Revenue administration of the Province was found to have suffered from this cause to such a marked extent, that in 1876-77 a Committee of Oudh officers was appointed to look into the whole matter, and devise some means of relief. The measure now to be adopted, if the Bill which he was asking leave to introduce became law, was the outcome of that Committee's report. It was certainly a much more comprehensive measure than that which was adopted to meet a similar state of things in the Panjáb a few years ago, not only because it afforded more substantial relief to the overworked local executive, but because it was likely to be far more satisfactory to the public, inasmuch as it purported to create a judiciary absolutely distinct from, and wholly independent of, that executive, after the model of the system which was in force in the older Provinces.

The "Oudh Judicial Scheme," as it was called, which had received the sanction of the Secretary of State, provided for the entertainment of four District Judges, twelve Subordinate Judges and twenty-two Munsifs, all subject to the control of the existing Judicial Commissioner as a High Court for the trial of all civil suits and appeals. Oudh was at present divided into twelve districts and four Commissioners' divisions, which for revenue and executive purposes would remain unaltered. For the administration of civil justice these divisions would constitute "districts," with one Judge and an average of about four Subordinate Judges and six Munsifs for each "district." No practical inconvenience was to be anticipated from an arrangement of this kind; for there was nothing new in thus combining two or more revenue districts for civil Court purposes and placing them under a single Judge. There were in the North-Western Provinces, he believed, some six or seven, and in Bengal certainly not less than eight or nine, such combinations, which hitherto had been found to work satisfactorily.

The present Oudh Courts Act, both as regarded the nomenclature of the several Courts and the pecuniary limits of jurisdiction which it assigned to each class of Courts, was not adapted to the proposed change of system; hence fresh legislation had become necessary.

The Bill which, if the permission of the Council was accorded, he desired to introduce, was drawn mainly on the lines of the Bengal Civil Courts Act of 1871, with one or two important exceptions designed to meet the special circumstances of the Oudh Province.

He would, for the present, reserve any detailed account of those exceptions and the reasons for them, as falling properly within the explanation which he would have to submit to the Council when introducing the Bill.

The Motion was put and agreed to.

PANJÁB ADDITIONAL FINANCIAL COMMISSIONER'S BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to provide for the appointment in the Panjáb of an Additional Financial Commissioner.

He said that the Financial Commissioner of the Panjáb had applied to Government for the assistance of an officer, to be appointed for a limited period, to help him in clearing off the arrears of work which had accumulated in his office during the incumbency of his predecessor, the late much-regretted Mr. Gore Ouseley.

The Panjáb Land-Revenue Act, 1871, however, only provided for the appointment of one Financial Commissioner, and appeared to contemplate that all the duties which it assigned to the Financial Commissioner should be performed by that one officer in person. Further, it might be a question whether the functions of the Financial Commissioner under certain other enactments could be devolved upon any other officer. Hence the necessity for legislation.

The present Bill would authorize the Local Government, with the previous sanction of the Governor General in Council, to appoint an Additional Financial Commissioner to perform such portion of the work of the Financial Commissioner, under any enactment for the time being in force, as that officer might choose to assign to him.

The Motion was put and agreed to.

MR. STOKES then introduced the Bill. The Legislative Department had been so recently instructed to prepare it that there had been no time to print it and to circulate it in the usual way to Hon'ble Members. It had, however, been carefully settled in consultation with the Hon'ble Members (Sir A. Arbuthnot and Mr. Rivers Thompson) who were respectively in charge of the Home and Revenue Departments; and his hon'ble friend the Financial Member (*frugi dicatur*, as Horace would say) would be glad to hear that the Bill was only a temporary measure, and would expire on the 30th September, 1879. He (MR. STOKES) would now read the Bill to the Council:—

"A BILL

TO

Provide for the temporary appointment in the Panjáb of an Additional Financial Commissioner.

Preamble. "Whereas it is expedient to provide temporarily for the appointment of an Additional Financial Commissioner to assist the Financial Commissioner of the Panjáb; It is hereby enacted as follows:—

Short title. Commencement. "1. This Act may be called 'The Panjáb Additional Financial Commissioner's Act, 1879': and it shall come into force at once.

Appointment of Additional Financial Commissioner. "2. The Lieutenant-Governor of the Panjáb may, from time to time, with the previous sanction of the Governor General in Council, appoint such person as the said Lieutenant-Governor thinks fit to be an Additional Financial Commissioner.

"Every person so appointed shall hold his office during the pleasure of the Governor General in Council:

Provided that no such person shall be so appointed or continue in office after the thirtieth day of September, 1879.

Business transferred by Financial Commissioner to be disposed of by Additional Financial Commissioner. "3. Every Additional Financial Commissioner, appointed under section two, shall hold his sittings at such place in the Panjáb as the said Lieutenant-Governor from time to time directs, and shall dispose of such revenue, judicial and other business, now or hereafter pending before the Financial Commissioner of the Panjáb, under any enactment for the time being in force, as the said Financial Commissioner may, from time to time, transfer to him for that purpose, and, in the disposal of such business, shall follow the same procedure and exercise the same powers as would be followed and exercised by the said Financial Commissioner in like cases.

Power to withdraw cases so transferred. "The said Financial Commissioner may at any time withdraw and himself dispose of any business transferred to the Additional Financial Commissioner under this section and not disposed of by him."

The Hon'ble MR. STOKES applied to the President to suspend the Rules for the Conduct of Business. The matter was one of great urgency; the arrears in the office of the Financial Commissioner were exceedingly large, and the public interests required that not a day should be lost in clearing them off.

The PRESIDENT declared the Rules suspended.

The Hon'ble MR. STOKES then moved that the Bill be taken into consideration.

The Motion was put and agreed to.

The Hon'ble MR. STOKES then moved that the Bill be passed.

The Motion was put and agreed to.

TRADE-MARKS BILL.

The Hon'ble MR. STOKES also moved for leave to introduce a Bill for the registration of Trade-marks. He said that this Bill had been prepared, at the request of the Government of Bombay, to meet the wishes of the Mill-owners Association and the Bombay Chamber of Commerce. Both these bodies had called the attention of the Local Government to the provisions of the English Trade-marks Registration Acts of 1875 and 1876 (which had been held by the High Court of Bombay not to apply to India), and stated that it seemed desirable, having regard to the increase of manufactures in this country, and especially of the cotton-manufactures of Bombay, that there should be a law of a similar nature in India.

The Bill was nothing more than a reproduction, with the changes required to fit them to the different circumstances of this country, of the provisions of the Statutes 38 & 39 Vic., chapter 91 (An Act to establish a register of Trade-marks), and 39 & 40 Vic., chapter 33 (An Act for the amendment of the Trade-marks Registration Act, 1875). It seemed desirable (more especially in the case of laws dealing with large commercial interests), when the object of one of our Acts was merely to extend the provisions of an Imperial Statute to this country, to follow closely the lines of such Statute, so as to make the law in this country as nearly as possible identical with that in England, and thus to give the Indian Courts the guidance of the decisions of the English tribunals on the corresponding provisions of the English enactment.

The Motion was put and agreed to.

MILITARY CANTONMENTS ACT AMENDMENT BILL.

The Hon'ble MR. STOKES also moved for leave to introduce a Bill to provide for the revision of proceedings in trials held under the Military Cantonments Act, 1864, section 20. He said that section 20 of the Cantonments Act (XXII of 1864) declared that breaches of the Cantonment rules should be triable by the Cantonment Magistrate where there was such an officer, and empowered the Local Government to invest any other person with power to try such breaches. The section then declared that the Magistrate of the District should have no control over the Cantonment Magistrate or any other person so invested. Now, in a case tried some months ago by an officer specially invested under section 20 with power to try breaches of Cantonment rules, the Judges of the Chief Court of the Panjáb, to whom the officer's order was submitted for revision, expressed a doubt (which, if MR. STOKES might venture to say so, was perfectly well founded) as to whether the twenty-second chapter of the Code of Criminal Procedure gave them any power of revision in such a case. They, at the same time, expressed an opinion to the effect that such a power ought to be provided. The Governor General in Council concurred as to the need of such a power, and the present Bill had been drafted to provide it.

The Motion was put and agreed to.

BURMA COAST-LIGHTS BILL.

The Hon'ble MR. STOKES also presented the Report of the Select Committee on the Bill to amend the law relating to Coast-lights in the eastern part of the Bay of Bengal.

PLEADERS ACT AMENDMENT BILL.

The Hon'ble MR. STOKES also moved that the Hon'ble Mr. Colvin be added to the Select Committee on the Bill to amend the Pleaders, Mukhtárs and Revenue Agents Act, 1865.

The Motion was put and agreed to.

RANGOON PORT COMMISSIONERS BILL.

The Hon'ble MR. THOMPSON moved that the Hon'ble Messrs. Cockerell and Colvin be added to the Select Committee on the Bill to appoint Commissioners for the Port of Rangoon.

The Motion was put and agreed to.

N. W. P. LAND-REVENUE ACT AMENDMENT BILL.

The Hon'ble MR. COLVIN presented the Report of the Select Committee on the Bill to amend the North-Western Provinces Land-Revenue Act, 1873.

OUDH LAND-REVENUE ACT AMENDMENT BILL.

The Hon'ble MR. COLVIN also presented the Report of the Select Committee on the Bill to amend the Oudh Land-Revenue Act, 1876.

The Council adjourned to Wednesday, the 21st May, 1879.

SIMLA;
The 7th May, 1879.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 6th MAY 1879.

GENERAL REMARKS.—In Madras general prospects remain fair. The usual early showers of rain have fallen in parts of Mysore and are expected in others; the *vaisak* rice crop is in good condition. In the Bombay Presidency rain fell in the Southern Mahratta Districts and in Kurrachee; preparations for the monsoon crop are in active progress. The harvest in the Central Provinces has been completed everywhere except in the Saugor and Mandla districts; ploughing for the *kharif* has commenced in places. Ploughing continues in Berar. The state of things in Rajputana is on the whole satisfactory. In Central India prices are rising. Good rain has fallen in many places in Eastern, North-eastern and Central Bengal; rain is generally greatly needed and where there has been none the crops are suffering much and cultivation has stopped; prices are very high and are rising in some districts; small-pox is said to be very widely epidemic and cholera continues. In Assam the early rains have set in and cultivation is going on satisfactorily. The general health of British Burma is good; small-pox is prevalent in places and cattle disease exists in two districts. The weather in the North-Western Provinces and Oudh has been seasonable; foot-and-mouth disease has appeared among cattle. In the Punjab the harvest is progressing; cholera is reported from seven out of the eleven districts which the returns comprise.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 5th)	*Nil*	Rice 11·36, *cholum* 14·23, *raggi* 18·42, *cumboo* 13·93; *raggi* and tobacco under wells harvested in some taluks, outturn ½; *dalwa* paddy in Gudivada taluk yielded a good outturn.
Kurnool („ 3rd)	·45 in Nandikotkur	Rice 11·15, *cholum* 16·31, *raggi* 21·22, *cumboo* 15·39; fever prevalent; 2nd crop paddy being harvested, outturn ¾; cotton picking completed; fodder and water ample.
Tanjore („ „	*Nil*	Rice 10·85, *cholum* 18·90, *raggi* 18·19, cumboo 14·7; some branches of the Cauvery contain about 6 or 12 inches of water; wet and dry crops generally in good condition, though in certain parts want of rain is felt; harvest of *gingelly*, chillies, and oil-seeds, outturn ½ to ⅝.
Madura („)	*Nil*	Rice 10·59, *cholum* 17·41, *raggi* 18·43, *cumboo* 17·86.
Malabar („)	·31 (average of 2 stations); others *nil.*	Rice 10·08, *raggi* 18·33; prices slightly risen in Kurambranad, Wynaad, Calicut and Palghaut, stationary elsewhere; sowing of 1st crop begun generally; pasture scanty. *General Remarks.*—General prospects fair.
Bombay (May 7th)—		
Sind—		
Kurrachee ...	·15 at Kotri on 29th	Hail at Khánápur; river on 4th, 4 feet 10 inches against 13 feet 10 inches last year; small-pox in Sehwan taluka, two fresh cases in Kurrachee, one fatal; shock of earthquake felt at Johi.
Shikarpur ...	...	River on 5th, 3 feet 9 inches against 10 feet 8 inches on same date last year; two cases of cholera at Sukkur, one fatal.
Hyderabad ...	...	Spring crops reaped; summer crops thriving; preparations being made for autumn cultivations; small-pox in four talukas; river rising slowly.
Upper Sind Frontier...	...	Weather warm and cloudy; harvesting of wheat, barley and pulse continues; foot-and-mouth disease among cattle.
Guzerat—		
Ahmedabad ...	...	Heat increasing; manuring operations continue; cholera continues in Dhandhuka.
Páneh Maháls ...	...	Weather cloudy; public health good.
Kaira ...	...	Weather warm and somewhat cloudy; nine cases of cholera in two talukas, three deaths.
Surat ...	...	Cotton picking nearly over; *jowari* crops still thriving in few places.
Broach ...	...	Two cholera cases in city, none fatal; weather hot.
Konkan—		
Tanna ...	...	Cholera and small-pox in Bassein taluka.
Colába (May 5th)	...	Weather warm; fever in Pen; *rabi* reaping finished.
Ratnágiri (April 29th)	...	Agricultural preparations being made; 17 deaths from fever in Malwan taluka.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Deccan—		
Poona ...	...	Prices of *bajra* and *jowari* rising.
Ahmednagar ...	...	Land being prepared for monsoon crops; public health good.
Southern Mahratta Country—		
Kaladgi ...	1·57 at Indi; ·41 at Bijápur; ·35 at Búgalkot; ·30 at Bádámi.	Fever prevails.
Belgaum ...	·08 at Belgaum; ·65 at Chikori; ·50 at Bídi; ·16 at Athni; ·14 at Sampgaon.	Except some cotton crops all others harvested; fever in all talukas; flight of locusts through Belgaum; numbers of beggars in Athni.
Dharwar ...	Average ·44 in 10 talukas.	*Rabi* harvest nearly over; slight fever in 8 talukas.
Kanara ...	2·71 at Supa	Health good.
Rájkot ...	...	Weather hot; cholera in some places.
Kattywar and Gaekwar's Territory—		
Baroda ...	...	Cotton picking completed; public health good; cattle suffering from foot-and mouth disease in some parts. *General Remarks.*—Weather generally very warm; slight cholera in several districts; monsoon crop preparations going on; early showers in Southern Mahratta Districts.
Bengal—(May 7th)—		
Chittagong ...	3·05	
Noakholly ...	A slight shower on 1st	
Chittagong Hill Tracts...	·55	
Hill Tipperah ...	1·30	
Backergunge ...	A shower on 1st	Cholera and small-pox still prevalent.
Furreedpore ...	·92	
Dacca ...	1·53	
Tipperah ...	4·14	
Mymensingh ...	3·49	
24-Pergunnahs ...	*Nil*	Small-pox and cholera still prevail in suburbs.
Jessore ...	·60	
Nuddea ...	·61	Cholera and small-pox less.
Moorshedabad ...	2·30	
Pubna ...	·18	
Rajshahye ...	·29	
Bogra ...	4·41	
Maldah ...	·91	
Dinagepore ...	4·45	
Rungpore ...	3·56	Small-pox still prevalent.
Cooch Behar ...	1·45	
Jalpáiguri ...	2·71	
Darjeeling ...	2·06	
Midnapore ...	*Nil*	Small-pox still prevalent.
Howrah ...	*Nil*	
Hooghly ...	·15	Fever and small-pox.
Burdwan ...	Return not received.	Cholera and small-pox prevalent.
Bankoora ...	*Nil*	
Beerbhoom ...	·14	
Sonthal Pergunnahs ...	*Nil*	
Bhágalpur ...	*Nil*	
Monghyr ...	*Nil*	
Purneah ...	·85

Mozufferpore ...	·12	
Sarun ...	*Nil*	
Chumparun ...	Few drops.	
Patna ...	*Nil*	
Gya ...	*Nil*	Small-pox still prevalent.
Shahabad ...	*Nil*	Cholera and small-pox abated.
Hazáribágh ...	*Nil*	
Lohardugga ...	*Nil*	Small-pox prevalent.
Manbhoom ...	*Nil*	
Singhbhoom ...	*Nil*	
Balasore ...	*Nil*	
Cuttack ...	*Nil*	
Pooree ...	*Nil*	Many fever cases reported.
		General Remarks.—Good rain in many places in Eastern, North-eastern and Central Bengal, but none of importance in other parts of Province; where rain still holds off crops suffering greatly and cultivation at a standstill; rain generally much wanted; prices already very high and rising in some districts; small-pox epidemic in almost all districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. P. and Oudh (May 7th)—		
Benares (May 6th)	...	No change.
Allahabad („ „)	...	No change; seasonable weather; a little cholera in east and south; city and station healthy.
Jhánsi („ 7th)	...	No change.
Agra („ 6th)	...	Mortality amongst cattle from foot-and-mouth disease; in other respects situation unchanged.
Bareilly („ 7th)	...	No change; weather seasonable.
Meerut („ „)	...	Hotter; wheat 17, gram 16, and *jowar* 20 seers; cholera 77 seizures, 27 deaths; foot-and-mouth disease appeared in Sardhana and Mawána tahsils.
Kumaun („ 3rd)	...	Weather seasonable; crops in Bhábar cut; cholera bad in the Bhábar, and pilgrims from Hardwár have also brought it into the Hills.
Lucknow („ 7th)	...	No change.
Sitapur („ „)	...	No change; health good.
Partabgarh („ 5th)	...	No change; hot winds prevail; health generally good; a few cases of small-pox and fever are reported.
Fyzabad („ 7th)	...	No change. *General Remarks.*—Weather seasonable; foot-and-mouth disease has broken out among cattle.
Punjab—(May 6th)—		
Delhi ...	*Nil*	Harvesting in progress; slight fluctuations in price of food-grains; cholera prevailing.
Hissar ...	...	*Rabi* crops gathered; *kharif* sowings commenced; slight fluctuation in price of food-grains; cholera assuming an epidemic form; cattle disease shown itself.
Umballa ...	...	Crops being harvested; cholera prevailing.
Jullundur ...	...	Crops gathered; cholera decreasing; small-pox prevalent.
Amritsar ...	...	Crops being threshed; price of food-grains stationary; cholera decreasing.
Ferozepore ...	...	Harvest prospects good.
Lahore ...	...	Crops good; cholera prevailing.
Ráwalpindi ...	...	Agricultural prospects average; cholera prevailing.
Mooltan ...	...	Crops being cut and gathered; price of food-grains slightly fluctuating; health good.
Dera Ismail Khan ...	...	Crops being cut and gathered; health good.
Pesháwar ...	...	Slight fluctuation in prices of food-grains. *General Remarks.*—No rain during the week; weather seasonable for harvesting crops; cholera prevailing, health otherwise generally good.
Central Provinces (May 7th)—		
Nimár ...	...	Very hot; health good; prices stationary.
Hoshangabad ...	...	Hot; small-pox continues.
Betúl ...	...	Harvest completed; no epidemic; prices stationary.
Wardha ...	...	Ploughing for *kharif* progressing; small-pox and cholera slightly prevalent; prices steady.
Nágpur (May 7th)	...	Very hot; harvest completed; ploughing for *kharif* continues; cholera in two tahsils.
Chánda ...	...	Hot; harvest completed; ploughing for *kharif* commenced; slight cholera; fever in Brahmapuri tahsil; prices risen.
Narsinghpur ...	...	Hot; outturn of wheat eight annas; health good.
Bhandara (May 6th)	...	Cloudy; very hot; harvest completed; cholera, small-pox, and fever prevalent; prices rising.
Seoni ...	...	Harvest completed; cholera and small-pox continue.
Bálaghát ...	...	Cloudy; hot; harvest completed; cholera and small-pox prevalent; prices stationary.
Mandla ...	...	Threshing and harvesting continue; prices stationary.
Saugor ...	...	Cloudy; hot; threshing and winnowing progressing; outturn of wheat poor; prices rising.
Damoh ...	...	Winnowing completed; health good; prices rising.
Jubbulpore ...	...	Clear; small-pox continues; prices rising.
Raipur ...	...	Warm; harvest completed; cholera and small-pox continue; prices risen.
Biláspur (May 3rd)	...	Days hot; harvest completed; cholera, small-pox, measles, and fever prevalent.
Sambalpur („ 2nd)	...	Days warm; nights cool; tanks drying; cholera decreasing; fever prevalent. *General Remarks.*—Cloudy and hot; threshing and winnowing completed everywhere except at Saugor and Mandla; ploughing for *kharif* commenced in some districts; cholera in nine districts; prices steady and rising in some districts.
British Burma (May 7th)—		
Arakan Division ...	...	Public health good, except in Cheduba island, where a sharp attack of cholera is reported.
Pegu Division—		
Rangoon ...	...	Fourteen cases of small-pox in Rangoon town, of which 7 fatal; public health good in district.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
British Burma—*contd.*			
Thonkwa	...	...	One death from small-pox at Vandoon; slight small-pox and cholera reported in Thonkwa township; 25 deaths from cattle disease in one circle of Pantanaw township and 2 deaths in Donabyoo township; in week ended 26th April 1 death from cholera and 1 from small-pox in Pantanaw, and slight cholera and small-pox in Donabyoo.
Bassein	...	...	Health good; cattle disease prevalent in Ngatraingyoung Sub-Division; 95 deaths reported in 5 circles of Yaigyee township from 3rd to 14th April.
Henzada	...	...	Public health good.
Tharrawaddy	...	...	Small-pox still prevalent.
Prome	...	...	Small-pox in Mahachanan township.
Thayetmyo	...	...	General health normal; 5 deaths from cholera in Allanmyo, in previous week 10 fatal cases; small-pox decreasing.
Tenasserim Division—			
Amherst	...	...	Public health good; no cattle disease.
Tavoy	...	...	Public health good.
Shwegyeen	...	...	Report not received.
			General Remarks.—General health good; small-pox prevalent in places; cattle disease in two districts.
Assam—			
Gauhâti	(May 7th)	2·44	The early rains have set in steadily; cultivation of *ase* in progress.
Sylhet	(„ „)	7·81	Cultivation going forward satisfactorily; sowings of *aman* commenced.
Mysore and Coorg (May 7th)—		Usual early showers fell in some parts.	Rain expected in other parts; *raisal* rice crop in good condition; fever continues; slight earthquake felt at Bagenhalli in the Kolar District on the 28th ultimo.
Hyderabad Assigned Districts— (May 7th)		...	Very hot and cloudy; ploughing continues.
Central India—			
Indore	(May 7th)		Weather warm, health good; prices rising. *General Remarks.*—Clouds in Malwa.
Rajputana—			
Serohi	(May 4th)	...	Tanks dry; wells and health fair; prices still falling; day and night warm, morning fresh; hot winds prevail; weather seasonable.
Marwar	(„ 3rd)	...	Sufficient water supply; health and crops good; great heat; crops being harvested; prices falling slowly.
Meywar	(„ 2nd)	...	Tanks, wells, health, and prospects good; weather seasonable.
Harowtee	(April 26th)	...	Health good; weather seasonable; harvest gathered.
Jhallawar	(May 1st)	...	Tanks and wells low; weather hot; health good.
Ajmere	(„ 7th)	...	Weather seasonable; cholera here and there of a mild type; harvest probably not below average; prices easier.
Jeypore	...	...	Prospects unchanged; weather seasonable; health good.
Ulwur	...	...	Weather seasonable; cholera bad in one tahsil; some cases in 5 tahsils.

PUBLIC WORKS DEPARTMENT.

IRRIGATION BRANCH.

IRRIGATION OPERATIONS OF THE NORTH-WESTERN PROVINCES FOR THE KHARIF SEASON, 1878-79.

No. 379A, dated Allahabad, the 19th March, 1879.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces and Oudh.

Read—

Statements A. 11, B.11, C.11, showing the irrigation operations for the kharif, 1878.

OBSERVATIONS.—The season of kharif, 1878, was characterised by exceptionally heavy showers in April and May, by unusually scanty rain in June and July, and by a sufficient rainfall during August and September. In the majority of districts the rainfall was below the average, but it was well-timed for food crops.

2. The following statement shows roughly the comparative areas irrigated monthly in the two years 1877 and 1878:—

	1877.	1878.
April	170,990	206,174
May	171,634	145,393
June	96,568	116,000
July	66,293	85,146
August	120,817	75,487
September	105,281	31,826
TOTAL ...	731,583	660,026

The chief difference in the two seasons consists in the wider spread of irrigation in August and September of 1877; this extension was principally in cotton, the coarser grains and fodder crops, and was due to the nature of the season.

3. The following statement compares the areas under the several crops for the last three years :—

Crop.	Kharif, 1876, Acres.	Kharif, 1877, Acres.	Kharif, 1878, Acres.
Sugar	129,607	139,005	147,661
Rice	84,744	66,684	79,257
Bajra and jowar	4,830	81,137	12,079
Maize	27,424	61,577	65,818
Other food grains	2,533	12,272	19,326
Fodders	5,273	36,030	17,155
Fibres	41,150	105,309	74,532
Dyes	148,589	214,286	228,284
Miscellaneous	19,380	15,283	15,914
Total ...	463,530	731,583	660,026

Compared with 1877, the increase and decrease in the several crops irrigated during kharif, 1878, was as follows :—

Sugar	+8,656	
Rice	+12,573	
Bajra and jowar	—69,058	
Maize	+4,241	
Other food grains	+7,054	
Fodders	—18,875	
Fibres	—30,777	
Dyes	+13,998	
Miscellaneous	+631	—71,557

The net decrease in the coarser food crops amounted to 57,763* acres, and was the natural result of the well-timed rainfall. The decrease in cotton is also attributable to the season, and is equally divided between the Ganges and Agra Canals; on the Eastern Jumna Canal there is a slight increase. The total area under this crop is still very much higher than in any year previous to 1877.

The increase in rice is due to a larger area having been sown than in the previous year, owing to the rains having been more favourable, but the area is below the average, as the early rains, though more plentiful than those of the previous year, were still scanty. The area under sugarcane is greater than it has ever before been: this area is, as explained in last year's review, independent of the rainfall and influenced chiefly by the market. The area of indigo is also a maximum, the figures for the last five years being as follows :—

Average of 3 years prior to 1877	157,000
Area, 1877	212,912
Do., 1878	227,220

4. The following statement compares the areas under sugarcane, rice and indigo, the crops which take the greatest amount of water, with the areas under other crops :—

Crop.	1876.	1877.	1878.
Sugar, rice, indigo	362,809	418,601	454,138
Other crops	100,711	312,982	205,888
Total ...	463,520	731,583	660,026

* Bajra and juar ... ... —69,058
Maize and other grains ... ... —11,295+57,763

5. The following compares the areas by canals :—

Canal.	1877.	1878.	More.	Less.
Ganges	541,313	483,356	...	57,957
Eastern Jumna	103,632	110,722	7,090	...
Agra	57,652	40,484	...	17,168
Dún	4,979	3,597	...	1,382
Rohilkhand	23,072	21,679	...	1,393
Bijnor	647	...	...	647
Bundelkhand	288	188	...	100

The Eastern Jumna is the only canal on which a decrease has not taken place, the area irrigated this year having been 7,090 acres more than that of 1877, and the highest on record after that of 1869, when the area was 119,164 acres. The following figures illustrate the regularity of the irrigation on this old-established canal :—

Crop.	1868.	1869.	1877.	1878.
Sugar...	31,733	27,311	34,701	32,747
Indigo	1,181	1,762	2,660	2,262
Rice	35,532	46,269	23,614	29,495
Cotton	8,651	15,315	13,373	15,229
Fodder	4,164	7,181	8,138	3,877
Coarser grains	15,772	18,121	16,387	23,650
Miscellaneous	4,792	3,205	4,759	3,462
Total ...	101,825	119,164	103,632	110,722

The coarser grains consist principally of maize.

The decrease on the other canals requires no explanation. The entire cessation of irrigation on the Bijnor canals is attributed by the Collector to the early rains in April and May.

6. The following statement compares the assessments on account of water-rate for 1869, 1876, and the two following years :—

Canal.	1869.	1876.	1877.	1878.
	Rs.	Rs.	Rs.	Rs.
Ganges	8,77,885	9,33,303	13,37,729	13,18,842
Eastern Jumna	3,11,592	3,29,960	3,58,278	3,84,001
Agra	...	39,133	1,41,262	1,23,138
Rohilkhand	19,964	34,354	20,848	19,053
Dún	12,962	14,184	12,385	11,097
Bijnor	1,185	4,859	1,036	...
Bundelkhand	644	783	1,499	309
Total ...	12,24,232	13,56,576	18,73,037	18,56,440

Thus, owing to the larger area of the more valuable crops, the decrease in revenue is only Rs. 16,597 against a decrease in area of 71,557 acres.

Ordered, that copies of this Resolution be submitted to the Government of India for information; that it be circulated as usual to other Governments and Departments, and that it be published in the *Government Gazette*.

By order, &c.,

H. A. BROWNLOW, *Colonel, R.E.*,
Secretary.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 13th MAY 1879.

GENERAL REMARKS.—In Madras general prospects continue fair; the want of rain is much felt in parts of Trichinopoly and Tinnevelly. Matters are favourable in Mysore where good rain has fallen in various places. In the Bombay Presidency there has been slight rain in only the Southern Mahratta districts, Kaira, part of Hyderabad and Satara; preparations for the monsoon crops are going on everywhere; in one division of Hyderabad severe hailstorms have caused serious damage, and in part of Kaladgi the people are said to be wandering about in search of employment. The *rabi* harvest in the Central Provinces has now been quite completed and land is being ploughed and manured for the *kharif* sowings; prices are rising in some districts and remain high in others. Ploughing operations are progressing in Berar. In Central India prices are rising. The state of things in Rajputana is on the whole promising. Rain has fallen generally in Eastern and Northern Bengal and improved prospects; in Central Bengal there has been only slight and partial rain and more is much wanted; except in Midnapore no rain fell in Western Bengal nor in Behar, Orissa and Chota Nagpore; cultivation is retarded and where there has been no good rain the crops on the ground are suffering greatly; the outturn of the spring rice, now being reaped, is not expected to be favourable; prices are still rising in some districts; small-pox and cholera continue in many places. Heavy rain fell in Assam and the outlook is satisfactory. In British Burma general health is good; a few cases of small-pox and cholera have occurred and cattle disease exists in two districts. In the North-Western Provinces and Oudh the weather is hot and seasonable; cholera and cattle disease are prevalent in the northern districts. The *rabi* harvest is going on in the Punjab with fair results; cholera is reported from only four districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 10th)	·33 (average of 2 stations).	Rice 10·93, *cholum* 13·84, *raggi* 18·22, *cumboo* 13·7; *cholum* and *cumboo* under wells in Vinukonda taluk doing well; *raggi* under wells and cotton harvested in Palnad taluk, outturn ¾.
Kurnool. („ „)	·59 (average of 6 stations).	Rice 11·34, *cholum* 16·18, *raggi* 21·84, *cumboo* 17·19; fever prevalent; agricultural operations going on throughout the district; second crop paddy being harvested under Cumbum tank, outturn ¾; fodder and water ample.
Tanjore („ „)	*Nil*	Rice 10·72, *cholum* 17·71, *raggi* 17·80, *cumboo* 14·27; rivers almost dry; wet and dry crops, though generally in good condition, require rain; harvest of *gingelly*, chillies and *chil* seeds, outturn ½ to ¾.
Madura („ „)	*Nil*	Rice 10·42, *cholum* 17·01, *raggi* 17·54, *cumboo* 17·58.
Malabar („ „)	1·0 (average of 5 stations); *nil* in others.	Rice 10·13, *raggi* 17·19; prices slightly risen in Wynaad and Ponani, fallen in Calicut and Palghat, stationary elsewhere; sowing of first crop in progress everywhere; pasture scanty.
		General Remarks.—General prospects fair; rain much wanted in parts of Trichinopoly and Tinnevelly.
Bombay (May 14th)—		
Sind—		
Kurrachee ...	...	River on 11th 5 feet 8 inches, against 14 feet 2 inches last year; one fresh case of small-pox in Kurrachee; fever prevalent.
Shikarpur ...	...	*Rabi* harvest over; river very low for time of year; cholera increasing in Sukkur; small-pox in nine talukas; cattle disease in seven talukas.
Hyderabad ...	Rain in 3 talukas, maximum 1·55.	*Kharif* preparations being made; fearful hailstorms causing serious damage in Hála division; small-pox continues in two talukas.
Upper Sind Frontier...	...	Weather cloudy, hot, and very sultry; *batái* of *rabi* crops progressing; preparations for *kharif* on the Begári limited, on the desert canal active; prices of food-grains decreasing.
Guzerat—		
Ahmedabad ...	...	Heat increasing; ploughing and manuring operations continue.
Pánch Mahála ...	...	Weather clear and hot.
Kaira ...	·04	Thunder storms with rain; fall of hailstones in a few villages of Borsad taluka; two deaths by lightning in that taluka; four cases of cholera in Mehmadabad taluka, two cases fatal.
Surat ...	...	Cotton picking nearly over; general health good.
Broach ...	...	Five cholera cases in city, one fatal; weather hot; public health good.
Khandesh and Nasik—		
Khandesh ...	...	*Rabi* crops gathered; preparations for next season commenced; public health good; prices of grains rising.
Násik ...	...	Harvest gathered; land being prepared for *kharif*.
Konkan—		
Tanna ...	...	Cholera in Bassein taluka.
Colába (May 12th)	...	Weather warm; public health good; slight fever in Pen; *rabi* reaping over.
Ratnágiri („ 6th)	...	Preparation for monsoon crops progressing; fever in two talukas.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Deccan—		
Poona ...	...	Prices of *bajri* and *jowari* steady in city, rising in districts.
Ahmednagar ...	...	Monsoon crop preparations progressing; public health good; prices of grain rising.
Sholapur ...	...	Weather very hot and cloudy; general condition of people middling.
Satara ...	Slight rain	Fever in six talukas; ground being prepared for monsoon crops.
Southern Mahratta Country—		
Kaladgi ...	·24 at Hungund; ·10 at Indi.	Land being prepared for *kharif;* fever continues; people wandering for employment in Sindgi.
Belgaum ...	·31 at Belgaum; ·43 at Sampgaon.	Prospects fair; fever continues; rain needed to reduce prices of grain.
Dharwar ...	In six talukas average ·49.	Tillage commenced in six talukas; heavy flights of locusts over two talukas; fever slightly prevalent.
Kanara ...	...	Ground being prepared for monsoon crop; health good.
Kattywar and Gaekwar's Territory—		
Rájkot ...	...	Weather hot; intermittent fever prevalent; thunder storms with drops of rain; cholera continues.
Wadhwan ...	...	Weather very hot; one death from cholera at Buldana.
Baroda ...	...	*Rabi* harvesting almost over; public health good.
		General Remarks.—Weather generally very warm; preparation for monsoon crops going on; showers in Southern Mahratta districts; public health generally fair, though cholera exists in Sukkur and to a slight extent in several districts.
Bengal—(May 14th)—		
Chittagong ...	·31	
Noakholly ...	·68	
Chittagong Hill Tracts...	5·87	
Hill Tipperah ...	6·04	Cholera yet prevalent.
Backergunge ...	1·32	Public health improved.
Furreedpore ...	1·45	Health good.
Dacca ...	·3	
Tipperah ...	·07	
Mymensingh ...	2·02	
24-Pergunnahs ...	*Nil*	Public health generally good; sporadic cases of cholera and small-pox in Baraset, Dum-Dum, and the suburbs.
Jessore ...	1·31	Cholera in Bagirhat and Khoolna.
Nuddea ...	*Nil.*	
Moorshedabad ...	*Nil*	Cholera still prevalent in places.
Pubna ...	·46	Cholera and small-pox rather abated.
Rajshahye ...	*Nil*	Cholera and small-pox still prevalent.
Bogra ...	·24	Cholera prevalent in Thana Khetlál; rest of district fairly healthy.
Maldah ...	*Nil.*	
Dinagepore ...	*Nil.*	
Rungpore	·87	Small-pox still prevailing in Bagdogra.
Cooch Behar ...	4·70	Cholera decreasing.
Jalpáiguri ...	·21	
Darjeeling ...	2·77	
Midnapore ...	1·82	Small-pox still prevalent.
Howrah ...	*Nil.*	
Hooghly ...	*Nil*	Small-pox and cholera in places.
Burdwan ...	*Nil*	Small-pox and cholera in Culna and Raneegunge, small-pox in Boodbood.
Bankoora ...	*Nil.*	
Beerbhoom ...	*Nil.*	
Sonthal Pergunnahs ...	*Nil.*	
Bhágalpur ...	*Nil.*	
Monghyr ...	*Nil.*	
Purneah ...	*Nil.*	
Durbhunga ...	*Nil.*	
Mozufferpore ...	*Nil*	Public health generally good.
Sarun ...	*Nil*	Small-pox still prevalent; cholera epidemic in places.
Chumparun ...	*Nil.*	
Patna ...	*Nil.*	
Gya ...	*Nil*	Small-pox continues.
Shahabad ...	*Nil*	Cholera and small-pox prevalent in interior.
Hazáribágh ...	*Nil*	Small-pox prevalent.
Lohardugga ...	*Nil*	Small-pox still prevalent.
Manbhoom ...	*Nil.*	
Singhbhoom ...	*Nil*	Cholera and small-pox in Dhalbhoom.
Balasore ...	·02	Cholera still prevalent.
Cuttack ...	*Nil.*	
Pooree ...	*Nil.*	
		General Remarks.—Rain in Eastern and Northern Bengal generally improved prospects; in Central Bengal rain slight and partial and more much needed; excepting Midnapore no rain yet in Western Bengal, and none also in Behar, Orissa, and Chota Nagpore; cultivation retarded, and such crops as are on the ground suffering greatly, save where good rain has fallen; spring rice being reaped, outturn not expected good; prices still rising in some districts; small-pox and cholera in many places.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. P. and Oudh (May 14th)—		
Benares (May 13th)	...	Sugar-cane being irrigated; no other crop in ground at present; prospects favourable.
Allahabad („ „)	*Nil*	Hot; seasonable weather; health good.
Jhánsi („ 14th)	...	Hot winds prevail; health generally good; prices still rising.
Agra („ 13th)	...	Heat increasing; fever prevalent in city; cholera and cattle disease in district.
Bareilly („ 14th)	...	Weather seasonable; condition of people fair.
Meerut („ „)	...	Weather seasonable; cholera 159 seizures, 52 deaths; foot-and-mouth disease in Sardhana, Mawána and Gháziabad; cheapest prices, wheat 16½, gram 15½, *jowar* 20, barley 22½ seers.
Kumaun („ 13th)	...	Crops being cut, except on irrigated land, outturn poor; cholera still prevalent.
Lucknow („ 14th)	...	Weather seasonable; crops harvested; health fair.
Sitapur („ „)	*Nil*	Weather seasonable; health good.
Partabgarh („ 12th)	...	Sugar-cane, cotton and *sáwán* are the only crops on the ground just now, they are being irrigated; weather seasonable.
Fyzabad („ 14th)	*Nil*	Agricultural operations limited to irrigation of sugar-cane; westerly winds continue; health generally good.
		General Remarks.—Cholera and cattle disease still prevalent in the northern districts; weather hot, but seasonable.
Punjab—(May 13th)—		
Delhi ...	*Nil*	Crops being gathered; prospects average; cholera and fever prevalent.
Hissar ...	*Nil*	Weather seasonable but cloudy; *kharif* sowings progressing; prices of food-grains fluctuating slightly; cholera prevails, chiefly among pilgrims.
Umballa ...	*Nil*	Crops being harvested; cholera prevailing.
Jullundur ...	*Nil*	Crops cut; prices steady; sickness diminishing.
Amritsar ...	*Nil*	Crops being threshed.
Ferozepore ...	*Nil*	Harvest yield good.
Lahore ...	*Nil*	Crops average; health fair.
Ráwalpindi ...	Slight rain ...	Agricultural prospects average; cholera prevails.
Mooltan ...	*Nil*	*Rabi* crops being threshed; health good.
Dera Ismail Khan ...	*Nil*	Crops being cut; health good.
Pesháwar ...	*Nil*	Weather cloudy; crops being gathered.
		General Remarks.—Weather seasonable and prospects at present fair.
Central Provinces (May 14th)—		
Nimár ...	...	Very hot; health good; prices slightly risen.
Hoshangabad ...	...	Small-pox continues; prices slightly risen.
Betúl ...	Occasional showers	Cloudy; ploughing for *kharif* sowings continue; prices slightly risen.
Wardha ...	...	Ploughing for *kharif* continues; slight cholera and small-pox; prices steady.
Nágpur (May 14th)	...	Cloudy; very hot; ploughing for *kharif* continues; cholera and small-pox slightly prevalent; prices steady.
Chánda ...	...	Hot; cloudy at intervals; ploughing for *kharif* sowings continue; health good; prices stationary.
Chhindwára ...	...	Hot; ploughing for *kharif* sowings commenced; prices steady.
Narsinghpur ...	...	Cloudy and hot; land is being prepared for *kharif* sowings; health good; prices rising.
Bhandara (May 13th)	...	Cloudy and hot; rain anxiously awaited to commence ploughing for *kharif* sowings; fever, small-pox and cholera continue; prices rising.
Seoni ...	·05	Cloudy; land being prepared for *kharif* sowings; cholera continues.
Bálaghát ...	...	Cloudy; very hot; fields being manured and ploughed for *kharif* sowings; cholera and small-pox continue; prices stationary.
Mándla ...	...	*Rabi* outturn fairly satisfactory; health good; prices stationary.
Saugor ...	...	Cloudy and hot; *rabi* harvest completed; small-pox continues; prices stationary.
Damoh ...	·05	Outturn of *rabi* very poor; health good; prices steady.
Jubbulpore ...	Few drops of rain occasionally.	Cloudy; harvest completed; small-pox continues; prices rising owing to large exports.
Raipur ...	...	Cloudy and close; fields being ploughed for *kharif* sowings; cholera and small-pox continue; prices stationary.
Bilaspur (May 10th)	...	Very hot; fields being manured and ploughed for *kharif* sowings; outturn of *rabi* generally good; cholera increasing; small-pox continues; cattle disease prevalent.
Sambalpur („ 9th)	...	Cloudy; water scarce; cholera disappearing; fever prevalent.
		General Remarks.—Cloudy and very hot, with slight rain at Damoh, Jubbulpore, Seoni and Betúl; *rabi* harvest completed; land being manured and ploughed for *kharif* sowings; cholera prevalent in 7 districts; prices rising in some districts and continue high and steady in others.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma (May 14th)—		
Arakan Division ...	...	Public health continues normal; a few cases of cholera in Ramree and Cheduba island.
Pegu Division—		
Rangoon ...	...	Thirteen deaths from small-pox in Rangoon town; public health of district good; no cattle disease.
Thonkwa ...	...	Slight cholera and small-pox in two circles, otherwise public health good; slight cattle disease.
Bassein ...	...	Public health good; 190 deaths from cattle disease in Kyoonpyaw, and 181 in Yaigyee townships from 15th March to 14th April, 117 in Thabbung in April.
Henzada ...	...	Public health normal.
Prome ...	...	Two cases of cholera, otherwise health good.
Thayetmyo ...	...	General health normal; small-pox decreasing; a few cases of cholera at Allanmyo.
Tharrawaddy ...	...	Report not received.
Tennaserim Division—		
Amherst ...	...	Small-pox in one township, otherwise public health good.
Shwegyeen ...	...	Public health fair.
Toungoo ...	...	Public health good.
Tavoy (May 3rd)	...	Ditto.
		General Remarks.—General health good; a little small-pox and cholera; cattle disease in two districts.
Assam—		
Gauhâti (May 14th)	5·26; on evening of 9th hailstorm from north.	Some of the hailstones measured 4 inches across, and weighed from 4 to 5 ounces; *aus* coming up well.
Sylhet („ „)	6·35	*Bura* rice outturn better than expected; water very high for time of year; price of rice stationary.
Mysore and Coorg (May 14th)—	·90 in Bangalore; ·27 in Coorg; copious showers also fell in various parts of the province.	Prospects of season favourable; prices stationary; fever continues in several districts; two fatal cases of cholera occurred in the Shimoga district.
Hyderabad Assigned Districts— (May 14th)	...	Heat intense; ploughing operations going on.
Central India— (May 14th)	Slight showers throughout Malwa.	Prices rising; health good.
Rajputana—		
Serohi (May 11th)	Shower on 10th	Tanks dry; wells and health fair; hot and cloudy; cooler and more breezy since 10th; seasonable.
Marwar („ 10th)	...	Health and prospects good; hot and cloudy; prices stationary.
Meywar („ 9th)	...	Tanks, wells, and health good; hot winds during day.
Harowtee („ 10th)	·01 in Deoli	Health good; weather cloudy occasionally with dust storms.
Jhallawar („ 8th)	...	Tanks and wells low; hot; health good.
Ajmere („ 14th)	Showers accompanied with thunder.	Hot; few cases sporadic cholera; prices steady, probably kept up by general purchases for consumption.
Jeypore ...	Drops	Stormy; health good.
Bhurtpur ...	...	Health good; bazar low; occasionally cloudy.
Ulwur ...	...	Wells failing; cholera in four tahsils; seasonable.

Calcutta, 21st May 1879.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 20th MAY 1879.

GENERAL REMARKS.—In Madras general prospects are satisfactory. Slight rain has fallen in several districts of Mysore, and there have been heavy showers in Chitaldroog and Coorg; ploughing is going on in places. In the Bombay Presidency preparations for the monsoon crops are proceeding everywhere; the weather is very hot in Guzerat, close and cloudy in Bombay and stormy and showery in the Deccan and Southern Mahratta Country; cholera is prevalent in the Sind districts, Ahmedabad and Kaira. Slight rain has fallen in only three districts of the Central Provinces; the fields are however being prepared and manured for *kharif* sowings in all districts; prices are rising. Preparations for the *kharif* are progressing in Berar. In Central India prices of food are high. In Rajputana matters are on the whole promising. In Central and Eastern Bengal prospects generally have been improved by rain, but where the fall has been slight more is much wanted; drought continues in Western Bengal, Behar, Orissa and Chota Nagpur, and in most places the crops on the ground are withering and agricultural operations at a stand-still; Cholera and small-pox are still prevalent in many places. The state of things in Assam is favourable. In British Burma general health is good; small-pox and cholera continue in places, and cattle disease prevails in two districts. In the North-Western Provinces and Oudh slight rain fell in Meerut and Fyzabad only; cholera is abating except in Meerut and Kumaun, and cattle disease is disappearing. The weather in the Punjab is seasonable and prospects are generally favourable; cholera is reported from five districts, but it appears to be declining.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kurnool (May 17th)	·28 (average of 2 stations).	Rice 11·34, *cholum* 16·18, *raggi* 21·84, *cumboo* 17·19; fever prevalent; agricultural operations going on steadily; fodder and water ample.
Tanjore („ „)	*Nil*	Rice 10·68, *cholum* 17·52, *raggi* 17·90, *cumboo* 14·65; rivers almost dry; the few isolated standing dry crops generally require rain, though in parts of the district they are in good condition; harvest of *gingelly* and chillies, outturn ½ to ¾.
Madura („ „)	*Nil*	Rice 10·11, *cholum* 14·85, *raggi* 17·15, *cumboo* 16·89.
Malabar („ „)	1·31 (average of 10 stations); *nil* in others.	Rice 10·30, *raggi* 17·19; prices slightly fallen in Calicut, Emad, Walluvanad and Ponani, stationary elsewhere; sowing of first crop in progress; more rain required everywhere; pasture still scanty.
Kistna („ 20th)	·6 (average of 3 stations); *nil* in others.	Rice 10·9, *cholum* 13·84, *raggi* 17·74, *cumboo* 13·58; *cholum* and *cumboo* under wells in Venakonda taluk doing well. *General Remarks.*—General prospects satisfactory.
Bombay (May 21st)—		
Sind—		
Kurrachee ...	·03 at Sehwan ...	River at Kotri on 18th, 6 feet 2 inches against 14 feet 11 inches on same date last year; 76 cases of cholera in Kotri—31 fatal, 3 cases in Kurrachee—all fatal, two cases in Tháno Bula Khán; one case of small-pox in Kurrachee; fever prevalent.
Shikarpur ...	...	River 6 feet 2 inches on 19th—5 feet 9 inches lower than on same date last year; worms attacked *peshras* cultivation in Kakar taluka; small-pox in eleven and cattle disease in ten talukas; cholera in five talukas, but is abating.
Hyderabad ...	...	Sixteen cholera cases in Hyderabad taluka, seven fatal; small-pox in three talukas.
Upper Sind Frontier...	...	Weather hot and sultry; *battái* in progress; prices of food-grains decreasing; preparations for *kharif* active on desert canal only; seven cases of small-pox in Thul and Jacobabad.
Guzerat—		
Ahmedabad ...	...	Heat intense; manuring operations continue; cholera again in Dhandhuka taluka, including Dholera.
Pánch Mahális ...	Few drops on 15th ...	Weather occasionally cloudy.
Kaira ...	...	Weather very warm; seven cholera cases in two talukas, three fatal.
Surat ...	...	Cotton picking completed; general health good.
Broach ...	...	Public health good; weather very hot; mornings cloudy.
Khandesh and Násik—		
Khandesh ...	...	Weather cloudy; agricultural operations commenced.
Násik ...	Heavy rain on 20th...	Harvest gathered; land being prepared for *kharif*; strong east wind with the rain on 20th.
Konkan—		
Tanna ...	...	Cholera in Bassein taluka.
Colába (May 19th)	...	Weather warm; public health good; slight fever in Pen; cattle disease to a slight extent in Mahád taluka.
Ratnágiri („ 13th)	...	Preparation for monsoon crop continues; fever in four talukas, 21 deaths in Málwan.
Deccan—		
Poona ...	Maximum 1·26 at Purandhar; minimum ·08, at Bhimthari.	Rainfall general, except at Indápur.
Ahmednagar ...	·08 at Nagar; ·10 at Sangamner.	Sowing preparations completed; public health good; weather hot.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Sholapur ...	Slight in 5 talukas	Rain beneficial to hot weather crops; weather hot and stormy; general condition of people middling.
Satara ...	In 9 talukas; maximum 2·0 at Wálwa; minimum ·16 at Tasgaon.	Weather cloudy; agricultural operations commenced; fever prevails.
Southern Mahratta Country—		
Kaladgi ...	·35; at Bádámi 1·02; at Hungund ·80.	Land being prepared for sowing; fever continues; beggars increasing in Sindgi.
Dharwar ...	In 10 talukas; average fall ·73.	Tillage progressing; locusts in two talukas; fever prevalent.
Kanara ...	Showers with light rain, average in all talukas ·18.	Sowing operations begun on coast; sky overcast; rain accompanied by strong westerly wind.
Kattywar and Gaekwar's Territory—		
Rájkot ...	...	Weather hot; cholera in Gohelwar prant and at Kotrasangani and Upleta.
Wadhwán ...	...	Weather very hot; health good; cattle disease of bad type in several villages of Wánkáner.
Baroda ...	...	Public health good.
		General Remarks.—Cholera prevalent in Sind Districts, Ahmedabad and Kaira; weather very hot in Guzerat, stormy and showery in the Deccan and Southern Mahratta Country, close and cloudy in Bombay; monsoon crop preparations proceeding every where.
Bengal—May 21st—

Durbhunga ...	*Nil*	Small-pox and cholera in some places.
Mozufferpore ...	*Nil*	
Sarun ...	*Nil*	Cholera and small-pox in places.
Chumparun ...	*Nil*	
Patna ...	*Nil*	
Gya ...	*Nil*	Cholera in places.
Shahabad ...	*Nil*	Small-pox abating, cholera still in interior.
Hazáribágh ...	*Nil*	Small-pox prevalent.
Lohardugga ...	*Nil*	Small-pox prevalent; some cholera cases.
Manbhoom ...	*Nil*	Sporadic cholera in many places.
Singhbhoom ...	*Nil*	Cholera and small-pox abating in Dhalbhoom.
Balasore ...	*Nil*	Cholera still prevalent.
Cuttack ...	*Nil*	
Pooree ...	·02	
		General Remarks.—Prospects in Central and Eastern Bengal generally brighter, but more rain greatly needed where fall has been slight; drought still prevails in Western Bengal, Behar, Orissa and Chota Nagpur, and in most places agricultural operations quite at a stand-still and crops withering; cholera and small-pox still in many places, and fever reported in Hooghly and Noakholly.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. P. and Oudh (May 21st)—		
Benares (May 20th)	*Nil*	Sugar-cane being irrigated; seasonable weather; no unusual sickness.
Allahabad („ „)	*Nil*	Air perceptibly more humid and atmosphere more oppressive; wind west; health good.
Jhánsi („ 21st)	...	Weather hot, but seasonable; prices still rising; health good.
Agra („ 20th)	...	Great heat; fever prevalent, but not of a fatal type; cholera and cattle disease decreasing.
Bareilly („ 21st)	...	Weather hot, but seasonable; condition of people fair.
Meerut („ „)	Sprinkling of rain on Sunday evening and Monday morning.	Intermittent hot winds; cholera 168 seizures, 69 deaths; cattle disease abating; cheapest price of wheat 17, gram 16, barley 21½, *jowar* 21 seers.
Kumaun („ 18th)	...	Strong westerly winds; cloudy; cholera prevails.
Lucknow („ 21st)	...	Weather seasonable; crops harvested; sugar-cane irrigated.
Sitapur („ „)	*Nil*	Weather seasonably hot.
Partabgarh („ 19th)	...	Weather close and sultry; hot westerly winds have generally abated; this season is remarkable for its opposite effect on mangoes and *mohwa*, whilst the mango trees are yielding fruit in unusual profusion, the *mohwas* have almost entirely failed.
Fyzabad („ 21st)	Slight rain on 19th instant at Sadr.	Irrigation of sugar-cane continues; prices easy; health good.
		General Remarks.—Slight rain in Meerut and Fyzabad; cholera abating, except in Meerut and Kumaun; cattle disease disappearing.
Punjab—(May 20th)—		
Delhi ...	*Nil*	Harvest gathered; slight rise in prices of food-grains; few cases of cholera.
Hissar ...	Rain on 20th	*Kharif* operations continue; prices of food-grains nearly stationary; cholera about, but decreasing.
Umballa ...	*Nil*	Crops harvested; cholera prevailing.
Jullundur ...	*Nil*	Wheat still on threshing floors; prices steady; district fairly healthy.
Amritsar ...	A little rain	Crops being threshed; prices stationary.
Lahore ...	Several slight showers	Crops average; health generally good but cholera hanging about.
Sialkot ...	1·0	
Ráwalpindi ...	·2	*Rabi* crops average; cholera declining.
Mooltan ...	*Nil*	Crops being threshed; prices steady.
Dera Ismail Khan ...	·16	Crops being gathered; health good.
Pesháwar ...	*Nil*	Prices of food-grains have fallen slightly.
		General Remarks.—Weather seasonable and prospects generally favourable.
Central Provinces (May 21st)—		
Nimár ...	...	Heat intense; ploughing continues; health good; prices slightly risen.
Hoshangabad ...	...	Ploughing for *kharif* progressing; small-pox continues; prices stationary.
Betúl ...	...	Very warm; ploughing for *kharif* continues; health good; prices risen.
Wardha ...	·08	Cloudy; windy; ploughing continues; few cases of cholera; prices steady.
Nágpur (May 21st)	...	Cloudy; very hot; ploughing for *kharif* continues; few cases of cholera; prices risen.
Chánda ...	·63	Intensely hot and cloudy; ploughing continues; small-pox and cholera slightly prevalent; prices stationary.
Narsinghpur ...	...	Oppressive; health good; prices stationary.
Bhandara (May 20th)	...	Cloudy; oppressive; fever, small-pox and cholera continue; prices high.
Seoni ...	...	Cloudy; ploughing for *kharif* progressing; cholera and small-pox continue.
Bálaghát ...	...	Cloudy; very hot; ploughing for *kharif* sowings continues; cholera and small-pox prevalent; prices stationary.
Mandla ...	...	Fields being prepared for *kharif* sowings; one death from cholera; prices stationary.
Saugor ...	...	Cloudy and hot; harvest completed; ground being prepared for *kharif* sowing; small-pox continues; prices stationary.
Damoh ...	...	Ploughing continues; health good; prices rising.
Jubbulpore ...	...	Cloudy and close; ploughing for *kharif* continues; small-pox prevalent; prices rising owing to large exports.
Raipur ...	...	Sultry; ploughing continues; cholera and small-pox prevalent; cattle disease in Dhamtari tahsil; prices rising.
Bilaspur (May 17th)	...	Very hot; ploughing and manuring continue; small-pox abating; cholera increasing; cattle disease continues; prices slightly risen.
Sambalpur („ 16th)	·02	Oppressive; warm; water scarce; cholera disappeared; few cases of small-pox.
		General Remarks.—Cloudy; very hot with slight rain at Chánda, Wardha and Sambalpur; fields being prepared and manured for *kharif* sowing in all districts; cholera and small-pox in nine districts; prices rising.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma (May 21st)		
Arakan Division ...	...	Public health continues good; a few deaths from cholera reported from Cheduba.
Pegu Division—		
Rangoon ...	...	Seven fatal cases of small-pox in Rangoon town; 6 deaths from cholera in one circle; small-pox reported from Kyouktan and Dhabien, otherwise public health good; 10 deaths from cattle disease in Pegu township; cattle disease prevalent in three more townships.
Bassein ...	...	Health good; 635 deaths from cattle disease in Kyoonpyaw township during April, 243 in Yaigyee from 24th April to 5th May, 86 in Thaboung from 1st to 14th May, 8 in Bassein from 14th to 19th May.
Henzada ...	...	Public health good; 1 death from small-pox.
Tharrawaddy (May 17th)	...	General health fair.
Prome	...	Few cases of small-pox in Prome and Mahathaman townships, otherwise public health good.
Thayetmyo ...	...	General health normal; small-pox decreasing; cholera disappeared from Allanmyo.
Thonkwa ...	...	Report not received.
Tenasserim Division—		
Amherst ...	...	Public health good; no cattle disease.
Shwegyeen ...	...	Public health fair.
Toungoo ...	...	Public health good.
		General Remarks.—General health good; some small-pox and cholera; cattle disease prevalent in two districts.
Assam—(May 21st)—		
Gauhâti ...	1·35	Weather seasonable; cultivation of *aus* favourable.
Sylhet ...	·42	Ploughing and sowing of *amun* still in arrear; price of rice stationary.
Mysore and Coorg— (May 21st)—	Slight rain in several districts; heavy showers in Chitaldroog and Coorg.	Ryots engaged in ploughing in parts of the provinces; prices generally stationary; fever prevalent, but to a lesser extent.
Hyderabad Assigned Districts—		
Amraoti (May 21st)	...	*Kharif* field being prepared; weather sultry.
Central India— (May 21st)	*Nil*	Health good, except at Rewah; food prices high throughout.
Rajputana—		
Sirohi (May 18th)	...	Tanks dry; wells and health fair; occasional clouds; hot winds; seasonable.
Marwar („ 17th)	...	Water-supply sufficient; health and crops good; hot winds; occasional sand storms.
Mayyar („ 16th)	...	Water-supply and health good; weather seasonable.
Harowtee („ 17th)	·03 in Deoli; ·18 in Tonk; and 1 in Shahpura.	Health good; weather variable; often still and sultry; wind occasionally from north-east.
Jhallawar („ 15th)	Slight shower on 19th	Cloudy; appearance of rain; seasonable; ploughing in anticipation of *kharif* sowing commenced.
Ajmere („ 21st)	Slight rain in Todgarh	Some cases of cholera in district; great heat; winds light and variable; health good; prices steady.
Jeypore	Drops	Stormy and cloudy; health good; weather seasonable.
Bhurtpur (May 20th)	...	Health good; prices low; high winds.
Ulwur („ 21st)	...	Cholera still prevails; wells failing; slight fall in prices.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Wednesday, the 21st May, 1879.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, C.S.I.
His Excellency the Commander-in-Chief, G.C.B.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B.
The Hon'ble Whitley Stokes, C.S.I.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble F. R. Cockerell.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.

N. W. P. LAND-REVENUE ACT AMENDMENT BILL.

The Hon'ble MR. COLVIN moved that the Report of the Select Committee on the Bill to amend the North-Western Provinces Land-Revenue Act, 1873, be taken into consideration.

He said that the Bill had been a good deal enlarged since it had first been introduced in Council. At that time it contained only three amendments of the present Act. The principal of these was intended to deprive persons whose estates might be under the management of the Court of Wards of power to charge or alienate those estates. Of the other two amendments, one was little more than an improvement in drafting, which required no notice. The last was more important. It was an addition to section 29 of the Act which was being amended, and it declared that charges incurred in the preparation of village-maps should be deemed to be charges within the meaning of that section. The effect of this was to make the village-map a part of the patwáris' records. It had been doubted whether village-maps could, under the wording of the Act as it stands, be properly treated as part of the patwáris' records. Whatever the proper interpretation of the Act might be, in practice they had for a great many years past been so treated. In 1854, and again in 1856, the Local Government expressly declared that to make a map was part of a patwári's ordinary duty; and, as a matter of fact, a great part of the existing village-maps in the temporarily-settled districts of the North-Western Provinces were, according to those orders, prepared by patwáris, or by substitutes for whom they paid. Again, in the latest rules prescribing the duties to be performed by a patwári which have been issued by the local Board of Revenue, it was declared that a patwári shall make any survey which may be required; and the Collector was authorized, if necessary, to appoint an establishment to assist him, which establishment might be paid out of the surplus of the patwári fund. The truth was that these village-maps were indispensable if the patwáris' records were to be of any use at all, and if the provisions of the Act in respect of these were not to remain a dead-letter. Those records, apart from the map, merely gave a list of the names of the different persons who held shares in the village and of the fields which they possessed, showing the dimensions and area of each. Every one of those fields bore a distinguishing number in the list, which it also bore in the village-map; and, by turning to the map, any field that was wanted could be found at once. Without it, these distinguishing numbers were meaningless, and the patwári's record scarcely of more service than an index to an atlas would be without its corresponding maps. It gave a list of fields, but furnished no clue by which they could be found. In short, he did not see how

there could be any such thing as a "proper supervision, maintenance and correction of patwáris' records," which the Act enjoined, unless the village-map were recognized to be a part of them. Under these circumstances, it was highly expedient to remove any doubts which might exist upon the subject; and, by the Bill as now framed, village-maps were declared to form a part of the village-records.

The next point in the Bill which required notice was the provision in the same section that the patwáris' rate—the rate, that was to say, by which the village-accountants were paid—should be credited to a provincial fund. A good deal of discussion had taken place, at the time when the present Act was passed, between those who wished that this rate should be thrown into a general fund and those who maintained that a separate account ought to be kept for each village. It was argued by those who held the latter view that the patwárí was a village-servant, and ought to be paid by the village-owners. On the other side, it was contended that the village-accountant had gradually been transformed into a servant of the State as regards many of his duties, and that he was no longer a mere private servant; and that the Government in making this change had incurred responsibilities towards the patwáris, of which one of the first was to see that the men were adequately and regularly paid. What he had just said gave the substance of the two conflicting opinions. It was unnecessary to take up the time of the Council with the arguments of either side in detail, because, whatever the merits of the controversy, it had been found in practice that effect could not be given everywhere to the plan of making each patwárí dependent for his pay upon his own circle only. There were some parts of the country so poor that the full legal rate of three per cent. upon the annual value of an estate did not provide the patwáris with better wages than those of a day-labourer. Unfortunately, it also happened that the duties of a patwárí in these poor circles were commonly heavier than they were on a rich estate, where the rate provided a good income. In order to obtain men fit for the post, it was necessary in such places to raise the salary above the amount yielded by the legal rate; and, as the individual villages could not out of their small rental supply the money necessary for this purpose, it was obvious that a fund which was composed of the surplus of richer circles could more properly contribute it than the proceeds of any general taxation.

Another alteration with respect to the patwáris' rate was contained in section 5 of the Bill. It had been found that in some districts the old rate according to which the patwáris had hitherto been paid was in excess of that allowed by the present Act. It would be very inconvenient—indeed, sometimes impossible—to reduce the rate so paid to three per cent. on the annual value of the estate, which was the highest contribution that could be levied under the Act, because, if this were done, the patwárí in many cases would be very inadequately provided for, and arrangements which had been in force for years past would be disturbed. Accordingly, it was proposed that, in those districts where the facts were as he had described, the rate hitherto levied should for the future be deemed to be the legal rate. The districts referred to by him were those of Lalitpur, Dehra and Budaun.

He proceeded now to notice the changes which were proposed in section 66 of the present Act.

The first of these was the addition to its second clause of a sentence which declared that no list such as is spoken of in it shall be altered or added to during the currency of a settlement. This was only a change of form, not of substance. The Committee were satisfied that this was the intention of section 66 as it now stands. It declared that a list of certain cesses shall, if generally or specially sanctioned by the Local Government, be made by the Settlement-officer, and that no such cess which is not included in that list shall be enforced in any Court. It further empowered the Local Government *from time to time* to impose certain conditions on the collection of these cesses; but it was plain from the wording that it was not contemplated that the list itself should be altered during the currency of a settlement. It appeared, however, that this had not always been so understood. The Committee accordingly recommended the addition of a sentence to clause 2, section 66, which would place the intention of the Act beyond the possibility of doubt.

The second addition to section 66 empowered the Governor General in Council to declare in cases of doubt what shall be deemed to be a cess within the meaning of the section. This power would provide for the removal of any doubts, if they should arise, about the cesses which do or do not fall within the meaning of the section. The Committee, as he had observed before, did not think that any such power could properly be exercised during the currency of a settlement, and had limited it to the time during which a settlement was in progress.

The next section of the Bill which appeared to call for notice was the one which amended section 74 of the Act, and empowered the Settlement-officer in certain tracts to refuse commutation from rents in kind to rents in money. When the Act of 1873 was passed, it was believed that, by enabling the tenants to convert all rents which were payable in produce into rents payable in cash, a benefit would be conferred upon them. The effect of giving them that power had, however, in some parts of the country proved the reverse of a boon. It was, indeed, a doubtful advantage for tenants to pay in money instead of in grain, in places where the crops were precarious. Where they paid a fixed portion of the produce, the demand from them varied according to the outturn of the harvest; but no such adaptation of the landlord's claim to circumstances was to be looked for in the case of fixed cash rents. Now, there were some tracts in the North-Western Provinces where the tenants at the time of settlement had applied for cash rents and had obtained them very much against the landlords' wishes. It so happened that, after the rents had been so commuted, there came two or three years of very bad harvests. The zamíndárs claimed their full rents. The tenants, they said, had wished for payments in money, and now they must abide by them. The cultivators had neither the money nor the means of raising it, and were obliged to execute engagements to pay at some future time which they could never fulfil. Mischief of this kind had occurred in more than one place from making the commutation of rents compulsory on the application of either party. It was proposed, therefore, to add a clause to section 74, enabling the Settlement-officer to refuse commutation, under certain circumstances, in such tracts as the Local Government thought fit to bring within the operation of the clause.

A change of some importance was proposed in Section 157. The Local Government were anxious that the power to transfer a pattí from one landowner to another should be given to the Collector. At present it was vested in the Board of Revenue. It was found, however, that in some parts of the country the present procedure, by which the Collector had to report to the Commissioner, and the Commissioner to report to the Board, caused a delay which the Local Government considered mischievous. It was, therefore, proposed to make the procedure quicker and more summary by vesting the power of transferring shares which do not exceed 50 rupees in the Collector. This power would be subject to the sanction of the Commissioner, and to revision, if necessary, by the Board. The Committee had not thought it right to exempt it from the general supervision and control of the Board; but it was not anticipated that they would interfere with completed transfers, except under extraordinary circumstances.

There was only one other point that required notice. Opportunity had been taken in amending the North-Western Provinces Local Rates Act, 1878, to extend the definition of "tenant" so as to include lessees and under-proprietors who did not themselves use or occupy the land. It was not an uncommon practice in many parts of the country for a landowner to grant perpetual leases of a portion of his estate, on the payment of a fixed rent annually for ever. It had been held that such a perpetual lessee was neither a landlord nor a tenant within the meaning of the Act, and that the only course left for the lessor, who had to pay the whole rate, was to recover the tenants' moiety of it, if he could, from the different users or occupiers of the land. It was proposed to remedy this defect by altering the definition of the word "tenants" in the North-Western Provinces Local Rates Act in the manner which he had described.

The Motion was put and agreed to.

The Hon'ble MR. COLVIN then moved that the Bill as amended be passed.

The Motion was put and agreed to.

BURMA COAST-LIGHTS BILL.

The Hon'ble MR. STOKES moved that the Report of the Select Committee on the Bill to amend the law relating to Coast-lights in the eastern part of the Bay of Bengal be taken into consideration. He said that the Committee had made three amendments in the substance of the measure, namely, first, by omitting the explanation to section 9, and thus relieving a ship's agent of liability for the master's or owner's refusal to pay dues payable under the proposed Act; secondly, by adding a section requiring the Government to publish annually a statement of the receipts on account of coast-light dues and of the expenditure on the lights; and thirdly, by substituting for "Port Blair" in both the places in which it occurred in the schedule the words "any Port in the Andaman and Nicobar Islands." The first of these amendments had been made at the suggestion of the Bengal Chamber of Commerce, who justly observed that the power to distrain and sell the vessel was sufficient. The second had been made with a view to providing those who paid the dues with the means of judging whether the rates from time to time fixed were reasonable or not; and the third was necessitated by the development of a trade in cocoanuts carried on by Native vessels plying between Burma and the Nicobars—vessels which undoubtedly benefited by some of the lights to which the Bill referred. The Committee had also made some improvements in the wording and arrangement of the Bill.

The Bill had been approved by the five Local Governments concerned; but the Bengal Chamber of Commerce had taken exception to the proposal to raise the coast-light dues, on the ground that, "as the calculations of dues sufficient for the purposes covered by the Act (XIII of 1867) were made at and for a period when the tonnage in respect of which the dues were payable was much smaller than at the present time, it is difficult to understand how those estimates could have been framed so inaccurately as to render it necessary at this moment of largely increased revenue to call for an addition of fifty per cent.; and how, while the revenue during intervening years has been progressive, the expenditure has been progressive also." They requested that, before any additional rate was imposed, they might be furnished with fuller explanation than that given in the Statement of Objects and Reasons attached to the Bill, and with the requisite accounts to justify the addition which it was proposed to make to the existing tax on tonnage.

It was easy to give the fuller explanation desired by the Chamber. The particulars of certain expenditure had not yet been received from England, and the entire capital expended on the lights up to date could not therefore be ascertained. But the accounts, so far as they went, showed Rs. 21,07,733 to have been expended. (MR. STOKES took these figures, as well as the others which he would quote, from an official Note drawn up last October by Mr. C. J. Lyall, the able and accurate Under-Secretary to the Revenue Department). The annual interest on this sum, at 4½ per cent., was Rs. 94,848. The average cost of maintenance for the six years ending 1877-78 had been Rs. 53,277. This was exclusive of the Oyster Reef Light, which appeared only in the two last of these years. If we included the average cost of the Oyster Reef Light for the two years, the average cost of maintaining all the lights for future years might be estimated at Rs. 63,177. We thus had the annual charge (including interest on capital) equal, roughly speaking, to Rs. 1,58,000. Now, the total income from the light-dues for the six years ending 1877-78 had been Rs. 4,74,000, giving an average of only Rs. 79,000 per annum. It was true that this income had been rapidly rising. It had in fact increased in the six years under review by about fifty per cent., and in the year 1877-78 was as high as Rs. 97,000 or Rs. 98,000; but (omitting deficits for past years) it was still so very far short of the annual charge as above estimated, that even the increase of the rate by fifty per cent. which was now proposed would not for some time to come cover that charge. Further, assuming against all probability that the income would go on increasing at the same rate as hitherto, it should be remembered that, if the Krishna Shoal Light-house was to be reconstructed, a considerable addition would be made to the annual charge, even though we adopted the suggestion of the Chamber as to distributing the cost over a series of years.

It must be admitted that the author of the Act of 1867—the late Sir William Grey—in his anxiety to keep the dues as low as possible, pitched the rate below what it ought to have been. The Government of India, however

bountifully disposed, must not continue to be, as Cicero said somewhere *benignior quam res patitur*,—more generous than its means allowed.

MR STOKES observed, in conclusion, that section 6 of the Bill empowered the Government to reduce the rate whenever the lights had begun to pay their way.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the Bill as amended be passed.

The Motion was put and agreed to.

OUDH LAND-REVENUE ACT AMENDMENT BILL.

The Hon'ble MR. COLVIN moved that the Report of the Select Committee on the Bill to amend the Oudh Land-Revenue Act, 1876, be taken into consideration. He said that the Bill had been altered in shape a good deal since it was first introduced into the Council. It had originally been a Bill to amend the Oudh Land-Revenue Act, but had subsequently been turned into a Bill for the recovery of certain advances made to landholders. The practice of giving *takkávi*—that was to say, advances for agricultural purposes to landholders—existed before our time in India, and had been continued by the British Government. These advances used to be given to landholders only, and were made recoverable in the same way as an arrear of land-revenue by a Regulation of 1803. At that time the objects for which those advances could be made were undefined; but they were never given, he believed, except for agricultural purposes. In 1871 the Land Improvement Act was passed. By that Act agricultural advances made for certain particular objects were dealt with, and the privilege of receiving them was extended from landholders to tenants. Nothing was said about advances for any other agricultural objects. But, in 1873, when the Land-Revenue Act for the North-Western Provinces was passed, the Regulation of 1803 which had been mentioned was repealed. Since that time there had been no law regarding any advances but those made under the Land Improvement Act. If the Local Government chose to make such advances, there was nothing that he knew of to prevent it; but it would not be able to recover them except by going into the Civil Court in every case where payment was delayed or withheld. This might be, and often was, very inconvenient. There were occasions on which it was most necessary to make such advances—for the purchase of seed and cattle, for instance, after a famine. As the law stood at present, however, advances so made could not be recovered in any way except by a civil suit. This being so, there was danger that either the money would not be advanced at all from the doubts that would exist as to its recovery, or, if it were lent notwithstanding those doubts, that much of it might be lost. To remedy this, when the North-Western Provinces Land-Revenue Act was amended, a section had originally been inserted in the Bill declaring that all advances for agricultural purposes should be recoverable as arrears of land-revenue. In order to assimilate the practice in Oudh to that proposed for the North-Western Provinces, the present measure had been introduced in its first shape of a Bill to amend the Oudh Land-Revenue Act. But the Local Government expressed a wish that the Bill should take the form of a general measure for the recovery of *takkávi*. Upon this, the opportunity was taken to ask other Local Governments whether it was not desirable that such a Bill, if passed, should be made applicable to them also. The result was that all the Provinces usually comprised in the term "Northern India," *i.e.*, the Panjáb, the Central Provinces, Assam and Ajmer, as well as the North-Western Provinces and Oudh, had agreed to accept the measure; and it had been extended to them accordingly. In its present shape, therefore, the Bill provided for advances made to owners and occupiers of land for agricultural objects other than those specified in the Land Improvement Act, and declared that such advances should be recoverable from the persons receiving them or from their sureties in the same way as arrears of land-revenue.

In addition to this, the Bill imposed a condition upon the granting of such advances. In order to bring them within the operation of the law which it was proposed to enact, the Bill provided that the advances must have been made in accordance with rules to be framed by the Local Government and sanctioned by the Governor General in Council. It had been objected—and the

Committee thought with reason—that it was not expedient that the power of making agricultural advances which could be recovered by such a sharp and summary process as that for the realization of arrears of revenue should be left vague and unrestricted. In the rules required by the Bill, the objects for which such loans might be made could, from time to time, be defined, and their conditions clearly specified, so that all persons interested would have the means of knowing when and how they could obtain an advance, and would also be informed of the liabilities which they incurred by accepting it.

The Motion was put and agreed to.

The Hon'ble MR. COLVIN also moved that the Bill as amended be passed.

The Motion was put and agreed to.

TRADE-MARKS BILL.

The Hon'ble MR. STOKES introduced the Bill to provide for the registration of trade-marks, and moved that it be referred to a Select Committee consisting of the Hon'ble Sir A. J. Arbuthnot, the Hon'ble Messrs. Cockerell and Hope and the Mover. He said that when he had obtained leave to introduce this Bill, he had explained the circumstances under which it had been prepared, and stated that it was nothing more than a reproduction, with the changes required to fit them to the different circumstances of this country, of the provisions of the two Statutes which regulated the registration of trade-marks in England. He had now only to say that the Bill provided for the appointment of a Registrar and the registration of trade-marks, and enacted that, after a certain fixed date, no suit should be brought for the infringement of a trade-mark, unless such trade-mark was registered in accordance with the provisions of the Bill. It further defined the essential particulars of which a trade-mark must hereafter consist; those particulars were as follows:—

"(*a*) a name of an individual or firm printed, impressed or woven in some particular and distinctive manner, or

(*b*) a written signature or copy of a written signature of an individual or firm, or

(*c*) a distinctive device, mark, heading, label or ticket:

provided that there may be added to any one or more of the said particulars any letters, words or numerals, or combination of letters, words or numerals:

it includes also any special and distinctive word or words, or combination of numerals or letters, used as a trade-mark before the passing of this Act."

The other provisions of the Bill were subsidiary to these, and the only one of them calling for notice here was that by which the High Court at Fort William was appointed the Court for the purposes of the Act. As it was understood that the registry-office would be situate at Calcutta (where alone proprietorship in copyright and specifications of inventions were registered), that Court was obviously the most convenient one to appoint.

The Bill would of course be improved by the criticisms which he hoped it would receive from the Local Governments and the mercantile community. But, even if passed in its present form, he thought it would be a useful piece of legislation. It would, in conjunction with the 18th chapter of the Penal Code, help to give effect to the sound general principle which Lord Langdale, in *Perry* v. *Truefitt*, had expressed thus: "A man is not to sell his own goods under the pretence that they are the goods of another man; he cannot be permitted to practise such a deception, nor to use the means which contribute to that end. He cannot, therefore, be allowed to use names, marks, letters or other *indicia* by which he may induce purchasers to believe that the goods which he is selling are the manufacture of another person." Moreover, the protection of trade-marks was, like the quality of mercy, "twice blessed": it was, in other words, doubly beneficial: it benefited the public, because it enabled them to buy with a reasonable certainty that they were getting what they asked for, and it benefited the manufacturer, because it secured to him the custom which he deserved, and which was intended for him.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the Bill be published in the local official Gazettes, in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

OUDH CIVIL COURTS BILL.

The Hon'ble MR. COCKERELL introduced the Bill to amend the law relating to Civil Courts in Oudh, and moved that it be referred to a Select Committee consisting of the Hon'ble Sir A. J. Arbuthnot, the Hon'ble Messrs. Stokes, Hope and Colvin and the Mover, with instructions to report in four weeks. He said that the Bill, in effect, reproduced for application to the Oudh Province most of the provisions of Act VI of 1871, the Bengal Civil Courts Act.

As a separate subordinate judiciary, which from the District Court downwards was constructed after the model of that at present existing in Bengal and the North-Western Provinces, was to be established in Oudh, it seemed clearly right that the law relating to Civil Courts in the latter Province should be assimilated as much as possible to the law on this subject in force in the former Provinces.

The Bill, however, provided for one important distinction from the Bengal Act in regard to the original jurisdiction of the Courts of Subordinate Judges. Such Courts in Bengal and the North-Western Provinces exercised an unlimited jurisdiction in respect of the amount or value of the property in dispute in any case; whereas in Oudh it was proposed to limit the jurisdiction of Sub-Judges to cases in which the amount or value of the property forming the subject of litigation did not exceed Rs. 10,000.

Many cogent reasons could be assigned for the proposed restriction, but it would be sufficient here to mention two of these:—

1*st*.—It was desirable that suits of great importance, as involving an unusually heavy pecuniary stake, should be tried by the strongest Courts of original jurisdiction available; but where concurrent jurisdiction was given to two classes of Courts in respect of such suits, then, under the operation of the rules of the Civil Procedure Code, the result was that these suits were necessarily instituted, and generally tried by the lower class of Courts; for, although the Code conferred upon a District Court the power of withdrawing suits from any Subordinate Court and trying them itself, yet in practice it was found that this power was exercised very sparingly, in special circumstances, such as on the application of a party, and without any particular reference to the amount or value involved in the suit to be withdrawn.

2*nd*.—It was doubtful whether the public would have such confidence in these new Sub-Judges' Courts as to be willing to intrust cases involving an unusually heavy pecuniary stake to the adjudication of such Judges, some of whom at least (for the new posts would to some extent be filled by the late Assistant and Extra Assistant Commissioners) had hitherto exercised jurisdiction only in respect of suits in which the amount or value of the property in dispute did not exceed Rs. 5,000.

Indeed, strong representations had been made, from non-official quarters, too, to the effect that the public in Oudh would not have such confidence, and that it was consequently expedient to place some limitation as regards the pecuniary amount upon the jurisdiction to be exercised by these Judges.

There was no reason, moreover, to apprehend that the new "District Courts" in Oudh would have insufficient time for the trial and disposal of suits involving an amount or value in excess of Rs. 10,000; for not many such suits were instituted in the Oudh Courts: during the three years from 1875 to 1877 inclusive, the annual average number of such institutions did not exceed fifty-six, which, distributed amongst the four District Courts, gave an average of fourteen cases only to be disposed of by each Judge. It must be remembered also that these new District Judges would not, for some time at least, have the criminal work, which devolved upon the District Courts of the older Provinces.

Whilst the Courts of original jurisdiction in Oudh were, under the new scheme, to be entirely reconstructed, the highest Appellate Court (Judicial Commissioner's) would remain as heretofore; hence it was proposed to retain the special provisions of the law now in force in that Province in regard to second appeals.

In one respect this law was peculiar to Oudh; for in no other Province was an absolute finality accorded to the substantially concurrent decisions of the Appellate Court and the Court of first instance. The other special provision, allowing a second appeal on the facts of a case, when the decision of the first Appellate Court reversed or materially modified the order of the Court of first instance, was also in force in the Panjáb. Both these enactments were reported to have worked well in Oudh, and the twenty-first section of the Bill had consequently been drawn so as to provide for their retention.

Some provisions of the Bengal Courts Act had been omitted, as, for instance, the power of appointing a Munsif, temporarily, on the sudden occurrence of a vacancy in that office. The Local Government was averse to giving this power to the new District Judges in Oudh, and proposed to give it to the Judicial Commissioners, but it was thought that such an arrangement would fail to secure the object of this provision for temporary appointments, *i.e.*, the avoidance of delay in the filling up of a vacancy; for it would take nearly as long a time to obtain a fresh appointment by the Judicial Commissioner, who, unlike the District Judge, did not ordinarily reside in the district where the vacancy would occur, as an appointment to be made by the Local Government. For these reasons, it seemed best to abandon this provision. Probably, in any case, it would be unnecessary in these days of more rapid communications.

Through inadvertence, the converse provision of the Bengal Act regarding the suspension of Munsifs by District Judges, which ought equally to have been omitted, had been inserted in the Bill; it would be for the Select Committee to which the Bill might be referred to determine whether the considerations which led the Local Government to disapprove of giving the power of appointment of Munsifs to the District Judges did not apply with greater force to this provision enabling them to suspend such officers.

It only remained for him (MR. Cockerell) to draw attention to the two last sections of the Bill, which had been framed to provide for the rather complicated questions which would arise out of the abolition, from the date of the new law coming into force, of one set of Courts, and their immediate replacement by another set with totally different designations and limits of jurisdiction. It was thought that these provisions would be found to effect all that was needed.

The Motion was put and agreed to.

The Hon'ble MR. COCKERELL also moved that the Bill be published in the *Government Gazette, North-Western Provinces and Oudh*, in English and in such other languages as the Local Government thinks fit.

The Motion was put and agreed to.

MILITARY CANTONMENTS ACT AMENDMENT BILL.

The Hon'ble MR. STOKES introduced the Bill to provide for the revision of proceedings in trials held under the Military Cantonments Act, 1864, section 20, and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Cockerell and Colvin and himself. He said that the Bill was one of extreme simplicity and brevity. The effect of it was that in trials for breaches of Cantonment Rules there would be no appeal, but the Cantonment Magistrate trying the case would, for the purposes of the twenty-second chap[ter] of the Code of Criminal Procedure, be subordinate to the High Court, the Court of Session and the District Magistrate.

The Motion was put and agreed to.

CIVIL PROCEDURE CODE AMENDMENT BILL.

The Hon'ble MR STOKES also moved that the Hon'ble Messrs. Hope and Colvin be added to the Select Committee on the Bill to amend the Code of Civil Procedure

The Motion was put and agreed to.

The Council adjourned to Thursday, the 5th June, 1879.

SIMLA;
The 21st May, 1879.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 27th MAY 1879.

GENERAL REMARKS.—In Madras general prospects are favourable; good rain has fallen in the districts reported on, and the fall in Malabar has been so far excessive, as to interfere slightly with sowings. The south-west monsoon is reported to have set in in Mysore and there has been heavy rain throughout the Province; ploughing is going on and prices are generally stationary. In the Bombay Presidency rain has been general in the Deccan and Southern Mahratta Country districts, and there has also been some in other places; agricultural operations are progressing everywhere; cholera prevails in Sind and Guzerat where the heat is excessive. In the Central Provinces rain has fallen in several districts; ploughing continues and prices are steady. In Berar ploughing operations have been nearly completed. Slight rain has fallen in places in Central India, and it is said that there are signs of the approach of the monsoon. In Rajputana matters remain on the whole promising. Rain has fallen in nearly every district in Bengal; in some places it has been very slight, but in Jalpáiguri and Cooch Behar, especially in the former locality, it was excessive; prospects in the northern districts are generally favourable, and in most other districts the rain has benefitted the crops which suffered from drought; more rain however is much wanted for rice cultivation which has not yet commenced in many places; prices are gradually rising in almost all districts. In Assam the state of things is satisfactory. Public health in British Burma is good; slight small-pox and cholera continue and cattle disease exists in six districts. In the North-Western Provinces and Oudh slight rain fell in Kumaun, Sitapur and Fyzabad; cholera is still prevalent in the first-named place, but is disappearing elsewhere. Seasonable weather continues in the Punjab and prospects are fair.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 24th)	3·98 (average of 9 stations); no reports from Nandigama and Gudivada.	Rice 10·82, *cholum* 13·56, *raggi* 17·63, *cumboo* 12·99; rainfall is good for cultivation.
Kurnool („ „)	2·56 (average of 9 stations).	Rice 11·34, *cholum* 16·18, *raggi* 21·84, *cumboo* 17·09; fever prevalent; agricultural operations are going on steadily; fodder and water ample.
Tanjore („ „)	1·21 (average of 13 stations).	Rice 10·63, *cholum* 15·75, *raggi* 17·80, *cumboo* 14·27; freshes down the Cauvery and one of its main branches, 24 to 36 inches deep; the few standing dry and garden-grown crops improved by the rains during the week; harvest of chillies and gingelly, outturn ⅔.
Madura („ „)	·82 (average of 10 stations).	Rice 10·0, *cholum* 14·85, *raggi* 16·37, *cumboo* 16·34.
Malabar („ „)	10·59 (average of 13 stations); *nil* in Vyteri.	Rice 9·99, *raggi* 17·50; prices slightly risen in Calicut, Walluvanad and Palghat, stationary elsewhere: sowing of first crop in progress; excessive rain has slightly interfered with sowing operations; pasture improving. *General Remarks.*—General prospects continue favourable.
Bombay (May 28th)—		
Sind—		
Kurrachee ...	...	River at Kotri on 25th 8½ feet against 15 feet on same date last year; 263 cases of cholera in Kotri, 157 fatal; nine cases in Kohistan, six fatal; small-pox in Kurrachee and Bubak; heat excessive.
Shikarpur ...	...	River still very low; cholera abating; small-pox in 14, cattle disease in 12, talukas; flight of locusts through Nasirabad on 18th.
Hyderabad ...	...	Small-pox continues in three, cholera in seven, talukas, 245 cases, 116 fatal; weather very hot.
Upper Sind Frontier...	...	Weather hot; *kharíf* preparations progressing; *buttái* of *rabi* nearly completed; 70 cases of cholera, 5 fatal; 2 deaths from heat apoplexy at Dighri; 1 case of small-pox in Thul.
Guzerat—		
Ahmedabad ...	Slight rain	Strong winds every night; heat severe; manuring operations progressing; slight cholera in Dholera, 28 cases fatal in Daskrohi villages.
Panch Mahals ...	·8 at Godhra.	
Kaira ...	Slight rain in 3 talukas	Heat excessive; three cases of cholera in Mehmadabad taluka, one fatal.
Broach ...	·46	Weather overcast; two cases of cholera in Ankleswar, one fatal; monsoon crop preparations continue; *rabi* crops gathered.
Surat ...	·17	Weather hot and cloudy; cholera in Bulsar taluka.
Khandesh and Násik—		
Khandesh ...	Rain in 11 talukas; maximum 1·16, minimum ·06.	Rain preceded by storms; flood in Girna; agricultural operations commenced.
Násik ...	Rain general throughout district.	Ploughing commenced.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Konkan—		
Tanna ...	2·80	Cholera continues in Bassein taluka.
Colába (May 26th)	4·32 at Alibag	Weather warm; public health good; slight fever in one taluka, cattle disease to a slight extent in two talukas.
Ratnágiri („ 20th)	·33	Rice sowing commenced; 19 deaths from fever in Málwan taluka.
Deccan—		
Poona ...	Maximum 2·03 at Junnar, minimum ·04 at Indápur.	
Ahmednagar ...	1·22	Public health good.
Sholapur ...	Slight rain in all talukas.	Prospects improved; flight of locusts through two talukas; general condition of people middling.
Satara ...	Maximum 1·70 at Wai, minimum ·10 at Koregaon.	More rain wanted; agricultural operations progressing.
Southern Mahratta Country—		
Kaládgi ...	Maximum ·3 at Muddebihal, minimum ·09 at Indi.	Land being prepared for sowing; fever continues.
Dharwar ...	Rain general, average fall 3·0.	Sowing commenced; fever in seven talukas.
Kattywar and Gaekwar's Territory—		
Rájkot ...	·92 at Songarh	Weather very hot and cloudy; cholera in certain places; fever re-appearing.
Wadhwán ...	...	Two cholera cases in Wadhwán taluka, 13 in Limri taluka, 12 fatal.
Baroda ...	...	Weather very cloudy; heat intense; indications of early monsoon.
		General Remarks.—Heat great in Sind and Guzerat, where also cholera prevails; rain general in Deccan and Southern Mahratta Country Districts; slight rain in Guzerat Districts; ploughing commenced everywhere; weather in Bombay close and oppressive, with heavy thunder showers.
Bengal—(May 28th)—		
Chittagong ...	·92	
Noakholly ...	·05	Small-pox prevalent.
Chittagong Hill Tracts...	·77	
Hill Tipperah ...	1·20	Cholera disappearing.
Backergunge ...	·05	Cholera abating in Perozepore, in other sub-divisions public health satisfactory.
Furreedpore ...	Rainfall not given.	
Dacca ...	·98	
Tipperah ...	·77	
Mymensingh ...	·22	
24-Pergunnahs ...	1·34	Public health generally good.
Jessore ...	Occasional showers in interior.	
Nuddea ...	·87	Sickness less.
Moorshedabad ...	·71	Public health generally good.
Pubna ...	·67	Public health slightly improved.
Rajshahye ...	·31	Cholera in Central Jail somewhat abated.
Bogra ...	·25	
Maldah ...	*Nil*	Cholera and small-pox still reported.
Dinagepore ...	·18	
Rungpore ...	1·94	Small-pox still prevalent.
Cooch Behar ...	7·19	Cholera much abated.
Jalpáiguri ...	19·72	
Darjeeling ...	5·74	
Midnapore ...	·78	Small-pox decreasing.
Howrah ...	·18	
Hooghly ...	·09	Isolated cases of cholera and small-pox in many places.
Burdwan ...	*Nil*	Clouds hanging on; public health good.
Bankoora ...	1·15	
Beerbhoom ...	·26	
Sonthal Pergunnahs ...	·49	
Bhágalpur ...	Not measurable.	
Monghyr ...	·10	
Purneah ...	·67	
Durbhunga ...	1·94	Cholera at head-quarters and in some villages.
Mozufferpore ...	·44	
Sarun ...	*Nil*	Cholera and small-pox continue.
Chumparun ...	1·87	
Patna ...	*Nil*	
Gya ...	Few drops	Some cholera and small-pox.
Shahabad ...	*Nil*	Cholera and small-pox prevalent.
Hazáribágh ...	·36	Small-pox still prevalent.
Lohardugga ...	·65	Small-pox still prevalent, many fatal cholera cases.
Manbhoom ...	·73	Much sickness about.
Singhbhoom ...	*Nil*	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Balasore ...	*Nil*	Cholera still prevalent, especially in south.
Cuttack ...	·20	
Pooree ...	·02	Public health good.
		General Remarks.—Prospects in northern districts generally favourable, but rainfall at Jalpáiguri and Cooch Behar rather excessive; in most other districts slight rain has done some good to crops which already suffered much from drought, but more rain is urgently needed for rice cultivation, which in many places is not yet commenced; no rain yet in Orissa, Singbhoom and in parts of Behar; prices gradually rising in almost all districts.
N. W. P. and Oudh (May 28th)—		
Benares (May 27th)	*Nil*	Sugar-cane being irrigated; seasonable weather; sickness increasing.
Allahabad („ „)	...	Wind easterly for some days; heavy clouds and sultry weather; health good.

The Gazette of India.

No. 23.} CALCUTTA, SATURDAY, JUNE 7, 1879.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXECUTION OF CONTRACTS BY THE COMMISSIONER, DEPUTY COMMISSIONER AND DEPUTY COLLECTORS OF SALT REVENUE IN THE MADRAS PRESIDENCY.

No. 623.

Extract from the Proceedings of the Government of India in the Home Department (Judicial),—under date Simla, the 28th May 1879.

Read again the following correspondence relative to the execution of deeds, contracts, &c., on behalf of the Secretary of State:—

From Government of Madras, No. 2583, dated the 13th December 1876.
Home Department Resolution No. 989, dated the 23rd June 1877.

Read also the under-mentioned papers on the same subject:—

From Government of Madras, No. 1961, dated the 25th September 1878.
To Government of Madras, No. 1503, dated the 5th November 1878.
From Government of Madras, No. 594, dated the 19th March 1879.

RESOLUTION.

In exercise of the power conferred by the thirty-third and thirty-fourth of Victoria, Cap. fifty-nine, section 2, the Governor General in Council is pleased to declare that the under-mentioned classes of the deeds, contracts and other instruments referred to in the twenty-second and twenty-third of Victoria, Cap. forty-one, section 2, may be executed as follows in the territories administered by the Governor of Madras in Council:—

By the Commissioner of Salt Revenue.—All contracts, deeds or other agreements relating to the execution of salt works, or the purchase, sale or transport of salt. the supply of labor, stores, building materials, &c., and any other like engagements relating to the salt revenue or the business of the Salt Department.

By the Deputy Commissioners of Salt Revenue.—All contracts, deeds or other agreements relating to the execution of salt works, or the purchase, sale or transport of salt, the supply of labor, stores, building materials, &c., and any other like engagements relating to the salt revenue or the business of the Salt Department within their respective jurisdictions and within the limit of value of Rs. 5,000; and in respect of contracts or agreements for the import of foreign salt on credit, for payment of the duty leviable thereon, or of contracts or agreements for the purchase of salt wholesale on deposit of securities within the limit of value of Rs. 50,000.

By Deputy Collectors of Salt Revenue.—Contracts or agreements for the import of foreign salts on credit for payment of the duty leviable thereon, and contracts or agreements for the purchase of salt wholesale on deposit of securities within the limit of value of Rs. 10,000.

Ordered, that this Resolution be communicated to the Government of Madras and to the Revenue, Agriculture and Commerce Department for information, and also that it be published in the Supplement to the *Gazette of India*.

(True Extract.)

Foot Note.—The differences in the figures shewn in these statements, of areas leased for irrigation up to end of January and February 1878 and those shewn in the statements for those months are due to the revised method adopted since March 1878 in the preparation of the returns.

The 7th April 1879.

H. C. LEVINGE, *C.E.*,
Joint Secretary to the Government of Bengal,
in the Public Works Department, Irrigation Branch.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 3rd JUNE 1879.

GENERAL REMARKS.—In Madras rain has fallen in all the districts reported on; it has been excessive in the Malabar district, where the existing cultivation has been slightly injured, and sowing operations impeded; prospects are improving. Slight showers have fallen in Mysore, and heavy rain is reported in Coorg; the *vaisakh* paddy crop is being harvested in places; agricultural prospects are favourable. In the Bombay Presidency there has been moderate rain throughout the Deccan and the Southern Mahratta Country; ploughing operations are going on in all districts; cholera continues in Sind, Guzerat and Kattywar. Rain has fallen in almost all the districts of the Central Provinces; it has been very heavy in Nágpur and Seoni; prices are rising; preparations for *kharif* sowings are going on. In Berar there has been good rain; ploughing continues. In Central India showers are reported from Indore, Sutna and Sirdarpore, and there has been slight rain in Bhopal and Maunpore. No rain fell in Rajputana. In Bengal the rain has been general; it was very heavy and rather excessive in Northern and Eastern Bengal, and especially at Jalpaiguri and Chittagong; the prospects of the standing crops have been generally improved, and rice cultivation is now going on. Very heavy rain has fallen in Assam, and injury to the *aman* paddy on low lands in Sylhet is feared. In British Burma, public health remains generally good; cattle disease continues and is bad in the Bassein district. On 30th May the monsoon was reported to have set in at Akyab and apparently also at Rangoon. In the North-Western Provinces and Oudh there has been slight rain in all the districts, except at Agra where the heat is said to be intense; cholera is still prevalent in Kumaun, and is again on the increase in Agra and Meerut; ploughing for *kharif* sowings has begun. No rain fell in the Punjab districts comprised in the return; prospects continue fair, and prices generally have a downward tendency. Cholera is reported from six districts. The general feature of the week is the prevalence of rain over the Central Provinces and Southern and North-Eastern India, especially in Bengal and Assam, the zone of rainfall extending also to the North-Western Provinces, but not to Rajputana or as yet to the Punjab.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (May 31st)	1·27 (average of 8 stations).	Rice 10·91, *cholum* 13·52, *raggi* 17·73, *cumboo* 13·22; 30 inches over anicut on 27th May, 9 inches on 31st; lands being ploughed for sowing; grass sprouting.
Kurnool („ „)	·75 (average of 5 stations).	Rice 10·01, *cholum* 15·56, *raggi* 20·93, *cumboo* 16·95; fever prevalent; agricultural operations going on steadily; fodder and water ample.
Tanjore („ „)	·13 (average of 2 stations); *nil* in others.	Rice 10·37, *cholum* 15·75, *raggi* 17·65, *cumboo* 15·27; Cauvery and branches flow with 18 to 72 inches depth of water; the few standing dry and garden crops are generally in good condition; harvest of gingelly, outturn ½ to ¾.
Madura („ „)	·8 (average of 3 stations); *nil* in others.	Rice 10·01, *cholum* 14·85, *raggi* 16·38, *cumboo* 16·01.
Malabar („ „)	8·89 (average of 14 stations).	Rice 9·78, *raggi* 17·53; prices stationary in Wynaad, Ernad, Walluvanad and Palghat, slightly risen elsewhere; sowing of first crop in progress everywhere; excessive rain has slightly injured existing cultivation, and interferes with sowing operations; pasture improving.
Bombay (June 4th)—		*General Remarks.*—General prospects improving.
Sind—		
Kurrachee ...	...	River at Kotri on 1st 7¾ feet; cholera in Kotri 309 cases, 187 fatal, in Sehwan, Bubak, Kurrachee and Kotri taluka 23 cases, 14 fatal; small-pox in Kurrachee and Bubak; monsoon winds set in.
Shikárpur ...	...	River still very low; small-pox in 14 talukas; cattle disease in 11 talukas; cholera has nearly disappeared.
Hyderabad ...	...	*Kharif* preparations progressing; in Guni rice seedling destroyed by hot northerly winds; cholera in 10 talukas, 650 cases, 406 fatal; disease assuming milder type since prevalence of strong southerly winds.
Upper Sind Frontier...	...	Weather very hot and sultry; *batai* of *rabi* crops not finished; *kharif* preparations confined chiefly to desert canal; water admitted into Begári desert canal on 1st; 10 cholera cases, 7 fatal.
Guzerat—		
Ahmedabad ...	...	Heat less severe; manuring operations continue; slight cholera in district, 7 fatal cases.
Pánch Maháls ...	...	Weather cloudy; monsoon seems near.
Kaira ...	...	Weather cloudy with strong winds; manuring operations progressing; 5 cholera cases in Malar, 2 fatal.
Surat ...	·20	Agricultural operations progressing; cholera in Bulsar taluka, 57 cases, 17 fatal.
Broach ...	...	Weather fine; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Khandesh and Násik—		
Khandesh ...	Throughout district maximum 5·81, minimum ·08.	Locusts in Dhulia taluka.
Násik ...	Rain throughout district except in the north.	Ploughing progressing.
Konkan—		
Tanna ...	1·0	Total rainfall 3·80; cholera in Bassein taluka.
Colába (June 2nd)	2·16 at Alibág.	Total rainfall 6·18; weather warm; public health good; fever in Pen; cattle disease in Mahád taluka.
Ratnágiri (May 27th)	1·91	Total rainfall 2·27; sowing operations continue; 13 deaths from fever in Malwan taluka.
Deccan—		
Poona ...	Maximum 4·76 at Junnar, minimum 1·77 at Mawal.	
Ahmednagar ...	·44, fall general throughout district; maximum 5·44 at Newasa, minimum 1·22 at Akola.	Public health good.
Sholapur ...	Rainfall general.	In some places the rain was sufficient for sowing; prospects improved; condition of people middling.
Satara ...	Maximum 2·0 at Khatase, minimum ·86 at Satara.	*Kharif* sowing partially commenced.
Southern Mahratta Country—		
Kaládgi ...	Maxmium 1·28 at Indi, minimum ·10 at Bágewári.	More rain wanted; weather cloudy; land being prepared for sowing; fever continues.
Belgaum ...	·82, fall general throughout district; maximum 1·57 at Gokak, minimum ·15 at Parasgad.	Fever less.
Dharwar ...	Rainfall light, average ·59.	Sowing progressing; slight fever in 7 talukas.
Kanara ...	8·18	Sowing continues.
Kattywar and Gaekwar's Territory—		
Rájkot ...	·50 at Manikwada.	Weather hot; cholera in Kotrasangani and in villages under Wala Bhaunagar, Junágarh, Lakhápádár and Jetpur.
Wadhwán ...	...	Weather very hot; health good; cholera in Limri and Wadhwán talukas and Bhalala and Talsana, 28 cases, 17 fatal.
Baroda ...	...	Public health good; weather cloudy; *kharif* preparations progressing; prices of grain stationary.
		General Remarks.—Cholera continues in Sind, Guzerat and Kattywar; moderate rain throughout the Deccan and Southern Mahratta Country; ploughing going on in all districts; weather in Bombay hot and clear.
Bengal—(June 4th)—		
Chittagong ...	15·14	
Noakholly ...	4·01	
Chittagong Hill Tracts...	1·5	
Hill Tipperah ...	1·72	Public health not good, cholera not yet over.
Backergunge ...	·96	Cholera still in Perozepore.
Furreedpore ...	1·85	
Dacca ...	7·08	
Tipperah ...	4·0	
Mymensingh ...	·16	Some sporadic cases of cholera.
24-Pergunnahs ...	5·98	Public health generally good, cholera in Baripore and Baraset.
Jessore ...	1·28	
Nuddea ...	·57	Small-pox and cholera still in Meherpore.
Moorshedabad ...	·84	
Pubna ...	·14	Public health improved.
Rajshahye ...	·61	Cholera still reported.
Bogra ...	1·23	
Maldah ...	·35	Cholera and small-pox less.
Dinagepore ...	Return not received.	
Rungpore ...	8·57	Small-pox abating.
Cooch Behar ...	12·21	Cholera nearly disappeared.
Jalpáiguri ...	3·28	General health improved, cholera and small-pox decreasing.
Darjeeling ...	8·84	
Midnapore ...	1·79	Small-pox decreasing.
Howrah ...	1·47	
Hooghly ...	3·80	Cholera abating.
Burdwan ...	·29	
Bankoora ...	·63	
Beerbhoom ...	1·97	
Sonthal Pergunnahs ...	·15	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Bhágalpur ...	·41	
Monghyr ...	·68	
Purneah ...	1·49	
Durbhunga ...	·16	Cholera in town and a few villages.
Mozufferpore ...	*Nil*	
Sarun ...	*Nil*	Cholera and small-pox still prevalent.
Chumparun ...	·42	
Patna ...	·17	
Gya ...	·07	
Shahabad ...	Slight rain.	Cholera still prevalent.
Hazáribágh ...	·45	
Lohardugga ...	·70	Cholera in many places, small-pox still prevalent.
Manbhoom ...	·18	Cholera in many places.
Singhbhoom ...	*Nil*	
Balasore ...	1·53	Cholera very rife.
Cuttack ...	8·32	
Pooree ...	1·30	
		General Remarks.—Week's rainfall general and beneficial, only a small area in Central Behar and Singhbhoom not yet reached; rain very heavy and rather excessive in parts of Northern and Eastern Bengal, especially Julpáiguri, Cooch Behar and Chittagong; rice cultivation now going on in most places; prospects of standing crops generally improved; public health also much improved.
N. W. P. and Oudh (June 4th)—		
Benares (June 3rd)	·5 at Chandauli and ·9 at Gangapur on 2nd; a slight shower at Benares.	East wind and cloudy weather; sickness decreasing.
Allahabad („ „)	Slight and partial showers.	After a week of east wind and every sign of imminent rain only slight and partial showers fell, the clouds cleared away and the wind is again strong from west.
Jhánsi („ 4th)	Heavy shower near Mau last Tuesday.	Hot westerly winds prevail; prices fluctuating.
Agra (May 31st)	...	Intense heat with variable winds; cholera again on the increase in districts.
Bareilly (June 4th)	A heavy shower at Baheri on 26th and at Nawábganj on 27th May.	Weather very hot; wind from the east; condition of people fair.
Meerut („ „)	Shower on Monday night.	Hot; thick atmosphere; rain attended with thunder; variable winds; fever prevalent; 144 cases of cholera, 58 deaths; cheapest price of wheat 17, gram 18, barley 21½, jowar 20, and *bajra* 18 seers.
Kumaun („ 1st)	Rain general.	More rain expected; wind from north-east; cholera still prevalent.
Lucknow („ 4th)	·1 on 3rd.	Thunder storm; weather cloudy and steamy.
Sitapur ...	·1 on night of 2nd.	
Partabgarh („ 2nd)	Slight shower last night and this morning at Sadr.	Sky cloudy; wind easterly.
Fyzabad („ 4th)	·5	Ploughing general.
		General Remarks.—Slight rain all over the province; wind easterly, except in Allahabad and Jhánsi; cholera still prevalent in Kumaun, Agra and Meerut; *kharif* ploughing begun.
Punjab—(3rd June)—		
Delhi ...	*Nil*	Prospects fair; prices of food-grains stationary; fever prevailing; a few cases of cholera also.
Hissar ...	*Nil*	Weather very hot; *kharif* operations continue; canal crops sown and doing well; slight variations in prices of food-grains with downward tendency; cholera abating.
Umballa ...	*Nil*	Crops harvested; cholera prevailing.
Jullundur ...	*Nil*	Crops being garnered; slight fall in prices; health much improved.
Amritsar ...	*Nil*	Crops nearly threshed; health fair; prices stationary.
Ferozepore ...	*Nil*	Crops nearly harvested; cholera in district.
Lahore ...	*Nil*	Agricultural prospects good; cholera about.
Ráwalpindi ...	*Nil*	Cholera prevailing.
Mooltan ...	*Nil*	Crops being garnered; slight fluctuations in prices with downward tendency; health good.
Dera Ismail Khan ...	*Nil*	Crops gathered.
Pesháwar ...	*Nil*	Prices of food-grains falling.
		General Remarks.—Prices generally have a downward tendency.
Central Provinces (June 4th)—		
Nimár ...	...	Ploughing for *kharif* continues.
Hoshangabad ...	Smart showers of rain have fallen recently.	Small-pox continues.
Betúl ...	·40	Cloudy; windy; ploughing continues; health good; prices stationary.
Wardha ...	4·42	Ploughing continues; cholera disappeared.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *continued.*			
Nágpur	(June 4th)	11·58	Ploughing for *kharif* sowings continue; cholera abating.
Chánda	...	2·98	Sugarcane planted; ploughing and manuring continue; slight cholera; prices rising steadily.
Chhindwára	...	5·49	Ploughing for *kharif* progressing; small-pox slightly prevalent; prices rising.
Narsinghpur	...	Over 3·0 rain on Sunday	Ploughing for *kharif* continues; prices rising.
Bhandara	(June 3rd)	4·13	Preparation for *kharif* sowings being pushed on; cholera, small-pox and fever continue; prices high.
Seoni	...	11·80	Monsoon fairly set in; cholera continues; small-pox disappeared.
Bálaghát	(May 31st)	·31	Cloudy, hot; ploughing for *kharif* progressing; cholera continues; small-pox declining; prices steady.
Mandla	...	·85	*Kharif* ploughing continues; cholera still prevalent.
Saugor	...	...	Windy; *kharif* ploughing continues; small-pox prevalent; prices stationary.
Damoh	...	·23	Preparations for *kharif* sowings continue; health good; prices steady.
Jubbulpore	(June 4th)	3·48, rain general throughout the district.	Fields being bunded and preparation for *kharif* sowings progressing; small-pox continues; prices rising.
Raipur	...	4·1	Ploughing for *kharif* sowing progressing; cholera, small-pox and cattle disease continue; prices stationary.
Bilaspur	(May 31st)	·40	Cloudy and windy; ploughing for *kharif* progressing; cholera still bad; prices slightly risen.
			General Remarks.—Heavy fall of rain between afternoon of Saturday 31st and morning of Sunday, but was confined to districts of Nágpur and Seoni as centre, and the surrounding districts of Narsinghpur, Chhindwára, Wardha, Chánda and Bhandára; ploughing for *kharif* sowings continues; prices rising.
British Burma— (June 4th)			
Arakan Division	...	...	Public health continues good; 19 deaths from cholera in Koladan township, 23 in Cheduba; a few cases of small-pox in Kyoukphyoo.
Pegu Division—			
Rangoon District	...	...	Fourteen deaths from small-pox in Rangoon town; a few deaths from small-pox in Syriam, otherwise public health good; slight cattle disease in Thonkwa district for week ended the 24th May; 2 deaths from cholera at Phyapoon, 1 from small-pox at Yandoon; slight cholera and small-pox reported in Doonabyoo and Engapoo circles; 5 deaths from cattle disease in Doonabyoo township; 5 deaths from cholera in Phyapoon; 13 deaths from cattle disease in Panlanwa, 11 deaths in Yandoon sub-division; health otherwise good.
Bassein	...	...	Public health good; cattle disease prevalent, 995 deaths in Kyoonpyaw township from 26th April to 15th May, 243 deaths in Yaigyee from 22nd April to 28th May, 308 in Theegwin in May, 12 in Thaboung from 15th to 28th May, 11 in Bassein from 23rd to 30th May.
Henzada	...	...	Public health normal; slight cattle disease, 56 deaths in one circle.
Prome	...	...	Small-pox prevalent in Prome town, otherwise public health good.
Tharrawaddy	...	...	Public health good; cattle disease in Monio township.
Thayetmyo	...	...	General health normal.
Tennasserim Division—			
Amherst	...	...	Public health good; no cattle disease; ploughing commenced in some parts of the district.
Shwegyeen	...	...	Public health fair.
Toungoo	...	...	Public health good; 90 buffaloes died from disease.
Tavoy	(May 17th)	...	Public health good.
			General Remarks.—Health generally good; small-pox in several districts and some cholera; cattle disease continues.
Assam—			
Gauháti	(June 4th)	5·83, very heavy rain during last 3 days.	*Asu* and other crops coming up well.
Sylhet	(„ „)	9·93	Price of rice rising; the rivers have risen very high; the sowing of *aman* in low grounds having been so late, injury is feared.
Mysore and Coorg— (June 4th)—		1·38 in Bangalore, moderate showers in the districts; 10·02 in Coorg.	The *Vaisakh* paddy crop is being harvested in some places; agricultural prospects favourable; fever less prevalent.
Hyderabad Assigned Districts—(June 4th)			
Amráoti	...	4·0	Ploughing continues.

Presidency or Province and District.		Rainfall for week preceding.	State of agricultural prospects.
Central India— (June 4th)			
Indore	...	1·83	Health good.
Morar	...	*Nil*	
Sutna	...	1·06	Weather clear and hot; high west wind; cholera increasing at Rewah and Sutna.
Goona	...	*Nil*	Weather cloudy; strong winds.
Neemuch	...		
Rutlam	...		
Agar	...		
Sirdarpore	...	1·01	
Mánpur	...	0·05	
Bhopal	...	0·15	
Rajputana—			
Serohi	(June 1st)	...	Tanks dry, wells and health fair; mornings and nights cooler; fresh breezes; season agreeable.
Marwar	(May 31st)	...	Water-supply sufficient; health good; weather hot; prices stationary.
Bickaneer	(„ 27th)	*Nil*	Health good; no scarcity of water; sowing operations not commenced.
Meywar	(„ 30th)	.....	Tanks, wells and health good; hot winds prevailing.
Harowtee	(„ 31st)	.....	Health good; prices high; weather very hot; wind variable.
Jhallawar	(„ 29th)	.....	Weather cloudy; appearance of rain; health good.
Ajmere	(June 4th)	.....	Everything seasonable; high west winds; all expect early favourable monsoon; prices easy.
Jeypore	...	.....	Weather seasonable; health good.
Bhurtpur	(June 3rd)	.....	Health good; water scarce; rates steady; weather sultry.
Ulwur	...	.....	Wells failing; heat great; cholera still prevails; small-pox in one tahsil.

Telegraph.

ADMINISTRATION REPORT OF THE INDO-EUROPEAN TELEGRAPH DEPARTMENT FOR THE YEAR 1877-78.

Nos. 138-45 T, dated Simla, May 5th, 1879.

Read—

Letter from the Director-in-Chief, Indo-European Telegraph Department, No. 1279, dated 1st September 1878, submitting the above report and enclosures.

OBSERVATIONS.—The year 1877-78 appears to have been one of remarkable commercial depression, and consequent diminution of telegraphic traffic. The Russo-Turkish war, and especially the long-continued interruption caused by the Turkish raid on Sookhoum Kaleh, materially affected the prosperity of the lines worked by this Department.

2. The interruption at Sookhoum Kaleh was overcome by the erection of an alternative line between Ekaterinodar and Tiflis. The break occurred beyond the limits of the Indo-European Telegraph Department's lines; but that Department shared in the cost incurred in renewing communication.

3. *Capital.*—The capital account at the close of the year is stated to stand approximately at £1,153,751-15.

4. *Revenue.*—The earnings have fallen off by £25,000, and amount to £40,196-18-3; while the working expenses amounted to £80,379-14-3; showing a net loss of £40,182-16.

5. The working expenses of the year were swelled by the debit of £3,600 on account of three annual royalties due to the Government of Persia, which have been placed to the credit of a suspense account. The claims of the Telegraph Department against the Government of Persia will be referred to the Foreign Department for consideration.

6. *Line maintenance and repairs.*—The lines worked by the Department consisted at the close of the year of 1,716 nautical miles of cable, and 1,468

statute miles of land-line, carrying 2,936 miles of wire; the maintenance and repairs have been efficiently carried on.

7. *Interruptions.*—The interruptions causing stoppage in traffic amounted on the Persian Section to a total interval of 3 days 5 hours and 55 minutes, and on the Persian Gulf Section to 4 hours; in the previous year the total interruptions on the Persian Section lasted only for 20 hours. The large increase now shown is partly attributable to the severity of the winter. The interruptions on the Company's lines in connection with this system amounted to 129 days 19 hours and 30 minutes, but of this 126 days 9 hours and 35 minutes were due to the stoppage at Sookhoum Kaleh mentioned above.

8. *Traffic.*—This has naturally fallen off considerably under the adverse circumstances detailed; but owing to the increased employment of the Turkish route, the diminution in traffic was less than it otherwise would have been. The improvement shown in speed and accuracy of transmission of messages is noted with satisfaction by the Government of India.

9. *Inspections, Buildings and Stores.*—The condition of the Telegraph buildings along the Mekran coast and at Karachee, as described in paragraphs 55, 57, 59 and 60, will be brought to the notice of the Government of Bombay for consideration.

10. The Government of India notices with satisfaction the cordial relations subsisting between Major Smith and the Persian authorities, and is pleased to record its appreciation of the services of the officers brought to notice in the 81st paragraph of the report.

11. The exceptionally heavy loss (£40,000 + interest on capital) at which these Telegraph lines have been worked during the year under review is to be regretted, but they are maintained quite as much for political and administrative as for commercial purposes: and there are indications that future reports will show a far more satisfactory balance sheet.

12. The figures given in this report differ considerably from those entered in the annual accounts received from the Examiner of Telegraph Accounts. The discrepancies are due to the report including all outstanding assets and liabilities relating to the year under review, while the statements from the Examiner of Accounts deal only with actual cash receipts and disbursements. An explanation of the differences has been called for and furnished; but the delay in obtaining it has prevented the publication of the report in time to be of practical value; and for the future, to obviate such delays, the requisite explanation should be submitted with the report.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Director-in-Chief, Indo-European Telegraph Department, for information and guidance.

Also, that copies of the Report and Resolution be forwarded to the Financial, Marine, and Revenue, Agriculture and Commerce Departments for information.

To the Government of Bombay, in the Public Works Department, for information and with special reference to paragraph 9 of the Resolution.

To the Foreign Department, with reference to paragraphs 5 and 10 of the Resolution, and paragraphs 14, 15 and 50 to 52 of the Report.

To the Home Department for information.

To the Director General of Telegraphs for information.

To the Publisher of the *Gazette of India* for publication in the Supplement to the *Gazette*.

Ordered further, that the Report and Resolution be forwarded to Secretary of State for the information of Her Majesty's Government.

G. F. L. MARSHALL, *Captain, R.E.*,
Asst. Secretary to the Government of India.

No. 1279, dated 1st September 1878.

From—Major J. U. BATEMAN-CHAMPAIN, R.E., Director-in-Chief, Indo-European Government Telegraph Dept.,

To—The Secretary to the Government of India, Public Works Department.

I have the honor to lay before the Government of India the following statement of the administration of this Department for the year ending the 31st March 1878, a year of remarkable commercial depression and consequent diminution of telegraphic traffic generally.

2. The effect of the Russo-Turkish war, which may be said to have continued throughout the 12 months under report, was peculiarly felt by the Indo-European Company and by this Department; not only because of the actual interruption of the wires during the Turkish raid on Soukhoum Kaleh, but also on account of the natural disinclination of the public to direct their messages across Russia, at a time when the relations between that empire and our own appeared so strained and unsatisfactory. In the summer of 1877 such was the falling off of the traffic that the bankruptcy of the Indo-European Company seemed imminent, and it was only averted by extraordinary measures which I will briefly mention here, but which will be touched on more circumstantially further on. One was the consent of the Most Hon'ble the Secretary of State to aid in the construction of an alternative line near Soukhoum Kaleh by handing over to the Company half of our international cable receipts for the first two months after the re-establishment of communication. The other was the coalition of the Indo-European Company and the Eastern Company on the system now known 'as the joint purse'. The causes of the almost overwhelming embarrassments of the Company's finances were quite as seriously felt by this Department, and necessitated our taking a very important step which places us on a new footing offering greatly improved financial prospects. I refer to our having accepted the invitation to join the Companies' joint purse from the 1st April 1878. The negotiations leading up to this arrangement were carried on under the authority of the Most Hon'ble the Secretary of State towards the end of the official year 1877-78, and have no doubt been fully reported to the Government of India. I hope I may say with truth that, under the very trying and difficult circumstances of the past year, I have done all that lay in my power to combat the effects of exceptional disasters entirely beyond our control, and to diminish the consequences of similar events in the future.

