T. C. HOPE,
Additional Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

Weekly Condition Report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 7).

Condition Report of each District for the week ending 24th March 1877.

Bangalore District.—Markets moderately supplied, and only slight fluctuation in price of food grains. Slight rain in Bangalore and Dodballapur Taluks only; water generally scarce. The standing crops are in fairly good condition; but in some places sugarcane is withering from want of water. Cholera prevalent throughout the district; small-pox also in the Bangalore Taluk. Cattle still suffer much from want of fodder.

Kolar District.—Markets fairly supplied by importation from Madras. Price of rice fell slightly, but there was a small rise in that of ragi. There were no fresh sowings during the week; the condition of the standing crops remains the same as in last week. In some places javari has been harvested; in others it is ripening. No rain fell except in the Mulbagal and Sidlagatta Taluks; but heavy clouds have been gathering, and there has been some thunder and lightning. Cholera prevails, as also small-pox, and some fever. Cattle suffer much from want of fodder.

Tumkur District.—Markets fairly supplied by importation from Bangalore; prices rose slightly in two taluks; in three they fell and in the others were stationary. 30 and 20 cents of rain fell in the Kunigal and Sira Taluks respectively, while a heavier fall was registered in the Kadaba Taluk; a few tanks receiving from 15 to 30 days' supply of water. Javari was harvested in Tumkur, Korategere and Madagiri Taluks; the remaining crops in beds of tanks and under wells are in a promising condition. The cocoanut gardens in the Chiknayakanhalli and Honnavalli Taluks suffer much from want of moisture. Cholera and small-pox prevail in all the taluks; the former of a virulent type, the deaths from which were more than in the preceding week; the taluk of Chiknayakanhalli is the most seriously affected locality in this respect. The Deputy Commissioner reports that, on a recent tour, he was struck with the improvement in the general condition of the people and appearance of the country since his last visit in November; and brings to notice the industry of ryots in deepening old wells, sinking new ones and making the best of the situation. He adds that the crops raised under irrigation and in tank beds were very fine, and that young grass was springing up.

Mysore District.—Markets fairly supplied except at Yedatore. Slight showers of rain, except in Talkad, Heggaddevankote, Gundlupet and Nandya Taluks, have fallen and a few days' supply has here and there been received in the tanks; there was a slight fresh in the Honholé stream at Chamrajnagar, but water is generally scarce. The ryots are ploughing and manuring their lands diligently wherever it is possible. Sugarcane is thriving in the Ashtagram, Mandya and Malvalli, ragi in Talkad, and paddy and javari in the Chamrajnagar Taluks. The cotton crop in the latter taluk has withered, but javari has recently been sown there and in Nanjangúd and Ashtagram. In the Yedatore Taluk, javari, black and green grams have been partially destroyed by insect foes, and Bengal-gram crops in the beds of a few tanks in Mandya have been submerged. Cholera appears to be generally on the decline; cattle still suffer much from want of forage and from murrain.

Hassan District.—Markets well supplied except in Manjarabad, Arkalgud, Belur, Channaraypatna and Harnhalli Taluks, where importation has been checked owing to prevalence of cholera, and the supply is only just sufficient for local consumption. Sugarcane in Hassan and paddy in Manjarabad are withering, but they are thriving under nallas in Attikuppa, where javari, black and green grams have been in some places fresh sown. Bengal-gram sown in the bed of the Channaraypatna tank has been reaped. Rain fell in Manjarabad, Arkalgud and Attikuppa, and somewhat freely in parts of the Hassan and Narsipur Taluks, where some tanks received a small supply of water. Cholera prevails more or less in each taluk of the district, and cattle still suffer from want of forage.

Shimoga District.—Markets moderately supplied, and except in Channagiri Taluk, where there was a slight rise, prices are steady. There was no rain during the week. In the corresponding week of last year 3·25 inches of rain were registered. The state of the crops is the same as in last week, and the prospects of the season are not very bright. Cholera prevails throughout the district and severely in the Channagiri and Honnali Taluks, and small-pox in the town of Shimoga. Cattle suffer much from want of fodder.

Kadur District.—Markets fairly supplied by importation from Mangalore, Hassan District and Bangalore. Price of food grains generally steady, but slightly cheaper than last week in the Tarikere Taluk. 40 cents of rain fell in the Banavar Taluk, where sugarcane under large tanks is in fair condition. It is being cut in Lakvalli. There are no crops in the other taluks. The health of the public is generally indifferent; cholera and small-pox prevail; cattle suffer from want of fodder and from the foot-and-mouth diseases.

Chitaldroog District.—Markets moderately supplied; but in scattered villages of the Chitaldroog, Kankuppa, Doderi, Hiriyur and Pavagada Taluks, the supply was scanty. In the three first named taluks, as well as in Davangere, javari and ragi were dearer than in last week. Light drizzling showers fell in Hiriyur and Hosdurga. Javari and Bengal-gram in the Chitaldroog Taluk, and the latter in Hosdurga were harvested; paddy, javari, &c., under wells are ready for harvest in the Kankuppa and Doderi Taluks. The standing crops in Chitaldroog and Pavagada are in fair condition; but in Hosdurga they are fading. There is more or less cholera in all the taluks except in Budihal. Fever, small-pox and colic are also somewhat prevalent. Cattle continue to suffer much from want of fodder.

GENERAL REMARKS.

Very little rain fell during the week, except in the Kadaba, Hassan, Narsipur and Yedatore Taluks, where some of the smaller tanks were partially filled. In a few favoured localities fresh seed has been sown, principally javari, which is being grown for the seed, and for green cattle food, to a larger extent than formerly; in Attikuppa black and green gram have been put into the ground in the hope of reaping a 'stolen' crop. Ploughing and cross ploughing have been vigorously prosecuted wherever it was possible, and a general expectation on the part of the farmers of coming rain has been reported. The meteorological observations somewhat confirm this 'rule of thumb' prognostication, and the district reports give a rather more hopeful account of the condition of the people and appearance of the country, which is enlivened by green patches of cereals grown under irrigation, for which purpose old wells have been deepened, and new ones sunk to meet the exigencies of the case. These ripening crops are generally said to be progressing favourably, and where the supply of water is abundant, to be very luxuriant. There is much distress among the poorer classes, and some pitiable accounts of destitution have been received; but every effort has been and is being made to reach distress of every kind, and to provide adequate and appropriate relief. The kitchens and camps afford it to those who are physically unfit to labour, or to perform any but the lightest task work. The relief works under the Revenue Officers, which have been judiciously selected with reference to the need of the people, provide employment for these who can do a fair day's work under the circumstances; while the Professional Department do the same for those who are able-bodied, on large sanctioned works, the principal of which are the water-works at Bangalore and Mysore, and other large irrigation works throughout the Province which otherwise might not have been carried on so vigorously. Under the Revenue authorities, the available labour is mainly employed on repairs to irrigation works, and on cross country roads and village improvements; and at the camps, &c., those who are able to do light work are usefully employed as far as it is found possible to do so. Cholera still continues its ravages, and the number of deaths from this cause and from famine diarrhœa are very high; small-pox and fever also are prevalent in many places. The numbers from the first cause for the week ending the 22nd of March were 3,504 as follows:—

Bangalore	...	369	Hassan	...	522
Kolar	...	1,167	Shimoga	...	115
Tumkur	...	539	Kadur	...	314
Mysore	...	169	Chitaldroog	...	309

According to the report of the Commissioner of Nundydroog, the deaths in his Division from July 1876 to the end of February 1877 (in which month the death-rate was excessive) amounted to 23,615. Of these 7,759 were due to cholera and famine diarrhœa, 861 to small-pox, and the remainder to other diseases. Cattle have also suffered greatly. The same report shews that 149,114 have died from pestilence and famine in the same period, and that forage is very scarce.

As against this tale of suffering, the grain merchants are making a good harvest out of the opportunity, and the smaller traders are, in the same way, doing a brisk trade in the local markets to their own and the consumers' advantage. Had it not been for this wide movement of grain by the agency of private trade, the distress in the villages would have been frightful to contemplate. With regard to the weight of grain imported by rail, the daily averages since November last are given below:—

From 1st November 1876 to 24th February 1877	...	380	tons daily.
For week ending 3rd March	...	283	do.
Do. 10th do.	...	529	do.
Do. 17th do.	...	529	do.
Do. 24th do.	...	426	do.

The totals for the last week were—

Delivery at the terminal station	...	2,673	tons.
Do. Kolar Road do.	...	310	„
Total	...	2,983	tons.

or 722 tons less than in last week. Of this Madras sent 2,412 tons, Beypoor 286, and Negapatam and Trichinopoly by the S. I. Railway 85. There were also 13 tons received from the northward by the G. I. P. Railway and 82 from Bellary, the neighbouring zillahs of the Madras Presidency furnishing the remainder. With regard to the receipt of 82 tons from Bellary the consignment was a tentative one from a market overstocked with Bengal-gram; this is said to have been sent from Bombay to Bellary, and a portion of it transferred to Bangalore.

In addition to these importations which are considered, if continued, to be sufficient for Mysore's requirements, there are the ripening crops, and the western coast supply *viâ* the western ghâts, a correct estimate of which has not yet been received. There was also, previous to the 15th March, a large harvest of bamboo-rice from the dying trees in the Mysore jungles, to which many of the poorer classes resorted in order to subsist upon the exceptional crop, and to collect it for sale at 25 seers per rupee. Colonel Hay states that in 1837 when crops failed, the bamboos seeded, and the ryots sold the grain at half the price of ordinary rice. The price of food grains has been steady. In Bangalore and Tumkur it was a little cheaper, and the reverse in Kadur and Hassan.

Compared with last week there is an increase of 147 in the number of works in progress under the Revenue Officers, and of 5,853 in the daily average of number of persons employed upon them, chiefly in the Bangalore and Hassan Districts, the Kolar and Kadur Districts shewing a decrease of 683 and 261 respectively. With regard to the piece-work system the Deputy Commissioner of Hassan reports that it works very satisfactorily, that parties of equal working power club together and execute their allotted tasks cheerfully and well, that they sometimes earn by diligent labour more than they could otherwise earn on the daily hire system, and that when sure of their supervisors, they not infrequently ask for their pay for the week to be given to them in a lump on market day, alleging, as is of course true, that they can then lay it out to better advantage.

There is an increase of 5,610 in the daily number of persons receiving gratuitous relief at kitchens and camps in all the districts, except Tumkur which shews a decrease of 2,007. The cause of the influx was briefly noticed in Return No. 6, and the scale therein mentioned was, during the week, issued for adoption uniformly throughout the province, for one month tentatively, subject to a report at the end of that time.

SCALE.

A. For each adult of either sex, who is physically unable to work, ¾rds of a seer of *ragi flour* per diem, equal to 45 tolas, together with *condiments* in each case of the average value of 3 pies per head, at the discretion of the supervising officer, both as to the combination of the necessary "soup" and the distribution within these limits.

B. Children of either sex under 10 years of age, half the above rations.

N. B.—Should *rice* be issued in lieu of *ragi flour*, it is to be given at the rate of ½ a seer of *grain* equal to 40 tolas or 1 lb.

Each institution has to submit returns of the numbers fed as above, for the week ending Saturday at midnight. These are tabulated correctly through the several offices of the taluk and district, and submitted by the Commissioners of Divisions to the Chief Commissioner's Office, where after further analysis they will be finally recorded in specially prepared register books for easy reference at any time. It is considered, by this uniformity of practice and strict supervision, that the number so fed may shew a gradual decrease. With regard to this form of relief, a brief review of the operations in the Bangalore District is given, which may be considered as a type of the others.

Within the limits of the Municipality, 4 feeding kitchens and one camp were at work in all March, affording relief to a daily average number of 7,127, of which 1,055 were men, 2,923 women, and 3,149 children, the average cost per head being 9½ pies for one meal per diem at the kitchens, and 2 per diem at the camp at Binnamangalam.

In addition to this, there were (and still are) 7 camps established on the radiating lines of road, distant from 6 to 8 miles from Bangalore, to prevent influx of paupers, &c., to the town. They are fed there and provided with work, or otherwise judiciously assisted to procure a means of livelihood. A daily average of 4,783 were so aided, of which 1,388 were men, 1,773 women, and 1,622 children. The average cost per head is reported to be 1 anna and 4 pies.

Throughout the district there are, excluding the above, 16 relief houses in selected sites relieving a daily average of 9,265, of which 4,932 were adults, and 4,333 children, the cost per head being 9½ pies.

The percentage of collections of revenue to the Government demand made up to 31st March will be included in report No. 8, which will close the official year.

The officer deputed by this Administration in accordance with the desire of the Madras Government to Pennacondah to withdraw from that taluk and the two adjoining taluks of Hindupur and Mudducksera, reports that the authorities were only able to indicate 35 persons of both sexes and children receiving gratuitous relief in these three large taluks.

As regards the Mysore people stated to have congregated in large numbers into the Wynaad, the Collector of Malabar now reports that there are no persons in that locality in need of relief.

J. PUCKLE,
On Special Duty.

* Such as digging and repairing wells, prickly-pear clearances, &c.

A little rain has fallen in Nasik.

2. There has been a slight rise in the price of grain this week; it now averages only 22½ lbs. per rupee, but continues plentiful.

3. The number of people upon relief works in the nine affected districts is 253,270 against 236,038 last week, and there are also 2,883 hill-men and immigrants employed in Ratnagiri and Kanara. The increase is slight in every Collectorate, except in Dharwar, where it is very marked, and is due chiefly to the return movement of the immigrants referred to in paragraph 6 of the last summary.

4. With a view to facilitate the grain traffic during the monsoon, instructions have been issued to the local officers to pay particular attention to ferry crossings and ferry-boat accommodation.

5. The Sanitary Commissioner has, during the past week, submitted reports upon the condition of the people of Kaladgi and Sholapur. In Kaladgi, owing to the fact that the orders of Government regarding the organization for village inspection, charitable relief, and payments to young children whose parents are upon relief works, have not been fully carried out, the condition of some of the people has become unsatisfactory. In Sholapur, on the contrary, where the orders of Government have been administered with great care and ability, the condition of the people has improved, and is satisfactory.

The arrangements necessary for bringing about a better state of matters in Kaladgi have been made.

6. In Dharwar the arrangements described in paragraph 6 of the last summary have begun to take effect, and the reports that have been received as regards the movements, employment, and relief of the immigrants, are more satisfactory.

7. More complete arrangements for village inspection, charitable relief, and relief of young children, have also been made in the most affected parts of the Belgaum Collectorate.

8. The Collector of Ratnagiri has reported the return, from Bombay, through his districts, of many persons on their way to their homes in the Deccan. These people had left employment in Bombay, and were in the possession of money. Many of them were suffering from disease acquired in Bombay, due probably to over-exertion, working in unhealthy localities, and living in overcrowded and dirty houses. Other sick persons of the same class are now being treated in a hospital that has been established by the Municipality on the flats in Bombay. Many of these immigrants appear to have means of their own, and some of them are daily leaving the town, by different outlets, on their way to their homes in the Deccan and elsewhere. The nature of the disease (fever) from which the people have been suffering, the exciting cause of which has been by some persons (probably erroneously) attributed to the existence of the famine in the Deccan and Southern Mahratta Country, is now under investigation by the Surgeon General, Indian Medical Department, whose report has been called for.

9. Tables (A) and (B) are appended as before. It will be seen that, during the week ending 31st March, the number of people upon Civil works was 24,700, the number upon works under Public Works Department agency being 222,973.

10. The following table gives the distribution of the people among the relief works in the nine affected districts employing 1,000 people or more. It will be seen that 204,993,

or fully four-fifths of the labourers, are now employed upon the works enumerated:—

Districts.	Works.	Number of labourers.	Total.	Remarks.
Khandesh ...	Songir-Nandurbar Road ...	1,040	1,040

TOTAL ..	7,273	3,521	53,991	55,166	6,107	47,026

* No expenditure has been incurred by the Collector.

13. A table is appended showing the condition of the affected Native States.

14. With regard to the movements of food-grains, 4,519 tons were exported from Bombay to the Southern Mahratta ports during the week ending 31st March, and during the same week 4,629 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 9,148 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the 31st March to the Southern Mahratta ports and the Railway stations in the distressed districts. It will be seen that the total amount delivered up to the 31st March was 219,750 tons:—

Food-grains sent to	In October 1876.	In November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports.	7,675	19,228	17,312	13,459	16,075	16,798	90,547
South-Eastern line, from Poona to Sholapur.	11,683	30,014	25,498	15,471	12,477	13,760	108,903
North-Eastern line, from Nasik to Bhusawal.	4,447	4,776	3,606	1,615	2,622	3,234	20,300
TOTAL ...	23,805	54,018	46,416	30,545	31,174	33,792	219,750

15. On the whole, the grain supply continues to be sufficient, the transfer of labourers from Civil to Public Works agency has made satisfactory progress, and the general condition of the people is fairly good, except among the Dharwar immigrants, and in Kaladgi, where measures, which will, no doubt, work a speedy improvement, have been stringently ordered.

M. K. KENNEDY, *Major-General*, R. E.,
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.
These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

Proceedings of the Board of Revenue, Madras, dated 5th April 1877.

Read Relief Reports for the week ending 24th March 1877; from the Collector of the Kistna District, dated 27th March 1877; from the Collector of Kurnool, dated 28th and 29th March 1877; and from the Collector of South Arcot, dated 31st March 1877.

THE relief reports of the Kistna, Kurnool, and South Arcot Districts for the week ending 24th March are submitted for the information of Government in continuation of Board's Proceedings, 30th March 1877, No. A Talukwar Abstract accompanies.

2. *Prices.*—In *Kistna* prices have risen slightly on the whole. There are fluctuations in individual taluks, but the only one calling for special notice is a somewhat sharp rise in the prices of the three inferior grains in Sattenapalli. In *Kurnool* also there is little change. Rice has fallen in Cumbum, but risen in Markapur; it is stationary elsewhere. Cholum has fallen in Cumbum and Markapur, and risen in Ramalkota, Pattikonda, and Koilkuntla. Ragi is stationary except in Ramalkota, where it has fallen. Cumboo has risen in Pattikonda and fallen in Cumbum. This taluk, in which prices are falling, is the only one which presents appearance of general change. In the distressed taluks of South Arcot, ragi and cumbu have fallen, but other grains are stationary.

3. No rain is reported to have been received in any of these districts in the week.

4. In Kistna the works in progress are the river embankment, Commamur channel, and the clearance of the Ellore and main canals. The number on the first two works was 2,630; those on the canal clearances are not reported. In South Arcot, only minor works employing 538 persons were in progress.

5. The numbers on the works in each taluk of Kurnool are given below:—

	17th March.	24th March.	
Ramalkota ...	43,897	39,434	— 4,463
Nandikotkur ...	8,252	8,975	+ 723
Nundial ...	18,703	28,973	+10,265
Sirwell ...	12,521	13,930	+ 1,409
Koilkuntla ...	30,196	31,725	+ 1,259
Pattikonda ...	19,999	19,292	— 707
Cumbum ...	46,318	34,531	—11,785
Markapur ...	12,137	8,551	— 3,586
Total	192,028	185,443	— 6,585

The increase in Nundial is ascribed to the return of coolies who had gone away for the New Year's feast, and who had been rejected on weeding; and those in Sirwell and Koilkuntla to the second of these causes. The decrease in Ramalkota is attributed to refusal of coolies to move, on transfer to other works being ordered, and that in Cumbum and Markapur to concentration of work, hot weather, &c., and in Pattikonda to enormous estimate for a work unreported in the previous week. But the telegram since received for the 31st, which shows a large increase in the district, states that the decrease in these taluks for the week under report was to a great extent non-existent, and results simply from defective reports. The Board trust such errors will be guarded against in future. The sudden large increase in Nundial is alarming.

6. In Cumbum and Markapur taluks, wages are still paid at the higher task rates. The Collector will be called upon by telegraph to furnish explanation. In other taluks wages at the lower scale of task work, in Nandikotkur, Nundial, and Sirwell with reference to price of 6½ seers per rupee, and in Ramalkota, Pattikonda, and Koilkuntla of 7½ seers. In the first-named three taluks, rice, which seems to be the grain taken, is at 6·77, 6·41, and 7·12 for this week and last, and the wages are, therefore, too high in two of the taluks. The prices of rice and cholum in the other three taluks are given in the margin, and it will be observed that whatever grain has been taken as the standard, the wages are wrong. Mr. Clogstown should be called upon to explain. In Mr. Farmer's division rice is the standard.

	Rice. March. 17th	Rice. March. 24th	Cholum. March. 17th	Cholum. March. 24th
Ramalkota	6·23	6·23	8·90	7·30
Pattikonda	7·52	7·52	9·07	9·07
Koilkuntla	8·25	8·25	9·07	8·80

In South Arcot the sliding scale is in force in two taluks, in Villapuram at full task rates to rice at 8 seers, and in Tirumalay at lower task rates to rice at 7½ seers; prices higher in both cases than those quoted in the return. In Tindivanam the old 2 anna scale is in force.

7. Gratuitous relief in Kistna and South Arcot is on a very small scale, the numbers being 235 and 59 respectively. In Kurnool they are 25,572, and of these 22,256 are children. The taluk comparison for the week is as follows:—

	17th March.	24th March.	
Ramalkota ...	7,773	11,636	+ 3,863
Nandikotkur ...	1,155	1,871	+ 716
Nundial ...	1,594	4,601	+ 3,007
Sirwell ...	271	882	+ 611
Koilkuntla ...	7,057	4,165	— 2,892
Pattikonda ...	209	398	+ 189
Cumbum ...	879	1,431	+ 552
Markapur ...	468	588	+ 120
Total	19,406	25,572	+ 6,166

The increase is due to the inclusion of children of persons on the works and allo[illegible] a head per diem; though the order seems not to have been yet applied in all ta[illegible] decrease in Pattikonda is not explained.

Talukwar Abstract of relief in certain districts of the Madras Presidency for the week ending Saturday, the 24th March 1877.

District.	Taluks.	Grants of funds sanctioned for relief works up to 24th March 1877.	Probable cost of works or sum sanctioned for their execution.	Outlay on works in progress. In the week. H. E. STOKES,
Secretary.

REVENUE BOARD OFFICE,
MADRAS;
The 5th April 1877.

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, dated 6th April 1877.

THE Board submit to Government the relief reports for the week ending 31st March, with the usual statements and maps of the districts marginally noted. The South Arcot and Malabar reports are again wanting, and telegraphic summaries only have been received from Kistna and Kurnool.

Cuddapah. Madura. Salem. Coimbatore. Chingleput. Nellore. Bellary.

2. *Prices.*—Are nearly stationary. In Cuddapah there has been a general decline of prices in Kadiri, but raggi has risen in three taluks. Bellary prices show a slight tendency to rise, but there is a remarkable fall in rice at Harpanhally from 5·8 to 7 seers, which affects the district average.

In Chingleput rice has risen in Ponneri, but raggi is cheaper at Trivellore, probably owing to the fall of rain which has taken place there. In North Arcot prices have fallen at Arcot, Arnee, Gudiattum and Kangundi. In Salem the recovery in Dharampury noticed last week is ascribed to large importation having set in. There is a fall at Ahtur, but no other changes to note in that district, or in Coimbatore, except a rise in raggi and cumboo at Sattiamungalum and in raggi at Dharapuram. The prices of the better kinds of cholum and of raggi and cumboo have risen in the sub-division taluks of Madura. Raggi is cheaper in Tinnevelly. There is no change of importance in Trichinopoly.

3. *Rainfall.*—There has been very general rain during the week, Bellary being the only district from which none is reported. It has been heavy in Kistna, and fell in six taluks of Nellore, ranging from 3 inches in Kanigiri to ·65 in Kandukur.

The Pennair has again been in fresh, and water supply is now pretty well assured. The rain in Cuddapah was heaviest in the south of the district but no where reached an inch. There was rain in six taluks of Kurnool. In Chingleput 2·6 inches fell at Trivellore and a shower at Conjeveram. There was good rain in the central portion of North Arcot reaching 1¼ inches at Narayanavanam, and half an inch was registered at Palamnair. Rain fell in five taluks of Salem, the highest being 1·7 inches in Ahtur.

In Madura 1·83 inches fell in Periyakolam and showers were received in the eastern parts of Trichinopoly and south of Coimbatore, and in four of the distressed taluks of Tinnevelly. Rain thus fell in almost every district; but the showers, though heavy in places, were scattered and capricious. They are too early for much benefit to cultivation, but will improve water supply and forage for cattle. The cotton crop in Tinnevelly is reported to have benefited much by recent rains.

4. The grants for works and charitable relief made by the Board up to 31st March were Rs. 1,13,35,283; and Rs. 99,67,186 were expended on these objects. The grants have been exceeded in Kurnool and Chingleput, and further funds will be separately placed at the Collector's disposal. The following is the usual abstract of the outlay on works in progress, so far as details are available:—

	In the week. Rs.	Up to the week. Rs.
Roads—		
New works	1,44,186	35,45,929
Repairs	65,935	10,10,762
	2,01,121	45,56,691
Irrigation works	25,400	4,28,685
Miscellaneous	41,901	5,00,693
	2,77,422	54,86,069

A further statement showing the numbers and magnitude of the works undertaken in all districts except Kurnool is appended; and the following is a summary of it:—

	In progress. Number.	In progress. Length in miles.	Completed. Number.	Completed. Length in miles.
Roads—				
New works	354	2.657	88	
Repairs	233	2 062	55	
Total ...	587	4,719	143	
Irrigation works—				
New works	55	.....	24	
Repairs	784	.....	150	
Miscellaneous	2,422	.....	1,287	
	3,548	.....	1,604	

The new road works are principally in Bellary, Cuddapah and Salem; and the road repairs in Bellary, North Arcot and Coimbatore. The irrigation works are most numerous in Salem, Bellary, Chingleput and North Arcot. The great number of works classed as miscellaneous are chiefly well s and drinking-water tanks.

5. *Numbers on relief works.*—The totals for each district are compared below with last week's report:—

	24th March.	31st March.	
Kistna	2,630	1,875	−755
Nellore	35,134	28,824	−6,310
Cuddapah	73,702	78,902	+5,200
Bellary	212,139	225,485	+13,346
Kurnool	185,443	202,142	+16,699
Chingleput	10,499	10,829	+330
North Arcot	23,245	29,469	+6,224
South Arcot	538	538	.....
Madura	8,291	8,447	+156
Tinnevelly	1,930	1,736	−194
Coimbatore	24,480	21,532	−2,948
Salem	51,258	48,175	−3,083
	629,289	657,954	+28,665
East Coast Canal	30,911	34,970	+4,059
	660,200	692,924	+32,724

6. There is thus a considerable increase during the week which, but for a decrease in the numbers in Nellore, Coimbatore and Salem, would have amounted to some forty-five thousand. The report does not explain the decrease in Nellore, but it is due to some extent to drafts of coolies to the East Coast Canal. It however occurs chiefly in the Atmakur and Kanigiri taluks, which are remote from the Coast and where some large works seem to have been finished. The Collector is requested to report on the continued decrease in numbers in the last few weeks.

7. The increase in Cuddapah occurs in the four sub-division taluks, where the numbers have risen from 27,617 to 34,793. In Pulivendala, Prodattoor and Pullampet there is a further increase of 2,280; but in other taluks a decrease. The Sub-Collector appears to have taken it upon himself to defer reduction of wages to those fixed for lower tasks, and a report on the subject is before the Board, and will be separately submitted. The taluk details for the *Bellary* district are given in the margin. There is a general tendency to increase, but the causes of the variations are not given in all cases. The Board regret to notice increase in Adoni and Alur, but the fall in Bellary is satisfactory. The increase in Alur is ascribed to return of coolies rejected on weeding gangs; in Madaksira and Kudligi to abatement of cholera panic, and in Herpunhalli and Hadagalli to influx from the Nizâm's country. The decrease in Gooty is due to work being available at the railway station and to concentration.

	24th March.	31st March.	
Adoni	52,575	54,649	+2,074
Alur	17,640	19,735	+2,095
Gooty	12,178	10,183	−1,995
Tadpatri	9,956	10 669	+713
Anantapur	9,296	11,390	+2,092
Dharmavarum	1,887	1.551	−336
Penkonda	1,865	2,336	+471
Hindupur	678	811	+133
Madaksira	5,087	12,044	+6,957
Raidrug	9,363	6.302	−3,061
Bellary	48,659	41,299	−7.360
Hospett	13,673	16,202	+2,529
Sundur	2.926	2,987	+61
Kudlighi	6,352	7,562	+1,210
Herpunhalli	12,230	14,740	+2,510
Hadagalli	7,772	13,025	+5,253
Total ...	212,139	225,485	+13,346

8. The Collector of *Kurnool* states that the increase in the district is to a great extent nominal and due to defective returns, chiefly from the Cumbum Division in the previous week. In *North Arcot* there is a great increase in the Wallajah Taluk (2,896 to 6,679) and in Punganoor, Chittoor, Chendraghiri and Vellore numbers have also risen. The aggregate number employed on the railway works near Arconum are not included in the report. The returns for *Coimbatore and Salem* exhibit a decrease. That in *Coimbatore* is due to report from Erode Taluk not having been received. The Collector will take due notice of this default. There is increase in Coimbatore and Dharapuram taluks and decline in Udumalpettah, owing to

return of coolies from the Madura District. In *Salem* there is an increase of about 400 in Uttengarai and Dharampuri, but decrease in all other taluks, probably owing to prospects being more hopeful from recent rains. The decrease in *Tinnevelly* is due to mitigation of distress by the same cause and to commencement of agricultural operations. The *Madura* returns call for no remark.

9. *Rates of Wages*.—Higher task rates are given in parts of *Cuddapah*; in the principal division rates are fixed with reference to rice. The state of affairs in the sub-division has been above alluded to. The old rates (2 annas, 1 anna 4 pie and 10 pie) are still in force in Kadiri. The new scale, with lower task rates, is in force throughout *Bellary*; but the rate for a man cooly varies from 1 anna 2 pie to 1 anna 9 pie, owing to the adoption sometimes of rice and sometimes of Cholum as the standard grain. In *Salem*, a single rate, 7½ seers, the average price of rice, seems to be adopted, which is wrong. The new scale is in force throughout *Nellore, Chingleput, North Arcot* and *Tinnevelly*, rates for higher task appearing in the following taluks, Saidapett, Pulladum, Udumalapetta, Caroor, Coimbatore, Dharapuram, Srivilliputtur, Sattur, Sankhanainarkovil, Ottapidaram, Addanki, Kanigiri and Darsi. The scale in *Nellore* seems not very correctly worked There is great diversity of rates in all districts in which it is in operation, owing apparently to different grains being adopted. The attention of Collectors is called to the subject. If the instructions are properly observed, greater uniformity should appear. In the Madura District, wages at the old rates appear in Madura and Tirumungalum taluks, and wages in kind are given in Palni. The Collector should enquire on both points.

10. *Gratuitous relief*.—The total numbers in each district are compared below:—

	24th March.	31st March.	
Kistna	235	530	+295
Nellore	6,613	4,976	−1,637
Cuddapah	3,268	6,129	+2,861
Bellary	33,102	82,519	+49,417
Kurnool	25,572	33,753	+8,181
Chingleput	6,030	6,211	+181
North Arcot	2,089	2,060	−29
South Arcot	59	59	...
Madura	1,263	1,484	+221
Tinnevelly	417	415	−2
Coimbatore	2,291	2,738	+447
Salem	5,816	10,113	+4,297
Total ...	86,785	151,017	+64,232

This enormous increase is due to the inclusion of children of persons on the works, allowed 3 pies a head and to the initiation of village relief. The former is the more important of the two causes. The Board hope to be able in next report to give full details regarding the extended gratuitous relief now being afforded, but information has not yet been furnished from all districts in the form prescribed. The new orders appear to have been worked in their entirety only in the Ceded Districts and in Salem. The Collector of Coimbatore says that, as the coolies earn sufficient at the higher tasks rates, the concession to children is not required, and he is of opinion that there is no need of village relief in his district. If deterioration in physique of the labourers is observed, the allowance for the children now supported from their parents' wages should be introduced.

11. The outlay during the week and up to it is classified as follows:—

	In the week.	Up to the week.
	Rs.	Rs.
Relief works	4,01,712	96,01,495
Gratuitous relief	31,536	3,65,691
Total ...	4,33,248	99,67,186

The usual memorandum showing grants sanctioned by the Board to date is enclosed, the total is Rs. 1,13,96,493.

12. The following are details of advances from famine funds under the Land Improvement Act for digging wells:—

	In the week.	Up to the week.
	Rs.	Rs.
Nellore	...	12,846
Cuddapah	7,945	33,188
Bellary	...	1,270
Chingleput	7,475	7,475
Madura	1,275	1,275
Tinnevelly	1,915	16,970
Salem	3,779	4,229
Total ...	22,389	77,253

The considerable advances made during the week is satisfactory.

13. The establishment returns are summarised below. Return has not been received from Nellore. The expenditure on establishment is steadily rising.

	Relief.		Payment of wages.		Accounts, &c.		Total.		Pay of superior officers included.

14. The report of the Commissioner of Police, Madras, gives the following details:—average number of resident paupers in relief camps 11,818; number now resident 12,411; number in hospital on 31st March 512; deaths, 120 in hospital, 14 in camps; outlay in the week Rs. 24,260, and up to the week Rs. 3,18,703. The paupers resident on 31st March belonged to the following districts:—Chingleput 6,062, North Arcot 2,509, Nellore 3,057, others 131; total 11,759. The Board have also been favoured by the President, Municipal Commission, with a return of the numbers employed on relief works carried on by him from famine funds placed at his disp sal, and of the inmates of a relief camp which he has established at Sattonkad, on the northern canal. The relief labourers numbered 4,483 and the resident paupers 760 on the 31st March.

Scarcity in Western and Southern India.

No. 24, dated India Office, London, 15th March 1877.
From—The Secretary of State for India,
To—The Government of India.

The despatch of Your Excellency in Council, dated 19th January, No. 4 of 1877, forwarding a copy of the instructions to Sir Richard Temple with reference to his mission to the Bombay and Madras Presidencies, has been considered by me in Council.

2. I approve of the policy which you have laid down for the guidance of Sir Richard Temple. The object of saving life is undoubtedly paramount to all other considerations. But it is essential that in pursuing this end your officers should sedulously guard against the danger of inducing the population to rely upon Government aid rather than upon their own industry and thrift. In the interest of the distressed population itself, as well as of the tax-payers generally, you are bound to adopt precautions against indolence or imposition, similar, so far as the circumstances of India will permit, to those with which, in this country, it has always been found necessary to protect the distribution of public relief from abuse.

3. I observe with much satisfaction that your Government is taking into serious consideration the question of the incidence of famine charges, to which your attention was called in my despatch of the 25th November 1875, and I can assure you that in carrying out the principles laid down in that despatch, Your Excellency may count on my cordial support. The practical application of them is not free from difficulty; and I shall await with great interest the communication of the measures by which you propose to carry them into effect.

4. Four minutes on the condition of the affected districts in Bombay, submitted by Sir Richard Temple to your Government, accompany the despatch under reply. These show that the prospect is very serious, especially in Sholapur, but I perceive with satisfaction that Sir Richard Temple bears testimony to the zeal and energy of the authorities in the distressed Collectorates. If the first conditions stated in the 5th paragraph of the third minute, dated 12th January, are kept carefully in view and vigilantly acted on, I trust the expenditure in relief operations in the Bombay Presidency may be kept within the limit indicated by Sir Richard Temple of £1,500,000, or perhaps £1,750,000.

5. The requisitions by Sir Richard Temple for an increase in the supervising, and especially in the engineering staff, will, I am confident, have received the best attention of Your Excellency in Council.

6. I approve of the instructions to the Government of Bombay to abstain at present from making or positively promising remissions of land revenue.

7. Your telegrams have informed me of the arrival of Sir Richard Temple at Madras; I may, therefore, expect at an early date the remarks of that officer on the condition and prospects of the districts in that Presidency which have been so severely affected by the present calamity.

No. 21, dated Simla, the 19th April 1877.

From—The Government of India,
To—Her Majesty's Secretary of State for India.

OUR latest information from the famine districts is contained in the following telegram from Sir Richard Temple, despatched from Arcot on the 17th instant, but referring exclusively to the Presidency of Madras:—

"After telegraphing to Government India account of Negapatam trade, I visited Madura district. Situation of Southern Peninsula including Madura and Tinnevelly is as follows:—Rain has begun falling in most parts, especially under Ghaut mountains. Emigration to Ceylon affords relief. Agricultural classes possess resources. No general distress yet, but some slight scattered distress relieved with discrimination. Markets filled with grain from ports of Negapatam and Tuticorin. Neighbouring parts of Tanjore and Trichinopoly almost free from distress, but rain has recently ceased, and until it falls sufficiently, situation somewhat critical. In Salem and North Arcot considerable scattered distress relieved by village visitation. Central relief camps still unpopular, this aggravates necessity for village relief. In districts near Madras wanderers and stray beggars still going about in bad condition. Whenever found, they are relieved, but despite medical treatment they often die, and these cases affect public mind. Agriculture partly reviving after recent showers. In Bellary rain has fallen, but situation not likely to improve in that quarter at present. Relief labourers generally keep well. Better success beginning in despatch of relief labourers to Nellore Canal and Railway from Bellary towards Dharwar. Failure to utilize Public Works Department in relief works generally continues, and is to be regretted."

2. We enclose several papers received from Sir Richard Temple during the present week, of which the most important is the report made by Dr. Townsend, Officiating Sanitary Commissioner with the Government of India, regarding the physical condition of the labourers employed on the relief works, with reference to the alleged insufficiency of the reduced rate of wages. In our despatch of the 12th instant, we stated the conclusion at which Dr. Townsend had arrived, as communicated to us by telegraph, *viz.*, that the reduced rate is sufficient to support the labourers in fair condition, provided that care is taken that the individual recipient is the only person supported on it. The grounds of this conclusion are fully stated in Dr. Townsend's report. It is based on an inspection of gangs containing some 32,000 persons (34,000 was the number erroneously given in our last despatch, owing to some error in the telegram) in the districts of Sholapur, Bellary, Cuddapah and North Arcot.

At Sholapur the labourers employed under the Public Works Department were in good condition, men, women and children, and there was no doubt on the part of the officers superintending the works that the wage was quite sufficient for the support of the labourers in health. The labourers on the Civil works were in a less satisfactory condition; but a large proportion of them were above middle age, and they had come on the works in January in an enfeebled state. Dr. Townsend thinks it probable that at the best of times they were below the average physique.

At Adoni, in the Bellary district, the labourers, as a rule, were in fair condition, and, in the opinion of the relief officers, they had not deteriorated since the reduced rate of wage had been in force. There were here and there weakly and feeble people; but these exceptions consisted of persons who had never been in good health or condition, or it was found on enquiry that they shared their wages with a child or other relative.

At Bellary, where task work was exacted, the great majority were receiving less than the reduced rate; but there was no sickness among them, and the relief officers stated that these gangs had improved greatly in appearance since the works were established, and they certainly had not fallen off since the reduced rate of wage had come into force.

At Cuddapah, where Dr. Townsend inspected two bodies of labourers, one close to the town, which he visited in company with Dr. Cornish, the Madras Sanitary Commissioner, and on which the women greatly outnumbered the men, the people were in appearance little, if at all, below the standard of health common in the town populations of this country. In the other gang, composed chiefly of the agricultural population of the surrounding villages, the appearance of the people "was very good." A very large number of the men and women were as stout and healthy-looking as they could be in the best of times. Here and there thin and weakly persons were observed; but on enquiry

it did not appear that their weakly condition was attributable to want of food. The relief officer stated that when the people received the higher rate of wages, they did not spend more on food than they do now, but saved the difference, and they have not deteriorated in condition since the wage was reduced."

At Vellore, in a relief gang consisting of 1,600 people, who had been for a time on the reduced rate of wages, which apparently had been recently raised, the people were in fair condition, and, as far as Dr. Townsend had been able to ascertain, "they did not deteriorate or show signs of weakness during the five or six weeks that they were on the reduced rate of wages."

3. The facts stated in the foregoing extracts from Dr. Townsend's report appear to us to justify the conclusion at which he has arrived, that there are not yet any sufficient grounds for any general raising of the relief wage rates in the Madras Presidency. The Madras Government have very properly directed, as Sir Richard Temple points out in the 5th paragraph of his Minute, that relief officers shall treat specially all cases of relief labourers who from any cause have fallen into a reduced condition of body. They have also directed that the relief wages shall be paid daily. If these instructions be duly enforced, and if care be taken to carry out a systematic house-to-house visitation in the villages, and to search out wanderers on the high roads, as has been frequently suggested by Sir Richard Temple, and ordered by the Government of Madras, we see no reason to doubt that the objects which the Government have in view, *viz.*, the saving of life and the prevention of severe suffering, may be accomplished without any general raising of relief wages. At the same time we do not overlook the fact that the recent reports of the Madras Sanitary Commissioner contain very lamentable descriptions of the condition of the people at some of the places visited by him. We have requested the Madras Government to communicate to us the result of the enquiry directed in their orders* on Dr. Cornish's report, with reference to the unsatisfactory physical condition of many of the relief labourers at Maddanapalli, where the reduced rate of wages had not been introduced.

4. With reference to the remarks made in the 7th paragraph of the despatch addressed by the Madras Government to Your Lordship, under date the 7th instant, to the effect that no communication had been made to them regarding Dr. Townsend's deputation, we have explained to that Government that Dr. Townsend not having been sent on an independent mission, but merely having been placed under the orders of Sir Richard Temple to aid him in conducting certain enquiries which he desired to institute in the two Presidencies, it was not deemed necessary to make any communication to either Government on the subject of Dr. Townsend's deputation.

5. The prospect of the supply of grain to the Ceded Districts from the north, as explained in Captain Bisset's memorandum of the 31st ultimo, appears to be satisfactory.

6. Reference has more than once been made in the correspondence regarding the famine in Madras to the difficulty which appeared to be experienced in that Presidency in devising large works on which the relief labourers could be employed. The only works of magnitude which have been proposed are the East Coast Canal, the Railway from Bellary towards Hubli, and the extension of the Railway from Conjeveram to Chingleput. To these may perhaps be added the doubling of the Railway line from Madras to Arconum. Recently, on a suggestion from our Public Works Department, we asked Sir Richard Temple for his opinion as to the expediency of employing relief labour on the earth-work of three short branch Railways which were proposed some years ago for connecting the Madras Railway with the towns of Arcot, Vellore and Salem. His reply, which is contained in his Minute of the 6th instant (No. XCVII), is adverse to the proposition. He does not consider these lines to be adapted as relief works. The amount of earth-work and ballast is not considerable. It is doubtful whether the work could be begun before the first week in May, and if good rain falls in that month, it is probable that relief labour would not suffice to finish even the banks and ballast; nor does Sir Richard Temple consider that it would be practicable to organize large gangs of skilled relief labourers (such as stone-cutters of the Waddah caste) for employment on these lines in time enough to do any considerable quantity of work before the rainy season begins. These objections

* Reported to Secretary of State in Madras despatch of 7th April, No. 25.

appear to us to be conclusive against the adoption of the works in question as relief works, at all events, at the present. Should the famine unhappily last longer than we at present anticipate, the question may have to be reconsidered.

7. Sir Richard Temple in his short Minute on the present condition of Mysore (No. XCV), repeats the favourable opinion expressed by him on the 14th February last, regarding the progress of relief administration in that Province. The labourers on relief works are all employed on piece-work at rates somewhat cheaper than the piece-work rates of the Public Works Department in ordinary years. They can earn in this way enough to support themselves, and are in fairly good physical condition. Villages are really visited, and patels (village headmen) are kept up to their duty by responsible officers, whose weekly diaries show what is being done, and how useful the village relief is.

8. In connexion with Mysore, we enclose a correspondence which has passed between the Chief Commissioner and the Government of Madras, regarding the incidence of certain charges incurred in affording relief to inhabitants of Mysore who had migrated into the adjoining Madras districts, together with a Minute recorded on the subject by Sir Richard Temple. We have not received any communication on the subject from the Government of Madras, and at present no orders appear to be required.

9. The following extract from our telegram of the 14th instant gives the numbers of persons on the relief works, and on the receipt of charitable relief according to the latest returns:—

"In Madras Presidency relief labourers increased to six hundred ninety-three thousand, and charitably relieved to one hundred fourteen thousand: latter increase chiefly young children. In Mysore seventy-five thousand on works, and fifty-two thousand charitably relieved. In Bombay further increase to two hundred fifty-six thousand on works. Sixty-two thousand charitably relieved."

No. 169, dated Bangalore, 4th April 1877.

From—The Secretary to SIR RICHARD TEMPLE,

To—The Additional Secretary to the Government of India.

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him on Dr. Townsend's report regarding the physical condition of relief labourers with reference to the reduced rate of wages. Dr. Townsend's report and annexure are also submitted.

Minute by SIR RICHARD TEMPLE, *dated Bangalore, 3rd April* 1877.

WHEN questions arose as to the sufficiency of the revised scale of relief wages in both the Madras and the Bombay Presidency, the Government of India was pleased to depute, at my suggestion, Dr. Townsend, the Sanitary Commissioner, to visit the distressed districts and advise me whether the present rate of wages is sufficient to keep needy relief labourers in moderately good health. Dr. Townsend has now inspected more than 32,000 persons on relief works, of whom 29,000 were in the Madras Presidency; and he has drawn up a report stating his views and the grounds upon which he forms them.

2. I desire to lay this report of Dr. Townsend's before the Government of Madras. It will be seen that Dr. Townsend's experience and his knowledge leads him to lay little stress on the physiological argument that the reduced wage does not furnish the relief labourers with a sufficiency of certain elements of food. He prefers to decide the question—so far as decision is now possible—by investigating the physical condition of a large number of labourers of both sexes and all ages, who have been subsisting on the reduced wage for periods ranging from three to five weeks. His report and its annexure show that he found the relief gangs which he inspected to consist, in the main, of men, women and children who were in good health and in moderately good condition. In nearly every large body of labourers he found some persons whose condition was below par. But in most of these cases he found that the sufferer's condition was referrible to other causes than inadequacy of wages. Either the person had come very recently on the works; in some cases he or she was supporting others from the subsistence wage intended for one person's support only; or the person had recently suffered from fever or guinea-worm. In some gangs a very few cases remained of persons whose reduced physical condition was not due to any other causes. But Dr. Townsend considers that the number of such exceptional cases was hardly greater than that which would be found among ordinary work people in ordinary years. Though Dr. Townsend has no special knowledge of the Southern India races, he has a very extensive knowledge of all classes of the people in other parts of India.

3. I am able to say that Dr. Townsend's views on this important matter coincide with mine, which have been formed after inspecting nearly 200,000 people under relief in Southern India. And my impression is that the majority of the Civil officers, the relief officers and

the Engineering officers, employed in supervising relief operations in the Madras Presidency, hold the same views. Yet these officers are in no way wanting in thoughtful consideration for the people, or in energetic care in watching their condition. Of the senior Civil officers, Mr. Price, the Collector of Cuddapah, is the only one who has, to my knowledge, reported an opinion that the reduced relief wage is generally inadequate. But that view is not borne out by Dr. Townsend's inspection of some gangs at or near Cuddapah. And from my own knowledge of the relief gangs in that district, I should not be disposed to concur with the Collector.

4. Every relief officer must occasionally, as Dr. Townsend did, and as I have often done, come upon cases of relief labourers who are really reduced and who require special treatment. But I see no reason for thinking that such exceptional cases require or warrant a general enhancement of the wage rate.

5. The orders of the Madras Government, dated the 14th March, which were passed by them after conferring with me, and in which I fully concur, direct that relief officers shall treat specially all cases of relief labourers who, from any cause, have fallen into a reduced condition of body. So far as my enquiries have gone, very few officers have found any cause to avail themselves of this discretion. But the humane instructions of the Government in this matter ought to be acted upon, wherever necessity arises; and if they are so acted upon, then I am confident that if the full wage* reaches punctually and not less than three times a week, then the present scale will suffice to keep in health relief labourers, who do only a very moderate daily task.

6. I would therefore recommend the adoption of the opinion of the Sanitary Commissioner Dr. Townsend to the effect that there are not as yet any sufficient grounds whatever for any general raising of the relief wage rates in the Madras Presidency.

7. And I would again represent in the most earnest terms that, if unhappily some poor wanderers fall in a dangerously reduced condition and die, as has been the case in the relief camps near Madras, then such sad occurrences can be prevented and should be prevented, not by any general raising of relief wages but by increased care and watchfulness in conducting house-to-house inspection and in all the villages throughout the interior of the country, and in searching out all cases of poor creatures who wander away in search of charity and who never go upon the relief works at all.

RICHARD TEMPLE.

Report by SURGEON-MAJOR S. C. TOWNSEND, *Officiating Sanitary Commissioner with the Government of India, on the condition of the famine relief labourers in the Madras Presidency, dated Bangalore, 3rd April* 1877.

I WAS directed by the Government of India to proceed to Sholapur and put myself in communication with Sir Richard Temple under the following circumstances.

2. "The Government of India in letter from the Additional Secretary in the Department of Revenue, Agriculture, and Commerce to Sir Richard Temple, No. 45, dated 16th January last, had laid down as the principle on which relief in the famine-affected districts of Bombay and Madras should be conducted, and while every effort should be made, so far as the resources of the State admit, for the preservation of deaths from famine, it is essential that the most severe economy should be practised, and moreover that, apart from financial considerations, it would not be just on the part of Government to attempt the task of preventing all suffering and giving general relief to the poorer classes of the community, that indiscriminate charity on the part of Government would not only inevitably lead to the imposition of heavy and permanent burden on the industry of the country, but would also tend to demoralize the people themselves.

3. In order to carry out the principle thus laid down, relief works were established of two kinds,—one under the Department Public Works on which task-work could be exacted, and on which a full wage for a full task could be obtained by those who were able and willing to work; the other, works under the Civil administration established solely with the view of affording relief to persons who might be incapable of performing full task-work, or who in ordinary times would not undertake out-of-door labour. These Civil relief works have for the most part been established near the centres of population and conveniently near the homes of the people that would come on them. But while the Civil works form a very necessary part of the measures of famine relief, they are attended with the danger of creating difficulties in the labour market by withdrawing number of labourers from the usual occupation and also of inducing a large influx of persons of both sexes who are not really in need of relief. In order to obviate this danger it was necessary to fix the rate of wage as low as possible, and to make it no more than is sufficient to maintain the applicants for relief in fair physical condition under the light amount of labour exacted from them.

4. Up to the middle of January the rate of wage in the Ceded Districts of the Madras Presidency was two annas per diem for a male adult and proportionately less for women and children. This rate was fixed on the supposition that it would purchase 1½lb. of grain per diem,—

---

* NOTE.—That is to say—

10½ annas for a man,
8¼ " " woman,
5¼ " " working child,
1¾ " " infant unable to work.

per week, when food is not dearer than 8 seers (16lbs.) per rupee.

a quantity which was deemed essential for a man while at work. But it seemed to Sir Richard Temple that this rate of wage was too high and that it had the effect of inducing numbers to come on the works who were not really in want, and withdrawing many from their usual occupations which were still open to them. He accordingly recommended in his Minute of the 19th January that the rate of wage given on Civil relief works should be reduced from two annas to 1½ for an adult, which at the prevailing prices would purchase a pound of grain and leave a margin for condiments, vegetable and the like. This recommendation was in effect adopted, and a reduced rate of wages ordered in the Madras Government order No. 329, dated 31st January 1877.

5. The reduced rate was fixed so long as grain could be bought at 16lbs. per rupee, at 1¼ anna for adults, 1¼ anna for women, 9 pie or ¾ of an anna for children above 7 years of age. This rate appears to have been brought into force generally on the relief works from the 15th to the 20th February. The practice is not uniform on all works with respect to payment for Sunday. On most of the works it is given, in some, as at Adoni and Cuddapah, it is not.

6. About the same time the allowance of 3 pie or ¼ of anna to children too young for labour was sanctioned,—a measure which practically nullified the reduction in the case of married people with 3 or more children which they had been obliged to feed on the former rate of two annas.

7. In a letter to the Secretary to the Government of Madras, No. 115, dated the 13th February, Dr. Cornish, the Sanitary Commissioner for Madras, objected to the reduced scale of diet recommended by Sir Richard Temple, that it was not sufficient to maintain labouring persons in health, and that its adoption was fraught with great danger to the health of the people. Dr. Cornish's objection to the scale was founded chiefly on physiological grounds, that a pound of any of the grains used by the people did not contain the nitrogenous elements of food in sufficient quantity to supply the waste of the muscular and other tissues under labour. As Dr. Cornish's argument on this point seemed to Sir Richard Temple open to question, and as the conclusion arrived at, if acted upon, would involve a large increase of expenditure on famine relief, Sir Richard Temple deemed it advisable to ask for another opinion on the subject, and on the 16th of March I was directed to proceed to Sholapur and join Sir Richard Temple.

8. The point in question cannot in my opinion be decided on physiological grounds. It is true that some years ago the doctrine on the subject was, that muscular exertion entailed waste of muscular tissue, and that in order to compensate this waste, food containing nitrogenous principles must be supplied in proportion to the labour undergone, but later investigations have, I believe, tended greatly to modify this teaching, and certainly at the present time there is no theory on the subject so generally accepted or founded on data so incontrovertible that no economic question involving the expenditure of large sums of public money can be decided by it.

9. The question of the sufficiency or otherwise of any scale of diet can only be decided by observation of its effect on individuals and on masses of people, and observations of this kind in a time of scarcity like the present, if conducted impartially and without bias towards theories, cannot fail to contribute facts bearing on the question of the quantity of food of different kinds that is necessary to the support of the human system under certain conditions which would be of great value, from a scientific point of view, as well as for guidance in the conduct of measures of relief in future times. Observations of this kind, however, are beset with certain difficulties and sources of error, which have to be guarded against. Accurate information is wanting regarding the state of the people when they first came on the relief work, and again of their state when the rate of wages was reduced. Moreover, a knowledge of the aspect and condition of the poorer classes in ordinary times is requisite to enable one to form a just estimate of the effect that the prevailing scarcity may have had on them. I have no knowledge of the population of this Presidency, but considerable experience in other provinces leads me to believe that at all times signs of mal-nutrition are more or less visible among the poorer classes of the populations of India. A loose and shrivelled skin, a pale and anæmic aspect and emaciation will certainly follow privation and insufficient food, but the same appearances may arise from defective nutrition resulting from constitutional debility or disease. Again when famine presses hard on the population, diminutive and emaciated infants become numerous and form one of the most painful evidences of the prevailing distress; but in the best of times, if any large portion of the poorer classes were subjected to inspection, the number of these distressing objects would be considerable. Our statistics show that the rate of mortality of infants among the population of this country is as high or even higher than in the manufacturing districts of England, and it is more than probable that the number of women who are unable to nourish their infants is as numerous here as in other countries, while it is not the habit of the mothers to supplement their own defective supply by other food. In short, the scale of living among the population of this country is at all times low. Diseases resulting from mal-nutrition are common, and the rate of mortality compared with that of other countries is very high; therefore when inspecting masses of people collected from the poorer classes with the view of estimating the effects of abnormal scarcity among them, a very large allowance must be made for what may be called permanent poverty, and which it is beyond the power of Government to remove.

10. The want of accurate information as to the extent to which the people on the relief works possess sources of support, other than the daily wage given them, is another obstacle in the way of forming a correct estimate of the sufficiency or otherwise of that wage to maintain

them in fair condition. Where the gangs are encamped on works away from their homes, and where the men are equal to or outnumber the women, it is probable that the majority are dependent solely on the wages they earn; but when the works are near the larger towns and the gangs are composed to a very large extent of women and children, it may be assumed that the men are earning wages in some form elsewhere, and that the earnings of the women and children are simply accessory to the ordinary means of support. On the other hand, enquiry will often elicit the fact that individuals on the works are supporting with their earning a child or relation at home besides themselves.

11. But notwithstanding these difficulties it is possible by a careful scrutiny of large gangs of people in different localities, combined with information derived on the spot from the officers who have superintended the relief measures from the commencement and have watched the condition of the people, to arrive at a fair estimate of the extent to which the people have suffered and are suffering from the prevailing scarcity of labour and dearness of food, and how far the measures adopted for their relief have proved successful.

12. The appended notes give the details concerning the several gangs that I have inspected in the course of my tour. I will here only direct attention to the points more particularly bearing on the question of the sufficiency of the reduced rate of wage. The first bodies of relief labourers that I inspected were at Sholapur in the Bombay Presidency Here there were two bodies of labourers, a large body of upwards of 3,000 employed under the Department Public Works, and performing about half the task ordinarily exacted from able-bodied labourers. The men were receiving 1¾ anna, the women 1¼, and the children ¾ of an anna. Here there was no question as to the sufficiency of the food. Men, women and children appeared in good condition, and there was no doubt on the part of the officers superintending the works that the wage was quite sufficient for the support of the labourers in health.

13. The other body of labourers was employed under the Civil authorities and numbered about 300. A large proportion of them was above middle age, and they had come on the works in January in an enfeebled state. Some of these people had improved since they came on the works, but as a body they were much lower in condition than the gangs under the Department Public Works. The wage given was in both instances the same, with the exception that the men employed on the civil works received only 1¼ anna instead of 1¾; in neither case was payment given for Sundays, when no work was done. The lower condition of the civil gangs was no doubt due chiefly to the circumstance that they had become more reduced before coming on the work. The average age of the adults was greater, and it is probable that at the best of times they were below the average in physique.

14. At Adoni I inspected nearly 13,000 relief labourers, the greater majority of whom had been on the reduced rate of wage for above a month. The task-work performed was very light, not more than ⅓ of the task exacted from a coolie in ordinary times. The largest gang employed on the Yemmogamir road was composed chiefly of inhabitants of the town of Adoni; the other gang contained chiefly people belonging to the agricultural population. As a rule, all these people were in fair condition, and in the opinion of the relief officer they had not deteriorated since the reduced rate of wage had been in force. There were of course exceptions, and weakly and feeble people were here and there picked out; but these exceptions consisted of persons who had never been in good health and condition, or it was found on enquiry that the individuals shared their wages with a child or other relative.

15. At Bellary I inspected upwards of 10,000 relief labourers. At the Hiliyal road where a large body of 7,500 was employed, the men considerably outnumbered the women. Task-work was exacted, and if the task was not complete, less wage was given; and the great majority were receiving less than the reduced rate. There was however no sickness among them. The number whose appearance called for enquiry was very small, and the impoverished appearance of the individuals lighted on was usually accounted for in much the same way as at Adoni. The relief officer stated that these gangs had improved greatly in appearance since the works were established, and they had certainly not fallen off since the reduced rate of wage had come into force.

16. In Cuddapah I inspected two bodies of labourers: one numbering 950, employed close to the town and station, consisted chiefly of the inhabitants of the town, and the women greatly outnumbered the men; and several of these women were the wives of syces and other servants of Europeans. The daily task exacted was light and was commonly completed. In my opinion these people were in appearance little, if at all, below the standard of health common in the town populations of this country. Some were no doubt thin and anæmic, but the number was small, and in the majority of these cases the individuals had only lately come on the works or had been suffering from fever. The other gang, 800 strong, that I inspected in Cuddapah was composed chiefly of agricultural population belonging to the surrounding villages. Here also the women generally outnumbered the men, who were said to find work elsewhere. The general appearance of these people was very good. A very large number of the men and women were as stout and healthy-looking as they could be in the best of times; here and there thin and weakly persons were observed, but on enquiry it did not appear that their weak condition was attributable to want of food. The relief officer stated that when the people received the higher rate of wages they did not spend more in food than they do now, but save the difference, and they have not deteriorated in condition since the wage was reduced.

17. At Vellore, North Arcot district, I inspected altogether about 3,000 people: 1,120 employed and 400 applicants for employment in the construction of an embankment on the

Palaar river, may be considered as samples of the population who have not hitherto been on relief, for those employed had been collected some for about a fortnight, others for not more than a few days. The proportion of men employed here was small, being only 7 men to 28 women and children, and a very large proportion of the men were old or elderly. The task exacted here is 75 per cent. of the ordinary Department Public Works rates, and the people are paid at the following rates :—

Men	...	1 anna 11 pie.
Women	...	1 anna 5 pie.
Children	...	1 anna.

This is higher than the reduced rate given in other districts, and seven days' payment is given for six days' work. The elderly men were most of them of spare habit, but they were fairly muscular and their appearance healthy. The younger men were for the most part robust and in good condition. At the Sooriaghuta tank 1,600 people are employed, and here the proportion of men is very small, being only 3 to 35 women and children. This small proportion of men on the works is attributable to the circumstance that in this part of the country agricultural operations and other means of employment are not suspended to the same extent as in the Ceded Districts, and that the able-bodied men are for the most part employed in the occupations that engage them in ordinary seasons; but at the present prices of food their earnings do not suffice to maintain their families, and women, who in ordinary times would not undertake coolie labour, are on this account induced to come and earn additional means of subsistence on works which are conveniently near their homes. The gangs at the Sooria tank were first formed on the 24th November. From the 19th February to the 25th March they were on the reduced rate, but it has now been again raised to the same rate as on the Palaar embankment, because the people did heavier tasks. As a body, these people were in fair condition, and so far as I was able to ascertain did not deteriorate or show signs of weakness during the 5 or 6 weeks that they were on the reduced rate of wages.

18. At the Vellore relief house 700 people who are incapable of work are fed. The proportion of men and women is about equal. Each adult male receives daily 11b of dry rice cooked; 10 oz. of this is given at 10 o'clock, and the remainder in the evening. To the evening meal is added half an ounce of dal mixed with vegetable and condiments in the form of curry. In many of these people the effects of famine are very evident, particularly among a number of people who have come in from the Kulhustri zemindari, but they are improving on the food now given them.

19. Taking the evidence that has come before me in the course of my tour, I can arrive at no other conclusion than that the rate to which the wage of the relief labourer was reduced on the recommendation of Sir Richard Temple is sufficient to support them in fair condition, provided that care is taken that the individual recipient is the only person who is supported on it. And I see no reason why the wage should be raised unless an equivalent amount of work is performed.

S. C. TOWNSEND, *Surgeon-Major,*

Offg. Sany. Commr. with the Govt. of India.

Notes by **Dr. Townsend,** ***Officiating Sanitary Commissioner with the Government of India, deputed at the request of*** **Sir Richard Temple** ***to investigate and ascertain whether the scale of wages now given to the people employed on the several famine relief works is sufficient to support them in fair health.***

Sholapur (*Bombay*), *March 20th.*—Inspected a large body of people, about 3,000 including women and children employed under the Department Public Works in excavating a large tank (Moti Bagh). The men are employed on task work, the daily task being 54 cubic feet, or about half the ordinary task for an able-bodied coolie: for this he receives 1 anna and 9 pie. The women and children employed to remove the earth excavated receive 1¼ and ¾ of an anna respectively. No work is done and no pay given on Sundays.

Men, women and children are in good condition. They exhibit no signs of being underfed, and there is no sickness among them attributable to insufficient food. I inspected the camps, and many of the people were preparing their evening meal: some had jowari, many wheat of a rather inferior quality, some Indian-corn and jowari mixed; others bajra and toor. Salt, chillies, onions were in common use. The young children were in very good case.

March 21st.—This morning rode out with Mr. Percival, the Collector, to visit a gang of labourers employed under the Civil authorities in excavating a tank about three miles from Sholapur. These were a much poorer lot than the gangs employed on the Moti Bagh tank. A very large portion of them were old and infirm, or in some way incapacitated for hard labour. Task work is not exacted, and they accomplish very little in the day. The number employed here was about 300. The men receive 1¼ anna, the women 1¼ anna, and the children 7 to 9 pie. The bigger lads are reckoned as women. Children too young to work receive 3 pie each.

The greater number of these people had been on the work at the above rate of wages since the middle of January. Their condition varied considerably. Many were stout and in good condition; others were thin and weakly. The majority of the latter were old and infirm, but there were a few among the lads and young women who were undoubtedly suffering from the effects of insufficient nourishment. These cases however had come on the relief work very feeble and emaciated and they had improved since. The young children were in very good condition and looked to be well cared for.

On the way back we inspected the charitable relief house, where about 200 people old and infirm, or from other causes incapable of work of any kind are relieved. All were fit recipients of relief.

Adoni (*Madras*), *March 26th.*—Inspected with Mr. Oldham and Captain Hamilton.

1. Inefficient gang established ten days and composed of persons who had previously been in receipt of charitable relief at the relief house, and of old and weakly persons drafted from other gangs. The number, including women and children, was 253. They were employed on light work, forming platforms for the sheds constructed near the railway station for storing grain.

Ration given—

To men	...	...	...	1½ anna.
„ women	...	...	...	1¼ „
„ children on works	...	...	...	¾ „
„ young children	...	...	...	¼ „

Only the inefficient gangs receive pay or relief on Sundays.

Many old people were thin and shrivelled by reason of age. Only two old women looked weakly. There were no symptoms attributable to insufficient food. The children as a body were in very good case. Two infants very thin and miserable-looking had been suffering from fever.

2. A body of people numbering nearly 700 wanting work. These were mostly people who had been employed on relief works, but who had been discharged in consequence of their refusal to shift to works not more than ten miles distant. The condition of the people was generally good, especially the women and children. The people who looked in worst condition were a few who had not been on any relief work at all.

3. A gang of 507 work-people.—These people have been on work for some months altogether, and for one month on the reduced scale above given. As a body they appear to be in good condition. No sickness among them, with the exception of small-pox among the children. A few that we picked out as looking rather weakly had been only a few days on the works. One man had been feeding two children who were not in receipt of relief. Practically task-work is not exacted.

Five hundred cubic feet of earthwork is assigned to 50 men, which is half the ordinary task, but on measurement it is found that they execute only ¼th of the task assigned.

4. Gangs from Sirgoopah road, 1,208 in number, exclusive of very young children.—The condition of the women here was not so decidedly good as in the gangs close to Adoni. There was however nothing in their appearance to afford ground for fear that they were not now receiving sufficient nourishment. The condition of the men and the children on the other hand was very good. In some few cases men, whom we lighted on as looking weakly, were found on enquiry to be sharing their ration with a wife or child at home.

5. A gang of applicants for labour, 139 in number, who had struck work on being selected for transfer to a short distance 20 days ago.—All in very fair condition. In a similar gang belonging to the Aloor taluk, 220 in number, a few persons exhibited signs of having been insufficiently fed.

6. Gang of Madaveram, 3,100, inclusive of 400 young children.—As a body, men, women and children in good condition. Here and there where a weakly-looking individual was lighted on, it was found that he or she was suffering from fever, or sharing his ration with a relation not on the works.

7. Yemmigenoor road.—Gang 7,000 strong, including women and children.—The greater number of these people are inhabitants of Adoni, and come out daily to the work a distance of four or five miles. The total population of Adoni is stated to be 25,000. As a body, men, women and children are in good condition. The young men and women with few exceptions were plump and well nourished. The exceptions consisted of persons who at no time are in good health and condition; one youth for instance consumptive; another had the scars of old ulcers in the thigh and was lame from this cause; a third had a withered hand. Among the older people many exhibited that shrivelled condition of skin which is common among elderly natives of this climate at all times; but in other respects they were in good condition and looked healthy. In cases exhibiting weakness and want of nourishment the same explanation was given as in the gangs previously inspected. Either the individuals had been suffering from fever, or a child or other relation was sharing their means of subsistence with them. This was particularly the case with some of the women, for the allowance of 3 pie to each young child had not been distributed to the full extent intended by Government. The Adoni relief officers are now remedying this shortcoming.

Bellary, March 27th.—Gooty road.—Gangs assembled on the 5th mile. The whole number employed from the 5th to the 10th mile amounts to upwards of 7,000, but the order to bring them together for inspection did not reach the relief officer sufficiently early, and not more than half were collected for inspection. The wages here given are the same as at Adoni. As a body, the people were in good condition, and a large number of the men who were stout and able-bodied were selected as fit for transfer to the Nellore irrigation works, others for the earth-work of the line of railway to be constructed from Bellary to Dharwar. Of those selected for transfer to Nellore about 50 per cent. consented to go.

Bellary, March 28th.—Hiriyal road, 6th to 8th mile stone from Bellary.—Gang numbering altogether 7,500* have been established three or four months. The employment consists in breaking and stacking metal and in excavating gravel. Task-work is exacted at the rate of 6 cubic yards from each gang, consisting of 25 men, 20 women and 5 children; and for this task the payment is 1½ anna men, 1¼ anna women, and 9 pie children; but very few gangs not amounting to 500 people altogether complete this task in a day and draw the full wage. The great bulk receive only 1¼ anna men, 1 anna women and 7 pie children. The young children are allowed 3 pie each.

* 3,750 men.
3,000 women.
600 children above 7 years.
600 children under 7 years.

Rice is the food chiefly consumed by these people. Cholum is procurable in the shops where they purchase their food, but they buy rice in preference. The bazar price of rice is 8 seers per rupee. Mr. Smith, the relief officer, shewed great knowledge of the people under him and was able to give the history of a great number that we had reason to enquire about. As a body, these people are in very good condition. In walking down the long line the number whose appearance called for enquiry was very small, and in all or nearly all cases the impoverished appearance of the individual lighted on was accounted for:—

1*st*.—A thin child through an oversight had not been registered in the list of those receiving the 3 pie allowance.
2*nd*.—A very thin famished woman had only joined the work from a distant village two days previously.
3*rd*.—Another woman who gave the same explanation.
4*th*.—Two brothers who had been on the work less than a week.
5*th*.—An oldish man who had been on the work about a fortnight, and though thin had improved since he joined.

Mr. Smith, the relief officer, states that as a body these people have improved greatly in appearance since the works were established, and they have certainly not fallen off since the reduced rate of wage came into force. If on first arrival any of them are in a very bad state, they are first fed on cooked food for some days, but as soon as they are at all able they were allowed to wander on the works though without doing much, and they seemed to improve better on this plan than when kept altogether in the relief hospital. In some few cases the infants at the breast shewed sign of being insufficiently nourished, but it was by no means the rule in their cases that the mother was in bad condition. At all times in a certain number of cases women will be unable to sufficiently nourish their infants.

Cuddapah, March 29th.—Inspected some gangs of labourers employed in excavation of a tank close to the town of Cuddapah. Dr. Cornish, Sanitary Commissioner for Madras, was kind enough to accompany me. They mustered 950 in all, arranged in gangs of 50, consisting of 20 men and 30 women and children. The number of children was small; the women greatly outnumbered the men, the people were chiefly the residents of the town and of villages within two miles, and the Civil Surgeon, Mr. Hyaswamy, stated that a very large number of the women were the wives of syces and other servants of Europeans. The wages given are:—

Men, 1 anna 5 pie.	Children above 7, 8½ pie.
Women, 1 anna 2 pie.	Children under 7, 3 „

Payment is made on Sunday for 6 days. The daily task-work nominally exacted is 24 cubic yards of earth-work for a gang of 50. This task, which is very light, was commonly completed; but even if it were not, the wage above mentioned was generally given.

In my opinion these people were in appearance little, if at all, below the standard of health common in native populations. Some were no doubt thin and anæmic, but the proportion in this condition was not great. In many instances individuals that struck us as being more enfeebled than others were found on enquiry to have been on the works a very short time. One of them had been on a fortnight, another came on only yesterday. A very thin weakly-looking woman had come on the works 3 days ago, another, a Brinjara, had been on only 4 days. A thin elderly man who looked weak was suffering from fever. One man, thin and anæmic, had been on the works from the commencement, but on either side of him there was a very stout strong man who had also been on the works for months.

I also inspected at Cuddapah a relief camp whereat persons coming in from the districts in a weak and enfeebled condition are supported until they become fit for work, when they are transferred to the works. The food here given is cholum and ragi mixed. Two meals are given daily at 10 and at 5, each meal consisting of 12 oz. of the above grain with condiments for an adult male. Women and children receive less. The greater number of these people were old and unequal to labour of any kind. It appeared that many of them were kept at the camp against their will; they would prefer being at large, picking up what they could by begging. No betel-nut being given was one reason why they disliked being detained in the camp.

Some of the people supported in idleness at the camp would, I think, have been more suitably provided for at the works. There was one woman, for instance, in very good condition with 4 children in equally good case: also a stout strong man with his family; the reason given for their being kept at the camp being that there was no one to look after the children while the parents were at work.

Cuddapah District, March 30th.—*Booja road*, 3 miles from Cuddapah.—Inspected with Mr. Macarthy 800 people divided into 16 gangs, each composed of 20 men, 25 women and 5 children. The women generally outnumber the men who find other work. The people all belong to the surrounding villages. They are employed in digging and stacking gravel. The daily task assigned is 18 cubic yards for each gang,—a more severe task than is imposed upon the labourers at the tank inspected yesterday. It is, however, exacted without difficulty. The rate of wage is the same as the other gangs in the district. The labourers are paid once a week on Sunday for the six days. A considerable proportion of the people in these gangs, as well as in those inspected yesterday, belongs to castes who eat meat. The Wudas kill and eat sheep and pigs but not bullocks. The pariahs eat carrion or the flesh of bullocks and other animals that have died. The shepherds eat the flesh of sheep and goats that die.

The general appearance of the people composing these gangs was good. A very large number of the men and women were as stout and healthy looking as they could be in the best of times. Here and there thin persons in weakly condition were observable, but their history did not prove their condition to be attributable to want of food.

Gang No. 1.—Two thin men but not unhealthy looking.
„ „ 2.—One spare weakly looking man states that he has been so for years.
„ „ 3.—Two thin feeble men state that they have always been so; one sickly child has had fever.
„ „ 4.—All in good condition.
„ „ 5.—One feeble looking man states that he has always been so.
„ „ 6.—The same.
„ Nos. 7, 8, 9.—All in good condition.
„ No. 10.—An emaciated boy has been on the works a fortnight and has improved since he joined.
„ „ 11.—A thin weedy lad always so.
„ „ 12.—All in good condition.
„ „ 13.—A feeble man has a large spleen; is better now than he has been for a long time. Another sickly looking man has lately suffered from fever.
„ Nos. 14,15,16.—All in good condition.

These gangs have been established from November last.

Mr. Quinlass, the relief officer, says that when the people received higher rate of wages they did not spend more in food than they do now, but saved the difference. They have not deteriorated in condition since the wage has been reduced. About 15 men who had been sent to Nellore returned again to these gangs. They said the place did not agree with them; that the water was bad and gave them dysentery. The task work at Nellore appears to be harder and the maistries more severe upon people transferred from other works.

There were 26 applicants for work. Only one man among them, and he was a ryot, who had lost all his cattle, and having no other source of maintenance came on the works. He was a strong healthy man. The rest, all women and children, were in good condition.

Vellore, March 31st.

1. Relief gangs employed in constructing an embankment along the Palaar river, 1,120 people, divided into 8 gangs of 32, in the proportion of 7 men, 16 women and 12 children. Some of these gangs were formed on the 15th of March; others on the 21st to 23rd, and some as late as the 29th.

These people are employed on task work, the task being 75 per cent. of the ordinary Public Works rates. And they are paid at the following rate:—

Men, 1 anna 11 pie.
Women, 1 anna 5 pie.
Children, 1 anna. No allowance is given to young children.

Payment is made once a week, seven days' pay is given for six days' work.

A very large proportion of the men employed were old or elderly, and many of them were of spare habit, as is very commonly the case with the natives above the middle age, but they were fairly muscular and their appearance healthy. The younger men were for the most part robust and in good condition. The same may be said of the women. Many of the older women were thin and spare and some of them weakly looking, but the younger women were for the most part plump and in good condition. The children on the whole had the appearance of being well nourished.

There were present about 400 applicants for employment on these works, chiefly women and children belonging to the town. Of late too, a large proportion of Mussalman women

have come on the works, and this is considered a sign that the distress is spreading to classes that have not been hitherto touched by it. The general appearance of the new applicants however did not indicate that they have been insufficiently fed.

2. Gangs of coolies, chiefly women, employed in fencing the relief camp. These gangs had been established about six weeks, and had been on the reduced rate of—

1 anna 5 pie for men,
1 „ for women,
9 pie for children.

They appeared to me to be in very fair condition, and there was no sickness among them.

3. *Relief Camp.—Hospital.*—Forty-one patients, chiefly old people suffering from diarrhœa and dysentery, and it is probable that the percentage of mortality among them will be high. There are about 700 people fed in the relief camps. The proportion of men, women and children being about equal. In many of them the effects of famine are very evident, particularly among a number of people who had come from the Kalhustri Zemindari, but they are now improving.

Each adult male receives daily 1lb of dry rice cooked, 10 oz. of this is given about 10 o'clock, and the remainder in the evening. To the evening meal is added half an ounce of dál mixed with vegetable and condiments in the form of curry.

4. *Sooriaghunta tank.*—1,600 people employed in excavation work divided into gangs consisting of 3 men and 35 women and children. The gangs were first formed on the 24th November, and from the 19th February up to the 25th March were on the reduced rate of wages, *viz.*, men 1 anna 5 pie; women 1 anna 2 pie; children 9 pie. No allowance was given for children too young for work.

No work is done on Sunday, but the people receive pay for that day.

As a body these people were in fair condition, and as far as I was able to ascertain they did not deteriorate or show signs of weakness during the five or six weeks that they were on the reduced rate of wages.

The small proportion of men on these works is attributable to the circumstance that in this part of the country agricultural operations and other means of employment are not suspended to the same extent as in the Ceded Districts, and the able-bodied men are for the most part employed in their usual occupations; but at the present price of food their earnings are not sufficient to maintain their families, and women, who in ordinary times would not undertake cooly labour, are on this account induced to come on works which are conveniently near their homes and earn additional means of subsistence.

BANGALORE,
3rd April 1877. } S. C. TOWNSEND,
Offg. Sanitary Commissioner with the Govt. of India.

No. 172, dated Bangalore, 7th April 1877.

From—The Secretary to SIR RICHARD TEMPLE,
To—The Additional Secretary to the Government of India.

BY direction of Sir Richard Temple, I have the honor to submit copy of the paper marginally noted, regarding the supply of grain from Central India to the northern districts of Madras.

Memorandum by Captain Bisset on his visit to Bombay and the Nagpore District of the Great Indian Peninsula Railway.

2. From Captain Bisset's narrative Sir Richard Temple learns that there is no reason to anticipate failure of the grain supplies from Nagpore and the Berars; that much of the grain from those quarters is at present despatched to Bombay, probably for shipment to the western ports; and that an increase in the despatches to the Deccan and to the Ceded Districts of Madras will occur as soon as a change in prices shows the need for a larger supply.

3. I am to express Sir Richard Temple's satisfaction with the promised provision of Great Indian Peninsula wagons to expedite the movement of grain to the south. He anticipates that, with the facilities thus given, the supplies to the chief grain markets of the Ceded Districts will be fully equal to the demands from the interior.

Memorandum by CAPTAIN W. S. S. BISSET, *on his visit to Bombay and the Nagpore District of the Great Indian Peninsula Railway,—dated Bangalore, 31st March* 1877.

ACCORDING to the instructions conveyed in Sir Richard Temple's Minute of the 13th March 1877, I visited Bombay on the 19th March, for the purpose of enquiring into the causes of the diminution of the supply of food grain from the north to the Ceded Districts, and I was present at a meeting held on the 20th March between the Consulting Engineer and the Agent and the General Traffic Manager of the Great Indian Peninsula Railway.

At this meeting a resolution* was recorded to the effect that the grain destined for the famine districts should have preference to all other consignments, and that wagons for its conveyance should be provided to the full extent indicated in Sir Richard Temple's Minute.

* A copy of this resolution has already been sent by Colonel Hancock for Sir Richard Temple's information.

2. I visited the Nagpore line of railway on the 21st, 22nd, and 23rd March and made enquiries into the accumulations of grain at each station, and also about the urgency of the demands for carriage.

* Not forwarded.

My notes* are appended in detail.

3. The accumulations of grain which existed in the month of January† had been cleared off by the middle of February; the fresh stocks‡ now lying in the railway stations are much smaller than the previous ones, and they are to a larger extent than before destined for Bombay itself, probably for shipment§ to the ports on the western coast. The detention of grain at the stations is not so prolonged as formerly, but owing to the uniform demand for carriage from all parts of the Great Indian Peninsula Railway and to the large through traffic from Hindustan to Bombay, it has not been found possible to provide wagons or train-room to carry away the grain as fast as it is offered.

† On 19th January 1877 there were lying at Nagpore ... 8,500 tons grain.
At smaller stations ... 7,000 „ „
Total ... 15,500 „ „

‡ On 21st March 1877 there were lying at Nagpore ... 1,500 tons grain.
At smaller stations ... 3,500 „ „
Total ... 5,000 „ „

§ The shipments from Bombay to the Southern Mahratta ports amounted to nearly 9,000 tons in the first 15 days of March. The despatches to the more southerly ports are not abstracted.

The reduced accumulations at the railway stations seem to indicate some reduction on the demand for carriage, but there have been changes in the mode of receiving goods which have tended to limit these deposits; and there seems no doubt that large quantities of grain are from various causes kept back in the bazars and in the villages.

The brokers in attendance at the minor stations say they keep much of their grain back rather than take the risks of exposure to weather and to the ravages of white-ants during the unknown period of detention at the smaller railway stations. And for these reasons I believe that the reduction of the demand for carriage is not proportionate to the reduction in the weight of goods awaiting despatch.

4. The system of registration of goods actually deposited in the Nagpore station yard is most carefully carried out, and it appears to give the greatest satisfaction. The merchants understand it thoroughly, and they look after their own and their neighbours' allotments very sharply.

At the smaller stations some of the consignors think their claims are postponed for the advantage of senders from other stations, but they have no grounds for this belief except their annoyance at having to wait. The only important requirement is that more goods shall be carried away, and with the present extraordinary pressure on the railway, this is the cry from all sides, and it is not perhaps much satisfaction to the merchants who have to wait to know that their goods are having, or that they are likely to have in their due turn, their proper place in the largest traffic that has ever been carried on this railway.

I have however ventured to suggest that instead of an undefined date for clearing off the accumulations at the road-side stations, there should be a periodical clearance, any one day of the week being fixed for each small station on which goods might be received, consigned and despatched to such extent as is practicable. On the motion of Colonel Hancock, Consulting Engineer for Railways, this proposal has already been taken into consideration by Mr. Conder, and a decision may be expected shortly.

5. A few of the consignors at the smaller stations were loud in their appeals for wagons, not however to take away grain, but mainly to convey linseed to Bombay to meet contracts made for the end of March.

In the grain trade there is not at present the same prospect of large profits that there was in January, and, although there appears to be abundance of grain for despatch, there is less speculation and less anxiety for immediate transport. The anxiety is proportionate to the anticipation of profit, and the present prices in the famine districts of Sholapur and Madras give a sufficient but not a very large profit.

6. And there is a heavy demand for grain from Bombay itself, apparently of equal urgency with the needs of the Deccan and Madras. This is evident from the figures in the margin, which show the despatches of linseed, grain, &c., from Nagpore during the seven days immediately preceding my visit. It may be necessary to explain that under the present arrangements for receiving and despatching grain at Nagpore station, these figures indicate very exactly the current demands of the several markets.

The shipments from Bombay to the Southern Mahratta Ports amounted to nearly 9,000 *tons in the first* 15 *days of March.*

Extract from Notes.

In the week from the 15th to 21st March the despatches from Nagpore are shown below:—

	To Bombay.	To Poona and Sholapur.	To Raichore and Madras.
	Tons.	Tons.	Tons.
Linseed ...	493	...	...
Wheat ...	188		
Jowari ...	219	455	143
Rice ...	60		
Pulses ...	65		
Total tons ...	1,025	455	143
On the 22nd March the consignments were—			
Linseed ...	80	...	...
Grains, &c. ...	180	176	66
Total tons ...	260	176	66

So that, although it is moderately certain that much more grain would have been despatched from Nagpore if there had been more wagons available, it is apparent that the merchants might have sent much more to the Poona and Sholapur Districts and to Madras if they had preferred doing so to sending linseed or grain to Bombay. And a very small rise in prices will again divert the flow of traffic to the south.

L

7. It is satisfactory to learn that although the deliveries of grain by railway have during the past fortnight been smaller than those which in the early part of the month excited some apprehension, the prices of grain have remained steady at Poona, Sholapur and in the principal markets of the Ceded Districts of Madras. And it may be inferred that the requirements of grain have been estimated at too high a figure, and that the present importations are sufficient to meet the present wants.

8. The Great Indian Peninsula Railway has so much to do that it must sacrifice some of its Bombay traffic to carry more grain to Sholapur and Madras. The Government of India are arranging to augment the engine power of this railway, and in the meantime the Agent and Mr. Conder are prepared for the sacrifice, and they have arranged that the requisite number of wagons shall be provided as soon as the grain is presented.

The Madras Railway has, comparatively speaking, nothing but grain and salt to carry at present, and it is, I have good reason to believe, capable of carrying about half as much more grain as it has conveyed* during the month of March.

There is therefore every reason to hope that the railways will be equal to their share of the work, and from the evidence afforded by the recent reports, there is little room to doubt the sufficiency of the means of carriage from the railways to the interior of the affected districts.

31*st March* 1877. W. S. S. BISSET.

No. 174, dated Bangalore, the 7th April 1877.

From—Secretary to SIR RICHARD TEMPLE,

To—Additional Secretary to the Government of India.

BY direction of Sir Richard Temple I have the honour to submit copy of a Minute explanatory of his reasons for recommending the commencement of the earth-work of the Conjeveram and Chingleput railway project.

Minute by SIR RICHARD TEMPLE, *dated Bangalore, the 6th April* 1877.

IN Memorandum No. XXVII, dated 30th January, were explained the reasons why I was then unable to recommend that the proposed railway from Chingleput to Conjeveram should be undertaken as a relief work. It was explained that the proportion of the cost that would be expended on relief wages was small, and that the financial prospects of the proposed line did not seem very good.

2. Since that Memorandum was submitted, the Government of India have been pleased to sanction my proposal that the earth-work of the Bellary and Hooblee line should be begun as a relief work, without the Government being pledged to complete the line; which case establishes the principle that in a dearth of large projects for employment of relief labour, the earth-work of any such project may be commenced, even though the Government may not be able at present to complete the scheme.

Further I have seen in the Madras Presidency that there is great need for large works, on which a large number of relief labourers can be concentrated under adequate professional supervision. My Minutes dated the 18th and 29th March set forth the great advantages to be obtained by placing relief works under professional supervision. In Chingleput and North Arcot districts there was special need for professionally supervised works. So long therefore as the Government of India was not committed to the completion of the proposed line, I considered that it might be better to employ relief labourers under engineering control, on a work that might hereafter be useful, than to leave them all on the scattered civil works, whereon little real labour was exacted and over which there was practically no adequate supervision.

3. Under these circumstances, it seems to me that the conditions under which the Chingleput and Conjeveram railway project presents itself have altered. I have now therefore recommended that, subject to the restriction above mentioned, the earth-work on the proposed Conjeveram and Chingleput railway should be begun as a relief work, whether the line be subsequently completed or not. And that recommendation the Government of India has been pleased to approve.

RICHARD TEMPLE.

No. 175, dated Bangalore, 7th April 1877.

From—The Secretary to SIR RICHARD TEMPLE,

To—The Additional Secretary to the Government of India.

BY direction of Sir Richard Temple, I have the honor to submit copy of a Minute recorded by him regarding the emigration of people from the Mysore Province to the relief institutions in Madras districts, together with my note on the subject.

* Approximate total delivered by rail from all sources during March 62,000 tons.

Minute by SIR RICHARD TEMPLE, *dated Bangalore, 6th April* 1877.

I HAVE, while at Bangalore, investigated the facts regarding the emigration of people from the Mysore Province to the relief works and relief houses in British districts of the Madras Presidency. At one time there were some, perhaps many thousands of Mysore people on the relief works in the Bellary and Cuddapah districts; and there were large bodies of Mysore labourers in the coffee districts of the Wynaad. Immigrant labourers from Mysore do indeed flock yearly to the coffee districts, and do much useful work there. This year by reason of the scarcity, double the usual number emigrated to the Wynaad; and as the coffee crop was short, there was less than the usual quantity of work to be done.

2. In my Minute No. XXXVII, dated 16th February, I expressed my opinion that the distressed people of Mysore could be relieved by the Mysore Government which had made adequate provision to that end; and I advised that such people should, after receiving temporary relief, be sent back under proper arrangements to their homes.

3. If there were still at this time any considerable number of Mysore people receiving or needing relief in British districts, then I should advise that the Chief Commissioner's offer to depute an officer, who would take over such refugees, should at once be accepted. For there is no reason why the British treasury should be burdened with the support of distressed persons from neighbouring States, which are both able and willing to relieve their own people.

4. But, as matters now stand, there seems no present need for action. The Wynaad coolie question is settling itself; for the Collector reports* that the Mysore immigrants are returning to their homes. It is probable that, while they were in the Wynaad, they had earnings or other means of supporting themselves at least until they could recross the Mysore frontier.

* See the appended note.

5. In Bellary and Cuddapah the numbers of Mysoreans appears comparatively trifling. On the borders between provinces like Bellary and Mysore there will always be some interchange of population in times like this; and the Commissioner of the Nundidroog Division recently learnt that resveral hundreds of British subjects from the Pennekonda Division had come to the relief centres in Kolar and Bangalore, having fled from their home by reason of the cholera which was then raging.

6. Although there is no present need for action, yet, if hereafter there should be any large gathering of Mysore people on relief works, or at relief centres, I consider that early intimation should be given to the local officers in Mysore, so that the Mysore authorities might promptly take over and relieve their own people, as indeed they are very ready and able to do.

RICHARD TEMPLE.

Mysore people in the Madras distressed district.

THE case now stands on this wise—

Mysore declined to pay the charges which Madras might incur in relieving Mysore immigrants either by relief wages or otherwise. But Mysore offered to send and fetch back her people. Accordingly an Assistant Commissioner was sent from Kolar to Pennekonda to fetch back Mysore people who might be on the Bellary works. But none were found in Pennekonda, and only 35 in the other taluks. So the Assistant Commissioner came back empty.

2. It was about Pennekonda that the question first arose. Subsequently Madras represented that Mysore people were surging over into Coimbatore; and specially that large numbers† of people, who had gone to the Wynaad for employment on the coffee estates, were now practically on the hands of the Madras Government;—for there was no coffee labour to be had, and the people seemed disinclined to go back to Mysore. The correspondence between the Collector and the planters shows that there is much want of roads in the Wynaad; and the present is considered a favourable opportunity of getting these roads made. The Madras Government enquired whether Mysore would contribute one-third the cost of these roads, on the ground that Mysore poor would be employed thereon and sustained thereby. Mysore declined the offer, because she too had plenty of good relief works waiting to be done, and on which in some places work-people would not come. At the same time Mysore repeated the expression of her readiness to send and fetch her people home.

† *Note.*—In the correspondence the Collector of Malabar offers no estimate of the number of these immigrant Mysoreans. But at Madras the figure was stated (no doubt roughly) at sixty thousand. We telegraphed yesterday to know what was the Collector's estimate of the numbers.

3. Madras has now replied asking that Mysore would at once send officers to fetch back her people from the Wynaad, Coimbatore, Bellary and Cuddapah, and has begged that Mysore will take steps to prevent her people immigrating into Madras country for the future.

4. The Chief Commissioner of Mysore is now ready to send officers and will do so The largest number of his tenants are said to be in the Wynaad; he has works close to the border to employ them, and he has relief houses along the road whereat the returning emigrants can be fed as they come along. But he anticipates that many of them will be quite unwilling to come back, if they can get easy, highly paid, work in the Wynaad. He foresees too that there will be difficulty, and there may be loss to the coffee interest if emigration from Mysore into the Wynaad is permanently checked or restricted. The Chief Commissioner has

suggested that the Wynaad authorities should decide which Mysore people ought to be sent back home, and which should be kept.

BANGALORE; 2nd *April* 1877.

C. BERNARD,
Secretary to Sir Richard Temple.

P. S.—After the foregoing paragraphs were written, telegrams were sent by Sir Richard Temple's order to the Collectors of Malabar, Bellary and Cuddapah; asking for an estimate of the number of Mysoreans needing relief in the Wynaad, in Bellary, and in Cuddapah. The Collector of Malabar replied that "no Mysore people in Wynaad now need relief. They are returning already to Mysore; and all say they intend returning as crops and prospects have improved at home." The Collector of Bellary replied that he estimated 'the Mysoreans on relief works and receiving gratuitous relief at not more than a few hundreds." The Collector of Cuddapah replied that he could "form no estimate," as he had "no data."

BANGALORE; 6th *April* 1877.

C. BERNARD,
Secretary to Sir Richard Temple.

No. 176, dated Bangalore, 7th April 1877.

From—The Secretary to SIR RICHARD TEMPLE,

To—The Additional Secretary to the Government of India.

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him, together with a note on the present condition of relief affairs in Mysore.

Minute by SIR RICHARD TEMPLE, *dated Bangalore, 6th April* 1877.

I HAVE again enquired into the state of relief affairs in the Mysore Province. I find that the total numbers on relief are now 116,000, equal to about 2 per cent. of the total population of Mysore, or about 3¼ per cent. of the population of its distressed tracts. An unusually large number of Mysore people had emigrated to the coffee districts; and though they are now coming back, yet for some months they obtained subsistence by working on the plantations. When the failure of season, which is now going on for the third year consecutively, is remembered, these numbers appear very moderate, and show, firstly, that the people must be in good condition and must have some self-sustaining power; and secondly, that the authorities are administering relief very carefully and economically.

2. The results of relief administration in Mysore still compare favourably with the neighbouring districts of the Madras Presidency, namely, the Ceded Districts and Kurnool, even after all the economy and reduction which have been introduced into those districts.

3. The labourers on the relief works are all employed on piece-work at rates somewhat cheaper than the piece-work rates of the Public Works Department in ordinary years. They can earn in this way enough to support themselves, and they are in fairly good physical condition. Their earnings on piece-work are estimated to amount to two annas per diem for adult men. The people also receive gratuitous relief at the relief centres, also do a certain amount of light work. From the helpless poor, who are relieved at their villages through the agency of the patels (village headmen), no work of any kind is exacted.

4. I am still of the opinion expressed in my Minute, dated the 14th February, that the Government of India and the Chief Commissioner may be satisfied with the progress of relief affairs in the Province of Mysore. Already favourable rain has (1st April) fallen over the whole Province; prices have fallen; and the people are taking courage.

RICHARD TEMPLE.

Present condition of relief affairs in Mysore.

SINCE Sir Richard Temple was in Mysore last, the following changes have occurred in the relief operations and their results:—

(1).—The distressed districts are much the same as before stated, except that severe distress has declared itself in the northern taluks of the Mysore district.

(2).—The number of labourers on the relief works has increased somewhat, and so also have the numbers on charitable relief, thus—

Name of district.	Total number on relief works.		Number on charitable relief.		Total on all relief.	
	In January.	On 15th March.	January.	15th March.	January.	15th March.
Bangalore	13,000	18,200	11,500	10,300	24,500	28,500
Municipality	...	1,000	...	6,200	...	7,200
Kolar	8,500	8,700	3,700	4,200	12,200	12,900
Tumkur	8,900	10,600	2,100	18,200	11,000	28,800
Mysore	5,500	9,800	3,700	1,900	9,200	11,700
Municipality	...	200	...	1,600	...	1,800
Hassan.	9,700	7,100	4,200	1,400	13,900	8,500
Shimoga	1,200	3,200	1,500	300	2,700	3,500
Kadoor	6,300	3,000	1,400	800	7,700	3,800
Chittaldroog	6,000	7,800	1,800	1,800	7,800	9,600
	59,100	69,600	29,900	46,700	89,000	116,300

(3).—Some of the increase is said to be due to the efficient village relief that is now being carried out. The Moonsiffs and Civil Court establishments are now employed on relief work, now that their ordinary business is so slack. For each distressed taluk a sufficient relief staff has been appointed; villages are really visited, and patels (village headmen) are kept up to their duty by responsible officers, whose weekly diaries show what is being done, and how useful the village relief is.

(4).—Ample number of relief works are open and ready to be open in every district of the Province.

(5).—The importations of grain by railway into the Mysore Province has gone on increasing; they averaged 330 tons a day in January; they were 530 tons a day during the last week of March. Since the rain of Sunday (1st April) prices are cheaper, and importations have somewhat slackened. Of this total only about 30 tons a day as yet comes by the Negapatam route.

2. The Mysore Government issues every Monday a short progress report with tables showing the progress of relief operations during the week. These reports contain all necessary information as to the condition of the people and as to relief operations.

3. I may note that Colonel Christie, Superintending Engineer of Irrigation, has recently been on tour in Chitaldroog. He tells me that he saw no emaciated people save in the relief kitchens, that the physical condition of the people on the relief works is good, and that in some cases his officers were unable to get labour for tank repairs which they wanted to carry out.

BANGALORE; 6th *April* 1877.

C. BERNARD,
Secretary to Sir Richard Temple.

No. 181, dated Bangalore, 7th April 1877.

From—The Secretary to SIR RICHARD TEMPLE,

To—The Additional Secretary to Government of India.

IN reply to your letter No. 315, dated the 22nd March 1877, I am directed to submit copy of a minute recorded by Sir Richard Temple regarding the advisability of undertaking the earth-work of three short branch railways to Arcot, Vellore and Salem as relief works.

Minute by SIR RICHARD TEMPLE, *dated Bangalore, 6th April* 1877.

THE Government of India have asked my opinion on the suggestion that relief labour should be employed on the earth-work of three short branch railways, which have been projected to the towns of—

Arcot	population	11,000
Vellore	„	38,000
Salem	„	50,000

The Madras Railway line passes by each of these towns at a distance of from three [illegible] miles. The Commission which reported on the traffic of the Madras Railway in 1875

mended that these three branch lines should be undertaken in order to draw traffic to the railway. If the railway were now being aligned, there would be no doubt that it should be taken to Salem and Vellore, for Salem is the largest town south of Madras which this line serves; while Vellore is a great, if not the chief, trading mart between Madras and Trichinopoly. But the question now is whether it is advisable to undertake the earth-work of these branch lines as relief works.

2. I have not been able to see any detailed estimates for these lines. The Madras Government estimate the cost of the three at approximately twenty lakhs of rupees; and consider them not to be so well adapted for relief work as the Conjeveram and Chingleput line. I have traversed the lines which these three branch railways would probably take. On each of them the banks would, save perhaps at the Palar bridge approaches, be very light, and the great items of cost on the Vellore and Arcot branches would be the bridging of the Palar; for I understand that the existing narrow road bridge near Vellore would not suffice for a standard gauge railway.

3. I understand from Captain Bisset that, in default of detailed estimates, the earth-work and ballast on these branches could not be estimated at more than about Rs. 50,000 in all. This amounts to 2½ per cent. on the total cost of the line; it is doubtful whether the work could (failing previous detailed surveys) be begun before the first week in May. And if good rains fall in May, it is most probable that relief labour would not suffice to finish even the banks and ballast. I fear that it would not be practicable to organize large gangs of skilled relief labourers (such as stone-cutters of the Waddah caste) for employment on these lines, in time enough to do any considerable quantity of work before the rainy season begins.

4. Under these circumstances, however anxious I may be to find some public work on which relief labourers can be properly tasked, I hardly see how to recommend that these branch lines be undertaken as relief works. In regard to the general question whether the branch lines would pay, I attach weight to the view expressed in Mr. Elvin's dissent at page 18 of the Commission's report. And I think much enquiry should be made before the Government decide to add £200,000 to the guaranteed capital of a railway which does not pay, in order to construct branch lines which also may not pay. If any of these branch lines could be undertaken by private enterprise, as suggested by Mr. Elvin, then perhaps Government might see fit to grant some aid to the projectors of such branch railways.

RICHARD TEMPLE.

No. 183, dated Salem, the 10th April 1877.

From—The Secretary to SIR RICHARD TEMPLE,

To—The Additional Secretary to the Government of India.

I HAVE the honour, by direction of Sir Richard Temple, to submit copy of a Minute recorded by him on the administration of relief works by Public Works Department officers in the Salem district on much the same system as he recommended for the Bellary and Kurnool districts.

Minute by SIR RICHARD TEMPLE, *dated Salem, the 10th April* 1877.

IN my Minute dated the 29th March I invited the consideration of the Madras Government to the desirability of employing in the Bellary and Kurnool districts a certain proportion of the relief labourers on works supervised and directed by Public Works Department officers, who could exact from the labourers adequate tasks. And I indicated certain works on which this plan might at once be tried.

2. On revisiting the Salem district, I find that the procedure, which I recommended for Bellary and Kurnool, had already been adopted in Salem. Out of the 47,000 relief labourers in the district of Salem, about 25,000 are employed on 398 large and small works under the Public Works Department. Most of these works are irrigation tanks, which must be repaired sooner or later, and on which much excellent work will have been done this year. The labourers are employed on piece-works, at a rate of 2 annas per cubic yard, as compared with 1¼ annas which is paid in ordinary years. Mr. Norfor, Range officer, finds that on some of his works the people earned at these rates—

In the month of February.				In the month of March.		
0	2	2	for each adult man	0	1	10
0	1	4	for each woman	0	1	2
0	0	9	for each child	0	0	8

3. The Engineer officers do not seem to have succeeded in opening so many works in the more distressed taluk of Dharampooree as elsewhere. All labourers are admitted to the Public Works Department undertakings, who are willing to work at the present rates; and no enquiry is made as to the applicants being in absolute need. Relief labourers moreover are not, save in the case of about six thousand labourers on works in December last, handed over by the Civil officers to the Engineering officers, as recommended should be done in Bellary and Kurnool. But there is apparently no reason to fear that relief is being given unnecessarily on the Engineers' works; for the officers in charge report that the condition of the labourers is generally poor when they come on the works. And there is no risk of the Civil and Engineering officers competing with each other for labour; as no civil relief works are opened in the neighbourhoods served by the works under Engineering supervision.

4. I lay this account of Salem relief works before the Madras Government, because the system, which works well in Salem, would succeed in Bellary and Kurnool, where professionally supervised works are most urgently required.

RICHARD TEMPLE.

Weekly Condition Report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 8.)

Condition Report for week ending 31*st March* 1877.

Bangalore District.—Markets moderately supplied, and prices steady. 2·20 cents of rain fell at Bangalore during the night of the 31st March; and the Dharmambudi tank received a three months' supply of water. The Deputy Commissioner reports "Welcome rain has fallen in several parts of the district, which will be especially useful for cattle for periods varying from 15 to 60 days." He adds that the crops generally are in tolerable condition, except in the Closepet Taluk, where they are suffering from want of water, and that cholera is very prevalent in the district, as well as fever and ague in the Nelamangala Taluk. The suffering among the cattle from want of fodder and from murrain is also reported to be great.

Kolar District.—Markets fairly supplied by importation. The standing sugarcane crop is in good condition; Bengal-gram and javari sown in beds of tanks have been harvested in some places. Cholera still prevails, as also fevers, small-pox, diarrhœa and dysentery. The prospects of the season are said to be unfavourable, and the weather to be very hot, with however indications of heavy rain, which had fallen in showers up to the 31st of March in all the taluks except three.

Túmkúr District.—Markets fairly supplied; and a slight fall in the price of ragi and rice. During the week rain fell generally throughout the Koratagere, Maddagiri, Túmkúr and Kadaba Taluks, at the head-quarters of which 40 cents, 50 cents, one inch 32 cents, and 60 cents were registered respectively; a few tanks received a fair supply of water. Ploughing has commenced in some places; and the prospects of the season are somewhat improving. The crops in the beds of tanks and under wells are in a promising condition; javari was harvested in some parts of the Maddagiri Taluk; but the gardens in those of Honnavalli and Chiknayakanhalli suffer from want of water. Cholera and small-pox are still prevalent in almost all taluks of the district, but they may be said to be on the decline. Coolies from the coffee estates are daily returning.

Mysore District.—Markets fairly supplied, and, except in the Mysore, Periyapatna, Heggaddevankote and Nanjangúd Taluks where there was a slight rise, the prices of rice and ragi are steady. Rain fell generally throughout the district except Mandya and Talkad; 58, 18, 40, 20 and 42 cents were registered at the head-quarters of the Chamrajnagar, Ashtagram, Periyapatna, Gundlupet and Malvalli Taluks respectively; some of the tanks receiving from 15 to 60 days' supply. Ploughing has commenced; javari was sown in Ashtagram and Malvalli. In Nanjangúd the seed previously sown has germinated. In Mandya, Malvalli, Ashtagram and Yedatore sugarcane under tanks is withering; and javari in Mysore. In these and other taluks the crops under nallas are doing well. Cholera still prevails more or less in the taluks; but is on the decline. Cattle suffer from murrain in some places. Emigrants are returning.

Hassan District.—Markets are fairly supplied, and prices on that whole steady. Rain fell in showers, except in the three taluks of Arakalgud, Channaraypatna and Nagamangala. Maize, oil seeds, dhal and other pulses, which were recently sown in the Attikuppa, Taluk, have germinated, and are doing well; but in some parts of the Channaraypatna Taluk, the maize has not yet shewn vitality. Bengal-gram in the bed of the Channaraypatna tank has been reaped. The paddy crop in the Manjarabad Taluk has been destroyed by insect pests, and sugarcane in Hassan is withering. Cholera which prevails throughout the district, was on the increase in the town of Hassan; there is fever also in Channaraypatna.

Shimoga District.—Markets moderately supplied, but price of food-grains has risen slightly. There was no rain at Shimoga, where in the corresponding week of last year, 27¼ cents were registered. Sugarcane is being sown in the Sorab and Ságar Taluks. The Vaisakhi (Rabi) paddy and Bengal-gram, sown in beds of tanks in Channagiri and Nagar Taluks, have to a great extent withered; the prospects of the season are unfavourable. Cholera still prevails, the greatest number of deaths being in the Channagiri Taluk. Cattle in Shimoga and Nagar suffer from murrain, and want of water and fodder for them is much felt.

Kadur District.—Markets fairly supplied by importation and home growth, and, except in the Tarikere Taluk where there was a slight rise, prices of food-grains are stationary. A good down-pour of rain fell on the 27th March at, and within a radius of 8 miles from, Chikmagalur, where 92½ cents were registered; there was only a slight shower at Kadur on the same day. In the Banavar Taluk the sugarcane crop is doing fairly well; in the other taluks, there are no standing crops. Prospects continue to the unfavourable. Cholera prevails in all the taluks, as also small-pox and bowel complaints. Murrain too is prevalent among cattle in the Koppa Taluk.

Chitaldroog District.—Markets fairly supplied, except in some scattered localities where importation was slack on account of cholera, and the price of food-grains was on the whole very steady. No rain during the week in any part of the district. There are no crops standing on the ground in the Davangere, Hiriyur and Budihal Taluks; in the others, paddy and javari, under tanks and wells, are in good condition, and in some places they are ready for the

sickle; Bengal-gram and javari grown in tank beds were harvested in the Chitaldroog, Dodéri, Hosdurga and Pavagada Taluks, the crop in the first and last-named taluks being estimated at ⅛ and ¼, respectively, of a fair average crop. Cholera prevails in all the taluks of the district.

General Remarks.

With the exception of three taluks in each of the districts of the Nundydroog and Ashtagram Divisions, rain is reported to have fallen everywhere during the week, and the prospects to be somewhat improved. Ploughing, manuring, and other preliminary agricultural operations are being carried on diligently; seed previously sown has germinated, and fresh sowings have been made in the following taluks:—

Bangalore ...	Sugarcane and ragi.	Gumnayakanpalya ...	Sugarcane and ragi.
Devanhalli ...	Ditto and javari.	Chamrajnagar	Javari.
Kankanhalli ...	Sugarcane.	Gundlupet	
Shrinivaspur	Javari.	Ashtagram	
Malur ...	Sugarcane and ragi.	Malvalli	

In the Kadur District rain has also fallen, except in the three taluks of Lakvalli, Tarikere and Koppa, and similar agricultural industry exists. But, with the exception of the Hiriyur Taluk, the Shimoga and Chitaldroog Districts are still without rain, though in the corresponding week of last year a fair supply had been received.

Colonel Campbell, the Commissioner of the Nagar Division, after visiting in company with Dr. Benson, the Shimoga, Honnali, Harihara, Davangere, Chitaldroog, Hosdurga and Tarikere Taluks during the fortnight ending 31st March, reports (1) that since the date of his previous fortnightly return, rain had fallen and tanks here and there had received a small supply, but that the feeling of disappointment on the part of the agriculturists had not then been allayed; (2) that the markets were generally supplied sufficiently; (3) that no favourable change had taken place in the prevalence of cholera and small-pox; and (4) that robberies were of not infrequent occurrence, but the conviction of 50 dacoits at a special sessions at Chitaldroog would probably have a deterrent effect. During this tour, advantage of the presence of a large number of children at the kitchens (where the recipients are chiefly old people and children) was taken to vaccinate them; notes were also made of the improved condition of those gratuitously fed; of the probability of their numbers being reduced shortly; and of the fact that many of them supplemented the kitchen allowance by begging, which probably no increase of allowance of food would put a stop to. The fact of their occasionally refusing food, and demanding pice, has been noticed by Captain Strahan and other independent observers. The Commissioners of the two other Divisions report an improved condition of affairs within the limits of their Divisions, and it is hoped that before the next return leaves, this may be found to have also extended to Nagar.

Cholera is still very prevalent, though fatal cases are generally on the decline, 644 less than in the previous return being reported. The deaths from cholera for the whole Province were as below:—

Bangalore	364	Hassan	264
Kolar	1,032	Shimoga	38
Túmkúr	261	Kadur	446
Mysore	175	Chitaldroog	280
		Total ...	2,860

Small-pox also still continues to claim its victims.

The mortality among the cattle from want of fodder and here there from murrain is still great. From the 1st April to 31st December 1876 the deaths are given below:—

Bangalore	13,715	Hassan	32,601
Kolar	14,381	Shimoga	29,077
Túmkúr	54,588	Kadur	21,087
Mysore	14,763	Chitaldroog	50,534
		Total ...	230,746

Many of these being poor and weakly are said to have been killed by the owners for their hides, &c., as they were unable to feed them, but the better kind have been preserved in large numbers by pasturing them in the forest and jungle tracts; sheep and goats, horses and asses are not included in the above heavy bill of mortality. Grass however is springing up in many localities, and should the expected showers continue, much anxiety on this account will be removed.

The rain that fell on the night of the 31st in Bangalore and its neighbourhood, or rather on the early morning of the 1st April, has had a very beneficial influence, and a hopeful spirit of active self-dependence is taking the place of that of depression.

The weight of grain imported was—

at the terminal station	2,403 tons
at Kolar Road	486 ,,
	2,889 ,,

or 94 tons less than in the previous week, giving a daily average of 413 tons, of which Madras sent 2,438, Beypore 339 and neighbouring districts 43, while the receipts by the South Indian Railway from Negápatam and other places on the line were 49 (20 from Negapatam, 8 from Trichinopoly, and 21 from Boodalore), and by the Great Indian Peninsula Railway from the north, 20 tons. The tabulation of daily receipts from 1st November is here added for convenient reference:—

380 tons daily from 1st November 1876 to 24th February 1877.		
283 ,,	for week ending	3rd March.
529 ,,	for ,,	10th ,,
529 ,,	for ,,	17th ,,
416 ,,	for ,,	24th ,,
413 ,,	for ,,	31st ,, as above.

Regarding its transport from the terminal station to the interior of the Province, and beyond the frontier, no reliable figures have yet been obtained, but there are no indications of grain being stored in large quantities in Bangalore. On the contrary, it is known to be exported into the interior almost as soon and in nearly as large quantities as it arrives, the difference being due almost entirely to local consumption.

There were 2,052 works in progress under Revenue Officers in the period treated of, or 125 more than in last week, the increase being chiefly in the Hassan and Kolar Districts, and an increase in the daily average of 11,322 persons employed thereon. The daily average numbers of those gratuitously fed rose from 52,471 to 57,974, the increase being chiefly in the Bangalore, Kolar and Mysore Districts. The effect of the circular issued on the 29th March regarding those gratuitously fed will not be apparent for some days, but it is confidently hoped that it will shortly prevent any sentimental or unwise administration of this important form of relief. House-to-house visitation is actively carried on, and the President of the Central Famine Relief Committee reports that the Executive Committee has decided on a special mode of relief, under competent check, of those who from any cause are prevented from participating in cooked food daily at the kitchens.

By the reports of the Amildars of Anekal, Kolar, Mulbagal, and Chikballapur and Honnavalli, some 200 men from the neighbouring districts of the Madras Presidency were, during the week, fed at the relieving houses in the Nundydroog Division. In the Kolar District a nominal roll is kept at each institution, which shows all the particulars required, and the verification of these reports has been accordingly called for. Of those said to be similarly relieved in the districts along the northern border and in the Wynaad, the latest reports received from the Collectors show that, with the exception of 33 at Hindupoor, who were said to be too weak for removal, there were no Mysoreans anywhere in need of such relief. The Chief Commissioner has sent a special officer to Hindupoor to deport such of the 33 as can be removed, and to make arrangements as to the others. He had previously directed that paupers from this Province should not be allowed to burden the finances of the neighbouring districts, but with regard to the emigration of able-bodied coolies, who find congenial employment beyond the frontier, he considers it should find its own level, on the ground that although they have work provided for them within the Province, they must consult their own interests in searching farther a field for easier work or better pay. The Madras Government has been addressed on the subject, as well as the Collectors of the neighbouring districts, who have been informed that every aid will be given in deporting such Mysoreans of the latter class as the authorities there may object to give employment to, and that should they give intimation to this effect, a special officer shall be deputed to carry out the necessary arrangements, but it is clear that all such arrangements should be reciprocally binding on the authorities of the Madras Territories and Mysore Province.

The following statement shows the demand, collection and balance of land revenue from the 1st April 1876 to the end of February last, the figures for March not yet having been tabulated:—

Districts.	Demand.	Collection.	Balance.	Percentage of collection to Demand.
Bangalore	4,30,516	2,45,707	1,84,809	57 per cent.
Kolar	4,41,079	1,60,855	2,80,224	36 ,,
Túmkúr	4,54,790	1,99,979	2,54,811	44 ,,
Mysore	5,07,329	4,23,145	84,184	83 ,,
Hassan	5,96,538	3,58,471	2,38,067	60 ,,
Shimoga	8,64,144	7,07,396	1,56,748	81 ,,
Kadur	3,89,649	2,81,943	1,07,706	72 ,,
Chitaldroog	3,58,242	1,35,743	2,22,499	37 ,,
Total ...	40,42,287	25,13,239	15,29,048	62 ,,

The reports received from the officers of the Professional Department shew (1) that the condition of the coolies they have employed was generally good, except in the Chitaldroog Range; (2) that the labour on the Hirekere-halli tank (Chitaldroog District) was increasing on account of the reduction of rates in Her Majesty's territories; (3) that there was a short supply of labourers on certain works owing to the prevalence of cholera, and the vigorous prosecution of agricultural operations; (4) that the coolies who had proceeded to the Malnad were leaving it for their homes; and (5) that real distress prevails chiefly, if not only, among the aged, the sickly and on those whose physique has, from wandering in quest of easy employment, or from unwholesome, innutritious or insufficient food, been brought low, and for these employment is found on relief works under Civil agency on varying degrees of task-work.

The condition of these men is generally fair, and they fall readily in with the piece-work system, some of them earning good wages, by undertaking in self-organized gangs, extra work. It is gratifying to add that this system has called forth the spirit of self-help among the labouring classes, and that lazy workers have been refused admittance into, or expelled from, such well-ordered gangs.

J. PUCKLE,
On Special Duty.

PROVINCE OF MYSORE.

(No. 8.)

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, dated 13th April 1877.

The Board submit to Government the relief reports for the week ending 7th April 1877, with maps of the districts noted in the margin. The Collector of Malabar has not yet found it necessary to start relief operations and the report is blank as usual; the Kistna and Kurnool reports are telegraphic.

Madura. North Arcot. Chingleput. Cuddapah. Salem. Bellary. Coimbatore. Nellore.

2. *Prices*—In Kistna are nearly stationary, but ragi is somewhat cheaper than in last week. This grain has also fallen in Nellore, but rice and cholum have risen in a few places in the district. In the Cuddapah district, price of rice, cholum and ragi have fallen in Madnapalli, and ragi generally shows tendency to fall. Cholum has risen in Cuddapah, Sidhout, Pullempett and Budwail taluks. In Bellary prices are nearly stationary, but show tendency to fall, especially in the more accessible taluks. The prices of rice (6·48 seers), ragi (7·76) and cumboo (7·52) are very high in Pennakondah, but cholum (9·27) is cheaper there than the average of the district. Prices in Kurnool are nearly stationary, but there is a slight fall in those of dry grains owing to importation. In Chingleput there is no change, and, except as regards ragi, which has fallen at nine stations chiefly in the north and east, none to call for notice in North Arcot. In Salem rice has fallen in Dharampuri and Oossoor, ragi in Dharampuri and Ahtur, and cumboo in Tripatore; there are no other fluctuations of importance. In Coimbatore ragi is considerably cheaper in two taluks and cumboo dearer in them; otherwise there is little change. Prices in South Arcot, Trichinopoly, Madura and Tinnevelly are falling. Generally prices are either stationary, or slightly falling,—a condition due doubtless to the recent beneficial showers which give hopes for the future.

3. *Rainfall.*—Showers varying greatly in quantity have fallen in eight of the distressed districts. Rain fell in four taluks of Kurnool, in Udayagiri and Kanigiri in Nellore, at four stations in Cuddapah, nine in North Arcot, five in Salem, six in Coimbatore, four in Madura and three in Tinnevelly. In the margin are given the districts and stations at which an inch or more was registered in the week. The rainfall of 1877 has so far, in almost all districts, exceeded the average, and the water-supply has been much increased by the rains of last month.

District.	Station.	Quantity, inches.
Cuddapah ...	Peelair ...	1·5
North Arcot ...	Vellore ...	1·7
	Chendragherry ...	1·45
Salem ...	Oossoor ...	1·0
Coimbatore ...	Udumulpetta ...	2·5
Madura ...	Malur ...	1·23
	Periakolum ...	1·75
Tinnevelly ...	Strivillipattur ...	2·35

4. *Grants and outlay.*—The grants made up to the 7th April were Rs. 1,13,85,283, against which the outlay was Rs. 1,04,24,467. The following shows the classifications of the expenditure on works in progress so far as details are available:—

	In the week. Rs.	Up to the week. Rs.
Roads—		
New works	88,239	28,55,095
Repairs	95,290	18,88,332
	1,83,529	47,43,427
Irrigation works	27,075	4,54,173
Miscellaneous	47,845	5,60,209
	2,58,449	57,57,809

The proportion of outlay on new roads is decreasing.

5. *Numbers on relief works.*—The district totals compare as follows with last week's figures :—

	31st March.	7th April.	
Kistna	1,875	2,265	+390
Nellore	28,824	15,409	—13,415
Cuddapah	78,902	82,663	+3,761
Bellary	2,25,485	2,29,236	+3,751
Kurnool	2,02,142	2,16,765	+14,623
Chingleput	10,829	7,793	—3,036
North Arcot	29,469	27,448	—2,021
South Arcot	874	299	—575
Madura	8,447	8,373	—74
Tinnevelly	1,736	2,668	+932
Coimbatore	24,217	23,244	—973
Salem	48,175	51,016	+2,841
	6,60,975	6,67,179	+6,204
East Coast Canal	34,970	31,597	—3,373
	6,95,945	6,98,776	+2,831

The numbers are increasing in the Ceded Districts and in Salem, but in Nellore, Chingleput and North Arcot they have fallen. The decrease in *Nellore* is very great, and according to the report has not been accompanied by an increase on the East Coast Canal. No explanation is given. In his telegram dated 3rd April the Collector attributed the decrease to agricultural employment caused by rain and to the refusal of employment to able-bodied people. He is requested to explain the latter statement. Works in Kavali, Rapur, Kundakur and Ongole seem to have been stopped altogether. In these taluks there were 12,704 on the works on 31st March.

6. The details for the Cuddapah District are given in the margin. The decrease in Jamalamadugú is ascribed to the elimination of coolies whoare unable to work, but the explanation is doubtful, as the number gratuitously relieved has increased by 138 only. The Collector's attention is called to the matter. The increase in other taluks in the principal Division is ascribed to the larger numbers seeking employment. The Sub-Division returns are apparently incomplete.

Jamalamadugu	3,515	1,446	—2,069
Pullvendla	10,674	11,890	+1,216
Proddatur	4,967	5,383	+416
Cuddapah	3,413	4,045	+632
Budwail	8,835	9,501	+666
Sidhout	2,162	2,213	+51
Pullempett	10,543	10,973	+430
Kadiri	7,941	7,750	—191
Royachoti	7,211	7,809	+598
Madnapalli	9,577	11,680	+2,103
Voilpaud	10,064	9,973	—91
Total ..	78,902	82,663	+3,761

7. The marginal details of taluk numbers in *Bellary* show very great fluctuations. The increase in Adoni and Bellary taluks where numbers were already excessive, is unsatisfactory and is not explained. The decrease in Madaksira is unexplained, but the causes alleged for Hindupur, *viz.*, reduced wages, and agricultural operations probably account for it. The increase in Harpunhalli is ascribed to influx from other taluks and districts.

