception of two, relief kitchens have been opened, both from private subscriptions and Government contributions, to afford relief to destitute travellers and to people incapable of earning a livelihood.
SHIMOGA.	The local stock comprises 42,500 kandies of grain. Importations are being made from Bombay *vid* Bellary and from Comti, and will be sufficient for the present, though eventually the supplies will, it is suggested, require to be supplemented by Government.	The larger proportion of the population are agriculturists, and very few are of high caste. A very small number of the landlords are able to aid their tenants.	About 2,000 persons have removed their cattle to the Mulnad to graze, and people from other districts have also brought their cattle there in search of fodder. The latter, it is expected, will leave as soon as the harvest is over, as there is no likelihood of their earning a livelihood except on relief works.	Rs. 23,906 have been sanctioned for relief works, and these are considered to be sufficient. Two more works will be undertaken if it be found necessary to do so.	In one taluk a feeding-house has been opened, where travellers, and the aged and infirm, are fed.
KADUR.	There are about 8,930 kandies of grain in stock, and importation is going on from Hassan, Bangalore, and the Mulnad, the principal centres of supply. Private enterprise will, it is expected, meet the requirements of the people, but no fall in prices is anticipated.	The greater number of the people in this district are of high caste, and about 99 per cent. of the population is poor. From 15 to 50 per cent. are urban or artizans. There are no landholders in so well-to-do a position as to be able to aid their tenants.	About 25 per cent. of the population have emigrated from two taluks, and further emigration is said to be probable.	The relief works already started will cost Rs. 8,442. The further works which it is proposed to undertake, such as digging wells, constructing roads, and excavating tanks, will, it is roughly estimated, cost Rs. 19,000.	Private kitchens have been opened in each of the three distressed taluks. Private subscriptions, supplemented by Government donations, have also been raised to relieve helpless people, who are unable to earn a livelihood.
CHITULDROOG.	In some taluks there is a stock of grain, but not very large, while in others there is little or none at all. Grain is, however, being imported from Bangalore, Bellary, Devangiri, Dharwar, and from the Mulnad taluks of the Kadur and Shimoga districts. It is feared that the merchants are not sufficiently well off to import largely so as to meet all demands.	The population are of both high and low caste, and are for the most part poor. About two-thirds of them are agriculturists. There are a few well-to-do landholders, but it is not thought that they will assist their tenants to any great extent.	A large number of people have emigrated from some taluks to the Mulnad and to coffee estates, in the former case for fodder for their cattle and in the latter for employment. Some have returned because of the unconGeniality of the climate, and because of their being unsuccessful in earning a livelihood. Notwithstanding these adverse circumstances further emigration is probable.	Rs. 1,12,984 have already been sanctioned for starting relief works, and a further outlay is still to be incurred.	Except in two taluks, where no relief measures have as yet been adopted, travellers, the aged and infirm, &c., are fed from private subscriptions and from contributions of like sums made by Government.

STATEMENT

STATISTICS

RELATING TO THE

DISTRESSED DISTRICTS

THE MADRAS PRESIDENCY.

N. B.—This Statement consists of extracts from the information furnished by the Government of Madras on the 14th November and 15th December, 1876, and the 4th January, 1877, in accordance with the telegram from the Government of India of the 30th October, 1876, and of summaries of the reports on each taluk called for by the Government of India on December 2nd, 1876.

KEY to the alphabetical headings in the following statement:—

(*a*)—a careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately: if there be any prospect of further sowings, it should be mentioned:

(*b*)—an estimate, as close as may at the time be practicable, of the amount of revenue to be remitted:

(*c*)—information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future:

(*d*)—the nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any:

(*e*)—the course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages:

(*f*)—the local stocks, as far as ascertainable; the centres, railway stations, or otherwise whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation:

(*g*)—the character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse:

(*h*)—the movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable:

(*i*)—the relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity:

(*j*)—the nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work:

(*k*)—the number of persons whom the Government has on its hands at date of report for relief (1) by works, (2) by charitable measures, and the number, roughly estimated, which it is likely to have on its hands on March 1st, May 1st and July 1st.

NORTH ARCOT DISTRICT.

N. B.—There are no statistics of the last five taluks, which are Zemindari.

NORTH ARCOT DISTRICT

CHENDRAGIRI Taluk (Assistant Collector in charge Mr. A. F. Cox).

a	b	c	d	e	f	g	h	i	j	k
The crops saved under wells and spring channels average from full to 9 annas, the usual area of cultivation being reduced. Under tanks hardly any crops have been saved. In the south-west and western parts of the taluk the failure of all crops has been almost complete.	Remissions Rs. 50,000, out of a total revenue of Rs. 97,745.	There has been a large mortality among cattle, which is expected to increase. Animals are being sold at almost nominal prices, and the survivors are emaciated and weak in the extreme. Hides are sold at a quarter of their usual price. No measures, so far, have been adopted to save the cattle.	There is no fear of a water famine at present. Most of the wells contain water, though other sources are running dry. If rain does not fall within 2 or 3 months, much distress from want of water is apprehended, especially for cattle.		There are no considerable stocks of grain. Large importations *viâ* the Railway which traverses the division have been made, but at very high prices.	The population is 99,628: 20 or 25 per cent. of the people are artisans, who just manage to earn a living.	There has been some emigration to Ceylon and other places, but to an inconsiderable extent. Further emigration is expected, but to a less degree, as relief works are now in active operation.	The relief works for this taluk already suggested are insufficient, and further schemes will be submitted for approval.	Government has given slight relief to the infirm and aged in this taluk. Private charity has done something, but it will not last much longer.	At present there are 2,000 persons on relief works. Estimate for the future is— 1st March ... 1st May ... 1st July ... } 17,000 (*On works.*)

The Assistant Collector reports on 29th December that rice was selling at 3¾ measures per rupee; that ragi, the usual food of the poor, can with difficulty be obtained for 4 measures per rupee; and that prices present every appearance of rising steadily.

CHITTOOR Taluk (Collector Mr. W. S. Whiteside).

a	b	c	d	e	f	g	h	i	j	k
The kharif crops saved are estimated at 6 annas; rabi 3 annas. There will be no further sowings, unless rain falls.	Remissions Rs. 78,000, out of a total revenue of Rs. 2,71,920.	The past mortality among cattle has been 42; agricultural stock *nil*. Instructions have been issued regarding feeding cattle on prickly pear. Further mortality is anticipated.	All sources of water have dried up, except wells, which still contain a scanty supply. Measures are being taken to deepen existing and sinking new wells in stream and tank beds, where water can be obtained without much difficulty. Further failure of water is anticipated, unless the season improves.		There are no local stocks of grain in the taluk. Merchants keep small quantities in store. Importations are made largely from Madras *viâ* Vellore, and they will continue steadily. If the famine continues, local importations probably will not be able to cope with the demand. There is no probability of a fall in prices owing to ample importation.	The population is 213,045, and consists half of cultivators and labourers, and half of partly agriculturists and those engaged in other occupations. There are hardly any landholders who are able or likely to help their tenants.	No emigration has taken place; none is expected, as relief works are in progress and a relief camp will shortly be established at Chittoor.	The works now in progress, consisting of the construction of roads, sinking and repairing wells and town improvements, with those proposed for execution, are quite sufficient for the present. Where more are required, further proposals will be submitted.	No charitable relief has as yet been given.	The number now on the hands of Government is—2,238 on works; 3,000 more are waiting for employment till the further works proposed are commenced. The estimate for the future is— 1st March ... 6,000 1st May ... 8,000 1st July ... 10,000 (*On works.*)

PALMANAIR Taluk (Collector Mr. W. S. Whiteside).

a	b	c	d	e	f	g	h	i	j	k
The crops saved are estimated at— Kharif ... As. 5 Rabi 3	Remissions Rs. 39,000, out of a total revenue of Rs. 75,797.	The past mortality among cattle has been 500; among agricultural stock 400. Further deaths anticipated by early rains failing and thereby causing want of fodder and pasture. The construction of water works by Government has been of great benefit to the cattle, thereby enabling fodder to be grown. Further works of a similar nature are proposed for the future.	There are some small streams. Almost all the tanks are dry; wells are in a similar condition, and the remedial measures undertaken are deepening old and sinking new ones.		The local stocks of grain are considered to be small. Importations are made from Madras *viâ* Gudiattum Railway station. Private enterprise is probably sufficient to meet demands. A fall in prices through ample importation is not expected.	The population is 60,211, and consists of one-fifth pure agriculturists and one-third partly cultivators and artisans. There are only a few rich landholders who are able and likely to aid their tenants.	No emigration as yet, but it may take place if the season continues unfavourable.	The works now in progress consist of the construction and repair of roads, wells, tank-bunds, tunnels and embankments, and removing prickly-pear. These are considered sufficient for the present, and as they become completed, other works will be carried out.	No charitable relief has been given to travellers, as none have applied for it.	The number now on the hands of Government is— *On works.* 2,013 *By charity* *Nil.* Forecast for the future is— 1st March ... 4,000 1st May ... 5,000 1st July ... 6,000 (*On works.*)

a	b	c	d	e	f	g	h	i	j	k
GUDIATTUM Taluk (Acting Sub-Collector Mr. G. D. Irvine).										
The crops saved are estimated both for kharif and rabi at 2 annas.	Remissions Rs. 40,000, out of a total revenue of Rs. 2,67,835.	So far there have been no deaths among the cattle, but, unless the season improves, great mortality is expected from scarity of fodder and water. Prickly pear has been used as fodder, but only to a small extent, and efforts are being made to improve the water-supply.	Water is becoming scarce, but there remains sufficient for drinking purposes. The usual remedial measures will be carried out.	Prices of the principal food-grains (*Seers of 80 tolahs per rupee.*) Dates. / Rice, 2nd sort. / Cholum. / Ragi. / Cumboo. 1876. October ... 7½ 9 10¼ 10 November ... 7 9 10¼ 10 December, 1st week ... 7¼ 7½ 8¾ 9 " 2nd " ... 7¼ 7½ 7¾ 7⅞ " 3rd " ... 6¾ 7¼ 7½ 7 " 4th " ... 6 7¼ 6¾ 7⅛ Average for the past four years 17 29¼ 32⅛ 28	It is estimated that there are 4,000 kallams of grain in the hands of the rich ryots for the use of their families; large importations are made from Madras to Gudiattum Railway Station. Prices are not expected to fall, but will be ruled by the Madras rates.	The population is 162,980. Of the 56,578 males, 3,300 are merchants, 28,700 cultivators, 13,210 are coolies, and the rest of other professions. There are but few of high castes, and there are no rich landholders.	There has been no regular emigration, but about 200 persons left the taluk in search of work. As relief works have been started, no further exodus is expected.	Relief works to the amount of Rs. 12,200 have been started, and further works estimated at Rs. 11,500 have been approved. As the works in hand approach completion, others will be commenced.	Rs. 460 have been privately subscribed for the relief of the poor. Relief camps have been instituted at Vellore, Ranipett and Chittoor at Government expense.	There are 650 persons now on the hands of Government on works. The estimate for the future is— *On works.* 1st March ... } 5,000 1st May ... } 1st July ...
VELLORE Taluk (Acting Sub-Collector Mr. G. D. Irvine).										
The crops saved are estimated for both kharif and rabi at from 3 to 5 annas.	Rs. 70,000 will have to be remitted, out of a total revenue of Rs. 1,99,430.	The deaths among the cattle have so far been trifling. Information regarding the anticipated mortality is the same as for Gudiattum Taluk.	*Vide* remarks on Gudiattum Taluk.	Prices of the principal food-grains (*Seers of 80 tolahs per rupee.*) Dates. / Rice, 2nd sort. / Cholum. / Ragi. / Cumboo. 1876. October ... 10½ 13⅓ 14½ 14 November ... 8 9 11 12½ December, 1st week ... 8 8⅔ 9 10½ " 2nd " ... 8 9⅓ 9 9⅛ " 3rd " ... 7 8 7¾ 8 " 4th " ... 7 7¼ 7½ 7⅛ Average for the last 4 years 18 34¼ 34½ 29½	The stock of grain is chiefly in the hands of a few rich ryots and the merchants of Vellore town, and it is impossible to correctly estimate the quantity; importations are made largely, but have not reduced prices much.	The population is 179,156, and is chiefly of low caste. Two-thirds are poor, one-third middle class, with a sprinkling of well-to-do people; three-fourths are cultivators who are mostly urban and one-fourth artisan, &c. There are no rich landholders, and the few rich ryots are either unable or unwilling to help others, except to a small extent.	About 1,000 people have emigrated, but it is not known whether or not they have bettered themselves. The Tahsildar considers that four times the number already emigrated may follow them.	Relief works to the amount of Rs. 34,776 have already been started, and others amounting to Rs. 31,800 more have been approved and will be taken in hand as the others are finished.	973 aged and infirm persons are fed daily from Municipal Funds. The rich traders of Vellore will not help the poor. A relief camp will shortly be opened by Government where those unable to earn their living on relief works will be fed.	The number now on the hands of Government is— *On works.* 5,461 Estimate for the future is— *On works.* 1st March ... 10,000 1st May ... 15,000 1st July ... 20,000
ARCOT (Acting Sub-Collector Mr. G. D. Irvine).										
Crops were saved on only 2,400 acres, and they yielded an average of 6 annas.	Remissions Rs. 1,50,000, out of a total revenue of Rs. 2,98,766.	There has been no mortality among cattle hitherto. The ryots who could afford it have taken their cattle to the river-sides; others have sold theirs. Government has adopted no remedial measures.	There are no villages entirely without water, but the wells, tanks, &c., are everywhere drying up. If advances are made to the ryots under the Land Improvement Act, they will remove silt from wells and tanks, which will be sufficient to meet requirements.	Prices of the principal food-grains (*Seers of 80 tolahs per rupee.*) Dates. / Rice, 2nd sort. / Cholum. / Ragi. / Cumboo. 1876. October ... ... 10 11½ 14½ 10½ November ... ... 8 5½ 11 12 December, 1st week ... 8 ... 11 10½ " 2nd " ... 7⅔ ... 9 10½ " 3rd " ... 7 ... 8½ 8½ " 4th " ... 7 ... 7½ 7½ Average for the last four years 16½ 29 29 26½	The stock of grain in hand is *nil*. Importations are made to a small extent, but there is not much private enterprise. There are two railway stations on the borders of the taluk, from whence supplies can easily be drawn.	The population is 167,391, and is of mixed castes. The agriculturists number three-fourths. Of these, three-eighths are urban and three-eighths artisan. There are no rich landholders able to aid their tenants.	Some emigration took place in the earlier days of the distress, but they returned when relief works were opened.	Relief works to the amount of Rs. 20,000 have been already started, and works to the amount of Rs. 4,500 more have been approved. When these approach completion, others will be started.	No charitable relief is given to travellers; 54 persons are fed at a relief house. The rich native traders, who have made large profits out of the famine prices for grain, have done, and will do, nothing to aid the poor.	The number now on relief works is 3,782. Estimate for the future is— *On works.* 1st March ... } 20,000 1st May ... } 1st July ...

NORTH ARCOT DISTRICT—continued.

WALLAJAH Taluk (Assistant Collector in charge, Mr. A. F. Cox).

a	b	c	d	e	f	g	h	i	j	k
The crop saved under wells and spring channels averages from full to 9 as., the usual area of cultivation being reduced. Under tanks hardly any crops have been procured. The dry crops have almost entirely failed, and only in a few places has a 3-anna crop been reaped.	Remissions Rs. 2,50,000, out of a total revenue of Rs. 3,25,636.	*Vide* Chendragiri Taluk.	*Vide* Chendragiri Taluk.	Prices of the principal food-grains (*Seers of 80 tolahs per rupee.*) Dates. / Rice, 2nd sort. / Ragi. / Cumboo. 1876. Average of the past four years ... ... 16¼ / 27¼ / 19¼ For further remarks *vide* Chendragiri Taluk.	*Vide* Chendragiri Taluk.	The population is 216,204, and is chiefly agricultural and poor. For further remarks *vide* Chendragiri Taluk.	There has been siderable emigration to Ceylon and other places. Further emigration is expected, but to a less degree, as relief works are now in active operation.	The relief works in hand will suffice for the next 2 or 3 months, after which, if the necessity arises, further relief must be afforded.	At present private charity keeps pace with the necessity of feeding the poor, infirm and aged, but soon the Government will have to open relief houses.	At present there are 5,000 persons on relief works. Estimate for the future is— On works. 1st March ... } 17,000 1st May ... } 1st July ... }

POLUR Taluk (Deputy Collector Mr. Meer Ausurdin).

a	b	c	d	e	f	g	h	i	j	k
The average crops saved are estimated at, for Nunjah 4 as. and for Punjah 8 annas. There is no prospect of further sowings.	Remissions Rs. 95,000, out of a total revenue of Rs. 2,05,580.	No mortality among the cattle so far. By the use of prickly pear as fodder and by sinking new and deepening old wells, future deaths may be prevented to a great extent.	The tanks are dry, and there is but little water in wells and ponds for drinking purposes. Should there be no early fall of rain, steps will be taken to sink wells and clear ponds, &c.	Prices of the principal food-grains (*Seers of 80 tolahs per rupee.*) Dates. / Rice, 2nd sort. / Cholum. / Ragi. / Cumboo. 1876. October ... ... 10½ / ... / 14⅓ / 17 November ... ... 10 / ... / 11 / 12 December, 1st week ... 8½ / ... / 10 / 8 „ 2nd „ ... 8 / . / 8½ / 8 „ 3rd „ ... 6½ / ... / 7½ / 7 „ 4th „ ... 7 / 11½ / 7¾ / 7 Average of the last 4 years 21 / 27 / 31 / 31⅓	The local stocks of grain in hand are kept by the ryots for their own use. Importations from Madras *vid* Vellore Railway Station, 34 miles off, are inconsiderable. Private enterprise is considered insufficient to meet the demand.	The population is 109,150, and is of both high and low caste, with only a few well-to-do people. There are no zemindars or large landholders able to maintain their tenants.	No emigration has taken place, and there will be none when relief works are opened. It is proposed to open relief houses where a small number of people who are unable to support themselves may be maintained.	No relief works opened as yet, but proposals are now under consideration, and some works will be undertaken at once.	No charitable relief is given.	There were no persons on the hands of Government on date of report. Estimate for the future is— On works. / By charity. 1st March ... 3,000 / 100 1st May ... 2,500 / 100 1st July ... 2,000 / 100

WANDEWASH Taluk (Deputy Collector Mr. Meer Ausurdin).

a	b	c	d	e	f	g	h	i	j	k
The crops saved are estimated at for nunjah 4 annas and punjah 8 annas.	Remissions Rs. 1,00,000, out of a total revenue of Rs. 3,74,840.	There has not been much mortality among cattle or agricultural stock. By using prickly pear, sinking new and deepening existing wells, cattle can be saved to some extent; but it is feared that the want of fodder later on will carry off many, especially as there are no jungles to which the cattle can be driven.	Water is rapidly failing. As a remedial measure, the deepening of wells and tanks is recommended.	Prices of the principal food-grains (*Seers of 80 tolahs per rupee.*) Dates. / Rice, 2nd sort. / Ragi. 1876. October ... ... 10 / 18½ November ... ... 10 / 12¾ December 1st week ... ... / ... „ 2nd „ ... 10 / 10 „ 3rd „ ... 8½ / 9 „ 4th „ ... 8 / 8¼ Average of the last four years ... ... 20 / 29½	There are larger stocks of grain in this taluk than in the other portions of the district. When grain is in urgent demand, it will be imported from Madras.	The population is 153,507, and consists of both high and low castes, the latter predominating. About ¼ are well-to-do, but no aid can be expected from them. About 15 per cent. of the whole population are urban or artisans; the rest are cultivators.	Small emigration of the poor classes has taken place. Further emigration will be checked by the opening of relief works.	A scheme of relief works is under consideration, and will be commenced when approved.	No charitable relief is given to travellers and others, as it is not at present required.	The number now on the hands of Government is nil. Estimate for the future is— On works. 1st March ... 5,000 1st May ... 7,000 1st July ... 9,000

NORTH ARCOT DISTRICT—continued

a	b	c	d	e	f	g	h	i	j	k
No definite information. Crop saved perhaps one-eighth.	As this is a zemindari division, no estimate regarding remissions is sent up. Rice ... 50 Paddy ... 30 Ragi ... 20 Sujjalu ... 1 Punnalu ... 1 Horse-gram ... ½ Wheat ... ½ Total ... 102½ A puttly is equal to 80 ballas of 320 tolahs each. Large importations are made *via* Gudiattum Railway Station. Private enterprise is sufficient to meet demands. A fall in prices has taken place through ample importations.	The population is 109,282, and is composed of two-thirds agriculturists and the remainder artisans and traders. The people are chiefly low caste, and there are none able and willing to aid their tenantry.	About 2,000 persons emigrated in October and November, but have since returned, on the opening of relief works near their own homes. Further emigration is improbable.	Eleven relief works, principally roads, have been sanctioned at a total cost of Rs. 37,000. Three more roads are proposed to be undertaken when required, at a total cost of Rs. 10,000.	No charitable relief is given by Government to travellers and the aged, infirm, &c., who are unable to work. The zemindar recently opened a relief house, where about 100 persons are fed daily.	The number now on the hands of Government is— *On works.* / *By charity.* 3,161 / *Nil* Anticipated numbers are— *On works.* / *By charity.* 1st March, 1st May... 1st July... 5,000 / *Nil*

NORTH ARCOT DISTRICT—concluded.

KANGUNDI Taluk (Acting Sub-Collector Mr. G. D. Irvine).

a	b	c	d	e	f	g	h	i	j	k
As this is a zemindari division, no information regarding the crops saved can be obtained.	No remissions required. Total revenue Rs. 27,616.	The tahsildar estimates the past deaths of cattle at 500, the anticipated at 10,000. These numbers the Sub-Collector thinks too high. Ryots are feeding their cattle on leaves. The only measure adopted by Government is to recommend the use of prickly pear, but it does not find favour.	The water-supply is running short. Government has given aid towards the removing of silt from existing wells and the sinking of new ones.	PRICES OF THE PRINCIPAL FOOD-GRAINS. (*Measures per rupee.*) Last week in: Rice. / Cholum. / Ragi. / Wheat. / Gram. / Horse-gram. 1876. October ... 3½ / 6 / 5½ / 4 / 6 / 6 November ... 3½ / 6 / 5½ / *3½ / 6 / 5½ December ... 3 / 5 / 4½ / 3 / 4½ / 5 Average of the last six years. 9½ / 12¼ / 29½ / 5 / 28 / 15½	The stock of grain in hand is estimated at 20,000 putties, and 30 or 35 putties of grain are imported every week by rail. Unless the season improves, there will be no fall in prices, notwithstanding ample importations.	The population is 52,047, and is chiefly low-caste. The zemindar is the only wealthy man, and he has done nothing to aid his tenants.	From 4 to 500 people have emigrated, and nothing is known as to how they have fared. None have returned. If rain does not fall, 2 or 3,000 will follow.	Government has no intention of commencing relief works in the taluk.	No charitable relief is given. The opening of a relief-house is recommended, as it would be of great use, but it should be maintained by the zemindar.	500 persons will have to be supported, either on works or by charity. The Commissioner remarks that this is a zemindari tract, and one that is far more fortunate in comparison with the other portions of the district. Distress is not severe yet, and there is no famine. There was timely, though not plenteous, rainfall. The zemindar will be made to provide relief for his tenants when required.

Regarding the Arnee Jagir no separate report has been made, but the Madras Board of Revenue state that its condition does not differ much from that of the adjacent Government taluks of Vellore and Arcot.

BELLARY DISTRICT.

COLLECTOR—Mr. J. H. MASTER.

BELLARY DISTRICT

a	b	c	d	e	f	g	h	i	j	k

PENNAKONDAH Taluk (Assist (Collector Mr. J. H. Master).

The estimated kharif crop saved is 2 annas; the rabi 3 annas. No prospect of further sowings, unless under a few wells.
In this, and most of the following Taluks, the land not sown, and those that produce no crop at all, appear to have been left out of the calculation.

Remissions Rs. 69,000, out of a total of Rs. 1,09,178.

One-third of the non-agricultural cattle have already died, and three-fourths are expected to succumb before the season can improve. There has been a slight mortality among the agricultural stock, and one fourth are expected to die. Prickly pear has been used as fodder, but it is scarce. There are no reserved forests or pasture lands. Importation of fodder is strongly advocated to save the rest, but it would be very expensive.

The water-supply is becoming daily smaller. Strenuous efforts are being made to meet the deficiency by sinking wells at Government expense and giving advances under the Land Improvement Act.

Weeks ending.	Prices of the principal food-grains.				
	Rice, 1st sort.	Rice, 2nd sort.	Ragi.	Cholum.	Horse-gram.

Average for the past six years	15½	17	36½	30½	27½

The stock of grain in hand is estimated at 3,000 tons, in the hand, of a few rich holders. Importations are made from Bangalore and other parts of Mysore, and from stations on the North-West Line. Private enterprise is insufficient to meet the wants of the people, and will not cause a fall in prices.

Population is 88,754, of whom 3,880 are high castes. There are about 20,000 families, of whom about 1,000 are well-to-do; two-thirds of the whole population are agriculturists. There are no landholders so wealthy as to be likely, or even able, to aid their tenants.

Emigration very slight, about 100 have gone to coffee estates in Malabar, where their relatives are already settled. No further emigration is probable.

The relief works already started are—

Communication ...	19
Irrigation ...	19
Sanitation ...	16
Water-supply ...	21
Total ...	75

These are considered sufficient to meet all wants for some months to come; 26 other works are proposed to be undertaken when necessary.

In 15 villages charitable relief is given by Government in the shape of cooked food to travellers, the aged, infirm and very young, who have no means of support. In other places, village officers feed travellers at Government expense.

The number now on the hands of Government is—

On works.	By charity.
23,300	3,000

Estimate for the future is—

	On works.	By charity.
1st March	25,000	4,000
1st May	26,000	6,000
1st July	27,000	8,000

If early rains fall as usual in June, the numbers on relief works will probably fall to about 15,000 by 1st July.

MADAKSIRA Taluk (Assistan (Collector Mr. H. T. Ross).

The estimated amount saved out of the crops not withered is for both kharif and rabi 2 annas. The only crops not withered are under a few wells and spring channels, and, except under such sources, there is no prospect of further sowings.

Remissions Rs. 70,000, out of a total revenue of Rs. 91,880.

About half the non-agricultural cattle have died, and it is estimated that three-fourths will have perished before the season can improve. One-eighth have already perished, and at least one-fourth will perish, of the agricultural stock. There is but little prickly pear, and the only remedy is to make advances to ryots to enable them to feed their animals on imported grain or fodder imported on a large scale, and cattle camps formed.

There is no river in the taluk. The wells are drying up, and advances are being made for the purpose of sinking wells in tank-beds and channels.

Weeks ending.	Prices of the principal food-grains.				
	Rice, 1st sort.	Rice, 2nd sort.	Ragi.	Cholum.	Horse-gram.

6th January 1877	5	5½	6½	6½	6
13th "	5½	5½	7½	7½	7
20th "	6	6½	8	8	7
Average for the last six years	16½	19½	38½	37	33

No local stocks are very small. Importation goes on principally from Bangalore, and some from Bellary. It is not probable that private enterprise will import sufficient quantities to cause a continued fall in prices, with a sufficient supply for the wants of the people.

Population is 79,458. Of these, 4,000 are high caste and 23,000 are Vellalars and other good castes. It is estimated that 1,000 families out of the 20,000 families in the taluk are well-to-do. Three-fourths are agriculturists, the remainder laborers. There are no landholders so wealthy as to be able to assist their tenants, or are they likely to do so.

No emigration is known to have taken place, nor is any probable so long as relief works and relief houses are maintained.

The relief works now in progress are—

Communication ...	14
Sanitation ...	4
Water-supply ...	4
Total ...	22

Thirty-one other works are proposed to be taken in hand when required. These will be sufficient till the next rains.

Travellers in distress are fed at stages of their journeys by village officers. The aged, infirm and orphans, and others known to be starving and unable to work, are given cooked food in 13 village relief houses.

The number of persons on the hands of Government is—

On works.	By charity.
18,000	3,700.

Estimate for the future is—

	On works.	By charity.
1st March, 1st May ... 1st July ...	30,000	6,000

The numbers for July are on the assumption that rain falls in June.

BELLARY DISTRICT—continued.

HINDUPUR Taluk (Assistant Collector Mr. H. T. Ross).

a	b	c	d	e	f	g	h	i	j	k
The kharif crops have totally failed, and it is estimated that 2 annas have been saved only in the crops sown under wells and nalas. Rabi crops not yet harvested; the yield is estimated at 2 annas, except in tank-beds, where it may be 4 annas. There is no prospect of further sowing.	Remissions Rs. 75,000, out of a total revenue of Rs. 1,15,094.	More than one-third of the non-agricultural, and about one-eighth of the agricultural, cattle have been lost. It is anticipated that three-fourths of the former and one-fourth of the latter will perish. The people have made no attempt to save the non-agricultural stock. Very little prickly pear in the taluk. No further suggestions can be made than those given in Pennakonda and Madaksira taluks.	All tanks except one, rivers, many wells and nullas, are dry. Every effort is made to meet the failure of the water-supply by sinking new wells, deepening and clearing old ones, and by advances under the Land Improvement Act for these purposes, as well as general permission to sink temporary wells in the rivers, channels and tank-beds.	Prices of the principal food-grains. Weeks ending: Rice, 2nd sort. — Ragi. — Cholum. — Horse gram. 7th October 1876 ... 9 — 11 — 10 — 10 14th " ... 8 — 11 — 10 — 10 21st " ... 7 — 10 — 9 — 9 28th " ... 6 — 9 — 8 — 8 4th November 1876 ... 6½ — 9 — 8 — 8 11th " ... 6½ — 9 — 7 — 8 18th " ... 7 — 9½ — 8¼ — 8 25th " ... 7 — 9 — 8 — 7 2nd December 1876 ... 7 — 9 — 8½ — 7 9th " ... 7 — 8 — 7½ — 7 16th " ... 6½ — 7½ — 7 — 7 23rd " ... 6⅝ — 7¼ — 6½ — 7 30th " ... 6 — 7¼ — 6½ — 7 6th January 1877 ... 6 — 7¼ — 7 — 7 13th " ... 6 — 8 — 8 — 7 20th " ... 6⅛ — 8 — 8½ — 7 Average of the last six years ... 17¾ — 47⅛ — 36 — 36¼	The local stocks are not ascertainable, but are known to be insignificant, except in the hands of a very few rich holders. Large importations are being made from Bangalore, but are not expected to continue, so a sustained fall in prices is not probable.	Population is 87,895; of these 5,734 belong to high-caste 20,960 are of the Vellalar and other good castes. About 1/16th of the whole are well-to-do. Three-fourths are agriculturists. There are a few considerable landholders, but none so wealthy as to be likely, or even able, to aid their tenants.	No emigration is known to have taken place, nor is any likely as long as relief works and relief houses are extensively maintained.	The relief works now in progress are— Irrigation ... 1 Communication ... 15 Sanitation ... 3 Water-supply ... 7 Total ... 26 40 irrigation and several other works are proposed. These will afford sufficient work till the season improves.	Travellers are fed at stages of their journeys by village officers at Government expense. Charitable relief in the shape of cooked food has been given in nine village relief houses to all persons known to be in extreme want and unable to work. Under recent orders relief in this shape will be much reduced.	The numbers now on the hands of Government are— On works. 16,000 — By charity 13,000 Estimate for the future is— On works. 1st March 20,000 — By charity 5,000 1st May ... 22,000 — 7,000 1st July ... 24,000 — 8,000 If rain falls in June, the numbers on works will be reduced to about 16,000.