3. On the 18th September 1877, I informed you that the Eastern and Indo-European Companies had arranged between them a joint purse on a plan which, by leaving out my Department, appeared to threaten our interests in an alarming degree, and soon afterwards I obtained leave from the India Office to proceed to Constantinople to concert, if possible, some arrangement for protecting ourselves by bringing into more general use the Turkish wires to Fâo. The Managers of the Eastern Company had also turned their attention to this line, and I was fearful that should the concession to work it fall into their hands, our Gulf cables would be completely at the mercy of the coalition. I was, in fact, followed to Constantinople by some of these gentlemen, but by the time they arrived I had secured a promise that the concession should on no account be given to a private Company, and I had drawn up an agreement having for its object the better working of the through line from London to Vienna, Constantinople and Fao. My offer to take over the through Turkish line on behalf of the Indian Government was politely declined by the Turkish Director General of Telegraphs, who asserted his own ability to re-organize and improve the working. From time to time I submitted many circumstantial reports to the India Office explaining my action at Constantinople and at Vienna, whither I proceeded before returning to London. The subsequent advance of the Russians towards Constantinople put an end to our efforts to ameliorate the defective correspondence between London and Constantinople; and indeed for some time the latter city was completely cut off from Europe, all telegrams passing of necessity *viâ* Fâo to Bombay and westward again by the Red Sea. The state of South Eastern Europe is still extremely unsettled, but the Turkish line to India will doubtless claim our attention again before long.

4. Some time after my return, I received the invitation (to which I referred above) from the two Companies—the Eastern and the Indo-European—that this Department should take part in the joint purse. I laid the case before the Secretary of State, and I also submitted a preliminary report explanatory of the matter to the Government of India. The latter is numbered 1034, and dated the 25th January 1878. Eventually I received authority from the India Office to accept the invitation, and after many meetings with Sir James Anderson and Mr. Andrews, I signed on behalf of the Government, Indo-European Department, an agreement which ensures to us for the future a share of the total traffic, at least equal to anything we have enjoyed in past years and with a reasonable prospect of a steady increase. A spare copy of the agreement is attached to this report, together with an explanatory confidential memorandum prepared with great care and ability by Mr. Brasher who rendered me most indefatigable and valuable assistance throughout these rather intricate transactions. Writing as I now am some months after the establishment of the new system, I am able to report that our receipts have again reached their normal figure, and should peace be secured and mercantile confidence restored, the Departmental returns of future years will surely present a bright contrast to those of 1877-78.

5. The observations which I have to submit will be arranged as in last year's report in the following order :—

1.—Capital and Revenue.
2.—Lines maintenance and repairs.
3.—Interruptions.
4.—Traffic.
5.—Inspections, buildings and stores.
6.—Establishments.

Capital and Revenue.

6. The preliminary departmental accounts prepared by Mr. Brasher are attached as Appendices A and B.

Capital.

7. At the commencement of 1877-78, the finally adjusted Capital Account stood at £1,158,188-1-10; the figures given in last year's report were, as has been explained, necessarily only approximate. Subsequent corrections alter the amount there entered (as £1,154,493-7-6) to that now given. Similarly the £1,153,751-15-0 below will no doubt be susceptible of modification.

8. The expenditure during the year was £751-11-4, and the receipts with sundry book adjustments, amounted to £ 5,187-18-2.

9. The Capital Account therefore at the close of the year, subject to final adjustment, stood at £1,153,751-15-0, or at rather less than at the commencement.

10. The small amount expended consisted of credits to the Public Works Department. The receipts were composed of an instalment from the Indo-European Company towards the liquidation of the Persian debt for telegraph material. Two recoveries from the Persian Government under Article I of the Anglo-Persian treaty of 1872, and various credits to the Department from suspense accounts.

Revenue.

11. The following is a summary of the preliminary Revenue Account :—

Dr.	£	s.	d.	Cr.	£	s.	d.
Traffic earnings	39,196	5	10	Ordinary expenditure ...	71,543	5	7
Miscellaneous receipts	1,000	12	5	Extraordinary ,, ...	2,334	10	11
Excess of total expenditure over receipts	40,182	16	0	Debits on account of previous years ...	6,501	17	9
	80,379	14	3		80,379	14	3

12. The earnings compared with those of the previous year show a falling off of about £25,000 chiefly due to the interruption of the Indo-European line for more than three months, owing to the destruction of the Company's Soukhoum Kaleh Section in the course of the Russo-Turkish war. Allusion has already been made to this interruption and to other causes which contributed to diminish our receipts. They will be again treated of under the head 'Traffic.'

13. The total amount brought to debit under the head of Expenditure in 1877-78 is £80,379-14-3, showing an increase of about £8,000 when compared with the expenditure of 1876-77.

14. The increase, however, will be found when analysed to be more apparent than real, the bulk of it being outlay or liabilities incurred in previous years, and brought to debit for the first time in 1877-78. Thus it includes £3,600 made up of three annual royalties of £1,200 payable to Persia under the 1868 treaty, in 1875, 1876 and 1877 for right of way for Gwadur-Jask line, but withheld by our minister at Teheran as a partial set off to our claims against the Persian Government for message money collected for us but not paid to us.

15. The royalties thus withheld and brought to the debit of the Persian Gulf line in a lump sum in 1877-78 have been placed to the credit of a suspense account, pending the sanction of Government to definitely appropriate them in part liquidation of our traffic claims.

16. The increase also includes £ 1,549 for advertising and agency charges incurred in 1875-76 and 1876-77, the account for which, though often applied for, was not submitted by the Indo-European Telegraph Company in time to be included in the reports for the years to which the sums relate.

17. Finally, the increase comprises the extraordinary item of £ 2,334 paid to the Indo-European Company under the authority of the Secretary of State as mentioned in paragraph 11 of this report. This sum represents half the earnings of the Kurrachee-Bushire cable during the two months immediately following the completion of the loop line near Soukhoum Kaleh. Our Persian and Gulf Sections were paralysed by the disaster to the main feeder of our system. The Company was in a well nigh desperate condition, and although most anxious to erect the required alternative link between Tiflis and Ekaterinodar had great difficulty in finding the means. Under the peculiar circumstances, the Secretary of State consented to the earnest request of the Company that a part of the estimated outlay of about £ 10,000 should be borne under certain conditions by this Department. The alternative link was consequently completed and open for traffic by the 23rd August 1877, while the original Soukhoum Kaleh Section could not be repaired until the 16th January 1878.

Lines Maintenance and Repairs.

Persia.

18. The line of three wires having been completed with iron standards for some time, and the full number of control stations having been established, no new works were undertaken during 1877-78.

Persian Gulf.

19. The transfer in November of the Telegraph Station from the Town of Bushire to a site 6 miles distant from the city walls, necessitated a corresponding removal of the heavy shore ends of cable to Reshire in the neighbourhood of the new Offices. In this removal about 40 miles of cable were expended and 55 miles picked up; the alteration had thus the effect of shortening the line by between 15 and 16 miles. The following table exhibits the reduction in the length of the different sections :—

Section.	Present length, 1877-78.	Length in 1876-77.
Gutta-percha cables—		
Kurrachee-Manora 3 cables	18	18
Manora-Gwadur	271	271
Gwadur-Jask	272	272
Jask-Henjam	143	143
Henjam-Bushire	361	369
Bushire-Fão	153	156
	1,218	1,229
India-rubber cable—		
Jask-Bushire	498	503
	1,716	1,732

20. The Mekran land lines were also somewhat reduced in length by a change in their direction near Charbar, and by a correction in the measurement of several of the sections. Actual survey shows that the distances hitherto recorded were somewhat inexact. The corrected length of the line from Kurrachee to Jask is, line 676, wire 1,352.

21. At the end of 1877-78 the lines worked by the Department were therefore as follows :—

	Cable.	Land-line.	Wire.
	Nautical miles.	Statute miles.	
Persian Gulf Telegraph—			
Submarine line	1,716	...	1,716
Land line	...	676	1,352
Persian Telegraphs	...	792	1,584

22. Appendices C, C1, C2 and D show the renewals of the shore ends of the different sections, the total cable expended during the year, and the state of the insulation of the submarine lines at the close of the year.

23. The state of the insulation at the close of the year was not materially different from that recorded in 1876-77 and may be considered as on the whole satisfactory. The faults which exist in the different sections do not interfere with the working of the line, and considering the age of the cable we cannot anticipate that it will ever again be quite free from leakage.

24. The iron-guards which give the mechanical strength to the cable have been found during the past year to have been much weakened in some places, while in others they are quite good. This is only what may be fairly expected after a submersion of 14 years. It may be anticipated that in a few years' time extensive renewals of the iron covering will be necessary in certain localities, but it is possible that a small addition to our covering machine lately erected at Kurrachee will enable us to execute the requisite repairs at not very great cost. I am not however able to speak with certainty on this matter as yet, but I intend to institute enquiries shortly.

25. The experiment was tried during the year of connecting the cable ends at Bushire, Henjam and Gwadur with the Telegraph Offices by means of short lengths of land line insulated by Johnson and Phillips' fluid insulators. The results obtained were so far satisfactory.

26. An improved arrangement for increasing the clearness and speed of Morse signals, proposed and carried out by Mr. Trimmer of the Persian Gulf Establishment, was also adopted on the cables with success.

Interruptions.

Persia.

27. The interruptions on the Teheran-Bushire Section were as follows :—

Partial. Not stopping traffic. 1 wire broken, or 2 in contact.		Partial. Not stopping traffic. 2 wires broken or 3 wires in contact.		Total. Stopping traffic. 3 wires broken.	
H.	M.	H.	M.	H.	M.
535	37	75	36	77	55

28. In the previous year, which was an exceptionally good one, the total interruptions amounted to 20 hours only. The higher aggregate in 1877-78 is attributed by Major Smith chiefly to the unusual severity of the winter, but also to some extent to the cracking of many of the cast-iron sockets of the standards, the cause of which he is still somewhat at a loss to explain. He is, however, inclined to think that it may be due to rapid violent changes of temperature accompanied by strong vibrations during high winds acting on minute flaws in the casting. As a remedial measure whenever the slightest crack is discovered, wrought-iron clamps are immediately applied to the throats of the sockets.

29. Cases of wilful damage which in my previous report I had the satisfaction to state were diminishing in number showed, I am happy to say, a further decrease in 1877-78. Twenty-five posts only were perforated during the year as compared with 45 in 1876-77 and 88 in 1875-76. The decrease is to be ascribed to the precautions taken in various ways by ourselves and to the stronger measures of repression adopted by the Persian authorities owing to our frequent remonstrances.

30. Appendices E and E1 give the details of the interruptions of every description which occurred in Persia in 1877-78.

Persian Gulf.

31. The following is a summary of the interruptions between Fâo and Kurrachee, Appendices C 1, D and F :—

	Partial. Of either cable or land line separately, not stopping traffic.		Total. Of both cable and land line simultaneously, stopping traffic.
	H.	M.	H.
Total on cables	928	48	...
Total on the Mekran Coast line	375	30	4
	1,304	18	4

32. Of the foregoing interruptions, those on the cables between Kurrachee and Bushire were not quite so numerous as in 1876-77, and their aggregate duration was somewhat less. They were almost entirely caused by the decay of the iron guards outside the cable, leaving the core unprotected. The interruptions on the Fâo-Bushire Section were due to two faults consisting of a bad joint and a small hole in the gutta-percha; the first occurred on the 30th July, but did not stop the traffic until the occurrence of the second on 21st October. The section was then interrupted until 26th October, when the faults or one of them partially sealed up until the 2nd November, on which date it again declared itself, and communication was interrupted from the latter date to the 17th November, when both faults were repaired. Full details respecting the faults and their repairs are given in Appendices C 1 and D.

33. The ordinary interruptions on the Mekran Coast land line were of somewhat greater aggregate duration than those of the previous year. Mr. Finch reports that they were due to hurricanes and unusually heavy rains. He is giving his best attention to the strengthening of the line wherever necessary or desirable and to the improvement of the insulation.

Indo-European Company's Section.

34. The interruptions hitherto spoken of in this division of the report were due to ordinary wear and tear, storms, rains, &c. But in addition to these, as mentioned in paras. 2, 12, and 17, there was the disastrous interruption of the Company's Black Sea Coast Section caused by the Turkish attack on Soukhoum Kaleh Station. This was of incomparably greater magnitude than all the others taken together. It occurred on the 10th May 1877, when the line at Soukhoum Kaleh and in its neighbourhood was completely destroyed. The break continued till the 23rd August, the date of the opening of the alternative link between Ekaterinodar and Tiflis. This lamentable interruption lasted therefore upwards of 3½ months. The length of the new Ekaterinodar-Tiflis Section is 513 miles, and its erection in so short a space of time is very creditable to the Company, especially when it is considered that the whole of the materials had to be obtained from England and conveyed across the entire length of the Russian railway system, at that time heavily encumbered with materials of war.

35. The sum of the total interruptions to traffic on the Indo-European *route* in 1877-78 therefore amounted to—

D.	H.	M.	
126	9	35	on Indo-European Company's Section.
3	5	55	on the Teheran-Bushire Section.
0	4	0	on the Persian Gulf Section.
129	19	30	See Appendix F 1.

36. On the Turkish route the total interruptions of traffic amounted to 13 days, 21 hours, 51 minutes, Appendix F 2.

Traffic.

37. With our principal route interrupted upwards of one-third of the working year, mainly from circumstances beyond our control, a heavy loss in our earnings was inevitable. It is

true that the Russians placed their crown wires at the service of the Company for one or more hours every night after the Soukhoum-Kaleh Section had been destroyed, and that the Company so far availed itself of the offer as to use the wires for the transmission of the weekly "Times" messages, so that our contract with that paper was preserved, but the communication was obviously of too limited and precarious a nature to be made use of for private traffic. Accordingly with the exception of an occasional message at first none were directed by this route.

38. Besides the direct loss of revenue caused by the war, there was the further indirect loss occasioned by the slowness with which our former customers returned to us after communication with India had been re-established by the Ekaterinodar loop. Their confidence in the Teheran route had been seriously shaken, not only by the long interruption but by the continuance of the war, and they saw that the new loop line was subject to more frequent breaks than the old section. They had moreover become so accustomed to employ the route *viâ* Suez that, previous to the close of the financial year, scarcely more than one-half of our usual supporters had restored to us their business.

39. In addition to this, the common purse arrangement was concluded between the Eastern and Indo-European Companies in the summer, and came into force on the 1st September, and it had, it may be presumed, some effect in diminishing our revenue, as by the agreement the greater the proportion of messages transmitted *viâ* Suez the greater became the contents of the common purse which the Associated Companies had to divide.

40. These causes, *viz.*, the war, the slow return of our customers, and the Companies' common purse in which the Department had no share, and finally the general depression of trade from which a telegraph line depending for its revenue chiefly upon commercial messages is one of the first enterprises to suffer, I think fully explain the serious loss of earnings shown in the Revenue Account.

41. The war which diminished our receipts so much *viâ* Teheran gave us on the other hand a small amount of revenue *viâ* Fâo. The line from Constantinople to Fâo, Kurrachee, Bombay and Suez was during the months of February and March if not the only means of telegraphic communication between Turkey and Europe, certainly the most rapid and reliable, and was employed freely during the time to which I refer by Her Majesty's Government. The Persian Gulf revenue from these exceptional messages thus transmitted was about £ 1,198.

42. The following is a synopsis of the traffic conveyed by the Persian Gulf cables during the year :—

Messages.			Words.
Commercial and private.	Government.	Total.	
28,048	1,315	29,363	601,523
Paid press messages for the "Times"		53	43,448
Unpaid Government news messages for Bushire		569	40,772

43. The corresponding statistics for 1876-77 are—

Messages.			Words.
Commercial and private.	Government.	Total.	
43,709	1,496	42,205	883,913
Paid press messages for "Times"		51	36,056
Unpaid Government news messages for Bushire		432	26,668

44. The traffic transmitted by the Department was conveyed in the proportion of 79·97 per cent. by the Teheran route and 20·03 by the Turkish route.

45. The average rate of transmission for the year from England to Calcutta *viâ* Teheran was 3·19 per message, but if the months of May, June, July and August which contained traffic delayed by the Russian crown lines be excluded, the average would be 1·10 per message as compared with 1·19 *viâ* Suez.

46. The co-operation of the section under my charge towards this unprecedented average was as follows :—

Section, Teheran-Bushire ... ... 7 minutes per message.
" Bushire-Kurrachee ... ... 15 " " "

Appendices G and Q.

47. The accuracy attained was also of a high standard, the Teheran-Bushire Section having transmitted 99·855 per cent. of its words free from error, and the Bushire-Kurrachee Section having transmitted 99·231 per cent. with similar correctness—Appendices H and S.

48. I think therefore that the speed and accuracy of the Indo-European route during the months of its working may be said to have been decidedly satisfactory, and it was evidently from no fault on this score that traffic was lost to us.

49. The usual statistics prepared by Mr. Herbage and containing a great deal of usual information regarding the traffic are attached as Appendices I to S. Further statistics relating to the Persian traffic are also attached. The rules and tariffs of the St. Petersburg Convention were in force during the year.

Inspections, Buildings and Stores.

Persia.

50. During the months of March and April, Major Smith, R.E., made a complete tour of inspection of the line and offices under his charge, and was well pleased with their general condition. Instead of making the double journey from Teheran to Bushire and back, Major Smith, with my approval, travelled along the old line between Teheran and Baghdad, the control of which was abandoned by us years ago.

He went from Teheran *viâ* Hamadan and Kermanshah to Baghdad travelling along the route of the old line which he found in a very dilapidated condition. He reports that "when we withdrew from the maintenance and working of that line in 1868, it was in as good a state as a wooden line in this country can be, with two wires thoroughly well insulated throughout. One of the two wires and almost all the insulators have now disappeared, and very few of the old poles have been renewed. For use as an international line, it would practically have to be re-constructed. During last year the Persian Government has set up a single wire wooden pole line from Hamadan to Sehna in Kurdistan and another from Hamadan to Shuster in Arabistan. All three lines (to Khanikin, Sehna, and Shuster) depend consequently on the single wire line from Teheran to Hamadan. In the event therefore of its ever becoming advisable for us to resume charge of the Khanikin line, it would be necessary to add a second wire to the line from Teheran to Hamadan besides re-insulating and thoroughly repairing the whole line to Khanikin."

51. "From Khanikin, two Turkish lines now join the main line from Constantinople to Fâo, *viz.*, a single wire iron pole one to Baghdad and a single wire wooden pole one to Kifri. Formerly, as you are aware, the connection between Khanikin and the main line was formed by one line of two wires on iron poles from Khanikin to Baghdad. The present single iron pole line from Khanikin to Baghdad appears to be in good order. It is used for local traffic and in connection with the Kifri Branch as an alternative to the portion of the main line between Baghdad and Kifri."

And in speaking of the Teheran-Bushire Section, he states "from Bushire to Teheran I found the line and offices in excellent order, and a marked absence of any disagreement and difficulties with the Persian authorities. Everywhere their relations with the members of our staff appeared to be of the most amicable nature.

52. "At no previous period of my experience have I seen the country so peaceable and free of robbers. From Teheran to the Turkish Frontier and from Bushire to Teheran I found there was perfect security for the persons and property of travellers. This improved state of affairs is doubtless owing to the vigorous government of His Royal Highness Hissam-es-Sultaneh at Kermanshah and of his brother His Royal Highness Meetemed-ed-dowleh at Shiraz. Personally I met everywhere with an amount of kindness and attention at the hands of the Persian authorities that was almost embarrassing."

Persian Gulf.

53. Mr. Ffinch thoroughly inspected his division between the months of November and February last, and while expressing his satisfaction with the state of the offices, writes as follows on the condition of the buildings:—

Cable Houses.—"The cable houses between Kurrachee and Manora, inclusive, are in good order, and have only required slight repairs during the year.

54. *Manora Buildings, &c.*—"The buildings, tanks, boats, &c., at Manora, are, in good order. New lines of stone work were built for some of the native establishment during the year, taking the place of mat huts, and it is hoped that funds will permit of this necessary work being completed during the current year.

55. *Manora Jetty.*—"The jetty still remains next to useless; but in consequence of objections raised by the Port Department to our moving it forward, because it would render their boat-sheds useless, nothing has as yet been done. A correspondence on the subject is still going on, and I trust the difficulties will be overcome.

56. *Kurrachee.*—"The buildings at Kurrachee are all in good order, and call for no remark.

57. *Ormara.*—"At Ormara the buildings have been repaired by the Public Works Department, but some of these repairs have been carelessly executed, and Lieutenant Spilsbury of that Department who inspected them with me stated he would bring the subject to the Executive Engineer's notice.

58. *Gwadur.*—"Extensive repairs have also been carried out to the buildings at Gwadur, and they are now in good order.

59. *Charbar.*—"No repairs have been executed to the Charbar buildings which are badly in want of them, more especially the roof. The Executive Engineer promises to have these carried out after the monsoon season.

60. *Jask.*—"At Jask, although large sums of money have been spent on the repairs of the station buildings, still their state is not satisfactory, and the Executive Engineer purposes submitting a further estimate for some Rs. 8,000; the plaster continues to peel off the walls, the Portland cement flooring to crack and the roofs to leak.

"Two new latrines for the natives have lately been built and are a decided success.

61. *Henjam.*—"The wooden building at Henjam is in good order, but requires painting and oiling, for these materials have been provided. The glare on the south side being very trying, a mat verandah has also been erected on that side.

62. *Fâo.*—"The repairs of the Fâo building were completed early in the year, and the building is now in a satisfactory state.

63. "The old mud godown being in a very insecure state has been pulled down, and a new one erected in its place. A new mud cook-house and latrine have also been built, and the ground round the office building has been raised.

64. *Sonmeanee.*—"The building at Sonmeanee is in need of repairs which, at the request of the Agent, Governor General for Beloochistan, I have applied to have carried out; they are estimated by the Public Works Department to cost Rs. 411.

65. *Pusnee.*—"The Pusnee building is in fair order."

Stores.

Persia.

66. The expenditure for stores amounted to only £323-6-1 compared with £2,918-14-2 in the previous year. As pointed out in para. 44 of my report for 1876-77, the line having now been strengthened by the full number of iron standards required, the yearly outlay for stores in Persia will henceforth be very moderate.

Persian Gulf.

67. The cost of stores according to the India Office account and the Examiner's returns is given below, compared with that for 1876-77.

68. It includes two special items of cable recovered from the

	£	s.	d.
sea and placed in stock...	881	12	0
and purchases of furniture for use of staff £376 and £234... ...	600	0	0

69. The comparative statement is—

	1876-77. £	s.	d.	1877-78. £	s.	d.
Purchased in India	2,041	11	9	3,905	13	9
„ in England	3,909	5	6	2,037	12	7
	5,950	17	3	5,943	6	4

70. The issues from stock during the same two years were—

1876-77. £	s.	d.	1877-78. £	s.	d.
7,148	10	5	7,765	0	10

71. During 1877-78 the cable expended in repairs and alterations was—

	Knots.
Gutta-percha	8·05
India-rubber	3·11

72. The following remained in stock at the close of the year:—

	Knots.	Remarks.
Gutta-percha	92·98	13·95 of this is in short pieces.
India-rubber	33·89	2·11 ditto ditto.

73. I have specially drawn Mr. Ffinch's attention to the absolute necessity of insisting on the most rigid economy in the matter of stores and supplies. He reports that this will be carefully attended to, and he anticipates a great reduction in the value of stores purchased during the current official year.

74. The value of stores in hand at Kurrachee on the 31st March 1878 was Rs. 3,86,053 against Rs. 3,83,169 last year.

The balance on the 31st March 1878 was as follows:—

	Rs.	A.	P.
Miscellaneous stores	48,878	1	3
Cable	2,59,509	0	0
Other construction stores and tools	62,983	10	4
Instruments and furniture	10,957	12	5
Stationery	1,734	6	3
Forms and books	1,991	7	9
	3,86,053	6	0

ESTABLISHMENTS.

75. No changes of special importance have been made during the past year in the distribution of the staff either in Persia or the Gulf. As the Examiner of Telegraph Accounts now periodically prints a Classified List of the entire establishment, I need not repeat the tables given in paras. 49 and 52 of my last annual report, but I attach instead one of the printed returns.

76. Mr. E. J. D. Walker, a very active and zealous officer holding the appointment of Superintendent in the Persian Division, died suddenly on his way to England on the 1st December 1877. This melancholy event was reported by me in my letter of the 18th December 1877. One civil signaller in Persia resigned his post.

77. In the Gulf the appointment of the Assistant Accountant at Kurrachee was abolished. One of our Mechanicians, Mr. S. Fearn, died. Six clerks resigned the service, and two deserted. The general conduct of the staff has been good.

78. The duties performed by the S. S. *Amberwitch* are shown in the subjoined table This vessel is now about to be replaced, but in the mean time it has been found necessary to repair her boilers which, for some time past, have been in an unsafe state.

DATE.				Particulars.
	From		To	
1877.		1877.		
April	1	April	3	Lying at Kurrachee.
"	4	"	7	Proceeded to Sver Creek and back with the Commissioner in Sind and suite.
"	8	May	12	Lying at Kurrachee.
May	13	"	31	Proceeded to Persian Gulf, repairing cable and returned.
June	1	Sept.	10	Lying at Kurrachee.
Sept.	11	"	14	On passage to Bombay.
"	15	"	17	Lying in Bombay ready for docking.
"	18	Oct.	27	Docked.
Oct.	28	"	3	Hauled out of dock and preparing for sea.
"	4	"	7	On passage to Kurrachee.
"	8	"	23	Lying at Kurrachee.
"	24	Dec.	27	Employed on annual inspection up the Persian Gulf Stations, repairing cable, and diversion of cables at Bushire.
Dec.	28	1878.		
1878.		Jan.	15	Lying at Kurrachee.
Jan.	16	"	20	Hauled up on the beach, cleaned and painted.
"	21	Feb.	2	Lying at Kurrachee.
Feb.	3	March	2	Proceeded to Persian Gulf, Henjam Island, repairing cable and returned.
March	3	"	31	Lying at Kurrachee.

79. The new steam cutter provided as one of the *Amberwitch's* life boats was received at Kurrachee in December 1877. She is admirably suited to the requirements of the Department. She was built by Mr. J. S. White of Cowes, and her total cost when landed in Kurrachee was Rs. 4,190. For the launch which she replaced we received credit from the Public Works Department to the amount of Rs. 3,500, and as that launch had been in use by us for nearly 4 years, the exchange was effected on good terms.

80. The libraries are reported to be in good order; the Gulf Recreation Fund continues in a prosperous state; the principal purchases out of it during the year have been articles required for lawn tennis and for the maintenance of the station gardens. A large fishing net was bought for use at Jask, and a miniature billiard table for Fao, &c., &c.

81. Finally, I beg leave to express my sense of the good services rendered as heretofore by Major Smith and his staff in Persia and by Mr. Finch, Lieutenant Stiffe, and the Officers of the Persian Gulf Division, as well as by Mr. Brasher, the Superintendent of this Office.

APPENDIX A.

INDO-EUROPEAN GOVERNMENT TELEGRAPH DEPARTMENT.

SUMMARY OF EXPENDITURE ON CAPITAL ACCOUNT TO 31ST MARCH 1878.

Prepared partly from telegram.

	In India.	In England.	TOTAL.	£ s. d.
Capital Account—				
Total Capital expenditure to 31st March 1877				1,158,188 1 10

APPENDIX C.

OFFICIAL YEAR, 1877-78.

Statement of cable on hand at commencement and end of year.

Description.	Balance, 31st March 1877.	Balance, 31st March 1878.	Amount expended.	Remarks.
Gutta-percha.				
Shore end	...	4·77	8·05	The three cables at Bushire have all been shortened by the diversion to Reshire, the two percha ones are 11 miles shorter, there is, therefore, an expenditure of 8·05 during the year: besides the increase in short pieces, most of which must be stripped.
Deep sea, 1st class	56·6	74·26		
„ 2nd „	26·8			
„ 3rd „ and short pieces	6·9	13·95		
Total Gutta-percha ...	90·3	92·98		
India-rubber.				
First class	27·60	31·05	1·55	As this cable is now 5 miles shorter owing to the diversion, the expenditure has been 1·55 really for all repairs.
Second „	1·9	2·84	1·56	Short pieces used for fencing flagstaffs, and sold to harbour works.
Short pieces	2·5			
Total India-rubber ...	33·0	33·89		

Kurrachee;
4th April 1878.

B. FFINCH,
Deputy Director, Persian Gulf Telegraph.

A. STIFFE,
Engineer and Electrician, Persian Gulf Telegraph.

APPENDIX C—1.

Statement showing the repairs and renewals on Persian Gulf and Kurrachee Harbour Cables during the official year 1877-78.

Number.	Date of development of fault.	Date of completion of repairs.	Length of interruption. Days.	Hours.	Section.	Locality of fault. Miles.	From	Cause of fault.	Remarks.
					SEA SECTIONS.				
1	30th July ...	17th November...	20	2	Bushire-Fâo ...	7 & 53	Bushire-Fâo ...	One bad joint, one small round hole in percha.	These two faults occurred together. The second one caused intermitting interruption until repaired.
2	16th February ...	18th February ...	2	4	Bushire-Henjam..	37	Henjam ...	Cable cut to test and found so much decayed that repairs were required.	The iron wires quite rotted away in patches.
3	7th May ...	22nd May ...	2	0	Henjam-Jask ...	7	„ ...	Cable guards rotted away, leaving core unprotected.	These faults are all due to the same cause, the damage is extensive, but disconnected; short corroded parts alternating with long lengths of perfectly sound and good cable.
4	24th September ..	3rd November...	2	1	„ ...	53	Jask ...	Ditto ditto ...	
5	14th January ...	9th February ...	...	23½	„ ...	½	„ ...	Ditto ditto ...	
6	5th November...	22nd December...	2	6	Jask-Gwadur ...	127	Gwadur ...	Ditto ditto ...	This fault was in 30 fathoms water, and affords ground for fears as to the durability of the cable.
					HARBOUR CABLES (REPAIRS OF MINOR IMPORTANCE).				
1	16th July ...	19th July ...	...	...	Nos. 1, 2 and 3...		Near Manora Office ...	Cables buried in dry sand for ½ mile; core decayed.	The three cables had each a new section put in between Manora Office and the nearest junction house.
2	14th September ..	18th September..	...	...	No. 1 ...	1	Manora ...	Boring shell ...	Outer wires decayed.
3	19th October ...	20th October ...	...	...	„ 1 ...	1¼	„ ...	„ ...	Ditto ditto.
4	30th July ...	2nd August ...	...	...	„ 2 ...	Two faults at half a mile and ¾ mile from Kurrachee Office.		Core decayed ...	Under-ground line had been down since 1867.
5	7th June ...	8th June ...	...	...	„ 3 ...	3	Manora ...	Decayed joint.	
6	11th January ...	18th January ...	...	...	„ 3 ...	⅔	„ ...	Boring shell.	
7	20th „ ...	21st „ ...	...	...	„ 3 ...		Near Kurrachee Office.	Loss of insulation, probably core decayed.	A new section from Kurrachee to nearest junction house.

KURRACHEE;
4th April 1878.

B. FFINCH,
Deputy Director, Persian Gulf Telegraph.

A. STIFFE,
Engineer and Electrician, Persian Gulf Telegraph.

APPENDIX C—2.

OFFICIAL YEAR, 1877-78.

Renewals of ends of cables on shore at the different stations during 1877-78.

Station.	Section.	Date of becoming defective.	Date of renewal.	Remarks.
Gwadur	Gwadur-Manora	Gradual... ...	24th December ...	End perished; dug up and cut off end.
„	„	2nd April ...	2nd April ...	Cable bad, Office to cable house; renewed temporarily with core.
„	Gwadur-Jask	13th August ...	31st December ...	Cable bad between Office and cable house; replaced by land line fluid insulators.
Jask	All three sections	14th May ...	25th May ...	Three new cables laid between Office and cable house.
„	I. R. cable...	Gradual... ...	31st October ...	Old end in cable house cut off.
„	Henjam	„	9th February ...	New shore ends cable house to water.
„	Gwadur	„	12th „ ...	
Henjam	Jask-Henjam	„	16th December ...	Cables bad from cable house to Office since last year; replaced by land line with fluid insulators.
„	Bushire-Henjam	„		
Bushire	I. R. cable...	„	27th November ...	New ends for diversions, and land line with fluid insulators to Office.
„	Henjam-Bushire	„	24th „ ...	
„	Fâo-Bushire	„	30th „ ...	
Fâo	Bushire-Fâo	„	14th „ ...	New end from Office to water's edge.

KURRACHEE;
4th April 1878.

B. FFINCH,
Deputy Director, Persian Gulf Telegraph.

A. STIFFE,
Engineer and Electrician, Persian Gulf Telegraph.

APPENDIX D.

OFFICIAL YEAR, 1877-78.

Abstract showing insulation of cables at beginning and end of year with interruptions (occasioned by faults and also by diversions).

Sections.	Length.	Insulation for March		Number of faults and interruptions.	Total number of days interrupted.	Remarks.
		1877. Megohms per knot.	1878. Megohms per knot.			
Fáo-Bushire	156 / 153	421	745	2	22·6	Two faults in this section, the second of which caused interruption, happened at the same time as a fault in another section. Insulation now very high owing to a cold season in Gulf. The second interruption for diversion to Rishir.
Bushire-Henjam	369 / 361	180	128	2	6·2	Small intermittent fault still exists without detriment to working, one interruption for diversion to Rishir.
Henjam-Jask	143	292	321	3	5·1	This section has given much trouble, having had three different faults owing to local decay of iron wires; it now tests higher than for many years.
Bushire-Jask, I. R.	503 / 498	66	116	1	1·3	There is still a minute defect in this cable. In February 1878, I endeavoured to break this down and localise it without success, so it is not likely to cause inconvenience. Cable interrupted only for diversion to Rishir.
Jask-Gwadur	272	234	201	2	3·5	There has been a fault this year in deep water, 30 fathoms; until last year this section was singularly free from defect. A short interruption also for renewing the shore end at Jask.
Gwadur-Manora	271	191	181	...	...	The sea part alone, tested on 25th March, 220 megohms, the apparently low figures being due to imperfect shore ends.
No. 1 Harbour	6	7	13	3	...	No interruptions; faults repaired as convenient. The use of the third cable has now been abundantly demonstrated. The faults are so easily and exactly localised by loop tests that repairs are quickly completed.
„ 2 „	6	1·5	5	1	...	
„ 3 „	6	12·6	16	3	...	

KURRACHEE; *4th April 1878.*

B. FFINCH,
Deputy Director, Persian Gulf Telegraph.

A. STIFFE,
Engineer and Electrician, Persian Gulf Telegraph.

	27,554	65	122	66⅔	18,472	61⅓	104		55,866	56	

The above receipts are due ⅔ to the Persian and ⅓ to the Indian Government under Art. VIII of Anglo-Persian Treaty of 2nd December 1872, as modified in 1877. But there are two amounts of 1,000 tomans payable by Persia annually under Arts. I and X of the same Treaty, and the sum of these is treated as a first charge against the ⅔ due to Persia. Further, the ⅓ for the year ended 31st March 1877 having fallen short of the amount of the claims above referred to, the deficiency is brought forward as an additional first charge in this year's account, and the adjustment of the whole is shown below—

	Retained as "set off" against Treaty claims, and credited to Persian Government.				Payable to Persian Government.

GRANT OF ASSISTANCE TO COVENANTED ENGINE-DRIVERS AND OTHER MECHANICS TOWARDS MEETING THE EXPENSE OF BRINGING OUT THEIR FAMILIES TO INDIA.

Nos. 787—795 E. R., dated Simla, 27th May 1879.

The following is forwarded to the Administrations and Officers marginally noted for information and guidance, with intimation that a form of agreement for the signature of the men embodying the conditions prescribed in the Despatch will be circulated for adoption.

Governments of Bombay and Bengal, Public Works Department, Railway Branch.
Chief Commissioners, Central Provinces and British Burmah.
Resident, Hyderabad.
Consulting Engineers, Calcutta and Lahore.
Director of State Railways, Western System.
Accountant General, Public Works Department.

Ordered also, that a copy be published in the Supplement to the *Gazette of India*.

By order,

A. B. SAMPSON,

Under Secy. to the Govt. of India.

No. 27 R., dated 27th February 1879.

From—The Secretary of State for India,

To—The Government of India.

I have received Your Excellency's letter of the 27th December last, No. 306, proposing to grant assistance to Engine-drivers and other Mechanics, who are serving under covenants for five years, towards meeting the expense of taking out their families.

2. You propose that the grant in each case shall not exceed half the cost of a second-class passage for the man's wife only, and that it shall not be made until the man has served for a period of twelve months, during which time his conduct shall have been satisfactory; the other conditions being, that the men who may be granted the indulgence shall consent to extend their agreements for a period of two years, and that until the expiration of the seven years' service, the money paid by Government shall be treated as an advance, recoverable without interest, in case of dismissal, or resignation from any other cause than that of ill-health.

3. Upon these conditions I sanction compliance with your proposal.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Thursday, the 5th June, 1879.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, C.S.I.
His Excellency the Commander-in-Chief, G.C.B.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B.
The Hon'ble Whitley Stokes, C.S.I.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble F. R. Cockerell.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.

PROBATE AND ADMINISTRATION BILL.

The Hon'ble Mr. Stokes moved for leave to introduce a Bill to provide for the grant of probates of wills and letters of administration to the estates of certain deceased persons. He said that, as the law of British India at this moment stood, there was, speaking generally, no means of conferring upon any one a complete and conclusive title as representative of the estate of a deceased Hindú, Muhammadan or Buddhist or other person exempt from the operation of the Indian Succession Act.

The Hindú Wills Act was at present limited in its operation to the Presidency-towns and Lower Bengal; and, even if the proposal to extend it to other parts of British India, now under consideration of the Local Governments, was carried out, it would still only apply to cases of testamentary succession among Hindús; and outside the Presidency-towns there would be no clear power to grant letters of administration in the case of Hindús, Muhammadans and Buddhists dying intestate.

The grant of a certificate under Act XXVII of 1860 made the person who had obtained it a representative only for certain very limited purposes; that was to say, for the recovery of debts, the receipt of interest and dividends on Government securities, bank-shares and shares in Public Companies, and the 'negotiation' of such securities and shares. And, though in the Bombay Presidency a certificate purporting to confer larger powers might be obtained under Regulation VIII of 1827, it was by no means clear what the status of the holder of such a certificate precisely was.

In the Presidency-towns probates of the wills and letters of administration to the estates of deceased Natives could be granted under the Supreme Court Charters in cases to which the Succession Act and the Hindú Wills Act did not apply; but the representative status conferred by such grants fell far short of that conferred by similar grants in the case of deceased European British subjects. Thus, in 1867, in *Sharo Bibi* v. *Baldeo Dás*, (1 Beng. Law Reports, Or. Jur. 24), the late Mr. Justice Norman held that a Hindú executor took nothing from any grant of the Court. "His title," said that learned Judge, "is founded solely and simply on the will of the testator, considered as an instrument of gift. Except for the purposes of evidence, the will of a Hindú does not require probate. . . . . As against those who get the probate or oppose the grant of it, [it] is no doubt binding; as against parties cited it is evidence;

but it has no greater effect than the ordinary decree in a Civil Court against persons who have no means of appearing in the suit or right to dispute the grant."

From this state of things much trouble and litigation at times resulted. The heirs might be very numerous; their interests might differ in degree; some of them might be minors or otherwise incapacitated; others might be residing at a distance; the titles of some might be disputed; the settlement of claims against the estate might thus be a matter of endless complication; the making of a satisfactory title to any portion of it which it might be necessary to sell might be impossible. Furthermore, a Native's will, not requiring to be proved, need not be deposited for safe custody. The resulting opportunities for forgery and fraudulent alteration were obvious. Nor could a Native executor be compelled to exhibit an inventory or account of his testator's estate except by the tedious, expensive and hazardous process of a lawsuit. The consequence (as Mr. Montriou had observed in his note to *In the goods of Bibi Muttra*, Morton's Decisions, second edition, p. 262), was that, when the estate was too small to bear the costs of the suit, women, children and absentees had no adequate check on the executor, and at any distance of time it was difficult to fix him with the possession of moveable, and sometimes even of immoveable, property.

The necessity of devising some means of removing these difficulties was brought to the notice of the Government of India some time ago by Mr. Broughton, then Administrator General of Bengal, and now a Judge of the Calcutta High Court; and a Bill drafted by him was circulated for the opinions of local authorities. That Bill, while guarding against any interference with the succession laws of the Hindús, Muhammadans and Buddhists, went in effect to apply to them the provisions of the Indian Succession Act relating to probate and administration, and, amongst others, those provisions which make the grant of probate or letters of administration a condition precedent to the establishment of any right derived by succession from a deceased person.

The reports of the local authorities had now been received, and their purport might be briefly described by saying that, while there was a considerable body of opinion in favour of providing the means of obtaining probate of the will or letters of administration to the estate of any deceased person when those interested desired to do so, the proposal to insist on probate or letters of administration as essential in all cases had been generally condemned, as tending to impose upon a multitude of poor and ignorant people in cases where there was no difficulty or dispute an unnecessary amount of trouble and expense.

The Bill had been drawn on the lines thus indicated. It applied to the estates of all persons not at present governed by the Indian Succession Act the portions of that Act relating to the grant of probate and administration and the powers, duties and procedure of executors and administrators, omitting, however, those sections (187 and 190) which made it compulsory to obtain probate or administration. He (MR. STOKES) believed that as soon as the Bill was understood by the people, its necessary effect in quieting titles and obviating litigation as to the ownership of property would induce them to avail themselves largely of its provisions. One result of this would be that they would voluntarily tax themselves to the same extent that all persons whose property was dealt with under the Succession Act or Hindú Wills Act were now taxed; that was to say, property covered by the grant and exceeding 1,000 rupees in amount or value would pay a Court-fee of two per cent., but property not exceeding that sum in amount or value would be exempt. People would thus voluntarily and usefully pay to the public treasury a part of the money which they now voluntarily and often uselessly spent in litigation, and the problem of levying a tax on successions to wealthy Natives' estates would thus, to some extent, be solved without hardship to the tax-payer or trouble to the Government.

The Motion was put and agreed to.

DISTRICT DELEGATES BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to make further provision for the grant of probates of wills and letters of administration in non-contentious cases.

He said this was a sister measure to that which the Council had just given him leave to introduce. The Indian Succession Act as originally framed by the Law Commissioners empowered the District Judge to appoint judicial officers to act for him as delegates to grant probates and letters of administration in non-contentious cases, much in the same way as the District Registrars appointed under the Court of Probate Act, 1857, did in England; but the provisions relating to this matter were struck out of the Bill by the Select Committee, partly because they were thought unnecessary, and partly because it was feared that the power which was to be conferred on District Judges would give rise to abuse.

If, however, the Bill to provide for granting probate of the wills and administration to the estates of persons now exempted from the operation of the Indian Succession Act should become law, it was probable that the business of granting probate and administration would increase to such an extent that the District Judges would be unable to dispose of it without assistance.

The present Bill had accordingly been framed with a view to replacing in the Succession Act, with some slight modifications in point of form, the sections removed from it by the Select Committee; but, in order to avoid as far as possible the danger of abuse apprehended by the Select Committee, the power of appointing the delegates had been vested not in the District Judges, but in the High Courts, and its exercise had in the case of High Courts not established by Royal Charter been made subject to the previous sanction of the Local Government.

The Motion was put and agreed to.

BOMBAY INDEBTED AGRICULTURISTS RELIEF BILL.

The Hon'ble Mr. HOPE moved for leave to introduce a Bill for the relief of indebted agriculturists in certain parts of the Presidency of Bombay. He said:—"The Council are already aware that during the monsoon of 1875 agrarian outrages of a serious nature took place in certain districts of the Dekkhan forming a part of the Bombay Presidency; that a Commission, appointed by Government, reported very fully upon the causes of these outrages, and the remedial measures they thought desirable; that the Government of Bombay in April, 1877, before Sir Philip Wodehouse's departure, submitted their general views upon the question to the Government of India; and finally, that Sir Richard Temple's Government sent up in January 1878 the first definite proposals for meeting the case by legislation. The origin, nature and causes of the difficulty, and the various proposals for its removal, were explained so fully and clearly by my hon'ble friend Mr. Cockerell in his speech of the 20th June last, that it is not necessary for me to go over any part of the ground again, at least on the present occasion.

"The course of procedure at that time considered desirable was that some of the Bombay Government's proposals should be dealt with in this Council and others in that of Bombay. Leave to introduce Bills was accordingly granted by this Council to Mr. Cockerell on the date already mentioned, and by the Bombay Legislative Council to Mr. Ashburner on September 13th, 1878. It happened, however, that, during the discussion of the details of the measures thus decided on, a telegram from the Secretary of State was received on December 3rd, requesting that further definite action might be postponed pending the arrival of a despatch he was about to send. The despatch arrived towards the end of January last, and showed that the Secretary of State, while approving of the proposals of the Bombay Government, considered that they should be supplemented by further provisions for increasing the efficiency of the Courts of justice, and also that the subject could be better dealt with by one 'comprehensive measure' than by two passed in different legislatures.

"The Government of India, concurring in these views, and finding that, owing to various Acts passed in the Governor General's Council being affected, that Council alone was competent to enact one measure disposing of the whole subject, entrusted to me the duty of conferring with the Government of Bombay as to the provisions which such a measure should embrace, and of

introducing into this Council the Bill as finally determined upon. I accordingly visited Bombay in April last, and the result was that a Bill was framed in full consultation with me, and proposed by the Government of Bombay to the Government of India for adoption. The Government of India have, I am glad to say, entirely accepted, in their executive capacity, the main principles and policy of this Bill, which are also, I believe, in conformity with the views of the Secretary of State. The two Bills for which leave has been already granted need not now, therefore, be proceeded with; and it remains for me to ask of this Council leave to introduce the new Bill, reserving all detailed explanations for the occasion of its introduction."

The Motion was put and agreed to.

BENARES FAMILY DOMAINS BILL.

The Hon'ble MR. COLVIN moved for leave to introduce a Bill to amend Bengal Regulation VII of 1828. He said that the object of the Bill which he desired to introduce could be explained in a few words. A short time after the transfer of the sovereignty of Benares from the Nawáb of Oudh to the East India Company, an agreement was made with the Rájá of that time for the purpose of introducing into the Province of Benares the same system of judicial and revenue administration as had been established in 1793 in the Provinces of Bengal, Bihár and Orissa. By that agreement the entire administration of the Province of Benares was transferred, upon certain conditions, to the British Government, with the exception of a reservation which was made in favour of the Rájá in respect of one portion of it. The portion so excepted comprised the territories which were generally known as the Benares Family Domains. These Family Domains, which were the Mahárájá's private and personal property, consisted of three parganas—that of Kaswá Rájá in the District of Benares, held at ordinary or full zamíndárí rates, and of two párganas, Bhadohi and Khera Mángror, in the District of Mirzapur, the first of which was held at half-revenue rates, and the second free of all revenue. Their total area was, in round figures, 1,000 square miles; the population about 400,000, and the revenue paid for them nearly three lákhs of rupees. When the administration of the rest of the Province was transferred, the decision of causes relating to the revenue and of certain other claims arising out of land in these parganas was reserved to the Rájá, subject to the supervision and control of the Collector. The special stipulation contained in the agreement on this subject ran as follows:—

"In case of complaints relative to revenue causes or charity ground, &c., being preferred to the Huzoor (*i. e.*, the English Government) by any parties residing within the jagheer and altumgah, &c., the personal or private lands of Rajah Muheep Narain Singh, the inquiry thereinto shall be made in like manner as such cases were amicably conducted between Mr. Duncan and the Rajah; that is, that since the gentleman holding the station of Collector will have more concern with such matters than the other gentlemen, the rule shall be that, with the privity and ascertainment of the said Collector (who is to have regard to the honour and dignity of the said Rajah), such causes are to be settled through the channel of the said Rajah, or of the officers of the said Rajah's cutcherry; it being at the same time understood and provided that, as it is a duty incumbent on the Hon'ble Company's Government to distribute and ensure the attainment of justice to all the inhabitants of Benares, should it so happen that, after referring such complaints to the Rajah or to his officers in the cutcherry, the contentment of the parties complaining and aggrieved shall not be obtained, the Rajah shall relative to the adjustment of such causes listen to and approve of the suggestions and advice of the Collector, in like manner as hath been practised in the time of Mr. Duncan. And it is also incumbent on the said Collector, in all proper and just cases, to show the utmost attention possible to the Rajah's accommodation, and to hold in view the maintenance of his honour and dignity, such being entirely consistent with the wishes of Government; and if (which God forbid!) any such subject should arise as cannot be settled between the said Collector and the Rajah aforesaid, the decision in such case shall depend on the Governor General in Council."

It was evident that the success of such an agreement as this depended largely upon the mutual good-will and forbearance of the parties who carried it out. It was possible—in the commencement of our rule, and with Agents like Mr. Duncan, who possessed great influence and popularity—that such a plan may for a time have worked successfully; but it was easy to predict that powers and duties which were so vaguely defined must either soon fall into

disuse and be neglected, or, if the attempt to maintain them in force were prolonged, that the first serious difference of opinion would bring their working to a dead lock. It appears, from the history of the experiment, that it was the first of these two probable causes of failure which was fatal to it. It was found, after a very short experience, that the conditions of the agreement were quite insufficient to protect the subjects of the Rájá from oppression. Some time elapsed before any effective measures were taken for their protection; but the complaints of this oppression became at last so loud and numerous, that in 1826 the Governor General appointed Mr. Wilberforce Bird as a Special Commissioner to enquire into the causes of the great and general dissatisfaction. The result of that enquiry was to show that many gross acts of injustice had been committed, that the supposed Courts of justice were mere engines of extortion and oppression, and that the power of appeal to the Collector and the Governor General had been of no effect whatever in checking these evils.

In order to remedy the state of affairs thus disclosed, a law was passed. That law was Regulation VII of 1828, which it was now proposed to amend. The Regulation did not differ in substance from the agreement made in 1794; but it laid down more precise and definite rules for giving effect to that agreement. It directed a settlement and record of rights to be made in the Benares Family Domains. Further, within those territories, it conferred on the Rájá the powers of a Collector in respect of certain revenue matters; it provided for the appointment of Native Commissioners to determine suits relating to land or the proceeds of land; and it placed both these Commissioners and the Rájá in the exercise of his powers as Collector under the control of an officer styled the Superintendent, who was himself made directly subordinate to the Governor General in Council.

The Regulation of which he had just given an outline was still in force, and during the last fifty years no change had been made in it. During that time, however, great changes had taken place in the general administration of the country. The law had become more full and exact, and its operation more certain; procedure had been far more minutely and carefully regulated, and superior authorities had been multiplied. The attention of these higher authorities had also, of necessity, been more and more withdrawn from matters of detail and directed to matters of greater importance. In order to adapt the revenue system of the Family Domains to the changes which were thus going on in other branches of the administration, various alterations had from time to time been made in the manner of complying with the provisions of Regulation VII of 1828. In all such alterations the intentions of the Regulation and the terms of the agreement of 1794 had been scrupulously respected. On this point he believed there had never been any just ground of complaint. It might be, however, that the precise letter of the law had not always been strictly observed. It was necessary now to bring the law and the existing practice into accordance. But, as any such deviations from the letter of the law (if they had occurred) had been compelled by circumstances, it had been thought better to alter the law so as to adapt it to existing requirements than to attempt to make the facts comply with the obsolete provisions of the law.

Besides this, there was another reason for the proposed legislation regarding the Benares Family Domains to which it was necessary to advert. About five years ago the two Acts known as the Scheduled Districts Act and the Laws Local Extent Act were passed. Their object, as the Council were aware, was to define precisely and declare the laws which applied to certain parts of British India which were known as Non-Regulation Districts. Now, the Benares Family Domains had come under the operation of those Acts on account of the special nature of their revenue administration, which excluded from them a great deal of the Revenue law that was generally applicable to the North-Western Provinces, and caused a distinction between them and the districts by which they were surrounded. His Highness the present Mahárájá, however, was very anxious that his Family Domains should be withdrawn from their operation. He was apprehensive apparently that some day, under the powers conferred by those Acts, the Revenue law which was generally in force in the North-Western Provinces might be extended to his estate.

Nothing of the sort had been done, and he felt sure that nothing of the sort had ever been intended. But the possibility of such a thing was a cause of uneasiness to His Highness; and it had been suggested that any such apprehensions might be removed, without sacrificing the objects which the two Acts that he had mentioned were intended to accomplish, if opportunity were taken, when amending Regulation VII of 1828, to declare in the amending Act what laws were applicable to the Benares Family Domains.

These, then, were the two main objects of the Bill. First, to alter the provisions of Regulation VII of 1828 so as to adapt it to the present state of affairs without making any important change in the practice of the last fifty years. Secondly, to ascertain and declare the laws which were applicable to the Mahárájá's private estate.

MR. COLVIN hoped that this explanation would be sufficient to show the general grounds upon which further legislation in respect to Regulation VII of 1828 was required. If the leave to introduce a Bill which he was then asking for were given by the Council, he would, on a future occasion, notice more particularly the points on which it was proposed to amend the present law.

The Motion was put and agreed to.

RELIGIOUS CONGREGATIONS BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to provide for the holding of property by certain Religious Congregations. He said that Mr. Chapman and other members of the Simla Union Church, so far back as the year 1873, drew the attention of Government to the hardship under which they laboured in being unable, without constantly recurring trouble and expense, to keep up a permanent and effective body of trustees to whom to commit the property of the Church. The Secretary to the Calcutta Missionary Conference about the same time made a similar representation to Government; and there were probably other bodies associated for religious purposes in India who experienced like difficulties.

The present Bill was drawn on the lines of 13 & 14 Vic., c. 28 (commonly known as Peto's Act), which was passed to meet a similar difficulty felt by Religious Societies in England. It differed from that Statute, however, first in applying only to Religious Congregations and not to Societies formed for purposes of education (which seemed sufficiently provided for by our Act XXI of 1860); and secondly, in providing for the case of moveable as well as immoveable property.

The Bill simply declared that, if property of certain specified descriptions was conveyed to trustees in trust for any Religious Congregation, and no special provision was made for the appointment of new trustees, new trustees might be appointed in such manner as that Congregation might determine; and further, that on the appointment of new trustees, whether in exercise of the powers thus conferred or otherwise, the property should vest in them without any further conveyance.

Hindús, Muhammadans and Buddhists were excepted from the provisions of the Bill, as it was thought undesirable to interfere with the laws regulating their religious endowments.

The Motion was put and agreed to.

LEGAL PRACTITIONERS BILL.

The Hon'ble MR. STOKES moved that the Hon'ble Sir Alexander Arbuthnot be added to the Select Committee on the Bill to consolidate and amend the law relating to legal practitioners.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 26th June, 1879.

SIMLA;
The 5th June, 1879.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 10th JUNE 1879.

GENERAL REMARKS—In Madras general prospects are fair except in the north-east part of Tinnevelly, where the crops have failed. Rain has fallen throughout the province of Mysore and the outlook is hopeful; the later crops of paddy are being harvested and ploughing operations continue; prices have risen slightly. In the Bombay Presidency there have been showers in the Deccan and Southern Mahratta Country, but the monsoon is not yet established; agricultural operations are progressing; cholera prevails to a great extent in Sind and slightly in Guzerat. In the Central Provinces good rain has fallen in the districts of Raipur, Balaghat, Mandla, Betul and Chanda and there have been light showers in five other districts; ploughing for the *kharif* sowings is going on and rice and cotton sowings have commenced in places; prices are rising. Cotton sowing has begun in Berar. With the exception of 3 stations more or less rain has fallen throughout Central India. Rain fell in parts of Rajputana and there were said to be signs of the approach of the monsoon. In Bengal rain has fallen in most districts; in Eastern and Central Bengal it is generally adequate for present agricultural purposes, but in Orissa, Western Bengal, Chota Nagpore and Behar it is still insufficient; some damage has been caused by floods in Dacca and Furreedpore and in parts of Northern Bengal the fall of rain has been somewhat excessive and a break is needed. Rain continues to fall in Assam, and the *asu* crop on low lands has been slightly injured by inundation. In British Burma no rain is shewn as having fallen during the week but other reports indicate continued showers at Akyab and Rangoon; ploughing has commenced and public health is generally good; cattle-disease prevails in four districts. In the North-Western Provinces and Oudh light rain fell over the whole of the Province in the early part of the week, but westerly winds have again set in; cholera continues in Kumaun, Meerut and Agra, and a few cases are reported from Lucknow; ploughing has followed the rain that fell in Bareilly. In the Punjab rain has fallen in 9 of the 11 districts mentioned in the report; prospects generally are favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 7th)	·41 (average of 6 stations).	Rice 10·76, *cholum* 13·49, *raggi* 17·53, *cumboo* 13·15; 25 inches water over anicut; sowing of early dry crops commenced in places.
Kurnool („ „)	·22 (average of 5 stations); *nil* in others.	Rice 10·0, *cholum* 15·56, *raggi* 20·72, *cumboo* 16·95; season favourable; agricultural operations going on steadily; fodder and water ample.
Tanjore („ „)	·78 (average of 7 stations).	Rice 10·16, *cholum* 15·55, *raggi* 17·12, *cumboo* 14·27; Cauvery and its branches flow with about 24 to 84 inches of water; the few standing dry and garden-grown crops are generally in good condition; harvest *nil*, outturn *nil*.
Madura („ „)	·6 (average of 2 stations).	Rice 9·74, *cholum* 4·85, *raggi* 15·88, *cumboo* 16·52.
Malabar („ „)	3·29 (average of 13 stations).	Rice 9·85, *raggi* 17·25; prices slightly risen in Kurumbranad and Cochin, fallen in Cherakal, Calicut and Palghat, stationary elsewhere; diminution of rain, but sufficient; pasture improving; Vyteri return not received. *General Remarks.*—General prospects continue fair, except in north-east corner of Tinnevelly where crops have failed.
Bombay (June 11th)—		
Sind—		
Kurrachee ...	...	River on 8th 9 feet 2 inches against 14 feet 11 inches on same date last year; water wanted for seed sown in Jerruck and Shahbandar districts; cholera in 8 talukas, in Kotri, Kurrachee and Sehwan 358 cases, 211 fatal.
Shikárpur ...	...	River on 10th 10 feet 3 inches against 11 feet 1 inch on same date last year; small-pox in 14 talukas; cattle-disease in 11 talukas; cholera in certain villages of 4 talukas.
Hyderabad ...	...	Cholera in 11 talukas, 1,037 cases, 732 fatal; cattle-disease in Nowshahro; river rising fast; strong wind in Sakrand taluka breaking branches of trees.
Upper Sind Frontier...	...	Weather hot and close; dust storms from north-west; *kharif* preparations continue; cholera in Mouladad, Novuza and Jummue, 60 cases, 16 fatal.
Guzerat—		
Ahmedabad ...	...	Lands being prepared for cultivation; slight cholera about.
Pánch Mahals ...	...	Weather clearer.
Kaira ...	...	General health good; slight rain in Mátar taluka; manuring operations continue.
Broach ...	...	Weather warm and cloudy; three fatal cases of cholera in city.
Surat ...	...	Total rainfall ·21, regular monsoon not yet set in; cholera in Bulsar taluka, 28 cases, 11 fatal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Khandesh and Násik—		
Khandesh ...	...	Slight showers in 8 talukas; agricultural operations progressing; public health good.
Colába (June 9th)	·39 at Alibág	Total rainfall 6·87; weather warm; public health good; cattle-disease in Mahád taluka.
Ratnágiri („ 3rd)	9·16	Total rainfall 11·43; sowing operations progressing; 7 deaths from fever in Málwan taluka.
Deccan—		
Poona ...	Maximum 1·24 at Bhimthari, minimum ·02 at Indápur.	*Kharif* sowing progressing.
Ahmednagar ...	·60, fall general; maximum 5· at Jámkhed, minimum 1·60 at Karjat.	Public health good.
Sholapur ...	Slight rain	*Kharif* sowing commenced in some talukas; condition of the poor not good.
Satara ...	·67; maximum 1·69 at Janli, minimum ·13 at Khánápur.	More rain wanted, especially in eastern talukas; health good.
Southern Mahratta Country—		
Kaládgi ...	Maximum ·66 at Indi, minimum ·21 at Bijápur.	More rain wanted; sowing commenced in red soil; slight fever.
Belgaum ...	·53; at Sampgaon ·68, at Bidi 1·26, little elsewhere.	Prospects good; sowing operations progressing; fever decreasing.
Dharwar ...	Average ·25	Sowing retarded in 2 talukas from excessive moisture, in others progressing; slight fever in 7 talukas.
Kanara ...	3·40 in Karwar; heavy fall in talukas.	Fever general; cattle disease in places; sowing continues.
Kattywar and Gaekwar's Territory—		
Rájkot ...	...	Weather hot and cloudy; cholera in Kotrasangani, Karána and villages under Junágarh and Jetpur; fever in some places.
Wadhwán ...	Few drops	Weather hot; 2 fatal cases of cholera in town, in Limri and Wadhwan talukas and in Bhalal 24 cases, 14 fatal.
Baroda ...	Slight at Karri and Amreli.	*Kharif* preparations continue; rice sowing commenced in Naswári; prices of grain slightly risen; public health good.
		General Remarks.—Cholera continues extensively in Sind and slightly in Guzerat; showers in the Deccan and Southern Mahratta country districts, but monsoon not established; in Bombay weather cloudy and warm.
Bengal—(June 11th)		
Chittagong ...	·75	
Noakholly ...	10·21	General health improved.
Chittagong Hill Tracts...	9·64	Much fever about.
Hill Tipperah ...	2·63	Public health somewhat improved.
Backergunge ...	3·13	Cholera still in Perozepore.
Furreedpore ...	6·83	Public health good.
Dacca ...	1·78	
Tipperah ...	1·58	
Mymensingh ...	6·63	
24-Pergunnahs ...	·11	Cholera in Baripore and Barasct.
Jessore ...	3·10	Sickness diminishing.
Nuddea ...	3·18	Cholera at Meherpore.
Moorshedabad ...	5·26	Public health generally good.
Pubna ...	4·14	Public health good.
Raishahye ...	8·83	
Bogra ...	6·64	
Maldah ...	4·38	Public health improving.
Dinagepore ...	·02	
Rungpore ...	2·74	Small-pox slightly abated.
Cooch Behar ...	4·04	Small-pox in Mekhaliganj.
Jalpáiguri ...	3·16	
Darjeeling ...	·32	
Midnapore ...	*Nil*	Small-pox slightly decreasing, cholera again in town.
Howrah ...	4·14	
Hooghly ...	·21	Public health improving.
Burdwan ...	·25	Health good in Raneegunge; 40 fatal cases of cholera.
Bankoora ...	1·88	
Beerbhoom ...	2·13	
Sonthal Pergunnahs ...	·23	
Bhágalpur ...	·21	
Monghyr ...	·98	
Purneah ...	*Nil*	
Durbhunga ...	*Nil*	
Mozufferpore ...	*Nil*	Cholera prevalent.
Sarun ...	*Nil*	Cholera and small-pox still prevalent.
Chumparun ...	·64	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Patna ...	*Nil*	Sporadic cholera and small-pox in places.
Gya ...	·65	
Shahabad ...	*Nil*	
Hazáribágh ...	1·96	Small-pox prevails, cholera in north and west.
Lohardugga ...	1·32	Cholera and small-pox still prevalent.
Manbhoom ...	*Nil*	Cholera still bad in many parts.
Singhbhoom ...	Slight rain.	
Balasore ...	·30	Cholera still prevalent, especially at and near head-quarters, some small-pox cases.
Cuttack ...	·13	
Pooree ...	1·64	
		General Remarks.—In Eastern and Central Bengal rainfall generally adequate for present agricultural purposes; in Orissa, Western Bengal, Chota Nagpore, and Behar rain still insufficient; some damage from floods in Dacca and Furreedpore; rapid rise of Megna also reported from Tipperah; rain in places in Northern Bengal rather excessive and a break needed.
N. W. P. and Oudh		
Benares (June 10th)	*Nil* since 2nd instant	Hot west wind blowing for some days; sickness decreasing.
Allahabad („ „)	Slight and partial showers on 3rd and 4th instant.	High hot westerly wind; no sign of rain; health good.
Jhánsi („ 11th)	·6 at Garotha on 5th instant.	Prices fluctuating.
Agra („ 10th)	Rain on 6th and 7th instant in six tahsils varying from ·1 to ·4; no rain since.	Heat again on the increase; cholera continues in four tahsils.
Bareilly („ 11th)	Heavy showers throughout the district in early part of week.	Ploughing has followed the rain; weather cooler; condition of people fair.
Meerut („ „)	Slight rain on 5th ...	Weather seasonable; fever prevalent; cholera 162 seizures, 88 deaths; cheapest price of wheat 17, gram 17, barley 22, *jowar* 20, and *bajra* 17 seers per rupee.
Kumaun („ 10th)	Rain has fallen everywhere.	Rain has done much good; cholera still prevails.
Lucknow („ 11th)	·1 on 5th.	West wind; weather hot; a few cases of cholera reported.
Partabgarh („ 9th)	Slight rain on 3rd and 4th at Sadr and in parts of district; ·10 at Kunda.	
Sitapur („ 11th)	.....	Steady west wind; weather seasonable.
Fyzabad („ „)	*Nil*	Wind again westerly; manuring of fields continues.
		General Remarks.—Light rain over the whole province in the early part of the week; westerly winds now prevalent; cholera still continues in Kumaun, Meerut and Agra, and a few cases have occurred in Lucknow; ploughing begun in Bareilly.
Punjab—(10th June)—		
Delhi ...	*Nil*	Prospects fair; prices of food-grains show a downward tendency; fever about and few cases of cholera.
Hissar ...	*Nil*	Slight rise in prices of food-grains; weather cloudy; cholera diminishing.
Umballa ...	·7	Cholera about.
Jullundur ...	Slight rain ...	Prices steady; *rabi* nearly garnered; health good.
Amritsar ...	·5	Crops completely threshed; prices steady.
Ferozepore ...	·2	Crops almost all harvested; cholera about.
Lahore ...	·3	Land preparing for *kharif* crop; cholera prevails.
Siálkot ...	1·5	Prospects good.
Ráwalpindi ...	1·0	*Kharif* prospects good; cholera prevails.
Mooltan ...	1·4	*Rabi* crops all removed; preparations for *kharif* sowings commenced; prices of food-grains show a downward tendency.
Dera Ismail Khan ...	·12	Crops being gathered; weather cool; health good.
		General Remarks.—Weather seasonable and prospects generally may be considered favourable.
Central Provinces—		
Nimár ...	.....	Cooler; health good; prices steady.
Hoshangabad ...	.....	Warm; ploughing continues; few cases of small-pox; prices stationary.
Betúl ...	6·20	Ploughing continues; slight cholera; prices steady.
Wardha ...	·03	Ploughing continues; slight cholera; prices steady.
Nágpur (June 11th)	.....	Close; considerable portion of land ploughed and ready for sowings on the first fall of rain; cholera abating.
Chánda ...	1·76	Cloudy; hot; ploughing and manuring continue; few cases of cholera and small-pox; prices rising steadily.
Narsinghpur ...	.....	Rice sowings commenced; health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *continued.*		
Bhandara (June 10th)	.....	Cloudy; close; ploughing for *kharif* sowings continue; cholera, small-pox and fever prevalent; prices continue high.
Seoni ...	·20	Hot; *kharif* sowings progressing; cholera and small-pox continues.
Bálaghát ...	1·62	Cloudy; hot; sowings commenced in places; cholera and small-pox continue; prices steady.
Mandla ...	3·90	Sowings progressing; cholera continues; prices stationary.
Saugor ...	.....	Cloudy; *kharif* ploughing continues; cotton sowings commenced; small-pox still prevalent; prices stationary.
Damoh ...	·14	Land being prepared for *kharif* sowings; health good; prices rising.
Jubbulpore ...	.....	Sultry; oppressive; *kharif* sowings commenced in places; small-pox continues; prices rising.
Raipur ...	1·88	Close; cloudy; ploughing for *kharif* sowings continue; cholera and small-pox still prevalent; prices considerably risen.
Bilaspur (June 7th)	·12	Ploughing progressing; rice sowings commenced in places; cholera decreasing; small-pox and cattle-disease disappearing; fever prevalent.
Sambalpur (June 6th)	·97	Cloudy; hot; ploughing for *kharif* sowings progressing; fever and small-pox continue.
		General Remarks.—Close; cloudy; good rain has fallen at Raipur, Balaghat, Mandla, Betul and Chanda, slight in 5 other districts; ploughing for *kharif* sowing being pushed on; rice and cotton sowings commenced in places; cholera more or less prevalent in 10 districts; prices rising.
British Burma— (June 11th)		
Arakan Division ...	...	Public health continues good.
Pegu Division—		
Rangoon ...	...	One death from cholera, and 7 fatal cases of small-pox in Rangoon town; public health of district good; ploughing commenced.
Thonkwa ...	...	Health generally good; 1 death from small-pox, 1 from cholera; 68 deaths reported from cattle-disease; disease spreading.
Henzada ...	...	Public health good; 3 deaths from small-pox; cattle disease, 19 deaths in Dhambhee, 80 in Htantaberg, 7 in Khabaing circle; ploughing commenced.
Bassein ...	...	Public health good; cattle disease, 146 deaths in Ytigyee township from 24th April to 28th May, 231 in Thaboung during May, 29 in Theegwin from 27th May to 4th June, and 148 in Bassein from 3rd to 8th June.
Tharrawaddy ...	...	Public health good.
Prome ...	...	Small-pox in Prome and Mahathaman, otherwise health good.
Thayetmyo ...	...	General health normal.
Tennaserim Division—		
Amherst ...	...	Public health good; ploughing commenced everywhere; cattle disease, 118 deaths among buffaloes in Wagaroo, 41 deaths at Hlinebwai.
Shwegyeen ...	...	Public health normal.
Toungoo ...	...	Public health good.
Mergui (May 24th)	...	Public health good; cattle healthy.
Tavoy („ „)	...	Public health good.
		General Remarks.—Public health good; ploughing commenced; cattle-disease prevalent in four districts.
Assam—		
Gauháti (June 11th)	1·04	Weather seasonable; slight damage to *aus* crop on low lands by inundation.
Sylhet („ „)	3·67	Prospects good; much fever about; price of rice lower.
Mysore and Coorg— (June 11th)—	Rain throughout the province; ·96 at Bangalore.	Prospects hopeful; later crops of paddy being harvested; ploughing operations continue; public health generally good; prices slightly risen.
Hyderabad Assigned Districts—(June 11th)		
Amráoti ...	·08	Cotton sowing commenced.
Central India— (June 11th)		
Indore ...	·9	Health good; all food-grain dear.
Morar ...	·35	
Sutna ...	·10	Weather hot; clear sky; high west wind; cholera still prevails at Rewah, Sutna, Sohawal and Nagode.
Neemuch ...	1·85	Weather cloudy.
Rutlam ...	1·80	Health good.
Sirdarpore ...	...	Health good; weather cool but less sign of rains; fears of maize sowing suffering if rain does not fall soon.
Agar ...	·15	Health good.
Mánpur ...	·85	Prices stationary.
Bhopal ...	·10	Cloudy.
Goona ...	*Nil*	
Nowgong ...	...	No report received.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—		
Abu (June 11th)	1·0	Occasional clouds.
Serohi („ 8th)	3·29	Tanks partially filled; health fair; cool and fresh, with strong winds at night; season agreeable.
Marwar („ 7th)	.....	Sufficient water supply; health good; cooler; prices steady; prospects good.
Bickaneer („ 3rd)	.....	Health good; sowing operations not commenced, no rain having fallen; no scarcity of water; heat excessive.
Meywar („ 6th)	·20	Tanks, wells and health good; high winds, heavy clouds; signs of early monsoons; cool.
Harowtee („ 7th)	·11 in Deoli; ·10 in Kotah; ·09 in Shahpura.	Health good; weather cooler; cloudy, with dust storms; winds variable.
Jhallawar („ 5th)	Shower on Sunday ...	Weather cloudy; strong winds; health good.
Ajmere („ 11th)	30 Jassakhera to Dawer, elsewhere showers.	Seasonable weather; approach of monsoon apparent.
Jeypore ...	Sprinkling of rain ...	Weather stormy and cloudy; health good.
Bhurtpur (June 10th)	.....	Health good; prices steady; cloudy and stormy.
Ulwur ...	·30 in Tyanah only ...	Wells failing; cholera decreasing.

PUBLIC WORKS DEPARTMENT.

RAILWAY.

RETURNS OF ACCIDENTS ON INDIAN RAILWAYS FOR THE THIRD QUARTER OF 1878.

Circular No. 15 R., dated Simla, 29th May 1879.

RESOLUTION.

Read again—

Public Works Department Circular No. 4R. of 6th February 1879.
" " " " " 10R. of 12th March 1879.

Read also—

Returns of Accidents to trains, &c., on Railways open for traffic in India for the third quarter of 1878.

OBSERVATIONS.—*Part I.—Accidents to Trains, Rolling-stock, Permanent-way, &c.*—The total casualties resulting from accidents to trains, &c., during the third quarter of 1878, were among passengers—1 killed and 6 injured, and among Railway servants 7 injured. The casualties to passengers were caused by a bank on the Indus Valley State Railway, which had been undermined by flood water, sinking under the weight of the engine of a mixed train. Of the 7 servants injured, 5 received injuries from a lorry running against an engine standing at the reversing station, Bhore Ghat, through failure of the brake of the lorry.

There were 3 collisions between passenger trains or parts of passenger trains by which 1 servant was injured; 3 collisions between passenger trains and goods or mineral trains, engines and vehicles standing foul of the line, causing injury to 1 servant; 5 collisions between goods trains or parts of goods trains; 4 collisions between light engines; 4 cases of passenger trains or parts of passenger trains leaving the rails; 76 cases of goods trains or parts of goods trains, engines, &c., leaving the rails; 1 case of engine travelling in the wrong direction through points; 1 case of train running into stations or sidings

at too high a speed; 151 cases of trains running over cattle; 21 cases of trains running over obstructions on the line; 7 cases of trains running through level-crossing gates; and 1 case of bursting of the gauge glass of the engine. There were 22 failures of engine machinery, 1 of wheels, 1 of tyres, 14 of axles, 1 of lorry brake apparatus, causing injury to 5 Railway servants, already referred to, 44 of couplings and 1 of a bridge.

Of the 14 cases of failures of axles, 8 took place on the Great Indian Peninsula Railway, and of the 44 cases of failures of couplings, 15 were on the East Indian, 10 on the Punjab Northern, and 10 on the Rajputana.

There were also reported 9 cases of broken rails; 34 cases of flooding of portions of permanent-way, in one of which 1 passenger was killed and 6 injured as above noticed; 27 cases of slips in cuttings or embankments; 11 cases of fire in trains; and 159 miscellaneous accidents.

The number of miscellaneous accidents is, as previously, the largest on the East Indian Railway, being 142 out of a total of 159. This is due to the inclusion of many accidents of a minor character which, it is presumed, are omitted from the returns of other Railways. Under the ruling laid down in Public Works Department Circular No. 4R. of 6th February 1879, certain minor accidents should be excluded in future.

The total number of accidents to trains, &c., was 601, against 733 in the first quarter and 752 in the second, there being a decrease of 18 and 20 per cent., respectively. The casualties resulting from these accidents were, 1 killed and 13 injured, against 3 killed and 4 injured in the first quarter, and 5 killed and 16 injured in the second quarter.

The number of cattle accidents shows a large decrease, being 151 against 224 in the previous quarter. This is chiefly due to the number on the Rajputana Railway falling off from 55 to 10. The accidents from fire also decreased considerably, *viz.*, from 151 in the first quarter and 79 in the second quarter to 11 in the quarter under review. The decrease is most prominent on the Great Indian Peninsula Railway, there being only 1 accident against 55 in the first quarter.

In returning the cases of trains running over cattle on some of the Railways, nothing is said as to the state of the fencing. It is desirable that this should be done in future.

It is observed that the case in which a wagon had to be detached from a train on the East Indian Railway on 1st July, on account of broken spring, is classified under heading 25 of the key to Part I. This should have been shown under heading 13. Similarly, the derailments of wagons which took place on this line during shunting operations should have been classified under heading 6 instead of 25. It is not clear why the damage caused to two wagons through bad iron on the 29th September is classified under heading 18.

The derailment of a pilot engine on the Madras Railway on the 30th September, caused by the fracture of a switch handle, should have been shown under heading 13, and not heading 6. Whenever an accident appears to come under more than one heading, *i.e.*, when one accident leads to another, such as derailments of wagons or carriages caused by the failure of axles or wheels, the classification should always be made with reference to the primary cause.

In the return of the Rangoon and Irrawaddy Valley State Railway, the breaking down of 3 ballast wagons on 6th September in Menghladoon quarry, through coolies hand-shunting them without order, is classified under "collisions between goods trains or parts of goods train." It is not unlikely that a collision took place, but the facts should have been more clearly stated.

It appears that 1 rail and 1 chair were broken on the Great Indian Peninsula Railway by the slip of rock which took place on the 17th September. This accident should have been repeated in the general return as directed in paragraph 3 of Public Works Department Circular No. 27 R. of 16th September 1878.

Part II.—Accidents to Passengers from causes other than accidents to trains, &c., persons passing over level-crossings, trespassers, and others.—There were 3 passengers killed and 9 injured, of whom 2 were killed and 1 injured by

falling between carriages and platforms; 1 injured by the closing of a carriage door; 6 injured by falling out of carriages during the travelling of trains; and 1 killed and 1 injured through other causes. Of other persons included in this part of the return, 2 were killed and 1 injured whilst passing over railways at level-crossings; 44 killed and 10 injured while trespassing on the line; 17 were suicides; and 10 killed and 1 injured from miscellaneous causes.

The numbers of passengers killed and injured during the first three quarters were as follows:—

				Killed.	Injured.
1st quarter of 1878	...	...	...	5	9
2nd „ „	...	...	...	1	14
3rd „ „	...	...	...	3	9

In the case of a boy who was killed by wolves, and whose body was found on the pathway at the side of the line near Jhinjhak, East Indian Railway, the entry is made under "Other persons—Miscellaneous" in this part of the return. This accident should have been shown in Part IV, and all cases of dead bodies found within the boundaries of a Railway, not run over by trains, should, in future, be similarly dealt with.

Part III.—Accidents to servants in the employ of railways or of contractors whilst performing duties connected directly with the transit of passengers and goods.—Out of a total of 39 killed and 53 injured, 2 were killed and 7 injured during shunting operations; 6 injured by falling off engines, &c.; 1 killed by coming in contact with overbridge, &c., during the travelling of trains; 2 injured by coming in contact, while shunting, with vehicles, &c., standing in adjoining lines; 5 killed and 6 injured while getting on or off trains, engines, &c.; 6 injured whilst loading, unloading or shunting; 1 injured whilst breaking, spragging, or chocking wheels; 2 killed whilst working at cranes or capstans; 2 killed and 2 injured whilst working on the permanent-way or in sidings; 4 killed whilst walking along the lines on the way home or to work; 11 killed and 3 injured whilst walking, crossing or standing on the line; 1 killed and 1 injured whilst passing between vehicles; 2 injured whilst attending to the machinery of engines, cleaning them, &c.; 5 killed and 2 injured whilst attending to gates at level-crossings; 1 killed and 1 injured by falling or being caught between vehicles and platforms; 2 injured by falling off ladders, scaffolds, platforms, &c.; 1 killed and 3 injured by the falling of lamps, wagon-doors, timber weights, &c.; 2 killed and 3 injured whilst coupling or uncoupling wagons; and 2 killed and 6 injured from miscellaneous causes.

On the Rangoon and Irrawaddy Valley State Railway, 1 fireman fell off the foot-plate of an engine and another fell off the tender of the engine of a mixed train, but both fortunately escaped injury.

As compared with the first quarter of 1878, the number killed shows an increase of 5 and the number injured a decrease of 12; and as compared with the second quarter of 1878, the number killed shows an increase of 3 and the number injured a decrease of 24.

The following table exhibits the total numbers of persons killed and injured from causes connected with the working of trains on all Railways:—

	Killed.	Injured.
Passengers—		
From causes beyond their own control	1	7
„ misconduct or want of caution	3	8
Servants—		
From causes beyond their own control	10	21
„ misconduct or want of caution	29	39
Persons passing at level-crossings	2	1
Trespassers (including suicides)	61	10
Other persons	10	1
	116	87

In addition to the above, 9 persons are reported to have been killed, 46 injured in yards, workshops, &c., and 72 passengers to have met with death in carriages and at stations owing largely to their undertaking journeys when not in a fit state of health to travel.

On the Indus Valley State Railway, a Guard is said to have died from heat apoplexy while travelling in charge of a train on 2nd July. This casualty should have been entered in Part III, and not in Part V, which is only intended to show deaths of passengers.

Owing to the late submission of the returns of some of the Railways the compilation of the General Returns under review has been considerably delayed.

The following particulars have been omitted from the General Returns owing to their having been received too late :—

Indus Valley State Railway.

Number of servants employed	1,379
„ of passengers carried	93,685
Train mileage of all descriptions	74,884
Passenger mileage	4,593,856

Per mile open.

Number of passengers carried	334
Train mileage of all descriptions	267
Passenger mileage	16,406

RESOLUTION.—Resolved, that the necessity of adopting such measures as will ensure the punctual submission of the accident returns in future be impressed upon the Local Governments and Officers concerned, and their attention be drawn to the remarks made above in regard to the classification of certain accidents and the omission on the part of some of the Railways to report, in connection with cattle accidents, the condition of the fencing on the line.

ORDER.—Ordered, that this Resolution be communicated to the Governments, Administrations and Officers noted in the margin, for information and guidance, together with copies of the returns compiled.

Madras, Bombay, Bengal, North-Western Provinces and Oudh, Central Provinces, British Burma, and Hyderabad.
Consulting Engineers to the Government of India for Guaranteed Railways.
Director of State Railways, Western System.

Ordered also, that these papers be forwarded to the Government and Administrations and Department marginally noted, for information, and that copies be forwarded to the Secretary of State for the information of Her Majesty's Government.

Punjab.
Mysore and Coorg.
Assam.
Rajputana.
Central India.
Home Department.

Ordered further, that this Resolution, with Tables 1 to 4 of the Returns, be published in the Supplement to the *Gazette of India*.

NOTE—(*a*) In last half yearly statement for Kharif, 1877-78, the rainfall during June 1877 was shown as 6·80, which was a clerical error.
(*b*) Superintending Engineer states that the rainfall, 2·30, is correct, and not 1·11 as shown in previous return.
(*c*) Superintending Engineer, Derajat Circle, has since reported that the acreage of the Dera Ghazi Khan District is 142,502 as shown in this return.
(*d*) The difference between the total acreage for Kharif, 1877-78, shown in this return and in the one for that crop is due to the addition of 4,010 acres for the Shahpur Canals in the present statement.

* Juar (small).
† Choti juar.
‡ Kodo.
§ Labarra, sawan, kakun, and kodo.
‖ Peas.
¶ Peas, arhar, mash, and kodo.

[a] Barley rising and jowar falling.
[b] Barley rising.
[c] Firewood rising.
[d] Jowar rising.
[e] Jowar and firewood rising.
[f] Barley falling.
[g] Firewood falling.

Prices Current of Food-grains throughout India for the 2nd half of May 1879—concluded.

QUANTITIES PER RUPEE IN SEERS OF 80 TOLAHS.

A. O. HUME,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE AND COMMERCE.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 17th JUNE 1879.

General Remarks.—In Madras general prospects remain fair. Rain continues to fall throughout the Province of Mysore and cultivation is in active progress. In the Bombay Presidency good general rain has fallen in the Deccan districts, Konkan and the Southern Mahratta Country, and there has also been heavy rain in Bombay; the outlook is promising; cholera prevails extensively in Sind and slightly in Guzerat and Tanna. Very slight rain fell in only a few districts of the Central Provinces and the weather was hot and oppressive; ploughing for the *kharif* sowings is in progress, but rice and cotton sowings have been suspended in several districts in consequence of the want of rain; prices are steady. Sowings continue in Berar. There has been more or less rain in six stations in Central India and sowing has begun in Malwa. Some rain fell in parts of Rajputana and ploughing has commenced in places. Rain has fallen in nearly all the districts of Bengal; in Bengal proper matters have greatly improved but more rain is required in the Burdwan and Presidency Divisions; in Jalpáiguri and Cooch Behar the rain has somewhat injured the early rice and jute, and in Pubna, Dacca, Furreedpore and Mymensingh the crops on low lands are suffering from inundations; in Behar, Orissa and Chota Nagpore there has been insufficient rain and cultivation is backward; a simultaneous outbreak of cholera is reported from a block of five districts. Rain continues in Assam; in Sylhet it has been heavy, and it is feared that the low-lying rice crops, which were sown late, will suffer from inundation. The rainfall in British Burma is not stated, but other reports shew that it continues in Rangoon and Akyab; ploughing is going on in places and the general health of the province is good; cattle-disease still exists. Slight rain has fallen in several districts of the North-Western Provinces and Oudh and there were indications of more; ploughing has begun in Jhansi and *kharif* sowings in the canal tracts in Agra; sickness is decreasing. In the Punjab rain is wanted in Umballa and Ferozepore and preparations for the *kharif* have commenced in Lahore and Mooltan; the condition of the province generally is favourable.

The principal feature of the week was the prospect of the early establishment of the monsoon throughout the greater part of India; a prospect which was not however fully realised, although later reports show that there is no present cause for any anxiety.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 14th)	1·1 (average of 5 stations); no report from Narsarowpet; other stations *nil*.	Rice 10·83, *cholum* 13·37, *raggi* 17·31, *cumboo* 13·03; 13 inches water over anicut; *sazza, jonna* and maize are being sown in some taluks.
Kurnool („ „)	1·72 (average of 7 stations).	Rice 10·83, *cholum* 15·22, *raggi* 19·79, *cumboo* 16·83; season favourable; agricultural operations going on steadily; the land is being made ready for sowing; fodder and water ample.
Tanjore („ „)	1·04 (average of 10 stations); *nil* in others.	Rice 10·23, *cholum* 14·96, *raggi* 16·85, *cumboo* 16·17; Cauvery and its branches flow with about 12 to 67 inches of water; the few standing dry and garden-grown crops are generally in good condition, except in parts of the Tanjore and Puttukottai taluks; harvest *nil*, outturn *nil*.
Madura („ „)	·17 (average of 4 stations).	Rice 9·5, *cholum* 15·12, *raggi* 15·79, *cumboo* 15·86.
Malabar („ „)	·83 (average of 12 stations); Manjeri and Vyteri returns not received.	Rice 9·85, *raggi* 17·25; prices slightly risen in Walluvanad and Cochin, fallen in Wynaad, stationary elsewhere; rain sufficient for first crop cultivation; pasture improving.
		General Remarks.—General prospects fair.
Bombay (June 18th)—		
Sind—		
Kurrachee ...	·08 at Tatta; ·03 at Manora.	River at Kotri on 15th 10 feet 7 inches against 14½ feet on same date last year; Western Nára commenced to flow; small-pox in Bubak; cholera cases 710, deaths 426.
Shikárpur ...	...	River 5 feet 1 inch lower than on same date last year; water in Western Nára insufficient for *kharif* sowing; rice planting commenced; small-pox and cholera in 11, and cattle-disease in 3, talukas.
Hyderabad ...	...	*Kharif* sowing continues; rivers very low and falling; small-pox in Kandiáro and Sakrand; fever in 3, cholera in 13, talukas, cases 1,416, deaths 958.
Upper Sind Frontier...	About ·25	Weather hot; lightning and dust-storm last night followed by drizzling rain; rain beneficial to public health; cholera decreasing, 7 cases amongst labourers on Khasmor Bund, 3 fatal; water-supply deficient in the Begári and the Desert Canals.
Guzerat—		
Ahmedabad ...	·06	Lands being prepared for cultivation; slight cholera about, one fatal case in city.
Páneh Mahâls ...	...	Weather cloudy.
Kaira ...	...	Weather somewhat cloudy; 2 cholera cases in Nariád, 1 fatal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Surat ...	Varying in taluks from 3·45 to ·12.	More rain needed for rice and other crops; cholera in Bulsar, 16 cases, 5 deaths.
Broach ...	...	Weather cloudy.
Khandesh and Násik—		
Khandesh ...	...	Rain much wanted; sowing commenced in places; public health good.
Násik ...	Good rain everywhere.	Sowing in progress; few cases of cholera in Malegaon, one death.
Konkan—		
Tanna ...	4·41	Total rainfall 9·13; sowing nearly completed; cholera in Dáhánu and Bassein talukas.
Colába (June 16th)	3·66 at Alibág	Total rainfall 10·53; weather warm; public health good; cattle-disease in Mahád taluka; sowing operations commenced in all talukas.
Ratnágiri („ 10th)	3·27	Total rainfall 14·70; sowing operations nearly completed; 24 deaths from fever in Malwan taluka, and 10 from cholera in Dápoli taluka.
Deccan—		
Poona ...	Maximum 3·27 at Judupur, minimum ·44 at Khed.	
Ahmednagar ...	1·90, fall general; maximum 4·15 at Sheogaon, minimum 1·36 at Shrigonda.	Sowing commenced in parts of Jamkhed and Newása; public health good.
Sholapur ...	Rain general	Sowings general, but stopped in Málsiras owing to excessive fall; condition of poor not good.
Satara ...	1·72, fall general and seasonable; maximum 4·88 in Mán, minimum 1·27 in Jauli.	Total rainfall 2·42; *kharif* sowing progressing.
Southern Mahratta Country—		
Kaládgi ...	Rain throughout district; maximum 2·96 at Bagewári, minimum ·46 at Indi.	Sowing commenced in red soil; slight fever.
Belgaum ...	Rain general; in Athni 3·45.	Prospects good; sowing progressing.
Dharwar ...	Average 2·68	Rice sowing nearly completed; ague and fever in 8 talukas; seed sown in some talukas devoured by rats.
Kanara ...	8·07 at Karwar; maximum 13·40 at Honáwar, minimum 1·38 at Haliyál.	Cattle-disease in Honáwar; sowing continues; fever prevalent.
Kattywar and Gaekwar's Territory—		
Rájkot ...	...	Weather cloudy; cholera in town and other places in Kattywar; fever prevalent.
Wadhwán ...	...	Weather sometimes cloudy; one fatal case of cholera in camp, in Chara, Simri and Bhalod talukas 49 cases, 30 deaths; cattle-disease in Wánkáner taluka.
Baroda ...	Passing showers in places.	Public health good; prices of grain stationary.
		General Remarks.—Cholera continues in Sind and slightly in Guzerat and Tanna; good rain general throughout the Deccan Konkan and the Southern Mahratta Country; heavy rain in Bombay; prospects promising.
Bengal—(June 18th)—		
Chittagong ...	18·62	
Noakholly ...	11·04	General health satisfactory.
Chittagong Hill Tracts...	2·73	
Hill Tipperah ...	·29	Public health good.
Backergunge ...	·37	
Furreedpore ...	1·02	
Dacca ...	3·88	
Tipperah ...	7·30	
Mymensingh ...	·17	
24-Pergunnahs ...	1·20	Public health fair; sporadic cases of cholera in Busseerhat and Baraset.
Jessore ...	*Nil*	Public health improving.
Nuddea ...	*Nil*	
Moorshedabad ...	·20	Public health generally good.
Pubna ...	·03	Public health generally good.
Rajshahye ...	2·03	Cholera abated.
Bogra ...	·34	
Maldah ...	·88	Public health improved.
Dinagepore ...	4·60	
Rungpore ...	5·82	Small-pox and cholera somewhat abated.
Cooch Behar ...	5·47	Public health generally good.
Jalpáiguri ...	11·27	
Darjeeling ...	3·77	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Midnapore ...	·81	Sudden out-break of cholera in town and vicinity.
Howrah ...	*Nil*	Cholera among travellers on Cuttack road.
Hooghly ...	1·33	Public health improving.
Burdwan ...	1·0	Seventy-five fatal cases of cholera in Raneegunge and neighbourhood, small-pox and cholera in Culna and Bood-bood.
Bankoora ...	1·31	
Beerbhoom ...	·39	
Sonthal Pergunnahs ...	·60	
Bhágalpur ...	·60	
Monghyr ...	·11	
Purneah ...	2·37	
Durbhunga ...	2·18	Cholera still in town and many villages.
Mozufferpore ...	4·82	Cholera still prevalent.
Sarun ...	*Nil*	Cholera and small-pox still prevalent.
Chumparun ...	2·79	
Patna ...	·08	Cholera less.
Gya ...	*Nil*	
Shahabad ...	·36	
Hazáribágh ...	*Nil*	Small-pox still prevalent.
Lohardugga ...	*Nil*	Small-pox and cholera still very prevalent, latter increasing.
Manbhoom ...	·05	Twenty-six deaths from cholera in Purulia town, and cases in all parts of district.
Singhbhoom ...	*Nil*	Virulent cholera in Chaibassa, cholera also in other parts of district.
Balasore ...	1·82	Cholera widespread and severe.
Cuttack ...	·26	
Pooree ...	1·32	
		General Remarks.—In Bengal proper prospects generally much improved, but more rain still wanted in Burdwan and Presidency divisions; in Jalpáiguri and Cooch Behar rainfall rather injurious to early rice and jute; in Pubna, Dacca, Furreedpore and Mymensingh crops on low lands suffering from inundations; in Behar, Orissa and in Chota Nagpore rainfall hitherto very insufficient and cultivation backward; a simultaneous outbreak of cholera reported from the block of districts, Balasore, Midnapore, Manbhoom, Singhbhoom and Lohardugga.
N. W. P. and Oudh— (June 18th)		
Benares (June 17th)	A few drops of rain last night.	East wind; cool and cloudy; sugar-cane being irrigated; sickness lessening.
Allahabad („ „)	.....	High hot west wind until yesterday, when wind changed to east and heavy clouds came up; health good.
Jhánsi („ 18th)	*Nil*	Prices rising; ploughing begun; scarcity of water in wells felt.
Agra („ „)	*Nil*	Hot westerly winds; cholera, fever, and cattle-disease decreasing; *kharif* sowings begun in canal tracts.
Bareilly („ 17th)	...	Weather again hot; wind variable, but chiefly westerly; health and condition of people fair.
Meerut („ 18th)	·2 on night of 17th	Monsoon begun; easterly wind; cloudy; fever continues; cholera 178 seizures, 55 deaths; cheapest price of wheat 16¼, barley 21½, gram 17½, *jowar* 18, *bajra* 17 seers.
Kumaun („ 15th)	*Nil*	Westerly winds; hot.
Lucknow („ 18th)	Slight shower on night of 16th.	Cloudy.
Partabgarh („ 16th)	.....	Hot; westerly winds have re-commenced, yesterday wind easterly, to-day it has gone back to west; a few cases of cattle-disease reported in tahsil Patti.
Sitapur („ 18th)	*Nil*	Wind east; very cloudy.
Fyzabad („ „)	·8 on 17th at Sadr ...	Rain partial; wind easterly and high; sky cloudy. *General Remarks.*—Slight rain in several districts; cloudiness increasing; wind variable, but chiefly easterly; cholera, fever, and cattle-disease decreasing.
Punjab—(17th June)—		
Delhi ...	*Nil*	Prospects fair; slight increase in prices of food-grains; fever prevailing and a few cases of cholera.
Umballa ...	.....	Rain wanted for *kharif* sowings; cholera prevalent.
Jullundur ...	1·8	Crops gathered; health good.
Amritsar ...	Slight rain ...	Fever prevalent; prices steady.
Ferozepore ...	.....	Rain much wanted for *kharif* sowings; weather cloudy; cholera prevalent.
Lahore ...	·1	Preparations for *kharif* sowings commenced; cholera subsiding.
Siálkot ...	*Nil*	
Ráwalpindi ...	·5	Agricultural prospects good; cholera prevails.
Mooltan ...	Slight rain ...	*Kharif* sowings commenced; slight fluctuations in prices of food-grains; health good.
Dera Ismail Khan ...	.....	Weather cloudy; harvest gathered; health good. *General Remarks.*—Weather fair; agricultural prospects favourable; cholera prevalent; health otherwise good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— (June 18th)		
Nimár ...	...	Sowings suspended for want of rain; health good; prices steady.
Hoshangabad ...	·86	Ploughing completed; land ready for sowings.
Betúl ...	...	Cloudy and close; ploughing for *kharif* sowings continue; prices slightly risen.
Wardha ...	·56	Sowings commenced; one cholera case; prices steady.
Nágpur (June 18th)	·15	Cloudy and very hot; *kharif* sowings commenced in places; few cases of cholera.
Chánda ...	...	Cloudy and hot; ploughing and manuring continue; cholera increasing; small-pox decreasing; prices stationary.
Narsinghpur ...	...	Sowings of rice and cotton commenced; prices rising.
Seoni ...	·55	Hot; *kharif* sowings continue; cholera and small-pox continue.
Bálaghát ...	...	Cloudy and hot; *kharif* sowings progressing; cholera and small-pox prevalent; prices stationary.
Mandla ...	...	Ploughing progressing; cholera continues; prices stationary.
Saugor ...	Slight showers ...	Cloudy; small-pox continues.
Damoh ...	...	Rain wanted for sowings; health good; prices rising.
Jubbulpore ...	·82	Close and sultry; ploughing for *kharif* progressing; small-pox continues.
Raipur ...	...	Very sultry; rice sowings progressing; cholera and small-pox continue; prices stationary.
Bilaspur (June 14th)	...	Very hot; sowings stopped for want of rain; manuring fields continues; cholera prevalent; small-pox decreased; prices stationary.
Sambalpur („ 13th)	...	Very close and oppressive; ploughing continues; large quantity of rice sown; fever and small-pox prevalent.
		General Remarks.—Hot and oppressive; cloudy towards end of week; ploughing for *kharif* sowings progressing; rice and cotton sowings continue in a few districts, in others suspended for want of rain; cholera in nine districts; prices steady.
British Burma— (June 18th)		
Arakan Division ...	...	Twenty-eight deaths from cholera between the 8th and 31st May reported from Cheduba, otherwise public health good; weather favourable for ploughing, which has commenced.
Pegu Division—		
Rangoon ...	...	Two fatal cases of small-pox in Rangoon town; public health of district good; slight cattle-disease; ploughing continues.
Thonkwa ...	...	General health good; slight cattle-disease in Donabyoo and Yandoon townships; no report received from Phyapoon, Shweloung and Pantanaw townships.
Bassein ...	...	Public health good; cattle-disease, 197 deaths in Bassein township from 1st to 13th June, 34 in Theegwin from 3rd to 7th June, 2 in Ngapootaw from 8th to 29th May, 103 in Thaboung from 24th May to 8th June, 608 in Kyoonpyaw from 10th May to 4th June, and 65 in Yaigyee from 29th May to 1st June.
Henzada ...	...	Public health good; 31 deaths from cattle-disease in Dhambae.
Tharrawaddy ...	...	Public health good.
Prome ...	...	Slight small-pox in Prome town, otherwise public health good.
Thayetmyo ...	...	General health normal.
Tennaserim Division—		
Amherst ...	...	Public health good; cattle-disease, 61 deaths in Amherst township, 43 in Gyne Attaran, 87 in Hlinebway, and 51 in Thatone.
Shwegyeen ...	...	Public health fair.
Toungoo ...	...	Public health good; 95 deaths from cattle-disease in Zeawaddie township during past fortnight.
		General Remarks.—General health good; cattle-disease continues.
Assam—		
Gauháti (June 18th)	1·88	Weather seasonable; slight damage to *asu* crops on low lands by inundation.
Sylhet („ „)	16·41	The water has risen again, and fears are entertained for low-lying rice crops, because they were sown so late; fever still prevalent.
Mysore and Coorg—	1·40 at Bangalore; good rain also throughout the Province; 4·61 in Coorg.	Cultivation carried on actively; health good.
Hyderabad Assigned Districts—		
Amráoti (June 18th)	·60	Sowings in progress.

Telegraph.

ADMINISTRATION REPORT OF THE TELEGRAPH DEPARTMENT FOR THE YEAR 1877-78.

Nos. 193-208 T, dated Simla, June 5, 1879.

Read—

Letter No. 533T., dated 28th December 1878, together with its enclosure, the Administration Report of the Telegraph Department for 1877-78.

RESOLUTION.—For the first time since the establishment of the Telegraph System in India, the receipts have more than covered the working expenses, exclusive of the interest charges. The Government of India views with great satisfaction this evidence of the care and ability with which the administration of the department has been conducted.

2. The net capital expenditure during the year was Rs. 9,01,455, and the capital account of the department, excluding Ceylon, stood at the end of the year under review at Rs. 3,30,13,602.*

* There is a discrepancy, amounting to Rs. 36,478, between this amount shewn in the report and the amount entered in the Finance and Revenue Accounts, which should be cleared up.

3. The working expenses amounted to Rs. 31,40,124, while the earnings aggregated Rs. 33,22,252, leaving a surplus of Rs. 1,82,128 after providing for the loss of Rs. 29,524 sustained in working the Ceylon System of Telegraphs.

4. The expenditure per mile of line has also decreased from Rs. 162·12 in 1872-73 to Rs. 147·08 during the year under review; while the receipts per mile of line have risen in the same period from Rs. 117·09 to Rs. 155·61.

5. The main increase of revenue is under the head "message revenue earned" (Rs. 5,29,903), while there is a falling-off of Rs. 16,190 in the news-free and other "*pro formâ* message revenue."

6. There has been a large increase in the business of the department under every head, State and private, inland and foreign. The increase in inland messages, both State and private, is largely attributable to the famine in Southern India, and to the activity of the grain trade.

7. The average value of State messages shows a slight increase, while that of private messages has decreased. The attention of all officers authorised to issue telegrams on the public service to places out of India has recently been drawn by circular to the necessity for care in the compression of foreign State messages, and the report under review shows that this point requires careful attention with reference to inland State messages also, though on administrative subjects clearness should never be sacrificed to mere condensation.

8. During the year, an important benefit has been conferred on the public in the exemption of inland messages from forwarding charges.

9. There is a marked increase in the number and value of private foreign messages. The impetus to which this increase is due was probably afforded by the introduction of the word tariff. The "word tariff" system has been extended during the year to Japan and to Cuba.

10. The percentage of complaints on matters for which the department is responsible shows a considerable reduction, as compared with the figures for the previous year.

11. There has been great improvement in the average speed of transmission of messages between Karachi and Calcutta, Bombay and Karachi, and Calcutta and Rangoon; while on the main lines converging on Madras there has been a falling-off in average speed of transmission owing to the abnormal pressure of traffic.

12. The decrease which has taken place in the length of "news-free" messages is satisfactory.

13. A marked decrease is shown in the number and duration of interruptions on departmental lines.

14. With reference to paragraph 66 of the report, the Government of India concur with the Director General in thinking that considerable economy has resulted from the use of one set of posts for the carriage of wires both for Railway and Government use, and also by the combination of the outdoor supervising establishments; but the arrangement has not worked without some friction and complaints (on the part of, at all events, the Guaranteed Railway Companies), which it should be the object of the Telegraph Department to reduce to a minimum.

15. The appendices attached to the report have been modified in accordance with the instructions of the Right Hon'ble the Secretary of State, conveyed in His Lordship's despatch No. 22T. of the 4th July 1878, and the modifications meet with the approval of the Government of India.

16. No alterations in the form of exhibiting the accounts of the department in the direction indicated by the Secretary of State's despatch No. 27 of the 15th June 1876, have been introduced, owing to practical difficulties in carrying out the changes suggested. This point is still under consideration by the Government of India, and will be dealt with separately.

17. The Government of India records its appreciation of the services rendered by Colonel Murray and Mr. Cappel (who officiated as Director General for half the year under review), and the officers of the department generally, in bringing about the high state of efficiency exhibited in this report, and also notes with satisfaction the good service rendered by Mr. J. A. Briggs, Assistant Superintendent, as indicated in the 48th paragraph of the Report.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Secretary of State and the Local Governments and Administrations noted on the margin, to the Government of Ceylon and to the Commissioner in Sind.

Madras, Bombay, Bengal, North-Western Provinces and Oudh, Punjab, Central Provinces, British Burma, Mysore and Coorg, Assam, Hyderabad, Central India and Rajputana.

Also, that a copy of this Resolution be forwarded to the Director General of Telegraphs for information.

Also, that a copy of this Resolution and of the Report and Appendices A, B and F be forwarded to the Home Department of the Government of India for information, and to the Publisher of the *Gazette of India* for publication in the Supplement to the Gazette.

ALEX. FRASER, *Major-Genl., R. E.,*
Secretary to the Government of India.

ADMINISTRATION REPORT OF THE INDIAN TELEGRAPH DEPARTMENT FOR 1877-78.

THE results of the operations of the department for the year 1877-78 have more than realized the anticipations of progressive improvement held out in the opening paragraphs of the Annual Administration Report for 1876-77, and, for the first time since the establishment of the Telegraph in India, the receipts have more than covered the working expenses.

The total working expenses amounted to Rs. 31,40,124, and the earnings to Rs. 33,22,252, shewing a surplus of Rs. 1,82,128,* as compared with a deficit of Rs. 401 during the preceding year.

The number of paid telegrams increased from 1,109,036 in 1876-77 to 1,357,014 in 1877-78, of which 1,169,954 were inland and 187,060 foreign.

The miles of lines and wires (including cables) increased respectively from 17,840 and 39,780 to 18,210 and 42,796, and, in addition, 10,749 miles of wire, not the property of Government, were maintained by the department for the service of Railway Companies.

The number of departmental offices rose from 234 to 239, and, at the close of the year, 484 Railway Telegraph offices were technically supervised by the department.

Notwithstanding the large increase of traffic, the speed of transmission was well maintained; the percentage of complaints by the public was much less than during the previous year; the proportion of undelivered telegrams was 15 per cent. less than in 1876-77, and interruptions to communication caused by accidents to the lines were considerably fewer, not only for each unit of length of line, but absolutely both in number and duration, as compared with the previous year.

2. A clear idea of the progress that has been made year by year will be readily obtained from the following table and from the diagrams which are annexed to this report:—

HEADS OF FINANCIAL RESULTS.			1871-72.	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.
Total expenditure per message ...			3·69	3·69	3·44	3·15	3·11	2·48	2·30

REVENUE AND EXPENDITURE.

Capital Expenditure.

3. The net Capital Expenditure of the Department during the year amounted to Rs. 9,01,455, of which Rs. 44,024, on account of telegraph lines in Kashmir, will be recovered from the Maharajah. The actual departmental expenditure on lines

* After providing for the loss of Rs. 29,524 sustained in working the Ceylon system of telegraphs.

representing the amount of work done was Rs. 9,71,429, from which must be deducted Rs. 2,44,833 on account of suspense recoveries and value of stores used out of stock and not replaced within the year. Particulars of the various capital works executed in each division will be found further on. A sum of Rs. 1,36,832 was spent on Telegraph buildings by the Department of Public Works and Rs. 38,027 is the amount of Capital Expenditure incurred on our behalf by the Stationery and Press Departments.

The Capital account of the Department (excluding Ceylon)* at the end of the year stood at Rs. 3,30,13,602, including Rs. 55,26,222, the value of abandoned lines, buildings and stores.

4. The following is a brief statement of Receipts and Expenditure on Revenue account of the whole department, including India and Ceylon :—

Revenue Account.

	Rs.	Rs.	Rs.	Rs.
Expenditure in India and Ceylon	...	...	...	31,40,124
RECEIPTS.	INDIA.	CEYLON.	TOTAL.	
Revenue from paid Messages	28,03,967	99,735	29,03,702	
Receipts from State Railways	52,503	900	53,403	
Ditto Guaranteed Railways	1,68,519	...	1,68,519	
Miscellaneous	54,290	735	55,025	
	30,79,279	1,01,370	31,80,649	
"*Pro formâ*" Message Revenue	1,41,603	...	1,41,603	
TOTAL RECEIPTS ...	32,20,882	1,01,370	33,22,252	33,22,252
Net Profit	...	...	...	1,82,128

5. Separate revenue accounts for India and Ceylon are given elsewhere, and it will be sufficient here to call attention to the satisfactory progress indicated by the following figures :—

Profits and losses.

1873-74 ...	...	Loss.	Rs. 5,61,666
1874-75 ...	...	„	„ 4,17,807
1875-76 ...	...	„	„ 4,39,783
1876-77 ...	...	„	„ 401
1877-78 ...	...	Profit	„ 1,82,128

6. It has been explained in previous reports that the receipts (excluding "*pro formâ*") shewn in the Revenue Account and in the Finance or Budget Accounts must, from the very nature of these two accounts, differ, as, independently of mere book details and differences of classification, in the one case we shew *earnings* and in the other *realizations*. As the reconciliation of the two accounts is not a matter of general interest, and the details have been submitted to Government in the usual course, their repetition here does not appear necessary, it being merely noted to prevent misunderstanding that the difference between the receipts as exhibited in the two accounts is Rs. 1,19,758.

Reconciliation of Revenue and Finance Accounts.

* Particulars of the Capital account of Ceylon are shewn separately in Appendix A.

7. The following is an Abstract Revenue Account for India only, with corresponding figures for 1876-77 :—

Revenue Account (India).

ABSTRACT REVENUE ACCOUNT, 1876-77—1877-78.

EXPENDITURE.	1876-77.	1877-78.	RECEIPTS.	1876-77.	1877-78.
Repairs to lines ...	1,80,901	2,80,248	Message Revenue earned ...	22,74,064	28,03,967
Repairs to buildings by Public Works Department.	34,132	31,728	Receipts from State Railways for interest, line maintenance, technical supervision, &c.	54,296	52,503

NET PROFIT ...	19,995	2,11,652	TOTAL RECEIPTS ...	26,78,578	32,20,882

8. The net increase of expenditure over the previous year amounts to Rs. 3,50,647, which includes the following principal items :—Repairs to lines Rs. 99,347, Signalling Rs. 38,134, Tools and Plant Rs. 79,524, Absentee allowances paid in England Rs. 79,084. The increase in cost of repairs is due partly to the increase of wire mileage maintained, amounting to nearly 10,000 miles, and partly to the fact that repair expenditure in the previous year was exceptionally low. The rate per mile of wire was Rs. 5·31 against Rs. 4·2 in 1876-77, and against Rs. 5·29, the average of the preceding three years. The increase in signalling is due to the increments of salary earned by the establishment, to increase in the number of offices, and to general increase of work in all branches.

Causes of increased expenditure.

9. The increase under Tools and Plant is partly due to the extension of our operations in connection with Railways, but in the present instance much of the excess expenditure is nominal only, being due to the value balance of stationery in hand, Rs. 51,980, having been charged off at once to admit of simplification in the method of keeping the accounts As regards absentee allowances, it was stated in the report for 1876-77 that the expenditure for 1875-76 was unavoidably included in the accounts for 1876-77, and that it appeared likely that these payments made in England would always appear in the accounts of the succeeding year to that to which they properly belong. The item Rs. 1,43,475, under this head, charged in the accounts for 1877-78, includes, however, two years' payments, *viz.*, Rs. 93,866 belonging to 1876-77, and Rs. 49,609 to 1877-78, so that instead of an increase there is really a decrease. Expenditure on the famine lines and offices amounted to Rs. 17,620, and the revenue realized by them was Rs. 12,195 only, causing a loss of Rs. 5,425.

10. On the requisite adjustments being made in the furlough payments, the excess expenditure of 1877-78 over 1876-77 is reduced to Rs. 2,27,306, of which, as shewn above, Rs. 51,980 is nominal, and the remainder is principally due to the great expansion that has taken place in the operations of the Department.

11. The message revenue earned, excluding Ceylon, has increased by Rs. 5,29,903 against a similar increase of Rs. 3,25,981 in 1876-77. Particulars of these increases and comparisons with the figures of previous years are given in detail further on. The receipts from Railways shew an increase of Rs. 29,182, notwithstanding that the claims for this year are only made up for the nine months ending 31st December

Particulars of receipts.

1877, instead of, as heretofore, for twelve months. The accounts of the various Railways being all kept according to the calendar and not the official year, the bills against them are prepared accordingly, and it has been found desirable that the receipts from Railways shewn in the Departmental Revenue Account should correspond exactly with the bills instead of being the actuals for 9 months and an estimate for the remaining three. This change causes a nominal reduction of Rs. 68,125 in the receipts of 1877-78, but future accounts will be duly credited with a full twelve months' earnings.

Summary of financial results.

12. Appendix A contains summaries of the financial results obtained in the working of the telegraphs in India and Ceylon separately from the commencement up to the end of the year 1877-78. The loss on "working" of the Indian telegraph system is shewn to amount to no less than Rs. 1,26,78,716, exclusive of all interest charges, in an existence of about 25 years, and the profit of last year is only equivalent to a small dividend of 0·64 per cent on capital. It must be understood, however, that these bare figures by themselves necessarily convey a very incorrect idea of our financial position, and they would require to be supplemented by a volume of explanation before inferences of a commercial nature could be drawn from them.

TRAFFIC.

13. A return of the number and value of Inland and Foreign messages, under the sub-heads State and Private, is annnexed (Appendix B), the percentages being as follows :—

Class.	Inland.		Foreign.		Total.	
	No.	Value.	No.	Value.	No.	Value.
State	9·14	15·44	0·16	1·23	9·30	16·67
Private	77·08	54·62	13·62	28·71	90·70	83·33
Total ...	86·22	70·06	13·78	9·94	100·00	100·00

shewing the following absolute and proportionate increase over the result of the previous year :—

Class.	Actual Increase.								Percentage of Increase.					
	Inland.			Foreign.			Total.		Inland.		Foreign.		Total.	
	No.	Value.		No.	Value.		No.	Value.	No.	Value.	No.	Value.	No.	Value.
		Rs.	A.		Rs.	A.		Rs.						
State ...	24,831	1,26,734	13	345	6,960	3	25,176	1,33,695	25·08	39·42	18·02	24·11	24·94	38·16
Private ...	1,71,772	2,24,717	14	51,030	1,78,703	9	2,22,802	4,03,421	19·64	16·51	38·14	27·28	22·10	20·00
Total ...	1,96,603	3,51,452	11	51,375	1,85,663	12	2,47,978	5,37,116	20·20	20·89	37·86	27·14	22·36	22·70

The total number and value of paid messages as compared with the previous year was as follows :—

Year.	State.			Private.			Total.		
	No.	Value.		No.	Value.		No.	Value.	
		Rs.	A.		Rs.	A.		Rs.	A.
1876-77	1,00,917	3,50,338	12	10,08,119	20,16,246	13	11,09,036	23,66,585	9
1877-78	1,26,093	4,84,033	12	12,30,921	24,19,668	4	13,57,014	29,03,702	...

INLAND TRAFFIC.

14. The large increase in Inland messages on the service of the State is traceable mainly to the Famine in Southern India.

The increase in Inland private telegrams is also abnormal, and chiefly due to activity in the grain trade throughout India during the greater portion of the year. The revenue under this head has increased 38·35 per cent. during the last two years. while the corresponding numerical increase in Inland private messages has been no less than 43·28 per cent.

15. The average amount paid by the sender for an Inland message during the period which has elapsed since the last change in the tariff has been as follows :—

Year.	State.	Private.
	Rs.	Rs.
1872-73	3·33	1·82
1873-74	3·26	1·72
1874-75	3·33	1·63
1875-76	3·07	1·58
1876-77	3·24	1·56
1877-78	3·86	1·51

The tendency to compression in private messages is thus steadily progressive, while the average length of official telegrams is, on the contrary, increasing.

16. The following is a complete return of the number and value of Inland State and Private messages sent during the same period, shewing also the percentage of increase and decrease year by year:—

YEAR.	STATE.				PRIVATE.				TOTAL PAID MESSAGES.					
	Number.	Value.	Percentage of number compared with previous year.		Number.	Value.	Percentage of number compared with previous year.		Number.	Value.	Percentage of number compared with previous year.		Percentage of value compared with previous year.	
			Increase.	Decrease.			Increase.	Decrease.			Increase.	Decrease.	Increase.	Decrease.
		Rs. A.				Rs. A.				Rs. A.				
1872-73 ...	57,448	1,91,213 2	9·39	...	548,846	9,96,149 15	4·93	...	606,294	11,87,363 1	5·35	...	5·94	...

CHANGES IN INLAND TARIFF, &c.

17. The only change effected during the year in the rules or rates for Inland messages was the exemption, with effect from the 1st November 1877, of re-addressed telegrams from a forwarding charge.

FOREIGN TRAFFIC.

18. An increase of 345 in number, and of Rs. 6,960-3-0 in value, is observable under Foreign State Messages: this appears due to a more general use of the wires, and not to any special causes.

19. In Foreign Private Traffic the increase during the year is very marked, as will be seen from the following figures:—

YEAR.	PERCENTAGE OF INCREASE COMPARED WITH PREVIOUS YEAR.	
	No.	Value.
1873-74 ...	12·72	7·33
1874-75 ...	15·75	6·24
1875-76 ...	8·87	8·21
1876-77 ...	22·44	5·34
1877-78 ...	38·14	27·28

In the two years which have succeeded the introduction of the "word tariff" foreign private messages have increased 60·58 per cent. in number, and 32·62 per cent. in value.

20. Appendix C shews the percentage of number of messages between India and places to the westward by each route for the past seven years. The comparative results of the period under review and of the previous year are as follows:—

	1876-77.	1877-78.
Vid Suez	60·22	79·10
„ Teheran	37·57	17·72
„ Turkey	2·21	3·18
TOTAL ...	100·00	100·00

Details of the number and value of messages to, from, and through India by each route will be found in the abstract of Foreign Traffic attached to Appendix B.

21. The average Indian share of the charge on a foreign telegram for the past six years has been as follows:—

YEAR.	State.	Private.
	Rs.	Rs.
1872-73 ...	10·07	6·56
1873-74 ...	9·35	6·24
1874-75 ...	8·47	5·73
1875-76 ...	9·10	5·69
1876-77 ...	15·08	4·90
1877-78 ...	15·86	4·51

22. Here also, as in the case of Inland messages, the Private Foreign message becomes year by year shorter, while the Foreign State telegram averages in length over 50 per cent. more than was the case previous to 1876-77.

23. The following return corresponds to that given in para. 16 for Inland traffic, and contains details of the number and value of all Foreign messages for the past six years, with the percentage of increase or decrease under each head, year by year:—

YEAR.	PRIVATE.						STATE.						TOTAL.					
	Number.	Indian share of the charge.	Percentage of *value*, as compared with previous year.		Percentage of *number*, as compared with previous year.		Number.	Indian share of the charge.	Percentage of *value*, as compared with previous year.		Percentage of *number*, as compared with previous year.		Number.	Indian share of the charge.	Percentage of *value*, as compared with previous year.		Percentage of *number*, as compared with previous year.	
			Increase.	Decrease.	Increase.	Decrease.			Increase.	Decrease.	Increase.	Decrease.			Increase.	Decrease.	Increase.	Decrease.
		Rs. A.						Rs. A.						Rs. A.				
1872-73 ...	1,211	12,196 9	...	48·80	...	32·46	76,883	5,03,918 14	...	0·66	18·02	...	78,094	5,16,115 7	13·22	...	...	1·65

CHANGES IN FOREIGN TARIFF.