Adoni	54,649	56,280	+1,631
Alur	19,735	18,791	—944
Gooty	10,183	10,201	+18
Tadpatri	10,669	11,101	+432
Anantapur	11,390	12,309	+919
Dharmavoram	1,551	1,430	—121
Penkonda	2,336	2,264	—72
Hindupur	811	585	—226
Madaksira	12,044	8,491	—3,553
Raidrug	6,302	6,794	+492
Bellary	41,299	44,101	+2,802
Hospett	16,202	15,595	—607
Sundur	2,987	3,328	+341
Kudligi	7,562	6,728	—834

Total ..	225,485	229,236	+3,751

8. The increase of 14,623 in *Kurnool* is spread over all taluks except Ramalkota, and is ascribed to the return of coolies who were weeded out of the gangs. From Ramalkota a number of coolies were despatched to the East Coast Canal. The decline in numbers in *Chingleput* is ascribed to the coolies having been sent to the railway works (the doubling the line to Arconum), but the explanation is inadequate, as half the decrease occurs in the Madurantakam Taluk. The decrease in *North Arcot* is ascribed to the same cause apparently correctly, as the fall in numbers is chiefly in the divisions adjoining Arconum. In *South Arcot* report from one taluk (Tindivanum) is wanting. In *Madura*, decrease in the Madura and Terumangalam Taluks is counterbalanced by increase in Palni. No State relief works appear to be now in progress in Ramnad. The increase on the relief works in *Tinnevelly* is ascribed to the return of emigrants to their villages. In *Coimbatore* the fluctuations are not important. The increase in *Salem* is principally in the Dharampuri and Kistnagiri Taluks.

9. *Rates of wages.*—In *Cuddapah* the "sliding scale" is said to be in force in three of the sub-division taluks, but the rates paid are not stated. In *Madanapalli* the old scale of wages has been continued under orders of Government. In *Chingleput* wages based on different prices are in force in the same taluk, Saidapet. This is due to the exceptional course allowed of taking prices as quoted in the village bazaars, and not at the taluk head-quarters. As regards other districts, the remarks made by the Board last week generally apply.

Kistna ..	530	442	—88
Nellore ..	4,076	22,267	+17,291
Cuddapah ..	6,129	14,897	+8,268
Bellary ..	82,519	66,551	—15,968
Kurnool ..	33,753	46,841	+13,088
Chingleput ..	6,211	6,473	+262
North Arcot ..	2,060	2,174	+114
South Arcot ..	93	1,256	+1,163
Madura ..	1,484	11,056	+9,572
Tinnevelly ..	415	428	+13
Coimbatore ..	3,129	4,194	+1,065
Salem ..	10,143	16,836	+6,693
Total ..	151,442	192,915	+41,473

10. *Gratuitous relief.*—There has been a large increase in the numbers fed without exaction of labour. In every district, except *Bellary* and *Kistna*, the numbers have risen. The causes are the same as mentioned last week, *viz.*, the inclusion of children under 7 years of age allowed 3 pies each per diem, and the extension of village relief. The returns are still incomplete in the new form prescribed, but the following details are available :—

	In camps and relief houses.	Village relief.	Children of persons on works.	Total relieved.
	No.	No.	No.	No.
Nellore ...	22,267	...	...	22,267
Cuddapah* ...	5,134	4,613	4,036	13,783
Bellary ...	20,898	19,554	26,099	66,551
Madura ...	10,381	675	...	11,056
Coimbatore ...	3,902	292	...	4,194
TOTAL ...	62,582	25,134	30,135	1,17,851

From these figures it would seem that there has been also a large extension in the numbers in relief houses, due probably to destitute persons discovered in village inspections being sent in. In *Nellore* there is nothing but camp and relief house feeding; and the increase of 17,291 is accounted for by the Udayagiri taluk and the Venkatagiri zemindari, which had on 7th April respectively 6,536 and 11,670 in relief houses against none, and 1,145 in the previous week. The distress in the zemindari is very keen, but the Collector is requested to explain the sudden increase. The allowance of 3 pies to children has been very sparingly introduced in *Cuddapah*, and in the report from *Coimbatore* it is stated that the concession is not required as the coolies for the most part earn wages at the higher task rates and can support their children. The Board observe that if the adults do higher tasks they require more food, and the Collector is requested to carry out the orders on the subject. Of the increase in numbers in *Madura*, 7,865 appertain to the taluk of that name. The cause is not stated, and the Collector is requested to report it. The *South Arcot* increase seems to be due to the total of the daily numbers being entered.

11. The outlay in the districts in the week and up to the end of it are reported as follows :—

	In the week.	Up to the week.
	Rs.	Rs.
Relief works	3,81,571	1,00,17,139
Gratuitous relief	44,350	4,07,328
TOTAL ...	4,25,921	1,04,24,467

There is a large increase in the cost of gratuitous reliefs. A memorandum of the grants sanctioned by the Board up to the 12th instant accompanies these proceedings. The amount is Rs. 1,20,99,493.

* Jemmalamadugu taluk omitted.

12. The return of special establishments employed is annexed. The amount of monthly pay, excluding Nellore, is Rs. 83,874; of this Rs. 29,775 are for 70 superior officers.

Statement of Establishment entertained for relief works for the week ending 7th April 1877.

Addl. Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 19TH APRIL 1877.

GENERAL REMARKS.—In Madras 3 inches of rain are reported to have fallen in parts of Kistna, and from 2 to 3 inches in parts of Bellary: there has also been good rain in Tinnevelly, and showers have fallen in all other districts except Coimbatore: general prospects are however said to be unchanged. The total number on relief works is 724,146, an increase on last week (which was however defective by the omission of certain figures from Nellore) of 16,132; there is a decrease of 12,000 in Kurnool, 7,600 in Bellary and 6,600 in Cuddapah, and an increase of 12,400 in North Arcot, 19,400 in Nellore (due to omission of returns of two taluks in last report), 9,000 in Chingleput, and 3,500 in Madura. The numbers relieved gratuitously are 234,115, an increase of 46,139. In Bombay a good shower is reported from Belgaum and slight falls from Ahmednagar, Satara and Sholapur: rain has also fallen in Sind. There has been rain in Mysore: the number on relief works, including those under Public Works supervision, is 63,762, and receiving gratuitous relief 59,444. In the Central Provinces there has been rain and hail in many districts; damage to crops now being threshed is said to have occurred in Bilaspur, Raipur, Bhandára, Saugor and Mandla, but prospects are on the whole fair. In Berar there has been rain, and ploughing is going on. A few showers have fallen in Central India; in Rajputana there has been none: prospects are good. Showers have fallen in most districts of Bengal: prospects are generally favourable. In the North-Western Provinces and Oudh trifling showers are reported only from Agra and Bareilly; the harvest is progressing. In the Punjab rain is reported from every district, and injury to the crops is feared if it continue.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (April 16th)	3·00 at Tirur; 1·93 at Vinukonda; ·66 at Palnad; slight at Nandigama and Sattanapalli.	Where good rain fell ground being ploughed for early crops; *sajja* being sold in places; markets fairly supplied; seers of Rs. 80 weight rice 8·27, *cholum* 11·36, *raggi* 14·07, *cumboo* 11·07; imports in Bezwada rice 11·23 tons on transit *vid* Guntur from Godavery to Nellore; rice 78·12, *cholum* 31·25; number on relief works 2,207, number fed gratuitously by Government 497, ditto by people 1,253; cholera abating, seizures 116, deaths 58, fever slight, small-pox and cattle disease almost general.
Nellore „ 17th)	·10 at Makur; 1·0 at Udayagiri; ·30 at Kandukur; ·80 at Durai.	Average prices second sort rice 7·91 seers per rupee, *cholum* 9·75, *raggi* 12·31, *cumboo* 10·14; imports on behalf of Government none, on behalf of merchants rice 1,114 tons, *raggi* 16 tons, *cholum* 12; on 24th number on relief works including canal coolies 66.061, the increase is due to the non-receipt of accounts of two taluks last week; number fed gratuitously 38,447; this nominal increase is also the result of the receipt of accounts from all stations this week; 85 deaths from cholera, several deaths from other diseases; cholera, small-pox, fever and dysentery prevalent in some taluks; most wells in the south dry; prospects of surviving cattle slightly improved.
Cuddapah („ „)	...	Average prices seers per rupee second sort rice 8·21, *cholum* 9·45, *raggi* 9·29, *cumboo* 9·63; people on relief works 80,509, gratuitously fed 30,409; cholera, 453 deaths; number of cattle died from want of fodder and disease 875; rain reported in 3 taluks.
Bellary („ „)	2·3 at Bellary; 3·5 at Hospett; ·25 at Raidrug; showers in some other places.	Average price second sort rice 7·7, boiled rice at Bellary 9·45, *cholum* or great millet 8·68, Jubbulpore *cholum* at Bellary 9·53, *raggi* or lesser millet 9·05, *cumboo* 8·39, seers of 80 tolas; import, 2,696 tons; accounts from 2 railway stations only; 2,18,280 persons on relief works, net decrease as compared with return for previous week 7,628; principal decrease is in Bellary and Adoni taluks, this is owing to the removal of able-bodied coolies for the purpose of sending to Nellore and to Hubli railway, and the rejection of others who refuse to go to these works; the increase in some taluks is owing to more coolies having gone to relief works; and in Hadgully some more persons from Hyderabad and Dharwar having been temporarily admitted; 79,444 gratuitously fed; increase as compared with return for previous week 13,317, this is owing to the payment of 3 pies to the children of coolies employed on relief works, and to the opening of relief-houses in several villages, 3,908 gratuitously fed by private charity aided by Government grant; cholera decreasing but still in all taluks; small-pox and fever prevalent, but the former decreasing; cattle still perishing in some places from want of fodder; supply of drinking water diminishing, except where rain has fallen in this and last month.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Kurnool (April 17th)	Average fall ·33.	Slight rain in 3 taluks; *cholum*, *raggi* and paddy crops under wells and spring channels in fair condition; cholera, small-pox and fever prevalent; cattle reported to be dying for want of fodder; cholera seizures 296, deaths 157; second sort rice per rupee in Imperial seers 7·28, *cholum* 8·67, *raggi* 10·27, *cumboo* 9·83; number on relief works 2,04,504, gratuitously relieved 39,317, including children under 7 years of age, and excluding 13,794 mostly wrongly relieved by village headmen; under recent orders of Government measures taken to check the abuse; imports Government grain 262 tons in the district; private import 169 tons; the slight rise and fall in the price of grain call for no remark; there was a decrease of 12,261 in the number of coolies, partly owing to emigration to the Nellore canal and partly it is believed to abuse by the village heads of the relief works lately granted them; no internal change in the physique of coolies reported; emigration to the East Coast canal improving; new rate of wages prevail; very severe grain payments continue on 3 works in Cumbum taluk, notwithstanding the stringent orders sent to Mr. Farewell on the subject.
North Arcot („ „)	0·58 average of 6 stations.	Average prices in Government seers second sort rice per rupee 8·9, *cholum* 10·7, *raggi* 11·1, *cumboo* 9·2, wheat 5·7; relief works' coolies 40,069, persons gratuitously fed 2,482; cholera still prevalent; fever and small-pox in some places; pasture scarce, cattle dying of starvation in some parts.
Chingleput („ „)	·22	Average prices per rupee second sort rice 9·45, *raggi* 11·40, *cumboo* 10·78, *cholum* 10·74 seers of 80 tolas; imports of grain 206 tons; water very scarce; number on relief works 17,144, there is a large net increase of 9,208 persons as compared with the previous week, of this increase 7,643 is number employed in the Umbathur and Arconum railway line, there is also an increase of 1,387 persons in number on relief works in Madarantakum, owing partly to number employed last week under deputy tahsildar not having been included for that week's return and partly to more labour being available to the D. P. W. consequent on the *raggi* harvest having been brought to a close; number gratuitously fed 6,933; cholera, small pox, fever and dysentery more or less prevalent throughout the district; pasturage *nil*.
South Arcot („ „)	·5 at Trinconmally; ·1 at Tindivanum and Villaparum on 9th.	Rice second sort 10¼ seers, *cumboo* and *raggi* 13½ each, *cholum* 12½; no grain imported by sea; number employed excluding Mercanum which report not received, 331; gratuitously fed 195; cholera deaths reported 206 out of 280 attacks; cattle disease in some villages; pasturage deficient.
Tanjore („ „)	Slight rain in one village of Combaconum and in few of Puttukatta taluks.	Prices, rice 9⅛, *raggi* 11⅝, *cumboo* 11, and *cholum* 13¾ seers; imports, rice 3,319, dry grains 103 tons; relief works none; deaths from cholera 71; cattle disease in Tanjore, Combaconum, Mayavaram and Nanilam taluks, no loss of life reported, fodder available.
Trichinopoly („ „)	·37 at Turaiyar; ·52 at Trichinopoly; ·15 at Udayarpaliam.	Second sort rice 8½, *cholum* 16½, *raggi* 11½, *cumboo* 10⅛ seers; import of grain for week ending Saturday 121 tons; no relief works; gratuitously fed on 14th instant by public subscription 1,708; cholera 171 seizures, 84 deaths; small-pox 441 attacks, 36 deaths; pasture scanty; *vekkai* among cattle in Udayarpaliam taluk.
Madura („ 18th)	·10 at Dindigul; 1·12 at Periacolum.	Average price rice second sort 8⅝, *cholum* 9¾, *raggi* 10⅜, *cumboo* 10¼ seers; import rice 2,012, other grains 65 tons; number on relief works on the last day of the week 13,626, increase due to new works started in Polany and Madura; charitable relief 4,494, excess attributable to relief camps and houses opened last week; public health generally good; cholera and small-pox continue, deaths 211; pasture scarce, except in Periacolum, Shevagunga zemindari; drinking water scarce; cattle doing better.
Tinnevelly („ 17th)	Good rain in Sunkernarcovil and slight showers throughout district.	Average prices per rupee second sort rice 8¾ seers of 80 tolas, *cholum* 10½, *cumboo* 11 and *raggi* 11⅜; import of grain, rice 1,265 and *cumboo* 82 tons; number on relief works 1,748; number gratuitously fed 2,044; moderate freshes in minor rivers and a few tanks received partial supply; cholera still bad and small-pox severe in Sunkerninarcovil; cattle disease continues with slight mortality; decrease in number on relief works owing to coolies finding work in sinking private wells at higher wages.
Coimbatore („ „)	*Nil*	Prices nearly stationary, rice (slight rise) second sort 7·74, *cholum* (slight fall) 9·39, *raggi* (slight rise) 9·64, *cumboo* (rise) 9·61; imports, estimated rise 876 tons, other grains 618; cholera prevalent in all taluks, attacks 612, deaths 447; fever in Collegal, Erode and Caroor, abating in Sattiamangalum; small-pox in Bhowany, Caroor, Palladum, Pallachy and Erode; cattle poor, losses in Collegal, Sattiamangalum, Oodumulpetta and Bhowany; fodder and water scarce; cultivation to a small extent on lands visited by rain in all taluks except Collegal; on relief works 24,140, gratuitously fed 5,023; no unfavourable report respecting physique of work-people.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Salem (April 17th)	·56	Prices of grains, seers of 80 tolas, rice 8 3/16, *raggi* 9 9/16, *cumboo* 9, *cholum* 9⅝; imports of all grains 1,300 tons; number on relief works 53,000, number gratuitously fed 24,830, ditto by private subscription 460; cholera in all taluks; gratuitous relief number rising 44 per cent., due to extensive villagewar relief.
Malabar („ „)	·65	East, north-east and south markets well supplied; imports by sea and land, rice 3,840, *raggi* 17¼, *cholum* 1,259 tons; exports, rice 1,713, *raggi* 637 tons; prices of rice slightly risen in Cherakal and Ponany, fallen or stationary elsewhere, highest 7⅞ Indian seers in Wynaad lowest 11⅜ in Kotteyam, average 9⅜ Indian seers per rupee, *raggi* 11¼ Indian seers per rupee in Wynaad, average elsewhere 14¼; small-pox and cholera in 7 taluks, deaths from latter 246; cattle healthy; pasture good in Cochin, improving in Wynaad and Palghaut, failing elsewhere; 2,437 coolies on Kolathur roads. *General Remarks.*—General prospects unchanged; exports of grain by rail from Madras 7,691 tons during week ending 16th April 1877.
Bombay— (April 19th)		
Sind—(„ 18th)		
Kurrachee ...	...	Heavy rain and hail in Kohestan on 14th, thunder-storm in Kurrachee on 16th; small-pox in Sehwan taluka, 5 fresh cases in Kurrachee.
Shikárpur ...	...	Wheat harvesting general; in Lárkána taluka grain crops destroyed by insects; slight showers of rain on 12th, 15th and 16th; fever general; cattle disease in 5 talukas.
Hyderabad ...	...	Rain with hail on 14th in Hyderabad and Mirpur; weather cooler; cattle disease in Shahdápur taluka; small-pox and fever still continue.
Guzerat—(April 18th)		
Ahmedabad ...	...	No change.
Kaira ...	...	Weather warm; public health good.
Surat ...	...	No change.
Broach ...	...	Small-pox in all talukas except Wágra; fatal cases in Broach, Hánsot and Ankleswar; heat excessive; crops fully collected.
Khandesh and Ndsik.—(April 18th)		
Khandesh ...	...	Small-pox continues.
Násik ...	...	No change.
Konkan—(April 18th)		
Tanna ...	...	Land being prepared for next monsoon crops; small-pox continues in 4 talukas.
Deccan—(April 18th)		
Poona ...	...	Few cases of cholera in some talukas; small-pox in mild form throughout the collectorate.
Ahmednagar ...	·15	Cholera in 3 talukas, cases 89, deaths 22.
Sholapur ...	·45 on night of 17th.	Two deaths from cholera in Sholapur.
Satara ...	·19 in Walwa and ·2 in Khanapur.	284 deaths from cholera.
Southern Mahratta Country—(April 18th)		
Belgaum ...	1·54	Deaths from cholera 229.
Dharwar ...	...	Deaths from cholera 343.
Kaládgi ...	...	Deaths from cholera 350 in 7 talukas; about 50 deaths from small-pox in Bágalkot.
Kattywar and Gaekwar's Territory—(April 18th)		
Rájkot ...	...	No change in weather and health.
Wadhwán ...	...	Cattle disease in Potri and Jhinjhuwára; small-pox in latter taluka.
Baroda ...	...	Small-pox continues slightly in the city. *General Remarks.*—Good shower of rain in Belgaum and slight fall at Satara, Sholapur and Ahmednagar; rain also in Sind where, as well as in districts mentioned last week, small-pox continues; cholera prevalent in Southern Mahratta Country and parts of Deccan.
Bengal— (April 19th)		
Chittagong ...	*Nil*	Cholera almost disappeared from head-quarters sub-division, but appearing in Cox's Bazar.
Noakholly ...	3·14	Stray cases of cholera reported from Begumgunge, Bama, and Dalál Bazar.
Chittagong Hill Tracts...	·60	Cholera almost entirely abated.
Hill Tipperah ...	·98	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Backergunge ...	8·26	Much sickness in the district; sporadic cholera in thanas Nalchiti, Backergunge, Gournadi, Mendilgunge, Sharúpkai, Motbarai, Gulshakháli and Mirzapungi *; also fever in thanas Nalchiti, Backergunge and Mirzagunge; health of cattle everywhere good.
Furreedpore ...	1·01; 2·99 in Madareepore; 1·90 in Goalundo.	Cholera and dysentery in some parts of the district.
Dacca ...	1·92	Weather now fine and favourable; a good deal of cholera.
Mymensingh ...	·81	
Tipperah ...	1·58	
24-Pergunnahs ...	·10	Public health generally good; a few cases of cholera reported from thanas Hasanabad and Magra.
Jessore ...	·95; 7·19 in Bagirhat.	
Nuddea ...	3·14	
Moorshedabad ...	2·46	A few cases of cholera in some localities.
Pubna ...	·99; 2·05 in Serajgunj.	A few cases of cholera and small-pox here and there.
Rajshahye ...	·34	Several cases of cholera in Beauleah, nearly all of which proved fatal; a good many cases also reported from several thanas.
Bogra ...	·90	Cholera slightly prevalent.
Dinagepore ...	*Nil*; 1·74 in Roygunge.	
Rungpore ...	*Nil*; 2·09 in Kurigram; 1·15 in Gaibanda; ·82 in Baghdogra.	Cholera is stated to have broken out at Chelmari in Kurigram subdivision.
Cooch Behar ...	3·24; 2·97 in Mekhaliganj; 1·79 in Mátabhánga; 1·65 in Dinháta.	Public health good.
Jalpáiguri ...	·38	
Darjeeling ...	·35	
Midnapore ...	·39	
Howrah ...	3.07	
Hooghly ...	·20	Cholera somewhat abated.
Burdwan ...	1·11; ·68 in Jehanabad; 1·03 in Boodbood; 1·83 in Culna; ·41 in Raneegunge; 1·98 in Cutwa.	Public health fair.
Bankipore ...	·86	
Beerbhoom ...	·49	
Sonthal Pergunnahs ...	1·94; 1·20 in Deoghur; ·21 in Godda.	Health generally good.
Bhágalpur ...	*Nil*	General health very good, but cholera cases are frequent in parts of the town.
Monghyr ...	*Nil*; ·42 in Jamooee; ·03 in Begoo Serai; ·35 in previous week.	
Purneah ...	*Nil*; 1·56 in Arrareah; ·87 in Kishengunge.	
Maldah ...	·29	Cholera still bad, 100 deaths reported.
Durbhunga ...	*Nil*	
Mozufferpore ...	*Nil*	A few cases of small-pox at Belsund and Shinhar, otherwise general health good.
Sarun ...	·011; ·159 in Gopálganj.	General health good.

* *Sic* in telegram.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*concluded.*		
Chumparun ...	*Nil*	
Patna ...	*Nil*	Sporadic cases of cholera and small-pox.
Gya ...	·31	Public health good.
Shahabad ...	*Nil*	
Hazáribágh ...	·78	Health good.
Lohardugga ...	·61	
Palamow ...	·75	A few cases of small-pox, 1 in Palamow, and 1 case of cholera at Ranchi, otherwise general health good.
Manbhoom ...	1·29	Some cases of fever of a bad type in neighbourhood of Purulia.
Singhbhoom ...	1·04	Health good.
Balasore ...	1·04; 3·71 in Bhuddruck.	Sporadic cholera very bad.
Cuttack ...	1·41	
Pooree ...	·27; ·92 in Khoordah.	A few cases of cholera.
		General Remarks.—There has been rain in many districts during the week, and although in some cases injury has been done by excessive rainfall, the general prospects are favourable; the harvesting of the cold weather crops is almost complete.
N. W. P. & Oudh—		
Benares (April 18th)	*Nil*	*Rabi* cut; treading out of grain delayed by cloudy weather.
Allahabad („ „)	...	No change.
Jhansi („ 19th)	...	No change; cattle disease reported in some places.
Agra („ 18th)	·1 to ·5 in two Parganas.	Crops being gathered.
Meerut („ „)	...	Weather clear; crops being harvested.
Bareilly („ „)	Slight rain.	Weather now clear.
Almora („ 16th)	...	Weather unsettled until 13th; since then it has every appearance of having cleared; partial damage by hail in a few villages.
Lucknow („ 18th)	*Nil*	Prospects fair.
Sitápur („ „)	„	Harvesting progressing.
Fyzabad („ „)	...	No change.
Punjab— (April 18th)		
Delhi ...	·1	Health good.
Hissar ...	·2	Rain with hailstorms in the Rohtak district; crops good; harvesting in progress, and health generally good.
Umballa ...	·2	Health and crops good in each district.
Jullundur ...	1·4	
Lahore ...	·9	
Rawalpindi ...	1·5	Rain still pouring; damage to crops by rain apprehended; health good.
Mooltan ...	·5	Health and crops good in both districts.
Dera Ismail Khan ...	1·5	
Peshawar ...	·3	Crops have suffered from excessive rain; health good.
		General Remarks.—Up to the present there has been the prospect of an abundant harvest, but unseasonable rains may damage the ripening crops.
Central Provinces—		
Upper Godávari (Apl. 14th)	1·16	Cloudy; no crops on ground; health good; prices steady.
Sambalpur ...	·48	Cloudy and close; ploughing continues; few cholera cases reported.
Biláspur ...	·45	Cloudy with heavy storms and rain on 13th; wheat in threshing floors damaged; *kharif* ploughing commenced; prices slightly risen.
Raipur ...	·74	Rain has been destructive to grain on threshing floor and in transit; cholera abating; prices stationary.
Bálághát ...	...	Cloudy; *rabi* harvest continues; health good; prices stationary.
Chhindwára ...	...	*Rabi* gathered; health good; prices steady.
Cháuda (April 18th)	·81	Cloudy; threshing *rabi* almost completed; small-pox and cattle disease continue; prices stationary.
Betúl („ 16th)	Slight rain on 15th.	Threshing *rabi* continues; health good; cattle disease in places; prices stationary.
Bhandára („ 17th)	2·20	Rain caused much damage to grain on threshing floor; fever and cholera continue; prices easy.
Nágpur („ 18th)	1·10	Violent storms on 15th and 16th; threshing delayed by unsettled state of weather; small-pox in Kátol tahsil; prices steady.
Wardha („ 18th)	·88	Rain with severe thunder and lightning; small-pox slightly prevalent.
Nimár ...	...	Cloudy; *kharif* ploughing; small-pox continues; prices slightly risen.
Hoshangabad ...	...	Health good; prices unchanged.
Narsinghpur ...	...	Reaping commenced; threshing and winnowing continue; measles prevalent; prices steady.
Jubbulpore ...	1·33	Heavy hail-storm on 13th; crops damaged where left uncut.
Saugor (April 18th)	·78	Hail-storm on 13th; much damage done to crops; reaping continues; prices rising.
Seoni ...	1·65	Rain with heavy hail-storms; reaping and winnowing continue; small-pox prevalent.
Mandla ...	1·72	Rain and hail seriously damaged crops; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—*concld.*		
Damoh ...	·15	*Rabi* harvest complete; prices stationary. *General Remarks.*—Rain in districts with violent storms and hail; *rabi* damaged in some districts, but prospects on the whole are fair; prices steady.
British Burma— (April 19th)		
Arrakan Division ...	...	Eighty-two deaths in Akyab town from cholera, including 8 Europeans; a comparative decrease in the number of deaths during 15th and 16th; cattle disease in 2 townships of Akyab district; no cholera or cattle disease in Kyoukphyoo and Sandoway districts.
Pegu Division—		
Rangoon ...	...	Public health and agricultural prospects good.
Thonkwa ...	...	Health generally good; 1 case of cholera at Maoobin.
Bassein ...	...	Eighteen deaths from cholera in Bassein town; cholera also in district.
Henzada ...	...	Public health good.
Prome ...	...	Cholera in Prome, 12 deaths; in Padoung sub-division 2; 6 cases of small-pox, otherwise healthy.
Thayetmyo ...	...	Report not received.
Tenasserim Division ...	...	Public health fair; slight cholera at Moulmein, also a few cases of small-pox at out-stations.
Assam—		
Gauhâti ...	...	Report not received.
Sylhet (April 19th)	0·50	*Bura* crops being reaped, other sorts being sown; cholera and small-pox still reported.
Mysore and Coorg— (April 19th)		
Bangalore	*Nil*	Ordinary rice selling from 12 to 15 pounds per rupee; deaths by cholera 1,390 in Mysore and 53 in Coorg; daily average number on relief work and charitably relieved according to condition; statement last tabulated is in—

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Wednesday, the 28th March 1877.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble Sir Arthur Hobhouse, Q.C., K.C.S.I.
The Hon'ble Sir E. C. Bayley, K.C.S.I.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B.
The Hon'ble Sir J. Strachey, K.C.S.I.
Major-General the Hon'ble Sir E. B. Johnson, K.C.B.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble D. Cowie.
The Hon'ble Mahárájá Narendra Krishna.
The Hon'ble J. R. Bullen Smith, C.S.I.
The Hon'ble F. R. Cockerell.
The Hon'ble B. W. Colvin.
The Hon'ble Mahárájá Jotíndra Mohan Tagore.

N.-W. P. LOCAL RATES ACT, 1871, AMENDMENT BILL.

The Hon'ble MR. COLVIN presented the Report of the Select Committee on the Bill to amend the law relating to assignments from the general Provincial Fund established under the North-Western Provinces Local Rates Act, 1871.

The Hon'ble MR. COLVIN having applied to the President to suspend the Rules for the conduct of business,

The President declared the Rules suspended.

The Hon'ble MR. COLVIN then moved that the Report be taken into consideration. He said that the amendments made by the Select Committee in the Bill now before the Council were limited to a few verbal amendments which were found necessary to bring the new sections and the old law into harmony. No other amendments had been made whatever, and he did not think it was necessary to add anything to the remarks which he had made last week on this Bill.

The Motion was put and agreed to.

The Hon'ble MR. COLVIN then moved that the Bill as amended be passed.

The Motion was put and agreed to.

NORTH-WESTERN PROVINCES LICENSING BILL.

The Hon'ble MR. COLVIN also presented the Report of the Select Committee on the Bill for the licensing of certain trades and dealings in the North-Western Provinces.

The Hon'ble MR. COLVIN having applied to the President to suspend the Rules for the conduct of business,

The President declared the Rules suspended.

The Hon'ble MR. COLVIN then moved that the Report be taken into consideration. He said that before formally making the motion which stood in his name in the notice paper, it was perhaps right that he should state the reasons for certain changes which had been made in the present Bill by the Select Committee.

The Bill as now presented differed a good deal from the one which was originally presented to the Council. The first and most important change was that the grades of taxation had been abolished. In the Bill as introduced there were ten of these grades, ranging from Rs. 64 to Rs. 2. As it now stood there were only three rates of taxation upon each class, Rs. 16, Rs. 8 and Rs. 2. This change had been made in accordance with the wishes of the Government of the North-Western Provinces, which found after calculating the charges it had to meet, and reconsidering the funds at its disposal, that the taxes, if imposed at the lower rates, would yield sufficient for its requirements. The Bill had been altered accordingly. There were no doubt some theoretical advantages about the former scheme, because, besides yielding larger profits, it would have made the incidence of the tax somewhat less unequal. In the face however of the opinion of the Local Government that the Bill in its present shape would yield sufficient money, the Committee were not prepared to carry taxation any further. In its new shape the Bill did not differ in any material respects from the one which was introduced and abandoned in 1871. The only material difference was that the rates of duty leviable on the first and second classes of traders were somewhat higher than they then were. The next change introduced in Committee was that special notices which had to be given to each person who was liable to the tax had been dispensed with. Now that the Bill grouped all trades under three classes, and assigned a fixed rate of duty for each class, the Committee thought that every person liable to the tax would have ample opportunity of informing himself of the amount due from him. They thought also that the service of special notice on each person might possibly lead to petty exactions. Power however had been reserved to the Local Government to prescribe notices in any particular case or class of cases in which it might think them necessary.

The third change was that a maximum of two per cent. upon incomes, which was adopted to guard against over-taxation, had been abandoned. With the very low rates of duty now proposed, this seemed to be an unnecessary precaution. A further change was that the power of appeal had been taken away. In the Bill as introduced any person who had been assessed and was dissatisfied with the amount with which he was charged had the power within fifteen days of appealing to the Commissioner. But the present Bill left so little discretion to the Collector that the right of appeal seemed scarcely necessary. The only point which the Collector actually had to decide was whether a man

exercised a trade or profession or not, and secondly, whether his income was over Rs. 200. The first was a very simple matter of fact, and the second was a point upon which precise proof was very rarely procurable. And in view of this, and the fact of there being no likelihood of the Act being worked harshly towards the lower classes of traders, it was thought better to withdraw the right of appeal.

Lastly, a few minor changes had been made in the Schedule of Trades. A few had been added to the first, and a few to the second class, and one or two had been taken away. But whatever had been done, had been done under the recommendation of the Local Government. The Select Committee did not think it safe to act on their own knowledge, and allowed themselves to be guided entirely by the recommendations they had received. In conclusion, he might say that he had received a telegram from the Lieutenant-Governor of the North-Western Provinces, expressing his concurrence in, and approval of, all the amendments which the Bill had undergone in Committee.

The Motion was put and agreed to.

The Hon'ble MR. COLVIN then moved that the Bill as amended be passed.

His Excellency THE PRESIDENT said:—"My hon'ble friend Sir John Strachey began his singularly able Financial Statement by observing that it is the first Financial Statement made before the public in this Council since the year 1872. I am glad that in the first year of my administration the Government of India has had the opportunity of submitting its whole financial policy to the discussion of this Council. Whatever may be thought of the manner in which we have availed ourselves of this opportunity, no one I think can justly say that it has been half-hearted, reserved, evasive or ambiguous. Rarely has any Government been able to take the public into a confidence so complete as that which on the present occasion it has at least been our honest endeavour to facilitate; not only about our acts, but even, I might almost say, our inmost thoughts; our anxieties and hopes, our regrets and aspirations. When this Government was deprived of the experienced aid of my friend Sir W. Muir, Sir John Strachey, at the request of the Secretary of State, under a high sense of personal obligation to public duty, consented to exchange a very comfortable and easy post for a very anxious and laborious one. But to the discharge of its difficult duties, during a difficult period, few men could have brought greater courage and capacity than those which received last week, from my hon'ble friend Mr. Bullen Smith, such generous, though well deserved, recognition.

"There is one of the announcements made by my hon'ble colleague in his Financial Statement which no hon'ble member has yet noticed, but on which I congratulate myself, and on which I think the public may also be congratulated. I allude to the announcement that although indeed we cannot at present apply the new rule to existing works, yet the expenditure on all unremunerative public works which may hereafter be undertaken will be carefully excluded from Extraordinary Account. This is a change of policy decided on by the Secretary of State when Lord Northbrook was Viceroy; but it has never before been publicly announced as the rule we intend to follow. Now it may be said that this rule is a mere reform in book-keeping; in fact that it is a very small matter. I admit that it is a small matter if it goes no further; but it will certainly not be my fault, nor that of my hon'ble colleague, if it does not go a great deal farther; and if it only goes far enough, I maintain that it is a very great matter. So far as it does go, it is a step in the right direction; for I share the doubt expressed by Sir John Strachey whether our Extraordinary Budgets have not been altogether a mistake. In the course of an official life which at least began early, it has frequently been my hard lot to grope my way with the greatest difficulty through the financial accounts of Continental Governments, in order to place before my own Government an accurate estimate of their financial situation. And a system which I have more than once officially described as vicious and misleading,—a system which has, I confess, sorely tried my temper when adopted by other Governments—is certainly not one which I can regard

The Hon'ble MR. COLVIN then moved that the Report be taken into consideration. He said that the amendments made by the Select Committee in the Bill now before the Council were limited to a few verbal amendments which were found necessary to bring the new sections and the old law into harmony. No other amendments had been made whatever, and he did not think it was necessary to add anything to the remarks which he had made last week on this Bill.

The Motion was put and agreed to.

The Hon'ble MR. COLVIN then moved that the Bill as amended be passed.

The Motion was put and agreed to.

NORTH-WESTERN PROVINCES LICENSING BILL.

The Hon'ble MR. COLVIN also presented the Report of the Select Committee on the Bill for the licensing of certain trades and dealings in the North-Western Provinces.

The Hon'ble MR. COLVIN having applied to the President to suspend the Rules for the conduct of business,

The President declared the Rules suspended.

The Hon'ble MR. COLVIN then moved that the Report be taken into consideration. He said that before formally making the motion which stood in his name in the notice paper, it was perhaps right that he should state the reasons for certain changes which had been made in the present Bill by the Select Committee.

The Bill as now presented differed a good deal from the one which was originally presented to the Council. The first and most important change was that the grades of taxation had been abolished. In the Bill as introduced there were ten of these grades, ranging from Rs. 64 to Rs. 2. As it now stood there were only three rates of taxation upon each class, Rs. 16, Rs. 8 and Rs. 2. This change had been made in accordance with the wishes of the Government of the North-Western Provinces, which found after calculating the charges it had to meet, and reconsidering the funds at its disposal, that the taxes, if imposed at the lower rates, would yield sufficient for its requirements. The Bill had been altered accordingly. There were no doubt some theoretical advantages about the former scheme, because, besides yielding larger profits, it would have made the incidence of the tax somewhat less unequal. In the face however of the opinion of the Local Government that the Bill in its present shape would yield sufficient money, the Committee were not prepared to carry taxation any further. In its new shape the Bill did not differ in any material respects from the one which was introduced and abandoned in 1871. The only material difference was that the rates of duty leviable on the first and second classes of traders were somewhat higher than they then were. The next change introduced in Committee was that special notices which had to be given to each person who was liable to the tax had been dispensed with. Now that the Bill grouped all trades under three classes, and assigned a fixed rate of duty for each class, the Committee thought that every person liable to the tax would have ample opportunity of informing himself of the amount due from him. They thought also that the service of special notice on each person might possibly lead to petty exactions. Power however had been reserved to the Local Government to prescribe notices in any particular case or class of cases in which it might think them necessary.

The third change was that a maximum of two per cent. upon incomes, which was adopted to guard against over-taxation, had been abandoned. With the very low rates of duty now proposed, this seemed to be an unnecessary precaution. A further change was that the power of appeal had been taken away. In the Bill as introduced any person who had been assessed and was dissatisfied with the amount with which he was charged had the power within fifteen days of appealing to the Commissioner. But the present Bill left so little discretion to the Collector that the right of appeal seemed scarcely necessary. The only point which the Collector actually had to decide was whether a man

without reluctance as the system to be permanently pursued by the Government of India. The French Government, to its credit, has already abandoned that system. I have heard it said that our own system is exempt from the objections which apply to the Extraordinary Budgets of Continental States; since we do not put into our Extraordinary Budget any expenditure which ought properly to be carried to Ordinary Account. But I do not think we are entitled to lay that flattering unction to our souls. As a matter of fact, we have put into our Extraordinary Account many charges which ought to have been carried to Ordinary Account. However Spartan may be our financial virtue, still we are but human; and in my opinion, the whole system of Extraordinary Account is a perilous temptation to human weakness. A great English thinker, Mr. Burke, in his character of George Grenville, has held up to contempt those persons who mistake regulations for Commerce and figures for Finance; and certainly I do not pretend to say that good book-keeping is in itself tantamount to good finance. But I do say that it goes a long way towards good finance, and that it is the primary condition of a sound financial situation. I think that our book-keeping has hitherto not been so good as it might be; and I say this with some confidence, although I say it in the presence of a gentleman whom I believe to be one of the ablest and the most conscientious Financial Secretaries which this or any other Government has ever had the good fortune to possess. It is quite impossible for me to express in terms too strong the acknowledgments which, on my own behalf, I desire to add to those of Sir John Strachey, of the valuable services which this Government has received, and is receiving, from Mr. Chapman. But I am certain that Mr. Chapman himself feels as strongly as any man that our system of account-keeping, which he himself has so greatly improved, is not yet as simple as might be. Indeed I may say that I have always found in him one of the strongest advocates for its reform. I am sure that he feels what I feel myself, that no man who has studied as intelligently as he has studied the past history of Indian finance, will regard as unfounded the fears expressed by my hon'ble colleague, that the system hitherto followed, of jumbling-up together remunerative and unremunerative public works in an account, to which the term 'extraordinary' is extremely applicable, has tended to make us less chary than we should otherwise have been in spending money upon them. For my own part, I am not at all afraid of the deficits which we might have to show by a change of system. What I do regard with fear and distrust is everything which may tend to conceal those deficits unduly from our own eyes or from those of the public. The first step towards getting rid of deficit is to look it frankly in the face. Nature abhors a vacuum; and the recognition of a financial vacuum is so revolting to ordinary human nature, that our best chance of filling it up consists in never losing sight of it. My hon'ble colleague has shown that, during the last seven years, while our expenditure has remained stationary, our income has steadily increased; and I am convinced that our financial character has everything to gain, and nothing to fear, from public criticism, if only public criticism be furnished with accurate data for the guidance of impartial judgments.

"There is another subject by no means unimportant, although the Government is not in a position to afford Hon'ble Members an opportunity of practically expressing their opinions by recording their votes upon it. It was for that reason no doubt that my hon'ble friend reserved it for the close of his financial statement; but in the arrangement of my own remarks upon that statement it will, I think, be convenient that I should say at once what little I have to say about it. I refer to the present position of this Government in reference to the Cotton-duties. Now I am not going to tax the patience of the Council with a long disquisition on those duties. I shall abstain from doing so for three very sufficient reasons. In the first place, there is now under discussion no measure which is even remotely connected with the Cotton-duties. In the second place, I have the misfortune to differ on this subject from the opinions entertained about it by many able and hon'ble gentlemen who have given to the consideration of it prolonged attention. Some of them are men of great eminence. Several of them are possessed of wide experience and high authority on fiscal and commercial questions, and not a few of them

are my esteemed personal friends. Consistently therefore with the sincere respect I entertain for those who advocate the indefinite maintenance of the present import-duties on Cotton-goods, I could not adequately justify my dissent from their convictions without entering into a somewhat lengthened and detailed examination of the points on which we differ. But to do this when there is no measure before us either to defend or oppose, would in my opinion be an inexcusable waste of the valuable time of this Council. There is only one view of the question to which I feel obliged to demur. It is that which assumes that, on the one hand, those statesmen who have advocated the permanent maintenance of our present Cotton-duties have done so regardless of the debt which, as English statesmen, they owe to English interests; or that, on the other hand, those who, like myself, earnestly desire the removal of these duties from our customs-tariff, are recklessly indifferent to the duty which, as Indian Legislators, we owe to Indian interests. On this point I cannot too cordially re-echo the language held by my hon'ble friend Mr. Bullen Smith. My pride and confidence in the character of my countrymen are far too great to admit within the scope of my liveliest imaginative efforts, such a notion as that the maintenance of the Cotton-duties has ever been advocated by English statesmen without reference to English interests. But I must also add that I am not prepared to concede to the advocates of these duties a monopoly of disinterested devotion to the interests of India. To say the truth, I am all the less disposed to do so for this reason: with those from whom I reluctantly differ on the question of the Cotton-duties, I cannot, and do not, presume to claim equality in tested ability, or recognized authority: but I do claim equality with all of them in the conscientious desire to deal justly and truly by the interests of this Empire. Therefore I will not yield to any man an inch of foothold on that one and only ground within whose special limits every honest man is entitled to consider himself the equal of its most illustrious occupant. Nor indeed am I able to recognise much reality in the ingenious distinction which has been suggested between the interests of Manchester and the interests of England. The so-called interests of Manchester are a great vital organic part of the whole English body-politic; and though it may be convenient to do so in theory, it appears to me quite impossible in fact, or in act, to separate the part from the whole. If a man stabs me in the hand or the foot, I am not comforted by his assurance that he recognises a distinction between my limbs and myself; that he has only been attacking my foot, or my hand; and that he had no intention of inflicting any personal injury on me He *does* inflict a personal injury upon me; and the pain and hurt of that injury I feel, not only in the spot where I am wounded, but in every part of my body. But I do not think this question is primarily or exclusively a Manchester question. Political Economy is either a science or it is not. If it is a science, the laws of it are not affected by locality or climate. They will assert themselves as inexorably in one part of the world as in another, whether they are followed or disregarded. No one I presume will assert that a financial principle, if sound at all, is not equally sound in every case to which it is applicable. In the present stage of economic science, few men venture to advocate openly protective duties, on the ground that they are protective. The advocates of such duties generally try to persuade themselves and their opponents that the duties which practically protect a young manufacture are not maintained for the purpose of protecting it. Now I am not so pedantic a political economist as to deny, or even to doubt, that in many quite conceivable circumstances, *bonâ fide* protective duties may be proper duties. But I like to call a spade a spade. And I congratulate my hon'ble friend Mahárájá Narendra Krishna upon having the courage of his opinions. I have no doubt that my hon'ble friend, the Mahárájá, unconsciously uttered the secret sentiment of many hearts besides his own, when he frankly told us that he hoped our present Cotton-duty would be maintained, because he believed it to be necessary for the protection of our cotton-manufactures. My experienced predecessor, however, in a statement of great ability, which he made two years ago on this subject, observed that 'Indian statesmen have all acknowledged the principles of recent English financial legislation to be sound, al-

though, owing to the differences between the two countries, it has been impossible to carry them out as completely in India as in England. Indian statesmen,' he said, 'have never regarded Customs-duties as desirable for the purpose of protecting the products or manufactures of India. In India, equally as in England, protection has been regarded as an exploded doctrine, contrary to the general interests of the country which imposes protective duties.' I accept and endorse this statement; and if I object to the present Cotton-duties, it is because they appear to me inconsistent with sound financial principles, and as such, injurious to the interests of India. Now this opinion may be right or wrong. Like all human opinions, it is open to discussion; but as my hon'ble friend Sir John Strachey has appealed to my opinion, I feel it due to him, due to myself, and due to the public, that I should assure this Council that my hon'ble friend has not mis-interpreted or mis-stated my opinion. In saying that the Secretary of State has left to the Government of India a large discretion on this subject, my hon'ble friend Mr. Bullen Smith did no more than justice to the common sense of my noble friend the Secretary of State. Yes, the Secretary of State has left to us a large discretion, but he has not left to us an unlimited discretion. The Secretary of State has distinctly affirmed and established the principle by which he intends our action to be guided; and the discretion he has left to us extends only to the time and mode which we may deem most suitable and most efficacious for carrying that principle into practical effect. In the exercise of that discretion, we have reluctantly recognized, but frankly acknowledged, the practical impossibility of any present reduction of the import-duty on cotton-goods. No one, so far as I am aware, no one in England or in India, has ever advocated, or even suggested, the reduction of this duty at the cost of fresh taxation for the purpose; and most certainly no such course is, or has ever been, contemplated by myself.

"I am sorry to say that I cannot dispute the opinion expressed by my hon'ble friend Mr. Bullen Smith, that our financial-system is not yet free from other features quite as vicious, if not, indeed, more vicious, than these Cotton-duties, from a purely fiscal point of view. But I doubt if they are equally objectionable from a social and political point of view. Be that as it may, however, my hon'ble friend cannot desire more ardently than I do myself to see our fiscal policy purged of their presence. They all stand upon our condemned list; and I hope it may be in our power, as it will certainly be within our aim, to deal simultaneously with at least the worst of them. But I dare not indulge in vaticination. The awful warning contained in the homily addressed last Wednesday by my hon'ble friend the Lieutenant-Governor to my hon'ble colleague Sir John Strachey is still ringing in my intimidated ear. Mrs. Malaprop long ago averred that we should not anticipate misfortunes till they are past; and certainly that is a policy which appears to have greatly commended itself of late years to English statesmanship. But my hon'ble friend the Lieutenant-Governor goes further than Mrs. Malaprop, and forbids us even to anticipate good fortune. Therefore, as I am sitting just now within close reach of his ferule, I will endeavour not to anticipate anything at all. Perhaps however I may be permitted to mention one fact which, I hope, will satisfy Hon'ble Members that we have not been regardless of salt or sugar in our efforts at fiscal reform. No man can be more impatient than I am myself to see removed, as soon as possible, from the records of Anglo-Indian history such a scandal as our present Inland-Customs-frontier. Previous to the present appointment so ably held by my hon'ble friend Sir John Strachey,—indeed some months before his return to India, and before either of us could have anticipated that we should be sitting to-day at the same Council Board,—I had entered into personal negociations with the Rulers of those Native States whose co-operation is an unavoidable condition to any practical measures for the removal of this commercial 'Abomination of desolation standing where it ought not.' These negociations are now so far, and so satisfactorily, advanced as to justify, I think, some confidence in the anticipation that ere long we shall be able to effect an early breach in what my hon'ble friend has not unfairly, I think, described as our commercial wall of China. But more than this I dare not say at the present moment, for fear of incurring renewed rebuke from my hon'ble friend, and close neighbour, the Lieutenant-Governor; and therefore without pausing to put even a pinch of salt on the visionary tail of this bird in the bush, I will ask permission to say a few words on behalf of the two little birds I now hold in my hand.

"One of the most pressing and important questions I had to consider on behalf of this Government, when I assumed charge of it, was—Whether we can afford to go on borrowing, as heretofore, something like four million sterling annually for the prosecution of Extraordinary Public Works. I came to the conclusion that we cannot afford it. Then I had to consider whether we can afford to do without such works, or to prosecute them on a greatly reduced scale. I am satisfied that this is equally impossible. These works are our only safeguard against famine; and their vigorous prosecution is in my opinion essential to the prosperity of the Empire. What should we do then? From the dilemma in which we are thus placed, reflection has convinced me that there is only one practical issue. It is, however, an issue which I believe to be not only practical, but highly advantageous; and I find it in the prompt adoption and steady development of financial decentralization accompanied by localised administrative responsibility. Of this principle, it is the privilege of my hon'ble colleague, Sir John Strachey, to be one of the official parents. But I think I may honestly say, on my own behalf, that it is not as a convert I am prepared to maintain it: at least my conversion to it dates far back in the course of my official life. It is not only in India that the conflicting principles of centralization and decentralization have been debated, or considered, in reference to financial and administrative policy. I have watched in other countries the conflict of those principles, and witnessed the issue of it. Observing that even in Spain, which should more properly perhaps be called 'the Spains,' it has been found impossible, up to the present moment, to codify the laws which govern the most essential relations, and determine the most fundamental interests, of society; observing, too, that over a geographical area comparatively so restricted as that of the Austrian Empire, it has been found after repeated effort, equally impossible to apply one centralized homogeneous system of taxation to all the Imperial provinces, it certainly does seem to me surprising that English statesmanship, generally so free from the Continental passion for legislative symmetry, should have persisted in attempting to apply to every part of an empire vast, various, and composite, as this of India, the same form and mode of taxation. Doubtless there is one conspicuous and most satisfactory exception to this otherwise general rule of our past financial policy. But it is an exception which tells most strongly in favour of the principle we are now endeavouring to introduce. The Government of India has never applied the contrary principle to its administration of the Land-revenue: and I think I may safely say that, on the whole, no branch of the public service has been so wisely, or so well, administered as the Land-revenue.

"I listened with the attention which his clear and practical utterances always command from me, to the few observations made last Wednesday by my hon'ble friend Mahárájá Jotíndra Mohan Tagore upon the policy which has led us to introduce these Bills; and to which they will give effect, partial as yet no doubt, but salutary I hope, so far as it can now be extended. I did not gather from what he then said that he had any cause to complain of the application to Bengal of the principle of localised financial responsibility: and indeed I think it can hardly be doubted that, if there be one province in India to which, more than any other, this principle may be justly and equitably applied, it is the wealthy and privileged province of Bengal. I trust then that the measures we hope to pass into law this morning will be prolific of beneficial results which may hereafter be more widely extended. This will not be through any merits of their own; for in themselves they are somewhat insignificant little measures: but because of the principles they recognize, and which they will help us to carry out.

"Before I assumed the anxious charge of this administration, it was said to me by experienced friends,—and said with a prophetic truth which has been prematurely verified by my personal experience,—that the one thing which of

all others it behoves every Governor General of India to be constantly foreseeing is the unforeseen.

"Scarcely had I reached Calcutta, ere the rosy financial horizon, which might otherwise have been opened to the admiring gaze of a pleased and hopeful public, had been unexpectedly darkened by the appearance of a little cloud, with a depreciated silver lining to it, that was by no means reassuring. That cloud grew and greatened till it hung over our heads like a portent of doom; and so grievously did its growth oppress the minds of men, that really I think I may say without much exaggeration, that not even the siege of Jerusalem itself was more prolific in warnings, wailings, predictions of disaster, and desperate proposals for reckless remedies, than the financial period covered by the first six months of my administration. And then, just when our financial prospects appeared to promise better things—just when the cloud was clearing away from the horizon, when our patience seemed about to be rewarded, and our confidence revived, a wholly unforeseen calamity occurred; and a great part of the southern region of this Empire was suddenly smitten with widespread famine. Nor is this all. Misfortunes never come single; nor anxieties either; and these things happened during a season of extreme political tension, when no night passed on which we could say with certainty that we should not receive on the morrow some telegram from London or Constantinople of a character very unfavourable to the tranquil prosecution and improvement of our domestic affairs.

"From that source of anxiety we have, I am thankful to say, been entirely relieved by the patriotic exertions of my noble friend the present Secretary of State for India. But I am not at all surprised that Hon'ble Members should have alluded in anxious tones to the fallen value of silver measured in gold; for I fear that we cannot reasonably anticipate any immediate release from the disturbance occasioned by this phenomenon in our exchanges with Great Britain and other countries which have a gold standard of value. I fully recognise the magnitude of the inconvenience thereby occasioned to trade; and I deeply deplore the loss inflicted on many public officers and others who can ill afford it. But I certainly do think that experience has fully justified the resolution to which we came last September, not to tamper prematurely with our standard of value. This question is not, in our opinion, a question that simply affects foreign exchanges. A country's standard unit of value cannot be either enhanced or reduced without injury to many important interests; and India is certainly no exception to the rest of the world. I do not disguise from myself that we may have to face a long period of anxiety and difficulty, during which the various interests, already affected by the depreciation in the value of silver measured in gold, will be slowly and painfully readjusting themselves to the altered relations between the precious metals; and I can assure my hon'ble friend Mr. Hope, that we are by no means indifferent to the importance of the questions in dispute between the monometallists and the bimetallists, or to any of the various modes of utilising the two precious metals with a fixed intervaluation for the establishment of a double or compensatory standard. Indeed, the stoppage of the great compensation-valve, formerly opened in France to the world at large, renders all such questions of special interest to this country. And although it is undoubtedly not in our power to announce any immediate or isolated action in regard to it, still we are fully alive to the importance of this subject. I have but very few words to say upon our other great source of financial anxiety.

"Now I think it cannot be doubted that the present famine is one of the most serious and wide-spread scarcities with which India has yet been afflicted. In extent and intensity, it greatly exceeds the last famine in Bengal and Bihár; and should there be a failure in the rainfall due next month, I fear that the scarcity in Madras may assume still more serious dimensions. Yet, although the management of the last famine cost six-and-three-quarter millions, we are able to estimate the nett cost of the much larger famine with which we are now dealing at no more than five-and-a-quarter millions; and we feel confident that, should we hereafter have to deal with a famine as serious as this, the cost of it will be very much smaller still.

"Now I cannot but think that this is an encouraging fact. It is partly due to the previous completion of adequate railway-communications, partly also to the application of principles which experience has proved to be sound, and to the energy and discretion with which those principles have been carried out in many of the famine-districts. They were spontaneously resorted to by the Government of Bombay; and now that they have been loyally adopted by the Government of Madras, I feel no doubt that they will be no less efficiently and scrupulously acted on in that important Presidency. I cannot mention this subject without expressing the sincere gratitude of the Government of India for the eminent services rendered to it and to the whole empire, by the indefatigable and most successful labours of Sir Richard Temple. But the person to whom we are, in my opinion, primarily indebted for our present comparatively moderate estimate of famine-expenditure, and for our hopes of still more moderate famine estimates in the future, is my immediate predecessor, Lord Northbrook. It must not be forgotten, and it ought I think to be thankfully acknowledged, that although the famine with which we are dealing, is much larger, and more serious, than the famine dealt with by Lord Northbrook, the conditions under which we are dealing with it are much more favourable.

"In his management of the famine in Bengal and Bihár, Lord Northbrook found himself placed under a tremendous pressure of public opinion in favour of reckless expenditure; but he did not shrink from the no less tremendous responsibility of withstanding it. No public man can ever be entirely independent of public opinion; and had Lord Northbrook's hands been wholly free, I have no doubt that he would have greatly diminished the cost of the late famine, without in any wise increasing the loss of human life. But in the teeth of all antagonisms, he prevented famine-expenditure from reaching far more extravagant dimensions. And by resisting public opinion, he educated it. What is the result? The Government of India, relieved from all undue pressure, is now in a position to carry out calmly, and develope more fully, the principles bequeathed by him for our guidance.

"One of these enjoins upon us the importance of providing for famine-expenditure out of income, and charging it to Ordinary Account. This principle has been re-affirmed by my hon'ble colleague, Sir John Strachey. It may be said, however, that though he has re-affirmed it, he is not acting on it, since he finds himself still obliged to borrow on account of famine-expenditure. It may be said that it is easier to lay down principles than to carry them out, and that our present action is a proof of this. It may be said that principles thus publicly proclaimed are too often like triumphal arches, which make a very handsome effect, and look very fine, but which practically lead to nothing. It may be said that, once erected into doctrine, there they remain,—lofty and monumental, with plenty of empty space all round to show them off; but that practical life, going about its business as before, takes care to pass on each side of them, and whilst admiring them, rarely makes use of them.

"Well, I must admit that our present position is exposed to criticism of that sort. The fact is, however, that Lord Northbrook left India before it was practically in his power, or in the power of any man, to make sufficient provision for enabling his successors to carry out, at the shortest possible notice, the principle he had laid down; and this recurrent calamity has smitten us suddenly, before it was in our own power to provide for it in conformity with that principle. But all we ask is fair time and fair play for the future. The salutary principle we hope to affirm today—that principle which hands over to Local Governments the responsible management of local works, coupled with financial responsibility for the result of their management of them,—will, I believe, go far towards facilitating the fulfilment of the principle laid down by Lord Northbrook, and unreservedly adopted by ourselves, as the guide of our future conduct in regard to famine-expenditure. For if such expenditure is to be provided for out of ordinary resources, it is quite clear to me that the Governments of the famine-stricken Provinces must, to some extent at least, be held henceforth responsible for the financial results of their famine-management.

"My hon'ble colleague wisely and properly refrained from prematurely indicating the steps we may hereafter be prepared to take to enable the Government of India to carry out the principle laid down by Lord Northbrook on this subject; but I can assure the Council that we are not regardless of our duty with reference to them.

"There is only one other subject on which I need any longer detain the attention of the Council. Sir John Strachey has rightly drawn attention to the ominous circumstance of our increasing military expenditure; and I shall not attempt to deny that this circumstance is one which I regard with profound concern. An examination however of the figures given by my hon'ble colleague, in the Minute he has laid before the Council, will show that the nett increase in our Military Budget is mainly due to charges not under the control of the Government of India. In regard to those branches of our military expenditure which *are* under the control of this Government, I am bound to acknowledge our great obligation to the colleague of whose services we have recently been deprived, for the unceasing vigilance with which he, and the responsible officers acting under him, have successfully restrained the growth of them.

"Those who witnessed the representative military force assembled at Delhi last January, cannot have failed to admire the discipline, intelligence, and equipment of the Army of India: but to discipline, to intelligence, and to equipment must be added some power of rapid mobilization, in case of any sudden emergency, before the practical efficiency of an army can be regarded as altogether complete.

"Now, some measures taken by us, in consultation with the Commander-in-Chief and our other military authorities, to remedy certain undeniable deficiencies in the mobility of our defensive force, have been misrepresented and magnified by uninstructed rumour, into preparations for a great campaign against our neighbours. I beg to assure this Council that nothing could possibly be further from our minds than the intention thus imputed to us. It is obvious that, if we harboured any such design as this, the estimates laid before the Council would be very different from what they are. And to rush into purposeless border-warfare, or wantonly to provoke hostilities with any of our immediate neighbours, would be an act of insanity doubly inexcusable on the part of a Government for which I am prepared to claim the merit of having secured within the last few months the most beneficent results from the patient pursuance of precisely the opposite policy. Two years ago our relations with the neighbouring Khanate of Khelat were so extremely unsatisfactory that military operations against that country were commended to our immediate adoption by some of our most experienced frontier-authorities. But before having recourse to any act of aggression upon a weak and neighbouring State, the Government of India wisely resolved to make further pacific efforts for the restoration of order around our western frontier. Those efforts, commenced by Lord Northbrook, it has been my privilege to conduct to a successful issue; and the result of it is, that without having fired a single shot, or shed a single drop of blood, our present relations with Khelat are more satisfactory, more fraught with promise for the future and security for the present, than they have been for a long series of years. Not only is British influence now predominant throughout that country; not only is this influence cordially welcomed and appreciated by all its inhabitants, from the highest to the lowest; but the beneficently practical results of the influence thus established are already apparent in the restored freedom and security of peaceful commerce, in the rebuilding of villages destroyed by civil war, in the revival and extension of agriculture, and in the general contentment and confidence of the population and its lawful Ruler.

"I may be asked however, what are the means upon which this Government relies for the maintenance of British influence; and why we desire to extend and confirm British influence beyond our own immediate territory?

"To the first question I reply, that the means on which we reckon for the maintenance of British influence are loyal and disinterested advice, supported, if needs be, by timely and sufficient assistance for the promotion or confirmation of good government and social order, in contiguous territories less civilized than our own. To the second question I reply, that we desire the promotion of this salutary British influence beyond our border, because we do not desire the hostile movement of British armies beyond our border. The connection existing between the tribes and populations inside and outside the frontier which it is our duty to guard, is so close and so far-reaching, that any disturbance of the latter vibrates instantaneously along the whole extent of contiguous British territory.

"Unrestrained barbarism immediately beyond our frontier, means constant insecurity immediately within our frontier. Civil war on the part of neighbouring Asiatic populations, or even a passive, but pronounced hostility towards the British Government, involves the closing of our trade-routes, the maltreatment of our merchants, the spoliation of their property, and the chronic disquietude of our subjects. Therefore it is that the one only thing which at no time past or present this Government has ever been able to do, however greatly it might desire to do it, is to remain a passive and inert spectator of what passes immediately beyond our border.

"Now I consider that the safest and strongest frontier India can possibly possess would be a belt of independent frontier-States, throughout which the British name is honored and trusted; within which British subjects are welcomed and respected, because they are subjects of a Government known to be unselfish as it is powerful, and resolute as it is humane; by which our advice is followed without suspicion, and our word relied on without misgiving, because the first has been justified by good results, and the second never quibbled away by timorous sub-intents or tricky saving-clauses,—a belt of States in short, whose chiefs and populations should have every interest, and every desire, to co-operate with our own officers in preserving the peace of the frontier, developing the resources of their own territories, augmenting the wealth of their own treasuries, and vindicating in the eyes of the eastern and western world, their title to an independence of which we are ourselves the chief well-wishers and supporters.

"Looking to the history of recent events along our lower Panjáb and Sindh frontiers, I cannot think that this aim is unattainable, or that the desire of attaining it is inconsistent with common sense. But although I believe that the influence I desire to exert and extend is perfectly attainable, I do not believe that it is attainable by means of military expeditions; or indeed by anything except constant friendly contact with our less civilized neighbours, and the presence and every-day acts in their midst, of earnest upright English gentlemen.

"Now during the last six months we have passed through a time when the Powers of Europe, armed as they still are to the teeth, seemed drifting into a war of which the eddies could not fail to reach and trouble the minds of our Asiatic neighbours; whilst at the same time our frontier seemed threatened with a succession of local outrages and disturbances greatly in excess of any by which it has been afflicted for many years past. At that time it was in my opinion the duty of this Government to place itself in a position of preparedness to defend the interests committed to its charge by military action, should military action at any moment be necessary, instead of waiting unprepared till the opportunity of effective military action had passed away.

"I am not ashamed to say that we did not shrink from the recognition of this duty. Had the Pass Afridís continued recalcitrant; had the recent inroads on British territory been renewed; had the late disturbances on our frontier assumed, as at one time they seemed likely to assume, a more systematic character, then we might have found ourselves at any moment under an imperative obligation to resort to military operations, in order to punish the murder, or preserve the lives and properties, of our own subjects, or restore and secure the peace of our frontier. This however, I can truly say, no one would have recognised more reluctantly, or more deeply regretted the necessity of recourse to such measures, than myself. The British Government repudiates all views of conquest or territorial extension. Our territories are already vast enough to occupy all our attention and satisfy all our ambition.

"Our paramount position on this Continent is so indisputable that it is rarely indeed we need ever have recourse to arms for the protection of those who trust us, or the punishment of those who deceive us. There is not an independent Native State which is not strengthened by the bestowal, or weakened by the withdrawal, of our friendship. It has been my object ever since I assumed charge of affairs in this country, to draw closer by every legitimate means in my power, the bonds of friendly relation between ourselves and our neighbours. I think there are few persons who will maintain that our present relations with the tribes and peoples immediately upon our north-western border are altogether satisfactory, whether we regard them from a political, or from a philanthropical, point of view. Those neighbouring regions have, after 25 years of the closest geographical contact between us and them, remained almost the only ones in the whole world which are forbidden grounds to British footsteps, except on some mission of vengeance, and for the purpose of burning the homes, or destroying the property, of our neighbours, in retaliation for outrages committed by them upon our own territory. Surely this is not a state of things which any Englishman can contemplate with unmitigated satisfaction, or which any English statesman should wish to perpetuate. I am thankful to say that these retaliatory raids have been somewhat less frequent of late years; still already twice within my own short tenure of office, I have been called upon to consider the necessity of recourse to them.

"Now no one can realize more deeply, or acknowledge more unreservedly, than I do myself, the practical difficulties of dealing with such wild social material as that which fringes the greater part of our Indian-frontier. If I am inclined to trust more to negociation and friendly intercourse, and less to a policy of alternate vengeance and inaction, than some of my predecessors in the government of this country, it is certainly not from any assumption of superior wisdom or humanity on my part. I am well aware that these military expeditions have been considered the only means of bringing our influence to bear efficiently upon turbulent neighbours, by men whose names are no less celebrated for their Christian humanity than for their knowledge of the tribes to whom that system has been applied. Therefore, if with their example and opinion before me, I still prefer to make attempts in the direction of a more patiently-pacific, but less impassive, policy, it is not because I undervalue their judgment or overrate my own, but because the object I have in view appears to me so supremely important, and so generally beneficial to all concerned, as to justify a more systematic prosecution of it than has yet been attempted. If I fail in my own efforts to attain it, I shall not be ashamed; for I had rather be able to say that I have tried and failed in such a cause, than be obliged to own that I had never tried at all.

"I do not think that, consistently with its high duties to God and man, as the greatest civilizing Power in Asia, this Government can watch coldly and immovably its closest neighbours floundering in anarchy and bloodshed on its immediate border, without extending to them in their hour of need a kindly and a helpful hand, if they seek its assistance and invoke its guidance. Such a policy would be in my opinion an atheistic and inhuman one. But whilst humanity condemns a stolid indifference to the interests of our neighbours, prudence equally forbids undeserved and unrequited favours to those who make no effort to reciprocate our confidence and justify our protection.

"If I do not rely upon military expeditions for the reasonable extension or maintenance of British influence around our frontier, neither do I rely upon spasmodic gifts and aimless expenditure of money, or a profitless assumption of embarrassing obligations.

"These, then, are the feelings which induced me to invite a friendly interchange of views between ourselves and our near neighbour, the Amír of Cabul, on matters of common interest, and for the improvement of our mutual relations; as also to comply with the suggestion made to us by His Highness, that Envoys on the part of the two Governments should meet at Peshâwar for this purpose. These also are the principles which determined the instructions given to Sir Lewis Pelly. The personal and official intercourse between the two

Envoys has been friendly. But I regret to say it has been prematurely terminated by a sad event. The Cabul Envoy, who was in seriously ill health when he arrived on British territory, died at Pesháwar last Saturday, of a malady from which he had long been suffering.

"What might otherwise have been the practical results of his conferences with Sir Lewis Pelly, I am no more able to say than any other Member of this Council. But I can positively state to the Council what will *not* be the practical result of these, or any other conceivable, negociations with the Amír of Cabul.

"On the one hand, they will assuredly not result in any unprovoked aggression by us upon the independence or territories of His Highness, nor in any uninvited intervention in Afghanistan. On the other hand, they will no less assuredly not result in any unreciprocated concessions or uncalled for obligations on our part.

"That His Highness has lost in the late Envoy a wise, an honest, and an experienced councillor, is a fact which I certainly regret all the more because it cannot be denied that the mind of the Amír has been deeply stirred by recent events at Constantinople, which inflaming the sentiment of religious fanaticism at Cabul, have somewhat disturbed his usually clear judgment and good sense.

"The position however of this Government in the matter is a very simple and intelligible one. We think that between closely neighbouring States, having in common certain interests, to which neither of them can afford to be wholly indifferent, the best security against mutual misunderstanding and mistrust is to be found in adequate means of free, frank, and frequent intercourse.

"We think that in some representations recently made to us by the Amír, with reference to episodes in our relations with His Highness during the last few years, there is confirmation of this impression; and we believe that the peculiar and exceptional isolation in which His Highness has been induced to seek a source of strength, is more likely to prove a source of weakness to his rule, by acting prejudicially on the internal peace and progress of his dominions. We have therefore assured him that, if he really desires to strengthen the bonds of his relations with us, we shall at all times be ready to reciprocate that desire, and to assist him in promoting the attainment of its object; but that if he has no such desire, we cannot act on the assumption of a sentiment the evidence of which is not before us; that the matter is one which concerns His Highness rather than ourselves; and that we cannot accept, or acknowledge, unreciprocated liabilities.

"I feel that I owe some apology to the Council for having intruded upon it this explanation of the real facts and plain principles of our frontier-policy; although indeed my explanation has reference to a subject closely and most practically connected with the Financial Statement of my hon'ble colleague. For it is obvious that on the character of such facts and principles, must at all times depend the military expenditure which it is his duty to provide for and my duty to justify. But my excuse is this: The Viceroy of India has very few opportunities of telling the public the truth about the facts and principles of his policy on important questions in which the public is legitimately interested. In countries governed by representative institutions it is the easy function of a free Press to criticise the action of a free Government of whose action all the facts and principles are not only well known, but elaborately explained to the community at large. In India, however, the position of the Press is a peculiarly difficult and embarrassing one; for it is expected to criticise daily the policy and action of a Government, whose policy and action are in nine instances out of ten wholly unknown to it. And thus, even with the best intention, its judgment is exceptionally liable to error. The members of such a Government as ours cannot sit in the gate like the law-givers of old; they cannot be continually crying out to the public, 'Pray good people allow us to prove to you that we are neither fools nor knaves, 'only hear us for our cause, and be silent that you may hear.' But there is at least one thing which can be done by the head of this Government to mitigate the mutual disadvantages of an anomalous position. He can, even at the risk of sometimes disregarding official etiquette, seize every opportunity

which comes within his reach to win confidence by showing confidence; and to dispel fictions by stating facts. Such an opportunity has been offered me today, and I have embraced it eagerly, perhaps even recklessly, because I think that every member of the non-official community ought to feel interested (and I am glad to believe that every member of it does feel interested) in all questions that concern the public welfare. For the management of such questions, this Government must no doubt, in the first instance, be generously trusted by the public, whose interests it is here to protect or improve. But sooner or later, the Government must satisfy the public that it has not been regardless of the responsibilities involved in so great a trust; and the sooner it can do this the better it will be for all concerned. Since I came to India the magnitude of these responsibilities has been daily, hourly, I may say unceasingly, present to my mind; and if I err in my own judgment as to the course we ought to follow in the discharge of them, I am fortunately surrounded by able and experienced Councillors who are ever ready to correct me. Believing as I do, that at all times the purity of our purpose, and the character of our policy, will bear the light, I hope that I shall ever be ready to court, and never disposed to shirk, the daylight of public opinion.

"The Latin proverb avers that all is magnified by the unknown. My own experience assures me that all is distorted by the half-known, and it is not the daylight, but the twilight, that I shun.

"With these explanations and apologies, I have now to put the motion I hold in my hand."

The Motion was put and agreed to.

LIMITATION OF SUITS BILL.

The Hon'ble SIR ARTHUR HOBHOUSE presented the Report of the Select Committee on the Bill for the limitation of suits, and for other purposes. He had no remarks to make on the substance of the Report. He had explained to the Council when he moved for leave to bring in the Bill, that it was desirable to pass it into law some time prior to the Civil Procedure Code coming into operation. If all things went smooth with respect to the Civil Procedure Code, it would come into operation in the autumn, that was to say on the first of October. Therefore it was advisable that this Bill should pass some time between that day and this. The Committee recommended that it should be republished in order that any observations that might occur to persons interested might be made. They did not anticipate that any important alterations would be suggested, and inasmuch as they had had the benefit of considering the Bill during the sittings in Calcutta, and with all the assistance which the resources of Calcutta afforded, it would be desirable that the Bill should be passed some time during the sittings in Simla.

ACT No. XXIII OF 1867 CONTINUANCE BILL.

The Hon'ble SIR EDWARD BAYLEY moved that the Bill to prolong and amend Act No. XXIII of 1867 be taken into consideration. He said that he should, as he stated last week, request the Council to take this Bill into consideration at their present meeting without reference to a Select Committee; he had only now to add that the Bill was practically in the same shape in which it was introduced, with the exception of one or two verbal amendments, which were rendered necessary by the fact that during the time the Bill had been before the Council, Act XXIII of 1867 had actually expired. He had nothing further to say as to the reasons for which this Bill was introduced or in explanation of its details. He trusted that what he had said on two previous occasions would satisfy the Council that the Bill was required and that it was suited to its purpose.

The Hon'ble MR. COCKERELL said that the hon'ble mover, both on the occasion of asking leave to introduce, and the subsequent introduction of, the Bill, laid much stress upon the fact that Act XXIII of 1867, during its passage through the Council, met with the most thorough consideration, and underwent the fullest discussion in a Council, of which many of the members were especially qualified by their personal administrative experience to give an authoritative opinion on such a question; but he did not remind the Council

that the exceptional character of that enactment had been fully recognized by the acceptance on the part of those experienced gentlemen of the amendment which was brought forward and carried in the course of the debate on that measure, and which restricted the operation of that Act to a limited period.

The Bill which became Act XXIII of 1867 was introduced into the Council with no such limitation, and it was evident therefrom that the outcome of the full discussion which had been referred to was this, that whilst the emergent circumstances of the time were such as to justify the passing of such an enactment, the measure was one of an avowedly exceptional character, and should not remain permanently in force, but that the question of the policy of its continued maintenance should come under the consideration of the Legislative Council from time to time. If the Bill which was introduced had been referred to a Select Committee according to the usual course, he (MR. COCKERELL) would have advocated the consideration of the question as to whether a fixed period for the prolongation of Act XXIII of 1867 was not preferable to the indefinite period contemplated by the present Bill. Although however it was proposed now to re-enact this special law for an indefinite, in lieu of its former fixed, period, still some degree of finality to its operation was intended, and the effect of the change was merely to shift the responsibility for seeing that the Act was kept in force no longer than was necessary, from the Legislative Council to the Executive Government. He (MR. COCKERELL) would only therefore add the expression of a hope that the Executive Government would not be unmindful of its obligation.

The Hon'ble SIR EDWARD BAYLEY wished to explain very briefly the reason why the clause which the Hon'ble Member had just brought to the notice of the Council was not inserted in the present Bill. The Act when it was originally proposed was a purely tentative one; whereas it had now been in operation for ten years; it was no longer an experiment; the machinery it employed had been most successfully tested. It was therefore a tentative measure no longer, and the limitation as to time of its operations was no longer necessary. He would only remark in addition that his hon'ble friend's present objection seemed rather inconsistent with the opinion he expressed on the last occasion when the Bill was discussed, that the law ought to be continued by the executive action of the Governor General in Council and by a mere notification in the Gazette. It seemed to SIR EDWARD BAYLEY that if his hon'ble friend thought the Governor General ought to have power whenever he chose, without reference to this Council, to give fresh life to the law, there was no reason why it should not be left to the Governor General in Council to continue or terminate it when he deemed it necessary without reference to this Council.

The Motion was put and agreed to.

The Hon'ble SIR EDWARD BAYLEY also moved that the Bill be passed.

The Motion was put and agreed to.

BRITISH BURMA EMBANKMENTS BILL.

Colonel the Hon'ble SIR ANDREW CLARKE introduced the Bill to provide for the execution of emergent works in connection with embankments in British Burma, and moved that it be referred to a Select Committee. He had no observations to make.

The Motion was put and agreed to.

CIVIL PROCEDURE BILL.

The Hon'ble SIR ARTHUR HOBHOUSE moved that the Reports of the Select Committee on the Bill to consolidate and amend the laws relating to the Procedure of the Courts of Civil Judicature be taken into consideration. He said:—"this motion is not one to pass the Bill before the Council into law, but it is intended to lead up to that final step, and I should like to add something to the reasons which I assigned a fortnight ago why that final step should now be taken, because, unless it is now taken, the labour of the Council in travelling into the consideration of these reports may prove to be premature, and may be to a considerable extent thrown away.

"I have seen some appeals publicly made to me of late days not to allow any desire I may feel to connect my name with the passing of this measure to influence me in trying to pass it. These appeals have not been made in any rude or disrespectful spirit; on the contrary, they have been made in terms that are only too complimentary to me; but there are one or two observations to be made upon them. In the first place, the man who built his house upon the sand would be a wise man compared to myself if I were to hope for any immortality because I happened to be the Law Member of Council at the time when this Bill was passed into law. We hope that this Code will be an improvement on the Code of 1859. But it is not nearly so great or difficult a work as the Code of 1859, because it is not nearly so original a work. Yet who connects the names of the authors of the Code of 1859 with that Code? It is true that men like Sir Barnes Peacock, Sir James Colville, or Sir Henry Harington have a lasting reputation, but that is because they have uniformly distinguished themselves throughout their lives, and not on the particular account of the Code of 1859.

"But even if I were vain enough to indulge in aspirations such as—

Forsitan et nostrum nomen miscebitur istis

or to sing,

Non omnis moriar, multaque pars mei
vitabit Libitinam

—if I were vain enough to indulge in any such sentiments as these, I am not going to be unjust enough to put myself in the place of those who have performed the solid part of this work. My Lord, the man who has done the greater part of this work from the time of the re-arrangement of the Code in 1875 up to the final correction of the proofs, is Mr. Stokes. The man who has borne the second part in the labour is our colleague, Mr. Cockerell, who has brought to it all his great experience and ability and his untiring industry. In fact it is my belief that Mr. Cockerell knows this bundle of papers by heart; for when I want to know where anything is to be found, I do not trouble myself to hunt about the table of contents for it, but I ask him, and he immediately tells me. Moreover there is the original draft by Sir Henry Harington on which this Bill is founded, and there is the great number of able and industrious gentlemen outside this Council, to whose labours a large portion of the Bill is due—men like Sir Richard Garth, Mr. Justice Turner, Mr. Justice Ainslie, Mr. Field, and others whom time would fail me to mention. In fact if there ever was a law framed by the concurrence of a number of skilled hands, this is such a law; and if I were to appropriate it to myself because I happen to be the spokesman in Council, I should be an impostor, and some condign punishment would infallibly overtake me.

"I think that in this Council I need not disclaim any personal motive, but I wish to show how in point of fact there can be no personal motive for my pressing on the passing of this Bill.

"The only reason for the postponement of the Bill is, that it has been so short a time before the public. I dealt with that matter before, but I should like to read to the Council a letter which I received within the last two or three days from Mr. Justice Turner of the Allahabad High Court. He is one of the most able and uncompromising opponents of a certain portion of our Bill; and he is also one of those who have come forward and have assisted us most materially in framing that same Bill. He writes thus:—

"'Although as you are aware I was strongly opposed to some of the provisions of the Procedure Code Bill, No. IV, and although I fear I shall remain unconvinced of the desirability of some few of the modified provisions which remain in the Bill you propose to pass, I have no hesitation in asserting it will be a public misfortune if the passing of the Bill is delayed.

"'It cannot be said that the proposals embodied in the Bill have not been before the public for a sufficient time to enable all those who would be likely to criticize them to submit their opinions.

"'I have no reason to expect that within any reasonable period the constitution of the Legislative Council will be so altered, or the opinion of executive officers so much changed, as to promise a more favourable consideration of the objections I still entertain to some few sections.

"'On the other hand, should those sections of the Bill be disallowed by the Secretary of State, the symmetry of the measure would be undisturbed, and the valuable additions it makes to our rules of procedure would be immediately secured.

"'Moreover it is, as I understand it, the chief recommendation of a Code that any defects which escape notice in its enactment, or any provisions which may be found to operate unadvisably, may be immediately corrected by legislation.

"'For these reasons, if you think my opinion as an opponent of a few of the provisions of the Bill of any weight, I have felt bound to put you in possession of it.'

"Now I do think his opinion of weight, because no man outside this Council has more carefully studied our work than Mr. Turner, and no man is in a position which better enables him to judge what good it is likely to effect in the general business of the Courts of Law.

"The plain fact is, that a change of officers who have the conduct of a great measure like this does lead to disturbance of the work, and to waste of power. We all have our parts to play—Mr. Cockerell has one part, Mr. Stokes another part, and I a third part. If I go away Mr. Stokes must play my part, and his successor must play his. That would infallibly result in the unsettlement of portions of the work, and the necessity of doing a good deal of it over again. If therefore the matter is in substance ripe for final discussion, it is worth while to strain a point to bring on that discussion before a change takes place. I am afraid that some inconvenience has been caused to members of Council owing to the last print of the Bill being placed in their hands so late. But as regards the substantial questions of controversy which are embodied in this Bill, it seems to me that the time has come when they are quite ripe for final discussion: and therefore I hope the Council will not object to bring on that discussion now and finish it.

"Now I will pass to the more direct subject of my motion. There are three reports before the Council to consider. You are aware that this Bill was published in the year 1864. That publication brought in a great quantity of valuable comment, which resulted in the alteration of the Bill, and the republication of it in the year 1865 in the shape in which it was intended that it should pass. However the work was suspended, and it was not resumed until the year 1873. We then found that owing to changes in the law and other circumstances, it was necessary to alter the draft of 1865 to such an extent that it was convenient to recast it altogether. Accordingly we did that, and we published it in a remodelled form, being that Bill which is labelled Bill No. III. That re-publication was accompanied by a report which is the first report before the Council. Our re-publication brought us in a very large amount of most valuable and laborious comment from a number of skilled persons, which resulted in numerous alterations set forth in our Bill No. IV. No. IV was published in September 1876, and was accompanied by a report which is the second report before the Council. Again we have had a great number of comments; not so many as before, but some of very great value; and again we have made a number of alterations; not nearly so many as before, but such as necessitated the reprinting of the Bill. The reprinted Bill is the Bill on the table and is numbered V. It is accompanied by a final report, which is the third report before the Council.

"The various papers have been placed in the hands of Hon'ble Members from time to time as they have been printed. They have not been placed on the table; and indeed if they were on the table, I should be speaking from behind a sort of breast-work of papers, and all my colleagues would be equally well protected; but they are in the hands of Hon'ble Members to use as they think fit.

"The substance of the two earlier reports has been explained to the Council, and I think I need not refer to it except so far as it may be in controversy at the present moment. Neither need I refer to the great quantity of detailed matter which we have touched from time to time. I shall confine this opening to the two subjects which have attracted general attention since the publication of Bill No. IV.

"The first of these subjects is the distribution of business between District Courts and Subordinate Courts. In Bill No. IV we proposed an alteration of the law for the purpose of confining to District Courts certain kinds of business

now performed by Subordinate Courts. My hon'ble friend Mr. Cockerell explained the reasons for that proposal, and no doubt there was and is a good deal of reason and also a good deal of authority, as incidentally I shall have occasion to show, for the change proposed. But there came to the Committee so much evidence of the practical inconvenience likely to be caused by the change, that it seemed to them or the majority of them to preponderate, and it was thought wiser to leave matters as they now stand.

"There is a notice of motion on the paper in the name of my hon'ble friend Mahárájá Jotíndra Mohan Tagore. It is the third notice which stands in his name, and touches the relations of District Courts and Subordinate Courts. But it does not touch the general principles on which the changes were made by Bill No. IV, and I shall say nothing more about it at the present moment.

"The second subject of controversy relates to those parts of the Code which regulate the execution of decrees for money-debts. When I addressed the Council in September last, I stated that our Code was found to work in a harsh and rigid way against the debtor, so as to drive men to despair, and to create much suffering and even danger. I said that having proposed to soften the law in this respect by our Bill No. III, we had on the evidence and advice sent in to us proposed to go further in the same direction and soften it still further by Bill No. IV. I mentioned various points in which we proposed alterations for that purpose. The principal of these were imprisonment for debt, the sale of land, and the exemption of property from execution at the instance of the creditor. Now in proposing these alterations we had regard to what was told us of the state of various parts of the country, which warned us that a very rapid transfer of land from the hands of one class to the hands of another class, or too great harshness and rigour in the prosecution of decrees against debtors, produced great misery and disorder, and even in some parts of the country danger. So far then, although it is confined to its own proper province of procedure, our Bill is connected, as other legal operations are connected, with a great political question. I thought we had given to the State somewhat more power than the present Code gave to it to guide the course of a decree, though I think now that in that opinion I was mistaken. But still I thought that substantially we aimed at the same objects with our predecessors who framed the Code of 1859, and that we kept their main lines intact. Speaking in Council I summed up the alterations thus:—

"'These provisions relating to execution-sales constitute the principal alteration that we propose in the Code, and our object has been to alleviate the harshness and rigidity of the law, to diminish the number of forced sales, and to get for the owner of the land something like an adequate value for it, at the same time keeping clearly in mind the important principle—one of the most important objects of all civilized society—that a man should perform his contracts and pay his debts to the best of his ability.'

"Such being my view of our proposals, what was my surprise when I found that the publication of the Bill brought us in lectures on political economy, or what calls itself such, and charges that we were confiscating property, disturbing the money-market, re-enacting usury laws, reverting to a patriarchal system of government, undergoing violent oscillations of policy which was known only to the minds of Indian officials, disregarding the wisdom of ages, and making laws at variance with human nature. Indeed such a storm of expostulation arose that I was quite frightened, until the happy thought occurred to me of looking to see what the existing law actually is, and what were the alterations we proposed. Then I was comforted, for with one dubious exception which I will explain presently, I found that we had proposed no more than what I had stated to the Council. In fact we had proposed something less. For being driven by stress of weather to examine the motives of the Code of 1859, I satisfied myself that not only did we aim at precisely the same objects with the framers of that Code, but that we had in contemplation precisely the same methods as they had. In fact the head and front of our offending is this, that we show an intention on the part of the legislature that the powers existing in the law, but now lying unused, shall be used, and for that purpose we proposed to commit them to hands more likely to use them.

"It will be convenient if at this point I explain to the Council what are the provisions that are so much complained of, and what they do, and what they do not, effect. They will be found in the sections of Bill No. V which are numbered 320 to 325. I omit section 326, because it is only a repetition of what is in the existing Code, and I do not for the present speak of section 327, because it turns upon some considerations which are peculiar to itself.

"In the first place these sections do not of their own force work any alterations either in law or practice, for they are only to be brought into action when and where the Executive Government thinks fit.

"In the second place they do not interfere with any specific contracts affecting land, such as a mortgage. If for instance land is to be sold in pursuance of a mortgage, the only powers the Collector will have over the sale are those powers which a prudent vendor by auction commonly exercises—the power of lotting the property, of adjourning the sale, of fixing a reserved bid, and of buying in. But in connection with this point, I should say that, owing to some inadvertence in the drawing of the Bill No. IV, it might have been considered that the whole of these sections applied to mortgages as well as to unsecured money-debts. It was obvious indeed from the context, and also from what I said in Council, that they were not intended so to apply; and in his comments, Mr. Justice Turner has treated this defect as an obvious slip, and with his invariable fairness has taken no advantage of it in his argument. But I mention the matter now because it may possibly account for what seems to me the very exaggerated views of our operations entertained by various of our critics.

"So much for what the sections do not effect. Now for what they do.

"Section 320 enables the Executive to declare that in any place and with regard to any class of decrees for the sale of land, the execution of the decree shall be committed to the hands of the Collector.

"Section 321 gives to the Collector the ordinary powers of vendors at auction-sales.

"Section 322 gives him further powers in cases only of money-decrees, namely, powers of arrangement between debtors and creditors. It provides that if he sees reason to believe that the judgment-debt of the debtor can be discharged without the sale of the whole of the property, he may raise the amount necessary to discharge the debt, with interest according to the decree if the decree specifies the rate of interest, and according to his discretion if the decree does not specify the rate of interest, by sale, by mortgage, by letting or by taking the property under his own management. The Council will observe that in sub-section (*b*), which gives powers to let on farm or to manage, it is provided that these powers shall be exercised only with the decree-holder's consent. That is a restriction which did not exist in Bill No. IV, but was introduced by the Committee in Bill No. V, and my hon'ble friend Sir Edward Bayley has a motion on the paper for the purpose of restoring the provisions of Bill No. IV in that respect.

"Section 323 requires the Collector to ascertain the other judgment-debts of the debtor, and it protects the property against alienation while in the hands of the Collector, just as the existing Code protects the property against alienation while in the hands of the Court.

"Section 324 provides that if the arrangements made by the Collector do not succeed in paying the debt, the property shall be sold after all.

"Section 325 makes the Collector accountable to the Court for all his receipts, and it directs the distribution of the proceeds in payment of the debts.

"I should have thought that these proposals were moderate and reasonable enough, but they certainly do not appear so to some people, because they have been severely observed in several quarters. I will read to the Council what Mr. Justice Turner says about them. I select him, not because he stands alone, but because he puts with much force what he has to say. He has sent in to the Committee a Minute on Bill No. IV which I can recommend as good reading to those of the Council who have not read it, in which he first enters into some general arguments directed against patriarchal government. Possibly those general strictures might have been modified in view of the alterations made since Bill No. IV was published, but those alterations have not pre-

vented a hostile motion, and I have to meet the whole line of argument on which that is grounded. In the course of these arguments he makes the following observations:—

"'In India however there exists, I will not say a school of political thought, but a numerous body of gentlemen, who declare that the experience of centuries should be disregarded, and that the rules of political and economical science, which the wisdom of Western philosophy has deduced from the motives ordinarily influencing mankind, are wholly inapplicable to Eastern nations.'

"Then when he comes to these particular clauses he says:—

"'The first objection which I have to offer to these sections, in common with section 326, is, that the Legislature is called upon to delegate its functions to an authority so eminent as to be almost above the reach of criticism. It is asked to empower the Executive Government, by purely arbitrary acts which will have *ex post facto* operation, to disturb the securities on which millions of rupees are invested, and to deprive persons who have money-claims against the owners of lands of the fund to which they are entitled to have recourse, and which, in the case of money lent, was the basis of the debtor's credit.'

"Now pausing here for a moment to explain, the Council will notice that section 326 of Bill No. IV, which Mr. Turner mentions, is section 327 of our Bill, to which I have said that different considerations apply. Nor does he mix up the two together. But all his observations, as the Council will observe from what I have said, apply both to the earlier sections, 320 to 325, and apply again to 327. He is also speaking of general money-debts, which he alleges to be contracted with an eye to the land, and not of debts secured by mortgage.

"Then he continues:—

"'Such acts amount to confiscation. Nothing can justify them but the gravest political necessity, and at present no such necessity exists or is imminent. I urge then that legislation should be postponed until the necessity arises which justifies the creation of this power.

"'The oscillation of official opinion, owing to the constant changes of the *personnel* of the Government and the absence of party traditions, is so great, that economical heresies are never killed, but revive at least once in a decade of years. Although I believe no one who pretends to statesmanship would at the present moment exercise powers of which the iniquity is apparent, and which are justifiable only in extreme emergencies, when the tide of official opinion turns, pressure may be brought on the Executive to avail itself of powers which it has ready at hand, and which, were time allowed for public discussion, it would not create.'

"Well now that is a good, honest, outspoken statement of the faith that is in a man, and such as one likes to see; and I think that we ought to be very much obliged to any gentleman who, with no motive whatever but the public interest, takes the trouble to put what he believes to be the truth into such very frank and clear language. At the same time it seems to me that the remarks are misdirected when they are applied to the provisions I have explained to the Council. I say the same of other similar arguments, and the Council will understand me to be addressing myself to the whole line of attack represented by the motion of my hon'ble friend the Maháráját Jotíndra Mohan Tagore.

"Inasmuch as I contend that we are only proceeding cautiously on lines already laid down, the Council will hardly expect me to take much time in combating arguments which, whatever their abstract value may be, are pitched so high as entirely to miss the mark. But before I go on to show how they miss the mark, I will try to show what seem to me to be the broad differences of opinion between the opposing parties.

"I may be wrong, and I hardly suppose that our opponents will accept my view of what is necessary to make the position a sound one, but it seems to me that they cannot support their objections without first making good two propositions. The first of these is, that when a man has made a contract with another man, he is entitled to call upon the supreme forces of Society to step in and enforce his contract in every jot and tittle, and that without allowing to Society any moderating influence over the contract, unless perhaps it can be shown to be grounded in fraud. The second proposition is, that a contract by A to pay B a hundred rupees is a contract by A to strip himself of every shred of property that he possesses in order to make good that hundred rupees.

"Now both these propositions seem to me exaggerations of principles which, if stated with their due qualifications, most people will be ready to

accept. Of the first proposition I should say, that it is a most sound and important principle that people should be held to the substantial performance of their contracts. But I should add that if the rigid and extreme performance of contracts is found to produce misery and disorder, then Society, which is called in to enforce these contracts, should exercise some moderating influence over them, and that such a duty is the more imperative in proportion to the helplessness of the debtor-class. Of the second proposition I should say, that a contract to pay a sum of money seems to me quite a different thing from a contract that the borrower shall strip himself of all the property that he has for the support of himself and his family in order to pay that money. It may be argued that, in order to enforce a contract to pay money, it is the duty of Society to step in and strip the borrower naked. But I do not see how it is even arguable that if such a process takes place, the creditor does not get something outside the terms of his contract. If he does, terms may be reasonably imposed upon him in return, such as are found necessary for the peace and welfare of Society.

"How far Society should step in and insist upon some moderation as the price of its assistance, is a question of detail which has to be solved in every age and in every country. But it seems to me that all laws intended for the protection of debtors on terms short of the payment of the whole debt—laws of bankruptcy, laws for the exemption of property from execution—are founded on the view I take of the duties and interests of Society.

"It is clear however that our opponents assume that the laws of other nations are in accordance with their views of what is a righteous law of debtor and creditor. And indeed in another passage occurring amongst his general observations Mr. Justice Turner speaks of such legislation as ours as being 'a divergence from the laws ordinarily accepted by civilized nations.'

"Now I do not myself profess much knowledge of any law except the laws of England and of India. But the Council are aware that the Bombay Government lately appointed a Commission to enquire into certain serious outrages committed in some of the districts of the Dekkhan by the peasants upon the money-lending classes. That Commission have made an able and elaborate report. They draw a very distressing picture of the state of the country, and they assign as one of its causes the state of our law of debtor and creditor. I will read to the Council what they say of the law of India as compared with other laws. They speak thus:—

"'In order to recover a debt, it is obvious that resort can only be had to the property, present and future, of the debtor and to the labour of the debtor and his family. A law which allows an unlimited resort to all these means of recovery gives the greatest help to the creditor that it is physically possible to give. The law of India appears to be the only modern law which allows such unlimited resort, and we find that under it the debtor and his family are liable in person and property to an extent which is practically unlimited.'

Imprisonment.

"Then they go on to mention some details of our law and of other laws, and they continue thus:—

"'96. The mere statement of what the power of the creditor is, would seem in itself a sufficient answer to the question. The power to utterly ruin and enslave the debtor is a power which clearly the creditor ought not to have, and as a fact it was never intended when the Code itself was passed that the creditor should have it.. 'The ancient laws of most countries,' says Mill, 'were all severity to the debtor. They invested the creditor with a power of coercion more or less tyrannical, which he might use against his insolvent debtor, either to extort the surrender of hidden property or to obtain satisfaction of a vindictive character, which might console him for the non-payment of the debt. This arbitrary power has extended in some countries to making the insolvent debtor serve the creditor as his slave, in which plan there were at least some grains of common sense, since it might possibly be regarded as a scheme for making him work out the debt by his labour. In England the coercion assumed the milder form of ordinary imprisonment. The one and the other were the barbarous expedients of a rude age, repugnant to justice as well as to humanity.' When we compare the law of India with that of other countries, we find that not one is so oppressive as the Civil Procedure Code in this respect, not even the oldest law in the world, the law of Moses, which allowed the debtor a discharge after serving seven years.'

"The Commission are here speaking of our general law of debtor and creditor, not only of that which relates to the sale of land, but also of that which relates to the seizure of chattels and of the person. But the Council will

find that the whole of these subjects are mixed up together, and that those who object to the restriction of the creditor's power with respect to the sale of land are the persons who also object to the restriction of his power in other respects.

"Now with regard to the law of England, inasmuch as England may claim to have been in the rank of civilized nations for some time, I should like to give to the Council an account of what the law respecting the sale of land for debts has been and is there, which I think I may do without any great degree of prolixity.

"Before the reign of Edward I, land could not be taken in execution at all for a general debt. In that reign a Statute was passed known as the Statute of *elegit*. It gave to the creditor power to take the chattels of the debtor, except his oxen and his beasts of the plough, and power also to take one moiety of his land. The *elegit* creditor, as he was called, might take possession of the land, but he was subject to account for his receipts in the Court of Chancery, and he had no right to a sale. When he was fully repaid by the rents of the land, the debtor resumed possession. It is true that by means of successive *elegits*, as when various creditors took out judgment against a debtor, he might be deprived of the whole of his land instead of half. It is also true that possession by the *elegit* creditor not unfrequently resulted in the sale of the land, and that there was a tendency for such sales to increase; but such sales only took place through the medium of a Court of Equity, and with all due and proper safe-guards, and only in those cases (by no means all cases, though, as I have said, there was a a tendency in them to increase) in which the Court had by some means or other acquired jurisdiction to sell. In such cases, to use the expressions of Mr. Justice Story, 'where the payment of the judgment cannot be obtained at all by a mere application of the rents and profits (as if the interest upon the judgment exceeds the annual rents and profits), or when the payment cannot be obtained out of the rents and profits within a reasonable time, Courts of Equity will accelerate the payment by decreeing a sale of the moiety of the lands.'

"Now that was the law of England for five hundred and fifty years; and it seems to me,—though of course it differs in detail for we have not the same machinery here as in England, but it seems to me a law not very unlike the arrangements which we contemplate, though more prohibitive of sales of land. It provided for payment of the creditor by the gradual application of the rents of the land for that purpose; it did not resort to the sale of land except where these means failed, and in many cases did not resort to it at all. And yet the existence of such a law did not prevent England from rising into the very front rank of commercial nations.

"It was not until the year 1838 that matters were thought ripe for an alteration of that law. In that year a Statute was passed which effected the alteration. First the creditor was enabled to take possession of the whole instead of only half of his debtor's land; and secondly, when he had procured a judgment of a superior Court, it had the same effect as if the debtor had agreed to charge his land with the amount of the debt.

"Unless some change has recently taken place which I do not happen to know of, that is the law of England at the present moment. And it is attended with incidents which must make it extremely unsatisfactory to those critics to whom I have referred; for it by no means gives to the creditor the short, sharp, swift, direct remedy against the debtor's land which they think is necessary for the law of a civilized country. In the first place, it is only the superior Courts—that is to say, some five or six Courts in England—which can issue decrees charging the land at all; and that is the sort of arrangement which my hon'ble friend Mr. Cockerell proposed for India. In the second place, though the creditor might at once take possession of his debtor's land, he must account for every farthing of his receipts in the Court of Chancery. In the third place he acquires no immediate right to sell that land. If he wants to sell, he must institute an entirely new suit in a Court of Equity; a Court which takes care that all parties interested are brought before it; a Court which will give every facility for arrangement and accommodation as it well knows how to do, and when it does decree a sale will take care that the sale is carried into effect with all due precautions and safeguards. In the

fourth place, the creditor cannot institute even that new suit directly. The Statute says he must wait a full year after he has got his judgment, and after he has performed certain formalities with that judgment. And in the fifth place, our Parliament has been guilty of enacting what these gentlemen call a Usury Law; that is to say, they have provided that when the Court gives to the creditor the security of a decree, his debt shall carry a Court rate of interest which they have fixed at four per cent.

"It must also be noticed that during all these centuries I have spoken of, there were other influences at work which tended very much to retard the passing of land from the hands of one class to the hands of another class. The most familiar of these influences is the system of entails or strict settlements, a thing so familiar to every reader of English history, that I will not trouble the Council with pointing out its effects. But there was another influence which has been much less observed upon, but which in all probability has exercised no less effect than the system of entails, and that is the action of the statesmen who presided over our Courts of Equity.

"In his concise and admirable account of the distinctive characteristics of Courts of Equity, Blackstone points out this among the chief; that they construed contracts for securing money in a different way from the way in which the same contracts were construed by Courts of law. In point of fact the Courts of Equity exercised a regulating power over such contracts, and they exercised it in favour of debtors.

"The common form of a penal bond is this: A borrows £100 of B, and he contracts that if he does not pay B within twelve months he shall pay £200. The terms of the contract are as clear as noonday; and yet the Courts of Equity held that the penalty of £200 was a mere fashion of speech, Shylock's merry jest, a sort of playful way of securing principal and interest. And accordingly to principal and interest they confined the creditor, and they prohibited him from suing for the penalty.

"The common form of mortgage is, that the borrower conveys his land to the lender out and out, but with a proviso that if he pays the lender the sum borrowed in the course of a year, the conveyance shall be void; otherwise it remains indefeasible. Again I say the contract is as clear as noonday, but Courts of Equity applied to it the same construction that they applied to penal bonds, and they allowed a debtor to redeem his land after very long periods of time on payment of principal and interest.

"Now that is something like interference with contracts. And indeed there were not wanting eminent persons, principally common lawyers, who denounced the proceedings of the Courts of Equity in language as vigorous as that in which our far milder proceedings are denounced at the present moment. The battle was nearly over by Lord Hale's time, but even he complains that 'by the growth of Equity on Equity the heart of the Common Law is eaten out, and legal settlements are destroyed.' The fact is that these proceedings of the Courts of Equity led to very sharp collisions between them and the Courts of Law. But the Courts of Equity held their ground, because the good sense of the nation was at their back. Their doctrine as to mortgages has long since formed part and parcel of the framework of the Law of England; and their doctrines as to bonds were imported into Common Law Courts by a Statute passed in the reign of Queen Anne.

"Now upon that brief review of English history I think the Council will have observed two things. One is the extreme slowness with which, even in an advancing commercial nation like ours, the *corpus* of the land, as distinguished from its temporary and redeemable possession, was made available to answer general debts. The other is the care which our legislature took, when it was at last giving the creditor full remedies against his debtor's land, to provide that these remedies should be worked with due moderation and caution, and under due control.

"Slow and spontaneous changes such as these are the healthy growth of nations. But some of our critics tell us that we are right, indeed that we are bound, to introduce all these changes, and more than all, at once, without the slightest attempt at mitigation, by foreign rule, into extremely backward communities. Certain abstract principles are brandished in our faces, and

we are told that if we hesitate to transmute money-debts into the ownership of the debtor's land, we are setting ourselves against the experience and wisdom of ages. I answer that the study of history and the study of contemporary phenomena equally convince me that nations do not accept that species of transmutation very readily; and that for us to put it into force without any attempt at mitigation among primitive agricultural communities is not Political Economy; it is not Policy; it is not Economy, nor any combination of the two; but it rather savours of pedantry, and of a disposition to treat matters on some *á priori* theory, instead of dealing with men as we find them.

"Having now as I trust disposed of the assertion that we are setting ourselves against the example of all civilized nations and on principles peculiar to Indian official nature, I proceed to examine the assertion that even in India such a proposal as we have made can only be due to some violent oscillation of official opinion.

"The existing Code of 1859 contains the following provisions: By section 243 it is provided that where the property attached consists of land, it shall be competent to the Court to appoint a manager, and that the manager shall collect the rents and apply them in payment of the debt, and to the term of such management no limit of time is assigned. It is also provided that if the judgment-debtor can satisfy the Court that there is a reasonable ground to believe that the amount of the judgment may be raised by mortgage, lease or private sale, it shall be competent to the Court to postpone the sale for such period as it may think proper to enable the judgment-debtor to raise the amount. And again to that postponement no limit of time is assigned. Now I think that those who followed me in my exposition of Bill No. V, sections 320 to 325, will see that the Court has here given to it powers as wide and large as those which we propose to bestow upon Collectors. It may pay the debt by management, and by gradually applying the rents and profits. It may allow the judgment-debtor to try his hand at making arrangements short of a suit. In point of fact the powers given to the Court are somewhat larger, because we propose to limit the Collector's operations to twenty years, whereas the Code leaves the Court's operation unlimited in point of time; and we propose not to apply our provision to mortgage-debts, whereas this section is so framed as to apply to mortgage-debts.

"By section 248 it is provided that if the property to be sold is land, and the Government shall so direct, the sale shall be conducted by the Collector on the requisition of the Court. And by section 244 it is provided that in such a case as is mentioned in section 248,

'If the Collector shall represent to the Court that a public sale of the land is objectionable, and that satisfaction of the decree may be made within a reasonable period by a temporary alienation of the land, the Court may authorize the Collector, on security for the amount of the decree or for the value of such land being given, to make provision for such satisfaction in the manner recommended by the Collector, instead of proceeding to a public sale of the land.'

"Now what is the object of these sections? To find that, I refer to the debates which took place in Council when the Legislature was engaged in discussing the Code.

"In the first place the Council had before it much evidence of the mischief and embarrassment which was being produced by the rapid transfer of land from one class to another, and they had also before them a despatch from the Secretary of State, Lord Stanley, written in 1857, the terms of which I will proceed to state. He began by saying:—

"'It cannot be doubted that the increased powers in respect of suits relating to real property, which of late years have been conferred upon the Subordinate Civil Courts, have greatly promoted the rapid transfer of such property from old to new hands.'

"Then he goes into some details on the subject, and continues thus:—

"'With reference to the foregoing remarks, the question arises as to the expediency of altering the existing constitution of the Munsifs' Courts, and of reverting to the system under which they were tribunals for the adjudication of suits only for money or other personal property, at the same time enlarging, if thought advisable, their jurisdiction in such cases. A further check might be imposed by providing that no process either for attachment or sale of real property shall be allowed in cases below a fixed amount, and that in suits exceeding that amount the Munsif shall not be competent to issue such a process without the previous sanction of the Judge.'

"That was the proposal made by Bill No. IV which my hon'ble friend Mr. Cockerell explained to the Council at Simla. There was another proposal before the Council, that they should put some express prohibition upon sales, in what form I do not exactly know, for the principle was discussed without any definite plan being propounded; but the Council did not see their way to it. Neither did they see their way to the suggestion made by Lord Stanley. Whether they rejected it on account of the practical considerations which have influenced us I cannot find. At all events they did not accept either of those two suggestions, but instead thereof, and with the same object, they enacted these sections which I have been citing.

"Sir Henry Harington moved to insert that section which is now section 243, and the reason he gave is stated as follows:—

"'The addition proposed by him was intended to meet to some extent the objections entertained by many persons to the sale of land in satisfaction of money-decrees. He would not now go into the very important question as to whether such sales should or should not be allowed.'

"He then intimates his opinion that there was some exaggeration in the matter, and that alienation of land could not be prevented.

"Mr. Currie proposed the introduction of the section which, with a difference, is now section 244, and he spoke thus:—

"'He remarked that the present section went a step further than the last section. The Judge of Cawnpore, the Commissioner of Allahabad, and the Agra Sadr Court, objected to the indiscriminate sale of land. Mr. Muir objected to any sale of land at all under civil process. He (MR. CURRIE) would not go so far as Mr. Muir. He agreed generally with what had been said on the subject by the Hon'ble Member for the North-Western Provinces. But even if it were admitted that the transfer of the land from the hands of the old proprietors was an unmitigated evil, still in the existing state of things that would be no sufficient reason for a general stoppage of sales.

"'Something however was to be conceded to opinions so strongly expressed and urged by the authorities he had named. The new section which he proposed would enable the revenue authorities to interfere in behalf of old proprietors in all cases in which such interference could be beneficially exercised.'

"Now I will ask what difference is discernible between the policy of 1859 and the policy of 1877. Then, as now, there were differences of opinion on this subject; then, I hope I may say as now, the majority of opinions was, that something should be done to check the indiscriminate sale of land; then, as now, the Council rejected the proposal to confine decrees for the sale of land to District Courts and the proposal to put a direct prohibition on such sales; then, as now, they resorted to the scheme of giving large powers of arrangement to some authority which in the first instance they said should be a Court of Law; and then, as now, they contemplated that these powers should be exercised by the Collector.

"I do not find that anybody then came forward to tell the Council that they were meditating confiscation or interference with contracts. But if we are doing so, most certainly they were. If I am a creditor seeking to sell my debtor's land, and if it is confiscation of my rights to tell me that I must be content with payment out of the rents, it is no consolation whatever to me that the officer who tells me so is called a Judge instead of being called a Collector, or that he is a Collector set to work by a Judge instead of being a Collector set to work by the Government.

"However that was the reasonable policy which our predecessors adopted, to call in some controlling power to make reasonable arrangements, which might be the Court or which might be the Collector. Unfortunately it was suggested by somebody that if the land was in the hands of the Collector, some further security was required for the payment of the debt; though nobody seemed to dream that any further security was required when exactly the same process was going on in the hands of the Court. But in the course of the debate, apparently without any further consideration, that idea was accepted, and the clause I read to the Council about security was put in, which converted section 244 to almost an absolute dead letter. There is the section however and as evidence of the policy of the legislature it and the reasons for it remain; and we ought not to be charged with violent oscillations of opinion and departure from the policy of our predecessors because we are attempting to make a living letter of that which has become almost a dead letter.

"But I have something more to say on this point. The Code of 1859 extended of its own force only to the Regulation Provinces of the three Presidencies. With respect to the rest of India it is extendible by order of the Executive Government. When it came to be extended to Non-Regulation Provinces, it was found that although in other respects it might be suitable to those Provinces, in respect of the sale of land which it authorizes so freely it was not suitable; and accordingly the Lieutenant-Governor of Bengal extended it to his Non-Regulation Provinces, or to some of them, with the proviso that the land should not be sold without the consent of some executive authority. Well His Honour had no power to do that. The moment this question came up before the Council they proceeded to alter the Code; and in the month of July 1859 Sir Henry Harington introduced a Bill to enable the Local Governments of the Non-Regulation Provinces to do the thing that the Lieutenant-Governor of Bengal had assumed to do.

"On that occasion he spoke as follows:—

"'Lastly, the Bill proposed an alteration in section 385 of the Code. That section set forth that the Act should not take effect in any part of the territories not subject to the general Regulation of Bengal, Madras and Bombay, until the same should be extended thereto by the Governor General of India in Council, or by the Local Government to which such territory was subordinate, and notified in the Gazette. Hon'ble Members might have observed in a recent number of the *Calcutta Gazette*, that the Lieutenant-Governor of Bengal had extended the Act to certain Non-Regulation districts under his Government; but that in doing so, His Honour had added a proviso that no sale of land should be made without the sanction of the Commissioner of the Province. The Code contained no such provision, and a question might arise as to the competency of the Lieutenant-Governor to pursue this course, and whether, if he extended the Code at all, he was not bound to extend the whole Code. But as it seemed very desirable that the power exercised by the Lieutenant-Governor of Bengal in this instance should exist somewhere, the Bill proposed to authorize the Government of a Non-Regulation Province to which the Act might be extended, with the previous sanction of the Governor General of India in Council, to declare that the Act should take effect therein subject to any restriction, limitation or proviso which it might think proper.'

"The Bill was then passed into Law. It has since been re-enacted, and it stands now as section 39 of Act XXIII of 1861. I have before stated to the Council how very largely that restriction on the sale of land has been used. The modifying power extends as you have heard to the whole of the Code; but it has hardly been used at all, except only for the one purpose of moderating the sale of land; and for that purpose it has been used throughout very large Provinces. I am not prepared to say in how large a portion of the Non-Regulation Provinces of India, but certainly throughout the Panjáb and Oudh and the Central Provinces the Code was only put into operation subject to the restriction that the sale of land in execution of decrees should not take place without the consent of some executive authority.

"Well now we have this result, that for the purpose of preventing the too indiscriminate sales of land which it was found the Code allowed, the Council of that day, the very same men who passed the Code, within four months after they passed it into law, passed an amending Act giving powers to the Executive of an extent and magnitude compared to which the powers we propose to give are the merest flea-bite; not a mere power to say that certain operations may be executed by one hand instead of another, but a power to extend the Code subject to any restriction, limitation or proviso whatever. And it is not right that we should be charged with departing violently from the policy of our predecessors, when we are only following their footsteps at a humble distance.

"Now I hope I have given the Council reason to think that the condemnation of our proceedings, however confidently and boldly pronounced, is founded on erroneous data and on a narrow and partial view of the case. At all events I am anxious to hear the allegations and arguments by which that condemnation is supported in Council. I know that whatever can be said on that subject will be said by my friend Mahárájá Jotíndra Mohan Tagore; for in Committee he has supported the views of the objectors with great ability and acuteness, and I must add with equal good feeling and moderation.

"The next question is, whether we have any case for altering the arrangements of the law at all. And here again I find a disposition to assume that

our district officers must all be mistaken in what they think they see; and that if there is any mischief going on, it is all due to other causes, and not to this cause, namely, the state of the law of creditor and debtor. Other causes no doubt there are, but it seems to me impossible to doubt that this cause also exists, unless we are prepared to say that a great number of intelligent gentlemen, knowing the country thoroughly, better than any other men, some of them appointed to enquire into this very matter, are all mistaken in what they think they see and hear. I have told the Council before how much evidence there is on this point, and I will now add one other piece of evidence which has come to my hands since I last spoke on this subject. The Dekkhan Commission say:—

Increase of money-holders and money-lending business.

"'62. Another cause of the increase of indebtedness is the facility with which the money-lending class can command the assistance of the law in the recovery of debt, and consequent upon that facility an expansion of the raiyat's credit, inducing numbers of small capitalists to compete for investments in loans to the Kunbi. We have already quoted Sir G. Wingate's remarks on this point. Although at the present time other causes have combined to impair the raiyat's credit, still one material cause of his present condition must undoubtedly be sought in the state of things described in 1852; and since that date other causes have operated to aggravate immensely the evil which was then discerned. Whatever facilities were afforded by the law to the creditor in 1852 have been greatly enhanced by the introduction of the present procedure in 1859, and by the punctual conduct of judicial duties now exacted from the Subordinate Courts, while the raiyat's credit has been enhanced by the addition of his land and agricultural stock and implements to the security liable for his debts.'

"It is their opinion that the provisions of the law and the much greater swiftness with which the law is executed have aggravated the miserable condition in which they found the peasants of that part of the country. They no doubt are speaking of the law at large and not merely of that part of it which relates to sales of land. As regards sales we have this broad fact, that the complaints which come to us are from those parts of the country where the Code is at work without restriction; and those parts of the country in which it operates subject to restriction are the parts from which complaints do not come. That seems to me a cogent piece of evidence.

"Our case then is this: We have evidence, which seems to us conclusive, that the Code has worked in a harsh, rigid, mechanical way, which leads to the ruin of the debtor, sometimes with benefit to the creditor, sometimes without any such corresponding benefit. We do not assume to regulate the contracts of mankind; we are not reverting to any patriarchal system of government; but we say that Society ought not to be a mere passive instrument in the hands of creditors for the purpose of skinning their debtors, and that the Code, not in its own nature, nor by the intention of its framers, but in its working, has been made too passive an instrument for that purpose. We are not foolish enough to suppose that we can control human nature; but we say that mischief which has been created by foreign and artificial causes may be remedied by modifying those causes; that what procedure has done procedure may undo; and we believe that we are swimming with the stream, and not against the stream, of human nature.

"The next question is, whether the alteration we propose is the best we can make. We have not seen our way to other alterations. One other alteration, namely, to confine sales of land to decrees of District Courts, we did propose, but have abstained from pressing it in the face of practical objections. What we do see our way to is the constitution of some authority which will have the power and the will to make some reasonable arrangements between creditor and debtor in those painful circumstances in which the *ultima ratio* has been applied, which will prevent the Code from being merely the means of carrying out to the bitter end that *summum jus* which is proverbially *summa injuria*, and which may in proper cases answer the old prayer of the debtor, 'have patience with me, and I will pay thee all.'

"We are trying to give life to the intentions of our predecessors which have to a great extent failed of effect; for not only have the provisions of section 244, but also those of section 243, failed to a very great extent. That matter was the subject of inquiry by the Government of the North-Western Prov-

inces in 1873, and they received from their officers some accounts of the working of the sections. They sum up the matter thus :—

Opinion of Government, North-Western Provinces.

"'It will be seen that nearly all the officers consulted by the Court are of opinion that the sections in question are almost inoperative either from the ignorance of the judgment-debtor, or from the difficulties in the way of settlement under them. But His Honour the Lieutenant-Governor concurs with the Hon'ble Judges of the Court and the Board of Revenue in thinking that the sections do a certain amount of good, and work for the benefit both of creditors and debtors.'

"Now of course sections that are almost inoperative cannot do much amount of good. What is meant clearly is, that the sections are good in themselves: that they are right in principle; that where they do work they do good, but unfortunately they are almost inoperative. I believe that these sections will remain inoperative as long as the motive power is confined to Courts of Law. Such operations are not judicial in their character; they are matters of arrangement and discretion and are quite extra-judicial. They are far more likely to be carried into effect by a person who knows the property, knows the place, knows the people, is accustomed to move about and visit his villages, and is in the habit of making administrative arrangements, than by a man who is accustomed to sit in his own Court, and to decide such legal points as are brought before him. This was seen quite clearly by our predecessors when they passed section 244, avowedly as a further step in the same direction with section 243, and with the view (I will quote the words again) 'that the Revenue-authorities should be enabled to interfere on behalf of local proprietors in all cases in which such interference may be beneficially exercised.' That view has not been answered because of the reasons which I have mentioned; and we seek now to make that a living letter which remains a dead one. We see no better plan than to follow the same line of policy, and to call on the Collector to exercise a reasonable discretion, not only when a Court of law thinks fit, but when the Government thinks fit.

"We are not proposing any rigid law for the whole of India. It is only when the Executive Government thinks that a part of the country requires these provisions, and also that there are hands to work them, that they will be applied. When that is the case, we wish the Government to have those powers which the Bombay Government desired to exercise in 1875, but were deterred from exercising by the opinion—no doubt a very well founded opinion—of the High Court as to the state of the law. Now I confess that it is at this point that the palsy of doubt begins to affect my mind. I will read a few words from a very valuable paper sent to us by the Advocate General of Bengal, Mr. Paul. He is a gentleman of great experience in Mufassal affairs. He quite approves of what we propose to do for the purpose of softening the law against the debtor; he is only sorry we do not carry some of our provisions a good deal further. He says:—

"'If the Collector who may be charged with the execution of decrees be an officer who has sufficient time in his hands to devote to the new department of jurisdiction intended to be created, I think the exercise of the powers proposed to be given to the Collector will be beneficial to debtors.'

"That is just it; 'if the Collector has time.' It may be that the Collector has not time. It may be that the Collector's hands will require strengthening. It may be that in order to work this provision efficiently, we shall have to go further and do what Sir Richard Temple has recommended us to do, namely, to establish a separate execution department. But practical difficulties of that kind are no reason against giving powers to the Government which are sound in principle and which may be exercised in places where no such practical difficulties exist.

"Now I have finished what I had to say upon sections 320 to 325. I do not propose to say anything now upon section 327 but would prefer to hear the reasons of my hon'ble friend Mahárájá Jotíndra Mohan Tagore for expunging it from the Bill, because I apprehend that what I have said on the other part of the case will with some little addition be sufficient to constitute a good defence.

"But before I close I must call the attention of the Council to section 266, for that also is a part of our work on which we are said to be sentimental, patriarchal, violent, and all the rest of it. I am glad to think no person wishes us quite to go back to the simplicity of the present Code, and to exempt nothing whatever from being taken by the creditor in execution, and that there is no motion on the paper to expunge any of the items which we propose to exempt from execution. In fact I think that members of the Committee were satisfied that we were not being guided by pure sentiment, but that we gave to the matter a fair amount of hard-headed, if not hard-hearted, consideration. I must however tell the Council what alterations have been made. In sub-section (*b*) we have adopted the language of an old Bombay Regulation, the repeal of which by the Code of 1859, as the Dekkhan Commission inform us, has caused much distress. It exempts tools, implements of husbandry and such cattle as are necessary to enable a man to earn his livelihood by agriculture. This latter part accords with the first English Statute which gave powers to the creditor to seize his debtor's goods. Sub-section (*c*) has been modified by the provision that it shall not apply to the execution of decrees for rent. The peculiar relation of landlord and tenant induced us to put in this provision. In sub-section (*h*), which applies to the salaries of public officers or *quasi* public officers, such as Railway-servants, we have, instead of exempting the whole of the salary, applied the principle of the English Mutiny Act, and exempted only a moiety. That is a course suggested by Mr. Justice Turner among the many valuable and careful suggestions which he has made to us for the alteration of the Bill. With these exceptions we have maintained the exemptions which were contained in section 266 of our Bill No. IV. But I should mention that there are two items which appear to be very important ones, those contained in sub-sections (*g*) and (*i*), but they are only an expression of the present law culled from the Pensions Act and from the Indian Articles of War. They are only put in here for convenience sake so as to have the whole of the exemptions in a single list.