GOOTY Taluk (Sub-Collector Mr. W. H. Glenny).

a	b	c	d	e	f	g	h	i	j	k
Dry. About 80,000 acres were sown for kharif, and on about 1/8th of this area there was a 2 or 3-anna crop. No rabi sowings. Wet. About 3,000 acres have hitherto been sown for summer crops. On about half of this there has been a 6-anna crop, on the other half there has been from 3 annas to *nil*. Cold weather crops under wells and river channels are in fair condition, but the area is inconsiderable.	Remissions Rs. 2,00,000, out of a total revenue of Rs. 2,18,980.	The majority of the cattle have been sent to graze in the Nallamalla hills. It is believed that but few have died so far, though many are in a very poor condition. The use of prickly pear does not seem to be successful. No remedial measures can be suggested. The greater portion of the useful cattle will doubtless survive.	No apprehensions are felt regarding the water-supply, though much inconvenience will be felt by villagers having to go long distances for their water. Temporary and permanent wells are being dug by relief labor along the lines of road, and these measures will be very beneficial.	Prices of the principal food-grains. Weeks ending: Rice. — Cholum. — Ragi. — Wheat. — Bengal gram. — Dhall. — Black gram. — Horse gram. 1876. 4th Oct.... 9 — 14 — ... — 9 — 11 — 13 — 11 — 13 11th " ... 8¼ — 12 — 12 — 8 — 9½ — 11½ — 11 — 11 18th " ... 7⅓ — 9 — 10 — 8 — 9 — 12 — 8 — 10 25th " ... 7½ — 9 — 10 — 8⅓ — 9⅛ — 12 — 8 — 10 28th " ... 6½ — 9 — 10 — 8 — 9 — 12 — 11 — 10 4th Nov.... 6½ — 8 — 8 — 7 — 7 — 11 — 10 — 9 11th " ... 6½ — 8 — 9 — 7 — 9 — 10 — 12 — 8 18th " ... 6⅛ — 8 — 9 — 7 — 9 — 10 — 12 — 8 25th " ... 6½ — 7½ — 9 — 6 — 8 — 10 — 10 — 6 2nd Dec.... 6½ — 7½ — 9 — 6⅜ — 8 — 9 — 10 — 6½ 9th " ... 6½ — 8 — 9 — 7¼ — 8 — 9 — 10 — 7 16th " ... 6½ — 8 — 8½ — 7 — 8 — 9 — 10 — 7 23rd " ... 6⅜ — 8 — 9 — 7½ — 8 — 9 — 10 — 7 30th " ... 6½ — 7½ — 8 — 7 — 8 — 9 — 10 — 7 1877. 6th Jan. ... 6½ — 8 — 8¼ — 7⅓ — 8* — 9 — 10 — 7 Average of the last six years ... 13⅛ — 26½ — 23½ — 10¦ — 7½* — 14* — 11⅛ — 24½ * Average of 3 years.	There are large stores of grain hoarded in grain pits. The people live on imported grain which comes into the taluk by two railway stations, which are fed by good roads. Private enterprise amply suffices to supply the taluk with food. Government importation has caused a slight fall in prices, which will shortly rise again.	The population is 144,568, and consists chiefly of agriculturists, the artisans being in a great minority; they are mostly Hindus, with a small percentage of Mussalmans. No help is to be expected from the richer ryots, and many of the poorer are on relief works.	No emigration further than to the nearest relief work has taken place. None is expected hereafter.	Storing of metal and other road works afford ample employment for all who seek it, and will be sufficient for 8 months more.	Relief is given in 12 villages to the maximum extent of 4 per cent. of the population. Village officers feed destitute travellers at the cost of Government.	The numbers now on the hands of Government are— On works. 32,000 — By charity 3,000 Estimate for the future is— On works. 50,000 — By charity 70,000 If rain falls in June, the numbers in July will be reduced to 10,000 or 20,000.

BELLARY DISTRICT—continued.

a	b	c	d	e	f	g	h	i	j	k
				ALUR Taluk (Sub-Collector Mr. W. H. Glenny).						
DRY. 34,000 acres were sown for kharif. The outturn was *nil*. No rabi sowings. WET. Extent so small that it need not be noticed; all the crops may therefore be said to have been lost.	As this taluk has lost all its crops, almost a total remission of revenue will have to be made. The total revenue is Rs. 2,79,166.	*Vide* remarks on Gooty taluk, except that as there has been no home produce of fodder, and the taluk is almost entirely off the great lines of traffic, the cattle have suffered far more.	There will be great scarcity of water, and people will have to go long distances to procure their supply, but no actual deaths are expected from this cause. Wells, both permanent and temporary, are being dug along lines of road and elsewhere.	No detailed list of the prices of the principal food-grains is sent up, but it is practically the same as for Gooty taluk.	*Vide* remarks on Gooty taluk, with the exception that the ryots are a more comfortable class; the population is to a greater extent agricultural, and the percentage of Mussulmans is higher.	The population is 98,230. *Vide* further remarks on Gooty taluk.	*Vide* remarks on Gooty taluk.	*Vide* remarks on Gooty taluk.	*Vide* remarks on Gooty taluk.	The number now on the hands of Government is 45,000; 5,000 of these are inhabitants of Adoni taluk. It is expected that the numbers for March, May and July will not exceed 45,000, though perhaps 50,000 or 60,000 may have to be admitted to relief.
On 128,000 acres sown for kharif, on two-thirds of this area, a 4-anna grain crop and a fine yield of kurbee was obtained. The kurbee is a very valuable product, and the total outturn is worth as much as a moderate grain crop would have been. On 1,000 acres of rabi the crop was successful. A small extent under tank irrigation yielded a 6 anna crop.	Remission Rs. 1,00,000, out of a total of revenue of Rs. 2,79,366.	*Vide* remarks on Gooty taluk.	The taluk is not badly off for water, except in a few places.	**ADONI Taluk (Sub-Collector Mr. W. H. Glenny).** PRICES OF THE PRINCIPAL FOOD-GRAINS.	*Vide* remarks on Gooty taluk. The taluk is well off in having three railway stations; prices are consequently a little lower than in the other taluks; private enterprise is sufficient to supply an adequate quantity of food for the people.	The population is 181,683, and is divided equally between agriculturists and weavers. There is a larger proportion here than elsewhere of poor people, many of whom have no means of livelihood. There are a large number of Musulmans, among whom there is great distress, though mitigated by the cheapness of animal food.	*Vide* remarks on Gooty taluk.	*Vide* remarks on Gooty taluk.	*Vide* remarks on Gooty taluk.	The present number on the hands of Government is over 70,000: efforts will be made to keep this number from increasing.

Glenny). *Vide* remarks on Gooty taluk. Tadpatry has two railway stations, both favourably situated.	The population is 117,211, and is mainly agricultural. A large proportion are farm labourers. There are many of the sheep and goat-keeping castes. The towns are few, chiefly inhabited by petty traders. The artisans are comparatively few. The agricultural labourers are better off here than elsewhere this year, owing to the sustained demand for labour in lands under wells and channels.	*Vide* remarks on Gooty taluk.	*Vide* remarks on Gooty taluk, except that for the only new line of road which it is desirable to make, there are absolutely no materials within an average distance of 6 or 8 miles.	No information.	The number now on the hands of Government is 14,000. This number will not increase beyond 15,000 or 16,000; the maximum will be reached on 1st May, unless rain fails.
An average 1½ anna crop has been saved on the whole. Further sowings may take place to the extent of 1,000 acres under tanks, wells, &c.	Remissions Rs. 66,000, out of a total revenue of Rs. 1,06,038.	Five thousand two hundred out of 15,600 agricultural stock, and 30,650 out of 92,040 cattle, have died up to date of report. Of the remaining 71,790 head, 10,000 may be expected to die. Ryots are feeding their cattle on date leaves, roots of grass, leaves of jungle trees, &c., and the large herds have been driven to the Nallamalla hills. There is very little prickly-pear. It is recommended that Government should import fodder and establish depôts at certain places.	This taluk is very badly off for water. All tanks, river channels, and jungle streams are perfectly dry, and the few wells will soon be dry also. Sinking wells, &c., is adopted as a remedial measure.	**KUDLIGHI Taluk (Deputy** PRICES OF THE PRINCIPAL FOOD-GRAINS. Weeks: Rice. / Cholum. / Ragi. 1876. October, 1st week: 7 / 8 / ... „ 2nd „: 5 / 8 / 8 „ 3rd „: 5½ / 8 / 10 „ 4th „: 5½ / 7 / 10 November, 1st week: 5½ / 6 / ... „ 2nd „: 5⅔ / 7 / 9 „ 3rd „: 5¾ / 6½ / 7 „ 4th „: 5¾ / 6 / 7 December, 1st „: 5½ / 6 / 7 „ 2nd „: 5 / 6½ / 7½ „ 3rd „: 6 / 7 / 8 „ 4th „: 6¼ / 8 / 8 Average of the last 6 years...: 11½ / 31½ / 37½	Collector Mr. N. Mivurgesam Moodeliar). The ryots have about 10,00,000 seers of grain in stock, which is only sufficient for their own wants. About 38,000 seers are imported from Bellary every week. The local merchants are not wealthy, but their importations are sufficient to keep the prices steady.	The population is 98,228, and is three-fourths agricultural, and the rest urban and artisan. They are generally poor, and there are no rich landholders who are able or willing to render help to the poor.	There has been no emigration, nor is there likely to be any. There has been considerable immigration from adjoining taluks.	One hundred and twenty-two relief works have already been sanctioned, and are now in progress. Besides these, 33 irrigation works are proposed to be undertaken as the others are finished.	No charitable relief is given to pauper travellers. The aged, infirm, the blind and children incapable of working are fed in relief houses at a daily cost of Rs. 100.	The numbers now on the hands of Government are— On works. 19,974 / By charity. 2,019 The Deputy Collector estimates the numbers for the future for this and Raidrug taluk together at, on— On works. / By charity. 1st March 28,000 / 3,000 1st May 30,000 / 4,000 1st July 32,000 / 5,000
The crops saved for both kharif and rabi are estimated at 1½ annas.	Remissions Rs. 1,12,000, out of a total revenue of Rs. 1,40,034.	About one-quarter of the agricultural stock, and half of the other cattle, have died; the others are in a very poor condition. Scarcely any fodder is to be had. They are at present fed on prickly-pear and roots of jungle grass.	Tanks have dried up. There are no springs in nallahs and channels, and no likelihood of improvement in this respect. Wells might be deepened, &c.	**RAIDRUG Taluk (Deputy** PRICES OF THE PRINCIPAL FOOD-GRAINS. Weeks: Rice. / Cholum. / Ragi. 1876. October, 1st week: 9 / 13 / 13 „ 2nd „: 7 / 11 / 11 „ 3rd „: 6½ / 8⅔ / 9 „ 4th „: 6 / 8⅔ / 9 November, 1st week: 5½ / 7⅔ / 8 „ 2nd „: 6 / 7 / 8 „ 3rd „: 6 / 7 / 8⅓ „ 4th „: 6 / 7 / 8 December, 1st week: 6 / 7 / 8 „ 2nd „: 6½ / 7 / 8 „ 3rd „: 6½ / 7 / 8 „ 4th „: 6½ / 7 / 8 Average of the last 6 years: 14 / 32 / 34	Collector Mr. N. Mivurgesam Moodeliar). Some wealthy ryots and merchants have 20,00,000 seers of grain in stock. Grain is imported from Bellary to a small extent, but is insufficient in quantity.	The population is 87,779. No details are given regarding them. There are no rich persons to aid the poor.	About 500 persons have gone to villages where wet cultivation is carried on. About 1,000 have taken their cattle to distant villages in search of fodder, and about 1,000 more may be expected to leave; but all will return after the famine.	Prickly-pear is being cleared in 37 villages. Road-works are in progress. Repairs of tanks and channels may yet be undertaken, but these are insufficient to meet the wants of the people as regards relief. The construction of four large tanks and repairing another, at a total cost of Rs. 1,30,000, will prove sufficient.	Charitable relief is given to travellers, the aged, infirm, blind and children unable to work.	7,850 people are employed on relief works, and about as many more may be expected if fresh works are started.

BELLARY DISTRICT—continued.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The crops saved are estimated at 7 annas. These crops refer only to the land under the Toongabhadra Channels, which from absence of rain have borne badly. Further sowings are expected under the river channels.	Remissions Rs. 60,000, out of a total revenue of Rs. 1,55,152.	Out of 122 villages in the taluk there is fodder in 34 for 9,000 cattle. Of the remaining 18,000 cattle; half have already died. It is expected that only 4,000 will survive the famine. Cattle, are being sold for trifling sums, a rupee or less, and even a few seers of grain. Government has done nothing to save them, beyond suggesting the use of prickly-pear, which is too expensive to prepare to be of much use. To provide against a famine of fodder for the future, the Deputy Collector advised allowing the ryots to hold waste land at one-fourth of the land they cultivate without being required to pay assessment on it.	The wells and tanks are drying up. No remedial measures are suggested.	**HOSPETT Taluk (Deputy**	The stock of grain in hand would last the people for two months. Bellary Railway Station is 39 miles from Hospett, and further supplies may be drawn from there. Private enterprise is able to meet demands.	Of the population of 93,424, there are 20,000 agriculturists; the rest are merchants, artizans, &c. There are no zemindars or large landholders. There are a few well-to-do ryots, but they are not able to assist others.	No emigration has taken place. There is no prospect of emigration so long as relief works are in progress.	Relief works, such as digging new wells, repairing old ones, repairing tanks, making roads, &c., cost Rs. 68,134 up to the end of December. Further irrigation works are proposed.	Rs. 3,334 were spent up to the end of December in distributing cooked food to travellers, the aged and infirm, in two villages in the taluk.	The number now on the hands of Government is— On works. 18,194 By charity. 3,077 Estimate for the future is—

The crops saved are estimated at 3 annas. Further sowings are expected under Nala lands.	Remissions Rs. 1,07,630, out of a total revenue of Rs. 1,36,802.	Of the 100,000 cattle in the taluk, one-sixth have already died. One-fourth of the whole only are expected to survive. Many cattle were driven to the Mulnad, but they had to return, as no fodder could be procured there. There is but little prickly-pear in the taluk.	Tanks and wells have dried up. Many are being repaired from famine funds.	**HUVINHADGALI Taluk (Deputy**	Local stocks of grain are scanty. Importations are made from Bellary, &c., but as the grain has to come from great distances, the prices are high. Unless Government imports, the prices will not fall.	The population is 89,538, of whom 20,000 are agricultural, and the rest artizan, &c. There are no landholders or zemindars able and willing to help their tenants.	About 5,000 persons emigrated with their cattle to the Mulnad. Many have returned. No further emigration is probable.	Up to the end of December Rs. 62,000 were spent on the repair of tanks and wells, making roads, &c. Certain irrigation works are proposed to be executed in the future.	Rs. 1,815 were expended up to the end of December in the Cusbah town in giving charitable relief to the aged, infirm, &c., and children under 10 years of age.	The number now on the hands of Government is— On works. 12,064 By charity. 1,462 The estimate for the future is—

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The crops saved for both kharif and rabi are below one anna. There is no prospect of any further sowings on dry land, and only to a very small extent on wet lands under the Tumbadhra channels.	Remissions Rs. 2,60,000, out of a total revenue of Rs. 3,03,274.	Half the whole number of cattle and agricultural stock have died. About 6,000 are being fed on prickly-pear, and an equal number have been sent to the hills. No suggestions are offered for the future.	In most villages there will be enough drinking water to last till the rains. In the others advances are made to villagers to enable them to sink new wells and deepen old ones.	**BELLARY Taluk (Tahsildar**	**Mr. J. G. Firth).**					
					There is a sufficient stock of grain to supply the taluk for another year. Large quantities are imported by railway from the north as well as from Madras. Considerable exports have been made. Private enterprise is able to maintain supplies. There is no likelihood of prices falling till the early rains set in.	Population 182,244, of whom about one-fourth are high caste. About 37,000 are agricultural; the remainder urban or artizan. They are generally poor. There are no large landholders and none able to aid their tenants.	There has been slight emigration only: 4,000 persons are said to have left the taluk. Nothing is known as to whether they have bettered themselves or not.	Relief works have been started on 6 important roads, and about 55,000 persons are employed on them. Besides these, improvements have been sanctioned in 57 villages and the repair of 4 small tanks and a new road. These works, and the ones to be begun, are sufficient for the present.	Charitable relief is given in the shape of grain or cooked food to those unable to work, in several places in the taluk.	On January 13th there were— *On works.* 55,219 — *By charity.* 50 Estimate for the future is— 1st March, 1st May ... *On works.* 65,000 — *By charity.* 1,000 1st July ... *On works.* 35,000 — *By charity.* 1,000 The number for July is on the assumption that rain will fall in May or June.

ANANTAPUR Taluk (Deputy Collector

The crops saved are estimated at between 2 and 4 annas. No prospect of further sowings.	Half the total revenue of Rs. 1,35,382, will have to be remitted.	The past mortality among cattle may be estimated at ⅓rd of the whole. The anticipated mortality is expected to be half the present number. Feeding them on prickly-pear is not very successful.	There is no water in the tanks, and springs and wells are drying up. Sinking new wells and excavating springs would afford a measure of relief.		**Mr. K. Narasingarow).**					
					Local stocks are estimated at 500 kandies of 30 maunds each. Small supplies are drawn from 2 railway stations. Private enterprise is considered insufficient to meet the demand. If ample importations should take place, there would be no fall in prices, owing to the large requirements of the people.	Three-fourths of the total population of 102,761 are agriculturists and the remainder petty traders. No landholders are able to help their tenants.	Only a few persons left the taluk, and they returned on the opening of relief works.	The relief works now in hand are considered sufficient for the present. Further works will be commenced when required.	Cooked food is given to travellers and to the aged and infirm, who are unable to work.	The number now on the hands of Government is— *On works.* 15,200 — *By charity.* 70 The anticipated numbers are— 1st March ... *On works.* 18,000 1st May ... 20,000 1st July ... 22,000

DHARMAVERAM Taluk (Temporary

The average crops saved are estimated at from 2 to 4 annas. Except under river or spring channels and wells, there is no prospect of further sowings.	Three-fourths of the total revenue of Rs. 1,41,342, will have to be remitted.	Mortality among cattle has been three-fourths, and among agricultural stock one-half the entire number that were in the taluk. The anticipated deaths are estimated at half the present number of agricultural stock, and three-fourths of the other cattle. The prickly-pear in the taluk is unsuitable for fodder.	There is no water in the tanks; it is also failing in springs and wells.		**Deputy Collector Mr. W. Winslow).**					
					The stock of grain in hand is estimated to be 300 kandies of 30 maunds each. Small supplies are drawn from 2 railway stations. Private enterprise is insufficient to meet the demand. Even if there be ample importations, prices will not fall owing to the large demands.	Of the entire population of 120,608, one-fourth are small traders, and the rest agriculturists. There are no landholders able and willing to help their tenants.	No emigration has taken place.	The relief works already started are sufficient for the present. The repair of irrigation works, roads between important places, excavating spring channels, sinking new wells, &c., will be started where needed.	Cooked food or grain is given to travellers and to the aged and infirm who are unable to work.	The number of persons now on the hands of Government is— *On works.* 18,701 — *By charity.* 842 Estimate for the future is— 1st March ... *On works.* 20,000 1st May ... 22,000 1st July ... 25,000

Average for the past six years ...	12·65	17·32	18·37	17·11	...

a

Two annas of the crop saved. No prospect of sowings, unless there be a timely fall of rain.

b

Remissions Rs. 1,73,000, out of a revenue of Rs. 2,57,368.

c

No mortality among cattle as yet, but it is apprehended if there be no rain. The pastures, obtained hitherto from slight showers and from withered crops, have now become exhausted. Deepening of wells, spring ponds and pools is being undertaken to improve water-supply. Cattle permitted to graze on high-lying tracts of jungle, and prickly-pear suggested as fodder.

d

The Palar tanks and wells. All tanks however, with the exception of two (Red Hills and Madratakum), have become dry. The only villages fortunate in water-supply have been those traversed by rivers and river channels. Ryots encouraged to dig wells. Remedial measures proposed are—

(1) Reduction to Rs. 50 of the minimum advance under the Land Improvement Act, and procedure under the same simplified;

(2) Ryots permitted to cultivate wet lands with dry crop, Punjab rates only being charged; and

(3) Cultivation in beds of tanks permitted under certain restrictions as regards assessment.

f

Local stocks limited. There are only a few wealthy landholders possessed of a supply of grain, and this chiefly for their own consumption. A few northern markets, comparatively inaccessible from Madras, have felt the scarcity of grain. Supplies not expected to fail, even if left to private enterprise. The chief centre of supply is Madras, where the imported stock is said to be abundant. Fall in prices not expected till the next heavy rains.

g

The population of the entire district amounts to 938,184. One-third of the males are agriculturists and sixteen-twenty-fifths are artisans. The people are of all castes, and are generally poor. There are very few well-to-do landholders, and they are not able to aid their tenants.

h

Very little emigration. Labourers with their families, beggars, aged and infirm, have however flocked to Madras. Influx checked by formation of relief works at Red Hills, Pallaveram and Krutter, where the sick, aged, destitute, &c., are fed. The able-bodied are provided with work on the new roads in course of construction. Pools are being deepened, and there is enough employment for all.

i

Relief works already started: Constructing three lines of road, Rs. 18,500; deepening drinking ponds, &c., Rs. 5,000; total Rs. 23,500. Works practicable: Two new roads to cost Rs. 6,000.

j

Destitute travellers, aged, infirm, &c., receive gratuitous aid in the shape of cooked rice, with a certain portion of condiments. Village officers instructed to give a meal to those visiting their villages, and who may be in imminent danger of starvation.

k

The number of persons Government is likely to have on its hands in the entire district on the dates specified is approximately as follows:—

	No. on hand.	On 1st March.	On 1st May.	On 1st July.
On works...	14,423	28,000	40,000	50,000
By charity...	3,289			

The above figures will greatly diminish if there be a seasonable fall of rain.

COIMBATORE DISTRICT—(Collector Mr. A. Wedderburn).

COLLEGAL Taluk (Acting Deputy Collector Mr. C. A. Mackenzie).

a The crops saved are estimated at—

	As.
Dry lands ...	7½
Wet „ ...	9
Garden „ ...	*Nil*

No prospects of further sowings.

b Remissions Rs. 24,000, out of a total revenue of Rs. 97,542.

c The mortality among cattle up to date was 6,000, caused by disease and want of fodder. Most of the cattle have been driven to the hills, where pasturage and water is obtainable. No suggestions for the future are offered.

d The villages distant from the Cauvery river are dependent on wells for water, and these are drying up. Advances will be made to deepen them under the Land Improvement Act. An estimate is sent up for this purpose for this taluk, amounting to Rs. 600.

f Mr. C. A. Mackenzie).

The tahsildar reports that the people have large stores of grain (20,000 selagais). Grains are imported from Bangalore and Mysore. There are no railway stations near the taluk. There are no large centres of supply.

g The population is 90,830, of whom the low caste form the greater portion; 20,000 have no land, &c., about 4,000 are artisans and 46,000 ryots; of whom about 200 are rich, but none will aid their tenants.

h About 200 people have left their homes; their whereabouts are unknown, and none have returned. Further emigration is probable.

i 15 relief works have been started at a probable cost of Rs. 15,000, consisting principally of roads, of a total length of 92 miles.

j Three persons have subscribed Rs. 100 each: with this sum about 50 poor persons are fed on conjee daily.

k As relief works have only lately been commenced, no account is sent up of the number of people now employed on them. Forecast for the future is—

	On works.	*By charity.*
1st March / 1st May / 1st July	2,000 altogether.	

BHOWANI Taluk (Acting Deputy Collector Mr. C. A. Mackenzie).

a The crops saved are estimated at—

	As.
Dry lands ...	3
Wet „ ...	4½
Garden „ ...	6

No prospects of further sowings.

b Remissions Rs. 60,000, out of a total revenue of Rs. 1,21,395.

c No deaths from disease or starvation among the cattle in this taluk. It is feared that the mortality will be great, unless the state of the season improves.

d *Vide* Collegal Taluk.

f Collector Mr. C. A. Mackenzie).

Large stores of grain were kept in the hilly and remote villages; the temptation of high prices in Mysore has caused the opening of the grain-pits and considerable sales and consequent increased prices. They have doubtless retained sufficient for their own consumption. Supplies are obtained from the railway stations about 30 and 40 miles distant from the cusbah. Extensive importations will diminish prices.

g The population is 102,813, of whom the tahsildar reports that coolies and agriculturists are in equal proportion. There are no rich ryots able and willing to help the poor.

h No emigration as yet, though it may be expected if the season does not improve.

i 8 relief works have been started at a probable cost of Rs. 10,370. They consist chiefly of roads, of a total length of 75 miles.

j A relief house has been recently opened, and about 50 persons are fed daily. Rs. 114 have been subscribed by 11 respectable persons, and it is hoped that others will follow their example.

k As relief works have only lately been commenced, no account is sent up of the number of people now employed on them. Forecast for the future is—

	On works.	*By charity.*

f Collector Mr. C. A. Mackenzie).

Large stores of grain were kept in the hilly and remote villages; the temptation of high prices in Mysore has caused the opening of the grain-pits and considerable sales and consequent increased prices. They have doubtless retained sufficient for their own consumption. Supplies are obtained from the railway stations about 30 and 40 miles distant from the cusbah. Extensive importations will diminish prices.

g The population is 169,916, and of all castes and denominations, of whom the artisans comprise a little less than ⅛th. The agricultural portion with their dependents is a little more than ⅓rd; labourers number 70,000. There are about 70 rich people; the remainder are ryots and poor persons. The rich will not aid their poor neighbours.

h About 5,000 people have emigrated to the Wynaad and Nilgiris to seek employment on the extensive coffee plantations there. A few have returned. Further emigration is unlikely.

i 10 relief works have been started at a probable cost of Rs. 14,615. They consist chiefly of roads, of a total length of 139 miles.

j A relief house has been opened by the tahsildar, assisted by some well-to-do ryots, in which the average number of persons fed is 350 daily, and the cost about Rs. 120 per mensem.

k As relief works have only lately been commenced, no account is sent up of the number of people now employed on them. Forecast for the future is—

	On works.	*By charity.*
1st March ...	15,000	500
1st May ...	10,000	500
1st July ...	7,000	500

The Collector considers that the number for March (15,000) may probably be less.

COIMBATORE DISTRICT—continued.

COIMBATORE Taluk (Collector Mr. A. Wedderburn).

a

The crops saved are estimated at, on—

	As.
Dry lands ...	3
Wet „ ...	6
Garden „ ...	6

No prospects of further sowings.

b

Remissions Rs. 1,00,000, out of a total revenue of Rs. 3,50,651.

c

It is estimated that 5,000 head of cattle have died from disease. Pasture scarce. Poor ryots are selling their cattle at low prices.

d

Water-supply scarce. The deepening of wells is being carried out as a remedial measure.

e

Average of last six years ...	6	6½	10½	14	14¼

f

The quantity of grain in stock is not ascertainable, but is considered to be small. Grains are imported in sufficient quantities. There are six railway stations in the taluk, and good roads everywhere.

g

The population is 243,995; about half are high caste; the majority are poor. Only 33,000 are purely agricultural. Wealthy landholders are few, and are not likely to aid their dependents.

h

Emigration small, and those that have left have returned, or will do so hereafter.

i

Thirteen relief works of various kinds have been started at a total estimated cost of Rs. 24,050.

j

Fifty aged and infirm persons are daily fed at Coimbatore from Government funds; about 400 persons are fed also by private charity. Pauper travellers are fed on their way through the villages at the public expense.

k

The number now on the hands of Government is—

On works.	*By charity.*
279	400

Estimate for the future is—

	On works.	*By charity.*
1st March ...	10,000	Number
1st May ...	6,000	not
1st July ...	4,000	given.

PULLADUM Taluk (Head Assistant Collector Mr. G. Mackenzie).

a

The crops saved are estimated at, on—

	As.
Dry lands ...	3
Wet „ ...	*Nil*
Garden „ ...	10½

b

Remissions Rs. 1,63,000, out of a total revenue of Rs. 3,92,748.

c

No deaths among the cattle as yet. Some have been driven to the Annamallay Hills for pasture, also to the taluks of Pollachi and Coimbatore; many have been sold at low prices. It is recommended that in February, March and April fodder be imported by Government from Malabar, or else there will be no cattle when ploughing commences.

d

There is much inconvenience from want of water, but no actual distress. The deepening of wells is considered a sufficient remedial measure.

f

The stock of grain in hand is not known; it is imported in large quantities from Madras and Malabar by the railway running through the taluk. No fears are felt that supplies will fail.

g

The population is 237,808, and is almost entirely agricultural, with a sprinkling of artisans and others. The ryots are generally well-to-do. There are no wealthy landholders or zemindars who will help their tenants.

h

Early in the season people in the north of the taluk left for the coffee estates on the Nilgiris and the wet lands in Sattiamangalam Taluk. They will return to their homes in February. No further emigration probable.

i

Various relief works, at an estimated cost of Rs. 56,920, have been started. These will be completed in March, when others will be commenced.

j

In the town of Tiroopur merchants have relieved a few destitute persons. Orders have been issued to heads of villages to assist poor travellers.

k

The number now on relief works is 3,500. Estimate for the future is—

	On works
1st March ...	40,00
1st May ...	
1st July ...	10,00

ERODE Taluk (Acting Sub-Collector Mr. G. McWalters).

a

The average crops saved are—

	As.
Dry lands ...	1
Wet „ ...	7½
Garden „ ...	9

b

Remissions Rs. 2,08,000, out of a total revenue of Rs. 4,67,340.

c

There has been no unusual mortality among cattle from want of fodder, and it is anticipated that no special measures will be needed to preserve agricultural stock. Ryots are selling their surplus stock at low prices.

d

There are three rivers in the taluk. A few villages will suffer from want of water, but deepening wells will supply all deficiencies.

e

Weeks ending	Prices of the principal food-grains. (*Measures of 144 tolahs per rupee.*)

f

The quantity of grain in stock is not known. Two lines of railway intersect the taluk, and there are 14 well located weekly markets. Private enterprise is able to maintain sufficient stocks of food-grains.

g

Total population 2,33,564; the majority are poor and purely agricultural. No assistance can be expected from the landholders.

h

There has been but little emigration, and the relief works at home will probably bring all back again who have gone.

i

One hundred and thirty-six miles of roads at a cost averaging Rs. 120 a mile are being made as relief works. Also storing metal is going on for the existing local fund roads, which have a total length of 173½ miles. Other minor works are in progress.

j

No relief to travellers and others has been given as yet.

k

The number now on works 3,531. The tahsildar estimates that there will be on—

	On work
1st March ...	3,500
1st May ...	7,500
1st July ...	9,000

The Sub-Collector expects 4,00 5,000 and 5,000 on each of t above dates, respectively.