24. The laying of the cable between Elephant Point and Penang having necessitated the raising of the transit charge for foreign messages passing over the Indian lines by this route (a distance of 2,750 miles, as against 991 miles between Kurrachee or Bombay and Madras), a mean rate of 75 centimes per word was adopted for the two routes instead of having differential charges for them. This change took effect from the 27th May 1877.

25. To provide for the case of an interruption on the land line connecting Arakan and Burmah with India, a tariff was, with effect from the 1st July 1877, arranged with the Eastern Extension Telegraph Company for messages passing over their cables between Elephant Point and Madras *viâ* Penang.

26. The "word tariff" system was extended to all places in Japan from March, and to Cuba from February 1878.

EXTENSIONS OF INTERNATIONAL LINES.

27. A new cable, connecting Elephant Point with Penang, was laid by the Eastern Extension Telegraph Company and opened for traffic on the 27th May 1877.

In the Mediterranean a new cable was laid between Syra and Candia in March 1878.

Telegraphic communication was extended by land line between Southern and Western Australia in December 1877.

PRINCIPAL INTERRUPTIONS ON INTERNATIONAL LINES.

28. The cables of the Eastern Telegraph Company were uninterrupted during the year, with the following exceptions:—

From Lisbon to Falmouth, from 2nd February to 5th September, and from 13th November to 19th December 1877.
From Lisbon to Vigo, from the 8th December 1877 to the end of the period under report.

29. On the cables of the Eastern Extension Telegraph Company the following interruptions occurred:—

Between Elephant Point and Penang, from the 10th September 1877 to the 15th January, and from the 23rd March to the 8th April.
Between Penang and Singapore, from the 13th to 22nd July, from the 19th to the 31st October, and from the 4th to 7th November 1877.
Between Singapore and Batavia, from the 28th September to the 17th October, from the 9th to 17th November 1877, and from the 22nd January to the 3rd February 1878.
Between Java and Australia, from the 8th November to the 15th December 1878.

30. The Great Northern Company's China cables were interrupted to the following extent—

Between Amoy and Shanghai, from the 5th to the 15th May and from the 7th to the 15th September 1877.
Between Shanghai and Nagasaki, from the 30th October to the 8th November 1877 and from the 4th to the 12th February 1878.
Between Nagasaki and Wladiwostok, from the 29th December 1877 to the 13th January 1878, and from the 28th March to the 5th April 1878.

31. The cable connecting Australia with Tasmania was interrupted from the 25th May to the 15th June, and from the 8th to the 20th August 1877.

32. On the land line through Asiatic Russia to China 16 interruptions were reported, ranging from one to three days.

33. On the 12th May 1877 the Teheran route between India and Europe was interrupted consequent on the bombardment by the Turks of Soukhom Kale on the north-east coast of the Black Sea. A diversion from Tiflis through Stavropol and Ekaterinodor to Kertch was opened on the 22nd August. Five other interruptions occurred on this route but none of them lasted more than one day.

34. On the Turkish route 8 interruptions were reported lasting from one to two days each. The Fao-Bushire cable was also interrupted from the 21st to the 26th October 1877.

SIGNAL OFFICES.

35. Appendix D is a classified abstract of signal offices according to the amount of traffic originating at each for the past six years.

36. Appendix E shews the number of offices in each Division open at the close of the year. The following stations were opened and closed during the year:—

Opened.	Date.	Closed.	Date.
Beawar (re-opened) ...	3rd February ...	Ahmednuggur	16th March.
Coimbatore	23rd April ...	Akote	30th April.
Erode	30th April ...	Dholepore	10th January.
False Point	22nd August ...	Hingunghat	28th February.
Gondul	15th June ...	Sheagaon	30th April.
Indore City (re-opened) ...	10th December ...	Wurdah	15th April.
Kalka (re-opened)	28th March.		
Panadure	14th February.		
Ranikhet	26th December.		
Salem	30th April.		
Quetta	17th May.		

Number of offices open on the 31st March 1877 ...	...	234
ADD—Number of offices opened during the year ...	...	11
TOTAL ...	...	245
DEDUCT—Number of offices closed during the year ...	...	6
Number of offices open on 31st March 1878	...	239

COMPLAINTS.

37. In Appendix F will be found particulars of all the complaints received from the public during the year, those in which this department was concerned being separated from those chargeable to Railway or Foreign Telegraph lines. It will be seen that the percentage of those for which the department is responsible is considerably less than during the previous year.

SPEED OF TRANSMISSION.

38. The average periods occupied in the transmission of messages on the long main routes connecting Calcutta, Bombay, Madras, Kurrachee, Galle and Rangoon during the year under review and that preceding it were as follows:—

	1876-77.		1877-78.	
	H.	M.	H.	M.
Calcutta to Kurrachee	0	17	0	11
Kurrachee to Calcutta	0	44	0	26
Calcutta to Bombay	1	13	1	14
Bombay to Calcutta	1	13	1	15
Calcutta to Madras	1	51	2	28
Madras to Calcutta	1	56	2	20
Bombay to Kurrachee	0	47	0	43
Kurrachee to Bombay	0	17	0	28
Bombay to Madras	0	46	1	16
Madras to Bombay	0	18	1	8
Galle to Madras	3	8	5	6
Rangoon to Calcutta	11	49	7	41

The great improvement on the Calcutta-Rangoon line was obtained prior to the completion of the second wire which now greatly expedites the traffic, and which will enable a much better result to be shown for 1878-79. The lines converging on Madras during the famine in Southern India were very heavily worked, and a falling off in average speed was unavoidable; on the wires connecting Calcutta with Bombay, notwithstandig increased traffic, the speed has been practically maintained, while the working of the lines from Kurrachee to Calcutta and to Bombay exhibit a considerable improvement.

NEWS-FREE MESSAGES.

39. Reports of the state of the weather, of the arrivals of mail steamers, &c., shew a slight increase in number, but a considerable decrease in length, *viz.*:—

	No.	*Value.* Rs.
1876-77	7,307	1,16,247
1877-78	7,358	78,966
Increase ...	51	...
Decrease ...	...	37,281

TRAFFIC WITH RAILWAY TELEGRAPHS.

40. Appendix G shews the number and value of messages transferred to and received from State and Guaranteed Railways during the past five years. A comparison of the figures of the period under report with those of the preceding year shews the following result:—

PARTICULARS.	1876-77.			1877-78.		
	No.	Value.		No.	Value.	
		Rs.	A.		Rs.	A.
Traffic exchanged with State Railways ...	21,049	30,582	7½	28,985	32,339	14½
Ditto ditto Guaranteed Railways ...	75,260	77,205	8¾	96,225	93,372	15
TOTAL TRAFFIC EXCHANGED WITH RAILWAYS	96,309	107,788	0¼	125,210	125,712	13½

PRESS MESSAGES.

41. The number and value of Press messages sent at reduced rates by Reuter's Telegraph Co. and by other associations or individuals, are shewn in Appendix H. As compared with the previous year, the following increase has occurred:—

	No.	*Value.* Rs.
Messages sent by Reuter's Co.	884	1,040
Ditto do. by others	916	16,566
TOTAL INCREASE ...	1,830	17,606

UNDELIVERED MESSAGES.

42. The number of undelivered messages was 4,064, an increase of 270, or 7 per cent. over the previous year: as traffic increased 22 per cent. during the same period, this result is not unsatisfactory. The causes of non-delivery are here given:—

Not found, address insufficient	1,258
Not found at address given	1,189
Address changed in transmission	148
Left Station, new address not known	299
Left India	105
Left for original station	727
Refused	123
Returned by Dead Letter Office	133
Other reasons	82
TOTAL ...	4,064

INTERRUPTIONS ON DEPARTMENTAL LINES.

43. There were 386 interruptions during the year, against 458 in 1876-77; their aggregate duration 5,790 hours against 8,841 hours; their average duration 15·00 against 19·08 hours, and the proportion of interruptions per 100 miles of wire 0·92 against 1·18.

SIGNALLING ESTABLISHMENT.

44. There were 815 departmental and 66 Military Telegraph Masters and Signallers on the strength of the establishment at the close of the year, as

compared with 818 and 43, respectively, on the 31st March, 1877. The following statement shews the average amount of traffic disposed of by each Telegraph Master and Signaller during the past five years :—

Year.	Total number of messages paid and free.	Number of Telegraph Masters and Signallers.			Average number of messages disposed of by each man.
		Departmental.	Military.	Total.	
1873-74	788,572	852	28	880	896
1874-75	883,727	852	42	894	989
1875-76	958,408	838	44	882	1,087
1876-77	1,166,833	818	43	861	1,355
1877-78	1,431,452	815	66	881	1,625

By improved traffic arrangements it has thus been possible to meet the doubled amount of work without increase of establishment, while speed and accuracy have been materially enhanced.

45. The number of casualties has been 27, as per margin, against 30 during the preceding year, a percentage of 3·30 against 3·67

Deaths ...	6	Pensioned	1
Dismissals	14	Resignations	6

46. The number of military signallers trained by the department during the year to whom certificates of proficiency were given was 21. There were employed in departmental offices 41, and in purely military offices 25 men.

ELECTRICAL.

47. Mr. R. S. Brough ably officiated as departmental electrician throughout the year. The regular line-testing stations now number 20, Cuttack and Bankipore having been added to the list during the year; nearly all the testing Telegraph Masters have now become so conversant with the use of their instruments, that they localize the positions of faults with most creditable accuracy.

48. After 3 years' practical experience of Mr. Schwendler's double balance duplex system it was found advisable to definitely abandon it in favor of another, differing from the ordinary differential duplex, in that the battery, and not the receiving instrument, is differentiated. A very similar method was described by Mr. O. Heaviside in 1873, but it had never been reduced to practice until Mr. J. A. Briggs, an Assistant Superintendent in this department, worked it out and brought it to the notice of the Director General.

EXTENSIONS OF LINES AND WIRES, AND LINE MAINTENANCE.

49. Appendix J. is a classified list of all telegraph lines, the property of this department in India, Burmah and Ceylon on the 31st March 1878. The following are the totals of line, wire and cable, contrasted with those existing on the same date in 1877 :—

Extent of system.

	Line.	Wire.	Cable.
1876-77	17839·67	39706·18	79·92
1877-78	18209·53	42687·33	108·43
Increase ...	369 86	2987·15	28 51

In addition to the above, the department maintained 3,225 miles of line and 10,749 miles of wire, the property of Railway Companies, particulars of which are given in Appendix I.

Principal works.

The principal works executed in each division are enumerated below :—

ARAKAN.

50. The suspension of the second wire, Calcutta to Rangoon and Elephant Point, was in active progress throughout the division during the whole working season, and was nearly completed by the end of the official year. The work included strengthening and improving the existing line, heavy jungle-clearing, and making numerous minor alterations in route. In connection with the additional wire, cables, aggregating 12,000 yards in length, were laid across the Mayu, Kurudi and Koladán rivers.

ASSAM.

51. From Bhukwamarri (on the left bank of the Brahmaputra opposite Dhubri) to Gauhati, a distance of about 137 miles, the telegraph line was shifted from its former route to the side of the recently-completed Assam Grand Trunk Road. The line was originally carried nearer the river than the new road, along the best route then available, but the difficulties of the country traversed were very great, and in the rainy season the line could only be followed for the purposes of inspection or repair on elephants. The change of route to the Trunk Road, which is bridged throughout, will much facilitate the work of the district officers and render telegraphic communication with Assam more reliable.

BENGAL.

52. No new departmental works of any importance were carried out in this division, but 20 miles of the East Indian Railway line between Beddiah and Kanu were re-constructed, and very extensive repairs effected over 937 miles more of the Company's telegraph system. Repairs of the Railway line were still in progress at the close of the year.

BOMBAY.

53. A line of two wires was erected for the use of the Railway along the Dhond-Munmad State Railway, a distance of 150 miles, and the old road line, 71 miles in length, between Poona and Ahmednuggur, dismantled. An additional wire was also suspended between Bombay and Poona, 119 miles.

BRITISH BURMAH.

54. The telegraph line from Bassein to Diamond Island was completed in December by the submersion of cables across the Bassein river, and from the main land near Pagoda Point to Diamond Island, the latter distance being about 10 miles. The cable used was manufactured in our workshops in Calcutta, and is of the strongest description, having been specially designed for the shallow, rocky sea in which it was to be laid. We have no special vessel for transporting and laying cables, and it was a work of no small difficulty to convey with the necessary precautions, this massive cable, weighing over 5½ tons per statute mile, from Calcutta to Diamond Island in a passenger steamer, and lay it from an ordinary cargo boat. Thanks to the assistance of Messrs. Mackinnon, Mackenzie and Co., of Captain James of the British India Steamer *Madras*, of Captain O'Brien of the Bassein Pilot Service, and to the excellent arrangements of Messrs. Hill and Luke of the Department, the work was carried through most successfully, and the important ship-signalling and meteorological station of Diamond Island thereby placed in telegraphic communication with the rest of India.

55. The second wire from Calcutta to Rangoon and Elephant Point was completed throughout this Division by the 16th March, and a number of private wires were erected in the vicinity of Rangoon to connect the offices with the rice mills of the principal firms. By the end of the year no less than 33½ miles of wire were in use for this purpose, and the demand for more wires still continues. A survey was commenced of the route of the proposed line of telegraph from Maulmain to Tavoy and Mergui, but owing to the setting in of the rains it was not carried on further than Tavoy.

DACCA.

56. The suspension of the second wire, Calcutta to Rangoon, completed last year as far as the Fenny River near Comillah, was continued and completed by the end of the year for a further distance of about 220 miles to the southernmost limit of the division. Cables for the circuit of the second wire were laid across the Pudda, Dhullesuri, Borrigunga, Megna and Katalia Ganj (Srimutti) Rivers, and the latter river was also spanned with steel wire. The following works were executed in connection with the telegraph lines on the Northern Bengal State Railway :—erection of a three-wire line from Parodha on the Eastern Bengal Railway to the Ganges, 14 miles; the submersion of a cable across the Ganges at Sara; construction of a line of two wires from Parbuttipore to Rungpore, 23 miles, and the extension of the main line for the joint use of this Department and the Railway from Julpigorie to Silligorie, 22 miles.

GANJAM.

57. The line from Cuttack to False Point, 64 miles in length, was completed and opened for traffic on the 22nd August. In June, two new gutta-percha cables, each three miles in length, were laid across the Godavery River near Rajamundry, to replace the previously existing India-rubber cables which had become defective.

MADRAS.

58. A wire, about 144 miles in length, was erected for departmental purposes along the South Indian Railway from Madras to Tinnevelly *viâ* Tanjore, Trichinopoly and Madura. In circuit on this wire are short-looped branches to Pondicherry and Tuticorin, and from Madura branches off a new two-wire line to Ramnad, 69 miles in length, constructed during the year for the Ceylon traffic. These additions have been made chiefly to supersede 200 miles of the coast line from Negapatam to Tuticorin, which was expensive and difficult to maintain and much exposed to the corrosive action of the sea air. In connection with famine operations, 58 miles of wire were suspended on the posts of the Madras Railway Company from Salem to Erode and Coimbatore to Metapollium, to enable the Government of Madras to communicate with the Collectors of Salem and Coimbatore at a time when, owing to the great pressure of grain traffic, the Madras Railway Telegraph Offices were obliged to restrict themselves to the despatch of Railway service messages only.

OUDH AND ROHILCUND.

59. A hill line, 18·5 miles in length, between Naini Tal and Ranikhet, required for military purposes, was completed in January. An extra wire was also erected from Bareilly to Chandausi, 45 miles, and one wire dismantled between Chandausi and Moradabad; by this arrangement Bareilly was made the junction station for Naini Tal, and it became possible to make considerable reduction in the cost of working the Moradabad Office.

PUNJAB.

60. Flying lines from Kohat and Peshawar, aggregating about 35 miles in length, were erected in connection with the military operations against the Jowakis, and 15 miles of the permanent line between Rawal Pindi and Kohat required entire re-construction when order had been restored in the district. An extra wire was erected from Lahore to Wazirabad, 62 miles, for the Sialkot traffic, and the hill line from Mussouri to Chakrata was completed early in the year. The construction of a three-wire line between Lahore and Jhelum, for the joint use of the Punjab Northern State Railway and of this department, was in progress, its completion near stations being delayed by the unfinished state of the Railway buildings.

RAJPUTANA.

61. A line of three wires was erected for the joint use of the department and the Sindia State Railway from Agra to the Chumbul River, a distance of about 40 miles; the departmental road line of two wires between Ajmere and Beawur, 32 miles, was moved on to the Western Rajputana State Railway, and two wires added for the use of the Railway.

SIND.

62. The fourth wire between Mooltan and Kotri, 508 miles, was completed and brought into use before the close of the year.

BELUCHISTAN.

63. At the commencement of the year the telegraph line had been erected from Jacobabad to Dadur, a distance of 103 miles. The line was completed to Quetta, 83 miles further, by the 17th May, and an office opened at that station the same day. At the close of the year, arrangements were in progress for extending the line from Quetta to Khelat.

KASHMIR.

64. His Highness the Maharajah of Kashmir having intimated to the Government of India his desire to establish a telegraph line from Jummoo to Srinuggur and thence to Gilghit, it was arranged that all the material, except posts, should be supplied by this department, and that the services of an officer and construction-party should be placed at the disposal of the Maharajah for the execution of the work. Mr. Duthy, the officer nominated for the duty, commenced the line from Srinuggur towards Gilghit in August, and had completed 94 miles as far as Das by the 14th October, when further progress was stopped by the snow. On the 14th November, the section from Srinuggur towards Jummoo was commenced, and posts were erected as far as the northern foot of the Banihal Pass, when work on this section also was stopped by the snow. A commencement was then made from the Jummoo end and a short section of line completed by the end of the year. Progress was checked by the scarcity prevailing in Kashmir, and by regular and sufficient supplies of posts not being always available. Mr. Duthy and the men under his orders have been compelled to undergo much privation and exposure at high altitudes, and have deservedly earned the approbation of the Maharajah and of their own superior officers for the success so far achieved.

STATE AND GUARANTEED RAILWAY TELEGRAPHS.

65. Appendix I is a return shewing the number of Telegraph Offices and extent of line and wire maintained for State and Guaranteed railways, together with the capital expended by the Telegraph Department on behalf of each railway. The return has been included in this report in accordance with the orders contained in paragraphs 33 and 34 of the orders of Government on the reports of 1875-76 and 1876-77. Care has been taken to distinguish between lines the property of the Telegraph Department and of Railway Companies, and between lines wholly used by railways and those in joint use of the Department and the railways.

Extent of Railway Telegraphs maintained.

66. On behalf of Guaranteed Railways we supervise 288 Telegraph Offices and maintain 5,542 miles of line and 14,378 miles of wire, of which, 3,216 miles of line, 10,642 miles of wire are the property of the Companies. On behalf of State railways (excluding Ceylon), we supervise 196 Telegraph Offices and maintain 2,154 miles of line and 4,293 miles of wire. Of the miles of line, 2,269 on Guaranteed and 1,700 on State railways are "joint," that is, the posts carry both Railway and Government wires. The very considerable economy which has resulted from these joint lines both to the Government and the railways is self-evident. The grand totals of miles of line and wire in India and Ceylon maintained by the Department in connection with railways on the 31st March last amounted to 7,791 and 18,778, respectively.

Capital expended.

67. Some omissions will be noticed in the column of Appendix I, shewing the capital spent on behalf of the various railways. Owing to the unfinished state of the lines and other causes, it has not yet been found possible to make up to date the telegraph capital accounts of certain railways, and the figures given merely represent the progress made by the end of the year.

68. The transfer to this department of the maintenance of the lines and offices of the East Indian, and Sind, Punjab and Delhi Railways took effect early in the year.

STORES AND WORKSHOPS.

Stores and workshops.

69. The following are the principal items of expenditure under this head during the year:—

	Rs.
Purchase of stores in India	1,69,931
London stores, including freight and landing charges ...	3,77,175
Workshop and Press	1,72,513
Store-keeping	94,401
Stationery received from the Superintendent of Stationery without charge, and value of printing done by the Superintendent of Government Printing	38,027
TOTAL ...	8,52,347

70. Under the head of "Purchase of Stores in India" is included a sum of Rs. 74,311 for stores received from the East Indian Railway, and Rs. 34,680 from the Sind, Punjab and Delhi Railway.

71. The value of the outturn from the workshops was Rs. 3,63,446, and from the Press Rs. 40,362 against Rs. 2,69,546 and Rs. 30,369, respectively, during the previous year.

72. The total value of stores received and issued amounted to Rs. 17,96,199, and the store-keeping charges amounted to Rs. 94,401, or 5·2 per cent.

CEYLON.

Summary of financial results.

73. Appendix A contains the usual summary of financial results of the Ceylon Telegraphs from the 1st January 1869, the date of their transfer to the Indian Government, up to the end of the year 1877-78.

74. There has been no capital outlay by the Indian Government during the year, and after taking credit for certain small recoveries on capital account, the total of the account as regards the Indian Government now stands at Rs. 67,578. Under present arrangements, the Ceylon Government furnishes the funds for all capital works. The net loss on working for the year amounts to Rs. 29,524, and from the transfer up to the end of the year to Rs. 2,03,906, exclusive of all interest charges.

75. The following is an abstract of the Revenue Account compared with the figures of the previous year.

Expenditure.	1876-77.	1877-78.	Receipts.	1876-77.	1877-78.
	Rs.	Rs.		Rs.	Rs.
Repairs of Lines	13,545	20,142	Message Revenue ...	92,522	99,735
Repairs to Buildings (Departmentally)	4	462	Miscellaneous	52	735
Direction Accounts, &c., (share of general charges) ...	10,333	10,650	Received for maintenance of Ceylon Railway line ...	900	900
Superintendence	28,654	26,022	Total Receipts ...	93,474	1,01,370
Line Maintenance Establishment	10,060	11,169	Net Loss ...	20,396	29,524
Signalling	45,752	54,236		1,13,870	1,30,894
Tools and Plant	4,630	2,785			
Value of printed forms supplied from India	1,949	5,023			
Total Expenditure ...	1,14,927	1,30,489			
Deduct share of charges for Direction Account, &c., debitable to capital	1,057	405*			
Net Revenue Expenditure...	1,13,870	1,30,894			

Causes of increased expenditure.

76. The excess expenditure has been caused chiefly in the items "Repairs of Lines" and "Signalling." The posts used in the Island are almost entirely of wood, and as many of the lines are comparatively old, a large number of posts have to be renewed annually. The heavy expenditure that has been incurred on this account for some years past is, however, now beginning to tell, and the general stability of the lines is much improved. The increase in "Signalling" is mainly due to increments of salary earned by the establishment, including some arrears on this account.

Receipts.

77. Message revenue shews an increase of Rs. 7,213 over the previous year. The receipts under this head during the last four years have been as follows, shewing a steady but slower growth than the message revenue of India :—

1874-75	71,830
1875-76	81,264
1876-77	92,522
1877-78	99,735

Extensions.

78. The line between the office of the Breakwater Engineer at Colombo and the Mahari Quarry, which was in progress at the end of last year, was completed on the 15th April, and an additional wire, 13 miles in length, was added for the use of the Ceylon Railway between Rambukkana and Kaduganawa.

New Offices.

79. One new office was opened during the year at Panaduri between Colombo and Galle.

Extent of System.

80. On the 31st March 1878, the Ceylon Telegraph system, including the Railway line, consisted of 619 miles of line, 787 miles of wire, and 13 Departmental and 13 Railway offices.

PERSONAL.

81. The loss that the Department and the Government sustained by the death of the late lamented Major-General D. G. Robinson, R. E., received due acknowledgment in the following Resolution of Government, dated 3rd August 1877, which was published in the *Gazette of India* :—

"The Governor General in Council has received, with deep regret, intelligence of the death at sea, near Aden, on the 27th ultimo, of Colonel Daniel George Robinson, R.E., Director General of Telegraphs in India.

"By the untimely death of this officer, the State has lost an able and zealous public servant. Colonel Robinson earned early distinction in the Punjab campaigns, and after a lengthened period of valuable service in the Survey Department, he directed, with marked success, during the last twelve years, the constantly expanding operations of the Telegraph Department—a department which he was mainly instrumental in reorganizing and raising to its present state of high efficiency."

82. Expressions of regret and esteem were also received from the heads of the Telegraph Administrations of Germany and Italy, and from the Director of the International Telegraph Bureau at Berne, with all of whom the late Major-General Robinson had been associated in the International Telegraph Conferences at Berne, Rome and St. Petersburg.

83. Mr. Cappel officiated as Director General from the 9th July 1877, the date of Major-General Robinson's departure on leave, until the 5th January 1878, when he was relieved by the undersigned on his return from furlough.

Simla,
The 1st November 1878.

R. Murray, *Colonel,*
Offg. Director General of Telegraphs in India.

* This item is an addition caused by recoveries having been made on capital account.

APPENDIX A.

Summary of Financial results of the Indian Telegraph Department for the year 1877-78.

Capital Outlay.		Revenue.		Working Expenses.		Net Charge for Interest.		Percentage of Revenue and Charge on Capital Outlay to end of year.		Number of Miles.		
During year.	To end of year.	During year.	To end of year.	During year.	To end of year.	During year.	To end of year.	Revenue.	Charge.	Lines.	Wires.	Cables.
Existing lines with buildings and first equipment connected with them ...	10,75,978	2,42,45,416										
Workshop and press capital	29,344	2,29,574										
Materials	4,499	98,644										
Storehouses	67	4,45,709										
Quarters for officers	...	10,425

REMARKS.

Ganges Canal :—Mean volume of water passing through Solani aqueduct ... ... Cubic feet per second. 4,791
Cawnpore escape 256
Ditto tail 258
Etáwah escape 48
Syana escape 2
564
Balance expended 1,227

Meerut Division reports :— Rain on 14th, falling in light showers, did much good to the crops and practically put an end to the rabi irrigation.

Eastern Jumna Canal :—
Water entering canal 882
Net consumption 882

Agra Canals :—
Water entering canal 837
Do. leaving Bátá escape 12
Do. do. Kitam escape 57 69
Net consumption ... 768

Rohilkhand Canals :—
Water entering canal 252
Do. leaving do. 259

Dún Canals :—
Water entering canal 112
Do. leaving silt trap at Ambari 3
Net consumption ... 109

Executive Engineer reports :—Moderate demand for rabi crops and sugarcane sowings.

NOTE.—In the statement for February 1879, against Jhánsi Division and Grand Total in column headed "Total area of irrigation during current fasl," for the figures 646 and 9,62,971 *read* 318 and 9,63,643, respectively. Also against zila Jhánsi, in Zillawar Statement, *read* in the respective columns 34, 36, 69, 136, 11, 319, and under "Total" *read* in the same columns 5,64,912, 1,34,738, 32,761, 15,468, 84,719, 9,68,836, and against increase *read* 2,41,605, 94,769, 7,513, 50,147, 33,331, 4,30,265.

ALLAHABAD, *The 2nd May 1879.*

G. H. D. WALKER,

Remarks.

GANGES CANAL.

There was a sudden check in the upward movement of the coarser kind of food grains early in the month, owing to a fall in prices in the northern districts of the canal. Considerable shipment of wheat was made from the Cawnpore section, principally for the Hardwar fair. The total tonnage moved on canal shows a slight increase as compared with the returns for the previous months, and also for the corresponding period in 1878.

A. O. HUME,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

FINANCIAL DEPARTMENT.

REPORT OF THE OPERATIONS OF THE POST OFFICE OF INDIA FOR THE YEAR 1877-78.

Extract from the Proceedings of the Government of India, Financial Department,—No. 1468 (Separate Revenue—Post Office), dated 27th June 1879.

Read—

Report of the Operations of the Post Office of India for the year 1877-78.

RESOLUTION.—The development of the Post Office during the year was satisfactory. The charges for carrying packets and parcels were simplified and reduced; the whole postage on re-directed covers of all kinds was remitted, and the following additional postal facilities were provided:—

(1.) Receipts for inland registered letters can now be procured for a fee of 1 anna.

(2.) The 'value-payable' system was applied to inland parcels.

(3.) Provision was made for the insurance of inland parcels and letters.

2. The number of post offices was increased by 225, of letter-boxes by 120, and of village-postmen by 363 during the year.

3. Covers carried by the Post Office increased 5·13 per cent., *viz.*, letters by 4·58 per cent., and newspapers by 11·33 per cent. Cash receipts increased about 8 per cent.

4. The total number of covers carried was 128,826,080, of which only 667,170 remained finally undisposed of in the Dead Letter Office whose operations were fairly successful.

5. The *net* revenue from the Overland Parcel Post rose to Rs. 97,277 from Rs. 78,876 in the previous year. Evidently, the convenience afforded by this branch of the Indian Post Office is appreciated.

6. The statistics of correspondence with the United Kingdom show an increase of 4 per cent. in letters, and 5 per cent. in newspapers, some of which may be due to the rates which came into force from the 1st July 1876. But the effect of the reduction of rate in attracting correspondence to the Brindisi route is not so apparent as it was in the previous year. Still, of letters despatched *from* India to the United Kingdom, the percentage carried by the Brindisi route reached 73 as against 70 in 1876-77, and of newspapers 85 as against 82.

7. The decrease of from 63 to 62 per cent. of letters despatched from the United Kingdom to India must be considered in connection with the large increase of from 55 to 63 per cent. which occurred in the previous year. It seems plain that the effect of the reduction of overland postage has been mainly to transfer correspondence to the shorter route, and perhaps very slightly to stimulate correspondence. The further reduction recently effected will probably attract a still larger proportion of the correspondence to the Brindisi route.

8. *Paragraphs* 55-58.—The financial results of the year are satisfactory, showing a net revenue of Rs. 12,16,672 in the purely postal branches, or, deducting the items enumerated in paragraph 57, an actual profit of Rs. 2,19,713. This result is attained in spite of the disbursements of 1¼ lakhs (paragraph 20) as famine allowances to postal employés, and notwithstanding the increased

net cost of the overland route owing to the reduction of the overland postage. The results for the last 8 years are as follows:—

Years.	Total receipts from all sources.	Net revenue after deducting postage due to foreign countries.	Net revenue deducting also official postage.	Expenditure.	Surplus revenue.	Deficit without official postage.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1870-71	83,70,858	79,82,895	37,43,771	51,77,567	28,05,328	14,33,796
1871-72	82,94,054	78,34,332	43,38,763	50,97,695	27,36,637	7,58,932
1872-73	60,30,003	55,16,109	44,52,262	52,32,689	2,83,420	7,80,427
1873-74	61,92,962	55,78,656	45,24,362	54,21,251	1,57,405	8,96,889
1874-75	65,24,338	59,48,732	48,66,162	55,70,868	3,77,864	7,04,706
1875-76	69,07,834	63,35,301	51,90,400	56,39,310	6,95,991	4,48,910
1876-77	71,38,259	66,88,656	54,81,772	57,87,667	9,00,989	3,05,895
1877-78	77,14,997	73,04,329	60,18,193	60,87,657	12,16,672	69,464

9. The table in paragraph 59 is interesting enough to extract in part:

Year.	Comparison of number of letters and newspapers, those of 1855-56 being represented by 100.	Comparison of revenue from private correspondence, that of 1855-56 being represented by 100.	Comparison of expenditure, that of 1855-56 being represented by 100.
1855-56—first complete year of new rates	100	100	100
1873-74—nineteenth complete year ...	328	284	184
1874-75—twentieth ditto ...	348	305	189
1875-76—twenty-first ditto ...	352	326	191
1876-77—twenty-second ditto ...	368	345	196
1877-78—twenty-third ditto ...	387	378	206

10. His Excellency in Council desires to express his cordial appreciation of the administration of the Department by Mr. Monteath, who has so long presided over it.

11. His Excellency also concurs in the encomium passed on Mr. Macfarlan's recent administration in Bengal, and regrets that his services should have been so early lost to the Department.

12. The Government of India observe with pleasure that the services of the following Officers have been thought worthy of mention with special approbation:—

In Bengal—Mr. Mackenzie, Mr. Barton Groves, and Babu Bishen Chunder Dutt.
In Madras—Mr. Coombs, Mr. Christian.
In Bombay—Khan Sahib Cursetji Palonji, Dinanath Babaji.
In the Punjab—Mr. Sullen.
Travelling Post Office Department—Mr. Hill and B. Thurmiah Garoo.
In British Burmah—Mr. Twemlow.
In Oudh—Mr. Antram, and Lala Raj Coomar Lal.

Ordered, that this Resolution be communicated to the Director General of the Post Office of India, and that the Report and the Resolution be published in the Supplement to the *Gazette of India*.

ANNUAL REPORT

ON THE

OPERATIONS OF THE POST OFFICE OF INDIA

FOR THE YEAR

1877-78.

No. 33C., dated Umballa, 31st March, 1879.

From—A. M. Monteath, Esq., *Director General of the Post Office of India,*
To—*The Secretary to the Government of India,* Financial Department.

I have the honor to submit the Annual Report on the Operations of the Post Office of India during the year 1877-78.

GENERAL POSTAL UNION.

2. The countries belonging to the General Postal Union at the commencement of the year under report, and those which were admitted into it during the year, are enumerated below:—

Countries belonging to the General Postal Union on the 1st April 1877.	*Countries admitted to the General Postal Union during the year.*
Great Britain.	British Colonies including—
Germany.	Trinidad,
Austria.	Bermuda,
Hungary.	Jamaica,
Belgium.	Guiana,
Denmark.	Ceylon,
Egypt.	Straits Settlements,
Spain.	Labuan,
United States of America.	Mauritius,
France.	Hongkong.
Greece.	Spanish Colonies in—
Italy.	America and
Luxembourg.	Oceania.
Norway.	Dutch Colonies in—
Holland.	America and
Portugal.	Asia.
Roumania.	Portuguese Colonies in—
Russia.	Asia,
Servia.	Africa, and
Sweden.	Oceania.
Switzerland.	Danish Colonies in—
Turkey.	America.
British India.	Brazil.
French Colonies.	Japan.
	Persia.

3. The General Postal Union was formed by the Treaty of Berne, dated the 9th October 1874, and came into force on the 1st July 1875. It comprised at first, besides the countries of Europe, only Egypt and the United States of America. By a separate international arrangement made at Berne in January 1876, provision was made for the admission of British India and of certain French Colonies under special conditions as regards rates of postage, &c.; and it is under these special conditions that all the subsequent admissions have been made.

4. In view of the approaching termination of the term of years covered by the original treaty, arrangements were made, during the year under report, by the countries interested, for the preparation of a new Convention: but, as the new Convention of Paris was not signed till the 1st June 1878, and does not come into force till the 1st April 1879, the notice of it may properly be left for the report of next year.

SEA COMMUNICATION WITH EUROPE.

5. As explained in the previous report, the communication by sea between India and Europe is a service which has always been treated as quite separate from the Indian Inland

Post, to which this report refers. All the sea postage collected by India is handed over to Great Britain; and, when this, as well as the British collections, have been deducted from the total cost of the sea service, the balance, or net cost, is made a charge in equal shares upon Great Britain and India. The amounts charged against India during recent years have been as follows:—

	Net loss on the Overland Mail Service charged against India. £	
1869-70	29,300	These sums show considerable fluctuation in the amounts actually paid in each year: the payments are made on estimate and not on fixed dates, so that a particular quarter's payment sometimes falls in one year and sometimes in another; but the accounts, when adjusted so as to shew the amounts properly belonging to each year, exhibit a net loss of £73,000 in the first year (1869-70), and a decreasing sum in the following years down to about £53,000 in 1875-76.
1870-71	132,783	
1871-72	30,724	
1872-73	61,955	
1873-74	60,000	
1874-75	46,197	
1875-76	48,000	
1876-77	62,170	The calculations of the sums properly belonging to these years have not been received from London.
1877-78	75,126	

6. The increase of the net loss in the two last years is the result of the reduction of the rates of postage which came into operation on the 1st July 1876.

7. There were only three instances of delay in the arrival of the European mails at Bombay, as shewn in the margin. Of these, two only were material, the one being a delay of about one day by the *Sumatra*, owing to a foul bottom; and the other a delay of nearly three days, owing to a late start from Suez resulting from a delay of the Southampton packet by severe weather in the Bay of Biscay and by a stoppage in the Canal. Besides these instances there was a serious delay of over three days in the arrival of the *Bokhara* from China in October, owing to an accident to the machinery.

Due date and hour for arrival at Bombay.	Actual date and hour of arrival at Bombay.	Number of hours late.		
1877.	1877.	D.	H.	M.

6th December, 6 ,, ...	9th December, 1-30 ,, ...	2	19	30

LOCAL STEAM SERVICES.

8. The statements of Local Steam Services given in last year's report are here repeated, no changes having taken place:—

By the British India Steam Navigation Company.

(1). Fortnightly communication between Calcutta and Kyouk Phyoo *viâ* Chittagong and Akyab, with a four-weekly extension to Sandoway during the fair season.
(2). Fortnightly communication between Calcutta and Rangoon *viâ* Akyab.
(3). Weekly communication between Calcutta, Rangoon, and Moulmein.
(4). Four-weekly communication between Calcutta, Singapore, and intermediate ports.
(5). Fortnightly communication between Moulmein and Singapore *viâ* Penang and Malacca.
(6). Fortnightly communication between Madras, Rangoon, and intermediate ports on the north-east coast.
(7). Weekly communication between Calcutta and Bombay, touching at intermediate ports on the Coromandel and Malabar Coasts.
(8). Semi-weekly communication between Bombay and Karáchi, with a weekly continuation to the Persian Gulf.
(9). Four-weekly communication between Aden and Karáchi.

Nos. 1 to 9 are under the control of the Post Office, by which a subsidy of Rs. 7,25,000 per annum is paid.

(10). Four-weekly communication between Calcutta and Port Blair, with extensions to Camorta and Rangoon.

No. 10 is under the control of the Military Department, the consideration given being, not in the form of subsidy, but of guaranteed rates for the transport of Government stores.

By other Agencies.

(11). By the Irrawaddy Flotilla Company, a weekly communication between Rangoon, Mandalay, and intermediate ports, with a monthly extension to Bhamo, the subsidy being Rs. 5,000 per mensem.
(12). By the Irrawaddy Flotilla Company, a semi-weekly communication between Rangoon and Bassein on a monthly subsidy of Rs. 1,500.
(13). By the Burmese Steam Tug Company, a fortnightly communication between Moulmein, Tavoy, and Mergui, on a monthly subsidy of Rs. 1,500.

Nos. 11 to 13 are under the control of the Chief Commissioner of British Burmah, the Post Office contributing a portion (Rs. 500 per mensem) of the subsidy for No. 12.

By other Agencies,—concluded.

(14). By Jardine, Matheson & Co. (of Hongkong), and Apcar & Co. (of Calcutta), a monthly communication between Calcutta, the Straits, and Hongkong, the dates of departure being regulated primarily with reference to the Calcutta opium sales.

No subsidy for No. 14.

(15). By the Euphrates and Tigris Steam Navigation Company, a communication thrice a month between Busrah and Bagdad.

No. 15 is under the control of Her Majesty's Secretary of State for India: the subsidy is £300 per mensem.

The small service maintained by the Government of Ceylon between Point Calimere on the Indian side and Kankesanturai on the Ceylon side was also continued.

9. The lines maintained by the British India Steam Navigation Company, under contract with the Post Office (Nos. 1 to 9 of the statement), were performed with but few serious irregularities. Among these, the most serious were the instances mentioned in the margin, all of which were caused by severe weather in the Bay of Bengal, and the consequent difficulty of entering the Hooghly river.

Overland Mails from Akyab and Rangoon which should have reached Calcutta per *Himalaya* and *Madras* in time for homeward despatch on the 26th June 1877.
Overland Mails from Rangoon which should have reached Calcutta per *Oriental* in time for homeward despatch on the 11th September 1877.
Overland Mails from Rangoon which should have reached Calcutta per *Calcutta* in time for homeward despatch on the 7th August 1877.

CHANGES OF INLAND RATES OF POSTAGE.

10. Various measures involving changes in the inland rates of postage were carried out during the year under report, *viz.*:—

A reduction of the rates chargeable on packets of books and other articles with open ends exceeding 20 tolas in weight, the 2-anna rate being allowed to cover 40 tolas, instead of 20 tolas as before.
A reduction of the rates chargeable on parcels exceeding 40 tolas, the amount chargeable upon every additional 40 tolas being 4 annas, instead of 2 annas for every additional 10 tolas. This measure was coupled with an increase of the minimum charge from 4 annas for 20 tolas to 8 annas for 40 tolas.

With effect from 1st September 1877.

An entire abolition of the charge of re-direction postage, the measure being carried out in respect of newspapers, packets, and registered letters at the commencement of the year, and extended to all other articles (ordinary letters and parcels) towards the end of the year.

Carried out partially on 1st April 1877, and fully on 1st January 1878.

11. Of these measures, the last was the most important financially, as it involved the sacrifice of a considerable revenue; but the measure had effect only during the last three months of the year, thus leaving the larger portion of the results to be accounted for in the next report. Re-direction postage as an item of charge was often paid with a grudge, and as an item of revenue to the Department it caused considerable trouble in collection. The principles of the General Postal Union are against the charge of re-direction postage on articles passing from one country to another; and, although the rules of the Union do not apply to the internal postal system of any country, they will doubtless have a considerable indirect influence upon the internal systems of most of the countries which belong to it. The British Post Office, however, still maintains the additional charge for re-direction as respects its inland service.

ADDITIONAL POSTAL FACILITIES.

12. Several measures were also introduced during the year having for their object the provision of additional postal facilities. Among these may be mentioned the following:—

An acknowledgment for an inland registered letter taken from the addressee and forwarded to the sender on payment by the latter at the time of registration of 1 anna. — With effect from 1st August 1877.
Inland parcels allowed to be sent on the "value-payable" system ... ... 1st December 1877.
Insurance of inland parcels and letters ... ... 1st January 1878.

13. The registered letter acknowledgments have been made use of to a considerable extent by the native community. There is no departmental record of the total number of such acknowledgments; but a special enumeration in Bombay shewed an average of about 1,200 acknowledgments per mensem in the Presidency town of Bombay alone.

14. The "value-payable" system, as applied to inland parcels, though very little used in the first few months* after its introduction, has since been steadily on the increase. But this will fall more appropriately for notice in the next report.

* *Note.*—For the four months of December 1877 to March 1878 the value realised was Rs. 5,225.

15. The system of insuring inland parcels and letters obtained considerable development even in the small portion (three months) of its existence which appertained to the year under report. The insurance revenue for these three months was Rs. 3,013 for January, Rs. 4,620 for February, and Rs. 5,596 for March, against losses in three cases aggregating Rs. 2,189. It will be explained in the next report how the insurance rates, originally fixed at ½ per cent., were soon reduced to ¼ per cent., and how the revenue at the reduced rate soon equalled, and then surpassed, the figure which had been attained at the previous high rate.

MARINE POSTAL CHANGES.

16. During the year under report a considerable transfer of sorting work took place from the Marine Post Office, on board the mail steamers between Suez and Bombay, to the Railway Travelling Post Office. The gradual development of the system of sorting mails in transit by railway, and the improved working of that branch of the Department, made it possible to relieve the Marine Post Office of much of the detailed sorting of the Overland mails: and the change resulted in a net saving of about a thousand rupees monthly. This saving made it possible to carry out some further improvements of the Railway Travelling Post Office, which were much wanted.

CREATION OF A NEW POSTAL CIRCLE FOR BEHAR.

17. As the operations of the Department have extended, it has been found necessary from time to time to sub-divide the original Postal Circles. It was in this way that the Postal Circles of British Burma, Sindh, the Central Provinces, Oudh, Rajputana, and Assam came to be separated from the parent Circles of Bengal, Bombay, and the North-Western Provinces; and, in the year now under report, Behar was added to the list of Postal Circles. In cases where the new Circle comprises territory governed by a Civil Administration of its own, the Postal head is designated Chief Inspector of Post Offices, and is placed in direct subordination to this Office; but when (as in the case of Behar, and subsequently of Oudh) the territory forms part of the Civil Government of a larger Province, the Postal head is placed, as regards certain matters, in subordination to the Post Master General of that Province, and is designated Deputy Post Master General.

GENERAL REVISION OF POSTAL ESTABLISHMENT IN BENGAL.

18. During the year under report, an extensive revision of establishment was carried out in the Bengal Circle under the direction of Mr. MacFarlan, the Officiating Post Master General. The need of a thorough revision of this sort had for some time been felt; and as Mr. MacFarlan had made a most valuable revision of a like kind some years ago in Bombay, the opportunity of his presence in Bengal was taken for carrying out the object. An examination was made into the work of every office and line, and a re-distribution of establishment was then worked out. It was a work of immense labor to Mr. MacFarlan, and of great value to the Department.

THE FAMINE IN SOUTHERN INDIA.

19. The famine which prevailed in Southern India during the greater part of the year under report was a continuation of a scarcity which had almost attained the dimensions of a famine in the previous year. A time of famine affects the Post Office during the actual currency of the dearth by stimulating correspondence in connection with the transport of grain, the remittance of money, &c., and by producing in some localities, and especially in the earlier stage of the dearth, an increased use of the Parcel Post for the transmission of gold and silver ornaments, &c., to the mint. This increased use of the Parcel Post was especially noticeable in Bombay in the year preceding that under report. I do not lose sight of the fact that, in a poor country like India, where even the low letter rate of ½ anna is a very large proportion (about ⅛th) of the daily wage of a laboring man, the impoverishment resulting from famine must eventually impede the growth of correspondence; but any immediate effect of this kind is compensated by the artificial stimulus above referred to.

20. Another effect of famine upon the Post Office is the increase of expenditure in the shape of famine allowances, which amounted in the year under report to about 1¼ lakhs.

INUNDATIONS IN SOUTHERN INDIA.

21. Heavy floods followed upon the wake of the famine in Southern India, causing many serious breaches in the South Indian Railway, and consequent interruption of the mail service.

JOWAKI CAMPAIGN.

22. In the raids by the Jowaki section of the Afridi tribe on the border of the Kohat district, the leader was a pensioned overseer of the postal line to Kohat; and, shortly after the commencement of the raids, the Head Overseer of that line and three assistant Overseers joined the insurgents. The postal requirements of the expeditionary forces subsequently sent into the Jowaki territory met with the approval of the Military Authorities.

OTHER MEASURES AFFECTING THE INTERNAL WORKING OF THE DEPARTMENT.

23. There were many measures affecting the internal working of the Department which were carried out during the year under report. Reference to this work of internal revision as going on in the previous year was made in paragraph 24 of last report: and it has been carried on during the year now under report. The purely departmental character of these measures would make any attempt at detailed reference to them out of place in a report like this. One great object has been the simplification of work so as to leave room for the additional duties involved in the increase of correspondence as well as in the extension of postal facilities.

SECTION I.—POST-OFFICES, LETTER-BOXES, AND RURAL MESSENGERS.

24. In the margin will be found an abstract from Appendix No. I, shewing the number of post-offices, letter-boxes, and village postmen (formerly termed rural messengers) at the close of the year under review, as compared with the number existing at the close of the previous year. The increase is not remarkable either for largeness or smallness. It would have been a larger one, but for the financial restriction which was brought into force in October 1877, consequent upon the increased expenditure caused by the famine.

	Number at close of 1876-77.	Number at close of 1877-78.	Increase.
Post-offices	3,852	4,107	255
Letter-boxes	5,454	5,574	120
Village postmen	1,950	2,313	363

25. The largest share of the increase belongs to the Bombay Circle, for which the returns shew 97 additional post-offices. This is mainly due to the development of postal operations in the rising province of Kattywar, in which no less than 28 of the new offices are situated. Before leaving on furlough, Mr. James, the Officiating Post Master General of Bombay, reported fully on the prospects to be looked for in connection with postal development in Kattywar, and the result was a considerable extension with thoroughly satisfactory results.

26. The Post Master General of Bengal has brought to my notice the existence of a practice in Chota Nagpore under which the village postmen deliver unpaid articles, receiving payment in grain from poor people who are unable to pay in any other form. The grain so received is converted into money by the village postmen, who themselves bear the risk of the sale.

SECTION II.—POSTAL LINES.

27. The usual statistics respecting postal lines will be found in Appendix II, of which an abstract is given on the margin. Of the total railway mileage (7,338 miles), the greater portion (6,039) is served by travelling post-offices. The increase of 400 miles of rail is due to an extension of the Northern Bengal State Railway (118 miles), to various petty extensions in the Eastern Bengal Railway, the South Indian Railway, the Holkar and Neemuch State Railway, and the Wardah Valley State Railway, and to the opening of the Scindia State Railway (87 miles from Agra to Dholpur), and of the Rangoon and Irrawaddy Valley State Railway (163 miles). Under the head of "mail-cart, horse and camel dâk," the decrease of 138 miles is the net result of decreases aggregating 608 miles, and increases aggregating 470 miles. Most of these changes had reference to arrangements for the conveyance of mails under contract by proprietors of private passenger services. Such arrangements are subject to constant fluctuation. The most important changes in respect of lines under direct management were the abolition of the Caragola and Siligori Carriage Service (Darjeeling road), consequent upon the extension of the Northern Bengal State Railway, and the establishment of a camel post between Rajkot and Jamnagur (56 miles) in Kattywar. The net increase of 205 miles under the head of "runners and boats" is the result of numerous changes, principally in Bengal, where there was a large reduction of runners' mileage (465 miles), mainly due to the revision carried out by Mr. MacFarlan (already referred to in paragraph 18), and in Bombay, where there was a net increase of 776 miles (457 being experimental), connected, to a large extent, with the extension of postal operations in Kattywar (already referred to in paragraph 25).

Year.	Railway.	Mail-cart, horse and camel dâk.	Runners and boats.	Sea.	Total.
1876-77 ...	6,938	3,919	32,952	13,687	57,496
1877-78 ...	7,338	3,781	33,157	13,687	57,963
	Increase. 400	Decrease. 138	Increase. 205	...	Increase. 467

SECTION III.—CORRESPONDENCE.

28. The results of the correspondence statistics are shewn in Appendix III, of which an abstract is given in the margin. The increase of 4·58 per cent. in "letters" shews an average rate of development: and the real development is somewhat greater than that shewn, owing to the exclusion for the first time of postal service letters. The increase under the head of "newspapers" (11·33 per cent.) is larger than usual; it may possibly have arisen from increased interest in European news connected with the Russo-Turkish War. From the statistics of registered periodi-

Year.	Letters.	Newspapers.	Parcels.	Books, Patterns and Packets.	Total.
1876-77 ...	110,051,340	9,880,679	990,661	1,619,073	122,541,753
1877-78 ...	115,089,336	10,999,758	909,962	1,827,024	128,826,080
Increase ...	5,037,996	1,119,079	.....	207,951	6,284,327
Decrease ...	.....	.....	80,699	.....	.....
Percentage of increase or decrease ...	4·58	11·33	8·15	12·84	5·13

cals (given in paragraph 32 below) it will be seen that there was an increase of 6 per cent. in the number of such periodicals; and this, with a moderate increase of the circulation of those already existing, would account for the increase of 11·33 per cent. in the total circulation. The decrease under the head of "parcels" is caused partly by a cessation during the year of the extraordinary traffic of bullion parcels from the famine districts referred to in paragraph 33 of last year's report, and partly by the exclusion from the parcel statistics of postal service parcels containing returned mail-bags, &c. The largeness of the increase under the head of "packets" is probably due to the reduction of the rates of postage chargeable on packets exceeding 20 tolas in weight, as described in a preceding paragraph (10).

29. The usual further analysis of the returns relating to *letters* is given on the margin. There is nothing in it calling for remark, save the relatively large increase in the number of registered letters caused by the grant of full registration powers to all branch post-offices, in June 1877.

Year.	Paid.	Unpaid.	Registered.	Total.
1876-77	76,081,339	31,355,998	2,611,003	110,051,340

Increase	3,481,484	1,417,921	135,591	5,037,996
Percentage of increase ...	4·58	4·52	5·19	4·58

30. *Overland Parcel Post.*—As part of the correspondence returns, it is usual to make special mention of the Overland Parcel Post. The following statement gives information in the same form as in preceding years :—

Parcel Exchanges.	Total number of parcels.		Average weight of each parcel.		Net revenue derived by the Indian Post Office after deduction of custom duty, and sums due to the P. and O. Company.	
	1876-77.	1877-78.	1876-77.	1877-78.	1876-77.	1877-78.

From India ...	.....	15	.....	0 11·73	.....	18
	.....	15	.....	0 11·73	.....	18
Total ...	45,325	59,095	4 12·74	5 0·07	78,876	97,277

The parcel exchanges with the Straits and Aden were not introduced till December 1877 and February 1878, respectively, so that the results for the year under report are but small.

31. The growth of the Overland Branch of the parcel post has continued to progress rapidly. The exceptional largeness of the increase in the year under review is mainly

attributable to the reduction of the rate chargeable on outward parcels of books from 1*s.* to 6*d.* per lb., with effect from May 1877. The progress in the several years since the institution of the Overland Parcel Post is summarised below :—

	Number of parcels.
1873-74	21,923
1874-75	25,563
1875-76	35,819
1876-77	45,325
1877-78	**59,095**

The large decrease in the number of parcels sent from the continent of Europe to India is ascribed to the heavy custom duty levied on gold thread. Parcels of gold thread which were once numerous entirely disappeared, thus causing the falling off under notice.

32. *Registered Periodicals.*—It has been usual also to give separate statistical information respecting periodicals registered as eligible for the privileged rate of postage. The privileged rate of postage which belonged in time past only to registered periodicals was, from the commencement of the next official year (1st April 1878), extended to packets of books, patterns, and other articles in open ends, so that the registration of periodicals for the special privilege came to an end with the year under report. The statement given below in the usual form is therefore the last of the kind :—

Registered Periodicals in the following Postal Circles.	European.		Oriental.		European and Oriental.		Total.	
	On 31st March 1877.	On 31st March 1878.	On 31st March 1877.	On 31st March 1878.	On 31st March 1877.	On 31st March 1878.	On 31st March 1877.	On 31st March 1878.

Added	142
Discontinued	103
Net Increase ...	39

The development of newspaper circulation (upwards of 11 per cent.) in the year under report has already been referred to (paragraph 28). A detailed list of the 683 periodicals in existence on the 31st March 1878 was published in the Supplement to the *Gazette of India* of the 8th March 1879.

33. The correspondence entered on the margin of paragraph 28 was disposed of as follows :—

Disposal of Correspondence.	Sent out for delivery.	Received back undelivered.	Balance actually delivered.
	Number.	Number.	Number.
By Post Office peons, or from the window	90,275,881	3,050,918	87,224,963
To Branch Post Offices	31,335,405	1,595,703	29,739,702
To District Post Offices	3,558,541	222,337	3,336,204
To Rural Messengers	3,656,253	174,964	3,481,289
	128,826,080	5,043,922	123,782,158
Sent to Dead Letter Offices			2,781,626
Total ...			126,563,784

Note.—Of the number received back undelivered, some are subsequently delivered under re-issue, the remainder being sent to Dead Letter Offices.

The actual delivery bears the same proportion (97 per cent.) to the total as in last year.

34. *Foreign Correspondence.*—The usual statement of foreign correspondence has been enlarged this year so as to include packets of books, &c. The figures are given below :—

Route.		Estimated aggregate number.		Proportion of correspondence by each route.	
		1876-77.	1877-78.	1876-77.	1877-78.

35. As regards correspondence with the United Kingdom (to which the first and larger part of the statement refers), there is a moderate increase of 4 per cent. in letters and 5 per cent. in newspapers; but it will be observed that the homeward mail continues to shew an increasing use of the Brindisi route, as compared with the Southampton route, the proportion sent by Brindisi having risen from 70 to 73 per cent. for letters, and from 82 to 85 per cent. for newspapers. The statistics of the outward mail give a different result, the Brindisi proportion having fallen for letters from 63 to 62 per cent., and remaining stationary for newspapers at 67 per cent.

36. As regards correspondence with other places abroad, the statistics shew a large increase of 28 per cent. These statistics are of comparatively recent origin, and may perhaps have been affected to some extent in the way of increase by a more careful inclusion of

previously omitted items; but allowing for all this, I believe that there has been a large development of this class of correspondence, owing principally to the improved conditions under which it may now be carried on under the Postal Union rates and rules.

37. *Dead Letters.*—The usual statistics of the working of Dead Letter Offices will be found in Appendix IV, of which an abstract is given below :—

		Number.		Percentage.	
		1876-77.	1877-78.	1876-77.	1877-78.
Total number of articles received in Dead Letter Offices		2,539,143	2,781,626		
DEDUCT.					
	1876-77. 1877-78.				
Articles issued by Dead Letter Offices for delivery to the addressees or senders and received back again as undeliverable	130,701 134,596				
Articles transferred to other Dead Letter Offices	523,333 607,858				
		654,034	742,454		
Net receipts to be disposed of by the Dead Letter Offices		1,885,109	2,039,172	100	100
Articles disposed of by the Dead Letter Offices, less the proportion of articles returned undelivered.	Disposed of by re-direction to addressees	88,784	197,819	4·71	9·70
	Disposed of by return to senders	1,105,064	1,174,183	58·62	57·58
Articles undisposable and deposited as dead ...		691,261	667,170	36·67	32·72

The work of Dead Letter Offices in this country has two characters: *viz.*, *firstly*, endeavouring to find out the addressees (Directories, Lists, and other available sources of information being supplied for this purpose); and, *secondly* (when the above fails), finding out the senders in view to returning to them the communications which cannot be delivered. The percentage of articles undisposable in either of these ways has again fallen, and this is an indication of increased success in the work assigned to them. Dead Letter Office work involves not merely intelligence and care but responsibility in regard to valuable enclosures. As an instance of this responsibility, it may be mentioned that in the year under report a cover containing notes for Rs. 2,500, without any address on it, and with a torn end through which the notes were visible, passed through the Bombay General Post Office to the Dead Letter Office, the valuable contents being safely returned by the latter to the sender.

38. *Postage Stamp Sales.*—The statistics of the sales of postage stamps will be found in Appendices V (ordinary stamps) and VI (service stamps). An abstract is given below :—

Ordinary Postage Stamps.		½-anna labels.	1-anna labels.	2-anna labels.	4-anna labels.	6-anna labels.	8-anna labels.	12-anna labels.	1-rupee labels.	Gross value.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.

39. There is nothing in the results exhibited above which calls for special remark, except the continued rapid growth of the sale of half-anna embossed envelopes. The sale of these envelopes is limited by the supply, and although the supply has for some years been increased as fast as it is possible to do so under the present contract with the English manufacturers, it has never yet been fully equal to the demand. The experience of former years showed that when embossed envelopes were offered for sale with a charge upon them over and above the value of the stamps so as to cover the cost of paper and manufacture, they had little or no attraction for the Indian public; and as it was considered very desirable to induce natives of the country to use envelopes of a proper size, shape, and texture, it was determined to offer the inducement of envelopes purchaseable at the value of the stamps borne by them. This inducement has proved to be so great that the Department has never been able as yet to offer a supply fully equal to the demand. The object which the measure had in view is being fully realized by the gradual disappearance from among native correspondence of the flimsy rolls of paper, about the size of a finger, which gave so much trouble to the sorting offices, and caused so much miscarriage from illegibility of address. Although the supply of embossed envelopes without any charge for the envelopes themselves is a practical reduction of the postage rate from six pie to about five pie, I am sure that the concession is a proper one, and that it is good policy to maintain it.

40. The proportion of revenue derived from the sale of ordinary postage stamps continues to increase slowly but steadily, as will be seen from the figures given below :—

	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.
Total postage revenue	100	100	100	100	100
Cash	31·23	31·23	30·97	30·71	29·33
Proportion derived from ordinary stamps	51·50	52·08	52·37	52·29	53·87
Proportion derived from service stamps...	17·27	16·69	16·66	17·00	16·80

SECTION IV.—DISTRICT POSTS.

41. The district posts of the three districts of Ganjam, Vizagapatam and Cuddapah, in the Madras Presidency, were transferred during the year under report to the management of the Imperial post, thus completing the transfer as regards the Madras Presidency, and (speaking generally) throughout India. As explained in previous reports, the district posts have for their primary object the conveyance of official correspondence between police and revenue stations in the interior of districts where the general wants of the locality are not such as to call for the provision of postal facilities by the Imperial post. The cost of such arrangements is defrayed in some cases by local cesses and in others by Imperial grants; the administration being in every case under the Local Government. Since 1864, endeavours have been made to introduce the local officers of the Imperial post as managers of the district posts under the orders of the Local Governments, and this object has now been attained throughout India. The administration of these district posts remains as heretofore under the control of the Local Governments, but the officers employed by them in the administration are the local officers of the Imperial post. It has taken about 14 years to bring about this change, for at first objections were raised in many quarters; but gradually the objections have disappeared in the face of the manifest improvement which took place wherever the change was introduced. The interest which the Imperial post has in these district posts is a great one, for when made available for private correspondence, they do the work of pioneers of the Imperial post. The chief demands for new Imperial offices occur in places where the correspondence has been first developed by the district posts. Wherever there is such development, the Imperial post steps in and undertakes the cost of the office, leaving the district post funds free for extension elsewhere. This has been the practical working hitherto; but difficulties are beginning to appear in some quarters in getting leave from Local Governments to spend the funds thus set free; however, I hope that proper representations will result in the avoidance of serious difficulty of this kind. The following figures respecting district posts have been compiled in the same form as in previous reports; but the information is always more or less

incomplete, owing to the accounts, &c., being under so many different authorities unconnected with this department:—

Names of Postal Circles.		Number of district post offices and village post-men receiving houses.	Number of district post district post men and postmen.	Number of miles of district post letter-boxes.	Distance in miles of district post lines.	Local cess.	Expenditure.	Grant from Imperial Revenue.	Articles received from the Imperial and district posts for delivery by the district post.	Articles posted in the district post for despatch to the Imperial or district post.	Articles received in the district post for delivery by the Imperial post undelivered.	Percentage of those returned on the total number received for delivery by the district post.

(a). Exclusive of Rs. 4,125·9·6 on account of famine latta.
(b). Including Rs. 720 contributed from the District Improvement Fund in Assam.
(c). Including the annual subsidy paid from the District Dák Fund for the maintenance of the Dera Ismail Khan and Chichawani Hill Cart line in the Punjab.
(d). Including contributions from Provincial and Local Funds in the Central Provinces and Berars.
(e). The distance in rainy season amounted to 761 miles.
(f). Excluding Rs. 21,892 paid from the Imperial revenues on account of pay of village postmen and postmen attached to district post offices.

42. Postal arrangements in Native States are for the most part very bad; and I am not able for the present to anticipate any considerable improvement in places where the extension of the Imperial Post is not encouraged. The subject is no doubt important, and will, I think, become more and more important as time goes on.

SECTION V.—MISCELLANEOUS.

43. *Security taken from Post Office Servants.*—The operations of the Security Fund are exhibited in the following abstract:—

Receipts.	Number of Employes. First half-year.	Number of Employes. Second half-year.	Amount of Subscription. First half-year.	Amount of Subscription. Second half-year.	Amount of Subscription. Total.	Charges.	Amount.
			Rs.	Rs.	Rs.		Rs.

District ...	3,403	3,389	1,701	1,694	3,396	Cost of establishment.	1,080
Total ...	13,019	13,199	6,509	6,599	13,109	Total ...	1,464
						Total Charges	5,919
						Balance at credit	1,01,551
Grand Total ...	...	...	...	...	1,07,470	Grand Total	1,07,470

The Fund is supported by subscriptions from officials of the pensionable (*a*) class at the rate of one rupee half-yearly, and from officials of the non-pensionable (*b*) class at half that rate. As has been explained on former occasions, the subscriptions of the former (pensionable class) are returnable on resignation or death in the proportion borne for each year by the surplus income to the total income, while those of the latter (non-pensionable class) are not returnable at all. The balance in hand divided into returnable and non-returnable is shown below:—

	1876-77. Rs.	1877-78. Rs.
Total balance	79,734	1,01,551
Returnable portion	37,448	46,253
Non-returnable portion	42,286	55,298

44. This Fund was commenced in April 1873 to meet a great want. Private Guarantee Associations demanded rates of *premia* which the subordinates of the Department found it difficult to pay; and when the European Assurance Guarantee Society, from which numerous Postal officers had obtained security, collapsed, the opportunity was taken of establishing a departmental system. The relief to Postal subordinates in the reduced amount of subscriptions was immense, and even with the low rates the balance of the Fund has gone on steadily increasing from year to year.

45. In the year under report an important class of liabilities commenced, owing to the introduction of the insurance system. It was owing to the prospect of a greater measure of liability on this account that the Fund has been maintained at the present rates of subscription; and it may perhaps be able to bear the liabilities so accruing without any large amount

of help from the insurance income. There were no payments from the Fund on account of insured articles in the year under review, although there were three cases of the loss of insured parcels, aggregating Rs. 2,189 in value, which were made the subject of compensation in the next year. It will be convenient to restrict the yearly remarks under this head to compensation payments made in the year under review; and I shall not therefore refer to these cases at greater length on this occasion.

46. *Complaints from the public.*—There were 5,339 complaints made by the public in the year under review, as compared with 5,407 in the previous year. Of these, 1,316 were acknowledged to be well founded, as compared with 1,203 in the previous year. The following analysis of complaints relating to articles of value in the two last years shows that, though the aggregate number in the year under report was smaller, the number proved against the officials of the department was larger :—

	Ordinary letters.		Registered letters.		Parcels.		Total.	
	1876-77.	1877-78.	1876-77.	1877-78.	1876-77.	1877-78.	1876-77.	1877-78.
I.—Cases in which the enquiry showed either that no loss had occurred, or that the loss had not occurred through fault of Postal officials	147	153	150	144	160	105	457	402
II.—Cases in which the Postal establishment was proved to be in fault, or in which there was strong ground for believing it to be so	144	150	87	95	45	72	276	317
III.—Cases in which no definite conclusion was arrived at	661	578	31	28	52	108	744	714
TOTAL ...	952	881	268	267	257	285	1,477	1,433

One of the most important cases of complaint related to the abstraction of the contents of a registered letter posted in Bombay containing notes of the value of Rs. 15,000. It was proved, however, that the abstraction was effected (and that in a very ingenious way) by the servant of the sender before the letter was registered. The servant was tried and convicted.

47. *Convictions and departmental punishments.*—An abstract of the number of legal convictions and departmental punishments (detailed in Appendix VIII) is given below :—

	1876-77.	1877-78.
Number of legal convictions	139	171
Number of cases punished departmentally	81	95
TOTAL ...	220	266

Perhaps the most important conviction was that relating to a theft of a parcel mail-bag containing property of the value of Rs. 9,558, shortly after leaving the Bangalore office. The Post Master General of Madras gives the following description of it:—"It was effected by collusion between the banghy clerk and one of the runners. As the runner left the office on his way to the railway station, distant one mile, he pitched the bag containing the banghy into a vehicle previously stationed in a convenient corner, and ran on. It was a dark evening, and he ran for half a mile, and then, lagging behind, called out that he was being attacked. When the other runners got back, he asserted that the robbers had knocked him down, and had gone off with the bag. The Bangalore police gave great attention to this case, and it was through their unremitting efforts that it was brought to light and punished."

POSTAL CIRCLES.	1876-77.			1877-78.

TOTAL ...	12	4	16	34	18	52

48. *Highway robberies.*—An abstract of highway robberies is given on the margin. The very large increase in the number of such robberies is due mainly to the prevalence of famine. The increase in number as compared with the previous year is 36, of which half belongs to Madras and Bombay, where the scarcity was most severely felt. There had been a gradual, but marked, decrease of crime of this sort in the previous five years, as will be seen from the figures given below :—

	British territory.	Foreign territory.	Total.

	Total ...	34	5	Total ...	18	8

Total (British) 34, besides 5 attacks. Total (Foreign) 18, besides 8 attacks.

50. Of the 8 cases of robbery in Bengal, there were none involving loss of life. Convictions were obtained in 4; and in every case the greater part of the plundered property was recovered. The Madras cases (13 robberies and 2 attacks) were not very serious. In only one instance (one of those in the Mysore territory) was life lost, the runner who was attacked dying subsequently of his wound. Convictions were obtained in 5 cases; and of the whole property stolen, the greater part was recovered. In the Bombay cases (12 robberies and 2 attacks) there was only 1 in Kattywar involving loss of life. In only 2 instances were convictions obtained; but none of them were serious as regards the amount plundered, the mails being in most cases left by the robbers after searching for valuables, of which but little was found. In the cases in the North-Western Provinces (9 robberies and 4 attacks) there was no loss of life. Convictions were obtained in 6 cases; and in only 3 cases was the plundered property of appreciable value. The only other Postal Circle at all prominent in respect of highway robberies is Rajputana; and considering the great distress which prevailed among a population containing so many lawless characters, the Political authorities are of opinion that the smallness of the number (4 robberies and 4 attacks) is very satisfactory. In none of the Rajputana cases was a conviction obtained.

Postal Officials.	1876-77.	1877-78.
	No.	No.
Inspectors	197	197
Post Masters, Deputy and Sub-Deputy Post Masters	3,554	3,770

Village Postmen	1,950	2,313
TOTAL ...	27,453	28,975

51. The numerical strength of the establishment in the several Postal Circles is shown in Appendix IX. The abstract on the margin includes all grades below that of Post Master General, Deputy Post Master General or Chief Inspector.

SECTION VI.—NON-POSTAL BRANCHES OF THE DEPARTMENT.

52. The number of Government Carrying Agency offices for goods (36) remained the same as in the preceding year, one office (Bahawalpur) having been closed, and another (Dholpur) opened. The road transit by means of carts gave place to railway transit between Agra and Dholpur, consequent upon the opening of the Railway between those places; and the road line between Mooltan and Bahawalpur was abolished for a like cause. The Government Carrying Agency service at the close of the year under review consisted of a line from Calcutta to Jhelum by railway and onwards by bullock train to Peshawar; with principal branches to Fatehgarh (bullock train), Gwalior (partly rail and partly bullock train), Moradabad (rail), Landour (bullock train), Simla (bullock train), Ferozepore (bullock train), Mooltan (rail), Sialkot (bullock train), and Murree (bullock train).

53. The passenger services on mail cart lines were reduced by the abolition of the Darjeeling line and Bahawalpur line, consequent upon the extension of the Railway system in those directions. They comprised at the close of the year under review the Van Dâk lines from Jhelum to Peshawar (with branches to Murree, Sialkot, and Kohat), and from Amritsar to Pathankot; also lines from Umballa to Kalka and Bareilly to Ranibagh. The last-mentioned line has, however, no special provision for passengers, the accommodation offered being merely a seat on the mail cart, when available.

54. The financial results of these Non-Postal branches will be found under the next section.

SECTION VII.—FINANCIAL RESULTS.

55. There is a still further improvement of financial results this year, as will be seen from the figures given below :—

Review of financial results.

	1876-77.	1877-78.
PURELY POSTAL SERVICE.	Rs.	Rs.
Receipts, including sale of service postage stamps ...	66,88,656	73,04,329
Ditto excluding ditto ditto ...	54,81,772	60,18,193
Disbursements	57,87,667	60,87,657
Net revenue, including sale of service postage stamps ...	9,00,989	12,16,672
NON-POSTAL BRANCHES.		
Government Carrying Agency, commonly called the Government Bullock Train.		
Receipts	7,91,813	7,13,046

Surplus ...	8,745	29,636
Passenger services on mail cart lines.		
Receipts	1,03,183	86,421
Disbursements	1,03,183	86,421
Contract subsidies to local steamers employed to a large extent on general and military considerations, but paid entirely through the Post Office as a matter of convenience.		
Disbursements	7,12,000	7,08,515
* {Purely Bullock Train ...	6,07,746	6,01,587
{Postal charges debited to Bullock Train ...	1,417	1,430
TOTAL ...	6,09,163	6,03,017

Briefly stated, the results for the last two years are as follows :—

	1876-77.	1877-78.
	Rs.	Rs.
A net revenue in the purely Postal Department of ...	9,00,989	12,16,672
A net surplus in the Bullock Train Department of ...	1,82,650	1,10,029
A net surplus in Punjab Military Van Dâk of ...	8,745	29,636
TOTAL ...	10,92,384	13,56,337

56. But, in order to get a full view of the financial results, certain other items of charge have to be taken into account; and I have again endeavoured to make this estimate still more accurate than formerly. The change to which I refer consists in a more accurate calculation of the cost of the "Railway free service." This matter has recently been made the subject of careful examination with the view of settling the basis of actual payment to be made for postal services in the case of State Railways; and I am now for the first time in a position to offer an estimate having the character of approximate accuracy. The calculation is based on the railway statistics showing the actual cost per vehicle for each mile run; and from this is deducted the amount actually paid, the remainder being shown as the estimated cost of the service rendered free. The statistics of actual mileage run by postal vehicles in the year under review are imperfect, owing to the absence of any exact record on the subject; and in this and some other minor respects the present estimate is faulty, but I give it as an undoubtedly better estimate than the former one.

57. The list of items so chargeable against the Post Office, with the estimate under each head as made out in last report for the preceding year and in the report for the year under review, is given on the margin.

	1876-77.	1877-78.
	Rs.	Rs.
Cost of stationery supplied by the Superintendent of Stationery ...	35,203	25,816
Railway free service (estimated cost)	2,40,000	3,66,000
English stores	98,983	1,78,612
Value of service rendered to the Post Office by the Government Press ...	42,806	48,609
Rent of Government buildings	2,01,169	2,07,000
Estimated Postal share of Local Marine subsidies	2,03,854	2,03,854
Gratuities	2,169	2,595
Leave allowances paid in Great Britain	895	16,191
Pensions granted during the year, aggregating in annual value Rs. 8,652, capitalised at 10·165 years' purchase (8,652 × 10·165 =) Rs. 87,917 ...	5,42,808	87,947
TOTAL	9,70,827	11,36,624

Taking the total net revenue (as given in paragraph 55) at Rs. 13,56,337, and deducting the total of the items now under reference, we find a net profit of Rs. 2,19,713 for the year under review.

58. In reviewing the corresponding portion of my last report, the Government noticed the absence of information about the basis on which the departmental share of the liability for Local Marine subsidies was estimated; and I take this opportunity of explaining it. The lines served by the contract vessels of the British India Steam Navigation Company are divided for the purpose of this estimate into those in which the Post Office has a predominating interest and those in which it has merely a subordinate interest. The whole cost of the former lines (having a predominating Postal interest) is set down as a Postal charge, and the cost of the latter lines (having only a subordinate Postal interest) is thrown entirely out of the departmental estimate. On this principle the sum chargeable to the Post Office is calculated as shown in the margin. When the Bombay and Karachi line first commenced to carry a portion of the heavy mails, a reduction was made in the cost of the land line to the extent of Rs. 25,768; and this saving was accordingly added to the sum before calculated, making a total of Rs. 2,03,854. The complete abolition of the land line in the year following that now under report will result in a further alteration of the estimated Postal share by transferring the Karachi and Bombay sea-line to the list of lines in which the Post Office has a predominating interest.

	Miles run per annum.	
For all the contract lines	955,168	
For lines in which the Post Office has a predominating interest, *viz.*—		
Calcutta to Akyab and back ...	234,624

SECTION VIII.—GENERAL REVIEW OF PROGRESS.

Year	Comparison of number of letters and newspapers, those of 1855-56 being represented by 100.	Comparison of revenue from private correspondence, that of 1855-56 being represented by 100.	Comparison of expenditure, that of 1855-56 being represented by 100.
1855-56—first complete year of new rates ...	100	100	100
1867-68—thirteenth complete year ...	207	237	161
1868-69—fourteenth ditto ...	228	258	182
1869-70—fifteenth ditto ...	233	246	190
1870-71—sixteenth ditto ...	257	235	175
1871-72—seventeenth ditto ...	269	272	173
1872-73—eighteenth ditto ...	279	279	177
1873-74—nineteenth ditto ...	328	284	184
1874-75—twentieth ditto ...	318	305	189
1875-76—twenty-first ditto ...	362	326	191
1876-77—twenty-second ditto ...	368	345	196
1877-78—twenty third ditto ...	387	378	206

59. I give as usual on the margin the usual comparison of correspondence, revenue and expenditure, from the year 1855-56 onwards; that year being selected as the first complete year after the introduction of the low rates of postage under the Postal Act of 1854.

SECTION IX.—NOTICES OF POST OFFICE OFFICIALS.

60. I have already referred (paragraph 18) to the important revision of Postal establishments carried out by Mr. MacFarlan, Officiating Post Master General of Bengal; and I feel that special thanks are due to him on this account, for not only was the work laborious, but it required and received at his hands the exercise of great discrimination and judgment. Mr. MacFarlan has since retired from the service; and it may not be out of place for me to record here the value which has been set upon his services. His first connection with the Department was in the beginning of 1871, when he acted for about four years as Post Master General of the Bombay Circle. For his work in Bombay he received the special acknowledgment of the Government of India. He then took furlough, but, as a special case, was appointed (while on furlough) to the substantive office of Post Master General of Madras. On his return to India, in April 1877, he was appointed to officiate as Post Master General, Bengal, in which office he remained till his retirement from the service, in December 1878. The loss of his services is a real loss to the Department.

61. I would also mention Mr. Turton Smith, of the Punjab Police, whose temporary connection with the Department, as Assistant Director General, ended shortly after the close of the year under report. Mr. Turton Smith's energies were devoted with much success to the prosecution of crime in the Department, as well as among gangs of thieves and forgers who made the Post Office a sphere for their operations.

62. From among the many subordinate officers mentioned by the several Post Masters General, I can refer here only to a selected number. In *Bengal*, the Post Master General mentions Mr. McKenzie, Mr. Barton Groves, and Babu Bishen Chunder Dutt, as Inspectors who rendered special help to him in the revision of establishments. In *Madras* are mentioned Mr. Coombs, Inspector, for general efficiency in the administration of his division; and, among Post Masters, Mr. Christian, for a particularly well-ordered office. In *Bombay*, the Post Master General mentions Khan Sahib Cursetji Palonji, one of the oldest and best Inspectors in the Department, as having done some good service during the year; and Dinanath Babaji, the Superintendent of the Postal Printing Press at Bombay, whose efficient management made the office a model of good workmanship, combined with economy. In the *Punjab*, the Post Master General refers to a number of officers, both Inspectors and Post Masters, among whom I mention particularly Mr. Sullen, Post Master of Lahore, who was shortly after selected to fill the place of Officiating Superintendent of the Punjab Van Dâk. In the *Travelling Post Office* are mentioned especially Mr. Hill, Superintendent, and B. Thurmiah Garoo, Sub-Inspector, for good service during the Madras floods. In *British Burma* the first on the Chief Inspector's list is Mr. Twemlow, who has for a long series of years satisfactorily controlled the Post Office at Moulmein. In *Oudh*, Mr. Antram, the Post Master of Lucknow, is mentioned as having introduced several useful reforms; and Lala Raj Coomar Lal, Sub-Inspector, for special care and success in the prosecution of an important case.

A. M. MONTEATH,

Director General of the Post Office of India.

Statement showing the number of Post Offices and Letter Boxes opened and Village Postmen entertained during the year 1877-78, and the total number that stood at the end of the official years 1876-77 and 1877-78.

Column 2.—These figures represent the net proceeds of the sale of ordinary postage stamps after deducting the sale discount.
Column 3.—The great differences observable in this column are due mainly to changes of system in the treatment of official correspondence, which was charged at full letter rates up to 1865-66, at the same rates as ordinary correspondence (letters, and newspapers, &c.) from that year on to 1872-73; after which a low privileged rate of 1 anna for each letter not exceeding 10 tolahs (about 4 ozs.) was conceded, thus reducing immensely the postage income.
Column 8.—The figures in this column are useful as showing the revenue undisturbed by the changes of system in respect of official correspondence explained in the note referring to column 3.

Year.	Postal Lines.					Total Number of Articles received for delivery.					Articles finally undelivered after passing through the Dead Letter Office.		European Letters.			Indian share of loss upon subsidized line, P. & O. Co.'s, of outward mail after deduction of sea postage receipts.

Column 12.—The figures in this column show the proportion of the cash collections in column 4 to the total postal revenue of columns 2, 3 and 4. The comparison commences with the year 1872-73, when the official postage rate was reduced (see note on Column 3) and the whole collected in stamps.
Columns 26 and 27.—These figures cannot be given prior to 1873-74, owing to a difference in the system of statistical record.
Column 28.—The registration of newspapers only commenced in the year 1871-72.
Columns 29.—Three digits are omitted from the figures in these columns.
Columns 21 to 25.—Three digits are omitted from the figures in these columns.
(a). Revised so as to include letters to Gibraltar, Malta, and places east of Suez.

A. M. MONTEATH,
Director General of the Post Office of India.

R. B. CHAPMAN,
Secy. to the Govt. of India.

MARINE SURVEYS—CASUALTIES AND DANGERS TO NAVIGATION.

The information contained in this Notice is to be carefully considered, to be noted in the Sailing Directions, and compared with the Charts when the ship is navigating the locality to which it refers.

Hydrographic Notice.

[No. 17.]

INDIA—WEST COAST;

RATNAGIRI, RAJAPUR BAY, AND VIZIADURG.*

THE following information, resulting from recent surveys on the west coast of India, has been furnished by Navigating Lieutenant F. W. Jarrad, R.N., Deputy Superintendent in charge of the Surveys.

[*All bearings are Magnetic. Variation in* 1879, 1° 0′ *E.*]

RATNAGIRI.

RATNAGIRI.—The old Mahratta fortress of Ratnagiri which bears about N. ½ W. 6 miles from Paos point, covers a large high headland of laterite rock connected by a narrow sandy neck with the main land. When viewed from a distance seaward this bold and conspicuous headland appears insulated, and its summit nearly level; the south end (300 feet in height) is, however, the highest part of the headland. The northern part (separated from the southern and highest part by a valley) has a perfectly flat top 200 feet above the sea; the whole being enclosed within massive stone walls forming a separate inner fortress. The whole of the eastern side, which is very steep, is surmounted by a stone line of fortifications with bastions of great strength and solidity. The sea-face of the headland is composed of perpendicular cliffs of considerable height at the north and south points, but of less elevation between. On both these sides the fortress is apparently inaccessible. The north side forms a small Bay (Kila-ka-Bunder), evidently once the landing place. Strong fortifications extend round the head of this bay and join the upper defences completely enclosing the whole headland. Native craft (pattimars) engaged in the coasting trade during the fine season anchor here, but the water is too shallow to admit of even small vessels finding shelter during the south-west monsoon.

Light.—On the south bastion of the fort in latitude 16° 59′ 10″N., longitude 73° 15′ 50″E., 308 feet above high water, is a small *white* masonry tower 22 feet in height, from which is exhibited a *fixed red* light of the 6th order visible (from N. by W. ½ W. round through north and east to S. ¼ W.) in clear weather from a distance of from 8 to 10 miles.

RATNAGIRI BAY, on the south side of Ratnagiri headland, is about 2 miles long and 1 mile deep. About a mile to the eastward of the fort is a river capable of receiving small vessels over its bar at high water, but though extending some distance inland it is shallow, and is only navigable for very small native craft at high water. At about a mile up the river are banks of sand and silt, from which an apparently inexhaustible supply of dead shells is obtained and made into lime. The shore of Ratnagiri bay between the fort and the river is low and is fringed with cocoanut palms, behind which are fields and gardens adjoining the native town. The European station is on the north side of the entrance, on the brow of a flat ridge of hills elevated about 150 feet above the sea; it consists of the Adślut, or court-house, Collector's kutcherry, hospital, police lines and jail, leper hospital, and the residences and offices of the various officials belonging to the Ratnagiri taluka. The native town or bazar is immediately below the brow of the same hill, and contains a considerable number of houses. The population of Ratnagiri was about 10,660 in 1877, of whom 46 were Europeans. The shore south of the river for half a mile consists of a low sandy flat, on which are a few patches of palms. The southern shore of the bay is steep and rocky, and the coast thence southward forms in low flat ridges of nearly equal height, terminating in cliffs and huge boulders.

The principal export is grain, the value of the exports for the year 1877-78 amounting to Rs. 1,32,223, and of imports to Rs. 6,05,675. During the fine season (N. E. monsoon) vessels of the British India Steam Navigation Company call weekly, and there is also at that time daily communication with the coast ports by small steamers. During the S. W. monsoon the mail steamers call at Kalbadavi bay to land passengers and goods. There is a good road (under construction) from Kalbadavi bay to Ratnagiri, and other improvements are being carried out in connection with the new road to the Deccan *vid* the Amba Ghaut, which will shortly be opened.

* This information supersedes that given at pages 115 to 119 of the West Coast of Hindostan Pilot, and affects Taylor's Sailing Directory, vol. i, pp. 388 to 390, and the following Indian Marine Survey charts, Ratnagiri, including Mirya and Kalbadavi bays, No. 1190, and Rajapur bay and Viziadurg with adjacent coast, No. 1191;—also British Admiralty charts Nos. 739, 2736 and 2737.

The landing place in Ratnagiri bay during the N. E. monsoon is at the custom house about half a mile from a small round tower at the foot of the headland, under the fort, but when landing a good look-out must be kept for rocks, as extensive reefs project from the shore in a westerly direction, and isolated patches nearly awash at low-water lie scattered about: as these are nearly all covered with kelp and long seaweed, the sea does not always break on them. During the westerly breezes,—which sometimes set in during the fine season, and occasionally last three days,—a heavy swell rolls up to this landing-place, and landing there becomes hazardous. In the S. W. monsoon there is a very heavy surf in the bay, and landing here is then generally impossible. It is not safe to enter the river in a boat except at high water, when, if the sea on the bar does not break, large native craft can enter the river.

Reef.—At the south extremity of the bay is a reef of rocks (Brum Mudle) above water, about half a mile from the shore, with a shoal bank of from 2 to 3 fathoms rocky ground extending to the westward, the outer edge of which (5 fathoms) bears south from the light-house. A vessel coming from the southward should give this foul ground a wide berth, as there is a depth of 7 fathoms close to it.

Tides.—It is high water at full and change of the moon at Ratnagiri at 10h. 52m.; ordinary *mean* springs rise 6 feet, neaps 4½ feet.*

It is said that, when the south-west monsoon is in full force, there is at low water, in the day-time, half a fathom more water than during the fine season in all the bays along this part of the coast.†

Mirya Donghur is a high headland of bare laterite rock lighter in colour than the surrounding land, and appearing like an island when seen from northward or southward. Its sea-face, which is very steep, is covered with large boulders of laterite and terminates near the water's edge in cliffs of varying height. Its highest part (Mirya peak), on which there is an old flagstaff, is 475 feet above the sea.

MIRYA BAY is formed between Miyet point (the south-west point of this headland) and the headland on which Ratnagiri fort is situated; it is 1½ miles long and 1 mile deep, and has depths over it of from 4 to 5 fathoms to within a quarter of a mile of the beach.

The shore of Mirya bay is composed of a narrow sandy strip of land in no part more than 2½ cables across. It is covered with cocoanut palms and fronted by a ridge of sandhills from 20 to 30 feet above high water. It connects the headland of Mirya with the mainland, and behind it is an extensive flat of mud and sand, thickly overgrown in many places with mangroves and covered at high-water spring-tides, through which a narrow creek (Sirgaum creek) winds up to the native part of the town of Ratnagiri. The entrance to this creek is on the north side of Mirya headland, where it joins a large inlet (Kalbadavi river), which extends some considerable distance inland, and at the entrance to which, on the north side, are the village and temples of Kalbadavi. Large native craft come up the Sirgaum creek at high water, and lie off a bunder near the native part of the town of Ratnagiri, where they unload or load their cargoes.

Mudle Shoal.—In the northern part of the bay 7 cables S. E. ¾ E. from Miyet point (the south-west point of Mirya headland) is a rock on which at low water, when the sea breaks heavily on it, there is only a depth of 5 feet; shoal water extends for 1½ cables from the rock in all directions, but there is a depth of 6 fathoms at 2 cables distance.

The bay on the south side of Mirya Donghur affords shelter for small vessels from north-west winds, in 3 or 4 fathoms mud and sand; but the above sunken rock must be avoided, and there are other rocky patches lying close to the cliffs. There is no anchorage in this bay during the south-west monsoon, as a heavy sea rolls in and breaks in from 2 to 3 fathoms water.

KALBADAVI BAY.—On the north side of Mirya Donghur headland, between it and Karni point, 2¼ miles distant, is Kalbadavi bay, in the south-east corner of which there is sheltered anchorage from south-west winds, in 5 fathoms mud, off the entrance to Kalbadavi river, whence the Sirgaum creek before mentioned runs up to Ratnagiri. During the Indian Mutiny, 1857, advantage was taken of the shelter afforded here to land troops during the south-west monsoon, the water at that season being quite smooth and landing easy.

Winds.—During the north-east monsoon, from November to April (the fine season on this coast), land and sea breezes prevail throughout with more or less strength. In November the sea breeze, which sets in about 1 or 2 P.M., is well to the westward, and blows at times fresh, lasting until about sunset. The land breeze is also frequently strong, and blows strongest at about 2 A.M. The mornings are calm, and the sea smooth. The same weather is experienced in December, January, and February; but the sea breeze draws more to the north-west and sets in earlier. Towards the end of February, or beginning of March, strong winds from the north-west, known locally as "north-westers," set in with squalls and rain, and last sometimes for a week or ten days. The weather at that time is boisterous and the sea rough. April is an uncertain month, the prevailing wind being from the north-west, and it frequently blows hard from that quarter, with intervals of calm and occasional dust-storms from the eastward. May is often a fine but uncertain month, and the weather is generally calm. The rains commence about the middle of June, with the wind from the westward, and until the middle

* The diurnal inequality in the heights of high-water amounts to 2 feet, and in those of low-water to as much as 4 feet, with the moon's declination at its greatest. The rise at spring tides of a P.M. tide between September and March (not inclusive) and of an A. M. tide between March and September is 8 feet 4 inches; of an A.M. tide between September and March and of a P.M. tide between March and September the rise at springs is 7 feet 5 inches. In March and September the A.M. and P.M. tides are alike in height. The corresponding rise of neap-tides at these periods is respectively 4 feet 11 inches and 6 feet 3 inches above the datum to which the soundings on the chart are referred.

† Lieutenant Montriou, I. N., 1844.

of July the wind is seldom to the south of west. After that date, it veers between S.W. and W.S.W., and sometimes west, and blows in violent gusts. The sea at this time is very high all along the coast, until the middle of August, when the weather moderates; but it still continues to blow hard at intervals, and there is frequently, after a short period of tolerably fine weather, recurrence of bad weather, continuing well into September. The rainfall is very uncertain, and varies between 50 and 150 inches. September and October are tolerably fine months, but the weather is uncertain. The average maximum temperature is about 88° and the minimum 74.°

VIZIADURG.

VIZIADURG (Viziadroog) harbour is a bay 1½ mile wide (north and south) and a little over 1 mile in depth (east and west) at the entrance to the Wagotna river; about 12 miles north of Deoghur and 25 miles south of Ratnagiri. On the west side of the entrance to the river is the old fort of Viziadroog, or Geriah, one of the strongest of the ancient fortresses strengthened by Sivaji and held by Angria, the celebrated pirate chief. The point or neck of rocky land, on which the fort is built, with the land to the west-ward, forms the south side of the bay, and is 100 feet above the sea; conspicuous in the fort is the old flag-staff 70 feet in height, and 170 feet above the sea. The land on the south and south-west hides the fort from vessels coming from the south.

The fortress, which is of considerable extent, consists of an inner and outer line of fortifications, protected by heavy bastions, and the walls have been of very great strength; but it has long been neglected and the work of decay is going on through the slow, but sure, agency of the trees and creepers which have taken root in the interstices of the walls, and the interior is overrun with jungle, though there are several large habitable buildings and good wells; the sea has made several breaches in the outer wall on the west side of the fort, near the wells.

THE WAGOTNA RIVER is navigable at high water as far as Wagotna (at the foot of the Phunda ghaut) by vessels drawing 7 feet; at Wagotna there is a stone jetty at which the native craft unload or load. Canoes can go up to Kariputtan more than 20 miles from the entrance.

The Wagotna river has no bar, and at its entrance between Viziadurg fort and the high cliffs to the north-east (on which is an old Mahratta battery)—where it is 6 cables wide—there are depths of from 20 to 24 feet at low water, but inside it rapidly shoals, and 2½ cables further in the depth at low water is only from 12 to 13 feet.

A tongue of sand, on which the depths vary from 12 feet at its extreme, to 8 feet further in, extends from the middle of the river at its entrance, up as far as opposite an old dock, nearly 2 miles up the river on the western shore, where it joins the eastern shore in a shoal bank, on which is only a few feet at low water.

The deep channel, which is only 1½ cable broad, lies close to the left bank (western shore), and there is not room for a large vessel to swing except at high water spring tides; the depths in the channel vary from 14 and 15 feet at the entrance to 22 and 29 feet further in.

The left bank of the river near the fort is steep, and the cliff slopes are bare of vegetation except near the fort, where there are a few large trees. The table-land south of the village of Viziadurg is of bare laterite rock without vegetation except in the rainy season. A good road runs from Viziadurg to Wagotna and into the Deccan, *viâ* the Phunda Ghaut, but is little used. The village of Viziadurg is very small and the houses poorly built; the inhabitants are principally engaged in fishing, and there is very little land in the immediate vicinity under cultivation.

The land on the right bank of the Wagotna, south of the fort, is of much less elevation, and there is more land under cultivation. The land immediately bordering on the river is covered with a low thorny scrub, which it is difficult to penetrate.

The old dock before mentioned was built by Angria. It is excavated out of the rock, and is said to have been capable of receiving vessels of 500 tons, but it is now nearly choked up with mud; the stone face and entrance, however, are still to be seen. The bottom is of clay and sand.

Anchorage.—In the fine season vessels may anchor anywhere in the harbour, the best position being in 3½ fathoms, mud and clay, at low water, with the extremes of the fort bearing from W.S.W. to S.W. Further in than this position, the water shoals quickly, but vessels of less than 12 feet draught can enter the river at any time and lie in perfectly smooth water a cable from the shore abreast the landing place. A long ship should be moored head and stern, with the best bower to ebb, which in the freshets runs at the rate of nearly 4 knots an hour.

The harbour is accessible and capable of affording perfect shelter to vessels during the south-west monsoon, in the height of which steamers of the Indian navy conveyed troops there during the Indian Mutiny.

Tides.—It is high water, full and change, of the moon at 10 hours 37 minutes; mean springs rise 6 feet 9 inches, neaps 4 feet 10 inches.*

* There is a large diurnal inequality in the heights of both high and low waters; in the former it amounts to about 2 feet, and in the latter to 4 feet with the moon's declination at its greatest. Between September and March the P. M. tides at springs are the highest and the tide then rises (about 36 hours after full or change) to 8 feet 4 inches above the following low water (which is the lowest during the above period) or low water of ordinary spring tides. The A. M. high water at this time rises only to 7 feet 5 inches above this datum. (*See note* on Chart, No. 1191, Rajapur bay and Viziadurg, published by Marine Survey Department).

At neaps during the above period the A M. low waters are the lowest and the rise of a P. M. tide is 6 feet 3 inches and of an A. M. tide 4 feet 11 inches.

From March to September the reverse occurs, that is, the high tides at springs are A. M. tides, &c.

RAJAPUR BAY.

RAJAPUR BAY, 3 miles north of Viziadurg, and about 22 miles south of Ratnagiri, is about three-quarters of a mile broad at its entrance between perpendicular cliffs of laterite, and a mile in depth (east and west). It is broken up into several small coves and inlets, the largest of which, Tulsunda cove, on the south side of this bay, is accessible to small vessels when overtaken by a south-west gale. The bay affords shelter from the "north-westers" which blow during the fine season, but with westerly winds there is a heavy short swell in the bay, which makes it a not very safe anchorage; at that time the north side of the bay should be resorted to. Rajapur river, which enters the bay in the north-east corner, flows past the town of Rajapur, a place of considerable importance, 15 miles from its mouth; coasting vessels, however, cannot go up so far. There is only 7 or 8 feet water on the bar at low water, but further in are depths of from 15 to 24 feet abreast the large village of Jaitapur, which is situated just inside on the left bank of the river. A short distance inside the entrance on the north side is the old fortress of Essent Ghur, now in ruins and overrun by trees and jungle. There is a small Mahomedan village on the east side of the fort.

In a small sandy cove on the north side of the bay is a well of good water and a rest-house in not very good repair. The cove is resorted to by native craft requiring water. Immediately above, on the ridge, is a stone octagonal-shaped tower.

The coast between Viziadurg and Rajapur bay is composed of cliffs about 70 feet high, faced by huge masses of laterite, which have been dislodged by the continued action of the sea during the south-west monsoons; it is deeply indented in many places, and is quite clear of dangers at a quarter of a mile from it.

Light.—Close to the edge of the cliff on the south point of Rajapur bay (Wagapur point) there is a small white masonry tower 21 feet in height, from which is exhibited during the north-east monsoon only (10th September to 10th June) a *fixed white* light of the *sixth* order, 99 feet above sea, visible in clear weather from a distance of 9 miles. This is generally called Jaitapur light.

Holi, or three-tree hill, a round sloping mount 285 feet high, distant about 2 miles E.S.E. from Musargagi or north Rajapur point, is a conspicuous feature near Rajapur bay, for the table-land of the Konkan, faced with steep cliffs everywhere, presents almost the same appearance from seaward and of about an equal height.

Ambolghur bay is a shallow indentation in the coast immediately north of Rajapur bay. Both Ambolghur and Rajapur form really one large bay between Ambolghur point and Wagapur point (on which Jaitapur light-house stands), Musargagi point, which separates them, lying more than half a mile east of these points. At the head of Ambolghur bay is a large stretch of sandy beach, backed by low flat ridges of laterite. In the southern part of the bay is a valley where there are the remains of extensive salt works now abandoned. In the northern corner is the small village of Ambolghur.

Ambolghur reef, an extensive shoal patch, upon which the sea breaks generally, except at high water, and a part of which, composed of masses of rock, dries at low-water spring-tides, lies 1½ mile north of Jaitapur light-house, and half a mile S.S.W. ¾ W. of Ambolghur point. Vessels should not shoal under 8 fathoms near this reef, although the neighbouring coast is safe to approach within 6 fathoms. The octagonal tower on Rajapur north point, in line with Holi hill, leads on to the shoalest part of Ambolghur reef, and the same hill, in line, or a little open south of the same point, leads to the southward of the reef in 7 fathoms.

Buoy.—A black buoy is placed (during the N.E. monsoon only) in 7 fathoms, low water, 1½ cable from the south-west edge of the reef; and 4 cables from the patch which dries. From the buoy the light on Wagapur point bears S. by E. ½ E., distant 1½ mile.

Ambolghur point is a small table-land faced with cliffs, and joined to the main by a sandy isthmus. A sandy beach extends northward nearly 3 miles to the town and little backwater of Yetia; thence to Poranghur is rocky table-land, except at the mouth of Muchkundi river.

Tides.—It is high water, at full and change of the moon, in Rajapur bay at 10 hours 45 minutes; ordinary (mean) springs rise 6 feet 5 inches; neaps rise 4 feet 5 inches.

MARINE SURVEY DEPARTMENT;
Calcutta, 4th June 1879.

A. DUNDAS TAYLOR, *Comdr. (late I.N.),*
Supdt., Marine Survey of India.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 24th JUNE 1879.

GENERAL REMARKS.—In Madras general prospects are favourable. The rainfall in Mysore has been slight during the week; sowings are in active progress and the outlook is satisfactory. In the Bombay Presidency showers have fallen in Guzerat and there has been good general rain elsewhere; in Bombay heavy monsoon weather is reported; there is a great deal of cholera in Sind, and some in part of Guzerat, Tanna and Nasik. In the Central Provinces sufficient rain has fallen in seven districts and there have been slight showers in others; sowings are being pushed on in all districts except Bhandara, where the rainfall has been inadequate for their commencement; prices are steady. Sowings of cotton and *tur* are going on in Berar. The reports from Central India and Rajputana shew that more or less rain has fallen everywhere and that prospects are good. Rain continues to fall in nearly all the districts of Bengal; in Central and Eastern Bengal slight damage has been caused by excessive rain and floods, but otherwise the state of things is favourable; there has now been fair rain in Behar and matters have greatly improved; in parts of Mozufferpore the rain has been too heavy for ploughing and sowing, while in the Burdwan, Orissa and Chota Nagpore divisions and in places in the Patna and Presidency divisions more rain is still required; cholera continues to be severe in four districts. In Assam the reaping of *asu* has begun and land is being ploughed for *sali dhan;* the rain in Sylhet has again been heavy and the rice crops have been injured by floods. Good rain has fallen throughout British Burma and ploughing is general; cattle-disease continues and is reported to be rinderpest in Bassein. In the North-Western Provinces and Oudh there has been general rain and *kharif* sowings have commenced. Rain has also fallen in several districts of the Punjab but there has been none in Hissar where it is wanted; the agricultural condition of the province is favourable.

It is satisfactory to note that the prospect of good general rain referred to last week has now been realised almost everywhere and that there is reason to hope that the monsoon has been fairly established.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (June 21st)	1·81 (average of 10 stations); *nil* Vissanapett; no report from 2 stations.	Rice 10·76, *cholum* 13·64, *raggi* 17·28, *cumboo* 13·21; 48 inches of water over anicut; *cumboo, dál*, green gram, *raggi* and *gingelly* sown.
Kurnool („ „)	1·02 (average of 8 stations).	Rice 11·01, *cholum* 15·31, *raggi* 19·72, *cumboo* 16·97; season favourable; agricultural operations going on steadily; yellow *cholum, sajja* and *arcka* are being sown on red soil; fodder and water ample.
Tanjore („ „)	·27 (average of 8 stations); *nil* in others.	Rice 10·7, *cholum* 14·96, *raggi* 16·85, *cumboo* 16·17; Cauvery and its branches flow with about 30 to 60 inches of water; wet and dry crops are generally in good condition, except in parts of the Tanjore and Puttukottai taluks; harvest general, outturn ½ to ¾.
Madura („ „)	·93 (average of 6 stations).	Rice 9·34, *cholum* 15·72, *raggi* 16·05, *cumboo* 15·43.
Malabar („ „)	3·15 (average of 14 stations).	Rice 9·82, *raggi* 17·25; prices slightly fallen in Ponani, risen in Kotayam and Wynaad, stationary elsewhere; rain sufficient for first crop cultivation; transplanting commenced in two taluks; pasture good. *General Remarks.*—General prospects favourable.
Bombay (June 25th)—		
Sind—		
Kurrachee ...	·14 at Kotri; ·07 at Tatta.	River at Kotri on 22nd 10 feet 10 inches, against 15½ feet on same date last year; crabs injuring rice seedlings in Shahbandar taluka; 559 cases of cholera, 333 deaths.
Hyderabad ...	Slight in 5 talukas	Total cases of cholera 1,662, deaths 1,146; river rising fast.
Upper Sind Frontier...	.....	Weather not extremely sultry, clouds about hills; floods damaged Karyastail Norwa canal; water-supply in Begari canal low, desert canal fair; 121 cases of cholera, 46 fatal; two cases of small-pox in Jacobabad, one in Kashmor; cow-pox among cattle, few deaths.
Guzerat—		
Ahmedabad ...	·83	Total rainfall ·89; lands being prepared for cultivation; slight cholera about.
Panch Mahâls ...	Occasional showers; but not regular monsoon.	
Kaira ...	·25; slight in some talukas.	Total rainfall ·41; general health good.
Surat ...	1·23	Total rainfall 1·44; more rain wanted; sowing commenced; one death from cholera in city.
Broach ...	·15	Fields being prepared for monsoon crops; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Khandesh and Násik—		
Khandesh ...	Throughout district, maximum 5·34, minimum ·65.	Sowing operations progressing; public health good.
Násik ...	Abundant	Prospects good in all talukas; cholera in Malegaon and Manmád.
Konkan—		
Tanna ...	8·64	Total rainfall 17·77; transplantation of crops commenced; cholera in 2 talukas.
Colába (June 23rd)	4·44 at Alibág	Total rainfall 14·97; more rain wanted; weather warm; public health good; cattle-disease in Mahád taluka; sowing operations continue.
Ratnágiri („ 17th)	4·13	Total rainfall 18·83; rice sowing completed; *nagli, wari* and *harie* sowing progressing; deaths from fever in Malwan taluka.
Deccan—		
Poona ...	Maximum 2·45 at Bhimthari, minimum ·24 at Mawal.	
Ahmednagar ...	·08, fall general; maximum 2·85 at Newasa, minimum ·64 at Karjat.	Sowing progressing in 7 talukas; public health good.
Sholapur ...	General	*Kharif* sowing progressing; rats in Madha damaging young crops; condition of poor not good.
Satara ...	·45; maximum 2 at Mán, minimum ·05 at Jauli.	Total rainfall 2·87; more rain required.
Southern Mahratta Country—		
Kaládgi ...	Throughout district; maximum 2·74 at Bijápur, minimum ·78 at Sindgi.	More rain wanted; sowing continues; slight fever.
Belgaum ...	General	Prospects good; sufficient rain in Sampgaon, wanted in Parasgad; devastation by rats in Gokák; sowing continues.
Dharwar ...	Average ·45	Ague and guinea-worm prevalent in 6 talukas; sowing of early crops progressing; young crops devoured by rats in some parts of Karajgi taluka.
Kanara ...	7·16; heavy in talukas	Total rainfall 41·48; sowing continues; rice plants healthy.
Kattywar and Gaekwar's Territory—		
Rájkot ...	4·76	Weather close; sowing operations commenced; fever, diarrhœa, and cholera in some places.
Baroda ...	1·65	Land being sown; public health good; prospects fair.
		General Remarks.—River rising in Sind; showers in Guzerat; good rain general in Konkan, the Deccan and Southern Mahratta Country; heavy monsoon weather in Bombay; cholera continues in Sind, slightly in Guzerat, Tanna, and Nasik.
Bengal—**(April 25th)**		
Chittagong ...	·95	
Noakholly ...	9·77	General health good.
Chittagong Hill Tracts...	12·19	
Hill Tipperah ...	5·47	
Backergunge ...	6·72	Public health satisfactory.
Furreedpore ...	1·70	General health good.
Dacca ...	·77	
Tipperah ...	1·50	
Mymensingh ...	10·82	
24-Pergunnahs ...	·45	Cholera still in Baraset and suburbs.
Jessore ...	7·45	Public health good.
Nuddea ...	2·28	Public health generally good, a few cases of cholera and small-pox in Meherpore.
Moorshedabad ...	1·70	
Pubna ...	4·64	Public health fair.
Raishahye ...	3·86	A few cases of cholera still reported.
Bogra ...	6·97	Public health fairly good.
Maldah ...	8·12	Health fair.
Dinagepore ...	Return not received.	
Rungpore ...	8·38	Small-pox abated a little, a few cases of cholera in Bagdogra and Kurigram sub-divisions.
Cooch Behar ...	13·82	Public health fairly good.
Jalpáiguri ...	4·05	
Darjeeling ...	4·32	
Midnapore ...	1·32	Great mortality from cholera at Dinapore and Ghattal; small-pox slightly decreasing.
Howrah ...	1·76	
Hooghly ...	·37	
Burdwan ...	*Nil*	One hundred and forty-one fatal cases of cholera in Raneegunge, a few cases of cholera also in Bood-bood; general health otherwise good.
Bankoora ...	·37	
Beerbhoom ...	·79	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Sonthal Pergunnahs ...	1·76	
Bhágalpur ...	2·41	
Monghyr ...	2·94	
Purneah ...	1·50	
Durbhunga ...	4·52	Cholera decreasing.
Mozufferpore ...	7·79	
Sarun ...	·32	Cholera epidemic in Chupra town and in places in interior.
Chumparun ...	3·02	
Patna ...	2·38	Cholera and small-pox still in places.
Gya ...	·48	Cholera in a few villages.
Shahabad ...	4·03	
Hazáribágh ...	·92	Cholera and small-pox prevalent.
Lohardugga ...	·69	Small-pox and cholera still prevalent.
Manbhoom ...	1·65	Much bowel complaint owing to scarcity of drinking water; cholera dying out in Purulia native town.
Singhbhoom ...	3·15	Cholera still raging in Chybassa, since 10th 246 seizures and 202 deaths, cholera also epidemic in Seraikeyla, but sporadic in other parts of district.
Balasore ...	1·67	Six hundred and forty-one deaths from cholera during week ending 19th.
Cuttack ...	2·06	
Pooree ...	·80	A few cases of cholera still reported.
		General Remarks.—In Central and Eastern Bengal prospects generally favourable save where a little damage has been done by excessive rain and floods; fair rain has at last fallen in Behar and greatly improved prospects; in parts of Mozufferpore rain too heavy for ploughing and sowing, in Burdwan, Orissa and Chota Nagpore divisions and in places in Patna and Presidency divisions more rain wanted; in Hooghly jute crop suffered much from late drought; cholera still severe in Balasore, Midnapore, Singbhoom and Raneegunge.
N. W. P. and Oudh—		
Benares (June 24th)	1·20 rain fell at Gangapur on 20th; ·3 at Chandauli on 22nd; and on 23rd ·1 at Chandauli and ·7 at Benares.	
Allahabad („ „)	Average of 1·3 since 1st June all over district; heaviest in Dadba and trans-Jumna.	Ploughing commenced in parts; health good.
Jhánsi („ 25th)	·3 on 23rd	Prices falling.
Agra („ 24th)	...	Rains have apparently set in, though not heavily; ploughing has begun in all the tahsils; a few cases of cholera still occurring
Bareilly („ 25th)	...	Monsoon seems to have begun, but the reported rainfall is irregular and nowhere great; ploughing going on in many places; condition of people fair.
Kumaun („ 23rd)	Heavy rain all over the district.	
Sitapur („ 25th)	·2 on 20th; ·1 on 23rd	Prospects good.
Fyzabad („ „)	·25	Ploughing general; sowings commenced.
Partabgarh („ 23rd)	·2 on 20th and 2·3 on 22nd at Sadr, and 1·75 at Kunda on latter date.	Ploughing commenced; weather cool; atmosphere humid and moist; sky cloudy.
Lucknow („ 25th)	4·3 since last Wednesday to 10 A M.	Prospects good.
Meerut („ 25th)	Rainfall pretty general, but not heavy.	Cloudy and sultry; wind easterly; ploughing commenced; cholera diminishing; fever still prevalent; cheapest wheat 17¼, barley 21, gram 17½ seers.
		General Remarks.—Rain has fallen all over the province; the monsoon seems to have begun; cholera disappearing; *kharif* sowings commenced; health of people fair.
Punjab—(June 24th)—		
Delhi ...	7·6	Prices falling; prospects fair; health good.
Hissar ...	...	Weather sultry; rain required for *kharif*; prices slightly fluctuate; cholera diminished; health generally good.
Umballa ...	3·1	*Kharif* sowings commenced; cholera prevalent.
Jullundur ...	2·1	Prices steady; cholera prevalent; health otherwise good.
Amritsar ...	1·5	Prices steady; health fair.
Ferozepore ...	·4	Cholera prevalent.
Siálkot ...	3·5	
Ráwalpindi ...	1·75	*Kharif* prospects good; cholera continues.
Peshawar ...	*Nil*	
Mooltan ...	*Nil*	*Kharif* being sown; prices steady; health good.
Dera Ismail Khan ...	...	Weather cloudy; *rabi* gathered; health good.
		General Remarks.—Weather seasonable; prospects fair; cholera diminishing; health generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—(June 21st)		
Nimár ...	3·97	Sowings commenced; health good; prices steady.
Hoshangabad ...	1·53	Sowings commenced; small-pox continues; prices stationary.
Betúl ...	·30	Cloudy; close; sowings commenced; slight cholera; prices stationary.
Wardha ...	·30	Sowing progressing; cholera slight; prices steady.
Nágpur (June 25th)	1·9	Cloudy; close; sowings continue; cholera slight.
Chánda ...	3·16	Ploughing, manuring and sowings continue; small-pox prevalent; cholera in 2 tahsils; prices falling.
Chhindwara ...	·27	Sowings progressing; prices rising.
Narsinghpur ...	...	*Kharif* sowings progressing; prices stationary.
Bhandara ...	·24	Cloudy; close; ploughing continues; more rain wanted for sowings; cholera abating; small-pox still prevalent; prices continue high.
Seoni ...	2·90	Cloudy; hot; sowings progressing; cholera and small-pox continue.
Bálaghát ...	·86	Cloudy; hot; sowings progressing; small-pox and cholera continue; prices stationary.
Mandla ...	·68	Sowings progressing; cholera continues; prices stationary.
Saugor (June 25th)	2·61	Showery; sowings commenced; small-pox continues; prices stationary.
Damoh ...	1·20	Sowings continue; health good; prices stationary.
Jubbulpore ...	1·71	Sowing being pushed on; small-pox continues; prices easier.
Raipur ...	1·92	Close; *kharif* sowings progressing; cholera and small-pox abating; prices stationary.
Bilaspur (June 21st)	·85	Cloudy; very hot; ploughing and sowings continue; small-pox and cholera decreasing; slight cattle-disease.
		General Remarks.—Cloudy; close; good rain in 7 districts, slight in others; sowings being pushed on in all districts except Bhandara, where rain is insufficient to commence sowings; cholera and small-pox decreasing; prices steady.
British Burma—(June 25th)		
Arakan Division ...	6·0 in Akyab ...	Total rainfall 44·0; public health continues good; ploughing commenced; weather favourable; 37 deaths from cattle-disease in Koladan township.
Pegu Division—		
Rangoon ...	2·75	Total rainfall 27·41; one fatal case of small-pox in Rangoon town; public health of district good; rain-fall propitious; ploughing commenced and prospects so far encouraging; slight cattle-disease in Pegu sub-division.
Henzada ...	2·03	Total rainfall 13·71; public health generally good; 2 deaths from small-pox; ploughing progressing; 115 deaths from cattle-disease in Kyoonpaw, 39 in Dhambae, 192 in Kubaing.
Thonkwa ...	...	Report not received; total rainfall up to 14th June 12·32.
Bassein ...	1·72	Total rainfall 17·36; public health good; 200 deaths from cattle-disease in Bassein township, 241 in Thaboung from 1st to 18th June, 15 in Konyna Circle and 8 in Myoungmya from 9th to 17th June.
Tharrawaddy ...	2·12	Total rainfall 17·47; public health good; slight cattle-disease in Leppadan; ploughing commenced.
Prome ...	1·6	Total rainfall 6·14; slight small-pox in Prome, otherwise health good.
Thayetmyo ...	2·07	Total rainfall 6·11; general health normal.
Tennaserim Division—		
Amherst ...	2·34	Total rainfall 39·59; public health good; sowing and ploughing continue; more rain wanted; 38 deaths from cattle-disease in Amherst, 81 in Gyne Salween.
Shwegyeen ...	2·57	Total rainfall 23·90; public health normal.
Toungoo ...	2·90	Total rainfall 12·70; public health good.
Salween ...	...	Ploughing commenced and progressing favourably.
Tavoy (May 31st)	9·3	Total rainfall 33·5; public health good.
„ (June 7th)	12·4	Total rainfall 45·9; ploughing commenced; 66 deaths from cattle-disease up to the 4th June.
Mergui (May 31st)	10·75	Public health good; cattle healthy.
„ (June 7th)	5·96	Total rainfall 48·99; public health good; cattle healthy.
		General Remarks.—Public health good; cattle-disease continues, reported to be rinderpest in Bassein; ploughing general.
Assam (June 25th)—		
Gauháti ...	·92	Weather seasonable; reaping of *asu* commenced; ploughing land for *sali dhan*.
Sylhet ...	9·94	Damage to rice crops by flood; price of rice stationary.
Mysore and Coorg (June 25th)—	·37 at Bangalore; slight rain in the districts.	Sowing actively progressing; prospects of season favourable; fever slightly prevalent, otherwise public health generally good.
Hyderabad Assigned Districts—		
Amráoti (June 25th)	1·24	Sowing of cotton and *tur* going on.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India (June 25th)—		
Indore ...	3·07	
Mánpur ...	·15	Rain falling favourably; health and prospects good.
Rutlam ...	·92	
Neemuch ...	2·28	Public health good; agricultural operations commenced.
Agar ...	1·38	Health good.
Sirdarpore ...	1·68	General sowing of *mukha* will now commence.
Sutna ...	2·24	Cool and cloudy; cholera abating.
Bhopal ...	.....	No report.
Nowgong ...	.....	
Goona ...	3·39	
Morar ...	1·75	Ploughing beginning; prospects very good.
Rajputana—		
Abu (June 25th)	1·40	Cloudy; showery.
Serohi („ 22nd)	·20	Tanks fairly full; wells good; health fair; at times very hot; clouds.

Remarks.

GANGES CANAL.

There is a slight falling off in the grain traffic as compared with the returns for April 1878. None of present season's crop of wheat has yet come into the market.
Cotton and oilseeds show a heavy increase over last year's return, while the salt carried is less by 27,122 maunds.
The total tonnage moved during the month is 578 tons in excess of that carried for the same period last year.

R. B. CHAPMAN,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 15th JULY 1879.

GENERAL REMARKS.—In Madras general prospects continue fair, but rain is still much required in parts of Kurnool, Coimbatore and Tinnevelly. Slight rain has fallen throughout Mysore except Kolar, where it is much wanted; prospects are improving. In the Bombay Presidency the rainfall of the week was scanty, but prospects are as yet fair, though not so good as they were a short time ago; cholera continues in the districts from which it was reported last week, and is still severe in Sind. In the Central Provinces there has been general rain, ample in eight districts, but slight in the others; more rain is needed; sowings have been completed in some districts and are well advanced in others; prospects continue favourable and prices are steady. Rain is much needed in Berar; in some taluks crops are being damaged by small insects resembling locusts. In Central India good rain has fallen in Nowgong, Bhopal and Sutna; in other places there has been little rain; more is required. There has been slight rain here and there in Rajputana, where prospects are favourable. Throughout Bengal rain has fallen; in the Northern and Eastern Districts and in Behar there has been too much and a break would be welcome, but more is required in parts of the Burdwan Division and in the Singhbhoom District; the early rice is not expected to be good, but the late rice promises well. Cholera still prevails in many districts, but has decreased in Balasore. In Assam there has been good rain; prospects of both early and late rice are satisfactory. Heavy rain has fallen throughout Burma; cattle disease continues in the Pegu Division and is severe in the Bassein and Henzada Districts; it has abated in Tenasserim. In the North-Western Provinces and Oudh the rain has been abundant and general; fine weather would now do good, as there are complaints of the wet interrupting ploughings, and, in the Allahabad District, rotting the seed. In the Punjab the Hissar Division and the Lahore District would benefit by more rain; agricultural prospects are generally encouraging. Cholera still prevails in some places.