"There are some other minor points connected with the law of debtor and creditor as to which some people think us foolishly indulgent to debtors, but they are comparatively trifling, and I do not think that the Council would be grateful to me if I took up further time by discussing them. I must therefore leave them to be opened by any other Hon'ble Member who may feel it desirable to do so."

The Motion was put and agreed to.

The Hon'ble MAHÁRÁJÁ JOTÍNDRA MOHAN TAGORE moved that section 417 be omitted. He said that after the very able and exhaustive statement made by the hon'ble and learned member in charge of the Bill he had reason to modify his opinions as to sections 320 to 325, regarding which he had given notice of amendment. He gathered that there were certain parts of the country in which the restrictions on the sale of land were absolutely necessary for political purposes; that was a matter respecting which he had nothing to say. He was of opinion that, as regarded Bengal, these sections would be mischievous in their effect, and he therefore desired to oppose them; but supposing that his amendments were accepted, he feared from the explanations given that certain parts of the country would be in a very unsatisfactory condition. He therefore did not desire to press them; the more so as the sections were of a permissive nature, and he had sufficient confidence in the special circumstances of Bengal, and in the judgment of His Honour the Lieutenant-Governor, to believe that these sections would not be applied to Bengal. He begged leave accordingly to withdraw the amendment which stood in his name with regard to sections 320 to 325. Section 327 was so closely connected with the previous sections, that for the reasons he had already stated, he begged to withdraw his amendment regarding that section also. He next begged to move that section 417 be omitted. Nearly two decades had elapsed since Act VIII of 1859 was passed, and from that time up to the present day the Munsifs had had the power of trying cases in which Government or its officers were concerned. The Principal Sadr Amins, or subordinate judges as they were now called, had enjoyed this power from a period long anterior even to that; but now it was proposed to make a retro-

grade move. He was not aware that there was anything to show that these officers had deteriorated either in character or competency. On the contrary Hon'ble Members of this Council, such as Sir William Muir and Sir Alexander Arbuthnot, had spoken in respect of the provinces which they represented in very high terms of the integrity and efficiency of these judicial officers. Sir Richard Temple in his Administration Report said:—

"Now I have constantly inquired from all sorts of persons likely to know, European and Native, official and non-official, and the universal opinion attests the integrity and probity of the Native judges, that is, the Subordinate Judges and the Munsifs. This is to my mind a striking circumstance, and a cause for thankfulness, inasmuch as corruption used to be one of the traditional evils of India."

The High Court said in one of its reports:—

"The Court has had increasing reason to be satisfied with the performance and promise of the inferior judicial officers under its control, who in point of ability, competency, and attention, are far beyond the Munsifs of former periods. The character of this class of officers has long stood high, but the superior mode in which the business of their Courts is now transacted fully attests the wisdom of the Government in improving their condition in respect of emoluments and prospects."

Mr. Justice Jackson said:—

"I now come to the Munsifs, and I am able to say with confidence that they continue as a class to improve in carefulness and to bear a high character. We are no longer under the necessity of employing very young men, and we are able to insist upon the possession of some experience in addition to that of learning and ability which are indicated by the possession of a degree. Generally speaking therefore the Munsifs, even at the beginning of their career, are well prepared for the performance of their judicial duties; and failure in that respect is of great rarity."

Sir Richard Couch remarked:—

"The appeal from a Munsif is in most cases heard by a Judge who is not superior in knowledge or ability to the Judge whose decision is appealed against; in some instances he is inferior."

Mr. Justice Bayley said:—

"My own later experience here is that a Munsif in the Court of first instance, who has been educated in our colleges and schools, and takes his law degree in our University, not only discharges his duty with ability, but with a faithfulness and care and perspicuity which is certainly not surpassed, if it is equalled (except in cases of promotion from the same style of men), by some of the Subordinate Native Judges who hear the Munsif's appeals."

Mr. Justice Markby said:—

"In discussing the important question now raised it will not be safe to disguise the truth, however unpalatable it may be: and that the Courts of appeal in Lower Bengal are frequently below them, it is I fear impossible to deny. I insert again here the opinions upon which in my former Minute I based this conclusion. None of these opinions have since been withdrawn. No opinion to the contrary has been since expressed. And my own more recent experience has strengthened me in the view that the conclusion I then stated and now repeat was correct."

Now he would not detain the Council by reading any more extracts, but after the testimony of these high authorities, it would be an ill recompense to the Subordinate Judges and Munsifs to put such restrictions on the power which they had so long enjoyed, and which, as far as he was aware, they had never abused. If the Government would not trust these subordinate Courts, the people would naturally hesitate to place any confidence in them, and the effect of this section would be prejudicial to the administration of justice. It had been said that this section had been introduced to prevent unseemly conflicts between the Munsifs and the executive; but he did not understand why there should be any friction between the two classes. Both served the same Government, and both were appointed to administer the law; the members of one class were amenable to the other only when there was an infringement of the law, and even then the officer who tried the case was bound by the Code under which he acted, and he could not go beyond that. Some cases were cited in which it was alleged that the Munsifs were influenced by their bias against the executive. He was not acquainted with the merits of these cases, and he could not therefore say how far those decisions were influenced by *animus* against the officers of Government, or were errors of judgment; but he knew of other cases in which, although it was at first believed that the Munsifs were biased in their decisions, those very decisions were on appeal upheld by the highest tribunal. Mr. Justice Innes of Madras, commenting on this section of the Bill, said:—

"Section 416 appears to be conceived in a similar spirit of distrust. It is certainly a retrograde step, and one much to be deprecated, that at a time when the Native judicial service is in education and integrity so much in advance of what it was before the enactment of the present Procedure Code, the Legislature should revive a restriction of the jurisdiction of these officers, which is certainly, so far as my experience goes, not called for by their mode of dealing with suits of the kind referred to in this section, namely, suits by or against Government or public officers."

Indeed he considered it very inconsistent, in the face of the testimony of so many high authorities, as regards the integrity, conscientiousness, and efficiency of the subordinate judicial officers, to hold that they were likely to be biassed in their judgment against the executive officers or the Government they served. It had also been urged that cases in which the Government or its officers were interested often involved questions of large and important public interest, and that the Munsifs were unable to form any opinion upon them. But in such cases he submitted the remedy was always ready at hand. Section 25 of the new Bill provided that any District Court might, on the application of either of the parties, or of its own motion, withdraw a suit from any Subordinate Court and try it itself, or transfer it to any other Court of competent jurisdiction. The Government therefore could on sufficient ground apply at any time for the transfer of a suit from the Munsif's Court. Further he submitted that it was not conducive to public interests to provide a special tribunal for the trial of suits in which Government or its officers were interested. Sir Richard Garth questioned if it was either necessary or desirable to withdraw all suits against public officers from the jurisdiction of the inferior Courts; and His Honour the Lieutenant-Governor said that it seemed to him quite impossible for Government to say, as it did here, that the Courts which it provided for the public were good enough for ordinary suitors, but not good enough for its officers. Under these circumstances he earnestly trusted that the Hon'ble Council in its wisdom would see fit to expunge this section, which would otherwise remain a standing reproach upon a deserving class of officers, and have a most discouraging and disheartening effect upon them.

The Hon'ble MR. COCKERELL thought that the remarks which prefaced the amendment propounded by his hon'ble friend the Mahárájá, would have been more in point if applied to the corresponding provisions of Bill No. IV in relation to the subject of the amendment.

His hon'ble friend had commented on the section which he desired to strike out of the Bill as though its effect was to take away absolutely the existing jurisdiction of the inferior Courts of first instance in respect to suits against the Government and public officers. That statement of the case would more or less correctly apply to the proposals of the former Bill in regard to this matter; but those proposals had undergone material modification, and all that was now desired was that the inferior should obtain the sanction of the superior Courts, ere proceeding to try suits of that class instituted before them.

He would further submit that in treating this matter as a question of the proved competency or otherwise of the inferior Courts, his hon'ble friend had narrowed very considerably the issue upon which the subject-matter of the amendment should be considered and dealt with by the Council. We were not now called upon—as it seemed to him (MR. COCKERELL)—to determine by our action in this matter whether these Courts were or were not competent to deal satisfactorily with this class of suits, but to determine a question of much wider character, and one that should be considered and decided on a much broader basis—namely on the grounds of the general public convenience—the advantage and pecuniary interest of the tax-paying community, and on such grounds he held that the provisions of the Bill before the Council should be maintained and the amendment of his hon'ble friend should not be accepted.

As regards the question of the established efficiency of our lower Civil Courts, and the extent to which they enjoyed the confidence of the people at large, there was no doubt a good deal to be said on both sides; for whilst on the

one hand there had been very great improvement in the personal qualifications, in the direction of a superior education and legal training, of the Judges of these Courts—and indeed he felt that it was almost presumptuous, and at least superfluous, to offer any opinion or bear any personal testimony to a fact so clearly brought out in the recorded opinions of those who were of course far more competent to speak authoritatively on such a subject, some of which opinions had been cited in the speech of his hon'ble friend the mover of the amendment—but on the other hand, in Bengal at least, there was evidence to show that these Courts were according to a well-informed section of public opinion far from having attained perfection.

So recently as the period—about two years ago—at which much public discussion took place in regard to the Bengal Civil Appeals Bill, it was urged very strongly that it was impolitic and inexpedient to take any action which would have the effect of curtailing the existing area of appeal whilst the majority of the Courts of first instance were in such an unsatisfactory condition, and that the essential first step towards a substantial reform of the administration of Civil justice was the amelioration of the character of the inferior Courts of original jurisdiction.

At a public meeting held he believed in the rooms, and under the auspices, of the distinguished Association with which the hon'ble mover of the amendment and another of their hon'ble colleagues (the Mahárájá Narendra Krishna) were connected, this view of the question was strongly insisted on—a Bengáli gentleman of wide reputation who possessed large estates, with whom he (MR. COCKERELL) had the honour of having been acquainted for many years past, and whose personal experience and knowledge of the question then under discussion he believed to be unsurpassed, spoke on that occasion as follows :—

"Our Munsifs, who have to try a large number of original suits, and almost the whole class of suits between landlords and their tenants, are chiefly young University graduates, who have no knowledge of the world, and who are in many points as ignorant of the habits, customs, and feelings of the people as any European. They are usually required, after they have obtained their diploma in law, to practice in the High Court, or some zila Court, before they are appointed as Munsifs. This should doubtless give them an insight into the working of the Courts, and to the practical operation of the laws, but as a matter of fact this condition is of very little use. Those who can secure good practice do not care to exchange their profession for the service, while it is only those whom we might describe in one word as "briefless," and who, after a short time, give up attending Courts, which entails some expense, that are appointed Munsifs."

That was the candidly expressed opinion, not of an European official too often credited with the indisposition, from selfish motives, to accord the full recognition and generous acknowledgment of the value of the services of his Native fellow-officials which those services may have merited, but of a fellow-countryman of the Native Judges themselves, and a fellow-countryman moreover whose opportunities for forming a correct judgment on the matter, and general competency to speak with some authority on such a subject, he (MR. COCKERELL) was sure that his hon'ble friend the Mahárájá could not gainsay.

But as he had said before he did not think that the question before the Council ought to be determined upon this issue, and he had only referred to the subject for the purpose of showing that an argument against the amendment, even on the ground just stated, was not absolutely untenable. He had moreover cited the speech above mentioned in reference to what had passed when this Bill was last before the Council, on which occasion he had been rather severely taken to task by two Hon'ble Members, who seemed to think that their lengthened period of service and assumed intimate acquaintance with the people of this country entitled them to speak with paramount authority on such a question, for his remarks in regard to the personal characteristics of the Native Judges of our inferior Civil Courts in Bengal; he thought it right therefore, and in fact incumbent upon him in justice to himself, to appeal to the plainly declared opinion of one of their own countrymen, which had been delivered under the responsibility that attaches to public utterances, in corroboration of all that he had then advanced.

Passing now to the question as to how the disposal of this class of suits could be arranged so as to conduce most to the interest and advantage of the community, he would first ask, what there was in the way of novelty or innovation in the principle underlying the arrangement by which particular classes of suits or proceedings, or suits or proceedings affecting particular classes of persons, were reserved to particular Courts? He could point to several enactments by which the cognizance of particular kinds of suits and proceedings was reserved to special Courts or classes of Courts. So also institutions of suits or appeals were restricted to a few Courts only in certain cases. He would take, as an example of this, appeals against the decrees and orders of Munsifs. These appeals, though they might be, and in the majority of cases were, tried by Subordinate Judges, could be instituted in the district Court only. Or he might refer to Small Cause Courts, which, although the Judges of these Courts were picked men of undoubted competency, had not jurisdiction even to attach immoveable property in execution of their decrees.

Indeed he might say that there was no class of Courts the jurisdiction of which was not restricted or limited in some direction; and his contention was therefore that the reservation of the cognizance of, or power to deal with, a particular class of suits to certain specified Courts, did not necesssarily imply the disparagement of any other Courts to which such authority was not extended, and he hoped that the Council would not, from a too tender regard for the sensitiveness of Munsifs or any other class of Judges, or from any apprehension of popular misconstruction of the object of the change in the law contemplated by the Bill in its present shape, be induced to settle this question otherwise than on the broad grounds of sound policy and the general interests of the tax-payer.

In determining a question of this sort some regard should, he thought, be had to the generally important character as well as the comparative number of the suits which, as regards the choice of forum, it was proposed to deal with in an exceptional manner. Now there could be no question in his opinion as to the greater relative importance of these suits as compared with that of suits between private parties, whilst their number was comparatively insignificant.

From the sort of criticism that the action of Government was so often subjected to, the popular conception of it would seem to attribute to it a personal character, and that, moreover, of a not very creditable type; nevertheless the Government did not make an unscrupulous use of its power; it was not aggressive in its instincts, nor did it evince a tendency to encroach on or trample upon the rights of individuals. So far from this being the case as was so frequently, by implication at least, suggested, the Government was in fact in its appearance before the Courts, whether as prosecutor or defendant, no more nor less than the legal representative of the tax-paying community, endeavouring to protect the rights of that community which had been invaded or meanaced by its opponent in the suit. Such being the case it would be natural to suppose that the support and sympathy of the public in such a contest would be on the side of the Government, whereas the exact reverse of this was found to be the case, and notoriously the Government, instead of enjoying special advantages in the conduct of its litigation, might be said to litigate at great disadvantage. This fact was brought out clearly in the very small percentage of costs recovered in execution of its decrees.

Another important consideration in favour of the course proposed in the Bill was the increasing difficulty in regard to the maintenance of an adequate legal agency for the conduct of suits. If the Government must defend suits and carry on litigation, in every Civil Court in the country, it was evident that an expenditure for the maintenance of an adequate staff of Government Pleaders must be incurred which would be wholly unreasonable with reference to the object in view, and entail a burden upon the finances of the Empire, and consequently upon the tax-payer, which the exigencies of the case would not justify.

For these reasons he hoped that the amendment of his hon'ble friend, the Mahárájá, would not be accepted.

The Hon'ble MAHÁRÁJÁ NARENDRA KRISHNA said that it was with extreme diffidence he would venture to offer a few remarks on this Bill. It aimed at consolidating into one law all the enactments passed by the legislature from time to time for regulating the trial of civil suits. If even the legislature had confined itself strictly to the mere embodiment of the provisions of the old laws into one compact form, the opportunity should not have been lost of introducing improvements urgently needed, or of adopting modifications and omissions justified by past experience. But when there was obvious departure from this circumscribed course; when it was proposed to curtail the powers of some judicial officers and to increase those of others; when important changes in Civil Procedure were suggested, surely it behoved them to consider and discuss, not only the new points brought forward, but also to recommend important improvements which might occur to them, inasmuch as such a proceeding would obviate the inevitable necessity of re-discussing the consolidated Bill soon after it passed into law. He would observe in the first place that the terms of the contract between lender and borrower should always be allowed to be settled among themselves by laws based on the sound principles of equity and political economy. The capitalist, when he was forced to go to law to enforce the fulfilment of the terms of the contract, had to encounter difficulties of various sorts, and incur certain unavoidable expenses not recoverable by law, up to the date of the realisation of his money. It would therefore be considered a grievance by the capitalist if the rate of interest contracted for was cut down after the decree at the discretion of the Court; a proceeding which directly tended to over-ride the substantive law on the subject as provided in section 2 of Act XXVIII of 1855. The kind object of the legislature—to protect the helpless borrower—might be defeated by the lender exacting commission and other charges before granting the loan, knowing that the law would only sanction the legal rate of interest. He would therefore recommend that the substantive law in respect of the rate of interest be not interfered with by the present Bill. The Bill threw greater obstacles in the execution of decrees than formerly existed, as by section 230 the decree-holder must apply for its execution on or before three years from the date of a decree; and if in the first execution he failed to realise any benefit therefrom, he would not be allowed a second execution, unless he proved to the satisfaction of the Court that he had exerted himself to give effect to it. This would in effect facilitate the evasion of the payment of a just debt, and would shield a fraudulent debtor. If the decree was kept alive by due measures, the time for its execution should not be barred until after the expiration of twelve years.

His Excellency THE PRESIDENT said that he was unwilling to disturb or interrupt the Hon'ble Member, and had therefore not done so before, as he was under the impression that his hon'ble friend intended to move another amendment; but he would beg to remind him that the Council had now before them the amendment proposed by Mahárájá Jotíndra Mohan Tagore.

The Hon'ble MAHÁRÁJÁ NARENDRA KRISHNA said that he had been making remarks on the general contents of the Bill. However as His Excellency had stated that it was the amendment only which was at present before the Council for consideration, he begged to state that he gave the amendment his unqualified support, as he failed to see that any evidence had been brought forward to enable the Council to form an opinion that the suits in question should not be tried by subordinate judges. It was a matter of regret that the country would very soon be deprived of the valuable services of the Hon'ble Sir Arthur Hobhouse; the laws passed which he had the charge of had been generally received by the public with satisfaction. With high legal attainments he combined an earnest regard for the welfare of the sons of the soil, and his approaching departure therefore would be felt by them as a great loss.

The Hon'ble MR. HOPE said that at this late hour he would only say a few words on the amendment which had been proposed. He perfectly agreed with his hon'ble friend Mr. Cockerell in the view he took, that in making the ques-

saving in the matter of time and expense to the parties; because, if the case was a large and important one, it was not to be supposed that the Government would accept the verdict of the lowest Court, unless it were clearly shown that they were wrong: they would carry the case upwards even to the High Court.

The Hon'ble SIR JOHN STRACHEY said, if the amendment had been brought forward with an object the very opposite of that with which the amendment of the Hon'ble Member was made, and it had been proposed to take away altogether from the subordinate Courts the power of hearing suits against the Secretary of State in Council and the officers of the Government for acts done in their official capacity, he for his part should have given it his support. Amongst civilised nations, such as those which existed in some of the countries of Europe, the best safeguard against arbitrary and illegal acts on the part of the officers of Government was to give the Courts of law authority to decide between the persons who considered themselves aggrieved and the officers of Government. That was true where the Government was the servant and not the master of the people, and where both the people and the Government had perfect confidence in the Courts. But it seemed to him that that was by no means true in a country like India. He believed that through nearly the whole of India the people were quite incapable of understanding the idea that the proper way of giving to a man the means of redress for injury received at the hands of the Government, was to give him the power to bring a suit in a petty Civil Court. SIR JOHN STRACHEY believed that if the man thought at all, which he certainly did not do on such a subject, the only light in which he could look on such a law was that it was another illustration of the strange fancies that his English Governors took into their heads.

He believed the law in regard to this matter to be wrong in principle. He quite admitted that it had done little or no harm in practice. The hon'ble member said that these powers had not been abused. SIR JOHN STRACHEY had no doubt that that was perfectly true. But he thought it would be more correct to say that these powers had been little used, and consequently they had done no harm. Still he thought them wrong in principle, because he believed that the first object essential in this country was a strong executive authority. Giving power to petty Civil Courts to call in question acts of the executive authority gave as a matter of fact the people no means whatever of redress against injuries inflicted upon them. But to give these powers to subordinate Courts had a distinct tendency to weaken that authority which it ought always to be our object to strengthen. This particular little section to which the hon'ble member objected, in SIR JOHN STRACHEY's opinion, did not go half far enough. Still it was better than nothing, and he accepted it with a certain amount of thankfulness.

The Hon'ble SIR ALEXANDER ARBUTHNOT intended to vote in favour of the amendment. He regarded this question, as his hon'ble friend Sir John Strachey regarded it, mainly from a political point of view. But the conclusions at which he arrived from a consideration of the question were, he regretted to say, essentially different from the conclusions at which his hon'ble colleague had arrived. It seemed to be admitted on all hands that no serious practical inconvenience of any sort had resulted from the state of the law as it now stood in the Statute-book. Had the section proposed by the Select Committee been embodied in the existing law; had it been in operation ever since the Code of Civil Procedure had been passed in 1859; had it been merely a re-enactment of a provision already in the Code, he should not have been disposed to advocate its removal. But he thought that the case was essentially different when it was suggested to remove from a body of useful public servants powers and jurisdiction which they had long exercised without apparently any perceptible disadvantage to the State. And when we had before us the evidence of numerous eminent judicial officers—and he thought he might add the evidence and opinion of numerous members of the official class not belonging to the judicial establishments of the country—that the efficiency of the subordinate Courts during the last twenty years had vastly and remarkably increased, he thought that, for the sake of what his hon'ble colleague regarded as a principle, which he himself regarded as an idea, but about which there might be a good deal of dispute—he thought that it would not be the part of wisdom that this Council should show that mistrust which would be indicated by the passing of this section as it now stood in the Bill, towards the particular class of judicial officers against whom it was directed.

His hon'ble colleague had more than once in the course of his speech designated these Courts as petty Civil Courts. They were of course Courts of inferior jurisdiction, but they were Courts of great importance and deserving of great consideration in connection with the administration of justice. Our policy, our aim, and our desire had been for many years by every possible means in our power to raise and elevate the standard of these Courts. It was not denied that a great deal had been effected in that direction. There might be many difficulties; there probably were some inefficient Judges. But even in other ranks of the judiciary, instances of that sort were not wanting. And he deemed it to be a good and salutary principle that if you wanted to make people trustworthy, you should show them that you trusted them; and when you had indications of real and material improvement, then he thought that it was a mistake to pass any measure calculated to manifest a distrust which was not called for by the most urgent and practical reasons of State policy.

The Hon'ble SIR ARTHUR HOBHOUSE said:—"perhaps it is because I have never been in the painful position in which my hon'ble friend Mr. Hope tells the Council he has often been placed, namely, as defendant to a suit, that I have never been able to satisfy myself that this is a question of very serious importance. Even if the clause stood as it was in Bill No. IV, I do not think it is very important. And that is shown by nobody being able to show any evidence of the ill-working of the law, either in Bengal where the subordinate Courts entertain these suits without restriction, or in Bombay where they are forbidden to entertain them at all. If the clause stood as in Bill No. IV, I confess I should not be able to maintain my ground against such an argument as we have heard from my hon'ble friend Mahárájá Jotíndra Mohan Tagore. I have shown that conviction in the most practical way by succumbing to his arguments in Committee, and voting with him on his proposal to alter Bill No. IV. But it seems to me that the rule now laid down in Bill No. V gives a convenient rule of practice. It is one which will leave all petty suits of this kind to be decided in the Munsif's Courts, and will give time to consider whether the more important suits shall be taken into the District Courts. My hon'ble friends have advanced arguments for this provision which I will not repeat. But there is one argument which seems to me worth consideration, and that is the argument which arises from the course of appeal. If a suit is decided in a Munsif's Court the appeal lies to the District Court, and the case does not reach the High Court excepting in that most unsatisfactory of all shapes, a special appeal. But if a suit is decided in the first instance in the District Court, then the appeal lies direct to the High Court, which has the whole case before it and can decide according to the merits. I believe I am right in saying that my hon'ble friend the Mahárájá Jotíndra Mohan Tagore and those with whom he acts have the greatest confidence in the High Courts, and would be glad that cases of importance should be decided on their merits by those Courts. It is true that the District Court can call up a case when it thinks fit. But it is not nearly so likely to call up a case in the ordinary course as if there was a provision for a particular class of suits that notice should be given to it upon which it should make up its mind. It seems to me that this is a provision which is likely to operate as intended, namely, that important cases should be decided, as it is desirable they should be decided, by the higher tribunals, and that unimportant cases should continue to be tried, as they are now tried, by the subordinate Courts.

HIS HONOUR THE LIEUTENANT-GOVERNOR said he felt ashamed to take up the time of the Council at that late hour, but as his hon'ble friend Mahárájá Jotíndra Mohan Tagore had done him the honour to refer to him, he must say that he entirely agreed with his hon'ble friend in every word that he had said in support of the amendment. HIS HONOUR observed that during this discussion the whole of the arguments which had been used had been directed to the question

of the Munsifs' Courts. But it was not only that class of officers who were placed under an implied ban, but the whole of the Subordinate Judges of the country were by this section to be branded as being unworthy to be trusted with the trial of suits in which Government servants were concerned. He thought it was very wrong in principle that the Government should now come forward, on no particular grounds, and state by implication that it considered that its Native Judges were not to be trusted to try cases in which the Government were concerned, although they were perfectly competent to try cases in which other classes were concerned, and claim for itself and its officers exceptional treatment in the Courts.

No doubt the section as it had now been amended was less open to objection than it was in the previous Bill, but it was still so worded as to throw a great slur on the whole of that valuable class of officers, the Subordinate Judicial officers. For his part he thought nothing showed so clearly the good effect education had had in this country as the extraordinary improvement which had taken place of late years in the efficiency and morality of the Subordinate Judges, and our judicial establishments generally; and he thought that no more unfitting time could have been chosen than this to cast such a slur upon a most deserving class of officers. His hon'ble friend Mr. Cockerell stated that cases of abuse of authority by Munsifs in trying Government suits, and hostility on their part to the executive officer, had become so frequent as to constitute a public scandal such as he considered would justify the passing of the provision now under discussion. His Honour had called for a return from the records of the Bengal Secretary's office of the number of cases which came before the Local Government, in which there was reason to suppose that officers of this class had abused their power, and he found that only two complaints of any kind had ever come under the notice of Government. One of these cases was the case of a Munsif who, acting with the concurrence of the District Judge, ordered the arrest of a Magistrate who had neglected to obey an injunction of the Court. That, His Honour admitted, was an unfortunate case; but cases of occasional abuse of authority were not confined to Munsifs or Native officers, and in this case Government would have gained nothing by the interference of the Judge, who, though consulted, never attempted to guide the Munsif to do otherwise than he did do, and must therefore be presumed to have thought him right. The case occurred many years ago and the Munsif was punished. The other case to which he referred occurred a short time ago, in which a Munsif gave a decree against an executive officer for interfering with what he believed to be an obstruction on the public highway. The case was appealed to the District Judge, who gave his decision to the same effect as the Munsif; so that there would have been no difference if that case had gone originally to the Judge instead of to the Munsif. From the decision of the Judge the case was appealed to the High Court, who decided that the Native Judge was right and the executive officer wrong. Therefore, the only two cases which His Honour had been able to find were entirely opposed to the assumption of his hon'ble friend Mr. Cockerell as to the present state of the law leading to judicial scandals. As far as His Honour was aware, there was no such scandal as that which had been alleged. If there was anything of the sort, the records of Government would surely show it.

The only other reason which had been given for introducing this section—at least as far as regards its application to Bengal—was, that some similar section had existed in Bombay for many years. But he submitted that if that was the law in Bombay, the proper method of legislating was to bring Bombay forward to the state of things which was in force and which had worked so successfully here, and not to push Bengal back to the condition of things which existed in Bombay.

He could not altogether agree in what had fallen from his hon'ble friend Sir John Strachey, because, although His Honour agreed with him that it was most important to maintain a strong executive administration in this country, yet there was no way in which an Executive Government could better show its strength and its consciousness that its acts were all founded on a just consideration for the rights of others, than by its willingness to submit its conduct to

the criticism of the Courts, and to stand before these Courts on terms of absolute equality with the humblest suitor.

The question being put,

The Council divided—

Ayes.	Noes.
Mahárájá Jotíndra Mohan Tagore.	Mr. Cockerell.
Mr. Colvin.	Mr. Cowie.
Mr. Bullen Smith.	Mr. Hope.
Mahárájá Narendra Krishna.	Sir E Johnson.
Sir A. Clarke.	Sir J. Strachey.
Sir A. J. Arbuthnot.	Sir E. C. Bayley.
His Honour the Lieutenant-Governor.	Sir A Hobhouse.
His Excellency the President.	

So the motion was carried.

The Council adjourned till Thursday the 29th March 1877.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

CALCUTTA,
The 28th March 1877.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Prices Current of Food-grains throughout India for the 2nd half of March 1877.

Balance expended ... 1,735

Meerut division reports "no demand for water during the month," and in the Cawnpore division it is reported that there was "a demand towards the end of the month, chiefly for poppy."

Eastern Jumna Canal.—Reports "no demand to speak of."

Traffic.—"Owing to the low supply in canal during February, the total quantity of traffic carried by canal boats shows a heavy decrease."

* Rainfall to end of March 1877.

ALLAHABAD,
The 28th March 1877.

G. H. D. WALKER,
Asst. Secy. to Govt., N. W. P., P. W. D. Irrigation Branch.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Weekly Relief Report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, Madras, dated 14th April 1877.

Read Relief Reports for the week ending 31st March 1877, from the Collector of South Arcot, dated 6th April 1877; from Kistna, dated 3rd April 1877; from Kurnool, dated 4th April 1877; from Coimbatore, dated 6th April 1877; and from Malabar, dated 10th April 1877.

THE detailed relief reports for the Kistna, Kurnool and South Arcot districts, a supplemental statement relating to the Erode taluk of Coimbatore, and a blank relief report from the Malabar district for the week ending 31st March will be submitted for the information of Government. The Collector of Malabar will be good enough to report why he has not found it necessary to commence relief operations which were represented to be urgently needed in Wynaad.

2. Good rainfall throughout the Kistna district, and as much as 5·15 inches were registered at Guntoor. Prices nevertheless show tendency to rise, though there is no very marked change to call for special notice. Rain also fell in all taluks of Kurnool except Pattikonda and Koilkuntla; 1·5 inches were received at Nandial and 1·43 inches at Cumbum. The district average prices of dry grain were stationary, but there were considerable changes in the taluk prices. Ragi and cumbu rose smartly in Ramalkota, but cholum and rice fell. All dry grains rose in Markapur, and cumbu and cholum in Cumbum. Ragi and rice fell in Nandial and Sirwell. In South Arcot distressed taluks there was no rain, but prices fell in Villapuram.

3. In Kistna, report was received only from the Commameer Canal extension works, on which 1,875 coolies were employed, and Rs. 5,076 were expended in the week; work seemed to have ceased in the Tindivanum taluq of South Arcot; in the Trinamalai and Villapuram taluks 874 coolies were employed on minor works, and Rs. 308 were spent within the week. Wages are correctly adjusted under the sliding scale.

4. The taluk details of the numbers on relief works in Kurnool are as follows:—

	24th March.	31st March.	
Ramalkota	39,434	41,915	+ 2,481
Nandikotkur	8,975	9,720	+ 745
Nundial	28,973	28,887	— 86
Sirwell	13,960	14,667	+ 707
Kollkuntla	31,725	30,974	— 751
Pattikonda	19,292	23,340	+ 4,048
Cumbum	34,533	42,933	+ 8,400
Markapur	8,551	9,706	+ 1,155
Total	185,443	*202,142	16,699

In Ramalkota and Pattikonda the increase is nominal, and is due to wrong return in the previous week; and in Cumbum the large increase is ascribed to the same cause, the numbers on two works on 24th having been estimated. The Markapur increase is due to the return of coolies who had temporarily left the works on concentration.

5. The wages paid in the two eastern sections are the same as commented on by the Board in last week. They have not been raised since first fixed in February, and prices have since fallen. In Cumbum no less than 5 different sets of rates are paid, notwithstanding the Collector's repeated orders.

6. Gratuitous relief is very small in Kistna and South Arcot. In Kurnool the village relief return is incomplete, but 36,252 persons were relieved in camps and relief houses. Of these, 30,214 were children, most of whom were drawing 3 pies a day each. The concession seems to have been introduced in all taluks except Nandikotkur and Markapur. The Board suspect fraud in Ramalkota, where the number of children on gratuitous relief is 25 per cent. of those on the works. The Collector should call the attention of the Sectional Officer to this excessive proportion.

Talukwar Abstract of relief in certain districts of the Madras Presidency for the week ending Saturday, the 31st March 1877.

District.	Taluks.	Grants of funds sanctioned for relief works up to 31st March 1877.	Probable cost of works or sums sanctioned for their execution.	Outlay on works in progress. In the week.	Outlay on works in progress. To the end of the week.	Outlay since the commencement of distress. On relief works.	Outlay since the commencement of distress. Gratuitous relief.	Cost of gratuitous relief during the week.	Number of coolies employed on the last day of the week. Men.	Women.	Children.	Total.	Number of persons in receipt of gratuitous relief on the last day of the week. Men.	Women.	Children.	Total.

REVENUE BOARD OFFICE, MADRAS; *The 14th April* 1877.

H. E. STOKES, *Secretary.*

Scarcity in the Deccan and Southern Mahratta Country.

Statement No. XXII regarding the scarcity in the Deccan and Southern Mahratta Country, together with a Summary of Government Orders issued during the week ending 13th April 1877.

Districts.	Area in square miles.	Affected area in square miles.	Population of district.	Affected population.	Collectors' Reports by telegram, dated 10th and 11th April 1877.	Works in progress.	Number of people employed. During the past week.	Number of people employed. During the present week.	Number of people employed. Percentage of labourers to population of district.	Grants, including the large works authorized in Government Resolution No. 6152 of 27th Oct. 1876.	Expenditure up to latest known date.	Prices of staple grain in lbs. per rupee. Ordinary prices.	Prices of staple grain in lbs. per rupee. During the past week.	Prices of staple grain in lbs. per rupee. During the present week.	Average rainfall, *i.e.*, the average of all the Talukas for five years.	Average rainfall during the past season of all the Talukas.
										Rs.	Rs.					
Khandesh ...	10,162	5,500	10,28,642	6,46,944	Slight importations of grain. Small-pox in some Talukas.	Roads ... / Tanks ... / Miscellaneous *	3,725	4,736	·46	2,46,733	1,51,195	Jowari ...56 / Bajri ..54	32¾ / 28½	32¾ / 28¾	24·94	14·4

Dharwar ...	4,564	3,000	9,88,037	6,30,000	Grain market fairly supplied. Prices rising owing to diminished imports consequent upon rise of cart-hire. 332 deaths from cholera.	Ditto ...	41,294	37,193	3·76	9,68,239	4,09,520	Jowari ...43	16¼	15¾	26·39	13·81
TOTAL ...	54,355	34,183	79,63,927	50,18,992			2,53,270	2,66,691	3·34	68,30,891	39,48,937					

* Such as digging and repairing wells, prickly-pear clearances, &c.

No rain has fallen during the week.

2. The average price of jowari throughout the nine affected districts is nearly the same as last week, but it appears to have a tendency to rise in Kaladgi and Dharwar.

3. The number of people upon relief works in the nine affected districts is 266,691 against 253,270 last week, and there are also 3,624 hill-men and immigrants employed in Ratnagiri and Kanara. The increase is very general, and in Kaladgi it is considerable.

4. Government have given orders for special assistance being given to immigrants into Kanara and Dharwar returning to their homes.

5. The Sanitary Commissioner has visited the Ashti tank, in the Sholapur District, upon which 14,000, and the Nira Canal in the Poona district, upon which 5,000, labourers are employed, and reports favourably upon the condition of the people.

6. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 7th April, the number of people upon Civil Works was 25,890, the number upon works under Public Works Department agency being 236,187. About one-tenth of the relief labourers are, therefore, upon the former description of works, and this proportion does not appear likely to be materially reduced.

7. As the season has arrived when it is probable that the greatest amount of pressure will be felt in the famine districts, Government have drawn the attention of all their officers employed within the famine area to the main points which require the most watchful attention. These are:—

The organization for village inspection, in order that the amount of distress which exists or is imminent, may be accurately ascertained.

The immediate relief of destitute persons temporarily unable to earn their livelihood.

The providing of relief-houses or kitchens for the old and infirm poor.

The supporting the young children of labourers employed upon relief works, whether under Public Works Department or Civil agency.

The arrangements for informing those able to labour where work is to be had, with the various subsidiary provisions of treating them when sick, and meeting the many exceptional cases which arise in practice.

The providing them with a subsistence while in transit to a relief work.

8. Maps accompany this summary. They do not differ materially from those previously sent, and Government hope that it may not prove necessary to open any more considerable works.

9. The following table gives the expenditure by Government, during the week ending 31st March, upon charity in the relief of the aged and infirm poor; and in payments made to the young children of labourers employed upon relief works: the amount of expenditure on this class of relief in the Kanarese Districts is still noticeably low:—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

	GRAND TOTAL		214,811	

11. A table is appended, showing the condition of the affected Native States.

12. With regard to the movements of food-grains, 4,158 tons were exported from Bombay to the Southern Mahratta ports during the week ending 7th April, and during the same week 3,849 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 8,007 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the 7th April to the Southern Mahratta ports and the Railway stations in the distressed districts. It will be seen that the total amount delivered up to the 7th April was 227,757 tons:—

Food-grains sent to	In October 1876.	In November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	In April up to 7th.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports.	7,675	19,228	17,312	13,459	16,075	16,798	4,158	94,705
South-Eastern line, from Poona to Sholapur.	11,683	30,014	25,498	15,471	12,477	13,760	2,972	111,875
North-Eastern line, from Nasik to Bhusawal.	4,447	4,776	3,606	1,615	2,622	3,234	877	21,177
TOTAL ...	23,805	54,018	46,416	30,545	31,174	33,792	8,007	227,757

13. On the whole, the grain supply continues to be sufficient, and, with the exception of the cholera in the south of the Presidency, the condition of the people is satisfactory. It is noticeable that the health of the people employed on relief works has been generally very good, and compares favourably in this respect with the health of the general population.

M. K. KENNEDY, *Major-General*, R. E.,
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.
These figures are for the nine districts. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

Weekly Condition Report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(No. 9.)

Condition Report for week ending 7th April 1877.

Bangalore District.—Markets moderately supplied. With the exception of the downpour that fell at Bangalore on the morning of the 1st (of which a note has already been made in return No. 8) and a drizzle (5 cents) in the Devanhalli Taluk, there was no rain during the week, nor was there any improvement in the condition of the crops. The prospects of the season continue to be bad, and people and cattle suffer from the drought. The public health is as in last week; cholera and small-pox being very prevalent, as well as fever and small-pox in the Nelamangala Taluk.

Kolar District.—Markets fairly supplied. There was no rain except in three taluks, where light showers fell, which enabled a small supply of water to be stored in some of the tanks. Two of the millet tribe and superior til seed are being sown in some places. The standing sugarcane and irrigated ragi crops are in good condition, except in the Gummanayakanpalya Taluk where they suffer from the drought. The prospects of the season are said to be unfavourable; the weather is warm during nights with cloudy mornings and clear days. Cholera, small-pox, fevers, diarrhœa and dysentery are still prevalent.

Tumkur District.—Markets fairly supplied and prices steady. There was a good fall of rain in the Koratagere Taluk in which four tanks received from 1 to 1½ months' supply of water; in the Maddagiri Taluk it was moderate, one tank receiving 10 days' supply; 65 cents were registered in Honnavalli, and there were slight showers throughout the Tumkur Taluk. The prospects of the season are somewhat improving. Javari crops in the Tumkur, Koratagere and Maddagiri Taluks have been reaped. Bengal-gram sown in beds of tanks is thriving, and the palm gardens have recovered a little. Cholera and small-pox still prevail, the number of deaths from the former cause being 70 more than in last week. Coolies from the coffee estates are returning.

Mysore District.—Markets fairly supplied, and prices steady on the whole. With the exception of the Chamrajnagar, Gundlupet and Talkad Taluks, rain fell throughout the district generally, and some tanks received a small supply of water. Javari and oil-seeds were fresh sown in the Mysore, Mandya and Gundlupet Taluks; javari and oil-seeds sown in the Ashtagram Taluk have germinated, and are doing well, but in Gundlupet they are affected by the drought. The crops below channels, rabi-paddy and Bengal-gram in Chamrajnagar, and javari in Mysore, are in good condition; but in Malvalli and Chamrajnagar sugarcane and javari, respectively, are withering. Cholera still prevails more or less in all the taluks of the district, as also fever in Periyapatna. Cattle also suffer from murrain in the Chamrajnagar, Ashtagram and Mandya Taluks. Emigrants are returning to their homes from the coffee districts and are now engaged in home agriculture.

Hassan District.—Markets sufficiently supplied, but prices fluctuate slightly. With the exception of the two taluks of Manjarabad and Belur, rain fell throughout the district, and 22, 2, and 20 cents were registered at Arakalgud, Attikuppa and Narsipur, respectively. The Bengal-gram crop in the bed of the Channaraypatna tank is being reaped. The recent rains have been beneficial to the sugarcane crops in the Hassan Taluk. Maize, oil-seeds, and pulses which had germinated during the last week in the Attikuppa Taluk are withering in same places for want of rain. Maize and green and black gram, sown under channels in the Narsipur Taluk, are thriving. The prospects of the season remain unaltered. Cholera continues to prevail more or less in all the taluks, as also fever in those of Channaraypatna and Narsipur; the number of deaths from the former cause in the town of Hassan was more than in the last week. Cattle in the Attikuppa Taluk suffer from murrain, and generally from want of forage and water.

Shimoga District.—With the exception of a few villages in the Shikarpur and Honnali Taluks, where cholera prevailed, the markets were generally fairly supplied, and price of foodgrains was stationary. There was no rain in any of the talukas, although in the corresponding week of last year 12¼ cents were registered at Shimoga. Rabi-paddy in the Channagiri Taluk is in fair condition, but it is suffering from drought in some parts of Naggar and Sagar. The young sugarcane recently planted in the Sorab Taluk is thriving. The prospects of season remain the same as in last week. Cholera prevails in Sorab and Channagiri, and small-pox in the latter and Nagar Talukas.

Kadur District.—Markets fairly supplied and prices steady. There was no rain except at Chikmagalur where 55 cents were gauged. Sugarcane recently transplanted in the Lakvalli Taluk is doing generally well. Prospects continue to be unfavourable. Cholera prevails throughout the district, as also fever, small-pox and dysentery in Lakvalli, Tarikere and Kobba. Cattle suffer from want of forage and water.

Chitaldroog District.—Markets sufficiently supplied, except in some scattered villages where importation was checked by cholera, and, with the exception of Budihal, Kankuppa and Chitaldroog, where there was a slight fall, the price of food-grains was steady. There was rain

on the 1st and 2nd in some of the villages of the Chitaldroog Taluk, and three tanks received a 15 days' supply of water. There are no crops in the Davangere, Hiryur, and Budihal Taluks. Javari was harvested in the Chitaldroog, Kankuppa, and Doderi, as also Bengal-gram, and Navane in Pavagada. The paddy crops in some parts of the Doderi and Husdurga are withering. Prospects remain unaltered. Cholera prevails in all the taluks, as also small-pox, fever and ague.

General Remarks.

The condition of the Province has not improved since last report. The rain that fell on the 1st April was fairly general, but since then the expectations that were raised have not been realized. All the taluks, with the exception of 4 in the Mysore and 2 in the Hassan Districts, have, however, since that date, received partial showers, but in the Nundydroog Division it was not so, 3 taluks each in Bangalore and Kolar Districts and 4 in Tumkur being all that registered any rainfall. In Shimoga there was none, and in Kadur and Chitaldroog, only the head-quarter taluks received any supply. The weather continues hot and oppressive, but the rain has kept off except as above, and Colonel Campbell writes somewhat anxiously about his Division. Notwithstanding these rather gloomy reports, agricultural operations are reported to be in active progress. Young plants are generally doing well; and fresh sowings have been made in the taluks mentioned below, and should rain fall shortly (and the indications of its possibility still continue) the prospects would be much improved.

Devanhalli	... Maize and sugarcane.	Channarayapatna	Javari and castor-oil seeds.
Gumnayakanpalya	Sugarcane.	Narsipur	... Javari, green gram, and gingelly oil-seeds.
Koratagere	... Irrigated ragi.		
Hassan	... Paddy.	Mysore	... Javari and oil-seeds.
Attikuppa	... Javari.	Mandya	.. Javari.

Cholera and small-pox still prevail generally thoughout the Province. The number of deaths from the former during the week ending 5th April was 3,290, or 430 more than in the previous, but 214 less than in the penultimate week, *viz.*:—

Bangalore	... 360	Hassan	... 366
Kolar ...	... 853	Shimoga	... 200
Tumkur	... 561	Kadur	... 176
Mysore...	... 311	Chitaldroog	... 463
		Total	... 3,290

In Kadur, Kolar and Bangalore Districts, there was comparatively a decrease, while the reverse was the case in the other districts.

To prevent the spread of these diseases by the burial or burning of dead bodies close to tanks, rivers and villages, the Chief Commissioner has since issued stringent orders for the observance of due sanitary precautions, the patels and the taluk police officers generally being held responsible that such are duly carried out.

The condition of the cattle remains much the same, forage being still scarce, though young grass is making its welcome appearance. The use of prickly-pear as a substitute in times of scarcity has been made known throughout the Province, and in some taluks of the Chitaldroog District and elsewhere experiments in accordance with the accounts given by Messrs. Harvey and Sabhapati, have been carefully made with a view to its utilization.

The Deputy Commissioner of Chitaldroog states that the Amildar of Pavagada Taluk has been successful in his attempts to introduce it, and that he has fed his own cattle with it, with this result, that if it is carefully burned so as to remove all the speculœ, and well washed afterwards, the animals eat it greedily and thrive fairly on it. Mr. Saunders, however, thinks it can only be used as an alternative in times like the present, and has directed a list to be prepared of all the indigenous and acclimatized grasses of which there are so many in Mysore, with a view to their being more extensively cultivated for grazing purposes and for hay. With regard to the statement that the Amrut Mahal cattle at Hunsur were suffering from diseases, the spread of which was encouraged by affected private cattle being let loose over the country, enquiries are being carefully made, and the Madras Government has been asked to furnish more particulars on the subject.

The Commissioners of Divisions have been also asked to report on the condition of the sheep, indigenous as well as the half-breed Merino kind, resulting from the importation some years ago of fresh blood from England and Australia, and how the want of forage has affected them.

The weight of grain received was—

at the terminal station	...	3,111 tons.
at Kolar Road „	...	311 „
Total	...	3,422 tons.

or 533 more than in last week, the daily average receipts amounting to 489 tons, as against 413. Of this quantity, 2,972 were received from Madras, 285 from Beypore, 18 from Negapatam

and Boodalore (past week 49) by the South Indian Railway, and the remainder from the neighbouring districts of the Madras Presidency. Immediately after the rainfall on the 1st, merchants countermanded supplies, and for a day or two there was a great decline in the importations. As the rain held off, a recovery took place, and at the end of the week the daily average was as above. The merchants are keenly alive to their interests in this matter; they are besides contented with a small margin of profit, and employ the railway in a manner that does not at first appear credible. The Agent, however, assured the Chief Commissioner that green hides were brought to Bangalore from Delhi and Cawnpore, to be tanned, and then exported in that state from Madras, and that green cocoanuts had been sent from near Beypore to Sholapore, &c.

The cause of the small imports by the alternative route from Negapatam is attributed, (1) to the fact that the reduced rates sanctioned by the Madras Government in their order dated 7th March were not brought into force until the 24th idem; (2) that the Bangalore dealers who had been assured that the reduced rates would be in force on and after the 8th, had to pay the old rates for all consignments received between that date and the 24th, which discouraged them. On the recommendation of Captain Bisset, however, the Madras Government has, it is understood, the matter under consideration, with a view to a refund being made, which will have a beneficial effect.

No reliable statistics are yet forthcoming as regards the quantity of imported grain consumed within the Province and exported beyond the frontier, nor has the information called for with reference to Sir R. Temple's Minute on the necessity of forecasting the requirements of the Province for the next three months been received. Advices, however, from Coorg state that that Principality will not require to indent on railway-borne grain, as the merchants have made arrangements to get what was required from Mangalore and Tellicherry, where heavy consignments have been received, and that they were fully alive to the necessity of storing it in Coorg before the 15th June. The Superintendent, after careful review of the surroundings of the case and a calculation as to the requirements of the people, is of opinion that, with the agency of private trade, the stored home growth, and the fair prospects of the season, the wants of Coorg are duly cared for.

Owing to the completion of some of the works under the Revenue Officers before the close of the official year, there is a decrease of 263 in the number of works, and of 23,640 persons employed thereon. The Deputy Commissioner of Tumkur reports a large demand for labour for harvesting the javari crops, and the same may be said of other parts of the Province. Under the rules of the Department Public Works, sanctions lapse if not fully utilized before the close of the official year; but to prevent this operating adversely to the interests of the relief labourers, Commissioners of Divisions have been directed to apply for the necessary re-appropriations of unexpended grants, and to proceed with the works pending sanction.

The daily average number gratuitously fed at the camps and kitchens was 59,444, or 1,470 more than in the week before; but stringent orders to prevent anything like wasteful expenditure have been issued on the subject, which have already borne good fruit, and have been lately repeated. Some mistakes must here and there occur, but Mr. Saunders is resolved that this necessary form of relief shall be uniformly administered according to the rules provided therefor. Sensational writing on the subject is not infrequent, and must be expected; for instance, it was reported that great destitution prevailed among the more respectable people in the Pete and Cantonment, who could not be prevailed upon to seek relief at the kitchens. In last week's return the proceedings of the General Famine Relief Committee in reference to this point was noted, and since then the most careful enquiries have been, and still are being, carried on, with house-to-house visitation, the result of which, so far as it has gone, has been to prove that the statements were not only much exaggerated, but that few such cases exist. At one of the camps an experiment has been successfully tried as follows:—Men and women who cannot find work, or earn sufficient at light work, are provided with work under arrangement with the Department Public Works officers near. They are fed from the kitchen on ¾ths of a seer of rice per day, and 6 and 3 pies respectively are given to them in addition, the value of their labour on piece-work being received from the Department Public Works and credited to the accounts to recoup the outlay. Others who are less able-bodied are fed at the roadside chattrams, and employed to collect bones, which are sold in convenient lots as manure for coffee plantations, &c., and the sale amounts credited against the expenditure.

During the crisis destitute children have occasionally been rescued, and orders have been recently issued that such should be maintained at the cost of the State for the present, lists being made of the foundlings, with full particulars as to the circumstances under which they were rescued, so that they may be eventually identified, or otherwise disposed of.

J. PUCKLE,
On Special Duty.

PROVINCE OF MYSORE.

J. PUCKLE.

Scarcity in Western and Southern India.

No. 26, dated India Office, London, 22nd March 1877.

From—Her Majesty's Secretary of State for India,
To—The Government of India.

THE despatch of Your Excellency in Council, dated 2nd February, No. 6 of 1877, relative to the scarcity in Western and Southern India, has been considered by me in Council.

2. I have read with great interest the reports of Sir R. Temple, which give a clear and vigorous sketch of the condition of the effected districts in the Madras Presidency. I note, with satisfaction, that the Madras Government has been able to accede substantially to all the proposals made by Sir R. Temple, and that orders on the subject will at once be issued.

3. There appears to be no material change in the condition of the distressed districts in either Presidency. The worst feature is the prevalence of cholera in the Madras districts.

4. I shall hope soon to receive the reports alluded to in the last paragraph of the despatch of Your Lordship in Council.

No. 22, dated Simla, the 26th April 1877.

From—The Government of India,
To—Her Majesty's Secretary of State for India.

WE enclose a Minute by Sir Richard Temple regarding the condition of the upland taluks in the district of Salem, which he describes as being among the most distressed tracts in the whole of the Madras Presidency. Some parts of these taluks have not had crops for two years. One of them, Utangiri, was one of the taluks which suffered most severely in the scarcity of 1866. The relief operations appear to be conducted with care and judgment.

2. Yesterday we received the following telegram from Sir Richard Temple:—

"Since last weekly telegram I have visited South Arcot, re-visited districts North Arcot, Cuddapah, Kurnool, Bellary. In Southern India situation changed slightly for worse contrary to expectation, because showers ceased middle April; any moment rain might alter whole case; otherwise distress must gradually increase. Near Madras, on East Coast, no rain at all; country there quite parched. Northwards, above Ghâts, in Bellary and Kurnool, situation worse, according to previous expectation. Season of trouble approaching. Agricultural and able-bodied classes still sustain themselves; but famine beginning to seize lower classes. Numbers on gratuitous relief rising. Many come to relief works in reduced state. Village inspection and relief being better developed, but still not complete everywhere; I have again urged its full development. Those who cannot work becoming badly distressed; in relief gangs able-bodied still healthy, but weaker ones sometimes fall into low condition. A sort of scurvy appearing; many think reduced wage should be raised. I deprecate raising wages for able-bodied, fearing influx of persons to work who could otherwise support themselves; but I have recommended special allowance for all who are found reduced, also concession Sunday wage. Efforts with some success to send labourers to Nellore canal; but earth-work slowly and feebly begun on railway from Bellary towards Dharwar. Active markets supplied. Draught cattle sustained. Inferior animals languishing or perishing in large numbers. Imports to Madras steady, but from Bombay direction increasing. No actual want of drinking water. I have just quitted Madras Presidency."

From the facts stated in this telegram it is evident that, unless rain falls within the next week or so, there will be a very great increase in the numbers of persons needing relief, and also in the loss of cattle, already, it is to be feared, very grievous. Your Lordship will have learnt from our telegram of the 21st instant that the number in receipt of relief in the Madras Presidency had then reached very nearly a million, which, however, is still considerably below the estimate for April submitted by the Madras Board of Revenue in December last, according to which the numbers likely to require relief in April were put down at 1,405,000. The greatest increase is perceptible in the number in receipt of gratuitous relief, which amounted to 241,000 persons; and from Sir Richard Temple's allusion in his present telegram to the insufficient development of the system of village inspection, we may look for a still further increase in the numbers requiring State relief in this form.

3. The situation is serious and critical; but the trade in grain is active, and there is, we trust, no reason for apprehending any deficiency in the supply in any of the districts. Sir Richard Temple, who is now on his way to Bombay to assume the Government of that Presidency, is about to furnish us with a

comprehensive report on his mission, which will doubtless embody his latest impressions on the present aspect of the famine, and which we shall lose no time in forwarding to Your Lordship.

4. The following is an extract from our telegram of the 21st instant regarding the numbers on the relief works and in the receipt of charitable relief according to the latest returns:—

"In Madras seven hundred twenty-six thousand on relief works, and two hundred forty-one thousand charitably relieved. In Bombay two hundred seventy thousand on works, and sixty-six thousand charitably relieved. In Mysore sixty-four thousand on works, and fifty-nine thousand charitably relieved."

5. Since the above was written we have received the following supplementary telegram from Sir Richard Temple, despatched yesterday from Dhond in the Poona district, the point from which the railway starts which is to connect the Northern and Southern sections of the Great Indian Peninsula Railway, and which has been commenced as a relief work:—

"I have seen some local officers, districts Sholapur, Poona and Ahmednagar, have inspected 3,500 relief labourers, person by person, on Dhond and Munmar Railway, found them doing well on new wage. General situation of Bombay Deccan appears thus: Pressure becoming harder everywhere, numbers on relief works slightly increasing, system steady. Vast majority of relief labourers under professional officers, task works well enforced, numbers on gratuitous relief increasing fast, village inspection developed. Prices slightly rising. Trade active. Markets well supplied. Draught cattle sustained, but numbers of other cattle perishing. Fate of animals sent to Ghât mountains for grazing uncertain. Many dying there. Anxiety about bullocks for future ploughing. Showers have fallen, but do not effect material good. I found water in rivers Tungabadra and Krishna increased in volume since last visit. Drinking water scarce occasionally, but failure averted by excavating wells."

No. 186, dated Ranеepet, the 17th April 1877.

From—C. BERNARD, Esq, C.S.I., *Secretary to* SIR RICHARD TEMPLE,

To—*The Hon'ble* T. C. HOPE, C.S.I., *Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him, together with a memorandum regarding relief operations in the most distressed parts of the Salem district.

Minute by SIR RICHARD TEMPLE, *dated Ranеepet, the 17th April* 1877.

IN forwarding the accompanying memorandum regarding the most distressed parts of the Salem district, I have a few remarks to record.

2. The taluks above the Ghât range adjoining the Mysore plateau are among the most distressed tracts in the whole of the Madras Presidency. Some parts of these taluks have not had crops for two years. The endurance of the inhabitants and the relieving zeal of the officers are being tasked to the utmost.

3. On further examination the system of relief works in this district is found to merit all the praise bestowed upon it in my Minute of the 12th March. As regards strict tasking by the civil officers, utilizing of the public works establishments, discharging relief labourers wherever showers enable the people to plough, preserving the relief labourers in sufficiently good condition without offering any undue temptation, selecting useful and beneficial works for the employment of relief labour, there is little left to be desired. And the management of the whole affair by the Collector, Mr. Longley, is entirely worthy of confidence.

4. The relief camp at Dhurumpooree, in the midst of the scene of the greatest distress, is comparatively popular. The camp at Salem is not unpopular, or at least is fairly well attended. There is some light suitable work afforded, or about to be afforded, to the weavers of the finer fabrics in that city.

5. The system of village relief and visitation is being carried out all over the district, and nowhere is it more needed than here. In some of the worst tracts it was probably not commenced soon enough in full force. I trust that it is now going on rightly. At first there was some difference of opinion between the Collector and the Board of Revenue. The Board seem to have rightly deemed the Collector's proposals too large for the commencement, as indeed they were. But although the Collector could not carry out his own proposals in their integrity, he could fall back upon the general orders of Government to collect in large camps all those destitute persons who could be collected, and to sustain in the villages those who could not be so collected; and he doubtless did so. This plan is being carried out fully, as I understand, in the worst tracts.

6. There is one tract however where the system was not being carried out at the time of my visit, the 7th and 8th April, and where it is much wanted, namely, the low hills, and valleys and jungly places in and about the Shevaroy hills inhabited by various Malayali tribes. Many wretched persons were met with going up to Yercaud (the settlement on the Shevaroy hills), and

some equally miserable were on a relief work at Yercaud. Information reached me to the effect that others, in equally bad case, might be lingering in the huts and hamlets among these hills. I was glad to see that the subject was attracting the attention of the authorities on the spot. It certainly seemed to me that some special official ought to be deputed to examine immediately all the inhabitants of that group of hills. And I have been glad to hear that the Collector has since taken steps to effect such examination.

RICHARD TEMPLE.

Relief affairs in the worst part of the Salem district during the middle of April 1877.

THE total population of the district is in round numbers two millions. On the 9th April the district had—

		No.
On relief works—		
Under Civil officers	...	24,527
„ Public Works Department officers	...	26,861
Total	...	51,388
On gratuitous relief	...	17,249

During the last fortnight there have been partial showers, nowhere exceeding 1¼ inches, and in most places much less. The people have ploughed a good deal of land where the rain has exceeded half an inch. As yet the rain has not sufficed to raise fodder for the cattle.

2. The relief labourers are for the most part paid by piece-work; and the rates are from 50 to 100 per cent. dearer (that is more favourable to the workman) than in ordinary years. Some weeks ago the rates were harder, but they were lightened by the Collector, who considered that the people were becoming reduced in condition. An adult male labourer earns at piece-work from 2½ to 2 annas a day: women and children make proportionate earnings. Some few light labour gangs in every taluk are on a daily wage of 1½ annas a day for men, and 1¼ annas for women. Infants who cannot work get 3 pie a day, whether their parents belong to piece-work or light labour gangs.

3. Though the whole district is distressed, yet some parts are much worse than others. The Dhurumpooree taluk (population 186,000) is the worst of all; next comes the Ootengiri taluk (population 170,000); and there is some severe distress in and around the town of Salem, and in the taluk of Trichurgode.

4. It is ascertained from Mr. Dawes, Deputy Collector, that in his two taluks, Ootengiri and Tripettore, there were—

8,100 on relief works under Public Works Department officers.
2,800 on relief works under Civil officers.
1,000 on gratuitous relief in three relief camps and at villages.

The village relief system established by the Collector in January, but stopped by the Board's orders after a few weeks' trial, is now being revived. Under this system a list of the helpless poor in every village is made out and checked, and then a cash allowance, 12 to 15 pie a day, is made to each one of these destitute people through the village headman; children get only 10 pie. The success of this system depends entirely on the supervising staff; and the Collector has 8 to 14 circles in each taluk with a sufficiently paid inspector over each. These inspectors, acting under the Tahsildar and Relief Officer, see that the gratuitous allowance really reaches the needy people.

5. Nearly all the relief labourers in these two taluks are employed on piece-work at rates which are double (that is twice as dear as) the rates of ordinary years. All the work done is useful work, and most of it is on tanks. No public works undertakings are going on, or ever have gone on in the Salem district, side by side with, and in competition with the relief works. Both Mr. Dawes and the Tahsildar of Ootengiri were confident that deaths do not now occur in these two taluks from starvation, unless in the case of some of the wanderers whom it is so difficult to control. Cholera keeps constantly appearing here and there among the villages. Cattle are dying in great numbers; to this fact the enormous number of hides constantly brought to market testifies. People have driven their cattle down off the Shevaroy and other hills because of the want of water there. In the low lands there is no absolute dearth of water either for man or beast.

6. At Dhurumpooree 2,300 labourers were inspected, of whom about 200 were on daily wages at the 1½ anna rate; and the rest were on piece-work, earning about 2 annas for each male adult. Most of these people had been employed for 3 or 4 months. About two-fifths of them belonged to Pariah, and three-fifths to other castes. Among them were some 400 men and women, who were remarkably stout and strong; these sturdy gangs have to do 20 per cent. more work for the rupee than the other gangs, and they are going to be drafted on to tank-work elsewhere. The rest of these workpeople were in fair (but not first-rate) physical condition; some few were below par. There was only one really emaciated person, and he had been at work for three months; *but* he had been supporting two sick relations at home out of his wage. The children were, as a rule, in very fair condition. The Tahsildar and a pensioned Rajpoot Subadar, who lives in Dhurumpooree, considered that the people in these gangs were decidedly below the physical condition of such people in ordinary years, but if we could, by our

relief operations, keep the suffering poor up to the standard of these gangs till the end of the famine, we should be very successful.

7. Some 400 applicants for work were inspected. Most of these people have till very lately been on other relief works, and their condition was on the whole fair.

8. On enquiry into the causes of the depressed condition of the labourers as reported by the Relief Officer and Collector several weeks ago, it appeared that the relief wage had been kept at 1 anna 6 pie for adults, even when food was selling at 11 and 12 lbs per rupee. Under the Madras Government orders of the 30th January, the man's wage ought to have been about 1 anna 10 pie or 1 anna 11 pie when the price of food was so dear. Prices in Dhurampooree are now much cheaper, ranging at 16 or 17 lbs. per rupee for rice in the Dhurumpooree bazaar, and 15 or 15½ lbs. in the outlying villages.

9. The aspect of the relief camp made it clear that we have not succeeded in keeping the condition of all the suffering poor of this taluk nearly up to the standard of the labour gangs of the Dhurumpooree Fort. There were 930 inmates, and among the children there were many, nearly 10 per cent., very emaciated little creatures. Most of these little things had been two or three months in the relief camp, and they had not picked up at all. Side by side with them were fat, happy little creatures, who got no larger allowance than the thin ones. The explanation given by the Relief Officer and the Native Doctor is that some of the children came into the camp in very bad condition, and that they cannot assimilate the rice and rice broth. The Native Doctor said that these poor little things passed their food in an undigested state, they had been tried with ragi, with rice and with cholum, and some of them had been treated in hospital with sago, but nothing would bring them round. Among the adults, too, were some people who had been in the camp for months, and yet were still very emaciated. The death-rate was for weeks 6 per diem in this camp.

10. The ration of rice in the camp has recently been raised from 16 ounces to 20 ounces per diem for adults, and the results of this change remain to be seen. But when the greater number of inmates, adults and children, flourish on the ration, the circumstance that a percentage fail to recover condition does not by itself prove the ration to be insufficient. Probably the only way of getting these poor creatures into good condition will be to send them back gradually to their homes, with sufficient care for their maintenance on the road, and then to bring them upon the village relief now organised by the Collector. The change home, with assured hope of food while the trouble lasts, would give these poor people a chance of recovering. There seems to be something in the air or circumstances of the camp that prevents some of the people from picking up strength. Not that the camp is badly organised,—much otherwise,—the sheds are well ventilated and clean; and the camp is locally more popular than any other of the relief camps yet visited in the interior of the Presidency.

11. It may not be possible to send some of the famine babies and their mothers home just yet; and for them the Relief Officer is, under the Collector's instructions, arranging some kind of nursery apart from the camp for the children which do not recover under present circumstances.

12. On some of the roads round Dhurumpooree and in the town were to be seen a certain number of emaciated people, women and young men, whose physical condition showed them to be in real need of relief. The village relief now being organised will, it is to be hoped, suffice to save such people from the risk in which they are now. In and round Dhurumpooree indeed are now to be seen more pronounced signs of famine than have been noticed anywhere outside the Madras camps.

MORAPORE;
16*th April* 1877.

C. BERNARD,
Secy. to Sir Richard Temple.

Works in progress.

Collectors' Reports by telegram, dated 17th and 18th April 1877.

Khandesh ... No rain. Slight exportation and importation of grain continue.
Násik ... No rain. Grain supply abundant
Ahmednagar ... 15 cents of rain. Grain importations enough. 22 deaths from cholera.
Poona ... 80 cents of rain in the Indapur talukas. Large importations of grain. A few cases of cholera.
Sholapur ... 45 cents of rain. Grain supply ample, but prices rising. 2 deaths from cholera.
Satara ... An inch and a half of rain at Koregaum, and 20 cents in Walwa and Khanapur talukas. Grain supply abundant. 264 deaths from cholera, 4 on the Pingli and 5 on the Islampur tank.
Kaládgi ... From two inches to half an inch of rain in 4 talukas. Grain importation continues, but is decreasing in the Bagewari talukas. 360 deaths from cholera, and 50 from small-pox. Scarcity of fodder much felt.
Belgaum ... An inch and a half of rain has fallen in 4 talukas. Grain supply plentiful, except in Athni where it is getting scarce and dear. 229 deaths from cholera.
Dharwar ... Heavy rain throughout the district, averaging an inch and three-quarters. Grain market fairly supplied. 343 deaths from cholera.

* Such as digging and repairing wells, prickly-pear clearances, &c.

There has been a considerable fall of rain during the week in the southern and eastern parts of the Presidency. In Dharwar and Belgaum the showers have been heavy and general; also in a portion of Kaládgi and Satara.

These showers will, no doubt, prove of great benefit to the water-supply, both that available for drinking purposes and irrigation, and will, where they have been heavy, assist the growth of grass for the cattle. They will also enable those cultivators whose cattle are on the spot, to commence preparing the ground for sowing, but they are too early in the season materially to affect the prospects of the next crops.

2. There is a marked rise in the price of grain. With the exception of Nasik, the price of jowari has risen more or less in every Collectorate, and now averages only 21¼ lbs. per rupee for the nine affected districts. This rise is due partly to the enhanced value of food-grains in the Bombay market, partly to the increase in the rates for freight to the Southern Mahratta ports, and partly to the increase in cartage rates due to the dearness of fodder. This rise in prices is met, so far as the people upon relief works are concerned, by the operation of the sliding scale of wages, but it must be a serious matter to a large proportion of the rest of the population, and Government hope that the recent rain, which seems to have been very general, may, by affording promise of a good monsoon, tend to cause a fall in the prices of food-grains. It is satisfactory to note the large importations (10,116 tons) into the famine districts which took place during the last week.

3. The number of people upon relief works in the nine affected districts is 287,760 against 266,691 last week, and there are also 4,734 hill-men and immigrants employed in Ratnagiri and Kanara. The increase in Kaládgi and Dharwar is very marked.

4. There has been a severe outbreak of cholera in the Satara district, but it is satisfactory to note that, of the 284 deaths which took place, only 9 were those of persons upon relief works.

5. Tables (A) and (B) are appended as usual. It will be seen that during the week ending 14th April the number of people upon Civil works was 28,118, the number upon works under Public Works Department agency being 259,057. Less than a tenth of the relief labourers are, therefore, upon the former description of works.

6. The Sanitary Commissioner has visited a portion of the large works on the embankment of the proposed railway between Dhond and Munmar, upon which upwards of 17,000 people are employed, and reports that the condition of the people is fair.

7. Owing to the increasing pressure in the Sholapur district, due partly to the return of people who had migrated early in the season, Government have ordered the immediate commencement of the Pangaon tank, the heavy earth-work of which can afford immediate employment to 10,000 labourers. Government have also been compelled to order the commencement of the Amba Ghat for relief purposes, the cost of which will, however, be met by the Ratnagiri Local Funds and the Kolhapur State.

8. The Collector of Ratnagiri reports the continued return, through his district to the Deccan, of people who, according to their annual custom, had migrated to Bombay in search of work. They seem to have been very successful in obtaining employment in Bombay, as they are in possession of considerable savings. There is, however, a good deal of sickness among them, though it is doubtful whether there is more than is usual among Deccan labourers returning from Bombay at this season of the year.

The people, who had migrated with their cattle into Dharwar and Kanara, are evincing a tendency to return to their homes, and, as mentioned in the last Summary, arrangements are being made to assist them. As, however, the movement is premature, the local officers have been instructed, as far as possible, to detain them near where grazing is procurable for a short time longer.

9. The following table gives the distribution of the people among the relief works employing 1,000 people or more. It will be seen that 220,711, or more than

three-fourths of the labourers are now employed upon the works enumerated:—

Districts.	Works.	Number of labourers.	Total.	Remarks.
Khandesh ...	Songir-Nandurbar Road ...	1,282	1,282	
Nasik ...	Sinnar-Goti Road	6,902	16,495

	Grand Total ...	...	220,711	

10. A map accompanies this Summary, showing the large works enumerated above. This is in substitution of that formerly submitted, which from the number of works delineated upon it, had a confused appearance.

11. The following table gives the expenditure by Government, during the week ending 7th April, upon charity in the relief of the aged and infirm poor, and in payments made to the young children of labourers employed upon relief works. Comparing it with

the table which accompanied the last Summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 9,061 to 9,495, and the number of children under 7 years of age from 57,242 to 62,290 :—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

* Collector's returns not received.

† No expenditure has been incurred by the Collector.

12. A table is appended, showing the condition of the affected Native States.

13. With regard to the movements of food-grains, 5,372 tons were exported from Bombay to the Southern Mahratta ports during the week ending 14th April, and during the same week 4,744 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 10,116 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the 14th April to the Southern Mahratta ports and the Railway stations in the distressed districts. It will be seen that the total amount delivered up to the 14th April was 237,873 tons :—

Food-grains sent to	In October 1876.	In November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	In April up to 14th.	Total.

Total ...	23,805	54,018	46,416	30,545	31,174	33,792	18,123	237,873

14. On the whole, the food-supply continues to be sufficient, though rising in price, and the condition of the people, particularly those upon the relief works, is satisfactory. The general distress is probably now at its worst. Emigrants are slowly working backwards towards their homes, many of those who have as yet been able to keep a way from the relief works and relief houses, are now being driven to seek aid, and the heat is very great. Great vigilance is needed in watching every part of the famine tract, and such vigilance is, as far as possible, now being exercised, and measures are immediately taken to meet any exceptional cases as they arise. The recent rain has, however, given heart to the people, and if, during the coming month, seasonable showers should generally prevail, much cause for anxiety will be removed. Cholera is not on the increase, and the type of the disease has throughout been mild.

M. K. KENNEDY, *Major-General, R. E.,*
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women, and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.

The figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

T. C. HOPE,
Addl. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 26TH APRIL 1877.

GENERAL REMARKS.—In Madras good rain has fallen in parts of Bellary, Madura Tinnevelly and Malabar, and showers are reported from Kurnool, Tanjore, Coimbatore and Salem; the numbers on relief works are 702,923, a decrease on last week of 22,223: the decreases are in Cuddapah 20,400, Chingleput 12,000, Madura 2,500, Salem 1,800, Coimbatore 1,780: there is an increase of 8,600 in Kurnool, 5,300 in Bellary, and 1,400 in Nellore; numbers receiving gratuitous relief 291,293: increase on last week 57,178: the increase is general except in Cuddapah, where the numbers are 3,000 less; general prospects are reported to show no improvement. In Bombay there have been showers in Sholapur, Satara, Belgaum, Dharwar and Kaládgi: also in parts of Guzerat and in Sind. In Mysore rain has fallen in all districts except Bangalore, Kolar and Túmkúr; the numbers on relief works including those on public works are 59,701: gratuitously relieved 68,641. In the Central Provinces showers are reported from Chhindwára, Chánda, and a few other districts; prospects on the whole continue good. No rain is reported from Berar: ploughing is progressing. There have been light showers in many parts of Central India and Rajputana; prospects are good. In Bengal showers are reported from a few districts: the prospects of the standing crops are good, and the *rabi* harvest is almost complete. In the North-Western Provinces and Oudh the only rain reported is from Meerut, Almora and Lucknow: the harvest is progressing. In the Punjab showers have fallen in all districts except Delhi, but they have been heavy only in Ráwalpindi and Pesháwar; there is still prospect of a good harvest notwithstanding some damage due to rain and hail. Rain has fallen in Assam. None is reported from Burma.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna	(April 24th) *Nil*	All crops harvested, except *raggi* and *jorra* under wells in places; prices slightly fallen in 5 taluks, stationary elsewhere; seers of Rs. 80 weight, rice 8·41, *cholum* 11·28, *raggi* 14·21, *cumboo* 10·93; on transit from Godavery *viâ* Guntur to Nellore and thereabouts, rice 42·97 tons, *cholum* 29·06, *cumboo* 3·13; number on relief works 2,314, number fed gratuitously by Government 415, by people 1,266; cholera in 5 taluks, seizures 108, deaths 36; small-pox and cattle disease prevalent; markets fairly supplied.
Nellore	(„ „) *Nil*	Average prices, second sort rice 9·05, *cholum* 9·71, *raggi* 12·46, *cumboo* 10·14; imports by sea on behalf of Government none, on behalf of merchants, rice 1,276 tons, *cumboo* 1 ton; imports by land by merchants, rice 106 tons, *raggi* 12 tons; number on relief works including canal coolies, 67,501, the increase is due to the large number employed on the canal; number fed gratuitously during the whole week 58,235; the increase is due partly to increasing distress, but chiefly to increased efficiency of village inspection; 15 deaths from cholera; several deaths from other diseases; cholera of a virulent type has broken out in the jail; small-pox, fever, and dysentery prevailing in some taluks; water-supply insufficient over the greater part of the district, most so in the south; prospects of surviving cattle slightly improved.
Cuddapah	(„ „) *Nil*	Average prices per rupee, second sort of rice 9·05, *cholum* 9·79, *raggi* 11·04, *cumboo* 9·45; people on relief works 60,106; gratuitously fed 27,390; 279 deaths from cholera; number of cattle died from want of fodder and disease 406.
Bellary	(„ „) 4·5 at Hoodlighi; 2·5 at Hospett; ·1 at Hadgalli.	Average price, second sort of rice 7·7, boiled rice at Bellary 9·72, *cholum* or great millet 8·53, Jubbulpore *cholum* at Bellary 9·70, *raggi* or lesser millet 8·73, *cumboo* 8·11 seers of 80 tolas; imports, tons 4,629; accounts from three railway stations only; 223,671 persons on relief works, increase as compared with return for previous week 5,291, this is owing to the increasing pressure of the famine and to more coolies having therefore come to the relief works, also to opening of new works in Harpanhally and Alur, and to some persons from Hyderabad and Dharwar having been temporarily admitted in Hadgalli; there is a decrease of 9·071 in Bellary taluk, due to the removal of able-bodied coolies for the purpose of sending to Nellore and to Hooblee Railway, and the rejection of others who refused to go to these works; 94,138 gratuitously fed, increase as compared with return for previous week 14,694, this is chiefly due to the payment of 3 pies to the children of coolies employed on relief works, but also to the opening of relief houses in several villages and to the relief granted to *gosha* women; 4,476 gratuitously fed by private charity aided by Government grant; cholera decreasing, but still in all taluks; small-pox and fever prevalent, but the former decreasing; cattle still perishing in some places from want of fodder; supply of drinking water diminishing except where rain has fallen.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Kurnool (April 24th)	·3 in Nandikotkur taluk; *nil* elsewhere.	Second crop of paddy, *raggi* and *cholum* under wells and spring channels in fair condition and partly harvested; cholera, small-pox and fever prevalent; cattle reported to be dying from want of fodder; cholera seizures 221, deaths 135; second sort of rice per rupee in Imperial seers 7·23, *cholum* 8·51, *raggi* 10·32, *cumboo* 9·47; number on relief works 213,172; gratuitously relieved 48,927, including children under 7 years of age and excluding 14,404 mostly wrongly relieved by village headmen under recent orders of Government; import Government grain 51 tons in the district, private import 24 tons; so far as returns are received, the slight rise and fall in the price of grain call for no remark; there was an increase of 8,668 in the number of coolies in the taluks of Ramalkota, Nandikotkur, Pattikonda and Nandial; this is chiefly due to the coolies who dispersed last week having collected on the main roads under repair; nothing new reported about the physique of coolies.
North Arcot („ „)	*Nil*	For week ending 20th April, average prices in Government seers, second sort rice per rupee 8·9, *cholum* 10·4, *raggi* 11·3, *cumboo* 9·1; relief works' coolies 40,279; persons gratuitously fed 3,115; cholera still prevalent, fever and small-pox in some places; pasture scarce, cattle still dying of starvation in some parts.
Chingleput („ „)	*Nil*	Prices, rice second sort 9·58, *raggi* 11·43, *cholum* 10·90, *cumboo* 10·78; imports, rice 161 tons, *raggi* 38; cholera in all taluks, small-pox in several, fever and dysentery in some; condition of cattle poor; pasturage *nil*; water very scarce and dry fodder very expensive; on relief works 5,995, gratuitously fed 7,378.
South Arcot („ „)	*Nil*	Average price, rice second sort 10$\frac{1}{16}$ seers, *cumboo* 13$\frac{5}{16}$, *raggi* 13$\frac{9}{16}$, *cholum* 12$\frac{1}{2}$; no grains imported by sea; number employed last day of week 1,054, gratuitously fed in relief house in Chengam last day 312, in relief camp in Merkanum and village relief whole week 4,075; people generally healthy; cholera deaths reported 163 out of 190 attacks; cattle disease in some villages; pasture deficient.
Tanjore („ „)	Slight rain on 18th in Nannilam and in few villages of Puttukottai taluks.	Prices, rice 9$\frac{1}{8}$ seers, *raggi* 12$\frac{9}{16}$, *cumboo* 11, *cholum* 13$\frac{9}{16}$; imports by sea, rice 1,184 tons, dry grains 34, relief works none; deaths from cholera 71; cattle disease in Tanjore, Cumbaconum and Mayaveram taluks with some loss of life; fodder available.
Trichinopoly („ „)	*Nil*	Prices same as last week; import for week ending Saturday 102 tons; no relief work; gratuitously fed on 21st instant by public subscription 1,390, in villages by Government during the week 241; cholera 155 seizures, 109 deaths; small-pox 433 seizures, 30 deaths; pasture and condition of cattle unchanged.
Madura („ „)	2·18 in Ramnad; 1·12 in Periacolum; ·5 in Polany.	Average price, rice second sort 8$\frac{7}{10}$ seers per rupee, *cholum* 9$\frac{8}{10}$, *raggi* 10$\frac{3}{8}$, *cumboo* 10$\frac{7}{16}$; import, rice 2,380 tons, other grain 22; number on relief works on the last day of the week 11,045; charitable relief 7,572; public health generally good; cholera, small-pox and fever continue in places, total deaths 118; pasture scarce, except in Periacolum and Shevagunga zemindary; water scarce in many parts; condition of cattle unaltered.
Tinnevelly („ „)	Showers throughout district, and heavy rains in Tenkasi and Satur.	Crops in good condition; cholera somewhat abated; slight fall in prices; cattle disease in 3 taluks with small loss; average prices per rupee, second sort rice 9 seers of 80 tolas, *cholum* 11, *cumboo* 11$\frac{1}{4}$, *raggi* 12; import of grain, rice 2,135, *cholum* 24, and *cumboo* 39 tons; number on relief works 1,193; number gratuitously fed 1,843; decrease in number on relief works owing to coolies finding employment in sinking wells and in ploughing operations at higher rates of wages.
Coimbatore („ „)	·21	Prices nearly stationary; rice (slight fall) second sort 7·94, *cholum* (slight rise) 9·29, *raggi* 9·65, *cumboo* 9·63; imports estimated, rice 728 tons, other grains 434; cholera in 9 taluks, attacks 643, deaths 433; fever in Collegal, small-pox in Palladum, fever and small-pox in Erode; rain in northern parts of Bhowany a good fall on the 18th, in parts of Palladum a moderate fall, in Pollachy, Cusbahs and adjacent villages on 17th ·55, on 18th ·38, on 21st ·90, in Oodoomalpetta ·30, in villages 4 miles west good fall; cultivation to a small extent on *punjah* lands visited by rain; cattle poor, losses in Suttiamangalum, Collegal, Bhowany, Palladum, fodder and water scarce; on relief works 22,358, decrease 1,802 owing to the completion of some works and the transfer of coolies to others; a few engaged in ploughing since late showers; no favourable report respecting the physique of work people; gratuitously fed 7,464.
Salem („ „)	·25	Prices of grains, seers of 80 tolas, rice 8$\frac{5}{16}$, *raggi* 9$\frac{9}{16}$, *cumboo* 9$\frac{1}{16}$, *cholum* 9$\frac{1}{8}$; import of all grains 850 tons; number on relief works 51,200; number gratuitously fed 30,500; number fed by private charity 900; cholera in all taluks; gratuitous relief number rising 23 per cent., due to extensive villagewar relief and partly to larger numbers fed in relief camps.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Malabar (April 26th)	1·24	Markets well supplied; imports by sea and land, rice 5,812, *raggi* 230, *cholum* 1,353 tons; exports, rice 1,312, *raggi* 579 tons; prices of rice slightly risen in Cherakal and Kotteyam, fallen in Kurumbranad and Ponany, stationary elsewhere, highest 7$\frac{7}{8}$ Indian seers in Wynaad, lowest 11 in Kotteyam, average 9$\frac{11}{12}$ Indian seers per rupee, *raggi* 10$\frac{1}{8}$ Indian seers per rupee in Wynaad, average elsewhere 13$\frac{1}{8}$; small-pox and cholera in 8 taluks; deaths from latter 267, cattle healthy; pasture good in Cochin and improving everywhere; 3,135 coolies on Kolathur roads; no relief works opened in Wynaad. *General Remarks.*—General prospects not improved; 8,465$\frac{1}{2}$ tons exported by rail from Madras during the week ending the 21st April.
Bombay— (April 26th)		
Sind—(April 25th)		
Kurrachee ...	·17 in Kurrachee; ·16 in Keti; 1·13 in Tatta with hail-storm.	Thunder-storm in Kurrachee on 23rd; 5 fresh cases of small-pox in Kurrachee; river at Kotri on 23rd 10 feet 1 inch against 8 feet 3 inches on same date last year; freshes in Gáj on 14th.
Shikárpur ...	...	Rain fell throughout district, bad for oil-seed harvest, river unusually high.
Hyderabad ...	...	Dust-storm on Monday; fever in 4, small-pox in 5, cattle disease in 2 talukas; rain in 8 talukas on 16th and 19th; blight in wheat in Kandiáro and Moro, and worm in grain in Moro taluka; rain damaged *rabi* crops in Naushahro taluka.
Upper Sind Frontier ...	...	Weather cloudy, dust-storms with light rain; *rabi* harvesting actively progressing; average outturn for 3 talukas, wheat 14 annas in the rupee, oil-seed 13$\frac{1}{2}$, barley 12, gram 13, *muttur* 12.
Guzerat—(April 25th)		
Ahmedabad ...	·05	Weather cloudy and warm.
Kaira ...	·39	Weather hot; public health good.
Surat ...	...	No change.
Broach ...	...	No change.
Khandesh and Násik.—(April 25th)		
Khandesh ...	...	Weather unsettled, thunder-storm with a few drops of rain on the evening of 24th; small-pox decreasing.
Násik ...	...	No change.
Konkan—(April 25th)		
Tanna ...	...	Cholera has appeard in town of Tanna; small-pox in 5 talukas.
Deccan—(April 25th)		
Poona ...	...	No cholera in Junnar; cattle disease in Sirur only.
Ahmednagar ...	...	Cholera in 4 talukas, cases 56, deaths 19.
Sholapur ...	1·0	Storms throughout district; 22 deaths from cholera.
Satara ...	...	Slight rain in 4 talukas; only 30 deaths from cholera on Islámpur tank and 2 on Pingli tank, total number of deaths in the district 503.
Southern Mahratta Country—(April 25th)		
Belgaum ...	...	Weather warm, sometimes cloudy; light showers throughout district; deaths from cholera 155; small-pox in some villages of Chikóri.
Dharwar ...	...	Rain in every taluka except Ránibennur, Kod and Ron; cholera prevalent, deaths 407.
Kanara ...	...	Cholera prevalent, 89 deaths.
Kaládgi ...	·35	Cholera cases 642, deaths 408.
Kattywar and Gaekwar's Territory—(April 25th)		
Rájkot ...	...	Weather cloudy; general health good.
Wadhwan ...	...	Weather and health same as before.
Baroda ...	...	No change. *General Remarks.*—Showers of rain in Sind, parts of Guzerat, Deccan and Southern Mahratta Country; cholera increasing in Dharwar, Kaládgi and Satara, small-pox decreasing in Sind and elsewhere.
Bengal— (April 26th)		
Chittagong ...	1·09	Cholera in some thánás; small-pox in Sudder station.
Noakholly ...	·07	Stray cases of cholera still in Begumgunge, Bamni, and Dalál bazaar.
Chittagong Hill Tracts ...	*Nil*	
Hill Tipperah	·66	
Backergunge ...	·57	Fever and sporadic cholera all over the district; cattle everywhere healthy.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Furreedpore ...	·20; ·59 in Madareepore.	No recent reports of cholera.
Dacca ...	·18	Cholera bad in thánáNawabganj.
Tipperah ...	2·25; 2·68 in Bráhmanbaria	
Mymensingh ...	·11	
24-Pergunnahs ...	*Nil*	Public health generally good.
Jessore ...	·04	
Nuddea ...	·63	Cholera in several parts.
Moorshedabad ...	*Nil*	Cholera still prevails more or less throughout.
Pubna ...	*Nil*	Cholera in and near Shahzadpore.
Rajshahye ...	*Nil*	A few cases of cholera daily, though the outbreak is by no means a severe one.
Bogra ...	*Nil*	Cholera and small-pox somewhat prevalent.
Malda ...	*Nil*	Cholera still increasing, 144 deaths all over the district.
Dinagepore ...	*Nil*	
Rungpore ...	·18 in Gaibanda; ·9 in Kurigram.	Cholera said to be bad in Chilmári.
Cooch Behar ...	1·12; 2·14 in Mátabhánga; 2·28 in Dinháta; 4·72 in Mekhaliganj.	Public health good.
Jalpáiguri ...	*Nil.*	
Darjeeling ...	·03	
Midnapore ...	*Nil*	
Howrah ...	*Nil*	
Hooghly ...	*Nil*	Cholera bad in Boinchee; it exists in a sporadic form all over the district.
Burdwan ...	*Nil*; ·33 in Jehanabad; ·08 in Raneegunge.	Slight cholera in Raneegunge.
Bankoora ...	*Nil*	
Beerbhoom ...	*Nil*	
Sonthal Pergunnahs ...	*Nil*	Among children measles followed by dysentery rather bad in Moheshpore.
Bhágalpur ...	*Nil*	A good deal of cholera still in the town.
Monghyr ...	*Nil*	
Purneah ...	*Nil*	
Durbhunga ...	*Nil*	
Mozufferpore ...	*Nil*	Some cases of small-pox in Belsund.
Sarun ...	*Nil*	General health good.
Chumparun ...	*Nil*	
Patna ...	*Nil*	Stray cases of cholera and small-pox throughout.
Gya ...	·14	
Shahabad ...	*Nil*	Cholera in Sasseram; a special native docter appointed.
Hazáribágh ...	*Nil*	Public health good.
Lohardugga ...	·25	No reports of either small-pox or cholera.
Manbhoom ...	*Nil*	
Singhbhoom ...	·46	
Balasore ...	*Nil*	Sporadic cholera still causes mortality, but is not increasing.
Cuttack ...	*Nil*	
Pooree ...	*Nil*; ·69 in Khoordah.	Cholera diminished.
		General Remarks.—The weather is now seasonably hot, but some insignificant showers are reported from a few districts. The state and prospects of the standing crops are good and the *rabi* harvest is almost complete. The mango and *mohwa* crops this year will be indifferent on account of the late heavy rains and hail-storms.
N. W. P. and Oudh—		
Benares (April 25th) ...	...	*Rabi* cut and being threshed.
Allahabad („ „) ...	...	Harvesting of *rabi* progressing.
Jhansi („ 26th) ...	...	No change.
Agra („ 25th) ...	*Nil*	*Rabi* being reaped; sugarcane getting watered; weather unseasonable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. P. & Oudh—*concld.*		
Meerut (April 25th) ...	Rain on 23rd	Crops all cut.
Bareilly („ „) ...	...	Ditto ditto.
Almora („ 23rd) ...	...	Two storms during week, weather now settled; crops where not attacked by rust good.
Lucknow („ 25th) ...	...	Hail-storm on 19th in tahsil Lucknow; prospects fair.
Sitapur („ „) ...	*Nil*	Harvesting going on; wheat much lighter than was hoped.
Fyzabad („ „) ...	*Nil*	Weather seasonable; export of grain lively.
Punjab—		
Delhi (April 25th)	*Nil*	Health good; crops being harvested.
Hissar („ „)	·1	Crops good; harvesting still in progress and early *kharif* sowings commenced; health generally good.
Umballa („ „)	·6	Health and crops good in each district.
Jullundur („ „)	·2	
Lahore („ „)	·2	
Rawalpindi („ „)	2·0	Crops partially injured by heavy rain; health good.
Mooltan („ „)	·4	Crops suffering from continued rain; health good.
Dera Ismail Khan „)	·4	Health and harvest good.
Peshawar („ „)	1·6	Agricultural prospects good, except where damaged by hail; health good.
		General Remarks.—Public health generally good, and there is still the prospect of a good harvest throughout the province.
Central Provinces—		
Upper Godávari (Apl. 21st)	·34	Stormy; harvest over; health good; prices steady.
Sambalpur ...	...	Cloudy and close; ploughing continues; cholera disappearing; prices easy.
Bilaspur ...	...	Sugarcane crop good; prices slightly risen.
Raipur ...	·30	Grain on threshing floors injured; prices rising.
Bálághát ...	·10	Cloudy and stormy; threshing of *rabi* continues; fever prevalent; prices falling.
Chhindwára ...	1·13	*Rabi* damaged by rain in some parts; health good; prices steady.
Chánda (April 22nd)	·40	Cloudy; threshing *rabi* nearly finished; cattle disease continues; prices stationary.
Betúl („ 23rd)	...	Cloudy and close; *rabi* threshing; cattle disease in places; prices rising.
Bhandára („ 24th)	Slight showers	Threshing of *rabi* and *kharif* ploughings continue; fever and cholera prevalent; prices dear.
Nágpur („ 25th)	...	Cloudy; *rabi* threshing continues; health good; prices unchanged.
Wardha ...	...	Cloudy; small-pox slightly prevalent.
Nimár ...	...	Cloudy and warm; small-pox continues.
Hoshungabad ...	...	Cloudy; few cases of small-pox; prices unchanged.
Narsinghpur ...	...	Reaping of *rabi* completed; threshing continues; measles prevalent prices slightly fallen.
Jubbulpore ...	·17	Heavy hail-storm on 20th; threshing continues; health good.
Saugor ...	·08	Reaping completed; threshing commenced.
Seoni ...	·05	*Rabi* threshing continues; health good.
Mandla ...	...	Harvest injured to certain extent by late rain; threshing continues; fever prevalent; prices falling.
Dumoh ...	...	Prices steady.
		General Remarks—There has been slight rain in some districts accompanied with hail-storms; prospects on the whole continue good.
British Burma—		
(April 26th)		
Arrakan Division ...	...	Thirty-four deaths from cholera in Akyab town; slight cholera and cattle disease in 3 townships of Akyab district; otherwise public health good.
Pegu Division—		
Rangoon ...	...	Public health good; cattle disease in Hmawwoon circle.
Bassein ...	...	Six deaths from cholera in town; health of district good.
Henzada ...	...	One death from small-pox; public health fairly good.
Prome ...	...	Ten deaths from cholera in Prome, 11 in Padoung, and 4 in Mahathaman; 4 cases of small-pox in Prome.
Thonkwa ...	...	Reports not received.
Thayetmyo ...	...	
Tenasserim Division ...	...	Public health fair; slight cholera in Moulmein, and small-pox at outstations.
Assam—		
Gauháti (April 26th) ...	·15	Weather becoming hot, occasionally heavy storms; *aus* cultivation and tea manufacture in progress; public health indifferent.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg—			
Bangalore	(April 26th)	Some rain has fallen in the districts excepting Bangalore. Kolar and Túmkúr.	Ordinary rice selling at Bangalore at 17 lbs. per rupee; deaths by cholera in Mysore province 1,277, in Coorg 48; daily average number on relief works and charitably relieved according to condition statement last tabulated, is in— Bangalore District including town ... 8,025 and 31,878; Kolar ... 4,040 „ 7,561; Túmkúr ... 5,773 „ 13,204; Mysore ... 145 „ 6,047; Hassan ... 1,111 „ 2,158; Shimoga ... 779 „ 1,134; Kadur ... 1,860 „ 1,140; Chitaldroog ... 7,426 „ 5,519; Total ... 29,159 „ 68,641

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Thursday, the 29th March 1877.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *Presiding.*
His Honour the Lieutenant-Governor of Bengal.
The Hon'ble Sir Arthur Hobhouse, Q.C., K.C.S.I.
The Hon'ble Sir E. C. Bayley, K.C.S.I.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B.
The Hon'ble Sir J. Strachey, K.C.S.I.
Major-General the Hon'ble Sir E. B. Johnson, K.C.B.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble D. Cowie.
The Hon'ble Mahárájá Narendra Krishna.
The Hon'ble J. R. Bullen Smith, C.S.I.
The Hon'ble F. B. Cockerell.
The Hon'ble B. W. Colvin.
The Hon'ble Mahárájá Jotíndra Mohan Tagore.

CIVIL PROCEDURE BILL.

The Hon'ble SIR EDWARD BAYLEY moved the following amendments:—

That in section 322, *for* clauses (*b*), (*c*) and (*d*), the following clauses be substituted:—

"(*b*) by mortgaging the whole or any part of such property: or

(*c*) by selling part of such property: or

(*d*) by letting on farm or managing by himself or another the whole or any part of such property for any term not exceeding twenty years from the date of the order of sale; or

(*e*) partly by one of such modes and partly by another or others of them.

He said that if Hon'ble Members would look at section 322 as at present amended, they would see that clauses (*b*) and (*c*) and (*e*) of the proposed amended section were counterparts of clauses in the present section. The whole force of the amendment lay in the clause which was lettered (*d*). As the section at present stood in the Bill, the Collector was authorized to do what the proposed amendment gave him power to do, *but only at the request of the decree-holder*, and in such case there was no limit of time according to the Bill as at present drawn to his management or interference. SIR EDWARD BAYLEY'S proposed amendment was in effect to give the Collector this discretion without the consent of the decree-holder, but it limited the term of his management to a period of twenty years. The main object which particularly he had in view was the treatment of the very numerous class of petty holdings and rights in the Upper Provinces, which it was very difficult to deal with in any other way. As a matter of fact these rights were often attached for default of revenue, and he could recollect, amongst his earliest experiences, the late Mr. Thomason was ever urging upon all Revenue Officers the extreme expediency of adopting this course of procedure in preference to any other, that was to say, the expediency of satisfying the demand against the defaulter by transferring his share to the management of some co-proprietor or fellow-sharer. The properties in themselves were very often mixed up with those of others, so that it was difficult to get any one except a fellow-villager to take them in mortgage; indeed a class of persons who were unused to the village system generally, could hardly afford to take them up in mortgage, but the villagers could usually manage such properties among themselves in some way or other together with their own holdings and make a profit by it. In fact this practice of managing the shares of others was a natural and indigenous arrangement which had always gone on with regard to absent sharers of every kind. If a man went on a pilgrimage, or enlisted, or left the village for any other reason, his share was usually made over to one or other of the shareholders in the village who dealt with it as the owner, paid his revenue and ordinarily managed his domestic affairs for him. There was no law precisely on this subject; it had been a kind of natural arrangement, an arrangement on honour utilized for the mutual advantage of the people of the village. And in many cases the right of the absent shareholder had been protected in that way long beyond the periods of limitation. When SIR EDWARD BAYLEY had charge of the Kangra district shortly after it came under British rule, he found that during the previous government of the Sikhs and Goorkhas, large numbers of villagers had left in discontent and had sought refuge across the Sutlej in States under our protection. But when the Kangra district fell under the British Government these men returned. It was a long time however before they were all aware of the ameliorated condition of things at their own homes; some did not come back for eight or ten years after we occupied that district. Many had been absent twenty, thirty, forty, and fifty years, and in the meantime the regular settlement had been made in the Kangra district, and the rights of the absentees had been settled with others; but when these men came back, they invariably looked to receive back their property, and a practice instituted by his predecessor Mr. George Barnes was followed with great success. A man, for example, came back and said—"Forty years ago I left this village, and my rights were made over to such and such other persons." The claimant was referred to the Chief Revenue Officer of the district, who had instructions to take the claimant to his village and settle the case by voluntary agreement amongst the villagers, and in no single case was the right of these men ever refused. On the contrary, the right was acknowledged in spite of the lapse of many years, and in spite of the fact of a new settlement having been made giving to those others in possession a legal and usually indefeasible claim to the property. It was amongst that class of people the natural mode of helping absent shareholders; it had therefore been the practice we had adopted with great advantage in managing the estates of petty revenue defaulters; it was an extremely ancient practice, and it was more applicable to that class of cases than any other mode, and it seemed one, then, which it was wise and appropriate to adopt in realising other demands besides those for arrears of revenue.

The objections to the proposal to give the Collector the power of adopting this mode of arrangement were of two classes. One of the objections was that the management did not secure the immediate payment of the creditor, and that the creditor having got a decree for immediate and instant payment without regard to any other interest, was entitled to have the benefit of that immediate payment. This opinion SIR EDWARD BAYLEY knew was very strongly held by very many gentlemen. But he thought the speech of his hon'ble friend Sir Arthur Hobhouse the other day must have convinced them that it was a principle absolutely unknown to the English law—a principle which he might say was not recognized by law in any civilized country. It was a theory which had grown up, he believed, in India alone amongst a certain class of jurists who had not very wide experience of the principles of jurisprudence, and which they were pleased to think was a logical result of the doctrines of political economy. SIR EDWARD BAYLEY thought it could hardly be called the result of the doctrines of any science at all, much less of the doctrines of political economy. He did not himself see how such result was to be upheld without contravening the real principles of political economy, or applying them blindly, and without reference to the fitness of the application, to the facts of the case before the Council.

The other objection was that we should give a great deal of trouble to the Collector. He understood that there would probably be on the average about two hundred and fifty cases of execution of decrees against landed property made over to the Collector in each district of the North-Western Provinces, where this class of cases was most likely to arise. It was not proposed, nor was it likely, that they should be all dealt with in this way. In some cases no doubt actual sale would take place; in others some of the various modes provided in this section of the Bill would be put into use. It would probably be only in cases of small petty holdings which were almost of no saleable value that the mode provided by clause (*d*) of his amended section would be employed: if these were left to any other process, it was a question even whether the creditor would in most cases ever realize his decree. Indeed such a mode of dealing with cases of this sort would ignore what SIR EDWARD BAYLEY thought he had shown to be the indigenous and natural and popular means of getting over such difficulties, the practice employed by the people themselves time out of mind, and which gave a reasonable hope that the creditor himself might get his money sooner or later.

The extreme number of twenty years had been fixed for this process, because it was supposed that if the object of the management could not be effected in twenty years, there would be little hope that it could be effected at all. As a matter of fact twenty years was an extreme time. He believed that five, ten or fifteen years were the ordinary terms for which shares were put under management for default in payment of revenue. The amendment would of course include all the Provinces which had small tenures,—the Panjáb, Oudh, and the greater part of the Central Provinces. He could not of course speak so confidently as regards other Provinces, such as Bombay and Madras. This mode might not be equally applicable to them. But it was quite competent to the Local Government to give a discretion to their Collectors as to the use of these powers, assuming that the sale of lands in execution of decrees was made over to them. He believed that in one or two large provinces—Madras and Bengal for instance—the agency of the Collector would probably be not employed at all. At any rate, it would only be in those particular instances in which this mode of procedure was applicable that it would be usually applied; and in those it only would be practically useful, and then probably it would be the only way in which the creditor would have a chance in most cases of realizing the full amount of his decree. He however regretted to say that clause had been struck out of the Bill in Committee under what he believed to be a misapprehension of its true character and probable effect, and he therefore at the time gave notice that he should move to re-introduce it on the present discussion of the Bill in Council. It was with this object that he moved the amendment. He might say a good deal more on the general principle of this clause, but he thought what had been said would be sufficient to allow the Council to understand the urgency of the

reasons upon which he proceeded, and to enable the Council to judge of the expediency of restoring it.

The Hon'ble MAHÁRÁJÁ JOTÍNDRA MOHAN TÁGORE said that he did not pretend to any knowledge of jurisprudence, English or Indian; but speaking from a common-sense view of the question, he was one of those who thought that a creditor ought to have every reasonable facility for the recovery of his money at the time stipulated in the contract entered into by his debtor. He fully appreciated the generous motive of the hon'ble mover of this amendment, but he was sorry he could not support a proposal which attempted to favour the debtor at the expense of an innocent third party. The judgment-creditor might have had to raise the money on the strength of his higher credit from some Bank or some other source, and might have advanced it to his debtor in the certain belief that he would receive back his money within the stipulated period, and thus be able to liquidate his own loan on the due date. There were many people in this country who advanced money in this way. But if the Collector were to step in and order the judgment-debtor to repay his debt by instalments spreading over twenty years, and that too without interest, it might be a great blesssing to the debtor, but it would be absolute ruin to the honest creditor. It would be reversing the principle of the maxim, that one should be just before he was generous, if this amendment were accepted; for the Collector would have the sanction of the legislature to be generous before he was just. Besides this, he was not sure whether the amendment if passed would be altogether a boon to the class for whose benefit it was intended. The better class of capitalists would retire from the field and the money-lending business would be in the hands of less scrupulous men. The greater the obstacles thrown in the way of the execution of decrees, the more stringent would be the conditions imposed by the money-lenders to cover the risk which they would have to run. The effect of the amendment would, he feared, very likely be that no money would be advanced on mere credit, and those who required to borrow would be forced to mortgage their property and land or to sell them outright. For these reasons he was opposed to the amendment.

The Hon'ble MR. COCKERELL said the hon'ble mover of the amendment had suggested the possibility of the Bill having assumed its present shape in Committee owing to some misapprehension on the part of the hon'ble members by whose vote its provisions in regard to the subject of the amendment were determined. He wished therefore to state for his own part, as one of the majority by whose opinions those provisions were regulated, to disclaim most emphatically any misapprehension as to their effect, and he proposed to confirm this statement by the vote which he would give today in the event of the Council dividing on the subject of the amendment. The difference between the hon'ble member's amendment and the provisions of the Bill on this subject was simply this, that whereas the Bill would allow farming and managing for a period not exceeding twenty years where the decree-holder consented, the hon'ble member's amendment would allow of such a course whether the decree-holder consented or not. There was no other difference between the procedure of the Bill in regard to this matter and the proposals of the hon'ble mover of the amendment.

The hon'ble member who last addressed the Council had spoken of the hardship of postponing for such a long period the settlement of the decree-holder's claims without his consent, and had pointed out that there were conceivable cases in which such postponement would be almost tantamount to the ruin of the decree-holder. He (MR. COCKERELL) thought that this was probably not an exaggerated view of the case. Decree-holders were not necessarily always capitalists, who, so long as the security was good and the interest adequate, could afford to wait for the gradual repayment of their advances.

He believed that it was a not uncommon practice in this country—at all events it was so in Lower Bengal—for people to advance on good security, money which they had either themselves borrowed from others, or for the early return of which they had made themselves responsible, and if they did not

recover their money so as to be in a position to replace it within the period upon which they had calculated, it was not too much to say that the consequence might be absolute ruin to them.

Where there was no such exigency for an early recovery of the amount advanced, it was reasonable to suppose that the legitimate influence of the Collector, which was recognized in Bengal to a considerable degree, and in the North-Western Provinces and in Bombay and Madras to an even greater extent, would be always found sufficient to effect an arrangement for the satisfaction of the decree-holder's claims by the process of gradual liquidation.

Hence it seemed to him that the distinctive feature of the amendment, as contrasted with the existing provision of the Bill, would—if the amendment prevailed—only come into operation in those cases in which it would be a *quasi* suicidal action on the part of the decree-holder to consent of his own free will to a protracted liquidation of his claim; and it was for the Council to consider whether it would be justifiable to provide for the relief of the judgment-debtor to the extent of inflicting such possible injury on the decree-holder, in circumstances for which it was fair to presume that the judgment-debtor rather than the decree-holder was equitably responsible.

The Hon'ble MR. HOPE said the objection which was taken to the amendment by the two Hon'ble Members who had spoken reminded him somewhat of the objection which was made by one of them in the course of the discussion on section 417 yesterday, to the effect that if the course proposed was taken, some very dire consequences would ensue. He would remind the Council of the fact he laid before them then as to the dire consequences threatened in the event of all classes of Courts not being allowed to try the highest classes of suits not involving money. We were now told that unless the clause was allowed to stand as it was at present, money-lenders stood a very poor chance of being repaid. The answer to that objection was essentially the same as the answer to the other. The answer to the objection against the other clause was, that in the case of the Bombay Presidency the law was diametrically opposed to the law in the Lower Provinces, and yet none of those consequences had ensued. On the present question he would point out that hitherto in many of the Native States, some of which were admirably administered by most distinguished men, we did not find this severe law for the sale of land in execution of money-decrees and for imprisonment for debt, and yet the people managed to get loans, and money-lenders were not ruined at all. He thought it would be better if, instead of arguing on speculative and *á priori* grounds, we were to look at what was going on in these Native States. We were told that in most respects they were much behind us, but he thought that in these matters, in some matters connected with land-administration and everything in fact in which action to suit Native peculiarities was concerned, they were indeed in advance of us. This had, he thought, been well brought out by the replies given to the question asked in 1867 regarding the relative merits of British and Native Rule, which had been printed in a Blue Book and laid before Parliament.

THE Hon'ble SIR JOHN STRACHEY said:—"I do not wish to give an altogether silent vote in favour of the amendment of my hon'ble friend Sir Edward Bayley, because I think it the duty of those who have for many years taken part in the actual every-day work of district and provincial administration, and who may be supposed to have thus obtained some practical acquaintance with the country and the people, not to remain silent on such a question as this, even when they feel that really nothing remains to be said about it. The question raised by this amendment is, I think, in reality the same as that on which my hon'ble friend Sir A. Hobhouse spoke yesterday with such admirable and convincing ability. My hon'ble friend performed by that speech a great public service. He put this most important question of the sale of land in execution of decrees in its true light, and while he has left nothing, I think, for those who agree with him to say, except indeed to express their admiration and gratitude, I am quite sure that he has left nothing to be said by those who disagree with him. I predict that my hon'ble friend, by his speech of

yesterday, has closed for the present generation all controversy on this subject. That speech teaches us how we ought to vote on the amendment of my hon'ble friend Sir E. Bayley, for this amendment is the logical outcome of the principle which Sir A. Hobhouse explained to us yesterday, and which I hope I may assume that the unanimous voice of this Council has approved. If we admit that great social and political evils have to be remedied or prevented, and if we say that our Courts shall not be instruments for bringing undeserved misery and ruin upon debtors, and that we have to provide an authority which shall be able to bring about fair and equitable arrangements between debtors and creditors, it follows necessarily that the more we can in a reasonable way strengthen the hands of that authority, the more chance there will be that we shall succeed in the objects at which we aim. The provision in the Bill as it now stands, that it is only with the consent of the creditor that certain measures for saving the property of the debtor from being sold in execution of a decree can be adopted, is entirely opposed to the assumption with which we start. To say that the consent of the decree-holder shall be necessary is flatly to contradict the principle which we now desire to maintain. If the amendment of my hon'ble friend be carried, I believe that the single serious blot which now remains in this provision of the Bill will be removed; and the Council may then hope that the law has at last been put into a shape which will make it possible to carry out the object which the most experienced officers throughout the greater part of India have been for years declaring to be of paramount importance, and which my hon'ble friend Sir A. Hobhouse told us yesterday will be in complete accordance with the intentions of the eminent men by whom the Code of Civil Procedure was framed. Having, my Lord, myself held almost every office, both in the Regulation and Non-regulation Provinces of Northern India, which a Member of the Civil Service ordinarily can hold, I have had perhaps better opportunities than most men, of at least making myself acquainted with the views which have been held on this subject by the most distinguished officers of the Government, and by the most intelligent members of the Native community. I know of course that high authorities have thought otherwise; but even they I believe must admit that there is perhaps no great subject of public importance that can be named on which there has been so general a consensus of opinion in Northern India as there has been on this.

"There has no doubt been much discussion about the exact nature of the remedies to be applied, but almost every one has agreed that the unrestricted transfer of land to strangers in the execution of decrees for debt has led and is leading to much social misery and political danger. My own personal experience during the last thirty years or more enables me to confirm without hesitation the statement which was made yesterday by my hon'ble friend Sir A. Hobhouse, that this is a subject on which there has been no oscillation of opinion; and it seems to me impossible to suppose that all the eminent men who for a great number of years past have had the best possible opportunities of forming an opinion on the subject should have come to this practically unanimous conclusion without good reason.

"I think, my Lord, that the truth is that the authorites who have taken the other side of the question have sometimes been led astray by the mistaken application of true economical principles. The present case offers a good illustration of the way in which political economy gets a bad name without the least reason. The truth seems to me to be, in the present instance, that the principles of political economy do not in the very slightest degree teach us, that in Northern India, or in many other parts of India, there ought to be no interference with the sales of land in execution of decrees. What political economy does teach us in regard to this matter is merely this abstract principle, that such interference tends *primâ facie* to cause loss of wealth to the community. But a Political Economist, if he understands his own science rightly, does not go beyond this, and he may with complete consistency declare that there are other, and perhaps more important, considerations than those which his own science deals with, which render it wise to accept such loss; and he may even believe that neglect of these considerations will lead to loss of wealth still greater. I am convinced that such considerations

exist in the present case. Political economy never teaches us to carry out theories without reference to facts. I deny that these provisions of the Bill are open to economical objections, and I believe that, with the amendment which my hon'ble friend Sir E. Bayley has now proposed, they will afford a very moderate, reasonable, but I hope sufficient, safeguard against serious evils without interfering with any true principles."

The Hon'ble SIR ARTHUR HOBHOUSE said:—"to a certain extent my hon'ble friend Sir John Strachey has anticipated what I was about to say. It seems to me, as it does to him, that those who have accepted as sound the general line of argument that I submitted to the Council yesterday should support my hon'ble friend Sir Edward Bayley's amendment. We must remember that those powers which the amendment would give to the Collector are already in the bosom of the law although they there lie almost unused. Section 243 of the existing Code gives to the Court unlimited power to manage property which is attached, and to pay the debt gradually out of the rents. It also gives to the Courts unlimited power to postpone the sale in order that the judgment-debtor himself may make arrangements, one of which arrangements is letting the property in farm. Section 224 contemplates that the Collector may exercise similar powers, though unfortunately it is coupled with the fatal proviso that security must then be given for the amount of the debt or the value of the land. Now of course it is quite competent to our opponents to say that although these powers are already in the law they are mischievous, and that we ought to strike them out. But if we accept the principle that the decree-holder is not, and ought not to be, the owner of his debtor's land to all intents and purposes, then such a power as the amendment contemplates is most essential. The other courses which the Collector may take are sale, mortgage, or letting on such terms as will raise money at once to pay the debt. But these courses all proceed on the principle that the creditor has a right to have an immediate and full payment of his debt out of his debtor's land, and they all involve practically the alienation of the land. What we want is some course which does not involve the final and complete alienation of the land, but which more resembles that course adopted by the English law under the writ of *elegit* which I mentioned yesterday. Suppose the case of a country which is desolated by famine. The land there may for a considerable space of time be producing absolutely nothing, and if the creditor elects to have the land of the debtor sold immediately or disposed of in some other way which shall raise the whole amount of the debt immediately, the land may go for next to nothing, and the creditor may buy it in, as he usually does, for next to nothing. But if the land can be held on for a time, better times will come, and the land may produce something not only for the creditor but also for its owner. I should therefore be very sorry if the Council thought it right to strike out of the existing law these powers which are in it. But if it is not right to strike them out, surely it is right to make them living powers instead of dead powers. I gave the Council yesterday evidence to show how very inoperative these sections had been, and it is my confident belief that if such discretions as these are left entirely to legal officers acting in districts where the peasant defendants are ignorant, helpless, without skilled advice, and totally unable to urge the Court into action, so long they will not be of any very great use. In fact it may be said that a Court of law carries such powers as these

> 'As the flint bears fire,
> Which much enforced shows a hasty spark,
> And straight is cold again.'

"Now our predecessors clearly saw that truth; they clearly saw that if they were to make these powers of use they must be committed to administrative hands and not only to legal hands. That is what I say now, and that is the effect of Sir Edward Bayley's amendment.

"The only alteration we are making in the principle of the law is that we do not require security to be given when the Collector has the management of the property. But as I understand the objection to the proposal, it is not grounded on the fear that the creditor will lose the security of the land, but on

the hardship caused by delay, and by keeping the creditor out of his money. Now the creditor is just as much kept out of his money whether security is given or not. By security we do not mean security that can be enforced during management: that would be an absurdity, and make the management totally nugatory. What is meant is that the creditor shall have security which shall take effect after the management comes to an end, or in case the land is sold under some paramount claim as for arrears of Government revenue. But such security as that is equally wanted when the Court has the management of the property. All the liabilities which may occur to the land in the hands of the Collector may equally occur to it when in the hands of the Court. No such security however is required if the Court has the management; and why it should be required because the Collector has the management I cannot conceive.

"Now I will make one or two remarks on the arguments which have been advanced against the amendment. I understand my hon'ble friend Mahárájá Jotíndra Mohan Tagore to rest his objection entirely on the right of the creditor to be paid at once and on the evils of delay; and as he said, if the Court has the power or the Collector has the power to order the debt to be paid by instalments, it will be a serious thing both to the lender and the borrower. Now the Court has the power under the Code, and has had the power at least since the year 1859—I do not know how long before—to direct any debt to be paid by instalments. Yet we have never heard that the money-market was disturbed by that power, or that either the lender or the borrower had been injured by the exercise of it.

"Then my hon'ble friend says that you will drive the honest and more respectable lenders out of the market and call in a class of men whom it is not advantageous to the borrower to call in. But that is a very speculative matter, and it is one to which the Dekkhan Commission have paid a good deal of attention. They give us an account of the classes and characters of money-lenders, and of the different ways in which different classes of lenders deal with borrowers; and the conclusion they come to is exactly the opposite to that to which my hon'ble friend comes. I do not say they are right; I am not competent to form an opinion. But I say that it is a purely conjectural matter, and I think that such arguments ought not to weigh with this Council one way or another.

"Then my hon'ble friend Mr. Cockerell says the small capitalists deal with capital which is not their own, but borrow for the purpose of lending again at a higher rate of interest. I am sorry to hear that the money-market is conducted on so rotten a system of dealing in money without capital, and I should be surprised to hear that the gentlemen who conduct their business in that way do not secure themselves by mortgages when they lend their money. The man who makes it his trade to borrow for the purpose of lending again is exactly the man who will secure himself by taking a mortgage. I think therefore we ought to know how that matter stands before we attach much weight to my hon'ble friend's argument.

"Then he tells us that the Collector's personal influence can effect such arrangments as are contemplated under this section. If that is so, surely it places the Collector in a more proper position to arm him with legal powers to do that which is a good thing, but which he now effects by some irregular, however beneficial, influence on the minds of the persons with whom he is brought into contact.

"I think it has not been sufficiently observed by those who oppose this amendment that these powers are not to take effect except in those cases in which there is reason to believe that the judgment-debts of the debtor can be discharged without the sale of the whole of the property. I cannot help thinking that the cases contemplated by my hon'ble friend Mahárájá Jotíndra Mohan Tagore and those who act with him are cases in which the property is in a hopeless state of insolvency. Those are not the cases in which the Collector is empowered to exercise the discretion which we propose to give to him. He has first to satisfy himself that the case is a *bonâ fide* one; that there is a property which if properly managed may satisfy the debt and leave something to the owner, but which, if it goes into the market at short notice

and on peremptory sale, will be lost, with the result of ruining the debtor, perhaps without satisfying the creditor."

HIS HONOUR THE LIEUTENANT-GOVERNOR said that the section before the Council being entirely permissive, and being therefore not likely to affect the part of the country in which he was interested, he should not take up the time of the Council in discussing the general principle of this section. He believed that the provisions of the section were entirely inapplicable to the tenures of Bengal, although it might be the case that they were absolutely necessary in some parts of the country of which he knew nothing. Therefore taking that view of the case, and accepting the assurance given by his hon'ble friend Sir John Strachey, that in Northern and Central India the provisions of these sections were really required, he should not oppose the amendment before the Council.

But he thought he might say a few words in regard to the probable practical working of these provisions, and to the allusions made during the discussion to the powers of the Revenue Courts to deal with the mass of business which would be thrown upon them. Judging from the experience of the Non-Regulation Provinces of Bengal, in which sections precisely similar to these had been applied by special Acts of Council, he thought that it would be found that the powers of the Collectors to deal with all cases which would come before them would be quite inadequate; and that the section could not be worked without a large increase of the Revenue-establishments. We had to work powers similar to these in certain districts of the Chutiá Nágpur Division. He saw by a return before him that we had already 320 petty estates attached for debt in four districts, of which 167 were under the management of the Collector in one single district. In 89 cases the current annual demand was below Rs. 100 a year; in 87 cases it was above Rs. 100 and below Rs. 500. HIS HONOUR did not think it was one of the functions of the Government to take over the whole of the management of all the petty holdings of the country, and if the Government did do so, it would end by the Collectors being completely swamped with their work; for there was apparently scarcely an estate in the Dekkhan and parts of Northern India in which there were not already some heavy debts.

The Hon'ble SIR EDWARD BAYLEY wished to make a few remarks in closing this discussion, and in doing so he would not detain the Council long. The remarks which his hon'ble colleagues Sir John Strachey and Sir Arthur Hobhouse had made practically disposed of the theoretical part of the objections that were brought forward against the amendment so effectually that he only should diminish their force if he attempted to add any thing to what they had said in that respect. He wished rather to remark on one or two points of detail which those who opposed the amendment seemed to have overlooked. As regards the effect on a creditor who himself was a borrower, he thought not only had it been overlooked that the power of directing the payment of a debt by instalments was no new one, for it existed in the old law long before the Code of 1859, but the provisions of this Bill were not confined to debts of any particular class; they extended to all debtors, and if the unfortunate man who had borrowed money to lend it out again found himself in a difficulty, he would at the same time find under the other provisions of this Act that the Courts had power to give him also a very large measure of relief, so as to enable him to pay his debts without being brought to absolute ruin.

As regards moreover the economical effect which these clauses were likely to have, his hon'ble friend Mr. Hope had very justly pointed out that that particular principle on which they were founded had to a great extent been acted upon in Native States, and had there produced no such evil results as were anticipated. But SIR EDWARD BAYLEY would add also that it had been shown by experience they could be worked with equal benefit in our own Provinces. This was the case notably in the Panjáb. The spirit of this law had been practically in operation there from the day of the annexation until now. And what was the result there? Was the land less valuable? Were the tenants less solvent? Was the rate of interest higher? Was there, as a matter of fact,

greater difficulty in obtaining credit by tenants in the Panjáb than elsewhere? It so happened that enquiries had been, independently of the subject-matter of this Bill, recently made on these points, and the result of the enquiry showed that the peasantry were less indebted and in a more flourishing condition than perhaps in any other British Province. No difficulty was found by them in obtaining money, nor, as far as he knew, did they pay a higher rate of interest than elsewhere. The real fact seemed to be that a moderate and merciful application of the law was in the long run as much to the interest of the creditor-class as to that of the debtor-class; it was certainly to the advantage of the creditor to have to do with a prosperous, contented and substantial class of debtors rather than with a pauperized and insolvent class. SIR EDWARD BAYLEY thought that the Dekkhan Riots Commission had shown how that in certain parts of the country to which their particular enquiries extended, the unrestricted action of the Civil Courts had, by various abuses, which he would not stop to discuss, actually been the main cause of producing the complete pauperization of the agricultural community. This surely was a result most deeply to be regretted, and he was certain nothing could be worse for the interests of the creditors themselves than the state of things disclosed in that report. The object of this Bill was to do something to prevent a similar state of things arising elsewhere, and the clauses he now moved were intended to give more full effect to the principle which the Bill had generally adopted in regard to the execution of decrees, and specially as regards those for the sale of land, and to facilitate the application of that principle in regard to the more humble and more ignorant class of debtors.