COIMBATORE DISTRICT—continued.

Average of last six years	6⅔	8⅓	15	17⅔	19½

The crops saved are estimated at— As. Dry lands ... 1½ Wet „ ... 3 Garden „ ... 9	Remissions Rs. 1,55,000, out of a total revenue of Rs. 3,51,758.	No unusual mortality among cattle and agricultural stock. Both are reduced in condition and sold at a great sacrifice, chiefly for the sake of their hides. The July cumboo and cholum crops having been reaped, afford some fodder for the present. No great mortality is anticipated, and no remedial measures appear practicable.	There are two rivers in the taluk, which supply water to the adjoining tracts of country. Rs. 1,000 have been allotted for the purpose of deepening wells in those villages where there is a scarcity of water; no other measures necessary.	**DHARAPURAM Taluk (Acting Sub-Collector Mr. G. McWalters).**	No considerable quantity of grain in stock, but native merchants can supply all demands. Grain is imported from Calicut, Palghaut, Pulney and Udumalpettah. The railway runs close to several parts of the taluk, though Jirupper station is 45 miles from the kusba.	Total population 217,493; the majority are poor and purely agricultural. No assistance is to be expected from the landholders.	About 2,000 persons have emigrated in search of work, but are expected to return to the relief works started at their own homes.	24 miles of road are under construction. The proposed relief works are— (1) road-making to connect markets and railway; (2) village improvements; (3) channel clearing; (4) storing metal for 88 miles of existing road. These proposed works will afford employment to all likely to require it.	Rs. 359 have been subscribed for feeding the poor. Government will have to provide further funds for this purpose; 600 people are fed daily at the kusba.	On December 16th there were 133 persons on works. The estimate for the future is— On works. By charity. 1st March 1st May 1st July } 4,000 Nil.

Average of last six years ...	7⅓	8⅓	13	20⅓	19⅓

The crops saved are estimated at— As. Dry lands ... 9 Wet „ ... 7⅓ Garden „ ... 6 This taluk is well off, as although the crops are below the average, the ryots have obtained double prices for them. No further sowings will be made, except under wells, until rain falls in May.	Remissions Rs. 3,500, out of a total revenue of Rs. 2,17,656.	No unusual mortality among cattle; and later on it is anticipated that only the surplus head will succumb from want of fodder. There is a large quantity of straw in store, for which the ryots obtain high prices. No Government aid appears necessary.	No anxiety about the water-supply need be felt; a few wells in some of the eastern villages may have to be deepened.	**PULLACHI Taluk (Acting Head Assistant Collector Mr. G. Mackenzie).**	The Tahsildar estimates the stock of grain in hand at 3,000 tons, sufficient for one month's supply for the whole population. This is considered low. A railway runs through the taluk, and no apprehensions are felt regarding the future supplies of grain. At first large exportations took place, but these have now stopped. Rice is now coming in.	The population is 167,546, and is, save a few in the timber trade, purely agricultural. There are some rich ryots, but as no distress is anticipated, help from them will not be required.	No emigration so far, nor is any probable. There is a large immigration from other taluks.	There are no relief works started as yet. Some may be commenced later on to employ labourers from the distressed taluks.	There has been no necessity to give relief to travellers or others.	No necessity for relief is anticipated in this taluk.

COIMBATORE DISTRICT—concluded.

UDUMALPETTA Taluk (Head Assistant Collector Mr. G. Mackenzie).

a	b	c	d	e	f	g	h	i	j	k
The crops saved are estimated at— As. On dry lands ... 1 Wet „ ... 9 Garden „ ... 6 No prospects of further sowings till next season.	Remissions Rs. 64,000, out of a total revenue of Rs. 2,19,908.	No cattle have died as yet. The ryots have been selling off their surplus stock at low prices, but have kept their ploughing bullocks. It is suggested that the reserved parts of the Annamallay hills be thrown open, and that fodder be imported by Government.	The water-supply is failing in places, but the deepening of wells, &c., will avert a water famine.	See table below	The stock of grain is not ascertainable, but is considered to be inconsiderable. The Railway runs only 39 miles from Udumalpetta, and good roads abound. Local traders will maintain supplies. Prices will not fall unless rice goes down in Madras.	The population is 123,650, and is almost entirely agricultural. There are a few artisans and traders. No help is to be expected from the well-to-do landholders and others.	A few people have emigrated, but have since returned. No further exodus is expected.	The relief works now in progress consist of (1) village roads; (2) collection of metal for existing roads; (3) clearing irrigation channels and minor village improvements. The estimated cost exceeds Rs. 30 000. Other works will be provided later on.	Funds have been subscribed, by which 1,450 persons were fed every evening up to January 10th. Government will have to provide further funds for this purpose. Travellers are fed in the villages from the public purse.	The number now on the hands of Government on works is 4,500. Estimate for the future is— *On works.* 1st March ... } 20,000 1st May ... } 1st July ... 5,000

CUDDAPAH DISTRICT—(Collector Mr. J. R. Daniel).

JAMMALAMADUGU Taluk (Acting Deputy Collector Mr. A. Krishna Row).

a	b	c	d	e	f	g	h	i	j	k
Rain-fed dry crops, such as jowári, cotton, and other pulses, in the black cotton plains have yielded a 1-anna crop. Dry crops grown by irrigation under wells, &c., within tank Ayakuts a 6-anna. Wet crops, paddy and rági, a 6-anna crop. There are no prospects of further sowings.	Remissions Rs. 1,53,203 out of a total revenue of Rs. 2,11,152.	The total number of cattle is not given; 40 per cent. had died up to date from disease and starvation. Cattle are now being driven to the Nallamalla hills, where pasturage is plentiful. There is great scarcity of water on these hills; it is proposed to dig wells there for the cattle. By the end of the hot season only 20 per cent. of the cattle will probably survive. There is scarcely any prickly pear in the taluk.	All the wells in the black cotton plains, which constitute one-third of the total number, are dry. The remaining one-third will become dry before the rains. As a remedial measure, wells have been and are being dug; old ones repaired out of relief funds. Landholders are also encouraged to take advances under the Land Improvement Act.		There are no large stores of grain in the taluk. Supplies are coming in *vid* the railway stations of Muddanoor and Kondapuram. The Deputy Collector considers that private enterprise is insufficient to maintain regular and ample supplies. No fall in prices is apparent, as importations are scanty, and the cost of transit so great owing to the distance grain has to be brought.	The Deputy Collector gives no particulars regarding the occupations, castes, &c., of the people, who number 109,965, but says that each landholder, whether large, wealthy, or the reverse, maintains his tenantry as members of his own family, and that 50 per cent. of these landholders are men of means, but he does not give their total number.	There has been some emigration, but the greater number of those who left the taluk have returned. No further exodus is expected, as there is sufficient relief work for the people near their own homes.	Twenty-three relief works are now in progress, consisting chiefly of roads and repairing wells; they are considered sufficient for the present: ten other works are proposed to be undertaken, as the ones now in hand become completed.	A relief house has been opened at the Cusbah Station, where the aged and infirm receive cooked food gratuitously. The number of such persons is daily increasing. Arrangements have been made to give relief to such travellers as are really in a distressed condition.	The number now on the hands of Government is— On works. 13,066. By charity. 96. The number it is likely to have is, on— 1st March: On works. 15,000. By charity. 200 1st May: On works. 25,000. By charity. 300 1st July: On works. 20,000. By charity. 400

PRODATUR Taluk (Acting Deputy Collector Mr. A. Krishna Row).

a	b	c	d	e	f	g	h	i	j	k
7 villages a 3-anna rabi crop has been saved. In all the others the dry crops have failed. In 15 villages a 10-anna crop has been saved under wells and the Company's canal. In April and May 1876, one-third of river and other spring channel Ayakuts have been cultivated with paddy, and a 3-anna crop saved. The prospect of further sowings is slight.	Estimated remissions Rs. 1,45,700, out of a total of Rs. 2,27,015.	Total number of cattle not given; 15 per cent. had died up to date from utter starvation and disease. It is expected that 50 per cent. will succumb before the rains set in. The Nallamalla hills which form the northern boundary of the taluk yield abundance of pasturage; but for this the mortality would have been much greater. In the north and east parts of the taluk, there is fodder for the next six months. In the other parts cattle will suffer severely.	The two rivers in the taluk and three-fourths of the wells are dry, and before the next rains set in, the remaining fourth will dry up. As remedial measures, expenditure has been and is being incurred in the excavation of wells and repair of old ones. Landholders are encouraged to apply for advances under the Land Improvement Act for this purpose.		A few well-to-do men only have any stores of grain. There is enough grain for local consumption in the markets. Though importations are feasible, there is no fall in prices, owing to the distance the imported grain has to come, and to large exportation to the Karnool District.	The Deputy Collector gives no details regarding the occupations of the people, who number 102,744, but remarks that the rich Soucars are helping their poorer neighbours and have subscribed for the maintenance of a relief house to be opened for the old and infirm.	People have emigrated to Nellore and the East Coast Canal, but are returning, as extensive relief works have been started.	Twenty-five relief works have been started, and are considered sufficient for the present; 28 other works are also proposed.	No charitable relief has hitherto been given to the aged and infirm. Arrangements are being made to start a relief house out of relief funds, aided by local subscriptions, which amount to Rs. 1,360. Relief is given to distressed travellers at every village.	Number of persons now on the hands of Government is— On works. 12,250. By charity. Nil. Estimate for the future is— On works. By charity. 1st March 20,000 Nil. 1st May 25,000 Nil. 1st July 26,000 Nil.

CUDDAPAH DISTRICT—continued.

a	b	c	d	e	f	g	h	i	j	k
Rather less than a 2-anna crop has been saved. There is little or no prospect of further sowings before the next rains.	The tahsildar estimates the remissions at Rs. 78,000, the Collector at Rs. 92,331, out of a total revenue of Rs. 1,30,762.	Total number of cattle was 85,541. Deaths up to date of report 650; anticipated 6,000. The mortality is not from disease or want of water, but from scarcity of fodder. Forest reserves have been thrown open, and cattle are fed with hill grass and forest leaves. Efforts have been made to induce the people to use prickly-pear, but with scant success.	For the present and for some time to come there will be a sufficiency of drinking water. As wells dry up, others will be dug where most required.	**BUDWAIL Taluk (Acting Head Assistant**	There is about a 2 months' supply of grain in store for all the people in the taluk, but merchants will not sell, being in hopes of obtaining higher prices later on, and ryots and other holders, through fear of worse times to come. There is no Railway in the taluk. Large supplies are being drawn from Cuddapah and Ongole, some also from Nellore. No prospect of a fall in prices consequent on ample importation.	Population 93,051, of whom 48,422 are high castes, 22,600 low castes, 5,246 no caste at all, and 6,676 Mussalmen. The population is poor, and there are very few rich people, and none willing to aid their neighbours. Nearly all are agriculturists.	10,000 persons left the taluk in the early days of the distress, and but few have returned. A few are still leaving. As relief works are in reach of all, further emigration is unlikely.	As relief works, the construction of 4 roads has been started, total length 35 miles; 4 other roads are also propcsed. Besides these a number of minor village works will be carried out, chiefly clearing and digging new wells, making village roads, improving village sites, &c.	Orders have been issued to Reddies to aid travellers and sick persons. No Government aid is given to the infirm. It is proposed to open food-houses for the relief of those who are unable to work.	The number on large relief works is 4,560. A small number are employed on village works. None are relieved gratuitously. Estimate for the future— *On works.* *By charity.* 1st March... 15,000 2,000 1st May ... 13,000 3,000 1st July ... 8,000 1,500 These figures are on the assumption that rain will fall early in spring; if not, they will be much higher.

a	b	c	d	e	f	g	h	i	j	k
Dry crops on 41,959 acres have not been sown at all. Wet crops sown on 2,291 acres average 7 annas. Garden area of 984 acres average 9 annas. Only crops on lands irrigated by river channels and wells have been saved. As the water-supply is failing, there is very little hope of a second crop being sown.	Remissions Rs. 86,676 out of a total revenue of Rs. 1,73,111.	There is no food for cattle. The ryots have been feeding them on leaves of trees, and on hill grass brought from the Nallamala hills, 120 miles off. Prickly pear has been suggested for fodder, but there is very little in the taluk. No remedial measures are suggested, and it is feared that many cattle will die.	At present there is very little scarcity of water, but later on it is feared that the wells may dry up. It is thought that clearing and deepening them will guard against any great distress in this respect.	**PULIVENDLA Taluk (Temporary**	Very few people have kept a supply of grain for their own use. Grain is supplied from Cuddapah, Moodanoor and Condapoor Railway stations. Private enterprise is insufficient, as there are no merchants with large capital. Prices are rising rapidly, and through the block on the Madras lines there is no prospect of their falling.	There are no large landowners or zemindars. The population is 110,405, of whom only 20,655 are low castes. Only 10 per cent. of the whole are well-to-do, all the rest are poor. Nearly two-thirds of the population are purely agricultural; the rest comprise labourers, artisans, &c.	No emigration has as yet taken place; as there are relief works throughout the division at an easy distance, none is expected.	The construction of 5 roads, of a total length of 102 miles, is giving relief work to 20,617 people, as well as such minor works as clearing wells and digging new ones. This will furnish employment for three months. When completed, eighteen other works are suggested.	No charitable relief has been commenced. Aged and infirm people are supported by their relations and by private charity. It is expected that this cannot last much longer.	At date of report (6th January 1877) 21,000 persons were on Government relief works. No Government charitable relief works had then been started. Numbers anticipated for the future:— *On works.* *By charity.* 1st March... 50,000 5,000 1st May ... 60,000 6,000 1st July ... 80,000 8,000

EXTRA SUPPLEMENT TO THE GAZETTE OF INDIA, MAY 5, 1877.

CUDDAPAH DISTRICT—continued.

CUDDAPAH Taluk (Special Assistant Collector Mr. C. F. MacCartie).

a	b	c	d	e	f	g	h	i	j	k
Kharif crop is estimated at 5 annas, and the rabi at 1½ annas.	The tahsildar estimates the remissions at Rs. 1,54,179, and the Assistant Collector at Rs. 1,44,185, out of a total revenue of Rs. 3,19,149.	The number of cattle was as follows:— Agricultural 21,521 Non-do. 39,253 TOTAL ... 60,774 Deaths up to date of report 700 and 1,300 respectively. The tahsildar estimates the anticipated deaths at 5,000 and 12,000 respectively, but the Assistant Collector sees no reason why the latter should exceed 2,000. The people will do nothing to save their beasts; the only suggestion is to have the cattle forcibly taken and fed with prickly-pear by famine coolies.	Wells are drying up, and it is apprehended that there will be a very serious scarcity of water during the hot season unless rain falls. Wells can be dug; it is hoped that the water obtained from them will prove sufficient.	PRICES OF THE PRINCIPAL FOOD-GRAINS. DATES. / Rice. / Dhall. / Black gram. / Bengal „ / Green „ / Wheat. / Cholum. / Rágí. / Horse-gram. 1876. 7th Oct. 6 7 8 6 9 7 10 10 10 14th „ 5⅜ 7 8 6 9 7 8 8 8 21st „ 5 7 8 6 8½ 6½ 6½ 7½ 6½ 28th „ 4½ 6 6½ 5½ 6½ 6½ 6 7 6 4th Nov. 4½ 4½ 5¾ 5½ 5¾ 5 5 5½ 5½ 11th „ 4⅜ 5 5¾ 5½ 5¾ 4¼ 5¾ 7 5½ 18th „ 4½ 5 5¾ 5⅝ 5⅝ 4½ 5 6 5½ 25th „ 4½ 4½ 6¼ 5⅛ 6 4¾ 5¼ 6 6 2nd Dec. 4⅜ 4½ 6 5½ 5½ 4 5½ 5¼ 5 9th „ 4 4½ 6 5½ 5½ 4 4¾ 5½ ... 16th „ 4 4½ 6 5½ 5¼ 4 4¾ 5⅜ ... 23rd „ 3¾ 4⅜ 5½ 5½ 5 4 4½ 5 ... 30th „ 3¾ 4½ 6 5½ 5 4 4½ 5 4½ Average of last six years. 8¾ 7 8 8 9½ 8¼ 14½ 18 14	The tahsildar estimates the stock of grain in hand at 10,000 kandies, but the Assistant Collector considers this amount too high, and does not believe that the local stock ever exceeds half the above amount at any time. Madras is the chief source of supply by rail, but rági and cholum come in from Nellore by cart. Private enterprise is sufficient to maintain supplies. Importation keeps prices steady, and unless there is heavy rain, they will not fall.	The total population is 163,013, of whom 1/13 th are high caste, and ½ of the remainder are agriculturists. There are no large landholders, but there are many cultivators who are fairly well off, who may help the poor in a small way.	Very little emigration. About 1,000 have left for the East Coast Canal Relief Works. No further emigration expected.	16 relief works have been started, of which 3 have been completed; 25 other works are proposed. Those in progress are sufficient for the present; the others will be taken up as required.	1,000 persons are daily fed at Cuddapah by private charity. Orders have been issued to relieve travellers.	12,743 were employed on works at date of report; none assisted gratuitously by Government. Estimate for the future is— On works. / By charity. 1st March ... 20,000 / Nil. 1st May ... 24,000 / 2,000 1st July ... 28,000 / 5,000 The figures for charity are in the event of no rain falling.

SIDHOUT Taluk (Acting Head Assistant Collector Mr. R. S. Benson).

a	b	c	d	e	f	g	h	i	j	k
Average crops saved: As. Kharif ... 2. Rabi ... 1 Future sowings will only be to a very small extent under wells.	The Assistant Collector estimates the remissions at Rs. 75,758, Rs. 19,758 more than the tahsildar's estimate, out of a total revenue of Rs. 1,05,174.	The total number of cattle in the taluk was— Cows and bullocks ... 19,561 Sheep and goats ... 38,500 TOTAL ... 58,061 Past deaths of the former 500, of the latter 100. Anticipated of the former 6,000, of the latter 1,000. The people use prickly pear as fodder, with beneficial results. The forest reserves have been thrown open for grazing. No other measures have been taken by Government, and none seem possible.	At present there is a sufficiency of water for all. Later on advances will be made to enable the people to deepen, clear, &c., their wells, and to dig new ones. These measures, it is hoped, will avert a water famine.	PRICES OF THE PRINCIPAL FOOD-GRAINS. DATES. / Rice, 1st sort. / Rice, 2nd sort. / Rági. / Cholum. / Cumboo. 1876. 1st October ... 5½ 6 11 11 ... 8th „ ... 5½ 6 11 11 ... 16th „ ... 5 5⅛ 8⅓ 8 11 24th „ ... 5 5⅛ 8½ 8 11 31st „ ... 5 5½ 8⅙ 8 11 7th November ... 4 4¼ 5½ 5⅓ 6 15th „ 4 4⅓ 7 6 6 23rd „ ... 4 4½ 6 5⅓ 6 30th „ ... 4 4⅓ 6 5⅓ 6 7th December ... 4 4⅕ 5¾ 5½ 6 15th „ ... 3⅞ 4 5 4⅓ 5½ 23rd „ ... 3¼ 3⅜ 5 4⅓ 5 31st „ ... 3½ 3¾ 5 4⅓ 5 1877. 4th January ... 3½ 3⅞ 4¼ 4⅓ 4⅔ Average of last six years ... 7 ¼ 9⅛ 18¾ 15 16¾	It is considered that there is a two months' stock of grain in the taluk. Supplies are freely drawn from the railway stations of Cuddapah, Wontimitta and Rajempett. Private merchants can meet future demands. In the Hoblam Valley alone, which is isolated, payments will have to be made in grain for some time. Rice may fall in price slightly, owing to ample importation.	The total population is 76,667, of whom 39,679 are high-caste, 17,863 are low-caste, 14,625 no caste at all, and 4,490 are Mussalmans. The greater portion are agriculturists and poor. There are no zemindars or rich landholders, and only a few fairly well-off. Little aid can be expected from them.	Emigration is set down at 5,000, and of which half have returned since relief works have been opened. A large future emigration is improbable, except on the part of the wudders, professional workers in earth and rock, who find remunerative employment on the East Coast Canal.	The construction and repair of four roads are in progress as relief works; four more road works are proposed, besides a multitude of minor village works, such as clearing and digging wells and channels, &c. These works will be sufficient till rain falls.	Ordinary travellers receive no aid. Sick and infirm are helped by the Reddis and sent on if able to proceed. No Government eating houses for those unable to work have yet been opened. This will soon be done at Sidhout and perhaps one other town.	Number now on hand is— On works. / By charity. 5,540 / Nil. The tahsildar estimates for the future— On works. 1st March ... 10,000 1st May ... 8,000 1st July ... 6,000 The Assistant Collector estimates— On works. / By charity. 1st March ... 15,000 / 1,500 1st May ... 12,000 / 2,500 1st July ... 8,000 / 1,000 This is on the assumption that early and good rain falls, otherwise the numbers requiring aid in May and July will exceed those on hand in March.

Average crops saved: As. Kharif ... 2 Rabi ... 1 **Further sowings are only probable this season to a very slight extent.**	**Tahsildar estimates remissions at Rs. 65,000, the Assistant Collector at Rs. 93,377, out of a total revenue of Rs. 1,82,441.**	**Total number of cattle was—** Cows and bullocks ... 43,960 Sheep and goats ... 20,255 TOTAL ... 64,215 **The Assistant Collector estimates the past deaths at 1,900, anticipated at 15,000; but says that these figures are little better than guesses. Measures taken by both people and Government for saving the cattle are the same as those detailed in the Budwail and Sidhout Taluks, and will probably prove as ineffectual if no rain falls till summer or late in spring.**	**There is a supply of water in wells sufficient for the taluk for one or two months more, when new wells will have to be dug, and old ones deepened and cleared. It is hoped that with the aid of advances, these measures will prevent a water famine.**	**PULLUMPETT Taluk (Acting Head Assistant Collector Mr. R. S. Benson).** PRICES OF THE PRINCIPAL FOOD-GRAINS. 1876. 1st week in October ... Rice, 1st sort. 5½; Rice, 2nd sort. 6; Rágí. 11; Cumboo. 11; Cholum. 10 2nd „ „ ... 5¼; 5½; 9½; 10; 9 3rd „ „ ... 5; 5½; 8; 8; 9 4th „ „ ... 4½; 4¼; 8; 8; 8 1st „ in November 4½; 4½; 8; 8; 8 2nd „ „ ... 4½; 4½; 7; 7; 6½ 3rd „ „ ... 4½; 4½; 7; 7; 6 4th „ „ ... 4½; 4½; 6½; 7; 6½ 1st „ in December 4½; 4½; 6; 6½; 6 2nd „ „ ... 4; 4½; 6; 6; 6 3rd „ „ ... 4; 4½; 6; 6; 6 4th „ „ ... 4; 4½; 5½; 5½; 5½ 4; 4½; 5; 5; 5 Average of six years 8½; 9½; 30; 18½; 17½	**There is sufficient grain in store for the people for two months. The railway runs right through the taluk, and has four stations, Kadur, Reddipally, Rajempett and Nandalur, from all of which supplies of grain are freely drawn. As it takes a fortnight to deliver grain in the taluk from Madras, there is little chance of the prices falling, as merchants fear that prices may go down in the mean time, and only import small quantities to supply immediate wants.**	**The total population is 145,180, of whom 80,615 are high-caste, 30,316 are low-caste; 26,844 are no caste at all, and 7,376 are Mussalmans. The population is poor, though with a fair proportion of well-to-do people. The bulk of them are agriculturists. There are no wealthy landholders who can help the poor. A few rich Reddis have done something to aid the poor in the villages, but no aid can be expected from them in the future.**	**3,000 have emigrated to Nellore and the Sub-Division of Cuddapah, owing to the higher rates of relief wages given there. No further emigration is expected, as many works have now been opened.**	**Five relief works have been started, four roads, total length 23 miles, and the Cheyair embankments, which will cost over a lakh, and will employ 4,000 people for three or four months. Besides these, there are five other works proposed.**	**Orders have been issued to relieve travellers, &c. It is probable that four relief houses will have to be opened to feed the infirm and others unable to work.**	**The number now receiving relief is—** *On works.* 7,500; *By charity.* *Nil.* **The tahsildar estimates the numbers to be relieved on—** *On works.* 1st March ... 10,000 1st May ... 10,000 1st July ... 5,000 **The Assistant Collector estimates—** *On works.* *By charity.* 1st March 20,000 2,000 1st May 17,000 2,500 1st July 11,000 1,500 **The estimates for May and July will be exceeded, unless early and sufficient rain falls.**

CUDDAPAH DISTRICT—concluded.

MADANAPULLI Taluk (Acting Sub-Collector Mr. J. D. B. Gribble).

a

The crops saved are—

Dry.	As.	Wet.	As.
Ragi	6	Ragi	8
Cujja	6	Paddy	8
Oil-seeds	2	Cholum	8
Dhall	2	Sugar-cane	8
Horse-gram	1	Tobacco	8
Annumoo-loo pulse	2		

Average of the whole crops saved is 3⅛ and 8 annas respectively. The above have been raised only on lands irrigated by wells. Every tank is empty, and no crops have been raised in tank Ayakuts. Future sowings can only be made in tank beds; in some of which crops can be raised.

b

Remissions Rs. 1,30,260, out of a total revenue of Rs. 1,85,296.

c

The mortality among cattle is not less than one-fourth. Unless there is an immediate change for the better, the deaths will greatly increase, as there is at present no fodder and water. The results obtained by feeding cattle on prickly pear are very trifling, as the people do not care to use it, and it is scarce also.

d

There is no scarcity of water, and it is found close to the surface.

e

Weeks.	Prices of the principal food-grains. (*Measures of 80 tolahs per rupee.*) Rice, 2nd sort.	Cholum.	Cumboo.	Ragi.

Average of the last six years	19	23¼	30¼	37

f

A few rich men only possess any stocks of grain. Importations small and limited; prices rising day by day. Importation of grain to the several local markets is being made from Madras and Vellore in North Arcot. Consignments of grain have sometimes to wait for a month before they are despatched, owing to the block on the Railways.

g

Population is 135,468, and is generally poor, with but few exceptions. Castes are of all kinds, high and low, but the majority of the people belong to the agricultural and labouring classes. There are very few landholders who can aid their tenants.

h

No emigration has taken place, as a sufficient number of works have been opened. Works have been so arranged as to provide labour to all within 8 miles of their villages. Large numbers of coolies are pouring in from Mysore and the zemindari of Panganur to find work.

i

39 relief works have been started in the taluk. Many others have been proposed, but have not been commenced as yet: 14 roads of a total length of 119 miles are now in progress. When all these works are completed, others will be begun.

j

Langakhanas have been opened to relieve travellers, aged and infirm, &c. To support them subscriptions have been raised and are supplemented from relief work.

k

36,594 persons are now employed on works, and 112 are supported by charity.

Estimate for the future is, on—

	On works.
1st March ...	45,000
1st May ... } 1st July ... }	50,000

VOILPAUD Taluk (Acting Sub-Collector Mr. J. D. B. Gribble).

a

An average 8-anna crop has been saved on both wet and dry lands. These crops have been raised only on lands irrigated by wells. For other information see Madanapulli Taluk.

b

Remissions Rs. 1,13,886, out of a total revenue of Rs. 1,74,702.

c

The same as for Madanapulli Taluk.

d

There is no general scarcity of drinking water. At Palair, which stands high and is on very rocky soil, water is reported to be both scarce and bad. A large well has been dug, and there is still a fair supply in the river, which is close to the village. Between Palair and Voilpaud too, water is reported to be scarce, but not for drinking purposes.

REPALLI Taluk

(Mr. G. W. Fawcett, Assistant Collector).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Three annas of the dry crop saved, twelve annas of the wet.	Remissions Rs.1,40,000 out of a total of Rs. 6,39,816.	No mortality among cattle in the past or expected in the future. Grazing lands are to be thrown open for cattle free of rent.	No failure of water-supply is anticipated.		The local stocks amount to 40,975 putties, or 43,091¾ tons of grain; and this is considered quite sufficient for the requirements of the taluk.	The majority of the population of 169,912 are agriculturists and are fairly well-to-do. No zemindars or landholders are likely to aid their tenants, but all ryots will help their farm servants.	No emigration has occurred.	Petty local funds works have been started where necessary, but no actual relief works are necessary.	A poor-house is to be constructed at Keetepalli for the infirm, poor, &c. Considerable charitable aid in the way of private subscriptions have been afforded the poor.	No persons employed either on relief works, or are there any fed by charity.

GUNTOOR Taluk

(Mr. B. Horsbrugh, Sub-Collector).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Four and a half annas of the dry crop saved. The rági, which is being raised under wells, will yield a twelve-anna crop.	Remissions Rs. 1,00,000, out of a total of Rs. 4,13,764.	Mortality among cattle is not expected, as there is plenty of cholum straw. The cattle of Prathpad have been permitted to graze on the Rellu grass in the river Lankas.	River Kistna, tanks and wells. Tanks have run dry, but there is water in the river and in the wells. There are no fears of a failure in water-supply.		About 1,500 kandies of grain are supposed to be in stock, which is quite inadequate for the requirements of the people.	Three-fourths of the population of 126,997 are agriculturists, and one-fourth urban or artisans. The majority are of low caste. There are no zemindars but the landlords, it is believed, will aid their agricultural labourers.	No emigration has taken place in the taluk. Influx of people from Nellore and Kurnool proceeding northwards to better their condition.	No relief works are necessary.	The townspeople have started a poor-house, where the aged, sick, and infirm are fed.	No persons are expected to come on Government hands for support either on works or by charity.

SATTANAPALLI Taluk

(Mr. B. Horsbrugh, Sub-Collector).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Four annas of the dry crop saved. No estimate is given of the savings of any of the wet crops.	Remissions Rs. 25,800 estimated by the Sub-Collector, out of a total of Rs. 3,71,051; but the Collector considers this amount too high.	No mortality as yet among cattle, nor is any expected. Pasture is said to have improved by late rains, and there is plenty of cholum straw.	Wells, tanks, hill-streams, and the Kistna river. There is no apprehension of a failure of water in the taluk.		There is a sufficient quantity of jotisna for all the villages of this taluk, and paddy is being imported as usual. There will be no necessity for Government interference.	The people are chiefly of low caste, and number 101,728. Three-fourths are agriculturists and fairly well-off. There are no zemindars, but the ryots will assist their under-ryots.	There has been no emigration. A few people have, however, as is customary, gone to the Delta to assist in the harvesting. There is ample work for labourers to be employed upon.	No relief works are needed.	No relief kitchens are necessary.	No persons are employed on relief works or are fed by charity in this taluk.