The reports from Western and parts of Southern India are not so favourable as they were last week; the insufficiency of rain, which, at the date of the previous returns, was confined, in the Bombay Presidency, to a few localities is now widely felt. In Northern and Eastern India prospects are satisfactory, though in some parts there has been too much wet.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (July 12th)	Average rainfall 3 stations ·10; others *nil*.	Rice 11·99, *cholum* 14·03, *raggi* 18·16, *cumboo* 13·08; 87 inches water over anicut; early dry crops doing fairly; *sazza giddajonna* damaged by rats in parts of Bapatla and Palnad taluks; *sazza* and maize sown late in Bezwada taluks affected by small locusts; sowing continues; more rain wanted.
Kurnool („ „)	Average rainfall 5 stations ·63.	Rice 11·31, *raggi* 20·45, *cholum* 15·26, *cumboo* 16·99; crops failing in Cumbum, Nandikotkar and Pattikonda for want of rain; cultivation progressing in Markapur and Servail portions of Koilkuntla and Nandial; elsewhere checked; fodder and water sufficient.
Tanjore („ „)	Average rainfall 11 stations ·72; no report from one station; Tanjore *nil*.	Rice 9·88, *cholum* 14·57, *raggi* 16·85, *cumboo* 16·17; Cauvery 24 to 87 inches water; crops wet and dry in good condition, excellent in parts of Puttukottai taluk; harvest of gingelly and chillies, outturn ⅝ths to ¾th.
Madura („ „)	Average rainfall 6 stations ·41.	Rice 9·39, *cholum* 15·52, *raggi* 15·28, *cumboo* 15·28.
Malabar („ „)	Average rainfall 14 stations 5·65.	Rice 9·89, *raggi* 17·50; prices slightly fallen in Kurambranad, Wynaad and Ponani, risen in Cherakal, stationary elsewhere; rain sufficient and favourable for first crop; cultivation and pasture good.
		General Remarks.—General prospects fair; rain still much wanted in parts of Kurnool, Coimbatore and Tinnevelly.
Bombay (July 16th)—		
Sind—		
Kurrachee ...	.....	Total rainfall from 1st January at Manora 2·23, Tatta 1·61, Jerruck 2·40, Keti Bandar 1·12, Sehwan ·36, Kurrachee ·97, Kotri 2·34, Tháno Bula Khán 2·54, Mirpur Batoro 1·42, Dádu 1·5, Johi ·35, Mánjhand 2·13, Sákro 1·75, Ghorabári 1·28, Belo 2·73, Sháhbandar ·70, Mugalbhin ·90; river at Kotri on 13th 16 feet 10 inches – last year on same date 17·25; small-pox at Bubak; locusts in Sehwan; cotton attacked in 2 dehs in Ghorabari in danger from overflow of Ochito; cholera cases 1,474, deaths 856.
Shikárpur ...	.....	River 13 feet 8 inches against 15 feet 1 inch on same date last year; cholera in 6, small-pox and cattle disease in 11 talukas; locusts visited 3 talukas and slightly injured cotton plants in Rohri taluka.
Hyderabad ...	.....	River steady; locusts in 4 talukas; total cholera cases 2,046, deaths 1,363; weather pleasant.
Upper Sind Frontier...	.....	Weather cooler, nights pleasant; water-supply in irrigation canals satisfactory; locusts appeared on 13th, no damage; prices of food-grains steady; public health improving.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Guzerat—		
Ahmedabad ...	...	Sowing operations progressing; slight cholera about.
Pánch Mahál ...	...	Break continues; sowing nearly completed.
Kaira ...	...	Some damage done in 4 talukas by caterpillars; 8 cases of cholera in Nariád, 2 fatal.
Broach ...	...	Sowing almost completed; public health good.
Surat ...	·31	Total rainfall 13·98; more rain wanted; sowing nearly finished; in Bulsar 7 cases of cholera, 2 deaths; in Jálalpur 16 cases, 12 deaths.

IRRIGATION REVENUE REPORT OF THE NORTH-WESTERN PROVINCES FOR 1877-78.

Nos. 193-207 I, dated Simla, the 16th July 1879.

Read—

Letter from the Secretary to the Government of the North-Western Provinces, Public Works Department, Irrigation Branch, No. 397A. of the 24th March 1879, and its enclosures, being the Irrigation Revenue Report of the North-Western Provinces for 1877-78, and a Resolution by His Honor the Lieutenant-Governor reviewing the report.

OBSERVATIONS.—The report exhibits a success in irrigation administration well deserving of the commendation passed on it by the Lieutenant-Governor. The results on the Agra Canal are especially satisfactory. Hitherto they have largely exceeded the forecast made previously to the work coming into operation which was at the time considered by many as too sanguine.

2. The total area irrigated from these canals during 1877-78 was 1,461,428 acres. The gross revenue, direct and indirect, amounted to Rs. 45,95,701; the working expenses to Rs. 14,39,843; and the net revenue to Rs. 31,55,858, yielding 7·26 per cent. on the capital sunk on works in operation (Rs. 4,34,64,619). Excluding indirect revenue, the returns were at the rate of 4·95 per cent. on the same capital outlay.

3. In Table A of the Chief Engineer's report (paragraph 1) the total capital debit is entered as Rs. 5,67,34,008. This sum includes the amount expended on the abandoned Eastern Ganges Canal which, under the orders conveyed in Public Works Department letter No. 3731. of the 22nd October 1878, should have been removed from the capital account of the North-Western Provinces Canals. The corrected amount is Rs. 5,64,49,768.

4. The accumulated interest charges of works in operation were reduced during the year by Rs. 10,87,014, and at the end of the year stood at Rs. 80,78,541, according to the statements compiled in the Accountant General's Office, after taking credit for the indirect revenue ascertained to be due to the operation of the canals.

5. A significant fact bearing on the effect of the canals in a year of drought is noted in the Lieutenant-Governor's review. It is stated that in the Meerut Division, where irrigation has been most largely developed, relief-works and poor-houses were not required, though the rainfall in that locality was not less deficient than it was elsewhere. It is believed, however, that some relief-works were carried on in all the districts of the division, though comparatively small.

6. The investigations regarding the loss of water between the canal-head and the fields are evidently being carried out carefully and vigorously. The question is one of extreme importance in the administration of irrigation works.

7. The report was received by the Government of India more than four months after it was due. Efforts to ensure punctuality in its submission should continue to be made.

8. In the Resolution by the Government of India passing orders on the report for the previous year, 1876-77, attention was drawn to the increase in demands outstanding. The present report shows that so far from any improvement having taken place, there is a large increase in the percentage of outstanding balances to demands. Careful enquiry into the causes that have led to this is required.

ORDER.—Ordered, that a copy of this Resolution, and of the report and Resolution by the Local Government, be forwarded to the Secretary of State, and to the Finance and Commerce, and the Home, Revenue and Agricultural Departments of the Government of India for information.

Also, that copies of this Resolution be forwarded to the Government of the North-Western Provinces and Oudh, Public Works Department, Irrigation Branch, for information and guidance; and to the Local Governments and Administrations noted in the margin, in the Public Works Department, Irrigation Branch, for information.

The Governments of Madras, Bombay, Bengal, and the Punjab.
The Chief Commissioners, Central Provinces, British Burmah, Mysore and Coorg, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General, Central India and Rajputana.

Also, that this Resolution and the Resolution of the Local Government be published in the Supplement to the *Gazette of India*.

J. CROFTON, *Major-Genl., R.E.*,
Dy. Secy. to the Govt. of India.

No. 138 A., dated Allahabad, the 6th February 1879.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces.

Read—

Officiating Chief Engineer's Review of the Revenue Report for 1877-78.

His Honor is pleased to express satisfaction at the results of the operations of the Irrigation Department in the year under review.

2. If the benefit conferred by the canals of the province is great in an ordinary year, in a year of drought it is all but incalculable. While on the one hand canals enable the agricultural population to follow its ordinary pursuits, on the other they provide the means of raising and watering the food crops needful for its wants. In a country unprovided with canals not only is the distress from want of food great, but that distress is aggravated by the want of employment.

3. Though no one district of the province was more favored than another in the amount of rain it received in 1877, yet the failure of the monsoon was least felt in the Meerut Division, the division in which the canal-irrigated area bears a high ratio to the cultivated area. Relief-works and poor-houses in the Meerut Division were conspicuous by their absence.

4. The results of the year's operations show that the net direct income is Rs. 4·95 per cent. on the capital of canals in operation, or nearly half per cent. more than the interest charges, while the net direct and indirect income is Rs. 7·26 per cent., or 2¾ per cent. more than the interest charges on the entire capital embarked in the province. The irrigation works of the North-Western Provinces not only pay the interest charges on the capital sunk in them, but in addition return an income of nearly Rs. 10 lakhs per annum.

5. The rapid development of the Agra Canal is highly satisfactory. In the fourth year of its existence the canal has returned an income of Rs. 3·09 per cent. on its capital.

6. The attention of the Board of Revenue will be called to the outstanding balances which have risen from Rs. 31,588 in 1875-76 to Rs. 1,62,186 in 1877-78.

7. His Honor is gratified to find that the remarks made in last year's review anent the loss of water between the canal head and the field is attracting attention. The solution of the problem now only needs time.

8. As observed by the Officiating Chief Engineer, Sir George Couper is of opinion that better testimony of the loyal exertions of the officers of the Irrigation Department or of the benefits conferred by the canals than that afforded by the statistical tables that accompany the Chief Engineer's report, is not only not needed, but cannot be procured. To each and all of the officers of the department, but especially to Mr. Clinton Anderson, who was at the head of it during the whole of this trying year, His Honor's thanks are due, and are herewith tendered for their acceptance.

CLINTON C. ANDERSON,
Offg. Secy. to Govt., N.W.P., P. W. D., Irrign. Branch.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Thursday, the 17th July, 1879.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, C.S.I.
His Excellency the Commander-in-Chief, G.C.B.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B., C.I.E.
The Hon'ble Sir John Strachey, G.C.S.I.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B.
The Hon'ble Whitley Stokes, C.S.I.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble F. R. Cockerell.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.

BURMA DISTRICT CESSES AND RURAL POLICE BILL.

The Hon'ble MR. RIVERS THOMPSON moved for leave to introduce a Bill to amend the law relating to district cesses and rural police in British Burma.

He said that he should perhaps best explain the necessity for the proposed legislation if he briefly described to the Council the circumstances and conditions of the rural police in Burma, and the demand which was made upon the Government to effect some improvement in them. He would advert at a later stage of the measure, if the Council accorded him permission to introduce the Bill, to the powers which should be taken to provide the funds necessary to carry out that object, which, from his own experience and in the opinion of all the authorities who had been consulted, appeared to be a very necessary measure of reform.

The regular establishment of police in British Burma was modelled very much upon the system which obtained in other Provinces, and the proposed Bill, if it became law, would not affect the regular police. It would affect and apply only to the rural police—an institution which we found in existence when we succeeded to the territories which now constituted the Province of British Burma, and which, owing to more urgent demands, and consequent expenditure of money, in other directions, had remained to this day, he was inclined to think, very much in the position in which we had found it. That system recognized a headman of every village analogous to the police patel in Bombay, and a headman of a circle of villages analogous, he was told, to the police officials of circles in other parts of India; and upon those officials had devolved, amid a multiplicity of other functions, civil and revenue, the duty of giving information and assistance in all matters relating to police requirements. He might explain that the village formed the unit of civil administration in Burma, and to those officials—to the headman of the village and the headman of the circle—had attached a kind of official status, as in other Government appointments in Burma, which, in the absence of

anything like a large landed aristocracy or a hereditary nobility, had carried with it a social rank and superiority always recognized and highly prized. Till recent years, therefore, the position of headman of a village having general supervision of the affairs of the village and that of headman of a circle, embracing, possibly, ten or twenty villages, were appointments which had always been very greatly coveted, and which, notwithstanding the smallness of the direct emoluments received from Government, it had always been found easy to fill. Gradually, however, the growth and prosperity of the Province, bringing with it an increase of population, larger revenues and wider fields for employment in every direction, had tended to show not only to the officers of the Administration but to those men themselves that the labours now required of them were very imperfectly remunerated by the small salaries—if they could be called 'salaries' —which Government offered to them. He might explain that, now-a-days, Burma received that particular kind of attention which, represented by Circulars and Resolutions of the Government of India, imposed upon the officers of the administration there much larger work in different directions than formerly. Requisitions from which Burma had before been exempt are now made upon it, as in other Provinces and Administrations. Burma, an eminently prosperous Province, and growing in population as fast as good order and security and natural laws would allow, was called upon now to register its births, deaths and marriages, and not only to say when a man died, but the particular disease of which he died; as well as to furnish information in connection with sanitation, meteorological statistics and numerous other subjects of more or less importance. He (MR. THOMPSON) certainly always felt, when he was in Burma,—and he had no doubt the present Chief Commissioner felt it more acutely—that the agency for the collection of all this information was very imperfect; and there was no reason to doubt that the agent himself upon whom we relied for such information from rural and distant places, unaccustomed to returns of this kind, found, notwithstanding the privileges of his status and position, that life was not worth having at the price which we offered him for the discharge of those duties. This was the less to be wondered at when we realised that the actual extent of the remuneration which the village headman received from Government was his exemption from the capitation tax, which was never more than Rs. 5 in the year; and that the headman of a circle, having larger jurisdiction, was in the enjoyment of a salary which did not exceed more than Rs. 10 or Rs. 12 a month. It was not therefore matter for surprise that we found the Chief Commissioner complaining that, in consequence of the smallness of the pay accorded to these men and the variety of the labour exacted from them, when vacancies arose there was great difficulty now-a-days in filling them; and he was certain that Burma administration would suffer if its village official constitution was imperilled in any way. If, however, in general matters of administration the pressure which those demands exerted was heavy, when it came to the question of police work and criminal administration it took a form which was obviously inconvenient and dangerous. With the increase of population there had been a great increase of serious crime; and if in earlier days a village headman, depending upon his isolation and his distance from any control, reported what he liked and omitted to report what he did not like, the result was that no one was any the wiser; but at the present time better administration had brought with it a more direct supervision of the proceedings of those officials; it subjected them to a closer inspection, more frequent questionings, and a spirit of enquiry which he supposed any man on Rs. 5 a year would resent as an intrusion upon his freedom. In the meantime, the progress of organized crime in British Burma formed a marked feature in the administration reports of that Province. It was not an easy country, even with the best of agencies, to administer in the Police Department, from its wide area, its scattered population, the difficulties of communication, the dense jungles which extended over its vast uncultivated tracts, and the hills which afforded shelter and harbourage to those who were inclined to criminal propensities. He had seen it stated, as illustrative of the easy condition of the ordinary Burmese villager, that he was in no sense a slave to the soil. After he had paid in his light revenue, he, with others of the agricultural population, often found

employment and profit from the large inland fisheries, forests and the numerous other occupations which a small labour market afforded them; but he was afraid, when that was all told, there was yet a wicked residuum which, from its natural aptitude in such things and as much from an inherent love of adventure as from the desire for unlawful gain, committed itself to cattle-lifting and other offences against property. The reports received from the Chief Commissioner showed that there was a great prevalence of crime and very small means of adequately repressing it. As a matter of statistics, he might mention that, while in British Burma, which had really no rural police, or hardly any that might be called by that name, the average proportion of police to area was one man to fourteen square miles and one man to every 428 of the population. If in other provinces the proportion of police is one to 1,300 or 1,400, it must be remembered that the area of police jurisdiction in Burma was much larger, with very tedious and difficult roads to traverse. In Burma there are 7 reported offences per thousand of the population; in other provinces the average is under 3 per thousand. In Burma about 5 per thousand of the population are yearly convicted and sent to jail for crime; in other provinces the proportion is from 1 to 2 per thousand. Apart from those facts, he should say that Burma had a very extensive frontier to guard, and that, in one direction especially, it was a constant source of anxiety and trouble. The efforts of the regular police had not been wanting to control those difficulties; and he was glad to find that his opinion was supported by Mr. Aitchison as to their devotion to duty and their unsparing exertions. There was, however, no proper co-operation between them and the village police; and this arose chiefly from the want of organisation of the village police, its inadequate pay and the indefinite character of its jurisdiction and duties. The Chief Commissioner had, therefore, after consultation with experienced officers, Native and European, submitted a scheme to us for the remedy of those defects, and the assistance of the legislature was now asked to carry his proposals into effect.

Liberal concessions had been made to British Burma by recent financial arrangements with regard to its provincial revenue, and this would put the Chief Commissioner in a much better position to meet the wants of the Province and to overcome the difficulties which arose from an imperfect rural police. But outside that, powers would have to be taken for providing, by an enlargement of the local cesses, funds which would be applied to the improvement of the pay and position of the rural police. He would reserve for a future occasion the explanation of the course which legislation should take, and the means to be adopted for raising those funds.

The Motion was put and agreed to.

DEKKHAN AGRICULTURISTS RELIEF BILL.

The Hon'ble MR. HOPE introduced the Bill for the relief of indebted agriculturists in the Dekkhan. He said:—

"In availing myself of the leave granted me at the meeting of the Council on the 5th ultimo to introduce a measure designed to afford relief to the indebted population of our Dekkhan districts, I fear it is indispensable that I should tax the patience of my hearers by treating the subject at considerable length. A careful analysis of the condition of the raiyats, and an investigation of the cause of that condition, seem to be a preliminary indispensable to a just appraisement of each of the numerous provisions comprised in the contemplated legislation.

"The 'Dekkhan riots' began in May 1875. They extended to thirty-three villages in the districts of Puna and Ahmadnagar, and many more were threatened; but order was restored within a month's time. Symptoms of the bad terms subsisting between the raiyat and the money-lender had not been wanting in past years. Whenever, as from time to time happened, the turbulent and predatory aboriginal hillmen—Bhíls, Rámusís or Kolís—rose, they made money-lenders their victims, partly from personal motives, and partly to propitiate the population generally. Not a year passed without isolated murders

by exasperated debtors. But in 1875 the uneasiness became general in the Dekkhan. An individual case set fire to the long-laid train. The villagers began by combining to refuse supplies, water and service to the money-lenders, but soon proceeded to actual outrage. The singular character of the proceedings proclaimed at once their cause and their importance. Setting aside isolated cases of personal violence and plunder, the movement was simply an organised, and temperately but determinedly conducted, effort, directed to the definite object of obtaining and destroying the bonds, decrees and account-books of the money-lenders. No persons except the latter were molested. The mobs were composed of respectable members of the community, not *bádmashes*, and were often led or encouraged by the headmen of the village. On attaining their object, they dispersed as rapidly and quietly as they had come together. The eventual cessation of the riots was due, not merely to the prompt action of the police and the military, but to the assurances of the civil authorities that complaints should be enquired into and proved grievances redressed. The latter pledge it remains for this Council to redeem.

"The riots have been followed by investigations in various forms. A Special Commission, in the first place, was without delay appointed by the Bombay Government. It was composed of two European officers, Messrs. Richey and Izon, of the Revenue and Judicial branches of the service, Mr. Shambuprasád, a distinguished Native administrator, and a civilian from the North-Western Provinces (first Mr. Auckland Colvin, now employed in Egypt, and afterwards Mr. Carpenter). Their report, in five volumes and above 1,500 pages, is a very able survey of the difficulty in all its aspects. Besides this, the riots gave a special direction in Bombay to the enquiries into the working of the Civil Courts then going on throughout India in connection with the amended Civil Procedure Code under the consideration of this Council, which eventually became law as Act X of 1877; and a judicial officer, Mr. William Wedderburn, was deputed to report on the subject. Further, other circumstances led in 1878 to the condition of the peasantry in the four districts of the Dekkhan being subjected to a close investigation, in which the most experienced officers of the Bombay Presidency took part, and which is summed up in a Minute by Sir Richard Temple dated October 29th, 1878. The Famine Commission also this year obtained a good deal of valuable evidence, to which they have been so good as to allow me free access. Finally, the question has been very ably and instructively discussed by the Press, both in India and in England. It would be impossible for me, on an occasion like the present, to summarize all these enquiries, or to state separately the opinions of all the principal authorities. I can only lay before the Council what seem to myself, by the light of this mass of evidence and of my own knowledge and general experience, to be the condition of the people in the disturbed area and the causes which have operated to produce it, and then explain the measures by which the Executive Government propose that relief should be afforded.

II.

"The Central Dekkhan, which is the locality principally distressed, though unfortunately not the only one, and to which the present Bill is intended to apply, consists of four 'districts' or executive collector's charges, namely, Puna, Ahmadnagar, Sholapur and Satara. The three first named became British territory in A.D. 1819-21, but Satara not till A.D. 1849. Their area is 21,000 square miles, and their population three-and-a-half millions; that is to say, the population of Scotland, located in two-thirds of its space. Mountains and forests occupy much of the country, so that the actually cultivated area gives about six acres per head of the agricultural population. The State is the landlord; the tenure *raiyatwári* on the Bombay system of permanent occupancy, with revision of assessment every thirty years. The peasant-proprietors themselves cultivate about three-fourths of their land and sublet the remainder. The assessment or rent they pay to the Government is at average rates of from seven annas (10½*d.*) to twelve annas (1*s.* 6*d.*) per acre, which is equivalent on fairly good land to from an eighth to a sixteenth of the gross produce, and on the poor soils to much less.

"The proportion and extent of indebtedness are not easy to ascertain. In one batch of twelve villages tested by the Commission of 1875, one-third of the peasant-proprietors were found to be very heavily embarrassed; and of these, two-thirds were petty landholders, paying assessments of only twenty rupees (£2) per annum and under. Their debts came to eighteen times the average assessment, and two-thirds of this were secured by mortgage of the land. In another batch of seventeen villages in Ahmadnagar, forty-three per cent. of the proprietors were deeply in debt, the debts averaging fifteen times the assessment, but reaching forty-five times in individual cases. Only one-third of the debts appeared to be secured by mortgage, but one-eighth of the land had already been actually transferred to the money-lenders; and with regard to much of the remainder, the raiyats were virtually mere tenants-at-will of their creditors. The Collector was of opinion that, throughout the whole district, three-fifths of the people were so involved that, in ordinary course, it was impossible for them ever to get free. Upon this and much other evidence, I must confess myself unable to share optimist views of the condition of the people. Supposing only one-third of the proprietors to be irretrievably involved, is a ruined, despairing and embittered population of above a million souls beneath special consideration? The proportion seems to me, however, to have been nearer one-half than one-third, and to be, moreover, constantly increasing. Finally, it must not be forgotten that the statistics of the Commission, which I have been quoting, are now four years old. Since then, the terrible famine of 1876-77 and the subsequent indifferent seasons have passed over the land, and cannot but have left deep traces behind. True, as it is, that the peasant-proprietary struggled nobly and long to maintain themselves and their dependents without State relief, and vast as was the amount of accumulated savings, in gold and silver ornaments and the like, which they were found to possess, we must not forget that those savings were revealed by their passage to the mint, and that their dissipation must have left at the mercy of the money-lender thousands who were never so before. We may admire the honest pride and fortitude which the peasantry, as a body, displayed throughout their long-protracted trial; but we cannot ignore the obvious effects on their condition.

"Granted, however, that a large proportion of the population are deeply involved, we may well enquire whether such a condition is abnormal. It has been said, and in one sense with truth, that 'poverty and debt were the familiar heritage of the raiyats before the advent of the British rule.' Our records of the country when first acquired tell of indebtedness extending largely among the population. The raiyats, it is said, 'though usually frugal and provident,' were in many cases 'living in dependence on the saukár (or money-lender), delivering to him their produce and drawing upon him for necessaries'; and this condition is mainly attributed to the Marátha system of levying heavy contributions from bankers, to whom the revenues of villages were assigned in repayment, and of collecting the State dues generally through the agency of such capitalists, who recovered in kind what they paid in cash. Indebtedness thus arising mainly from a vicious system of collecting the land-revenue paid by all, necessarily extended to a large proportion of the population. But the amount of individual debt appears to have usually been moderate—necessarily so, it may be added, because the security and means of recovery were small, since land was not sold for debts, and little or no assistance in recovering them was given by the State. Very much the same condition of affairs is shown by ample testimony to exist now, to a greater or less degree, in the Native States of India. I have myself noted it in those of Western India, with many of which I have had considerable official experience. The reply to our enquiry, then, is that, as compared with former times and with Native States, indebtedness now in the Dekkhan extends to smaller numbers, but is heavier in individual incidence, followed by consequences infinitely more serious, and decidedly abnormal.

"Some may feel inclined to question whether, after all, there is any real harm in the present state of things. The institution of private property in land is essential, it will be said, to the well-being and progress of every civilized community, to the encouragement of industry and the accumulation of capital. But it is indispensable that such property should be in the hands of those who

by their capital, intelligence and industry are qualified to turn it to the best account. If this condition be not fulfilled, but the land be held by a class who, through their ignorance, improvidence and want of energy, have burdened their heritage with debt which can never be repaid, and thus have deprived themselves of all incentive to labour and all interest in its results, then the only remedy is to promote rather than to obstruct a gradual restoration of healthier conditions of society by the bankruptcy and eviction of the incapable. True as such principles undoubtedly are in modern European populations, considerable caution is necessary in applying them to the ill-studied and little-understood problems of Oriental life. Assuming hastily a similarity of premises, we are apt to jump to familiar conclusions, and to inaugurate action wholly inapplicable and pernicious. Much of the difficulty in the present instance arises from such inconsiderate interference in the past. When we overturn by an Act of the Legislature institutions which popular consent has maintained for above a score of centuries, we sometimes forget that we are not the bearers of a political revelation from Heaven.

"In the present instance there seem grave reasons for doubting whether the premises upon which a policy of *laissez faire* is based are sound. If the present condition of the Dekkhan raiyats is caused by inherent moral and physical defects, unfitting them for peasant-proprietorship; if they encumber the land to the exclusion of a class of intelligent, enterprising and energetic capitalists, and if the land is such that capital in large single sums can alone effect its improvement, then, indeed, we must perhaps sit down and sit out the process of gradual transfer of the rights of property from the one class to the other, merely softening, if need be, the fall of the sufferers. But consideration will show that no such circumstances exist in the Dekkhan. The Marátha kunbí is not the defective and useless creature postulated. No such material composed the armies of Sivají and his successors, which defeated the Mogals, overran half India, and founded an empire of which the remnants still flourish around us. As a soldier, the Marátha in olden days was as enterprising as he was hardy, equally able to 'bide a buffet' and to strike a blow. At present, he furnishes material perhaps second to none in India for the purposes of modern war. All representations of him as thriftless, enervated and puny are incorrect. As a peasant-proprietor, he is no unfavourable specimen of the class. Mr. Chaplin and our other early authorities give him credit for many sterling qualities. He is still represented by the Commission as 'a simple, well-disposed peasant, contented with the scantiest clothing and hardest fare,' not without 'masculine qualities' and 'a stubborn endurance,' though still mostly uneducated, and consequently without a broad range of intelligence. Of course improvidence and slovenly cultivation may be detected in individuals or particular localities. But we must not expect too much. Under British rule, the kunbí has undoubtedly progressed as fast as adverse circumstances allowed. He works his fields to the best of his lights, and in the dry season travels far in search of day-labour, or with his cart on hire. During the late famine he displayed resources equally creditable to his thrift and his good-feeling. His embarrassed condition seems to be rather his misfortune than his fault, induced by the calamities of the last century, the obligation of ancestral debt, the burden of the land-revenue demand—formerly in amount and latterly in imposition—and the facilities for extortion conferred by our laws upon his creditors.

"On the other hand, those into whose hands the land is now observed to be passing are not yearning for it in order to improve it by their intelligence, enterprise and capital. With solitary exceptions, the transferees are the professional money-lenders, who have no wish even to hold the status of landed proprietors, much less to invest their capital in comparatively unprofitable agricultural experiments. Often too they are aliens, who return home after a time. So far from eagerly getting the land formally transferred to their own names, they show general reluctance to do so. They prefer to keep the raiyat on his land, and extract all they can from him: the punctual discharge of their advances is the last thing they desire. As Mr. Auckland Colvin says,—

'the position is that of a man recorded as occupier of his holding, and responsible for the payment of revenue assessed on it, but virtually reduced by pressure of debt to a tenant-at-will, holding at a rack-rent from, and sweated by, his Marwari creditor. It is in that

creditor's power to eject him any day by putting in force any one of the decrees he has against him; and if allowed to hold on, it is only on condition of paying over to his creditor all the produce of his land not absolutely necessary for next year's seed-grain or for the support of life. * * He has nothing to hope for, but lives in daily fear of the final catastrophe. Under a so-called ryôtwari settlement it is gradually coming to this, that the ryot is the tenant, and the Marwari is the proprietor. * * The proprietor is irresponsible; the tenant unprotected. It promises to become, not a ryotwari, but a Marwari settlement.'

Such conditions deprive the transfer of land from distressed to monied classes of all the glamour with which political economy would surround it. They show that the noble gift of property in land, made by the British Government to the peasantry for their sole benefit, is passing, contrary to their intentions and in frustration of their objects, to a class unfitted to possess it. As observed as early as 1852 by Sir George Wingate, the great author of the gift,—

'it was never contemplated that the measures intended to secure these benefits for the class of landholders should transfer their dearest rights and the possessions that had descended to them from their forefathers to a class of usurious money-lenders, and degrade the former to the position of labourers or of tenants cultivating their former lands at the will of the latter.'

In short, the second of the premises on which a policy of *laissez faire* would rest is as unsound as the first. In the words of Mr. Pedder, a gentleman who has long made a special study of this subject, and whose talents have lately led to his transfer from the Bombay Civil Service to a high position at the India Office,—

'it cannot be too clearly understood that only in the dream of a visionary will the English agricultural system of large landlords, capitalist farmers of large farms, and peasant-labourers for wage, ever be substituted for the *petite culture* of India. Happen what will, each ryot will till his petty holding; but he may be, as we have made him in Bombay, its proprietor; he may be, as in the North-West, a member of a proprietary cultivating community; he may be, as in Rajpootana, the customary tenant of an hereditary lord; or he may be, as I fear he is becoming, the prædial serf of a money-lender.'

"Only one of the three premises mentioned above remains—that the land is such that capital in large single sums can alone effect its improvement. That is exactly what it is not. There are indeed certain localities, limited in number, where irrigation projects may alter the character of the produce and counteract seasons of drought. But these are far too extensive for individual enterprise. They must be undertaken by joint stock companies or Government, and the latter has them in hand. But the great proportion of the cultivated area is such that the most it is capable of can be made out of it either by mere careful tillage and economy of stable manure, or by petty improvements, such as, for instance, digging a well, banking-up a stream or watershed at certain seasons, making a supply-channel from a neighbouring canal or river, or altering the level or inclination of a field—by action, in short, of exactly the kind which the peasant-proprietor, standing on his own land, fully realizing its capabilities, and feeling pride and pleasure as well as utility in developing them to meet the growing needs of himself and his children, is at once the most competent and the most likely to apply. That he has so improved his estate since it came into his hands when he could, despite all the adverse circumstances by which he has been met, is proved by the increase in wells and the reclamation of unassessed waste within holdings during the last thirty years. Whether he shall pursue these inclinations freely, or continue, as at present, thwarted and checkmated at every turn, it now mainly rests with us to decide.

"To the question, therefore, whether there is, after all, much harm in the present state of things, we must, perforce, answer that the harm is of the greatest. To a peasantry such as I have described, expropriation means discouragement, despair and exasperation. To the money-lending class, it means the acquisition of what they are unfitted to use and do not particularly desire to have, of what yields them at best a precarious profit, not exceeding that which reasonable rates of interest, combined with easy recovery, would produce, but wrung forth with trouble, anxiety, expense, popular execration, and even personal danger. To society, it means the discouragement of labour in extracting wealth from the soil, the application of capital in disadvantageous and comparatively unproductive channels, and the fomentation of disorder and outrage. As reported

to the Bombay Government in 1858 by Mr. J. D. Inverarity, the Revenue Commissioner,—

'the question is one of vital importance both to Government and the people. Even the passive society of the East cannot bear so great a burden without making from time to time convulsive efforts to shake it off. These efforts must increase in frequency and strength, unless the legislature seriously takes up the evil and applies the knife to it.'

III.

"Assuming, then, that indebtedness to an unusual and extreme extent is the condition of a large proportion of the people in the British Dekkhan, we must enter into a critical examination of its probable causes before we can hope to apply an effective remedy. These causes are numerous, and complicated both in themselves and in their action and reaction upon each other. They may be conveniently classed as 'normal' and 'special.'

"The normal causes are those which may be found at work, more or less, at all times, and some in all parts of India, others only in certain localities. First of these stands *poverty*. It is obvious that where there is a peasant-proprietary, though the stimulus to individual exertion is considerable, and in India the Hindú joint-family system tends to prevent minute subdivision, the individual capital cannot be great, and misfortunes comparatively small will throw even a thrifty and industrious person into the hands of the money-lender for temporary loans. Besides this, the kunbí of our Dekkhan labours under the special disadvantage of a soil mostly indifferent, and a rainfall so precarious, that he hardly gets a full crop once in three years. Finally, the obligation to pay a father's debts, laid by Hindú law upon a son without any equitable restrictions, imposes a burden oppressive at all times, and too often aggravated by fraud in the creditor and ignorance in the debtor. The Commission, in fact, go so far as to term ancestral debt the 'chief cause' of the raiyat's embarrassments. Next to poverty comes *ignorance*, which renders the unlettered peasant unable to read, and often to understand, the documents and accounts in which he is vitally concerned, or to state and substantiate in a Civil Court a good defence when he has one, and thus makes him a tempting subject for every kind of roguery. *Social observances*, such as marriage, birth and funeral expenses, also swell the roll of obligations; but, being connected with religion, they are to a great extent unavoidable. If occasionally excessive in prosperity, they are reduced in bad times. The Commission consider that in amount they are generally not larger than the raiyat's income, if otherwise only fairly taxed, would justify, and that undue prominence has been given to them as a cause of his ruin. *Improvidence* must be admitted to contribute its share to the catastrophe; but it consists, as the Commission remark, 'rather in the short-sighted improvidence of an ignorant class, ready to relieve present necessity by discounting future income on any terms, and unable to realize the consequences of obligations foolishly contracted, than in an extravagant expenditure and misapplication of income.' To this may be added an honest and confiding, rather than vigilant, temperament. A soil yielding but one crop, and therefore the whole year's income at one period, a climate so capricious as to preclude at seed-time any safe estimate of what the harvest, if there be one, will be worth, and prices varying above cent. per cent., as they twice have done in this century, might well derange the calculations, and produce the bankruptcy, even of sober men of business.

"Besides these normal causes conducive to indebtedness, there exists a long array of special ones, some general in their operation, others peculiar to the Bombay Presidency or the Dekkhan alone. These I propose to notice in four groups—namely, those increasing credit, diminishing ability to repay, proceeding from the revenue system, and comprised in the term 'arming of the money-lender.'

"*Increased credit* obviously flowed primarily from our establishment of a settled government, and the consequent immunity of the raiyat from being plundered and murdered by hostile armies, or drawn from his fields, perhaps killed in battle, on his own side, as also from the grosser forms of private crime. A like effect followed our land-settlements. The meaning of the phrase

'land-revenue' varies greatly in different parts of India. In Bombay the State is the landlord, entitled to the entire rent—that is, to the whole net produce or surplus after deducting the cost of cultivation and of the subsistence of the peasant and his family. The State has no intermediary or landlord to think of, to whom a certain proportion of the rent must be left. It may relinquish to the peasant-cultivator as much or as little of the rent as it chooses. The Native governments preceding us relinquished but little, and the cultivator was rack-rented. Hence, even a small debt pressed heavily, and complaints of indebtedness were general when we acquired the country. Gradually we reduced our land-revenue demands, producing immediate relief and recovery of agriculture, until by the revenue survey system, founded by Goldsmid and Wingate in 1838-40, and gradually extended throughout the Presidency, we levy, says Mr. Pedder, only one-half, *at most*, of the net produce or rent, thus leaving the cultivator a liberal margin upon which to borrow and repay. But we went further than this. Under the Native government a cultivator could not, according to custom, be ejected as long as he paid the revenue demand; but that demand was so high that his right of occupancy was worth little or nothing, and was, besides, mostly not recognized as saleable. The land was not his to sell, being deemed the property of the State. Under our settlement, however, 'this right of conditional occupancy' (to quote Bombay Act I of 1865) 'is declared to be a saleable and transferable property.' Though the land is still termed 'Government land,' the occupant has acquired a tenant-right far wider than that of Ireland, and has virtually become proprietor, while the Government retains only a rent charge, variable once in thirty years, within certain prescribed limits. The right of property thus granted acquired simultaneously a considerable value through the reduction of the revenue demand and its invariability for thirty years. The gift, intended to enrich the raiyat, increased his credit along with his means, thus exposing him to the loss, not only of the extra share of net produce bestowed, but of the land from which a livelihood had hitherto been secure.

"Fast upon these additions to solvency and credit came days of brilliant but ephemeral prosperity. Commencing with 1850, railways, roads, bridges and other public works poured millions into labourers' hands, while a series of good seasons gave the best encouragement to agriculture, and brought almost every available acre under the plough. Then came the American war, raising to almost fabulous rates the prices of cotton and other produce. These circumstances had a double effect: many raiyats paid off, or greatly reduced, their debts: many more, both of these and others, increased their expenses, and some even borrowed largely, upon the strength of increased incomes which they supposed would last for ever: all learned a higher standard of comfort and new wants, which they could not relinquish with readiness equal to the subsequent rapid contraction of their means. A further expansion of the raiyat's credit was induced by greater facility in obtaining loans, owing to two reasons. The arming of the money-lender, to which I shall presently allude, rendered frauds and legal recovery of advances easier. Also, the general prosperity increased the capital of money-lenders for investment and the number of persons competing in the business. Money was lent recklessly, on unsound credit; money was lent designedly to secure the unwary raiyat as a bond-slave for ever.

"*Diminished ability to repay* arose partly from greater pressure on the land by the population, which had grown 45 per cent. in the thirty years ending with 1875. The proportion of 167 souls per square mile becomes extremely heavy after making allowance for mountains, forests, &c., and for the defects of the cultivable soil and the climate. But even the cultivable area cannot be, on an average, as productive as in former days. When only a half of it was cultivated, the best soils were chosen, fallows were readily allowed; the waste land and forests supported cattle freely; the stable manure was sufficient. Now all is reversed. The waste land has disappeared; the cattle and manure are insufficient in proportion; the jungles have become reserved forests; the poor soils reduce the average; and the general result is a lower yield per head for subsistence or repayment of debt. Again, the raiyat's solvency was reduced by a great fall in prices after the close of the American war. Between 1836 and 1866 prices

rose from fifty-six to eighteen *seers* per rupee: between 1866 and 1874 they fell again to fifty *seers*. With the various causes of low prices; with questions such as those of the effect of levying revenue in money instead of in kind; of the sufficiency of the circulating medium, or of the action of the so-called 'Indian tribute,' I am not now concerned; for our present purpose, to note the fact of the fall is sufficient. A series of bad seasons has, likewise, supervened. Finally, the effect of an absence of stimulus to exertion in lessening ability to repay must not be overlooked. Where the raiyat is hopelessly involved, and all produce goes to the creditor, a bare subsistence being given back, what inducement can there be to add to the latter's gains? The raiyat pays off less; his debt on paper increases, and what more? He thinks it 'as well to be hung for a sheep as for a lamb.'

"*To our revenue system* must in candour be ascribed some share in the indebtedness of the raiyat. Time would fail me were I to attempt to enter here into the elaborate question of the pressure of the land-revenue demand, nor does my subject require that I should do so. The Commission's report and the other enquiries to which I have referred contain the fullest information on the subject. Suffice it to say that it is amply proved that the riots had no immediate connection with the revision of assessment, which was neither imposed nor contemplated in many of the localities where they occurred. Still less can the general indebtedness of the raiyat be ascribed to the weight of the assessment, whether unrevised or revised, since the proportion of the net produce taken is low in itself; very low for *a landlord* to take; far lower than that prevailing in 'alienated' British villages and adjacent foreign States. I am here of course speaking broadly, irrespective of individual instances of over-assessment, which in so vast an undertaking may not improbably have occurred. But it seems likely that indebtedness arising mainly from other causes, normal or special, may have been aggravated by our rigid system. If any considerable increase at a revision were gradually worked up to in the course of two to five years, the raiyat would have time to readjust his expenses to his means instead of being taken by surprise, and perhaps driven to the money-lender. Again, if the recovery of instalments were more coincident with the time when the raiyat realizes on his produce, instead of falling sometimes too early and sometimes too late, and so the land-revenue were more in practice (what it is in law) a first charge on the latter, much temporary borrowing, fraud in crediting produce, and eventual Government process for recovery, might be avoided. Some debt, too, may be caused by the fear of eviction—a mode of recovering the revenue for which a substitute is much needed. Moreover, though the system of taking revenue in kind, besides involving the injustice of assessment on the gross produce instead of the net, is so open to fraud, when adopted on a large scale, as to be impracticable, its object might be attained, in localities subject to drought, by such suspension of the revenue demand as to spread over three or four years, according to the seasons, the aggregate amount to be recovered in that period. Finally, in times of famine, suspension of demand might be systematically granted, as of late it has been by Sir Richard Temple, and even total remission, which is not inconsistent with the Bombay settlements. And, above all, whatever relief is deemed reasonable should be granted in time.

"*The arming of the money-lender* is a general term which I shall apply to the process of increasing in numberless ways the legal power of creditor over debtor, which has been synonymous with the elaboration of our Indian law procedure. In our early judicial dealings with our newly-acquired possessions in the Bombay Presidency, we combined as far as possible the Native model in form with European common sense and equity in practice; but gradually the system was made more regular and rigid. Mountstuart Elphinstone's Code of 1827, however, still contained much of the old leaven, such as arbitration courts, usury law, and a long limitation for suits. Only gradually did creditors perceive and work up to the advantages the law had given them. At first the debtors complained of usurious interest only. From 1843 to 1850 the Court's influence became rapidly more apparent. Attachments, and the extortion of new bonds with a premium for forbearance, increased. From 1850 to

1858 credit and frauds much expanded. Numerous public officers pointed out the mischief which was going on; none foresaw more clearly than Sir George Wingate how the benefit of his settlement was being turned into wrong channels, or pleaded more earnestly, though in vain, for prompt and effective remedies. While affairs were in this state, the legislature stepped in to aggravate the evil. In 1859 the period of limitation for suits was reduced and the first Civil Procedure Code was passed, followed by the Stamp Act in 1860.

"The condition then consummated, which has lasted with but slight variation for about twenty years, may be thus briefly summarized as it appears in the Dekkhan. The procedure is highly elaborate and technical; the penalties for contravention of it severe, and litigation dangerous without the guidance of a pleader, whose services are costly and interests often at variance with those of his client. The procedure is the same for a debt of Rs. 5 and Rs. 5,000, except in the rare instances where Small Cause Courts are established. Stamp and court expenses have nearly doubled. Arbitration has been gradually shouldered out, partly by the superior prestige of the Courts, partly by the stamp-duties, partly by its disadvantages for the money-lender. Suits may be heard *ex parte* in the absence of the defendant, and are found to be so, in the four Dekkhan districts, in above half of the cases. Great weight is attached by the Courts to bonds, and they are therefore largely, almost exclusively, depended on. However fraudulent, extortionate or in excess of consideration a bond may be, the burden of proof lies on the debtor, and in practice his defence is generally hopeless. Payments on a decree made by the debtor out of court were (till 1877) ignored, and were therefore obtained, wherever possible, by the fraudulent creditor. The reduction of the limitation period for bonded debts from twelve to six and in some cases three years, and for simple money debts from six to three years, respectively, has subjected the debtor to compound interest, frequent suits, extra costs and a vast increase of his liabilities. The power of obtaining arrest and imprisonment gives the creditor the means of extorting almost any terms for his forbearance in exercising it. Of all the weapons he has obtained, this has been proved to be the most misused. The power of sale in execution extended, till 1877, to *everything* the debtor possessed: since then certain bare necessaries have alone been exempted. Land remains saleable, whether ancestral or acquired, subject to certain provisions for saving it analogous to an *elegit*, which have hitherto proved inoperative, but are now being amended. Of all sales it is a characteristic that the property, through technical difficulties, constantly goes for a mere song, and the creditor is the purchaser. Decrees were, till 1877, interminable, and the Commission found numbers to be of twenty years' standing. Now they may be executed for twelve years. A sub-judge mentions one executed *nine* times. If the persecuted debtor turned towards the law of insolvency, he, till quite recently, found it little more than a name. Until actually arrested or in jail, he could not resort to it at all; and whether, after doing so, he escaped its pitfalls and two years' imprisonment or not, his subsequently acquired property and earnings were liable (unless his debt was under Rs. 100 and the judge chose to discharge him) until the last pice due, with interest, had been repaid. Finally, the increase of work entailed delay, with loss of time and money, in the disposal of cases, while financial reasons led to reduction in the numbers of the Courts, and consequently to their greater remoteness from the raiyat's home. And all this is the more important, in that a vast increase of litigation has followed the new law, so that in 1876 there were 37,128 suits, and in 1878 (after the famine) 27,577, disposed of in our four districts alone.

"The tendency of the change of relations thus gradually brought about by the law will be seen to have been all one way—in favour of the party possessing the most intelligence and money. Even of old, the superiority of the money-lender over the raiyat was considerable, though the former had little power of compulsion; but by the law this superiority has been infinitely increased. The likening of the contest between them to one 'between a child and a giant' is no figure of speech; yet the law presumes them both to be equal! That the superiority is fully and often fraudulently availed of is proved by the vast increase of litigation just mentioned; by the evidence of judicial and revenue

officers and of numberless debtors; by the scrutiny of accounts by the Commission, and by the use in 1874 of some 150,000 warrants as threats only. The general result is that through these undue powers the raiyat is enslaved by a vast amount of debt, which has been much enhanced by our legal system, and in part was never incurred by him at all. In concluding this sketch, it seems scarcely necessary for me to add that the law, and not the Judges, are to blame. Some of the most valuable proofs of the defects of the former are derived from judicial officers, Native as well as European; and I fully agree with Mr. Auckland Colvin that it is 'very much to the credit of the subordinate judicial administration that it has expressed itself so clearly as to the position which it is compelled to occupy.'

IV.

"Having thus enumerated the various causes of the raiyat's indebtedness, I will briefly classify them according to the possibility or expediency of remedial measures. As causes regarding which little or no special action is practicable we may put down all normal ones. Ignorance, improvidence and extravagant ceremonial or social expenditure can never be eradicated from the world, either in the Dekkhan or elsewhere, though time, experience and education may reduce their strength. An agricultural population everywhere is comparatively ignorant; they are found so even in England under a compulsory educational system, much more in India, where compulsion cannot be thought of. But village-schools are exceptionally numerous and efficient in the Bombay Presidency; cultivators' children form 21 per cent. of the pupils, and we may hope for gradual improvement in this respect. Comparative poverty must continue the lot of a peasant-proprietary whose soil is poor and climate capricious. Periodical absorption of savings by famine can, at least, be only diminished in degree by palliatives of partial applicability, such as forest conservancy, railways and irrigation, which, under Sir Richard Temple's vigorous administration, are being promoted as rapidly as means allow. Prices must take their course.

"As causes regarding which interference is undesirable may be mentioned the increased credit due to orderly government, property in land and competition of money-lenders, and the lessened ability to repay arising from the diminution of waste land for fallows and grazing by the extension of cultivation and forest reserves. The raising of the land-assessment to the level of Native States in order to stimulate exertion, and the lowering of it so as to pay private debts at the expense of the community in general, are equally out of the question.

"Respecting the remaining causes, action, either executive or legislative, seems open to us. *Executively*, some little might probably be done to relieve pressure of population by favouring emigration to other districts. Then, though the idea of Government agricultural banks appears to me to be unsound in theory and unworkable in practice, the opening of local loans in small amounts, as in France, might offer to bankers an alternative for indiscriminate lending on usury, and to cultivators an investment preferable to ornaments. The system of advances by Government for land-improvement, also, might be simplified. Again, relief might be afforded by modifying, in the directions I have already indicated, the mode in which our land-revenue demand is imposed and levied. Stamp and process fees and batta seem also capable of revision. Finally, there are exchange and cognate financial questions. But I must not dilate upon these executive remedies, which are beyond the sphere of this Council. I have touched on them merely in order to show that I am not so simple as to suppose that all the raiyat's difficulties will be removed by the passing of the Bill before us. *Legislatively*, what we can do, what is proved by overwhelming evidence to be the thing required, what we undoubtedly ought to do, promptly and effectively, is to restore, as far as may be, the rude balance between debtor and creditor, which has been disturbed by our own legal institutions. We may take back many of the weapons inconsiderately placed in the money-lender's hand and shown to have been misused; we may check the undue credit arising from unjustifiable facilities for recovery; we may increase ability to repay by removing discouragements to industry; we

may obey the long-neglected proverbial mandate to hear both parties; we may substitute for the blind and ruthless operation of legal machinery the intelligent dispensation of justice between man and man.

V.

"As introductory to a fuller definition of the principles upon which our proposed measure should rest and to a detailed explanation of the Bill itself, it may be instructive to survey, briefly, the relations of debtor and creditor as they were found on the introduction of British rule and as they may now be seen subsisting in some of the best administered Native States. For the former period I can quote no better sketch than that given in the despatch of the Secretary of State dated December 26th, 1878, which has recently become public:—

'Under Native Governments, it seems no assistance was, ordinarily, afforded by the State to a creditor for the recovery of his debts. No Court of justice was open to him, and he was left to his own devices to extort what was due, Government winking at very forcible measures that were occasionally employed. The result was not so bad as might have been expected. It speaks well for the national character that contracts were rarely repudiated. And the Commissioners observe that in these proceedings honesty was the best policy for the raiyat and caution was a necessity to the money-lender.'

"In order to state correctly the present practice in Native States, I have made special enquiries in four cases. As to Haidarábád, His Excellency Sir Salar Jung has favoured me, through the Resident, Sir Richard Meade, with a valuable memorandum and summary of regulations. From Bhaunagar, a large State in Káthiáwár, which was, till lately, under joint-administrators, English and Native, during the minority of the Thákur, and of which a graphic account by Sir David Wedderburn appeared last year in the *Fortnightly Review*, I obtained a note through Mr. Percival. The system in Morvi, another Káthiáwár State, is described in communications from the administrator, Mr. Shambuprasád, who was a member of the Dekkhan Riots Commission. About Baroda full information is forthcoming in the administration reports of Sir T. Madava Ráo and the letters of some private Native friends I have there. In all these States civil suits for debt are comparatively rare. The limitation period, where there is any definitely laid down, is twelve and six years. The Hindú rule of *dam-dupat*, or disallowance of interest at any time in excess of the principal, is observed in Baroda, Bhaunagar and Morvi. In Haidarábád usurious interest is summarily cut down to a reasonable rate. Imprisonment for debt is not allowed in Morvi, nor, apparently, in Bhaunagar. In Baroda it is forbidden altogether during the cultivating seasons, and very sparingly used at other times. In Haidarábád it is reserved for cases of contumacy and fraud. As to the sale of a raiyat's land and house for debt, both are exempt in Bhaunagar, and the former (if not both) in Morvi. In Haidarábád the sale of either is said to be resorted to in extreme cases only. In Baroda only such portion is saleable as may be in excess of what is indispensable for the residence and support of the raiyat and his family, and sales are not favoured by the Courts. The sale of moveables is also under characteristic restrictions. In Baroda the raiyat's implements and cattle necessary for cultivation, cooking utensils and clothes indispensable for daily use, 'the ornaments which a married woman must have on her person as long as her husband is alive' (even if not hers, but her husband's), and two months' corn for the raiyat and his family are all exempt. In Bhaunagar only agricultural stock and implements in excess of what is necessary for cultivation, as also the produce, may be sold; and in Morvi the rule seems much the same. In Haidarábád the reservations embrace cattle and implements necessary for agriculture, seed-grain for the next season, grain for subsistence for six months, and necessary apparel and cooking utensils. In all the States the fixing of instalments is common, and, whatever may be the standard rules promulgated through a desire to imitate our judicial institutions and to obtain credit for well-organized government, a summary inquiry into the facts of the case, with scrutiny of accounts, and a more or less rough-and-ready adaptation of the creditor's demands to the debtor's means, appear to be the practice. This practice, being supported by

popular opinion, is probably less affected in individual cases by corruption, partiality or oppression than might on general grounds be expected. Having held for many years intimate relations, official and otherwise, with Native States, which in Bombay form one-third of the Presidency, I can say with confidence that, making due allowance for the growing mischievous tendency to copy the British system blindly, the picture just presented is, on the whole, fairly typical of them all.

"This picture may, at first sight, seem to exhibit conditions under which either the raiyat can get no credit or the money-lender no returns. As a matter of fact, however, neither result occurs, because all the parties concerned—debtors, creditors and rulers—thoroughly understand the limits to their several action which are essential to their several ends. No doubt the raiyat has in many cases a hand-to-mouth sort of existence; but even this is endurable, combined with immunity from eviction. I have come upon a passage in Sir T. Madava Ráo's Administration Report of the Baroda State for 1875-76 so ably describing the position that I must ask leave to quote it at length:—

'Sales must not be made so rigorous as to crush or impair industrial energy or to induce its emigration. The Civil Courts have to be specially careful in regard to the last-mentioned point, which mainly concerns the raiyats. These have frequent dealings with the saukárs, whose exacting tendencies are well known. The Civil Court should take up such a position between the raiyat and the saukár as freely to allow benefits to pass, but effectually to arrest mutual injuries. The raiyat here can never, as a rule, altogether dispense with the services of the saukár; for the seasons are not so regular nor are the means of irrigation so extensive as to ensure equability or constancy of production. Again, the land-tax is in most cases fixed, and absorbs a considerable proportion of the produce; and, again, the prices of produce fluctuate, changing the incidence of the tax on the produce from year to year. In other words, while the outturn of the land is necessarily varying, the raiyat has to pay a fixed and considerable tax, which must come from the land. In other words, again, the exchequer has to draw a constant and continuous stream out of a fitful supply. The saukár by his interposition meets the mechanical necessity of the problem. He is the receiver of the fitful supply, and enables the raiyat to pay the sarkár equably. He often performs another useful function, namely, he enables the raiyat also to draw from that fitful supply an equable subsistence for himself and family. It is thus to him that both sarkár and raiyat are indebted for equalizing to each their annual receipts from a fluctuating source. He, therefore, fulfils very beneficial duties, and deserves to be conserved as an almost indispensable part of the rural organization. At the same time, we are bound to see that he does not override the interests of the raiyats. Let the Civil Courts enable the saukár to recover his just claims from the raiyats. But the Courts should not permit the saukár to press the raiyats to the point of crushing. This point should be well defined and ever kept in view. No process of the Courts should, without the concurrence of the revenue-officers of the sarkár, deprive the raiyat of his land, of his agricultural cattle and implements to the extent necessary for the cultivation of that land, of his cottage, and of food and raiment according to the necessity of himself and family. These should be left to the raiyat, and, as a general rule, placed beyond the grasp of the saukár. It should be understood that the first demand on the produce of the land is that on account of the sarkár tax; the next is that on account of the subsistence of the raiyat and his family; and the last is that on account of the debt due to the saukár. The surplus which may be forthcoming in good seasons after meeting the first two demands may be made available to the saukár for the recovery of his advances made to or for the raiyat in bad seasons. This being understood, the saukár will easily limit his advances to the prospects of such recurring surplus, and will not go beyond. This principle of adjustment may be expected to work well and to the advantage of all the parties concerned, provided that the land-tax is not so excessive as to trench upon the subsistence of the raiyat and the remuneration of the saukár in an average year. As a rule, the principle is not novel in Native States, and has been long in operation, more or less. Our new Civil Courts should recognize and respect it, and by no means set it aside. After what I have stated, I need hardly say that our Courts should not imprison the raiyat on account of debts due to the saukár and consign industrious hands to idleness, unless where the debtor may be fairly presumed to possess the means of payment and to withhold payment from a refractory spirit.'

The *Quarterly Review*, in an able and interesting sketch of the Dekkhan published last April, further truly describes the useful functions of the money-lender in relation to both the State and Society:—

'The village-banker is essential to the social system of the country. At once the purchaser of rural produce and the local agent of the central mercantile firms, alike the village shopkeeper and money-lender, he enables the peasantry to derive full benefit from a good season, and to moderate the recurring disasters of drought and flood. Without his aid the rent would not be realized. His functions in normal times are most important, but in the abnormal times of famine they are indispensable. Then the banker and shopkeeper is

stimulated to double activity in both capacities. He advances from his stores food, seed, stock, and even money to the peasantry, who can offer nothing but their credit in return. By relieving the better classes of the community he lessens the pressure on the public purse. But he does more than this. * * * Experience has proved the advantage of leaving the transport and distribution of food-supplies to private trade. * * It is the saukár who spans the gulf which separates want from plenty, and fulfils the functions of distribution which no State agency can perform.'

"The problem before us is how to keep the money-lender in his place, to encourage and support him in all useful functions, but to restrain him, as he is restrained in Native States, from becoming the enemy and oppressor of the poor? The leading principles of our new measure then should be to give both sides fair play, instead of setting the two classes by the ears; to diminish the risks of fraud in borrowing and extortion in repaying; to diminish the risks of loss in lending and excessive delay in recovery; to obliterate any stigma resting on our judicial institutions. We must foster due credit, check that which is undue, and allow free scope to all civilizing processes and healthy relations between capital and labour. We must hold the raiyat responsible in our Courts for what he has really borrowed, not for what he has not, and make him repay by his own exertions all that he reasonably can repay, not set him free, by sudden, one-sided or 'heroic' remedies, to enter on a fresh career of indebtedness. In short, we must see the parties as they really are, in a condition of Oriental, not of European, civilization, and deal with them by the Indian experience of success in past generations and failure in the present, rather than by the intrusion *per saltum* of alien institutions which are in their own land the result of centuries of experience under totally different conditions.

"I will now endeavour to set forth, as clearly and fully as time and the occasion permit, the principal provisions of the Bill I am introducing, premising that, as the latter is intended to supplement, modify and dovetail into the Civil Procedure Code, and it therefore in some parts presents to the unskilled reader a confused and imperfect aspect, I shall discard its arrangement, and endeavour to express in plain English the effect which its provisions (coupled with the Code) are intended to produce.

"The first object aimed at is to establish precautions against fraud by either debtor or creditor in their original transactions with each other, and so keep them on good terms and out of court, as far as possible. The Commission thus enumerate the chief frauds which are practised:—

By creditors: (1) forging bonds; (2) withholding the consideration mentioned in bond; (3) obtaining new bonds in satisfaction of old bonds and of decrees and nevertheless enforcing the latter; (4) not giving credit for payments; (5) refusing to explain or wrongly representing their accounts to debtors.

By debtors: (6) tendering in evidence false receipts and false evidence of alleged payments; (7) pleading that bonds are false when they are really genuine.

"Chapter VIII of the Bill is intended to meet the first three and the last-mentioned kinds of fraud. It provides that every instrument to which an agriculturist is a party shall be written by or under the superintendence of a village-registrar, executed in his presence, and attested by him; that the registrar shall give a copy of it to the party not entitled to the original, and shall both endorse on the original whether transfer of consideration took place before him or not and mark for future identification any instrument which such original supersedes. The reasonableness of such a measure is evidenced by the provisions for notaries in France and most other European countries, and by the penalty in England on unauthorized persons practising as conveyancers. Instruments not so executed will be invalid. By these means every raiyat should at least know what he signs, and both parties should receive due protection. Chapter IX, directed against the remaining three kinds of fraud, provides, under a penalty, for the grant to raiyats on demand of written receipts, annual statements of their account, and pass-books, and for the latter being written up from time to time and attested by the money-lender. These two chapters are based on recommendations of the Commission. Certain provisions of both of them may to some eyes appear too minute to be satisfactorily workable. But due allowance must be made for the existence of a raiyatwárí settlement; for the detailed regulations which the position of Government as

a landlord necessitates, and for the intimate personal relations with the people resulting from residence of revenue-officers (who will supervise the working of these chapters) in camp for six or seven months of every year. For instance, the granting of receipts for revenue payments and furnishing every raiyat with a copy of his account have in Bombay been provided for by law since the commencement of British rule, and the calling raiyats in person by thousands and testing the pass-books or receipts given to them by the Government books is there one of the most ordinary and useful duties of an assistant or deputy collector.

"The next step contemplated is that, whenever serious misunderstanding unfortunately arises between money-lender and raiyat, either party should be able to resort to a friendly non-judicial authority bound to use his best offices to reconcile the two, and that no litigation should be commenced without a certificate from the Conciliator (as the authority constituted by chapter VI will be termed) that his endeavours in this behalf have failed. Such Courts of Conciliation were advocated by Sir John Strachey just twenty years ago, and by Mr. Cust in 1870 in the *Calcutta Review*. On the present occasion, their success in France was brought forward last year by Sir Erskine Perry, in some Notes which have been published in India; and the subject is suggested for consideration in the Secretary of State's despatch already referred to. For details of the French system, derived from personal observation during a residence in France, I am much indebted to Mr. Fitzpatrick, the Secretary to the Government of India in the Legislative Department. The proposed Conciliators will so far differ from the French *Juges de Paix*, that they will not have, in addition to conciliatory functions, a petty judicial jurisdiction (up to 100 francs = Rs. 50), nor will they be able to compel the attendance of the defendant before them; but they will, in consequence, be unable to exercise undue pressure, which in India might perhaps under some circumstances be apprehended.

"Closely connected with the subject of conciliation is that of Panchâyats, or arbitration by non-official persons or bodies, such as the Puna Arbitration Court, and of incorporating such arbitration, with more or less assistance and control, into our judicial system. The question is a difficult one in some aspects. All that I am now able to say is that it is under careful consideration, and that any provisions which may be decided on can be inserted hereafter in the Bill when passing through the Select Committee of this Council.

"Supposing that, notwithstanding all the preceding precautions, the dispute unfortunately develops into litigation, the Bill next endeavours to place the Courts of law within easier distance from the homes of the people, and to make them more absolute, less technical, less dilatory and less expensive. I may here mention that, out of 4,650 villages in our four districts, only 29 per cent. are now within ten miles of their Courts; 35 per cent. are from ten to twenty miles off; 24 per cent. from twenty to thirty miles; and 12 per cent. between thirty and sixty miles—distances which, in the absence of railways, represent a considerable inconvenience and loss of time to those obliged to attend. In pursuance of the objects just named, chapter V empowers the Local Government to appoint any Patel of a village whom it deems competent to be village-munsif for his own village, or, if desired, for other villages also within a radius of two miles. The munsif's jurisdiction will be limited to suits for money not exceeding ten rupees, and will generally follow the model of the Madras village-munsif's system, constituted under Madras Regulation IV of 1816, except that the munsif will not have, as there, a further jurisdiction, by consent of parties, extending up to Rs. 100. The munsif's decision will be final, except in case of corruption, gross partiality or misconduct proved before the special Judge, to whom I will presently refer. This Madras system is well worthy of attention. It is a remarkable fact that these munsifs dispose of nearly one-fourth of the whole civil litigation of the Presidency. In other words, some 45,000 suits, for which the people in Bombay might be dragged to our regular Courts, with all their attendant delay, cost and harshness, are in Madras quietly disposed of at the people's own homes without any one of these evils. Nearly the whole of these suits are for sums not exceeding Rs. 20, and nearly half for Rs. 5 and under; but the returns do not show how many of them are for Rs. 10 and under, and therefore tried without the consent of both parties. It has been surmised that many of the disputes here dignified by the name of 'suits' are so petty, that in Bombay they are never brought to a regular Court at all; but the general statistics do not bear this out, as in the Bombay Mufassal in 1877 there were 144,412 suits to a population of 15½ millions, while in Madras there were only 190,290 to above 31 millions. Again, I understand from Mr. Carmichael, Member of Council at Madras, who has kindly given me much information, that the bulk of them are not between usurers and raiyats. But the fact remains that a very inferior agency can dispose successfully, without appeal, of suits not lower in value, though differing somewhat in nature, from those with which we have to deal. Although, however, village-munsifs may thus be a fairly efficient institution in Madras, where they are a survival of ancient times, and where society is still in a comparatively simple state, it would be impossible at the present day to constitute them by law throughout all villages or village-circles in our Dekkhan districts. The people are now too independent, too active-minded, too irreverent to accept implicitly the decision of village seniors as such, or, as a Native newspaper puts it, 'in the present times of freedom and liberty, when even children do not obey their parents, the village headmen have no authority and influence.' Even if we in Bombay could successfully impose on our hard-worked and ill-paid Patels this, to them, novel function, there is the further difficulty in their case that the bulk of our petty suits are brought by money-lenders, with whom the Patel would too often be, by want of education or by absolute interest, unqualified to cope. Our advanced conditions postulate a more skilled judicature, better Judges, and, consequently, fewer of them; and these the Government must in the main provide. At the same time, there can be no harm in taking advantage of the present opportunity to empower the Government to invest with petty jurisdiction up to Rs. 10 any village Patels whom it may here and there find to be qualified by education and character. We may hope that the number of such will gradually increase.

"Next above these new Munsif's Courts come the existing Courts of subordinate Judges, who are all trained officers, divided into two classes, with proportionate powers, and receiving salaries of from Rs. 200 to Rs. 800 per mensem. These Courts it is proposed to strengthen in two ways. Their number will be increased from 24 to 36, thus diminishing their local jurisdictions and the distances to them from the people's homes; but this, being an executive measure, needs not to be provided for in the Bill. Their powers will, moreover, be considerably increased. By chapter II of the Bill all subordinate Judges in the four districts will be invested with what are termed small-cause-court powers, but enlarged so as to include mortgage-cases of the class in which agriculturists are so commonly involved. And by chapter IV they will all receive jurisdiction in insolvency. The question of how far the summary jurisdiction, not open to appeal, which the small-cause-court model implies, might safely be entrusted to the two classes of subordinate Judge has received careful consideration in connection with the opinion of the Secretary of State in paragraph 33 of the despatch: 'I am inclined to think that the principle of summary jurisdiction without appeal might be conferred experimentally on all civil Judges in the Dekkhan with great benefit.' It is considered that such jurisdiction may be conferred on the first class subordinate Judges up to the full limit allowed in the Mufassal Small-Cause-Courts Act, namely, Rs. 500 (£40), and on the second class subordinate Judges up to Rs. 100 (£8) absolutely, and up to Rs. 500 by consent of the parties (on the analogy of the higher jurisdiction of village-munsifs in Madras). But three special safeguards are proposed in chapter VII. *Firstly, inspection.*—A special Judge will be appointed to inspect, supervise and control the proceedings of the subordinate Judges, munsifs and conciliators under the Act in all the four districts, and see its new principles and policy effectively carried out. The special Judge will be aided, in each pair of the four districts, by a special assistant Judge or subordinate Judge, who will during the greater part of the year be engaged in travelling about, inspecting and supervising all subordinate Courts. In Bombay the collector and his assistants similarly move about, inspecting

and controlling the revenue and magisterial administration, mixing with the people, and, in particular, examining the civil work done by mámlatdárs. Long experience has proved that the system produces excellent results. *Secondly, revision.*—The power of revision vested in the High Court by section 622 of the Code of Civil Procedure is extended, on the analogy of section 295 of the Code of Civil Procedure, to the special Judge, who will be enabled to call for and examine the record of any case and correct failures of justice, as also similarly to deal with cases called for and referred to him by his assistants just mentioned. The powers of the High Court under the same section will remain intact. *Thirdly, sitting 'in banco.'*—The special Judge and the assistants with his authorization are enabled to stay the proceedings in any case pending in a subordinate Court, and to sit with the Judge as a Bench to try it. The power of withdrawing a case and trying it himself, or transferring it to another Court, which the district Judge possesses under section 25 of the Code of Civil Procedure, will also be exercised by the special Judge, and by his assistants with his authorization. These provisions will enable important cases to be tried by superior officers or a Bench, and promote that exercise by such officers of their personal example and that enlargement of their practical experience which are thought so desirable by the Secretary of State.

"In concluding this part of the subject, I should explain that the amended jurisdiction will, for convenience' sake, supersede altogether that under the Mufassal Small-Cause-Courts Act, and thus litigants who are not agriculturists will in money cases obtain throughout the four districts the special advantages designed for the latter. Also, no special provision is made for subordinate Judges moving about and sitting at different places, because they can be required to do so under the existing law.

"The procedure followed by the Courts under their new jurisdiction will be pretty nearly that of Small-Cause-Courts, which again differs but little, except as to recording evidence at length, from that of the Code of Civil Procedure. One exception, however, is so important as to require special mention. The Commission pointed out that the proportion of cases decided in Bombay *ex parte*, or in the absence of the defendant, vastly exceeded that in any other part of India. In the four districts the proportion ranged in 1876 from 60 to 74 per cent., and last year from 57 to 66 per cent. This has been ascribed to a variety of causes, of which the chief probably are ignorance of the raiyat that he has a defence, want of means to pay a pleader, conviction that the Court, for want of time or other reasons, will not go into the merits of his case or look behind the bond, fear of irritating his creditor by a defence or fraudulent non-service of summons. The various provisions of the present Bill, however, completely alter the position. The obligation laid on the Court of going into the whole merits of the case, and behind the bond if necessary, to which I shall presently allude, will remove the first three of the above causes of backwardness on the raiyat's part, and will probably lead to his more frequent voluntary appearance. But that obligation can scarcely ever be successfully performed in his absence and without his help; and it is therefore considered indispensable to make it incumbent on the Court ordinarily to exercise in all cases of a defendant's non-appearance the power of compelling him to attend now vested in it by the Code for exceptional use. Compulsory attendance will meet the other two causes of absence above mentioned. Any hardship which it might be supposed to involve will be more than balanced by the consequent better hearing of the case, and will, moreover, be much lessened by the proposed bringing of the Court nearer to the debtor's home.

"Closely connected with the question of procedure is that of how far effect should be given to the suggestion of the Secretary of State that possibly it would be desirable to exclude professional pleaders from the 'Courts with summary jurisdiction and without appeal up to a limited amount' which he desires. Upon this point we have two precedents. The French Code excludes all skilled advocacy from the Courts of the *Juges de Paix*, whether in conciliation or trial of suits, in the following most stringent terms:—

'Aucuns avoués, greffiers, huissiers et ci-devant hommes de loi ou procureurs ne pourront representer les parties aux bureaux de paix.'

The Madras Regulation for village-munsifs excludes professionals, but allows the deputation of a relative, servant or dependent—so that, for instance, a saukár could send his *gumáshta*, and a raiyat could send or bring with him a clever son or nephew, educated in a Government school. It may be true that where a case, involving even a moderate amount, is intricate, owing to mortgages or other exceptional circumstances, a competent pleader may be of much use both to the parties and the Court. On the other hand, it must be admitted that a pleader is a weapon at the command of the rich alone (one subordinate Judge even states that a pleader who often took raiyats' cases would lose his best customers); that in simple suits a pleader can often add nothing of value to what is in evidence, but only wastes time and introduces confusion; and that the presence of pleaders pre-disposes some Judges to decide on what counsel put before them instead of going independently into the merits. Upon a balance of such considerations, the draft Bill follows the Madras law in excluding pleaders, but admitting non-professionals, in all cases before a village-munsif or conciliator. It also attempts to check the unnecessary employment of pleaders in higher Courts, by excluding pleaders' fees from the costs awarded in cases before a subordinate Judge not exceeding Rs. 100, unless the Court certifies that professional assistance was necessary to the proper conduct of the case. The appointment of a pleader by the Court in cases where the debtor needs counsel but cannot obtain it is also provided for. This has been suggested in several quarters, and seems reasonable.

"I must here venture to express my regret that a material simplification of the civil procedure with a view to saving delay and expense has not been found to be feasible. I see from official returns that in the Bombay Presidency in 1877 the average duration of uncontested suits was 132 days, and of contested suits 272. It is no doubt true that the intricacy of a suit has no necessary connection with the amount in issue, and that a mortgage for Rs. 50 may present the same features as one for Rs. 5,000; and it may be argued with much show of reason that a Procedure Code should provide for all possible circumstances, and be of general application. At the same time, looking to the fact that, out of about fourteen hundred thousand civil suits of all kinds disposed of annually by the Courts of all grades in British India, some twelve hundred thousand, or 85 per cent., are for sums under Rs. 100 (£8), and six hundred and thirty thousand, or 44 per cent., for sums less than Rs. 20, I cannot but feel, and I think the people feel too, that our Civil Procedure Code, with its six hundred and fifty sections and all that they involve, is in minor cases a burden almost too heavy to be borne. I trust the day may come when not only Dekkhan raiyats but all India will obtain some relief in this respect.

"Having thus noticed the proposed reorganization of the Courts, I proceed to explain some important changes contemplated in the substantive law which they administer. These group themselves round two main heads,—the definition of a debtor's liability, and the mode and extent of its enforcement.

"A Court proceeding to determine the amount of a debtor's liability is met *in limine* (in our four districts at any rate) by the undeniable fact that, as Mr. Pedder expresses it, 'the passing of a bond by a Native of India is often of no more value as proof of a debt he thereby acknowledges than the confession by a man under torture of the crime he is charged with.' The Commission urge two points,—that the money-lenders have learned, through our system, to use and rely upon bonds almost exclusively, and that their bonds are mostly no correct representation of actual transactions. In close connection with this difficulty about bonds is that of usurious and of compound interest, whether only levied in the account, or also provided for in the bond. That the money-lenders do obtain bonds on false pretences; enter in them sums larger than agreed upon; deduct extortionate premiums; give no receipts for payments and then deny them; credit produce at fraudulent prices; retain liquidated bonds and sue on them; use threats and warrants of imprisonment to extort fresh bonds for sums not advanced; charge interest unstipulated for, over-calculated, or in contravention of Hindú law, and commit a score of other rogueries—these are facts proved by evidence so overwhelming that I scarcely know whose to quote out of the five volumes composing the Report of the Commission. Hence

arises the question whether, as the Secretary of State expresses it, 'the Courts should be obliged to enter into the merits of every money-claim, whether secured by bond or not, and should award only such sums, whether for principal or interest, as they deemed just, and should in no case give compound interest, or a larger amount of interest than the principal sum.'

"The answer in the affirmative has been maintained, in various quarters of not inconsiderable authority, to be in accordance with sound general principles of equity. Sir Arthur Hobhouse, in a note on the execution-sale of land dated April 28th, 1874, when alluding to some remarks by 'a man like Sir John Strachey, who treats the subject with equal sobriety and ability,' continues:—

'From my point of view, I say that, if what he has said, or the major part of it, be now true, it can only be met by a large increase of correctional power over contracts to be vested in judicial tribunals and strengthened by a usury law. In our own country the Courts of Equity invented laws for the protection, not only of persons of weak character and immature age, but of expectant heirs, of reversioners—in fact, of all persons placed under temptation to make improvident bargains. When they came across the usury laws, they made them subject to the more sweeping law created by themselves, and moulded them so as to produce fairly reasonable, though not very legal, results. They laid hold of mortgages under which the mortgagee became absolute owner if the debt were not paid by a certain day, and declared that the parties did not mean what they had said, but that, notwithstanding the absolute forfeiture, there remained an equity of redemption in the mortgagor. * * * I do believe that sensible Judges, armed with a large power of moulding improvident bargains, and strengthened by a usury law in the background, may administer more than a trifling palliative.'

Sir George Wingate wrote thus in 1852:—

'It remains to be shown how it is that the creditor in our Provinces has acquired a degree of power over his debtor which is wholly unknown in Native States. This power, it is clear to me, has been conferred by our laws, which enable the creditor to obtain a decree against a debtor for whatever may be written in his bond, and enforcement of that decree by the attachment and sale of whatever property, moveable or immoveable, his debtor may possess or acquire. * * * The first remedy I have to suggest is as follows. * * The enactment of a law to permit the Court to decree in all cases, on equitable consideration, whatever rate of interest it may deem proper, but that in no case shall the total amount of interest exceed the principal; and that the Court shall also in all cases be at liberty to fix the amount of the principal on equitable considerations with reference to the amount which it may consider to have been actually received by the debtor, and irrespective of the sum entered in the bond or acknowledgment of the debt.'

Mr. Pedder says:—

'A bond should not be considered sufficient proof of a debt unless its antecedents will bear the light, and show that the consideration for which it was passed was a fair as well as an actual one. * * * *

'It appears to me that some limitation of the rate of interest and some restriction on grossly unfair stipulations in contracts, as contrary to justice and public policy, are practicable and expedient.'

From 'The Land and the Law,' a well-known pamphlet by the Hon'ble Mr. Justice West, of the Bombay High Court, I take the following excerpts:—

'If, on the one hand, therefore, the State must needs lend its aid to the creditor as an essential condition of material progress, it must, on the other hand, assign bounds and conditions to this aid, without which it will probably become an instrument of social and political mischief. Particular classes in England supposed to be specially subject to imposition or unfair usage—as seamen and miners—are protected against disadvantageous bargains. The truth is recognized and acted on that there is no real equality, even of the roughest kind, between them and their employers. Still less can such an equality be assumed with safety in a community split up into sections, divided by the impassable barriers of caste and hereditary occupations. The extremes of astuteness and gullibility are thus fostered and brought into contact. * * At an earlier stage, borrowing at interest in England, as elsewhere, was generally an appeal of helplessness to avarice. * * * There are few who will deny that the India we have to deal with is much more like that earlier England than the England of today. * * * In the case of all obligations for a principal of not more than Rs. 500, the Courts should have full power to treat any interest in excess of nine per cent. as simply penal, and to cut it down to such rate as should, under the circumstances, seem just. * * * Compound interest should be disallowed, consistent as it is with sound commercial principles, in order to make it a disadvantage to creditors to leave obligations unsettled until the debtors are involved beyond redemption.'

"But upon this subject not only opinion but precedent are forthcoming. Of the manner in which our Government, a few years ago, deemed it necessary

to protect the raiyat we have a striking instance in a clause (still unrepealed) of the Bombay Regulation V of 1827. It runs thus:—

'*Clause* 2.—And in the case of a cultivator of the soil, sued upon a written acknowledgment executed at a place which was not at the time of such execution under British jurisdiction, if the circumstances are such as to convince the Court that the creditor might reasonably be expected to possess other proof of the amount besides such written acknowledgment (the consideration received for the same being contested), then the said writing shall not be held conclusive as to the amount, whether the defendant prove a deficiency in the consideration or not, but the Court shall pass a decree for only such amount as the claimant may otherwise prove to be due.'

The law which preceded it, Regulation I of 1823, was even more explicit:

'*Section* 36.—Whenever a cultivator of the soil is sued upon an acknowledgment in writing executed by him before the territory where it was executed came into the possession of the British Government, it shall be competent for him to plead that he did not receive a full consideration for the same, whereupon the plaintiff shall be required to prove his debt in the same manner as if no acknowledgment had been executed; and such sum only as in the circumstances of the case is just and equitable shall be allowed in the decree.'

The wisdom of our early legislators in thus dealing with the facts around them was greater than their foresight, which led them to hope that with the planting of the British flag and the establishment of 'a regular system for administering justice' the causes would pass away by which 'cultivators were easily induced to grant written obligations for larger sums than were due.'

"What the Bombay Government of Sir Richard Temple have from the first substantially advocated, and what we really need, is something approaching to a restoration of this early law, together with power to cut down unreasonable interest. The Court should set itself to do substantial justice in every case which came before it, instead of being satisfied with the letter of a bond or the bald assertions of either party, and it should of its own motion make such inquiry as it found necessary to this end. On the one hand, a simple denial of consideration should not throw the burden of proof on the plaintiff, but, on the other, if the circumstances were such that he ought to have clear accounts and evidence and he failed to produce them voluntarily or on the Court's requisition, the Court would draw its own conclusions against him accordingly. If he did not come into Court with clean hands, he would be entitled to little consideration. The Court should not go farther in any case or against either side than sufficed to get at the truth of the matter, and to give an equitable decision. There appears no reason to fear that such an exercise of its discretion by the Court would be either unfair to the creditor or demoralizing to the debtor. The objections to usury-laws are well-known and so cogent that only special circumstances can justify special legislation. Even a maximum legal rate of interest, however, had this advantage that, as Mr. West says, 'it set up a standard, and gave fixity to men's vague ideas of what might reasonably be asked for the use of money in those numerous cases in which the loan partook but slightly of the character of a true mercantile transaction.' Where the rate of interest is regulated by the ordinary laws of supply and demand, interference is indefensible, unless, as in the case of interest after decree, the security be changed. But where, as Sir John Strachey has said, 'the conditions depend more upon the degree of simplicity in the borrower and of rapacity in the lender than on anything else,' no such respect need be paid to them—the less so that with Hindús we have the support of the law of *dám-dupat*, and that the security will be greatly increased by the provisions for recovery to be mentioned shortly. It has been urged, and with some truth, that there is nothing in the present law to prevent such enquiry and doing of substantial justice; that certain rulings of the Bombay and other High Courts are suggestive of this course and support *dám-dupat*, and that the provisions of the Contract Act as to undue influence are very wide. But, however this may be, the practice of the lower Courts is usually different, and there are good reasons to fear that, unless their duty in this respect be clearly expressed in the law, ignorance of rulings, press of work, indolence or a desire to get through cases rapidly will, as hitherto, tend to prevent its performance. It may be pointed out, finally, that Lord Cranbrook, besides confirming the sanction given by Lord

Salisbury to the introduction of the Bombay draft Bill containing provisions on the principle above referred to, appears to look with approval on 'extending the powers of Judges to modify the contracts entered into between man and man.' In accordance with this view the first four sections of chapter III have been framed, and will apply to all determination of the debts of agriculturists which may take place under the Act. The history and merits of disputed or doubtful cases will be enquired into, and an account will be taken in a certain way if the Court considers the agreement not fair and equitable. Whether these sections express intelligibly, or will secure effectively, the action needed seems doubtful; but they can perhaps be improved in select committee. Regarding this safeguard and those of registration and accounts already explained, I should perhaps observe that any ingenious person can imagine methods by which debtor and creditor in collusion may evade them. But the same may be said of many other most beneficial enactments. We can only help those who will help themselves; and I believe a large proportion of our Dekkhan peasantry will take heart of grace to do so.

"A second important question affecting the determination of the amount of the debtor's liability is that of the period of limitation. The old law of Bombay (Regulation V, 1827, sections 3 and 4) fixed twelve years in the case of debts supported by a bond, and six years in the case of debts not so supported, as the periods within which civil suits for recovery must be brought respectively. By Act XIV of 1859 these periods were reduced to six and three years respectively, with the further restriction that a debt supported by written contract was to come under the three years' period, unless it was registered. This is the present law, Acts IX of 1871 and XV of 1877 having made no material change. There is an almost universal consensus of opinion that, as the Commission say, 'the reduction in the periods of limitation has been the cause of considerable hardship to the debtor.' Under the old law, the debtor was rarely sued or called upon to renew the bond till near the expiration of the twelve years, and then he was, at most, sued under the provision of *dám-dupat* for twice the principal sum lent. But under the law since 1859 the creditor is forced within every three years either to sue the debtor, or to obtain from him a fresh bond for principal and any accumulated interest. In practice, he does so nearly every two years, in order to make sure of not missing the period through any accident or default. To show the difference between the two laws: Rupees 100 at 9 per cent. become Rs. 208 in 12 years; but if the bond be renewed triennially, the amount is raised to Rs. 260. At the higher rates which are but too common the effect is more startling. Rupees 100 at 25 per cent. become Rs. 400 in twelve years; but renewals every two years produce a total of Rs. 1,139! That these results are actually enforced in practice is amply proved by the evidence taken by the Commission, from which Mr. Pedder (in an interesting article in *The Nineteenth Century* for September 1877) gives a few illustrations. In short, the debtor thus suffers the cost of writing and stamping a new bond; is charged compound interest instead of simple; often has to bear the expenses of a suit, and, finally, is frequently obliged also to submit to a large nominal increase of the principal, as the price of the creditor's forbearing to sell him entirely up, or to have him arrested and imprisoned. It is perhaps unnecessary for me to quote numerous authorities at length to prove these general results. The collective opinion of the Commission has been stated. Mr. Auckland Colvin summarizes the evils, and favours a change. Mr. Shambuprasád has treated the subject with much minuteness, and strongly urges the restoration of the old Bombay law. Revenue and judicial officers, both Native and European, take the same view in their letters to the Commission. Mr. Pedder has been quoted already. Mr. Wedderburn, in a report specially called for by the Bombay Government, advocates a twelve and six years' limit; and it has, I observe, been adopted as desirable at a public meeting of the inhabitants of Puna held not long ago. The Collector of Puna gave evidence to the same effect before the Famine Commission.

"The only plea which has, as far as I am aware, been advanced in favour of the three-years' period is that it obliges the making up of accounts at short intervals, thus enabling the raiyat to know how he stands, and preventing his being deeply involved without his knowledge. This objection had, undoubtedly, very considerable weight at the time it was made. Whether the benefit of a short account, thus secured by a three-years' limitation, outweighed the evils of a new bond, compound interest, &c., which it entailed, is a point upon which there may well be difference of opinion. But the whole aspect of the question seems to be changed by the provisions in chapter IX of the Bill regarding receipts and statements of account. Taken in connection with section 17, which enables any agriculturist to sue for an account, and to get a declaration of the amount really due to him under all the new and searching provisions of the Act, it would appear that the object of short accounts will now be attained, and perhaps more efficiently than it ever could have been by the indirect expedient of a limitation-law. Under these circumstances, it is proposed to restore, by section 72, the old Bombay law.

"I now proceed to the second head—the mode and extent of enforcement of equitably determined liability. In the execution of a decree by sale of moveables, the necessary wearing apparel of the judgment-debtor and his wife and children, his implements of husbandry, and such cattle as the Court may deem necessary to enable him to earn his livelihood as an agriculturist, are now protected by the amended Code of 1877, so it has not been thought necessary to go further. As to execution against the person by arrest and imprisonment, I rejoice to state that it is now considered expedient to abolish it altogether. Imprisonment will still be inflicted as a punishment for fraud detected on insolvency; but that is a totally different thing. The maintenance of imprisonment for debt, as found in the Indian law, is equally indefensible in principle and in practice. As to principle, the Dekkhan Riots Commission make clear that point, utilizing the opinions of John Stuart Mill. Their appendices teem with evidence in detail as to the extortion and wrong of which the warrant of arrest becomes in practice the engine. Unacknowledged payments, fresh bonds for sums unadvanced, life-long slavery and even female dishonour may all be obtained—the first three constantly, by the mere production of the warrant of arrest without enforcement. They say, for instance, that in 1874 'it would seem probable that somewhere about 150,000 warrants had been used as threats only.' The outcry against imprisonment from officers well qualified to judge of it has been uniform and persistent. Its abolition is unanimously recommended by the Dekkhan Riots Commission. Mr. Pedder and Miss Nightingale have in *The Nineteenth Century* brought the evils it causes prominently before the British public. Sir Erskine Perry gives its abolition his 'unqualified approval' in a note dated December 1st, 1877. Judicial officers and pleaders take the same view as the Executive. Were it even defensible in theory, which we have seen that it is not, the abuses to which, in a country like Western India at least, it is proved to lead in practice afford sufficient ground for its condemnation in the districts to which the Bill is to apply. The case has already been once laid, though less perfectly and authoritatively than at present, before the Governor General's Council in the debates on the Civil Procedure Bill. The representations I then made had the warm concurrence of Sir Edward Bayley and the learned Advocate General for Bengal (Mr. Paul). The discussions in select committee as well as in council showed that the objections to the measure related less to its principle than to the other arrangements, such as an effective insolvency-law and a speedy recovery of *bond fide* debts, by which it ought to be accompanied. These the Select Committee and the Council could not see their way to, owing to the insufficiency of the judicial machinery in the Mufassal; and the matter may be held to have been deferred rather than negatived. But the present Bill provides all these necessary accompaniments for the districts to which it is to apply. Imprisonment was, at best, a barbarous device to meet the case of a debtor's concealing his property or refusing to give it up. Under the draft Bill, it will be quite unnecessary for these purposes and reserved for cases of flagrant fraud or dishonesty in insolvents. In this altered position I trust that no hesitation will now be felt by the Council in abolishing a system which has been proved to be grossly abused as an engine of extortion, and is in opposition to the legislation of the civilized world.

"The case of execution of a decree by sale of immoveable property remains for notice. The problem of whether such sales should be enforced—one of the most difficult by which Indian administration is beset—is entirely the creation of British rule. Although the later Hindú law permitted the sale of land 'on proof of necessity' and Muhammadan law placed no bar to it whatever, the general feeling of the country against alienation of ancestral lands, coupled with the trifling value of the right of occupancy and the political objections to expropriation felt under a Native Government, to which I have already alluded in my sketch of the system of Native States, appear to have co-operated to prevent sales to any noticeable extent. But under our judicial system 'the sale of land registered in the collector's books is' (as observed by Lord Stanley in a despatch of January 25th, 1859) 'the most ready way of enforcing a judgment: it gives the least trouble to both the creditor and the Court, and holds out every inducement to both to resort to that mode of satisfying the decree in preference to any other, even in the most trifling cases.' The Code provides, indeed, an alternative to sale of the nature of an *elegit*, or temporary alienation, by allowing the land to be placed under the management of the collector for a term of years, not exceeding twenty, whenever there is reason to believe that the liability can be thereby cleared off. But the sections enacted in 1859 were not efficient for the purpose in view, and therefore little acted on. Those substituted in 1877 accidentally became almost unintelligible, and we are now amending them. Practically, therefore, sale has hitherto stood in the Code unfettered. The extent to which this judicial system has been allowed to play varies remarkably in different parts of India. In Lower Bengal a zamíndárí and certain subordinate tenures are freely saleable, but the tenure of an occupancy-raiyat is not; and the local legislature are just now considering whether transfer shall be allowed, provided the purchaser be a brother-raiyat and not a money-lender. Saleability in execution will, of course, follow power to transfer. In the Panjáb hereditary or joint-acquired land cannot be sold in execution without the sanction of the Chief Court, or other land without that of the Commissioner. In the Central Provinces and Oudh ancestral property cannot be so sold without the sanction of the Chief Commissioner, or self-acquired property without that of the Commissioner. In Ajmer all sale is absolutely prohibited. In the North-Western Provinces, Madras and Bombay sales are unrestricted. The position of the question as I have just described it is generally admitted to be unsatisfactory. In a correspondence originated by the despatch of Lord Stanley already quoted, carried on through the last twenty years, and now here embodied in some four hundred pages of print, the question of a remedy has been discussed by the most able administrators throughout India. The alternatives of making land by law absolutely unsaleable for debt; of enabling proprietors to make it so by voluntary trusts or entails; of limiting sale (as in some Native States) to any surplus unnecessary for the subsistence of the proprietor and his family; of replacing sale in execution by usufructuary mortgages for the debtor's life or a maximum term of years; of restricting sales to specifically pledged land; and of confining the power of sale to the chief Court of a district—all these have found powerful and zealous advocates. In favour of restriction generally, it is urged that to a community whom a variety of circumstances combine to constrain or tempt into debt, the addition of the land to the security they can offer is no advantage whatever, but the reverse. It merely amounts to a permission to live on capital, instead of living on income, anticipated perhaps, but still only income. The process of living on capital is but a short one, all the world over. Abolish the whole land-revenue to-morrow, and the process would merely be somewhat prolonged. The inevitable end must come at last, but its concomitants of eviction and penury will, where the evil is wide-spread, lead to large charitable relief in famine—perhaps eventually to a poor-law—and are also, in parts of India at least, politically dangerous. But the conclusion of this Council when passing the Civil Procedure Code, as explained most fully by Sir Arthur Hobhouse in a remarkable speech on March 28th, 1877, was that, though special measures might be admissible in particular localities, the plan of temporary alienation through the collector for a term of years, whenever the property would be ultimately

saved thereby, being in accordance with the past course of legislation regarding land in England and not inequitable, deserved a fair trial; and that, before going further, an attempt should be made to give life to the intentions of the legislators of 1859, which have to a great extent failed of effect.

"My object in this statement of the position of the land question, which I fear may be deemed a digression, is to account for the absence in the Bill of any attempt at a final comprehensive settlement of it, and at the same time to show the connection and admissibility of the two limited measures which are proposed. Section 23 exempts the land of agriculturists from attachment and sale unless it has been specifically pledged. The equity of thus restricting a creditor's security has able champions in the general correspondence already referred to. But in Bombay the question is mainly one of fact, whether the existing debt can be held to have been, on the whole, contracted in view of the security of unpledged land. Keeping in mind the large proportion of such debt which the Commission found to be ancestral, the recent date (1865) of the legalization of transfers of occupancy, the known reluctance of the raiyats to pledge their land, and other considerations, the first local authorities have decided that it cannot. I must confess to some misgivings as to how the exemption may work in practice. The money-lender may everywhere make the execution of a bond, laying on the land all his existing unsecured advances, an indispensable condition of further accommodation. At the same time, the exemption rests as to the past upon a perfectly intelligible and reasonable basis, while as to the future, the proposed village-registration will at least ensure that every raiyat when he pledges his land shall understand what he is doing, and insolvency will open to him a loophole of escape when unreasonably pressed by an extortionate creditor, if he prefers that alternative. The second measure, also contained in section 23, is the grant of power to the Court, when passing a decree or subsequently, to direct the collector to pay off the amount by managing for not more than seven years any land not specifically pledged, after deducting a modicum sufficient for the support of the debtor and those of his family dependent on him. This course, which is only a new application of the principle of temporary alienation, will add greatly to the creditor's security, while diminishing the worry and expense to both himself and the debtor; but I reserve further exposition for the Insolvency-chapter, where analogous provisions occur.

"While thus contemplating the continued recovery of debts from moveables and land, however, policy no less than justice demands that the last refuge of an effective insolvency-law should be provided for the debtor. Such a law is really the bottom of the whole matter. Compared with what we mean to compel a man to *pay*, the question of what we shall hold him to owe sinks into insignificance. The need for it has been generally admitted for a long series of years, and has led to various legislative efforts and measures. Sir George Wingate in 1852 advocated strongly 'the enactment of a simple and equitable insolvent-law to enable a debtor hopelessly involved to free himself from all his liabilities within a limited period'; and so recently as December 23rd, 1877, he wrote thus: 'Of all the remedies proposed, I estimate the Insolvency Act as of the highest importance, and as likely to prove the most efficacious.' Sir Bartle Frere in 1853, when Commissioner in Sindh, issued Rules which worked well, but were superseded in 1861 by the Code of Civil Procedure. Mr. William Frere, Member of Council at Bombay, introduced into the Legislative Council there in 1863 a Bill based on these Rules and the Insolvent Act of the Presidency-town (11 & 12 Vic., cap. 21), but applicable to the whole Presidency. It was carefully matured in select committee, but was eventually withdrawn in 1867 for a variety of reasons, of which the expediency of awaiting the result of contemplated legislation in England was one of the chief. Sir James Stephen in 1870 introduced into the Legislative Council of the Governor General an Insolvency Bill applicable to all India. It was taken almost entirely from the English Bankruptcy Act of 1869; and on circulation to the Local Governments was generally held to be too complicated and unsuited to the circumstances of the Indian Mufassal. In 1872 Mr. (now the Hon'ble Justice) West, Judge of the Sadr Court in Sindh, proposed a

Bill with the essential features of the original Rules of that Province; but the matter was not proceeded with. The measure generally is also advocated in his well-known pamphlet 'The Land and the Law.' In 1872, also, the Panjáb made a material step in advance in the Laws Act then passed.

"Upon the acknowledged harshness of the Indian law of insolvency as it stood up to 1877 I need not enlarge. The new Code of that year, together with the amending Bill, which will, I hope, be passed at our next sitting, have so far relaxed it, that a debtor arrested or imprisoned, or whose property has been attached, may by application obtain a general inquiry into his affairs, a declaration of insolvency, and a release if in jail (with immunity from subsequent arrest for the scheduled debts) on *boná fide* surrender of all his property. A judgment-creditor also may apply for such declaration. A final discharge may also be granted by the Court at its discretion where the debts do not exceed Rs. 200, and is in any case acquired on payment of one-third of the scheduled debts, if the assets do not produce more, or after the lapse of twelve years. The law is still, however, most defective. Application may not be made by a debtor until process has issued against him; arrest is retained and imprisonment, though for a shorter period; *all* property, except the moveables exempt from sale in execution, must be surrendered; the debtor may be summarily imprisoned for a year, 'at the instance of any creditor,' for concealment or bad faith, while no such penalty awaits the creditor; and in some cases the debtor's future earnings will be unreasonably burdened, while in others the creditor will not get what might fairly be recovered for him. Finally, the whole becomes a farce through the restriction that the Court may not grant a declaration unless it 'is satisfied' that the debtor 'has not, knowing himself to be unable to pay his debts in full, recklessly contracted debts,' as if persons able to pay in full were the usual customers of the money-lender!

"The fact is that insolvency-law for the Indian Mufassal made an altogether false start. In England fraud by the debtor is the chief danger, and even the legislation of 1869 has failed through his ingenuity; in India fraud by the creditor has almost solely to be guarded against. In England insolvency is presumably a man's fault; in India it is presumably only his misfortune. In England embarrassment ordinarily arises from gross extravagance or reckless trading; in India one or more bad seasons, the loss of a bullock or two, or the religious necessity of marrying a child, are its most frequent origin: extortion and fraud by creditors help its onward course. Yet in England insolvency has hitherto been treated more leniently than in India. Misfortune has here been made a crime, for which even life-long slavery might not atone. Surely, we must divest ourselves of much confusion of ideas. Whether a man *is* insolvent or not is a mere question of fact, quite unconnected with the enquiry how he came to be so. How much he *can* repay, without being made a useless or dangerous member of society, is a mere matter of calculation, into which the moral aspects of his past conduct cannot enter. To such enquiries ideas of revenge and punishment are altogether irrelevant. Imprisonment is only appropriate for concealment, contumacy and other forms of fraud. To declare an agriculturist insolvent when he is so; to set a reasonable time before him during which he shall work himself free and reserve the means therefor; and eventually to start him afresh with the lesson of experience, seem more sensible than to lock him up for a time while his family are starving, and then turn him adrift a beggar. To the creditor certainly the former course will be the more profitable, as also to Society.

"In accordance with these principles, the Bill, in the first place, provides (section 20) for the numberless petty cases in which the means of the debtor, the claims against him and his partial or total inability to satisfy them come before the Court in the course of the suit or application for execution. Where this is so, it is far shorter, simpler and less troublesome to all parties to empower the Court at once to settle the matter than to let it go on through the perfectly useless, but costly and vexatious, forms of taking out execution, and applying for declaration of insolvency. Where the case is quite simple, the Court will therefore release the debtor from any balance which it is satisfied he cannot pay. When there are several creditors or other complications and the

amount exceeds Rs. 50, it may at once direct the taking of insolvency-proceedings. Again, where such proceedings are instituted, either so or on the application of either debtor or creditor, ascertained insolvency will be at once admitted, and the Court will proceed to turn the available assets to the best advantage. To avoid the frequently ruinous loss through selling moveables by auction, the Court may hand over articles at a valuation made by assessors. As to immoveable property, any portion specifically pledged for a scheduled debt may be let rent-free for a premium for a term not exceeding twenty years, instead of being sold, if the debt can thereby be cleared off. Portions unpledged may be handed over for a term not exceeding seven years to the collector, who will assign to the insolvent sufficient to maintain himself and those of his family dependent on him and lease the remainder for the benefit of the creditors. In practice, the lessee will probably sometimes be a creditor, but more often the insolvent himself under due security. If the debts cannot be fully paid off by these measures, the insolvent will be discharged from the balance. The proposal which has been made that the fixed period should be subject to the life of the insolvent has been rejected as too unfavourable to the creditor. The limit of seven years has been fixed after careful consideration of the various proposals relating to temporary alienation contained in the land-sale correspondence already spoken of. If a man's debts are so heavy that he cannot clear them off in this time, it is better that he should get a discharge for the balance, than that he should drag on as a slave without hope of freedom or stimulus to exertion.

VII.

"Reviewing the Bill broadly, it may fairly be said to secure, to an extent not hitherto attempted, (1) precautions against fraud by either debtor or creditor in their original transactions with each other; (2) interposition of friendly conciliation between disputants, previous to litigation; (3) approximation of the Courts to the homes of the people; (4) some small simplification of procedure and diminution of the expense and technicalities arising from legal practitioners; (5) equitable jurisdiction to reduce all exorbitant, fictitious and fraudulent claims; (6) finality of judicial decisions, subject to adequate safeguards; (7) prompt and unfailing enforcement, through the collector when necessary, of all adjudicated claims of reasonable amount; (8) discharge of the debtor from such claims, or balance of them, as, after all reasonable enforcement for a long period, could not be fully realized except by demoralization or life-long bondage.

"Such a result, while falling not short in favour of either debtor or creditor of what is fairly commensurate with the nature of the case, the analogy of law in other countries, the rules of pecuniary need and supply, and the strictest equity, goes no farther in reform than the political necessity of a prompt and effective remedy for the social disorders of the Dekkhan appears imperatively to demand.

"If I am asked what I think will probably be the effects of the measure and how far I expect it to be successful, I must reply that, although I cannot undertake to answer for all the detailed provisions of a Bill which is the outcome of revision at more hands and authorities than one, I think that it cannot but be most beneficial, and that it will to a great extent meet the needs of the Dekkhan, provided it be supplemented by executive action in the directions already indicated. Of course, no one expects from it the abolition of indebtedness for all time. The raiyats are 'depressed and crushed by a variety of concurrent causes.' With only one class of these, though, perhaps, the largest, does the Bill profess to deal, but in a way which may reasonably be rewarded with success. At least, it gives effective help to every raiyat who is disposed to help himself. The reorganization of the Courts is favourable to all parties. The relations of debtor and creditor are adjusted on fundamental principles, equitable as between the two, and essential to the cohesion of society. A man should pay what he really owes, and no more; but his creditor should not be allowed to use the State for the purpose of beggaring and enslaving him. On the other hand, we cannot justly and reasonably legislate for the

summary relief of the debtor from unjust and extortionate claims, unless we also give to the creditor full and effective aid in obtaining all that is fairly due to him and reasonably recoverable. A creditor's difficulties when he has got his decree should be reduced to a minimum. If we make the decree a just one, it should be effectively enforceable. Without ample provision on this principle, the destruction of the raiyat's credit or his bondage to secret and extortionate agreements must ensue, and all our well-intentioned interference will do harm instead of good. With such provision, the measure will not injure the raiyat's legitimate credit, but improve it. Against all prognostications to the contrary, I set the actual facts observable in Native States. The raiyats there get all the credit that is good for them. I have no faith in the virtues of unlimited 'tick.' Borrowing, and lending with a view to securing permanent enslavement, will no doubt be checked; and so much the better. *Boná fide* debts should be more easily recovered, and more reasonable interest would thus be profitable. Finally, a legitimate mode, more practicable than any yet suggested, will be provided for gradually clearing off the mass of existing debt which now weighs upon the people and stops all improvement, while the great institution of a peasant-proprietary, which is at once essentially Indian and considered in Europe the best form of tenure for a free people, will not be destroyed.

"In conclusion, I have only to urge upon the Council that, while the deliberation and care with which this question has been brought to maturity are a sufficient guarantee for the suitability of the Bill now introduced, the period which has elapsed since the raiyats first expressed discontent by outrage, the famine which has intervened, and the continued evidences of popular distress, render it desirable that the measure should be passed into law at the earliest practicable date."

The Hon'ble MR. HOPE moved that the Bill be referred to a Select Committee consisting of the Hon'ble Sir A. J. Arbuthnot, the Hon'ble Sir J. Strachey, the Hon'ble Messrs. Stokes and Thompson, the Hon'ble Sayyad Ahmad Khán, the Hon'ble Mr. Colvin and the Mover.

The Hon'ble SAYYAD AHMAD KHÁN said:—"Before the Bill goes to the Select Committee, I wish, with Your Excellency's permission, to make a few observations with regard to the principles upon which the proposed legislation is based. These observations I have handed to my friend Mr. Fitzpatrick, who, with Your Excellency's permission, will read them to the Council."

Mr. Fitzpatrick then read the Hon'ble Member's remarks as follows:—

"My Lord,—I agree with the Hon'ble Member in his motion that the Bill should be referred to a Select Committee. But before the Bill goes to the Committee, I wish, with Your Excellency's permission, to make a few observations with regard to the principles upon which the proposed legislation is based.

"It may be accepted as an indisputable principle that special laws should only be introduced to meet special cases. The disturbances in the Dekkhan which have given rise to this Bill revealed the existence of considerable distress among the agricultural classes. The causes appear to have been the following. Owing to the large exportation of cotton during the American war, the prices both of that article and of all agricultural produce greatly increased. This increase led to an increase in the expenditure and in the credit of agriculturists. It also appeared to justify an increase in the Government revenue, which was accordingly imposed in some of the districts, and, as it appears, unequally. When the demand for Indian cotton fell off, the prices of all agricultural produce fell; and the fund out of which the agriculturists had to meet the increased revenue, and the debts which they had contracted, became insufficient for that purpose. Credit could no longer be procured; and the raiyats, whether instigated by disloyal persons or of their own motion, commenced to attack and plunder the houses of money-lenders, and especially of the class of Márwáris, who, being strangers, were particularly obnoxious to them. It does not appear from the evidence of the rioters taken by the Commission that these men complained of the action of the civil Courts.

Many of them asserted that they were not in debt, and others that they had not been sued for their debts; but, seeing that the object of the rioters was not only plunder but the recovery of bonds, it seems manifest that there had been a refusal of credit, and, in all probability, threats of proceedings in Court for the recovery of outstanding debts. It also appears that, by reason of a scanty and uncertain rainfall, the productive powers of the districts are usually uncertain, and have for some years been abnormally small.

"My Lord, no doubt a case has been made out for the application of special measures of relief, and I fully admit that that relief should take the form of a law providing facilities for the release of debtors from debts which they can have no hope of discharging, and which, while they remain subject to them, deprive them of the ordinary motives for exertion—the attainment of something more than bare livelihood.

"But, My Lord, while it is desirable to give greater facilities to the raiyats of the Dekkhan, whose ruin has been accomplished by unforeseen circumstances, to free themselves from debts which paralyse their industry, care must be taken that the remedies are such as will not deter the people from having recourse to them, nor impair the credit which is ordinarily given to agriculturists, and without which they would be unable to meet the demand for revenue, or to sustain themselves from harvest to harvest.

"The requirements of the present Bill as to registration appear to me so onerous, that they will operate to deter persons from committing their transactions to writing. Registration affords a very doubtful proof of the payment of money. It is a common experience in this country that money paid in the presence of the registration-officer is in part or wholly returned when the parties leave the presence of the registrar. It is rarely denied that a transaction has taken place; but if a dispute arises, it is as to the amount received.

"The portion of the Bill which relates to conciliation also deserves serious consideration. The Bill provides for the appointment of Conciliators, who, having invited the parties to attend, are to use their best endeavours to induce them to agree to an amicable settlement. Now, the matter on which the parties are supposed to be at variance is not a mere dispute arising out of domestic or friendly relations, in which the impartiality of a stranger or the influence of a neighbour can be hopefully introduced, to persuade the parties to make mutual concessions; and, therefore, I am not hopeful that this provision will be of practical use. No doubt, a revenue-officer or a police-officer could bring influences to bear on creditors which would induce them altogether to forego their claims; but I need hardly express my conviction that the Government of India would altogether discountenance the exercise of any such influence; and I have no doubt the Council, in order to avoid even the apprehension of its exercise, will see fit to introduce a provision in the Bill prohibiting the appointment as Conciliator of any officer exercising revenue or police functions.

"On the other hand, the attendance before the Conciliator will put the parties to considerable inconvenience. The Conciliator can only 'invite' them to attend; and if the defendant does not attend, the Conciliator may adjourn the case for an indefinite time and as often as he pleases. A claimant may have to waste any number of days to obtain relief in the most trifling case; and there is no provision to secure him compensation.

"My Lord, in my judgment there is more reason to expect that a creditor will abate his claims when the parties are brought face to face in a public Court of justice than at a private sitting held by a Conciliator; but if it is resolved that an experiment be made, at least provisions should be introduced to secure the appointment of Conciliators to whom all parties can resort with equal confidence, and to restrict adjournments.

"My Lord, I now come to the provisions relating to the procedure in the civil Courts; and before I offer any remarks upon them, I must defend my countrymen from some imputations which have been, I think unfairly, cast on them and received as true without sufficient enquiry. It is said they are prone to litigation. In those provinces in which I have acquired experience I have

found no facts to warrant this conclusion. Looking to the numbers of the population and their innumerable transactions resulting in credit, the number of suits for the recovery of debt will compare not unfavourably with the statistics of any other civilized country. Creditors rarely sue their debtors unless a dispute has arisen, or unless they desire, by obtaining a decree, to secure an advantage over other creditors. Nor is it true, as has been frequently asserted, that the village money-lender generally desires to acquire the land of his debtor. He looks for the return of his money principally to the crop raised by the labour of his debtor, and takes a mortgage to prevent the debtor's making away with the crop or defeating his claim in favour of another money-lender. In the hands of the money-lender, who cannot himself cultivate, the land is worth only the rent a tenant could give for it.

"Again, in the large majority of cases the claims brought are just, and the defendants do not seek to evade them by unjust defences. I do not mean to say that there are not in this country, as elsewhere, extortionate usurers and persons who advance false claims in Courts of justice, and also debtors who have recourse to fraud to defeat just claims; but I believe—and I have seen no proof to the contrary—that the civil Courts have, in the ordinary course of their procedure, not failed in this country more than elsewhere to detect fraud and defeat its intended consequences. In fact, our acquaintance with such frauds is derived chiefly from the investigations of Courts of civil justice.

"I would also observe that in this country, where opportunities for small investments rarely present themselves except in the shape of loans on the security of land, there is a large number of persons who are not professional money-lenders, but who invest their savings in such securities, and almost universally charge no higher interest than the usual rate in the market. The first deviation from the ordinary procedure which I find in the Bill is the compulsory enforcement of the attendance of the defendant. My Lord, if I am right in supposing that in the majority of cases the claim is just, it follows that in the majority of cases in which the defendant does not appear it is, because he knows the complaint is just, and does not desire to lose the labour of several days, possibly at a critical season for his crop, and incur the expense of going to and from, and attending the Court. It would perhaps be sufficient to require the Court to exercise the power it already possesses, of enforcing the attendance of the defendant only in those cases in which, on looking into the account, it sees reason to believe the claim is fraudulent or extortionate. The rule prescribed in the Bill appears to me calculated to injure rather than benefit the majority of defendants.

"The provisions of the Bill which direct the Court to go into the history of the case from the commencement of the transactions, I think, also require modification. They may involve an enquiry imposing on a Court many days' labour and affording it no certain conclusions. It is scarcely reasonable to expect either of the parties to produce reliable evidence of petty money transactions extending over a number of years and commencing, it may be, a quarter of a century ago, especially seeing that the limitation-law has encouraged them to believe that such evidence would not be required of them. I therefore think some definite and not too remote period should be prescribed for such enquiries. So also a definite limit of time should be prescribed for re-opening statements and settlements of accounts. Some debts which will come before the Courts will be the result of transactions commenced and settled before the lifetime of either party to the suit. The consequence of imposing on the Courts a duty they cannot possibly discharge would be to encourage them to evade it.

"My Lord, I think it right to point out that the provisions of section 12, requiring the Court to search for a defence 'on the ground of fraud, mistake, accident, undue influence' (whatever that expression may mean) 'or otherwise,' are calculated to encourage defendants to set up false defences and to support them with false evidence; and for this reason they call for very serious consideration. Nor can I give my consent to the provisions of section 15, forcing an arbitration on parties, whether they consent to it or not. Competent and impartial arbitrators are rarely to be found in villages; and it is one of the acknowledged privileges of British citizenship that for the vindication of right recourse may be had to Judges of whose competency and impartiality their selection by the State is a guarantee.

"My Lord, I am also unable to agree with the principle upon which section 16 of the Bill is based. The provisions of that section appear to me to be contrary to Hindú law as administered on this side of India and to general equity. If a Hindú dies leaving assets, then *whoever* takes his assets, in whatever degree he may be related to the deceased, and even if he be a stranger, is liable to satisfy the debts of the deceased to the extent of the assets, and, where such debts bear interest, with interest. This rule is common to the English and Muhammadan as well as to the Hindú law. The Hindú law does, indeed, impose a moral obligation on the descendants of a deceased person to pay his debts, and, when the descendants are related to the deceased in the first degree, with interest; but this obligation, which has not the force of law, is not enforced by the Courts on this side of India, and ought, I think, in no case to be enforced, to the injury of *bonâ fide* creditors of the descendants of the deceased.

"In section 20, which provides that a debtor, owing less than fifty rupees, who is unable wholly to pay the debt should be discharged on payment of a portion, it appears to me necessary to specify what portion he is to pay—whether it be so much as he is able or a percentage: but this point will, no doubt, receive the attention of the Committee.

"The provisions of the Bill tending to prevent the employment of vakíls appear to me to be of very doubtful expediency. Having exercised judicial functions for many years, I am bound to say the Courts receive considerable assistance from vakíls, and that the more ignorant the suitor is, the less probability is there he will be able to explain his case in the confusion he experiences in a Court of justice as well as he can to his adviser outside the Court. I would prefer to see provision made for the employment of Government pleaders to appear on behalf of debtors in all cases, rather than discountenance the employment of pleaders at all.

"With regard to appeals, which are entirely prohibited in the Bill, I admit that they entail evils, in that they prolong litigation and increase expense; but it seems to me better to experience these evils than the greater evil of imperfect justice. Cases triable by the Courts of Small Causes ordinarily present very simple issues and do not call for the intervention of a superior Court; but questions relating to land are far more complicated, and involve frequently questions on which the law is not well settled. I can see no reason why appeals should in these cases be refused in the Dekkhan when they are allowed elsewhere. Revision is, at the best, an imperfect substitute for the right of appeal.

"For similar reasons, I consider the expediency of introducing special rules of limitation, proposed in the Bill, open to serious doubt. If it is desirable in the interest of the debtor to extend the period of limitation for the recovery of debts, the benefit should be given to agriculturists everywhere, and, indeed, to debtors of all classes.

"The provisions of the amended Code of Civil Procedure relating to insolvency will afford sensible relief—and relief that was needed—to agricultural and other debtors in all parts of the country. The insolvency provisions in the present Bill go beyond the general law. I am not prepared to dissent from them on that account; for the circumstances have been shown to justify special remedies. But the provision respecting the delivery of property in lieu of cash is anomalous. It will not, I think, be acceptable to either party, nor does it appear called for.

"With regard to section 35 of the Bill, I have only to observe that I can see no reason why a fraudulent insolvent in the Dekkhan should be exposed to less penalties than a fraudulent debtor elsewhere.

"My Lord, there is one more point to which I wish to invite the Council's attention. Admitting, as I do, that the exigencies of the case require special legislation, I entertain a serious doubt whether the rules framed in the Bill should be enacted more than as a temporary measure. Perhaps, the requirements of the case would be sufficiently met if the operation of the proposed

law is limited to a certain number of years. Some of the most important provisions of the Bill relating to interest strongly resemble the laws against usury which for many years were prevalent in this country. I had some share in administering them. They were found ineffective; they encouraged fraud; they operated as a hardship upon the borrower; and as such were repealed both in England and in this country. The revival of any rules of law which limit the rate of interest or empower Courts to interfere in the terms of private contract cannot be regarded by me as other than a retrograde step—a step which, if justified by extreme emergency, should, at any rate, not be allowed permanently to affect the law, even in a small portion of the country.

"My Lord, I have ventured to offer these criticisms, not in any way pledging myself to oppose any of the provisions of the Bill, in whatever shape they may eventually come before the Council, but with a view to invite the attention of the Select Committee before which the Bill will be laid to those provisions of which the expediency appears to me to be doubtful. So far as the Bill tends to relieve the Dekkhan raiyats from their present embarrassments it will have my cordial support. The acerbity of feeling occasioned to creditors by the discharge of their debtors will be sensibly mitigated if the just ascertainment of their claims be secured to them. But should the provisions of the Bill go to deprive them of this privilege, and so far as such provisions tend to hinder the ordinary transactions of the people and render the recovery of debts incurred hereafter uncertain, I should be reluctant to support it.

"My Lord, I should indeed be grieved if, from what I have said, it should be understood I am not cognisant of the difficulties and hardships under which the agricultural classes of India labour. I have for many years felt a deep sympathy with the raiyat, and should look upon it as a great piece of good fortune to take part in the passing of any measures which would relieve him from the miseries which indebtedness brings upon him. But at the same time I am convinced that no law can be framed which will do away with the necessity of borrowing, or, so long as the recovery of loans is uncertain and fraught with difficulty, put a stop to exorbitant rates of interest. An experience of thirty-five years, during which I had the honour of serving as a judicial officer of the Government, induces me to say that all rules which aim at regulating the rate of interest on private loans or which place difficulties in the way of their recovery, far from relieving, are injurious to the borrower, whose necessities compel him to evade the law by secret and collusive agreements of which the terms are more onerous because they cannot be enforced. The condition of the Indian raiyats not only in the Dekkhan, but in other parts of India, fully deserves consideration at the hands of the Government: perhaps in their pecuniary difficulties may be traced some of the causes which make famine so severe and oft-recurring a calamity. The question is undoubtedly momentous; and Your Excellency's administration is to be congratulated upon having undertaken its solution. But, My Lord, the solution, in my humble opinion, lies not in conferring anomalous privileges of protection against the demands of the money-lender, not in placing difficulties in the way of borrowing money, not in making the recovery of judgment-debts dilatory or uncertain—but in providing the agriculturists of India with facilities for borrowing money on moderate interest, and in making the recovery of such loans speedy and certain."

The Hon'ble MR. COCKERELL said that, whilst he readily admitted that a case had been made out for the application of some remedy, through special legislation, for the evils shown to exist in the heretofore subsisting relations between the agriculturists and the money-lenders in the Dekkhan districts, he thought the Bill before the Council aimed at a much greater interference with those relations, and a more extensive variation of the ordinary law of the country than was necessary or justifiable; and he felt bound to record his dissent to those provisions of the Bill which in his opinion came within this designation. He considered the sections relating to the establishment of village Courts for the trial of petty cases and a system of village registration of contracts between the agriculturists and the money-lending classes, as well as the enforcement of the

delivery of receipts and statements of account, as likely to prove efficacious in the removal of many of the evils now complained of. He would not object to the enactment of the conciliatory clauses of the Bill by way of experiment, though he apprehended that their effect for good or for evil would depend entirely on the character of the agency selected for the discharge of the functions of a conciliator.

If the powers conferred by the Bill were to be vested in officers trained in that school of thought which had devised some of the provisions of the Bill to which he would advert presently, the results to be anticipated could be hardly otherwise than unsatisfactory; they might be exceedingly mischievous.

The proposed abolition of imprisonment for debt had his concurrence as a measure which, if found to work satisfactorily in a limited area, might be advantageously extended at some future period to all India; and he was free to admit also that the proposed alteration of the law of limitation in regard to the recovery of debts (though personally he had doubts as to its advantage) had for its recommendation the support of the most competent authorities on such a question. He would have had no great objection to the disallowance of appeals if the unqualified power of revision to be substituted therefor were vested in the ordinary superior Courts; but he distrusted the action of a special revising agency such as was to be created under the Bill, which might be constituted so as to operate as a mere machine for carrying out the ruling policy of the day towards the classes affected by the proposed legislation.

He thought that the provisions of section twenty, which gave a discretionary power to the Court to absolve any debtor, after the partial satisfaction of a decree or claim, from his remaining liability to his creditor without any of the safeguards which belonged to the ordinary insolvency procedure, were unjust to the creditor, and wholly uncalled-for in the circumstances of the case.

His greatest objection, however, was to the provisions of chapter IV of the Bill, which contained a special insolvency procedure for the benefit of the indebted agriculturist. In the first place, it was proposed in section twenty-seven to virtually declare that no amount of falsehood or dishonesty on the part of the raiyat-debtor should deprive him of the advantages of an adjudication of bankruptcy if, as a matter of fact, he was found to be in insolvent circumstances. He would ask what tenable ground there could be for enacting that misrepresentation and fraud on the part of a Dekkhan agriculturist should not be attended with the same disabling and punitory consequences which would be the result of such conduct on the part of any other person. The Hon'ble Mover of the Bill had argued that, for an insolvency procedure to be efficient, the only question to be considered was whether a person seeking its benefits was in insolvent circumstances, and that, if he was, he was entitled to obtain the relief sought for; he (MR. COCKERELL) regarded such an argument as wholly fallacious; an insolvency law was intended for the relief of honest debtors; hence, when it appeared on the face of a case that a person applying for a declaration of insolvency had been guilty of misrepresentation and dishonesty in regard to the matter of his application, he was most justly and properly thereby debarred from obtaining benefits and privileges to which from the nature of the case he was not entitled.

The next provision on which he had to comment was contained in section thirty. That provision was no less remarkable for its excessive unfairness than for the originality of its conception. After the moveable property of an insolvent had passed into the hands of a Receiver, the Court was to be allowed to interfere for the purpose of prohibiting its sale and to force its acceptance on an unwilling creditor, at a valuation made under no sort of responsibility, and consequently wholly unreliable, in liquidation or part liquidation of his claim against the insolvent.