As regards one other question, namely, the influence which the Collector exercised in restraining the action of creditors, he thought it had been so satisfactorily set at rest by the remarks of his hon'ble friend Sir Arthur Hobhouse, that he (SIR EDWARD BAYLEY) need hardly say more, except that there were many cases in which neither the Collector nor any body in the world had any power to effect any thing with an unreasonable and harsh creditor.

He had only further to notice the objection which his hon'ble friend the Lieutenant-Governor had raised from his own experience in the Santhál Parganas, as to the capability of the Collector practically to work the provisions of this section; his hon'ble friend had, he thought, overlooked one material difference between the Collectors in Bengal and those in other parts of the country. In Bengal the Collectors had not at their disposal the agency of the officers called tahsíldárs in the Upper Provinces, and mámlatdárs in Bombay; they had not in fact the machinery which was used in other Provinces. As SIR EDWARD BAYLEY had said before, an exactly similar power was used in other parts of the country for recovering arrears of revenue, and the work was entirely done by the Collectors through tahsíldárs. Supposing there were on the average from 240 to 250 cases of execution against landed property a year in each Collectorate, probably to not one in twenty of these on the average would this particular procedure be applied. The work which it imposed on each tahsíldár would probably not be more than six or seven hours a year in each case, and probably each tahsíldár would at the outside never have more than fifteen or twenty such cases, and the supervising work of the Collector would not occupy him altogether more than one whole day in the year. Of course if there was no such machinery in any particular Province, this clause would be inapplicable; and if it were desired to use it more effectually in the Santhál Parganas, it might be necessary to provide the Collector with better machinery. But that was no argument against the policy indicated by these clauses, nor against their introduction in places where the machinery already existed in complete working order, as it did in the Provinces to which the operation of these clauses was more particularly suited.

The Motion was put and agreed to.

The Hon'ble MR. HOPE moved the following amendments:—

That the following clauses be added to section 336:—

"The Local Government may, by notification published in the official Gazette, direct that whenever a judgment-debtor is arrested in execution of a decree for money and brought before the Court under this section, the Court shall inform him that he may apply under chapter XX to be declared an insolvent, and that he will be discharged if he has not committed any act of bad faith regarding the subject of his application, and if he places all his property in possession of a receiver appointed by the Court.

"If after such publication the judgment-debtor express his intention so to apply, and if he furnish sufficient security that he will appear when called upon, and that he will within one month apply under section 344 to be declared an insolvent, the Court shall release him from arrest:

"But if he fails so to apply, the Court may either direct the security to be realized or commit him to jail in execution of the decree."

He said that the hon'ble mover of the Bill now under consideration yesterday expressed the opinion, or at any rate quoted from elsewhere with approval the opinion, that the Indian law with reference to debtor and creditor was the most severe and anomalous in the world. The creditor was able to proceed against the property, not only present but future, and also against the person of the debtor. There was only one small door left open—a door which indeed had been slightly enlarged by the amended form of the present Bill, but which still was an exceedingly small one, he meant the door of the insolvent clauses. Under the Bill as it was now before the Council, a man, if he chose to make a declaration of insolvency, could obtain a release from imprisonment, and if his debt did not exceed a certain small sum the Court could give him his liberty for the future altogether. But it had been proved to be the fact in some parts of India that a very large proportion of debtors were absolutely unacquainted with the existence of this door. In the document which had been so frequently referred to, the Report of the Dekkhan Riots Commission, it was stated of debtors arrested—

"That they may on certain conditions get free, or that the term of imprisonment is not absolutely of unlimited duration and hardship, is also as a rule unknown to them."

And in consequence of that there arose a very large number of evils, which he did not mean to recapitulate, caused by the fear of being so imprisoned. The Commission consequently recommended that when a man was brought up before the Court in the first instance on a warrant of arrest, care should be taken that he was made acquainted with this mode by which he could be saved the ignominy which he so excessively dreaded. As regards Bombay this recommendation had considerable force, more than as regards other Provinces, owing to the large abuse of these powers in that Presidency. It was not an impossible thing for a Subordinate Judge's Court to be eighty or a hundred miles from that of the District Judge or the Civil jail. A man brought before the Subordinate Judge was not only imprisoned, but sent off to a distant jail before in practice he could declare to the Judge his wish to become an insolvent. A large proportion of these debtors were ignorant people who very seldom left their village and could not take advantage of the insolvency clauses, until they had performed this long and terrible journey. In order to support their recommendation the Dekkhan Riots Commission pointed out that in 1872, out of 1,877 persons who were imprisoned, only 76 took the benefit of the Insolvent Act. The force of this fact could be best appreciated by bearing in mind another fact, that in 99 cases out of 100 these people had no property whatever. The Commission pointed this out. They said—

"If, as is the case with the agricultural ryot of the Dekkhan, the debtor is a man with an established residence to which he is bound by the strongest ties; if his property is such that it is easily ascertainable and in great measure impossible to conceal; and if such frauds as he may be tempted to commit in order to evade payment are punishable under the criminal law, the necessity for the alternative method of securing his property in payment is reduced to a minimum."

So that we might fairly infer that a very large proportion of these 1,800 men who were sent to jail, and who had no property, did not get out simply because they were not aware of the advantage which the law gave them. The object of the amendment therefore was to impose on Courts of first instance the duty of simply informing the debtor that there were these provisions for his avoiding being sent to jail, provided he chose to take advantage of them. And the clauses had, with the assistance of the learned Secretary, been so framed as to give sufficient security against this power being made use of in a fraudulent manner, because it would be necessary, when the debtor expressed his intention to become an insolvent, that he should take the proper

steps to do so in a certain time, and if he did not, the security would be debarred. MR. HOPE was well aware that it was one of the practical features of the whole question that there were enormous differences between one part of India and another. On this ground he had, at the suggestion of the hon'ble mover of the Bill, made a slight amendment in the terms of his amendment as it was originally laid before the Council. The effect would be that instead of the clause being applicable to all parts of India, it would only have effect in such districts as the Local Government might think necessary. He trusted that in this modified form, which was designed to ensure the intention of the law being carried out, it would meet with acceptance at the hands of the Council. He trusted also that the case would not be injured by his endeavour to compress what he had to say into a small compass.

The Hon'ble MAHÁRÁJÁ JOTÍNDRA MOHAN TAGORE said that in a country where the *benámí* system prevailed to a large extent, the facilities for fraudulent transfers of property were necessarily great, and the dread of imprisonment acted as a wholesome check upon dishonest debtors. If the proposed amendment was accepted, it would in a great measure remove that check; for if every time as a rule the Court were to expound the law of insolvency whenever debtors were brought under arrest, it would in many instances be construed that it had a leaning towards the debtors, and that it was the wish of the Court that the debtors should declare themselves insolvents; the effect would be to encourage indirectly fraudulent transactions over the country. It would be far better to declare openly that there was to be no more imprisonment for debt than that the judgment-creditor should be led to undergo all expense and trouble for the purpose of arresting his debtor, in order that the Court might read to him a homily on Chapter XX of the Code, and then release him from imprisonment. But he saw that the amendment as now proposed to be altered was to be permissive in its character, and he had every hope that the responsible head of the Bengal Government would never see reason to extend it to Bengal.

The Motion was put and agreed to.

The Hon'ble SIR ARTHUR HOBHOUSE moved that the Bill as amended be passed. He said:—"Before this Bill is dismissed into the outer world with all its imperfections on its head, I have one or two observations to make, but they will not be very long. First the Council will observe that we propose that it shall come into force on the first of October 1877. That seems a long way off. But it must be remembered that the Bill has to be translated, and many persons have to make themselves acquainted with its contents; and therefore the time proposed is not likely to be found too much. Indeed it is more likely to be found too little, as in the case of the Criminal Procedure Code the operation of which had to be postponed. The intervening time is also very useful in another way, because in the hurry of printing and general hurry of work at the last moment mistakes must be made, which may be found out in the process of translation or the other processes through which an Act has to pass between the time of passing and of coming into operation. Opportunity is thus afforded of introducing amendments before the mistakes have caused inconvenience.

"There is still one section in the Bill connected with the vexed question of sales of land, on which I should like to offer some explanation. This is section 427, my remarks upon which I designedly postponed yesterday, because I thought my hon'ble friend Mahárájá Jotíndra Mohan Tagore was about to move to expunge it, and I conceived it would be more proper to state then how the Bill stood in that respect. It is the more necessary to explain, because it looks as if it gives the executive some very large powers, whereas in point of fact it does not give them powers much larger than they possess at the present moment. It provides that the Local Government, with the sanction of the Governor General in Council, may make special rules for any local area, imposing conditions in respect of sales of any class of interests in land in execution of decrees for money, where such interests are so uncertain or undetermined as in the opinion of the Local Government to make it impossible to fix their value.

In our Bill No. III that provision ran thus, that the Executive Government may make special rules imposing conditions in respect to the sale of land in execution of decrees for money. What was contemplated was that the Local Governments would make some conditions of the kind which prevail in the Non-Regulation Provinces. We did not at the time see our way to making the rules ourselves, nor did we see our way to do so until we got information from the Local Governments and authorities, particularly the Governments of Bombay and Bengal. Now we have made special rules for ourselves, namely, the rules we have just been discussing. It will therefore not be advisable to leave in the Bill a general power to make rules when we have made rules ourselves, for the power might over-ride the rules made by the Council. But we do give power to make special rules in one particular class of cases. That was proposed in Bill No. IV, and the power was carried further, because it was then said that the Local Governments, acting in concert with the Governor General in Council, may make rules imposing conditions on sales of land or prohibiting sales of land, not only where the interests in such land are uncertain or undetermined, but where for reasons of State the Local Government thinks that such class of interests should not be compulsorily transferable. Now we have left that out of Bill No. V, and we have only given power to make special rules where interests in land are so uncertain or undetermined as to make it impossible to fix their value. With that power and with the clause which enables the executive to transfer the execution of decrees to the Collector, we hope that all cases can be met which we contemplate providing for by legislation. I mentioned at Simla that the power of prohibiting sales was intended to meet cases where the nature of the interests in land was extremely obscure, very valuable to the actual cultivator but worth nothing in the market, and I illustrated the position by reference to what is going on in the Central Provinces. However on consideration we thought that so wide a power need not be given for so limited an object; so the power has been materially cut down, and the provision stands in the simple form in which the Council see it.

"The latter part of the section says that if any special rules for sales of land in execution of decrees are in force in any Province, the Local Government may continue such rules or modify them. That in effect is only a power which the Local Governments in question have already.

"I explained yesterday what alteration was made in the Code almost immediately after it was passed for the purpose of enabling the Local Governments to check indiscriminate sales of land. The check has been applied in this form, that sales shall not take place without the consent of some executive authority. Of course that consent may be given on any conditions, for the power of withholding it can always be exercised at discretion. These conditions have been specified by different rules in different places. Still there remains the absolute discretion vested in the Government which carries *in gremio* the power of making rules and conditions from time to time. So that the provision I am commenting on really gives no more power than the Local Governments of the territories subject to these special rules possess at the present moment, but only gives them what is given in the Code of 1859 as it was amended within four months after its passing.

"I do not think there is any other point I need bring to the notice of the Council specially."

The Hon'ble MAHÁRÁJÁ NARENDRA KRISHNA requested that the remarks which he had made on the 28th March in the course of the debate on the Civil Procedure Bill be taken to form a part of this day's proceedings.

The Hon'ble MR. HOPE was sorry to appear again as an offender by taking up the time of the Council, but as he was one of the signatories to the Report of the Select Committee he thought it only due to himself to state that he had not done so wholly without reservation. One of the ablest, most courteous and most practical among the critics who had given them the benefit of their advice on this Bill, Mr. Justice Turner, had been pleased to designate those who thought as MR. HOPE

did as the party of interference. Now he ventured to think that those who interfered were those who innovated, who introduced something new and contrary to all previous custom, and it was evident that Mr. Justice Turner also took the word in that sense. The English might well call themselves interferers in India, and he thought those might justly be called the party of interference, or innovators, who commenced by a law to upset all the relations which had existed between debtor and creditor, for many centuries previously. Those seemed to him properly to be interferers or innovators who first of all introduced the petty details of the English law in the Presidency-towns and produced the results which were so ably sketched in Lord Macaulay's well-known Essay, and those who year by year carried out the same policy in the mufassal, and made our judicial system that minute, elaborate, complicated, costly and dilatory machine that it was. He did not mean to deny that to a considerable extent the alterations introduced might have been good. There were certain principles which lay at the bottom of all sound law, and their recognition was an advantage which all who had to do with the subject must recognise.

But it seemed to him that the test of all measures was success. If innovation turned out to be a success, then it was called improvement, and all were glad that it should be so. But if it turned out otherwise, then it was naturally and very properly stigmatized as interference. Tried by this test he claimed that the law of the English as to debtors and creditors had been a conspicuous failure, and in proof he would point to the ever-increasing wave of objection which came rolling in. Not only did our public records during the last twenty or thirty years show perpetual differences and discussions and references carried on in almost all the Governments in India between all the highest authorities, but our Statute-book bore the same evidence in the number of special laws which it had been found necessary to introduce,—laws which he saw the critic to whom he referred looked on with regret. The same was also evident in the numerous exceptions which existed in the Civil Procedure Code and which were preserved in the present Bill, such as the exemption of the Panjáb and Central Provinces from some of the more important provisions, including even the very power regarding land to which the Hon'ble Mahárájá Jotíndra Mohan Tagore recently referred. Mr. Justice Turner had been so good as to designate this party of interference as a numerous body of gentlemen, but to deny to them the title of a "school of political thought." MR. HOPE was very content to accept the humbler designation. He was thankful that the number of those who thought with him was large, as admitted by his critic, and that it was increasing. He was not ashamed to be found on the ground of practical action, rather than up among the clouds of imagination, to be driven hither and thither by higher currents. The characteristic of this wave of objection was that it applied to some parts of India and not perhaps with any force at all to other parts of the country. This was naturally to be expected from the wondrous diversity of nations and circumstances, which had been so well described by his hon'ble friend Sir John Strachey, and which led Mr. Bright to propose the division of India into separate provinces independent of each other. MR. HOPE thought that the proper remedy was to have separate chapters and clauses applicable to different parts of India. In this way we could provide against the risk of enforcing in any place what was not applicable to it. In the course of the sittings in Committee he had been endeavouring to urge these opinions, and he was extremely indebted to the forbearance of his colleagues upon whom he had endeavoured to enforce views in which they could not agree. He had been at a disadvantage owing to the fact that the Dekkhan Commissioners' report was not officially before the Committee, and that its contents were therefore not thoroughly known except to the hon'ble mover, who took a good deal of trouble to master them.

As regards this question of sales of land in execution of decrees it seemed to him that the proper course was to provide a permissive clause, and that had been done to a certain extent. He could only regret the omission of the clause (327 (*b*) of Bill No. IV) which allowed the Government to prohibit absolutely sales of land in certain districts. That gave a larger degree of power

than the clause which we had succeeded in preserving, and a power which he thought it was fairer to have, on the face of the Statute-book, than the undefined power of at any time upsetting the whole law by some special Act.

As regards what might follow a decree besides touching immoveable property, the most important question was imprisonment for debt. Our law here was most barbarous; it was admitted to be most severe. The enormous evils which that mode of endeavouring to recover property from the debtor were well described in this same report, a report which was not merely a report of the state of circumstances in the Bombay Presidency, but summarised all previous discussions in other parts of India; and it was with regret that he saw that it was not possible to take any advanced step in the present Bill towards the abolition of imprisonment.

He had made these remarks merely to qualify his own signature to the report of the Select Committee. He was aware that in a large number of matters the Bill was an immense improvement, and he was extremely glad that it had fallen to the Hon'ble Mover to complete this work in which he had taken so much interest. MR. HOPE was glad to mark the progress of the views which he had advanced. They derived immense support from the admirable speech of Sir A. Hobhouse. He was aware that he must trust to time, which, as he had remarked on another occasion, had already done so much for law-reform. He only hoped we might not eventually owe their triumph to any popular rising, such as that of the Santháls, or more recently the Dekkhan riots, or to such disturbances as were witnessed by Sir William Muir after the outbreak of 1857, when whole lines of villages were seen in flames, where the villagers had risen and murdered those who had ousted them through the Civil Courts. If he was indulging in any vaticination in looking forward to the ultimate success of his principles, he could only plead the distinguished examples of looking to the future which had been set him during the last few days, and the fact that in the present debate the part of Cassandra had remained unfilled.

THE HON'BLE SIR EDWARD BAYLEY wished to say a few words on one subject only, namely, the law of imprisonment for debt. He cordially acknowledged the very many improvements which this Bill would introduce into our Civil Procedure. The evidence which was laid before the Council did establish the fact that although the procedure of 1859 was in itself an enormous improvement upon that which preceded it, still it left open several doors by which very great fraud, cruelty and oppression had been practised through the agency of our Courts. The particular instances which had been brought to notice by the Dekkhan Riots Commission were perhaps crucial instances of abuses which had been perpetrated by the agency of the judicial administration of the country. He thought no one could read the evidence given before the Commission without feeling indignant that such things could have taken place under British rule. He did not wonder at the unfortunate men who were subjected to such proceedings rising up in utter despair against their oppressors. He could only say that it redounded very much to their patience and respect for the law, that they proceeded no farther than they did. Some of the measures which the Bill introduced would go, he trusted, far to make impossible such cruelty in the future. But he thought the Riots Commission had satisfactorily shown that the power of imprisonment for debt was one of the agencies which had been most abused, and which had, so abused, most actively contributed to the terrible result which ensued. He himself when he entered into the discussions upon this Bill was quite unprepared to take into consideration the expediency of the abolition of imprisonment for debt. But he had in the course of those discussions seen the horrible abuses to which that power could be twisted, and he now felt that it was one which was most dangerous and pernicious. He believed himself moreover that it was an utterly unnecessary power. His hon'ble friends, the Native Members of Council, had both spoken

of the necessity of retaining it as a remedy against fraud; they spoke no doubt of what they saw as regards their own part of the country. But he believed he was able to oppose to that an authority relating to the same part of the country, which he thought it would be admitted was of no less weight, he meant the learned Advocate General of Bengal, Mr. Paul. That gentleman said:—

"I am an advocate for the abolition of imprisonment for debt, and I entirely concur in and support the views held by the Hon'ble Mr. Hope. During an experience of Mufassal Courts and cases for the last fifteen years, I do not remember meeting with a single case in which I have been engaged where an application had been made for the imprisonment of the debtor, but no doubt there are cases in which such applications have been made and debtors have been imprisoned. I merely refer to my experience as showing that mode of enforcing decrees is not ordinarily pursued, and that its abolition will not entail any serious mischief or harm. I am fully satisfied that the process of imprisonment for debt is resorted to, either as a vindictive measure or as a means to extort money from the relations of the debtor, or to oppress the debtor for some purpose other than obtaining merely the monetary redress covered by the decree."

That opinion had been supported by the Madras Government which had, also recently proposed the total abolition of imprisonment for debt, and it fell to him, during the operations relating to the proclamation of Her Majesty as Empress, to take an account of the number of petty cases in which prisoners were actually lying in jail for debts of small amount: they were very few—he was surprised to find how few—all over the country. As a matter of fact therefore it was a power which in most parts of the country was hardly used at all, even as the law now existed. As the Bill was framed it had cut down the period of imprisonment so materially that it could no longer act as a deterrent to a man who was inclined to be fraudulent or recalcitrant: the only deterrent effect it could have was upon an honest but unfortunate debtor, and those were not the men to whom it ought to be made applicable.

SIR EDWARD BAYLEY therefore announced himself a convert to the doctrine of abolition of imprisonment for debt. Imprisonment for debt was, he felt, utterly unsuited to the circumstances of the country, and it was capable of being applied to the most cruel purposes. He should therefore have considered it his duty, even at this late stage, to move for the omission of the clauses which provided for it in the present Bill, although they had been in some respects modified and made less severe. But there was one particular difficulty connected with its abolition, namely the present state of the law of insolvency. He quite admitted that if imprisonment for debt were abolished, it would be necessary to enter into the consideration of a total reconstruction of the Insolvency law. But that would demand much time and discussion and involve the passing of a very considerable measure. He could not hope that it would be possible to take it into consideration in connection with the present Bill. He did hope however that his learned friend who would succeed Sir Arthur Hobhouse might find leisure at an early period to bring in an amended Code of Insolvency, together with a provision for the total abolition of the practice of imprisonment for debt.

His Excellency THE PRESIDENT said:—"I am reluctant to allow a measure so important as the present Bill to pass into law and become a substantive part of the Indian Statute-book, without at least a word of good speed from the President of this Council.

"But after listening yesterday to the masterly speech of my hon'ble friend Sir Arthur Hobhouse, I felt, what appears to have been felt equally by our hon'ble colleague Sir John Strachey, that nothing had been left for any of us to say of the slightest practical value on behalf of this Bill.

"I think, indeed, I cannot do better than imitate the judicious example of that civic worthy, I believe he was a Mayor of Liverpool, who, having to speak on some public question after Edmund Burke, condensed his own eloquence into three words, and said, "ditto to Mr. Burke." I say "ditto to Sir Arthur

Hobhouse." The same has already been said in a more emphatic form by another hon'ble member of this Council. For of the six amendments of which he had given notice, my hon'ble friend Mahárájá Jotíndra Mohan Tagore, after listening to what he justly called the exhaustive statement of my hon'ble colleague, immediately withdrew five, and I think that his withdrawal of these five amendments was a most emphatic ditto to Sir Arthur Hobhouse. It is also I think creditable to the care with which this Bill has been drafted, or perhaps I should rather say, with which it has been considered in Committee, that on the sixth, and only, amendment moved by my hon'ble friend the Mahárájá, the opinions of the Council were so nicely balanced and so narrowly divided that the amendment was only carried by a single vote: and that vote I believe was my own. I gave it because I thought my hon'ble friend had established his contention that we have before us no sufficient evidence to justify us in withdrawing from a very painstaking body of judicial officers functions which they have hitherto exercised with promising intelligence and discretion.

"My hon'ble colleague, whose modesty takes, I think, a too Sadducean view of the immortality of his fame, disavowed and repudiated all claim to the special connection of his own name with the measure which we hope to pass into law today. But he may, I think, be congratulated,—and I do congratulate him—on the fact that he has been able before leaving India to bequeath to India so valuable a result of his latest labours, which have, I know, been most arduous. And I think that every Member of this Council may also be congratulated on the fact that my hon'ble colleague has bequeathed to us the recollection of one of the most brilliant orations, one of the most lucid, logical, and complete expositions, to which I have ever had the pleasure of listening, even from himself, on all the facts and bearings of a legal question specially important to this country.

"To say the truth I could not help feeling when I listened to what seemed to me his unanswerable arguments, that they would suffice to cover and to justify legislation much more copious and forcible than any which is contained within the four corners of the few and moderate clauses of this Bill which regulate the relations between debtor and creditor.

"And I have no doubt that if hereafter further legislation in the same direction be found necessary, future legislators will refer to the speech of my hon'ble colleague Sir Arthur Hobhouse as a high authority in favour of such legislation. I must frankly confess that if the amendment of my hon'ble friend Sir Edward Bayley had not been carried, as I am thankful to say it has been carried by a nearly unanimous Council, this Bill would have passed into law with what I for one should have considered a very serious—indeed, I may say, a very discreditable—defect in it.

"My hon'ble colleague Sir John Strachey most properly and appropriately vindicated the science of political economy from much of the nonsense we so often hear put forth in its name. Political economy is simply that science which enables us to understand and to practise the laws which govern the creation and accumulation of wealth. But it has nothing whatever to do with the laws which govern the distribution of wealth. I think that one of the first and most important considerations which practical legislators are bound to bear in mind when dealing with the subject to which the amendment of my hon'ble friend has special reference is, not what are the laws of political economy, but what are the actual facts to which they are to be applied; what are the interests and social circumstances which will be affected by their legislation, and whether those social conditions are of a character which a wise statesman would desire to encourage and possibly to extend, or to restrain and restrict. That being the case, the only objection I have heard made to the amendment of my hon'ble friend is one that surprises me; for it amounts to this, that his amendment, if carried, would

have the effect of ridding the community, or at least the community of Bengal, of the existence, or at least the unrestrained activity, of a class which I confess appears to me to be about one of the most worthless, mischievous nuisances by which any community was ever infested—a class of needy usurers who have no capital of their own, who borrow at one rate of interest in order to invest their borrowed money at a higher rate, in speculating on the plunder of the agricultural community. I do not think it is necessary further to notice such an objection.

"I had also great satisfaction in voting for the amendment of my hon'ble friend Mr. Hope. I entirely concur in the principle embodied in that amendment. My hon'ble friend referred to Mr. Justice Turner in terms which were not exactly those of appreciation. But I am quite certain that whatever may be thought of the abstract views and opinions of Mr. Justice Turner, every one who has practically had to do with the preparation of this Bill must feel that it is indebted to Mr. Turner for most valuable assistance; and I think it is fair to record the fact that to the revision of this Code he has sacrificed not only much valuable time, but also much hard-earned leisure.

"I am sure that I only express the feelings of all my colleagues when I add to those of Sir Arthur Hobhouse the expression of our collective thanks for the care and thought and consummate knowledge of statute law, which have been bestowed upon the preparation of this Bill by my friend Mr. Stokes, whom we shall all be proud to welcome to his well-won place at the head of that great department of our Government with which he has been so long and so worthily associated. I also beg to join in the tribute of gratitude so eloquently rendered by Sir Arthur Hobhouse, to my honourable friend Mr. Cockerell, to the Chief Justice Sir Richard Garth, and many other high judicial authorities, as well as to all the Local Governments, on behalf of this Bill.

"This Code of Civil Procedure, which we hope to pass into law today, may at first sight seem to constitute an enormous addition to the Indian Statute-book, but an examination of its details will show that, although the body of the Code contains no less than 652 sections, it repeals as many as 575 sections of other enactments. Therefore the addition made by it to our Statute-book represents only about 70 sections. But although this addition is not enormous, it is, I think, important, for it provides for many matters which have hitherto been, either not at all or inadequately provided for. It provides, for instance, for interrogatories, affidavits, foreign judgments, *lis pendens*, admission of documents, administration-suits, suits for dissolution of partnership, insolvency, commissions to make partitions, suits by and against minors and lunatics, interpleader, suits relating to public charities, and several others, amongst which I may specially mention suits against foreign Rulers, section 433. This last-named section of the Code will, I have no doubt, prove generally satisfactory to Native Chiefs, or Princes, carrying on commercial relations with British subjects, as it supersedes the present unsatisfactory manner of adjusting disputes in such cases, and provides certain and easily accessible remedies for breach of contract. The other sections of the Code which have been so lucidly explained by my hon'ble friend Sir Arthur Hobhouse, do not call for any special remark on my part. In attempting to deal comprehensively with questions so numerous and interests so various as those to which the present Code will be applicable, no Government can flatter itself that it has not made any important omissions, and we do not suppose that the law we hope to pass to-day may not be susceptible of improvement by future amendments.

"The framing of such a Code as this requires more than the science of the lawyer—more than the skill of the draftsman. It demands also that intimate knowledge of local peculiarities of practice and custom, and that familiarity with the practical working of existing laws, which are specially possessed by

the European and Native Judges in the Mufassal, and by the executive officers of the Local Governments. From all these, prolonged assistance has been received, and to all these our final thanks are due.

"It may indeed be said that the whole legislative and administrative machinery of India has, for a lengthened period, been at work upon the Bill before us, and my trust is that the Council will now concur in ratifying the result of so much labour, thought, and knowledge."

The Motion was put and agreed to.

The following Select Committee was named:—

On the Bill to provide for the execution of emergent works in connection with embankments in British Burma——The Hon'ble Sir Arthur Hobhouse, the Hon'ble Sir A. Arbuthnot and the Hon'ble Mr. Cockerell and the Mover.

The Council adjourned *sine die*.

WHITLEY STOKES,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Weekly relief report of the distressed districts of the Madras Presidency.

No. 1784.

Proceedings of the Board of Revenue, Madras, dated 19th April 1877.

Read Relief Reports for the week ending 7th April 1877, from the Collector of Kistna, dated 10th April 1877, and from the Collector of Kurnool, dated 13th and 14th April 1877.

The detailed relief reports of the Kistna and Kurnool districts, for the week ending 7th April 1877, are submitted for the information of Government, in continuation of Board's Proceedings, 13th April 1877, No.—.

2. *Prices* in Kistna show tendency to fall. The only cases in which there has been rise of any importance are the prices of cholum in Bandar, and of cumboo in Vissannapett. No rain appears to have fallen during the week. In Kurnool, rice has risen in Koilkuntla, but ragi has fallen in that taluk and in Nandial, and cholum in Pattikonda. There is no other marked change. Rain from 3 to 4¼ tenths of an inch fell in four taluks.

3. The Commanneer Canal extension is the only work in the Kistna district from which report has been received. The number employed upon it was 2,265, and the outlay in the week Rs. 1,979.

4. The numbers on works in each taluk in Kurnool are compared below with those for the previous week :—

	31st March.	7th April.	
Ramalkota	41,915	40,391	— 1,524
Nandikotkur	9,720	12,330	+ 2,610
Nandial	28,887	31,103	+ 2,216
Sirwell	14,667	16,449	+ 1,782
Koilkuntla	30,974	32,679	+ 1,705
Pattikonda	23,340	26,289	+ 2,949
Cumbum	42,933	46,346	+ 3,413
Markapur	9,706	11,178	+ 1,472
Total	202,142	216,765	+14,623

There is thus an increase in every taluk except Ramalkota. The decrease in Ramalkota is attributed to emigration to the East Coast Canal and to cholera. The increase in Nadikotkur is not explained, but is doubtless due to the same cause as is advanced in all the other cases, *viz.*, return of coolies who had been weeded out. In Sirwell and Koilkuntla the cessation of harvest operations is added; and it is said that coolies from Jammalamadugu works are coming into Koilkuntla, alleging that the payments are irregularly made in their own taluk. The Collector of Cuddapah should call the attention of the officer in charge to the assertion.

5. The following table shows the number of works with more than 1,500 coolies, the number of coolies on them, and the total number of works and coolies. It shows that the coolies have been concentrated on large works to a very considerable extent :— .

Taluks.	Works with 1,500 coolies and upwards.			All works in progress.		Percentage of coolies on large works.
	Number.	Number of coolies.	Average per work.	Number.	Number of coolies.	
Ramalkota	8	40,235	5,029	11	40,391	99·6
Nandikotkur	3	7,828	2,609	9	12,330	63·5
Nandial	7	28,181	4,026	10	31,103	90·6
Sirwell	4	12,401	3,134	10	16,449	70·6
Koilkuntla	3	32,594	10,865	5	32,679	99·7
Pattikonda	4	23,824	5,956	9	26,280	90·5
Cumbum	8	42,714	5,339	10	46,346	92·2
Markapur	2	11,000	5,500	8	11,178	98·5
Total	39	198,777	5,097	67	216,765	91·7

Nearly 92 per cent. are on large works. Concentration has been carried out less in Mr. Gibson's than in other sections.

6. The rates of wages are still unaltered in the six western taluks, but in part of Nandial full task-rates to grain at 6½ seers are paid on the trunk road works under the Public Works Department. The price of rice in the taluk is 7½; of cholum 8½, and of ragi 10 seers per rupee. These rates should be revised. The old 2 annas scale seems also to be in force in Pattikonda. The Collector will explain. Wages in Markapur are not given. In Cumbum they have been reduced to the new scale to grain at 6 seers. Rice, however, sells at 6·6, cholum at 8·25, and ragi at 9·9 seers per rupee. Wages in kind on the new scale are also given in the taluk.

7. In Kurnool 46,841 persons were gratuitously relieved at a cost of Rs. 8,510. Of these, 1,099 were in villages, but information had come in only from one taluk. Of the whole number, 36,429 were children, mostly those receiving 3 pies a head. In the Kistna gratuitous relief is trifling, only 439 persons being in camps and relief houses, and hardly any in villages.

A

Talukwar Abstract of relief in certain districts of the Madras Presidency, for the week ending Saturday, the 7th April 1877.

District.	Taluks.	Grants of funds sanctioned for relief works up to 7th April 1877.	Probable cost of works or sums sanctioned for their execution.	Outlay on works in progress.		Outlay since the commencement of distress.		Cost of Gratuitous relief during the week.	Number of coolies employed on the last day of the week. H. E. STOKES,
Secretary.

REVENUE BOARD OFFICE,
MADRAS;
The 19th April 1877.

Weekly relief report of the distressed districts of the Madras Presidency.

No. 1817.

Proceedings of the Board of Revenue, Madras, dated 20th April 1877.

THE Board submit to Government the relief reports for the week ending 14th April, with statements and maps as per margin. No relief operations are in progress in Malabar.

Maps for

Madura.
South Arcot.
Cuddapah.
Chingleput.
Salem.
Bellary.
Coimbatore.
Nellore.

Statements.

No. 1. Prices.
„ 2. Relief Report.
„ 3. Talukwar Abstract.
„ 4. Classified list.
„ 5. Statistics of gratuitous relief.
„ 6. Memo. of sums sanctioned.

2. *Prices.*—In *Kistna*, prices except of cumboo have fallen slightly. The only case of rise of price in *Nellore* is the rate for ragi in Kandukur taluk, in all other cases prices are either stationary or falling. In *Cuddapah* rice has risen slightly in Proddatur; cholum in Proddatur, Jammalamadugu and Pulivendla, and ragi in these taluks and in Budwail. Cumboo is nearly stationary in the district. Apparently there is a decline in imports of dry grain from the north. In Bellary prices are rising, due probably to the same cause. In *Kurnool* there is no material change in prices. In Chingleput and North Arcot also they are nearly stationary, but show tendency to fall, especially the price of ragi, in the latter district. In the distressed taluks of South Arcot prices have fallen. In *Trichinopoly* they are also easier, and there is a fall in the price of rice in the three southern taluks of *Madura* and on the coast. In the distressed taluks of *Tinnevelly* rice is unchanged, but the prices of dry grains have fallen. In *Coimbatore* prices of all grains show a somewhat sharp rice in Dharapuram taluk, but there is no other change of importance. In *Salem* district rice is cheaper in Salem and Trichengode, but dearer in Oossoor; cholum has fallen in five out of nine taluks; ragi is stationary except in the sub-division, where the price is unsteady; cumboo has risen in Tripatore. On the whole prices are but little changed, but the tendency is towards fall.

3. *Rainfall.*—There was very heavy rain in parts of the *Kistna* district, and the average of all stations is 1·42 inches. Rain fell in the *Nellore* district under the hills in the North-West, and 1 inch was registered at Udayagiri. There were light showers in three taluks of *Cuddapah*, and the same in *Kurnool*. There was good rain in the *Bellary* district, 2·3 inches fell at Bellary itself, and 3·5 inches at Hospett on the 13th and 14th, and there were showers at Adoni and Raidrug. The rain in *North Arcot* was chiefly in the west of the district; one inch was received at Palmanair. There was general rain throughout *Trichinopoly* and as much as 2·6 inches in the Musiri taluk; but it did not extend into the adjoining taluks of *Salem*. In Oossoor, however, 1·35 inches fell. *Madura* had some heavy showers in Periyakolam (1·12 inches) and *Tinnevelly* in the Sankaranainarkoil taluk (1·22 inches).

4. *Grants and outlay.*—The grants made up to the 14th April amounted to Rs. 1,20,85,283. The outlay against these grants was Rs. 1,09,11,861. The classification of outlay on works in progress so far as details are available are as follows:—

	In the week. Rs.	Up to the week. Rs.
Roads—		
New works	1,54,381	40,20,110
Repairs	37,842	7,05,425
	1,92,223	47,25,535
Irrigation works	76,557	5,11,240
Miscellaneous	48,478	5,90,005
	3,17,258	58,26,780

The numbers of works in progress and completed and the mileage of roads was as follows:—

Road Works.	In progress. Number.	In progress. Miles.	Completed. Number.	Completed. Miles.
New Works	388	2,587	95	258
Repairs	288	2,652	74	346
	676	5,239	169	604
Irrigation—New works	61		18	
Repairs	807		159	
	868		177	
Miscellaneous	3,037		1,735	
	4,581		2,081	

5. *Numbers on relief works.*—The figures for each district compare as follows with the previous week :—

	7th April.	14th April.	
Kistna	2,265	2,423	+158
Nellore	15,409	28,759	+13,350
Cuddapah	82,663	80,868	—1,795
Bellary	2,29,236	2,22,115	—7,121
Kurnool	2,16,765	2,04,504	—12,261
Chingleput	7,793	15,961	+8,168
North Arcot	27,448	39,212	+11,764
South Arcot	299	331	+32
Madura	8,373	10,577	+2,204
Tinnevelly	2,668	1,349	—1,319
Coimbatore	23,244	24,160	+916
Salem	51,016	54,708	+3,692
	667,179	684,967	+17,788
East Coast Canal	31,597	37,306	+5,709
TOTAL ...	698,776	722,273	+23,497

6. Thus there is a total increase of 23,497, of which 5,709 are on the East Coast Canal; but, as will be seen below, a great deal of the increase is not real. In Nellore, which shows increase of 13,350, there has really been little change, the apparent large decrease of nearly equivalent amount on the 7th April having been due to defective return. The increase on the East Coast Canal is largely due to immigration from other districts. In Cuddapah there is slight decrease (from 37,212 to 36,505) in the Sub-Division, chiefly in Kadiri. The only other fluctuations of importance are an increase of 1,750 in Jammalamadugu, and a decline in Proddatur from 5,383 to 1,588 ascribed to the elimination of weakly persons from the gangs. Gratuitous relief, however, also shows a decrease, and the explanation is therefore wrong. A similar error was noted last week.

	7th April.	14th April.	
Adoni	56,280	51,998	—4,282
Alur	18,791	18,191	—600
Gooty	10,201	11,375	+1,174
Tadpatri	11,101	11,530	+429
Anantapur	12,309	13,094	+785
Dharmaveram	1,430	1,554	+124
Penkonda	2,264	3,268	+1,004
Hindapur	585	470	—115
Madaksira	8,491	10,098	+1,607
Raidrug	6,794	7,095	+301
Bellary	44,101	31,117	—12,984
Hospett	15,595	17,793	+2,198
Sundur	3,328	3,854	+526
Kudlighi	6,728	7,133	+405
Harpunhalli	17,409	17,049	—360
Hadgalli	13,829	16,496	+2,667
Total ..	220,236	222,115	—7,121

7. The numbers in *Bellary* are compared by taluks in the margin. The decrease in Adoni and Bellary is due to recruitment of able-bodied persons for the Nellore canal. In the Adoni report it is remarked that the numbers of children are increasing owing to those of emigrants to Nellore being taken on the works; but the Board observe that it was understood that emigrants were to take their families with them. In the Bellary taluk very few have consented to go to Nellore, but those who refuse are turned off the works. Many are also going from this taluk to the Hooblee Railway. The changes in other taluks are unimportant and generally unexplained. The increase in Madaksira is ascribed to abatement of cholera; and it is stated that Hyderabad and Dharwar coolies continue to come into Hadgalli.

8. The large decrease in *Kurnool* is due partly to emigration to the East Coast Canal, but partly, the Collector believes, to the abuse by village officers of the relief powers lately granted them.

9. The increase in *Chingleput* is almost entirely due to the inclusion of the numbers (6,791 coolies) employed in doubling the railway line, and the cessation of the ragi harvest accounts for most of the remaining increase. The taluk details for North Arcot are compared in the margin. There is a general increase, but the Arcot returns show an increase of no less than 8,205. The return, however, appears to be wrong. Of the whole number in the taluk, 7,534 are employed on minor works, and the total for the week has probably been given. No payments were made on these works. The Collector is requested to furnish explanation.

	7th April.	14th April.	
Chittoor	1,909	2,081	+ 172
Chendraghiri	1,670	2,108	+ 438
Palmanair	862	870	+ 8
Gudiattum	944	1,372	+ 428
Vellore	4,378	5,069	+ 691
Polur	224	681	+ 457
Arcot	1,845	10,050	+ 8,205
Wallajah	5,672	6,479	+ 807
Western Zemindaries	3,490	3,579	+ 89
Eastern Zemindaries	6,454	6,925	+ 469
Total ...	27,448	39,212	11,764

In *Madura* the increase occurs in Palni and Trumangalam. The Collector is requested to explain why there are none on relief works in Ramand and Shivagunga. The decrease in *Tinnevelly* is ascribed to coolies finding employment from the advances made under the Act for sinking wells. In *Coimbatore* there is an increase in Caroor, owing to opening of fresh works, but slight fall in other taluks. The increase in *Salem* district occurs in the Salem and Trichengode taluks.

9. *Concentration of coolies.*—The following statement is compiled from the detailed reports to show the degree to which coolies are massed upon the relief works. *Major* works are those which cost Rs. 2,000 and upwards. The East Coast Canal is not included.

TALUKS.	MAJOR WORKS IN PROGRESS HAVING 1,500 COOLIES OR UPWARDS.			TOTAL MAJOR WORKS.		Total number of coolies.	Column 3 per cent. of total coolies.	Column 6 per cent. of total coolies.
	Number.	Number of coolies.	Average per work.	Number.	Number of coolies.			
Nellore ...	4	19,859	4,965	25	28,521	28,759	69	99
Cuddapah ...	20	50,054	2,503	73	74,428	80,868	62	92
Bellary ...	30	172,180	5,739	226	213,994	222,115	78	96
Kurnool* ...	39	198,777	5,097	67	216,765	216,765	92	100
Chingleput ...	3	8,290	2,763	21	12,916	15,961	52	81
North Arcot ...	2	3,444	1,722	58	21,670	39,212	9	55
South Arcot ...	...	...	...	...	...	331	...	...
Madura ...	1	4,394	4,394	17	8,571	10,577	42	81
Tinnevelly ...	...	...	...	6	447	1,349	...	33
Coimbatore ...	...	...	...	78	21,967	24,160	...	91
Salem ...	1	2,086	2,086	104	24,801	54,708	4	45
Total ...	100	459,064	4,591	675	624,080	694,805	66	90

* Figures for 7th April.

10. From this table it will be seen that two-thirds of the whole number of coolies are on works capable of employing 1,500 or more, and the average on such works is 4,591. Concentration has proceeded furthest in Kurnool, but a fair proportion of the coolies are employed on large works in Bellary, Cuddapah and Nellore. The great mass of the works in the southern districts, especially Salem, and in a less degree Coimbatore, are scattered and small, but in these districts numbers have been kept down. The figures seem to show that there is no necessary connection between large numbers and affording work to the people near their homes.

11. *Rates of wages.*—In most taluks of Bellary and Cuddapah wages appear to be regulated with reference to the prices of the cheapest dry grains, but the exact rates paid in the Cuddapah sub-division are still unreported. In other districts there is no material change from the state of things reported last week.

12. *Gratuitous relief.*—The following statement compares the total numbers in receipt of gratuitous relief in the week under report and the previous week. There seems to be a gross mistake in the Chingleput returns—127,506 persons being entered as relieved, at a cost of Rs. 1,440. Evidently the total for the week is given, and the Board have divided the numbers by 7:—

	7th April.	14th April.	
Kistna	442	2,298	+ 1,856
Nellore	22,267	38,447	+ 16,180
Cuddapah	14,397	30,409	+ 16,012
Bellary	66,651	80,366	+ 13,815
Kurnool	46,841	39,317	— 7,524
Chingleput	6,473	18,215	+ 11,742
North Arcot	2,174	2,482	+ 308
South Arcot	1,256	2,368	+ 1,112
Madura	11,056	27,595	+ 16,539
Tinnevelly	428	2,044	+ 1,616
Coimbatore	4,194	5,023	+ 829
Salem	16,836	25,021	+ 8,185
Total ...	192,915	273,585	80,670

13. The increase is thus 42 per cent. and occurs in all districts except Kurnool, where the decrease is due to detection of abuses of which the village headmen were guilty. The Board have compiled a separate statement in the new form, separating camp and village relief, details

being complete for all districts except Kistna, Kurnool and North Arcot. In the other nine districts there were 209 relief camps or houses at which 125,211 persons were being fed. Village relief does not exist in Nellore. Seven districts (South Arcot excluded) have 350 inspection circles, and the number of persons receiving relief under the village system was 46,970 in 2,631 villages. This relief is very extensively given in the Salem district. 57,305 children in Bellary and Cuddapah were on allowance of 3 pies per diem.

14. The outlay in the districts in the week and up to the week is reported as follows:—

	In the week.	Up to the week.
	Rs.	Rs.
Relief works	3,95,074	1,04,16,718
Gratuitous relief	57,507	4,65,143
TOTAL ...	4,52,581	1,09,11,861

The grants sanctioned by the Board to the 19th instant amount to Rs. 1,28,49,493 as per enclosed memorandum.

15. The following statement shows the advances under the Land Improvement Act to date:—

	In the week.	Up to the week.
	Rs.	Rs.
Nellore	5,316	18,162
Cuddapah	4,574	46,825
Bellary	100	1,370
Chingleput	10,670	25,280
North Arcot	50	50
Madura	925	4,670
Tinnevelly	4,245	28,465
Coimbatore	...	500
Salem	2,432	8,436
Total ...	28,312	1,33,258

The Collector of Chingleput will report on the sudden increase in his district, and state what steps are adopted to secure *bonâ fides*.

16. The special establishment return is annexed.

Statement showing the special establishment entertained for relief works for the week ending Saturday, the 14th April 1877.

Districts.	Relief.		Payment of wages.		Accounts, &c.		Total.		Superior Officers included.

* The return from this district is not in proper form and is incomplete. It shows, however, 97 subordinate officers drawing Rs. 2,206.

17. The report of the Commissioner of Police shows the following details:—

	7th April.	14th April.
	No.	No.
Average daily number resident in camp	13,036	13,716
„ „ non-resident paupers	12,769	13,709
Number in hospitals	407	484
Deaths in hospital in the week	111	120
„ out of hospital	23	17
	Rs.	Rs.
Outlay in the week	20,977	35,955
„ up to the week	3,39,680	3,75,635

The resident paupers on 7th and 14th April came from the following districts:—

	7th April.	14th April.
Chingleput	5,891	7,276
North Arcot	3,690	3,600
Nellore	3,309	2,972
South Arcot	31	29
Other districts	86	91
TOTAL ...	13,007	13,968

18. The average number fed at the Sattankad relief camp under the supervision of the President Municipal Commission on 14th was 752, and the average of the preceding fortnight 718, and on relief works under him 4,831 on 14th April. He expended in the fortnight Rs. 5,326, and in all Rs. 32,553 on relief operations.

No. 1.

Average number of Government seers of 80 *tolahs per rupee of different grains and rainfall in certain districts of the Madras Presidency, for the week ending Saturday, the* 14*th April* 1877.

H. E. STOKES, *Secretary.*

REVENUE BOARD OFFICE, MADRAS; *20th April* 1877.

AGRICULTURE AND HORTICULTURE—Famine.

No. 23, dated Simla, the 3rd May 1877.

From—The Government of India,

To—The Secretary of State for India.

WE enclose several Minutes written by Sir Richard Temple during the last fortnight of his stay in the Madras Presidency, referring to various questions connected with the administration of famine relief.

2. The most important questions discussed in these papers are—

1*st.*—The expediency of utilizing the officers of the Public Works Department in the superintendence of the relief works.

2*nd.*—The sufficiency of the rate of relief wages.

3*rd.*—The expediency of gradually reducing and eventually abolishing the relief camps, by drafting able-bodied persons to the works and sending the infirm and helpless poor to their homes, as the system of village relief becomes sufficiently organized.

4*th.*—The substitution of coal fuel for wood on the Madras Railway lines, with the object of preventing the destruction of the forests, and especially the hill forests, the gradual denudation of which has a prejudicial effect on the regularity of the rainfall.

The last of these proposals will require to be carefully examined; and while we fully recognize its importance, we are not at present in a position to offer any definite opinion as to its feasibility.

3. The question of more effectively utilizing the large Public Works establishments in the Madras Presidency on the duty of superintending the relief works has been repeatedly pressed by Sir Richard Temple upon the attention of the Madras Government, not only in the Minutes now sent, but in other Minutes which have been already laid before Your Lordship. In his Minute of the 29th March (No. LXXXVII), adverting to the defects in the exaction of task-work which characterised many of the relief works in Madras, Sir Richard Temple remarked that the main cause of the failure consisted in this, "that the Public Works Department in each of the distressed districts is not sufficiently employed (indeed is sometimes hardly employed at all) in the tasking,—an affair which is of all affairs the very one which it is most competent to manage, and which can be thoroughly managed by it alone." In most of the districts, and especially in Bellary and Kurnool, the number of the relief works under the Department of Public Works is very small, while the majority of the relief works are under Civil officers. The result is that the tasking is at the best but light, and when the supervision is native only, the tasking is too often nominal. The subject is referred to in several of the Minutes enclosed in this despatch, and more particularly in that of the 24th ultimo, written on the eve of Sir Richard Temple's departure from the Madras Presidency, wherein he points out that, while in the Bombay Presidency the plan of tasking the relief labourers under a settled departmental system by professional establishments, specially trained for the business, has been so advanced, that out of 287,760 persons on the relief works in that Presidency, 259,057 are worked under the Public Works Department, and only 28,703 are under Civil officers; in the Madras Presidency, out of 716,507 in all, there are not more than 83,000 under the Public Works Department, the remainder, 633,507, being under Civil officers—

"Out of this latter number it may be admitted that 24,140 in Coimbatore, 28,000 in Salem, 13,626 in Madura, in all 65,766, are well and fully tasked. The remainder, 568,741, are (with the exception of a certain number in Cuddapah which I cannot state precisely) under the Civil officers, and are for the most part lightly tasked. It is especially remarkable that in the two districts showing the largest numbers, Bellary and Kurnool, having both together 422,784 persons, the whole are under Civil officers, and lightly tasked, with the exception of the 3,000 on the railway from Bellary towards Dharwar."

This difference in system, in Sir Richard Temple's opinion, is the main cause of the difference in the proportion of relief labourers to the whole

population between these two districts, on the one hand, and the Bombay Deccan, on the other hand. The percentage of relief labourers on the whole population is in Bellary 12·75 per cent., and in Kurnool 21·25; while in Sholapur, in the Bombay Presidency, it is only 6·69, in Kaladgi 4·8, and in the distressed part of Poona 3·7. Making every allowance for the greater intensity of the famine in the Madras Presidency, these facts appear to us to afford strong presumptive evidence of the superiority of the Bombay system, and of the expediency of adopting it in Madras. Another consideration which is adverted to in Sir Richard Temple's Minute of the 20th ultimo regarding the South Arcot district, is that, if this plan were adopted, the Civil officers would then have more leisure for effectively superintending the system of village relief. We are about to address the Madras Government on this subject with reference to the remarks contained in the 8th paragraph of their despatch to Your Lordship under date the 7th ultimo, No. 25, and also regarding the proposal contained in Sir Richard Temple's Minute of the 22nd ultimo, for the gradual abolition of the relief camps.

4. The remarks recorded in Sir Richard Temple's Minute of the 18th ultimo appear to us fully to dispose of the objections advanced by the Sanitary Commissioner of Madras to the reduced rate of wage. We would draw Your Lordship's particular attention to the following passages in the Minute:—

"I must advert for a moment to certain parts of the argument of the Sanitary Commissioner of Madras which seem to amount to this, that because there is mortality among the recipients of gratuitous relief, who are admitted to particular relief camps, therefore the wages of relief labourers must be insufficient. Whether the Sanitary Commissioner intends to convey this idea I know not, but something of the sort would, I apprehend, be gathered by ordinary readers of that which he has written. Therefore I have to explain that there is no connection whatever between recipients of gratuitous relief on the one hand and the recipients of relief wages on the other. The gratuitous rations allowed to the inmates of relief camps have nothing whatever to do with the wages paid on relief works. The inmates of these camps who are admitted there as being unable to work are a class totally different from those who are admitted to the relief works as being able to work. Inferences deduced from the condition of the recipients of gratuitous relief are wholly irrelevant if attempted to be applied to the condition of relief labourers. If unhappily there be mortality among the inmates of relief camps, it by no means follows that there is any mortality among relief labourers. In point of fact there is no mortality among relief labourers except from cholera, small-pox or other diseases, and when sometimes cholera has stricken and dispersed large gangs of relief labourers, there has never been any reason to suppose that the scourge arose from want of food. Again, if notwithstanding scientifically arranged diet, the condition of the inmates of relief camps continues bad, no amelioration whatever could be afforded by raising the wage of relief labourers who are a totally different class. These poor inmates have never gone to relief works at all. Indeed the very reason of their admission to the relief camps is this, that they are incapable of going to relief works. They are diseased or infirm, or being indisposed to work have wandered about, or passing by means of relief close at home have wandered to a distance.

"Being thus helpless for one reason or another they are picked up and taken care of, but when picked up they are often beyond the reach of human aid. No analogy, therefore drawn from these persons can possibly be applicable to relief labourers, and to mention the two cases with any sort of parallelism and in any kind of connection, would be to produce confusion of ideas and other misapprehension.

"If indeed persons who were pale on being admitted to relief works were to become thinner and thinner and weaker and weaker till at last they had to be drafted off to gratuitous relief camps as unfit to work, then that would be a reason for reconsidering the wage, but this is just what has not occurred, and is not occurring. If I saw or knew any signs of its occurring then I should be the first to move. Many relief labourers indeed have left the works of their own accord, not so much however because the wage was reduced, but rather because task-work was enforced, or because the scene of labour was removed to a distance from their homes.

"How it happens that so many of the destitute poor sank so low before being taken up for gratuitous relief, is a question which need not be discussed in this Minute. I may reiterate however that the proper remedy lies in the institution of house-to-house visitation throughout the distressed districts, and from the time of entering the Madras Presidency I have never ceased to urge upon the Government and the local authorities the necessity of such a visitation. And indeed this visitation has generally been instituted. But that it has not always been perfectly carried out is proved by the mortality which has occurred, or still occurs, in some of the relief camps."

5. Regarding the condition of the Bombay Presidency, Sir Richard Temple telegraphed as follows on the 1st instant:—

"Situation of Bombay Deccan same as described in my telegram of 25th. Recent showers in Konkan and South Mahratta country have encouraged people, improved water-supply, and benefited cattle. Poona and Sholapur, plough cattle suffering severely, but draught cattle sustained, and trade active. Great Indian Peninsula Railway continues doing well. Emigrants who left Deccan districts beginning to return home to resume agriculture. Movement discouraged as premature. Number on relief works slightly reduced, and on gratuitous relief increased. This was expected. General condition of the people fairly good. Special concessions allowed to return emigrants in South Mahratta Country. Similar allowance authorized in individual cases of need every where; but relief labourers on reduced wages are sustained in fair health. One pound grain per diem still thought sufficient if work light. Endeavours made to render village relief efficient as pressure on poorest classes increases. In Bombay city much sickness, and death-rate high due to fever attacking all classes alike. Causes not connected at all with famine. Those who come from interior find employment in city."

6. According to the latest returns which have reached us, the numbers in the receipt of relief were as follows:—

In Madras ...	...	702,923 on relief works. 299,325 charitably relieved.
In Bombay ...	...	311,000 on relief works. 77,700 charitably relieved.
In Mysore ...	...	59,701 on relief works. 68,641 charitably relieved.

7. Last week's season reports showed that there had been a good fall of rain in parts of Bellary, Madura and Tinnevelly, and showers in Kurnool, Tanjore, Coimbatore and Salem and in most of the Bombay districts, as well as in the western districts of Mysore.

8. We enclose copy of a Notification which we issued on the 1st instant, giving public expression to the high sense which we entertain of Sir Richard Temple's services in the difficult and delicate mission on which he has been employed since January last. We shall advert to this subject more fully in our review of Sir Richard Temple's final report, which we expect to receive in the course of a few days.

No. 189, dated Raneepet, 17th April 1877.

From—C. BERNARD, Esq., C.S.I., *Secretary to* SIR RICHARD TEMPLE,

To—*The* Honourable T. C. HOPE, C.S.I., *Additional Secretary to Government of India.*

By direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him, after inspection of the relief camp at Raneepet, regarding the need for improved relief arrangements in the Kalustri Zemindari.

Minute by SIR RICHARD TEMPLE, *dated Raneepet, 17th April* 1877.

I HAVE again inspected the relief camp at Arcot (Raneepet), and have enquired further into the circumstances of the inmates. The number is now just about 800. Fresh admissions are constantly being made: or rather fresh persons are daily being sent in, having been picked up or found on the roads or in the villages of the interior. But then there are desertions going on just as constantly, and so the numbers are not progressive. Indeed they are rather retrogressive, for recently there were, I understand, 1,200 inmates. If this be so, it would seem to follow that some hundreds of persons sent in by the local authorities in consequence of destitution must have deserted the camp and reverted to a most precarious existence. This necessarily causes grave apprehension, and suggests the necessity of re-doubled precautions for village inspection and relief. It might have been expected that many of the most wretched of them come from the zemindaris of Kalustri and Kárvetnagar, and this has led me to enquire further into the system of village inspection specially recommended for these tracts in my Minute of the 5th March. It is the more necessary to pursue the subject, inasmuch as the distress is becoming more and more severe as the season advances.

2. The local authorities appear to have given the requisite orders in these very distressed tracts, that is to say, Government officials are sent round to inspect the villages, to cause those who cannot move to be relieved in their homes and those who can move to be sent to the relief centres, and some relief centres are in working order, though my impression is that the number of these centres might be increased with advantage. Taking the cases which I have just seen together with what I hear, I am under the impression that, however excellent the local arrangements may be in these two zemindaris, especially in Kalustri, they require to be further strengthened by European supervision of a superior kind. There ought to be the means of knowing whether the Native officials are really and faithfully performing that which must be a toilsome and irksome duty, on the due performance of which very many human lives may depend. Otherwise I fear that many deaths from starvation may occur in Kalustri before the season of distress is over. I bear in mind that many destitute persons from the Madhoo Pauk portion of Kalustri resort to the camps at or near Madras, which are nearer than Kalustri, the head-quarters of the zemindari. Still I should apprehend that even this part needs more of trained and competent inspection than it now receives. And this remark is still more applicable to the more distant

parts of the zemindari. I know that the Collector has not at his disposal any European officer for the work of such inspection. But the Government might be able to send an officer for this purpose.

3. I would therefore most earnestly and urgently recommend for the consideration of the Madras Government that a selected European officer of smartness and ability be deputed to Kalustri to reside there, and under the direction of the Collector to see that the village inspection and relief is thoroughly carried out for the general carrying out of which he would feel himself responsible. He would understand that no destitute person is to be permitted to perish of hunger; that every destitute person who can move must be sent to a relief centre, where relief can be dispensed without compulsory residence in camp, and that every destitute person who cannot move (of whom there may be one or more in every village) must be fed at home. He might reside at Kalustri where there is good accommodation. And Kárvetnagar might be included in his jurisdiction.

RICHARD TEMPLE.

DR. CORNISH'S REPLY TO SIR R. TEMPLE'S MINUTES.

From—The Sanitary Commissioner for Madras,

To—The Chief Secretary to Government, Public Department, Fort St. George.

I HAVE the honour to acknowledge the receipt of two Minutes dated, respectively, the 7th and 14th March 1877, by the Honourable Sir Richard Temple, Bt., K.C.S.I., in reference to my objections to the subsistence allowance of relief coolies being calculated on the basis of 1 lb. of grain a day, and to submit herewith for the consideration of the Madras Government a memorandum in further elucidation of the subject.

2. The Government of India, while giving every publicity to the "Minutes" above referred to in the official *Gazette of India* has not thought proper to give a like publicity to my letter No. 115 of 13th February, to overthrow the arguments of which these Minutes were especially designed.

3. The subject involved is the sufficiency or otherwise of an arbitrary allowance of food to maintain the health and strength of the labouring poor. It is a practical question of the highest interest to men of science, political economists, and social reformers in every part of the world, and in the interests of humanity generally, I venture to express a hope that the fullest publicity be given to my own part in the discussion, as well as to Sir Richard Temple's, so that the public, and scientific men in particular, may have the subject of discussion before them.

A reply to Sir Richard Temple's Minutes of the 7th and 14th March as to the sufficiency of a pound of grain as the basis of famine wages.

IN a letter addressed to the Madras Government, dated 13th February 1877, No. 115, I felt it my duty to protest against a suggestion made by Sir R. Temple in his Minute dated 10th January, that 16 ounces of cereal grain per diem would suffice for the maintenance of a labouring adult in health and strength.

Sir Richard Temple thought that the sufficiency or insufficiency of this grant of food was a matter of "opinion," and recommended that a scale of payment, based on the price of a pound of grain, should be tried "as an experiment" in the various relief operations throughout this Presidency, and the Madras Government had already acceded to the proposition, and issued orders for the enforcement of a reduced scale of wages, before I was aware that the subject had been before the Government. Under these circumstances there was a choice of courses before me: I might have held my peace, and in the event of subsequent calamity, have sheltered myself under the plea that the Madras Government had not done me the honour of seeking my advise before sanctioning the reduced scale of wages; or knowing from long and painful experience the risks to the population resulting from inadequate food and nourishment, and the general want of accurate knowledge of subjects by most people, I might have ventured, unsolicited, to sound a note of warning to the Government, and to state my opinion in terms admitting of no misunderstanding. I chose the latter course, and I am very glad that I did so, as my letter has drawn forth two elaborate minutes from Sir Richard Temple, regarding the basis on which he calculated that a pound of grain a day would suffice for a labouring man, and the subject can now be discussed purely on its merits, by scientific men, and the public at large, quite irrespective of the official positions of the parties contributing to the solution of the problem of feeding a people with the least expenditure of life and money.

I have, of course, been an attentive reader of famine literature, to which Sir Richard Temple has been so large and valuable a contributor. His most masterly "Narrative on the Famine in Bengal and Behar in 1874" lays down with clearness and precision the data on which the importation of grain was then determined, and I need not say that I agree almost entirely with every word Sir Richard Temple then wrote in regard to the quantity and quality of the food supplies necessary for the maintenance of the health of the people of Bengal.

The only error I find, in fact, is one of an arithmetical, and not of a physiological character. Sir Richard Temple based his calculations on 1½ lbs. of grain per head being required for a certain period for a certain proportion of the population, whereas 1½ lbs. ought to have been taken for an adult, and half the quantity for each child under ten years of age. The error was of course one on the right and humane side, but involved the provision of more than 100,000 tons of grain beyond what was necessary according to accepted physiological data.

Even so late as January 1877, in a Minute written at Sholapur in Bombay, Sir Richard Temple accepted, without question, the fact that the relief wages in Bombay were calculated on the basis of 1½ lbs. of grain per diem for an adult. It was only on his arrival in the Bellary district of the Madras Presidency that he appears to have undergone a conversion to the "pound a day" theory; but Sir Richard has not explained in the Minute dated 13th January (to a portion of which I took exception) the grounds of his sudden change of opinion, and as his views in 1874 and 1877 appear to me to be irreconcilable, I can only quote them here in parallel columns, in the hope that some attempt may be made to explain them.

Sir R. Temple in 1874.—

(*Bengal Famine.*)

"This rate (¾ of a seer or about 1½ lbs. per head for men, women, and children) at which grain should be provided was assumed after due consideration and discussion. The lowest diet provided in Bengal jails for non-labouring prisoners is equal to about 1 seer or 2 lbs. The ordinary diet of a labouring adult in Bengal is taken after statistical enquiry to be 1 seer of rice besides ¼ seer (about ¼ lb.) of fish, pulse, pepper, or other condiments. The diet prescribed for adult Bengalee emigrants on ship-board and for Bengalee sailors always exceeds one seer a day in total weight and in some cases it reaches 2 seers a day. Many of the poor people for whom grain was to be provided would be labouring hard on relief works during inclement and exhausting weather. Nearly the whole of the Government provision of grain consisted of rice, which contains less strength-giving qualities than wheat and some other grains. It was known that each bag of the expected consignments of Burma rice would contain from 8 to 20 per cent. of innutritious husk. In view of all these considerations, I framed my estimates of total requirements on the basis that each person to be relieved would on the average require ¾ of a seer (1½ lbs. of grain) a day. In practice it was found that even to ordinary paupers, who did not do any work, local Committees had to give ¾ of a seer of rice daily besides one pie (½ of a penny) for the purchase of salt and condiments; to women in delicate health and to persons reduced by previous hunger a still larger daily dole had to be allowed.

Being responsible for the general character of these estimates, I feel bound to record my tribute to the utility of the census which had been carried out two years previously under Sir George Campbell—the first regular census which had ever been taken in Bengal. If the success of the prescribed plan of relief operations has in any degree depended on the framing of estimates, if these estimates have in any degree enabled the Government to make a proper forecast of the supplies, and the resources necessary to encounter the crisis, then it is to be remembered that these estimates could never have been framed had not that census existed."

Sir R. Temple in 1877.—

(*Madras Famine.*)

"The present rate of wages is fixed at 2 annas per diem for an adult and proportionately lower for women and children. This rate is fixed upon the supposition that it will purchase 1½lbs. of grain per diem—a quantity which is deemed essential for a man while at work. There might indeed be a question whether life cannot be sustained with 1 lb. of grain per diem; and whether Government is bound to do more than sustain life. This is a matter of opinion, and I myself think that 1 lb. per diem might be sufficient to sustain life, and that the experiment ought to be tried. Possibly the gangs might not perceptibly fall off in condition. After a week or fortnight's experience it would be seen whether they so fall off, or not; if they were to seriously fall off, then the point could be considered."

* * * *

(11). "The objection to the new scale, which Dr. Cornish states in detail is properly formulated by the phrase a full day's wages (that is something more than the 1 lb. and the ¼ anna) for a fair day's work. But the phrase postulates that there is a fair day's work, which is just what the vast majority of the relief labourers do not render. Therefore they are not entitled to, and do not physically need, the full day's wage."

* * *

(14). * * "The scale laid down appears to me to be on the whole sufficient to yield the people that subsistence which alone Government can afford. We would gladly give more if it were in our power, but we must content ourselves with saving life and cannot pretend to prevent all forms of distress."

* * * *

(16). "Having carefully inspected during my tour in this Presidency thousands of relief labourers, I give it as my opinion that with very few exceptions, which are not, as a rule, traceable to insufficient relief wages, the general physical condition of the labourers is as good now as in ordinary years."

* * * *

(17). "In conclusion it is not possible, I submit, to determine, *a priori*, on scientific data, what amount of food is necessary to sustain the particular classes who come to our relief. The real point to be considered is whether in ordinary times they get more than 1 lb. a day for a male adult. This is an economic question which can be determined by calculating the rates of wages in the rural

districts, not the wages of trained professional labourers employed by public bodies—not the wages of stalwart men of the professional class of workmen, but the men of lesser physique and lighter frame such as that of the village poor—but the wages received by the labouring poor in the villages of the interior; and then by taking the prices of common grains in ordinary years. Now from enquiries made in various districts of the Madras Presidency, I apprehend that the labouring poor in rural localities can hardly get more than 1 lb. a day for a male adult in ordinary times." * * *

In his Minute of the 7th March 1877, Sir Richard Temple declines to enter into the "purely professional arguments" advanced in my letter, further than to note "that while no doubt abstract scientific theories of great value on the subject of public health are of modern growth, the Indian population with which we are now dealing have lived for centuries in disregard of them." I must confess that I am not quite clear as to the meaning of the above extract. I did not put forward any "abstract scientific theory," but merely stated *a fact*, that as the human frame, in every race and climate, disposes of a certain amount of nitrogenous matter every 24 hours, a like amount must be taken into the body in food to restore that waste otherwise the tissues of the body will gradually disappear, and that in my opinion 1 lb. of rice containing from 68 to 80 grains of nitrogen and a small money payment of 6 pice or 3 farthings, would not suffice to enable a labourer to provide a sufficiency of nitrogenous food to restore his daily expenditure of tissue. In reply I am told, in effect, that abstract scientific theories are very pretty in their way, but that the Indian people who disregard them, manage to get on very well without them. But this manner of disposing of the subject does not seem to have satisfied Sir Richard Temple, for in a subsequent "Minute" dated 14th March, he endeavours to grapple with the scientific objections to his proposals.

I think, however, in dealing with this double reply, it will be more convenient if I discuss the practical objections of the first Minute here, leaving the scientific arguments of the second Minute for the conclusion.

Sir Richard Temple objects in the first place that my data refer to the case of Europeans, and that owing to the greater size and weight of the white-skinned races, the quantities of food necessary for natives of India cannot be decided by European experience. I am very sorry if I failed to make myself clear on this point, because in paragraph 5 of my letter I expressly allude to an important statistical enquiry undertaken *in India* in the year 1863 regarding the nature and quality of the food of the various classes of the people of *India*. I took an active part in this enquiry as regards the Madras Presidency. I drew up the instructions for the medical officers who made the investigations in the various districts, and I compiled the report in which the observations were submitted to Government and the Secretary of State for India. I not only did all this as regards the collection of facts for the Madras Presidency, but for many months, I made a collection of the various food grains, experimented with them practically in my own person, as to the methods of preparing and cooking them, and their digestibility, and I further learned by questioning all sorts and conditions of men the average quantity of food they were in the habit of using. I did all this under a conviction that the statistical enquiry ordered by the Secretary of State was one of vast importance, and I took unusual trouble to attain accuracy based on actual investigation, because I was convinced that the heavy mortality in our jails was in a great measure due to bad and unscientific feeding, and that the only chance of improving the existing jail diets lay in putting the evidence so clearly before Government that the deductions would be irresistible.

But this investigation was not confined to the Madras Presidency. A similar enquiry was made, so far as I can remember, by every Administration in India, and the results are no doubt available for Sir Richard Temple's guidance, though in regard to many of the Provinces I never heard of the results having been published. I imagine that the "statistical enquiry" alluded to by Sir Richard Temple in his "Narrative" and in which the quantity of grain per adult is said to be from one to two seers per diem, must be the one made in Bengal in 1863. I think it is much to be regretted that papers of this kind were not at the time collected and published as a standard authority on food supplies, and Indian dietaries. There may perhaps be copies of my official report in the Government Offices, or in the India Office, but I do not myself possess a single copy. My paper on "food and prison dietaries" published in Vol. VIII, pp. 1-73 of the "Madras Medical Journal," embodies all the facts collected in reference to the nature and variety of food supplies and the quantity of grain habitually used by the people of Southern India.

It is not easy therefore to account for the mistake that my remarks had reference to the dietaries of Europeans, when I was at special pains to point out that an independent investigation, conducted by some 20 or 30 medical officers in the mofussil civil stations, and checked by my own independent enquiries and observations, showed that the minimum grain allowance of a man in health and in work was not less than 24 ounces, and that it was frequently double that quantity in favourable seasons.

Moreover in regard to the proportion of nitrogenous to non-nitrogenous food, the reference I made to Sir Robert Christison's labours, was simply to show the standard to which all

successful dietaries should approach, and I expressly admitted that in the food of an Indian people, the "proportions of 1 to 3 are but barely attained, and the tendency is always to a smaller proportion of nitrogenous food" (paragraph 4).

I referred moreover to the experience of Indian jails (paragraph 8) in which practical food experiments on many thousands of persons have been going on for a long series of years under very strict tests as to supervision and observation, with the view of shewing that the food of a people was a more complex question than that of providing a certain quantity of grain.

The whole experience I wished to bring forward on this question of food and health was Indian experience, and I am surprised that Sir Richard Temple, who knew so well in 1874 what the ordinary food of the people was, should write as if there had never existed any periodical medical literature in India, or that he should ignore the fact that every Indian medical authority who has written on the subject of food for prisoners is opposed to his recent opinions. One might think from Sir Richard Temple's Minute that men like Leith, Chevers, Ewart, Bedford, Strong, Mouat, Fawcus, Irving, Forbes Watson, Mayer, Lyons, myself and many others, whose papers I have not immediately at hand to refer to, had never thought out the subject of feeding in its practical and scientific aspects, and that jail and other diets in India had been constructed without reference to the nutritious quality of the food-grains, or to the proportions of the various kinds of food. It must be abundantly clear to the Government that if this new theory of Sir Richard Temple's is correct, *viz.*, that one pound of grain and a small money payment equivalent to three farthings is enough to keep a labouring man in health and strength while undergoing a fair daily task, then every Administration in India has been for years past inciting people to break the law by providing criminals with a dietary beyond their actual necessities, and all the carefully recorded experience of the last 30 years, as to the effects of food on health in Indian jails, must be discarded as worthless.

I shall have occasion to show, however, that the carefully built up experience of the past must be our guide in this matter, in preference to the mere "opinion" of a gentleman who, apparently unconscious of the cruelty involved in his proposals, would desire to begin a huge "experiment" on the starving poor of this country, at a time, and under conditions which would prevent the results of that "experiment" ever being tested and recorded.

What in fact was the proposition of Sir Richard Temple's to which I took exception? It was this: "There might indeed be a question whether life cannot be sustained with 1 lb. of grain per diem, and whether Government is bound to do more than sustain life. This is a matter of opinion, and I think that 1 lb. per diem might be sufficient to sustain life, and that the experiment ought to be tried. Perhaps the gangs might not perceptibly fall off in condition. After a week or fortnight of experience, it would be seen whether they so fall off or not."

If it were not so serious a matter as a blind experimentation on the limits of human endurance, it would be amusing to note the method by which Sir Richard Temple here proposes to test the results. "After a week or fortnight of experience" he says "it would be seen whether the gangs fall off perceptibly in condition." Now what are the conditions abroad in the country by which such an experiment could be subjected to those rigorous tests which would satisfy practical men, as well as scientific men? Our relief works are scattered over many thousands of square miles of country, they are but indifferently supervised, and in no instances are the native supervisors qualified to test the results of any special system of feeding or payment, as regards the health of the people. To record the results of such an experiment with the accuracy required, it would be essential to weigh every individual of a gang, to enter their names and weights in columns, and to repeat the weighing week by week for a period of several months,—to note also the condition of each individual, week by week, as to anæmia, pulse, tongue, heart's action, muscular power, &c. An "experiment" of this nature might be carried out as regards a few persons under the constant observation of a medical man, aided by careful assistants, but it is obvious that the results on a large scale according to the tests proposed by Sir Richard Temple, could never be ascertained. Sir Richard Temple does not seem to be aware of the fact that "a week or two" of low living, while doing much mischief, might still give no results measurable by the eye or by weighing.

There is nothing more remarkable in connection with these famine relief works than the sudden changes and fluctuations in the "personal" of gangs. The people inspected one day may be away the next. The people falling ill and unable to work are replaced by others, and there is never any certainty that two inspecting officers going over the same ground, within a short interval of time, are seeing the same people. Any comparison of their observations or reports therefore can scarcely be gone into profitably, while this uncertainty exists in regard to the identity of the individuals composing the gangs.

There is, however, a rough and coarse test of the results of the reduction of wages, which may commend itself to the notice of Government. It is that while the numbers paid for, and supposed to be employed on, relief works in the first week of February were 907,316, they fell in the last week of March to 662,195, and that the numbers "too weak for work, requiring cooked food in relief houses," had increased from 38,163 in the first week of March to 99,113 in the last week of the same month. From my recent inspection in Maddanapully and Royachoti, I found these helpless and infirm people were increasing at the rate of more than 100 a day at each relief house, and if they continue so to increase, as I think is but too probable, the numbers to be fed in the Cuddapah District will probably reach 20,000 within the next two months, instead of 3,294 as in the last week of March. I leave it for others to determine whether the policy of instituting a bare subsistence wage on relief works has, or has not, contributed to the enormous increase of the sick and feeble, and of the gratuitous feeding throughout the distressed districts.

Sir Richard Temple is of opinion that the task-work required of coolies who are paid on the lower scale, is very nearly equivalent to a condition of rest, and that the scale of food necessary for persons in a state of idleness will very well suit those who only execute light work.

The condition of the labouring gangs varies very much in the several localities. Some have very little distance to go to their labour, and in such cases the collection of half a cubic yard of road material may not involve any unusual exertion. But even in these cases, I have seen work attempted when the ground was as hard as iron, and with tools much too heavy for the strength of those who had to wield them, and officials of the Public Works Department have told me that in their contract rates, no coolies would ever think of attempting work of this kind, except when the ground had been softened by rain. In such cases the bodily wear and tear of moving half a cubic yard of material, or executing 50 per cent. of a Department Public Works task, is considerable, and especially in the case of weakly gangs.

I have seen moreover very wretched and enfeebled creatures in the gangs who have come distances of 4, 6, and even 8 miles to their work, some of them dragging their children to and fro with them, and I have no hesitation in stating that when these walking distances and carrying weights are taken into account with the day's work, that the expenditure of force is far ahead of its replenishment in the shape of food wages.

Sir Richard Temple states that his lowest scale of wages will permit in most instances of men buying 1½lbs. of grain in addition to condiments and some other nourishment, but however this may be the case in the Bellary District or in certain stations on the line of railway which I have not yet inspected, it is not so in the upland taluks of North Arcot and Cuddapah. At Goorumkonda the other day the bazaar prices of rice was only 13 lbs. the rupee, and at Royachoti about 14 lbs., so that one anna would not purchase even a pound of grain.

The mode of calculating the wages of the coolies too in some districts has practically the effect of reducing the earnings of men from 1 anna 6 pie to 1 anna 5 pie or 1 anna 4 pie, and what with deductions for short work, and the "customary tribute" to the gangsmen, there is reason to fear that in a very large proportion of cases the labourers do not get anything like the whole of the reduced wage.

Sir Richard Temple has, however, made a most important concession to the famine labourers in consequence of my protest, and if no other good has resulted, I feel bound to thank him for the consideration given to the last paragraph of my letter, in which I pointed out that a man must *eat*, even if we give him no *work* on Sundays, and that a subsistence wage ought not to be shared with young children. Practically, there is now very little difference between Sir Richard Temple's wage-rate and my own recommendations. I have contended, and given reasons for considering, that the basis of a pound of grain for a labouring man was unsafe, especially when that wage was paid only for six days in the week, and when helpless children had to share in the food. Sir Richard Temple admits the weakness of this portion of his scheme, and by conceding additional help to feed the young, has of point in fact yielded all that I felt justified in urging.

According to my observation, though the ordinary wage rate of 2 annas, 1-6 and 1 anna, for men, women and children, respectively, may in some districts be too little to procure a sufficiency of nourishing food to keep up health, yet in times like these the people are ready enough to work for wages cheerfully and with a good heart, getting payment for, and doing work only on, six days in the week. Whatever deficiencies in their food there may be, they supplement in their own fashion by using articles that, though not in general use, may help at a pinch to sustain life, such as the seeds of the bamboo, tamarind, &c., the pith of the aloe plant, and certain jungle leaves like the *Sethiæ Indica*.

The actual wage receipts of a family of man, wife and four children, on the old and amended new scale of wages is given below:—

			Rs.	A.	P.
Ordinary scale.					
Man	... 6 days at 2 annas	...	0	12	2
Woman ...	... „ 1½ „	...	0	9	0
2 children ...	... „ 1 „	...	0	12	0
2 children under 7 years of age					
Total per week		...	2	1	0
Sir Richard Temple's amended scale.					
Man	... 7 days at 1½ annas	...	0	10	6
Woman ...	... „ 1¼ „	...	0	8	9
2 children ...	... „ ¾ „	...	0	10	6
2 children below 7 years, relief grant	¼ „	...	0	3	6
Total per week		...	2	1	3

From this comparison it will be seen that in the case of a man with a family of four children, two of whom are workers, and two non-workers, he is actually better off by 3 pie per week under Sir Richard Temple's modified reduced wage, than he was when working six days in the week for ordinary wages. Mr. West, C. E., in charge of the Cheyar embankment works, informs me that to meet the views of the district authorities and to avoid the appearance of competition in the labour market, he has reduced his rates from the ordinary two annas to the modified scale of Sir Richard Temple's, and paid for the Sundays, and that practically his disbursements per head average just the same as before.

The great financial saving therefore of over so many lakhs of rupees is not likely to accrue from the introduction of the new scale of wage. It has given intense dissatisfaction to the labouring people, who could not, or would not, comprehend its terms; it has opened the door for abuses of various kinds, and it has not tended to economy in disbursements.

In some gangs near Cuddapah the other day I saw several women labourers encumbered by three or four children under age, who had been brought to secure the pittance granted under the recent modification of the rules. These children are of course much exposed all day, and distract the mother's attention from her work. The present system can be good neither for the mother nor the children, nor is it economical to the Government, according to the experience of Mr. West who has tried both systems and according to the typical case I have given.

Sir Richard Temple asks if I will admit that a pound of grain a day is sufficient to maintain an adult native of India in a "state of rest." In reply I have to state that I do not know of any cereal grain which would give a sufficiency of albuminous matter in a lb. weight to replace the daily waste of nitrogen from the adult native body, and consequently I am unable to admit any such proposition. The "evidence" adduced by Sir Richard Temple in regard to this matter is, in reality, no evidence at all. Sir Richard says that in the Vellore relief camp Dr. Fox and Captain Harris were agreed that men had so improved on 1 lb. of grain, but when I came to enquire into this matter I found that the "evidence" rested on general impressions, and not on periodical weighing and individual record of weight from time to time.

Even in the "weight test" some caution is necessary, for many of the people who come into camps appear to be filling out and fattening, when in reality they are getting dropsical and in a fair way to die. I can easily understand that the people in the Vellore camp did better on 1 lb. of grain per diem than they did on 12 ounces, which was the scale in use until a few weeks ago when Dr. Fox urged an increase.

I have thought it safer and more prudent in this matter to fall back on our experience in dieting non-labouring prisoners, and to recommend 20 ounces or 1¼ lbs. of cereal grain besides dhall, vegetables, condiments, &c., for adults fed in relief camps, and this allowance is now sanctioned by Government, and should be, I think, a minimum allowance, considering how much tissue these poor creatures have to repair before they can be brought into a state to do a day's work.

In a paper recently brought to my notice by Surgeon-General G. Smith, I find that at Nellore, Surgeon-Major A. M. Ross has been weighing coolies on relief works, and that their average weight is below that of average "under-trial" prisoners in jail. Thus—

In Jail.		
Men.	Women.	Children.
109·1 lbs.	92·3 lbs.	70 lbs.
Relief works.		
94·3	77·6	46

These weights appear to indicate much wasting, but the weighings will be continued and reported on from week to week.

In the last paragraph of his Minute of the 7th March, Sir Richard Temple states his belief that the labouring poor in Madras in rural localities can hardly get more than 1 lb. of grain a day for a male adult in ordinary times. The enquiries on which this belief is founded were made, I apprehend, by Sir Richard Temple himself in the course of his rapid journeys through the country.

But I would submit to any impartial person whether enquiries made in this way to satisfy a foregone conclusion, can be compared in value with the careful statistical enquiry undertaken calmly and deliberately in the years 1862 and 1863, and which enquiry furnished the basis for all our subsequent arrangements in the dieting of the people under circumstances where they cannot have any voice in the choice of their own food. Most people in India are acquainted with the sort of answers a high official personage will get in reply to leading questions, and if Sir Richard Temple thinks he has got at the truth in this matter, I can assure him, after a close practical study of the food of the people of Southern India for the last fifteen years, that he is utterly and entirely mistaken, and that so far from the labouring adults living upon a pound a day, they eat on the average nearly double.

The following is what I wrote on this subject fifteen years ago. With my great opportunities of enquiry in regard to the civil population, jails, hospitals, soldiers' rations, &c., during the past fifteen years, I have nothing to add or alter.

"A free labourer, if he has the means, will use from 32 to 40 ounces of cereal grain, (cholum, cumboo, ragi, or rice) about two or three ounces of dhall, a similar quantity of meat, or fish, and fruits or vegetables in addition."

"From numerous personal enquiries I should be inclined to reckon the average consumption of cereal grain per diem of an adult labouring man is rather under than above 30 ounces.

"The greater variety of food and its more liberal use by the free population depends very much upon the means of the individual, as well as upon the supply of food in the district. In times of famine and drought, after repeated failure of crops, the quantities of grain given as the probable daily consumption of a healthy man would be very much reduced, and in such seasons the jail diet would be superior to that of the greater

number of the labouring poor. This is still too often the case. In years of scarcity grain robberies and petty thefts are very prevalent, and many of these offences are committed with the express object of securing the jail rations as a remedy against starvation. At such times the want of due nourishment is painfully evident in the attenuated bodies of the poor. Many die from the immediate effects of starvation, while the great bulk of those who live to struggle against famine, have the vital powers so reduced that they are predisposed to suffer from the ravages of cholera and fever. The connection between famine and pestilence, the following of the latter in the wake of the former, has received many a practical illustration in the "records of Indian history within the present century"—(*Cornish on food and prison dietaries, Madras Medical Journal, Vol. VIII, page* 83)

I now come to the consideration of Sir Richard Temple's second Minute of the 14th March, in which he enters upon the scientific questions involved in my objections to his diet scale.

In this Minute Sir Richard Temple observes, paragraph 6:—"The opinion that one pound a day of grain might suffice for a relief labourer, together with some allowance for condiments and the like, or some nutritious substance, was not indeed based on scientific theory. It was founded rather on probabilities practically deduced from the condition of the poorer classes in ordinary times, and on the results of general experience."

I think it would have been more to the point if Sir Richard Temple had given something a little more precise than the vague term "general experience" I may ask, in return, whose experience? Not Sir Richard Temple's, surely; for in 1874 he assures us that the people in Bengal habitually use from 1 to 2 seers of grain (2 to 4 lbs.) per adult, and that even the people in relief houses, doing no work, got ¾ of a seer (1½ lbs). Sir Richard Temple records nothing of his travels in Bombay, showing that the people on relief works there lived on a pound of grain a day. It was only on his arrival in the Bellary District that he evolved this strange doctrine, that a Madrasee could do what the people in no other part of India can,—thrive on sixteen ounces of cereal grain a day.

I know of no other "general experience" bearing on this question and favourable to Sir Richard Temple's view. Sir Richard Temple appears to consider Sir Robert Christison's opinion to be entitled to a respectful hearing, and I may therefore be allowed to make a further quotation from that venerable and accomplished author's remarks on the diet of the British soldier during the Crimean War.

"Experience has shown that the most successful dietaries for bodies of men, deduced from practical observation, contain carboniferous nitrogenous food in the proportion of about three of the former to one of the latter by weight. During two-and-twenty years that my attention has been turned to the present subject, not a single exception has occurred to me.

"Hence it is obvious that the least weight of food in the rough state will be required, first, when there is the least moisture and cellulose tissue in it, and, secondly, when the carboniferous and nitrogenous principles are nearest the proportion of three to one.

"Of the various nutritive principles belonging to each set, some may replace one another; some are better than others; some are probably essential.

"Two things, however, are certain, that nitrogenous may replace carboniferous food for supporting respiration, though at a great loss, but that carboniferous food (without nitrogen) *cannot replace nitrogenous food for repairing textural waste.*

"Dietaries are never to be estimated by the rough weight of their constituents, without distinct reference to the real nutriment in them as determined by physiological and chemical enquiry."

Keeping these principles in view and with the help of a simple table it is not difficult to fix the dietary advisable for any body of men, according to their occupation. It is also, in general, easy to detect the source of error in unsuccessful dietaries. For example, any scientific person conversant with the present subject, could have foretold as a certain consequence sooner or later of their dietary, that the British troops would have fallen into the calamitous state of health which befel them last winter on the Crimea.*

Remarks of this nature, from so eminent an authority as Sir R. Christison, ought to make unskilled constructors of dietaries in famine times somewhat modest in respect to their knowledge. It should make them especially cautious in the enunciation of new and strange doctrine, such as "that the amount of nitrogen required by natives must be much less than that required by Europeans" (paragraph II of Minute.)

This is really the crucial test of the whole question, and I am afraid it cannot be definitely settled on the *ipse dixit* of Sir Richard Temple. In the scientific world we are accustomed to ask that any one bringing forward a new theory shall state the facts on which his theory is based; and in this case it would be quite fair to ask Sir Richard Temple whether by himself, or with professional aid, he has endeavoured to test his theory by estimating and measuring the amount of nitrogen which natives of ordinary size and weight eliminate from their bodies. The investigation is one of, by no means, a difficult character, and no one has any right to bring forward such a theory in proof of the sufficiency of a scale of food without first ascertaining, by repeated investigation and experiment, that the nitrogen excreted by natives is proportionately less than in Europeans. The consequences of our accepting such a theory, without the clearest and plainest proof, might be most disastrous, and the *onus probandi* remains with the originator of the theory.

I almost wish, in regard to Sir Richard Temple's reputation as a gentleman of many and varied accomplishments, that he had spared me the difficulty of dealing with his "crucial tests" in paragraphs 11 and 12, as regards the alleged discrepancies in theory and practice as

* Observations on a report by Sir J. McNeill, relative to rations for soldiers.

to the amount of nitrogen necessary to a successful dietary. It is not a pleasant thing for one in my position to point out errors of comprehension on Sir Richard Temple's part; but however painful the operation, it must be done. Sir Richard Temple quotes from the *Madras Manual of Hygiene*, a work of admitted excellence, by Surgeon-Major H. King, M. B., the composition of a scale of rations allowed to native soldiers on foreign service. He points out very truly that these rations while yielding an abundance of carboniferous food (32 ounces of rice), are very defective in nitrogenous principles, the whole weight of food in fact yielding only 178 grains of nitrogen per diem. "According to this theory," observes Sir Richard Temple, "the Madras sepoy would be undergoing starvation at the hands of the Government. But, in fact, he is not so reduced physically, nor does he fail the Government when it calls upon him for exertion. This case, I submit, makes very strongly against Dr. Cornish's theory."

I have no excuse to make for this dietary of our native soldiers on foreign service. I gave it up fifteen years ago, and recorded my opinion of it in the following terms:—

"The deficiency of animal food in the diet, and the excess of carboniferous material, is undoubtedly a fertile source of the prevalence of sickness in native troops on foreign service. The mortality of Madras troops on this diet in Burma is more than double what occurs in Indian stations, where they find their own food."*

The foreign service "ration" in fact is a "survival" from the time of the first Burmese War. It was framed in times long before Sanitary Commissioners or Chemists learned in food composition existed; and at the present time it is no more to be regarded as a typical "diet" than are the buttons on the backs of our dress-coats to be regarded as a device for supporting a sword-belt. The ration is simply an "aid" to the soldiers employed in a foreign country, and the men are put under no stoppages whatever on account of it, but draw the full pay of their rank, just as if they had to find every particle of food out of their pay. If the relief coolies in whose behalf I have protested had seven or nine rupees a month in addition to the pound of grain, I should have made no objections to the insufficiency of their rations.

The Government expect, in these settled times, with the Burmese markets well supplied with poultry, eggs, fish, and flesh, that the sepoy can buy his nitrogenous food for himself, and practically he does so to such an extent that of late years the troops stationed in Burma have been almost as healthy as when in Southern India.

But there are and have been exceptions. I need not go back to the very terrible mortality of native troops from bowel complaints in the first and second Burmese wars. These things are matters of history, but no later than the year 1872, a detachment of native troops was sent from Burma to occupy posts on the Arracan River in co-operation with the Lushai Expedition.

Strength ... 184		
Hospital admissions 901		
Deaths ... 27 12 from "dropsy," 5 "debility."		
Ratios of sick to strength per mille. 4896·7	Deaths. 146·7	

In this locality the men had no market at hand in which to buy animal food, and in attempting to live on their "rations," they sickened and died in large numbers. The proportions are given in the margin.

In this case, and in all others demanding active service away from markets of supply, the native soldier on foreign service *does*, in fact, "fail to do what the Government want of him," and simply because his "rations" are unfitted of themselves to support his health and strength. The fact is acknowledged and admitted by every officer who has commanded in Burma, and I did not at all over-state the case fifteen years ago when I reported to Government as follows:—

"I have not entered into the question as to the propriety of revising the ration list of sepoys on foreign service, or of effecting changes in civil hospital diets, or of the sufficiency of the food laid down by law for emigrants from British India to the colonies, all of which dietaries are unscientific in composition, and there need be little hesitation in stating, unfitted to support life. The whole of these dietaries require revision."†

Then again the "rations" of the European soldier do not, as Sir Richard Temple supposes, constitute his whole food.

Every Commanding Officer knows that the British soldier habitually buys extra meat from the bazaar out of his ample pay, and there is no regiment in the country which has not a provision shop of its own in which anything, from a Yarmouth bloater to a truffled sausage, may be bought. The rations on the whole are very fairly adapted for the British soldier, although there is no doubt that he eats more meat than the quantity contained in the ration.

In the calculation of the component parts of this dietary in the Madras Manual of Hygiene, I see that the nutritive value of the 1 lb. of vegetables has been put down, as if all the vegetables were of the cabbage or soft kind, "whereas potatoes form usually one-half of the vegetable ration of the soldier."

No calculation, moreover, has been made of the nutritive value of the malt liquor or spirit he consumes.

The proportions of albuminous to carbonferous food in the official ration are about one to four.

Sir Richard Temple has made a mistake as to soldiers "in garrison" receiving a "reduced diet."

They do nothing of the kind, but European soldiers "in prison" do receive, when sentenced for short periods, a punitive diet which has no bearing whatever on the question of the insufficiency of albuminous food in a pound of grain to keep an adult native in health.

* Madras Medical Journal, Volume VIII, page 30.

† Madras Medical Journal, Food and Prison Dietaries, Volume VIII, page 56.

I must confess that I was a little staggered by Sir Richard Temple's quotation of the scale of food allowed to "European soldiers on board ship." I was travelling at the time of receiving the Minute, and away from all books of reference, so that I could not verify the composition of the diet, as given in the *Madras Manual of Hygiene*,' but I knew that this diet had been framed under the advice of scientific men, and that it was not likely to err in the direction of giving too little nitrogenous food, and I was quite satisfied that some error had crept into the calculations, and that Sir Richard Temple had pitched upon this "crucial instance" without thought of the possible inaccuracy of the figures.

The explanation of the calculated quantity of nitrogen in this diet being only 155 grains per day is very simple. The diets which are valued in the appendix to the *Madras Manual of Hygiene* are all taken from the Madras Medical Code. The quantities of this particular diet will be found in the Code, page 133, Vol. II. The transcriber instead of entering 4 lbs. or 64 oz. "fresh bread" for a week's ration, has made the mistake of entering 4 oz. and, as a consequence, all the calculations of albuminous and carboniferous food are below the actual truth.

There is also another error. The calculator of the nutritive values has assumed that "salt meat" contains less albumen than fresh, and has put down a less proportion of nitrogen for the salt meat; but this is not really the case, though in salt meat the albuminous matter may be less easily digested. The effect of salting meat is to harden the albuminous tissues, and to cause the watery juices of the meat to enter the brine; consequently salt meat has more albumen in a given weight than fresh, or preserved, meat.

On the whole, I consider the ship-board dietary of the European soldier, containing as it does, according to my calculation, from 200 to 240 grains of nitrogen per diem, very well suited for a class of people who have nothing whatever to do.

Sir Richard Temple says the British soldier is not reduced by a diet containing 155 grains of nitrogen, and the answer to this statement is that the British soldier is never put on any such diet, and that the figures on which Sir Richard Temple rest his "crucial instance" are wholly wrong, partly from a clerical error of the transcriber and partly from the mistake in estimating the albuminous matter in the salt meat of the shipboard ration.

It follows, therefore, that all Sir Richard Temple's surmises on the hypothesis that 155 grains of nitrogen is enough for a British soldier fall to the ground, and this part of the question need scarcely be noticed further.

I feel bound, however, to protest against the line of argument advanced by Sir Richard Temple that as the British soldier only needs so much nitrogenous food, that the native of India can do with two-thirds of that amount or less. We have no grounds whatever for admitting so dangerous a theory, and all our practical experience tells just the other way.

In the *Indian Annals of Medical Science*, Vol. III, 1855, Mr. Strong gives some very remarkable tables showing the influence of a change of diet in the Alipore Jail. A Magistrate in charge *thought* that the prisoners were being too well treated, and so abandoned a scale of food, which had been sanctioned by the Medical Board, and which had kept the prisoners in health, for a dietary of his own devising. The change consisted chiefly in knocking off the meat, reducing the grain allowance, and obliging the prisoners to consume what they had in a single meal. The result of this amateur tampering with the food of the people was an increase in mortality from an average of 42·4 per thousand to 117·5 per thousand in the three years during which the "experiment" was in force. The constituents of this dietary gave about 19 parts of carboniferous food to 1½ of nitrogenous!

The late Mr. Bedford of the Bengal Medical Service records a similar increase of mortality dependent on a change of food in the Rajshaye Jail in 1852-53. In this case several months elapsed before the bowel sickness began to appear, but the result was a trebling of the annual mortality.

The effect of improving the standard of diets in the Madras jails in 1867, so as to raise the amount of albuminous food equal to from 200 to 240 grains of nitrogen per diem, has been to diminish the mean annual death-rate from 107 to about 22 per thousand, for the eight years in which the new dietaries have been in force.*

This ought to be fairly convincing testimony, but there is more behind. A few years ago, a Jail Superintendent, who had been admonished by Government for over much flogging, was requested to adopt some other mode of punishment, and the punishment book showed, in the course of a few months, some hundreds of entries to this effect: "Half rations until he completes his task." The result was great increase of sickness and mortality from the diseases such as now fill our famine camps, *viz.*, sloughing ulcers, bowel complaints, dropsy, and impoverished blood. On discontinuing the food punishment the mortality began slowly to subside to its normal proportions. So close is the connection in fact between a sufficiency of nitrogenous food and health of the prisoners, that I never now hear of an increase of bowel disorders and dropsies in a jail, without at once suspecting tampering with the food, or privation in the district furnishing prisoners. In talking the matter over with the Inspector General of Prisons, I find that he has arrived at precisely the same conclusion. After the Bengal famine I see it noted that the rate of mortality in the Julpigori jail was 27 per cent. chiefly from "bowel complaints." In Rungpore 17·6 per cent. In Gya, Tirhoot and Chumparun the mortality was 17, 10and 15 per cent., respectively. "Dysentery was the most fatal disease." The precis-writer who compiles the sanitary statistics of the India Office does not appear to have had a notion of the connection

* See paper—"Sanitary Improvements in Indian Jails."
Transactions, Social Science Association for 1875.

of the undue jail mortality with the famine, but notes that a "special report has been called for" to explain it.* Reading between the lines I can at once tell him that it was a mortality from starvation diseases.

With all these facts before me I think myself quite justified in having given early warning of the danger of reducing wages to the basis of 1 lb. of cereal grain a day, even admitting that my remonstrance was, as Sir Richard Temple states, "strongly worded." It saves time to state in plain terms one's actual meaning, and my meaning was quite evident when I showed that Sir Richard Temple's proposals were out of harmony with the experience of the Bengal famine, and with our actual knowledge of the effects of insufficient food.

There remains yet one more point to be noticed with reference to differences of opinion in regard to the present condition of the labouring poor. On this point Sir Richard Temple states—"Having carefully inspected during my tour in this Presidency thousands of relief labourers, I give it as my opinion that with very few exceptions, which are not as a rule traceable to insufficient wages, the general physical condition of the labourers is as good now as in ordinary years."

This is Sir Richard Temple's opinion, but not mine. I too have seen a considerable number of relief labourers, and have taken some pains to find out where the distress really is, and my experience is this, that if I want to see the darkest side of the famine picture, I must look for it elsewhere than amongst the ranks of those who have still strength enough left them to work. Consequently I make a point of examining, wherever I can, the condition of the people fed in relief houses, lungerkhanas, and by private charity. I try to ascertain the condition of the poor who frequent the public bazaars and markets; and I pay special attention to the condition of the old and the young, whom I find almost invariably to be the earliest victims to distress. It is in this respect probably that my estimate of the effects of the famine on the health of the lower classes differs so widely from Sir Richard Temple's. My view is briefly this, that the famine is pressing with peculiar severity upon certain sections of the labouring classes who average from 20 to 30 per cent. of the population of the several districts, that amongst these classes there has been already a very large mortality, primarily due to bad and insufficient feeding, and that the condition of the survivors is in many cases critical in the extreme, as shown by the rapidly increasing proportion of persons who are unfit to work, and who have to be fed entirely at Government expense to keep the feeble vitality they have from being altogether extinguished.

Immediately the condition of a people becomes so low that they cannot work, the question of saving life becomes enormously complicated, and in plain language the time has then passed by when Government relief can do more than attempt to rescue a few possessed of the strongest constitutions. What has been our experience in this respect in the Madras relief camps, and in the camps now being established throughout the country? Sir Richard Temple I observe in his numerous Minutes has passed by this subject of the actual mortality of the famine stricken, but as a public health official, I am bound to take notice of it.

The following figures show the mortality amongst this class of the population in the Madras camps for ten weeks ending 31st March:—

Mean strength.	Total deaths.	Annual ratio per mille.
11,005	1,971	930·8

This enormous mortality simply means an annual death-rate equivalent to 930·8 per mille of the population constantly under observation, and, in fact, is a death-rate which wipes out nearly the whole of the living within a year. The excessive death-rate going on in Madras is going on in every relief camp in the country. I find but little difference in the proportion of deaths, whether in North Arcot, Cuddapah or Madras. And it must not be supposed that this excessive death-rate is due to cholera, or small-pox, for the Madras camps have been singularly free of the former, and by means of vaccination the small-pox epidemic has been controlled. The deaths are almost entirely due to diseases which invariably, in India, attack under-fed and starved people, *viz.*, extreme wasting of tissue, and destruction of the lining membrane of the lower bowel. This is a simple statement of fact. Thanks to the assistance of Surgeon-General G. Smith and his able medical staff in Madras, this question of the nature of the famine disease has been abundantly verified by post-mortem examinations. Surgeon-Major Porter informs me that the average weight of bodies of full grown men he has examined has varied from 57 to 85lbs., and it is enough to record this fact to show the extreme wasting going on during life.

But if the condition of the labouring classes is so generally satisfactory to Sir Richard Temple, how is it, I may ask, that the death returns of the famine districts are so much above what is usual? I have not as yet received the returns for February, but those for December and January are available for comparison with the average results of the previous five years. I must, however, note with respect to these district death returns that from personal investigation in the districts, I know they very much understate the real mortality of the last few months. The truth is, the famine has disorganised our village establishments to such an extent that the actual numbers who have already perished will never be known. Hundreds and thousands of people have died away from their homes, have fallen down by the roadsides, and their bodies have been left to be eaten by dogs and jackalls. Mr. Gribble, the Sub-Collector of Cuddapah, in the course of a morning's ride of 14 miles, came upon eight unburied bodies, and at Royachoti in January last Mr. Supervisor Mathews informed me that after an outbreak of cholera 53 dead bodies lay for days exposed in the dry bed of a river, near the works the

* Report of Sanitary Measures in India, Volume VIII, page 10.

relief coolies were engaged on. Walking over this ground two months after the event, the numerous skulls and human bones scattered on the surface convinced me that the statement was founded on fact.

With our village establishments panic-stricken and the village messengers away at relief works, it is quite certain that the death registration has been most incomplete. At Maddanapully I found that the deaths in the civil hospital had exceeded those borne on the village register for certain months, and at Royachoti the deaths amongst the starving people sent in to the relief shed in March had exceeded the registered mortality for the whole town. It is obvious therefore that the figures I now give do not represent the real truth of our losses; they are at the best approximative only.

Mortality in famine districts.

Districts.		Chingleput.	Nellore.	North Arcot.	Kurnool.	Cuddapah.	Bellary.
Population		938,184	1,376,811	2,015,278	914,432	1,351,194	1,668,006
				Registered deaths.

Present Season ...	December 1876 ...	2,865	5,641	6,006	11,862	6,612	7,440
	January 1877 ...	6,094	11,142	13,686	6,253	13,361	9,361
Ratio per 1,000 of population per annum.							
Average of 5 years (two months) ...		21·08	16·6	21·9	18·3	19·9	17·8
Present season (two months)		87·2	73·7	58·7	118·8	86·7	80·4

Even these figures, which we know to be under the truth, show an appalling mortality in the famine districts during December and January. I have no reason to suppose that the state of things here indicated has much improved in February and March. But in our municipal towns, or in some of them at least within the famine area, death registration is more efficiently managed, and the following figures will tend to show the gravity of famine, has exemplified in an abnormal death-rate. In Bellary I have long had reason to suppose that the registration was not properly done and the returns of some of the Bellary municipalities are obviously imperfect. The first thing that attracted my attention in connection with the famine, on returning to duty in the end of January, was the abnormal death-rate amongst certain classes and certain localities of the Presidency town, and I lost no time in drawing the attention of Government to the condition of the people, and suggesting measures for combating the great destruction of life then going on. While the mortality of the Presidency town was exaggerated by the influx of starving immigrants, the experience of other municipalities shows that throughout the famine tract, the death rate has risen out of all proportion to its normal condition.

Mortality in the municipalities of the famine districts.

The famine, so far has already fallen very heavily on the old, the weakly constitutioned, and young children. It is still "weeding out" from our labouring classes a large number of victims, and in consideration of the fact that diseased conditions dependent on sufficient food *follow many months after the cause has passed away*, I apprehend that a heavy and unusual mortality will continue even after the period of drought and dearth of food has ended.

The survivors of the famine will be the strongest and best fitted of their race to continue the species, and when plenty again blesses the land, they will produce a vigorous race of descendants; but I think there can be no reasonable doubt that this food deficiency has fallen very heavily upon the ordinary agricultural labouring poor, and that many years must elapse before they will have made up the numbers who have fallen, and are still falling, victims to the combined famine and pestilence now in our midst. I have in former reports called attention to the fact that the children born of famine-stricken mothers are nothing but skin and bone. My recent experience goes to show that the birth-rate is seriously diminishing, and that pregnancy amongst the distressed women is becoming a rare condition.

It is on these grounds that I cannot subscribe to the pleasing and hopeful telegrams in which Sir Richard Temple summarises the weekly progress of events for the benefit of the Home Government and the English people. There are two sides to every picture. Sir Richard Temple, like a skilful General commanding in battle, naturally fixes his attention on the main points of attack and defence, and so long as these are safe, his main work is accomplished.

I on the other hand as a public health official, whose special duty it is to preserve life, am bound to listen to the cries of the wounded, and to note in what way the combatants suffer, and I should be wanting in my duty to myself, and to the Government I serve, if I failed to state the facts coming to my knowledge, and the deduction drawn from those facts.

MADRAS; *The 6th April* 1877.

W. R. CORNISH, F. R. C. S., *Surgeon-Major, Sanitary Commissioner for Madras.*

No. 190, dated Cuddalore, the 19th April 1877.

From—C. BERNARD, Esq., C. S. I., *Secretary to* SIR RICHARD TEMPLE,

To—The Honourable T. C. HOPE, C. S. I., *Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him respecting passages in the report of the Sanitary Commissioner of Madras, dated the 6th April.

Minute by SIR RICHARD TEMPLE, *dated Cuddalore, the 18th April* 1877.

IT is necessary for me to make a few brief remarks upon the Minute of the 6th April by the Sanitary Commissioner of Madras regarding the reduced wage for the relief labourers of Madras, inasmuch as this Minute refers to some of my own previous Minutes on the subject. Having regard to the importance of the subject, I refrain from making the objections which might ordinarily be made to the tone of some parts of the Sanitary Commissioner's Minute as an official paper.

2. In order to shew the uncertainty of medico-chemical dicta regarding such a matter as relief wages, I pointed out certain discrepancies between the Sanitary Commissioner's opinion and the Madras Manual of Hygiene on a particular point. The Sanitary Commissioner now says that the Manual of Hygiene is wrong on this point. Very possibly it is.

3. It is not necessary, however, to pursue this point, or any such like points because I understand that the medico-chemical theories upon which the Sanitary Commissioner seems still to rely are not implicitly accepted by the highest sanitary authorities in India, and do not entirely coincide with the newest development of scientific thought regarding the carbonaceous and nitrogenous elements necessary for the nutrition of the human frame. Nor is it practically necessary to discuss further the Sanitary Commissioner's opinion regarding the sufficiency or otherwise of the reduced wages, because in his present Minute he admits that, as now applied, it is sufficient. His previous objections appear to have been diminished by the granting of the wage on Sundays as well as week-days, and by the granting of a small allowance for the support of the young children of persons employed on the works.

4. I had myself always contemplated that the reduced wage should be allowed on Sundays. As regards the very young children, their case did not at first suggest itself for consideration, as all children of 7 years and upwards were admitted to relief. But as soon as the case of the children under 7 years of age was brought to my notice, I recommended that they also should receive a small allowance. I found however that this had been already ordered by the Madras Government.

5. Though I do not undertake to pronounce any opinion upon a medico-chemical point, yet I do undertake to say whether thousands of relief labourers inspected by me are physically in fair working condition or not. And I adhere to the opinion previously expressed that the many gangs which I inspected working on the reduced wage were in such condition, regard being had to the condition of such persons in ordinary times. In this opinion I was confirmed by the experienced medical officer on my staff, who had seen the realities of famine in other parts of India. But in order that no doubt might remain upon the point, I

asked for and obtained the opinion of the Sanitary Commissioner with the Government of India. And after inspecting in different parts of the country some thirty-five thousand relief labourers, he pronounced them to be, with some individual exceptions, in fair physical condition. This then is the true test of the sufficiency or otherwise of the reduced wage to which I have always appealed and still appeal. According to this test the wage appears to be sufficient at present. If at any time any marked deterioration of the physical condition were to indicate that the reduced wage is insufficient, then I shall be the first to make a revised recommendation.

6. But I must advert for a moment to certain parts of the argument of the Sanitary Commissioner of Madras which seem to amount to this, that because there is mortality among the recipients of gratuitous relief, who are admitted to particular relief camps, therefore the wages of relief labourers must be insufficient. Whether the Sanitary Commissioner intends to convey this idea I know not, but something of the sort would, I apprehend, be gathered by ordinary readers of that which he has written. Therefore I have to explain that there is no connection whatever between recipients of gratuitous relief on the one hand and the recipients of relief wages on the other. The gratuitous rations allowed to the inmates of relief camps have nothing whatever to do with the wages paid on relief works. The inmates of these camps who are admitted there as being unable to work are a class totally different from those who are admitted to the relief works as being able to work. Inferences deduced from the condition of the recipients of gratuitous relief are wholly irrelevnat if attempted to be applied to the condition of relief labourers. If unhappily there be mortality among the inmates of relief camps, it by no means follows that there is any mortality among relief labourers. In point of fact there is no mortality among relief labourers except from cholera, small-pox or other diseases, and when sometimes cholera has stricken and dispersed large gangs of relief labourers, there has never been any reason to suppose that the scourge arose from want of food. Again, if notwithstanding scientifically arranged diet, the condition of the inmates of relief camps continues bad, no amelioration whatever could be afforded by raising the wage of relief labourers who are a totally different class. These poor inmates have never gone to relief works at all. Indeed the very reason of their admission to the relief camps is this, that they are incapable of going to relief works. They are diseased or infirm, or being indisposed to work have wandered about, or passing by means of relief close at home have wandered to a distance.

7. Being thus helpless for one reason or another they are picked up and taken care of, but when picked up they are often beyond the reach of human aid. No analogy therefore drawn from these persons can possibly be applicable to relief labourers, and to mention the two cases with any sort of parallelism and in any kind of connection would be to produce confusion of ideas and other misapprehension.

8. If indeed persons who were pale on being admitted to relief works were to become thinner and thinner and weaker and weaker till at last they had to be drafted off to gratuitous relief camps as unfit to work, then that would be a reason for reconsidering the wage, but this is just what has not occurred, and is not occurring. If I saw or knew any signs of it occurring, then I should be the first to move. Many relief labourers indeed have left the works of their own accord, not so much however because the wage was reduced, but rather because task-work was enforced, or because the scene of labour was removed to a distance from their homes.

9. How it happens that so many of the destitute poor sank so low before being taken up for gratuitous relief is a question which need not be discussed in this Minute. I may reiterate however that the proper remedy lies in the institution of house-to-house visitation throughout the distressed districts, and from the time of entering the Madras Presidency I have never ceased to urge upon the Government and the local authorities the necessity of such a visitation. And indeed this visitation has generally been instituted. But that it has not always been perfectly carried out is proved by the mortality which has occurred, or still occurs, in some of the relief camps.

RICHARD TEMPLE.

No. 192, dated Cuddalore, the 19th April 1877.

From—C. BERNARD, Esq., C. S. I., *Secretary to* SIR RICHARD TEMPLE,

To—The Honourable T. C. HOPE, C. S. I., *Additional Secretary to the Govt. of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him regarding the present condition of relief affairs in the district of Madura.

Minute by SIR RICHARD TEMPLE, *dated* 18*th April* 1877.

I HAVE paid a second visit (13th to 16th April) to the Madura district to see the Collector Mr. MacQuhae and some of his officers, because, as already stated in the Memorandum of the 24th January, the month of April is likely to be a critical season in determining whether there is to be distress or not in that season. By the 15th of April some of the ordinary spring showers had fallen causing some partial revival of agriculture, but except in one place (Periakolum at the foot of the Pulnee hills) there had not been enough rain to place the district or any part of the district beyond the reach of distress in May.

2. The grain markets continue to be well stocked; the main source of supply is the port of Negapatam; though supplies come also from Tuticorin. In fact it is the strong demand in Madura that attracts the grain which might otherwise have gone from Negapatam to Mysore. At present the grain goes in the Mysore direction as far as Trichinopoly, and is thence diverted to the Madura district.

3. Meanwhile the proprietary ryots seemed to be bearing up well against the consequences of the long continued drought. Either they have material resources of their own, or they possess credit whereby they can obtain such resources. Field labourers, notwithstanding the want of labour in the fields, appear to receive some support from their employers; but doubtless one great means of support for this class is emigration to Ceylon, which appears to have attained during this year nearly double its ordinary proportions. I could not learn that the excess number who had gone to Ceylon are faring badly, though perhaps they are not receiving so much remuneration as would have been given had the numbers been less. There is of course the usual proportion of the poorest classes, but it is understood that they are receiving some support from private charity.

4. The relief labourers are as yet but few in number. Care has been exercised by the Collector to prevent the number increasing unnecessarily; and the task-work is being strictly exacted. It would have been better perhaps if the works had been placed altogether under the Public Works Department. The assistance of that Department, however, is used for measuring up the task-work. Arrangements are made for giving all the gratuitous relief that is really needed, though happily the amount needed is as yet but little. Relief centres in sufficient number have been established. On the whole, I should think that the consequences of the drought are being prudently and firmly dealt with by the Collector, and at present I have nothing further to suggest.

RICHARD TEMPLE.

No. 194, dated Cuddalore, the 19th April 1877.

From—C. BERNARD, Esq., C.S.I., *Secretary to* SIR RICHARD TEMPLE,

To—The Honourable T. C. HOPE, C. S. I., *Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him, in which he suggests the use of coal on the Madras Railways as some check against the destruction of forests of the Madras Presidency.

Minute by SIR RICHARD TEMPLE, *dated Cuddalore, the* 18*th April* 1877.

THERE is a point connected with the supply of fuel to the several railways of the Madras Presidency, which has a bearing upon the rainfall and the prospects of future harvests, and which I desire to represent to the Madras Government as follows.

2. The failure of the periodical rains, and the consequent loss of crops seem to be becoming more frequent in Southern India. This circumstance is attributed by many, with much show of probability, to the gradual denudation of the forests with which the country used to abound. The effects are felt throughout the presidency generally, but more particularly in those tracts which adjoin the sources or upper courses of some of the rivers, upon which irrigation works, great or small, depend. One potential cause of this denudation has been, and still is, the demand of fuel for the consumption of the locomotives on the several railways.

3. As an instance out of a great many, I would mention that at this moment there is understood to be a contract between the Madras Railway Company and a native contractor for the supply of a very large quantity of wood fuel—a quantity large enough to cause a heavy drain, if not an utter exhaustion, of the particular forests from which the supplies are drawn. It unfortunately happens that these forests lie, as I understand, near the upper course of the Palar river. Their destruction doubtless tends to aggravate the uncertainty which hangs more and more over the water-supply of this river. And such uncertainty is peculiarly unfortunate, inasmuch as from this river are drawn the channels which fill an extensive series of tanks for irrigation in the districts of North Arcot and Chingleput. Seldom does this river descend in seasonable and propitious floods. One year it will come down with violent inundation demolishing its dams, tearing up its channels, breaching its tanks, another year it will leave them all high and dry. I merely adduce this as a type of what is going on too often and in too many parts of the country, and which is in part at least attributable to denudation of forests.

4. Of course there are difficulties arising out of private rights with reference to the preservation of forests. There are also many means of overcoming those difficulties. I am now addressing myself to one measure only for mitigating the evil, *viz.*, the diminution of the demand which is at present so greatly stimulated by the railway requirements for wood fuel.

5. The question immediately arises, why should not the Madras Railways burn coal in the same way as do the East Indian Railway, the Eastern Bengal Railway, the Great Indian Peninsula Railway, the Oudh and Rohilkhund Railway and various of the State Railways? The Madras Railway, it is true, does not pass through the heart of a rich coal basin as the East Indian Railway does, nor does it touch a coal field at any of its extremities as the Great Indian Peninsula Railway does. But compared with any other of the railways mentioned it is favourably situated. It touches the sea-cost at Madras and Beypore, and at either of these ports it can land English and Australian coal at the same rate per ton as the Great Indian Peninsula Railway Company does at Bombay, or as both the southern lines do at Madras and Negapatam or Tuticorin. And although from a commercial company trading at its own risk, grave objections might be offered to a course which will undoubtedly at first increase its expenditure on fuel, I have to repeat that this is a case* where present economy may, and in the opinion of most thoughtful men undoubtedly will, aggravate the calamity of famine in future.

* NOTE.—And I cite the Madras Railway Company as a sample.

6. The increased cost, as far as the Madras Railway Company is concerned, is likely, for many years to come, to fall upon the Government, and it may be possible to form an approximate estimate of its amount.

7. The cost of working 2,400,000 train miles per annum would, I am informed by Captain Bisset, be approximately Rs. 8,00,000 at the present cost of fuel to the Madras Railway Company. Considering the advantages of the two ports, it may fairly be estimated that the cost of working the same number of train miles with coal fuel only will not much exceed Rs. 9,00,000. And when local enterprise enters into the business of carrying coal from the fields of Bengal to the coast ports of Madras, it is not unreasonable to expect that the cost of Indian coal delivered at these ports (which is at the present time quoted at Rs. 22 per ton or from Rs. 2 to Rs. 4 higher than English coal of rather higher cash value at the pits' mouth) will be so far reduced as to make coal fuel even less expensive to the Madras Railway than wood fuel is at the present time.

8. There are some minor advantages in the use of coal fuel which are too well known to require mention in this Minute, although they are of some importance to economical working. And I conclude by reiterating my opinion that the interests of the Madras districts require a more careful guarding of the forests, especially the hill forests, from destruction, and that one practical way of checking this destruction would be to burn coal instead of wood on all the Madras Railway lines, and so stop entirely a heavy and constant drain on the forests and undergrowth of the hill-sides of the Madras country.

RICHARD TEMPLE.

No. 196, dated Madras, the 20th April 1877.

From—C. BERNARD, Esq., C.S.I., *Secretary to* SIR RICHARD TEMPLE,

To—*The Hon'ble* T. C. HOPE, C.S.I., *Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him, together with a Memorandum respecting the condition of affairs in the South Arcot district.

Minute by SIR RICHARD TEMPLE, *dated 20th April* 1877.

IN forwarding the accompanying memorandum regarding my recent visit to the district of South Arcot, I have to record some few brief remarks.

2. Though the south-west monsoon of 1876 failed here as elsewhere, still there was a good fall of rain at the end of the north-east monsoon in the south-east part of the district, and saved especially the taluks of Cuddalore, Vellaporumand Chellumbrum. The south-western and the central parts of the district received but little rain on this occasion. Being near to the coast taluks which received rain and to the Coleroon and Cauvery basin where the crops have been good, these parts have not yet suffered distress. And hope was entertained that if the April showers should prove propitious, distress might be staved off until the next monsoon. As yet however (20th April) these showers (which have fallen favourably to the westwards) have held off in this district, one taluk only (Kallukoorchy in the south-west) having received any rain during the spring season. They may yet come, of course if they do, trouble will be averted. But if they do not come by the middle of May, and if the south-west monsoon should be late, and it is usually late in this quarter, not arriving till July, then some severe distress can hardly be avoided in certain parts of this district.

3. As yet the district authorities have prudently refrained from giving any encouragement to the agricultural classes to resort to relief. In some taluks satisfactory reports are heard of the efforts made by the people themselves to save their crops by digging wells. That they had the means of sustaining themselves during the winter months is proved by the fact that, when some small relief works were opened tentatively, they did not avail themselves of the opportunity.