KISTNA DISTRICT—continued.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Four annas of the dry crop saved. No estimate of the wet crop is given.	Remissions Rs. 2,00,000, out of a total of Rs. 3,44,784.	No deaths as yet among cattle from starvation, nor are any expected if there be a seasonable fall of rain.	Water can always be procured by digging in beds of the numerous springs in this taluk. No distress from want of water is anticipated.	**NARSAROWPETT—Taluk (Mr. Kanchi**	Subba Rao, Deputy Collector). One thousand and five hundred kandies of grain are reported to be in stock. The chief centre of supply is the Guntoor market, the delta and the Godavery district. No importation has taken place as yet. Private enterprise, it is thought, will maintain supplies.	The population is 120,619: they are mostly agriculturists and are of low caste. There are no zemindars possessing tenants to whom assistance could be afforded.	No emigration has taken place from this taluk. A few have, however, gone to the imperial works at Santakavar to earn their livelihood.	Two thousand people have, on an average, been daily employed on local fund works. The able-bodied are encouraged to go to the imperial relief works at Santakavar. The infirm and those unable to travel are found work at their villages.	Travellers are fed and sent to the nearest relief work. Those unable to work are kept in the relief house at head-quarters.	The number of people estimated to be on the hands of Government on the dates specified is as under:—

Wet crop entirely lost, except that under the Pedda Cancherla Tank, where a saving of 2 annas may be expected. Two annas of the dry crop saved.	Remissions are as under— Dry ... Rs. 90,000 Wet ... „ 8,000 Total ... „ 98,000, out of a revenue of Rs. 1,47,636.	No mortality among cattle, nor is any expected.	The failure of the water-supply is not likely to be worse than what is usual in other years.	**VENNUCONDAH Taluk (Mr. Kanchi**	Subba Rao, Deputy Collector). If there be no exports from this taluk, the grain in stock, it is believed, will suffice for the requirements of the people.	The population is 64,508: they are mostly agricultural and poor. There are no well-to-do zemindars capable of aiding their tenants.	About four hundred persons have emigrated to Kurnool, where they are employed on relief works. People are encouraged to go to the imperial relief works, such as those at Vinakandu and the Commamur Extension Canal.	No relief works have yet been opened, but the young and infirm are given employment on local funds works, which ought either to be increased in number or supplemented by Government relief works.	Travellers have a meal of rice given them, and besides a sufficient quantity to take them to the Santakavar relief works. Persons incapable of manual labour are fed gratuitously.	The number of persons on relief works on date of report was 200, and the number maintained by charity 52. The number on the dates specified below is as follows:—

Weeks.	Prices of the principal food-grains. (*Local measures, each being Rs. 120 in weight per rupee.*)

The early crops saved are in the following proportions:— As. Jonna ... 6 Suzza ... 6 Korra ... 2 No accurate estimate can be made of savings of wet and dry cultivation.	The estimated remissions are— Rs. Wet ... 12,000 Dry ... 90,000 Total ... 1,02,000 out of a revenue of Rs. 3,35,524.	No deaths among cattle as yet from want of fodder. On the failure of pasture people drive their cattle to the jungles, &c., to graze.	Wells, tanks and the Naguleru and Kistna hill-streams. No fears are entertained of the failure of water, and should there be, wells will be deepened.	**PALNAD Taluk (Mr. Kanchi**	Subba Rao, Deputy Collector). A fair stock of foodgrains, it is believed, is in the taluk. The chief centres of supply are Masulipatam, Nizampatam or Motupilli, but importations at present, it is said, will not pay. The wet paddy crop is being cut, and is in places already in the market.	The total population is 120,658, and they are poor, chiefly agriculturaral, and of low caste.	No emigration has yet taken place, but there has been an influx of people from Hyderabad.	No actual relief works, but local funds are being spent on roads. There is ample work for able-bodied coolies on the imperial relief work at Santakavar.	Travellers get a meal supplied to them, and are then sent to relief works. Relief houses for the aged, infirm, &c., will be opened where necessary.	No persons employed on works at present; but the number estimated on the undermentioned dates is as follows:—

KISTNA DISTRICT —continued.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Twelve annas of the crop saved from both dry and wet cultivation.	Remissions Rs. 80,000, out of a total of Rs. 4,79,954.	There is no suffering among cattle from the want of fodder. The Collair Lake is, however, to be thrown open for the cattle to graze in.	Collair Lake, irrigation channels and swamps, tanks and wells. It is proposed to retain such water as may be possible in the Collair Lake, and to fill, if practicable, all tanks and swamps with river water.	**GUDIWADA Taluk (Mr.**	The grain in stock is quite sufficient for the requirements of the people if there be no exports. At any rate there is not much fear of distress on this account.	The population is 87,138 and are generally agriculturists, of low caste, and not well-to-do. There are no zemindars likely to assist their tenants, but wealthy ryots are expected to do so.	No actual emigration, nor is any expected. People however who usually go during harvest time to the Godavery district have returned because of the wages being low from the large number of extra coolies congregated there.	No relief works have been started, nor are any needed.	No charitable relief has been found necessary.	No estimate can be made.

Eight annas of the dry crop saved. Wet crop unknown.	Remissions Rs. 2,25,000, out of a total of Rs. 5,99,.584.	A few cattle have died from starvation. Ryots are driving their cattle to Narsarowpett for fodder, but the Commissioner suggests the Collair Lake; but too great crowding here is objectionable.	Kristna Channels, wells, tanks, ponds, &c. In the event of a scarcity of water, wells are proposed to be sunk in the Varchur, Inkole, Duggupad, Magolla and Rakuman tanks, where good potable water may be got.	**BAPUTLA Taluk (Mr.**	No estimate is given of the stock of grain. The importation, if supplemented with the outturn of the rice expected, will help to maintain supplies.	The population is 143,629; they are for the most part agriculturists and poor. There are no zemindars in the taluk, but the well-to-do ryots will assist their labourers.	No emigration reported, but large numbers of people are said to have come from Nellore and Kurnool, some to beg, some to get work on the Commamur Extension Canal, and others for pasture for cattle.	The Commamur Extension Canal has been started, and this work, it is expected, will be sufficient for the wants of the people. If inadequate, the Rompairu drain will be taken in hand.	Charitable aid is extended to the destitute, aged and infirm in all villages.	No information supplied.

Seven annas of the dry crop saved. Wet crop not given.	Remissions Rs. 80,000, out of a total of Rs. 2,74,195.	The condition of the cattle is good, and scarcity of water and pasture is not apprehended.	Krishna river, irrigation channels, tanks and wells. Fears are entertained in regard to a scarcity of water, but no special remedial measures are suggested.	**BANDAR**	There is a stock according to tahsildar's estimate of 22,500 maunds of food-grain, which is expected to last the taluk for ten days; but in the Collector's opinion there is enough grain to last throughout the year.	The population is 164,525; they are for the most part agriculturists, poor, and of low caste. There are two zemindars who, it is hoped, will help their tenants.	People from the labouring classes have gone to work on the river bank-work at Royyur, as well as to assist in the Godavery harvest. As soon as the harvest is over, a good many will return and possibly will go to Royyur for work.	No relief works started as yet, but if any are needed, the tanks and channels in Devi Island and the river embankment will suffice.	There is a relief house at Bandar, and arrangements for supplying indigent travellers with food have also been made.	Not a single person is on the hands of Government, either on works or fed by charity, and no estimate of the number on 1st March, 1st May and 1st July can be made.

KISTNA DISTRICT—continued.

a	b	c	d	e	f	g	h	i	j	k
Four annas of both the early and late dry crops saved. The wet crop has entirely failed.	Remissions Rs. 50,000 out of a total of Rs. 2,00,236.	There has been no unusual mortality among the cattle. No special measures have been adopted, but, in the event of failure of both pasture and water, the cattle will be driven to the Collair Lake to graze.	The water-supply of the taluk is obtained from wells, tanks and channels. These are reported to be drying, but the proximity of the rivers Munneru, the Paleru, the Vira the Kristna and others causes no fear of a water famine.	NANDIGAMA Taluk (Mr. R. Sewell, Acting Head Assistant Collector).	There is enough food-grain in the taluk to last the people for the next eight months at least, with what is now existing and what will be reaped in a day or two.	The population is 106,465, and is of low caste and mostly agricultural. There are well-to do merchants in Jugrahpett, but the landlords number only three, and they are not wealthy. The latter are not likely to assist their tenants, except the zemindar of Mutiyala, who proposes to borrow Rs. 10,000 from Government to dig a channel. Without a loan he is powerless to help his people.	There is no special movement of the people. The able-bodied will go to the relief work at Royyur after the cholum harvest is reaped and, as regards the infirm and old, small works will be started in the villages, such as clearing tanks, wells, &c., on urgency arising.	The necessity for relief works has not as yet arisen.	None by Government. The townspeople of Jugrahpett have, however, started a poor-house.	No persons employed on relief works, nor is it expected that any will be so employed or maintained by charity on the 1st March, 1st May and 1st July.

a	b	c	d	e	f	g	h	i	j	k
The early crop is said to have yielded four annas, the wet paddy ten annas, and the later dry crop about three annas. A little rági may be put down, but not sufficient to make any appreciable difference in the estimate.	Remissions Rs. 32,000, out of a total of Rs. 1,60,116.	No unusual mortality reported. Renters are being induced to give up rents of pasture lands this year so as to throw them all open. The cattle if necessary will be sent to the Collair Lake.	The sources of water-supply are wells, tanks, channels, and the Kistna and Budamer rivers. There will probably be great inconvenience if no rain falls, but no absolute distress.	BEZWADA Taluk (Mr. R. Sewell, Acting Head Assistant Collector).	The Collector thinks there is no difficulty in regard to the supply of food-grain, but should any exist it will be surmounted.	The population is 88,091. They are chiefly agriculturists and fairly well-to-do. There are two zemindars in the taluk; one has no money to spend on his people, and the other will help his ryots, but it is believed that no help will be required.	There has been no emigration, nor is any likely to take place.	The embankment works of Zanamala, Kudura and Royyur afford sufficient work for the people.	Travellers are ordered to be fed and sent to relief works. The aged and infirm have a meal a day, and they are put to such light work as they are capable of doing; if incapable they are fed.	The number of people on works on date of report was 4,000. The number on the dates specified are expected to be as follows:— 1st March ... 4,000 1st May ... 6,000 1st June ... 6,000 If ordinary rain falls the people it is expected, will have left by July.

KISTNA DISTRICT —concluded.

a	b	c	d	e	f	g	h	i	j	k
The crop saved is estimated to be 4 annas. If rain falls a little rági may yet be put down.	It is reported that the zemindars will give no remission. The total revenue is Rs. 20,875.	There has been no serious loss among cattle, nor is any expected.	The water-supply has not failed to any serious extent as yet, nor is much difficulty in this matter anticipated.	**VISENNAPETT Zemindari Division (Mr. R. Sewell, Acting Head Assistant Collector).** Weeks. / Prices of the principal food-grains. / Paddy. / Cholum. / Sudza. 1876. / Manikas.* / Manikas.* / Manikas.* 1st week in October ... 17 17 21 2nd " " ... 14 13 16 3rd " " ... 13 12 16 4th " " ... 13 12 16 1st week in November ... 12 11 14 2nd " " ... 11 10 12 3rd " " ... 11 9 10 4th " " ... 11 9 10 1st week in December ... 11 9 10 2nd " " ... 10 7 8 3rd " " ... 9 6 7 4th " " ... 9 7 8 Average of the past six years... 17¾ 16 20½ * A manika=2 seers of 80 Rs. weight.	It is supposed that there is no lack of food-grains in this taluk.	The population is 55,662; they are chiefly low caste cultivators and poor. The landlords are poor, and not likely to help their tenants.	There has been no unusual emgration. None is expected except to the relief work at Royyur.	No relief works have been started. The able-bodied will be sent to Royyur, to the imperial relief work. The infirm will have such little work as may be necessary, found for them at home.	No special charitable relief is being given.	No persons on relief works as yet, nor are any expected to be on such works or maintained by charity on the 1st March, 1st May and 1st July.
No estimate given. The dry crops are, however, reported to be fair, and the wet magnificent.	Remissions considered unnecessary, but will be given in such cases where needed. The total revenue is Rs. 1,02,703.	No unusual mortality among cattle reported. No remedial measures, therefore, seem necessary.	Should there be an unusual failure of water, digging holes in tanks and streams will be undertaken.	**NUZVID Zemindari Division (Mr. R. Sewell, Acting Head Assistant Collector).** Weeks. / Prices of the principal food-grains. / Paddy. / Cholum. Manikas.* / Manikas.* December, 1876 ... 7 4¾ * A manika=2½ seers of 80 Rs. weight.	There are no fears of a scarcity of food-grain in this taluk.	The population is 107,465, and is chiefly agricultural and fairly well-to-do. The zemindar will, it is said, give his people every assistance in providing work for them, &c.	No emigration has as yet taken place, nor is any expected.	The zemindar will, if necessary, start relief works, but at present none are needed, and the imperial works are close to this division.	The zemindar's chuttrum is open, and people are relieved by private charity. No Government interference is called for.	No persons on the hands of Government. Any that may come are included in the establishment of work at Royyur. The zemindar will find work for the people in the villages.

An average six-anna crop has been saved. Some further sowings may be made.	Remissions Rs. 1,50,498, out of a total of Rs. 206,650.	Past mortality among cattle is given at 3,205 out of 32,035; agricultural stock 2,135; out of 21,355. The future mortality will be great, as the grass on the Nallamalla Hills is failing: 23 villages out of the 92 in the taluk have a supply of fodder for 6 months. It is proposed that relief coolies should cut and store grass from the hills, which the cattle owners will be very glad to buy later on at cost price.	**NUNDIAL Taluk (Deputy Collector** In 59 villages bordering on 3 rivers and an irrigation canal, there will be no difficulty for water. In the others the supply will fail by the end of February, when a limited, though sufficient supply will be obtained by deepening wells.	Prices of the principal food-grains. Ramachandra Row).** Local stocks are estimated at 2,617,930 measures of food-grains: ¼ of this quantity is for sale; the remainder reserved by merchants for themselves. Importations are made from several places, including Cuddapah and Yerraguntla Railway; and it is considered that private enterprise is sufficient to maintain supplies.	Total population 107,320: of these 20,400 are wealthy, 28,685 fairly well off, and 57,369 poor. Out of the whole population, ⅜ are agricultural, ¼ partly so and traders, ⅛ artisans, 7/80 labourers. The few who are well off will not assist their poor neighbours.	246 persons have emigrated to the East Coast Canal. No further emigration probable so long as relief works are kept open.	Ten roads, 2 irrigation works, and 7 channels for the Madras Irrigation Canal Company are now in operation. The above nearly sufficient for the present, but further works are proposed.	No charitable relief is given to travellers. The aged and infirm who are unable to work receive relief in the shape of grain or money. Rs. 726 have been subscribed by private persons, and a relief house opened at Nundial, where cooked food is distributed to the aged, infirm, &c., and those unable to work: 8,355 persons have been fed so far.	The number of persons on the hands of Government on 27th December was— *On works.* 46,856 / *By charity.* 79 Rough estimate for the future— 1st March 56,856 250 1st May 66,856 400 1st July 76,856 700
The kharif crop saved is estimated at one anna, the rabi at 9 pies.	It is expected that the total Land Revenue of Rs. 97,554 will have to be remitted.	*Vide* Cumbum Taluk ...	**MARKAPUR Taluk (Head Assistant** *Vide* Cumbum Taluk Prices of the principal food-grains. Ramachandra Row).** The local stock may be estimated at a three-months' supply. Grain is imported by local dealers in small quantities from Cuddapah and Yerraguntla Railway, and from the Godavári and Kistna Districts *viâ* Nandikanama ghâts. It is improbable that future importations will be ample enough to cause a fall in prices.	Most of the population of 71,066 are poor. Three-fourths are agriculturists, one-eighth live partly by agriculture and partly by trade, while the remaining one-eighth are urban.	Only a few have emigrated to the East Coast Canal. As long as relief works are in operation they will not quit the taluk.	As relief works, nine roads have been commenced. When completed, seven more roads and seven irrigation works are proposed.	No travellers receive gratuitous relief. There are nine aged and infirm persons who are charitably fed.	The number of persons on the hands of Government on 28th December was— *On works.* 20,873 / *By charity.* 6 Forecast for the future— 1st March 30,000 25 1st May 35,000 50 1st July 40,000 80

KURNOOL DISTRICT—continued.

a	*b*	*c*	*d*	*e*
The taluk contains 297,929 acres, on 39,590 of which a crop has been saved, averaging about 2½ annas, or ¼ of an average yield. The crop saved on the whole area of the Taluk is about eight pies.	Remissions Rs. 1,93,619, out of a total revenue of Rs. 2,21,316.	Two thousand three hundred and seventy-two ploughing oxen and 5,177 other live-stock have died since 1st October last, and 2,533 more of the former and 5,307 of the latter are expected to die. There is a sufficiency of fodder obtained from the Nallamalla Hills and coarse green grass cut from the jhils of the Madras Irrigation Canal. The greatest scarcity will prevail during the hot months.	Omitting 9 villages which derive their water from the Tumbudra and Kistna rivers, the remaining 92 villages will be in great straits for water during the hot weather, unless the wells are deepened and silt removed. Estimates for this work have been called for, and will be put in hand when necessary.	**NANDIKOTKUR Taluk (Acting**

The kharif crop saved is estimated at 3 annas; the rabi at 1 anna.	Remissions Rs. 1,60,000, out of a total revenue of Rs. 1,67,921.	In August last there were 40,000 bullocks, buffaloes and cows in the taluk, of which 10,000 have already died, 20,000 more will probably die before the rains set in, leaving 10,000 alive if the scarcity of fodder ends in July. As remedial measures, many have been driven to the Nallamalla Hills, and grass is also imported.	At present there is some water in the taluk, but before long the wells, tanks and streams will have dried up, and the former will have to be cleared and deepened to supply water during the hot months.	**CUMBUM Taluk (Head Assistant**

Average of the last three years								

A 6-anna paddy and ragi, a 1-anna cumboo and a ¾ cholum crop have been saved. No other crops were raised; and as the sowing season has already expired, there are no prospects of other sowings.	Remissions about Rs. 2,00,000, out of a total revenue of Rs. 1,88,568.	Mortality among cattle from 1st October up to date was as follows: Bullocks ... 1,974 Buffaloes ... 477 Other live-stock ... 4,479 Expected to die— Bullocks ... 2,682 Buffaloes ... 636 Other live-stock ... 5,972 The causes of deaths have been from disease and want of water and fodder. As a remedial measure, it is proposed that Government should import fodder by railway.	Only a small portion of the taluk suffers from want of water. A supply is obtained for most of the villages from the Hindry and Tungabudra, and for a few others from wells.	**RAMALKOTA Taluk (Acting**

f	*g*	*h*	*i*	*j*	*k*
Collector Mr. R. Davidson).					
The local stock in the possession of merchants and well-to-do ryots is estimated at 2,650 putties of 1,000 measures each. The outturn in canal villages will suffice to meet local wants, and in some cases a surplus for sale. No importation of any kind. No railway station near. Ample importation would lower prices to the extent of ¼ or 1 measure per rupee.	There are 6,701 high-caste people and 90,758 low-caste. Of these, 2,457 are well-to-do and 10 or 12 of them worth about Rs. 20,000 or 30,000. Of 95,002 poor people, 54,078 are agriculturists and the rest urban and artisans. There are no landholders able or willing to help their tenants.	Before relief works were started 2,000 people left the taluk and have not returned. No more are expected to leave, as they obtain a living on the relief works, save 2,000, who will not go to them, though unable to maintain themselves, as they consider it an indignity to go to work on them.	Besides the clearing of the 400 wells referred to, 4 relief works, consisting of roads estimated to cost Rs. 1,48,000, will have to be commenced.	Cooked food at the rate of ½ a measure per head has been given to travellers, the aged and infirm, at a cost so far of Rs. 2,728-1-3. Relief houses for the distribution of cooked food have been opened at Nandikotkur, Pagidial, Atmakur and Velgode.	The numbers on the hands of Government on 21st January were— *On works.* 24,105 *By charity.* 668 Estimate for the future is— *On works.* / *By charity.* 1st March... 35,000 / 1,000 1st May ... 36,000 / 1,000 1st June ... 27,000 / 1,000 The numbers for June are on the assumption that the monsoon will set in, when 9,000 coolies may resort to their ordinary agricultural work.
Collector Mr. H. R. Farmer).					
[illegible] are about 4 or 5,000 tons of grain in stock in the taluk. There is no probability of private enterprise being sufficient to maintain a sufficient supply of grain, nor will prices fall, even if Government imports. Grain can be landed at two ports on the coast, and will have to be carted about 80 miles.	Total population is 123,042, 45 per cent. of whom are Sudras who live by agriculture. The artisans form only 1·3 of the population. The landholders are small, and those few who have tenants are unable to help them. There is no urban population. People in this taluk are the poorest in the Presidency.	About 7,500 people have emigrated, which equals 6 per cent. of the total population. Some have returned. No further emigration probable.	Four relief works (roads) have been started. These works will provide occupation for 60,000 persons in this and Markapur Taluk, and works to employ 30,000 more are to be commenced.	Those who are incapable of working are fed wherever relief works are going on. Three-quarters of a pound of cooked grain is given to each adult (once a day), and rations to children in proportion to their ages.	The number of persons now on the hands of Government is— *On works.* 40,000 *By charity.* 670 Estimate for the future is— *On works.* / *By charity.* 1st March 70,000 / 10,000 1st May ... 70,000 / 10,000 1st July ... 40,000 / 10,000 The Assistant Collector in a lengthy report points out that this and Markapur Taluk are the two worst affected in the Presidency, owing to the exceptional poverty of the people, and the inaccessibility and difficulty in procuring carriage for grain and food for the cattle.
Collector Mr. R. Davidson).					
Twenty-four villages out of 109 have a supply of grain in store for their own use for about two months. The other villages have none. Grain is imported from Gooty and Adoni Railway Stations. A few Soukars replenish the village markets fortnightly, and this checks the rise in prices. Should grain continue to be exported from this to other taluks, there will be a rise in prices from 3 to 4 annas in the rupee.	Three-fourths of the population of 146,195 are agriculturists, and 2 or 3 thousand are artisans. There are only 7 or 8 people possessed of large landed property, and they afford no help to their tenants.	No emigration from the taluk.	Fourteen relief works have been started, consisting chiefly of roads. When finished, 7 other roads are proposed to be taken in hand.	Rs. 15-10-3 have been expended on gratuitous relief. A relief-house has been opened in Kurnool town, where cooked food is given to about 2,000 people daily. Rs. 12,000 have been subscribed for this purpose, which will be supplemented by an equal grant from Government, when expended.	The number now on the hands of Government is— *On works.* 72,130 *By charity* 243 Estimate for the future is— *On works.* / *By charity* 1st Mar. / 1st May / 1st July } 80,000 / 1,000

KURNOOL DISTRICT—concluded.

KOILKUNTLA Taluk (Acting Collector Mr. R. Davidson).

a	b	c	d	e	f	g	h	i	j	k
The outturn of ragi and cholum hitherto harvested is 12 annas. To be harvested—ragi, cholum, paddy, saffron, and chilly will realise 8 annas. No prospects of further sowings.	Remissions Rs. 2,36,032, out of a total revenue of Rs. 2,47,515.	Mortality among cattle since 1st October last has been 2,000 she-buffaloes, 400 male-buffaloes, 400 cows and 1,000 bullocks. Three times the above numbers are expected to die from want of fodder. Government has done nothing to save them. They are fed on hill grass, which does not agree with them. Even this fodder will fail in the hot weather, and there remains no remedy except for Government to import fodder.	At present the people depend on two rivers and wells for their supply of water. In March next the supply will fail, and spring pits in the river beds and new wells will have to be dug. An estimate for Rs. 1,710 is sent up for 23 small village works designed to improve the water-supply.		The present stock of grain in the taluk is 3,000 putties, or 1,920,000 measures, of cholum. Grain is imported from the Palnadu Kistna District and from 3 railway stations. Ample importation would not check a rise in prices.	Two-thirds of the population of 98,844 are high and one-third low castes. One-fifth are well-to-do, and the rest poor. Three-fifths are agricultural, one-fifth artisan. A few are wealthy landholders, but they do not help their tenants.	Some people from 16 villages have emigrated to Palnad; and as none have returned, nothing is known as to how they have fared there. No further emigration expected so long as relief works are in progress.	Three roads and the deepening of the Ouk Tank are in progress as relief works. They are insufficient, and 8 other large road works are proposed. No estimates are given for the above. Besides these, 3 roads to cost Rs. 2,22,000 are proposed.	A sum of Rs. 643-7-5 has been disbursed to travellers, the aged and infirm, since the commencement of the relief works.	The number now on the hands of Government is— *On works.* 44,607 — *By charity.* 136 Anticipated— 1st March: *On works.* 54,000 — *By charity.* 130 1st May...: *On works.* 54,000 — *By charity.* 130 1st July...: *On works.* 40,000 — *By charity.* 130

PATTIKONDA Taluk (Additional Sub-Collector Mr. C. S. Bird).

a	b	c	d	e	f	g	h	i	j	k
The crops saved are 12 annas on 14,482 acres, 8 annas on 24,450, 4 annas on 1,11,189, 2 annas on 49,185 and 1 anna on 19,055, average on the whole 4¼ annas on the extent which yielded; and as compared with the total average cultivation. 125 of a full yield, or 1½ annas, taking 12 annas as the average crop.	Remissions Rs. 1,32,836, out of a total revenue of Rs. 2,33,459.	There were 163,200 cattle, including agricultural stock, in the taluk. A fourth of the latter and half of the former have died since October. This mortality is caused through scarcity of fodder. No remedial measures have been adopted by Government, but the people obtain fodder from cultivation under wells and from the Nallamalla Hills. Prickly pear is scarce, and the ryots do not care to use it.	Villages on the banks of the Haindry River, which flows on the north and west of the taluk, have plenty of water. Wells have failed only in a few places. A list of 20 wells is sent up which require improving; the estimated cost being Rs. 3,775.		The stock of grain in hand is estimated at 200 putties. Small importations take place, but are not sufficient to cause a fall in prices.	Three-fourths of the population of 173,434 are low caste, one-half are artisan, and the rest are high caste. Of the latter, only a few are wealthy. One-half the population is agricultural, a fourth traders; the rest Mussalmans. The few rich landholders will do nothing to aid their tenants.	From 6 villages people emigrated to the Nizam's country in search of work, but they have since returned. No further emigration is expected.	Four roads and two tanks are in progress as relief works, and will prove sufficient for 2 or 3 months to come. Two other roads of a total length of 27 miles are proposed.	Charitable relief has been given to travellers, the aged, infirm, &c., partly in grain and partly in money.	On February 16th there were on the hands of Government— *On works.* 23,797 — *By charity.* 154 Estimate for the future is— 1st March: *On works.* 25,000 — *By charity.* 170 1st May...: *On works.* 26,000 — *By charity.* 180 1st July...: *On works.* 20,000 — *By charity.* 100

MADURA DISTRICT—(Collector Mr. W. McQuhae).

MADURA Taluk (Acting Deputy Collector Mr. P. Soobrein).

a	b	c	d	e	f	g	h	i	j	k
Four to eight annas of the dry crops and two to eight annas of the wet crops saved. No sowings practicable, unless there be a fall of rain.	Remissions Rs. 2,24,014, out of a total revenue of Rs. 4,35,861.	There is a great scarcity of fodder in the taluk, and it is feared many head of cattle will die from starvation. Cattle permitted to graze on slopes of hills and forest reserves.	Wells, river Vygai, and pits dug in the bed of the river. The villages situated on the banks of the river have an abundant supply of water. Wells and pits are, however, drying. The remedial measures proposed are digging new wells and repairing ponds, for which work a sum of Rs. 9,500 have been sanctioned by the Local Funds Committee.	See below.	The stock of grain in hand at the end of January was 30 garce. Importation of grain has been begun, but at present it is not in such large quantities as to cause a fall in prices. Private enterprise, it is hoped, will maintain supplies.	One-eighth of the population of 231,418 is high-caste, two-thirds of it are agriculturists, and the remainder urban or artisan. There are no wealthy landholders capable of aiding their tenants.	Slight emigration to Ceylon and neighbouring districts, the reported number being 6,962. A few have returned; but as regards the others, it is not known whether they have bettered their condition. Further emigration is however probable.	Rs. 26,000 have been sanctioned for irrigation works, and it is proposed to incur a further sum of Rs. 20,000 for the same purpose.	Three chuttrums have been opened at Government expense to feed travellers, the aged and infirm, &c.	The number of persons on the hands of Government at date of report was 1,443. Estimate for the future :— *On works.* 1st March ... 3,000 1st May ... 5,000 1st July ... 7,000

TERUMANGALAM Taluk (Deputy Collector Mr. P. Subbaiyar).

a	b	c	d	e	f	g	h	i	j	k
Four annas of the crops saved. No further sowings until next rains.	Remissions Rs. 1,75,059, out of a total revenue of Rs. 4,31,488.	No mortality among cattle, as hitherto there has been a sufficiency of pasture and water-supply. In event of fodder becoming exhausted, it is recommended that cattle be permitted to graze on slopes of hills and State forests.	Wells and ooranies. There is no distress at present for water, but should wells get dry, it is suggested that they be deepened and new wells dug.	See below.	Local stocks of grain are reported to be 855 garce, but are not sufficient to meet the requirements of the people. If merchants import grain largely, there will be a fall in prices.	Three-fourths of the population of 241,215 are agriculturists; the remainder are labourers and artisans. Two-thirds of the population are well-to-do. A few landholders may aid their tenants, but not to any large extent.	About 4,171 people have emigrated to Ceylon. Further emigration is probable.	Rs. 4,236 from Imperial and Rs. 756 from Local Funds have been sanctioned for deepening wells and ooranies.	No relief houses opened as yet, though there are two chuttrums in the taluk where travellers are generally fed.	The number employed on relief works on date of report was 1,183. The number estimated on the dates indicated below is— *On works.* *By charity.* 1st March ... 3,000 1st May ... 4,000 1st July ... 6,000

MELUR Taluk (Mr. M. Tillinayagam, Temporary Deputy Collector).

a	b	c	d	e	f	g	h	i	j	k
Eight annas of the dry crop and three annas of the wet crop saved. Further sowings are possible if there be a reasonable fall of rain.	Remissions Rs. 1,40,000, out of a total revenue of Rs. 2,97,169.	1,516 head of cattle and 2,341 of sheep have died, but not from starvation. There is reported to be fodder enough for cattle for two months, after which, if there be no rain, there will be great mortality among cattle. Slopes of hills are recommended to be used for grazing purposes, and ryots encouraged by promises of light assessment to grow cholum plants for fodder. Prickly-pear is scarce.	No distress felt at present for drinking water, though fears are entertained of a scarcity two months hence in about 30 villages, where it is recommended that wells be sunk.	See below.	Local stocks estimated to be sufficient for one month. A few traders and principal ryots may have grain for their own consumption for about six months, but three-fourths of the population have none at all. Madura is the chief centre of supply; importation of paddy is however being made from Tanjore and Trichinopoly. Private enterprise not expected to cope with the demand for grain, and importation by Government is suggested. Fall of prices depends upon abundant importation and upon a fall of rain.	The population amounts to 128,983 souls, of whom 16,641 are high caste and 1,405 urban, or artisan. The rest are of low caste, and consist of agriculturists and labourers. There are no well-to-do landholders capable of aiding their tenants or padiyals.	About 6,000 persons estimated to have emigrated to Ceylon, and a similar number it is thought possible may follow. The people are not returning; hence it is believed that they have bettered themselves.	The works started by the Local Funds Board consist of the construction of three ooranies at a cost of Rs. 3,264. The works proposed are construction of roads and ooranies, excavation of tanks and clearances of channels. Rs. 2,329 have sanctioned on this account.	Relief is given to travellers in the chuttrums at Melur and Kollampatee. It is recommended that grants to these chuttrums be increased, and relief houses for the infirm, aged, &c., opened.	The number on hand on relief works is 750. The number approximately estimated on the dates specified is— *On works.* 1st March ... 600 1st May ... 4,000 1st July ... 10,000 If rain falls before these dates, it is expected that only a few persons will remain on relief works.