The property so thrust upon the creditor might be wholly unacceptable quite apart from any question of a fair valuation; it might be a village pig, and the unfortunate creditor might have a conscientious objection to have anything to do with the unclean animal! It might be said, perhaps, that he was

putting an extreme case; but it was a case that might well occur under the operation of the proposed section.

The provisions in section thirty-four of the Bill, which was designed to give an absolute release from all further liability for existing debt to an insolvent debtor whose available assets had been distributed amongst his creditors, had been conceived in the same spirit, *i.e.*, it was intended thereby to make a special concession to the insolvent agriculturist at the expense of his creditors which nothing in the circumstances of the case in any way justified, and this, moreover, at a time when, through the passing of the Bill for amending the Code of Civil Procedure, the general law of the country would be made as favourable to the insolvent-debtor in this direction as was reasonable, having regard to the just claims of the creditor to impartial consideration. The Hon'ble Mover had said in the course of his remarks that a man *ought* to pay what was *justly* due from him, but no more. He (MR. COCKERELL) did not understand how the proposed enactment of section thirty-four of the Bill could be reconciled with that sentiment; for the effect of the general provisions of this Bill, if passed into law, would be so to scrutinize and cut down the money-lender's claims against the agriculturist that the residuum found to be due from him must surely come within the category of just debts, and leave the insolvent-debtor with no title to obtain any greater immunity from liability to meet them than was enjoyed by other insolvent debtors throughout the Empire.

He now came to the provisions which in his judgment evinced, perhaps, the greatest disregard of all equitable principles; he referred to section thirty-five which limited the power of Subordinate Judges to inflict punishment for offences under section 359 of the Civil Procedure Code to a sentence of three months' imprisonment in certain cases and one month in others—the punishment allowed in such cases by the said Code extending to one year's imprisonment. This section was so worded as to make it appear at first sight that the provision just described was a mere matter of jurisdiction; but then, even in that view, there would appear to be something anomalous in curtailing the jurisdiction which would be exercised by Subordinate Judges vested with the powers of Insolvent Courts outside of the Dekkhan in the case of the Judges upon whom as regards other matters unusually large powers were to be conferred by this Bill. But when section twenty-five, which required all insolvency cases to be disposed of by these Subordinate Judges exclusively, came to be considered in connection with this section (thirty-five), it was clearly the intention of the framer of the Bill to reduce the maximum penalty which could be imposed for offences under section 359 of the Code from one year to three months' imprisonment in some cases and only one month's imprisonment in others. Now, he (MR. COCKERELL) entirely concurred in what had fallen from the last speaker on the subject of this provision of the Bill, and he would ask why the punishment to be awarded for rascality of the kind dealt with in section 359 of the Code should be appraised by a different standard when the acts evincing such rascality were committed by indebted agriculturists? He (MR. COCKERELL) could not too strongly deprecate such class-distinction in the punishment of criminal offences as was contemplated by this section of the Bill.

The provisions of this chapter (IV) on which he had been commenting were mildly described in the Statement of Objects and Reasons as constituting a "procedure more liberal to the debtor than that of the Civil Code"; and the Hon'ble Member in charge of the Bill had endeavoured in his remarks to defend them as quite consistent with the exigencies of the case. The Hon'ble Member's explanation had in no degree shaken his (MR. COCKERELL'S) conviction as to the monstrously inequitable character of these provisions, which he would describe as marked by a degree of partiality and one-sidedness which he believed to be without precedent in the annals of Indian legislation. He wished to be understood, however, in these remarks as not opposing the motion for the reference of the Bill to a Select Committee; but he had thought it right to state his views thus plainly in the hope that the provisions of the Bill on which he had specially commented would undergo such pruning and purging by the Select Committee to which it would be referred that the Indian Statute-book would not be tarnished by the admission to its pages of enactments conceived in a spirit

diametrically opposed to that sense of fairness and strict impartiality in dealing with the interests of all parties affected by it which had heretofore characterized the legislation of this Empire.

His Honour THE LIEUTENANT-GOVERNOR said he did not wish to criticize in detail any of the provisions of this Bill, but he thought that the circumstances which had led to its being introduced were of such general prevalence throughout India that the mode in which they were to be treated in the Dekkhan might possibly form a precedent for their treatment in other parts of the country. He was not acquainted with the state of the revenue administration in Bombay, but he knew in the Panjáb there were many agriculturists and land-proprietors whose condition was very much the same as that described in the speech of the Hon'ble Member who introduced the Bill; there were parts of the country in the Panjáb, as doubtless there were in every Presidency, where the rainfall was uncertain and the crops precarious; yet in all those districts the Government had introduced its revenue system, which obliged the peasant-proprietor who had engaged for the revenue to pay a fixed sum at fixed times as Government revenue, and the Government had imposed the most stringent conditions with regard to the realization of its own demands. It seemed to him that too little attention had been paid to this cause, which must in a great degree have contributed, if it did not entirely originate, the difficulties of the Dekkhan raiyats in the part of the country to which this Bill was to be made applicable. The peasant-proprietor who had become indebted to a banker was still obliged to satisfy the Government demand in cash: to procure that cash he had again to resort to the money-lender, and, as the Government demand came upon him at the usual season of the year with regular recurrence, he was obliged to resort again and again to the money-lender in order to procure the cash wherewith to meet it. The Government in this Bill proposed to take very stringent measures to protect the raiyat from the demands of the money-lender; but the provisions of the Revenue-law for the realization of the Government demand had apparently been in no way altered. Every one knew the great stringency of those regulations, and it seemed to him unreasonable that, while we upheld them for the realization of our own revenue, we should make such alterations in the ordinary law in regard to private contracts. He thought it would have been more satisfactory if, before introducing this Bill, we had been told what measures the Bombay Government proposed to take in order to lighten the burden which the payment of the Government revenue demand imposed upon the peasant proprietor. He thought it desirable that, at the same time as measures of relief were afforded to the raiyat from his private creditor, the Government, which appeared as a public creditor of the raiyat, should also take measures to in some way lighten the pressure of its own demand—not perhaps by reduction of assessment, but by taking that assessment in some other way which would not impose upon the raiyat the burden of meeting all the risks of a scanty rainfall and a precarious crop, but would leave those risks on the Government itself, and relieve the peasant-proprietor, who had shown himself unfit to meet them. He thought there was considerable danger in altering the ordinary law of contract in the manner now proposed in this Bill in the case of agriculturists, unless Government itself took measures to relieve the burden which it had itself imposed upon them.

The Hon'ble MR. STOKES said:—"I shall vote for referring this Bill to a Select Committee, and I do not intend, either now or hereafter, to oppose it, so far as it carries out the express orders of the Secretary of State, that is to say, so far as it requires the Courts to enter into the merits of all money-claims by saukárs against Dekkhan raiyats, and forbids them to compel a raiyat to pay a saukár compound interest, or an amount of interest exceeding the principal sum lent; so far as it provides that the principle of the Presidency-towns Insolvent Act (11 & 12 Vic., c. 21) shall be extended to the Dekkhan raiyats; that their land shall not be sold in execution, unless specially pledged by a bond duly registered; that the number of Courts with small-cause jurisdiction shall be increased, so that there

shall be at least one within reach of every raiyat's home; and that Courts of Conciliation shall be established.

"Those instructions have been accepted by the Government of India in its executive capacity, and I am not now going to raise any question as to the necessity or propriety of such acceptance. I may, however, remark that the Bill, so far as it requires the Courts to enter into the merits of money-claims, is simply declaratory of the existing law: so far as it provides a special law of insolvency, it is, to my mind, rendered unnecessary by the great extension which the Select Committee on the Bill to amend the Code of Civil Procedure has recently given to chapter XX of the Code—an extension of which the Secretary of State was not, and is not, fully aware; and, so far as it provides for multiplying Courts with small-cause jurisdiction, all that is really needed may be done by executive orders under section 3 of Act XI of 1865 and section 28 of Act XIV of 1869.

"The remarks with which I shall venture to trouble the Council have reference merely to the additions which the Bombay Government and the Hon'ble Mover have thought fit to make to the simple scheme recommended by the Secretary of State. It seems to me that, in framing a measure of which the policy is, to say the least, questionable, we should not go an inch beyond the instructions which the Indian Executive is bound to obey; and that we should all, whether we are ordinary Members or Additional Members of this Council, regard with the utmost jealousy accretions as to which the authors of the Bill have wilfully abstained from consulting the Bombay High Court Judges and other persons of judicial experience.

"The first of these accretions to which I shall call your attention is section 73:—

'No appeal shall lie from any decision or order in any suit or proceeding before a Subordinate Judge under this Act.'

"The effect of this section, coupled with section 3, will probably be the reverse of what is intended. It shuts out from appeal the decisions in almost all mortgage-suits. The object of doing so is, of course, to relieve indebted raiyats from expense and prolonged litigation. But, first, I am informed by Mr. Justice West that in the Bombay Presidency the Courts of first instance, in dealing with these suits, usually apply the harsh letter of the law in favour of the creditor. Relief is got from the higher Courts, in which modifications favourable to the raiyat are much more frequent than those in favour of the saukár. And, secondly, the useful power which the Appellate Court now possesses under section 551 of the Code of Civil Procedure of confirming the decision of the lower Court without sending or serving notice has in most cases rendered the cost of an appeal quite insignificant. The result of this part of the Bill will therefore be, on the whole, to place the indebted raiyat in a worse pecuniary position than he is in at present. As to cutting off all appeals in order to shorten litigation, the remedy will be worse than the disease. Let us remember that, in the absence of an appellate Court, the Judges of first instance will have no one (as Bentham says) 'to stand in awe of.' The errors arising from corruption, incapacity, laziness, precipitation, ignorance and love of arbitrary power, which are certain to be committed in these difficult land-suits, especially where the Judges are inexperienced and unaided by a Bar, will remain uncorrected and cause hardship and discontent. The barring of an appeal in cases of the small-cause type (suits for debts, damages or moveables not exceeding Rs. 500 in amount or value) may be justified, because, as a rule, those cases are simple and easy, and practically it is better, on the whole, for the community that in such cases the decision should be rapid than that it should be careful and correct. But mortgage-cases sometimes involve the investigation of difficult questions as to title, priorities, marshalling securities, contribution and rights of maintenance, and always the taking of complicated accounts. A Judge who does all this rapidly will simply scamp his work; and the power of calling for and revising his imperfect

records will, as I shall show, be a very inadequate substitute for an appeal—a remedy which, wherever wrong has been done, the appellant's interest urges him to apply.

"The effect of abolishing appeals should also be considered in connection with the rule as to *res judicata* (Code of Civil Procedure, section 13). It seems to me that great hardship may sometimes be caused by regarding (as we must, if the Bill is passed in its present form) the uncontrolled judgments of these subordinate Courts as conclusive on questions of title to land. We may, of course, insert a clause declaring that, for the purpose of section 13 of the Code, no Court trying a suit under this Bill shall be deemed, as regards the title to immoveable property in respect of which the suit is brought, a Court of competent jurisdiction. But, then, suitors would be exposed to the harassment of repeated litigation, which the rule as to *res judicata* has been framed to prevent.

"The power given by section 54 to the Special Judge to call for and examine the records of suits tried by Subordinate Judges is intended as a substitute for appeals. But, first, the records of cases tried by second class Subordinate Judges at Rs. 150 a month will, it is safe to say, generally be defective; and the Bill (section 11) expressly provides that in the bulk of cases (those of which the subject-matter does not exceed Rs. 10 in amount or value) there need not be even a memorandum of the evidence. Under the Bill, therefore, the revising Judge will constantly have to exercise his jurisdiction on imperfect materials.

Secondly, the revising Judge, no matter how carefully he is selected and how highly he is paid, will be greatly inferior in learning, ability and experience to the Judges of the High Court, who now form the ultimate Court of appeal in the Presidency. The result will be that rights will be established all over the Dekkhan, founded on the Judge's crotchets and erroneous ideas of law, and the greatest confusion and hardship will result when these rights are upset (as they are sure, at last, to be) by the High Court or the Judicial Committee of the Privy Council.

"Thirdly, those records, if, as I suppose, they resemble the Bengálí *nathis*, will be masses of ill-written documents in a Native character and language which, it is safe to say, no revising Judge will have time or skill to decipher and translate. The business of revision will therefore practically be placed in the hands of the sarishtadárs, who are notoriously open to the saukárs' bribes; and here, again, the Bill will work to the injury rather than the benefit of the raiyat.

"Another mode in which it seems to me certain that the provisions of the Bill will be used to injure the raiyat is suggested by sections 45 and 46. Those sections provide that when the parties to a case before a Conciliator (who is intended to represent in India the French *Juge de Paix*) come to an agreement finally disposing of the matter, the agreement shall be reduced to writing and signed, and that the Conciliator shall forward the same in original to the Court of the Subordinate Judge of lowest grade having jurisdiction in the place where the agriculturist who is a party thereto resides. The Bill then proceeds thus:—

'The Court which receives the agreement shall order it to be filed; *and it shall then take effect as if it were a decree of the said Court passed on the day on which it is ordered to be filed and from which no appeal lies.*'

"It requires no power of divination to say how this provision will work. The saukár will say to the raiyat, who, we are told, is generally weak and apathetic: 'I will lend you the Rs. 50 for which you ask; you need not give me a mortgage, and you will thus not have to pay the Sarkár anything for stamps or registration-fees. We can arrange the matter thus. I shall apply to the Conciliator 'to effect an amicable settlement' between us, and you will come with me before him and agree to pay me Rs. 100 three months hence.' The wretched raiyat will have to do so, and the saukár, chuckling at the ease with which he twists a foolish law to his own advantage, will see the agreement taking effect as if it were a decree 'from which no appeal lies.'

"Chapter VIII, which requires all money-obligations executed by raiyats to be written by or before village registrars, also seems to me a specimen of

blundering benevolence. The chief result of this well-meant attempt to ensure the authenticity of documents will, I am certain, be to discourage the use of written agreements, and to force *oral* contracts on persons who would otherwise have expressed themselves in writing. I need hardly say that this is impolitic and contrary to one of the wisest aims of our recent legislation. If the scheme succeeds, it will also add greatly to the cost of all loans, such cost falling finally on the raiyats, who cannot pay their revenue without occasionally borrowing. But wherever saukárs are concerned the scheme is, I think, pretty sure to fail. The saukár will give up mortgages and written instruments altogether. He will say to the raiyat: 'I will lend you money at 60 per cent.; but mind, if you do not repay me on the day fixed, I shall never lend to you again, nor will any of my brother-saukárs.' The raiyat will borrow on the terms proposed, and his last state will be worse than his first.

"Section 69 declares that, in awarding costs in suits before Subordinate Judges in which the subject-matter does not exceed Rs. 100 in amount or value, nothing shall be allowed, unless the Court is of opinion that professional assistance was necessary. This, I fear, will practically exclude pleaders from appearing in most of the difficult mortgage-cases cognizable by Subordinate Judges. Now, on this point I have only to say that the experience of India and of every other country in the world proves that an honest, learned and independent Bar is of the greatest advantage to the Judge in the trial of complicated cases. And if the Bombay pleaders are, as a rule, honest, learned and independent (as to which, not having the needful local knowledge, I offer no opinion), the exclusion of them will be a public calamity as well as an unmerited slur on an honourable profession. It may be true that some of them are dishonest and ignorant; but the arbitrary exclusion of the whole body from their proper functions will deprive the peccant members of all chance of improvement, render them discontented and dangerous, and compel them to earn their livelihood by all kinds of dishonourable practices. To draw the line at Rs. 100 or any other amount is absurd; for the difficulty of a mortgage-case does not vary directly as the amount involved. To give the Subordinate Judge power (as is done by section 69) to refuse any pleader's fees will obviously tend to excite suspicions of favouritism, whenever the Judge grants those fees, and to destroy that independence of the Bar which, for the sake of the Bench as well as the suitors, a wise Government ought to encourage. Lastly, if, as is probably the case, the legal profession in the Bombay Presidency is as influential as it is elsewhere, to make this powerful body of men bitterly hostile to the Bill seems to me the most certain mode of ensuring the failure of the experiment which it has been framed to try.

"The provisions which I have hitherto noticed are, in my opinion, unwise; but those to which I shall now ask the attention of the Council are grossly unjust and (if I may use the expression in India) unconstitutional. Both section 20 and section 49 are retrospective in their operation. They relate to decrees passed *before* the proposed Act will come into force, and the former section at least seriously interferes with the vested rights of the holders of such decrees. Section 20, paragraph 1, runs as follows:—

'When a decree has been passed, *whether before or after this Act comes into force*, under which any sum less than fifty rupees is recoverable from an agriculturist, the Court may, whether in the course of execution of the said decree or otherwise, if it is satisfied that there is no other claim against him and that he is unable to pay the whole of such sum, direct the payment of *a portion of the same, and grant him a discharge from such* [sic] *balance*.'

Under this section, therefore, if a man (whether he be a saukár or not) has before the first of October, 1879, obtained a decree against a raiyat for Rs. 49, the Court, if it is satisfied that there is no other claim against the raiyat, that he is unable to pay more than Rs. 48, but that he is quite able to pay that amount, may direct him to pay only *one* anna, and grant him a discharge from the balance. Surely such a provision was never before proposed for the consideration of a legislature! Section 49 declares that no application for execution of a decree passed before the proposed Act comes into force 'to which any agriculturist residing within any local limits for which a Conciliator has been appointed is a party' shall be entertained by

any Civil Court unless the decree-holder produces a certificate under section 48. When the judgment-debtor refuses (as he often will) to appear before the Conciliator, the decree-holder cannot execute his decree until the expiration of that incalculable space of time which the Bill describes as 'such period as the Conciliator thinks reasonable.' Section 30 is also retrospective. It runs as follows:—

'Whenever any moveable property of an insolvent is liable to be sold by a receiver under section 356 of the said Code, the Court may direct that it shall not be so sold, and may, after recording the opinions of two Assessors appointed by the Court in this behalf, determine the value of such property and direct the receiver to transfer it to any of the scheduled creditors who may be entitled to receive in the distribution under the said section 356 an amount equal to or greater than the value so determined; *and such creditor shall accept such property in full or partial liquidation (as the case may be) of the amount to which he is so entitled.*'

A creditor who before the first of October, 1879, has contracted to be paid in money may be compelled, under this wonderful section, to receive payment of his debt in old brass pots, or worn-out bullocks, or village-pigs, or anything else which he does not want and which he may be unable to sell. I believe that the Hon'ble Mover is the sole author of this section—at least I can find nothing about it in the letter from the Bombay Government. Remedial statutes may be retrospective when they only go to confirm rights already existing and add to the means of enforcing existing obligations. But sections like these, that disturb absolute vested rights against which there is no equity, are founded on unconstitutional principles, and I, for one, will never be a party to passing them into law."

The Hon'ble SIR ALEXANDER ARBUTHNOT said:—"At this late hour I will detain the Council by a very few remarks. This Bill, which has been placed in charge of the Hon'ble Mr. Hope by the Executive Government in consideration of his experience in the districts now in question and of the attention which he has given to the subject, is in a great measure based on a draft Bill which was sent up to the Government of India by the Bombay Government, and in the preparation of which Mr. Hope's aid and advice were made available. I have no doubt that, if the Bill had emanated entirely from the Executive Government of India, it would have assumed in some matters of detail a very different shape. There are several provisions in the Bill with which I, for one, am unable to agree; but, as regards the general scope of the Bill, apart from those particular provisions, I feel bound to say that I consider that a sufficient case has been made out for special legislation, and that I approve of certain leading principles which the Bill embodies. On the other hand, I think that there is great force in many of the remarks which my hon'ble colleague Mr. Stokes has made regarding the section which bars appeals in cases of claims founded on mortgages. I personally entertain very little doubt that, when the Bill has undergone that examination and sifting which it will undergo at the hands of the High Court of Bombay and of other judicial authorities, and when it has been examined and revised by the Select Committee, that section will, if it does not entirely disappear, be very materially modified. In all that Mr. Stokes has said on the subject of those provisions of the Bill which provide for supervision and inspection in lieu of appeals I entirely concur. I may also say that I agree with my hon'ble colleague Mr. Cockerell in thinking that several of the insolvency provisions are exceedingly questionable. My impression is that it will be found that the insolvency-law which we hope to see enacted in the course of a few days in the Bill amending the Code of Civil Procedure will be found sufficient for the particular districts which are dealt with in the project of law now before us, as well as for the rest of India. However, I think it was only right that, looking to the circumstances under which the Bill has been framed, we should send it forth for criticism and examination, not exactly in the shape in which we, looking at the question from our point of view and not from the local point of view, might be disposed to regard it, but that we should pay very great deference to the suggestions made by the Local Government, and afford every opportunity for those suggestions being examined and criticised in the Presidency to which the Bill refers.

"There are one or two points in connection with the address which was delivered by the Mover of the Bill on which I should wish to say a few words.

The full and exhaustive, and, I am bound to say, very interesting and suggestive, address to which we have listened this morning shows that the Hon'ble Member has exhausted every source of information which was available to him. It shows that he has carefully studied the Report of the Commission which has led to this project of law, and the correspondence which during a long series of years has passed on the particular subject to which this project of law refers, and on other subjects cognate to it. Naturally, in the Hon'ble Member's address a great deal was taken from the Report of the Dekkhan Riots Commission. From that report he was able to adduce a great deal of evidence in support of the views which he individually entertains. But it struck me that on one or two points on which, as I read the report of the Dekkhan Riots Commission, the opinions expressed by the members of that Commission seemed to differ from those entertained by the Hon'ble Member, he failed to give us the benefit of the observations which are to be found in the Commission's Report.

"I do not think that the tone in which the Hon'ble Member expressed himself with regard to the character of the saukárs in the Dekkhan districts is by any means fully supported by the text of the Commission's Report. The Hon'ble Member used the expression 'usurious money-lenders.' He said many other things which, as his address was read rapidly, I cannot repeat *verbatim*, but which gave me the impression that he regards the money-lenders of the Dekkhan districts as a class, with scarcely an exception, of usurious and rapacious men—a class of men who make enormous and extravagant profits at the expense of the ignorant raiyat, and a class against whom it is desirable that the Government should direct very stringent legislation.

"Now, it seems to me that this is not the view held by the members of the Commission. On the contrary, I find it expressly stated, in the 85th paragraph of their report, that 'on the whole there is no reason to believe that the saukárs dealing with the agricultural classes make higher profits than are warranted by the nature of their business, which is always precarious and unpopular—occasionally, as we have seen, dangerous.' There are other passages in the report on which I cannot lay my hand at this moment which convey to my mind a similar impression; and I think it would be wrong that this Bill should go forth to the public or to the people of the districts which it will affect with the impression that the Government of India entertain in regard to this particular class of the community—a class more or less intelligent, which is really very useful, and the existence of which in the circumstances of the country is an absolute necessity—views such as those which appear to be entertained by the Mover of the Bill. I have no doubt that among this class, as among other classes of money-lenders in other parts of the world, there are many black sheep, and that here, as elsewhere, there are instances of gross extortion and rapacity; but I do not for a moment believe that the case is nearly so bad—that the class, as a class, is so extortionate and such a curse to society—as might be inferred from some of the expressions used in the Hon'ble Member's address; such expressions, for instance, as that 'money is lent designedly to render the raiyat a bond slave'; or that 'fraud by the creditor is, in India, the only thing to be guarded against.'

"On another point it appears to me that the remarks of the Hon'ble Member are not borne out by the Report of the Dekkhan Riots Commission. I refer to the alleged technicality of the procedure of our Courts. Nor do I think that those remarks are borne out by the actual facts of the case.

"In the 116th paragraph of the Report of the Commission I find it stated that 'upon these and similar statements the first remark we have to make is that it is a mistake to suppose that Courts in India are bound only to administer law in the strict sense in which the term is here used. They are distinctly Courts 'of equity and good conscience' as well as of law. Secondly, it is certain that the laws of this country, as, for instance, the Contract Act, the Evidence Act and the Civil Procedure Code, are as little open to the charge of technicality as any laws can possibly be.'

"I listened with great attention and with great interest to the speech of our hon'ble colleague Sayyad Ahmad Khán, the Native Member of this Council, and the only Native Member present. One of the observations made by him

which particularly struck me, was that in which he expressed his opinion as to the expediency of prohibiting in this Bill the appointment of revenue or police officers as Conciliators. I agree in every word which the Hon'ble Member said on this point; and I trust that in this respect the Bill will be amended by the Select Committee. On the other hand, I do not agree in all that the Hon'ble Member said in regard to the Limitation-law. The alteration of the Limitation-law for these districts, and I should think for the country generally, in the direction in which it is proposed to alter it in this Bill seems to me to rest on very substantial grounds.

"There was one remark made by my hon'ble colleague Mr. Stokes at the commencement of his speech in regard to the scope of the Bill, with reference to the instructions which we have received from the Secretary of State, with which, if I understood him correctly, I am unable to concur. I do not conceive that this Government is either positively bound to enact every provision which was recommended in the despatch of the Secretary of State, or that it is debarred from going beyond those provisions, if, on full consideration, it appears to us that the main object which the Secretary of State had in view will be advanced by our enacting additional provisions which were not contemplated by him. Everything that the Secretary of State has written on the subject of this Bill, as well as on all other subjects, whether relating to executive or legislative matters, is entitled to the most careful and respectful attention of the Council of the Governor General. But it does not appear to me that in such a case as this, or indeed in any case, the Government of India is precluded from deviating from the letter of those instructions; or, at all events, from urging their reconsideration, if such a course should be deemed necessary. I conceive that it is quite open to us, if any of the provisions recommended by the Secretary of State to be inserted in a project of law appear to us to be either inexpedient or impracticable or inadequate, to make such alterations or additions as we deem to be required.

"It only remains for me to advert to the remarks made by His Honour the Lieutenant-Governor—remarks for which I think the Government and this Council are very much indebted to His Honour—because it is very desirable that it should be known to the public generally, and to the community which will be affected by this Bill, that the question raised by the Lieutenant-Governor has not been overlooked by the Government of India; that, on the contrary, the view which is entertained by the Government of India on that particular question is, I may say, entirely in accordance with the opinion expressed by Mr. Egerton. With the permission of your Lordship, I will read the concluding paragraph of the letter which was addressed to the Government of Bombay previous to the preparation of the draft Bill, which, as I have said, formed the basis of the Bill now before the Council. After making various observations, which form the subject of fifteen paragraphs of the letter, in regard to the general scope and tenour of the projected legislation, the Government of India expressed themselves as follows on the particular point to which the Lieutenant-Governor alluded:—

'There is one point, however, which, although it may positively not involve legislation, appears to the Governor General in Council to demand further consideration from the Bombay Government, namely, *the possibility of adapting the assessment of the land-revenue to the variations in the season*. This question is discussed in paragraph 10 of the Bombay Government letter of the 6th April, 1877. The Governor General in Council fully agrees in the view that, in ordinary cases and where the land-revenue is moderate, it would not be good, either for the raiyats or for the public treasury, that the land-revenue demand should fluctuate. But the system which is best for districts enjoying an ordinarily regular rainfall may not be the best for the arid tract of the Central Dekkhan, where (it is said that) a good rainfall comes only once in three years. In view of the very great fall of prices and the vicissitudes of season in the Dekkhan during the last few years, it would be desirable that the present Government of Bombay should consider whether the recent (1873—75) revisions of the revenue have given sufficient relief from an assessment which was based, in part, on an unduly high estimate of the normal value of field produce in the Dekkhan. And, further, the Governor General in Council would wish the Government of Bombay to consider whether in these four districts, or in parts of them, it would not be wise to have *a varying scale of revenue* demand to be applied in unfavourable seasons, whereby the normal assessment might be reduced by a certain percentage over an entire district, or division of a district, in the event of a failure of rain or other cause of serious damage to the crops.'

"These instructions expressly refer only to the four districts included in the scope of this Bill; but I quite agree with His Honour the Lieutenant-Governor that they are instructions which are probably very applicable to many other districts, not only in Bombay, but in other Provinces in other parts of the Empire. And I may mention that at this moment, and for some time past, the expediency of applying such a system to another district in another part of India—I refer to the district of Jhánsi—is, and has been, under the consideration of the Executive Government."

His Excellency THE PRESIDENT here adjourned the debate to the following day, and the remainder of the business was proceeded with.

FOREIGN JURISDICTION AND EXTRADITION BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to amend the Foreign Jurisdiction and Extradition Act, 1872. He said that the eighth section of the English Extradition Act of 1870 empowered a Magistrate, when any person was charged with having committed an offence abroad, to issue a warrant of arrest in anticipation of a request being made for extradition by the State within whose limits the offence had been committed. Sections 19 and 20 of Act VII of 1854 contained similar provisions; but they were omitted in Act XI of 1872, the present Extradition Act, which consolidated and amended the existing law on the subject. It was, he believed, supposed by the framers of that Act that the matter was sufficiently provided for by the Code of Criminal Procedure, section 157. But that section seemed limited to the case of offenders whom some Court in British India would have jurisdiction to try, and would therefore not cover the case of a foreigner who had committed an offence at some place beyond the limits of British India. Section 194 of the Code was equally inapplicable. Certain recent cases in which subjects of the Nizam had stolen bullocks and committed other offences in the Nizam's territory, and then taken refuge in British India, had shown that some such provisions as those of Act VII of 1854, sections 19 and 20, were still required to prevent failures of justice. The present Bill, which had been prepared to meet this want, practically re-enacted, with certain unimportant modifications, what was the law in India up to the year 1872.

The Motion was put and agreed to.

LOCAL AUTHORITIES LOAN BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to amend the Local Public Works Loan Act, 1871. He said that section 3 of the Local Public Works Loan Act, 1871, prohibited the Trustees of the Port of Bombay and the Commissioners for making improvements in the Port of Calcutta from raising money on the security of their funds and the property vested in them, except in the manner provided by that Act; and, as the prohibition was imposed by an Act of the Governor General in Council, it was one from which the local legislature could not relieve those bodies. This had been found to lead to some inconvenience. The Municipalities of Calcutta, Madras and Bombay were exempted from the prohibition in question; and there appeared to be no reason why the Commissioners or Trustees of the Ports of Calcutta and Bombay, and any similar body which might hereafter be created at Madras, should not likewise be relieved from it. The main object of the present Bill was to provide such relief; but the opportunity had been taken to re-enact the Local Public Works Loan Act with a view to removing certain difficulties of construction which had presented themselves in the working of it and to making the Act express in clearer terms what was understood to have been the intention of its framers.

The Motion was put and agreed to.

The Hon'ble MR. STOKES introduced the Bill and read the clause exempting from its provisions the Commissioners of the Port of Calcutta, the Trustees of the Port of Bombay, and any similar body that might hereafter be created at Madras.

The Hon'ble MR. STOKES then applied to His Excellency the President to suspend the Rules for the Conduct of Business. The matter was one of much urgency, as the Bombay Government and legislature desired to confer borrowing powers at once on the Trustees of the Port of Bombay, and this could not be legally done unless and until the present Bill was passed.

His Excellency THE PRESIDENT declared the Rules suspended.

The Hon'ble MR. STOKES then moved that the Bill be passed.

The Motion was put and agreed to.

OUDH CIVIL COURTS BILL.

The Hon'ble MR. COCKERELL presented the Report of the Select Committee on the Bill to amend the law relating to Civil Courts in Oudh.

CIVIL PROCEDURE CODE AMENDMENT BILL.

The Hon'ble MR. STOKES presented the final Report of the Select Committee on the Bill to amend the Code of Civil Procedure.

The Council adjourned to Friday, the 18th July, 1879.

SIMLA;
The 17th July, 1879.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

NOTE.—The meeting which was originally fixed for Thursday, the 10th July, 1879, was adjourned to Thursday, the 17th July, 1879.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council assembled at Government House on Friday, the 18th July, 1879.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, C.S.I.
His Excellency the Commander-in-Chief, G.C.B.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B., C.I.E.
The Hon'ble Sir John Strachey, G.C.S.I.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B.
The Hon'ble Whitley Stokes, C.S.I.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble F. R. Cockerell.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.

DEKKHAN AGRICULTURISTS RELIEF BILL.

The adjourned debate on the Bill was resumed this day.

The Hon'ble MR. RIVERS THOMPSON said:—"My Lord, in the very few remarks which I wish to offer on the resumption of this important debate I have

no desire to question the propriety of the free and impartial criticisms which have passed upon many details of the Bill before the Council, but would prefer to confine myself to the general aspects of the measure; because I think, from the tendency of many of the observations which we heard yesterday, it would seem as if we were losing sight of the main principles which we wish to maintain, and of the causes which have led to the interference of the Government in a matter which, if special reasons did not exist, it would have been right to leave to the ordinary laws and procedure of our Civil Courts. For my own part, I take no exception to the severity of those criticisms; for I think when a case of such grave and far-reaching importance, and one which has occupied the attention of Government for many years, comes before the Legislature of the Supreme Government, it is necessary and desirable, and not incompatible with an earnest desire for an effective solution of long-standing and serious difficulties, that there should be the most unqualified freedom of debate. I think it right to express this opinion very decidedly, because, obviously, we are not dealing with a sudden emergency of the immediate past, nor with a question in which unanimity of opinion has always existed as to the relief to be afforded, but one the magnitude of which has claimed the close attention of successive administrators in the single Presidency affected by the Bill, and for the remedy of which innumerable proposals have been put forward by the most experienced officers upon whom it has devolved to consider the matter. In confirmation of this view, I would refer the Council to the single page at the beginning of the second volume of the Commission's Report, from which it will be seen that this complicated question of the Dekkhan raiyats' indebtedness and troubles has since 1843-44 been continuously before the Local Government; and in the *précis* of correspondence on the remedial measures from time to time under notice, we find the recommendations of the Bombay Government in 1844; suggestions by the Chief Justice in 1863; proposals by Captain Wingate in 1852; by Mr. Fraser Tytler in 1859; by the Hon'ble Mr. West's pamphlet in 1872, and by Mr. Pedder's report about the same year. Even of these it is said that the summary covers but a fractional part of the recommendations with which the Bombay records abound.

"With such facts before us, it is inconceivable, in the first place, that any single measure, and that referring chiefly to the procedure of the Courts, should provide the complete cure of evils of such great intensity and arising from such a vast variety and combination of causes; and, secondly, it is impossible that, constituted as this Council is and representing the different experiences of different parts of the Indian Empire, even that single measure, framed on exceptional lines for a special object and to be tentatively applied, should not elicit a diversity of opinion on many of its details. For myself, therefore, I may say that, while I listened with the greatest interest to the speeches of Hon'ble Members objecting to detached provisions of the Bill, and value their contributions so far as they demand a careful scrutiny of the impugned sections, I maintain still the necessity which is imposed upon us as the Government of the country to support the leading principles on which the Hon'ble Member in charge of the Bill would propose to legislate. At this stage—the second reading, if I may so call it, of the Bill—it would have been open to any Member, as I understand the rules, to attack the principles of the measure and to oppose its reference to a Select Committee. I am glad that no such course has been taken. It seems to me that, having regard to the time and labour which preceded its introduction—to the urgent request of the Local Government for such a law—and to the correspondence which has passed with the Secretary of State, it would have been unreasonable to have done so. And if in some of its features it still appears open to objection, I would remind the Council that the Bill has still to go to the Bombay Government for reconsideration, with a request that it may be submitted to the learned Judges of the High Court of that Presidency, and that, when their views upon the measure have been received (and I have no doubt their attention will be directed to all the points of difference which this discussion has brought out), it has afterwards to undergo a detailed revision by the Select Committee here. There is thus ample security that no hurried or imperfect project of law will issue from this Council.

"I take it that the general view in which we may regard the position of the question, so far as this Bill is concerned, is that, upon the evidence adduced by the Commission, which gives no uncertain sound in the matter, the districts of the Dekkhan, with an impoverished and ignorant population, are suffering from our having imported into them laws and institutions suited only to an advanced and educated community; and that, where the people are not educated and not prepared for an elaborate and technical procedure in the administration of the law, we are bound to introduce for their benefit some simpler form for the adjustment of their numerous disputes. I share in no way the sentiments expressed by the Hon'ble Member from Bombay as to the character and effect of the regular civil code procedure upon the country. Though I do not remember his exact words and am unable at this moment to refer to his speech, I think I am not incorrect in stating that he looks upon the 650 sections of the Civil Procedure Code as a burden too heavy to be borne by India, and as a curse from which it should be relieved. It requires no words from me to rebut such radical sentiments; but, if the Hon'ble Member considers that his present scheme of procedure in civil actions between creditors and debtors is a model for general imitation, or is capable of extension to all classes of the people and to all parts of the country, I am sure not only that he will be disappointed in his expectations, but that most people will rejoice at his disappointment. On the exceptional grounds that we are in the presence of a great calamity, I am prepared to support this Bill. That calamity in the Dekkhan is due in part to the caprices of climate and to the natural evils to which all Indian agriculture is exposed, and which no Government action could prevent or anticipate. But, so far as it is in our power to help, by the establishment of special courts, by an increase in the number of the Judges, and by the substitution of less complex rules and laws of procedure, in the settlement of difficulties for which, in an embittered social condition especially, our present law is unsuited or inadequate, I have accepted this measure as a tentative proposal for the relief of the emergency. In that character I am ready to support it as desirable for the present need; and in that character I am prepared to favour any reasonable amendments when they come before us for later consideration.

"At the same time, My Lord, I think we must all feel that, however necessary and urgent this present measure of legislative reform is, it is but a small instalment of the remedies which the disorder demands. We have to deal with a case of poverty, ignorance and indebtedness among the people prevalent in these districts for a long series of years, dating, I believe in some parts, to a period antecedent to our advent as rulers; and a heavy responsibility rests upon the Local Government to meet the claims of the case by liberal administrative arrangements. The country possibly needs the introduction of a system of canal irrigation, and it certainly will not suffer by the extension of its schools and the improvement of those which are already in existence. I hope the attention of His Excellency the Governor of Bombay will be attracted also to the remarks of my hon'ble friend the Lieutenant-Governor of the Panjáb as to inflexible terms under which the Government revenue is realized; and, though the difficulties of that problem are great in the presence of what I believe to be generally a light assessment, the attempt to solve that problem and the caution necessary at the revision of settlements in the matter of the enhancement of the land-revenue will receive, I am satisfied, the consideration which the great importance of the subject demands at the hands of the Bombay Government."

The Hon'ble SIR JOHN STRACHEY said:—"I hope I shall not detain the Council for any length of time to-day, but I do not like to remain altogether silent when a subject of such importance is under discussion. The subject, although, no doubt, it now comes before the Council in an extreme and aggravated shape, is one which has occupied the minds of Indian statesmen for a very long time past.

"I myself have repeatedly had to take part in discussions which have virtually been identical with those in which we are now engaged, and my hon'ble friend Mr. Hope did me the honour to quote opinions which I expressed some

twenty years ago. Consequently, whatever may be the value of my 'prophetic strain' in judging what the effect of this measure may be, I may at any rate claim the qualification of 'old experience.'

"I may say, in the first place, that I think the Government and the public are greatly indebted to Mr. Hope for the able and interesting account which he gave to us yesterday of the unfortunate condition of these districts of the Dekkhan and for the Bill which the Bombay Government has prepared in communication with him; and I think that we are the more indebted to Mr. Hope for the great care that he has given to this question: and this Bill is the more important because, unfortunately, a great deal that has been said is true, not only of the Dekkhan, but of many other parts of India also. I think my hon'ble friend Mr. Colvin could tell us very nearly as lamentable a story about the state of Jhánsi as Mr. Hope has told us regarding the Dekkhan; and I am afraid others could tell us equally lamentable stories about some other parts of India. These of course are, nevertheless, extreme and exceptional cases; for, taking India as a whole, it is, beyond a doubt, a happy and a prosperous country. Nevertheless, much that we have been told of the state of the Dekkhan is more or less true of the peasantry in some other provinces, and, therefore, although the problems now before us possess special local urgency, they have also a more general interest, and I think there can be no doubt that the success or failure of the experiment which we are now about to try may have results which will extend far beyond the limits of the Dekkhan.

"My Lord, I do not propose to criticise any of the details of this Bill, and there is a good deal in it which I, for my part, do not feel competent to criticise; for there is much in it which requires local knowledge, without the possession of which no useful opinion can, in my opinion, be given. While the Government of India is entirely responsible for the general principles on which this Bill is based, and while the Executive Government has been unanimous in accepting those principles, which have been most fully and most carefully considered, the Bill is in its details essentially a local Bill; and, in judging of these details, I think that local opinion must to a very great extent guide us. The discussion of yesterday shows, as my hon'ble friend Mr. Thompson has justly observed, that in regard to the details of the Bill there will be a very great diversity of opinion; but I agree with Mr. Thompson in the satisfaction he expressed that nothing that was said yesterday, so far as I can judge, touches really the main principles on which the Bill is based. The matters referred to yesterday are, after all, all, or nearly all, matters of detail, which, until they are fought out and decided in the ordinary way by a majority of this Council, we must be content to differ about.

"No one has denied the necessity for special legislation to meet the great evils which have been described. We desire to give to every man the means of cheap and speedy justice near his own home: and cheap and speedy justice means the simplest possible procedure of the Courts, and we desire that these Courts should be Courts of equity in the broadest sense, doing simple justice between man and man, and creditor and debtor alike. We desire also, further, that every effort should be made to bring about amicable agreements without imposing upon debtors and creditors the necessity of going into Court at all by the establishment in some form or other of Courts of Conciliation.

"Speaking of justice to creditors, I may say that I think that justice has hardly been done to Mr. Hope by some of the remarks which have been made in criticism of his speech of yesterday.

"I do not understand that Mr. Hope made any such general attack upon the creditors as has been attributed to him. I understood him to recognise in the clearest way that the money-lender is an essential element in the agricultural system of the Dekkhan and of India; and he quite admitted that protection and security for the creditors were as necessary as protection for the debtors.

"It would be a great misfortune and mistake if people were to suppose that the Government approved the idea of a crusade against the money-lenders. Money-lenders are obviously as necessary to the Indian agriculturist as the seed which he sows, or as the rain which falls from heaven to water his fields. Agriculture without them would probably be impossible; but, while I believe this of the money-lenders, and have no doubt it is quite true that vast numbers of them—I hope I may say the great majority of them—are honest and honourable men, it seems to me that it is impossible to ignore the vast amount of evidence which exists in proof that there are still very many of them who deserve a different character, and that this section of the money-lending class is so numerous that it has become absolutely necessary to give to the debtor some better protection against it than is now available. In regard to these questions between creditor and debtor, there have always been two great parties; and it is inevitable that the old discussions on this subject should again be entered into in regard to the Bill now before the Council. With reference to this question, I should like, with your Excellency's permission, to read to the Council a passage from the admirable speech made by Sir Arthur Hobhouse on the 28th March, 1877, on the Code of Civil Procedure. It appears to me entirely applicable to the present case, and I think that it serves excellently to illustrate the principles upon which we are now proposing to legislate. Sir Arthur Hobhouse said:—

'I will try to show what seem to me to be the broad differences of opinion between the opposing parties.

I may be wrong, and I hardly suppose that our opponents will accept my view of what is necessary to make their position a sound one; but it seems to me that they cannot support their objections without first making good two propositions. The first of these is that, when a man has made a contract with another man, he is entitled to call upon the supreme forces of society to step in and enforce his contract in every jot and tittle, and that without allowing to society any moderating influence over the contract, unless, perhaps, it can be shown to be grounded in fraud. The second proposition is that a contract by A to pay B a hundred rupees is a contract by A to strip himself of every shred of property that he possesses in order to make good that hundred rupees.

Now, both these propositions seem to be exaggerations of principles which, if stated with their due qualifications, most people will be ready to accept. Of the first proposition, I should say that is a most sound and important principle that people should be held to the substantial performance of their contracts. But I should add that, if the rigid and extreme performance of contracts is found to produce misery and disorder, then society, which is called in to enforce these contracts, should exercise some moderating influence over them, and that such a duty is the more imperative in proportion to the helplessness of the debtor class. Of the second proposition, I should say that a contract to pay a sum of money seems to me quite a different thing from a contract that the borrower shall strip himself of all the property that he has for the support of himself and his family in order to pay that money. It may be argued that, in order to enforce a contract to pay money, it is the duty of society to step in and strip the borrower naked. But I do not see how it is even arguable that, if such a process takes place, the creditor does not get something outside the terms of his contract. If he does, terms may be reasonably imposed upon him in return, such as are found necessary for the peace and welfare of society.

How far society should step in and insist upon some moderation as the price of its assistance is a question of detail which has to be solved in every age and in every country. But it seems to me that all laws intended for the protection of debtors on terms short of the payment of the whole debt—laws of bankruptcy, laws for the exemption of property from execution—are founded on the view I take of the duties and interests of society.'

"The principle thus laid down by Sir Arthur Hobhouse is, I think, the basis of our proposed legislation now. Those 'duties and interests of society' of which Sir Arthur Hobhouse spoke require most urgently that we should interfere in the districts of the Dekkhan between creditors and debtors. We shall hurt no honest, honourable and reasonable creditors; and, if this legislation and other measures of relief should be successful and happier times should come round, I for my part shall not think it a matter of regret if the dishonest and rapacious money-lender finds no means to recover his ill-gotten gains, and if, after all the claims of justice to all parties have been met, he is left to lament, like Sganarelle,—

'tout le monde est content; il n'y a que moi seul de malheureux. Mes gages, mes gages, mes gages!'

"There is only one other point to which I wish to refer. I entirely agree with my hon'ble friends the Lieutenant-Governor and Mr. Thompson with regard to the extreme importance of sparing no administrative efforts to improve the revenue system in such a way that the pressure of the Government

demand upon the land may be lightened. This problem has to be solved not only in Bombay but throughout nearly the whole of India.

"There can be no doubt that the demand of the Government is almost everywhere moderate. Mr. Hope has assured us that in the districts of the Dekkhan in particular there can be no doubt of its moderation.

"In other parts of India with which I myself am acquainted, I know that the same is true, and that our revenue demand is far lighter than that ever imposed by any Native ruler. Nevertheless, it is equally true that this demand upon the land falls not infrequently in bad seasons with extreme severity. It is not that the assessment is too heavy, but that the procedure under which it is levied is too rigid. I cannot doubt that means will be found—although they unfortunately have not been found up to the present time—to combine complete and proper security for the recovery of the Government demand upon the land with some greater leniency to the peasant-proprietors, who, from no fault of their own, but from misfortune of season, cannot meet their engagements to the State. Bombay has now for its Governor a great administrator: if he can initiate measures in the direction to which I have now been referring, he will do a greater service to the country than any which this Council can accomplish by this Bill."

The Hon'ble MR. HOPE said:—"I am glad to find that the main principles of the Bill, which have, as I was already aware, the approval of the Executive Government, are also, I think I may venture to say, accepted by this Council, and that my task is confined to replying upon what are, by comparison, matters of detail.

"In the first place, it was suggested by the Hon'ble the Law Member that chapter XX of the Civil Procedure Code, as amended in the Bill presented yesterday, would meet all the wants of our Dekkhan districts in respect of insolvency. But I must altogether demur to accepting it as sufficient or suitable for that purpose. The objections to the law, even when amended by the Bill, which I stated yesterday need not be repeated; but I may add to them that the provision for granting a discharge when an insolvent has paid one-third of the scheduled debts, which has been imported from the Presidency Insolvency Act, seems to me false in principle, and likely to work unreasonably in practice, sometimes giving the creditor less than might be recovered for him, and sometimes pressing harshly on the debtor. It has, moreover, been discarded from bankruptcy legislation in England. I admit that by the Bill in question an advance has been made; but an advance somewhat haphazard, tentative and restricted by the difficulty as to insufficiency of Courts, &c., which, as I said yesterday, has hitherto prevented this Council from going even so far as is now ventured on. Finally, one thing which that amended chapter does *not* do is, singularly enough, the very thing which has been represented in the official correspondence, and is indicated in the Secretary of State's despatch, as urgently required—namely, the allowing a debtor to apply for declaration of insolvency, though no process has issued against him.

"Another remark of the Hon'ble Law Member was that it would be sufficient, as to jurisdiction of the Courts, if small-cause-court powers were conferred on all of them. But it seems to me that the only course open to us consistent with common sense is that the Courts should have power to deal with all the sorts of cases in which raiyats are ordinarily involved. That such cases must very frequently compriso mortgages is clear from the fact ascertained by the Commission, as I said yesterday, that in the villages in Puna tested by them two-thirds of the indebted raiyats' land was mortgaged. To provide Courts professing to deal with raiyats' difficulties but unable to touch, perhaps, one-half of the cases in which raiyats are concerned would be a half-measure, from which no good results could be expected.

"The next question raised is that of appeals, for which the Hon'ble Law Member considers the revision provided for by the Bill an inadequate substitute. Here I may point out that the Bill goes farther in caution than even the suggestions of the Secretary of State. His Lordship says, in the quotation which I read yesterday: 'I am inclined to think that summary jurisdiction without appeal might be conferred experimentally on all Civil Judges in the Dekkhan with great benefit.' But the Bill provides the safeguard of a thorough supervision. It is a misapprehension to suppose, as I understood the Hon'ble Mr. Cockerell to do, that the supervising agency will be a special one. It will be merely a strengthening of the regular staff for the purpose of thoroughly carrying out section 9 of the Bombay Civil Courts Act (XIV of 1869), which runs thus:—

'The District Judge shall have general control over all the Civil Courts and their establishments within the district, and it shall be his duty to inspect, or to cause one of his assistants to inspect, the proceedings of all the Courts subordinate to him, and to give such directions,' &c.

"The officers appointed will be members of the regular judicial department subordinate to the High Court: they will work the law subject to its general control: the Local Government will have no special jurisdiction over them, and will be unable to make them, as the Hon'ble Member apprehends, a machine for carrying out the policy of the day.

"As to the merits of allowing appeals, compared with a system of revision, I would point out that by the former from three to four per cent. of the cases tried are brought before the Courts, while by the latter the proportion is probably not less than from fifty to sixty per cent. Moreover, the cases which come up in appeal are often not those which deserve to come. Many a man who has a good case cannot afford to appeal: many a man with money needlessly drags his opponent through all the appellate Courts. As an illustration of the persistency of monied litigants, I may mention that I have heard that Sir Barnes Peacock, with reference to the petty appeals, about Rs. 5 sometimes, by which the High Court was troubled, remarked that it would be more economical for Government to pay the amount of the appeals than to keep up Judges and establishments to hear them. Again, the Hon'ble Law Member has said, as an objection to revision, that the record called for will be inaccurate, incomplete and in the vernacular. As to inaccuracy and incompleteness, the objection, if good at all, applies just as much to appeals as to revision. As to the third point, I feel it my duty to repudiate, on behalf of the Bombay Civil Service, of which I have the honour to be a member, the suggestion that they are unable to deal with cases in the vernacular. Again, the Subordinate Judges will not be inexperienced, as the Hon'ble Member supposes. It is true that twelve new men will be appointed; but they will be added, as stated in the official letter from Bombay, to the list of Subordinate Judges for the whole Presidency: and I cannot doubt that the Executive Government will place men of experience, drawn from other districts, in charge of the newly-opened Courts.

"In favour of the retention of appeals, much stress has been laid on the mortgage-cases, which are said to be intricate, involving difficult questions of account. But this is a misapprehension. Mortgage-cases in which raiyats are concerned are not necessarily intricate, and do not involve more accounts than simple money-cases. This can easily be seen by reference to the actual cases of raiyats, of which a large number are given in full detail in the Appendices to the Commission's Report. If a raiyat owes money, there is an account of it—possibly long and intricate; but it is no more so when he happens to have pledged his land as security for the debt than when he has not. Mortgage-cases are usually only difficult if they happen to involve questions of priorities and the like, or there are several creditors."

The Hon'ble SIR ALEXANDER ARBUTHNOT enquired whether there might not be questions of title.

The Hon'ble MR. HOPE replied:—"Under the Bombay revenue system the name of the owner of every field is entered in the Government books. It would only be in most rare instances that the man whose name appeared was not the real owner; and so questions of title are not likely to give trouble.

"I may mention to the Council," the Hon'ble MR. HOPE continued, "that, as regards this question of appeals, contrasted with revision, I happen to have had a very considerable experience—if not actually in civil cases, still in criminal ones, which for this purpose come to the same thing. I was once for a long

time Magistrate and Collector of a district so large that appeals lay to me from the decisions of twenty-nine Subordinate Magistrates; and the cases they tried, which came up to me, and of which it was my duty regularly to examine a large proportion, sometimes reached five hundred in the month. My experience was that all the serious abuses and irregularities came to light in the examination and revision: scarcely anything ever came out in appeal. After all, however, the would-be appellant is deprived of nothing by the proposed substitution of inspection and revision; for he can draw attention to his case by petition, and practically get it dealt with just as he can now. If, as the Hon'ble Law Member says, appellate Courts are less harsh than the Courts of first instance, there is nothing to prevent the revising Judge from showing leniency too: if appellate Courts often confirm decisions on mere perusal of the record, his inspection may have the same effect.

"The Hon'ble Law Member has next expressed his fears that section 46, about agreements before Conciliators, and also the registration-provisions, may be defeated by collusion and fraud. As to agreements, of which he seems to think their having the force of a decree the objectionable feature, I would point out that the case is analogous to that of awards filed under section 525 of the Civil Procedure Code, which have the force of a decree too. The objections, if there be any, to the one must apply equally to the other. As to both the agreements and the registration, I would repeat my observation of yesterday, that the same objection as to being open to fraud may be made to many other good laws. The Registration Act may, as the Hon'ble Sayyad Ahmad has said, be easily defeated by one party to a deed returning to the other at home the consideration which they have paid and received before the registrar. The Stamp-laws are constantly evaded by the re-use of spoiled stamps, &c., and the Coinage-laws do not prevent the circulation of false money. Yet we do not think it necessary on this account to abolish registration, stamps and our coinage. The Bill will help those who help themselves: if any persons prefer collusive evasion of it, they will suffer accordingly, and rightly so.

"I will now notice the objections of the Hon'ble Law Member and Mr. Cockerell to certain details of the Insolvency chapter. First, as to the power given to the Court to admit as an insolvent a person found to be so, and to give him a discharge, both Hon'ble Members seem to me to be, if I may say so in all courtesy, still under that confusion of ideas between the fact of insolvency and the conduct of the insolvent which I referred to in my speech of yesterday. If a man is really insolvent, it is perfectly futile to call him anything else. If a man cannot pay more than one anna—to take the Hon'ble Law Member's illustration,—the Court may *now*, under section 358 of the Code, let him off the whole balance, so that the Bill makes no change of principle whatever. Secondly, it is complained that section 20 is retrospective. But so is the present law; and so will be the new Civil Procedure Bill, which I hope we shall pass at our next sitting. If a man, the day after that Bill is passed, applies and is declared an insolvent, all the old decrees against him may be wiped out when he has paid only one-third of their amount, and after twelve years, whether he has paid even that much or not. Thirdly, as to imprisonment and the Hon'ble Mr. Cockerell's objections to the reduction, by section 35 of the Bill, of the power of Subordinate Judges under section 359 of the Code to imprison debtors up to one year for fraud, I have as great a hatred of 'proved rascality' as any one else. But I consider the power given by the Code a most arbitrary and oppressive one. So far from the rascality being really 'proved,' the Judge is practically allowed simply to say, at the end of the proceedings—'I think the insolvent's conduct very disreputable: he is no doubt a rascal'; and thereupon, without any specific charge, or hearing him in his defence, or even recording a judgment, to send him off to jail for a twelve month. In the Bill this power is, in the case of Subordinate Judges, reduced nearer to what officers of their rank and emoluments would exercise if they were Magistrates. It is essential to note, however, that the Court has always the alternative, under section 359, of sending the insolvent to a Magistrate. Before him, and not in any Civil Court, all serious rascality ought to be dealt with; and I hope it will be.

"To section 30, exception has been taken by the Hon'ble Sayyad Ahmad, Mr. Cockerell and the Law Member. The latter, after expressing his objections, concluded with some warmth by affirming his belief that I was the 'sole author' of the section, and giving as his reason for this belief that he 'did not remember anything about it in the Bombay letter.' If he attributes to me everything which is not mentioned in that letter, I presume that, by parity of reasoning, he acquits me of responsibility for everything he does not like which is, and I feel grateful for the relief accordingly. I must, however, protest against any such attempt to individualise the authorship of any particular parts of the Bill. The Hon'ble Member is well aware that the measure now before us is no private Bill; that it emanated from the Bombay Government; that, after modifications thought suitable, it is presented to this Council by the order, sanction and authority of the Government of India, and that I am officially charged with the duty of doing justice to it, irrespective of my personal convictions. I think the Hon'ble Member would have shown more generosity if he had abstained from the remark he has made, and if he had evinced some sympathy for, and desire to render less onerous, the difficult and delicate task I have to perform, instead of endeavouring to fix on me personally the odium of what he seems to consider one of the most obnoxious features of the Bill.

"Turning from this personal question—on which I entered with reluctance, and only from a sense of what was due to myself and to the Government—to the subject-matter of section 30, I find that making over moveable property at a valuation to a creditor is considered unfair; and the Hon'ble Mr. Cockerell has enforced his objections by an illustration about a pig. Now it so happens that this provision is a very old and well-established one in English law, in execution of writs of *elegit*, which is thus described in a well-known text-book:—

'The sheriff is bound upon receipt of the *elegit* to empannel a jury, who are to enquire of all the goods and chattels of the debtor and appraise the same, and also to enquire as to his lands and tenements and their value. After inquisition had, the sheriff delivers to the execution-creditor all the goods and chattels of the debtor (except his oxen and beasts of the plough) at the value set upon them by the jury: if they be insufficient, he delivers also execution of the lands, and he then returns the writ,' &c.

"Between this English law and our Bill, however, there is this essential difference, that, whereas by the latter it is optional with the Court to use the power regarding any particular articles of property, or not at all, by the latter the action of the sheriff is unavoidable and compulsory. Whenever the Hon'ble Law Member returns, as in due time I hope he will, in health and honour to his native land, he will be liable, in the event of his having to resort to legal proceedings to recover money due to him, to have forced on him, at a valuation fixed by a jury, his debtor's goods and chattels—pig and all!

"With regard to the Hon'ble Sir Alexander Arbuthnot's remarks, I am glad to thank him for the kindly expressions of appreciation which fell from him, and to add my satisfaction that he found in my speech nothing to comment on more serious than what seemed to him the one-sidedness of my description of the money-lender. But I have every confidence that, when he is able to study my remarks in print at leisure, he will agree that I have done the money-lender full justice. It is no doubt difficult to catch the general scope, or even the exact words, of a long and rapidly-spoken address. Thus, the phrase 'usurious money-lender' which he ascribes to me I believe I did not employ. As to extravagant profits, I have nowhere attributed them to money-lenders. On the contrary, the very passage which he has read from paragraph 85 of the Commission's Report was the germ of my remark, that in the land money-lenders acquired 'what yields them at best a precarious profit, not exceeding that which reasonable rates of interest, combined with easy recovery, would produce, but wrung forth with trouble, anxiety, expense, popular execration, and even personal danger.' Nor did I say that in India fraud by the creditor was 'the only thing' to be guarded against. I said it had 'almost solely' to be so. Speaking, as I did, in broad terms and of the Mufassal, what I said seems correct; and it is borne out by a recent remark of the Hon'ble Sir Charles Turner's, that even in the town of Madras the bulk of insolvents were not traders, but part of the general population. So far from keeping frauds by debtors

in the background, however, I enumerated them specially, and explained the provisions of chapters VIII and IX for counteracting them. Finally, nothing could be more complete than the terms in which I have acknowledged the usefulness and necessity of the saukár, and the propriety of giving him all fair help. In this respect the Hon'ble Sir John Strachey has done me no less than justice; and I have, as I said, every confidence that the Hon'ble Sir Alexander Arbuthnot will eventually do the same. These remarks will, perhaps, be a sufficient reply to what the Hon'ble Mr. Rivers Thompson said on the same subject.

"In conclusion, I have only a few words to add on what fell from His Honour the Lieutenant-Governor of the Panjáb. I fully recognize, as he does, the gravity of the subject, and the possibility of this Bill being followed by similar legislation, or demands for it, in respect of other parts of India. But the circumstances of the different provinces of India are so diverse that I hold, and have held in other cases before this Council, that they need separate treatment. This Bill will, therefore, furnish to them, at most, an analogy and not a precedent. It is expressly a local Bill, and has been so deliberately made so, that a power of extension to other parts of the Bombay Presidency, which was in the draft, has been cut out. The subject of the other remedies of executive application has, as the Hon'ble Sir Alexander Arbuthnot has shown, been brought to the notice of the Executive Government. What I would therefore earnestly deprecate is, first, any hampering of the progress of the Bill by consideration of other parts of India; secondly, any delay of it while executive remedies, which are a separate affair, are being matured; and lastly, any serious mutilation of it by the Select Committee or the Council. It should be remembered that the Bill is essentially local in character, and the outcome of careful consideration by those who are best acquainted with local circumstances, and the best judges of popular feeling and the probable result of what they recommend. The Bill has only come to this Council by accident, so to speak, through the local legislature not having power to pass such parts of it as affect the Civil Procedure Code. It should therefore be taken as a whole. Its main principles are already accepted by the Executive Government and, I think I may add, by this Council. If it be altered, cut down and emasculated in detail, it will end in *fiasco*, for which there will be no satisfaction to the Local Government in the reflection that it is not responsible."

His Excellency THE PRESIDENT said:—"I do not think it consistent with the importance I personally attach, and which, I may add, the Government collectively attaches, to the subject of the motion now before us that my own vote upon this motion should be an altogether silent one. But the Bill introduced yesterday by the Hon'ble Mr. Hope has already been the subject of such prolonged and exhaustive comment, and also of such copious explanation by the Hon'ble Member himself, that I think I can promise that my own remarks upon it will not be very lengthy. I am the better able to make this promise because, in the observations made at the commencement of the discussion this morning by my hon'ble colleague Mr. Rivers Thompson, and at the close of the discussion yesterday by my hon'ble colleague Sir Alexander Arbuthnot, those Hon'ble Members largely anticipated what I should otherwise have wished to say myself on behalf of the Government as regards the various points to which they alluded. I think, however, that I gathered from the remarks of my hon'ble colleague Sir Alexander Arbuthnot that some words which had previously fallen from my hon'ble colleague Mr. Stokes had conveyed to his mind (and possibly, therefore, they may have conveyed it to the minds of other Hon'ble Members) an impression that the Member of this Government who is specially concerned in the conduct of its Legislative business had characterised the vote he was about to give as a vote given in more or less reluctant compliance with instructions from the Secretary of State to the support of a measure which he generally deprecated. Now, I am bound to say that this was not the impression conveyed to my own mind by the remarks of my hon'ble colleague on the left (Mr. Stokes). I was listening, as I always do listen, with great attention and interest to his remarks; and the impression they conveyed to my mind was essentially different from that

which appeared reflected in the remarks of my hon'ble colleague on the right (Sir Alexander Arbuthnot). Had it been otherwise, I should not have failed to interrupt my hon'ble friend Mr. Stokes in order to afford him that opportunity of which he is now deprived by our rules of clearing his language from a construction entirely inconsistent with his position as a Member of this Government. But, whilst I am persuaded that the remarks of my hon'ble colleague were not quite accurately caught on this side of the table, I am grateful to my hon'ble friend Sir Alexander Arbuthnot for having promptly repudiated on behalf of the Government a position which I feel sure no Member of it would be less willing to accept than my hon'ble friend Mr. Stokes. What I understood that Hon'ble Member to say, and what I believe he really did say (he will correct me if I misrepresent him), was simply this. He said that, whilst approving the purpose, and supporting the essential principles, of this measure, he found in it, as at present drafted, certain provisions which he could not reconcile himself to acquiesce in—*firstly*, because he regarded those provisions as unconstitutional; and *secondly*, because he did not regard them as in any wise essential to the recognized purpose of the Bill. And then, in support of the view thus expressed by him, he went on to point out that those provisions had not been suggested, or even considered, by the Secretary of State, in concert with whom the essential principles of the Bill had been laid down by the Government of India. Well, whatever view be taken of those particular provisions,—and on such a subject the opinion of my hon'ble friend carries a weight of a legal authority which is entitled to the greatest respect—I must venture to say that the statement thus made by him appears to me perfectly consistent with the position and sentiments of the Government of India in reference to this measure, to which we, one and all of us, attach the greatest importance, and which we, one and all of us, are most earnestly desirous to carry into law without any avoidable delay. But it is precisely for this very reason—that is to say, because the measure now before us is a measure in which the Government is earnestly interested; a measure in which our responsibility is largely concerned, and because, moreover, it is necessarily, and properly, of a more or less experimental and tentative character—that it seems to me undesirable, even if it were practically possible, that on the part of its warmest well-wishers there should be at the present stage of it complete unanimity of opinion upon every one of its seventy-seven clauses. For my own part, I am persuaded that nothing but great advantage can accrue from the fullest consideration of all points in connection with any portion of this Bill upon which differences of opinion have been entertained or expressed; and I sincerely trust they will receive such consideration from the local and legal authorities, as well as from the Select Committee to which the Bill is about to be referred. The Government of India has not committed, in an equal degree, to every single detail of every single clause of this elaborate measure the maintenance of those important principles which we regard as absolutely essential to its efficiency. But on those principles the mind of the Government is unanimous, and we are fully resolved to maintain and enforce them.

"I should like for a moment to refer to the genesis—if I may so call it—of this measure. As pointed out just now by my hon'ble colleague Sir John Strachey, the distressed condition of the peasantry in many parts of the Dekkhan is a matter which has been long—perhaps too long—under the anxious consideration of the Government of India. It has been the subject of profuse correspondence and protracted inquiry; and from all that correspondence and inquiry we were at length led to one very clear, definite and settled conclusion. That conclusion was that the case we have to deal with here is a special case, absolutely requiring special legislation. In that conclusion we have had the concurrence, support and approval of the Secretary of State; and, having come to that conclusion, and at the same time most fully recognising all the risks inseparable from special legislation of this kind, we deemed that our best security for the preparation of a thoroughly practical measure would be to obtain as speedily as possible the fullest available special knowledge and local experience on the subject of it. Well, it was with this object, and in this

belief, that the Hon'ble Mr. Hope, who had given to this question long and special study, was deputed by the Government of India to proceed to Bombay, and there, in concert with the Bombay Government, and in personal conference with the Governor, whom my hon'ble colleague has justly called a most able and experienced administrator, to frame the measure which, at our request, he yesterday laid before this Council. Of course the measure thus framed naturally contains various clauses which have not been devised by the Government of India, and on which I do not think the Government of India is at present in a position to express any decisive opinion. Our position in regard to all these clauses is a very obvious one. We deem it due to the Local Government, which is so especially and directly interested in the effects of this measure, and due also to its experienced coadjutor in preparing the measure, that no clause devised by them, whatever opinion may at present be entertained in regard to it, shall be altered or withdrawn, disturbed or modified, without the amplest and most searching examination during those preparatory stages through which the Bill has still to pass. But the Bill, as it now stands in its present form, satisfactorily embodies certain great principles on which the opinion of the Government is unanimous—principles which we believe to be essential to the efficiency of the measure. Those principles it is our intention to uphold intact; and on those principles the Government of India is not prepared to entertain any compromise at any stage of the Bill. The principles I refer to have been practically indicated in the course of our discussions, and they may, I think, be briefly enumerated under seven main heads. There is, in the *first* place, that power which was referred to yesterday—the power to go behind the bond; *secondly*, the necessity for simplifying the procedure; *thirdly*, the augmentation of the number of tribunals; *fourthly*, village registration, to which we attach great importance; *fifthly*, the establishment of Courts of Conciliation; *sixthly*, the extension of the period of limitation, and *seventhly*, the abolition of imprisonment for debt.

"All these principles are principles on which the Government of India has, after lengthened deliberation, come to a definite and final conclusion; and I certainly think that the Hon'ble Member who introduced this Bill was fully entitled to observe, as he did, that the general suitableness of the Bill is amply guaranteed by the lengthened deliberation with which it has been brought on to maturity. For my own part, I am of opinion that this measure has not come before us a day too soon; and I entirely agree with the Hon'ble Mr. Hope in thinking that, for the reasons stated by him, the passage of this measure into law at the earliest possible moment is a matter of supreme importance.

"The Hon'ble Member reminded us that it now rests with this Council to redeem the pledges given four years ago for the redress of grievances which have been thoroughly investigated and amply proved—grievances which are, indeed, too notorious to be disputed. But I think he might have gone even further, and taken deserved credit to himself for the fact that the measure now before the Council really represents the first serious effort to deal practically and directly with the deplorable state of things urged on the attention of the Legislature no less than twenty years ago by the Local Government. In 1858, Lord Elphinstone, who was then Governor of Bombay, passed in Council a Resolution which is very brief, and which, with the permission of the Council, I should like to read. It is as follows:—

'His Lordship in Council entertains no doubt of the fact that the labouring classes of the Native community suffer enormous injustice from the want of protection by law from the extortionate practices of money-lenders. He believes that our Civil Courts have become hateful to the masses of our Indian subjects from being made the instruments of the almost incredible rapacity of usurious capitalists. Nothing can be more calculated to give rise to wide-spread discontent and disaffection to the British Government than the practical working of the present law. The attention of the Legislative Council on the subject should be requested, and copy of the Revenue Commissioner's letter forwarded for their consideration.'

"I think there can be no doubt that the state of things that Resolution describes has since then gone on growing from bad to worse; and, so far as I

am aware, up to the present moment there has really been no practical effort made to deal directly with it. The Code of Civil Procedure has been completed; the Usury Law has been revoked; but these measures have not been taken with special reference to the condition of the rural population in the Dekkhan: and I do not think it can be asserted by anybody that the condition of the peasantry of that part of India has been appreciably affected by those measures. For my own part, I must say that I regret that the effort now being made has been so long deferred. I regret the circumstances in which this measure has been introduced. I do so because I cannot but fear that in those circumstances there is much that may not impossibly expose the motives of the Government in the eyes of ill-disposed or superficial observers to misconstruction. That part of India for which we are now legislating has again been afflicted with social disturbances. I think it not improbable that many persons will be disposed to attribute the source of those disturbances to the still unremedied condition of the indebted raiyat. As a matter of fact, that supposition would be erroneous. There is no evidence in support of it; and there is much evidence to the contrary which points to a very different cause of these troubles. I have lately received several communications from the Government of Bombay on the recent disturbances and dákáities in the Dekkhan; and this is what His Excellency writes:—

'There is no sign of agrarian connexion in this case—that is, the land-holding community had nothing to do with it. This disposes of the idea that indebtedness of raiyats is at the bottom of the matter.'

"I have no doubt that Sir Richard Temple, who is in the best position to do so, has arrived at a sound conclusion on that point. But I would ask the Council—is it not obvious that—if in any part of India the actual cultivators of the soil see not only the proceeds of their labour, but actually their personal freedom, passing from them into the hands of a class whom, rightly or wrongly, they regard as the authors of their ruin, and under the operation of laws which, rightly or wrongly, they regard as the engines of it—the bitterness of sentiment, the sense of hopelessness and irremediable wrong, engendered by such a state of things must be a chronic incentive, if not to social disturbances of this kind, at least to personal crime? Allusion has been frequently made in the course of this discussion to the report of the Dekkhan Riots Commission; and that report abounds in evidence that this is actually the case. I select a single instance furnished by the First Assistant Collector of Ahmadnagar. He writes:—

'Another sad case occurred at Visapur, taluka Tasgaon. One Appa Rowji owed money on a bond to Hirachund Guzur. Hirachund threatened to sell him up, but promised not to do so if Appa Rowji would get one Appa Malli to go bail for him. Appa Malli was accordingly induced to befriend Appa Rowji, and passed a bond for Rs. 200 to the Guzur, giving as security for payment his house and land. The agreement was that Appa Rowji should at the same time give to Appa Malli a bond of Rs. 400, with his land as security. Other money was owing by Appa Rowji to Appa Malli, which made the whole amount up to Rs. 400. This bond, however, was never forthcoming. Time after time Appa Malli was put off. Meanwhile, the Guzur lost no time in enforcing the bond for Rs. 200 which Appa Malli had so weakly executed. His house and lands were seized after all due proceedings in the Civil Court; and, to add insult to injury, the latter were given to Appa Rowji to cultivate. Accordingly, Appa Malli, despairing of obtaining redress by the ordinary course of law against his more crafty opponent, waylaid Hirachund Guzur and murdered him in open daylight, and in the presence of several witnesses. He confessed everything, and courted the fullest inquiry into his money transactions. Appa Malli has been hanged as a matter of course. Such executions, however, would appear to have little effect in deterring others placed in similar circumstances from committing similar crimes. Nor, on the other hand, do the Guzurs appear to grow a whit less grasping through fear of meeting a violent death at the hands of maddened debtors. The motive in all these cases is the same; and in all these appears an utter recklessness which is deplorable in the extreme. Careless and untutored, the ryots learn by bitter experience that they have little chance of obtaining redress in the Civil Courts against the more cunning sowcars. Brooding over their wrongs, real or fancied, makes them desperate; and in an evil hour, without fear for the present or hope for the future, they turn upon their oppressors. It is certainly the case that in our Courts, as at present constituted, the poor and ignorant have no chance against the wealthy and clever.'

"I do not wish to multiply illustrations of this kind, which might be very easily done; nor do I desire to dwell on this particular one. Nothing could

be further from my own wishes, or more contrary to my own views, than to lend countenance to a popular cry, which in so far as it is general I believe to be unjust, against that much-abused, but most important and useful, class of middle-men on whose co-operation the agricultural industry of this country is entirely dependent. I should be very sorry if anything said in the course of this discussion appeared to give on the part of the Government countenance to such a cry. I do not, of course, suppose for a moment that the saukár and the baniyá are, as a class, invariably animated by the highest moral sentiments; but I do not believe that, in the exercise of their calling, they show a greater indifference to honesty than any other class exposed to similar temptations and difficulties. My hon'ble colleague truly pointed out yesterday that there is ample evidence in the report of this commission that the source of their profits are extremely precarious as well as unpopular. Nor is there any evidence that those profits, as a rule, are unfair. The creditor is, no less than the debtor, entitled to the protection of the law in the maintenance of his honest interests; and any legislation unduly directed against the small capitalist to the unfair advantage of the debtor might very possibly paralyse the whole agricultural industry of this country by shaking to its foundation the system of credit upon which its operations are conducted. But, in saying this, I think it obvious that what is good for the honest debtor is also good for the honest creditor. It cannot be to the interests of the saukár that the raiyat, who is his partner in the operations of agricultural industry, should be systematically pauperised and embittered against him. It cannot be for the interest of the community itself that the relations between these two classes should be such as to provoke feelings of animosity, often breaking out into crime, upon either one side or the other; and I think it cannot be doubted that, in that part of the Dekkhan for which we are now legislating, the relations between the saukár and the raiyat have been brought by a variety of causes into a condition which no legislator could have ever contemplated, and which must withdraw popular confidence and esteem from any law which artificially tends to perpetuate it. The Hon'ble Member who introduced this Bill referred to Mr. Pedder; and I think no one will dispute that of this state of things there is no more competent observer than Mr. Pedder. Mr. Pedder sketched, not long ago, in the pages of a London periodical a very graphic picture of this state of things drawn from the life; and, so far as I am aware, I do not think the truth of that picture has ever been challenged. But I can say that, in the truth of such a picture, I find the amplest justification for the special and exceptional legislation embodied in this Bill. This is how Mr. Pedder describes the career of a Dekkhan raiyat who has once fallen into debt:—

'The indebted peasant executes a bond, bearing high interest and burdened with onerous conditions. For a couple of years he is not pressed; but when the period of limitation is drawing near, he is told that his payments cover only what he has had in necessaries, and that the sum borrowed, with interest, is still due. He pays something and executes a fresh bond on still more onerous terms for the balance, with a premium for renewal. Then he pays all he can; yet, at the end of the next period of limitation, finds that the debt has increased. Perhaps the process of execution of fresh bonds is repeated again and again; but at last the saukár deems it desirable to bring a suit. In nine cases out of ten it is decided *ex parte*, because the people say it is useless to appear in Court unless they can deny execution of the bond sued for, or without the aid of a pleader, whom they have not the means to pay. The creditor then partially executes the decree by sale of the cattle, household utensils and other personal property of the debtor, and holds over him the threat of imprisonment in satisfaction of the balance. Even female honour is sometimes the price of forbearance. * * * * * Thenceforward, lending the peasant on exorbitant terms the seed and cattle absolutely necessary for cultivation, he takes all the produce of the land, except the barest subsistence of the nominal owner and his family. * * * * But sometimes the creditor sells the land of the debtor in execution, and usually buys it in at a price very far below its value, leaving the balance of the decree unsatisfied, since no peasant dares to bid against a powerful saukár, and it would be thought unbusiness-like in another saukár to do so. Then the best that can happen to the unfortunate yeoman is to remain as a tenant-at-will at an exorbitant rack-rent on the land he once owned. * * * * * If the creditor does not allow this, the peasant flies the country, and tries to begin life again in some distant locality. * * * * * Even there, unless he takes refuge in foreign territory, the arm of the law reaches the judgment-debtor as soon as he has got together a little property. * * * * As soon as the colonists, who are assisted with advances by Government, have acquired any property, it is seized in execution of decrees for old debts. * * * * There is, however, a depth lower than penury or exile. Sometimes the wretched debtor executes an agreement which almost avowedly makes him the bond-slave of his creditor.'

"Well, then, that is the state of things for the remedy of which this Bill has been introduced. My hon'ble friend the Lieutenant-Governor pointed out to us yesterday what I am afraid is only too true, that this state of things exists, not indeed in the same degree of intensity, yet more or less potentially as it were, throughout the greater part of India, where a comparatively slight aggravation of existing circumstances might not impossibly produce results scarcely less distressing than those which it is our present object to mitigate in some parts of the Dekkhan. In view of this fact, His Honour observed that the condition of the Indian peasant could only be partially improved by the measure we are now taking for his protection from the exorbitance of claims upon the part of the money-lender, unless we simultaneously relieve him from the unvarying pressure of claims on the part of the State itself, by relaxing the rigidity of our land-revenue system. Well, I do not feel in a position to enter into that question, which is a very large and very important one. I may say at once that the Government is certainly not indifferent to any of the considerations which suggested the remarks of my hon'ble friend. It was mentioned yesterday by my hon'ble colleague Sir Alexander Arbuthnot that this question has been urged by us on the attention of the Government of Bombay in special reference to those districts of the Dekkhan for which we are now legislating, and that it has engaged our own attention in reference to other parts of India. I may add that this question, in all its aspects and bearings, was some time ago commended by the Government of India to the special attention of the Famine Commission, from whose report I anticipate much practical aid in the further consideration of it. The indifference of the Government to this aspect of the question must not, therefore, be assumed from the absence of all allusion to it in the terms of the present measure. I am personally disposed to believe that the rigidity of our present land system might, in various directions, be relaxed with great benefit to the cultivator, unaccompanied by any serious inconvenience to the State. But, were I now to indicate my own views on this important question, I feel that any expression of them would be necessarily crude and premature, inviting discussion on a subject which is not at present under the consideration of this Council. All that I am concerned to point out is that alterations in the *modus operandi* of our land-revenue system, whether as regards the collection or assessment of revenue, can be effected without legislation; and that, therefore, the provisions of the Bill now before us are properly confined to those remedial measures which absolutely require not only legislation, but legislation of a special and somewhat novel character. The Bill in this respect embodies certain definite conclusions at which the Government has arrived, and represents our settled determination to carry those conclusions into effect. It is essentially a local Bill and a Bill of a tentative character. If the measure works well, it may be cautiously extended. If it works badly, it can be promptly modified; and, as regards those minor features of it on which differences of opinion still exist and will doubtless continue to exist, I do not think they can be satisfactorily removed or reconciled by any other authority less conclusive than that of experience. It is for this reason that I sincerely hope the measure now before us may be passed into law before the close of the present year."

The Motion was put and agreed to.

The Hon'ble MR. HOPE moved that the Bill be published in the *Bombay Government Gazette*, in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 24th July, 1879.

SIMLA;
The 18th July, 1879.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

DEKKHAN AGRICULTURISTS RELIEF BILL.

No. 780, dated Simla, the 26th July, 1879.

From—D. FITZPATRICK, Esq., Secy. to the Govt. of India, Legislative Dept.,

To—The Chief Secretary to the Government of Bombay.

I am directed to forward herewith thirty copies of the Bill for the relief of indebted agriculturists in certain parts of the Dekkhan (with its statement of objects and reasons), introduced into the Legislative Council of His Excellency the Governor General by the Hon'ble Mr. Hope, together with the papers noted in the margin, and to request that the opinions of the Government of Bombay, the Hon'ble the Judges of the High Court, and such of the local officers, not exceeding six in number, as the Government of Bombay think fit to consult thereon, may be forwarded to me, for submission to the Select Committee to which the Bill has been referred, before the 15th of September.

1. From the Hon'ble T. C. Hope, C.S.I., dated 26th April, 1879, and enclosures.
2. Explanatory note by ditto, dated 8th May, 1879.
3. Further note by ditto, dated 29th May, 1879.
4. Statement by ditto regarding the trial of civil suits in the disturbed districts of the Bombay Presidency.
5. Ditto showing the business of the Civil Appellate Courts in the disturbed districts of the Bombay Presidency.
6. Ditto of the Puna Arbitration Court 1876-79.
7. Abstracts of Proceedings of the Council of the Governor General, dated the 17th and 18th July, 1879.

2. I am also to request that the Bill and statement of objects and reasons may be published in the *Bombay Government Gazette* in English and in such other languages as His Excellency in Council may deem proper, and that the dates of such publication may be communicated in your reply.

3. It will be seen from the report of the debate in Council on the 17th and 18th instant that, while the principles of the Bill are accepted, there has been some difference of opinion on certain points of detail. The authorities consulted will doubtless give these points their best consideration; but to some of them, as well as to one or two additional points which have not formed the subject of discussion in the Legislative Council, I am to invite special attention.

4. In the first place, there is the question as to the extent to which the present right of appeal should be curtailed. This question has been left by paragraphs 31 to 34 of the Secretary of State's despatch of the 26th of December last completely in the discretion of the Supreme Government and the Government of Bombay, and there has been some difference of opinion on it here.

The Bill as it now stands has, in accordance with the views of the Government of Bombay, been so drawn as to exclude appeals in all those classes of cases to which it applies; and the machinery provided for conducting the system of revision which is to take the place of appeal has been strengthened by the addition of a special Judge, who is to devote himself exclusively to superintending and controlling the working of the Act.

5. The Governor General in Council is of opinion that, looking to the arduous nature of the duties which the Act imposes on the Subordinate Judges and the large discretion it confers on them, the appointment of a special officer of this sort, who would ordinarily be chosen from the more experienced District Judges, is essential to the proper working of the system proposed, but the Governor in Council will observe that it has been questioned here whether any system of revision, even if worked under the control of the ablest Judge that could be chosen, would in the case of all the suits dealt with by the Bill be an adequate substitute for the present system of appeals. It has been argued that, at all events in mortgage suits, the right of appeal should be maintained, and the Government of India have determined to treat the question, in so far as lies in them, as an open one pending the receipt of your reply to this letter.

6. The provisions of the Bill to which I am next to invite attention are those contained in section 13, regulating the mode in which the account is to be taken in cases where it is found necessary to set aside an inequitable agreement into which an agriculturist has been inveigled. The corresponding provisions contained in the Bill submitted with your No. 2056, dated 18th April last, were found on examination to be on more points than one susceptible of various constructions. An attempt has been made in section 13 of the present Bill to express what it is believed was intended, and it is for the Government of Bombay to say whether that attempt has been successful, or, if not, what modifications in the wording of the section are required.

7. In connection with section 13 of the Bill I am to invite attention to sections 16 and 24, which go to relieve an heir from a portion of his ancestor's debt, though he may have inherited from that ancestor property sufficient to pay such debt. Similar provisions were contained in the Bill submitted with your predecessor's No. 308, dated 19th January, 1878, and as the subject was one which the Bombay Legislature was competent to deal with, the letter from the Revenue, Agriculture and Commerce Department, No. 404, dated 1st July, 1878, left it to be dealt with by that Legislature; but I am to say that, now that the question has come to be dealt with here and has been considered further and in more detail, the Governor General in Council is unable to see any ground on which such provisions can be supported.

The Governor General in Council cannot understand why, when the ancestor's debt has under the ample powers contained in sections 12 to 15 of the Bill been fully inquired into and reduced to its just limits, the heir should not be bound to pay it to the extent of the property he has inherited. The obligation binding him to do so is, as observed by the Hon'ble Sayyad Ahmad in his speech, a matter of natural equity common to the English, Hindú and Muhammadan legal systems. Moreover, it is an obligation with the force of which the people of this country are perhaps more strongly impressed than those of any other country, and the sense of which, as observed in your predecessor's letter of the 6th April, 1877, is "one of the best traits in their character."

8. For these reasons, the Governor General in Council would be disposed to omit altogether the sections of the Bill referred to, and he is the more disposed to do so as he gathers from your predecessor's letter just cited that the Dekkhan Riots Commission and the Government of Bombay in the year 1877 were opposed to any attempt to afford relief in this way.

The sections have been allowed to stand pending your reply to this letter; but I am to beg that, if the Governor in Council proposes to advocate their retention, you will submit for the consideration of the Select Committee a redraft of them providing in more detail for the various cases that may present themselves—cases, *e.g.*, where the debt is secured by a mortgage, cases in which the ancestor's account has been for some time dealt with as incorporated in the heirs, cases where the heir has given a fresh bond, and so on.

9. In the chapter relating to village munsifs it will be seen that the main lines of the Madras system have been to some extent restored. It appears to the Governor General in Council that it is of the essence of that system that the qualification for the office of munsif should be based, not on literary attainments, but on social status and local influence; that accordingly the appointments should, as in Madras, be restricted to village headmen; and that, as these must in many instances be illiterate persons whose judgments could not be expected to stand the tests applied by our Courts of revision, their decrees must, as in Madras, be made final, except when they are impugned on the ground of corruption or partiality.

If, unhappily, it should appear that the number of village headmen in the Dekkhan districts who can be trusted to decide petty suits without any regular check in the way of appeal or revision is inconsiderable, the proper conclusion seems to be that the village munsif system is scarcely suited to those districts, and it may be a question whether the provisions relating to it should not be altogether omitted from the Bill.

10. In connection with Chapter VIII, relating to registration, it has been suggested that the persons available in the Dekkhan for the post of village registrar are not always to be trusted. I am directed to mention this, but the point, I am to add, is one upon which the Government of Bombay are most competent to form an opinion.

11. The portions of the Bill relating to the procedure in civil suits and to insolvency were, in the draft submitted with your No. 2056, dated 18th April, 1879, so drawn as in the opinion of the Governor General in Council to lead to an impression that the deviation from the ordinary law involved in them was more extensive than it in fact was. In the Bill as now drafted the safer and simpler course, as it appears to the Governor General in Council, has been taken of providing directly only for the particular points on which a deviation from the ordinary law seems unavoidable, and then enacting that as to the rest the ordinary law shall apply. It is hoped that, in effecting this alteration in the form of the Bill, no special provision has been omitted to which the Government of Bombay attach any considerable importance; but however this may be, it should be borne in mind that even in their present shape the portions of the Bill now referred to have met with considerable opposition here, and that, if any further deviations from the ordinary law are introduced, they will prove so many additional obstructions to the progress of the Bill through its remaining stages.

12. Regarding the exclusion of pleaders (as provided for in the Bill submitted by you) in suits not exceeding one hundred rupees in value or amount, there has been much discussion here, and the course adopted in section 69 of the present Bill, of empowering the Courts to refuse costs, has, I am to say, been adopted with a view to a compromise between conflicting opinions.

13. The only other matters to which I am to refer in connection with the Bill are the suggestions contained in Mr. Hope's note of the 29th of May last. The first of these suggestions—that as to the extension of the period of limitation in debt cases—is supported by a considerable body of authority; the arguments on which it is based appear to the Governor General in Council to be sound; and the Government of Bombay, though not supporting it themselves, have expressed no strong opinion against it. It has accordingly been provisionally adopted in the Bill.

14. Mr. Hope's other suggestion, that the Arbitration Courts which have established themselves at Puna and elsewhere should be recognized and have a certain status and position in our judicial system accorded to them, and that a mode of reviewing their decisions should be provided, is one which involves not only the general questions as to the desirability of setting up a body of standing arbitrators and as to the propriety of allowing awards to be revised on their merits, but also the question as to the expediency of recognizing in the manner proposed the particular bodies referred to. These are questions on which the Governor General in Council deems it undesirable to come to any conclusion pending the receipt of your reply, especially as it appears that the Government of Bombay had provisions identical with those now proposed submitted to them for their consideration in Mr. Hope's draft Bill, and, for some reason not stated in the correspondence, did not think fit to adopt them. For this reason no provision regarding Arbitration Courts has been made in the present Bill.

15. I am, in conclusion, to invite attention to the question referred to in the last paragraph of the letter from the Home Department, No. 222, dated 26th February, 1879, as to the possibility of making improvements in the revenue system now prevailing in the Dekkhan districts—a question which you will observe was discussed by several Hon'ble Members in the recent debate. That question, however, should be kept separate from those connected with the present Bill, and any communication you may have to make on it should be addressed to the Secretary for the Home, Revenue and Agricultural Department.

D. FITZPATRICK,
Secretary to the Govt. of India,
Legislative Department.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Thursday, the 24th July, 1879.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding.*
His Honour the Lieutenant-Governor of the Panjáb, C.S.I.
His Excellency the Commander-in-Chief, G.C.B.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B.
The Hon'ble Whitley Stokes, C.S.I.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble F. R. Cockerell.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.

CIVIL PROCEDURE CODE AMENDMENT BILL.

The Hon'ble MR. STOKES moved that the Reports of the Select Committee on the Bill to amend the Code of Civil Procedure be taken into consideration. He said that in March 1877, on the occasion of passing the Code of Civil Procedure, His Excellency the President had averred, with perfect accuracy, that it might indeed be said that the whole legislative and administrative machinery of India had, for a lengthened period, been at work upon the Bill then before the Council. It might now be averred, with equal accuracy, that for nearly two years the whole of this machinery had again been at work, criticising with the utmost minuteness and freedom the result of its former labours. The Bill which MR. STOKES would ask the Council to pass to-day embodied the bulk of this criticism. The report which he now asked the Council to consider, together with the two preliminary reports which had already been presented and published, described in great detail the additions which the Select Committee had made to the Bill. Following the precedent of what was done in the case of the Railway Act, they proposed that this final report should be published in the Gazette along with the Bill when passed, and this course would relieve him from the necessity of troubling the Council with a mass of technical details which no ingenuity could render interesting to unprofessional persons. There were, however, two or three changes of substance on which it seemed desirable to say a few words.

The first was the amendment of section 13, which dealt with *res judicata.* The object of that section was to lay down the rule that the Courts may not try any suit in which the matter directly and substantially in issue, having been directly and substantially in issue in a former suit before a Court of competent jurisdiction, was heard and finally decided therein. The former judgment was not conclusive, to use the language of De Grey C. J., in the Duchess of Kingston's case, as to any matter "which came collaterally in question," or as to any matter "incidentally cognizable," or as to any matter "to be inferred by argument from the judgment." The first paragraph of section 13 of Act X of 1877 was intended to express this doctrine; but it was not very accurately worded, the words "directly and substantially in issue" not being clearly referrible to the former suit as well as the latter. The amendment made by the Bill would, he trusted, preclude the difficulty sometimes felt in cases like the following, which had actually occurred under the former Code. A sues B in a Court of Small Causes to recover damages for the wrongful cutting down and removal of some mango trees, which grew on land claimed by A. B denies that A has any right to the land or the trees. The Court may try

the question as to A's title to the land as an incidental question, the decision of which is necessary to the adjudication on the claim for damages. But the judgment on this point would not be conclusive, except so far as regards the right to the damages claimed (Sutherland S. C. C. Rep. 51). Again, A sues B in a Munsif's Court to recover damages for the taking away by B of some mango trees growing on land to which A set up a title. A's title is tried incidentally in the suit and decided in his favour. B subsequently sues A for a declaration of right to the land. The decision in the former suit is no bar to B's claim (1 Beng. L. R. A. C. 4). We had struck out the explanation which we proposed to add to this section, since it would not, apparently, have suited any part of British India but the Lower Provinces. There the local legislature would be able, if it thought fit, to declare that a Court trying a suit under a rent-law should not be deemed by any Court trying a suit under any other law, as regarded the title to the immoveable property in respect of which the suit was brought, a Court of competent jurisdiction within the meaning of this section.

The next point to which MR. STOKES would ask the Council's attention was the extension which the Bill gave to the chapter on Insolvency. The present Code provided an insolvent law for the Mufassal much less rudimentary than that of the former Code, Act VIII of 1859. But (to quote one of Sir Arthur Hobhouse's instructive speeches) it still fell "short of a complete and full Insolvency law, which we are informed the judicial machinery of the Mufassal is not strong enough to work."

The expediency of extending the law was strongly urged upon us by Major Grant, formerly District Judge of Karáchí, and now Judicial Commissioner of Sindh. Major Grant said:—

"The Insolvency law, as contained in chapter XX of the Code, is of very little practical benefit to any one, and is indeed, I might almost say, a dead-letter. The provisions of chapter XX are, in fact, perhaps less seldom used than the provisions of the old Code, which did duty for an Insolvency law. I think, if enquiry was made, this would be found to be generally the case throughout the Mufassal of India. I have before me the report on the Judicial Administration (Civil) of the Central Provinces for the year 1878. At paragraph 43, page 33, I find it stated that in nine districts the law on the subject of insolvency was never put into use, and that, as regards the remaining districts, out of a total of 68 persons declared insolvents during the year, 52 belonged to Nágpur. There can be no doubt that this very unsatisfactory state of things results from the fact that the law only applies to judgment-debtors who have been arrested or imprisoned in execution of a decree. I would gladly see the law go a great deal further, as proposed in the memorandum submitted with my letter referred to above; but if it is still held that the judicial machinery is not strong enough to work a complete Insolvency law, I think at any rate that some slight extension of the present law might be granted without causing any great increase of work. What I now venture to propose—and I earnestly beg that my proposal be considered—is that the provisions of the existing law, as contained in chapter XX of the Code, be extended to persons *against whose property an order of attachment has issued in execution of a money decree.* This would benefit debtors and creditors alike. It is obvious that it would greatly benefit a debtor to be enabled to become an insolvent before all he possesses has been sold at possibly a ruinous loss, and his creditors would benefit by a rateable distribution of his property while he has some. At present it is a fact, which can be very clearly proved, that, as a rule, those who are under the existing law declared insolvents have no property at all. It has all disappeared by process of attachment and sale before they have had an opportunity of being declared insolvents."

The Committee had accordingly extended chapter XX to persons against whose property orders of attachment had issued in execution of money-decrees. It had been proposed to provide (as was done by the Panjáb Laws Act, 1872, section 23) that any creditor whose debts amounted to a certain sum might apply that the debtor be adjudicated an insolvent. But, as this might obviously lead to harassing applications by persons who were not creditors at all, or who were not creditors for the requisite amount, the Committee decided, instead, to allow any holder of a money-decree to apply. The other changes in this chapter were specified in the report. The most important was that, as soon as the debts due to the scheduled creditors were satisfied to the extent of one-third, the Court was empowered to declare the insolvent free from all liability in respect of such debts. The law in this respect would thus be, as it ought, identical in the Mufassal and in the Presidency-towns, where the Statute 11 & 12 Vic., c. 21, s. 69, was still in force.

Chapter XX, even with all these improvements, would still be incomplete. But it went as far as most of us, with our present knowledge of the condition of the Mufassal Courts and the extent of Indian indebtedness, thought safe and wise. The Home Department either had issued, or was about to issue, a circular to the Local Governments requesting their opinion as to the propriety of allowing debtors to a certain amount to apply for a declaration of insolvency; and, if this were found feasible, the law would be altered accordingly.

Lastly, MR. STOKES had to mention the extension of the High Courts' revisional jurisdiction which would be effected by the proposed amendment of section 622. The Committee considered that this section should run thus:—

"622. The High Court may call for the record of any case in which no appeal lies to the High Court, if the Court by which the case was decided appears to have exercised a jurisdiction not vested in it by law, or to have failed to exercise a jurisdiction so vested, *or to have acted illegally, or with material irregularity, in the exercise of its jurisdiction,* and may pass such order in the case as the High Court thinks fit."

The change was a serious one and must be understood as made tentatively. It would never do if the new power to call for cases in which the lower Court had acted illegally, or with material irregularity, in the exercise of its jurisdiction were misused so as, practically, to give a second appeal in every case. But the High Court of Bombay at present exercised under Bombay Regulation II of 1827, section 5, the jurisdiction which the amended section would confer on all the High Courts; and both Sir Charles Turner and Mr. Justice Innes were of opinion that the change should be made and might be made safely.

Lastly, as the Code would, if the Bill passed, be amended, more or less, in about 130 of its 652 sections, the Legislative Department would, for the convenience of judicial officers and pleaders, at once issue a revised edition of the Code, embodying all the amendments which the Bill would effect.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the Bill as amended be passed.

The Motion was put and agreed to.

OUDH CIVIL COURTS BILL.

The Hon'ble MR. COCKERELL moved that the Report of the Select Committee on the Bill to amend the law relating to Civil Courts in Oudh be taken into consideration. He said that the very few amendments of substance which had been made by the Select Committee since the Bill was last before the Council had been made on, and entirely in accordance with, the suggestions of the local authorities, and that these alterations of the former Bill were described in sufficient detail in the brief report now under consideration.

He would therefore confine the few remarks which he had to make in regard to the subject of this Bill to an explanation of the reasons which had led the Select Committee to withhold their support from some of the recommendations of the local authorities. The Local Government had strongly pressed the expediency of assimilating the provisions of the law in regard to second appeals, where the judgment of the first Court of appeal was in substantial concurrence with that of the original Court, to the law which was current in all other parts of India. It would, in short, abrogate the finality of concurrent judgments, which was the peculiar feature of the Oudh appellate procedure. The theory of this special procedure seemed to be that, as each Court, whether original or appellate, consisted only of a single Judge, where the judgments of the two first Courts by which any case was tried were substantially at variance in regard to such case, there should be a power of reference, in the form of a second appeal, to a third Court; but that no satisfactory result could be expected from a reference to a third Judge in the converse state of circumstances where the two first Judges who had to do with the case were agreed as to the decision to be pronounced upon it; and this conclusion applied equally whether the question at issue was one of fact or of law. Now, as the effect of this

Bill was simply to alter the status of Courts subordinate to the chief Appellate Court and the latter remained on precisely the same footing as before, the plea for the assimilation of the appellate law in Oudh to that of other Provinces in which the Chief Courts of Appeal consisted of two or more Judges had no particular force. It had been further urged that the extraordinary powers of revision exercised heretofore by the Chief Appellate Court in Oudh had acted as a safety-valve to the otherwise dangerous curtailment of the ordinary right of appeal; whereas it was proposed in this Bill to rescind those powers. As a matter of fact, these special appellate provisions, which were, without any qualification as to time, reported to have worked satisfactorily, had been in force in Oudh since 1871; whilst the extraordinary powers of revision were conferred on the chief Appellate Court only in 1876. The Select Committee, however, would probably have been prepared to admit as a general principle that any curtailment of the ordinary right of appeal should be accompanied by the grant to the superior Court of an efficient power of reviewing non-appealable cases, and in that view would have provided in this Bill for the exercise by the Judicial Commissioner of some extraordinary power of revision of concurrent judgments declared to be final; but all necessity for any such special provision had been avoided by the passing into law to-day of the Bill for amending the Civil Procedure Code, which afforded the utmost desirable protection and relief in this direction.

The local authorities had also desired that the opportunity afforded by the present fresh legislation in regard to the Civil Courts in Oudh should be taken for conferring on the Judicial Commissioner, as the High Court of that province, the powers in regard to matters of divorce and probate which were by Act IV of 1869, and Act XIII of 1875 in conjunction with Act II of 1877, conferred upon the High Courts of most other Provinces. As he had already observed, the status of the Judicial Commissioner's Court was in no way altered by this Bill; it continued to be a Court consisting of a single Judge, and the considerations which operated in withholding the powers conferred by those Acts, at the time that they were enacted, from the Court of the Judicial Commissioner were in full force still.

The Hon'ble MR. HOPE said that he did not propose to offer any objection to the passing of the Bill, or to bring forward any amendment with respect to it. There was, however, one point which it seemed to him desirable should remain on record in connection with the measure. Under the system which would be superseded by this Bill, there was a large number of Courts in Oudh. So far as he had been able to ascertain from the papers which had been kindly furnished to him for perusal by the Home Department, it appeared that formerly there used to be 128 Courts of several grades in Oudh to which the people could resort, and amongst them there were 43 Courts of tahsíldárs, that was to say, officers in charge of the lowest subdivisions of a district. Under the Bill the number of those Courts would be reduced to about 38, and the Courts of the tahsíldárs would be abolished. So far as he had been able to make out from the papers, which were not perhaps very clear, about 18 tahsílís would be left without any Court at all, whereas under the previous system the tahsíldár had a jurisdiction up to Rs. 100, and the people of those tahsílís would now have to resort to some adjoining tahsílí in order to get their cases decided. Besides that, it appeared that the subordinate Judges and munsifs who were now to be appointed, and who corresponded with the assistant commissioners and extra assistant commissioners of the old system, would have two classes of powers instead of one, and that in the present Bill we had reduced the power of the munsifs from Rs. 1,000 as it originally stood to Rs. 500, for a reason which he would not say was a valid one, but which, at any rate, was connected with the remark with which he wished to conclude—namely, that, unless the jurisdiction of the munsifs was cut down, there would be little left for the subordinate Judges above them to do. The effect of this was that people with cases above Rs. 500 would be obliged to go to a subordinate Judge at a distance instead of a munsif, in order that he might have his time sufficiently occupied.

MR. HOPE was well aware that this reorganization had been very carefully considered by the Local Government and by the Government of India in the

Home Department, and he was not in a position, ignorant as he was of the local circumstances of Oudh, to offer criticisms on the general policy of the measure; but he wished merely to call the attention of the Council to the fact, which might remain on record, that this seemed to him a move rather in the opposite direction to that in which it was considered desirable to move in the Dekkhan, and rather opposed to the policy lately suggested in the despatch of the Secretary of State, which was well known to the Council, of bringing the Courts near the homes of the people.

The Hon'ble SIR ALEXANDER ARBUTHNOT said that, as the Hon'ble Member who had just spoken had referred to certain facts which had come to his knowledge from papers furnished to him by the Department of which he (SIR ALEXANDER ARBUTHNOT) had charge, it was perhaps desirable that he should say a few words on the subject. He gathered that the Hon'ble Member objected to the reduction which would be made under this Bill in the number of Courts of the lowest grade in Oudh.

The Hon'ble MR. HOPE explained that he did not object. He merely wished to draw attention to the fact of the reduction.

The Hon'ble SIR ALEXANDER ARBUTHNOT continued to say that he gathered, however, that, from the remarks the Hon'ble Member had made, he wished to place on record the fact that he regarded the measure which had been recommended by the Local Government, and supported by the Government of India and by the Select Committee of that Council, as a measure which was inconsistent with the principles of the policy which had been followed in the Bill recently introduced into the Council with reference to the Dekkhan districts; and, as Mr. Hope had had charge of the last-mentioned Bill, he inferred from his present remarks that he greatly preferred the principle of that Bill to the principle of the Bill which had now been introduced into the Council by our hon'ble colleague Mr. Cockerell. He thought that, in the remarks Mr. Hope had made, he had somewhat overlooked the very material difference between the judicial and executive arrangements hitherto subsisting in Oudh, and those hitherto subsisting and now existing in the Bombay Presidency. Oudh, up to the present time, had been administered under what was called the non-regulation system. The judicial and revenue functions had been discharged by the same officers. The tahsíldár had not only performed executive duties, often of a very onerous character, but had been entrusted with judicial duties corresponding with those which were performed by district munsifs in the Regulation Provinces. Under the Bill now before the Council, the Revenue authorities would be entirely divested of their judicial functions; in fact, the motive of the Bill had been to relieve the Revenue authorities of those functions, on the ground that the work in Oudh was so heavy that it was impossible for the same officers to do justice both to their judicial and to their revenue work. Now, he had no more personal experience of Oudh than the Hon'ble Mr. Hope had; but he understood that the districts in Oudh were very small, and he had no doubt that, when the measure now before the Council became law, the territorial jurisdiction of the district munsifs of the Courts which would now be established would not be greater—probably it would be considerably less—than the territorial jurisdiction of the corresponding Courts in the Regulation Provinces of Bengal, Madras and Bombay, while, as in Madras and Bombay, their whole time would be devoted to their judicial work. The two Governments and the Select Committee having come to the conclusion that, on general grounds, it was desirable to separate the two functions—judicial and executive—and to constitute a separate judicial establishment in Oudh, it had become necessary, with reference to the character of the litigation, to entrust to the subordinate Judges suits involving lower amounts than those entrusted to subordinate Judges in other provinces; but the difference of jurisdiction under the present Bill would be so small that he did not think that there was any reason whatever to apprehend that the proposed measure would involve any denial of justice to suitors.

He believed that the circumstances of the case afforded a complete justification for the measure now before the Council.

The Hon'ble MR. HOPE begged the permission of His Excellency the President to explain that his remarks had no reference either to the principle of the Bill, or to the propriety of relieving the Revenue officers of judicial work —in which he entirely concurred—or to the area of their jurisdiction. His remarks simply had reference to exactly what they contained—namely, that he thought the Council, in passing the Bill, should be aware of the fact that they were thereby placing the Courts further off from the homes of the people.

The Hon'ble MR. COCKERELL had only one observation to make in reply to what had fallen from the Hon'ble Member on his right (Mr. Hope).

The hon'ble gentleman was a Member of the Select Committee on this Bill, and yet he had not in Committee, so far as he (MR. COCKERELL) could remember, at any time raised this question of the possible inconvenience to the people arising out of the reduced number of Civil Courts which would be one of the results of this Bill being passed into law. At all events, he could say positively that his hon'ble friend had not put the question—to use the technical phrase—"directly and substantially in issue" before the Committee; had he done so, he (MR. COCKERELL) had little doubt but that he could have met the question with statistics to show that the Hon'ble Member's apparent apprehensions were not well grounded. He might remark also that the Hon'ble Member had apparently, in his conjecture as to the evil or inconvenience that might be caused through the reduced numerical strength of the Civil Courts in Oudh, taken no account of the provisions of section 15 relating to the investment with civil jurisdiction of taluqdárs. He (MR. COCKERELL) could not say how many of these gentlemen were likely to be invested with the powers of Civil Courts, or what appreciable measure of the litigation of the Province was likely to be disposed of through this agency. But he conceived it possible, and even probable, that the Local Government would, where it was likely to operate advantageously in bringing the administration of justice nearer to the homes of the people, readily avail itself of this kind of judiciary for the trial of petty cases, and he could not doubt but that it would prove certainly not inferior in administrative efficiency to the village munsifs of Madras or the patels of the Dekkhan.

The Motion was put and agreed to.

The Hon'ble MR. COCKERELL also moved that the Bill as amended be passed.

The Motion was put and agreed to.

BURMA DISTRICT CESSES AND RURAL POLICE BILL.

The Hon'ble Mr. RIVERS THOMPSON introduced the Bill to amend the law relating to District Cesses and Rural Police in British Burma, and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Stokes and Colvin and the Mover. He said that he had endeavoured to explain to the Council at the last meeting the necessity which existed for placing the rural police in British Burma upon a better footing. The progress of violent crime throughout that Province, especially in times of excitement and disturbance on an extensive frontier, had been too plainly proved by the Administration Reports in the Police Department, and he knew, from the most recent one that had come under his notice, that in the last year there were as many as 61 dákáities within British Burman territory, which was a larger number than had been committed in any year since 1872.

The defect in the organization of the village police system, which had been long recognised and had grown with the growth of the Province and the greater and closer supervision given in recent years to all executive measures, had shown to all concerned in the government of the country that a really efficient rural police was very urgently required, not only as supplementary to the regular police, but as a link—and a very valuable one—between the people and the central authority, and that measures with that object had to be seriously considered, and, if possible, a remedy to be supplied. The subject, he might say, had not been without consideration in previous administrations, but the want of means,

coupled with the larger demands for expenditure in other directions, prevented immediate attention to it, and it was only recently, since a larger concession had been made to the Chief Commissioner in his provincial revenue arrangements, that he had been in a position, in a measure, to deal with this important question; still he was bound to say that, whatever concessions had been made to the Chief Commissioner, a somewhat ampler provision was necessary to enable him to carry out an effective and comprehensive police reform. British Burma was still very backward, compared with the position which older provinces had attained, in the administration of many of those departments which were sources of revenue—such as the administration of stamps, excise, the registration of deeds and several others; and, whatever surplus or funds the Chief Commissioner of British Burma might have at his disposal for the improvement and development of those resources, he imagined that very little would be left over to him, after all those requirements were met, for dealing with the question of police organization throughout the province. The Chief Commissioner had accordingly recommended—and he thought, upon consideration, that he was justified in his recommendation—that the local cess now levied upon the land-revenue and the revenue from fisheries throughout British Burma at a rate of 5 per cent. should be doubled. He (MR. THOMPSON) might explain that the practice of levying a percentage upon those revenues for purposes of local utility had prevailed almost since the time that Burma had become British territory. From the days of Sir Arthur Phayre downwards this practice had been followed; but what was done in this way formerly under rules sanctioned by the Governor General in Council and having the force of law had recently been embodied in the substantive land-law of Burma passed by this Council in 1876. That cess was levied in the proportion of one-eighth from the fisheries-revenue, and of seven-eighths from the land-revenue. It was levied over and above the imperial revenues under those heads, and the proceeds, which were entirely at the disposal of the Chief Commissioner, were applied in proportions, which he could fix at his own discretion, for the construction and improvement of district roads, the local postal service, primary education, and chiefly and mainly for the maintenance of the village police.

The funds realized from that cess were used in the districts where they were raised, and they were accepted by the people as taxes which went mainly to improve their own condition. In proposing to enhance the rate from 5 to 10 per cent., it was not intended by the measure under consideration to alter in any way the mode of collection or to divert the funds which would be raised under the Bill from those purely local purposes to which the funds had hitherto been applied; beyond this, that in the eighth section of the Bill it was contemplated that, in addition to those purposes to which he had already alluded, there should be included the object of sanitary improvement in villages—an object to which attention had been recently called by despatches from home, and in the desirability of which he thought that the Council would readily agree.

It needed that he should say something as to the reasonableness of the proposal to enhance the rate from 5 to 10 per cent. The justification for all taxation is to be found in the necessities of the State and the ability of the people to pay; and it was, of course, desirable in imposing any extra impost like this that we should be able to show the people not only the needs of Government, but also that the funds realized from such taxes were intended for their own personal benefit and the general public interest. He did not propose to trench in any way upon the department of his hon'ble colleague and friend Sir John Strachey as regarded the necessities of the State. It was well known to the Council that the financial depression which at present existed was caused by circumstances which, without any figure of speech, were absolutely and entirely beyond the control of the Government, and while those causes remained in operation our object must perforce be—if we did not desire to increase imperial taxation, which he knew we did not—to restrict expenditure rather than to expand it. But, even with this financial pressure upon the Government, a much more generous, though perhaps he would better describe it as a much more just, consideration had been shown to the claims of British Burma, which was one of our most flourishing provinces; and he was satis-

fied that, with the resources now placed at the Chief Commissioner's disposal, we should, under his auspices, secure very soon a full and commensurate return for whatever we had accorded to him. However, having made those concessions to the province, it was not to be expected that any additional help should be afforded from imperial resources for carrying out reforms and measures such as those contemplated by the Bill; and when we saw that the improvement and reformation which we desired under this Bill were directed to purely local purposes and local objects, it was reasonable that we should look to the people themselves for supplying the funds necessary for carrying them out. Now, the burden of this impost of 10 per cent. upon the land-revenue might be calculated in a measure from the incidence of the land-revenue upon the country; and by universal accord—both from past experience and recent reports—it was admitted that the revenue assessment in British Burma was exceedingly light. It would be surprising if it was not so. Nearly everything in connection with the conduct of the revenue administration in British Burma depended upon the intelligence, industry and honesty of a single official—the Thoogyee. He measured the land, assessed the revenue, collected the revenue and, indeed, all the other taxes; and it was found from the extent of District jurisdictions and the difficulties of inter-communication that, in a great measure, he was left without any proper control, and was therefore independent of that supervision which was necessary in the discharge of such important duties. The annual measurements which practically prevailed, except in a few cases in which settlements had been made, had by their frequency and uncertainty opened a door to innumerable frauds; and he was sure that His Lordship and the Council would agree that an unscientific settlement was as obnoxious and objectionable as an unscientific frontier. The result of bringing the work of these Native officers to a test—which had been done in his own time in Burma in one of the most fertile districts of the province, by comparing the measurements of area made by the Thoogyee with the measurements effected by a more detailed and proper survey—showed a discrepancy of 24 per cent., and in the revenue an actual discrepancy of 28 per cent. In both instances the advantage, of course, was in favour of the cultivators. All this, he was glad to say, was about to be remedied. We had already taken measures to introduce into the Province a cadastral survey; and from the arrangements now being carried out, he hoped during the next cold season to see a very appreciable advance made in an accurate survey of the most advanced Districts in the Province, with the certain result of placing both the revenue and fiscal administration upon a better footing and of enabling the Government of India, if it should so deem it right, to consider the question of abolishing what was a very unsound, and in its incidence a very unjust, tax, that was, the capitation tax which now prevailed in the country.

He had entered upon this explanation to show that, with a very light land-assessment throughout Burma, the 10 per cent. assessment which this Bill proposed to realize as a cess for local purposes and objects would not press with any severity upon the people; and in support of this statement he would revert to a few practical details which illustrated very clearly the position and profits of the agricultural community in Burma. It was well known that there was a very large export of rice, the staple produce of the province, from all the ports in Burma. It amounted now to something over 800,000 tons in the year, and the demand was so large and continuous that it gave a very great and effective impulse to the clearance of land and the cultivation of rice throughout the Districts. When he first went to Burma, and almost within a week after his arrival, it was talked of as an unprecedented rise in the price of this commodity that it was selling in Rangoon at Rs. 66 for the hundred baskets—a measure equivalent to the English bushel. The ordinary price of paddy had averaged at a not advanced period of the season between Rs. 45 and 50, and it was thought incredible in the month of April that Rs. 66 should be demanded. Within three years afterwards the price had risen, during the middle of the season, from Rs. 66 to Rs. 100 and Rs. 120 per hundred baskets, and in speculative seasons it reached the figure of Rs. 130. He believed, from recent returns, that not only had those high prices been maintained, but, in

several instances, they had even gone beyond to Rs. 140 and Rs. 145 per hundred baskets. Now, he was aware that it had been said that the cultivator did not realize the whole profits of his produce, and that the intervention of middlemen between the raiyat and those with whom he dealt caused a considerable reduction of those profits; but he (Mr. THOMPSON) had considerable confidence in the shrewdness and sagacity of the Burman; and, though in outlying parts the brokerage system found a place and the raiyats were often induced to take money at disadvantageous loans before their crops were reaped, it was generally the case that the Burman was quite equal to the occasion in bargaining for his grain, and, if report be true, that often, indeed, he was more than a match for the combined action of the Chamber of Commerce of Rangoon. Again, the opening of the railway in Burma, which passed through some of the richest tracts of the country, had placed the cultivator in direct relation with the mill-owners who prepared the rice for the English markets: and, for himself, he had no reason to doubt that the greater proportion of the rise in the price which had resulted in the last three or four years from the competition in Rangoon had gone almost entirely into the pocket of the agriculturist.

Well then, what were the deductions from those facts? It was found that an acre of indifferent land in an ordinary district in British Burma produced about 25 baskets of rice; an acre of medium land gave 45 baskets; and an acre of superior soil rendered about from 70 to 80 baskets. The assessment on rice-growing land in British Burma varied from 6 annas an acre on poor soil to Rs. 2-4 on the best soil. The average was about Rs. 1-6 per acre. This assessment had been generally continued without any variation; and if when it was first imposed the price which was realized for the produce was at the rate of Rs. 45 to Rs. 50 per hundred baskets, and we now found that the average was from Rs. 100 to Rs. 120 per hundred baskets, and that the gain upon the acreage had risen on an average on the poorest soil to Rs. 23-5 an acre; on medium soil to Rs. 42 an acre; and on the best soil to Rs. 50 an acre, it went without saying that the Government was not receiving its due share of the revenue derivable from the land. All those circumstances in his opinion justified the imposition of a higher percentage now in the form of a local cess where it was to be devoted to purely local objects of utility. It was due to the present Chief Commissioner to say that he had brought this point very prominently before us. Burma had rejoiced for many years in a very conservative administration; and the officers in the commission there, brought up at the feet of Sir Arthur Phayre, one of the most able administrators whom India had ever produced, were inclined to contend that what was good for his time was good for all ages; and so there had been an occasional difficulty in getting those with whom the Chief Commissioner had to act to realize the necessity of such changes as the present Bill contemplated. They considered that the 5 per cent. cess upon the land-revenue was sufficient for all purposes, and if for some time he himself had shared that conviction in the belief that British Burma had for very many years before the introduction of the provincial system been paying a local cess which in other provinces was only introduced with the introduction of the provincial system in 1871, still, when he found that during the last seven years the local cesses throughout India had been very considerably raised for purposes of local requirement, and that, in addition to those, a famine insurance-fund in one form or another was applied to the different provinces last year, from which Burma was entirely exempted, he thought the time had come when we might fairly say that, in view of the very light assessment realized from the land-revenue in British Burma, it was reasonable and equitable to enhance the cess by the addition of 5 per cent. What was now realized under this cess amounted to a little over two lákhs of rupees, so that the whole cess, when doubled, would give something more than four lákhs of rupees in the whole province of British Burma.

Having explained the circumstances which in his opinion justified the enhancement, he would now allude briefly to other sections of the Bill. They were explained generally in the Statement of Objects and Reasons. He might say definitely that there was no intention whatever of disturbing or interfering with the indigenous system of rural police, the object of the Bill being to pro-

vide for the strengthening and better organization of that body. He had already explained all that was necessary with regard to the enhancement of the cess on the land-revenue; and he would now add—as the Statement of Objects and Reasons put it—that,—

"as it would be obviously unjust to throw completely upon the agricultural classes the burthen of providing for expenditure by which the non-agricultural population of the villages and rural towns will equally benefit, the Chief Commissioner has been empowered to impose a house-cess, not to exceed two rupees per house, on persons who do not pay the agricultural cess."

It should be stated that already a house-tax existed in a great many towns in British Burma, and that where that tax was found to exist the new house-cess would not be imposed.

Opportunity had also been taken under the Bill to provide—

"that the inhabitants of any town, village or hamlet are bound to aid in the prevention of dákáiti and robbery in such town, village or hamlet, and, when such offence has been committed, to aid in securing the offenders."

It had been too often found that the inhabitants had held aloof from giving any aid in the repression of crime. This arose partly from fear of the criminals, partly from apathy; and power would be taken under the Bill to enforce by rules their obligation to give that assistance, or in case of refusal to punish them.

This was the general scope of the Bill, and he had now the honour, in submitting it to the Council, to move that it be referred to a Select Committee consisting of the Hon'ble Mr. Stokes, the Hon'ble Mr. Colvin and the Mover.

The Motion was put and agreed to.

The Hon'ble MR. THOMPSON also moved that the Bill be published in the *British Burma Gazette*, in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

FOREIGN JURISDICTION AND EXTRADITION BILL.

The Hon'ble MR. STOKES introduced the Bill to amend the Foreign Jurisdiction and Extradition Act, 1872, and moved that it be referred to a Select Committee consisting of the Hon'ble Sir A. J. Arbuthnot, the Hon'ble Messrs. Cockerell, Colvin and Hope and the Mover.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the Bill be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 7th August, 1879.