4. If relief works have to be opened at all, I would earnestly recommend that this be not done through the civil officers who have so much else to attend to, but should be entrusted to the regular Public Works Department, which in this district is strongly represented by the Irrigation Engineers. There is much work for them to do by way of repairing and improving the tanks, and if they undertake this, they will be able to afford all the relief that is needed for the able-bodied, who will be thus employed on works not scattered but concentrated and under professional supervision.

5. To the Civil officers would then be left what may be described as their legitimate work, that is, visiting the villages in search of destitute and helpless persons, affording gratuitous relief to some, and assigning light work to others, who though weakly can yet do something.

6. We need not yet, however, abandon the hope that seasonable showers may yet ward off the threatened distress.

RICHARD TEMPLE.

Memorandum respecting the condition of affairs in the South Arcot District.

SIR RICHARD TEMPLE met in the South Arcot district the Collector Mr. Hughesdon, the Sub-Collector Mr. Wallace, the Head Assistant Mr. Thomson, as well as the Collectorate Sheristadar and other native officials.

2. Sir Richard Temple also visited Pondicherry, and learnt that severe drought had afflicted the French territory, and that gratuitous relief was being distributed to a considerable number of persons. He did not understand that relief works had been opened.

3. The taluks of South Arcot, in parts of which there is risk of severe distress being felt, are—

Trinomalai,
Tindevenum,
Kallukoorchy,
Tricaloor,
Vridachellum,

where the rainfall last year failed, where there is comparatively little "wet" cultivation, and where the crops were extremely short. As yet there has been no severe distress, but if the rain holds off till the end of May, trouble must arise. Relief works were opened in parts of Tindevenum, Trinomalai and Vellapoorum about the end of January; but people would not come readily to work, so very little was done, and during the last two weeks there has been small demand for relief employment. One relief centre was opened for distributing gratuitous relief in Trinomalai. Some little relief was also given about a month ago in Villapoorum by private charity. But this has since stopped as the demand slackened; now that the late rice, the ragi and ground-nut is being harvested. A good deal of work is being given by the South Indian Railway to people in the Vellapoorum, Cuddalore and Chellumbrum taluks; a very little is being given in Tindevenum. All this helps to support the labouring poor.

4. The Public Works Department has projects, namely, repairs of tank, dams and irrigation channels on hand to do. The grant for the whole year for the district is about one lakh of rupees. Of this perhaps Rs. 15,000 would, under ordinary circumstances, be spent during May. The work is done by contract; but the village headmen are usually the people to whom contracts of this kind are let. The Public Works Department could undertake and supervise works costing much more than this sum of Rs. 15,000, provided only that certain restrictions were foregone, which compel the range officer to inspect and pay for every work himself.

5. There is plenty of food in the district; and the dealers have stores of imported rice. Prices are high. But there has not hitherto been any starvation or any famine anywhere. The jumabundi (annual verification of cultivated holdings) is now going on everywhere; Revenue Inspectors and higher Revenue officers are seeing a great deal of the people at their villages; and the district officers are satisfied that there is not at present anything worse than distress in any part of the district. So far as they can judge, the best way of preventing increase of distress would be for the Public Works Department to push on at once its works in the worst taluks, and to keep sufficient works going until the rain sets in. If the grants made to the District Engineer from ordinary sources should be nearly exhausted, then more grants might be given, debitable to famine. Under this system, if adopted, relief labour would be utilised to the utmost on necessary district works. The work would be done by petty contract, but the people needing relief would get the work, and at present the people are strong enough to do such work at ordinary contract rates.

6. Major Mead, District Engineer, considers that he could, without additional engineering establishment, do all that may at present be needed. If further grants were made, he could spend them most usefully on much needed irrigation repairs. But he would require discretion to relax the present rules as to completion certificate for works costing less than Rs. 1,000 a piece. And also he would want to have temporarily in abeyance the order which forbids the District Engineer and Collector to sanction any petty irrigation repairs for which the estimate exceeds the average annual revenue from the work. The District Engineer would of course be careful in acting upon the additional discretion allowed him. But unless it be granted, there is risk that, if much relief employment is suddenly wanted, we may have to drift, in South Arcot as elsewhere, into the practice of leaving the relief works to be managed by professionally unskilled and (at time of jumabundi) hard-worked civil officials.

CUDDALORE,
19*th April* 1877.

C. BERNARD,
Secretary to Sir Richard Temple.

No. 198, dated Madras, 20th April 1877.

From—C. BERNARD, Esq., C.S.I., *Secretary to* SIR RICHARD TEMPLE,

To—The Honourable T. C. HOPE, C.S.I., *Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him in respect of the management of relief works in the North Arcot district through the Public Works Department agency.

Minute by SIR RICHARD TEMPLE, *dated Madras*, 20*th April* 1877.

IN continuation of my Minutes of the 29th March regarding Bellary and Kurnool, and of the 10th April regarding Salem, the purport of which was to represent the expediency of placing relief works as much as possible under the regular Public Works Department, I desire to submit a similar representation regarding the district of North Arcot, which I have passed through once more,—visiting the anicut over the Palar and the Cauvery Pauk lake.

2. In reference to the apprehensions which arose during February or March regarding distress breaking out here and there in this district, relief works have been opened (not under professional officers, but such Civil officials as can be obtained for the occasion) in many and various places, and doubtless have done good so far as they have gone. But while appreciating the reasons which induced the local authorities to take these proceedings, I must yet represent

that these numerous petty and scattered works are very much open to all the objections which have been elsewhere urged against relief works of this description, except that the wage having been reduced the temptation is so far lessened. But even now there are, I fear, hundreds, perhaps thousands, of instances of persons who avail themselves of these works, not exactly to keep off distress, but slightly to enlarge their narrow income,—for instance, men, who still have some employment of their own at home, send their wives and elder children to the relief works close at hand, in order to make just a little money for the family. Besides this, the season is advancing, the spring harvest has been partly reaped, the demand for relief employment is slightly increasing. On the other hand, there is still some spring harvest to be reaped. The spring showers have caused ploughing to be commenced in most parts of the district. And the spring harvest itself, which owing to the wells in which the district abounds is proving to be fairly good, will afford a considerable augmentation of the food supply. Notwithstanding all this, the numbers on relief works about 40,000, according to the latest information, have been mounting up and may mount higher still; thus the aggregate is becoming sufficiently large and serious to necessitate the consideration of the introduction of some further checks.

3. The obvious check is, of course, the placing of the relief works under the regular Public Works Department.

4. Already the Madras Government have ordered that petty relief works, within easy reach of the operations for the doubling of the railway line to Arconum, should be closed. This order will doubtless have the beneficial effect of compelling many able-bodied persons seeking relief to place themselves under the professional supervision of the railway engineers.

5. Similarly, I believe that the Government intend to order the closing of any petty relief works which exist near the railway line from Chingleput to Conjeveram, of which the earth-work is about to be commenced. Although this work pertains to the Chingleput district, possibly some able-bodied persons might be sent to this work from North Arcot district.

6. But in North Arcot the main point is this: The Government, as I understand, have signified a wish that the irrigation works, repairs and improvement of tanks, and the like, should be pressed on as much as possible, and that the available funds appropriated to irrigation for the year should be made use of, as soon as possible, for purposes of relief, under the engineering establishments. There can be no doubt of the excellence of this policy. The only precaution necessary would be to provide that none should be thus employed save those able-bodied persons who are in need of relief. The Engineers might be directed to fill their rolls in the first instances with able-bodied persons selected from the Civil relief works. In that case it would be very desirable to instruct the Collector to draft off to the irrigation works, under the Engineers, all able-bodied persons who are now on the petty relief works. If any such persons, on being ordered, refuse to go, they might be discharged altogether, as evidently being not in need of relief. The effect of this would be excellent. And then the petty relief works would have but those who are weakly and who have from any reason a claim to indulgence, and the apprehension which now arises from the recent augmentation of numbers on these works would be mitigated. I believe the Collector understands this already, and he may be perhaps acting on this principle. Still it might be well to order this explicitly.

RICHARD TEMPLE.

No. 201, dated Gooty, 22nd April 1877.

From—C. BERNARD, Esq., C.S.I., *Secretary to* SIR RICHARD TEMPLE,

To—The Honourable T. C. HOPE, C.S.I., *Additional Secretary to the Govt. of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him about discharging paupers from the relief camps.

Minute by SIR RICHARD TEMPLE, *dated Gooty, 22nd April* 1877.

THERE is one suggestion which I wish to lay before the Government of Madras, respecting the treatment and retention of paupers in the large relief camps. At the beginning of the distress it was no doubt quite necessary to confine wandering paupers and other non-labouring poor in relief camps, because the restrictions accompanying in-door relief are irksome, and prevent persons who are not absolutely in need from seeking (and even from accepting) admission to the camps. Moreover, the village relief system, which is still in many places incomplete, was not begun; and so there was little hope of the indigent poor being relieved anywhere except on relief works or at relief camps. And, as we know, there were in January, and are still, many thousands who seem to prefer the chances of wandering and begging to the moderate certainty of the relief wage.

2. In most of the relief camps which I have visited, and notably in the relief camps round Madras, all that humane care and medical skill could, within reasonable limits, desire, has been done to improve the condition of the inmates of relief camps. In many cases there is marked improvement in the physical condition of the older inmates of these camps. But still the fact remains that the death-rate among the inmates of camps is terribly high; that such diseases as are engendered among gatherings of poor people often appear and reappear, and that the air and surroundings of these camps are very depressing. For the little children especially, the life must be very depressing indeed. Some of these troubles will, I fear, be aggravated when rain and cold come on, and make relief camp life even less endurable than it now is.

3. When I thus point out the evils of relief camp life, I would not be understood to find any fault whatever with the humane and diligent officers who manage these camps. The experience of relief camps in Orissa during 1866 was the same. And I should anticipate that some of the very best of the relief camp officers feel how difficult it is for the poor creatures under their care to recover health and strength under the conditions of the relief camps.

4. The question then arises what remedy can be suggested. It seems to me that a remedy may be applied on this wise. Able-bodied people are drafted on to the works, and regarding them nothing further need be said. But the old, the cripples, the women burdened with children, and the children cannot be drafted to the works. I would recommend that such people, when they are able to move, should be sent under proper arrangements to their homes, to be brought upon the village relief lists there.

5. At the homes of some of the inmates of the Madras relief camps, such as those who live in the Kalustri or Karvetnagar zemindaris, full reliance cannot yet be placed on the village relief arrangements which have been or are being organized; and people from these tracts cannot yet be sent home. But in the Chingleput district, in most parts of Nellore and Cuddapah and in many parts of North Arcot such reliance may be placed on the organization of relief circles, and on relief inspectors who enforce their duties on the village headmen (reddies or moonsiffs). And people belonging to these tracts might safely be sent home from the relief camps near Madras, and in the same way people might gradually be sent home from other relief camps, such as the Vellore, the Dhurmpuri, the Salem and the Cuddapah relief camps.

6. The poor people could not be sent away suddenly or in large numbers. But the plan might be begun gradually; the inmates of the camps might be sent away a few at a time under care of a camp servant; and they could be made over to the relief inspector* of this circle, whose duty it would be to see that the poor people were brought upon the village relief lists.

* NOTE.—In all the worst districts the taluks are divided into circles containing 15,000 to 20,000 inhabitants each. And the inspector of each of these circles has more or less close relations with the village headman of his circle.

7. The District Collector and his officials would work in unison with the relief camp officer. And in this way the inmates of the camps would gradually be conveyed to their homes and would be cared for there. Eventually the survivors of the camps must be so sent back, and provided the village relief system is efficient, the sooner they go the better it will be for them. And it will also be to the advantage of the public treasury; for inmates of relief camps probably cost, all told, from 3 annas a head at the relief camps of Madras to 1½ anna a head at the cheaper relief camps in the interior; whereas the village relief allowance proposed by the Board for Salem is only 1 anna per diem, while in no district it is more than 1¼ or 1½ anna a day for adult men.

8. I recommend therefore that an attempt be made, on some such plan as is here suggested, to gradually draft not only the able-bodied but the infirm and helpless poor from the relief camps to their homes. In regard to orphan children difficulty may arise; but this difficulty will have to be met under any circumstances; and the longer the parents are kept in relief camps, the larger the number of orphans is likely to become.

RICHARD TEMPLE.

No. 205, dated Gooty, 23rd April 1877.

From—C. BERNARD, Esq, C. S. I., *Secretary to* SIR RICHARD TEMPLE,

To—The Honourable T. C. HOPE, C. S. I., *Additional Secy. to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him, together with a memorandum respecting the present condition of relief affairs in the Cuddapah district.

Minute by SIR RICHARD TEMPLE, *dated Gooty, 22nd April* 1877.

PASSING through the Cuddapah district, I had the advantage of once more considering the returns of relief labourers and recipients of gratuitous relief, as presented by Mr. Benson, the Head Assistant Collector, and by the Collectorate Serishtadar.

2. The present number of relief labourers is 80,000, the lowest number was 67,000, the highest number in January was 204,000. In no district, since January last, has stricter care been exercised in preventing relief being given to those who do not need it, or in confining relief to those who really are in need. The vigilance and discrimination exercised in this respect seem to me to be very creditable to the Collector (Mr. Price). Considering, however, the comparatively good spring harvest which has been, and is still being, reaped in this district, and the fall of rain, timely though moderate, which has fallen in this quarter, I should think that much caution ought to be exercised in permitting the number of relief labourers to rise materially, unless indeed from the rain holding off, or from other cause, matters should take a turn for the worse.

3. On the other hand, my impression is that the numbers on gratuitous relief in the interior of the district (some 30,000 persons†) is probably not large enough, and that the system of village inspection and relief is still incomplete. I fail to gather favourable accounts of the conduct of the village headmen in this respect. As the staff of European officers

† The majority of whom are little children.

is now so strong, there ought to be no difficulty in seeing that the village headmen do their duty. This seems to me more necessary in the Maddanpally sub-division of the district than anywhere, from which quarter accounts of distressed individuals, scattered here and there, are received.

4. An examination of the return of relief work makes me apprehend that they are too numerous in some parts of the district, especially in the north-western taluks; if they could in such places be more concentrated that would facilitate check and control.

5. Some of the relief works are really under the control of Public Works officers, but most of the works are not so. In the latter works, which constitute the great majority, the Public Works Department merely helps and advises, but does not take actual charge of the works. This is, as it seems to me, to be regretted, especially as there are three ranges or executive divisions in the district in each of which there is a professional establishment. I would recommend that this establishment be utilized by being ordered to take charge of as many of the relief works as possible.

RICHARD TEMPLE.

Present state of relief affairs in the Cuddapah District.

MR. BENSON, one of the relief officers of the Cuddapah district, met Sir Richard Temple at Tadputri on the railway line; he brought with him the Serishtadar who was acquainted with the relief statistics of the whole district.

2. There was good rain (averaging about one inch) over the whole district in the middle of last month (March), and there have been partial light showers since. One result has been that a certain small quantity of fodder has come up, and the cattle are not dying at the same rate as before, but many of the weakly animals have previously been carried off.

3. The numbers on relief for the second week of April are—

On relief works ...	...	...	...	80,000
On gratuitous relief	...	...	...	30,000

About 5,000 labourers in all have gone off to the Nellore Canal. Twelve annas a head (8 annas to the labourer and 4 annas to the recruiter) is paid under Government orders for every adult man who reaches the canal work; and he gets rations for himself and his family on the road. In the Palampett taluk one-half* of the labourers are working under the Public Works Department, and effort is being made to hand still more labourers over to professional officers. In Sidhout all the labourers are supervised by a Public Works Department Overseer, who is now serving directly under Mr. Benson. Payments to these labourers are, however, made by the Revenue officials on certificates furnished by the Public Works Department officers. On the civil works some task is exacted; but the majority of people do their full task, the deductions for short work, amounting to barely 2 per cent. of the total wage. No figures are here available to show the proportion of labourers under Public Works Department's supervision in other taluks.

* NOTE.—This includes the labourers on the Cheyair embankment under Mr. West, the Railway Engineer.

4. Regarding the condition of his labourers, Mr. Benson says that the men and women on the works seem to him to be generally in fair condition. But among the small children (on 3 pie per diem) he finds, especially at Kodoor, a considerable number of emaciated little creatures. Many of these were found on enquiry to have come on the 3 pie allowance within the last few days only. Perhaps they will come round on the 3 pie; meanwhile those who were very reduced have been handed over to the village headmen (reddies) to be fed at home. On the Cheyair embankment the labourers were till recently on the 2 annas scale, but they were reduced to the 1½ anna rate about 20 days ago. Since the reduction took place, Mr. Benson has visited them twice, and he did not observe any sensible reduction in their condition. But then though the wages are reduced, these labourers now get the Sunday's wage, and also get the 3 pie allowance for children, whereas previously they enjoyed neither of these advantages.

5. Out of the number on gratuitous relief (30,000), nearly one-half are the 3-pie children on the works. For the rest there is a relief camp (in the Maddanpally Division, one of several centres for out-door relief) at the head-quarters of each taluk. Additional relief camps are being erected in Mr. Benson's taluks. There is a first class relief camp at Cuddapah itself, where over 330 inmates are fed. The smaller camps are to hold 250 a piece; but as yet none of Mr. Benson's camps have more than 80 inmates, as they have only just been completed. A certain number of people, who cannot be brought into the relief camps, are being relieved through the village headmen in their villages.

6. The village relief is supervised by inspectors, of whom there are two to four to each taluk. But Mr. Benson fears that it is only very recently that the village headmen are fulfilling their duties. They are and always were prompt enough to relieve ryots and people of the middle class. But it is very difficult to make them look after and relieve the pariahs, although they are fully repaid for all their expenses, and though each reddy has an advance of Government money to meet such charges. The duty of the reddy is to relieve on the spot the helpless, to relieve and send into the nearest camp such paupers as can be moved, and to send in weekly accounts of their expenditure. The inspectors, with their peons, go round and enforce these duties on the reddies. Each inspector has from 30,000 to 50,000 people in his circle. Mr. Benson has been on tour for ten weeks and has inspected many villages. He found in many

places, especially in the larger villages, a small number of people of pariah caste who were much reduced by want. Such cases are, he hopes, being gradually picked up and relieved. But the most emaciated cases he has seen anywhere were the 3-pie children newly brought upon the works, to which reference has been made at paragraph 4.

TADPUTRI; *The 21st April* 1877.

C. BERNARD, *Secy. to Sir Richard Temple.*

No. 207, dated Bellary District, 24th April 1877.

From—C. E. BUCKLAND, Esq., *Private Secretary to* SIR RICHARD TEMPLE,

To—The Honourable T. C. HOPE, C.S I., *Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copies of Minutes recorded by him—

(1) containing his remarks, after inspection of certain relief gangs at Gooty and Goondakal;
(2) bringing to notice the state of affairs on the Bellary-Dharwar Railway;
(3) suggesting the deputation of an experienced European officer to the western taluks of the Bellary District.

Minute by SIR RICHARD TEMPLE, *dated Bellary District, 24th April* 1877.

HAVING again paid a brief visit to a part of the Bellary District, I have to submit the following remarks.

2. One gang (500 strong) of relief labourers employed on the railway at Gooty under professional supervision, on reduced wage and good tasks, were found by me to be in very fair condition. Another large gang (1,000 strong) inspected by me at Goondakal consisted of 800 women and children in fair condition (with some few exceptions), and of 200 men of whom one-third were in indifferent condition, some even in bad condition, most of these latter being new arrivals. From information received from Bellary and Adoni, I learn that in several gangs there are found some persons in weakly condition. These points will doubtless cause some to think that the relief wage ought to be raised. Looking, however, to Dr. Townsend's recent evidence as to the good condition of the able-bodied labourers on the reduced wage, which is again confirmed by my own recent observation, and to the importance of not holding out any temptation to able-bodied men to come on relief who might be otherwise able to sustain themselves, I would still strongly deprecate the raising of the wage to the able-bodied.

3. In some places the Sunday wage is not allowed, as no work is done on that day. It is in these cases supposed that the men have some other slight means of support besides their relief wage. If, however, there be any doubt on this point, then the Sunday wage might be allowed on the ground that the subsistence afforded by the wage is as much needed on Sundays as on week days. But as it is inconvenient to pay the wage on Sundays (1½ anna), then in commutation ¼ of anna might be paid on each week day raising the wage to 1¾ annas.

4. If any persons now in the gangs fall into bad health, or come on to the works in a low state, the existing orders amply provide for their being specially treated either by extra special allowance or by nominal work.

5. But it is very important at this season to avoid offering more than 1½ anna a day to the able-bodied people outside, who are possibly considering in their own minds as the season advances whether they will or will not come on to the works.

6. The number of persons who are unable to work, and who are seeking for food, is increasing fast. I believe that the system of relief centres and village relief is being fairly well worked in this district. But the subject is so important that I must be excused for making reiterated mention of it.

RICHARD TEMPLE.

Minute by SIR RICHARD TEMPLE, *dated Bellary District, 24th April* 1877.

HAVING had a share in recommending the commencement of the earth-work of the railway from Bellary towards Dharwar and having enquired much during my visit to Bellary (on the 26th March) as to the possibility of making a speedy commencement, I deem it my duty to report to the Madras Government that, from what I learn while passing through the district, the commencement is apparently not being made with the expected rapidity by the local engineers. I am under the impression that the Civil Officers have got, or could immediately get, from 10,000 to 12,000 relief labourers ready for this work, and the expectation was that at least this number would be employed. Whereas not more than 3,000 persons are actually being employed. This is excellent so far as it goes; but as much more is needed, it would seem to follow either that some further instructions from Government to the local engineers, or else that, if such instructions have been given to these officers, they have not yet been sufficiently followed. As so much stress was laid by the Madras Government on the undertaking of this work as a means of employing and tasking relief labour under professional officers, I trust I shall be excused in bringing this subject again to notice.

2. It is the more necessary to press the point, as this is the only large work in the district where relief labour can be professionally tasked, no action having apparently been taken on my Minute of the 10th April recommending that relief labourers be drafted on to certain selected public works,—a suggestion which I would still commend to the consideration of the Government of Madras.

RICHARD TEMPLE.

Minute by SIR RICHARD TEMPLE, *dated Bellary District, 24th April* 1877.

MY last visit to the Bellary District brought to recollection a point which I have often heard discussed, namely, the need of some European officer being deputed to inspect the relief operations in the western taluks of that district, namely, Harpanhally, Havind-Hudgully, and Kudlegi. These operations are no doubt under able native officers, and the distress is not very bad apparently in that quarter. Still the work would be all the better for a visit from an experienced European officer versed in the principles and practice of relief. It is probable that such an officer would effect good as regards the discharge of persons not fit objects of relief, the tasking of the relief labourers and the prevention of waste or fraud. All the other parts of the district have the advantage of European supervision save these western taluks. I would represent to the Madras Government the expediency of despatching thither such an officer if he could be spared as some one might probably be spared for a time at least. I understand that the Collector who has been for some time past in camp intended to visit these taluks, but he has not (I believe) done so yet.

RICHARD TEMPLE.

No. 209, dated Bellary District, the 24th April 1877.

From—C. E. BUCKLAND, Esq., *Private Secy. to* SIR RICHARD TEMPLE,

To—*The* HON'BLE T. C. HOPE, C.S.I., *Additional Secy. to the Govt. of India.*

BY direction of Sir Richard Temple, I have the honor to submit copy of a Minute recorded by him comparing the percentage of relief recipients in Kurnool with those in the Bombay Deccan, and suggesting the concentration of relief works under Public Works officers.

Minute by SIR RICHARD TEMPLE, *dated Goondakal (Bellary District), the 24th April* 1877.

HAVING again paid a brief visit to a part of the Kurnool district, I find the numbers of persons on relief wages and gratuitous relief together to be so high, that I must invite the consideration of the Madras Government to the points set forth in my Minutes of the 17th March and of the 29th March. These points are doubtless well known to the Madras Government, and they certainly have been brought to the notice of the local authorities. But as there is no change in those respects perceptible, I must again represent the case.

2. The percentage of recipients of relief of both kinds in the Kurnool district may be compared thus with the percentages in other districts of the Madras and the Bombay Presidencies:—

Distressed districts.		Total numbers on relief works and on gratuitous relief during the first week of April.	Percentage of persons receiving relief of both kinds on the total population of the district.
Madras Presidency ...	Kurnool	236,000	24½ per cent.
	Bellary	269,000	17 „
	Cuddapah	80,000	6 „
	Nellore	69,000	5 „
	Chingleput (inclusive of Madras city) ...	29,000	2 „
	North Arcot	32,000	1½ „
	Salem	58,000	3 „
	Coimbatore	2[illegible],000	1⅓ „
	Madura	12,000	½ „
	Tinnevelly	3,000	⅛ „
Bombay Presidency ...	Sholapur	49,955	7 „
	Kaladgi	27,120	3½ „
	Part of Poona	57,691	6⅛ „

3. Many of the Madras districts have been so economically managed from the first that it is difficult to make a comparison. But Kurnool may be fairly compared with Bellary, in which the failure of harvests has been worse, and in which there was quite as much liberality of relief at the outset as in Kurnool. There cannot be any good reason why the percentage should be 24 in Kurnool, while it is only 17 per cent. in Bellary. Indeed, if the percentage (17) in Bellary be deemed reasonable, the percentage in Kurnool ought to be under 15.

4. The contrast with the Bombay Deccan is still more striking. It is, I believe, impossible to account for the difference in the extent of relief save by assuming that there is a difference in system. And what is that systematic difference? Why! just this, that in the Bombay Deccan the relief labourers are systematically tasked by engineering establishments and under professional supervision, while in Kurnool they are not so tasked. I have been unable to ascertain the precise value of the work done by the Kurnool relief gangs, but I understand that it costs many times as much as it would in ordinary times under the Department Public Works, and that the tasks are very light. In the Bombay Deccan the Department of Public Works has real control over the relief labourers, while in Kurnool it has not. This matter was represented to the Madras Government by my Minute of the 29th March. I do not know exactly how far the recommendations therein submitted have been approved.

5. The percentage of relief recipients to the whole population in the Kurnool district may be better seen from the details of the "taluks" or divisions into which the district is divided:—

TALUKS.	Population according to census of 1871.	NUMBER OF PERSONS.		Total.	Percentage of relief recipients to population.
		On relief works.	On gratuitous relief.		
Ramalkota	146,195	40,391	16,060	56,451	38½
Nandikotkur	101,866	12,330	2,205	14,535	14¼
Nandial	107,320	31,103	5,750	36,853	34⅓
Sirwell	71,066	16,449	2,776	19,225	27
Koilkuntla	98,844	32,679	5,409	38,088	38⅗
Pattikonda	173,434	26,289	10,652	36,941	27¼
Cumbum	123,042	46,346	3,172	49,518	40⅕
Markapur	92,665	11,178	817	11,995	12⅘
	914,432	216,765	46,841	263,606	28¾

6. The numbers on gratuitous relief are probably not too high: the excess must be in the numbers on relief works, which is specially apparent in the "taluks" of Cumbum, Koilkuntla, and of Nandial. Perhaps in Ramalkota the apparent excess may be accounted for by the Kurnool city being situate therein; otherwise there also the percentage is very high.

7. The measure primarily to be suggested is the concentration of the gangs on public works (specified in the Minutes of the 17th and 29th March) under Public Works officers. Then they will be sent to some longer distance from their homes than at present, and will be better tasked than at present. The effect of this on the numbers of the labourers would, I am sanguine, be soon apparent.

8. In submitting these remarks I am far from being forgetful of the efforts made by the Collector and his officers to enforce system and economy; but it is impossible to overlook the statistical facts which show that some further efforts are still necessary.

RICHARD TEMPLE.

No. 211, dated Bellary District, the 24th April 1877.

From—C. E. BUCKLAND, Esq., C.S., *Private Secretary to* SIR RICHARD TEMPLE,

To—*The* Hon'ble T. C. HOPE, C.S.I., *Additional Secretary to the Government of India.*

BY direction of Sir Richard Temple, I have the honour to submit copy of a Minute recorded by him comparing the system of tasking relief labourers in the Madras and Bombay Presidencies, and suggesting the utilization of the Public Works officers in Madras on relief works in certain districts.

Minute by SIR RICHARD TEMPLE, *dated Bellary District, the 24th April* 1877.

BEFORE quitting the Madras Presidency, I would beg to represent to the Madras Government one remarkable difference between the system heretofore pursued in that Presidency and the system followed from the first in the Bombay Presidency, and which is being followed there more and more. Though the point has previously been brought by me to the notice of the Madras Government, it is so important that I may be excused representing it once more.

2. There will doubtless be no question as to the superiority of the plan whereby relief labourers are tasked under a settled departmental system by professional establishments specially trained for the business, over the plan by which they are tasked by Civil officers not trained to the business. In the former case the tasking will be strict and hard and will be endured only by those who are in need; in the latter case it will often (though not always) be either light or nominal, and will be undergone by many who are not in need.

3. In the Bombay Presidency the plan has been so advanced that now almost all the relief labourers are under the Public Works Department. Out of 287,760 persons in all, 259,057 are under that Department, and only 28,703 are under Civil officers.

4. In the Madras Presidency, out of 716,507 in all, there are not more than 83,000* under the Public Works Department, the remainder 633,507 being under Civil officers. Out of this latter number it may be admitted that 24,140 in Coimbatore, 28,000 in Salem, 13,626 in Madura, in all 65,766 are well and fully tasked. The remainder 568,741 are (with the exception of a certain number in Cuddapah, which I cannot state precisely) under the Civil officers, and are for the most part lightly tasked. It is especially remarkable that in the two districts showing the largest numbers, Bellary and Kurnool, having both together 422,784 persons, the whole are under Civil officers, and lightly tasked, with the exception of the 3,000 on the railway from Bellary towards Dharwar.

* East Coast Canal	...	40,000
Arconum doubling	...	15,000
Bellary-Dharwar Railway ...	...	3,000
Salem district	...	25,000
Total	...	83,000

Some may be very shortly expected on the Chingleput Railway, and some also on the irrigation works of North Arcot.

5. I am sure that this difference in system is the main cause of the difference in the proportion of relief labourers to the whole population between these two districts on the one hand, and the Bombay Deccan on the other hand. The percentage of relief labourers on the whole population is in Bellary 12¾ per cent. and in Kurnool 2·¼; while (Bombay Presidency) in Sholápur it is only 6·69, in Kaládgi 4·8, and in the distressed part of Poona 3·7.

6. There is no want of engineering and professional establishments in the districts of Bellary, Kurnool and Cuddapah; on the contrary each district is under a District Engineer, whose executive charge is divided into so many "ranges," in each of which there is an Engineer officer. But, as shown by me in former Minutes, these excellent and competent establishments only help in a general way, and have no actual charge of any relief work. They might be utilized fully for this important purpose at any moment the Madras Government may see fit.

7. The same remarks apply equally to North Arcot, and would similarly apply to South Arcot if any relief works shall have to be opened there. They apply too in a considerable degree to Nellore.

RICHARD TEMPLE.

Notification by the Government of India, in the Department of Revenue, Agriculture and Commerce, dated Simla, the 30th April 1877.

THE Hon'ble Sir Richard Temple, Bart., K.C.S.I., being about to assume the office of Governor of Bombay, to which he has been appointed by Her Majesty, and being in consequence under the necessity of closing the special mission on which he has been employed since the beginning of January in the Presidencies of Madras and Bombay, and in the territories of His Highness the Maharaja of Mysore, His Excellency the Viceroy and Governor General in Council desires to give public expression to the high sense which the Government of India entertain of Sir Richard Temple's services on this occasion.

When in January last it was deemed expedient that a high officer fully acquainted with the views of the Government of India should visit the Presidencies of Madras and Bombay for the purpose of inspecting the districts afflicted with scarcity, and communicating personally with the two Governments regarding the measures which were being carried out for the relief of distress, the choice of the Government of India at once fell upon Sir Richard Temple as the officer whose experience, ability, and energy pointed him out to be specially qualified for the duty. At a considerable sacrifice of personal comfort and convenience, Sir Richard Temple promptly responded to the call made upon him, and has conducted his arduous and delicate mission with signal ability and success.

The energy and devotion which have enabled him to undergo an amount of physical exertion which few could have accomplished are not more remarkable than the thoroughness of his enquiries and the judgment and tact which have characterized his communications with the Local Governments and their officers. To the Government of India Sir Richard Temple has rendered invaluable assistance at this trying juncture, in enabling it by his clear and lucid reports to appreciate the actual facts of the situation; and His Excellency in Council is persuaded that the Government to which he was accredited must recognize the advantage of his practical suggestions for the relief of distress and for promoting a judicious economy in the heavy expenditure which is being necessarily incurred.

The Governor General in Council has no doubt that if life and health be spared to him in the high office which he is about to assume, Sir Richard Temple will add fresh and important services to those which he has already rendered to the State during his long and distinguished career. In entering upon his new duties he carries with him the best wishes of the Government of India.

Weekly Condition Report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 10).

Condition Report for the week ending 14*th April* 1877.

Bangalore District.—Markets fairly supplied and prices slightly fluctuating. There was no rain during the week, except in the Magadi taluk, where there were a few showers, and as the head-quarters where 5 cents were registered. The condition of the crops and the prospects of the season, however, have not improved. Cholera and small-pox are still prevalent, as also fever in the Bangalore and Nelamangala taluks.

Kolar District.—Markets fairly supplied except in some villages of the Gumnayakanpalya taluk, where owing to prevalence of cholera, importation has stopped. Light showers of rain fell in 5 out of the 10 taluks, and a 10 to 20 days' supply of water was received into some tanks. Sugarcane is being sown in the Gumnayakanpalya and Goribidnur taluks. The standing crops, *viz.*, sugarcane, irrigated ragi, and baragu (little millet), are in good condition in some places. Cholera is on the decline, but small-pox and fevers prevail.

Túmkúr District.—Markets sufficiently supplied. The prices fell slightly except in three taluks, where they were stationary. Excepting in the Maddagiri and Sira taluks, showers of rain have fallen throughout the district, 36 cents being gauged at Túmkúr, and from 20 to 40 cents elsewhere. A few tanks in the Kadaba taluk were filled, and five other tanks in the district received from three to four months' supply. In Maddagiri fresh javari was sown. The javari and Bengal-gram crops have been harvested, the outturn being generally good. Cholera and small-pox epidemics are abating somewhat. The people who have emigrated are still returning.

Mysore District.—Markets fairly supplied. Prices fluctuating. Light showers fell in all but three taluks. The heaviest fall was registered at one inch and 20 cents at Heggaddevankote; and a few tanks in the Yedatore, Malvalli and Periyapatna taluks received a small supply. Javari, dhál and castor-oil seeds were sown in the Chamrajnagar and Ashtagram taluks. The dry crops cultivated below the river channels are in good condition. In the Chamrajnagar taluk, Bengal-gram and cotton crops have been harvested. Cholera still prevails. Water is scarce in some places. Cattle suffer generally from murrain and want of forage and water. Emigrants are returning from the coffee estates.

Hassan District.—Markets sufficiently supplied, except in the Narsipur and Harnhalli taluks, where importation is slack on account of cholera. Rain has fallen in all the taluks of the district, *viz.*, 90 cents at Channaraypatna, 90 cents at Saklespur, 35 cents at Belur, 35 cents at Attikuppa, 20 cents at Arkalgud, and 18 cents at Narsipur. These showers have made prospects more hopeful. Fresh sowings of javari, green gram, gingelly-oil seeds and paddy were made in some parts of the Hassan, Nagamangala, and Channaraypatna taluks, and of rice in Manjarabad. Green and black gram in lands under nallas are in pretty good condition. The areca-nut gardens in the Harnhalli taluk have suffered seriously from the drought. Cholera and small-pox still prevail: but the former is on the decline. Cattle in the Attikuppa taluk suffer from murrain.

Shimoga District.—Markets fairly supplied, except at Honnali where cholera checked importation from abroad. There were good showers of rain in several taluks. The rice crop has been harvested in the Channagiri taluk. The prospects of the season remain unaltered. Cholera is still raging in all the taluks, except Nagar, Kavaledurga, and Ságár. Dysentery slightly prevalent in the town of Shimoga.

Kadur District.—Markets fairly supplied, and prices steady on the whole. Rain fell in three taluks, and 97, 30, and 16 cents were registered at Chikmagalur, Mudgere and Banavar respectively. The sugarcane crop in the Lakvalli and Banavar taluks is doing pretty well, as also javari in the latter taluk. The prospects of the season continue bad. Cholera prevails generally in all the taluks except Múdgere. Small-pox, fever and dysentery are prevalent in some places. Cattle in the Tarikere taluk are suffering from want of forage and water.

Chitaldroog District.—Markets are fairly supplied; and prices of food grains steady on the whole. Light showers of rain fell in all but three taluks, and some of the tanks received a small supply of water. The Deputy Commissioner reports that, on the afternoon of Saturday, the 14th instant, a thunder-storm accompanied by hail and rain passed over Chitaldroog and other places, and was followed by a fresh outbreak of cholera in the town. Javari, navane (millet) and wheat crops were harvested in the Chitaldroog, Dodéri and Kankuppa taluks. The rice crops in some parts of the Hosdurga taluk are withering. There is no improvement in the prospects of the season. Cholera has not abated, and small-pox and fevers are prevalent in some places.

GENERAL REMARKS.

There has not been any marked change in the condition of the Province since the despatch of the last narrative; but there is much ground for hopefulness owing to the thunder showers, which generally precede the Mungar or south-west monsoon, having fallen almost throughout the Province, as will be seen from the condition report of each district.

2. The rain has been very scanty in many places, but in Channagiri taluk of the Shimoga district and in the Chikmagalur taluk of the Kadur district the rainfall has been measured by as much as from 97 cents to 2 inches.

3. Fresh sowings have been made in the following taluks during the week under report:—

Bangalore	taluk... Sugarcane and ragi.	Chamrajnagar taluk ...	Javari, dhâl, and castor-oil seeds.
Devanhalli	„ ... Maize and sugarcane.	Ashtagram „ ...	
Kankanhalli	„ ... Sugarcane.	Hassan „ ...	Javari and paddy.
Gumnayakanpalya	„ ... Do.	Channaraypatna „ ...	Javari, gingelly-oil seeds and green gram.
Goribidnur	„ ... Do. and javari.		
Maddagiri	„ ... Javari.	Nagamangala „ ...	Javari.

But until good rains fall and the soil is rendered sufficiently soft and fit for ploughing operations, the people, it is evident, are constrained to remain on relief works.

4. The distress, which we may now consider to have more fully developed itself, will probably be limited to the present affected area for another month or two, when, it is hoped, the south-west monsoon will set in and there will be a change for the better.

5. The affected area in the Shimoga district has, during this week, received an accession by the inclusion of the Shimoga taluk, in which it has been found absolutely necessary to start relief works in order to give employment to those belonging to the taluk and others who have flocked into it from the other parts of the Province and from beyond our borders. The Múdgere taluk, which was newly constituted from 1st instant under the sanction of the Government of India, has been included in the Kadur district, but no change has been made in the figures denoting the area affected, pending the receipt of the information called for from the Commissioners of Divisions.

6. Public health has not improved. Cholera and small-pox still prevail with more or less intensity throughout the Province. The number of deaths from the former, reported during the week ending 12th April, was 2,623, as shewn below, which was less than that of the previous week by 667:—

Bangalore district ...	370	Shimoga district	155
Kolar „ ...	507	Kadur „	167
Túmkúr „ ...	435	Chitaldroog „	292
Mysore „ ...	373		
Hassan „ ...	324	Total ...	2,623

7. The Commissioner of the Nagar Division reports that the epidemic has almost entirely disappeared from the Banavar taluk.

8. Compared with the return of the previous week, there is an increase of 28 in the number of works in progress under Revenue officers, and a decrease of 2,888 in the daily average number of persons employed thereon; the greatest increase and decrease being in the Chitaldroog and Bangalore districts respectively. The decrease is owing, partly, to the completion of many of the works before the close of the official year, and, partly, to the commencement of sowing operations, which must have drawn away some of the labourers from relief works to the fields.

9. The daily average number of recipients of gratuitous relief at Government kitchens and camps was 68,641 or 9,197 more than in the previous week. The increase is owing, chiefly, to the inclusion in the return, for the first time, of a large number of persons fed at the seven road-side kitchens around Bangalore, the accounts relating thereto having only lately been received in this office. The Commissioner of the Nagar Division, who has lately personally inspected the kitchens in the Kadur district, reports that, with few exceptions, all the persons relieved were proper recipients of charity; that there was a tendency to underfeed, but that the new scale* of diet, which is considered liberal, has been opportunely introduced everywhere. He further adds that the kitchens are much frequented by persons belonging to neighbouring districts; that there is continual movement of these people between the kitchens situated on high roads; and that there has recently been a general tendency on the part of the agricultural population to return towards their homes.

* Noted in return No. 7.

10. The number on gratuitous and charitable relief is likely to increase, as the admission of persons, who from caste or other reasons, cannot work and who are in really destitute circumstances, has been rendered necessary to prevent cases of death by starvation. To guard, however, against imposition, over-liberality and waste, stringent orders have been issued to Commissioners of Divisions to warn all relief officers to be careful in the dispensation of gratuitous relief, and to exercise a strict supervision and control over the minor officers entrusted with the immediate management of the kitchens.

11. The opinion of the Madras Government, that there are still large numbers of Mysore people in the bordering districts of the Madras Presidency, has not yet been confirmed by the Collectors of those districts who were addressed from this office on the subject. The result of the deputation of an officer to Hindupoor in the Bellary district resulted in finding 91 Mysoreans, of whom 17 could not with safety be moved. It does not appear, however, that these 91 persons were all in need of relief, and the Chief Commissioner is opposed to any action

which will interfere with the liberty of able-bodied persons. Where such persons are found on works on which light labour is exacted, they should be turned off, and the Madras Government have been requested to instruct their officers accordingly.

12. The weight of grain imported by rail was:—

	Tons.
at the Bangalore terminal station	2,606
at Kolar road „	301
Total ...	2,907

or 515 tons less than in the previous week. The daily average receipts amounted to 415 as against 489 tons. Of this quantity 2,568 tons came from Madras, 247 from Beypore, 21 from Negapatam by the South Indian Railway, 10 from Sholapur by the Great Indian Peninsula Railway, and the remainder from the neighbouring districts of the Madras Presidency. In order to encourage the employment of the Negapatam route, full publicity has been given to the order of the Madras Government, authorizing the equalization of rates of carriage, by a notification in the Local Gazette. The Chief Commissioner apprehends that there have been unforeseen difficulties in making this route fully available for the grain traffic to Bangalore, or that the requirements of the Madura markets have been such as to attract all the grain available in that direction.

13. From the returns furnished by the Municipality, it would appear that 1,896 tons of grain were exported during the week from Bangalore, of which 769 tons were sent in the direction of the Túmkúr district, 256 in that of Bellary, 277 towards Mysore, and 246 to Oossoor in the Salem district of the Madras Presidency. This movement of food grains from Bangalore shews that private trade is sufficiently brisk to meet the existing demand.

T. CLARKE,
Offg. Secretary.

Note—1. The expenditure entered in column 24 includes the amount contributed by private subscriptions, as well as the Government grant-in-aid thereto.
2. The figures entered in columns 17 and 18 are based on the latest accounts received from the Public Works Department.
3. The figures in column 13 have been corrected according to the revised list lately received from the Chief Engineer.
4. The figures in columns 20 to 24 against the Bangalore district exhibit an increase, as they include the expenditure on account of seven road-side kitchens established around Bangalore, the accounts of which were only lately received.

Register of Rainfall recorded scientifically at the Government Observatory at Bangalore for each week in the year, as the usual monthly averages do not give sufficiently reliable information in a tropical climate.

T. C.

Weekly relief report of the distressed districts of the Madras Presidency.

No. 1951, dated 27th April 1877.

Proceedings of the Board of Revenue, Madras.

The relief reports for the week ending 21st April will be submitted for the information of Government with the following review. Relief maps of the districts noted in the margin accompany.

Salem.	Cuddapah.	Nellore.
North Arcot.	Madura.	Bellary.
Chingleput.	Coimbatore.	South Arcot.

2. *Prices* are very little changed, but on the whole show a slight fall. In *Nellore* rice has fallen in the coast taluks; other prices are stationary. In *Cuddapah* the price of rice is fluctuating, but the average is unchanged; cholum and ragi have fallen in Voilpaud and Kadiri, but the latter grain has risen in price in Budwail, Proddatur and Jammalamadugu; cumboo has also risen in Proddatur. In *Bellary* district rice is stationary, but grains have risen in Gooty, Tadpatri and Kudligi. Cholum has risen in price in four other taluks, and ragi is not quoted in Harpanhali, Hospett, Hadgalli and Alur. Cumboo has risen in five taluks. *Kurnool* prices have risen slightly. In *Chingleput* and the greater part of *North Arcot* there is no change of importance, but in the Tirtany and Narayanavanam divisions of the latter district, prices, except of ragi, have sharply risen. In the distressed taluks of *South Arcot* prices are falling, In *Trichinopoly*, *Madura* and the distressed taluks of *Tinnevelly* they are generally stationary. but rice has fallen in Dindigul and Palni and cholam in Ramnad. In *Coimbatore* prices are stationary or falling slightly, the only cases of rise being the prices of cholum in Satyamangalam and of ragi in Collegal. The latter is due ot demand for export. Dry grain has risen in the Namkul taluk of *Salem*, but all other quotations from the district show tendency to a fall in price.

3. *Rainfall.*—Rain is reported from *Bellary*, *Kurnool*, *Madura*, *Tinnevelly* and *Coimbatore*. The quantity however is small. Light showers were received in the taluks of Hospett, Kudligi and Hadgalli in *Bellary*, and 0·3 inches in the Nandikotkur taluk in *Kurnool*. In the three southern districts above named, the rain was heavier; 1·75 inches fell in Pollachy, 2·18 in Ramnad, 1·12 in Periyakolam and 1 inch in Sattar.

4. *Grants and outlay.*—The grants made to the 21st instant amounted to Rs. 1,28,35,283, and against these grants Rs. 1,14,13,757 had been spent; the grant for the districts of Cuddapah, Chingleput, North Arcot and Salem were exceeded, but further grants have since been made for the last three districts. The excess in Cuddapah is only Rs. 626.

The following statement shows the outlay on works in progress under the Collectors in some districts:—

	In the week. Rs.	Up to the week. Rs.
Roads—		
New works	1,69,163	41,94,974
Repairs	34,329	8,39,579
	2,03,492	50,34,553
Irrigation works	29,290	5,30,833
Miscellaneous	52,429	6,21,873
Total ...	2,85,211	61,87,259

5. *Numbers on relief works.*—The district totals compare with last week's report as follows:—

	14th April.	21st April.	
Kistna	2,423	2,256	−167
Nellore	28,759	26,481	−2,278
Cuddapah	80,868	56,768	−24,100
Bellary	222,115	227,695	+5,580
Kurnool	204,504	213,172	+8,668
Chingleput	15,961	10,417	−5,544
North Arcot	39,212	39,458	+246
South Arcot	331	1,054	+723
Madura	10,577	11,045	+468
Tinnevelly	1,349	1,037	−312
Coimbatore	24,160	22,250	−1,910
Salem	54,708	52,748	−1,960
	684,967	664,381	−20,586
East Coast Canal	37,306	41,020	+3,714
Total ...	722,273	705,401	−16,872

Thus a large decrease, principally due to a fall of numbers in Cuddapah and Chingleput, has taken place in the week.

6. The decline in Nellore is due to a fall of 3,580 in the Kavali and Udayagiri taluks (where more than half the labourers are employed) and is owing to able-bodied coolies being directed to the East Coast canal. In most of the other taluks there is a slight increase. The great decrease in Cuddapah appears from the marginal figures to belong chiefly to the Pulivendla, Voilpaud, Madanapulli and Budwail taluks. The decrease in Pulivendla and Budwail is ascribed to able-bodied coolies having been drafted to the Nellore canal, and that in the sub-division is probably due to the same cause. The increase in Kadiri is not explained.

	14th April.	21st April.	
Jammalamagagu	1,525	316	—1,209
Pulivendla	13,641	4,160	—9,481
Proddatur	1,588	1,830	+242
Cuddapah	4,022	3,845	—177
Budwail	10,515	5,746	—4,769
Sidhout	1,956	1,843	—113
Pullempett	11,116	11,678	+562
Kadiri	6,959	10,251	+3,292
Royachoti	7,486	6,460	—1,026
Madanapulli	11,616	7,891	—3,725
Voilpaud	10,444	2,748	—7,696
Total ...	80,868	56,768	—24,100

7. The details for the Bellary district are compared in the margin. There is a general tendency to increase of numbers, and but for the considerable fall in the Bellary taluk the increase would be very great. The increase is attributed to greater pressure of the famine in Adoni, Gooty, Hindupur Hospett, and Hurpunhulli; in Hindipur also to abatement of cholera; and in Pennakonda to return of coolies from the cholam harvest. It is observed that in Madaksira and the western taluks the works are very numerous. In Adoni the bulk of the coolies are on six large works, and in Alur only one is open. The decrease in Bellary is due to able-bodied persons being turned off and offered the option of the Hooblee Railway works or the East Coast canal. Very few take the latter, but numbers are, it is stated, going to the Railway works, which however do not appear in these returns. Those who are turned off and go to their houses are being watched, and no ill results are yet apparent.

	14th April.	21st April.	
Adoni	51,998	54,220	+2,222
Allur	18,191	19,250	+1,059
Gooty	11,375	11,867	+492
Tadpatri	11,530	10,846	—684
Anantapur	13,094	12,228	—866
Dharmaverum	1,554	1,830	+276
Pennakonda	3,268	4,400	+1,132
Hindupur	470	1,556	+1,086
Madaksira	10,098	12,458	+2,360
Raidrug	7,095	7,268	+173
Bellary	31,117	22,046	—9,071
Hospett	17,793	18,695	+902
Sundur	3,854	4,144	+290
Kudligi	7,133	7,405	+272
Herpunhalli	17,049	21,116	+4,067
Hadagalli	16,496	18,366	+1,870
Total ...	222,115	227,695	+5,580

The increase in *Kurnool* is in Ramalkota, Pattikonda, Nandikotkur and Nandial, and is said to be due to coolies, who left on outlying works being closed, now resorting to the larger works. The fall in *Chingleput* is due mainly to decreased numbers on the Railway earth-works (from 6,791 to 3,584), but is also ascribed to dissatisfaction of the coolies at the reduced wages and to their absconding from some works to go to Madras. Though the numbers in North Arcot are nearly the same as in last week, there have been great fluctuations in the different taluks as shewn in the margin. The principal cause of increase is the extension of works in Polur and Wandiwash, where they have hitherto been considered unnecessary. The decrease in Arcot is due to the correction of the erroneous return noticed by the Board last week. The figures for the district do not include those employed under Government officers from funds advanced to the Punganur Zemindar, *viz.*, 831 coolies. In *Madura* there is no change of importance; three-fourths of the whole number are in the Pulni taluk. The decrease in Tinnevelly is said to be due to improving prospects, and to the coolies finding work at higher wages in ploughing and sinking wells. The decrease in *Coimbatore* is chiefly in Oodumulapetta, Bhowany and Caroor, and is ascribed in the first two taluks to the people having gone to plough their fields. In *Salem* numbers have fallen in Ahtur, Oossoor and Kistnagiri; probably owing to the same cause as in Coimbatore.

	14th April.	21st April.	
Chittoor	2,081	3,054	+973
Chendragiri	2,108	1,416	—692
Palmanair	870	1,054	+184
Gudiatum	1,372	1,547	+175
Vellore	5,069	5,674	+605
Polur	681	3,175	+2,494
Wandiwash	..	726	+726
Arcot	10,050	3,501	—6,549
Wallajah	6,479	7,410	+931
Western Zemindaris ...	3,579	4,001	+422
Eastern do. ...	6,923	7,900	+977
Total ..	39,212	39,458	+246

8. There is nothing special to remark as regards rates of wages.

9. *Gratuitous relief.*—There is again a heavy increase under this head:—

	14th April.	21st April.	
Kistna	2,298	4,141	+1,843
Nellore	38,447	58,235	+19,788
Cuddapah	30,409	29,013	—1,396
Bellary	80,366	95,074	+14,708
Kurnool	53,111	48,927	—4,184
Chingleput	18,215	51,996	+33,781
North Arcot	2,482	3,115	+633
South Arcot	2,368	5,689	+3,321
Madura	27,595	5,871	—21,724
Tinnevelly	2,044	1,843	—201
Coimbatore	5,023	7,464	+2,441
Salem	25,021	34,364	+9,343
Total ...	287,379	345,732	+58,353

10. The distribution as between camp and village relief (see abstract appended) on the two dates is (excluding Kurnool, Kistna and North Arcot for which details are not furnished) as follows:—

	14th April.	21st April.	
Camps	125,211	158,805	+33,594
Village relief	46,970	68,691	+21,721
Total ...	172,181	227,496	+55,315

There is a greater proportionate increase in village than in camp relief. In Nellore and Chingleput however, which present the largest increase, it is entirely in camp relief. In Nellore there is no village relief, and, in Chingleput very little. The Collectors of these districts will be requested to explain the great increase during the week. In *Nellore* it belongs chiefly to the Gudur, Atmakur, Udyagiri and Kanigiri taluks, the last three of which are amongst those which have suffered most. In *Chingleput*, the Conjeveram and Sydapett taluks account for 34,755 out of the increase.

11. In *Bellary* the increase under gratuitous relief is due to greater numbers of children on the allowance of 3 pies a day, who have increased from 38,869 to 48,620. This number is 21·4 per cent. of the numbers of coolies,—a proportion far too high, and indicative of fraud. The numbers on village relief in this district and in *Cuddapah* have slightly increased. The fall in *Kurnool* is due to repression of malpractices by village headmen in connection with village relief. In *Madura* the decrease of 21,724 is in the numbers in camps, and occurs in the Madura and Dindigul taluks. The Collector is requested to explain to what it is due. In *Salem*, *Coimbatore* and *South Arcot* village relief has largely increased.

12. The outlay during and up to the week is as follows:—

	In the week. Rs.	Up to the week. Rs.
Relief works	4,10,452	1,08,73,311
Gratuitous relief	73,840	5,40,446
Total ...	4,84,292	1,14,13,757

There is of course a large increase under gratuitous relief. The grants sanctioned by the Board to date amount to Rs. 1,30,49,493.

13. The following statement shows advances, in sums of Rs. 300 and less, under the Land Improvement Act for digging wells:—

	In the week. Rs.	Up to the week. Rs.
Nellore	...	18,162
Cuddapah	5,784	52,109
Bellary	9,145	10,515
Chingleput	5,245	30,525
North Arcot	...	50
Madura	2,745	7,415
Tinnevelly	3,225	31,690
Coimbatore	430	930
Salem	2,065	10,501
Total ...	28,639	1,61,897

These advances are now being eagerly antailed of. Collectors have been cautioned to see that the recipients fully understand the terms, and that adequate security is obtained. The outlay will be highly beneficial to the country.

14. The following is the establishment return completed as far as possible :—

Districts.	Relief.		Payment of wages.		Accounts.		Total.		Superior officers included.

* Return incomplete: 92 subordinate officers drawing Rs. 2,226 are employed.
† Figures for 14th April.

15. The following particulars are taken from the reports of the Commissioner of Police, Madras :—

	14th April.	21st April.
Average daily residents in camp	13,716	13,793
Average non-residents daily fed	13,709	13,983
Numbers in hospitals	484	449
Died in hospitals	120	121
Died in and near camps	17	9

The fresh admissions were 2,279, or more than one-sixth of the average strength; they came chiefly from Chingleput and Nellore. Those resident on 21st came from the following districts: Chingleput 6,687; North Arcot 3,702; Nellore 3,541; South Arcot 64; Cuddapah 74; total 14,115. The Commissioner's outlay in the week was Rs. 20,816 and up to the week Rs. 3,96,451.

16. The President of the Municipal Commission had in the Sattankad relief camp 790 persons on the 21st April and 1,244 persons on relief works there; the averages for the week being respectively 900 and 1,222. He had also 2,501 persons on the 21st and an average of 2,426 employed elsewhere on relief works. He had expended to the end of the week Rs. 35,045.

No. 1.

Average number of Government seers of 80 tolas per rupee of different grains and rainfall in certain districts of the Madras Presidency for the week ending Saturday, the 21st April 1877.

* Such as digging and repairing wells, prickly-pear clearances, &c.

There has again been a considerable fall of rain in Sholapur, Satara, Kaladgi, Belgaum and Dharwar.

2. Grain has slightly risen in price, and jowari now averages 21 lbs. per rupee.

3. The number of people upon relief works in the nine affected districts is 278,700 against 287,760 last week, and there are also 5,214 hill-men and immigrants employed in Ratnagiri and Kanara. The decrease is probably due to the rain having induced some of the people to leave the works, in order to prepare for the agricultural operations of the coming monsoon. Should showers not continue to fall, many of these persons will, in all probability, return to the relief works.

4. Cholera has decreased in Belgaum, but continues prevalent in Satara, Kaladgi and Dharwar.

5. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 21st April, the number of people upon Civil works was 30,698, the number upon works under Public Works Department agency being 243,789. The proportion of the former class continues, therefore, at about 10 per cent. of the whole number.

6. The Sanitary Commissioner has visited the Mutha Canal, the Matoba Tank, and the Patas Tank, three large works in the Poona Collectorate, employing between them upwards of 17,000 people, and reports that the condition of the labourers is satisfactory.

In summing up his experience of the state of the people obtained from a tour of two months in the famine districts, the Sanitary Commissioner reports that he considers the physical condition of the labourers employed upon relief works in the Mahratta-speaking country, including Sholapur, as extremely satisfactory, the rates of wages being sufficient apparently to enable persons who had been reduced to recover strength and flesh, while on the Civil works the people obtain sufficient food to prevent wasting, and to keep the children plump and with well-rounded limbs.

In parts of the Kanarese districts the condition of the people is lower, but the Sanitary Commissioner is of opinion that recent orders of Government fully meet the case, and provide for every possible contingency, and his anxiety is now confined to those immigrants who have caught jungle fever in the grazing grounds of the Kanara Collectorate.

7. With a view to securing the greatest practicable uniformity in the management of the numerous relief-houses established in the famine-stricken area, Government have published rules, to which officers in charge of relief-houses are requested to conform as far as local circumstances will permit. With a view, too, to provide for those able-bodied labourers who will be left upon the hands of Government during the monsoon, Government have ordered that upon such large works as can be carried on during the rains, shelter shall be provided for those who are unable to resort to the dhurumshalas and houses in the neighbouring villages. Government hope that the greater proportion of the people now upon relief works will, as soon as the monsoon fairly bursts, leave the works, and return to the cultivation of the land, but of these it is probable that considerable numbers will be unable altogether to provide for themselves in this way until the reaping of the next harvest commences. For the support of such people, Government have directed the local officers to be ready with works in the vicinity of their villages.

8. Approximate calculations recently made show an estimated saving on the cost of relief operations, apart from the question of remissions, up to the present date, of about 25 lakhs of rupees on the lowest estimate yet made of the cost of relief works and charitable relief, *i. e.*, the estimate of the Bombay Government of the 24th February last.

9. The following table gives the distribution of the people among the relief works employing 1,000 labourers, or more. It will be seen that 224,940, or more than four-fifths

of the labourers are now employed upon the works enumerated :—

Districts.	Works.	Number of labourers.	Total.	Remarks.

10. Maps are not sent with this Summary, as they would merely repeat the information already given.

11. The following table gives the expenditure by Government. during the week ending 14th April, upon charity in the relief of the aged and infirm poor; and in payments made to the young children of labourers employed upon relief works. Comparing it with the table which accompanied the last Summary, it will be seen that the number of persons

in receipt of Government charitable relief has increased from 9,495 to 15,109, and the number of children under 7 years of age from 68,205 to 76,187. This increase is due to village inspection having been carried out more stringently in some parts than it has heretofore been, and to greater attention having been paid in those parts to the support of young children.

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

* No expenditure has been incurred by the Collector.

12. A table is appended, showing the condition of the affected Native States.

13. With regard to the movements of food-grains, 4,434 tons were exported from Bombay to the Southern Mahratta ports during the week ending 21st April, and during the same week 3,568 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 8,002 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the 21st April to the Southern Mahratta ports and the Railway stations in the distressed districts. It will be seen that the total amount delivered up to the 21st April was 245,875 tons:—

Food-grains sent to	In October 1876.	In November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	In April up to 21st.	Total.

14. On the whole, there is no noteworthy change in the condition of the people during the week. Grain continues abundant; the late rains have caused grass to spring up in some districts, to the great advantage of the cattle; and little inconvenience on account of scarcity of drinking water is felt; cholera does not seem to increase as the hot weather advances, and the condition of the people is generally satisfactory, and where rain has fallen, they are in better heart.

M. K. KENNEDY, *Major-General, R. E.,*
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women and children, as in a few returns these particulars have not been given, the total number of labours alone having been entered.

These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

T. C. HOPE,
Addl. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 3RD MAY 1877.

GENERAL REMARKS.—In Madras good rain has fallen in parts of Bellary and Tinnevelly, and beneficial showers are reported from Coimbatore, Madura, Salem and Malabar: a little rain has also fallen in Kurnool; general prospects are said to be unchanged. The numbers on relief works are 700,774, a decrease of 2,149 on last week: but the returns from Nellore are incomplete; there is an increase of 5,600 in Salem, 1,500 in North Arcot, 1,100 in Bellary, 600 in Madura: a decrease of 7,500 in Cuddapah, 1,200 in Kurnool, and 900 in Malabar. There are 275,448 persons receiving gratuitous relief, being an increase of about 34,000 on last week (the numbers for which were incorrectly stated owing to a mistake in Nellore explained below). From Mysore it is reported that good showers have fallen in some outlying districts, but the prospect is unimproved in those affected by famine: numbers on works 58,228, on gratuitous relief 82,501. In Bombay there have been showers in the Southern Mahratta Country and Sholapur, and slight rain in Khandesh and Násik and parts of Guzerat; heavy showers are reported from Lower Sind, where the river is very high. In the Central Provinces rain and hail fell in 14 out of 18 districts, injuring grain on the threshing floors. In Berar ploughing is going on. Showers are reported from many parts of Rajputana and Central India. In Bengal there has been light rain in almost half the districts of the Province: prospects are good. Rain has fallen in Assam and Sylhet. In the North-Western Provinces and Oudh showers fell in one or two districts: prospects appear to be favourable. In the Punjab rain is reported only from Hissar (where damage has been done to the crops now being reaped), Lahore and Rawalpindi: the condition of things generally is still good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 1st)	*Nil*	Maize, *jonna* and *sajja* sown in places after late rains withering; *raggi* harvested, outturn half to full; prices generally stationary; seers of Rs. 80 weight, rice 8·54, *cholum* 11·23, *raggi* 14·[illegible] *cumboo* 10·71; imports by sea at Ipurpalem, rice 347·18 tons, *ra*[illegible]3·40, by land at Guntur from Godavery; *rice* 66·85, *cholum* 15·62; number on relief works 2,155, fed gratuitously by Government 241, by people 1,469; cholera seizures 78, deaths 35; small-pox and cattle disease continue.
Nellore („ „)	*Nil*	Average prices 2nd sort of rice 8·22, *cholum* 10, *raggi* 12·79, *cumboo* 10; imports by sea on behalf of Government none, on behalf of merchants rice 1,341 tons, *raggi* 110 tons; returns from Kottapatam and Itamukkala ports not received; imports by merchants into the town of Nellore, rice 346 tons, *cholum* 1 ton, *raggi* 13 tons; number on relief works including canal coolies 67,485; Naidoopett Deputy Collector's return not received; number fed gratuitously 10,697, the nominal large decrease is due to the total number fed during the whole week having been shown in last report instead of the number on the last day; 31 deaths from cholera, small-pox, fever and dysentery prevalent in some taluks; water supply insufficient over the greater part of the district so much so as to cause anxiety in Gudur, Polur and Venkatagiri; prospects of cattle much the same as last week.
Cuddapah („ „)	*Nil*	Average price seers per rupee second sort of rice 8·05, *cholum* 8·7, *raggi* 10·56, *cumboo* 9·26; people on relief works 52,614, gratuitously fed 24,326; 322 deaths from cholera; number of cattle that died from want of fodder and disease 975.
Bellary („ „)	2·25 at Bellary on 29th; 2·5 at Hospett on 30th; showers at Hadgalli on 23rd.	Average price second sort of rice 7·63, boiled rice at Bellary 9·72, *cholum* or great millet 8·4, Jubbulpore *cholum* at Bellary 9·53, *raggi* or lesser millet 8·73, *cumboo* 8·03, seers of 80 tolas; import tons 4,696½; accounts from 3 railway stations only; 224,676 persons on relief works; increase as compared with return for previous week 1,105, this is owing to more coolies having come to the works; 100,487 gratuitously fed, increase as compared with return for previous week 6,349, this is chiefly due to the payment of 3 pies to the children of coolies employed on relief works, but also the opening of relief houses in several villages, 4,468 gratuitously fed by private charity aided by Government grant; cholera declining but still in all taluks; small-pox and fever prevalent, but the former decreasing; cattle still perishing in some places from want of fodder; supply of drinking water diminishing except where rain has fallen.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Kurnool (May 1st)	·3 in Nandikotkur; *nil* elsewhere.	Crops under spring channels and wells in fair condition and partly harvested; cholera, small-pox and fever prevalent; cattle reported to be dying for want of fodder; cholera, seizures 203, deaths 114; second sort of rice per rupee in imperial seers 7·27, *cholum* 8·49, *raggi* 10·20, *cumboo* 9·47; number on relief works 211,889, gratuitously relieved 63,797, including children under 7 years of age and those fed by village headmen; import of Government grain 81 tons in the district, private import 256 tons, the slight changes in the prices of grain call for no remark; the decrease in the number of coolies is 1,283, which is the net result of an increase of 8,861 in 5 taluks, and a decrease of 10,144 in 3 taluks; increase chiefly due to the employment of new coolies in distressed state, and decrease to the reduction of coolies by Public Works Department, and to prevalency of cholera, &c.; physique of coolies slightly affected, possibly by heat.
North Arcot („ „)	*Nil*	Average prices in Government seers, second sort rice per rupee 8 7, *cholum* 9·8, *raggi* 10·6, *cumboo* 8·9; coolies on relief works 41,862, persons gratuitously fed 12,765; cholera still prevalent, fever and small-pox in some places; pasture scarce; cattle still dying of starvation in some parts.
Chingleput („ „)	*Nil*	Prices rice second sort 9·55, *raggi* 11·49, *cholum* 10·92, *cumboo* 10·78; imports rice 155·38 tons, *raggi* 40·12; cholera prevalent in all the taluks; small-pox, fever and dysentery in several; condition of cattle poor; pasturage *nil*; water very scarce, and dry fodder very expensive; on relief works 5,960, gratuitous relief 8,470.
South Arcot („ „)	*Nil*	Average prices, rice second sort 9½ seers, *cumboo* 12½, *raggi* 12⅝, *cholum* 12¼, dearer than last telegraphed prices, due to absence of rain and no importation by sea; number employed on last day of week 724; gratuitously fed last day at Chengam 420; village relief whole week, 6,273; people generally healthy; cholera deaths 132 out of 205 attacks; cattle disease in some villages; pasture deficient.
Tanjore („ „)	*Nil*	Price of rice 9 1/8 seers, *raggi* 12 1/8, *cumboo* 10⅛, *cholum* 12⅛; imports by sea, rice 2,073 tons; relief works none; deaths from cholera 56; cattle disease in Tanjore, Combaconum and Mayaveram taluks with some loss of life; fodder available.
Trichinopoly („ „)	*Nil*	Second sort rice 8¼ seers, *cholum* 16½, *raggi* 11, *cumboo* 10½; imports of grain 77 tons; no relief works; gratuitously fed on 28th ultimo by public subscription 1,619, in village by Government on the same day 82; cholera 302 attacks, 191 deaths; small-pox 515 attacks, 12 deaths; cattle disease in Udayarpalam and Musuri taluks; pasture procurable in the wet parts and deficient in dry.
Madura („ „)	Showers in some places.	Average price rice second sort 8⅝, *cholum* 10⅓, *raggi* 10¾, *cumboo* 10½; imports rice tons 2,668, other grain 40; number on relief works 11,637, number fed gratis 6,224; cholera in most parts but not to a great extent, fever and small-pox continue in some places, deaths by cholera 296; no change in other respects.
Tinnevelly („ „)	Slight showers; in Tenkasi heavy rain.	Standing crops thriving; cholera severe this week, 782 attacks, 652 deaths; cattle disease still prevalent but mortality slight; pasture and water supply good on the whole; average prices per rupee second sort rice 9 seers of 80 tolas, *cholum* 11, *cumboo* 11 and *raggi* 12½; import of grain, rice 3,050 and *cholum* 4 tons; number on relief works 862, number gratuitously fed 225; decrease in number on relief works owing to coolies returning to their villages to celebrate an important feast and to their obtaining more remunerative wages under private engagements.
Coimbatore („ „)	·80 at Collegal on 28th; ·30 at Erode on 25th; ·40 at Pollachy on 22nd; 1·24 at Bhowany on 25th and 26th; showers in portions of all taluks except Coimbatore.	Prices nearly stationary; rice (slight fall) second sort 8·01, *cholum* (no change) 9·29, *raggi* (slight rise) 9·53, *cumboo* 9·62; imports estimated, rice 788 tons, other grains 450; cholera in 9 taluks, attacks 1,382, deaths 990, small-pox and fever prevalent; cultivation to a small extent in five taluks; cattle poor, losses in Sattiamangalum, Collegal, Bhowany but not severe; fodder and water scarce; on relief works 21,958; no deterioration in physique of work people reported; gratuitously fed 11,161.
Salem („ „)	·37	Prices of grains seers of 80 tolas, rice 8 5/16, *raggi* 9 1/16, *cumboo* 8 11/16, *cholum* 9½; import of all grains 1,240 tons; number on relief works 56,800; number gratuitously fed 30,700; number gratuitously fed by private aid 800; cholera in all taluks.
Malabar („ „)	·90 average of nine taluks.	Markets well supplied; imports by sea and land, rice 5,965, *raggi* 163, *cholum* 1,252 tons; exports, rice 1,451, *raggi* 585 and *cholum* 120 tons; prices of rice risen slightly in Wynaad and Walluvanad, fallen or stationary elsewhere, highest 7½ Indian seers in Wynaad, lowest 11 seers in Kottayam and Ponany, average 10 Indian seers per rupee; *raggi* 13½ Indian seers per rupee in Wynaad, average elsewhere 19⅜; small-pox in 8 taluks, cholera in all except Cochin, deaths from latter 424; cattle healthy; pasture good in Cochin and improving everywhere; 2,152 coolies on Kolathur roads. *General Remarks.*—General prospects not changed; exports by rail from Madras during week ending 28th April 8,359 tons.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay— (May 3rd)		
Sind—(May 2nd)		
Kurrachee ...	·16 in Kurrachee; ·37 in Manora; ·53 in Jerruk; ·20 in Tháno Bula Khán, and 1·25 in Tatta.	Four fresh cases of small-pox in Kurrachee; river at Kotri on 30th 10 feet 5 inches, last year on same date 8 feet 2 inches, much water passing into Manchhar through Aral by rise in river; freshes in Gáj during week; cattle disease in most talukas; great storm at Sehwan on 23rd, many trees rooted up and much damage done; heavy rain.
Shikárpur ...	Slight rain	*Peshras* cultivation doing well; weather sultry.
Hyderabad ...	...	River on 30th 10 feet 9 inches, 2 feet 7 inches higher than on same date last year; weather warmer.
Upper Sind Frontier ...	...	Weather close and warm; *rabi* harvesting continues; cotton and other *peshras* crops thriving.
Guserat—(May 2nd)		
Ahmedabad ...	·03	Weather cloudy and warm.
Kaira ...	·24	Weather hot.
Surat ...	...	No change.
Broach ...	...	Small-pox throughout district.
Khandesh and Násik.—(May 2nd)		
Khandesh ...	Slight showers of rain in 5 talukas.	Small-pox continues.
Násik ...	·10 in Kalwan.	Cholera in Yeola taluka; cattle disease in Kalwan, 66 deaths.
Konkan—(May 2nd)		
Tanna ...	...	Small-pox in 6 talukas, cholera prevails in the town of Tanna and 2 villages in Salsette taluka.
Deccan—(May 2nd)		
Poona ...	...	Cholera in Junnar, cattle disease in Sirur and Haveli.
Ahmednagar ...	...	Cholera in 3 talukas, cases 1,701, deaths 48.
Sholapur ...	...	Rain storms continue; 5 deaths from cholera in Sholapur taluka.
Satara ...	...	Ten deaths from cholera, one in Pingli and 7 on Nahr tanks, total number of deaths from cholera in the district 226; small-pox in Satara taluka; cattle disease in 4 talukas.
Southern Mahratta Country—(May 2nd)		
Belgaum ...	1·35 in Chikori.	Deaths from cholera 236; slight showers in some villages of Bidi, Parasgad and Chikóri; great scarcity of water in Athni.
Dharwar ...	Slight rain except in 3 talukas, average fall ·47.	Cholera prevalent, deaths 365.
Kanara ...	...	Cholera prevalent, deaths 92.
Kaládgi ...	·30 in Oudi; ·28 in Bágewári; ·14 in Bijápur; ·20 in Bágalkot; ·50 in Bádámi.	Cholera prevalent, deaths 250 in 7 talukas; slight small-pox in Bágalkot, cattle disease in Bijápur.
Kattywar and Gaekwar's Territory—(May 2nd)		
Rájkot ...	...	Weather hot; health good.
Wadhwan ...	Drizzling of rain in Limri on 28th.	Cattle disease in Jhinjhuwára and Patri decreasing; no other change.
Baroda ...	...	Small-pox continues in the city. *General Remarks.*—Slight showers in Southern Mahratta Country and part of the Deccan; cholera rather decreasing in Southern Mahratta Country, spreading in Ahmednagar but to no great extent; heavy showers in parts of Sind.
Bengal—		
Chittagong ...	*Nil*	Cholera still prevalent in the south; small-pox reported from headquarters.
Noakholly ...	·35	Cholera still in thánas Begumgunge and Fenny.
Chittagong Hill Tracts	·5	
Hill Tipperah ...	·67	
Backergunge ...	·66	Cholera in a sporadic form and fever throughout the district, with the exception of 4 thánas; health of cattle good.
Furreedpore ...	·64; 2·15 in Goalundo.	
Dacca ...	1·68	Cholera in parts.
Tipperah ...	2·79	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Mymensingh ...	·36	
24-Pergunnahs ...	·04	Public health in general good.
Jessore ...	·12	
Nuddea ...	*Nil*	Cholera has appeared in several parts.
Moorshedabad ...	*Nil*	Cholera in a sporadic form still reported.
Pubna ...	1·45	A native doctor has been sent to treat cases of cholera at Shamidpore.
Rajshahye ...	*Nil*	
Bogra ...	*Nil*	
Malda ...	*Nil*	179 deaths from cholera.
Dinagepore ...	Return not received.	A good deal of cholera.
Rungpore ...	·82	Small-pox reported to have broken out in Chilmári and Bhowanigunge.
Cooch Behar ...	*Nil*	Public health good, but fever appears to be prevalent, and in Mátabhánga there is still small-pox.
Jalpáiguri ...	·53	
Darjeeling ...	1·72	
Midnapore ...	·27	
Howrah ...	*Nil*	
Hooghly ...	·53	Cholera still prevalent; cattle disease has broken out in many places.
Burdwan ...	*Nil*	Public health fair.
Bankoora ...	*Nil*	
Beerbhoom ...	*Nil*	
Sonthal Pergunnahs ...	*Nil*	
Bhágalpur ...	·09	Cholera spreading and still bad in town.
Monghyr ...	*Nil.*	
Purneah ...	·18	Cholera reported all along the east of the district.
Durbhunga ...	·43	
Mozufferpore ...	*Nil*	With the exception of small-pox at Shiuhar, general health good.
Sarun ...	·03	General health good.
Chumparun ...	·16	
Patna ...	·05	Health generally good.
Gya ...	*Nil*	Cholera threatens Gya town; it originated in an encampment of opium asámis outside the town.
Shahabad ...	Slight rain.	
Hazáribágh ...	*Nil*	A few cases of cholera and small-pox in the interior.
Lohardugga ...	·55	General health good.
Manbhoom ...	*Nil*	
Singhbhoom ...	*Nil*	District healthy.
Balasore ...	·50	Many deaths from cholera still occur both at head-quarters and in the interior.
Cuttack ...	1·26	
Pooree ...	*Nil*	Public health good.
		General Remarks.—There has been rain during the week and the crops now on the ground are doing well; the spring rice is being cut; the sowings of autumn rice are nearly complete; and the cultivation for the winter rice is in steady progress.
N. W. P. and Oudh—		
Benares (May 2nd)...	...	No change.
Allahabad („ „) ...	...	
Jhansi („ 3rd)...	Slight rain.	Weather still cloudy.
Agra („ 2nd)...	·2 to ·5 in two parganas.	Crops being reaped; sugarcane being watered.
Meerut („ „) ...	...	Weather cool and cloudy.
Bareilly („ „) ...	...	No change.
Almora (April 30th) ...	...	Weather very unsettled; all rain now falling does damage to standing crops; harvest commences in warm valleys.
Lucknow (May 2nd) ...	Slight rain on 30th April.	
Sitapur („ „) ...	*Nil*	Weather uncertain.
Fyzabad („ „) ...	...	No change.
Punjab— (May 2nd)		
Delhi ...	*Nil*	Crops harvested; health good.
Hissar ...	1·4	Reaping still in progress, crops lying cut on the ground somewhat affected by rain and hail-storms; health generally good.
Umballa ...	*Nil*	Health and crops good.
Jullundur ...		
Lahore ...	·5	Health and crops good.
Ráwalpindi ...	·5	Agricultural prospects fair; health good.
Mooltan ...	*Nil*	Crops have been slightly damaged; health good.
Dera Ismail Khan ...	*Nil*	Health and harvest good.
Pesháwar ...	*Nil*	Reaping in progress; health good.
		General Remarks.—The health and agricultural reports still favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
Upper Godávari (Apl. 28th)	Slight rain on 26th and 27th	Cloudy and stormy; health good; prices steady.
Sambalpur ...	...	Cloudy; ploughing continues; prices easy.
Raipur ...	·68	Stormy; *kharif* ploughing continues; prices easy.
Bálághát ...	·80	Cloudy and stormy; *rabi* threshing delayed; fever and cattle disease continue; prices stationary.
Chhindwára ...	·53	Cloudy and stormy; grain on threshing floors injured; health good; prices rising.
Chánda (April 29th)	1·39	Cloudy; threshing nearly finished; cattle disease continues; prices stationary.
Betúl („ 30th)	...	Cloudy; threshing nearly completed; cattle disease continues; prices slightly risen.
Bhandára (May 1st)	·84	Grain injured by rain in places; ploughing continues; fever, cholera, and small-pox prevalent; prices rising.
Nágpur („ 2nd)	...	Stormy; a storm of extraordinary violence doing much damage passed over the station on 28th; *rabi* threshing completed; health good; prices rising.
Wardha ...	·84	Small-pox slightly prevalent in places.
Nimár ...	·12	Small-pox continues; prices slightly risen.
Hoshangabad ...	...	Cloudy and stormy; small-pox prevalent; prices unchanged.
Narsinghpur ...	...	Grain on threshing floor slightly damaged by rain and hail; health good; prices rising.
Jubbulpore ...	2·44	Stormy; threshing and winnowing continue; health good.
Saugor ...	·42	Cloudy; threshing and winnowing stopped, owing to constant showers and rain; grain in field injured; health good; prices rising.
Seoni ...	1·20	Grain gathered damaged; prices risen.
Mandla ...	·90	Cloudy and stormy; threshing delayed; wheat grain injured; fever continues; prices stationary.
Damoh ...	...	Threshing continues; prices stationary.
		General Remarks.—Storms of more or less violence reported from almost all the districts in the province; rain and hail fell in 14 districts, injuring grain on threshing floors; prices rising.
British Burma— (May 3rd)		
Arrakan Division ...	...	Twenty-seven deaths from cholera in Akyab town, slight cholera in Ooretoung, East Kyalet, and Rathaidoung township; cholera also in Naaf township; cattle disease in 3 townships of Akyab district; otherwise public health good in the division.
Pegu Division—

G. H. M. BATTEN,
Offg. Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

Papers connected with the trial of Mr. Fuller at Agra, under Section 323 of the Indian Penal Code.

No. 116, dated Fort William, the 20th January 1876.

From—Arthur Howell, Esq., Offg. Secy. to the Govt. of India,

To—The Secretary to the Government of the N.-W. Provinces.

With reference to the first entry in page 632 of the selections from the vernacular newspapers published in the Upper Provinces between the 10th and 15th ultimo, I am directed to enquire whether there is any foundation for the statement that a Mr. Fuller, a Pleader at Agra, killed a syce and was fined Rs. 30 for the offence. If the case has been in any way before the North-Western Provinces Government, the Governor General in Council would be glad to see a copy of the final orders passed on it.

No. 313 A., dated Naini Tal, the 18th May 1876.

From—B. W. Colvin, Esq., Offg. Secy. to the Govt. of the N.-W. Provinces,

To—The Offg. Secretary to the Government of India.

In reply to your letter No. 116, dated 20th January last, I am directed to say that the first extract on page 632 of the selections from vernacular newspapers of the 20th December 1875, regarding an assault committed by a Mr. Fuller of Agra upon his syce, resulting in the death of the latter, for which Mr. Fuller was fined Rs. 30, is founded on fact.

2. The case has not been directly before the Local Government, but the opinion of the High Court of these Provinces has been taken respecting the adequacy of the sentence. I am to forward a copy* of that opinion and of the judgment of the Joint-Magistrate of Agra, Mr. R. J. Leeds, upon which it was based, and to say that as the High Court do not think the sentence especially open to objection, no further action appears to the Lieutenant-Governor to be necessary.

* No. 1338, dated the 27th of April last.

No. 1338, dated Allahabad, the 27th April 1876.

From—W. Tyrrell, Esq., Registrar, High Court of Judicature, N.-W. Provinces,

To—The Offg. Secretary to the Government of the North-Western Provinces.

I am directed to acknowledge the receipt of the demi-official letter from your office dated the 31st ultimo, forwarding the record of the case indicated in the margin, and requesting an expression of the Court's opinion as to the propriety of the sentence passed upon the accused.

Regina v. *Fuller.*
Charged under Section 323, Indian Penal Code, and sentenced to pay a fine of Rs. 30 by the Joint Magistrate of Agra.

2. In reply, I am desired to observe that the Joint Magistrate considered the evidence given by Saikoo coachman to be the most reliable. According to his statement, the accused was annoyed because the deceased, a syce, did not attend when his carriage was brought round to the door: he sent for him, struck him twice with his open hand, and seized him by the hair of his head, whereupon the deceased fell.

The medical evidence shows that the spleen was in a diseased condition, that death was caused by the rupture of the spleen, that this injury might have been caused by moderate violence or by a fall, and that there were no external marks of injury on the body.

3. Under these circumstances it appears that no great violence was used, and that the accused neither contemplated nor could have foreseen that severe hurt would have resulted from the degree of violence exerted by him, much less that it should have been followed by the lamentable result of death.

4. On these facts as found by the Joint Magistrate the sentence, though perhaps lighter than the Court would have been disposed to inflict under the circumstances, does not appear to be specially open to objection.

5. The record of the case received from your office is herewith returned.

Government v. *R. A. Fuller.*

The accused is charged under Section 323, Indian Penal Code, with causing hurt to one Kafwaroo, his syce. It appears that on the morning of 31st October last the accused and his family were about to proceed to church, and that the accused annoyed at the non-attendance of the syce, sent for him, struck him with his open hand on the head and face, and pulled his hair, causing him to fall. The syce immediately got up and ran across the road into the adjoining compound, where he fell in front of the kitchen, and died shortly after.

In the meanwhile the accused and his family drove on to the cathedral, whence they were summoned by a neighbour, who informed them of what had happened. The medical evidence shows clearly that Katwaroo, the deceased, died from rupture of the spleen which was much enlarged, and that very slight violence, either from a blow or a fall, would be sufficient to cause the injury.

Three out of the four eye-witnesses declare that the deceased was kicked in the stomach, but I see no ground for believing the statement. In the *first* place, the coachman Saikoo, who was the only one of the witnesses in a position to see well what passed, makes no mention of the kicking.

2ndly,—The accused himself, who at once reported the occurrence to the Magistrate, and made a detailed statement before me within two hours of the event, emphatically denies having kicked the deceased.

3rdly,—There were no external marks of injury whatever, and it is on evidence that the rupture of the spleen which caused Katwaroo's death may have resulted from very slight violence, either in the shape of a blow or a fall.

4thly,—The three grass-cuts were, by their own showing, at some distance and in positions which make it doubtful whether they really saw what passed.

5thly,—The grass-cuts are more or less prejudiced witnesses from their relationship and connection with the deceased.

6thly,—It is *primâ facie* improbable that a European would kick his servant in the stomach. On these grounds I decline to accept a statement which, if true, would greatly aggravate the character of the offence and render a committal necessary.

The coachman, who was close by when the assault took place, appears to have given a very fair account of what passed; and accepting the fact deposed to by him, it does not seem to me that the offence was other than one of causing hurt as defined in Sections 319 and 321, Indian Penal Code.

I have accordingly framed a charge under Section 323, to which the accused pleads guilty. Before the charge had been drawn up, Mr. Beddy for the accused contended—

(*1st*) that no offence had been committed, as the law authorised a master to inflict moderate chastisement on his servant:

(*2nd*) that no offence had been committed as there was an implied contract on the part of the deceased as a servant to submit to such moderate chastisement.

On these objections being overruled, and the accused formally charged, Mr. Beddy urged in extenuation—

(*1st*) that the hurt voluntarily caused was slight:
(*2nd*) that it was inflicted by way of correction:
(*3rd*) that it was inflicted under provocation:
(*4th*) that the offence was a compoundable one.

Taking all the circumstances fully and fairly into consideration, I am of opinion that the accused is guilty of voluntarily causing what distinctly amounts to hurt, in the ordinary as well as the technical sense of that word, and thus the illegality of his conduct must be marked by a fine which shall be something more than nominal.

I accordingly find Robert Augustus Fuller guilty of voluntarily causing hurt to one Katwaroo, an offence punishable under Section 323, Indian Penal Code, and sentence him to pay a fine of Rs. 30, or in default to undergo 15 days' simple imprisonment.

Under Section 308, Act X of 1872, I direct that the amount of the fine be paid to the widow of the deceased.

AGRA;
The 8th November 1875.

R. J. LEEDS,
Joint Magistrate and Justice of the Peace.

No. 1098, dated Simla, the 7th July 1876.

From—ARTHUR HOWELL, Esq., Officiating Secretary to the Government of India,
To—The Secretary to the Government of the North-Western Provinces.

I AM directed to acknowledge your letter No. 313, dated the 18th May last, forwarding, at the request of the Government of India, copy of the judgment of Mr. Leeds, Joint Magistrate of Agra, in the case of the Crown *versus* R. A. Fuller, together with a letter from the High Court of the North-Western Provinces, expressing the Court's opinion on the sentence inflicted on Mr. Fuller by the Joint Magistrate.

2. The facts of the case are as follows: One Sunday morning, Mr. Fuller, an English Pleader at Agra, was about to drive to church with his family. When the carriage was brought to the door, the syce failed to be in attendance, but made his appearance when sent for. For this cause Mr. Fuller struck the syce with his open hand on the head and face and pulled him by the hair so as to cause him to fall down. Mr. Fuller and his family drove on to church; the syce got up, went into an adjoining compound, and there died almost immediately.

3. The Joint Magistrate of Agra, before whom Mr. Fuller was placed to take his trial, framed the indictment under Section 323 of the Indian Penal Code for "causing hurt to one Katwaroo, his syce;" and it appeared from the evidence of the medical officer who had conducted the *post mortem* examination that the man had died from rupture of the spleen, which very slight violence, either from a blow or a fall, would be sufficient to cause, in consequence of the morbid enlargement of that organ. The evidence in the case does not show any other assault; at least the Joint Magistrate disbelieved (apparently on good grounds) all that portion of the evidence which referred to any other assault. The Joint Magistrate found Mr. Fuller guilty of "voluntarily causing what distinctly amounts to hurt," and sentenced him to pay a fine of Rs. 30, or in default to undergo fifteen days' simple imprisonment; directing the amount of the fine to be made over to the widow of the deceased. At the request of the Local Government, the High Court expressed an opinion on the case, which was to the effect that the sentence, though perhaps lighter than the High Court would have been disposed to inflict under the circumstances, was not specially open to objection.

4. The Governor General in Council cannot but regret that the High Court should have considered that its duties and responsibilities in this matter were adequately fulfilled by the expression of such an opinion. He also regrets that the Local Government should have made no enquiry, until directed to do so by the Government of India, into the circumstances of a case so injurious to the honor of British rule, and so damaging to the reputation of British justice in this country.

5. The Governor General in Council cannot doubt that the death of Katwaroo was the direct result of the violence used towards him by Mr. Fuller. He observes that the High Court assumes the connection between the two events as being clear. Yet on reading Mr. Leeds' judgment he does not find that that gentleman ever considered the effect or even the existence of this connection. Mr. Leeds did, indeed, consider whether Mr. Fuller ought not to be subjected to a more serious charge, but only because there was evidence given of further violence used by him, which evidence Mr. Leeds rejected, on grounds which are here assumed to have been sufficient. He seems, however, to have viewed an assault resulting in the death of the injured man in just the same light as if it had been attended by no such result.

6. The class of misconduct out of which this crime has arisen is believed to be dying out; but the Governor General in Council would take this opportunity of expressing his abhorrence of the practice, instances of which occasionally come to light, of European masters treating their native servants in a manner in which they would not treat men of their own race. This practice is all the more cowardly, because those who are least able to retaliate injury or insult have the strongest claim upon the forbearance and protection of their employers. But bad as it is from every point of view, it is made worse by the fact, known to all residents in India, that Asiatics are subject to internal disease which often renders fatal to life even a slight external shock. The Governor General in Council considers that the habit of resorting to blows on every trifling provocation should be visited by adequate legal penalties, and that those who indulge it should reflect that they may be put in jeopardy for a serious crime.

7. The Governor General in Council cannot say whether Mr. Fuller would have been convicted of a more serious offence, such as that of causing grievous hurt, or that of culpable homicide, had he been charged with it. But this he can say with confidence, that in consequence of Mr. Fuller's illegal violence his servant died, and that it was the plain duty of the Magistrate to have sent Mr. Fuller to trial for the more serious offence; a course which would not have prevented him from being punished (indeed he could thus have been more adequately punished) for the lesser offence, if that alone had been proved.

8. But besides his error of judgment in trying this case himself the Governor General in Council thinks that Mr. Leeds has evinced a most inadequate sense of the magnitude of the offence of which Mr. Fuller was found guilty. The offence was that of "voluntarily causing hurt." That is an offence which varies infinitely in degree, from one which is little more than nominal, to one which is so great that the Penal Code assigns to it the heavy punishment of imprisonment for a year *and* a fine of Rs. 1,000. The amount of hurt and the amount of provocation are material elements in determining the sentence for such an offence. In Mr. Fuller's case, while the provocation was exceedingly small, the hurt was death. For this, Mr. Leeds, while saying that he intends to inflict a punishment something more than nominal, inflicts only a fine of Rs. 30. The Governor General in Council considers that with reference either to the public interests, or to the compensation due to Katwaroo's family from a person in Mr. Fuller's position (and it does not appear from the papers that Mr. Fuller has made any other compensation), such a sentence is wholly insufficient. He considers that Mr. Leeds has treated the offence as a merely nominal one, and has inflicted a merely nominal punishment; and that to treat such offences with practical impunity, is a very bad example and likely rather to encourage than repress them.

9. For these reasons, the Governor General in Council views Mr. Leeds' conduct in this case with grave dissatisfaction. He should be so informed, and should be severely reprimanded for his great want of judgment and judicial capacity. In the opinion of the Governor General in Council, Mr. Leeds should not be entrusted, even temporarily, with the independent charge of a district, until he has given proof of better judgment and a more correct appreciation of the duties and responsibilities of Magisterial officers for at least a year.

No. 610 A, dated Naini Tal, the 15th August 1876.

From—B. W. COLVIN, Esq., Offg. Secy. to the Govt. of the N.-W. Provinces,

To—The Officiating Secretary to the Government of India.

WITH reference to your letter No. 1098, dated 7th July last, I am directed to forward the enclosed letter* addressed by the High Court of Judicature, North-Western Provinces, to the Government of India, regarding the case of Regina *v.* Fuller.

* No. 2431, dated 5th August 1876.

2. With advertence to its para. 35 I am desired by the Officiating Lieutenant-Governor to say that he has reason to believe that the favourable opinion of Mr. Leeds' general character and qualifications which is expressed by the High Court was also held by his predecessor.

3. Mr. Leeds has already during the present month been once passed over for the charge of a district in compliance with the instructions conveyed in your letter under reply.

In view of this, and of the recommendation in his behalf which has been submitted by the High Court, Sir George Couper would be glad if His Excellency the Governor General in Council should see fit to re-consider the orders which have been passed regarding him, and to relieve him of the disqualification which at present operates as a bar to his promotion for the next year to come.

No. 2431, dated Allahabad, the 5th August 1876.

From—W. TYRRELL, Esq., Registrar, High Court, North-Western Provinces,

To—The Officiating Secretary to the Government of India.

THE High Court of Judicature for the North-Western Provinces has observed in the *Gazette of India* a letter addressed by you to the Secretary to Government, North-Western Provinces, dated Simla, July 7th, 1876, of which it has recently been favoured with a copy through the Local Government.

2. In that letter you inform the Local Government that His Excellency in Council has been pleased to pass a grave censure on the High Court, and to condemn and visit with a severe punishment a Magistrate subordinate to the Court. You point out at the same time the course which in the discharge of his judicial duties the Magistrate should have pursued, and thus suggest the inference that the High Court is blameable for its omission to issue similar directions.

While it entertains all due respect for the high authority you represent, the High Court desires to submit the following observations for the consideration of His Excellency in Council.

3. The procedure adopted by His Excellency in Council gives rise to most important questions touching the position of the High Courts of Judicature in reference to the executive authority of His Excellency in Council.

4. In establishing Supreme Courts of Judicature in the Presidency Towns the Sovereign delegated his inherent powers for the administration of justice to tribunals which, in the exercise of the functions committed to them, were to be generally independent of the executive.

5. When Parliament empowered Her Imperial Majesty to substitute for the Supreme and Sadr Courts High Courts of Judicature, it was its intention to provide for the creation in those parts of British India, to which Her Imperial Majesty might be advised the privilege could be conceded, of independent tribunals, similar to those which had theretofore exercised jurisdiction in the Presidency Towns.

The Statute 24 and 25 Vic., c. 104, which gave effect to this purpose, declares that the Judges of the High Courts shall hold office during Her Majesty's pleasure; and confers on the Governor General in Council, or the Governors in Council, as the case may be, no other powers in respect of the appointment or removal of Judges than the power to receive their resignations, and to make temporary appointments to vacancies in the Court until Her Majesty's pleasure be known.

The 9th Section enacts that each of the High Courts to be established thereunder shall have and exercise all such civil, criminal, &c., jurisdiction, and all such powers and authority in relation to the administration of justice, as Her Majesty may by Her Letters Patent direct, but subject to such limitations as are prescribed thereby; and that, save as by Her Letters Patent may be otherwise directed, and subject and without prejudice to the legislative powers of the Governor General in Council, &c., the High Courts shall have and exercise all jurisdiction and every power and authority whatsoever in any manner vested in any of the Courts abolished under the Act, &c. By the 15th Section of the same Statute it is declared that the High Courts shall have superintendence over all Courts which may be subject to its appellate jurisdiction, and power to make general rules for regulating practice and procedure of the subordinate courts, to prescribe forms, and to settle tables of fees, provided that such general rules, forms and tables are not inconsistent with the provisions of any law in force, and shall, before they are issued, have received the sanction of the Governor General in Council.

6. The Letters Patent creating the High Court for the North-Western Provinces do not subject the High Court to the executive power of the Governor General in Council further than by declaring Her Majesty's pleasure that the Court shall comply with such requisitions as may

be made by the Government for records, returns and statements in such form and manner as the Government may deem proper.

7. Seeing, then, that the Judges of the High Court derive their powers immediately from Her Imperial Majesty and from Parliament, and are directly responsible to the supreme authority of Her Imperial Majesty for the proper discharge of the functions committed to them, the first question that arises is—whether they are subject to the executive power of His Excellency in Council further than is declared by the Statute or by the Letters Patent, and whether it is within the province of His Excellency in Council in a published resolution to approve of or condemn the action of the Court in any matter which falls clearly within the functions committed to the Court.

8. The next question that arises is—whether, in distinctly conferring on the Court all such powers and authority for and in relation to the administration of justice within the territory subject to its jurisdiction, as Her Majesty might by Her Letters Patent direct, save as might be thereby expressly limited and subject to the legislative powers of the Governor General in Council, and in committing to the Court superintendence over all courts subordinate to its appellate jurisdiction, it was not the intention of Parliament to exclude the executive authority from such functions, and consequently whether it is not beyond the competency of any authority other than the High Court to instruct the subordinate courts touching the conduct of their judicial duties.

The Court must not be understood as questioning the competency of His Excellency in Council to notice and punish misconduct on the part of an officer of a subordinate court, though it ventures to think this power might be more fairly exercised after reference to the High Court to which the officer is subordinate; but it is submitted that in the exercise of this power regard should be had to the peculiar functions committed to the High Court and any declaration avoided as to the law which should have been administered or procedure which should have been adopted in a particular instance, seeing that proceeding from so high an authority any such declaration could not but influence the subordinate courts in other cases.

If it be competent to any other authority than the High Court to exercise such functions conflicting directions may confuse the subordinate courts and impede the administration of justice.

9. The Court believed that this important distinction between the functions of the Executive Government and the High Court had in a measure been recently recognized by the Governor General in Council in the sense for which it now contends, on the occasion of a reference made at the instance of the Court by the Hon'ble Sir William Muir when holding the office of Lieutenant-Governor of the North-Western Provinces.

10. But assuming that the action of His Excellency in Council is within his high prerogative, the Court cannot but regret that no intimation was conveyed to it of the intention of His Excellency in Council to take action, and no opportunity afforded it for explanation or statement before the publication of your letter in the *Gazette*. The course pursued has obliged the Court to invest the vindication of its office with an appearance of protest, which the high respect it owes to His Excellency in Council would have induced it on any less grave occasion to avoid. Having regard to the source from which its functions are derived, the Court submits it was entitled to expect an opportunity of addressing His Excellency in Council before the publication of a resolution which cannot but impair its authority.

11. The case of the Crown *v.* Fuller was, it is believed, first brought to the notice of the Government of India by the published translation of extracts from the vernacular press. These translated extracts are not furnished to the Court, and the first intimation which the Court received of the proceedings in the Crown *v.* Fuller was contained in two letters from the Secretary to the Local Government. In the first letter it was mentioned that the case had attracted the attention of the Government of India, and it was suggested the Judges might wish to see the papers; and in the second letter the record was enclosed, and the opinion of the Judges requested by His Honour the Lieutenant-Governor as to the adequacy of the sentence.

12. Some of the Judges doubted whether they ought to express an opinion on a question which it was competent to the Government to bring formally before them by motion in Court. But as a matter of courtesy, and in the belief that the Local Government was acting in concert with the Government of India, the record was submitted to each of the five Judges who constitute the Court, and a unanimous opinion was recorded that the sentence, though lighter than the Court would have been disposed to inflict, was under the circumstances not specially open to objection, and therefore did not call for interference. This opinion was communicated to His Honour the Lieutenant-Governor.

13. His Excellency in Council expresses his regret that the Court should have considered its duties and responsibilities in this matter were adequately fulfilled by the expression of such an opinion.

14. The Court may allow it would more properly have discharged its duty had it pointed out to the Government that, if doubt were entertained of the propriety of the sentence, it should be moved to exercise its powers of revision by one of the three law officers appointed to represent the Government in the High Court. The procedure adopted deprived the Court of the advantage of hearing the arguments of the law officers of the Crown.

15. It is doubtless within the competency of the Court of its own motion to call for and revise the proceedings of the subordinate courts, and it not unfrequently exercises this power, although for reasons which are obvious it is at all times chary of interfering to enhance

sentences passed by the subordinate courts, but it also permits parties to the proceedings to move it to exercise its powers of revision. It is submitted that it would be more convenient if, when the Government which is a party to every criminal proceeding, is alive to any apparent defect in the administration of criminal justice, it moved the Court through its law officers to call for the proceedings, and, if necessary, to correct them in revision.

16. When, however, the Court at the instance of the Government had perused the record, and had arrived at the opinion that on the facts found by the Magistrate (facts which His Excellency in Council admits to have been *correctly* found) the sentence was inadequate, but not so inadequate as to call for interference, the Court fails to perceive that in abstaining from further action it showed itself insensible of its duties or responsibilities.

Whilst giving, as it is at all times prepared to do, the fullest consideration to the opinion of His Excellency in Council on the adequacy of the punishments awarded by the Courts in any class of cases, the Court is assured His Excellency in Council will admit that any court (superior or subordinate) would violate its duty if in any particular case it suffered its own convictions as to the sentence which the ends of justice required it to pronounce or affirm to be overridden by any other consideration.

17. In view of the stricture publicly passed on the course pursued by the Court, the Court feels it due to itself to explain its opinions as to the duties of a Magistrate and the law which in such cases as that of the Crown *v.* Fuller he is bound to administer.

The 196th Section of the Code of Criminal Procedure declares in what cases a Magistrate is to make a commitment. The Court reads this section and instructs the subordinate courts—that a Magistrate is to commit an accused person only when *he is satisfied* from evidence which appears to him fairly trustworthy that there is a *primâ facie* case against the accused that he has committed an offence triable exclusively by the Sessions Court, or High Court, or an offence which *in the opinion of the Magistrate* he himself is not competent to visit with an adequate sentence. Where then a Magistrate, acting in good faith, gives effect to his own convictions he simply does his duty, however unwisely, in dealing with the accused himself. If a Magistrate were to commit an accused person without being satisfied there were grounds or cause for the commitment, he would be guilty of a breach of duty and of an injustice for which there is no remedy. On the other hand, if he has through an error of judgment failed to commit an accused person when he should have committed him, or passed on an accused person an inadequate sentence, the law provides for the revision of his proceedings.

18. But the Court is constrained to inform His Excellency in Council it could not direct the subordinate courts that, on the facts disclosed by credible evidence in Fuller's case, it would be the duty of a Magistrate to commit an accused person either on a charge of culpable homicide or of voluntarily causing grievous hurt.

19. With some additions and one slight alteration those facts are correctly stated in the second paragraph of your letter. Katwaroo, the deceased, was a well developed and muscular man. Fuller struck him twice on the head and face with his open hand, and seized him by the scalp-lock. Katwaroo fell to the ground, whether of his own accord or by reason of force exerted by Fuller the evidence leaves doubtful. He then rose and ran into an adjoining compound, a distance of two hundred or three hundred yards, where he again fell down. In the report of the *post-mortem* examination Dr. Christison records that there were no external marks of violence, that the spleen was ruptured on its inner surface, and that "the cause of death was probably a fall or a blow over the spleen," and that a slight injury might be sufficient to cause this result. On cross-examination in the Magistrate's Court Dr. Christison deposed that, in his opinion, a man receiving so serious an injury of the spleen as that he had described would have been unable to do anything in the way of exertion afterwards, as he would be rapidly weakened by the loss of blood, and that he should not have expected a man to be able to run two hundred or three hundred yards after receiving the injury described.

20. It also appears from the record that the Magistrate was careful to inquire of all the witnesses whether Fuller was in the habit of striking his servants. The coachman, who had been in Fuller's service for *fourteen months*, swore that Fuller had not during that period on any other occasion beaten any of his servants.

21. On referring to the Court's letter in answer to the Secretary to Government, North-Western Provinces, it will be seen that the Court so expressed itself as to leave it open whether the fall in Fuller's compound, which the Court considered the more probable cause of death (for it was not shown that Fuller had struck the deceased over the spleen), was the direct or indirect result of the assault, and that the Court adverted to the medical evidence showing that the injury might have been occasioned by moderate violence or by a fall. But assuming the injury to the spleen was the direct result of the act of Fuller, the Court would be unable to hold that under the circumstances Fuller could by the law of India have been convicted, or properly placed on his trial for either of the grave offences suggested in the 7th para. of your letter.

22. The law of India relating to offences against the person differs materially from the law of England. Under the law of England, a man who commits an unlawful act, and in the commission of such act involuntarily causes death, is guilty of murder if the unlawful act be a felony, or what is known to the law as a *malum in se*: and he is guilty of manslaughter if death ensues from any other wrongful act committed without justification or excuse.

The framers of the Indian Penal Code denounced these principles of the law of England as unworthy of enlightened legislation. Speaking generally (for there are exceptions) they proceeded on the principle that a man should be held criminally responsible only for such results of his act as he intended or knew to be probable.

23. To take the case suggested by Lord Macaulay. If a man while stealing a handkerchief from a pocket accidently caused the explosion of a loaded pistol which the owner of the handkerchief carried without the knowledge of the thief, and in consequence of such explosion the owner was shot and died, the thief would by the law of England be punishable for murder, while by the law of India he could only be convicted of theft. To take another case. If a man while shooting deer without leave in another's park in sport—without any feloneous intent, and after having taken every reasonable precaution to avoid injury to by-standers—by his shot kills a by-stander and a deer, he is by the law of England amenable to a charge of manslaughter; whereas by the law of India he is amenable only to a charge of mischief in killing the animal.

24. By the law of India, as by the law of England, a person causing bodily injury to another who is labouring under a disorder, disease, or bodily infirmity, and thereby *accelerating* the death of that other, is deemed to have "caused his death." Nevertheless, every causing of death does not amount to the offence of culpable homicide. Unless it be proved that a person who has caused the death of another caused death with the intention—

(1) To cause death;
(2) to cause bodily injury likely to cause death;
(3) to cause such bodily injury as he knew to be likely to cause death to the person to whom the harm is done;
or (4) to cause bodily injury to any person sufficient in the ordinary course of nature to cause death;
or with the knowledge—
(5) that he was likely by his act to cause death;
or (6) that his act was so eminently dangerous that it must in all probability cause death or such bodily injury as is likely to cause death—

the person who has caused death cannot by the law of India be convicted of culpable homicide of either description.—[*Note on the amendment of the Penal Code by the Honourable J. F. Stephen.*]

25. Nor can a person be convicted of the offence of *voluntarily* causing grievous hurt, unless it be proved that he caused one of the descriptions of hurt defined in the Code as grievous hurt either by means whereby he intended to cause such hurt, or by means which at the time of employing those means he knew or had reason to believe to be likely to cause it.—(Indian Penal Code, Section 39.)

26. In Fuller's case there was no evidence that he had committed any of the kinds of hurt defined in the Code as grievous hurt; and although a person is by law presumed to know and to intend the ordinary and probable result of his acts, the result could hardly be declared ordinary or probable; while the circumstances rebutted the presumption of intention or knowledge to commit either culpable homicide or grievous hurt.

27. If it be held that, because disease of the spleen is not uncommon in this country, and because when persons are afflicted with the disease in a particular form death may result from very slight violence, therefore every person must be presumed to know that in striking a Native he is likely to cause death, it follows that every person, as well Native as European, who strikes a Native is amenable to a far more serious charge than that under which such offences are now usually punished.

The Court, in view of the consequences, does not find itself justified in directing the subordinate courts to adopt a presumption which the infrequency of a fatal result does not appear to warrant.

28. Your letter contains no allusion to the 304th Section of the Indian Penal Code, enacted in 1873, which renders a person criminally responsible when death results from his rash or negligent act. It is presumed that this provision of the law did not appear applicable, and with this view the Court is disposed to agree.

29. A section drafted in 1870, which provided for the punishment of illegal killing, and defined that offence as the causing of death by an illegal act in cases other than those which constitute culpable homicide, would have met the circumstances assumed in Fuller's case; but the section was withdrawn or rejected in Committee, and it is clearly opposed to the principles on which the Code was framed.

30. In the opinion of the Court, Fuller, although he caused hurt and more than hurt, only intended to cause hurt, and only used means which he knew, or had reason to believe, to be likely to cause such hurt. He was therefore properly convicted of voluntarily causing hurt without adequate provocation.

31. In the view taken by the Court of the law it is bound to administer, that ordinarily an accused person is liable to punishment only for such results as he intended or knew to be probable, the Court could not direct the subordinate courts that on such facts as were disclosed in Fuller's case a heavier sentence should have been imposed than a Magistrate is competent to pass on a European British subject, namely, rigorous imprisonment for three months and a fine of Rs. 1,000, nor that a much lighter punishment, than a Magistrate is competent to inflict, would not have satisfied justice.

32. Furthermore, the Court would be unable, in the view it entertains of the law, to direct the subordinate courts that in awarding the punishment of fine they should regard the compensation due to those who are indirectly injured by the commission of an offence.

The Court admits that a Magistrate may properly consider whether compensation has been voluntarily made by the offender, because such an act is an indication of contrition. But even in this respect the Magistrate must exercise judgment, otherwise it would be competent for the rich to secure a partial immunity from the consequences of their offences. But where no compensation has been voluntarily made, it is the duty of the Magistrate in imposing a fine to have regard only to the ends of justice (that is to say, the deterring others from the commission of the offence) and the means of the offender The 308th Section of the Code of Criminal Procedure does not convert a court of criminal justice into a forum for granting civil relief. When the Magistrate has determined the amount of the fine he should impose in view of the considerations above-mentioned, he is empowered to order the payment "to the complainant or the party injured," or both, of the whole or a part of the fine as compensation for the expenses of the prosecution, or for the offence, and "in any subsequent civil proceedings relating to the same matter" the Court must take into account the sum so awarded.

33. But the relations of Katwaroo were not left without a remedy, inasmuch as the Indian Act XIII of 1855 allows the wife, husband, parent and child of a person whose death has been caused by a wrongful act to maintain a suit and recover damages in respect thereof.

34. In determining what degree of punishment is required in the interest of the public, the Court is accustomed to consider whether an offence is increasing or decreasing in prevalence. The circumstance that the class of offence which evoked the indignation of His Excellency in Council is dying out argues that the sentences heretofore awarded by the Courts have not proved insufficient for the ends of justice. The Court desires to assure His Excellency in Council that it views such offences with as much abhorrence as has been expressed by the Government of India, and that should necessity be shewn it will not be slow to avail itself to the utmost of the powers confided to it for their repression, and to point out to the subordinate courts that severity has become a duty.

35. The Court is constrained to express its apprehension that the imposition on a Magistrate of a severe penalty for what in any view was a mere error of judgment in a single instance, is calculated to deter from the impartial discharge of their duty all those officers who are dependent on the executive for their advancement. The Court, therefore, ventures to solicit His Excellency in Council to re-consider the orders passed on the Joint Magistrate, Mr. Leeds—an officer who during a long service has by his ability and diligence earned the respect of the High Court and it is believed the confidence of the Local Government, and whose action could not but have been influenced by the views of the law entertained by the Court to which he is subordinate.

36. Should His Excellency in Council be unable to resolve the questions suggested in the 2nd to 10th and 15th paras. of this letter in a sense favourable to the independence and authority of the High Courts, the Court prays that the points raised may be referred for the consideration and orders of the Most Noble the Principal Secretary of State for India.

No. 647 A, dated Naini Tal, the 31st August 1876.

From—B. W. Colvin, Esq., Offg. Secy. to the Govt. of the North-Western Provinces,

To—The Offg. Secretary to the Government of India.

In continuation of my letter No. 610 A, dated 15th August, I am directed to forward, for the consideration of His Excellency the Governor General in Council, the accompanying Minute* recorded by the Honourable the Chief Justice of the High Court of Judicature for the North-Western Provinces regarding the case of *Regina* v. *Fuller*.

* Dated the 18th of August.

Minute by the Honourable Sir Robert Stuart, Chief Justice, North-Western Provinces, respecting the Resolution of the Government of India in the case of *Regina* v. *Fuller*,—dated Allahabad, the 18th August 1876.

The terms of the Court's letter to the Government of India on the published resolution in *Regina* v. *Fuller* were carefully considered by me, and, in full concurrence with my colleagues, had and have my entire assent. But the matters embraced in that letter have suggested to my mind considerations, my views as to which I desire to record in this form.

2. That letter by the Court raises and determines four very serious questions. The *first* relates to the authority and powers of this High Court; the *second* has regard to the relative authority and powers of His Excellency the Governor General in Council; the *third* deals with the merits of the case of *Regina* v. *Fuller*; and *fourth*, and in connection with these merits, and generally, the position of Mr. Leeds, who tried, convicted and sentenced Fuller.

3. It results from the examination afforded by paras. 4, 5 and 6 of the Court's letter that the High Courts of Judicature in India are not the Courts in any sense, or in any degree, of the Government of India, or of His Excellency the Governor General in Council, but the Courts of Her Majesty the Queen, constituted and established by Her Majesty, not arbitrarily or for any undisclosed reasons, but constitutionally on the public grounds and conditions, and for the purposes and with all the rights and privileges with which Her Majesty has thought fit to invest them: the principal of these being that the High Court, or any of the Judges thereof, were not to be answerable for any act of duty done in virtue of their office

to any authority whatever, save that of Her Majesty herself in Council. This distinctly and sufficiently appears from the express terms of the charters of the several High Courts; and with respect to the High Court Act 24 and 25 Vic., Cap. 104, such characteristic, quality and position of the High Courts is one of the provisions applicable to the old abolished Supreme Courts, which, by Section 11 of the said Act, are revived and applied to the substituted High Courts as will presently appear.

4. The 9th Section of the Statute 24 and 25 Vic., Cap. 104, referred to in para. 5 of the Court's letter, further provides that "the High Court to be established in each Presidency shall have and exercise all jurisdiction and every power and authority whatsoever in any manner vested in any of the Courts in the same Presidency abolished under this Act at the time of the abolition of such last-mentioned Courts;" and by Section 10 of the same Act it is provided that "all jurisdiction now exercised by the Supreme Courts of Calcutta, Madras and Bombay respectively over inhabitants of such parts of India as may not be comprised within the local limits of the Letters Patent to be issued under this Act establishing High Courts at Fort William, Madras and Bombay shall be exercised by such High Courts respectively." Section 11 provides that all laws then in force applicable to the abolished Supreme Courts or to the Judges of those Courts, "shall be taken to be applicable to the said High Courts and to the Judges thereof, respectively, so far as may be consistent with the provisions of this Act and the Letters Patent to be issued in pursuance thereof, and subject to the legislative powers in relation to the matters aforesaid of the Governor General of India in Council," and Section 12 saves all proceedings pending in the abolished Courts, and provides that "such proceedings, and all previous proceedings in the last-mentioned Courts, shall be dealt with as if the same had been had in the said High Court save that any such proceedings may be continued as nearly as circumstances permit, under and according to the practice of the abolished Courts respectively."

5. By Section 16 of the same Act Her Majesty is empowerd by Letters Patent to erect and establish a High Court of Judicature for the North-Western Provinces, with the like jurisdiction, powers and authority as were conferred on the other three Courts, as far as circumstances may permit, and this intention has been fully carried out by the Court's charter issued by Her Majesty's warrant under the Great Seal of England on the 17th day of March 1866 in the 29th year of Her Majesty's reign.

6. In order adequately to apprehend and appreciate the full force of these provisions of the High Court Act, it is necessary to advert to the terms of the charters of the abolished Supreme Courts. They are all three to the same effect, but that of Calcutta may be selected for the purposes of this Minute. This charter, after reciting the Act of Parliament under which it was granted, and stating the names and position of the Judges who were to compose the Court, goes on to provide as follows: "And it is our further will and pleasure that the said Chief Justice and the said Puisne Justices shall severally and respectively be, and they are, all and every of them, hereby appointed to be justices and conservators of the peace, and coroners, within and throughout the said provinces, districts and countries of Bengal, Behar, and Orissa, and every part thereof; and to have such jurisdiction and authority as our justices of our Court of King's Bench have, and may lawfully exercise, within that part of Great Britain called England, by the common law thereof:" and it is further and subsequently provided in the same charter that "the said Supreme Court of Judicature at Fort William in Bengal should also be a Court of Equity, and shall and may have full power and authority to administer justice in a summary manner, as nearly as may be, according to the rules and proceedings of our High Court of Chancery in Great Britain; and, upon a bill filed, to issue subpœnas and other process, under the seal of the said Supreme Court of Judicature at Fort William in Bengal, to compel the appearance, and answer upon oath, of the parties therein complained against, and obedience to the decrees and orders of the said Court of Equity, in such manner and form, and to such effect as our High Chancellor of Great Britain doth, or lawfully may, under our Great Seal of Great Britain." And it was also provided by the charter that the Supreme Court, besides being a Court of Common Law, like the Court of Queen's Bench in England, and a Court of Equity, like the Court of Chancery in England, should be a Court of Oyer and Terminer and Gaol Delivery, "and shall have the like power and authority as Commissioners or Justice of Oyer and Terminer and Gaol Delivery, have or may exercise in that part of Great Britain called England * * * * and to proceed to hear, examine, try, and determine indictments and offences, and to give judgment thereupon, and award execution thereof, and in all respects to administer criminal justice in such and the like manner and form, or as nearly as the condition and circumstances of place and persons will admit of, as our Courts of Oyer and Terminer and Goal Delivery do or may in that part of Great Britain called England * * * * and to all other acts which shall be necessary for the due administration of criminal justice in such manner and form, or as nearly as the circumstances and condition of the case will admit, of our Courts of Oyer and Terminer and Gaol Delivery may do in that part of Great Britain called England." And there are various other provisions of the same nature, all showing that the Supreme Court established by the charter was not only to be modelled in the English form in all respects, but to have its jurisdiction and authority protected and enforced on the same constitutional principles as those recognized in the case of the English Courts, the only difference being that, instead of proceeding by appeal and error in Parliament, the appeal from the Supreme Court was to be to the King in Council.

7. The charter of the Supreme Court contains anxious provisions where the old East India Company is a suitor before it, and for compelling the Company's appearance and their

pleading where necessary ; and with respect to the Governor General and his Council, the only provision which the charter contains relates to the safety of their persons and exemption from arrest, although in this respect the Chief Justice and Judges of the Supreme Court are placed on the same footing and are similarly exempted."

8. The Supreme Court was thus thoroughly independent and amenable to no authority whatever in the exercise of its official and judicial powers, save and except only to the King in Council ; and even then in regard only to "judgments, decrees, orders or rules."

9. Such were the character, authority and powers of the old Supreme Courts, and if there was nothing else on which to base the complete independence of the High Courts as the successors of the former in the exercise of their functions, the above recitals would surely be enough, showing, as they do, not only that the Supreme Courts enjoyed the independent authority and prestige of English Courts, but they were judicially answerable solely and only to the King in Council. The express words of the charters of the High Courts, however, in which there is not the slightest recognition, directly or indirectly, or by any kind of implication, of any authority over or right of interference with, these Courts by the Governor General in Council, or any other prerogative authority whatever in India, leaves no doubt on the subject.

10. Irrespective, however, of any such provisions of the law, the reasons and the policy which determined Parliament and the Crown to invest Her Majesty's Courts, and Her Majesty's Judges in India with such official and judicial independence are very apparent.

11. In the first place the investment of the Courts with such independence exceedingly increases and magnifies the responsibility of the Judges to Her Majesty for any errors, misconduct, or misfeasance with which they might be chargeable. In the second place there are no persons or authorities in India possessed of qualifications which could fit them to supervise or in any way control Her Majesty's Courts, for, I say it with all respect, His Excellency and his Council, with one exception, are not legally and technically learned persons. They have not within themselves as a body, necessarily and intrinsically, any official, forensic, or judicial training, or experience in matters of law, and they could not, however, justly dispose (and they could not be otherwise than justly disposed), satisfactorily perform the duties of directors or superintendents of the Courts. I say with one exception, although even my honourable and learned friend Mr. Hobhouse who so ably fills the place of Legal Member of Council would not, I am sure, maintain that he is either entitled himself to exercise, or that, by force of his great knowledge and position, he can impart to His Excellency and the other Members of Council any Pretorian powers in the way of supervision, direction, or control over these Courts. And in the third place, any such authority on the part of the Governor General in Council would lead to the anomaly of the Crown acting inconsistently with, if not contradicting, not only its own royal charters, but the legislative enactments of the Imperial Parliament itself. His Excellency the Governor General in Council in India acts in a purely delegated character and exercises delegated authority, and not independently of Her Majesty the Queen and her Government as represented by her Secretary of State ; and all his acts, resolutions, and proceedings are subject to Her Majesty's allowance or disallowance ; and any resolution therefore of His Excellency at variance with, or purporting to be at variance with, the prerogatives and independence of the Queen's Courts would impose on Her Majesty and her Ministers the painful and anomalous duty of considering whether they would treat the Indian Courts in a manner different from, and other than, the consideration and respect which in a similar or corresponding issue, would undoubtedly be shown by another department of Her Majesty's same Government to the Courts and Judges in England. But this I hope I may believe could not possibly be. No Home Secretary in England would dream of interfering, by the expression of regrets or of opinions of approval or disapproval with the manner in which the English Judges discharge their duties and responsibilities ; and it appears to me difficult, if not impossible, to understand that Her Majesty's Secretary of State for India would be otherwise disposed in the case of Her Majesty's Indian courts.