MADURA DISTRICT—continued.

DINDIGUL Taluk (Mr. C. W. W. Martin, Acting Sub-Collector).

a	b	c	d	e	f	g	h	i	j	k
Nine annas of the wet and two and half annas of the dry crops saved.	Remissions Rs. 1,15,768, out of a total revenue of Rs. 5,26,708.	5,200 head of cattle had died from disease up to date of report. Forest reserves have been thrown open to cattle, and prickly-pear suggested as fodder. It is considered that there is a sufficiency of pasture as well as of grass and stalks from withered crops for the cattle.	Tanks, wells, rivers Manjalar and Kodaranar, and a number of jungle streams. Wells have run dry, but the beds of the rivers, which are fed by mountain streams, are not likely to do so. Every village is said to be provided with a number of wells, and an absolute scarcity of water is not apprehended.	PRICES OF THE PRINCIPAL FOOD-GRAINS. Weeks. / Rice, 2nd sort. / Paddy, 2nd sort. / Cholum. / Cumboo. / Ragi. / Wheat. / Horse Gram. Ten per cent. of the population only have a supply for three months. The chief centres of supply are Madras, Tanjore and Tinnevelly. The railway stations are those of Caroor and Dindigul. Private enterprise, it is hoped, will maintain supplies.	The population numbers 324,366, of whom 185,000, or about 57 per cent., are agriculturists, and the remainder, or nearly 43 per cent., are of mixed occupation, among which are included 81,000 labourers. Landholders are not likely to aid their tenants, but well-to-do ryots will assist their farm labourers as long as they can.	Farm labourers, it is said, emigrate to coffee plantations in Ceylon and Travancore, where it is thought they better themselves. It is reported that they are now returning as the working season there is over.	The works already started are construction of roads and irrigation works at a cost of Rs. 52,615. The works proposed are constructing new and repairing old roads and irrigation works generally, which are to cost a sum of Rs. 1,64,087.	A relief-house has been opened at Vedasenolur for feeding travellers, the aged and infirm, &c.	The number of persons likely to be on the hands of Government on the following dates is— On Works. / By charity. 1st March ... 4,000 / 1,200 1st May ... 6,000 / 1,600 1st July ... 2,000 / 2,000

PULNI Taluk (Mr. C. W. W. Martin, Acting Sub-Collector).

a	b	c	d	e	f	g	h	i	j	k
Five annas of the wet crop and from one and half to three annas of the dry crop. Some wet cultivation is probable for a third crop under wells if there be a fall of rain.	Remissions Rs. 1,22,800, out of a total of Rs. 3,76,912.	3,000 head of cattle and 6,000 sheep have died from starvation, and but for the Palani and Annamalai hills, which afford pasture, the cattle would have suffered much from want of fodder. Forest reserves have been thrown open for the cattle, and prickly-pear suggested as fodder. The establishment of fodder depôts is also to be attempted.	Rivers Amravati, Tranganjiar and Shanmuganadi, numerous tanks and wells. Tanks have run dry, and water in wells is not abundant, yet no fear is expressed of a total failure of water-supply.	PRICES OF THE PRINCIPAL FOOD-GRAINS. Weeks. / Rice, 2nd sort. / Paddy, 2nd sort. / Cholum. / Cumboo. / Ragi. / Horse-Gram. Average for the past six years	16·47	28·67	33·61	32·16	33·60

a: Six annas of the wet crop and three annas of the dry crop saved.

b: Remissions Rs. 1,78,999, out of a total revenue of Rs. 3,86,953.

c: No mortality among cattle from starvation. There is abundant grass in surrounding hills, and no deaths are expected.

f: Local stocks of grain are said to be very small. The taluk is connected with the railway and by good roads. Private enterprise, it is expected, will keep the large markets supplied, which will not be the case as regards village markets, where scarcity is feared. Fall of prices is not anticipated.

g: The population numbers 217,418 souls, of whom very few are high caste. The greater portion are agriculturists. One-fourth is well-to-do. There are two landholders, but the aid they are likely to give is not much.

h: Emigration not to any great extent.

i: No relief works started as yet. Excavation of tanks are the works proposed as practicable.

j: Besides private charity, which is very liberally extended, nothing has been done for the aged, infirm, &c.; but it is proposed to open three relief-houses from the 10th February.

k: The number of persons Government is likely to have on its hands on dates specified is—

	On works.
1st May ...	7,000
1st July ...	3,000

RAMNAD Zemindari Division (Special Assistant Collector Mr. J. Lee Warner).

a: Two annas of the wet crops, and 3 annas of the dry crops, saved.

b: Rs. 6,879 will have to be remitted on wet lands, and Rs. 45,724 on dry lands, out of a total revenue of Rs. 7,16,892.

c: The mortality among cattle and agricultural stock has been unprecedented; the only remedy proposed is emigration. The prospects of next season's ploughing are reported to be very gloomy.

d: In the greater portion of the taluk water is running dry in the village wells, and there is no water in the tanks. The remedial measures suggested are emigration to more favourably situated places.

e:

Months.	Prices of the principal food-grains.			
	Ragi, 2nd sort.	Ragi.	Cholum.	Cumboo.

Average for three years ending 1874 ...	13·01	28·61	22·68	22·78

f: Grain merchants and well-to-do ryots have a supply of grain, but not in very large quantities. Grain has begun to be imported. The weekly markets are well supplied. The stock of grain in hand is estimated at 14,290 colums of 90 Madras measures each.

g: The population is 504,131, and is purely agricultural and mostly very poor. The landholders are not likely to aid their tenants.

h: Emigration has taken place, but the people are returning for want of work.

i: Relief works started; constructing one new road and excavating six new tanks.

j: No relief-houses have been started as yet, as there does not appear to be any immediate need for them.

k: There were 6,574 persons on relief works on date of report. Estimate for the future is—

	On works.
1st March ...	5,500
1st May ...	7,500
1st July ...	10,000

SIVAGANGA Zemindari Division (Acting Head Assistant Collector Mr. F. A. Nicholson.

a: The crops saved are estimated at 1½ annas.

b: Being a zemindari division no information is given regarding the remissions. The revenue is Rs. 4,44,751.

c: Some deaths among cattle appear to have occurred, but the numbers are not stated. Cattle are said to be selling at very low rates, specially in the south of the division.

d: The present supply in the north is good; in the south it is reported to be bad. Wells are scarce, and improving them would form most useful relief work. Ooranies also should be deepened.

e:

f: The local stocks of grain are considered to be small. Importations are very considerable. Prices have slightly fallen. Traders will keep up a constant supply, so long as the ryots have means to purchase the grain.

g: The total population is 434,253, and is chiefly agricultural and poor.

h: Large emigrations have taken place, chiefly to Ceylon.

i: Several relief works are in progress, including two roads.

j: No gratuitous relief has been given as yet. Travellers are fed at the chuttrums, but both funds and grain are becoming low.

k: The Assistant Collector is unable to give an estimate of the number of persons who are expected to be on the hands of Government in the future, but points out that the distress will be at its highest in July, and that the number then requiring aid will probably be very great.

EXTRA SUPPLEMENT TO THE GAZETTE OF INDIA, MAY 5, 1877.

NELLORE DISTRICT

(Mr. F. R. H. Sharp, Acting Collector).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Five annas of the crop saved. No further sowings, unless there be a fall of rain.	Remissions Rs. 1,75,000, out of a total of Rs. 2,80,629.	A fourth of the cattle and agricultural stock have died, and a similar number or more are expected to die if rain fails for a month or two. In absence of pasture and dry fodder, cattle are being fed on leaves of margosa, rani, dirsena, juni, marri, palmyra and date trees, and on thatch of houses.	There is spring water in the Pennair river of a foot deep, and it is feared that this will fail within a couple of months. Digging of new wells and improving old ones are recommended at a cost of Rs. 30,000.	**ATMAKUR Taluk (Mr. F. R. H. Sharp, Acting Collector).**	1,850 kandies of food-grains are estimated to be in the possession of merchants and agriculturists; paddy is in store at Kalumava, Mahimahir..u, Kartampand, Tatiparty, Mahamadapuram, Vorur, Apparowpalem, Chejerla, and Turpakambhanipand; dry grains at Bommavarum, Pongur, Mangupalli, Chirmana, Kartampand, Navur, Prabhagiripaturu, Topugunta, Bathpand and its hamlet, Nallapureddipalli. Ordinary roads are the means by which supplies are imported. The owners of food-grains are not disposed to part with them; private enterprise not considered sufficient; importation by Government will be necessary.	The population is 103,802; 25 per cent. of whom are of high caste, the remainder are of mixed occupations. The people are mostly agriculturists; about one-fourth of the population are wealthy, and aid their tenants by selling food-grains.	About 1,000 people of low caste have emigrated to Madras, East Coast Canal, &c., for work. As they are not returning, it is supposed they are well off; further emigration probable.	The relief works already started are the construction of channels, tanks, bunds, embankments, and roads, at a cost of Rs. 19,492; the works practicable are constructing five new roads, three channels, and excavating two tanks.	Cooked food is supplied to travellers, the old and infirm at Kasba Atmakur, Gollapalli, and Rattapand. The amount expended up to date was Rs. 270. A poor-house is also to be opened on the Dornal near Gollapalli.	The number of coolies on date of report was—on works 4,618 and by charity 253. The number on the dates specified below will be—

ATMAKUR Taluk (Mr. F. R. H. Sharp, Acting Collector).

Four annas of the dry crop saved; wet crops entirely lost.	Remissions Rs. 1,45,207, out of a total of Rs. 2,14,298.	About a fourth of the cattle have died from want of fodder, and a similar number are expected to die. There is no fodder for the cattle in the taluk, and owners are for the most part too poor to import straw. Prickly-pear suggested as fodder, but the ryots will not be persuaded to use it. Cattle are, however, to be fed on palmyra leaves.	There is no water for agricultural purposes, as all the rivers and most of the tanks have become dry. There is at present, however, enough drinking water for the people and cattle. Sinking new wells, it is hoped, will prevent a water-famine next hot weather.	**KAVALI Taluk (Mr. G. F. T. Power, Assistant Collector).**	Importations of grain are being made, chiefly from the Kistna district and from the seaport of Kottapatnam in the Ongole taluk. Whether private enterprise will maintain supplies cannot accurately be stated, owing to the difficulties of importation from want of railway communication and roads. Fall in prices not anticipated.	Almost the entire population of 81,336 are agriculturists, and the majority of the people are low caste and poor. The landholders are generally not well-to-do, and are therefore not likely to help their tenants.	From 12 to 15 families have emigrated to neighbouring districts; they have not returned, and their condition is not known. Further emigration is probable, but not to any very large extent, so long as local relief works exist.	The works already started are two main roads and two village roads. The works practicable are improving communication between the different villages, and connecting larger villages by good cart tracks with the main roads; also tank repairs and improvements.	There are two poor-houses—one at Kavali, and the other at Ademurtipuram: in the former 1,800 and in the latter 300 poor persons, and those physically incapable of work are fed daily.	The number on relief works is 5,830, and maintained by charity 1,541. The number on the dates indicated below will be—

KAVALI Taluk (Mr. G. F. T. Power, Assistant Collector).

a	b	c	d	e	f	g	h	i	j	k
Three annas of the sujjee crop and four annas of the ragi crop under wells have been saved. Further sowings will be made if there be a fall of rain.	Remissions Rs. 48,895, in the following proportions— Dry ... Rs. 39,781 Wet ... „ 9,114 On a rough calculation the Collector puts down the remissions at Rs. 35,000, out of a total of Rs. 67,365.	A great number of cattle have died, and are expected to die, from starvation. The well-to-do ryots feed their cattle on roots of grass and cholum grain, but the only available fodder is leaves of trees. Herds of cattle have also been driven to the Veligonda hills and Kistna.	In some villages there is a supply of water, while in others there is a great want of it. Water-supply depends chiefly on wells, and if there is not a fall of rain soon, it will be necessary to send the people of the northern villages to the Pennair river.	**UDAYAGIRI Taluk (Mr. J.W.G. Underwood, Acting Head Assistant Collector).** PRICES OF THE PRINCIPAL FOOD-GRAINS. Weeks. / Paddy. / Cholum. / Ragi. / Horse-gram. / Peas. / Wheat. 1st Oct. 1876 ... 14½ 10½ 11½ 9 7 7 8th „ ... 14 10 11 9 7 7 15th „ ... 13 9½ 9½ 9 6½ 7 22nd „ ... 12 8 9 8 5½ 7 29th „ ... 11 7½ 8 7 5½ 6½ 5th Nov. 1876 ... 10 7 7½ 6½ 5½ 6 12th „ ... 10 6½ 8 6 4½ 6 19th „ ... 9 6½ 7 6 4½ 5 26th „ ... 8 5½ 6 5½ 3½ 5 3rd Dec. 1876 ... 8 5½ 6 5½ 3½ 4½ 10th „ ... 6 ... 5½ 5½ 3 4½ 17th „ ... 6 ... 4½ 4½ 2½ 3½ 24th „ ... 6 ... 4½ 4½ 3 3½ 31st „ ... 6 ... 4½ 4½ 3 3½ 7th Jan. 1877 ... 6½ ... 4½ ... 3½ 3½ 14th „ ... 6 4 4½ 4 3 3 Average for the last six years ... 18 14 18 13 8 6	Rice is chiefly being imported from Nellore, Kavali and Rottapatam; and if this be carried out in large quantities, it is expected that private enterprise will maintain supplies.	The greater portion of the population of 100,985 are agriculturists, while artisans are in the minority. The condition of the people is poor. There are a few wealthy landholders who are capable of aiding their tenants, but whether they do so or not is un-known.	Labourers from a few villages have emigrated to neighbouring districts in search of employment, but they have returned since relief works have been opened in the taluk.	The relief works started consist of the construction of two roads and the digging of several wells. The works practicable are two new roads: one from Duttalur to Paniur; the other from Gollapally to Ramapuram.	Relief houses have been opened at Udayagiri, Sitharampuram and Duttalur, where sick and infirm people are fed. The cost of charitable relief amounts to Rs. 467-15-1.	The number of coolies on relief works on date of report was 18,000; by charity 410. The approximate number on the dates specified below will be— On works. / By charity. 1st March 18,450 500 1st June 20,700 600 1st July 18,090 450
All crops have failed, except those under wells, which have averaged 3 annas.	Remissions Rs. 86,000, out of a total revenue of Rs.5, 93,207.	There has been great mortality among the cattle. People are, however, sending their cattle to the Veligonda hills and to Kistna. They are also feeding them on thatch and prickly-pear.	Fears are entertained regarding the water-supply, which is almost wholly derived from wells, as they will fail unless early rain falls and the people will have to be encamped near the Pennair.	**NELLORE Taluk (Mr. J. W. G. Underwood, Acting Head Assistant Collector).** PRICES OF THE PRINCIPAL FOOD-GRAINS. Months. / Rice, 2nd sort. / Cholum. / Cumboo. / Ragi. Small supplies are coming in from Kistna. It is doubtful whether private enterprise can maintain supplies.	No information regarding the population which numbers 179,769. No assistance whatever is to be expected from the landholders, who are not well-to-do as a whole.	No emigration has taken place. The people will not even go to the relief works on the East Coast Canal, which are near their villages.	Two roads, 42 miles in length, are in progress as relief works, but are insufficient. Several other works are in contemplation, such as opening new roads and excavating tanks.	Village Munsifs feed travellers, the aged and infirm, at a diurnal cost of about 2 annas. Uncooked food is given to the poor at Udayagiri.	The number of persons now on the hands of Government is— On works. / By charity. 1,255 490 Estimate for the future is— On works. / By charity. 1st May ... 2,500 2,000 1st July ... 2,500 2,500

NELLORE DISTRICT—continued.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The crops saved are estimated at an average of two annas.	Remissions Rs. 36,000, out of a total Revenue of Rs. 61,765.	Up to the middle of January 3,000 cattle and 3,000 sheep had died, and one-third of the existing stock is expected to perish. A small supply of cholum straw is in stock, and is given very sparingly to the more valuable cattle, the inferior kinds being fed on prickly-pear and thatch.	Many wells are dry; some have a quarter and others less than their usual supply. It is proposed to clear and deepen the drinking-water wells in those villages where the want of water is most felt.	**KANIGIRI Taluk (Acting Sub-Collector Mr. T. V. D. Hardinge).** PRICES OF THE PRINCIPAL FOOD-GRAINS. (*Manikas per rupee*). WEEKS ENDING — Paddy, 2nd sort. — Cholum. — Cumboo. — Ragi. — Horse-gram. — Rice, 2nd sort. — Wheat. 1876. 1st Oct. ... 14 — 12 — 12 — 14 — 12 — 6 — 5½ 7th „ ... 14 — 12 — 12 — 14 — 12 — 6 — 5½ 14th „ ... 13½ — 12 — 12 — 13½ — 12 — 6 — 5½ 21st „ ... 12 — 11 — 12 — 13½ — 10¾ — 5¾ — 5½ 28th „ ... 11½ — 11 — 11 — 11 — 10¾ — 5¾ — 5½ 4th Nov. ... 10½ — 9 — 9 — 10 — 9 — 5½ — 5½ 11th „ ... 9½ — 9 — 9 — 10 — 7 — 4¾ — 5 18th „ ... 9 — 8 — 8 — 9 — 7 — 4½ — 5 25th „ ... 8½ — 8 — 8 — 9 — 7 — 4 — 5 2nd Dec. ... 8 — 6 — 6 — 6 — ... — 3¾ — 4 9th „ ... 8 — 6 — 6 — 6 — ... — 3¾ — 4 16th „ ... 8 — 6 — 6 — 6 — ... — 3¾ — 4 23rd „ ... 8 — 6 — 6 — 6 — ... — 3¾ — 4 30th „ ... 8 — 6 — 6 — 6 — ... — 3¾ — 4 1877. 6th Jan. ... 8 — ... — 6 — 5½ — 4½ — 3¾ — 4 13th „ ... 8 — ... — 6 — 5½ — 4½ — 3¾ — 4 20th „ ... 8 — ... — 5½ — 5 — 4½ — 3¾ — 4 Average of the last four years ... 17¼ — 15½ — 15½ — 18¾ — 14½ — 8 — 6½	The stock of grain in store is considered to be small. Rice is imported by merchants from Guntur and Ongole. The tahsildar considers that the importations do not meet the demand. The Collector remarks that Government, if necessary, could import grain in large quantities from the port and market of Kottapatam, distant 50 miles from Kanigiri town.	The population consists of— Brahmins ... 4,999 Kshatrias ... 1,247 Chetties ... 8,931 Vellalas ...46,444 Other good castes ... 689 TOTAL ...62,310 The total population is 127,259, and there are 63,480 low-caste persons. They are generally poor, and are chiefly agriculturists. There are no landholders able to help their tenants.	A few persons have emigrated, and have not returned. Further emigration is unlikely.	Two roads, a pond, and the repair of a large well are the relief works in progress. Eight other roads are proposed.	Destitute travellers are given relief. The aged, infirm, &c., receive one meal per diem at a poor-house at Kanigiri.	On 10th February, there were on the hands of Government— *On works.* 6,119 — *By charity.* 553 Estimate for the future is— *On works.* — *By charity.* 1st March ... 8,000 — 500 1st May ... 15,000 — 1,000 No numbers are given for July, on the assumption that rain will fall in June, and cultivation commence.
Three annas of the crops saved.	The tahsildar estimates remissions at Rs. 2,95,614, out of a total of Rs. 3,41,921. The Acting Sub-Collector of Nellore calculates the remissions at Rs. 1,57,411.	Deaths have occurred, and will occur, among cattle from want of fodder, but the number in each case is not given. Well-to-do ryots have driven their cattle to the Kristna and Godavery districts for fodder. Grass, cholum straws and stalks of cholum plant upon which cattle have hitherto been fed, have become exhausted. They are now fed on leaves of Margoza and other trees, prickly-pear and old thatch obtained from the roofs of dwelling-houses. Importation of fodder by Government for cattle is recommended.	The wells are drying up. Villages situated near rivers or on the sea-coast have a plentiful supply of water. Towards the north and east of the taluk the want of water will chiefly be felt. Sinking wells have been undertaken in tank beds, and beds of ponds, and existing wells are being cleared of silt.	**ONGOLE Taluk (Mr. T. V. D. Hardinge, Acting Sub-Collector).** PRICES OF THE PRINCIPAL FOOD-GRAINS. (*Seers of 80 tolahs per Rupee*). YEARS. — Rice, 2nd sort. — Cholum. — Cumboo. — Ragi. December, 1875 ... 16·70 — 29·10 — 30·00 — 31·52 „ 1876 ... 6·89 — 8·87 — 8·90 — 8·51 Average prices of three years ending 1874. ... 16·1 — 24·9 — 30·7 — 27·8	Rice and paddy are being imported from Kottapatam, a seaport town on the coast 10 miles east of Ongole, and from the Kistna and Godavery districts. Fall in prices has taken place owing to importation and to a cessation of the importation of food-grains. It is not known whether importation will continue so as to maintain supplies for the next six months.	The population amounts to 195,068 souls. Of these 40,233 are cultivators and 28,589 urban or artizans. The landholders are well-to-do, and are quite capable of assisting their tenants.	Emigration to a small extent has taken place to the Kistna district, and is confined only to people who have relations in that district. Further emigration improbable.	The relief works that have been started are constructing two new roads, repairing three tanks, and removing and destroying prickly-pear; works practicable are seven new roads. The East Coast Canal in course of construction affords employment to a large number of able-bodied laborers.	Two relief-houses have been opened, one at Ongole and the other at Addankey; a subscription of Rs. 250 has been raised, besides the monthly contribution of Rs. 500 by Government, towards relieving distress among the destitute and people physically incapacitated from work.	On the date of report 1,283 persons were provided on works, and 331 were fed by charity. Three times that number are likely to be on relief works on the 1st May, after which date it is expected that the necessity for relief will cease.

NELLORE DISTRICT—continued.

RAPUR Taluk (Acting Collector Mr. H. Sharp).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Nearly the whole of the crops have been lost; in a few places $\frac{1}{10}$th of an average yield has been obtained. This crop refers only to dry lands. On wet lands no cultivation was undertaken. If the season improves some slight sowings may yet be made.	Remissions seven-eighths of the total revenue of Rs. 1,19,879.	Half of the cattle in the taluk have already died, and of the remainder $\frac{1}{4}$th more will succumb unless the season improves. Owners are feeding their animals on thatch, leaves of trees, &c., and are doing all they can to preserve them. The ryots who have large herds have sent them to the Western Hills. Unless rain falls, ponds must be deepened for the cattle. Government has afforded no help so far.	Drinking water has generally failed. A river runs through the taluk, so the villages on its borders have a sufficiency. In other villages the wells must be deepened, public ones at Government expense, private ones by advances made to their owners.		A few ryots have enough grain in store for the use of their families. There are no Railway Stations near the Taluk, but private persons import rice, so grain is easily procured, and prices have fallen a little lately. If this importation is checked, there will be great distress.	The population is 63,885, and are chiefly agriculturists and labourers. One-eighth are artizans, and a sixteenth petty traders. There are no rich Pattahdars; tenants obtain occasionally some slight assistance from their landlords. There are some well-to-do persons, but they never assist the poor.	Before relief works were started many people emigrated, some with their cattle, others to places where they could obtain work.	Several roads have been undertaken as relief works, and some wells cleared out. When necessary, further relief works will be proposed.	Poor houses have been opened at three convenient centres. Village officers have received strict orders to look after destitute travellers.	The number now on the hands of Government is— *On works.* 2,000; *By charity.* 700 Estimate for the future is— 1st March … *On works.* 4,000 1st April … 5,000 1st May … 6,000

GUDUR Taluk (Mr. M. Raja Row, Tahsildar).

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The dry-crops saved are estimated at one anna, the wet at two annas.	Remissions Rs. 2,57,000 out of a total revenue of Rs. 4,39,041.	Five-sixths of the cattle have already died, and if rain does not fall early in March, it is feared that less than a quarter of the cattle will survive. The ploughing cattle are the best taken care of, but half have already died, and the tahsildar fears that the remainder will perish in the course of the next two or three months. The use of prickly-pear as fodder does not find much favor with the ryots, nor when used does it agree with the cattle.	There is no water in the ponds and tanks. Both people and cattle are dependent for water on wells, which are rapidly drying up. It is suggested that the deepening of old, and digging of new, wells would prove a sufficient remedial measure.		A few ryots have sufficient grain in store for their own use for a year. Rice is largely imported *vid* Madras, and has slightly lowered the prices. Private enterprise is considered equal to supplying the demand.	There are comparatively few persons of high castes. One-eighth of the people are well-to-do, the rest are poor. Of the latter, one-eighth are cultivators, and the rest are engaged in other avocations. Very little help is to be expected from the rich pattadars in the district.	A few persons have emigrated to Madras and the East Coast Canal.	Relief works have been started in the taluk, and are considered sufficient.	About 500 or 600 poor, sick, and aged persons are gratuitously fed at two relief-houses that have been opened at Gudur and Kota Cusbahs. Travellers are fed at these houses when unable to work.	There were 17,558 persons on works, and 5,469 gratuitously fed on February 24th. Estimate for the future is— 1st March … *On works.* 1,500 1st May } … 3,000 1st July }

NELLORE DISTRICT—concluded.

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
The crops saved are estimated at rather more than 1 anna.	Remissions Rs. 1,74,240, out of a total revenue of Rs. 3,01,618.	The total number of cattle in the taluk was— Working cattle 18,229 Cows and she-buffaloes ... 23,601 Goats & sheep 37,773 Total ... 79,603 Of these, the sheep and goats are reported not to have suffered much; of the cattle, $\frac{1}{8}$th are estimated to have already perished; the rest are fed on leaves of trees, and are said to be in a very poor condition; the Tahsildar thinks that half may die hereafer. Ragi and other straw will be of great use, when reaped, for feeding cattle.	At present there is a sufficiency of drinking water. Rs. 132 have been spent so far on repairing wells, and further works of this kind will be undertaken when required.	**Kandukur Taluk (Acting Sub-** | **Collector, Mr. T. V. D. Hardinge).**	Large quantities of grain were exported to adjacent famine taluks in the early days of the distress, but now rice is imported extensively, and the supply may be relied on as continous and sufficient. No further increase on prices is expected, and they may go down somewhat, as the ragi crop will soon be for sale.	The total population is 1,38,375, of whom 67,309 are of good castes, and 71,433 are of inferior castes. Of the males, 33,453 are agricultural, and 20,069 urban or artizan. The people are, as a rule, well-to-do. A few rich ryots assist their dependents.	There has been no emigration in the port, nor is any expected in the future.	Three roads have been started as relief works, and 9 others will be commenced when needed. These works will meet all requirements.	Travellers are fed and sent on. A relief-house has been opened for the aged, infirm, &c., who receive one meal of cooked rice per diem.	On 17th February there were 7,365 persons on relief works, and 650 fed by Government gratuitously. Estimate for the future is— *On works.* *By charity.* 1st March...10,000 } 644 1st May ... 5,000 } 1st July ... None.

As this taluk forms part of the Venkatagiri zemindari Division, the Deputy Tahsildar is not in possession of information under this head, but the Sub-Collector estimates the crops saved at 4 annas for most villages.	*Vide* column (*a*).	It is reported that ⅓rds of the cattle have already died, and that ⅛th will probably die from want of fodder. They are fed on leaves of various trees and on prickly-pear, which is used largely. The straw of the paddy crop when reaped will enable the cattle to tide over the next 3 or 4 months, when it is hoped that rain will fall.	The water in wells is rapidly diminishing, and it is suggested that they should be deepened and cleared at the expense of the zemindar.	**PODILE—Zemindari Division (Acting** | **Sub-Collector, Mr. T V. D. Hardinge).**	The stock of grain in hand is unascertainable, but it is imported in considerable quantities from Kothapatam. Private enterprise can cope with demands, but prices will not be reduced thereby.	The total population is 62,934, of whom the good castes number 29,990. The number of cultivators is 11 of 159, urban and artizans number 10,294. The landholders are in general well-to-do, and are said to aid their tenants as far as their present means will allow.	No emigration in the port, nor is any anticipated in the future.	Several relief works are in contemplation, those now in progress being insufficient.	A relief house has been started where cooked food is given to the aged and infirm, and travellers are cared for.	The number of persons on the hands of Government on 10th February was— *On works.* *By charity.* 2,420 115 It is expected that the above numbers will be doubled on 1st May, but it is hoped that on 1st July all will have returned to their villages.

* As this Taluk was not regarded as one of the distressed talúks, no separate report regarding it has been submitted. There is distress, but not very severe, and only a few relief works have been opened, chiefly in the eastern villages, to provide for the poorer classes and for water supply.

SALEM DISTRICT

(Mr. C. T. Longley, Collector).

SALEM Taluk (Mr. P. T. Rajagopala Chari, Special Deputy Collector).

a

Irrigated.

Four annas of the crop saved. Further sowings in event of good downpour of rain and supply to tanks.

Unirrigated.