SIMLA;
The 24th July, 1879.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

DEVELOPMENT OF THE SILK INDUSTRY.

No. 16R., dated, India Office, London, 10th April 1879.

From—The Secretary of State for India,

To—The Government of India.

Herewith I enclose for Your Excellency's information, copy of a letter from Mr. Thomas Wardle, together with the specimen of silk and cocoons therein referred to, on the subject of experiments made by him in dressing silk of the *Attacus cynthia* or Ailanthus worm.

2. Mr. Wardle is desirous of making further trials in order to ascertain whether this silk in the spun state is capable of extended application and improved manufacture and dyeing, for which purpose he requests that a bale of Eria cocoons, of from 50lbs. to 100lbs. in weight, may be sent to him. I desire that a bale of these cocoons may be sent to this office, for transmission to Mr. Wardle, together with a report as to the probable extent to which this silk would be obtainable in India in the event of a demand arising for it for commercial use.

Dated, St. Edward Street, Leek, 20th March 1879.

Demi-official from—THOMAS WARDLE, Esq.,

To—SIR LOUIS MALLET, C.B.

I beg to enclose a little packet of Eria silk which I have had dressed from some Eria cocoons sent to me from the India Office some time ago.

The fibre appears to be beautifully adapted for spun silk cloth, but for want of sufficient quantity to fill the machinery to make a continuous thread, I am unable to proceed further than this stage of the manipulation. I should feel glad if you would authorize the collection in India of a bale of these cocoons, say 50 lbs. to 100 lbs. in weight, to be sent to me for the purpose of seeing whether this silk, in the spun state, is not capable of very extended application and improved manufacture and dying. It is the silk of the *Attacus cynthia* or Ailanthus worm, possibly also the *Attacus ricini* or worm feeding on the castor-oil plant (*Ricinus communis*), two cocoons of which latter I send, which are similar to those from which I have extracted the accompanying dressed fibres.

I have the honor of sending my monograph on the wild silks and dyestuffs of India, which I wrote at the earnest request of Sir P. Cunliffe Owen to describe the silks and dyestuffs I arranged in the India Section at the Paris Exhibition last year, and shall be pleased by your acceptance of it.

At P. No. 24 you will find the Eria silk described more fully.

Extract from the Proceedings of the Government of India in the Department of Revenue, Agriculture and Commerce, (Fibres and Silk)—Nos. 47-48, dated Simla, the 11th June 1879.

READ—

Despatch from Her Majesty's Secretary of State for India, No. 16, dated the 10th April 1879, forwarding copy of a letter, dated 20th March 1879, from Mr. Thomas Wardle, with samples of silk and cocoons, relative to an experiment made by him in dressing silk of the Eria silkworm.

RESOLUTION—1. The silk dressed by Mr. Wardle, though called by him the produce of the *Attacus cynthia*, is no doubt that of the *Attacus ricini*, the castor-oil worm—Eria, or arándi.

2. The worm occurs in Bengal (the Dinagepore and Rungpore Districts and perhaps elsewhere) and in Assam. In the latter province it spins a white silk, while in Dinagepore the colour of the cocoon, it is understood, is brown. In accordance with the desire expressed by Her Majesty's Secretary of State, the Governor General in Council requests that the Government of Bengal and the Chief Commissioner of Assam will be good enough to make up each a bale of cocoons of this worm weighing 50lbs., which, when ready, should be sent to this Department for transmission to England. Care should be taken to kill the chrysalis before the cocoons are packed. It is also advisable that a similar quantity of munga cocoons should be forwarded by the Chief Commissioner of Assam in order that experiments may be made on them.

3. His Excellency in Council also requests that the Government of Bengal and the Chief Commissioner of Assam will furnish as speedily as possible the report required in paragraph 2 of the despatch from the Secretary of State, relative to the probable extent to which Eria silk would be obtainable in the event of a demand arising for it for commercial use.

ORDER.—Ordered, that copy, with copy of the papers read in the preamble, be communicated to the Government of Bengal and the Chief Commissioner of Assam.

No. 1731, dated Shillong, 1st July 1879.

From—S. O. B. RIDSDALE Esq., C.B., Secretary to the Chief Commissioner of Assam,

To—The Secretary to the Government of India, Department of Revenue, Agriculture and Commerce.

I am directed to acknowledge the receipt of the Resolution by the Government of India Nos. 47-48, dated 11th June 1879, and in reply to say that the district officers of Darrang and Nowgong have been asked to furnish the supply of the Eria and Muga cocoons required by the Government of India. The cocoons will be forwarded to you directed to the address of the Secretary to the Government of India, Department of Revenue, Agriculture and Commerce, Calcutta, and the Bill of Lading, together with intimation of their despatch, will be forwarded to the Calcutta Office to the address of the Head Assistant.

2. With reference to paragraph three of the resolution, I am to forward a copy of the Chief Commissioner's Resolution, dated 6th June 1879, on the development of the silk industry, from which it will appear that enquiries are already being made as to the probable quantity of Eria silk as well as other silks obtainable in the several districts of Assam for exportation. The result of these enquiries will be reported for the information of the Government of India as soon as possible.

Extract from the Proceedings of the Chief Commissioner of Assam, in the Revenue Department,—dated Shillong, the 6th June 1879.

RESOLUTION.—The attention of the Government of India has long been directed to the possibility of developing the silk industry of this country, and at various times information on the subject has been collected.

For a long time, under the management of the East India Company, efforts were made to develop this industry by encouraging the cultivation in this country of the silkworms commonly cultivated in Europe. These experiments were carried on with varying success, but little or no permanent results were obtained.

The results of the more important recent inquiries which have been made by the Government of India are embodied in a work entitled "Silk in India," by J. Geoghegan, a work containing much useful and interesting information on this subject.

Printed at Calcutta Government Press, 1872.

2. Since the publication of this work, the Government of India called for further information in Resolution No. 5-156-165, of 23rd November 1875. Copies of this Resolution were distributed throughout the Province of Assam, and the information received in reply was embodied in this office No. 256 of 9th February 1877.

Important experiments were at the same time conducted in Europe, which have resulted in proving that the difficulties which have hitherto in this country been found insuperable, in the matter of winding Tasar cocoons and dyeing this silk, so as to equal the results obtainable from the ordinary staple European silk, have been completely overcome. Experiments have also been made with some of the most common silkworms of Assam, such as the Eria and the Muga, and results but little less satisfactory have been obtained.

It seems not improbable, therefore, that the produce of these and other native silkworms of India will, if it can be supplied in sufficient abundance, obtain as firm a position in the European market as the produce of the common mulberry silkworm (*Bombyx mori.*)

3. The most widely-distributed silkworm in India is the Tasar, and it is to this that attention has hitherto been chiefly drawn. This silkworm, however, thought it is found within this Province, is not common. But there are other well-known silkworms which are commonly cultivated in Assam, and whose value will probably prove little, if at all, inferior to the Tasar, and it is in the extended cultivation and production of these that the development of the silk industry of this Province obviously lies.

Besides the two which are abundant in this Province, the Muga and Eria silks, upon which experiments have been sucessfully tried, there are a large number of wild silks to be found throughout this Province which have never yet been subjected to experiments under trained European skill. It is very important that a sufficient quantity of the cocoons of these silkworms should be collected and forwarded to Europe for examination. The success which has recently been obtained in the manufacture of Tasar, Eria, and Muga silk renders it not improbable that other common wild silks of this Province will be found to have a value in the European market. It is of great importance that this point should be ascertained, as the cultivation of the silkworms indigenous to this Province will be likely to be accompanied with the least difficulty. It is not to be expected that there will be any extended cultivation of such silkworms before it is ascertained that the produce has a commercial value, and this, therefore, must first be determined. Directions will be issued for the collection of cocoons of the known kinds of silkworm, which have not yet been experimented on in sufficient quantity for this purpose.

4. In consequence of the very important results which have been obtained from the experiments lately conducted in Europe, which seem to point to a possible great development of the silk trade of India, further information has been called for in Government of India Resolution I., of 28th February 1879, published in the Supplement to the *Gazette of India* dated the 15th March 1879, page 213.

This Resolution, dealing as it does with the silk of India generally, is largely occupied with considerations affecting only the Tasar, and this silkworm, as has been said, is not common in this Province. However it may be in the future, at present it is clear that the attention of those who are desirous of developing the silk industry of Assam should be directed to the cultivation and production of the silkworms common to Assam. It will be sufficient to note here only so much of the Resolution as seems to apply more especially to this Province.

5. At present it would seem that the silk trade, at all events of this Province, should take a new departure, and that, instead of, as formerly, the silk being reeled from the cocoons before sale, the cocoons themselves should be (after the worms have been carefully killed) sorted and packed and sent to market without any unreasonable delay; as there is some difficulty in unreeling cocoons if they are more than a year old, and are too hard and dry. This is of the utmost importance, because all the special skill and training, and the great labour which would otherwise be involved in this industry, and which it would be particularly difficult to obtain in this Province, are dispensed with.

It is only now necessary that the cocoon should be produced, and for this purpose all that will be required will be the selection and cultivation of the trees suited to the silkworm, most of which are common jungle trees, and proper care and attention to the silkworm during its growth. This will require little or no capital, and only ordinary skill and attention. In an appendix to this Resolution (Appendix B), such information as is already known on this subject in regard to the cultivation of the more common silkworms of this Province has been collected, and is published for general information.

6. The permanent demand for cocoons of the classes common in this Province cannot well be ascertained; nor can it yet be said whether the production of cocoons will ultimately prove remunerative; nor can it be said yet which will be economically the most profitable cocoons to cultivate. It will not be till after some time, and after the trade has become to some extent established, that this question can be fully answered. The trade in cocoons, like every other trade, will depend for its success on a great variety of conditions. The cost of producing cocoons in large quantities cannot practically be tested without experiment, and the same must be said of any calculation of their probable market value. The popularity of the material into which they will ultimately be worked, the cost of manufacture, and an immense variety of other considerations, must be practically determined before any real answer can be given to this question. But, so far as can at present be judged, the prospect of this trade seems eminently hopeful, and there is very much which should direct the attention of the Europeans engaged in tea cultivation in this Province to this industry. As has been said, the difficulties of manufacture have been overcome, and, with the development of the industry, the cost of manufacture may confidently be expected to decline also, and this will probably result in increased demand for the manufactured articles, and enable a higher price to be paid for the cocoons. Already, one silk manufacturer, M. David, of St. Etienne, has expressed his willingness to purchase 2,000 kilogrammes (55 maunds) of Tasar conoons at 1 *franc per kilogramme* for experiment, and there can be no doubt that manufacturers would be found to purchase at a similar price cocoons of other kinds. This gives a price of altogether 30*s.* per maund for the cocoons *delivered in France*, which, with exchange at 1*s.* 6*d.* = Rs. 20 per maund = 8 annas per seer, to cover all cost of culture, collection, and transport. It has been further asserted by M. David and other manufacturers that all the possible production of India would be eagerly bought at this rate. This is probably too low a rate to be remunerative to the producer, but it must not be considered as the final or fixed market rate of the future. The Government of India, in Resolution I. of 28th February 1879, para. 6, assert "there is at least as great a demand in the European markets for the cocoon of the Eria and Muga worm as there is for that of the Tasar." It should be noticed, further, that there is a use for waste and for pierced cocoon, as these, where they cannot be reeled, can be spun.

The great abundance in the jungles of Assam of the food required by the several kinds of silkworm, and the ease with which many of the trees and shrubs requisite for their food can be obtained in the wild state, and could also be cultivated, render possible an almost unbounded development of the production of cocoons. No difficulty need be anticipated as regards carriage of the cocoons, nor need there be any delay likely to cause harm, in transporting them to the manufacturer.

7. A more accurate preliminary forecast of the prospects of the industry could be made, if certain information, which it is hoped to obtain, were available, and for this purpose the

Government of India have in their last quoted Resolution directed the following further inquiries to be made :—

* * * * * * *

"12. The results obtained by Mr. Wardle, as well as by others working independently, are so important, and so full of promise as regards the manufacture of this silk and the utilisation of the manufacture for apparel and other purposes, that it is eminently desirable to thoroughly investigate the question of production. Information on this subject has been sought from various quarters, but the information in the possession of Government is not sufficient to enable it to furnish precise answers. Yet it is necessary, if the attention of capitalists is to be attracted to the development of this industry, that full information should be forthcoming. M. Natalis Rondot, a delegate from the Chamber of Commerce of Lyons to the Paris Exhibition, and President of the Jury in the Silk Section, has written to the Government of India, asking for information on the following points, not only as regards the Tasar worm, but also as regards other undomesticated worms :—

(1) an enumeration of the different kinds of wild worms;

(2) the districts from which each kind is obtained, and in what quantities;

(3) the species of worm from which each kind of silk is manufactured;

(4) the trees on which the worms feed;

(5) the uses to which the silk is put by the natives;

(6) the markets where they are to be purchased;

(7) the probable prices of dry cocoons of each kind and of the silk as reeled by the natives;

(8) the probable quantities retained for local consumption and available for exportation to European silk mills;

(9) and the outturn in money value of the silks woven in India, which M. Rondot thinks must be considerable, especially if Tasar and other similar silks commonly worn by the natives are taken into account.

"13. M. David, of St. Etienne, also asks for information on the following points :—

(1) the nature of the chemical agent used by natives to soften the cocoon;

(2) whether the natives can reel a cocoon more than a year old;

(3) the length of time elapsing from the spinning of the cocoon and the emergence of the moth;

(4) whether the dark and light coloured cocoons which are found mixed in the bales sent from India are of different varieties, and whether they are found the same localities;

(5) also, whether it would be possible to obtain bales containing only light-coloured cocoons.

"14. Some information, but of a vague and general kind, exists on a good many of the points enumerated by M. Rondot, and the Governor General in Council desires that an effort may be made to cause such specific information as is obtainable, with special reference to the quantity obtainable and the prices on the spot, to be furnished with as little delay as possible. It is also much to be desired that particulars of manufacture should be obtained as far as possible."

8. In order to facilitate search for the information which is required, a short *resumé* is given in an appendix to this Resolution (Appendix A), of what is already known in answer to each of the questions here asked. Directions will be issued for the collection of further information in answer to these questions. The information contained in the Appendix is of a vague and general kind, and is probably not even entirely correct as regards this Province as a whole. It will need verifying in detail as regards each district, and each distinct locality in the Province. In many respects it is also very incomplete. In supplying the information required, it should be understood that what is needed is not wide and general speculations affecting the Province generally, but exact local knowledge, to be obtained by careful inquiry within the district on which report is made.

9. Looking to the great importance to the Province of Assam of the development of a new industry, and the production of a new export staple, the Chief Commissioner is anxious that every effort should be made to develop the silk industry. He therefore solicits the active co-operation of the many European gentlemen resident in this Province. He feels sure that there must be not a few gentlemen whose training and tastes and opportunities must enable them to render very material assistance, both in collecting the information now called for in paragraph 7 of this Resolution, and in making collections of wild silk-worms' cocoons, as is mentioned in paragraph 3, accompanied with information regarding the natural history of these silk-worms, and the price and probable quantity in which they can be obtained at present, either wild or under any system of cultivation.

But, above all, the active co-operation of European gentlemen is needed, if the cultivation of the more commonly-known silk worms of Assam is to be developed, so as to form an important staple of trade. There is much cultivation of silk in Assam, but such as there is is chiefly in small quantities, and for home use. There does not seem to be any reason why the production of cocoons should not be almost indefinitely extended. The Chief Commissioner will be glad to hear that the subject has engaged the active attention and interest of gentlemen in this Province. Communications conveying any information of interest on the subject should be addressed to the Secretary, and will always receive the Chief Commissioner's attention; and he hopes that, in addition to the replies which will be received from Government officers in answer to the enquiries contained in paragraph 7 valuable information may be supplied to him by many gentlemen in this Province.

APPENDIX A.

Information at present available on the subjects of inquiry mentioned in paragraphs 12 *and* 13 *of Resolution of the Government of India quoted in the foregoing Resolution of the Chief Commissioner of Assam, paragraph* 7.

Questions (1) and (2).—The following is a list of the different kinds of silkworms, domesticated and wild, which are said to exist in this Province :—

Silkworm.			District in which known to exist.	Approximate quantity in which supposed to be obtainable.
Local name or common name.		Scientific name.		
I. Tasar or Katkuri ...		Antheræa Paphia (probably there are several distinct species of this silkworm).	Upper Assam ... Cachar (?)	Unknown, said not to be utilized.
II. Munga or Muga ...		Antheræa Assama ...	Throughout Assam, cultivated in Assam, wild in Cachar.	Not known.
III. Goree or Deo-muga		Bombyx religiosæ ...	Assam. Sylhet, and Cachar (?) ...	„
IV. Eria or Arindy ...		Attacus Ricini ...	Throughout Assam and Cachar (?)	„

Of many of these wild silkworms the local name is unknown. Probably, owing to the silkworm being but little noticed, there is no distinctive local name. In such cases, it will not always be easy to ascertain if the silkworms really occur in any district. Specimens of unknown kinds, if obtainable, can, however, be forwarded with such detailed information as is known, which will enable them to be identified. In supplying information, it should be stated exactly under column 3 whether the worm is known to exist in the particular district reported on, and in column 4 should be stated what is the quantity obtainable in the district reported on now, and what it is presumed the quantity might become, if a steady demand existed, in the opinion of those who have most practical experience. The amount of silk obtainable should be shown as well as the amount of cocoons. Special attention is directed to this point as one of very great importance in regard to the future of the silk trade.

The silk of the Múga worm varies according to the food it lives on, which again varies in different districts. It should therefore be shown in the replies the kind of silk or cocoon obtainable in each district, as well as the quantity of each kind obtainable.

The *Bombyx* (*Antheræa*), local name *Yama-mai*, a native of Japan, is said to be very hardy, and would be likely to do well in India. It is not known to exist in Assam, but enquiry might be made for it.

Question (3).—The species of worm from which each kind of silk is obtainable.

The five kinds of silk common in Assam are :—

(1.) Medanggori or Mezankuri, the produce of the Múga when fed on the Mezankuri (*or* Adakuri) tree (*Tetranthera polyantha*).

(2.) Múga, the produce of the same worm when fed on the Sum tree (*Machilus odoratissima*), the Sualu tree (*Tetrantherà monopetalu*), and several other species of trees.

(3.) The Eri, the produce of the Eri or Erendi worm, *Attacus ricini*, which is only spun and not reeled. This worm is fed on the leaves of the castor-oil plant (*Ricinus communis*) and the Kesseru tree (*Heterapanax fragrans*).

(4). Pát Minor, a yellow silk, the produce of the worm *Bombyx Cræsi*.

(5.) Pát Major, a white silk, the produce of the worm *Bombyx textor*.

There may be other kinds of silk made, particularly among hill tribes, and, if so, information on this point would be interesting. For instance, some Cacharis are said to work up the produce of the *Attacus Atlas* into clothing in small quantities for their own use; and inquiries among the hill tribes, Nágas, Gáros, Khásis, Cacharis, Mikirs, Lushais, Manipuris, &c., would probably result in very important knowledge on the subject of utilising many comparatively unknown wild silkworms.

Question (4).—Trees on which the worm feeds:—

I.—The Tasar or Katkura silkworm feeds on—

Local name.	Scientific name.
Country almond	Terminalia catapa.
Assun	„ alata.
Saj	„ tomentosa.
Jamu	Syzygium jambolanum.
(Baer) Ber or Bher	Zizyphus jujuba.
Simul	Bombax malabaricum.
Sal	Shorea robusta.
Teak	Tectona grandis.
Sidah	Lagerstrœmia parvitlora.

It is of importance to ascertain upon which of the above trees the Tasar thrives best.

II.—The Munga or Múga silkworm feeds on—

Local name.	Scientific name.
Sum (Assam) Cheng Thesal (Cachar) ...	Machilus odoratissima.
Sualu	Tetranthera monopetala.
Mezankuri or Adakuri	„ polyantha.
Diglotti	„ glauca.
Pattichunda	Cinnamomum obtusifolium.
Kotoloah	Cylicodaphne nitida.
Bumroti	Symplocos grandiflora.

III. The Goree or Deomuga (*Bombyx Religiosæ*) silkworm feeds on—

Local name.	Scientific name.
Peepul	Ficus Religiosa.
Bot	Ficus Indica.

IV. The Eri silkworm feeds on—

Eri	Ricinus communis.
Kesseru	Heteropannax fragrans.

(Besides these two, Geoghegan mentions various other plants, but it is doubtful if these have been carefully verified, and they are named here more by way of suggestion than as statements of fact.)

Common Ber	Zizyphus Jujuba.
Keora Kaura	Sapini Schiferum.
Goolunchа Phul (Assam) / Bherondo (Bengal)	Jatropha Curcas.
Bengali Alu.	
Koosrol.	
Hindu grass.	

V. Pat Minor, Pat Major, Pat Pulu, or Boro Pulu (*Bombyx textor and B. Cræsi*) feed on—

Noonee, or the wild mulberry	Morus Indica.

VI. The Attacus Atlas.

The following is the list of trees fed on by this worm, given by Mr. Brownlow, of Cachar, in the journal of the Agri-Horticultural Society:—

"1. Phakeera (Cinchonaceæ) Foliage slightly bitter; stature middling, tolerably abundant.

"2. No native name,—probably a laurel; foliage redolent of prussic acid, fruit like a plum, kernel containing a large portion of oil, resembling that of bitter almonds; stature large, not very common.

"3. Could not find out any native name, but the tree may easily be identified by its resemblance to the China tea plant, and its frequent occurrence as a weed in tea-gardens, where it is often left by the weeders by mistake for tea; stature middling, common in jhúm lands, less so in primitive forest.

"4. Nagdana (*Artemisia sp.*?)—An annual, and one of the most common of jhúm weeds; it may be known by the satin pile on its leaves, which, rubbed in the finger and smelt, cause sneezing; they possess a scent similar to lavender. The Cachar name is quite local, and is probably given to it because of its fragrance. The true Nagdana is the *Boswellia Thurifera*; this plant is too small in stature to be available as a silk tree, for which in other respects its abundance peculiarly fits it.

"5. Monphul (Cachar name), known in Dacca as the Myna kata, a thorny, rapid-growing fruit tree, not indigenous, but found in great quantities self-sown about the villages; the fruit is somewhat smaller than an apple, but, except in being yellow, has a good deal of resemblance to that fruit; the fruit is cut up by the natives into slices, which are threaded on the string and hung up in their houses to smoke and dry; stature middling.

"6. Balos, a rapid-growing weed which affects new clearances; the deep green of the leaf, with the elongated delicate red leaf stalks enable it to be easily recognised; very common, and of large stature; fed on also by *A. Canningi*.

"7. Koorkooree, of the commonest of jhúm weeds; it invades and monopolizes large tracts of land; exclusively, or very nearly so, grows to a middling stature, and, where abundant, shades the ground completely. This tree one of the most eligible for trainning the Atlas on.

"8. Lutki (*Osbeckia*), the common conspicuous pink-flowering plant; it scarcely grows large enough to train silk on, but the silk off it is very white.

"9. Bon Chelita, so called probably from a resemblance in the grouping of the leaves to the Chelita; a large hardy, rapid-growing tree, sufficiently common for purposes of silk cultivation.

"10. Kadam (*Nauclea*) a common large-leaved rapid-growing tree, especially on new clearings, where it soon, if allowed to grow, overshades the land; well adapted as a nurse for young tea or any delicate plants; the leaves become of great size when the plant is young, especially on rich hill lands; as the tree grows larger, they diminish in size; occurs mostly on hill lands, seldom on alluvial.

"11. Chelita (*Dillenia speciosa*), a large-sized luxuriant tree, partial to alluvial lands, on which it may be found in clumps or groves; grows very well even in badly-drained soil, and with water about the roots; owing to the large size of this tree, its growing in clusters, and the large quantity and bushiness of its foliage, it is eminently adapted for training the *Atlas* worm on.

"12. Boidraj (*Padrelaceæ*?) a large-sized and very common tree in old forests. *Atlas* silk of this is very dark. This tree is very common in the Sylhet district, and occurs all the way down to Dacca.

"13. Lood, also a full-sized tree, may be known by its dark green shiny leaves, and its bark, which is thicker than that of probably any other tree; this tree is also fed on by the *A. Canningi*.

VII.—Attacus Cynthia feeds on—

Castor-oil plant	Ricinus Communis.

VIII.—Cricula Trifenestrata—

Cashew nut	Anacardium orientale.

IX.—Actias Selene—

Wild cherry, walnut.

Question (5). The uses to which the silk is put by natives:—

From the Munga are made the following:—

Soorias (dhooties).	Rhiha (scarves).
Meklas (petticoats).	Chhelang (for men's shoulders).
Jootha Borakapor (worn in winter).	Masahris (curtains.)

Eria is converted into Borkapor, Mekla, and Rhiha, Goursha.

Pát is utilised in the same way, and is also used for masahris (curtains). This is chiefly used for the clothing of the higher classes.

The remaining silkworms are not known to be largely used, but clothes are made of Atlas and Deo-munga silk, to a small extent it is believed, by Cacharies and others, and probably by many hill tribes.

Question (6). The markets where they are to be purchased :—

It is not known whether any of these silks are to be had in the local bazaars or elsewhere in Assam.

Question (7). The probable prices of dry cocoons of each kind and of the silk as reeled by the natives :—

The answer to this unknown. The present prices can be ascertained by local inquiry in bazaars and fairs, and the opinion of local traders and producers taken as to the probable result of an extended demand in reducing the price. The information on this point is of too old a date to be of any present value. It is a question of much importance as regards the future of the silk trade in this Province, and very careful inquiry should by made on this point.

Questions (8) and (9). It is difficult to estimate the probable quantity of silk retained for local consumption. This and the next question can only be answered by local experience and observation of the proportion of people who wear silks of different classes. The average value of these, the approximately known population, and the frequency with which the silk cloths have to be renewed are data on which these questions could be roughly answered. The opinion of native traders and others could also he ascertained on this point.

It is not believed that at present there is much silk available for exportation. The answer to this is easily ascertainable by inquiry in bazaars and of local traders.

See para. 13 of Resolution I., dated 28th February, 1879, Government of India, Department of Revenue, Agriculture and Commerce.

Question (1). The nature of the chemical agent used by the natives to soften the cocoons :—

A ley of potas formed from plantain-leaves, and cowdung and water, are the only chemical agent known to be used by natives to soften the cocoons.

Question (2). Whether natives can reel a cocoon more than a year old is not known :—
This can easily be determined by local inquiry.

Question (3). The length of time elapsing from the spinning of the cocoon and emergence of the moth :—

For convenience, the natural life of the better known worms is given below in a tabulated form. The specific information required under this is entered as correctly as it is known in the last column.

As the trade requires that the chrysalis be killed before it emerges as a moth in the case of the cocoons which are intended for commerce, and not to be reserved for breeding (for otherwise the hole cut in the cocoon diminishes its value), this question is of some importance. The facts on this subject should be carefully determined, and the statements here made should be carefully verified :—

Name of silkworm.	Period of life of moth.	Period from laying of eggs to their being hatched.	Period of life of the worm.	Period from beginning of worm to spin to completion of chrysalis.	From completion of chrysalis to emergence of moth from cocoon.
I. Tasar or Kutkuri ...	3 or 4 days ...	9 days	36 days ...	15 days ...	Not given.
II. Munga	6 days ...	10 days	30 days ...	5 or 6 days ...	10 to 20 days.
III. Eria or Arendi	Not known exactly.		A complete cycle is made in from 43 days to two months.		
IV. Pat Major } *Bombyx textor* } / Minor } „ *Cræsi* }	3 or 4 days ...	10 months ...	30 to 40 days ...	5 or 6 days ...	20 to 25 days.
Attacus Atlas	No exact details are given.		Eggs lie dormant through cold weather, and 2 or perhaps 3 crops are obtained in the year.		

The Pát gives only one crop of cocoons in the year.

In Upper Assam the eggs of the Pát are hatched about the end of December.

„ Lower „ „ „ „ January.

The Eria sometimes gives as many as seven crops in the year. The Múga gives five crops a year. The Tasar gives, it is believed, two crops a year. Attacus atlas gives two or perhaps three crops.

Question (4). The difference in the colour of cocoons in the case of cocoons of the same silkworm is known to be due partly to the local influence of climate and largely to the food which the silkworm eats.

An exact answer to this question can only be given by examination of the bales in question by an experienced sericulturist. It will, however, be possible to say whether in any single locality dark and light coloured cocoons are mixed before sale, and whether this is due to the mixing of different varieties of cocoons, or whether the cocoons in one bale are of the same variety, but vary from other causes such as are suggested above. This point should be determined by local inquiry.

Question (5). As the trade is at present, there might perhaps be some difficulty in effectually sorting cocoons, but under a developed system of sericulture there ought to be no difficulty in sorting the cocoons to suit the market. Suggestions might be offered on this point.

APPENDIX B.

A Note on a few of the more important facts known on the subject of practical Sericulture in the Province of Assam.

It is not intended that this Note should replace the detailed and more elaborate information which is given in special works on this subject. Only a few of the more salient points to be observed in practical sericulture are here mentioned.

2. As regards their treatment, the natural distinction of silkworms is into those which are wholly domesticated and those which are partially domesticated. About the wholly wild silkworms which are collected from the jungles, such as is the case generally, though not invariably, in India with the Tasar silkworm, little need be said. It may, no doubt, be possible to give some artificial stimulus to their production, and in a sense they may then be said to be partially cultivated. Also, many of the wild silkworms may be capable of being domesticated. This is a point which can only be determined by experiment. It may be doubtful whether any large trade in wild silkworms be possible in this Province; but, when once the cocoons have been collected, the general remarks which are made below, on the subject of sorting the cocoons and packing and despatching them will apply to this class equally with the other classes.

3. Of wholly domesticated silkworms, the common kinds in Assam are the Pát Major and Pát Minor, and the Eria or Arundy. Details, as far as they are known, are given in Appendix A (in answer to Questions 4 and 3 A) upon the subject of the food of the better-known silkworms and their natural life, and this information need not be repeated in full. Both these kinds of silkworms are fed wholly within doors, the leaves of the trees and plants they feed upon being plucked and brought to them. The Pát (*Bombyx textor*), which is closely allied to the common mulberry silkworm (*Bombyx mori*) of Europe, is more delicate, and has to be treated with more care than the Eria. Also, it gives but one crop in the year, while the Eria may give seven crops. The Silk of the Pát is, however, the more valuable. Great care has to be taken to keep everything about the Pát scrupulously clean.

4. A general point to observe in silkworm-rearing is that silkworms of as nearly as possible the same size and strength only should be allowed to feed together. If this rule be not observed, the stronger silkworms will bully the weaker, and deprive the latter of their food.

5. The chief partially-domesticated silkworms of this province are the Múga or Munga, the Tasar or Kutkuri, and the *Attacus Atlas*. The two latter, the Tasar and the *Atlas*, are also found in a wholly wild state, and a silkworm, probably the same as the Múga of Assam, is found wholly wild in Cachar. Some of the other wild silkworms of this Province are said to have been partially domesticated. In Assam, the Múga may be said to be wholly domesticated, but in its general treatment corresponds to the Tasar and Atlas, and other wild silkworms which have been at times partially domesticated, and it is convenient therefore to consider the Múga as of this partially-domesticated class.

The difference in treatment of this class of silkworms consists in this, that they are fed out of doors and not kept within houses. The Múga eggs are laid on small bundles of grass of straw, half the thickness of a finger, and tied to the trees before they are hatched. The Múga worms are reared on the trees, and standing in the open, and not on leaves, collected and given to the worms in houses, as is the case with Pát and Eria. Great care has to be taken to destroy the ants, which would otherwise kill the silkworm. This is frequently done by putting baits of molasses, fish, or dead toads, at the foot of the tree. But, besides these enemies, the presence of a large collection of silkworms is sure to attract other enemies: crows, wasps, and the ichneumon by day, bats, owls, and rats by night, will, unless guarded against, destroy great numbers of the silkworms.

The silkworms themselves are prevented from leaving the tree by bands of some smooth substance, such as fresh plaintain-leaves, over which they cannot crawl. If all the food of the tree has been eaten, they are allowed to descend, and collected and put on another tree. When about to spin, they will descend the trunk until arrested by the plaintain-leaves. They are then collected in baskets and over these baskets are suspended branches of dried leaves, up which they crawl and form their cocoons. Many silkworms drop off the trees, and the ground under the trees on which they feed should therefore be kept clear, to enable them

to be easily found and replaced on the tree. Continual heavy rain is apt to wash them off the tree, but otherwise they seem to be able to protect themselves from the rain by crawling under the leaves.

6. It remains now only to explain how the cocoons should be dealt with when obtained. The cocoons will be known to be completed by the absence of any sound within. The first care will naturally be to select a sufficient number for breeding purposes. Many of the silk-worms die before completing the spinning of the cocoon. These are, of course, no use for the present purpose. They may be distinguished generally by their being smaller, and in an incomplete condition, and by a hollow sound they yield when gently tapped. About an equal number of males and females are usually selected. The females may generally be distinguished by being larger than the males, and of a more symmetrical shape. The males have the cocoons somewhat irregular in shape, and as if pinched at one end. These are kept together in suitable places until they burst into the moth. The eggs are generally laid in one or two days, after which the moths die.

In the case of the silkworms which have been classed as wholly domesticated, neither in the stage of the moth nor in that of the silkworms is there any tendency to roam. But in the case of the partially-domesticated worms some care has to be taken to provide against this tendency, while, at the same time the moths must not be frightened by too severe restrictions.

7. A curious fact which has been noted in regard to these partially-domesticated moths is that it frequently happens that if a female moth be fastened out at a convenient place at night, a wild male moth will discover and impregnate the former. This fact is sometimes made use of to strengthen the breed of comparatively wild silkworms, which seem often to deteriorate under domestication.

A further point may be incidentally mentioned,—that crosses between different kinds of silkworms have often been attempted, and with some success, but this subject requires too elaborate treatment to be conveniently dealt with here.

8. Of the remaining cocoons, after the selection has been made for breeding, a further sorting will have to be made.

The French growers sort the cocoons of the single common silkworm (*Bombyx mori*) into as many as nine varieties, distinguishing the good ones from those in which the worm has died, and making other distinctions required by the trade. The reeling of silk from the cocoons is nearly all done on the continent of Europe, and principally in the south of France. As a branch of manufacture, reeling is unknown in England, which latter country only works up the reeled silk. The trade in cocoons would therefore be, at least at first, with France, and, for the purpose of ascertaining what assortment of cocoons was required, it would be necessary for the grower to put himself in communication, through his agents, or otherwise, with the manufacturers of that country. There would be no difficulty whatever in this, and when once it were ascertained in what manner the cocoons should be sorted, there ought to be little practical difficulty in sorting them. In despatching specimen bales, the point of importance would naturally be to make the bales as like the samples as possible; and probably at first it would be well to make as many distinctions in the cocoons as were readily noticeable, and to err on the side of over-minute distinctions rather than otherwise. The manufacturers would at once point out which distinctions were of importance, and which not so.

9. As in the case of good cocoons, the chrysalis would in a longer or shorter period eat its way through, and perforate the cocoon, it is necessary, where the cocoons are intended to be reserved for reeling, to kill the chrysalis carefully. This is done in various ways,—by exposing them to the sun, by placing them in boiling water, or by placing them in an oven with a gentle heat. Where the cocoons were intended to be packed for export, the first or last plan would probably be found to be the best.

Damaged cocoons, and those perforated, and almost all classes of wild cocoons, have a value, as, where they cannot be reeled, they can still be turned to account for spinning.

10. There still remains to mention the very important question of the cultivation of the more important articles of food of the silkworms. The discussion of this has been avoided: many of the necessary descriptions of food will be found growing wild in the jungles. In the case of these trees, it will not be difficult to study their habits. A list of the principal trees on which the several classes of silkworms feed will be found in Appendix A in answer to Question (4). Further information on this subject will no doubt be gradually obtainable as the necessity for the cultivation of food-stocks arises. Meanwhile, very much can be gathered from the practice of the native silkworm-growers on this as on other points.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 29th JULY 1879.

GENERAL REMARKS.—In Madras there has been good rain and prospects continue to improve; prices have fallen slightly. In Bombay more rain is still required in Gazerat and Konkan, where, however, there have been some showers; throughout the Deccan and Southern Mahratta Country there has been good general rain which has greatly improved prospects; cholera continues to be severe in Sind. Rain is reported from all districts of Bengal except Balasore; but it has been generally lighter than during the preceding week. Prospects are favourable; more would, however, be welcome in parts of the Burdwan and Orissa Divisions and in the 24-Pergunnahs. In Central Bengal, Behar, Dacca and Furreedpore some damage to early crops in consequence of excessive rain and floods is still mentioned in the reports. In the North-Western Provinces and Oudh the desired break in the rainfall has occurred and has done much good; prospects are excellent. Rain in the Punjab has been unequally distributed; the fall up to date is below the average, and more would be an advantage in many places; in a few districts matters might, perhaps, be better; but are not at present unfavourable any where except in Hissar and Sirsa, where there is some lack of forage for cattle. There has been rain throughout the Central Provinces; but here as in parts of Bengal rice transplanting would be the better for a further fall. In Burma the rain has been general but less than in the previous week; the health of the Province is good and cattle disease is decreasing; the Irrawaddy has risen high and in Bassein danger is apprehended to the Ngawoon embankment. In Assam, Mysore and Coorg prospects continue favourable. The rain that has fallen in Berar during the week has been very beneficial. In Central India good rain has fallen except at Morar and Sirdarpore where it has been slight; prospects are improving, but more rain is wanted here and there in Rajputana. There has been slight and as yet in sufficient rain during the week.

The week's reports are generally satisfactory. In the Central districts of the Punjab, in Rajputana, and in some districts of Bombay, the season has as yet been too dry; but in Madras and the Deccan where the July rains were at one time deficient prospects have much improved. Although in some parts of India a break is still needed, and in others, besides those mentioned above, more abundant rain would aid the agricultural operations in progress, it may be said that, on the whole, prospects are thus far decidedly good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (July 26th)	Average rainfall of 9 stations 1·12; no reports from Narsarowpet and Nandigama.	Rice 11·21, *cholum* 14·13, *raggi* 18·14, *cumboo* 13·23; 43 inches water over anicut; standing crops require more rain; canal supply deficient.
Kurnool („ „)	Average rainfall of 8 stations ·95.	Rice 11·07, *raggi* 19·62, *cholum* 15·08, *cumboo* 16·81; rain much wanted in Koilkuntla, Nandial and Cumbum; crops reviving in other taluks; *korra*, cotton and oilseed being sown in parts; pasture and water sufficient.
Tanjore („ „)	Average rainfall 13 stations 1·92.	Rice 9·81, *cholum* 14·76, *raggi* 15·65, *cumboo* 16·17; Cauvery 24 to 114 inches water; wet and dry crops in good condition; *gingelly* outturn ⅜ths.
Madura („ „)	Average rainfall 13 stations 3·0.	Rice 9·64, *cholum* 15·93, *raggi* 16·27, *cumboo* 15·31.
Malabar („ „)	Average rainfall 14 stations 4·79.	Rice 9·94, *raggi* 17·38; prices slightly fallen in Cherakal and Ponani, risen in Wynaad and Calicut, stationary elsewhere; rain sufficient and favourable for first crop cultivation; pasture good. *General Remarks.*—Improvement in prospects maintained.
Bombay (July 30th)—		
Sind—		
Kurrachee ...	.....	River at Kotri on 27th 16 feet 7 inches—last year 17¾ feet; locusts appeared in Sehwan taluka—no damage; cholera cases 1,638, deaths 946; some cattle disease in two talukas.
Hyderabad ...	.....	Locusts and fever in 3 talukas; cattle disease in one taluka; want of water felt in southern portions of Tando division, in Kandiáro supply insufficient; total cholera cases 2,105, deaths 1,409.
Upper Sind Frontier...	.....	Weather occasionally cloudy but sultry; nights cool; prospects fair; *kharif* sowings progressing; early crops damaged by worms in 2 talukas; small-pox in one taluka; cattle disease in 2 talukas.
Guzerat—		
Ahmedabad ...	·10	Total rainfall 14·74, more rain much needed; transplantation of rice suspended for its want; slight cholera yet.
Pánch Maháls ...	1·5 on 28th	Rainfall most opportune to save withering crops.
Kaira ...	·18, at Thasra ·72	Prolonged break causing anxiety; 73 cholera cases in Nariad, 21 fatal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Surat ...	·39	Total rainfall 14·42, more rain needed; rice crops withering and sowing retarded; one death from cholera in Surat.
Broach ...	Maximum at Wágra 1·9, minimum at Broach ·04	More rain wanted; weather cloudy; public health good.
Khandesh and Násik—		
Khandesh ...	Generally fair; maximum 5·92, minimum ·30	Sowing nearly completed; young crops healthy.
Násik ...	Ample rain everywhere except in Peint, Igatpuri and some parts of ghát villages.	Four deaths from cholera; weather hot.
Konkan—		
Tanna ...	·28	Total rainfall 11·99; transplantation of crops stopped for its want; slight cholera continues in Bassein and Salsette talukas.
Colába (July 28th)	·23	Total rainfall 29·05; public health generally good; fever in Mangaon taluka; cattle disease continues in Mahad taluka; transplanting operations generally suspended; in Alibág and Pen talukas young plants withering for want of rain.
Ratnágiri („ 22nd)	2·93	Total rainfall 42·89; transplantation of rice suspended for want of rain; rice, *nagli*, *vari* and *harie* plants not flourishing; 15 deaths from fever in Malwan taluka.
Deccan—		
Poona (July 27th)	Maximum 4·81 at Baramati and Bhimthári; minimum 2·39 at Junnar.	More rain wanted in Mawal and Junnar.
Ahmednagar ...	4·09, fall general.	Sowing delayed in Newása owing to continuous fall, but completed in 4 talukas and progressing in others; cholera in Nagar and Akola, deaths 4.
Sholapur ...	Good and general.	Prospects much improved; young crops good; rats causing damage but being killed; fever in Malsiras and Sholapur; condition of poor bad but hopeful.
Satara ...	2·37; good fall throughout district except in Pátan and Jauli talukas.	Total rainfall 17·10; crops thriving.
Southern Mahratta Country—		
Kaládgi ...	Maximum 5·17 at Kaladgi, minimum 1·02 at Bagalkot; fall general.	Sowing resumed; rats still destroying crops; slight fever; prices falling.
Belgaum ...	Rainfall generally good except in Bidi and parts of Athni.	Prospects good.
Dharwar ...	Average 1·80	Rice crops require rain; sowing operations progressing; damage from rats continues, their destruction vigorously carried on.
Kanara ...	Maximum 8·44 at Karwar, minimum ·02 at Supa.	Total rainfall 70·26; transplanting continues.
Kattywar and Gaekwar's Territory—		
Rajkot ...	1·01	Total rainfall 17·83; more rain wanted; diarrhœa, fever and slight cholera continues.
Wadhwán ...	1·18	Total rainfall 9·89; weather not good; fever prevailing in Khapeli in Jhinjhuwára.
Baroda ...	·06	Total rainfall 22·15; more rain much needed; weather cloudy; public health good.
		General Remarks.—Good rain general throughout the Deccan and Southern Mahratta Country, has improved prospects greatly there; rain is urgently required still in Guzerat and Konkan; weather in Bombay cloudy and showery; cholera continues in Sind, Guzerat, Tanna, Násik and Ahmednagar.
Bengal (30th July)—		
Chittagong ...	1·21	
Noakholly ...	2·51	Small-pox cases.
Chittagong Hill Tracts...	1·18	Fever still prevalent.
Hill Tipperah ...	1·43	Public health not good; fever prevailing.
Backergunge ...	2·94	Fever prevalent.
Furreedpore ...	1·31	
Dacca ...	4·99	Public health good.
Mymensingh ...	3·04	
Tipperah ...	3·52	
24-Pergunnahs ...	·71	Public health generally good.
Jessore ...	3·11	Fever still prevalent in Bagirhat; health elsewhere generally good.
Nuddea ...	·30	
Moorshedabad ...	·96	Public health good.
Pubna ...	1·54	Public health good.
Rajshahye ...	1·71	
Bogra ...	2·41	Public health good.
Dinagepore ...	3·89	
Rungpore ...	5·12	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Cooch Behar ...	13·51	Small-pox cases in places.
Jalpáiguri ...	2·29	
Darjeeling ...	4·57	
Midnapore ...	3·42	Cholera decreasing.
Howrah ...	·43	
Hooghly ...	5·51	
Burdwan ...	1·24	Cholera cases in Cutwa, Culna and Raneegunge sub-divisions.
Bankoora ...	1·76	
Beerbhoom ...	·63	
Sonthal Pergunnahs ...	1·87	
Bhágalpur ...	1·14	
Monghyr ...	1·54	Cholera continues.
Purneah ...	1·97	
Maldah ...	·61	
Durbhunga ...	4·16	
Mozufferpore ...	1·67	Cholera still severe in Seetamurhee sub-division; elsewhere decreasing rapidly.
Sarun ...	3·70	Cholera still prevalent.
Chumparun ...	1·99	
Patna ...	·28	
Gya ...	2·78	Cholera still prevalent.
Shahabad ...	·19	Return not received.
Hazáribágh ...	2·14	Cholera still prevalent in north.
Lohardugga ...	·30	Little if any abatement of cholera and small-pox.
Manbhoom ...	·44	Cholera not yet disappeared.
Singhbhoom ...	2·17	Cholera slowly abating.
Balasore ...	*Nil.*	Cholera much decreased; 182 deaths during week ending 24th instant.
Cuttack ...	2·02	
Pooree ...	6·09	Public health good.
		General Remarks.—Rain this week generally much less with favourable prospects, but in Burdwan and Orissa divisions and in 24-Pergunnahs more rain still required for transplantation; in Central Bengal, Behar, Dacca and Furreedpore some damage done to early crops by excessive rain and floods; cholera much decreased in Balasore and Midnapore, but still unusually prevalent for the present season.
N. W. P. and Oudh—		
Benares (July 29th)	Benares, ·5; Chandauli, ·3; Gangapur, ·41.	Prospects continue good.
Allahabad („ „)	·12 [average of week]; rain having fallen chiefly in Phulpur, Handia and Karchana, and little or none in rest of district.	Prospects still excellent; general health good.
Jhansi (July 30th)	·4	Weeding of crops commenced; prices stationary; health good.
Agra („ 29th)	·19 [average.]	Prospects excellent; fever and ague increasing.
Bareilly („ 30th)	4·7 [average.]	There is now a break which will do much good; health good.
Meerut („ „)	1·4 at Meerut; 4·8 at Ghaziabad; 5·1 at Hapur.	Clear and cloudy alternately; crops well forward, in excellent condition; health good; cheapest prices, wheat, gram and *bajra* 17, *jwar* 30, and barley 22 seers.
Kumaun („ 28th)	Heavy and continuous rain up to 26th, since fine.	Cholera abating.
Lucknow („ 30th)	2·5	Prospects good.
Partabgarh („ 28th)	2·7 at Sadr; 2·6 at Patti; ·3 at Kunda.	*Kharif* sowings are vigorously progressing; there have been partial breaks in rain during week.
Sitapur („ 30th)	3·4	Several days sunshine; prospects very good.
Fyzabad („ „)	·9	The break of rain has been of great advantage.
		Summary.—There has been a general break which has done much good; prospects excellent; cholera abating in Kumaun; health good, with the exception of some fever and ague in Agra.
Punjab (July 29th)—		
Delhi ...	4·70	Prospects continue favourable; slight fall in prices of food grains; fever on the increase.
Hissar ...	...	Harvest prospects are at present bad in the Hissar and Sirsa districts, and cattle are being removed for want of forage; prospects are fair in the Rohtak district.
Umballa ...	1·50	Crops fair but more rain wanted; cholera diminishing.
Jullundur ...	3·40	The rainfall has not been general, so that prospects are not quite satisfactory throughout the district; prices falling slightly.
Amritsar ...	1·30	More rain required; slight rise in prices; cholera diminishing.
Lahore ...	*Nil.*	Crops suffering; cholera decreasing.
Ferozepore ...	*Nil.*	Prospects rather unfavourable.
Rawalpindi ...	4·50	Agricultural prospects good; cholera decreasing.
Mooltan ...	*Nil.*	Crops and health good; prices of food grains have risen slightly.
Dera Ismail Khan ...	*Nil.*	Prospects fair; health good.
Peshawar ...	*Nil.*	Rain much wanted; prospects unfavourable; prices have risen slightly.
Sialkot ...	...	Report not received.
		General Remarks.—The rainfall generally is still below the average, and more is needed in most districts of the Punjab.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
Nimár ...	2·59	Cotton crop good; no epidemic; prices steady.
Hoshangabad ...	2·8	Prospects fair; small-pox continues.
Betúl ...	1·81	Prospects good; cholera continues; prices stationary.
Wardha ...	4·46	Sowings completed; health good; prices unchanged.
Nágpur (July 30th)	5·29	Sowings completed; prospects favourable; health good.
Chánda ...	1·32	Sowings continue; cholera in Brahmapuri tahsíl; prices stationary.
Narsinghpur ...	2·38	Crops favourable; health good; prices stationary.
Bhandára (July 29th)	·88	Rain much wanted for rice transplanting; cholera continues; prices slightly risen.
Seoni ...	2·7	More rain required for transplanting rice; cotton and *jowar* thriving; one cholera case.
Bálaghát ...	1·25	Rice transplantation progressing; fever prevalent; prices stationary.
Mandla ...	5·29	Prospects favourable; cholera continues; prices stationary.
Saugor ..	3·1	Weeding progressing; prospects good; small-pox continues; one cholera case; prices stationary.
Damoh ...	3·09	Rain beneficial; health good; prices stationary.
Jubbulpore ...	1·86	Weeding progressing; small-pox continues; prices stationary.
Raipur ...	1·98	Cholera and small-pox continue; prices stationary.
Bilaspur (July 26th)	1·44	More rain wanted for transplanting rice; cholera continues; small-pox ceased.
Sambalpur („ 25th)	2·99	Prospects good; cholera continues; small-pox disappearing; cattle disease increasing.
Chhindwára ...	3	Prices favourable; slight fever; prices falling.
		General Remarks.—Rain general from 5·29 to ·88 cents; more required for transplanting rice in the districts of Chanda, Raipur, Bilaspur, Bhandára, Bálaghát and Seoni; prospects generally good as yet; cholera continues in seven districts; prices stationary.
British Burmah—(July 30th)		
Arakan Division—		
Akyab ...	3·33	Total rainfall 120·81; public health good in Akyab town; sporadic cholera in Rathaidoung township; slight cattle disease still prevails in some parts of district.
Kyoukphyoo ...	5·0	Total rainfall 98·0; cholera in Cheduba; 9 deaths from small-pox in Kyoukphyoo; slight cattle disease in 3 circles.
Sandoway ...	9·0	Total rainfall 125·0; public health good; agricultural prospects good throughout division.
Pegu Division—		
Rangoon ...	1·59	Total rainfall 48·26; no cases of cholera or small-pox in Rangoon town; agricultural prospects fair in district; slight fever in Syriam; 5 deaths from cattle disease, otherwise public health good.
Thonkwa (July 19th)	3·38	Total rainfall 40·14; public health good; 92 deaths from cattle disease in Donabyoo township, 19 in Yandoon; crop seedlings healthy.
Bassein ...	3·75	Total rainfall 43·88; public health fair; Ngawoon river rising higher, danger apprehended to embankment; 83 deaths from cattle disease in Yaigyee township from 1st to 14th, 4 in Myanoung from 8th to 15th, 96 in Thaboung from 10th to 23rd, 50 in Bassein from 19th to 27th, 92 in Laymyethna from 22nd to 28th; ploughing progressing.
Henzada ...	2·83	Total rainfall 41·89; public health good; 51 deaths from cattle disease in Zaloon township, 7 in Henzada, 24 in Oapho, 14 in Kanoung, 13 in Miganoung, 10 in Kyankheng; transplantation progressing; agricultural prospects favourable.
Tharrawaddy ...	1·71	Total rainfall 38·23; small-pox continues in Menghee; cattle disease still prevalent; ploughing continues.
Prome ...	·69	Total rainfall 18·31; public health fair; river rising; Prome town partially flooded.
Thayetmyo (July 19th)	...	Two cases cholera at Tsaain, 4 at Meidai.
Ditto („ 26th)	·89	Total rainfall 16·32; general health normal; paddy planting progressing favourably; river rising rapidly; deaths from cholera in town and cantonments 27, and in district 20.
Tenasserim Division—		
Amherst ...	2·06	Total rainfall 78·90; public health good; 24 deaths from cattle disease in Hlinebwai; ploughing nearly over; transplanting progressing favourably; crops reported good; more rain wanted.
Shwegyeen ...	4·36	Total raintall 60·75; public health good; ploughing and sowing progressing.
Toungoo ...	1·13	Total rainfall 32·94; one death from small-pox, otherwise public health good; agricultural prospects good; no deaths from cattle disease.
Tavoy (July 19th)	3·7	Total rainfall 91·5; public health good; ploughing nearly finished; no further report of cattle disease.
Mergui ...	...	No report received.
		General Remarks.—General health good; though cases of cholera and small-pox occur; cattle disease slight in Arakan, nearly disappeared in Tenasserim and prevalent in four circles of Pegu; progress of paddy cultivation statisfactory; high rise in river Irrawaddy.

Presidency or Province and District.	Rainfall for k preceding	State of agricultural prospects.
Assam—		
Gauháti (July 30th)	·92	Weather seasonable; transplanting of *sali* in progress.
Sylhet („ „)	12·86	Prices falling; prospects good.
Mysore and Coorg (July 30th)—	2·55 at Bangre; heavy rain throughout the Province	Prospects of season favourable; public health generally good; fever and other ailments continue in parts.
Hyderabad Assigned Districts—		
Amráoti (July 30th)	1·50	Rain has done much good; weeding commenced.
Central India (July 30th)—		
Indore ...	2·20	Rain now falling and has been general in Malwa.
Morar ...	·08	
Sutna ...	1·86	
Rutlam ...	1·82	Prospects good.
Neemuch ...	2·51	Crops improving.
Goona ...	·90	
Bhopal ...	2·10	Rain needed.
Sehore ...		
Ágar ...	·57	Health good.
Nowgong ...	2·90	
Sirdarpore ...	·07	Rain much wanted; crops have suffered.
Mánpur ...	2·30	Crops much benefited.
Rajputana—		
Abu (July 30th)	1·0	Sultry, cloudy.
Serohi ...	...	Total rainfall 27·6; two months' supply of water in tanks; wells good; health fair; rain much wanted; warmer; cool breeze; drizzling.
Marwar (July 26th)	*Nil* since 2nd.	Strong north-west winds; rain much needed; prices rising.
Meywar („ 25th)	...	Tanks, wells and health good; rain much needed for crops.
Harowtee („ 26th)	·02 in Deoli, ·14 in Touk, and ·25 in Kotah.	Health good; wind south-west; cloudy; crops suffering; rain greatly wanted.
Jhallawar („ 24th)	·09; heavy rain reported around.	Rain has improved prospects; health good; more rain required.
Ajmere („ 30th)	·14	Heat excessive; rain much required for *baráni* crops which are withering.
Jeypore ...	·29	Rain wanted; fever on increase; heat great.
Bhurtpur ...	1·89	More wanted; ague prevalent.
Ulwur (July 29th)	About ·50 in 4 tahsils	Sky rainy looking; locusts here and there; much fever.
Nopal (July 22nd)—	2·065	Total rainfall 33·2; weather improving, rain not being so constant.

PUBLIC WORKS DEPARTMENT.

IRRIGATION BRANCH.

IRRIGATION OPERATIONS OF THE NORTH-WESTERN PROVINCES FOR THE RABI SEASON 1878-79.

Nos. 874-80A., dated Allahabad, the 7th July 1879.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces and Oudh.

READ—

Statements A11, B11, C11, for fasl rabi, 1878-79.

OBSERVATIONS.—The total area irrigated during rabi 1878-79 was 1,075,952 acres. This area is greater by 321,000* acres than the average of the last four years, the areas of which differ very little one from the other, and it exceeds the largest area hitherto on record, that of 1868-69, by 118,539 acres.

YEAR.	Area.
	Acres.
*1874-75	752,745
1875-76	758,403
1876-77	776,358
1877-78	729,845
TOTAL .	3,017,351
Average	754,338
1878-79	1,075,952
Increase	321,614

2. The principal cause for this great increase of area is that the autumn rains of 1878 were very light and unevenly distributed. Although there were abnormal floods, especially round Aligarh, in the beginning of September, yet the rainfall was so local that by the first week of October hot west winds were blowing, and in many parts the ripening juár and bajra crops suffered severely. Hence a very brisk demand for rabi "paleo," or fallow, watering was felt from the last week in October. Notwithstanding slight showers in the beginning of December the demand continued, and it was still further intensified by frost in the middle of December. In January the demand was still continuous, the very moderate showers of rain not affecting the necessity for artificial waterings.

3. Another feature worthy of remark, which renders the season under review a very exceptional one, was the extremely dry state of the sub-soil as compared with that of 1874-75, 1875-76, and on this account, although the rainfall in November, December, and January of 1878-79 resembled that of the two years just mentioned, still the crops were not at all as well protected from drought. The sub-soil water was as much as six feet lower than in 1874-75, and thus it happened that the light falls of 0·3 to 0·6 inches in January had no effect in checking demand for irrigation even for the pulses.

4. This marked sub-soil drought showed itself beneficially in the wet lowlands of the Káli nadi, where, except in places that could not be broken up for cultivation, the crops were excellent.

5. The high prices ruling in the market undoubtedly had a marked effect in causing the people to take water for the poorer grains sooner and more readily than they generally do.

6. The following table compares the areas by canals for 1868-69, and for three years 1876-77 to 1878-79 :—

Canal.	1868-69.	1876-77.	1877-78.	1878-79.
	Acres.	Acres.	Acres.	Acres.
Ganges	734,132	592,951	503,701	725,871
Lower Ganges	...	...	...	16,020
Eastern Jumna	171,858	104,397	103,100	181,228
Agra	...	32,231	105,982	83,094
Dún	9,874	6,869	7,381	9,607
Rohilkhand	37,862	37,483	7,004	57,237
Bijnor	2,781	1,711	1,475	1,283
Hamírpur	890	457	757	1,026
Jhánsi	16	254	445	586
Total	957,413	776,353	729,845	1,075,952

7. The only falling off worthy of notice is on the Agra Canal. It is thus shown :—

	1877-78.	1878-79.	1878-79.	
			Increase.	Decrease.
	Acres.	Acres.	Acres.	Acres.
Gardens and Orchards	6,547	897	...	5,650
Wheat	29,214	14,521	...	14,693
Barley	17,618	37,068	19,450	...
Other grains	32,466	23,276	...	9,190
Pulses	18,669	6,324	...	12,345
Fodder crops	225	25	...	200
Dyes	...	440	440	...
Drugs	58	45	...	13
Oil-seeds	419	3	...	416
Miscellaneous	766	495	...	271
Total	105,982	83,094	19,890	42,778
Net Decrease	...	...	...	22,888

8. Allowing that the barley and mixed grains occupy practically the same place in the cultivator's series of crops, it will be seen that both wheat, the highest class of rabi crop, and pulses, the lowest class, suffered a marked diminution. This can only be accounted for by the fact that the canal is quite new, and that the cultivators having lost their kharíf crops in 1877, sowed an abnormally large area of rabi for the winter of 1877-78. There was no deficiency of water in the Agra Canal, the average discharge for November, December, and January being upwards of 1,100 cubic feet per second. The low duty obtained from the irrigation of only 83,094 acres is probably owing to the

extreme dryness of the soil compelling more frequent waterings, and the absence of famine pressure which caused a more regular style of watering.

9. The increase of irrigation in the districts of Meerut, Bulandshahr, and Etah is upwards of 100 per cent. on the year 1877-78. This is due partly to the heavy demand, and partly to the opening of new distributaries from the branches of the Upper Ganges Canal and the new irrigation of the Lower Ganges Canal.

10. The following table shows the areas of the principal crops for 1868-69 and the seven years 1872-73 to 1878-79 :—

Year.	Wheat.	Barley.	Other grains.	Pulses.	Opium and drugs.
	Acres.	Acres.	Acres.	Acres.	Acres.
1868-69	597,936	257,509	8,161	69,331	4,514
1872-73	363,529	160,023	13,560	38,422	7,994
1873-74	402,755	185,581	8,219	28,008	8,440
1874-75	445,970	204,896	26,139	48,629	10,184
1875-76	471,498	191,812	31,973	35,719	12,986
1876-77	532,221	160,361	24,821	26,584	12,530
1877-78	415,659	138,627	59,912	64,328	10,823
1878-79	586,776	266,472	115,914	66,901	15,371

11. It should be borne in mind in making comparisons that the columns for "barley" and "other grains" are interchangeable in their figures; the difference between a barley crop and a barley and gram and pea crop not having been very accurately noted in 1868-69.

12. The following compares the rabi assessments of the years noted :—

Canal.	1868-69.	1876-77.	1877-78.	1878-79.
	Rs.	Rs.	Rs.	Rs.
Ganges	14,50,689	11,75,306	10,23,990	14,91,412
Lower Ganges	...	...	...	37,276
Eastern Jumna	3,18,819	2,19,133	2,16,822	3,76,455
Agra	...	76,860	2,45,207	2,23,023
Dún	14,146	8,156	8,365	10,767
Rohilkhand	12,963	21,129	4,275	32,955
Bijnor	2,609	1,664	1,581	1,358
Bundelkhand	1,082	2,049	3,403	2,469
Total	18,00,308	15,04,297	15,03,643	21,75,715

Order.—Ordered, that the above Resolution be submitted to the Government of India for information, and that it be published in the *North-Western Provinces and Oudh Government Gazette*.

Ordered also, that copies be circulated to the Governments of Bengal and Punjab, and to the General and Public Works Departments of this Government, and to the Board of Revenue, for information.

By Order, &c.,

HENRY A. BROWNLOW, *Col., R.E.*,

Secy. to Govt., N. W. P. and Oudh, P. W. D., I. B.

R. B. CHAPMAN,
Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 5th AUGUST 1879.

GENERAL REMARKS.—In Madras favourable rain has again fallen, but more is wanted in parts; general prospects continue fair. In Bombay there has been good general rain, except in Sind where it is required; prospects outside Sind are excellent; cholera is still prevalent in that portion of the presidency. A break in the rainfall in Bengal has been beneficial, but the want of more rain is still felt in the Burdwan, Orissa and Chota Nagpore Divisions and in the 24-Pergunnahs; early crops have suffered from excessive rain and floods in parts of Central Bengal, Dacca, Furreedpore and Behar. In the North-Western Provinces and Oudh rain has been abundant; prospects remain favourable. The rain in the Punjab has been partial; it was reported from six districts but except at Delhi and Siálkot where 5 and a little over 2 inches fell respectively, the fall was very slight, prospects have consequently not improved; in Hissar and Sirsa forage is becoming scarcer, and in these districts and Jullundur (where agricultural prospects are said to be growing critical) prices are rising. Heavy rain is reported from the Central Provinces and the weather is very favourable to the *kharif* crops. In British Burma also there has been heavy rain during the week, and in parts of the Bassein District crops have been destroyed by floods; agricultural prospects are good. In Assam, Mysore and Coorg, and Berar prospects continue good, but a break in the rainfall is required in the last mentioned Province. There has been favourable rain again in Central India and prospects there are now very good. In Rajputana the rain that has fallen has improved prospects; more is however required in places.

Except in the Punjab, where more rain is needed, the prospects of the season and the condition of the crops are now, on the whole, decidedly favourable throughout the Empire.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kistna (Augt. 2nd)	1·70 (average of 10 stations.)	*Ragi* 18·65; 73 inches of water over anicut; standing crops generally good but require more rain in some taluks; *sazza* coming into ear; transplanting of wet paddy commenced; canal supply deficient.
Kurnool („ „)	2·46 (average of 6 stations.)	*Ragi* 18·82; rain wanted in Cumbum and some villages of Markapur where standing crops are withering; crops flourishing elsewhere; *korra, cumboo* and paddy being sown; prices stationary; pasture and water sufficient.
Tanjore („ „)	·56 (average of 9 stations) *nil* in others.	*Ragi* 15·65; 36 to 90 inches of water in Cauvery; wet and dry crops in good condition; harvest of *gingelly*, outturn ½.
Madura („ „)	*Nil.*	*Ragi* 16·08.
Malabar („ „)	5·14 (average of 14 stations.)	*Ragi* 17·93; prices slightly fallen in Cherakal, Palghat and Cochin, stationary elsewhere; rain sufficient and favourable for first crop cultivation; pasture good.
		General Remarks.—General prospects fair.
Bombay (Aug. 6th)—		
Kurrachee ...	·10 at Kotri ...	River on 3rd 17 feet 2 inches—last year on same date 18¾ feet; locusts appeared in two talukas, no damage; some injury to crops, &c., by overflow of river in Ghorabári; active preparations for *kharif* continuing; cholera prevails.
Hyderabad ...	.....	Locusts in 3 talukas damaging indigo and other seedlings; few cases of small-pox in Kandiaro; cattle disease in Naushahro; cholera still prevalent; river rising steadily.
Ahmedabad ...	·68	Total rainfall 15·42; transplantation of rice progressing; young crops generally thriving.
Surat ...	8·50, fall general ...	Total rainfall 22·92; rice transplanting commenced; prospects much improved.
Násik ...	2·0	Prospects good everywhere; no cholera.
Colába (Aug. 4th)	10·68	Total rainfall 39·73; public health generally good; fever and cattle disease in parts.
Poona („ 3rd)	Fall general; maximum 4·42 at Máwal, minimum ·68 at Sirur.	Rats being destroyed in Bárámati and Indápur.
Ahmednagar ...	1·09, fall general.	Crops good in 4 talukas; *bajri* resown in parts of Kopargaon, first crops having been destroyed by insects; break in weather desirable; slight cholera in parts.
Sholapur ...	Rain general.	Prospects and crops good; rats being killed; fever in 2 talukas condition of poor bad but hopeful.
Dharwar ...	.....	No report.
Kánara ...	9·69 at Karwar; maximum 15·36 at Honore, minimum 2·68 at Supa.	Total rainfall 79·95; prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Rajkot ...	1·17	Total rainfall 19·0; crops thriving; fever and diarrhœa continue, also cholera in some parts.
Baroda ...	3·29	Total rainfall 25·44; weather cloudy; prospects good.
		General Remarks.—Rain general and plentiful throughout the Presidency except in Sind where it is required; prospect excellent; continuous heavy rain in Bombay since last report; cholera continues in Sind, and slightly in Kaira, Surat, Tanna and Ahmednagar.
Bengal (6th Aug.)—		
Chittagong ...	2·20	
Dacca ...	3·25	Public health good.
24-Pergunnahs (Calcutta)	1·97	Cholera cases in Barrackpore and fever in Busseerhat and Dum-Dum.
Moorshedabad ...	·94	General health good.
Rajshahye ...	·41	
Burdwan ...	1·22	Public health good.
Rungpore ...	1·04	Public health good.
Bhágalpur ...	1·04	
Purneah ...	1·07	
Patna ...	2·63	
Durbhunga ...	·72	
Hazáribágh ...	1·37	Much sickness.
Cuttack ...	1·54	
		General Remarks.—A break in the weather during week has generally done good, but in the Burdwan, Orissa and Chota Nagpore divisions and in the 24th-Pergunnahs more rain is still much wanted for transplantation; early crops in places in Central Bengal, Dacca, Furreedpore and Behar have suffered much from excessive rain and floods, floods are reported to be subsiding in Behar; there was a severe storm at Cooch Behar on the night of 29th July; cholera has greatly diminished in Balasore and Midnapore, but is still prevalent in some districts.
N. W. P. and Oudh (Aug. 6th)—		
Benares (Aug. 5th)	1·3, ·9 at Gungapur.	Prospects continue good.
Allahabad („ „)	·8 [average of week]; Karchana... Handia ... *Nil.*	Prospects continue favourable; health good.
Jhansi („ 7th)	5·5	Prospects good; prices stationary; health good generally, but slight cholera here and there.
Agra („ 5th)	1·4 (average).	Prospects excellent; fever and ague still increasing.
Bareilly (Aug. 6th)	Excessive rain in end of week.	Rivers much flooded; agricultural operations suspended.
Meerut („ „)	Meerut ... 4·3 Baghput ... 7·9 Ghaziabad ... 5·9 Less in other places.	Fever reported in places; another break wanted; prospects excellent; cheapest wheat and gram 17, *bajra* 18, *juar* and barley 22 seers.
Kumaun („ 4th)	Continuous rain from the 2nd instant.	There was a break up to 2nd.
Lucknow („ 6th)	1·4	Prospects good.
Partabgarh („ 4th)	Sadr ... 2·1 Kunda ... ·6 Putti ... 3·4	There was another break of four days; *kharif* sowings nearly finished; weeding going on; *jarhan* rice is being transplanted.
Sitapur („ 6th)	2·8	Prospects good.
Fyzabad („ „)	·9	Wind greater and strong during Tuesday and Wednesday.
		General Remarks.—Rain general all over the Province; prospects favourable; health good except in Agra and Meerut where there is some fever, and in Jhansi where there are a few cases of cholera.
Punjab (Aug. 5th)—		
Delhi ...	5·0	
Hissar ...	*Nil.*	Prospects favourable; fever prevalent; prices of food grains stationary.
		Prospects bad in Hissar and Sirsa where pasturage and fodder are daily becoming scarcer and prices of food grains are rising; health generally good.
Umballa ...	·8	Crops fair; cholera has nearly disappeared.
Jullundur ...	*Nil.*	Agricultural prospects getting critical; prices rising.
Lahore ...	·8	More rain wanted; health fairly good, but cholera about.
Ferozepore ...	·1	Agricultural prospects continue unfavourable.
Siálkot ...	2·2	
Ráwalpindi ...	1·0	Agricultural prospects good; cholera diminishing.
Pesháwar ...	*Nil.*	Prospects unfavourable.
Mooltan ...	*Nil.*	Crops fair; prices stationary.
Dera Ismail Khan ...	*Nil.*	Crops are suffering; health good.
		General Remarks.—Rainfall during the week has been only partial and prospects generally have not improved.
Central Provinces (Aug. 6th)—		
Nágpur ...	5·83	Prospects of cotton and other crops favourable; weeding continues.
Jubbulpore ...	...	Cotton crop excellent; prospects of other crops generally good; weeding progressing; small-pox continues.
Saugor ...	4·31	Cotton healthy; other crops well; small-pox continues; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—*continued.*		
Seoni ...	5·45	Weather favourable to cotton prospects; slight cholera and small-pox.
Hoshangabad ...	14·56	Cotton much improved by recent rains; small-pox continues.
Raipur (Aug. 1st)	3·95	Rain plentiful; cotton suffered to some extent; more rain wanted for rice; small-pox disappearing; cholera continues.
Sambalpur („ 2nd)	1·60	Cotton doing well; prospects favourable; cholera and small-pox continue; prices rising.
		General Remarks.—Weather all that could be desired for agricultural prospects; cotton and all other *kharif* crops doing well; more rain required at Bilaspur and Damoh; prices steady.
British Burmah— (Aug. 7th)		
Akyab ...	7·41	Total rainfall 128·22; cholera in Cheduba and small-pox in Kyoukphyoo town, otherwise public health good throughout division; agricultural prospects good everywhere; slight cattle disease in Akyab district.
Rangoon ...	6·54	Total rainfall 54·80; public health good; agricultural prospects good.
Bassein ...	2·70	Total rainfall 46·58; public health good; cattle disease still rife; ploughing continues; transplanting going on; in parts half the cultivation destroyed by floods.
Prome ...	2·96	Total rainfall 21·27; public health fair; floods subsiding.
Thayetmyo ...	1·06	Total rainfall 16·33; general health normal; paddy planting progressing; cholera decreasing.
Amherst (Moulmein) ...	6·37	Total rainfall 85·27; public health good; no cattle disease reported; crops good; rain now abundant.
Toungoo ...	1·13	Total rainfall 34·07; public health good; agricultural prospects good; no cattle disease.
		General Remarks.—General health good, though cases of small-pox and cholera still occur; cattle disease slight in Arakan and Tenasserim and decreased in Pegu but prevalent in two districts; agricultural prospects continue good.
Assam—		
Gauháti (Aug. 6th)	3·53	Weather hot and seasonable; prospects of crops good; transplanting of *sali* in progress.
Sylhet („ „)	5·89	Prices stationary; transplanting of *sali* and *aus* reaping progressing; prospects good.
Mysore and Coorg (Aug. 6th)—	2·52 in Bangalore; rain throughout the Province.	Newly sown crops on dry lands have suffered in parts from excessive moisture; prospects favourable; public health generally good; fever and other ailments continue in parts.
Hyderabad Assigned Districts—		
Amráoti (Aug. 6th)	6·89	Rain has fallen continuously for five days; break wanted; prospects good.
Central India (Aug. 6th)—		
Indore ...	1·75	Prospects excellent throughout Malwa; health good; prices high though falling somewhat; *jowar* 12 seers 10 chittaks.
Morar ...	2·11	
Sutna ...	5·41	
Rutlam ...	1·65	Agricultural prospects and health satisfactory.
Neemuch ...	4·16	
Goona ...	3·81	
Bhopal ...	3·15 in Sehore.	Prospects favourable.
Ágar ...	1·74	Health good.
Nowgong ...	·75	
Mánpur ...	3·30	Crops in excellent condition.
Rajputana—		
Abu (Aug. 6th)	1·50	Sultry; cloudy; occasional drizzling.
Serohi („ 3rd)	·85	Tanks, wells and health fair; prospects slightly improved; rain much required.
Marwar („ 2nd)	Some rain reported in south-eastern districts.	Tanks half full; plenty of water in wells; health and crops good; cloudy; high winds; more rain urgently needed.
Meywar („ 1st)	2·60	Tanks, wells and health good; crops much improved.
Harowtee („ 2nd)	·26 in Deoli, ·98 in Kotah, ·28 in Tonk, and 1·19 in Shahpura; favourable rainfall last night, ·71, apparently general.	Wind south-west; rain will improve prospects.
Jhallawar (July 31st)	3·88	Health good; prospects favourable; risk of grass scarcity averted.
Ajmere (Aug. 6th)	·66	Rain seasonable; crops saved; locusts passed without damage; health good.
Jeypore ...	1·27	Rain threatening; fever still prevalent; prospects improved.
Bhurtpur ...	1·30	Ague increasing; cloudy; east winds.
Ulwur (Aug. 5th)	·75 (Average).	Rain brightens prospects much; fever very prevalent.
Nepal (July 29th)—	·96	Total rainfall 34·16; agricultural prospects fair.

WEEKLY TELEGRAPHIC REPORTS ON THE SEASON AND CROPS FOR THE GAZETTE OF INDIA.

Extract from the Proceedings of the Government of India, in the Home, Revenue and Agricultural Department—No. 1—95-113, (Meteorology), dated Simla, the 8th August 1879.

RESOLUTION—The Government of India have had under consideration the weekly telegraphic reports on the season, published in the *Gazette of India*. They observe that, since the dates of the orders requiring the weekly reports on the state of the season and the prospects of the crops, which are published in the *Gazette of India*, the issue of Daily Weather Sheets has been undertaken by the Meteorological Reporter. His statements furnish with great promptitude a continuous index of agricultural conditions so far as they depend on the presence or absence of rainfall; and the number of stations included therein has just been raised from 50 to 84, reports from the additional 34 stations being telegraphed only during the monsoon months. Moreover, season reports appear regularly under the orders of the Local Governments in the Local Gazettes. The information given in the Supplement to the *Gazette of India* is, of course, much more detailed, in respect of agriculture, than that contained in the Daily Weather Sheets; comprising, as it does, particulars as to the prospects and yield of crops, the progress of farming operations, the average prices of food grains, the health of people and of cattle, the numbers on relief-works or gratuitously relieved, if any, and miscellaneous facts affecting the harvests, such as the occurrence of hail, the presence of locusts, and the state of rivers and irrigation; all of which are, by the nature of the case, excluded from the meteorological return.

2. The object of the telegraphic reports published in the *Gazette of India* is that a survey of the current agricultural conditions of each province, as a whole, such as shall suffice to supply the deficiencies of the daily weather reports, may be placed promptly before the public and the Government. At present the number of stations for which weekly telegraphic reports are sent to the *Gazette of India* varies greatly in the several provinces, thus:—

Madras	sends reports from	5	districts.
Bombay	,,	24	districts and places.
Bengal	,,	46	,,
The N.-W. P. and Oudh	,,	11	,,
The Punjab	,,	12	,,
The Central Provinces	,,	17	,,
British Burma	,,	15	,,
Assam	,,	2	,,
Mysore and Coorg	,,	1	,,
Berar and Hyderabad	,,	1	,,
Central India States	,,	12	,,
Rajputana States	,,	10	,,
Nepal	,,	1	,,

From some provinces the reports are too few, while from others they are needlessly many, for the purpose of conveying to the Government and to the public a general view of the state of agricultural affairs in each province.

3. In times of scarcity or famine in any province the number of reporting stations for such province will be temporarily increased. But, for the future, in ordinary times, the Governor General in Council would wish to receive for the *Gazette of India* weekly telegraphic reports for the undermentioned districts only in each province, namely,—

MADRAS.	BOMBAY.	BENGAL.
Bellary.	Kurrachee.	Chittagong.
Kurnool.	Hyderabad.	Dacca.
Ganjam.	Ahmedabad.	24-Pergunnahs (Calcutta).
Kistna.	Baroda.	Moorshedabad.
Chingleput (Madras).	Surat.	Rajshaye.
Coimbatore.	Nasik.	Burdwan.
Tanjore.	Colaba (Bombay).	Rungpore.
Madura.	Poona.	Bhagulpur.
Malabar.	Ahmednuggur.	Purneah.

	Nowgong.	Bhartpur.
	Manpúr.	Alwar.

4. The instructions already in force regarding the preparation of these telegraphic reports and of the "General remarks," and regarding their submission by the Local Governments, will stand. Now that the number of reporting stations for each province is fixed, the Governor General in Council trusts that the Local Governments will secure that every one of the appointed districts sends its telegram regularly without fail. It is inconvenient that the Bengal Government should report, as was done in the Gazette of the 2nd current, that no return was received from important districts like Patna, Bhagulpur and Hazaribagh, every one of which places is on the line of telegraph. Where the Local Government may have settled that a particular district (as for instance Gauhati) should send its weekly telegram direct to the Government of India, that arrangement may stand. Although fluctuations of prices of food are among the subjects to be noticed in the weekly telegrams, yet it is not necessary to give weekly the prices of two or three kinds of grain in detail. When food is ranging at scarcity rates, the price of one staple may usefully be given; and the Local Government will decide in each case what price should be considered to be a scarcity rate. Similarly, it is not necessary to give in the weekly telegram, as has recently been done for some Burma districts, the number of deaths from cholera and small-pox, and the estimated number of cattle deaths separately for each sub-division of the district. General remarks as to the public health and the prevalence of any special epidemic or epizootic disease will suffice for the purposes of the weekly reports.

ORDER—Ordered, that this Resolution be communicated to all Local Governments and Administrations, and to the Agents to the Governor General for Central India and Rajputana, for information and guidance, and to the several Departments of the Government of India, and the Meteorological Reporter, for information, also that a copy be published in the Supplement to the *Gazette of India*.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY.

RETURNS OF ACCIDENTS ON INDIAN RAILWAYS FOR THE 4th QUARTER OF 1878.

Circular No. 24 R., dated Simla, 31st July 1879.

RESOLUTION.

Read again—

Public Works Department Circular No. 4R. of 6th February 1879.

Ditto ditto No. 10R. of 12th March 1879.

Ditto ditto No. 15R. of 29th May 1879.

Read also—

Returns of accidents to trains, &c., on the open lines of Railway in India for the quarter ending 31st December 1878.

OBSERVATIONS.—The total number of accidents to trains, rolling-stock, permanent-way, &c., during the 4th quarter of 1878, was 711, against 601 in the previous quarter. The casualties resulting from these accidents were, among passengers, 3 injured, against 1 killed and 6 injured, and among servants, 1 killed and 5 injured, against 7 injured.

2. There was 1 collision between the two parts of a mixed train which had got separated, causing injury to 2 passengers; 17 collisions between passenger trains and goods or mineral trains, engines and vehicles standing foul of the line, by which 1 servant was injured; 25 collisions between goods trains, or

parts of goods trains, by which 1 passenger and 2 railway servants were injured; 9 collisions between light engines; 11 cases of passenger trains or parts of passenger trains, leaving the rails; 88 cases of goods trains, or parts of goods trains, engines, &c., leaving the rails, by which 1 servant was killed, and 1 injured; 22 cases of trains or engines travelling in the wrong direction through points; 4 cases of trains running into stations or sidings, at too high a speed; 149 cases of trains running over cattle on the line; 28 cases of trains running over obstructions; 13 cases of trains running through gates at level crossings; and 9 cases of bursting of boilers or tubes, &c., of engines. There were 31 failures of engine machinery, 1 of tyres, 13 of axles, by which 1 servant was injured, 1 of brake apparatus and 42 of couplings.

3. Out of the 13 cases of failures of axles, 6 took place on the Great Indian Peninsula Railway, and of the 42 cases of failures of couplings, 9 were on the East Indian Railway, 8 on the Rajputana, 7 on the Great Indian Peninsula, and 6 on the Punjab Northern.

4. There have also been reported 2 cases of broken rails; 5 cases of flooding of permanent-way; 6 cases of slips in cuttings and embankments; 66 cases of fire in trains; 2 cases of fire at stations; and 166 miscellaneous accidents.

5. As observed in the returns for the three previous quarters, the number of miscellaneous accidents is the largest on the East Indian Railway, *viz.*, 115, out of a total of 166. This is due to a great extent to the inclusion of all cases of damage done to points. In Public Works Department Circular No. 4R. of 6th February 1879, reviewing the accident returns for the first quarter of 1878, it was laid down that the discretionary powers relegated to Consulting Engineers in paragraph 2 of Circular No. 27R. of 16th September 1878, should be exercised in the exclusion from the returns submitted to Government of such accidents as damage to points resulting in no further mischief. But this has not been done, though the returns of the East Indian Railway were not forwarded by the Consulting Engineer until 3rd May 1879, or about three months after the issue of the Circular just referred to.

6. The numbers of accidents from trains running over cattle, and cases of fire in trains, were the largest on the Indus Valley State Railway: the former being 34 out of a total of 149; and the latter 16 out of a total of 66. The frequency of cattle accidents on this line is stated to be due to the want of fencing. In regard to the accidents from fire, it is not stated in all cases whether the engine was fitted with spark-arrester, and what description of fuel was used, as required by Clause VII of paragraph 4 of Public Works Department Circular No. 4R. of 5th March 1878.

7. The casualties to passengers from causes other than accidents to trains, &c., and to other persons, were as follows:—

	Killed.	Injured.
Passengers	6	14
Other persons—		
Whilst passing over the line at level crossings	2	...
Trespassers	24	5
Suicides ...	6	...
Miscellaneous	5	3

8. Of the passengers killed and injured, 1 was killed by falling between carriages and platforms; 3 killed and 2 injured by falling on to the platform,

ballast, &c., when getting into or out of trains; 8 injured by falling out of carriages during the travelling of trains; and 2 killed and 4 injured through other causes.

9. The accidents to servants in the employ of railways or of contractors, whilst performing duties connected directly with the transit of passengers and goods, from causes other than accidents to trains, &c., consisted of 40 killed and 73 injured. Of these, 1 was killed and 4 injured during shunting operations; 8 killed and 14 injured by falling off engines, vans, wagons, &c.; 1 injured by coming in contact with a bridge, during the travelling of trains; 2 killed and 5 injured whilst getting on or off trains, engines, &c.; 1 killed and 4 injured whilst loading, unloading or shunting; 1 injured whilst braking, spragging or chocking wheels; 2 killed and 1 injured whilst working on the permanent-way or in sidings; 2 killed and 2 injured whilst walking along the line on the way home or to work; 9 killed and 13 injured whilst walking, crossing or standing on the line; 1 killed whilst passing between vehicles; 5 injured whilst attending to the machinery of engines, cleaning them, &c.; 3 killed whilst attending to gates at level crossings; 1 killed and 2 injured by falling off ladders, scaffolds, platforms, &c.; 2 injured by the falling of lamps, wagon doors, timber, weights, &c.; 5 killed and 9 injured whilst coupling or uncoupling wagons; and 5 killed and 10 injured from miscellaneous causes.

10. The following table exhibits the total numbers of persons killed and injured from causes connected with the working of trains, as compared with those in the previous quarter:—

	Third quarter 1878.		Fourth quarter 1878.	
	Killed.	Injured.	Killed.	Injured.
Passengers—				
From causes beyond their own control	1	7	2	4
From misconduct, or want of caution	3	8	4	13
Servants—				
From causes beyond their own control	10	21	7	19
From misconduct, or want of caution	29	39	34	59
Others—				
Whilst passing at level crossings	2	1	2	...
Trespassers (including suicides)	61	10	30	5
Other persons	10	1	5	3
	116	87	84	103

11. In addition to the above, 11 persons are reported to have been killed and 33 injured in yards, workshops, &c., and 128 passengers to have met death in carriages and at stations from causes unconnected with the working of trains.

12. It is observed that the returns of all the railways were received in February and March with the exception of those of the East Indian and Eastern Bengal Railways which were not received until 10th and 6th May 1879, respectively. Owing to the late submission of these latter returns, the compilation of the general tables has been considerably delayed.

RESOLUTION.—Resolved, that the attention of the Consulting Engineer, Calcutta, be invited to the remarks made above in regard to miscellaneous accidents on the East Indian Railway, and to the delay in the submission of the returns for the railways under his control. *These returns should in future*

be submitted in manuscript within a month of the date to which they are made up. The Manager of the Indus Valley State Railway should state, in reporting accidents from fire caused by sparks, whether the engine was fitted with a spark-arrester, and what description of fuel was in use.

ORDER.—Ordered, that this Resolution be communicated to the Governments, Administrations and Officers noted in the margin, for information and guidance, together with copies of the returns compiled.

Madras, Bombay, Bengal, and the North-Western Provinces and Oudh.
Central Provinces, British Burma, and Hyderabad.
Consulting Engineers to the Government of India for Guaranteed Railways.

Ordered also, that these papers be forwarded to the Government, Administrations and Officer marginally noted, for information, and that copies be forwarded to the Secretary of State, for the information of Her Majesty's Government.

Punjab.
Mysore and Coorg.
Assam.
Rajputana.
Central India.
Director of State Railways, Western System.

Ordered further, that this Resolution, with the compiled returns, be published in the Supplement to the *Gazette of India*.

(a) This includes the Midnapúr branch of the Northern Bengal State Railway. (b) Exclusive of the distance (13 miles) between Ghaziabad and Delhi. (c) This line was closed to traffic from 16th July to 14th November 1878. (d) Re-opened on 15th November 1878.

TABLE

No. 2.

NUMBER of PERSONS reported, during the Fourth Quarter of 1878, as KILLED or INJURED on the several RAILWAYS open for Traffic in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS and OTHER PERSONS; and classifying, as far as practicable, the Nature and Causes of the Accidents occasioning the Death or Injury.

	RAILWAYS.	PASSENGERS.																										SER			
		From Accidents to trains, &c. See Table No. 4.		1. From falling between carriages and platforms.		2. Falling on to the platform, ballast, &c., when getting into or out of trains.		3. Whilst crossing the line at Stations.		4. By the closing of carriage doors.		5. Falling out of carriages during the travelling of trains.		6. Other accidents.		TOTAL PASSENGERS.		From Accidents to trains, &c. See Table No. 4.		1. During shunting operations.		2. Falling off engines, vans, wagons, &c.		3. Coming in contact with overbridges, &c., during the travelling of trains.		4. Coming in contact, whilst shunting, with vehicles, &c., standing in adjacent lines.		5. Getting on or off trains, engines, &c.		6. Whilst loading, unloading or shunting.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

Irrigation.

STATEMENT SHOWING IRRIGATION AND RAINFALL FOR 1877-78.

No. 391 I, dated 10th July 1879.

Read the following paper:—

Proceedings of the Board of Revenue, dated 20th May 1879, No. 1352.

Read the following statements showing the irrigation and rainfall for 1877-78:—

From the Collector of	Ganjam,	dated 10th Dec.	1878,	S. No.	265
„ „	of Vizagapatam,	„ 30th Nov.	„	„	—
„ „	of Godavari,	„ 16th Sept.	„	„	266
„ „	of Kistna,	„ 11th Jan.	1879,	„	—
„ „	of Nellore,	„ 1st April	„	„	1122
„ „	of Cuddapah,	„ 14th March	„	„	78
„ „	of Bellary,	„ 17th Jan.	„	„	11
„ „	of Kurnool,	„ — „	„	„	—
„ „	of Chingleput,	„ 29th „	„	„	64
„ „	of North Arcot,	„ 21st Sept.	1878,	„	—
„ „	of South Arcot,	„ 12th March	1879,	„	102
„ „	of Tanjore,	„ 12th Dec.	1878,	„	4615
„ „	of Trichinopoly,	„ 31st July	„	„	219
„ „	of Madura,	„ 3rd Nov.	„	„	441
„ „	of Tinnevelly,	„ 25th Sept.	„	„	704
„ „	of Coimbatore,	„ 20th Dec.	„	„	—
„ „	of Salem,	„ 29th Nov.	„	„	—

A STATEMENT compiled from the above returns will, as usual, be forwarded to the Chief Engineer for Irrigation with reference to Board's Proceedings, dated 11th May 1874, No. 1092.

2. The area actually irrigated from Government sources of irrigation in 1877-78 is considerably in excess of that irrigated in the previous year as shown below:—

—	Government.	Inam.	Zemindari.	TOTAL.
	Acres.	Acres.	Acres.	Acres.
1876-77 . . .	3,003,284	687,989	173,853	3,865,126
1877-78 . . .	3,591,945	804,186	188,047	4,584,178
INCREASE .	588,661	116,197	14,194	719,052

3. The increase is due to the favorable character of the season.

(A true Extract.)

C. A. GALTON,
Acting Secretary.

Comparative Statement of Irrigation and Rainfall for the Years 1876-77 and 1877-78, in the several Districts.

REPORT ON THE OPERATIONS OF BORING AN ARTESIAN WELL IN THE JARDIN d'ACCLIMATATION AT PONDICHERRY.

The following paper is republished from the *Madras Gazette* of the 22nd July 1879:—

Report on the operations of boring an artesian well in the Jardin d'Acclimatation at Pondicherry, dated Pondicherry, 24th March 1879.

Mons. l' Ordonnateur.—Conformably to your communication, No. 333, of the 15th February last, I have the honor to forward a full report on the operations connected with boring an artesian well in the Jardin d'Acclimatation at Pondicherry.

In order that the report may be complete, I have deemed it necessary to go back to the formation of the Commission appointed by Order of the 23rd February 1877, and to the commencement of the operations which decided the Administration to encourage and popularies an advance in the means of irrigation of the Colony, and of which the results ought to prove most beneficial to agriculture and rural requirements.

Consequent on the success achieved in sinking an artesian well by the aid of the "Savana" Machine as carried out by Mr. Charles Poulain, Manager of Poulain's Spinning Factory, a Commission appointed by an order of His Excellency the Governor, dated 23rd February 1877, under the Presidency of the Colonial Engineer and Chef du Service of Roads and Bridges, proposed to the Administration on the 20th of June of the same year that a complete set of machinery for boring should be procured. This Commission intimated their preference for that of Messrs. Dégousée and Lippman to any other, and suggested that a sum of 1,200 francs should be placed at the disposal of Mr. Charles Poulain (who found himself without funds) in order that he might carry on his work.

The machinery arrived in the Colony on the 4th September 1878, and the Commission, after visiting the Jardin d'Acclimatation, were unanimously of opinion that the well ought to be sunk in the centre of the basin in that garden, that situation being the one which offered the greatest facility for irrigating so large an exent of ground, presuming the probable success of the undertaking.

After fitting and erecting the crane, the works were carried on under the supervision and with the assistance of the Department of Roads and Bridges. First of all, a small well 1·80 metre deep was dug in the centre of the basin, at the bottom of which boring was begun on the 30th October 1878, commencing with tubes of a diameter of ·26 of a metre. The work which on this date has reached 79m 52c in depth has passed through the following series of geological strata:—

TABLE of Geological Strata of the Artesian Well bored in the Jardin d'Acclimatation at Pondicherry.

Drawn up by the Colonial Engineer, Chef du Service of Roads and Bridges.

A. CARRIOL,
Pondicherry.

24th March 1879.

On the 15th November, after thirteen days of work, a rise of water-level was found at a depth of 10·74 metres. The water-level, which was originally 2·80 metres below the level of the soil, rose to 1·27 metres. The water was of the same character as that of surrounding wells, the water level of which remained stationary at 2·80 metres.

These first 10·74 metres (which gave a mean depth sunk of ·82 of a metre per diem of ten hours of actual work) consisted of alternate layers of ordinary gravel mixed with clay, fine and very fluid sand, lumps of black plastic clay, bits of decayed wood, and of coarse blackish sand mixed with black clay, and were bored either by a rotating auger (tarière), or by means of a "soupape à boulet." This last implement produced the best results, especially in quicksand, during the whole course of operations.

From the 15th November to the 20th December, boring continued without interruption; the level of the rising water rose higher and higher; from 1·27 metres which it had when first met with, it rose till it was not more than ·95 of a metre below the surface of the ground on the 18th. It remained at this level till the 20th December, on which date at a depth of 56·50 metres, a gush of water was encountered.

This outflow showed itself on the night of the 19th. The temperature of the water was 31° centigrade, and its hydrostatic level rose ·55 of a metre above the level of the ground. During the boring, the water rose and fell intermittently, varying between ·40 and ·44 of a metre. This was the result of the continuance of the operations. On the 21st December, the hydrostatic level rose to ·99 of a metre and gave a discharge of 140 litres a minute. Work was carried on at this time in a stratum of coarse gravel mixed with clay and small gravel. The water-level remained stationary for some time; the discharge increased considerably, rising from 140 to 224 litres between the 21st and the 24th December. The temperature of the water was 34°, and on analysis by Mons. Cazalis, 1st-class Chemist of Marine, showed the following composition, as embodied in the Proceedings of the Commission of the 28th December 1878:—

Sulphate of Lime	0,1050	Substances precipitated by soap and water.
Corbonate of Lime, Silica, Magnesia, Iron (traces of)	0,0210	
Chloride of Soda	0,1800	
	0,3060	

These proportions not constituting a perfectly drinkable water, though very useful for watering the garden, the Commission determined to carry on operations to a greater depth. The tubing was accordingly continued with pipes of the same diameter as at the beginning. From the 30th December, under the impetus given to the works, the hydrostatic level commenced to fall, and in consequence the discharge of water underwent the same diminution. From 1·28 metres which it had attained, there was not more than 1·005 of a metre on the 31st December, ·83 on the 4th January 1879, and on the 6th (having attained a depth of 62·54 metres), the level was ·01 below the level of the ground.

From the 6th to the 13th January, the works were continued and pushed on to 68·75 metres. On the 13th, a second gush of water showed itself, which rose at length to 0·40 of a metre above the ground, but the piping became more and more difficult. A deviation of ·07 of a metre had already been noticed in the vertical projection of the column which caused friction at the bottom of the last pipe, the soupape à boulet continued to act, but the results were very poor. At one time, every effort that was made could not overcome the resistance in sinking the column on account of the pressure of the sand against the sides. The situation was serious and very embarrassing. It was seen, moreover, that the hoop which protected the bottom of the first pipe was displaced, and that the "trépan" of the "soupape" struck it at every stroke and brought away fragments of it. It was necessary to use repeatedly the large trépan which entirely detached the hoop and ground it into small pieces. The crane which was lifted by the pressure of the jackscrews was successively charged with weights varying from 1,920 kilos to 5,070 kilos. Notwithstanding this pressure, the resistance was still great. The "soupape à boulet" continually brought up the débris of the hoop and the pipe to which it was rivetted; the work of boring was almost at a standing, and the crane continued to rise. It was then loaded with a total weight of 19,290 kilos. A small sounding probe was lowered down the tube, which penetrated to a depth of ·55 of a metre in the ground and brought away traces of bluish clay. The boring was then at 68·81 metres which showed the depth sunk during the day to be only ·06 of a metre. The hydrostatic level which rose for a moment to 1·03 fell to 0·95, and on the 16th January was not more than ·25 of a metre above the ground. It rose and fell, alternately, from ·73 to ·69 of a metre, and eventually fell down to ·12 below the ground-level, while the tubes were not able to be driven in more than ·67 of a metre in a week.

The works were proceeded with nevertheless, but the results were very poor. We were, however, on the point of overcoming the resistance to the driving in of the pipe. When the column had passed the water-bearing strata, the water caused an opening between the exterior of the pipes and the ground penetrated. From that time the work became easier; resistance diminished, and the "soupape" having reached the coarse sand, operations became a great deal more satisfactory.

On the 3rd February, there was a third gush of water, the hydrostatic level of which rose to ·38 of a metre above the level of the ground. The boring had then reached to 73·60 metres. This fresh gush of water, like the one which preceded it, made the sand flow back from ·50 of a metre to 1·20 metres into the interior of the tube. The work continued by means of the small soupape à boulet, and we then attained a depth of 79·34 metres.

At length, on the 13th February, after penetrating a stratum of very fine sand mixed with grits and remains of decayed wood, the hydrostatic level which had remained at about the level of the ground rose to ·52 of a metre, and continued under the impetus given to the work, to rise gradually to 1·48 metres in twenty-nine days. This is the jet we now have. The water is very clear, does not taste bad, and boils vegetables perfectly. It marks 9° on the hydrometer. Its temperature is 34° 30′.

The discharge of water was on the 13th February at 10 A.M., 140 litres; in the evening it was 268 litres; and today, the 20th March, it has reached to 666 litres a minute,—a quantity more than sufficient to irrigate the Jardin d' Acclimatation. After several attempts to extract the bottom of the pipe, it was discovered that the force of the rising water brought up sand to the surface, and that the detachment had been effected spontaneously. The boring has reached to 79·52 metres. It took 89 days of 10 hours each of actual work. This gave an average per diem of $\frac{79{\cdot}52}{89} = {\cdot}89$ daily.

The following have been the general expenses:—

	F. C.		F. C.
Construction of the crane	1908·52		
Transport and setting up, &c.	662·03		2570·55
Value of 80m of pipes	2340·00		
Expenses of packing, freight and insurance	1080·00		3420·00
Hire for driving in the pipes	1630·12		1630·12
		TOTAL	7620·67
			2570·55
			5050·12

If from this sum the cost of the crane be deducted, which was Fr. 2570·55, the real cost of the well will be only 5050·12.

This makes the cost of each running metre in boring $\frac{5050{\cdot}12}{79{\cdot}32}$=63f 50c.

This expenditure is really very small when we take into consideration the dreadful famine which raged through this country in 1877 and 1878 in consequence of want of water.

One can now assert with certainty after the success achieved in boring three wells within a radius of about 800 metres of each other, and at depths varying from 38·53 to 79·52 metres, that if the calamities which famines involve on the Coromandel Coast are not completely overcome, their disastrous consequences can be considerably mitigated by sinking artesian wells.

* * * *

This being the first attempt at boring to such a great depth in this country, I have thought that, from a scientific point of view, it would be useful to have in France a complete collection of geological specimens of the strata penetrated. With this view, I have caused a case containing an extract from the register of borings with all the specimens and four bottles of the water now issuing from the well to be deposited in the Magasin Général. I think M. l'Ordonnateur that this case should be forwarded to His Excellency the Minister of Marine and the Colonies who would probably make it over either to the School of Roads and Bridges or the School of Mines.

A. CARRIOL,

L'Ingénieur, Colonial,

Chef du Service des Ponts et Chaussées.

J. H. GARSTIN,

Acting Secretary to Government.

Ootacamund, 3rd July 1879.

DEPT. OF FINANCE AND COMMERCE, (STATISTICAL BRANCH);
Calcutta, 15th August 1879.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

WORKING OF THE SEVERAL MUNICIPALITIES OF THE MADRAS PRESIDENCY DURING 1877-78.

Extract from the Proceedings of the Government of Madras, Financial Department, No. 1120, dated 11th June 1879.

READ the file of Municipal Reports for 1877-78.

ORDER THEREON.—The reports from the several Municipalities for 1877-78 having been separately reviewed, the Government now proceed to review them collectively. The late date at which some of the reports were submitted has led to delay in the preparation of this general review. The last report, which was from Mettapolliem, was only received in March 1879; and the accounts of this Municipality had not been audited even at that date. The Municipality having been abolished from 1st April 1878, no further notice need be taken of it here. The Presidents of the various Municipalities are reminded that their reports for 1878-79 are now due.

2. During the year the number of Municipalities administered under Act III of 1871 was forty-eight against forty-seven in 1876-77, Ongole in the District of Nellore having been newly added to the list.

3. The constitution of the Committees of the several Municipalities was as follows:—

	Europeans.	Natives.	Officials.	Non-officials.	Total.
1876-77	292	469	345	416	761
1877-78	294	489	351	432	783

Hence the average number of Commissioners for a Municipality was sixteen, and 44 per cent. of the aggregate number were official. The Act provides for not more than half the number in each Board being official members; but Statement I appended to this review shows that the proportion was exceeded in five Municipalities. The attention of the Presidents will be drawn to the provision of the Act prescribing the proportion of official and non-official members to be maintained in the constitution of Municipal Boards. The elective system will be tried during the current year in a few of the more important towns; and rules for the conduct of elections have been recently promulgated.

4. In the following abstract the receipts for 1877-78 are compared with those for 1876-77:—

Receipts.	1876-77. Rs.	1877-78. Rs.
Tax on Houses and Lands	3,02,224	3,24,560
Profession Tax	43,020	65,482
Tax on Vehicles	46,948	94,448
Tax on Animals	49,291	
Tolls and Ferries	2,79,389	2,53,666
License Fees	18,273	17,791
Total Income from Taxation ...	7,39,145	7,55,947
Rent of Markets, &c.	64,270	64,035
Fines	23,045	25,803
Miscellaneous	1,32,920	1,14,723
Fees for Private Scavenging	11,459	11,837
Contribution from Provincial and Local Funds ...	75,842	92,223
Total Income ...	10,46,681	10,64,568
Opening Balance ...	1,26,404	82,671
Grand Total ...	11,73,085	11,47,239

5. The receipts from taxation show an excess of Rs. 16,802 over those of the previous year, being the net result of a gross increase of Rs. 56,659 under House Rate, Profession Tax, &c., and a gross decrease of Rs. 39,857 under Tolls and Ferries, License Fees, &c. The increase under House Tax was

chiefly in Madura, Trichinopoly, and Tanjore, and is ascribed to vigorous measures adopted in the first two for collection of revenue and to the realization of portion of arrears left uncollected in the previous year in the last. The reasons assigned, *viz.*, pressure of famine and labor imposed on the tax collectors in connection with the License Tax, do not sufficiently account for the slack collections in that Municipality. The Profession tax was levied during the year in the five towns marginally noted, in addition to the twelve in which the tax had been in force in the previous year. The actual receipts in the former were, for special reasons, not as high as the amounts estimated; but the collections in the latter were in excess of those of the previous year by Rs. 8,865. This increase arose from the collection of the tax in Guntoor where it had been partially suspended in the previous year and from revision of rates and increased grain traffic on account of the famine in Negapatam. The collections on account of Tax on Carriages and that on animals are not distinguished in some of the returns and notably so in Bellary and Trichinopoly where lump sums of Rs. 7,053 and 8,337 have been shown as receipts under both heads, while in the previous year's accounts the receipts were distinguished as under :—

	Actuals. Rs.	Estimate. Rs.
Masulipatam	3,701	4,500
Cannanore	1,625	3,000
Vellore	3,665	5,000
Wallajapet	1,672	2,040
Salem	2,934	6,000
Total ...	13,597	20,540

	Tax on Vehicles. Rs.	Tax on Animals. Rs.	Total. Rs.
Bellary	2,071	6,064	8,135
Trichinopoly	3,490	5,113	8,603

Similar particulars should in future be furnished by all Municipalities. On the whole there appears a decrease of only Rs. 1,791 in the receipts from both taxes on vehicles and animals although the year was a disastrous one for cattle. The revenue from Tolls was less by Rs. 25,723, as compared with that for 1876-77. The decrease may be generally ascribed to the system of sharing Tolls with the Local Fund Boards having been more generally carried into effect during the year than in the previous one. The large decrease of Rs. 14,760 in Combaconum is attributed to the Local Fund share for two years having been paid in the year and also to the opening of the Railway having caused a diversion of the traffic. The income derived from markets was still small. The provisions of Act III of 1871, which do not contemplate interference with markets existing when the Act came into force, are generally and in a measure justly regarded as rendering the establishment of Municipal markets with a good prospect of financial success almost hopeless in most towns; but the Government cannot but think that if the subject were taken up earnestly by the Commissioners considerable advance might be made in supplying institutions of much importance both as regards the comfort of the people and the progress of trade. The increase in the proceeds of fines appears to indicate greater energy in enforcing the sanitary provisions of the Act in several important towns, notably Negapatam and Combaconum. The miscellaneous receipts fell by Rs. 18,197 owing chiefly to the credits taken in the accounts for 1876-77 on account of loans granted to Coonoor and Mangalore, and to the large amount realized in that year by the sale of waste lands in Tuticorin. The sale of poudrette in Ootacamund yielded only Rs. 173 against an estimate of Rs. 2,500. The failure of this once promising enterprize is attributed partly to doubts as to the intrinsic qualities of the manure, and partly to the difficulty of procuring carriage owing to increased grain traffic. Changes, however, may have been introduced into the system of manufacture which lowered it in public estimation. The fees collected for private scavenging produced almost the same amount as last year, the Municipalities which undertook the service remaining almost the same as before, Mannargudi showing, however, a decided falling off in this respect. The smallness of the revenue derived from this source is to be regretted. It is improbable that house conservancy can be effective when the householders are not concerned to see that they get that for which they pay. Moreover it is inequitable that this service should be performed gratis.

6. The following statement shows the incidence of taxation in each Municipality :—

Municipalities.	1871 Census Population.	Income from Taxation.	Incidence of Taxation including Tolls.	Incidence of Taxation excluding Tolls.
		Rs.	Rs. A. P.	Rs. A. P.
1. Adoni	22,723	13,027	0 9 2	0 6 5

39. Negapatam	48,525	41,226	0 13 7	0 10 5
40. Tanjore	52,175	35,811	0 11 0	0 6 7
41. Palamcottah	17,945	10,458	0 9 4	0 4 8
42. Tinnevelly	21,044	11,769	0 8 11	0 5 0
43. Tuticorin	10,565	11,364	1 1 3	0 12 4
44. Srirangam	11,271	7,871	0 12 7	0 11 2
45. Trichinopoly	76,530	45,680	0 9 7	0 6 8
46. Bimlipatam	8,744	6,004	0 11 0	0 4 1
47. Vizagapatam	32,191	19,842	0 9 10	0 5 5
48. Vizianagram	20,169	13,902	0 11 0	0 4 7
Total ...	1,202,827	7,55,947	0 10 1	0 6 8

The incidence of direct taxation was as usual the highest in the Hill stations of Ootacamund and Coonoor. Elsewhere it varied from two annas three pies in Chicacole to twelve annas four pies in Tuticorin. The average was six annas eight pies and the incidence fell below four annas in Conjeveram, Chicacole, Ellore, Kurnool, Dindigul, Palghat, and Mannargudi.

Anantapur. Mettapolliem. Berhampore. | Palamcottah. Bimlipatam. Vizianagram.

In all these save Conjeveram and in the six Municipalities marginally noted, the revenue from Tolls nearly equalled or exceeded that from direct taxation.

The revenue derived from Tolls is at present out of proportion to the revenue derived from other sources, and unduly large compared with the expenditure upon roads and even with that on public works generally. Whilst the receipts for Tolls were upwards of two lakhs and a half, the expenditure on roads was little over one lakh. Were it not that these dues act to some extent as an octroi or tax on articles consumed in the towns, their continuance at the present high figure would be open to very serious local objections. The position of Tolls in the financial system of this Presidency however demands and will receive the early attention of Government.

In the Municipalities of Tanjore, Negapatam, Wallajapet, Vellore, Cannanore, Madura, Masulipatam, Guntoor, and Mettapolliem, the apparent incidence of direct taxation was in excess of that in the previous year by one anna and more; while increased taxation was imposed during the year only as particularized below:—

1. *Masulipatam.*—Profession Tax newly imposed.
2. *Cocanada.*—Tolls raised to full rates.
3. *Ellore.*—Ditto ditto.
4. *Cannanore.*—Profession Tax newly imposed.
5. *Salem.*—Re-imposition of the Profession Tax.
6. *Negapatam.*—Tolls increased from half to three-quarter rates.
7. *Tanjore.*—House Tax raised from 5 to 7½ per cent., Registration of carts introduced, Tolls raised from half to three-quarter rates.
8. *Ootacamund.*—Tax on houses raised from 5 to 6 per cent.
9. *Vizianagram.*—House rate raised from 3 to 4 per cent.

7. The expenditure as compared with that of the previous year was as shown below:—

Expenditure.	1876-77. Rs.	1877-78. Rs.
Public Works—		
Roads	1,44,801	1,05,586
Drainage	10,606	9,174
Water Supply	23,596	12,532
Buildings	74,994	33,573
Miscellaneous	21,762	13,340
Total Public Works ...	2,75,759	1,74,205
Education	63,978	66,805
Hospitals, Vaccination, &c.	2,00,676	2,01,591
Registration of Births and Deaths	9,219	9,311
Conservancy	2,98,075	3,15,521
Lighting	58,957	61,383
Watering Roads	2,122	1,372
Miscellaneous	57,819	1,15,074
Interest and Repayment of Debts	17,019	7,792
Contribution to Local or Provincial Funds	2,949	19,769
Supervision, Management, and Collection	1,03,381	87,386
	10,89,954	10,60,209
Balance ...	83,131	87,030
Total ...	11,73,085	11,47,239

8. The total expenditure amounted to Rs. 10,60,209 or Rs. 4,359 short of the current income. The closing balance was consequently in excess of the opening balance by that sum, while the latter differed from the entry in the accounts for 1876-77 for the reasons stated in the reports from Ootacamund, Nellore, Chilambaram, Trichinopoly, and Negapatam. Three Municipalities closed the year in deficit. Of these two had begun the year in deficit, the transactions of Masulipatam during the year raising the debt by Rupees 300, those of Salem reducing it by Rupees 4,024. In Wallajapet the Municipal Commissioners met a deficit of Rupees 235 by a loan from deposit funds, a procedure the impropriety of which has been pointed out to the Commissioners.

10. The expenditure on Public Works amounted to Rs. 1,74,205 against Rs. 2,75,759 in 1876-77. About 60 per cent. of this or 41 per cent. of the tolls revenue was devoted to the construction and maintenance of roads. The highest percentage of expenditure on roads during the year was in Madura and Ootacamund. In the latter Municipality the greater portion of the sum shown as expenditure was paid for work done in the preceding

year. Under-drainage, no large sums were spent in any Municipality; and the expenditure under water-supply amounted to about Rs. 1,800 in Adoni and Coimbatore and to Rs. 4,042 in Kurnool. The greater portion of the outlay in Coimbatore was incurred in deepening and improving old wells from the loan of Rs. 1,000 granted by Government; and the sum spent in Kurnool was the payment made to the Irrigation Canal Company for supplying water to the town. In Tanjore the scheme, which has been determined on for improving the water-supply of the town, is not yet in execution, the Government of India not having sanctioned a loan for the purpose. In Madura, where funds are being accumulated for the drainage and water-supply projects, little or no expenditure was incurred on these accounts, while a sum of Rs. 5,000 was drawn from the accumulated funds for ordinary current expenditure. On buildings Rs. 33,573 were expended during the year against Rs. 74,994 in 1876-77. The principal works executed were a dispensary at Ellore at a cost of Rs. 2,600, and a market in Cuddapah on which Rs. 4,458 were expended. Latrines, cartstands and many other petty works were executed during the year in many of the other Municipalities.

11. The Educational charges amounted to Rs. 66,805 against Rs. 63,978 in 1877-78. In thirteen Municipalities the expenditure was about Rs. 500 and under; in eleven it ranged between two and four thousand rupees, and in Madura alone it was as high as Rs. 5,076. Statement No. V intended to show the state of education in each Municipality has been generally incorrectly prepared and the totals differ from the entries in Statement II. A general statement complied from these returns is appended; for, although more or less inaccurate, it affords comparative information which may prove useful to the Commissioners. The large cost of the Municipal school at Cochin is due to the school being of the middle class. It was intended at the beginning of the year to reduce it to a lower class, but it was not found practicable to do so during the year. In Madura an important change was made in the management of the schools, the Municipal schools there having been incorporated with a few other schools into ten combined system schools and the whole placed directly under the supervision of the Deputy Inspector of schools of the range, whose report on the working of the schools is favorable. In Tanjore, the expenditure shown against Municipal schools appertains to only a portion of the year, the schools having subsequently been abolished in favor of the results grants system which the Commisioners advocated. The high cost of educating each pupil in the Tellicherry Municipal School is ascribed to the falling off in attendance consequent upon the breaking out of cholera during the year.

12. Medical charges, including Vaccination and Charitable Establishments, amounted to Rs. 2,01,591 against Rs. 2,00,676 spent in 1867-77 under this head. The hospitals and dispensaries were as in former years most satisfactorily worked and rendered excellent service in so disastrous a year as the one under review. The attendance at these institutions increased considerably as the following abstract giving the particulars for a few of the more important institutions shows:—

Municipality in which Dispensary is situated.	Population.	1876-77.		1877-78.	
		In-patients.	Out-patients.	In-patients.	Out-patients.
Conjeveram	37,327	400	11,966	3,749	13,103
Cuddapah	16,275	731	8,404	1,366	11,090
Calicut	47,962	529	10,871	443	12,367
Cuddalore	40,290	413	19,058	687	22,507
Madura	51,987	405	20,668	46,714	
Nellore	29,922	2,836	4,923	9,617	9,989
Salem	50,012	187	8,221	337	8,748
Trichinopoly	76,530	791	17,739	1,444	18,058
Tanjore	52,175	11,691		12,464	

The number of in-patients especially rose during the year owing to the influx of strangers into towns when the famine was at its height. The excess charge incurred in connection with the dieting of famine patients was, to a considerable amount, paid by the Government to the Municipalities concerned. The Lying-in wards attached to the hospitals at Cuddalore and Mannargudi are specially appreciated by the public; and the midwifery class opened by the Native Surgeon at the latter station is reported to be working satisfactorily. The American Mission Dispensaries in Madura and Dindigul, which receive grants-in-aid from the Municipalities, afforded as usual considerable relief to the people in the neighbourhood.

13. As usual a large portion of the Municipal expenditure was under Conservancy, nearly 30 per cent. of the income of the year having been devoted to it. In some * Municipalities nearly half the revenue was expended on conservancy; and in Bellary a sum of Rs. 35,117 was spent out of an income of Rs. 66,337 owing to the exceptional circumstances of the year. Lighting cost Rs. 61,383 against Rs. 58,957 in 1876-77, Madura, Negapatam, Trichinopoly, Vellore, and Bellary spending more under this head than other Municipalities. The registration of births and deaths is carried on in most Municipalities by a special agency, and the result is stated by the Sanitary Commissioner in his report for 1877 to be satisfactory.

* Gooty.
Rajahmundry.
Coonoor.

14. The annual audit of Municipal accounts is entrusted usually by the President to a qualified resident, whether official or non-official. The system has worked fairly well; but the want of uniformity of procedure and the desultory nature of audits have frequently been observed as important defects in it.

15. The Government will now review very briefly the working of Act III of 1871, over a period of seven years. The results have been on the whole very satisfactory and undoubtedly the health, convenience, and comfort of the inhabitants of the towns in which the Act has been in operation have been beneficially affected thereby. The average population of these towns has been about 25,100—Trichinopoly having the greatest (76,530) and Coonoor the smallest (3,058) number of inhabitants—according to the figures of the census of 1871. In the statements appended, marked A, B, C, the receipts and expenditure of Municipalities collectively, and the incidence of taxation in each Municipality during the seven years will be found. In 1871-72 there were forty-six Municipalities in existence. Two of these, Palconda and Cumbum, were subsequently abolished; but Municipalities were established in Chilambaram, Ongole, Karur, and Mettapolliem, raising the number to forty-eight.

16. During the seven years the total receipts of the Municipalites amounted to Rs. 74,89,008, of which Rs. 55,25,204 or 73·7 per cent. were derived from taxation including the Municipal share of tolls, the proceeds of this item amounting to Rs. 21,63,367 or 39·1 per cent. of the total taxation. The total receipts from the house and land tax amounted to Rs. 19,54,702, but the yearly yield of this tax has been gradually increasing, having risen from Rs. 2,24,000 to Rs. 3,24,000 in the seven years. This increase is in a measure due to the increase in the rate at which the cess is levied, especially after the abolition of the trades tax in 1874-75; but it is also due to a more careful revision of the registers in several towns. The exemption of lands from any cess, though irregular and probably illegal, in many Municipalities, seriously affected the receipts. Recently, however, the error has been rectified in several instances. The collection of this tax has generally been carried out without difficulty. The yield of the tax however is so small, considering that it represents probably on an average about 3 to 3½ per cent. on annual rental of the real property within Municipal limits of a population aggregating considerably over one million souls, that the conclusion can hardly be resisted that the standard of assessment of houses and lands in Municipalities is very low. For, deducing the rental of such property from the cess, it appears that the total annual rental of the forty-eight Municipalities was only about 100 lakhs of rupees or one million sterling; which, if only 5 per cent. be assumed as the return for capital invested in houses and lands in these towns, would

give the total value of their real property at about five millions sterling—a figure, which considering that such wealthy towns as Madura, Trichinopoly, Tanjore, Calicut, and Negapatam are included in the list, is manifestly very far short indeed of the market value of such property. This state of things is in considerable part due to the provisions of the Act for assessing house property; the basis of the assessment being rental whilst a considerable portion, and that the wealthiest portion, of the town populations, inhabit their own houses from generation to generation. Consequently the rental is a mere guess, or at the best an assumption, the accuracy of which there are but few data to test. The Government, however, are glad to observe that during the last year changes have been made in some Municipalities which will result in the tax on houses being more equitably assessed.

17. Prior to the decision of Government to abolish the profession tax in Municipalities in 1874, this tax produced revenue amounting to rather over one and-a-half lakhs. Pressing Municipal requirements have compelled its revival in several Municipalities; and before long it will probably be universally in force. Some difficulty has been experienced in working the provisions of the Act relating to this tax, owing to the want of definiteness in the wording of some of the sections. Several Municipalities have raised difficulties with the apparent intention of postponing or avoiding the imposition of a tax, which though yielding, comparatively speaking, a small revenue, is generally decidedly unpopular, Commissioners being ready to resort to almost any other means of raising money.

18. The taxes on vehicles and animals have steadily improved, having yielded in the last year of the *septennium* Rs. 94,000, against Rs. 72,000, in the first. It is noteworthy that the yield of the tax generally increased during the famine, though in individual cases there was a falling off. This was probably chiefly due to two causes: the increase of traffic caused by the famine; and the greater attention paid to collection on abolition of the profession tax.