12. The only element in the High Courts which might be supposed to favour, however covertly, any opposite contention might perhaps be imagined to be the presence in the High Courts of Judges who are the representatives and successors of the old Sadr Courts, which undoubtedly were to a great extent under the influence and control of the Government of India, and even of the Local Government. But the Sadr Courts were entirely abolished by the High Court Act, and it is important to observe that it is *after*, and not before, the section abolishing these Courts that its provisions determining the independent character of the Court and the appeal to Her Majesty in Council are to be found. Nor, unlike the provisions relating to the old Supreme Court, to which I have referred as having been revived and made applicable to the High Courts, is there a single word or expression in the Act, or in any of the High Court's charters, saving or continuing any portion, feature, or quality of the Sadr Courts. The independent character therefore of the High Courts is wholly unaffected by the presence, if any, in its constitution of the Sadr Court element.

13. The 9th paragraph of the Court's letter states that the distinction between the functions of the Executive Government and the High Court have in a measure been recently recognized by the Governor General in Council on the occasion of a reference made by the Honourable Sir William Muir, now a Member of Council, but then Lieutenant-Governor of these Provinces. But it appears to me that it would be useful to advert more fully to the circumstances of that case, showing how completely justified the Court is in referring to it.

14. That was the case of *Girdhari Lal* v. *Hearsey*, and the question which was ultimately referred for consideration to the Government of India arose in this way. While at Dehra Dun in camp in the cold season of 1872 and 1873, the Lieutenant-Governor paid a visit to the jail, and found there Girdhari Lal, the plaintiff in the suit, who ultimately, by reason of the defendant's plea of minority, lost his case in the High Court with costs, and it was for these costs which he was unable to pay that he was in jail.

15. The man being in prison under such circumstances excited the Lieutenant-Governor's sympathy, and His Honour had recourse to the expedient of drawing up a Resolution, dated 23rd January 1873, the 3rd paragraph of which was as follows :

"The Lieutenant-Governor accordingly thinks that the Subordinate Judge should take the earliest opportunity of proceeding under Sections 280 and 281 of Act VIII of 1859, and calling on the prisoner to file a list of his property against which proceedings may be taken, and, in default of any further means of payment being shown to exist, that the Subordinate Judge should consider whether, under the provisions of the law, he should not be released from further imprisonment." It will be observed that there is here, directly from the Lieutenant-Governor to the Subordinate Judge, what is neither more nor less than a judicial order that certain procedure should be adopted for the prisoner's release from jail, and it was ordered by His Honour that a copy of this resolution should be sent to the Subordinate Judge at Dehra and to the High Court.

16. The irregularity of this proceeding on the part of His Honour at once attracted the attention and action of the High Court ; and a correspondence ensued in which the Court pointed out to the Lieutenant-Governor the error he had committed, under a mistaken view of his position and duty, by interfering, as he had done, with the Court's process, informing him distinctly that "it was the interference with a judical officer's procedure in his Court that the Court thought it necessary to notice. It regrets to see from the concluding portion of the 2nd paragraph of your letter His Honour still justifies his action." The correspondence ended by the Court's requesting that a complete copy of it should be forwarded to the Government of India.

17. In due time the Government of India communicated its opinions on the case, and there is now before me the letter from the Government of India (marked Home Department, Judicial, dated the 20th March 1874) in which these opinions are explained. In this letter His Excellency in Council points out a misapprehension on the part of the Lieutenant-Governor of the precise question for the determination of which the High Court had requested that the correspondence might be forwarded to the Government of India, and correcting that misapprehension His Excellency proceeds to remark as follows : "But the matter upon which the High Court throughout this correspondence have laid stress relates, not to the tenor of these instructions given on the spot after a visit to the jail, but to the form and substance of the instruction contained in the resolution which was published and communicated to the Court and to the Subordinate Judge of Dehra, in which the Subordinate Judge was prompted to proceed under certain sections of the Civil Procedure Code, and to call on the prisoner to file a list of his property. * * * * And what the High Court contend is that instructions and suggestions, such as those contained in this Resolution of the 23rd January, as to the course which they should pursue in the discharge of their judicial duty, should not be communicated to judicial officers subordinate to the Court. Upon this point I am to say that His Excellency the Governor General in Council concurs with the opinion expressed by the High Court, and considers that it is undesirable to issue such instructions, or to publish them in a resolution. And though His Excellency in Council is by no means prepared to lay down that the chief executive authority of a province may not properly and usefully admonish Judges in other departments of action, still less that he may not see that all remedies which the law permits are fully applied to remove unnecessary hardships in the law's operations, yet I am to observe that functions of this kind should be exercised with caution, especially having regard to the statutory powers of superintendence vested in the High Court." And the letter of His Excellency ends thus : "Though of opinion that the terms of the resolution in question have been justly objected to by the High Court, the Government of India wish at the same time to express their entire approval of the object which the Lieutenant-Governor sought to attain by the instructions of December 1872 and with the tenor of those instructions." This letter from the Government of India appears to be conclusive as to its understanding of the distinction between the functions of the Executive Government and the High Court.

18. The independence of the High Courts in relation to the Executive Government being thus thoroughly established, and also fully recognized by the Government of India itself, we were scarcely prepared for the communication from the same quarter which, to our extreme surprise, we have received, and which has occasioned this discussion. For that such a communication at least purports to, and shows a disposition to, invade the Court's independence, is clear, even if it actually and legally does not, and cannot have that effect : and the Court is entitled to complain of, and to remonstrate against, such an attitude on the part of the Executive Government towards it, as relatively an independent institution.

19. The "regret" expressed by the Governor General in Council in the 4th paragraph of the letter referred to is really a judgment by His Excellency arrived at by his mind being judicially exercised, and after calling the High Court to his bar. Now the mere statement of such a view of the matter—a statement which, however apparently extravagant, is nevertheless, with reference to the scope of the paragraph, a perfectly correct one—is almost enough to show how untenable is the position taken by the Government of India towards the High Court. But this

false position (if I may without disrespect say so) on the part of the Government towards the Court will further appear from what actually occurred in the case of *Regina* v. *Fuller*, so far as the Court is concerned.

20. That case was first brought to the knowledge of the Court by a demi-official letter from the present Local Government of these Provinces to Mr. Tyrrell, the Court's Registrar, dated the 31st of March last, enclosing the record of the case, and begging that it might be laid before the Judges, and asking their opinion as to the adequacy of the sentence. This was the first time the case came before the Court at all, and it will be observed that, however judicially the Court may be supposed to have been consulted by the Local Government, the case did not come before the Court in the form of an appeal, or by way of revision, or by any method or proceeding which necessitated or involved any hearing *in foro*, with a judicial determination thereon. The Court's opinion was simply asked as a matter of courtesy, and in accordance with a practice on the part of the Local Government of consulting the Court simply by letter where any legal difficulty was experienced in its administration—a practice, however, which I have often felt was open to many objections. Of course the Court is not bound to answer such enquiries, but the disposition of the Judges is always, if possible, to assist the Government, although they generally keep in view the possibility of the matters so submitted to them being brought before them in their proper judicial capacity.

21. On this subject the observations in the Court's letter leave nothing material to be added, and they ought, I think, to be conclusive to the mind of any one of judicial experience in criminal cases in India as to the position in which the High Court was placed, not by any act of its own, but on the unanticipated invitation of the Local Government.

22. As stated in the Court's letter, any fault that could be imputed to Mr. Leeds was at most an error of judgment, and in a single instance, and to punish him in the manner intimated in the Government's letter appears to me to be not only unjust and unreasonable, but also contrary to law. For Mr. Leeds, however amenable in a general sense, personally and socially, to the Government of India and their subordinate Governments, was not in any way answerable to any Government authority for his *judicial* conduct. In that respect he is amenable only to the High Court, and it is not even usual to entertain complaints against subordinate judicial officers without communication and consultation with the High Court as the legally constituted superior authority.

23. Respecting Mr. Leeds' conduct, however, it does not appear to me that he was guilty of any serious error of judgment; and I humbly venture to think that, having regard to the principles of culpability recognized by the criminal law, Mr. Leeds' comparative immunity from error is shown by the manner in which the facts are referred to in the letter of the Government of India itself. It is there stated that Mr. Fuller struck the syce with his open hand on his head and face, and pulled him by the hair, so as to cause him to fall down. Mr. Fuller and his family drove on to church; the syce got up, went (it would have been more correct to have said ran) into an adjoining compound, and there died almost immediately. It would appear from the medical evidence that the spleen of the deceased was in such a diseased state that very slight violence, either from a blow or fall, would have been sufficient to have caused death. Indeed, it is plain that a mere accident to the man, such as his tripping while walking or running, might have had this fatal result; but that there is nothing in the case to show that such extreme and perilous sensibility of body was known to, or could have been reasonably suspected by Mr. Fuller; and his guilt or criminal responsibility would have been the same, and neither more nor less, if Katwaroo had not died. The letter of the Government of India goes on to state that "the death of Katwaroo was the direct result of the violence used towards him by Mr. Fuller," and His Excellency in Council observes that "the High Court assumes the connection between the two events as being clear," but adding "yet, on reading Mr. Leeds' judgment, he does not find that that gentleman ever considered the effect, or even the evidence of this connection." The portion of the Court's letter thus referred to is in these terms:

"The medical evidence shows that the spleen was in a diseased condition; that death was caused by the rupture of the spleen; that this injury might have been caused by moderate violence or by a fall; and that there were no external marks of injury on the body. Under these circumstances it appears that no great violence was used, and that the accused neither contemplated nor could have foreseen that severe hurt would have resulted from the degree of violence exerted by him, much less that it should have been followed by the lamentable result of death." It will be observed that Mr. Fuller's not very violent blow and Katwaroo's death are here stated as connected facts, but not in such a way as to show Mr. Fuller's culpability in regard to the death. In fact it is unnecessary to dwell on the mere fact of the connection between the two circumstances, the material and vital question being, not whether the death did in fact result from the blow, but whether Mr. Fuller had such a guilty knowledge of the probable consequences as to make him really responsible for the fatal occurrence. But there is nothing in the record to show any such guilty knowledge on his part, or that he intended to occasion a hurt which would ordinarily or probably cause death, and every circumstance ought to have been distinctly proved, and not left to any kind of inference or suspicion. With respect to Mr. Leeds' judgment, I must really venture to differ from His Excellency in Council, and suggest that that judgment proceeds on the evidence before the Magistrate; that it distinctly states the fact of the blow or assault, as it may be called, and also Katwaroo's ultimate death; but it does not state—and, with great respect and deference, I submit it very properly does not state—these as necessarily connected facts against Mr. Fuller in the way of measuring his

culpability. Mr. Leeds was trying the case under Sections 319 and 323, Indian Penal Code, and with the judgment now before me I cannot see that he omitted any material consideration in any way arising out of the evidence.

24. Mr. Leeds cannot be charged with any mistake or error of judgment in taking a faulty view of the case before him under Sections 319 and 323, and it is correctly stated in the Court's letter that he could not have committed Mr. Fuller for trial on a charge of culpable homicide or of voluntarily causing grievous hurt. But if, by any straining of any section of the Penal Code, Mr. Fuller had been committed for trial before the Sessions Court or the High Court, the result would in all probability have been, and I think must have been, the same; if, indeed, the fine might not have been even less, for the syce had violated his duty and disobeyed his master's orders, and had incurred at least a severe reprimand, under which he might have equally taken to his heels, as Native servants often do when they are scolded, and thus ruptured his diseased spleen; for, on the evidence, it is not at all improbable that the running into the contiguous compound, ending with the fall there, caused the injury to the spleen and the death, or at least materially contributed to these two results.

25. Stated, however, at its worst, Mr. Leeds was guilty of nothing except a mistake or error of judgment; and if such mental shortcoming is to be visited with not merely judicial correction, but with personal punishment to the erring officer, there is not, I will undertake to say, a single Magistrate of any grade, European or Native, in these Provinces—I might venture to say in all India—who could pass scatheless through such an ordeal. My experience indeed as a Judge of a High Court does not point to any particular tendency on the part of Magistrates to adopt a lenient view of cases on trial before them, whether the accused persons are Europeans or Natives, but quite the reverse; and I have been particularly struck with the severity which Native Magistrates sometimes evince in these cases. Nor can I for a moment believe that in his investigation of Mr. Fuller's case Mr. Leeds was in any degree actuated, either in favor of Mr. Fuller or against Katwaroo, by any feeling relating to their being of different races. There is not the slightest indication, either in his judgment or in the record of Mr. Fuller's case, to indicate the existence of such a feeling, and I cannot appreciate the reasonableness of visiting Mr. Leeds with penal consequences, simply because he performed his duty according to the light of his intelligence and with no improper or corrupt motive. He has always borne the highest character for industry and care, and no officer subordinate to the High Court has been held in higher esteem by the Judges. I find he has been in the Civil Service of India for about fifteen years, and that he has actually served for about twelve, and during the whole of that time no fault of temper or conduct has been entertained or recorded against him. I trust therefore that the re-consideration of this matter, as requested in the Court's letter, may have its intended effect, and that the penalty recommended to be inflicted on Mr. Leeds may be cancelled. Should this not be conceded, my fear is that the moral effect of such a state of things on the young magistracy of the country may be not such as the Government of India would desire. Already there have been indications of this, and I myself have recently had occasion to repress the undue zeal of some young Magistrates.

26. In a previous part of this Minute I have referred to the regret expressed by His Excellency in Council respecting the conduct of the High Court in this matter as being a judicial opinion which invaded the Court's independent authority; and it is, I think, scarcely too much to say that if the power to administer such a censure could be justified, there is not a prosecution, suit, appeal, or any other judicial proceeding of the High Court with which the Government of India could not similarly interfere, not even excepting cases in which the Government of India itself is a party, and it is frequently a litigant. The very case under consideration is that of *Regina* v. *Fuller*, and His Excellency in Council might have been reminded that he himself, and not the friends of the deceased man, was the real and legal prosecutor, and in that sense Mr. Fuller's litigious adversary.

27. The Court's letter expresses regret on the Court's part that no intimation was conveyed to it of the intention of His Excellency in Council to take action, and no opportunity afforded it for explanation or statement before the publication of His Excellency's letter in the *Gazette*; and the Court further states that Fuller's case was, it is believed, first brought to the notice of the Government of India by published extracts from the Vernacular Press, and that these published extracts were not furnished to the Court; and the course thus pursued towards the Court does not appear from the Government of India's letter itself to have been, nor has it been in any way, explained, and this I deeply regret.

28. In some European countries the judicial office is not held in the high esteem with which it is regarded by the Government of Her Majesty the Queen and by the English Parliament, but is made subordinate to a minister who may to a large extent control the action of the courts. But it is otherwise with regard to Her Majesty's Courts of Judicature, and Her Majesty's Judges holding their Commissions, as they do, direct from the Queen herself. These Courts and Judges can even entertain and decide questions relating to the impugned validity of acts and proceedings of the Crown itself; and in India the High Courts can call in question the validity, and, if necessary, declare to be invalid, all acts, proceedings and measures on the part of the Government which can be shown to be *ultra vires* of their province. And so commissioned, this High Court will go on in the discharge of its duties and responsibilities uninfluenced by any consideration other than the true exposition of the law and the sound administration of even-handed justice.

29. I have now, and only, in conclusion to assert, which I do most confidently, that no Court, body, or constituted authority could treat the natives of this country with greater con-

sideration on all suitable occasions than this Court invariably does, never allowing any opportunity to pass of rebuking any misconduct towards them.

No. 37, dated Simla, the 12th October 1876.

From—The Government of India,

To—Her Majesty's Secretary of State for India.

WE have the honour to forward the correspondence noted in the margin with the Government of the North-Western Provinces and the High Court at Allahabad on the subject of the criminal trial of Mr. Fuller by the Joint Magistrate of Agra, Mr. Leeds, in November 1875.

Letter to the Government, North-Western Provinces, No. 116, dated 20th January 1876.
Letter from the Government, North-Western Provinces, No. 313 A, dated 18th May 1876, and enclosures.
Letter to the Government, North-Western Provinces, No. 1098, dated 7th July 1876.
Letter from the Government, North-Western Provinces, No. 610 A, dated 15th August 1876, and enclosure.
Letter from the Government, North-Western Provinces, No. 617 A, dated 31st August 1876, and enclosure.

2. Briefly stated, these are the facts on which Mr. Fuller was tried: He had, on account of some slight unpunctuality on the part of his syce, assaulted the man by striking him on the head and face, and pulling him by the hair. Under this assault (which Mr. Fuller alleges to have been committed with the open hand and not with the fist) the man fell down; then rose, ran into an adjoining compound, and died almost immediately. A *post-mortem* examination proved that the man had died from rupture of the spleen; for which, in the diseased condition of that organ, the violence he had suffered was sufficient cause. For this assault Mr. Fuller was indicted by Mr. Leeds, under Section 323 of the Indian Penal Code, on a charge of "causing hurt to his syce," tried on that charge, and sentenced to a fine of Rs. 30.

3. Certain notices in the Vernacular Press drew the attention of the Government of India to the case, and on the 20th of January last, we requested the North-Western Provinces Government to furnish us with information respecting the alleged inadequacy of the sentence passed on Mr. Fuller. This information was given by that Government in its letter No. 313A, dated 18th May, and it was fully reviewed in the letter of this Government, No. 1098, dated 7th July.

4. From these two papers, Your Lordship will perceive that the case had apparently passed without notice from the Local Government previous to its receipt of our communication. Thereupon, however, the Lieutenant-Governor called the attention of the High Court at Allahabad to the case, and obtained from them an intimation that, though the sentence awarded by the Joint Magistrate was, in the opinion of the High Court, perhaps inadequate, yet that it did not seem to the Court especially open to objection. The Lieutenant-Governor, in forwarding the Court's answer, stated that, in His Honour's own opinion, the case did not call for further action.

5. In that opinion we were unable to concur. It appears from Mr. Leeds' judgment that Mr. Fuller is a European British subject; and a Magistrate of the rank of Mr. Leeds cannot inflict on a European British subject any sentence heavier than that of a fine of Rs. 1,000 and 3 months' imprisonment: whereas the punishment allowed by law for the offence of simple hurt is a fine of Rs. 1,000 and 1 year's imprisonment, to say nothing of that which may be awarded for the graver offences suggested by an illegal act resulting in death. We also thought that the occasion more specially called for the notice of superior authority, because the case was not an isolated case, but one of several in which very insufficient sentences had been passed for similar offences. It seemed to us that the course adopted by the Joint Magistrate was open to two serious objections: We believed, in the first place, that Mr. Leeds had shown a grave want of discretion in dealing with the case himself, and that he might, and ought to, have remitted to a superior tribunal the questions both of the legal degree of guilt attaching to the acts of the accused, and of the proper degree of punishment applicable thereto. We considered, in the 2nd place, that, even supposing Mr. Leeds had acted rightly in dealing with the case himself, the penalty which he inflicted on the accused was scandalously inadequate, and in fact purely nominal.

6. We accordingly intimated our regret that the Government of the North-Western Provinces had allowed the case originally to pass without notice, and that the High Court had deemed their duties and responsibilities adequately discharged by such a mere expression of opinion as the case had called forth from them. We at the same time censured Mr. Leeds for his want of judgment and judicial capacity, and desired that he should not be employed in any higher office for at least a year.

7. We have since received, as will be seen, a letter from the High Court at Allahabad, and a Minute written by the Honourable the Chief Justice Sir Robert Stuart, which deal with our observations and orders, and raise certain objections of a legal or constitutional character, on which we will comment after dealing with some separate matters.

8. Apart from their legal objections, the Court observe that the case of *Regina* v. *Fuller* was never fully laid before them, and express regret that the Government of India, by challenging their view of the case before they had arrived at a matured and deliberate judgment on it, should have virtually censured the Court on an informal expression of opinion

which they had no opportunity to explain or re-consider. Inasmuch, therefore, as the Court themselves imply that some more satisfactory result might have followed further reference to them, it must be regretted that the formal and precise character of the reply given by the Court to the enquiry of the Local Government left us no reason to suppose that it did not express their deliberate and final opinion, and, in fact, that opinion now appears to stand unchanged in all material points.

9. In their 8th paragraph, the Court, while they admit the authority of the Executive to censure or punish misconduct on the part of an officer of a subordinate Court, express an opinion that this authority would ordinarily be more fairly exercised after reference to the Court to which that officer is subordinate. We do not dispute this position; on the contrary, we have usually, on such occasions, sought the assistance of High Courts, and gladly acknowledge the aid we have received from them. We may say, in fact, that such a reference is almost invariably our practice. Certainly, in the present case, we should have been very glad if the Court had seen their way to interpose by the exercise of either their judicial or their executive functions; that is, either by calling up the case, or by rebuking the Magistrate. If the Court had so acted, we should have been relieved from the duty of reproving the Magistrate ourselves. But, as before pointed out, we had every reason to believe that the Court, having had their attention called to the case, had declared an opinion which we were unable to accept.

10. In their 10th paragraph the Court express apprehension that our resolution may impair their authority. We, however, are anxious that they should exercise their authority in such cases; and we think that our expression of regret that they have not done so is calculated rather to strengthen than to weaken their hands whenever they put in action those functions of reproof and advice which are involved in their general duty of superintendence.

11. So far as their 15th paragraph is concerned, we concur in the general expediency of the course recommended by the Court, though there are some practical difficulties in the way of always adopting it. In the present instance it was quite within the competence of the Court to have required a more formal procedure. We are willing, however, that, as far as possible, the course which the Court indicate should be adopted in similar cases for the future, and will gladly avail ourselves of any suggestion from the Court for rendering that course more generally practicable.

12. By far the most important portion of the remonstrance addressed to us by the Court lies in paragraphs 2 to 10 of their letter; and inasmuch as we cannot resolve in the sense suggested and desired by the Court, the questions raised in this part of their letter, though we do not conceive that we have in any way encroached on their authority or independence, we refer them to Your Lordship in accordance with their wishes. Whilst so doing, we are glad to acknowledge the temperate and dispassionate manner in which the Court have stated their views concerning their relations to other parts of the Indian system of Government.

13. The arguments on which the Court and Chief Justice rely in claiming for the High Court's entire independence of the Executive may be briefly stated as follows:

In establishing the old Supreme Courts of Judicature in the Presidency Towns, the Crown, they say, delegated its inherent powers for the administration of justice to tribunals intended to be generally independent of the Executive in the discharge of their functions; and it was the intention of Parliament to invest the present High Courts with a similar independence. The Statutes under which these Courts were established declare that the Judges shall hold office during Her Majesty's pleasure, and only empower the Governor General in Council (or the Governor in Council as the case may be) to receive their resignation and make temporary appointments to vacancies on the Bench. The Courts were, by the Act, invested with such powers as the Crown might confer on them by Letters Patent; but subject to these Letters Patent, and to the legislative action of the Governor General in Council, they were to possess the same powers as those of the Supreme and Sudder Courts which the Act abolished, as well as a general superintendence over the Courts subordinate to their appellate jurisdiction, although the rules made for this and other similar purposes were to be subject to the sanction of the Governor General in Council. The Letters Patent, moreover, only declare that the Courts should obey the requisition of the Government for such records, returns, and statements as the Government may require.

14. On these grounds, the Court question the right of the Governor General in Council to approve or condemn their action in any matter within the jurisdiction of the Court. The Court's letter also suggests that, in giving to the High Courts power and authority to administer justice and exercise superintendence over the subordinate tribunals, it was the intention of Parliament to exclude the Executive Government altogether from any share in such functions.

15. The Chief Justice carries his conclusions further. He contends that the Supreme Courts, in the exercise of their official and judicial powers, were amenable to no authority but that of the King in Council, and to this only in respect of judgments, decrees and orders appealed from; that the power of the Supreme Courts, limited only by the Letters Patent, has descended intact to the High Courts; and that no authority anywhere exists competent to review the action of the High Courts except in those cases in which appeals are preferred to the Privy Council from their decrees. The Chief Justice also goes on to compare the relations existing in India and in England, respectively, between the Judiciary and the Executive.

16. We do not think it necessary to follow the learned Chief Justice into his comparison of Indian with English arrangements; nor to enquire how far the various ranks of the Magistracy in England may be subjected to comment or correction from Her Majesty's Executive Government, or from the Houses of Parliament which influence the Executive. We have simply to enquire whether, Indian arrangements being what they are, it is beyond the province of the Governor General in Council to reprimand or to punish an Indian Magistrate whom he considers to have erred in the discharge of his duty, or to remark on what he believes to be the shortcoming of a High Court.

17. For the same reason we do not enter upon any enquiry how far the High Courts stand in the position of the Supreme Courts, and how far in that of the Sudder Courts, nor stop to point out the extremely limited jurisdiction of the Supreme Courts. The High Courts Act established machinery compounded of various pre-existing elements and some new ones, but forming a new and different whole, and the question what part it plays in our system should, we conceive, be decided on other grounds than those of inheritance or tradition.

18. By Act of Parliament the Governor General in Council is charged with the "superintendence, direction and control of the whole Civil and Military Government" of British India, subject in turn to the control of the Secretary of State in Council. The Governor General in Council is, therefore, the only authority in British India invested with the entire responsibility of every department and function of Government. There can be no question that the administration of justice is one of the most important functions of Government. Misbehaviour in the charge of judicial functions, from whatever cause proceeding, brings the administration of justice into contempt, and nothing is more calculated to derange the social order which it is the especial duty of the Government to preserve.

19. Each of the High Courts in India is invested with some important executive functions within its own province. The High Courts Act gives to them the superintendence over all subordinate Courts; with power to call for returns, and, subject to the control of Government, to make rules for practice, besides performing other acts of supervision. They have also been invested by Acts of Indian Legislature with divers controlling powers; and, in the case of some minor Civil Judges, with powers of punishment. They are, therefore, an important portion of the executive administration of the country.

20. We are quite unable to find in the High Courts Act, or in any Charter, an intention to substitute the High Court for the Government of India in that portion of the administration which consists of reviewing or controlling the acts of the Magistracy. There is no power there given to them of appointing, promoting, removing, suspending, or in any way punishing (except that reproof may follow upon superintendence) any subordinate Magistrate whatever. It can hardly be supposed that the Legislature meant to leave the whole power of reward and punishment in the hands of one authority, and the whole power of commendation, reproof, and advice in the hands of another.

21. We are equally unable to see how, in the Acts or Charters relating to the High Courts, anything can be found to show that their executive action enjoys immunity from comment, whether by the Governor General in Council, as contended by the Court, or by all other authorities, as contended by the Chief Justice. If it were so, there might be any degree of supineness on the part of a High Court, or refusal to use the powers committed to them, and yet not a word could be said, according to one view, by the authority responsible for the whole Civil Government of India, and, according to the other view, by any authority at all. With regard to the language of the High Courts Act respecting the appointment of Judges, on which the Court seem disposed to lay stress, we should rather say that if it has any bearing at all on the present question, it would, when read by the light of the history of the English judicature, lead to a conclusion very different from that drawn by the High Court.

22. Unless, therefore, we are otherwise instructed by Your Lordship in Council, we shall continue to act on the principle that it is our duty, in the ultimate resort and in adequate cases, to censure and to punish flagrant miscarriages of justice; and to comment, when necessary, on the course of the administration of justice in India. We are sensible of the delicacy of this power, and we feel assured that the Government of India will never use it wantonly or indiscreetly.

23. We have dealt with the subject in its broadest aspect, because we think that the question is distinctly so raised by the letter and minute under review. But the Court, as distinguished from the Chief Justice, do not press to its full extent the principle on which they rely. Seeing that the power of reward and punishment resides with the Executive alone, they draw a distinction between the present case and other cases which they do not specify; and they suggest (in their paragraph 8) that, though the Government of India may interfere sometimes, it is not right for anybody but themselves "to instruct the subordinate Courts touching the conduct of their judicial duties," and that the Government of India should avoid any declaration "as to the law which should have been administered, or procedure which should have been adopted, in a particular instance"

24. Upon that distinction we have to observe that, in the present instance, we have carefully guarded ourselves from expressing any opinion on the substantive law of the case; that is to say, we have expressed no opinion as to what was the legal nature of the offence of which Mr. Fuller should have been found guilty upon the evidence ultimately received by the Court. The learned Judges have bestowed some attention on that question, but we do not consider it relevant to the discussion.

25 The overt and undisputed facts of the case are that Mr. Fuller committed an act of illegal violence, and that it caused death. Between those two facts is comprehended a whole

series of offences ranging from simple hurt to wilful murder. Such an act with such a result may amount to either of those crimes, or to culpable homicide, grievous hurt, or rashness causing death. The degree of criminality depends on the intention.

26. Now there may be cases of offences triable either by a Magistrate or the Court of Sessions, according to the magnitude of the crime involved, in which the intention is so clear, and the lighter character of the offence so palpable, that a Magistrate may properly take them as established on preliminary enquiry and deal with the case himself. But in cases of homicide this is rarely proper. The question of intention is usually one of nicety and not so plain as to be decided on a preliminary enquiry.

In the present case, there was some evidence given at the trial which if believed (the Joint Magistrate did not believe it, and we have assumed that he was right), would have given to Mr. Fuller's offence a much graver complexion than Mr. Leeds considered it to possess; and we think that both the evidence and the legal definition of the offence ought to have been left to the judgment of the higher Court. Moreover, the act of illegal violence committed by Mr. Fuller belonged to a class of offences which ought, for obvious political reasons, to receive the fullest, the most public, and the most authoritative examination, whenever they occur, by a tribunal competent to inflict upon any offender, whatever his nationality, such sentence as may be found to be appropriate.

27. We therefore censured Mr. Leeds, not for an error in law, but for an error in conduct. We consider that the Joint Magistrate, having, for the trial of this case, an option between two tribunals, evinced a culpable want of discretion in selecting that one before which evidence either of the graver class of crime, or of an aggravated instance of the lighter class would be useless for want of jurisdiction. We consider further that this primary error was seriously augmented by the passing of a sentence which, if regarded only in reference to the evidence received and the indictment framed by the Joint Magistrate, was still so inadequate as to constitute a mockery of justice.

28. If we are right Mr. Leeds has been justly censured, and we are not to be debarred from censuring him because his faultly act was a judicial act. The position taken by the Court would shut us out from noticing all judicial acts, however corrupt, however arbitrary, however perverse, however calculated to bring obloquy on our administration. Such a position cannot, as we conceive, be maintained.

29. It is true that the Court seem to suggest in their 17th and 18th paragraphs that the circumstances of the case were such as under the 196th Section of the Code of Criminal Procedure left no discretion whatever to the Magistrate, and that he was bound to try the case himself on the lightest charge consistent with the undisputed facts. We have, however, much difficulty in ascertaining the precise meaning of the Court, for in their paragraph 18 they apply the reasoning of paragraph 17 to the facts actually disclosed by credible evidence; whereas the question is, what facts appeared on preliminary enquiry, and what facts should have been taken, when such grave results had happened, as fairly likely to be disclosed before a competent tribunal. To the principles expressed in paragraph 17 we take no exception. The action of the Magistrate is to depend, according to those principles, on his being satisfied, and on his own opinion. But a man may be satisfied on reasonable or unreasonable grounds, and may form his opinion with or without care and judgment. A certain degree of irrationality or carelessness is visitable with censure, and we think that such a case occurred here.

30. If indeed we thought that the law compelled a Magistrate, on preliminary enquiry, to ascertain precisely the legal character of the offence, we should at once propose to alter the rule of procedure; for the result would be to confine to the lower and least experienced Court the decision on all delicate questions of law and evidence, and to refer to the superior and more experienced Court, which moreover alone has the assistance of a jury or assessors, only those cases in which there could be little or no possible question either of law or of fact, and every such case would thus be twice fully investigated—once by the Magistrate and once by the Judge. We feel assured that the intention of the framers of the Code of Criminal Procedure was very different from that involved in this view, and that the clause in question is calculated merely to assist the discretion of the Magistrate, and to indicate the point to which he is bound to carry his investigation before relegating a case to the Sessions Court for complete trial.

31. With reference to the case mentioned by the High Court in paragraph 9 of their letter, and again by the Chief Justice, we have only to remark that this case had nothing to do with the misconduct of a Judge, and has no bearing on the present question.

32. Your Lordship will observe that both the High Court, the Chief Justice, and the Lieutenant-Governor unite in recommending that our order suspending Mr. Leeds from the exercise of his Magisterial functions may now be withdrawn in consideration of that officer's general character for ability and diligence. We are glad to receive testimony so favourable to Mr. Leeds. But our order was not passed on any consideration of his general character. It was passed with exclusive reference to what we considered to have been a flagrant miscarriage of justice in this particular case. The facts on which that opinion was founded remain unchanged. If the order we passed upon them was at any time a just one, its justice cannot now be impugned; and we are of opinion that the revocation or reversa of it would destroy the good it was intended to effect.

33. In conclusion, we observe that the High Court seem somewhat out of order in addressing their letter (though it was forwarded to us through the Government of the North-Western Provinces) direct to the Government of India instead of to the Local Government. But the subject-matter of the correspondence is so important that we do not consider it right to delay the transmission of it to Your Lordship in Council for the rectification of a mere error in form.

No. 5 (Judicial), dated India Office, London, the 22nd March 1877.

From—The Secretary of State for India,

To—The Government of India.

I HAVE received and considered in Council your letter of the 12th October 1876, No. 37, together with the letter of the Registrar of the High Court of the North-West Provinces, and of the Chief Justice of that Court, enclosed therein.

2. These papers record the circumstances under which it seemed proper to Your Excellency in Council to censure Mr. Leeds, Joint Magistrate of Agra, for his proceedings in the case of Mr. Fuller, who was accused before him of an assault upon his servant, resulting in the death of the latter.

3. Your orders in this case have been commented upon at much length, both by the Court of the North-West Provinces collectively, and by the Chief Justice of that Court separately. Exception is taken in these criticisms both to the justice of the sentence passed upon Mr. Leeds, and to the propriety of any interference on the part of Your Excellency's Government with the proceedings of the High Court, or of the tribunals subject to its jurisdiction. On the present occasion I will consider the first point only, reserving for another despatch the grave constitutional questions raised by the protest of the High Court.

4. Two points in Mr. Leeds' conduct of this case are, in your judgment, open to censure. It was open to him to deal with the case himself, or to refer it to a higher Court. He decided to deal with it himself. When he had come to this decision, and had formed his judgment as to the precise legal character of the offence, it was open to him to inflict the full penalty within the scope of his powers, or to inflict a mitigated penalty. He decided to inflict a penalty so mitigated that, as you observe, it was merely nominal.

5. There can, I think, be no doubt that, upon these two points, Mr. Leeds possessed entire discretion to act according to his judgment, and for the mode in which that discretion was exercised, he is, of course, responsible.

6. The fact that Mr. Fuller's violence resulted in the death of his servant, should, in your judgment, have led Mr. Leeds to remit the matter to a higher Court for trial, both because such a Court would have been more competent to sift the evidence on which the character of the offence depended, and also because, even if no graver offence had there been brought home to Mr. Fuller than that of which he was actually convicted, the higher Court would have possessed a far larger latitude of punishment. The same consideration should also, in your view, have induced Mr. Leeds, after he had decided to deal with the case himself, to have inflicted a severer penalty.

7. The High Court, on the other hand, dwells on the well known departure of the Indian law from its English model in determining the effect of fatal consequences upon the criminal character of the illegal act.

"The law of India relating to offences against the person differs materially from the law "of England. Under the law of England, a man who commits an unlawful act, and in the "commission of such act involuntarily causes death, is guilty of murder, if the unlawful act "be a felony, or what is known to the law as a *malum in se*; and he is guilty of manslaughter, "if death ensues from any other wrongful act committed without justification or excuse.

"The framers of the Indian Penal Code denounced these principles of the law of England "as unworthy of enlightened legislation. Speaking generally (for there are exceptions), they "proceeded on the principle that a man should be held criminally responsible only for such "results of his act as he intended or knew to be probable."

And the Court develops this consideration at some length.

8. I infer from the pains which the Court have taken to expound the Indian law upon this point, that in their view your Government has censured Mr. Leeds for not taking the fatal issue into consideration in deciding on the quality of Mr. Fuller's offence. If you had done so, your orders, certainly, could not have been upheld. But I do not see how any such construction can be put upon your words. You confine yourself to those parts of the Magistrate's duty which were undoubtedly matter of discretion—his resolution to decide summarily, and the nominal amount of his sentence. Upon these points, I agree with you in thinking that Mr. Leeds, having a discretion, was bound so to exercise it as to discourage the employment of violence to servants, and to uphold in the public mind the sacredness of human life. He exercised it in a manner likely to bring about exactly opposite results, and in so doing became justly obnoxious to your censure.

9. The indiscretion of disposing by summary hearing of an offence which had caused a sacrifice of life was enhanced by the fact that the evidence upon the question of intention was certainly conflicting; while upon the intention depended the question whether the offence was trivial, and falling within the cognizance of the Magistrate, or a much graver offence, reserved for the superior tribunal. Three witnesses swore that, in addition to the blow with his hand, Mr. Fuller kicked his servant in the stomach. One witness "made no mention" of this circumstance, and the accused denied it. If the three witnesses were correct, there can be little doubt that Mr. Fuller was guilty of a more serious offence, which Mr. Leeds had no authority to dispose of summarily. Mr. Leeds believed the accused, supported by the silence of one witness, and disbelieved the three who testified against him. Some of the reasons he gives for this view are certainly open to serious criticism; yet it is quite possible he may have been right as to the facts. But this conflict of evidence very much adds to Mr. Leeds' responsibility in deciding, as he practically did, that the superior Court could not have convicted Mr. Fuller of the graver crime.

10. The fatal consequence of Mr. Fuller's violence did not, according to Indian law, increase its criminal character; but it did increase most materially the importance of ascertaining the exact nature of the crime committed, not only accurately, but in such a manner that the accuracy of the decision should be generally recognized. When death has been caused, it is of the utmost importance to satisfy the community that impartial justice has been done, and this necessity is specially urgent where the deceased is dependent and helpless, and the person causing death belongs to a superior class of society. In Western countries, public feeling has been dangerously moved in such instances by the suspicion that an undue leniency was likely to be exercised on account of the difference in position between the deceased and the accused. Perhaps no such danger is to be apprehended in India; but the duty is not less imperious of guarding against a misconstruction which would be dishonouring to the law and would diminish the security of life.

11. It was doubtless not without pain that Your Excellency inflicted a censure upon an officer to whose general conduct so many high authorities have borne favourable testimony. I do not doubt that you gave, and will continue to give, full weight to such important recommendations. But I am of opinion that the inadequate condemnation of misconduct such as that of which Mr. Fuller was guilty is likely, especially in India, to be attended with great public mischief, and therefore I think that you were fully justified in severely noticing Mr. Leeds' treatment of the case.

12. In conclusion, I must express my conviction that, in your course throughout this difficult case, Your Excellency has been guided by an anxious care for the more helpless classes under your rule, and have to assure you of the warm sympathy of Her Majesty's Government with the feelings by which your conduct has been inspired.

No. 6 (Judicial), dated India Office, London, the 22nd March 1877.

From—The Secretary of State for India,

To—The Government of India.

I HAVE made some observations in Despatch No. 5, of this day's date, upon Your Excellency's orders in regard to Mr. Leeds, so far as they concerned the conduct of that Magistrate.

2. Before any notice of it was taken by your Government, your predecessor had directed the attention of the Government of the North-West Provinces to the case. Under the Indian Law, the High Courts possess the power of their own motion of calling up and re-hearing criminal causes disposed of by the subordinate Courts, and, if need be, of revising their sentences. Having regard to this power, the Government of the North-West passed on the inquiry of your predecessor to the High Court, and received from them a reply, stating that "the sentence though perhaps lighter than the High Court would have been disposed to inflict under the circumstances, did not appear to be specially open to objection." In reference to this reply, Your Excellency observes—"The Governor General in Council cannot but regret that the High Court should have considered that its duties and responsibilities in this matter were adequately fulfilled by the expression of such an opinion."

3. The High Court conceived that in this passage of your Secretary's letter, as well as in the censure passed upon Mr. Leeds, Your Excellency had exceeded your province, and dealt with matters which were not within your competence. The Court, in expressing this opinion, further requested that, in case you should feel yourself unable to accede to their view, the points raised by them should be referred for my consideration and orders.

4. I have carefully considered in Council the matters so referred to me, and have now to make the following observations upon them. The Judges of the High Court, in discussing the action of the Executive Government, rely partly upon the language of the Act and Letters Patent by which the High Court has been established, partly upon the independence of the Executive, which, according to the general intention of English legislation, is accorded to Courts of Justice. The Chief Justice, in a separate Minute, holds similar, though stronger, language.

5. The material question raised is, whether Your Excellency, in the measures you have taken, has exceeded the province which, either by law or by practice, has been assigned to the Executive Government. In considering this point, it is material to bear in mind that some of the functions exercised by the High Courts in India are, according to the practice of this country, strictly executive functions. The supervision of the subordinate Courts, so far as any means exist of exercising it at all, is here confided to officers who form a portion of the Executive Government, and, in respect to the tenure of their office, possess no judicial

independence. Unpaid Magistrates who misconduct themselves are reproved, or, if need be, removed by the Lord Chancellor. In the case of Stipendiary Magistrates, a similar duty devolves upon the Home Secretary. The review of the decisions of subordinate tribunals belongs, of course, to superior Courts; but the action by which they are submitted to the consideration of a superior Court, so far as it is exercised by any public authority at all, is initiated by the Attorney General or at the instance of an Executive Department.

6. In this case, therefore, it appears to me that the question of the relations between the Judicial and Executive authorities is not in reality raised. In censuring Mr. Leeds, and in expressing your regret that the authority responsible for doing so did not bring his proceedings under judicial review, Your Excellency was dealing with purely executive functions, which it is your special province to control. The fact that these functions are, by an exceptional arrangement, partially committed to the High Court does not, in my judgment, alter their executive character, or withdraw them from the superintendence of the Executive Government.

7. The peculiar character of the duties, however, in respect to which your opinion was expressed, has escaped the notice of the Judges of the High Court, and they have conceived themselves bound to raise the much wider question whether, and how far, the mode in which their judicial duties is performed is a proper subject for the animadversion of the Government of India. The question is not in my view raised by these papers. It is, therefore, now, and I trust will long remain, purely speculative. If, therefore, the Judges had not distinctly requested my opinion on the point, I should have preferred to reserve the consideration of it till the necessity for a decision practically arose.

8. The question the Judges of the High Court have, however, formally submitted for my decision, is whether "they are subject to the executive authority of Your Excellency in Council, further than is declared by the Letters Patent, and whether it is in the province of Your Excellency in Council, in a published Resolution, to approve or condemn the action of the Court in any matter which falls clearly within the functions committed to that Court." The Chief Justice, in the Minute appended by him to the letter of the High Court, lays down, in support of this view, "that the Indian High Courts enjoy the independent authority and prestige of the English Courts."

9. It seems to me that in this contention the vital difference between the tenure of English and Indian Judges is overlooked. Until the Act of Settlement all English Judges held their office, as Indian Judges do now, during Her Majesty's pleasure. When Parliament desired to assure their independence and to withdraw them from the authority of the Executive, it enacted that their Commissions should be made "during good behaviour." But when Parliament set up the existing High Courts of India in the year 1861, it did not think fit to adopt towards them the same policy which had been adopted and maintained towards the Courts in England. On the contrary, it was specially enacted that the Judges in all the Courts established under the Act of 1861 should "hold their offices during Her Majesty's pleasure."

10. It appears to Her Majesty's Government impossible to treat this difference, deliberately established between the Indian and the English Courts, as accidental or inoperative. In withholding from the Indian Judges the independence of the Executive, which had been on a solemn occasion formally conferred upon the English Judges, Parliament must be taken to have fully intended the consequences of the important distinction which it was sanctioning.

11. The right to dismiss any person holding an office, carries necessarily with it a right to indicate the conduct which may, if persisted in, incur dismissal. In other words, it involves the right to approve or condemn the action of the officer who is so liable to be dismissed.

12. I gather from some phrases used by the Court, and in his Minute by the Chief Justice, that a distinction is drawn in their minds between the powers vested in Her Majesty and those vested in Your Excellency. This distinction may be sustained when applied to any act of a formal character. A Judge might obviously decline to accept his dismissal from Your Excellency alone, and might ask to be assured that Her Majesty's pleasure had been taken; but in any case it could be only through you that such an intimation could be conveyed. The expression of approval or disapproval on Her Majesty's behalf to Her servants who hold office at Her pleasure, is one of the most important functions with which you are charged. You fulfil it in conformity with your instructions and subject to your responsibility to the Crown. But it does not appear to me that any person holding Her Majesty's Commission can claim to be informed of Her pleasure in any more direct or authoritative way than by a communication from the Viceroy.

13. This appears to me to be in strict right the relation subsisting between your Government and the Judges in India. But it is not necessary for me to state to you that, as a matter of policy, any executive action trenching on the independence of Judges in the exercise of their purely judicial functions, could only be justified by reasons of extreme necessity. Your Excellency is as deeply impressed as Her Majesty's Government with the importance of maintaining intact that confidence in the impartiality of the law Courts which any interference of the Executive, except under pressure of such reasons, would destroy.

Extract from the Proceedings of the Government of India in the Home Department (Judicial), —No. 690A., dated 30th April 1877.

READ again—

A despatch addressed to the Secretary of State, No. 37, dated the 12th October last, and its enclosures.

Read—

A despatch from the Secretary of State No. 5, dated 22nd March; also a despatch from the Secretary of State, No. 6, dated 22nd March.

RESOLUTION.—THE High Court at Allahabad in their Registrar's letter No. 2431, dated 5th August 1876, and the Honourable the Chief Justice in his Minute, dated 18th August 1876, took certain objections to the action of the Government of India in publishing the letter in this Department, dated 7th July 1876, which commented on the orders passed by Mr. Leeds, Joint Magistrate of Agra, and by the High Court itself in the case of Mr. Fuller, who was charged with causing the death of his syce by illegal violence.

2. As the Governor General in Council was unable to accept the views adopted by the learned Judges, His Excellency determined, at the High Court's request, that the entire correspondence should be submitted for the orders of Her Majesty's Secretary of State for India. This was done in the despatch of the Government of India, No. 37, dated the 12th October last; and the Secretary of State has now replied in two separate despatches, Nos. 5 and 6, dated the 22nd of March last.

3. These despatches deal with constitutional questions of high importance; and in view of the general interest of the subject, His Excellency in Council considers that they should be forwarded for the information of the Judges of the High Court, and should be published in the Supplement to the *Gazette of India*.

ORDER.—Ordered, that a copy of this Resolution and of the papers mentioned in the preamble be forwarded to the Government of the North-Western Provinces and Oudh for information and communication to the Honourable the Judges of the High Court; and that the entire correspondence be published in the Supplement to the *Gazette of India*.

From ARTHUR HOWELL, Esq., Officiating Secretary to the Government of India, Home Department, to the Secretary to the Government of the North-Western Provinces and Oudh,—No. 691, dated Simla, the 30th April 1877.

I AM directed to forward, for the information of the Lieutenant-Governor, and for communication to the Judges of the High Court at Allahabad, two despatches from the Secretary of State, Nos. 5 and 6, dated the 22nd March 1877, together with a copy of the despatch from this Government, No. 37, dated the 12th October last, to which they reply.

2. This correspondence deals with the action of the Governor General in Council in regard to the case of Mr. Fuller of Agra, who was tried before Mr. Leeds, Joint Magistrate, for causing the death of his syce.

3. You will perceive that the Governor General in Council, finding himself unable to acquiesce in the view of this case and of the important questions raised in connection with it, which the learned Judges of the High Court adopted, resolved, as requested by them, to submit the entire correspondence to the Secretary of State for India.

4. These despatches convey the Secretary of State's decision both as to the constitutional questions involved and as to the conduct of Mr. Leeds. Considering the great importance and general interest of this correspondence, the Governor General in Council has directed its publication in the Supplement to the *Gazette of India*.

5. You will receive a separate letter in respect to Mr. Leeds.

From ARTHUR HOWELL, Esq., Officiating Secretary to the Government of India, Home Department, to the Secretary to the Government of the North-Western Provinces and Oudh,—No. 692, dated Simla, the 30th April 1877.

From the Secretary of State, to the Government of India, Nos. 5 and 6, dated 22nd March 1877.

MY letter of this day's date, No. 691, forwards to you the two despatches noted on the margin,—one of which deals with the conduct of Mr. Leeds, and the other with the important constitutional questions raised by the High Court of Allahabad in reference to the orders of the Governor General in Council in the case of Regina *versus* Fuller.

2. I am to say in reference to the former despatch that the Governor General in Council considered necessary at the time to mark with severity his sense of the serious errors into which Mr. Leeds was betrayed in his judgment on that case.

3. His Excellency in Council did so however with regret, for he was fully aware of the general high character for zeal and ability borne by Mr. Leeds.

4. The orders of the Secretary of State now received so entirely vindicate the interests of public justice that His Excellency in Council is of opinion that it is no longer necessary to continue the punishment under which Mr. Leeds is suffering.

5. In accordance therefore with the recommendation of the High Court, supported by the Lieutenant-Governor in your predecessor's letter No. 610 A, dated 15th August last, I am directed to say that the Governor General in Council is pleased to remove the restriction placed on Mr. Leeds' promotion, and you are at liberty to place him in charge of a district as soon as a suitable opportunity offers.

ARTHUR HOWELL,
Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, Madras, No. 1940, *dated* 26*th April* 1877.

Read relief report for the week ending 14th April 1877, from the Collector of Kistna district, dated 17th April 1877, and from the Collector of Kurnool, dated 19th and 21st April 1877.

THE Board submit to Government the detailed relief reports for the Kistna and Kurnool districts for the week ending 14th April, in continuation of Board's Proceedings, 20th April 1877, No. 1817.

2. In Kistna prices are lower, rice having fallen in three, and cholum and ragi each in four taluks. The only case of rise of price is that of cumboo in Guntoor; other prices are stationary. Ragi has fallen very considerably in Guntoor and Bandar. Rain was registered at four stations, the fall at Vissanapett being 3 inches and at Vinukonda 1·93 inches.

3. In Kurnool rice has fallen at one station, Nandial, and is unchanged elsewhere. Cholum has risen at Nandikotkur, Pattikonda and Nandial, but fallen at Cumbum; ragi is stationary except at Nandial where it has risen. These changes of price, however, are nowhere very great. Six-tenths of an inch of rain fell at Nandial, and showers in two other taluks.

4. The only work in progress in Kistna is the Commaneer Canal extension which employed 2,423 labourers, and on which Rs. 47,259 have been expended from famine funds.

5. The numbers in the different taluks in Kurnool are compared below with those for the previous week:—

	7th April.	14th April.	
Ramalkota	40,391	32,995	— 7,396
Nandikotkur	12,330	12,232	— 98
Nandial	31,103	28,044	— 3,059
Sirwell	16,449	16,630	+ 181
Koilkuntla	32,679	32,381	— 298
Pattikonda	26,289	22,010	— 4,279
Cumbum	46,346	46,737	+ 391
Markapur	11,178	13,475	+ 2,297
Total	216,765	204,504	—12,261

The decrease in Ramalkota was due to drafts to the East Coast Canal. That in Pattikonda is stated to be nominal only, some coolies having been under transfer from one work to another; and that in Nandial is ascribed to concentration of labour. There is increase in the Cumbum division, ascribed to the opening of new works in Markapur. A new road, item No. 10, with 1,900 coolies, seems to have been started, and the Collector is requested to report on the necessity for this measure which seems to the Board undesirable. Those wanting employment might get it at the existing works or at the East Coast Canal. Of the coolies employed in the district, 190,690, or 93 per cent., were on 41 works having more than 1,500 coolies, and the average number on these works was 4,651.

6. Wages appear to be unchanged except in the Cumbum division. The new scale of money-wages has been introduced into Markapur, and is based on the price of rice 7½ seers. In Cumbum, money-wages to grain at 6 seers are paid in part, and there is an entirely new scale of purely grain wages, *viz.*, 60 tolas, 50 tolas and 30 tolas, also in force. This, it is presumed, has some connection with the recent orders of Government directing that the grain locally purchased should be used in payment of wages; but apparently it was not intended that the wages should be entirely in grain, but rather that the portion of the wage representing grain value should alone be given in kind. Orders are requested on the point.

G. O., 10th April 1877, No 1391.

7. In Kistna 2,998 persons, of whom 2,712 were in camps and relief houses, were in receipt of gratuitous relief.

The corresponding numbers in Kurnool, including in the former class the children on receipt of 3 pies a day, were 53,111 and 39,317. Children largely preponderate, as shown below, under both kinds of relief:—

	In camps.	Village.	Total.
Men	2,057	2,496	4,553
Women	2,830	3,893	6,723
Children	34,430	7,405	41,835
	39,317	13,794	53,111

The comparison by taluks is as follows:—

	7th April.	14th April.	
Ramalkota	16,060	13,726	— 2,334
Nandikotkur	2,205	3,236	+ 1,031
Nandial	5,750	7,185	+ 1,435
Sirwell	2,776	3,151	+ 375
Koilkuntla	5,409	10,000	+ 4,591
Pattikonda	10,652	4,460	— 6,192
Cumbum	3,172	6,453	+ 3,281
Markapur	817	4,850	+ 4,033
Total	46,841	53,111	+ 6,270

The decrease in Pattikonda is nominal and is due to imperfect return, so that the true increase is larger than that shewn. The increase is very great in Koilkuntla and in the Cumbum division. The report states that it is feared that the village reddies are abusing their relief powers, but that prompt measures are being adopted to check this.

Talukwar Abstract of relief in certain districts of the Madras Presidency for the week ending Saturday, the 14th April 1877.

District.	Taluka.	Grants of funds sanctioned for relief works up to 14th April 1877.	Probable cost of works or sum sanctioned for their execution.	Outlay on works in progress. In the week.	Outlay on works in progress. To the end of the week.	Outlay since the commencement of distress. On relief works.	Outlay since the commencement of distress. Gratuitous relief.	Cost of Gratuitous relief during the week.	Number of coolies employed on the last day of the week. Men.	Number of coolies employed on the last day of the week. Women.	Number of coolies employed on the last day of the week. Children.	Number of coolies employed on the last day of the week. Total.	Number of persons in receipt of gratuitous relief on the last day of the week. Men.	Number of persons in receipt of gratuitous relief on the last day of the week. Women. H. E. STOKES,
Secretary.

REVENUE BOARD OFFICE,
MADRAS;
The 26th April 1877.

Scarcity in Western and Southern India.

No. 27, dated India Office, London, 29th March 1877.

From—Her Majesty's Secretary of State for India,
To—The Government of India.

THE despatch of Your Excellency in Council, dated 16th of February, No. 11 of 1877, forwarding a summary of the principal matters which have engaged your attention in connection with the famine in Madras and Bombay since the 9th February, has been considered by me in Council.

2. Among the enclosures to the despatch are Minutes by Sir Richard Temple on the condition of Chingleput and North Arcot. In Chingleput the redeeming feature is that, in consequence of the presence of three railways in the district, the markets are well supplied with grain, but I regret to observe that the death-rate is very high in the relief camps, and that a heavy mortality among the cattle is expected, unless showers fall within the next six weeks. As this is the third bad season in the district, it cannot be regarded as matter for surprise that the Collector does not anticipate that more than half the land revenue will be realized.

3. In North Arcot, which Sir Richard Temple has now visited for the second time, he found the condition of the district less favourable than he had hoped it would prove when making his first enquiries. I trust that the Government of Madras has disposed of the departmental difficulties which have delayed the commencement of certain relief works, by appointing a superior officer, as suggested by Sir Richard Temple, for the general direction and control of all relief operations in the district.

4. I am glad to understand that Sir Richard Temple considers the relief arrangements in Mysore to be "carefully and economically conducted," and that, in the Ceded Districts and Kurnool, "the condition of the people is fair and good, and the private trade in grain extraordinarily active."

5. I concur in the opinion expressed by Your Excellency in Council and by the Government of Bombay as to the mischief of yielding to a strike on relief works attributable to combination.

6. The question of granting remissions of land revenue in Madras has been very properly left to the discretion of the Government of that Presidency.

7. It is satisfactory that the returns again show a decrease in the number of persons on the relief works in Madras, the aggregate number being, for the week under report, 876,000, as against 908,410 in the previous week. The number of persons receiving gratuitous relief is also reduced by more than 7,000, the figures being for the present week 53,287, and for the previous week 60,402.

No. 29 (Revenue), dated India Office, London, 6th Aprll 1877.

From—Her Majesty's Secretary of State for India,
To—The Government of India.

THE despatch of Your Excellency in Council dated 23rd February, No. 12 of 1877, forwarding further Minutes and Memoranda by Sir R. Temple relative to the famine in the Presidencies of Madras and Bombay, has been considered by me in Council.

2. The information contained in this despatch and its enclosures has been for the most part anticipated by telegrams from Your Excellency in Council. The Minutes of Sir R. Temple are full of interest, and I have only to record that the intelligence to be gathered from the despatch and its enclosures is on the whole more re-assuring than could have been anticipaled.

3. I fully concur in the praise bestowed by Your Lordship in Council on the punctuality, care and ability with which the taluka returns of the Bombay Presidency have been prepared, and I join with your Government in congratulating the Government of Bombay "on the manner in which the substancial safety of some five millions of people is being secured under circumstances of great danger."

No. 217, dated Bombay, the 28th April 1877.

From—C. E. BUCKLAND, Esq., C.S., *Private Secy. to* SIR RICHARD TEMPLE,
To—The Honourable T. C. HOPE, C.S.I., *Addl. Secy. to the Govt. of India.*

I AM directed by Sir Richard Temple to submit the papers named in the margin on the subject of the imports of grain into the Presidency of Madras and its transport by the Madras Railway.

1. Minute by Sir Richard Temple, dated Bombay, 28th April 1877.
2. Memorandum by Captain Bisset, R.E., of the imports of grain into the Presidency of Madras by sea and land.
3. Memorandum by Captain Bisset, R.E., on the movements of grain by the Madras Railway from August 1876 to March 1877.

2. In consideration of the interest attaching to the subject, the statistical tables contained in these memoranda have been placed at the disposal of the press for the information of the mercantile world.

Minute by SIR RICHARD TEMPLE, *dated Bombay, the 28th April* 1877.

LATER information makes it desirable to state finally the statistics of the imports of food grains into the Presidency of Madras since the commencement of the scarcity of 1876-77.

Copies of certain notes and memoranda by Captain Bisset are forwarded.

2. It was assumed originally on the published data of the Madras Board of Revenue that the imports before the month of November were altogether inconsiderable. The despatches of grain by rail from Madras were however during the months of August, September and October so much in excess of the total imports thus shown that it was doubted whether the Board's statements were complete. And on further inquiry it was ascertained that the 5,637 tons shown as imported during August, September and October from beyond the Presidency were supplemented by an import amounting to 38,000 tons from ports known by the Madras Board of Revenue as "subordinate ports."

3. Thus before November, the month previously recognised by me as the beginning of heavy imports, there were delivered into Madras a total of 44,000 tons of food grains. Some corrections have been made in the returns for the period from November onwards, the estimated imports for March having been very much exceeded by the actuals both at Madras and at the minor ports on the East and West Coasts, and the whole supply taken by the Presidency has to be stated at 535,000 tons.

4. The following is the abstract of importations in the Presidency of Madras :—

	Tons.
By sea from Bengal, Burma, Orissa and Ganjam to Madras and other East Coast ports	356,000
To Beypore	118,000
By the Great Indian Peninsula Railway	61,000
Grand Total ...	535,000

5. The following is an abstract of the quantities of grain which were carried away by rail from Madras into the interior :—

	Tons.
To Chingleput district	514
„ North Arcot	22,316
„ Mysore territory	45,542
„ Salem district	5,486
„ Coimbatore and Malabar	1,878
„ Cuddapah district	33,045
„ Bellary and Kurnool	37,335
Total ...	146,454

6. The despatches of grain from Madras from 3,000 tons in August rose to over 10,000 tons in October, and to more than 13,000 tons in November, from which time the despatches have been limited only by the carrying powers of the Madras Railway.

7. Hence it is apparent that there was a very great activity in the grain trade of Madras during the autumn,—a fact very material to the estimate which was formed of the conjuncture arising at that period.

RICHARD TEMPLE.

Memorandum by CAPTAIN W. S. S. BISSET, R. E., *on special duty, dated Bombay, the 28th April* 1877.

THE following notes are based upon returns which have just been obtained from Madras. The very extensive importation into Madras of grain from the subordinate ports during the months of August, September and October 1876 had escaped my notice, and I have to express my thanks to Captain Coaker, R. E., Deputy Consulting Engineer, and to Mr. H. E. Church, Traffic Manager of the Madras Railway, for having called attention to the matter and for having assisted me in obtaining the additional statistics now presented.

For the months of August, September and October 1876, the published statements of the Madras Board of Revenue show the import of food grains into the port of Madras at a total of 5,637 tons. During the same period the Madras Railway alone carried out of Madras 20,446 tons of grains, and the question arose where this supply came from.

The figures thus published are found to be the imports from non-subordinate ports only, the imports of food grains from the ports subordinate to the Madras Presidency during these months having actually amounted to 38,000 tons in addition to the 5,637 tons above mentioned.

During November and December 1876, 55,466 tons were delivered in Madras from beyond the Presidency, and 30,000 tons from the subordinate ports; while during the first three months of 1877 the imports of food grains into the port of Madras amounted to 165,852 tons from ports beyond, and 36,000 tons from other ports within the jurisdiction of the Local Government. The imports into the port of Madras commencing in August with a total of 15,000 tons steadily rose up to January 1877 when the total imports from all sources into Madras alone exceeded 80,000 tons.

The total food supply made available in Madras from August 1876 to the end of March was therefore—

	Tons.
From subordinate ports	104,000
From non-subordinate ports	227,000
Total ...	331,000

Of this vast supply, the Madras Railway forwarded from Madras over 146,000 tons, its maximum despatches having amounted to 35,000 tons during the month of March.

Up to the end of March the minor East Coast ports of Negapatam, Tuticorin and others imported 25,000 tons of grain, and this supply enabled Southern India to send to the more distressed districts served by the Madras Railway over 15,000 tons of food grain; Mysore taking over 8,000 tons of this amount.

During the same period, Beypore and Calicut received approximately 63,000 tons of food grains. Of this over 35,000 tons was sent up by rail, nearly all to Coimbatore, Salem and Mysore. The Malabar district probably received much of this by land, for it sent away by rail 5,000 tons of grain more than it received.

The other ports on the West Coast are said to have received 52,750* tons up to the end of February, and this large supply has all been distributed by cart.

* The total up to the end of March has been assumed at 55,000 tons.

If the period from August to October 1876 be included, the total imports into the Madras Presidency will be seen to be as follows :—

Import of food grains into the Presidency of Madras.

MADRAS RECEIVED IN	From ports beyond the Presidency or non-subordinate ports.	From subordinate ports.	TOTAL.
	Tons.	Tons.	Tons.
August 1876	1,769		
September „	875	38,000	43,637
October „	2,993		
November „	26,792		
December „	28,674	30,000	85,466
January 1877	72,985		
February „	57,421	36,000	201,852
March „	35,446		
Total ...	226,955	104,000	330,955
Other East Coast ports received from all sources			25,000
Grand Total Madras and East Coast ...			355,955
Beypore and Calicut received from all sources			63,000
Other West Coast ports ditto ditto			55,000
Grand Total of West Coast ports ...			118,000

	Tons.
The Northern districts received by rail from Great Indian Peninsula Railway	61,000

The above figures abstracted show the total imports as follows :—

By sea from Bengal, Burma, Orissa and Ganjam to Madras, Tuticorin, &c.	356,000
By sea into Beypore and other West Coast ports ...	118,000
By Great Indian Peninsula Railway from Northern and Central India into the Madras Presidency	61,000
Grand Total ...	535,000

W. S. S. BISSET, *Capt., R. E.,*
On special duty.

Memorandum by CAPTAIN W. S. S. BISSET, R. E., *on special duty, dated Dhond, the 25th April* 1877.

THE three accompanying statements abstracted from returns furnished, at Sir Richard Temple's request, by the officers of the Madras Railway Company, contain statistics of considerable interest to the mercantile world.

The first exhibits the movements of food grains on the Madras Railway for March 1877; the second shews month by month the quantity of food grain delivered by rail into each district; and the third exhibits the total quantities received in each district from the 1st August to the 31st March, as well as the source from which the supplies have been drawn. In Statement No. II the last column professes to shew the total delivery of each month by the Madras Railway; but it is necessary to explain that a considerable portion of the grain invoiced from Northern India in December 1876 and January 1877 was not actually delivered in the Madras Presidency till the month of February.

The best month's work out of Madras has been that of March, when nearly 35,000 tons of grain were despatched; the best month's work from Beypore that of January, when over 10,000 tons of grain were carried; and the best month's work from the northern end that of February, when the actual quantity of grain sent southwards from Raichore was approximately 18,000 tons.

Up to the end of March there was no effective increase to the engine power, for although the additional engines were in the hands of the Madras Railway Company, the drivers for these engines had not reached their posts till the first week of April.

With the increased demand which is just beginning to be felt in the Ceded Districts of Madras, and which, in my humble opinion, is likely to grow daily till the rains fall, the additional engine power will be fully engaged; and it may be worthy of notice that, while the despatches of grain from Madras cannot be largely increased without suspension of the ordinary traffic, there is even now train-room for many more grain wagons from the north.

W. S. S. BISSET, *Capt., R. E.,*
On special duty.

W. S. S. BISSET.

Weekly Condition Report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 11.)

Condition report for week ending 21st April 1877.

Bangalore District.—Markets fairly supplied. Prices slightly fluctuating. There was no rain in any of the taluks during the week, and the prospects of the season, therefore, continue to be very unfavourable. Irrigated ragi, sugarcane and other garden produce were sown in some places. The standing crops generally are in tolerably good condition. Public health has not improved; cholera and small-pox being still prevalent, more or less, throughout the district. Cattle suffer from want of forage and also, in some parts, from murrain.

Kolar District.—Markets sufficiently supplied, and, except in four taluks, where there were slight fluctuations, the prices were stationary. No rain fell in any of the taluks. The state of the crops continues to be the same as in last week. The prospects have not improved as the expected rains have held off. Cholera, small-pox, and fevers prevail. Cattle suffer generally from want of good fodder.

Túmkúr District.—Markets fairly supplied. Prices steady, except in the Chiknayakanhalli, Honnavalli and Kunigal taluks where they have fallen slightly. Rain is reported to have fallen in the taluks of Maddagiri, Chiknayakanhalli, Kunigal and Kaduba, three tanks in the last-named taluk receiving from 20 days' to 2 months' supply of water. There has been no change since the last report in agricultural prospects. Cholera and small-pox are still prevalent.

Mysore District.—Markets sufficiently supplied. Prices were stationary, except in the Chamrajnagar and Yedatore taluks where there was a slight rise. Rain is reported to have fallen in all the taluks except Yedatore; the fall registered at Mysore being 70 cents, and from 8 cents to 1·80 inches in other taluks. The tanks in the Mysore, Chamrajnagar and Perivapatna taluks have received a small supply of water. Drinking water, however, is still scarce in parts of the Mysore, Talkad and Mandya taluks. The crops below river channels are progressing favourably. Javari generally is doing well. Fresh sowings of javari and oil-seeds are being made in several villages, and more rain is anxiously looked for. Cholera and small-pox still prevail. Cattle in parts of the Chamrajnagar, Ashtagram, Mandya, Malvalli and Yedatore taluks suffer from murrain.

Hassan District.—Markets sufficiently supplied. Prices slightly fluctuating. Rain fell in all the taluks, and a small supply of water has been stored in some tanks. The rainfall registered in the taluks varied from 44 cents to 1·35 inches. The paddy crop in the Manjarabad taluk has benefited by the recent rains, and in the Malnad tracts of Arkalgúd, it is doing well. Maize was sown afresh in parts of the Hassan taluk. This and other cereals in the Attikuppa and Channaraypatna taluks, as well as under channels in the Narsipur taluk, are also doing well. Ploughing has been commenced in all the taluks, and the prospects of the season are thought to be hopeful. Cholera, small-pox and fever prevail.

Shimoga District.—Markets sufficiently supplied, except in some places in the Channagiri, Honnali, and Shikárpur taluks, where cholera has checked importation. Rain has fallen during the week in all the taluks except Channagiri, and some of the tanks received from 15 to 60 days' supply of water. The rainfall registered at Shimoga amounted to 35 cents, and in the other taluks it varied from 70 cents to 1 inch and 60 cents. The Vaisak paddy crop in the Ságar taluk is doing well; while in Nagar the want of sufficient rain is felt. The paddy crop under the Sulekere tank in Channagiri taluk is being harvested. The sugarcane crop, which had been sown to a small extent in the Sorab taluk, has not been doing well, but it is hoped that the recent showers will have proved beneficial. The recent rains have brightened prospects in this district. Cholera still prevails in five taluks, and small-pox at Shimoga. Cattle suffer generally from want of fodder, and also in the Nagar and Honnali taluks from murrain.

Kadur District.—Markets fairly supplied, and prices slightly fluctuating in some taluks. Rain fell in all the taluks: the quantity registered at Koppa being 2 inches. The javari and sugarcane crops in the Banavar and Lakvalli taluks are doing well. There are no standing crops in the other taluks. The prospects of the season are reported to be indifferent, and the public health bad owing to prevalence of cholera and small-pox.

Chitaldroog District.—Markets fairly supplied except in some villages of the Pavagada and Hosdurga taluks. Prices slightly fluctuating. With the exception of Pavagada and Hiriyur, rain fell in all the taluks, and a small supply of water was stored in some tanks. The prospects of the season remain unaltered. The Deputy Commissioner reports that the rainfall has not been sufficient, and that the water-supply at Chitaldroog has not been improved. Javari and navane (millet), which had germinated under wells in the Chitaldroog and under nallas in the Pavagada taluk, are reported to be fading, and so are the paddy crops in the Dodéri and Hosdurga taluks. The public health is, on the whole, not very bad, but cholera still prevails in some isolated villages of each taluk, except Kankuppa which is free from the epidemic. Fever and small-pox also prevail in some portions of the Hiriyur and Budihal taluks. Cattle suffer from want of forage.

GENERAL REMARKS.

The present report is for the week ending 21st April. No improvement has taken place in the condition of the country, and, on the contrary, there are indications that the pressure from famine is becoming very critical in these districts chiefly affected. Though there have been showers of rain in parts of the Province, these have not been sufficiently heavy or continuous to effect agricultural prospects to any material extent.

2. The markets throughout the country continue to be adequately supplied, and there is no reason to apprehend any difficulties arising on this score. As has been remarked by the Commissioner of the Ashtagram Division, "the scarcity has stimulated a number of the ryots who have carts and a little capital to form partnerships and to combine to import grain." He adds that "a marked characteristic of the present scarcity is the extent to which all the available cattle in the country has been diverted into the grain trade."

3. In the Nundydroog Division about 27,138 acres of land have been brought under well irrigation, and the potato crop in the Chikballapur and Devanhalli taluks is reported to have been finer than was almost ever known.

4. In the Ashtragram Division ploughing and sowing are progressing favourably. The Mysore District has, on the whole, been most favoured with the Mungar or early rains, and the agricultural prospects are reported to be good.

5. In the Nagar Division there has not been any great improvement, and the general cry is for more rain.

6. Cholera and small-pox have abated to some extent. The number of deaths from the former during the week ending 19th April was 1,678 as shown below, or 945 less than in the previous week :—

Bangalore District	... 179	Shimoga District	... 137
Kolar „	... 149	Kadur „	... 146
Túmkúr „	... 288	Chitaldroog „	... 226
Mysore „	... 274		
Hassan „	... 279	Total	... 1,678

7. Mortality amongst cattle is still on the increase. Between the 10th of March and 7th April there were no less than 25,005 deaths in the three districts of the Nundydroog Division. Colonel Pearse reports that there are still good draught cattle all over the country, but the herds, which used to be driven out in hundreds and thousands to graze on the pasture lands, are fast disappearing.

8. In the Ashtagram Division, out of the large numbers that had taken refuge in the hill tracts south of the Mysore District, a considerable proportion has been withdrawn, in expectation, no doubt, of their services being needed for agricultural operations. The extent of the losses in plough cattle that have been sustained by the ryots during the present famine is described by Colonel Hay, in reporting the result of enquiries made in a single hobli or taluk sub-division in the Harnhalli taluk of the Hassan District, in the following extract: "At the close of last year, it seems, as far as can be ascertained, that the average number of plough bullocks owned by the ryots of Gandesi was two pairs per house, the maximum being six pairs, with a proportion of mixed stock kept for breeding, for milk and for their manure. Out of 1,055 ryots, 455 have lost all their plough cattle, 358 are left with single bullocks, and only 242 have one or more pairs" It is satisfactory to learn, however, that, in other parts of the Ashtagram Division, the showers that have fallen have done much to improve the supply of food for cattle, and that young grass is springing up along the water-courses and in the low-lying lands. It would appear that the profits made by the ryots of the channel taluks and of the Malnad by the sale of straw have been very great, and that it has been exported even to Dharwar from Hassan and Manjarabad.

9. In the Nagar Division the cattle gathered in the forest tracts along the western taluks have suffered severely from diseases incidental no doubt to the pasturage obtainable there.

10. Compared with the return of the previous week there is a decrease of 178 in the number of works in progress under Revenue Officers, and of 1,473 in the daily average number of persons employed thereon.

11. The task or piece work system, which has been introduced at the rate of from 16 to 12 cubic yards of excavation per rupee, appears to have been working satisfactorily in the Ashtagram Division. The people, it is reported, form themselves into parties of 2 men and 4 women or boys, and finish a given portion of the work, earning on an average 1 anna 4 pies per head per diem. The difficulty of providing for single individuals and for surplus females who are not attached to any working party, must be met by assigning to them a lighter task and paying full wages.

12. The labour return of the Public Works Department shews the same figures as those entered last week, as no fresh accounts have been received since the submission of the last report. In accordance, however, with the instructions of Government conveyed in the telegram of 20th April, arrangements have been made to obtain weekly returns, which, it is hoped, will be furnished regularly from the 5th instant.

13. The number gratuitously relieved at kitchens is steadily increasing. During the week under report it rose from 68,641 to 82,501; the increase was chiefly in the Bangalore and Kolar Districts. The Commissioner of the Nundydroog Division apprehends, no doubt correctly, that the endurance of those whose stocks were at no time large is giving way under the continued pressure from want and high prices. It is said that many, who have hitherto held bravely on to their homes and shewed no outward signs of severe destitution, could maintain appearances no longer. It is evident that many, who were hitherto deterred by caste prejudices from having recourse to public kitchens, have been at last compelled to avail themselves of the bounty of Government. The Commissioner of Ashtagram Division reports that a large portion of the persons fed at kitchens were half starved and sickly emigrants from other places.

14. The reports received from the Amildars of taluks lying near the frontier of the Madras districts shew that there are about 640 persons belonging to Her Majesty's territory who are receiving gratuitous relief at the Government kitchens. Steps have been taken to obtain precise statistics on this point. The Chief Commissioner has refrained from issuing any orders for the rejection of such persons, but should their numbers largely increase, it will become necessary to urge upon the Madras authorities the removal of such persons to their own taluks.

15. As the result of the arrangements made to register the number of persons passing into the Wynaad and other coffee districts from the Mysore District, it appears that, since the 1st April 1877, the number migrated westward is 5,158, while the returning coolies amount to 9,088. Colonel Hay remarks that endeavours have been made to prevent actual paupers and persons physically unfit for work from migrating, but it is considered inadvisable to interfere to any great extent and to prevent persons from joining their friends and relatives employed in the coffee plantations who are prepared to assist them. This course is in accordance with the instructions issued by the Chief Commissioner.

16. The importation of grain, which during last week shewed a decline, has begun to rise again. The quantity received during the week was :—

	Tons.
at the Bangalore station	3,360
at Kolar Road „	196
Total ...	3,556

or 649 more than in the previous week. The daily average receipts amounted to 508 tons, of which 31 tons were imported from Beypore and 14 tons from Trichinopoly and Negapatam.

17. About 1,929 tons of grain were exported from Bangalore into the interior of the Province as shewn below :—

	Tons.

18. The Superintendent of Coorg reports that there is a sufficiency of grain for the ordinary resident population of that district, until the next harvest, which will be reaped in December or January next. The requirements of the rest of the population, consisting chiefly of coolies on coffee estates, must be met by importation, and though the West Coast will be closed against the importations of sea-borne grain after June, the local traders are stated to be storing grain on the coast to meet this contingency and anticipate no difficulty in supplying all demands, provided that the road approaches to Coorg are kept in a fit condition for traffic during the monsoon.

T. CLARKE,
Offg. Secretary.

PROVINCE OF MYSORE.

NOTE—1. The expenditure entered in column 24 includes the amount contributed by private subscriptions, as well as the Government grant-in-aid thereto.
2. The figures entered in columns 14, 17 and 18 are the same as those of last week, as no accounts have been received since from the Public Works Department.
3. The increase in the number of persons gratuitously relieved has been chiefly in the Bangalore and Kolar Districts. Explanation has been called for.

T. CLARKE,
Offg. Secretary.

Register of Rainfall recorded scientifically at the Government Observatory at Bangalore for each week in the year, as the usual monthly averages do not give sufficiently reliable information in a tropical climate.

Total ...	54,355	34,183	79,63,927	50,18,992			2,78,700	2,89,775	3·63	83,28,379	44,55,916					

* Such as digging and repairing wells, prickly-pear clearances, &c.

There has been rain during the week in some of the Talukas of every Collectorate, except Ahmednagar, and the fall has been considerable in parts of Satara, Kaladgi, Belgaum, and Dharwar.

2. Grain is slightly dearer in Kaladgi and Belgaum, and slightly cheaper in Dharwar. Jowari averages 21 lbs. the rupee throughout the famine area. The trade continues active, especially by the ports on the Coast, but the season during which vessels can ply to the Southern Mahratta ports is now drawing to a close.

3 The number of people upon Relief Works in the nine affected districts is 289,775 against 278,700 last week, and there are also 6,319 hill-men and immigrants employed in Ratnagiri and Kanara. The increase is chiefly in Kaladgi and Belgaum, and is due partly to the return of emigrants, and partly to the return to Relief Works of people who left them during the recent heavy rainfall. The number in the present week, however, only exceeds the number of the week before last by 2,015.

It seems probable that, unless more heavy rain falls, the numbers will now continue to increase until the monsoon bursts, when Government hope that the greater proportion of those on Relief Works will resume their agricultural operations.

4. There has been a decided decrease in the number of deaths from cholera during the week under review as compared with former weeks.

5. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 28th April, the number of people upon Civil Works was 29,861, the number upon works under Public Works Department Agency being 264,564. It appears, therefore, that the proportion of people on the former as compared with the latter is not materially different from that shewn in the last Summary, *i. e.*, about 10 per cent.

No reports have been received shewing that the wage on Civil Agency works is generally insufficient for the sustenance of the people receiving it, but several reports treating of particular instances and places have reached Government, to the effect that the wage in these instances and places is sufficient. All labour gangs are carefully watched, and special allowances are granted, and special remedies applied whenever special necessity is held to have arisen. The orders of Government are very stringent on this point, and as the worst period of the distress is now probably present, village inspection will continue to be enforced, and vigilance will not in any respect be relaxed. It is probable that, when rain falls abundantly, many now on large public works will have to be provided for nearer their homes on Civil Agency wages; the maintenance of rates not in excess of absolute necessity is therefore an object of increased financial importance.

6. The following table gives the expenditure by Government, during the week ending 21st April, upon charity in the relief of the aged and infirm poor, and in payments made to the young children of labourers employed upon Relief Works. Comparing it with the table which accompanied the last Summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 15,109 to 16,065, while the number of children under 7 years of age remains almost stationary. The increase of the number on charitable relief is less than was anticipated, but the number will probably continue to rise in a larger proportion when the advance of the season tends to close some of the larger Relief Works:—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 28th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.
	No.	Rs.	Rs.	No.	Rs.	Rs.
Khandesh	154	67	1,173	689	66	1,089
Nasik	3	1	207	7,031	967	8,580
Ahmednagar	1,782	479	9,144	10,267	1,070	7,318
Poona	4,057	1,610	18,697	13,303	1,457	23,555

Ratnagiri	*	*	*	88	14	32
TOTAL ..	16,065	7,882	79,426	76,088	8,513	78,474

* No expenditure has been incurred by the Collector.

7. The following table gives the distribution of the people among the relief works employing 1,000 labourers, or more. It will be seen that 237,166, or nearly five-sixths of the labourers, are now employed upon the 53 works enumerated. Most of these works are very useful, and it is satisfactory that so much of the relief labour is concentrated upon them:—

Districts.	Works.	Number of labourers.	Total.	REMARKS.

8. Maps are not sent with this summary, as they would merely repeat the information already given.

9. A table is appended, showing the condition of the affected Native States.

10. With regard to the movements of food-grains, 7,435 tons were exported from Bombay to the Southern Mahratta ports during the week ending 30th April, (this is 3,001 tons in excess of the exports of last week to the Southern Mahratta ports), and during the same week 3,041 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 10,476 tons for the week. The table below shows the quantities of grain sent by sea and rail from October until the end of April to the Southern Mahratta ports and the Railway stations in the distressed districts. It will be seen that the total amount delivered up to the end of April was 256,351 tons:—

Food-grains sent to	In October 1876.	In November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	In April 1877.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports.	7,675	19,228	17,312	13,459	16,075	16,798	21,399	111,946
South-Eastern line, from Poona to Sholapur.	11,683	30,014	25,498	15,471	12,477	13,760	12,856	121,759
North-Eastern line, from Nasik to Bhusawal.	4,447	4,776	3,606	1,615	2,622	3,234	2,346	22,646
TOTAL ...	23,805	54,018	46,416	30,545	31,174	33,792	36,601	256,351

11. On the whole, the grain supply continues sufficient, and the continuance of rain in Belgaum and Dharwar will probably enable the people in parts of these districts to grow some inferior, but quick-growing crops. Ploughing has already commenced in some parts of the districts. The condition of the people is generally good, and they are suffering less from epidemic diseases. Some anxiety is still felt as regards the condition of the cattle, but it is anticipated that, though many may perish, a sufficient number will be preserved for agricultural purposes.

M. K. KENNEDY, *Major-General*, R. E.,
Secretary to Government.

Statement regarding the condition of Native States.

NOTE.—The totals are not invariably the sum of the men, women, and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.
These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

T. C. HOPE,
Addl. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 10TH MAY 1877.

GENERAL REMARKS.—In Madras showers (which have been generally light except in parts of Tinnevelly) are reported from Salem, Malabar, Tinnevelly, Bellary, and parts of Kistna and Kurnool; general prospects are not improved; the reported number on relief works is 670,851, but the Nellore returns are again largely deficient, and the total probably really exceeds instead of falling short (by about 30,000) of that of last week; besides Nellore, decreases appear in Kurnool (nearly 7,000) and Salem (3,800): increases in Bellary (9,100), Malabar (3,500), Coimbatore (2,400), Cuddapah (2,100), North Arcot (2,100) and Madura 1,200; numbers on gratuitous relief are 319,839, giving an increase of 44,391; but the Nellore returns are defective under this head also; the increase is general except in South Arcot. In Mysore a trifling shower is reported; there is no improvement in prospects: the numbers relieved are 63,253 on works and 87,693 gratuitously, showing an increase on last week of about 5,000 under each head. In Bombay good rain appears to have fallen in Dharwar and Khandesh; showers are reported from Kaládgi and Násik: there has also been rain in Sind and parts of Guzerat. In the Central Provinces rain is reported from 15 out of 18 districts, causing some damage to the gathered crops and delay in threshing. No rain has fallen in Berar, where threshing is still going on. In Central India and Rajputana there have been storms and in places hail with some damage to the crops now being harvested. In Bengal rain has fallen with benefit to the crops in almost all districts; the harvest of the spring rice is being reaped with an excellent outturn and the sowings of the autumn rice are nearly complete. In Assam there has been favourable rain, and prospects are good. In the North-Western Provinces and Oudh there has been general light rain, which has retarded the harvest and done some injury to the crops. Rain and hail are reported from all districts of the Punjab, but in quantity only from Hissar and Ráwalpindi; damage to the crops, which are now being reaped, is complained of.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 8th)	·10 with hail at Bezwada; *nil* elsewhere.	Crops lately sown in places require rain; prices almost stationary; seers of Rs. 80 weight, rice 8·67, *cholum* 11·15, *raggi* 14·01, *cumboo* 10·91; imports by sea, rice 32·65 tons, boiled rice 161·01, broken rice 11·00; by land from Godavery at Guntur and Bezwada, rice 16·93, *raggi* 6·25; 1,752 people on relief works, 364 fed gratuitously by Government, 1,597 by people; cholera, seizures 58, deaths 23; small-pox and cattle disease continue.
Nellore („ „)	*Nil*	Average prices second sort rice 8·04 seers per rupee, *cholum* 9·77, *raggi* 12·36, *cumboo* 9·89; imports by sea on behalf of Government none, on behalf of merchants, rice 2,477 tons, *raggi* 18 tons; imports by merchants into the town of Nellore by road, rice 46 tons, *cholum* 3 tons, *raggi* 15 tons; number on district relief works alone 28,648, this is exclusive of the numbers at Venkatagiri and on the canal which have not been reported; number fed gratuitously 17,431, exclusive of Venkatagiri, the increase is due to more general payment of the 3 pies allowance to children and to increased distress; 35 deaths from cholera reported, small-pox, fever, dysentery and diarrhœa prevalent among the coolies coming from the west; water supply insufficient over the greater part of the district, so much so as to cause great anxiety in Polar, and anxiety in Venkatagiri; prospects of cattle same as last week.
Cuddapah („ „)	*Nil*	Average prices seers per rupee, second sort rice 7·7, *cholum* 9·32, *raggi* 10, *cumboo* 9·15; people on relief works 54,784, gratuitously fed 25,447; deaths from cholera 320; number of cattle died from want of fodder and disease 299.
Bellary („ „)	·3 in Hospett; ·25 in Kudlighi; slight in Hadgalli; ·3 in Harpanhally; ·3 in Adoni; ·25 in Raidrug; ·7 in Anantapur.	Average prices second sort rice 7·56, boiled rice 7·56, boiled rice at Bellary 8·91, *cholum* or great millet 8·99, Jubbulpore *cholum* at Bellary 9·53, *raggi* or lesser millet 8·45, *cumboo* 7·95 seers of 80 tolas; import, 3,826 tons; accounts from three railway stations only; 233,798 persons on relief works, increase as compared with return for previous week 9,122, this is owing to the increasing pressure of the famine and to new works having been opened, 107,426 gratuitously fed, increase as compared with return for previous week 6,939, this is chiefly due to the payment of 3 pies to the children of coolies employed on relief works, but also to the opening of relief houses in several villages; 4,751 gratuitously fed by private charity aided by Government grant; cholera decreasing but still in all taluks; small-pox and fever prevalent, but the former decreasing; cattle still perishing in some places from want of fodder; supply of drinking water diminishing except where rain has fallen.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Kurnool (May 8th)	·9 in Ramalkota; *nil* elsewhere.	Fresh continues in Tumbudra; town water supply good; paddy in Nandial taluk being harvested; *raggi*, *cholum* and *sajja* pretty fair under wells and spring channels; cholera, small-pox and fever prevalent; cattle reported to be dying from want of fodder; cholera, seizures 118, deaths 64; second sort rice per rupee in imperial seers 7·18, *cholum* 8·30, *raggi* 9·77, *cumboo* 9·47; slight increase in prices owing to dull importation; number on relief works 204,972; gratuitously relieved 64,817, including 43,916 children under 7 years and 14,037 people fed by village heads; imports, Government grain, 21 tons, private 5 tons in Kurnool town, other returns not received; the decrease in number of coolies is 6,917, the net result of 6,946 increase in 4 taluks and 13,863 decrease in 4 taluks; increase attributed chiefly to employment of fresh coolies; decrease partly to emigration to Nellore canal, partly to defective returns from Nandial, decreased village relief owing to improved checks; physique of coolies indifferent.
North Arcot („ „)	*Nil*	Average prices in Government seers, second sort rice per rupee 8·2, *cholum* 9·3, *raggi* 10·2, *cumboo* 8·6; relief works coolies 44,001, persons gratuitously fed 12,842; cholera still prevalent, fever and small-pox in some places, pasture scarce; cattle still dying of starvation in some parts.
Chingleput („ „)	*Nil*	Prices, rice second sort 8·97, *raggi* 11·22, *cholum* 10·40, *cumboo* 10·78; imports, rice 169·25 tons, *raggi* 33·75; cholera prevalent more or less in all taluks, small-pox and fever in some, dysentery and fever in others; condition of cattle poor; pasturage *nil*; water failing; dry fodder very scarce and expensive; on relief works 5,468; gratuitous relief 9,318.
South Arcot („ 9th)	*Nil*	Average prices, rice second sort 9¼ seers, *cumboo* 12⅜, *raggi* 12, *cholum* 11, little dearer than last telegraphed prices, due to absence of rain and little importation by sea; number employed last day of week 546, gratuitously fed last day at Chengam 476, in villages 1,572; children paid 3 pies per diem 70; people generally healthy; cholera deaths reported 270 out of 388 attacks; cattle disease in some villages; pasture deficient.
Tanjore („ 8th)	*Nil*	Prices, rice 8 1⅛ seers, *raggi* 10 1/16, *cumboo* 10 1/16, *cholum* 12⅜; imports by sea, rice 1,761 tons, dry grains tons 24; relief works none; deaths from cholera 115; cattle disease in Tanjore, Combaconum and Mayavaram taluks with some loss of life; fodder available.
Trichinopoly („ „)	*Nil*	Second sort rice 8¼ seers, *cholum* 16⅛, *raggi* 10⅜, *cumboo* 11 1/16; import of grains for week ending Saturday, 111 tons; no relief works; gratuitously fed on the 5th instant by public subscription 1,895; deaths from cholera 235, from small-pox 41; pasture and health of cattle unchanged; water in the Cauvery a little increased; scarcity in dry parts of district.
Madura („ „)	*Nil*	Second sort rice 8¼, *cholum* 9⅜, *raggi* 10⅜, *cumboo* 10½; import, rice 2,758 tons, other grains 25; number on relief works 12,832; number fed gratis 7,676; condition of public health and of cattle unaltered; deaths from cholera 196.
Tinnevelly („ „)	Slight showers; nearly 3·0 in Tenkari and fair quantities in Sankarninarcovil and Strevilliputur.	Several tanks received partial supplies; standing crops in good condition; no material abatement of cholera, 715 attacks, 595 deaths of which more than half in Tenkari taluk alone; cattle disease in three taluks; water supply and pasture satisfactory; prices stationary; average prices per rupee, second sort rice 9 seers of 80 tolas, *cholum* 11¼, *cumboo* 10¾ and *raggi* 11½; import of grain, rice 1,936 tons; number on relief works 971; number gratuitously fed 568.
Coimbatore („ „)	·75 at Collegal on 29th April; ·05 at Oodoomulpetta.	Prices nearly stationary, rice no change, second sort 8·01, *cholum* (slight rise) 9·05, *raggi* (slight rise) 9·49, *cumboo* (slight rise) 9·36; imports estimated rice 632 tons, other grains 390; cholera everywhere except in Caroor taluk, attacks 1,158, deaths 851; small-pox in Erode; fever in Erode and Collegal; cultivation to a very small extent in Coimbatore, Sattiamangalum, and Bhowany; standing crops on wells and *punjah* lands in Palladum withering from want of rain; cattle poor, losses in Sattiamangalum, Collegal, Bhowany and Caroor; fodder and water scarce; on relief works 24,425; no deterioration in physique of work people reported; gratuitously fed 12,632.
Salem („ „)	·18	Prices of grain, seers of 80 tolas, rice 7 1/16, *raggi* 8 1/16, *cumboo* 8 3/16, *cholum* 8 1/16; import of all grains 1,000 tons; number on relief works 53,000; number gratuitously fed 59,200; number gratuitously fed by private subscription 650; cholera in all taluks; the large increase under gratuitous relief is due to extensive villagewar relief in Darampury and Oossoor.
Malabar („ „)	·80 (average of 7 taluks.)	Markets well supplied; imports by sea and land, rice 3,691 tons, *raggi* 18, *cholum* 543; exports, rice 1,603, *raggi* 651 and *cholum* 49 tons; prices of rice slightly fallen in Ponany, risen in Calicut, Ernad and Palghaut, and stationary elsewhere, highest 7½ Indian seers in Wynaad, lowest 11⅛ in Ponany, average 9⅞ Indian seers per rupee; *raggi* 10⅛ Indian seers per rupee in Wynaad, average elsewhere 13⅜; small-pox in 8 taluks, cholera in all except Cochin, deaths from latter 321; cattle healthy; pasture good in Cochin, and improving everywhere; 5,654 coolies in Kolathur roads.
		General Remarks.—General prospects not improved; exports by rail from Madras during week ending 5th May, 7,588 tons of grain.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay— (May 10th)		
Sind—(May 9th)		
Kurrachee ...	...	Total rainfall since 1st January, 2·16 in Kurrachee, 1·38 in Kotri, 3·31 in Tatta, 1·65 in Mirpur Batoro; four fresh cases of small-pox in Kurrachee.
Shikárpur ...	...	Wheat harvesting general; *kharif* preparations commenced.
Hyderabad ...	...	Rain in eight talukas; *rabi* produce damaged thereby in taluka Kandiáro; fever and small-pox continue.
Upper Sind Frontier ...	...	Weather warm; reaping of *rabi* crops continues.
Guzerat—(May 9th)		
Ahmedabad ...	·84	Weather good.
Kaira ...	·89	Weather cloudy and stormy.
Surat ...	...	No change.
Broach ...	...	Slight drizzling at Ankleswar and Hansot; small-pox and fever abating.
Khandesh and Násik.—(May 9th)		
Khandesh ...	...	More or less rain fell in different talukas, improving the water supply small-pox, fever and cattle disease prevalent.
Násik ...	·06 in Sinnar	Two deaths from cholera in Yeola.
Konkan—(May 9th)		
Tanna ...	...	Cholera in 4 and small-pox in 7 talukas.
Deccan—(May 9th)		
Poona ...	...	Few cholera cases everywhere except in Indápur; cattle disease in Sirur.
Ahmednagar* ...	...	Cholera in 4 talukas, cases 194, deaths 31.
Sholapur ...	...	7 deaths from cholera.
Satara ...	...	28 deaths from cholera on Islámpur, 2 on Pingli and 8 on Nahr tanks; total deaths in the district 356.
Southern Mahratta Country—(May 9th)		
Belgaum* ...	...	Deaths from cholera 83.
Dharwar ...	2·77 in 5 talukas.	Cholera prevalent, deaths 319; cattle disease in Navalgund, Gadag and Bankápur.
Kanara ...	...	Cholera prevalent, deaths 30.
Kaládgi ...	·28 in Indi; ·37 in Sindgi; ·08 in Bágewári; ·20 in Bijapur; ·28 in Bagalkot.	575 cases of cholera, deaths 296.
Kattywar and Gaekwar's Territory—(May 9th)		
Rájkot ...	...	Weather hot; general health good.
Wadhwan ...	·17	Weather rather stormy.
Baroda ...	...	No change.
		General Remarks.—Slight showers in Guzerat, parts of Deccan and the Southern Mahratta Country; cholera decreasing in Dharwar, Kanara and Belgaum, but spreading in Kaládgi, Satara, Poona, Tanna and Ahmednagar; small-pox continues in Sind.
Bengal— (May 10th)

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SYSTEM OF CONSERVANCY IN FORCE IN THE TOWN OF AMRITSAR.

No. 123 (Municipalities), dated Simla, 12th October 1876.

From—G. H. M. BATTEN, Esq., Officiating Secretary to the Government of India, Department of Revenue, Agriculture and Commerce,

To—The Secretary to the Government of the Punjab.

It having been noticed from a letter on page 4 of the *Pioneer* of the 2nd instant, signed "Ed. Nicholl, Secretary to the Municipal Committee of Amritsar," that that Municipality in 1875-76 made Rs. 30,000 by the sale of manure, I am directed to state that the Government of India will be glad to be furnished with an account of the system by which such a favourable result was attained.

No. 326, dated Lahore, 27th March 1877.

From—LEPEL GRIFFIN, Esq., Officiating Secretary to Government, Punjab,

To—The Officiating Secretary to the Government of India, Department of Revenue, Agriculture and Commerce.

In reply to your No. 123, dated 12th October last, I am desired to forward copy of a letter from the Deputy Commissioner of Amritsar, No. 62, dated 7th instant, together with four printed copies of the report therewith enclosed, furnishing the information called for relating to the system of conservancy in force in the town of Amritsar.

No. 62, dated 7th March 1877.

From—The Deputy Commissioner and President, Municipal Committee, Amritsar,

To—The Commissioner and Superintendent, Amritsar Division.

In reply to your No. $\frac{468}{T}$, dated 2nd November last, I have the honor to forward six copies of printed papers relating to the system of conservancy in force in Amritsar.

2. Mr. Nicholl's object in writing to the *Pioneer* of the 2nd October 1876 was to show that agriculturists in the Punjab generally, and in Amritsar in particular, did use manure on their fields, and were fully alive to the benefits that the land derived from its use. From statistics prepared in the Municipal Office, it appears that during one year of the total number of donkey-loads of manure sold from the Municipal godowns, agriculturists purchased two-thirds.

Note.	
Total sold ...	5,68,957
To agriculturists	3,59,108
Brick-burners ...	2,09,849

3. It may be thought, after a perusal of the printed paper which accompanies, that the Committee has not, in a financial point of view, benefitted by the change of system, by which

it disposes of the manure of the city by direct agency instead of through a contractor, and this is to a certain extent true. But the advantages of the present system cannot be estimated in money. Under the contractor the conservancy of the town was never properly attended to; drains were cleaned in a perfunctory way, manure was allowed to lie for long periods in the streets, and applications for an enhancement of the monthly cash subsidy were made on the slightest pretexts and had often to be granted; manure was taken direct from the city to the fields near its walls and allowed to lie there till the purchaser thought proper to plough it in. Now it is first stacked in a godown, where it undergoes a certain amount of deodorization, and is then sold. Moreover, at the present time, the drains and streets that have to be cleaned by the Committee's establishment are double the length they were when the contractor had the management.

4. The demand for manure is at times so great that it far exceeds the supply. This of itself shows how highly its use is appreciated.

5. With a view to secure a complete monopoly of the manure of the city, the Committee is making arrangements to purchase the sweeping of all the large sarais and other enclosures where horses and cattle are put up. When these arrangements are complete the income will be considerably increased. Arrangements are also being made to reduce the expenditure by introducing carts in place of donkeys for removing the manure from the city. I am sanguine that in course of time the income and expenditure will be equal.

Report on the Conservancy Establishment of the City of Amritsar.

For some time I have had under consideration the question of how to regulate the conservancy establishment of this city, with regard to the work required of it, and consistent with the due cleanliness of all parts of the town.

I must confess that the matter is a difficult one; but I entertain hopes that, with the assistance of the sub-committee, the difficulties will vanish, and that what is at present chaos will be reduced to order.

2. My present remarks will be illustrated by tabular statements, which I append to this report.

3. Statement A. shows with tolerable accuracy the total length of the streets and drains of all kinds in each division of the city, the number of bhisties and sweepers that were employed on the 15th May 1876, the number that were employed when the present system was introduced in 1872, and the number that would in my opinion be sufficient to keep all the public streets and drains in the city clean, if properly supervised.

The difference between the number of bhisties and sweepers that were employed when the system was first introduced and the number at present employed is very striking. How the establishment came to be so largely increased is not known to me. The only authority for an increase is that contained in Resolution No. 102 of 1874, by which an increased expenditure of Rs. 700 per mensem was sanctioned. I am not in a position to state from personal experience whether the sanitary condition of the city has improved in proportion to the increase of the establishment, as compared to what it was when the existing system was introduced.

4. I have ascertained that one sweeper can clean one thousand running feet of street and the drains at both sides in two hours; and according to this I have fixed what I consider the "proper complement" of sweepers and bhisties, supposing them to work for four hours only daily. It would be well, perhaps, to allow a margin to the number that I have fixed in Statement C., in the proportion of 1 in 5 for *kucha* and other work. The strength of the establishment would then be 329 sweepers, or a reduction of 106; and 186 bhisties, or a reduction of 37, which in money would represent a monthly saving of Rs. 500.

5. Statement B. shows the numerical strength of the city establishment on the 15th instant.

With a jemadar and a duffadar to each division, I cannot see the necessity for a chuprassie in addition. I think nine of this grade might be reduced without danger; the other three I would retain to check the number of donkeys that go out of the city daily loaded with manure; and I think that instead of having six lumberdars, three would be ample, *i. e.*, one to each conservancy division. The pay of the three retained might be increased to Rs. 6 per mensem.

These reductions would result in a saving of Rs. 57 per mensem.

For the present a saving of Rs. 550 per mensem might be effected without endangering the health of the people or the efficiency of the system.

6. Statement C. shows the cost of the conservancy establishment during 1874-75 and 1875-76. In the latter year there was a saving of upwards of Rs. 2,500 owing to the introduction of the system of employing our own donkeys.

7. If any reliance is to be placed on what the conservancy darogha says, the difficulty that he experiences in getting sweepers to work for the committee is very great. Whether this is put

forward as an excuse when brought to account for neglect or what, I cannot say. It is not unlikely that the work is not liked, for the reason that fines are imposed for the most trivial faults. It is rare a thing for a sweeper to get his full pay for two months running. If fining were less frequently resorted to, the difficulty of obtaining men would I think disappear.

8. Another way of getting men to do our work willingly would be to assist them in obtaining the *virt** of a certain number of houses. This could be managed in the following way:—

Say there are thirty sweepers employed in a division: allot to each a certain part of the division to be kept thoroughly clean, and to him and his family a certain number of private dwellings to look after, when off duty, *i. e.*, after he has cleaned the portion of public street and drains under his charge.

9. Allow no male sweeper who is not employed by the Municipal Committee, or who has not a ticket authorizing him to sweep private dwellings, to collect the *virt* of such dwellings. Every *mehteranee* employed in private dwellings to be also furnished with a ticket or brass number, and allow none but those who have such a ticket or number to exercise their calling. In this way the Committee establishment, and such women as the Committee might grant tickets to, would have the monopoly of the *virt* of the city. This is a valuable source of income, and is often sold by one sweeper to another for a large sum. We can easily bring the people to assist us in this matter, by getting them to employ no sweeper or *mehteranee* who is not furnished with a ticket or *number* from the Committee. Any private individual who refused to assist us could easily be brought to his senses by having him up before the Honorary Magistrates the first time his house or premises were found in a filthy state.

10. It would be well I think if we were to adopt the recommendation of the Cholera Commissioner, to the effect that in small blind (*cul-de-sac*) allies, house-holders should be held responsible for the daily cleaning of the portion of street opposite their houses. This would relieve our establishment to a considerable extent.

11. I purpose when at leisure drawing up a few simple rules for the guidance of the darogha and other subordinates of the conservancy establishment, which will, if followed, bring things into form.

ED. NICHOLL,
Secretary, Municipal Committee.

Dated 22nd May 1876.

Rules for the guidance of the Conservancy Establishment.

1. The conservancy establishment shall consist of:—one darogha, three naib daroghas, one mohurrir, and as many other munshis, jemadars, duffadars, lumberdars, peons, bhisties and sweepers as the Sub-Committee may appoint, provided that the cost of such establishment shall not exceed the budget provision of the year.

2. (*a*). The appointment, dismissal, or other punishment of the darogha, naib daroghas, mohurrir, munshis, and jemadars shall be governed by the terms of para. 21 of the Rules of Business.

(*b*). The appointment, dismissal or other punishment of the duffadars, lumberdars, peons, bhisties and sweepers shall rest with the Members of the Sub-Committee of Conservancy.

3. The jemadars and the other members of the establishment mentioned in para. 2 (*b*) above are directly under the orders of the members of conservancy divisions.

4. It will be the duty of members of conservancy divisions to see that the establishment is kept up to its proper strength, that it performs its duty in a proper manner, that the cleansing of the public streets and drains is properly attended to, and that all orders of a special or general character issued by the President, the General or Sub-Committee, are properly carried out.

5. The darogha, naib daroghas and mohurrir not being attached to any particular division, will be directly under the orders of the Secretary, as the Executive Officer of the Committee; at the same time they shall be bound to obey any order connected with their duties given to them by members of conservancy divisions, provided such order is not contrary or opposed to any previous order given to them by the President, the Secretary or the Sub-Committee.

6. The darogha will be held primarily responsible for the proper conservancy of the entire city. He shall be held responsible by members of divisions in the first instance, that a proper supervision is exercised over the jemadars, bhisties and sweepers in the performance of their duties.

7. The naib daroghas are subordinate to and under the orders of the darogha.

8. The supervision of all public latrines and of the conservancy of the suburbs, excluding the civil station and the cantonments, shall be the duty of the naib daroghas.

9. In summer, *i. e.*, from 15th April till 15th October, the cleansing of the public streets, drains and latrines shall commence at 2 o'clock a. m. and 5 o'clock p. m.; and during winter, *i. e.*, from 16th October till 14th April, at 4 o'clock a. m. and 8-30 o'clock p. m.

10. In each division a place of assembly shall be appointed by members of divisions at which, at the time fixed in the preceding para. 9, the conservancy establishment shall

* The leavings from meals.

assemble and be told off by jemadars to their respective beats. Any member of the establishment not present at the assembly to be reported absent, unless he reports himself within a reasonable time after the hours fixed in para. 9 to the jemadar of his division, and shows good cause for his absence.

11. When the establishment has been told off to duty as prescribed in the preceding paragraph, it shall be the duty of the darogha, naib daroghas, jemadars and duffadars to patrol each division to see that the members of the establishment are at their respective posts and doing their work properly.

11*A*. Every evening after the day's work has been done, the jemadars of divisions shall bring the day's muster roll to the sadr office, for incorporation in the general register of daily attendance. He shall be held responsible for any errors or false entries that may then or afterwards be detected in such lists.

12. The sweepings of private houses and of public streets and drains must be removed to the intra-mural godowns before sunrise, and from thence to the extra-mural godowns with the least possible delay.

The *mehteranees* of private houses to be warned by jemadars that the sweepings of the houses under their charge must be collected at the appointed places, to admit of their removal to the intra-mural godowns before sunrise, under the penalty of being prohibited from exercising their calling.

13. The removal of filth from the intra-mural godowns shall be under the supervision of the darogha, and he will be held responsible that no delay is allowed to occur in its removal to the extra-mural godowns, which shall be under the charge of the naib daroghas.

14. Deposits of filth at the intra-mural godowns should be sprinkled over with a little white (slaked) lime, and the locality after the removal of the filth should be well cleaned, and some dry earth, with which white or slaked lime shall be mixed in the proportion of one-half, sprinkled over it.

15. The three extra-mural godowns shall be under the charge of the naib daroghas, and to each a munshi (*mohafiz*) and peon are attached.

Sweepings from the intra-mural godowns shall be taken out of the city by three gates, *viz.*, Lahori, Gilwalli and Ghi Mundi. At each of these gates a peon is stationed, whose duty it is to note down the number of donkey and cart-loads of manure that leave the city daily, and the names of the donkey-drivers and cartmen. The daily total to be compared every evening in the presence of the darogha and naib daroghas at the sadr office with the list of the godown munshi (*mohafiz*). Any discrepancy to be at once brought to the notice of the Secretary.

16. The extra-mural godowns shall be closed for the months of June, July, August and September of each year, and the daily deposits shall be covered with a thin layer of earth from 3 to 4 inches thick.

17. During the open season, that is, from October till May, the godown munshi shall keep a ledger, showing the number of donkey-loads of manure sold to each purchaser. Each day's sales shall be reported to the sadr office, where they will be entered in a "sales ledger," similar to the one kept up by the godown munshi. Each daily report of sales must be verified by the signature of the naib daroghas.

18. When a purchaser has received the number of loads paid for, his account shall be closed until a further cash payment is made. Any excess issues over what has been paid for shall be at the personal debit of the naib daroghas.

19. The selling rate of manure, per hundred donkey-loads, shall be fixed from time to time, the price being regulated by the demand. The size of the bags (*borahe*) used by the purchasers to be the same as those used by the Committee. The use of bags of a larger size is prohibited.

20. There are three donkey-enclosures: each is under the charge of a munshi (*mohafiz*), who is responsible for the proper care and custody of the donkeys and their trappings; the supervision of these men shall be under the darogha.

It shall be the duty of the munshis in charge to see that the donkeys leave the enclosures at day-break for the different divisions properly supplied with trappings and with the proper complement of drivers. The name of each driver and the number of donkeys made over to him to be noted down on the donkeys leaving the enclosure. On the return of the donkeys to the enclosure the list should be referred to with a view to ascertain that none are missing. The donkeys should at the same time be examined to see that they have received no injuries, and that their trappings are complete.

21. When it appears to the munshi that a donkey has received injuries during the time it was in charge of the driver, a report should at once be made by him to the Secretary through the darogha, stating the nature of the injuries received and by whom inflicted. When trappings are found missing, new ones to replace them should be ordered through the darogha, and the cost recovered from the pay of the responsible driver.

22. The contractor for the supply of food to the donkeys shall convey it daily to the enclosures, where it shall be weighed in the presence of the darogha, or in his absence the naib darogha, and the munshi in charge of the enclosure, and be made over to the charge of the latter, who will be held responsible that it is given to the donkeys at the hours appointed from time to time according to the season of the year.

23. Should the food supplied by the contractor appear to the darogha or naib daroghas to be of an inferior quality, a report of the fact should at once be made to the Secretary, and a sample sent to him with the report.

ED. NICHOLL,
Secretary, Municipal Committee.

Amritsar.

Extract from the Report of the Amritsar Municipality for 1873-74.

Conservancy. 24. The conservancy of this city was for many years carried out through a contractor, who in consideration of receiving the sweepings and a monthly cash subsidy, which averaged between 800 and 1,000 rupees, became responsible for the cleansing of the entire city.

25. In 1872, the present arrangements, under which the cleansing of the city is carried out under direct agency, were introduced. The supervision of the establishment and other minor matters in the city is exercised by a Sub-Committee, consisting of three zealous native members presided over by the President (the Deputy Commissioner).

26. The city is divided into 12 wards, and each of the three native members above-mentioned has in his peculiar charge 4 of these wards. The city is therefore for conservancy purposes divided into three divisions.

27. The details of the plan by which the filth of the city is daily removed are as follows:—

The bazars and streets have to be swept and the side drains washed by 6 A. M. (later in winter). The sweepings are placed on donkeys and conveyed to a depôt inside the city. There are ten of these depôts, and they are situated in unfrequented neighbourhoods so as to be as little as possible of a public nuisance.

From these intra-mural depôts the filth is again removed as early in the day as possible to one of the extra-mural manure godowns, of which there are three situated at some distance from the city walls, outside the Lahori, Gilwalli and Sultanwind gates. When all the filth has been removed, the intra-mural depôts are sprinkled over with earth.

28. The cleansing of the bye-lanes or gullies is carried out partly by the house-holders to whose houses they lead, and partly by the Committee's establishment. The *mehteranees* who are employed by the house-holders for the private work of their houses, in most cases themselves carry in baskets the filth of the house or houses they serve in to the depôts. This is supplemented by the sweepers and donkey-men of the Committee's establishment, who visit the bye-lanes or gullies when necessary. All lanes are cleaned by the sweeper and bhistie establishment twice a week.

29. There are twelve latrines situated outside the city gates, not far from the walls, which have recently been remodelled. To each of these, one, to some two, sweepers are attached. The filth on being removed from these latrines is deposited in a pit hard by and covered over with earth. Morning and evening it is removed in conservancy carts and deposited in the nearest extra-mural godown.

30. Separate accommodation was provided in each latrine for females, but it has not been used to a large extent, owing to the repugnance that most native females have to using a close apartment of the kind which does not hold more than one occupant at a time.

31. The surface drains in the city are kept clean by the sweepers and bhisties, and there is a large main sewage channel, constructed round the north side of the city in 1868, which receives the internal sewage, and carries it to a low-lying spot situated some 7 or 8 miles south-west of the city. This drain is cleaned out once a week, and then flushed with canal water. The sewage thus liquified is used by the zemindars on the banks of the channel, who pay the Committee for it.

A similar channel round the south side of the city still remains to be constructed. This is daily becoming a pressing necessity, and must shortly be taken in hand.

32. The establishment which carries out the operation above detailed is as follows:—

There are on an average 250 sweepers, who receive Rs. 4 per mensem. These are immediately supervised by 13 duffadars on Rs. 6 per mensem each. Over them again are 12 jemadars, one for each of the city wards. These men can read and write, and make reports to the darogha. They get Rs. 10 each per mensem.

There are about 165 bhisties, who receive the same as the sweepers, and these are supervised by 3 duffadars, who report to the jemadars of the wards abovementioned; they receive Rs. 6 each per mensem.

About 500 donkeys are employed for conveying the sweepings from the bazars and streets to the intra-mural depôts, and thence to the extra-mural godowns. The hire of each donkey is Rs. 4 per mensem. The donkey-drivers are supervised by 6 lumberdars, who receive Rs. 5 per mensem each.*

33. The whole establishment is supervised by a darogha on Rs. 100 per mensem, who receives daily reports from the jemadars and others, and himself reports to the three members of the Sub-Committee, and if necessary to the Secretary. The accounts of pay, &c., is kept and written up daily by a mohurrir, who receives Rs. 15 per mensem, and the pay of the whole establishment is disbursed monthly by the Secretary.

34. The extra-mural manure godowns are under the charge of a naib darogha, who gets Rs. 30 per mensem. He is assisted in keeping the accounts of the manure stored and disbursed by 4 mohurrirs, on salaries ranging from Rs. 6 to 15 per mensem, and a few chuprassies. Zemindars and others requiring manure apply in the first instance to the Secretary, who issues the necessary orders to the naib darogha, and receives all money paid in.

* Since this was written, the Municipal Committee have purchased donkeys of their own.

35. The following may be interesting as showing the income and expenditure since the present system was introduced in October 1872, up to the end of the year under report:—

	Expenditure. Rs.	A.	P.
Oct. 1872	3,959	0	0
Nov. „	4,078	8	0
Dec. „	3,826	0	0
Jan. 1873	3,834	0	0
Feb. „	3,851	0	0
March „	3,887	0	0
TOTAL ... Rs.	23,435	8	0
Income ... „	14,685	0	0
Difference which Committee had to pay ... „	8,750	8	0

During 1873-74 the income and expenditure was as follows:—

	Income. Rs.	A.	P.	*Expenditure.* Rs.	A.	P.
April 1873 ...	805	8	0	4,050	13	6
May „ ...	1,177	14	0	4,011	15	8
June „ ...	2,568	3	1	4,078	1	2
July „ ...	1,274	10	3	4,129	7	9
Aug. „ ...	1,510	10	0	4,168	8	9
Sep. „ ...	2,233	3	8	4,149	0	0
Oct. „ ...	3,311	14	3	3,969	3	7
Nov. „ ...	2,466	8	3	4,123	11	8
Dec. „ ...	4,201	0	0	3,982	14	8
Jan. 1874 ...	3,250	6	0	3,729	1	3
Feb. „ ...	2,475	5	9	3,402	7	8
March „ ...	3,826	7	9	3,542	12	11
TOTAL ...	29,101	11	0	47,308	2	7

36. **The amount credited in the treasury during the year was Rs. 25,040. The actual cost of the establishment to the Committee after deducting income was therefore Rs. 22,268-2-7. There can be little question as to the superior efficiency of the arrangements now in force as compared with the old contract system.**

The demand for manure is gradually increasing, and gives some hope that in a short time the cost of maintaining the system will not be so great as at present.

The income and expenditure during the years 1874-75 and 1875-76 was as follows:—

	Income. Rs.	A.	P.	*Expenditure.* Rs.	A.	P.
April 1874 ...	1,650	0	0	3,654	12	7
May „ ...	1,581	2	1	3,348	4	9

G. H. M. BATTEN,
Offg. Secy. to the Govt. of India.

DEPT. OF REVENUE, AGRICULTURE, AND COMMERCE (STATISTICAL BRANCH).
Calcutta, 18th May 1877.

GOVERNMENT OF INDIA.

FINANCIAL DEPARTMENT.

ANNUAL REPORT ON THE OPERATIONS OF THE DEPARTMENT OF ISSUE OF PAPER CURRENCY FOR THE YEAR 1875-76.

No. 554, dated Calcutta, the 21st April 1877.

From—The Head Commissioner of the Department of Issue,
To—The Secy. to the Govt. of India, FINANCIAL DEPT.

I have the honor to submit, for the information of Government, the following report and statements on the operations of the Department of Issue for the year 1875-76:—

No. I.—Statement of the value of Government currency notes in circulation throughout India during 1875-76 and previous years.

No. II.—Statement of notes issued, received, and cancelled during 1875-76.

No. VIII.—Statement of receipts and expenses of the Department of Issue of Paper Currency for the year 1875-76.

TOTAL CIRCULATION.

2. The maximum, minimum, and average value of notes in circulation throughout India on the last day of each month during the last two years have been as follows:—

Year.	Maximum.	Month.	Minimum.	Month.	Average.
	Rs.		Rs.		Rs.
1874-75	11,23,64,380	March 1875 ...	9,27,43,385	April 1874 ...	10,67,04,071
1875-76	12,06,69,585	October 1875 ...	10,75,44,640	„ 1875 ...	11,35,26,621

3. The average circulation, dating from the commencement of currency operations, has been as follows:—

	Rs.
In 1862-63	4,41,94,285
„ 1863-64	5,23,25,000
„ 1864-65	6,88,20,116
„ 1865-66	7,72,57,983
„ 1866-67	8,98,93,179
„ 1867-68	9,28,50,848
„ 1868-69	10,14,55,827
„ 1869-70	10,66,90,777
„ 1870-71	9,81,82,240
„ 1871-72	11,41,57,442
„ 1872-73	12,86,40,367
„ 1873-74	11,14,51,907
„ 1874-75	10,67,04,071
„ 1875-76	11,35,26,621

4. An examination of the lowest amount of the circulation in successive seasons is of more importance in judging of the movements of the note circulation than a comparison of averages.

A statement in lakhs of rupees is subjoined for the past eight years; the statement is arranged for the calendar year, which for this purpose is more

convenient than the official year; the month in which the circulation was at the lowest is indicated by the figures in black type :—

Circle.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.
Calcutta ...	9 355·2	8 320·2	2 335·2	1 415·2	3 431·2	10 438·9	5 465·2	5 437·3

5. The following amounts of notes were issued against silver bullion in the course of the year in Calcutta :—

		Rs.
In August 1875	...	5,50,000
„ September „	...	17,50,000
Total	...	23,00,000

against Rs. 1,75,10,000 in the preceding year.

6. In Bombay the amount of silver bullion purchased by the Currency Department was as follows :—

		Rs.
In April 1875	...	17,00,000
„ May „	...	1,00,000
„ August „	...	6,00,000
„ September „	...	37,00,000
„ October „	...	31,00,000
„ November „	...	15,00,000
„ January 1876	...	1,00,000
„ February „	...	1,00,000
Total	...	1,09,00,000

Calcutta sub-circles.

7. The annexed statement shows the amount of sub-circle notes received at Calcutta for coin or notes in each month of the year; the aggregate encashments of Allahabad notes are 10 lakhs less than in the previous year, of Lahore notes 26 lakhs more :—

Month.	Allahabad Notes.	Lahore Notes.	Total.
	Rs.	Rs.	Rs.
April 1875 ...	6,12,225	10,58,575	16,70,800
May „ ...	3,71,910	11,11,365	14,83,275

Akola	23,57,600	45,95,795	21,73,880	47,63,380
Total ...	68,25,78,760	62,69,70,815	63,66,57,570	62,17,81,655
Decrease in 1875-76 ...		5,56,07,945		1,48,75,915

9. The aggregate issues and receipts of the several denominations of notes were as follows :—

	Number of Notes for Rupees								Total	
	5	10	20	50	100	500	1,000	10,000	Number.	Value.
										Rs.
Issues ...	6,43,229	20,95,306	10,24,663	4,06,367	6,61,870	1,25,156	3,62,085	7,114	53,25,790	62,69,70,815
Receipts ...	6,60,481	20,22,780	10,43,265	4,03,578	6,49,870	1,19,911	3,62,755	6,951	52,69,541	62,17,81,655
Excess of issues over receipts ...	...	72,526	...	2,789	12,000	5,245	...	163	56,249	51,89,160
Excess of receipts over issues ...	17,252	...	18,602	...	...	...	670	...	...	...