About four annas of the crop saved. Further sowings in lands under wells if there be a good fall of rain.

b

REMISSIONS—

Wet—
Rs. 50,000,

Dry—
Rs. 1,70,000,
out of a total revenue of Rs. 5,34,674.

c

One-sixteenth of the cattle and agricultural stock are reported to have died from want of pasture. Should there be no rain soon, half of the remaining number is expected to die for want of fodder. No remedial measures adopted by people, but local authorities pay prompt attention to improvement of water-supply wherever it has failed.

d

Taking wells and small rivers. Tanks and some rivers have already dried up; others have a scanty supply. The extent of failure at present is about five-eighths. The water supply would have entirely failed before next rains if no remedial measures had been adopted. A failure is not expected, as local authorities pay every attention to improved water-supply wherever it is likely to fail.

e

f

A few ryots in the taluk have some stock of grain, which will probably be enough for their own use until the next crop. Two railway stations within the limits of the taluk, *viz.*, Salem and Shevroyo. Further supplies are being drawn from Salem Station, South Arcot, and Trichinopoly, and it is thought private enterprise will be sufficient to maintain them. In case of ample importation, prices would fall.

g

The population consists of both high and low castes. Three-fourths of it are poor, two-thirds belong to the agricultural class, and the rest are artisans, &c. The landholders, with very few exceptions, cannot be said to be large, wealthy, and able to aid their tenants.

h

A few of the weaving class people have emigrated to Tanjore and other places, finding their trade here unprofitable. It is not thought that by this emigration they have bettered themselves. Some of them are returning. It is not expected that there will be any further emigration worth noticing.

i

The relief works already started, but which will last only a short time, consist of six roads, to cost Rs. 14,450 and one hundred petty village relief works, such as deepening wells and improving village sites, to cost Rs. 5,000. Five road works, to cost Rs. 4,600, are sanctioned but not yet started. The works which are considered practicable are—

	Rs.
Road works	35,000
Repair and improvement of tanks, supply channels, &c. ...	26,900
Village works as above ...	20,000
	81,900

j

Destitute travellers found at any place are provided with a day's meal and sent to the nearest Sub-Magistrate, who feeds them and sends them on to the next station. Aged and infirm, &c., who are unable to work, are fed in their own villages at the cost of Government.

k

Number of persons Government has on its hands at date of report—

On works.	*By charity.*
10,476	68

Number of persons, roughly estimated, which the Government is likely to have on its hands should there be no fall of rain—

	On works.	*By charity.*
1st March	30,000	6,000
1st May ...	40,000	6,000
1st July ...	50,000	6,000

In the event of a good fall of rain the number will be—

	On works.	*By charity.*
1st March	8,000	1,000
1st May ...	5,000	500
1st July ...	2,000	200

TRICHENGODE Taluk (Mr. Mahomed Ghattallah Sahib).

a

Irrigated.

One and a half anna of the crop saved. In event of rain, further sowings will be made in lands under tanks.

Unirrigated.

One and a half anna of the crop saved. If there be rain, further sowings will be made, principally in lands under wells. The Collector, however, seems to think that no further sowings are possible, as the season for it is past.

b

REMISSIONS—

Wet—
Rs. 50,000,

Dry—
Rs. 80,000,
out of a total revenue of Rs. 4,15,358.

c

One-fourth of the cattle and agricultural stock have died from want of fodder. Half may die should there be no rain before May. No remedial measures adopted by either Government or people. The condition of the cattle is miserable.

d

The tanks are entirely dry, and some of the wells have a very scanty supply, hardly sufficient for drinking purposes for man or beast. Extent of failure seven-eighths. Should there be no rain soon, no water will be left in any of the wells. The Collector says that where water is scanty, measures will be taken to deepen the existing wells; and this has already been done to a great extent. He does not see necessity for new wells.

e

Weeks ending	Prices of the principal food-grains. Rice, 2nd sort.	Ragi.	Cumboo.	Cholam.

f

Only a few ryots have a stock of grain for 1½ months. There are two railway stations, *viz.*, Sunkagherry and Macdonald's Choultry, from which grain supplies are drawn. Merchants bring grain from Madras, Vellore, Calicut, Palghat, Trichinopoly, Tanjore, and Erode through these stations. Private enterprise is not likely to maintain the supply. Importation not sufficient to cause a fall in prices.

g

Three-fourths of the population are of low caste. Two-thirds poor and partly agricultural. One-sixteenth are artisans. One-half of the landholders are wealthy and able to aid their tenants. With the exception of one or two, the others do not afford any aid to their tenants.

h

People have emigrated—some to Kandy and others to parts of Southern Districts. Those to Kandy alone bettered their condition; the others are returning to work at the relief works. Should there be no rain, further emigration may occur.

i

The relief works already started are—

	Rs.
1. Repairing tanks ...	25,100
2. Constructing and repairing roads ...	11,100
3. Relief works, such as deepening village wells and improving village site ...	3,500
TOTAL ...	39,700

Further works considered practicable—

	Rs.
1. Constructing new roads and repairing old ones	12,100
2. Repair of sanctioned Government tanks ...	40,000
TOTAL ...	52,000

Irrigation works will hereafter be taken up. This will be done when the funds sanctioned for the works in hand run short.

j

At every station one day's meal is given to destitute travellers. The aged, infirm, blind and sick, &c., who are unable to work, are fed in every village. Rs. 1,000 sanctioned for this purpose. More money will however be allotted when needed.

k

1. The number of persons at date of report (23rd December 1876) was—

On works.	*By charity.*
5,923	120

2. Number of persons, roughly estimated, which the Government is likely to have on its hands on the dates specified is—

		On works.	*By charity.*
1st July.		50,000	40,000
		40,000	17,500
1st May.		1,000	800
		20,000	13,000
1st March.		2,500	1,000
		20,000	7,000
	I. On works.		
	(a) If rain fail meantime ...		
	(b) Should there be no rain ...		
	II. On charity.		
	(a) If rain fail meanwhile ...		
	(b) Should there be no rain...		

No rain is likely to fall before April, when the number on relief works will probably be 20,000. This number will, however, diminish in proportion as rain falls.

SALEM DISTRICT—continued.

OOSSOOR Taluk (Mr. Frank Wilkinson, Acting Sub-Collector).

a

Irrigated.
3 annas.

Unirrigated.
3 annas.
There is no prospect of further sowings.

b

REMISSIONS—

Wet—
Rs. 23,000,

Dry—
Rs. 54,000,
out of a total revenue of Rs. 2,15,450.

c

Mortality among cattle 15 to 20 per cent.; 6 to 10 per cent. among agricultural stock. Taluk denuded in a great measure of cattle from cyclone of 1874 and rinderpest of 1875. In event of no rain, losses expected to reach 35 per cent. among cattle, and 25 per cent. among agricultural stock. No remedial measures adopted by Government. Cattle driven by people into the forests for fodder. Great scarcity of water. It will be necessary to deepen some of the ponds in the forests, or to sink wells for the use of the cattle, and this is being adopted.

d

One river runs through the Taluk, and there are two streams in which water is generally procurable. The tanks and ponds are dry, and many wells have failed. Deepening wells and sinking new ones have supplied water, but if there is no rain it is feared wells will fail. Deepening existing wells and sinking new ones in low-lying localities are the remedial measures proposed.

e

WEEKS ENDING	PRICES OF THE PRINCIPAL FOOD-GRAINS. Rice, 2nd sort.	Ragi.	Cumboo.	Cholum.

24th " ...	6 1/16	8¾	9	7½
Average of the last six years.	13½	40	...	...

f

Large amount of ragi reported to be stored up in underground pits. Mallur, on the Bangalore line, is the only Railway Station from which supplies are drawn; but supplies of grain may be obtained from Bangalore—a distance of 25 miles. Private enterprize will not suffice to maintain the necessary supplies of grain. The grain merchants are men of no capital, and even now the market is indifferently supplied. Ample importation would not affect prices.

g

The majority of the population is of low caste, poor and purely agricultural. There are four principal landholders, two of whom, though not wealthy, are at present assisting their tenants. Of the other two, one is a bankrupt, and the other not disposed to aid his tenants.

h

There has as yet been little or no emigration, nor is one likely, as relief measures have been set on foot and gratuitous relief is being given.

i

Relief works already started are—

Major works—	Rs.
Constructing three lines of road	6,950
Deepening Oossoor tank	2,000
Minor works.	
Roads	4,400
Irrigation	4,350
Improvement of water-supply	5,938
Ditto village site	2,790
TOTAL	26,428

Works considered practicable are—

Major works—	Rs.
Roads	44,000
Irrigation	3,000
Minor works—	
Roads	1,525
Irrigation	1,600
Improvement of water-supply	1,290
Do. village site	300
TOTAL	51,715

j

Measures are being taken to aid travellers as well as the aged and infirm. Three Conjee-houses, supported by private charity, have been in existence for the past six weeks.

k

Number of persons Government has on hand for relief is—

On works.
2,576

Rough estimate of the number likely to be on hand :—

	On works.	*By charity.*
1st March ...	9,000	1,500
1st May ...	15,000	3,000
1st July ...	25,000	5,000

The Collector thinks that the fall of rain in April will largely diminish the May and July figures.

NAMAKAL Taluk (Mr. Mahomed Ghattallah Sahib).

a

Irrigated.

Two annas of the crop saved. If there be rain, further sowings will be made in lands under tanks. Lands irrigated by Cannery channels have not suffered. Failure of rain will not affect them.

Unirrigated.

Two annas of the crop saved. If rain falls further sowings will be made, principally in lands under wells.

b

REMISSIONS—

Wet—
Rs. 25,000,

Dry—
Rs. 75,000,
out of a total revenue of Rs. 3,85,576.

c

One-eighth of the cattle and agricultural stock are supposed to have died from want of fodder. Half may die if there is no rain before May, leaving about three-eighths alive. No remedial measures yet adopted by either the people or the Government. It is said that, in the event of the failure of grass, if cholum be sown it will answer as fodder. If there be rain, the crop may be harvested, and the stalks used for cattle.

d

Cannery channels, tanks, and wells. No deficiency in the Cannery channels. Tanks entirely dry, and the wells have got a very scanty supply of water. Extent of failure three-fourths. Further anticipated failure up to next rain will reduce the supply almost to *nil*. If existing wells be deepened and fresh ones sunk, a supply may be ensured to some extent.

e

WEEKS ENDING	PRICES OF THE PRINCIPAL FOOD-GRAINS. Rice, 2nd sort.	Ragi.	Cumboo.	Cholum.
1876.	Srs.	Srs.	Srs.	Srs.

17th " ...	8	11	12	9
24th " ...	8	11	12	9
Average of the last six years ...	21	44	42	36

f

Local stocks nearly exhausted. There are four Railway Stations, *viz.*, Pogaloor, Passoor, Kodemoody, and Carvor, bordering on the Namkal Taluk, from which supplies may be drawn as well as from Salem. Supplies of grain received from Trichinopoly and Tanjore Districts. Private enterprize not sufficient to maintain them. Fall of prices anticipated in consequence of importation.

g

Population both of high and low castes. The latter greater in proportion and generally poor; partly agricultural. About one-sixteenth are artizans. Large number of landholders. One-half of them are wealthy and able to aid their tenants. Many, however, not likely to do so.

h

Emigration has taken place. Emigrants put down at one-fiftieth. They have gone to Kandy in Ceylon and to the southern districts of the Presidency. Emigrants to Kandy are supposed to have bettered themselves. Emigrants to other places are returning. Further emigration probable should there be no rain.

i

Relief works already started are—

	Rs.
1. Repair of ruined tank in Serook Kalay	6,020
2. Two new roads to cost	1,800
3. Village relief works, *viz.*, deepening village wells and improving village sites	1,950
4. Gratuitous relief	500
TOTAL	10,270

The above works are only sufficient for the present. Further works considered practicable are—

	Rs.
1. Repairing the ruined tank at Talakavay	2,000
2. Widening and improving the local fund road from Bodmaikumpatty to Shendamangolum	6,000
3. Two new roads to cost	3,000
4. Repair of sanctioned Government tanks	35,000
TOTAL	46,000

j

Destitute travellers get one day's meal at every station, and are forwarded to the nearest Sub-Magistrate, who feeds and sends them on to the next Sub-Magistrate. The aged, infirm, blind and sick, &c., who are unable to work, are fed in every village. Rs. 500 sanctioned for this purpose.

k

The number of persons to date of report (23rd December 1876) was—

On works.	*By charity.*
4,907	216

2. Number of persons, roughly estimated, whom the Government is likely to have on its hands during the quarters ending 1st March, 1st May, and 1st July—

	On works.	*By charity.*
1st March.		
I.—On works.

1st July.		
(*a*). Should rain fall ...	300	200
(*b*). Should there be no rain ...	35,000	15,000

SALEM DISTRICT—continued.

UTTANGARAI Taluk (Mr. W. J. H. LeFanu, Acting Head Assistant Collector).

a	b	c	d	e	f	g	h	i	j	k
Irrigated. The average of the wet crop harvested is estimated at 2 annas. Should rain fall Gingelly will be sown. *Unirrigated.* A 3-annas crop may have been obtained. Should it rain Gingelly will be sown to a small extent in jungly tracts. The Collecter believes that there is no prospect of further sowings.	*Wet*— Remissions may be granted to the extent of Rs. 17,000, out of Rs. 40,952; this amount includes both waste and withered crops. *Dry*— Remissions may be granted to the extent of Rs. 58,000, out of Rs. 1,55,336. The Collector thinks these estimates too low. The total Revenue is Rs. 1,40,939.	Ploughing cattle 21,426 Other cattle ... 1,19,807 TOTAL ... 1,41,233 A quarter of these estimated to have perished from want of pasture. Half of the remaining cattle expected to die from the same cause. Certain wells repaired from relief fund afford a little water for cattle. People possessing large herds of cattle in hill tracts, such as Kottapatti, Chitteri, &c., have dug wells at their own cost in low grounds in jungle streams. This mode of supply is stated to be insufficient. Wells drying up. No pasturage. Considerable loss of cattle apprehended. Cattle already comparatively worthless.	Irrigation works of this Taluk are as follow:— In thorough repair. Tanks ... ... 319 River channels ... 13 Springs ... ... 2 Anicuts ... 66 Wells ... ... 2,184 TOTAL ... 2,584 Tanks totally dried up. Decrease of ten-sixteenths of water in rivers and wells, which, it is expected, will be dry before next rains. Water supply deficient. Petty repairs of tanks and wells are being made but large outlay desirable. In Harur there is more water in river and wells than elsewhere. When water is scanty for drinking purposes measures will be taken to improve the supply, and this has already been done in several places.		PRICES OF THE PRINCIPAL FOOD-GRAINS.				Estimated stock of grain in possession of ryots is 16,000 kandagams. Rice, ragi, &c., are imported from Madras and Negapatam, through Morapur and Samalpatti railway stations. Rice, Kambu, &c., are received by road in Uttan Garai from South Arcot district. It is not anticipated that private enterprize will meet the demand for cereals in famine tracts to such an extent as to mitigate the ruling high prices, which are prohibitory. It is said that a day's wages will not purchase a day's meal. People possessing grain indisposed to help the distressed ryots; to prevent importation, and to secure their stock being exhausted, are afraid to tell or to admit that they have grain. Importation by Government will alone reduce prices. Private enterprize cannot combat demand, and natural greed will operate to prevent any fall in price. There is no scarcity of supply, and the relief works now opened will, it is hoped, enable the poorer classes to compete for the purchase of food.	Population of Taluk ... 1,50,569 Of this, the number of women and those below 10 years of age is ...1,02,712 and Working class ... 47,857 High caste ... 1/6 Low caste ... 11/12 A few in the high, and a large percentage in the low, castes are poor. More than one half of the working class are agriculturists. Five mittadars in the Taluk are large landholders, three of whom are wealthy. It is not probable that they will aid their tenants, as they have quite enough to do to pay ryot's peacush. There are no ryots holding pottas for more than 200 rupees, and no Government ryots deserve to be classed as landholders of consideration.	Estimated emigration one-sixteenth of the population. It is not known whether emigrants bettered themselves or not. No further emigration expected, as relief works and Conjee-houses afford partial relief to the people.	Rs. Amount sanctioned for road works ... 7,500 Ditto village relief works ... 1,030 8,530 Following works practicable according to tahsildars' estimates. Irrigation Works Rs. 5,000 Channel Improvement of wells, kuttas, &c. 2,000 10,000 This sum is, however, considered insufficient by the Assistant Collector, and he states his reasons for thinking so. The amount needed for irrigation works is Rs. 22,107. In addition to roads already in progress, construction of an additional road is suggested. Kottaipatti in Uttairkarai to Thummal in Attar, or 10 miles @ Rs. 200 a mile=Rs. 2,000. It is doubted whether all these works will suffice; but it is added that, if all the maintenance grants for local fund roads be taken as famine works on 1st April, they would help to afford relief. All these works should be taken in hand to keep the people employed at their villages.	Travellers provided with food on the road. Rs. 1,000 sanctioned for charitable relief purposes. Estimated cost of Conjee-houses for the protection of the infirm, &c., unable to work, Rs. 3,000. More funds will be allotted as those in haud run short. The needy will disperse when season improves. Present scarcity of food partly due to a provident care on the part of ryots.	The number of persons obtaining relief by works is 1,700. The tahsildar estimates the number which the Government is likely to have on its hands, on the dates indicated, as follows— *On works.* *Charitable measures.* 1st March ... 4,000 1,200 1st May ... 3,500 1,500 1st July ... 2,500 1,500 The Assistant Collector puts the figures at— *On works.* *Charitable measures.* 1st March ... 35,000 5,000 1st May ... 11,000 5,000 Regarding the number on the 1st July, he thinks that his hands may be clear or full according to whether rain falls or not. The Collector, however, thinks that rain in April may reduce the above estimate considerably.

TRIPATORE Taluk (Mr. W. J. H. LeFanu, Acting Head Assistant Collector).

a	b	c	d	e	f	g	h	i	j	k
3 annas of the crop saved both in irrigated and unirrigated lands. Owing to failure of rain it would be useless to cultivate any more grain.	REMISSIONS— *Wet*— Rs. 20,000 *Dry*— Rs. 30,000 out of a total Revenue of Rs. 1,75,376.	The total number of ploughing cattle, sheep, buffaloes, &c., in this Taluk is 81,795. Cattle suffering much from want of pasture. They are driven to neighbouring hills for fodder. In case of no rain, half of the cattle are expected to die. No remedial measures as yet adopted by Government. It is not proposed to buy fodder; but a recommendation is made to deepen wells, or in other respects to improve the water-supply of the hills for the cattle driven to graze there.	The following are the sources of water-supply:— Tanks ... 214 River channels. 52 Spring ... 23 Anicuts ... 15 Wells ... 3,586 Besides the above a few jungle streams supply certain villages with water. The rivers are dry. In their neighbourhood holes are dug which supply people and cattle with drinking-water. Not a sufficient quantity of water in wells. It is not apprehended at present that there will be an entire failure of water. Deepening of wells is recommended, but the water-supply, it is considered, will never be sufficient for cultivation.		PRICES OF THE PRINCIPAL FOOD-GRAINS.				Fifteen thousand kandagums of grain are believed to be in the possession of certain merchants, mittadars, and some rich ryots. There are three Railway Stations in the Taluk, *viz.*, Tripatore, Vaniyambadi, and Jollarpett. Grain imported from Madras and other towns through these stations. Exportation of grain reported from Tripatore, Cuddapah and other towns. As relief works are opened the poorer classes will be able to buy grain at the ruling prices. It is not apprehended that there will be a scarcity of supply.	Population—192,704. It is composed of both high and low caste people, as well as mittadars and rich merchants. Half of the population are agriculturists; one-eighth artizans and retail dealers; the rest are coolies. There are 25 mittadars in the Taluk, and of these 9 are able to help their tenants, but they do not do so.	Emigration limited, say about 3,000, and is confined to certain parts of the Thiruvaugmalai Taluk in South Arcot, where it is thought that grain is sold at a cheaper rate.	The work in hand is a road from Puthapett to Nattrampalli. It is proposed to spend Rs. 26,800 on irrigation works, which, together with other relief works, will raise the amount to Rs. 40,000. Early measures are being adopted to put the irrigation works in hand in order to induce the people to remain at their villages.	A Conjee house opened at Tripatore for travellers and for the aged and infirm. Rs. 500 have also been advanced for opening Conjee-houses in villages where most required.	Number of persons on the hands of Government on the date of report— *On works.* *By charity.* *Nil.* 156 Number which the Government is likely to have on its hand on the undermentioned dates:— *On works.* *By charity.* 1st March ... 12,000 4,000 1st May ... 7,000 4,000 1st July ... 750 750 The number on 1st May, it is expected, will diminish if there be rain in the meanwhile.

SALEM DISTRICT—concluded.

DARAMPURI Taluk

(Mr. Frank Wilkinson, Acting Sub-Collector.)

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Irrigated. Four annas of the crop saved. *Unirrigated.* One anna of the crop saved. Ragi, the staple grain of the Taluk, has entirely failed as well as the oil crop, on the outturn of which ryots depended to pay their assessment.	REMISSIONS— *Irrigated*— Rs. 85,000. *Unirrigated*— Rs. 35,000. Out of a total of Rs. 2,37,428.	Mortality among cattle estimated at 10 per cent., and among agricultural stock 5 per cent. Expected deaths among cattle 30 per cent., and among agricultural stock 15 per cent. Cattle sold at great sacrifice owing to the want of fodder. No remedial measures adopted by Government. The ryots, however, have driven their cattle to the jungles on the banks of the Cauvery river for pasturage. This river skirts one side of the Taluk, and there is no fear of scarcity of water for cattle. But the pasturage is parched and dry, and will not improve unless there be rain.	There are two rivers on the outskirts of this Taluk, tanks and wells. Water in some wells has entirely failed; in others it is so low, that it is obtained with great difficulty. Water, however, procured by deepening existing wells; and it is suggested that to avert total failure, not only should this be done, but new wells should be sunk in favorable localities.	PRICES OF THE PRINCIPAL FOOD-GRAINS. WEEKS ENDING Rice, 2nd sort. — Ragi. — Cumboo. — Cholum. 1st Oct. 1876 ... 9 — 14¾ — 17¾ — 16½ 8th „ „ ... 9 — 14¾ — 17¾ — 16½ 15th „ „ ... 9 — 13 — 17½ — 14½ 22nd „ „ ... 7 — 9½ — 7½ — 7½ 29th „ „ ... 7 — 10 — 7½ — 7½ 5th Nov. „ ... 6½ — 10 — 7½ — 9 12th „ „ ... 7½ — 11½ — 11½ — 9 19th „ „ ... 7½ — 11½ — 11½ — 9 26th „ „ ... 7½ — 10½ — 11½ — 8½ 3rd Dec. „ ... 6½ — 8½ — 10 — 7½ 10th „ „ ... 5½ — 7½ — 8½ — 7½ 17th „ „ ... 7½ — 9½ — 9½ — 8½ 24th „ „ ... 7 — 7½ — 8½ — ... Average of the last six years ... 15½ — 37½ — 41½ — 36½	The local stock amounts to 6,000 kandagams of ragi, or about two weeks' consumption. Rice is imported from Madras, ragi and cholum from Coimbatore. Morapur is the Railway Station by which the Taluk is supplied with grain. Private enterprize, it is expected, will more than maintain supplies. Fall in prices is not, however, anticipated.	The majority of the population are of low caste and poor. Two-thirds of them are purely agriculturists. The majority of the landholders are possessed of insufficient means, and hence are not able to aid their tenants. There are only two landholders who are said to be wealthy, and they are not likely to relieve their ryots.	One thousand low caste people have left for the neighbouring districts, but nothing is known of their present condition. They are not returning, and, it is presumed, they have bettered themselves. Further emigration to any extent considered improbable.	Relief works already started— *Major works.* Rs. Constructing three lines of road ... 8,950 Improving Pauper ghât ... 2,000 TOTAL ...10,950 *Minor works.* Rs. Roads ... 1,500 Irrigation ... 6,100 Improving water-supply 6,635 Improving village site ... 3,600 TOTAL ...17,835 WORKS PRACTICABLE. *Major works.* Rs. Irrigation ... 3,000 *Minor works.* Rs. Roads ... 250 Irrigation ... 3,500 Improving water-supply 4,050 Improving village site ... 3,350 TOTAL ...11,150	No charitable relief has as yet been afforded to the aged, infirm, &c., but measures are being taken to do so.	The number of persons on the hands of Government on date of report is— *On works.* 2,631 — *By charity.* 167 The number estimated on the dates specified below is— *On works.* — *By charity.* 1st March ... 40,000 — 6,000 1st May ... 50,000 — 8,000 1st July ... 50,000 — 10,000 The Collector thinks that half of the above figures may be taken as approximate. If rain falls in April, the numbers will diminish.

KRISHNAGIRI Taluk

(Mr. Frank Wilkinson, Acting Sub-Collector.)

a	*b*	*c*	*d*	*e*	*f*	*g*	*h*	*i*	*j*	*k*
Three annas of the dry crop saved, and four annas of the crop in wet lands. No prospect of further sowings, unless there be a fall of rain.	REMISSIONS— *Wet*— Rs. 20,500, *Dry*— Rs. 56,600, Out of a total of Rs. 2,08,761.	Mortality among cattle 5 per cent., and among agricultural stock 2 per cent. Deaths anticipated among cattle about 30 per cent., and among agricultural stock 20 per cent. No remedial measures adopted by Government. Ryots have driven their cattle to graze on the hills, but from the want of water a large number have died. Large numbers of cattle have in consequence been sold at a sacrifice.	The river Pennaar and two small streams. By digging wells near the latter, water is procurable. No actual failure of drinking water, but tanks and ponds for cattle have dried up. In villages where wells have dried up people go to a distance of 2 miles for water. In the event of no rain, drinking-water wells will all dry up. Deepening existing wells and sinking new ones suggested.	PRICES OF THE PRINCIPAL FOOD-GRAINS. * There being no distress or failure of crops in these taluks, no separate reports regarding them have been submitted.

TINNEVELLY DISTRICT—(Mr. A. J. Stuart, Acting Collector).

NANGUNERI Taluk.

a

Cultivation of dry land in this taluk is in excess of the average cultivation of the three previous years. Wet land will yield half the average crop; the rest of the crops will either perish or fail if there be no rain.

b

Remissions Rs. 1,64,647, out of a total of Rs. 3,57,732.

c

No mortality as yet among cattle. The cattle, however, suffer from want of water. The range of the Western Ghâts is to be thrown open for pasture this year. A ghât path is also to be constructed to enable Tinnevelly cattle to get access to a large area of pasture on the Travancore side of the water-shed.

d

There is a good supply of water in the numerous wells of this taluk, and notwithstanding deficiency of rain, show little signs of failure. In the hot weather deepening of wells will be necessary, but ample water is always procurable in river beds and mountain pastures.

e

Cereal.	Prices of the principal food-grains. October 1876.	November 1876.	December 1876.	Average for the past six years.
	Srs.	Srs.	Srs.	Srs.
Rice, 2nd sort ...	10·72	10·41	7·55	11·21

f

The local stock, in the entire district of Tinnevelly, including the surplus of the Car rice crop and the Peshamum rice crop, is estimated to last for six months, unless high prices in neighbouring districts induce exportation. There was much exportation during last December, but it has been checked since prices have run up. Private enterprise, it is hoped, will maintain supplies. The river valley is only 18 miles from the chief town of this taluk and is connected by railway. There is, moreover, railway communication with Tuticorin, which has a good harbour, where rice can with facility be landed at all seasons.

g

The population amounts to 178,078 is of mixed caste, and is, on the whole, well-to-do. The people are chiefly agriculturists. 15 per cent. of the population of the entire district are urban or artizans. A fair proportion of the landholders is able and willing to aid its tenants and labourers, but not to such extent as to prevent serious distress if relief works were not undertaken.

h

Five per cent. of the population, consisting of the poor and labouring classes, as well as owners of small farms, have emigrated to coffee plantations in Ceylon and Travancore. A few are returning on account of reported outbreak of cholera in Ceylon and fever on the hills. Notwithstanding these adverse circumstances, further emigration is probable.

i

No regular relief works have as yet been started; minor works, such as deepening drinking wells, drains, &c., have been undertaken. The relief works practicable are repairs to and clearances of a large number of tanks, channels, and other irrigation works.

j

There are both private and local funds Chuttrams in this taluk, where about 200 persons are fed daily. A sum of Rs. 3,000 has been sanctioned for the entire district to relieve distress among the aged, infirm, &c., and this amount is considered ample.

k

The number of persons on the hands of Government is approximately 1,000.

The number estimated on the dates specified for the entire district is—

	On works.	By charity.
1st March ...	10,000	
1st May ...	20,000	
1st July	50,000

TRICHINOPOLY DISTRICT—Collector Mr. H. Sewell.

TRICHINOPOLY Taluk (Assistant Collector Mr. S. H. Wynne).

a The crops saved are estimated at, on—
As.
Irrigated ... 4 to 12
Unirrigated... 4
If rain falls a considerable sowing may be expected. The Collector remarks that the northern part of the taluk and the Illuppur Division in the extreme south have suffered greatly from the bad season. The late rains at Christmas have done some good, but nearly all the cultivation under rain-fed tanks has gone.

b Remissions Rs. 95,000, out of a total revenue of Rs. 4,60,701.

c No mortality amongst the cattle so far. There is, however, only a two months' supply of fodder in the dry villages, and unless rain falls, deficiency of food may cause disease amongst them. If necessary, the river paduga is can be opened by Government for grazing, which will provide valuable aid to the people.

d In irrigated villages there will be no deficiency of drinking water, but in the Kadarambam, unless rain falls before 1st March, the water will fail. Repairs to drinking wells and the excavation of 50 new ones will remedy the deficiency.

f Stocks of grain in hand are—
Kallams.
Karpaddy ... 15,000
Cumboo ... 5,000
Ragi ... 500
Cholum ... 1,000
Paddy and rice are imported from Tanjore and the seaports, and dry grain from the Kadarambam portion of the district. Importation and fall of rain has reduced prices.

g The population is 306,461, of which one-third are high caste, one-half agricultural, and the rest urban. Very little aid to their tenants may be expected from landholders.

h About 1,000 over the average number of persons have emigrated to Ceylon. No further emigration is likely to take place.

i One small relief work only has been started, which employs about 60 men and some women and children, who are immigrants. This will prove sufficient for two months, when seven other works are proposed.

j Relief houses have been opened, supported by public subscription, and about 1,000 persons fed daily.

k On 27th January there were 857 persons on relief works.
None are supported gratuitously by Government.
It is estimated that 1,000 persons may be on works on 1st March. No numbers are given for May and July.