19. The large portion of the taxation which has been derived from tolls during the period under review has already been noted. It is, however, satisfactory to observe that the proceeds of the tax, or rather the proportion of it reserved by Municipalities in the distribution between themselves and Local Fund Boards, has been gradually falling. On strict principles, the yield of this tax should be expended upon the construction and maintenance of roads and other works such as drainage connected with communications; but this has been far from the fact in most Municipalities. During the last three years, whilst Rs. 8,72,765 were derived from tolls, only Rs. 4,21,608 were laid out on roads. This anomaly, however, is somewhat mitigated when it is considered, as already remarked, that the tax is to some extent a tax upon the consumption of the town; but even when this fact is taken into consideration the present position of this impost is unsatisfactory, for it is to be feared that in too many towns it acts not simply as a tax on the consumer, but also in some measure on the outside producer. Whether it be from selfish motives, or the dislike of direct taxation, tolls are undoubtedly the most popular of Municipal imposts.

20. The yield of license fees shows but little increase and does not indicate any great advance in the several trades from which these fees are mainly derived.

21. The gradual increase of miscellaneous revenue is very satisfactory, despite the slight falling off in 1876-77 and 1877-78, the two famine years. The revenue, however, which is classed under this general head, is undoubtedly in many towns capable of great expansion. The Government trust the Commissioners will exert themselves in every way to utilise the means of obtaining funds for Municipal purposes which are available, and thus prevent, as far as possible, resort to taxation.

	Rs.
1871-72	1,41,538
1872-73	1,73,866

1875-76	2,41,486
1876-77	2,31,694
1877-78	2,16,398

22. As regards balances, there has been a rapid fall in amount carried forward during the last three years, but the Government consider that the figure Rs. 87,000 with which the year 1877-78 closed approximately sufficient for the opening of the new year. It is unnecessary ordinarily to retain more money in hand than is required for the outlay to be incurred in the first month of the Municipal year.

23. Passing on to expenditure, the Government note that during the last two years of the period there was a large falling off in the expenditure upon works. This reduction was due to the heavy demands made upon the Commissioners during the famine for purposes connected with the health administration of many of the towns. During the five earlier years of the septenate the expenditure upon new works and repairs amounted to about one-third of the total outlay in each year. Great improvements have been effected in the communications and surface drainage of many towns, also in the provision of public latrines; but no large water-supply or drainage scheme has as yet been undertaken in any Municipality, though large schemes are contemplated in several towns—notably in Tanjore, Negapatam, Vellore and Tuticorin as regards water, and Ootacamund and Coonoor in regard to drainage. In Trichinopoly the important undertaking of filling in the moat surrounding the Fort has been completed. It is to be hoped that in course of time the Commissioners will see the propriety of carrying out such schemes with money raised by loan from their own townspeople.

24. The amount expended on education shows a slight gradual increase, but does not yet bear a fair proportion to other Municipal outlay. The organization and systematising of educational effort in Municipalities is now engaging the attention of Government, who are most anxious to interest the leading townsmen in the education of their fellow citizens. The natives generally feel a laudable pride in being connected with educational institutions; and the control of such institutions will doubtless add to the consideration in which a Municipal Commissioner is held by his fellow townsmen. The devotion of portion of the Municipal revenues to an object generally obtaining the sympathy of a considerable portion of the people tends to mitigate the disagreeableness of taxation. No purpose contemplated in Municipal legislation seems, however, to be better appreciated than the provision of hospitals and dispensaries. In seven years the expenditure thereon has quadrupled itself, and shows every tendency to increase. The increase in the patients treated has been very great. During the famine these institutions proved great public benefits. In two Municipalities small medical schools have sprung into existence, whilst in several trained midwives are maintained. The management of the hospitals appears generally to be very satisfactory. The amount expended on registration of vital statistics is still small, but Dr. Cornish has recently borne testimony to the fact that though much remains to be done to render such statistics as complete and accurate as is desirable, still good work is done. The conservancy overseers are employed in the work in some Municipalities with good results. On conservancy the expenditure has been gradually increasing, and there is every reason to believe that very great changes in the sanitary condition of many towns have been and still are in progress, which will in time produce a favorable result in the general health of the districts, as it is in the large centres of population that diseases are mostly bred and fostered. The greatest defect probably in the conservancy arrangements of the several Municipalities is connected with the conservancy of private houses, not only those of the poor, but also of the well-to-do classes. The sanctity or privacy of the home is no doubt a great obstacle to efficient supervision, but the Government trust that the gradual spread of knowledge of a few of the simple laws of health among the people will gradually improve matters, and render the task of the Commissioners in this respect less antagonistic to the general opinion of the people.

25. The Commissioners have generally refrained from raising money by loan for public works. This is to be regretted, as doubtless much more might have been done in improving the towns and adding to the comfort of the people, had advantage been taken of the facilities till recently afforded by

Government for loans. It is, however, to be hoped that the permission now accorded to Municipal Commissioners to borrow in the local money market may lead to employment of local capital in the creation of local works. Such loans would probably tend to economy, besides interesting deeply the monied classes in the stability and progress of the Commissions.

26. In conclusion, the Government note with satisfaction that the charges for establishment have on the whole been moderate, though economy in this respect is not the characteristic of some Municipalities.

No. 91, dated Simla, the 15th August 1879.

From—C. BERNARD, Esq., C.S.I., Offg. Secy. to the Govt. of India,

To—The Secretary to the Government of Madras.

I AM directed to acknowledge the receipt of your letter, No. 1120A, dated 11th June last, submitting, with the usual statements, a review on the municipal reports of the Madras Presidency for the year 1877-78.

2. In reply, I am to say that this review and the statements appended thereto satisfactorily show that the incidence of municipal taxation in the Madras Presidency is generally light. Madras towns have hitherto been free from all liability to support municipal police. This immunity however will probably soon cease. Considerable sums were expended, during the year under report, upon education, conservancy, and charitable institutions such as hospitals and dispensaries. The Governor General in Council is glad to observe that in these respects the municipalities of the Presidency of Madras set an excellent example to municipalities in other parts of India. His Excellency in Council also observes that the Sanitary Commissioner to the Madras Government exercises more control and affords more assistance in municipal sanitary matters than is the case in other Provinces.

3. The Governor General in Council desires to take this opportunity of conveying to His Grace the Governor of Madras in Council the acknowledgments of the Government of India for the care with which municipal administration is directed and controlled by the Madras Government, and I am to add that the review under acknowledgment, together with this letter, will be published in the Supplement to the *Gazette of India*.

CULTIVATION OF THE GROUND-NUT IN INDIA.

Extract from the Proceedings of the Government of India in the Home, Revenue and Agricultural Department (Agriculture and Horticulture),—No. 2—382-392, Simla, 15th August 1879.

READ—

Resolution in the Department of Revenue, Agriculture and Commerce, Nos. 514-24C., dated the 2nd November 1877, relative to the cultivation of the ground-nut in India.

RESOLUTION.

OBSERVATIONS.—The ground-nut (*Arachis hypogæa*—N. O. *Leguminosae*) is otherwise known as Manilla-nut, earth-nut, pea-nut, and pig-nut. Its vernacular synonyms are *China-badám* and *Vilaiti Moong*, Hindustani; *Moong phalli*, Bengali; *Myé-bye*, Burmese; *Ver kadale* and *Vella kadale*, Tamil; *Katjang*, Malay.

2. From the seed of the nut a considerable proportion of excellent oil is expressed, varying in quantity, according to circumstances, from 33 to 50 per cent. of the weight of the husked seed: the oil is of a light-greenish colour, very clear and bright, and is largely used in Europe and in India for illumination. It is also used both for the table when mixed with olive-oil, and for the lubrication of machinery. The oil is good for every purpose for which olive and almond oil are used; it makes good soap, and has the advantage of not quickly becoming rancid and of burning without smoke. The nut is eaten, roasted, by natives, and occasionally by Europeans in India. It is of universal consumption in the United States and by Spaniards, both in Spain

and in America: it is eaten roasted, and is also used in confectionery. The following extract from Mr. P. L. Simmonds' *Tropical Agriculture* shows the value of the ground-nut as a food:—

"Dr. Muter, after giving the following analysis of ground-nut meal, urges its more general use as an important article of food:—

Moisture	9·6
Fatty matter	11·8
Nitrogenous compounds (flesh-formers)	31·9
Sugar, starch, &c.	37·8
Fibre	4·3
Ash	4·6
Total ...	100

"From this analysis it is evident," he observes, "that the residue from them, after the expression of the oil, far exceeds that of peas, and is even richer than lentils in flesh-forming constituents, while it contains more fat and more phosphoric acid than either of them. On these grounds, we are justified in urging the adoption of the ground-nut meal as a source of food, it being superior in richness of all important constituents to any other vegetable products of a similar nature. Although in the raw state it possesses a somewhat harsh odour, similar to that of lentils, this flavour entirely passes off in cooking, and, when properly prepared, it has a very agreeable flavour."

The green plant forms excellent fodder for cattle, and the cake left after expression of the oil is a valuable cattle food and manure.

3. In the Resolution read in the preamble the following remarks were made in regard to the development of the cultivation and trade in the nut:—

In connection with this subject, the Governor General in Council thinks it opportune to record his opinion that it is of more importance to stimulate and develope the production of articles already known in the country, than to initiate costly experiments in articles not commercially known and of which the ultimate success is problematical. One of these articles is the ground-nut (*Arachis hypogæa*). The kernel of the pod of this plant produces a very large proportion of excellent oil, extensively used in Europe as well as in this country. The plant grows abundantly in the Madras Presidency and elsewhere, but it does not seem to be fully utilized. The exports of the nut to foreign countries in 1875-76 were, from Madras, 6,994 cwt., value Rs. 29,774, and from Bombay, 3,721 cwt., value Rs. 13,845. From Bengal the exports have been so trifling that they have not been separately distinguished. The plant is grown to some extent in Burma, but not sufficiently for local consumption, and quantities are imported from Madras.

Although the exports to foreign countries from British India are trifling, considerable quantities are sent from Pondicherry to France, as will be seen from the following figures, which have been extracted from the French trade returns of 1875:—

	Kilogrammes.	Value. Francs.
Imports from British India	1,231,803	406,494
„ „ French India	6,404,899	2,113,616

The total imports into France in the year from all countries were 101,524,468 kilogrammes, or nearly 100,000 tons, worth 33,503,000 francs.

Thus, out of this total value of 33½ millions francs, only 2½ millions stand against India, of which French India has by far the largest share. Nearly all the rest is imported from the western coast of Africa.

The French trade in ground-nuts is a large and increasing one, the extraction of the oil, which is in considerable demand for the manufacture of soap, for consumption as food, and for other purposes, being conducted on a large scale at Marseilles. If the cultivation can be developed in this country, it seems probable that British India should be able to compete with Africa and supply France with a very considerable part of her requirements of this article, adding the ground-nut to other oil-seeds, such as gingelly and rape, which are now exported to France in great quantities.

The Governor General in Council requests that the Local Governments will be good enough to obtain particulars of the extent of its cultivation in their provinces, and to report them with any particulars they can ascertain as to the consumption of the seed and oil in the country. His Excellency in Council will also be glad to be favoured with any suggestions they may wish to make as to possible development of the cultivation and trade. In the maritime provinces it is desirable that the export trade should be recorded in the monthly and annual returns, and this should be done with effect from the 1st of April next, in both the foreign and coasting trade returns.

4. The results of the enquiries instituted by Local Governments and Administrations are summarized below:—

5. MADRAS.—The Board of Revenue, reviewing the replies of the Collectors of the districts, state that the cultivation of the ground-nut is on the whole very limited, the total area cultivated with this crop in *Fasli* 1286 (*i.e.*, 1876-77) being only about 34,632 acres, out of an area of 19 millions of acres under crop in that year in the Madras Presidency. Loose sandy soil in the vicinity of the sea, or alluvial soils on the side of rivers, are stated to be best suited for the growth of the plant.

The nut is not generally consumed as an article of food, but the kernel is fried and eaten by the poor, especially by children, more as a luxury than as an article of ordinary diet. The oil is used for lamps, giving a bright light, free from smell and smoke, and sometimes for cooking purposes. In France it passes as olive-oil. The cake is given to cattle, and also used as a manure.

The following figures are available as illustrating the exports of the seed and oil, both foreign and coastwise, in the districts of the Presidency:—

	1873-74.		1874-75.		1875-76.		1876-77.		1877-78.

Total ...	6,768	6,103	735	15,468	4,464	18,506	8,110	44,539	32	1,149

In 1876-77, the exports by land from South Arcot to Pondicherry were, seed 29,709 cwt. and oil 25,562 cwt. The areas under cultivation in Tanjore and South Arcot, where these are French Settlements, average 5,413 and 25,660 acres respectively, yielding a produce of 11,862 cwt. and 258,750 cwt. respectively. The cultivation of the nut is well known in the Presidency, and increase of production will follow any increased demands.

6. BOMBAY.—The nut is not cultivated anywhere in Sind, but imported for sale and is to be found in all bazars; it is roasted and eaten by the natives, and is very generally used. Several officers have evinced a desire to try its cultivation.

It is not cultivated, except to a very trifling extent, in the Northern Division of the Bombay Presidency. In 1877 it was experimentally cultivated in one field in Ahmedabad, and on a small area in the Surat district, where it produced about 1,238 Bengal maunds, which were locally consumed for food purposes. Importation into this division is on a very small scale, the nut being merely used for food, and not for manufacturing oil; and any development of the export trade must be looked for elsewhere than in the Northern Division, a very great part of which is not well suited for the cultivation of the nut.

The Collector of Násik states that the ground-nut is grown in almost all the talukas of that district in land irrigated by pát as a rotation crop; that not more than from 1,000 to 2,000 acres are cultivated with it in any one taluka; that the nut is used as food; that oil is also extracted from it, generally for the purpose of adulterating other oils; that the crop requires a good deal of water; and that about half the produce is consumed within the district, the remainder being exported to Bombay.

The Collector of Khándesh reports that, in 1876-77, ground to the extent of 2,151 acres and 37 guṇthás was cultivated with the ground-nut in his district, and subjoins remarks by Messrs. Blathwayt, Woodward, and Stormont to the effect that—

> what is grown is used almost entirely for food, and consumed within the district; that a small portion is used for the production of oil, which is employed chiefly for adulterating other oils; and that the crop is grown on irrigated land, and is not profitable in comparison with other garden produce.
>
> The main objection to the ground-nut as a regular oil-crop is that, in Khándesh, where the soil is mostly tenacious and cloddy, it is difficult to recover all the nuts from the ground, so that some always remain in the ground, and by germinating become a troublesome weed.

The Collector of Ahmednagar reports that a small area (between 1,100 and 1,200 acres) of land is cultivated with ground-nut; that good soil is necessary for its cultivation; that it is invariably an irrigated crop; and that the expenses of cultivation are great, but that the profits are in proportion and generally exceed those from other crops usually grown on soil of similar description to that on which the ground-nut is sown.

The Collector of Poona roughly estimates that about 21,000 acres are cultivated with ground-nut chiefly in Khed taluka. He says that it requires irrigation and can be grown on almost any soil, but flourishes best on red and stony ground; that it is a more profitable crop than any other; and that about three-fourths is converted into oil and the rest used as food on fast days. He is of opinion that, if an export trade could be started from Bombay and agents established in the mofussil towns to purchase the nut, the cultivators would learn its value, and the crop could be grown to almost any extent required.

The Acting Collector of Sholápur reports that land to the extent of about 15,000 acres, chiefly in Bársi taluka, is cultivated with the nut, which is grown in soft, black and reddish soil, and used as food by the poor to a small extent, and by Hindus generally on fast days. He states that oil is extracted from it to a great extent for lighting and other purposes, and that it is said to be a very profitable crop where it can be grown without irrigation, and moderately so elsewhere.

The Collector of Satara reports that about 29,000 acres are annually cultivated with the nut in that district; that it is generally grown on good soil, but irrigation is absolutely necessary for its proper growth; and that the profits from its cultivation exceed those from other crops usually grown on similar soils.

In submitting these reports from the Collectors of his division, the Commissioner, Central Division, says that—

The nut is chiefly grown in the Satara, Sholápur, and Násik Collectorates, and he has no doubt that, should a demand for the nut spring up in mercantile circles, its growth would be largely and rapidly extended, as it is said to be a very paying crop.

The Commissioner, Southern Division, states that the ground-nut is cultivated to a limited extent in two talukas of the Belgaum district only, and 75 per cent. of the produce is consumed locally, and that in the remaining districts of that division it is imported in small quantities for local consumption, and is mixed with *kardi*, *kusumbá* or safflower, the oil thus extracted being used for culinary and lighting purposes.

The Government of Bombay adds generally that the nut is grown in that Presidency almost entirely for local consumption, but that, should any great demand for the crop arise, an immediate and large extension of the cultivation would undoubtedly result.

7. BENGAL.—The ground-nut is not grown as an article of trade in the Lower Provinces of Bengal. The following paragraphs contain such particulars as have been furnished of its cultivation:—

In the *Presidency Division* it is grown to a very small extent, and the seed and oil are not largely consumed.

In the *Patna Division* it is not grown, except to a very limited extent in the gardens of some of the rich natives of the Hajeepore sub-division of the Mozufferpore district, and in the Chumparun district.

In the *Rajshahye and Cooch Behar Divisions* it is not grown. From a private experiment made by him, Mr. French, Manager of the Court of Wards' Estates, Dinagepore, thinks that the nuts might grow in Dinagepore.

In the *Chota Nágpur Division* it is unknown, except in Hazáribágh, where it is cultivated in the town on a very small scale as a dessert fruit by a few gentlemen.

In the *Bhágalpur Division* the nut is not grown, except occasionally in the gardens of a few planters in the Muddehpoora sub-division of the Bhágalpur district, and to a small extent as an article of luxury in the Purneah district.

In the *Burdwan Division* it is not grown, except to a very small extent in the Beerbhoom district, where it is used as an article of food, but not of commerce, and in the gardens of a few well-to-do natives in Hooghly.

In the *Chittagong, Dacca, and Orissa Divisions* it is not grown.

8. North-Western Provinces and Oudh.—Mr. Buck, Director of Agriculture and Commerce, states that his attention was drawn to this product from his having noticed the enormous extent to which it is cultivated in America under the name of pea-nut. The nut is little grown in the North-Western Provinces, but it is found in market-gardens near towns under the name of *Moong-phalli*. It requires a sandy soil, and perhaps wants a moister climate than the North-Western Provinces can give it, but may succeed with canal irrigation. In the North-Western Provinces it appears to be used as a luxury, and no oil is extracted from it, nor is it exported. It is cultivated as a garden, and not a field crop. The only districts in which it is known to have been grown are Bánda, Hamírpur, Jaunpur, and Mirzapur; it is sown in the months of June and July, and the crop is cut from December to February, the outturn being from 4½ to 15 maunds per acre. It is chiefly used for food, though in Bánda and Mirzapur oil is said to be extracted from the seed. The green leaves are readily eaten by cattle, and, when rotted, make excellent manure. It is occasionally imported into the North-Western Provinces from Gwalior and Jubbulpore. Experiments with the plant have been undertaken in the Government Farms at Cawnpore and Allahabad, and in the Lucknow and Saháranpur gardens with the results reported below:

The experiments at Saháranpur were made partly with seed raised in the gardens during the previous year, and with seed obtained from Bengal: 1 lb. 3 ozs. of the former seed gave an outturn of 61 lbs., being almost 49-fold; and 8 lbs. of the latter seed yielded 192 lbs., or 24-fold. There was no apparent difference in the size of the nut or quantity of the crops.

In the Lucknow horticultural gardens 6 lbs. of Bengal seed sown gave an outturn of 192 lbs., or 32-fold. The land was ploughed three times and manured at the rate of 400 maunds per acre; the crop was irrigated four times and weeded twice. The area on which the seed was sown was 1,164 yards, which gives a rate of yield per acre of about 9¾ maunds. The value of the produce at 4 seers per rupee would be Rs. 97-8 per acre. This compares favourably with the value of the produce of an acre of sugarcane, which, under the same amount of cultivation, is estimated at Rs. 70.

Bengal seed was sown at the Allahabad and Cawnpore Government Farms, but the result in both places proved a failure owing to want of proper management, the outturn per acre at Allahabad being only 90 lbs. and at Cawnpore somewhat less.

Mr. Buck believes that the nut can be cultivated with profit only in the damper Sub-Himalayan regions where the climate most closely approximates to that of Bengal. It is well known at Cawnpore and other places.

9. Punjab.—The ground-nut is unknown in most districts as an article of local cultivation. It is imported into Delhi from Bombay and Gwalior, and into the neighbouring districts from Delhi, and is generally sold by the vendors of dried fruits at the rate of 8 annas a seer. It is eaten in small quantities like pistachio nuts, but its use as an oilseed is unknown. The value of the nut cannot be judged from the few experiments made with it in all three districts of the Delhi Division; but, seeing that the zamindars are averse to the introduction of any new products, it seems doubtful whether the cultivation of the nut would there be successful. The Punjab Government suggest that a few experiments might be tried in the Government garden in each district.

In *Hissar* it is not cultivated. Some years ago the Deputy Commissioner (Colonel Forster) tried its cultivation experimentally in the public garden, where it throve very well and produced a good crop. It requires a fair share of irrigation, and there is no doubt it would grow well enough and be sufficiently productive on canal-irrigated land, but it will not otherwise flourish.

It is unknown in the *Jullundur* Division, except to Mr. J. W. Wright, C.E., Executive Engineer, Military Works, Jullundur Division, who in 1865 tried the following experiment:—Half a seer of nuts was sown on a plot of 400 square feet about the end of April, and germinated freely. The crop was dug up in January 1866, and the outturn was five seers of fine nuts; half a seer of nuts was kept for seed and sown again in the spring of 1866, and the result was about the same; but the nuts were not quite so full and large. Half a seer was kept and sown in the spring of 1867, but the nuts failed to germinate. The nut requires a light sandy soil, and, so far as Mr. Wright's experience goes, much irrigation is not necessary. The surface of the soil should not be allowed to become a hard crust, as it prevents the plants from sending down the nut-bearing shoots from the runners which are thrown out during the rains. Just before the rains a small quantity of manure was sprinkled over the plot after it had been broken up. The nut will thrive best in a moist climate, and Mr. Wright doubts much whether the Punjab is well suited for it. It would be easy to try it on some of the sandy patches in Jullundur, trusting to the natural moisture of the ground, and also a second lot near wells where water can be had when required, and then note results. When the crop is dug up, the old plants should be destroyed and a fresh piece of ground selected for the next year's crop.

In *Siálkot* an experiment was tried in the public gardens some three years ago, and "the produce of a small plot of ground was sufficient to indicate that the cultivation would be remunerative." The Deputy Commissioner of the district suggests that the sandy and fertile soil of the "Bajwat" tract in that district would probably be a suitable place for experiment.

It is unknown in *Sirsa*, and, according to the Deputy Commissioner, unlikely to succeed there; but Mr. Wakefield, a former Deputy Commissioner of the district, now at Ludhiána, states that he grew it at Sirsa in his own garden, and he proposes to try it in Ludhiána.

Dr. Henderson, Civil Surgeon of Ráwalpindi, says that in Lahore the plant succeeded well on sandy soil, but failed on clayey soil.

The Financial Commissioner says that the manufacture of oil from this nut does not seem to be known in any part of the Punjab. The nut, where it is known at all, is eaten in small quantities as food, and probably only as a luxury; and it cannot be determined whether the cultivation of the plant for the sake of the oil or for export to Europe would be remunerative, until experiments on a larger scale have been undertaken. With this view the Financial Commissioner thinks it would be useful to ascertain whether nuts produced in the dry climate of the Punjab will yield the same proportion of oil as in the moister parts of India where the cultivation is better known. He suggests that seed be procured for further experiment. The Lieutenant-Governor seems to

think experiment unnecessary, because the plant apparently requires a higher temperature than that of the Punjab.

10. CENTRAL PROVINCES.—In these Provinces, as in the Punjab, the plant is grown to but a small extent for food, and not for the extraction of oil. The divisional officers report as follows:

Nágpur Division.—It is not cultivated at all in the Chánda, Bálághát, and Upper Godávári districts, and scarcely at all in Bhandára; it is cultivated to a limited extent in the Wardha and Nágpur districts; but the necessity for irrigation on the one hand, and the limited demand on the other, prevent its cultivation from being more general.

Jubbulpore Division.—The people understand its cultivation better than in Nágpur, and it is therefore more general; but there is no exportation, and it is only used as an edible luxury.

Nerbudda Division.—It is not cultivated at all in Narsinghpur, and but little in Hoshangabad, Betúl, and Chhindwára. Nimar is the only district in which there is really any regular, though very limited, cultivation of the plant. Consumption is chiefly local, and but little is exported to the neighbouring district of Hoshangabad.

Chhattísgarh Division.—The plant is quite unknown, except in the Biláspur district, where it was introduced by a Mahratta gardener, who uses the seed only in the preparation of sweetmeats.

It seems to be generally believed that soil suitable for its production would be easily obtainable in the Central Provinces, but the demand must rise considerably before it will be possible to extend cultivation to any appreciable degree.

11. BRITISH BURMA.—The plant is grown to a very limited extent in this Province; the seed is used as food, and no oil is extracted; it is cultivated almost exclusively by Shans, who seem to have introduced it into the Province.

12. ASSAM.—There is no cultivation of the plant, nor any appreciable trade in, or consumption of, the nut or its oil in Assam; it is doubtful whether any artificial encouragement of its introduction would be successful.

13. MYSORE.—The cultivation of the nut is almost wholly limited to the Bangalore and Kolar districts of the Nundydroog division.

In the Bangalore district the statistics for 1873-74 to 1877-78 show that the average area annually under cultivation with the nut was 3,540 acres, with an outturn of about 3,131 tons, of which about 1,149 tons were exported. Of the remainder, 1,085 tons were retained for consumption, and about 897 tons used for extraction of the oil.

In the Kolar district the area under cultivation annually is stated to be 1,054 acres, yielding about 1,640 tons; the greater portion of this quantity, *viz.*, 1,190 tons, was consumed locally as food, and the remainder 450 tons used for the extraction of oil. It does not appear that any portion of the product is exported, but the Chief Commissioner apprehends that the information supplied on this point is deficient.

The nut is cultivated to a small extent in the Túmkúr district of the Nundydroog division and in the Chitaldroog district of the Nagar division.

The Chief Commissioner states that from the fact that the nut is chiefly cultivated in the Nundydroog division, it may be inferred that its value as an article of export has been to some extent recognised in the districts adjacent to Bangalore, and its cultivation and use otherwise than as an article of consumption may be expected in course of time to develope and extend further into the interior. The progress already made may be estimated by the fact that, prior to the assumption of the British rule in the province, the extraction of oil from the ground-nut had been prohibited, and in 1860 Sir Mark Cubbon, the then Chief Commissioner, deemed it necessary to issue a notification formally cancelling that interdict, and pointing out to the people the advantages of employing the oil as an article of trade.

The plant is ordinarily cultivated as an alternative crop on land watered by wells; it is put down during the first rains in April to June, and harvested in January or February following. The leaves are used to enrich the soil for the cultivation of sugarcane and other crops, which are considered more productive.

14. BERAR.—In Amráoti, 1,300 acres were cultivated with the plant during the year 1877-78. A small quantity was exported to the Bombay Presidency. The nut is eaten by the people, but oil is not extracted from it. The soil of the district is said to be quite unsuitable for its growth, and the ravages caused by pigs, combined with the scanty yield, is against the extension of its cultivation.

In Ellichpur it is practically unknown. A few *mális* are said to have raised a small quantity, but the cultivation is so limited that it has not been separately recorded in the returns.

In Wún about 259 acres in one taluka were sown with the nut last year, the yield from which is said to have been at the rate of 800 lbs. per acre. It was sold at 13 seers per rupee, the receipts per acre being thus Rs. 30-12; the cost of cultivation is not mentioned. The nut is eaten, but is not used for the extraction of oil.

In Akola it is cultivated in only two talukas; the area cultivated last year was 190 acres. The nut is generally eaten by Hindus on fast-days, but nowhere used for making oil. The Deputy Commissioner does not think its cultivation could be increased, as other crops are more profitable.

In Buldána 1,111 acres were cultivated with the nut; it is eaten by Hindus on fast-days, but no oil is extracted.

In Básim cultivation is so limited that the area under it has not been separately shown.

The Resident thinks the cultivation of the plant not capable of much extension in Berar. It is culturable only as a garden crop, and, garden cultivation being comparatively limited, this alone acts as a check upon the extended cultivation of the nut. He feels confident, from his own experience, that where the ground-nut thrives, as in Mysore and other places, it may be turned to most useful and profitable account. The oil extracted from it is good, and realises a price which repays production, while the refuse forms an excellent cake for feeding cows and fattening cattle and sheep for market.

15. AJMERE.—The nut is not grown in this district; it was once grown in two or three biswas of well land in the village of Rámsar, and the outturn was about 13 seers.

16. From the above summary it appears that the total recorded area under cultivation with the ground-nut in all India is about 112,000 acres, exclusively in the Madras and Bombay Presidencies, Berar and Mysore. In the Bombay Presidency, the area (70,350 acres) is more than double that of Madras (34,630 acres), although such exportation as there is from British India to foreign countries is confined to the latter Presidency. The yield per acre is stated to range from ten cwts. in Tanjore and South Arcot to over one ton per acre in Kolar. In Central and Northern India the nut is cultivated for food or for conversion into oil, in both cases to a very small extent and only for local consumption. The plant likes a light sandy soil and a considerable amount of water, with a tolerably equable, sub-tropical temperature, and these requirements may be supplied in many parts of the littoral of the Bombay and Madras Presidencies, the eastern districts of Bengal, and the Burman coast. The cultivation is very profitable, and the demand, which is mostly for France, is large. In 1878, the imports into France of "Arachides et noix de touloucouna" amounted to 111,443,366 kilogrammes, valued at 80,239,602 francs. Of this quantity, upwards of 103,000,000 kilogrammes were imported from the western coast of Africa, where the negroes have found the cultivation a very profitable

investment. The exports of the nut from British India in the official year 1878-79 amounted to only 25,472 cwt. (1,294,102 kilogrammes), or little more than 1 per cent. of the imports into France.

17. The question now is whether India should be content to leave France to draw all her supplies of this valuable food-stuff and commercial product from Africa, or whether she should not enter actively into competition for, at any rate, a substantial portion of the trade. The cultivation is no novelty requiring the removal of prejudices and other obstacles, for its introduction. The plant is well known and appreciated by the people, and in some places the cultivation is already not insignificant and there is abundant room for development. Cultivators would probably respond without delay or difficulty to any call made upon them for an increased production, but they can hardly be expected to undertake any considerable risk by largely increasing the area under the plant without first having an assured demand for the produce. The increase of the effective demand must depend upon the action of produce merchants at the chief ports of export. The Governor General in Council has thought it expedient to give publicity to the foregoing details, in case the merchants of Bombay, Madras and Calcutta should find it to their advantage to enter into relation with the Marseilles houses, who import this staple, or with dealers in the districts where the nut is already a recognised agricultural staple.

ORDER.—Ordered, that the above Resolution be communicated to the Local Governments and Administrations for information; and with a request that it may be published in the Local Government Gazettes.

Ordered, also, that the Resolution be published in the Supplement to the *Gazette of India*.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 12th AUGUST 1879.

GENERAL REMARKS.—In Madras slight rain fell during the week, more is required in parts; prospects continue fair. Good rain has again fallen in the Bombay Presidency, except in Sind, where locusts are doing some damage; rats are destroying crops in parts of the Deccan and of Dharwar; prospects are on the whole excellent. The rain in Bengal has been heavy, but more is still required in the Burdwan Division and in Manbhoom; the early crops have suffered from inundation in Central and Eastern Bengal, and particularly in Furreedpore, Monghyr and Bhágalpur, where the damage is reported to be serious. In the North-Western Provinces and Oudh rain has been heavy in parts and moderate in other places, a break is required in Bareilly and Kumaun; in Meerut cotton has been damaged by excessive rain; prospects continue to be favourable. In the Punjab good rain has fallen during the week; at Ráwalpindi and Umballa 7 and nearly 3 inches fell respectively; prospects have improved in Jullunder and Peshawar; prospects, though still unfavourable in Hissar and Ferozepore, have on the whole improved throughout the Province. Beneficial rain has fallen in the Central Provinces and prospects are generally good. In British Burma there has been general, and in parts very heavy, rain; prospects remain good. Prospects also continue favourable in Assam, Berar and Mysore and Coorg. In Central India and Rajputana beneficial rain has fallen and agricultural prospects are very good.

Prospects have improved in the Punjab; and in the rest of the Empire they continue favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Kurnool (Augt. 9th)	·42 (average of six stations).	*Ragi* 12·25; rain wanted in some taluks; crops thriving except in Cumbum and some villages in Markapur where rain insufficient; *korra, sajja* and paddy being sown; prices stationary pasture and water sufficient; indigo and *korra* destroyed in parts of Koilkuntla.
Kistna („ „)	·42 (average of ten stations).	*Ragi* 18·62; 103 inches water over anicut; standing crops and nursery beds beginning to wither; *sazza* and maize coming into ear in some taluks; canal water supply deficient.
Tanjore („ „)	1·30 in Shealli; other stations *nil*.	*Ragi* 15·65, Cauvery 12 to 108 inches; crops good; harvest of *gingelly*, outturn half.
Madura („ „)	*Nil*.	Rice 9·61, *cholum* 16·47, *ragi* 15·96, *cumboo* 14·82.
Malabar („ „)	3·17 (average of 14 stations).	Rice 10·14, *ragi* 17·93; prices slightly fallen in Kurambranad, stationary elsewhere; rain sufficient for existing cultivation; general prospects fair.
Bombay (Aug. 14th)—		
Kurrachee ...	·02 at Koti ...	River on 10th 16⅔ feet against 18 feet 9½ inches last year; locusts about in 3 talukas, did damage in Mánjhand; cholera abating, slightly prevalent in Kurrachee and Mirpur.
Hyderabad ...	Rain in 4 talukas on 7th and 8th.	Locusts everywhere; cotton, indigo, *bajri* and *jowari* attacked; river rising.
Ahmedabad ...	1·73	Total rainfall 17·15; transplantation of rice continues; crops thriving.
Baroda ...	8·22	Total rainfall 33·66; crops greatly improving; transplantation of rice finished; health good.
Surat ...	2·80	Total rainfall 25·72; rice transplanting progressing; other crops healthy; prospects good; a few deaths from cholera in Surat.
Násik ...	.....	Weather showery; crop prospects good everywhere; one death from cholera in Sinnar; prices slightly higher; cattle disease in Dindori.
Colába (Aug. 11th)	10·41 at Alibág; good throughout district.	Total rainfall 50·14; public health good; cattle disease continues in Mahád taluka; transplanting operations progressing; young plants improving.
Poona ...	Sufficient rain; maximum 11·25 at Máwal, minimum ·82 at Indápur.	No more rain required at present; *kharif* prospects excellent.
Ahmednagar ...	·25, fall general, maximum 2·26 at Akola; minimum ·23 at Kopargaon.	Crops being destroyed by rats and insects in Kopargaon; good in other talukas; cholera in parts with some deaths.
Sholapur ...	Rain general ...	Crops good; rats still causing damage but being killed; fever in 2 talukas; condition of poor bad but not deteriorating.
Dharwar ...	1·5	Rice good; resowing of *jowari* progressing where seed was eaten by rats; damage by them still continues.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Kanara ...	4·68 at Karwar, maximum 11·51 at Yellápur, minimum 1·0 at Supa.	Total rainfall 84·63; prospects very good; fever and diarrhœa continue, also cholera in parts.
Rajkot ...	·68	Total rainfall 19·69; prospects very good; fever and diarrhœa continue, also cholera in some talukas. *General Remarks.*—Some damage by locusts in Sind; rain general throughout the Presidency; prospects excellent.
Bengal (13th Aug.)—		
Chittagong ...	2·98	Prospects promising; cholera bad in Chukeria.
Dacca ...	6·13	Floods have risen very high and submerged part of the *aus* which was ready for cutting, jute and *amun* still promising; public health good.
24-Pergunnahs (Calcutta)	4·40	Transplantation proceeding briskly; prices continue high; public health fair; fever cases in places.
Moorshedabad ...	4·71	Prospects good except in low lands in north and east, where *aus* has suffered much from floods, prices high; general health good.
Rajshahye ...	4·27	Prospects of all crops good excepting those damaged by early floods.
Burdwan ...	3·45	Prospects brighter; rain still wanted in greater part of the district; cholera cases in places.
Rungpore ...	2·84	Prospects good everywhere, but in Gaibanda inundation lately caused some injury to *aus* in low lands; public health good.
Bhágalpur ...	5·82	Rice prospects good; transplantation proceeding.
Purneah ...	8·42	Crops good, some *bhadoi* destroyed by inundation; cholera bad in north-east of Purneah.
Patna ...	1·08	Prospects favourable.
Durbhanga ...	·60	Crops on high lands much improved; transplantation proceeding prices stationary; general health good.
Hazáribágh ...	3·69	Crops all doing well; much sickness prevailing.
Cuttack ...	·21	Transplantation and second ploughing going on; prospects good. *General Remarks.*—Prospects generally fair, but more rain still required in greater part of the Burdwan division and in Manbhoom for transplantation; owing to excessive rain and floods the early crops have been damaged in places in Central and Eastern Bengal and Behar, particularly in Furreedpore, Monghyr and Bhágalpur where damage is serious; *aus* and jute harvest has commenced in North and East Bengal; cholera diminishing; prices still generally very high.
N. W. P. and Oudh—		
Benares (Aug. 12th)	4·1, 6·9 at Chandausi, 4·2 at Gangapur.	Prospects good.
Allahabad („ „)	2·8 (average) fairly distributed.	Total rainfall since 1st June 20·6, progress very good; health excellent.
Jhansi ...	5·4	Sowing for *kharif* almost completed; prices stationary; cholera disappearing.
Agra („ „)	5·3 (average).	Prospects excellent; fever and ague still bad in city and parganas.
Bareilly („ 13th)	11·1 (average).	Clear weather much wanted; health good.
Meerut („ „)	Meerut ... 1·3 Mawána ... 1·8 Bágpat ... 2·9 Gháziabad ... 3·8	Fever throughout district; cotton damaged by excessive rain; prospects otherwise good; cheapest wheat 17, gram and *bajra* 18, barley and *juar* 22 seers.
Kumaun („ 11th)	Heavy rain ...	Partial sunshine; a break much wanted.
Lucknow („ 13th)	·9	Prospects good.
Partabgarh („ 11th)	Sadr ... 4·8 Kunda ... 3·2 Putti ... 3·3	General appearance of crops is promising, and with seasonable breaks the harvest should be a plentiful one.
Sitapur („ 13th)	1·5	Prospects good.
Fyzabad („ „)	3·5	Prospects favourable; fine weather. *General Remarks.*—Rain throughout the Province; a break wanted in Bareilly and Kumaun; prospects favourable; health good, except in Agra and Meerut where there is fever and ague.
Punjab (Aug. 12th)—		
Delhi ...	·70	Prospects good; prices of food grains stationary; fever about.
Hissar ...	Drizzling	Cloudy; prospects in Hissar and Sirsa bad, owing to continued drought; prices are rising.
Umballa ...	2·90	Crops fair and health good.
Jullundur ...	·50; continuous drizzling for about three days.	Rain has done much good to crops, but more required; prices steady.
Lahore ...	·40	Health good generally and cholera disappearing.
Ferozepore ...	·50	Agricultural prospects not favourable.
Siálkot ...	1·90	
Ráwalpindi ...	7·0	Agricultural prospects good.
Mooltan ...	*Nil*	Prospects fair; prices steady.
Dera Ismail Khan ...	*Nil*	Crops are suffering from drought.
Pesháwar ...	1·80	Rain has fallen chiefly in Yusafzai, where it was much needed, and harvest prospects have improved. *General Remarks.*—Prospects have on the whole improved somewhat this week.

On page 521 of the Supplement to the *Gazette of India* of the 26th ultimo, opposite Indore in the rainfall column for "9·09" read "·09."

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
Nágpur (Aug. 13th)	2·11	Cotton doing well; other *kharif* crops good; prospects very favourable; health good.
Jubbulpore ...	8·99	Prospects of crops of all kinds excellent; cotton weeded once and doing well; small-pox continues; prices slightly fallen.
Saugor ...	6·34	Weather favourable to *kharif* crops; cotton so far excellent; prospects generally good; small-pox continues.
Seoni ...	2·15	Cotton and other *kharif* crops flourishing; cholera and small-pox slight.
Hoshangabad ...	4·96	Crops good, particularly cotton and *juar*.
Raipur (Aug. 9th)	5·85	Rain favourable to cotton and other crops; prospects excellent; cholera and small-pox continue; prices stationary. *General Remarks.*—Rain general and favourable for transplanting rice, which is being pushed forward; *kharif* crops flourishing; prospects so far generally good; prices steady.
British Burmah— (Aug. 13th)		
Akyab ...	26·19	Total rainfall 154·41; public health good.
Rangoon ...	5·62	Total rainfall 60·42; public health good; slight fever and measles in Angyee township; few deaths from cattle disease in Hmawbee Subdivision; crops progressing.
Bassein ...	4·54	Total rainfall 51·12; public health good; cattle disease still rife; greater part of land from Ngawoon down to Kyoukkhyainggyee submerged, Kindatdaigondaga, Kabai and Shoaymyoungben circles on the east also submerged.
Prome ...	1·20	Total rainfall 22·47; public health fair; floods in Prome subsiding; crop prospects good.
Amherst (Moulmein) ...	17·46	Total rainfall 102·73; public health good; slight cattle disease; slight injury to crops in 8 circles of Zaya and Gyne Attaram townships, otherwise crop prospects good.
Toungoo ...	4·21	Total rainfall 38·28; public health good; agricultural prospects good. *General Remarks.*—General health good; a few cases of cholera and small-pox; cattle disease slight in Arakam and Tenasserim and abated in Pegu; agricultural prospects continue favourable; the Irrawaddy has fallen.
Assam—		
Gauháti (Aug. 13th)	2·30	Weather hot and sultry; prospects of crops favourable.
Sylhet („ „)	7·03	Prices falling, from 9 to 10 seers a rupee; prospects good.
Hyderabad Assigned Districts—		
Amráoti ...	1·76	Crops in good condition; prospects favourable.
Mysore and Coorg (Aug. 13th)—	·45 at Bangalore; slight rain also in the district.	Agricultural prospects favourable throughout; public health generally good; fever and other ailments continue in parts.
Central India (Aug. 13th)—		
Indore ...	·83	Cereal prospects excellent; crops everywhere promising; at Indore wheat 9 seers 7 chittaks and *jowar* 13 seers 4 chittaks.
Morar (Gwalior) ...	3·50	
Sutna ...	5·84	Tanks and wells full; health good; prospects excellent; *jowar* 18 seers.
Rutlam ...	1·79	Prospects and health satisfactory.
Neemuch ...	2·32	Crops good.
Goona ...	7·78	
Bhopal ...	9·15 in Schore	Prospects good.
Ágar ...	10·19	Health good.
Nowgong ...	6·35	
Mánpur ...	2·05	Crops in good condition.
Rajputana—		
Abu (Aug. 13th)	18·54; still raining...	Total rainfall 43·0.
Serohi („ 10th)	4·05	Small tanks full; wells good; health fair; prospects good; cool.
Marwar („ 9th)	1·10	Water plentiful in tanks and wells; health and crops good; rain beneficial; prices falling.
Meywar („ 8th)	2·85	Tanks, wells, health and crops good; prices falling.
Harowtee („ 9th)	7·28 in Deoli; 10·53 in Kotah; 4·38 in Tonk, and 8·17 in Shahpura.	Health good; cloudy; prospects much improved.
Jhallawar („ 7th)	6·99	Prospects very favourable; tanks almost full; health good.
Ajmere („ 13th)	2·13	Season most favourable; prices falling; health good.
Jeypore ...	1·97	Prospects favourable; prices falling; fever abating.
Bhurtpur (Aug. 12th)	5·67	Ague prevalent; east winds.
Ulwur ...	3·08 (average) ...	Prospects good; fever everywhere prevalent.
Nepal (Aug. 5th)—	3·03	Agricultural prospects fair.

SUPPLEMENT TO

The Gazette of India.

No 34.} CALCUTTA, SATURDAY, AUGUST 23, 1879.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

MELBOURNE INTERNATIONAL EXHIBITION, 1880.

Nos. $\frac{4}{170-82}$.

Extract from the Proceedings of the Government of India in the Home, Revenue and Agricultural Department ($\frac{\text{Education}}{\text{Industry, Science and Art.}}$),—under date Simla, the 9th August 1879.

READ—

The following despatches from Her Majesty's Secretary of State for India relative to the International Exhibitions which it is proposed to hold at Sydney and Melbourne, in Australia—the former in September 1879, and the latter in October 1880:

No. 136	(Statistics and Commerce),	dated	the 18th July 1878.
No. 62	ditto	ditto	30th April 1879.
No. 36	ditto	ditto	13th March 1879.
No. 68	ditto	ditto	8th May 1879.

OBSERVATIONS.

WITH the despatch first cited, the Secretary of State forwarded copies of the prospectus of the Sydney Exhibition, and of a letter from the Colonial Office, in which the co-operation of the Indian Government in carrying the project to a successful issue was invited. His Lordship left it to the Government of India to comply with this invitation in such manner as they thought fit; and observed that, as exhibitions of this nature were very frequent, a moderate limit of expenditure should be fixed.

2. The Governor General in Council concurred in this view; and it was accordingly resolved merely to publish the prospectus of the exhibition for general information, and to circulate it to Local Governments and Administrations, leaving it to them to take such action in the matter as they considered desirable in the interests of the territories under their control, and as the funds at their disposal permitted. A sum of Rs. 400 was, however, sanctioned from Imperial revenues for the purchase of samples of India teas and of coffee grown in Southern India, it being thought probable that a considerable trade in these commodities might result between Australia and India, if measures were adopted for bringing them prominently before the colonial public.

3. The only Government by which any steps were taken in the direction indicated was that of the North-Western Provinces and Oudh, under whose orders a collection comprising the following articles was prepared and despatched through Mr. O'Conor, to Sydney by Mr. E. C. Buck, the Director of the local Department of Agriculture and Commerce:—

Azimgarh silk cloth.
Benares and Moradabad ware.
Carpets from Mirzapur, Agra and Jhánsi.
Cloth from the Cawnpore mills.
Tea from Kumaun.
Sugar from the Rosa Works at Shájahánpur.
Rámpur chadars.
Ludhiána cloth.

In addition, selected samples of teas grown in Bengal, Assam and Arakan were sent to the exhibition. The Cawnpore Mills' cloth, the Shájahánpur sugar, and the teas were supplied gratuitously, the Government paying their freight to Sydney; the remaining articles being purchased by the Government of the North-Western Provinces and Oudh at a cost of Rs. 2,650. Major M. Clementi, a retired officer of the Indian Army, has kindly offered his services towards making the most of the Indian contribution to the Sydney Exhibition, and His Excellency the Governor General in Council has gladly accepted Major Clementi's offer.

4. The prospectus of the Melbourne Exhibition was received with the Secretary of State's despatch of the 13th March last; and with his despatch of the 8th May following was forwarded copy of a letter from His Royal Highness the Prince of Wales, in his capacity as President of the Commission for the Australian Exhibitions. His Royal Highness expressed a hope that India would be represented at those exhibitions, and observed that a collection of objects illustrative of the arts and manufactures of the country, such as was sent to Philadelphia, would be of great utility. As in the case of the Sydney

Exhibition, the Secretary of State left it to the Government of India to decide upon the measures to be taken to meet the wishes of the colonial authorities.

5. The Governor General in Council, as at present advised, is not prepared to send any considerable quantity of the art-manufactures of India to the Melbourne Exhibition, and it is apprehended that private exhibitors may be few. Possibly the officer, Major M. Clementi, who has consented to act in behalf of the Government of India at the Sydney Exhibition, may be able, in his report to the Government of India on that exhibition, to make suggestions regarding the art-manufacture contributions that might usefully be sent to the Melbourne Exhibition. There are, however, various classes of goods, raw products and manufactures outside the domain of art, a collection of which could be easily and inexpensively made; and whilst this would better represent the resources and industrial capacity of India, it might also tend to further the interests of Indian commerce. For the purpose of forming such a collection, the Governor General in Council sanctions the expenditure of a sum not exceeding Rs. 5,000, and desires that all needful arrangements for the preparation and despatch of the collection should be entrusted to a committee, which will be composed of the gentlemen named below, if their services can be made available:

President:

E. C. Buck, Esq., C. S., Director of the Department of Agriculture and Commerce, North-Western Provinces and Oudh.

Members:

J. S. Gamble, Esq., M. A., Officiating Conservator of Forests, Bengal.

J. E. O'Conor, Esq., Assistant Secretary to the Government of India, Department of Finance and Commerce.

The Bengal Government will be asked to invite the Chamber of Commerce to nominate one of its body to represent the commercial interests of Bengal.

6. The prospectus of the Melbourne Exhibition will be published in the *Gazette of India* and in the several local Gazettes for general information. The attention of all Local Governments and Administrations will also be drawn to the subject, and they will be asked to send to the committee, care of the Home, Revenue and Agricultural Department, Calcutta, such articles in the shape of raw agricultural and forest produce and special local manufactures, either from jute, cotton or carpet factories, or from jail workshops, or from private persons, as they can readily obtain or lend. It would add greatly to the value of the collection if Local Governments and Administrations could spare a small grant from the funds at their command for the purchase of specimens of local manufactures. In the event of any Local Government or Administration finding itself in a position to co-operate in the matter, it would be convenient if a selected officer were appointed to correspond with the President of the Committee on the subject; but should the Governments of Madras and Bombay prefer sending their contributions separately, there would be no objection to their doing so.

7. Since the foregoing paragraphs were put in type, the Governor General in Council has learned that the Chamber of Commerce, Bombay, recently addressed His Excellency the Governor in Council of that Presidency on the subject of appointing a local committee for the purpose of promoting India contributions to the Melbourne Exhibition. If other local public bodies would co-operate cordially in the matter, the task of procuring an adequate representation of Indian products at the Melbourne Exhibition would be greatly facilitated.

ORDER.—Ordered, that a copy of the foregoing Resolution and of the prospectus of the Melbourne Exhibition be forwarded to the Local Governments and Administrations marginally noted for information and guidance, and that they be published in the *Supplement to the Gazette of India* for general information.

Government of Bengal.
Ditto North-Western Provinces.
Ditto Punjab.
Chief Commissioner of the Central Provinces.
Ditto ditto British Burma.
Ditto ditto Mysore and Coorg.
Ditto ditto Assam.
Resident at Hyderabad.

Ordered also, that a copy of the Resolution be communicated to the Governments of Madras and Bombay and to the Foreign Department for information, and to the Department of Finance and Commerce for information and further orders.

(True Extract.)

C. BERNARD,
Offg. Secretary to the Government of India.

MELBOURNE INTERNATIONAL EXHIBITION, 1880.

LIST OF COMMISSIONERS.

President:

The Honourable William John Clarke, M. L. C.

Vice-Presidents:

The Honourable James Joseph Casey, C. M. G., M. P.
The Honourable James Munro, M. P.
The Honourable Sir Bryan O'Loghlen, BARONET, M. P., Attorney-General.
The Honourable Sir George F. Verdon, K. C. M. G., C. B., F. R. S.
The Honourable Sir Samuel Wilson, M. L. C.

Members:

The Honourable Graham Berry, M. P., Chief Secretary.
The Honourable James Brown Patterson, M. P., Commissioner of Public Works.
The Honourable John Woods, M. P., Commissioner of Railways.
The Honourable Henry Cuthbert, M. L. C.
The Honourable John Cumming, M. L. C.

THE MELBOURNE INTERNATIONAL EXHIBITION, 1880.

In accordance with a Commission issued under the great seal of the Colony of Victoria, and with the co-operation of the Imperial Government of our Gracious Sovereign the Queen, an International Exhibition of Arts, Manufactures, and Agricultural and Industrial Products of all Nations will be opened at Melbourne on the 1st day of October 1880, and will close on the 31st day of March 1881.

The Exhibition will be held in buildings specially erected for the purpose in Carlton Gardens, centrally situated in the City of Melbourne, and the cost of erecting such buildings, and all expenses incidental to the Exhibition, will be defrayed out of funds voted by the Parliament of Victoria.

The Commissioners are empowered to invite the British, Foreign, and Colonial Governments to take part in this Exhibition, and they will be glad to learn that steps have been taken to provide for the representation of every country and colony thereat.

The fact that Australasia has been represented at all the great Exhibitions of the world since their inception in the year 1851, and the advance she has made in productive industry, the extent of her commercial relations, and the high position to which her imports and exports have attained, indicate that she has now reached the period when she may profitably invite the great manufacturing countries to send the most complete products of their skilled industry to a people who are in a position to become not only good customers, but generous competitors.

1. Applications for space, with full particulars, are invited as early as possible. Copies of the official form of entry can be obtained upon application to the Secretary to the Commissioners.

2. Excepting under the circumstances specified under Article 4, applications for space must be made through the representatives of the country or colony to which the applicants belong.

3. Governments intending to take part in this Exhibition are requested to forward an intimation to that effect not later than the 1st of June 1879.

4. In the event of no representatives being appointed by the country or colony to which an intending exhibitor belongs, he can communicate direct with the Secretary.

5. Applications for space should be made not later than the 30th day of June 1879.

6. British, Foreign, and Colonial Governments, or Commissioners appointed by them, are requested to inform the Melbourne Commission not later than the 1st day of January 1880 whether they require any increase or diminution of the space offered them, and the amount. They are also requested to state whether there will be any exhibits for which special space should be provided, together with a description showing their nature and quantity.

7. Before the 1st day of June 1880 the representatives of countries or colonies should furnish approximate plans, showing the manner of allotting the space assigned to them, and lists of their exhibitors, and other information necessary for the production of the official catalogue.

8. Commissioners representing countries or colonies and private exhibitors may adopt one of three courses, viz.,—

(*a*) They can ship their exhibits direct to Melbourne, and make their own arrangements for their shipment, reception, and exhibition.

(*b*) Or consign their exhibits to—

The Secretary, International Exhibition, 1880,

Melbourne, Australia,

with specific instructions as to what is desired.

(*c*) Or, having previously forwarded an entry to the Melbourne Commission, they can forward the goods, together with invoices and descriptions, to any of the following firms or companies:

London—MESSRS. JAMES M'EWAN & Co., 27 Lombard Street; or to MESSRS. M'ILWRAITH, M'EACHRAN & Co., Leadenhall Street.

Liverpool—MESSRS. JOHN SWIRE & SONS.

Glasgow—MESSRS. AITKEN, LILBURNE & Co.

Antwerp—MESSRS. JULES RENARD & Co.

New York—MESSRS. R. W. CAMERON & Co.

San Francisco—PACIFIC MAIL COMPANY.

All Ports where the Company has Agencies—THE PENINSULAR AND ORIENTAL COMPANY.

9. Packages forwarded from countries and colonies represented at the Exhibition should be addressed—

To the Commissioner for

at the International Exhibition of 1880,

Melbourne,

Victoria,

Australia,

and have two labels bearing the flag of the country to which the exhibitor belongs or, where no representative has been appointed,—

To the Secretary,

International Exhibition of 1880,

Melbourne,

Victoria,

Australia,

and two labels, affixed to different but not opposite sides of the package, giving the following information: (1) The country from which it comes. (2) Name or firm of exhibitor. (3) Residence of the exhibitor. (4) Group and class to which exhibits belong. (5) Total number of packages sent by same exhibitor. (6) Serial number of that particular package. Each package must contain a list of the exhibits it contains.

Packages from foreign countries containing goods intended for the exhibition must likewise have painted on them, as distinctive marks, the letters M. I. E.

surrounded by a circle 

Packages from foreign countries must all be marked in such a way as to show distinctly whence they come, viz., with the colours and devices of their national flag. Foreign Commissioners are particularly requested to forward to the Melbourne Commission, as soon as possible, copies of the forms of address and the distinguishing marks which they have severally adopted.

10. In cases where exhibits are forwarded to Melbourne through any of the above-named agents of the Commission, all expenses of freight, marine insurance, &c., should be prepaid by the exhibitor; but if that be inconvenient, the exhibits will be forwarded, and the charges and freight paid by the agents. The sum advanced by the agents will be regarded as a first charge upon the exhibits, to be deducted

from the net proceeds, in the event of their being sold. Should such exhibits, however, not be sold, but be claimed by the exhibitor or his authorised agent at the close of the Exhibition, then such sums as may have been disbursed by the Commission or any of its agents must be paid before such goods are delivered.

11. Customs entries, transportation, receiving, unpacking, and arranging the products for exhibition will, if required by the exhibitor, be undertaken by the Commission, at the expense of the exhibitor.

12. Arrangements will be made for transporting goods from the port of Melbourne, or the several railway stations, to the Exhibition grounds at a fixed rate of charges.

13. Exhibits will be admitted free of duty. The removal of goods, except under special circumstances, will not be permitted prior to the close of the Exhibition. Facilities will be given for the sale of exhibits, delivery to be made after the close of the Exhibition.

14. The protection of inventions capable of being patented and of designs is secured by the patent laws of Victoria.

15. The placing and fixing of heavy articles, requiring special foundations or adjustment, should begin by special arrangement as soon as the progress of the work upon the Exhibition buildings will permit. The general reception of articles in the Exhibition buildings will commence on 1st June 1880, and no articles will be admitted after 31st August 1880. The plans for the display and accommodation of such objects as may require either special arrangements or exceptional works for their erection must receive the approval of the Commission before they are executed, and the works must be carried out under the supervision of its agents. The special preparations of which mention has been made will be commenced as soon as the buildings and various annexes are sufficiently advanced. The works of general fitting-up must be commenced not later than the 1st of May 1880, and must be ready to receive goods before the 15th day of July 1880.

16. Space assigned to countries and colonies, and not occupied on the first day of September 1880, will revert to the Commission, and will be subject to re-arrangement.

17. If exhibits are not intended for competition it must be so stated by the exhibitors, and they will be excluded from examination by the International Jurors.

18. An official catalogue will be published in English by the Commission, by which the sale of catalogue is reserved. Every country and colony will, however, have the right of producing at its own expense, but in its own language only, a special catalogue of the objects exhibited in its section. No work of art, nor any article whatever, exhibited in the buildings, parks, or gardens, may be drawn, copied or re-produced in any manner whatsoever, without the permission of the exhibitor. The Commission reserves the right of authorising the production of general views.

19. The representatives of countries and colonies, when appointed, will be allowed to group their exhibits as they may think fit in that portion of the Exhibition buildings allotted to the country or colony which they represent.

20. Exhibits, from any country or colony, whose Government is not represented, will be grouped according to some one of the following classes. The same direction will be followed in the catalogue:

(1.) Works of art.
(2.) Education and instruction—Apparatus and processes of the liberal arts.
(3.) Furniture and accessories.
(4.) Textile fabrics, clothing and accessories.
(5.) Raw and manufactured products.
(6.) Machinery—Apparatus and processess used in the mechanical industries.
(7.) Alimentary products.
(8.) Agriculture.
(9.) Horticulture.
(10.) Mining industries—Machinery and products.

Each of these groups is divided into classes, according to the system of general classification annexed to these Regulations (Appendix). This Appendix includes for each class a summary enumeration of the objects which it will comprise.

21. A limited quantity of steam and water power will be supplied gratuitously. The quantity of each will be settled definitely at the time of the allotment of space. The Commissioners desire to encourage the display of machinery in motion, and they will endeavour to provide adequate power to meet all reasonable demands. Any power required by the exhibitor in excess of that allowed will be furnished by the Commission at a moderate price. Demands for such excess of power must be settled prior to the 31st August 1880.

22. By the introduction of steam power it is proposed to afford facilities for presenting not only the machinery for any given manufactures, but the manufactures themselves; and it is further intended that space shall be afforded for the production in the Exhibition of interesting objects by manual labour.

23. Exhibitors must provide at their own cost all show-cases, shelving, counters, fittings, &c., which they may require; and all shaftings, pulleys, belting, &c., for the traces and measures of power from the main shafts; but the Commission is prepared, if required, and upon being furnished with full particulars, to make arrangements for the construction of show-cases by contract at a price per cubic foot, the cost to be borne by the exhibitor using the same. All artistic decorations and arrangements must be approved by the Commission.

24. The Commission reserves the right of rejecting or returning any proposed exhibit.

25. The following special regulations are framed for the reception and admission of works of art. The works admissible include the five classes mentioned below:

(1.) Paintings.

(2.) Drawings, water-colours, crayon drawings, minatures, enamels, porcelain, designs for stained-glass windows (with the exception of those which merely represent subjects of ornamentation), and mosaic work.

(3.) Sculpture and die-sinking, and engraving on precious stones.

(4.) Architecture.

(5.) Engraving and lithography.

26. The following are excluded:

(1.) Unframed pictures or drawings.

(2.) Sculpture in unbaked clay.

27. The duty of deciding upon the admission of works of art will devolve upon a special jury. Special and suitable rooms will be reserved for the exhibition of such ancient pictures and works of art as may be admitted by a special jury. Other regulations will give information as to the despatch and reception of works of art.

28. Facilities will be given, upon application to the Commission, for the erection of special constructions, whether in the buildings or grounds.

29. The Commission will take precautions for the safe preservation of all objects in the Exhibition, but will be in no way responsible for damage or loss of any kind, or accidents by fire or otherwise, however caused.

30. Facilities will be afforded the representatives of countries and colonies, and private exhibitors, for insuring their goods; and they may also employ watchmen of their own choice to guard their goods during the hours their exhibition is open to the public. The appointment of such watchmen will be subject to the approval of the Commission. These persons shall wear a special dress or distinctive badge, and they will always have the power of calling the police to their aid.

31. Articles that are in any way dangerous or offensive, or injurious to public decency and morality, will not be admitted into the Exhibition.

32. Sketches, drawings, photographs, or other reproductions of articles exhibited, will only be allowed upon the joint consent of the exhibitor and the Commissioners; but views of portions of the building may be made upon the sanction of the Commission alone.

33. The following is the system under which the awards will be made:

The awards shall be based upon written reports adopted by the Jurors.

The Jurors shall be selected for their known qualifications and character, and shall be experts in the departments to which they are specially assigned; the British, Foreign, and Colonial Jurors shall be appointed by the representatives of each country or colony exhibiting. The Jurors for Victoria will be appointed by the Melbourne Commission.

Jurors will be reimbursed their personal expenses.

Reports and awards shall be based upon inherent and comparative merit, the elements of merit being held to include considerations relating to originality, invention, discovery, utility, quality, skill, workmanship, fitness for the purposes intended, adaptation to public wants, economy and cost.

Each report shall be delivered to the Commission as soon as completed.

Awards shall consist of gold, silver, and bronze medals, and a certificate of honourable mention, together with a special report of the Jurors on the subject of the award.

Each exhibitor shall have the right to produce and publish the report awarded to him, but the Commission reserves the right to publish and dispose of all reports in the manner it thinks best for public information, and to embody and distribute the reports as records of the Exhibition.

34. Immediately after the close of the Exhibition, exhibitors, or their duly appointed agents, shall remove their effects and complete such removal by the 1st June 1881. Goods then remaining will be removed by the Commission, and sold by auction, or otherwise disposed of, under the direction of the Commission, and the net proceeds handed to the exhibitors or their duly appointed agents.

35. Every person who becomes an exhibitor thereby acknowledges, and undertakes to observe, the rules and regulations established for the government of the Exhibition.

36. The Commission reserves the right to alter, explain, amend, or add to these Regulations whatever may be deemed necessary.

Information upon any question of details can be obtained upon application to

THE AGENT GENERAL FOR VICTORIA,
8 VICTORIA CHAMBERS,
VICTORIA STREET,
WESTMINSTER,
LONDON, S. W.

REGULATIONS

CONCERNING THE DESPATCH, RECEPTION, ARRANGEMENT, AND RETURN OF THE GOODS EXHIBITED, AND DISPOSAL OF SPACE.

1. EVERY person admitted as an exhibitor will receive, in due time, and with the least possible delay, an exhibitor's ticket, showing his rotation number and the dimensions of the space allotted to him. He will receive at the same time printed address labels to be affixed to the packages he may send to the Exhibition.

2. The address labels supplied to exhibitors will be printed on paper of different colours, according to the group to which the products to be exhibited may belong.

The conventional colours adopted are as follows:

Group 1.	(Works of art)	Pink.
Group 2.	(Education and instruction—Apparatus and processes of the liberal arts)	White.
Group 3.	(Furniture and accessories)	Blue.
Group 4.	(Textile fabrics, clothing and accessories)	Bright-yellow.
Group 5.	(Raw and manufactured products)	Brown.
Group 6.	(Apparatus and processes used in the mechanical industries)	Red.
Group 7.	(Alimentary products)	Violet.
Group 8.	(Agriculture)	Dark-green.
Group 9.	(Horticulture)	Light-green.
Group 10.	(Mining industries—Machinery and products) ...	Grey.

3. The Commission places at the disposal of countries and colonies all information and plans which may be useful for their arrangements.

4. Exchange of spaces between countries and colonies cannot be made without the consent of the Commission.

5. Exhibitors will not have to pay rent for the space occupied by them in the Exhibition. The flooring will be provided in sound condition and ready for use within the whole of the main building, with the exception of the hall for machinery; but the flooring must not be altered, removed, or strengthened for the convenience of arrangement, except with the consent of the Commission, and at the expense of the exhibitors.

6. The spaces reserved outside the Exhibition allotments being strictly calculated with a view to the necessities of circulation, packages and empty cases will not be allowed to remain there.

Cases must, therefore, be unpacked as early as possible after their reception, and the empty cases at once taken away by the exhibitors or their agents.

Should the exhibitors neglect to carry out in the manner thus indicated the unpacking of the goods and the removal of the empty cases, the work will be undertaken by the Commission, but in no case will the Commission incur any responsibility whatsoever in the execution of this duty. The Commission will have nothing to do with the warehousing and preservation of the empty cases; neither have any arrangements been made, nor any space reserved for the purpose. Exhibitors who may be unable to provide for the removal and preservation of their empty cases are advised to communicate with the Secretary.

GENERAL ARRANGEMENTS.

7. Certain products, which it may be found impossible to display in the main buildings, will, in some exceptional cases, be exhibited in the surrounding parks and gardens, in buildings erected for the purpose.

8. With regard to the Victorian section, the Commission will place itself in communication with the committees established in each locality. The duties of these committees are:

(1.) To make known the rules concerning the organisation of the Exhibition, and to distribute the forms of application for admission, as well as all other documents relative to the Exhibition.

(2.) To point out as soon as possible the principal artists, agriculturists, and manufacturers whose exhibits would appear to be particularly calculated to promote the success of the undertaking.

(3.) To encourage the exhibition of the mineral, pastoral, agricultural and horticultural products of the district.

(4.) To encourage and to organize, when necessary, the collective exhibition of groups of similar products of the district, and to accredit to the Commission the delegate charged with the representation of each collective exhibition.

9. Spirits, or alcohol, oils and essences, corrosive substances, and generally all substances which might spoil other articles, or inconvenience the public, can only be received in solid and suitable vessels of small size.

Percussion caps, fireworks, chemical matches, and other similar objects, can only be received when made in imitation, and deprived of all inflammable ingredients.

10. Exhibitors of objects of a disagreeable nature, or such as may be prejudicial to health, will be bound at all times to conform to such precautionary measures as may be laid down for them.

11. The Commission reserves the absolute right to cause the removal of any product, from whatever quarter it may come, if on account of its nature or appearance it seems to be detrimental to, or incompatible with, the object or the decorum of the Exhibition.

ADMINISTRATION AND POLICE.

12. All goods must be exhibited under the name of the person who has signed the application for admission.

13. Exhibitors are entitled to insert after their name or that of their firm the names of their assistants of every class and grade who may have taken part in the production of the goods exhibited.

14. Exhibitors are particularly requested to mark the trade price of the articles exhibited, so as to facilitate the judgment of the jury, as well as for the information of visitors.

15. A general supervision will be established for the prevention of robbery and embezzlement.

16. In the Victorian section, the exhibitors of each class must arrange among themselves as to the organisation of a staff of attendants independent of the general supervision established by the Commission. Private agents of this description must be approved by the Commission and must wear badges bearing the number of the class to which they will be attached.

17. It must be distinctly understood that the Commission declines all responsibility for any thefts or embezzlements which may be committed.

18. All communications relating to the Exhibition must be addressed—

The Secretary to the Commissioners,
International Exhibition,
Melbourne, Australia.

19. Persons desirous of exhibiting articles not mentioned in the Appendix may apply to the Commission.

APPENDIX.

SYSTEM OF GENERAL CLASSIFICATION.

First Group.—Works of Art.

Class 1.—Oil Paintings.

Paintings on canvas, on panel, and on other grounds.

Class 2.—Various Paintings and Drawings.

Miniatures, water-colour paintings, pastels, and drawings of every kind; paintings on enamel, earthenware, and porcelain; cartoons for stained-glass windows and frescoes.

Class 3.—Sculpture and Die-sinking.

Sculpture in high relief, bas-reliefs, chased and repoussé work. Medals, cameos, engraved stones. Niello work.

Class 4.—Architectural Drawings and Models.

Studies and details. Elevations and plans of buildings. Restorations based upon existing ruins or documents.

Class 5.—Engravings and Lithographs.

Engravings, coloured engravings. Lithographs executed with pencil and with brush chromo-lithographs.

Second Group.—Education and Instruction—Apparatus and Processes of the Liberal Arts.

Class 6.—Education of Children, Primary Instruction, Instruction of Adults.

Plans and models of orphan asylums, infant schools; system of management and furniture of such establishments; appliances for instruction suitable for the physical, moral, and intellectual training of the child previous to its entering school.

Plans and models of scholastic establishments for town and country; system of management, and furniture for these establishments. Appliances for instruction—books, maps, apparatus, and models.

Plans and models of scholastic establishments for adult and professional instruction. System of management and furniture for these establishments. Appliances for adult and professional instruction.

Appliances for the elementary teaching of music, singing, foreign languages, book-keeping, political economy, practical agriculture and horticulture, technology and drawing.

Appliances adapted to the instruction of the blind and of deaf mutes.

Works of pupils of both sexes.

Libraries and publications.

Class 7.—Organisation and Appliances for Secondary Instruction.

Plans and models of establishments for secondary instruction, lyceums, grammar schools, colleges, industrial and commercial schools. Arrangement and furniture of such establishments.

Collections, classical works, maps and globes.

Appliances for technological and scientific instruction, and for teaching the fine arts, drawing, music, and singing.

Apparatus and methods for instruction in gymnastics, fencing, and military exercises.

Class 8.—Organisations, Method, and Appliances for Superior Instruction.

Plans and models of academies, universities, medical schools, practical schools, technical and practical schools, schools of agriculture, observatories, scientific museums, amphitheatres, lecture-rooms, laboratories for instruction and research.

Furniture and arrangement of such establishments.

Apparatus, collections, and appliances intended for higher instruction and scientific research.

Special exhibitions of learned, technical, agricultural, commercial, and industrial societies and institutions.

Scientific expeditions.

Class 9.—Printing Books.

Specimens of typography; autographic proofs; lithographic proofs, black or coloured; proofs of engravings.

New books and new editions of books already known; collections of works forming special libraries; periodical publications. Drawings, atlases, and albums.

Class 10.—Stationery, Bookbinding, Painting, and Drawing Materials.

Paper; card and pasteboard; inks; chalks; pencils; pastels; all things necessary for writing-desks and offices; inkstands; apparatus for weighing letters, &c.; copying presses.

Objects made of paper—lamp-shades, lanterns, flower-pot covers.

Registers, copy-books, albums, and memorandum books; bindings, loose covers for books, cases, &c.

Various products used in water-colour painting and tinting; colours in cakes, pastels, bladders, tubes, and shells. Instruments and apparatus for the use of painters, draughtsmen, engravers, and modellers.

Class 11.—General Application of the Arts of Drawing and Modelling.

Designs for industrial purposes: designs obtained, reproduced, or reduced by mechanical processes. Decorative paintings, lithographs, chromo-lithographs, or engravings for industrial purposes. Models and small articulated wooden models of figures, ornaments, &c.

Carvings. Cameos, seals, and various objects decorated with engraving. Objects modelled for industrial purposes produced by mechanical processes, reductions, photo-sculpture, &c. Casts.

Class 12.—Photographic Proofs and Apparatus.

Photographs on paper, glass, wood, stuffs, and enamel. Heliographic engravings, lithographic proofs. Photo-lithographic proofs, photographic stereotypes, stereoscopic proofs, and stereoscopes. Enlarged photographs. Colour photographs.

Instruments, apparatus, and chemicals necessary for photography. Materials and appliances used in photographic studios.

Class 13.—Musical Instruments.

Non-metallic wind instruments—with common mouth-pieces, with reeds with or without air reservoirs.

Metallic wind instruments, simple, with lengthening pieces, with slides, with piston, with keys, with reeds.

Wind instruments with keyboards: organs, accordions, &c.

Stringed instruments played with the fingers, or without keyboards.

Stringed instruments with keyboards: pianos, &c.

Instruments played by percussion or friction.

Automaton instruments, barrel organs, bird organs.

Separate parts of musical instruments and orchestral appliances.

Class 14.—Medicine, Hygiene, and Public Relief.

Appliances, instruments, and apparatus requisite for anatomical and histological works.

Plastic anatomical models.

Instruments of medical research.

Apparatus and instruments for dressing wounds and for simple surgery, general and local; anæsthetic apparatus.

Surgical instruments grouped according to their purposes: instruments for amputations and dissection. Special instruments, obstetrics, ovariotomy, urinary channels, ophthalmology, dentistry, &c.; electro-therapeutic apparatus.

Apparatus for plastic and mechanical prosthesis, orthopedic apparatus.

Trusses.

Apparatus for restoring persons apparently drowned or suffocated.

Baths and hydro-therapeutic apparatus; gymnastical apparatus for medical and hygienic purposes.

Plans and models of hospitals, various asylums, houses of refuge, poor-houses, lunatic asylums. Arrangements and furniture of such establishments. Various apparatus for infirm persons, invalids, and lunatics. Accessory objects for the medical, surgical, and pharmaceutical services in hospitals or infirmaries.

Chests and cases of instruments and medicines for military and naval surgeons. Means and apparatus for succouring the wounded on battle fields. Civil and military ambulances.

Appliances, instruments, apparatus, and all things requisite for veterinary surgery.

Class 15.—Mathematical and Philosophical Instruments.

Apparatus and instruments used for mathematical purposes.

Apparatus and instruments illustrating practical geometry, land-surveying, topography, and geodesy; compasses calculating machines, levels, mariners' compasses.

Apparatus and instruments for measurement; verniers, micrometric screws, dividing machines, &c.; scales for scientific uses.

Optical instruments. Astronomical instruments. Physical and meteorological instruments, &c. Instruments and apparatus requisite for laboratories and observatories.

Weights and measures of various countries. Coins and medals.

Class 16.—Maps, and Geographical and Cosmographical Apparatus.

Topographical, geographical, geological, hydrographical and astronomical maps, atlases, &c.

Physical maps of every kind. Plans in relief.

Terrestrial and celestial globes and spheres. Statistical works and tables. Tables and ephemerides for the use of astronomers and sailors.

THIRD GROUP.—FURNITURE AND ACCESSORIES.

Class 17.—Cheap and Fancy Furniture.

Sideboards, book-cases, tables, dressing-tables, beds, sofas, couches, billiard-tables, &c.

Class 18.—Upholsterers' and Decorators' Work.

Bed furnitures, stuffed chairs, canopies, curtains, tapestry and other hangings.

Decorative furniture made of costly stones and substances. Composition ornaments and objects moulded in plaster, carton-pierre, papier-mache, &c. Frames. Paintings and decorations for churches and houses.

Class 19.—Crystal, Glass, and Stained Glass.

Drinking glasses of crystal, cut glass, plated and mounted crystal, &c. Table glass. Common glass-bottles.

Window and mirror-glass. Cast, enamelled, crackled, frosted, and tempered glass.

Glass, crystals for optical purposes, ornamental glass, &c.

Stained glass. Mirrors, looking-glasses, &c.

Venetian glass.

Class 20.—Pottery.

Biscuit ware, hard and soft paste porcelains. Japanese, Indian, and Chinese porcelain.

Fine earthenware with coloured glazing, &c. Earthenware biscuit. Terra cotta. Enamelled lava. Bricks and tiles. Stoneware.

Class 21.—Carpets, Tapestry, and other Stuffs for Furniture.

Carpets and rugs, moquettes, tapestry, terry and velvet pile, &c. Felt carpets, matting, &c. India-rubber floorcloth, &c.

Furniture stuffs of cotton, wool, or silk, plain or figured. Horse-hair fabrics and leather cloths, moleskins, &c. Leather for hangings, for covering furniture, &c. Oilcloths.

Class 22.—Paper Hangings.

Printed paper hangings. Flock, marbled, veined paper, &c. Paper for covering, book-binding, &c. Artistic papers. Varnished and enamelled paper. Imitations of wood and of leather. Painted or printed blinds.

Class 23.—Cutlery.

Knives, penknives, scissors, razors, &c. Cutlery of every description.

Class 24.—*Goldsmiths' and Silversmith's Work.*

Church plate, ornamental plate and table plate, gold and silver toilet articles, writing materials, &c. Electrotypes. Enamels, cloisonne, champlevé.

Class 25.—*Bronzes and various Art Castings and Repoussé Work.*

Statues and bas-reliefs in bronze, cast-iron, zinc, &c. Castings coated with other metals by galvanic action.

Repoussé work in copper, lead, zinc, &c.

Class 26.—*Clocks and Watches.*

Separate parts of clocks of large or small size.

Watches, chronometers, pedometers; various time-keepers, &c. Time-pieces and clocks working by springs or weights, regulators, metronomes.

Astronomical clocks; marine chronometers; travelling clocks. Alarums, &c. Water-clocks and sand-glasses. Electric clocks. Turret and church clocks.

Class 27.—*Apparatus and Processes for Heating and Lighting.*

Fire-grates, fire-places, stoves, and hot-air stoves. Accessory objects for heating. Kitchen-ranges and apparatus for heating and cooking by gas.

Apparatus for heating by the circulation of hot water, steam, or heated air. Ventilating apparatus. Drying apparatus; drying stoves.

Enameller's lamps, blow-pipes, portable forges.

Lamps for illuminating purposes, fed with various oils.

Accessory objects for lighting. Matches.

Apparatus and accessory objects for lighting by gas.

Lamps for the electric light. Apparatus for the use of the electric and magnesium light.

Class 28.—*Perfumery.*

Cosmetics and pomatums. Perfumed oils, essences, extracts and scents, aromatic vinegar; almond paste; perfumed powders, pastilles, and scent bags; perfumes for burning. Toilet soap.

Class 29.—*Leather Work, Fancy Articles, and Basket Work.*

Dressing cases, work boxes, small articles of fancy furniture, liqueur-cases, glove-boxes, caskets. Cases and bags, jewel-boxes. Purses, pocket-books, note-books, cigar-cases.

Turned, engine-turned, carved, or engraved articles in wood, ivory, tortoise-shell, &c. Snuff-boxes. Pipes.

Fancy toilet combs and brushes.

Lacquered ware.

Fancy basket-work; wicker-work for bottles; articles in fine straw.

FOURTH GROUP.—TEXTILE FABRICS, CLOTHING, AND ACCESSORIES.

Class 30.—*Cotton Thread and Fabrics.*

Cotton, dressed and spun.

Pure cotton fabrics, plain and figured.

Mixed cotton fabrics.

Cotton velvet.

Cotton ribands and tapes.

Class 31.—*Thread and Fabrics of Flax, Hemp, &c.*

Flax, hemp, and other vegetable fibres spun.

Linen and drills. Cambric. Linen fabrics mixed with cotton or silk.

Fabrics made from vegetable fibres as substitutes for flax and hemp.

Class 32.—*Worsted Yarn and Fabrics.*

Carded wool, worsted yarn.

Muslins de laine, Scotch cashmere, merinos, serges, &c.

Ribands and laces of wool, mixed with cotton or thread, silk, or floss silk. Hair tissues, pure or mixed.

Class 33.—*Woollen Yarn and Fabrics.*

Combed wool and woollen yarn.

Cloth and other woollen fabrics.

Blankets. Felt of wool or hair for carpets, hats.

Shoes.

Woollen fabrics, unmilled or slightly milled; flannel, tartans, swansdown.

Class 34.—*Silk and Silk Fabrics.*

Raw and thrown silk. Floss silk yarn.

Silk fabrics, pure, plain, figured, brocaded. Silk fabrics mixed with gold, silver, cotton, wool. thread.

Manufactures of floss silk, pure or mixed.

Velvet and plush.

Silk ribands, pure or mixed.

Class 35.—*Shawls.*

Woollen shawls, pure or mixed.

Cashmere shawls.

Silk shawls, &c.

Class 36.—*Lace, Net, Embroidery, and Trimmings.*

Thread or cotton lace made with the distaff, the needle, or the loom.

Lace made of silk, worsted, or mohair.

Gold and silver lace.

Silk or cotton net, plain or figured.

Tambour embroidery, crotchet-work, &c. Gold, silver, and silk embroidery. Church embroidery. Embroidery, tapestry, and other work done by the hand.

Lace-work and trimmings of silk, floss silk, worsted, mohair, horsehair, thread, and cotton; laces.

Lace-work and trimmings, real or imitation; lace-work for military uniforms.

Class 37.—*Hosiery and Underclothing and Accessories of Clothing*

Hosiery of cotton, thread, wool, cashmere, silk, or floss silk, pure or mixed. Elastic fabrics. Underclothing for men, women, and children; baby linen. Flannel and other woollen garments.

Stays, scarves, gloves, gaiters, garters, braces, fans, screens, umbrellas, parasols, walking-sticks, &c.

Class 38.—*Clothing for both Sexes.*

Men's clothes; women's clothes. Waterproof clothing.

Men and women's head-dresses; artificial flowers and feathers.

Wigs and works in hair.

Boots and shoes.

Children's clothes.

Clothing peculiar to various professions and trades.

Native costumes of different countries.

Class 39.—*Jewellery and Precious Stones.*

Jewellery in precious metals (gold, platinum, silver, alumìnium), chased, filagreed, set with precious stones, &c.

Plated and imitation jewellery.

Ornaments in jet, amber, coral, mother-of-pearl, steel, &c.

Diamonds, precious stones, pearls, and imitations.

Class 40.—*Portable Weapons and Hunting and Shooting Equipments.*

Defensive armour: cuirasses and helmets.

Blunt weapons: maces, life-preservers.

Side-arms: foils, swords, sabres, bayonets, lances, axes, hunting knives.

Missile weapons: bows, cross-bows, slings.

Fire-arms: guns, rifles, pistols, and revolvers.

Accessory objects appertaining to every kind of small arms: powder-flasks, bullet-moulds, &c.

Round, oblong, hollow, and explosive projectiles. Percussion-caps, priming, cartridges.

Hunting and sporting equipments.

Class 41.—*Travelling Apparatus and Camp Equipage.*

Trunks, valises, saddle-bags, &c. Dressing-cases and travelling-cases. Various objects. Travelling-rugs, cushions, caps, travelling-costumes and boots, iron-shod sticks, grapnel-hooks, sun-shades, &c.

Portable apparatus specially intended for scientific voyages and expeditions; travelling photographic apparatus and instruments for astronomical and meteorological observations; equipments and implements for geologists, mineralogists, naturalists, colonists, pioneers, &c.

Tents and camp equipage: beds, hammocks, folding chairs, &c.

Class 42.—Toys.

Dolls and playthings: dolls and figures in wax.

Games for the amusement of children and adults.

Instructive games.

FIFTH GROUP.—RAW AND MANUFACTURED PRODUCTS.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Specimens of different kinds of forest trees.

Wood for cabinet-work, for firewood, and for building. Timber for ship-building; staves; cleft timber shingles.

Cork: bark for textile purposes. Tanning, colouring, odoriferous, and resinous substances.

Products obtained from forests: charcoal and dried wood; raw potash; turnery; basket-work; straw-work; wooden shoes, &c.

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Instruments connected therewith.

Collections and drawings of terrestrial and amphibious animals, of birds, eggs, fishes; of cetacea, of mollusca, and crustacea.

Products of hunting and shoooting: furs and skins, hair, bristles, undressed feathers, down, horn, teeth, ivory, bone, tortoise-shell, musk, castoreum, and analogous products.

Products of fishing train, oil, spermaceti, &c. Whalebone, ambergris, shells of mollusca, pearls, mother-of-pearl, sepia, purple, coral, sponge.

Vegetable products of the earth obtained without culture: mushrooms, truffles, wild fruit, lichens used as dyes, food, and fodder; fermented sap; Peruvian bark; useful barks and filaments, wax, resinous gums; India-rubber, gutta-percha, &c.

Traps and snares: fishing lines and hooks, harpoons, nets, bait, and fishing apparatus.

Apparatus and instruments for gathering the products obtained without culture.

Class 45.—Agricultural Products not used for Food.

Textile materials: raw cotton, flax and hemp, scutched and unscutched; textile vegetable fibres of all kinds; wool, washed or unwashed; cocoons of the silkworm.

Various agricultural products used in manufactures, in pharmacy, and for household purposes; oleaginous plants; oil, wax, resin.

Tobacco in leaves or manufactured. German tinder. Tanning and dyeing substances.

Preserved fodder and substances specially intended for feeding cattle.

Class 46.—Chemical and Pharmaceutical Products.

Acids, alkalis, salts of all kinds. Sea-salt and products extracted from mother water.

Various products of chemistry: wax and fatty substances; soaps and candles; raw materials used in perfumery; resins, tar, and the products derived from them; essences and varnishes; various coating substances; blacking. Objects made of India-rubber and gutta-percha; dyes and colours.

Mineral waters and natural and artificial aërated waters. Raw materials used in pharmacy. Medicines, simple and made up.

Class 47.—Chemical Processes for Bleaching, Dyeing, Printing, and Dressing.

Specimens of threads and fabrics, bleached or dyed. Specimens of fabrics prepared for dyeing.

Specimens of printed or dyed linen, of printed cotton fabrics, pure or mixed. Specimens of printed worsted or woollen fabrics, pure or mixed, combed or carded.

Specimens of printed silk fabrics, pure or mixed.

Specimens of printed felt or cloth carpets. Oilcloth.

Class 48.—Leather and Skins.

Raw materials used in the dressing of skins and leather.

Raw hides, salted hides. Tanned, curried, dressed, or dyed leather. Varnished leather.

Morocco and sheepskin; skins grained, shamoyed, tawed, dressed or dyed. Prepared skins for glove-making. Skins and furs, dressed and dyed. Parchment.

Gut-work: strings for musical instruments, gold-beater's skin, sinews.

SIXTH GROUP.—MACHINERY—APPARATUS AND PROCESSES USED IN THE MECHANICAL INDUSTRIES.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Plans of culture, distribution, and management of crops. Apparatus and works for agricultural engineering, draining, irrigation, &c. Plans and models of farm buildings.

Tools, implements, machines, and apparatus used in husbandry, sowing and planting, harvesting, preparation and preservation of crops.

Various agricultural machines worked by horse-power or by steam.

Carts and other rural means of transport.

Locomotives, engines, and horse-powers.

Manures, organic or mineral.

Apparatus for the physical and chemical study of soils.

Plans of different systems of re-planting, managing, and cultivating forests.

Apparatus used in the cultivation of forests, and in the trades appertaining thereto.

Apparatus used in the manufactory of tobacco.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Apparatus used in agricultural works; manufacture of artificial manures; of drain pipes; cheese factories, dairies; apparatus used in preparing flour, fecula, starches, oils; apparatus used in breweries, distilleries, sugar manufactories and refineries; workshops for the dressing of textile materials; silk-worm nurseries, &c.

Apparatus used in the preparation of alimentary products, mechanical appliances for kneading and baking; apparatus used in making pastry and confectionery.

Apparatus for the manufacture of vermicelli, macaroni, &c. Machines for making sea biscuits. Chocolate machines. Apparatus for roasting coffee.

Apparatus for making ices and cool drinks; manufacture and preservation of ice.

Class 51.—Apparatus used in Chemistry, Pharmacy, and Tanning.

Laboratory utensils and apparatus.

Apparatus and instruments used in assays for industrial and commercial purposes.

Processes and apparatus used in the manufacture of chemicals, soaps, and candles.

Processes and apparatus used in the manufacture of essences, varnishes, and articles made of india-rubber and gutta-percha.

Processes and apparatus used in gas-works.

Processes and apparatus used in bleaching.

Processes used in the preparation of pharmaceutical products.

Processes used in tan-yards, and in leather-dressing.

Processes and apparatus used in glass-works and in china and earthenware manufactories.

Class 52.—Machines and Apparatus in general.

Separate pieces of machinery: bearings, rollers, slide-bars, eccentrics, toothed wheels, connecting rods, cranks, parallel joints, belts, funicular apparatus, &c. Gearing, spring and catchwork, &c. Regulators and governors.

Lubricators.

Machines for counting and registering: Dynamometers, steam gauges, weighing machines. Gauges for liquids and gas.

Machines used for moving heavy weights.

Hydraulic machines for raising water, &c.; norias (chain pumps), scoop wheels, hydraulic rams, &c.

Hydraulic engines, water-wheels, turbines, hydraulic lifts, centrifugal, steam, and other pumps.

Accumulators and hydraulic presses.

Steam engines. Boilers, steam generators, and apparatus appertaining thereto.

Apparatus for condensing steam.

Machines set in motion by the evaporation of either chloroform, ammonia, or by a combination of gases.

Machines set in motion by gas, hot air, and compressed air.

Electro-magnetic machines. Windmills and panemones. Air-balloons.

Class 53.—Machine Tools.

Travelling circular saw benches, self-acting, for breaking down heavy timber. Machines for boring timber used in fencing.

Engines and tools for preparing wood for the workshop. Machines for making casks.

Machines for cutting cork. Lathes, boring and planing machines. Slotting, drilling and shaping machines. Screw-cutting engines and riveting machines. Various kinds of tools used in machine workshops.

Tools, engines, and apparatus for pressing, crushing, working up, sawing, polishing, &c. Special tools and engines used in various trades.

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Hand-spinning apparatus. Separate parts of spinning apparatus. Machines and apparatus used in the dressing and spinning of textile materials. Apparatus and processes for the subsidiary operations appertaining thereto; for drawing, winding, twisting, throwing, dressing. Apparatus for separating the qualities and numbering the thread.

Materials used in rope manufacture: Round, flat, tapering cables, cord and twine, wire-ropes, cables with wire core, rope-matches, quick-matches, &c.

Class 55.—*Apparatus and Processes used in Weaving.*

Apparatus used in the preparation of materials for weaving: warping mills, spooling (winding) machines. Card-making for the jacquard looms.

Hand looms and mechanical looms for the manufacture of plain fabrics. Looms for the manufacture of figured and brocaded stuffs; damask looms, electric looms.

Looms for the manufacture of carpets and tapestry.

Mesh-weaving looms for the manufacture of hosiery and net. Apparatus for making lace. Apparatus used in the manufacture of lace-work.

High warp looms and different modes of preparing the bobbins for weaving. Accessory apparatus: machines for fulling, calendering, figuring, watering, measuring, folding, &c.

Class 56.—*Apparatus and Processes for Sewing and for Making-up Clothing.*

Ordinary implements used by tailors and seamstresses. Sewing, quilting, hemming, and embroidering machines.

Implements for cutting out materials and leather for making garments and shoes.

Machines for making, nailing, and screwing boots and shoes.

Machines for the application of india-rubber.

Class 57.—*Apparatus and Processes used in the Manufacture of Furniture and Objects for Dwellings.*

Machines for cutting veneers. Turning webs, vertical and circular saw-frames, shingle-cutters, &c.

Machines for cutting the mouldings and beadings of frames, the squares of inlaid floors, furniture, &c. Lathes and other apparatus used in carpentering and cabinet-making.

Machines for stamping and burnishing. Machines and apparatus for working stucco, papier-maché, ivory, bone, and horn.

Machines for pointing, carving, and reducing statues; for engraving, engine-turning, &c.

Machines for making bricks and tiles; machines for making artificial stones.

Machines for sawing and polishing hard stones, marbles, &c.

Class 58.—*Apparatus and Processes used in Paper-making, Dyeing and Printing.*

Materials and products of the manufacture of pulps for making paper, of wood, straw, alpha, &c.

Processes and products of the bleaching of wood fibre.

Apparatus for making paper by hand and by machinery. Apparatus for pressing, glazing, watering, embossing, and ruling paper. Machines for cutting out, paring, stamping paper, &c.

Apparatus for bleaching and dyeing, and for the preparation of paper and tissues.

Apparatus for printing paper-hangings and tissues. Machines for engraving cylinders for printing.

Materials, apparatus, and products of type-founding, stereotypes, &c.

Machines and apparatus used in typography, stereotyping, copper-plate printing, autography, lithography, chalcography, panicomography, chromo-lithography, &c. Machines for setting up and sorting types. Printing of blank notes, postage stamps, &c.

Class 59.—*Machines, Instruments and Processes used in various Works.*

Coining presses.

Machines for making buttons, pens, pins, envelopes; packing machines, brush-making machines, machines for making cards, capsules; for affixing lead seals to merchandise; for corking bottles, &c.

Tools for, and processes of, making clocks, toys, marqueterie, baskets, &c.

Machines for binding books. Writing machines.

Class 60.—*Carriages and Wheelwrights' Work.*

Separate parts of wheels and carriages: wheels, tires, axles, axle-boxes, iron-work, &c. Springs and various methods of hanging carriages.

Different systems of harnessing. Breaks.

Wheelwrights' Work: Waggons, tumbrels, drays, and other vehicles for special purposes.

Carriages; public, State, and private carriages; sedan chairs, litters, sledges, &c., velocipedes.

Class 61.—*Harness and Saddlery.*

Various articles used for carriage horses and saddle horses; pack-saddles, saddles, bridles, and harness for saddle horses, beasts of burden, and draught horses; stirrups, spurs whips.

Class 62.—*Railway Apparatus.*

Separate parts: springs, buffers, breaks.

Permanent-way: rails, chairs, crossings, switches, fish-plates, turn-tables; buffers, feeding cranes, and tanks; optical and acoustic signals.

Permanent-way for tramways.

Rolling stock: waggons for passengers, for carrying earth, goods, cattle; locomotives, tenders.

Self-moving carriages; locomotives, for roads.

Special tools and machines for the maintenance, repair, and construction of railways.

Appartus for inclined planes and self-acting planes; apparatus and engines for atmospheric railways; models of engines, of systems of traction, of apparatus appertaining to railways.

Models, plans, and drawings of platforms, stations, and engine-houses, and other buildings necessary for the working of railways.

Class 63.—*Telegraphic Apparatus and Processes.*

Appliances for telegraphs based on the transmission of light, sound, &c.

Apparatus for the electric telegraph, post, wires, stretchers, &c.

Batteries and apparatus for sending and receiving messages.

Bells and electric signals.

Telegraphs for military purposes. Objects appertaining to telegraphy: lightning-conductors, commutators, prepared paper for printing messages and for sending autographic messages.

Special apparatus for pneumatic telegraphy.

Class 64.—*Apparatus and Processes of Civil Engineering, Public Works, and Architecture.*

Building materials: stone, wood, metals; ornamental stone; lime, mortar, cements, artificial stone, and concrete; asphalt; roofing tiles, bricks, paving tiles; slates, pasteboard and felt for roofing.

Apparatus and products of processes used in the preservation of wood. Apparatus and instruments for testing building materials.

Apparatus for earthworks, excavators. Apparatus used in building yards. Tools and processes used by stone dressers and cutters, masons, carpenters, tilers, blacksmiths, joiners, glaziers, plumbers, house painters, &c.

Locksmiths' work; locks, padlocks, railings, balconies, bannisters, &c.

Apparatus and engines used in making foundations; pile-drivers and pile-work, screw piles, pumps, pneumatic apparatus, dredging machines, &c. Apparatus used in hydraulic works connected with harbours, canals, rivers; machines used in reducing stones, quartz, or other hard substances.

Apparatus used in the supply of water and of gas. Apparatus used in the maintenance of roads, plantations, and public walks.

Models, plans, and drawings of public works; bridges, viaducts, aqueducts, drains, canal bridges, dams, weirs, &c.

Lighthouses. Public buildings for special purposes; buildings for civil purposes; mansions and houses for letting; workmen's towns, industrial dwellings, &c.

Class 65.—*Navigation and Life-saving.*

Drawings and models of slips, graving docks, floating docks, &c.

Drawings and models of vessels of all kinds, sea-going and for rivers. Models of the systems of ship-building adopted in the navy.

Boats and barges.

Materials for the rigging of ships.

Flags and signals. Apparatus for the prevention of collisions at sea: Buoys, becons, &c.

Apparatus for swimming, diving, and life-saving exhibited in action; floats, swimming belts, &c. Diving belts, cork jackets, nautilus life-belts, &c. Submarine boats; apparatus for saving life at sea, rocket apparatus, life boats, &c.

Apparatus of all kinds used for saving life from fires and other accidents.

Pleasure boats, yachts, &c.

Class 66.—*Materials and Apparatus for Military Purposes.*

Military engineering and fortifications.

Artillery, gun-carriages, and weapons and projectiles of every kind.

Military equipment, clothing, and encampments.

Military transport service.

Military topography and geography.

SEVENTH GROUP.—ALIMENTARY PRODUCTS.

Class 67.—*Cereals, Farinaceous Products, and Products derived from them.*

Wheat, rye, barley, rice, maize, millet, and other cereals in grain and in flour.

Grain without husk, and groats.

Fecula from potatoes, rice, lentils, &c., gluten.

Tapioca, sago, arrowroot, cassava, and other fecula, compound farinaceous products, &c.

Italian pastes, semolina, vermicelli, macaroni.

Alimentary preparations as substitutes for bread, home-made paste, &c.

Class 68.—*Bread and Pastry.*

Various kinds of bread, with or without yeast, fancy bread and bread in shapes, compressed bread for travelling, military campaigns, &c. (*See* Biscuits).

Pastry of various kinds peculiar to each country. Gingerbread and dry cakes capable of being preserved.

Class 69.—*Fatty Substances used as Food.—Milk and Eggs.*

Fatty substances and oils good for food.

Fresh and preserved milk; fresh and salt butter; cheese.

Eggs of all kinds.

Class 70.—*Meat and Fish.*

Salt meat of all kinds. Meats preserved by various processes. Meat and soup cakes. Hams and prepared meats.

Poultry and game.

Salt fish, fish in barrels: cod, herrings, &c.; fish preserved in oil: sardines, tunny, &c.

Crustacea and shell-fish: lobsters, shrimps, oysters, potted oysters, anchovies, &c.

Class 71.—*Vegetables and Fruits.*

Tubers: potatoes, &c.

Dry farinaceous vegetables: beans, lentils, &c.

Green vegetables for cooking: cabbages, &c.

Vegetable roots: carrots, turnips, &c.

Vegetables used for flavouring: onions, garlic, &c.

Salads, cucumbers, gourds: pumpkins, melons, &c.

Vegetables preserved by various processes.

Fresh fruit; dried and prepared fruits: prunes, figs, raisins, &c.

Fruits preserved without sugar.

Class 72.—*Condiments and Stimulants, Sugar and Confectionery.*

Spices, pepper, cinnamon, allspice, &c.

Table salt.

Vinegar.

Compound condiments and stimulants: mustard, kari, English sauces, &c.

Tea, coffee, and other aromatic beverages, chicory and sweet acorn coffee.

Chocolate.

Sugar for household purposes: grape sugar, sugar of milk.

Confectionery: sugar plums, bonbons, nougats, angelica, aniseed, &c., preserves and jellies.

Dried and preserved fruits: cedrates, lemons, oranges, pineapples.

Fruits preserved in brandy.

Syrups and liqueurs.

Class 73.—*Fermented Drinks.*

Vin ordinaire, red and white.

Sweet wines and still wines.

Sparkling wines.

Ale, porter, cider, perry and other beverages made from cereals.

Fermented drinks made from vegetable sap, from milk, and sweet substances of all kinds.

Brandies and alcohols.

Spirits: whisky, gin, rum, tafia, kirsch, &c.

EIGHTH GROUP.—AGRICULTURE.

Class 74.—*Specimens of Farm Buildings and Agricultural Works.*

Examples of the farm buildings of various countries.

Examples of stables, cattle-sheds, sheep-folds, pig-sties, and of premises for rearing and fattening such animals.

Utensils used in stables, cattle-sheds, kennels, &c.

Apparatus for preparing the food of animals.

Agricultural machinery in motion: steam ploughs, reaping and binding and mowing machines, hay-making machines, threshing, finishing, and dressing machines, &c.

Specimens of agricultural works: distilleries, sugar-mills, sugar-refineries, breweries, works for the preparation of flour, fecula, starch; silkworm nurseries, &c. Apparatus for artificial hatching.

Presses for wine, cider, oil.

NINTH GROUP.—HORTICULTURE.

Class 75.—*Conservatories and Horticultural Apparatus.*

Gardeners', nurserymen's, and horticulturists' tools.

Apparatus for watering and keeping turf in order, &c.

Large conservatories and apparatus appertaining thereto. Room and window conservatories.

Aquariums for aquatic plants.

Fountains and other means for ornamenting gardens.

Class 76.—*Flowers and Ornamental Plants.*

Species of plants and examples of culture exhibiting the characteristic types of the gardens and dwellings of each country.

Class 77.—*Vegetables.*

Species of plants and examples of culture exhibiting the characteristic types of the kitchen gardens of each country.

Class 78.—*Fruit and Fruit Trees.*

Species of plants and specimens of products exhibiting the characteristic types of the orchards of each country.

Class 79.—*Seeds and Saplings of Forest Trees.*

Species of plants and specimens of products illustrating the processes followed in each country for planting forests.

Class 80.—*Plants for Conservatories.*

Illustrations of the mode of culture adopted in various countries, with a view either to pleasure or to utility.

TENTH GROUP.—MINING INDUSTRIES—MACHINERY AND PRODUCTS.

Class 81.—*Apparatus and Processes of the Art of Mining and Metallurgy.*

Boring apparatus for artesian wells and wells of large diameters. Boring machines and apparatus for breaking down coal and cutting rocks. Apparatus for blasting by electricity.

Models, plans, and views of the mode of working in mines and quarries. Works for obtaining mineral waters. Machines and apparatus used for extracting ore, and for lowering and hoisting miners.

Winding, pumping, and crushing machinery.

Safety cages and hooks; signals and other appliances for lessening the danger in mines.

Machines for draining; pumps.

Ventilating apparatus; ventilators.

Safety lamps; lamps for electric light.

Apparatus for the mechanical dressing of ores and mineral fuel.

Apparatus for compressing fuel into cakes.

Apparatus for the carbonisation of fuel. Smelting furnaces. Smoke-consuming apparatus.

Apparatus used in metal works.

Special apparatus used in forges and foundries, electro-metallurgical apparatus.

Apparatus used in metal manufactures of all kinds.

Drawings of different classes of machinery used in mining.

Class 82.—*Mining and Metallurgy.*

Collections and specimens of rocks, minerals, ores. Ornamental stones. Hard stones Refractory substances. Earths and clays. Various mineral products. Raw sulphur. Rock salt; salt from salt springs.

Mineral fuel, various kinds of coal, coal dust, and compressed coal. Asphalt and rock asphalt. Bitumen. Mineral tar. Petroleum, &c.

Metals in a crude state: pig-iron, iron, steel, cast-steel, copper, lead, gold, silver, zinc, antimony, &c. Alloys.

Products of washing and refining precious metals, of gold-beating, &c.

Electro-metallurgy: objects gilt, silvered, or coated with copper, steel, nickel, &c., by the galvanic process.

Products of the working of metals: rough-castings, bells, wrought-iron, iron for special purposes, sheet-iron and tin-plates, iron-plates for casing ships and constructions, &c.

Sheet-iron coated with zinc or lead; copper, lead, and zinc sheets, &c.

Manufactured metals: blacksmiths' work, wheels and tires, unwelded pipes, chains, &c.

Wire-drawing. Needles, pins, wire-ropes, wire-work, and wire-gauze, perforated sheet-iron.

Hardware, edge-tools, ironmongery, copper, sheet-iron, tinware, &c.

Other metal manufactures.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORT ON THE ALPHA GOLD MINE IN SOUTH-EAST WYNAD.

Dated Devalah, the 18th February 1879.

From—R. Brough Smyth, Esq., Mining Engineer,

To—J. H. Garstin, Esq., Acting Secretary to Govt. of Madras, Revenue Dept.

Referring to the paper, dated 10th January 1879, No. 42, wherein I am instructed by the Government to ascertain how it is that, notwithstanding the presence of considerable quantities of gold in the reefs at the Alpha Mine and to the extent reported by me, the operations have not proved successful, and especially whether this want of success has arisen from any peculiar difficulties in separating the gold from the matrix at this particular spot, or from the cost of labor or fuel or from other reasons within or beyond the control of the mine proprietors, I now do myself the honor to submit the following report for the consideration of His Grace the Governor in Council.

PRELIMINARY.

Immediately on receipt of the instructions above referred to, and as directed by the Government, I communicated with the Directors of the Alpha Company and sought permission to make a careful examination of the mine, and at the same time I asked a number of questions respecting the operations of the Company.

Subsequently I wrote to the Secretaries and Treasurers in Madras requesting them to furnish such information respecting the work done in the past as they could supply.

The Directors very promptly furnished papers relating to the expenditure of moneys, the quantities of quartz raised and the results, and they replied to some of the questions asked by me; and I would wish to record my appreciation of the assistance afforded by them, by Messrs. Parry and Company and by Mr. G. E. Withers who at one time had the management of the works under what is known as "The Prince of Wales Quartz Reef Gold Prospecting Company," a Company which held and worked the Alpha Mine on tribute for a brief period.

Though necessarily from the nature of the duties which I have had to discharge since I came to this district, I was well acquainted with the mine and the machinery of the Alpha Company, I have since the receipt of instructions made a further careful examination of the land held by them, the reefs, and the works erected for the purpose of reducing the auriferous quartz.

THE AREA GRANTED TO THE ALPHA COMPANY.

I have not been able to obtain a plan or a sufficient description of the boundaries of the area granted to the Alpha Company. The extent is said to be fifteen acres, but on the map of the Ouchterlony Valley and three Amshoms of South-East Wynad the area marked "Alpha Company" exceeds one hundred acres.

The lines of demarcation as pointed out to me on the ground seem to embrace a larger area than fifteen acres.

The boundaries are thus described in the prospectus of the Company:—A block of fifteen acres bounded on the west and south by two large streams, and on the east and north by four demarcation stones.

As my report deals principally with only so much of the main reef as is known to be within the area granted to the Company, the question of boundaries need not be further referred to.

THE QUARTZ VEINS.

The principal quartz vein intersecting the land is that known as the "Skull Reef." It appears at the surface at various points between "Wright's Level" and the northern boundary of the Company's area, and is traceable further northward for a great distance. Wright's Level is on the eastern slope of the

range that forms the western rim of the basin drained by the Carcoor Poya, and is distant thirty chains from the Alpha mill.

The country is intersected by streams trending to the Carcoor Poya, and there are low and high hills, some very steep, but nearly all with smooth contours.

At Wright's Level the vein is from four to five feet in thickness near the surface, and seven feet six inches at a depth of thirty feet. Its strike for a distance of more than one chain is nearly north and south, and the dip is east at an angle of 30° to 40°.

The quartz in some parts of the vein is laminated, the laminæ being from two to four inches and more in thickness, and they are nearly parallel to the line of strike. These are crossed by other lines transverse to the dip and strike, and there are in places thin veins of talcose clay cutting the reef transversely. There is also solid iron-free nearly white quartz. Near the surface the stone, when broken out, is seen to be highly ferruginous and is colored yellow, bright red, and bluish purple. Much of the quartz is cavernous, honey-combed, or mice-eaten, and the associated minerals near the upper part of the vein are limonite and other oxyds of iron due to the decomposition of iron pyrites which are found in considerable quantities in the deeper levels. Sulphur is also seen occasionally in cavities. I have not seen any sulphide of antimony or any of the ores of lead.

Northward, twelve chains from Wright's Level, an adit made by native miners has been re-opened by me, and the thickness of the reef at this point is four feet; the strike is nearly north and south, and the dip is nearly due east at an angle at the outcrop of 45° and at a depth of twenty-four feet 60° nearly.

A section taken from the middle of this reef shows massive white nearly iron-free quartz. It is ferruginous and cavernous near the hanging wall and foot-wall.

At the large excavation from which the reef derives its name about twenty-two chains north of Wright's Level, the vein is thick: at the face it is not less than fourteen feet from the hanging wall to what appears to be a "horse," the extent of which has not been ascertained. The total thickness of the reef at this point is not known. The general character of the stone is similar to that at Wright's Level, but there is much more sulphur. It is not difficult to find rather large quantities of clean sulphur in the cavities. Here also there is an absence of those minerals that are most detrimental to amalgamation. The strike of the reef is N. 20° W. and the dip N. 70° E. at an angle of 18° to 30°, but the dip nowhere is uniform.

About four chains and fifty-six links north-westerly from the excavation the reef is again seen on the bandy-road where it intersects a low hill. Here the dip is N. 80° E. at an angle of 40°, and the thickness as well as can be observed is six feet. On the north-western side of the hill the outcrop is again found, and it is seen also on the further side of a stream which runs at the foot of the hill. On a bandy-road south-easterly of the Skull Reef there are thin ferruginous veins containing numerous cubes of iron-pyrites decomposing into limonite which are said to be highly auriferous. The "casing" of the reef throughout is generally a talcose schist.

There is another reef within the boundaries pointed out to me, west of Wright's Level and one near the Alpha Bungalow. Neither of these has been opened by the Company.

THE MINES.

Now that the thick and high grass is burnt on many of the ridges it is comparatively easy to follow the outcrops of the reefs and to discover old native workings. Since this report was commenced, I have examined very extensive native workings south and west of Wright's Level quite on the edge of the ghât. The ridge southward of the Alpha workings has been sluiced on both sides, and a channel has been cut in the valley about five feet in width and eight feet in depth for a length of more than three hundred yards. There are also numerous subsidiary small channels and deep and large excavations. On following the main channel downwards (it commences at the outcrop of the reef at Wright's Level) in a direction 8° south of west a strong vein of quartz is found nearly

three hundred and fifty yards from the Alpha workings. One shaft has been sunk here, but the reef has not been excavated. It appears to have a strike of N. 30° W., and is probably a continuation of that which crops out in the jungle on the further side of a stream trending towards the ghât. The existence of these native workings and the reef referred to is, I am informed, unknown to the proprietors of the Alpha Mine. Surrounding the recent excavation at Wright's Level there are other native workings evidently very ancient. There are several shallow pits and small excavations; and heaps of broken quartz are to be seen all along the strike of the reef. At one place, between Wright's Level and the Skull, there is a shallow pit communicating with an aperture like a chimney in in which it is probable the quartz was roasted.

Near the Skull and for some distance northwards the workings are numerous, and at the Skull itself there is an excavation, the full extent of which cannot be ascertained as the roof has fallen: as far as it can be examined it shows a width at the entrance of twenty-nine links, a breadth at the broadest part of fifty-three links; and it measures seventy-five links to the mouth of a drive which cannot be followed until some expenditure is incurred in clearing it and securing it. The height of the excavation from flow to roof is twenty-five links. There are vertical shafts communicating with this excavation which no doubt were sunk long before the adit was commenced. The amount of work done on the reef is conclusive proof that the native miners found gold in quantities sufficient to remunerate them. They appear to have dug into the soft casing and taken stone from the footwall, but they did not confine their operations to this part of the reef. They followed the run of gold wherever they were able to do so.

According to the information I have been able to obtain, it appears that the Alpha Company commenced their mining operations by quarrying stone in the old native workings at the Skull, where they took out about one hundred tons of quartz. Subsequently they quarried stone near Wright's Level, and then the adit named Wright's Level was driven for a length of about twenty feet.

At a point a little more than ninety feet eastward of Wright's Level and twenty-five feet below it an adit forty-two feet in length, five feet in width, and six feet in height was driven to cut the reef, and the reef is now seen in the "face" where a hole has been sunk in quartz to the depth of five feet. The Company or the Tributers also put down a shaft east of but quite near Wright's Level. It was sunk to the depth of forty feet where the reef was struck, and it is said good stone was got from the bottom. Further northward, but still within a few yards of Wright's Level, a shaft was sunk to the depth of sixteen feet and an adit was driven, cutting the shaft about five feet from the bottom. This is known as "Harris' Tunnel." On the slope of the range towards the ghât, and about three hundred and thirty feet east of "Harris' Tunnel", another adit was driven evidently for the purpose of cutting the reef. It has been continued for a distance of over fifty feet. It is not timbered, and near the mouth there is a fall of earth. It has intersected a small vein of quartz. It is nearly on the same level as the other adit below Wright's Level. A shallow pit was sunk south of the large excavation at Wright's Level with, I am informed, good results.

Another shaft now filled in and completely covered with broken quartz was sunk on the dip a few feet south of Wright's Level. It was fourteen feet in depth and a drive was put away for a distance of fourteen feet. It is stated that rich stone was got in the shaft and drive. Subsequently rich stone was broken out, it is said, at the north-western corner of the excavation.

The excavation at Wright's Level, as it appears at present, is eighty feet in length, twenty-two feet in breadth, and from ten to fifteen feet in depth.

Near the excavation at the Skull and about fourteen feet below it some native workings were re-opened by those who had the management of the mines. What is known as "Binny's Level" is situated a little distance northward of the Skull. The reef was cut here about twenty feet from the entrance. Still further northward is "Ryan's Level," which is about twenty-five yards from the battery. A commencement only was made with this work. Indeed it may be described as a hole from which broken quartz—the results of native labor—was carried away to the battery. An adit known as "Withers' Level" not far from the works was driven about fifty feet and then abandoned. It did not cut the reef. It was undertaken prior to the formation of the Alpha Company.

It would seem then that quartz in some quantities was taken and crushed by the Alpha Company and Tributers from the Skull, from the excavation at Wright's Level, and from shallow pits and short adits near Wright's Level, and that seven adits were driven at various points and two shafts sunk which, even where the reef was struck, were, for reasons probably known to the Managers, discontinued. These works, the seven adits and the two shafts were unproductive, and it would be difficult to discover why they were undertaken at all. Having regard to the position of the battery nothing was to be gained by making adits east of Wright's Level.

It is probable that the Company expended some moneys in other similar works not known to me. I have, however, made every effort to ascertain the facts.

YIELD OF GOLD FROM QUARTZ.

It will be apparent from the statements already made that little has been done to develope the reef within the boundaries of the Alpha Company's area or to determine its value. The apparently purposeless scratchings on the surface and the useless expenditure of moneys in driving short adits and sinking shallow pits have not even had the result of proving the character of the reef except at one or two points. It is however evident, from the character and extent of the native workings and from experiments made in the laboratory, that the stone in some places is highly auriferous.

The yields obtained by myself have been as follows:—

WRIGHT'S LEVEL.	oz.	dwts.	grs.	
1. No gold visible in the stone at the rate of .	0	11	6·0	per ton of 2,240 lbs.
2. No gold visible in the stone . . .	2	16	1·6	„ „ „
3. A little gold to be seen . . .	56	13	19·5	„ „ „
4. Gold visible in the stone . . .	204	11	16·7	„ „ „

Large blocks of quartz were broken out at the spot where the stone giving these results was obtained; and in several of these gold was visible. In one or two instances loose gold was found in cavities; and indeed some of the quartz was so rich that if portions of it had been tested the yields would have occasioned excitement amongst persons not acquainted with quartz mining, and unheedful of the cautions and statements which would necessarily have accompanied the report of any such yields. According to the judgment of those well able to form an opinion some of the quartz from the reef near Wright's Level would have yielded at the rate of 1,000 oz. or more per ton. The value of the reef however cannot be measured by such results. Where this quartz was obtained the vein is about four feet in thickness; and the heaviest gold is found mostly in the upper part of the vein, as it is now exposed, and near the footwall, throughout a thickness of two feet only. It is to be followed downwards across the line of dip for a distance of sixty feet, where there is good stone showing gold near the footwall. Quartz with pyrites obtained from the adit below Wright's Level, and not on this run of gold, gave at the rate of only 3 dwts. 23·04 grs. per ton.

At the face of the large excavation at the Skull a vertical section of the reef was taken, and the results for the several parts were as follows:—

	Rate per Ton. oz.	dwts.	grs.
1. One foot in thickness (hanging wall) . . .	0	0	16·19
2. Three feet in thickness	0	0	9·92
3. Four feet in thickness	0	1	2·20
4. Five feet in thickness	0	2	2·21
5. Six inches in thickness	0	0	4·25

Northward of the excavation and within a few yards of it the run of gold is found, and quartz from that portion yielded at the rate of 1 oz. 4 dwts. 5 grs. per ton.

Mr. W. King, B.A., the Deputy Superintendent of the Geological Survey of India, estimated from preliminary crushings made by him that the yield per

ton of the reefs in this district would be 7 dwts., and he refers to the results obtained by the Tributers who worked at Wright's Level, *viz.*, 11 dwts. and 17 dwts. per ton.

In the table attached to Mr. King's report in the *Records of the Geological Survey of India* (No. 3—1878, Vol. XI) it is stated that 769½ tons crushed by the Alpha Company gave an average yield of 2 dwts. 9 grs. per ton. One large parcel included in this return yielded only 1 dwt. 17 grs. per ton, but another parcel—6½ tons—treated at the Wynad Prospecting Company's works, yielded 19 dwts. 22 grs. per ton.

In a report, dated 2nd April 1875, Mr. King writes as follows:—

"Among the lodes detailed above [referring to a table] the Skull Reef about to be mined by the Alpha Company was tried most carefully by seven parcels of quartz obtained from one cross-cut through the reef where it is 15 feet wide. There was no gold visible in the sample which gave the proportion of 25·92 dwts. to the ton. This rich proportion of gold is from a band of laminated quartz about 2 feet thick, within a couple of feet of the foot-wall or underside of the reef. The average proportion from this two-feet band would be 22·68 dwts., or taking the 10th, 12th, and 13th feet of the 15-feet cross-cut, from each of which I have samples, we get a proportion of 16 dwts. for what appears to be the richest part of this reef. The work was done by hand and dry crushing."

In a pamphlet entitled "Gold Prospecting in the Wynad" a table is given, which purports to be an extract from a report made by Mr. King. The experiments were made on quartz taken from the Skull Reef, and they are as follows:—

"APPEARANCE, COLOR, &c.	Results.	Depth in cross-cut from back of reef.
Compact, coarse texture, laminated, white color	2 dwts. to ton.	1st foot.
Still white in color but stained with ferruginous matter	2·5 dwts. to ton.	3rd foot.
Whitish, discolored with iron	None.	5th foot.
Whitish, discolored with iron, good color in dish-host in amalgamation	...	7th foot.
Still white but ferruginous matter	5·18 dwts. to ton.	10th foot.
Highly colored, red and brown, ferruginous, cellular with white iron pyrites: gold visible	19·44 dwts. to ton.	12th foot.
Highly colored, red and brown, washed and amalgamated in my presence by Mr. Withers; gold not visible	25·92 dwts. to ton.	13th foot."

In a printed report made by Mr. R. Lindon to the Directors of the Alpha Company there are results of trials as follows:—

	oz.	dwts.	grs.
Quartz from Wright's Level, picked specimens	25	13	0
Quartz from Wright's Level, picked pieces without gold visible	11	13	0
Quartz from Skull working	0	6	16

It would be altogether injudicious to attempt to give an average from the above results; but they are sufficient to prove that the reef within the boundaries of the Alpha Company's area is in some parts highly auriferous, and, having regard also to the large extent of native workings, that its character is such as to justify a Mining Company in opening it thoroughly with a view to the erection of works for treating the quartz.

THE MACHINERY AND WORKS.