10. During the year, 52,69,541 notes were received and 35,00,318 cancelled, being 66·43 per cent. of the total number received against 65 of last year.

11. The average number of notes that passed over the counters of the undermentioned offices on each working day during the past three years has been :—

	Notes cashed.		
	1873-74.	1874-75.	1875-76.
Calcutta	9,868	10,814	11,659
Madras	1,784	1,912	1,876
Bombay	4,450	4,449	4,107
Allahabad	250	335	450

	Notes issued.		
	1873-74.	1874-75.	1875-76.
Calcutta	9,830	10,795	11,306
Madras	1,803	1,654	1,619
Bombay	4,111	4,631	4,136
Allahabad	498	503	579

12. The daily average of cancellations during the same period has been—

	1873-74.	1874-75.	1875-76.
Calcutta	4,853	6,478	8,303
Madras	1,190	1,482	1,339
Bombay	2,808	2,907	2,532

13. The following statement gives the net circulation of the several denominations in numbers and value on 31st March 1875, agreeing therefore with the value of each circle on that date in Statement No. I :—

Circle.	Number of Notes for Rupees								Total	
	5	10	20	50	100	500	1,000	10,000	Pieces.	Value.
										Rs.
Calcutta	2,18,902	6,13,220	2,90,341	60,858	83,709	11,363	16,889	...	12,95,282	4,70,17,830
Madras	49,278	53,297	33,529	25,355	47,459	4,595	2,203	10	2,15,726	1,20,64,090
Bombay	63,404	3,34,455	73,264	49,664	56,457	3,906	8,412	450	5,90,012	2,81,30,750
Allahabad	25,207	30,469	22,652	17,202	17,452	1,658	2,291	33	1,16,959	69,36,565

Foreign Circle Notes.

14. The following table shows the encashment of Foreign Circle notes, giving for the year an aggregate total of Rupees 5,96,63,920 :—

Encashed by	Calcutta.	Madras.	Bombay.	Allahabad.	Lahore.	Calicut	Cocanada.	Nagpur.	Kurrachee.	Akola.	Total Value.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Calcutta ...	...	5,53,760	9,83,300	c1,39,08,155	c1,35,55,695	57,465	78,996	3,06,126	46,160	36,655	2,97,81,310
Madras ...	3,80,290	...	7,38,190	1,21,535	17,685	c1,02,005	c21,74,535	22,020	5,800	14,775	80,76,855
Bombay ...	13,75,180	4,08,960	...	1,97,250	2,69,545	77,930	6,680	c24,66,980	c11,03,860	c88,22,175	97,94,360
Allahabad ...	31,16,785	2,89,825	3,07,255	...	6,55,865	16,285	4,465	71,070	18,160	14,945	44,44,155
Lahore ...	8,64,435	1,01,660	1,75,210	3,27,540	...	4,725	610	24,835	1,57,775	7,450	16,64,240
Calicut ...	6,040	15,46,360	76,715	450	80	7,195	...	1,100	21	445	16,88,600
Cocanada ...	2,595	1,43,215	500	745	170	9,235	...	540	120	20	1,57,145
Nagpur ...	10,62,280	3,71,995	12,68,925	9,260	5,635	2,895	10,635	...	735	8,69,890	30,96,290
Kurrachee ...	19,010	2,040	9,14,040	7,145	91,535	455	...	12,215	...	2,665	10,49,095
Akola ...	218	3,998	22,945	685	80	20	100	1,625	880	...	29,990
Total ...	73,26,775	38,65,210	44,84,080	1,45,97,785	1,45,95,770	42,77,710	23,76,020	31,65,810	18,32,160	42,60,020	5,96,63,920

15. In the above table the amounts paid, in fulfilment of the obligation imposed by the Currency Act to pay at the Presidency Town notes issued at circle offices in the interior of each presidency, are marked with the letter (*c*), the remaining amounts represent accommodation afforded to the public beyond the requirements of the law, which during the year under review amounted to Rs. 1,85,36,715, against Rs. 2,06,50,070 of the preceding year.

Reserve.

16. The value of Government securities held by the Department throughout the year was 569 lakhs of rupees.

The distribution of coin and bullion at the end of the year was as follows:—

Circle.	Notes in circulation.	Coin and Bullion.	Percentage of circulation.
Calcutta	470	79	16·8
Madras	121	67	55·4
Bombay	281	152*	54·1
Allahabad	69	112	162·3
Lahore	63	62	98·4
Calicut	26	13	50·0
Cocanada	36	32	88·8
Nagpore	11	4	36·4
Kurrachee	16	3	18·8
Akola	7	5	71·4
Total ...	1,100	529	48·0

* Of which 2 lakhs is bullion.

Outstanding Notes.

17. The following is a comparative statement by years of notes outstanding on 31st December 1874 and 31st December 1875 :—

Year.	Value outstanding 31st December 1874.	Value outstanding 31st December 1875.
	Rs.	Rs.
1862	5,58,330	4,55,420
1863	2,09,260	1,79,280
1864	2,12,420	2,07,750
1865	2,57,380	2,27,980
1866	3,04,080	2,41,640
1867	5,01,950	3,96,[illegible]
1868	8,17,320	6,73,[illegible]
1869	9,60,220	8,34,[illegible]
1870	18,14,220	12,10,430
1871	26,45,510	15,40,950
1872	81,98,795	39,32,790
1873	2,66,07,320	93,20,465
1874	10,00,80,980	1,50,02,580
1875	.....	10,30,95,445

18. It is necessary to explain that the amount of outstanding notes includes, besides those in circulation, all notes held by the department for re-issue, and also such as, having been withdrawn from circulation by other offices than that of issue, have not as yet been cancelled in the registers of the office of issue.

Lost Notes.

19. The following figures show in a consolidated form the total number of notes of the various denominations lost from different causes, of which value has been paid under indemnity :—

	Nature of Loss.	Number of Notes for Rupees									Total	
		5	10	20	50	100	500	1,000	10	00	Number.	Value.
												Rs.
Half Notes ...	Lost by post ...	153	366	234	163	289	11	8	...		1,224	59,655
[illegible] ...	Lost accidentally ...	98	177	148	70	103	24	2	...		[illegible]	[illegible]
[illegible] ...	Mutilated ...	14	[illegible]	[illegible]	13	9	...	1	...		[illegible]	[illegible]
		265	543	432	246	400	35	11	...		1,936	[illegible]
Whole Notes ...	Lost by post ...	...	...	2	3	8	...	...	...		13	650
Ditto ...	Lost accidentally ...	1	3	2	2	11	4	...	...		23	2,625
Ditto ...	Mutilated ...	4	27	28	7	9	...	3	...		101	5,130
		5	48	44	12	28	4	3	...		144	9,785
	Wrongly joined ...	108	181	102	14	15	...	...	...		420	6,990
	Total ...	378	777	548	271	443	39	14	...		2,470	1,11,970

Total value of 1874-75 Rs. 98,030, and of 1873-74 Rs. 70,925.

20. No claim has been established against the Department for the value of any notes, the amount of which has been paid under indemnity.

Forged Notes.

21. Only a single case of presentation of a forged note has been brought to notice in the past year; a paper purporting to be a Bombay note for Rs. 100 was presented at the Shikarpur Treasury; the forgery was detected and the note forwarded to Government of India.

Small Silver Coin and Copper.

22. The receipts and issues of small change during the year were as follows:—

	Receipts.			Issues.			Net Issues.		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
Half Rupees	63,299	0	0	11,09,187	0	0			
Quarter Rupees	47,149	0	0	7,75,349	0	0			
One-eighth Rupees	28,332	0	0	9,01,307	0	0			
Copper	985	0	0	52,186	0	0			
Total ...	1,39,765	0	0	28,37,979	0	0	26,98,214	0	0
Total 1874-75 ...	66,549	8	0	18,60,258	6	0	17,99,709	8	0
				Increase ...			8,98,504	12	0

23. Worn pice to the nominal value of Rs. 35,850 were received at the Calcutta Currency Office during the year.

GOLD.

24. No gold transactions took place during the year at any circle.

COIN OPERATIONS.

25. The following sums were issued and received at the respective offices during the last two years :—

CIRCLE.	ISSUED.		RECEIVED.	
	1874-75.	1875-76.	1874-75.	1875-76.
	Rs.	Rs.	Rs.	Rs.
Calcutta	2,88,46,790	2,65,30,710	3,78,61,745	1,99,92,158
Madras	47,29,505	39,88,525	37,39,625	67,57,965
Bombay	4,67,09,865	3,60,15,330	5,13,12,415	3,38,94,990
Allahabad	1,58,66,595	28,27,325	1,63,59,275	1,21,80,215
Lahore	1,38,74,615	1,49,31,210	1,62,76,690	1,71,41,800
Calicut	45,63,565	36,27,605	46,49,330	46,56,015
Cocanada	24,68,425	25,69,885	35,42,850	31,60,220
Nagpur	54,56,760	95,37,175	59,43,080	94,51,815
Kurrachee	49,23,465	18,12,390	41,33,850	16,13,055
Akola	21,56,070	47,63,380	23,39,790	45,95,795
TOTAL ...	12,95,95,655	10,66,03,535	14,61,58,650	11,34,44,028

26. The following remittances of specie took place during the year under review :—

From Akola to Bombay ... ... 29 lakhs.
„ Bombay to Kurrachee ... ... 6 „

TREASURY DEALINGS IN NOTES.

27. The transactions in notes at the several treasuries in India during 1873-74, 1874-75, and 1875-76 have been as follows :—

	1873-74.	1874-75.	1875-76.
	Rs.	Rs.	Rs.
Receipts from public in payment of Government dues	3,29,27,095	2,96,69,920	3,17,97,380
Ditto in exchange for silver ...	3,18,89,050	2,89,17,665	3,52,80,715
Ditto for other notes	11,60,785	16,83,315	16,18,635
TOTAL RECEIPTS ...	6,59,76,930	6,02,70,900	6,86,96,730
Issues to public in payment of Government dues ...	2,27,29,990	2,24,34,810	2,39,66,950
Ditto in exchange for silver	4,24,64,150	4,15,59,890	4,74,74,715
Ditto for other notes	11,60,785	16,83,315	16,18,635
TOTAL ISSUES ...	6,63,54,925	6,56,78,015	7,30,60,300

28. The total transactions in notes during the last seven years have been the following :—

In 1869-70 ... 635 lakhs.
„ 1870-71 ... 758 „
„ 1871-72 ... 1,095 „
„ 1872-73 ... 1,264 „
„ 1873-74 ... 1,323 „ excluding Branch Banks.
„ 1874-75 ... 1,259 „ ditto.
„ 1875-76 ... 1,418 „ ditto.

which may be analysed thus—

GOVERNMENT OR ADMINISTRATION.	1869-70.	1870-71.	1871-72.	1872-73.	1873-74.	1874-75.	1875-76.
	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.
Government of India ...	4	31	40	7	9	21	45
Lower Bengal	153	238	443	566	623	493	487
Ditto Assam ...	...	..	...	...	...	36	42
North-Western Provinces ...	48	48	87	122	114	128	169
Oudh	8	7	13	22	36	41	43

Hyderabad	...	...	...	...	...	5	5
TOTAL ...	635	758	1,095	1,264	1,323	1,259	1,418

29. The proportion of cash and notes in the following presidencies and provinces on the 31st March last was as follows :—

GOVERNMENT OR ADMINISTRATION.	CASH.	NOTES.
Government of India	95 per cent.	5 per cent.
Lower Bengal	82 „	18 „
Ditto Assam	64 „	36 „
North-Western Provinces	87 „	13 „
Oudh	92 „	8 „
Punjab	88 „	12 „
Madras	81 „	19 „
Bombay	93 „	7 „
Central Provinces	96 „	4 „
British Burma	84 „	16 „

30. Facilities are given for cashing notes at revenue treasuries as far as this can be done without inconvenience in other directions.

A list is subjoined (A) of treasuries which, throughout the year, were able to cash notes at all times to the extent of the public demand on them; a second list (B) contains the names of treasuries, which were ordinarily able to cash notes on presentation; and a third (C) the names of treasuries at which this accommodation was not usually available :—

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, No. 2078, *dated 4th May* 1877.

THE usual weekly reports of relief for the week ending 28th April 1877 are herewith submitted to Government with maps of the districts marginally noted.

Cuddapah. Nellore. South Arcot. | North Arcot. Salem. Chingleput. | Bellary. Coimbatore.

2. *Prices.*—The Kistna prices show little change; rice and cholum have fallen, and ragi and cumboo risen slightly. In *Nellore*, there is a tendency to fall which is especially marked in the northern taluks and in Nellore itself. The quotations in the Ceded Districts and *Kurnool* show rising prices. In *Cuddapah* the rise occurs in the Sub-Division and at Stations in the Jammalamadugu taluk. There has been a sharp rise of prices in the Hindupur taluk of the Bellary District extending to all grains, and prices have also risen in Hospett, Kudlighi and Hadgalli in the west. There has been little change elsewhere in the district. The district averages for *Kurnool* show increased prices for cholum and ragi, a slight fall in the rate for rice and the prices of cumboo stationary. Prices in *Chingleput*, depending probably on importation only, are stationary, but in *North* and *South Arcot* and in *Salem* they show a decided tendency to rise. In Chendragiri and Vellore there is a marked rise in the prices of all grains, and prices have risen also in Chittoor, Palmanair, Punganur and Gudiattam. The taluks of *Salem* in which the rise is most marked are Tripatore, Oossoor and Kistnagiri. In Trichinopoly, Madura and the distressed taluks of Tinnevelly, rates are almost stationary. In *Coimbatore* prices are fluctuating; large quantities of grain are being imported from the west coast. The general condition of prices is that in the inland districts they are rising, probably owing to the cessation of showers which promised so favourably in the beginning of the month; but in the coast and southern districts the rates are nearly stationary.

3. *Rainfall.*—There have been a few light and partial showers during the week. A quarter inch fell at Penkonda in *Bellary* and 0·3 inch at Nandikotkur in *Kurnool*; 0·35 in Namkal in *Salem*; and slight showers in two taluks of *Madura*. There was rain in six out of the ten taluks of *Coimbatore*, and in one, Bhowany, 1·24 inch were registered. No rain fell in any other district.

4. *Grants and outlay.*—The grants up to the 28th April for works and gratuitous relief under Collectors amounted to Rs. 1,31,29,763 and the outlay for these purposes to Rs. 1,19,12,026. The Collectors of *Cuddapah* and *Chingleput* whose grants were exceeded have since been placed in funds. The following is the usual summary showing the classification of outlay on works in progress during the week so far as details are available:—

	In the week. Rs.	Up to the week. Rs.
Roads—		
New works	1,49,189	42,84,568
Repairs	36,328	9,08,822
	1,85,517	51,93,390
Irrigation works	43,863	5,58,825
Miscellaneous	47,885	6,38,313
Total ...	2,77,265	63,90,528

5. *Numbers on relief works*—Compare as follows, by districts, with last report:

	21st April.	28th April.	
Kistna	2,256	1,978	−278
Nellore	26,481	27,859	+1,378
Cuddapah	56,768	51,192	−5,576
Bellary	227,695	229,233	+1,538
Kurnool	213,172	211,889	−1,283
Chingleput	10,417	5,499	−4,918
North Arcot	39,458	41,042	+1,584
South Arcot	1,054	724	−330
Madura	11,045	11,631	+586
Tinnevelly	1,037	499	−538
Coimbatore	22,250	21,958	−292
Salem	52,748	57,989	+5,241
	664,381	661,493	−2,888
East Coast Canal	41,020	40,691	−329
Total ...	705,401	702,184	−3,217

6. Except in *Chingleput*, *Cuddapah* and *Salem* there is no important change in the total numbers. There is a slight increase in *Nellore* (chiefly in the Kavali taluk) though work has ceased in Kandukur. The numbers on the Canal have not risen notwithstanding the efforts made to recruit labourers for the work. The figures for the *Cuddapah* district are compared in the margin. The fluctuations are considerable. The increase in Jammalamadugu is ascribed to coolies under transfer to a new work having been omitted last week. The decrease in Pulivendla and Budwail is due to recruiting for the East Coast Canal. That in the Sub-division taluks is not explained, but seems due to imperfect return and to stoppage of works in view to concentration of the labour.

Jammalamadugu ...	316	3,693	+3,377
Pulivendla ...	4,160	2,596	−1,564
Prodattoor ...	1,830	1,947	+117
Cuddapah ...	3,845	3,857	+12
Budwail ...	5,746	4,892	−854
Sidhout ...	1,843	2,074	+231
Pullumpett ...	11,678	12,390	+712
Kadiri ...	10,251	7,304	−2,947
Royachoti ...	6,460	2,716	−3,744
Madanapalli ...	7,891	6,251	−1,640
Vollpaud ...	2,748	3,472	+724
Total ...	56,768	51,192	−5,576

7. In *Bellary* also there are large fluctuations. The numbers have decreased by 15,621 almost entirely in the western taluks, but in the rest of the district have increased by 17,159. The decrease in Gooty and Raidrug is ascribed to outbreaks of cholera; and that in the western taluks to the fall of rain and the stoppage of some of the works which were scattered. The increase in the other taluks is ascribed to the return of coolies who had left the works on the reduction of wages and to reap cholum, straw, and to the increasing pressure of the famine. The increase in Madaksira is very great.

	21st April.	28th April.	
Adoni ...	54,220	55,805	+1,585
Alur ...	19,250	19,426	+176
Gooty ...	11,867	10,627	−1,240
Tadpatri ...	10,846	11,889	+1,043
Anantapur ...	12,228	12,245	+17
Dharmaveram ...	1,830	2,950	+1,120
Penkonda ...	4,400	7,124	+2,724
Hindupur ...	1,556	1,812	+256
Madaksira ...	12,458	18,011	+5,553
Raidrug ...	7,268	6,647	−631
Bellary ...	22,046	22,894	+848
Hospett ...	18,695	15,633	−3,062
Sundur ...	4,144	4,553	+409
Kudligi ...	7,405	10,833	+3,428
Herpunhalli ...	21,116	14,550	−6,566
Hadgalli ...	18,366	14,234	−4,132
Total ...	227,695	229,283	+1,588

8. There is scarcely any change in *Kurnool*, but there is apparently a heavy fall in numbers in *Chingleput*. The report however shows this to be due to non-receipt of reports of numbers from the railway works and from irrigation works under the Public Works Department and partly also to stoppage of works under that department. This will be enquired into. The increase in *North Arcot* is general, and the details call for no remark. Of the *Madura* coolies 8,513 are employed in Pulni against 7,286 last week, in the other taluks numbers have declined from 3,759 to 3,118. No relief work is in progress in the zemindaries. In *Coimbatore* numbers are nearly stationary except in Palladum and Bhowany; in the former they have decreased owing to cholera and in the latter increased by about the same amount. The taluk numbers in *Salem* are compared in the margin. No explanation is given in the report. The fall in Utangarai and rise in Tripatore are remarkable.

Salem ...	10,338	11,343	+1,005
Ahtur ...	3,210	2,071	−1,139
Namkul ...	2,989	2,714	−275
Trichengode ...	5,643	6,810	+1,167
Utangarai ...	7,013	3,569	−3,444
Tripatore ...	3,762	8,246	+ 4,484
Dharampuri ...	9,498	9,388	− 110
Ossoor ...	3,054	3,434	+ 380
Kistnagiri ...	7,241	10,414	+ 3,173
Total ...	52,748	57,989	+ 5,244

9. *Rates of wages.*—The highest and lowest rates of wages to a male adult on each of the two scales of task work prescribed are as follows in each district:—

	Scale I.		Scale II.	
	Highest.	Lowest.	Highest.	Lowest.
	A. P.	A. P.	A. P.	A. P.
Nellore	...	...	1 6	1 6
Cuddapah	2 0	1 9	1 10	1 8
Bellary	...	...	1 9	1 4
Chingleput	1 10	1 10	1 6	1 3
North Arcot	2 0	1 7	1 5	1 3
South Arcot	...	...	1 5	1 4
Madura	2 0	1 9	1 5	1 5
Tinnevelly	...	...	1 5	1 4
Coimbatore	2 0	1 9	1 5	1 5
Salem	...	...	1 6	1 6

The variation in rates results from difference of prices and difference in the standard grains taken. The higher rates are in force only in five districts. The lower scale is in force in one taluk only of each of the districts of Madura and Coimbatore. There is a uniform rate throughout Nellore, on the lower scale, which is wrong and should be altered at once. Piece work is general in Salem. Daily wages are paid only on a few minor works. The scale is uniform.

10. *Gratuitous relief.*—The district totals compare as follows with those entered in last week's report:—

	21st April.	28th April.	
Kistna ...	4,141	509	−3,632
Nellore ...	58,235	13,151	−45,084
Cuddapah ...	29,013	24,988	−4,025
Bellary ...	95,074	101,623	+6,549
Kurnool ...	70,024	63,797	−6,227
Chingleput ...	51,996	9,059	−42,937
North Arcot ...	3,115	8,071	+4,956
South Arcot ...	5,689	1,280	−4,409
Madura ...	5,871	6,224	+ 353
Tinnevelly ...	1,843	225	−1,618
Coimbatore ...	7,464	11,195	+3,731
Salem ...	34,364	35,540	+1,176
Total ...	366,829	275,662	−91,167

11. The decrease is not real, as the numbers for the 21st are vastly overstated, some of the Collectors having misunderstood the instructions issued and entered in the new form of return for village and camp relief the whole numbers for the week instead of those on the last day of it. The figures for the 28th are now correct, except that for *Kistna* and *Tinnevelly*, the average for the week is given. The error above noticed accounts for the decrease in *Kistna*, *Nellore*, *Chingleput*, *South Arcot* and *Tennevelly*.

12. Abstract No. 5 gives full details of the administration of gratuitous relief in each district exclusive of *Kurnool* and Kistna, there were 226 camps and relief houses at which 75,878 persons were being fed; village relief was given to 71,833 persons in 4,264 villages out of 21,738, which have been divided into 468 inspection circles, village relief has already been given in nearly half the villages of *Bellary*, *Cuddapah* and *Salem*. In Nellore the organization is only just commencing to work; in other districts the proportion of villages in which relief has been given is small, but in these, distress is not so widespread and severe. The special allowance to children under seven years is not given at all in *Chingleput*, *North Arcot*, *South Arcot*, *Tinnevelly*, *Coimbatore* or *Salem*. It is in full force in the Ceded Districts and *Kurnool*, where the numbers bear too high a proportion to the numbers of working coolies; to a small extent in *Nellore*; and still smaller in *Madura*. The total number of children receiving this allowance is 99,802 of whom 96,591 are in *Bellary*, *Cuddapah* and *Kurnool*.

The following statement shows the distribution as to class of the persons in relief camps and in villages (so far as reported):—

	In camps &		In villages.	
	Number.	Per cent.	Number.	Per cent.
Men ...	14,772	20·1	15,036	20·9
Women ...	22,172	30·2	25,052	34·9
Children ...	36,465	49·7	31,745	44·2
	73,409	100·0	71,833	100·0

The deaths in camps and relief houses are reported to have been 101.

13. The following statement shows the total numbers on the hands of Government in each district or part of a district classed as distressed and the proportion which the numbers bear to the population.

	Population as per Census of 1871.	Numbers.			Per cent. of population.
		Relief works.	Gratuitous relief.	Total.	
Kistna ...	308,154	1,978	509	2,487	0·81
Nellore ...	1,376,811	*68,550	13,151	81,701	5·93
Cuddapah ...	1,351,194	51,192	24,988	76,180	5·64
Bellary ...	1,668,006	229,233	101,623	330,856	19·83

REVENUE BOARD OFFICE, MADRAS; *4th May* 1877.

J. H. GARSTIN, *Addl. Secy. to Govt.*

H. E. STOKES, *Secretary.*

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, Madras, No. 2039, dated 2nd May 1877.

Read relief reports for the week ending 21st April 1877, from the Collector of Kistna, dated 24th April 1877, and from the Collector of Kurnool, dated 28th April 1877.

THE Board submit to Government the detailed relief reports for the Kistna and Kurnool districts for the week ending 21st April, in continuation of Board's Proceedings, 27th April 1877, No. 1951.

2. Prices in Kistna are nearly stationary; the only important changes are, a rise in the prices of rice, cholum and ragi in Guntur, and a fall in those of dry grains in Naranowpeta. No rain fell in the district in the week. There was scarcely any change in prices in Kurnool. No rain was registered in the district except in Nandikotkur, where three-tenths of an inch fell.

3. In Kistna as usual report has been received only from the Commamur Canal Extension Works, on which 2,256 persons were employed. The Collector will explain why the others are classed as relief works; and if properly so classed, why returns are not furnished from them. The taluk numbers in Kurnool are detailed below:—

	14th April.	21st April.	
Ramalkota	32,995	36,800	+ 3,805
Nandikotkur	12,232	15,199	+ 2,967
Nandial	28,044	30,467	+ 2,423
Sirwell	16,630	16,214	— 416
Koilkuntla	32,381	32,502	+ 121
Pattikonda	22,010	26,448	+ 4,438
Cumbum	46,737	45,532	— 1,205
Markapur	13,475	10,010	— 3,465
Total	204,504	213,172	+ 8,668

The increase in Pattikonda is nominal, being due to the inclusion of coolies who were under transfer the previous week. For Ramalkota, Nandikotkur and Nandial no explanation is given except that more coolies were admitted by Public Works officers. The decrease in the eastern taluks (Cumbum and Markapur) is due to task-work reduction of wages and concentration of labour.

4. Rates of wages in Kurnool are the same as last week, except that the higher scale is now paid in two taluks on works under the Public Works Department; that wages have been lowered somewhat in Cumbum, though still too high to correspond with the quoted price of cholum or ragi; and that in Nandial they have been increased from rates corresponding to grain at 7½ seers per rupee to those prescribed for grain at 6 seers. The price of rice, however, which is the dearest grain, is 7·84 seers. The Collector will call upon Mr. Gibson to explain.

5. In Kistna 4,141 persons were gratuitously relieved at a cost of Rs. 339. It seems that the number of rations for the whole week has been given, which is wrong. In Kurnool 70,024* persons were in receipt of this relief, of whom 16,875 were in villages and 53,156, including children too young to work, were in camps and relief houses. The taluk comparison is as follows:—

Men	8,232
Women	12,667
Children	49,125
	70,024

	14th April.	21st April.	
Ramalkota	13,726	14,827	+ 1,101
Nandikotkur	3,286	5,826	+ 2,540
Nandial	7,185	9,384	+ 2,199
Sirwell	3,151	10,393	+ 7,242
Koilkuntla	10,000	9,863	— 137
Pattikonda	4,460	6,682	+ 2,222
Cumbum	6,453	8,186	+ 1,733
Markapur	4,850	4,863	+ 13
Total	53,111	70,024	+16,913

This increase is ascribed by the Collector to abuse by the village officers of the relief powers granted them, which abuse however he was doing his utmost to repress.

Talukwar Abstract of relief in certain districts of the Madras Presidency, for the week ending Saturday, the 21st April 1877.

H. E. STOKES,
Secretary.

REVENUE BOARD OFFICE,
MADRAS;
The 2nd May 1877.

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Madras Govt., No. 1639, *dated 4th May* 1877.

Read the following :—

Proceedings of the Board of Revenue, Madras, No. 2009, *dated* 30*th April* 1877.

Read the following :—

No. 379, dated 21st April 1877.

From—R. DAVIDSON, Esq., *Acting Collector of Kurnool,*

To—The Secretary to the Board of Revenue, Madras.

THE relief reports and return of prices and rainfall for the week ending 7th April 1877 having already been forwarded, I have the honour to make the following remarks in connection with them.

2. Statement No. 1.—On comparing the district average for the past and present weeks the variations in the price of grain are very slight as shown in the margin. In Pattikonda, however, cholum fell from 9·67 in the previous week to 10·21, while in Koilkuntla rice rose from 8·25 in the previous week to 7·42, and ragi fell from 9·07 to 10·72. In Nandial and Markapur also there was a fall in the price of ragi from 8·91 and 9·07 to 9·97 and 9·90 respectively. This is due to the harvest of ragi which has been obtained in those taluks under wells and the Gundlacaunna Channel.

Average of the districts.

	31ST MARCH	7TH APRIL
Rice	7·29	7·23
Cholum	8·79	8·39
Ragi	9·92	10·42
Cumboo	8·88	9·06
Wheat	7·69	7·48
Horse gram	8·17	8·22

3. There was a slight fall of rain in four of the taluks averaging ·36 of an inch, the highest fall being ·44 inch in the vicinity of Markapur.

4. The number of works sanctioned for execution, those in progress, and completed during the week are shown in the annexed table :—

TALUKS.	No. of works sanctioned.	No. of works in progress.	No. of works completed.
Ramalkota	46	14	....
Nandikotkur	56	13	1
Pattikonda	59	9	....
Koilkuntla	18	7	1
Nandial	59	22	....
Sirwell	46	15	....
Cumbum	40	15	....
Markapur	28	8	6
Total	352	103	8

5. The works reported to be completed in the week are (1) filling up pits dug by the Canal Company in the village of Allur in Nandikotkur taluk at a cost of Rs. 2,733, and (2) repairs of 7 wells in Koilkuntla and Markapur taluks at a cost of Rs. 2,157.

6. Two abstracts are enclosed to show the outlay on works and gratuitous* relief and the number of persons employed on works and gratuitously* relieved.

* Already forwarded.

7. The grants made up to the 7th April amounted to Rs. 30,21,000; the outlay on works during the week was Rs. 1,23,121 against Rs. 1,24,290 in the previous week; the small decrease of Rs. 1,169 calls for no particular remark.

8. Numbers on relief works.—The numbers employed in each taluk, as contrasted with those reported for the previous weeks are given in the margin. The increase of 14,623 which is spread over all the taluks except Ramalkota is reported chiefly to be owing to the re-admission to works of coolies who had been eliminated some time back as being temporarily able to provide for themselves, to the return of such as had dispersed on the concentration of labour on the main lines of communication, to an influx into the Koilkuntla taluk of coolies from Jammalamadugu of the Cuddapah district, and to the cessation of harvest under the canal which has thrown some labourers out of employ. The decrease in Ramalkota is due to coolies having left our works preparatory to starting for the East Coast Canal, though it does not appear that they have all started as yet.

TALUKS.	31st March.	7th April.	Difference.
Ramalkota	41,915	40,391	—1,524
Nandikotkur	9,720	12,330	+2,610
Pattikonda	23,340	26,289	+2,949
Koilkuntla	30,974	32,679	+1,705
Nandial	28,887	31,103	+2,216
Sirwell	14,667	16,449	+1,782
Cumbum	42,933	46,346	+3,413
Markapur	9,706	11,178	+1,472
Total ..	202,142	216,765	+14,623

9. Wages were paid during the week according to the sanctioned rates, and second sort rice was adopted as the standard in all the taluks except Ramalkota, Pattikonda and Koilkuntla. Mr. Gibson reports that in his section he was obliged to "adopt second sort rice as the standard on the ground that cholum is not everywhere to be had, although generally procurable in the Santas (markets) and the Kusbahs," and he observes that he "sees no reason at present to suppose that the present allowance is insufficient."

10. The following money or grain wages were in force during the week :—

Taluks.	Money.			Grain.		
	Man.	Woman.	Child.	Man.	Woman.	Child.
	A. P.	A. P.	A. P.			
Ramalkota	1 6	1 3	0 9	...	...	...
Nandikotkur	1 8	1 5	0 10	...	...	...
Pattikonda	2 0	1 4	0 10	...	...	...
Koilkuntla	1 6	1 3	0 9	...	...	...
Nandial	1 8	1 5	0 10	...	...	...
Sirwell	1 8	1 5	0 10	...	...	...
Cumbum	1 9	1 6	0 11	40 tolas. +¼ anna.	40 tolas. +¼ anna.	20 tolas. +¼ anna.
Markapur		Not reported.				

11. Grain wages were paid during the week on certain works in the Cumbum taluk, and Mr. Farmer has been addressed on the subject. The lower scale was adopted generally throughout the district except on the Rampoor Ghat road in the Pattikonda taluk and the trunk road in Nundial taluk, where higher rates were paid apparently in consequence of the higher tale of work exacted.

12. Gratuitous relief.—The numbers for the several taluks are compared below :—

Taluks.	31st March.	7th April.	Difference.
Ramalkota	11,907	16,060	+ 4,153
Nandikotkur	1,844	2,205	+ 361
Pattikonda	4,574	10,652	+ 6,078
Koilkuntla	6,061	5,409	— 652
Nandial	4,068	5,750	+ 1,682
Sirwell	2,199	2,776	+ 577
Cumbum	2,574	3,172	+ 598
Markapur	526	817	+ 291
Total ...	33,753	46,841	+ 13,088

The increase is due partly to the inclusion of the numbers fed at the Kurnool Langerkhana and partly to the extension of the village relief system. The cost of gratuitous relief during the week was Rs. 8,510, and the entire cost since the commencement of distress amounted to Rs. 41,414.

13. The following table shows the number of persons who emigrated to the East Coast Canal during the week under report from Kurnool Town and from Cumbum :—

Men.	Women.	Children.		Total.
		Above 7 years.	Below 7 years.	
451	490	269	188	1,398

14. The subjoined table exhibits the number of cattle fed with prickly-pear on the last day of the week and the expenditure incurred on this account in the town of Kurnool :—

No. of cattle fed.	Expenditure in the week.	Expenditure to the end of the week.
	Rs. A. P.	Rs. A. P.
48	41 5 0	131 3 11

15. A list of extra establishment entertained is herewith submitted.

16. No material change in the physique of coolies has been reported.

Submitted to Government in continuation of Board's Proceedings dated 19th April 1877, No. 1784, reviewing the detailed reports.

(True Extract)

H. E. STOKES,
Secretary.

Order thereon, 4th May 1877, No. 1639.

Communicated to the Government of India in continuation of the Board's Proceedings of 19th April 1877, No. 1784.

(True Extract)

J. H. GARSTIN,
Addl. Secretary to Government.

Return of Establishments employed in connection with relief works in the Kurnool District for the week ending 7th April 1877.

1. Supervision of execution of works, ordinary revenue establishments—

Number of.
- 8 Tahsildars.
- 4 Deputy Tahsildars.
- 10 Revenue Inspectors.
- 9 Taluk Gumastahs.
- 8 Overseers, D. P. W.
- 8 Others.

Establishment specially entertained.

Number of.		Aggregate monthly pay. Rs. A. P.
24	Special European Officers	9,107 0 0
2	Deputy Collectors	750 0 0
2	Tahsildars	.....
8	Deputy Tahsildars	560 0 0
10	General Superintendents	965 0 0
18	Overseers	102 0 0
36	Revenue Inspectors	998 0 0
116	Settlement and Survey Establishment ...	3,029 0 0
176	Head Mistries	2,194 0 0
70	Village officials specially remunerated ...	638 0 0
278	Others above the grade of head-cooly or gauger ...	2,352 0 0

2. Payment of wages—

Number of.

214	Paymasters or paying Gomastahs	1,943 0 0
37	Others (Clerks for grain depôts, &c.) ...	447 0 0

3. Accounts—

Number of.

64	Special Clerks	769 0 0
11	For audit and check of labour bills and accounts...	288 0 0

R. DAVIDSON,
Acting Collector.

J. H. GARSTIN,
Addl. Secretary to Government.

Talukwar Abstract of Relief in the Kurnool District for the week ending 7th April 1877.

Talukas.	Grants of funds sanctioned for relief works up to 7th April 1877.	Probable cost of work or sums sanctioned for their execution.	Outlay on works in progress.		On relief works since the commencement of distress.	Number of coolies employed on the last day of the week.				Last week's total.	Difference.	Remarks.

R. DAVIDSON,
Acting Collector.

J. H. GARSTIN,
Addl. Secretary to Govt.

No. 340 E.—1098, dated 11th May 1877.

From—The Secretary to the Government of Bombay, Public Works Dept.,
To—The Secretary to the Government of India.

I AM directed by His Excellency the Governor in Council to forward, for the information of the Government of India, a memorandum prepared by Surgeon-Major Lyon, Chemical Analyser to Government, and to observe that this able and interesting paper appears to throw light on the question recently raised, and still under discussion, as to the sufficiency of a ration based on 1 lb. of grain a day for a relief labourer.

2. The calculations by Dr. Lyon, which are deduced from actual experience, and are not purely theoretical, seem to show that a ration based on 1 lb. of grain is sufficient for the sustenance of persons not performing severe labour.

Memorandum by Surgeon-Major I. B. LYON, F. C. S., *Chemical Analyser to Government, Bombay, dated 7th May* 1877.

DURING the year 1876, 534 Native prisoners (all on hard labour) were discharged from the Bombay House of Correction. Their average weight on admission was 105 lbs.=7 stone 7 lbs. On discharge they were found to have gained in weight on an average 1 lb. 10¼ oz. each. Their daily diet, while in Jail, is shown at (*a*) Table I., its value in nitrogen and carbon, calculated by the factors given in Table II., is, as shown (Table III. *a*), nitrogen 201·6 grains, carbon 4,011 grains daily.

These quantities of nitrogen and carbon are very much less than the quantities laid down by authorities as requisite for a European of average weight in moderate work. Thus many authorities estimate the quantities required by a European, of average weight in moderate work, at about nitrogen 300 grains, carbon 4,850 grains daily (see Table IV.; 1 and 2). Letheby, taking a mean calculated from the researches of various physiologists, estimates the quantities required by a European male adult of average weight on ordinary labour as nitrogen 307 grains, carbon 5,688 grains (Table IV., 3). The hard labour diet of English convicts contains nitrogen 281 grains, carbon 5,140 grains per diem (see Table IV., 10).

The experience of the Bombay House of Correction that Native prisoners at hard labour gain weight on a diet containing less nitrogen and carbon than the quantities laid down by authorities as requisite for European adults of average weight in moderate work, is confirmed by the experience of the Jails of the Hyderabad Assigned Districts. The hard labour diet of these Jails is shown in Table I. (*b*'), and its value, nitrogen 230·5 grains, carbon 4,600 at Table III. (*b*'). On this diet the lowest, except the Bombay House of Correction diet, of the hard labour diets of the Indian Jails, the prisoners are found to be "very healthy." Again the new scale for all Indian Jails proposed by the Jail Conference recently assembled at Calcutta, (Table I. (*c*')), values (see Table III. (*c*')) nitrogen 213·2 grains, carbon 4,454 grains.

Considering together the experience of the Bombay House of Correction and the experience of the Hyderabad Assigned District Jails, and considering also this proposal of the Jail Conference which, it may be presumed, is founded on the experience of officers well qualified to judge of the requirements of Native prisoners, there seems to be no doubt but that hard labour prisoners in Indian jails require a diet containing less carbon and nitrogen than the amounts laid down by authorities as required by Europeans of average weight in moderate work. There thus appears to be a difference between Indian experience and European authorities.

If, however, the weight of Natives of India as compared with Europeans is taken into account, this apparent difference practically disappears, for taking the Bombay House of Correction diet, shown by experience to suffice for labouring prisoners averaging 105 lbs. in weight and raising its value in the proportion of 105 to 150, the quantities become nitrogen 288 grains, carbon 5,730 grains, quantities not greatly different from—1, Letheby's estimate for ordinary labour (Table IV., 3), *viz.*, nitrogen 307 grains, carbon 5,688 grains, and 2, the value of the hard labour diet of English convicts (Table IV., 10), *viz.*, nitrogen 281 grains, carbon 5,140 grains. The proportion 105 to 150 is employed, because, while the average weight of the prisoners discharged from the Bombay House of Correction in 1876 was on admission 105 lbs., the average weight of a European male adult is given by most authorities as 150 lbs.

There certainly appears to be no theoretical objection to the proposition that the quantity of food required by adults is proportionate to their weight; provided, of course, always that the quantity of work expected from them is likewise proportioned to their weight. In order, however, to place the three diet scales I now propose (see Tables V. to IX.) as much as possible on the basis of experiences, I take as the foundation of the scales the experience of the Bombay House of Correction, *viz.*, that Native prisoners averaging 105 lbs. in weight, did well at jail labour on a daily diet containing nitrogen 201·6 grains, carbon 4,011 grains. From this I derive the three proposed scales as follows:—

1. *Scale No.* 1.—The labour scale;—is simply the Bombay House of Correction scale, raised and lowered proportionally to the weight of the individuals to be fed.
2. *Scale No.* 2.—The light labour scale;—is Scale No. 1, reduced in the same proportion that the light labour diet of English convicts (Table IV., 12), is lower than English convict hard labour diet (Table IV., 10).
3. *Scale No.* 3.—The bare sustenance scale;—is Scale No. 1, reduced in the same proportion that a mean between Edwin Smith's and Letheby's estimates for bare sustenance (Table IV., 16 and 17), is lower than English convict hard labour diet (Table IV., 10).

On these three scales the quantities of nitrogen and carbon required daily by men averaging 105 lbs. in weight is in grains (Table V.):—

	Nitrogen.	Carbon.
On Scale No. 1, Labour	201·6	4,011
On Scale No. 2, Light labour	173·6	3,528
On Scale No. 3, Bare sustenance	136·7	3,195

These quantities are represented respectively by the following weights in ounces (*a'*) of jowari and pulse—(*b'*) of bajri and pulse, *plus* in each case, half an ounce of fat:—

	Jowari.	Pulse.	Total.
(*a'*)—Scale 1, Table VII., Columns 3 and 6	16·98	5·62	22 60
„ 2, „ VIII., „ „ ...	15·08	4·68	19·76
„ 3, „ IX., „ „ ...	15·23	2 56	17·79
	Bajri.	Pulse.	Total.
(*b'*)—Scale 1, Table VII., Columns 3 and 9	18·60	4·00	22·60
„ 2, „ VIII. „ „ ...	16·50	3·26	19·76
„ 3, „ IX, „ „ ...	16·67	1·12	17·79

TABLE I.

Daily allowance (exclusive of salt and condiments of certain Indian jails).

(*á*) *Bombay House of Correction—(for labouring prisoners).*

	Ounces.
Rice	8·0
Wheat	4·57
Bájri	3·43
Dhall	5·0
Vegetables	8·0
Fat	·5

On this diet 534 Native prisoners, all on hard labour, discharged during 1876, gained in weight on an average 1 lb. 10½ oz. each. The average weight of the prisoners on admission was 7 stone 7 lbs. Of the 534 discharged during the year—

295	gained in weight on an average ... ... 4 lbs. 3 oz. each.
102	lost in weight on an average ... ... 3 lbs. 8 oz. each.
137	neither gained nor lost weight.
534	

Of these prisoners—

130	had been under 3 months in jail.
89	had been over 3 and under 6 months in jail.
217	had been over 6 and under 12 months in jail.
71	had been over 12 and under 24 months in jail.
27	had been 2years in jail.
534	

The non-labour diet of the Common Jail, Bombay, is the same as the above less daily—

	Ounces.
Wheat or bájri	2
Dholl	1
Vegetables	2

Other dietaries.

(*b'*) Jails, Hyderabad Assigned Districts, labouring prisoners.
(*c'*) New proposed scale for all Indian jails.
(*d'*) Jails, Hyderabad Assigned Districts non-labouring prisoners. „
(*e*) Oudh jails non-labouring prisoners.

Daily, exclusive of salt and condiments.	Cereals.	Pulses.	Vegetables.	Fatty matter.
	Ozs.	Ozs.	Ozs.	Grains.
(*b'*) Hyderabad Assigned Districts (labour).	20·7	4·8	3·4	192
(*c'*) New scale (labour)	20·0	4·0	6·0	218·75
(*d'*) Hyderabad Assigned Districts (non-labour)	16·3	4·5	3·4	144
(*e*) Oudh (non-labour)	17·5	1·5	5·5	90

Dr. Cruickshank, Inspector General of Prisons, Bombay, in forwarding the above scales, writes:—"Please look at the diet scales of the Hyderabad Assigned Districts, where the prisoners are very healthy."

TABLE II.

Factors employed in estimating the value of the various dietaries, and in the construction of Tables VII., VIII. and IX.

(1)	Rice,	nitrogen, grains per ounce. ...	...	5·07
(2)	Barley	ditto ...	(E. Smith) ...	5·81
(3)	Jowári	ditto ...	(Parkes) ...	5·97
(4)	Common millet	ditto ...	(Parkes) ...	6·40
(5)	Maize	ditto ...	(mean) ...	6·93
(6)	Bájri	ditto ...	(Parkes) ...	7·00
(7)	Oat-meal	ditto ...	(Letheby) ...	8·70
(8)	Wheat	ditto ...	(mean) ...	9·22
(9)	Pulse	ditto ...	(mean) ...	17·86
(10)	Succulent vegetables, grains per ounce		(mean) ...	·70
(11)	Average carbon of cereals and pulse, grains per ounce			... 170·0
(12)	Ditto do. of succulent vegetables, grains per ounce			... 33·5
(13)	Carbon of fat, grains per ounce		(Parkes)	... 345·6

See also Appendix.

TABLE III.

Value in Nitrogen and Carbon of the Indian Dietaries enumerated in Table I.

	Nitrogen grains daily.	Carbon grains daily.
(*á*) Bombay House of Correction (labour)	201·6	4,011
(*b'*) Hyderabad Assigned District Jails (labour)	230·5	4,600
(*c'*) New proposed scale for all Indian Jails (labour)	213·2	4,454
(*d'*) Bombay Common Jail (non-labour)	165·8	3,434
(*e*) Hyderabad Assigned District Jails (non-labour)	194·9	3,764
(*f'*) Oudh Jails (non-labour)	151·2	3,485
The above values raised 3 ✓10ths or in the proportion of 105 to 150.		
(*á*) Bombay House of Correction (labour)	288	5,730
(*b'*) Hyderabad Assigned District Jails (labour)	329	6,571
(*c'*) New proposed scale for Indian Jails (labour)	305	6,363
(*d'*) Bombay Common Jail (non-labour)	237	4,906
(*e*) Hyderabad Assigned District Jails (non-labour)	278	5,377
(*f'*) Oudh Jails (non-labour)	216	4,979

TABLE IV.

Daily Nitrogen and Carbon of European Dietaries.

	Nitrogen Grains daily.	Carbon Grains daily.
1.—Standard Diet (Moleschott)	316·5	4,862
2.— Do. (Parkes, Pavy, Church)	300	4,850
3.—Mean for ordinary labour (Letheby)...	307	5,689
4.—Hard working labourers (Playfair)	389	6,066
5.—Active labourers, do	273	4,478
6.—Active labourers, Royal Engineers (Playfair)	350	6,004
7.—Moderate exercise (Playfair)	291	5,094
8.—English Soldier, Home Service (Playfair)	293	5,104
9.— Do. do. (Parkes)	266	4,718
English Government Convict Establishments.		
10.—(*a'*) Hard labour	281	5,140
11.—(*b'*) Industrial employment	256	4,766
12.—(*c'*) Light labour	242	4,520
13.—Mean of English, Scotch, Welsh, and Irish farm labourers (E. Smith) ...	300	6,478
14.—English farm labourers, lowest of the four (E. Smith)	228	5,810
15.—Low-fed operatives average (E. Smith)	214	4,881
16.—Bare sustenance diet (E. Smith)	200	4,300
17.— Do. (Letheby)	181	3,988
18.— Do. (Playfair)	161	3,103

Notes to Table IV.

1. For a male European adult of average height and weight (5 feet 6 inches to 5 feet 10 inches and 140 to 160 lbs.) in moderate work.

2. Average weight (154 lbs., Church) and moderate work.

3. Mean calculated from researches of various physiologists for adult males.

5. Soldiers during war.

6. Calculated from amount of food consumed by 495 men of the Royal Engineers at work at Chatham.

7. Mean of English, French, Austrian and Prussian soldiers during peace.

16. Average representing the daily diet of an adult man during periods of idleness.

17. Mean calculated from researches of various physiologists, representing the amount required by an adult man during idleness.

18. Mean of—diet of needle-women in London, certain prison dietaries, common dietary for convalescents, Edinburgh Infirmary, average diet during cotton famine of 1862 in Lancashire.

The three diet scales now given (see Tables V. to IX.) are calculated as follows :—

Diet Scale No. 1.—This is the Bombay House of Correction diet ([*d*] Tables I. and III.) raised and lowered in proportion to weight. The average weight of the prisoners on admission into the House of Correction being 105 lbs., nitrogen 201·6 grains, carbon 4,011 grains (the value in nitrogen and carbon of the House of Correction diet) is placed opposite the weight 105 lbs. For every 5 lbs. in weight over or under 105 lbs. $\frac{1}{21}$ of these quantities of nitrogen or carbon is added or deducted as the case may be. It will be observed that at weight 150 lbs. the quantities of nitrogen and carbon become respectively 288 and 5,730 grains. At 150 lbs., therefore, the nitrogen is very slightly above the nitrogen of the English convict hard labour diet (Table IV., 10) *viz.*, 281 grains; the carbon, however, is considerably higher than the carbon of the English convict hard labour diet, *viz.*, 5,730, as compared with 5,140 grains, or 11·47 per cent. higher. Letheby's mean estimate for ordinary labour (Table IV., 3), *viz.*, nitrogen 307 grains, carbon 5,688 grains, comes as regards carbon very near diet Scale No. 1 at weight 150 lbs. The quantity of nitrogen in Letheby's estimate, however, is higher, *viz.*, 307, as compared with 288 grains.

Diet Scale No. 2.—This is (diet Scale No. 1) lowered in the same proportion as English convict light labour diet (Table IV., 12) is lower than English convict hard labour diet, *i. e.*, as 281 is to 242 for the nitrogen and as 5,140 is to 4,520 for the carbon. Lowered in this proportion, the quantities become—

At 105 lbs., nitrogen 173·6 grains, carbon 3,528 grains.
At 150 lbs., „ 248·0 „ „ 5,039 „

At 105 lbs., therefore, diet Scale No. 2 is very similar in value to the nonlabour diet of the Common Jail, Bombay (Table III [*d'*]) and somewhat better than the Oudh Jails non-labour diet (Table III. [*f*]) at 150 lbs. Diet scale No. 2 is better than the average diet of low-fed English operatives, as estimated by Edwin Smith (Table IV., 15), it is of course also better than the light labour diet of English convict establishments in the same proportion that diet Scale No. 1 is better than the hard labour diet of the same establishments.

Diet Scale No. 3.—This is calculated as follows :—Of the three estimates for bare sustenance diet the mean of the two highest (Edwin Smith's and Letheby's Table IV., 16 and 17) is nitrogen 190·5, carbon 4,094 grains; both these estimates are for average adult males. Playfair's estimate (Table IV., 18), which is considerably lower than the other two, is excluded, as it does not wholly refer to adult males. Raising this mean in the same proportion as diet Scale No. 1 at 150 lbs., exceeds English convict hard labour diet, the figures become nitrogen 195·3 grains, carbon 4,564 grains. These quantities placed opposite weight 150 lbs. form the foundation of diet Scale No. 3. For the other weights shown in the table, the quantities are proportionally reduced. Comparing diet Scale No. 3 with Playfair's estimate for bare sustenance (Table IV., 18), it will be seen that the nitrogen of the scale does not run below Playfair's estimate until after weight 125 lbs. is reached, and, similarly, it is only when the weight runs below 105 lbs. that the amount of carbon becomes lower than that given in Playfair's estimate.

TABLE V.

Showing the quantity of nitrogen and carbon required daily on each of three scales, *viz.* :—

Scale 1.—A labour scale—the Bombay House of Correction diet raised and lowered in proportion to weight.

Scale 2.—A light labour scale.—Scale No. 1 reduced in the same proportion that English convict light labour diet bears to English convict hard labour diet.

Scale 3.—A bare sustenance scale.—Scale No. 1 reduced in same proportion that a mean bare sustenance estimate for Europeans (mean of 16 and 17, Table IV.) bears to English convict hard labour diet.

Weight—lbs.	Scale No. 1 daily.		Scale No. 2 daily.		Scale No. 3 daily.	
	Nitrogen grains.	Carbon grains.	Nitrogen grains.	Carbon grains.	Nitrogen grains.	Carbon grains.
80	153·6	3,065	132·3	2,688	104·2	2,434
85	163 2	3,247	140·5	2,856	110·7	2,586
90	172·8	3,438	148·8	3,024	117·2	2,739
95	182·4	3,629	157·0	3,192	123·7	2,891
100	192·0	3,820	165·3	3,360	130·2	3,043
105	201·6	4,011	173·6	3,528	136·7	3,195
110	211·2	4,202	181·9	3,696	143·2	3,347
115	220·8	4,393	190·2	3,864	149·7	3,499
120	230·4	4,584	198·4	4,032	156·3	3,652
125	240·0	4,775	206·7	4,200	162·8	3,804
130	249·6	4,966	214·9	4,368	169·3	3,956
135	259·2	5,157	223·2	4,536	175·8	4,108
140	268·8	5,348	231 5	4,704	182·3	4,260
145	278·4	5,539	239·8	4.872	188·8	4,412
150	288·0	5,730	248·0	5,039	195·3	4,564

TABLE VI.

Showing the total quantities of mixed cereal and pulse which, plus half an ounce of fat, are equivalent to the quantities of nitrogen and carbon shown in each of the three scales of Table V.

Weight—lbs.	Scale No. 1, ounces daily.	Scale No. 2, ounces daily.	Scale No. 3, ounces daily.
80	16·98	14·81	13·32
85	18·10	15·80	14·21

145	31·59	27·65	24·95
150	32·71	28·64	25·85

The three tables which now follow, *viz.*, Tables VII., VIII. and IX., show in what proportions each of the eight cereals—rice, barley, jowári, common millet, bájri, maize, oats, and wheat,—must respectively be mixed with pulse in order to furnish the quantities of nitrogen and carbon shewn on each of the three scale of Table V.

In Tables VII., VIII. and IX the first two columns give average weights of persons to be fed, and the third column the total quantity in ounces of mixed cereal and pulse which, plus half an ounce of fat, will furnish the necessary carbon. The remaining eight columns, each headed by the name of a cereal, give the quantities in ounces of the cereal which must be abstracted from the total quantity shown in column 3, and replaced (in order to furnish the required nitrogen) by an equal weight of pulse. The examples at the end of the tables show how they may be employed, all three tables are subject to the general remarks following the examples.

TABLE VII.

Diet Scale No. 1.—Labour Scale.

1.—For the weight shown in columns 1, 2, take the quantity (*plus* always half an ounce of fat) of mixed Cereal and Pulse shown in column 3.
2.—Opposite the quantities shown in column 3, under the name of each Cereal, is a number representing the number of ounces of the quantity shown in column 3, which must consist of Pulse, the remainder to consist of the Cereal heading the column. (See Examples.)

Weight of Individuals to be fed.		3	Ounces of Cereal to be replaced by Ounces of Pulse (average Nitrogen per oz. of Pulse 17·86 grains).

150	10·10	25·85	5·03	3·74	3·45	2·60	1·48	1·32	3·23	4·70	

Examples illustrating the method of employing Tables VII, VIII, and IX.

Average weight of individuals to be fed say 105 lbs. (=7 stone 7 lbs.), Table V shows that—for this weight—the amount of nitrogen and carbon daily required is in grains—

	Nitrogen.	Carbon.
On Scale 1.—The labour scale	201·6	4,011
On Scale 2.—Light labour scale	173·6	3,528
On Scale 3.—Bare sustenance scale	136·7	3,195

Table VI shows that these quantities of nitrogen and carbon may be supplied by the following quantities of mixed cereal and pulse *plus* half an ounce of fat, *e. g.*, ghee or oil, *viz.*—

For Scale No. 1 ... ... 22·60 ounces.
For Scale No. 2 ... ... 19 76 „
For Scale No. 3 ... ... 17·79 „

The proportions which the cereal and pulse should bear to one another in the 22·60 ounces required by Scale No. 1 are shown for each of 8 cereal grains in Table VII. Tables VIII and IX show similarly the proportions which the cereal and pulse should bear to one another in respectively the 19·76 ounces required on Scale 2, and the 17·79 ounces required on Scale 3.

One or two examples will serve to show how from the tables these proportions can be ascertained. Take for example the 22·60 ounces of cereal and pulse required for men averaging 105 lbs. in weight on Scale No. 1. A reference to Table VII. shows, opposite 105 lbs. in the column headed Rice (column No. 4), the number 6·81, this means that if rice is the cereal given 6·81 ounces out of the 22·60 ounces of mixed cereal and pulse must consist of pulse and the remainder or 15·70 ounces of rice. These quantities, *plus* half an ounce of fat, will supply the amount of nitrogen and carbon required. The calculation may be proved by employing the factors given in Table II, thus—

Rice ... 15·79 × 5·07 = Nitrogen grains 80·0
Pulse ... 6·81 × 17·86 = ditto 121·6

22·60 oz. mixed rice and pulse = 201·6
Calculation for carbon 22·60 × 170 = 3,842 grains
plus for half an ounce fat . 172 „

= Total carbon grains ...4,015

or if instead of rice the cereal employed is bájri, in column 9, Table VII, under bájri, opposite 105 lbs., is the number 4·00. Hence of the 22·60 ounces of mixed cereal and pulse (column 3, Table VII) 4·00 ounces must be pulse if bájri is the cereal used.

Proof.

Bájri ... 18·60 × 7·00 = Nitrogen grains 130·20
Pulse .. 4·00 × 17·86 = ditto 71·44

22·60 oz. mixed bájri and pulse = 201·64

Calculation for carbon as in previous example.

Where, as in column 11, Tables VII, VIII and IX, and in column 10, Table IX, and the last portion of column 10, Table VIII, the figures of the column are preceded by a *minus* sign no pulse need be employed; the number of ounces of the cereal heading the column shown opposite the weight containing more than the required quantity of nitrogen,—*e. g.*, the 22·60 ounces required on Scale 1, for men averaging 105 lbs. in weight contain in the case of wheat 22·60 × 9·22 = 208·37 grains of nitrogen, a quantity slightly in excess of that (201·6) required by the scale. These *minus* figures come into use when mixed cereals are employed, as will be seen by the following examples:—

1. Men, averaging 120 lbs., require on Scale 1 (see Table V) nitrogen 230·4 grains, carbon 4,584 grains daily. The number of ounces of cereal and pulse necessary (see Table VI.) is 25·97. If the cereals available are rice and bájri in about equal proportions the calculation becomes—

Rice... ... 25·97 — 7·72 (see Table VII., Col. 4) = 18·25 + 2 = 9·12 oz.
Bájri ... 25·97 — 4·48 (see Table VII., Col. 9) = 21·49 + 2 = 10·75 „
Pulse ... 7·72 + 4·48 = 12·20 + 2 = 6·10 „

Proof.

Rice ... 9·12 × 5·07 = Nitrogen grains ... 46·24
Bájri ... 10·75 × 7·00 = do. ... 75·25
Pulse ... 6·10 × 17·86 = do. ... 108·95

25·97 oz. mixed cereals and pulse = ... 230·44

Calculation for carbon 25·97 × 170 = 4,415 grains.
Plus for ½ an oz. fat... ... ... 172 „

= Total carbon ... 4,587 „

2. If, however, the cereals to be used are rice and wheat, then the use of the *minus* figures under wheat is shown as follows:—

Rice	... 25·97 — 7·72	(see Table VII., Col. 4)	= 18·25 ÷ 2 =	9·12 oz.
Wheat	... 25·97 + 1·05	(see Table VII., Col. 1f)	= 27·02 ÷ 2 =	13·51 „
Pulse	... 7·72 — 1·05		= 6·67 ÷ 2 =	3·34 „

Proof.

Rice	... 9·12 × 5·07 =	Nitrogen grains	... 46·24
Wheat	... 13·51 × 9·92 =	do.	... 124·56
Pulse	... 3·34 × 17·86 =	do.	... 59·65
	25·97 oz. mixed cereals and pulse =		... 230·45

Calculation for carbon as in previous example.

It will be observed that in this last example the *minus* figures of the wheat column are added to the wheat and deducted from the pulse, and are employed in fact in exactly the reverse way to that in which the figures unpreceded by a *minus* sign are employed.

General remarks applicable to all three scales.

1. It of course must be understood that the weights for which these scales are calculated are weights of individuals fairly nourished, not weights of individuals reduced by disease or famine below the normal.

2. The Tables VII., VIII. and IX. are based on the supposition that grains fairly clean and fairly free from husk are employed. Should this not be the case a proportionate allowance must be made. Taking all circumstances into consideration, it seems to me that (save in very exceptional cases) an increase of 5 per cent. on the quantities of grain shown in the tables would fairly suffice as compensation for husk.

3. Where a cereal is so deficient in nitrogen that a large proportion of it requires to be replaced by pulse, it is desirable to mix it with a more nitrogenous cereal, so that a smaller quantity of pulse may suffice, *e. g.*, rice, especially on Scale 1, and in a less degree on Scale 2, (see Tables VII. and VIII., Column 4), may advantageously be mixed with wheat or bájri.

4. Where a cereal is so rich in nitrogen that according to the tables little or no pulse is required to be mixed with it, no objection exists to replacing a larger proportion of it by pulse than is by the tables shown to be necessary, provided always that the total quantity of pulse given is kept within reasonable limits, say under 4 to 5 ounces.

5. If on any of the scales the quantity of fat given is raised from ½ an ounce to 1 ounce, a withdrawal of 1½ ounces of cereal and an addition of ½ an ounce of pulse serves to compensate for the change.

Note in regard to the limits of error of the tables.

It will be observed that the amount of carbon required regulates the aggregate quantity of cereal and pulse, while the amount of nitrogen required regulates the proportion which pulse ought to bear to cereal.

In calculating the value of the Bombay House of Correction diet and in constructing Tables VI. to IX., all cereals and pulses have been assumed to contain 170 grains per ounce of carbon.

The probable limits of error due to this assumption of a uniform carbon value for all cereals and pulses may be stated as follows.

It will be observed that the three scales of Tables V. to IX. are comparable (weight for weight) with certain European scales, *viz.*—

Scale No. 1 with English convict hard labour diet.

Scale No. 2 with English convict light labour diet.

Scale No. 3 with a mean bare sustenance estimate for male European adults.

And that as regards carbon the three scales of the tables are just 11·5 per cent. richer than the corresponding European scales.

Now suppose that the cereals and pulse supplied to the Bombay House of Correction were exceptionally rich in carbon and contained 175 instead of 170 grains of carbon per ounce, then in order to keep up the correspondence of the three scales with the amended value of the Bombay House of Correction diet, the quantities of carbon shown in Table V. would have to be raised from 11·5 to 14·4 per cent. above the quantities of carbon contained in the corresponding European scales.

Taking an extreme case the other way, suppose that in any particular instance the cereals and pulse available for food-supply happen to be so exceptionally poor in carbon as to contain only 155 instead of 170 grains per ounce,—then the amounts of carbon yielded by the quantities of cereal and pulse laid down in the tables for the three scales, would only be 1·9 per cent. higher than the quantities contained in the corresponding European scales.

Hence, even with the cereals and pulses exceptionally poor in carbon, the quantities of cereal and pulse provided by the three scales, would still yield 1·9 per cent. more carbon than is contained in the corresponding European scales;

Hence also, even with cereals and pulse exceptionally poor in carbon, an increase of ten per cent. on the quantities laid down in Tables VI. to IX. would raise the carbon value of the three scales to that shown in Table V;

Hence also, even supposing that the cereals and pulse supplied to the Bombay House of Correction were exceptionally rich in carbon and the cereals and pulse available for food-supply happen to be exceptionally poor in carbon, an increase of 12½ per cent. on the quantities of cereals and pulse, laid down in Tables VI. to IX., would bring the carbon value of the three scales into correspondence with the carbon value of the Bombay House of Correction diet, and would raise the carbon value of the same scales to 14·4 per cent. above that of the corresponding European dietaries.

The possible nitrogen error of the scales is more difficult to estimate. An error due to over-estimation of the quantity of nitrogen in a cereal or pulse would be always, to some extent, met by any increase (as allowance for deficient carbon [see above]) of the aggregate quantity of cereal and pulse laid down in Table VI. Any *minus* nitrogen error not met in this way must be met by increased replacement of pulse for cereal.

No. 423, dated Simla, 8th May 1877.

From—The Honourable T. C. Hope, C.S.I., *Additional Secretary to the Govt. of India,*

To—J. H. Garstin, Esq., *Additional Secretary to the Government of Madras, Revenue Dept.*

His Excellency the Governor General in Council having had under his consideration the subject of the larger employment of Public Works agency in the Madras Presidency, I am directed to communicate the following observations.

2. Sir Richard Temple has made to the Government of Madras, on the dates specified in the margin, various representations on this important subject. While admitting that in many of the Madras districts relief has been economically managed from the first, he points out that in others the numbers in receipt of relief are apparently excessive compared with equally distressed localities elsewhere, that the number of relief labourers in the Madras Presidency under Public Works agency is only 11½ per cent. of the total number on the works, and that the utilization of such agency in the Salem district has been attended with the most beneficial results. He also dwells on the advantage of the Civil Officers being so relieved as to give more time to village inspection.

February 10th.
March 18th.
„ 29th.
April 10th.
„ 17th.
„ 20th.
„ 24th (two.)

3. The Madras Government in paragraph 8 of their despatch to the Secretary of State, No. 25 of the 7th ultimo, while recognising the advantages of Public Works agency, apparently consider its employment to a greater extent than at present not practicable owing to the insufficiency of large works in the Presidency generally, and the impossibility of devising them in certain districts.

4. There would appear, I am directed to observe, to be some misapprehension arising from different applications of the term "large works." In so far as it extends to undertakings of primary magnitude, such as the East Coast Canal and other irrigational projects, there may be, as indicated in Sir Richard Temple's own Minute of February 10th, some difficulty in devising them in the Madras Presidency, or at any rate in doing so in time to be of use in the present juncture. But the term would appear to be used by Sir Richard Temple in his Minutes above referred to in the more limited sense of works capable of employing about 1,200 to 1,500 labourers and upwards. This is the sense in which the term is used in the Bombay Presidency, and a reference to paragraph 9 of the Bombay Weekly Statement No. XXIV (*Gazette of India*, May 5th) will shew that of the large works upon which the Public Works agency is found to be so advantageous, fifteen have less than 2,000 labourers, and only sixteen more than 5,000, employed upon them. And of large works, using the term in the same sense, there would appear to be no lack in the Madras Presidency, for it appears from the Proceedings of the Board of Revenue, No. 1817 of the 20th ultimo, paragraph 9, that 66 per cent. of the total number of labourers are employed upon works having 1,500 and upwards, and that the average number per work is no less than 4,591.

5. His Excellency the Governor General in Council has observed with satisfaction that the Madras Government have, in their Proceedings No. 1331 (Revenue Department), dated the 4th ultimo, invited the opinions of the Collectors and the Public Works Department upon the question of further utilization of the latter, but trusts that in view of the explanations above given and the success of the system in Bombay after ample trial, His Grace the Governor in Council will be able at an early date to authorize its introduction, especially in Bellary and Kurnool, where the numbers on relief works are apparently the most excessive.

No. 441, dated Simla, 12th May 1877.

From—The Honourable T. C. Hope, C. S. I., *Additional Secy. to the Government of India,*

To—J. H. Garstin, Esq., *Additional Secy. to the Govt. of Madras, Revenue Dept.*

His Excellency the Governor General in Council has had under his consideration Sir Richard Temple's Minute of the 22nd ultimo, in which, after

recognizing the humane care and the skill with which the large relief camps are conducted, he remarks as follows :—

"But still the fact remains that the death-rate among the inmates of camps is terribly high; that such diseases as are engendered among gatherings of poor people appear and re-appear, and that the air and surroundings of these camps are very depressing. For the little children especially the life must be very depressing indeed. Some of these troubles will, I fear, be aggravated when rain and cold come on, and make relief camp life even less endurable than it now is."

The remedy which Sir Richard Temple suggests is the gradual drafting off of the inmates of these camps to their own homes, to be there cared for under the system of house-to-house visitation and village relief.

2. His Excellency the Governor General in Council considers Sir Richard Temple's suggestion to be deserving of consideration, especially in view of the approach of the rainy season, and would be glad to be informed of the views of His Grace the Governor in Council on the subject. It is obvious that, in order that the measure proposed may be safely carried out, considerable efficiency in the system of village relief is indispensable. The system has now, it is believed, been organized in most of the distressed districts, but His Excellency the Governor General would wish that no pains or expense should be spared to render it thoroughly efficient, while confining, of course, its action to those only who are not able-bodied and capable of being drafted on to the works. There seems every reason to hope that this end would be materially furthered if the Civil Officers were enabled by the larger employment of Public Works agency, as suggested in my letter No. 423 of the 8th instant, to give more of their time and attention to the subject.

No. 200, dated Tadputree, 21st April 1877.

From—C. BERNARD, Esq., C.S.I., *Secretary to* SIR RICHARD TEMPLE,

To—*The Additional Secretary to the Government of India.*

AT paragraph* 9 of the Madras Government despatch (No. 28 of the 14th April) to Her Majesty's Secretary of State for India, allusion is made to Dr. Townsend, the Sanitary Commissioner's visit to the Madras Presidency. And Sir Richard Temple directs me to lay before the Government of India certain explanation relating thereto.

* NOTE.—Extract copy of the paragraph is appended to this letter.

2. Dr. Townsend was deputed by the Government of India to advise Sir Richard Temple concerning the sufficiency of the reduced relief wage and its effect on the condition of the people. Dr. Townsend joined the mission when Sir Richard Temple was in the Bombay Presidency; and he inspected gangs of labourers at and near Sholapur. The long railway journey from Calcutta to Sholapur in the heat had, however, brought on an attack of dysentery, and Dr. Townsend was unable to do as much as he wished.

3. On the day Dr. Townsend entered the Madras Presidency, Sir Richard Temple wrote and informed His Grace the Governor of Dr. Townsend's coming and of the work he was to do in connection with the mission. On the same day I informed Mr. Garstin, the Secretary to the Madras Government, of Dr. Townsend's arrival and of the inspections he hoped to make.

4. Dr. Townsend inspected some 30,000 labourers, and then drew up a report of what he had seen, and of the impressions he had received. A copy of that report with a Minute recorded by Sir Richard Temple was immediately forwarded to the Government of Madras. And Sir Richard Temple arranged with His Grace the Governor that Dr. Townsend, whose early return to ordinary duty with the Government of India was much desired, should visit Madras and wait upon His Grace.

5. Meanwhile Dr. Townsend had gone southwards to inspect certain Coimbatore gangs, regarding the physical condition of which there had been doubt. He was to have visited Madras according to the appointment already made on his way back from Coimbatore. But at that place he was again attacked by the same complaint which had afflicted him previously. And as the complaint did not at first yield to treatment, he decided not to go into Madras, but to return to Bombay at once. He at once intimated to His Grace the Governor's Private Secretary the reasons which had, to his regret, compelled him to leave the Madras Presidency without waiting upon His Excellency. And afterwards I explained more at length to Mr. Garstin, the Famine Secretary, the circumstances of Dr. Townsend's departure. Sir Richard Temple also explained to His Excellency the Governor the sickness which prevented Dr. Townsend from presenting himself at Madras.

6. Sir Richard Temple regrets much that Dr. Townsend should thus have been unavoidably prevented from waiting on His Grace the Governor of Madras, and laying before His Excellency the impressions he had received from his inspections of relief labourers in the Bombay and Madras Presidencies.

7. Dr. Townsend had however the advantage of meeting at Cuddapah, by special appointment and arrangement, the Sanitary Commissioner of Madras.

Extract paragraph 9 *from the Madras Government despatch No.* 28 *of* 14*th April* 1877, *to the Secretary of State for India.*

PARA. 9.—We have not been favoured with any intimation from the Supreme Government of the outline of the instructions given to Dr. Townsend, the Sanitary Commissioner with the Government of India, who left the Presidency without having reported to us his arrival in it, or made any other communication with us. He did not visit the city of Madras or the camps in its neighbourhood.

Telegram, dated 15th May 1877.

From—Kurrachee,
From—Governor,

To—Simla,
To—Revenue Additional Secretary.

FOLLOWING for mail:—Good rain fallen Dharwar, Belgaum, Kaládgi; showers elsewhere. Onion growing; crops sown considerable breadth Dharwar, Belgaum. People Southern Districts good spirits, situation Central Eastern districts more stringent; increase this week on works 33,000 caused by improved working village inspection, which sends people to work who would otherwise need charitable relief or suffer great distress at home. Increase of people, charitable relief 3,000; numbers on works will probably continue increasing till monsoon. Concentration on large works whereon five-sixths of total number are employed. Condition people continues good, except some cases of recent applicants for relief and their young children which were bad. These cases specially treated. Condition cattle, Central and Eastern districts, still causing anxiety, but cannot be accurately ascertained till animals reassembled in villages, believed that enough will survive for agricultural purposes. Grain trade active, prices slightly rising, exportation Bombay to Western Coast ports trade endeavouring to throw in supplies before ports close. Position hopeful, but vigilant activity needed. Arrangements working well.

Weekly Condition Report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* XII.)

Condition Report for week ending 28*th April* 1877.

Bangalore District.—Prices have risen slightly in the Bangalore, Dodballapur and Nelamangala Taluks. One cent of rain was gauged at the Bangalore Observatory but elsewhere in the station the fall must have measured half an inch, and there was nearly a similar quantity registered in the Closepet, Anekal and Kankanhalli Taluks. Agricultural operations consisted in the sowing of Indian-corn, paddy and sweet potatoes in sum taluks, and in transplanting the sugarcane crops. Bangalore itself is pretty free from cholera and small-pox. These epidemics are still prevalent in the outlying taluks.

Kolar District.—Markets continue fairly supplied. Prices have slightly fluctuated. The standing crops of javari, irrigated ragi and sugar cane are in need of rain, none having fallen in this district during the week. Cholera and small-pox still prevalent.

Túmkúr District.—Markets continue fairly supplied, and prices have remained generally stationary. Some rain fell during the week in two taluks, *viz.*, Kunigal and Honnavalli. Prospects are less hopeful, the ryots having been disappointed of the rain usual at this season. Cholera and small-pox still prevalent.

Mysore District.—Markets continue sufficiently supplied and prices are generally stationary. There were showers of rain in all but three taluks. Dry crops below channels are in good condition and sugar cane is being cut in Ashtagram. Drinking water is scarce except in those places which lie in close proximity to rivers and streams. Cholera prevails more or less throughout the district and small-pox also in the Gundlupet Taluk.

Hassan District.—Markets continue fairly supplied. There has been rain throughout the district, the fall registered ranging from 10 to 90 cents. The standing crops of sugar cane, paddy, &c., were doing well, and the ryots were actively engaged in sowing. Cholera, small-pox and dysentery still prevail. Cattle suffer generally from want of fodder and also from foot-and-mouth diseases in the Manjarabad, Belur and Attikuppa Taluks.

Shimoga District.—Markets continue sufficiently supplied and prices steady. The rain fall registered was from 30 cents to 1·55 inches in the several taluks. The standing paddy crops and betel-nut in the Malnad taluks are said to have suffered from want of rain, but the prospects in this district are considered to have improved somewhat. Cholera prevails in all the taluks except Nagar, and small-pox also in the Channagiri, Shimoga and Sorab Taluks.

Kadur District.—Markets continue fairly supplied and prices pretty steady. Rainfall in all the taluks except Banavar, the quantity registered at the head-quarters of taluks varying from 30 cents to 1·35 inches. Javari and sugar cane crops in the Banavar and Lakvalli Taluks are doing well. There are no standing crops in the other taluks of the district. Cholera and small-pox are still prevalent.

Chitaldroog District.—Markets continue fairly supplied and prices steady. With the exception of a light shower in the Kankuppa Taluk, no rain fell in this district during the week. The prospects of the season remain unaltered. Cholera prevails in scattered villages of all the taluks and fever also in Budihal. Cattle suffer generally from want of forage.

GENERAL REMARKS.

This narrative is for the week ending 28th April. The rainfall reported during the week has been very scanty, and the Kolar District, which is most seriously affected, has not secured even a drop. The failure of rain has, without doubt, occasioned much discouragement, and there is evidence of increasing distress, chiefly in the Bangalore, Kolar, Hassan and Chitaldroog Districts.

2. Prices of food grains have risen in Bangalore, and the tendency to rise will continue probably while the prospects of seasonable rain remain uncertain.

3. Cholera and small-pox are still prevalent in the districts, but the station of Bangalore is almost free from epidemic diseases. The deaths from cholera were returned at 1,265, according to the latest reports received for the week ending 28th April, as shewn below :—

Bangalore District ...	...	70	Shimoga District	274
Kolar „ ...	...	99	Kadur „	47
Túmkúr „ ...	...	125	Chitaldroog „	117
Mysore „ ...	...	234		
Hassan „ ...	...	299	Total ...	1,265

4. Compared with the return of the previous week, there is an increase of 434 in the number of works in progress under revenue officers, and of 2,384 in the daily average number of persons employed thereon. The Bangalore District is the only one in which a decrease is shewn in the number of works in progress. The labour return of the Public Works Department also shews an increase as noted below :—

Daily average number employed during the present week ...	33,183
Ditto ditto during the past week	30,542
Increase ...	2,641

The showers usual at this period have been undoubtedly less abundant than was expected, and the result has been to compel many to resort to the relief works again.

5. The number gratuitously relieved at kitchens is still on the increase; the daily average number fed during the present week being 87,691 in men, women and children, as against 82,501 of the previous week. The increase amounts to 5,190 persons, and of this the Bangalore District contributes the largest quota, *viz.*, 2,493. During the past four weeks, the numbers in the relief kitchens under the control of the Deputy Commissioner of this District have risen from 16,753 to 38,667, and these are irrespective of 8,804 persons being fed at the Government kitchens under the charge of the Central Executive Committee. The tendency of the famine-stricken to gravitate towards the capital of the Province is natural, and it will be very requisite that the greatest vigilance should be exercised in preventing the resort to kitchens of those who are capable of labour, however light, on relief works.

6. With a view to ensure a strict and systematic supervision of relief kitchens and works and to guard against abuses, the Chief Commissioner has found it needful to require District Officers and their Assistants to visit weekly or fortnightly every relief centre within their respective jurisdictions and to scrutinize the accounts in order to ascertain whether they have been regularly kept and are free from suspicion.

7. The number of persons belonging to Her Majesty's Territory, who were receiving gratuitous relief at the Government kitchens in this Province, has increased from 640 to 1,037, as shewn below :—

Anekal Taluk ...	...	...	260
Kolar „ ...	...	...	49
Betmangala „ ...	...	...	21
Mulbagal „ ...	...	...	35
Gudibanda „ ...	...	...	2
Sidlagata „ ...	...	...	7
Chikballapur „ ...	...	...	46
Malur „ ...	...	...	49
Davangere „ ...	...	...	528
Dodéri „ ...	...	...	40
Total		...	1,037

8. The Collector of Malabar has recently reported that there were no Mysoreans in the Wynaad District whose removal to their own country was called for, many having returned to their homes while others have obtained employment on the plantations.

9. The quantity of grain imported by railway during the week (including the receipts at the Kolar road station) was 3,130 tons or 426 tons less than that of the previous week. The daily average receipts amounted to 447 tons, which were exported from the following places :—

	Tons.
From Beypore	68
„ Negapatam and Trichinopoly District	26
„ Sholapur and Nagpoor	7
„ Secunderabad	3
„ Madras	338
„ the Kolar District in Mysore	3
„ the adjoining districts of the Madras Presidency ...	2
Total ...	447

10. About 1,977 tons of grain were exported from Bangalore into the interior of the Province as shown below :—

	Tons.
Towards the Túmkúr District	766
„ Chitaldroog and Bellary	307
„ Mysore District	233
„ Oossoor in the Salem District (Madras Presidency)	278
To the taluks around Bangalore	393
	1,977

11. The land revenue, on account of the four kists or instalments amounting to 10 annas in the rupee, which fell due during the months of December, January, February and March, has been pretty fairly collected, as shown in the following table. The Mysore District shews collections in excess of the demand by Rs. 42,453 :—

Districts.	Demand.	Collection.	Balance.
Bangalore	5,39,425	3,62,404	1,77,021
Kolar	5,52,650	2,17,785	3,34,865
Túmkúr	5,69,260	2,47,356	3,21,904
Mysore	6,24,052	6,66,505	...
Hassan	7,14,325	5,03,188	2,11,137
Shimoga	10,09,180	9,35,896	73,284
Kadur	4,51,811	3,98,350	53,461
Chitaldroog	4,14,621	2,23,621	1,91,000
Total ...	48,75,324	35,55,105	13,62,672

12. The remissions sanctioned by the Chief Commissioner relate to the later kists due between April and June, amounting to six annas in the rupee; but a very small portion of this demand, if any, is likely to be realized.

"By order,"

T. CLARKE,
Offg. Secretary.

* Such as digging and repairing wells, prickly-pear clearances, &c.

There have been slight showers of rain in Khandesh and Nasik, while the fall in parts of Kaladgi and Belgaum has been considerable, and in parts of Dharwar heavy.

2. There is again a slight rise in the price of grain, and jowari now averages little more than 21 lbs. per rupee throughout the affected area. The supply, however, continues to be sufficient, and the rise this week has been chiefly in districts where grain has hitherto been fairly cheap.

3. The number of people upon relief works in the nine affected districts is 319,208 against 289,775 last week, and there are also 10,403 hill-men and immigrants employed in Ratnagiri and Kanara. The increase is large, and is due to the fact that many people who have hitherto been able to support themselves without assistance from Government are now obliged to resort to the relief works.

The decrease in Nasik is due to the transfer of about 5,000 labourers from that district to a section of the Dhond-Manmad Railway earth-works. About half this contingent have declined to accept employment on this work, and have returned towards their villages. Government have directed that their condition should be watched, but that no other employment should be given to them.

4. Cholera appears to be slightly on the decrease in the Southern Mahratta Country, but continues to be prevalent in Satara.

5. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 5th May, the number of people upon Civil Works was 30,681, the number upon works under Public Works Department Agency being 291,456. It appears, therefore, that the proportion of people upon the former as compared with the latter is not materially changed.

6. Government have sanctioned the extension of the Mutha Canal from Warwand to Patas as a relief work.

7. The Sanitary Commissioner has again visited the Nehr, Pingli and Mhaswad Tanks, three large relief works in the Satara Collectorate employing upwards of 28,000 labourers, and reports that the condition of the people who have been some time on the works is very fair, but that some new comers—especially the children of such persons—showed signs of protracted innutrition. Government have ordered careful special treatment in such cases, and have reiterated their orders regarding very close village inspection.

8. The following table gives the expenditure by Government, during the week ending 28th April, upon charity in the relief of the aged and infirm poor; and in payments made to the young children of labourers employed upon relief works. Comparing it with the table which accompanied the last Summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 16,065 to 19,608, while the number of children under 7 years of age has increased from 76,088 to 84,856 :—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

	Karwar-Bellary Road ...	1,652		
	Bunkapur-Hangal Road ...	1,002		
	GRAND TOTAL ...		265,680	

10. Maps are not sent with this Summary, as they would merely repeat the information already given.

11. A table is appended, showing the condition of the affected Native States.

12. The table below shows the quantities of grain sent by sea and rail from October till the 7th May to the Southern Mahratta Ports and the Railway Stations in the distressed districts. It will be seen that the total amount delivered up to the 7th May was 266,722 tons. The total for the week is 10,371 tons:—

Food-grains sent to	In October and November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	In April 1877.	In May (up to 7th.)	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports.	26,903	17,312	13,459	16,075	16,798	21,399	7,015	118,961
South-Eastern line, from Poona to Sholapur.	41,697	25,498	15,471	12,477	13,760	12,856	2,916	124,675
North-Eastern line, from Nasik to Bhusawal.	9,223	3,606	1,615	2,622	3,234	2,346	440	23,086
TOTAL ...	77,823	46,416	30,545	31,174	33,792	36,601	10,371	266,722

13. On the whole, the food supply is sufficient, though grain is becoming dearer; the import trade at the Southern Mahratta Country Ports has been very active, the total amount during the week having reached 7,015 tons. This movement, which is likely to continue till the Coast is closed, is evidently due to the desire of the trade to take the greatest advantage of the sea route while it is still open. The general condition of the people continues fairly good. The condition of the cattle in Poona, Ahmednagar, Sholapur, and Kaladgi is still causing anxiety, but it will be impossible to ascertain it exactly until the animals are driven back from the grazing grounds on the hills, and are collected at the villages. Sowing of quick-growing crops has been commenced to a considerable extent in Dharwar and Belgaum, where the rain-fall has been comparatively heavy. There has been a net increase of 33,517 labourers upon Relief Works. This has been caused by the increased stringency of the situation, but is also due to the greater efficacy of the arrangements for village inspection, which has caused numbers to resort for relief to the works, who would otherwise have swelled the lists of those on charitable relief, or would have suffered the utmost distress in their villages and homes. Cholera, though not increasing, continues prevalent.

M. K. KENNEDY, *Major-General*, R. E.,
Secretary to Government.

5th May	1,12,413	1,32,792	46,251	2,91,456	12,93,425	11,282	14,015	5,384	30,681	1,23,695	1,46,807	51,635	3,22,137	56,50,145

NOTE.—The totals are not invariably the sum of the men, women, and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.
These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

Weekly relief report of the distressed districts of the Madras Presidency.

No. 2177.

Proceedings of the Board of Revenue, Madras, dated 11th May 1877.

THE Board herewith submit to Government the relief reports for the week ending 5th May, with maps and statements as per margin.

Maps for—

Nellore. Bellary. Cuddapah. North Arcot. South Arcot. Chingleput. Madura. Salem. Coimbatore.

Statements.

No. 1. Price Return.
" 2. Relief Report.
" 3. Talukwar Abstract.
" 4. Classified list of expenditure.
" 5. Statistics of gratuitous relief.
" 6. Memo. of sums sanctioned.

2. *Prices.*—There is a very general rise in prices, as will be seen on looking at the district averages. Rice has risen in all districts except *Coimbatore* and *Tinnevelly*, cholum in 9 districts out of 12; ragi in all, and cumboo in six. In *Nellore* the rise in the price of rice occurs in Polur and in the northern taluks; of cholum in Nellore and Kanigiri, and of ragi and cumboo in Venkatagiri. Reports are wanting for two taluks in *Cuddapah*; rice has risen at five, cholum at 7, and ragi at 8 of the 11 stations whence reports have been received. In Bellary the rise of price is not so general, but has been heavy in several instances. Details for *Kurnool* are not available yet, but rice, cholum, and ragi have all risen, especially the last. In Chingleput there is a general rise in the price of rice, and ragi has risen in Conjeveram, Saidapet and Chingleput. In North Arcot the rise is very general but is most marked in the case of dry grains at Chittoor, Palmanair and Punganur. In South Arcot also prices are rising. In *Madura* and *Trichinopoly* there are no changes of importance, and in *Tinnevelly* prices are stationary. In Coimbatore, though the district averages have gone up slightly, there is no general rise at any particular station or in any particular grain.

In *Salem* prices generally tend to rise, and their is a sharp increase in Utangarai, Oossoor and Dharumpuri, which extends to all grains.

Districts.	Rice.		Ragi.	
	Highest.	Lowest.	Highest.	Lowest.
Nellore	7·0	10·50	8·75	14·00
Cuddapah	6·64	8·71	7·50	10·50
Bellary	5·94	8·64	7·76	9·70
Chingleput	7·99	9·18	9·88	11·98
North Arcot	7·00	9·70	8·50	12·00
South Arcot	8·75	10·50	10·10	13·10
Trichinopoly	7·25	9·95	10·46	13·17
Madura	8·45	9·20	10·07	12·60
Tinnevelly	8·20	9·40	10·50	12·00
Coimbatore	6·12	9·06	8·34	10·66
Salem	6·56	8·46	7·50	9·75

The general tendency to increase which is noticed this week is due to the cessation of the April showers which promised to be favorable in the early part of the month. The highest and lowest prices of rice and ragi in each district are noted in the margin.

3. *Rainfall.*—There were slight showers in seven taluks of *Bellary*, but nowhere reaching an inch; in *Kurnool* 0·9 inch fell in Ramalakota; in Tinnevelly there were showers in Sattur and Sankaraninarkovil; and in Coimbatore 0·75 inches fell in Collegal. There have been reports of heavy rainfall on the 5th in Tinnevelly, but this is not included in the report under review.

Roads.	In the week. Rs.	Up to the week. Rs.
New works	2,16,337	45,10,529
Repairs	35,342	8,94,285
	2,51,679	54,04,814
Irrigation Works	31,418	5,90,597
Miscellaneous	47,754	6,77,235
	3,30,851	66,72,746

4. The grants to 5th May amounted to Rs. 1,36,35,288, and the outlay against them to Rs. 1,24,80,451. The totals of statement 4 are given in the margin.

5. The district numbers are compared as usual below. No report has been received from the East Coast Canal and the number entered for last week is repeated.

	28th April.	5th May.	
Kistna	1,978	1,773—	205
Nellore	27,859	28,292+	433
Cuddapah	51,192	52,459+	1,267
Bellary	229,233	236,839+	7,606
Kurnool	211,889	204,972—	6,917
Chingleput	5,499	7,029+	1,530
North Arcot	41,042	50,724+	9,682
South Arcot	724	546—	178
Madura	11,631	12,832+	1,201
Tinnevelly	499	462—	37
Coimbatore	21,958	24,425+	2,467
Salem	57,989	54,160—	3,829
	661,493	674,513+	13,020
East Coast Canal ...	40,691	40,691	
	702,184	715,204+	13,020

6. The slight increase in Nellore seems to be due to resumption of work in Kandakur taluk. That in *Cuddapah* results from increase of nearly 6000 in the three taluks of Voilpaud, Madanapalli, and Royachoti, and of decrease in Irodatur, Cuddapah, Budwail and Kadiri. Reports from two taluks are wanting, and last week's figures are repeated for them. The Sub-Collector has made a note in the return to the effect that the numbers in the sub-division are understated by 12,000 coolies; especially as regards Kadiri which in the report shows a decrease. The sub-division numbers have therefore very largely increased, notwithstanding that nearly 7,000 coolies have, it is stated, been despatched to the Nellore Canal. The cause of decrease in the principal division taluks is emigration to Nellore.

7. The increase in the *Bellary* district is almost accounted for by increase in Madaksira and Raidrug. In the former taluk it is ascribed to greater pressure of the famine, but there must be some more special reason for the large number and the increase in this taluk which should be enquired into by the Collector. In Raidrug the increase results from extension of works. The numbers in the extreme western taluks of Hadagalli and Harpanahally rose and fell respectively by about 4,300 coolies. The rise is due to abatement of cholera; the fall to concentration of works. There is no great change in other taluks. Adoni shows a slight increase said to be due to fraud, which has been discovered, and a reduction is expected in the current week. The coolies employed on the Hooblee Railway in the Bellary taluk are not included in this return. They should be in future.

8. The telegram from *Kurnool* states that there has been increase of 6,446 in four taluks, due to increased pressure, and a decrease of 13,863 in four others, owing to drafts for Nellore, and defective report from Nundial. The railway works are not included in the *Chingleput* return, and apparently also some officers of the Public Works Department in the district have failed to supply information as to works under their control. Hence the small numbers. The taluk details for North Arcot which presents a large increase are compared in the margin. The increase is due to the inclusion of 7,793 coolies (under Eastern Zemindaries) working on the railway line to Arconum. *Madura* shows increase of 1,360 in Pulni, which has now 9,873 coolies out of 12,832 in the district. The increase in Coimbatore district occurs in Coimbatore, Erode, Palladam and Dharapuram. It is ascribed to subsidence of cholera and opening of fresh works. In *Salem* the numbers in the sub-division have fallen from 31,482 to 27,732, but there is increase in Ahtur which is unsatisfactory.

	28th April.	5th May.	
Chittoor			
Chendragiri	4,593	3,061	—1,532
Palmanair	328	336	+ 8
Gudiattum	1,493	1,797	+ 304
Vellore	1,207	1,137	— 70
Polur	6,168	6,896	+ 728
Wandiwash	1,594	2,458	+ 864
Arcot	1,300	1,898	+ 598
Wallajah	4,118	3,600	— 518
Eastern Zemindaries	7,188	6,639	— 549
Western Zemindaries	9,434	17,935	+9,481
	4,729	4,997	+ 268
Total ...	41,042	50,734	+9,692

9. *Rates of wages.*—The only material alteration to be noted is that in Adoni, Alur, Gooty and Tadpatri in the Bellary district; the relief officers have considered it necessary to raise wages by 3 pies above scale, and in Adoni the wage for men has been raised by 6 pies. The rates now are in these taluks 1 anna 9 pies, 1 anna 6 pies, and 1 anna for men, women and children, and 2 annas for men in Adoni. The matter is before Government. Elsewhere there is no change of importance to be noted.

10. *Gratuitous relief.*—The following statement gives the usual comparison by districts of the total numbers:—

	28th April.	5th May.	
Kistna	509	364	—145
Nellore	13,151	18,431	+5,280
Cuddapah	24,988	24,810	—178
Bellary	1,01,623	1,08,499	+6,876
Kurnool	63,797	64,817	+1,020
Chingleput	9,059	10,441	+1,382
North Arcot	8,071	12,843	+4,772
South Arcot	1,280	1,991	+711
Madura	6,224	7,776	+1,552
Tinnevelly	225	568	+343
Coimbatore	11,181	12,632	+1,451
Salem	35,540	60,420	+24,880
TOTAL ...	275,648	323,592	+47,944

The increase is to a great extent due to the extension of the special grant to young children, whose number has risen from 99,802 to 126,890 or by 27,088; of which increase upwards of 20,000 will be found in the *Ceded Districts*, and nearly all the rest in *North Arcot*. The number of these children are now altogether excessive in *Bellary* and *Kurnool*, and fraud is suspected. The concession to young children is now introduced in all districts except Chingleput and Coimbatore, and the numbers will further increase. The extension of this concession accounts for the increase on the whole which appears in *Bellary*, *North Arcot* and *Kurnool* (where camp and village relief have decreased). The increase in *Nellore*, *Chingleput* and *Coimbatore* is under camp relief.

11. The enormous increase in *Salem* is due to the extension of village relief which has attained enormous dimensions in that district. The numbers on village relief have gone up from 29,318 to 52,853 as shown by taluks in the margin. The increase is chiefly in Ossoor, and the Board cannot but think that the system is being abused or overdone. The village relief is probably made too permanent, and it seems to be forgotten that when distressed persons who are able to work or can be moved are discovered in the villages, they should be transferred to works or camps. There may, however, be some error in the Oossoor return.

	28th April.	5th May.	
Salem ..	2,266	2,265	—1
Ahtur ..	79	383	+304
Namkul ..	1,408	1,465	+57
Trichengode ..	2,647	3,973	+1,326
Tripatore ..	1,711	1,910	+199
Utangarai ..	984	1,572	+588
Dharampuri ..	8,875	11,439	+2,564
Oossoor ..	6,071	24,319	+18,248
Kistnagiri ..	5,277	5,527	+250
	29,318	52,853	+23,535

12. The abstract appended (No. 5) gives details of the organization for gratuitous relief in each district. There were 229 camps or relief houses with 94,947 persons; relief was given to 101,391 persons in villages; and 126,890 children were in receipt of 3 pies a day. The deaths in relief camps were 771 during the week against 110 last week. *Chingleput* with 421 deaths shows the highest figure. Of these 408 occurred in Conjeveram, and the Collector will be called upon to report regarding this extraordinary mortality. The increase in mortality is probably due to more accurate reporting in the week under review. The outlay on gratuitous relief during the week was Rs. 94,692 and up to the week Rs. 7,23,533.

13. The following statement shows the progress of operations under the Land Improvement Act:—

	In the week.	Up to the end of the week.
Nellore	...	18,182
Cuddapah	2,150	91,437
Bellary	...	10,515
Chingleput	10,063	51,483
North Arcot	250	300
Madura	3,113	13,183
Tinnevelly	410	32,400
Coimbatore	810	2,655
Salem	6,172	19,896
Total ...	22,968	240,031

The attention of the Collector of Chingleput is called to the apparently excessive advances being made in his district. A further advance of Rs. 3,260, making a total of Rs. 6,831, was made to weavers in *Salem*.

14. The special establishment according to the most recent returns is as follows :—

15. The usual memorandum of advances sanctioned by the Board accompanies. The total is Rs. 1,36,49,493.

16. The report of the Commissioner of Police, Madras, shows a daily average of 15,580 paupers resident in Camps and of 14,445 persons fed, against 14,814 and 14,188 in the previous week. There were 1,163 fresh admissions, of whom 587 were from *Chingleput*. The strength in hospital was 482, and the deaths in the week 159, of which 142 occurred in hospital. The resident population on the 5th May was 15,765, of whom were from *Chingleput* 8,004, North Arcot 3,868, Nellore 3,739 and other districts 154. The outlay in the week was Rs. 9,484, and up to the week Rs. 4,41,045, the President of the Municipal Commission had 1,297 persons at the Sattankad Camp on the 5th May, and 3,807 persons employed on relief works. He spent Rs. 2,700 in the week, and Rs. 39,647 up to the week.

H. E. STOKES,
Secretary.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 17TH MAY 1877.

GENERAL REMARKS.—In Madras there has been good rain in Malabar and parts of Tinnevelly, and showers in South Arcot, Coimbatore, Trichinopoly and Salem, with slight rain in parts of Kistna, Bellary, Kurnool, North Arcot, Chingleput, Tanjore and Madura; the reported number on relief works is 702,737, which is exclusive of the labourers on the Nellore Canal, who are probably about 50,000 in number: excluding them from both weeks, the numbers now reported exceed those of last week by about 32,000: the chief increases are in Cuddapah 15,500, Bellary 11,400, and Salem 4,600: there is a decrease of 2,500 in Malabar: the numbers on gratuitous relief are 325,258, an increase of 5,419. In Mysore there has been no rain, and its failure is said to have intensified the distress: in Coorg the coffee crop is reported to be threatened: the numbers on relief works are 62,511 and gratuitously fed 94,873: the former are slightly less, the latter 7,000 more than last week. In Bombay there have been slight showers in parts of Khandesh, Belgaum and Dharwar: a little rain is also reported from Sind. In the Central Provinces light rain fell in five districts: the threshing of the *rabi* and the ploughings for the *kharif* are proceeding. In Berar there has been no rain: ploughing continues. No rain is reported from Central India. Showers have fallen in parts of Rajputana. In Bengal moderate rain is reported from almost all districts: prospects are good. In Assam good rain has fallen. In the North-Western Provinces and Oudh the weather is now settled and prospects are good. In the Punjab there have been light showers in many districts, but the weather has generally improved and prospects are more favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 14th)	1·0 in Tirur; ·45 in Palnad; *nil* elsewhere.	*Jonna, sajja*, maize, &c., sown after late rain are good but want rain prices slightly risen in Repalli and Gudivada, steady elsewhere; seers of Rs. 80 weight, rice 8·57, *cholum* 11·19, *raggi* 14·10, *cumboo* 11·18; import at Guntur from Godavery, rice 12·95 tons; 1,871 on relief works; 278, Guntur report wanting, fed gratuitously by Government; 1,386 by people; cholera seizures 107, deaths 47, small-pox and cattle disease in some taluks; fodder scarce; markets fairly supplied.
Nellore („ 15th)	*Nil*	Average prices, second sort rice 7·75 seers per rupee, *cholum* 9·74, *raggi* 11·96, *cumboo* 9·70; imports by sea on behalf of Government none, on behalf of merchants, rice 334 tons, *raggi* 1 ton, *cholum* 16 tons; imports by merchants into the town of Nellore by road, rice 32 tons, *cholum* 3 tons, *raggi* 12 tons; number on district relief works 28,016, number on canal for week ended 5th May, as per district engineer's return received yesterday, 49,102, his return for this week not received; number fed gratuitously 21,797; 76 deaths from cholera reported; cholera, small-pox, fever, dysentery and diarrhœa prevalent in some taluks; cholera prevailing among coolies that have come from the west; water-supply insufficient over the greater part of the district, so much so as to cause great anxiety in Gudur and Polur, and anxiety in Venkatagiri; prospects of cattle same as in last week.
Cuddapah ...	*Nil*	Average prices, seers per rupee, second sort rice 7·49, *cholum* 8·76, *raggi* 9·42, *cumboo* 8·94; people on relief works 70,337, gratuitously fed 28,726; cholera deaths 311; number of cattle died from want of fodder and disease 655.
Bellary (May 15th)	·5 at Gooty; slight shower at Tadpatri.	Average price of second sort rice 7·27, boiled rice at Bellary 7·83, *cholum* or great millet 8·09, Jubbulpore *cholum* at Bellary 9·01, *raggi* or lesser millet 8·47, *cumboo* 7·96 seers of 80 tolas; import 902 tons; accounts from 1 railway station only; 245,266 persons on relief works; increase as compared with return for previous week 11,468, this is owing to the increasing pressure of the famine; 119,738 gratuitously fed; increase as compared with return for previous week 12,312, this is chiefly due to the payment of 3 pies to the children of coolies employed on relief works, but also to an increase in the numbers in relief houses; 2,989 gratuitously fed by private charity aided by Government grant; cholera decreasing but still in all taluks; small-pox and fever prevalent, but the former decreasing; cattle still perishing from want of fodder; supply of drinking water diminishing.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Kurnool (May 15th)	·1 in Ramalkota; *nil* elsewhere.	Weather close and trying now; water-supply good; slight fresh continues in Tumbudra; paddy in Nandial taluks being harvested; cholera throughout, but in Markapur abated, small-pox and fever general, cattle continue dying for want of fodder; cholera seizures 90, deaths 54; second sort rice per rupee in Imperial seers 7·27, *cholum* 8·10, *raggi* 9·81, *cumboo* 8·74; number on relief works 204,858, gratuitously fed 61,049, including 40,752 children under 7 years and 13,394 people fed by village heads; import Government grain 73 tons, private 205 tons; in the taluks the net decrease of coolies is 114, fluctuations in numbers great in some taluks either owing to emigration or fresh admissions; decrease in village relief attributable to improved checks; physique of coolies indifferent.
North Arcot („ „)	0·18, average of two stations.	Average prices in Government seers second sort of rice per rupee 7·9, *cholum* 9·3, *raggi* 9·7, *cumboo* 8·5; relief works' coolies 45,797; persons gratuitously fed 11,851, decrease not explained; cholera still prevalent; fever and small-pox in some places; pasture scarce; cattle still dying of starvation in some parts.
Chingleput („ „)	Slight rain fell in some parts of the Trivalore and Conjeveram taluks.	Prices of rice second sort 8·79, *raggi* 10·99, *cholum* 9·95, *cumboo* 10·78; imports rice 169·75, *raggi* 39·12 tons; cholera prevalent more or less in all taluks; small-pox and fever in some, dysentery in others; condition of cattle poor; deaths occurring from disease in some taluks; pasturage *nil*; water failing and dry fodder very scarce and expensive; on relief works 6,146; gratuitous relief 12,894.
South Arcot („ „)	·78; in Tricalore and Kolacoorchy 1·5; ·1 in Trinamally.	Rice second sort 9 seers, *cumboo* 11¾, *raggi* 11¾, *cholum* 11, little dearer owing chiefly to absence of rain; number employed last day of week 1,627, gratuitously fed last day at Chengam 1,151, in villages 2,015; children paid 3 pies; people generally healthy; deaths from cholera 326 out of 375 attacks; cattle disease in some villages; pasture deficient.
Tanjore („ „)	Slight rain in some villages of Tanjore taluks.	Prices seers, rice 8¼. *raggi* 10 ⅛, *cumboo* 10½, *cholum* 10 7/10; imports by sea, rice 2,445 tons; relief works none; deaths from cholera 111, small-pox almost throughout the district; cattle disease in Tanjore, Combaconum, Mayaveram and Sheally taluks with some loss of life; fodder available.
Trichinopoly („ „)	·47	Second sort rice 7 9/10 seers, *cholum* 16¾, *raggi* 11, *cumboo* 10¾; import of grains for week ending Saturday 97 tons; no relief works; gratuitously fed on 12th instant by public subscription 2,349; deaths from cholera 199, from small-pox 65; pasture and health of cattle unchanged.
Madura („ „)	Slight fall at Palany and Periacolum.	Rice second sort 8¾, *cholum* 9½, *raggi* 10, import, rice 2,703 tons, other grains 164; number on relief works 13,476, number fed gratuitously 8,286; cholera continues, deaths 285; cattle disease in some taluks.
Tinnevelly („ „)	Heavy rain in Tenkasi and Satur; slight fall in 5 taluks.	A few tanks received partial supplies; standing crops in good condition except in two taluks, 327 deaths to 429 attacks; cattle disease in three taluks with mortality; heat severe; prices rising slightly, average prices per rupee, second sort rice 8¾ seers of 80 tolas, *cholum* 13½, *cumboo* 11 and *raggi* 11½; import of grain, rice 491 tons; number on relief works 818; number gratuitously fed 677.
Coimbatore („ „)	·10 at Coimbatore on 7th and 8th; ·20 at Collegal on 7th; ·25 at Erode; ·50 at Bhowany; ·25 at Dharpuram; ·10 at Oodoomulpetta; showers in parts of Palladum, Sattiamangalum and Erode taluks on 7th.	Prices rising, rice second sort 7·61, *cholum* 8·62, *raggi* 9·20, *cumboo* 9; imports estimated, rice 682 tons, other grains 410; severe cholera in all taluks, attacks 1,133, deaths 945; fever and small-pox prevalent; no cultivation except to a small extent under wells; some crops on *punjah* and well lands are suffering from want of rain; cattle poor, losses in Collegal and Sattiamangalum; fodder and water scarce; on relief works 23,770; no deterioration in physique of work people reported; gratuitously relieved 15,996; increase due to opening of relief houses to meet local distress.
Salem („ „)	·31	Prices, rice 7¾, *raggi* 8¾, *cumboo* 8, cholum 8 1/16; import of all grains 1,300; number on relief works 57,600; number gratuitously fed 40,800, number fed by private charity 800; cholera in all taluks; gratuitous relief number falling off 30 per cent. due to erroneous entry in Oossoor return.
Malabar („ „)	1·38, average of 7 taluks.	Rainfall not quite sufficient in some places for first crop cultivation; markets well supplied; imports by sea and land, rice 6,475, *raggi* 8, *cholum* 556 tons; exports, rice 1,023 and *raggi* 750 tons; prices of rice stationary in Cherakal, Wynaad, Walluvanaad and Cochin, and slightly risen elsewhere, highest 7¼ Indian seers in Wynaad, lowest 10¾ in Cochin, average 10¾ Indian seers per rupee; *raggi* 10¾ Indian seers per rupee in Wynaad, average elsewhere 13¼; small-pox in 8 taluks; cholera in all except Cochin, deaths from latter 279; cattle healthy; pasture good in Cochin and improving everywhere; 3,155 coolies on Kolathur roads. *General Remarks.*—General prospects unchanged; exports of grain by rail from Madras 9,165 tons during week ending 12th May.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay— **(May 17th)**		
Sind—(May 16th)		
Kurrachee ...	·01 in Kurrachee.	Total fall since 1st January 1·69 in Manora; 2·25 in Sehwan; 1·35 in Jeruck; freshes in Gaj; river at Kotri on 14th 10 feet 9 inches, 7 inches higher than last year; 5 fresh cases of small-pox in Kurrachee.
Shikárpur ...	...	Rather hot; river high; public health good.
Hyderabad ...	...	No change.
Upper Sind Frontier ...	Slight rain on 9th.	Weather warm; peshras crops healthy.
Guzerat—(May 16th)		
Ahmedabad ...	...	Weather warm; small-pox in Dholka.
Kaira ...	...	Weather very hot; cotton-picking completed.
Surat ...	...	No change.
Broach ...	...	No change.
Khandesh and Násik.		
Khandesh ...	·20 to ·50 in eastern talukas.	Hail-storms at Taloda; small-pox and fever continue; water-supply very scanty in some places.
Násik ...	...	Two deaths from cholera in Yeola.
Konkan—(May 16th)		
Tanna ...	...	Cholera continues in 4 talukas; small-pox in almost all talukas.
Deccan—(May 16th)		
Poona ...	...	Cattle disease in Khed, Sirlur and Haveli talukas; cholera and small-pox as last reported.
Ahmednagar ...	...	Cholera in 7 talukas, cases 87, deaths 37.

Mymensingh ...	2·36	
24-Pergunnahs ...	Return not received.	
Jessore ...	1·37	
Nuddea ...	·29	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Moorshedabad ...	·62; Aurungabad ·38.	Cholera prevalent in parts.
Pubna ...	1·18	
Rajshahye ...	·49	Cases of cholera in nearly all thánas, but they have not been severe in any part except in Lukhunbatee.
Bogra ...	·65	
Maldah ...	2·14	Cholera much worse; 386 deaths, of which 276 in Shibganj and Kaliachuck thánas, 138 in each; a native doctor has been sent and a special man asked for from the Deputy Surgeon-General.
Dinagepore ...	·03; ·81 in Roy-gunge.	Cholera somewhat abating.
Rungpore ...	1·46; 2·47 in Gaibanda; 2·37 in Bagdogra; 1·43 in Kurigram.	Cholera disappeared from Kurigram sub-division, but stated to be prevalent in Bhabániganj in Gaibanda sub-division.
Cooch Behar ...	2·24; Dinhátа; 2·83; Mátabhánga 1·85.	A few isolated cases of cholera, but no regular outbreak as yet.
Jalpáiguri ...	·17	
Darjeeling ...	·71	
Midnapore ...	·03	
Howrah ...	·32	
Hooghly ...	*Nil*	Cholera and cattle disease still exist.
Burdwan ...	·37; Culna ·29; Boodbood 1·12; Raneegunge ·24; Jehanabad ·66.	Cholera abated, but fever prevalent.
Bankoora ...	·92	
Beerbhoom ...	·17	
Sonthal Pergunnahs ...	·43; Deoghur 1·08; Godda ·26; Rajmehal ·9.	
Bhágalpur ...	*Nil* ·35 in previous week.	Health improved.
Monghyr ...	*Nil*; ·31 in Begoo Serai; ·42 in Jamooee.	Cholera prevalent slightly in several parts.
Purneah ...	·25; 1·68 in Kissengunge; 1·90 in Arrareah.	Cholera prevalent in Dhámdaha and in the eastern thánas.
Durbhunga ...	*Nil*	
Mozufferpore ...	*Nil*	A few cases of cholera and small-pox reported from Hajeepore and Seetamurhee sub-divisions.
Sarun ...	·22; Sewan ·15.	General health good, but cholera in a mild form has broken out in the town and some villages in the interior.
Chumparun ...	*Nil*	Cholera and small-pox still reported.
Patna ...	·03	Sporadic cases of cholera throughout the district.
Gya ...	·10; Nowáda ·15.	
Shahabad ...	*Nil*	Health good.
Hazáribágh ...	1·47	Cases of small-pox still reported.
Lohardugga ...	·71; Palamow ·45.	Public health good, with the exception of a few cases of small-pox in Palamow.
Manbhoom ...	·74	
Singhbhoom ...	·90	District healthy.
Balasore ...	·99	Cholera on the decline.
Cuttack ...	·55	
Pooree ...	·67; Khoordah 2·11	Public health good.
		General Remarks.—Rain has fallen in most districts, and the prospects of the crops have much benefited by it.
N.-W. P. and Oudh—		
Benares (May 16th)	...	Weather dry and hot.
Allahabad („ „)	...	Nothing new to report.
Jhansi („ 17th)	...	Weather now clear and seasonable.
Agra („ 16th)	·1 to ·5	
Meerut („ „)	*Nil*	Weather clear.
Bareilly („ „)	...	Weather clear and seasonable.
Almora („ 14th)	...	Weather cleared since 9th, only two partial storms since.
Lucknow („ 16th)	...	Nothing particular.
Sitapur („ „)	*Nil*	Weather more seasonable; grain being threshed out.
Fyzabad („ „)	...	Weather seasonably hot; sugarcane irrigation going on.
		General Remarks.—Cessation of storms and rain is generally reported; heat is increasing.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab— (May 16th)		
Delhi ...	*Nil*	Health good; harvest over.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CORRESPONDENCE RELATIVE TO THE REDUCTION OF RATES BY THE GREAT INDIAN PENINSULA RAILWAY COMPANY FOR THE CARRIAGE OF GRAIN FROM THE N.-W. PROVINCES.

No. 320 A. & H., dated Simla, 24th August 1876.

Office memo. from—C. J. LYALL, Esq., Under Secy. to the Govt. of India, Dept. of Reve., Agri., & Commerce,
To—The Secretary to the Government of India, P. W. Dept.

In forwarding copy of the letter noted in the margin, on the subject of the export of wheat to England, the undersigned is directed to request that the suggestion contained in paragraph 3 thereof, *viz.*, that the Great Indian Peninsula Railway Company should be moved to reduce their rates for the carriage of grain on through freight to Bombay, may be considered in the Public Works Department.

From the Government of the North-Western Provinces, No. 1235 A, dated the 24th July 1876.

No. 1235A, dated Naini Tal, 24th July 1876.

From—B. W. COLVIN, Esq., Officiating Secretary to Government, N.-W. Provinces,
To—The Secy. to the Govt. of India, Dept. of Reve., Agri., & Commerce.

I am directed to submit, for the consideration and orders of His Excellency the Governor General in Council, the accompanying copy of a letter* from the Director of Agriculture and Commerce, North-Western Provinces, regarding the export of wheat to England.

*No. $\frac{T}{18A}$, dated 3rd July.

2. The Lieutenant-Governor is of opinion that it is very desirable that information should, if possible, be obtained before the rabi is sown in this country, as to the limits of prices which both wheat and barley are expected to command in the London markets during the spring and summer months which precede the harvest in European countries. This information, if procurable, might be published in the Gazette or otherwise for general information, and might prove very useful for the purpose indicated by the Director of Agriculture and Commerce. His Honor, however, does not approve of the Director's suggestion to circulate it among the people through Government officials.

3. In view of the increasing export trade in wheat to Europe, and of its possible future extension, His Honor would suggest for consideration the propriety of endeavouring to induce the Great Indian Peninsula Railway Company to lower their rates of freight. These add greatly at present to the cost of carriage of grain [illegible]nt by Bombay, which is the nearest and most convenient port for consignments to Europe.

No. 1236 A.

Copy forwarded to the Director of Agriculture and Commerce, North-Western Provinces, for information, in reply to his letter No. $\frac{T}{18 A}$, dated the 3rd July.

No. $\frac{T}{18 A}$, dated Naini Tal, 3rd July 1876.

From—E. C. Buck, Esq., Director of Agriculture and Commerce, N.-W. Provinces,

To—The Officiating Secretary to Government, N.-W. Provinces.

I have the honor to make the following representation for the consideration of Government.

2. The export of wheat has of late years been attracting attention. The amount exported depends upon—

(1.) The quantity available in India.
(2.) The price in England.
(3.) The price in India.

3. The large export of the present year is due in a great measure to the low price of grain in India, which has allowed safe profits to the exporting merchants.

4. The quantity of good wheat available for export, *i. e.*, of the kind which fetches the best price, has been small. It is evident, however, that the area under the best wheat would probably be increased if the cultivating classes could be made to accept the information that the price of good wheat would be high.

5. From enquiries which I have made, it appears possible that information might be obtained in September of the probable limits of the price of wheat in March and April in London. The cold-country harvests are then over, and the supply of wheat from them known. If this is the case, the information could be telegraphed to India in time to warn the cultivators before the wheat is sown in India.

6. I have the means, through the *kanúngos* and *pátwaris*, of communicating information very widely in a few days. A Hindi circular would be sent to each *kanúngo*, who would make the 30 or 40 pátwaris under him copy it when collected on their monthly visit at the tahsil. The pátwaris would be directed to explain it to the cultivators.

7. At present no custom of offering advances for wheat has arisen, nor, from the enquiries which I have made, is it likely to arise at present. Under these circumstances, it will be not undesirable that Government should lead the way in endeavouring to induce cultivation to increase the supply to meet a foreign demand.

8. I request, therefore, that Government may be pleased to consider whether the Government of India may not be moved to address the Right Hon'ble the Secretary of State, with a view of ascertaining whether any reliable information as to the probable price of wheat for six months can be obtained in September, and if so, of procuring telegraphic information on the subject.

9. I may add that the first orders received in Cawnpore for foreign export are said to have arrived this year in December. Despatches commenced in January.

No. 2410R, dated 15th September 1876.

From—The Government of India, P. W. Dept.,

To—The Government of Bombay, P. W. Dept., Railway Branch.

In forwarding for your information a copy of the correspondence noted in the margin, on the subject of the export of wheat to England, I am directed to enclose a comparative statement of the special grain rates per ton per mile in force on the East Indian and Great Indian Peninsula Railways.

From Govt., N.-W. P., to Govt. of India, R., A., and C. Dept., No. 1235 A, dated 24th July 1876.

From Dir. of A. and C., to Govt., N.-W. P., No. $\frac{T}{18 A}$, dated 3rd July 1876.

From Govt. of India, R., A., and C. Dept., to Govt. of India, P. W. Dept., No. 320, dated 24th August 1876.

Comparative Statement showing the special grain rates per ton per mile in force on the G. I. P. and E. I. Railways.

	G. I. P.	E. I.	G. I. P.	E. I.	G. I. P.	E. I.	G. I. P.	E. I.

	Pies.	Pies.	Pies.	Pies.	Pies.	Pies.	Pies.	
Special grain rate.	7·0	6·81	7·0	6·0	6·5	5·45	6·0	5·1

No. 2411 R.

Copy of the above forwarded to the Revenue, Agriculture, and Commerce Department for information, with reference to its No. [illegible] of 24th August 1876.

No. 498, dated Bombay Castle, 29th March 1877.

From—Major-General M. K. Kennedy, R. E., Secy. to the Govt. of Bombay, P. W. Department,

To—The Secretary to the Government of India, Public Works Department.

With reference to your memorandum No. 834 R., dated 20th instant, I am directed to state that the Great Indian Peninsula Railway Company have not reduced their rates for carriage of wheat from the North-West Provinces since the receipt of your letter No. 2410 R., dated 15th September last, and there is no *immediate* prospect of their doing so.

2. The late Agent, Mr. LeMessurier, in reply to the reference made to him on the subject, wrote as follows on 11th October:—

> "On the subject of the rate charged on the Great Indian Peninsula Railway for wheat and other grains, I have the honor to state that the rate from Jabalpur to Bombay is 5½ pies per ton per mile, without terminal, and that is the maximum rate charged from that district.
>
> "Our rates were fixed after much enquiry and discussion, and I am informed that the merchants in Bombay have repeatedly stated that they are satisfied with them, and are enabled to export wheat, &c., with a profit. The large increase in the export of grains, &c., is perhaps as good a test as any that can be obtained. I am therefore of opinion that so long as the merchants do a prosperous and largely increasing trade, we can hardly be called upon to lower our present very moderate charges."

3. He also on 1st November forwarded a comparative statement of cost of carrying wheat from Cawnpore to London and Liverpool *viâ* Calcutta and Bombay respectively. A copy of this statement is appended.

4. The subject was also referred for the opinion of the Bombay Chamber of Commerce, and copies of the correspondence with that body and extracts from speeches made on the 16th instant at a meeting of the Chamber by Messrs. Graham and Bythell are appended. It will be seen that, in the opinion of this Government, the present is not an opportune time for pressing farther reductions in the rates for grain from the North-West Provinces on the Great Indian Peninsula Railway Company.

First, because the rate from Jabalpur has already been reduced below any other, *viz.*, to 5½ pies* per ton per mile, without terminal, and is believed to leave a very small margin of profit.

* The East Indian rate to Jabalpur and Howrah appears to be $5\frac{1}{10}$ pies per ton per mile.

Secondly, because the London Board would be likely to oppose reduction, having recently expressed themselves as of opinion that reduction had been carried far enough for the present.

Thirdly, and chiefly, because the famine traffic, superadded to the ordinary traffic, is now taxing the carrying powers of the Great Indian Peninsula Railway to the uttermost.

The force of the last objection is admitted to a certain extent by the Bombay Chamber of Commerce. It will, of course, lose force if the traffic falls off, but apart from the famine there is a marked increase this season in the quantity of cereals and oil-seeds brought to Bombay for export, and the necessity of increasing the carrying powers of the line in order to admit of a further reduction in rates, whether from Jabalpur or elsewhere, is becoming daily more obvious.

No. 1189, dated Bombay Castle, 29th September 1876.

Extract from the Proceedings of the Government of Bombay, P. W. Dept., Railway Branch.

Read—

Letter from the Under Secretary to the Government of India, No. 2410R, dated 15th September 1876. In forwarding for information a copy of the correspondence noted in the margin, on the subject of the export of wheat to England, encloses a comparative statement of the special grain rates per ton per mile in force on the East Indian and the Great Indian Peninsula Railways.

From Government, North-Western Provinces, to Government of India, Dept. of Revenue, Agriculture, and Commerce, No. 1235 A, dated 24th July 1876.

From Director of Agriculture and Commerce, to Government, North-Western Provinces, No. $\frac{T}{18 A}$, dated 3rd July 1876.

From Government of India, P. W. Dept., No. 320, dated 24th August 1876.