KULITTALAI Taluk (Acting Head Assistant Collector Mr. L. Moore).

a The crops saved are estimated at, on—
As.
Irrigated ... 2 to 12
Unirrigated 2 to 6

b Remissions Rs. 30,000, out of a total revenue of Rs. 2,32,108.

c There has been some slight mortality amongst cattle, owing to disease and scarcity of fodder. Heavy loss is expected during the hot weather. People are selling their cattle at low prices. Purchasers are few.

d There will be no scarcity of water along the Cauvery. In the rest of the taluk, and especially in the Manapparai Division, there are many villages that will suffer. The funds at the disposal of the Local Fund Board are sufficient to provide for the repair of existing wells and deepening of new ones, which will prove a sufficient remedial measure.

e

Average of the last six years ...	10½	12½	20½	27½	27½	7½

f There is a fair amount of rice in the villages along the Cauvery; in the south of the taluk and the Manapparai division but little. Two railways run through the taluk, and there are 5 stations. There are good roads also, and private enterprise is able to maintain supplies.

g The population is 228,313, and is almost entirely agricultural. Those along the river bank are well to do. In the south they are very poor. It is hoped that two zemindars may help their tenants.

h Many persons have emigrated to Ceylon. No further exodus is expected, as some of those who left have returned, being unable to obtain employment.

i About 200 or 300 coolies are employed in clearing prickly-pear from local funds. The allotment will soon be exhausted, when it is proposed to repair the old road from Manapparai to Puttanattam from general funds. The numbers in want of work are daily increasing, and other works will have to be started soon.

j Between 150 and 200 destitute people are fed daily at Manapparai on conjee, provided by private subscriptions. They are chiefly travellers.

k Government has at present none on its hands either on works or by charitable measures.
Estimate for the future is—

	On works only.
1st March ...	1,000
1st May ...	5,000
1st July ...	8,000

MUSIRI Taluk (Acting Head Assistant Collector Mr. L. Moore).

a The crops saved are estimated at, on—
As.
Irrigated 12
Unirrigated 2 to 8

b Remissions Rs. 75,000, out of a total revenue of Rs. 3,45,123.

c There has been no loss as yet of cattle or agricultural stock, and there is no ground for apprehension for the future.

d There has been no failure of the supply of drinking water in the river-irrigated portions of the taluk, and but little anywhere. In some of the dry villages a scarcity may be expected in the hot weather, and in all these wells have been or will be dug at the expense of the Local Fund Board.

e

Weeks.	Prices of the principal food-grains. Rice, 1st sort.	Rice, 2nd sort.	Cholum.	Cumboo.	Ragi.	Wheat.

Average of the last six years ...	10½	12½	40	26½	27	7½

f A rough estimate of the grain in stock is—
Kallams.
Karpaddy ... 20,000
Ragi ... 2,000
Cumboo ... 8,000
Cholum ... 4,000
Large quantities of grain have been exported by road to the Salem district and Mysore. There have been no imports by rail as yet. The railway runs close to the taluk, being only separated from it by the Cauvery river.

g The population is 257,174, and is chiefly agricultural and well-to-do. A few rich landholders have afforded help to their poor neighbours.

h The usual emigration to Ceylon has not been exceeded on account of the prevailing distress.

i No relief works have been opened as yet, and it appears that none will be required, for some months at any rate.

j There is considerable relief given to destitute persons, travellers, &c., the funds having been raised by private subscription; and food is also given by some rich natives to the poor at two villages.

k The Government gives no relie in this taluk at present.
Estimate for the future is—

	On relie works.
1st March ...	500
1st May ...	3,000
1st July ...	5,000

It is hoped that relief works wi not be required at all, and required they will be smal The prospects of this taluk ar good on the whole, and there no cause for apprehension.

TRICHINOPOLY DISTRICT—continued.

PERAMBALUR Taluk (Acting Deputy Collector, Mr. V. Doraswami Aiyer).

a	b	c	d	e	f	g	h	i	j	k
The crops saved are estimated at, on— Ans. Irrigated ... 9 Unirrigated ... 6 No prospect of further sowings this season.	Remissions Rs. 10,000, out of a total revenue of Rs. 2,55,127.	No unusual mortality amongst the cattle. There will be a sufficiency of fodder after the reaping of the ensuing harvest, to last till the monsoons set in.	There is only a slight deficiency in the drinking water supply throughout the taluk. Where necessary, the Local Funds have supplied money for the deepening of wells, &c.		The stock of grain in hand is estimated at 2,00,000 kallams. No apprehension need be felt regarding the supply of food for the people for the future. The railway is distant only 32 miles from the kusbah town.	The population is 170,567, and half is composed of Reddies, who are well-to-do. The rest are agriculturists, &c.	No emigration has taken place so far.	The only relief works started are clearing prickly-pear and improving the water-supply in some of the villages. An allotment has been made from local funds for this purpose.	No charitable relief houses have been opened as yet, but it is contemplated to give aid to aged and infirm travellers, &c.	The estimated number of people on the hands of Government on the dates specified is— *On works.* 1st March ... 4,000 1st May ... 8,000 1st July ... 12,000

UDAYARPALAYAM Taluk (Acting Deputy Collector Mr. V. Doraswami Aiyer).

a	b	c	d	e	f	g	h	i	j	k
The crops saved are estimated at, on— Ans. Irrigated ... 12 Unirrigated 4 to 12	Remissions Rs. 15,000, out of a total revenue of Rs. 2,37,338.	500 head of cattle and 700 sheep had died up to date of report from disease and want of fodder. Pasturage is becoming scarce, and unless rain falls in April and May, there will be a great mortality among the agricultural stock.	Water is becoming scarce in places distant from the Coleroon river and its channels. Steps are being taken to deepen wells, &c.		The tahsildar estimated the stock of grain at 1,00,000 kallams, in the hands of the comparatively large landed proprietors. The Deputy Collector thinks this estimate too high. Large exportations have been made. Prices are no texpected to fall. No difficulty in obtaining food at present.	The population is 237,893; consists of both high and low castes, and is chiefly agricultural. The ryots are generally poor. The few rich landholders may do something to help their tenants, but their efforts can be of but little use in alleviating the general distress.	There has been no emigration.	Rs. 437 have been allotted from the local funds to find employment for the poor, who are engaged in extirpating the prickly-pear from the village Nattam. Further relief works have been estimated for, to be started if necessary.	A few infirm poor have received charitable relief. Subscriptions have been raised, and it is proposed to open relief houses in the kusbah towns.	Only the few who are employed on prickly-pear are on the hands of Government as yet. The estimate for the future is, 2,000 persons on works on March 1st with increasing numbers in May and July, and an equal number fed at the relief houses.

STATEMENT

B—(*continued.*)

	Remarks on the character of the season.	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately: if there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.
NORTH ARCOT.	In 1875, the N. E. monsoon was a failure and the S.W. monsoon not ample. In 1876, the early rains or S.W. monsoon, under which 63 per cent. of the cultivation is effected, only reached an average of 16 inches, instead of 25½, which is the average of the preceding three years, while in some taluks they were less than one-half the usual amount. The N. E. monsoon which followed amounted to only 2½ inches, instead of 11¼.	The information given is not at all clear. Taking the district as a whole, the Board of Revenue think that the yield of early crops (which are 63 per cent. of the whole) was from 5 to 6 annas, and of the later crop next to nothing. Sir R. Temple in his Minute of January 20th says that not more than four annas of the total harvest has been saved. The separate reports of taluks and zemindari divisions give the following estimates of the crop saved:— Full average in ... 1 taluk. Five-sixths „ ... 1 „ Two-thirds „ ... 1 „ One-half „ ... 1 „ One-third „ ... 3 taluks. One-fourth „ ... 3 „ One-sixth „ ... 1 taluk. One-eighth „ ... 2 taluks. *Nil* ... ... 1 taluk. Total ... 14 taluks.	In the nine Government taluks the local officers estimate the remissions at Rs. 8,72,000, and the Board consider this not excessive. In the zemindari divisions no remissions will be granted, but the zemindar of Punganur has been allowed to pay the second half of his Peishkush in instalments spread over three years.	The condition of the cattle is good in seven taluks, indifferent in two, and bad in Chendragiri and Wallajah taluks, and Kalastri, Karvetnagar and Kangundi zemindaris. There are large jungles in three taluks which are mostly open for grazing, but the use of prickly pear does not find favour, and the Board expect that large numbers of cattle will be lost.	The condition of the water-supply is indifferent in eleven taluks, and bad in three. The Board do not apprehend scarcity for drinking purposes. Sinking new wells and deepening old ones is progressing.
BELLARY.	This district is under the influence of both monsoons, but does not get the full benefit of either. It depends most on the S. W. monsoon. Nearly the whole cultivation is dry. The total average fall is 20 inches, of which 12 fall in June and July, and 7 in October and November. The rains of June and July last gave, however, only 7·7 inches, and the later rains failed entirely. The seasons of 1874 and 1875 having also been unfavourable, this further failure produced the most severe distress.	The information supplied by the local officers is most vague and unsatisfactory. On the whole, cultivation was not attempted in 53 per cent. of the land, and on 75 per cent. of the remainder no crop whatever was produced. The Board put the yield of the whole district at not more than one to one and a half annas. According to the local reports the crop saved was— One-sixth in ... 3 taluks. One-eighth „ ... 10 „ *Nil* „ ... 2 „ Total ... 15 „	The estimate of the local officers is for Rs. 17,37,242 and the Board generally accept it. In the Alur taluk it is proposed to remit the entire demand, "not even a stalk of straw" having been produced.	The loss of cattle had already, before the close of the year, been enormous, and the Board consider it "unlikely that more than 25 per cent. of non-agricultural cattle, and 60 to 70 per cent. of agricultural cattle will survive the famine." About 4,000 animals are fed at Bellary on prickly-pear, but the experiment has not been generally successful. Importation of fodder is impracticable, as none is to be procured within a reasonable distance. The loss of cattle will most seriously affect agricultural operations next season.	The Toongabhudra and Pennair rivers, and the channels from them, the Pennair jungle streams, and tanks and wells are the sources of drinking water. The Toongabhudra channels are very low, the other channels and tanks are all dry, and so are also many of the wells. There is no absolute failure of water but great difficulty in procuring it. Government have sunk many temporary and permanent wells by the roadsides, and have encouraged the ryots, by advances and otherwise, to sink wells on their own account.
CHINGLEPUT.	In 1875-76 there was, owing to deficient rainfall, a large decrease in cultivation, and a crop only slightly above a fourth of the average. The average rainfall in the S. W. monsoon is 21 inches, and in the N. E. monsoon 20 inches, but in 1876-77 the former yielded only 15 inches and the latter only 5 inches. The district thus got only half what it required.	The scanty rainfall produced a decrease of about 25 per cent. in the area cultivated. The amount of crop saved is put by the Collector at one-third in two taluks and one-sixth in the remaining four, but if, as the Board deem probable, he refers only to the early crop, and the whole of the later crop was lost, this estimate must be reduced by nearly one-half.	The remissions are estimated at Rs. 10,57,000.	There has been no serious mortality among the cattle, but the pressure is great and increasing. The reserved jungles have been thrown open, and many wells and ponds have been deepened in order to afford water for animals.	The tanks are all quite dry, with one or two exceptions. There is not an absolute failure of water, but much difficulty in many places in obtaining it.

	The course of prices weekly of each of the principal food-grains, from October 1st up to the date of report in each case, and six years' averages.	The local stocks, as far as ascertainable; the centres, railway stations, or otherwise, whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.	The relief works already started, and some leading particulars regarding them.	The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
NORTH ARCOT.	Prices fell without interruption throughout the district from October till the end of the year, when rice was at from six to seven seers per rupee, or about one-third its usual average. Ragi and cumboo, which are the grains principally consumed, were then at about seven seers, or one-fourth the quantity usually obtainable.	The stocks are believed to be very low throughout the district, except perhaps in Karvetnagar, but private trade will meet all needs, and the railway running through four taluks affords every facility for importations.	The people are, as a rule, of the poorer class, though in the south and centre they are not ill off. Few landlords have the means of assisting their tenants. The zemindars of Kalastri and Punganur are well disposed to help their people, but not wealthy. The zemindar of Karvetnagar is in difficulties, and the zemindar of Kangundi is well off, but not disposed to relieve his ryots. These two last-named zemindaris, however, are not much distressed.	There has been a small emigration from three taluks to Ceylon and other places, but the opening of relief works will check the movement.	Works had only been started in nine taluks up to the end of the year. The number of persons employed on them was 24,305. The Board state that up to the 10th February the expenditure was Rs. 73,779 on road works, Rs. 13,071 on irrigation, and Rs. 30,792 on miscellaneous works.	No relief houses had been opened up to the end of the year, but arrangements had been matured for relief camps at Vellore, Ranipett, and Chittoor. About 1,000 persons were, however, being fed from municipal funds at Vellore, and 50 at Arcot. The Punganur Zemindar also was feeding 100 persons daily.
BELLARY.	Prices were below the average in August, 1876, being then 27½ seers of cholam per rupee. They rose gradually to 30 seers in August, 1876, and then suddenly to 19½ seers in September, 10½ in October, and 7½ in November and December last. At the close of the year they ranged from about 6 to 8 seers in the several taluks. By March 10th they had recovered to from 8 to 10 seers).	The local stocks are believed to be abundant in Bellary, Gooty, Alur, Adoni, and Tadpatri, but much will be hoarded until the prospects of the next season are secure. In several of the other taluks the stocks are scanty. Trade is active, but the local officers of the southern and south-eastern taluks doubt whether it will suffice to maintain the supply.	More than half the population are agriculturists, and of these a large proportion are farm labourers. There are no large landholders. The holders of ryotwári puttahs are 137,289, of whom nearly two-thirds pay less than 10 rupees each.	No emigration has taken place, nor is any likely, as famine prevails in the adjacent districts of Hyderabad, Mysore, and Bombay.	Extensive relief works became necessary in the western taluks in August. They were subsequently extended to Penaconda, Madakaira, and the Sub-Collector's division, and by November were general throughout the district. The works selected were, generally, the construction and repair of roads, digging wells, and the repair of tanks and their supply channels. At the commencement, works of village improvement were started, but as the numbers grew, concentation became necessary. No suitable large works are practicable except the Bellary-Hubli Railway lately started. Attempts to send labourers to the East Coast canal in Nellore mostly failed. The numbers employed on relief works gradually rose, till on January 6th, 1877, they had reached 398,961. By closer supervision, task-work and scrutiny of applications, together with reduced wages, they had by March 10th been reduced to 216,819.	The numbers gratuitously relieved were 36,555 on January 6th, but by March 10th had fallen to 17,576.
CHINGLEPUT.	Prices for October and November are not given. By the close of the year, rice was about double the ordinary price, and the other grains were still dearer. Compared with the year 1875 only, the result was even more unfavourable.	There are no stocks of grain, but owing to the vicinity of Madras this is unimportant. Abundance of grain is being imported and the district is well supplied with communications.	The landholders are generally poor, and unable to help their tenants.	There has been little or no emigration. On the contrary, large numbers flocked into the district, and the city of Madras, from other districts, but this has now been checked to a considerable extent.	The relief works started consist of roads and deepening drinking ponds. The expenditure up to January 20th was Rs. 54,822. The junction canal has been taken in hand since the close of the year. The numbers on the works on December 30th were 14,423.	Cooked food is given to infirm and aged persons at the relief camps, and also, in urgent cases, by the village officers. On December 30th, 3,239 persons were in receipt of such relief.

B—(*continued.*)

	Remarks on the character of the season.	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately: if there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.
COIMBATORE.	The S. W. monsoon was slightly above the average, but the N. E. monsoon gave only three-tenths of the usual quantity of rain. The rainfall was, however, very unequal; consequently, the southern and south-eastern taluks are the worst off, Bhowani and Satiamangalam in the north with Coimbatore and Pollachi are in a comparatively satisfactory state, while Collegal and part of Pollachi are scarcely threatened.	The same uncertainty prevails in this case as in that of Chingleput as to the amount of crops saved. It would appear, however, to be— Five-sixths in ... 1 taluk. Three-fourths „ ... 1 „ One-half „ ... 1 „ One-third „ ... 4 taluks. One-fourth „ ... 3 „ Total ... 10 „	The taluk and divisional officers propose remissions to the extent of Rs. 9,83,500, but the Collector considers five lakhs to be ample, and the Board concur with him.	Three taluks have lost considerable numbers of cattle from disease. Otherwise no large mortality is expected. The difficulty of procuring fodder has, however, led to the sale of much surplus stock at great sacrifices.	There is scarcity of water in seven taluks, and deepening of wells and other expedients are being resorted to, but no serious distress on this account is apprehended.
CUDDAPAH.	This is the second bad season in this district. The average rainfall is 22 inches between April and September and 10½ inches between October and December, but this year only 7 inches fell in the former period and half an inch in the latter. Even this scanty fall was ill-distributed, as regards both time and place, some taluks getting far less than others.	The information is confused and imperfect. The cultivated area shews a falling off of 39 per cent. in the case of wet lands, and 57 per cent. in that of dry. What crops have been obtained have been realized by means of wells, which are numerous in the district. The Board estimate the yield of the whole at one-fourth of an ordinary crop. Analysis of the taluk reports gives the following results as to crop saved:— One-half in ... 3 taluks. One third in ... 2 „ One-fourth in ... 2 „ One-sixth in ... 2 „ One eighth in ... 2 „ Total ... 11 „ In this, as in some other cases, it is, however, uncertain whether any allowance has been made for the land not cultivated at all.	The local estimate of remissions is Rs. 11,79,793, or more than half the revenue. The Collector has been directed to suspend collections pending investigation, but the Board hope that so large an amount of remission will not eventually be found necessary.	The condition of the cattle appears to be bad in three taluks and indifferent in the remainder. The mortality is said to have reached 40 per cent. in one taluk and 25 per cent. in four others, but these are only estimates. It is however certain that the mortality will be very great. The forest reserves have been thrown open, and the hills in the district also will furnish some pasture.	The water-supply appears to be bad in four taluks, indifferent in three and good in four. The wells in black soil are generally dry, the springs in many river beds lower than they usually are in May. Numbers of new wells are being sunk and old ones repaired, and advances are being freely given for these purposes.
KISTNA.	The early rains were 16 inches against an average of 20½, and the late rains only ¾ of an inch instead of 13 inches. There is, however, no general or widespread distress in the district, and only those parts beyond the reach of the Kistna Anicut need help from Government. Rain fell in January and February, but too late to be of much practical use.	The Board remark that the estimates "rest on no reliable foundation." The earlier crops were mostly moderately successful, while the late ones were either very scanty or total failures. The crop saved, according to the taluk returns, was:— Full in .. 1 taluk. Three-fourths in 1 „ Two-thirds in ... 1 „ One-half in ... 2 taluks. One-third in ... 6 „ One-sixth in ... 1 taluk. One-eighth in ... 1 „ Total ... 13 taluks.	The local estimate of remissions is Rs. 11,32,800. The Board think this "altogether excessive, considering that in the delta the ryots have had a fair average yield with prices more than doubled; while in the upland taluks they must have saved a considerable portion of their early dry crops." The Board do not anticipate a loss of more than seven lakhs.	There has been no unusual mortality among cattle, nor is much apprehended from want of fodder. If necessity arises, the greater part of the cattle in the district can be sent to graze on the islands in the Collar Lake.	The Kistna channels are the mainstay of the district. Some difficulty is apprehended in the Bapatla and Bandar taluks from the wells running dry, but elsewhere there is no fear of scarcity.

The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.	The local stocks, as far as ascertainable; the centres, railway stations or otherwise whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely, or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.	The relief works already started, and some leading particulars regarding them.	The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
Prices rose steadily up to the end of the year, and were then more than double the average. The increase was in a great measure owing to the demands from other districts.	Stores were believed to be considerable at the commencement of the famine, but they have been drawn forth by the high prices in this and other districts, and are now probably not large. Railway communications throughout the district are exceptionally good, and there are numerous and enterprising merchants to whom the task of supply may be safely left.	The great majority of the people are poor and engaged in agriculture. There are no zemindars or other large proprietors of importance; no assistance in the relief of distress or in the maintenance of their dependants can be expected from this class.	No emigration of any importance has yet taken place. From a few taluks some persons have gone in search of work on the coffee estates in Malabar and the Nilgiri.	The relief works consi of—(1) making roads, (chiefly improvements of existing village communications) to connect market towns with main lines of road and the railway; (2) village improvements; (3) clearing channels; (4) raising bunds of tanks; (5) storing metal for existing roads. A full and well-considered scheme for the above works was submitted by the Collector in good time, and is being carried out. The work now being done is almost entirely task-work. The actual outlay up to January 13th was only Rs. 30,962.	No systematic relief at State expense had been organised up to the close of the year, but private individuals had opened several relief houses in the Collegal and Bhowani taluks. The village officers were authorised to assist helpless and destitute travellers, and had funds for the purpose, but no occasion for doing so had arisen.
Prices rose very suddenly in October, and more gradually afterwards, till at the end of the year ragi, the staple food of the people, stood at from six to eight seers per rupee, against an average price, in that month, of from 21 to 30 seers.	Local stocks are low, but importation of grain is very active. There are 120 miles of railway line, and ten stations in the district. The roads are mostly good and easy. Private enterprise is said to be probably sufficient to supply all parts except the most remote, such as Sidhout, north of the Pennair, and the sub-division, comprising the Kadiri, Royachoti, Madanapulli, and Voilpaud taluks.	About half the landholders in Jamiladugu, one of the worst taluks, are said to be men of means. There are also well-to-do people in Prodatur and Cuddapah. Elsewhere the bulk of the ryots are poor.	In the earlier stages of the distress there was considerable emigration to other districts, chiefly Nellore and Kistna. About 15,000 who went from Budwail and Sidhout have returned, but many Wuddurs have staid on the East Coast canal. No more emigration is expected. There was a considerable influx of labourers from Mysore, but measures have lately been adopted for their return to their own country.	Numerous works, chiefly roads, and repair of tanks and irrigation channels, have been executed. At the close of the year about 128 were in progress. The expenditure up to February 10th was Rs. 11,21,203, of which 67 per cent. had been incurred in the sub-division alone. In the first week in January there were 201,061 persons on the works.	No systematic charitable relief had been organised, but relief camps and other measures were in progress.
Prices fell steadily from the beginning of October, and at the close of the year were from one-half to one-third of their ordinary rate. The rise was, however, owing to exports to other districts as much as to deficiency of production. Rice is used by the well-to-do only.	There are believed to be fair local stocks throughout the district, and importation from the adjoining district of Godavery and from Bengal is easy. Trade is active.	The zemindars, with the exception of the owner of the large Nuzvid estate, are without means or desire to help their tenants. The ryots, however, are generally well off, and will hardly need special aid, but will help their own labourers.	There has been no unusual emigration, but an influx of labourers from Nellore and Kurnool into the Guntoor and Bapatla taluks and from Hyderabad into the Palnad taluk.	Employment to a certain extent has been generally afforded by Local Fund works, but no regular relief works have been started except the Commamore canal extension and clearance, in the Bapatla taluk, and three canal works of no great magnitude in Bezwada. Even these were wanted for the immigrants as much as for the local population. The whole expenditure up to March 10th was only about half a lakh of rupees. It did not commence till near the close of the year.	Private persons have opened relief houses, supported by subscriptions, in four taluks, but no Government aid has been required, beyond giving the village officers funds to relieve destitute travellers.

STATEMENT

B—(*continued*).

	Remarks on the character of the season.	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas; *kharif* and *rabi* should be shown separately: if there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.
KURNOOL.	This district is subject to both monsoons, but gets its greatest rainfall from the south-west. The rainfall from April to September was only 7½ inches, instead of the usual average of 25⅝ inches, and from October to March only a few more decimals fell instead of a further supply of about 8 inches. The entire supply was thus under 8 inches instead of 33½.	Nearly one-half of the land was left uncultivated. The dry crops on the remaining land failed entirely, and the trifling extent of wet cultivation yielded at best a poor outturn. The canal lands have done well, and their area has been increased considerably, under a promise that water rate should not be charged unless a fair crop was produced. The local estimates are very vague, but according to them the crop saved is:— One-half in 1 taluk. One-fourth in 1 „ One-sixth in 1 „ On-eighth in 2 taluks. *Nil* in 3 „ Total 8 „ The Board consider that the outturn of the whole district cannot be more than one-sixth.	The local officers' estimate of remissions is Rs. 13,61,89½, but the Board remark that in some cases quit-rent on inams has been included, which is not to be remitted, and that, generally, no careful calculation has been made. They consider that a remission of 8½ lakhs, or a little over, should be sufficient.	The conditions of the cattle appears to be bad in one taluk, and indifferent in the others. On the whole, 22 per cent. are said to have died already, and further mortality of 60 per cent. is apprehended. The Board consider this forecast exaggerated, but no doubt the loss has been and will be severe. Cattle have been sent to the Nallamalai Hills, and fodder has been obtained thence and from the Irrigation Company's canal.	The water-supply appears to be bad in one taluk, indifferent in four, and fairly good in three. The tanks and wells are running dry, and in some localities even springs in river beds have failed. Especial difficulty is felt on hills and high lands. General deepening of wells and digging of pits in the beds of streams is going on, and with the aid of April showers it is hoped that the hot season may be tided over without disaster.
MADURA.	The preceding season of 1875-76 was unfavourable. The district depends largely on the north-east monsoon, and would have been safe had not the rains failed after the beginning of October last. The south-west monsoon yielded 10½ inches, against an average of 12½, but the fall was capricious, while the north-east monsoon amounted to only 6 inches instead of 15.	The estimates of failure of crops seem to have been made more carefully than in other cases, but owing to the peculiarities of the seasons and cultivation of the district they are complicated, and a general result is not easily attained. The crops saved appear to be:— One-half in 3 taluks. One-third in 2 „ One-fourth in 2 „ One-eighth in 1 taluk. Total 8 taluks. The area cultivated is less by nearly one-seventh.	The local estimate of remissions in the six Government taluks is Rs. 10,09,243, but the Board consider 5 lakhs to be sufficient, as owners of dry lands which have yielded any crop should not have remission. The Peishkush of the two large zemindaris will be allowed to stand over till next year.	The condition of the cattle seems good in four taluks, indifferent in three, and bad in one zemindari division. As the Pulni and Annamalay hills, and the forest reserves are available, and occasional showers have freshened up the pasture, no severe loss is anticipated.	The water-supply is rather indifferent in three taluks, but good in the rest. The tanks and rivers are for the most part dry, but the wells generally hold out, and no serious failure anywhere is apprehended.
NELLORE.	The season of 1875-76 was a bad one, and the mortality among the cattle from insufficient pasturage and drinking water was considerable. In 1876-77, the south-west monsoon yielded only 9·3 inches, against an average of 14·4 inches, and the north-east only 2 inches instead of 20. In no taluk, except one, has the rainfall reached half the average, and in Gudur and Atmakur it was less than 1/10th and 1/8th respectively. Distress appeared in Kavali in August, by the end of October Atmakur and Udayagiri were in a critical condition, and in November, on the failure of the north-east becoming certain, the calamity became general. The north of the district depends chiefly on the south-west monsoon; the rest on both.	In cultivation under the south-west monsoon there was a decrease of one-third and in that under the north-east the falling off exceeded one-half. The information is singularly incomplete. According to the local reports, the crop saved is— One-third in ... 3 taluks. One-fourth in ... 3 „ One-sixth in ... 1 taluk. One-eighth in ... 3 taluks. *Nil* in ... 3 „ Total ... 13 „ The Board consider one-sixth to be an extreme estimate for the whole district.	The taluk estimates of remissions amount to Rs. 12,73,641, but the Collector reduces this to three-fourths of the net ryotwar demand of the preceding year, which is Rs. 12,68,000. The Board, however, think that nine lakhs ought to be sufficient.	The condition of the cattle is indifferent in six taluks and bad in seven. At least 25 per cent. of the cattle have already died, and further mortality is inevitable, though recent showers have secured the central taluks. Nellore being famous for its breed of cattle, which supplies the surrounding districts, this loss is singularly to be deplored.	At the close of the year, the water-supply was bad in four taluks, indifferent in eight, and good in one only. Recent rain, however, has considerably improved the appearance of affairs.

	The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.	The local stocks, as far as ascertainable; the centres, railway stations or otherwise whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisans; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.	The relief works already started, and some leading particulars regarding them.	The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
KURNOOL.	Famine prices were reached in this district at a comparatively early date, and they continued to rise till the end of the year, when cholum, the staple food of the people, was from three to four times its ordinary price.	The local stocks were generally inconsiderable, and the distance of the district from both sea and railway caused some apprehension that they might not be supplemented by importation. Private trade has, however, been found sufficiently active, and recent enquiries have proved that it will suffice for the needs even of the Cumbum and Markapur taluks, which are the least accessible.	The population are generally poor. The few wealthy landholders there are give little or no help to their tenantry.	At the commencement of the distress there was a considerable emigration of the poorer classes from all taluks except two, and especially from Cumbum and Markapur. The people mostly went to the Godavery and Kistna districts. The majority have returned, and further emigration is improbable.	Very extensive relief works were started at an early date, consisting chiefly of roads. Some repairs of tanks and wells, and minor irrigation works, had also been undertaken. The expenditure up to March 3rd had been Rs. 25,83,926.	Up to the close of the year, gratuitous relief had not been given to any very large extent, but the usual measures for relief houses and village relief had been adopted.
MADURA.	Prices were high at the beginning of October, and a sudden rise took place in the third week, on the failure of the north-east monsoon appearing probable. In the second week of November there was a further sudden rise. At the close of the year cholum and cumboo were three times as high as in ordinary years, and ragi rather higher still.	The stocks were generally low owing to the preceding year having been a bad one, and the early rise in prices tempted ryots to sell. The railway runs through or near almost every Government taluk, and the roads are good, except near the sea. The Ramnad zemindari, which lies on the coast, has three ports through which grain is imported, and supplies also come from Negapatam and Tuticorin.	Three-fourths of the population are agriculturists, and the whole are mostly low-caste and poor. The zemindarni of Shivaganga appears anxious to relieve the people by repairing long-neglected irrigation works. In the zemindari of Ramnad, and three other estates which are under the Court of Wards, suitable expenditure for relief purposes is being incurred. In no other cases is relief to tenants to be expected.	The poorer population are in the habit of going, in unfavourable seasons, to the coffee estates of Ceylon for employment. This year far larger numbers went than usual from Pamuben and Tuticorin. Many have, however, returned, as the labour market appears to be glutted.	Relief works were scarcely started by the end of the year, and they have not even yet been extended to all taluks, though works have been selected and are ready for commencement whenever necessity arises. The number of persons on the works on December 30th was 7,148.	Relief houses have been opened in Pulni and Dindigul, and orders for village relief have been issued. On December 30th 1,015 persons were receiving gratuitous aid.
NELLORE.	Prices rose from the middle of October, and continued to do so gradually till the end of the year, but the pressure has not been so severe as in some other districts. In the last week of December cholum stood at eight seers and a half, and rice, 2nd sort, at six and a half. Since then an improvement has gradually taken place.	Stocks of grain were generally low, as both 1873 and 1875 were bad years, and during October, November, and December much exportation to the Ceded Districts and Kurnool went on. The length of seaboard, along which supplies are thrown in, is a compensation for the want of railway communication, and trade is active.	The majority of the population is agricultural and poor. The Raja of Venkatagiri and the Zemindar of Kalastri are the two wealthiest landholders. The estate of the former covers nearly one-fourth of the district, but after making great promises, he has done little. The latter has done nothing.	There has been no emigration worthy of remark.	Relief works were started generally before the close of the year, and 43,853 persons were employed upon them on December 30th—a number which has not much increased since. The East Coast Canal was also started, to employ labourers of other districts as well as Nellore; but though it could occupy 90,000, the numbers on it have never exceeded 30,000, owing to the reluctance of the people to leave their homes.	The village officers have had the usual orders to relieve those in danger of starvation, and cooked food is served out to the infirm and destitute at all Sub-Magistrates' stations and important villages. The numbers relieved were 1,111 at the end of the year, but had risen to 6,613 by the 24th of March.