The machinery consists of a battery of fifteen stamps, in three groups of five and a fourteen horse-power steam-engine having a tubular boiler and a fire-box constructed to burn coal. It was intended that this engine should drive also a pulverizer and a circular saw, both of which can be connected with the engine and are under the same roof as that which covers the stamps and the engine. The stamps, including the shanks and discs, are said to weigh about 3½ cwt. each, but they appear to be very much heavier. Motion is given to the stamps by cams attached to a shaft. The coffers in which the stampers work have in front of them only (and not at the back) perforated iron plates with 125 holes to the square inch. There are three copper plates, four feet six inches in width—one is seventeen inches in length, one three feet eleven inches, and the lowest twenty inches. These are divided by ripples. The angle of inclination

of the plates is from 3° to 3¼°, but they are not even. They bulge a little in some places. The tables are from ten feet eight inches to twenty-six feet in length, each group of stamps having tables of different lengths; each table is in three partitions, seventeen inches in width; the angle of inclination of the tables is 6°. The blankets were nine feet in length, and only nine feet in length of the tables were covered with blankets. The tailings ran through launders to catchpits.

A small furnace for roasting the tailings, a retorting furnace and kilns for roasting the quartz previous to crushing, complete the list of appliances at the mill.

The information I have received furnishes a melancholy history of the various attempts to work the machinery. When it was erected it is said, it worked very well, that is to say, the machinery moved smoothly, but it never crushed any such quantities of stone as ought to have been crushed. One day about eight tons of stone were crushed; but the Alpha Company crushed, at the best of times, only seven tons in twenty-four hours, and even this rate would not be maintained. It was found impossible to move the stamps, the pulverizer and the circular saw at the same time. The engine, it is stated, was worked at a pressure of 60 lbs., but it was never possible to keep up steam. It usually took three hours to get up steam. No firewood was stored. It was cut green, and even old wood that was gathered was often quite wet.

The present condition of the battery and tables is, of course, worse than it was when they were erected. The weather and use have injured them; and one of the Managers in order to re-arrange the tables of the middle battery, according to his ideas, cut away one of the main bed-logs, and since that was done the vibration has been so great, with the machinery in motion, as to shake the tables to pieces. The wood of the tables is shrunken and warped; there are numerous apertures through which water, quicksilver, and amalgam could escape; and I am told that 35 lbs. of quicksilver were found under one table. The fall from the coffers is not on to the plates; there is a space of over an inch between the plates and the edge of the coffers, and even now the course which the water and tailings took as they escaped through this aperture is plainly to be seen under the tables. The fastenings, too, are bad; the nuts and washers below the coffers do not cover the holes in the plates for the bolts, and the mercury and amalgam fell through the spaces thus exposed. Some of the arms of the drum for the belt connecting the engine with the pulverizer are broken, owing, it is supposed, to their having been screwed up too tightly.

The pulverizer is said to have reduced the tailings to a fine powder, but the quicksilver "floured" owing to the iron pyrites not being properly roasted.

About 10 cwt. of "tailings" could be ground by this machine in a day. Owing to the condition of the machinery I would not deem it prudent to put the pulverizer in motion. It is to be noted that the taps through which the quicksilver or amalgam flows from the pulverizer are made of brass. They are now nearly entirely eaten away.

THE TREATMENT OF THE QUARTZ AND THE RESULTS.

From information furnished by the Directors it appears that mining operations were commenced by the Alpha Company in February 1875, and ceased in March 1876, and that the total quantity of quartz treated from first to last was 779½ tons. The time occupied in crushing and treating this quantity was seven months, including stoppages. The gold obtained weighed 91 oz. 12 dwts. 23 grs., being at the rate of 2 dwts. 8·43 grs. nearly per ton. This is inclusive of six tons and a-half which were treated at the Wynad Prospecting Company's works for the Alpha Company, and which, as already stated, yielded at the rate of 19 dwts. 22 grs. per ton. The average cost of raising quartz was Rs. 2 per ton; the average cost of conveying the stone to the mill was Rs. 1-8-0 per ton, and the average cost of crushing Rs. 1-13-0 per ton. The total cost of raising and crushing quartz is stated to have been Rs. 2,971-6-0.

To these must be added the following items as given in the statements furnished by the Directors:—Firewood (estimated) Rs. 50 (per week); timbering in the mine, Rs. 150; blasting-powder, Rs. 700; and quicksilver (quantity used not known), Rs. 3,000. The cost of supervision is set down at Rs. 2,384

for seven months only. The machinery is stated to have cost Rs. 25,000, and the erecting of it about Rs. 1,800. The construction of roads cost Rs. 795-7-7.

The aggregate of these sums, including interest on the capital invested, shows that the quartz, for raising, treating, supervision, stores, &c., must have cost more than Rs. 15 per ton or, to put the matter in another way, that the gold was obtained at an expense of Rs. 127 per ounce.

The balance sheet of the Alpha Company, prepared by the Secretaries and Treasurers (copy hereto marked A*) shows that the sums expended in preliminary expenses were Rs. 8,708-4-5, and in supervision, management, &c., Rs. 14,675-11-9; and the only point in the statement that is really important is the relatively small sum expended in actual mining operations, which under the head of "Mining, Felling, and Storage" is set down as Rs. 11,327-0-10. The value of the gold got, the result of these operations, is stated at Rs. 3,037-6-3.

The stone treated at the Wynad Prospecting Company's works, six tons and a-half, was got from the reef at Wright's Level, and it cost for sinking the shaft and raising Rs. 70-10-0; for breaking Rs. 3-10-0; for conveyance to the works Rs. 21; and for crushing Rs. 65—total Rs. 160-4-0.

The gold got sold for Rs. 297-6-3. The stone treated by the Alpha Company at their works was not roasted before being sent to the mill; but the "tailings" collected in the settling pits were roasted in a furnace and ground in the pulverizer. I have not been informed as to the results of the treatment of the tailings.

The stone crushed for the Alpha Company at the Wynad Prospecting Company's works was roasted before being crushed.

"The Prince of Wales Quartz Reef Gold Prospecting Company" took possession of the Alpha Works on the 1st June 1877 under an agreement with the Alpha Company. They commenced mining operations on the 17th August 1877, and continued to mine with some interruptions until the end of February 1878. The pecuniary results of this adventure are shown in the balance sheet hereto marked B.* The value of the gold got, including specimens, is stated at Rs. 8,132-10-8.

Copies of the reports furnished by the Manager, as well as several papers relating to this Company's proceedings, have been placed in my hands for perusal by one of the proprietors, and I gather the following facts from them:—

QUARTZ CRUSHED AND TREATED.

	Tons.	Average yield per Ton. oz.	dwts.	grs.
Wright's Level	41⅔			
Skull Reef	63			
	104⅔	0	2	18·5
Skull Reef	12	0	2	5
Wright's Level	50	0	11	19
Do.	50	0	16	12·5
Do.	104	0	14	21·34
Do.	2	0	8	0

The average yield per ton from these parcels was 10 dwts. 12 grs. nearly. Pieces of quartz containing gold were sold for Rs. 1,251-4-0. The "specimens" containing gold got from the parcel of 104 tons are said to have been sold for Rs. 920, and it may be assumed therefore that the stone was very rich.

There is not much information to be obtained as to the mode of treatment pursued by the Alpha Company, but it is stated that the stamper-boxes were charged with quicksilver, not largely, and that they relied mainly on their copperplates and ripples for saving the gold. They used sodium amalgam very freely.

The Manager of the Prince of Wales Tribute Company has furnished many details respecting the mode of treating the quartz when the results of the operations were apparently to some extent satisfactory to the shareholders.

Kilns were built, and the stone before being sent to the mill was roasted. Wood was placed in the kilns and the stone piled thereon and the roasting was continued for forty-eight hours.

He informs me that a small quantity of quicksilver was put in the coffers two or three times a day according to the estimated richness of the stone. On

* Not published.

the copperplates 2½ per cent. of sodium amalgam was used with the quicksilver, and in the pulverizer as much as 3 per cent. Still the quicksilver "floured."

Blankets of the ordinary kind were used, and the length covered by the blankets was nine feet. They were washed every half hour. It seems that all the tables were for this length covered with blankets and the water was allowed to spread itself over the whole.

Water was conveyed to the mill through troughs which discharged into a tank, and an iron pipe, fed from the tank, was fixed in front of the battery. To this were attached smaller pipes provided with taps, two to each battery, and when the supply was sufficient the water must have entered the coffers with great force. The flow, however, was not even, the smaller pipes were often choked with grass, and owing to the troughs or boxes being badly made and improperly placed the water escaped and sometimes there was not sufficient for the tables.

The stone was broken by hand before being sent to the mill, at a cost of nine annas per ton.

The feeding was very irregular. It happened not seldom that so much quartz was put into a coffer as to stop the action of the stamper, and at other times the coffer was not fed and the disc struck upon and injured the cam.

Oil from the machinery often dropped on the plates and it found its way also into the coffers.

Tailings escaped from the catchpits.

The stone treated, as already mentioned, must have been rich. In one "cleaning up" of a stamp-box coarse pieces of gold were found weighing from 6 grs. to 3 dwts., and of these about thirty were obtained; one piece weighed about 7½ dwts.

CAUSES OF FAILURE.

The first important step taken by the Alpha Company was to erect machinery, and subsequently they made attempts under the advice of various Managers to open their main reef. As stated in another part of this report they first quarried stone at the native workings on the northern extension of the reef, and subsequently at the southern portion of it, but no successful effort was made to mine systematically. There was consequently unnecessary cost incurred in getting stone, and great cost in conveying it to the mill.

There was no stone-breaking machine at the mill; the stone was broken by hand. There was no self-feeding apparatus: the feeding was irregular; and the platform on which the quartz was delivered was not partitioned off from the stampers and engine. The dust rose sometimes in clouds and fell on the bearers, injuring them and rendering necessary a large supply of oil, &c., for lubricating the various parts of the machinery; some of which often dropped on the plates, thus making effective amalgamation impossible, even if there had not been other detrimental influences in operation.

A great error was committed by the Tribute Company in roasting the quartz in kilns before sending it to the mill. Nearly all the quartz in the reef is more or less pyritous, and the percentage of iron pyrites in several sections probably varies from 0·1 or less to 5 per cent., and when this is placed in a kiln in the manner described elsewhere in this report it is impossible to oxydise the sulphur. The fusible lower sulphides coat the gold and prevent its amalgamation with mercury. The roasted stone I have seen in Devalah is often a slag, and any gold in it must be "glazed."

Sodium amalgam appears to have been used in excessive quantities. This amalgam has all the valuable properties ascribed to it by the patentee, Mr. William Crookes, F.R.S.; but the utmost care and caution are necessary in using it in the extraction of gold and silver. A very minute quantity of sodium amalgam added to quicksilver has the effect of rendering the metal more mobile and more "eager" for gold, and therefore it is the more likely to escape from the mill and carry the fine gold with it unless the ripples are properly arranged and other precautions taken.

It was a mistake to put quicksilver in the coffers. The undecomposed pyrites, reduced to powder, would accumulate in the coffers and cause the "sickening" and "flouring" of the mercury. The metal breaking up into minute globules or adhering to the powdered pyrites would be carried away.

If no quicksilver had been put in the coffers the copperplates might have been dispensed with.

The inclination of the tables was excessive. Instead of 1 in 10 they should have been not more than 1 in 14 or 1 in 16.

The water from the battery (often insufficient) was allowed to spread itself over the whole extent of the tables, whereas, as there was not sufficient water, but under any circumstances, it should have been so regulated as to carry the tailings evenly over the blankets. And the length of the blanketing, nine feet, was not enough. I have been informed that iron pyrites from the Alpha Mill was taken out of the bed of the stream quite 200 yards away, and that it was found to yield 1 oz. to the ton.

Buddles were not used for concentrating the tailings, and a large proportion of the stuff sent to the furnace must have consisted of quartz.

The furnace which was built by the Tributers is unsuitable for treating pyrites.

The steam-engine was never equal to the duty required of it. One of forty horse-power would be needed to drive the stampers and keep in motion the pulverizer, fully charged, and the saw. The Alpha Company and the Tributers are said to have crushed 1,102 tons of quartz in fifteen months: if the machinery had been effective, and if the works had been skilfully managed, at least 11,000 tons should have been reduced in fifteen months.

During the whole period that the works were in operation, when only an average of 2·8 tons were crushed per diem, the expenses of management, dead-work, &c., were running on as well as interest on the capital invested, and it is not a matter for wonder that doing only one-tenth of the work that ought to have been done the two adventures were not remunerative.

The greatest credit it appears to me is due, however, to the projectors for their spirit and enterprize. They failed because they did not first of all commence to mine, and because they had not appliances for saving gold.

HOW THE OPERATIONS SHOULD BE CONDUCTED.

A run of gold in the main reef is found at Wright's Level, and this has been followed for a distance of sixty feet. I would advise that in the first instance this run should be followed still further on the underlie—say—if the good stone continues—for 100 feet or 150 feet; that the shaft should be well and safely timbered, and that skids should be put in so that the quartz might be brought to grass with facility. It may be assumed, judging from the stone already taken out, that the quartz from this shaft would yield a fair proportion of gold.

This preliminary work, but productive, would indicate the best site for a main adit, and that will be found at a point on the slope of the ghât eastward of Wright's Level.

This main adit running west should be driven at a low level so as to intersect the reef at a considerable depth below the outcrop on the ridge.

From this adit and other cross-cuts the reef could be mined economically. It could be stopped from different levels quite up to the surface. A site for the battery could be found near the mouth of the main adit. All these undertakings and all arrangements connected with them should be well considered, and the objects in view should be to open the mine on a good plan, and to raise a large quantity of stone which from careful assays should show such a yield per ton as would justify the erection of machinery.

I recommend that water-power be employed for driving the machinery, either an over-shot wheel or a turbine.

I regret to say that I am not sufficiently acquainted with the laws or regulations in force in India under which water may be diverted, but it would be no doubt practicable to arrange for the diversion of water from the stream near the Wynad Prospecting Company's works.

Perhaps reservoirs would have to be constructed for storing water.

The relative cost of using steam and water in this district cannot be fairly estimated by me, as I am ignorant at what cost fuel could be got if proper arrangements were made for procuring it in large quantities, but in mills elsewhere the proportions are—for water about 1·2, and for steam 2·1.

There is not much at the Alpha Mill that could be used in any new adventure. The stamps could be made available, and the coffers seem to be uninjured and might again be set up; but in my humble opinion it would be more economical to procure a new plant furnished with all the best appliances than to patch up the machinery at the Alpha.

All patent contrivances that have not been proved to be of value by a lengthened experience should be rejected, and only those adopted that are known to have yielded good results and now find a place in the best conducted mines.

As well as a battery there would be required:—

(*a*).—A stone-breaking machine. The smaller pieces of quartz would be separated from the larger and sent direct to the stamps and the latter to the stone-breaking machine.

(*b*).—A self-feeding hopper.

(*c*).—A buddle for concentrating the "tailings" which are saved in the settling boxes.

(*d*).—An inclined reverberatory furnace for roasting the "tailings." This would consist of a fire-box, hearth, &c., and should be on the plan of some of those that have given the best results in Victoria.

The quartz should be crushed raw. Quicksilver should not be used in the coffers: and copper platforms are likely to cause a loss of amalgam, and I do not recommend that they should be employed. Ripples and blanket-strakes will do the work more effectually. The tables should be twenty feet or more in length, and about fourteen inches in breadth for each stamp-head; the fall should be about one in sixteen (if a good supply of water is maintained), and they should be covered with closely woven green baize.

Experience would of course lead to some modifications in the arrangements, but it would not be difficult to adjust the length and fall of the tables so as to meet any conditions that might arise.

SUMMARY.

I have endeavoured to indicate as briefly as possible the causes which prevented the Alpha Company from obtaining profitable results from their adventure. I am satisfied that their machinery and appliances are such as to make it impossible to save the gold even if the best scientific and technical knowledge was brought to bear on the operations. The one fact that oil and grease were allowed to fall on the copperplates and to get into the coffers is sufficient to show what the state of affairs was when the best results were obtained.

The main reef within the area held by the Alpha Company is nearly 2,000 feet in length; it is from 4 to 14 feet (at least) in thickness; in one part the quartz is of extraordinary richness; and other parts have yielded well.

Native miners have picked what must have been auriferous quartz all along the outcrop, and at the "Skull" their excavations are extensive. The position of the reef and the formation of the ground both offer facilities for economical mining.

It appears that the yields of gold have been for 779½ tons of quartz 2 dwts. 9 grs., and for 322·66 tons, 10 dwts. 12 grs., and the gold was got, as I have shown, under the most disadvantageous circumstances.

These results may be compared with some operations in Australia.

The compilation of mineral statistics was commenced in Victoria in 1860, and from 1860 to 1876 (inclusive) information has been obtained respecting the results of the treatment of 13,402,915 tons of quartz, and the returns show an average yield of 11 dwts. 6·30 grs. per ton. The average yield of gold from 1,011,808 tons crushed in Victoria during the year 1876 was 10 dwts. 13·48 grs. per ton.

The Black Hill Company at Ballaarat crushed 283,550 tons, which yielded an average of 2 dwts. 23 grs. per ton and the dividends paid amounted to £23,900. It is stated that the machinery cost £10,030, and that the Company paid £24,235 for "claims" (*i. e.*, land on which to mine).

Other Companies have treated large quantities of quartz yielding averages per ton of 2 dwts. 13·4 grs.; 3 dwts. 6·01 grs.; 3 dwts. 7·89 grs.; and 3 dwts. 18·53 grs., and have paid dividends.

The prices paid by the Alpha Company and Tributers for labor, for timber, and for firewood are no criteria to guide me in estimating the costs of mining at Devalah. Under skilful management arrangements would be made for procuring all necessary supplies at the minimum cost, but in desultory operations the maximum cost as a matter of course has to be paid.

In reply to the questions in the paper, dated 10th January 1879, No. 42, I can safely say that the want of success of the Alpha Company has not arisen from any peculiar difficulties in separating the gold from the matrix, and I cannot believe the cost of labor or fuel would be so great here as injuriously to affect mining pursuits.

In this report I have omitted all details that appeared to me not necessary to the full elucidation of the questions with which I was instructed to deal.

Note.—The late Manager of the Prince of Wales Tribute Company states that the wages paid for native labor were from four to five annas per diem; the cost of fuel was Rs. 3 per ton; the cost of drilling in hard rock was four annas per foot, and in soft rock two annas per foot; and the cost of driving such adits as are seen here varied from six annas to Rs. 3 per foot.

The cost of carrying stone from the "Skull" to the battery was six annas per ton, and the cost of carting stone from Wright's Level to the battery was thirteen annas per ton.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR THE YEAR 1877-78.

Nos. 234-47 I, Simla, August 8, 1879.

RESOLUTION.

Read—

Letter No. 259 I. A., dated 22nd January 1879, from the Government of Bengal in the Public Works Department, and its enclosures; being the Revenue Report of Irrigation Works in Bengal for the year 1877-78, and a resolution by His Honor the Lieutenant-Governor reviewing the report.

OBSERVATIONS.—The most prominent feature in the transactions of the year under review is the demand which is reported to have at last arisen for irrigation on the Orissa and Midnapore Canals.

2. On the Orissa Canals the area actually irrigated during the year was 119,042 acres, or four times the maximum area hitherto obtained. Of this, 98,495 acres were charged with water-rate, and five-year leases, terminating in November 1882, have since been executed for nearly the whole of this area. So great is the alteration in the ideas of the cultivators regarding irrigation, that the Revenue Superintendent states his conviction that "wherever irrigation may not be popular in Orissa now, it is not because of any want of appreciation of it, but because it cannot be profitably resorted to, owing to the absence of either distributaries, drainage, or protection from floods."

Orissa Canals.

3. The sudden increase in the irrigation from these canals will be apparent from the results of the past four years—

1874-75	22,457 acres.
1875-76	18,409 „
1876-77	30,381 „
1877-78	98,495 „

The figures for 1877-78 given above represent only the area assessed with water-rate; the area actually irrigated having been, as stated in the 2nd paragraph of this Resolution, 119,042 acres. There is still room for expansion also, as the area which the existing distributaries can irrigate is stated to be 182,950 acres, and in the sanctioned estimate distributaries were provided for 206,172 acres.

4. The increase during the year appears to have been altogether in rice cultivation.

5. The lengths of channels open in Orissa are now—

Total main canals	209⅜	miles.
Of this navigable	147⅜	„
Distributaries	642·4	„

and the area protected from floods is stated to be 377,180 acres.

6. The time seems to have arrived for the completion of the distributary system, which was only sanctioned in 1876 to the extent which had up to that period been carried out, in order that proof might be obtained from experience as to whether the means of irrigation would be more largely availed of than up to that time seemed likely. Approximate estimates for additional distributaries have been submitted to the Government of India, but as the cost involved is supplementary to the sanctioned estimate, and under existing rules the sanction of Her Majesty's Government to the increased expenditure is necessary, the estimates were returned to the Government of Bengal for a revision of the last sanctioned estimate for the entire project. The revised estimates for this project are awaited by the Government of India, and should receive very early attention.

7. The revenue administration of the canals in Orissa seems to have been very satisfactory, and the Government of India endorses the commendation by His Honor the Lieutenant-Governor of Mr. Wyllie, the Revenue Superintendent.

8. On the Midnapore Canals there was a deplorable falling-off in the area irrigated, which is not clearly accounted for in the reports. The areas for the past six years have been as follows:—

Midnapore Canals.

1872-73	13,406 acres.
1873-74	36,549 „
1874-75	72,318 „
1875-76	55,995 „
1876-77	32,681 „
1877-78	19,819 „

Showing a rapid decrease since 1874-75, and this in spite of large profits as stated by the revenue officer from the irrigated cultivation, and of the fact that the whole area irrigated during the year was subsequently leased for five years, and that an aggregate area of 56,000 acres was leased on the same terms in the following year

9. The falling-off in the irrigation from this canal was noticed in the 10th paragraph of the Government of India Resolution on the report of the previous year, and the opinion of the Lieutenant-Governor was asked for. No. reply has as yet been received, nor has any allusion been made to it in the present report. The Government of India would be glad to receive a special report on the subject.

10. The length of the Midnapore Canal is 53 miles, navigable throughout. The distributary system, consisting of 255¼ miles of channel (to be eventually increased to 260 miles) is capable of supplying 148,600 acres, but it is stated in the Superintending Engineer's report that there was water during the year under review for only 90,000 acres, and from the observations in the Chief Engineer's report and His Honor the Lieutenant-Governor's review, it appears that not more than 56,000 acres can be irrigated on the average; this is further borne out by the facts reported by the Government of Bengal in September 1875, that in 1873 there was only water sufficient for 30,000 to 40,000 acres, and in 1874, when 60,000 acres were under irrigation, the river was drained.

11. As the tide of opinion among the cultivating classes appears to have turned in favor of irrigation on this canal as well as in Orissa, the Government of India desires that the question of supplementing the supply of water in the river may be investigated. Storage reservoirs were from the first proposed in

connection with this canal, and the desirability of constructing them appears now to require consideration.

12. The unrealised balances in Midnapore are still very large, though reduced to one-half of the amount outstanding in the previous year; this point requires the attention of the Government of Bengal.

Soane Canals.

13. Turning to the Soane Canals, the irrigation from them appears to have developed very rapidly during the year under review, which was the second year of their history as an irrigation work, but the exact figures cannot be gathered from the reports.

14. In the Lieutenant-Governor's review the areas are thus given—

Khurreef	107,087 acres.
Rubbee	134,903 „
TOTAL .	241,990 acres.

In the Chief Engineer's report they are—

Khurreef	107,087 acres.
Rubbee	129,012 „
Perennial	5,286 „
TOTAL .	241,385 acres.

and these figures, it is added, are exclusive of 80,633 acres of khurreef irrigated from the Patna Canal free of water-rate. Again, in the 11th paragraph of the Superintending Engineer's report the rubbee irrigation of the previous year is mixed up with that of the year under review; the remaining figures are as given in the Chief Engineer's report.

15. But the rubbee area is stated to be that for which leases were issued, not the actually irrigated area, which was not known at the date of the report, and it is this area which is entered in the Chief Engineer's report, though it is added that a portion, amounting to 20,615 acres, in the Buxar Division was not irrigated at all. As the review by the Government of Bengal is dated the 11th January last, there was ample time to have cleared up all doubtful points, and the Government of Bengal is requested to report after enquiry the correct figures.

16. The aggregate length of the main canals and branches on the Soane system at the close of the year was 172 miles; the length of distributaries was 567 miles.

17. From paragraph 45 of the Chief Engineer's report it is noticed that a very large portion of the assessments on the Soane Canals is still outstanding; this matter should receive the attention of the Government of Bengal.

18. The revenue system on these canals is yet in its infancy, the year under review being the first of its regular operation. Measures are being taken to remedy defects which are inevitable in the introduction of any system of administration, so totally new to the country and people.

19. The water-rate for the main crop in Orissa and Midnapore, Rs. 1-8 per acre, is still much below the real value of the water, and cannot, as stated in the Lieutenant-Governor's review, be expected to pay the interest on the large outlay incurred on these projects.

20. The statements with the reports, with the exception of that for the Tidal Canal, show only the collections during the year, not the earnings of the year, so that the true results of the year's operations cannot be exhibited. In the case of the Orissa Canal the Superintending Engineer computes the aggregate earnings at Rs. 1,90,400; but in the statement prepared in the Government of India Account Department they are entered as Rs. 1,80,765. For the Soane Canals the Superintending Engineer gives the earnings as Rs. 4,14,291, which after some additions and subtractions would probably be reduced to something less than Rs. 3,00,000. For the future the results from the earnings of the year, which forms the only true basis of comparison of the operations of one year with another, should be shown. If realisations only be taken into account, correct results cannot be arrived at without comparison of income with expenditure during a long series of years.

21. No financial statements have been submitted similar to those furnished with the report of the previous year (pages 22 to 27 of enclosures to the report). A general summary of financial results should accompany future reports.

22. Some attempts have been made to ascertain the duty of the water, a most important point in judging of the efficiency of the canal administration and in forming any reliable forecast of the ultimate prospects of the works; the results as yet attained appear, however, to be but approximations. In Orissa the Superintending Engineer roughly estimates the duty from June to November at 136 acres per cubic foot per second. In Midnapore the Superintending Engineer calculates the duty from July to October at 83 acres from the Midnapore weir and 53 from the Panchkoora weir, but he states that in September and October the duty was not more than 44 acres per cubic foot per second. On the Soane the Superintending Engineer's calculation for the main western series during the khurreef from August to November is 74 acres, and for the rubbee from December to March 138 acres is deduced as the duty; but in the latter calculation the whole of the leased area is taken, though, as stated above, 20,615 acres of this amount were not irrigated at all. On the Patna Canal, a portion of the main eastern series, the duty is roughly calculated at 64 acres per cubic foot per second; the calculations are however made only on the supply entering at the head; the quantity actually utilised after deducting loss at the extremities of the canals, and at escapes, should also be shown, as from this only the actual irrigating capability of the water can be arrived at. For the future, accurate observations should be undertaken, and the results exhibited somewhat in the form adopted in the revenue reports of the North-Western Provinces and Punjab.

23. Some very interesting experiments on the comparative yield of irrigated and unirrigated rice crops are reported. They go to prove that in seasons of heavy rainfall, as might have been expected, there is no difference in the yield; but that in seasons of average or deficient rainfall, an increase of yield is obtained by irrigation, varying from 5 to 16 maunds of rice and from 11 to 30 maunds of straw per acre.

24. The traffic on all the canals during the year shows a satisfactory increase, due, it is stated, mainly to the demand for food-grains for the famine-stricken districts in Madras. The introduction of steam traffic on all the main canals is reported to be under contemplation; the Government of India will watch with interest the result of this experiment. The remark at paragraph 50 of the report, to the effect that the traffic on the Arrah Canal would have been greater had there been permanent navigable communication with the Ganges, has attracted the attention of the Government of India, and the views of the Government of Bengal on this point are requested.

25. The prospects of the Irrigation Works in Bengal are on the whole more hopeful than they have ever yet been, but it is not yet possible to form any reliable judgment on the possibilities of the future. The Soane Canals are still in their infancy; and the demand for irrigation in Orissa, as sudden as it was unexpected, may yet lead to success which at one time seemed hopeless.

26. The Government of India is glad to observe from a brief notice in the review of the report that efforts are being made to extend projects for drainage and water-supply such as those which have been so successfully carried out in the Hooghly district at the expense of the proprietors of the lands interested.

ORDER.—Ordered, that copies of this Resolution and of the report and its accompaniments be forwarded to the Secretary of State, and to the Finance and Commerce, and the Home, Revenue and Agricultural Departments for information.

Also, that copy of this Resolution be forwarded to the Government of Bengal for information and guidance.

The Governments of Madras, Bombay, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces, British Burma, and Mysore and Coorg.
The Resident at Hyderabad.
The Agents to the Governor General for Central India and Rajputana.

Also, that copies of this Resolution be forwarded to the Local Governments and Administrations noted in the margin in the Public Works Department, Irrigation Branch, for information.

Also, that this Resolution, the Resolution of the Bengal Government and the Chief Engineer's report, with a few selected statements, be published in the Supplement to the *Gazette of India*.

* After deduction of Rs. 2,900, being an excess credit on account "Expenditure in England."

Extract from the Proceedings of the Lieutenant-Governor of Bengal in the Public Works Department, Irrigation Branch,—No. 162IA, under date the 11th January 1879.

Read—

The Canal Revenue Reports for the year 1877-78, and the Note by the Chief Engineer on the same.

The total expenditure in the Irrigation Branch of this province during the year under review amounted under all heads of account to Rs. 39,80,553, as detailed in paragraph 6 of the Chief Engineer's Note. The expenditure on works, for which capital accounts are kept, was Rs. 24,15,348, thereby increasing the capital outlay on irrigation works in Bengal from Rs. 4,41,23,640 at the commencement of the year to Rs. 4,65,38,988 at its close. Of the total capital outlay, Rs. 4,57,01,620 has been spent on the class of works now termed "Productive Public Works," which in this province includes the following:—

Orissa Canals,
Midnapore Canal,
Hidgellee Tidal Canal,
Soane Canals.

The Hidgellee Tidal Canal has been completed and is in full operation; the other projects are more or less incomplete, but in operation and yielding revenue. The balance of the capital outlay, *viz.*, Rs. 8,37,368, is the expenditure on works other than productive public works for which capital accounts are kept, *viz.*—

Tirhoot irrigation scheme,
Hooghly ditto,
Damoodah ditto.

The first of these is still under investigation, but the other two have been abandoned.

The receipts for the year amounted to Rs. 4,94,772, against Rs. 3,29,760 in 1876-77, and Rs. 2,30,434 in 1875-76.

The following table shows in detail the revenue of each project from the several sources as compared with the previous two years:—

Details.	Actual receipts, 1877-78.	Actual receipts, 1876-77.	Actual receipts, 1875-76.
Orissa Canals.	Rs.	Rs.	Rs.
Water-rates	1,17,818	40,378	20,330
Navigation receipts	33,814	22,881	16,377
Miscellaneous	9,445	11,298	8,783
Total	1,61,107	74,557	45,490
Midnapore Canal.			
Water-rates	53,483	61,460	52,791
Navigation receipts	1,06,917	67,651	51,810
Miscellaneous	9,693	7,876	6,508
Total	1,70,093	1,36,987	1,11,109
Hidgellee Tidal Canal.			
Navigation receipts	60,971	44,572	22,540
Miscellaneous	1,309	464	395
Total	62,280	45,036	22,935
Soane Canals.			
Water-rates	59,651	59,761	50,865
Navigation receipts	26,774	4,852	.....
Miscellaneous	14,867	8,567	35
Total	1,01,292	73,180	50,900
GRAND TOTAL	4,94,772	3,29,760	2,30,434

The above statement shows a steady growth in the revenue of each of the canals. In the case of the Soane Canals the increase would have been more marked had a fair proportion of the assessments been realized. Owing, however, to delays incidental to the first introduction of a regular revenue system, and to remissions rendered necessary by the destruction of crops by insects in the spring, the collections fell far short of the demands.

The increase in the Orissa Canals is specially gratifying, having been due to a nearly three-fold expansion of the irrigated area concurrently with an enhancement of 50 per cent. in the price charged for the water. It is satisfactory to add that five-year leases have since been executed by the ryots for nearly the whole of the lands irrigated in 1877-78.

In Midnapore the decrease was due to the discouragement caused by two previous years of abundant rainfall, but the area irrigated was all leased for five years, and has since been raised to the full extent of the irrigating capacity of the canal.

The working expenses for the year 1877-78 amounted to Rs. 7,02,857, against Rs. 5,97,960 and Rs. 5,29,490 of the previous two years. The increase was, however, almost wholly in Midnapore and on the Soane, and was due partly to a heavy and exceptional outlay on the re-construction of a lock in the former district and partly to the increased length of canal brought into operation and the great extension of irrigation in Shahabad.

The deficit, *i.e.*, working expenses, less revenue receipts, was Rs. 2,08,085, against Rs. 2,68,200 in 1876-77 and Rs. 2,99,056 in 1875-76, but inclusive of interest charges which are annually increasing in proportion to increased capital outlay, the total deficit amounted to Rs. 22,47,798, against Rs. 21,80,294 and Rs. 20,39,174 of the two previous years.

The year was on the whole favorable to irrigation, the rainfall having been deficient in all the irrigated districts, especially in the Soane, where the khurreef crops suffered considerably. The areas irrigated compare with those of the previous year as follows:—

		1876-77.	1877-78.
Orissa	Khurreef	26,070	95,088
	Rubbee	4,312	3,407
	Total	30,382	98,495
Midnapore	Khurreef	32,600	19,550
	Rubbee	81	269
	Total	32,681	19,819
Soane	Khurreef	1,923	1,07,087
	Rubbee	33,896	1,34,903
	Total	35,819	2,41,990

The water-rate in Orissa was raised from Re. 1 to Re. 1-8 per acre for khurreef crops. The rate in Midnapore was Re. 1-8. On the Soane the rate was lowered to Re. 1 for khurreef rice as a temporary measure, but has since been raised to its former amount, Rs. 2-8. For both rubbee and khurreef crops three-year leases at reduced rates were offered in the Soane districts towards the close of the year, but there has not yet been time to ascertain how far they are likely to be accepted by the people.

The attention of the Lieutenant-Governor was drawn during the year to the large extent of country still unprovided with distributaries under some of the canals in Orissa. For want of these subsidiary and comparatively inexpensive channels, the heavy outlay incurred on the main canals remains without possibility of return, and at least 200,000 acres are deprived of the water which flows idly past them down the canals constructed specially for their irrigation.

Steps have been taken to remedy the defect, and estimates, amounting to Rs. 8 lakhs, have been submitted to the Government of India for additional distributaries from the Kendrapara and Patamundi Canals

The canal traffic exhibits everywhere a steady growth, the total for the year being about 350,000 tons, against 235,000 tons in 1876-77, and the receipts from tolls Rs. 2,26,043 for the former period, against Rs. 1,43,801 for the latter.

Measures have been taken for the introduction of steam-traffic on all the main canals.

The revenue system on the Soane Canals was organized and brought into regular operation for the first time during the year. That in Orissa was administered with much ability by Mr. Wylly, the Deputy Revenue Superintendent, to whose good management the extension of irrigation there is largely due.

A project for the irrigation of part of the Sarun district was set on foot under a guarantee by the planters and zemindars of the interest on the outlay. The terms of the guarantee were settled at two meetings held at Chupra in the spring, and work was commenced in some of the cuts by which water is to be brought from the Gunduk into the district.

A similar project for the water-supply of those parts of Hooghly which have suffered from the closing of old water-courses formerly fed from the Damoodah was also introduced, on the basis of a contribution by the zemindars towards the capital cost, which is estimated at five lakhs. Schemes for the drainage of extensive swamps, covering about 100,000 acres of land in Southern Hooghly, were brought to maturity, and enquiries set on foot with a view to the provision of a legal enactment for carrying out the works at the expense of the proprietors of the lands benefited in the same way as in the case of the Dancooni works, which continue to yield very satisfactory results.

On the whole, the general result of the operations of the year may be said to have considerably improved the prospects of irrigation in Bengal as far as its universal adoption by the people, wherever available, is concerned, though the rates at which water is now sold in Midnapore and Orissa will not pay the interest on the very heavy outlay which has been incurred.

By order of the Lieutenant-Governor of Bengal,

F. T. HAIG, *Colonel, R. E.,*
Joint-Secretary to the Government of Bengal,
P. W. Dept.

REVENUE REPORT.

Note on the Canal Revenue Reports for the year 1877-78, by COLONEL F. T. HAIG, R. E., *Chief Engineer, Bengal, Irrigation Branch.*

1. The capital outlay, inclusive of capitalized abatement of land revenue, on irrigation productive public works in Bengal in 1877-78, was . . . . . Rs. 24,15,348

In the three previous years the capital outlay was as follows:—

	Rs.
1874-75	49,97,142
1875-76	42,11,204
1876-77	33,93,328

2. The total capital invested in these works by the State up to the end of the year amounted to . . . Rs. 4,65,38,988

viz.—

	Rs.
Irrigation productive public works	4,57,01,620
Ordinary works for which capital accounts are kept.	8,37,368

3. The items composing the outlay are as follows:—

PROJECTS.	OUTLAY During the year.	OUTLAY To the end of the year.
IRRIGATION PRODUCTIVE PUBLIC WORKS.	Rs.	Rs.
Orissa works	4,72,507	1,77,80,902
Midnapore canal	2,16,887	70,51,773
Hidgelee Tidal canal	...	17,83,905
Soane canals	6,91,323	1,90,85,040
TOTAL	23,80,717	4,57,01,620
ORDINARY WORKS FOR WHICH CAPITAL ACCOUNTS ARE KEPT.		
Tirhoot project	32,901	5,34,907
Hooghly ditto	—371	1,42,959
Damoodah ditto	2,101	1,59,502
TOTAL	34,631	8,37,368
GRAND TOTAL	24,15,348	4,65,38,988

4. The following table shows the total receipts, the working expenses, and the charge for interest for the year 1877-78 as compared with the three previous years:—

	1877-78.	1876-77.	1875-76.	1874-75.
	Rs.	Rs.	Rs.	Rs.
Receipts from all sources	4,94,772	3,29,760	2,30,434	2,17,593
Working expenses	7,02,857	5,97,960	5,29,490	3,61,388
Net revenue	—2,08,085	—2,68,200	—2,99,056	—1,43,795
Charge for interest	20,39,713	19,12,094	17,40,118	15,42,962
TOTAL DEFICIT	22,47,798	21,80,294	20,39,174	16,86,757

5. The total accumulated debt on account of interest on unpaid working expenses to the end of the year amounted to Rs. 1,32,69,781, *viz.*:—

	Rs.
Working expenses	15,73,130
Interest	1,16,96,651

6. The total expenditure by the Irrigation Department during the year 1877-78 was—

		Rs.
Capital	Extraordinary	23,80,731*
	Ordinary	34,617
		24,15,348
Revenue		7,02,857
Irrigation works		4,81,848
Tuccavee		3,28,383
Contributions		52,117
TOTAL		39,80,553

* Inclusive of Rs. 6,379 for capitalised abatement of land revenue.

7. The following table shows the areas irrigated in the three circles, as compared with those of the two previous years :—

	1877-78.				1876-77.				1875-76.			
	Khurreef.	Rubbee.	Perennial.	Total.	Khurreef.	Rubbee.	Perennial.	Total.	Khurreef.	Rubbee.	Perennial.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Orissa . . .	95,088	3,071	336	98,495	26,070	3,991	321	30,382	13,991	4,104	314	18,409

1876-77	26,069	3,991	321	30,382	44·26*
1877-78	95,088	3,071	336	98,495	47·94*

* These are the mean of observations at Cuttack and Marsaghai.

Revenue.

13. The year was remarkable for a great and unprecedented extension of irrigation in Orissa; 109,000 acres were irrigated, and, of these, 98,495 were assessed to water-rate under regular lease. Since the commencement of regular irrigation in 1872-73 the area had fluctuated between 12,000 and 20,000 acres, and only once rose as high as 30,000. This great advance was due partly to the fact that the ryots, after five years careful trial of irrigation, had fully satisfied themselves of its profitable character at the rates charged; partly to the operation of the new Irrigation Act, the provisions of which place such stringent checks on illicit irrigation that it is found cheaper to purchase water in the regular way than to steal it; and partly to a scant rainfall: the last being the most potent cause.

14. The rainfall of the year at Cuttack was 43 inches, against an average of 55 inches for 21 years, and probably of 60 inches for the Delta generally. A

comparison with the average for each of the five most important months shows as follows:—

	Rainfall.	
	1877. Inches.	Average Inches.
June	8·40	9·83
July	8·75	11·23
August	8·09	11·20
September.	5·14	10·13
October	3·46	5·69
	31·11	48·08

15. These favorable conditions were skilfully taken advantage of by Mr. Wylly, the Deputy Revenue Superintendent, who, by relaxing the very stringent rules, and dispensing with much of the cumbrous, but at first very necessary, procedure under which canal water had formerly been supplied, managed to give water to a very large area for which it was demanded, in advance of the leases which were afterwards executed. So ably were the operations conducted, and so well was Mr. Wylly seconded by his subordinates and by the Engineer Department, that not only was the unprecedentedly large area above mentioned assessed to water-rate under regular lease, but 80 per cent. of the water-rates (due by rule only in January) were collected before the close of the year. The result is in the highest degree creditable to Mr. Wylly, as there can be no doubt that such a relaxation of the rules could only have been successful in the hands of a man who had acquired a thorough knowledge of the people, and fully gained their confidence.

	Rs.
The khurreef demand was	1,52,132
Collections	1,22,862
Remissions	474
Remaining to be collected	28,796

It should be added that these results could not have been attained had not the canals and distributaries been in a high state of efficiency, and the engineers active and skilful in the management of the distribution.

16. The rubbee crops in Orissa are of little importance, occupying probably not above 7 or 8 per cent. of the cultivated area. There was a slight falling off in the area irrigated, the total, including sugarcane, being 3,107 acres, against 4,312 in the previous year.

17. It is gratifying to add that the advance thus made in khurreef irrigation in 1877-78 has since been fully maintained, five-year leases being now executed for the whole area then irrigated.

18. The water-rate for khurreef rice was Rs. 1-8—50 per cent. more than it had previously been, which makes the sudden and permanent extensions of irrigation the more remarkable. This rate is now continued for five-year leases, the charge for an annual lease being double, or Rs. 3.

NAVIGATION.

19. The canals in operation and the toll collections were as follow:—

Canal.	Length of canal open.	Toll collections.	Collection per mile.
	Miles.	Rs.	Rs.
High level	33	7,410	225
Kendrapara	39	24,930	639
Taldunda	27	1,504	55
Machgong	4	...	
Total	...	33,844	

The collections in previous years were—

	Rs.
1876-77	22,881
1875-76	16,377
1874-75	21,412
1873-74	18,577
1872-73	10,044

20. The revenue from navigation thus shows an advance, the traffic in the canals having been stimulated by the great export of rice to the famine districts in the south. The receipts from tolls rose from Rs. 22,881 in the previous year to Rs. 33,844, and the tonnage of goods carried from 77,367 tons, valued at 32 lakhs, to 105,257 tons, valued at 53 lakhs.

21. The following is a comparison of the canal traffic in Orissa for the past six years:—

Year.	Tonnage, exclusive of empty boats.	Estimated value.
	Tons.	Rs.
1872-73	31,955	47,83,683
1873-74	65,860	43,89,273
1874-75	57,312	32,81,053
1875-76	60,574	38,92,178
1876-77	77,367	32,12,183
1877-78	105,257	53,12,548

22. The details of the past two years, exclusive of Government traffic, are shown below—

	Tonnage of cargo, 1876-77.	Tonnage of cargo, 1877-78.	Value of cargo, 1876-77.	Value of cargo, 1877-78.
	Tons.	Tons.	Rs.	Rs.
Articles of food	36,590	50,627	22,96,512	34,57,378
Stimulants	11	64	700	39,240
Clothing	122	327	7,100	42,016
Staples of manufacture	1,369	1,232	2,46,575	2,85,707
Building materials	4,650	8,719	1,11,898	3,03,120
Live stock	49	19	600	580
Fuel	415	302	2,687	5,803
Cooking utensils and domestic implements.	.....	142	.....	3,647
Miscellaneous	14,066	24,828	4,66,090	11,31,794
Total	57,272	86,260	31,31,562	52,72,285

23. The total revenue as credited in the accounts, compared with that of the previous year, the highest attained up to that time, was as follows:—

	1876-77. Rs.	1877-78. Rs.
Water-rates	40,378	1,17,818
Navigation	22,881	33,844
Miscellaneous	11,298	9,445
Total	74,557	1,61,107

The working expenses for the year amounted to Rs. 2,16,072, *viz.*:—

	Rs.	Rs.
Maintenance		1,76,837
Revenue management—		
Irrigation establishment	33,223	
Navigation ditto	6,012	
		39,235
Total		2,16,072

In spite, therefore, of the increased irrigation revenue, the receipts fell short of the expenses by Rs. 54,965.

24. No more favorable result can be expected until, by the improvement of the drainage and the extension of the distributaries, the whole of the large extent of country now commanded by the canals can actually be brought under irrigation.

25. The revenue from plantations is at present insignificant; but more attention was given to the subject during the year, and an annual grant of Rs. 10,000 from provincial funds was sanctioned for the extension of plantations. The cocoanut and one or two other valuable trees thrive well in the Orissa Deltas, and may yet, if extensively planted along the canal banks, afford a not unimportant addition to the revenues.

26. The following tables show the receipts and working expenses for the past six years:—

RECEIPTS.

Year.	Water-rates.	Navigation.	Miscellaneous.	Total.
	Rs.	Rs.	Rs.	Rs.
1872-73	19,071	10,044	7,508	36,623
1873-74	17,412	18,577	7,846	43,835
1874-75	20,382	21,412	6,691	48,485
1875-76	20,330	16,377	8,783	45,490
1876-77	40,378	22,881	11,298	74,557
1877-78	1,17,818	33,814	9,445	1,61,107

WORKING EXPENSES.

Particulars.	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.
1. Maintenance—	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Works	1,63,884	74,505	1,17,547	1,36,856	1,40,494	1,37,044
Establishments, including direction and accounts	26,552	9,568	20,100	33,501	34,948	31,518
Tools and plant	...	688	18,070	5,823	11,688	8,234
Profit and loss	30	...	...	...	...	...
Refunds of revenue	...	...	...	...	...	41
Total maintenance	1,90,466	84,756	1,55,717	1,76,180	1,87,130	1,76,837
2. Revenue management—						
Irrigation establishment	41,382	38,607	35,016	25,785	21,696	33,223
Navigation ditto	6,154	5,828	5,694	5,655	5,835	6,012
Total revenue management	47,536	44,435	40,710	31,438	27,531	39,235
Total working expenses	2,38,002	1,29,191	1,96,427	2,07,618	2,14,661	2,16,072

The cost of irrigation revenue management was increased from Rs. 21,696 in 1876-77 to Rs. 33,223 in 1877-78; but the increase was necessary on account of the great extension of irrigation. The percentage, however, was reduced from 53·73 to 28·2 per cent.

27. The following table shows the comparative cost of maintenance of distributaries:—

Year.	Length of distributary open.	Cost of maintenance.	Cost per mile.
	Miles.	Rs.	Rs.
1873-74	541	23,551	43
1874-75	541	21,166	39
1875-76	551	22,806	41
1876-77	554	23,653	42
1877-78	587	17,567	30

The reduction in the cost per mile from Rs. 42 in 1876-77 to Rs. 30 only is satisfactory.

28. Among minor items of interest, it may be mentioned that some interesting experiments were made during the year to test the comparative outturn of irrigated and unirrigated crops. Seven hundred distinct measurements made on crops under the Taldunda and Machgaon Canals gave the following results:—

	Paddy. Maunds.	Straw. Maunds.
Yield of irrigated rice	26·61	26·87
Ditto unirrigated	10·72	12·08
Balance in favor of irrigation	15·89	14·79

Eighty-three experiments by Mr. Campbell on the Kendrapara and High Level Canals showed a gain of only 6·25 maunds of paddy and 7·18 maunds of straw. Mr. Walker thinks this great difference was perhaps attributable to the better supply of water given from the Taldunda and Machgaon Canals, and expresses dissatisfaction with the distribution from the Kendrapara. At the rates prevailing in January last, *viz.*, 40 seers paddy and 16 maunds straw per rupee, the money value of the increased yield due to irrigation would be Rs. 17 per acre in the one case and Rs. 6-12 in the other, out of which only Rs. 1-8 had to be paid for water-rate. The season was very favorable to irrigation, and the high result obtained in the former case is very largely in excess of that found in former years of heavier rainfall.

MIDNAPORE CANAL.

29. The capital, interest, and revenue accounts of this canal are shown below—

CAPITAL ACCOUNT.

	Outlay during 1877-78.	Outlay to end of 1877-78.
	Rs.	Rs.
Works	1,19,754	48,61,310
Establishment	61,949	16,58,586
Tools and plant.	44,407	3,96,354
Suspense balance	—5,693	1,55,561
Total	2,20,417	70,71,811
Deduct receipts on capital account	3,530	20,038
Net outlay	2,16,887	70,51,773

INTEREST ACCOUNT.

	Rs.
Interest to end of 1876-77	18,24,509
Ditto for 1877-78	3,13,234
Total to end of 1877-78	21,37,743

REVENUE ACCOUNT.

	Expenditure. During 1877-78.	Expenditure. To end of 1877-78.		Receipts. During 1877-78.	Receipts. To end of 1877-78.
	Rs.	Rs.		Rs.	Rs.
Works—Extensions and improvements	...	5,559	Water-rates	53,483	3,45,269
Works—Maintenance	1,41,334*	6,62,865*	Navigation	1,06,917	3,64,917
Establishment	56,346	3,23,316	Miscellaneous	9,693	47,159
Tools and plant	6,117	21,009			
Refunds of revenue	17	17			
Total	2,03,814	10,12,766	Total	1,70,093	7,57,285
			Deficit	33,721	2,55,481

* Includes Rs. 26,536 spent in 1877-78 on the reconstruction of the Lutchmutpore lock. The amount in the total column also includes the expenditure of 1876-77, *viz.*, Rs. 19,141.

30. The total debt for unpaid working expenses and interest amounted for the year to Rs. 3,46,955, and to the end of the year to Rs. 23,93,224.

31. The area irrigated was less than that of any previous year since 1872-73. In 1874-75, the famine year, it rose to 72,318 acres, but the next two years being years of excessive rainfall, it fell successively to 55,995 and 32,681 acres. In 1877-78 it again fell to 19,819 acres, although the rainfall was somewhat scant, having been 47·79 inches, against an average of 55·19 for the preceding nine years. But the whole of the area irrigated was leased for five years at a rate of Rs. 1-8 per acre, indicating a conviction on the part of the ryots, after all the disappointments of the two previous years, that, taking one year with another, the canal water is worth that price. This area has since risen in 1877-78 to 56,000 acres, all under five-year leases. It thus appears that within the area which the canal can effectively supply irrigation has taken as firm root in Midnapore as in Cuttack.

32. The collections amounted to Rs. 53,483, including the balances of previous years. Of this amount more than half was realized by compulsory process. The state of the collections in Midnapore has from the first been very unsatisfactory, the outstanding balances being always very heavy, and the actual realizations effected to a large extent only under compulsion. The reasons are not quite apparent, the Deputy Revenue Superintendent persistently reiterating his assertions of the extreme poverty of the people, though it is difficult to reconcile with this the fact of the great difficulty experienced in procuring labour for public works within the irrigated area. As regards 1877-78, the difficulty experienced in making the collections was the more inexplicable because irrigation was, according to the Deputy Revenue Superintendent's own showing, extremely profitable. The mean of a number of measurements of crops made by him showed, in the cases of leases taken early in the season, a gain of 10 maunds of paddy per acre and 13 of straw, as compared with the yield of unirrigated fields; and in the cases of leases executed at a later date, a gain of 8 maunds and 8 maunds respectively. At the prices then ruling (the average, according to the Deputy Superintendent, being Rs. 1-8 per maund) the money gain from the paddy alone, not taking any account of the straw, must have been Rs. 15 and Rs. 12 per acre, the water-rate being Rs. 1-8. The question will be more fully investigated. The navigation revenue, despite an unfortunate breakdown in one of the locks, which prevented boats getting nearer than eight miles to Midnapore for the greater part of the year, and the closure of one of the tidal reaches for two months for silt clearance, were far in excess of those of previous years, having reached the amount of Rs. 1,06,917, against Rs. 67,651 in 1876-77 and Rs. 51,810 in 1875-76. This was due to the great demand for rice for Madras and other southern ports. The measurement tonnage of the boats passed through the canal was 360,968, and the actual probably 200,000 tons, valued at 171 lakhs. These amounts are 50 per cent. higher than those of any previous year. Mile for mile the tolls levied are heavy, but the canal connects three great rivers, and its different sections are merely links in much longer lines of untaxed navigation: so that the incidence of the tolls is much lighter than would at first appear. As regards the Midnapore district, there is ample evidence of the great value of the canal in raising the value of produce and landed property within a large tract of country.

33. The canal revenues for the year were as follows:—

	Rs.
Water-rates	53,483
Navigation	1,06,917
Miscellaneous	9,693
TOTAL	1,70,093

34. The working expenses were—

	Rs.	Rs.
Maintenance	1,80,457	
Revenue management	23,340	
Refunds of revenue	17	
		2,03,814
DEFICIT		33,721

Had it not been for the accident to the lock above mentioned, which necessitated a heavy outlay for reconstruction, the canal would this year have paid its working expenses.

35. The following tables show the details of revenue and working expenses of the year, as compared with those of previous years:—

RECEIPTS.

YEAR.	Water-rates.	Navigation.	Miscellaneous.	Total.
	Rs.	Rs.	Rs.	Rs.
1872-73	23,556	20,994	6,714	51,264
1873-74	35,823	34,104	2,711	72,638
1874-75	67,015	44,886	4,316	1,16,217
1875-76	52,791	51,810	6,508	1,11,109

HIDGELLEE TIDAL CANAL.

37. The capital, interest, and revenue accounts are given below—

CAPITAL ACCOUNT.

	Outlay during the year.	Outlay to the end of the year.
	Rs.	Rs.
Works	...	12,66,239
Establishment	...	4,49,790
Tools and plant	...	57,585
TOTAL	...	17,73,614
Deduct receipts on capital account	...	915
	...	17,72,699
Add capitalised abatement of land revenue	...	11,206
NET OUTLAY	...	17,83,905

INTEREST ACCOUNT.

	Rs.
Interest to end of previous year	5,25,724
Ditto for the year	80,268
TOTAL INTEREST TO END OF 1877-78	6,05,992

REVENUE ACCOUNT.

	Expenditure.			Receipts.	
	During the year.	To end of the year.		During the year.	To end of the year.
	Rs.	Rs.		Rs.	Rs.
Works, maintenance	22,469	1,53,813	Water-rates	...	2,611
Establishment	7,931	54,899	Navigation	60,971	2,54,052
Tools and plant	164	4,103	Miscellaneous	1,309	4,589
TOTAL	30,564	2,12,815	TOTAL	62,280	2,61,252
SURPLUS	31,716	48,437			

38. The traffic was considerably in excess of that of any previous year, amounting to 154,426 measurement tons, or about 80,000 tons net, valued at 31 lakhs. The great bulk of the tonnage is paddy and rice, and therefore of low value. There is no irrigation from this canal.

39. The receipts were—

	Rs.
Navigation tolls	60,971
Miscellaneous	1,309
	62,280
Working expenses	30,564
SURPLUS	31,716

40. The cost of the canal as given by the Examiner is Rs. 23,00,000, but this includes at least three lakhs for interest after construction, besides other charges of an altogether exceptional nature, such as the bonus, Rs. 1,80,000, paid to the Irrigation Company at the time of the purchase. Taking the cost at 18 lakhs, the surplus in 1877-78 would represent a return of nearly 2 per cent. upon the capital.

41. The details of the traffic from 1872-73 are given in the following statements:—

COMPARISON OF TRAFFIC.

	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.

Total Working Expenses	2,52,407	5,67,432			

43. The year was one of very scanty rainfall. The total during the months of June to September was as low as that of 1873-74. Nevertheless the people displayed a surprising unwillingness to resort to canal water for the rice crop, until forced to do so. This failure of the rains was common to almost all Northern India, and prospects were at one time so dark that, with a view simply to the production of more food, the Lieutenant-Governor determined, at a certain sacrifice of revenue, to reduce the water-rate for the khurreef crop from Rs. 2-8, at which it had previously been fixed, to Re. 1, and to give water free in the Patna Canal, where regular assessments were impracticable, owing to the unfinished state of the distributaries. These measures led to a considerable demand for water, which was well sustained in the rubbee season, and altogether 288,596 acres were brought under irrigation, *viz.*, khurreef 149,894 acres, rubbee 138,702 acres, of which 64,090 acres, under the Patna Canal, were exempted from water-rate.

44. The irrigated khurreef rice proved a bumper crop, and the rubbee crops would have been as good, had it not been for the ravages caused by caterpillars and other insects when the crop was approaching maturity. So extensive were the losses thus inflicted that it was found necessary to remit a large part of the water-rates on all crops except wheat, barley, opium, and sugarcane.

45. The revenue collections of the year fell far short of the demands, having amounted to Rs. 59,651, including arrears of former years, against assessments (according to the Superintending Engineer) amounting to Rs. 4,14,291, of which Rs. 1,50,000 were due within the year.

46. The principal cause of the short collections was the failure on the part of the Engineer officers to furnish the Collectors with demand statements in proper time. This was due to several causes, but mainly to the inexperience of the establishment, this having been the first year of regular irrigation, the area irrigated large, and the establishment engaged in supplying a heavy demand for rubbee irrigation at the same time that the preparation of the khurreef accounts were going on. The bhowli tenures introduced another great difficulty, the water-rates in such cases being payable by the zemindar and by the ryot in the proportion of their respective shares of the crop. In many cases the proprietors were numerous, and as each has to be furnished with a separate bill, the multiplication of accounts was enormous.

47. The operations of the season, however, brought to light certain defects in the revenue system, for which some further experience will probably

be required to devise the proper remedies. A committee, consisting of the Collector, Superintending Engineer, and Executive Engineer, was appointed to report upon the subject.

48. With a view to encouraging the spread of irrigation and diminishing the labour of annual measurements and assessments, three-year leases were during the year for the first time offered to the cultivators on the following terms :—

For khurreef irrigation the rate per acre is to be Rs. 1-8, but no lease can be given for any area less than the whole irrigable area of the village.

For rubbee, the rate is Rs. 2-4, and the area leased must be at least half the gross irrigable area.

For annual leases, whether khurreef or rubbee, the rate is Rs. 2-8.

The system was introduced too late in the year to become generally known, but has since been accepted by a few villagers to the extent of about 1,500 acres.

49. In Orissa no five-year lease is now given for anything less than the gross irrigable (which there corresponds closely with the gross cultivable) area of the village, and on these terms such leases are now readily taken up.

50. Navigation is gradually developing in the Soane Canals. Its progress would probably have been more rapid had there been permanent navigable connections between the Arrah Canal and the Ganges. Eighty-seven miles of canal were open, and the receipts from the tolls in 1877-78 was Rs. 26,774, against a budget estimate of Rs. 16,000. The tonnage of boats is set down at 82,000 tons, which is probably double the actual weight of goods carried, and the value at Rs. 12,80,000.

51. The revenue account of the Soane Canals was as follows :—

	Rs.
Receipts—	
Water-rates	59,651
Navigation	26,774
Miscellaneous	14,867
Total .	1,01,292
Less refunds of revenue	750
Net Revenue .	1,00,542
Working Expenses—	
Maintenance	2,10,828
Revenue management	40,829
Total .	2,51,657
Deficit .	1,51,115

A portion of the establishments here charged to maintenance is properly chargeable to revenue management; but it is not possible, at present, to determine the exact amount.

Had the comparison been made with the *assessments* for the year, the result would have been the reverse of the above, *viz.*—

	Rs.
Assessments	4,14,291
Working expenses	2,51,657
Surplus .	1,62,634

Financial position and prospects of the Bengal Canals.

52. The amounts of the sanctioned estimates for the irrigation projects, either finished or under execution, inclusive of the usual book charges for capitalization of land revenue, pensions, and interest, are as follow :—

	Rs.
Orissa	2,53,35,073
Midnapore Canal	96,84,000
Tidal Canal	21,35,152
Soane Canals	3,17,30,337
Total .	6,88,84,562

53. Of these estimates, the portions for works, establishments, and tools and plant, which is that on which interest is charged, and the actual outlay to end of 1877-78, are shown below :—

	Estimated cost of works, establishments, and tools and plant.	Actual outlay to end of 1877-78
	Rs.	Rs.
Orissa	1,93,12,557	1,77,80,902
Midnapore Canal	76,83,500	70,51,773
Tidal Canal	17,75,032	17,83,905
Soane Canals	2,73,63,503	1,90,85,040

54. The amounts in the second column are those on which interest will be charged for 1877-78, the total charge for that year being the amount thus obtained minus interest on half the outlay in the year.

This, added to the deficit on working, if any, will represent the total charge for which the Local Government will be responsible.

55. Calculated in this manner, the corresponding charge to local revenues for the year 1877-78 was as follows :—

	Rs.
Orissa Project	8,45,515
Midnapore and Tidal Canals	3,95,507
Soane Canals	9,70,333
TOTAL	22,11,355

56. This Government is, however, also debited with the interest on the following projects, for which, in the two first cases, no possible return can be received, *viz.* :—

	Outlay. Rs.
Tirhoot Surveys	5,31,907
Ranegunge Canal (an abandoned project)	1,59,502
Hooghly water-supply	1,42,959

The interest charges made good by this Government upon these three projects amounted to Rs. 36,143 in 1877-78, making the total charge to the provincial revenues Rs. 22,47,798.

57. If 1878-79 proves a favorable year for irrigation, it is estimated that the corresponding charge for that year will be reduced to Rs. 20,00,000.

58. It will be apparent from what has already been said with reference to the operations of the past year, that the direction in which a reduction of these charges upon the local revenues is mainly to be sought are—

(1) The extension of the area irrigable by the construction of the distributaries necessary to bring the whole of the lands now commanded by the main canals within reach of irrigation.

(2) The reduction of working expenses, to whatever extent that may be practicable.

(3) The extension of the means of cheap transport between the irrigated districts and the best markets, so as to raise the local value of produce, and consequently the water-rate which may be charged.

59. Judging from present appearances, there is little prospect that any one of the three great schemes can pay directly the interest on the capital outlay on them for a long time to come. At the same time, there can be no doubt that the indirect value of the canals to the country must be largely in excess of the charges they involve. In 1877-78, 400,000 acres were irrigated, and, taking the yield at an average of 20 maunds worth Re. 1 each, the total value of the crops raised could not have been less than 80 lakhs, half of which at least was due to irrigation; and if 1877-78 was an exceptionally favorable year for irrigation, still it is apparent that, even with the very restricted area now irrigable, the returns in average years must be in excess of the deficits now met from the proceeds of the Public Works Cess.

F. T. HAIG, *Colonel, R.E.*,
Chief Engineer, Bengal Irrigation Branch.

IRRIGATION OPERATIONS IN BENGAL.

D. B. HORN,
Assistant Secretary to the Government of Bengal,
Public Works Department, Irrigation Branch.

The 4th August 1879.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Thursday, the 21st August, 1879.

PRESENT:

The Hon'ble Sir A. J. Arbuthnot, K.C.S.I., Senior Member of the Council of the Governor General, *presiding*.
Colonel the Hon'ble Sir Andrew Clarke, R.E., K.C.M.G., C.B., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B.
The Hon'ble Whitley Stokes, C.S.I.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble T. H. Thornton, D.C.L., C.S.I.
The Hon'ble F. R. Cockerell.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.

MILITARY CANTONMENTS ACT AMENDMENT BILL.

The Hon'ble MR. STOKES presented the Report of the Select Committee on the Bill to provide for the revision of proceedings in trials held under the Military Cantonments Act, 1864, section 20.

The Hon'ble MR. STOKES asked leave to postpone the motion that the Report be taken into consideration and the motion that the Bill be passed.

Leave was granted.

MERCHANT SHIPPING BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill relating to Merchant Shipping. He said that the object of the Bill was to make eight amendments in the law relating to merchant shipping, which he would briefly specify:—

First, to extend to this country the principal provisions of the Statute 39 & 40 Vic., c. 80 (commonly called "Plimsoll's Act"), relating to the seaworthiness of ships, the stowing of grain-cargoes, and the marking of ships with deck and load lines;

Secondly, to provide for the examination and licensing of fit persons to be marine surveyors, and for prohibiting unlicensed persons from acting as marine surveyors in any port in which there might be a licensed surveyor;

Thirdly, to provide for the appointment of receivers of wreck, here following the precedent of the English Merchant Shipping Act of 1854;

Fourthly, to provide for the appointment of persons to inspect ships for the purpose of seeing whether they were properly furnished with lights, and with the means of making fog-signals, in accordance with the regulations for preventing collisions at sea;

Fifthly, to provide for the appointment of a Port-inspector, who would not only perform the duties at present performed by the Health-officer, but

would inquire into any complaints which might be made on the arrival of a ship in port by any of the crew against the master or any other of the crew;

Sixthly, to amend the Indian Merchant Shipping Act, 1875, so as to give power to hold Marine Courts of Enquiry in certain cases which were at present unprovided for;

Seventhly, to empower the Local Governments to fix a minimum scale of provisions for lascars or Native seamen; and

Eighthly, to provide for the conveyance home of distressed Asiatic seamen in Indian waters, and to fix a reasonable rate of allowance for their subsistence when on the voyage.

The Motion was put and agreed to.

PLEADERS BILL.

The Hon'ble MR. STOKES presented a further Report of the Select Committee on the Bill to amend the Pleaders, Mukhtárs and Revenue-agents Act, 1865. He said, with the President's permission, that the changes made in the Bill since the presentation of the former Report were carefully enumerated in the present Report. Only two required special notice. One was the provision in section 28 that agreements between pleader and client regarding the remuneration for services rendered by the former should always be in writing and be filed in Court, and the further provision in section 29 that, when a suit was brought on such an agreement, the Court, unless the transaction were proved to be fair and reasonable, might reduce the amount payable under it or set it aside altogether.

These provisions were, it was thought by the Committtee, better suited to this country, than the elaborate rules contained in the English Statute 33 and 34 Vic., c. 28, Sections 4, 5, 8, 9 and 10.

The other was the penalty which section 36 would impose on the practice of giving or receiving commission on fees paid to legal practitioners. This shameful practice was injurious in many ways. First of all, it injured the interest of those whom the recipients of the commission were bound to protect. On this point MR. STOKES would quote Sir Richard Garth:—

"I will explain the way in which the evil works by an illustration founded on fact.

A mukhtár is employed by his client (a zamindár of eminence) to retain Counsel in Calcutta to conduct a case in the Mufassal.

He is entrusted for this purpose with a liberal retaining-fee (of say Rs. 1,000), with which it is of course his duty to obtain the best professional talent which such a sum can procure.

But the mukhtár's first object is to take care of himself; and, although, for his own credit as well as his client's benefit, he is willing to obtain the best assistance he can, he will only do so subject to his own interests being first provided for. Accordingly, he applies in the first instance to some gentlemen of eminence at the Bar, and offers him the case and the fee, provided he will return him some 25 per cent. of it for his own commission.

The offer is of course indignantly refused; whereupon the mukhtár descends lower, and eventually retains some far less competent, as well as less conscientious, Counsel, who is content to share with him both the fee and the dishonour, and to allow him a much larger commission than he would have dared to ask from a Barrister of good position.

The result is, that the mukhtár's client is cheated. The money which he gave for one purpose is fraudulently misappropriated to another; the case is not conducted nearly so well as it would have been in the hands of an abler Advocate; and the more honourable and eminent members of the Bar are thus supplanted by others of inferior character and position.

Secondly, it sometimes imposed an undue liability on the litigant to whom the practitioner giving the commission was opposed. Thus Mr. Stokes was credibly informed that in one of the Districts of Lower Bengal a wealthy litigant, who was constantly engaged in suits, habitually gave his mukhtár a certain sum, say Rs. 200, to fee his pleader. The mukhtár might get back any commission he could for himself, but it was an essential part of the arrangement that the pleader was to give back a certain percentage of the fee (say 20 per cent.) to the client himself. The pleader gave a receipt for the whole sum, Rs. 200; and if he was successful, and costs were decreed, the Rs. 200

were charged against the opposite party, so that the latter was made to pay a sum to the client under the name of pleader's fee, which the client had in fact never paid to the pleader at all.

Thirdly, the practice demoralized the practitioners who consented to give commission.

Fourthly, it inflicted great hardship on the younger men who honourably refused to submit to it.

Fifthly, it led to the bringing and maintaining of many frivolous suits and appeals.

This salutary addition to their penal law was strongly recommended by the Chief Justice of Bengal, and the Madras High Court; and MR. STOKES trusted that nothing would prevent its enactment at an early date.

In the meantime the Committee would further consider and finally decide on the expediency of empowering the Chief Court of the Panjáb to make rules for the admission of Advocates in that Province.

HACKNEY-CARRIAGES BILL.

The Hon'ble MR. THORNTON presented the Report of the Select Committee on the Bill for the regulation and control of Hackney-Carriages in certain Municipalities and Cantonments.

SUNDRY BILLS.

The Hon'ble MR. STOKES moved that the Hon'ble Mr. Thornton be added to the Select Committee on the following Bills—

To provide for the grant of probates of wills and letters of administration to the estates of certain deceased persons.

To make further provision for the grant of probates of wills and letters of administration in non-contentious cases.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 4th September, 1879.

SIMLA; *The 21st August*, 1879.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

NOTE.—The meeting which was originally fixed for the 7th instant was postponed to the 21st instant.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 19th AUGUST 1879.

GENERAL REMARKS.—In Madras moderate rain fell during the week; general prospects are fair. In Bombay and Sind there has been heavy rain and a break is wanted, especially in the Deccan; locusts are still about in Sind, and have damaged crops in parts of Hyderabad; rats are doing injury to crops in parts of the Deccan and Southern Mahratta Country; prospects continue good. In Bengal the rain has been general, and heavy in Behar, where the *bhadoi* crop on riparian and low lands has been much damaged by floods; inundations have also occurred in Cuttack and Pooree; more rain is still wanted in parts of the Burdwan Division for the *amun* rice; prospects of the winter rice are generally favourable throughout the Province, but the yield of the early autumn crops will be short by reason of the excessive rain and floods. Rain has fallen in all the districts of the North-Western Provinces and Oudh; a break is now needed in most parts; prospects remain fair. In the Punjab there has been slight rain during the week in most districts, but none in Hissar; recent telegrams report 2½ to 5 inches of rain at Ferozepore, Lahore and Jullundur, where rain was much needed; prospects are fair in the Province, except at Hissar and Sirsa, where they are still unfavourable. The rain in the Central Provinces has been heavy, and some injury has resulted to cotton; a break would be acceptable; prospects are on the whole favourable. In British Burma and the other Provinces and States prospects continue very favourable.

Heavy rain has fallen in parts of Bombay, Bengal, the North-Western Provinces and Oudh, the Central Provinces and British Burma during the week; in several places floods have occurred and crops have been injured; prospects throughout the Empire remain favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras (Aug. 20th)—		
Bellary ...	...	No report received.
Kurnool (Aug. 16th)	·99 (average of 8 stations).	*Raggi* 18·82; crops reviving in Cumbum, thriving elsewhere; prices generally stationary, falling in Nandial; pasture and water abundant.
Kistna („ „)	1·21 (average of 11 stations).	*Raggi* 19·0; 139 inches water over anicut; canal supplies reported insufficient in Bandar and Gudivada taluks; upland tanks supply insufficient for wet cultivation.
Ganjam ...	...	No report received.
Chingleput (Madras) ...	...	No report received.
Coimbatore ...	...	No report received.
Tanjore (Aug. 16th)	1·60 (average of 13 stations).	*Raggi* 15·91; 24 to 90 inches water in Cauvery; crops good; harvest *gingelly*, outturn ½.
Madura („ „)	·39 (average of 9 stations).	*Raggi* 15·89.
Malabar („ „)	2·52 (average of 14 stations).	*Raggi* 17·93; prices slightly falling in Palghat and Ponani, stationary elsewhere; rain sufficient for existing cultivation; harvesting of first crops partially begun; pasture good.
Travancore ...	...	No report received.
Bombay (Aug. 20th)—		*General Remarks.*—General prospects fair.
Kurrachee ...	3·22 at Keti, 1·0 at Manora, 1·0 at Sákro, ·90 at Ghorabari, 2·3 at Shahbandar, 1·32 at Mugalbhin, ·92 at Sujawal, ·50 at Kurrachee.	River at Kotri on 7th 17 feet 10 inches—last year 19½ feet; cattle-disease prevalent in 2 talukas; locusts still about in Sehwan division.
Hyderabad ...	2·40 at Badin, ·25 at Mirpur.	Young crops damaged by locusts in 4 talukas; river high and rising daily; clouds gathering.
Ahmedabad ...	5·97	Total rainfall 23·12; transplantation of rice progressing; crops thriving; slight cholera yet in Dholka.
Baroda ...	2·83	Total rainfall 36·49; crops and health very good.
Surat ...	1·62; heavy in Chikli, Pardi and Bulsar.	Total rainfall 27·34; all crops generally healthy; one cholera case in Surat.
Násik ...	2·8	Sunshine wanted; cholera in Sinnar; prices slightly higher; crops good everywhere.
Poona (Aug. 17th)	Maximum 9·62 at Mawal, minimum ·37 at Sirur.	Weather breaking; rain not required at present.
Ahmednagar ...	1·37; fall general	Crops good, but break desirable in some talukas for weeding; injury to crops by rats in parts of Newása and Párner.
Sholapur ...	...	Break much needed; crops in places damaged by rain; rats doing damage but being killed; fever in Sholapur and Malsiras; condition of poor not good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Kanara ...	12·86 at Karwar; maximum 15·48 at Yellapur, minimum 3·25 at Supa.	Total rainfall 97·49; all crops thriving.
Rajkot ...	1·53	Total rainfall 21·22; prospects good; insects doing damage in few places to *bajri*; crops and health generally good but fever and slight cholera continue.
		General Remarks—Heavy showers general throughout the Presidency and Sind; some damage by locusts in Hyderabad, grasshoppers in Ahmedabad and rats in parts of the Deccan and Southern Mahratta Country; break required generally, but prospects continue good.
Bengal—		
Chittagong ...	1·41	Prospects good; cholera in Chakaria and Kutubdia.
Dacca ...	1·14	In south 6 to 12 annas *aus* lost, in most other parts 8 to 12 annas expected; *amun* promising, except in flooded localities in south; public health good.
24-Pergunnahs (Calcutta)	3·07	Transplantation still going on briskly; prices high; public health generally good.
Moorshedabad ...	1·87	Prospects good except in low lands in north and east, where *aus* has suffered very much from floods; prices high; general health good.
Rajshahye ...	3·44	*Aus* being cut in some parts, winter rice promises very well, except where damaged by floods; Ganges unusually high.
Burdwan ...	1·67	In Cutwa and Calna sub-divisions crops doing well, in other sub-divisions, especially in Sudder, more rain very much wanted for transplantation; at present in these sub-divisions not more than half the usual quantity of land planted with *amun*, and unless there is plentiful rain during next two weeks and in October that crop will probably be a very short one.
Rungpore ...	8·39	Prospects good; public health good; small-pox much abated.
Bhágalpur ...	2·91	Unusual rise of Ganges, Kosi and Chundun has flooded great portion of district; *bhadoi* crop, except on highest land, already gone; rice prospects favourable; cholera and fever still prevalent.
Purneah ...	7·05	Reports of damage by floods on banks of large rivers and on low lands; indigo crop a complete failure; cholera prevalent.
Patna ...	6·77	A heavy flood in Ganges has done much damage to house and crops on dearahs and low lands, otherwise everything continues favourable.
Durbhanga ...	2·34	Rice prospects generally fair where seedlings are procurable; much *bhadoi* lost.
Hazáribágh ...	1·97	Prospects of all crops except *makai* good in all parts of district, but in north-eastern portion they are suffering from want of rain.
Cuttack ...	·63	Heavy rain on 9th and 10th; storm from west on 10th; high flood from 11th to 13th, but since subsiding; eastern portion of district under water; some embankments breached and damage to crops apprehended; a peculiar cattle-disease reported from Kendrapara.
		General Remarks.—Rain general; prospects of winter rice generally favourable, but in greater portion of Burdwan division more rain still much wanted for transplantation; *aus* and jute on low lands in places in Central and Eastern Bengal injured by excessive rain and floods; in Dacca *aus* will be below average, and in Furreedpore about a four-anna crop; in Behar, Ganges and other rivers have overflowed and *bhadoi* on riparian and low lands much damaged; *bhadoi* in Monghyr and Bhágalpur and indigo in Purneah have nearly failed; high floods also reported in Cuttack and Pooree and damage to crops anticipated; cholera much diminished; fever in some places.
N.-W. P. and Oudh—		
Benares (Aug. 19th)	Benares ... 3·2	Prospects good.
Allahabad („ „)	1·6 (average)	Total rainfall since 1st June 21·0; rivers falling; prospects and health good.
Gorakhpur („ 18th)	8·0	Total rainfall 45·6; weather seasonable; rice prospects good; prices high; health average.
Jhansi („ 21st)	1·2	Crops flourishing; weeding in progress; transplanting of rice commenced; prices stationary; some cholera; ploughing going on.
Agra („ 19th)	2·6 (average)	Prospects excellent; fever and ague still very bad in city and parganas.
Bareilly („ 20th)	4·7 (average)	From continuous wet and cloudy weather prospects of *kharif* crops, except rice, indifferent; sharp outbreak of cholera in two villages in Puranpur, otherwise health good.
Meerut („ „)	3·0	Fine weather needed; fever and ague general; a few cases of cholera in places; prices much the same.
Kumaun („ 18th)	Rain with short breaks throughout week.	
Lucknow („ 20th)	1·8	Weather showery; prospects fair.
Partabgarh („ 18th)	Sudder ... 8·0 Patti ... 2·6 Kunda ... 2·1 4·23 (average).	Rainfall at sudder excessive, a good break wanted; crops everywhere promise well.
Sitapur („ 20th)	2·8	Break much needed.
Fyzabad („ „)	4·4	Prospects favourable.
		General Remarks.—Rain during the week in every district; general prospects fair, but a break needed; cholera has appeared in Meerut, Jhansi, and Bareilly; fever and ague prevalent in Meerut and Agra.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab (Aug. 19th)—		
Delhi ...	1·20	Prospects good and prices falling; fever prevails.
Hissar ...	*Nil*	Cloudy and windy; rain much wanted as crops are drying up in Hissar and Sirsa and there is very little prospect of a harvest; prices rising.
Umballa ...	·90	Crops fair; health good.
Jullundur ...	*Nil* at the station, but a fair fall in district.	Crop prospects fair; prices steady; health good.
Lahore ...	*Nil*	*Barani* crops a failure; cholera about.
Ferozepore ...	·20 at station, heavier in district.	Agricultural prospects continue unfavourable.
Siálkot ...	2·60	Agricultural prospects good; cholera continues.
Ráwalpindi ...	3·0	Prices are rising.
Pesháwar ...	·60	Agricultural prospects and health good; prices have risen slightly.
Mooltan ...	·50	Crops improved but more rain wanted.
Dera Ismail Khan ...	·80	*General Remarks.*—Prospects fair in all Districts, save Hissar, Sirsa, Ferozepore and Lahore.
Central Provinces—		
Nágpur (Aug. 20th)	2·77	Cloudy; cotton and all other *kharif* crops doing well, but break required for weeding.
Jubbulpore ...	1·1	Prospects of cotton and other *kharif* crops excellent; prices falling.
Saugor ...	·89	Prospects of cotton and other *kharif* crops favourable; fever and small-pox continue; prices stationary.
Seoni ...	5·50	Cotton and *jowar* suffering from excessive rain; break required; slight cholera.
Hoshangabad ...	2·0	Cotton and other *kharif* crops good; few cases small-pox.
Raipur (Aug. 16th)	6·8	Cotton slightly injured, other crops good; cholera and small-pox continue; prices stationary.
Sambalpur („ 15th)	14·57	Heavy rain slightly injured cotton and rice crops; cholera and small-pox continue.
		General Remarks.—Break required in the districts of Nágpur and Chhattísgarh Divisions and Seoni of the Jubbulpore Division; cotton slightly injured in Seoni, Raipur, Biláspur and Cháuda; prospects generally favourable.
British Burmah— (Aug. 20th)		
Akyab ...	19·82	Total rainfall 174·23; public health good; cattle-disease in Akyab.
Rangoon ...	3·31	Total rainfall 63·73; a few cases of small-pox in town; slight fever and small-pox prevalent in district, otherwise public health good; slight cattle-disease in 2 sub-divisions; crops in good condition.
Bassein ...	.....	Report not received.
Prome ...	3·75	Total rainfall 26·22; a few cases of cholera, otherwise public health good; rain insufficient in Poungday sub-division; crops progressing.
Amherst (Moulmein) ...	2·60	Total rainfall 105·33; public health good; crops in two townships slightly injured by insects, elsewhere good; no cattle-disease reported.
Toungoo ...	5·92	Total rainfall 44·38; public health good; no cattle-disease; 735 acres land destroyed by inundation.
		General Remarks.—Public health good; slight cholera and small-pox; cattle-disease slight in Arakan, Tenasserim and in 4 Districts of Pegu; cultivation advancing favourably; prospects good.
Assam—		
Gauháti (Aug. 20th)	5·04	Weather seasonable; prospects of crops favourable; transplanting of *sáli* in progress.
Sylhet („ „)	8·20	*Aus* reaping nearly over; *amun* promises well; fever still prevalent.
Cachar ...	.....	No report received.
Dibrugarh ...	.....	No report received.
Mysore and Coorg—		
Bangalore (Aug. 20th)	·26; slight rain also in the districts.	Prospects of season favourable; public health generally good; fever and other ailments still prevalent in parts.
Mysore ...	.....	No report received.
Mercara ...	.....	No report received.
Berar & Hyderabad—		
Amráoti (Aug. 20th)	·93	*Kharif* crops flourishing; weather favourable to cotton.
Central India States (Aug. 20th)—		
Indore ...	2·34	Crops promising; health good; wheat 9, gram 10, and *jowar* 12 seers.
Morar (Gwalior) ...	3·90	
Sutna ...	1·24	Weather clear; prospects excellent; *jowar* 18 seers.
Rutlam ...	·77	Health and prospects good; food prices lowering.
Neemuch ...	·86	Crops thriving well.
Goona ...	1·62	
Bhopal ...	4·05 in Sehore	Prospects of crops good.
Ágar ...	·83	Health good.
Nowgong ...	7·91	
Mánpur ...	2·0	Crops good; weather clear.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—		
Abu (Aug. 20th)	8·81	Cloudy.
Serohi („ 17th)	1·40	Tanks full; wells good; health fair; prospects good; cool.
Marwar („ 16th)	2·48	Tanks and wells almost full; fever prevails; prospects excellent; prices falling.
Meywar („ 15th)	·30	Tanks, wells, health and prospects good.
Harowtee („ 16th)	8·79 in Deoli, 3·26 in Kotah, and 12·83 in Tonk.	Health and prospects good; cloudy.
Jhallawar („ 14th)	2·94	Prospects very favourable; health good.
Ajmere („ 20th)	7·71	Prospects excellent; prices falling; health good.
Jeypore ...	5·06	Prospects very good; prices falling; fever less.
Bhurtpur („ 19th)	2·69	Ague still prevalent.
Ulwur ...	1·87 (average) ...	Break wanted; fever very prevalent.
Nepal—		
Katmandu (Aug. 12th)	2·9	Total rainfall 40·09; agricultural prospects fair; cholera prevalent in and about Katmandu.

Ditto 1877-78 ... ... 679,198 „
NET INCREASE ... 5,917 „

* In statement for rabi 1877-78, the acreage of Umballa District was given as 5,302 in Superintending Engineer's statement, which was incorrect. The correct figures are shown in the present return.

† The rainfall on the Delhi and Gurgaon Irrigation Works during rabi of 1877-78 was omitted in the statement furnished by Superintending Engineer for that crop, but it is shown in the present return.

‡ The total rainfall shown on the Inundation Canals in the Lahore and Montgomery Districts during rabi months of 1877-78 in the present return differs from that given in the return for the corresponding crop of 1877-78, which Superintending Engineer explains is due to the latter having been incomplete in consequence of its submission on the 1st March 1878.

§ In the case of the Mooltan and Dera Ghazi Khan Districts the Superintending Engineer reports that the difference between the figures of rainfall for rabi 1877-78 shown in the present return and that submitted last year for that crop is due to errors in the latter.

R. B. CHAPMAN,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 26th AUGUST 1879.

GENERAL REMARKS.—In Madras there was more rain than during the previous week; prospects are promising. In Bombay general, and in parts heavy, rain has fallen; a break is required in some districts; locusts have done some damage in Sind, and rats are doing harm in parts of Ahmednagar and Dharwar; prospects are excellent. Rain has been general in Bengal; but more is still wanted in most parts of the Burdwan Division, in the 24-Pergunnahs and in Balasore; considerable damage has been caused by floods in Behar, Moorshedabad and Rajshahye; in Cuttack also and Pooree much damage is apprehended from inundations; prospects of the winter rice are on the whole promising. In the North-Western Provinces and Oudh there has been heavy rain during the week, and a break is much needed in places; prospects remain favourable. Good rain has fallen in the Punjab and prospects are much improved. The rain in the Central Provinces has been less than in the previous week, but a break would prove beneficial to the *kharif* crops; prospects continue favourable. In British Burma the rain has been general; some damage has been done to crops by insects; prospects are good. In Assam also and the other Provinces and States the rain has been general and plentiful, and prospects are very favourable.

Despite inundations in parts of Bengal, and excessive rain in some other parts of the country, prospects are on the whole good throughout the Empire. In the Punjab the rain that has fallen during the week has removed all apprehensions that were entertained of drought.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
Bellary ...	...	No report received.
Kurnool (Aug. 23rd)	3·05 (average of 8 stations).	*Ragi* 21·87; crops promising; prices falling in 4 and stationary in 3 taluks; pasture and water abundant.
Ganjam ...	...	No report received.
Kistna (Aug. 23rd)	4·0 (average of 10 stations).	*Ragi* 19·97; Kistna risen, 186 inches water over anicut on 21st, 156 inches on 23rd; standing crops doing well; *sazza* and maize ripening; upland tanks received partial supplies; rain opportune and beneficial.
Chingleput (Madras) ...	...	No report received.
Coimbatore ...	...	No report received.
Tanjore (Aug. 23rd)	1·74 (average of 12 stations).	*Ragi* 16·73; 36 to 90 inches water in Cauvery; crops good; harvest of *cholum*, *cumboo*, and *gingelly*, outturn ½ to ⅝.
Madura („ „)	·57 (average of 8 stations).	*Ragi* 16·14.
Malabar („ „)	2·10 (average of 14 stations).	*Ragi* 17·93; prices slightly fallen in Cherakal, Calicut, and Ponani, risen in Kotcyam and Cochin, stationary elsewhere; harvesting of first crop partially begun; rain sufficient.
Travancore ...	...	No report received. *General Remarks.*—General prospects promising.
Bombay (Aug. 27th)—		
Kurrachee ...	·39 at Schwan, ·22 at Manora, ·22 at Mánjhand, ·20 at Sákro, ·13 at Tatta, ·10 at Ghorabári, ·40 at Kurrachee.	River on 23rd 19 feet, against 19 feet 5½ inches last year; locusts damaged cotton in Schwan taluka; cattle-disease continues; cholera is prevalent; *kharif* crops flourishing.
Hyderabad ...	Pretty general, varying from ·05 to 1·0.	River only 2 inches below last year's maximum; locusts damaged crops in Hála taluka.
Ahmedabad ...	1·09	Total rainfall 24·21; transplantation of rice almost completed; other crops excellent.
Baroda ...	4·12	Total rainfall 10·61; prices generally falling.
Surat ...	·86	Total rainfall 28·20; crops healthy; slight cholera in Surat.
Násik ...	.....	Seasonable break in rain; slight cholera in Sinnar and Malegaon; cattle disease in Násik and Dindori; prices slightly lower.
Colaba (Bombay) ...	5·48	Total rainfall 53·76, being 2·97 below average; average of abnormal temperature 2 degrees cool.
Poona (Aug. 24th)	Maximum 1·86 at Máwal; minimum ·64 at Purandhar.	
Ahmednagar ...	3·59; fall general ...	State of crops good in 4 talukas, in rest *bajri* plants have turned yellow owing to excessive fall, *mung* and other early crops damaged in 2 talukas; injury by rats in parts of 3 talukas; cholera in Nagar.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 26th AUGUST 1879.

GENERAL REMARKS.—In Madras there was more rain than during the previous week; prospects are promising. In Bombay general, and in parts heavy, rain has fallen; a break is required in some districts; locusts have done some damage in Sind, and rats are doing harm in parts of Ahmednagar and Dharwar; prospects are excellent. Rain has been general in Bengal; but more is still wanted in most parts of the Burdwan Division, in the 24-Pergunnahs and in Balasore; considerable damage has been caused by floods in Behar, Moorshedabad and Rajshahye; in Cuttack also and Pooree much damage is apprehended from inundations; prospects of the winter rice are on the whole promising. In the North-Western Provinces and Oudh there has been heavy rain during the week, and a break is much needed in places; prospects remain favourable. Malabar („ „)	2·10 (average of 14 stations).	*Ragi* 17·93; prices slightly fallen in Cherakal, Calicut, and Ponani, risen in Koteyam and Cochin, stationary elsewhere; harvesting of first crop partially begun; rain sufficient.
Travancore ...	...	No report received.
		General Remarks.—General prospects promising.
Bombay (Aug. 27th)—		
Kurrachee ...	·39 at Sehwan, ·22 at Manora, ·22 at Mánjhaud, ·20 at Sákro, ·13 at Tatta, ·10 at Ghorabári, ·40 at Kurrachee.	River on 23rd 19 feet, against 19 feet 5½ inches last year; locusts damaged cotton in Sehwan taluka; cattle-disease continues; cholera is prevalent; *kharif* crops flourishing.
Hyderabad ...	Pretty general, varying from ·05 to 1·0.	River only 2 inches below last year's maximum; locusts damaged crops in Hála taluka.
Ahmedabad ...	1·09	Total rainfall 24·21; transplantation of rice almost completed; other crops excellent.
Baroda ...	4·12	Total rainfall 40·61; prices generally falling.
Surat ...	·86	Total rainfall 28·20; crops healthy; slight cholera in Surat.
Násik ...	.....	Seasonable break in rain; slight cholera in Sinnar and Malegaon; cattle disease in Násik and Dindori; prices slightly lower.
Colaba (Bombay) ...	5·48	Total rainfall 53·76, being 2·97 below average; average of abnormal temperature 2 degrees cool.
Poona (Aug. 24th)	Maximum 1·86 at Máwal; minimum ·64 at Purandhar.	
Ahmednagar ...	3·59; fall general ...	State of crops good in 4 talukas, in rest *bajri* plants have turned yellow owing to excessive fall, *mung* and other early crops damaged in 2 talukas; injury by rats in parts of 3 talukas; cholera in Nagar.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Sholápur ...	.....	No report received.
Dharwar ...	Average 1·71 ...	Early crops good; break much desired; slight fever; damage by rats much less.
Kanara ...	4·90 at Karwar; maximum 13·88 at Kumpta, minimum 1·88 at Haliyál.	Total rainfall 102·39; early rice crop coming into ear at Karwar.
Rajkot ...	·88	Total rainfall 22·10; prospects very good; fever continues; cholera in Nawánagar.
		General Remarks.—Showers general; prospects excellent, though some damage has been done by locusts in Sind, and rats in Ahmednagar.
Bengal (27th Aug.)—		
Chittagong ...	·34	Prospects of crops good.
Dacca ...	·81	Floods again rising from recent flush coming down the Ganges from up-country; *aus* reaping nearly concluded; *amun* still promising; public health good.
24-Pergunnahs (Calcutta)	1·96	Prospects generally good, but more rain wanted; prices high; public health fair; fever and cattle-disease in Satkhira; fever in Busseerhat.
Moorshedabad ...	1·24	Prospects of crops on high lands good; rivers risen very high; some embankments given way; damage not yet estimated; public health good.
Rajshahye ...	1·39	Ganges unusually high; country generally flooded; considerable damage done to crops in low lands; in high lands rice prospects still good.
Burdwan ...	1·01	Except in Cutwa and Culna, *amun* prospects bad, though even now with rain that crop might be a good one; some cholera in Sudder and Raniganj; many fever cases in Culna and Cutwa.
Rungpore ...	5·31	Prospects good; *aus* harvest almost finished; transplantation going on; public health good.
Bhágalpur ...	2·04	District chiefly under water; rice prospects good.
Purneah ...	8·95	Crops in south of Gondwára, 14 miles north of Ganges, much damaged by floods; *aghani* and *rabi* prospects excellent.
Patna ...	2·36	Great damage done by heavy floods in Ganges; crops and many villages on inundated lands entirely destroyed; out of range of these floods prospects favourable.
Durbhanga ...	5·55	Floods in Ganges considerably damaged *bhadoi*; in south rice still promise well; some cholera still in Madhubani.
Hazáribágh ...	3·2;	General heavy rain; a little sunshine now wanted.
Cuttack ...	2·34	In several places crops under water; in Kendrapara considerable damage apprehended where *bhali* has also suffered, but present fine weather will probably improve matters.
		General Remarks.—Rain general, but more still required for transplanting in most parts of Burdwan Division and in 24-Pergunnahs and Balasore; in Behar, Moorshedabad, and Rajshahye considerable damage done by floods on low and riparian lands; *bhadoi* in many places entirely lost; some winter rice also destroyed, but its prospects on the whole promising; heavy floods also in Cuttack and Pooree, and much damage apprehended; cholera much diminished, but fever reported in many places.
N.-W. P. and Oudh—		
Benares (Aug. 26th)	Benares ... 1·9 Chandauli ... 3·2 Gungapur ... 5·3 3·0 (average)	Prospects good; health fair.
Allahabad („ „)	2·30	Total rainfall since 1st June 24·2; prices nearly stationary; wheat 14 7/8 seers; health and prospects excellent.
Gorakhpur („ 27th)	1·60	Total rainfall 47·2; weather seasonable; prices high; prospects good.
Jhansi („ 28th)	2·9	Prospects favourable; weeding retarded from excessive rain; prices falling; cholera in the decrease, and fever on the increase.
Agra („ 26th)	1·1 (average)	*Kharif* prospects good; fever and ague still bad in city and district.
Bareilly („ 27th)	6·0	Weather unfavourable for *kharif* crops except rice; health good, no further outbreak of cholera.
Meerut („ „)	2·30	Break much needed; cattle-disease in three tahsils; fever and ague prevalent; slight cholera in one village; prices much the same.
Kumaun („ 26th)	3 days' continuous rain on 21st, 22nd, and 23rd.	Weather on the whole favourable for crops.
Lucknow („ 27th)	2·1	Fine weather wanted.
Partabgarh („ 25th)	Sadr ... 6·75 Khunda ... 3·3 Putti ... 6·2	Crops are maturing, and in Khunda tahsil *makka* has ripened and is beginning to be cut; rainfall at Sadr heavy, but there has since been a three days' break; prices falling.
Sitapur („ 27th)	4·6	Health good; break much needed.
Fyzabad („ „)	2·1	Rice unusually good.
		General Ramarks.—General rain during the week; a break much needed in places, but on the whole prospects favourable; fever still prevalent in Meerut, Agra, and Jhansi; cattle-disease has appeared in Meerut.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab (Aug. 26th)—		
Delhi ...	2·5	Prospects continue favourable; slight fluctuations in prices of food-grains; fever prevalent.
Hissar ...	6·0	Rainfall has been heavy throughout the whole Division; all fears from drought removed; health good.
Umballa ...	2·6	Crops and health good.
Jullundur ...	5·1	Crops prospering and prices falling; health good.
Lahore ...	6·8	Rain will do good; health generally good, but a few cases of cholera still.
Ferozepore ...	3·4	Agricultural prospects improved; no cholera reported.
Siálkot ...	3·7	
Ráwalpindi ...	2·5	Agricultural prospects good; cholera and fever about.
Mooltan ...	Drizzling rain	Prospects good; prices steady.
Dera Ismail Khan ...	.....	Crops have improved but more rain wanted.
Pesháwar ...	·2	Harvest prospects have improved; prices steady.
		General Remarks.—Rainfall general throughout the Cis-Indus Districts, and prospects much improved.
Central Provinces (August 27th)—		
Nágpur ...	2·48	Cotton and *jowar* injured in places by continuous rain; break required.
Jubbulpore ...	3·44	Crops good, but break required for cotton; small-pox continues; prices stationary.
Saugor ...	2·18	Break required for cotton and millets; rice promising; fever prevalent; small-pox continues; prices slightly fallen.
Seoni ...	2·54	All crops, except rice, suffering from excessive rain; few cholera cases.
Hoshangabad ...	3·61	Cotton and other crops good; small-pox decreasing.
Raipur (Aug. 23rd)	2·23	Rice crops doing well; weeding in progress; cotton in low lands suffered from continuous rain; cholera and small-pox continue; prices stationary.
Sambalpur („ 22nd)	·44	Some rice-fields destroyed by floods caused by rain of previous week, being transplanted again; prospects good, except of cotton; cholera and small-pox continue.
		General Remarks.—Rice crops flourishing; other *kharif* crops require break of one week to improve them; prospects as yet good.
British Burmah— (Aug. 27th)		
Akyab ...	4·02	Total rainfall 178·25; public health good.
Rangoon ...	3·39	Total rainfall 67·12; public health normal; crop prospects favourable; slight floods in Pegu and Hline townships, but water subsiding.
Bassein (Aug. 16th)	3·96	Total rainfall 55·08; public health good; a few cases of small-pox; cattle-disease prevalent; ploughing and transplanting progressing, except in the inundated circles.
„ („ 23rd)	6·40	Total rainfall 61·48; public health good; cattle disease still prevalent; cultivation progressing favourably, except in inundated parts and one circle; slight destruction of crops by insects.
Prome ...	1·14	Total rainfall 27·36; a few cases of small-pox; crops progressing.
Amherst (Moulmein) ...	9·79	Total rainfall 115·12; public health good; reports still received of slight damage by insects in parts of district, otherwise crops good; slight cattle-disease in three townships.
Toungoo ..	3·97	Total rainfall 48·35; public health good.
		General Remarks.—Public health on the whole good throughout province; some cholera and small-pox here and there; slight cattle-disease in parts; crops progressing satisfactorily.
Assam (Aug. 27th)—		
Gauháti (Aug. 27th)	3·98	Weather cool, with rain nearly every day; transplanting of *sáli* in progress; prospects of crops favourable.
Sylhet ...	2·55	*Aus* crop a good one; prospects good; public health improving.
Cachar ...	...	No report received.
Dibrugarh ...	...	No report received.
Mysore and Coorg— (Aug. 27th)—		
Bangalore ...	1·27	Agricultural prospects favourable; public health generally good.
Mysore ...	1·45	
Mercara ...	7·08	
Berar & Hyderabad— (Aug. 27th)—		
Amráoti ..	3·71	Crops thriving, but break in weather much needed.
Akola ...	·88	Crops in forward condition; prospects favourable.
Hyderabad ...	2·55	Total rainfall from 1st April 21·81; prospects fair; young crops promising; poor-houses still open in West Raichur and Goolburgah.
Central India States (Aug. 27th)—		
Indore ...	2·42	Season most promising; rain has fallen favourably; prices are still very high; wheat 9, and gram 10, seers per rupee.
Morar (Gwalior) ...	3·45	Prospects good; *jowar* 18 seers.
Sutna ...	2·34	Health and prospects good.
Rutlam ..	5·78	Season and crops excellent.
Neemuch ...	3·63	Fever prevalent; health fair; crops very good; wheat 15 seers.
Goona ...	1·91	Prospects of crops good.
Bhopal ...	·95 in Sehore	Health good.
Agar ...	·87	
Nowgong ...	3·33	Crops good.
Mánpur ...	3·90	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—		
Abu (Aug. 27th)	5·38 (still raining)	
Serohi („ 24th)	·60	Tanks full; wells good; health fair; prospects very good; seasonable.
Marwar ...	.....	No report received.
Meywar (Aug. 22nd)	2·02	Tanks, wells, health, and crops good; prices still falling.
Harowtee ...	.....	No report received.
Jhallawar (Aug. 21st)	2·82	Normal monsoon weather; health good; prospects favourable.
Ajmere („ 27th)	·99	Prospects good; cloudy; health good.
Jeypore ...	2·54	Total rainfall 23·50; fever increasing.
Bhurtpur (Aug. 26th)	1·63	Cloudy; easterly wind; prospects brilliant; ague very prevalent.
Ulwur („ 27th)	4·35	Prospects excellent; fever prevalent.
Nepal (Aug. 19th)—		
Katmandu ...	4·6	Little cessation in the rain; cholera prevalent; prospects fair.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

REDUCTION OF THE SUPERIOR STAFF OF THE PUBLIC WORKS DEPARTMENT.

Extract from the Proceedings of the Government of India, Public Works Department,—Nos. 1506-1533 *E.—G., dated Simla, the* 28*th August* 1879.

Read again—

Resolution in the Department of Finance and Commerce, No. 2079, dated 31st July 1879.

RESOLUTION.—The present number of Chief Engineers, and officers ranking as such, in all India is 22, of whom 9 are in the 1st class and 13 in the 2nd and 3rd classes. In order to carry out the reductions in the Department proportionally, it is necessary to abolish five posts in all—*viz.*, two in the 1st class and three in the 2nd and 3rd. It is therefore desirable to notify to the Department generally the directions which these reductions will take.

2. The Governor General in Council has decided that the reduction in the 1st class shall be in the Irrigation and Railway Branches. The 1st class Chief Engineership of Irrigation will be replaced by an appointment in the 2nd or 3rd class. There must therefore be a reduction of four posts in the 2nd and 3rd classes taken together. After carefully considering the relative importance of the several appointments, the Governor General in Council has come to the conclusion that the following are the posts that ought to be reduced to Superintending Engineers' charges—

Consulting Engineer for Guaranteed Railways, Madras.
Chief Engineer for Irrigation, Bombay.
Central India.

One of the posts in State Railways will be abolished altogether.

3. The Chief Engineer of Mysore has already been replaced by a Superintending Engineer, irrespective of the present reductions.

4. In each of the Provinces of Bengal, the North-Western Provinces and Oudh, and the Punjab, there will be one Chief Engineer in the 1st class, and one in the 2nd or 3rd. The post of Secretary in the Public Works Department may be held either by the Chief Engineer in the General Branch, or the Chief Engineer of Irrigation. The officer who is Secretary will hold the 1st class appointment. The other will be Joint Secretary in one of the two lower classes.

The Lieutenant-Governor of Bengal should consider the expediency of bringing the business of the Railway Branch and of the Buildings and Roads Branch under one officer. This would be facilitated by placing the Provincial Railways open to traffic under the Consulting Engineer to the Government of India for Guaranteed Railways, Calcutta, according to the plan now adopted by the Government of India in regard to Imperial State lines.

Further, Local Governments will at once carry out, where the plan is not already adopted, the amalgamation of the several Secretariat offices in the Public Works Department whereby saving might be effected in respect of separate Assistant Secretaries and Registrars, Superintendents, or Chief Clerks in each branch, on the system similar to that obtaining in the Secretariat of the Government of India.

5. The total number of Superintending Engineers in all India is 60. The following reductions in present posts will be carried out:—

	PRESENT SCALE.				REDUCED SCALE.			
	GRADE.			TOTAL.	GRADE.			TOTAL.
	i.	ii.	iii.		i.	ii.	iii.	
Madras	2	2	1	5	2	1	1	4
Bombay	2	1	1	4	2	1	1	4
Bengal (Provincial)	2	2	1	5	...	...	...	6
„ (Irrigation)	1	1	1	3				
N. W. P. & Oudh (Provincial)...	1	1	1	3	...	...	...	4
„ „ (Irrigation)...	1	1	1	3				
Punjab (Provincial)	1	1	1	3	...	...	...	5
„ (Irrigation)	1	2	1	4				
Local Administrations—								
Burmah ... 1								
Assam ... 1								
Mysore ... 2	2	2	2	6	...	...	...	5*
Rajputana ... 1								
Hyderabad ... 1								
Military Works	4	2	2	8	2	2	1	5
Railway	5	5	6	16	3	4	4	11
Total ...	22	20	18	60	...	...	...	44

* The reduction is in Burmah.

To the reduced scale thus arrived at must be added the Consulting Engineer, Madras, and Central India, so that the whole sanctioned number of Superintending Engineers is 46. The scale in Madras will, including the Consulting Engineer, remain as at present, *viz.*, two in each of the 1st and 2nd grades, and one in the 3rd. In Bombay there will be a reduction of one Superintending Engineer, 1st grade, though the number will remain as at present in consequence of the Chief Engineer, Irrigation, being reduced to Superintending Engineer. The number in the Local Administrations will be six.

6. The Governments of Madras and Bombay being left to deal with their own promotions as hitherto, it appears to the Governor General in Council that the reduced staff of Superintending Engineers under Local Governments and Administrations should be again brought on one common list for promotion. The Government of India is not influenced by any desire for increasing its authority in matters of promotion, but in small lists, such as those of Superintending Engineers under Local Governments, the average rate of promotion, which in the long run must tell, has not time to operate within a reasonable period, perhaps not within the space of the longest official career, and the result is inequality in the rate of promotion, and consequent discontent.

The Governor General in Council is convinced that the wishes of the officers concerned are in favor of a reversion to the former mode of promotion. A further reason for the change is found in the fact that the Local Governments are apt to prefer one of their own Superintending Engineers for succession to Chief Engineer to another who may be unknown to them; and this bears very hardly on the Superintending Engineers of the Local Administrations.

7. For the first of these reasons the Executive and Assistant Engineers under Local Administrations will be brought on one list for promotion by the Government of India. In this case the Governor General in Council is of opinion the continuance of the present system would be positively unfair.

8. In like manner and for like reasons, the whole of the Executive and Assistant Engineers and Upper Subordinates now on separate lists under each Local Government will be brought on one list for the purpose of promotion only by such Government. This need not in any way disturb existing arrangements by which Irrigation is made a distinct and special service, though it will admit of the more ready transfer of officers from one branch of work to another within the Province.

9. The changes specified in the two foregoing paragraphs will be carried out from 1st April 1880.

10. The Railway list is sufficiently large to allow of it remaining separate in the executive branches; but Chief Engineers and Superintending Engineers, and officers ranking as such, will be borne on the General List of Chief Engineers and Superintending Engineers for the purpose of regulating their promotion.

11. There are also good reasons for keeping the list for the Military Works Branch separate, with the same exception.

12. In carrying out these reductions, superfluous officers in any class or grade must be relegated to a lower class or grade, till the reduced scale is reached, 3rd grade Superintending Engineers being relegated to the 1st grade of Executive Engineers. **But officers holding substantive rank in a class or grade, who are so relegated, will retain their present substantive emoluments, drawing the difference as a personal allowance. Acting allowances and extra pay due to temporary promotions must cease in accordance with general rules as reductions are effected.** Local Governments and Administrations will be addressed separately on the personal arrangements consequent on the changes ordered in this Resolution.

ORDER.—Ordered, that this Resolution be notified in the *Gazette of India* and communicated to the Local Governments, Administrations, and Officers noted in the margin: also to the Foreign Department for communication to the Chief Commissioner of Mysore.

The Governments of Madras, Bombay, and Bengal, in the Public Works Department, General, Irrigation, and Railway Branches.
The Government of the North-Western Provinces and Oudh, in the Public Works Department, Buildings and Roads and Irrigation Branches.
The Government of the Punjab, in the Public Works Department, General and Irrigation Branches.
The Chief Commissioners, Central Provinces, British Burmah, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India and Rajputana.
The Superintendent of Port Blair, and Chief Commissioner, Andaman and Nicobar Islands.
The Accountant General, Public Works Department.
The Inspector General of Military Works.
The Director of State Railways, Western System.
The Director of State Railway Stores.
The Consulting Engineers to the Government of India for Guaranteed Railways, Calcutta, Lahore, and Lucknow.

ALEX. FRASER, *Major-Genl., R.E.,*

CIVIL WORKS.

Irrigation.

REVENUE REPORT, IRRIGATION DEPARTMENT, PUNJAB, FOR THE YEAR 1877-78.

Nos. 252—64I., dated Simla, 15th August 1879.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Government of the Punjab, No. 60I., dated 8th January 1879, forwarding copy of the Revenue Report of Irrigation Works in the Punjab for 1877-78, and of the Resolution of that Government reviewing the same.

OBSERVATIONS.—The total capital invested in canals in the Punjab up to the end of 1876-77, exclusive of contributions from the Native States interested in the Sirhind Canal, amounted to Rs.3,12,41,097, which was increased to Rs.3,36,03,334 at the close of the year under review. Of this sum, Rs.1,09,89,544 were expended on works under construction not yet yielding revenue, leaving Rs.2,26,13,790 as the outlay on works in operation.

2. The gross assessments or earnings of the year amounted to Rs.31,42,132, of which Rs.21,24,501 were from direct income, Rs.10,17,631 from indirect.

3. The working expenses amounted to Rs.14 64,192, leaving a net revenue from total earnings of Rs.16,77,940, or Rs.6,60,309 from direct income only; or a profit on the gross outlay at the beginning of the year under review of 4·99 and 1·96 per cent. respectively.

4. Excluding the outlay on incomplete works, the capital debit to works in operation amounted at the commencement of the year to Rs.2,16,00,029, on which the net returns as above shew profits of 7·77 and 3·06 per cent. respectively; which shews a marked improvement on the results of the previous year, when the percentages were 6·09 and 1·32 respectively.

5. The interest charges for the year on the aggregate outlay, both on works in operation and under construction, amount to Rs.14,56,752. The direct earnings of the year thus fall short of the interest charges by Rs.7,96,443; but, adding the indirect revenue, the earnings exceed the interest, leaving a clear profit on the entire transactions of Rs.2,21,188.

6. In reviewing the report for the previous year, the Right Hon'ble the Secretary of State observed that the satisfactory financial results of irrigation operations in the Punjab were almost entirely due to the Western Jumna Canal, which not only paid its own way, but the large margin of profit which accrued from it covered the loss on other canals; and the lesson deduced from a comparison of the results on the Western Jumna and the Bari Doab Canals is in favor of moderate unambitious schemes and of indefatigable effort to keep down capital expenditure. The contrast is undoubtedly startling, but the circumstances connected with the construction and development of the two systems must be borne in mind in making any comparison. The Western Jumna Canal channels were carried for more than half their aggregate length in natural drainage channels, and the distributaries were, with few exceptions, made by the cultivators themselves crossing and blocking up the natural drainage outfalls in every direction, the result of which has been swamping and supersaturation of the soil, so extensively that a large expenditure is now being incurred to remedy the evils thus caused. The rates of wages and materials were considerably less when the old canals were constructed than they are now. The Western Jumna Canal has besides been in operation for fifty-seven years.

7. On the other hand, the Bari Doab Canal commenced irrigating just eighteen years ago; its channels are all artificial, and the distributary system, as on all canals of later years, has been carried out at the expense of Government. Care was taken from the first to prevent any obstructions to drainage, the result of which is now apparent in the exemption of the irrigated tracts from the evils which have long made the Western Jumna Canal districts unhappily notorious for unhealthiness.

The rise in cost of labor and materials of late years, and the necessity of providing much more liberally for the wants of the increased country traffic by bridges, have raised the outlay on this canal considerably above the amount which would have been required even thirty or forty years ago.

8. Admitting, however, that similar results to those of the older canal systems cannot be expected from the Bari Doab Canal at this early period of its history, the financial results, as shewn by the reports up to date, are not satisfactory, and appear to the Government of India to demand the careful attention of the Punjab Government.

9. The yearly income and expenditure for the last seven years were as follow:—

Year.	Gross direct Revenue (assessed.)	Working expenses.	Net direct Revenue.	Indirect Revenue.	Percentages on outlay		Capital at end of year.	Area irrigated.
					From direct income.	From total income.		
	Rs.	Rs.	Rs.	Rs.			Rs.	Acres.
1871-72 . .	6,85,870	3,47,983	3,37,887	2,50,410	2·56	4·46	1,31,91,288	287,070
1872-73 . .	6,33,910	3,15,702	3,18,208	1,83,180	2·36	3·73	1,34,49,568	228,796
1873-74 . .	6,65,150	3,46,086	3,19,064	1,27,940	2·32	3·25	1,37,50,775	232,146
1874-75 . .	7,60,570	3,37,458	4,23,112	1,46,250	2·99	4·03	1,41,27,792	279,813
1875-76 . .	6,23,450	4,80,939	1,42,511	1,66,530	0·98	2·13	1,45,16,124	214 599
1876-77 . .	5,98,610	5,53,652	44,958	1,07,300	0·31	1·04	1,46,97,271	202,712
1877-78 . .	6,89,630	5,23,987	1,65,643	1,19,030	1·12	1·92	1,48,36,496	266,995
			For 1868-69 the returns were—					
	7,38,460	3,65,585	3,72,875	2,68,400	3·12	5·38	1,19,27,240	299,834

From the above figures it appears that the decrease in profits during the last three years was mainly due to the large increase in working expenses; and

in the year under review the excessive charges on this account are stated by the Chief Engineer to be owing to special repairs to rapids and falls as well as to silt clearances; those in previous years were also due to special repairs to works. The Government of India would be glad to learn when this special expenditure is likely to cease.

10. Again in the capital debit at the close of the year, unproductive expenditure, amounting to Rs.18,96,125, is included, being the outlay on the Kussoor and Subraon branches, to which, although they were ready for the admission of water some time previously, it is stated in His Honor the Lieutenant-Governor's review that it was not possible to give a supply owing to the inability of the main channel to carry an extra volume on account of the defective condition of some of the rapids near the head. These defects, it is subsequently stated, have been so far remedied that a larger supply was safely passed down and distributed shortly after the close of the year under review, so that an increase in the area of irrigation may be looked for in succeeding years.

The supply, however, actually carried by the main canal does not appear to have been utilized to the full extent possible, the returns shewing a considerable volume running to waste every month in the escapes.

11. Again, the area of irrigation has gradually diminished from the year 1868-69. Every third year shews an area considerably larger than in the two previous or the two succeeding years, but these maxima have steadily decreased. The figures are, for—

1868-69	299,835 acres.
1871-72	287,070 „
1874-75	279,813 „
1877-78	266,995 „

The irrigated area in 1868-69 was, it is true, exceptionally large, as was the case on all the canals in Northern India, owing to the deficiency of rainfall, but the large and steady decrease down to the year under review calls for investigation.

12. In the Superintending Engineer's report on this canal, the fact is noticed that the irrigated area is fast approaching an average proportion of one-fourth the gross area. As this is a point of considerable importance in the successful development of irrigation, some further information regarding it is very desirable. The proportion in many villages is known to be much in excess of the above average, and in future reports the maximum and minimum as well as average proportion should be given; and also the maximum proportion of irrigated to gross area which observation shows to be admissible without causing an undue rise of the spring level.

13. The Government of India is glad to observe that the insufficiency of the income on the Indus series of inundation canals is under consideration.

Previous to the year 1873-74 these canals had not been credited with the share of the land revenue fairly due to them. Since then the credits on this account have been calculated according to rules made by the Local Government and approved by the Government of India. The results of the past five years, however, show that the total income, direct and indirect, has not been sufficient to cover the expenses, irrespective of interest charges. The share of land revenue due to the works, it would appear from the review of the Local Government of the report for 1874-75, should be at least Rs.1,69,718, whereas the highest yet credited in any year only amounts to Rs.1,38,761. The remissions to Jagirdars amounting, it is stated, from Rs.20,000 to Rs.30,000, have not yet been credited, though in the report for 1876-77 it was noted that this had been arranged for.

14. Again, the capital account is heavily weighted by the expenditure on the flood embankments without any corresponding credit on account of the vast extent of country, irrespective of the irrigated tracts, protected by them. Of the total capital debit at the close of the year under review, amounting to

Rs.5,77,475, no less than Rs.3,99,287, or over 65 per cent., is outlay on these embankments. The adjustment of the incidence of the maintenance charges, it is observed, is under consideration.

15. The state of the collections on these canals calls for explanation. The uncollected balance of the clearance rate, amounting to a fixed sum of Rs.45,000 annually, was at the close of the year under review Rs.80,920, although the crops on the irrigated lands were, it is stated, matured and more valuable than usual owing to drought elsewhere.

16. The operations of the year under review bring out very clearly the vast importance of the irrigation works to this Province. Their benefits were extended to no less than 1,324,480 acres or 2,070 square miles, and as it was a year of drought, the larger proportion of this area would have been either unproductive or nearly so without the aid of artificial irrigation. Of the total quantity of produce thus raised, food grains naturally form the largest share. The figures for the two permanent canals stand thus :—

	Area. Acres.	Quantity. Mds.	Value. Rs.
Western Jumna	328,309	4,381,423	1,13,55,947
Bari Doab	210,270	3,959,874	78,94,428
TOTAL .	538,579	8,341,297	1,92,50,375

shewing that the cultivation dependent on these two canals alone supplied upwards of 306,000 tons of food grains, where little or none could have been produced without irrigation. The gross value of all the crops grown under these two canals is estimated at Rs.1,88,45,967 out of an aggregate for all the irrigation works amounting to Rs.3,34,25,212.

ORDER.—Ordered, that copies of this Resolution and of the report be forwarded to the Secretary of State, and to the Finance and the Home, Revenue and Agricultural Departments for information.

Ordered also, that copies of this Resolution be forwarded to the Government of the Punjab and the several* other Local Governments and Administrations, in the Public Works Department, Irrigation Branch, for information.

* The Governments of Madras, Bombay, Bengal, and the North-Western Provinces and Oudh.
The Chief Commissioners, Central Provinces, British Burma, and Mysore and Coorg.
The Resident at Hyderabad.
The Agents to the Governor General for Central India and Rajputana.

Ordered further, that this Resolution, the Resolution of the Local Government, and the Chief Engineer's Report, with a few selected tables, be published in the *Gazette of India* Supplement.

J. CROFTON, *Major-Genl., R.E.*,
Depy. Secy. to the Govt. of India.

Proceedings of the Hon'ble the Lieutenant-Governor of the Punjab and its Dependencies, in the Public Works Department,—No. 59, dated 8th January 1879.

READ—

Revenue Report, 1877-78, and Review by Chief Engineer.

RESOLUTION.—The expenditure brought to account during the year on the works under the control of the Irrigation Department was Rs.32,39,965, of which Rs.8,77,728 were contributed by Native States; the addition to the capital invested in Canal works by the British Government was therefore Rs.23,62,237. This addition is mainly on account of the construction of the Sirhind and Swát River Canals, and of the new branches of the Western Jumna Canal, none of which at present yield income.

2. The capital (exclusive of the contributions of Native States) invested in the works was, on 1st April 1877, Rs.3,12,41,097, and on the 1st April 1878 it had, on account of the additions above noted, increased to Rs.3,36,03,334.

3. Of this sum, Rs.2,26,13,790 is the capital of the canals in operation, and Rs.1,09,89,544 of those under construction.

4. The *gross "direct"* revenue from all sources, based on the *assessments or earnings* of the year under review, was Rs.21,24,501; with the addition of the so-called *"indirect"* revenue, it amounted to Rs.31,42,132. The working expenses were Rs.14,64,192, so that the *net "direct"* revenue was Rs.6,60,309, and including the land revenue due or dependent on the works, Rs.16,77,940. These figures give percentages of 3·06 and 7·77, respectively, on Rs.2,16,00,029, which was the capital of the canals in operation at the beginning of the year.