Resolution.—To be communicated to the Consulting Engineer for Railways and the Agent, Great Indian Peninsula Railway Company, for early report, after consultation with the Company's officers. The subject is a very important one, and every endeavour should be made to effect any arrangement by which export of agricultural productions would be facilitated and stimulated.

No. 3846, dated Bombay, 18th October 1876.

Memo. by—Lieut.-Col. H. F. Hancock, R.E., Consulting Engineer to the Govt. of Bombay for Railways.

Submitted,* with reference to Government Resolution No. 1189, dated 29th September last.

* Letter from Agent, Great Indian Peninsula Railway Company, No. 8824, dated 11th October 1876, embodied in paragraph 2 of Bombay Government letter to Government of India, No. 498, dated 27th March 1877.

The Great Indian Peninsula Railway Company's rate from Jabalpur, which alone affects the trade of the North-Western Provinces, is 5½ pies per ton per mile without terminal, the East

Indian Railway rate to Jabalpur and Howrah is quoted at $5\frac{1}{10}$ pies. A reduction of $\frac{1}{2}$ pie per ton per mile would be equivalent to about Re. 1-10 per ton or 1 anna per Bengal maund in Bombay.

No. 1325, dated Bombay Castle, 26th October 1876.

From—Lieut.-Col. H. F. Hancock, R.E., Under Secy. to Govt., Bombay, P. W. Dept., Railway Branch,

To—The Secretary to the Chamber of Commerce, Bombay.

I am directed by His Excellency the Governor in Council to forward copies of the papers marginally noted, and to request that the Chamber will be so good as to favor Government with their opinion on the general question of the Great Indian Peninsula Railway rate for grains.

From the Government of India, No. 2410, dated 15th, and accompaniments.

Government Resolution No. 1189, dated 29th September 1876.

* See para. 2 of letter to Government of India. { Letter* from the Agent, Great Indian Peninsula Railway Company, dated 11th October 1876, No. 8824.

Memorandum by the Consulting Engineer for Railways, No. 3846, dated 18th October 1876.

No. 89, dated 23rd January 1877.

Extract from the Proceedings of Government of Bombay in the Public Works Dept., Railway Branch.

Read the following :—

From—J. Gordon, Esq., Secretary to the Chamber of Commerce, Bombay,

To—The Under Secretary to the Government of Bombay, P. W. Dept., Railway Branch.

I am directed to acknowledge the receipt of your letter No. 1325 of the 26th October last, with its accompaniments, and with reference to paragraph 3 of the letter of the Government of the North-Western Provinces to the Government of India, dated 24th July last, to state that in the opinion of this Chamber a reduction in the present high rates charged by the Great Indian Peninsula Railway Company for the carriage of grain would be attended with great benefit to all concerned in the trade, and to the Great Indian Peninsula Railway Company itself. A reduction of the Great Indian Peninsula Railway Company's rate would, the Chamber believes, result in a considerable expansion of the export trade. It would bring from Delhi, Cawnpore, and other places in Upper India large quantities of rape-seed, wheat, &c., which only struggle down to Bombay occasionally, and it would tend to render the export of wheat from this port continuous under changing circumstances of freight and exchange. At present the export is uncertain, and so sensitive is it to any increase of charge, that it frequently ceases, when the rate of freight by steamer rises even a little, say 2*s.* 6*d.* or 5*s.* per ton.

The experience which the Great Indian Peninsula Railway Company has had of the results of reduced rates, proves beyond question that it would be greatly to the interest of that Company to make further concessions. The reduction of the rates made in September 1875, for the carriage of wheat and seeds to Bombay, led to a very great increase in the traffic, which a further reduction would doubtless stimulate still more, to the advantage of all concerned. In the year 1872-73, the quantity of wheat exported from Bombay was 74,867 cwt.; in 1873-74 it rose, with the repeal of the export duty, to 434,453 cwt.; in 1874-75 the export was 633,681 cwt.; and in 1875-76 it amounted to 837,869 cwt. The railway charge was reduced in September 1875, and, in the six months ending 31st March 1876, the export of wheat was 415,651 cwt., against 264,835 cwt. in the corresponding period of the previous year.

The effect of reduced charges on the Great Indian Peninsula Railway seeds traffic is still more remarkable. In August 1875 the export duty on seeds was abolished, and about the same time the Great Indian Peninsula Railway Company's rate for the carriage of seeds was reduced. During the six months ending 31st March 1876, the quantity of the three principal descriptions exported, namely, linseed, rape-seed, and teel-seed, rose to the large total of 1,559,369 cwt., against 592,373 cwt. exported in the corresponding period of the previous year. The Chief Commissioner of the Central Provinces, in his report on the trade and resources of these Provinces for the year 1875-76, remarks: "In former years, oil-seed was an unimportant export in the tables, but this year it has taken the highest place,—higher than cotton, which all along was not approached by any other kind of produce,—that is to say, it brought in this year nearly £500,000,—a higher figure than any other single item of export."

The Chamber believes that there can be no doubt that this extraordinary development of the grain and seeds export trade is principally due to the reduction in the cost of carriage to Bombay. That the Great Indian Peninsula Railway Company's rates for the carriage of grain and seeds are still much too high, curtailing and hampering trade, is felt to his cost by every merchant engaged in it; and as there is no question of greater importance to the prosperity of the country, affecting as it does the export trade, the land revenue, and railway traffic itself, the Chamber trusts that His Excellency in Council will urge the Government of India to bring its influence to bear on the Great Indian Peninsula Railway Company to induce that Company to make further concessions in its rates.

Resolution.—The following letter to be addressed to the Secretary to the Chamber of Commerce :—

I am directed to acknowledge the receipt of your letter, dated 9th instant, and to forwarsd, for the information of the Chamber, copy of the note of the Consulting Engineer for Railwaye on the analysis of the Great Indian Peninsula Railway Company's revenue account for th half-year ending 30th June 1876, and of Tables C, C-I, and M-V of the Analysis.

2. The method of division of charges adopted in table M-V, is considered by the Consulting Engineer to throw too large a proportion of the working expenses on passengers and too small a proportion on goods; but the average cost of carrying a ton of goods one mile is shown in that table to have been $4\frac{1}{4}$ pies, and as the run of empty wagons is from Bombay towards Jabalpur, the present rate charged by the Company for wheat and other grains from Jabalpur to Bombay, *viz.*, $5\frac{1}{2}$ pies per ton per mile without terminals, does not allow much margin for profit.

3. In the opinion of Government, moreover, the present is not an opportune time for pressing further reductions in rates on the Railway Company. The Railway is at present overtaxed by the demands of the famine districts, and its resources will be even more severely strained as the ordinary traffic of the approaching busy season increases month by month. The London Board of Directors appear to beof opinion that reduction has been carried far enough for the present, and although Government concur with the Chamber that it may fairly be inferred from the success of the reductions already made that the interests of the shareholders will, in the long run, be best secured by still further lowering rates, and thereby increasing traffic, provided the capacity of the line is increased in due proportion, it is obviously not desirable for the Company to undertake more business than they can perform to the satisfaction of their customers.

No. 231, dated Bombay Castle, 15th February 1877.

Extract from the Proceedings of the Government of Bombay, P. W. Dept., Railway Branch.

Read the following—

Letter from the Secretary to the Chamber of Commerce, Bombay, dated 6th February 1877.

The Committee of the Chamber direct me to acknowledge the receipt of your letter No. 89 of the 23rd ultimo, containing the views of Government on the opinion which the Chamber, at the request of Government, was desired to express with respect to the point raised by the Government of the North-Western Provinces as to the propriety of endeavours being made to induce the Great Indian Peninsula Railway Company to lower their rates for the carriage of grain.

The Chamber regrets that it cannot concur in the views expressed by Government in the letter under acknowledgment, the tendency of which would be injurious to the public interests and opposed to what were among the principal objects of the Government in sanctioning the construction of railways in India, namely, the multiplication of produce and the consequent increase of the national wealth. Government admits that the interests of the Great Indian Peninsula Railway shareholders would be best secured by still further lowering rates, and thereby increasing traffic, but concludes with the remark that it is obviously not desirable for the Company to undertake more business than they can perform to the satisfaction of their customers; in other words, that because the present rolling-stock has been overtaxed, the traffic has risen to as large a point as it should be encouraged to go.

There is nothing to show that the capacity of the line has been overtaxed, but simply that there is a great deficiency of rolling-stock for the steadily increasing traffic, and this is borne out by the fact that before the scarcity in the famine districts appeared, complaints of delay in forwarding goods were frequent. Moreover, not only is the rolling-stock inadequate to the ordinary, but the Railway Company have none to cope with an emergency; and as famines are periodical in the country, it is incumbent upon them to have a rolling-stock more than equal to the ordinary demands which may be made on the line.

When the Chamber advocates a reduction of rates in order to increase traffic, it, of course, takes for granted that the necessary increase will be made to the rolling-stock. And if a train load carried at lower than present rates would pay its working expenses and contribute sufficiently towards the general expenses and interest, it appears to the Chamber that rates should be reduced, and that the rolling stock should be kept up to a point sufficient for whatever traffic may come. Table M-V shows that the carrying cost of goods per ton per mile was $4\frac{1}{4}$ pies, while the rate charged by the Company for wheat and other grains from Jabalpur was $5\frac{1}{2}$ pies per ton per mile, and Table C. gives the receipts as averaging from 7·08 pies to 49·86 pies per ton per mile. These figures induce the Chamber to believe that further reductions in rates are possible, and ought to be made.

The Chamber admits that, *for the moment*, it is not an opportune time for pressing further reduction in rates on the Railway Company, which, while the famine lasts, could not result in any advantage to the Company or to the public; but there is no reason why the enquiry should not be proceeding, and the efforts of the Company should be directed, not to curing the complaint from which they are suffering of excessive traffic by maintaining rates at figures that will keep down traffic, but by making provision for what they have, and for more, if they can obtain it, and if it will pay them to take it.

RESOLUTION—The following letter to be addressed to the Secretary to the Chamber of Commerce :—

In acknowledging the receipt of your letter dated 6th instant, I am directed to inform you that the necessity of increasing the carrying powers of the Great Indian Peninsula Railway, in view of an increasing traffic, is recognized by Government, and that arrangements are being carried out for adding to the number of locomotive engines, augmenting the carrying capacity of the rolling-stock, and giving more sidings. Government, however, have had no reason to believe that the rolling-stock has hitherto been inadequate for the maximum traffic of ordinary seasons.

2. Government, I am to add, did not intend their general observation, to the effect that it is not desirable for the Company to undertake more business than they can perform to the satisfaction of their customers, to convey an expression of opinion to the effect that traffic has "risen" on the Great Indian Peninsula Railway "to as large a point as it should be encouraged to go;" and are at a loss to understand on what grounds the Chamber assume Government to dissent from the view that the Company's efforts should be directed, not to checking traffic by increasing rates, but to increasing traffic, and making due provision to meet it.

Extract from a speech made by the Hon'ble D. Graham, Chairman at a special general meeting of the Bombay Chamber of Commerce, held on Friday, the 16th March 1877.

"The next question is that of Railway charges. I refer to those of the Great Indian Peninsula. This is a question which has occupied the attention of the Committee, and indeed it is a question which has occupied the attention of your Committees for many years past. They have, year after year, urged upon the Railway Authorities the necessity of reducing the rates of carriage, and in this we have received the encouragement of the Bombay Government. Lately the Government communicated with the Chamber, admitting that the reduction of rates had brought about increased traffic, but they added that they were doing as much as they possibly could, and could not at present undertake more. The Committee understood this remark to mean that the traffic had reached as high a point as it was desirable to encourage it. They then applied to Government, asking them to increase the carrying capacity of the lines, especially by additional rolling-stock, and entreated them not to restrict traffic. Government said that we have misunderstood the meaning of what they had said, and added that they were ready to encourage the facilities for traffic in every way. The Committee still hope that a further reduction will be made; but at present, with the increase of traffic owing to the famine, it is perhaps not an opportune time to urge the question. That it should be urged when convenient there can be no doubt. Wheat, for instance, costs one-third of its value in coming from Jabalpur to Bombay, and from Cawnpore it costs one-half its value, which shows how important it is that the freights should be reduced as much as possible."

Extract from a speech made by Mr. J. K. Bythell on the same occasion.

"I was also very glad to hear you say that the Committee had been steadily endeavouring to get the Government to get the railways to reduce their rates. Until we have cheaper means of transit for goods, it will be utterly impossible for the trade of this country to be developed as it ought to be. You referred to seed and wheat: the rates for these, no doubt, require further to be reduced. We have, however, had a considerable reduction in them, but in spite of that, no reduction has been made in the rates of cotton. Of course I am speaking of the Great Indian Peninsula Railway. I found that last year when I came out from England we were actually paying more than was charged in 1869, when cotton was double the price. I wrote to the Chamber about it, and I believe the Chamber wrote to the Great Indian Peninsula Railway Company about it, but even with the slight reduction which has been made we pay more than in 1867. Fortunately there has been a considerable advance in the price of cotton this year. If it had not been so,—if we had it at the same price as last year,—I believe there would have been considerable curtailment in the production of cotton. I think it is impossible to expect that when cotton cost four pence a lb., the freight from Kurrachee should be one halfpenny, or one-eighth of the cost, as was the charge last year, *minus* a slight reduction of what had been previously charged for ghât haulage. I believe that if the Chamber persists in urging this matter, a considerable reduction will be effected. When I came out here last year, I had as fellow-passengers some prominent members of Government, and we had conversations on the matter. I think I am justified in saying that they are entirely with us. What we want is to increase our exports, and the exports would be enormously developed if we had cheaper means of transit. Under the old Act, Government had it in their power to make the railways do so. Unfortunately now they have not that power, but we know that if they choose to bring pressure to bear upon the railways, they are obliged to submit; and as we know that the Government are with us, I hope that the Committee will persist in getting Government to bring its influence to bear.

Statement showing the Cost of conveying Indian Wheat per ton to London and Liverpool from Cawnpore viâ *Calcutta and Bombay.*

Rate of Exchange.		Carriage to Calcutta, 684 miles.	Carriage to Bombay, 964 miles.	Freight. Calcutta to London.	Freight. Calcutta to Liverpool.	Freight. Bombay to London.	Freight. Bombay to Liverpool.	Total cost. Calcutta to London.	Total cost. Calcutta to Liverpool.	Total cost. Bombay to London.	Total cost. Bombay to Liverpool.	Date.
s. d. 1 8	£	1 11 11½	2 5 4½	3 10 0	3 5 0	3 0 0	2 5 0	5 1 11½	4 16 11½	5 5 4½	4 10 4½	30th October 1876.
	Rs.	18 14 5	26 12 3	41 4 4	35 9 8	35 5 4	26 8 0	60 2 9	54 7 8	62 1 7	53 4 0	

From Kutnee to Bombay 673 miles, and on to Liverpool, per ton £3-19-9½, or Rs. 46-12-0.
Wheat is shipped to Liverpool. The London freight does not affect the question. I am told by one of the largest Liverpool ship-owners that at present anything over £3 per ton on the voyage round, *i. e.*, out and home, is clear profit.

31*st October.* H. P. LEMESSURIER.

NOTE.—Difference of time at sea is about six and a half to eight days in favor of Bombay.
Brokerage charge ¼ per cent. in Bombay; believed to be same in Calcutta.
In spite of our heavy gradients and charges for fuel, wheat can come to Bombay from Kutnee, per ton, 673 miles, for Rs. 20-4-0. By East Indian Railway, Cawnpore to Calcutta, 684 miles, the charge is Rs. 18-14-5.

No. 1392 R, dated 10th May 1877.

From—The Government of India, Public Works Department,

To—The Secretary to the Government of Bombay, Public Works Department, Railway Branch.

I am directed to acknowledge the receipt of your letter No. 498, dated the 29th March 1877, with enclosures, and in reply to state that the Government of India concurs with the Government of Bombay in considering it inexpedient at present to press the Great Indian Peninsula Railway Company to reduce further the rates for the carriage of grain from the North-Western Provinces.

G. H. M. BATTEN,
Offg. Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Proceedings of the Board of Revenue, Madras, No. 2154, dated 9th May 1877.

Read relief reports for the week ending 28th April 1877, from the Collector of Kistna District, dated 1st May 1877, from the Collector of Kurnool, dated 3rd May 1877; and from the Collector of Malabar, dated 1st May 1877.

The detailed relief reports for the Kistna, Kurnool, and Malabar districts for the week ending 28th April, are herewith submitted to Government.

2. Prices in Kistna were very nearly stationary. Rice has fallen in three taluks and risen in none; cholum and ragi each rose slightly in one taluk, and cumbu in two. In Kurnool rice has fallen in Ramalkota, and ragi risen in Koilkuntla; other prices are unchanged. With the exception of three-tenths of an inch in Nandikotkur no rain fell in either of the two districts. No price report is furnished for Malabar.

3. Works have been commenced in the last named district, some minor works on which Rs. 148 were expended having been started in the Wynaad during the week. The numbers employed are not given, and the statement of works in progress is blank. The Collector will report whether as the Board believe the works are stopped, no demand for labour at relief rates being found to exist. In Kistna the Commamur Canal and the Kistna embankment were in progress, but the numbers (1,978) are reported for the former only. Rs. 4,521, of which Rs. 4,481 were on the Commamur Canal, were expended during the week.

4. The numbers on relief works in the several taluks of Kurnool are compared below with those for the 21st April.

	21st April.	28th April.	
Ramalkota	36,800	32,550	— 4,250
Nandikotkur	15,199	16,724	+ 1,525
Nandial	30,467	32,651	+ 2,184
Sirwell	16,214	16,555	+ 341
Koilkuntla	33,502	33,411	— 89
Pattikonda	25,448	28,472	+ 3,024
Cumbum	45,582	49,434	+ 3,852
Markapur	10,010	7,092	— 2,918
Total	213,172	221,989	— 1,269

The decrease in Ramalkota is due to drafts for the East Coast Canal; that in Pattikonda to some items being entered on estimate; and that in Markapur to reduction of wages, emigration to canal, concentration of works, and cholera. The increase in Cumbum is nominal, the figures for the 21st being wrong; and those in the other taluks are ascribed to increasing pressure. The outlay upon relief works in the week was Rs. 1,14,216.

5. Except on large road works entirely under the Public Works Department (on which there were 36,072 coolies employed), wages corresponding under Scale II to grain at 7½ and 8 seers per rupee were paid in all taluks.

6. The statement of gratuitous relief in Kistna does not call for detailed notice. In Kurnool the numbers were 63,797, including 31,306 children under 7 years of age. These are not distinguished in the return, and the Board have assumed that they are included in the numbers entered under camps and relief houses. After excluding them the proportion of children in relief camps becomes very low, and the Collector will be asked to explain. The Board fear there is some confusion in the return. The number fed in 34 camps and relief houses was 13,581; and in 612 out of 769 villages in the district 18,910 persons were in receipt of relief. The cost of gratuitous relief was Rs. 19,870 in the week.

Taluk-wise Statement of relief in certain districts of the Madras Presidency for the week ending Saturday, the 28th April 1877.

H. E. STOKES,
Secretary.

REVENUE BOARD OFFICE,
MADRAS;
The 9th May 1877.

Weekly condition report of the distressed districts of the Mysore Province.

PROVINCES OF MYSORE.

(*No.* XIII.)

Condition report for week ending 5th May 1877.

Bangalore District.—Markets continue fairly supplied. Prices have slightly risen. A light shower of rain fell at Bangalore and in the neighbourhood. The standing crops were suffering, and no work could be done in the fields. Cholera and small-pox are still prevalent, but the former has much abated in the town.

Kolar District.—Markets continue fairly supplied. Prices have risen slightly. No rain had fallen during the week, and the standing crops are reported to be withering. Public health is bad; cholera, small-pox and fevers being prevalent throughout the district. Cattle suffer generally from want of fodder.

Tumkur District.—Markets fairly supplied. Prices had risen except in three taluks; no rain having fallen during the week. The condition of the standing crops remains unaltered. There has been no improvement in the prospects of the season and matters are beginning to look serious. The tanks which, by this time, should ordinarily have received a fair supply, are, in the majority of cases, empty. Only in a few places have lands been ploughed, and a general uneasiness is therefore beginning to be felt amongst the agricultural classes. Cholera and small-pox are still prevalent.

Mysore District.—Markets continue fairly supplied. Prices remained steady except in the Nanjangúd taluk where they rose slightly. Light showers of rain fell in the Chamrajnagar and Periyapatna taluks. Scarcity of drinking water is felt in many places. The standing javari and other crops, except under river channels, are withering for want of rain. Sugarcane is being harvested in parts of the Chamrajnagar and Ashtagram taluks. Prospects continue to be far from favourable. Cholera prevails in all the taluks of the district, and cattle suffer much from want of fodder and also from murrain in some taluks. The movement of coolies to and from the coffee-growing districts of the Wynaad, &c., still continues. A slight shock of an earthquake was experienced at Mandya in this district on the afternoon of the 2nd May.

Hassan District.—Markets fairly supplied. Prices not steady. Rain fell in five out of nine taluks, the quantity registered at head-quarters of taluks varying from 15 cents to 1·74 inches. The standing crops in Arkalgud, Attikuppa, Harnhalli and parts of Narsipur were withering for want of rain, but in other taluks they are doing well. Prospects are reported to be "pretty fair." Cholera, small-pox and fevers are still prevalent. Cattle in the Manjarabad and Belur taluks suffer from foot and mouth disease.

Shimoga District.—Markets continue sufficiently supplied, except in some villages of the Honnali and Shikarpur taluks where cholera prevailed and checked importation. Rain fell in all but two taluks, the quantity registered ranging from 20 cents to 1·05 inches. Ploughing operations are going on in all the taluks generally, and paddy is being shown in the Nagar, Ságar and Kavaledúrga taluks. The standing paddy crop is withering generally, as also the sugarcane crop in the Shikarpur taluk. Cholera prevails in all taluks except Nagar, but has abated somewhat during the week. Fever and dysentery also prevail to some extent.

Kadur District.—Markets continue fairly supplied and prices generally steady. Rain fell in all the taluks except Múdgere, the quantity registered at head-quarters varying from 9½ cents to 1·56 inches. Javari and sugarcane crops in the Banavar and Lakvalli taluks are doing well. There are no standing crops in the other taluks. Prospects remain unchanged. Public health is bad owing to prevalence of cholera and small-pox.

Chitaldroog District.—Markets continue fairly supplied, and prices have remained pretty stationary. Some rain fell in all but three taluks, and 20 to 80 cents were gauged at the head-quarters of taluks. The Deputy Commissioner reports that want of water for domestic purposes is very much felt, and that the wells are fast drying up. The standing crops, paddy, javari and navane are in fair condition in some taluks, but in others they stand in need of rain. Cholera prevails in all the taluks except Kankuppa, and cattle suffer much from want of good fodder and water.

GENERAL REMARKS.

During the week ending 5th May, to which this narrative relates, the rainfall reported was very partial and scanty, and has by no means satisfied the needs of the cultivators. In the Nundydroog Division there was no rain at all, except a few light showers at Bangalore and in a few villages of the Nelamangala taluk.

2. In the three districts of the Nundydroog Division and in the Chitaldroog district of Nagar Division the prices of food-grains have slightly risen, but in the other districts they have remained stationary. The markets, however, are sufficiently supplied, and the grain traffic this week, which will be noticed presently, shows signs of increasing activity.

3. The number of deaths from cholera during the week was 1,077 or 188 less than in the previous week :—

Bangalore district, including town and cantonment	... 95	Shimoga district	... 274
Kolar district	... 76	Kadur „	... 79
Túmkúr „	... 76	Chitaldroog „	... 197
Mysore „	... 97	Total	... 1,077
Hassan „	... 183		

4. The number of works in progress under Revenue officers was 2,170, or 97 more than in the previous week. The increase was chiefly in the Kolar, Hassan and Shimoga districts. The daily average number employed on these works was 32,352, or 2,282 more than in the preceding week. The return of the Department of Public Works shews a decrease of 3,024 persons as compared with the figures of the previous week, which is attributed partly to the prevalence of cholera in villages situated close to the works, and partly to the commencement of agricultural operations.

5. The list of recipients of gratuitous relief shews that the daily average number of persons fed at kitchens and camps during the week was 94,873, of whom 55,668 were adults and 39,205 children. The increase, as compared with the figures of previous week, was 7,182.

6. The Commissioner of Ashtagram Division reports that there are 36 kitchens in his Division, *viz.*, one at Mysore town, 15 in the Mysore district and 20 in the Hassan district. Colonel Hay states that "although it is difficult to predict the numbers who may, during the next three months, be found to need gratuitous relief, it is certain that they will rapidly increase till the early crop is reaped."

7. The number of persons belonging to Her Majesty's territory who were fed at the kitchens amounted to 1,083, as against 1,037 of the previous week, and shewn below :—

	Past week.	Present week.
Anekal taluk	... 260	245
Kolar „	... 49	49
Betmangala „	... 21	. .
Mulbagal „	... 35	64
Gudibanda „	... 2	6
Sidlagatta „	... 7	9

Malur „	... 49	64
Honnali „	... ...	103
Davangere „	... 528	392
Kankuppa „	... ...	35
Dodéri „	... 40	77
Total	... 1,037	1,083

8. The weight of grain imported by rail was—

at the Bangalore Station	3,573 tons;
„ Kolar Road „	252 „
Total ...	3,825 tons.

or 695 more than in the previous week. The average daily receipts amounted to 546 tons as against 447. Of the total quantity received, 2,799 tons were drawn from Madras, 560 from Beypore, 356 from Negapatam and the Trichinopoly district by the South Indian Railway, 12 from Sholapur and Jubbulpoor by the Great Indian Peninsula Railway, 19 from Secunderabad and 79 from the adjoining districts of the Madras Presidency.

9. About 2,068 tons of grain, or 91 tons more than in the previous week, were exported from Bangalore for consumption in the interior of the province and the frontier taluks of the Madras Presidency, as shewn below :—

Towards the Túmkúr district	806 tons.
„ Bellary and Chitaldroog	146 „
„ Mysore district	186 „
„ Oossoor in the Madras Presidency ...	409 „
To the taluks around Bangalore	521 „
Total ...	2,068 tons.

By Order,
T. CLARKE,
Offg. Secretary.

Notes 1. The expenditure entered in column 24 includes the amount contributed by private subscriptions, as well as the Government grant-in-aid thereto.
2. The figures entered in columns 17 and 18 are based on the latest accounts received from the Public Works Department.
3. The figures in column 18 exhibit the adjusted expenditure to end of February and unadjusted for March 1877.
4. Explanation has been called for as to the expenditure shown in column 24 exceeding the grant.

T. CLARKE,
Officiating Secretary.

Register of Rainfall recorded scientifically at the Government Observatory at Bangalore for each week in the year, as the usual monthly averages do not give sufficiently reliable information in a tropical climate.

Satara ...	4,988	2,662	10,64,002	4,61,900	No rain. Grain supply sufficient. 345 deaths from cholera.	Ditto ...	37,484	40,218	3·77	5,87,582	4,85,172	Jowari ...39 Bajri ...35	17 17	16½ 16½	54·60	25·43
Kaladgi ...	5,695	5,695	8,16,037	8,16,037	Grain supplies sufficient in all Talukas, except Muddibilal and Hungund. Emigrants returning with cattle. 215 deaths from cholera.	Ditto ...	57,889	66,257	8·11	11,74,043	6,23,733	Jowari ...56 Bajri ...76	14¼ 14	13¾ 13¾	22·43	6·13
Belgaum ...	4,591	2,660	9,33,750	5,01,000	Slight rain in Athni Taluka. Grain supply plentiful. 99 deaths from cholera.	Ditto ...	38,000	45,000	4·79	8,08,551	4,51,131	Jowari ...43 Bajri ...54	15 15	15 15	30·48	21·34
Dharwar ...	4,564	3,000	9,88,037	6,30,000	2 inches of rain in Dharwar, and rain must also have fallen to the eastward. Grain market fairly supplied. 187 deaths from cholera.	Ditto ...	46,187	53,571	5·42	12,18,700	5,35,688	Jowari ...43	14½	14	26·39	13·81
Total ...	54,355	34,183	79,63,927	50,18,902			3,19,208	3,54,976	4·45	89,84,843	46,72,352					

* Such as digging and repairing wells, prickly-pear clearances, &c.

Two inches rain have fallen in Dharwar, and slight showers in Khandesh and Belgaum.

2. Grain has again risen in price, and the average of Jowari throughout the affected area is now about 19½ lbs. per rupee. Bajri has, however, not risen in quite the same proportion as Jowari.

3. The number of people upon Relief Works in the nine affected districts is 354,976 against 319,208 last week, and there are also 9,089 hill-men and immigrants in Ratnagiri and Kanara. The increase is again large, and is due to the same cause as last week, *viz.*, the stringency of the situation forcing upon Relief Works people (many of them returned emigrants) who have hitherto been able to support themselves; also to the increased efficiency of the village inspection.

The decrease is Nasik in due to the continued transfer of labourers from that Collectorate to the Dhond-Munmar Railway in the Ahmednagar district.

4. Cholera continue prevalent in Satara, but appears to be on the decrease in the Southern Mahratta Country.

5. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 12th May, the number of people upon Civil Works in the nine affected districts was 28,817, the number upon works under Public Works Department Agency being 321,802. The proportion of people upon the former is therefore less than 10 per cent. of the total.

6. The monsoon burst at Colombo on the 14th instant with considerable violence, and may therefore be expected in Bombay early in June.

From information which Government called for regarding the classes of the community from which the relief labourers are drawn, it appears that, out of a total of 205,152, 11,366 are mechanics or manufacturers; 85,464 are holders or sub-holders of land, and 108,322 are persons who ordinarily subsist by labour. When the monsoon has fairly set in Government hope that very nearly all the land-holders, and a considerable proportion of the labourers and mechanics will be induced to leave the Relief Works.

7. The following table gives the expenditure by Government, during the week ending 5th May, upon charity in the relief of the aged and infirm poor; and in payments made to the young children of labourers employed upon relief works. Comparing it with the table which accompanied the last summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 19,608, to 21,144, while the number of children under 7 years of age has increased from 84,856 to 93,283:—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

	Grand Total ...	...	292,948	

9. Maps are not sent with this Summary, as they would merely repeat the information already given.

10. A table is appended, showing the condition of the affected Native States.

11. With regard to the movements of food-grains, 7,578 tons were exported from Bombay to the Southern Mahratta Ports during the week ending 15th May, and during the same week 3,021 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 10,599 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the 15th May to the Southern Mahratta Ports and the Railway Stations in the distressed districts. It will be seen that the total amount delivered up to the 15th May was 287,692 tons:—

Food-grains sent to	In October and November 1876.	In December 1876.	In January 1877.	In February 1877.	In March 1877.	In April 1877.	In May (up to 15th.)	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports.	26,903	17,312	13,459	16,075	16,798	21,399	14,593	133,554
South-Eastern line, from Poona to Sholapur.	41,697	25,498	15,471	12,477	13,760	12,856	5,708	130,383
North-Eastern line, from Nasik to Bhusawal.	9,223	3,606	1,615	2,622	3,234	2,346	669	23,755
TOTAL ...	77,823	46,416	30,545	31,174	33,792	36,601	20,970	287,692

12. On the whole, the situation does not differ materially from that of last week. The food supply is sufficient, though grain is gradually becoming dearer. The trade down the coast continues very active, and the amount of grain sent in the week ending the 15th instant (7,578 tons) is the largest quantity shipped in any week since 7th December. This export trade must, however, diminish as the monsoon comes up the coast, and when the rains have fairly set in the ports will be closed. Arrangements are being completed for laying down fodder to assist the grain traffic along the principal lines of communication from the railway and the western markets to Kaladgi and the eastward. The heavy rain in Dharwar will assist the crops already sown, facilitate further cultivation and the growth of fodder for the cattle, and probably cause a reduction in the number of people upon relief works in that district. The net increase of 34,454 persons on relief works is due to the same causes at last week, *viz.*, the increasing stringency of the situation, the return of emigrants, and the greater efficiency of village inspection. The additional numbers of persons who are receiving relief have been given occupation on the large public works, where a return will be secured for the aid afforded. It is satisfactory to note that the number of persons upon charitable relief is small; it amounts to only 21,114. The general condition of the people is good, and cholera is not on the increase. The condition of the cattle in the central and eastern districts is still causing anxiety; elsewhere t is favourable.

M. K. KENNEDY, *Major-General*, R. E.,
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women, and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.
These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, Madras, No. 2297, dated 18th May 1877.

Statement No. 1, Prices.
" " 2, Relief Reports.
" " 3, Talukwar Abstract.
" " 4, Statistics of Gratuitous Relief.
" " 5, Memo. of sums sanctioned.

Maps—Cuddapah.
" North Arcot.
" Bellary.
" Madura.
" Chingleput.

THE Board submit to Government the usual relief reports and statements with maps for the week ending 12th May 1877. The South Arcot report has not been received.

2. Prices have continued to rise almost everywhere. In *Kistna* rice, cholum and ragi are dearer, but cumboo has slightly fallen. In *Nellore* prices tend to rise to the north of the Penair, rice having risen in Kandakur, Kalgiri, Alur, Kavali and Atmakur, and dry grains also in Kandakur and Ongole. The change is probably due to temporary slackness of imports. In the north-west of the *Cuddapah* district prices are slightly easier, but there is a sharp rise in almost all quotations in the sub-division taluks and in Budwail and Sidhout. In *Bellary* rice has risen in 9 out of 15 taluks; the prices of other grains are fluctuating, and on the whole higher, but there is no very marked change; in Alur the rise of price extends to all grains. The *Kurnool* district average of cumboo is higher, but other grains are nearly stationary. In *Chingleput*, there is little change except a slight fall in Saidapett. The rise noted last week for the northern and north-western taluks of *North Arcot* has extended to the rest of the district. In Arcot and Wandewash all grains are now dearer. The cause is said to be decreased import and strong demand for other districts. At *Trichinopoly* and in *Madura* rise is very general, but the great increase in the Madura district average for cholum is due to the absence of a report from Ramnad, where an inferior and cheap kind of cholum is usually sold. In *Tinnevelly* all rates in Srivilliputtur have risen. In *Coimbatore* and *Salem* also the district average for all grains are higher. Rice has risen in 5, cholum in 6, and ragi in 4 taluks of *Coimbatore*. The Collegal price of rice (5·36 seers) is now the highest in the Presidency. In *Salem* there is a sharp rise in prices of all dry grains in Tripatore and Namkul, and rates in other taluks are fluctuating.

3. *Rainfall.*—There have been showers in all districts except *Nellore*, *Cuddapah* and *Chingleput*. From *Kistna* an average of one inch is telegraphed, but the Board doubt the correctness of the report. In *Bellary* there was a slight shower at Gooty, and in *Kurnool* an inch fell at Ramalkota. There was rain during the week in two taluks of *North Arcot*, 2 of *Trichinopoly*, 2 of *Madura*, 1 of the distressed taluks in *Tinnevelly*, 5 of *Coimbatore*, and 8 out of 9 taluks of *Salem*; but in no case did the fall reach one inch. There was good rain on the 5th May in the river valley in *Tinnevelly*.

4. The grants for district relief purposes to 12th May amounted to Rs. 1,36,35,283, and the outlay against them (excluding South Arcot) to Rs. 1,29,72,442. The following statement shows the number and description of the works and the mileage of the roads—many of the latter are mere village tracks :—

	In progress.		Completed.	
	Number.	Length in miles.	Number.	Length in miles.
Roads.				
New works	419	2,837	116	330
Repairs	355	2,832	88	448

Miscellaneous	3,543	...	1,990	...
Total ...	4,485	...	2,173	...
Grand Total ...	5,259	...	2,377	...

5. The numbers on relief works in the several districts compare with last week's return as follows :—

	5th May.	12th May.	
Kistna	1,773	2,149	+376
Nellore	28,292	28,016	—276
Cuddapah	52,459	81,921	+29,462
Bellary	236,839	251,655	+14,816
Kurnool	204,972	204,858	—114
Chingleput	7,029	5,276	—1,753
North Arcot	50,724	44,885	—5,839
South Arcot	546	546*	...
Madura	12,832	13,476	+644
Tinnevelly	462	612	+150
Coimbatore	24,425	23,770	—655
Salem	54,160	57,782	+3,622
	674,513	714,946	+40,433
East Coast Canal	40,691*	49,102	+8,411
25th April	715,204	764,048	+48,844

* Last week's report.

6. The returns show a considerable increase. In *Nellore* district, a decrease of 2,299 in Kavali is counterbalanced by increase in the Venkatagiri zemindari and in some other taluks. The increase in the number on the East Coast Canal is for a fortnight and amounts to 8,411. The taluk details for the *Cuddapah* district are compared in the margin. The increase is to some extent nominal and due to the numbers being under-stated last week. The true numbers in Jamalamadugu and Pulivendla on 5th May were 4,112 and 4,509. The rest of the increase in Pulivendla is ascribed to return of coolies from Nellore and cessation of emigration. It is to be noted however that wages have been raised in these taluks. No explanation is given as to the considerable increase (16,423) in the sub-division, but about 7,000 are now entered on estimate, and as noted in last report the numbers were then supposed to be understated by 12,000. The Collector will take steps to cause the returns from the sub-division taluks to be more punctually sent.

	5th May.	12th May.	
Jamalamadugu	3,693	6,222	+2,529
Pulivendla	2,596	13,317	+10,721
Prodattur	1,067	1,149	+82
Cuddapah	3,366	3,504	+138
Budwail	4,161	3,970	—191
Sidhout	2,080	2,084	+4
Pullumpett	12,478	12,234	—244
Kadri	5,196	6,285	+1,089
Royachoty	3,234	7,186	+3,951
Madanapalli	7,099	13,620	+6,521
Voilpaud	7,489	12,351	+4,862
Total ...	52,459	81,921	+29,462

In the *Bellary* district also the increase is considerable as shown in detail in the marginal statement. The increase is generally ascribed to increased pressure of the famine, but it is to be noted that in the first four taluks where increase is heavy wages have been raised. In Adoni the enhanced rates are paid only on works more than 10 miles from the town, and in the other three taluks only for six days in the week. On the other hand, it is to be observed that wages have also been raised in Raidrug and Harpanhalli which show decrease. The increase in Bellary is due to the inclusion of 3,152 coolies on the Hubli Railway. The decrease in Hindupur is ascribed to the coolies being under transfer from roads to irrigation works.

	5th May.	12th May.	
Adoni	56,408	58,688	+2,280
Alur	20,985	24,181	+3,196
Gooty	8,520	13,129	+4,609
Tadpatri	11,676	12,544	+868
Anantapur	13,390	13,370	—20
Dharmaveram	4,054	5,079	+1,025
Pennakonda	7,657	8,692	+1,035
Hindupur	1,658	1,215	—443
Madaksira	22,185	20,636	—1,549
Raidrug	8,264	8,052	—212
Bellary	21,923	24,330	+2,407
Hospett	16,976	19,790	+2,814
Sundur	3,424	3,670	+246
Kudligi	10,777	13,745	+2,968
Harpanhalli	10,281	9,225	—1,056
Hadgalli	18,661	15,309	—3,352
Total ...	236,839	251,655	+14,816

7. There is little change in *Kurnool*. In Chingleput decrease occurs in all taluks but one. It is partly due to the cessation of the railway works and the want of report of numbers on works under the Department Public Works, and partly to stoppage of works in the sub-division. The Collector's attention is called to this. The decrease in *North Arcot* occurs chiefly in Chittoor, Arcot and Wallaja, and is due partly to short return and partly to reduction of wages. The numbers in the eastern zemindaries are now 22,168 including 6,074 on the railway works near Arconum. The *Madura*, *Tinnevelly* and *Coimbatore* returns call for no remark. In *Salem* there is an increase of 3,622 which is accounted for by increase in the Kistnagiri and Utengarai taluks, where distress is very severe.

8. *Rates of wages*.—It has been already noticed that wages have been raised, under the discretion vested in relief officers, in several taluks of *Bellary* and *Cuddapah*. The "sliding scale" is said to be in force in the sub-division of the latter district, but the actual rates are not given. The Collector will now report them. In three taluks of *Bellary* grain wages on the 1lb scale *plus* the regulated money allowance are given in these taluks in view to using up grain locally purchased. There are no other changes to be noticed in connection with the subject.

9. The Board called upon Collectors to note in the reports for this week the works under officers of the Department Public Works, but this has not been completely done. The annexed statement, however, contains such particulars as have been given, and shows that 125,735 coolies or 16·5 per cent. of the whole are employed exclusively under skilled supervision.

Districts.	Number of works.	Estimated cost.	Outlay on works executed by Department Public Works. In the week.	Outlay on works executed by Department Public Works. To the end of the week.	Number of coolies.

* 11 Minor Works.
† 236 ditto.

10. The total numbers in receipt of gratuitous relief in the several districts are compared below with those last reported :—

	5th May.	12th May.	
Kistna	364	382	+18
Nellore	18,431	21,797	+3,366
Cuddapah	24,810	28,726	+3,916
Bellary	108,499	120,917	+12,418
Kurnool	64,817	61,049	—3,768
Chingleput	10,441	13,477	+3,036
North Arcot	12,843	11,563	—1,280
South Arcot	1,991	1,991*	...
Trichinopoly	...	40	+40
Madura	7,776	8,286	+510
Tinnevelly	568	677	+109
Coimbatore	12,632	16,003	+3,371
Salem	60,420	44,146	—16,274
Total ...	323,592	3,29,054	+5,462

* Last week's return.

11. The increase in *Nellore* is in the camp relief; village relief is small. Of the increase in *Cuddapah*, 1,273 is under camps, but 3,653 under young children on works. Village relief has decreased, but is pretty general, having been given in 581 out of 1,219 villages. It is however deficient in the sub-division taluks. In *Bellary* there is increase in all classes, but it is greatest under young children. Village relief was given in 1,124 out of 2,519 villages; but the system needs extension in Alur and Gooty. In *Kurnool* numbers under all these classes have decreased; details are not yet available. In *Chingleput* the increase is chiefly in camp relief, owing to the opening of a camp at the Contelliar; village relief has increased but is still trifling in extent; the allowance to young children in not given. In *North Arcot* the numbers in camp and village relief have declined. The latter is not sufficiently extended, having been given only in 85 out of 3,963 villages. It is given chiefly in Punganur and Tritany divisions. In *Madura* the increase is due to some extension of village relief. In *Coimbatore* the grant to young children has been introduced for the first time, and there has been increase both in camp and village relief. The decrease in *Salem* is apparent only, and is due to the return for the Oossoor taluk noticed last week having been erroneous.

12. The following shows the total numbers in receipt of each kind of relief (excluding Kistna and South Arcot districts) :—

Camp and relief houses	1,02,711
Village relief	87,335
Children on works	1,36,635
Total ...	3,26,681

13. The number of deaths during the week amongst recipients of gratuitous relief was 750, and the total deaths amongst such persons reported to date 1,105. The report of deaths in *Chingleput* last week was erroneous and due to clerical error—408 having been entered in a wrong column.

14. The outlay is reported as follows:—

	In the week.	Up to the week.
	Rs.	Rs.
Relief works	4,05,910	1,21,47,382
Gratuitous relief	1,02,668	8,25,060
Total ...	5,08,578	1,29,72,442

The grants sanctioned by the Board up to 12th May amount to Rs. 1,36,49,493.

15. The following statement shows transactions under the Land Improvement Act, and advances to weavers in Salem:—

	In the week.	Up to the week.
	Rs.	Rs.
Nellore	...	17,202
Cuddapah	6,623	1,02,660
Bellary	...	10,515
Chingleput	11,938	63,421
North Arcot	1,000	1,300
Madura	5,096	24,229
Tinnevelly	500	32,900
Coimbatore	950	3,605
Salem	5,179	25,075
Total ...	31,286	2,80,907
Salem.		
Advanced to weavers	11,934	18,765

16. The establishments according to the latest data are as follows:—

Districts.	Relief.		Payment of wages.		Accounts.		Total.		Superior officers included.	
	Number.	Monthly pay.	Number.	Monthly pay.	Number.	Monthly pay.	Number.	Monthly pay.	Number.	Monthly pay.

17. The report of the Commissioner of Police, Madras, shows the following particulars: average daily strength in Camps 16,537, average non-resident 16,435, fresh admission, 1,307, of whom 641 were from Chingleput, 352 from North Arcot, 303 from Nellore, and 11 other districts; strength in hospital 535, and total deaths in the week 153, of which 123 in hospital; distribution of residents on 12th May, from Chingleput 8,369, North Arcot 4,192, Nellore 4,266, other districts 189; outlay in the week, Rs. 51,057 and up to the week Rs. 4,92,102.

18. The President of the Municipal Commission, Madras, had 764 paupers in camp at Sathankad on 12th May and 3,942 persons on relief works. His outlay was in the week Rs. 2,891 and up to the week, Rs. 42,539.

(Signed) H. E. STOKES,
Secretary.

Scarcity in Western and Southern India.

No. 32 (Revenue), dated India Office, London, 19th April 1877.

From—Her Majesty's Secretary of State for India,
To—The Government of India.

The despatch of Your Excellency in Council, dated 2nd March, No. 13 of 1877, giving a summary of the matters which had engaged the attention of your Government in connection with the famine in Southern and Western India during the week ending 27th February, has been considered by me in Council.

2. I approve of your resolution to sanction the earth-work of the railway from Bellary to Hubli as a relief work, on the understanding that your Government is not pledged to carry on the line to Carwar.

3. The equalisation of the through rate for grain from the port of Negapatam, in Tanjore, to Bangalore, and the suspension of port dues at Negapatam in the case of vessels importing grain equal to a quarter of their whole cargo will, I trust, greatly diminish the difficulties now experienced in carrying grain into the interior. Such also will be the effect of doubling the line from Ambatur to Arconum. It is also to be hoped that some of the grain now sent from Calcutta, Burma, and elsewhere to Madras may be shipped to Negapatam, and thus find its way to the distressed districts in the south of the Madras Presidency.

4. The intelligence received from Sir R. Temple relative to Nellore, Bellary, and Tinnevelly, and also to the spring crops in Cuddapah and North Arcot, is on the whole satisfactory.

5. I have already, in my despatches of the 15th March and 6th April, Nos. 24 and 28 of 1877, expressed my opinion that, while the utmost efforts are made to preserve life, Government relief should be accompanied by such conditions as to prevent it being accepted by any but the really destitute. I concur, therefore, with the principles which have guided you in your instructions upon this subject to the Government of Bombay.

No. 33 (Revenue), dated India Office, London, 26th April 1877.

From—The Secretary of State for India,
To—The Government of India.

The despatch of Your Excellency in Council, dated 9th March, No. 14 of 1877, relative to the famine in the Presidencies of Madras and Bombay, has been considered by me in Council.

2. The insufficiency of the means at present available for the transport of grain from Madras to the interior, and especially to the Ceded Districts and Kurnool, must reasonably have caused much anxiety. The efforts hitherto made to increase the carrying power of the Railway have been met by unforeseen difficulties; but as the subject is now engaging the earnest attention of Your Excellency's Government and that of Madras, I trust that means will be devised for overcoming the present obstacles.

3. Your instructions to the Government of Madras relative to the necessity of removing the misapprehensions which exist in the public mind as to the relations between the Government and the firm of Arbuthnot and Company have my approval. If, after consultation with the Madras Government, your suggestion for the sale of the Government reserve stock be acted upon, I trust that the periods of sale and quantities sold may be so arranged as not to disturb the ordinary operations of trade.

4. I trust that the local authorities in Nellore, the Ceded Districts, and Kurnool will succeed in carrying into execution the plan suggested by Sir R. Temple of drafting labourers from the relief works in those districts to the great work of the East Coast Navigation Canal. The end to be attained is so important that I trust no exertions will be spared to make use of the present opportunity for the completion of this useful work.

5. I shall await the result of your deliberations on the subject, to which the Sanitary Commissioner of the Madras Government has drawn attention, of the alleged insufficiency of the reduced rate of wages lately prescribed for the relief works in that Presidency.

6. I fully concur in the views expressed in the Resolution of Your Excellency's Government on the returns received from the Chief Commissioner of Mysore relative to the scarcity in that Province. The Chief Commissioner and the officers of the Administration appear to have well deserved the praise bestowed on them by Your Excellency in Council for the zeal, judgment and humanity which have characterised their arrangements and exertions to meet the great calamity which has fallen on the Province.

7. I concur with Your Excellency in the emphatic recognition which you record of the value of Sir R. Temple's labours.

Telegram, dated 25th May 1877.

From—Simla, | *To—London,*
From—Viceroy, | *To—Secretary of State.*

No despatch this week. General rainfall in Madras Presidency has greatly improved prospects there. Quantity about as follows: Kistna one inch and half, Nellore from three to eight inches. In different parts tanks received two and three months' supply; Cuddapah average two decimal seven inches, Kurnool two inches, North Arcot two decimal three inches, Chingleput two to seven and half inches, Madras City twenty-one inches, Tanjore two to six inches, Trichinopoly two decimal three inches, Salem three-quarters of inch, Coimbatore general one inch, Tinnevelly slight rain. In Mysore showers throughout the province; one decimal three inches at Bangalore. In Bombay two inches rain in Dharwar; slight showers in Belgaum and Khandesh. Madras Government have raised rate of wages for relief labourers to value of one pound grain *plus* one anna when fifty per cent. of ordinary task is performed. In Bombay Presidency three hundred sixty-four thousand on works, one hundred fourteen thousand charitably relieved. In Mysore sixty-six thousand on works, one hundred two thousand charitably relieved. In Madras seven hundred eighty-eight thousand on works, besides three thousand five hundred on Arconum-Ambatur Railway, three hundred fifty-five thousand charitably relieved, besides sixty-six thousand in relief camps. Temple on 23rd telegraphs as follows:—

"Numbers increasing on relief works considerably, but on charitable relief slightly, caused by returning immigrants and by perfecting village inspection; sanitary reports regarding condition labourers favourable everywhere. Cattle as before; more rain South Mahratta Country, where ploughing progressing, sowing commenced. Trade active on coast on railway as before. Prices slightly higher. Moonsoon reported Malabar Coast, expected shortly Bombay. Great Indian Peninsula Railway continues sending grain towards Madras, giving preference to grain over all other articles."

T. C. HOPE,
Addl. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 24TH MAY 1877.

GENERAL REMARKS.—In Madras copious rain fell during the week in all the districts on the Coromandel coast: it was especially abundant in Madras, Chingleput, South Arcot, Nellore and Tanjore: in Tinnevelly and Malabar the fall was slight; the rain extended inland to Bellary, Kurnool, Cuddapah, and Coimbatore, and has done great good: agricultural operations are expected to commence at once in most districts. The reported numbers on relief works are 788,573, which includes those on the Nellore Canal, but not those employed on some other works in that district: the Vellore returns are also wanting in North Arcot: the total increase on last week is probably about 25,000; the numbers on gratuitous relief are 348,155, an increase of 22,897. Showers have fallen throughout Mysore; the returns (which refer to the period immediately before the rainfall) show 66,503 on works and 102,399 on gratuitous relief. In Bombay rain is reported throughout the Southern Mahratta Country and Deccan, besides showers in Khandesh and Násik; it has been heavy in parts of Kanara, Kaládgi, Satara and Poona. In the Central Provinces there has been slight rain with storms in 14 out of 19 districts: threshing the lately cut crops is going on, and ground is being prepared for the *kharif*. A little rain has fallen in Berar. No rain is reported in Central India or Rajputana, except a shower at Sutna. In Bengal more or less rain has fallen in most districts, in greatest abundance in the East and North: prospects are favourable. Much rain is reported from Assam, and upwards of 12 inches have fallen in Sylhet; prospects are very good No rain has fallen in the North-Western Provinces or Oudh, except a shower at Benares. The return from the Punjab is also blank, with the exception of a shower at Dera Ismail Khan.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 22nd)	1·58 in Masuliptam; 0·10 in Gudivada.	Very heavy gale with rain on 19th; harvest of paddy commenced in Gudivada taluk, outturn about ½; seer of rupees 80 weight, rice 8·46, *cholum* 11·7, *raggi* 13·16, *cumboo* 10·91; imports by sea, rice 8·55 tons, by land from Godavery rice 16·07, *cholum* 6·25, *raggi* 4·88 tons; 2,659 on relief works; 194 fed gratis by Government; 1,177 by people; slight cholera and small-pox continue; cattle disease in some taluks; information regarding weather and crops not received from 10 taluks and divisions owing to bad weather.
Nellore („ „)	8·70 in Nellore; 7·10 at Gudur in Atmakur 4·90; in Kavali 5·80; in Venkatagiri 6·30; in Darsi 4·60; in Ragur 4·75; in Udayagiri 2·0; in Kandukur 3·85; in Ongole 6·05.	Average prices, second sort rice 7·61, *cholum* 9·44, *raggi* 11·64, *cumboo* 9·53; imports by sea none, by land into the town of Nellore rice 38 tons, *cholum* 1 ton, *raggi* 17 tons; number on district relief works 24,445, number on canal 60,704; number fed gratuitously 18,217; returns from Gudur, Addanki and Darsi not received; 62 deaths from cholera reported; cholera, small-pox, fever, dysentery and diarrhœa prevalent in some taluks; water-supply assured; tanks throughout received between 2 and 3 months' supply of water: prospects of cattle improved.
Cuddapah („ „)	Average 2·73	Average prices, seers per rupee, second sort rice 7·72, *cholum* 8·76, *raggi* 9·32, *cumboo* 9·20; people on relief works 74,967; gratuitously fed 26,944; 199 deaths from cholera; number of cattle died for want of fodder and disease 1,608; rain reported from all taluks except one.
Bellary („)	·3 in Bellary; 1·0 in Hospett; 1·3 in Hadgalli; 1·0 in Harpanhally; ·7 in Adoni; 4·4 in Gooty; ·2 in Raidrug; 1·2 in Anantapur; 3·0 in Hindupur; 3·0 in Pennakonda; ·3 in Kudligbi.	Average price second sort rice 7·06, boiled rice at Bellary 8·1, *cholum* or great millet 7·5, Jubbulpore *cholum* at Bellary 8·76, *raggi* or lesser millet 8·02, *cumboo* 7·28 seers of 80 tolas; imports 3,034 tons; accounts from two railway stations only; 284,807 persons on relief works, increase as compared with return for previous week 39,541, this is owing to the increasing pressure of the famine; 132,156 gratuitously fed, increase as compared with the return for previous week 12,468, this is chiefly due to the payment of three pies to the children of coolies employed on relief works, but also to an increase in the numbers in relief houses; 2,664 gratuitously fed by private charity aided by Government grant; cholera decreasing but still in all taluks; small-pox and fever prevalent, but the former decreasing; cattle still perishing from want of fodder; supply of drinking water much improved by recent rains.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Kurnool (May 22nd)	Average 2·0 throughout district.	Many tanks have received a small supply; town water-supply abundant; slight freshes continue in Tumbudra and Hindri; agricultural operations commencing on red soil; cholera, small-pox and fever pretty general; cholera seizures 132, deaths 97; cattle suffering greatly from want of fodder; their prospects improved by late rains; second sort rice per rupee in Imperial seers 6·89, *cholum* 7·86, *raggi* 9·62, *cumboo* 9 1; number on relief works 203,742; gratuitously relieved 61,759, including 47,926 children under seven years, and 7,433 people fed by village heads; import, Government grain 62 tons, private 125 tons in three taluks; the decrease of 1,116 in the number of coolies is the net result of 6,627 increase in Pattikonda, and of 7,746 decrease in the other taluks; decrease in village relief attributable to improved checks; physique of coolies indifferent; number of children receiving cash payment has increased, explanation called for.
North Arcot („ „)	2·34, average of 16 stations.	Average prices in Government seers second sort rice per rupee 7·8, *cholum* 8·9, *raggi* 9·5, *cumboo* 8·4; coolies on relief works 36,766, decrease owing to non-receipt of relief reports from Vellore tahsildar, resident engineer and fall of rain; persons gratuitously fed 12,564; cholera still prevalent, fever and small-pox in some places; pasture scarce; cattle still dying of starvation in some parts.
Chingleput („ „)	Heavy rain throughout the district.	Prices rice second sort 8·84, *raggi* 10·83, *cholum* 9·71, *cumboo* 10·78; imports, rice 133 tons, *raggi* 30; cholera more or less prevalent in Saidapet, Trivellore and Ponneri, abating in other taluks; small-pox and fever in some, dysentery and fever in others; condition of cattle poor; deaths in every taluk, about 600 cattle are reported to have died in Conjeveram alone; in consequence of excess of rain, pasturage *nil*, dry fodder very scarce and expensive; water abundant; on relief works 4,325, gratuitous relief 11,735.
South Arcot („ 23rd)	7·5 in Hoozoor; 5·5 in Tendevanum; 5·75 in Villapooram and Chellambram; 3·2 in Trinomalay; 3·25 in Tricalore; 2·0 in Virdachellam; 1·75 in Kallacoorchy. From 2·0 to 6·0 in different parts of the district from 14th to 17th.	Rice second sort 9 seers, *cumboo* 11¾, *raggi* 11¼, *cholum* 10¾ as last week; number employed last day 2,235; gratuitously fed last day at Chengam 776, in villages 2,585; children paid three pice; people healthy; cholera deaths reported 148 against 215 attacks; cattle disease in some parts; pasture deficient.
Tanjore („ 22nd)		Prices rice 7⅞ seers, *raggi* 13, *cumboo* 10½, *cholum* 10⅝; imports by sea, rice 4 tons; relief works none; deaths from cholera 212; small-pox almost throughout district; cattle disease in Tanjore, Cumbaconum, Mayavaram and Negapatam taluks with some loss of life; fodder available.
Trichinopoly („ „)	Rainfall general throughout district; average 2·3.	Second sort rice 7 7/10 seers, *cholum* 16¼, *raggi* 10¼, *cumboo* 9⅜; import of grains during this week 69 tons; no relief works; gratuitously fed on 20th instant by public subscription 2,224; deaths from cholera 171, from small-pox 65; cattle disease and diarrhœa prevalent among cattle in some parts; pasture and water-supply improved.
Madura („ „)	Rainfall general, especially good near the sea coast.	Rice second sort 8⅓ seers, *cholum* 9¼, *raggi* 9 7/10, *cumboo* 9⅜; import, rice 1,339 tons, other grains 18; number on relief works 12,581; number gratuitously fed 8,905; deaths from cholera 296; cattle doing poorly for want of fodder; slight mortality in some taluks.
Tinnevelly („ „)	Slight rain in 5 taluks.	No freshes; standing crops in 2 taluks withering; 256 deaths to 303 attacks of cholera; cattle disease in 4 taluks with some loss; prices continue rising; average prices per rupee second sort rice 8⅓ seers of 80 tolas, *cholum* 11¾, *cumboo* 11¼, *raggi* 11¼; import of grain, rice 11,181 tons; number on relief works 811, number gratuitously fed 786.
Coimbatore („ „)	Rain pretty general; average ·94.	Prices rice (slight rise) second sort 7·49, *cholum* (no change) 8·62, *raggi* (slight rise) 8·96, *cumboo* (slight rise) 8·96; severe cholera in all taluks, attacks 1,436, deaths 1,150; fever and small-pox prevalent in Erode taluk; fever in Collegal; cultivation to a small extent in 5 taluks; in Palladum and Coimbatore *cholum* has been attacked by insects; cattle poor, losses in Collegal and Sattiamangalum; fodder and water scarce; on relief works 22,801; no observable deterioration of physique gratuitously fed 16,234.
Salem („ „)	1·75	Prices of grains, seers of 80 tolas, rice 7 2/16, *raggi* 8 13/16, *cumboo* 8, *cholum* 8½; imports of all grains 1,500 tons; number on relief works 55,400; number gratuitously fed 55,300; number fed by private charity 700; cholera in all taluks; gratuitous relief number rising 30 per cent., due to large numbers fed in Kistnagherry, Oossoor and Namkal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Malabar (May 22nd)	·73, average of 8 taluks.	Rainfall not sufficient in some places for first crop cultivation; markets well supplied; imports by sea and land, rice 4,020 tons, *raggi* 18, *cholum* 316; exports, rice 261 tons and *raggi* 640; prices of rice stationary in Wynaad and Cochin and slightly risen elsewhere, highest $7\frac{1}{3}$ Indian seers in Wynaad, lowest $10\frac{3}{4}$ in Cochin, average $9\frac{2}{5}$ Indian seers per rupee; *raggi* $10\frac{1}{8}$ Indian seers per rupee in Wynaad, average elsewhere 10; small-pox and cholera in all taluks except Cochin, deaths from latter 280; cattle healthy; pasture improving everywhere; 2,340 coolies on Kolathur roads; strong northerly wind followed by right southerly wind and heavy swell have greatly retarded landing grain operations in Calicut. *General Remarks.*—General prospects greatly improved by late fall of rain; agricultural operations will probably commence in most districts; coolies on Arconum and Ambathoor Railway works 3,535; number fed at 76 relief camps in eight districts 45,847 besides 20,603 at the five Madras city camps; exports of grain from Madras by rail during week ending 19th May 5,239 tons.
Bombay— (May 24th)		
Sind— (May 23rd)		
Kurrachee ...	...	Total rainfall from 1st January 2·89 in Thano Bula Khan, 3·05 in Belo, ·78 in Keti; three fresh cases of small-pox in Kurrachee; fever very prevalent; locusts in Dadu and Sehwan talukas, did some damage in former to *jowari* crops; freshes in Gaj.
Shikárpur ...	...	Weather very hot; cotton in flower, looking well; river high.
Hyderabad ...	...	River rising; locusts have damaged rice seedlings in Guni taluka cattle disease in one, fever in four, small-pox in six talukas; weather very sultry for four days; dust-storms prevailing.
Upper Sind Frontier ...	...	Weather hot; 3 cases of small-pox; cattle disease in Kashmor and Thul.
Guzerat—(May 23rd)		
Ahmedabad ...	·03	Weather warm and cloudy; small-pox in Dholka; locusts passed through Viramgam, no damage.
Kaira ...	...	No change.
Surat ...	...	No change.
Broach ...	·10	Weather sultry, rain in Ankleswar and Amod; dust-storm, lightning and hail-stones in Amod.
Khandesh and Násik. (May 23rd.)		
Khandesh ...	Slight rain in five talukas.	Weather oppressive; fever and small-pox continue.
Násik ...	About half inch rain in most talukas.	Eighteen deaths from cholera in Sinnar.
Konkan—(May 23rd)		
Tanna ...	...	Cholera in 5 and small-pox in 3 talukas.
Deccan—(May 23rd)		
Poona ...	·53 in Poona; ·83 in Indápur; ·03 in Khed; ·10 in Purandhar; ·35 in Bhimthari; ·05 in Mawal; 1·05 in Sirur; 2·45 in Baramati.	Cholera increasing in Khed; few cholera and small-pox cases everywhere except in Indápur.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Proceedings of the Board of Revenue, Madras, No. 2330, dated 22nd May 1877.

Read relief reports for the week ending 5th May 1877, from Kistna District, dated 8th and 11th, and from Kurnool, dated 9th, 10th and 11th May 1877.

The detailed relief reports for the Kistna and Kurnool districts for the week ending 5th May are submitted, for the information of Government, in continuation of Board's Proceedings, 11th May, 1877, No. 2177.

2. Prices rose slightly in Kurnool, but there was no very marked change. In Kurnool rice rose in Ramalkota, all grains in Nandikotkur, and cholum and ragi in Koilkuntla. There was slight rain in the Palnad and in Bezwada taluk in Kistna, and 0·9 inches at Ramalkota in Kurnool.

3. There is no change as regards relief works in Kistna, the Commamur Canal with 1,773 persons being the only work in progress. The following are the talukwar details of numbers in Kurnool :—

	28th April.	5th May.	
Ramalkota	32,550	32,863	+ 313
Nandikotkur	16,724	15,249	— 1,475
Nandial	32,651	23,571	— 9,080
Sirwell	16,555	18,044	+ 1,489
Koilkuntla	33,411	31,670	— 1,741
Pattikonda	23,472	27,578	+ 4,106
Cumbum	49,434	47,684	— 1,750
Markapur	7,092	8,130	+ 1,038
Total	211,889	204,789	— 7,100

The increase in Pattikonda, Sirwell and Markapur is nominal, the return for 28th April having been based partly on estimate. The decrease in Nandikotkur and Nandial has followed on concentration of coolies on trunk roads, and that in Koilkuntla and Cumbum is ascribed to the selection of able-bodied persons for emigration to the East Coast Canal. There is no change to be noticed as regards rates of wages.

4. In Kistna 367 persons were on gratuitous relief. Of these, 117 were casuals in villages in the taluks of Bapatla, Guntoor, Sattenapalli and Nuzvid, and the remainder were in two relief camps. In Kurnool 64,817 persons were gratuitously relieved—6,864 in camps and relief houses, 14,037 in villages, and 43,916 children under seven years of age allowed 3 pies each. The 753 villages in the district are divided into 26 circles, and in 616 villages relief was given. The average per village is 23 persons, which does not seem high. The Collector is watchful against abuses. The numbers of children admitted to 3 pies is too great. The number of relief houses is 34.

Taluqwar Abstract of relief in certain districts of the Madras Presidency for the week ending Saturday, the 5th May 1877.

District.	Taluks.	Grants of funds sanctioned for relief works up to 5th May 1877.	Probable cost of works or sums sanctioned for their execution.	Outlay on works in progress. (Signed) H. E. STOKES, *Secretary.*

REVENUE BOARD OFFICE, MADRAS; *The 22nd May 1877.*

Weekly condition report of the distressed districts of the Mysore Province.

PROVINCE OF MYSORE.

(*No.* 14.)

Condition report for week ending 12*th May* 1877.

Bangalore District.—Markets continue fairly supplied. Prices have risen slightly. There was no rain in any of the taluks except Anekal, where 14 cents were registered. The standing crops were suffering much from want of rain. Cholera and small-pox are still prevalent. Cattle suffer from want of good fodder.

Kolar District.—Markets fairly supplied. Prices unsteady. The condition of the standing crops and the prospects of the season remain unaltered. No rain fell in the district during this week. The public health is not good, cholera, fever and small-pox being still prevalent. Cattle suffer from want of forage.

Túmkúr District.—Markets continue fairly supplied and prices of food grains have risen. There was no rain in any of the taluks, and no improvement in the condition of the crops. Cholera and small-pox are still prevalent, but abating somewhat. Cattle suffer much from want of fodder and water.

Mysore District.—Markets continue fairly supplied except in the Malvalli taluk, where the supply received, it is reported, was barely sufficient for requirements. Steps are being taken to enquire into the alleged deficiency and to apply an adequate relief. Prices have risen generally. Light showers of rain fell in five out of eleven taluks, the quantity registered at head-quarters of taluks ranging from 19 to 53 cents. The standing crops, except under river channels, were withering for want of rain. Sugarcane and black and green gram were harvested in the Ashtagram taluk. Scarcity of drinking water is still felt in many places.

Hassan District.—Markets continue fairly supplied, but prices have risen. A light shower of rain fell in a few villages of the Hassan Taluk only. The young crops of paddy, ragi, maize, and other cereals were suffering from want of rain in every taluk except Manjarabad, where paddy was thriving. Cholera is prevalent throughout the district; fever, small-pox and dysentery also in some taluks. Cattle in the Manjaradad Taluk suffer from foot and mouth disease, and those in Attikupps and Belur from murrain.

Shimoga District.—Markets sufficiently supplied, except in a few villages of the Honnali taluk, where cholera prevented importation on a large scale. There was a slight fall of rain in one taluk only. The standing paddy and sugarcane crops are in tolerably good condition in the Sorab and Nagar taluks and in parts of Sagar also, but in other places they are suffering from want of rain. Fresh sowings are being carried on in all the taluks except Channagiri and Sorab. Cholera, fever and dysentery are prevalent.

Kadur District.—Markets continue fairly supplied and prices pretty steady. There was a slight fall of rain in one taluk (Lakvalli), the sugarcane crop in which is doing well. There are no standing crops in the other taluks. Cholera, fever and small-pox are still prevalent.

Chitaldroog District.—Markets continue fairly supplied, and prices have remained pretty stationary, except in those places where cholera prevailed and checked importation. No rain fell in any of the taluks excepting 5 villages in Hiriyur where the fall was very scanty. The standig corps in the Dodéri, Budihal and Pavagada taluks were suffering, but in others they were in fair condition. Javari and gingelly oil seeds were fresh sown during the week in parts of the Hiriyur taluk. The public health continued to be bad, cholera, small-pox and fevers being still prevalent. Cattle suffer much from want of water and fodder, and from disease also in some places.

General Remarks.

During the week ending 12th May, little or no rain had fallen, and the condition of the country was generally such as to cause considerable anxiety and apprehension. The young crops in any place were beginning to wither, and prospects, in almost all the districts, were somewhat critical. The Commissioner of Ashtagram Division reports that much more than the usual breadth of land had been prepared for the cultivation of the earlier spring crops, but the area over which the crops has actually sprung is less than usual, owing to much of the seed having failed. In the Nagar Division, the districts of Shimoga and Kadur have since benefited largely by the recent rain, and the prospects are somewhat more hopeful there. But as regards the Chitaldroog district no improvement had occurred.

2. The epidemics of cholera and small-pox are still very prevalent. The number of deaths from the former was 1,246 as shewn below, or 169 more than that of the previous week :—

Bangalore district, including town and cantonment	... 159	Shimoga district	... 90
Kolar district	... 139	Kadur „	... 69
Túmkúr „	... 116	Chitaldroog „	... 237
Mysore „	... 243	Total	... 1,246
Hassan „	... 193		

3. The number of works in progress under Revenue officers was 30 more than in the previous week, new works having been started in the Kolar, Túmkúr and Hassan districts; but the daily average number of coolies employed this week was 32,281, exhibiting a small decrease of 71 as compared with the returns of the preceding week. There was, however, an increase of 4,063, in the number employed on works carried out under the officers of the Public Works Department, notwithstanding that some works had to be stopped in the Chitaldroog and Kolar districts, owing to the prevalence of cholera. The Assistant Engineer of the Kadur range reports that the generality of the people coming from the maidan táluks for employment on works are in a miserable state and advances have, consequently, to be continually made to them, with a view to their supplying themselves with food.

4. The daily average number of persons fed at Government kitchens was 102,399 or 7,526 more than in the previous week. The increase was chiefly in the Bangalore district.

5. The number of persons belonging to Her Majesty's territory, who were fed at the kitchens, has been reduced during the week under review to 830.

6. Three thousand and three tons of grain were received by rail at the Bangalore station, and 611 tons at the Kolar road station, making in all 3,614 tons, or 211 less than in the preceding week. The daily average receipts amounted to 516 tons. The imports were drawn from the following places :—

From Madras	...	2,810 tons.
„ Beypore	...	458 „
„ Trichinopoly and Negapatam on the S. I. Railway ...		199 „
„ Sholapur on the G. I. P. Railway		10 „
„ the neighbouring districts of the Madras Presidency		137 „
Total	...	3,614 tons.

7. About 2,313 tons of grain were exported from Bangalore for consumption in the interior of the Province and the frontier táluks of the Madras Presidency, as shewn below :—

Towards the Túmkúr district	...	920 tons.
„ Bellary and Chitaldroog		238 „
„ Mysore district		251 „
„ Ossoor in the Salem district	...	337 „
To the táluks adjoining Bangalore		567 „
Total	...	2,313 tons.

8. An endeavour has been made to estimate the extent to which home-grown produce is still stored in the Province, but as yet with very imperfect success. The Commissioner of the Nagar Division reports, that the people in the Shimoga district live chiefly on home-grown produce, supplemented by moderate supplies received from the neighbouring markets in British territory, which, however, are expected to cease after the monsoon commences. In the Chitaldroog district, three táluks are reported

to be chiefly supplied from Bangalore, two from the Bellary markets and three from the Shimoga District; and there is no reason to apprehend that the imports will be insufficient to meet the demand. The imports into the Kadur District were chiefly from the western coast. The merchants at the seaport towns are said to have collected stores of rice in anticipation of the stoppage of imports from other places.

9. There has been great mortality amongst cattle which has considerably increased the distress and difficulties of the agricultural class. According to the returns received for the quarter ending 31st March last, the number of deaths from various causes amounted to 1,31,858 as against 38,832 of the corresponding period in 1876. The following abstract gives the details districtwar :—

Districts.	For quarter ending 31st March 1876.	For quarter ending 31st March 1877.	Percentage of increase.
Bangalore	3,711	9,626	159·4
Kolar	5,316	36,168	580·4
Túmkúr	4,067	29,550	626·6
Mysore	4,082	8,105	98·5
Hassam	5,263	19,449	269·5
Shimoga	5,387	6,581	22·2
Kadur	3,230	10,190	215·5
Chitaldroog	7,776	12,189	56·7
Total ...	38,832	131,858	239·5

"By Order,"

Note 1. The expenditure entered in column 24 includes the amount contributed by private subscriptions, as well as the Government grant-in-aid thereto.
2. The figures entered in columns 17 and 18 are based on the latest accounts received from the Public Works Department.
3. The figures in column 18 exhibit the adjusted expenditure to end of February and unadjusted for March 1877.
4. Explanation has been called for as to the expenditure shewn in column 24 exceeding the grant.

T. R. A. THUMBOO CHETTY,
Assistant Secretary.

Register of Rainfall recorded scientifically at the Government Observatory at Bangalore for each week in the year, as the usual monthly averages do not give sufficiently reliable information in a tropical climate.

* Such as digging and repairing wells, prickly-pear clearances, &c.

There has been a considerable quantity of rain during the week; from one to two inches have fallen over a large extent of all the affected Districts, except Khandesh and Nasik, where the showers have been lighter. The rain has been heavier in the eastern than in the western Talukas, and was perhaps connected with the cyclone which lately swept along the Coromandel Coast.

The fall of rain will prove very beneficial in enabling such cultivators as are prepared to take advantage of it to sow their lands, or prepare them for sowing. It will also be of much assistance to the quick-growing crops already sown, good accounts of which have been received from Dharwar. The benefit as regards fodder for the cattle, and wells used for irrigation and for other purposes, will be very great. Should the monsoon not be very seriously delayed, and should the rain-fall prove sufficient, the season promises to be a good one.

2. Grain has very slightly risen in price, the average of jowari throughout the affected area being now rather less than 19½ lbs. per rupee. Prices have, however, slightly given way in the Bombay market during the last few days.

The average price of jowari, throughout the affected area, is now almost exactly what it was during the week ended 22nd November; from that time until the first week in February, prices gradually fell, the lowest point touched being the average of 23¾ lbs. per rupee, noticed in Statement No. XIII. for the week ending 9th February. In the following week there was a slight rise, and prices remained nearly stationary at 23 lbs. per rupee for about two months, and rose to 22½ lbs. per rupee in the first week of April, since which time there has been a gradual rise at the rate of about half a pound a week.

Prices are highest in Kaladgi, but Government hope that the pressed fodder, which they have placed along the main roads leading to that isolated Collectorate, will, by facilitating the grain traffic, prevent the rise from becoming serious.

3. The number of people upon Relief Works in the nine affected districts is 367,307 against 354,976 last week, and there are also 9,613 hill-men and immigrants employed in Ratnagiri and Kanara. The increase is not marked except in Kaladgi. It is probable that many of the relief labourers will, after receiving their pay for the week, return to their fields, in order to take advantage of the recent heavy fall of rain.

4. Cholera continues prevalent, but appears to be decreasing in Satara.

5. Tables (A) and (B) are appended as usual. It will be seen that, during the week ending 19th May, the number of people upon Civil Works in the nine affected districts was 31,765, the number upon works under Public Works Department Agency being 335,545. The proportion of people upon the former is therefore less than 10 per cent. of the total.

6. The following table gives the expenditure by Government, during the week ending 12th May, upon charity in the relief of the aged and infirm poor, and in payments made to the young children of labourers employed upon relief works. Comparing it with the table which accompanied the last summary, it will be seen that the number of persons in receipt of Government charitable relief has increased from 21,114, to 28,666, while the number of children under 7 years of age has increased from 93,283 to 106,167:—

Districts.	Collector's discretionary grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.—1116 of 26th December 1876, on account of children under 7 years of age whose parents are upon relief works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

	Hubli-Kaladgi Road ...	5,179		
	GRAND TOTAL ...	298,845		

8. Maps are not sent with this summary, as they would merely repeat the information already given.

9. A table is appended showing the condition of the affected Native States.

10. With regard to the movements of food-grains, 6,145 tons were exported from Bombay to the Southern Mahratta ports during the week ending 23rd May, and during the same week 3,185 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 9,330 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the 23rd May to the Southern Mahratta ports and the Railway stations in the distressed districts. It will be seen that the total amount delivered up to the 23rd May was 286,651 tons. An error in the last table has been corrected:—

Food-grains sent to	In October and November 1876.	In December 1876.	In January 1876.	In February 1877.	In March 1877.	In April 1877.	In May (up to 23rd)	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports	26,903	17,312	13,459	16,075	16,798	21,399	20,738	132,684

North-Eastern line, from Nasik to Bhusawal ..	9,223	3,606	1,615	2,622	3,234	2,346	965	23,611
Total ...	77,823	46,416	30,545	81,174	33,792	36,601	30,300	286,651

11. On the whole there is a slight change for the better in the general situation as compared with that of last week. The food-supply continues sufficient, and prices have not materially risen. The grain trade continues active, though that down the coast has, as anticipated in the last summary, slightly decreased. The amount despatched to the Southern Mahratta ports is however large, amounting to 6,145 tons. Large quantities of pressed fodder have been thrown into the eastern districts to facilitate the grain traffic, and a portion of it is available for cultivators' cattle. More encouraging accounts of the condition of the cattle have been received from some districts, and the expectation is gaining ground that agricultural operations will not be materially impeded for want of plough cattle. The heavy and general rainfall will do much good as regards water both for drinking and irrigation; it will cause fodder to spring up for the cattle, assist the crops which are already sown, enable others to be sown, and land to be prepared for cultivation. On the other hand, as this heavy rainfall was unexpected, many of the people will, from their own absence, or that of their cattle from their fields, and from other causes, be unable to take full advantage of it. The net increase of 12,855 in the number of people upon relief works is due to the causes previously noticed, and is not so great as it was last week; and information has been received of the commencement of a movement of the immigrants from the works towards their homes. The general condition of the people continues to be fairly good, but the numbers receiving charitable relief are increasing; this is due to the continued activity of the village inspection. Cholera is not on the increase.

M. K. KENNEDY, *Major-General, R. E.,*
Secretary to Government.

NOTE.—The totals are not invariably the sum of the men, women, and children, as in a few returns these particulars have not been given, the total number of labourers alone having been entered.
These figures are for the nine distressed districts only. The people upon relief works in Ratnagiri and Kanara are shown in Table A.

Weekly relief report of the distressed districts of the Madras Presidency.

Proceedings of the Board of Revenue, Madras, No. 2389, dated 25th May 1877.

THE Board forward herewith, for the information of Government, the relief reports for the week ending 19th May. Maps and statements as per margin accompany.

Maps:

Chingleput.
North Arcot.
Madura.
Coimbatore.
Bellary.
Nellore.
Cuddapah.
South Arcot.
Salem.

Statements.

No. 1. Prices.
" 2. Relief Report.
" 3. Talukwar Abstract of relief.
" 4. Talukwar abstract of gratuitous relief.
" 5. Districtwar Statistics of ditto.
" 6. Number and description of works.
" 7. Memorandum of sums sanctioned.
" 8. Works under supervision of Department Public Works.

2. *Prices* generally continued to rise, but it is to be hoped that the heavy rainfall of the week will produce a decline which will appear in the reports for the 26th. In *Kistna* the district averages show nearly stationary rates. The detailed report has been received, but it is very incomplete. The chief rise of prices is at Guntoor and Narasarowpett. In *Nellore* prices are almost unchanged except in the north and north-west of the district. Rice has risen in Podili, Udayagiri and Kandukur, cholum in Kanigiri, and ragi in Addanki and Kanigiri. In *Cuddapah* all prices have risen in Budwail, but are elsewhere fluctuating tending generally to fall in the south-east of the district. The *Bellary* quotations show strong tendency to rise of price. Rice has risen nearly 15 per cent. in Harpanhalli, and is dearer in 6 other taluks, while in 4 taluks it shows a slight fall. Cholum has risen in 12 out of 15 taluks; ragi in 6 out of 11 in which it is quoted; and cumboo in 6 out of 9. The *Kurnool* district averages, except for cumboo, show rising prices. In *Chingleput* rice and ragi have risen in Chingleput, and rice in Trivellore. In *North Arcot* prices have risen in Polur, Arcot, and Arnee and in Chendragiri, Chittoor and Godiattum. The rates for ragi show most increase. In *South Arcot* prices incline to rise in Trinomalai and Tindevanum, which taluks are the worst off, and are fluctuating in the rest of the district. At Trichinopoly all rates have risen, and in *Madura* rice has risen in two taluks, ragi in three, and cumboo in four. All rates except for rice have risen in Pulni. *Tinnevelly* prices have risen slightly. The rise in the average for rice in Coimbatore is due to heavy rise in Collegal, where rice now sells at 4·59 seers, the highest quotations yet reached in the Presidency. Ragi has also risen in this taluk, but is nearly stationary elsewhere in Oodoomulpettah and Dharapuram where it has also risen. Cholum and cumboo are scarcely changed. In *Salem*, cholum, ragi and cumboo are nearly stationary, but rice has risen in 5 taluks, especially Utangarai and Oossoor.

3. *Rainfall.*—There was a cyclone accompanied by heavy rain, which affected chiefly the East Coast districts of *Chingleput*, *Nellore*, and *Kistna* and the adjoining parts of *North Arcot*, *South Arcot* and *Cuddapah*, but all the distressed districts received more or less rain. At Madras itself 21·18 inches were registered. The rain will probably suffice to start agricultural operations in all the districts, but reports as to its effect are not yet complete. The Collector of Kurnool telegraphs that two inches fell on the average throughout the district, and that prospects are improving. The following statement shows, for other distressed districts, the number of taluks which received rain, the district average, and the maximum and minimum fall recorded :—

Districts.	Taluks which received rain.	District average, inches.	Highest fall. Station.	Highest fall. Inches.	Lowest fall. Station.	Lowest fall. Inches.
Kistna	9 taluks from which reports have come.	3·23	Bapatla ...	9·05	Nuzvid ...	1·00
Nellore	All taluks ...	5·35	Nellore ...	8·70	Kanigiri ...	2·00
Cuddapah	Ditto ...	2·70	Pullampett ...	9·95	Jamalamadugu ...	0·50
Bellary	8 out of 15 ...	0·74	Gooty ...	4·40	Raidrug ...	0·20
Chingleput... ...	All taluks ...	9·15	Sydapett ...	20·4	Conjeveram ...	4·15
North Arcot ...	16 out of 18 stations.	2·08	Maderpauk ...	7·85	Polloor ...	0·40
South Arcot ...	7 out of 8 taluks ...	4·48	Cuddalore ...	7·70	Cullacoorchy ...	1·72
Salem	All taluks ...	1·77	Tripatore ...	3·90	Darampuri ...	0·65
Coimbatore ...	Ditto ...	0·94	Erode ...	2·50	Udumulpetta ...	0·15
Trichinopoly ...	Ditto ...	2·31	Udayarpalyum ...	3·03	Trichinopoly ...	1·78
Madura	6 taluks from which reports received.	0·78	Pariakolum ...	1·60	Pulni ...	0·45
Tinnevelly	4 out of 5 distressed taluks.	0·28	Srivullipootoor ...	0·40	Sunkernayanar-coil.	0·27

The rain in Bellary was light and partial and none fell in the west. The north-western taluks of Cuddapah also received very little rain. In *South Arcot* good rain fell, especially in the north of the district; Tanjore also received an average fall of two inches.

4. The district grants sanctioned up to the 19th May amounted to Rs. 1,45,35,283 and the outlay to Rs. 1,26,27,660 on relief works, and Rs. 9,25,746 on gratuitous relief.

The following is an abstract of the statement appended showing number and description of works in progress and completed—

	In Progress.		Completed.	
	Number.	Miles.	Number.	Miles.
Roads, New Works ...	441	2,963	111	321
Repairs ...	319	2,839	91	499
	760	5,802	202	820
Irrigation, New Works	57		18	
Repairs	904		197	
Miscellaneous ...	3,694		2,116	
	5,415		2,633	

5. The Board enclose a statement showing particulars, for all Districts but *Nellore*, *North Arcot* and *Coimbatore*, of works under the supervision of the Department Public Works. The total number of coolies employed upon these works is 152,114.

6. The following statement compares the numbers on relief works in each district with those for 12th May—

	12th May.	19th May.	
Kistna	2,149	2,765	+ 616
Nellore	28,016	24,445	— 3,571
Cuddapah	81,921	77,876	— 4,045
Bellary	251,655	288,179	+36,524
Kurnool	204,858	203,742	— 1,116
Chingleput	5,276	3,539	— 1,737
North Arcot	44,885	38,892	— 5,993
South Arcot	1,627	2,235	+ 608
Madura	13,476	12,681	— 795
Tinnevelly	612	463	— 149
Coimbatore	23,770	22,801	— 969
Salem	57,782	55,209	— 2,573
	716,027	732,827	+16,800
East Coast Canal	49,102	62,098	+12,996
	765,129	794,925	+29,796

7. The increase in the week is thus nearly 30,000 of which however 13,000 are on the East Coast Canal, resulting from the considerable emigration which for some weeks past has been going on from *Kurnool* and *Cuddapah*. In *Kistna* as usual the only work in progress is the Commamur Canal extension. *In Nellore* the numbers in Rapur taluk have increased on the Venkatagiri road and there is also increase in Kavili; but in Udayagiri and the Zemindari Divisions, North and South, there is considerable decrease. The latter is perhaps due to the opening of the Raja of Venkatagiri's relief works. In *Cuddapah* the numbers in the Sub-Division have decreased by 5,839, and slightly in Cuddapah and Pullumpett, but have increased in Jammalamadugu and Pulivendla. The decrease in the Sub-Division is not explained, but is probably due to efforts to send coolies to Nellore, and this cause is reported to have led to decrease in Pallumpett. The increase in the other taluks appears to be ascribed to greater pressure of distress.

8. The Bellary numbers show enormous increase, and the taluk details are compared as usual in the margin. The increase may be said to be general. The increase in Raidrug and Kudlighi is ascribed to the opening of fresh works; in nine other taluks the cause is said to be more intense pressure of the famine. The increase in Adoni is very great, and the numbers threaten to rise to the former excessive pitch. The increase in the taluk is said to be amongst women and children and in the inefficient or weakly gangs. The enhanced wages are paid only for six days, and to gangs working more than 10 miles from Adoni. The decrease in Tadpatri is said to be due to efforts to get coolies to go to the Hubli railway; on this work there were only 1,470 persons against 3,152 on the 12th May, but the numbers are stated to have since largely increased. In Sundoor the fall is ascribed to severity of the weather, and in Hindupur there is increase, although all works except minor ones have been stopped. The Collector will be called upon to report on this point and on the increase in Adoni and Alur.

	12th May.	19th May.	
Adoni	58,688	64,636	+5,948
Alur .. .	24,181	28,203	+4,022
Gooty	13,129	11,755	—1,374
Tadpatri	12,544	11,463	—1,081
Anantapur	13,370	14,352	+ 982
Dhurmaveram	5,079	9,131	+4,052
Penkonda	8,692	9,982	+1,290

Bellary	24,330	27,283	+2,953
Hospett	19,790	22,857	+3,067
Sundoor	3,670	3,276	— 394
Kudlighi	19,745	24,413	+4,667
Hurpanhalli	9,225	10,425	+1,200
Hudagalli	15,809	19,037	+3,728
Total ...	251,655	288,179	+36,524

9. The small decrease in *Kurnool* results from increase of 6,627 in Puttukonda, and of decrease of 7,746 in other taluks. The fall in *Chingleput* is ascribed to no work having been done in some places on the last day of the week owing to the heavy rain. The numbers in the district are very small. The numbers in *North Arcot* generally tend to increase, but not considerably. The decrease in the district total is due to non-receipt of the report from the Vellore taluk (which had 6,403 coolies on the 12th) and to decrease (from 6,064 to 4,792) in the numbers on the railway works approaching completion. In *Madura* the decrease in the Madura taluk, which however is slight, is ascribed to commencement of agricultural operations; but that in Pulni (1,012) is unexplained. In Tirumungalum there is increase. The decrease in *Coimbatore* apparently results from ordinary fluctuations. That in *Salem* results from fall in Namkul, Utungari, and Dharampuri, which is not explained in the report.

10. *Rates of wages.*—The Board noted last week increase of wages in certain taluks of Bellary and Cuddapah. These rates are maintained, and in one other taluk of Bellary, *viz.*, Hospett, where grain and money wages were in force, 1½lbs. (¾ seer) have now been substituted for 1lb. of grain. There is nothing of importance to note as regards wages in other districts.

11. *Gratuitous relief.*—The Board now submit to Government a talukwar as well as district abstract showing full details under this head. The totals for districts are compared as usual below with those for the previous week:—

	12th May.	19th May.	
Kistna	382	259	—23
Nellore	21,797	18,217	—3,580
Cuddapah	28,726	27,434	—1,292
Bellary	120,917	132,394	+11,477
Kurnool	61,049	61,759	+710
Chingleput	13,477	11,540	—1,937
North Arcot	11,563	12,304	+741
South Arcot	2,844	3,443	+599
Trichinopoly	40	32	—8
Madura	8,286	8,905	+619
Tinnevelly	677	786	+109
Coimbatore	16,003	16,234	+231
Salem	44,146	56,026	11,880
Total ...	329,907	349,333	+19,426

The numbers in receipt of relief of the different kinds are shown below:—

	12th May.	19th May.	
In camps and relief houses	103,750	103,289	—461
Village relief ...	89,444	94,454	+5,010
Children on 3 pies ...	136,713	151,590	+14,877
	329,907	349,333	+19,426

12. The increase, it will be seen, occurs in village relief and under non-working children allowed 3 pies a day. The number of camps and relief houses is 225. Relief given in them increased in all districts except Kistna, Nellore, Chingleput and North Arcot; but the variation is considerable only in Bellary (+3,054), in Nellore (—2,224) and Chingleput (—2,093). Village relief has materially decreased in Nellore, Cuddapah and Kurnool, and increased in Salem, from 35,162 to 47,807, which is an excessive number and accounts for the great increase in the total of gratuitous relief in that district. Village relief was given (excluding Kurnool) in 4,884 villages against 5,067 on 12th May. The increase in the *Bellary* total above shewn is almost entirely under young children who now number 75,584 against 67,312 on the 12th May, and amount to 21 per cent. of the total population on the works. In Kurnool the children have gone up from 40,752 to 47,926; and the latter number is 19 per cent. of the population on the works. The proportion ought not to exceed 16 or 17 per cent. The concession of the allowance for children is not largely availed of except in the Ceded Districts, Kurnool and North Arcot.

13. The deaths amongst persons in receipt of gratuitous relief reported for the week are as follows:—

	Number in the week.
In camps and relief houses	727
Village relief	146
Children under 7 on works	5
	878

The deaths reported since the orders on the subject were issued are 2,019.

14. The following statement shows operations under the Land Improvement Act:—

	In the week.	Up to the week.
Nellore	...	17,202
Cuddapah	5,358	1,09,483
Bellary	...	10,515
Kurnool	...	350
Chingleput	2,867	66,288
North Arcot	600	1,900
Madura	3,852	28,081
Tinnevelly	...	32,900
Coimbatore	1,530	5,135
Salem	2,540	27,615
Total ...	16,747	2,99,469

Advances, amounting to Rs. 34,288, have been made to weavers in Salem and Madura; particulars for other districts are not reported.

15. The special relief establishments are reported as follows:—

District.	Relief.		Payment of wages.		Accounts, &c.		Total.		Payment of superior officers included.	
	No.	Monthly pay.	No.	Monthly pay.	No.	Monthly pay.	No.	Monthly pay	No.	Monthly pay.

Salem	467	12,492	7	134	139	1,774	613	14,400	9	3,670
Total ...	3,679	92,753	506	5,823	552	8,209	4,737	1,06,785	88	39,849

16. The grants sanctioned by the Board to date amount to Rs. 1,54,49,493.

17. The following particulars are extracted from the report of the Commissioner of Police:—Average daily strength, resident 17,670, non-resident 15,452; of those resident on 19th May, 8,696 were from Chingleput, 4,405 from North Arcot, 4,034 from Nellore and 162 from other districts, total 17,297. There were 500 remaining in hospital and 118 deaths in hospital and 22 in camps occurred during the week. The outlay was in the week Rs. 11,831 and up to the week Rs. 5,03,933.

The President of the Municipal Commission, Madras, had 1,670 paupers in camp at Sattankad on 19th May. His relief works seem to have been stopped probably owing to the rain on the 17th and 18th, and on the 19th only 100 coolies were present. His outlay was Rs. 1,870 in the week, and Rs. 44,809 up to the 19th May.

(True Extract).

H. E. STOKES,
Secretary.

Scarcity in Western and Southern India.

No. 36 (Revenue), dated India Office, London, the 26th April 1877.

From—The Secretary of State for India,
To—The Government of India.

THE Despatch of Your Excellency in Council, dated 16th March, No. 15 of 1877, relative to the famine in the Presidencies of Bombay and Madras, has been considered by me in Council.

2. I will await the result of the deliberations of Your Excellency in Council, after full communication with the Government of Madras, on the Sangam project. As a reproductive work, it is well worthy of consideration at such a crisis as that which now engages your attention.

3. I am glad to learn that the conclusions at which Sir R. Temple arrived, after his repeated visits to North Arcot, are, on the whole favourable, and that he considers everything has been done which ought to have been done in respect to measures of relief by the local authorities.

4. Sir Richard Temple has discussed with ability the views stated by Dr. Cornish, the Sanitary Commissioner at Madras, as to the scale of rations for labourers on relief works. The question at issue is, without doubt, one of great difficulty, and one on which it would be unwise to lay down an inflexible rule. I am confident that the humane principles already laid down by Your Excellency will be scrupulously carried out by the officers of the Government and that no scale of rations will be maintained which is not adequate to the sustenance of the labourer.

5. It is very satisfactory that progress has been made towards enabling the Madras Railway Company to carry 1,400 tons a day, twice the amount which it has hitherto been able to carry.

6. The statement that the number of persons on the relief works in the two Presidencies has, during the week under review, been reduced by 49,266, is satisfactory.

7. I feel it my duty to record my approbation of the discrimination and judgment with which the calamity before you has been met by Your Excellency in Council, by Sir Richard Temple, by the Governments of Madras and Bombay, and by the local authorities in those Presidencies.

No. 39 (Revenue), dated India Office, London, 3rd May 1877.

From—Her Majesty's Secretary of State for India,
To—The Government of India.

THE despatch of Your Excellency in Council, dated 23rd March, No. 16 of 1877, relative to the famine in the Presidencies of Madras and Bombay, has been considered by me in Council.

2. With your despatch you have transmitted twelve Minutes and Memoranda by Sir Richard Temple on various questions connected with the famine. The views therein expressed will doubtless receive every attention from the Government of Madras, but they do not at the present time demand remarks from me.

3. Your judgment in determining that relief operations should be so conducted as not to interfere with private trade was sound, and has been fully justified by the event. All doubt as to the manner in which the grain in hands of the Madras Government will be employed has been set at rest by the public declaration of that Government that the grain shall be retained in reserve to meet future emergencies, and will not be utilised so long as private trade meets the requirements of the distressed districts. Under these circumstances, and with this reservation, I am of opinion that the movement and utilization of the reserve may be left to the discretion of the Madras Government.

4. The intelligence that there has been a good fall of rain in Bellary, Cuddapah, Kurnool, Nellore, Trichinopoly, Tinnevelly and other of the afflicted districts, is very satisfactory.

5. The small increase of 2,608 persons on the relief works in the two Presidencies may also be deemed satisfactory, when the period of the year is taken into consideration.

T. C. HOPE,
Addl. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 31ST MAY 1877.

GENERAL REMARKS.—In Madras heavy rain is reported from Kistna (but this perhaps belongs to last week) and parts of Coimbatore; good rain fell in North and South Arcot, and from all districts more or less is reported: in Tinnevelly the fall was very slight, and in Malabar it was insufficient in places for cultivation to begin; the commencement of cultivation in consequence of the recent rains is reported from Kistna, Kurnool and Coimbatore, and pasture is everywhere improving. The numbers reported on relief works are 771,968, a decrease of 15,241 compared with last week: the decreases are 24,682 in Bellary (some returns wanting), 15,937 in Nellore, 2,277 in Kistna, and 730 in Malabar; there is an increase of 13,835 in North Arcot, 4,745 in Cuddapah, 4,094 in Kurnool, 3,597 in Chingleput, and 2,878 in Coimbatore. The numbers on gratuitous relief are 405,601, an increase of 15,434. In Mysore good rain is reported to have fallen; the numbers on relief works are 64,399 and on gratuitous relief 108,482; the former is less by 2,104 and the latter more by 6,083 than last week. In Bombay there has been good rain in Dharwar and showers in Belgaum, Kanara, Kaládgi, Satara, Poona and Khandesh: sowings and other agricultural operations are reported from Satara, Belgaum and Dharwar. In the Central Provinces heavy rain is reported from the Upper Godávari, Biláspur and Bálaghát districts: ploughing for the *kharif* is progressing. No rain fell in Berar, where ploughing is also going on. In Central India a shower fell at Gwalior, and from Rajputana one is reported at Ulwar; prospects are good. General rain has fallen in Bengal; it has been very heavy in some of the Northern and Eastern districts, and a large quantity is also reported from Gya: prospects are generally favourable, but crops in low lands have in some places suffered from excessive rain. In the North-Western Provinces and Oudh the weather, with the exception of a few showers here and there, has been hot and dry. No rain has fallen in the Punjab; the harvest has been reaped, and the damage done by the late rains is less than was expected. From Burma it is reported that the monsoon has set in as far north as Rangoon. A little rain has fallen in Assam: prospects are good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 29th)	9·60 in Bapetla; 7·65 in Narsarowpet; 5·70 in Guntur; 5·85 in Sattanapalli; 5·53 in Vinukonda; 4·80 in Palnad; 4·0 in Nandigama; 3·9 in Bezwada; 3·0 in Repalli; 2·5 in Gudivada; 2·0 in Vissanapett and Nuzvid divisions.	**Heavy rain throughout district on 18th and 19th; this rain will generally enable ryots to prepare their lands for future cultivation,** and has also supplied tanks, but wind and heavy rain have damaged standing crops; Kistna rose to 3·50 feet over anicut on 21st; and fresh is telegraphed from Kurnool; *sajja* and *poonna* being sown in upland taluks; prices stationary; seers of 80 rupees weight, rice 8·45, *cholum* 11·13, *raggi* 13·10, *cumboo* 10·19; imports by land from Godavery at Guntur, rice 25·0, *cholum* 15·62 tons; 382 on relief works; 356 fed gratuitously by Government; 1,095 by people; cholera and small-pox slight; cattle disease in some taluks; in Vinukonda and Narsarowpet taluks deaths reported from want of fodder; markets fairly supplied.
Nellore („ „)	1·3 in Atmakur; ·65 in Kavali; ·45 in Udayagiri; 1·1 in Kanigiri; 1·5 in Kandukur.	Average prices second sort rice 7·76 seers per rupee, *cholum* 9·58, *raggi* 11·92, *cumboo* 10·18; imports by sea on behalf of Government none, on behalf of merchants rice 189 tons; by land into the town of Nellore, rice 30 tons, *cholum* 2 tons, and *raggi* 10 tons; number on district relief works 26,731, on canal 42,481; number fed gratuitously 16,954; 58 deaths from cholera reported; cholera, small-pox, fever, dysentery and diarrhœa prevalent in some taluks; water-supply assured for drinking, sufficient for agriculture; prospects of cattle, better.
Cuddapah („ „)	·72, average of 10 taluks.	Average prices seers per rupee, second sort rice 7·67, *cholum* 8·69, *raggi* 9·35, *cumboo* 8·69; people on relief works 79,712, increase 4,745, ascribed to stoppage of emigration to Nellore; gratuitously fed 26,391; cholera deaths 372; number of cattle died from want of fodder and disease 1,018.
Bellary („ 30th)	·25 at Hospett; 1·2 at Kudlighi; ·675 at Adoni; ·15 at Anantapur; 1·25 at Tadpury; 1·5 at Dharmapuram; ·15 at Pennakonda; showers at Bellary, Alur, Hadgally, Harpanhally and Hindupur.	Average price second sort rice 6·98, boiled rice at Bellary 8·1, *cholum* or great millet 7·65, Jubbulpore *cholum* at Bellary 8·76, *raggi* or lesser millet 8·11, *cumboo* 7·6 seers of 80 tolas; imports 1,148 tons; accounts from 2 railway stations only; 258,751 persons on relief works; decrease as compared with revised return for previous week 24,682, this is owing to the transfer of able-bodied coolies to the railway and to the accounts of some works not having been received; 151,116 gratuitously fed, increase as compared with revised return for previous week 411; 2,958 gratuitously fed by private charity aided by Government grant; cholera decreasing but still in all taluks; fever prevalent; cattle still perishing from want of fodder; supply of drinking water much improved by recent rain.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*continued.*		
Kurnool (May 29th)	·3 in Nandial taluk.	Weather dry and sultry; town water abundant; slight fresh continues in Tumbudra; agricultural operations commenced in some taluks; cholera, small-pox and fever general; cholera seizures 50, deaths 42; cattle still suffering greatly for want of fodder, but the late rain has improved their prospects; second sort rice per rupee in Imperial seers 6·92, *cholum* 7·86, *raggi* 9·51, *cumboo* 9·19; number on relief works 207,836, gratuitously relieved 62,486 including 50,199 children under 7 years of age, and 5,681 people fed by village heads; import, Government grain 89 tons, private 201 tons in 4 taluks; the increase of 4,094 in the number of coolies is the net result of 9,874 increase in 3 taluks and of 5,780 decrease in 5 taluks; endeavours being made to check number of children receiving cash payment; the decrease in village relief is attributable to improved checks and is satisfactory; physique of coolies indifferent.
North Arcot („ „)	2·51, average of 16 stations.	Average prices in Government seers, second sort rice per rupee 8·0, *cholum* 8·9, *raggi* 9·6, *cumboo* 8·3; relief works coolies 50,601 persons; gratuitously fed 14,753; cholera still prevalent; fever and small-pox in some places; pasture scarce; cattle still dying of starvation, some from cold weather and storm.
Chingleput („ „)	1·5, average fall in all taluks except Maduranti-kum and Ponneri.	Prices, rice second sort 8·90, *raggi* 10·87, *cholum* 9·05; imports, rice 127·75, *raggi* 29·37 tons; cholera more or less prevalent in all the taluks except Trivellore; dysentery, small-pox and fever in Saidapet and Ponneri.
South Arcot („ „)	2·62 in Trinomalay; 1·5 in Villapooram; 1·6 in Chellambram; 1·12 in Kallacoorchy; ·5 in Trikalore and Virdachellam.	Rice second sort 9, *cumboo* 11¾, *raggi* 11¼, *cholum* 11; number employed last day 1,830; gratuitously fed in villages last day 4,054; children paid 3 pice; people healthy; deaths from cholera reported 363, attacks 542; cattle disease in some villages; pasture improving.
Tanjore („ „)	From ·12 to 1·75 in different parts of the district on the 22nd.	Prices, rice 8½ seers, *raggi* 12 5/16, *cumboo* 10 13/16, *cholum* 10½; imports by sea, rice 2,622 tons, dry grains 25 tons; relief works none; some freshes in rivers; deaths from cholera 210; small-pox in some taluks; cattle disease in Combaconum and Nannalum taluks; no loss of life; fodder available.
Trichinopoly („ „)	·84 (average)	Prices during week ending 26th May, second sort rice 7 7/10 seers, *cholum* 16⅛, *raggi* 10½, *cumboo* 9¾; imports of grain during the week 336 tons; no relief works; gratuitously fed on 26th instant by public subscription 1,671; deaths from cholera 294, from small-pox 54; disease among cattle in Udiarpaliam; pasture improving; small-pox hospital camp opened on 22nd at Government expense, number on Saturday 52.
Madura („ „)	Rain fell in many villages of Periacolum, Tirumangalum, Madura and Shevagunga and in a few villages of other taluks.	Rice second sort 8 1/10, *cholum* 9¼, *raggi* 9 1/10, *cumboo* 9¼; import, rice 2,216, other grains 34 tons; number on relief works 12,354; gratuitously fed 9,106; cattle generally doing poorly; disease in some taluks; deaths from cholera 347.
Tinnevelly („ „)	Slight showers in 5 taluks.	No freshes; no improvement in prospects; 236 deaths to 301 attacks of cholera; cattle disease continues with slight mortality in 4 taluks; prices are stationary; average prices per rupee, second sort rice 8¼ seers of 80 tolas, *cholum* 11½, *cumboo* 11½, *raggi* 10¾; import of grain, rice 988 tons and *cumboo* 1 ton; number on relief works, 479; number gratuitously fed 738; decrease in number on relief works owing to works having been abandoned.
Coimbatore („ „)	4·50 in Collegal; 1·50 in Suttiamangalum on 25th and 26th; ·45 in Erode on 24th, 25th and 26th; ·45 in Caroor on 24th; ·63 in Bhowany on 22nd and 24th; showers in parts of Palladum and Oodoomulpetta.	Prices (slight rise) rice second sort 7·39, *cholum* 8·43, *raggi* 8·93, *cumboo* 8·78; imports estimated, rice 1,159, other grains 358 tons; severe cholera in all taluks, 1,676 attacks, deaths 1,179; fever and small-pox prevalent; lands visited by rain are being ploughed; standing crops except in Caroor taluk are suffering from want of rain, worst in Palladum; cattle poor; losses in Palladum, Suttiamangalum, Collegal and Bhowany; fodder and water scarce; on relief works 25,679; no observable deterioration of physique; gratuitously fed 21,139; cattle poor; pasturage just beginning to sprout; water abundant; 1,000 head of cattle is reported to have died in Conjeveram and 6,775 in Trivellore during and after the late heavy rain; on relief works 7,922, gratuitous relief 16,245.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*concluded.*		
Salem (May 30th)	1·12	Prices of grains, seers of 80 tolas, rice 7⅞, *raggi* 8⅝, *cumboo* 8, *cholum* 9; import of all grains 1,080 tons; number on relief works 55,600; number gratuitously fed 58,800; number fed by private charity 1,000; cholera in all taluks.
Malabar („ 29th)	1·31 (average).	Rainfall insufficient in some places for first crop; cultivation, markets well supplied; imports by sea and land, rice 4,626, *raggi* 50, *cholum* 277 tons; exports, rice 1,049, *raggi* 772 tons; prices of rice stationary in Cherakal, Kotteyam and Wynaad and slightly risen elsewhere, highest 7⅛ Indian seers in Wynaad, lowest 10¼ in Cochin, average 9 1/12 Indian seers per rupee; *raggi* 9 Indian seers per rupee, average elsewhere 12⅜; small-pox and cholera in all taluks except Cochin, deaths from latter 230; cattle healthy; pasture improving everywhere; 1,610 coolies on Kolathur roads. *General Remarks.*—General prospects same as last week; coolies on Arconum and Ambathur Railway works 979; number fed at relief camps alone reported fortnightly, at present 23,463 at the five Madras city camps; exports of grains from Madras by rail during week ending the 26th May 7,832 tons.
Bombay— (May 31st)		
Sind— („ 30th)		
Kurrachee ...	...	Total fall since 1st January 2·36 in Dádú; 3·45 in Mughalbbin; ·44 in Sákro; only three cases of small-pox remaining in Kurrachee; it continues in Sehwan, Kotri and Sákro talukas; measles in Sehwan and Kohistan; much fever in Kurrachee and districts; warm; keow* in crops in Kurrachee; locusts in Sehwan, Kohistan, Jerruck, Tatta and Mirpur Batoro, doing a little damage in places.
Shikárpur ...	...	Weather very hot; rice sowing commenced in Lárkána division; cattle disease in 5 talukas; river 8 feet 11 inches, last year 8 feet on same date.
Hyderabad ...	...	River one foot lower than on same date last year; locusts in Naushahro taluka on 24th; no damage.
Upper Sind Frontier ...	...	Minimum temperature 81°, maximum 115°; *kharif* preparations in progress.
Guzerat—		
Ahmedabad ...	...	Weather warm and cloudy; small-pox in Dholka.
Kaira ...	...	Weather very hot; nights cool.
Surat ...	Rain fell in Mándvi taluka.	Eight cholera cases in Pardi, five fatal; small-pox in Bárdoli.
Broach ...	·10	Small-pox in all talukas, except Wagra.
Khandesh and Násik.		
Khandesh ...	Slight rain in Chopra taluka.	Small-pox and cattle disease continue.
Násik ...	...	Thirty-one deaths from cholera in Sinnar.
Konkan.		
Tanna ...	...	Cholera in 5 and small-pox in 4 talukas.
Deccan.		
Poona ...	·06 in Bárámati.	
Ahmednagar ...	...	Cholera in 6 talukas, cases 289, deaths 112.
Sholapur ...	...	Thirty-nine deaths from cholera.
Satara ...	·15 in Satara.	Total rainfall 1·82; more required; land being prepared for monsoon crops; 12 deaths from cholera on Islámpur and one on Pingli works; total deaths in the district 304.
Southern Mahratta Country—		
Belgaum ...	Rain fell in several villages of all talukas.	Rain has enabled ryots to prepare lands for sowings and supplied tanks with a moderate quantity of water; cholera increasing, deaths 279; a good portion of rice lands sown in Belgaum, Bidi and Sampgaon.
Dharwar ...	Nearly 5·50 in Nawalgund taluka; less copious falls in Bankápur, Hangal, Karajgi, Kalghatgi and Ron; moderate in Hubli and Gadag; average of 8 talukas 2·30.	Cholera prevalent, deaths 156; rice sowing in progress.

* (Sic in telegram.)

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Kanara ...	·87 in Siddapur.	Cholera continues, deaths 38.
Kaládgi ...	·04 in Bijapur on 20th; and ·04 on 22nd; ·05 in Kaládgi on 23rd; ·10 in Sindgi; ·17 in Bagalkot on 17th.	Cholera cases 409, deaths 256.
Kattywar and Gaekwar's Territory—		
Rájkot ...	...	Weather hot; health good.
Wadhwan ...	...	Weather and health same as before; locusts reported in Bajaná and Dasára talukas; no damage.
Baroda ...	...	Small-pox and cattle disease decreasing; general health good. *General Remarks.*—Good rain in Dharwar, slight showers in Kanara, Kaládgi, Satara and Khandesh; cholera continues in Southern Mahratta Country, slightly less in Dharwar and Kaládgi, increasing in Ahmednagar, commenced in Surat; weather very hot in Guzerat and Sind; no signs of monsoon.
Bengal— (May 31st)		
Chittagong ...	·55	Cholera abating; small-pox reported from Sudder station.
Noakholly ...	2·9	Stray cases of cholera reported from the interior; fever prevailing in the south and east.
Chittagong Hill Tracts	3·87	Cholera has again broken out in the Chengri valley.
Hill Tipperah ...	5·56	Public health has improved at Agartolah.
Backergunge ...	4·03	Still a good deal of sickness; cattle are healthy.
Furreedpore ...	·97; 2·2 in Madareepore.	
Dacca ...	1·28.	
Tipperah ...	1·47	
Mymensingh ...	5·16	
24-Pergunnahs ...	1·54	Public health generally good.
Jessore ...	·45	
Nuddea ...	1·14	
Moorshedabad ...	·97	Cholera still prevails, but is abating.
Pubna ...	·24	
Rajshahye ...	1·94	
Bogra ...	4·09	
Maldah ...	6·33	Cholera decreasing.
Dinagepore ...	1·1	
Rungpore ...	·37	
Cooch Behar ...	13·37; 12·82 in Matabhanga; 11·71 in Dinhata; 4·92 in Mekhaliganj.	
Jalpáiguri ...	1·62	
Darjeeling ...	2·09	
Midnapore ...	·53	
Howrah ...	1·91	
Hooghly ...	1·79	Public health normal; cattle disease still exists in one village in Punloah station.
Burdwan ...	·84; 4·6 in Jehanabad.	Cases of cholera have occurred in Púrbasthali.
Bankoora ...	·84	
Beerbhoom ...	·55	
Sonthal Pergunnahs ...	1·27; 2·56 in Deoghur.	
Bhágalpur ...	·42	Health improving.
Monghyr ...	·11	
Purneah ...	·68	Cholera still prevalent in certain parts.
Durbhunga ...	·08	
Mozufferpore ...	·20	Few cases of cholera reported from different parts.
Sarun ...	·66; ·11 in Sewan.	
Chumparun ...	·84	Cholera still continues.
Patna ...	2·07	Health generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Gya ...	10·4; 10·3 in Nowada; 8·71 in Aurungabad.	Public health generally good, but there is some cholera in Gya town.
Shahabad ...	·55	Cholera has abated.
Hazáribágh ...	1·26	
Lohardugga ...	1·45; 4·80 in Palamow.	No further reports of cholera from Palamow; there have been a few cases of small-pox in that sub-division and also at Ranchi; cattle disease has appeared in the north-eastern border of the district.
Manbhoom ...	2·75	
Singhbhoom ...	1·85	District healthy.
Balasore ...	·33	Public health fair.
Cuttack ...	·47	General health good, though cholera exists in a sporadic form.
Pooree ...	2·17; 3·32 in Khoorda.	
		General Remarks.—There has been rain in Bengal, and the prospects continue favourable, but in a few districts, especially in Rungpore and Jalpáiguri, the crops in the low lands have suffered from excessive rain.
N.-W. P. and Oudh—		
Benares (May 30th)	...	Weather hot; wind easterly.
Allahabad („ 31st)	...	Hot wind rages.
Jhansi („ „)	Slight rain on 27th & 28th.	
Agra („ 30th)	·1 to ·5	
Meerut („ „)	...	Rain and hail on 28th.
Bareilly („ „)	...	No change.
Almora („ 28th)	...	Weather settled and hot with occasional storms; result of harvest very variable on different soils.
Lucknow („ 30th)	...	No change.
Sitapur („ „)	*Nil*	
Fyzabad („ „)	Slight rain on Monday.	Weather hot.
		General Remarks.—Slight rain is reported in one or two divisions, but the weather generally continues hot and dry.

G. H. M. BATTEN,
Offg. Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

Abstract of the Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 & 25 Vic., Cap. 67.

The Council met at Simla on Thursday, the 31st May 1877.

PRESENT:

His Excellency the Viceroy and Governor General of India, G. M. S. I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb.
His Excellency the Commander-in-Chief, K. C. B.
The Hon'ble Sir E. C. Bayley, K. C. S. I.
The Hon'ble Sir A. J. Arbuthnot, K. C. S. I.
Colonel the Hon'ble Sir Andrew Clarke, R. E., K. C. M. G., C. B.
The Hon'ble Sir J. Strachey, K. C. S. I.
Major-General the Hon'ble Sir E. B. Johnson, K. C. B.
The Hon'ble Whitley Stokes, C. S. I.
The Hon'ble T. C. Hope, C. S. I.
The Hon'ble F. R. Cockerell.
The Hon'ble B. W. Colvin.

MILITARY LUNATICS BILL.

Major-General the Hon'ble SIR E. B. JOHNSON moved that the Bill to facilitate the admission of Military Lunatics into Asylums be taken into consideration.

The Motion was put and agreed to.

Major-General the Hon'ble SIR E. B. JOHNSON moved that the Bill be passed.

The Motion was put and agreed to.

BRITISH BURMA EMBANKMENTS BILL.

Colonel the Hon'ble SIR ANDREW CLARKE presented the Report of the Select Committee on the Bill to provide for the execution of works urgently required in connection with embankments in British Burma.

BOMBAY REVENUE JURISDICTION ACT AMENDMENT BILL.

The Hon'ble SIR ALEXANDER ARBUTHNOT moved for leave to introduce a Bill to amend the Bombay Revenue Jurisdiction Act, 1876. He said that the object of the amending Bill was to restore, in certain provisions, whatever jurisdiction had been taken away from the Courts by certain articles in the Act of last year. The Bill had been framed under instructions from the Secretary of State, and the practical changes which it would effect in the law as it now stood were very slight. In fact it would in no way affect the main object with which the Act of last year was passed. Should leave be given to introduce the Bill, he would take occasion, when introducing it, to explain in detail the exact changes which it would effect.

The Motion was put and agreed to.

CHUTIA NÁGPUR ENCUMBERED ESTATES ACT AMENDMENT BILL.

The Hon'ble SIR ALEXANDER ARBUTHNOT moved for leave to introduce a Bill to amend the Chutia Nágpur Encumbered Estates Act, 1876. He said

that the object of the amending Bill in this case was to extend the period within which the Local Government must decide whether an encumbered estate which had been taken under management under the Act of last year should be retained under management or relinquished. The period of six months provided for in that Act had been found by experience to be too short, and it was proposed to extend it to twelve months.

The Motion was put and agreed to.

TRANSFER OF PROPERTY BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to define and amend the law relating to the transfer of property. He said—"As this is a convenient opportunity for stating the views of the Government on codification in India, I propose, with the permission of His Excellency the President, to trouble the Council with some remarks on the subject, premising that they are little but a précis of what learned and enlightened lawyers like John Austin and David Dudley Field have written in England and the United States. As no one ever does so, I need not acknowledge my obligations to their master Bentham, of whom Talleyrand said *Pillé de tout le monde il est toujours riche.*

"In the first place, speaking as I am in India, I feel myself relieved from the necessity of proving the possibility of successful codification. Thanks, chiefly, to the labours of Macaulay, Peacock, Maine, Stephen, William Macpherson (the Secretary to the late Indian Law Commission), and my wise and learned predecessor, to work under whom was not only a privilege but an education, British India now possesses Codes on the following subjects:—

I. Criminal Law (Act XLV of 1860).
II. Criminal Procedure (Act X of 1872).
III. Civil Procedure (Act VIII of 1859).
IV. Evidence (Act I of 1872).
V. Contract in General—Sale of Goods—Indemnity and Guarantee—Bailment—Agency—Partnership (Act IX of 1872).
VI. Limitation and Prescription (Act IX of 1871).
VII. Specific Relief (Act I of 1877).

"These seven Codes apply to persons of every race and religion in British India. There are, besides, the following, which, as yet, apply only to limited classes of the population:—

VIII. The Succession Act (X of 1865), which deals with domicile, wills and intestacies.
IX. The Divorce Act (IV of 1869).*

"Passing over the Specific Relief Act, which has not yet undergone sufficient probation, it is admitted by all unprejudiced and capable persons that, with one exception (the Code of Civil Procedure, Act VIII of 1859, which will soon be replaced by Act X of 1877), these Codes are working smoothly, and have been found reasonably adequate to provide for the cases that occur in the administration of the branches of the law with which they respectively deal.

"This being so, one might have supposed that no deliberate pause would have been made in the completion of this great and useful work. But such, unfortunately, is not the case. With the solitary exception of the Guardian and Ward Act XIII of 1874 (which does not apply to Bengal, Madras or Bombay), the codifying of our substantive law has since April 1872 totally ceased in India. We know the causes of this cessation, but it would not be expedient to state them.

* Besides these, we have comprehensive Acts which may be regarded as Codes, dealing with the following special subjects; Public Companies (X of 1866), the Post Office (XIV of 1866), Telegraphs (I of 1876), Merchant Seamen (I of 1859), Sea Customs (VI of 1863), Inland Customs (VIII of 1875), Articles of War (V of 1869) Stamps (XVIII of 1869), Court Fees (VII of 1870), Expropriation (X of 1870), Coinage (XXIII of 1870), Paper Currency (III of 1871), Emigration (VII of 1871), Ports and Port-dues (XII of 1875), Administration by Public Officers of trust and intestate estates (XVII of 1864 and II of 1874). In a redistribution of the matter of our law, some of these Acts might form parts of what the New York codifiers call a Political Code.

"Under these circumstances it seems worth while to consider the current objections to codification, and to mention the advantages which may be expected from resuming the work.

"The current objections to codification are four in number. It is said—

(1) that a Code cannot provide for future cases, in other words, that it is necessarily incomplete;

(2) that in the attempt to be systematic and concise the language of codifiers must be left open to different interpretations;

(3) that a Code is inflexible and does not adapt itself to the expanding wants of the society for which it is framed; and

(4) that the Codes which have been framed for foreign countries, in particular France and Prussia, have been failures.

"But these objections have often been answered. As to the first, it is true that a Code cannot provide for all cases, but is that any reason for not providing for as many as possible? Moreover (as Austin points out) this objection is equally applicable to all law—whether it be a Code, a body of judiciary law, or a body of judiciary law supplemented by statutes.

"The second objection—that the language of a Code must be open to different interpretations—is also equally applicable to judge-made law, the specimens of which manufactured in this country are certainly not always free from ambiguity. But the best reply to this objection is, that in India we can continue to follow the system of using concrete illustrations, and that our experience of the Penal Code shews that this method is admirably adapted to preclude uncertainty as to the meaning of the abstract propositions of which the bulk of a Code consists.