STATEMENT

B—(*concluded*).

	Remarks on the character of the season.	A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas; *kharif* and *rabi* should be shown separately: if there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.
SALEM.	There was a very deficient rainfall in 1875-76. In the current year, the south-west monsoon gave 16 inches instead of 20, and the north-east only 2 inches instead of about 10. This quantity was not evenly distributed, and the condition of the different taluks varied in consequence, the only one, however, which did not suffer severely is Athoor.	Ninety-three per cent. of the cultivation is dry crop. The area cultivated appears to have fallen off by about one-eleventh. The estimate of crop saved is:— Full average in ... 1 taluk. One-third „ ... 1 „ One-fourth „ ... 4 taluks. One-sixth „ ... 1 taluk. One-eighth „ ... 2 taluks. Total ... 9 „	The local officers estimate the remissions necessary at Rs. 8,49,100. The Board observe that this is far too high, and that careful scrutiny will be necessary.	The condition of the cattle is bad in all taluks except one, and the mortality up to the close of the year is reported at from six to twenty-five per cent. in the different taluks. The difficulty of obtaining fodder is great, and a future mortality of 40 or 50 per cent. is apprehended.	The water-supply was at the end of the year bad in four taluks, indifferent in four more, and good in one only. The Cauvery and the Pennair are the principal rivers. The former contained water, and in the bed of the latter it could be obtained by digging. The tanks and jungle streams were all dry. Some of the wells had failed and in the others water was very low. Digging and deepening wells was the only practicable remedy, and was being resorted to.
TINNEVELLY.	Four taluks of this district are valley taluks, where the land is mostly irrigated. They are the richest and most peopled, and they have not suffered at all. The five remaining taluks are black soil. They depend on the south-west monsoon for about one-third of their rain, and on the north-east for the rest. This year they got from the former 4·3 inches instead of 6·3, and from the latter 6·3 instead of 11·6. Sankeminarcovil and Nangueri were the best off, and Strivillipootur the worst.	In the four taluks distressed, the area cultivated was about one-sixth less than usual. The crop saved is not clearly shown, but may be inferred from the returns to be about as under:— Full average in ... 4 taluks. One-fourth „ ... 2 „ One-eighth „ ... 3 „ Total ... 9 „ This pretty closely approaches the information given to Sir Richard Temple. See Mr. Bernard's memorandum of January 24th.	The Collector estimates the necessary remissions in the five taluks at Rs. 7,52,545, besides Rs. 2,41,090 to be given through the zemindars to their tenants. The Board consider the former figure too high, and the latter item inadmissible, but require further information.	No mortality among the cattle had taken place, and it was proposed to admit them to graze along the Western Ghats by a road to be constructed.	There is no prospect of a failure of the water-supply. The rivers and tanks were almost dry by the end of the year, but the wells were in good condition, and the usual expedients of deepening and digging pits would suffice to get through the hot weather.
TRICHINOPOLY.	This district is better off than most of the distressed parts of the Madras Presidency. Distress exists chiefly among the poorer classes and emigrants from other districts, and arises more from high prices caused by exports to other districts than from actual drought. The rainfall during the south-west monsoon was slightly above the average, but the north-east monsoon failed to a great extent, as only 5 inches fell instead of 16. The result of the two was a total of 21¼ inches instead of 29.	The area cultivated was almost the same as in ordinary years. The crops saved are estimated in the taluk reports to be as under:— Full average in ... 1 taluk. Five-sixths „ ... 2 taluks. Three-fourths „ ... 2 „ Total ... 5 „	The local officers estimate remissions for dry lands, and for wet lands under rain fed tanks at Rs. 2,25,000, but the Board have authorised reduction up to one-third for the former in four taluks, and in a small tract of the Trichinopoly taluk.	No important mortality among the cattle had occurred, but loss was apprehended in two taluks in the hot weather.	Tanks were almost dry, but the villages along rivers and their channels were well off, and the water in wells was generally sufficient. The local funds would provide for deepening wells and digging new ones where necessary.

	The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.	The local stocks, as far as ascertainable; the centres, railway stations or otherwise whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.	The relief works already started, and some leading particulars regarding them.	The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
SALEM.	Ragi is the staple grain of the district. On the 1st October it was at more than double its usual price, and prices continued to rise till on December 24th they stood at 8¾ seers, against an average of 38¼. Rice rose less in proportion.	Local supplies are believed to be low, but as the railway passes through or close to almost all the taluks, roads are good, and private enterprise is active, no lack of grain is to be feared.	The mass of the people are agriculturists and labourers, and in poor circumstances. The few who are wealthy are not likely to aid their tenants.	There has been a moderate emigration to neighbouring districts and Ceylon. Those who went to the latter place are believed to have bettered themselves, but the others were returning, and further emigration would be checked by the relief works.	Before the close of the year works had been started in all taluks, which were to cost above a lakh of rupees. Further works were ready for sanction. Those mostly selected were the construction and repair of village roads, and the restoration or repair of irrigation works. The expenditure up to January 13th was Rs. 61,851, and the number employed on December 30th was 52,776.	Village relief was in operation at the end of the year, but a more central system was being substituted 3,488 persons were being fed gratuitously on December 30th.
TINNEVELLY.	The statistics of prices are not very complete, but the rise has not been so severe in this district as in many others. It was most decided in December.	The local stocks were estimated at the close of the year as ample, and importation had begun. The railway runs through the district to the port of Tuticorin, and private enterprise will be able to supply all wants.	Many of the landholders are able to assist their tenants and willing to do so.	About five per cent. of the population were believed to have gone to Ceylon and Travancore for employment before the end of the year, and further emigration was probable. In this respect the people were only availing themselves to a larger extent than usual of their usual outlet.	No regular relief works had been organised, nor was relief on any large scale considered necessary. Up to April 7th only Rs. 13,263 had been expended.	Private charity has helped to afford what little relief was required. Up to April 7th only Rs. 1,385 had been spent under this head.
TRICHINOPOLY.	There is some discrepancy between the various statements of prices, but the result is decidedly high, considering the advantages the district enjoys.	Stocks of grain were on the whole fair, and what with facilities for importation and activity of private trade there was no ground for apprehension.	The majority of the people are well-to-do, and some wealthy landholders were expected to aid their tenants.	The people of the Trichinopoly, Kulittalai, and Musiri taluks usually go to Ceylon for employment during part of the year, and the number who had thus emigrated was little above the average.	No regular relief works started. The local funds give assistance to the small extent required, and only Rs. 2,712 had been expended by the State up to April 7th.	No State relief was required, but private charity gave assistance to travellers.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

AGRICULTURE AND HORTICULTURE—FAMINE.

No. 418.

Extract from the Proceedings of the Government of India, in the Department of Revenue, Agriculture and Commerce, dated Simla, the 5th May, 1877.

READ—

Telegram to the Government of Madras, dated the 25th October, 1876, requesting the submission of separate statements regarding each taluk in the distressed districts, showing its area, population, Government realizable revenue in 1875-76, rough proportion of *kharif* to *rabi* cultivation, average annual rainfall, actual rainfall up to date, ordinary prices of the staple food of the taluk at that season, actual prices on the date of the return, probable extent of failure of crops, and amount, if any, sanctioned for relief works and other relief, and adding that the statements might be prepared from the best information then available, and corrected or supplemented afterwards if necessary.

Letters from the Government of Madras, Nos. 1599 A and 1648, dated the 7th and 14th November, 1876, submitting some of the particulars requested regarding the extent of distress prevailing in the Madras Presidency, and the measures inaugurated for affording relief; and stating that the information asked for relative to relief works, the extent of cultivation, the loss of revenue anticipated, &c., will be submitted shortly.

Letter to the Government of Madras, No. 469, dated the 2nd December, 1876, forwarding copy of a letter to the Government of Bombay, No. 459, dated 30th November, 1876, requesting that the information received might be supplemented by a complete review of the situation, comprising—

"(*a.*)—A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas: *kharif* and *rabi* should be shown separately. If there be any prospect of further sowings, it should be mentioned.

(*b.*)—An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.

(*c.*)—Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.

(*d.*)—The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.

(*e.*)—The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.

(*f.*)—The local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.

(*g.*)—The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.

(*h.*)—The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.

(*i.*)—The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.

(*j.*)—The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.

(*k.*)—The number of persons whom the Government has on its hands at date of report, for relief (1) by works, (2) by charitable measures, and the number, roughly estimated, which it is likely to have on its hands on March 1st, May 1st, and July 1st."

Adding that the above information "should be given for each taluk separately, and should be, in the first instance, prepared by the Mamlatdars, the permission already given to place them on special duty being freely availed of for the purpose. The Assistant or Deputy Collector in charge should test, verify, or supplement the statements of each Mamlatdar, and then submit *as his own*, and in his own language, a complete report for the taluk on the points indicated, with full and free expression of his own opinions. Each taluk report should be passed on by the Collector with his remarks to the Commissioner, and by him similarly to the Bombay Government, who will forward it to this Department. No report of any one taluk should be detained anywhere because others have not come to hand, and the whole of the reports should have reached the Government of India by the 15th of January next. As many of the details above specified have already been partially collected, or are in process of collection, and the welding of the whole, including the new matter, into a complete form will be of obvious use to both Governments, the President in Council trusts that the call now made will not prove especially difficult or irksome."

Letters to the Government of Madras, Nos. 488 and 522, dated the 8th and 15th December, 1876, the first requesting information as to the nature of relief works, &c., proposed to be undertaken, the second acknowledging the receipt of certain reports, pointing out that much of the information required is still wanting, and requesting its early submission.

Letter from the Government of Madras, No. 2053, dated the 15th December, 1876. Reports on the description of relief works undertaken in the affected districts of that Presidency, the amount sanctioned in connection with them up to the 7th December, 1876, and the estimated amount of expenditure before the close of the current official year, and loss of revenue during the current and ensuing years.

Letter from the Government of Madras, No. 32A, dated the 4th January, 1877. Forwards copies of the Proceedings of the Board of Revenue submitting statistics of rainfall, prices of food-grains, and cultivation for certain districts of the Madras Presidency.

Letters from the Government of Madras of various dates between the 22nd January and the end of March, 1877, forwarding the original reports received from certain districts together with the reviews thereof by the Board of Revenue.

Letter to the Government of Madras, No. 323, dated the 24th March, 1877, forwarding a memorandum of the information still wanting.

Proceedings of the Board of Revenue, Madras, dated the 26th March, 1877, reviewing the detailed reports of the Bellary district, and Proceedings of the 27th idem submitting a report on the Sundoor State within that district.

Proceedings of the Board of Revenue, Madras, dated the 28th March, 1877, reviewing the detailed reports of the Kurnool district.

Proceedings of the Board of Revenue, Madras, dated the 2nd April, 1877, reviewing the detailed reports of the Kistna district.

Letter from the Government of Madras, No. 1375, dated 9th April, 1877. In reply to letter No. 323, dated the 24th March, 1877, forwards Proceedings of the Board of Revenue furnishing the information requested; and also revised taluk reports of the Madura district and the Board's review of the Nellore district.

Proceedings of the Board of Revenue, Madras, dated the 13th April, 1877, submitting a detailed statement of the wet and dry cultivation in the Nellore district.

Proceedings of the Board of Revenue, Madras, dated 23rd April, reviewing the revised taluk reports of the Madura District.

Statement A, compiled from the returns and reviews received in reply to the telegram of the 25th October and letter of the 30th November, 1876, above referred to.

Statement B, being an abstract of Statement A, with additions from the Reviews of the Madras Board of Revenue, and other sources.

RESOLUTION.

IN the month of January, 1876, some remarks in the weekly "season and crops" telegram from the Government of Madras, referring to the unsatisfactory prospects of certain districts in that Presidency, attracted the attention

of the Government of India, and the Local Government were requested to give further information on the subject. From some papers then submitted, and subsequently from a more comprehensive report received in the month of July, it appeared that, in consequence of the deficiency of the north-east monsoon, failure of crops had taken place in parts of four districts. In Bellary and Cuddapah there had been a considerable decrease of cultivation, and some remissions would be required, but prices were steady, and the condition of the labouring classes did not appear to call for the interference of the State. In North and South Arcot, the loss of crops had been rather more severe, larger remissions were needed, and a general want of drinking water and pasturage was complained of. At the same time, slight falls of rain had taken place in all the districts, and while nothing could be safely predicted as to the coming south-west monsoon, the Government of Madras reported that they had taken every precaution for guarding against the serious effects of famine which its failure would occasion, and had sanctioned relief works for execution in the event of the provision of labour for the poorer classes becoming indispensable. In the month of August, 1876, the Madras Government applied for a grant of Rs. 41,000 from Imperial revenues for relief purposes, but it was not until the receipt of telegrams, dated October the 24th and 27th, that the Government of India became aware that the condition of Bellary, Kurnool and Cuddapah was very serious, and that if the north-east monsoon should not set in favourably within fifteen days, the gravest results were to be apprehended in those districts.

2. In accordance with the experience of the past, as summarised in paragraphs 9 and 11 of the Resolution of the Government of India on the Bengal Famine of 1873-74, dated February 13th, 1875, the Madras Government were on October the 25th requested by telegraph to supply detailed information on various important points with reference to the distressed districts. The replies to this call being incomplete in essential particulars, such as the extent of failure of crops and of relief works organised, it was followed on the 2nd December by a request for a complete review and forecast of all distressed districts, like that which had been required from the Government of Bombay on the 30th of November, to be submitted to the Government of India by the 15th of January. The Chief Commissioner of Mysore also was, on the same date, directed to submit similar information.

3. The reports of the Bombay local officers were sent in to their immediate superiors, in a generally complete state, about the close of the year, and together with the views of the Government of Bombay, were received by the Government of India in time to be considered and summarised, with orders thereon, in the *Gazette of India* of the 23rd February last. The reports from Mysore, though not quite so complete or trustworthy as those from Bombay, were similarly dealt with by the 10th of March. His Excellency the Governor General in Council regrets to observe that the reports of the local officers in the distressed districts of the Madras Presidency have not, with some notable exceptions, been characterised by the same punctuality, accuracy, or completeness. Their various deficiencies in important particulars have been sufficiently commented on by the Madras Board of Revenue, and have been to a great extent supplemented by the series of elaborate and able reviews of the several districts by the Board itself which have accompanied them. His Excellency in Council is willing to make the most ample allowance for the irksomeness and difficulty which must have been felt in submitting detailed statistics by officers who were labouring under the practical difficulties of organising relief for clamorous and starving multitudes, but is constrained to observe that had they more generally grasped the imperative need of temperate and thorough diagnosis of the condition of affairs around them at a very early stage of famine, the exaggerated impressions which were in many instances received, and the excessive and uncalled for relief which was consequently given, might have been alike avoided, and the general policy of Government might have been, in important particulars, different from what it was. While thus commenting on a general tendency which has had a not unimportant influence upon the conduct of affairs, His Excellency the Governor General in Council cannot withhold a tribute of admiration to the energy, ability, and self-devotion which the local officers of the Madras Presidency, of all grades, have uniformly displayed, to the humanity by which their measures, even if at times in excess of the occasion, have been prompted, and the loyalty with which they have accepted and endeavoured to carry out the famine policy of the Government of India, as set forth in the instructions of the 16th of January

last, and personally explained by Sir Richard Temple in the course of his mission.

4. The delay which has taken place in submitting the review and forecast which was due on the 15th of January last, has necessarily altered its character and diminished its use. The detailed information supplied is in some cases, and not in others, brought down to much later periods than that originally intended, and it is no longer possible by its aid to view, from a fixed stand-point, either the facts of the past or the prospects of the future. Fortunately, there is no longer the same necessity for doing so, as the progress of events, together with the mission of Sir Richard Temple, has solved many problems which, before the close of the year, presented themselves for earnest consideration. At the same time, His Excellency in Council is of opinion that the information which has now been collected, although in some instances incomplete in matters of calculation, and in others incongruous in point of time, may not prove to be devoid of value as a record of the earlier stage of a great famine, and of the attempt to deal with it on a basis of actual facts.

5. The area of the Madras Presidency, exclusive of Native States and of the city of Madras, is 138,291 square miles, and the total population 30,883,625. This tract is divided into twenty districts, of which Ganjam, Vizagapatam and Godavery on the extreme north, South Arcot and Tanjore towards the east centre, and South Canara, Malabar and Nilgiris on the west, have escaped any approach to actual famine, though the distress in parts of some of them, owing to high prices induced by partial failure of crops or extensive exportation, has not been inconsiderable. The remaining twelve districts have been subjected throughout to varied, but still severe pressure, which in parts of many of them has reached the extremities of famine. The twelve districts comprise 121 separate taluks, or sub-divisions (of which 13 are zemindars' estates), and for each of these separate information has now been submitted by the local officers, and reviewed by the Madras Board of Revenue. The total area and population of the twelve districts, and the area and population actually affected by famine, on the basis of considering as affected all taluks in which the crop saved amounts to less than one-half, are shewn in the margin. If, however, taluks in which the crop saved amounts to one-half be included, the affected area and population will be raised to 71,849 and 15,432,393 respectively. Considering that the quantity of land not cultivated at all has in many instances been omitted by the Madras local officers from their calculations of failure, these latter figures probably afford, in the case of Madras, a juster estimate than the former. The extent of the famine in Madras is contrasted in the subjoined table with that in the Presidency of Bombay and the Province of Mysore :—

	Total.	Affected.
Area in square miles ...	81,852	63,910
Population ...	18,592,534	13,713,307

	BOMBAY.			MYSORE.			MADRAS.		
	Total.	Affected.		Total.	Affected.		Total.	Affected.	
		Including half crops.	Excluding half crops.		Including half crops.	Excluding half crops.		Including half crops.	Excluding half crops.
Area in square miles ...	54,355	41,254	33,873	27,077	16,100	14,479	81,892	71,849	63,910
Population ...	7,963,927	6,180,209	4,981,616	5,055,412	3,141,747	2,849,320	18,592,534	15,432,393	13,713,307

6. Proceeding on the more favourable course of excluding taluks with half crops saved, it will be found that in Bombay the affected area and population are 62 per cent. of the total area of the districts concerned, in Mysore they are 53 and 56 per cent. only, while in Madras they reach 78 and 74 per cent. respectively. If taluks with half crops saved be included, the results are almost the same: Bombay appears somewhat less favourably, Mysore more so, but Madras still considerably exceeds the others. These facts, together with the large excess of the affected area and population in Madras over that of Bombay and Mysore combined, are sufficient evidence both of the magnitude of the calamity which has overtaken that Presidency, and the difficulties with which the Local Government and its subordinates of all grades are called upon to contend.

7. The total rainfall during the past season, as reported up to the close of the year, or to dates since which no appreciable increase has occurred, is shewn in the margin for 112 taluks. For the other nine, which are zemindari, no returns are available. The results, as thus shewn, are less favourable, though not greatly so, than those ascertained regarding Bombay, which, again, held a lower place than those for Mysore. In order, however, fully to appreciate the severity of the failure of rain which has fallen upon the Madras Presidency, the fact must be remembered that the latter is dependent upon two monsoons instead of one, in proportions which vary greatly, but rarely exceed two-thirds of one to one-third of the other. A fair supply during one monsoon, though it helps materially to raise the general proportion, is therefore no compensation for extensive failure during the other. This will be more fully understood from the accompanying statement :—

Proportion.	Number of taluks.
Full or nearly so	9
Three-fourths	12
Two-thirds	23
One-half	31
One-third	24
One-quarter	7
One-fifth	1
One-sixth	3
One-eighth and under	2
	112

North Arcot	25·6	16·0	11·3	2·5	Tinnevelly ...	6·3	4·3	11·6	6·3

The later rains were, in all cases, of great importance, but in some their failure alone produced the severity of famine.

8. The obscurity involving the estimates of the proportion of crops saved, in consequence of omission to take into account land left uncultivated, failure of later crops, or other particulars, has been in several instances pointed out by the Board of Revenue. The marginal table gives such a summary as can be made, but it probably shews matters somewhat better than they really are. It does not, moreover, shew fully the actual relative pressure of famine, as some districts which have lost more are, from previous good seasons or other circumstances, better off than others which have saved a larger proportion of their crops. Contrasting this table with the similar ones relating to Bombay and Mysore which have already been made public, the following results are obtained: The failure has been total, or nearly so, in 21 taluks of Bombay, 18 of Mysore, and 35 of Madras, or 22½, 26½, and 29 per cent. respectively: the taluks which have lost from one-sixth to one-half, both inclusive, are 48, 25, and 68, or 51½, 36½, and 56 per cent. in the three cases; while, finally, those which have lost [illegible] than one-half are 24, 25, and 18, or 26, 37, and 15 per cent. The Madras [illegible], even on the figures now obtainable, which have been described above as probably unduly favourable, are consequently heavier in every instance than those experienced by either Bombay or Mysore.

9. The estimates of probable remissions submitted by the local officers amount to Rs. 1,24,33,758, or about one crore and a quarter of rupees. The

Board of Revenue, in their reviews, make reductions in the case of Coimbatore, Kistna, Kurnool, Madura and Nellore, which reduce this amount to about one crore, and express their belief that further large reductions are practicable in Cuddapah, Salem and Tinnevelly. The question of remissions of land revenue has been the subject of a special correspondence with the Governor of Madras, in consequence of suggestions submitted to them by Sir Richard Temple for suspension of portion of the demand with a view to its recovery in future years. His Excellency the Governor General in Council decided to leave the matter in the hands of the Government of Madras, on the understanding that the local officers would be warned against too free remissions, and authorised to hold balances in suspense in cases in which it appeared likely that the landholder would be able, without undue pressure, to pay up next season. It is satisfactory to find that the remissions now stand at a lower figure than the previous estimate, and that the Board of Revenue consider further considerable reductions to be practicable.

10. The condition of the cattle and agricultural stock has occupied in all districts that attention which its importance deserves. According to the Administration Report of 1874-75, the numbers of cattle and sheep in the twelve affected districts were as shewn in the margin. The fact that these numbers, compared with the population, betoken a wealth in this respect inferior to that of the affected districts of Bombay, enhances both the severity of losses and the urgency of reducing them to a minimum. According to the local reports, the condition of the cattle appears to be good in forty-six taluks, indifferent in thirty-eight, and bad in thirty-seven. In some districts the mortality has already been extremely heavy. In Bellary the Madras Board of Revenue consider it unlikely that more than 25 per cent. of non-agricultural cattle, and from 60 to 70 per cent. of the agricultural cattle, will survive: Cuddapah and Kurnool have likewise suffered severely, while the heavy losses which have befallen the well-known breed in Nellore will be felt, for years to come, far beyond the limits of the district itself. Such relief as was practicable, by means of throwing open reserves and digging wells, has already been resorted to, and it may be hoped that the showers which have begun to fall may tend to freshen the pastures, and to diminish the further mortality which is so generally apprehended.

Cattle	...	...	5,323,000
Sheep	...	...	5,894,000
Total	...	...	11,217,000

11. The means of water-supply do not appear to have been so extensively impaired as might have been expected, and as has been the case in Mysore. The condition of forty-five taluks is considered to be good, of forty-eight indifferent, and of twenty-eight bad, but though the inconvenience caused by scarcity will be in many instances extreme, no actual calamity is anywhere anticipated. Already the rains, partial though they have been, have brought relief, and difficulties in this particular are not now likely to be prolonged.

12. Regarding the course of prices, the only remarks which may be made are that the rise appears mostly to have commenced at a very early date, so that the rates at the beginning of October were abnormally high; that the increase appears to have been continuous, though in some cases more sudden than in others, until the close of the year; and that staple grains were at that period generally dearer than in the Bombay Presidency.

13. The extent of the local stocks is a point at all times most difficult to ascertain, and the practice of hoarding until the nature of the coming season is assured tends to defeat any attempt at exact calculation. In districts such as Cuddapah, Kurnool, Madura and Nellore, which had suffered from previous bad seasons, the supplies in hand were undoubtedly low, and in others, where they were originally fair, they were drawn forth for exportation by the high prices obtainable elsewhere. The Madras Presidency enjoys, however, in its system of railways, penetrating almost every one of the distressed districts and conveying supplies both from Northern India and the Coast, as also in its extensive sea-board, lying open to the trade of Bengal and Burma, exceptional advantages for supplementing deficiencies in its food-supply. The experience of the past four months has amply demonstrated that it has at its command, both

within and beyond its limits, a body of merchants both competent and ready to utilise these advantages to the utmost, in accordance with the ordinary laws of supply and demand, and that any attempts to supplement their operations are entirely unnecessary, and cannot but prove prejudicial.

14. The condition of the mass of the people in the distressed districts, with the exception, perhaps, of Tinnevelly, is poor. There are, however, in certain districts, large zemindari estates of a nature nowhere to be found in Bombay and Mysore, the owners of which ought to be in a position to assist their tenants, but exhibit, with a few noteworthy exceptions, no disposition to do so. The proportion of agriculturists generally exceeds considerably that of other classes, and there can be no doubt that the population as a whole, after exhausting what little accumulated means individuals may possess, are dependent, on an emergency like the present, upon such aid as the State can afford.

15. The emigration reported amounts to only 174,925, or 1·3 per cent. of the total affected population, but some persons, whose numbers are unascertained, have probably left other taluks. The principal known emigration has occurred in the districts named in the margin. From Bellary, Kurnool and Cuddapah persons have resorted to the adjacent territories of the Nizam and to Mysore, as well as to British districts, but their movement is altogether abnormal, and they have probably already returned in large numbers. In the Southern Districts, it is difficult to distinguish the emigration to Ceylon and the coffee plantations of the western range of Ghâts which has been caused by famine, as the population annually use to a great extent these outlets for their labour. Practically, the difficulties of the famine have, in the Madras Presidency, been but little affected by the movement of the people. It may be added, in connection with this subject, that the Government of India have recently approved of proposals submitted by the Chief Commissioner of British Burma for encouraging, by means of advances, the emigration of 20,000 labourers to that Province.

Tinnevelly	...	...	49,511

Cuddapah	...	...	19,000
Madura	...	...	17,171
Kurnool	...	...	15,746

16. Relief works on an extensive scale had been started before the close of the year in Bellary, Kurnool and Cuddapah, and to a less, though still considerable, extent in Nellore. In Kistna, Coimbatore, North Arcot, Chingleput and Salem a commencement had been made, while in Madura, Trichinopoly and Tinnevelly the necessity for relief had barely made itself felt, and Local Funds were mostly supplying what little could be said to be necessary. In the two last named districts, indeed, actual distress has continued to be so limited that even up to April 14th only Rs. 18,857 had been expended. The works undertaken were, and have on the whole continued to be, what may be termed small and local, with the exception of the East Coast canal, the Junction canal, the Pennair embankment, and one or two minor undertakings. The construction and repair of roads, repair of tanks and their supply channels, digging or deepening wells, and village improvements of a petty nature have been generally resorted to. This material difference between the nature of the Madras works and those undertaken in Bombay is attributed by Sir Richard Temple, in his minute of the 10th of February, to the alleged fact that the facilities in the Madras Presidency for large projects are remarkably few. The Madras works also differ from those of Bombay in another important particular—that they have been, and are, conducted mainly by Civil officers, without taking, to a greater extent than about eleven and-a-half per cent., advantage of the more strict and disciplined organization of the Public Works Department.

17. The numbers in receipt of gratuitous relief at the end of the year were 56,042, of whom 36,342 were in Bellary and 10,512 in Nellore, other districts contributing the remainder [illegible] mostly quite insignificant. The system was mostly that of giving cooked food at central points to the aged or infirm, and authorising the village officers to relieve destitute travellers or other special cases of distress. The organisation of house to house visitation, and the admission of the children of labourers on the works to a charitable

allowance of three pies per diem, are measures of recent origin, and not yet universally in force, but their effect has been apparent in the increase of the number gratuitously relieved, which on April 24th had reached 295,256. The operations of the Government in this respect have been materially aided by conspicuous efforts of private charity.

18. In the case of Madras, as in that of Bombay, three estimates, which are shewn in the margin, have been framed of the numbers likely to be on relief works at various periods. The first was submitted by the Board of Revenue to the Government of Madras on the 19th of December, 1876; the second is for the 1st of March, May, and July only, and is the total of the estimates of local officers contained in the reports now under review; the last is that contained in Sir Richard Temple's Minute of February 5th, 1877, and based, as shewn by the remarks on its reverse, on information obtained, in almost all cases, from the local officers, at a time when, on the one hand, the famine had assumed, in some districts, a severer aspect than before, while, on the other, the policy to be followed in dealing with it had been defined and generally made known.

Months.	Board of Revenue, December 19th.	District reports, Christmas.	Sir Richard Temple, February 5th.	Actual monthly average.
December ..	577,000	....	....	....
January ..	820,000	....	1,039,000	1,025,025
February ..	1,095,000	....	1,228,000	821,357
March ..	1,290,000	1,646,189	1,480,000	640,117
April ..	1,405,000	....	1,840,000	702,076
May ..	1,355,000	1,857,245	1,530,000	....
June ..	1,140,000	....	795,000	....
July ..	780,000	1,804,196	310,000	....
August ..	405,000	....	....	....
September ..	100,000	.....	....	....
	8,967,000	....	8,222,000	....

For the numbers on charitable relief no separate estimate is offered by the Board of Revenue in their letter above referred to, but the local reports, and Sir Richard Temple's Minute, based on later local information, afford the results shewn in the margin. The measures adopted for more thorough relief of this description which have been already alluded to will, no doubt, cause a large access to the numbers in receipt of it in the months of pressure which are yet to come.

Months.	District reports, Christmas.	Sir Richard Temple, February 5th.	Actual monthly average.
January ...	...	50,000	81,219
February ...	...	100,000	44,850
March ...	176,064	250,000	62,282
April ...	...	500,000	209,860
May ...	11,871	600,000	...
June ...	...	700,000	...
July ...	232,304	500,000	...
August ...	...	160,000	...
	...	2,860,000	...

The actual numbers relieved according to the latest accounts, both by the works and charitably, have been placed in juxtaposition with the estimates, and His Excellency the Governor General in Council is glad to observe that, severe as is the amount of suffering which they disclose, it has fallen far short of the most careful estimates which circumstances permitted to be made.

19. In conclusion, His Excellency the Governor General in Council, while recording his deep concern at the calamity which has befallen so large a portion of British India as the Presidency of Madras, would add the expression of his warm sympathy with the extraordinary exertions which are being put forth by the officers of Government in all Departments for the mitigation of the suffering by which they are surrounded, and his confidence that their judgment and caution will be alike successful in the preservation of life and the watchful husbandry of the resources of the State.

ORDER.—Ordered, that copies of this Resolution be communicated to the Secretary of State for India, the Governments of Madras and Bombay, Sir Richard Temple, and the Chief Commissioner of Mysore, and that it be published in the *Gazette of India*.

(True Extract.)

T. C. HOPE,

Additional Secretary to the Government of India.
